The position in the iron and steel trades is easier. The minimum prices of steel bars have been reduced from £10 to £9 2s 6d, less a rebate of 7s 6d per ton for consumption at the local tinplate works, and that of tinplates from 24s per basis box to 23s 1d. The volume of business, however, shows little, if any, contraction, but inquiries from the Continent are less active.

CUMBERLAND IRON.

(FROM OUR WORKINGTON CORRESPONDENT.)

Business in the Cumberland and North Lancashire hematite pig-iron market has slowed down substantially of late, and consumers both on the Continent and at home, who in February and March exhibited such anxiety to cover their requirements to the end of June, are as yet showing little, if any, disposition to enter into commitments for the third quarter of the year. The menacing situation in the Ruhr has given a check to trade, and the outlook is regarded as far from reassuring. There is again uppermost the feeling of uncertainty, which is so bad for trade of any character whatever, and it would not be at all surprising if users were to stave off until the last possible moment any movement to make arrangements as regards their future needs. The result of the lull that has been produced has been, of course, to shade prices, and Bessemer mixed numbers are now down to £6 12s 6d per ton, delivered at Glasgow and Sheffield, to £6 15s per ton for export. The squeeze in ferro has sent up the price of this metal to £18 per ton delivered at home ports and to £20 f.o.b. for export, while spiegel is higher at £10 per ton delivered at home works and at £9 10s per ton, f.o.b., for export. There has been not the slightest improvement in the steel trade. The rail mills at Workington have worked intermittently on old contracts, and the tyre mill has been fairly well employed; but there is no new business coming in, and the prospects are far from good. Heavy rails are £10; lighter sections from £11 to £12 per ton; and billets from £10 to £11 per ton. The local requirements for native ore are such as to necessitate a normal production at the mines in the West and South of Cumberland, and small lots are being sold to Scotch and Yorkshire smelters. The best kinds of ore command from 26s to 28s per ton, and ordinary sorts from 22s to 24s 6d per ton. The coal trade is very brisk, Irish needs being larger than can be satisfied, in spite of the fact that a smaller tonnage is now reserved for the local land sale market. Best house coal for shipment across Channel is 27s 6d per ton; house nuts, 27s; and washer nuts, 24s per ton. Local industrial wants are considerable, and best steam is 30s and washed steam 29s per ton. Best house coal locally is 38s per ton at works. Coke is in big demand, the furnaces on ordinary iron in West Cumberland absorbing almost the entire output of the 300 ovens that are working at maximum pressure. The local price is 25s to 30s, according to carbon content. Continental inquiry has fallen off greatly. By-products are all being disposed of readily, and in the chemical industry a sharp demand is being experienced for creosote, pitch and tar acids.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Complaints are general regarding the paucity of new business in tops, yarns, and pieces, but the market shows no sign of real depression. There seems to be a feeling of quiet confidence in most quarters, and it is felt that any improvement in conditions in Germany would immediately be reflected here in an increased demand for tops and yarns. Meanwhile, things are just steady, and quotations for tops remain firm. There is hardly enough new business passing adequately to test values, but it is recognised that the wool position is sound, and the immediate future is not regarded with anxiety. The only fear is that firms may be tempted to get rid of their wool when they see a profit, and that between seasons there will be little wool for the combs, with, perhaps, a scarcity of tops later in the year. Spinners are not in a very happy position at the moment. The advance in wool values has

not brought out any more business in piece goods, and many manufacturers assert that they can do nothing on to-day's basis of values. Spinners of white Botany yarns are beginning to feel the pinch, and the outlook as regards employment in this section is none too promising. Several mills will take advantage of the Whit-tide holidays to close down for a full week. Yarn quotations show great irregularity, and a good deal of price-cutting is being indulged in. The fact of the matter is that between high wool prices on the one hand and keen Continental competition in yarns and pieces on the other, spinners and manufacturers are having rather a bad time. There is no new feature in the cloth trade. Home demand is restricted, but some of the export markets are doing rather better. Dress goods and fancy worsteds continue to sell fairly well, but the ordinary plain "bread-and-butter" lines continue to stick.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales finished last Friday in a way which cannot but have satisfied everyone associated with the selling end of the trade. Importers and selling brokers admit making prices which they never expected, and this speaks well for the soundness of the position of the raw material. Obviously, selling brokers are not the people to give publicity to any list of offerings withdrawn at the previous series, along with the prices then bid, and showing also what prices were paid when the same lots were re-offered at the third series. Everybody knows that anything from 2d to 8d per grease lb was the difference between the bids on the former occasion and the prices paid on the latter. Either one was much below the market level, or the other showed an extraordinary advance. The improvement in the prices for the lots withdrawn in March and then sold at the last series was anywhere up to 20 per cent., and for rank and file wools, a good 10 per cent. advance was shown. It must be acknowledged that the present level of wool prices is remarkably high, far higher than anyone expected to see. Great confidence was, and is still, felt in merino values, in which it was never expected that the improvement recorded would actually take place. We are satisfied that much can be said in favour of the present position of merinos and fine crossbreds, though already some are doing their best to flog the market in the hope of getting prices down. Attempts have been made to make capital out of a cable received from the United States announcing the cancellation of orders for piece goods, the illogical conclusion being drawn that these cancellations indicate a coming setback in wool values. It is quite true that some colossal buying has been done across the Atlantic, there being a remarkable boom in manufacturing circles.

A far greater service would be done to the industry if the public could be brought to realise that merino and crossbred wool are not on a relatively economic basis. This is largely due to the scarcity of merino supplies. During recent months it has been claimed that an increase was taking place in the consumption of crossbreds, but so far as the maintenance of values is concerned, there is much more confidence in fine wools than in coarse, and the movement of the latter at the last London sales indicates that these have for the time being reached high water mark.

II.—Raw Materials and Articles Mainly Unmanufactured—				

MANCHESTER, May 17.

The market continues to present an unsettled appearance. Much uncertainty prevails as to future prices, and the many ups and downs in raw cotton rates are very disturbing. In the cloth section a feature of interest has been the revival of inquiry for China. More contracts have been arranged in grey shirtings and sheetings than for some time back. It remains to be seen whether this is the beginning of extensive buying for the Far East in standard makes. Useful lines have also been booked in fancies for Shanghai and Hong Kong. Demand for India remains disappointing, especially for Calcutta, and operations have been confined to moderate lots in bleaching styles. A sorting-up business has been done for Egypt, the Levant, and South America. Clearances in the home trade continue to be adversely affected by the unseasonable weather for the time of the year. American yarns for home use have moved off quietly at irregular rates. There has not been much activity in Egyptian spinnings.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

Taking a broad view of the market for wood for building and construction work generally it must be stated that f.o.b. and c.i.f. prices for timber are increasing, forcing up values on the spot, though the latter cannot yet rise to the former's level.

The weather in the North of Europe has been very cold during the past month, consequently navigation has been delayed. For the first four months of this year, therefore, arrivals from Finland are not so large as January to April, 1922, but Swedish imports, from the southern district of that country, are about the same. Within the next few weeks cargoes will be arriving freely, as the United Kingdom has bought largely for June and later shipment.

As regards the spot market the demand is better than last year. House building still provides keen hopes on the part of timber traders, and now that arbitration has been settled on the wages question master builders may be able to make a real start. The combined railway companies seem to be very keen in adding to and repairing of their enormous equipments, which is most welcome to the merchant whilst shipbuilding is so quiet and also so troubled. The packing case makers, who use in busy times such huge quantities of lower quality European and Canadian spruce, are not large buyers at present, but there is an optimistic feeling prevalent among them that the demand will improve. This latter opinion is not confined to box and case makers—it is that of nearly all trading in timber for building and engineering work.

In the furniture woods market, however, the general tone is still disappointing on the spot, quite different to the optimistic assurances from America that the domestic demand across the Atlantic is good and c.i.f. values are advanced accordingly. At the mahogany log auction, held in London this week, considerable quantities of Cuba, St Domingo, African, and Honduras wood was withdrawn from sale, it being held at too high a limit for buyers. Wholesale prices made as follows:—Cuba, 7d and up per foot super; St Domingo, 6½d up; African, 5d up; Honduras, 9d up.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR OWN CORRESPONDENT.)

Markets have on the whole been quiet, and in the uncertain outlook there has been no disposition to do business to any extent. Linseed, though inclined to fluctuate, has remained at about the same level of values as a week ago. A small business has been done in Plate to Hull at £19 11s. 3d. on passage, £19 10s April-May, and £18 17s 6d June-July. The chief attention has been devoted to Indian linseed, and Hull has paid up to £21 for Calcutta on passage, £20 10s April-May, and £20 5s for May-June; while London has been a buyer at £20 7s 6d April-May and £20 5s May-June. Generally, however, the market lacks life, but is otherwise steady. With regard to the oil product there is a better tone, and values advanced 20s on reports of America being in the market, but are only moderately steady at £45 for spot and month ex-Hull mill. Forward positions, however, lack strength, and are quoted lower.

The poor demand for cottonseed is a reflex of the slow trade in oil, and crushers are buying very sparingly, if at all, though shippers of Egyptian appear more ready to discount late values. Very little movement is recorded in cotton oils, crude Egyptian offering at £39 10s and technical refined (soap makers' grade) at £43 without attracting substantial trade. Palm kernel oil has further receded to £40, and crude soya bean oil to £42 12s, but rape, castor and ground nut oils remain steady, though quiet. A better demand for linseed cakes is reported, but supplies are more than ample. Some preference is given for cotton cakes on account of their comparative cheapness.

HIDE, LEATHER, AND ALLIED TRADES.

(FROM OUR OWN CORRESPONDENT.)

The tone of the hide market was rather quieter in Bermondsey on Thursday, as quite a fair proportion of the hides offered failed to find buyers. Best ox sold from 8½d to 9½d, a decline of ½d being noted on two selections. Seconds sold badly, only two classes finding support at last prices: Cows, best, were steady at 7½d, seconds at 5½d dropping a ½d. Best calf sold from 6½d to 11d, declines of ½d to 1d being noted. Wools sold from 5s 6d to 12s 6d, hogs from 6s to 14s 6d, and lambs from 2s 3d to 6s each. The drop in values in the River Plate market has attracted business with home tanners, and sales of fregorifos are reported at round about 9d per lb. At the same time, importers consider the business should have been larger in view of the fall in prices. Dry hides are firm in price, and dry Montevideo Americans have sold at 12½d re-weights, whilst Cuyabano for shipment brought 8½d c.i.f. This week's cables report that America's market is weaker, with best heavy hides selling at 10 cents.

The trade in sole leather has slowed down this week, the proximity of the holiday and the unseasonable weather both being blamed. Prices show no material alteration, although sales are reported to have been made of bends at below schedule rates. Better class sole leather is now often asked for, owing to the bad wearing qualities of some of the leather made from cheap dry hides. Pinned offal is firm, and prices of good quality shoulders very firm indeed, with short stocks. Split hides are selling more freely, as motor-car hides are wanted by makers almost as fast as they can be produced.

Upper leathers have sold fairly well at firm prices, and in some cases advances have been obtained. Glacé kid in colours is wanted, but business is flat in black selections. Imports of glacé kid from Germany for the first four months of this year were valued at £36,314, and patent £30,455.

The boot and shoe section is better employed, and reports from districts where men's boots are made are better. Ladies' shoes are selling briskly, and Leicester makers have been working hard to cope with orders for home and export.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, May 18.

Quietness was again apparent in most directions, but more particularly so with regard to raw materials, while consumers show no disposition to depart from the hand-to-mouth policy followed for some considerable time past. The market for sugar maintained a very steady tone for actual parcels, as available quantities remain small, and this fact counteracts any slackness of demand felt at the moment. All the finer liquoring descriptions of tea were readily saleable at full recent rates, but undergrades disclosed slight weakness.

ALEXANDERS DISCOUNT Co., Ltd.,
24, LOMBARD STREET, E.C.3.

Telephones: 1332 & 225 Avenue. Telegrams: "Alexanders, Thread-London."

CAPITAL AUTHORISED £1,250,000 CAPITAL PAID UP £800,000
CAPITAL SUBSCRIBED £1,100,000 RESERVE FUND £400,000

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

ness. Jute was accorded but little support, and it seems that demand for manufactured goods will have to improve considerably if spinners are to interest themselves more freely upon the question of stocks. Favourable rains were recorded by cable from Calcutta for Daisee sowings. Copra continued to show irregular movements, with business confined to a moderate compass. Rubber depressed and quietly dealt in, the market at the moment being disturbed by financial considerations.

SUGAR.—No change occurred in British refined, and a moderate amount of business was effected. Messrs Tate and Lyle's cubes, 70s 9d to 71s 9d; granulated, 66s 1½d to 66s 7½d, as to quality, in 1 cwt bags, and 1½d less money 2 cwt bags; yellow crystals, 60s 1½d and 60s respectively; caster, 1 cwt bags, 67s 3d to 68s 1½d; finest, 69s 10½d; pieces, yellow to fine white, 55s 6d to 60s 9d; granulated, June and July, 66s 3d; August, 65s 9d, and September, 64s 9d. Crystallised West India in limited supply, and quoted 62s to 63s 6d. American granulated, spot, 64s 9d; May steamer, 37s; June, 37s 6d, c.f. and i., London. Canadian, spot, sold, 64s 6d. Czechoslovakian, granulated, 64s 6d to 64s 9d; ditto, November-December, sold, 27s 6d to 26s, f.o.b. terms, Hamburg. Of Dutch, Dinteloord, November-December, 27s, f.o.b., Rotterdam. White Java, spot, sold, 61s 6d to 62s; May-June, steamer, sold, 32s to 30s 3d and 31s; June-July, 30s to 29s and 29s 4½d; July-August, 28s 9d, 28s paid, c.f. and i., London. Cuban basis, 96 per cent., May-June, quoted 31s 6d. Brazilian basis, 80 per cent., May, 19s, c.f. and i., U.K. Madras, cane-jaggery, July-August, 18s 6d, c.f. and i., London. Terminal market generally quiet, and at times unsettled. August delivery, sold, 33s 9d to 32s 1½d and 32s 7½d; December, 26s 10½d to 25s 9d and 26s 3d. Cuban stocks stand at 751,200 tons, against 1,046,700 tons at corresponding period last year. Liquid glucose, spot, 29s 6d per cwt.

COFFEE.—A steady but generally quiet tone pervaded the market during the greater part of the week. Good bold Nairobi, sold, 98s to 104s; peas, up to 105s 6d; Costa Rica, bold sizes, 110s to 122s 6d; fine blue peas up to 172s. Future delivery market idle and quite nominal.

COCOA.—Market remains quiet, and trend of values against sellers. 1,000 bags Grenada, sold, 47s to 48s, chiefly at latter figure. Accra, F/F quality, June-July, sold, 32s to 31s 6d and 32s, f.o.b. terms.

TEA.—About 45,000 packages Indian were brought forward this week, and with general competition showing more activity, recent rates were supported, except for the commoner grades, and these marked a fractional decline. All good to fine qualities of the 20,570 packages Ceylon offered sold well, but in the case of common a reduction of ½d to ¾d per lb took place in order to effect business. Java and Sumatra rather quiet, and prices against sellers for common, fine being steady.

RICE.—With continued marked reticence on the part of buyers, a more or less nominal state of affairs prevails. Broken kinds also dull of sale. Rangoon beans, spot, 9s. Japanese peas unsettled, and general tone of market weak. Afloat parcels, sold, 22s; May-June, London and Liverpool, 21s 9d; September-October, quoted, 23s cwt.

SPICE.—Only quiet trading resulted in pepper, and prices in some cases favoured the buyer. Fair black Singapore, spot, quoted, 4½d; May-July, 3½d; Aleppo, spot, 4½d; Tellicherry, 4½d; white Singapore, spot, 6d; Muntok, 6½d; ditto, May-July, sold, 6d. Cloves quiet. Zanzibar, spot, quoted, 11½d; March-May, at 10½d; and May-July, 10½d, buyers. Tapioca dull. Fair flake Singapore, spot, 3½d; fine Java, 4½d per lb. Fair Penang seed pearl, spot, 31s 6d. Sago flour, May-July, quoted, 13s 7½d. Desiccated coconut quiet. Fine cut, spot, 47s 6d; medium, 49s 9d; halves, March-April, 46s; April-May, 44s; May-June, 42s 6d. Ginger firm, quiet. Calicut, B/C cut, spot, sold, 102s 6d; fair washed rough Ceylon, in sound condition, sellers, 75s; brown rough Calicut, spot, 75s cwt.

JUTE. Steadier, with more reserve shown by sellers, while cables from Calcutta recorded an improvement from recent depression, but closed easier. First grade, May-June, Continent, sold, £27 15s to £27 5s; new crop, August-September, sold, £27 10s to £27; and September-October, £27 5s to £26 15s ton. Lightning quality fails to engage much attention. Hessians steady, but quiet. 12 oz, spot, 28s; May-June, 27s 6d; July-September, 27s; 8 oz, May-June, 21s 6d per 100 yards. Twills unaltered.

HEMP.—Manila grades remained quietly steady. J, April-June, sellers, £32 10s; K and L, £30 15s; and M, £30 ton. New Zealand nominal in absence of business.

SHELLAC.—Market dull and easier. T.N., spot, 295s to 300s; August, 245s; October, sold, 235s to 240s cwt.

COPRA.—Steadier, with moderate inquiries, mainly confined to F.M.S. Straits. This quality, March-May shipment to Rotterdam, sold, £28 12s 6d; April-June, £27 17s 6d to £27 18s 9d, £27 17s 6d, and £28 5s; Ceylon, April-May, quoted £30; Java, April-June, £28 10s; Dutch East Indies, £28 5s; Cebu, £27 12s 6d; South Sea, £27; F.M. Straits, April-June, Marseilles, £27; mixed, £26 17s 6d. Palm kernels, June-August, Liverpool, sold, £19 1s 3d to £19 7s 6d per ton.

RUBBER.—Steadier, though slightly irregular, with fair covering orders in force. Standard plantation crepe and sheet, spot, and May delivery, sold, 13½d to 13½d, 13½d, and 14d; June, 13½d, to 13½d, 13½d, and 14d; July-September, 14d to 14½d, 14d, 14½d, and 14½d; October-December, 14½d to 15d, and 14½d; January-March 14½d to 15d. To New York standard sheet, June-July, quoted 14½d, c.f. and i. terms. Fine hard Para, spot, 14½d per lb.

EGG PRODUCTS.—Quiet. Prime hen liquid yolk, spot, 85s cwt. Albumen, spot, 3s 3d; April-May, 3s 2d per lb.

ESSENTIALS.—Menthol, spot, quoted 34s; shipment, 32s 6d. Japanese peppermint oil, spot, 6s 3d; shipment, 6s; aniseed oil, spot, 1s 1½d; shipment, 1s 1½d; slab camphor, spot, 3s 7d; crude, 3s 1½d; Ceylon citronella, spot, 3s 2d; Java, 4s; cinnamon leaf oil, spot, 4d; cassia oil, spot, 8s 6d; oil of lemon, 3s 2d; oil of orange, 11s for Sicilian; and 9s West Indian per lb.

EGG PRODUCTS. in quiet request, but sellers adhered to steady asking rates. Prime hen liquid yolk, spot, 85s per cwt. Dried yolk,

spot, 10d; hen albumen, spot, 3s 3d; and June-July shipment, 3s 1½d per lb.

FRUIT (DRIED).—There was no new feature to note, trade in currants, raisins, and also sultanias being of small dimensions. Of currants, Pyrgos quarter-cases, quoted 54s; half-bags, 53s to 53s 6d; Panaritii, 55s to 58s; good quality Vostiza, 67s to 71s; Australian, 71s. Sultanias: Smyrna, good, 80s to 82s; fine to choice, 95s to 115s; Californian, 65s. Valencia raisins, half-boxes quoted 32s to 34s; quarters, 36s to 46s. Dates continue to move off slowly. Hallowee, f.a.q., 20s to 21s; inferior, 17s to 18s; Siar, 15s. Evaporated fruits steadily held, and a moderate demand predominated. Cape apricots quoted 92s 6d to 110s. Californian pears, 65s to 75s. Extra choice apple-rings, 54s to 56s. Australian apricots, 120s. Plums slow.

CANNED GOODS.—A spell of favourable weather created quite a good demand, especially in the case of salmon. All the finer qualities of sardines were steadily inquired for. French 18-oz quoted 16s; ½-tins, 7s 6d; Portuguese quarters, 2s 6d to 3s 3d; ditto, 12-oz, 4s 9d to 5s 6d; 18-oz, 9s 6d to 11s per dozen tins. Lobster commands very full rates on continued scarcity. Fancy halves, on spot, quoted 175s to 180s. Salmon, 1 lb flat reds, labelled, quoted 55s to 58s; ditto, tall, 41s to 42s; 1 lb flat pink, 25s; ditto, tall, 23s 6d to 24s 6d; and cases of 36½ lbs, 31s 6d to 33s. Crayfish, cases of 96 halves, quoted 85s. Canned fruits: Singapore pines mark fair trading, and market firm. 1½ lb, on spot, quoted 6s 3d; apricots, 8s to 12s; peaches, 8s 6d to 12s; pears, 12s 6d to 14s 6d. Tomatoes remain a quiet sale. Spanish three quoted 65d; Italian, ditto, 7s per dozen tins. Only moderate inquiries were in force for meats, but prices show no essential alteration.

ISINGLASS.—At periodical auctions a fair proportion of the 606 packages found buyers at prices marking a good deal of irregularity. Saigon, good to fine leaf, advanced 1s to 2s per lb; inferior, 3d to 9d; round leaf, 3d to 9d. Brazilian lump declined 3d to 4d, but tongue was firm to a shade dearer. Karachi leaf declined 3d to 6d against last sales, tongue, purse, and bladderpipe being unaltered. West Indian fully supported. Russian withdrawn.

OILS.—Linseed in fair demand, and prices somewhat irregular. Spot, net, naked, quoted 47s; May, 45s 9d; May-August, 43s 3d; September-December, 39s. Rape easier. Crude, spot, 43s 6d; refined, 46s 6d. Cotton quiet. Crude Egyptian, spot, 43s; common edible, 47s; deodorised (in barrels), 49s. China-wood quiet. Hankow, spot (barrels), 130s; May-June, 118s. Coconut quiet. Ceylon, spot, 47s; May-June, 46s; Ceylon, ditto, quoted 48s 9d. Soya quiet. Oriental barrels, May-June, 38s 6d. Japan fish steady. May-June, cases 29s. Cod firm. English, spot, 35s to 36s. Ground-nuts quiet. English, crushed, naked, spot, 47s; deodorised, barrels, 56s. Turpentine dearer. American, spot, 116s 6d; May, 116s 6d; July-December, 82s 9d. Rosin quiet. American, grade B, 13s 6d; F, 13s 9d; G, 13s 9d; H to I, 13s 9d; WG, 17s 6d; WW, 18s 9d. French, F/G, 13s 6d; WW, 15s 6d per cwt. Petroleum steady. American standard, white, spot, 1s 1d; and water white, 1s 2d per gallon. Castor oil firm. First pressure, spot, to August, quoted 56s; second pressure, 55s, and pharmaceutical, 61s per cwt.

OILSEEDS.—Linseed quiet, and prices irregular after a firm opening. Bold Bombay, May-June, £21; small Bombay, ditto, £20 2s 6d; Calcutta, afloat, £21; April-May, sold, £20 12s 6d to £20 7s 6d; and May-June, £20 5s to £20 2s 6d. Plate, afloat, £19 15s; loading, £19 12s 6d; April-May, £19 7s 6d; May-June, £19 5s. Rapeseed easier. Toria, May-June, £17 10s; real bold Ferozepore, May-June, £16 5s; Jamba, May-June, £12 15s. Cottonseed quiet. Egyptian black, June, £12 2s 6d; and white, £11 7s 6d, paid to Hull. Bombay, May-June, £9 17s 6d. Gingelly-seed quiet. Large Bombay, April-May, Continent, sellers, £24 5s. Chinese, ditto, £24 15s to Continent, and £25 15s, Italy. Ground-nuts dull. Coromandel, machine dried, May-June, quoted £22 10s. Chinese deodorated, f.a.q., May-June, £23 7s 6d. Nigerian, ditto, £24. Soya beans steady. Manchurian, May-June, £12. Castorseed quiet. Bombay, May-June, £21 per ton.

METALS.—Tin opened flat, and values showed a decline of £6 6s to £7 per ton on last week's closing rates, the tendency being influenced by lower Eastern advices and pressure to sell. Standard cash sold at £199 and three months at £194 15s and £196 15s. Business in the East was reported on the basis of £206 c.i.f. The down movement was continued, due to lower foreign cables, though buyers showed more interest at the lower rates established. By the middle of the week standard cash sold down to £192 5s and three months £191 10s to £192 7s 6d. Further sales occurred in the East at £200 c.i.f. A firmer tone transpired at Thursday's session, and a good demand ensued. Standard cash sold at £195 15s to £196 10s; three months, £196 10s to £197 15s to £198 10s to £198. On the following day the tendency was firmer. Standard cash sold at £203, and three months at £201 to £202 10s to £201 10s to £202 15s to £202 5s, while later at £202 10s. English ingots £203 to £203 10s. Copper also opened easier on lower American cables and liberal offerings, with slight irregularity noticeable at times. A good business, however, transpired, including standard, cash, at £65, and three months £66 to £65 10s to £66 15s. Values further gave

48 Gracechurch Street, London, E.C.3.

way on continued selling desire and weaker American markets. On Wednesday standard cash, sold at £64 10s, and three months £65 10s to £65 5s and £65 7s 6d. Active and dearer at Thursday's meeting, though rates closed below the best. Standard, cash, sold at £65 15s to £65 7s 6d to £66 7s 6d to £65 17s 6d; three months, £66 10s to £66 5s to £67 5s, while finally registered £66 15s. At the final session the market ruled active and dearer, though prices closed below the top points reached. Standard cash sold at £68 15s to £69, £68 2s 6d, and three months £69 to £69 15s to £68 7s 6d to £68 10s. Electros, £77 to £78. 1st selected, £71 to £73; strong sheets, £104; and wire bars, £78 per ton. Antimony steady. Ordinary brands, £30 to £32. Aluminium firm. Home trade, £115; export, £120. Lead firmer at £26 7s 6d to £25 10s, as to position. Spelter firmer at £31 17s 6d to £31 10s, according to position.

the market was comfortable but suspicious, hinting at manipulation, which was going to deprive it of the benefit, next week, of the War Loan interest. Discount rates were weak, with three months' bank bills at $1\frac{1}{8}$ per cent.

	May 25, 1923.	May 18, 1923.	May 11, 1923.	May 4, 1923.	Previous Rate and Date Changed.
Bank Rate	3	3	3	3	$3\frac{1}{4}$ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	$1\frac{1}{4}$ (Jly. 13, '22)
Discount (Call)	1	1	1	1	$1\frac{1}{4}$ (Jly. 13, '22)
Houses (Notice)	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$ (Jly. 13, '22)
Market rate (3 months' bills) ..	$1\frac{1}{8}$	2	$1\frac{1}{8}$	2	..

The Bank return showed a decrease of £197,000 in the note circulation, a small increase in the stock of gold, and a total increase of £198,000 in the Reserve. The total securities declined by four millions, and likewise the total deposits; Public deposits suffered three-quarters of the loss. Currency notes outstanding were increased by £503,100 to £287,919,300, which includes £1,478,900 for notes called in but not yet cancelled. The fiduciary issue is £238,490,300, or £31,693,500 below the maximum.

THE STOCK MARKETS.

Business in the Stock Exchange, which in any case would probably have been on the quiet side after the Whitsuntide holiday, was further checked by both domestic and international political developments and by the weakness of the Continental exchanges. There has been some talk of forced liquidation. The Consol market has been dull, and the foreign bond market has been particularly affected by movements in the exchanges, but Mexican Government bonds have improved on the official publication of the debt arrangement. Home Rails, though fairly firm, are a little lower on balance. A rise in the price of the raw material helped rubber shares a little, but the improvement was not maintained; oil shares have been weak, following a further drop in Mexican Eagles. In the miscellaneous section, shipping, electric, and gas stocks were exceptionally firmer, but otherwise prices were inclined to slip back. Mining markets have lacked support.

THE COMMODITY MARKETS.

On account of the Whitsuntide holidays there has been very little business in markets during the week. The demand for wheat continues inactive, and quotations are unchanged. Sugar values remain round about the same level. Our Manchester cotton trade correspondent mentions that the market was open only one day of the week, Tuesday, and in consequence business done is of comparatively little importance. Although confidence in wool values remains unabated, there is practically no buying to impart activity to the industry. Our Middlesbrough correspondent reports that there was no iron market this week, while from Sheffield we learn that the resumption of work revealed quieter conditions. Copper has advanced £2 per ton, and tin improved on account of firmer advices from the Straits and America. The Cardiff coal market was officially opened on Wednesday, and though the actual business transacted was small, prices were firm. The demand for hides of all kinds remains as firm as ever, but there have been no Bermondsey sales this week.

FOREIGN EXCHANGES.

The past week has been uneventful in the foreign exchange market, owing to the holidays and the absence of political excitements abroad. The New York rate rose steadily from 4.62 $\frac{1}{2}$ to 4.63 $\frac{1}{2}$ —the quotation on Tuesday—but has since declined to 4.62 $\frac{1}{2}$. The rise was chiefly due to pressure in New York, but there is no suggestion of any sharp movement in either direction at the moment. The forward rate is slightly under 1 cent per month

above spot. On the Continent, the hopelessness of the German situation is well illustrated by the mark rate, which rose steadily during the earlier part of the week, reaching its highest point of 270,000 on Tuesday. A slight improvement, however, took place, and on Friday it stands at 250,000. The forward quotation is 30,000 per month above spot, but very few deals are being carried out. The Paris rate is quiet, but with a tendency to weakness, having risen, with intermediate fluctuations, from 69.25 to 69.90 during the week. Brussels is similarly affected, having moved from 80.35 to 81.25 today. Forward rates on Paris are steady at three times per month above spot, while on Brussels they have narrowed $\frac{1}{2}$ centime to 1.2 centimes below. The Italian rate has reacted again to 96 from 95 $\frac{1}{2}$. Of the neutral exchanges, Amsterdam moved up from 11.81 $\frac{1}{2}$ to 11.83 $\frac{1}{2}$ on Tuesday, but is now steadier again at 11.82. Madrid is slightly stronger at 30.37, while Switzerland has moved from 25.65 to 25.67. Of the Scandinavian exchanges Christiania showed a steady rise from 28.05 to 29.20 while Stockholm moved from 17.32 $\frac{1}{2}$ to 17.35, and Copenhagen from 24.85 to 24.92. Helsingfors is $\frac{1}{2}$ mark weaker at 167. In Central Europe, Vienna and Prague have remained steady at 325,000 and 155 respectively, while Warsaw is practically unchanged at 225,000. The Bucharest rate, however, had fallen steadily from 945 to 835 on Thursday, though a slight reaction to 855 was reported yesterday. Athens, after fluctuating during the week between 235 and 265, now stands at 240, at which rate it was quoted last Friday. In the East, the rupee is slightly lower at 18 4 $\frac{1}{2}$ d, while the yen is a little cheaper at 28 1 $\frac{1}{2}$ d. The silver market has been dull during the week. The Indian demand has been less keen, but inquiries from China for future purchases have helped to maintain the market. Fluctuations in price have only been small and temporary. Hong Kong, after standing at 28 4 $\frac{1}{2}$ d during most of the week, is now at 28 4d, which is $\frac{1}{2}$ d cheaper than the quotation last Friday, while Shanghai is steady at 35 2d. Of the South American exchanges, Rio has fallen from 5 1 $\frac{1}{2}$ d to 5 3 $\frac{1}{2}$ d, and Buenos Aires from 42 $\frac{1}{2}$ d to 42d. Montevideo has remained steady at 42d, but Valparaiso has recovered from 35.50 to 34.90 pesos.

NATIONAL ACCOUNT

The following table shows the national income and expenditure during the week ended May 19th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Land Settlement	507	From Revenue	15,444
Interest on War Debt, &c.	5,509		
Supply Services	6,500		
Increase in Balances	940		
Road Fund	680		
Reduction of Debt	2,708		
	15,444		15,444

Revenue at £15,444,000 compares with £18,100,000 in the corresponding week of 1922. The principal fall was in the item of special receipts, which were down to £5,900, against £2,876,000 a year ago. Income-tax and Super-tax brought in £2,841,000, against £2,068,000 twelve months ago. Customs at £2,180,000 compares with £3,015,000, and Excise at £7,107,000 with £7,025,000. Expenditure was £12,607,000, against £11,265,000 in the corresponding period of last year. Interest on War Debt rose to £5,509,000, compared with £3,184,000 a year ago. Supply Services, which absorbed £6,500,000 last week, were £8,000,000 in the corresponding week of 1922. The week's operations reduced the National Debt by £2,708,200, and caused the following changes:—

	Min. £		Min. £
National War Bonds repaid ..	9850	Treasury Bills	1,275
Public Department Advances ..	390	4% Treasury Bonds	1,907
Sundries	6,490	National Savings Certificates ..	300
			3,782

The floating debt was reduced by £4,275,000 to £780,670,500.

FINANCIAL YEAR, 1923-24 (April 1 to May 19, 1923).

	£		£
Total Expenditure ..	100,868,453	Raised by Revenue ..	118,511,813

THE CHANGE OF GOVERNMENT.

THE retirement of Mr Bonar Law severs yet another and almost the last of the links which connected the Cabinet of to-day with the Governments of the war era. The transition has been effected with despatch and an absence of fuss which has aroused pride in the forms of our smooth working Constitution and admiration for the efficiency and tact with which the King discharges his important functions. Mr Baldwin has been chosen in preference to Lord Curzon on the sound ground that in these days, when real power and the strife of politics is increasingly centred in the Lower House, the Prime Minister should be a House of Commons man. But the choice has commended itself to the country for the added reason that whatever Lord Curzon's claims to the chief office under the Crown may be—and his claims are very great—there is a personal objection to him as head of the State. The fact that, rightly or wrongly, Lord Curzon has come to be regarded as the embodiment of the aristocratic tradition of government is a real objection to a Curzon Premiership, for it would undoubtedly tend to emphasize the class character of the struggle in the political arena. There is a partial truth in this view of politics, but it is far from the whole of the truth. Political differences are the outcome partly of the variations of temperament and outlook to be found in every society and partly of divergent economic interests. Political life is the healthiest where the former predominate.

Mr Baldwin, on the other hand, has been accepted as a representative figure in a much wider sense. A man of insight, culture, and modesty of character, he has struck the imagination of the public by his humanity. Fond of home life rather than ambitious of advancement, his quiet request for the prayers rather than the congratulations of the Press men who met him after leaving Buckingham Palace will have stimulated a sympathetic reflex among serious minded people. Mr Baldwin therefore starts with a substantial credit balance of personal goodwill. The settlement of the American debt and this year's Budget are also substantial grounds for confidence in his

ability and statesmanship. At the same time, the appointment of a comparatively inexperienced Premier is undoubtedly something of an experiment. Nor can the future be very clearly foreseen with a leader whose political views are to the public more a matter of hearsay than of knowledge. Mr Baldwin is believed to be genuinely friendly to the League of Nations; but his appreciation of the importance of Free-trade, not merely as the foundation-stone of Britain's economic life, but also as the only possible basis of closer economic co-operation between the nations is much more open to question. The House of Commons never quite made up its mind how far Mr Baldwin's heart was in the Safeguarding of Industries Act; but, at any rate, his record is that of a convinced Tariff Reformer. Time will, however, rapidly resolve these uncertainties, and we shall have many occasions on which to follow Mr Baldwin's path through the jungle of contemporary history.

In the meantime we take our leave for the moment of Mr Bonar Law, with respect and sincere wishes for restored health. These sentiments are no mere matter of form. The late Prime Minister has long had a very firm hold over the affections of his own party, and there is no feature of his short administration more striking than the rapidity with which he won the esteem of both sections of a high-spirited and critical Opposition. When we come to assess Mr Bonar Law's contribution to the political history of his generation, it is by the qualities of sincerity and of integrity which he has brought into public life that he will be remembered rather than for actual achievement. To some extent this is due to the course of events. But it is doubtful whether his qualities equipped him for creative statesmanship even if the opportunity had befallen him. His public career falls into three periods. From the time when he was elected successor to Mr Balfour as leader of the Conservative party, as a compromise candidate between the rival claims of Mr Austen Chamberlain and Mr Walter Long, until the outbreak of war, his task was that of clogging the progress of Liberal legislation. In the light of subsequent events we may, perhaps, doubt whether he looks back with entire satisfaction on his resistance to progressive taxation, social insurance, and the democratisation of the franchise, or the support of the prerogatives of the House of Lords. Indeed, in connection with the greatest fight of all—Home Rule for Ireland—he observed with characteristic detachment during the debates on the Irish Treaty that "it is quite possible, if we chose to turn our minds back, that if the country had followed Gladstone in 1886 this terrible misfortune, for it is nothing less, would have been cured, at any rate, a generation ago." This first chapter came to an abrupt end when Mr Bonar Law gave Mr Asquith the assurance, on August 1, 1914, that he could rely on the support of the Conservative party in the event of war with Germany.

Mr Bonar Law's war service really starts when he joined the first Coalition Government in May, 1915. During the war years and in the year succeeding the Armistice he carried a heavy burden of administration. In this task his exceptional memory and his quickness in picking up his subject were invaluable. But throughout this period he was overshadowed by certain of his colleagues, and in particular by the more spectacular and imaginative figure of Mr Lloyd George. But, though there is little that stands out in the public mind as his distinctive contribution to Government during the war, he set a notable example to the world of loyal co-operation and an absence of desire for self-advertisement in pursuing the common aim.

Finally, we have, as the last phase, his short Administration. For an appreciable part of that time his health kept him from taking part in debate. He was returned with the object of carrying on for a period a quiet and sound administration, and to save the country as far as possible from excursions and alarms. But fate otherwise ordained. It fell to him to bring to a head our differences with France, three of his Ministers for whom seats had to be found after the General Election were wrecked in the violent storm which arose over housing, and in the last month his Home Secretary has been defeated in the Courts, and has become liable to severe penalties for interning suspected persons without trial. But, after all, we are perhaps doing Mr Bonar Law less than justice, for

he has to his credit the taking of the decisive step which overthrew the late Coalition. By this action he restored our political life to party lines at a time when it was a delusion and a sham to pretend that no differences existed.

The division into political parties is, as we have said, the natural and proper expression of real differences of outlook which must take effect in divergent action if politics are to be honest and sincere. Mr Bonar Law will be known to history as the man who restored party government when the national unity which was required to win the war had become no longer an overriding necessity.

GREAT BRITAIN AND THE EAST.

IN spite of alarms and excursions, the signature of peace at Lausanne still appears more likely than a fresh Græco-Turkish war along the Maritsa. If peace comes we can at length begin to reconstruct our position in the East, and it is already time to take stock of it. It has changed so profoundly during the last eight years that it requires some imagination to think ourselves back into what it was in 1914, on the eve of the European War, or in 1918, on the morrow of the Armistice.

In 1914 it was clearly defined from almost every point of view. Geographically, our Oriental Dependencies were then sheltered on the land side from any serious menace on the part of great military Powers, and were practically defensible by sea-power alone. Egypt was encompassed by desert and water; India was isolated from the rest of Asia by the Himalayas and Afghanistan, more effectively than Italy from Europe by the Alps and Switzerland. Within these well-fenced domains (which coincided with the richest and most populous portions of the Near and Middle East) we ruled partly by a tradition of military prestige; more by the living fact of our administrative and economic efficiency; and most of all by the justice and impartiality with which we conducted ourselves in our dealings. We believed in our moral ascendancy, and we were justified in this belief by the apparent assent of the great majority of the governed. We also believed that this state of affairs, though its origins had been sudden and almost miraculous and it was not yet a century old, was destined to endure for ever. Apparently the "Unchanging East" had been waiting for us since the Creation to take it in hand, and presumably it would remain in our safe keeping until the Day of Judgment, when we should render a gratifying account of our stewardship.

By 1918 the outlines had become less clear—particularly on the map, where the military necessities of the war had drawn us out into the open. Beyond the glaciis of Egypt, General Allenby (holding supreme command over our French and Syrian Allies) was occupying Palestine, Syria, Cilicia, and the passes of the Taurus. Beyond the glaciis of India, the Mesopotamian Expeditionary Force was occupying the plains of Iraq as far as Mosul, feeling its way into the Kurdish mountains, and stretching out a long arm across Persia to the Caspian. A third force—the "Army of the Black Sea"—was assisting the Navy to hold Constantinople and the Straits, and the two wings had joined hands across Trans-Caucasia, where a cordon of British troops was holding the railway between Batum and Baku. In Trans-Caspia another British force, linked by costly lines of communication with India, was warning the Russian Soviet troops off the left bank of the Oxus. And in Cis-Caucasia, the Murman Peninsula and Siberia, British munitions, money and men were being thrown into the scales of the Russian civil war. Geographically, the entire Middle East, including Russia's former holdings there, seemed in process of incorporation into our system, with the exception of one or two French enclaves; and Russia herself, our former rival, had become a carcass disputed by half-a-dozen client or pariah governments. Our Empire seemed expanding over the whole face of Asia, and though the military experts were already shaking their heads at the dispersal of our energies and the indefinite increase in our commitments, the Government and the public (only just relieved from

the fear of Germany) were refusing to take alarm. The financial drain of our new position in the East was still an imperceptible fraction of the gigantic drain of the War; we had become a first-class military power, as well as the chief power on sea; we had demonstrated our efficiency by improvising a victorious resistance to the German attack, by mobilising our economic energies for the struggle, and by carrying on the administration of our vast Empire, meanwhile; and, as for our moral position, had we not been fighting for the liberty of small nations and the cause of international right? Our Oriental dependents, at any rate, had testified both actively and passively to our righteousness. The rebellions *en masse*, which the Germans had expected and incited, had not come to pass. On the contrary, hundreds of thousands of Indian soldiers had volunteered for active service in Iraq and France, and hundreds of thousands of Egyptian labourers for work behind the front in Palestine. The former vassals of Turkey in the Arabian Peninsula had become our Allies; the Nationalists of Iraq, Syria, and Palestine had received us as liberators; the Amir of Afghanistan had stood by his treaty engagements, and a Persian Government was negotiating a treaty with us that was to supersede our agreement with Russia in 1907, and to give us an exclusive position; the Turks, prostrated by a crushing defeat after seven years of war, were asking for nothing better than a British protectorate, and were allowing a handful of British control officers to govern Anatolia; and finally there was the Greek army, trained without being exhausted by its participation in the last phase of the War, which Mr Venizelos was offering to place at our disposal if any part of the Eastern peace settlement needed to be carried through by force. The "Unchanging East" seemed to be watching our new aggrandisement in the same spirit of acquiescence as had made possible the foundation of our rule. This aggrandisement might or might not prove to be good business, but, with Germany and Russia out of the way, we could afford to test that at leisure, and if, on trial, we found our new line uncomfortably "far-flung," we could always (we thought) retire with safety and dignity into our well-tried pre-war frontiers.

By 1923 the position has changed again, and this time almost beyond recognition. The great armies that overthrew Turkey have not only ebbed away from the high water mark of 1918, they have been withdrawn and demobilised. We are almost back to the frontiers of 1914, and our security, even at the vital strategical points of our pre-war position, will now depend not only upon our military power to hold them, but on our success in securing the goodwill of the local governments and peoples. We shall not know how we stand at the Suez Canal until we have made friends with Egypt, or on the North-West frontier till we have made friends with Afghanistan, or in Iraq till we have made friends with Turkey, or in the Persian Gulf till we have pacified our rival clients in Arabia, or in Palestine till we have allayed the mutual suspicions and prejudices of the Arabs and Jews, the Catholic and the orthodox churches. In Persia, the Parliament has refused to ratify the Treaty signed by the ex-Government, and our last troops have left the country. Afghanistan has made war against us, and in recognition we have restored her to complete independence. Russia has again become a united and therefore a great Power; her troops have replaced ours in Trans-Caspia and Trans-Caucasia; our old competition with her for supremacy in the East has started again, and our relative positions during the last phase have (at least temporarily) inclined the sympathies of the Oriental world to her side. Her greatest triumph, and our greatest blow, has been the resuscitation of Turkey and her army. Instead of British officers controlling the Turkish forces in the interior of Asia Minor, the Turks themselves are now threatening the British garrisons in Iraq and at Constantinople; while the intervention of Mr Venizelos's army, which Mr Lloyd George duly brought into action, has merely stimulated Turkish nationalism, and made its triumph more complete. Worst of all, the outbreaks in Egypt and India, which Germany expected to contribute towards her victory, have occurred illogically after her defeat, with consequences hardly the less serious to the British Empire than if they had come upon us during the war.

Our most serious losses of all, however, cannot be stated in terms of territory or military power. They affect our moral standing, on which our whole position ultimately depends, and unhappily they are extensive. The Turks who have lived under our military occupation at Constantinople, or in our places of internment at Malta, have ceased to believe in our justice, incorruptibility or *savoir faire*; the Egyptians think us cheats for having tried to slip their country into our Imperial pocket after the string of protestations that we made between 1882 and the war, and hypocrites for maintaining martial law after conceding them independence in name; the Indians consider that we have broken faith with their soldiers who fought for us by failing to abide by declarations regarding the future of Turkey and the Holy Places, which we published during the war; King Hussein of the Hejaz and the Nationalists of Iraq, Palestine, and Syria deny that we have kept the pledges concerning Arab independence, which we gave them between 1916 and the Armistice; the Zionists quarrel with our interpretation of the Balfour Declaration, and the Cypriots with our interpretation of the rights of small nations. The Armenians are not grateful to us for extracting "propaganda value" out of their corpses during the war, and leaving them after the Armistice without even six feet of earth to rest in. The Greeks are sorry that they made themselves our pawns. It remains for us to disillusion the Assyro-Chaldeans, which we shall probably achieve in the process of settling the problem of Mosul.

Can we recover our moral prestige in the East? Our future there depends on the answer to this question, and though the present position is discouraging, it is certainly not irretrievable if we set about reconstructing it in the right way. In the first place, we have to realise that the East, which never has been unchanging when studied with the microscope, is now in a revolutionary state of transformation, which ought to be plain to the dullest eye. Secondly, we have to understand this state of mind, and the direction in which it is tending. And then, thirdly, we have to adapt our position to these realities, instead of continuing obstinately to orient ourselves by an imaginary picture of the past. The developments that have now broken through to the surface were, in fact, preparing themselves underground in the period before 1914, though we chose to ignore the symptoms. They have been greatly accelerated by the war, and most of the troubles that have happened to us after the war are legacies from it. In these critical circumstances we have yielded to the lassitude which is the inevitable reaction after abnormal exertions, and have displayed special indifference towards our Eastern interests at a time when they needed our special attention. Here is the point of departure for our new policy; for, whatever this is to be, we cannot begin to carry it out till we get into mental touch with the Oriental peoples whose destinies are bound up with our own.

JUVENILE UNEMPLOYMENT.

(BY A LABOUR CORRESPONDENT.)

THE announcement that the juvenile unemployment centres now in existence may shortly be compelled to close their doors draws attention to an important industrial problem which has been too long neglected. It does not appear to be realised that juvenile unemployment is a problem of some gravity. Even in normal times there is a good deal of unemployment amongst young people, and during a trade depression it becomes very considerable.

About 600,000 young people leave school every year, the vast majority of them to seek wage-earning employment. In a time of normal trade they are absorbed into industry and commerce with relatively little difficulty. But in a time of slump the demand for labour shrinks, and as the supply in the market is, in effect, constant there is a surplus. The entry of young, immature, and inexperienced workers into the labour market in these circumstances intensifies the problem. Either the new entrants get jobs or they do not. If they fail to get a job, they swell the army of the unemployed. If they succeed in getting jobs, then,

in general, it will be at the expense of others, and therefore, indirectly, each new juvenile who finds work adds to the volume of unemployment. It is not suggested that inexperienced boys take men's jobs. What, in fact, happens is that the cheaper, though less experienced, juvenile of fourteen may get a situation by ousting from it a youth of fifteen or sixteen, or securing it in competition with an older person already in the labour market. Young persons with some experience may, in their turn, maintain a foothold in the economic system by directly or indirectly displacing persons of eighteen or nineteen, who may drive out of jobs, or keep out of jobs, adult workers. This process, of course, is not put into operation by every lad or girl who has just left school; but it undoubtedly takes place in scores of thousands of cases. It is, indeed, inevitable that unemployment should be intensified during a period of diminished demand for labour if the supply of labour is automatically and regularly increased.

Now, suppose that the entry of boys and girls into the labour market were in some way barred during a period of trade depression. Several results would follow. In the first place, the dislocation and waste resulting from changes of jobs as younger and cheaper workers displaced those who are older would be avoided. Secondly, the volume of unemployment amongst youths, men, and women would be diminished and a large amount of loss of skill and a considerable amount of deterioration would be avoided. Thirdly, the State Insurance Fund would not be drained to the same degree by payments of unemployment benefit to workers and additional benefit to their dependents. Finally, the young persons who had been kept out of industry, provided adequate arrangements for their care had been made, would not have been subject to the demoralisation of periods of unemployment.

The only way in which a dam could be placed across the stream of new competitors for employment would be by legislation prohibiting boys and girls from leaving school when the volume of unemployment was abnormal—except, perhaps, in exceptional cases. Had this course been followed, probably nearly a million and a-half, and certainly over a million, juveniles could have been kept out of the labour market during the present trade depression. It can hardly be denied that the effect of this on the unemployment situation would have been appreciable. As these juveniles are the least valuable workers, their services might well be dispensed with during periods of unemployment, more especially as such a period is hardly an opportune time for immature youths to embark on wage-earning employment. There should be a large measure of agreement for legislation which would require all boys and girls to continue some form of full-time school attendance when there is more than, say, 5 per cent. of unemployment.

We have not, however, chosen to follow this course. Nor have we made provision against juvenile unemployment through the National Insurance scheme. Between the ages of fourteen and sixteen workers are excluded from the operation of the Unemployment Insurance Acts. At the latter age, if they are employed in industries and callings which are within the scope of the scheme, they become insured; but only 10 per cent. of the boys and girls between 16 and 18 years of age are qualified to receive benefit in the event of unemployment. It will be seen, therefore, that only a fraction of the workers under 18 receive unemployment benefit. Yet, so far as can be ascertained, the percentage of unemployment amongst juveniles is fully as high as the general percentage for all ages. Our unemployment records are incomplete, but more especially so as regards juveniles. It has been estimated that there were in January between 200,000 and 300,000 unemployed juveniles. This, however, is probably a conservative estimate, and the true figure in all likelihood exceeds 300,000. Of this number but a relatively small proportion are in receipt of unemployment benefit.

The only other way in which an attempt has been made to cope with juvenile unemployment is through the establishment of centres of an educational and recreational character. At the end of the war, when serious industrial dislocation and unemployment were

anticipated, in consequence of the cessation of war work, the Government, as part of its policy, provided the entire cost of juvenile unemployment centres for young people out of work. When, however, less generous provision was made by the State, most of the centres were closed, though in the meantime the general industrial situation had improved. It was not until the end of last year that an attempt was made to re-establish unemployment centres. The present Government shortly after it assumed office decided to make a grant, through the Ministry of Labour, equivalent to 15 per cent. of the cost of approved centres, the remainder of the expenditure falling upon the local education authorities. It was some time before the policy could be put into operation. The Ministry of Labour asked that schemes should be submitted by February 1st of this year. By February 21st 67 local authorities had submitted schemes, and of these 42 had been approved. The average total attendances at juvenile centres during March were 7,980, and there were 70 centres in action. The attendance during the week ended May 2nd—the latest date available—was 8,610 at 89 centres.

Unfortunately, instead of extending these centres and making attendance obligatory, there is a fear that the existing centres may come to an untimely end. The centres were recognised for three months ending May 31st. The period has, however, been extended to June 30th, and in the case of centres more recently established to July 21st. Then, unless there is a change of policy, no more money will be forthcoming from State funds, and the centres will therefore collapse.

It is a great misfortune that there has never been a coherent and comprehensive policy for dealing with the problem of juvenile unemployment. It is improbable that such a policy will be formulated and put into operation during the present period of unemployment. But the lessons of the last two years are obvious. Whether the question be regarded from the industrial point of view or from the wider national point of view, unemployment amongst juveniles is too serious a problem to be neglected. Any expenditure of public money which would be incurred by a constructive policy would offset a good deal of the present expenditure on unemployment benefit, whilst the effect on the juveniles themselves, though incommensurable, would be substantial from both the social and economic points of view.

OIL.—III.—THE TREND OF DEMAND.

CONSIDERING broadly the world's fuel consumption, it is foolish to describe the present as "the oil age." Even reckoning that four barrels of oil are the heat equivalent of one ton of coal, the world's present output of oil could not replace more than 11 per cent. of the quantity of coal consumed. It is estimated that to substitute fuel oil for the coal consumed annually in the United States alone would require an annual crude oil production in that country of over 3 billion barrels, as against the present production of something over half a billion barrels. The "oil age" is still upon us. Indeed, while a continuance of the progressive output of oil may be conditional, as we have suggested, only upon the progressive drilling of new wells, a continuance of the rate of increase in the consumption of oil (12.3 per cent. per annum since 1913 in America) is conditional upon many variable factors. It is only certain that the crude oil commodity in the future will be more economically and efficiently utilised, and that to some extent increases in the demand for oil products will be met without proportionately increasing the crude oil production. It is therefore possible to argue, as much from consideration of the trend of the world's oil consumption as from consideration of the world's oil resources, that supply should continue to meet demand.

Let us begin by analysing the past and present demand for oil in some detail. In the United States, where more than half the world's oil is consumed, the position may be summarised thus:—

PRINCIPAL OIL PRODUCTS PRODUCED FROM CRUDE OIL RUN TO STILL IN THE UNITED STATES IN APPROXIMATE QUANTITIES AND PERCENTAGES.

	(Millions of Gallons.)				
	Crude Oil.	Gasoline.	Kerosene.	Lub. Oil.	Gas and Fuel Oil.
1899—Run to stills	2,180	281	1,259	170	305
Percentages	..	13	58	8	14
1904—Run to stills	2,810	291	1,357	315	360
Percentages	..	10	48	10	13
1909—Run to stills	5,070	540	1,675	537	1,702
Percentages	..	10	33	10	34
1914—Run to stills	8,040	1,500	1,935	517	3,734
Percentages	..	18	24	6	46
1919—Run to stills	15,200	3,958	2,342	847	7,627
Percentages	..	26	15	6	50
1922—Run to stills	21,029	6,202	2,306	978	10,706
Percentages	..	19	11	5	50

The remarkable shifting of demand from one oil product to another illustrates the revolution which, as we have mentioned, the oil industry happily suffered at the hands of the automotive industry. The demand for kerosene, which required 58 per cent. of the total quantity of crude oil refined in 1899, has so decreased, with the competition of gas, electricity, and other forms of lighting, that it is now satisfied by only 11 per cent. of the present total. It will be observed that 69 per cent. of the total quantity of crude oil refined last year was required by the demand for oil as a power-producer—19 per cent. as gasoline for the motor engine and 50 per cent. as fuel oil, either for steam raising or for the Diesel type of engine. Indeed, with the new use for kerosene in the internal combustion engines of the farm tractor, the fishing vessel, and the like, together with the increasing use of gasoline for road and air transport, a still greater percentage of the crude oil supply will be utilised in the production of power. This is the consideration that has caused the oil business man to declare, whenever there is a boom in trade, that the demand for oil will go ahead too fast for production. To appreciate the unwisdom of this view, let us examine the demand for fuel oil and gasoline more closely.

The bulk of the fuel oil produced is required for burning under boilers for raising steam. It is not an exaggeration to say that this consumption of fuel oil under boilers is, except in certain industries, a passing economic phase. Fuel oil burning will disappear generally as soon as the use of heavy oils in the Diesel type of internal combustion engine becomes widespread enough to raise the price of fuel oil above its economic ratio to the price of coal—which is about 8:14. Up to the present time furnace oil has been able to compete with coal in the matter of price for two reasons—first, because the economic focus of the complete oil refinery is the production of gasoline, which leaves a fuel oil residue that the refiner can afford to sell cheaply (the gasoline accounting for 44.5 per cent. of the total return on the refining process); and, secondly, because in the era of flush production there are producers anxious to dispose of their heavy crude oil output as rapidly as possible, that is, by taking off the light distillates ("topping"), and disposing of the remainder as fuel oil. Even so, fuel oil very often fails to compete economically with coal. For instance, in England it has been plainly demonstrated that it needs a prolonged coal strike to turn industrial consumers to fuel oil. Even in America the consumption of fuel oil industrially is small in comparison with that of coal, except west of the Rockies, and is chiefly centred in the metallurgical industries, where oil burning serves a distinct and unique purpose. It must be remembered that economy in handling is possible even with solid coal. There are large electric power stations in America which handle their coal fuel entirely by machinery from the moment it leaves the mines, unloading it at the rate of eight tons a minute, and feeding it to the boilers on moving belts and automatic grates. The following statistics of the consumption of fuels in America in the production of electricity from 1919 to 1922 are instructive:—

FIGURES OF U.S. GEOLOGICAL SURVEY.

Fuel Consumed in Production of Electricity	1919.	1920.	1921.	1922.
Coal, tons	35,100,000	37,124,000	31,585,000	34,176,000
Oil, tons	1,674,000	1,988,000	1,823,000	1,999,700
Gas, 100 cubic feet	21,406,000	24,724,000	23,722,000	27,172,000

There are, of course, in some directions peculiar advantages in oil-burning as against coal—as, for instance, in ships, which can bunker more quickly with oil and save valuable cargo space, and particularly in the large passenger ships, which can secure extra voyages in the year and greatly reduce operating expenses, or in the palatial hotels and stores, or in food factories, which have as much regard for the cost of cleanliness as for the cost of heat units. But for the rest the price is the governing factor. Even in the British merchant marine the demand for fuel oil falls flat whenever the price exceeds, roughly, twice that of coal.

In any case, both fuel oil and coal burning are forms of economic waste. In average practice the steam engine utilises less than 10 per cent. of the heat in oil or coal, while the internal combustion engine makes use of over 30 per cent. With Diesel engines a ship can obtain the same power, or the same range, on one-third the quantity of the fuel which would be required for oil-fired furnaces. The important fact to seize is that heavy oil or fuel oil can be, and has been, used in the Diesel engine, although "Diesel oil" is presently required to be much lighter than "fuel oil" for the type of engine in vogue. In the merchant marine the number of Diesel-engined vessels is increasing steadily. There is no doubt that the internal combustion engine using heavy oil is the power unit of the future. The fact that the number of oil-burning vessels appears to be multiplying more rapidly than the number of Diesel-engined vessels means nothing, seeing that the oil-fired furnace can be, and is, converted back without much trouble to coal-burning whenever the relative prices of fuel oil and coal demand it. If, then, the demand for power units, either by the merchant marine or by the industrial plant, is to be met more economically by the consumption of heavy oil in the internal combustion engine than by burning it under boilers, one will readily appreciate how vastly that affects the ratio of oil supply to demand. One-third the quantity of heavy oil would serve the same power-purpose.

If we examine the demand for that other power-producing product of the crude oil—namely, gasoline—we find the same tendency for supply to go further; that is, to be utilised more economically. In this case it comes about through progress in the science of oil refining. The increasing demands for gasoline have been met, for example, without proportionately increasing the production of the crude oil. In other words, the production of natural gasoline (called "straight-run") in the refining process has been supplemented by a growing volume of "casing-head" gasoline and "cracked" gasoline, which are generally blended together. "Casing-head" is the highly volatile gasoline recovered from natural gas, while "cracked" gasoline is manufactured from the heavy oil fractions (fuel-oil) by processes of "cracking" distillation, whereby the heavy hydro-carbons are decomposed or "cracked" into lighter, more volatile, components. This supplementary production now accounts for about 20 per cent. of the total gasoline supply in America. At the same time, another supplement to supply has been increasingly utilised—that is, the inclusion of the lighter ends of kerosene, which has the effect of raising the "end point" of the gasoline product; in other words, of lowering its volatility—to the annoyance, hitherto, of the motor-engineer and driver. By this latter means about 15 per cent. of the total commercial supply in the United States is accounted for. In this direction far-reaching changes are developing.

Progress in oil technology is being made in other ways—to the same end of conservation of supply. Sir John Cadman has said: "I believe that before any danger arises of a world shortage of petrol, science will have perfected a method of hydrogenation to supersede the relatively wasteful and unsatisfactory 'cracking' processes. By this means the abundant supplies of kerosene, gas and fuel oils could be built up into petrol, and an immense addition made thereby to the quantity available." As a matter of fact, two inventors already claim to have solved the problem of hydrogenation—Dvorkovitz and Bergius—and Sir John Cadman must have been aware of the latter's invention when he made that prophecy. In the hydrogenation of coal cannot yet be said to be a commercial success has been applied on a semi-commercial scale to the

hydrogenation of heavy oils by a German company near Mannheim, whose plant is said to be capable of treating 50 tons of heavy oil per day. Mexican crude oil and German shale and lignite oils have there been successfully converted into oil products of low-boiling points. The importance of this invention can hardly be over-estimated.

Clearly, the theory of an impending oil famine cannot be predicated on the basis of the past consumption for oil products. The trend of demand is towards a much fuller utilisation of supply.

INDIAN GOLD MINING RESULTS.

(BY OUR MINING CORRESPONDENT.)

IN reviewing the results for 1921 of the group of gold mining companies operating in the Kolar field, India, we laid stress upon the significance for the then current year of the sharp decline in the gold premium. The reports for 1922, now all in the hands of the shareholders, make special reference to the difference in the price received—about 8s per ounce, although the whole of the gold was sold in India as a better market prevailed there, while shipping and insurance charges were saved. Moreover, nearly all the companies were under the necessity of using lower-grade ore than before. The outcome of these conditions in combination is a fairly substantial falling off in the profits, despite a distinct economy in costs. In several cases the market quotation of the shares now stands appreciably below what it did twelve months ago. Appended is a summary of the results for the past two years of a quartette of the companies:—

BALAGHAT.	1921.	1922.
Tons of ore milled	38,750	42,550
Mill yield per ton	12	11½
Working profit	36,530	36,340
Dividends	20,280	18,920
Rate per (ordinary) share	1/3	1/
Carried forward	4,820	4,160
Ore reserve tonnage	80,290	116,140
MYSORE.		
Tons of ore milled	202,290	218,080
Mill yield per ton	8½	8
Working profit	207,800	186,720
Dividends	152,500	122,000
Rate per share	2/6	2/
Carried forward	17,540	17,030
Ore reserve tonnage	837,000	712,000
NUNDYDROOG.		
Tons of ore milled	105,680	115,090
Mill yield per ton	10½	9½
Working profit	105,420	68,320
Dividends	42,400	28,300
Rate per share	1/6	1/
Carried forward	16,720	8,850
Ore reserve tonnage	175,200	191,300
OOREGUM.		
Tons of ore milled	154,000	155,000
Mill yield per ton	11½	11½
Working profit	246,400	205,080
Dividends	93,170	84,150
Rate per (ordinary) share	2/3	2/
Carried forward	17,180	16,340
Ore reserve tonnage	419,240	420,770

* Subject to corporation profits tax and directors' percentage.

On the whole, the best showing is made by the first company scheduled—the Balaghat. The profits were practically maintained at the previous year's level, although a small cut was made in the dividend; the ore reserves score a substantial increase, now representing nearly three years' supply. The saving in costs amounted to as much as 7s 4d per ton. A curious point comes to light in connection with the milling results of the Mysore. The 1921 report mentions separately the yield from the mill and from the residues, the former being 8.4 dwts. The 1922 report states that the average assay value of the ore milled was 10 dwts 3½ grs, and that the extraction equalled 98.15 per cent. Yet the crushing of a somewhat increased quantity of ore gave only 74,530 ounces as against 84,700 ounces previously. It will be noticed that the ore reserves show a fairly substantial decrease; the tonnage at the end of 1922 represents rather over three years' supply for the mill. With both the Nundydroog and Ooregum companies—especially the latter—a large proportion of the 1922 earnings was swallowed up by capital expenditure. Mainly with a view to improving

the ventilation the management of the Ooregum is temporarily suspending development at depth and concentrating upon shaft sinking. An interesting point is that a level from this property, extended into the Nundydroog 1,130 feet below the deepest workings of the latter, showed a fair run of payable ore. The Nundydroog last year opened up rather more ore than it milled.

The report of the Champion Reef is the first to cover the twelve months ended December 31st, the financial year having lately been altered so as to correspond with that of the other companies in the group. The results shown are far from exhilarating. Economy in costs did not go far towards compensating for the decline in the gold premium, the net profit coming out at barely £11,000. The financial position is strong, the net cash assets considerably exceeding the present market price of the shares. But, of course, the funds are not available for distribution—and may, indeed, be expended without adequate results in the way of ore supplies. For several reasons development was restricted last year, and the ore reserves show a decrease. In view of this, the tonnage of ore crushed monthly is to be curtailed by about one-quarter.

Appended is a comparison of market prices a year ago and now, and the return to the investor on the basis of the 1922 dividends:—

	Price of 10s Share.		Yield
	May, 1922.	May, 1923.	per Cent.
Balaghat Pref.	13/-	13/-	15
Do Ordinary.....	8/-	8/-	12½
Mysore	12/6	10/-	20
Nundydroog	9/-	8/6	12
Ooregum Pref.	22/-	20/-	15
Do Ordinary.....	14/6	13/-	15½

It will be seen that there are considerable variations and some anomalies.

LEAD MARKET PROSPECTS.

(FROM A CORRESPONDENT.)

IT was very striking during the recent rapid decline in values relating to the non-ferrous group of metals that pig-lead not only held its position but actually hardened a little, although dealings were small and largely confined to professional operators. This in the face of increasing supplies speaks well for the way the market and the course of prices are controlled, but users not only in this country but abroad as well are not inclined to pay much attention to this show of strength, and look for a lower level in selling rates during the next few months. The dispersal of the war surplus and the shrinkage in the world's lead production from 1918 onwards did much to aid manipulation, but a close analysis of the present position suggests that the figures now current are much too high, and that as time goes on the law of supply and demand will operate without hindrance in fixing world selling rates. London prices are usually below American parity, but it cannot be claimed that the market here is altogether free, and users all over the country greatly resent this price manipulation, which they claim is very detrimental to the manufacturing trade of Great Britain. As an instance of this it may be stated that foreign lead sheets and pipes are obtainable at several pounds per ton below home prices, and lead rollers and corrodors are thus under a very severe handicap in competing for overseas business. They claim that it is absolutely essential that they should have at their command ample supplies of raw material at competitive prices, and there is a lot of feeling among consumers at the way ordinary users are deliberately kept short of supplies, and in many cases forced to pay a premium of 10s to 20s per ton for spot or prompt metal.

Before the war, as is well known, the lead market was more or less under German control. The Lead Convention had full power, and prices were manipulated with impunity. Germany owned the lead mines in Upper Silesia, had large interests in the lead mines of Spain and other countries, and as prime producers of metallic ores

in all parts of the world, including Australia, Mexico, China, &c., it was comparatively easy for the Convention to manipulate the market and fix values as they pleased. Lead manufacturers and other consumers in this country did not like the arrangement at all, but they were compelled to pay what was asked. It was the aim of the Germans as prime producers to secure high prices for all lead marketed, and, generally speaking, an increase in world production did not lead to any fall in values. Thus while the world's production of lead increased from 1,092,000 metric tons in 1909 to 1,186,700 tons in 1913, the London selling price rose from an average in 1910 of £12 19s 1d to £17 15s 10d in 1912 and £18 10s 4d in 1913. In 1912 and 1913 the world's lead output rose to the very highest, but the imports into the United Kingdom dropped to 205,000 tons, and from this it is obvious that the markets were under very close control. The average London selling price of lead from 1903 to 1912 was £14 10s per ton, and this while the market was under German control, but the average for the ten years from 1913 to 1922 was no less than £26 19s 6d. Allowance must be made for the fact that in 1920 lead was phenomenally high with a range from £52 7s 6d down to £21 10s, but nevertheless it is a striking fact that the average price of lead last year was kept within a few shillings per ton of the average for the period from 1916 to 1919, and this certainly needs some explanation. The world's production of lead, which in 1913 amounted to 1,186,700 tons, stood at 1,312,552 tons in 1918 and then began to fall away rather rapidly, the output for 1921 amounting to 941,119 tons. This comparatively small production no doubt laid the markets open to manipulative tactics, and it is an undoubted fact that while the stocks of lead in the warehouses in the United Kingdom since the end of 1921 have never once exceeded 700 tons, the imports into the country have been on a full scale, running for the first four months of this year to 15,000 tons per month, against a similar tonnage for the same period of 1922. Thus it seems pretty certain that there must be secret stocks held somewhere. That they are rigidly controlled is proved by the backwardation of 15s to 20s per ton and the shortness of prompt lead. Not so long ago it was freely stated that lead, that is to say, of course, soft foreign pig-lead, was going to fall to under £23 per ton, and buyers have been making their purchases and covering their future commitments accordingly. When values were on the up-grade, they refused to believe in the higher level, and the rise to £29 15s in March last created a very suspicious feeling, which is still in evidence. In the second week in May London values dropped to about £24 for a brief period, but there has since been a steady upward movement again, and this, in the face of the apathetic trade demand, is certainly a very striking factor in the situation. There was a lot of bear selling when the market looked like falling, and naturally the subsequent rise induced some covering, but, all the same, the metal keeps on arriving in excess of trade requirements; thus it cannot be said that the present level of prices represents the exact value of lead, and it remains to be seen how long holders can maintain their position if consumers hold back.

Everything points to an increase in supplies over the remainder of the year, this remark applying to Spain, Australia, and South Africa, but more particularly to Mexico. The latter country is reported to be producing lead at the rate of 16,000 tons per month just now, and it is perfectly obvious that if a Mexican lead output of something like 200,000 tons per annum has to be reckoned with world values of the metal will be influenced very considerably. The Mexican production in the year 1912 was about 120,000 tons, and in 1913 there was a fall to 70,000 tons. From 1914 to 1917 the output ranged from 22,000 to 50,000 tons, as near as can be gathered, but in 1918, helped by the high selling prices, the production jumped up to close on 100,000 tons. Thus, if Mexico is about to produce lead even in excess of its normal pre-war output, the world value of the metal is bound to be influenced. Most of the Mexican lead is shipped to the United States and refined in bond, and usually re-exported to Europe. The lead production in the United States is also steadily expanding again, and while the demand for the metal for American domestic use is good at the rate of 500,000 tons per annum, it is not likely to exceed this.

Thus, with an American lead production from domestic ores of fully 475,000 for all this year, there would be a full supply available for export, and this must be taken into account in seeking to gauge the future course of the market. In 1913 Spain was producing lead at the rate of about 200,000 tons per annum. In 1921 the output had fallen to about 115,000 tons, but it is quite likely that there will be an improvement this year, as the labour position is somewhat more satisfactory, and the high rates recorded last year did much to stimulate mining enterprise. The Australian production, which in 1918 was over 150,000 tons, has been seriously disturbed by labour difficulties, and in 1920 the output was very small, but here again the position has improved, and a better production has to be reckoned with. The African and Burma lead outputs will also make a good showing this year if expectations are realised, and this, in the face of a very limited trade outlet for supplies in this country and throughout Europe, must inevitably influence the trend of prices. The lead production of the whole world has been increasing during the last year or so at a very rapid rate, and had it not been for the exceptionally heavy trade demand in the United States during recent months, a fall could not have been held back. The cost of producing lead is still very high compared with pre-war figures, but this is now falling, and it certainly would be surprising if selling rates could be maintained at present level if the production keeps up. Lead buyers in all parts of the country are taking as little as possible; thus, very narrow markets, apart from mere speculative transactions and kindred operations, must continue for some time to come until it is seen how the position is going to turn. Well-informed opinion favours the view that there must be a downward adjustment in world lead values during the next few months unless industrial conditions change very suddenly for the better, and this would certainly do much to help various trades. The cable makers are fairly busy, but makers of lead sheets, pipes, and the usual compounds are faced with very serious competition, and thus the matter of securing ample supplies of raw material at reasonable rates is now of immense importance to them. The world lead production is not likely to expand to the 1913 level of 1,186,700 metric tons yet awhile, but it is moving that way, and with consumption everywhere feeble, the outlook cannot be regarded with any degree of confidence. Statistically the metal is fairly healthy, but the accumulation of supplies cannot be disregarded, and producers would be well advised to consider their attitude to users very carefully, as something akin to a "buyers' strike" in lead is developing, and this, if allowed to go on, would be detrimental to the whole industry.

STOCK EXCHANGE REFLECTIONS.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THE Stock Exchange has just celebrated its 122nd birthday, the foundation-stone of the present building having been laid in 1801. The stone itself was discovered about 40 years ago during some alterations that were being made to the strong-room. It contains a plate with suitable inscription, praying that the blessing of the constitution may be preserved to the latest posterity. This constitution, in its essential details, has been handed down to the present day. Various modifications have occurred from time to time, but mostly of a minor character. The Stock Exchange continues to be governed by managers as representing proprietors, and by a committee on behalf of members as such, in the same way as was the case over a hundred years ago. The main criticisms directed against the House at the present time are invariably aimed at what is termed the archaic nature of its legislation, and the fine flavour of antiquity which hangs about its rules. Those rules themselves are founded upon the original set that were drawn up by the men who formed the first Stock Exchange, and who banded themselves together for the conduct of public business in stocks and shares. At that day they were under the yoke of the Lord Mayor and Corporation, nor were they able to shake this off

until the Brokers' Relief Act came into force in September, 1886. The term licensed broker, or sworn broker, is still seen on the old-fashioned Stock Exchange lists, which, by the way, contain information as to the prices of grain and other produce, of the numbers of births and deaths, the fluctuations in coal prices, and similar information which is lacking from the existing publication. There can be no doubt that a thorough revision of the Stock Exchange rules would be of sensible advantage to the House and to the public. Some of the rules may be read as contradictory; others are couched in language which baffles even the wit of experienced members to understand. In matters relating to Stock Exchange business, the plainer and the more definite the language in which rules and regulations are laid down, the better for everyone concerned. To undertake a re-casting of the rules would be admittedly a heavy task, and would require a judicious mixture of Stock Exchange and legal knowledge that might be difficult to find now, or at any other time. Nevertheless, the task would seem to be one that is worth attempting, for unless the House keeps abreast of modern tendencies, the competition which unceasingly threatens it will eat, little by little, into the business which hitherto has been regarded as practically its own. In the matter of making prices, for instance, the Stock Exchange is claimed by its members to have an instinct which has been cultivated by over a century of dealing in this manner and which is not to be found in any other Stock Exchange in the world, provincial, foreign, colonial, or American.

Although much has been done of late years, especially during the past quarter of a century, to popularise markets—the movement having come about partly automatically, partly by reason of the war, and partly by enterprise on the part of its members—a great deal of mystery and misunderstanding continues to drape Stock Exchange affairs in the eyes of the public. To remove this obscurity, a more modern rendering of the rules would contribute in no small degree. It may also be questioned whether the House is well advised to maintain some of its older traditions. No doubt the average member would regard with horror the suggestion that hammering should be abandoned, and some less dramatic manner found for announcing defaults in the Stock Exchange, but it is a fact that the fall of the hammer acts as a bad advertisement for the House, drawing attention to weakness which is bound to occur every now and then as a result of clients' defaults or other reasons. Markets have been a good deal upset during the past few business days by what is described as forced liquidation, and, while it would be as impossible as undesirable to take any steps to prevent this state of affairs from being reflected in the newspapers, the mild sensation produced by any possible hammering is of very doubtful value to the House at large. By painfully slow degrees the day approaches when the clash of interests between the proprietors of Stock Exchange shares and of members *qua* members will no longer be felt, owing to the operation of the rule which insists that new members shall acquire shares. It is easy enough to cry over the modernisation of an institution like the Stock Exchange, which has lasted for so long, and whose Official List can be traced back, in the Stock Exchange Reading Room, to the year 1697. Tradition and precedent make a formidable pair of opponents to those who would lay revolutionary hands upon Stock Exchange rules, customs, and usages, and it is worth remembering that the Royal Commission appointed in the year 1877 to look into the affairs of the Stock Exchange offered very few suggestions that might be called novel, and none, in fact, that were actually accepted. That, however, was 45 years ago. There is no avoiding the fact that the Stock Exchange and its clients would be well served if a start were to be made in the direction of removing some of the venerable excrescences which have fastened upon House business, and that these should be replaced by conditions more in keeping with the interests and the spirit of the times.

Notes of the Week.

The Soviet Reply.—We cannot agree with those who profess to regard the Soviet Note handed to Lord Curzon by Mr Krassin on Wednesday as meriting nothing better than contemptuous rejection. No reasonable person looks for complete and grovelling surrender in a document of this kind, and we are disposed, on the whole, to regard the Note as surprisingly conciliatory. A convention is offered giving rights of fishing outside the three-mile limit, pending the definite settlement of the question internationally—which is precisely the attitude taken by the Czarist Government before the war. Compensation is offered for cases where trawlers have been interfered with, and also for the execution of Mr Davison and the arrest of Mrs Stan Harding. This is a very practical form of *amende*, and we do not think the British interests really require that we should push matters to the point of rupture, and demand that Russia should make an obviously insincere declaration repudiating the validity of their action in these cases. The two truculent letters of Mr Weinstein are withdrawn. As regards the charges of anti-British propaganda, the Soviet offers to have the whole question investigated by delegates of the two countries. Further than that one could hardly expect the Russian Government to go. That they have gone so far is a surprise due, apparently, to the fact that a high value is attached to the Anglo-Russian trade agreement, and a serious view taken of the consequences of a breach. The change of Government in this country has delayed the British reply. That is all to the good, for, given a few days for calm reflection, we do not see how Mr Baldwin and his Cabinet can do otherwise than treat the Note as opening the door to continued diplomatic discussion of outstanding differences.

Hungarian Reparations.—On Wednesday last the British-Italian plan of suspending the liens on certain revenues held in respect of Reparation payments, in order to enable Hungary to raise foreign loans, was rejected by the Reparation Commission on the casting vote of its chairman—the French delegate. The suspension of these liens was regarded in British and Italian circles as a necessary preliminary to the establishment of a general system of supervision by the League on the Austrian model. The decision actually arrived at by the Reparation Commission, however, admitted the desirability of a concession on the question of liens, but "only in certain cases, and for definite loan schemes which the Hungarian Government might submit for the approval of the Reparation Commission, a fixed part of which would be assigned to Reparations." Even this "concession," however, carried with it the proviso "that the necessary guarantees and facilities for supervision must be given, so that the Commission may be assured that the portion of the loans left at the disposal of the Hungarian Government shall be applied exclusively to the financial restoration of Hungary with a view to putting that country in a position to meet her Reparation obligations." It would appear, at first sight, improbable that an international loan could be floated under such conditions, though the question of Hungary's capacity to pay Reparations certainly needs fuller exploration. With this end in view the Reparation Commission decided to send a mission to Hungary "to examine the financial and economic constitution of the country." The fundamental economic conditions of Hungary are by no means so unbalanced, nor is the country saddled with so large a redundant population as Austria, and the restoring of a stable economic régime may well take a somewhat different form. The real problem in Hungary appears to be political rather than economic. The intentions of the present Government we believe to be sincere, but more influential are organisations such as the Society of Awakening Magyars, whose lack of responsibility certainly does not make for moderation. From the financial point of view, the first necessity is clearly to restore the authority of the Finance Minister, and it is by no means certain that this could be achieved by international supervision. It should not be forgotten that Hungary is predominantly an agricultural country, and

a depreciated exchange does not imply the same degree of disorganisation as in the case of a highly-industrialised country. The great sacrifice of fiscal independence which has been made by Austria was the result of acute economic pressure, and an almost universal recognition of the need for foreign support and control. It is by no means certain that Hungary has reached, or will reach, this chastened frame of mind.

The Betting Tax.—It is probable that the ultimate fate of the Betting Tax proposal will be decided on political, and not on financial grounds, but as the inquiry that is now taking place can hardly cover the wider issues which the proposal raises, we anticipate, in fact, that its energies will be devoted to the question of the practicability of administration. The tax has much to commend it. Imposts on luxury expenditure are always less irritating to the payer than direct taxes, and in the case of the Betting Tax the State will take its tithe at a moment when the public are in an expansive frame of mind. We do not pretend to know what effect it will have on betting, or what its incidence or its yield will be, but in our opinion it has the merits of the taxes on alcohol, namely, that if the public insist upon drinking and betting in spite of the tax the Revenue will prosper; but if, on the other hand, the tax proves too burdensome for the liking of the patrons of the racecourse and the public-house, and the revenue fails to materialise, the State will have checked, and possibly reduced, two forms of expenditure which undoubtedly bring in their train a very great amount of social evil. We do not attach very much importance to the fear of those who urge that by putting a tax on betting the Government will give its stamp of approval to an undesirable practice. Betting undoubtedly has a greater hold in this country than elsewhere, and the State approval which control of betting involves in France and Australasia, where various forms of betting taxes are enforced, does not appear to have given special stimulus to betting. Indeed, we are disposed to agree that the tax will check betting to some extent, and possibly to a very large extent, if the 10 per cent. tax on turnover is ever put into force. Various estimates have been made of the amounts spent in betting, but all are very speculative, and vary from one hundred million upwards. The effect of the tax, however, must be judged, not so much by considering the total turnover, as by considering the amount of money spent in betting and the number of times that the new money, brought in by the public, changes hands. A good many people will, no doubt, bet once only in a year, but the regular race-goer will turn over a given amount of money very many times, his winnings and losings being set off one against the other, leaving profit or loss at the end, as the case may be. The problem may be stated by taking quite fanciful assumptions. Let us assume, for example, that the amount of money spent by the public in betting in a year is £50 millions, and the betting turnover £150 millions. The distribution of this money at the end of the year may be that £15 millions remains as the profit of the bookmaking fraternity, and the rest, viz., £35 millions, will be redistributed among those who originally provided it. Now, if the tax on turnover of 10 per cent. is imposed, the State will take a second £15 millions. In order to keep business going the bookmakers may provide a share of this, but this would only be a small amount, and far the greater part, say 80 per cent. of it, will be supplied by the public. In other words, the public will retain at the end of the year only £23 millions out of the £50 millions originally put up. This is a very small proportion, and it would be less if, in fact, money employed in betting is turned over more frequently than we have estimated. In other words, the regular better will find it much harder to balance his books at the end of the year, and will either have to restrict his betting to smaller amounts or to make heavier losses out of his general income. We should ourselves expect the result to be that a certain amount more money would be found by the betting public on the one hand, and, on the other, that to a certain extent the betting turnover will be reduced through people coming to the end of their resources quicker than they otherwise would.

Employment in April.—A further decline in unemployment during April is recorded by the *Ministry of Labour Gazette*. Between March 26th and April 30th the total number of registered unemployed fell from 1,289,000 to 1,269,000. The comparable figure for the end of April, 1922, was 1,699,000, so that the past 12 months have seen a fall of 430,000. The trade union unemployment percentage fell one point in April, from 12.3 to 11.3, this percentage having fallen for five consecutive months. How it has moved month by month over a number of years is shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8	13.7
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3	13.1
March	1.9	0.3	1.2	2.9	1.1	10.0	16.3	12.3
April	1.7	0.3	0.9	2.8	0.9	17.6*	17.0	11.3
May	1.9	0.4	0.9	2.1	1.1	22.2*	16.4	..
June	1.9	0.4	0.7	1.7	1.2	23.1*	15.7	..
July	1.9	0.4	0.6	2.0	1.4	16.7	14.6	..
August	2.0	0.5	0.5	2.2	1.6	16.3	14.4	..
September ..	2.3	1.3	0.5	1.6	2.2	14.8	14.6	..
October	2.2	1.1	0.4	2.6	5.3*	15.6	14.0	..
November ..	2.0	1.1	0.5	2.9	3.7	15.9	14.2	..
December ..	2.6	1.4	1.2	3.2	6.0	16.5	14.0	..

* Excluding coal miners.

A smaller reduction in the percentage unemployed—namely, from 11.1 to 10.9—is shown by the figures of unemployed among all workpeople covered by the Unemployment Insurance Acts in Great Britain and Northern Ireland. A gradual improvement in a number of large industries is recorded, and the figures for April would have been better had it not been for a decided slackening in the cotton, hosiery, and worsted industries.

Cost of Living.—The "cost of living" index number compiled by the *Ministry of Labour Gazette* shows a drop of four points in April, the largest decline shown in any individual month since March, 1922. On May 1st the figure indicated a cost 70 per cent. above the pre-war level, as compared with a cost at March 31st 74 per cent. above that level. Movements of this figure month by month over recent years are traced in the following table:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.	1923.
January 1st..	85-90	120	125	165	92	78
February ..	90	120	130	151	88	77
March	90	115	130	141	86	76
April	90-95	110	132	133	82	74

For food alone the increase at May 1st over July, 1914, was 62 per cent., as compared with 68 per cent. a month earlier. This substantial drop during April was mainly due to seasonal causes. The introduction of summer prices for milk caused the price to fall by 1d or 2d per quart in most towns. There was also a heavy fall, averaging about 4d per lb in butter prices, while there were important reductions also in the prices of cheese and eggs. On the other hand, the average price of granulated sugar rose by 3d per lb in April. In other articles of food movements were small. It will be seen that the cost of living figure has fallen 10 points in the past five months, each month having contributed to a continuous decline.

The World's Iron and Steel Markets.—Since the export trade is of such vital importance to the iron and steel industry, it is not surprising that the National Federation of Iron and Steel Manufacturers should have found it desirable to issue a special "Foreign Trade" Supplement to their monthly statistical bulletin, devoted entirely to

the foreign trade in iron and steel of this and the other steel-producing countries. The latest figures from which comparison can be made are for January last, but the figures are the more instructive seeing that the exports had practically not been affected by the occupation of the Ruhr. This is shown by the fact that Germany's monthly exports of iron and steel in 1922 averaged 210,000 tons, and in January, 1923, were 211,000 tons. The exports of America were 60,000 tons less than the average for 1922, owing to the big home demand in the United States, while British exports were 70,000 tons higher than the average for 1922. The analyses by countries in the trade returns of Great Britain, America, and Germany respectively are not in all cases the same, and it is not, therefore, possible to give a completely comparable statement for each of these. In the following table, however, there are a number of markets which can be separately distinguished for each of these three steel-producing nations, and the table is sufficiently detailed to show where each is selling the greater part of its products:—

EXPORTS OF IRON AND STEEL TO VARIOUS MARKETS IN JANUARY, 1923.

	(In Tons.)		
Destination.	From U.K.	From U.S.A.	From Germany.
United Kingdom	50,606	4,470	17,731
U.S.A.	6,341	..	2,143
Germany	..	122	..
Europe (other than U.K. and Germany)	56,014	3,579	114,030
Canada	5,860	56,506	..
India	55,429	1,804	9,325
Australasia	67,226	4,331	..
British South Africa	12,985	804	2,276
Other British possessions	13,091	5,719	167
South America	18,321	14,091	19,788
Japan	14,358	9,429	16,006
Other countries	53,158	21,901	32,960
Total	353,389	122,756	214,450
Total exports in 1913 (monthly average)	414,100	241,000	516,900

* Figures not being separately available, are included under "Other countries."

The figures bring out the enormous importance to Great Britain of India and Australasia, but it is also significant that under the conditions prevailing immediately before the Ruhr occupation produced a new state of affairs, Great Britain was sending iron and steel in large quantities both to the United States and to Europe. America holds the bulk of the Canadian market (though subsequent months' figures show this hold is weakening somewhat); the three countries are not unevenly balanced in South America, while in Japan Germany holds a slight lead. The figures for Europe need interpretation, for, so far as Great Britain is concerned, a large item is pig-iron, which we have always supplied in considerable quantities to Italy, Belgium, and other European countries. The export figures analysed above include nearly 89,000 tons of pig-iron in the case of the United Kingdom, 2,600 tons in the case of America, and 16,860 in the case of Germany. Out of British pig-iron exports of 89,000 tons, 34,900 tons went to Europe. On the other hand, the exports to Europe from Germany include nearly 40,000 tons sent to the Netherlands. It is fairly certain that a considerable amount of this material was sent for resale to other destinations which are not indicated. Turning to production, the monthly statistics for this country show a further increase in pig-iron output in April, the total amounting to 652,200 tons, which compares with 633,600 tons in March, and a monthly average of 408,300 tons in 1922, and of 855,000 tons in 1913. The furnaces in blast at the end of the month numbered 216, an increase of 14 during the month. The April production includes 226,400 tons of hematite, 207,200 tons of basic, 144,700 tons of foundry, and 38,800 tons of forge pig-iron. The output of steel ingots and castings in April amounted to 749,400 tons, compared with 802,500 tons in the previous month, the decrease being due to the incidence of the Easter holidays. The monthly average in 1922 was 486,000 tons, and in 1913 638,600 tons.

Mexican Debt and Foreign Investors.—Under date of June 16, 1922, the International Committee of Bankers on Mexico concluded an arrangement with the Mexican Minister of Finance for the resumption of payment of interest on various bonds and other securities. Follow-

ing this arrangement the International Committee announces that it has been agreed that with reference to interest payments from January 3, 1923, to December 31, 1927:—"The Mexican Government during the first five years covered by the plan undertakes to set aside certain prescribed revenues, starting the first year with a minimum of 30,000,000 pesos (\$15,000,000 United States of America gold), this minimum increasing by 5,000,000 pesos (\$2,500,000 U.S. gold) per annum for each of the ensuing four years, reaching 50,000,000 pesos (\$25,000,000 U.S. gold) in the fifth year. Out of this fund payments in cash are to be made to bondholders.The difference, if any, between the full interest on the bonds and the amounts provided to be paid in cash is to be dealt with in 20-year scrip, not bearing any interest during the first five years, but bearing interest at the rate of 3 per cent. per annum for the balance of 15 years." With regard to arrears of interest up to January 2, 1923:—"The coupons maturing on or before January 2, 1923, are to be lodged with a depositary against the issue of non-interest bearing receipts. Such receipts are to be purchased or redeemed by the Government from a fund sufficient to retire them in full, during a period of 40 years, beginning January 1, 1928. The receipts will be of two classes—Class 'A' and Class 'B' (Class 'A' to be retired completely prior to Class 'B')." A list of the Mexican issues affected by the arrangement is given, together with a table showing the proposed settlement of interest in arrears, and the percentages of current annual interest to be paid in cash over five years. The statement concludes:—"As soon as the necessary documents have been printed and distributed, a call will be issued for the deposit of the bonds, and the names of the depositaries with which the bonds are to be lodged will be published."

British Cotton Growing.—What may be considered a satisfactory annual report is that just issued by the British Cotton Growing Association. The number of bales marketed, namely, 67,386, was the largest in its history. The value of the cotton was £1,628,788, and that, with the exception of 1920, was higher than in any other of the 25 years' history of the association. The estimated amount of cotton grown in new fields in the British Empire during 1922 was 103,400 bales, as compared with 165,100 bales in 1921 and 72,600 bales in 1917. Commenting on the falling off of the production as compared with the previous year, the report states that the prospects for the future are distinctly promising, but temporary set-backs, caused by climatic and economic conditions, occasionally arise, and cannot be avoided. It is now certain that within the next few years large quantities of suitable cotton will be produced within the Empire, and those new areas which at the present time give the greatest promise are the Sudan, Northern Nigeria, and Uganda. By careful management of "hedger" the year's working has yielded a surplus of £33,088, which increases the excess of income over expenditure to £59,522. There is no doubt that that money will be very useful, as there is still a great deal of work to be done in fostering the growth of cotton within the Empire. It was only to be expected that, owing to the violent fluctuations which have taken place in raw cotton rates during the last two years, the native cotton growing industry in some colonies and protectorates would suffer a set-back, as it is difficult for the natives to understand fluctuations in values. According to the report, this has especially been the case in the southern provinces of Nigeria and in Uganda. The demand for African cotton during the greater part of the year was quite satisfactory, and there are now adequate shipping facilities from the African ports.

Scotch Whisky Trade.—It is safe to predict that the latest of many big deals in the Scotch whisky trade—the acquisition of the stock-in-trade of James Watson and Co., Limited, of Dundee, by Messrs Buchanan-Dewar, Limited, and Messrs John Walker and Sons, Limited—will prove most unpalatable to the trade as a whole, writes an Edinburgh correspondent. Those successive

absorptions have all been due primarily to the fact that there is a severe shortage of fine old matured whiskies, with the result that the prices of those have been pushed up to a ridiculously high level. Firms with stocks insufficient to assure that they would be able to meet all demands upon them were, therefore, in the happy position of being able to sell out on terms which left them a very handsome surplus indeed without running the risks of a more than usually uncertain future. On the other hand, the bigger distributors of proprietary blended whiskies have been able to acquire, albeit at high prices, additional stocks wherewith to eke out their previously existing supplies, which, large though they may appear, are still inadequate when the demands of the next few years are taken into account. But, satisfactory as those deals have undoubtedly been to the parties directly concerned, they are far from being so to the customers of the firms selling out, as the almost inevitable result is to deprive them of their source of supply, because it is evident that if the purchasing firm entered into an obligation to supply the selling firm's customers there would be little advantage in the deal to the former, who require the additional stocks for the needs of their own customers. In addition, the effect of the disappearance of so many wholesale distributing firms is to create a virtual monopoly in the distributing trade, for the two or three big firms who have been conspicuous in buying up all the stocks of matured whiskies they could lay their hands on. Hence the trade as a whole has received the announcement of this latest deal with something like consternation, as James Watson and Co. was one of the largest and most active of the remaining distributing firms outside of the "Big Three," who are being credited in the trade with the benevolent intention of establishing a monopoly in the distribution of proprietary whiskies. The stock involved in this latest transaction aggregates 5,500,000 gallons, of which only a comparatively small proportion is fine old matured whisky, and the purchase price amounts to something over two millions sterling. The already complex situation is further complicated by the fact that despite the marked shortage of old whiskies there are now available ample supplies of three-year-old whisky, with the result that while in the former prices are very firm, with, if anything, an upward tendency, the values of the latter tend to fall. This latter movement is accentuated by the fact that under the handicap of a preposterously high spirit duty the consumptive demand still tends to decline, and now amounts, both at home and abroad, to less than 50 per cent. of what it was in 1913. Production is still being maintained at a rate considerably in excess of the consumption, and stocks are rapidly accumulating. Of course, a stock larger than was customary in pre-war years is now required by reason of the three years' age limit, but even when this is taken into account it is feared that a surplus of post-war whisky has been bonded unless the high spirit duty is substantially reduced.

Two Economic Reports on France.—The very full report just issued by the Overseas Trade Department, and the particulars published by the French National Bank of Foreign Commerce, show that French thrift, industry and method are bringing up production to its pre-war level and preparing for a large future increase. In 1922 the output of coal exceeded that of 1921 by 10 per cent., that of iron-ore by 50 per cent.; the production of pig-iron, in spite of a coke shortage, was 50 per cent. greater, that of steel 41 per cent.; the textile trades—except linen, which is concentrated in the war zone and behind it—showed a large increase in output and (in most branches) in export, though latterly the uncertainty of the foreign exchanges reduced orders from abroad. The daily average of loaded trucks was 16 per cent. higher; the railway receipts, excluding the Alsace-Lorraine lines, were 14 per cent. more than in 1921; the unemployed, so far as shown by the statistics in March, 1921, numbered 91,225; in December, 1922, 2,644. New industrial districts arose during the war, some of them using hydro-electric power; the devastated regions are restarting with modern machinery and increased capacity for production. The great metallurgical, electrical and chemical companies have been largely combined by interlocking alliances or otherwise. The first-named have acquired interests in

subsidiary trades and foreign concerns; and other industries show a tendency to combination. Inland waterways are being enlarged and extended, partly to facilitate traffic from Alsace-Lorraine and the North-Eastern mines to Central France; a new seaport and industrial region is being created at the Etang de Berre by the great canal from the Rhone at Arles to Marseilles. The ports have been brought up-to-date in equipment; the Midi, the Paris-Orleans, and the P.L.M. railway systems are being extensively electrified; new lines are being constructed and existing lines doubled to give more direct routes from Alsace-Lorraine and Switzerland to the Atlantic. Agriculture lost 1,250,000 workers killed or disabled in the war; it is using more machinery and (near the frontier) Italian and Spanish labour; Italian and Belgian labour is also largely employed in manufacture, and the three nationalities together constitute by far the largest foreign element (nearly 1,190,000) in the population, which, even with Alsace-Lorraine, is still some 400,000 below the 1911 figures (39,604,992). The restoration of the devastated districts is nearly complete; the cost has been met by internal loans. In spite of the grave financial situation, the future, given peace in Europe, is hopeful.

Norwegian Bank Affairs.—Our Christiania correspondent writes:—Since my last letter there has been little development in the bank crisis. One or two minor provincial banks have applied for treatment, according to the March Act, and there has been the general meeting of the shareholders in Foreningsbanken. Nothing new came to the light, but many strong words were used of the manner in which the former board had acquitted themselves of their task. Mr Chr. Michelsen, the ex-Premier, who, about six months ago, consented to put himself at the head of the Bergen branch, but who, of course, cannot be blamed for the trouble, made a lengthy explanatory speech, and, naturally, wanted full light to be thrown into all the details of the management that brought such unhappy results. Both in the Press and among the public there are unmistakable signs that the anxiety and nervousness caused by the difficulties of the two banks are subsiding and giving place to a decision to set to work to repair the damages done. Bank shares generally, which fell rapidly during the period following the bad news, very soon began to rally, and although there have again been some relapses, a firmer tone and stiffened prices, with an increased turnover, have set in, and, it is hoped, will continue. Much diversity of opinion has existed as to the wisdom of the step taken by the Bank of Norway, when, on the 2nd inst., it increased the rate of interest by 1 per cent. to 6 per cent. It is argued that the commercial life of the country is working under circumstances so disadvantageous that it needs the assistance which cheap money can render. On the other hand, the bank can point to its strained position, and also to the danger of money being transferred to Denmark, where, a month earlier, the rate was increased to the same level—6 per cent.

Poland and Danzig.—Our Warsaw correspondent writes:—The statistics of the port of Danzig, which have been recently published, reveal a great progress in comparison with the pre-war figures, as shown below:—

	Entered		Cleared		Total
	Ships.	Tonnage.	Ships.	Tonnage.	Tonnage.
1913....	2,854	918,097	2,836	931,509	1,849,606
1919....	1,435	535,466	1,413	567,099	1,102,565
1920....	1,951	987,750	1,935	975,178	1,962,928
1921....	2,631	1,567,633	2,623	1,603,709	3,171,342
1922....	2,690	1,414,000	2,718	1,437,000	2,851,000

Taking the year 1913 as basis (100) of the total tonnage, we obtain for 1920 an index of 106.1, for 1921 of 171.4, and for 1922 155.5. The comparison with the pre-war level gives less favourable results if, instead of the tonnage, we take the quantities of imported and exported goods. While for 1913 we have a total of 2,172,000 tons, the respective figures are for 1920 1,838,000 tons, for 1921 1,405,000 tons, for 1922 1,300,000 tons. There is a marked decline not only in comparison with 1913 but also with 1920, Danzig being affected by the crisis from which the whole world has been suffering during the last two years. The political relations with Danzig are far

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000

Paid Up Capital 1,050,000

Reserve Fund and Undivided Profits 1,352,105

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

from being satisfactory. In the Diet, in the Polish Press, and in speeches of leading politicians complaints are frequently uttered that the Free City tries to deprive Poland of the benefits guaranteed by the Treaty of Versailles. It is alleged that Polish citizens, instead of possessing a privileged position, are subject to worse treatment than English, French, German, and other foreign merchants. The Polish authorities are prevented from exercising a control over the port and the administration of the Customs, so that Danzig has become a kind of hole through which it is possible to evade the Polish import and export regulations. The occupation by the Danzig police of a building acquired for the foundation of a Polish Commercial School led to the breaking off of the negotiations which were conducted in Warsaw between the representatives of the Free City and of the Polish Republic. In a speech in Pomerania the President, Wojciechowski, threatened Danzig with an economic blockade, and the Minister of Foreign Affairs declared a few days ago in the Diet that a policy of retaliation will be applied.

R.M.S.P. Profits.—The report of the Royal Mail Steam Packet Company for the year 1922 shows a recovery in profits following the sharp drop recorded twelve months ago. The latter was ascribed by the directors to the effect on passenger traffic to and from South America of adverse exchange, and of competition from foreign lines, subsidised in many cases by their Governments. In the latest report the directors state that the general conditions of the trades in which the company is specially interested have continued to be difficult, and both passenger traffic and freights have shown decreased earnings. Close attention, however, has been devoted to securing "the utmost economy in working expenses." But how far these have been successful it is, unfortunately, impossible to ascertain from the accounts, which merely show the profit, including dividends on holdings in other companies, after deducting fleet depreciation, &c. As will be seen from the table below, the figure disclosed is over £60,000 higher at £771,880, but whether this is due to a smaller allowance for depreciation or to a reduction in expenditure we are not told:—

	Profit.	Deb. Int. &c.	To Incoe. Fund.	To Reserve Fund, &c.	Prof. Div.	Ord. Div.	Rate.	Carried Forward.
	£	£	£	£	£	£	%	£

1921.....	710,935	314,336	..	..	103,500	300,000	6	105,927
1922.....	771,752	281,651	..	..	168,500	300,000	6	125,528

The balance-sheet shows an addition of £74,900 to the insurance fund as against £172,600 a year ago, and although no mention of this item is made in the profit and loss account the difference in the two years more than accounts for the increase shown in the profit figure. Unfortunately, however, the directors still keep the traditional obscurity which seems to be the main characteristic of the accounts of shipping companies.

Debt interest remains unchanged at £218,000, but "interest and discount" requires only £63,700 as against £96,300 a year ago. An issue of £2,000,000 of 6½ per cent. cumulative preference stock was made in July, and this accounts for the increase of £63,000 in the amount required for preference dividend. The ordinary dividend is maintained at 6 per cent. and an addition of over £21,000 made to the carry forward, but no allocation is made for the second year in succession to the reserve fund, which stands at £1,600,000. The assets side of the balance-sheet contains a larger number of items than are usually given by shipping companies, but of a total of less than £23 millions nearly £19 millions figures as one item, the company's fleet and investments being lumped together. The tonnage of the fleet is given as 378,964 tons, which compares with 347,829 tons a year ago, while the fleets of affiliated companies are shown as 1,774,122 tons against 1,797,048 tons. An analysis of the balance-sheet will be found in a later column.

Rubber Plantations Investment, Limited.—A marked improvement is shown by the report and accounts for the year ended December 31, 1922. Accurate comparison with the preceding 12 months cannot be made, owing to the fact that a year ago the company's accounts, through a change in the financial year, while including income from the properties for the full 12 months, could show income from other sources for nine months only. The change for the better then indicated has been realised in the past year. Net profit for the year, including the directors' remuneration of 2½ per cent. on the dividend, was £108,568, against £4,598 in the last accounts. With £98,918 brought forward, there is an available balance of £207,486, and the company, after two years without dividend, is able to pay 6 per cent., absorbing £88,371, after income-tax has been deducted, and to make moderate provisions for the future. The following table gives the results of the past seven years:—

	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921.	1922.

* £121,233, less £104,641 transferred to reserve.
† £57,125, less £525 in donations to war charities.

The total sum appearing under the headings of properties and investments is £2,314,884, and tea is still, despite the company's title, the principal product, the distribution of the interests of the company being, in tea 52½ per cent., rubber 38½ per cent., other products and land 8½ per cent. It will be noticed in the analysis of the balance-sheet which appears in our usual column that a separate entry is made this year of an investment of £90,000 5 per cent. War Loan, 1929-47, at cost—namely, £89,214. Tea crop costs were 7.81d per lb, against 8.25d in the previous year, and the net sale price was 9.55d. Rubber production costs were brought down to 7.12d per lb, against 9.87d in the previous year, while the net sale price was 1s 0.66d per lb, which compares with 8.82d in the preceding year. There was thus a satisfactory margin in both products, the rubber figures being particularly good. The directors set aside £60,000 as a loans reserve account, explaining that the loans of £131,331 represent advances to companies in which this concern is largely interested. The reserve, they think, will be sufficient to provide for any loss in respect of loans. A sum of £13,500 is transferred from profits to meet depreciation of the Sumatra properties, this being additional to £31,838 written off for depreciation of buildings, &c., during the year. At the general meeting a resolution will be brought forward in favour of increasing the company's capital from £2,000,000 to £2,500,000 by the creation of 500,000 new shares of £1 each.

Crosses and Winkworth.—From a loss of £539,323 for 1922 to a profit of £274,148 for the year ended March 28, 1923, is the striking change shown in the accounts issued by Crosses and Winkworth. It should be noticed, however, that their figure of earnings, amounting to £274,148, include "transfer from reserve for contingencies." A year ago "reserve for contingencies, including taxation" was £363,235. This year the item has disappeared, but we notice that reserve for excess profits duty is shown at £125,000. In the auditors' report it is stated that "the profit and loss account includes £100,000 taken from 'cotton stock reserves for depreciation.'" But exactly what the trading profit has been during the year is not clear. But still, the payment of the 10 per cent. half-year dividend on the cumulative preference shares, which will absorb £150,000, is recommended, leaving £155,076 "balance available for liability to income-tax and carry forward." Premium on shares remain as before in a reserve account at £750,000—a comfortable nest-egg, but there is still £550,121 owing to bankers. Total assets are down from £6,970,544 to £6,322,284, mainly on account of investments—securities in the Heaton undertaking being valued at £381,500 as against £1,004,064 a year ago. Stock at £869,132 is slightly higher; the separating in the last balance of this item under four headings was useful additional information which the present accounts deny us.

Southern Pacific Report.—The report of the Southern Pacific Company for the year 1922 shows that a decline in operating revenue was accompanied by a much more substantial reduction in operating expenses, with the result that net operating income increased by nearly 21 per cent., while operating income rose in a similar proportion, as may be seen from the following summary:—

	1921.	1922.	Ino. or Dec.
Operating revenues ..	269,494,365	262,519,169	- 6,975,196
Operating expenses ..	212,752,263	193,664,456	- 18,907,807
Net operating revenue	56,922,102	68,854,713	+ 11,932,611
Railway tax, &c.....	15,664,035	18,986,949	+ 3,322,914
Operating income	41,258,067	49,867,764	+ 8,609,697

In the first half of the year, it is stated, the business depression was responsible for a decline of over \$10 millions in operating revenue; but in the second half, after a general reduction in freight rates, some of the loss was recovered, the year's decline being less than \$7 millions. The principal reductions in expenses occurred under maintenance (—\$6½ millions) and transportations (—\$12½ millions). As regards the latter, total train mileage decreased by 0.53 per cent., the net tons of all freight per ton increased by 4.69 per cent., and the average number of passengers per train increased by 0.32 per cent. Continued increase in efficiency in the use of fuel also contributed to the reduction in expenses. Net operating income was \$10½ millions, or 25½ per cent. higher at \$46½ millions, thanks to a substantial reduction in equipment rents, but non-operating income dropped from \$19½ millions to \$9½ millions, partly owing to a decline of nearly \$5 millions in dividend income and partly through the absence of the U.S. Government guarantee, which in 1921 produced over \$3½ millions. Deductions from gross income were slightly lower, and the income balance transferred to profit and loss account was \$31,472,034 against \$29,515,218. The 6 per cent. dividend absorbs \$20,663,140, and the profit and loss balance is increased by \$11,467,900. The directors complain that the reduction in rates reduced revenues by \$16,350,000, an amount almost equal to the saving from lower wages and fuel costs. "In consequence substantially all the reduction in expenses, which should have lodged in the company's Treasury (inasmuch as the return on the property devoted to the service of the public was but 4.29 per cent. instead of 5.75 per cent. contemplated by Statute) was extracted therefrom and given to the public. Nor was this all. \$18,859,356 was taken from you by the public in taxes, which are \$3,320,000, or 21.36 per cent. higher than in 1921." They further add that the railroads are paying wages, which constitute about 60 per

cent. of operating expenses, 120 per cent. higher than in 1913; that materials cost 56 per cent. more; while for the sale of their freight transportation they receive only 53 per cent. more than in 1913—a position not very dissimilar to that in which the British railways find themselves. The report states that in December last a complete and final settlement of all claims and accounts growing out of the Federal control of railroads was made, the company receiving a balance due of \$9,250,000. Under the provisions of the Transportation Act of 1920 plans are being discussed for the consolidation of systems in the district served by the company. Under the existing Statute the proposed consolidations must be voluntary, but supplemental legislation to make them compulsory is being seriously discussed.

Equitable Life Office.—After emerging from the troubles of the war the "Old Equitable" has resumed its even course. Last year 637 new policies were issued, assuring £600,385 net, an amount larger than in any recent year. The claims paid under whole life with-profit policies showed that, on the average, every £1,000 of original assurance had been increased to £2,062. The funds were increased by £327,991 to £5,381,394, of which £15,827 was contributed by profits on securities realised. The interest earnings were £4 3s 10d per cent. net, after deducting tax, and the expenses of management amounted to 6.8 per cent. of the premiums. The Equitable pays no commission for the introduction of business, and now that the temporary suspension of bonuses has ended, the prospects before policyholders should be almost as good as ever in the society's history.

Guardian Assurance Company.—This office, which many years ago gave up fire business in the United States, continues to progress favourably on its own selected course. Last year the fire premium income was £964,199, against £1,013,734 in 1921. The claims were at the rate of 54 per cent. of the premiums, against 54.2 per cent., and the expenses were 42.9 per cent., against 40.5 per cent. After providing for all outgoings and for unexpired risks on a generous scale a trading profit of £34,434 is brought out. In the accident, &c., department the premiums were £475,765, against £519,565. The claims were at the low rate of 43.8 per cent., and the expenses 42.5 per cent. The trading surplus was £83,921. The interest receipts available for profit and loss were £141,768, and the amount provided for dividends on preference and ordinary shares was £139,415. The credit balance at profit and loss after meeting the dividends for last year was £104,933, as compared with £122,629 a year before.

Esperanza.—The Mining department of the Stock Exchange, writes our Mining Correspondent, has this week provided a small sensation in the shape of a virtual collapse in the price of Esperanza shares. The undertaking is one which in its time has made history. Some 15 to 20 years ago very high-grade ore was worked, and dividends ranging from 30 to as much as 160 per cent. per annum were paid. The last two distributions, however—in respect of 1917 and 1918—only amounted to 5 per cent. each. For some time past the company has been developing on a restricted scale and earning small profits. In 1920 a patch of rich ore was discovered, upon the strength of which the shares were run up to £2 10s. Of late speculative interest has ruled on a small scale. The proposal to reconstruct came as a complete surprise to the market, the secret having been well kept. In effect, the shareholders are asked to provide 5s. per share, the scheme being to allot five 10s. shares credited share, the scheme being of every two existing £1 shares. A 8s paid in respect of the extensions to the circular states that on completion of the extensions to the plant 30,000 tons per month of low-grade ore can be treated for a profit of 50 cents per ton; the quantity of this material available is placed at 1,000,000 tons. If all the new shares are subscribed, £113,750 additional resources will be provided; in any case, £65,000 has been provisionally guaranteed. Those shareholders who go into the reorganisation will probably do so more on the chance that another rich discovery may be made than on

the profits likely to be earned with such a narrow surplus. In this connection it may be noted that important developments in the adjoining Mexico El Oro property are near the Esperanza boundary.

SIR ROBERT CORYNDON, K.C.M.G., Governor of Kenya, will preside at a meeting of the Royal Colonial Institute on Tuesday, May 29th, at 4 p.m., at the Edward VII. Rooms, Hotel Victoria, when Captain J. Pulteney Tolland, Deputy-Director of Lands, Survey and Mines Department, Tanganyika, will give an illustrated lecture on Tanganyika Territory.

Oversea Correspondence.

UNITED STATES.—GOVERNMENT CROP REPORT—CHAMBER OF COMMERCE CONVENTION—PROSPECTS OF GOLD EXPORTS—MAROH RAILROAD EARNINGS—UNFILLED STEEL ORDERS DECREASE.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 14.

THE Government's report, as of May 1st, shows that crop conditions generally improved during April. The condition of winter wheat on that date is given as 80.1 per cent., as compared with 75.2 on April 1st and 83.5 on May 1, 1922. With the exception of 1920 and 1917, the condition on the first of this month was the lowest reported on that date for the past decade. The report also confirms predictions that an extensive area, planted to winter wheat, had been abandoned on account of winter-killing. The total, according to the Department of Agriculture figures, amounted to 6,629,000 acres, or more than 14 per cent. of the acreage planted last autumn. Such a heavy loss has been exceeded in only two years, namely, 1912 and 1917. The crop area is now placed at 39,750,000 acres, which is 2,377,000 acres, or 5.6 per cent., less than was actually harvested last year. Despite the comparatively low condition of winter wheat and the smaller area still under the crop, the Government's forecast points to a yield of 578,287,000 bushels, which would be only 8,000,000 bushels less than last year's harvest. Although the farming season is late in practically all sections of the country, the Government's report shows that nearly 69 per cent. of spring ploughing has been completed, as against 63.5 per cent. a year ago, while 55.4 per cent. of spring planting has been finished, as compared with 53.6 per cent. at this time last year.

The eleventh annual convention, held here last week, of the United States Chamber of Commerce (whose membership consists of Chambers of Commerce in all sections of the country, and represents every important branch of trade and industry) attracted a great deal of attention. One of the principal speakers was Secretary of Commerce Hoover, who dwelt at considerable length upon the American banking position, the vast accumulation of superfluous gold now held by the Federal Reserve

system, and its latent possibilities of producing undue inflation and speculation. Gold reserves, he pointed out, had increased from about \$2,000,000,000 in 1920 to the present huge total of \$3,000,000,000, approximately, but "this additional billion," he remarked, "has not been trenched upon, and our present reserve against credit and currency is about 77 per cent." Three months ago, he said in substance, the outstanding notes and deposit liabilities of the Federal Reserve system required a legal reserve of \$1,500,000,000, yet the Federal Reserve Banks' actual cash holdings amounted to \$3,200,000,000, which made it theoretically possible to more than double the \$2,217,000,000 Federal Reserve notes then in circulation, and the \$1,964,000,000 deposits, and still maintain the full reserve ratio required by the Federal Reserve banking law. In other words, without the additional billion in gold received since 1920, the Federal Reserve system would still be well above the legal safety limit in the matter of reserves. "Some of this new importation (of gold)," he went on to say, "yields no return to us in earnings or security. It would serve us much better if we were getting returns from it by its export to foreign countries. If it aided in making foreign currencies convertible into gold, it would also contribute to stabilise foreign exchange and improve foreign commerce. In fact, for us it contains an element of insecurity. There seems to be heard," he continued, "a sort of chortle in parts of Europe over the commercial strategy in shipping gold to us. It is assumed that we will incorporate this gold in our credit system, and be put out of action by the price rises resulting from it. If we retain our normal commercial intelligence this will not happen. I am convinced that the surplus of gold will eventually flow outward in an orderly way without any necessary increase in price levels, and its flow need make no disturbance in our business life." Although foreign trade in commodities in 1922 showed a balance to the credit of the United States of about \$700,000,000, Secretary Hoover said that "if we would add to the balance-sheet the movement of invisible items, we would find the balance turned one or two hundred millions against us, even without the gold imports. Indications for 1923," he added, "make it seem probable that the very considerable increase in imports due to our increased buying power, the probable larger volume of immigrant earnings sent abroad from our large employment, and the increased volume of tourist traffic may again leave us an adverse balance. I believe that in time these adverse balances will begin to force gold from us without the impulse of inflation."

The Chamber, at its convention, went on record as strongly opposed to the Government's recently announced policy of operating the Shipping Board's vessels if it cannot sell them. A resolution was adopted urging that further efforts be made to evolve a plan whereby ships necessary to the maintenance of official services shall be operated by private citizens, with a view to their acquisition by citizens of the United States as soon as the vessels can be made self-sustaining. The Chamber also indorsed the draft of a uniform ocean bill of lading prepared by the Brussels International Convention as an improvement on the Hague Rules of 1921. With respect to immigration, it was recommended that a 2 per cent. quota on a selective basis be added to the present 3 per cent. quota. A resolution was also passed declaring in favour of a general economic conference to solve the pressing financial and economic problems now disturbing Europe, and approving adhesion by the United States to the protocol establishing the world court.

According to the Bureau of Railway Economics, net operating income of 194 first-class railroads of the United States amounted in March to \$83,568,000, equivalent to an annual return on property valuation at the rate of 5.84 per cent. This compares with \$38,903,000, or 3.73 per cent. in February of 1923, and with \$83,487,000, or 5.96 per cent. in March of last year. The lower rate of return in March of this year, despite a slight increase in net operating income as compared with the same month a year ago, is attributed to additional investment in railroad property in 1922. Returns are not complete, but those now available indicate that March freight traffic approximated 39 billion net ton miles, the highest record for that month in the history of American railroading.

The reduction of 114,823 tons during April in the amount of forward business on its books is the first decrease in unfilled tonnage to be reported by the United States Steel Corporation since last December. The falling off, however, has occasioned no surprise in view of the fact that new buying has slackened somewhat lately, and that the corporation's plants are now operating at about 97 per cent. of capacity. Productive capacity, furthermore, has been increased considerably in recent years. At the end of April unfilled orders totalled 7,288,509 tons. Even should there be another reduction during the present month, it is apparent that the corporation's mills can continue to run at the present high rate of capacity for a number of months.

FRANCE.—COST OF RUHR OCCUPATION—COAL AND COKE DELIVERIES—IRON.

(FROM OUR CORRESPONDENT.)

PARIS, May 23.

THE Ruhr remains the vital point of French political and economic policy, and for this reason it merits closer attention than any other aspect of current affairs. It would not be going too far, indeed, to insist that in the Ruhr, at the present moment, from the point of view of, perhaps, ninety per cent. of the people of this country, France is straining every nerve to win back that large proportion of the fruits of victory which was taken from her by the operation of certain of the clauses of the Treaty of Versailles. The extent to which she is succeeding in this task may be gauged to some extent—although, of course, only from the French point of view, even then—by the statement of what she has accomplished since the occupation began in January last, which was made by M. Poincaré last Thursday before the Commissions for Finance and for Foreign Affairs, in the Chamber. The statement was made in connection with the Bill to authorise credits to meet the cost of the occupation of the Ruhr.

M. Poincaré informed the Commissions that the additional cost of maintaining the troops down to May 1 (after deducting the amount that would have had to be spent in any case in this connection if the men had remained on this side of the frontier) was 61,000,000f, while the civil expenses had amounted to 2,650,000f, making a grand total of 63,650,000f. Against this, in presenting what was for all practical purposes a balance-sheet of the operation, M. Poincaré showed revenue from customs, forests, permits, fines, &c., amounting to about 36,000,000f, plus 36,680,000f representing the value of coke and coal requisitioned in the Ruhr and transported to France. On balance, therefore, it would appear that the Ruhr operation, so far, has resulted in a credit balance of slightly over 9,000,000f. M. Poincaré pointed out that, in view of the fact that deliveries of coal and coke to France began only about the middle of March, whereas the overhead charges of the operation began two months earlier, the results achieved may be expected to be much more satisfactory in the future, thereby suggesting that merely as a commercial affair the occupation will be found ultimately to be entirely justifiable. In support of this he put forward the facts that the yield from the railways was steadily increasing. Train mileage has increased from 31,000 train-kilometres per day on March 18 to about 50,000 per day on May 1, while the number of passengers had risen from 17,000 per day on April 15 to 28,000 on May 1. From the political point of view the most important statement made by M. Poincaré, perhaps, was in answer to a question by a deputy, who asked him if the security of France depends on the continued occupation of the Ruhr. The Prime Minister replied in the negative, explaining that the occupation of the left bank of the Rhine would alone be sufficient to assure the security of France. This clear statement, it is felt here, will remove some, at least, of the suspicion that has been set up abroad as the result of the occupation of the Ruhr. Satisfaction will also be felt at the disclosure that the cost of the occupation has been so much less than had been feared.

There has been a tendency in certain organs identified with the French metallurgical industry to complain that the amount of coke and coal that is being received from

the Ruhr is proving insufficient to meet the needs of the blast furnaces. It may be admitted that this criticism dates from some weeks ago, when the French organisation in the Ruhr had not reached its present developments, and when there may have been some justification for the view expressed. It was, perhaps, with a view to silence such criticisms that the "Journal Officiel" published a day or two ago the text of a supplementary report in regard to the situation in the Ruhr which has been drawn up by M. Eymond on behalf of the Finance Commission of the Chamber. M. Eymond states, in addition to the facts mentioned by M. Poincaré, that the daily output of coke in the Ruhr (or, rather, the average amount daily sent out of the Ruhr) has now risen from 1,000 tons to 11,000 tons. As three-quarters of this total comes to France, whose metallurgical industry requires only 6,000 tons a day from the Ruhr (in view of its other resources), it is obvious that the French metallurgical industry is now receiving at least 8,000 tons a day, or more than is required. Down to the present, the report states, 700,000 tons of coke have been seized, and of this over 300,000 have been delivered to France. The stocks actually seized, therefore, represent sufficient to meet the needs of the French iron and steel concerns down to the end of August. There still remains, according to M. Eymond, a further accumulation of over a million tons of coke which has not yet been seized, and of this 750,000 tons would come to France, in the ordinary course. The stocks in hand and in sight, therefore, if delivered at the rate of 6,000 tons a day, will suffice to meet the needs of the French metallurgists until the end of January.

The report states further that the French output of cast-iron is again appreciably approaching the total at which it stood before the occupation of the Ruhr began. The average monthly output during 1922 was 420,000 tons. The total in February last was 305,000 tons. This rose in March, when the deliveries from the Ruhr began, to 316,000 tons, and in April to 335,000 tons. The only obstacle that may prevent a return in the near future to the average monthly output achieved last year, the report states, is the diminution in the number of orders from which the industry is at present suffering. (Information from various other sources indicates that this absence of orders is likely to be remedied in the near future, now that the situation in the Ruhr appears to be becoming stabilised.)

M. Eymond takes an equally rosy view of the situation as regards coal. Deliveries from the Ruhr, he asserts, have now risen to 10,000 tons a day, and he foresees that in the near future this figure will be increased to 85,000 in the near future this figure will be increased to 85,000 tons daily, of which one-third will be water-borne. The seizable stocks now accumulated in the Ruhr total, he states, 2,000,000 tons. At the same time the output of the French pits, which varied between 2,000,000 and 2,500,000 tons a month during 1922, rose to over 3,000,000 tons in March, and will probably exceed 3,500,000 tons during the coming summer. An increase of 100,000 tons a month is also expected to be attained in the Loire field. In spite of these increases, however, France will still have to continue to purchase an appreciable portion of her combustible abroad. Ruhr coke is being sold to manufacturers here at around 90f per ton, whilst the net amount received by the French Government from the sale of coal drawn from the Ruhr is in the neighbourhood of 50f a ton. The daily revenue received by the Government from the sale of coke, coal and colliery by-products (not including the merchandise seized from the Badische Anilin works) is, in round figures, 1,500,000f per day.

GERMANY.—REPARATIONS—FINANCES—EXCHANGE AND BOURSE—PRICES—BUSINESS.

(FROM OUR CORRESPONDENT.)

BERLIN, May 22.

No decision has yet been come to as to the Cuno Cabinet's measures in regard to Reparations. The decision may be expected this week. The Cabinet has taken various steps to sound opinion in Ally countries. The Socialists and to some extent the centre parties last week made clear to Dr Cuno that they considered Germany must continue her attempt to bring

MUTUAL LIFE ASSURANCE.

the whole question, including the Ruhr, again into the domain of negotiations; in particular the Socialists emphasise the guarantees question, requiring precise proposals for making industry and agriculture direct guarantors of foreign Reparations loans. This view is also supported in principle by the leader of the industrial German People's Party, Dr. Stresemann. In practice there are difficulties; it is very hard to distribute the burden in a way which all interests will consider equitable; and apart from that is the consideration that pledges, if they are to attract foreign lenders, must be directly and easily realisable in case of default; and the realisability of a vast guarantee by practically the whole private property of Germany would, if at all practicable, depend upon stability of German social and political conditions. Given this stability it would probably be easy for the German State to meet the Reparations liabilities by the ordinary path of taxation. The Note of May 2 is now generally recognised to have been inadequate. The Foreign Minister, Dr. Rosenberg, confirms what has been stated from here that the Note was intended to put Germany right with the world as a reasonable party rather than to supply a basis for negotiations, by telling a Vienna newspaper that the most important thing in the Note was neither its form nor its contents, but the fact that Germany showed sufficient self-mastery "to take the first step towards reconciliation" at a time when the enemy had invaded German territory.

The Customs gold surcharge has been raised to 855,900 per cent. Both gold and "wertbeständig" loans are being issued. The Main-Danube Canal Company gold loan was heavily oversubscribed, and a gold loan of 1,000,000 gm is announced for the construction of a power station in connection with the canalisation of the Neckar. The Prussian Potash Loan was equally successful, and Prussia announces a second loan of the same kind, with a value of 50,000 tons of potash. The Third Civil Court of Cologne has ruled that mortgages, as has hitherto been done, may be paid off in paper marks, and has thus gone against the decision of a Darmstadt court recently reported. The Cologne Court has in general held to the doctrine that "a mark is a mark"; legislators made it so; it would be bad law and in practice impossible for a court to correct the inevitable hardships following the doctrine; and a secured mark debt does not differ from an unsecured debt, the fact that the security has risen in paper mark value while the debt has remained unchanged being a matter with which the creditor has nothing to do.

The foreign exchanges have now touched about the lowest level of January 31; so the attempt to keep them on a basis of about 20,000 marks to the dollar must be considered at an end and unsuccessful. There is no sign that the intervention policy, which will be maintained to prevent if possible a further fall, will be pushed so far as to raise the mark again; and the price-rise which has taken place in the last weeks would make such an attempt unwise. The Reichswirtschafts-Minister last week held discussions with financial experts on the practicability of

concentrating exchange dealings in the Reichsbank or under its control; but the discussion was broken off, and it is believed that the Bank opposes the plan for reasons of organisation and cost. The last exchange decree is being generally violated. Stocks last week were very active, and on the last Bourse day, the 18th, there was a boom, some papers rising 100,000 points. The "Frankfurter Zeitung's" dividend-payers' index for the 18th shows 2,211,665 against 2,095,605 on the 11th, a high point of 1,567,265 during the early February boom, 376,685 on January 5, and 27,340 on January 4, 1922. Since the beginning of last year, stocks have risen on an average eighty-fold, while the gold exchange has risen over two hundred-fold; in part this disparity may be due to increases of capital, in part to the ever-smaller gold value of dividends. Bonds on the 18th were quoted: War Loan 90, Fours 1240, 3½ per cent. 499, Threes 5,000, Colonial Fours 9,000, Savings and Premium 315, Forced Loan 35.50, Prussian Threes 208, Hamburg Staats-Rente 3½ per cent. 360, Berlin Fours 1912, 150.

Prices are moving steadily upwards. The Railways Council has decided to increase fares by 40 per cent., and freight rates by an unstated percentage which will be sufficient to cover operating costs. Coal prices were raised all round from the 16th, standard Ruhr (*Foederkohle*) from 114,117 marks to 143,510 marks per metric ton, foundry coke from 175,871 marks to 220,570 marks. The new pig prices are: hematite 804,000 marks, foundry iron I. 774,000, ditto No. III. 771,000, Siegerland steel-iron 844,000 marks, Spiegeleisen (6 to 8 per cent. manganese) 935,000 marks. Ingots have been raised to 965,000 marks, bars to 1,348,000 marks, and thick plates (5 mill. and over) to 1,519,000 marks.

Measures for facilitating export continue. A decree is impending abolishing export licences for large categories of goods, which will in future be exportable on condition that the export is simply registered and that proof is given that the goods were invoiced in a high currency, and that 40 per cent. of the currency was delivered to the Reichsbank. Foreign trade values in March were: imports 503,100,000 gm against 446,200,000 gm in February; exports 435,800,000 gm against 360,600,000 gm. The increase in import values was expected, being mainly due to the more than doubled imports of fuel; but it is remarkable that exports of textiles, paper, paper wares, chemicals and some sorts of machines increased despite the conditions in occupied territory. Patent fees have been increased. The limit for a patent is fifteen years. The application fee is 21,000 marks, annual fee 21,000 marks for the first year, rising to 49,000 marks for the fifth year, 210,000 marks for the tenth year, and 1,400,000 marks for the fifteenth year. Business continues dull; reports from individual industries show that the mark-exchange drop had a certain animating effect, particularly in the boot branch. In the Metal Workers' Trade Union the unemployed rose during April from 2.30 to 6.49 per cent.

ITALY. — SIGNOR DE STEFANI'S SPEECH — AN ITALIAN GEDDES COMMITTEE—THE DEFICIT FOR 1923-24 — NEW DEBTS AFTER 1914 — TREASURY CONTROL — ECONOMIC IMPROVEMENT.

(FROM OUR CORRESPONDENT.)

TURIN, May 20.

THE great financial event of the week has been the speech of Signor De Stefani, Minister of Finance, at the Scala Theatre, in Milan. The interest centred in the final figure of the reduction of the deficit, which was the avowed aim of the Fascist Government to reach. The results of the work of a small committee may be summed up as follows:—Net decrease in expenditure, 1,305 million lire; increased yield of revenue, 442 million lire; net reduction in the deficit, 1,747 million lire. The totals of revenue and expenditure estimated for the financial year 1923-24 are now, therefore, as follow:—

	(Millions.)	Revenue.	Expenditure.	Difference.
Ordinary budget	14,332.5	12,368.8	..	+ 1,963.7
Extraordinary budget....	1,233.0	5,812.8	..	+ 4,579.7
Total	15,565.5	18,181.6	..	— 2,616.0

These figures call for comment. In the extraordinary revenue are included 1,000 millions for German reparations, a more than doubtful item, from which it may be expedient to deduct 750 millions. On the other side, in the ordinary expenditure there are included 1,153 millions as interest on the sums due to Great Britain and the United States. It may safely be assumed that not a penny will be paid on this score, at least in the next financial year. This is a matter which will be eventually arranged between interested Powers, but it seems useless to budget next year for payments which will not be made.

The deficit of State Railways is estimated for 1923-24 at only 374 million lire. This may be, perhaps, too sanguine. And it may be that new unavoidable expenses may arise, which will add something to the deficit. Summing up, it seems probable that, with 750 millions less income than budgeted and 1,153 millions less cash expenditure, the Budget, even allowing for 400 millions unforeseen expenditure, will close with a deficit of about 2,616 million lire, as estimated by Signor De Stefani. Up to 1,500 millions, the ways and means to pay for this deficit are already provided, as the Government has announced its intention to pay no more war damages compensation in cash. Next year the sum of 1,500 millions, which is included in the above estimates of extraordinary expenditure, will be paid in the form of 25-year 3½ per cent. bonds compulsorily given at par. The remaining 1,100 million lire deficit will be easily covered by nine-years Exchequer 5 per cent. premium bonds, which find in Italy a ready market at an issue price of 99 or 99½. The new internal debt created in Italy every year since the war may then be calculated as follows (in millions of lire):—

1914-1915	2,629.3	1919-1920	13,117.5
1915-1916	5,643.0	1920-1921	13,513.5
1916-1917	9,555.2	1921-1922	6,286.1
1917-1918	14,012.5	1922-1923 (estimated) ..	4,000.0
1918-1919	11,961.0	1923-1924 (estimated) ..	2,616.0

The greatest decrease took place from 1920-21 to 1921-22, when Signor Giolitti abolished the bread subsidy, the greatest scourge of our Budget. After that great feat the betterment was continuous. The last billions are diehards indeed; and Signor De Stefani deserves great credit for the valiant efforts to eliminate the causes which compel the Treasury to incur new debts.

He is distinctly optimistic; and, truly, the fact that the ordinary Budget shows a surplus gives stimulus to hopes. But are extraordinary expenses bound to decrease? Of the huge sum of 5,812.8 millions, the greatest item, 1,500 millions yearly for war damages in invaded provinces, will disappear in about six years. Another formidable item—1,318 millions of war pensions—will disappear also, if more slowly; it is estimated that the expenditure will fall below 1,000 millions in 1929-30, and below 500 millions in 1946-47. The railway deficit, estimated at 374 millions in 1923-24, should be cancelled in three years; and so will be cancelled the postal deficit of 81 million lire.

Signor De Stefani laid great stress on the efficacy of the British Treasury in checking expenses and controlling expenditure departments. All efforts to increase the powers of the Italian Treasury over spending departments are meritorious; and to that end Signor De Stefani has decreed that the departmental accountants shall no more be appointed by the spending Ministers, but by himself as head of Treasury, and shall be the subordinates of the Accountant-General of the State. Ministers shall no more have authority to order departmental accountants to countersign an order of payments or expenditure. Expenditure will be authorised only when bearing the consent of the Accountant-General of the State and his subordinate officials. Perhaps this seemingly little reform will be the greatest achievement of the new Government in financial matters.

Economic conditions in Italy, as seen by Signor De Stefani, are improving. Unemployed, after increasing from 88,101 at July 31, 1920, to a maximum of 606,810 at February 1, 1922, decreased to 498,606 at April 1, 1922; reached bottom with 304,242 at August 1, 1922; increased as usual in the winter to a maximum of 391,974 at February 1, 1923, only to decrease to 280,201 at April 1, 1923.

Imports decreased from 17,267 million lire in 1921 to 15,728 in 1922, while exports increased from 8,275 to

9,293 millions, the adverse balance thus falling from 8,992 in 1921 to 6,435 millions in 1922. In the last three months for which figures are available—December, 1922, to February, 1923—imports increased by 296 million lire, chiefly owing to larger takings of raw materials—e.g., cotton, wool, coal, and metals; but exports increased 352 million lire, silk and cotton textiles and agricultural products contributing largely.

Railway traffics are also increasing; in the first quarter of 1923 11.8 million tons of goods were carried, against 9.5 million tons in the corresponding months of last year. Passengers were decreasing in numbers in the last two months of 1922, but the total was gaining ground in the first two months of 1923.

HOLLAND.—AUSTRIAN RECONSTRUCTION LOAN—POSTAL GIRO SERVICE—BANKING AFFAIRS.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, May 18.

THE Second Chamber has not yet come to a decision whether this country should or should not participate in the guarantee of the Austrian reconstruction loan. The general feeling, even of the Socialist party, is that Holland should not stand aloof from this united action which may have far-reaching effects in reconstruction work over a wider field. The attention of one of our leading banks was directed some years ago to the reconstruction of Austria: in fact, in 1920, the Rotterdamsche Bankvereniging formed the Reconstruction Bank for Austria. On the other hand, Holland has already lost some money to Austria in recent years—apart from the serious loss in Austrian securities caused by the fall of the crown. But some years ago we lent 24,000,000 fl to Austria for the import of foodstuffs, and although the loan was guaranteed by all the principal banks, 9,000,000 fl were not paid back. The chief objection to the guarantee in question is Protocol I, because this has the political effect of forbidding Austria to unite with Germany. People here ask why they should meddle with Austria's sovereignty, and are not impressed by Austria's consent to this condition. The question of participating in the Austrian reconstruction loan has one difficult side. It may be expected that the banks will in the first place be invited to lend their assistance. Now the banks have as a whole a bad year behind them, and moreover, the general feeling in the banking world is that the investing public will be extremely cautious as to putting further money in a country where it has had such bad experiences. The banks are afraid of being saddled with too big a parcel of reconstruction loan which they cannot afford in view of their liquidity.

Among bankers there is a growing dissatisfaction against the Postal Cheque and Giro Service because large amounts of liquid money which used to go to the banks in the shape of deposits and balances in current account are now attracted by this governmental service which allows interest in competition with the banks. It is argued that the service should not allow any interest, or only up to a certain limited balance, since its chief activity should consist of rendering easy the transfer of sums due by one current account holder to another, but not of competing with the banks. This giro system has developed remarkably since its establishment in 1918. At the end of that year it had 4,000 accounts, and now after five years it has 90,000. The aggregate balances of all the accounts amounted to 38,000,000 fl at the end of 1918, and 207,000,000 fl at the end of 1922. In the latter year the giro service effected over 14,000,000 transactions, the giro service effected over ten milliards of florins. Whereas involving an amount of ten milliards of florins in the use of paying by bank cheques, as it is in vogue in your country has never developed quite satisfactory here—especially not for payments of minor amounts for household bills and the like—the giro system has been a great success. Another source of trouble to the banks are the treasury bills, which have more and more become a form of investment of liquid means of industrial companies, &c. It will hardly prove possible to suppress either form of competition. It should not be forgotten that, quite naturally, the public has been a little scared by some defaults among the banks.

The banks have, on the whole, had a rather disadvantageous year, and the accounts show that important losses have again been suffered in 1922. In this connection it was rather a surprise to the banking world that the Disconto Maatschappij in Rotterdam had to write off 30 per cent. of its capital. A year ago this little bank had to tide over a difficult time, but managed to make its position more liquid; and as the direction had always rested in conservative hands, the feeling was that the bank should surmount the difficulties without losing a feather in the fight, but this had not been so.

CANADA. — AGRICULTURAL CONDITIONS — ROYAL COMMISSION ON GRAIN TRADE—TAX ON GRAIN FUTURES — THE MERCHANT MARINE—BANK ACT REVISION—TRADE RETURNS.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 7.

FROM end to end of Canada farmers are now busy upon the land. On an average, seeding is a fortnight later than usual, but it is held that the very moist and satisfactory condition of the seed-bed in most districts will compensate for the delay. In the West seeding is now general everywhere, and indications are that there will not be any curtailment of wheat acreage in Alberta, and the decline in the acreage in Saskatchewan and Alberta due to lateness, and water on the land, will be considerably less than was feared a fortnight ago. Land, especially in Manitoba, which is not dried off in time for wheat will probably be seeded down with flax, which can be planted with safety up till June 8th, and for which the world outlook is good. By May 5th Alberta had seeded 75 per cent. of its normal wheat acreage, and anticipated a substantial increase in the area planted with oats and fodder maize. The latter crop, as well as sunflowers, sweet clover, and lucerne, will be much more extensively planted in all three prairie provinces, because large numbers of farmers, in disgust with the recent results of growing grain for export, are determined to transform the produce of their land into beef and pork, for which the markets are now reasonably satisfactory. Stock has emerged from the winter in very good condition considering its severity, and pastures, especially in Eastern Canada, are already abundant, the change wrought in the last week being amazing. Western cattle raisers are encouraged by the news that agricultural opinion in the middle Western States of the Republic is convinced that the tariff barriers now maintained against Canadian cattle are quite futile, and have simply served as an impediment to a very profitable trade, whereby Canadian store cattle were sent south each autumn in thousands to be fattened on the maize crops of Iowa and Nebraska. Many agrarian leaders in the United States profess a willingness to see the old arrangement restored, and if this occurs, the export of Canadian store cattle to Britain is never likely to reach very large dimensions. Meanwhile, the Federal Government has announced the personnel of the Royal Commission on the Grain Trade, which they have appointed on the recommendation of the special agricultural committee of Parliament. As it includes no practical farmer or member of the Western grain trade, it does not command any great enthusiasm. On May 1st a new tax on grain futures imposed by the Provincial Government came into force in Manitoba. It is levied on sales, and not on purchases, and the grain trade has never seriously opposed it. A buyer of 10,000 bushels of wheat for future delivery will pay no tax, but if he sells it without taking delivery he must pay on wheat 6 cents per 1,000 bushels, on flax 12 cents, and on oats, barley, and rye 3 cents. On the basis of last year's trading, it is expected to yield about \$2,000,000. Some proof of the magnitude and stability of the Winnipeg grain market can be gleaned from the fact that 12,670,000 bushels of wheat were delivered through the clearing house on May 1st, and yet the market broke less than one cent. Navigation on the Great Lakes is late in opening, and there are very heavy stocks of wheat piled up at the Thunder Bay ports.

The official statement of the operations of the Canadian

Mercantile Marine last year shows a total deficit, including interest and depreciation, of \$9,649,478. The operating deficit was \$2,384,189, and to this there had to be added \$4,078,277 for interest on notes due the Government, \$2,932,130 for depreciation and other small items. The report states that outward tonnage was well maintained, but inward business, especially from the United Kingdom and Australian ports, was difficult to secure, and most of the voyages resulted in a loss. The Canadian National Railway directorate, who now manage the Government ships, recommend that the fleet be kept in operation as an ally of the C.N.R., but that only 37 of the larger ships be retained, and that the balance be disposed of. They also urge that the capital cost of the vessels be written down to what may be considered replacement value, and the figure of \$50 per ton, which is about one-fourth of their average original cost, is being suggested.

Since the Easter recess the Banking and Commerce Commission has held two sittings on almost every Parliamentary day, and have been able to make very substantial progress. During the past fortnight a long string of witnesses have appeared. The case for the existing system was put most effectively by Sir Edmund Walker, the president of the Bank of Commerce, and other bankers who gave evidence were Mr C. E. Neill, general manager of the Royal Bank, and Mr H. O. Powell, of the Weyburn Securities Bank. Major C. H. Douglas, who has been brought over by the Progressives, outlined his scheme of credit reform, and a most interesting witness was Professor Irving Fisher, of Yale, who unfolded his scheme for the stabilisation of the dollar. A number of other economists, accountants, farmers, and detached critics of the banks have also given evidence. The Progressives, however, have made private representations to the Cabinet, where their plea for postponement has some support, and if these fail they plan to start a regular blockade of the Act, which in view of its length and the Parliamentary rules at Ottawa would be easy to make effective. They have the support of most of the Western papers, and resolutions urging postponement are pouring into Ottawa from agrarian associations. Under such circumstances there is no certainty that the new Bank Act will become law this year.

Brief particulars of the trade returns for the full fiscal year 1922-23, which ended March 31st, are subjoined:—

	1921.	1922.	1923.
Total imports.....	1,240,158,882	747,804,332	802,465,043
Total exports.....	1,189,163,701	740,240,680	931,451,443
Foreign exports	21,264,418	13,686,329	13,844,394

The distribution of trade between Canada and the United Kingdom and the United States is as follows:—

Imports for Consumption.		Exports (Canadian.)	
From U.K.	From U.S.	To U.K.	To U.S.
141,287,671	540,917,432	379,067,445	369,080,218

While far below the figures of 1921, they show a gratifying increase over the 1922 returns both in exports and imports.

SOUTH AFRICA.—SHOULD THE UNION RETURN TO THE GOLD BASIS?—VARYING VIEWS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, May 2.

The Select Committee of the Union House of Assembly on Public Accounts has been considering the Currency and Banking Act Amendment Bill. Some highly interesting evidence was given by prominent bankers and others on several points, chief among which was the desirability or otherwise of South Africa returning to the gold basis of currency. Mr W. H. Clegg, Governor of the South African Reserve Bank, was the first witness, and others were the general managers of the three commercial banks, the Standard, the National, and the Netherlands; directors of the Reserve Bank, and the Secretary for Finance.

Clause two of the Currency and Banking Act Amendment Bill provides for the extension of the period of suspension of the redemption of gold certificates by two years to June, 1925. The general recommendation was made by the Board "off their own bat," to repeat the

colloquial expression used by the governor of the South African Reserve Bank, without any instigation whatever from the Government. Mr Clegg explained that gold had reached a point very close to parity, but it was an extremely uncertain thing whether when parity was reached London would establish a free gold market. The advantages of maintaining a stable rate with Great Britain were greater than any advantages that could be obtained by taking what might be called "a plunge and starting off on its own basis." In any case, it would be extremely difficult for a small country like South Africa, between 57 and 60 per cent. of whose trade is with Great Britain, to maintain itself on a gold basis if Great Britain did not, and, therefore, it was far better at present to wait and see how things would develop.

Among the points made by Mr Clegg in his evidence were the following:—The fact that the Union was a gold-producing country did not in any way give her an advantage, as the gold produced on the Rand was one of the commodities sold in order to pay for imports. A premium existing on gold in any other part of the world would attract gold to that country, unless the Government is prepared to pay the premium so as to keep the gold in the Union. The embargo on the export of gold lapsed in June last year, but people could not get hold of gold to export. The amount of gold held in South Africa as gold specie is very small, a mere "fleabite" in the world's market. The example of South Africa in going on to gold coinage would have no effect whatever on any other country. Trade relationships between Great Britain and South Africa are so strong that the two currencies move *pari passu*. If gold left the Union, causing a visible continuous diminution of the base upon which credit is erected, a panic would ensue, and the only way would be to go back to the Act again. It was in the interests of every bank in the country to have a central bank, which gave far more elasticity, and, therefore, the commercial banks should welcome it.

Mr L. P. Gibson, senior general manager of the Standard Bank, explained in a memorandum his objections to the revised constitution of the Board of the South African Reserve Bank, which provided for the non-continuance of representatives of the commercial banks, but this memorandum is not published. South Africa, Mr Gibson contended, was not in a position to revert to the gold basis, as she would lose her gold in a month. The fact that South Africa was a gold-producing country did not alter the position at all. If her debts were paid out in gold, it would simply go out in a flood. Gold was produced as a commodity and sold in the world's markets. "You cannot help it if the price is against you." Gold operations are very large, and all South Africa has got could go out in one operation.

Mr H. C. Hull, a director of the Reserve Bank, and for several years Minister of Finance in the Transvaal, advocates a return to the gold standard as soon as possible. Mr William Dunlop, general manager of the National Bank of South Africa, on the other hand, said that while it was the ideal thing to get on to a gold basis, it was neither practicable nor desirable at present.

Sir Ernest Chappell, K.B.E., another director of the Reserve Bank, said in South Africa the practice existed of doing business in loan credit, and a good deal of effort was required to get a sufficiency of bills (for note cover). Bills increased enormously, but as the established practice of the country was difficult to move, and because of the heavy falling off in business, the Reserve Bank did not get the bills they wanted and expected. His opinion was that direct discounting should be extended. If they could educate South Africa to the same point of business which prevails in older countries, of business being done on bills, the necessity for Treasury bills (to constitute 35 per cent. of the note cover, besides 25 per cent. bills and 40 per cent. gold) will fall away; the banks themselves are seeing the wisdom and convenience of the bill system.

Mr J. Postmus, general manager of the Netherlands Bank of South Africa, differing from his colleagues, was not in favour of extending inconvertibility of notes for a further two years. There was, in his opinion, no indication that people who advocated that South Africa should not go back to gold were right. Drainage of gold, he thought, would be prevented by

the banks arranging their exchanges. Even if it did drain away, it would not matter. "We produce gold," he said, "and cannot eat it. We must export it. Why not, then, export it to a country which is prepared to give us goods in exchange? Those who produce gold should have the right to sell their product in the best market. Our monetary position is so strong that we could be on a level with America." The possibility of the British sovereign going higher than its gold value, as suggested by Mr Hirst, was, he thought, very remote. He could not see it would make any difference to the banks if the gold standard were reverted to immediately.

Mr Clegg, in his final examination, said he would not advocate South Africa going back to the gold standard by herself in existing circumstances. Great Britain was so uncertain of what the effect might be of going back to gold, in view of her enormous debt to America, she will be very careful of going back until she knows she can remain there. Nothing would be worse for the business world than uncertainty. "I think," he said, "there is more possibility of our getting on to the gold standard in conjunction with Great Britain without loss to the country than our attempting, at present, to act on our own."

On behalf of the Gold Producers' Committee of the Transvaal Chamber of Mines, Mr W. Gemmill, actuary and labour adviser, discussed the possibilities, indicated by Mr Hirst, of the British Government endeavouring to depreciate the value of gold, as measured in British currency, so as to reduce the burden of the annual debt charge to America, and of advantage being taken of any further depreciation in the dollar to inflate British currency maintaining the Bradbury on a par with the dollar, and simultaneously increasing commodity prices in the United Kingdom. "In either event, gold would be depreciated in terms of commodities with serious consequences to the gold mines. Dangers of this description would continue to arise until the United Kingdom has returned to a gold basis; indeed, the sooner the world generally returns to a gold basis the better, from the point of view of gold mining."

ARGENTINA.—TRADE RECOVERY—THE FINANCIAL POSITION.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, April 23.

ARGENTINE commercial movement, considered as a whole, is at the moment distinctly satisfactory, both import and export trade showing a healthy tone and a larger turnover than has been seen for a very long time. The recovery is to a certain extent sudden. For, though at the opening of 1923 expectations were high, slow movement and poor prices in the export trade led to a reaction. To-day all Argentine produce is in demand. Maize is turning out much better than was expected, both as to quantity and quality, while the phenomenally large crop of linseed is being sold as fast as it can be shipped, not only to the United States, but also to Europe, the local quotation being over \$22 Argentine paper per 100 kilos, as against the quotation given in December of \$17.80, April-May delivery. Import business is brisk owing to the desire of merchants to forestall probable increases of duties. Customs dues collected in Buenos Aires port to date, for the current year, are \$84,300,000 Argentine paper, or, in the current year, are \$84,300,000 Argentine paper, or, in round figures, some twenty-eight millions more than was collected during the corresponding period of 1922.

Unfortunately, there are as yet no signs of any determination to tackle the problem of national finance as a whole. In plain language, it costs \$600,000,000 Argentine paper per annum to administer Argentina to-day, in so far as the national Government is concerned; while the far as the national Government is concerned; while the actual budgetary sanctions only amount to some five hundred millions, in cash and in credits. Something must be done, or the great consolidation schemes, upon which Congress will be asked to pronounce directly the 1923 Budget has been dealt with, cannot have more than a temporary effect on the stability of the national finances. Pending such pronouncement the Government, officially at any rate, is refusing to consider loan proposals. But

there is a belief in financial circles that there are various offers in hand. Both London and New York are ready, and, provided Congress is expeditious and businesslike, no time is likely to be lost in putting the matter through. As for the internal part of the plan, all one can say is that the trend of the local money market does not seem to be veering in favour of large lock-up investments, and with increasing demand at better rates for their funds the banks may be less anxious to take up the five hundred million dollars worth of 3 per cent. bonds allocated to them in the original proposal than was the case six months ago.

The question of differential treatment for Argentine as opposed to foreign companies is again to the fore. Not only have the additional rates of taxation been again mooted, but there is also a proposed increase in the amount of the licences payable annually by the foreign insurance companies working in this Republic. Their present scale of licences ranges from \$4,000 to \$10,000 Argentine paper; if the suggestion of the Budget Committee be passed by Congress, the range will be from \$6,000 to \$15,000. Coupled with a 7 per cent. tax on fire and general premium income, and 2 per cent. on life, as opposed to \$1.40 per cent. and ½ per cent. payable by companies whose directorates and domicile are Argentine, this latest charge is not encouraging. Indeed, as the Association of Foreign Insurance Companies in Argentina has pointed out in a very pertinent memorandum addressed to the chairman of the Budget Committee, differential taxation is already reducing their business. Between 1919 and 1922 the drop in fire business alone was 20 per cent., while in marine the diminution is as much as 50 per cent. The rights of the foreign companies to consideration are unquestionable, but inasmuch as it has been said on many occasions of recent years, both in and out of Congress, that nationalisation of the insurance business throughout Argentina is eminently desirable, there is not much hope for the petitioners. It is, indeed, but another manifestation of the new spirit which seeks to limit as far as it can the remission of profits made here to proprietors abroad. The illogical nature of such a view is patent at once, yet precisely the same reasons are at the bottom of the unexpected treatment of the Anglo-Argentine Tramway Company, Limited, in the matter of the fares chargeable under the municipal concession. Reduction from 12 cents to the old rate of 10 cents paper, having regard to the additional charges—contribution to Pension Fund, increased wages, &c., imposed when the 12-cent rate was sanctioned in 1919—means indefinite postponement of dividends on the ordinary shares of the company, in arrears since 1914, and is patently opposed to the facts as stated by the investigatory committee appointed by the Municipal Commission. This committee, made up of a group of young men having theoretic minds and a firm belief in the advisability of nationalising all Argentine public services, certified in their report that the information they sought was rapidly obtainable from the company's books, and that not only did the balance-sheets published in London and Buenos Aires coincide, but that they faithfully reflected the true position of the company's affairs. Yet, after stating that "the capital of the company with last year's profits produced 6 per cent. interest," i.e., with a 12-cent fare, they recommend a return to the old tariff, the ostensible reason being that prospects in general are better, and working costs likely to decline. Granted that the final acceptance of the Committee's recommendations was largely based on political considerations, Radicals and Socialists striving to be first in showing the voting public which party could be relied on to give tangible results, the main fact to be borne in mind is the tendency to believe that national interests benefit by restricting as much as possible all outgoings that take the form of dividends, interest on mortgages, and other monetary profit generally considered as appertaining to capital investment. One cannot imagine that the question of the Anglo-Argentine Tramway Company will rest where it is at present. A more likely supposition is that it will follow, *mutatis mutandis*, a somewhat similar course to that of the railway tariffs, with, it may be hoped, greater celerity.

A motion has been laid before Congress which, if passed, would permit the Treasury to draw gold from the

Conversion Office, against a delivery of the statutory equivalent in paper money, for the purpose of meeting services on external debts. That it would be an exceedingly profitable operation for the Government is clear, but more than mere mention of the matter is inadvisable, since it perforce connects with the whole question of the state of the national finances and currency outlook in general. One may add, however, that as an isolated factor acting on the local exchange market, the periodic effect on rates, should the proposal take concrete shape, would be but small.

JAPAN.—THREE MONTHS' FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

TOKYO, April 10.

THE unfavourable balance of trade which marked the close of last year in Japan has continued during the first three months of the present year, and now reaches a total of over 164,000,000 yen. The figures for the quarter may be summarised as follows:—

	January to March—	
	1922.	1923.
	Yen.	Yen.
Exports	302,641,000	339,764,000
Imports	582,964,000	503,794,000
Total	886,605,000	843,561,000
Adverse balance	279,328,000	164,033,000

The main cause of the persistence in an unfavourable trade balance is the steady decline in demand for exports of cotton goods and silk fabrics, together with an equally steady increase in raw cotton imports. In the export trade 18 out of 30 principal articles showed a decrease, the principal items being starch, tea, waste silk and silk fabrics, coal, lumber, cottons, iron, matches, cement, tyres, and machinery. Ten articles registered small gains. On the import list 19 out of 30 chief articles of trade experienced a decline, of which the following may be mentioned:—Rice, wheat, eggs, sugar, sulphate of ammonia, ores, lumber, dyes, woollen yarn, pulp, iron and steel, woollen cloth, and paper, the principal gains being raw cotton, beans, coal, and machinery. The general trend of trade has been the reverse of what business circles appear to have expected. Trade with China and Germany shows a tendency to increase.

The efflux of gold from Japan continues to increase, and the total of the national reserve has been reduced by as much as 2,000,000 yen in the last few weeks, owing largely to sales of bullion. The total gold holdings now stand at 1,803,000,000 yen, of which £46,000,000 yen is held by the Government and 1,157,000,000 yen by the Bank of Japan; and of the total 1,208,000,000 yen is in Japan and 595,000,000 yen abroad, mainly in England and the United States. The note issue of the Bank of Japan on April 6th amounted to 1,131,297,000 yen, against a gold reserve of 1,057,176,000 yen.

Letters to the Editor.

THE OUTLOOK IN TURKEY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your readers who have intimate commercial ties with the East and are longing for a sane régime in Turkey will heartily welcome the admirable and illuminating article in your issue of the 12th inst., which entirely confirms the private intelligence which reaches me from Asia Minor correspondents.

Mr Bonar Law and Lord Curzon have chances of regaining British influence in Ottoman Councils if they follow the dictum of Lord Currie in dealing with the Turk—"Always pursue an open and honest policy: act with courage and wisdom."

It is, Sir, not the least of the avoidable tragedies of the past 10 years that, owing to a mixture of arrogance, evasion, crookedness, and ignorance, our political over-seers have lowered the prestige of our nation in the East, gone out of their way to make enemies, checked British trade and progress, and well-nigh ruined our "Imperial

destinies" in every corner of the world. In Constantinople and Cairo (where we had many loyal friends amongst the notables) our weakness and vacillation has filled true allies with despair. Those who look to Lausanne for a settlement will, I fear, look in vain, because it is plain from the reports in the Press that the delegates are blind to the teachings of history and have overlooked the records of the past. Take, for example, the question of the capitulations. These were voluntary, unilateral, and gratuitous. In the sixteenth century the Sultans, to suit their own pleasure and to encourage trade with Europe, made certain defined concessions to foreign traders and settlers simply because Ottoman polity, social customs, the laws of inheritance, procedure, and civil jurisprudence were unsuited for dealing with the affairs of aliens. All who have resided in Constantinople, Smyrna, or Cairo know that the same legal conditions exist to-day as in the reign of Queen Elizabeth, because of the operation of the unchangeable Law of Islam. We do not complain of this, but simply recognise the fact. But Turks and Egyptians have ample grounds for demanding the repeal of scandalous exemptions from local taxation (never contemplated by the Imperial Firmans of the sixteenth century), which have been tacked on wrongfully to the original concessions, and as our financial interests in Turkey, built up slowly and involving many millions sterling, entirely outweigh those of any other nation, we have an equitable right to make our voice heard in advising Turkey. Lord Currie has left us a guide—in his experience as Ambassador a valuable guide—which his Majesty's Government would do well to follow.—Yours obediently,

EDWARD ATKIN.

STATISTICAL ANALYSES OF SELLING EXPENSES.*

IN the United States, during the decade before the war, there had originated a systematic examination of the conditions of production, selling, and distribution, which experience in the war and since has but intensified. Its avowed purpose is to promote greater efficiency in every department. Its outward manifestation is to be found in the campaign for scientific management; in the establishment of elaborate systems of cost-analysis, joined to which will generally be found mechanism for studying the internal statistics of the business; in the initiation of statistical bureaux which place at the disposal of the small business the same facilities for collecting and discussing both internal and external statistics as the larger business is able to organise for its own use; and in the foundation of commercial departments in the universities. These departments are not contented with the provision of more or less elaborate courses in the theory of commerce, but push their activities into the field of research. Of late years there has been an awakening to the necessity of similar study in this country, and though a good start has been made in the London School of Economics, the commercial departments of our universities, the increasing study on systematic lines by our Press, and other ways, still we are far behind the States in our convinced ardour for the crusade. It is possible that our late start may yet redound to our advantage, by enabling us to avoid some of the errors into which our trans-Atlantic friends have fallen from time to time, just as our own experience in railway construction enabled those who followed us to profit by our failures and errors. The book under review is a case in point. It presents the second of two studies on commercial practice in the retail distribution of clothing in the United States. The present study was undertaken to find out what it costs to sell clothing in stores, and also, if possible, the principles governing these costs, and the methods by which they may be controlled. The study was carried out by the Bureau of Business Research of the

* "Selling Expenses and Their Control." A Study in the Retail Distribution of Clothing. By North-Western University School of Commerce Bureau of Business Research, Horace Secrist, Director, in Co-operation with the National Association of Retail Clothiers. Prentice-Hall, Inc., New York City, 1922.

North-Western University School of Commerce, under the direction of Mr Horace Secrist, who is already known as the author of a handbook of statistics treated from the business point of view. The book claims to have shown "that the relations of selling expense to sales and to total operating expense are governed by conditions which, to a large extent, are subject to effective merchandising control; that they vary according to clearly defined principles, and that these principles can be stated, and the conditions of expense distribution under them measured." An immense amount of labour has evidently been expended on the study, and the book is got up in a style befitting the expenditure of labour, but it is difficult to admit that the results obtained are commensurate with this output. Here and there, no doubt, interesting and sufficiently important results are obtained. Thus one learns that wages and salaries per \$100 of net sales increase with the size of the turnover, in each of the three years, 1914, 1918, and 1919, considered, and that the percentage of advertising expense decreases at first, but afterwards increases with the size of the turnover. Further, there has been a small but general reduction of the ratio of selling cost to net sales from 1914 to 1918, and again to 1919. Perhaps the explanation of this lies in the movement towards efficiency to which reference has been made above, though no explanation is attempted by the authors themselves. Indeed, the want of any attempt to identify tendencies elicited by statistical methods with causal sequences, and to discuss them in that light, is a cardinal weakness of the work. Another source of weakness lies in the unfortunate selection of units employed. Of these there are some 41 in all, 20 simple, 21 complex. Of the former some, such as the ratio of various selling expenses to total net sales, are legitimate, and others, such as selling expense per 100 square feet of floor space, while perhaps legitimate enough, do not appear to be very relevant, in the absence of any explanation as to what physical conception they are intended to measure; but of most of the complex units one can only say that the ordinary mind cannot grasp quite what they mean. What, for example, is the physical meaning of "Expense per \$100 of total net sales per sales per square foot of floor space?" Not only are these complex units difficult to interpret physically, but their use is dangerous, since it may, and in some cases does, introduce spurious correlations amongst quantities that may be entirely independent of causal connection, or at least are much less strongly correlated. As a case in point, take Table 162, where first the ratio of wages to sales, and then the "wages per \$100 of total net sales per \$1,000 of sales per full-time sales person" (i.e., the wage ratio per unit of staff efficiency) are compared with the staff efficiency. There is a small but not invariable inverse correlation between the wage ratio and the efficiency ratio, which is converted into a high (inverse) correlation on division of the former by the latter, but this correlation is almost entirely spurious, and no useful conclusion can be drawn from it. Used with caution, the work may be of benefit to trained statisticians, but it is doubtful how far it will prove of use to the general run of business man, who is unable to separate the grain from the chaff. To have obtained the collaboration of a large business association is much, but one feels that the discussion might have been worthier of the opportunity.

THE LEAGUE AND ITS WORK.*

ONE of the misfortunes of the League of Nations is that its shortcomings always get into the limelight, whereas its merits and achievements attract inadequate notice. We should, therefore, like to see this book of Mr Roth Williams widely read by the British public. The author is obviously impregnated with the League spirit, but he is not a mere up-in-the-air idealist. He tells in plain straightforward language what the League has done and is doing, and there is much in the record that will surprise scoffers. He traces the process of constitutional evolution that the League has undergone since its formation; he explains League machinery, and discusses the attitude of the three great States that are not yet members. Finally, he makes a number of practical suggestions "for equipping our own

* "The League of Nations To-Day." By Roth Williams. (London) George Allen and Unwin, Limited. 6s net.

country to take the lead in getting all countries into the League, and transacting all international questions through the League system, as part of a bold and consistent peace policy in Europe and the world." The League is frequently voted a dry subject. But Mr Williams makes it interesting, as well as instructive. Many people are fond of asking what the League has done, what it is doing, and why it doesn't do more towards solving Europe's troubles. If they will read this book they will find their ignorance dispelled, and their questions fully and capably answered.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
May 30.

ACCOUNT.
May 31.

A variety of reasons conspired against revival of Stock Exchange business when the House returned after the Whitsun holidays. The resignation of Mr Bonar Law, greatly regretted as it is throughout the Stock Exchange, is held to constitute a reason for caution amongst investors, although the appointment of Mr Stanley Baldwin as Premier has given general satisfaction. The utter chaos of the mark and the movements in the franc are responsible for weakness in various directions, more especially, of course, in connection with foreign stocks. Both the Cape and Paris have been sellers on balance of South Africans, while the oil market suffered a fresh spasm of apprehension by reason of another drop in Mexican Eagles. There has been talk of forced liquidation, and possibly a substratum of truth lurks in the rumour that certain people had got out of their financial depth.

The Consol market has scarcely recovered from the surprise which was experienced upon the new India 4½ per cent. scrip being so substantially bought that a premium of ½ was established on the price, in spite of the fact that underwriters were left with 51 per cent. of the stock. This premium gave way

Kaffirs are a dull market, though the pressure to sell from Johannesburg has been slightly relaxed. Nevertheless, the Cape seems to be a seller on balance, and Paris left no support to Diamonds, nor to copper shares. The last-named have been flat, for which the fall in the metal is, of course, partly responsible. Tin went above £200 per ton, but failed to stay there, and upon the price sinking back the markets for Cornish, Malayan, and West African tin shares relapsed into heaviness and inanition. The slump in *Esperanzas*, which lowered the price from 11s to 4s 6d in a day, followed the directors' announcement of reconstruction. This affected, to some extent, kindred shares in the Mexican mining group. Other mining shares have fallen upon quietude, their markets commanding even less attention than is directed to others in different parts of the House. But next week is expected to throw a brighter complexion upon the aspects of business and prices.

COMPANY MEETINGS, &c.

GRESHAM FIRE AND ACCIDENT INSURANCE SOCIETY, LIMITED.

CONTINUED PROGRESS.

ESTABLISHMENT EXPENSES REDUCED.

DIVIDEND INCREASED.

The thirteenth annual general meeting of the Gresham Fire and Accident Insurance Society, Limited, was held, on Thursday, May 24th, at the head offices of the society, St Mildred's House, Poultry, London, E.C., Sir Reginald Macleod (of Macleod), K.C.B. (chairman of the society), presiding.

The general manager and secretary (Mr T. Brand Miller) having read the notice convening the meeting and the report of the auditors,

The Chairman, after expressing regret at the loss which the society had sustained by the death of Mr C. C. Macrae, said: I presume, gentlemen, you will take the report and accounts, which are in your hands, as read. When I addressed you a year ago the country was passing through a difficult and trying period of depression in trade, and I fear it must be admitted there was no material improvement in 1922 over the previous year. While the unemployed, varying in number from 1,250,000 to 1,500,000, were in one form or another artificially supported, while our factories were largely idle and our warehouses only partly filled, insurance business must suffer, and it is therefore in no way surprising that our premium income does not show expansion. It were ungracious not to acknowledge the relief given to taxation by reduction of income-tax from 6s to 5s and again to 4s 6d, and by the reduction of one-half in the corporation profits tax from June 30th. That means that for the year now current one-quarter of that burden will be removed, and I trust it means also that by the next Budget the tax will be finally abolished as being the most illogical, the most partial, and the most unjust of all. The tax as now provided for in our accounts is equivalent to a dividend of 1 per cent. on your capital, and I cannot conceive why shareholders in a company like this are required not only to pay income-tax like other people, but to suffer a diminution of the sum which would be available for their service by the imposition of this peculiar and, so to speak, personal tax upon ordinary shareholders in any business concern. We have no doubt that the country will emerge from its present financial and commercial difficulties gradually but surely, and that our organisation will profit by the improvement as it comes. We are well equipped and ready to take advantage of the tide when it begins to flow. In the meantime, it is gratifying to be able to say that the general financial results of the year's operations find the society in a stronger position than it was twelve months ago.

Taking the accounts for last year, you will notice that the fire premium income amounted to £140,918, and is about £10,000 less than the previous year. The fire claims ratio is 57.6 per cent., and is less by 12.1 per cent. than it was a year ago. The commission and management expenses, taken together, amount to 41.9 per cent., compared with 41.5 per cent. for 1921. The amount required to maintain our reserve at 35 per cent. is somewhat less than in the previous year, and this gives us a balance of £3,468 10s 11d, which has been carried to the credit of the profit and loss account. Coming to the accident account, the premium income

amounted to £111,186, compared with £102,270 in 1921, being an increase of £8,916. The claims paid and outstanding are 42.1 per cent. of the premium income in this department, against a ratio of 44.9 per cent. in the previous year, an improvement of 2.8 per cent. in the claims. The commission and management expenses, taken together, show a ratio of 46.2 per cent., compared with 45.7 per cent., showing a slight increase in the expenses, which the directors trust will be rectified during the present year. As income grows expenses, we may definitely hope, will become lower. Combining the results of the society as a whole, you will find that the total income received was £267,504, and, adding the sum of £427 released from the reserve for unexpired risks, the total is increased to £267,931.

The total claims paid and outstanding represent 50.74 per cent. of the premium income, against 59.60 per cent. for 1921, showing a reduction in the total claims of nearly 9 per cent. The expenses of management and commission accounted for 43.82 per cent. of the premium income, compared with 43.24 per cent., being an increase of 0.58 per cent. over the previous year. The excess of receipts over expenditure is £23,168, which is increased by adding £7,702, the amount brought forward in the profit and loss account from the previous year, to £30,870, which compares with £21,702 in 1921. Our income from investments now amounts to over £10,000, and your directors, having carefully considered the present satisfactory condition of the society, have decided to recommend an increase in the dividend from 5 per cent. to 6 per cent., less income-tax. The amount which will now be required to meet the dividend, £8,850, is still within our interest earnings. The directors have also set aside £12,000 for the reduction of the establishment of business account, which they are desirous of seeing extinguished as soon as practicable. The balance to be carried forward to next year is £10,020. Turning to the balance-sheet, there is, I think, only one item I might refer to, and that is the shares we have in the Dominion Gresham Company of Canada. Our allied society, the Gresham Life Office, and ourselves, have held practically all the shares in that company for some years. During the past year we have considered it desirable to place the Canadian company in sufficient funds to enable the directors in Montreal to apply for the necessary license from the Canadian Government to commence fire business, and we therefore supplied the additional capital required, amounting to just over £10,000, in exchange for which we hold fully-paid 5 per cent. cumulative preference shares, thus increasing our holding in the company to £35,945. The company has a very valuable agency organisation throughout Canada, and it will, we believe, prove a profitable investment for us.

SUMMARY OF RESULTS.

I may summarise the result of the year's operations as follows:—1 per cent. more paid in dividends, establishment of business account reduced by £12,000, and the carry forward is increased from £7,700 to £10,000. In attaining this measure of success in a year so full of difficulty in assurance business, I desire to express our appreciation of the skill and devotion to your interests shown by the general manager, and, under him, by his assistants at the head office and branches.

I may say one word about the future. At the moment our prospects are better than they have been during the last two years. We have every reason to believe that the present year will show distinct progress in our income. The society's business has been built up on sound lines, and we look forward to the future with every confidence of success.

Before concluding, I have an important announcement to make with regard to our head office premises known as St Mildred's House. The building has been found quite inadequate for the requirements of our allied society, the Gresham Life Office, and ourselves, involving the lodgment of sections of our staff in neighbouring buildings, and in consequence the Gresham Life Office, who are the owners of this building, have disposed of it and arranged for the erection of a new building at 188 and 190 Fleet street, which is to be completed by the end of this year, and to which it is intended to transfer the head office organisations of both societies. I trust, therefore, it may be my pleasure to welcome you to our new premises at our next annual meeting. I should also like to say that we intend to open a branch office as near our present offices as possible, for the convenience of the many agents and friends of the Fire and Accident Society in this part of the City. I now move: "That the directors' and auditors' reports be approved and adopted, and that a dividend at the rate of 6 per cent., less income-tax, be paid upon the paid-up capital of the society."

Mr Courtenay C. S. Fooks (deputy-chairman) seconded the motion, and it was carried unanimously. The retiring directors, Mr Laurence Currie and Mr C. H. Beadnell, were re-elected, and the auditors, Messrs Price, Waterhouse and Co., were re-appointed, the proceedings terminating with a cordial vote of thanks to the chairman.

HAMBROS BANK, LIMITED. INCREASE OF LOANS AND ACCEPTANCES.

The eleventh annual ordinary general meeting of the shareholders of Hambros Bank, Limited, was held, on the 24th instant, at the registered offices of the company, 43, Bishopsgate, London, Sir Everard Hambro, K.C.V.O. (the chairman), presiding.

The secretary (Mr J. H. Roscoe) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—You will find laid on the table the directors' report and the statement of accounts for the year ended March 31 last, and I will assume that, according to our usual custom, we may take them as read.

In comparing shortly our balance-sheet figures with those of last year, the chief features are the increase of loans and acceptances, which reflect to a large extent the increased exports to this country from the northern countries which require financing during the late winter and early spring. It has become a practice that the exporter to this country, when making his contract, has, in order to avoid speculation, to secure his exchange, this being the only way he can determine the price at which he can sell; hence the considerable demands upon us during the first few months of the year, which are liquidated by the shipments during the summer.

The banking difficulties in Denmark and Norway have been wisely and ably met, I believe with success, and we may hope to see the result in a steady improvement in the position, with a return to the normal.

Before formally moving the adoption of the report and accounts, I shall be pleased to reply to any questions or observations from any shareholder.

No questions being asked, the Chairman formally moved: "That the report of the directors and audited statement of accounts to the report of the directors and audited statement of accounts to the March 31, 1923, already printed and circulated among the shareholders, and as presented to this meeting, be received, adopted, and entered upon the minutes."

Mr H. C. Hambro seconded the resolution, which was carried unanimously.

The Chairman next moved: "That a final dividend of 12 per cent. for the year ended March 31, 1923, free of income-tax, be declared on the capital paid up, and that such dividend be made payable on and after May 25, 1923."

Mr W. J. Heriot seconded the motion, which was unanimously adopted.

Sir Eric Hambro, K.B.E. (vice-chairman and managing director) I beg to move: "That Sir Everard Hambro, K.C.V.O., Mr H. C. Hambro, Mr W. J. Heriot, Mr J. Jorgensen, and Mr J. C. Priestley, K.C., be and they are hereby re-elected directors of the company."

The proposition was seconded by Mr H. Rendixson (vice-chairman), and unanimously approved.

The auditors having been re-elected, the proceedings terminated.

LUNUYA (CEYLON) TEA AND RUBBER ESTATES, LIMITED SATISFACTORY RESULTS OF THE YEAR.

The sixteenth ordinary general meeting of the Lunuya (Ceylon) Tea and Rubber Estates, Limited, was held, on the 25th instant, in the council room of the Rubber Growers' Association (Incorporated), 3, Idol lane, London, Mr H. J. Welch, chairman of the company, presiding.

Mr John Calderwood, representing the agents and secretaries (Messrs Harrison and Crosfield, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, our issued capital has been increased during the year to £272,800 by the issue of 48,000 shares in respect of the estates purchased in 1921 and by 24,800 shares issued for cash to the shareholders. Our reserve account stands at £30,878. The total cost of our properties and their development and equipment at December 31 last was £290,988. After deducting from our issued capital the excess of our liquid assets over our liabilities, including the dividend to be paid to-day, our issued share capital represented a little over £45 per planted acre, without allowing any value for our reserve land.

TEA AND RUBBER CROPS.

The tea crop harvested amounted to 2,308,951 lbs, against 2,248,427 lbs in the previous year. The f.o.b. cost of production was 8.62d per lb, against 6.52d per lb. The higher cost was principally due to increased expenditure on cultivation and labour. The net average price realised was 1d per lb lower than in the previous year. A little more than half the crop was sold forward under contracts made early in January, 1922, for what were considered then to be satisfactory prices. The remainder of the crop was sold on the open market, and realised less than 1d per lb more than that sold under forward contracts.

The restricted rubber crop harvested was 69,639 lbs, against a

crop of 20,005 lbs in the previous year. The cost of production f.o.b. was reduced by almost 2d per lb, and the net average price realised was 4.36d higher than in the previous year. 2,467,442 coconuts were gathered during the year, of which 2,444,561 nuts were converted into 455 tons of copra. The f.o.b. cost of production was equivalent to £12 6s 3d, and the net average price realised was equal to £20 1s 7d per ton. The details of the planted areas are set out in the report. Except for 43 acres of tea, our areas are all mature. The labour force was sufficient for all requirements, and the general health conditions were satisfactory. The visiting agents report that the estates are all in good condition.

PROFIT AND ALLOCATIONS.

The profit for the year amounted to £39,872, to which has been added the amount brought forward from last year, making £43,785. After deducting the interim dividend of 5 per cent. paid in October, there remains a balance of £33,726. The directors recommend that the balance of outstanding labour advances, amounting to £10,000, and the increase of capital expenses, £1,031, be written off, and that a final dividend of 7½ per cent., less income-tax, be paid for the year, leaving £7,265 to be carried forward. Having regard to the liberal depreciation written off in previous years, and the heavy amounts written off labour advances this and last year, the directors have not thought it necessary to make further provision for depreciation this year. The directors believe the buildings, machinery, plant, &c., stand in the balance-sheet at below their real value, and they propose making an investigation into the matter in the course of the current year.

With the writing off of the labour advances, and the increase of capital expenses, which is proposed out of last year's available balance, all the items not represented by real assets will be removed from the balance-sheet. Our restricted rubber crop for the current year is estimated at 96,500 lbs, and of this we have harvested to April 30th, 24,181 lbs, against 23,756 lbs for last year. Our coconut crop is estimated at 2½ million nuts, of which we have harvested to April 30th, 439,721 nuts, against 468,462 nuts in the previous year. The estimated tea crop for the current year is 2,460,000 lbs, of which we have harvested to April 30th 892,729 lbs, against 827,004 lbs for last year, an increase of over 65,000 lbs. We have sold forward approximately 57 per cent. of our estimated crop at prices which will give us a net average price of approximately 1s 3¼d per lb, as compared with 1s 0.66d per lb last year. The balance is being sold on the open market, and is obtaining satisfactory prices. In conclusion I wish to acknowledge the valuable services rendered during the year by our agents, visiting agents and various members of our estate staffs. I now beg to move: "That the directors' report and statement of accounts for the year ended December 31, 1922, as now submitted, be and they are hereby approved and adopted."

Mr C. Heath Clark, J.P., seconded the resolution, and it was carried unanimously.

A final dividend of 7½ per cent., less tax, making 12½ per cent. for the year, was declared, the retiring directors, Mr C. Heath Clark, J.P., and Mr C. H. Bagot, were re-elected, and the auditors, Messrs McAuliffe, Davis and Hope, were re-appointed.

VICKERS, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The fifty-sixth annual general meeting of the members of Vickers, Limited, was held at River Don Works, Sheffield, on the 24th instant, Mr Douglas Vickers, chairman of the company, presiding.

The secretary read the notice convening the meeting and the auditor's report.

The Chairman dealt in detail with various items in the balance-sheet, and in the course of his remarks he pointed out that the reserve accounts stood at the same figure as last year. Referring to the question of depreciation, he said it would be noticed that again for 1922 nothing had been written off the plant of the parent company. In view of the figure of £3,200,000 standing on the other side of the balance-sheet to works reserve account, it was the directors' opinion that the question of depreciation might with perfect safety be left till conditions became more normal.

Proceeding, he said:

Interests in subsidiary and connected companies.—These stand in the balance-sheet at a figure about £124,000 below that of 1921, due mainly to reserves made out of profits.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, the profits for 1922 are £683,204, a decrease of nearly £25,000 as compared with the previous year. By drawing upon the carry-over to the extent of a little over £169,000, your directors are able to recommend the same dividend on the ordinary shares as for 1921, after paying the usual preference dividends in full. The carry-forward still stands at the substantial figure of £703,907. The final settlement of certain taxation questions has contributed partly to this result by

allowing reserves which had previously been made to be brought in. Shipbuilding was depressed all the time, and shipbuilders all over the country, in their eagerness to obtain work to keep their yards going, were not only prepared to quote prices which included no profit and even only a part of their proper charges, but also to accept deferred payments. We have succeeded in obtaining an order for a first-class liner from a new customer, the Orient Company, as well as a few ships of smaller importance, one fitted with internal combustion engines of the company's type. These engines, which are the result of application to merchant ships of the company's very large experience gained in the construction of engines for submarines, have shown great reliability and extremely economical results in actual work. The attention of ship-owners has been fixed on the internal combustion engine for some time, and now that they have been proved successful it is probable that a large proportion of the ships of moderate size of the future will be fitted with this type of engine.

LAND BOILERS—NEW FIELD.

The substitution of the internal combustion engine for the steam engine, and the small prospect of orders for warships with the large engines, make it clear that there will be great difficulty in the future in filling the large boiler shops at Barrow with work. We, therefore, soon after last year ended, decided to break into a new field—that of land boilers. We thought the best course was to make a working arrangement with a firm which already carries a good name in the land boiler trade, and we have, therefore, made such an arrangement with the Spearing Boiler Company, the well-known boiler designers, by which we enter that organisation. We shall manufacture for them and start with the advantage that is obtained by using a recognised and well-known type. One interesting point is that the combination will put the company in the position of being able to equip a complete electrical power station from the boilers to the turbines and generators, and the switch-board and cables distributing the current.

As to these works, railway work was also to be had only in small quantities, and there was little armament work beyond the armour for Japan, which was finished about the middle of the year. Towards the end of 1922 the Government placed orders for supplies for two battleships, of which we got our fair share. Some expenditure on capital account has been incurred in this factory to enable it to satisfy new requirements in connection with these orders. The spring department, which was originally confined to motor-car springs, has been extended with success to railway springs.

The company's carriage and wagon interests were slack, the Ashbury works (near Manchester) having even been closed down the whole of the year. Fortunately, an order of some magnitude for wagons from the East Indian Railways made it possible to keep the Birmingham works going. There were also a few orders for carriages. The year of the Metropolitan Carriage Company only ends on March 31st, but a sum on account has been brought into the profits of the parent company.

The Wolsley Company's accounts for the year ending in September last are not yet closed, but we know that the results were unsatisfactory for reasons which I gave last July. Their output was disorganised by the engineers' strike, coming on top of the moulders' strike not many months before. Orders have, however, come along in larger numbers, and the deliveries of the last few months, particularly of the medium types, have been considerably higher than they ever reached before.

THE OUTLOOK.

Speaking to you last July, I said that there were points which indicated that the skies might clear. If to-day's meeting had been held a few months ago, I think I should have said that my hopes

were then on the point of being fulfilled. Unfortunately, about that time the French occupation of the Ruhr district began; the production of coal and steel in that district was reduced and diverted from its natural course, with the result that prices of coke and coal rose here, and those of steel followed, with the natural result that the costs of these rose to a price which holds off those buyers who have not already been frightened away by the uncertainty of the political situation. Coal and coke companies, and makers of raw steel of ordinary qualities, have gained a passing advantage, but, on the whole, the French occupation of the Ruhr is causing a considerable loss to the engineering trades of this country.

Under these circumstances, it is not easy to forecast the results of 1923. I can only say that, unless there is a definite change, the year is not likely to be very different from 1922.

The report and accounts were adopted.

BOOTS PURE DRUG COMPANY, LIMITED.

GOOD RESULTS—INCREASED DIVIDEND.

OFFER OF ORDINARY SHARES.

The thirty-fifth annual meeting of Boots Pure Drug Company, Limited, was held, on the 19th instant, at Station street, Nottingham, Mr J. C. Boot (the vice-chairman) presiding.

The secretary (Mr A. L. Milne) read the notice convening the meeting, and Mr J. C. Parsons (Sharp, Parsons and Co.) read the auditors' report.

The Chairman said:

Gentlemen,—I rise to propose that the directors' report and statement of accounts for the year ending March 31, 1923, be received and adopted. I am sorry that Sir Jesse Boot's health does not permit him to be here to-day, but I have seen him this week, and am pleased to say he is a good deal better than he was.

As you know, when building anything, a lot of hard work has to be done before there is much to show for it, but a time comes when the same amount of work gives far bigger visible results, and so it has been with this business.

No business without solid foundations could have shown the satisfactory results through the last few years that we have done.

FUNDING OF RESERVES.

Turning to the accounts, you will notice that the capital of the company has undergone a certain amount of reconstruction. As you are aware, the ordinary share capital for many years has been merely nominal, and it has in no way represented the true value of the ordinary shares. Large reserves have been kept in the business, and it has now been considered advisable to fund permanently a portion of these. This will mean that the security of the preference and preferred ordinary shareholders will be increased, as previously these reserves could have been distributed in cash to the ordinary shareholders, but this is now no longer possible.

The authorised share capital has been increased by £650,000 to the sum of £2,400,000, and 900,000 unissued ordinary shares will be paid up in full, and issued to the holders of the original ordinary shares by the appropriation of £900,000 from surplus account. The preference dividends amounted to £96,729 for the year, and the dividend on the ordinary shares £360,000, both less income-tax at 5s in the £1. This is a slight increase over the dividends last year, when that paid on the ordinary shares amounted to £349,713, less tax. After payment of these dividends, the satisfactory sum of £139,082 6s 7d is left over as undivided profits for the year, and the whole amount has been carried to surplus account. When the capitalisation referred to above has been carried into effect, the surplus account will stand at £543,071 10s 9d.

ASSETS.

On the assets side of the balance-sheet, the freehold and leasehold land and buildings stand at over £1,000,000. It has always been

the policy of your directors to write down any properties which they consider have depreciated in value, but appreciation in others has never been taken into account. You will observe that the depreciation fund on fittings and plant amounts to over 50 per cent. of the amount standing on the balance-sheet.

From the merchandise point of view, the year has been exceedingly satisfactory. Stocks were cleaned up so thoroughly in the previous year that far fewer losses have had to be taken. Now that prices are more stable, your directors have put back to surplus account £148,189, which was held in reserve against further losses through the fall in the value of merchandise.

For many years goodwill has stood at £45,088 19s 1d, and as this is such a small fraction of what the goodwill of the business is worth, your directors have decided to write it off out of surplus, and to show the asset side of the balance-sheet consisting of tangible assets only.

Your directors have always realised that they have a triple duty to perform. Firstly to the public, in giving the best possible service and value, and in this respect the policy has always been to make a large number of sales at a small profit, and your directors have no intention of departing from this policy.

CARE OF STAFF.

Secondly, our duty to our employees, to whom we pay good wages. In spite of the reductions during the last year, in nearly every case we are paying more than the standard union rate, and, where there is no fixed minimum, we are paying considerably more than the rates paid for similar work. Boots Health Insurance Society is approved under the National Insurance Act, and has a membership of 8,000. The firm pays the costs of administration, and this has enabled the society to show a surplus of £10,000 at the first valuation. A portion of this money is being spent on two convalescent homes, one at Skegness and the other at Llanfairfechan. Commencing in 1897, certain amounts were set aside each year to form a capital sum, the interest of which would enable us to pay pensions to qualified chemists. By 1918 this fund stood at £120,000, and the scheme was started and has now approximately one thousand members, and costs the company about £8,000 a year. This year we are asking you to agree to vote £20,000 to commence building up a capital sum which, when it reaches the required amount, will enable us to start a pension fund for the whole of our employees. This will of necessity take a considerable time, but I can assure you that, in the meantime, our old employees are not being neglected, for during the past year we have paid £7,000 in gratuities and pensions for long service.

ISSUE OF ORDINARY SHARES.

Thirdly, our duty to our shareholders, by ensuring them, as far as we possibly can, a good return on the money they have entrusted to us by building the business on the broadest possible basis. Our conservative cash policy enables us to take advantage of every suitable opening for profitable business.

In the past we have tried very successfully to get a large number of customers holding our shares. In continuance of that policy the owners of the ordinary shares have decided to place on the market a portion of their holding, and this I am sure will greatly benefit our company by giving still more of our employees and customers the chance to hold shares.

We have a magnificent staff, and when I tell you that, in spite of all difficulties, our trade last Christmas was a record one, you will realise how wholeheartedly they work for the firm, and our best thanks are due to them all.

In view of the trade conditions, I think the results of last year's trading must be considered satisfactory, and I have pleasure in moving that the directors' report and statement of accounts for the year ending March 31, 1923, be received and adopted.

This motion was seconded by Mr J. E. Greenwood, and carried unanimously.

The retiring directors—Sir Jesse Boot, Bart., and Mr L. K. Liggett—were re-elected directors of the company, and the auditors (Messrs Sharp, Parsons and Co.) were re-appointed. A vote of thanks to the chairman and staff concluded the proceedings.

CAWNPORE ELECTRIC SUPPLY CORPORATION, LIMITED.

A PERIOD OF TRANSITION.

The annual ordinary general meeting of shareholders was held, on the 23rd instant, at Winchester House, London, Mr John G. B. Stone, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said: I wish to point out that the accounts cover a period of transition from the closing down of the old power station to the opening of the new one at the river side, and consequently the results shown are not a true indication of the position as it stands to-day. The period under review has had to carry the capital charges incidental to the construction of these new

works, which did not come into full operation until towards the end of the year. It has also had to bear charges arising out of the issue of debentures in May last year, for the purpose of making still further additions to our generating plant. Another feature is that in spite of lower profits in 1922 we have had to pay £745 more income-tax in India than we did in the previous year.

The accounts are presented to you in what we consider to be an improved form, but the alteration makes comparison difficult. For your information, however, I may say that the real difference between this year and last year is, before allowing for the income-tax above referred to, a reduction of £4,200 in profit on working. These accounts show a net revenue of £16,104 6s 6d, and if this was a true guide to the state of the undertaking we should not recommend withdrawing £2,347 11s 9d from reserve to maintain the 10 per cent. dividend. After doing so and including the sum brought in from 1921 the net amount for disposal is £21,731 0s 6d. Of this amount £12,238 0s 4d has been disbursed in dividends, leaving a balance of £10,075 15s 5d, with which we propose to pay a final dividend of 7 per cent., making 10 per cent. for the year.

You will observe that during the year under review holders of a further 33,732 preference shares exercised their option to convert into ordinary shares, making in all at the date of expiry of the option 38,507 shares so converted. A further issue of £250,000 5 per cent. tax-free debentures was made during the year, and of this amount £224,194 had been received by the end of the year. The balance has since been paid up. The 6 per cent. debentures outstanding in 1921 amounted to £49,600, of which £34,300 has been converted into the new issue. The other side of the balance-sheet shows an investment of £95,000; £15,500 of this has been deposited with the trustee of the 6 per cent. debentures to provide for the interest and redemption of the outstanding debentures of that issue at or before maturity. Our report mentions a considerable increase in the company's revenue since the close of the year, and we anticipate a marked saving in working costs.

Mr Scott Moncrieff seconded the motion, which was carried.

BALAGHAT GOLD MINES, LIMITED.

The third ordinary general meeting of this company was held, on the 23rd instant, at 6 Queen street place, London.

Lieut.-Colonel Sir Donald Robertson, K.C.S.I., who presided, said that the total return for the past year was 32,820 ounces of fine gold, as compared with 28,842 ounces in 1921, an increase of 3,978 ounces. The average market price of the gold was £4 13s 8.4d per fine ounce, as compared with £5 5s 4.4d, the sum realised being only £1,923 more than in 1922. There had been a reduction in working costs of 7s 4d per ton, and the profit for the year was £36,338, or practically the same as in the preceding year, notwithstanding the appreciable fall in the price of gold. The preference shareholders had received 2s and the ordinary shareholders 1s per share by way of dividend, and £4,163 was being carried forward, subject to corporation profits tax. At the close of the financial year the company possessed cash and other liquid assets amounting to £60,527, and there were liabilities to the amount of £21,859, leaving a balance of assets of £38,667, in addition to which there were materials and stores at the mine valued at £26,329, and goods in transit which had cost £3,222. There had been an increased footage in the underground development work during the year, and he was glad to say that the reserves of ore at December 31st last, which were estimated at 116,139 tons, were 35,845 tons more than at the end of 1921. The superintendent reported that "as development generally disclosed excellent values, if nothing of an unforeseen nature occurs, the output of gold for the current year should exceed that of the one under review."

The report and accounts were unanimously adopted.

BANCA COMMERCIALE ITALIANA.—The report and accounts of this bank for the year ended December 31, 1922, is prefaced by a review of political and financial events in Italy, in which the directors state that "the new Government aims with great determination at a reduction of the deficit, with a view to making possible the balancing of the national Budget at an early date." The

TATA INDUSTRIAL BANK.—The profit earned for the year ended March 31, 1923, after making provision for all known liabilities and bad and doubtful debts, amounts to Rs 16,31,001. Add balance brought forward from last year Rs 1,91,136, making Rs18,22,137. The directors have appropriated out of this sum as follows:—(1) In payment of an interim dividend of 8 annas per share, free of income-tax, payable December 1, 1922, Rs.5,00,443. (2) Provision for income-tax and super-tax, Rs1,00,000. Balance at credit of profit and loss account, Rs12,21,694. The report states that the profit earned from the ordinary banking side has been well maintained, and in normal circumstances it should have been possible to pay a final dividend after placing a substantial sum to reserve. A year ago the activities of the industrial department were suspended owing to the depression and the uncertainty then prevailing in regard to the future of all industrial undertakings in India. These conditions continue to-day, and the directors have decided to transfer Rs1,50,000 from profit and loss account to writing down industrial investments, carrying forward the balance of Rs71,694-2-7 remaining at credit of profit and loss account to next account. The directors regret being unable to recommend a final dividend, but feel confident that they will have the support of the shareholders and public in the action they have taken. It is pointed out that very considerable economies have been effected in the charges of the bank. The

directors state that, having regard to the difficult times through which trade has been passing, the result for the year will be considered satisfactory, and they are confident that with the return of better times the bank has a good future before it.

ASSURANCE COMPANIES.

CONSOLIDATED ASSURANCE COMPANY.—In the fire account last year the premiums were £844,091, the claims £580,045, and the expenses and commissions £206,204. After allowing for the increased reserve for unexpired risks, £74,579 was transferred to profit and loss. In the marine account the premiums were £400,101, the claims £550,998, and the expenses £49,242. The sum of £121,250 was taken from profit and loss to make the marine fund up to £290,268, against £369,158 a year before. Interest receipts yielded £52,707, and there was £197,332 received as the net premium on the issue last year of new shares. The dividend for the year is 20 per cent. and a bonus of 5 per cent., all less tax (costing £50,702), £100,000 was transferred to general reserve, and £77,632 carried forward. The total funds, including paid-up capital, amount to £1,370,443, of which £644,233 is invested in British Government securities.

WESTERN ALLIANCE REINSURANCE COMPANY.—The report for last year shows fire premiums of £319,798, claims of £196,485, and expenses and commissions of £111,033. The fire fund was £128,274, against £115,994 a year before. In the marine account the premiums were £227,018, the claims £185,574, and expenses and commissions £36,498. After transferring £15,000 to profit and loss, the marine fund was £200,038, against £210,092 a year before. Interest, dividends, &c., yielded £37,184, and the balance at profit and loss on December 31st was £53,108, against £18,109 brought forward. The total dividend for the year (6 per cent., less tax) absorbed £13,312. The funds, including paid-up capital, amounted on December 31st to £681,421, of which £441,015 was invested in British Government securities.

MISCELLANEOUS.

WHITEHALL ELECTRIC INVESTMENTS, LIMITED.—The report and accounts for the first year's operations of the Whitehall Electric Investments, Limited—up to March 31, 1923—show a gross income of £538,764. The net income, after charging expenses (directors' and trustees' fees, £2,925; office and general expenses, £5,205), debenture interest, £150,000; income-tax, £36,675; and corporation profits tax, £25,172; was £318,786. The whole of the preliminary expenses amounting to £70,029, and discount on debenture stock to the amount of £36,257 are written off out of the profits. The preference dividends absorb £112,500. A dividend of 2 per cent. is declared on the ordinary shares, which takes the whole of the £100,000 left, so that there is nothing carried forward to next year. In the balance-sheet the total discount on the issue of debenture stock is stated at £492,500. Less the amount written off, it is now £456,243. Investments, at cost, are given at £8,252,621, and the income from investments for the year was £535,802. Debtors and debit balances are £24,634, and cash at bank and on deposit £491,565. Creditors and credit balances are £26,630. The directors state that the undertakings in which the company is interested have in the aggregate shown satisfactory results.

BRITISH AUSTRALIAN BROKEN HILL.—Fortnight ending May 19th: 6,458 tons crude ore produced 1,090 tons lead concentrates, containing 674 tons lead and 30,307 ozs silver; also 985 tons zinc concentrates, assaying 8.4 per cent. lead, 9.5 ozs silver per ton, and 45 per cent. zinc. 165 tons carbonates raised. Two days' stoppages.

BROKEN HILL SOUTH.—Four weeks ended April 7th:—Crude ore treated, 14,100 tons, assaying 15 per cent. Pb, 6.5 ozs Ag, 1.3 per cent. Zn, producing the following concentrates:—Lead conc. mill: 2,036 tons, assaying 70 per cent. Pb, 20 ozs Ag, 5.4 per cent. Zn. Current slime: 682 tons, assaying 59.6 per cent. Pb, 32.1 ozs Ag, 5.2 per cent. Zn. Total: 2,718 tons, assaying 67.4 per cent. Pb, 23 ozs Ag, 6.1 per cent. Zn. Slime zinc flotation plant: 10,389 tons residues, assaying 2.5 per cent. Pb, 1.4 ozs Ag, 1.2 per cent. Zn, producing the following zinc concentrates:—2,350 tons, assaying 67 per cent. Pb, 4.9 ozs Ag, 45.2 per cent. Zn. Dump slime treated: 10,666 tons, assaying 11.3 per cent. Pb, 6.8 ozs Ag, 13.8 per cent. Zn, producing the following lead concentrates:—2,169 tons, assaying 44.1 per cent. Pb, 2.8 ozs Ag, 17.7 per cent. Zn. In addition to the above, 686 tons of classified sands from dump slime, assaying 4.1 per cent. Pb, 3.1 ozs Ag, 12.9 per cent. Zn, were treated in the table sections, producing the following lead concentrates:—15 tons, assaying 47 per cent. Pb, 31 ozs Ag, 6.3 per cent. Zn. Despatches of zinc:—Amalgamated Zinc, 5,518 tons net.

MOUNT MORGAN.—Four weeks ended May 15th:—Treated 5,616 tons Mount Morgan ore, 531 tons Many Peaks ore, 4,655 tons concentrates and 1 ton of purchased ore and secondary products; produced 470 tons blister copper, containing 465 tons copper and 5,435 ozs gold, including 7 tons copper and 6 ozs gold from Many Peaks; concentrator treated 13,897 tons ore for a production of 5,395 tons of concentrates, containing 270 tons copper and 3,027 ozs gold. In addition to above production have matte on hand containing 9 tons copper and 92 ozs gold. Output has been affected by shortage competent miners; also two statutory holidays.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD.—Combined production for the week ending May 16, 1923, amounted to 791 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions have remained cold and unsettled, with further rains, and farmers are hoping for a spell of warm weather, as spring cereals are suffering from a lack of sunshine. Business during the week was on a limited scale, the markets being still largely under holiday influences, with price changes unimportant. Supplies of home-grown wheat continue to show a falling off, but trade very slack, though prices were fully maintained in sympathy with the firm tone of imported varieties. Best milling samples ruled up to 11s 3d, with lower grades down to 11s 3d per 112 lbs free on rail. Foreign descriptions quiet, but firmly held, especially for near at hand lots. No. 1 Northern Manitoba quoted 52s to 53s as to position, Rosafé 62½ lbs 51s 6d, Barusso 62½ lbs 51s 6d, choice white Karachi 52s 6d, all ex ship per 400 lbs. The cargo section ruled fully steady, but demand shows no general expansion, the small inquiry in evidence being chiefly on Continental account. Steamer of No. 2 hard winter July-August sold 47s to Germany. World's shipments to the United Kingdom are on a fair scale, while crop prospects in the principal exporting countries are mostly favourable. The flour market exhibited quiet features, but late rates were maintained. London standard straight run quoted at 41s, town households 39s, patents 43s to 44s per sack delivered in the Metropolitan area. Imported dull and prices largely nominal on the spot, while forward quotations are the turn easier for Canadian and Australian parcels. Manitoba patents range from 37s to 41s, Minneapolis good patents 40s 6d, and Australian 37s to 38s ex store per 280 lbs. All English country straights move off quietly at 33s 6d to 35s per sack delivered to London stations. Millers' offers: Easier. Broad bran quoted at 6s 9d to 7s ordinary ditto 5s 6d, middlings 7s 6d, bags included, ex mill. light oats 6s 3d, powdered oat husks 5s 9d, feed oatmeal 7s 9d, ground oats 13s 9d, all per cwt, free on rail. Barley: English quiet and ranges from 8s to 11s 6d, with malting samples in fair demand at 10s to 12s per 112 lbs, free on rail. Imported, dull. Californian quoted 44s 6d to 46s 6d, Australian chevalier 42s to 48s, New Zealand 33s to 47s as to quality, all landed per 48 lbs. Persian 27s, Plate 30s, Danubian 30s, American malting 48 lbs 28s 6d, No. 4 Canadian Western 28s 6d, Karachi 28s 3d, all landed per 400 lbs. Maize: Steady, but quiet. Plate landed 30s 6d, No. 2 yellow American ditto 30s, East African ex ship 30s 6d, landed 37s 6d, all per 480 lbs. On c.i.f. terms a steamer of La Plata May 31st shipment sold 36s 9d, if by June 5th 36s 6d, to Ireland. Oats: English quiet, while ranging from 8s 2d to 10s 6d per 112 lbs, free on rail as to sample and description. Imported quiet. Plate f.a.q. ex ship 23s 6d, landed 24s 9d, No. 2 Canadian Western ex ship 27s 6d, landed 28s 9d, No. 3 ditto landed 27s 3d, No. 2 Canadian feed ex ship 25s 3d, landed 26s 3d, New Zealand A grade 38s, B grade 37s, both landed all per 320 lbs. Oatmeal: Firmer for home milled. London made all cuts quoted at 18s 6d, rolled oats, also whole groats, 18s 6d, flaked 21s, ex mill. Ordinary Scottish oatmeal 10s 6d to 20s 6d, American all cuts 17s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20:—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated May 24th, is as follows:—Pig-iron: There was no market this week, and there is very little change to report. It is expected that efforts will be made to increase the output of Cleveland pig-iron; the shortly be made to increase the output of Cleveland pig-iron; the coke supply is, however, still very difficult. No. 3 Cleveland G.M.B. is now quoted 122s per ton. East Coast mixed numbers hematite is still 122s 6d per ton. Manufactured iron and steel: The steel rolling mills have now resumed after the holidays, and it is expected that the steel works will recommence operations next week. Steel ship plates, £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £10 10s. Iron ore: With consumers still holding off buying, there is no new business to report. Deliveries of ore are good.

Our Glasgow correspondent writes:—Conditions in the Scotch steel and iron trades have remained without material change on the week. Quotations just now hover round 120s for Scotch No. 1 and 116s for No. 3 (both at the works). No. 3 G.M.B. Scotch is and bringing 120s f.a.s. Local inquiry is as respectful as generous inquiry from the States (particularly the Pacific) is as generous as could be expected in current circumstances. Last week-end 1,000 tons Scotch were despatched from here to South America, and a lot of 500 tons went out yesterday (Wednesday), and moderate export amounts have been fixed upon, on to the middle of July. The coal trade is quieter, and prices for all Scotch qualities have eased another sixpence to one shilling a ton.

Our Sheffield correspondent writes:—The resumption of industrial activity revealed quieter conditions generally, although there is still great activity in the lower grades of steel, wire rods, wire

The First National Bank of Boston

The leading financial institution of New England

Correspondence solicited.

steel strips, and colliery equipment. Makers of the better qualities of steel report an absence of fresh bookings, while work in hand tends to decrease. This applies particularly to heavy steel castings and forgings, heavy engineering and agricultural engineering, as well as the best tool steels, sales of which have been negligible for several years owing mainly to the absence of overseas buying. The plants making railway steel continue to book orders for axles, tyres, and springs from South America and India. The home demand, however, has fallen off since the beginning of the present quarter. No changes have taken place in the prices of pig-iron and crude steel, and the feeling is growing that these are not likely to fall below the present level as costs cannot be reduced further. Fuel, the dominating factor in this connection, remains firm, and the large users are contracting for supplies to the end of the year at the current quotations. The coal and coke trades continue busy in most departments, and prices are firm. Best South Yorkshire steams are quoted 22s to 24s at pits, and best Blyth steams at from 32s to 34s f.o.b.

Our Cardiff correspondent writes:—In the South Wales coalfield all the mines were idle until Wednesday night, and as the output will be restricted to three days' partial working, it is not expected to reach more than about 500,000 tons. The coal market was officially opened on Wednesday, but in view of the idleness of the collieries, and the very restricted amount of free coal at the disposal of the salesmen, very little business has been transacted.

The current approximate quotations are as follows:—Best Admiralties, 42s 6d to 45s; second Admiralties, 40s to 41s; best dries, 38s to 40s; Western Valleys, 39s to 40s; Eastern Valleys, 37s 6d to 39s; best bunker smalls, 32s 6d to 33s; ordinary cargo smalls, 30s to 31s; anthracite big vein, 47s 6d to 50s; machine-made cobbles, 57s 6d to 60s; French nuts, 55s to 57s 6d; stove nuts, 52s 6d to 55s; rubbly culm, 17s 6d to 18s; coke for export, 65s to 75s; inland blastfurnace coke at ovens, 35s to 40s; patent fuel, 40s to 43s 6d; pitwood, ex ship, 30s to 31s.

In the tinplate trade production was reduced by the holidays, but the market was steady at last week's prices, and a meeting has been convened for the consideration of the question of extending the price stabilisation agreement for another period of three months. It is regarded as a foregone conclusion that the decision to prolong the agreement will be a unanimous one.

THE COTTON TRADE.

MANCHESTER, May 23.

Owing to the majority of traders being absent celebrating the Whitsuntide holidays, there has been very little business done in the market during the past week. As a matter of fact, the market was only open on one day of the week, Tuesday. Naturally, the attendance then on 'Change was very thin. Speaking generally, traders are hopeful with regard to future developments. Recently there has been a larger inquiry in piece goods for China, and the turnover has been better. It is expected that there will be an encouraging accumulation of orders for that outlet on the resumption of business after the holidays. No attempts have been made at business with regard to yarns.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There has been very little of an encouraging nature during the last week, but as several mills have been idle the whole-time improvement could hardly be expected. The whole industry appears to be suffering from stagnation at the moment, so that although confidence in wool values is still generally expressed, there is practically no buying movement to impart activity to the market. Nominally tops are unchanged, but slight concessions are obtainable in most cases, and in a few instances second-hand lots have been sold at prices well under the general level. The lack of new business, however, is most noticeable in the yarn section of the trade, and the outlook is causing some anxiety. Where orders can be placed with particulars down, some spinners are prepared to accept what look like ridiculous prices, but they are faced with the problem of keeping their machinery running or going on to short time. The keen Continental competition is largely responsible for the present unsatisfactory position of the yarn trade, imported yarns being offered in many cases at anything from 8d. to 1s below prices quoted by spinners in this country. Lower conversion costs, and the depreciated currencies, are responsible for this anomalous state of affairs. There is not much change in the piece goods trade.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The pastoral prospects in Australia will have been somewhat improved by the rains that have fallen during the past week, and it is understood that the situation in Victoria has been relieved. We should be glad to receive news to the same effect from New South Wales and Queensland. Though the rain reported is welcome, it has come a little too late to help the pastoral situation to any material extent, for after a very dry summer, feed and water had become scarce over very large areas, and this is the prelude to a smaller clip next year.

A good deal has been made in certain circles in Yorkshire about the cancellation of piece goods orders in America and the reported offering in Bradford of wool on Boston account. We do not attach much importance to either incident. Some American clothiers placed orders without paying adequate regard to whether they would need them all. The spring trade in the United States is as backward as in this country, and sales of spring and

summer goods are being delayed. Consequently some clothiers have resorted to the cancellation of a certain amount of goods, and this has given rise to some rather exaggerated statements. With regard to the offering of wool, it is well known that America bought very extensively in South America, taking no less than 77,500 bales from Buenos Ayres and 40,700 bales from Monte Video up to the end of April. This quantity was greatly in excess of what was purchased a year ago, and as low crossbreds are not in favour across the Atlantic, some of the dealers have tried to lighten their stocks by offering them in Bradford and Germany. Some fair shipments have been made to Hamburg, but we cannot ascertain that any wool above 46's quality has been offered in England. We regard the American situation as generally sound, and while higher prices are undesirable, we think that both America and Japan can carry on at to-day's level of values. The home trade is the section which is most seriously disorganised and which offers the least encouragement.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market remains firm at last prices, and as no sales were held in Bermondsey this week there is no alteration in values to report. The demand for hides of all kinds remains as keen as ever, and it is difficult to reconcile tanners' talk of loss with their desire to work in more hides at higher prices! Trade in foreign hides has opened up fairly well after the holidays, and several large tanners have covered their wants for some time ahead. River Plate hides have sold fairly well, and sales of San Paulo ox have been made at 8 1/2 d, and Liebig Colon ox at 9d to 9 1/2 d. Dry hides do not seem to be wanted much at the moment, tanners waiting for lower prices before operating on a large scale. Cables from New York report the American hide market as weak, with heavy Chicago packers now selling at 18 1/2 cents and native cows at 14 1/2 cents.

Upper leathers have met with little demand this week, but there has been a certain amount of business done in filling up lines. Prices are gradually advancing for calf and sheep leathers, but complaints are still heard of the unfair competition of German and other leathers—some of the former probably coming via Holland and paying no duty.

The cold and wet weather prior to the Whitsun holiday had rather a bad effect on the shoe retailer's business. It is early yet, however, to talk of future orders, but the outlook is regarded as much brighter, especially as export trade has taken a turn for the better.

VEGETABLE OILS AND OILSEEDS.

Apart from the intervention of the holiday, the market for oilseeds is very quiet all round, and with the oil demand within narrow compass, crushers, whose commitments are well covered, show little disposition to take up further supplies of seed. In view of the present outlook in Europe, there appears every probability that the supplies of seed will be ample to meet world requirements. So far shipments of Plate and Indian total 875,600 tons, leaving a balance of 721,000 tons yet to be exported, even if there be no revision in an upward direction as is suggested when the final estimate of the Argentine yield makes its appearance, as it will do within the next few days. Crop reports indicate larger areas under linseed in both the United States and Canada.

What little business has been done in linseed this week is either of a speculative or covering character, current value of Plate afloat and for early shipment being £19 15s to £20, while Calcutta, which has engaged some little attention, is worth up to £21 for afloat. With regard to the oil product prices steadied on a better demand for home consumption and small buying on American account for prompt shipment, but have since eased off again to £44 to £44 10s. spot and month, ex Hull mill.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, May 25.

SUGAR.—With some recovery in demand for refined goods, a fair amount of business was effected at full prices. British firm. Messrs Tate and Lyle's cubes, 70s 9d to 71s 9d; granulated, fine and coarse grain, 67s 1 1/2 d; No. 1, 66s 10 1/2 d; No. 2, also London, 66s 7 1/2 d; ditto, one month, 66s 6d; July, 66s 6d; August, 65s 9d; September, 64s 9d. Crystallised West India, nominally 61s 6d to 63s 6d. American granulated, spot, sold, 64s 6d; May, steamer, quoted 37s 3d; June, 37s 6d, c.f. and i. terms, London. White Java, spot, sold, 61s 6d to 62s; May-June, steamer, 32s 3d; June-July, 30s to 30s 6d; July-August, 29s, c.f. and i. terms, London. Belgian granulated,

October-December, quoted 26s 9d, f.o.b., Antwerp. Czecho-Slovakian granulated, November-December, quoted 27s, f.o.b., Hamburg. Dutch sugars sparingly offered. Cuban basis, 96 per cent., May-June, quoted 31s 9d; Brazilian ditto, 31s 9d; ditto, basis 80 per cent., 19s; and West India basis 96 per cent. preferential, 34s 6d, all c.f. and i. terms, U.K. Terminal market firmer. August delivery, sold, 33s 6d to 34s 4 1/2 d; October-December, 27s 3d to 27s 6d; December, 26s 7 1/2 d to 27s 1 1/2 d cwt. Cuban stock, 733,700 tons, against 1,060,700 last year.

COFFEE.—Spot market steady, unaltered, but trade quiet. Futures remain in a dull state. July quoted 55s 6d; September, 56s 6d; December, 56s per cwt.

COCOA.—Spot market very slow, and quotations largely nominal. Accra, F/F quality, June-July, sellers, 31s 6d per cwt, f.o.b. terms.

TEA.—Private contract market quite unchanged, pending resumption of public sales.

RICE.—Burma grain quite neglected and market nominal, but a steadier tone prevails for Spanish and also American. Two Stars, Rangoon, spot, 13s 9d; Spanish, spot, 21s 6d; forward, 20s 6d; American, fancy Blue Rose, May-June, 24s, c.f. and i. terms. Broken kinds idle. Rangoon beans scarce, on spot and hand-picked quoted 9s 6d. Japanese peas dull. Spot, 22s; May-June sold 21s 6d; September-October, new crop, quoted 23s 6d per cwt.

SPICE.—Pepper market remained quietly steady. Fair black Singapore, spot, 4 1/2 d; May-July, 4d; Aleppo, spot, 4 1/2 d; Tellicherry, 4 1/2 d; white Singapore, 6d; Muntok, spot, 6 1/2 d; ditto May-July, 6 1/2 d. Zanzibar cloves firm. Spot quoted 11 1/2 d; March-May, sold, 11 1/2 d; and May-July, 11 1/2 d to 11 1/2 d. Tapioca quiet. Fair flake Singapore, spot, 3 1/2 d; fine Java, 4 1/2 d lb. Fair Penang seed pearl tapioca, spot, 3 1/2 d. Sago flour, May-July, sellers, 13s 6d. Desiccated coconut, spot, fine cut, 47s 6d; medium, 49s 6d; halves, May-June, 42s; June-July, 41s 6d. Fair washed rough Cochinchina ginger, in sound condition, on the spot, quoted, 80s; Calicut, B/C, 102s 6d cwt.

JUTE.—Market steady, and business was on a moderate scale. First grade, May-June, continent, sold, £25 15s to £26 10s; ditto new crop, August-September, £26 to £26 10s; September-October, £25 15s to £26 5s, and £26. Hessians remain very dull. 10 oz. spot, 27s 6d; 8 oz, 22s per 100 yds. A twills, spot, 80s; B, 70s per 100 bags.

HEMP.—Manila dull, and barely steady. J grade, May-July, value, £32; K and L, £30; M, £29 5s. New Zealand idle and nominal. African Sisal, No. 1 Tanganyiki, May-July, sold, £35 15s; No. 1 Kenya due steamer, £37 for brushed per ton, c.f. and i.

SHELLAC.—Market dull. T.N., spot, 290s; August, sold, 240s; October, 235s cwt.

COPRA.—Market rather quiet and somewhat unsettled. F.M.S. Straits, March-May, Rotterdam, sold, £28 15s, £28 7s 6d; April-June, £28 to £27 16s 3d; May-July, £27 12s 6d. Ceylon, May-June, sellers, £30; Java, April-June, quoted £28 7s 6d; Dutch E.I., April-June, £28; Cebu, £27 15s; South Sea, May-June, sold, £27 5s. Palm kernels quiet. May-June and June-August, Liverpool, quoted £19 2s 6d.

RUBBER steady, with fair trading in force. Standard plantation crepe and sheet, spot, and May, sold, 14d to 14 1/2 d; June, 14d to 14 1/2 d; July-September, 14 1/2 d to 14 1/2 d; October-December, 14 1/2 d to 15 1/2 d; January-March, 15 1/2 d to 15 1/2 d. To New York standard sheet, May-June, buyers, 14 1/2 d; June-July, 14 1/2 d; July-August, sold, 14 1/2 d to 14 1/2 d, c.f. and i. Fine hard Para, spot, 14 1/2 d; soft fine, also ball, 14d per lb.

EGG PRODUCTS.—Apart from sustained inquiries for albumen, the market continues to show very quiet features. Chinese hen liquid yolk, spot, 85s; shipment, May-June, 80s per cwt. Dried yolk, spot, 10 1/2 d; albumen, spot, 3s 3 1/2 d; May-June, 3s 2 1/2 d; June-July, 3s 2d per lb.

FRUIT (DRIED).—General quietness characterised this market, but prices on balance manifest but little alteration. Of currants, Pyrgos quarter-cases, quoted 54s; half-bags, 53s to 53s 6d; Amalias, 55s to 57s; Panariti, 58s to 60s; good quality Vostizza, 67s to 71s; Australian, 71s. Sultanias: Smyrna, good, 80s to 82s; fine to choice, 95s to 115s; Californian, 65s. Valencia raisins, half-boxes quoted 32s to 34s; quarters, 36s to 46s. Dates in very poor support, but sellers adhered to previous asking prices. Hallowes, f.a.q., 19s to 20s; inferior, 17s; Siar, 14s to 15s. Evaporated fruits steady in most cases, but trade confined to moderate limits. Cape apricots quoted 90s to 110s; Californian pears, 65s to 75s; extra choice apple-rings, 54s to 56s. Australian apricots, 100s to 110s. Of plums, Bosnian

THE "ALL-IN" LIFE POLICY.

Every married man should send for particulars of this new and advanced form of Life Insurance, which provides for:—

- (1) Educational benefits (cash payments); (2) Financial protection for family; (3) Income for life on retirement or at an agreed date; (4) The remission of premiums in case of total disability through accident or illness; (5) Rebate of Income Tax in respect of premiums paid.

Send a post-card to day. Address:—Life Dept.

EAGLE, STAR & BRITISH DOMINIONS INSURANCE Co., Ltd.

32, MOORGATE, LONDON, E.C.2.

ASSETS EXCEED £20,000,000.

equipment to move the loads, the strike, including payments for watchmen, protection of life and limb of employees and of the company's property, housing and caring for employees continuing in its service, bonus payments to loyal men who remained at their posts and performed extra service, etc., amounting to \$1,565,000. As a result, the company has had to employ 1,500 men, besides the full force of loyal employees, with whom it has, as to terms of employment, through their own organisation, work under the wage rates and rules established by the United States Railroad Labor Board, and pledge obedience to its findings.

The Labor Board, in fixing new wage rates for the watchmen, also readjusted compensation for the employees of the company's employees. The effect of these various changes in wage rates was to reduce operating expenses by \$5,562,000; lower prices of material were responsible for a saving of \$1,986,000; and lower

SOUTHERN PACIFIC COMPANY AND PROPRIETARY COMPANIES COMBINED—continued.

prices of fuel oil, mainly in California, reduced expenses by \$6,906,000; a combined saving in operating expenses of \$16,776,000. The strike expenses, as stated above, were \$3,500,000, and the loss in freight revenue through reductions in rates amounted to \$16,550,000. These two items more than absorbed the effect of reduced wages and material prices. Consequently the improvement in operating results, reflected by the increase of \$11,932,619.58, or 20.96 per cent. in net revenue from railway operations, may be attributed principally to increased efficiency of operation, as better relations are being established with employees, and the normal conditions which applied previous to Federal control are being more nearly approached.

Maintenance of Way and Structures decreased \$5,392,753.84, or 12.78 per cent. The properties were maintained in good condition and up to the company's standards during the year. The following table shows the amount of material used in repairs and renewals during each of the past five years:

	1922	1921	1920	1919	1918
New steel rail, miles ..	298.16	497.43	527.76	474.73	498.44
Ties, number ..	4,022,549	4,791,542	4,987,913	4,173,774	3,889,768
Tie-plates, number ..	3,866,090	4,112,475	3,916,915	3,672,221	1,910,311
Piling, lineal feet ..	341,416	817,817	737,731	94,455	75,478
Lumber, feet b.m. ..	22,958,492	23,537,715	23,710,532	15,402,035	6,354,663

Maintenance of equipment decreased \$924,075.09, or 1.88 per cent. Charges for depreciation and retirements increased \$1,118,452.49, or 22.83 per cent., and other maintenance charges decreased \$2,042,527.58, or 4.61 per cent. Transportation service locomotive mileage decreased 0.46 per cent., and total car mileage increased 2.90 per cent. The progress of restoring to normal the freight cars, the condition of which had deteriorated because of neglected repairs, due to their absence on other railways during Federal control, is indicated by the following table showing the number of freight cars in shops or awaiting shipping on September 1, 1921, following the re-location of equipment to owners after Federal control; also at the close of 1921; at the close of 1922; and on April 1, 1923, covering the latest data available. This shows a reduction in shopped cars from 8,341 on September 1, 1921, to 3,440 on April 1, 1923.

* Debit. † Credit. ‡ In arriving at the figures for per cent. of railroad income and per cent. of other income on outstanding capital stock (line No. 60), an estimated apportionment of net income was made by allocating, as nearly as possible, to railroad income the items relating solely to that class, and to other income the items relating solely to that class, the remaining items being apportioned between the two classes on an estimated basis.

NON-OPERATING INCOME.

The item of \$869,740.80, shown in the 1921 column as Income from Lease of Road—Standard Return (line No. 31) is made up of \$1,859,646.63, representing the approximate amount of additional compensation for the use of additions and betterments, new equipment, and road extensions completed during the period of

Federal control, less \$1,006,905.83, representing the net deduction from the standard return rental (as fixed in the agreement with the Director General of Railroads and taken into account by the Company during the period of Federal control) resulting from changes and corrections made by the Interstate Commerce Commission in the accounts for the test period, which were used as a basis for the standard return. The item of \$1,869.98, shown in the 1922 column (line No. 31),

SOUTHERN PACIFIC COMPANY AND PROPRIETARY COMPANIES COMBINED—continued.

represents corrections made during the year in the amount of additional compensation taken into account last year.

The increase of \$119,616.16 in Other Income from Lease of Road (line No. 32) is due, principally, to an increase in the rental rate for lines leased to non-affiliated companies.

The decrease of \$269,705.83 in Miscellaneous Rent Income (line No. 39) is due, principally, to a decrease in the rental received for use of the oil pipe line formerly used by the Fuel Oil Department, resulting from the sale last year to the Pacific Oil Company of an interest therein.

The decrease of \$1,090,109.93 in Income from Unfunded Securities and Accounts (line No. 39) is the result, principally, of the liquidation during the year of short term securities, the income from which was credited last year to this account; and of the investment of the proceeds of such securities in U. S. Treasury Notes and Liberty Loan bonds, the income from which is included this year in the account Income from Funded Securities—Bonds and Notes.

The item of \$3,648,602.47, shown in the 1921 column as Miscellaneous Income—U. S. Government Guaranty (line No. 41), represents adjustments made last year in the estimated amount due from the Government under its guaranty for the six months ended August 31, 1920, as explained in last year's report.

The increase in Other Miscellaneous Income (line No. 42) is the result, principally, of including in the account last year charges, made by the U. S. Railroad Administration, representing adjustments on account of revenues prior to January 1, 1918, credited to the Company during Federal control.

DEDUCTIONS FROM GROSS INCOME.

The decrease of \$201,775.64 in Miscellaneous Tax Accruals (line No. 47) represents, principally, taxes on Central Pacific Railway Company Lands that were sold last year to the Central Pacific Land Company.

(a) The outstanding capital stock and funded debt include capital stocks and funded debt of system companies of the par value of \$346,770,400.00 and \$114,257,417.57, respectively, a total of \$461,027,817.57, which securities are owned by the Southern Pacific Company or by Proprietary Companies, or are held in sinking funds of Proprietary Companies. The cost of these securities is included in the investment assets. Of the said amount, stocks of the par value of \$249,653,161.00, which stand charged on the books at \$252,332,667.41, are pledged against the issue of Southern Pacific Company stock and bonds. (b) Represents principally, interest on construction advances which have not been repaid, as explained in the last paragraph but one under the heading "Income Account."

EQUIPMENT.

To provide for increased requirements and to replace vacated equipment, arrangements were made during the year for the purchase from outside builders, or for the construction at company shops, of rolling stock as follows:—

	Ordered from Builders	Built or Building at Company Shops	Total
Locomotives—steam	59	7	66
Locomotives—electric	3	—	3
Freight-train cars	7,900	427	8,327
Passenger-train cars	—	6	6
Electric motor cars	60	—	60
Company service equipment	45	4	49
Total estimated cost	\$24,150,900		

In addition to the above rolling stock the Pacific Fruit Express Company (which is owned one-half by Southern Pacific Company and one-half by Union Pacific R. R. Co., and which furnishes cars to, and operates along stations for, the Southern Pacific and Union Pacific Systems) ordered during the year 8,630 refrigerator cars, the estimated cost of which is \$26,437,000.

Including the Southern Pacific's one-half of the Pacific Fruit Express equipment, the total estimated cost of rolling stock provided for during the year for use on Southern Pacific lines amounted to \$50,587,900.

THE CONTROL BY THE SOUTHERN PACIFIC OF THE CENTRAL PACIFIC THROUGH LEASE AND STOCK OWNERSHIP.

In last year's report it was stated that the Supreme Court of the United States had decided that the common control of the Central Pacific and other Southern Pacific lines was in violation of the Sherman Anti-trust Act of 1890, and that the provisions of that Act required the termination of such control. A later Act of Congress, however, known as the Transportation Act, 1920, conferred power upon the Interstate Commerce Commission to authorize any carrier to acquire control over another carrier by lease or stock ownership, whenever the Commission should find, after investigation, that such acquisition of control was in the public interest. That Act further provided that a control so acquired under the authority of the Commission should be relieved from the operation of the Sherman law, as well as from the prohibition of other laws, state or federal, so far as might be necessary for the exercise of the control so authorized. This later legislation was not involved in the litigation which gave rise to the above referred to decision of the Supreme Court.

Believing that a common control of the properties in question was in the public interest, the Southern Pacific in October last applied to the Commission for authority to acquire control of the Central Pacific by lease and stock ownership. After an extended hearing, at which were represented the states of California, Nevada, Utah, Oregon, Arizona, Colorado, Idaho, Nebraska, and Wyoming, and also numerous civic associations, commercial organizations, and individuals, the representation including practically every interest concerned in transportation over the lines in question, the Commission, on February 6, 1923, approved and authorized the control applied for, and, as empowered by the statute, imposed certain conditions. The object and effect of the conditions were to prevent the control authorized from being exercised in such manner as to prevent the normal flow of traffic over the Southern Pacific Union Pacific lines through the Ogden gateway. The Commission found that the control applied for, subject to these conditions, was in the public interest, and that a separation of the properties was against the public interest. So much publicity has been given to the Commission's report and order that it is not necessary in this report to go further into details. It suffices to say that the Commission's order of approval and authorization, with the accompanying conditions, is satisfactory to the Southern Pacific and to the states and communities which were interested in preventing the threatened disintegration of the Southern Pacific System and is also satisfactory to the Union Pacific and to those who, mainly interested in the preservation of the Ogden route, had opposed the application on account of a possible use of the control applied for, to the detriment of transportation service by way of the Ogden gateway.

The Southern Pacific Company has re-acquired control of the Central Pacific pursuant to the Commission's order and subject to the conditions thereby imposed. It expects at an early date to bring the Commission's order and the Company's action thereunder to the attention of the District Court of Utah charged with entering a final decree pursuant to the opinion of the Supreme Court and the laws of the United States. As the Transportation Act emanates from the same source as the Sherman law and is equally binding upon the courts, it is expected that the District Court in rendering a final decree pursuant to the mandate of the Supreme Court, will recognize the fullness of the control acquired under authority of the Transportation Act and found to be in the public interest, and will treat the executive provision of the mandate, looking to separating and keeping separate the properties of the two Companies, as having been rendered inoperative by

subsequent legislation. In other words, it is not expected that the Court will reverse the will of Congress and subordinate the provisions and policy of the Act of 1920 to those of the Act of 1890.

It will be seen from the foregoing that, through the action of the Interstate Commerce Commission and the resulting application of the Transportation Act, 1920, to the case, we are on the eve of solving the question of the Southern Pacific's ownership and control of the Central Pacific in a way which is in the public interest and in harmony with the latest expression of legislative policy, and which at the same time, avoids the evils of a separation of the properties.

CONTROVERSY ARISING OUT OF THE OREGON AND CALIFORNIA RAILROAD'S LAND GRANT.

This is an accounting suit brought in 1917 by the United States seeking to offset against the compensation of \$2.50 per acre, due to the Company for the unsold lands, moneys received by the Company, in excess of \$2.50 per acre, by reason of past sales, leases, and otherwise, as well as taxes levied since the forfeiture decision in 1913 and voluntarily paid by the Federal Government to the State of Oregon. The trial of this case in the Federal District Court of Oregon is now at its last stage. It is expected that by the time this report is received by the stockholders the case will have been argued and submitted in the lower court.

SOUTHERN PACIFIC RAILROAD COMPANY OF MEXICO

In the annual report for 1921 the total of the claims against the Mexican Government was stated at \$2,840,272 pesos. Included in this amount, however, was an aggregate of 4,852,032 pesos, representing principal, 3,591,354 pesos, and interest, 1,260,678 pesos, on account of unpaid portion of subsidy provided for in the concession under which the company's line was constructed. Our requests that the Government pay this subsidy have been met with the reply that the completed line for which the subsidy is claimed contains a number of structures characterized as "temporary" by the Government inspecting engineers, and that the subsidy will not have been earned, and, therefore, will not become payable until such temporary structures shall have been replaced with permanent structures. It is therefore proper to exclude this subsidy from the claims subject to current settlement. The exclusion of this item and other reductions on account of payments, correction of claims, etc., up to March 2, 1923, have reduced the claims subject to current settlement to 24,065,000 pesos, equivalent in U. S. currency to \$12,032,500.

As a result of negotiations between the representatives of the Southern Pacific Railroad Company of Mexico and the President of the Republic, looking to a settlement of all matters at issue between the Railroad Company and the Government, an agreement was executed on March 2, 1923 which provides for:

(a) The settlement of the Railroad Company's claims against the Mexican Government.

(b) Suitable amendments to the original concessions in favour of the Railroad Company, including extensions of time for the completion of the lines upon which work was suspended on account of revolutionary disturbances.

(c) Completion by the Railroad Company within a period of four years of the 100 mile gap in the main line between Tepic and La Quemada; and

(d) The rehabilitation by the Railroad Company within a period of two years of the branch line between Corral and Tonichi, about 90 miles in length, and the branch line between Navojoa and Alamos, about 40 miles in length, the operations of which were abandoned in the spring of 1913 because of the partial destruction thereof by revolutionary forces.

The Company receives at once in notes of the Mexican Government 13,600,000 pesos bearing an average rate of interest of 3.7 per cent. per annum, which are to be paid at the rate of 3,000,000 pesos per annum; and the Government pledges itself to study and settle with a spirit of absolute equity and reasonable promptness the balance of the claim, amounting to 10,465,000 pesos, the amount to be paid to be based on adequate evidence, and when agreed upon, to be covered by notes.

Under the terms of the agreement the Company is required to begin the work of constructing the main line between Tepic and La Quemada, and also the work of reconstructing the Alamos and Tonichi branches, within 90 days from the date of the amended concession. Work on the main line was begun on March 6, 1923, and the work of reconstructing the branches will be commenced promptly.

The country through which the line already operates is susceptible of greatly increased production, but a number of its products are the same as produced in the United States, and the duties and other restrictions imposed upon imports from Mexico limit the available markets in this country for the Mexican products, while on the other hand the present termination of the Mexican line at Tepic affords no outlet for these products to the consuming markets of the Republic of Mexico. The proposed completion of the line to a connection with the National Railway of Mexico will give these products access to the Mexican consuming markets, and is expected to encourage and develop increased production and a corresponding increase in the business to be transported and the net revenue accruing therefrom.

TERMS OF SUBSCRIPTION.

Quarterly, 1s 6d; Half-yearly, £1 9s 6d; Yearly, £3 18s. od.
Colonies and Abroad, £3 11s 6d per Annum.

Single copies, post free, 1s 1d.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."

Office: Granville House, Arundel street, Strand, London, W.C. 2.

Copies of the Economist may always be obtained in the City at

Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmons,

5 Birch Lane; Barker and Howard, 6 Fenchurch building, Sugar

Loaf court, Leadenhall street; Pottle and Son, 15 Cullum street;

Willing and Co., Limited, 50 Cophall avenue, and 53 Finsbury

pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brestano's,

37 Avenue de l'Opera.

THE MONEY MARKET.

MONEY was wanted in the early part of the week, owing to the usual demands for balance-sheet and other purposes at the end of a month; nevertheless, the amounts borrowed from the Bank of England were not very considerable, and in the middle of the week a better supply was attributed to relief semi-officially given. Business

however, to the large number of early June Treasury bills believed to have been bought some time ago by the "hidden hand," there is a good deal of doubt as to the extent of the effect of this interest payment, much of which has, in effect, been in the hands of the market for a long time.

	June 1, 1923.	May 25, 1923.	May 18, 1923.	May 11, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount (Call)	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills) ..	1½	1½	2	1½	2

The Bank return showed a decrease of £1,272,000 in the reserve, almost entirely due to expansion in the note circulation. Government and other securities rose by £391,000 and £1,652,000 respectively, and there was thus an increase of nearly a million in the total deposits; but transfers preparatory to the War Loan payment left Public Deposits eight millions higher and Other 7½ millions lower. Currency notes outstanding were reduced this week by £437,800 to £287,481,500, which includes £1,477,500 for notes called in but not yet cancelled. The fiduciary issue is £238,054,000, or £32,129,800 below the maximum.

THE STOCK MARKETS.

The week has seen some recovery in the Stock Exchange, but attention has been largely concentrated on the gilt-edged market. Conversion Loan has been active, and has risen in price, but many other Government issues, including Consols, have been strong. In the Foreign market French issues have fluctuated, but some of the Chinese issues improved, and Finland and Helsingfors prices are better. Home rails, though quiet, have been fairly steady, but Argentine stocks weakened on the fall in the exchange. The Rubber market is slightly better, but oils remain heavy. Among industrials, tobacco shares have been buoyant, cement shares have attracted some attention, and business in Marconis has been fairly good. There has been a firmer tendency in the Kafir market, but the Mining markets, as a whole, lack support.

THE COMMODITY MARKETS.

There has been no appreciable quickening in demand in the commodity markets, and prices both of manufactured goods and of raw materials show, on the whole, a weakening tendency. Sugar has been quieter, with prices inclined to droop, but there was fair competition at the tea auctions. Rubber prices have shown a slight improvement. The wheat market has been dull, with some pressure to sell Indian wheat on the expectation of a large exportable surplus. Raw cotton prices have hardened a little, and our Manchester correspondent reports a slightly better demand for yarn and cloth. Raw wool prices remain firm, but business in tops and yarns is still much restricted. The piece trade is steady. Business in the pig-iron market is very quiet, and our Middlesbrough correspondent suggests that makers would reduce prices for genuine business. There is no change to report in the steel trade, orders being still difficult to obtain. With a recovery in output in South Wales, there has been a weakening in the prices of steam coal. Prices of tin and copper were irregular at first, but became firmer towards the end of the week. Lead has been easier. Business in the vegetable oil and oilseeds markets has been unusually slack, and prices have relapsed further. The hide market has weakened, but leather is firm; orders for boots and shoes are scarce.

FOREIGN EXCHANGES.

In the foreign exchange market business has continued very quiet, although in the case of some currencies there have been sharp movements in the rates. As was to be expected after the discussion in the Reichstag in which

it was made clear that the Reichsbank had given up in despair its attempt to steady rates, the mark has continued to depreciate rapidly, and from 250,000 on the 25th reached 325,000 on Thursday, for the first time standing at the same figure as the Austrian krone, with considerably less prospect of stability. Yesterday morning the rate had risen further to 330,000, while on the week the forward rate has risen another 10,000 to 40,000 marks above spot for one month ahead. At the end of last week the Paris rate was affected for the time by M. Poincaré's offer of resignation, and went up to 70, but this was followed by a recovery, and on Tuesday the quotation was back at 69.50. Since then, however, the German situation has reacted more severely than usual, and by yesterday morning the rate was up to 71.00, although at this figure there were signs of some recovery. It should be noted in connection with this rise that for the first time for some little period the Bank of France return shows an increase both in Government advances and in note circulation. The Brussels rate continues at about the same figure above Paris, and was quoted yesterday at 82.90, as compared with 81.40 a week ago. The strike continues to have a most adverse influence on trade conditions. Forward rates have widened somewhat on the week to 4½ centimes per month above spot in Paris, and 2 centimes below in Brussels. The New York rate has remained dull but fairly steady, with a slight movement against London, the quotation having moved from \$4.63 on the 25th to \$4.62½ yesterday morning. The rate for forward dollars is about the same at ¼ cents per month above spot. Among the other exchanges the chief feature has been the further sensational improvement in the drachma, which has fallen during the week from 230 to 160, after being about 400 a month ago. This movement, which is causing great confusion in Greece, would seem to be due to speculation on the possibility of a loan under the auspices of the League of Nations, and it is said that purchases, after having been confined mainly to Greece, have now spread to New York. Another remarkable recovery is that of the Bulgarian leu, which has dropped from 550 to 475, a recovery which is causing equal inconvenience to Bulgarian exporters. In Norway there has been a further satisfactory improvement from 28.75 to 27.82½, and it would seem that the lack of confidence occasioned by the recent banking crisis is being gradually overcome. In Helsingfors the rate at 167 shows a slight tendency to harden as this month is known always to be the most difficult for Finnish exchange. At the same time, the Bank of Finland has such a satisfactory reserve of foreign currency that this pressure is not likely to find much reflection in the rate. Amsterdam at 11.80½ has moved slightly against us, and Switzerland has also moved down a little to 25.62½, but Madrid has depreciated slightly to 30.44, and Italy has also moved up from 96½ to 98½. Vienna has, as usual, remained steady at 325,000, a satisfactory indication that the rate is not being allowed to be influenced by the general optimism in respect to this country, but Warsaw is up to 250,000, after being rather higher. Prague at 155 is unchanged. In the East the rupee is slightly cheaper at 1s 4½d, the yen rather dearer at 2s 1½d. The silver market has been dull, although the price has remained fairly steady. The announcement that the purchases by the American Government under the Pittman Act have been practically completed is tending to keep off buyers, and the Continent is again selling. Hong Kong has moved down from 2s 4½d to 2s 3½d, and Shanghai from 3s 2½d to 3s 1½d. In South America Buenos Ayres has been much weaker than for some time past, and stands at 41½d as compared with 42d a week ago, after being just below 41d on Wednesday. The general explanation would seem to be the falling off in European demand, mainly as the result of the German difficulties. The same influences are being felt in Brazil, but the Rio rate has been better maintained, and still stands at 5½d. Montevideo has fallen from 42d to 41½d, but Valparaiso has appreciated a little from 34.90 to 34.80 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 26th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	657	From Revenue	10,050
Northern Ireland Exchequer ..	380	Decrease in Balances	141
Reduction of Debt	4,477		
	10,191		10,191

Revenue, at £10,050,400, was about £430,000 less than in the corresponding week last year. Property and Income-tax yielded £1,471,000, and Super Tax £820,000, against a combined total of £2,284,000 last year. Special Receipts brought in £1,026,600, against £515,000. Customs yielded £2,599,000, against £3,095,000. Expenditure on Supply Services was about £1,000,000 lower at £4,677,000, and interest on War Debt about £900,000 lower at £657,200. The week's operations reduced the National Debt by £4,477,000, and caused the following changes:—

	Min. £		Min. £
Public Department Advances ..	6,400	Treasury Bills	1,723
		National Savings Certificates ..	100
		Unemployment Insurance ..	100
	6,400		1,923

The floating debt was reduced by £4,665,000 to £776,005,500.

FINANCIAL YEAR, 1923-24 (April 1 to May 26, 1923).

	£		£
Total Expenditure ..	106,583,381	Raised by Revenue ..	128,562,182
Net Capital Repayments ..	25,039,850	Decrease in Balances ..	3,061,049
Total	131,623,231	Total	131,623,231

ESTIMATES FOR YEAR 1923-24.

	£		£
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Our usual table of the National Debt will be found on page 1269.

THE WEEK IN PARLIAMENT.—The chief work of the new Government's first Parliamentary week has been the passage of the Restoration of Order in Ireland (Indemnity) Bill through all its stages in the Commons. Among other business transacted were the second readings of the Agricultural Credits Bill, the Workmen's Compensation (No. 2) Bill, and an L.C.C. Money Bill. Thursday was mainly occupied with the discussion of the Education Vote. On Wednesday the Indemnity Bill kept the Commons up all night. The Lords completed the Committee stage of the Mental Treatment Bill and the Freshwater Fisheries Bill. In the person of Lord Chaplin there has passed away this week a familiar Parliamentary figure, who was one of the few remaining links with the Parliamentary history of the Victorian era.

COMPANY MEETINGS OF THE WEEK.—On later pages of this issue will be found reports of the following company meetings:—Fine Cotton Spinners; Central Mining and Investment; Royal Insurance; Western Alliance Reinsurance; Gresham Life Assurance; Consolidated Assurance; Guardian Assurance; Equitable Life Assurance; Brunner, Mond; Royal Mail Steam Packet; Rubber Plantations Investment Trust; Bambra-kelly Tea and Rubber; India General Navigation and Railway; Crosses and Winkworth; Whitehall Electric Investments; Nitrate Producers' Steamship; Consolidated Mines Selection; and Lonely Reef Gold Mining. Among the features of the speeches were:—The references of Mr Thomas Woodsend (Royal Insurance) to insurance company investment policy; Mr Roscoe Brunner's explanation of the new scheme for allotting shares to Brunner, Mond's employees; the optimistic view of the future of the cotton industry taken by Mr Herbert W. Lee, of the Fine Cotton Spinners; the attack on nationalisation by Sir Lionel Phillips, of the Central Mining; the Duke of Argyll's review of the good bonus result of the Scottish Equitable; the reference to shipping companies and double taxation by Lord Kysant, of the Royal Mail; the confidence as to

bonus prospects expressed by the Hon. Evelyn Hubbard, of the Guardian Assurance; the defence of the rubber restriction scheme by Mr H. J. Welch, of the London Asiatic Rubber, who also reviewed the position of the tea industry at the meeting of the Rubber Plantations Investment Trust.

THE NEW TEAM AND THE ALIGNMENT OF PARTIES.

THE new Government, the personnel of which was still unsettled when we wrote last week, is starting its career under favourable auspices. The Prime Minister has had an exceptionally favourable Press, he has managed to include in his Cabinet one of the dissentient group of Conservative ex-Ministers, and he has added two other distinguished names to its roll. Thus his team is stronger than that of his predecessor, the prospect of a breakaway of a section of his majority is diminished, and he has on the whole a friendly public. The breach in the party is not, it is true, completely healed, for the influence of certain members of the caucus was strong enough to prevent the Prime Minister from extending an invitation to Mr Austen Chamberlain, the result being that Mr Baldwin also lost Sir Robert Horne. But at the eleventh hour he secured Sir Laming Worthington-Evans, who brings much-needed experience of administration, and is to some extent a guarantor of support from the group with whom he has been acting. But in any case this support was assured by Mr Chamberlain's magnanimous speech in the House on Tuesday.

The inclusion of Lord Robert Cecil and the prospective appointment of Mr McKenna as Chancellor of the Exchequer are even more important as bringing strength to the Government from new quarters. Lord Robert Cecil lost no time in buckling on his armour, and broke his first lance for his new chief over the Indemnity Bill, which he helped to pilot through the House. His conduct of the debate showed what an important Parliamentary asset Mr Baldwin has acquired. But it is not as a Parliamentary gladiator that Lord R. Cecil has joined the Government. His purpose is to see that the League of Nations plays what he conceives to be its proper rôle in our foreign diplomacy, and it is generally assumed that he has secured the necessary assurance of support from the Prime Minister on this point. He must, however, have accepted the invitation with some misgiving, for no one has urged more convincingly in the past that the League can only become the pivot of our foreign relations if it is taken as such by the Foreign Office, and used by the Foreign Minister as a substitute for the old methods of diplomacy. Any other plan raises the danger—so patent under the Coalition—of divided counsels. Lord Balfour, with his wide experience, tact, and aptitude for compromise, made the dualism work as smoothly as could be expected. But there may be room for doubt whether the necessary sympathy of outlook exists between Lord Curzon and Lord R. Cecil to prevent friction. The latter must accept his full share of responsibility in the House of Commons for the foreign policy of the Government without, in fact, having any control over the Department in which it is initiated. The minor activities of the League will, however, have secured a doughty, and probably an effective, champion in the Cabinet.

In view, however, of the overriding importance of financial policy, both international and domestic, the promise that Mr McKenna will shortly join the Government as Chancellor of the Exchequer is perhaps the most significant of Mr Baldwin's moves. Mr McKenna's record is a very exceptional one, his passing from the Treasury to the headship of one of the great joint-stock banks and back again to the Treasury being quite unique in our history. The sequence of appointments even suggests that the office of Chancellor of the Exchequer may be looked upon as a technical one in the same way that in various quarters people are urging that the position of Postmaster-General should be held on business merits irrespective of the politics of the Government of the day. But, of course, this argument can never really be applied to

the Exchequer. Finance has always been, and is particularly to-day, one of the chief factors influencing policy, and it is only when the country is in an extreme plight, as Austria has recently been, that its politicians would dream of surrendering the direction of financial policy to experts. Mr McKenna must not, therefore, be regarded simply as having joined the Government as its financial adviser, but as one who feels himself in harmony with the policy of the Conservative Party. Events will show how far he has, in fact, abandoned his former radical instincts—a matter on which, of course, he alone is sole judge. His acceptance, however, to those who know him has been to some extent a surprise, in spite of the general support which he proffered to Mr Bonar Law six months ago.

But though Mr McKenna's present political leanings have been kept in the background, his economic views have been constantly before the public in the last two years. His speeches have sometimes brought him into conflict with economists. For example, in his reference to deflation at the beginning of this year his criticism of Treasury policy in converting floating debt into Treasury bonds met with general criticism, both in regard to the arguments with which he supported his thesis, and also in respect of the policy which he was advocating. Again last autumn Mr McKenna, in a speech to the American bankers, put Germany's ability to pay on a basis lower than any other authority, and his suggestion that we cannot fix any reparation sum until Germany is producing an export surplus is a doctrine which quite clearly postpones all prospect of reparations to the Greek Calends. But against any misgivings that these utterances may have aroused, there are several points on which he carries City opinion with him. In the first place he keenly appreciates the interdependence of nations in commerce, and has illustrated this doctrine with very great effect. He is fully aware of the world-wide effects of the continued deadlock on the Continent. Secondly, he has made himself the champion of the doctrine that whatever may be done in regard to the revenue side of the Budget, the key which will release us from our financial difficulties is to be found on the side of public retrenchment. Again, Mr McKenna was a signatory of the bankers' appeal for free trade against the Safeguarding of Industries Act, and he also brings to his new office personal experience of the City and of our fiscal apparatus. The Federation of British Industries will also welcome Mr McKenna for his strong views on the evil of very high taxation, but we should qualify our approval on this ground by the consideration that the remission of taxes would be too dearly purchased if it is at the expense of a sound policy of dealing with our debt. In the City he has built up a high reputation. City circles would regard him as one who is essentially "*capax imperii*." Let us hope that they will never have to add the fatal qualification "*nisi imperasset*." Although certain of his views arouse nervousness, the Government certainly receive in Mr McKenna a strengthening of their technical equipment for dealing with business problems.

The new team has been afforded an excellent initial opportunity of showing its form in the debates on the Indemnity Bill, which formed the *pièce de résistance* of the week in the House of Commons. Liberal and Labour amendments were pressed with such persistence that the House was compelled to endure an all-night sitting on Wednesday. After the Government had accepted amendments confining the application of the measure more definitely to the single case of the deportations, the Bill passed its third reading yesterday. On the whole, the debates on this Bill have taken the course which we suggested last week it was desirable that they should take, namely, that the Bill should pass under a protest sufficiently strong to mark the occasion as a precedent to be avoided in future.

In the meantime, the "May meetings" being over, the Independent Liberals on Wednesday opened the season of annual political conferences at Buxton. But up to the moment of writing they have shown little sign of having anything either new or inspiring to say to the country, and have devoted their energies to a sorry wrangle on the question of reunion. Over this task the

party is making very heavy weather. The difficulties of Liberal reunion have much more substance than the obstacles which are preventing the reuniting of the Conservative party. The latter are purely questions of personal loyalty, and in respect of those affecting himself, Mr Lloyd George has recently in effect released his late colleagues from any obligations. The difficulties in the Liberal party are more real, for some of the National Liberals are now genuinely Conservative in outlook and policy, and will sooner or later join that party; while all of them are now more or less under obligations to Conservative voters in their constituencies. But the situation is undoubtedly altered by the change of Government, and it would clearly be a great gain if members would now sort themselves out into their true political affiliations on both sides of the House. Mr Lloyd George in both words and deeds has not merely shown desire, but has betrayed real anxiety for reunion, which indicates that he recognises the fact that there is for him no political future except as a member of a Liberal party. We appreciate the point of view of those Liberals who, finding it difficult to quiet their district of the late Premier or to forget the record of the Coalition, are unwilling to take on board one whom they regard at the moment as a political Jonah. But the demand that men, many of whom acted with the highest motives, shall give proofs of repentance, savours to the public far too much of Phariseism, which thanks God that it is not as these National Liberals. It is impossible to overestimate the value of principle and honesty in politics, and the Liberal leaders have set a fine example in this respect. But party speakers make themselves ridiculous when they claim a monopoly in these commodities. The only dignified attitude for the Liberal party is to concentrate on expounding the point of view and the programme of Liberalism, and to throw the doors wide open to all who will accept them. If Mr Asquith would let it be known that the Liberal Whip would be extended on application and without any personal excommunications to any member of the House who applied for it, subject only to the condition that no duplicate or sectional organisation is to be maintained within the party, his action would be above question, and Mr Lloyd George would have to make a choice between the dissolution of his party into its natural paths, or endeavouring to keep in existence a rival organisation which quite clearly lacks any specific purpose or homogeneity.

AMENDING WORKMEN'S COMPENSATION.

THERE are at present before the House of Commons two Workmen's Compensation Bills which seek to amend the existing Compensation Acts. The first in priority of introduction is the Labour Party's Bill, which was given a second reading before the Whitsuntide adjournment. This Bill follows generally the lines of the report of the Holman Gregory Committee of 1920, a report which at the time met with wide acceptance. But since 1920 a great change has come over the scene. The very high standard of wages which had outstripped the benefits of the Act of 1906, in spite of the war additions, has been subject to continuous reduction. The Ministry of Labour's index number of retail prices, which is taken roughly to represent the cost of living of the working classes, has fallen by a hundred points. The agreement of 1920, under which the insurance companies accepted the conclusions of the Holman Gregory Committee, has, therefore, lapsed by effluxion of time and circumstance. This was made clear by the Home Secretary, who though not officially opposing the second reading of the Labour Bill, announced his intention of producing a Government Bill better suited to the conditions of to-day than the Labour Party's rather belated effort. It is this Government Bill, which was read a second time this week, with which we are chiefly concerned just now.

It is agreed by everybody who is familiar with Workmen's Compensation that an amending Act is necessary. The Act of 1906 is out of date; it was shattered by the

war. Two War Addition Acts have been passed, in 1917 and 1919, under which the weekly maximum benefit for temporary disablement was raised from twenty shillings a week to thirty-five shillings. But the death compensation remained unchanged, and various other insufficiencies in the principal Act call for reconsideration. During and immediately after the war the insurance companies made large profits out of workmen's compensation risks; they could scarcely help themselves. The premiums based on wages bills soared upwards with the advances in wage rates. The proportion of claims to premiums fell. The discrepancy between claims and premiums was gone into thoroughly by the Holman Gregory Committee, and it was their recommendation that 70 per cent. of the premiums under a compulsory insurance scheme should be taken as the proportion which ought to go into benefits to injured workmen or dependents. The decline since then in premiums has kept pace with the reduction in the standard of wages and the movement of unemployment. Last year there was a decline of some 30 per cent. in the premium incomes of the insurance companies, and this year the progressive decline continues, though not quite so rapidly as in 1922. Part of that falling off has been due to a remission by the companies of 10 per cent. of the rates of premiums payable in 1920. The effect has been to raise the proportion of claims to premiums more nearly to the normal pre-war level, and to increase the proportion which salaries and other expenses of management bear to premiums. This economic process during three years of depression has made the 30 per cent. of the premiums (for expenses, commission, and profits) which was agreed to in 1920 a lower cost apportionment than could be accepted now, even were workmen's compensation insurance made compulsory and agency charges largely done away with.

The Government's Bill has nothing to do with compulsory insurance as recommended by the Holman Gregory Committee. It is purely an amending Bill, what some critics have called a "make-shift" Bill, and leaves premiums and expenses of workmen's compensation business to settle themselves subject to an agreement which the Under-Secretary for the Home Department stated had been made with the Accident Offices' Association. Under this agreement the amount to be paid in compensation during the next three years is to be not less than 65 per cent. of the premiums. After three years it is to be 62½ per cent. Adjustment of premiums is to be made as need arises on this basis. The principal features of the Bill are not revolutionary, though there are one or two sections of the measure which do propose to make rather startling changes. The first amendment of importance is the increase of the maximum compensation for accidental death to £500 instead of being £300 as at present. A widow without children does not under the Bill get more than £300, but there is a scale of benefits for children under 15 years which may—we anticipate in many instances will—raise the £300 to the limit of £500.

The War Addition Acts of 1917 and 1919, which dealt with weekly benefits for temporary incapacity, are repealed, and the maximum weekly benefit for total incapacity is put at thirty shillings as against twenty shillings in the Act of 1906, and as against thirty-five shillings in the War Addition Acts. There is a reduction here due, no doubt, to the fall in the rates of wages. The basis of compensation is 50 per cent. of the wages, subject to the maximum, as in the Act of 1906. The allowance for partial incapacity is far too complicated to be explained without chalk, a blackboard, and rather abstruse calculations. We gather from our inquiries that the insurance offices feel able to work out the problem as it will be presented to them, which is fortunate. If they had to give it up as the employers and workmen will at sight, there might be administrative complications. The Bill extends the definition of workmen so as to cover taxi-cab drivers, those who are employed for purposes of games and recreations, and share fishermen. It is not easy to see how taxi-cab drivers, for example, who are not paid wages but earn what they can out of a hired cab, are to be rated for premiums based on wages bills.

So far we have been concerned with amendments which, however important they may be, are no more than modi-

fications in detail of the existing Acts. No central principle has been affected. But it happens that there are two sections in the Government Bill which do cut rather deeply across established principles. It has hitherto been fundamental that compensation could only be legally enforceable when accidents arose out of, or in the course of, a man's employment. The limitation "arising out of or in the course of" employment has been criticised for years, and many modifications have been suggested to meet cases where compensation has been equitably due, though not at present legally granted. The Bill, in Section Six, declares that an accident resulting in death or serious and permanent disablement shall be "deemed" to arise out of and in the course of employment, even though the workman was at the time acting against regulations or orders, or was without instructions from his employer, "if such act was done by the workman for the purposes of and in connection with his employer's trade or business." This departure from principle looks rather dangerous, and may give rise to much litigation. The often harsh limitation, "arising out of or in the course of" employment, certainly needed to be made more elastic, but one may doubt the advisability of holding an employer responsible for compensation in the event of serious accidents occurring while his own regulations or orders are being broken by an employee. Another break with principle occurs in Section Thirteen, which forbids an employer from stopping or diminishing a weekly payment unless an injured workman has returned to work. This is to shift the burden of proof of a man's incapacity from the man to his employer. Hitherto the injured man has been the claimant, who has had to make good his claim to continued weekly payments. Under the Bill the employer has to go on paying until he can get the man back at work. There are certain safeguards, it is true, but the section does make a distinct change in principle.

Agreements to commute claims for compensation by the payment of a lump sum have been frequent in the past, and have been popular among all the parties concerned—the injured workman, the employers, and the insurance offices. A sufficient safeguard has been the approval and registration of agreements by the registrars or judges of county courts. Section Eleven of the Government's Bill introduces a new party to these agreements in the approved society or committee under the National Insurance Act which is concerned with the injured workman. The society or committee is given the right to appear before the county court, registrar, or judge, and object to registration of an agreement. It is perhaps natural that those responsible for the administration of the National Insurance Act should be given this *locus standi* in respect of lump sum agreements—for the man after he has spent his lump sum may come upon them for sickness or disablement benefit. We call attention to the innovation without expressing any desire to criticise it.

A BOVINE BUNGLE.

(FROM A CORRESPONDENT.)

THE question commonly known as the "embargo"—in other words, the admission of store cattle from Canada—had a popular vogue for a much longer time than is usual with subjects of public interest. For its extended vitality there were several reasons. There was a well-organised agitation both in this country and in Canada, but this in itself would have been inadequate had it not been possible to represent—falsely, but none the less forcibly—that the price of beef would be substantially affected by the result, and to stampede opinion in one constituency so as to inflict a heavy defeat on a Minister. Nevertheless, with all these adventitious aids, the discussion of the question was beginning to pall, and there was a general feeling of relief when it was, at long last, settled—as was supposed—last August. It was therefore with surprise that the public discover that the question, after all, is not settled, while among agriculturists the discovery has been received with consternation.

Not only have few subjects of minor importance been discussed with so much fervour and for so long a period, but few also have had such curious vicissitudes. It

originated in 1896, when a series of enactments restricting the importation of living food animals culminated in a law compelling all such animals to be slaughtered at the port of landing. The effect was, obviously, to allow the importation only of cattle which were in a fit condition for the butcher—in other words, fattened. The practical result was that a trade, which had been slowly growing between Canada and Great Britain, in young cattle arriving in "store" condition was stopped. It was only a small business, the number of animals affected being not more than some 60,000 or 70,000 in a year. The law, of course, applied to cattle from any country, and was regarded by British stockowners as putting the copingstone on the laboriously constructed defences against the risk of the introduction of disease among our flocks and herds. That it happened, at the time it was passed, to affect Canada—and practically no other country—was an incident which had no relevance to the policy in its broad aspect. For many years nothing much happened. From time to time protests, more or less formal and forcible, were made on behalf of Canada, mainly on the ground that there was no risk of disease in admitting cattle from the Dominion. The reply was that the policy was one of universal application, and that there was no discrimination in favour of, or against, any source of supply. Along these lines the controversy continued somewhat languidly, now and again breaking out into spasmodic activity under the impetus of persons interested. The war brought it suddenly and unexpectedly to an issue. At the Imperial War Conference in April, 1917, one of the Canadian Ministers brought forward a motion that the "embargo" should be removed. This was accepted by the British Ministers present and unanimously adopted, it being agreed that action to give effect to the motion should be deferred until after the war. It was when Canada, very naturally, pressed for action that the trouble began. The agricultural heather was on fire. Farmers were not entirely unanimous, but the overwhelming majority were vehemently opposed to any breach being made in the policy which they regarded as their wall of defence against the introduction of disease. The Government temporised, and eventually referred the question to a Royal Commission, composed of impartially-minded persons, under the chairmanship of Lord Finlay. They held a lengthy inquiry, and reported somewhat half-heartedly in favour of the admission of Canadian stores. Still the Government hesitated, but after one or two contradictory announcements stood aside and left the question to Parliament. But the irony of the situation lay in the fact that all this prolonged controversy on the advisability of admitting Canadian cattle and the effects of doing so was irrelevant to the real question submitted to Parliament and decided by it. The true issue was whether a pledge had been given to Canada by the British Government, and if so, whether it should be honoured. To this question there was only one honourable answer, and when it was made clear plain men wondered why the Government had hesitated. Both Houses expressed their opinion decisively, and, in effect, instructed the Government to keep the promise made by British Ministers.

Up to this point no question had arisen about the class of cattle which were affected by the "embargo," or which would be admitted when it was removed. The Canadian case, repeatedly insisted on, was that they reared a larger number of young stock than could be fattened in the Dominion, and that for them a market—or more precisely an alternative market to that of the United States—was required. When, however, the question arose of putting the decision of Parliament into definite terms it was claimed that it authorised the admission of any cattle from Canada, and not only store cattle. Sir Arthur Boscawen, who, as Minister of Agriculture, conducted the negotiations, appears to have admitted this claim in principle without demur, and confined himself to a discussion of the form in which effect should be given to it, and to bargaining for certain reciprocal arrangements in connection with the export of British stock to Canada. In a letter to the *Times* he states that up to this time the question had been "the embargo on Canadian cattle without qualification." It is difficult to accept this in the face of the evidence. The whole controversy had raged around store cattle. The Report on the subject was headed "Royal Commission on the Importation of Store Cattle." The recommendations

of the Commission, though not entirely free from ambiguity on this as on other technical points, indicated that they had only store cattle in mind. In eight out of their 10 recommendations the reference to store cattle exclusively is quite unmistakable, and in only two is it possible by a somewhat strained interpretation to contend that they had any other cattle in mind. Breeding cattle, in any case, are not mentioned in their recommendations.

Under these circumstances, it is, to say the least, questionable whether the decision of Parliament gave any authority to arrange for the admission of cattle other than stores. However this may be, Sir Arthur Boscawen agreed with the Canadian representatives that an Order should be laid before Parliament sanctioning the importation of breeding animals from Canada. He states that he did this with the knowledge and assent of the Live Stock Defence Committee and the National Farmers' Union. This appears to be disputed, but it is evident that farmers and stockowners generally were not consulted, and that they have only just become conscious of what has happened.

When challenged on the subject at the meeting of the Council of Agriculture a few days ago, Sir Robert Sanders, the present Minister of Agriculture, admitted that a promise had been given to introduce an Order admitting breeding animals. In that case the question would again come before Parliament for decision, not on its merits, but in a form which involves the fulfilment of a promise made by a responsible Minister. It would again be a matter of keeping faith with the Dominion. It would be difficult to imagine a more maladroit or unfortunate manner of dealing with the subject. Farmers would feel that once more, and this time with far less excuse, "the pass had been sold." About store cattle there was some division of opinion amongst them, but about breeding cattle they are unanimous.

It has been announced that the Government have decided to bring the whole question of the importation of Canadian cattle before the Imperial Conference, but it is not clear at present whether the introduction of the promised order is to be postponed until this event. This question will no doubt be determined in the present session.

THE STATE OF THE REPARATION ACCOUNT.

POPULAR ideas as to what Germany can and should pay by way of Reparations are, with some excuse, of the vaguest description. It is unfortunate that there is little more definiteness as to what has actually been accomplished. This, however, need no longer be the case, for the Reparation Commission are now regularly publishing a summary of their accounts—the second statement being one which brings the accounts between Germany and the Allies up to the end of 1922.* Germany's debt may be divided into (a) obligations in connection with the Occupation, Control Commissions, &c., plus money lent to Germany under the Spa Agreement for additional food for Ruhr miners, and (b) the debt fixed in 1921. The charges against Germany under (a) amount to 3,536,000,000 gold marks, and the receipts to 2,624,000,000, leaving a deficit of 912,000,000. The assessments under (b) are 132,000 million gold marks, plus 5,624 million gold marks in respect of the Allies' loans to Belgium, but the value of State property in ceded territory amounting to 2,554 million gold marks is regarded as a set-off against the capital of the debt, and reduces the total to 135,070,000,000 gold marks.

Putting the two sets of accounts together, we find that Germany has paid:—

	Millions of Gold Marks.	Million £ (Gold).
In cash.....	1,817½	90.9
.. kind	3,556	177.8
.. State property in ceded territory	2,554	127.7
	7,927½	396.4

In addition Germany has contributed to the local expenses of the Armies of Occupation in paper marks, or services (billeting, use of barracks, &c.), a sum which is equivalent

* Statement of Germany's Obligations under the Heading of Reparations, &c., at December 31, 1922. Stationery Office. Price 2s.

to between 1,600 and 2,000 million gold marks. This makes a total of nearly 10,000 million gold marks in all. The accounts also mention the payment by Germany of 3,836 million gold marks in respect of food and raw material supplied by the Allies to Germany in 1919. But as this is a purchase by Germany of necessities, it should not be added to the German payments. If, however, we are trying to estimate the burden on Germany's finances, we should add the sum paid to the Clearing House for private debts, which amount to 620 million gold marks.

An analysis of the deliveries in kind and of the property in ceded territory is as follows:—

VALUE OF DELIVERIES IN KIND. (In Millions of Gold Marks.)	
Reparation Recovery Act	163
Ships	707
Inland water craft	29
Livestock	159
Coal	949
Dyes, &c., &c.	105
Armistice—Abandoned war material	318
Rolling stock	827
Other (agricultural, motor lorries, &c.)	40
Submarine cables	49
Miscellaneous	233
	3,579
Less the amount inc. above for restitution of stolen property	23
Net value of deliveries in kind	3,556
VALUE OF STATE PROPERTIES IN CEDED TERRITORY. (In Millions of Gold Marks.)	
Saar Mines	400
School in Shanghai	2
Property in British Concession in Shameen	6
" " territory ceded to—	
Kiaochow	59
Czecho-Slovakia	6
Danzig	304
Poland (ceded area)	1,757.3
In lieu of taking over German debt assignable to Eupen and Malmédy (Belgium)	6
Silesia (Czecho-Slovakia)	4
Danzig	5.5
Various (Poland)	18.6
	2,554

The cost—other than that met by payments in paper marks—of the Armies of Occupation (excluding that of the U.S.A., the cost of which is 1,072 million gold marks) and other charges for control, commissions, &c., amounts to 2,840 million gold marks, of which all but 400 millions is for the armies. This leaves 4,000 million gold marks for Reparation, which has been distributed among the Allies as follows:—

WHAT THE ALLIES HAVE RECEIVED.						
	Kind (including Reparation Recovery Act).	Cash.	Property in Ceded Territory.	Total Distributed to Allies.	Repayment of Coal Advance Armies of Occupation, &c.	Net Receipts.
Great Britain	512	637	302½	1,449½	1,036½	113
France	1,345	142	302	1,789	1,500	289
Italy	242½	½	..	243	39½	203½
Japan	9	..	59	68	½	67½
Belgium	643½	1,075½	½	1,719½	264	1,455½
Poland	14½	..	1,776	1,790½	nil	1,790½
Greece	11	..	..	11	..	11
Roumania ..	10	..	..	10	..	10
S. C. Slovene ..	150	½	..	150½	..	150½
Czecho-Slovak ..	15	..	6	21	..	21
Portugal	4½	..	..	4½	..	4½
Total ..	2,957	1,855½	2,144	6,956½	2,840½	4,116½

These figures show some very striking results. Thus France's expenditure on the Army of Occupation is not quite met by her receipts in cash and kind, her net profit being entirely in respect of the Saar mines. Great Britain has a net surplus, thanks to the Reparation Recovery Act, but there is, of course, room for great difference of opinion as to whether this alleged British surplus is paid by Germany at all or whether it is rather money found by the British consumer of German goods! Belgium shows a large surplus through cash receipts under her priority rights, and Poland comes

best of all out of the whole business, as she has no excuse for charging her military expenditure against Germany.

This leaves 980 million gold marks undistributed—this figure representing the value of property ceded to Danzig, and also the difference in value between the total value of goods or property credited to Germany and the value reckoned in making the allocation to the Allies. Thus the Saar is regarded as worth 400 millions from Germany's point of view, but 300 millions to France. Similarly, the ships are credited to Germany at 707 millions, but only 316 millions when allocated to the Allies. These book-keeping transactions are only of importance as affecting the sharing of the spoils among the Allies.

German propagandists have put forward very much larger figures than the above, and in particular our attention has been called to a statement which amounts to the fantastic total of 136,000 million gold marks. But this is arrived at by putting in the "economic value" of ceded territory at 100,000 millions. The loss of territory, of course, means a reduction of Germany's ability to pay, but it is very difficult to put a money value on colonies which may easily become a liability and not an asset or even on Alsace-Lorraine. And in any case, a hypothetical value of this kind has no relation to the Reparation bill. The balance of 36 milliards is arrived at by including the value of German property abroad liquidated by the Allies, and by including the value of loans advanced by Germany to her former Allies. The whole economic loss sustained by Germany is, of course, much bigger than is shown in the above accounts; but the only substantial criticisms of their correctness for the purpose they set out to serve is that State property and deliveries in kind may have been undervalued. On this point Professor Gide notes the claim of Germany that if a fair valuation had been adopted the total would be over 20 milliard gold marks, instead of less than eight milliards, and assumes that the truth will be somewhere between the two figures, at, say, 12 to 14 milliards. The point is not without importance, for though the future payments must be limited not by what has been paid already, but by Germany's capacity, the question of the basis of valuation will continue to be of importance, for if fair principles are adopted it may help to reconcile figures which at the moment are separated by much too wide a gulf.

THE NATIONAL CREDIT OF IRELAND.

THE Government of the Irish Free State is investigating the possibilities of raising a public loan on the national credit. It appears that the estimated revenue for the year ending March 31, 1924, will fall short of the necessary expenditure by some £25,000,000, and that a further heavy sum will be required during the ensuing financial year to complete the liquidation of pre-Truce and post-Truce compensation claims and to provide for other pressing capital or non-recurrent outlays. These amounts, though large, are not intimidating. Ireland can easily carry a public debt equivalent to some two years' revenue, and though her taxation is still on the war level, her economic stability and financial buoyancy in face of her experiences of the last three years have been much better than might have been feared. It is claimed that the estimates of annual revenue, as well as those of the total cost of compensation, have been framed with a prudent regard for unfavourable contingencies, and that the machinery for tax collection is being tuned up to a high standard of efficiency. If this effort succeeds, and as the beneficial effects of peace and order progressively make themselves felt, revenue will tend to increase and ordinary administrative expenditure to decrease.

We are not aware of the exact figures of the projected borrowings, but it is an open secret that something like £50,000,000 may have to be provided during the next two years to supplement the revenue from taxation. How far this figure will require to be met by public loan and how far it will be provided by interest-bearing bonds, such as the Irish Free State Government intends to issue, in lieu of cash,

in part payment of compensation awards and for all payments under its new land purchase scheme, is not at the moment clear. But what is quite clear is that, whether before or after the General Election in September or October next, there must be a large national borrowing on the credit of the Irish Free State to provide monies for disbursement before March 31, 1924.

The occasion is one of great importance to Ireland, even more than the actual collection of Irish revenue by Irish taxgatherers. The issue of a national loan is a crucial test of Irish financial independence which is the indispensable correlative of true political independence. Much will depend hereafter upon this first transaction and the manner in which it is handled by the Irish Government and the Irish public. The first step counts for much.

There are only three possible markets in which Ireland can borrow, namely, London, New York, and Ireland itself. Some six months ago we suggested that it was advisable, in her own interests, that Ireland should, in the first instance, finance her own capital requirements, and that she had quite sufficient money available to enable her to do so. In this way only could an accurate gauge be obtained of the level at which the internal credit of the Irish Exchequer stands, and the level of the internal credit of Ireland will be the predominant factor in determining the level at which its external credit will stand in the money markets of the world. If Ireland does not support her own credit by purchasing her own national securities, she will be in real danger of coming under the influence of rival groups of money-lenders, whose dominance in finance matters might spread in an undesirable manner into the political sphere. If, on the other hand, she provides the whole or a substantial proportion of her own requirements on easy terms, she will have called the tune by which any future lenders will have to time their steps. It is probable that the Irish Free State Government will aim at the former alternative, and it appears not improbable that the Irish public, if judiciously taken into the Government's confidence, will make an effort to avoid their new policy drifting into the position of a tied-house to any group of foreign creditors. But the prospect before both Government and public is not devoid of difficulty.

The financial system of Ireland has heretofore centred on London, and the interval since the Treaty of December, 1921, has been short and much pre-occupied by the vital tasks of constitution-drafting and internal stabilisation. Those who—apart from official circles—carry on the daily financial and banking work of the community tend to think still in terms of the London money market, and to envisage new problems from that standpoint. This is not unnatural nor even unsound during the earlier stages of Ireland's emergence from financial dependency. And when it is accompanied by brand-new Treasury and Exchequer Departments, with a largely improvised personnel, a certain lack of self-confidence in those directing the national financial policy—official and unofficial—might be expected. We can only note the factors without venturing to forecast results or advise on policy. But there can be no doubt that a hearty response by the Irish public to an appeal for a public loan upon easy terms would be of great value to Ireland's prestige in matters financial, and not in matters financial alone.

We have adverted to the subject as well-wishers of the new Irish Free State, and because, frankly, in our view the existence of a prosperous and contented Ireland alongside of Great Britain is of more importance to the latter than the profit to be made by lending British money on a relatively small scale to its neighbour. And the omens appear to be propitious. Our Dublin correspondent recently pointed out that the Irish public has spontaneously been supporting Irish securities on the Dublin Exchange, and that the yield of certain municipal stocks and railway debentures is no more than $4\frac{1}{2}$ to 5 per cent. This is doubtless due to withdrawals of Irish money from British Government and industrial securities, in view of the complexity of income-tax problems and the trouble involved in the machinery for the avoidance of double income-tax. But the tendency is unmistakable. On the other hand, inasmuch as a good deal of the Irish borrowings will come to Great Britain in payment for land or compensation to expropriated landlords, something like a balance for the withdrawals will be created. It would

appear that all that is required for success would be that the drift of Irish capital back to Ireland should be accelerated, and used to put the State finances on a firm basis and settle the vexed and disturbing question of compensation. An appeal to the national pride, and the offer of terms attractive to all classes of investor, if supplemented by the loyal co-operation of the Irish banks, might produce the desired results. Possibly, as has already been hinted from Dublin, recourse may be had to an issue of premium bonds as the most promising post-war method of raising money upon the widest popular basis in a time of national emergency.

OUR INDEX NUMBER.

COMMODITY wholesale prices during May, according to our Index Number, reacted after the rise recorded during the previous month, there being a drop of 28 points in the total to 4,412, which is 20 points higher than the figure for the end of March. It would appear that the check to the rise in commodity prices which occurred in the United States three months ago, and has now turned into a definite decline, is now being repeated in this country. The net change in May is the result of fairly substantial counteracting movements in the various groups, advances in the two groups of foodstuffs being nearly offset by declines in minerals and miscellaneous products, leaving a decline in the textile group to account for the change in the total. The table below shows the monthly movements:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Base (avg. 1901-5) ..	500	500	500	400	500	2200	100.0
End July, 1914	879	352	616	464	553	2865	116.6
" Dec., 1915	897	446	731	711	848	3634	165.1
" Dec., 1917	1286	686	1684	839	1348	5891	268.2
" Nov., 1918	1289	782	1848	903	1389	6212	282.6
" Dec., "	1303	782	1805	866	1337	6094	277.0
" Dec., 1919	1441	881	2442	1145	1453	7364	334.7
" Mar., 1920	1608	914	2974	1248	1709	8332	379.6
" Dec., "	1344	805	1284	1216	1275	5924	269.3
" Dec., 1921	921	636	1106	762	931	4357	198.0
" June, 1922	1000	676	1135	690	887	4389	199.5
" Sept., "	873	682	1116	699	818	4189	190.4
" Dec., "	861	706	1184	705	807	4264	193.8
" Jan., 1923	860	711	1205	739	808	4324	196.5
" Feb., "	847	746	1201	797	810	4402	200.1
" Mar., "	824	752	1178	840	797	4392	199.6
" Apl., "	858	752	1199	834	797	4440	201.8
" May "	869	772	1166	818	785	4412	200.5

Home-grown cereals are largely responsible for the advance shown in the first group, chiefly as a result of a falling off in supplies. Foreign wheat, on the other hand, is a shade easier, and flour is slightly lower than it was a month ago. Small declines in beef and mutton were counteracted by a larger advance in pork. Among subsidiary foodstuffs, tea, coffee, and butter have fallen in price, but there is again an advance in sugar.

In the textile group, with the exception of a further advance in silk, movements are all downward, the largest of which are shown by Egyptian cotton and jute. Wool prices are unchanged, but there was another slight decline in hemp. Raw cotton prices have fluctuated considerably during the month, and this has proved a disturbing factor for the yarn and cloth sections, prices for which are also lower on balance.

In the minerals section, steel rails and iron bars remain unchanged, but pig-iron has again been lowered. Steam coal has also reacted a little from the high point reached a month ago. Among the minor metals tin and copper have suffered slightly from selling pressure and are lower on the month, but lead was slightly higher on balance. With reference to lead our market correspondent writes that following the publication of the article in last week's *Economist* on the market prospects of foreign pig lead, there has been a fall in prices, and, as anticipated, buyers have been keeping out of the market, although there was more desire to operate after the fall. "A noticeable feature has been an adjustment in the backwardation. This, at the close of last week, amounted to no less than 20s per ton, thus proving the artificial character of the whole position and the manipulation of prompt and

nearby metal. Early lead showed marked weakness, but forward in the late trade met with more attention and displayed a fairly steady undertone. Market values have now come down to a level more in keeping with the demand and statistical position of the metal, but there may have to be further adjustments later on. The world position of lead is very uncertain, owing to the expansion in production, and while a little business has come along for Russia, generally speaking, the Continental trade is stagnant." In the miscellaneous section there were only a few movements, all of which were in a downward direction, the largest being a decline of $6\frac{1}{2}$ points in indigo.

The changes in each commodity's index, as compared with the end of April, are shown in the next table, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	86	-1	Cotton, A.	139	-3	Copper	55	-4
English	84	+5	Cotton, E.	130	-9	Minerals	818	-15
Flour	80	+2	Yarn	130	-7			
Barley	89	+3	Cloth	127	-7			
Oats	82	+2	Wool, Eng.	123	..	Baltic timber	101	..
Potatoes	50	..	do. Aust.	120	..	Amer. timber	88	..
Rice	105	..	Silk	152	+4	Leather	68	..
Beef	90	-1	Flax	120	..	Petroleum	108	..
Mutton	106	-1	Hemp	46	-2	Oils	79	..
Pork	115	+6	Jute	88	-11	Oilseed	87	-3
						Tallow	65	-2
Cereals & Meat	869	+11	Textiles	1,666	-32	Indigo	87	-6
						Crystals	85	..
Tea	133	-9	Pig iron	131	-3	Rubber	15	-
Coffee	94	-4	Steel rails	87	..			
Sugar cane	223	+7	Iron bars	92	-4	Miscellaneous	785	-12
Sugar beet	135	+2	Coal, steam	172	..			
Butter	70	-2	House coal	94	..	Total	4,412	-28
Tobacco	116	..	Lead	109	+2			
			Tin	77	-5			
Other foods	772	+20						

From these figures it will be seen that most of the primary foodstuffs are considerably less than double the basis figure, but in the second group this only applies to coffee and butter. Cotton, wool, silk and flax stand much above the average, but hemp stands at the lowest figure in the list, rubber only excepted. Pig-iron and steam coal stand out prominently in the minerals group, to which copper affords a sharp contrast. In the miscellaneous group petroleum stands at the highest figure in relation to the base.

Changes in May bring present prices to a figure which is 72 per cent. above the level recorded at the outbreak of war, which compares with an increase of 73.1 per cent. at the end of April, as may be seen from the following table:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec., "	233	229	209	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6
June, 1922	174	192	184	149	160	171.1
Sept., "	151	194	181	150	148	163.5
Dec., "	149	200	193	152	146	166.2
Jan., 1923	149	201	196	159	146	168.6
Feb., "	146	211	195	172	146	171.6
Mar., "	143	214	191	181	144	171.2

May "	150	220	189	176	142	172.0

"Other foodstuffs" continue to move higher than ever above the average, but primary food, textiles and minerals are each moving towards the average figure.

In the final table we give the latest indices of wholesale prices in some of the principal foreign countries, the average for 1913 being taken as 100:—

	United States.*	France.	Italy.	Germany.	Switz'r land.	Sweden.	Denmark.	Japan.

* Brads' real's.

There was a very small decline in prices in America in March, but the decline in April was more substantial, the principal features being falls in provisions and textiles. The French index number shows a drop for the first time for many months, which, with the exception of sugar, was fairly general. The German prices have reached a new high record, but are still slightly under world market prices.

THE SEA CARRIAGE BILL.

THE Bill introduced by the Lord Chancellor in the House of Lords "to amend the law with respect to the carriage of goods by sea," while favourably received in commercial and shipping circles, has, nevertheless, given rise to considerable discussion, most of which has taken place outside Parliament. The measure, by which, as pointed out in the *Economist* of March 31st, it is proposed to make the revised Hague Rules compulsory as a term in all bills of lading, was read a second time on April 19th, and the principle involved may be taken, therefore, to have been approved, but the Committee stage has been postponed from time to time in order that points raised by certain sectional interests may be adjusted, and agreed amendments be brought forward. Since the second reading, also, the proposals have been severely criticised by distinguished lawyers, with the result that traders, bankers, and shipowners have rallied to the support of the scheme which embodies the business bargain internationally worked out by prolonged discussion.

While there was some justification for deferring the next stage of the Bill in order that parties might agree outside the House, a feeling of impatience at further delay has manifested itself. During this present week the Merchants Committee of the London Chamber of Commerce has adopted a resolution expressing satisfaction at the second reading of the Bill, and urging that it may be pressed through the remaining stages without material amendment, so as to give effect to the wishes of the mercantile community as a whole, both within and without the British Empire.

Some question was raised, when the Bill was introduced, as to the position of the coasting trade, but shipowners in that business did not move to support the suggestion that they were aggrieved. Then the coal exporters, while agreeing that the Bill would confer benefits upon those merchant interests engaged in shipping parcels of goods by liners, pressed their view that the proposals were unsuitable so far as their business was concerned. They preferred to adhere to the agreed shipping documents in use, without the modifications which might become necessary if the Bill passed, the principal point being that the weights specified are those ascertained by the colliery or some third party other than the shipper or sea carrier. A proposed clause was, however, drawn up to the satisfaction of those interested, making it clear that the exporter does not guarantee weights stated by a third party.

Subsequently came the legal criticism already referred to. The learned editors of "Scrutton on Charter Parties and Bills of Lading," in a preface communicated to the Press in advance of the publication of a new edition of their work, expressed the opinion that "the proposed Rules are full of legal difficulties, and are likely to give rise to extensive and expensive litigation when individual shipowners and traders find out to what various well-meaning persons have, without due consideration, committed them." Having regard to the two years' discussion which has been in progress, the criticism comes hopelessly late. In a statement replying to these legal objections, Sir Norman Hill, who took a prominent part in the Hague Conference at which the Rules in their original form were discussed and settled, pointed out how widely and exhaustively the proposals ultimately scheduled to the Bill have been discussed, not only in this country, but throughout the world, adding that "if they result in extensive and expensive litigation, then the individual shipowners and traders will have themselves alone to

thank, for it is they who have negotiated and settled the terms of the Rules word by word and line by line."

Probably no new code of Rules could be evolved which would not give rise to some litigation. Those contained in the schedule to the Bill before Parliament represent the outcome of a scheme to settle for international use a common form of conditions to be incorporated in bills of lading so that the sea carrier's responsibilities during the voyage may be common knowledge for all concerned, and may not be able to be diminished. The passage of the Bill will give a fresh start, or rather will give legislative sanction to the revised Hague Rules, the original Hague Rules, 1921, being already in extensive use by voluntary incorporation in bills of lading. In the vast majority of instances no question of difficulty arises or will arise. In exceptional cases of dispute the Rules should be interpreted as a self-contained international code not depending on any implied provisions of any national law. As Lord Sumner observed on the second reading of the Bill, "It will be of great importance that, when the courts of this country and other countries come to interpret the statutory contracts, as they will be called upon to do, they should no longer be obliged absolutely to follow the decisions of their predecessors in similar matters, no longer be bound strictly by the rules of interpretations as they have been laid down, but be at liberty to inform their minds and to have regard to the interpretations placed upon these Rules in other countries. It is only in that way that it will be possible for courts of law to arrive at something like a uniform interpretation and a uniform resolution on the disputes that arise."

In the meantime, the business community (unconvinced that the proposals are open, in point of form, to legal objections necessitating revision of the terms of the bargain) has shown its dissatisfaction at the delay in pressing on with the Bill. A suggestion which was made during this week that the measure should be considered by a Select Committee was unfavourably received. This, it was felt, would be a mere waste of time after the long international discussions, and, moreover, an unsuitable step to be taken by a Government whose representatives have come to an understanding after being in conference on the matter with those of other Governments. However, on Thursday the House of Lords decided to refer the Bill to a Joint Select Committee of both Houses. Any desire to delay progress was disclaimed, and it was intimated that Lord Sterndale would act as chairman of the Committee. He is eminently well qualified for that position, but the dilemma confronting the Committee is that the Bill itself contains only two or three clauses, and the substance of the measure is in the Schedule, which contains the Rules that have been the subject of international agreement. The Committee, while competent to alter any part of the measure as much as it pleases, cannot materially alter the Rules without destroying the international scheme, and, at the same time, of course, the Bill itself.

MOTOR MANUFACTURING COMPANIES.

APPARENTLY the British motor-car manufacturing industry has not been able to set its house in order, and the usual crop of trading deficits is revealed in our annual analysis of a number of companies given below. There are, of course, the few excellent exceptions which seem to thrive, and by their prosperity stand out as beacon lights. With the post-war boom the great cry from the motoring industry was more money. Bankers and public both opened their purses. Now, however, bankers and investors are sadder though wiser men.

The export position of the British motor-car industry is strikingly revealed by the following figures, and it is no wonder that these statistics are causing considerable anxiety amongst those who have the welfare of the industry at heart:—

IMPORTS AND EXPORTS OF MOTOR CARS AND PARTS.

	Total Imports.	Exports of British Manufactures.	Total Exports.
1913.....	£ 4,853,360	£ 3,649,891	£ 4,269,702
1920.....	23,447,340	8,398,126	8,757,288
1921.....	5,816,484	4,547,404	5,598,900
1922.....	5,938,156	2,765,810	3,006,947

So much for our overseas markets. But we would remind our readers that this is a protected industry, except for commercial vehicles, and we will therefore turn to the position of the home markets. Some interesting figures which recently appeared in the *Motor Trader* materially assist us in this direction. This journal, taking the broad results of a careful investigation, found that the total British car output for 1922 amounted to 37,753, the retail value of which was approximately £20½ millions. This was achieved by something like 90 undertakings, the aggregate capital of which amounted to £32 millions. Further, it is estimated that out of a total home market capacity for 1922 of nearly 72,000 cars "British-owned factories supplied about one-half, while direct foreign imports were responsible for nearly a third," and the conclusion is reached that "the foreign type of vehicle has found favour during the year with 50 per cent. of the year's purchasers, reckoning in the number of foreign cars assembled here."

To obtain a fair view of the progress made by the industry, on its financial side, during 1921-22, we have selected representative public companies and submitted their annual accounts to the following analyses. Our first table shows how assistance has been granted to some companies, and compares creditors with debtors. Stocks carried are also appended, the rise or fall of which is closely related to other items given:—

	Loans.		Creditors and Deposits.		Stocks of Cars, Parts, and Material.		Debtors.	
	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.
Bolsize.....	£ 330,188	£ ..	£ 163,754	£ ..	£ 456,603	£ ..	£ 83,982	£ ..
Crossleys.....	278,299	165,765	581,705	438,592	259,615	139,848	139,848	139,848
Cubitts.....	206,451	152,830	208,797	31,999	31,999	31,999	31,999	31,999
Napier.....	34,000	100	88,533	676,309	493,006	107,991	20,175	20,175
Swift.....	9,772	106,741	9,174	191,746	170,258	30,545	26,331	26,331
Vauxhall.....	125,306	127,370	126,054	118,322	258,453	191,671	97,508	36,771
Wrigley & Co.....	315,738	325,526	30,912	26,410	231,666	150,265	20,222	21,834

From the Bolsize we can obtain no fresh accounts. The Crossley Company is inclined to be informative in its accounts; deposits are separated from other creditors, and it certainly stands as some evidence of the popularity of its productions to find that deposits still amount to £34,337, as against £1,001 for 1921. Cubitts are in the throes of a rearrangement scheme, Sir Arthur Whinney having stated that at the end of last year the company was pressed by its creditors. A statement was published disclosing liabilities of £257,110, of which £195,028 was due to creditors for loans and under guarantees. Assets are, however, given as £401,702, thus showing a surplus of £144,651. Napier and Swift have cleared off their loans. Vauxhall and Wrigley have, however, slightly increased these items. The latter company is a remarkable example of the assistance granted to the industry by banks. Here is a company with total assets worth £551,273, yet we find Lloyds Bank as a creditor to the tune of over £300,000.

In the next table we show results of representative companies for the past two years, together with allocations of profit in the past year for the more fortunate undertakings:—

Company.	Results.		Preference Dividend.	Ordinary Dividend.	Reserve, Depreciation, &c.	Inc. or Dec. Carried Forward.
	1920-21.	1921-22.				
B'ham Small Arms.....	Dr 469,168	Dr 166,671	£ 23,134	£ ..	£ ..	£ ..
Crossleys.....	Dr 434,963	Dr 97,584	£ ..	£ 65,107	£ 15,505	£ 1,431
Dennis Bros.....	79,367	79,202	£ ..	£ 19,890	£ 29,288	£ 15,929

Napier.....	79,069	Dr 20,571	£ ..	£ 64,932	£ 84,000	£ 1,152
Rolls-Royce.....	107,326	149,807	£ ..	£ 75,250	£ 55,250	£ 16,504
Rover.....	139,907	146,754	£ ..	£ ..	£ ..	£ ..
S.T.D.....	167,395	68,608	£ ..	£ ..	£ ..	£ ..
Swift.....	Dr 37,735	10,124	£ 6,500	£ ..	£ ..	£ 376
Vauxhall.....	Dr 291,739	Dr 76,714	£ ..	£ ..	£ ..	£ ..

(a) August 8, 1920, to August 31, 1921.

On account of the differences of opinion existing as to what is an adequate sum for depreciation, we have shown where possible profits before amounts for depreciation have been deducted. Birmingham Small Arms and Napier, however, do not reveal the specific sums allocated for depreciation. Again a loss is revealed in the accounts of the former company for the year ended January 31st last. The report of the directors

states that as against a deficit of £356,000 for 1921-2, a loss of only £46,204 is now recorded. But these figures are arrived at without including any allowance for interest on the 12-year notes, which amounts to £120,466. It is difficult to estimate what part profits from motor-car production play in the Birmingham Small Arms returns. Dennis, though showing a decline, can usually be relied upon to show profitable results. Humber, Rolls Royce, and Rover all show increased profits. The last two companies stand out prominently as our best-managed motor concerns.

In an industry which has bewailed so much the lack of support of the financial world, it is interesting to compare the column of paid-up share capital given below with the profits and losses in the preceding table. It is also of further interest to compare the variations in the ratio of property and plant to total assets, and the ratio of share capital to property and plant and total assets:—

ASSETS, SHARE CAPITAL AND PROFITS COMPARED.

Company.	Property and Plant.		Total Assets.		Paid-up Share Capital.
	1920-21.	1921-22.	1920-21.	1921-22.	
Birmingham Small Arms.....	£ 3,199,885	£ 2,659,010	£ 8,964,174	£ 8,346,702	£ 3,368,902
Crossleys.....	155,077	154,884	1,597,797	1,163,883	1,101,448
Dennis Bros.....	96,187	98,778	713,434	667,570	500,825
Humber.....	297,727	312,780	1,282,599	1,270,833	624,376
Napier.....	240,718	221,807	1,348,801	1,171,376	846,000
Rolls-Royce.....	420,271	468,535	2,050,161	1,816,642	812,137
Rover.....	666,761	733,994	1,582,824	1,653,406	1,050,000
S. T. D.....	1,995,980	2,294,600	4,008,784	4,022,661	3,224,408
Swift.....	237,454	219,998	494,067	473,921	300,000
Vauxhall.....	709,741	508,390	1,156,582	956,486	600,000

On turning to the balance-sheet of the Birmingham Small Arms Company it is satisfactory to find that the contingent liability under guarantees to the bank in respect of overdrafts of the Aircraft Manufacturing Company, Limited (in liquidation), and Peter Hooker, Limited (also in liquidation), has been reduced during the year from £596,063 to £269,931, but "Investments" is an item concerning which we should be glad to hear more. The words "Shares in and loans to subsidiary companies" (valued at £4,121,848) are followed by the unusual statement that "These investments are brought forward on the same basis as in previous years, and no adjustment, in view of existing trade conditions, has been made."

Crossley is fortunate in having its goodwill valued at only £1, but investments "at cost" in other companies at £264,048 is an item concerning which shareholders might reasonably need further information. Moreover, sundry debtors at £139,848 include amounts owing by subsidiary and associated companies. This might also be dissected. On the other side a useful item appears in the shape of a general reserve fund of £150,000. The Dennis balance-sheet is a clear and informative statement of affairs, although it is quite time that the first item under assets, "Purchase of Business and Goodwill in 1913" at £102,597, was spread amongst other assets or explained. Humber accounts reveal that the undertaking is making capital headway. Napier still retains its goodwill at £300,000, but a reserve of £154,000 is, perhaps, some set-off. Rolls-Royce publish compact accounts. It is certainly gratifying to find that goodwill has been written entirely off in accounts, while the statement that "The company's holding in Rolls-Royce American Inc. does not appear in the assets, as the value at present is not determinable" is one which merits admiration for courage to tell the truth. Rover accounts need no criticism. S.T.D. Motors, however, come under a different heading. Under property and plant investments in subsidiary companies have been given. We do not see how shareholders can understand the true position of this combination until a statement is published showing the actual assets and liabilities of the constituent undertakings. The Vauxhall is now receiving attention from financial advisers. It is suggested that the debit balance of profit and loss account, £249,778, be written off, and investments reduced by £90,506. Altogether, £352,008 is to be written off. Against this it is proposed to reduce capital by one-half from £600,000 to £300,000, and take £52,012 from reserves.

Our final table shows price fluctuations in shares of these companies over a period of years:—

	Year 1919.		Year 1920.		Year 1921.		Price May 10, 1922.	Price End of May, 1923.
	H'st.	L'st.	H'st.	L'st.	H'st.	L'st.		
Bolsize Motors, £1.....	2½	1½	12	8	1	¾	8½	1½
Birmingham Small Arms, £1.....	2	1½	18½	12	1	¾	7½	1½
Crossleys, £1.....	2	1½	18½	12	1	¾	7½	1½
Cubitts Cum. Pref., £1.....	2½	1½	12	8	1	¾	8½	1½
Dennis Brothers, £1.....	2½	1½	12	8	1	¾	8½	1½
Humber, £1.....	1½	1	12	8	1	¾	8½	1½
D. Napier, £1.....	2½	1½	12	8	1	¾	8½	1½
Rolls Royce, £1.....	2½	1½	12	8	1	¾	8½	1½
Rover, £1.....	4½	2½	12	8	1	¾	8½	1½
S. T. D. Motors, £1.....	1½	1	12	8	1	¾	8½	1½
Vauxhall Motors, £1.....	1½	1	12	8	1	¾	8½	1½

The value of the figures given in this table may be somewhat vitiated by the policy of distributing paper profits and war-time and boom-period earnings in the form of bonus shares. In any event, the table is a sorrowful picture of what should be one of our most profitable industries.

Notes of the Week.

The Government of Palestine.—On Tuesday the Colonial Office communicated to the Press the text of a new Order in Council regarding the Government of Palestine, together with a statement explaining its significance. The Order annuls the elections recently held for a Legislative Council, and provides for the indefinite continuance of administration by the British High Commissioner, who is to be assisted by a nominated advisory council pending another experiment in self-government. This step has been made necessary by the abstention from the elections of a majority of the Arab population, and is a marked triumph for the promoters of the anti-Zionist movement among them. It shows that the Arabs of Palestine, like all the neighbouring Near-Eastern peoples, are prepared to follow native political leaders along the path of nationalism, and that these leaders have sufficient organising ability to make effective use of the public support accorded to them. In this case, again, as in others, the growing national consciousness, gradually developed through contact with the political ideas of the West, has been sharpened by a belief that the paramount Power is not fulfilling its engagements. The dispute turns upon whether Palestine was or was not included in the area within which the British Government promised King Hussein in 1915 that they would recognise and uphold Arab independence. The point was debated in a public correspondence last year between Mr Churchill, at that time Colonial Secretary, and the Christian-Muslim Palestinian Delegation which was visiting this country. After much subtle argumentation on both sides, each party claimed the victory; but an impartial observer could not fail to admit that the Arab case, both on legal and moral grounds, was strong. If there were any doubt at all about the interpretation of the British pledge, it was surely hard upon the Arabs that a policy so profoundly affecting their future as that of the Balfour Declaration should be imposed on them against their will. The grievance engendered by this sense of hardship has come home to roost in the rebuff now successfully administered to the mandatory Power. It is noticeable that this *impasse* between British policy and Arab nationalism in Palestine coincides in date with the negotiation of a treaty between the British Government and King Hussein of the Hedjaz, in which Arab aspirations are apparently to be recognised and assisted by us as far as the Arabian Peninsula, Iraq, and Trans-Jordan are concerned. This, in so far as it goes, is a loyal attempt on our part to carry out our pledges of 1915 within certain limits. But is it not really an admission that the pursuit of a non-national policy outside those limits (putting aside altogether the question of what the original limits contemplated were) is doomed to failure? If Arab national Governments are to be established in Iraq, Arabia, and Trans-Jordan, and to be encouraged to co-operate with one another, how long will it be possible to hold apart from them the territories inhabited by Arabic-speaking majorities that interpose between them and the Mediterranean Sea? Already a motor route is being opened from Baghdad to the Mediterranean across Syrian and Palestinian territory. Without the inclusion of the present British and French mandated areas of Palestine and Syria, any workable form of national union, economic or political, between the Arab populations of

there is much interest as to whether the scheme will be a success. There is a good deal of variation in the position of different mills with regard to finance, and now and again it is necessary for some companies to sell their production even at a loss rather than allow the accumulation of stocks. There is no likelihood of the proposed Control Board for the cotton trade being established. The suggestions of the provisional emergency committee have been rejected by the Federation of Master Cotton Spinners' Associations and the Cotton Spinners and Manufacturers' Association.

The World's Maize Crop.—The world's production of maize in 1922 was 3,436,017,000 bushels, or 285,443,000 bushels less than in 1921. These figures cover the 22 countries for which comparable figures are available. The United States exported more maize in 1921 and 1922 than any other country. Exports jumped from 132,000,000 bushels in 1921 to 166,000,000 bushels in 1922, an increase of 34,000,000 bushels, or 26 per cent. Before the war Argentina led in maize exports, and held first rank again in 1919 and 1920. Normally, Roumania exports almost as much maize as the United States. Canada is the heaviest importer of American maize, taking 45,000,000 bushels in 1922, as compared with 59,000,000 bushels in 1921. In 1922 Germany took 31,000,000 bushels, the United Kingdom 29,000,000 bushels, and the Netherlands 22,000,000 bushels, much larger amounts for all three countries than during 1921. The United Kingdom takes practically one-third of the world's exports of maize, and the remaining two-thirds are about equally divided among Germany, the Netherlands, Belgium, France, Denmark, and Canada. Complete data are not available for Germany in 1921, but returns for 1922 show imports amounting to about 43,000,000 bushels, compared with 32,000,000 bushels during the pre-war period 1900-1913. The London markets have paid higher average prices for Argentine maize than for American during the past two years. Roumanian maize, when on the British market, in 1921, sold at practically the same price as Argentine. The acreage planted to maize in Argentina for the 1922-23 crop is officially estimated to be 7,850,750 acres, which is 6 per cent. more than the area planted in 1921-22. The maize yield per acre for Argentina, however, is expected to be smaller this year as a result of the drought which prevailed during the summer months. No official forecast or estimate is yet available as to the probable harvest this year, but reports of the condition indicate a small crop.

American Shipping Sale.—A correspondent writes:—The report cabled over that the United States Shipping Board has received a serious bid of a billion dollars, or roughly £200 million sterling, for the merchant shipping now under Government control is not credited in well-informed British shipping circles. In the first place, the market price of second-hand tonnage of this description is certainly not more than 25 to 30 dollars per ton, and obviously no business man or syndicate composed of business men would bid three times the real value for an enterprise of this sort. To finance an operation entailing the purchase of a business calling for 1,000,000,000 dollars would tax the resources of the leaders of Wall Street at the present time, and the whole thing may be safely dismissed as absurd. In view of the extremely low level of freights all over the world, the poor demand for shipping space, and the competition for the small amount of business offering, no company could possibly take over this big collection of merchant shipping and show a profit. The United States Shipping Board have been making very heavy losses for a long time past, and this with the bulk of the fleet laid up idle. Thus the suggestion that there would be anything in a new company buying up the tonnage at an inflated figure and trying to run it on sound business lines to show a profit is simply nonsensical, as all students of economic forces will readily admit. Where the United States Shipping Board, with all the resources of the State at their back, have failed, a shipping company operating with its own money in the face of world competition with tonnage

purchased at high cost could not possibly succeed, and shipping people over here give no credence to the statement.

Finnish Finance and Trade.—During the year 1922 the national revenue so far exceeded the estimates that a surplus of 500 million marks was anticipated at the end of the year. The revenue derived from direct taxation is estimated at 464 million marks, or 21.3 per cent. of the total ordinary revenue. The Business Departments of the Government made profits by far exceeding the estimates. For the State Railways, 1922 was, indeed, a record year, a profit being shown of not less than 122,752,036.70 marks, after interest and sinking fund on loans and also agio losses had been deducted. Even allowing for extraordinary expenditure for new construction, and the purchase of rolling stock, a net profit of 40 million marks will remain. The State Forestry Department, again, yielded a net profit of 94.7 million marks. This result is the more satisfactory as the expenditure for the year includes investments of capital and the provision of instruction in forestry in addition to maintenance and administrative charges. Indirect taxes yielded by far the greatest surplus, Custom duties amounting to 994.9 million marks. The import duties, though easily collected, are felt to be burdensome, amounting on an average to 1-5th of the value of the goods concerned. The trade returns for the first quarter of the present year continue to indicate progress in the direction of economic stabilisation. The most striking symptom of the return to normal conditions has been the steady improvement in the rate of exchange on Finnish marks. The average quotation of the Bank of Finland on pounds sterling was Fmks. 187.84 in January, 179.31 in February, and 171.18 in March. The total quantity of imports for the three months was larger than during the corresponding period of 1913. That the quarter's imports exceeded exports by 375 million marks, in spite of the improved rate of exchange, is ascribed to seasonal divergencies between the balance of trade and the balance of payment. The Customs revenue yielded 245.4 million marks, against 131.1 million marks in the corresponding period of 1922. The increase, however, is only partly due to the improvement in trade, being ascribable in part to the higher duties which have been levied since the beginning of the year on cereals and other commodities.

Agriculture and Taxation in Russia.—The future of Russia, from the political no less than from the economic point of view, depends almost entirely upon the position of agricultural production, and this fact seems to be realised by the Soviet Government. The autumn sowings in South-Eastern Russia, which, as is well known, is potentially one of the greatest granaries of the world, have amounted this year, according to official Soviet reports, to nearly five million acres, or some 74 per cent. of the pre-war area. The shortage of seed seems to have been met to a large extent by loans from the Soviet Government. Livestock is, however, sadly reduced in numbers, and only represents about a half of the pre-war quota. While the troubled conditions of the war period, the destruction and lawlessness of the civil wars, and the total disorganisation of transport, combined to reduce the productive capacity of the country, there can be no doubt that the clumsy and badly organised system of rural taxation introduced by the Bolsheviks has also played a very important rôle in diminishing the acreage under cultivation. Since the introduction of the new economic policy considerable discontent has arisen in agricultural areas with regard to taxation, which has hitherto been paid both in kind—through the food tax—and also in money. Great confusion has accompanied the levying of these taxes among the peasantry; in many cases taxes have been illegally levied, and a demand has grown up for the simplification of the whole question of rural taxation by the institution of a "single agricultural tax." This will be levied on somewhat similar lines to the "single food tax," which has up till now provided the great bulk of the revenue from rural areas. There are, however, notable modifications, which indicate interesting developments in the outlook of the Soviet Ministry of Agriculture

on vital aspects of the present state of agriculture in Russia. Under the single food tax the peasant was under obligation to deliver to the Government a quantity of grain, graduated according to the acreage of land per head of his family. The higher the acreage the more heavily was he taxed, and the larger farms were rated extremely high, largely owing to the Government's desire to break them up and to remove inequalities in the holding of land. Notwithstanding this policy, and the more open warfare against the large farms which preceded it during the period of forced requisitions, the large farms, according to "Rural and Forest Economy," published by the Ministry for Agriculture, showed a tendency to weather the storms of the revolution better than the smaller ones. Finally, the uneconomic results of splitting up the land into minute holdings has had the result of persuading the agricultural authorities that the time has come not only to prevent further partition but also to grant the larger farms some relief from their heavy burden of taxation. Thus, under the proposals for the "single agricultural tax," the number of categories, according to which the tax is graduated, have been reduced, and the larger farms will be rated according to the new (and much lower) maximum category of farms having over four acres per head of the family. This will mean a considerable relief of taxation to the larger farmers, and, needless to say, the proposal is being resolutely opposed by certain sections of the Communist party, but the fact that it is being put forward in official quarters is a proof that the desirability of encouraging larger farming is gradually being recognised—miserably small though these farms are in Russia to-day compared with what is usually understood as large farming elsewhere. In order to encourage the cultivation of certain crops (notably cotton, the production of which has fallen to only 11.3 per cent. of the pre-war figure) exemptions from this "single agricultural tax" are granted on land which is so utilised. In the famine areas, also, there is to be a reduction varying from 10 to 20 per cent., according to the nature of the harvest, while peasants are encouraged to exhibit at the forthcoming Agricultural Exhibition at Moscow by the promise of a considerable measure of relief from this new tax. It is interesting also to note that local rates are to be charged as percentages of the central contribution—which is to be levied throughout the territories of Soviet Russia and its vassal States. Under the new scheme M. Sokolnikow, the Finance Commissar, has stated that 40 per cent. of the tax will continue to be paid in kind, as forced sales "would provoke a fall in the price of wheat and a catastrophe in the rural economy."

Conditions in Ecuador.—The sustained efforts upon the part of the Government of Ecuador to bring about a better state of economic affairs have had, at least, partial effect. A general revival has taken place, which is manifested in the absorption of a good deal of unemployed labour, and an activity in the building trade. On the other hand, writes a correspondent, the reason for the long-continued financial stringency appears to have been the elaborate programme of public works, undoubtedly desirable, but insufficiently supported by financial resources, entered into by previous administrations. Upon new transport construction alone—such as the Quito-Esmeraldas, Ambato-Curaray, Sibambé-Cuenca, Bahla-Chone, San Juan Chico-Riobamba, Puerto Bolívar-Loja, Manta-Santa Ana, and other new railways—several additional million sucres must be found in order to keep works, already commenced or contracted for, in activity. Other large outlays have been incurred in connection with a new dock and customs house at Guayaquil, while it has been found impossible to maintain regularly the substantial payments still due in connection with the water and sewerage system undergoing completion at the principal port of the Republic. The Government appears to have made efforts to maintain the full service of the Guayaquil-Quito Bonds and the 4 per cent. Salt Bonds, but stringency of funds and increasingly unfavourable rate of exchange rendered conditions difficult. Some advantage seems to have resulted from the prolonged deliberations and precautionary action taken by the Finance Commission, a body with the Minister of Finance as chairman, appointed last October to regulate the collection and expenditure of the national revenues.

and Municipal Bonds

Foreign Government Issues

Railroad, Public Utility and
Industrial Financing

Statistics are now published with something like expedition and greater accuracy, and since the Commission began its labours payments have been made abroad at a lower rate of exchange than that formerly possible. At the time that the Committee began to function the rate stood at 4.8 sucres to the \$ (the par exchange is 10.00 sucres to the £1 sterling); on December 31st it fell to 3.6 sucres, and since then has fluctuated but slightly against the country. The project for consolidating the foreign debt (amounting to about £3,670,000) has been temporarily abandoned in view of the still high rate of exchange and advance in the rate of interest. Revenues have been disappointing for the past two years, those of 1921 amounting to but 76 per cent. of the expenditures, while complete figures for 1922 (not as yet available) are expected to prove little more satisfactory. Neither have attempts to raise the revenue by means of granting monopolies on rum, tobacco, cigarette papers, matches, explosives, &c., proved wholly successful; profits, where made, have gone mainly into the pockets of native capitalists, the State revenues being left comparatively unbenefited. The mercantile community are frankly pessimistic. The only hope of permanently better conditions, they consider, is the raising of a fresh loan. A North American group of bankers have therefore been approached, but their terms are considered so prohibitive that Congressional consent is deemed improbable. Debts owing to the banks, already high, render further financial assistance from this direction doubtful. The question of exploiting, or even disposing of, the Galapagos Islands, at present a useless possession to Ecuador, has been revived as a means of relieving the country of its most pressing financial obligations, and a colonisation scheme for San Christobal Island, financed by Chilean capital, is being discussed.

The Finances of Santo Domingo.—If current estimates of the Santo Domingo cacao crop should be realised, writes a correspondent, the finances of this small West Indian Republic, where conditions have steadily improved under the ægis of an American Receiver-General, appointed in 1905, will be maintained on a firm footing, enabling liquidation, considerably ahead of their due date, of certain bond issues shortly maturing. The total indebtedness of the Republic is a little over £3,000,000 sterling. The two important outstanding issues are the 5 per cent. Customs Administration Sinking Funds gold bonds of 1908 (for \$20,000,000), of which \$13,958,500 have been purchased for the sinking fund to the end of 1922; and the 5½ per cent. 20-year Customs Administration bonds of 1922, of which \$6,700,000 (of an authorised \$10,000,000) have been issued. The only other indebtedness comprises the balance of \$1,627,400 of the 1918 5 per cent. bond issue for \$4,161,300, the sum of \$2,533,900 having been redeemed, as have been the whole of the \$2,500,000 8 per cent. four-year Customs Administration bonds of 1921. These were repaid in the following year from the proceeds of the new 5½ per cent. loan

(1922). From reports received lately, it would seem that Santo Domingo is destined to enjoy a better harvest than has been known for some years past; all classes of agriculture are sharing in these encouraging prospects. The cacao crop (50,000,000 lbs) is expected to prove a record; the corn crop shows excellent progress, promising an abundance sufficient to enable a considerable quantity to be exported; and the bean crop is predicted to be unusually large, providing sufficient for all local requirements and a small surplus for export. Cultivation of cotton in Santo Domingo has progressed sensibly, thanks to the enterprise of the local Chambers of Commerce in distributing free cottonseed to the farmers. While these favourable conditions prevail it would be prudent to remember that there is always a possibility at this time of the year of disappointment in West Indian harvests. In June the rainfall is due, and this can sometimes prove very destructive, especially in the central and northern districts of the island, where are located the most fertile sections of the country.

Oversea Correspondence.

UNITED STATES.—BIG GAIN IN MARCH IMPORTS—GOVERNMENT FINANCING—COTTON CONSUMPTION IN APRIL.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 21.

FOREIGN trade returns for March, issued by the Department of Commerce, show that the balance of trade turned heavily against the United States in that month. Imports had a total value of \$402,000,000, representing a gain of \$106,000,000, or 35 per cent., over February, and of \$146,000,000, or 57 per cent., over March a year ago. Exports in March of this year amounted to \$341,162,349. Imports exceeded exports, therefore, by \$60,837,651, or 17 per cent. This is the first instance since 1914 in which monthly imports have been greater than exports, and the excess of imports is said to be the largest ever recorded for any month in the country's history. The big import excess in March, together with the probable import showing for April, seems likely to turn the foreign trade balance for the first four months of 1923 against the United States, according to the Department of Commerce, which says:—"The merchandise exports for the first four months of 1923 were \$1,324,773,214, and the imports (using customs receipts for April as a basis of estimate for that month) amount to about \$1,375,000,000. The balance against us, of about \$50,000,000 on merchandise account, compares with the balance in our favour of about \$272,000,000 in the same period of 1922, and of about \$938,000,000 in the same period of 1921." The following table showing imports in the eight months ending with February, in 1922 and 1923, furnishes interesting comparisons:—

	Eight Months Ending February,	
	1922.	1923.
IMPORTS.		
Crude materials for manufacturing....	573,359,000	926,054,000
Foodstuffs—		
Crude, and animals.....	190,061,000	227,636,000
Partly or wholly manufactured	192,266,000	262,509,000
Manufactures for further manufacturing	240,071,000	437,899,000
Manufactures for consumption	412,224,000	457,824,000
Miscellaneous	13,619,000	14,733,000
Total imports	1,621,600,000	2,326,655,000

From the foregoing figures it will be seen that approximately three-fifths of all imports into the United States for eight months of the present fiscal year consisted of raw materials or partly manufactured goods for use in manufacturing. Present indications point to the smallest excess of exports for the fiscal year ending June 30th next since 1910, and with that exception since 1896.

The Government's May financing was a marked success. Subscriptions to the recent offering of Treasury 4½ per cent. notes exceeded \$1,100,000,000. Of that total, approximately \$900,000,000 represented cash subscriptions, while Victory notes tendered in exchange for the new Treasury notes aggregated about \$200,000,000. All of the Victory notes thus offered in exchange will be

accepted, as well as exchange subscriptions which were in the mails when the subscription books were closed (the exact total of Victory notes exchanged has not yet been announced). Allotments on cash subscriptions, however, have been held down to a total of some \$300,000,000. In order to secure as wide a distribution as possible of the new Treasury notes, preference was given, in making allotments, to subscriptions in amounts of \$100,000 or less; on larger subscriptions, allotments were cut down to sums not exceeding 10 per cent. While bankers and financial interests generally had expected an over-subscription, the extent of the latter, particularly the cash subscriptions, was something of a surprise. It plainly indicates that an enormous amount of funds is still seeking investment. The heavy subscription was no doubt due to the many attractive features of the offering, and, partly, to the knowledge that \$765,000,000 of Victory notes, which matured on May 20th, would be taken out of the investment field. At the same time, the recent easier tendency of money rates, together with the noticeable slackening of demand for accommodation in various lines of trade and industry, probably induced investors to take advantage of an opportunity to employ funds on more favourable terms than they may be able to obtain later on.

Cotton mill consumption in April, according to the Census Bureau's report, amounted to 577,396 bales of lint cotton, as against 623,105 bales in March. The average daily takings by American spinners last month was 754 bales less than in March, and somewhat smaller than in January, but still well above the war-time monthly maximum. The report, however, does not reflect such a pronounced falling off in domestic consumption as the recent reports of temporary curtailment by Fall River mills might have indicated. The number of cotton spindles in operation on April 30th was 35,515,791, a new high monthly record for a number of years. Perhaps the most striking feature of the Census Bureau's report is the extraordinary decrease in April exports of cotton, which were shown to have been 335,456 bales less than in April a year ago, and much less than in any month since the acute depression in the autumn of 1920. Owing to this shrinkage in European purchases of cotton, and the smaller takings by American spinners, the total domestic and foreign consumption of American cotton last month was more than 100,000 bales below that of April, 1922.

FRANCE.—BUDGET—BELGIUM AND THE RUHR—FOREIGN TRADE—CROP PROSPECTS.

(FROM OUR CORRESPONDENT.)

PARIS, May 30.

THE Budget situation appears to be as confused as ever. The end of May has now come, but the Senate has not yet embarked on the discussion of the Finance Bill for the financial year that began on January 1st last, and it is now regarded as doubtful whether it will be able to complete its work before the House rises for the summer holidays in July. A sixth monthly Vote on Account, to meet public expenditure during the month of June, was accorded (by 505 votes against 63) on Tuesday, and during the discussion the opinion was confidently expressed by many of the deputies that there will be no difficulty whatever in getting rid of the paper deficit of 3,800 million francs that was left by the Chamber, when the Finance Bill left the Lower House, as a problem for the Senate to solve. It is now becoming clear that a solution will be found partly in the continued unexpectedly satisfactory yield from taxation in excess of M. de Lasteyrie's estimates and partly in the drastic further reductions in expenditure recommended by the Senate Finance Commission, as the result of the systematic overhauling to which the Budgets of the various Government departments have been subjected since that body began its consideration of the Bill.

For the rest, the question of the Ruhr remains the crux of the whole situation. From the international point of view, the next move apparently lies with the Belgian Government, which is known to have been very actively engaged during the past two or three weeks in endeavouring to fix the minimum amount the German Government is to be called on to pay as reparations. There appears, indeed, to be an inclination here to leave the Belgians

for the moment to play the leading part in the diplomatic negotiations that are going on between the various Allies, while France devotes herself largely to completing the economic organisation of the Ruhr.

The French foreign trade returns for the first four months of the year, which are published by the Customs Department to-day, show that the value of the total imports and exports, as compared with those for the corresponding period of January-April, 1922, were as follows:—

	First Four Months of		Inc. or Dec. in 1923.
	1922.	1923.	
	Francs.	Francs.	Francs.
Imports—			
Foodstuffs	1,630,773,000	2,205,551,000	+ 574,778,000
Raw materials	4,001,029,000	5,955,889,000	+ 1,954,860,000
Manufactured goods	1,353,315,000	1,372,802,000	+ 19,487,000
Totals	6,985,117,000	9,534,242,000	+ 2,549,125,000
Exports—			
Foodstuffs	562,207,000	963,764,000	+ 401,557,000
Raw materials	1,655,528,000	2,827,956,000	+ 1,172,428,000
Manufactured goods	4,118,055,000	4,693,614,000	+ 575,559,000
Postal parcels	441,928,308	521,695,000	+ 79,767,000
Totals	6,777,718,000	9,007,029,000	+ 2,229,311,000

It is officially announced that, for the first time, these figures, so far as exports are concerned, are based on a modification of the official rates drawn up by the Permanent Valuation Commission of the French Customs in 1922, which have now been brought up to date. The value of all imported merchandise continues to be based, for statistical purposes, on the declarations made by the importers, subject to control by the Customs officials, in connection with the collection of the tax on turnover. These declarations have shown that, in comparison with 1922 commodity prices, there has been an average rise of approximately 11 per cent. in the values of imports. The official scale of valuation for imports that was fixed in 1922 has now been raised by the same percentage, in order to arrive at greater accuracy. These valuations will in future be revised every month, so that we may expect henceforth much greater approximate accuracy than in the past.

The figures for the four months show an excess of imports amounting to 527,213,000f, on a total volume of trade in round figures of 18,500,000,000f, as compared with an adverse balance of 207,500,000f during the corresponding period of 1922, when the total volume of trade was 13,762,000,000f. This adverse balance on ordinary exchanges, it need scarcely be mentioned, is nullified, as every French expert is convinced, by the large amount spent in this country by tourists, and by French investments abroad.

As in every month since the beginning of 1923, imports rose in value during April, the total for the month being 2,560,198,000f, as compared with 2,486,736,000f in March, 2,343,014,000f in February, and 2,144,294,000f in January. Exact comparison of the value of the exports is impossible for the moment, owing to the new method of valuation. A notable feature of the table, however, is the fact that imports of manufactured goods have increased only 19½ million francs during the four months as compared with the corresponding period of last year, while exports of the same category of merchandise have increased by (if postal packages be also included) over 655,000,000f. In weight, the imports of manufactured goods have decreased by over 54,000 tons, while exports of the same class of merchandise have increased by over 220,000 tons. Further, whereas imports and exports for the four months were respectively valued at 9,534 million francs and 9,007 million francs, the weights of the two categories varied to a vastly greater extent, and were respectively 16,257,000 tons and 7,721,000 tons. Finally, in view of the Ruhr conflict, it is significant that during the first four months of 1923 France imported 8,785,721 tons of coal, with a value of 963,915,000f, as compared with 9,468,308 tons (valued at 769,280,000f) during the corresponding period of 1922, and as compared with 7,475,800 tons (valued at 191,805,000f) during January-April, 1913.

Figures are now available from the Ministry of Agriculture showing the situation of the French crops, so far as sowing is concerned, on May 1st last, from which it is to

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

be inferred that, given a normally good yield, France will this year be in a much more satisfactory situation than last year as regards the necessity for having to draw on foreign supplies for the purpose of meeting her requirements. The total area sown with wheat this year, as compared with previous years, is as follows:—

	Acre.
1913	16,355,575
1919	11,509,275
1920	12,733,825
1921	13,455,675
1922	12,829,350
1923	13,919,275

Last year's crop was very disappointing, as may be judged from the fact that the acreage sown was 626,325 acres less than in the previous year. The total area under wheat this year is 989,925 acres in advance of last year's figures, but only 363,600 acres more than in 1921. The progress made in wheat-growing since the war, nevertheless, is remarkable, in view of the shortage of agricultural labour and other difficulties. The total yield of wheat from the coming crop is estimated, at 14½ quintals to the hectare (roughly 2½ acres), as likely to be over 80,000,000 quintals, which would leave a deficit (as compared with the normal requirements of the country, which average 90,000,000 quintals a year) of rather less than 10,000,000 quintals to be met by purchases of foreign-grown wheat. If the present wise policy of mixing wheaten flour for bread-making purposes with 20 per cent. of flour derived from other cereals be continued, however, as there is every probability that it will be, this deficit will be more than wiped out, and the country should not only be independent of foreign-grown wheat after the next harvest, but should have a substantial balance in hand to meet any contingencies that may arise. Whether this expected surplus will be utilised for export purposes or for the purpose of enabling the present regulations, which stipulate for the adulteration of wheaten flour for bread-making purposes with 20 per cent. of other cereals, to be abrogated, remains to be seen. It is significant, however, that last year's crop, which was exceptionally short, was quoted at 58f per quintal, whereas the present quotation, in spite of the prospective good harvest, stands at well over 71f per

quintal. Critics of the recent administrative decision to authorise an increase in the price of bread by 5c per kilogramme insist that the present price of flour is purely artificial, and is chiefly due to the manipulation of the market by middlemen, as most of the wheat-growers sold their crop long ago at considerably lower figures.

GERMANY.—INDUSTRIALISTS' REPARATIONS PROGRAMME—FINANCES AND CURRENCY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, May 29.

The programme of the Industrials for giving a direct guarantee for Reparations liabilities is published this morning. As expected, it is in a high degree conditional; in fact, it contains not only the changes in internal economic policy without which it cannot, say the signatories, be carried out, but also certain conditions precedent for the Allies. The corporation making the proposals is the "Reichsverband der deutschen Industrie." This body represents primarily "heavy industry" interests, but of late the "heavy industry" has extended its influence to most manufacturing branches. Among the signatories are Stinnes, Fritz Thyssen, C. F. von Siemens, Voegler, the head of the leading and oldest locomotive works, Ernst von Borsig, Kloeckner and Voegler. The programme begins by declaring that the Versailles Treaty gives the Allies a claim upon State property only; as between State and citizens Reparations is a matter of domestic politics. State property, and where that is not sufficient, private property by means of taxation, are liable for Reparations before "limited classes can be asked to bear special burdens." In determining the State's responsibility, the substance of all State property must be kept intact (i.e., no concession or mortgage of State capital values), and Customs independence must be maintained. State concerns, the signatories hold, could, if "regenerated on the principles of private business," yield a surplus of 600 million gold marks within visible time, or even 1 milliard, if the general economic development proves favourable. The amount of the guarantees by private business depends upon the amount of the State's contribution. The private business guarantee would, "despite serious doubts," consist in a pledging of properties.

The signatories hold that business, defined as agricultural and city real estate, industry, trade and banking could, certain conditions being fulfilled, guarantee a maximum of 500 million gold marks annually for 30 years. The capital value of this would exceed half the present selling value of all privately owned real property, which must serve as pledge. Industry proper is ready to guarantee 40 per cent. of the 500 millions a year, i.e., 200 millions, without regard to the relation of wealth between the different groups. The actual pledge would be the real property of the concerns and individuals making themselves liable, and the conditions of interest and amortisation would depend upon the conditions of the necessary foreign loan. Personal bonds would be given where there is no real property. The annual liability of any concern or individual would be redeemable by tax-free capital payments. As regards the Allies, the signatories declare that the above guarantee would be possible only if Germany is enabled by a moratorium to consolidate her internal position, and is given complete freedom in foreign trade. At home, the conditions demanded are: (1) Abstention by the State from interfering with private production and distribution, and in particular abolition of the war control and "Zwangswirtschaft" and of foreign trade control in so far as it is not necessary to secure a supply of food and indispensable goods. Abolition of the demobilisation decrees. (2) Retention of capital and the facilitation of a reasonable creation of new private capital for maintenance and expansion. This means a reform of present taxation in so far as it tends to exhaust capital. (3) Complete utilisation of working power, with the aim of a general increase of productive capacity. This requires that while in principle the Eight Hours Day is retained, freedom to make exceptions by agreement should be granted. In order that all real estate should bear its bur-

den, the signatories declare that "within a reasonable time" urban houses should be decontrolled.

The attitude of the Government to this programme has not yet been declared. The amount offered by the Industrials does not seem large, since the programme presupposes the return of normal conditions and a currency reform, which would make the real profits of industry not the intangible things which they are to-day. Socialist opposition was announced in the "Vorwärts" last night, before the exact details were known. The Socialists will certainly oppose the abolition of what remains of the "Zwangswirtschaft," and also infringement of the Eight Hours' Day principle. In fact, the Eight Hours' law is violated wholesale wherever workmen agree with their employers that it is a common interest to violate it, and the courts have of late either refused to fine offenders or have imposed only nominal fines. The plan to restore housing freedom will be opposed not only by the Socialists but by all political groups which represent the tenant interest.

The foreign exchanges have again risen, and now stand about 200 per cent. higher than during the February-April stabilisation period. Even the Austrian crown is above par. The Reichstag has opened an inquiry into the causes of the failure to maintain the exchange. The Government's representative at the inquiry describes present policy as "keeping the powder dry"—i.e., not exhausting the Reichsbank's holding of gold and bills by a further attempt to keep the mark level, but retaining the possibility of intervening at any critical moment. A Bill has been submitted extending to the "wertbeständig" (coal, rye, &c.) loans the provision of the civil code, which requires official sanction for bond issues. Such loans have the same effect on the money market as paper mark or gold loans. Further, they create in the lending class an interest in raising the price of the commodity chosen as standard.

The Federal Appeal Court has pronounced a new very radical decision in the currency question. A creditor, runs the decision, can claim compensation for losses suffered from paper-mark depreciation in case of delay in payment of a debt. The party condemned was an insurance company, which in good faith contested a claim in court; the claimant won, but found his policy money had depreciated in the meantime. This is another serious blow at the legal fiction that "a mark is a mark," and if applied generally it would have curious results. The Government for the first time recognised the new principle by the "law on currency depreciation (in taxation matters)" of last winter, which imposed, instead of the former 5 per cent. per annum interest on unpaid taxes, penalties of up to 30 per cent. a month. The Customs gold surcharge has been raised from May 30th to 991,000 per cent.

The Government has been obliged to quadruple to 800,000 marks a ton the price of rye sold by it to the municipalities. As the price of imported rye is over 2 millions a ton, there will still be a heavy State loss. Postal rates will be raised on July 1st; the present internal letter rate is about one-tenth of a penny at present exchange, and after the increase will still be only one-fifth. The delays in putting up State charges are hard to understand; where they have been resolutely put up—e.g., railway freight (not passenger) charges—the result has been good. Export duties have been abolished on goods produced in the occupied district which are sold for delivery after the French embargo on export is raised.

The Reichsbank statement for May 15th shows a renewal of pressure. Treasury bill discounts increased by 580,480 millions, commercial bills by 185,676 millions, circulation by 380,679 millions. The outstanding Darlehens advances total 1,737,800 millions, and the present legal limit of 2 billions is within sight. The bank's gold reserve has been considerably depleted by borrowings on security of its deposits abroad, and by the remittance of 60,000,000 gold marks to New York to meet the Belgian Treasury bills. On January 31st the bank had 954,800,000 gold marks in Berlin and 50,030,000 gold marks unhypothecated in foreign central banks; the statement for May 15th shows 629,880,000 gold marks in Berlin and 212,030,000 unhypothecated abroad; so that the disposable total has fallen from 1,004,830,000 gold marks to 841,910,000 gold marks. The hypothecated gold, remaining the bank's property, is booked under "other assets."

The latest mark exchange fall, conditioning higher prices, is bound to increase greatly the inflation rate. A new increase in coal prices is impending. Hematite pig-iron has been raised from 945,000 marks to 1,035,000 marks per metric ton; ingots from 965,000 marks to 1,271,000 marks; bars from 1,348,000 marks to 1,755,000 marks. The last three and the other products of the Steel Syndicate are due for another rise. Scrap iron now sells at 1,000,000 marks, against about 150,000 marks at the beginning of the year. All other prices are rising rapidly, and the indexes for June 1st will show a great increase.

The boom in stocks has been almost uninterrupted, with a slight weakening on the basis of weaker foreign exchanges to-day (in unofficial business). The Bourse was today closed. The *Frankfurter Zeitung's* index for dividend-payers for May 25th shows 2,892,350, against 2,211,665 a week earlier, 376,685 at the beginning of the year and 27,340 at the beginning of 1922. The rise has affected all stocks; in particular, mining-metal and oil papers have risen. The reported new oil trust of Herr Stinnes has materialised in the taking over by the Riebeck Montanwerke A.G., a Stinnes' concern, of 50,000,000 marks of shares in the A.G. fuer Petroleum-Industrie. A new important oil discovery is reported from Peine in Hanover, another from Bleckede on the Elbe. Owing to congestion, the Bourse has decided for the time being to admit no new stocks to quotation. The Mitteldeutsche Creditbank has decided to increase its capital of 170 millions to 600 million ordinary and 10 million preference shares. The dividend for 1922 is 150 per cent. The reports for 1922 of the big banks have, with one other exception, not yet appeared. Bonds were yesterday:—War Loan, 90.50; Fours, 1.270; 3½ per cents., 530; Threes, 7.500; Colonial Fours, 10.000; Savings and Premium, 450; Forced Loan, 36; Prussian Threes, 260; Hamburg Staats-Rente 3½ per cents., 390; Berlin Fours, 1.904; Ser. 2, 166. The bourses are again entirely under influence of the exchanges, and when these are rising no attention is paid to bad news.

CANADA.—MR FIELDING'S SEVENTEENTH BUDGET—LAST YEAR'S FINANCIAL RESULTS—NEW TARIFF PROPOSALS—THE BRITISH PREFERENCE.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 15.

ON May 11th Mr W. S. Fielding, the Minister of Finance, introduced his seventeenth Budget, and thereby falsified the prophecy that the Budget of 1922 would be the last of his many efforts. Reviewing the financial results of the year 1922-23, he placed the ordinary revenue at \$393,619,000, which corresponded to the estimates, and was able to add some 8 million dollars received from the British Treasury on war adjustments. Ordinary expenditure had been \$331,780,000, which had left a nominal surplus of \$61,839,000. But this had been completely swallowed up by the following debit items:—Capital expenditure, \$14,500,000; war claims, \$6,700,000; cost of loan flotations, \$3,050,000; railway advances, \$92,190,000; National marine advances, \$6,060,720. The net result was that over 49 million had been added to the national debt during the past year.

But, unfortunately, he could hold out little better prospects for the current fiscal year. He estimated, making allowance for the changes proposed, that the revenues for 1923-24 would show a decline of roughly 21 million dollars, and reach a total of \$372,517,000. He forecast increases of \$5,600,000 in Customs and \$7,180,000 in war revenue taxes, but against these he has to set off a probable loss on excise of exactly the increment on Customs duties and decreases of \$9,716,000 on interest on investments, and of nearly 18 million dollars on the income and business profits taxes.

The expenditure for 1923-24 he placed as follows:

Main estimates already submitted	\$ 353,011,255
Supplementary estimates	15,900,000
Advances to railways	73,000,000
Advances to national marine	1,500,000
Total expenditure	463,411,255
Estimated revenue	372,517,000
Probable deficit	60,894,255

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1746.

Capital (Paid Up) - £1,250,000
Reserve and Undivided Profits - £1,500,676

Every Description of Home and Foreign Banking Business transacted.

The prospect of another deficit of 60 million dollars is very unpalatable to the people of Canada, and as a result the Budget has developed an atmosphere of pessimism for the time being, and the Government's prestige has not improved.

The Budget proposes a number of tariff changes, a few upward, but mostly by way of slight reductions. A curious method is employed to increase the value of the British preference. When British goods are liable to a duty of 15 per cent. and upwards, and are imported direct via Canadian ports, there will be allowed on the duties a discount of 10 per cent. Since all British goods do not enjoy the preference, and some pay less than 15 per cent. duty, the aggregate reduction in duties is estimated at about one and a-half million dollars. But in the winter months the value of the discount for the Canadian consumer will be largely wiped out by the extra cost of freight rates over the long haul from Halifax and St John to interior points. At present Portland, Maine, which is connected with Canada by the Canadian National system, offers the cheapest freight ingress to Central Canada in the winter months when the St Lawrence is frozen, and the new discount is obviously planned to divert traffic from the American port to St John and Halifax. The former port, and, incidentally, the traffic returns of the Canadian Pacific Railway, of which it is the chief Atlantic outlet in winter, will benefit, and the National system will lose. Since the beginning of the year the friends of the C.N.R. have been gratified at the much greater improvement which its returns showed than those of the C.P.R. have done, and they suspect that the political allies of the latter have made their influence felt in the framing of the Budget.

Mr Fielding proposes to include in the Customs Act a clause authorising the Cabinet to enter at any time into negotiations with the United States, with a view to making commercial agreements between the two countries. He further proposes that if the President of the United States, under authority of the United States Tariff Act of 1922, determined to reduce by 50 per cent. the duties on cattle, wheat, flour, oats, barley, potatoes, onions, turnips, hay and fish, the Canadian Government would be authorised to "make such reductions of duties on similar articles imported into Canada from the United States as may be deemed reasonable by way of compensation."

The most radical change concerns the Sales Tax. Hitherto it has been collected by three different agencies, the Customs department, manufacturers and jobbers, and has been levied upon sales of raw material, semi-manufactured goods and completely finished products. The result was a serious overlapping of taxation, which caused endless irritation and confusion. It is now proposed to collect the Sales Tax at one source, from the manufacturer and producer, or on imports, and to impose a flat rate of 6 per cent.; moreover, the tax on raw materials will not be collected until the process of their manufacture is fully completed. The jobbers and wholesalers, whose pressure is mainly responsible for the change, welcome relief from the duty of acting as tax collectors, and the cost of supervising collections will be decreased. But there is criticism from other quarters on the ground that the new method is bound to increase the cost of living. Sir H. Drayton, the former Minister of Finance, in criticising the Budget, contended that whereas goods whose bare cost of production was \$100 would, under the old system, after the various profits on the original cost and

the tax had been added, be priced to the ultimate consumer at \$159.63, under the new plan their price would be \$164.66. Mr Fielding admitted that he hoped the new method would produce more revenue, but it will undoubtedly make evasions more practicable. He has also added to the list of exemptions from the tax raw furs, tiles, wool, manuscripts and newsprint.

To encourage the copper industry in British Columbia, where there is a large smelting plant at Traill, a new bounty of 1½ cents per lb. is established for copper rods and bars; and to help a factory which proposes to manufacture binder twine and cordage for the Western farms out of hemp grown in Manitoba, a parallel bounty of 1½ cents per pound on hemp products is proposed. Both will last for five years, but will decline in amount progressively each year. Some minor bounties, on the other hand, are wiped out. To stave off an agitation against the high prices of sugar, the duty on refined sugar is cut half a cent per lb., but as a proportionate reduction of the rates on raw sugar is conceded, the protection of the refiners is not affected. To afford a foothold for commercial negotiations with Australia—which is anxious to build up an export trade in raisins and dried currants—the duties on these articles are changed; under the general tariff the duty on them is raised from two-thirds of a cent to 3 cents per lb., but they are made free under the preferential tariff.

POLAND.—CABINET CRISIS—THE BUDGET FOR 1923 —STABILISATION OF EXCHANGES—PRODUCTION IN 1922.

(FROM OUR CORRESPONDENT.)

WARSAW, May 19.

THOUGH General Sikorski is still at the head of the Government, and has not yet tendered his resignation, it is not improper to speak of a Cabinet crisis. An agreement has been concluded by the two strongest parties of the Diet—the National Christian Union and the "Piast." The two parties control 235 votes in a Diet of 444 members, so that they possess an absolute majority. The new coalition is waiting only for an occasion for passing in the Diet a vote of censure upon the present Government and for overthrowing General Sikorski's Cabinet.

Though the new Cabinet, which will probably be formed in the near future, will be backed by a sufficient number of votes in the Diet, it will suffer from the beginning of its existence from an inherent weakness. It may be predicted as certain that as soon as it has to face the problem of agrarian reform, conflicting interests will come to a head.

The present Cabinet crisis will not alter the financial policy of the country. It is certain that Mr Grabski will remain in office, and that his programme of financial reform will be supported by the new Cabinet. Mr Grabski has presented to the Diet his Budget for 1923, which contains the following general items:—

(Zlotys, 000's omitted.)

	Revenues.	Expenditure.	Deficit or Surplus.
Administration.....	819,339	1,486,274	— 666,935
State undertakings ..	105,463	211,378	— 105,915
Monopolies	65,346	2,778	+ 62,568
Total	990,148	1,700,400	— 710,252

The Budget has been established for the first time in units equal to a gold franc. The computation of these "zlotys" is not effected on the basis of the quotations of the Swiss franc, but its value corresponds to the purchasing power which a quantity of gold equal to a franc possessed in Poland in 1914. For this purpose a special index number has been constructed by the Bureau of Statistics. The deficit of the State undertakings is due mainly to the railways. This deficit of 173 millions is partly compensated by revenues from the State forests and domains (95.7 millions). The only section of the Budget giving a surplus is monopolies (62.6 millions). The tobacco and salt monopolies are here the principal sources of revenue.

Since the end of April the exchanges have been maintained on a nearly stable level. This stabilisation is to a great extent the result of an intervention of the Ministry of

Finance on the exchange market. Hitherto this result has been attained without a great weakening of the gold reserve and the foreign assets of the Polish National Bank, as may be seen from the figures below:—

	(Million Gold Francs)	Gold Reserve.	Foreign Currencies.	Foreign Accounts.	Total.
End of January ..	41.1	2.0	35.9	79.0	
" February ..	41.4	3.3	40.2	84.9	
" March	41.7	8.0	34.7	84.4	
" April	41.9	6.3	31.1	79.3	

The total of the gold reserve and of the foreign assets is now on the same level as at the end of January. In comparison with the end of March, however, a decrease of 5.1 millions has taken place.

The official organ of the Ministry of Trade and Industry (*Przemysł i Handel*, May 10th) publishes an interesting table of Polish agricultural, mineral, and industrial production during the two past years as compared with 1913. I reproduce below the principal items:—

	1913.	1921.	1922.	% of 1913.
Crops—				
Winter corn....hect. cent.	..	52,743,200	63,389,400	..
Summer corn " "	..	34,051,200	41,236,200	..
Potatoes " "	..	167,995,600	191,029,600	..
Area under cultivation—				
Winter corn.....hectares	6,013,720	4,353,843	5,412,342	90
Summer corn....	1,226,220	991,725	1,113,600	91
Potatoes	2,384,440	1,940,739	2,146,400	93
Stock breeding—				
Horsesnumber	3,462,905	3,201,166	..	92
Cattle	8,100,088	7,894,586	..	97
Hogs	5,688,364	5,170,612	..	90
Coal production—				
Dombrows district (10 months)tons	5,714,632	4,665,740	5,981,582	105
Petroleum—				
Rock oilmetr. cent.	10,710,000	7,048,737	7,131,034	66
Petroleum products "	3,041,816	5,716,709	6,583,114	216
Cotton industry—				
Number of spindles	1,687,000	..	2,169,000	128
" workmen	66,162	..	72,599	109

This table, which does not embrace Upper Silesia, shows that the agricultural production has nearly reached the pre-war level. The coal output was in 1922 greater than in 1913. The production of rock oil has decreased by 34 per cent., but the total quantity of petroleum products was in 1922 116 per cent. greater than in 1913. In the cotton industry the number of spindles and of employed workmen has also surpassed the pre-war level. The productivity of the workers is, however, smaller, and it would be wrong to infer from these figures that a corresponding increase in the output has taken place.

SWEDEN.—GOTHENBURG EXHIBITION—INDUSTRIAL CONDITIONS—RAILWAY RATES—BOND MARKET.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, May 20.

THE Jubilee Exhibition of Gothenburg, which was opened by the King on May 8th, is exclusively Swedish except for art, where Denmark, Norway, and Finland are represented, and for automobiles and aviation, which part of it is international. The exhibition is arranged by the City of Gothenburg, in order to celebrate the 300th anniversary of its existence, and for the last two or three years neither work nor expense has been spared in order to make the exhibition the best possible proof of what Sweden can produce from the industrial as well as the cultural point of view, and it has, as far as the opinion runs at present, proved a great success. For business men the export exhibition will give a very good exposé of the Swedish industry at present. Representative foreigners who have been to see it have declared that it is extraordinary to find such a show in these depressed times.

The labour market, which showed much uneasiness at the beginning of the year, when big conflicts were going on in the sawmill, wood-pulp, workshop, and iron industries amongst others, is showing a more peaceful aspect now, as in all the above-named industries except the iron-works, settlements have been arrived at. It was hoped that even this conflict would be settled at the beginning of this month, but negotiations were broken off.

Parliament has, after much discussion, voted for the maintenance of the eight-hours working day to be prolonged, with certain modifications, for another three years. The supply of work is increasing. Apart from the seasonal increase of work, there are signs of a slow recovery in trade and industry. Our new Government has requested the Railway Board to make investigations as to what extent a general reduction of the railway rates can be made. As the high railway rates have been of no little hindrance to trade and industry, it is much to be hoped that a reduction will be found possible. The Railway Board has applied to the Government for total grants of 39 million crowns to cover the cost of the electrification of the railway line between Stockholm and Gothenburg, as the moment now seems favourable to commence this work, which is expected to be completed within two years from the time it is started.

Just for the moment there seems to be a lull in certain sections of trade, especially in the iron industry, owing to strikes, and shipping has not been so lively as it might have been. Weather conditions have prevented the opening of the ports in the North Baltic, which are not expected to be opened before the end of this month. The sales of timber and pulp, however, are proceeding satisfactorily, and at present the quantity of sold timber is estimated at 450,000 standards, which is considerably more than at the same time last year. It is estimated that Sweden during the last eight years has reduced its foreign debts by not less than about 800 million crowns, and that the remaining Swedish debts abroad are now not more than 3-400 million crowns. It is not only from the European countries that securities have been bought back, but even a good portion of the bond loan of 25 million dollars, which was issued by the Swedish State in U.S.A. during 1919, is now in Swedish hands. The Swedish bond market is rather firm at present, while the share market is weaker and rather unsettled. During January-March new bonds have been issued to an amount of 94.61 million crowns, which is about three times the sum for the same period last year.

ROUMANIA.—EXCHANGE—COST OF LIVING—BOURSE —TRADE WITH RUSSIA.

(FROM OUR CORRESPONDENT.)

BUCHAREST, May 21.

DURING the past three months the "leu" has advanced from 1,000 to 900 to the pound sterling. This appreciation has been made possible largely by the fact that a free market has practically ceased to exist, all transactions of any importance—as provided by the Exchange Control Law, which became operative on March 1st—now having to be negotiated through, or under the supervision of, the Banca Nationala. This institution, moreover, also has at its disposal a large part of the "strong" currencies received by the Ministry of Finance in payment of export taxes. As the floating supply of lei or lei balances in foreign hands outside of Roumania, and thus beyond the control of the Banca Nationala, is undoubtedly very small, and as the season is approaching when Treasury receipts from export taxes are normally at their highest, it seems possible that the bank, in co-operation with its associated institutions, may continue for some time to dominate the market, "feeding out" exchange only in amounts sufficient to meet the insistent demands of those entitled to it. As the penalties are very severe, "illegal" purchases of foreign exchange are apparently not being attempted on any large scale. With the present high schedule of export taxes, any further improvement in exchange must be expected seriously to interfere with grain exports—if this year's crops provide any considerable surplus available for sale abroad. Last August exports of grain were completely shut off for a time, owing to the appreciation of the "leu."

This firmness in the exchange is giving domestic prices an opportunity to catch up with world-market prices, although there is still a good deal of leeway to be made up in the case of commodities (such as foodstuffs and oil) produced in the country, the prices of which are under Government control. The *Argus* cost-of-living index, which was 2,466 in January (with a base of 100 for August, 1916), had risen to 2,775 by the end of April. On May 1st

railway passenger and freight rates were increased by approximately 33 per cent., while foreign postal rates were increased on May 15th by 100 per cent.

The tight money situation, so much in evidence now for close on a year, has had a disastrous effect on security prices. Government bonds, on an average, are down about 15 per cent. since the first of the year, and the annual yield on several issues now figures out at more than 10 per cent. Some of the leading bank shares are now selling for less in lei than they were in 1916, when the currency was on a par with gold. Most industrials are also very low in price, although they have not been liquidated to the same extent as bank shares. Oil shares, the speculative favourites of the Bucharest Bourse, appreciated almost 100 per cent. during the months of March and April, but nearly half of this rise has been lost during the last two weeks, owing in large measure to a decline in the price of crude oil, but mostly to lack of funds to sustain the "bull" movement. Throughout the past two years, security prices on the Bucharest Bourse have shown little response to exchange movements, securities often declining, while the exchange is depreciating, and vice-versa.

Trade with Russia across the Bessarabian frontier, which has been increasing in volume for several months, has now assumed sufficient importance to merit investigation by the Roumanian Government, and plans are being formulated to control it and to see that Customs requirements are properly complied with. It is proposed to establish at Chisinau, the capital of Bessarabia, an "Office for Trade with Russia," and to permit the export from Roumania of cereals (excepting wheat and corn), beans, fruits and wine, for which payment must be made in gold or in skins, sugar, or other commodities needed by Roumania.

Letters to the Editor.

THE VICEROY AND THE SALT TAX.

TO THE EDITOR OF THE ECONOMIST.

SIR,—My attention has just been called to a leader in your journal under date of March 24th in which you severely criticise the action of the Viceroy of India in employing his veto in the matter of the doubling of the Salt Tax in India.

The *Economist* is always so sane and trustworthy in its policy on matters of finance that I much regret to see that you adopt a condemnatory tone in connection with the Viceroy's action. It is hard on him, indeed, when he is harried in India by interested politicians for taking this step if he is also to be thrown to the wolves in England.

Practically all Europeans and Indians of standing are wholly in favour of this measure, there being only a noisy clique of malcontents vainly seeking to manufacture political capital out of it, who are putting up a show of fight against it.

Few out here take Sir Montagu Webb seriously. In March, 1922, he supported the increase of the salt duty, while in March, 1923, having changed his opinion (others have not), he denounces the increase of salt duty.

As stated at Lahore on May 5th by Sir Zulfikar Ali Khan, Member of the Council of State, the financial needs of the Government justify it, and no flight of imagination could ever conceive the possibility of the tax proving oppressive to the poorest consumers.

But for the present agitation, nobody would have ever felt he was paying enhanced tax. He added that the tax had been levied for one year only, and might be reduced next year, or as soon as conditions permit Government to do so. He felt sure that considerations of the impending general election had greatly influenced the obstinate opposition on the part of the Assembly majority.

A Punjab paper last month quoted Mr Devidas Ghandi, the son of Mr Ghandi, in a speech at Multan, as saying that the people should pay revenue to the Congress and not to Government. In particular, the proceeds of the salt tax, he urged, would be very useful to the party, and as it amounted to 1½ pies only per head, nobody would find it any burden to pay. Obviously, the idea of this is to prevent the Government from realising the salt tax, but Mr Ghandi's argument is a pretty good answer to those who complain of the inequity of the tax. I may add that a pie is a twelfth part of a penny.—Yours faithfully,

W. H. SAXON DAVIES, Major, O.B.E.
(Former Hony. Magistrate of Bombay.)

3 Council House street, Calcutta, May 7th, 1923.

[Our correspondent does not touch the main point of our criticism of the Viceroy, which was concerned not with the salt tax itself so much as with the constitutional danger of using emergency powers to override the majority of the Legislative Assembly in a case which did not seem to us to warrant such drastic action.—Ed., *Economist*.]

A TAX ON BETTING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Allow me to thank you for your note in your current issue, and especially for your argument that if a tax on betting does not check the gambling habit the Revenue will prosper, while if it does, there will be less waste of money on betting. In practice, I should expect both results, and each is desirable.

But there is one point on which I venture to differ from you. Is there any need for all the troublesome and costly machinery of a tax on individual wagers? It would involve much administrative machinery, no little resentment among the racing community, and a good deal of evasion. And it is not necessary; all you have to do is to license bookmakers, making them pay a substantial sum for their licence, which they should obtain every year from the magistrates, just as a publican obtains his licence. But it is also necessary to make a bookmaker take out an additional licence, or a combined licence, for every agent and clerk whom he may employ; the fee for each employee should, of course, be smaller. It does not matter very much what sum be fixed at the start for the licences; experience will show what figures can fairly be charged.

Of course, the bookmaker will pass the licence fee, or most of it, to his clients, and the Exchequer thus make him its collecting agent. The great advantage of taxation over prohibition when you want to check an undesirable practice is that the authorities can come down at once for frauds on the Revenue, whereas the enforcement of penal statutes is a difficult matter. May I express the hope that the Liberal members of the Select Committee will not be influenced by the old Puritan idea that the working classes have no right to choose their amusements?—Yours, &c.,

J. E. ALLEN.

RICARDO'S ECONOMIC ESSAYS.*

Few writers have contributed so much to the growth of economic science as did David Ricardo. To the student who has only read his *Principles of Political Economy*, however, the abstract nature of his reasoning and the frequent lack of completeness in his exposition together do much to detract from a proper understanding of the

* *Economic Essays*. By David Ricardo. Edited, with Introductory Essay and Notes, by Professor Sir E. C. K. Goner. (London) Cassell & Co. 6s.

real greatness of the man, who was both thinker and practical man of affairs. In these essays, which are now reprinted under the editorship of Professor Goner, we can see Ricardo at work on some of the practical problems of his day. The essay on the "High Price of Bullion" establishes the fact of depreciation of the banknotes in 1811 by reasoning which loses none of its significance for its being now perfectly familiar. In another essay Ricardo adequately deals with "Mr Bosanquet's alleged facts in supposed refutation" of his previous conclusions; and although this whole controversy is long since dead and buried, the reader of these essays cannot fail to find in the author's methods of reasoning much that will help him to a true understanding of the theory of money—a subject by no means universally understood even in this enlightened age of currency depreciation. Two essays on problems arising out of the post-war distress in agriculture, with which we, also, are only too familiar, complete a volume which will be interesting not only to the student of economic doctrine, to whom Professor Goner's short introduction should prove useful, but also to all those who believe that it is the function of economic science to provide a method of thought rather than a series of cut-and-dried solutions to practical problems.

This is a book which from beginning to end should be read by all small investors.

New Zealand Official Year-Book, 1923. Thirty-first issue. (Wellington) Government Printer.

Directory of Shipowners, Shipbuilders and Marine Engineers, 1923. (London) 33 Tothill street, 20s net.

The 1923 edition of the *Directory of Shipowners, Shipbuilders and Marine Engineers*, which has just been issued, gives particulars of steamship companies, shipbuilders, ship-repairers and marine engineering works throughout the world. In the shipping section the names and addresses of the companies and principal officials are given, and lists of the fleets, together with such information as passenger accommodation, speeds, carrying capacities, whether oil-fuel burning and so on. In the shipbuilding section the capacities of the shipyards and engine works are stated, and the dimensions of dry docks where ship-repairing is carried on. Other information includes a list of societies, institutions and trade and labour federations, and a directory of consulting naval architects and marine engineers.

The Nineteenth Century, June, 1923. (London) Constable and Co., Limited, 3s.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 13.	June 14.

This week it has been the turn of the gilt-edged markets to show the firmest texture amongst the Stock Exchange mills. Even the War Loan, which is curiously passed over by investors to whom a possible short-dated stock should offer no objection, has been lifted to a slight extent. Speculation in this market concerns itself mainly with conversion stock, the price of which spurred briskly, to give way a little towards the end of the week, on a few substantial lines coming to market. Other Government issues are strong, not excluding Consols. The new India scrip, left, it may be recalled, in the hands of underwriters to the tune of 51 per cent., stands about 1½ premium. The revival of business in this and some of the other markets is regarded as due to the fact that the public interest aroused by political happenings at home has subsided so far as these are concerned, leaving men freer to turn their attention to Stock Exchange markets.

The foreign market has seen fairly lively fluctuations in the

French issues, though on balance no particular change remains. Germans are flat. A fall in the Argentine rate of exchange led to Buenos Ayres 3½ per cents giving way sharply, though the sterling loans kept firm. The new Argentine Fives at 86½ came as a surprise. Two or three of the Chinese bonds are better. Finland and Helsingfors prices have improved, though Riga 4½ per cents went back for want of further news in regard to the rumoured settlement, which, according to gossip, attempts are now being made to bring about.

Home Railway stocks derive assistance from the strength of the gilt-edged market, though there is little business doing in them. Canadians are dormant. Mexican Rails have not yet benefited from the impression that recognition of Mexico by the U.S.A. is on the point of being announced. Argentine Railway stocks, after showing a strong front, went back abruptly because of the drop in the exchange. Cordova Centrals, exceptionally, are better on the forthcoming resumption of full cash distributions on the second debentures. Antofagasta and United of Havana stocks are well held, owing to their recent good dividends.

The rubber market has taken a languid turn for the better, thanks to a rally in the price of the produce, but oil shares, so far as the leaders are concerned, are heavy, dividend fears being rife in connection with Mexican Eagles. A good spot in the market is that for Agwi and Agwi Marketing shares, both of these being strengthened by the chairman's speech at the recent Agwi meeting. The tobacco group is the most active and the most resilient in the Stock Exchange, British Americans rising to the level £5, and Imperials, United Souths, and Canadians participating in the lively activity which the buoyancy of prices has generated. Amongst stores, catering and allied shares, Liebig's stand out as the principal feature, the price putting on £1 a share on hopes of a new issue at a low figure. Charing Cross Electric further advanced to 12, in consequence of the forthcoming issue of new shares at £7 10s to present proprietors. The iron and steel group is little more than steady, the buying and selling being pretty equally balanced. Lamberts hold their big rise, but have made no further progress. Lively dealings sprang up in Sudan Plantations and in Kassala Cotton shares, both of which were bought from Egypt and America; also by a few operators nearer home. The cement shares are stronger, and more attention has been paid to Marconis, in consequence of the manner in which the broadcasting boom continues to gain ground. Newspaper shares are good throughout, substantial rises taking place in the popular issues. The banking and insurance markets are quiet, though in regard to the latter, market reports have revived with reference to the possibility of two of the younger and enterprising companies being taken over in the near future by older-established concerns. A number of popular speculative industrials have responded to the brighter outlook which prevails in regard to trade. Brewery stocks and shares are better as a whole. Indo-China deferred weakened on the poor showing made for last year; other shipping descriptions have hardly moved.

Greater firmness is noticeable in various Kaffirs. Paris has been confining rather listless energies to Rio Tintos, De Beers, and its own particular favourites, while the Cape, having apparently got over its recent apprehensions in regard to possible labour troubles on the Rand, is doing but little in the market. London buyers, however, are lending support. A rise in Johannesburg Consolidated Investment shares followed optimistic anticipations in regard to the forthcoming dividend. Cam and Motor, amongst Rhodesians, have risen, on anticipations of a 20 per cent. dividend being declared this month. The diamond market moves somewhat erratically, but within narrow limits. Tin, the metal, is once more about £200 per ton, the improvement causing a few advances in Malayan tin shares; Cornish and West African shares have fallen into neglect. Mexico Mines are the best feature in their own particular market. Efforts to create public interest in Canadian mining shares met with scant success. There is nothing doing in West Australians or Indians, and the mining markets as a whole have yet to benefit from the expansion of public interest that is evident in other parts of the House.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

1916	234,556,137			

Argentine Government (Port of the Capital, Buenos Aires).—Issue of £2,500,000 5 per cent. bonds, at £86 10s per £100. The bonds are the direct obligation of the Argentine Government, and are repayable on July 1, 1949, at latest, but are redeemable by means of an accumulative sinking fund of 1 per cent., which begins to operate immediately. Principal and interest are payable in London in sterling, or in Buenos Aires at exchange of 48d per dollar, free from all present and future Argentine taxes. These bonds form part of an authorised issue of £5,000,000, of which, including the present offer, £4,121,000 have been issued. The yield, even if held to the latest redemption date, is nearly £6 1s per cent., and the bonds are an attractive investment. Subscribers will receive a full half-year's interest on July 1st. The lists were closed within a short time of opening.

Boots Pure Drug Company, Limited.—Authorised share capital £2,400,000, comprised of eight series of preference and preferred ordinary shares and 1,000,000 ordinary shares, all fully paid with the exception of 900,000 ordinary shares. Boots Pure Drug Company owns the whole of the ordinary share capital of various subsidiary companies known as Boots, Cash Chemists. There are now 250,000 £1 ordinary shares offered for sale, of which 60,000 are being reserved for employees of the company. The price per share to the public is £4 each, and to employees £3 10s. Neither the company nor any of the companies controlled has any outstanding debentures or debenture stock. As at March 31st last there was a surplus of assets over liabilities amounting to £543,071, and in respect of 1923 profits amounted to £591,072, with a balance available for ordinary shares and reserves of £494,343. A dividend equal to 36 per cent. was paid on the full ordinary share capital of the company for the year 1922-23. A yield of 9 per cent. on

a good industrial share is attractive, but the security of capital for £4 per share is not in evidence. The issue was quickly oversubscribed.

Peachey Leather Products, Limited.—Authorised capital £150,000, divided into £1 ordinary shares, of which 125,000 are now offered at par. The company has been formed to acquire a licence to work in the United Kingdom a process for the cold vulcanisation of rubber as applied in the manufacture of compounded articles containing leather or leather waste. It is stated that the directors and their friends have applied for 46,850 shares, while 25,000 shares are reserved for issue to Peachey Process Company, the licensors, in respect of royalties, as they accrue. We are reminded that, in view of the fact that the application of the process will open up a new use for rubber, the active support of the Rubber Growers' Association and other parties interested in the crude rubber trade may be relied upon in promoting the sale of the company's products. Premises have been acquired at Slough, with railway facilities. After providing for preliminary expenses it is estimated that £113,000 will be available for the business. An interesting proposition, the progress of which careful people will follow as possible investors.

Electric Supply Corporation.—Authorised capital £350,000, divided into 200,000 ordinary shares and £150,000 6 per cent. cumulative preference shares, all of £1 each. Of these 150,000 ordinary shares have been issued, and all the preference shares are now offered for subscription at par. There is outstanding £154,914 5 per cent. debenture stock (of which the company holds £24,914), and these are to be paid off out of the proceeds of the present issue. Preference shareholders' voting rights are limited to cases when the dividend may be in arrears. The company was formed in 1897, and owns a number of electric supply undertakings in England and Scotland. Profits are given since 1918, but the advertised abridged prospectus gives no figures of assets or liabilities. Further information than is given in this statement should be required by intending investors, but, on the face of the figures given, the interest looks to be fairly well covered.

Tottenham District Light, Heat, and Power.—Tenders are invited for £100,000 "B" consolidated stock, at a minimum price of £102 per cent., to rank *pari passu* with the existing consolidated ordinary stocks of the company. The dividend paid in respect of the second half of 1922 was 6½ per cent. The "B" stock ranks for a standard dividend of 3½ per cent. with a standard price of gas of 17 3-5d per therm, and as the company is reducing the price of gas to 10d per therm in July next, the present dividend seems safe enough at present. The company was formed as a gas company in 1847, since when other companies have been absorbed and in 1913 it undertook the supply of electricity, the sale of electric units having multiplied nearly ten-fold in the past seven years. Net profits for 1922, after payment of all charges and debenture interest, and allocating £10,000 to pension fund and £3,691 to reserve, were £80,529. The annual charge on the debenture stock is £18,324, there is £26,235 of preference stock outstanding, and £902,275 of consolidated stock. Dividends on the last named, on the basis of last year's profits, are well covered. Reserves and undivided profits on December 31st last amounted to £146,122. The stock is an attractive one of its class. Tenders will not be received after midday on June 18th.

Southend Waterworks Company.—Capital already issued consists of £324,191 preference (of which the present issue forms part) and £584,447 ordinary stock. The issued loan capital amounts to £243,090. This is an offer for sale by tender of £37,369 5 per cent. irredeemable preference stock. The minimum price has been fixed at £90 per £100. The company was incorporated by special Act of Parliament in 1879. The area of supply, including the County Borough of Southend-on-Sea, covers 160 square miles, with a residential population approaching 140,000. For 1922 revenue was £70,014 after payment of loan issues, and as it is estimated that preference stocks, including that now offered, will need but £19,720, a reasonable margin of security is found. A fairly good utility investment.

Durham County Water Board.—Issue of £300,000 4½ per cent. redeemable stock, 1938-48. The stock will be charged upon the revenues of the Board *pari passu* with all other stock issued or to be issued. The board has power to make up any deficiency by levying a rate on the constituent authorities whose assessable value at March 31, 1922, was £1,329,268. The total outstanding debt of the Board is approximately £1,604,600. These particulars are taken from the advertised statement to comply with Stock Exchange regulations.

Transvaal Silver and Base Metals, Limited.—Capital £300,000, in £1 shares, all of which have been issued and fully paid. A statement of this company's affairs is advertised this week, in accordance with the regulations of the committee of the London Stock Exchange, and is for information only. The company was formed in 1919, under the limited liability laws of the Transvaal, to acquire from the General Mining and Finance Corporation certain freeholds and pro-

specting rights. A prospectus was issued and advertised in the Union of South Africa. Smelting was started in January, 1922, and up to the end of April, 1923, 5,766 tons of bullion, containing about 97 per cent. lead and 97 oz of silver per ton, had been produced. The information given, as is usual in these statements, is meagre.

Josiah Smale and Son, Limited.—Capital £170,000 in £1 shares, all of which have been issued. The company was incorporated as a private company on May 31, 1918, to acquire a silk manufacturer's business, and converted last month into a public company. The issued share capital was credited as fully paid to the vendors in accordance with an agreement between the Fanti Consolidated Mines, Limited, and General Investors and Trustees, Limited. Profits for the past four years have averaged over £20,000 per annum. The information given in the advertisement published in compliance with Stock Exchange regulations, from which the above particulars are taken, is insufficient to guide investors as to the standing of the business.

THE FINE COTTON SPINNERS' AND DOUBLERS' ASSOCIATION, LIMITED.

SUCCESSFUL RESULTS OF YEAR'S TRADE.

INCREASED PROFIT AND DIVIDEND.

CONDITION OF AMERICAN ESTATES.

MR HERBERT W. LEE ON THE POSITION AND PROSPECTS.

The twenty-sixth ordinary general meeting of the shareholders of this company was held in the Memorial Hall, Albert square, Manchester, on Tuesday last (May 29, 1923). Mr Herbert W. Lee, chairman of the association, presided, and was supported by Colonel R. W. D. Brocklehurst and Mr John Graham Peel (vice-chairmen), Mr William Howarth (managing director), Mr Vernon Bellhouse, Mr Alfred Edwin Rahr, Mr John Wallace Adam, Mr Percy Ashworth, Mr A. W. Bramall, Mr Robert W. Bennett, Mr Archibald E. Dixon, Mr Francis Iredale Dixon, Mr John I. Higson, Mr James Marsden, Mr H. Ross Marsden, Mr Ernest Mather, Mr Percy Musgrave, Mr Edwin Oliver, Mr James Taylor, Mr John Baird Walker, Mr John A. Wanklyn, Mr Philip Bruce Whitehead, and Mr Claude H. Blair (director and secretary).

DIRECTORS' REPORT.

The twenty-fifth annual report of the directors for the year ended March 31, 1923, states that:—

The balance brought forward from last year's account is

The profits for the year, including amounts recovered in respect of enemy debts, but after charging £180,000 to depreciation, and providing for directors' fees, bonuses to management, and corporation profits tax, amount to

and after deducting:—
Interest on debenture stocks ..£110,000 0 0
Transfer to pension fund

there remains a balance of

Out of which have been paid interim dividends as under:—

On preference shares at the rate of 5 per cent. per annum ..£75,000 0 0

On preferred ordinary shares at the rate of 5 per cent. per annum

On ordinary shares at the rate of 8 per cent. per annum

leaving a balance of

which the directors recommend should be appropriated in the following manner:—

To a reserve for equalisation of dividends

To payment of a dividend for the half-year ended March 31, 1923, at the rate of 5 per cent. per annum on the preference shares

To payment of a dividend for the half-year ended March 31, 1923, at the rate of 5 per cent. per annum on the preferred ordinary shares

To payment of a dividend for the half-year ended March 31, 1923, at the rate of 17 per cent. per annum on the ordinary shares (making with the interim dividend a total distribution of 12½ per cent. for the year), absorbing

Total

Balance carried forward

721,206 4 9

The directors record with great regret the severe loss they have sustained by the death of their chairman and colleague, Mr John Wanklyn McConnel.

The directors regret to record the retirement of Mr William Eckersley from the vice-chairmanship of the association. Mr Eckersley retains his seat on the board as a director.

Mr John Graham Peel has been appointed a vice-chairman in the place of Mr Eckersley.

The directors regret to record the resignation of their colleague, Mr John Lincoln Tattersall.

THE BALANCE-SHEET.

Turning to the balance-sheet, it is a great gratification to me that on the first occasion on which I occupy this chair, and I may remind you also on the completion of the twenty-fifth year of the life of the association, that we have such a good result to put before you. The board feels it need not be ashamed of the profits on the year's working, and I think that the shareholders, on their part, ought to be more than satisfied with them, because it has not been a normal year in the cotton trade or an easy one in which to make profits. It is true that we have not had to contend with the lamentable condition that has obtained in the great section of the trade that spins American cotton, but it has, right through the year, been a struggle to keep our spindles employed. It has been especially difficult for this association, because the extra fine counts of yarn, in the spinning of which we are pre-eminent, have been entirely neglected, and the lace trade, which is one of our large outlets, has been almost at a standstill. I can assure you that it has taken the full energy of everyone concerned to produce the figures which we are able to put before you.

I will give you, as usual, the information you like to have on those figures.

ASSETS.

If you will turn first to the balance-sheet, and take the assets side, you will notice that the expenditure this year on additions to capital amounts to £8,476; the full amount spent is £25,000 more than this, but that amount has now been written off the other side of the balance-sheet from the sum voted some years ago for the research department, the expenditure on which was, in the first instance, placed to the capital account. In any case the amount expended is very small, and I want you to understand that it is not occasioned by want of energy or of enterprise on the part of the board. It is the result of calculated policy. Prices a year ago were still inflated; they have during the period fallen very considerably. Had we launched out during the year you would have had to-day additions to property standing in the books at much over their present value. Our experts inform us that to-day's cost of building is more or less reasonable, but that the prices of textile machinery are still much inflated, and the reduction at which we can now purchase does not correspond with the reduction that has taken place in wages and in raw material. As soon as textile machinery makers are content to accept reasonable prices it will be safe to consider proceeding with several schemes that the executive has worked out.

DEPRECIATION.

The provision for depreciation is taken at £180,000, the same figure as last year, and £181,397 has been expended, in addition to which the considerable sum of £129,021 has been spent and charged to profit and loss account for repairs. In the case of renewal of machinery, the board does not consider cost. If a machine will not turn out the best quality, and the full quantity, it is thrown out and replaced, and you may rest assured that every necessary renewal has been made this year. The net result of these two accounts is the small increase of £9,873 on the capital account.

SUNDRY INVESTMENTS.

The sundry investments stand at £4,185,367, a reduction of £230,768, the main factor in this reduction being the sale of the cotton we have been holding for the cotton estates. This cotton has now all been sold at first-rate prices, and the cotton estates have been able to reduce their loan to normal dimensions.

STOCK-IN-TRADE.

The stock-in-trade stands at £3,760,752, and shows an increase of £600,886. This looks a large increase, and it is therefore very necessary that I should explain to you that it is only a book-keeping increase, and that, in reality, there is no increase at all. We have always to hold considerable stocks of cotton in order to maintain the qualities of our yarns, and we use this cotton in the ordinary course of business, that is, a good part of it, to finance our trade. At the present time our finances are so easy that we are holding nearly all the cotton ourselves, and it consequently shows as an increased asset in our balance-sheet. Were we to take an account of last year's stocks of every description for which we are responsible, and compare it with this year's corresponding account, we should find that this year's account would show an actual decrease of £118,525, as compared with last. The whole of these stocks have been most carefully taken and scrutinised, and you may rest assured that they stand at a true value in the books.

TRADE DEBTS AND BANK BALANCE.

Our trade debts are reduced by £142,000, caused, in part, through a reduction in overdue accounts, and in part because we have done a rather larger proportion of trade in the home markets, where the terms of payment are shorter.

The bank balance shows an increase of £292,661, which is a

result of the profits we have made, and will, of course, be reduced when our dividend warrants are sent out and have been cashed.

LIABILITIES.

Turning to the other side of the balance-sheet, you will see that no change has taken place during the year in capital or in reserves. The insurance fund has a small increase of £5,446, and is slowly approaching a figure that should permit a rather larger percentage of risk being taken than that which we now carry.

PENSION FUND.

The pension fund, if you carry out our recommendation to add £50,000 to it, will show £60,193 invested to cover pensions already granted, and £117,909 for future needs, a total of £178,102. I can assure you that this fund is answering the purpose for which you established it. We have granted during the year 53 pensions, eleven of our old pensioners have died, and we now have 131 on the books. The average age of these pensioners is 65 years, and all have given over 30, and some up to 50, years' continuous service. It will be some years yet before we can tell you the total sum that will be required to make the scheme self-contained and automatic. A time will come when the deaths equal the pensions granted, but that time has not yet arrived, and additions to the capital sum will still be required. If for a little time to come each good year we make an addition to it, we shall arrive at the end we desire without hardship to our shareholders.

WELFARE WORK.

I should like to couple this scheme in your minds with the sum of £15,000 we are asking you to set aside for welfare work. We require money for the extension of this work, which we cannot very well take out of the profit and loss account of individual mills, and which we certainly should not like to put to capital account. The amounts required are not large, and they could be voted by the board, but we feel sure it is a sum the shareholders would prefer to vote themselves, and thus show their sympathy in the welfare of their employees. For some years we have been striving to look at our mills through our workpeople's eyes, and to lighten and improve the conditions under which they work. We are making slow but definite progress. We are working with our workpeople. It is only by so doing we can make the work effective, but, working together, we are sure we can in time attain our object.

RESEARCH AND EXPERIMENTAL DEPARTMENT.

I have already called your attention to the reduction of the fund set on one side for research by £25,000. We have renamed this department the Research and Experimental Department, as better representing the work it is doing. It is now fully equipped, and under the management of Dr. Balls, supported by the interest the executive and the board are taking in it, combined with the thought and time Mr Vernon Bellhouse is devoting to it, I begin to feel confident it will more than justify the money you are expending, and will become one of the elements contributing to the success of the association.

Loans show the normal variation.

Sundry creditors show an increase of £347,354; this increase is mainly caused by the increase of the temporary balance in Inland Revenue account, which I shall mention when I come to talk of Reparations.

PROFIT AND LOSS ACCOUNT.

I will ask you now to turn to the profit and loss account on the top of the sheet. You will see that we bring forward from last account £198,246, and that our net profit for the year is £943,460. This figure is £330,130 larger than last year, but it is really much better than that, because last year included a transfer from E.P.D. account, while this year, with the exception of £33,593, recovered for pre-war enemy debts, consists entirely of profit made during the year. Full provision has been made for income-tax, a large sum has been deducted for corporation profits tax, and all liabilities have been provided for.

DIVIDEND.

You will see on the other side of the account we place the interest on debenture stocks, and the amounts we hope you will vote for the pension and welfare funds, leaving a balance of £666,706 to be disposed of. If you turn now to the front page you will pick that figure up again, and you will find we have to deduct from it the dividends paid at the half-year, which leaves a sum of £721,206 4s 0d for your present consideration. From this amount the board suggests that it would be wise to place a sum of £100,000 to a reserve for the equalisation of dividends. The preference and preferred ordinary dividends, amounting to £98,500, must of course be paid, and the board proposes you should confirm the distribution of a dividend to the holders of ordinary shares at the rate of 17 per cent. per annum, making a distribution for the year of 12½ per cent. This would leave a carry forward of £210,331, which is £12,035 more than we brought forward from last year.

SUBSIDIARY INVESTMENTS.

Before I ask you to vote upon this I am sure you would desire to have some information on a few of our big subsidiary investments, and I will take first the one which has been of late years the least satisfactory, namely, our investment in cotton estates. You were promised last year that we would send a deputation to visit these estates, and last October a deputation, consisting of Colonel Brocklehurst, Mr Vernon Bellhouse, Mr Percy Ashworth, and myself, spent about a fortnight there. Our object was to ascertain whether the management had recovered from the disorganisation caused by the war, whether the extension of cotton growing on the newly cleared lands was progressing, whether the boll weevil could easily be kept in check, and especially whether the price at which the shares stood in our books was justified. I am glad to say we came back with a satisfactory report on all these points, and I am glad also to tell you that this year's working has resulted in a good profit.

Our colliery and other investments, which may be considered as outside cotton spinning, have all given us satisfactory results.

MILLS IN FRANCE.

A year ago I told you that we had great hopes that our mills in France had turned the corner, and you will be pleased to know that those hopes have been justified. Every mill there has made a satisfactory profit, and has contributed to the results of the year. In the matter of Reparations, so far as our three companies which are registered French companies are concerned, we are making good progress. For the big one, Delebart Mall et Fils, the actual figure is agreed, and the documents only require signing, which our French directors assure us is only a matter of form. I should like to say here that we owe a debt of gratitude to those directors, and especially to Mr Delebart, whose loyalty and devotion to our interests is beyond all praise, and we also owe a debt of gratitude to France. The French Government has treated us in exactly the same manner as it has treated companies whose capital was wholly French. It has shown us sympathy and consideration; it provided us with cotton and machinery to enable us to get going quickly, and while it has carefully scrutinised our claims, still it has put us back into first-rate working order without loss, other than the loss of the profits and the interest on capital during the enforced stoppage of the mills.

SOCIÉTÉ COTONNIÈRE D'HELLEMMES.

The attitude of the English Government regarding the Société Cotonnière d'Hellemmes, an English company working in France, has been in direct contrast to this. We have so far received nothing from it for reparations, and are not encouraged to expect that we shall ever be paid the full amount necessary to re-instate these mills. The Inland Revenue has permitted us to write off these losses out of profit and loss, so that we get a considerable contribution from the E.P.D. account from this source, and, with the amounts you have already provided, you have the satisfaction of knowing that Reparation is provided for, and we shall not have in the future to ask you to make any further sacrifices either from profits or from reserves on this account. We shall continue to do everything in our power to get repayment of the sums expended, and no doubt we shall eventually get something, but I must warn you that we shall not be able to take the whole of any sum we may receive as profit, as a considerable part will go to the Inland Revenue in repayment of the E.P.D. they have allowed us to retain.

For the rest, two of these mills are fully restored; we are slowly starting the third, and they are now working with satisfactory results.

E.P.D.

I must say one word about E.P.D. I had hoped to be able to tell you that this account was closed. We have made progress, and we are agreed upon the figures of the account, but there is one question of principle upon which we are not agreed, and which would make a considerable difference to our claim. It was decided in our favour two years ago by a high official of Somerset House, but his successors have lately reversed his decision. We have taken the best legal and expert advice, and we have confidence that when we put the point in detail before the present officials they will see the justice of our demands.

We take no blame, ladies and gentlemen, for the long delay in settling this account; we consider it has occurred through the many changes that have taken place in the officials appointed to go through our accounts. These changes may be necessary, but however considerate and skilled such officials may be—and we have nothing but praise for them—it means delay and extra work for us, and it seems a pity that in a difficult period like the present time and energy should be wasted in this manner, which would be better employed, not only in making dividends for our shareholders, but also in the task of keeping in full employment the 30,000 workpeople who depend upon us.

PROSPECTS.

I have already kept your attention too long, but you will want one word on the present prospects. The process of reconstruction after the war goes on, but it advances slowly, and it is impossible to regard the immediate future as anything but doubtful and confused.

The price of cotton, which is still too high, the difficulties with occupied Germany, and with Turkey, the loss of all trade with Russia, and the general disorganisation of Europe, make it impossible to forecast a good general trade, and must affect ours to some extent. We have been in the past both blamed and commended for taking a conservative view when we recommended dividends, and if this year you think we have been conservative, you will, I am sure, agree that we have good reason for it. At the same time, you must not think we are pessimistic. We stand, in fact, on this platform as a united body of optimists. We do not believe that the cotton trade is doomed, and we have every confidence that we can render a good account of our association. We are at present working nearly full time, and we are making profits, and so long as we can find business to keep our spindles going we are confident we can continue to make profits. Prospects now change quickly; there are no large stocks, and a favourable turn on the Continent, a slant of fashion in our favour, might easily alter all the aspects of the case. Great efforts are being made by the Federation of Master Cotton Spinners to stop the heavy losses that are being made in the yarns spun from American cotton to-day. I hope they will be successful. If spinners could be led to refuse to sell below cost, much would be gained. We have every sympathy with this object. We have no sympathy with the attempt of a small section of the trade to set up again machinery such as we had in the war under a board of control. That system can only be of use at a time of national crisis, and at a time when great profits were possible. The concern we have to manage for you is a great one, the actual number of spindles you own is over four millions, and if counted as equivalent spindles in the way that the federation of Master Cotton Spinners reckon they come out to very nearly five million spindles. To make a success of a business of this extent the directors must hold the control of policy of trading and of production in their own hands.

TRIBUTE TO STAFF.

I should like just to say one word about the staff. As your chairman, relieved of the detail work that falls to the lot of the managing director, I have more leisure to closely observe the general working of the mills, and I can assure you that you have reason to be more than satisfied with your staff. They have worked with the determination to succeed, and they have been backed up well by the workpeople who have, on the whole, shown an interest in their work and a concern for the success of their mills which is a great pleasure to record.

Ladies and gentlemen, I have given you a good many particulars about the balance-sheet and the working of the concern, but there may be some points you are anxious to hear something about which I have omitted, and so, before I propose the resolution which will pass the report, I will give you an opportunity of asking any questions you may desire to put to me.

COLONEL R. W. D. PHILLIPS BROCKLEHURST'S SPEECH.

AMERICAN ESTATES.

Colonel R. W. D. Phillips Brocklehurst: Ladies and gentlemen,—Before I proceed to second this resolution, the chairman has asked me to amplify the few remarks he has been able to make on the subject of our late expedition to our estates in America, and knowing of what very great importance the question is to us all, I feel that you would probably like to have information from another member of the party. Well, I think it was one of the most useful undertakings on which we could possibly have embarked. It took us 13 days to get to the estates. It takes a letter 10 days, so that you see most of the business has had to be conducted by cable. In addition to that it was between seven and eight years since any member of the board or the executive had visited these properties, so you will see how easy it was for misunderstanding to arise on minor points of policy, and it was unreasonable to expect that two boards of management, separated by so many thousands of miles of land and water as we were, should always see eye to eye on every question, and we felt that the management over there had begun to consider themselves neglected; they thought they were no longer looked upon as one of the family and a permanent part of us—the Fine Spinners' Association. Well, ladies and gentlemen, we have put all that right.

Personally, it was with very great reluctance that I undertook the journey. I knew little about cotton growing, and I had never before seen the estates, and it seemed to me that someone who had been in touch with them in their early stages would have been more able to draw comparisons and come to just conclusions. Well, I am very glad I went, for I know now we have a noble property over there. It is, I believe, the largest cotton

plantation in the world, and during the 14 days or so we were down in the South we had a very strenuous time indeed, but, thanks to the extraordinary capacity of our old friend "Tin Lizzie," or the Ford car, we had no difficulty, if necessary, in going straight across country, and we were able to visit every hole and corner of the estates. We were very pleased with all we saw.

PROPERTY IN FINE CONDITION.

The property had been kept up to a very high state of efficiency, and we saw nothing that appeared to be in disrepair or neglected, and I myself was very much struck by the very high standard of farming that we maintained. The crops were clean and well tended, and the livestock was in the most excellent condition. Now, you have out there a complete township called Scott, entirely built by yourselves. We have an hotel, a club, several stores or shops, "gineries," a most efficient and modern saw mill, a house for the staff, and some 20 outlying farms, all equipped with managers' houses, ample farm buildings, and the necessary quota of cabins or cottages for labour. They, over there, have suffered from the aftermath of the war in the same way as almost every industry the world over has suffered, but this year they have made a continued profit. They have enormously reduced their overdraft—you know we are acting as their bankers. The management seem satisfied that they have the boll-weevil well in check, through poison, and the levee or dam of the Mississippi, which has always been the cause of the most acute anxiety to us, and also a very considerable loss from floods, has now been put in such a state of repair by the Government that we are told we have no further reason to worry about it.

LABOUR.

On the other side of the matter, we have one very serious difficulty with which to contend, and it is labour. Now, it is absolutely essential for us to get every possible acre we can under cotton, that is the paying crop, but in this direction we are strictly limited by the amount of labour available. We have, up to now, never been able to approach our full capacity. We have always treated our labour with the greatest consideration and liberality, but the unprecedented prosperity of the northern mills, combined with the attraction of life in towns, have been a continual drain upon us. Ladies and gentlemen, we shall have to work hard in this direction, and hope for a change in our favour.

And now to turn to the balance-sheet. I am afraid some of you may think we have not done everything that was possible for our shareholders, but let me assure you we on this board and this executive look upon this business with as much solicitude as if it was one of our own children. We have, during our 25 years of existence, come across one, two, or three, or more, very bad years indeed, and however good your management may be, these bad years are bound to recur.

EQUALISATION OF DIVIDENDS.

Now, it is our ambition to build up the constitution of this company that when these bad years come they should be no cause for anxiety for you or for us—in a word, that your regular dividend should be assured to you. I feel that we have had a good year in a bad one, but we have no guarantee that we have not much greater difficulties to meet in the coming year than we have had even in the past. At the present moment I think the pointers are in that direction. I welcome, and welcome with open arms, the establishment of the fund for the equalisation of dividend. Speaking on my own account, wrapped up as I am in the future of this business, I personally should have been perfectly satisfied with a 12 per cent. dividend and the extra £50,000 placed to this most useful fund. I have great pleasure in seconding the resolution.

The Chairman: I put the resolution, "That the directors' report and accounts presented to this meeting, and the report by the auditors that has been read, be and the same are hereby received and adopted."

The resolution was adopted without discussion, no questions being asked.

THE DIVIDENDS.

The Chairman: I now beg to propose, "That the following dividends be now declared out of the profits of the undertaking, viz.:—A dividend for the half-year ended March 31, 1923, at the rate of 5 per cent. per annum on the £3,000,000 preference shares, numbered 1 to 3,000,000 inclusive; a dividend for the half-year ended March 31, 1923, at the rate of 5 per cent. per annum on the £940,000 preferred ordinary shares, numbered 1 to 940,000 inclusive; a dividend for the half-year ended March 31, 1923, at the rate of 17 per cent. per annum on the £3,675,000 ordinary shares, numbered 1 to 3,675,000 inclusive." I will ask Mr John Peel to second that resolution, and I should like to congratulate Mr Peel, and also to congratulate you, on his recent appointment as your vice-chairman.

MR JOHN PEEL'S VIEWS.

Mr John Peel: Mr Chairman, ladies and gentlemen,—I should like publicly to offer my thanks to the board for their expression and confidence in electing me to the highly honourable position of vice-chairman of this great company, and I do trust that they may never have cause to regret the appointment they have made. With regard to the dividends, there are one or two considerations which have to be taken into account when you are proposing the ordinary dividend. There are two different classes of shareholders. There is the one who asks for every penny that can be scratched out of the profits of the year, and thinks, rightly or wrongly, that they are very much safer in his pocket than in our coffers. Well, we have tried to provide for him in a way I will speak of a little later. But there is another class who would like to regard their shares as a kind of Consols, only showing a higher rate of dividend, and as shares upon which you may reckon upon getting a sort of fixed dividend, slowing increasing as years go on, but not decreasing—who prefer not to get 20 per cent. one year and 6 per cent. in another. And for them we have provided by the establishment of this fund, which we shall not hesitate to use in cases of need. If it had gone to the ordinary reserve I and most of my colleagues would have been very reluctant indeed ever to bring it out again, except, perhaps, for distribution of share bonus. But this fund we shall not hesitate to use for equalising dividends in case of need. One matter I might just mention is that this is the second best rate of dividend that this association has ever proposed or paid. There was one year, 1920, when they paid 20 per cent., and, of course, 12½ per cent. seems rather a fall off from that. But you have to realise that at the same time that they proposed the 20 per cent. they also made an issue of £1,225,000 in new ordinary shares; with the result that the distribution for this year, if you pass it, will on the ordinary shares absorb £469,356, whereas it only took £490,000 to pay the 20 per cent. in that year, a difference of only £31,000 all told. Having just said that, Mr Chairman, ladies and gentlemen, I have great pleasure in seconding that the dividends as set out in the report of the directors be adopted.

The Chairman: I am going to call upon Mr J. B. Walker to support that resolution.

TRIBUTE TO CHAIRMAN AND EXECUTIVE BOARD.

Mr J. B. Walker: Mr Chairman, ladies and gentlemen, I have been at these meetings for the last 25 years, but I have been privileged in addressing my fellow shareholders on all previous occasions from the body of the hall. This is really the first opportunity I have had to thank you for confirming my appointment to the board, and I thought it would not be an unfitness occasion to give my experience of how the undertaking is conducted. My reason for doing so is that most of my colleagues on the board here are practical men who have been successfully conducting our various mills. I have really been appointed by the board as a shareholders' representative, and I would like just to tell you in the first place, as some of you are aware, that this association is conducted almost entirely by the executive board. It consists of our chairman, of Colonel Brocklehurst, of Mr Peel, our vice-chairman; Mr Howarth, our managing director, and of Mr Bellhouse and Mr Rahr. It is really due to those gentlemen that you have had the wonderful results presented to you to-day by Mr Lee. I call them wonderful results considering the times, and I am sure you will agree. It is to the initiative and business ability of these members of the executive board that the result is due. But you must not think for a moment that they are an autocratic body, for they take everything to the rest of their colleagues as a consultative board. These gentlemen are in weekly and daily association with the executive board through the managing director and the chairman, and they are consulted on almost every detail of the business. Then we meet periodically, and after that the deliberations and results of all these meetings and decisions and initiative are submitted to the general board. Everything done by the association, so far as finances and expenditure is concerned, is submitted. I very much question that even in a private concern one partner would consult another in the way the executive board consult the consultative committee and the general board. There is not a £5 note given to a local charity without an opportunity of discussion and criticism by every member of the board. In fact, everything is open. We can see it day by day.

CHAIRMAN'S COMPLETE KNOWLEDGE OF AFFAIRS.

And I do not think that at any time in the association's experience, and during the whole of these 25 years, there has been a better chairman. He is conversant with the statistics of every little bit of the business done. If you were to drop on the chairman to-morrow and ask how we were situated as regards the proportion of cotton in relation to yarn consumed, he would tell you. If you asked what was our position with regard to sales or turnover in France, or Germany, or Nottingham, or Scotland, I can assure you that you would find the statistics of all of these things complete, so

that you would get your answer right away. I went in one day to give a notice before a board meeting. I said: "I am going to give you a couple of days' notice about a question I am going to put before the meeting; I am going to ask you the amount of money invested in one of our particularly large outside investments. I am going to ask you what is the capital value of that investment to-day, what was the profit last year, and what has been the average profit since we first invested our money." He said: "You can ask the question at the board meeting if you like, but if you will wait ten minutes I will give it to you now." That is an illustration of the complete control of the managing director and chairman. There is no room for mistakes. I would just like to add that I do not think that at any period of the association's existence have we been more fortunate than at the present time in the chairmanship of Mr Lee. I can assure you that he devotes all his time to the business. Personally, I think he ought to take a good deal more leisure. A business friend asked me the other day: "How can you get away twice a week, shooting?" I said: "I cannot get away; I go away." One of the great reasons why I think this board is successful, and will continue to be successful, is the harmony which exists among all the units, and in that respect Mr Lee contributes to a remarkable degree. Now, I won't trouble you any more. I will only say that if we get as good trade, I assure you, as a representative of the board, we will give you as good dividends.

The resolution was carried unanimously.

RE-ELECTION OF RETIRING DIRECTORS.

The Chairman: Now we have a resolution for the re-election of the retiring directors, and I am going to ask Mr William Howarth to move that.

Mr William Howarth, who was received with cheers, said: Mr Chairman, ladies and gentlemen,—Before moving the resolution committed to my care, I should just like to express my thanks to you for the manner in which you have voted the money for the welfare fund and the pensions fund, because I am quite sure that your practical directors—I mean those who have the management of the mills—will appreciate your action very cordially. This welfare fund will assist them in their work. There are times when work-people are not well and yet remain at their work. That is done, as a rule, all through the industrial world. Your directors, however, have suggested a way whereby this particular emergency may be met, and as a consequence I am sure we shall get better and more real work from the people employed by us. And in connection with the pension fund, it must be clearly realised by you all that there comes a time in the affairs of most workmen when they feel they cannot continue to give full service to the machine they tend. Your directors think, and you support them in their view, that it is to the interest of this association we should have full work from every machine, and that when a man has arrived at such a stage that he cannot give that attention to his work which he formerly gave, he should not be compelled through lack of funds to remain at his work, to his own loss and to our detriment, but should have a stand-by which will enable him to serve his own purpose and ours as well. I am hoping that in years to come we shall arrive at a point when a man, arriving at 68 or 70 years of age, will automatically, if he claims it, be placed on this pension fund. At the present time we have to confine its use to those who have served us for 30 years and are physically disabled, but I hope that a time will come when, as I have said, a man will automatically pass on to the fund at a given age. I thank you for the way you have voted the money for these funds. It shows you are of the same opinion as myself in this matter. I now move: "That Messrs H. W. Lee, R. W. Bennett, A. W. Bramall, John I. Higson, Edwin Oliver, H. Ross Marsden, and James Taylor be and they are hereby re-elected directors of the association." I need not paint the virtues of those gentlemen. With most of them you have been acquainted for years; they have been managers of mills, or associated with the work of the Central office. Our chairman heads the list, and I am sure his lucid exposition of the affairs of the association this morning tells you automatically that he puts energy and interest in his work all the time to the fullest extent. I desire to associate myself with the remarks of Mr Walker on this point, and to say that I think this association is exceptionally fortunate in having as chairman a gentleman like Mr Lee, whose whole energy, thought, and great capacity are directed to a line of action which promotes the welfare of this association. With regard to the other directors, whose names I have read, I need not describe them in detail. Each one has been a successful manager of one or another department of the association's work. They are all good fellows; our interests are their interests. They are working in our interest all the time, and I am quite sure I may commend this resolution to you without any fear of a dispute in regard to it.

The Chairman: I call on Mr Vernon Bellhouse to second the resolution.

Mr Bellhouse: I have great pleasure in seconding the resolution.

The Chairman: Ladies and gentlemen, I will now put the resolution. Those in favour say "Aye." To the contrary? The resolution is carried unanimously.

ELECTION OF AUDITORS.

Mr G. St. Clair Robertson: I have pleasure in moving:—"That Messrs Edwin Guthrie and Co., chartered accountants, of 71 King street, Manchester, be and they are hereby appointed auditors of the association until the next ordinary general meeting of the association, and that they be paid the sum of £1,500 as remuneration for their services, inclusive of out-of-pocket, travelling, and hotel expenses."

I do not think any words of mine are needed to commend this resolution to the shareholders. Messrs Guthrie and Co. have been the auditors to this association since its formation 26 years ago. I therefore submit the resolution with confidence.

Mr. Fred. A. Tomlinson: I have great pleasure in seconding the resolution.

The Chairman put the resolution, and it was passed unanimously.

THANKS TO THE CHAIRMAN.

Mr A. Linney Arnold: I beg to move the following resolution—"That the thanks of this meeting are due and are hereby tendered to Mr H. W. Lee for the ability and courtesy with which he has presided over this meeting." I feel sure, ladies and gentlemen, this is a resolution which you will carry with enthusiasm. I have attended a good many shareholders' meetings, but I do not think that I have ever gone from one as I shall go from this one, feeling that I knew so much about the affairs of the company as I do after listening to the very able speech of our chairman and the speeches of his colleagues on the board. Mr Lee has taken a position which was held with very great credit by his predecessors, but he has, I am quite sure, by his conduct at this, his first meeting, as chairman of the association, taken a place in the feelings of the shareholders which is second to none. We are very thankful indeed to him, and I think I am voicing your thanks, as well as my own, when I say we thank him for the ability and courtesy with which he has presided over this meeting. I should just like to say one further word, for though that is the exact wording of the resolution put into my hands, I take it that this resolution has a wider significance. I think it is intended to convey to the vice-chairman, and the executive, and to the board, and also to the staff, the thanks of the shareholders for their work during a very difficult year. The cotton trade generally has been—really, I think, the only simile I can give is that it has been very like the weather, very indifferent. We have all been hoping and expecting better things. But in spite of unfavourable conditions the association has had a good year. I speak subject to correction, but I believe this has been the second best year in its history, and that in a difficult period. Now there must be great ability to produce a balance-sheet like that which has been put before us this morning. For your services we tender you our grateful thanks, and so I have great pleasure in proposing this resolution.

Mr W. T. Stubbs: I cordially endorse everything Mr Arnold has said, and I have great pleasure in seconding the resolution.

Mr Herbert Knott: I support this resolution with especial pleasure, because it was my pleasure and privilege to occupy a seat next to Mr Lee in the board-room for the first six or seven years of this association. I can most emphatically testify to the truth of the statements which have been made from the platform as to Mr Lee being an extremely keen and enthusiastic worker. I feel sure, we, as an association, are to be greatly congratulated upon his filling the position to which he has been elected, and I feel sure that our interests as shareholders will be perfectly safe in his hands, and that he will very worthily maintain the traditions of chairman of this association.

The resolution was carried with renewed applause.

CHAIRMAN'S ACKNOWLEDGMENT.

The Chairman, who was again cheered on rising to reply, said: Mr Arnold, ladies and gentlemen,—I feel that it is quite impossible for me to tell you how grateful I am to the proposer, seconder, and supporter of this resolution for the very kind and very flattering things they have said about my work on the board, and to you, ladies and gentlemen, for the cordial manner in which you have passed the resolution. I would also thank Mr Walker especially, as Mr Walker told us he intended I shall work less. But I would remind Mr Walker that it is possible that I shall get more interest and more pleasure out of helping in the work of this association than he does out of his shooting. I am very conscious, ladies and gentlemen, that the post of chairman of this association is one which any man, whatever his position or whatever his ability, may be proud to possess. I assure you I realise to the full both the honour and the responsibilities of the position, and I shall do my best to live up to them. I should like to thank Mr Arnold, especially, for carrying on this vote of thanks to the executive, the board

and the staff. This vote from you should be carried annually in this manner. Personally, I am enormously proud of my board and staff, and, indeed, of practically every worker in the Fine Spinners, and it is a great pleasure to have once a year from you the knowledge that you realise how every one of those people have worked for you. Ladies and gentlemen, this is a great concern. It is not a one-man concern, and must never be allowed to become a one-man concern. As you have it now, everyone on this platform, pulling his weight, and doing his best, I think you will find we shall not go very far wrong. I thank you again.

The meeting then terminated.

GUARDIAN ASSURANCE COMPANY, LIMITED. SATISFACTORY RESULTS—INCREASED DIVIDEND.

The annual meeting of the Guardian Assurance Company, Limited, was held, on the 30th ultimo, at the head office, 68 King William street, London.

The Hon. Evelyn Hubbard, chairman of the company, presided.

The general manager and secretary (Mr George W. Reynolds) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, and after welcoming the proprietors in their new building, said: In the life department we have granted 1,442 new assurances, a lesser number than in 1921 by 60 policies, and the net new sums assured, at £1,109,064, are less by £139,391. The premium income is £442,046, against £429,955, an increase of £12,191, and the net income from interest (£191,025) is £18,636 more than in 1921. The consideration for annuities granted is £14,709, against £6,260. The ratio of total expenses of management to premiums is £13 6s 4d per cent., a slight increase of 15s per cent., but still very moderate. The life fund, including the investment reserve fund, amounts to £4,547,020, an addition in the year of £245,177. We say again in the report—as in each of the three years of the current quinquennium—"there has been a substantial profit from mortality." So far as we have travelled, the bonus prospects are bright, and we can look forward with some confidence to the valuation to be made at the end of 1924.

FIRE DEPARTMENT.

The net income from fire premiums, £964,199, is less than in 1921 by £49,535, and the net losses £521,331, against £550,109, or approximately the same ratio as in 1921 (54.07, against 54.2 per cent.). The total fire expenses are £2,681 higher than in 1921, and on the lower premium income the ratio is 2.39 per cent. higher. The receipts from interest are approximately £9,000 better, and there is a second item of interest, £16,712, on ex-enemy debts recovered in 1921. By the reduction in our liabilities, £24,500 is set free, and credit is taken in the reserve for unexpired risks. We deem it prudent, however, fully to maintain our reserves, and we have, by adding £40,000 to the general reserve, brought up our total fire reserves by £16,000 to £1,142,500. After these and other ample provisions for bad debts and loss in exchange, we transfer to profit and loss from the fire department £50,206, against £71,798 a year ago.

In the fund which under our articles is called the Accident Burglary and General Assurance Fund we include all those various classes of insurance other than life, fire, marine, and redemption assurances. The surplus in the accident fund is £103,639, but, as in the fire, we deem it prudent to maintain the total accident reserve, and to make up for the £20,000 released from the reserve for unexpired risks by adding £20,867 to the general reserve, rounding it off at £140,000, and leaving the total accident reserve at £354,500.

MARINE DEPARTMENT.

We have closed the 1921 marine account by transferring £13,620 to suspense for claims which may arise on the 1921 account and previous years. There is accordingly an underwriting profit on this closed account of £10,322. The premiums in 1922 are £123,121, against £153,679 in 1921. The first year's settlements—that is, 1922—amount to £16,258, or only 13 per cent., as compared with a corresponding first year's settlements of 20 per cent. The open account appears, therefore, to promise well. The income from interest is £15,607, and £22,901 has been transferred to profit and loss, leaving the fund at the end of the year at £314,006.

While we retain our investment reserves, we can look forward with complacency to a general revival in industries, though the revival may again cause a fall in the values of securities such as we hold, and for such contingency we have in these funds most ample provision.

PROFIT AND LOSS.

In the profit and loss account the aggregate of the transfers from the trading accounts is £155,564, or £27,640 less than a year ago, but this difference is largely offset by augmentation of the fire and

accident funds. We again transfer £10,000 to staff pensions fund, which now amounts to £54,162. We carry out of profit and loss £167,758, and if you confirm our recommendation as to dividend, we shall carry forward in profit and loss £104,933, against £122,629 a year ago. We propose an increase in the dividend on the ordinary shares of 1s per share, subject to tax at the average rate in 1922 of 5s 3d. The dividend now declared is wholly provided from interest accruing during the year, and this justifies us in asking you to approve not only the increase in the dividend, but also the augmentation of the reserve funds, from the investment of which the dividends are derived.

The report was unanimously adopted, and the dividends recommended were declared.

The retiring directors and the auditors having been re-elected, a vote of thanks to the chairman, directors, secretary, and staff terminated the proceedings.

NITRATE PRODUCERS' STEAMSHIP COMPANY, LIMITED.

HEAVY BURDEN OF TAXATION.

LABOUR PARTY AND BRITISH CREDIT.

The annual general meeting of the Nitrate Producers' Steamship Company, Limited, was held, on the 31st ult., at 20 Billiter buildings, London, E.C., Sir John Latta, Bart. (the chairman of the company), presiding.

The secretary (Mr James A. Walker) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the past year's profits were below the company's previous records, but, in view of prevailing conditions, he thought they must be regarded as satisfactory. Taxation for the year exceeded the gross profits by £18,000. During the last seven years they had paid over £1,000,000 in taxation, or over 90 per cent. per annum on their capital, which, he would imagine, must constitute a record. The shipping position generally had, in his opinion, never been worse, and he could detect no signs of any improvement in the immediate future. Our commercial troubles were put down to adverse foreign exchanges and the general upheaval consequent upon the war. These accounted for a good deal, but were too often quoted in order to cover up serious defects in our economic system. The very atmosphere was charged with the antagonism of labour. Leaders confined themselves to selfish criticism of those who were trying to relieve unemployment by finding trade, but they did not lift a finger to assist. That our country was as prosperous as it was he could only ascribe to our unswerving financial rectitude, to the balancing of our Budget, and to the strict observance of every home and foreign obligation, thus maintaining our high reputation as the world's safest monetary centre. That unique financial position was about the only national bulwark which the Labour party had so far been unable to destroy. Unfortunately, it had its eye on that, as Mr Ramsay Macdonald had asserted that if his party got into power a capital levy would be introduced.

CAPITAL LEVY AND TRADE.

Accountable to the automatic influence which the trend of money had on trade, we had become to a great extent the world's clearing-house, as well as a centre from which many businesses in countries beyond the control of our Government were managed. All that trade, with its attendant profit, would disappear before a capital levy like snow in summer. So sensitive was international capital that interests which the levy would not even touch would suffer through sheer nervousness on the part of operators. Had Labour offered to face world's competitive prices in an heroic effort to create the wealth that would admit of our debt to America being rapidly paid off—the yearly charges on which represented a far greater strain on the nation than the obligations attached to the £3,000,000,000 owing to ourselves—it would have shown some sagacity. Any half measures, however—which the proposed extinction of only £3,000,000,000 out of £8,000,000,000 represented—were more likely to lead to national bankruptcy than anything else. The operation would bring the good faith of Britain into question, while the withdrawal of so much credit would affect the cash in the till and bank balances of every trader. Under such conditions, it followed that to extinguish the £5,000,000,000 still remaining would be a far more formidable task than that which the total debt represented with our credit unimpaired; in fact, Mr Macdonald's remedy might be compared to a tradesman who sold his tools to pay part of a debt he owed. As the fallacies of a capital levy were so apparent, he could not refrain from believing that the Labour party had not the real interests of the country at heart at all. A Royal Commission should be appointed to thoroughly investigate the real influence of so-called trade unionism on the life of the community.

Mr Robert A. Lowther seconded the resolution, which was carried unanimously, and the usual formal business terminated the proceedings.

ROYAL INSURANCE COMPANY, LIMITED.

A SUCCESSFUL YEAR.

INCREASED DIVIDEND.

CURRENT YEAR'S PROSPECTS.

The seventy-eighth annual general meeting of shareholders in the Royal Insurance Company, Limited, was held on Monday, May 28, 1923, in the board room of the company's head office building, No. 1 North John street, Liverpool, at 12 o'clock noon.

Mr Thomas Woodsend (chairman of the company) presided over a large attendance of directors and shareholders.

The Chairman: Ladies and Gentlemen,—I presume it will be your desire to take the report and accounts as read.

The year under review has been an uneventful one in regard to the personnel of your board, and so, without preliminaries, I proceed to enlarge upon the results of the year.

FIRE DEPARTMENT.

In dealing with the fire account, the first point which invites comment is that the premiums have been practically maintained at the 1921 level, there being a drop of only some £1,200. There has really been an appreciable increase in what I might call the ordinary fire premiums, and the fact that we show a slight decrease is due to the falling off in demand, chiefly in this country, for cover against damage caused by riot and civil commotion. This evidence of a more settled condition of affairs more than reconciles us to the loss of revenue which it has entailed. It is gratifying to note that our losses are down by £320,000, as compared with last year, the percentage to premiums having fallen from 58.19 per cent. to 53.28 per cent. Again, we have had a heavy loss experience in the United States, from which country we draw a large proportion of our fire premium income. All reports indicate, however, more prosperous times in that country, and we have every reason to believe that when conditions there have fully readjusted themselves our business will again revert to a normal profit-yielding basis.

REDUCED COMMISSION AND EXPENSES.

Commissions and expenses taken together show a reduced percentage of 40.77 per cent., as compared with 41.11 per cent. a year ago. The reduction is slight, but is welcome as showing a tendency in the right direction. As regards expenses of management, it is some little satisfaction to your directors to be able to show a decrease of fully £100,000. By no means the least of the problems which confront us is to bring about a reasonable reduction in expenses without endangering efficiency; and you will realise that a large proportion of these is paid in salaries, the increase in which as compared with pre-war days has necessarily been very great, representing practically 3 per cent. on the total amount of premiums. It is, however, our aim to hold an even balance between the interests of the shareholders and the aspirations of the staff, believing that the welfare of the company can best be assured by a body of officials working in reasonable contentment. This question is one to which your directors and officials are always alert, and no effort is or will be spared to keep expenses down.

STRENGTHENED FIRE FUND.

You will observe that we have now brought into the fire account the whole of the £1,000,000 which remained in the reserve fund. This course is consistent with our policy in the past of strengthening the fire fund. The condition of the other accounts is now so strong that we feel all reasonable requirements are met by the specific funds allocated to each, and it therefore seemed to us appropriate that this reserve fund, which would always in effect have been applicable to the fire department, and has been coupled with that department in our announcements, should now be effectively incorporated in the fire fund. You will see that the total fire fund this year is within measurable distance of being equal to the year's premiums.

Taken as a whole, we think the result of our fire department affords ample ground for satisfaction, showing as it does a profit of £382,000, equal practically to 6 per cent. of our premium income.

LIFE DEPARTMENT.

Our life department pursues its steady course of prosperity, and we are very satisfied with the total of new business transacted, which at £3,687,181 in sums insured, exceeds by £10,000 last year's total. In a year of commercial depression, when the tendency all round is to curtail rather than expand personal expenditure of all sorts, the large amount of new life insurances secured shows the hold which this form of thrift and investment is gaining in public esteem.

FIFTY-FIVE YEARS' BONUS RECORD.

There has been a considerable movement on the part of other life insurance companies in the direction of declaring bonus additions to policies for the whole or part of the war period during which these companies had been obliged to suspend their bonuses. You will understand, however, that there is no occasion for us to consider any steps in that direction, as we took the somewhat exceptional course of continuing to declare at our quinquennial valuations at the end of 1914 and 1919 the same rate of bonus as had been declared for each quinquennium since 1864, and it is a matter of some satisfaction to us to know that the course of events has fully justified the optimistic view we then took of the future trend of financial conditions. We feel naturally some little pride in having maintained unbroken the tradition of a stable bonus during 55 years.

MARINE DEPARTMENT.

In my remarks last year I referred to the difficult times experienced by the marine market during the year 1921. I regret that during the year 1922 conditions remained unfavourable, as values of ships and cargoes continued to fall, and rates of premium under stress of severe and sometimes reckless competition fell in many cases below a paying basis. Also, the volume of the business offering was seriously affected by the depressed condition of trade, large numbers of vessels being laid up. But, fortunately, there are now signs of an improvement in the employment of steamers, and in the shipment of goods.

We think it is a matter of congratulation that our underwriters in Liverpool, London, and New York, and their colleagues elsewhere, by careful discrimination in selecting business, have been able to show an underwriting profit on the closed year—viz., 1921—of £68,000 after making ample provision for possible future claims.

While the 1922 premiums show some reduction on previous years, this was only to be expected, owing to the conditions referred to, and also to the necessity of our underwriters declining business offered at what they considered to be unremunerative rates. It is satisfactory to be able to report that the first year settlements for 1922 are light, in comparison with previous years.

ACCIDENT DEPARTMENTS.

Our personal accident department shows a trifling loss on the year's operations, disappointing but of no consequence, and merely a transitory condition.

Our workmen's compensation premiums show a large shrinkage, amounting to nearly £100,000. This, of course, was inevitable, and may be considered as a not unexpected reaction from the abnormal conditions which prevailed, due to the exceptional standard and amount of wages which were being paid for some years previously. Claims are heavier, and commission and expenses, though lower in amount, are slightly increased in percentage, owing to the smaller premium; but there is a profit of £71,104 remaining, which, together with the interest, has enabled us to transfer £100,000 to the profit and loss account, leaving the additional reserve practically equal to that of the previous year. It will not have escaped your notice that considerable attention is being directed to the question of workmen's compensation in the House of Commons, and a new Bill is at present before Parliament which will materially affect the operations of all insurance companies in this department.

GENERAL INSURANCES ACCOUNT.

In the general insurances account, which includes workmen's compensation and employers' liability insurance outside the United Kingdom and all the miscellaneous classes of business we transact at home and abroad, the bulk of the income is obtained by our allied company, the Royal Indemnity Company of New York, although an important and increasing element is provided by motor-car insurance in this country. The total result of the account is not so good as last year, in so far that while the premiums have increased by £71,000, claims have increased by £275,000. The net result is a profit of £78,417.

The Royal Indemnity Company has not done so well as in previous years, and has also had to face administrative changes, which, though temporarily unsettling, in no way affect the well-being of the company, and we look forward confidently to a continuance of its prosperous career. A second company, called the Eagle Indemnity Company, has been formed to operate in the United States casualty field, in the nature of what our American friends call a "running-mate" to the "Royal Indemnity," and we confidently anticipate that the new company under the able administration and control of the officials of the older concern will fully justify the step which has been taken.

PROFIT AND LOSS ACCOUNT.

I now turn to the profit and loss account, which this year contains one or two items on which I would like to make a few remarks. In the first place, you will notice that our net income from dividends and rents in this account is £51,000 more than in 1921. This increase, of course, arises in part from the reduction in income-tax which has been in operation during 1922, and you will no doubt appreciate that the expansion of our interest revenue (apart from the income-tax deduction) slowed off during the past few years owing to the reduction in the amount of our marine fund, which, due to the rapidly declining income, has been a diminishing quantity, and thus has operated to offset in some degree the enhanced interest earnings from other funds.

The dividend which we have received from the Liverpool and London and Globe is again included in our interest item at the same rate as last year. Whilst the results of that company's operations have not yet enabled them to declare an increased dividend, we have every confidence that their accounts will show a continuing improvement, and in time bring about a corresponding increase in the return from our investment in their shares.

APPRECIATION OF SECURITIES.

The three items of transfer from fire, marine, and employers' liability accounts represent the normal operations of the year, and they do not call for any special comment. The transfer of £400,000 from the General Contingencies Fund, however, is of a special nature, and it is well that I should explain to you what is in the directors' minds in this connection. You will remember that when I addressed you twelve months ago I was able to tell you that at that date the appreciation of the value of our Stock Exchange securities was sufficient to set free entirely the general contingencies fund which had been created to meet the general depreciation. Since that time the upward trend of the markets has continued, and I am able to say that the market price of our securities to-day shows a very marked appreciation beyond the values at which they appear in our books. The depreciation which appears at the end of our balance-sheet this year is without any qualification in regard to the general contingencies fund, and I think you will all share the satisfaction which we feel in being able to record this happy change from the long and troublesome years of depreciation. It does not, however, seem to your board that conditions in the world generally have reached a sufficient degree of stability to warrant them in disposing entirely of the general contingencies fund, although it is no longer required for its original purpose. When we consider the vast areas in Europe which are still in a turmoil of social, financial, and political unrest, and while we have no desire to take a pessimistic view as to the future, still the presence of the danger spots to which I have alluded seems to make it necessary to act with caution, and with that view we have determined to make only a partial disposal of the fund just referred to. We, therefore, transfer £400,000 to the profit and loss account, leaving the surplus of £1,200,000 still at the credit of the General Contingencies Fund.

REDUCED SHARE LIABILITY.

We gave very careful consideration to the manner in which this £400,000 should be utilised, and finally came to the conclusion that the most appropriate way in which to allow the shareholders to benefit therefrom was to utilise a proportion of the amount in crediting an additional 5s as paid-up on the shares of the company.

The first item on the credit side of the account shows the amount paid and provided for the dividend, and you are aware that we are recommending to you an increase from 11s to 12s in the final payment, making a total distribution for the year of 23s. The proposed further increase of 1s in November will bring the total to 24s. I need hardly say that it is always a matter of very great satisfaction to your board to be able to ask you to sanction an increase in dividend.

The item of £279,971 represents the amount necessary in connection with the 5s per share increase in paid-up capital which I have referred to, and we have temporarily placed it to a special fund in anticipation of your approval of our recommendation.

TAXATION BURDENS.

The provision for income-tax and corporation profits tax is £50,000 more than it was twelve months ago, but you will remember, of course, that in 1921 we had the benefit of a large refund of excess profits duty. In common with the commercial world generally, we welcome the reduction in the rate of income-tax which this year's Budget promises, and accept it as an augury of better things in store, and we are very hopeful that little by little this heavy burden will be lightened, although it must be recognised that the fixed charges on the National Revenue left by the war will prevent, for many a long year to

come, any return to the low rate of income-tax to which we were accustomed prior to 1914.

You will have observed that in the Finance Act which is being introduced to Parliament, provision is made for an alteration in the income-tax Acts in respect to life assurance companies. On previous occasions, in speaking to you on the subject of taxation, I have referred to what we consider the inequity of the method by which our life department operations are taxed. Many representations have been made to the Government on behalf of the life offices, and the alteration which has now been suggested is, in a manner, the outcome of these representations. I am sorry to say however, that the practical result, so far as we are concerned, will be a negative one, because while certain companies may benefit, so far as we can see we shall still be subject to the existing method by which we are charged income tax on all the interest earnings of the life department less expenses, a basis against which we shall continue to protest, with the hope that we may ultimately be able to convince the authorities of the justice of our contentions.

The absence of any appreciable increase in the revenue of any of our underwriting departments obviated any necessity for the transfer of any special amounts to supplement the reserves in these accounts, and your directors have, therefore, taken advantage of the opportunity so afforded to write off a further amount from the cost of businesses acquired, and you will see that £300,000 has been transferred from the profit and loss account accordingly. We feel confident that the shareholders will endorse our action in this measure, which prudence dictates as a desirable course to follow, although we are satisfied that the amounts at which these businesses stand in our books are below their intrinsic values.

The transfer to the superannuation fund is on the same lines as last year, and the balance of £710,621 in profit and loss carried forward is some £42,000 more than the previous year.

INVESTMENT POLICY.

I do not know whether you have taken any interest in the controversy which has been going on partly in the Press, but mainly in the speeches made by the chairmen of some other insurance companies, on the subject of the most appropriate form of investment policy to be followed by the boards of insurance companies. Into that controversy I do not propose to enter, but I should like to say that in so far as your board is concerned our duty as we understand it lies in the investment of the funds of the company in securities which offer unquestionable guarantees for the safeguarding of the capital sums involved, with the highest interest yield compatible with that primary requirement. While we shall neglect no reasonable opportunity of changing an investment when an occasion presents itself for doing so advantageously, we consider that deliberately to follow a system of investment with the object of securing such appreciation as the stock markets might afford would rather constitute the functions of the board of an investment or trust company than those of the board of an insurance company.

I would conclude by saying while the year 1922 will not rank amongst the outstandingly profitable years of our history, still on the whole I think we should be satisfied with the results achieved. The underwriting profit of 5.95 per cent. in our fire department we consider a good showing, and taking our own figures with those of our allied offices, the net result of the operations of the year—other than life—after providing for all outgoings, including Imperial taxes and payment of the year's dividend, shows a remaining balance of about half a million sterling.

CURRENT YEAR.

As regards the prospects of the present year, I am glad to say that increasing commercial and industrial activity is producing a somewhat increased volume of premiums, but I am not able to speak of any improvement in the loss ratio. The early months of the year in the United States witnessed a continuation of our heavy fire loss experience there, a contributory cause being a long spell of severe weather, which always leads to extra heating and produces an increased number of claims. These circumstances have been enhanced this year by the fact that through the upheaval in the coal mining industry in the United States it has been necessary to use a combustible of a different kind to that for which the ordinary American heating apparatus is devised, and numerous fires have arisen from this cause. These, of course, are merely passing phases.

I have now pleasure in moving the first resolution, which is as follows:—"That the report of the directors be approved and adopted, and that a dividend of 12s per share, less income-tax, be payable on or after Tuesday, the 29th instant, making, with the interim dividend paid in November last, 23s per share, less income-tax, for the year 1922."

Mr W. R. Glazebrook (deputy-chairman) seconded the motion. The motion was carried unanimously.

The retiring directors were re-elected, Messrs Harmood, Banner and Son re-appointed auditors, and a vote of thanks to the directors of the company and to the London board, also to the members of the company's local boards, and to its officers and agents at home and abroad, and to the boards of directors and officials of allied companies, for their valuable services during the past year, was carried with acclamation.

At the conclusion of the annual general meeting an extraordinary general meeting was held, at which, on the proposition of the Chairman, seconded by Mr H. M. Beausire, deputy-chairman, resolutions were passed approving of the directors' recommendation whereby the amount paid up on each share of the nominal value of £5 is increased by 5s to £1 10s, leaving £3 10s uncalled.

GRESHAM LIFE ASSURANCE SOCIETY, LIMITED.

LARGE VOLUME OF NEW BUSINESS—REDUCED EXPENSES.

BUSINESS IN ITALY.

The seventy-fourth ordinary general meeting of the Gresham Life Assurance Society, Limited, was held, on Thursday, May 31st, at the chief office of the society, St. Mildred's House, Poultry, London, E.C., Sir Reginald Macleod, chairman of the society, presiding.

The general manager and secretary (Mr Alexander Lawson) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I would refer you in a word to the sentence in our report indicating our sorrow at the death of our late colleague, Mr C. C. Macrae. Only a year ago he was present at our meeting, and addressed us in a vigorous speech. He had given us 24 years' service—arduous and devoted service—and I am quite sure that you on your side of the table, as we on ours, greatly regret and mourn his loss. In laying before you the report and accounts for 1922 there are many features for congratulation.

NEW BUSINESS.

4,265 policies have been issued, assuring a sum of £2,198,396, carrying a new premium income of £104,507. These large totals have been attained notwithstanding the entire cessation of business in Italy and certain other branches. In 1912 the Italian Government passed a law reserving at the end of ten years all new assurance business to a Department of State. Our choice lay between winding-up the business on our books—a very costly process in a country where expenses have considerably risen in sympathy with the fall in exchange—or in accepting an offer from the National Insurance Institute of Italy to take over and liquidate all our liabilities in that country against an equivalent surrender of Italian securities. While regretting that a business established by many years' hard work should be brought to an end by what we cannot but regard as an arbitrary act of Government, we consider the terms ultimately agreed upon were distinctly advantageous to the society. I would refer you to an entry in the first schedule, entitled assets surrendered in respect of the cession of the society's Italian, Austrian, and Polish business, £141,726 against liabilities. The Austria here referred to is the smaller Austria constituted under the treaty. The society's business in Hungary was ceded the previous year, and negotiations have been in progress, and are now nearing completion, for a like cession of liabilities and proportionate assets in the remaining States carved from the old Austro-Hungarian monarchy. The total carved from the old Austro-Hungarian monarchy. The total income of the year amounted to £1,101,728, being an increase over that of the previous year of £34,368. The death claims required a sum of £231,321, being a decrease of £24,738. The mortality has been favourable, amounting to no more than 73 per cent. of the amount expected, which contrasts with 78 per cent. in 1921. As I have previously stated, our mortality during the war years was within expectation, and during the three years now elapsed of the current quinquennium the mortality has been progressively satisfactory. Our quinquennial valuation will take place at the close of next year, and, while the possibility of political and financial disturbances precludes any attempt at forecast, I am safe in saying that the indications up to to-day are entirely favourable. The claims on matured endowments were met by a charge of £259,113, being a decrease of £67,440 as compared with 1921.

THE ASSETS.

The assets as shown in the balance-sheet amount to £6,802,325, an increase on the previous year of £119,216. I am glad to be able to report the material reduction in our expenses of nearly 4 per cent. It is true that our expenses are still at a high figure, but this has been explained in previous reports, and arises largely from the depreciation of foreign currencies and the consequent increased cost of living abroad, as expressed in those currencies—which we hope is a passing phase—and also, to some extent, from the continued large proportion of new business to the renewal income. The improvement towards the normal this year is substantial, and no effort is being spared by the board and the management to reduce expenditure in every direction, although care requires to be taken not to impair the society's organisation, which, as the new business figures indicate, is in a thoroughly healthy condition. It must also be borne in mind in this connection that for a very large volume of the society's business the rates of premium charged are higher than those obtaining in this country. The rate of interest realised upon our funds reached the satisfactory figure, after deducting income-tax, of £4 7s per cent. Our investments are most carefully selected, and frequently checked by a committee of the board, and the improvement from £4 5s 1d last year to £4 7s is in every way gratifying. The problem of investment of life assurance funds has been much discussed of late. Safety of capital is the first and obvious essential, a good rate of interest so as to give as large a margin as possible between the adopted rate and the actual return is eminently desirable, and I lay some stress on the avoidance, as far as possible, of fluctuations by the selection of securities amortisable at various dates, as this must add to the security of the position. In that respect, we hold a very strong position in having a large volume of amortisable securities. Turning to the balance-sheet, there is not a great deal to which I need direct your attention. Loans on the company's policies now amount to close on half a million. It is also satisfactory to note that British Government securities account for £1,274,000, being £220,000 higher than last year, while the amount outstanding in interest, rents and other floating assets is greatly reduced, and now stands at no more than the normal figure. I will now refer to an item of important news contained in our report—namely, the disposal of our head office property, known as St. Mildred's House, which was built for the society nearly fifty years ago. The needs of the society and our allied office—the Gresham Fire and Accident Insurance Society, Limited—have outgrown the accommodation of our present building, and there is no room for that further expansion which we foresee in the near future. An agreement for its sale has in these circumstances been entered into, which, I need hardly assure you, is one of considerable advantage to the society. The new building at 188-90, Fleet street, E.C., now in course of erection, which will be the future head office of both this society and the allied office, will be the freehold property of this society. The new premises, it is expected, will be ready for occupation by the end of the year, and will house with convenience and comfort the respective staffs of the two societies.

YEAR'S RESULTS SUMMARISED.

Gentlemen, I have said the result of the year's work has been satisfactory—a large volume of new business coming from a smaller area, reduced expenses, a healthy increase in our total income, a low rate of mortality, with a reduction of nearly 10 per cent. on the amount paid in death claims; and an increase in our assets of close on £120,000—also satisfactory, but full of difficulty—the cession of our business to the assurance department in Rome concluded, a similar cession in the several states which now make up the old Austrian Monarchy has been in some concluded, and in others is approaching conclusion; but in every case there have been anxious and difficult negotiations, involving conferences in Paris, Rome, Vienna, Prague, &c. These have been conducted under the untiring guidance of Mr Lawson, our general manager, by the actuary and his assistants, by the assistant manager and the chief accountant, to all of whom we are indebted. I should like to put on record also our appreciation of the services of the other officers and the branch managers and staffs at home and abroad, who have in no small measure contributed to the results which it has been my pleasure to place before you to-day. You will appreciate from what I have said that we look forward to the future with confidence, and I conclude by moving the adoption of the report and accounts.

Mr Courtenay C. S. Fooks (deputy-chairman) seconded the resolution, and it was carried unanimously.

The Chairman then moved the re-election of the retiring directors, Mr Laurence Currie, the Right Hon. Lord Southborough, G.C.B., and Major Walter H. Levy, D.S.O. This resolution was seconded by Mr C. H. Beadnell and unanimously approved.

shareholders in expressing sympathy with you in the fact that you are not enjoying at the present moment the best of health.

SERVICES OF THE MANAGING DIRECTOR AND SECRETARY.

Aside, however, from your experience, sir, I think we should recognise that in Mr Lane we have one of the ablest men in the country in the reinsurance business. We have in front of us to-day the result of his work. We have made money on under-writing, and very few companies have made money on reinsurance business in the course of the last few years. We have also made money on the investment side, and I do not think we should overlook what our secretary has done in looking after the investments. I can assure you that it is a great pleasure as well as a great experience for me to serve on a board under the chairmanship of Mr Colquhoun. It is also a great pleasure to me to serve on a board with such a man as Mr Lane, and, although I have been more or less associated with insurance for many years, I have learned far more than I ever thought it possible I should learn, having regard to the time I had spent in insurance, by my association with them. I assure you that I feel very proud indeed to have been identified with this company and that the company has been so successful. I think that we should not forget for one moment that the chairman, the secretary, and the managing director in particular, have brought about a condition of affairs to-day which, I think, makes all of us feel pleased and happy. I have great pleasure in seconding the adoption of the report and accounts.

The resolution was carried unanimously.

The Chairman next proposed that the final dividend recommended be approved, and that the interim dividend already paid be confirmed.

Colonel F. J. Scott seconded the motion, and it was carried unanimously.

The Chairman next proposed the re-election of the retiring director, Mr J. C. Gould, M.P.

This resolution was seconded by the Rt. Hon. the Lord Amphil, G.C.S.I., G.C.I.E., and unanimously approved.

On the proposition of Major Avern, seconded by Mr E. T. Clifford, the auditors, Messrs Baker, Sutton and Co., were reappointed.

SHAREHOLDERS' THANKS.

Mr W. R. Simpson: Gentlemen,—I should like to propose a vote of thanks to Mr Colquhoun for presiding and for taking us through the items of the balance-sheet, which, I think, the shareholders cannot but regard as being entirely satisfactory. I feel sure you would like me to include in this proposition the other directors and the staff. In this connection I should like, even at the risk of being invidious, to mention specially the valuable services of Mr Lane, whose specialised knowledge of re-insurance matters has been of such immense benefit to us, and Mr E. E. Colquhoun, our secretary, who has just returned from a trip abroad. The industry and ability of your secretary have contributed in no small measure to the success of the company.

Sir Frank Crisp, Bart., seconded the vote, and it was unanimously accorded.

THE CHAIRMAN'S ACKNOWLEDGMENT.

The Chairman: On behalf of my co-directors and myself, as well as of the staff, I beg to thank you very much for your kind appreciation of our services. With regard to what Mr. Gould was good enough to say about my services, I feel I must transfer all that to Mr Lane, and I shall ask him to thank you on his own behalf. Mr Lane is the re-insurance expert who guides your fortunes here, and I think you require no further evidence of his ability than the report which has been submitted to you to-day. So far as I can see, the company ought to have a successful future, and if there is going to be an improvement in trade, as everybody tells us there is, I think you will eventually see its effects reflected here in increased income and, I hope, better results, if possible.

MANAGING DIRECTOR'S THANKS.

Mr J. H. E. Lane (managing director): Mr Chairman and gentlemen,—I desire first of all to thank the proposer of this resolution for the far too generous and flattering terms in which he has referred to my efforts, and then to thank you for the way in which you received his remarks. I should like to take this opportunity to record my deep appreciation of the support and consideration which I invariably receive from my colleagues on the board, and in particular from the chairman, whose wise counsels at all times when difficulties arise are of the greatest value to me in the management of the company.

I should also like to take the opportunity of thanking you on behalf of the staff for the kind vote which you have passed, and also to record my appreciation of the very loyal assistance which I receive both from the secretary and from the chief officials who work under me in the organisation of this company. Once again I thank

you very much indeed, gentlemen, and I can only assure you that my efforts, as well as those of all who work with me, will be directed towards ensuring the continued success of this company; no efforts on our part will be spared.

The proceedings then terminated.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.

AN EXCELLENT BONUS REPORT.

At the 92nd annual general meeting in Edinburgh on Thursday, May 31st, the president, His Grace the Duke of Argyll, occupying the chair, the chairman of the board of directors, Brig-Gen. Gordon Gilmour, of Graigmillar, in moving the adoption of the report, said:—

It is a source of pleasure to the board to be able to present to the members at this special period in the society's history a report which, without exaggeration, may be said to show very satisfactory progress in all directions.

LARGELY INCREASED BUSINESS.

In the first place, I propose to deal briefly with the principal features in the year's business. The sums assured under new policies amounted to £1,651,142, of which £124,300 was reassured with other offices, leaving a net new business of £1,526,842. This net new business is £328,262 larger than in the previous year, and is a record for the society. We have the satisfaction of being able to report this result in a year when very few other offices have been able to show improved returns.

ACCOUNTS.

The total premium income has increased by the substantial sum of £25,722 to £578,421.

The gross amount of the interest and dividends rose from £352,214 to £365,408. The average net rate of interest earned on the whole funds was £4 9s 5d per cent., as compared with £4 3s 6d per cent. in the previous year.

The net claims by death were practically the same as in the previous year, the figures being £338,000, while the claims by survivance of the assured to the specified ages amounted to £178,700. The claims by death were, as usual, well within the expectation.

Notwithstanding the largely increased business, the ratio of the total expenses was slightly below that recorded in the previous year, and was also well below the rate of expense incurred by most other offices.

The life assurance fund increased during the year by £274,960 from £6,643,494 to £6,918,454.

QUINQUENNIAL VALUATION.

The principal interest of the members is in the results of the working during the five years as disclosed by the investigation into the society's affairs.

Throughout last winter the board went carefully into the position of every investment and all securities for loans included in the society's assets. Stock Exchange securities were in no case valued at more than the middle market price (less accrued interest) on March 1st, while the great majority of the society's holdings still stand at the low prices at which they were purchased or valued some years ago. The society's funds continue to be invested to the extent of nearly 55 per cent. in British Government securities. The aggregate market value of the Stock Exchange securities shows a substantial surplus as compared with the book values.

The board have authorised the strengthening of the reserves in several directions, so that the present figures show a stronger provision in the form of reserves than on any previous occasion.

GOOD BONUS RESULTS.

The net result is that there is a surplus of assets over liabilities amounting to £688,770. Out of this sum the directors have pleasure in declaring a bonus for the past quinquennium on ordinary participating policies at the rate of £1 10s per cent. per annum on the sums assured and existing bonuses, which will absorb £584,380.

They also propose, in view of the strong position shown by the valuation, that until otherwise resolved an intermediate bonus at the full declared rate of £1 10s per cent. per annum compound be allowed in the case of policies on the ordinary participating plan becoming claims before the next investigation, whether by death or survivance.

It is important to realise that this method of distributing profits gives, as is obviously fair, a larger share to the older policy-holders than to more recent entrants. Thus, for example, while a member who arranged a policy for £1,000 five years ago will have the substantial addition of £75 made as bonus, our oldest policy-holder will have no less than £190 added to his £1,000 policy.

CENTRAL MINING AND INVESTMENT CORPORATION, LIMITED.

IMPROVED RESULTS OF YEAR'S BUSINESS.

INCREASE IN LIQUID ASSETS.

GENERAL CONDITIONS IN SOUTH AFRICA.

CRITICISM OF LABOUR'S UNSOUND ATTITUDE.

The eighteenth ordinary general meeting of the Central Mining and Investment Corporation, Limited, was held, on the 30th ultimo, at 1 London Wall buildings, London.

Sir Lionel Phillips, Bart. (chairman of the company), presided.

The acting-secretary (Mr R. Walker) having read the notice convening the meeting, and also the auditors' report,

The Chairman said:—Gentlemen,—The accounts for the past year, compared with those of 1921, show quite a decided change for the better in the position of the corporation. I shall first deal briefly with the profit and loss account. You will there see that our gross earnings have increased, roughly, by £206,000. Turning to the debit side, there is a nominal increase of £27,000 in the general expenses account, which is only in a small part due to increased outlay. The contributions to our administrative charges by affiliated companies are in some cases based on the profits earned by them and are, I think very properly, placed by us to the credit of our expenses account. These items show a falling off, as the improvement in the position of the concerns in question occurred only in recent months and has not yet benefited the accounts submitted to you. South African taxation shows a reduction, as our income in that country suffered last year from the strike on the Rand. As regards corporation profits tax, we found that we had sufficient reserves in hand from previous years to discharge the liability of the corporation up to December 31, 1922.

DIVIDEND.

The net balance carried to appropriation account has increased by, giving it in rough figures, £214,000. Subject to your consent, we have dealt with this in the appropriation account by transferring another £100,000 to the reserve fund, which we were unable to do last year. We paid our usual 6s interim dividend in December last, and now recommend a final 6s and 4s bonus, making a total distribution of £340,000—that is, 10 per cent. free of tax, or an increase on last year of £85,000. Due provision is made for income-tax and directors' additional remuneration, and the carry forward is slightly in excess of that of last year.

The improvement in our affairs, however, is by no means confined to the profit and loss and appropriation accounts, for, after writing off sums we thought prudent, we have a considerably larger reserve in the difference between our book prices and market values than we were able to maintain in the previous year, owing to the difficult times through which we passed. I may say that our values are entered, as hitherto, on the conservative side—a policy which, I am sure, shareholders will deem sound. As chairman of the corporation, I am tempted to be more expansive upon this subject, but you will agree, I know, that it would be unwise to give too much vent to optimism to-day, because we are living in an unsettled era of rapid fluctuations. This statement, in any case, I trust, will satisfy shareholders that the board of directors always holds in view future contingencies in their representations.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, I will first compare the position of the corporation this year with last year respecting liquid assets. Our liabilities have increased by £1,720,000, to which must be added £85,000 which we propose to pay as bonus, making £1,805,000 in all. In liquid assets, it will be seen, gilt-edged securities have increased by £1,225,000, debtors by £94,000, loans by £1,047,000, and cash by £257,000, making together £2,623,000, or an improvement, as far as the liquid position is concerned, of £818,000 over last year. On the general side of the business, however, other assets, partly due to realisations and partly to a healthy amount of writing down, appear in the accounts at lower amounts than last year. The differences are:—Under the head of "gold and diamond mining," £457,000; under "base metals and minerals," £139,000; under "oil, coal, industrial and sundry interests," £118,000; and under "land companies and properties," £2,000; making a total of £716,000, which, deducted from the £818,000 referred to as an improvement in liquid assets, leaves, on balance, a net increase of assets over those shown last year of £102,000, represented by the additions to the reserve fund and carry forward.

It will be readily understood as obvious that in a progressive business it is necessary to dispose periodically, and as opportunity offers, of certain accumulated assets in order to be in a position to undertake new commitments. Enterprises in process of development, especially in the earlier stages of their existence, offer greater attractions than fully developed undertakings. They involve, of course, greater risks, which have to be carefully weighed, but if one never sold, one could never buy. This applies particularly to a corporation like ours or to a company, for instance, like the Rand Mines, Limited, with which we are closely associated, and must never be interpreted as a loss of confidence in the particular investment that may have been wholly or partially realised. The Rand Mines, Limited, publish a list of their holdings, but I have always resisted requests to do so in your corporation, not because there is any reason to feel ashamed of our list, but because the public would draw unwarrantable conclusions from the changes we effect.

THE MINES.

I do not think it is necessary to detain you any longer upon figures in the accounts. I will therefore now proceed to make a few observations upon the work in the mines during the past year and the present outlook. I hope I may assume that our shareholders not only read the report of the board, but the other very interesting matter accompanying it which is provided by our two colleagues resident in Johannesburg, and by Mr A. J. Brett, our consulting engineer. The general review of the situation and the detailed synopsis of the operations of the year are so comprehensive, that I could only deal more fully with the subject by a needless repetition, or by approaching it from another angle, which would, in the event of its being a correct one, produce the same result. There are, however, directions in which further light may be shed on the lessons to be drawn from the information available and on the prospects based upon the immediate outlook. Mr Brett, for instance, in a table giving the aggregate results of the whole of the Witwatersrand mines for 1922, shows also the figures for 1921 and, separately, those for nine months' work from April 1, 1922, to December 31, 1922, but, very properly, he points out the danger of drawing conclusions by comparing alone the statistical results of any one given period with another, as so many factors, besides the mere arithmetical picture, have to be taken into account in arriving at the true respective merits of the work done.

For the nine months referred to it will be seen the average profit per ton milled was 7s 10d at standard price of gold. As working conditions were by no means settled by April 1, 1922, and therefore working costs and profits for the nine months to December 31st could hardly be deemed to have reached a normal state, I have had a table prepared drawing comparisons between the results obtained over the last four months of the year 1922 and those over a similar period in 1921, in respect of 12 of the mines with which we are associated, leaving out properties like the Robinson Gold Mines, Ferreira Deep, Knight Central, and Modder East, where the working conditions cannot be said to be quite normal.

IMPROVED EFFICIENCY.

This table throws a very clear light upon the effect of improved efficiency. The average number of men employed, white and native, above and below ground, in 1922, was 79,001, and in 1921 it was 77,986. The fathoms broken in the stopes in 1922 were 234,960, and in 1921, 192,784; the development footage 104,447, against 87,159; the tons milled 3,786,666, against 3,447,736; the waste sorted out 11.39 per cent., against 9.96 per cent.; the tons handled per native working underground per month 20.1, against 18.4; and the number of white men working underground per 1,000 tons handled per month 3.20, against 4.54.

This gives very eloquent testimony as to the improvement in work since the upheaval of last year, and, as far as I know, there is no reason why this satisfactory standard should not be maintained. The fact is that the continual agitation and unrest to which the industry was subjected up to the terrible climax so demoralised the working man that, instead of giving a fair day's work for his pay, he resorted to practices that sapped his usefulness and brought many mines to the verge of ruin. His own occupation was thus seriously imperilled. It is quite true that fewer white men are employed relative to the number of natives than before the outbreak, but the number displaced is insignificant compared with

the number that would inevitably have lost their jobs if the industry had not been brought back to a proper state of organisation and efficiency. Confidence in the labour unions has been considerably weakened owing to the troubles brought upon the general body of members by the leaders in unduly pushing up wages and reducing output during and after the Great War.

LABOUR CONDITIONS.

In the course of my recent visit to South Africa, I went down several of the mines, and, as far as I was able to judge, the men were far more contented than before the great strike at the time of my previous visit. I sincerely believe that, in every walk of life, people are really happier when they are conscious of giving good service for the money they earn than when, at the instance of agitators, their feelings towards their employers and their employment are antagonised. There is no unrest at present, although, at the instance of the artisans, a conciliation board is now taking evidence in regard to the demand for an increase of 30 per cent. in their wages. The earnings of the white population of the Witwatersrand, underground and upon the surface, compare favourably, in relation to cost of living, with wages anywhere else in the world, and the amenities of life upon the Rand goldfields are, I believe, infinitely superior to those in any other mineral industry. There are many directions in which improvements in the health conditions have gradually been introduced, significant statistics in regard to which are supplied both by my colleagues in South Africa and by the consulting engineer. There is every reason, I think, to be pleased with the way in which the work is being conducted now, but there is still a field for further economy in the cost and use of stores. The extremely able investigations carried on by our mechanical engineering department in regard to drilling, drills, and steel consumption are bearing good fruit, and I am sure a saving, both in the amount of explosives required and of drilling in the hard rock, will be effected by the ingenious device invented for determining the direction of the holes, and improvements in shaping and sharpening bits. Our consultant draws attention to a significant change in the method of gold recovery in the shape of discarding the copper plates upon which gold was previously recovered (through the medium of a coating of mercury, which has a mechanical attraction for gold), in favour of a return to a very primitive form of recovering concentrates—namely, the use of blanket strakes or corduroy. The advantages of the practice now adopted are described by him, so I need not dwell upon them. This is an instance in which modern improvements, that promise so well in their early use, may, in the end, prove less valuable than the methods adopted by our less highly trained predecessors.

Attention is also drawn, both by the resident directors and the consulting engineer, to the great value of an adequate and regular labour supply. I think I should emphasise this point because the effect is far greater than the presence of a given number of hands at a given moment would imply. The manager, in laying out his programme of development and general mining operations, has, in accordance with their numbers, to distribute his resources over the different departments. If there is a great fluctuation in the labour available, it, of course, prevents uniformity in the work, and is harassing and expensive. Hence, I sincerely trust that the Union Government, in its anxiety to give the fullest opportunity to the natives of the Union, will not forget that, first of all, the contracts they make are of shorter duration than those of East Coast labourers, and that, as workers, they are not so effective.

CITY DEEP.

I shall now touch upon the operations of a few of our more important mines:—

City Deep, Limited.—I think I cannot do better than give you the text of a cable received summarising the chairman's remarks at the annual meeting of the company, held on the 22nd instant, on the ore reserves and development position of this mine. It reads:—

"The ore reserves show an increase of 386,700 tons. The average monthly development footage for the last six months of 1922 was 3,452 feet, as compared with 2,506 feet for the similar period in 1921. The average for the first four months of the current year was 2,897 feet. It is anticipated that the ore reserves at the end of the current year will be further substantially increased. During 1922 the payable ore developed amounted to 1,043,400 tons, valued at 8 dwts. Of the footage sampled 67.7 per cent. was payable, the average value being 17.3 dwts. over 26 inches. In the current year the average percentage of payability for the first four months has increased to 79.2 per cent., and development values generally are encouraging. The zone of unpayability in the hitherto large area extending about 2,000 feet to the west of No. 2 shaft appears to have been passed below the 17th level. A winze from the 16th level has been sunk to a depth of 480 feet, and has exposed values throughout this distance equivalent to 9.0 dwts. over a stopping width of 54 inches. As this is the deepest development heading in the mine these exposures must be considered highly satisfactory."

CROWN MINES.

Crown Mines.—We are very pleased with the condition of affairs and the outlook of this property. Record outputs have been obtained, the average tonnage milled during the last six months of last year being 216,400 tons, or at the rate of almost 2,600,000 tons per annum. It is a remarkable tribute to the management and to the potentialities of the mine itself, that, in spite of the severe drop in the price of gold and the upheaval last year (and I would remind you again that work was carried on under normal conditions for only the last six months of the year) the profit for 1922 was only 4d per ton lower than that for 1921. The ore reserve position remains strong, and at 8,882,100 tons shows an increase in the available ore of 179,800 tons compared with 1921, the value, 6.1 dwts., remaining the same. Development has been carried on at a high rate. The average monthly footage accomplished in the last six months of the year was the record figure of 4,759 feet. The payable tonnage developed was estimated at 2,065,300 tons. The values in the deepest workings are quite satisfactory. The company has purchased 51.5 claims from the Langlaagte Proprietary Company (in liquidation), which it is already working, and also 495 mining claims from the Government. These areas square off the company's southern and western boundaries, making the layout easier and prolonging the probable life of the mine. A careful geological examination has been made of the south and south-western portions of the company's area, and, while it affects the distant future, I may say the indications point to the reef underlying these claims being found at a lesser depth than the dip of the reef at the deepest points yet reached would imply.

DURBAN ROODEPOORT.

Durban Roodepoort Deep, Limited.—It has recently been decided to sink the circular shaft to a point at which a cross-cut will be made to connect with the existing workings. This will have the effect of improving the ventilation and working efficiency underground as well as saving maintenance costs in the present shafts. The experiment of substituting jack-hammer drills for hammer-boys is in contemplation, and, if successful, the number of natives required will be reduced with beneficial results on working costs. It is pleasurable to note that costs were reduced by no less than 7s 10d per ton milled for the last half of 1922 compared with the corresponding period of 1921. Development disclosures last year were slightly above the average of the reserves, and it should be remarked that the percentage of payability is very high. The recent acquisition of claims from the Princess Estate and Gold Mining Company, Limited (in liquidation), will greatly extend the life of the mine, and it will also enable more lateral instead of deeper and more costly development to be accomplished. Arrangements are now being made to drive into the ground, the assays of which show good values. The revised programme entails additional capital outlay, and an issue of £100,000 6 per cent. convertible debentures is being offered to shareholders. This, it is expected, will place the company on a sound financial footing. The outlook at this mine is certainly promising.

FAR EASTERN RAND.

Coming to the Far Eastern Rand, I may say that New Modder continues its highly successful career as regards both profits and development.

Regarding Modder B, which has hitherto had such a signally profitable record, I regret so say recent developments have been less favourable. A very large footage was accomplished last year, with poor results on the whole, though in the south-eastern corner of the property the values in the drive from the Geduld raise were satisfactory. The company has a large unexplored area, and development is being pushed vigorously.

In the Modder East the policy will be reconsidered as soon as the financial position is eased by the repayment of the outstanding debentures. The prospects, on the whole, are not very attractive, but during the last six months we have struck some better values in a patch, the extent of which cannot yet be assessed.

I do not think I can usefully add much to the other matters referred to in the printed documents that have been in your hands for some time.

DIAMOND INDUSTRY—TRINIDAD LEASEHOLDS.

It is gratifying to see that the diamond business has revived, as it affects us as holders of mining shares, as well as having interests in the diamond trade. Moreover, it bears upon the revenue of the country, to which I will refer anon.

It is particularly pleasing to be able to add a word upon the brighter outlook of the Trinidad Leaseholds, Limited, and to tell you that the operations have shown considerable improvement during the last twelve months. The increased capacity of the refinery has enabled larger quantities of crude oil to be treated. The sales of the company's products have correspondingly increased, and this, coupled with lower working costs, has resulted in a substantial advance in the company's profits and in its financial position.

NORTH VENEZUELAN PETROLEUM COMPANY.

The first well that is being drilled upon the property of the North Venezuelan Petroleum Company, Limited, is now down 860 ft, and we are hoping that we may be lucky enough to strike a good supply of oil in this first endeavour. We must not, of course, be disappointed or disheartened in the event of initial failure. Judging by the reports of the capable geologists who have been studying the formation, there is every reason to expect that the large concessions, in which we have an important interest, will turn out satisfactorily.

MESSRS BERNHARD, SCHOLLE, AND COMPANY.

There is one other item, before closing the financial review, to which I should make reference—namely, the interest we have taken in the banking firm of Messrs Bernhard, Scholle, and Co., Limited. The operations to date lead me to the conclusion that we have entered into a sound and progressive undertaking; more than that I should not say at this stage. I may affirm, however, that your board is constantly considering advantageous directions in which some of your resources can be permanently invested. Our mission is to find investments which are likely to give fair and growing returns. We are well equipped for new business which provides a field for our able and energetic staff, to whom I now tender warm thanks. Propositions, extremely varied in character, and from all parts of the globe, come before us, and are never lightly turned down. We breathe an atmosphere of investigation sometimes quite oppressive, but it is part of our day's work, and if we ceased to study new projects your corporation would degenerate into being merely the holder of interest-bearing securities, good, perhaps, in themselves, but not of an order which shareholders in a live concern have the right to expect.

Altogether, I am pleased with our general investments. We have large interests in mines, and provide for their amortisation in the annual computation of values. Holders of this class of security could, of course, create a reserve fund for the same purpose, but that is an irksome task which many of them neglect to perform. Moreover, the holder of shares in your corporation has an interest not only in a variety of mines, but in many other descriptions of property.

GENERAL CONDITIONS IN SOUTH AFRICA.

Leaving our particular affairs, I think it is desirable that I should, in the first place, say something about general conditions in South Africa, and then touch upon world conditions, which, of course, all men of affairs have to follow. As far as South Africa is concerned, it is not, of course, my province here to deal with party politics; matters affecting the position, progress, and prospects of the country are in another category. The statement recently made by the Minister of Finance leaves me anxious as to whether the efforts made to balance expenditure by revenue are sufficiently strenuous. The country cannot indefinitely defer provision for the repayment of its debts, nor hope to remedy the situation by unduly increasing taxation, which would be a blow to enterprise. The total public debt of the Union is £199,210,000. Even this large amount need not be considered excessive when the size and resources of the country, its valuable railway system and other assets are held in view. Steps, however, should be speedily taken to balance the annual budget, and again to provide, not only interest, but a reasonable sinking fund for debt redemption. The worst of the depression in trade and commerce is, I think, past, and, therefore, general revenue may be expected to benefit, and the resumption of work in the diamond mines will again provide revenue which was cut off as the result of the Great War. I understand, too, that the crops on the whole this year have been excellent, and, although this will not have any great direct bearing on the Government revenue, it must tend to an increase in trade, thus later on indirectly benefiting revenue. Holding, however, as sanguine a view as possible in this connection, there does not appear justification for maintaining the rate of expenditure by the Government, which has increased so enormously in the last decade. The Minister of Railways has been more successful in approximating revenue to expenditure than the Minister of Finance.

WAGES.

As in most other countries, a higher cost of commodities has had to be met, but the wage bills have grown out of all recognition. Without attempting to discuss the whole question, I will select one example to show at what an abnormal rate the increase has taken place. The Minister of Railways, in his statement, is reported to have said that, while in 1918 £7,908,732 was paid to 72,477 employees, at the time he made his speech £12,561,036 was paid to 72,218; that shows an increase of about 60 per cent., and when we realise that a large number of natives is employed in the service whose wages have, at all events, not been materially altered, some idea can be formed of the enormous rise in the emoluments of the white employees. This no doubt is a general

index of what has gone on throughout the Government service. Rates of pay should not be applied to lower the standard of living below that which prevailed in 1914, but I am not satisfied, in spite of the higher cost of living to-day, that those conditions are not considerably exceeded. All well-disposed persons would rather see their fellow-men living in comfort than doomed to penury, but there is no royal road to that happy state. It depends mainly upon mental and physical endowment and the strength of the individual himself. Legislation is a far less effective instrument than hard work and the will to succeed. A Government, like everyone else, should measure its resources in its expenditure. When its outlay is too great it must either employ less people or reduce their pay.

ATTITUDE OF LABOUR LEADERS.

Trade union leaders in South Africa, as elsewhere in the world, are mainly responsible for pushing up wages unduly and for encouraging slack work. Are they blissfully unconscious of the damage resulting to those they represent? Are they misled or wilfully blind and bent on mischief? One axiom, if they are sincere, should be ever present in their considerations, and that is that the payment of more than its value for a job can only end in the job ceasing to exist. Take hours of labour as an example. Eight hours' hard work in a closed building is a very different thing from eight hours in the open air. Working strain is, in fact, far less a question of hours than of occupation and environment. The modern theory of "one man, one job" is probably the worst so far invented, because nothing is more fatiguing than monotony, and, if there is one thing organised labour should stand for, it is variety. Specialisation in technical industries is unavoidable, but, regarded from the human standpoint, it is least desirable. The more branches a manufacturing concern can undertake, the less danger of unemployment, because a glut in one branch may be offset by a demand in another. Therefore the more varieties of work a man can efficiently perform, the less the risk of his being unemployed. I do not believe there is such a thing as over-production in the broad sense. There will always be at times an excess of particular articles, and after an orgy of waste, such as the Great War has imposed on mankind, and the impoverishment involved, the purchasing power must be terribly limited. What is the remedy? Still greater production, for that means cheap production, greater employment, more wage-earners, and more people able to consume and create the demand. This is a general truth. Restoration of confidence and stability are two other factors of supreme moment.

We are paying the penalty now of concessions to popular clamour made, perhaps wisely and inevitably, during the stress of war, but, if we are to avoid grave troubles, we must revert, as we are gradually reverting, to discipline and control in our conduct and in the whole management of affairs.

DANGERS AND FALLACIES OF SOCIALISM.

We must fight the disintegrating and debilitating doctrines spread in the name of Socialism, the unquestionable author of Bolshevism. What are its fundamental aims? To equalise mankind! Is it not an insane conception with the Universe in our sight? Nothing is equal in Nature. Neither the magnitude of the stars, the intensity of the sun's rays in different places, the rise and fall of the tides, the rainfall, the strength and capacity of men and animals, the productivity of seeds nor the bulk and vigour of plants. Let us probe one aspect only—the economic. Can a line be drawn between the essential and the superfluous? Food and shelter for the elements are primary needs. Some clothing, too, though with training it might be reduced and even eliminated—an unpleasant picture—the amenities of life abolished, replaced by a social condition, primitive, barbaric, and uncomfortable; but modern practices are tending that way. Tobacco, beer, bedding, tables, chairs, cutlery, boots, socks, brushes and combs, and a list of infinite length, are not essentials. Do away with them and millions upon millions would have no occupation.

I put the extreme to draw the true perspective. A definition of luxury is impossible. It may be interpreted as profusion and waste, which is reprehensible, or, in the sense I am using it, as the hall-mark of civilisation. Moreover, the greater the abundance, the variety, and the utility of commodities that contribute to the comfort and elevation of mankind, the wider the field of employment. It is a form of mental derangement to suppose that the imposition of a Spartan way of living is going to benefit the masses. The reverse is the truth. We may well deplore the gradual extinction of the well-to-do classes, the shutting up of large houses, the contraction of spending power, and the general limitation of so-called luxury because it is narrowing the avenues of employment for the wage-earners. They do not know it. Men of affairs do, and it is cowardly not to say so. We are living in an era of sickly sentimentality—not to be confounded with true sentiment—and compromise, the curse of upright action.

The burden of debt has to be borne by those with accumulated possessions, not because that procedure is just, but because it is

unavoidable. The effect is, nevertheless, to dry up the wells of capital. Present taxation is a levy on capital, and just as crops cannot be reaped unless seed is sown, so industry and commerce cannot flourish without accumulated wealth or capital. The evidence of that is provided by the reduced purchasing power of the world. Unless trades union leaders and Socialists, with their specious theories (which appeal to the ignorant, the envious, the indolent, and the ill-placed, and may even gain their votes), change their views, they will certainly level down the well-to-do without raising the poor. Improper concessions by Governments to sections of the community that are organised and have votes spread and stimulate the growth of evils in the body politic that lead the way to that illuminating example furnished by Russia. The paradise on earth of the theorists is chimerical. What crimes are committed, what subversive propaganda is circulated, and what evils are bred under a false cloak masquerading as liberty!

HARD WORK ONLY SOLUTION.

Forgive me for plain speaking, but I cannot be silent, knowing as I do that the only path to a restoration of real prosperity is harder and harder work, greater and greater production, well-ordered discipline and control. As Lord Balfour once said, it is easy to make rich men poor; the problem is how to make poor men rich. The recipe for that is individualism, every man doing the best he can for himself and his family. Incidentally, by doing that he is doing good service to his country. Grandmotherly interference by the Government in matters outside its proper sphere is detrimental. The most exalted Legislature and Cabinet have ample to do in preserving order, maintaining the moral and physical welfare of the people, adjusting taxation and fiscal regulations, and establishing honourable, enduring, and friendly relations with foreign nations, without meddling in the complexes of trade and industry.

Business affairs should be left to business people, men who know their jobs and find their own niches in any given service, according to energy and ability. Nationalisation of any source of wealth means ineffective bureaucratic control, waste, political jobbery, absence of responsibility, enthusiasm, or enterprise.

There is a sad lack of moral backbone in these days, a craven fear of antagonising this or that section by pursuing a line of action indisputably right. The more of us who lift our voices in support of courageous procedure, the more we are helping to get it. I offer that reason as a justification for these remarks.

THE RESOLUTION.

I beg to move:

"That the report and accounts for the year ended December 31, 1922, as printed and circulated among the shareholders, be, and they are, hereby received, approved, and adopted; and that the payment of a final dividend of 6s per share and a bonus of 4s per share, both free of income-tax, to shareholders registered on the books of the company at the close of business on May 23, 1923, and to holders of Coupon No. 22 attached to share warrants, in respect of the year ended December 31, 1922, be, and the same is, hereby sanctioned."

Mr F. Heim seconded the resolution.

The Chairman having invited discussion,

Mr F. J. Dormer said he thought that all present so thoroughly agreed with everything which Sir Lionel Phillips had said in his speech that there was nothing to discuss. They could only say, "Ditto."

The Chairman thanked Mr Dormer for his remarks, adding that he was glad the shareholders were pleased with the report, and were not dissatisfied with what he himself had said.

DENOMINATION OF SHARES.

In reply to a question put by Mr Holt bearing on the denomination of the shares, the Chairman said that the directors were not opposed to an alteration, but they had never felt that there was sufficient demand on the part of shareholders who were considerably interested even to bring the matter up for consideration by the board. The alteration in the exchange value of the franc did not affect the position of the corporation with regard to its arrangement with the French Fisc. The £8 shares as a multiple of £4 were a convenient denomination for the purpose of dealings in France. He was not wedded to £8, £4, or £1 shares. He was, however, averse from seeing Central Mining shares brought into the area of speculation too much.

He would like to hope that in the far future, when he was dead and gone, this corporation would still go on as a very solid concern, regarded in the City of London as a very sound investment, and, from that standpoint, there was no objection to an £8 share. There were many concerns with shares of a very much larger denomination. He agreed that a denomination of £8 might limit its speculative value, and if the shares were reduced to £1 he had no doubt they might have a very much larger list of shareholders and a greater speculative element. He had been told that,

in the case of companies with large capitals, if they had a small denomination of shares they suffered less in fluctuation than did those companies, such as this corporation, with a share of a big denomination.

BOARD'S VIEWS.

He would say that if there were a general demand by the shareholders to alter the denomination of the shares, in spite of the enormous cost which would be involved, the board would take the matter into their earnest consideration; but in the absence of such a demand, he was a little disinclined to do so, because the corporation was doing very well, and he was inclined to leave well alone. He hoped, therefore, he might be allowed to leave the subject in that position—that the shareholders must not think for a moment that the board were averse from any alteration of the kind if the general body of shareholders thought it desirable, but they certainly did not feel that the situation was sufficiently clear to them, so far as advantage to the shareholders was concerned, to bring the matter forward themselves.

The resolution was then put and carried unanimously, and the Chairman announced that the dividend warrants would be posted that evening.

TRIBUTE TO SIR HARRY SKINNER.

The Chairman next moved the re-election of Sir Evelyn Wallers, K.B.E., and Lieutenant-Colonel S. H. Pollen, C.M.G., as directors of the corporation. He was sorry to say that they had lost one of their colleagues on the board in Sir Harry Ross Skinner, the state of whose health had caused him to retire from the board and not to seek re-election. It was a matter of great regret to them to lose his services and his genial personality from their midst.

The motion was seconded by Mr Dormer, and unanimously agreed to.

On the proposition of Mr A. T. Schmidt, seconded by Mr M. Francke, Messrs Cooper Brothers and Co. were reappointed auditors of the corporation.

Mr Holt proposed a vote of thanks to the chairman for his efficient conduct of the meeting, and this having been carried with acclamation, the proceedings terminated.

BAMBRACKELLY (CEYLON) TEA AND RUBBER COMPANY, LIMITED.

SUCCESSFUL YEAR—SALE OF DYNEVOR ESTATE.

The fifteenth ordinary general meeting of the Bambrackelly (Ceylon) Tea and Rubber Company, Limited, was held, on the 31st ultimo, at 14 Great Tower street, London, Mr H. J. Welch, the chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said: You will probably agree that the period under review has been at least as successful as any ever experienced by this company. Our issued capital and general reserve remain unchanged at £80,000 and £8,000 respectively. The total cost of our properties, buildings, &c., as at December 31, 1922, was £57,659. After deducting from our issued capital the excess of our liquid assets over our liabilities, including the dividend to be paid to-day, and taking our Lunuva shares as worth 30s each, our share capital on January 1st last represents £35 per planted acre.

We have completed the sale of our Dynevior estate to the Lunuva (Ceylon) Tea and Rubber Estates, Limited, for fully paid shares in that company, on which we received an interim dividend of 5 per cent. in October last. A final dividend of 7½ per cent. was declared by that company last week, making 12½ per cent. for the year, and this dividend will be included in this year's accounts.

Of tea, 188,653 lbs were harvested at a f.o.b. cost of 8.70d per lb, and realised a net average price of 1s 3.10d per lb, and 156,067 lbs. of rubber were harvested at a f.o.b. cost of 6.32d per lb., and realised a net average price of 11.39d per lb. The labour force is now quite settled, and has proved sufficient for our requirements. The general health conditions were satisfactory. Our visiting agents report favourably on the condition of the estates.

With regard to the current year, we hope to secure a tea crop of 270,000 lbs, and of this quantity we have harvested to the end of last month 109,143 lbs, against 88,388 lbs for the corresponding period of last year. It is provisionally estimated that a restricted crop of rubber of 160,000 lbs will be harvested, and of this quantity we have harvested to end of last month 48,922 lbs. The net profit for the period of nine months amounted to £9,637, to which has been added the unappropriated profit brought forward, making £15,238. An interim dividend of 5 per cent., less income-tax, was paid in January, and the directors recommend the payment of a final dividend of 15 per cent., less income-tax, making 20 per cent. for the nine months ended December 31st last, and leaving £2,838 to be carried forward.

The motion was carried unanimously.

BRUNNER, MOND, AND COMPANY, LIMITED.

"A BETTER YEAR"—INCREASED DIVIDEND.

SOUND POSITION—STRONG RESERVES.

SCHEME FOR EMPLOYEES' SHARES.

The annual ordinary general meeting of Brunner, Mond, and Co., Limited, was held at the Midland Adelphi Hotel, Liverpool, on Friday, May 25th, Mr Roscoe Brunner (chairman of the directors) presiding over a large attendance, which included the following directors:—The Rt. Hon. G. W. Balfour, Sir John Brunner, Bart., Sir John G. Jarmay, K.B.E., Messrs Arthur Colegate, J. H. Gold, J. J. Harper, J. G. Nicholson, C. F. Poole, A. T. Smith, A. W. Tangye, O.B.E., and John I. Watts, and Mr D. Marsh, secretary.

The Chairman moved "that the directors' report and statement of accounts be adopted, and that the following dividends be paid for the year ended March 31, 1923, viz. :—

"(1) To the holders of preference shares at the rate of 7½ per cent. per annum, less income-tax, and less the interim dividend paid in December last.

"(2) To the holders of ordinary shares at the rate of 11 per cent. per annum, less income-tax, and less the interim dividend paid in December last."

BALANCE-SHEET ITEMS.

The Chairman said: Taking the balance-sheet first, I propose to go through the differences quite shortly. On the assets side the amount of the first item—properties, works, &c.—this year represents an increase of £314,000, and I propose to refer later to the work we have done in this respect. Investments are up by £279,000, in which there is a considerable amount of liquid assets, which are available at short notice. The stocks are down by £316,000, and we consider that our stocks are now at a proper figure, and we present to you the reductions as a piece of good finance. The debts owing to the company are up by £78,000, partly due to money we have advanced to Synthetic Ammonia and Nitrates, Limited, for the building of the works at Billingham, to which I shall shortly make reference. The share capital, on the liabilities side of the balance-sheet, is increased by £2,600, because of the purchase of a few more shares of Castner Kellner's. Depreciation is credited with £200,000 this year instead of £150,000, as last year. I am pleased to say that the savings bank account is up by £15,000. More of our men have become depositors, and there is a larger sum per man to their credit. The debts owing by the company are down by £880,000, partly accounted for by the fact that we had at the date of the last balance-sheet no trade bills running. The reason for this was that our cash reserves were so ample that we did not need to avail ourselves of the facilities which we have in previous years used. On the profit and loss account the investment revenue is increased by £130,000, our subsidiary companies also having had a better year, just as we had. The first item in this account—directors' and office salaries and auditing—is up by £2,000. We have a considerably increased staff, because we are doing a great deal of research work, and the advantage of this will be shown in the future prosperity of the company. The general charges, on the other hand, are down by £6,000, which, I think you will agree, is a good result.

"A BETTER YEAR."

We have had, as I ventured to hope last year would be the case, a better year than the previous one. For the first time we are paying the full dividend on the new preference capital, but we have had a full year's use of that preference capital, and we are satisfied that it has earned its dividend. You will have been able to calculate from the accounts before you that we propose to divide 82 per cent. of the available profit, and I venture to say that such a percentage constitutes a prudent division. Putting it another way, we propose to divide the whole of the investment revenue, leaving the subsidiary companies to make their own proper reserves—and I must tell you that they do make their own proper reserves—and to divide 75 per cent. of our own trading profits, which is a figure, I think, prudent shareholders ought to regard as satisfactory. The remainder of the profits we propose to put to the various reserve accounts, bringing the total of them close upon £3,300,000. We hope to finance a proportion of our immediate expenditure on works and construction out of those reserves, instead of increasing the capital.

SATISFACTION FOR SHAREHOLDERS, CUSTOMERS, AND STAFF.

I referred last year to the difficulty the directors had in satisfying shareholders, customers, staff, and workmen. The shareholders have secured an increased dividend, a dividend equal to the pre-war rate, and were it not for the fact that taxation and the cost of

living are very much higher than before the war, I think the shareholders would be satisfied with our results. As to our customers, we have given greater reductions during the year under review than in the previous year, reductions, generally speaking, in advance of decreases in the costs of production. I am glad to see by their accounts that, almost without exception, our large customers have recovered from the slump in trade which afflicted all of us during the past few years. Their accounts show better figures and increased dividends, which in some cases are higher than pre-war. We intend to continue our policy of reasonable prices, consistent with the other interests we have to look to, but I think you will agree that it is a little unreasonable for customers whose profits and dividends are better than our own to ask from us unreasonable reductions in prices.

EMPLOYEES' WAGES.

Salaries have for the most part remained at the reduced level, while as to the workmen, no reductions in wages have been made during the year under review, and, even after a small reduction in the wages of shift men which has just come into force, those shift men's wages remain at the level of 121 per cent. above pre-war. Our day men, other than mechanics, receive wages which stand at 104 per cent. above pre-war, and it seems to me that our men have very little to grumble at. I am glad to be able to tell you that they have surpassed their previous very fine record of time-keeping; 99.3 per cent. have this year earned the holiday to which they are entitled owing to not having lost more than two days' work in the year.

WORKS AT WALLERSCOTE AND BILLINGHAM.

Regarding our work in progress, we are always improving our plants, but ever with a very jealous eye to see that the proposed expenditure is justified by the saving that is looked for. The Wallerscote works are proceeding at the utmost economic speed. They are an ammonia soda works close to Winnington, which will be economically and efficiently managed from our head office. The erection of the Billingham works (Synthetic Ammonia and Nitrates, Limited) has been delayed by more than the three months which the trouble in the engineering trade lasted. Much of the engineering in connection with those works is new to Great Britain, and we have met with a number of difficulties, which, happily, have been surmounted. Those works are now making rapid progress, and we are greatly pleased with the work of the very capable and efficient staff in charge of them.

THIRTY THOUSAND SHAREHOLDERS.

I should like to give a special word of thanks to our accounting staff. This meeting is held three weeks earlier than last year, and to my mind it is a great feat to be able to hold a meeting of so great a company as ours 47 working days after the close of the financial year.

We have 30,000 shareholders, and it is of interest to note that the average holding is 455 shares, and as we employ 6,028 men at the present time it requires five shareholders to employ a man. Putting it into terms of the real capital in the company, it requires very nearly £3,000 to employ one man, and I venture to suggest that Labour leaders should welcome and not criticise, as they do, an increase in profits and increases in capital by employing companies, because every increase in profits and every increase in capital leads to the employment of more men.

THE FUTURE.

I spoke last year of the future and the difficulty of forecasting. To forecast the future is still difficult, and so dangerous that I do not intend to indulge in it. At the moment there is a lull in the upward trend of trade. In America the lull is a distinct one, but my hope of last year, of a general improvement in the world trade, has been borne out, and I believe we may look forward to continued slow improvement in trade conditions, and that, since improvement remains slow, any possible slump, if it comes, will be small, and will not last long.

SHARES FOR STAFF AND WORKPEOPLE.

Speaking of the future brings me quite naturally to the proposal in the report to empower the directors to allot shares up to a number of 100,000 to the staff and workpeople. Your directors consider that the future prosperity of the company will be increased if a greater number of their employees are interested in the company's business. Human nature being what it is, the argument is 'unanswerable' that a man will do better work if his work benefits

himself directly. It is because your directors are convinced that that result will follow its adoption that they make this proposal, from which, as you will note, they are themselves excluded. Our articles provide that, unless a general meeting directs to the contrary, all shares shall be offered to the shareholders in proportion to their holdings. That accounts for the phrase in the report and in the resolution which I will put to you, "without such shares being first offered to the shareholders," &c. The right we ask you to surrender for the result we have in view is one share for each of shares now held, so that if we were to offer 100,000 shares to the shareholders very many shareholders would get none, since they hold less than 96, and the average shareholder would get four only, and the total amount that we propose you should so surrender is less than 1.4 per cent. of the total issue of ordinary shares.

TERMS OF ISSUE.

You will naturally want to know the conditions upon which the directors propose to allot. The shares are to be paid for in cash, so that the company will get the benefit of the money which is subscribed, and we can always use, in every year a small amount of capital. They are to be paid for out of savings. The issue price is to be fixed from time to time by the directors, but it shall never be less than par, because we are forbidden by law to issue at less than par. The issue is to be made from time to time as our employees can afford to take up the shares, and it will be several years before the whole number is allotted. Since the whole idea involved is the complete possession of the shares by the employees, there can be no absolute bar against any employee selling his shares and taking his profit, but we are sure that that will not occur, save perhaps to a very small degree; and the cure is obvious, inasmuch as the employee will get no further allotment in any future issue. We are in very close touch with all our employees, and we have on many occasions to advise our men in their needs and troubles, and if a man comes to us saying that he must realise his investment we shall be able to help him over his time of trouble. We most earnestly and confidently commend this proposal to your favourable consideration as a real scheme of co-partnership.

LETTER FROM SIR ALFRED MOND.

You will have noted that your directors have invited Sir Alfred Mond to rejoin us on his relinquishing Government office. He comes back to us with an enhanced reputation, having in the opinion of all political parties made a great success of two difficult offices in very difficult times. He is not present to-day for the reason that his mother died only a few days ago after a long illness, and he needs a rest after a period of strain and anxiety. His mother was a worthy helpmeet to a great man, and we all sympathise with those she has left behind in the passing of the last link of the generation of our great founders. I have a letter from Sir Alfred Mond, which I would like to read to you.

"Will you please tell the shareholders at the meeting how disappointed I am not to meet them on this first occasion since my return to the board, but that I feel sure they will understand and excuse me. Would you also convey to them that if I had been present I would have taken the opportunity to congratulate them on the result of the year's work and the extremely sound position of their business, which in my opinion has never stood in a better position than in the fiftieth year of its existence. I had intended to say some words of warm appreciation as to the manner in which you and my colleagues"—(an entirely unsolicited testimonial)—"had piloted it through the last difficult years with so much ability. Would you add how strongly I advocate the acceptance of the policy of making our staff and workmen partners in our business by offering them a share participation on attractive terms."

LITIGATION WITH MANCHESTER SHIP CANAL.

The Chairman said he had been asked by several shareholders for information about the recent litigation with the Manchester Ship Canal. He gave an outline of the history of the trouble originating with an ambiguous clause inserted in the Manchester Ship Canal Act with the object of protecting traders on the River Weaver. He also referred to the efforts which have been put forth at different stages of the dispute to obtain a settlement. The traders on the Weaver had asked for nothing more than they had in pre-Ship Canal days, but they would not be satisfied with anything less. They made a substantial offer towards a settlement of the claim of the Ship Canal for back tolls, but settlement was refused by the Ship Canal Company, and the case went to the Court of Appeal. Here the decision went in favour of the Ship Canal Company, and once again in the interval between the hearing in the Court of Appeal and the further appeal to the House of Lords they (the Weaver traders) tried their best to arrive at an agreement, but negotiations broke down because the Canal Company declined to waive their claims for back tolls. The Weaver traders had gained from the House of Lords a declaration that an agreement did not mean a gutter without width, but meant a channel of proper curvature and width.

The main issue in the whole of the three trials had been whether the party responsible for providing and keeping that access should also be responsible for the buoying and lighting of the channel. The Lords had decided that, upon the law as it stood, the Ship Canal Company, though they had to provide the access, had no duty to define it. There was, however, said Mr. Brunner—another Appeal Court, and it the judges said this was the law, then justice demanded that Parliament should alter it. He had only to add that the whole of the company's liabilities under the judgment in the case had been provided for in the accounts under review, and not by the amount it was proposed to put to suspense account.

The Right Hon. G. W. Balfour seconded the resolution, which was unanimously carried.

SCHEME FOR EMPLOYEES' SHARES APPROVED.

On the motion of the Chairman, seconded by Sir John Brunner, supported by Mr. Percy Coghill and Mr. Petro (all of whom warmly commended the scheme), it was unanimously decided that the directors be empowered from time to time to issue to the staff and workpeople of the company (not being directors) ordinary shares of the company to a number not exceeding 100,000, without such shares being first offered to the ordinary shareholders in proportion to their holdings.

Mr. A. Travers Hawes moved, Mr. A. T. Smith seconded, and it was carried, that the retiring directors, Mr. Roscoe Brunner, the Right Hon. G. W. Balfour, Sir Hugh Bell, Bart., C.B., Mr. E. S. Mond, Mr. A. Solvay, and Mr. A. W. Tangey, and the Right Hon. Sir Alfred Mond, Bart., M.P., be re-elected as directors of the company.

It was also resolved, on the proposition of Mr. J. J. Leroy, seconded by Mr. S. Kidd, that the directors, other than those under written agreement, each be paid at the rate of £500 per annum for services rendered during the year ended March last.

Messrs Edmund D. White and Sons, chartered accountants, of Liverpool, were reappointed auditors, and a cordial vote of thanks was passed to the officials, staff, and workmen of the company for their excellent work during the year.

Thanks to the chairman and directors for their services during the past year concluded the meeting.

THE EQUITABLE LIFE ASSURANCE SOCIETY.

"A FLOURISHING CONDITION."

The 161st annual general meeting of the Equitable Life Assurance Society was held, on the 30th ult., at the society's house, Mansion House street, London, Sir Evan Spicer presiding.

The actuary and manager (Mr. W. Palin Elderton) having read the notice convening the meeting and the auditors' report.

The President, in moving the adoption of the report and accounts, said:—Now that the society had had a branch in the North of England for a few years the members would understand that the directors were glad to have on their board a member of their society who had had experience of business in the North of England, and was so well known there. Dealing with the year's business, he said that everything was satisfactory. The new business showed a continued improvement, and they had obtained more than £600,000 of new life assurance, which was not bad for an office that paid no commission. It was a considerably larger figure than was obtained by the society in the years before the war, and larger, in fact, than they obtained even in the two previous years, which were, or seemed at the time to be, exceptional.

The claims were a little heavier in amount than those of last year, but were still very light. They had fallen, to a greater extent than they did last year, on old lives, so that the mortality, from a financial point of view, had been exceptionally good. The rate of interest showed an improvement and the funds an appreciable increase. The two reversionary companies, of which they now held all the ordinary stock or shares, had been doing very well, and through them the society had obtained a fair amount of life assurance business. This was, of course, only an incidental advantage arising from the purchase of the companies, and even if they obtained no life assurance business from them the board would be perfectly satisfied with the purchase, as it was abundantly clear that they would produce to the society a handsome return in the long run on the amount it had invested. Looking back, he thought he might say that the society bought them "at the bottom of the market." The society was in a flourishing condition; its expenses and claims remained low, and new business and interest had increased. Investments showed a profit, and the statement of claims paid was a continuing testimony of what the society had done, and was still doing, for its members.

Mr. H. Leslie M. Tritton seconded the resolution, which was unanimously adopted.

ROYAL MAIL STEAM PACKET COMPANY.
LORD KYLSANT ON THE POSITION AND PROSPECTS.

SIGNS OF STEADY IMPROVEMENT.

The annual general meeting of the Royal Mail Steam Packet Company was held, on the 31st ultimo, at Cannon street Hotel, Cannon street, London, E.C., the Lord Kyslant, G.C.M.G. (chairman of the company), presiding.

The secretary (Mr. D. I. Conradi) having read the notice convening the meeting and the report of the auditor,

The Chairman said: Gentlemen, before coming to the ordinary business of the meeting, I desire to refer to the loss of two valued colleagues. Mr. James Cameron-Head, who died, after a brief illness, in December last, had been a member of the court for over nineteen years. Mr. Edward Norton, who, through ill-health, was obliged to retire at the end of 1922, passed away only last week, after having been a director of the company for nearly a quarter of a century. Both these gentlemen were highly esteemed, and are keenly missed.

As mentioned in the report, the court has appointed Sir Leslie Scott, K.C., M.P., to be a director of the company, and you will be asked to re-elect him to-day.

As the report and accounts have been in your hands for some days, I presume that, as usual, you will take them as read.

BOARD'S POLICY.

It is eighty-four years since this old-established company was constituted under royal charter, and for nearly a quarter of that period I have had the honour to be your chairman.

The shipping industry, from its nature, is, and always has been, liable to considerable fluctuations. Since I became chairman there have been many ups and downs in shipping—good times alternating with periods of depression—but, when I look back, the result, so far as our company is concerned, may be considered as not unsatisfactory.

The court of directors has kept steadily before it the definite policy of not only maintaining, but gradually building up this great business, whilst pursuing a sound and conservative financial policy, in the belief that stockholders appreciate a reasonable and fairly steady return on their capital rather than too violent fluctuations according as times may be good or bad.

GROSS TONNAGE OF FLEET.

The company now directly owns a fleet totalling nearly 380,000 tons gross register, whilst the aggregate totals of the fleets of the Royal Mail Steam Packet Company and our associated shipping companies amount to considerably over 2,000,000 tons gross register, exclusive of vessels building, or nearly a ninth of the entire British mercantile marine.

THE ACCOUNTS.

The accounts which you have before you set out the position clearly, and do not call for special comment.

After making provision for depreciation and taxation, and paying interest on the debenture stocks and dividends on the preference stocks, we propose to pay a final dividend on the ordinary stock, which, with the interim dividend already paid, makes the total dividend for the year 6 per cent., the same as for the previous year.

RESERVES AND DEPRECIATION.

The reserve fund amounts to £1,600,000, and the insurance fund to over £1,000,000. We have continued our usual policy of adequately writing down the assets of the company every year, and for each of the past 21 years we have written off not less than 5 per cent. per annum from the first cost of the steamers. Notwithstanding that some of our ships were acquired when the prices were unduly high, our fleet stands in the books at a moderate figure.

In July last we made an issue of £2,000,000 preference stock, which was considerably over-subscribed. Our ordinary, preference and debenture capital and reserves now amount to close upon £16,000,000 sterling.

NEW YORK SERVICE.

We have maintained our regular service of mail and passenger steamers between the Continent, Southampton, and New York.

The new twin-screw steamer "Ohio," of 19,000 tons gross register, which is the largest that the company has ever possessed up to this time, has been delivered by the builders, and is now running on this route. She should prove an attraction to passengers.

We have taken over from the Pacific Steam Navigation Company the ownership of the "Orca," "Orbita," and "Orduna," which have been employed for some time past on our North Atlantic service.

We are confident that these fine steamers, which, although not very fast, are exceptionally comfortable, will be increasingly appreciated by the travelling public.

Owing in large measure to the restrictions imposed by the United States Immigration Act, the number of third-class passengers

HARRISONS & CROSFIELD, LTD.,
1-4, GREAT TOWER STREET, LONDON, E.C.3.
TEA — RUBBER — PRODUCE
GENERAL — HARDWARE — TEXTILES
— EASTERN — MERCHANTS.

travelling to and from New York is still much below the normal.
MULTIPLE TAXATION.

Prior to the war the taxation of shipping was, with possibly one exception, governed by the sound principle that, as profits made by ships were earned on the high seas, each country should only tax the profits of its own shipping.

Under the stress of war the system of a country taxing the shipping profits of another country when the vessels of one serve the ports of another became a practice.

This led to retaliatory measures to such an extent that income derived from shipping is now often taxed twice—namely, first in the foreign country from which British ships load cargo and embark passengers, and, secondly, in the United Kingdom.

The Government of the United States of America realised that this state of affairs was most unjust and inequitable, and they have offered exemption from taxation to the shipping of all countries who shall agree to give similar immunity to American vessels.

I hope the British Government may see its way to accept this very reasonable offer by introducing into the Finance Bill a clause providing for the exemption from British taxation of the ships of those countries which grant similar exemption to British ships.

Such action on the part of Great Britain, as the premier maritime nation of the world, in meeting the offer of the United States Government would no doubt be followed in due course by other maritime nations, and thus simplify taxation, whilst at the same time removing a real hardship and one that constitutes a handicap for British shipping.

U.S. PROHIBITION LAWS.

A great deal of attention has been directed recently to the extension of the United States prohibition laws to ships of all nations immediately they enter the three-mile limit.

In the interests of the maintenance and development of overseas intercourse between nations it is, in my view, highly desirable that all countries should adhere to the long-accepted international practice under which the laws of its own flag govern and regulate the rights, duties, and obligations of those on board a ship, whether on the high seas or while within the territorial jurisdiction of any other nation.

Departure from such long-established practice would place on the owners and masters of all ships, whatever their nationality, the practically impossible task of having to comply on all international voyages with differing and often conflicting national laws affecting the conduct of those on board such ships—so long as they remain on board.

If such departure from long-accepted practice were to become general, most formidable powers would be conceded to other countries, such as Denmark, Holland, Sweden, Turkey, &c., through whose territorial jurisdiction ocean highways pass.

I am of the opinion that, in the interests of maritime commerce generally, the rights conceded under present international practice should be exercised as heretofore, subject, of course, to the continued control of the Customs authorities at the ports.

I hope it may be arranged that all nations may continue to adhere to this long-accepted international practice.

SOUTH AMERICAN SERVICES.

Our mail, passenger, and cargo services to Brazil and the River Plate have been regularly maintained by our "A" steamers from Southampton and by our "D" steamers from Liverpool.

The volume of traffic, however, has continued to be affected adversely by the depressed conditions of business in South America, consequent upon the universal disturbance in trade and commerce.

South America, as a great producer and exporter of primary foodstuffs and raw materials, is very sensitive to conditions elsewhere, and is bound to suffer by any failure of purchasing power on the part of the rest of the world.

When European affairs are straightened out, as we all hope they may be before long, and the nations of the world settle down to their normal activities, I believe South America will regain and surpass its former prosperity.

NORTH PACIFIC TRADE.

As soon as it was practicable after the war, the Royal Mail Steam Packet Company, in conjunction with our friends the Holland-America Line, instituted a direct service from United Kingdom and Continental ports via the Panama Canal to Vancouver.

We laid down three motor vessels of over 9,000 tons gross register,

capable of carrying not only a large amount of general cargo, but also of fruit in refrigerated chambers.

Two of these motor vessels, the "Loch Katrine" and "Loch Gail," have already been in service for some time, whilst the third is expected to be delivered by the end of the year.

During the British Columbian apple seasons of 1921 and 1922, several of our big completely refrigerated "N" boats were also placed in this service, and brought large quantities of apples to this country.

The joint service was the pioneer in introducing the direct route to the fruit-growers of Western Canada.

SERVICE TO VANCOUVER.

We are now, jointly with the Holland-America Line, providing a regular three-weekly service to and from Vancouver to the Continent and this country, and I am confident that by this means the trade between this Western outpost and the Old Country will be strengthened and extended.

The convenience of the all-sea route, as compared with the trans-continental route and thence to this country, is obvious, by reason of the less handling of cargo, a particular necessity when dealing with fruit.

It has always been our aim to foster inter-Imperial trade. With the resources of raw material which the British people have at their command, there is no reason why, if careful thought is given to this problem, the British Empire should not become much more nearly self-supporting.

With Europe in its present unsettled state it is, in my opinion, imperative that we should seek to open up new channels of Imperial trade, in order to provide increased employment for the industrial population of these islands.

WEST INDIAN SERVICES.

We are continuing to carry on our mail, passenger, and cargo service between Canada and the West Indies under contract with the Canadian Government. During the past winter we maintained our usual weekly passenger service between New York and Bermuda.

We have discontinued our Trinidad-Tobago coastal contract, which had been performed by the company for a good many years at a loss. This service is now operated by the Trinidad Government, to whom we have sold the "Belize," which was specially built for this trade.

PLEASURE CRUISES.

The Royal Mail Steam Packet Company's pleasure cruises have become increasingly popular. In order to extend this branch of

our business the "Arcadian"—over 12,000 tons gross register—has been specially fitted out as a tourist steamer (first class only) to give passengers all the comforts of a high-class hotel, with social hall for indoor dancing, swimming bath, &c., combined with a pleasant and interesting itinerary.

Our passenger cruises between New York and the West India Islands have continued to be highly appreciated by the American public.

SEVERE COMPETITION.

The movement of cargo to and from all parts of the world has continued to be restricted, with consequent low rates of freight, and competition has been severe, particularly as regards foreign shipping. The British mercantile marine has now, perhaps more than at any previous period in history, to fight to retain the supremacy it has long enjoyed.

Foreign Governments are supporting in various ways their own national mercantile marines, and British shipping may need more practical sympathy and support than in the past from the British Government if this vital industry is to hold its own, although I am convinced British shipowners fully realise that it is only by keeping their fleets up to date in every particular, with the most modern and economical vessels, that they can achieve success.

OPERATING EXPENSES.

A lean time has always one advantage, in that it necessitates everyone putting their house in order, involving a serious and sustained effort to secure the highest degree of efficiency combined with the utmost economy.

The individual shipowner has no control over the quantity of cargo offering or over rates of freight, which operate by the laws of supply and demand, but he can and must, if he is to survive, do all in his power to reduce working costs, and secure the utmost efficiency, so as to avoid running ships at a loss.

By consultation and mutual agreement, wage reductions have been agreed with the sea-going personnel, who naturally prefer employment at a slightly lower rate of remuneration than being out of work through the compulsory laying up of vessels.

The price of coal is still much too high, and trade generally, as well as shipping, are handicapped in consequence.

Dock charges have been unduly heavy, but, following upon representations by merchants and shipowners, these are now gradually coming down.

STAFF.

In these difficult times for all business undertakings, the quality of the day-by-day work of the officials and staff of a great organisa-

tion is especially important, and I would like to express my personal appreciation and that of my colleagues of the good work done by Mr. Clark, as general manager, by the assistant managers, officials, and staff, at home, abroad, and at sea. The company more than ever needs the best efforts of every member of its personnel.

GENERAL OUTLOOK.

When I addressed you a year ago, I said that, in my opinion, we would not witness a real revival in trade and commerce in this country, and secure work for all the unemployed until two things happened, viz., coal became available for industry and commerce at about a pound per ton, and the heavy burden of taxation was very substantially reduced, including the total abolition of the corporation profits tax.

This is, I believe, as true to-day as it was 12 months ago, but coal, instead of coming down to about a pound a ton, is now 37s to 40s per ton, compared with about 27s a year ago.

On the other hand, income-tax has been reduced 6d in the pound, and the corporation profits duty has been reduced by one-half, so that the burden of taxation, although still far too heavy, has been lightened to that extent, with the result that the number of men regularly employed is steadily increasing.

POLICY OF SOUND FINANCE.

The Chancellor of the Exchequer whose Budget contained these reliefs is now Prime Minister. Whatever their politics may be, I believe business men, as a whole, will warmly support Mr. Stanley Baldwin in pursuing the policy of sound finance, begetting confidence, the basis of all prosperous industry and commerce.

In my view, there are signs of steady, if slow, all-round improvement. In the meantime, we, as a company, are keeping our fleet efficient and up-to-date, overhauling our organisation, economising wherever possible, and generally preparing to be in a position to embrace every opportunity of participating in better times when they come.

I now beg to move: "That the report of the directors and the accounts and balance-sheet for the year ended December 31, 1922, submitted to this meeting, be and the same are hereby received and adopted; that the dividends paid on the preference stocks of the company as shown therein be and the same are hereby declared and the payment thereof approved; and that a final dividend on the ordinary stock of 4 per cent., less income-tax, making, with the interim dividend of 2 per cent. paid in November last, 6 per cent. for the year, be and the same is hereby declared." I will ask the Duke of Abercorn to second that.

The Duke of Abercorn, K.P., seconded the resolution, and, no questions being asked, it was thereupon put to the meeting and carried unanimously.

SHAREHOLDERS' APPRECIATION.

Mr. T. Melville proposed a cordial vote of thanks to the chairman, directors, managers and staff at home, abroad and afloat for the excellent way in which they had contributed to the results shown in the report. He said he felt sure all the shareholders would like to congratulate their chairman on the further honour which has been lately conferred on him by His Majesty the King.

Mr. D. W. Allport seconded the vote of thanks, and it was carried by acclamation.

The Chairman having briefly acknowledged the compliment, the proceedings terminated.

THE RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED. POSITION AND PROSPECTS OF TEA AND RUBBER INDUSTRIES.

At the fourteenth ordinary general meeting of the shareholders of the Rubber Plantations Investment Trust, Limited, held on the 1st instant, the Chairman, Mr. H. J. Welch, in the course of his remarks, said:—

From the produce of our estates we have secured a profit of £91,907, as against £5,557 for 1921. The net balance of the profit and loss account for the year was £108,568, and, when added to the amount brought forward, makes an available sum of £207,486. Out of this we propose to pay a dividend of 6 per cent., and, after making the other provisions set out in the report, to carry forward a balance of £42,619.

SUMATRA TEA AND RUBBER PROPERTIES.

We were able last year both to reduce the cost and obtain higher prices for the increased crop of 6,665,748 lbs of tea, produced from our Sumatra properties. The net profit realised was equal to 1½d per lb after providing nearly ½d of a penny per lb for depreciation.

For the current year we estimate a crop of 7,100,000 lbs, out of which we have sold forward about 87½ per cent. The prices obtained are approximately equal to 1s per lb net, as compared with 9.55d per lb for 1922. We hope to produce this crop at a cost not exceeding that for the past year.

The rubber crop harvested from our Sumatra Rubber Estates was 976,412 lbs, and realised a profit of 5.54d per lb after pro-

viding nearly 3d per lb for depreciation. This improvement on the result for the previous year is also due to decreased cost of production and the better conditions prevailing in the rubber industry towards the end of the year.

We estimate for 1923 a restricted crop of 785,000 lbs. The estates generally are reported to be in a satisfactory condition, and all works are up to date.

As mentioned in the report, we have sold our property in South India, as from April 1, 1923, for fully paid shares of the Malayalam Plantations, Limited.

The estate in Malaya, in which we hold a half-interest, has also been sold as from January 1, 1923, to the Perambang Rubber Estates, Limited, for fully paid shares.

Our interest in properties directly owned by this company is therefore now confined solely to Sumatra.

INCREASE OF CAPITAL.

We are putting before you to-day a proposal to increase the nominal capital of this company to £2,500,000. Your directors consider that they should be in a position to take advantage of any favourable opportunities which may present themselves of furthering the interests of the Trust, and, for this purpose, they think it is necessary that some unissued capital should be available.

TEA INDUSTRY.

Following our meeting in May last, tea prices declined for a month or two. The good markets had brought forward from certain districts a larger proportion of unattractive and stalky tea, but the fall in prices doubtless influenced planters to return to a more moderate plucking policy. This, combined with adverse climatic conditions and difficulties with labour, accounted for a subnormal output. A higher level of prices ensued, which continued until March of this year, when prices again started on a gradual decline, although they are still much higher than at this time last year.

The actual production from India, Ceylon, and the Dutch East Indies was about 583 million lbs, as compared with 510 million in 1921 and 643 million in 1920.

The consumption in the United Kingdom amounted to 412 million lbs, against 411 million in 1921 and 393 million in 1920. Consumption in the United Kingdom showed a satisfactory increase of 40 per cent. over the average for the years 1910-14.

Re-exports amounted to 42 million lbs, an increase of 20 per cent. over 1921. Up to April last, they showed a further increase of nearly 22 per cent. over the corresponding period of 1922.

The stock in bond in the United Kingdom at April 30th last amounted to 167½ million lbs, against 214½ million and 233 million respectively at the same dates in 1922 and 1921. It is anticipated that, after allowing for the increased stocks required by the increased consumption, they will be reduced at least to normal pre-war dimensions by the end of August.

With the present high prices, it is probable, if climatic and labour conditions are favourable, that we shall see a materially increased production this year, not only from the principal producing countries I have mentioned, but also from China, Japan, Formosa, and other smaller producing countries, which together exported about 96 million lbs. in 1922. Unless, therefore, there is a further considerable increase in consumption, supply may again, for a time, equal demand.

THE RUBBER INDUSTRY.

When I last addressed you the rubber industry was suffering from excessive stocks, increasing supplies, and low prices. To-day the excessive stocks are being quickly reduced, the supplies have been restricted, and the prices have been nearly doubled. This pleasing change has been brought about principally by legislative control of output in Ceylon and Malaya, an achievement for which the industry is deeply indebted to numerous individuals and organised bodies in this country and abroad. Our thanks are especially due to the committee representative of the rubber-growing interests of Malaya, which was known as the "Duncan Committee," to the Rubber Growers' Association, to the Government Committee in this country, and last, but not least, to Sir James Stevenson, the Right Hon. Mr. Winston Churchill, and the British and Colonial Governments concerned.

If you will permit me, however, I will utter a word of warning. The industry is only convalescent, not cured. Whilst the industry depends on Government restriction of part only of the sources of supply, it rests upon an artificial basis, and not upon the more healthy foundation of supply and demand. Our real hope lies in increase of demand, brought about by extension of the present uses and the discovery and development of new uses of our product. Not until, as a result of these, the demand equals the unrestricted supply at a profitable price will the industry rest upon a satisfactory commercial basis, nor will its position be considered sound by those who take the long and broad view of the matter. Personally, therefore, I think the recent set-back in price is a healthy one for the industry. It will hasten the tightening up of the provisions.

of the scheme and the prevention of the leakages and evasions. It has reminded us that the palliative of legislative restriction was necessary, because we were very sick, and we have only commenced upon what I hope may prove a short period of convalescence, but we are still only convalescent.

SUPPLY AND DEMAND.

The production of plantation rubber last year amounted to about 345,000 tons, and of wild rubber about 25,000 tons.

The estimated world's absorption amounted to approximately 375,000 tons, of which America accounted for 75 per cent. This was a total increase in absorption of 115,000 tons over the previous year, of which the American increase was 100,000 tons.

The exportable tonnage, and, therefore, to some extent the production this year, obviously depends upon the amount of restriction enforced, and that, again, depends upon the varying prices. If the average price for any of the periods of three months designated in the scheme is between 1s and 1s 3d London equivalent, and the exportable percentage during those three months is 65 or over, then the exportable percentage under the restrictive legislation will be reduced by 5 per cent. of the standard production allowed for the previous three months. If during such periods it exceeds 1s 3d, it will be increased by 5 per cent., or if it exceeds 1s 6d, it will be increased by 10 per cent.

Supposing for every one of such periods this year it exceeds 1s 3d but does not exceed 1s 6d, the available new supplies which will be exportable are estimated at 335,000 tons of plantation and 25,000 tons of wild rubber.

The total absorption is difficult to estimate, and I give figures with considerable hesitation. It will probably not amount to less than 400,000 tons, and will be the highest ever reached. It may considerably exceed even that figure. In this connection I may remind you motor-car registration in America increased in 1922 to the colossal figure of 12½ million, and it is estimated that not less than 3,000,000 new cars will be built this year—an estimate supported by the actual production up to the end of April. The total number of automobiles in use in the rest of the world is probably not far short of 3,000,000, and is steadily increasing. This increase is likely to be accelerated during the next few years, because motor transport is everywhere competing most successfully with horse transport, on the one hand, and railway transport, especially for short hauls, on the other.

IMPROVED FINANCIAL POSITION AND FUTURE POLICY.

If I may refer again for a moment to the Trust's domestic affairs, perhaps you will permit me to make a few remarks upon the financial position of the company and the present and future policy of the board.

You will no doubt have appreciated that from every point of view the financial position of the company has been much improved during the last two or three years.

With regard to the policy of the board, there is no doubt that in past years the company has suffered in revenue and in want of liquid resources, from having too large a proportion of its capital locked up in properties in process of planting or development. It is the policy of the board to avoid any repetition of this, and to continue to direct its energies towards the maintenance and improvement of the present favourable financial position of the company, the profit-earning capacity of its assets, and the rate of dividend which we are paying to-day.

The report and accounts were unanimously adopted, and the usual business transacted.

INDIA GENERAL NAVIGATION AND RAILWAY COMPANY, LIMITED.

SATISFACTORY YEAR—IMPROVED RESULTS.

The annual general meeting of the India General Navigation and Railway Company, Limited, was held, on the 30th ultimo, at Winchester House, Old Broad Street, London, Mr S. G. L. Eustace presiding.

The representative of the secretaries (Messrs Kilburn, Brown, and Co.) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, having referred to the great loss the company had sustained by the death of Colonel John Denny, said: The shareholders will have noticed that we have been most fortunate in obtaining the services of Mr Maurice Denny on the board. His appointment is subject to your confirmation to-day.

YEAR'S PROFIT.

With regard to the accounts, the actual profit on the year's working, after eliminating the credits for Indian and English tax refunds, is £3,083, which compares with a loss in 1921 of £58,100—an improvement of £61,183. In India Rs. 95,724 have been recovered for taxes paid on account of year 1920-21, and in London the system adopted of reserving for English taxation upon

the actual results of the year at the rate then ruling has resulted in a larger provision being built up than will now be required. Consequently, the amounts over provided have been retransferred to profit and loss account. Including these transfers, and the balance of £10,215 14s 4d brought in from the previous year, there is a balance of £44,680 12s 4d available for distribution, and our recommendations in regard to its disposal will, we trust, meet with your approval.

The balance-sheet, I think, calls for little comment, the only material alterations being the net increase of £249,566 in the property account and the reduction of £177,732 in the stocks and stores. These largely balance one another, and mean that materials for construction of vessels have been transferred from stores to their ultimate destination in the block account.

Your fleet has been maintained at a high level of efficiency. During the year we lost one flat (Chubwa), and we sold one old vessel which was built in 1851.

The additions during the year were four steamers, one launch, and six flats, aggregating 6,953 tons. On the other hand, we have, as mentioned before, lost one flat of 537 tons. In addition to the building, we have during the year repurchased from the Government three vessels which had been requisitioned for service in Mesopotamia. The building programme, initiated some years ago, is now practically completed. In this connection you may remember that when I last addressed you I mentioned that we had launched two of the largest steamers ever built in India. During the year both these vessels have been put into commission, and have proved to be excellent carriers and easily manoeuvred.

Although the jute crop last year was a small one, the carry-over from the previous year was substantial, resulting in a large increase in the carriage by your company as compared with the former year.

With regard to tea, the crop was larger than in the previous year, but owing to the increase in your fleet, the company experienced no difficulty in dealing with the shipments. The same remark also applies to coal and oil shipments.

Traffic on the Ganges was no doubt greatly assisted by the railway strike in the early part of the year.

As regards prospects. We understand that the jute carry-over from last year is very much smaller than usual, thereby adversely affecting our current earnings, but our latest information is that there is good reason to anticipate that this year's crop will turn out a bumper one.

By consistent endeavour, I am glad to say that large economies have been effected in the working of the company generally, which should be reflected in the results for the current year. These economies include a saving effected in the working of the fleet by grading the crews. Owing to certain measures which have been taken in hand, it is hoped to reduce pilferage on your vessels to a minimum, which should result in a corresponding elimination of claims against your company.

PROSPECTS.

You may recall that last year I ventured to predict that the company was on the highway to recovery. Although, perhaps, we are not as yet on the main road, we are, I think, approaching it, slowly, it is true, but perceptibly. From the accounts which we place before you, you will notice that there has been a gross improvement of £61,183—a very substantial amount, but at the same time insufficient for all the needs of your company. I, however, take heart from Lord Inchcape, when he tells us that there is nothing wrong with India, and therefore, fully in accord, venture to predict that, given good crops and tranquillity, we shall before long again earn the return on your capital which is due to the enterprise in which we are engaged. At the moment, however, traffic is dull, and consequently a number of your vessels are temporarily laid up.

I should like to add a good word to the staff in India, who have again, under conditions of much difficulty, carried out their duties in an energetic and satisfactory manner.

Sir Stephen Finney, C.I.E., seconded the resolution, which was unanimously carried.

CROSSES AND WINKWORTH CONSOLIDATED MILLS, GOOD RESULTS—NEW PROPERTIES.

The ordinary general meeting of Crosses and Winkworth Consolidated Mills, Limited, was held, on the 30th ultimo, at Bolton, Sir Edward Mackay Edgar, Bart. (chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said:—Your directors are able to submit a report of a far more agreeable character than last year's. We had then to disclose a loss of over £500,000. We now show a credit to profit and loss account of £424,147 for the current year, which will be dealt with as shown on the balance-sheet.

Since I had the honour of addressing you twelve months ago there have been very important developments in the history of your company, but before referring to what has been done in

that line I should like to touch on one or two items in the balance-sheet. Our stocks stand at £869,131 12s 9d. If you will turn to the directors' report you will see that this figure has been arrived at by taking all stocks at cost or market price, whichever was the lower. In other words, the valuation has been made on a most conservative basis.

BOARD'S SOUND FINANCIAL POLICY.

To a business audience I need not explain the significance of that; they will recognise it at once as a proof of sound financial policy.

It is in accordance with this same policy that no credit is taken in the balance-sheet for the surplus of Crosses and Heaton's over and above the debenture interest and sinking fund which this company has guaranteed. Nor is it in any way a departure from sound finance that the figure for depreciation which in the last balance-sheet showed at £250,000 in this one shows at £150,000. The strides that have been made in the last year in improving the efficiency of our plant have been so satisfactory that the managing directors unanimously agree that for this year an allowance of £150,000 for depreciation is more than ample.

The item appearing in the balance-sheet for March, 1922: reserve for contingencies, including taxation, £363,235—this amount is reduced in this year's balance-sheet to £125,000 to cover liability under the excess profits duty, the exact amount of which has not yet been agreed. All the other liabilities specially provided for in the account have been settled by payment or otherwise. This special reserve must not be confused with the share premium reserve account, which still figures in our present balance-sheet at £750,000.

From the inception of Crosses and Winkworth our policy has been one of progression and consolidation, with a maximum of internal technical efficiency and strict finance as its starting-point. We have acquired, as you know, several new properties. These acquisitions, or at any rate, the most important of them, have conformed to a general plan by which Crosses and Winkworth act as a parent company, owning the properties, controlling their business and financial operations, receiving their profits, and guaranteeing the interest and sinking fund on their debentures. With these new acquisitions we establish profit-earning machines, and at the same time lay the foundations of a future capital asset for the present concern. We are also able to effect—well, I do not want to exaggerate, so will say a very considerable saving in management and organisation.

I will cite Crosses and Heaton as an example of how the leasing system works out in practice.

RECENT ACQUISITIONS.

During the last few weeks we have acquired the share capital of John Bright and Brothers, Limited, and the same general scheme of finance has been followed in this case. From the purely business standpoint your board consider this as a very profitable investment. Even on the record of three of the leanest years the cotton trade has known, there is ample warrant for thinking we have made a most profitable deal in taking over this firm; and when conditions are more stable we confidently look for an even more handsome return on our outlay. The acquisition of John Bright and Brothers, Limited, greatly enlarges our sphere of interest in the textile industry, and, at the same time, provides a market on the spot for many of the products of Crosses and Winkworth and Crosses and Heaton.

Since the last meeting we have also acquired the mills of the North End Spinning Company, Limited, John Thomasson and Son, Limited, Merton Spinning Company, Limited, and the Duncan Doubling Company, Limited, and it needs no word from me to intimate to a Lancashire audience, especially in regard to the first two concerns, that their reputation as spinners of carded yarns ranks, in their own particular class, with that of Crosses and Winkworth and William Heaton and Sons, Limited, as spinners of super-combed and Sea Island yarns. Another fact of far-reaching bearing on the future of your company is that, after full discussion and much deliberation, your board has decided to build a new mill for spinning fine Egyptian yarns. This mill will have approximately 116,000 spindles, and owing to the financial arrangements we have made, with the details of which I will not worry you, this important addition to our plant will not involve us in an annual charge of more than £16,000, inclusive of sinking fund, and at the end of approximately 35 years or so this, too, will have become the unencumbered property of the parent company. This, again, is a showing which I venture to hope you will not consider unsatisfactory.

I am confident that ours is a sound method, that it is compatible with the maintenance of the higher state of technical efficiency, and that it results in a powerful welding and concentration of efforts and interests from top to bottom of the organisation.

I beg to move that the directors' report, auditors' report, and balance-sheet be adopted.

Mr John Heaton seconded the motion, and the report and balance-sheet were adopted.

LONDON ASIATIC RUBBER AND PRODUCE COMPANY, LIMITED.

STRONG FINANCIAL POSITION.

The fifteenth ordinary general meeting of the London Asiatic Rubber and Produce Company, Limited, was held, on the 28th ult., in the Council Room of the Rubber Growers' Association (Incorporated), 2-4, Idol Lane, London, Mr H. J. Welch (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—Our issued capital remains the same as last year. The reserve account has been increased by the transfer of £1,052, which was standing to the credit of taxation reserve, and is not now required. As mentioned in the directors' report, we propose to further increase our reserve account by £15,972, which will bring it up to £150,000. On the other side of the balance-sheet we have cost and development of properties, £475,194, showing an increase of over £32,000 since last year. £21,556 of this represents the value of the Batang Benar property, and the balance is the usual upkeep and other expenditure on immature areas for the year. Buildings and machinery and plant show a net reduction of over £2,000. We recommend to-day the payment of a dividend of 10 per cent., which will leave us with a carry forward of £53,000.

The crop was again heavily restricted. Cost of production works out at 8.47d per pound f.o.b., and as the expenditure on the upkeep of all our mature areas not tapped represents 1½d per pound, and is included in this cost, the reduction in cost is a very creditable performance on the part of our estate managers, visiting and local agents, upon which they deserve our congratulations. The sale price, at 11.18d per pound net, may be considered good, when it is borne in mind that during part of the year rubber was selling as low as 7d per pound gross.

NEW PROPERTIES.

The directors' report gives particulars of the new properties—Batang Benar and Tangkah estates—which we have acquired or agreed to acquire. We agreed to purchase Batang Benar estate for £21,725, payable in fully-paid shares. At par the cost works out at £21 15s per acre. The price was settled before the adoption of the Government restriction scheme, or we should not have been able to make the purchase on such favourable terms. It is situated about 15 miles by road from Semenyih estate. The age of the rubber of the greater portion of the planted area is between 11 and 13 years, and we were advised by our visiting agent, Mr F. G. Souter, that acre for acre the property is of equal value to the average of the London Asiatic Company's rubber. Mr Souter visited it again in February last, and reported that the estate was clean and in good order generally.

TANGKAH ESTATE.

The other property which we have agreed to acquire, subject to the approval of its shareholders, is the Tangkah Estate, belonging to Tangkah Rubber Estate, Limited, of which company I am chairman. Its improvement in every respect in the last year or two, under its able manager, Mr Cardwell, has been very great. The terms upon which it is being acquired are, I think, fair to both sides, for while the London Asiatic Company get a property which is in good order and well managed at a very moderate price, the Tangkah shareholders get a more marketable share, and carrying at least equally good dividend prospects. Your directors are satisfied that both purchases will prove advantageous to this company. With these two estates, we shall have a total acreage of 19,626 acres, of which 10,500 will be under rubber. After deducting from our capital issued and to be issued for our

KANSALLIS-OSAKE-PANKKI

(National Joint Stock Bank).

new estates, the excess of our liquid assets over liabilities—including the dividend to be paid on June 14th—the capitalisation of our company as at January 1st last will represent less than £33 per acre, disregarding the value of the reserve land. I feel sure you will consider that a very satisfactory state of affairs.

THE FUTURE.

With regard to the current year, we expect to harvest a crop of about 2,200,000 lbs, subject to the working of the restriction scheme. Generally, I think this company can face the future with equanimity. Our net cost per acre is very low, and much less than the replacement cost of our estates and equipment. Our properties are at least of average quality. Our cost of production is reasonably low. Our financial position is strong. Further, there is now no reason to doubt that legislative restriction will effect its purpose of successfully carrying the rubber-producing industry through the remainder of the period during which unrestricted supply exceeds the demand, and until once again it rests upon a healthy economic foundation and freed from Government restriction.

Mr Mence Wilkinson seconded the resolution, which was carried unanimously.

TANGKAH RUBBER ESTATE, LIMITED.

At an extraordinary general meeting of Tangkah Rubber Estate, Limited, held on the 28th ult., Mr H. J. Welch presiding, resolutions agreeing to the sale of the company's property, &c., to the London Asiatic Rubber and Produce Company, Limited, for fully paid shares in that company, and for liquidation, were unanimously adopted.

WHITEHALL ELECTRIC INVESTMENTS, LIMITED.

SATISFACTORY POSITION—EXCELLENT PROSPECTS.

The first ordinary general meeting of Whitehall Electric Investments, Limited, was held, on the 1st instant, at Winchester House, Old Broad Street, London, the Hon. Clive Pearson (chairman of the company) presiding.

The secretary (Mr J. Lister Walsh) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen.—The income from investments and interest receivable of £538,000 reflects the results which the companies in Chile and Mexico attained during the year 1922. I will deal later with the individual companies, and shall refer to growing earnings now taking effect as a result of the heavy capital expenditures incurred in improvements over the last two years. I would point out, however, that the consequent benefit to your company cannot show itself immediately, and that our income will not show any very material increase in the current year, it being clear that an interval occurs before the earnings of an operating company produce a corresponding benefit in the profit and loss account of a shareholding company.

ALLOCATIONS.

After providing for debenture interest, income-tax, and corporation profits tax, there is available £318,786, of which the preference share dividend takes £112,500. Of the balance of £206,286, rather over one-half has been allocated to write off the whole of the preliminary expenses and in reduction of the discount on the issue of debenture stock. The discount on issue of debenture stock is a considerable item, representing, in fact, not only the discount of the debentures, but also the expenses of issue both of the debentures and of the preference shares. The heavy preliminary expenses consist almost entirely of capital stamp duties. These allocations, you will agree, are wisely conservative, and your directors have pleasure in recommending that the balance of £100,000 be applied in payment of a 2 per cent. dividend upon the ordinary share capital.

The balance-sheet does not, I think, call for comment beyond referring to the large amount of cash. This is a satisfactory position, and will prove useful in connection with various opportunities for investment, which your directors are considering.

I propose now to tell you briefly of the doings and prospects of the undertakings in which you are interested, and I will speak first of your Chilean interest—the Compania Chilena de Electricidad. Operating results have not so far benefited from the company's extensions, and do not call for special comment. The progressive policy was adopted by the company of extending its sphere, and of taking care in advance of the latent demand of a populous and active territory; consequently, and since the territory was developed electrically only to a very partial degree, the company's programme of extensions has been a very comprehensive one, and has included a new hydro-electric plant, transmission lines, receiving stations and sub-stations, and the remodelling and extending of the distribution system of Santiago. The Chilena

Company has thus reached the point where it should immediately commence to reap the benefit from the large construction work it has undertaken.

MEXICAN INTERESTS.

Turning to your Mexican interests, I am glad to say that the companies have in the aggregate shown good results during the year 1922, and the outlook for the current year is satisfactory. The Puebla Tramway Light and Power Company continues to make progress, and has recently entered into a provisional contract with the Mexican Railway for the supply of power in connection with the electrification of a section of their railway. This necessitates an extension of the company's Tuxpango plant. The operating results of the Compania Electrica de Tampico for the year 1922, although not equal to those for the record year of 1921, have realised expectations. La Barra Tramway Concession, to which reference was made at the statutory meeting, has been duly transferred. The results of the Vera Cruz Electric Light, Power and Traction Company for the year 1922 have not been so satisfactory, due largely to unsettled conditions in the State of Vera Cruz, which resulted in a marked falling off in tramway receipts. The small Orizaba and Cordoba Companies have shown normal progress.

We are thankful to our colleague, Mr Vincent Yorke, who was recently in Mexico, for having visited your various Mexican interests. It will be known to you that the agreement between the Mexican Government and the International Bankers' Committee has been duly signed, and is a step forward in the re-establishment of the country's prosperity.

In conclusion, it may be said with confidence that the position of your company is satisfactory, and that its prospects are excellent.

I now have pleasure in formally proposing that the report of the directors, together with the accounts of the company for the year ended March 31, 1923, be and are hereby received and adopted.

Mr Vincent W. Yorke seconded the motion, which was carried unanimously.

LONELY REEF GOLD MINING COMPANY, LIMITED.

ORE RESERVES—DECREASED WORKING COSTS.

The thirteenth ordinary general meeting of the Lonely Reef Gold Mining Company, Limited, was held, on the 30th ultimo, at Cannon Street Hotel, Cannon Street, London, Mr. C. F. Rowsell presiding.

The Chairman, in moving the adoption of the report and accounts, first explained the change which had been made in the control of the company by transferring its management to Johannesburg. Dealing with the result of the year's working, the Chairman said that £72,479 had been brought into the accounts from the previous year, as against £68,729, and the profit for the twelve months had been £93,851, as against £113,720. The fall in profit was largely due to the reduced selling price of the gold, as well as to the reduction in the grade of ore sent to the mill. Two dividends of 15 per cent. each, amounting to £70,631, had been paid during the year, and he would point out that £33,552—a very enormous proportion of the profits—had been paid for British and Rhodesian income-tax. A considerable amount had again to be provided for capital expenditure, and in view of these facts the directors had decided to issue to the shareholders 27,100 shares, with the proceeds of which they would be in a position to free the profits and distribute them amongst the shareholders.

Dealing with the position at the mine, he said that the ore reserves on December 31st last were 192,183 tons, of an average value of 16.27 dwts, showing a decrease of 12,000 tons and 1.83 dwts. The quarterly report to March 31st last showed an increase both in quantity and value. The quarterly report also disclosed a very satisfactory increase in value in the drive south at the 25th level, which had only just reached the points where higher value ore was expected. Development on the 26th level had only just commenced, and he had no doubt when next he had the pleasure of addressing the shareholders, he would be able to give satisfactory information as to both those levels.

With reference to the question of costs, it was fortunate that the board adopted Mr Kingston's proposals for the introduction of suction gas plant to economise in fuel, because, but for this they would have been running up very much higher costs, as every day fuel was getting more and more scarce and expensive, and also more difficult to procure. Mr Kingston stated in his report that no less an amount than £38,955 was saved on fuel by this plant in 1921.

In conclusion, the Chairman said they had to date produced 663,156 tons of ore, had recovered £2,707,811 of gold, and paid dividends equivalent to 365 per cent. of the issued capital.

The report and accounts were unanimously adopted.

CONSOLIDATED MINES SELECTION COMPANY, LIMITED.

SALE OF SOUTH AFRICAN ASSETS.

The twenty-seventh ordinary general meeting of the Consolidated Mines Selection Company, Limited, was held, on the 29th ultimo, at Winchester House, London.

Mr Walter McDermott (chairman of the company) presided, and, in moving the adoption of the report and accounts, said that since their last annual meeting there had been an important change in the holdings and obligations of the company, resulting from the sale of their South African assets to the Anglo-American Corporation. The result of that sale, and the terms of the agreement by which it was effected, had been to convert all their varied interests in the individual mines of South Africa into one large holding of the shares of the Anglo-American Corporation. The change in the form of their interests in South African mining did not affect their position as an exploration company elsewhere; but it had relieved them of the heavy expense of maintaining an important organisation in Johannesburg, as well as reducing their London expenses. A further result had been to relieve them of some serious contingent liabilities they had undertaken, in the future financing of the mines they formerly managed. The broad consequences of the transaction were, therefore, that while they were still largely interested in the future of the several gold mines they capitalised and worked in past years, they were also largely interested in diamond mining, and they were in a sound financial position which permitted of resumption of dividends, while their expenses of operation were greatly reduced. Having reviewed the accounts, the chairman went on to give details of their various holdings in South Africa and elsewhere. In any anticipation of the results of the present year, he observed, there were three elements of chief importance to be taken into consideration. These were: first, the probable earnings of the gold mines on which they had always depended so largely; second, the market for diamonds; and third, the policy of the Anglo-American Corporation in the declaration of dividends from profit earned. As regards the gold-mining income, they had reason to expect continued good results in view of developments, and now that the cost of working had been reduced. Of the diamond market he could not speak with any authority, but among their directors were some who had had practical experience over many years, and the opinion to which they attached importance was that the market promised well for the absorption of diamonds enough to insure satisfactory earnings. On the third element he did not see any reason for doubting that the board of the corporation would consider the desire of shareholders to receive dividends in reasonable relation to earnings.

The report was adopted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel Street, Strand, London, W.C. 2.

AUTOMATIC TELEPHONE.—Directors again regret that it is not possible to pay dividend on ordinary shares.

FORESTAL LAND, TIMBER, AND RAILWAYS.—The board have decided not to recommend the payment of a dividend on the ordinary shares.

INTERNATIONAL AUTOMATIC TELEPHONE.—Directors regret that profits are not sufficient to enable dividend to be paid on ordinary and deferred shares.

NORTH LONSDALE IRON AND STEEL CO., LIMITED, announce that owing to the very uncertain state of the iron trade no interim dividend will be paid for the half-year to April 30, 1923.

SOUTH AUSTRALIAN COMPANY.—The directors having decided to make a distribution of assets of £10 per share to those shareholders who are registered in the company's books on May 31, 1923, in accordance with the resolution passed at the special general meeting held on July 31, 1922, and duly confirmed on August 16th that sum will be payable on June 11, 1923.

† Tax free.

Steamers of Rosafe, 62½ lbs, June 15th-July 5th, sold at 46s 1½d, part cargoes of choice white Karachi afloat at 48s 6d to France, and 47s 6d U.K. A full cargo of ditto May-June to U.K. at 47s, and Rosafe 62½ lbs shipment by June 20th at 47s to France. The decline was most noticeable in Indian descriptions owing to a larger estimated surplus being available for export. Flour moves off quietly at about late rates, though prices are weak, owing to the wheat position. London standard straight run quoted at 41s, patents 43s to 44s, town households 39s per sack delivered in London area. All English country straights 33s to 35s per sack delivered to London stations. Imported dull, and values largely nominal. Manitoba patents quoted at 37s to 41s, Minneapolis good patents 40s 6d, and Australian 37s to 38s per 280 lbs ex store. Millers' offals steady. Broad bran quoted at 6s 9d, ordinary ditto 5s 6d, middlings 7s 6d, bags included ex mill. Light oats 6s 3d, powdered oat husks 5s 9d, feed oatmeal 7s 9d, ground oats 13s 9d, all per cwt free on rail. Barley: English steady at 8s-11s 6d, as to sample, with malting descriptions ruling from 10s-12s per 112 lbs free on rail. Imported dull and weak. Californian 44s 6d-46s 6d, Australian chevalier 42s-48s, New Zealand 33s-47s as to quality, all per 448 lbs landed. Persian 27s, Plate 29s, Danubian 29s, American malting 48 lbs 28s 6d, No. 4 Canadian Western 28s 6d, Karachi 28s 3d, all landed per 400 lbs. Maize: Quiet and tendency easier. Plate landed 30s, No. 2 yellow American ditto 38s 3d, East African ex ship 36s 9d, landed 37s 6d, all per 480 lbs. On c.i.f. terms a cargo of J.A. Plata August-September sold 34s 9d. Oats: English quiet at 8s 2d-10s 6d per 112 lbs free on rail as to quality. Imported dull, and prices continue in buyers' favour. Plate f.a.q. ex ship 22s 9d, ditto landed 24s, No. 2 Canadian Western ex ship 27s 3d, ditto landed 28s 3d, No. 3 ditto 26s 9d landed, No. 2 Canadian feed ex ship 25s, landed 25s 6d, New Zealand A grade 38s, B grade 37s, both landed all per 320 lbs. Oatmeal: Steady, with a fair business passing. London-made all cuts quoted at 18s 6d, rolled oats also whole groats 18s 6d, flaked oats 21s ex mill, ordinary Scottish oatmeal 19s 6d-20s 6d, American all cuts 17s-17s 6d per cwt.

ALEXANDERS DISCOUNT Co., Ltd.,

24, LOMBARD STREET, E.C.3.

Telephones: 1832 & 225 Avenue. Telegrams: "Alexanders, Thread-London."

CAPITAL AUTHORISED £1,250,000 CAPITAL PAID UP £800,000
CAPITAL SUBSCRIBED £1,100,000 RESERVE FUND - £400,000

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, 1921-22, 1920-21, and 1919-20:-

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated May 31st, is as follows:—Pig-iron: The position of the pig-iron market is unsatisfactory. The outlook is not encouraging. Makers are receiving no orders for forward, and would be prepared to shade current prices considerably for genuine business. No. 3 Cleveland G.M.B. is now quoted 120s per ton and East Coast mixed numbers hematite holding off in the expectation of some reduction, as competition in steel ship angles, £10; iron bars, £12; steel rails, £10 to 10s. Iron ore: Supplies of ore are good, but hardly any inquiry for further quantities. Best Rubio is nominally 24s 6d per ton, c.i.f. Tees.

Our Glasgow correspondent writes:—Business in iron and steel this week has been quiet. Beardmore is fairly busy on both boiler and ship plates, and the company is actively employed on castings and forgings of comparatively heavy tonnage. Values are a little unsettled, but while talk of reduction is common, no material concessions have so far been noted, and they may be called at the moment (for home transactions) as £10 5s for ship plates, £10 for sections, and £13 for boiler plates. Steel sheets are steady at £12 10s for 3 and 1½-in. and firm at £19 10s for 24 g.b.g.—f.o.b. Glasgow. Sir William Arrol's firm have secured a nice line for

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There is very little change in general conditions. Everyone complains of the lack of new business, but although reports from Australia and New Zealand indicate that the wool position is still sound, the firmness of the raw material does not seem to have any effect in the consuming centres. No doubt everybody is now waiting for the position to be tested in this country, and most members of the trade are hoping that the auctions to be held at Hull next week and at Liverpool the following week will afford some indication of the true position, and give a lead to buyers of semi and fully-manufactured goods. Meanwhile, however, it is practically impossible to move any weight of tops or yarns; indeed, business is of so restricted and retail a character that it is difficult to say what could be done by a keen buyer. Quotations for tops and yarns are nominal, but practically all qualities have eased further during the week, and it is now essentially a buyers' market. The trouble is that prospective buyers seem quite definitely opposed to doing anything in the nature of forward buying. Some topmakers are in a comparatively safe position, and can afford to ignore the present tendency, but several have been forced to accept low prices on account of financial stringency. Spinners are in a worse position than topmakers, and in several cases the orders in hand are rapidly vanishing. This is undoubtedly the cause of the very low prices mentioned in some quarters. Certain firms, being anxious to keep machinery employed, have accepted business at prices out of all proportion to the cost of production. Short time is becoming more general in this section, and the same remark applies to the sorting and combing sections. The piece trade is quietly steady.

Our Cardiff correspondent writes:—There has been a marked change in the undertone of the Cardiff coal market this week. Since February prices have been moving steadily upwards. There was a brief period in the early part of May, when there were signs of a reaction, but with the approach of the Whitsun holidays the market regained its strength, and under the pressure of a great scarcity of coal last week quotations for prompt supplies were raised up to the maximum figures touched this year. This week there has been a perceptible weakening of the whole steam coal position. Outputs have been restored to their pre-holiday levels, but notwithstanding the exceptional extent to which the collieries are, in the majority of cases, sold under contracts, the market has not been able to absorb all the free coal that has been offering, and the glut of tonnage which was so normal a feature of dock conditions until quite recently has disappeared, and has been succeeded by shipping conditions of comparative scarcity. Quotations for all classes of coal are from 1s to 3s 6d per ton less than those quoted at the beginning of the week, and 5s per ton in the case of best large steam coals compared with the prices quoted for spot parcels immediately after the holidays. A contributory cause of this change in the position has been the greater relative weakness of the prices at Newcastle, where the Belgian strikes and the abatement in the demand from Germany had led to a slump. South Wales coals, however, have been less dependent than those shipped from the East Coast on the Continental demand, but all the British export prices react on each other, and another "bear" influence has been a revival in the export of American coals to Europe. Anthracite coals, however, are rarely affected by price movements in steam coals, and their strength this week has not only been maintained, but further accentuated.

The approximate current quotations are as follows:—Best Admiralties, 40s to 42s 6d; seconds, 38s to 40s; best dries, 38s to 39s; best bunker smalls, 30s to 32s 6d; ordinary cargo smalls, 28s 6d to 30s; anthracite big vein, 60s to 51s; stove nuts, 55s to 56s; coke for export, 65s to 70s; inland blast furnace coke at ovens, 35s to 40s; patent fuel, 40s to 42s 6d; pit wood, ex ship, 27s 6d to 28s.

Conditions in the iron and steel trade are also a shade easier. Tin plates are ruling at about 23s 3d to 23s 6d per basis box, and steel bars at £9 2s 6d, but the minima prices remained unchanged, and the stabilisation agreement has been renewed for a further period of three months.

CUMBERLAND IRON.

(BY OUR WORKINGTON CORRESPONDENT.)

The question of prices in the iron trade is receiving much anxious attention, the feeling being that consumers who may be holding off for a depreciation of values are backing a loser; and Bessemer mixed numbers, therefore, remain firm at £6 12s 6d per ton delivered at Glasgow and Sheffield, and at £6 15s 6d export. There is a steady demand for low phosphorus iron at prices varying according to analysis by high-class steel manufacturers in the Midlands. The "squeeze" in ferro-manganese continues, and this metal stands at £18 per ton delivered at home works and at £20 per ton for export, while spiegel is £10 and £9 10s per ton respectively.

In the steel trade things have not changed much, and the outlook is still doubtful. Rail orders are difficult to obtain, and though the mills at Workington are working again, there is nothing but intermittent employment in prospect this summer. The axle and tyre trade will alone offer uninterrupted operations. Heavy sections of rails are quoted at £10, lighter sections £11 10s to £12 per ton, and billets £10 to £11 per ton.

There is a full demand for hematite iron ore, and practically all the pits in West Cumberland are raising normal outputs. Scotland and the East Coast are taking small parcels of selected ores, but most of the production is going to the local furnaces. Best kinds of ore command 26s to 28s per ton, and ordinary sorts from 22s 6d to 24s 6d per ton.

Irish requirements and local industrial needs are a good deal larger than the coal trade can satisfy. Best round for export is 27s 6d, house nuts 27s, and washed nuts 24s per ton. Best house coal in the local landsale market is 38s 2d per ton at pit. Best steam is 30s, and washed steam 20s per ton delivered.

All the coke is now being sent to the furnaces in this district at 25s to 30s per ton, according to carbon content.

By-products are brisk, but there has been a slump in pitch, and creosote is a little easier.

MANCHESTER, May 31.

Since a week ago prices in the market have tended to harden, and sellers of yarn and cloth have reported an increased inquiry. Although a large part of the demand has been at impracticable rates, the turnover shows some improvement. In the piece goods section, the most promising outlet at the moment is China, the demand being on a large scale. Despite the fact that many offers have been unworkable, a more encouraging turnover has taken place in grey and white shirtings and fancies, and a considerable business is pending. Operations for India have been irregular, and light bleaching descriptions have attracted more attention than grey staples. Not much has been done for the Near Eastern and South American markets, but fancies have been in active request for the United States. The prospects for manufacturers seem to be rather brighter. In American and Egyptian yarns trade has been on freer lines, and rates are stiffer.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

The easier tone in the markets for both seed and oil which has characterised them for some little time tends to become accentuated, and one searches in vain for indications of improvement. A period of unusual slackness even for this part of the year has apparently arrived, contributed to no doubt by the cloud of depression hanging over the consuming industries and the still unsettled outlook in Europe. Home requirements of vegetable oils are already well covered by the imports of past few months—in fact, figures would go to show that unless larger exports are anticipated they have been liberally met. In the first four months of the year imports of refined and unrefined (less re-exports) were 29,408 tons, and of oilseeds and nuts and kernels (reduced to their oil equivalents) 190,760 tons—together 220,258 tons of oil. Exports of oil manufactured or refined in the United Kingdom in the same period were 37,867 tons, which deducted from the above gives a total of 182,391 tons left to meet home requirements, a figure much above the normal. The quantity remaining for home requirements in the past two years was 430,000 tons per annum, of between 35,000 and 36,000 tons per month, against 45,000 tons odd in each of the past four.

Though there has been a slightly better home demand linseed oil has in the past day or two suffered a sharp setback to under £40 at Hull on Thursday, due to speculators realising. The outlook for forward positions is not too promising, as with about 700,000 tons Plate and Indian seed remaining to be shipped there would appear in present circumstances to be sufficient to meet world demands to the end of the year. Prices for shipment have declined on the week, Plate offering to Hull at £19 10s, April-May, and £18 15s May-June, and Calcutta to London at £19 10s, April-May.

Cotton oils have been neglected, and values have fallen £37 10s for crude Egyptian, and £40 for soapmakers' grade of refined. Seed is easy, and £11 2s 6d has been accepted for Sakellaris, afloat, and June. Other oils are quiet, and values inclined lower.

CHEMICALS.

The report of Sir S. W. Royle and Co., Limited, of Manchester, dated May 30th, states that during May business in the home market has been only moderate, and Lancashire trade in particular has been affected by the Whitsuntide holidays. The export demand continues fair, but quantities are mostly small. Prices in some cases have eased, but on the whole values are well maintained. The price of sulphate of copper is a little lower, and a good business has been done for home consumption. Green copperas has been in better request and has realised higher values. There is no change in the position of acetates of lime, supplies being still short, and acetic acid also is scarce with prices well maintained. The demand for acetates of lead and soda has fallen away somewhat, although stocks are not large. Nitrate of lead continues to sell freely. The inquiry for carbonate and caustic potash has lessened, and values are slightly lower, though stocks are only moderate. Trade in Montreal potashes is only nominal. The demand for yellow prussiates of potash and soda is small, and, with pressure to sell stocks, prices are weaker. White powdered arsenic continues in short supply for near delivery, but, for shipment ahead, foreign makes are offering at lower rates. Tartaric acid has ruled firm with the clearance of second-hand parcels. Cream of tartar is being held for better prices, but stocks are ample for current needs. Citric acid is firmly held, although the demand has not been so active. Bichromates have been selling well, but values are unchanged. Chlorates of potash and soda remain dull, but there has been a better call for nitrite of soda. The price for boric acid has been reduced £5 per ton, but borax is unchanged. Oxalic acid is in only small demand. There is little change to report in the tar products market. Benzoles and toluoles remain steady. Solvent naphtha is without much inquiry, and prices, if anything, are lower. The demand for creosote has fallen away, and values are showing a downward tendency, consumers being reluctant to buy forward supplies in anticipation of still further drop in prices. The call for crude carbolic acid is quieter, and lower figures are being quoted, but crystals have been selling better.

Deposits are received for fixed periods on terms which may be ascertained on application.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

There was a weaker tone to the hide market at the Bermondsey auctions on Thursday, and a good deal of the stock offered was withdrawn. Best ox made from 7½d to 9½d, and showed, as compared with last week's prices, declines of ½d to ¾d per lb. Seconds, when sold, made from 7½d to 8d, and cows, best, 7½d. Kips dropped ½d in two classes, and practically all the calf were unsold, with one or two exceptions. Probably dealers are buying up privately, either for export or to lay down skins under salt, in view of autumn demand, when prices will be higher. Wools sold from 5s 6d to 12s 6d, and hogs from 6s to 14s 6d per skin. In spite of dull trade in leather, tanners have shown more interest in foreign hides. Latest cables from New York report the Chicago market as weak, with best heavy packers now selling at 18c.

The turnover in sole leather is still not up to expectations, although consumers are buying in small lots as required. Speculation seems a thing of the past, and even concessions have little effect. Shoe manufacturers do not seem able to gauge the position, and consequently are content with actual wants. The position, however, is very firm, as tanners consider prices have touched bottom. The main demand is for bends, round about 2s per lb, although repairers have been taking higher-priced bends of late. Upper leathers are moving off rather better, with prices firm. Imports of Continental chrome leather are on a more moderate scale, and one does not hear quite so much of German dumped stock of late. Glacé kid in colours sells well, but suede leather seems to have gone out of favour to some extent.

The Whitsun trade in boots and shoes had very little effect on the trade, and orders are scarce. Manufacturers, however, view the outlook with optimism, as a spell of fine weather would at once make itself felt on the demand for summer shoes.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, June 1.

A quiet condition of affairs again characterised most markets, demand for both manufactured goods and raw materials showing no appreciable improvement in most directions.

SUGAR.—With a steady inquiry for spot parcels of refined, business was on a moderate scale at full recent quotations, but later fell away, and rates receded. Of British, Messrs Tate and Lyle's cubes quoted 69s 9d to 70s 9d; crushed, 67s 6d; granulated, fine and coarse grain, 66s 1½d; No. 2, also London, 65s 7½d; ditto, July, 65s 6d; August, 64s 9d; and September, 63s 9d. Yellow crystals, spot, 60s 1½d; pieces, yellow to fine white, 55s to 61s. American granulated, spot, sold, 64s 9d to 65s and 64s; May, steamer, quoted 37s; June, 37s, c.f. and i., London. Dutch granulated, spot, sold, 64s 9d to 65s and 64s; Czecho-Slovakian, ditto, at 65s to 64s. Crystallised West India in limited supply, and quoted 65s. White Java, spot, sold, 61s 6d to 62s for medium quality; May-June steamer, 32s 6d to 31s 10½d; June-July, 30s 6d to 29s 9d; July-August, 29s 6d to 29s, c.f. and i. terms, London. Belgian granulated, October-December, 26s 6d, f.o.b., Antwerp. J. Dutch, prompt, quoted, 37s, f.o.b., Rotterdam. Cuban basis, 96 per cent., June steamer, 31s 9d; Brazilian, basis 80 per cent., June, 19s, c.f. and i., U.K. Cane, jaggery, July-August, quoted, 18s, c.f. and i., London. Terminal market unsettled and easier, with moderate dealings. June delivery, sold, 35s 6d; July, 35s 6d; August, 35s to 32s 4½d and 33s 3d; October, 30s 4½d to 29s 3d; December, 27s 9d to 26s and 26s 4½d. Cuban stocks stand at 709,000 tons, against 1,043,500 tons at corresponding period last year.

COFFEE.—Spot market disclosed some irregularity. Fair absorption took place on behalf of the home trade, but there is no revival in export demand. Of East India, bold Mysore, sold, 102s to 109s; Costa Rica, bold, 107s 6d to 132s; Nairobi, 89s 6d to 95s; bold Vera Paz, 113s 6d. Future delivery market dull, and general position nominal.

COCOA.—Only retail transactions occurred this week at about late rates regarding spot parcels. Accra, for shipment, June-July, sold, 31s 6d, f.o.b. terms, for F/F quality.

TEA.—Some 38,200 packages Indian were submitted to auction during the week, and elicited fair competition. All the finer and tippier descriptions were readily taken at a full range, while in comparatively small supply, but low medium, also common declined ½d to ¾d per lb, as the bulk of offerings consisted of such. 30,370 packages Ceylon attracted fair support. Finest liquoring parcels cleared steadily, but undergrades receded ½d per lb. Java and Sumatra quiet and generally easier.

RICE.—Market still very quiet, but sellers adhere to previous asking prices. Two Stars Rangoon, afloat, 13s 4½d, c.f. and i. Rangoon beans, spot, 10s cwt. Japanese peas, spot, 22s.

SPICE.—Only retail trading takes place in pepper on about former terms. Fair black Singapore, spot, 4½d; May-July, 4d; Aleppy, spot, 4½d; Tellicherry, 4½d; white Singapore, spot, 6d; Muniok, 6½d; May-July value, 6½d. Cloves steady, quiet. Zanzibar, spot, 11½d; May-July, 11½d. Tapioca very quiet. Fair flake Singapore, spot, sellers, 3½d; fine Java, sold, 4½d per lb; Singapore, May-June, Havre, quoted 25s; fair Penang seed pearl, spot, held for 31s; sago flour, May-July, quoted 13s 3d. Desiccated coconut slow. Fine cut, spot, sold, 45s; medium held for 47s 6d; halves, May-June, 41s to 40s paid; June-July, 40s cwt. Ginger steady, but general trade slow.

JUTE.—Continued in quiet support at barely steady rates, and, according to cables received, a similar state of affairs prevailed in the Calcutta market. First grade, May-June, continent, sold, £25 15s, £26, and £25 10s; new crop, August-September, £25 15s, £26 5s, and £26; September-October, £25 7s 6d, £25 15s, and £25 10s. Hessians quiet. 10 oz, spot, sellers, 27s; ditto, June-July, 26s 6d; 8 oz, spot, 23s; June-July, 21s, 100 yds. A twills, spot, 80s; June-July, 76s; B, spot, 72s and 64s 9d respectively; salts, June-July, 59s; sugars, spot, 81s, 100 bags.

IRVING BANK—COLUMBIA TRUST COMPANY

New York City

OFFERS to Banks, Bankers and Merchants a complete service covering every phase of export and import transactions with the United States.

The Irving-Columbia buys and sells foreign exchange—arranges export and import credits—makes collections—offers counsel on American markets—provides credit information on American firms.

The Irving-Columbia is also equipped to perform all standard trust and fiscal services required by corporations. The appointment as trustee of the Irving Bank-Columbia Trust Company, with its capital and surplus of \$28,000,000, and resources in excess of a third of a billion dollars, gives investors the assurance they demand.

MEMBER FEDERAL RESERVE SYSTEM

The Economist,

WEEKLY COMMERCIAL TIMES,

Bankers' Gazette and Railway Monitor:
A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

Vol. XXVI.

SATURDAY, JUNE 9, 1923.

No. 4163.

HEMP quite a featureless market, and general situation nominal at the moment owing to lack of sufficient support. Certain pressure to sell arriving parcels of Manila exercises a baneful influence. J grade, May-July, sellers, £31 10s; K and L, £29 10s; M, £28 10s, ton. New Zealand not mentioned. African sisal quiet, unaltered.

SHELLAC.—Market steady. T.N., spot, 275s; August, 260s; October, 250s cwt.

GAMBIE.—Block, May-June, sellers, 35s cwt, c.f. and i.

COFFEE.—Business was on a moderate scale, and with sellers well to the fore prices disclosed a depreciation. F.M.S. Straits, March-May, Rotterdam, sold, £27 12s 6d to £27; ditto, April-June, £27 2s 6d to £26 15s; May-July, £26 17s 6d to £26 7s 6d and £26 10s. Ceylon, May-June, quoted £28 5s; Java, April-June, £27 1s 3d; April-June, Indies, March-May, sold, £27 2s 6d to £27 1s 3d; April-June, £26 16s 3d, £27, and £26 7s 6d; Cebu, ditto, quoted £26; and South Sea Islands, June-July, £25 15s. Palm kernels, June-August, Liverpool, sold, £18 12s 6d to £18 15s.

ESSENTIALS.—Menthol, spot, 33s; Japanese peppermint oil, 6s 9d paid; aniseed, spot, sellers, 1s 11d; refined slab camphor, 3s 7d; crude, 3s 14d lb. Japanese wax, spot, 75s cwt.

OILSEEDS.—Linseed quiet, and prices easier. Bold Bombay, May, sold, £20 5s; small Bombay, ditto, sellers, £20; Calcutta, afloat, £20 5s; and May-June, sold, £20 to £19 5s. Plate, afloat, £19; loading, £19; May-June, £18 15s; June-July, £18 12s 6d. Rape-seed easier. Toria, May-June, £17; real bold Ferozepore, May-June, £15 15s; Jamba, May-June, £12. Cottonseed easier. Egyptian black, June, £11 17s 6d; and white, £11 2s 6d, paid to Hull. Bombay, May-June, £9 12s 6d. Gingly-seed quiet. Large Bombay, May-June, Continent, sellers, £24. Chinese, ditto, £24 to Continent, and £25, Italy. Ground-nuts dull. Coromandel, machine dried, May-June, quoted £22 5s. Chinese decorticated, f.a.q., May-June, £22 15s. Nigerian, ditto, £23 10s. Soya beans steady. Manchurian, May-June, £12. Castor-seed quiet. Bombay, May-June, £20 15s per ton.

OILS.—Linseed quiet and easier. Spot, net, naked, quoted 45s; June, 41s; July-August, 38s 9d; September-December, 37s 3d. Rape quiet. Crude, spot, 42s; refined, 45s. Cotton easier. Crude Egyptian, spot, 40s; common edible, 45s; deodorised (in barrels), 47s. China-wood dull. Hankow, spot (barrels), 116s; May-June, 87s. Coconut easier. Ceylon, spot, 44s 6d; May-June, 43s 6d; Cochin, ditto, quoted 47s. Soya quiet. Oriental barrels, May-June, 39s 3d. Japan fish steady. May-June, cases 29s. Cod firm. English, spot, 36s 3d. Groundnuts quiet. English, crushed, naked, spot, 47s; deodorised, barrels, 56s. Turpentine easier. American, spot, 110s; June, 94s; July-December, 76s. Rosin steady. American, grade B, 13s 6d; F, 13s 9d; G, 13s 9d; H to I, 13s 9d; W.G., 17s 6d; W.W., 18s 9d. French, F/G, 13s 6d; W.W., 15s 6d per cwt. Petroleum steady. American standard, white, spot, 1s 1d; and water white, 1s 2d per gallon. Castor oil steady. First pressure,

spot, to August, quoted 56s; second pressure, 55s, and pharmaceutical 61s per cwt.

METALS.—Tin at the opening session marked a downward tendency while attended by some irregularity, transactions being on a moderate scale. Standard, cash, sold down to £197, and three months, £197 15s to £196 15s. In the East business was reported on the basis of £198 5s, c.i.f. Subsequently prices recovered in view of stimulating advices from America and the East. By the middle of the week standard, cash, was dealt in at £199 15s, and three months £200 to £199 17s 6d. Sales in the East occurred at £202 15s, c.i.f. The tendency at Thursday's session proved steady, and a quiet demand prevailed. Standard, cash, sold at £199 10s, and three months £199 10s to £199 17s 6d to £199 15s to £200. At the final market values moved in favour of buyers, standard, cash, sold at £198 10s to £198 to £197, and three months, £199 10s to £197 5s. English ingots, £197 to £197 10s. Copper commenced with a weak tone, due to slight selling pressure, but offers were fairly well absorbed. Standard, cash, changed hands at £65 10s, and three months, £66 to £65 5s. After further sales of cash at £65, and three months, £65 2s 6d, the market assumed a firmer tendency, and values improved. On Wednesday a fairly good business was concluded. Standard, June, £65 10s, and three months up, £66 5s. The market further advanced on the following day, but smaller sales occurred. Standard, cash, quoted at £66 10s to £66 12s 6d; three months being sold at £66 15s to £67. At the final meeting the tone was again firmer, and larger sales took place, standard, cash, being dealt in at £67, and three months at £67 15s to £67 12s 6d to £67 10s. Electros, £73 to £73 10s; best selected, £69 10s to £71 10s; strong sheets, £100. Wire bags, £73 10s per ton. Antimony quiet. English regulus, £30 to £32; special brands, £36 15s to £38. Aluminium, home trade, £115; export, £120. Lead easier at £25 15s to £25 2s 6d, as to position. Spelter firmer at £31 5s to £30 15s, according to position.

The Fascist Creed	1303		

semi-official purchases of early June Treasury bills relieved the market from stringency, and it has now been relieved from saturation by the fact that these bills had been disposed of, with the result that the new Treasury bills that now have to be paid for are a drain instead of a replacement. Discount rates hardened decidedly, and business was reported in three months' bank bills at 2½ per cent. Yesterday money was much more abundant, and discounts were easier at 2 per cent.

	June 8, 1923.	June 1, 1923.	May 25, 1923.	May 18, 1923.	Previous Rate and Date Changed.
Bank Rate	3	3	3	3	3½ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount (Call)	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	2	1½	1½	2	..

From the official revenue return it appears that during the week ended last Saturday the Bank lent the Government 13 millions; the Bank return, made up on Wednesday, showed an increase of only 7½ millions in the Government securities, considerable repayments having already been effected. Other securities declined by 3 millions, owing to liquidation of the market's indebtedness. Public deposits were reduced by 9½ millions, and there was thus an addition of 13½ millions to the private deposits. The circulation declined by £160,000, and the Reserve, with a small addition to the stock of gold, rose by £163,000. Currency notes outstanding were increased by £367,400 to £287,848,900 this week, which includes £1,475,200 for notes called in but not yet cancelled. The fiduciary issue is £236,923,600, or £33,260,200 below the maximum.

THE STOCK MARKETS.

Derby week is often dull in the Stock Exchange, and this week has in this respect conformed to custom. Business generally has been quiet, and there has been some contraction in the demand for gilt-edged stocks, although re-investments of June War Loan interest produced signs of strength in the Consol market, which were not maintained. In the foreign market, French and German issues both strengthened. Home rails lacked public attention, and Argentine rails were sold on the drop in the exchange. Stagnation continued in the rubber and mining sections. The oil market derived a little encouragement from the Shell dividend announcement. In the industrial markets, generally speaking, business fell off, and prices tended to sag. To this rule tea shares, with spectacular rises, were a notable exception, while banking and insurance shares improved.

THE COMMODITY MARKETS.

General quietness has again been the feature in commodity markets, and prices have in most cases registered a further small decline. Wheat has been exceptional, with a firmer tendency, but sugar has been substantially marked down. Pig-iron prices have been reduced by 2s 6d a ton, owing to declining demand. Our Glasgow correspondent reports a more cheerful tone in the bar iron and steel trades than was the case earlier in the year, but the Sheffield trade is dull, and order books of makers are said to be practically exhausted. South Wales has experienced a slump in coal prices, a result, according to our Cardiff correspondent, of the operations of middlemen. The Manchester cotton market has been quieter than last week, but raw cotton prices have fluctuated widely. There has been some inquiry for cloth for China, but the turnover has been small. Bradford is in a depressed mood, and new business is small, prices being very irregular. The hide and leather markets show no improvement, and the shoe section is dull. There has been a slight improvement in the price of linseed oil, but the oil and oilseed market generally is quiet. At the beginning of the week both tin and copper showed a steadier tendency, but prices fell away later on selling pressure. Lead has been steady.

FOREIGN EXCHANGES.

Business in the foreign exchange market has again been restricted, and the general uncertainty in the European situation has been reflected in the sensitiveness of rates, which have moved sharply on quite small orders. The only exception has been the dollar, where the quotation, after a temporary improvement on Saturday last, has quietly sagged away from \$4.62½ to \$4.62¼ yesterday morning. Forward quotations are rather narrower at ½ to ¾ cent per month above spot. The downward movement is natural enough at this time of the year, and the rate is still sufficiently high to encourage a certain amount of buying of American securities. On the whole, however, apart from political eventualities, there would seem to be no reason to anticipate any very rapid fall. The mark has fluctuated widely, having been up to near 380,000, and then recovering again on Tuesday to 325,000. The issue of the Note has so far had an unfavourable rather than favourable effect, and the rate yesterday morning at 352,000 was higher than a week ago. This would not appear to be due to the Note itself, which is accepted in the market as a great improvement, both in form and substance, on previous offers, but to the first reports of its hostile acceptance in France. Forward marks have settled down to about 22,000 to 26,000 marks per month over spot. The Paris rate has also moved irregularly, and after being above 72, was brought down again, apparently through intervention, to 71.35 on Wednesday. Since then it has tended upwards, and yesterday morning stood at 71.80, as compared with 71.45 a week ago. During the same period the Brussels rate has moved from 83.15 to 83.20, the slight relative improvement being due, in the main, to the strike settlement. Forward rates in Paris have moved from 4½ to 5 centimes per month above spot. In Brussels they have narrowed to between 2 centimes below spot and parity. The lira, which on Monday was standing at rather over 100 as the result of the fear of trouble in the Fascist party, has improved to 98½, as compared with 99½ a week ago. Among neutral currencies, Amsterdam has moved sharply against us, from 11.81 to 11.77½. Switzerland and Madrid, however, have both again depreciated slightly, to 25.67 and 30.60 respectively. In Scandinavia, Stockholm has remained steady, but Christiania has, at 27.69, as compared with 27.30 last week, not been able to retain the whole of its recent improvement, while the Copenhagen rate has jumped from 25 to 25.47. In Central Europe the Vienna rate has been wisely kept stable at its usual figure of 325,000. Warsaw, after some fluctuations, is about the same, at 270,000. Prague shows little change, but both Belgrade and Bucharest have improved. Athens, after reaching 110 last Saturday, has had a natural reaction, and is up once more to 180. In the East the rupee has remained quite steady at 1s 4¼d, and the yen at 2s 1¾d. Under the influence of the Pittman Act, bear influences have been predominant in the silver market, and the Hong Kong rate has fallen from 2s 4d to 2s 3¼d, and Shanghai from 3s 2d to 3s 1¼d. In South America the Buenos Ayres rate has shown a marked recovery, from 41½d to 41¾d, while Rio has kept steady at 5½d. Montevideo at 41¾d is ½d dearer, and Valparaiso has also appreciated from 34.80 to 35.50.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 2nd:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	4642	From Revenue	7684
Sundries	096	Decrease in Balances	-119
Interest, &c., on War Debt	40158	Amount Borrowed	37093
	44896		44896

Revenue was about £2,200,000 lower than in the corresponding week last year at £7,683,700. Property and Income-tax yielded £1,077,000 and Super-tax £650,000, against a combined total of £3,020,000 last year. Estate Duties, &c., at £940,000 compare with £580,000. Customs produced £1,862,000, against £2,187,000. Special Receipts yielded only £492,700, against £1,329,100 a year ago. The total expenditure, which

was swollen by the payment of War Loan interest, was about £7,000,000 lower than in the same week a year ago. The item Interest, &c., on War Debt amounted to £40,157,900, against £43,165,700 a year ago. Supply Services at £4,642,000, compares with £8,652,500 in corresponding period. The week's operations increased the National Debt by £37,093,700, and caused the following changes:—

	Min. £		Min. £
Unemployment Insurance ..	-190	Treasury Bills	+16141
		National Savings Certificates ..	+150
		4% Treasury Bonds	+3337
		Bank of England Advances	+13000
		Public Department Advances ..	+4650
		Sundries	+006
	-190		+37284

The floating debt was increased by £33,815,000 to £809,820,500.

FINANCIAL YEAR, 1923-24 (April 1 to June 2, 1923).

	£		£
Total Expenditure ..	151,480,249	Raised by Revenue ..	136,245,856
		Net Borrowings.....	12,053,925
		Decrease in Balances	3,180,468
Total	151,480,249	Total	151,480,249

ESTIMATES FOR YEAR 1923-24.

	£		£
Ordinary Expenditure	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure..	15,603,000	Special Receipts....	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Our usual table of the National Debt will be found on page 1314.

THE WEEK IN PARLIAMENT.—The Rent Restrictions Act occupied two days of Parliamentary time. The official Labour amendment in the House of Commons was rejected by a majority of 164, and the second reading passed on Thursday. Monday was devoted to the second reading of the Agricultural Rates Relief Bill, and Tuesday to the Vote for Pensions. The Royal Assent was given, among other measures, to the Indemnity Bill and the Industrial Assurance Bill, the Lords having debated the former on Wednesday. The Lords also passed the second reading of the Honours Bill, and heard a statement by Lord Salisbury on the Singapore Naval Base on Tuesday. The week has seen the entry into the House of Commons of a third lady member, Mrs. Philipson, who was elected last week for Berwick-on-Tweed.

COMPANY MEETINGS OF THE WEEK.—On later pages of this issue will be found reports of the following company meetings:—National Bank of Greece, Investment Trust Corporation, Suez Canal Company, Leopoldina Railway Company, and Associated Newspapers. Among the features of the speeches were the remarks of Mr. Robert Fleming, of the Investment Trust Corporation, on investment policy, and Mr. Thos. Marlowe's statement that the income of the Associated Newspapers from advertisements alone last year was over £3,000,000. The Governor of the National Bank of Greece surveyed the recent history of the Greek exchange, while the most encouraging feature of the Suez Canal meeting was the statement that in 1922 traffic through the Canal regained its pre-war activity.

THE GERMAN NOTE AND BRITISH POLICY.

THE latest German Note, delivered on Thursday, is a definite step forward. Whether it will lead to the Conference which the German Government asks for depends, perhaps, more on the development of Anglo-French discussions than on the Note itself. It is too soon as yet to see whether the latest turn of the kaleidoscope will enable us to distinguish even the outlines of the word "settlement"; nevertheless, there is no doubt that the change in tone of the German, and even more of the Paris, press, as well as of official pronouncements, reveals the effect of increasing economic pressure and a certain anxiety to come to terms. The discussions of the next

few days will therefore take place in a more favourable atmosphere. Mons. Poincaré's recent attempt in the French Chamber to prove that there was already a small profit on the Ruhr adventure has convinced nobody. More significant is M. Humbert de Wendel's observation in a recent speech in Metz that the loss already incurred by Lorraine industry was equal to the whole of the military expenditure involved in the occupation, and that Lorraine would put in a special claim for compensation when the whole affair was over. On the other hand, it is equally clear that opinion in Germany realises that the present situation cannot continue. The depreciation of the mark is but one of many evidences of the deterioration which is occurring in Germany's economic life. The resulting change of temper is shown by the fact that, though Germany still apparently demands the evacuation of the Ruhr as a preliminary to negotiations, and the Government maintains—we believe with substantial truth—that in face of the growing and bitter resentment in the Ruhr it could not call off the passive resistance movement, increasing attention is being given to the suggestion which we noted a few weeks ago in the *Economist*—that something like an armistice might be arranged. Thus Herr Löffler, a director of the Coal Association of the Reich, writes in the monthly German periodical *Reconstruction* that the conditions on Germany's side on which passive resistance could be brought to an end would be as follows:—(1) All orders for expulsions from the occupied territory to be withdrawn, and the returning deportees to be reinstated in their old positions. (2) All persons arrested by the military authorities and sentenced by court-martial to be released. (3) The occupying Powers to refrain from all interference with business, public administration, and the political liberty of the citizens. "By assenting to something of this kind," he observes, "Germany would not by any means be giving herself away or be recognising the justice of the invasion." It may be added that Paris also is discussing what is meant by stopping passive resistance, and is showing a disposition to define the demand as meaning merely that an end must be put to active encouragement from Berlin of the local resistance, which is admitted to be in some degree beyond the Government's control.

But if the belligerents chiefly concerned are feeling the effects of economic pressure, this is also true of the world at large. The check—whether temporary or permanent we cannot say—which is now occurring in American trade development is of the greatest significance, and trade reports in Great Britain have responded painfully quickly to the suggestion from across the Atlantic that for the time being "prosperity is off." The fact that the world trade barometer is falling explains why it is that Belgium has taken action, and that even in Paris it is admitted that she is putting pressure on France in the direction of moderation. Belgium, unlike France, but like Great Britain, is not self-dependent, but buys her food from abroad in return for exports, and she therefore prospers when the world market is prospering. The actual strain upon Belgium of an indefinite prolongation of the occupation is at last fully realised, while Colonel Theunis, who is well qualified to appreciate the commercial needs of Belgium, has read aright the signs of the times.

Three points about the Note itself are important. In the first place, it abandons the main feature of the last Note, which made the payment of reparations dependent upon a loan for £1,000 millions being raised and paid over within four years. There has been a strong reaction against this plan for practical reasons. Opinion, particularly in France, has swung right back to considering the amount of annuity which Germany should pay. But though these annual payments are, of course, the first and essential part of any reparations scheme, it is as well, in abandoning the idea of a huge loan, not to overlook the part which might be played by a more modest flotation. It is to be hoped—indeed, it may be assumed—that in the end the reparation debt will become a private loan to individuals, for otherwise the reparation question will remain a cause of political trouble. Moreover, it has to be remembered that so far as reparations are needed for the restoration of the devastated areas, half the capital has already been subscribed, and the rest is coming forward fairly readily from French savings. German pay-

ments are needed primarily to ensure the interest on the cost of restoration. The capitalising of reparations means not the finding of new money from new investors, so much as converting the advances already made into a direct liability of the German Government. French opinion is right in thinking that this, though ultimately of the greatest importance, is not an immediate issue. The most important feature of the new Note is, however, the question of guarantees. The proposals are as follows:—

(1) Railways: The railway system is to be separated from other State property with independent accounts and control. Obligations to be issued up to ten milliard gold marks (£500,000,000), with a direct first charge on assets, and carrying 5 per cent. interest as from July 1, 1927. (2) Mortgage on Industry: To secure a further £25,000,000 annually (after July, 1927), the German Government will at once subject the entire business, industry, banking, trade, traffic, and agriculture of the country to a guarantee in the form of a first mortgage of ten milliard gold marks on real estate, whether buildings, dwellings, lands, or forests. The annual dues of five hundred million gold marks will be levied either indirectly, in the form of a general tax on all classes of property, or on the specific objects of mortgage. (3) Customs: The German Government will pledge as security the customs duties on imports of consumable articles other than necessities, the excise duties on tobacco, beer, wine, and sugar, and the receipts of the spirits monopoly. The average pre-war receipts from these sources were about £40 millions per annum. Their yield in gold marks has now fallen to one-quarter of that sum.

These proposals are getting down to hard tacks. But whether they are adequate or not cannot be ascertained without further examination. For example, the German railways at present are a liability heavily subsidised by the Government, which is paying railway costs by means of the printing press. In Austria the League of Nations Controller has found the Austrian railways the most difficult liability of all to eradicate from Austria's budget, and has called to his aid Sir W. M. Acworth to advise how they are to be restored to solvency. The Allies would hardly regard the German railways as a positive security unless they have assurance that they will pay their way. The same sort of considerations apply to the customs. Indeed, there is no single asset of Germany which is worth consideration unless and until currency is stabilised and the whole economic system put on a stable basis. Germany's creditors will need to inquire carefully what these professed assets are worth. These guarantees are, of course, supplementary to the general claim which the creditors hold on the whole revenues of the German Government.

The Note is not clear as to the connection between these specific sources of revenue and the payments to be made by the Government. The realising of some of these assets is to be delayed for four years. If this means that all annuities are to be delayed for four years, France will certainly refuse. It must, of course, be years before Germany can pay a full annuity, but given the bases of a settlement, we have never thought that a complete moratorium for four years was needed, nor seen any convincing argument to support such a contention. The Note perhaps wisely leaves this question in obscurity.

On the question of the final amount, the Note repeats that Germany could not herself increase her offer, but expresses her willingness to abide by the decision of an impartial body. France is apparently not willing to accept this, but insists that she must receive a minimum of 1,300 millions sterling free of all deductions for inter-Ally debts, and that if Great Britain and America do not surrender their claims upon France, these must be added to the amount to be demanded from Germany. It is significant that this demand does not exclude the possibility that America and Great Britain might make their decision contingent upon the decision of a Neutral Tribunal. If America as well as Great Britain is prepared to accept the French claim to what is in effect a prior charge, France would presumably not object to the American proposal for a Commission to determine the surplus amount. It is, however, fairly clear that before Great Britain takes any further step our Government should make up its mind as to whether it admits this prior claim or not. In a recent important letter to the *Times* over the signature of "Economicus," a clearly well-informed writer set out to prove that, though the figure mentioned may, in fact, be that which France will have spent in the devastated areas, the fact of this ex-

penditure, which has meant profit to contractors and profitable employment to large numbers of workpeople, has been not a burden upon France, but an advantage, for otherwise she would have had unemployment, and in some degree have been faced with such difficulties as Great Britain has been passing through. But this line of argument ignores the fact that France's problem is not a redundant population, but a shortage of man-power, and that if the devastated areas had not been overrun by Germany, this labour would have been engaged in building up other industries. It is, to say the least, extremely doubtful whether she would have suffered from the problem of unemployment.

At this week's conference in Brussels the French and Belgian Governments decided to approach Great Britain with a view to renewing joint action on the understanding that passive resistance in the Ruhr shall cease. Great Britain cannot accept this proposal except by agreement with Germany. This, as we have already suggested, is by no means impossible. Our Government has a very difficult and intensely critical rôle to play in the next few days. The guiding consideration should be that we must not pretend to fall into line with France except to put forward proposals which are within the bounds of possibility. We observe with some concern that Lord Derby still believes that we ought to be in formal alliance with France. But we cannot find that there is any appreciable body of opinion in the country which agrees with him to-day, and the Government would not be serving the true interests of the country if it allowed itself to be swayed too much by Lord Derby's view of the European problem. To join with France once again on another will o' the wisp hunt would postpone a real settlement for yet another weary period. It is far better that we should proceed two or three stages further by the curious and indirect method of triangular discussion, rather than that we should hasten too quickly along the wrong road. In this Note Germany has made an advance towards common sense. The world looks for a similar advance by France.

THE NEXT PHASE IN INDIA.

THE lull that followed the arrest of Mr Gandhi is evidently coming to an end. This was inevitable, for political movements are never put out of existence by the imprisonment of their leaders, especially when such large numbers are concerned. The question was rather whether the current of unrest, after surmounting the obstacle temporarily placed in its path by Government, would flow back into its previous channel or take a different turn. The policy of Mr C. R. Das, since his release from prison, indicates that the latter alternative is coming to pass. Non-co-operation having failed to produce its promised results by the promised date (and India, like the rest of the "unchanging East" at present, is in more of a hurry than most Western revolutionaries), it is to be followed by an attempt to capture the new experimental institutions of self-government in order to wreck them.

It is difficult yet to say how far this new departure will go. Superficially, the ultimate object of the Gandhi movement remains unquestioned, and only a change of tactics is involved; but what may start as an issue of tactics is likely to become an issue of aims or principles in the course of being translated into action. Mr Gandhi is more logical, or else more honest, than his former colleague. If India wants to eliminate the British factor from her life, then the most effective course in the long run is to have nothing to do with the unclean thing; and the economic boycott is more important than the political one. This attitude is perhaps in the tradition of Hindu feeling, and it has undoubtedly been adopted by earlier leaders of Hindu thought in the face of other foreign dominions. But does that tradition still govern the mind of India? Is she still willing to sacrifice time to eternity, and the body to the soul? And is the maximum of non-co-operation any longer her ultimate purpose? If the answers to these questions are even partly in the negative, then Mr Das's change of tactics may imply that Mr Gandhi's policy was not merely ineffective, but was imperfectly adjusted to contemporary Indian aspirations.

The truth seems to be that the past century of British ascendancy has made an ineffaceable impress upon the Indian mind, of which Mr Gandhi himself shows the traces. Could he have conceived his movement or have carried it so far as he has done if neither he nor his followers had come into contact with the West? Is he not dependent upon Western methods of organisation and propaganda, not to speak of our technical devices of printing and transportation? And if this Western leaven can be discerned in a personality so Indian and so self-consistent as his, is it not probable that the majority of his educated fellow-countrymen are still more deeply affected by it? The West has become a permanent feature in India's mental horizon, and equality of status with the West rather than the severance of relations with the West seems to be the real goal of her endeavours. It is true that if this equality be conceived on Mr Gandhi's spiritual and abstract plane, it converges towards the ideal of non-co-operation as an end in itself. But that is really an ideal of moral superiority over a civilisation which is essentially of this world, and it is too difficult to be sustained for long by multitudes of ordinary human beings. India, as a whole, seems gravitating less towards Mr Gandhi's ideal than towards Japan's: "Make yourselves a match for the West in the Western way, in order that you may hold your own in a Western world." Possibly this cleavage of ideals underlies the new departure in tactics announced by Mr Das. If so, we may expect Indian politics in their next phase to travel more violently and more hurriedly, but less far, than they promised to do under Mr Gandhi's guidance.

In any case, however, the future of India remains an enigma; for when we have prophesied the permanence of British influence, we cannot even begin to estimate its actual degree, and, according to its degree, it may have totally different consequences. India, when England conquered her, was like a forest shaken by a monsoon. Trees of every species, with jungle-growths matted round their roots and parasites clinging to their branches, were grinding and shattering one another as they were swayed by the storm. British rule reduced this chaos to sudden immobility. The wreckage of tree and creeper was buried underground, and, as it lay there, those chemical reactions began which transform vegetable matter into coal-deposits if allowed to continue for a sufficient length of time. What period suffices? That is the riddle which we cannot yet read. But fresh forces of disturbance, this time emanating from the West itself, as the stilling force of the British Raj did a century ago, are again descending upon India and ploughing up her soil. What will emerge? The fallen trunks of the old forest, capable, perhaps, of putting forth fresh shoots, but only by the reproduction of their separate individualities? Or a stratum, compacted out of completely metamorphosed organic materials, and stored with an energy capable of being turned into altogether new channels?

We must hope for the second alternative—that is, for an organic fusion between the elements of Indian and Western civilisation, which at its best might produce something higher than either, and which at its lowest

might preserve to India such advantages as she has gained during the British ascendancy. But time is of the essence of the process, and we must be prepared to see it brought to an untimely end by forces beyond our control. Western political dominion over non-Western societies probably contains in itself the seeds of its own destruction, and what forces of disintegration there were have been reinforced and accelerated by the catastrophe (accidental, from the standpoint of British India) of the European War. The wreckage out of which a new India was being gradually compacted may be tossed up and scattered again with some Western infusion in the fragments, but before the achievement of the organic change; and in that case it is to be feared that the last state of India may be worse than that in which she found herself when England started to deal with her. In the present mist of uncertainty, some rather ominous shapes from the past are emerging side by side with the new-fangled phenomena which both Mr Das and Mr Gandhi stand for; and it is conceivable that Sikh Akalis, Muslim Caliphatis, Mahrattis, Bengali and Tamil Nationalists, and the champions of dominant castes or submerged castes, may crowd the National Congressmen, and, indeed, all the English-style politicians—extremists or moderate—off the stage. If this happened, even to a partial extent, the vision of Indian Nationalism would dissolve into a chaos of many rival nationalisms tearing one another in pieces; and in that case, the mutual destruction might well be more, and not less, savage than that to which our English ancestors put a forcible end in the India of a hundred years ago; for the infection of Western Nationalism, as we now know from the melancholy example of its effects in the Near and Middle East, introduces struggles for existence between elements previously accustomed to struggle merely for ascendancy. Before the intrusion of the West and its political ideas, India, like the Near and Middle East, was a region in which a congeries of castes lived intermingled, without either assimilating or destroying one another, in an equilibrium which was recurrent, though unstable. The state in which we found India was one of those interludes of anarchy, which would doubtless have returned to equilibrium—under a Mahratta, perhaps, instead of a Mogul ascendancy—if we had not arrested India in the act of transformation and submerged her, petrified, in order that she might undergo the profound and utterly different effects of our rule. But if the old contending elements—Mahrattas and Muslims, Sikhs and Bengalis, and not least the tribesmen from beyond the frontier (whose heads have never gone under)—awake and start their conflicts again, they will no longer be content with ascendancy, but will fight to carve out for themselves sovereign States with homogeneous national populations. In that event, India will be in danger of going through the horrible process which has been working itself out during the past century in the countries lying between her and Western Europe, but from which British rule has hitherto preserved her.

This is perhaps the most likely result of a premature liquidation of British control brought on by the passion for equality of status. The various elements, in assert-

ing their equality with the paramount Power, would fall into collision with one another. But there is another force, derived from the same psychological origins, which will make for a consciousness of Pan-Indian national unity, and that is the increasing pressure exerted by all India upon the vacant or semi-vacant spaces of the British Empire. Here all Indians find themselves on new, and common, ground; and moderates, like Mr Shashi, who have identified themselves with this cause, evidently feel that if they are rebuffed, they will have lost their last chance of holding their own against either Mr Gandhi's or Mr Das's wing of the extremists. Mr Das, when he inaugurates his wrecking tactics, is more likely to concentrate his energies upon the military budget—a question with which both the Indianisation of the army and the rejection of heavier taxation are bound up, and which is therefore an obvious stick to wield against the Government. It happens, also, however, to be bound up with the question of the North-West Frontier, which has latterly assumed an importance hardly conceivable a few years ago. For the past century the tribes of Central Asia, like the castes and nationalities of India, have been immobilised by a foreign rule; but now that the Russian Empire has broken down, and Central Asia is in flux, the movements on the frontier may gather behind them, as they have done at other times in history, the momentum of half a continent. To treat the military budget as “ship-money” may be a tempting game for a “wrecker,” but it is a dangerous one for India. If carried to extremes, it might conceivably produce another, and most unwelcome, stimulus to the All-Indian consciousness in the shape of the barbarian invader.

THE BALANCE-SHEETS OF HOLDING COMPANIES.

It is doubtless because the existence of holding companies or—to adopt the Americanism—“mergers” upon a large scale in this country are of recent growth and of limited extent compared with the United States, that the practice of issuing consolidated balance-sheets is far more novel and less understood in this country than in America.

The movement towards consolidations and trusts was bound sooner or later to bring about some demand on the part of the Stock Exchange, banking and revenue authorities for fuller and more exact information as to the position of the composite concern than an ordinary legal balance-sheet drawn on the old lines could possibly show. The fact that each business owned is owned through the medium of 100 per cent. of the share capital in a separate legal entity is sufficient to enable the owning company to present as its asset in respect of that business a single sum, being the cost or value of the shares acquired. Except for that thin legal line, the obligation would be upon the company to present the values of the separate assets, together with all the fluctuations in the profit and loss position.

In this respect it may be said that the law is positively on the side of obscurity and lack of publicity, because it is doubtful whether the owning company has any right to publish anything else than shares as its assets, and all it can properly do is to offer auxiliary but voluntary information showing what is “behind” those share values and the true nature of the assets and liabilities.

As matters stand at present, it is possible for a company owning two businesses—one of which makes a profit of £100,000 and the other a loss of £100,000—to draw the dividends in full in the one case and ignore the loss in the other, and yet still to be technically able to declare dividends out of the profits so received, whereas, in fact, over the business as a whole no profit has been made. This is, perhaps, an extreme instance; but in the case of a company holding percentages of varying amounts in different concerns, practice upon these lines is by no means impossible without any literal infringement of legal or accountancy rules.

A consolidated balance-sheet must bring out the net interest of the owning company in the assets after allow-

ing for what is appropriate to the minority holders, as well as show full information as to the class of assets that are actually owned. Sir Josiah Stamp, at a conference of the Society of Incorporated Accountants and Auditors a little time back, discussed the economic value of the modern balance-sheet, not merely from the point of view of the reticence legally enforced upon owning or holding companies, but also from the point of view of the fair and square statement of facts for concerns in general. The gravamen of his charge was that the passion for a “safe” balance-sheet was merely a conventional prejudice in favour of one which does not tell lies in excess. There was supposed to be something positively creditable in presenting what was obviously not credible, such as showing the value of buildings at a figure ridiculously below their value or cost. Moreover, an excess under one head could not be allowed against a deficiency under another, and however much some items might be understated, no others must exceed the amount allowed by the letter of the “accountancy” law. As a consequence, a balance-sheet properly drawn might possibly represent something which was at the level of the true value of the business, but might equally be immeasurably below that level. Sir Josiah urged that there was surely a higher ideal of public opinion to be aimed at than this kind of one-sided deception or uncertainty, even within the narrow limits of the existing law. His strictures on behalf of economic progress were not received with enthusiasm by the accountancy profession, though no one has appeared to demonstrate that his grounds for criticism were wrong.

Whatever may be said about balance-sheets in the ordinary way, there can be no two opinions about the desirability of all combinations of businesses presenting to their shareholders information regarding those businesses which shall not be conditioned merely by legal technicalities, but shall really get to the heart of things, at any rate, to no less an extent than if those technicalities were absent. Accountancy fashions are bad enough without being further complicated by legal niceties.

In a very interesting and instructive paper given by Sir Gilbert Garnsey before the London members of the Institute of Chartered Accountants, and recently issued in book form, the whole question of the kind of published account appropriate to holding companies is very carefully explored and its technical aspects set forth. He says that:—

“The greatest opposition to any but the most essential changes in the form of the published accounts comes from directors who are not all imbued with the desire of giving their shareholders as much information as possible, no doubt having in mind the necessity for avoiding disclosure of information which might conceivably be of use to competitors. Moreover, in view of the fact that the shares in the industrial concerns of this country are generally very widely distributed among a large number of shareholders, the call for the consolidated accounts has never been insistent. Shareholders, perhaps, can hardly be expected to know what form of accounts they require, but in recent years there has been a demand for more information concerning the position and results of subsidiary businesses. It is the duty of accountants to help them, but accountants cannot do it unaided, as, after all, in this country it is the directors who prepare the published accounts and are responsible for the information given therein, although it is for the auditors to certify as to whether or not they are properly drawn up so as to exhibit a true and correct view of the state of the company's affairs.”

Then follows a statement of the difficulties—and they are by no means few—in practice and technique found when amalgamating the figures of different concerns made up on dissimilar lines and with widely different antecedents. He quotes extensively and with approval from the speech of the chairman of Nobel Industries, Limited, last year—a conspicuous example both of the necessity and the difficulty of affording this kind of information—and indicates that it is upon these lines that a right conception of what is necessary in industry should proceed. In that particular instance the formation of the merger fortunately in itself gave a uniform method of valuation of all assets and liabilities, and thus facilitated their aggregation, although the aggregation was not, in fact, an aggregation of the existing legal balance-sheets of those companies.

Where a combination of interests has come about gradually such a common basis is not available. The mere addition and aggregation of the existing balance-sheets may be confusing sometimes as an aggregation of unlike quantities, even if the classification of assets is correct. To secure uniform valuation merely for the purpose of this aggregation may be an expensive and not always a practicable affair.

The public, therefore, while exercising some pressure in the direction of getting information of this character, must not be impatient if progress along these lines is slow but sure. Although the legal balance-sheet may not undergo much change, the chairmen of limited companies should regard it as a duty incumbent upon them to furnish the best auxiliary information upon these lines that circumstances will allow, and thus reduce the well-known item, “shares in subsidiary companies,” to its proper proportions—viz., the aggregation of those minor interests which do not admit of any other kind of classification. This item should be an irresolvable minimum rather than a “glorious hold-all,” and wherever classification can be properly carried through to the real assets behind the shares, the public interest unquestionably demands that it should be given.

THE INCOME-TAX LEAKAGE IN FRANCE.

(BY A CORRESPONDENT.)

PERHAPS the most formidable difficulty that faces any French Finance Minister, who nowadays attempts to make the people of France balance their expenditure by increased taxation, is the fact that French people, so long as they feel that Germany ought to be paying for their reconstruction, regard taxation in much the same light as Irish people regarded English taxation after the publication of the Childers Commission Report. In Ireland it became almost a public duty to defraud the Exchequer once the Childers Commission had formally convicted England of overtaxing Ireland in the past. So now in France the Reparations Commission, in convicting Germany of default, has confirmed the prevalent feeling that no patriotic Frenchmen should pay increased taxation until Germany has paid for reconstructing the devastated districts. The Finance Minister who would introduce new taxes in France has to reckon upon this vehement dislike of all taxation, and particularly of taxes that involve investigation of private incomes by Government officials. And in a country which still derives at least three-fourths of its wealth from agriculture, either in production or in trade, the difficulties of ascertaining true incomes can scarcely be surmounted at all.

There is, however, one radical reform which in normal times could be counted upon to bring a vast amount of untaxed wealth within reach of the Treasury. It was debated in a very illuminating discussion in the Chambre des Députés towards the close of the recent Budget debates. The defeat of the proposal was a foregone conclusion, but the final division showed a formidable minority of 228 votes against the Government's majority of 322. This panacea proposed by the parties of the Left consists simply in insisting upon the conversion of bearer bonds into inscribed stock for almost all classes of securities. They declare that by this measure the Government could put the whole financial situation of France on a stable basis. Even the Finance Minister, M. de Lasteyrie, scarcely attempts to deny the truth of this contention, although he opposes its application vehemently, with the Finance Commission of the Chambre behind him. In the existing circumstances, which compel the French Treasury to appeal for vast reconstruction loans month after month, the Government does not dare interfere with the credit system of the country in any drastic way that might possibly restrict the hitherto abundant flow of new money subscribed for these loans.

The Radicals refuse to admit that the forced adoption of “titres nominatifs” would, in fact, reduce the borrowing power of the Government to any very serious extent.

But the case for insisting upon the abolition of “bons au porteur” is so strong on many grounds that no Government can fail to consider it closely. M. Vincent Auriol, in introducing his motion for the compulsory conversion of “bons au porteur” into “bons nominatifs,” put the problem in a nutshell when he said that “we are confronted by two problems—taxation and the evasion of taxes. Neither to-day nor to-morrow will you be able to vote new taxes until you have first dealt effectively with the evasion of existing taxes.” M. Charles Baron in the same debate stated what is an open secret in France, in saying that his inquiries among solicitors and men of business in all parts of the country invariably met with the answer that there could be no real suppression of tax evasion until Parliament had insisted upon the substitution of inscribed stock for the existing uninscribed bonds. That these views are not confined to the Radical Deputies is shown by the recent statement of a well-known Catholic and Conservative lawyer in Lyon, M. A. Crétonin, that “thanks to bearer bonds a man can use his money in a way that will escape all control.”

The general inferences stated above are amply confirmed by the official taxation returns. Since the debate in the Chambre, the French Treasury has issued its statistical table showing the amount of tax revenue paid by each group of taxpayers during 1921. The totals are preposterously small in proportion to the number of people who certainly have real incomes that would make them liable to income-tax if they could be ascertained. The official return shows that there are only 197 people in France with incomes of over a million francs a year (which is roughly £20,000, if one counts the franc at its average value for several years past of 50f to the £). Only 641 are returned as having between half-a-million and a million francs a year, and only 1,607 as having between 300 and 500 thousand a year. These totals are probably fairly accurate. But the totals for the lower scales of income are quite obviously ridiculously below the mark. According to the official return only 272,274 people had taxable incomes of from 6 to 10 thousand francs a year (say, £120-£200); only 320,137 had from 10 to 20 thousand; only 84,464 had from 20 to 30 thousand; and only 56,000 had from 30 to 50 thousand a year. “These figures,” declared one Conservative publicist at the time of their publication, “are, to my mind, a manifest proof of the unbelievable number of frauds that are practised by all classes of citizens. Can you really believe that there are only 320,000 people in France with incomes of 10 to 20 thousand francs (say, £200-£400) a year? Why, there are probably 200,000 in Paris alone. Do you think that in all our country there are no more than 84,500 people living on their investments, or retired from business, bankers, capitalists, landlords, commercial travellers, agents, &c., who have incomes from 20 to 30 thousand francs?”

In the light of these figures it is interesting to read the calculation given by M. Vincent Auriol in recommending his motion to the Chambre. He quotes the official figures for 1922 as showing that the “taxe sur le revenu des valeurs mobilières,” other than French State loans, amounted to 904 millions of francs, of which roughly 751 millions were for incomes derived from French securities and 153 millions for incomes derived from those of other countries. The tax on income from French investments being at the rate of 10 per cent., and that on foreign investments at 12 per cent., these figures show that the total of 900 millions in tax must represent roughly 9 milliards of gross income from these forms of investment, seeing that many securities paid no dividends at all in that year. To these 9 milliards of income from investments must be added the 13 milliards which the State pays in interest on its own loans, making in all an aggregate income of 22 milliards from investments, and representing a capital value of between 350 and 400 milliards invested in negotiable securities. Now, of these

22 milliards of income from investments only 3 milliards were declared to the tax collectors. Part of the total is, of course, made up out of small incomes which would be exempt from taxation, but M. Vincent Auriol seems reasonable in calculating that at least 12 or 15 milliards should have been declared for income-tax instead of only 3 milliards.

M. Auriol examined the returns for death duties in the same way. Assuming the above totals to be correct, M. Auriol deduces that the total of investments that should become liable to death duties every year must be from 18 to 20 milliards, which at an average of 7 per cent. tax should bring in to the Treasury 1,400 millions of death duty every year, instead of its actual receipts of only 800 millions.

M. Auriol also shows that the recently introduced improvements in the methods of supervising tax returns yielded an increase of from 5,338 to 6,974 million francs in the returns of income from industry and commerce. A similar revision of the returns of public and private salaries and wages raised the total of such incomes liable to taxation from 4,567 million francs to 6,437 millions. But in contrast with the very large increases in these returns, the revision of incomes derived from investments, which are notoriously far below the true figure, resulted only in an increase of 115 millions. What else, however, was to be expected, seeing that the Treasury has no possible means of directly tracing the ownership of bearer bonds? If it were true that these securities are widely distributed among the population, there would be less reason for believing that bearer bonds are bought principally with a view to escaping taxation. But M. Vincent Auriol shows how the popularity of "bons au porteur" has increased simultaneously with the acquisition of great blocks of shares by the war profiteers. The latest available report of the Chemin de Fer du Nord, for instance, shows that of the older issues of shares three-quarters were in inscribed stock, while 78.5 per cent. of the recent issues of the railways stock have been in bearer bonds. The Banque de France has no less than 19,667 separate holders of one or two of its shares, who constitute more than half of the total number of its shareholders, but even so, they hold less than one-sixth of the whole capital; and while more than nine-tenths of all the shareholders of the bank are small owners of from one to ten shares, their combined holdings are less than half of the bank's capital.

Such is the case for a compulsory transition to inscribed stock, as it is propounded by the French Radicals. That it offers the only means by which the Government in France can hope to impose its income-tax equitably, and to ascertain the true incomes of the big holders of investment securities, cannot be doubted. But the French Government, which realises, like everyone else in France, the impossibility of obtaining a full return from the income-tax under the existing system, is simply unable to contemplate the compulsory introduction of such a change. It has, indeed, shown its belief in the necessity for it by conferring substantial privileges upon inscribed stock in relation to bearer stocks, but it dare not think of compulsory measures. M. de Lasteyrie, as Finance Minister, declared emphatically that "to abolish the 'titre au porteur' would mean throwing the whole financial world into panic, and injuring the sources of our present supplies of credit. I appeal with all my strength to the Chambre to reject this proposal."

M. de Lasteyrie's statement can only mean that he dare not introduce such measures of compulsion in regard to investments as would bring the French investors' securities under the control of the State, because he fears that the French investors of all classes who now take up each new Government loan in rapid succession might suddenly cease to lend their money to the Government altogether, if, in doing so, they felt that they were giving the Government the means of knowing how much money they possessed. And so France goes on paying for her reconstruction, too little by enforcing the taxation of her people, and too much by borrowing continually at an ever-increasing rate of interest, and so piling up a load of interest charges for the next generation which they will certainly never tolerate, and which Germany neither will nor can repay to France.

OIL.—IV.—SUPPLEMENTARY SOURCES OF SUPPLY

WHEN Senator La Follette's sub-committee of the United States Senate Committee on Manufactures declared in its report that if present tendencies in the oil industry were allowed to proceed unchecked the price of gasoline might reach one dollar per gallon, Mr Walter Teagle, president of Standard Oil, made the rejoinder that long before that price could be reached some cheaper kind of motor fuel would take the place of gasoline. Without doubt, Mr Teagle felt that the margin of profit per gallon in the sale of gasoline was sufficiently wide to ensure longevity for Standard Oil. But his remark calls attention to a feature of the oil situation that is now assuming greater prominence—the supplementary sources of supply.

It will be understood that there are oil substitutes as well as supplements. Unfortunately, the economic issues of the former have been obscured by politics. In France, for example, the home manufacture of a substitute for gasoline has been made into a question of national defence. The Chamber of Deputies has resolved upon the mixing of 10 per cent. of home-produced alcohol with all motor spirit imported into France. The fact that the French Government holds large stocks of alcohol—about 88,000 tons last December—for which it is anxious to find an outlet, and that a little group of French refiners are self-interestedly desirous of increasing the heavy tariffs on imported oils, suggest ulterior motives and confuse the real commercial prospects of the cultivation of beetroot in France. Czecho-Slovakia, also, has devised a new motor fuel, known as dynalkol, a mixture of alcohol and benzol, to which 1 per cent. naphthalin or 5 per cent. ether is added. But the Czecho-Slovakian Government, too, is said to possess large stocks of alcohol, and to be contemplating further import duties on gasoline. Political measures may therefore force alcohol or other substitutes into economic competition with gasoline before their time. Nevertheless, there is no doubt that the widely different ways of producing alcohol—from cane or beet sugar, from potatoes, from prickly pear, from wood pulp and the like, give many oil-importing countries an economic opportunity of manufacturing a motor-fuel substitute, provided always the technical difficulties in its use are overcome by the automobile engineer. Attention, however, is being directed rather to the supplementary sources of oil supply, which we will call for convenience the production of "fixed oil," as opposed to the production of liquid oil from the well, which is generally called "free oil."

Let us begin with general principles. The production of fixed oil from solid bituminous minerals—such as coal (including cannel coal and lignite, or brown coal) and oil shale—necessarily involves, according to the commercial practices in vogue, three distinct operations—first, the mining of the solid bodies, either by quarrying from the surface or by mining underground; secondly, the crushing and retorting (distillation) of the bodies mined; thirdly, the refining of the crude tars or oils yielded from the retorts. Each of these operations requires heavy capital outlay. Wherefore, as long as an oil company can obtain a flow of free oil merely by boring a hole in the ground, and, as it were, turning on a tap, the fixed oil from coal or oil shale, laboriously mined and expensively retorted and distilled, cannot hope successfully to compete with the former in the matter of its market price. Certainly, free oil will always undersell fixed oil while free oil is obtained in anything like flush production and fixed oil is manufactured under existing practices.

This broad principle must, of course, be qualified in certain particulars. Consider the oil shale industry in the first place. Oil shales, which may be defined as fine-grained clay rocks containing an oil-yielding material—kerogen—of which very little is yet known, vary enormously both in physical and in chemical properties. Some are difficult to retort successfully. Some, like the oil shales of Scotland, yield only 18 to 25 gallons of oil to the ton; others, like the Australian, yield from 100 to 160 gallons. Some, like the oil shales of Norfolk and Dorset, may yield a large amount of crude oil, but with such an excess of sulphur in it as to baffle the skill of the refiner

to obtain commercially pure products.* In all cases it is certain that, to be profitable at all, operations must be conducted on a very large scale, and for a long period of years, having in view the amortisation of the capital expenditure on plant, which must embody mining, conveying, crushing, retorting, refining, and marketing equipment. In the Scottish shale industry the profit in the past has depended upon the sale of a by-product—ammonium sulphate—and for the present the Anglo-Persian Oil Company is keeping the industry alive by running Persian crude oil through its refineries. Figures of the normal annual capacity of the Scottish shale industry may be given as follows:—Shale retorted, 3,000,000 tons; crude oil yielded, 275,000 tons, or over 70,000,000 gallons; products refined: motor spirit, 600,000 gallons; naphtha, 4,400,000 gallons; kerosene, 20,000,000 gallons; gas or fuel, 12,000,000 gallons; lubricating, 10,000,000 gallons; paraffin wax, 25,000 tons; sulphate of ammonia, 55,000 tons. Nevertheless, it is claimed that the quality of lubricating oils derived from crude shale oil is superior to those derived from free oil, and will always command higher prices. In countries, therefore, where there is no local production of free oil, where imported oil has to bear heavy charges of freight, and possibly heavy import taxes, oil shale exploitation may still earn a livelihood, even under present conditions of free oil competition.

In the second place, the distillation of fixed oil from coal has certain economic advantages. A ton of coal may not only yield as many gallons of crude oil and as many pounds of ammonium sulphate as a ton of oil shale, but it leaves a coke residue that is a valuable smokeless fuel. Moreover, liquid hydro-carbons are already produced as by-products in certain industries, and can thus be sold at prices competitive with those of the products of free oil. The crude tar, for instance, distilled in the production of coke (in coke ovens) and in the manufacture of coal gas, can be refined into benzol for motor fuel, and creosote which can be utilised as fuel oil. Indeed, the demand for benzol exceeds the supply, for no better motor fuel can be found than a mixture of benzol and petrol. In Germany the output of benzol in 1921 from all sources—coke ovens, gas works, and brown coal-tar distilleries—was about 187,000 tons (of which 34,000 tons went to France as reparations). In Great Britain the present output for motor fuel is about 50,000 tons—less than half the war-time production. In France the potential output is about 53,000 tons—the actual about 12,000 tons. These quantities are, of course, mere drops in the ocean of gasoline consumption. Commercial interest is therefore turning from the high-temperature distillation of coal, which is evolved in coke ovens and gas works, to the low-temperature carbonisation of coal, by which a greater percentage of volatile hydro-carbons can be recovered. The distinctions between high- and low-temperature carbonisation may be shown thus:—

- HIGH TEMPERATURE.
1. Large volume of gas.
 2. Yield of sulphate of ammonia, say, 20 lbs.
 3. Yield of tar, say, 11 gallons per ton.
 4. Tar (aromatic series) yields motor spirit and products for manufacture of dyes, explosives, photographic chemicals, drugs, &c.
 5. Residue a hard coke with little volatile matter, useful for industrial purposes.

- LOW TEMPERATURE.
1. Low volume of gas.
 2. Yield of sulphate of ammonia, say, 10 lbs.
 3. Yield of tar (crude oil), say, 20 gallons per ton.
 4. Tar-crude oil (aliphatic series) yields motor spirit, fuel oil, lubricating oil, paraffin wax, but no useful tar acids except for disinfectants.
 5. Residue a soft coke, with 8-10 per cent. of volatile matter—a good smokeless household fuel.
- (Dr F. M. Perkin's classification.)

We are all interested in the distillation of coal, not only as a means to abolish the smoke nuisance, but as a step towards the conservation of our coal resources. To make a ton of coal yield a smokeless fuel, as well as motor spirit, fuel, and lubricating oils, not to mention sufficient gas to fire the retort, is obviously sound economic practice. But technical difficulties, and the financial condition of the coal industry, have temporarily postponed this supplement to free oil supplies.

* It is claimed that a process has been discovered whereby the oil can be purified by first transforming the sulphur into compounds which can be easily removed as required.

Of these arguments there is this general qualification to be made. The whole situation of the coal-oil and shale-oil industries may be "changed in the twinkling of an eye" by the discovery of some commercial process for the liquefaction of coal or shale by hydrogenation. We have mentioned that the Bergius process of hydrogenation has been successfully applied to heavy oils. The claim is made by this inventor that any coal possessing less than 85 per cent. of carbon can be successfully hydrogenated. It may be significant that, before the French occupation of the Ruhr, certain German coal interests were erecting a large plant at Rossleben to treat brown coal or lignite with the Bergius process. Consider the magnitude of the supplement to free oil supplies, if one can reckon the enormous reserves of coal, lignite, and oil shale as commercial sources of oil production!

Finally, let us not forget that oil is not the only power producer. There is water power; and its generation of electricity. Man may soon be harnessing the tides and rivers as he does the waterfall. Certainly he will be carrying electric power over ever-increasing distances. And one can speculate a little on the dreadful possibilities of the atom. All this helps one to regard the oil situation without trembling or excitement.

THE POULTRY INDUSTRY.

(BY A CORRESPONDENT.)

FEW people, save those intimately connected with the business, have any idea of the vast proportions to which the poultry industry has grown during the last decade. It is no exaggeration to say that poultry-keeping is to-day one of the largest and most important branches of agriculture. This is brought out in a striking manner by Mr E. Brown, F.L.S., in his annual review. The estimated value of eggs and poultry produced and consumed in Great Britain in 1921 was £34,027,866. Owing to reduction of values, as the volume of production is about the same, the estimate for 1922, after deducting exports, is £28,900,000, a decline of 15 per cent. The comparative estimates for grain crops in Britain are:—

	Quarters.	£
Wheat (40s 8d per qr.).....	7,964,000	16,193,466
Barley (37s 11d per qr.).....	5,796,000	10,988,250
Oats (23s per qr.).....	15,093,000	18,307,400
Total estimated value (1922).....		45,489,116

Thus in 1922 home supplies of eggs and poultry were in value nearly £13,000,000, or 77.1 per cent., greater than the wheat crop of Great Britain; £18,111,750, or 163 per cent., greater than the barley crop; and £10,794,600, or 57.9 per cent., greater than the oat crop. If these three classes of grain are totalled, production of eggs and poultry was in value equal to 63.5 per cent. of the whole British grain crops. These represent producer's (not consumer's) prices. Retail values would be correspondingly increased.

In spite of the large quantities of eggs produced at home, we have still to depend to a very great extent upon foreign supplies. The following table gives quantities of eggs imported in 1922 in comparison with 1921, and also 1913, the year before the war, as published in the Trade and Navigation Returns, exclusive of Ireland:—

From—	1913.	1921.	1922.
Russia.....	11,453,277	..	..
Denmark.....	4,264,943	4,735,275	5,734,577
Germany.....	513,740	3,735	23,446
Netherlands.....	977,350	505,493	650,200
France.....	702,281	53,546	319,080
Italy.....	845,789	..	319,034
Austria & Hungary.....	883,651	..	..
China.....	not stated	468,233	1,057,086
U.S. of America ..	5,869	221,889	337,301
Egypt.....	1,098,839	642,000	1,259,590
Canada.....	1,905	684,480	495,729
Other countries ..	834,561	3,242,853	3,465,628
Totals.....	21,597,950	10,557,504	13,661,671

So far as totals are concerned, the above table indicates that the 1922 egg imports, other than Irish, were 29.4 per cent. above 1921, but only equal to 63.3 per cent. of 1913. Most noticeable is the advance in supplies from

Denmark, much greater than in 1913, as is the large increase from China over 1921. In 1913 these, if any, were included under "other countries." The Netherlands is still one-third below 1913. Italy is again exporting to Britain, and France is steadily increasing. The U.S. and Canada, negligible in 1913, are sending modestly, but the latter country is considerably below 1921.

Although imports in 1922 were greater in quantities than in 1921, owing to reduction of prices, the total values are less. The relative values are:—

TOTAL VALUES OF IMPORTED EGGS (EXCLUDING IRISH).

	1913	1921	1922
.....	9,590,602	11,395,828	11,301,652

Below are given the relative values of each of the countries enumerated:—

AVERAGE VALUES OF IMPORTED EGGS, PER GREAT HUNDRED.

From—	1913.	1921.	1922.
	s d	s d	s d
Russia	8 3½	..	..
Denmark	10 9½	23 0½	19 7½
Germany	8 4½	18 9	12 10
Netherlands	10 0½	22 8½	17 6½
France	8 3½	21 2½	12 3
Italy	9 11½	..	15 3½
Austria and Hungary	8 6	14 7½	..
China	..	19 9	12 1
United States of America..	7 5	22 10	17 2½
Egypt	7 5	15 10	11 11½
Canada	7 5	23 0½	18 10½
Other countries.....	7 5	20 4½	14 6
Totals	9 10½	21 7½	16 5½

Of dried and liquid eggs during the last three years, the following are the net quantities and values—that is, less re-exports:—

	Quantities.	Values.
	Cwts.	£
1920	404,321	4,731,435
1921	380,440	3,294,294
1922	373,781	2,347,020

In 1920 the declared import value was 234s per cwt, and in 1922 125s 6d per cwt, a drop of 46 per cent. Dead poultry are included in the following table:—

COMPARATIVE IMPORTS OF POULTRY (excluding Irish).

From—	1913.	1921.	1922.
	Cwts.	Cwts.	Cwts.
Russia	119,944	..	..
France	31,175	17,558	42,648
United States of America	54,242	20,806	50,557
Other countries	73,100	47,170	78,846
Totals	278,465	85,534	172,051
Less re-exports	9,914	6,806	5,303
Net totals	268,551	78,728	166,748

Dead poultry imports more than doubled in 1922, as compared with the preceding year, but were 37.9 per cent. lower than in 1913. The United States is nearly up to the 1913 supplies, and France has exceeded these. Probably, unless Russia again enters into the field, which is unlikely, there will not be much increase in totals. The net values of dead poultry imports were (excluding Irish):—

	Values.	Per Cwt.
	£	s d
1913.....	909,894	68 7
1921.....	557,982	135 4
1922.....	1,214,506	145 8

Average values, therefore, were higher in 1922 than 1921, doubtless owing to better quality. More than 37 per cent. of the year's imports were received in the month of December.

The consumption values (wholesale) of eggs and poultry in Great Britain during 1922, less exports and re-exports, were:—

IMPORTED PRODUCE (Irish estimated).

	£
Eggs in shell.....	17,301,650
Poultry, less re-export	2,149,136
Dried and liquid eggs, less re-exports	2,347,020
	21,797,806

BRITISH PRODUCE.

Eggs and poultry, less exports	28,900,000
Total.....	50,697,806

From the above we arrive at the result that of the eggs and poultry consumed in Britain during 1922 43 per cent. in value were brought overseas.

THE POSITION OF SILVER.

SENTIMENT in the silver market of late has been considerably disturbed by the cessation of the purchases by the United States Treasury that were authorised by the Pittman Act, but during the last day or two there has been a harder undertone, and, for the time being, the scare seems to be over. The quotation for American-mined silver has now been discontinued in New York, and presumably the price fixed daily stands for both foreign and home metal. Up to quite recently American-mined silver has been bought by the United States Government at the rate of one dollar per ounce fine; thus there has been a very handsome premium, running quite recently to close on 35 cents an ounce, in favour of the American producers, and naturally the sudden stoppage of this concession has had effect on world values. Under the terms of the Pittman Act the United States Treasury was given the legal right to acquire up to 200,000,000 ounces to replace the silver supplied by the American Government to this country during the war, when the metal was very badly needed for Indian coinage purposes, and at the close of last month the Treasury authorities at Washington suddenly announced that no further silver would be bought until the exact position could be defined. The Pittman Act was passed to conserve the gold supply of the United States; to permit the settlement in silver of trade balances adverse to the United States; to provide silver for commercial use; to assist foreign governments at war with enemies of the United States, and also to stabilise the price of silver and encourage the production of the metal. As is well known, large quantities of coined silver were melted down in order to make a plentiful supply of the metal immediately available, and the understanding was that the silver so dealt with was to be replaced by silver derived from mines situated in the United States and refined by works so located, the purchase price being fixed at one dollar per ounce fine. It is estimated that 268,929,300 dollars were melted down and sold, so, therefore, the Treasury had to buy in 208,000,000 ounces of fine silver in order to carry out the terms of the law.

At the end of February it was estimated that there was something like 45,000,000 ounces still to be purchased, but apparently there has been some misunderstanding, and revoked sales have been set off against the total number of ounces to be acquired; thus, until the dispute that has arisen between the silver producers and the Washington Government authorities has been cleared up, it is impossible to say exactly how the matter stands. The whole thing turns on the reading of the Pittman Act, and whether this gives the Treasury the right to revoke certain sales of silver. Naturally enough, the producers wish to sell as much as they can at the full price of one dollar an ounce, but, of course, the American Government, knowing that silver can be bought in the open market on much easier terms, are not eager to go beyond the strict terms of the Act. Some time ago the producers and the representatives of the Treasury had a meeting, and it was decided then that it was necessary to find out exactly how matters stood. The silver in ore purchased must obviously take a long time to refine, and until the actual metal has been delivered to the Treasury it will be difficult to say what quantity has been taken. The silver producers have apparently been reckoning on the sales to the Government going on for some time longer, and every effort has been made to mine as much ore as possible; but this week it was announced that the American Treasury will make a statement about June 15th, and that this will show the exact position in which the Government stands in regard to its obligations under the Pittman Act. Well-informed opinion in bullion circles on this side regards the U.S. Government buying as finished, but, of course, it does not necessarily follow that any quantity of silver will be thrown on to the open market, as is taken for granted in certain quarters, even if this turns out to be correct; thus the effect of a statement indicating that the Treasury will buy no more dollar silver would have

nothing more than a sentimental influence on the position. Certainly, it would not mean that the American producers would be in a position to sell silver in any quantity even if they wished to at the market prices now current, and quite erroneous views are being taken as to the possibilities of the situation.

Last year silver moved very narrowly, taking it altogether, and ready bars on the London market never went over 37½d, which was recorded towards the close of May. For long periods there was very little movement, and for more than half the year the range was from 33d to 36d per ounce. Near the close there was a very depressed feeling, with a break in values, but the average cash price for all 1922 was 34½d per ounce. At the close of last year ready bars were over the worst at 31½d, and in the opening month of the current year there was some improvement on this, but in February the market here was subject to considerable pressure again, and there was a fall to 30½d on the 8th of that month, this being the lowest touched this year. In March the feeling was better, and the early weakness displayed in April soon gave way to a better tone, the price rising by the end of the month to 33½d, which is the best of 1923 so far. At the end of May ready bars declined to 32d, with 31½d for the forward position, and in the first week in June the movement was downwards until the middle of this week, when there was a slight rally, although trading kept within a very narrow compass. The check to the decline, however, was very significant, and from the fact that there was less pressure to sell forward it may be deduced that bear operators are not quite so sanguine as they were a week or two back. The New York price for silver this week has been round about 65 cents, and this is only about 2½ cents under the average for all 1922, and a little over 5 cents above the average for 1913. In 1919 the average selling price of silver in New York moved between 101.12 cents and 131.98 cents, and the average for the full twelve months was as high as 111.11 cents per fine ounce. Even in 1920 the average all through was kept just above 100 cents per ounce, but, of course, the market was quite artificial, owing to the price of American-mined silver being fixed at one dollar per ounce. Taking 1921 and 1922, an average selling price of 65.12 cents is arrived at; thus the current market value is very close to the average for the last two years.

The American silver production for last year was just over 55 million ounces fine, which compares with 75 million ounces in 1915 and 66,800,000 ounces in 1913. The U.S. Government have absorbed 200,000,000 in the last four years; thus it is argued in some directions that there will be an additional 50,000,000 ounces to be marketed, but this hardly takes into account other factors, which are bound to influence prices and output as time goes on. In the first place, it does not follow that, deprived of their market at one dollar an ounce through the absence of Government business, the American producers would be willing to sell at open-market rates. If the American exchange became normal again, as presumably it will one day, the American price of silver based on present rates would be only 30d, and considering the high cost of production this would be far too low for the ordinary producer. Assuming that silver remained on its present level and failed to go any better, many of the smaller mines would be forced to close down, and this would have considerable effect on the production. At the moment China is inclined to sell on any rise, and India is a buyer on any fall. During the recent drop in values considerable quantities of buying orders were received from the Indian Bazaars, which could not be filled owing to the limits being too low, but it shows that India is still a potential buyer of some importance, and this would soon make itself manifest on any improvement in world trade. There has been, of course, a lot of melted-down coinage sold here during recent months, and even now it is difficult to say how much more there is to dispose of, but it is only fair to assume that there will be an end to paper money printing operations one day, and this would bring silver into favour again as a metal for subsidiary coinage purposes. The British Mint is issuing coins of 500 fine, compared with 925 fine in former years, and as time goes on the need of a better coinage will be seen, although the debased coins bring in

a handsome revenue. China is still a doubtful factor in the situation, but Indian buying should offset any further selling from that quarter. London stocks just now run about 2,000,000 ounces, and with a lot of bear sales still uncovered the chances seem to favour steady markets for some time to come until the American position is straightened out. Unless there is another rush to sell short, narrow movement may be looked for, but competent judges of the world position regard silver as very low at its present level, and possibly time will prove that the Eastern operators have gone too far in their selling commitments, the same as they have done before.

ADAM SMITH—1723-1790.

LAST Tuesday was the bicentenary of the birth of Adam Smith, the Scottish professor, acknowledged by universal opinion as the founder of the science of political economy. It is true that many of the arguments that appear in "The Wealth of Nations" are foreshadowed in the writings of previous authors, but to a greater or less degree this is the case with all epoch-making works, and just as scholars have spent laborious days in hunting for the sources of the plots of Shakespeare's plays, so much has been written on the sources of Adam Smith's ideas. Nevertheless, his writings constitute the starting point of modern political economy as surely as those of Charles Darwin are the foundation of modern ideas of evolution. As a matter of fact, it was not until 1776 that the first edition of "The Wealth of Nations" was published. In comparison, therefore, with jurisprudence or philosophy, the science of political economy is a youngster barely a hundred and fifty years old. Writing about one hundred years after the appearance of "The Wealth of Nations," Bagehot observed that: "The life of almost everyone in England—perhaps of everyone—is different, and better in consequence of it. The whole commercial policy of the country is not so much founded on it as instinct with it. No other form of political philosophy has ever had one-tenth part of the influence on us. Its teachings have settled down into the common sense of the nation, and have become irreversible."

This is not the place to attempt an appreciation of a classic which, as Gibbon declared, contains a whole new science in a single book, and as Professor Cannan—Adam Smith's latest editor—points out, would need an encyclopædia if comment were to be made on all the theories suggested, or the topics dealt with, in this monumental work. But it is, perhaps, worth remarking why it is that even to-day Adam Smith's work is still so well worth study. On the one hand, "The Wealth of Nations" differs from many subsequent books on political economy in the fact that it is, at the same time, a theoretical treatise and a commentary on an enormous number of economic phenomena of the day. Thus Hume wrote that so complex a work could not be expected to be immediately popular, "but it has depth and solidity and acuteness, and is so much illustrated by curious fact that it must at last take the public attention." This concrete character of Adam Smith's work is even more emphasised by Bagehot: "'The Wealth of Nations' does not deal, as do our modern books, with a fictitious human being hypothetically simplified, but with the actual concrete men who live and move. It is concerned with Greeks and Romans, the nations of the middle ages, the Scotch and the English, and never diverges into the abstract world. Considering the natural progress of opulence as an item in greater studies, as part of the natural growth of human civilisation, Adam Smith always thought how it had been affected by human nature, taken as a whole." This combination of argument and exposition has, of course, its weaknesses as well as its strength. The arrangement and balance of the book compares unfavourably with its successors; and there are a number of propositions in "The Wealth of Nations"—particularly those relating to the laws governing the rent of land—which have been rejected by subsequent authority. On the

other hand, Adam Smith's judgments are open to criticism not merely because the circumstances on which he based his conclusions have radically changed, but also on the ground that his opinion of humanity was too narrow a one. Adam Smith did not attempt to argue from an abstract "economic man," but, in fact, he over-stressed the mercenary motive in human conduct, and, as has been well said, took it too much for granted that "there was a Scotchman inside every man." But these are the defects of its qualities, and do not sensibly weaken its importance or its power.

The keynote of "The Wealth of Nations" is that material prosperity is best advanced, both within the nation and between nations, by division of labour and specialisation, and by the interchange of the products of specialisation; and the practical corollary of this doctrine is the removal of all barriers to such interchange. The modern reader of "The Wealth of Nations" realises that in these ideas Adam Smith hit upon the basis of modern industrialism, but he will all the time be also conscious that Adam Smith's conception of the scale on which this division would proceed is puny compared to modern conditions. For example, anyone who wishes to see Adam Smith's exposition of the division of labour as illustrated by the classic example of pin making, expressed in modern terms, cannot do better than turn to the pages of Henry Ford's book, "My Life and Work." A single example will suffice:

Take the development of the piston-rod assembly. Even under the old plan this operation took only three minutes, and did not seem to be one to bother about. There were two benches and twenty-eight men in all; they assembled one hundred and seventy-five pistons and rods in a nine-hour day, which means just five seconds over three minutes each. The foreman examining the operation could not discover why it should take as much as three minutes. He analysed the motions with a stop-watch. He found that four hours out of a nine-hour day were spent in walking. The assembler did not go off anywhere, but he had to shift his feet to gather in his materials, and to push away his finished piece. In the whole task each man performed six operations. The foreman devised a new plan; he split the operation into three divisions, put a slide on the bench, and three men on each side of it, and an inspector at the end. Instead of one man performing the whole operation, one man then performed only one-third of the operation—he performed only as much as he could do without shifting his feet. They cut down the squad from twenty-eight to fourteen men. The former record for twenty-eight men was one hundred and seventy-five assemblies a day. Now seven men turn out twenty-six hundred assemblies in eight hours. It is not necessary to calculate the savings there!

This example affords a glimpse of the problem of industrial specialisation as it is to-day, and it is little wonder that questions affecting the life and social conditions of the people have become of equal importance with those which Adam Smith did so much to bring to the front. A large part of Henry Ford's book reveals him face to face with "the terror of the machine," the reaction of automatic work on human life, the problem of security of livelihood, and similar issues which hardly figure at all in the pages of "The Wealth of Nations."

Adam Smith was prepared to accept some limitation of the principle of liberty, where it was clearly in the interest of the nation. For example, he accepted the arguments in favour of the Navigation Laws in the interests of national defence, though he never concealed the fact that these laws were harmful to the material wealth of the nation. But Adam Smith's bias in favour of "natural liberty" was supported by his philosophical opinions. His view was that "the benevolent government of the world by God would in most cases lead the individual who was freely seeking his own interests, to advance the interests of the common weal," and that the individual would be "led by an invisible hand to promote an end which was no part of his intention." The modern reader of "The Wealth of Nations" will find himself out of harmony with the assumption that when wages rise population tends to increase to that extent, and that wages ultimately fall to the amount required for subsistence. Adam Smith quite definitely did not envisage that the increase of the nation's wealth would in fact be spread throughout all classes, and that the iron law of wages would be prevented from operating by a rise in the standard of living.

But when all has been said to show how far modern thought has moved with changed circumstances, the value

of Adam Smith and his work remains unimpaired. He himself had no conception that the underlying spirit of his treatise would become so widely and quickly accepted. For example, in regard to Free-trade, he records that: "To expect, indeed, that the freedom of trade should ever be entirely restored in Great Britain is as absurd as to expect that an Oceania or Utopia should ever be established in it. Not only the prejudices of the public, but, what is much more unconquerable, the private interests of many individuals, irresistibly oppose it." But Adam Smith's doctrines spread much more rapidly than he thought likely, because they fitted the circumstances of the day. The internal obstructions to trade against which he inveighed have in all modern countries long since disappeared, and though we are very far from a Free-trade world, such units as Germany, India, and the United States constitute enormous areas, with large masses of population, where no obstacles exist.

There are, perhaps, two reflections pertinent to our day which this anniversary suggests. The first is that if political economy, which plays so large a part in public life and in shaping the welfare of the whole population to-day, is to have its proper recognition, it must be based, as "The Wealth of Nations" was based, not purely upon abstract reasoning, but upon wide observation and comprehensive marshalling of the facts of economic life, and must be expressed in concrete terms which will commend themselves to a wide public by appealing to universal experience. The second reflection is that, while the macadam road, the canal, and the railway made a unity of individual nations in the eighteenth century, and enabled Adam Smith's views to prevail against local prejudice and long-established tradition, in this 20th century, when the cable, wireless and the airship have brought America nearer to Europe than Glasgow was to London in 1776, we need a new exposition of the advantages of national specialisation and freer interchange; for if the lessons of our present experience are properly understood, the time cannot be far distant when the forces making for full freedom of economic intercourse, certainly throughout Europe, and possibly over still wider fields, will prevail over the narrow influences of national exclusiveness.

Notes of the Week.

Rent Restriction.—The passage of the new Rent Restriction Bill through the House of Commons is proving a far smoother and more peaceful process than was suggested by the fierce and prolonged controversy which led up to its production. It is frankly a compromise measure, and, like all such measures, is not perfect. But considering the difficulties surrounding the problem, the framers of the Bill have succeeded rather surprisingly well in making their proposals so nearly immune from destructive criticism. For ourselves, we have frequently expressed the view that the ideal approach to the solution of the housing problem was through gradual decontrol and the reduction of the maximum rent increases in accordance with the movements in the cost of living. This apparently the Government have found impossible of translation into practicable legislative form. But the goal aimed at by the Government's Bill is not dissimilar. Its object is to couple a certain degree of decontrol with the maintenance of protection for tenants in the most important cases, and for a period that will be determined eventually by the course of economic events. It is, of course, easy to pick holes in the Bill. Mr Sidney Webb, who on behalf of the Labour Party moved a hostile amendment, found that there were no less than "eight loopholes" in the Bill, which would allow various classes of houses to become decontrolled with dangerous rapidity. Nevertheless, even Mr Webb, who was out to discredit the Bill, admitted that it had its "bright spots." This admission is proof of the success with which the Government have rounded what at one time appeared to be a very dangerous corner. On the whole, we believe the country will be content for the moment to accept the Bill as at least a tolerable *pis aller*.

The Austrian Loan.—Underwriting arrangements were completed this week for the long expected loan to Austria, contemplated under the League of Nations' plan, and to be issued forthwith under international guarantee. The total of the loan is £29 millions, of which the London portion is £14 millions. But bonds to the amount of £3,119,000 are being taken by the British Government as payment of sums due to them, so that the amount to be offered to the public here is £10,881,000. The issue price is fixed at £80 per £100, and interest is at the rate of 6 per cent. The loan is to be redeemed on or before June 1, 1943, by a cumulative sinking fund, beginning in October, 1924. The yield, allowing for redemption at the final date, is a little over 8 per cent. The bonds are secured on the general revenues of Austria, and also constitute a prior charge on the Customs revenue and the tobacco monopoly, the two latter yielding at present about £6,000,000 per annum. In addition, guarantees in sterling are given by various States in the following proportions:—Great Britain, France, and Czecho-Slovakia, 24½ per cent. each; Italy, 20½ per cent.; Belgium and Sweden, 2 per cent. each; Denmark and Holland, 1 per cent. each. Holders of the Austrian Treasury Bills issued at the end of February have the right of conversion into the new loan. The events leading up to this loan have been too often discussed in these columns to need recapitulation here. It is sufficient to say that its flotation marks a very important stage, not only in the history of the League of Nations, but also in the attempt to secure international co-operation in grappling with the task of the financial restoration of the States of Europe. The loan is assured in the first place of the support of all who are prepared to back in a practical manner their faith in the League. It should also, and we are confident that it will, be supported by financiers, both because it is a sound security and also because it is a practical effort to restore financial stability. One obvious criticism of the flotation is that the proportion of the total allotted for issue in Great Britain—namely, £14 millions out of £29 millions—is unduly large. Had the Unsited States been our colleague in the League of Nations she would undoubtedly have taken over a larger proportion than the £5,000,000 which is the amount to be issued in New York. Undoubtedly she could easily have done so, more especially because of the large lendings to foreign countries in which American institutions and American investors have of late been educated to participate. But as things are, it is a matter for no small gratification that the United States is taking a hand in the loan at all. That she is doing so is a significant event of good promise for the international future.

European Iron and Steel Production.—From the monthly bulletin of the National Federation of Iron and Steel Manufacturers we have compiled the following table of the output of pig-iron and steel from France, Belgium, and Luxembourg from the beginning of the year:—

	France.		Belgium.		Luxembourg.	
	Pig Iron.	Steel.	Pig Iron.	Steel.	Pig Iron.	Steel.
1922 Average Monthly.....	Tons. 428,900	Tons. 372,000	Tons. 131,500	Tons. 128,200	Tons. 137,500	Tons. 114,000
1923 January.....	478,600	401,400	157,800	159,800	139,500	121,500
February.....	300,800	285,300	149,000	154,700	86,500	72,400
March.....	311,200	310,900	167,300	181,100	93,900	78,500
April.....	345,000	349,200	169,600	167,700	94,400	77,600

Belgium's output, both of pig-iron and of steel, has been growing, and is now much above the monthly average for 1922, but in the case of France and Luxembourg, present output is well below last year's average. In a recent debate in the French Chamber, M. Poincaré stated that the supplies of fuel from the Ruhr were increasing so favourably that the coke supplies for the iron and steel industry were assured until the end of August. In view of the fact that Germany has allowed many of the coke ovens in the Ruhr to get cold, this view seems very optimistic, to say the least. Further, the French Government has recently ordered the iron and steel works to set aside one-third of all receipts of Ruhr coke in order to build up a stock of at least a fortnight's supply for emergencies. Probably about 150,000 tons of coke will have been obtained from the Ruhr in May, which will leave 100,000

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,352,105

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

tons available for the industry, in addition to supplies from other sources. Since October, 1919, Germany has not published monthly statistics of iron and steel production, and no official figures of output are available beyond that date.

Economic Conditions in Uruguay.—The report for 1922 from the British Vice-Consul at Montevideo, just issued by the Overseas Trade Department, shows that Uruguay's recovery from the post-war depression is delayed by the lessened European demand for the meat which is her staple export, and will be further hampered by the adverse exchanges and the increased taxation necessitated by a decreased Customs revenue, which are indirect results of the same cause. The economic conditions are sound, however, and the country will respond to any improvement in the purchasing power of Europe. The only remedies yet actually adopted are the suspension of the export duties on meat and cattle, and the organisation of the export of cattle to Spain—we presume as "stores." The slump has further lessened the demand for European pedigree stock, which fell off during the war because inferior animals were good enough for "bully beef." The prices of beasts are 30 to 50 per cent. less than during the war, and the ranchers are heavily in debt to the banks. Still, the value of the cattle and meat exports in 1922 was 53 per cent. more than in 1921; that of the wool exported—chiefly to the United States—was 33 per cent. less. Sealing, a new but minor industry, is doing well; the harvest was good, but the product is mostly consumed at home, and the cereal export is less than before the war, partly because more land has been taken up for grazing. This year the crop will be 66 per cent. less, and the export nil. Money is being invested chiefly in modern-type buildings in Montevideo. The Budget deficit for 1922-23 was nearly \$3,760,000, that for 1921-22 would probably reach \$10,000,000, and both, though temporarily met by short loans, will ultimately more than absorb a foreign loan, now authorised, of \$10,000,000. (The deficit, however, is partly caused by the resumption of the sinking fund on the external Customs loans.) Trade with the United States (which stands first) declined, with Great Britain (next in order) it showed improvement; but British goods meet increasing competition, especially from Germany, and exporters should study the local tastes. Shipping facilities are multiplying, though here Great Britain is still far ahead; but certain luxurious German and Italian vessels are bidding for passenger traffic. New lines from Peruvian ports and the Pacific coast of North America are to be started by a Peruvian company and by the United States Shipping Board. Free zones at Colonia and Nuevas Palmiras should stimulate the re-export trade with Paraguay, Bolivia, and Brazil. The German steamers between Buenos Ayres and Montevideo have been bought by the Argentine Navigation Company, and will serve the Uruguay river ports; but the company's monopoly is threatened by a projected express service via Colonia, though there are difficulties on the Uruguay side in the way of fast trains. State monopolies of alcohol and drugs are talked of, as well as the extension of that of insurance; but there is no further reference to State enterprise. The depression has had a not unusual effect; it has diminished labour unrest.

Brazil Coffee.—Particular interest, writes a correspondent, attaches to the Brazilian coffee statistics for the second half of the 1922-23 season. According to figures provided by the Associação Commercial de Santos, 2,778,550 bags of coffee were invoiced at that port up to the end of December last, while for the full calendar year of 1922 there were invoiced 4,855,248 bags. Stocks have been decreasing fairly steadily since February, while late reports from São Paulo tend to show that the anticipated crop (1923-24) of 12,000,000 bags will not only be realised, but, in all probability, exceeded. The largest coffee output ever recorded was 19,654,000 bags (or 2,594,328,000 lbs) for the 1906-7 season, a result which proved somewhat unfortunate, since the supply considerably exceeded the demand. As a consequence, prices fell so low that growers were threatened with financial disaster. The valuation plan, introduced at that period by the State Government, and which calls for the withholding of coffee from sale in order to maintain prices effectively, was intended to prevent any recurrence of such a calamity. The United States still constitutes Brazil's principal market. While ordinarily 50 to 55 per cent. of the crop is taken, the percentage increased to 65 per cent. for the six months ending December last, while this year it has advanced to 70 per cent.

El Salvador.—One of the smaller Latin-American States to feel the pinch of adversity is El Salvador, where hopes of economic improvement have yet to be realised. The past year proved unsatisfactory from a trade point of view, with the result that the Budget for 1922-1923 shows a probable deficit of 714,686.76 colones (1 colon = 2s). As in the case of Ecuador, hopes of amelioration in financial conditions have been based upon the raising of yet another loan, overtures with New York banks having been in progress for a considerable time past. In view of the steadily falling revenue, the Government has found difficulty in meeting its obligations on the Salvador Railway Company's mortgage debentures; but, all the same, interest has been paid up to the month of February last. On the other hand, it has been impossible to provide payments of the arrears of subsidy due from the Government to the company, which, over a long period, were formerly paid with commendable regularity. It would seem that the settlement of this outstanding claim is also dependent upon a new loan being negotiated. The best guarantee that British bondholders possess is the already proved probity and good faith of Salvador Governments. The present Administration may be expected to redeem its indebtedness so soon as economic conditions permit.

Plans for Increasing Income.—Ingenious schemes are constantly being prepared which offer temptation and attraction to those who, holding stocks and shares, are naturally willing to take advantage of any opportunity which affords them a safe manner for increasing their income. Several "snowball" plans have recently been circulated, the inherent disadvantages of which are not apparent until the schemes have been closely examined, and it was only a few months ago that a tontine proposal was widely advertised amongst security holders who probably had never heard of this method, at one time so fashionable, of speculating in the lives of subscribers to the arrangement. Variation of another financial operation, writes a correspondent, is furnished by a method put forward by a Westminster firm. Under this plan, the holder of Stock Exchange securities is shown, on paper, how he can obtain an increase, from his present investments, of 40 per cent. to 60 per cent. without changing or realising those securities. The trustees of the corporation making the proposal "will receive on deposit approved securities or cash withdrawable at agreed periods," and the corporation offers terms that range from an increase of 40 per cent. on present dividends, to 60 per cent. As an example, £100 War Loan is quoted; the stock is deposited with the trustees of the corporation for 12 months; "the depositor will receive annually the £5

interest, plus £2 10s, thus making a total for the year of £7 10s, which is 50 per cent. increase on the present dividend." Amongst the securities likely to be acceptable are mentioned British, Indian, and Colonial Government stocks, stocks in banks, discount and insurance companies, debenture stocks and shares in first-class industrial companies, and others. The securities or cash, when received, are immediately deposited with the bankers to the trustees of the corporation, and the bankers are guaranteed, by the corporation, a "proportion of any loan agreed to be made for the financing of high-class building properties. Such loans are secured by a temporary mortgage redeemable by the borrowers within a fixed period," the guarantee to bankers to be "effected by placing the securities deposited with the trustees in hypothecation with the bankers until the completion of the operation that has been entered into, when such deposited security is returned to the custody of the trustees." The corporation "undertakes that such deposited securities shall be only used as collateral security against advances by way of mortgage due to be repaid within such time as will permit of the return of the said securities to the depositors at the agreed dates." This, in brief, is the outline of a scheme that, on the face of it, presents an ingenious and somewhat attractive method for increasing income through the utilisation of securities without selling the latter. The weak spots in the scheme stand out at once as apparent to anyone who has experience of mortgages and house property. These are far from being as liquid, from the security point of view, as stocks and shares such as those referred to above. Recipients of these circulars will do well to exercise the utmost caution before they venture into a plan which, after all, seems to contain a good many elements of speculative risk.

Armstrong, Whitworth, and Co.—The accounts for 1922 of Sir W. G. Armstrong, Whitworth show a small improvement in profits as compared with the previous year. We have complained in recent years of the scantiness of the information vouchsafed in the report and accounts, and are sorry to find that the latest document is no better than its predecessors. No profit and loss account is produced, but we are told that after payment of debenture interest the profit was £467,600, which compares with £438,900 for the previous year. As regards the appropriation of this amount, the directors do not trouble to state the rate of dividend on the ordinary shares, but merely give the total amount paid to preference and ordinary shareholders together. Here is a summary of results:—

	Profit.	Interest and Expenses.	Prof. & Ord. Div.	Ord. Div. Rate.	To Reserve &c.	Carried Forward.
1910	£ 597,637	£ 119,772	£ 361,000	%	£	£
1911	627,227	119,401	441,250	10	50,000	184,997
1912	798,547	123,020	443,250	12½	100,000	201,573
1913	856,673	167,626	568,122	12½	133,059	335,850
1914	940,195	138,309	591,563	12½	200,000	323,716
1915	1,055,620	303,272	615,000	12½	100,000	334,038
1916-19..	4,053,605	?	2,465,093	12½	1,000,000	461,387
1920	675,180	?	803,750	10	..	1,049,899
1921	666,060	227,172	528,125	5	..	921,329
1922	691,895	224,345	528,125	5	..	832,092
						771,516

Two years ago the amount of debenture interest was not stated, and comparison is therefore vitiated. The balance-sheet, which is analysed in a later column, gives property and investments in and loans to subsidiaries in one item, which stands £453,900 higher at £1,170,600. Work in progress has dropped by £1,982,800 to £3,013,100, and debtors by £835,600 to £1,416,900, but cash and bills have risen by £245,700. Creditors are down by £1,812,100. The directors state that in the latter part of 1922 conditions were more stable, but that this year the dispute with the Boilermakers is causing considerable trouble in the shipyards, and delay in the execution of important orders. The suspended armament order, it is announced, has now been definitely placed by the Admiralty.

Burmah Oil.—The report for 1922 of the Burmah Oil Company shows some improvement in profits, which the directors ascribe to increased volume of production and sales, and to profits on exchange, together with increased revenue from investments and lower taxation and other charges. The net profit for the year, after writing off £149,800 for depreciation, is £2,115,800, as compared with £1,902,800 for 1921, when £170,300 was required for depreciation. The table below compares results for the past four years and for 1914:—

	1914.	1919.	1920.	1921.	1922.
Trading profit ..	£ 971,278	£ 4,344,469	£ 3,965,950	£ 2,353,894	£ 2,428,155
Interest, &c.	58,335	287,149	322,177	284,510	358,799
	1,029,613	4,631,618	4,288,127	2,638,404	2,786,954
Income-tax	50,509	318,121	294,835	470,733	371,455

† Tax free. ‡ Including donation of £50,000 to Cambridge University.

There was a substantial reduction, it will be seen, in income-tax. Reserve appropriations include £200,000 for general reserve, and £121,500 for employees' provident fund. The issue of £3,000,000 of 8 per cent. preference shares made in the middle of 1921 now ranks for full dividend, which requires £177,000, as against £84,000 at the end of 1921. After maintaining the ordinary dividend at 30 per cent., free of tax, the balance carried forward is slightly reduced. An analysis of the balance-sheet will be found in the usual column. This shows increases of £531,400 and £624,900 in investments and creditors respectively, while cash, loans, &c., have fallen by £474,500, and stocks of plant and stores by £785,000. An overdraft at bankers appears this time for £223,500. The report mentions that a record production of kerosene went fully into consumption in India at unchanged prices, but lower prices ruled for jute batching and lubricating oils. The Indian petrol trade showed further expansion, excess production being exported under a new contract. Prospects for the current year, the directors state, are obscured by the large over-production and stock accumulations in America, combined with the continued unsettlement of conditions on the Continent. The recent protracted strike in the fields will naturally have a prejudicial effect, but results are not expected to be materially different from those of the past year.

Forestral Land Company.—The accounts of the Forestral Timber and Railways Company for 1922 show some substantial improvement over those for 1921. For the latter year there was a trading loss of £291,300, which was augmented by London expenses and depreciation of stocks to £544,300. By releasing £170,000 set aside for taxation and not required, and transferring £500,000 from reserve, the directors called the result a profit of £126,300. For 1922 the accounts show a trading profit of £137,100, against which there are charged administration expenses of £23,200, leaving a net profit of £113,900. This, as may be seen from the table below, is much below the level of recent years:—

	1916.	1918.	1919.	1920.	1921.	1922.
Profit	£ 1,614,889	£ 815,980	£ 992,381	£ 560,261	£ 126,314	£ 113,902
To pref. shares	260,788	186,058	92,751	92,751	111,951	111,951
Preference dividend ..	15 %	12 %	6 %	6 %	6 %	6 %
To ordinary shares ..	504,111	279,922	371,004	432,832	..	..
Ordinary dividend ..	27 %	18 %	18 %	12 %	..	..
Special reserve	250,000	150,000	150,000	..	..	..
Excess profits res.	600,000	807,000	..	300,000	..	..

After payment of the 6 per cent. preference dividend there remains £129,600 to be carried forward, or 2,000 more than was brought in. The reserve account shows a reduction of £1,248,700, the directors having decided to write down certain assets, including holdings in asso-

ciated companies, by £800,000, and stocks of timber by £159,400. The report mentions that at December 31, 1921, £944,000 was outstanding on the purchase price of the estancias, including £45,000 indemnity for postponement of instalments. "New arrangements have been concluded by which, for the immediate receipt of £750,000, we consented to waive the £45,000 indemnity and to postpone the balance of £149,000 for ten years." The book profits for the sale of the estancias was added to reserve a year ago, but it is now to be transferred to suspense account. The depreciation account now stands at £988,600, and the reserve fund at £1,074,200, while creditors have been reduced by £528,100 to £1,281,000. The value of the stock of timber, &c., has been reduced by £1,326,300 to £570,200, but debtors are £733,300 higher at £1,356,600. An analysis of the balance-sheet appears in the usual column.

British Electric Traction.—The report of the British Electric Traction Co., Limited, for the year ended March 31, 1923, shows an increase of over £9,000 in the revenue from investments, but other receipts were smaller than in the previous year, total revenue being less than £1,000 higher at £263,800, which, as will be seen from the table appended, falls short of the record figure reached in 1920-21:—

	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
Divs. and interest	£ 198,841	£ 210,362	£ 217,864	£ 212,748	£ 208,387	£ 206,999	£ 218,116
Total revenue	225,755	237,906	250,214	246,717	264,772	262,895	263,894
Expenditure, &c.	27,266	28,685	36,890	35,401	44,575	44,402	46,894

(3½ %)	(6 %)	(6 %)	(6 %)	(6 %)	(6 %)	(6 %)	(6 %)
Ord. dividend	nil	39,788	39,788	53,051	53,051	53,051	53,051
(3 %)	(3 %)	(3 %)	(4 %)	(4 %)	(4 %)	(4 %)	(5 %)
Reserve, &c.	50,000	21,172	21,486	8,035	12,349	14,677	14,677
Balance forward	17,130	112,116	130,952	150,421	177,319	194,238	215,362

The net profit, however, is only £300 less than it was two years ago, and is £700 higher than it was for 1921-22. The ordinary dividend is raised from 4½ to 5 per cent., and the carry forward is increased by over £25,000, but no allocation is made to reserve. Investments, of which a detailed list is furnished with the report, consist largely of securities of tramway and omnibus undertakings. They stand in the balance-sheet at £3,970,000, or £17,600 less than in the previous accounts, but we are not told how they are valued, nor yet is any mention made of depreciation. The report states that the average yield from them was 5.49 per cent., as against 5.24 per cent. in the previous year. An analysis of the balance-sheet will be found in the usual column.

Elder Dempster.—For the second year in succession the profits of Elder Dempster and Co. show a contraction, those for the year 1922 amounting to £536,100, which compares with £564,600 for 1921 and £671,500 for 1920. But, as will be seen from the table below, last year's profits are still above the level of 1919 and preceding years:—

	1913.	1917.	1918.	1919.	1920.	1921.	1922.
Profits	£ 307,379	£ 366,808	£ 408,435	£ 522,873	£ 671,325	£ 564,320	£ 536,100

* Free of tax.

An increase in 1921 of 500,000 in the number of 6½ per cent. preference shares issued accounts for the larger amount required for preference dividend. The reserve allocation is reduced by £25,000, and the ordinary dividend lowered from 8 per cent., free of tax, to 7 per cent., less tax, the balance carried forward being reduced by £40,700 to £113,700. Changes in the balance-sheet include an increase of

£810,100 in investments, fleet, stocks, plant, &c., which now figure at £12,759,000, and a reduction of £1,173,500 in debtors. The directors report indications of an increased volume of traffic. This is reflected in the gradual reduction in the number of the company's steamers laid up and out of commission.

William Cory and Son.—A slight drop in profits is shown in the accounts of Wm. Cory and Son, Limited, for the year ended March 31st last, but as a larger amount was brought into the accounts than was the case a year ago, the amount available for distribution is substantially greater. The figures below give a comparison of results for a number of years past :—

	1914-15.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
Profit	£ 215,328	£ 468,616	£ 755,523	£ 770,843	£ 601,405	£ 588,194
Brought forward	44,511	135,084	177,153	278,308	391,812	478,839
Deb. interest...	259,839	603,700	932,675	1,049,151	993,217	1,067,033
Written off...	37,000	37,000	37,000	37,000	37,000	37,000
Reserve, &c. ...	6,000	25,000	..	..	..	100,000
Prof. dividend..	42,500	42,500	42,500	42,500	42,500	42,500
Ord. dividend..	115,000	318,000	570,017	570,020	427,514	427,514
(10 %)	(10 %)	(20 %)	(20 %)	(20 %)	(15 %)	(15 %)
Employees' shs	1,108	4,047	4,851	7,819	7,364	8,194
Carried forward	58,231	177,153	278,308	391,812	478,839	451,825

The distribution of profits is the same as in 1921-22, except that £100,000 is transferred to reserve, the balance forward being reduced by £27,000. The employees' shares, of which over £57,000 have been issued, receive a dividend of 15 per cent. The balance-sheet, of which an analysis appears elsewhere, shows no changes of importance. The position is still a very strong one, British Government securities standing at £2,148,000, at or under cost, while the total paid-up capital is £3,757,000.

Pennsylvania Railroad.—The accounts of the Pennsylvania Railroad Company for the year 1922 show a net railway operating income of nearly \$73½ millions, as against \$41½ millions for 1921. The directors point out, however, that this is only a return of 3.72 per cent. upon the investment in road and equipment of the company. In 1921, however, it was only 1.88 per cent. There was an increase in freight revenues of over \$34 millions as a result of increased business, and this, it is pointed out, would have been greater but for the coal strikes and the reductions in freight rates. The following table compares the results of the past two years :—

	1921.	1922.	Inc. or Dec. on 1921.
Net railway operating income..	\$ 41,221,968	\$ 73,405,328	+ 32,183,360
Non-operating income	38,036,467	29,093,153	- 8,943,314
Gross income	79,258,435	102,498,481	+ 23,240,046
Rents, bond interest, &c.	54,950,766	70,116,423	+ 15,165,657
Net income	24,307,669	32,382,058	+ 8,074,389
Sinking and other reserve funds	1,147,830	3,500,229	+ 2,352,399
Dividend	19,966,936	24,958,670	+ 4,991,734
Expenditure on leased roads ..	2,759,796	423,251	- 2,336,545
Balance	433,107	3,499,908	+ 3,066,801

There was a decline of \$6½ millions in railway operating expenses, transportation expenses, showing a reduction of over \$9½ millions. The dividend is raised from 4 to 5 per cent. Quarterly dividends at the rate of 1½ per cent. were resumed in November, 1922, thanks to "the improved net results and business outlook," and these, it is hoped, will be maintained. The report expresses dissatisfaction with the Government's railroad policy, and complains that "a regulatory policy which since 1908 has allowed a return upon the railroad investment averaging only about 4 per cent. per annum for this 15-year period is not regulation, but confiscation, of the investment." This complaint, however, loses something of its force when we find it stated in the next paragraph that "It is expected that in 1923 the railroads will earn some-

thing approaching a fair return upon the investment, provided there is no marked recession in business or rates, and no labour disturbances to interrupt the transportation service." The chairman of the British railways two years ago painted a most dismal picture of the outlook for the companies, but the accounts for 1922 showed that the companies had never been in a better financial situation. The accounts of American railways for 1922 which we have so far seen disclose a better state of affairs than might be expected from a perusal of the reports, and the outlook for the current year is in every case regarded hopefully.

A Tin Trio.—Although during the first seven months of 1922 the price of tin did not exceed £160 per ton, and at one time was as low as £140, the rise to over £180 which occurred during the concluding five months exerted a marked effect upon the profits of companies engaged in winning the metal. The report of the Tronoh Mines shows a surplus of £41,200 as against barely £5,000 for 1921, part of the revenue consisting of interest and dividends. The payment of 15 per cent. leaves an increased balance to be carried forward. On the basis of last year's distributions the yield is no more than 10 per cent., but as the price of tin is now well above the average of last year and the company's three dredges are fully employed—which they were not in 1922—the profits this year should be larger. Similarly, the Sungei Besi—in which a controlling interest is held by the Tronoh—earned £16,600 as against £3,500. This company also disbursed 15 per cent., but as £5,000, balance of the commission paid to the vendors, was written off, the carry forward had to be severely drawn upon. The quotation of these shares at a higher price than Tronohs appears to be something of an anomaly. Last year's earnings on the part of the Idris Hydraulic were negligible, and no dividend can be paid; for 1921 the company managed to squeeze out 2½ per cent. Alterations in the system of working the mine are expected to give better results this year.

Shamva.—Our Mining correspondent writes :—The position of this huge Rhodesian low-grade proposition at the moment is one calculated to give the shareholders a certain amount of anxiety. In 1921 the directors decided upon a change of policy in regard to the computation of the ore reserves, a fresh estimate being made on the basis of the inclusion of low-grade material, which, although not previously taken into account, had in practice to be extracted with the relatively better-grade rock. The consequence was that the ore reserves jumped nearly 1,000,000 tons to 2,801,000 tons, although the value necessarily declined—from 4.1 dwts to 3.5 dwts. As a result, however, the quantity of fresh ore which could be brought into account last year was only about one-sixth of that opened up, the ore reserve estimate on December 31st last declining to 2,248,000 tons. The quarterly statement to March 31st recorded a still further decrease. The question as to the development prospects, therefore, assumes considerable importance. From the report of the consulting engineer it appears that little success has attended work above the third level, although additions to the known ore bodies are expected to be discovered as stoping proceeds. One section tested at depth showed payable ore in two out of three cross-cuts, but the widths were scarcely equal to those encountered in the upper levels. Last year a further economy was effected in costs, the average being 107.85d, as against 122.50d in 1921. A still lower ratio is expected to be attained, and, if secured, will permit the treatment of considerable quantities of ore just below the present pay limit. The tendency, however, cannot continue indefinitely, as when ore comes to be extracted from greater depths expenses must necessarily rise. With regard to the financial outcome of last year's operations, the profit of £148,400 fell somewhat short of the 1921 total, and although the dividends for the year were reduced from 30 to 27½ per cent., they absorbed more than the profits, the carry-forward becoming reduced from £75,800 to £46,600. The first interim distribution on account of the current

year was 6½ per cent., or at the same rate as the two concluding distributions in respect of 1922. On the basis of dividends of 25 per cent. per annum the shares at current market price give the fair but by no means excessive yield of 15 per cent. Whether that rate will be maintained for the current quarter is, however, doubtful, operations having been interfered with by heavy rainfall.

Japanese Trade and Finance.—According to cables from Tokyo, the recent activity of trade in Japan has been checked. One or two local banks are reported to have met with difficulties, but the results are not serious. In the silk industry high prices for new cocoons have been maintained, and reellers are reluctant to buy at present quotations, more especially because stocks of silk are quite exceptionally large for the time of year. The cotton yarn and rice markets have been steady, and the stock markets lifeless. During the second half of May conditions in the money market were quiet, partly owing to the small demand for accommodation for purchase of new cocoons, while the usual displacement of funds at the end of the month was not particularly large. The rate for day-to-day loans, which towards the end of the month reached 10 per cent., fell on June 1st to 6½ per cent., owing to big disbursements by the Government of interest on Government bonds. The note issue of the Bank of Japan on June 1st was 1,225 million yen, as compared with 1,206 million yen a year ago, and discounts and advances 312 million yen, as compared with 197 million yen on June 1st, 1922.

FIELD-MARSHALL SIR WILLIAM ROBERTSON will preside at the evening meeting of the Royal Colonial Institute on Tuesday next, when Major-General Sir Frederick Maurice will deliver an address on the "Military Position of the Empire."

Two public lectures on I. "The Restoration of the Gold Standard," and II. "Devastation and Reconstruction in Europe" will be given by Professor Gustav Cassel (Professor of Political Economy in the University of Stockholm) at the London School of Economics, at 5 p.m. on Monday, June 18th, chairman, his Excellency the Swedish Ambassador (Baron Palmstierna); and Thursday, June 21st, chairman, Walter Leaf, Esq., Litt.D. (chairman of the Westminster Bank). Admission free, without ticket.

Oversea Correspondence.

UNITED STATES.—IMPORTANT SUPREME COURT DECISION—APRIL IMPORT EXCESS—AUSTRIAN LOAN—THE PENNSYLVANIA INCREASES WAGES—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 28.

A DECISION of the United States Supreme Court last week, in the case of the South-western Bell Telephone Company v. the Public Service Commission of Missouri, has attracted much attention, because the highest tribunal holds, in substance, that reproduction costs at prevailing prices must be taken into consideration in making rates for public service corporations. The majority opinion says: "It is impossible to ascertain what will amount to a fair return on properties devoted to public service without giving consideration to the cost of labour, supplies, &c., at the time the investigation is made. An honest and intelligent forecast of probable future values, made upon a view of all relevant circumstances, is essential. If the highly important element of presents costs is wholly disregarded, such a forecast becomes impossible. Estimates for to-morrow cannot ignore prices of to-day." It must never be forgotten, the court adds, that "while the State may regulate with a view to enforcing reasonable rates and charges, it is not the owner of the property of public utility companies, and is not clothed with the

CABLE ADDRESS: BANKTRUST, PARIS

general power of management incident to ownership." This decision is regarded as having a most important bearing upon the rights of railroad owners, and upon valuations of railroad properties, as fixed by the Interstate Commerce Commission. It serves to emphasise what many authorities have repeatedly claimed, that the Commerce Commission's railroad valuations, when finally determined (the Commission has been at work on the task for years), are not up to date, and probably never will be, because of constant changes in costs of material, labour, and so forth. Obviously, if, in line with the Supreme Court's decision just rendered, to-day's commodity and labour costs were to be taken into consideration in valuing railroad property, or in determining a theoretical reproduction, the appraisals made by the Commission in previous years would be far too low. One of the leading financial newspapers here points out editorially that "evidently some working compromise must be found between the awkward idea of revising the investment value according to year-to-year fluctuations in the general price level, and the still more injurious notion of holding the owners of the property down to a return upon original cost determined by the conditions of a bygone age."

There was another big excess of imports into the United States during April. According to the Department of Commerce figures, total imports in that month reached \$367,000,000, and exports \$326,000,000, showing a trade balance of \$41,000,000 against this country. Final revised figures for March show an import excess in that month of \$56,912,000, or considerably less than the amount reported in the preliminary returns. Nevertheless, both in April and March the excess of imports over exports was greater than in any month on record, while for the first four months of the present calendar year imports have exceeded exports by \$88,894,000, approximately, using the corrected figures for March, and preliminary statistics for April. If the balance of trade continues to move against the United States, it will have an important bearing on the matter of gold exports.

Financial interests here are awaiting with much interest the contemplated offering in the American market of \$25,000,000 of the total \$130,000,000 bond issue, which has been proposed as a reconstruction loan to Austria. A nation-wide syndicate, headed by J. P. Morgan and Co., has already been formed to underwrite and distribute the American portion of the offering. "Our main reasons for undertaking this work," Mr. J. P. Morgan explained, "are, first, we believe the bonds to be well secured, and, second, it is the first step toward the economic rehabilitation of Central Europe taken by all the countries working together, and we believe that the American market should take its part when such a concerted effort is being made to better general business conditions in the world." It is believed that the price at which the bonds will be offered here will prove attractive to American investors.

While wages have been increased in many industries during the past few months, railroads generally have taken no action in that direction. A notable exception is the Pennsylvania railroad, which, according to Chicago advices, has granted increases amounting to about

\$4,000,000 annually to some 55,000 shopmen employed throughout its system. The advance in pay is retrospective to May 1st; it amounts to 3 cents an hour in Chicago and 2 cents elsewhere, and has been granted on account of the higher living costs. The new rates, which are 75 and 76 cents an hour, as compared with the Labour Board's scale of 70 cents, are the result of an agreement reached between the Pennsylvania and representatives of the organisation of its own shopmen. The company, it is understood, is now negotiating over wage increases for its clerks and freight handlers.

The stock market has rallied vigorously from the recent severe depression, both railroad and industrial shares joining in the recovery. Much of the rise has been due to repurchasing by an extensive short interest, but there has also been substantial new buying for long account, attracted, apparently, by the comparatively low levels established a week or so ago. Bonds, likewise, including numerous European Government obligations, have displayed a better tone under an improved investment demand, many issues scoring sharp gains. Money markets continue unchanged, time funds being available at 5 to 5½ per cent., according to maturities, but are in rather light request. No material change in money conditions is expected during the next few months, but the trend of rates will depend largely, if not entirely, upon general trade and industrial requirements.

GERMANY.—REPARATIONS AND INDUSTRY—CURRENCY.—REICHSBANK POLICY.—STOCKS—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, June 5.

THE new Reparations Note will be delivered, it is expected, on the 7th. Whether the total offered will be increased is not, despite certain newspaper reports, yet definitely known, but it is certain that the guarantee plan will be more precisely put. Labour, as represented by the trades unions, received badly the plan, described last week, of the Reichsverband der Deutschen Industrie, the main objections being to the conditions that the remnants of the demobilisation industrial system be abolished and that the eight hours' day should be weakened. The unions demand "organic consolidation and simplification of the tax administration apparatus.....adaptation of taxation to the varying mark value," the making automatic of tax collection, and taxation of real values. This demand is emphasised by the new serious currency depreciation, which will again have the effect of freeing the wealthiest classes from a great part of the real burden of direct taxes. The law of last winter (*Geldentwertungs-gesetz*), increasing assessments and imposing heavy interest penalties for non-payments, has completely failed; the 15 to 30 per cent. a month charged on unpaid direct taxes proves to be a mere trifling loss beside the advantages to be gained by delaying payment, as the value of the currency has fallen again to about one-quarter in less than two months. The unions are, of course, against any "regeneration on the principles of private business" of the State railways, which would take the form of denationalisation; and an official statement declares that the railways will "in principle," as heretofore, remain a State concern. The Cabinet has had conferences with all parties except the German-Nationals and Communists, and it seems that it has got support for its Note; if so, the Note will probably represent a compromise, because there are deep-rooted oppositions between parties, in particular between the Volkspartei and the Socialists. As regards organisation of the guarantee to be given by business, a west German industrial suggests that a German Reparations Bank be founded, and given a 25 per cent. share in industrial concerns, and a 25 per cent. gold first mortgage on such real values as do not admit of sharing; the best way to give the share, the writer suggests, would be to increase capital 33½ per cent. all round. The representatives of agriculture have expressed their willingness to bear a burden of 200 million gold marks a year, the sum suggested by industry.

The Budget for 1923 was sanctioned on the 29th, with a deficit of 12,400 milliard marks. This estimate had no

meaning when submitted, because the price-level on which it was based was a thing of the past, and it has even less meaning now. The Budget of Prussia shows a net deficit of 400 milliards. The gross deficit is put at 975 milliards, but from this is to be deducted an additional 420 milliards from the State forests, 101 milliards more from the State's share of Federal taxes and some other revenues. Prussia announces a third loan in potash units, as a result of the fact that the second potash loan, like the first, was heavily over-subscribed. The remarkable success of all these "stable values" loans indicates that the public has plenty of money to lend, and is willing to lend if only it is secured against loss through currency depreciation. Only a small fraction of bond issues is now in mark units. In May all bond issues totalled 90,385 millions; of these 84,600 millions were in coal, rye, or other "wertbeständig" currency. The Customs gold surcharge has been raised from June 6th from 991,900 to 1,189,900 per cent., or nearly 12,000-fold the nominal; despite the rise the surcharge has again fallen behind the currency's gold depreciation, having been 497,900 per cent. before the break-up of the temporary stabilisation, when the dollar stood at about 22,000 marks. The Reichswirtschaftsrat has passed a resolution against cheapening bread with means provided by the note printing press. The public does not yet know what sum was provided in this way in 1922. In the future the cheapening system is to extend to only 10 per cent. of the population, and the plan, as reported, is to find the money by a new tax on the lines of the Forced Loan.

The plan for centralising exchange business has so far led to nothing. It seems certain that the Reichsbank even with the help of the great private banks could do nothing, and that a new and big department would be needed, and there is not much belief that the experiment would succeed. To the Reichstag the Reichsbank President, Herr Havenstein, denied that the panic demand for exchange which led to the failure of the stabilisation experiment was due to the action of industry, much less of particular leading industrials; the demand was from nearly all quarters, but Herr Havenstein repeated his statement of April 23rd that the demand was greater than the needs for the present or for the immediate future. Herr Havenstein defended the stabilisation policy, and, further, the bank's practice of giving credit all round. The system is certainly highly objectionable; a person with a "discountable signature" borrows a million marks produced with the note press, invests it in stable exchange or in goods, waits till the exchange or goods have trebled in price, repays his debt, and nets a couple of millions, which come in the shape of reduced buying-power from bondholders or other mark interests. The remedy, of course, is to lend only on a gold-exchange basis, or in some other "Wertbeständig" unit. The exact amount of manufactured money lent to and repaid by private interests cannot be estimated, but an idea may be had from the fact that since the beginning of 1922 the Reichsbank's holding of private bills has risen from 1,061 millions to 3,550,447 millions, and that the increase in five months of this year is over 3 billions.

Last week witnessed a record stock boom, the main cause being the big rise in the exchanges. The *Frankfurter Zeitung's* index for home dividend-payers rose from 2,892,350 on May 25th to 4,497,800 on June 1st; home loans from 8,328 to 11,110. Yesterday there was a slight reaction, due to the mark improvement and to profit-taking. All stocks, in particular metal, chemicals, shipping, and potash, had big rises—sometimes exceeding 100,000 points—on June 1st. Bond quotations yesterday and on the last Bourse day of 1922 were:—

	Dec. 29, 1922.	June 4, 1923.
War Loan, 5 per cent.....	80.75 ..	91
Fours	635 ..	1,550
3½ per cent.	330 ..	655
Threes	1,400 ..	9,500
Colonial Fours	6,000 ..	16,850
Savings and Premium	140 ..	500
Prussian Threes	334.50 ..	400
Hamburg Staats-Rente, 3½ per cent. ..	175 ..	470

Prices last month rose, according to the *Frankfurter Zeitung's* index, 78 per cent., from 8,237 to 14,639-fold those of 1914, but as the gold index on June 1st was 18,155, as against 8,869 on May 1st, gold prices fell,

as they always do immediately after a big rise in the gold exchange. Textiles, which follow the exchanges more rapidly than any other group, nearly doubled in the month:—

	Food.	Textiles and Leather.	Mine-rals.	Miscellaneous.	Manufactured Wares.	All.
Mid. 1914....	1	1	1	1	1	1
Jan., 1920....	20	26	27	11	15	20
Jan., 1923....	1,758	3,206	2,622	1,778	1,518	2,084
March, "....	5,361	9,450	8,298	6,949	5,514	6,770
May, "....	7,003	14,066	10,186	6,844	5,903	8,273
June, "....	12,575	27,640	17,577	10,924	10,233	14,639

The gold prices of finished wares fell to nearly half the prices of 1914. The index figure for ten home-produced products was 10,039, for ten imported 17,345. Ten food products wholesale rose 90 per cent. in May; retail 72 per cent. Coal prices were raised from the 1st; standard Ruhr (*Foerderkohle*) from 143,510 marks to 221,200 marks per metric ton; foundry coke from 220,570 marks to 338,700 marks; other sorts in proportion. Pig-iron (hematite) has been raised to 1,630,000 marks; ingots to 1,445,000 marks; blooms, 1,624,000 marks; construction forms, 2,020,000 marks; bars, 2,034,000 marks; thick plates (5 mm. and over), 2,292,000 marks. The May cost of living (average for whole month) was 3,816-fold that of 1914, against 2,954-fold in April. An index for the end of the month would show a much higher figure. Wages are now going up rapidly; their relation to the cost of living (real wage) varies extraordinarily, according to the date that is taken; one month gives a very much higher real wage than the month before or after, and the confusion caused by the use of indexes based on monthly or weekly averages with indexes based on prices or wages on a particular day is a cause of the contrary results arrived at by foreigners, and sometimes by Germans. The diagrams in the second issue for 1923 of *Die Wirtschaftskurve* show that real wages declined in February, but rose in March, and rose still more in April. This agrees with past observation; in February the cost of living (minimum existence) rose rapidly under influence of the heavy mark exchange drop of January, while in March, and again in April, the cost of living fell a little, but nominal wages continued to rise.

RUSSIA.—AGRICULTURE—INDUSTRY—FINANCE.

(FROM OUR CORRESPONDENT.)

MOSCOW, May 22.

THE new Agricultural Code approved, on October 30, 1922, by the fourth session of the Central Executive Committee, has assured the peasant a more stable enjoyment of the land. Nevertheless, his position has remained difficult as the result of the numerous taxes to which he has been subjected. In addition to the tax in kind (*prodnalog*), the peasant has had to pay numerous taxes imposed by the State and the local authorities. These supplementary taxes (in the case of the Altai goubernia, Siberia, the number of the supplementary taxes was 155) were collected at irregular intervals, so that the peasant could never foresee the tax payments which he would have to make during the year. To remedy this evil, the twelfth Congress of the Communist party decided in April, 1923, to support the enforcement of a single agricultural tax to take the place of the *prodnalog*, and all other State and local taxes. This single agricultural tax is to be collected at three or four intervals fixed in advance, and will be payable in the consuming regions in money, and in the productive regions in kind and in money. Sokolnikof, the Finance Commissar, estimates that for the whole of Russia two-fifths of the single tax will be paid in kind and three-fifths in money.

Kameneff, at the Communist Congress in April, reported that agriculture for the past year had furnished 25 per cent. (equivalent to 250 million gold roubles) of the total State Budget (paper emission furnished 25 per cent., and the balance of the revenue was obtained from commerce, transport, &c.). For the year 1923 the State Budget has been estimated at two milliards gold roubles, of which the peasant is expected to contribute 420 mil-

lions, i.e., 21 per cent.; the sowing area has increased this year about 15 per cent., so that with favourable crop conditions the tax burden on the peasant will not be more than last year. The authorities are perfectly well aware that the reconstruction of the country is only possible if Russia succeeds in taking her place in foreign markets, and exporting her agricultural produce (up to the present, time about 260,000 tons of grain will have been exported, and it is estimated that a further 400,000 tons will be exported before the end of the year), and attention is being focussed on agricultural development and the application of modern methods of culture.

Trotsky, in a speech made in April, stated that the gross revenue from light and heavy industries in 1913 was 3.7 milliard gold roubles, in 1921 the equivalent of 669 millions, and in 1922 954 millions. He urged the necessity of proper costing and accounting methods, and cited an enterprise which had recently made a theoretical profit of 4 trilliards, as being really 750,000 roubles in deficit. Trotsky's report raised an interesting debate in the Communist Congress, Lomof pointing out that the fault lay not with the accounts calculations, but with the confusion arising from the use in the accounts of different types of roubles—first the 1923 rouble, then the gold rouble, then the "goods" rouble (on May 15, 1923, the "goods" rouble was estimated at 64 roubles of 1923, and the gold rouble 100 roubles of 1923). Krassin, who urged the importance of foreign capital for the reconstruction of industry, was criticised by Zinovief and Kameneff, the latter saying that Krassin was too pessimistic as regards the possibility of reconstruction from within the country itself, and too optimistic in regard to European capital. After long debates on the question of the reorganisation of industry, the Communist Congress recognised that it is indispensable to concentrate production in a fewer number of factories, to establish for each industry a proper system of costings corresponding to the actual facts of production, to attract foreign capital for industries under the forms of concessions and mixed companies, and to determine definitely of the branches of industry to be put at the disposal of foreign capital, and on what conditions. The Congress also recognised the importance of giving wider powers and greater responsibility to the managers of the industries, whose salaries should be made contingent on the profits of the enterprise.

For the period October to March, 1923, the production of coal in Russia was 330,833,000 poods, of which the Donbas contributed 218,415,000, and of naphtha 150,733,000 poods, of which Baku contributed 101,387,000 poods. On May 2nd a naphtha fountain was found at Maikop, stated to be on land formerly the property of the Premier Oil Syndicate, a British company. For the year ending October, 1923, the Council of Labour and Defence allocated to the naphtha industry a subsidy of 17.88 million of "goods" roubles (part of which paid in bonds on the Finance Commissariat) in addition to the six million gold roubles already paid. Both the coal and naphtha indus-

tries have to deliver a large part of their production to the State at a price lower than the actual cost price; for example, for the Donbas coal the State pays 17.2 goods kopecks a pood, whereas in January the actual cost price was the equivalent of 24.702, and for February 20.871. In January and February of the total coal production about one-third was utilised by the Railway Administration.

Zinovief, at the Communist Congress, stated that there are now 26 foreign concessions in Russia, with a capital of 30 million gold roubles, and committed to grant further credits of 15 million gold roubles. There are also 80 mixed companies with a capital of £30,000 and 30 million German marks. Among the concessions recently accorded the following are of note:—(1) Swedish company SKF Gothenberg, for the production of ball bearings, in the former factory of this company. (2) The Hudson Bay Company, whereby the company furnishes the population of Kamchatka and Tchoukotsky with material value 350,000 dollars to be sold to the population at 20 per cent. over the London market price, and in exchange the company receive furs. (3) Mixed company composed of the Naphtha Syndicate and the Charles Sale Company for the export of naphtha products (concession awaits confirmation of Council of People's Commissars). (4) The Russo-Anglo-Les and the Russo-Holland-Les for the exploitation of certain forests in Northern Russia. (5) The mixed company, Russo-German Transport and Transit Company, for the transport of goods through the RSFSR and Allied Republics (from the Northern ports to the Caspian Sea). (6) A German Company (negotiations undertaken by Dr. Ludwig Haas, Deputy of the Reichstag) for exploitation of forests along the Moscow-Rybinsk railway. (7) An American company, "Produce Exchange Corporation," for the purchase and sale in America of goods for account of the State institutions, &c. (8) The Russo-Norwegian Transport Co., who will undertake part of the transport of the Arcos Company.

The Lottery Loan reported in the *Economist* for February 3rd is stated to have realised 20 million gold roubles, i.e., one-fifth of the sum estimated. Of this sum 300,000 gold roubles have been allocated to the Moscow Municipality for public works. A second Grain Loan has been issued for 30,000,000 poods. Bonds are issued for one, five, and ten poods, and the prices of the bonds are 16 roubles (1923), a pood in the productive gubernias, 20 roubles in the consuming gubernias in the East and South, and 28 roubles for the North-West and North-East gubernias and Siberia. The first State Grain Loan issued in September, 1922, was for 10 million poods, and the price was uniform in all gubernias throughout Russia. As last year, the bonds can be presented for equivalent payment of the agricultural tax, either in kind or money.

BELGIUM.—INDEX NUMBERS—NEW LOAN—BOURSE—LABOUR SETTLEMENT.

(FROM OUR CORRESPONDENT.)

BRUSSELS, June 6.

In spite of all the economies effected by the Government, the index number in Belgium has gone from 409 per cent. in April to 413 per cent. on May 15th, as against 365 per cent. in May, 1922, while for Brussels alone it amounts to 431 per cent. This has not prevented the new loan of one thousand million francs issued by the Devastated Regions from being a brilliant success, and the number of small subscriptions received has resulted in a very large reduction of allotments in respect of applications, the latter receiving only 5 per cent. of the amount applied for. It is a mistaken idea abroad to suppose that these successive loans drain the money from the country, and that soon it will be difficult to float a loan. The proceeds of this class of loan, of which this is the third, are paid to the people of the country to indemnify them for losses during the war. They have to reconstruct all the devastated areas, and the money thus received is spent on materials and labour in the country. After a certain time this money, which has merely changed hands, comes back into circulation once more. These loans have

shown once again the economical character of the Belgian people, and the majority of the prizes of the first two loans have been won by workmen, notably in the industrial areas.

The last loan just issued does not appear to have had a bad influence on the Bourse, as often happens in such a case. This is perhaps because, generally speaking, this kind of security appeals rather to the saving public than to the speculator, and because, as subscriptions are not payable in full on application, the amount of money to be realised immediately is not so important. We even experienced last week an appreciable rise in many shares, which is rather surprising at this time of the year, when the Bourse is generally somewhat quiet with the commencement of the holidays.

An interesting judgment has just been given by the Court of Appeal (the highest Court of justice in the country). Two stockbrokers had refused to supply the Ministry of Finance with particulars concerning operations transacted by them on account of certain of their customers whom the Ministry wanted to tax on their profits. The first judgment had been given in favour of the stockbrokers, and the Ministry of Finance appealed against this decision, with the result that the Court of Appeal upheld the judgment given against the Ministry. This decision, therefore, definitely establishes the right of stockbrokers not to disclose professional secrets.

The railway strike is at last settled. The Government have shown remarkable firmness in definitely refusing to negotiate or even examine the affair so long as the strike lasted. No fewer than 150 strikers, mostly union agitators, have been dismissed, and all other employees who have been reinstated have been made to sign a declaration accepting submission to any disciplinary measures which may eventually be introduced. This is a complete capitulation of the so-called "National" Union. It is a defeat for Belgian trade unionism, which is quite as heavy as that suffered by the "Confédération Générale du Travail" in France.

DENMARK.—HIGHER BANK RATE—TRADE AND FINANCIAL BALANCE—PRICES AND TRADE CONDITIONS—BANK DEPOSITS.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, June 1.

On May 1st the Nationalbank increased its rate of discount from 5 per cent. to 6 per cent. The official reason was the strong rise in the foreign exchange quotations, and it is hoped that this measure will gradually contribute to an improvement in the Danish krone. The step taken by the Nationalbank was recognised, not only by theorists, but also by wider circles of the population, where it is generally understood that the exchange conditions demand extraordinary measures, even if they have disagreeable effects on daily life.

The balance of trade is still against Denmark, and this is considered one of the principal reasons for the depreciation of the krone rate. The last figures available are those for March, which show an import surplus of 33,000,000 kr.—the value of the imports being 167,000,000 kr.—against exports aggregating 134,000,000 kr. Of the last-mentioned figure, 6,000,000 kr represents re-exports.

Figures of the total financial balance for 1922 have been published, and confirm that conditions have grown worse during the year, which was difficult in several respects. On the basis of the material collected, it is believed that Denmark's net debt to foreign countries may be estimated to have amounted to about 1,100,000,000 kr at the end of 1922. This figure is the balance of a computation showing amounts due to Denmark of about 380,000,000 kr, against debts aggregating about 1,480,000,000 kr. The corresponding figures for the net debt were 825,000,000 kr at the end of 1921, and about 900,000,000 kr before the war. The said figures appear as the result of the following estimates:—The value of Danish Government bonds in foreign possession is estimated to be about 480,000,000 kr—or about 5,000,000 kr more than at the last previous computation. For the municipal debt the calculated total

is 255,000,000 kr, as £2,000,000 (40,000,000 kr) has been added to last year's total (210,000,000 kr) for the loan contracted during the spring of 1922 by various municipalities through the intermediary of the Landmandsbank, to replace a previous loan given by the bank itself, while, further, it has been taken into consideration that some export of municipal bonds has taken place. According to information supplied by the Hypothekbank, the amount of its bonds in foreign possession can be estimated at the same amount as last year, viz., 25,000,000 kr. The value of Danish Credit Association bonds, Hypothek Association bonds, and shares in Danish concerns in foreign possession is estimated to be 185,000,000 kr, as against 125,000,000 kr last year. This figure has been increased owing to the loan of \$5,000,000 contracted by the United Steamship Company, and on the basis of reports received from banks and stockbrokers about the imports and exports of securities. Finally, the non-bonded (commercial) debt has been estimated to be about 510,000,000 kr, to which must be added about 25,000,000 kr for goods ordered. This makes a total debt of 1,480,000,000 kr.

On the other hand the claims on foreign countries amounted to a total of 380,000,000 kr—viz., 65,000,000 kr—in foreign securities in Danish possession, and about 315,000,000 kr commercial claims. Of these it should be said that during the year the amount of Danish claims on England has declined from 142,000,000 kr to 82,000,000 kr. The decline of the commercial claims is most pronounced as far as the banks are concerned, but can also be traced for the other trade groups.

For the purpose of computing the official retail price index, which is published semi-annually—next time in July—information of the prices of goods has been collected all over the country during the first week of April. It appears that the prices of a number of the most important articles of consumption have increased—for instance, those of bread, flour, groats, and most groceries. The most pronounced rise is that of the sugar prices, which is naturally connected with the international changes in this line. On the other hand, butter and egg prices are lower than at the beginning of January.

As regards trade generally, there is no decided change. Certain indications of improvement can be traced, however, and this has also had influence on the position of the banks. During April the total deposits in the banks have increased by 39,000,000 kr, and loans have increased by 26,000,000 kr. The figures now are 3,018,000,000 kr and 2,487,000,000 kr respectively, while since January, 1922, when the bank statistics were first published in their present form, these figures have been steadily declining. Concerning the Landmandsbank, it should be mentioned that deposits are continually increasing, and that the addition during April was even more than during March. The total deposits now amount to 877,000,000 kr, and of this deposits in pass-book account and against notice—i.e., savings accounts proper—amounted to more than 440,000,000 kr, a figure which more than anything else shows the continued importance of the Landmandsbank for the Danish community. Simultaneously with the increase of the bank deposits, which took place before the increase of the discount rate from 5 per cent. to 6 per cent., it appears from the *Savings Banks Gazette* that, for the first time after a long period of increase, the withdrawals from the savings banks have exceeded the deposits.

ARGENTINA.—THE PRESIDENT'S MESSAGE—PROTECTION AND ITS EFFECTS—FINANCIAL POLICY—MONEY AND EXCHANGE.

(FROM OUR OWN CORRESPONDENT.)

BUENOS AIRES, May 15.

REVERTING to a precedent which his predecessor in the Presidential chair had abrogated, Dr Alvear opened Congress for the ordinary sessions of 1923 with a formal address, or message, if one translates the Spanish phrase literally. It was a rare opportunity for emphasising before the eyes of the people the costly effects of indolence

and lack of Parliamentary preparation. Unfortunately the chance was lost, and in its place an assurance was given that, while the whole system of taxation was due for revision, immediate addition to the import dues would at once aid the exchequer and "protect home industries." Cutting out a lengthy preamble, which would up by emphasising "the imperative need for dignifying and defending national labour," one comes to the categorical statement that "the industries handling national raw material ought especially to be the object of attention and protection. Their destruction by foreign competition must be prevented.....all of which certainly does not prevent stimulus being afforded to those concerns which, though they may use raw material from abroad, are nevertheless of benefit to the country."

Before commenting on this declaration, one must in justice say that Dr Alvear foreshadows an attempt to revise the whole fiscal system, and to introduce a graded tax on income, but the shadow of the Custom House hangs far too heavily over the land to allow much light to pierce through from this quarter. The Government, in its Budget Estimates, proposed *ad valorem* taxation of imports, values to be established at the port of shipment; Congress, more closely informed of the difficulties of such a system, since various commercial deputations insisted on exercising their right of seeing the Special Committee charged with examining the said Estimates, altered the scheme to a 25 per cent. increase all round on present tariff values. Incidentally, this follows up the 20 per cent. increase sanctioned in 1920. Either way, the result is the same. To quote *La Prensa*, Argentina's leading daily, and an uncompromising defender of Free Trade principles, "The country may consider itself threatened with protectionist action, which will increase the cost of living and handicap its commerce." Roughly speaking, imported goods, taken all round, pay about 40 per cent. on their value to the Customs. Some articles are heavily taxed, others suffer less, yet the figure given would surely seem to indicate a fair measure of "protection." Not so, however, does it appear in the eyes of the supporters of "national" industries, which have almost invariably been founded by foreign capital, are directed by foreign managers and foremen, and, as often as not, must import a large proportion of their raw material if their finished article is to be saleable even in the local market. "Customs legislation," says another journal, "is the mighty arm wherewith the economic defence of nations can be undertaken, and this is the arm we so urgently need.....since this is the only road which will eventually render us economically independent of abroad." Much more reasoning of a similar sort has filled the Argentine Press of late, but few people seem to realise that while the advantage of protection is problematical, the immediate effect on the cost of living is sure. With an eminently agrarian population of scarcely eight million inhabitants, spread over a country nearly as large as Europe, its industry wholly dependent on imported machinery, iron, steel, and fuel, high tariffs must spell economic suicide unless conditions change completely. Great hopes were founded on the local petroleum fields, and the yield, now 300,000 tons a year, is relatively important. Yet in estimating its industrial value it must be remembered that to-day the Argentine crude oil is being sold at a loss of some \$5 Argentine paper per ton, in order to keep in line with imported Mexican oil,

which is sold at a profit. Costs of production explain the apparent anomaly: charges must increase with mathematical exactitude when the higher tariff raises the general cost of living translated into wages, food, and such materials as cannot be specially exempted from duty on the ground that they are essential to the oil industry. Indeed, the Patagonian region, now making steady progress in many directions, is already taking alarm at the course of events.

Referring to the state of the nation's indebtedness, Dr Alvear merely repeated the figures already published in connection with the floating loans. The only novelty was the statement that, thanks to cheap money, the average rate of renewals for the current year was $4\frac{1}{2}$ per cent. per annum, as against $5\frac{1}{2}$ per cent. for 1922. Stress was laid on the importance of the official banking institutions, and the statement made that the internal monetary situation remains unaltered. Argentina's fiduciary circulation is to-day \$1,362,563,000 paper, gold to the total of \$470,000,000 gold Argentine dollars being held in guarantee of the former amount. No allusion was made to the flotation of either internal or external loans, if one excepts a mild rebuke to Congress for its dilatory treatment of the original Government proposals.

Considerable sums of money held here by American and other interests unwilling to remit at current rates of exchange help to depress the local money market. A certain share of these adventitious funds find their way to the already overfilled tills of the banks, but they also contribute to the steady demand for mortgage bonds and national and provincial securities of ready realisation, with the result that the Cédulas of the National Mortgage Bank mark the highest quotations of the year. Banks call the market rate for loanable capital 6 to 7 per cent. per annum, but readily work at a much lower figure when first-class business is on offer. Commercial bills from the interior, endorsed by the import house discounting such lists, may be done at anything between 5 and 6 per cent. Yet beneath this easy money, and despite the ability of the Government to renew its treasury bills at 4 per cent., there is plainly perceptible a nervousness which might very easily change the state of the market over-night. Until the official and legislative terms relative to the consolidation or other form of liquidation of the floating debt are public and definite, this feeling will persist, and the doubts arising out of the Budget uncertainty do not tend to reassure financiers.

The sterling and dollar exchanges move slowly but steadily against Argentina. Continental rates have also moved against this country, though to a lesser extent. The mark soared to 36,000, but there is in reality no business of any importance passing in this currency. A better offer of export bills has marked the past month, but even so, the volume of paper put through the exchange market is not in anything like the quantity one would expect to see, given the steady outward movement of all produce. Cereal quotations are firm; linseed has fallen back a little owing to a slackening of the American demand. Freights, after a remarkable rally to well over 35s, San Lorenzo, U.K. or Continent, fell back to 30s, the general belief in local shipping circles being that this should prove a reasonably firm rate for the next month or so. Rates to New York are weaker in sympathy.

NEW ZEALAND.—PUBLIC FINANCES—THE POLITICAL SITUATION—ECONOMIC CONDITIONS.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, N.Z., April 16.

WHEN the Minister of Finance budgeted last year for a deficit the public were more alarmed than was really necessary. For a great many years it has been the custom for the budget of the Dominion to show a surplus. During the war successive surpluses accumulated until at one point they reached a total of £17½ millions. Much of this total was used in the schemes for repatriating soldiers by settling them on the land. At the beginning of the financial year 1922-3, however, there still remained £7½ millions of the accumulated surplus, and Mr Massey anticipated that he would need £1½ millions

of this amount to balance the expected deficit in the public finances. The accounts for the year just published fortunately disclose a much more satisfactory state of affairs than was anticipated. Instead of the expected deficit, there is actually a substantial surplus of £1,315,683. In the main this is due to considerable savings in expenditure, amounting in the railway department alone to £1,527,053. There is a decrease in practically all administrative departments, only partly offset by the increase of £457,679 in the interest and sinking fund charges on the public debt. The position thus disclosed has enabled the Minister of Finance to apply a sum approximately equal to the new borrowings for the year to the cancellation of securities falling due, so that the total of the public debt remains approximately the same, although public works to the value of £5½ millions were added to the national assets. There still remains a balance of £5,637,090 in the ordinary revenue account, the remainder of the accumulated war surpluses.

The publication of these satisfactory evidences of the Dominion's financial vitality comes opportunely for the Government. Mr Massey was faced after the general election with a very unstable position in the House. His party was apparently in a minority position, though neither of the other parties had anything approaching a majority, and there was no hope of fusion between them. A short session of Parliament was specially summoned to test the position, and three members of the Liberal party, by voting with Mr Massey against the amendment moved by the leader of the Liberal party, and supported by the Labour party, gave Mr Massey a majority of three (an independent member having been elected to the position of Speaker). Shortly afterwards the death of Sir William Herries, one of the ablest and most popular members of the Cabinet, once more jeopardised the position of the Government. The ensuing by-election at Tauranga was very keenly fought. Sir Joseph Ward, Mr Massey's old antagonist, entered the lists once more, and the election resolved itself into a duel between the two most prominent political figures of the Dominion. The result was a handsome win for Mr Massey, the Reform candidate being elected by a very substantial majority.

The depression that overtook the Dominion when the prices of primary products fell abruptly in the season 1920-1 has apparently passed over without any very serious disasters, and the outlook for the immediate future is brighter than it has been for some time. The general recovery of prices in the older countries, reflected here in unexpectedly good values for wool and also for frozen mutton and lamb, has been sufficient to re-establish the primary producers who are so important a factor in the economy of the Dominion. Higher prices, some relief in taxation, a reduction of the overdraft rate charged by the banks, and a natural reaction from the pessimism of two years ago, have all combined to improve the tone of business considerably.

The banking returns just published for the March quarter of the current year show that there is a solid basis for the returning optimism. There are only six banks operating in the Dominion, and their activities are a good index of the economic position at any particular time. The course of the crisis and recovery is clearly seen in the following summary table, showing the relation between deposits (both fixed and free) and advances made by the banks:—

Quarter.	Deposits. £	Advances. £
December, 1919	45.6	32.1
June, 1920	54.6	34.8
December, 1920	49.5	47.1
June, 1921	45.5	54.4
December, 1921	40.9	47.6
June, 1922	41.4	46.2
December, 1922	41.1	43.4
March, 1923	43.5	42.8

During the latter stages of the boom credits were banked up in London which were causing the banks some embarrassment to transfer to their owners in New Zealand. The existence of these balances was, however, invaluable when the strain of the crisis came in the early part of 1921. The extent to which the banks extended their accommodation to meet the liabilities of their customers

is clearly revealed in the table, and so is the steady reduction of advances since that time, owing to the readjustment of business organisation.

In the readjustment some of the weaker concerns have fallen by the way. There has been an increasing number of bankruptcies, especially of farmers; but no large businesses have been involved so far. There has been an increasing tendency in the last few months to hail the present revival as the return of the buoyant prosperity that was the rule before the war. But the events of the last few years have shown more clearly than ever that the prosperity of a country such as the Dominion, which is largely dependent on borrowed credit, is affected by the tendency of the general level of prices to rise or fall more than by any other factor. Just at the moment prices are rising, the bank returns are back to normal, the Minister of Finance announces a somewhat unexpected surplus, and optimism prevails. But if prices should tend to fall again, the heavy charges on industry that proceed from a swollen national debt, a high level of Governmental expenditure, inflated land values not yet adequately reduced, and the business expansion resulting from the boom, will again loom large.

Books and Publications.

JAPANESE WARS AND THEIR COSTS.*

IN these three volumes we have an elaborate survey of Japanese finance since the Restoration of 1868, with special reference to the wars waged by the Japanese Government. To some extent the first volume overlaps the other two; it divides the period under discussion into four epochs, the first ending with the Satsuma Rebellion, the second with the Chinese War, and the fourth carries us from the Russian War down to 1914. Few people are interested in the Satsuma Rebellion, but the second epoch (1877 to 1895) is that in which "the armaments on both land and sea were greatly extended," while in the fourth period Japan successfully asserted her position as a World Power.

At first the Government was greatly hampered by want of funds, and even the tiny cost of putting down the Rebellion, about £8½ million sterling, could only be financed by the issue of paper money. The War with China raised the annual expenditure from 87½ million yen to 223 millions, and the Russian War had even greater effect, bringing the total up to 656 million yen.

We may now turn to the volume on the War with China, which appears to have been mainly written by Mr Kasada under Mr Ono's direction.

This war arose out of quarrels between the two big Empires over the smaller kingdom of Korea, and we have complaints of "the repeated misdeeds and incivility of Korean officials," which remind one too much of an ancient fable. "In Japan," Mr. Kasada writes, "sympathy with Korea was universal, coupled with a strong desire to check the arrogance of China by a chivalric blow." If the Walrus and the Carpenter had professed to fight on behalf of the oysters, the analogy would be complete. After the Sino-Japanese War, which was almost a walk-over for the Island Empire, Chinese forces were permanently driven out of the peninsula, and although European Powers vetoed the cession of Lyaotung to Japan, China had to cede territory to Germany, Russia, Great Britain, and France; so it was the Japanese invasion which really undermined the authority of the Chinese Government and opened the way to subsequent anarchy and civil war.

Much of Mr Kasada's book is really ancient history, if it should be called history and not patriotic propaganda. The expenditures, carefully tabulated in great detail, now seem trifling with a total of only 235,000,000 yen, about equal to three or four days of our expenditure in 1918; but no less than 367,000,000 yen were exacted as an in-

demnity from China. So the Japanese made a profit out of their war, only to find, however, that their annual expenditure was doubled. Hardly any attempt was made to increase revenue and taxation during the war itself, when the Government relied upon loans and the issue of paper money, which led to higher prices and a permanent inflation of the currency, though part of the Chinese indemnity was used to establish a gold standard.

In the third volume, mainly written by Mr H. O. Oyama, we have the effects of the war with Russia, which was the last and greatest of the wars in which Japan fought single-handed. In the introduction Dr Ogawa says that "even to this day the people of Japan are groaning under a heavy burden of taxation as a result of their war with Russia." This war arose out of "a collision of influence between Russia and Japan in Manchuria and Korea," and left Japan supreme in the peninsula, where even the externals of sovereignty were withdrawn from Seoul, and with fresh interests in Southern Manchuria. At sea the war was a walk-over, ending in the astonishing triumph of Tsushima; on land it was a succession of costly victories.

Even before the war the Japanese Government was spending far more than it could raise by taxation, so the outbreak of hostilities threw the finances into confusion. Domestic war loans carried special privileges, such as acceptance at face value for tax payments and interest free of income-tax; foreign loans were largely over-subscribed, but gave what was then a very high yield. Altogether, Mr Oyama reckons the war expenditure at 1,986 million yen, and after the war taxation was more than doubled. Taxation was also raised more than once during the war, but our author does not make things clear to readers who are not already acquainted with Japanese finance, though he gives numerous tables. There were taxes on transactions of all kinds, and Government monopolies in tobacco and salt were established; indirect taxation increased so much that it passed direct taxation in 1906-7, and altogether the war increase seems to have been 178 million yen a year. Moreover, much taxation was oppressive as well as heavy; for the land tax assessments were not revised and the incidence was unequal.

THE FASCIST CREED.*

THIS book, written by an ardent Fascist, has been translated and condensed by a more discriminating English admirer, led by love of Italy to tolerate the flamboyant Nationalism of the movement, but occasionally constrained to protest against the author's Anglophobia. It is written in the torrential and redundant rhetoric affected by Italian politicians; the many repetitions of the original have not been entirely removed by the translator's condensations and omissions, and its perusal demands a much more comprehensive knowledge of Italian politics since the war—and, indeed, for thirty or forty years before it—than most of its English readers are likely to possess or to acquire *ad hoc*. They will rise from its perusal with mixed feelings. Fascism, the author explains, is not a mere patriotic and middle-class reaction against the extravagances of Bolshevised Italian Socialism; it is a system of economic reform and foreign policy. At home, it aims at transforming the economic life of Italy by "creating a new bourgeoisie" of peasant proprietors, who are actually now being settled on land obtained from the great landlords in the midlands and the south. It desires to develop agriculture, the real mainstay of Italy; to provide the country with new credit institutions, and with rural factories, especially of agricultural machinery and tools; to render Italy independent of the foreigner and keep her gold at home; to get rid of the hothouse industries created by Protection; and to work for Free-trade—which means "the open door" abroad. It opposes all Collectivism, including State railways, shipping, and shipping subsidies; it favours commercial expansion, especially in Albania and the Middle East, and—in spite of its hatred of Bolshevism—in Russia, and especially in the Ukraine. It means to Italianise the

Germans in the Trentino (it has already begun with those of Botzen); and thus it proposes to repeat those misdeeds of Germany and Austria-Hungary which were leading causes of their downfall. It desires to develop the Italian colonies, and to promote national feeling among the Italian communities in Tunis and America. (These latter consist mainly of migratory labourers; do the Fascists hope for settlements like those of the Germans in Brazil, and, if so, what about the attitude of the South American Governments, and the Monroe doctrine?) Its foreign policy is a strange mixture—revision of the Versailles Treaty; Irredentism (in Dalmatia); suspicion of France, Great Britain, and the United States, and of the League of Nations as a "capitalist combination," along with efforts to restore a balance of power in Europe, and ultimately to create a European Federation. Such a policy, were Italy able to carry it out, could only mean, in the first instance, war with Jugo-Slavia, and next, a re-establishment, in an intensified form, of the conditions which led to the catastrophe of 1914. Happily, the Fascists are only one party among many, and a divided party at that; and the experience of governing may eliminate their hotheads and teach their leaders wisdom.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
June 13. June 14.

Epsom excitements have provided more fascination for the public this week than those on offer in the Stock Exchange, where business has run on quiet lines, with a slight contraction of demand for gilt-edged stocks and a continuance of stagnation in the mining departments. New issues are well taken, one subscription list after another closing promptly. That the West Australia 4½ per cent. issue was not more rapidly subscribed occasioned a little remark, because, in comparison with some of the existing securities, the new Westralian has

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business. Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

attractions at ½ discount. A good deal of the June War Loan interest has been trickling back to the Consol market, where Victory Bonds, Funding, Conversion and Consols exhibited strength, the full extent of which was scarcely maintained. Surprising vitality developed in India scrip, the stock changing hands up to 3 premium, from which it dipped abruptly to 2½ premium and then rallied again.

Dealings began on Wednesday in the new Argentine Government 4½ per cent. Loan, offered at 80½, which will become fully paid next Friday. The price was expected to start at 1 premium, but instead of this, opened at about 1½ premium, and maintained the greater part of its strength. French issues are better, and the early recovery in the value of the mark caused a stiffening of the German issues. Chinese bonds are moving irregularly; some of the railway loans are better. Brazilians are quiescent, awaiting the hoped-for recovery in the milreis. Czecho-Slovaks improved on the idea that these 8 per cent. bonds at 96 will compare favourably with the new 6 per cent. Austrian loan at 80. Mexicans have again disappointed their supporters, prices shading off where they moved at all.

Home Railway stocks are dullish, the public refusing to take any hand in this market, in spite of the absorption of investment stocks elsewhere. Grand Trunk Pacific debenture is distinctly harder. The Argentine Railway market remains weak on sales by those who fear the results of the recent drop in the Argentine rate of exchange. But many people look for good dividends in October. Leopoldinas at first gave way on the meeting this week, the price freshening later, however, and Antofagasta attracted further buying.

The Rubber market is in the doldrums, although the price of the produce at 1s 3d per lb is a shade better. The Oil market received the Royal Dutch dividend as being favourable, the 26½ per cent. for last year being 4½ per cent. less than that of the previous twelve months. The Shell dividend, making 22½ per cent., shows a reduction of 5 per cent. as compared with the corresponding period. The latter result had been generally expected, and bear covering helped to prevent the price from slipping back below 4. Mexican Eagles are marking time. The two Agwi shares enjoyed sharp rises, and held a good part of them. Phoenix have been flat.

Tobacco shares, textiles, and other popular speculative investments have felt the effect of the Derby and the Oaks to an appreciable extent. Business in all of them has fallen off, and prices, as usual in these circumstances, tended to sag a little. Newspaper shares are also easier. The brewery market again moved forward. Marconis, after a show of strength, reacted on lack of public interest, and the cable group keeps hard. London banking shares are better, and the Insurance market, as a whole, is higher for choice. Further spectacular rises occurred amongst tea shares, partly on the bumper dividends recently declared by leading companies, partly on the idea that the outlook continues bright for the industry. The shipping group is motionless, save for improvements in pre-ordinary issues. Lyons gave way a trifle, on the maintenance of the dividend of 25 per cent. for the year. Other stores and hotel shares are steady. The new Boots ordinary shares have been dealt in on the basis of 12s 6d premium above the issue price of £4.

The Kaffir market has received no assistance from the publication of the May returns, which are considered tolerably good. The disposition of the share market is for prices to droop in the absence of outside interest. In diamond shares, dealings have been governed by the very languid interest taken in this market by Paris. Stock Exchange men point, as being symbolical of the present British indifference, to the fact that not until one o'clock, when Paris prices begin to come into the house, is there a reliable price in a fair number of De Beers. Rio Tintos are in somewhat similar case. Base metal shares hardly move from day to day. Rhodesians had a few spasmodic flutters of mild excitement without prices being affected to any noticeable degree. And Russians are lifeless.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

Western Australia.—Issue of £3,000,000 4½ per cent. inscribed stock at 95 per cent. Repayable at par on July 1, 1965, the Government of Western Australia having the option to redeem the stock in whole or in part at par on or after July 1, 1935, on giving three months' notice. A sinking fund at the rate of ½ per cent. per annum will be provided. The accumulated sinking funds invested in the names of trustees in the London now amount to above £8,000,000. The proceeds of the issue will be used for railways, harbours, water supply, &c. Holders not domiciled in Western Australia will not be subject to any taxes by that State. A sound trustee investment, yielding at the issue price £4 15s 7d per cent., allowing for redemption at par on July 1, 1965.

Urban Electric Supply.—Share capital £640,000, consisting of 250,000 6 per cent. cumulative preference shares and 240,000 ordinary shares, both of £1 each, all of which have been issued, and 150,000 shares of £1, 100,000 of which will be issued fully paid as 6 per cent. cumulative preference shares to Edmundsons' Electricity Corporation, Limited. There is also outstanding £317,006 of 4½ per cent. first mortgage debenture stock. The present is an issue of £250,000 5½ per cent. mortgage debenture stock at 97½. It will be secured by a trust deed constituting the stock a specific charge on the company's property, plant and machinery, but subject to the company's stock (which is repayable by 1940 by means of a cumulative sinking fund). The present issue will be repaid at par on June 30, 1960, but may be redeemed after June 30, 1925. A cumulative sinking fund of ½ per cent. will be provided, beginning in 1928, to be increased to 1 per cent. in the year following that in which the 4½ per cent. stock is redeemed. The company was formed in 1898, and supplies electricity under Parliamentary powers, either directly or through controlled companies, to a large number of districts in England and Scotland. Net assets available for security for the present issue are given as £1,122,000, while the profit statement, which goes back to 1911, shows that the service is amply covered. In liquidation of a sum of about £310,000 due to Edmundsons' Electricity Corporation, £100,000 of the 5½ per cent. stock is to be issued as fully paid to the latter in addition to the shares mentioned above. The issue is a satisfactory security of its type.

G. Glanfield and Son, Limited.—Authorized capital £265,000, divided into 215,000 7½ per cent. cumulative preference shares of £1 each and £50,000 in ordinary shares of 1s each. The whole of the preference and 215,000 ordinary shares are now offered for subscription at par, each subscriber

for preference shares being entitled to buy one ordinary share for every preference share taken up. There are no debentures, and no shares ranking prior to or *pari passu* with the preference shares can be created without the consent of preference and ordinary shareholders. The firm of G. Glanfield and Son, Limited, now turned into a company, was established in 1852, and carried on the business of wholesale manufacturers of clothing, uniforms, &c., and of woollen merchants. The purchase price is fixed at £235,000 in cash, but the vendor concern is to subscribe for all the ordinary shares not taken up by purchasers of the preference shares. The excess of assets over liabilities is set out as £268,040, goodwill being entered at £50,000. Profits are given since 1914, and have fluctuated widely. The prospectus is a clear statement of affairs. The offer is a moderate one, and speculative.

Tully Gas Plants, Limited.—Authorized capital £1,400,000, divided into £500,000 7 per cent. participating preference shares of £1 each, £850,000 ordinary income stock, and £50,000 ordinary shares. All the ordinary income stock and £200,000 of the preference shares have been issued, while £49,107 of the ordinary shares is held by the trustees for holders of the ordinary income stock. This is an offer for sale by Coal Gas and Electric Investments, Limited, of 200,000 7 per cent. participating preference shares of £1 each at par. The company was formed in 1921, and carries on the business of engineers and contractors for the supply of gas plants and equipment. The company has already supplied plants to a long list of towns, and has large orders in hand. The prospectus is optimistic, but the concern is at present in a development stage, and an investment in these shares is a speculation of which the chief interest lies in the participating rights. These consist of the right to 20 per cent. of remaining profits to be distributed after payment of the preference dividend.

Dubarry Perfumery.—Capital £150,000, divided into 100,000 7½ per cent. cumulative preference shares of £1 and 1,000,000 ordinary shares of 1s. each. The present is an offer of 86,200 of the preference and 86,200 (or £4,310) of the ordinary. Ordinary shares will only be allotted to applicants for preference shares, and in equal numbers. The company has been formed to acquire the Standard Toilet Company, founded in 1910, as manufacturers of perfumery and toilet articles. An independent valuation of the property, &c., to be acquired fixes the value at £70,052, and the net assets, including £30,000 for goodwill, are estimated at £96,000. Net profits have risen since 1918 from £7,000 to £15,200, before payment of income-tax and interest. The acquisition is to be effected by an exchange of shares, those of the new company handed over being of a nominal value of just under £60,000. The issues are of a speculative nature.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

British and Colonial Government Securities.

But it would be wrong to believe that this is the only capital entering the country. The funds coming through other banks, large and small, are also important, and that which arrives directly in foreign banknotes and coin is not at all unworthy of remark. But these amounts escape statistical comment, and for this reason we confine ourselves necessarily to the emigrants' remittances through the National Bank alone, which converted into *£*stg. are as follows:—

	<i>£</i>
1919	14,130,000
1920	21,102,000
1921	11,601,000
1922	2,095,000

According to the above, the correctness of which is indisputable, I do not think that I am wrong when I state that the lack of confidence—i.e., the psychological factor—is that which chiefly influenced the question. If it were possible to take material reasons alone as a criterion, I firmly believe that they would lead to a calmer judgment and to a more favourable appreciation of the value of the Greek drachma.

CONFIDENCE IN THE FUTURE.

We are convinced that confidence will return with the advent of peace in the East. Peace, by bringing Government and the public back into the regular path, will put a definite end to the creation of a fictitious currency through the increase of circulation, and will make it possible for measures to be taken with a view to assuring a real balance between public revenue and expenditure. This feeling of certainty that the State is not extending its expenditure beyond the limits of its power will be one of the chief sources of confidence. Those hidden reserves, which now remain barren, will then see the light, and the current will recommence to flow in from abroad. This capital in the hands of Greeks at home and abroad being thus cast into circulation in the market, will revivify the country with unimpaired elements of wealth, and will gradually bring back that equilibrium from the lack of which our economic life is now suffering.

CIRCULATION.

In an examination of our own affairs under this aspect, we are compelled to observe the conclusions which the facts themselves present.

Our note circulation amounted in all in December, 1921, to Drs.2,507,638,010, and in December, 1922, to Drs.3,698,141,090; in other words, an increase took place during the year of Drs.1,190,503,080.

If we now examine the quality of the circulation, and set aside that for merely banking business—viz., Drs.263,405,000, which is fully covered by corresponding funds in the bank's assets, and Drs.266,964,965 due in return for the advances made in drachmas by the bank to the French army in Macedonia, it will be seen that the balance of circulation is backed at present solely by the credit of the State, for whose needs it was issued.

This situation is certainly not satisfactory. But we are firmly convinced that it will be changed before long. The Allied credits, which form the chief part of the circulation authorised by law T.X.M.B., and the realisation of which has been suspended, will again become active. The unshakable legal grounds on which our claim is based, when impediments have in principle been removed, will certainly in due time lead to the recognition of our rights.

But, as long as the realisation of these credits is in abeyance, the whole currency, being thus weakened as an inevitable consequence, suffers a moral shock, and confidence in it is reduced. And as its amount is fixed in an arbitrary manner, its purchasing power is materially reduced.

EVILS OF INCREASE IN NOTE CIRCULATION.

I do not lose sight of the merciless compulsion, under the pressure of which recourse was had to increasing the resources of the Government by the fresh issue of notes. But I consider it my duty to emphasise the fact that this apparently inexpensive method is ruinous from the point of view of the production of wealth, because, invisibly, but surely, it saps and exhausts the economic organism of the country. And if the public do not

convince themselves that a definite end has been put to the increase of circulation, every endeavour with a view to stabilising the currency of the country is vain.

In any case, whenever the situation has to be coped with without delay, it is advisable to resort with the utmost caution to increasing the circulation of notes, but to do so gradually only, so that as far as possible the additional circulation shall at least be thrown upon the market insensibly, and its absorption may thus be facilitated without its bringing about a more profound and sudden reaction.

TAXATION.

In circumstances, however, like the present, in which expenditure, ordinary and extraordinary, is ever increasing, both on account of the unsettled state of international affairs and because the reduced value of the currency induces an increase of all expenditure of staff and material, it is the duty of the Government to endeavour to increase the regular revenue by taxation. Only in this manner will it be in a position to meet, at any rate, part of the additional expenditure by new resources, which it will find in the actual disposable funds of the public. Notwithstanding the disagreeableness of the measure the Government must not hesitate to have recourse to it. By adopting this course it will be working not only by greater financial easiness, but also undoubtedly in the interests of the public itself. For in the first place, public confidence is increased thereby, and is henceforward based upon a wider circle of revenue, whilst, further, the Treasury has at its disposal wider financial supplies drawn from those already in circulation, and it thus avoids in part, at any rate, the necessity of creating resources by fresh issues of notes, consequently it prevents a further fall in the value of the currency and a further increase in the cost of living.

This fiscal policy can show most remarkable results. Whilst in the financial year 1921-22 the revenue of the State from taxation amounted to 920,000,000, in 1922-23 it amounted to 1,588,000,000, and it is anticipated that it will reach 2,500,000,000 during the year which has just commenced—i.e., it will have almost tripled within three years.

But the method by taxation, itself useful and both morally and materially called for, cannot, without affecting the economic life of the country, exceed certain definite limits of resistance.

MONETARY STRINGENCY.

The continual repetition of fresh issues of notes as a means of relieving the necessities of the Government as they arise, is also one of the prime causes of the stringency of money which is to be observed. The money disposable in the market being reduced as to its purchasing power, grows less and becomes insufficient for the needs of the market, because in every enterprise, in every business, either of individuals or companies, and every private dealing, it is incumbent to keep a wider margin to meet contingencies, and in order to provide against the ever-increasing expenses.

This unhealthy condition many people believe to be remediable if the amount of note circulation at the disposal of the business public be increased. But this is a disastrous error. Any additional note circulation produces a merely temporary relief.

The only means which, from an internal point of view, in periods of crisis and fresh issues of notes, is capable—not, indeed, of remedying—but of restricting the evil, is for the Government to exercise the greatest possible circumspection in adding to the amount of notes in circulation. If, that is, feeling that it is not right to incur public expenditure once there are not sufficient funds which can be drawn from the existing disposable capital of the country to cover such expenditure, the Government mercifully cuts down the expenditure, however painful the operation may be, and reserves the issue of notes as a last resort, to be employed only for unavoidable needs, and only so far as such needs cannot either be postponed or paid out of actual resources.

PUBLIC DEBT.

A favourable sign on the economic horizon of Greece is the condition presented to-day by her public debt and the survey which, as a result, opens before us.

The same strength with which the country is endowed enabled

the Government to have recourse to the home market, either directly or indirectly, through the National Bank since 1917 in order to obtain real funds with which to cover part at any rate of its needs.

The funds thus derived amount from 1917 to date to 1,455 millions. Adding to this the net yield of the forced loan, to which, of course, the above favourable observations do not apply, and which amounts to between 1,200 millions and 1,250 millions, we have a total of native capital placed by the public at the disposal of the Government of between 2,650 million and 2,700 million drachmas.

This is an exceptional example of economic robustness and a clear proof that there exist in the country flourishing elements of wealth which can be more widely developed, and which allow one to hope that we may in time succeed without difficulty in paying off these debts to ourselves.

On the other hand, the increase of the debt, the service of which is in foreign currency, observable since 1914, does not exceed 420 millions of gold francs, which brings the total of our foreign public debt up to 1,700,000,000 nominal value.

A closer examination and analysis of the interest and sinking fund account of these loans in gold shows that we pay annually for the service of both those subject to the International Financial Commission and those not so subject a round sum of *£*2,250,000-*£*2,300,000.

This annual burden can, neither in itself nor on comparing Greece with other countries of the same size, be considered disproportionate to the wealth produced in the country or flowing into it from abroad. What really reduces the influence of this foreign debt in gold is the fact that a considerable portion of it, either does not practically leave the country, or else returns to it, as it belongs to Greeks who spend it in the country.

YIELD OF PLEDGED REVENUES.

The perfect and regular service of our foreign debt is absolutely secured, thanks to the abundant yield of the pledged revenues, which reached during the past year the sum of Drs.462,541,543, as compared with a total encashment in 1921 of Drs.259,929,905, in other words showing an increase of over 200,000,000, and leaving free a wide margin.

This abundant yield is due to the well-developed power of consumption of the country, as is shown by the progressive increase in the consumption of those articles which were affected by the respective taxes.

The yield, which is expected with confidence to be nearly three times as great during the current year, and which it is anticipated will exceed Drs.1,200,000, owing to the adjustment of the taxation to the fallen value of the drachma—an adjustment which, according to the results so far known, has in no way affected the amount of consumption—in an indisputable manner guarantees that our foreign loans will be served with ease in future, and that there will be a wide margin of surplus, notwithstanding the rise in the rates of foreign exchange.

PUBLIC CREDIT.

The impression made by the fact that every care is taken to assure the service of our foreign debt by the widening of the basis on which that service stands, is reflected in the ascending scale presented for some time past by the price of Greek securities on the London market. The positive English mind rejects as useless empty words, and expresses his confidence in the simple language of figures.

Thus Greek securities which, as long as Greece was flourishing, were on a level with those of the most powerful States, and had reached a price of *£*.70-*£*.60, began to fall gradually, so that, just after the National disasters, they reached a level never approached even in the tragic period of bankruptcy. Prices fell to *£*.20-*£*.21, i.e., the rate of interest of capitalisation rose to 25 per cent.

RECOVERY OF GREEK SECURITIES.

Fortunately, after this rapid fall, Greek credit, under the powerful influence of events, began once more to recover. To-day, on observing the gradual but continuous recovery which has been going on for four months past—from *£*.20 they have now reached a point between *£*.40 and *£*.45, that is to say, they have more than

doubled in price within a relatively short period—we are entitled to believe that our credit is regaining its lost ground, and is putting forth fresh roots in the esteem of international economists.

But, in order to establish our credit more firmly, and to prepare the ground favourably for negotiations for loans—to which, however, we shall not resort out of time, but only when the conditions of the foreign market are suitable, and when it will be possible to employ the produce of the loan safely both as a firm starting point from which to proceed to render our public finances sound, and as a permanent, not an ephemeral, aid to the economy of the country—we must not lose sight of certain facts.

It is an indispensable preliminary condition that there shall be not only a real raising of the psychological level of the whole economy of the country, but also that guarantees on a sound and tangible basis shall exist.

To that effect, and in view of the instability of the drachma, I consider that, following the example given by other States in similar circumstances, we ought without fail to create public revenues which shall be collected in firm foreign exchange. Of course, I do not recommend the imposition of additional taxation, but I believe that certain already existing taxes can be readjusted without any fresh burden being laid on the public.

INCREASE OF THE BANK'S BUSINESS.

Notwithstanding the whole-hearted assistance rendered by the National Bank to the Government during the past year also, the regular business of the bank shows a most important increase. This fact constitutes remarkable evidence as to the extent of the business movement in the country and of the intensity of production in all directions.

Capital was not lacking, and it showed greater boldness, turning its attention to various kinds of business which the conditions of the currency rendered both profitable and safe for individuals, and, whilst the rich reserves in exchange in the hands of private persons made their appearance with hesitation and caution, if it was a case of their being only converted into investments in drachmas, we find them willingly employed in immediately productive business, whether connected with real estate or with trade or local industry.

The following table shows the amounts devoted to the productive business of the bank during the year 1922, as compared with those of the previous year, together with the rate of increase observable in 1922:—

	(In thousands of drachmas.)		Increase in 1922.	
	1921.	1922.		%
Discounts.....	300,123 ..	552,778 ..	84.1	
Loans to agricultural proprietors	70,062 ..	92,787 ..	32.4	
Loans and open accounts on pledge of securities	228,668 ..	508,562 ..	122.4	
Loans and open accounts on mortgage. Loans to Societies for purchase of land	63,106 ..	103,477 ..	64	
Loans on the pledge of merchandise	394,687 ..	944,184 ..	139.2	

The increases observed cannot fail to produce a pleasant surprise. Of course, in some degree they are due to the fall in value of the drachma, which now makes it necessary to employ a larger nominal capital than in the past. But it would be an insufficient explanation of the phenomenon to attribute it entirely to the fall in value of the national currency. A detailed examination of certain chapters of the bank's business will convince one of this fact.

AGRARIAN CREDIT.

On account both of the importance of the subject itself and of the altogether special interest with which the National Bank deals with it, I think a somewhat more detailed treatment is due to the question of agrarian credit.

Revenue from the land is the chief and clearest active capital in the general account of our country. Tobacco, figs, oil, and currants, to confine myself to these articles alone, after deduction of the home consumption, yield an annual income of between 11 and 12 millions sterling.

But whilst those valuable products contribute to a most important extent to the influx of sound capital into the country, the inadequacy, on the other hand, of the local production of cereals creates a very heavy item on the debtor side of the general account of the country, which amounted in 1920 to £8,156,000, owing to the high prices ruling, and in 1922 to £5,420,000, owing to the fall of prices, whilst the amount will certainly be greater this year owing to the increased requirements.

Consequently, for two reasons, we ought to follow a policy of furthering agriculture. It is chiefly from the development of agriculture that Greece will derive definite wealth and will succeed in reducing her dependence upon foreign countries for an article of prime necessity.

BANK'S ASSISTANCE TO AGRICULTURE.

The National Bank, perhaps more than in any other branch, showed signs of energetic and helpful action in the branch of agricultural credit. Although, according to the existing conventions, the bank had only a restricted obligation, not exceeding the granting of Drs.50,000,000 in all, although the investment gives but a very small return, because the loans are granted at a very low rate of interest, and although this branch of business requires assiduous work and continual supervision, and multiplies, in respect of both quantity and quality, the trouble which has to be taken by the staff, the bank, nevertheless, considered it to be a duty to fortify this work, independently of any immediate material interest, and to increase its loans to agriculturists without restraint.

The new funds engaged in this branch under the various forms of loans during the past year (exclusive of those already so engaged at the beginning of the year—i.e., Drs.68,821,866.66) amounted to Drs.151,391,123.65, as compared with Drs.72,265,239 in 1921.

DEPOSITS.

The movement of deposits during the year under review presents certain aspects worthy of note. The tables published show considerable increase over the previous year's figures under all headings: sight, savings bank, permanent, and at fixed terms, as follows:—

(In millions of drachmas.)

	1921.	1922.
Deposits at sight	625	925
Savings Bank	186	197
Permanent and at fixed dates	884	951
Total	1,695	2,073

At the end of the year the increases were still more important. But a closer examination removes the first impression, and shows that the increase is apparent only, and that where it is real it is less than in the previous year.

The causes must be sought in the influence of the forced loan upon deposits, and in the scarcity of money which influenced business operations during the whole period.

For, notwithstanding the increase of circulation and the wide distribution of movable wealth of late years, fluid capital, encashed and saved by producers, did not flow in the banks, and did not appear on the surface of the economic life of the country. The rooted distrust, increased by the excessive fear inspired by the various measures taken from time to time, held this capital aloof from all business. The public were thus deprived, and at moments of economic crisis, of reserves of money which existed in the country but remained inactive in fruitless invisibility.

The permanent deposits, and those at fixed terms in bank notes, in gold and in exchange, taken together, show an increase of Drs.66,701,263.

Unfortunately, this is due only to the deposits in Bank notes, whilst, on the contrary, deposits in gold and exchange show a decrease of Drs.14,102,929.

RESTRICTIVE MEASURES AND THEIR RESULT.

This point, too, ought to attract the undivided attention both of the Government and of the National Bank. The continual increase of deposits on exchange observed during the past consti-

tuted one of the strongest elements of property in the country. It was a power in sound currency which has rendered our position enviable. The measures restricting the freedom of business which have from time to time been adopted, the arbitrary and often ephemeral prohibitions, and the uncertainty in which every holder of sound currency have remained, and which compels him either to send his capital abroad, or to keep it away from the possibility of being affected by the measures taken from time to time. All this has weakened severely this chief coefficient of the wealth of the country. Only when confidence grows deep and firm, and the conviction returns, that capital is no longer going to be affected by other measures, will this sound capital commence to return plentifully to the country.

Other countries, too, have passed through a period of uncertainty and of shock, especially during recent years. The trials which they have undergone have led them to abandon measures which, whilst they gave only spurious relief, unnerved their whole economy. Unfortunately, the experience of others aids men very little. I am sure that we also, passing through the same trials, shall very soon convince ourselves, not only of the unprofitableness of various experiments which we have made occasionally, but also of the fact that they are harmful to the business of the country.

FOOD SUPPLIES OF THE COUNTRY.

As regards the food supplies of the country, the National Bank of course continued during the past year to afford to the State the benefit of its organisation, and the support contributed by its disposable funds.

The requirements of the country in cereals during the year 1922 somewhat exceeded those of the previous year, although it had been anticipated that they would be less in view of the supplies expected from the Thracian plains.

Unfortunately, the endeavour to realise these expectations failed, owing to the supervening national misfortunes, and the country lost a most important auxiliary supply of cereals.

Orders for cereals during the year under review amounted to:—372,000 tons of wheat, 25,000 tons of flour, 18,000 tons of rye, costing Drs.870,000,000.

BANK'S PROFITS.

The profits of the National Bank for disposal during the year 1922, as appears from the analysis of its whole business, were exceptionally satisfactory. Of course, a portion of these profits arises from the profits undisposed of in previous years.

The gross profits amount to Drs.279,595,250, and after deduction of the expenses of administration, interest paid and amounts written off, there remains a net profit of Drs.187,466,654, which is higher than that of 1921 by Drs.72,000,000, and exceeds the profit realised in any previous year.

This net increase in profits enabled the administration of the bank to propose a dividend considerably higher than in any previous year, and thus to adapt the dividend to the current price of the shares. The ascending scale of dividends distributed, which from Drs.225 in 1915 reached Drs.250 in 1916, Drs.265 in 1917, Drs.300 in 1918, Drs.320 in 1919, Drs.420 in 1920, Drs.550 in 1921, and Drs.800 in 1922, is a practical proof of the increasing participation of the shareholder in the profits realised in this especially fruitful period.

The administration considered it, however, to be necessary, according to the policy instituted some years ago, to make strong additions to the reserves out of the profits which have accumulated out of the extraordinary business and exceptional circumstances of the last few years.

BANK'S SOUND POLICY.

It will be readily understood what a great advantage is derived by the shareholders from this policy, as well as by the bank itself and the whole public. The interests of all classes in the country coincide in this, that the National Bank as the central issuing bank of the country, shall possess in itself such strength that it may be in a position to withstand any unforeseen attack. And the bank can confidently look forward to being in such a position because it has taken care, without deviating from its policy in years of abundant harvest, to strengthen itself and to raise a bulwark against any unforeseen circumstances.

Following this policy, it assigned in the past year 45.4 per cent. of its net profits, or Drs.85,000,000 to increasing its reserves, which thus amounted on December 31, 1922, to Drs.220,000,000. Besides this, it was considered absolutely necessary to maintain various headings under assets in a strong position in order that they being in themselves strong may add to the bank's strength in general.

CONFIDENCE IN THE NATION.

I believe that the present year will open a new chapter in the life of Greece. After the disasters which have overwhelmed her, the clearest proof that our indomitable will is to march forward, will be devotion to work. And I believe that the Greek people, which is prudent, laborious, saving, will cast itself into the work of peace with a zeal and courage, and that it will thus lay those wider foundations which are necessary for the economic prosperity of the country in the future.

The report was unanimously adopted.

SUEZ CANAL COMPANY.

SUCCESSFUL YEAR—LARGE INCREASE IN TRAFFIC.

The sixty-ninth annual meeting of the shareholders was held in Paris on the 4th instant. The report of the Council of Administration was read to the meeting, and was substantially as follows:—

Traffic through the Canal in 1922 has regained, for the first time, its pre-war activity. Under the influence of a revival in trade which has begun to assert itself in certain countries, the maritime movement has surpassed the previous maximum. This is the more remarkable when existing circumstances are taken into consideration.

The growth of traffic caused a large increase in the company's receipts, and expenses are slightly less than in 1921. The repayment of Consolidated Coupon Bonds has relieved the company of a heavy charge, and it has, therefore, been decided to declare an appreciable increase of dividend, whilst still maintaining the prudent policy which has always guided the board.

ALLOCATIONS.

The same amounts as on the last occasion have been allocated to the sinking fund for stock, and to the fund for house building in Egypt. It has also been thought advisable to set aside from profits a sum of 25,000,000f as part of the expenses incurred in the works improvement fund. This will avoid, or at least delay for several years, the necessity of a loan, which has been already authorised, and greatly reduce the amount required. It is proposed to pay a dividend of 320f net per share, almost double that paid before the war. In making this comparison, however, it should be borne in mind that part of the dividend is due to the depreciation of the franc.

The increase in traffic has permitted, from March 1, 1923, a reduction of transit rates of 25c, which conforms with the liberal policy you have always approved of allowing those shippers who still suffer from the consequences of a severe crisis to share in the renewed prosperity of the Canal, and to share in lowering the charges which press on the shipping industry. The continued progress in traffic which has justified the reduction has since been so well maintained that the receipts to-day are much higher than on March 1st; moreover, the high rates of exchange permit

the remittance of money from Egypt or from England to France on exceptional terms, a condition, however, which it is hoped might ere long be modified.

FINANCIAL POSITION.

The total receipts for 1922 at 305,455,608f show an increase of 45,319,612f over the year 1921, of which transit dues account for 17,551,225f. Expenses in Egypt are about the same as in 1921. After making allowance for depreciation of investments, expenses, and provision for buildings, stock, and works, the excess of receipts over expenses amounts to 193,797,839f, to which has to be added 949,707f brought forward, making a sum of 194,747,547f. This leaves an amount for distribution amongst the shareholders of 192,641,126f, and provides for the payment of a dividend of 341f 93.8c per share, to which must be added 25f for interest, representing a gross return of 366f 93.8c, or a net amount of 320f, which exceeds that of 1921 by 75f per share.

It is interesting to note that, in spite of the increased dividend, the revenue paid to the British Government was much less than in 1913, and if the exchange on the day of maturity, in July next, does not vary from that of to-day the decrease will be 22 per cent.

CANAL TRAFFIC.

Four thousand three hundred and forty-five ships traversed the Canal in 1922, representing a net tonnage of 20,743,245, an increase of 468,125 tons over the highest previously reached—that in 1912. Commercial shipping reached 18,787,824 tons net, an increase of 3,016,204 tons on 1912. Under this heading are included 111 boats, the relative increase of which is 20.5 per cent. over 1921. Compared with 1921 the increase in ships is 370, or 2,624,246 tons. There was an ever-increasing number of vessels burning Mazout, representing 19 per cent. of the total movement of the year. The average time of transit was 15 hours 36 minutes, nearly the same as 1921, the most favourable up to the present. German shipping was more in evidence, having increased from the 1921 figures of 170,520 tons to 735,129 tons, a number much less than when Germany occupied second rank among the Canal's customers in 1913, with 3,352,287 tons.

The shipping at Port Said, ships which did not go through the Canal, reached 1,416,000 tons, against 1,290,000 tons in 1921.

Exports from Europe of manufactured articles and oil have been very active. Coal amounted to 1,663,000 tons, a figure it has never reached before.

The increase of return traffic is the more interesting in so far as it concerns raw materials necessary to Western industries. There is an increase both in oleaginous products and in mineral oils; these, coming principally from Persia and the Netherland Indies, have reached for the first time 2,000,000 tons, and represent 15 per cent. of the total merchandise from South to North, instead of 2 per cent. before the war.

Movement of minerals has been very large; manganese, in particular, realised the record figure of 941,000 tons. Cereals alone show a falling off, due to the small amount from Australia, which in 1921 sent an exceptionally large amount.

The current year shows a marked increase on the excellent results of 1922; for the first quarter the increase in tonnage amounts to 800,000 tons.

CHANGES ON THE BOARD.

Notable among changes made on the board are the retirement of M. Cremer, representing the Netherlands; the appointment of M. Barrere, in place of Baron de Courpel; Sir John Davis, in place of Lord Downham; and Sir Robert Horne, to succeed Lord Kysant, who has retired owing to the pressure of other activities.

INVESTMENT TRUST CORPORATION, LIMITED. LARGE APPRECIATION OF SECURITIES. SUCCESSFUL RESULTS OF THE YEAR.

The thirty-fifth annual meeting of the shareholders of the Investment Trust Corporation, Limited, was held on the 6th instant, at the offices of the corporation, Gresham House, 24 Old Broad street, London.

Mr Robert Fleming (the chairman) presided.

The secretary (Mr Hildred Carlisle) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—When we met last year I gave you a table showing the course of the Stock Exchange values of our securities during the preceding ten years. That showed that from 1915 to 1921, on May 1st in each year, there was a depreciation below book cost in market value reaching its greatest figure on May 1, 1921, when it was £571,531. But about that time the turn came, and, instead of a depreciation, we began the year which we are now reporting on with a rise of £27,517 over cost—i.e., over capital, reserve, and carry forward.

So the year began, and we end it on May 1st last, with an excess of £266,000.

INVESTMENT PRICES AND PROSPECTS.

If, reversing the order of Pharaoh's dream, seven fat years were to follow the seven lean ones, we might be only at the beginning of an improvement which will last for long, and optimists are not lacking who do not think this impossible, but as to the future course of prices I will not venture to make any prediction.

Though trade is certainly not so very depressed as it was a year ago, there is no very great improvement, and there has been no let up in the demand for investments and hardly a stop in the movement in an upward direction.

Notwithstanding the idea that used to prevail that, with the enormous destruction of capital, money was bound to be more and more in demand, and rates for its use, owing also to greatly increased taxes, likely to reach a higher level, the movement to higher security prices has now continued, almost without a break, for quite 18 months, and it certainly would not be surprising if, from one cause or another—better trade, or some adjustment of European financial affairs—the current should begin to run in an opposite direction. A prospect that did not contain these elements would not be a pleasant one.

INVESTMENT POLICY.

But even if we felt a change impending, it would hardly be the rôle of the management of an investment trust to indulge in heavy realising in consequence. We are not a finance company, and, altogether, the thoughts of the directors of an investment trust must turn more in the direction of intrinsic merits and comparative cheapness than on the fluctuations of the money market. We must try to keep your money always invested without, however, losing opportunities for exchange, one security for another, when suitable opportunities arise. I must exclude from this generalisation our large holding—£847,500—of British Government bonds. By selling these and reinvesting in other things not quite so good, but nevertheless good, we should be able gradually to add considerably to our total revenue. On the other hand, I ought also to mention that we have a few cases of bonds bearing 7 per cent. to 8 per cent., repayable before long at the option of the borrower who may then require us to accept repayment or a reduced rate of interest. A recent instance is that of Nobel Industries, Limited, whose 8 per cent. notes were issued in October, 1920, at 96½ per cent., and in terms of that issue paid off at 101 in February this year, being replaced by an issue of 5½ per cent. debentures at 99, now selling at 104½.

It is quite possible that we may be near the top of this price movement, and that when we meet a year hence we may not have so large an excess of market value to report, but, as I have said more than once, that is a matter of minor importance if we can continue to show no falling off in the annual income which is left for division among you.

RECEIPTS—DIVIDEND.

Our holdings in the United States are now 21 per cent. of the whole, against 70 per cent. in 1914. The average rate of exchange on income received from the United States during the year was \$4.54 per £, against \$4.12 per £ for the previous year.

Last year I said that I thought our revenue might somewhat fall off through a less favourable New York exchange, and there may be a further loss of revenue from the same cause this year.

I also said that the bad times might cause some reductions in revenue receipts, and such has been the case. But, on the other hand, in other directions some improvements in revenue have taken place, and our total net, as you see, exceeds that of last year by £4,133. It is £119,390, being 10½ per cent. on the £800,000 deferred capital stock, out of which we propose, with your approval, to

increase the dividend by 1 per cent., and make it 16 per cent. for the year, which, I hope, you will deem satisfactory.

THE RESOLUTION.

With these remarks I beg to move: "That the report and accounts, as presented, be and they are hereby received, approved, and adopted, and that a dividend of £9 10s per cent., less income-tax, on the deferred stock, making with the interim dividend £16 per cent. for the year ended May 1, 1923, be and the same is hereby declared."

Mr H. A. Vernet seconded the motion, which was unanimously adopted.

On the proposition of the Chairman, seconded by Sir W. Guy Granet, the retiring director (Mr H. A. Vernet) was unanimously re-elected.

The auditors (Mr. C. O. Webb and Mr Lionel Baddeley) were reappointed, on the motion of Mr W. E. Ledger, seconded by Mr Blair.

A hearty vote of thanks was accorded to the chairman, directors, and staff for their services during the past year, on the proposition of Colonel William Parker; and the proceedings terminated.

ASSOCIATED NEWSPAPERS, LIMITED. CHAIRMAN'S REVIEW.

The eighteenth annual meeting of the Associated Newspapers, Limited (proprietors of the *Daily Mail*, the *London Evening News*, and the *Weekly Dispatch*), was held at noon, on the 8th instant, in the Memorial Hall, Farringdon street, London. Mr Thomas Marlowe, the chairman, presided.

In moving the adoption of the annual report and accounts, the Chairman said:

I am sure that the first thought in our minds this morning must be a recollection of the great personal loss which this company has suffered by the death of Lord Northcliffe, which took place, as you remember, not long after our last annual meeting. He was the founder of the *Daily Mail*, and for more than 25 years he was the chief among those whose unceasing labours brought this company to its predominant position in the newspaper world. He was one of the greatest men of our time; he was a journalist of extraordinary powers, endowed with such energy as can only be realised by those who worked with him.

His first concern always was the interest of the country. It was this which inspired his great interest in aviation from the first moment that men began to fly, because he saw the vital importance of this new arm to Britain in war. The *Daily Mail* gave prize after prize to encourage flying and the construction of aeroplanes and to stimulate the public interest. It was to win a *Daily Mail* prize that the first flight was made from London to Manchester. The English Channel was first flown to win a *Daily Mail* prize, and the superb achievement of flying across the Atlantic was also performed for a *Daily Mail* prize of £10,000. All these events were due to the direct inspiration of Lord Northcliffe.

The same patriotic spirit inspired his efforts—which are now a matter of history—to give the British Army in France an adequate supply of shells in the early days of the war. He took up that cause in the face of the determined opposition of those who were responsible for the shortage, and at a time when nothing was so unpopular as the truth. With his personal assistance the *Daily Mail* carried on this crusade persistently until the supply was assured; and his efforts to secure victory were renewed again and again throughout the long years of the war.

Great energy, remarkable foresight, and impregnable independence were the qualities which distinguished him as a journalist, and he exercised these qualities with so much persistence that he established by the power of his great personality a tradition which cannot be forgotten by those who worked in close association with him.

He built on solid foundations, and the substantial character of his construction is proved by the position of prosperity in which the Associated Newspapers and allied businesses now stand.

NET SALES AND REVENUE.

The managers, editors, and staff remain the same, and, as you see from the balance-sheet, the progress of the company has been greater than ever. The sales of our newspapers maintain their splendid figures. The *Daily Mail* has a larger net sale than any other daily newspaper in the world. The *Evening News* has a larger net sale than any other evening paper. The *Weekly Dispatch* sales have continued to grow, and they also are better than last year. The *Overseas Daily Mail* increases its popularity throughout the British Empire, and is highly appreciated by British advertisers who wish to cultivate the growing markets of the Dominions.

We have this year launched the *Daily Mail* on the Atlantic. The large Cunard liners sailing between England and the United States

print the *Daily Mail* in the morning with news sent by wireless from London and New York overnight.

Our revenue during the past financial year has been the largest in the history of the company, the income from advertisements alone being over £3,000,000. By careful management the rate of profit has been increased, and we are able to show a total profit for the year of £680,620 10s 6d. You have all received copies of the accounts, and I need not elaborate the details. One important item which must give satisfaction is the cash position, which shows that at the close of the financial year the company held on short loan, deposit, current accounts, and in hand the sum of £447,895 15s 3d.

In November the shareholders decided to issue a bonus of 250,000 deferred shares out of the undivided profits; and in view of the exceptional prosperity of the past year a further bonus issue of 250,000 deferred shares was made in April after the close of the financial year under review.

We have for the last nine months of the financial year been paying quarterly dividends at the rate of 40 per cent. per annum, and for the last quarter a dividend at this rate has been paid since the accounts were closed.

PAPER MILLS AND WOOD PULP.

One of the problems which newspaper proprietors have to face is the provision of raw material for this great industry. Our raw material is paper, and the raw material of the paper-maker is wood pulp.

In order that we might be independent of sudden fluctuations in the price of paper, or an eventual shortage of this vital raw material, the Anglo-Newfoundland Development Company was founded in 1905, and large paper mills were built at Grand Falls to furnish this company and its allies with paper. For these mills about 3,000 square miles of forest and water powers were acquired, and the mills supply us with what is admitted to be the best newsprint paper in the world. The vital importance of having our own mills and forests to fall back upon was exemplified during the Great War, because this resource was the main factor that carried the company and its allies successfully through that period of paper shortage.

Our consumption of paper has greatly increased in recent years, and we have in consequence decided to develop largely the Newfoundland property. The control rests with the Associated Newspapers, Limited.

During the last few months the neighbouring mill of Bishop's Falls, which has a yearly output of 25,000 dry tons of mechanical pulp, has been acquired, along with its timber areas. The mill is on the same river of Exploits as the Anglo-Newfoundland mill, and the properties are contiguous. A very large paper-making machine is to be erected at Bishop's Falls, and should be running by the autumn of 1924, producing 25,000 tons of paper a year. This, added to the production at Grand Falls, will give us and our allied companies 75,000 tons of paper from Newfoundland.

The Newfoundland Company has also acquired a two-thirds interest in the large new sulphite mill at Alexander Bay, Newfoundland, 90 miles from Grand Falls. Purchase has been made on favourable terms. The timber areas are large and conveniently situated, and we expect to produce 25,000 dry tons of sulphite pulp per annum. Both these mills have valuable water powers, and their pulp-wood reserves have been very favourably reported on by our experts at Grand Falls.

4,000,000 ACRES OF TIMBER LANDS.

The Newfoundland Company has also acquired timber areas for itself during the last year, which, added to those of Bishop's Falls and Alexander Bay, amount altogether to about 3,300 square miles, bringing the total area of timber limits under our control just over 4,000,000 (four million) acres.

In short, the directors of the Anglo-Newfoundland Company and ourselves hope to make these three mills in Newfoundland the premier paper manufacturing plant in the world.

The Newfoundland Company owns two steamers for bringing its product to England, and has this year ordered a new ship of 8,800 tons deadweight to be built by Messrs Vickers, Limited, at Barrow. It has been specially designed for the Newfoundland trade, and is strengthened for passing through the ice which is encountered in the winter and spring. The advantage of constructing a steamer specially for our own trade is that we secure very much more economical working.

The Newfoundland Company has arranged to pay off next January the remaining 8 per cent. second debentures amounting to £500,000, which are in part guaranteed by the Associated Newspapers, Limited. That will also mean a saving to our company in the cost of paper. The directors confidently expect that within a short time their investment in the Anglo-Newfoundland Company will be producing handsome and increasing returns.

In conclusion, I would say that the prospects of the company to-day are thoroughly sound. Advertisers declare that our news-

papers bring them incomparable results, and manufacturers are finding more and more that newspaper advertising is the main-spring of business.

We have made good contracts for paper, and we trust that next year we shall have an equally good account to give you of the company's operations.

Sir Andrew Caird, managing director, seconded, and the report was unanimously adopted.

The auditors, Messrs Lever, Honeyman and Co. were re-elected.

LEOPOLDINA RAILWAY COMPANY, LIMITED.

INCREASED CURRENCY RECEIPTS.

The ordinary general meeting of the Leopoldina Railway Company, Limited, was held, on the 5th instant, at River Plate House, Finsbury circus, London, Mr Oliver R. H. Bury (the chairman) presiding.

The secretary (Mr J. H. Drury) read the notice convening the meeting and the report of the auditors.

The Chairman said that the gross currency receipts of the railway were 53,614 contos, an increase of 3,459 contos, while the expenditure was 670 contos less, the net receipts showing an increase of 4,219 contos, or nearly 38 per cent. Unfortunately, converting into sterling had resulted in a decrease in gross receipts of £154,294. On the other hand, the decrease in expenditure was £207,741, leaving the net receipts £428,329, or an increase of £53,447—equivalent to 14.26 per cent. The balance available was £243,419, from which the Board proposed to pay the dividend for the year on the 5½ per cent. preference shares. They much regretted they were unable to recommend a dividend on the ordinary stock, and proposed to carry forward the balance of £86,926. In recent years receipts in currency had risen very largely, showing thereby the steady development of the districts served by the railway. That was, perhaps, the most satisfactory feature in the report, which otherwise must be very disappointing to the shareholders. A unanimous decision had been given in the company's favour by the Judges of the Supreme Court in Rio in connection with the Customs claim, but unfortunately when the company paid the 978 contos in question the sterling equivalent was £53,000, while now it would represent only £22,000. As to the raising of tariffs, the late Government had agreed to an increase which included most of the articles carried by the railway, with the important exception of coffee, which the board thought could and should bear its proper proportion of the increased rates. Although they were again unable to pay a dividend on the ordinary stock, substantial progress had been made since last year, and while he would not attempt to prophesy about the future of exchange, the balance of trade was in favour of Brazil, and those who knew the conditions in that country were all expecting a turn for the better.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

closes a gratifying improvement. In regard to the Canadian company, the economies indicated in the last report have been effected, and the Canadian directors report that the organisation and equipment have been maintained in a high state of efficiency. The delay in the revival of trade in the Dominion has, however, precluded any revenue from that quarter. In these circumstances the directors do not recommend any dividend on the ordinary shares, but propose as a precautionary measure placing £5,000 to investment reserve account and carrying forward the balance. The amount standing to the credit of profit and loss account is £15,269, to which must be added the amount brought forward from the previous year, £5,890, making £21,159. The dividend on the 6 per cent. cumulative preference shares for the year has been paid, £3,600, and on the 10 per cent. second cumulative preference shares £6,000, leaving a balance of £11,559; to be placed to investment reserve, £5,000, leaving to be carried forward £6,559.

BUSTON AND HORNSEY.—The result of the company's working for the financial year ended March 31st last is as follows:—Balance of profit and loss account, £91,404, as compared with £101,638, less depreciation £53,951, interest on debentures £25,500—£79,451, leaving a balance of £12,043, as against £20,185, to which add balance from last year, £58,231, as compared with £43,920, carrying forward £70,274, as against £58,231. The directors report that the financial year under consideration has been a very difficult one, and although there are signs of brighter trade prospects the conditions are far from normal. To meet the possibility of further diminution in the values of stock-in-trade, a sum of £50,000 has been transferred from general reserve. Under these circumstances the directors feel that a conservative policy should still be pursued, and they, therefore, regret that they are unable to recommend the payment of the outstanding dividend on the preference shares, or a dividend on the ordinary shares for the past year. The cumulative preference dividends have been paid to July 1, 1921.

OIL OUTPUTS.

ALGERIAN OILFIELDS, LIMITED.—Reports from the Algerian property—in which the Algerian Oilfields, Limited, is so largely interested—state that the production for the month of April was 114 tons, and for the first three weeks of May 85 tons.

APEX (TRINIDAD) OILFIELDS.—Estimated gross production of crude oil for the month of May was 64,103 barrels, equal to approximately 9,100 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 12,000 tons.

LOBITOS OILFIELDS, LIMITED.—The production for May is cabled as 10,117 tons.

THE CALTEX OIL COMPANY state production for the month of April as 20,525 barrels or 3,257 tons.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during May, 14,100 tons; oil purchased during May from other companies, 12,050 tons. Of the above production 3,788 tons were obtained from well No. 25, Forest Reserve Field, which has recently been deepened from 900 ft to 1,786 ft. This well had previously produced over 22,600 tons from the upper sands.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, May 30, 1923, amounted to 821 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have remained dull and showery, but despite excessive rainfalls during the past month, winter wheat has continued to make satisfactory progress, and an average yield is expected. On the other hand, spring cereals have suffered from lack of sunshine, and in some parts present a patchy appearance. General course of trade shows no improvement, but prices were firmer inclined, owing to higher forward offers of imported descriptions. English wheat continues in slow demand, but sparingly offered, best milling samples being held for 10s 8d to 11s 3d, and inferior 10s 3d to 10s 6d per 112 lbs, free on rail. Foreign kinds firm, but buyers remain indifferent. No. 1 Northern Manitoba quoted 50s 6d, Rosafé 62½ lbs 50s, Barusso 62½ lbs 49s 6d, and choice white Karachi 50s 6d, all per 496 lbs ex ship terms. In the floating and forward cargo section rather more activity was noticeable, and with sellers somewhat reserved a firm tone ensued. Steamers of choice white Karachi on passage changed hands at 48s 1½d, ditto May-June 46s, No. 2 hard winter July-August 45s 3d, Rosafé 62½ lbs afloat 46s 3d to 46s 4½d, and a part cargo of Pacific August at 47s per 480 lbs c.i.f. Crop prospects in the principal exporting countries are maintained, while visible supplies in North America show a fair increase. Arrivals at U.K. ports, however, keep on a small scale, with larger supplies on passage to the Continent. The market for flour displayed quiet features, and prices were on a lower basis, town milled being reduced by 1s per sack. Official quotations of London standard straight run now 40s, patents 42s to 43s, town households 38s per sack delivered in London area. All English

country straights in small supply, and held for 35s to 36s per sack delivered to London stations. Of imported, Manitoba export patents quoted 36s to 40s 6d as to quality, Minneapolis patents 40s, and Australian 36s 6d to 37s 6d per 280 lbs, all ex store terms. Millers' offers quiet and tendency easier. Broad bran quoted at 6s 3d, ordinary, ditto, 5s. 3d., middlings 7s 6d, bags included, ex mill. Light oats, 6s 3d, powdered oat husks 5s 9d, feed oatmeal 7s 9d, ground oats 13s 3d, all per cwt, free on rail. Barley, English, steady, at 8s-11s, as to sample with malting descriptions, ranging from 10s, 12s per 112 lbs, free on rail. Imported quiet. Californian, 43s, 46s, Australian 42s, 48s, New Zealand 33s, 47s, as to quality, all landed per 448 lbs. Persian 26s 9d, Plate 29s, Danubian 29s, American malting 48s 10s, 28s, No. 4 Canadian Western 28s, Karachi 28s 3d, all landed per 400 lbs. Maize dearer. La Plata (new) 37s 6d, ex ship, 41s 6d landed, old 40s landed. East African, ex ship 36s 9d, landed 37s 6d, all per 480 lbs. Oats, English, firm at 8s 6d to 10s 6d per 112 lbs, free on rail as to quality. Imported firmer. Plate f.a.q. ex ship 23s, ditto landed 24s, No. 2 Canadian Western, ex ship, 27s, landed 28s 9d, No. 3 ditto 27s 3d landed, No. 2 Canadian feed 25s 6d ex ship, landed 26s 3d, New Zealand A grade 38s 6d, B grade 37s 6d, both landed, all per 320 lbs. Oatmeal in moderate demand at about previous prices. London made, all cuts, quoted at 18s, flaked oats 20s 6d, rolled oats also whole groats, 18s ex mill, ordinary Scottish oatmeal 19s 6d to 20s 6d, American, all cuts, 17s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, 1921-22, 1920-21, and 1919-20:—

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated June 7th, is as follows:—Pig-iron: Owing to falling off in demand, makers of Cleveland pig-iron reduced their prices 2s 6d per ton this week. It remains to be seen whether this reduction is sufficient to induce renewed inquiry. Cleveland No. 3 G.M.B. pig-iron, 117s 6d. East Coast hematite mixed numbers are also now quoted 117s 6d, and it is hoped that this price may bring in some Continental orders. Manufactured iron and steel: Steel works still have a fair amount of work in hand, but Continental competition is rather interfering with forward demand. Steel ship plates, £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £10 10s. Iron ore: Business extremely quiet, and prices nominally maintained.

Our Sheffield correspondent writes:—The iron and steel trades in this district have experienced another dull week so far as buying is concerned, and there is much pessimism about. The furnaces producing mild steel are slightly less busy, although still delivering a heavy tonnage against contracts. The order books of makers are now practically exhausted, and unless buyers come into the market again in the course of a week or two the works will have to go on short time. Prices are easier, but owing to the high cost of fuel no substantial reductions of the prices of pig-iron or billets are expected. Makers seem confident that buying will be resumed shortly as the mills have a good deal of finished work to execute. Soft basic billets, the price of which is not controlled, have now dropped to £9. It was decided by the associated steel makers this week not to alter the minimum prices of hard basic and acid billets. A good deal of Continental steel is being imported, including parcels of seconds quality. The depression in crucible and alloy steels and tools manufactured therefrom is rather more acute than before, and scarcity of money is a universal subject of complaint. Huge quantities of surplus war tools are being distributed, whereby makers of such goods have little work to do. Steel scrap is practically a dead market, and prices have dropped 2s since a month ago. Business in cutlery and plate is extremely uneven and poor in the aggregate, sales of stainless knives having shrunk considerably during the present year. Some lines in cutlery and plate can now be bought practically at the pre-war level of prices. Symptoms of weakness in the coal market have not affected prices in a downward direction, but that demand has met with a check cannot be questioned. The home demand for steam coal, however, is being maintained. Slacks are in a strong position, with none offering on the open market. Cobbles and nuts are rather easier in price. Coke is

† Tax free.

going away freely, and prices are firm. Best South Yorkshire steams are quoted at 22s to 24s; rough slacks, 12s to 14s; nutty slacks, 10s 6d to 12s 6d; smalls, 7s to 9s; but hand-picked branch, 32s 6d to 34s; best Silstone, 28s to 30s; best Blythe steams, 28s to 30s; Tyne steams, 18s to 19s.

Our Glasgow correspondent writes:—The week closes with a quiet tone ruling in the iron and steel trades. The "Derby" influences and the boiler-makers' lock-out, especially the latter, are no doubt responsible for the easier appearances, which in informed quarters are not expected to mend immediately. Boiler plates are at, nominally, £13 a ton, ship plates at £10 5s, and sections—joists, angles, &c.—at £10. In the sectional branch, that associated with house and works' building, a big constructive programme is in course of execution all over the West of Scotland, likely to last for many months. The state of affairs in the bar iron and steel trades is more cheerful than it was earlier in the year, and experts look assuredly forward for expansion, which seems to have set in encouragingly in Australian and other Colonial connections. Bridge-builders advise a more hopeful inquiry for this class of work. Some of the Indian railways are negotiating for substantial lines of rolling plant—waggons, trucks, and wheels and axles—running into the thousands. Black sheet makers, steel tube makers, and producers of wire ropes are busy on contracts which will keep them going well employed (off and on) for a while to come. Marine engines are in request for outside as well as home markets. All that is wanting is the introduction of a little more heartening into the situation. Scotch pig-iron is slow to move, buyers standing aloof until the cheapness that is promised takes effect. Scotch foundry No. 1 has yielded 1s 3d a ton this week at £6, and No. 3 1s 3d at £5 15s. Scotch hematite has relaxed 2s 6d at £6 5s. Coals remain weak (for home and export), with quotations from 1s to 1s 6d a ton back from last week. In informed circles the declines are described as heavier, but dealers refuse to disclose their full extent.

Our Cardiff correspondent writes:—There has been a slump this week in the current market prices of South Wales coals. It

has been due partly to a comparative scarcity of orders, and partly to the "bear" operations of foreign buyers who believe that by holding off temporarily, or through the purchase of American coal, they will be able to obtain supplies of South Wales coals for delivery over the second and third quarters of the year at figures much lower than those recently quoted by colliery salesmen. It does not, however, indicate any real depression in the trade. The weakness is only on the surface, and merchants are realising this when they try to arrange stems with the collieries. The lower prices are largely, if not entirely, the result of the competitive operations of middlemen, but while buyers are able to obtain from coal exporters spot or prompt parcels at prices 2s or 3s per ton below those quoted by the collieries, they are finding it extremely difficult to arrange for the shipment of those coals. Still, the general position of the market is easier than it has been for two or three months, and current quotations have ruled at anything from 2s 6d to 3s per ton less than they were a week ago. Second Admiralties have been obtainable at about 36s, and Monmouthshire coals at lower figures. The current approximate figures are as follows:—Best Admiralty, large, 37s 6d to 40s; second Admiralties, 36s to 37s; best drys, 36s 6d to 37s 6d; Black Veins, 36s to 38s 6d; Western Valleys, 35s to 35s 6d; Eastern Valleys, 33s 6d to 35s 6d; best bunker smalls, 27s 6d to 30s; ordinary cargo smalls, 27s 6d to 30s; anthracite big vein, 50s to 52s 6d; anthracite French nuts, 57s 6d to 60s; anthracite stove nuts, 55s to 56s; coke for export, 65s to 70s; inland blast furnace coke, at ovens, 35s to 40s; patent fuel, 40s to 42s 6d; pitwood, 30s to 31s, ex ship.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—General conditions in this centre remain very disappointing. New business in tops and yarns is confined to the covering of immediate and pressing requirements, and there is not enough to test values.

Quotations show some further decline on the week, but as things are they can only be described as nominal. There seems to be no relationship between wool and tops and yarn when it comes to a question of doing business, and every seller is a law unto himself, price being determined by his position in regard to commitments and the urgency of his need for orders to keep machinery running. In the circumstances some firms are accepting prices for tops and yarns that others will not consider for a moment, but the fact remains that under existing conditions it is practically impossible to make a remunerative price for anything. It is hoped that things will improve when the raw material market has been tested, but the general opinion seems to be that prices at Hull to-morrow (Friday) will show a decline of anything from 5 to 7½ per cent. from the level created at the last series of auctions in Coleman Street. There does not seem to be any real doubt about the strength of the wool position, but it is recognised that consumption has fallen off considerably in recent weeks, and wool values can only be maintained if France and the Continent generally give the necessary support. Reports from America indicate a certain amount of slackening off in demand in that country, and it is obvious that the wool textile industry will have to face a severe testing period during the next few weeks. Meanwhile, the policy in Yorkshire seems to be to go slowly and avoid forward buying. Spinners are in need of work, and yarn prices are very irregular.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

A real testing time is approaching in the Colonial wool trade. A wave of pessimism has spread over the West Riding industry during the past month, and there has seldom been a time like the present. Although wool sold at the last London sales in a manner that led one to think trade must be robust somewhere, it has not had the slightest effect upon the home industry by way of "bucking up" any section, a real spirit of callousness and indifference being everywhere manifest. But things are not so bad as has been represented, for the Bradford Conditioning House returns for May were on the whole good, a clear proof that in the aggregate big weight of tops in particular are on the move. Then the export returns are by no means bad, and in the aggregate the shipments of wool, tops, yarns, and pieces this year cannot but be regarded as very good. Still, a strong note of pessimism is everywhere heard, and to those connected with the London wool end of the trade it is hard to understand. Of course, manufacturers know best what they are having to face, and Continental competition is no doubt wrestling from West Riding firms a good deal of the trade they have hitherto been able to do, home manufacturers apparently being beaten on the question of price per yard. No doubt demoralised Continental exchanges are enabling French, Belgian, and German manufacturers to undersell home producers, and at a time like the present this competition is undoubtedly upsetting a good many. However, France is in all probability in as good a position to continue to buy raw wool as anyone, and we shall be greatly surprised if next week at Liverpool (which will offer a better test than Hull did), there is not a very healthy demand for merinos at values showing little change on those ruling at the last London sales.

The best news possible is to hand from Australia in the several reports of splendid rainfalls during the past few days. This puts to an end the spectre of serious drought, and everybody rejoices at the bountiful rainfall. It is now approaching mid-winter in Australia, and it certainly lays the soundest foundation possible for the forthcoming spring lambing, and also a good growth of grass. A plentiful supply of grass and water means prosperity

to Australia, for the pastoral life of the Commonwealth is undoubtedly the foundation of the prosperity of Australia. Everybody rejoices that the rains have fallen over the whole Continent, and several more inches will not come amiss. It should have a beneficial influence on the forthcoming new clip.

The general outlook for the raw material is more encouraging than for partly and fully made goods. During the next few weeks a considerable quantity of wool will be offered for sale in this country, and the English fairs are commencing, the latter fact helping to put users of crossbred produce in a rather cautious mood. For the time being Colonial crossbreds appear to have reached high-water mark, and slightly lower prices may be expected. Merinos may be relied upon to hold their own fairly well, for the total quantity available is not large compared with prospective needs. In spite of their dearthness, fine goods are maintaining their popularity.

MANCHESTER, June 7.

The tone of the market has been quieter than last week. Buyers do not seem to have sufficient confidence in current prices to go on operating steadily, and practicable demand is very irregular. Wide fluctuations are taking place in raw cotton rates, and after sentiment being rather bearish a stronger feeling now shows itself. A considerable inquiry has been dealt with in cloth for China, but the turnover has been limited, most of the offers especially in standard makes, being unworkable. Dealers in India continue to send poor bids, and it is not anticipated that trade of any importance will be done until after the breaking of the monsoon. Operations for the minor outlets have been featureless. Certain kinds of fancy goods have been overbought for the United States, and some efforts are being made to cancel contracts. Big attempts have been made to establish the basic price of the Masters' Federation for American yarns, and so far the scheme has not been successful. A restricted business has been done at a little below top rates. A fair trade has been reported in Egyptian spinnings.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

There has been but little improvement in the markets since last report, demand for oils of all descriptions being slow, and values only barely steady. With reference to linseed and linseed oil, the former is steadier on official reports of a smaller balance left for export than previously expected, but with more available from India there is a strong inclination to regard available supplies, now estimated at 260,000 tons for the whole year in excess of last year's total shipments, as sufficient to meet probable world requirements, even should the Plate balance show no improvement upon the very small figure of 209,000 tons remaining to be shipped. Present demand for the oil product is, however, small, and shows no sign of developing unless there is a marked improvement in trade generally. After realisations at the end of May a better tone is manifest, and values are somewhat above the lowest at £40 10s spot and £40 5s month ex-Hull mill.

Egyptian cottonseed has continued a dull market, and still lower prices have ruled, £10 15s having been accepted for Sakellaris at Hull. Oil has also further eased on poor demand, crude Egyptian offering at £30 10s and soapmakers' grade of refined at £39.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The London hide market continues to show signs of weakness, as reductions were in evidence at Thursday's market. Best ox, when sold, made from 8d to 9d per lb, showing a drop of 3d per lb on last prices. In seconds, prices of hides sold were 5½d to 7½d, but three classes out of the five offered were withdrawn, those disposed of showing a reduction of ½d. Tanners are not eager buyers of hides, and in view of the poor demand for leather seem determined to get the price of their raw material down somehow. The demand for wet salted imported hides has fallen away again, and frigorifics have sold only in small parcels, Argentine ox having been disposed of at 8½d c.i.f. Dry hides are still selling in the cheap grades, but business all round has been difficult. Cables from New York report Chicago packer hides as steady, with a fair demand at the reduced price of 17 cents.

The demand for sole leather has not improved much in view of the falling off in the demand for footwear; light selections have been the most popular, but a fair turnover has been done in wet salted 10-12 lb bends. Repairers are taking a better class bend up to 25 6d per lb, and the wet weather has stimulated the demand from this source. Offal is firm in price, and good shoulders taken up as fast as offered.

Trading in upper leather has been reduced to quite small parcels, shoe manufacturers preferring to order bare requirements. Box and willow calf are wanted in the cheap grades, whilst of late patent leather has been a favourite with makers of women's shoes. Black kid is also selling better, but suedes are neglected.

The shoe section is dull, retailers selling little owing to the bad weather.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, June 8.

General quietness was again the leading feature, demand for most commodities being measured by wants of immediate necessity, and, with only one or two exceptions, prices moved in a downward direction.

SUGAR.—With weather conditions militating against consumptive requirements, a slow condition of affairs again pervaded this market, and prices were substantially marked down in all directions. Actual supplies are in a moderate compass, but appear excessive in face of lacking demand. Messrs Tate and Lyle's cubes now quoted 66s 3d to 67s 3d; crushed, 64s 6d; granulated, fine and coarse grain in 1 cwt bags, 63s 1½d; No. 1, 62s 10½d; No. 2, 62s 7½d, with 2 cwt bags 1½d less money. Granulated, one month, also July, quoted 63s; August, 63s, and September, 60s 6d. Crystallised West India in very small supply, and fine yellow, sold, 64s. Most of the quantities arriving have been sold previously. American granulated, spot, changed hands at 63s 6d to 62s 6d; ditto, June steamer, 36s, c.f. and i., London. Dutch granulated, spot, 62s 3d to 62s 6d. Czecho, granulated, spot, 62s 3d. White Java, spot, sold, 60s 6d to 61s; May-June, steamer, 31s 6d to 30s 9d; June-July, 30s to 28s 9d; July-August, 28s 6d to 27s 9d, c.f. and i., London. Belgian granulated, October-December, quoted 25s 6d, f.o.b., Antwerp. Czecho, granulated, November-December, quoted 25s 9d,

f.o.b., Hamburg. Cuban, basis 96 per cent., June, quoted 30s 6d; Brazilian, basis 80 per cent., June, 18s 6d; and cane-jaggery, July-August, 18s 6d, c.f. and i., U.K. Terminal market dull and prices easier, while slightly unsettled. August, sold, 32s 9d to 31s 9d, and 32s; September, 30s 6d; October, 28s 4½d to 28s 3d; December, 25s 9d to 26s, 25s 3d; January-March, 25s 1½d; March, 25s. Cuban stocks stand at 669,500 tons, against 1,063,500 same time last year. Liquid glucose, spot, 29s 9d.

COFFEE.—Spot market presented rather quiet features, but prices show no material alteration. East India, bold sizes, sold, 97s to 126s 6d; peas up to 138s 6d. Costa Rica, bold, 102s 6d to 115s; peas, 94s to 135s.

COCOA.—Market still very dull, consumers showing no desire to depart from the hand-to-mouth policy followed for some considerable time past. Fine Grenada, sold, 47s to 48s; Accra, F/F quality, June-July, quoted 31s 6d, f.o.b. terms.

TEA.—Indian auctions this week embraced some 39,700 packages, and with more active and better distributed competition, a steady tone governed proceedings. Ceylon auctions of 21,000 packages received fair support, but apart from fine teas selling at a steady range, prices ruled easy and slightly irregular. Java and Sumatra mostly in sellers' favour, and a good demand prevailed.

RICE.—Market without new feature, actual business being restricted, but prices show no essential change. Rangoon beans, spot, scarce, and quoted 10s 6d. Japanese peas firmly held. Spot, 25s 6d; afloat, Liverpool, sold, 25s 6d; September-October, London/Liverpool, quoted 25s cwt.

SPICE.—Pepper market quiet but steady. Fair black Singapore, spot, 4½d; May-July, 4d; Lampung, May-July, 3½d; ditto August-October, 3½d; Ceylon, spot, 4½d; Aleppy, 4½d; Tellicherry, 4½d; white Singapore, 6d; Muntok, 6½d; ditto August-October buyers, 6½d. Zanzibar cloves, spot, 1s; March-May, quoted 1s 0½d; May-July, 1s 0½d. Tapioca firm. Fair Singapore, flake, spot, 3½d; fine Java, 4½d per lb; Singapore, June-July, Havre, quoted 27s 6d; Penang seed, spot, 30s 6d for fair quality; sago flour, May-July, 13s 1½d. Desiccated coconut dull. Fine cut, spot, 44s 6d; medium, 47s; May-June, halves, 40s cwt. Ginger quiet.

JUTE.—With continued firmness cabled from Calcutta and an improved outlook regarding the question of labour in the Dundee centre a good market ensued, prices being harder with fair disposition shown to purchase. First grade, May-June, Continent, sold, £27 10s to £27 15s; new crop, August-September, £27 5s to £27 15s; September-October, £27 5s to £27 15s ton. Hessians and twills firmly held.

HEMP.—Manila grades met a continued quiet demand. J grade, June-August, quoted £30 15s; K, £29 5s; L, £29; and M, £28 ton. New Zealand nominal.

SHELLAC.—Market firm, quiet. T.N., spot, 280s to 285s; August, 270s; October, 257s 6d cwt.

COPRA. after a firmer opening, assumed a weaker tone, as sellers manifested more disposition to force sales. F.M.S. Straits, March-May, Rotterdam, sold, £27 10s to £27 5s; April-June, £27 5s to £27 2s 6d; May-July, £27 1s 3d to £26 15s. Ceylon, May-June, quoted £28 5s; Java, April-June, £27 7s 6d; Dutch East Indies, sold, £27 5s; Cebu, quoted £26; and South Sea, £25 10s. F.M. Straits, May-June, Marseilles, quoted £25 17s 6d. Palm kernels quiet. June-August, Liverpool, sold, £19 to £18 17s 6d per ton.

RUBBER. presented very quiet features at the opening, but on buyers becoming more prominent, a steadier feeling set in. On balance, a fair amount of business was effected. Standard crepe and sheet, spot, sold, 14½d to 14½d; June, 14½d to 14½d; July, 14½d to 15½d and 15d; July-September, 15d to 15½d; October-December, 15½d to 15½d; January-March, 15½d to 16½d. To New York, standard sheet, July-August, sold, 15½d to 15½d and 15d per lb, c.f. and i. terms. Wild sorts, on spot, quiet, unaltered.

ESSENTIALS.—Market remained very quiet, and quotations largely nominal. Menthol, spot, 34s, forward, 32s 6d; Japanese peppermint oil, spot, 6s 3d; forward, 6s. Star anised oil, spot, 1s 11d; shipment, 1s 10d. Slab camphor, 2½ lbs, 3s 7d; forward, 3s 7d; crude, spot, 3s 1½d; shipment, 2s 11d. Ceylon citronelle oil, spot, 3s 3d; shipment, 2s 10½d; Java, spot, 4s; shipment, 3s 10d. Cassia oil, 80 per cent. to 85 per cent., spot, 8s 6d; forward, 8s 3d. Oil of lemon, spot, 3s; oil of orange, Sicilian, spot, 11s; and West India, 9s per lb.

EGG PRODUCTS generally quiet, apart from fair inquiries for albumen. Chinese hens' liquid yolk, spot, 85s; May-June, 77s 6d cwt. Albumen, spot, 3s 3½d to 3s 4d; May-June, 3s 2d; June-July, 3s 1½d. Dried yolk, spot, 10½d per lb.

The First National Bank of Boston

The leading financial institution of New England

Foreign and domestic commercial banking of every nature

Correspondence solicited.

GIRARD TRUST COMPANY

PHILADELPHIA, PENNSYLVANIA.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Chartered 1836.

Capital and Surplus - \$10,000,000.

Member of Federal Reserve System.

	June 15, 1923.	June 8, 1923.	June 1, 1923.	May 25, 1923.	Previous Rate and Date Changed.
Bank Rate	3	3	3	3	3½ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount (Call)	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills) ..	2½	2	1½	1½	1½

The Bank return showed a decline of 4½ millions in the Government securities, and an increase of £299,000 in the Reserve, chiefly due to the return of notes from circulation. There was thus a decline of nearly four millions in the deposits, most of which was taken off Other. Currency notes outstanding were increased this week by £95,400 to £287,944,300, which includes £1,474,000 for notes called in, but not yet cancelled. The fiduciary issue is £237,020,300, or £33,163,500 below the maximum.

The monthly statement of average weekly balances of London clearing banks for May, which is set out in detail on a later page, shows no very striking changes. In the appended table the aggregate figures for the nine English banks are compared:—

(Million £'s.)

	Dec., 1922.	Jan., 1923.	Feb., 1923.	March, 1923.	April, 1923.	May, 1923.
Capital and reserves	116.0	116.2	116.2	116.2	116.2	116.2
Deposits (incl. undiv. profits, &c.) ..	1,684.7	1,692.2	1,643.9	1,596.4	1,606.0	1,608.5
Total Liabilities	1,873.5	1,885.3	1,836.9	1,792.5	1,800.2	1,802.2
Cash, notes, balance at bank, and cheques in course of collection ..	253.0	246.5	234.5	232.3	240.0	234.6
Money at call	106.0	108.0	103.0	104.4	110.5	108.8
Investments	384.5	382.0	373.4	357.4	361.3	349.4
Discounts	298.3	320.0	286.4	250.4	249.5	262.3
Loans and advances	732.7	726.5	736.5	741.6	744.4	743.0
Over for accept., premises, &c.	99.0	102.3	103.1	106.4	104.5	104.1
Total assets	1,873.5	1,885.3	1,836.9	1,792.5	1,800.2	1,802.2

The principal movement shown in the May figures is an increase of £13 millions in bills discounted, presumably owing to purchases of Treasury bills, the operation being partly balanced by reductions of £5½ millions in cash and of £2 millions in investments. Loans and advances show a slight decline. Deposits are £2½ millions higher, but acceptances have dropped a little.

STOCK MARKETS.

Business in the gilt-edged markets has been fitful, and prices have moved irregularly. Substantial dealings took place in War Loan, Conversion Loan, and India scrip. Very heavy sales of Conversion Loan were made early in the week, but when the selling stopped the price rallied, and the gilt-edged market regained a firm tone. French issues of various kinds have responded to the changes in the estimate of the reparations outlook. A feature of the week was the development of a large premium on the new Austrian loan, in which the initial dealings were on a heavy scale. Home Railway stocks are neglected by the public, while Argentine rails recovered from recent weakness. In the oil, rubber, and mining sections speculative interest is at a low ebb. Among the general markets a severe slump, followed by a sharp recovery in Hudson's Bays, was a feature. Tobacco shares are quiet, and electric lighting shares stronger, while banking, insurance, and shipping issues are holding their ground. Nitrates have shown improvement, while in the iron and steel section movements are narrow and unimportant.

THE COMMODITY MARKETS

A further fall is recorded this week in the export price of coal, and this appears to have affected conditions in several industries. At Cardiff some coals are to-day quoted at from 7s 6d to 10s per ton less than the prices which were asked less than a month ago. Our Glasgow correspondent mentions that the demand for coal for both home and export is quiet, adding that "values are on the decline." In the pig-iron market buyers are few, and the strike of the boilermakers is still interfering with the steel output at the rolling mills; the shipbuilding demand

is quiet. Our Sheffield correspondent reports that stagnation is general throughout the iron and steel trades, and that prices are being dropped to tempt business. The wheat markets have been firm, but sugar prices were lower, owing to heavy liquidation in New York. A further rise in raw cotton prices caused spinners and manufacturers to advance quotations, but buyers held back. Jute improved in value on account of inquiries from Continental spinners. Rubber remained steady, but little demand was experienced. Tin suffered a slight relapse, but copper showed signs of improvement. The tone of the hide market continues weak, prices giving way.

FOREIGN EXCHANGES.

In the foreign exchange market business has again been quiet, the distinguishing feature of the week being the complete demoralisation of the mark, which from about 370,000 on the 8th, rose at one time on Thursday to 500,000 and over. There was a slight reaction later, and the rate opened on Friday at 485,000, but there is no certainty in these quotations, and there would seem to be nothing to prevent further wild movements, as confidence in the future of the currency has disappeared almost completely. A turn for the better in the reparation discussions would, of course, make a difference, but the outlook on this point is still obscure and unsatisfactory. Forward marks have a nominal quotation of 30,000 per month over spot. The chief currency which has been affected by the Berlin collapse has been the Polish mark, which has risen during the week from 270,000 to 385,000 on Friday, after being about 400,000 on Thursday. The French rate fell during the week-end from 71.80 to 71.40 on Monday. But since then the attitude taken up by France with regard to the German note has resulted in a steady fall up to Thursday night, when 73.00 was reached. This was followed by a slight recovery to 72.70 on Friday morning. The Brussels rate has moved each day in sympathy, and now stands at 85.10, as against 83.20 a week ago. Forward rates in Paris are steady at about 5 centimes per month above spot, while in Brussels they are at par. The New York rate has weakened perceptibly from 4.62½ to 4.61½, the lowest point reached being 4.61 yesterday. Forward rates remain about ½ per month above spot. The lira has risen over half a point to 99½. Of the neutral currencies, Amsterdam, from 11.77½, fluctuated slightly during the week, and stands to-day at 11.76½. The Swiss rate has risen 3 centimes to 25.70, while Madrid has also weakened from 30.60 to 31.12, probably owing to the uncertainty of the internal situation. In Scandinavia, Stockholm has risen slightly to 17.38, and Christiania, after fluctuating between 27.55 and 27.85, now stands at 27.77, as against 27.69 last Friday. Copenhagen rose from 25.47 to 26.00 during the week, but is better to-day at 25.65. This movement may have been partly due to a renewal in the Danish Parliament of the demand for the revision of the banking and company laws. In Central Europe Vienna remains steady at 325,000, and Prague at 154½. Belgrade has slightly depreciated at 410, and Bucharest at 912. In Sofia, the result of the revolution has been to bring a nominal improvement in the rate from 425 to 350; but in the absence of definite news, it is impossible to say whether this rate will be maintained. Athens is stronger at 155, an improvement of some 25 points on last week. In the East the rupee is still at 4½d, and the yen at 2s 1½d. In the silver market bear influences continue in the bazaars, but China has worked both ways. Prices have fluctuated within narrow limits. A certain lack of confidence in the future is apparent. Hong Kong has risen from 2s 3½d to 2s 3½d, and Shanghai by a like amount to 3s 1½d. In South America, Buenos Ayres shows considerable improvement, from 41½d to 42½d; Rio is also ½d dearer at 5½d, while Monte Video has gone up from 41½d to 43½d. Valparaiso, on the other hand, has depreciated ½ peso to 34.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 9th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	3,700	From Revenue	9,169
Sundries	417	Amount Borrowed	6,437
Interest, &c., on War Debt	11,482		
Increase in Balances	15,606		15,606

The total revenue for the week at £9,169,000 compares with £9,803,400 for the corresponding period last year. Customs yielded £2,943,000, against £2,416,000. Estate duties yielded about £400,000 lower at £810,000. Property and Income-tax brought in £1,220,000, and Super-tax £900,000, against a combined total of £2,273,000. Nothing came in from Special Receipts, as against £471,300 a year ago. Expenditure at £15,599,100 compares with £10,463,800. Supply Services were about £2,300,000 lower at £3,700,000. Interest, &c., on War Debt amounted to £11,482,000, against £4,392,600. The week's operations increased the National Debt by £6,436,800, and caused the following changes:—

	Min. £		Min. £
Bank of England Advances	6,000	Treasury Bills	5,482
Sundries	945	National Savings Certificates ..	500
Telegraph Money	600	Public Department Advances ..	7,100
	6,645		13,082

The floating debt was increased by £6,570,000 to £816,390,500.

FINANCIAL YEAR, 1923-24 (April 1 to June 9, 1923).

	£		£
Total Expenditure ..	167,079,334	Raised by Revenue ..	145,414,856
		Net Borrowings	18,490,711
		Decrease in Balances ..	3,173,767
Total	167,079,334	Total	167,079,334

ESTIMATES FOR YEAR 1923-24.

	£		£
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Our usual table of the National Debt will be found on page 1357.

The Week in Parliament.—The committee stage of the Finance Bill has been the principal dish on the House of Commons menu this week. The debates, as usual, have ranged over a wide field, the new sinking fund proposal, the tea, table-water, and beer duties, the McKenna duties, Imperial Preference, and the income-tax, all being the subject of separate discussion. Thursday was mainly occupied by the debate on the India Office vote, in which Lord Reading's action in connection with the Indian Budget was discussed. Two railway bills were read a second time. In the House of Lords on Wednesday a debate took place on a speech by Lord Birkenhead on "the growth of Socialism."

Company Meetings of the Week.—On later pages of this issue will be found reports of the meetings of the following companies:—Royal Bank of Australia, Burma Oil Company, Modderfontein Deep Levels, Union Corporation, Geduld Proprietary Mines, Elder Dempster and Co., Forestal Land, Timber, and Railways, Premier Oil, Louise and Co., William Cory and Son, British Electric Traction, and Lobitos Oilfields. Among the features of the speeches were the review by Mr R. S. Alcock, of the Royal Bank of Australia, of conditions in the Commonwealth, and Sir John Cargill's long discussion of the policy of the Burma Oil Company. At the Elder Dempster meeting Lord Kysant made an interesting reference to coalfields in Nigeria, and spoke hopefully of the development of West Africa, while Sir A. C. Cory-Wright, of William Cory and Son, commented on the position of the coal industry.

THE ANGLO-FRENCH PROBLEM.

WE write at a moment when the future of Europe is once more hanging in the balance, and it is not too much to say that the whole world is waiting with anxiety the issue of the next few days. The air is full of rumours, now pessimistic, now optimistic, as to the way the Anglo-French conversations are going, but the wise man will wait for certain knowledge. The resignation of the Belgian Cabinet will probably not affect the situation in any essential degree, for we believe that the immediate cause of the difficulty—namely, the question of the Flemish University—is the real one, and does not cover up any important change or difference of opinion on international policy. Indeed, it seems that Colonel Theunis will be invited to reconstruct his Cabinet, and, if he succeeds, Belgium will still retain at its head a statesman who possesses, by reason both of his business experience and also of his two years' membership as Belgian delegate of the Reparations Commission, very special qualifications for handling the international financial problem.

We have said that the issue is being watched with anxiety. The reason is not very far to seek, for, quite apart from political or humanitarian considerations, the economic situation to-day turns upon the solving of the Reparations problem. Until two months ago trade improvement, which began last autumn, had seemed, if anything, to be stimulated rather than checked by events in Europe; but this was an artificial spurt, and, in spite of the rather misleading impression conveyed by the May trade returns, which we comment upon in another column, there can be no doubt that since Easter the gathering clouds in Europe have succeeded in obscuring the rising sun of prosperity. This conviction has been expressed not merely in the City of London by bankers and other financiers, but also by industrial leaders, and by no one more strongly than Sir Eric Geddes, speaking with full responsibility as head of the Federation of British Industries. We may add, as a matter worthy of note, that in their recent speeches the chairmen of our two greatest armament firms, Vickers and Armstrongs, whom the cynics might have suspected of being interested in stirring up strife among the nations, are among the most emphatic in emphasising the need of political understanding, if they are to secure markets for the modern equivalent of ploughshares and pruning-hooks to which they have diverted their attention. But this point of view is not merely a British one. There are signs that the hold-up of trade is becoming world-wide, and that literally from China to Peru the inability to find a market for exportable products is by common consent traced to the situation in Europe.

For the moment the political aspect of the problem is in the ascendant. Last week we expressed the belief that it was not beyond the possibility of diplomacy to find a *modus vivendi* in the Ruhr during which conversations might proceed. Even this problem, however, is not altogether a simple one. When Mr Bonar Law said that he could not follow France into the Ruhr, because he thought her method would fail, he was voicing the almost universal opinion of this country, but was not expressing its whole mind. Behind this statement lay the very general view that France was committing an act of aggression, and if the Prime Minister of Great Britain were to follow the desire of the French, and insist, without conditions, that Germany should cease passive resistance, he knows perfectly well that he would be outraging the sense of fairness of the great mass of opinion not merely among his political opponents, but among his supporters also. With all our sympathy for France during the war, and our understanding of her present fears for her future safety, and fully though we recognise the weaknesses of the German Government, and the evasiveness of her industrial leaders, we cannot hide from ourselves that the manner in which France has played her cards is out of harmony with British instincts and traditions. If any of our French friends doubt the correctness of this diagnosis of British opinion they have only to inquire into the opinion current in the British army, and in particular among

those officers and men who have had occasion to serve in the occupied area. In saying this we do not, of course, mean that in no circumstances would it be proper for a technical Commission to exercise some rights of supervision in the Ruhr, or in any other part of Germany; but such a scheme can only be wholeheartedly supported by this country if it is carried out as part of an agreed policy between the Allies and Germany. We may add that, even if Great Britain could bring herself to urge Germany to cease passive resistance without condition, our advice would almost certainly be ineffective in present circumstances. Passive resistance has been greatly supported from Berlin, but it is also, undoubtedly, largely a spontaneous growth. The Ruhr has, even under the late Imperial Government, resisted military control, and would hardly be likely to brook French military occupation, if even the Kaiser could not venture to place his troops there. Again, the Ruhr worker is nervous of coming under the control of French industrialists, whom he regards as more reactionary in economic affairs than his own employers, who since the revolution have had to make many concessions in working conditions. Lastly, it must not be forgotten that many of the workers in the Ruhr regard this as a test case of the ability of workers' organisations to resist the dictatorship of military force, and are desperately anxious to prove to the world the effectiveness of their opposition. It is true that if the German Government withheld supplies, many of the Ruhr workers would return to work, but the conditions we have mentioned, added to the expulsions, imprisonments and other incidents which always occur in a military occupation of this kind, would in the opinion of many observers undoubtedly lead to a phase in which passive resistance by the many would be succeeded by a more dangerous active resistance by the few.

If we frankly recognise that France and Great Britain have taken different attitudes towards the Ruhr occupation, we can only hope to restore common action on lines leading to a general agreement on all aspects of the German problem. The French occupation of the Ruhr remains associated in the mind of France with the question of her security. That question cannot be settled apart from Reparations, but it equally follows that Reparations cannot be settled independently of the question of France's security. If we can satisfy France's desire for the better safeguarding of her Eastern frontier, the question of the Ruhr becomes part of the question as to how to guarantee the payment of Reparations. We have always maintained that Germany as a defaulting State must be willing to proffer adequate guarantees in this respect, and in view of the close relations between the Ruhr and Lorraine, a special régime in the Ruhr is necessarily a part of a Reparations understanding. It is only by agreeing with France and Germany what kind of economic régime is justified in the Ruhr from the point of view of securing Reparations that we can hope to reach a basis for common action once again. Provided, however, we can get to this point, we can see no reason why Great Britain should not associate herself with France in some practical scheme of economic supervision in the Ruhr and elsewhere in Germany.

It is unfortunate that at the moment there is considerable talk in London of what attitude we should take if France cannot find some way to modify her demand for unconditional cessation of passive resistance, and what steps we should take, either in conjunction with America or alone, in proceeding to arbitration of the question of Germany's capacity to pay. Such discussions, in our opinion, are to be deprecated unless and until it is quite certain that an Anglo-French understanding is impossible. Last week we indicated how we thought it possible to harmonise opinion in Great Britain and America as regards an impartial inquiry into Germany's capacity with France's demand for a minimum sum for the devastated areas. It is possible that the adoption of such principles would leave Great Britain with a net payment to make to America, which she could not recover from either France or Germany. We have always maintained that Great Britain should accept this responsibility as part of our cost of the war. The argument is familiar to our readers. If the cost of the war were divided between the nations in proportion to their wealth, and if, as is proper,

we added to the French cost the material damage done in Northern France and an allowance for the much greater loss of man-power which she suffered in comparison with our own losses, we should owe France money instead of her owing us a large debt. Moreover, there is a certain mockery in charging France, Italy, and Belgium for munitions when they used them to kill Germans, but when our own soliders took over the line and employed precisely the same weapons we regarded it as part of the British cost of the war. These debts are largely humbug, and were only recorded for purposes of control over our home markets during the war. It is very doubtful tactics for those who accept such arguments to use these debts now as a political lever because they dislike the policy of France.

The question of Germany's total capacity to pay cannot stand alone, but is inevitably linked with the question of the Allied debts and with the distribution of whatever Germany can pay. A new régime in the Ruhr is a part of the same Reparations problem, as it is also part of the political question of France's security. We cannot hope to make any headway at all with France on the political issue alone, but without France we can hardly hope to make much headway on the economic issue. If peace is to descend upon Europe, the first need is that France should abandon her habit of viewing economic facts through political spectacles; the second that Great Britain should make it clear to France that, if she will bend all her efforts towards securing a practical settlement of the economic and financial problem, we, in our turn, will not only contribute generously to the economic side of a settlement, but will also devote our best efforts to gaining for her the security she desires by any means in harmony with our conceptions of the future organisation of world peace.

THE STORY OF THE SINKING FUNDS.

THE British people are extraordinarily true to type. The generations pass, sons succeed their fathers, but the type, with its characteristics, persists unchanged. That is why English history intelligently written is so interesting to read; it always rings with a modern note. For two hundred years we have been borrowing money with both hands in national emergencies, and, in between whiles, moved by financial virtue, we have been trying to pay some of it back. But we never get very far. The hand which tries to pay back is always being stopped by the hand which does not want to pay, the hand which discovers so many more amusing uses for money than the repayment of dull old debts. In every generation we are told the same story in almost the same words: that debts can wait, while remission of taxation is really urgent if industry is to be revived. It is all very human and natural, and exactly typical of our people's ways.

We have been examining the history of the Sinking Funds since those remote days when Walpole tried to discover a new way to pay old debts without anybody being one penny the worse. Walpole's Sinking Fund began bravely in 1716 by setting aside the proceeds of certain taxes to redeem debt; it lasted for seventy years. But in all that time it did not succeed in paying off more than 24 millions. The Fund ought to have been credited with 200 millions, but Governments and Parliaments thought then as they think now, that the principal use of a sinking fund was to be encroached upon, and they did not hesitate to encroach. They paid interest out of it, and built ships out of it, and remitted taxation out of it, but they did not pay off debt, except occasionally. Then in 1786 came the Consolidated Fund and National Debt Commissioners, and the notion—a very good one—of devoting a fixed sum annually to redeem debt. The House of Commons thought that five millions a year from surplus income would form an excellent Sinking Fund. So it would, but when the surpluses began to be achieved by borrowing from the Sinking Fund the British character was seen to be asserting itself in the fashion we know so well. There was much repayment on paper, but very little in fact.

The Napoleonic Wars were bad for debt redemption, yet the appearance at least of repayment was kept up. We borrowed from Peter at a higher rate to pay off Paul at a lower rate, and thus cultivated virtue at a cost in taxation of a million and a-half a year on the average. After the Battle of Waterloo had been fought and peace returned something really was done. It is reckoned that the operation of Pitt's Sinking Fund during the years 1817-30 redeemed about 2½ millions of debt per annum. Then the House of Commons laid down three millions per annum as a proper sacrifice on the altar of debt redemption, but the priests at the Exchequer stole more than half of the offerings for other purposes, so that for forty years the average repayment did not exceed 1.3 millions annually. It will be observed that no Sinking Fund ever got a fair run. It was a helpless fowl from whose tempting body every Chancellor of the Exchequer plucked golden feathers.

In 1866 Parliament tried again, and while sweeping away the fixed annual sum of 1786 retained the rather tattered principle, which dated from that year, of applying all revenue surpluses automatically in repayment of debt. That principle, still called the Old Sinking Fund, endures to this day, and is observed. Under it Sir Robert Horne's surplus of 1922-23 was absorbed by the National Debt Commissioners. It was this vanished surplus, absorbed as it accrued, which a distinguished politician thought could be made available in 1923 for building houses. He was true to the British type of financier.

Sir Stafford Northcote, a Conservative Chancellor of the Exchequer, brought some order out of chaos in 1875 by establishing the New Sinking Fund, a scheme which would have achieved great things if the idea of robbing hen roosts had not been the common property of Chancellors long before the rise of Mr Lloyd George. Under the New Sinking Fund a definite sum was assigned annually to the service (interest and capital) of the debt, the notion being that the interest portion of it would steadily decline and the redemption portion as steadily increase. It started operations at 28 millions, and so continued for thirteen years. Then it began to suffer from the customary grasping hands of needy Chancellors; the wonder is that it remained for so long unplucked. In 1888 the 28 millions became 26, in 1890 they shrank to 25, and in 1899 they were shredded down to 23 millions. The South African War, of course, put a stop to all debt redemption for the next three years.

We have now reached the twentieth century, which in its dealing with sinking funds has been faithful to the financial traditions of its nineteenth and eighteenth predecessors. We get the regular rotation of history repeating itself. First, virtue and the establishment of a sinking fund; secondly, the growing pressure of some financial emergency and the raiding of the sinking fund; thirdly, a real emergency, and the sinking fund wiped out altogether. In 1903-04, with the increased burden of debt due to the South African War, we see the fixed service of the debt put at 27 millions as against 23 millions in 1898-9. The 27 millions rose to 28 millions in 1905-6, to 28½ millions in 1906-7 and to 29½ millions in 1907-8. So far virtue was rising on strong pinions. But now the German menace began to influence seriously our Budgets, and 1908-9 got no more than 28 millions. In 1909-10 the country "wanted eight" (battleships), and as it could no longer afford to wait the service of the debt was cut to 21.7 millions, and redemption had to be content with a single million. In 1907-8, the peak year, we repaid 8.3 millions of debt. There was a compromise in 1910-11 with a fixed annual sum of 24.5 millions (of which 4.1 millions went to redemption). And so to 1914-15 and the Great War.

After that catastrophe until peace became re-established there could be no talk of redemption. The old debt, to which the New Sinking Fund applied, was kept distinct from the new war debt, but nothing was allotted, even on paper, to repayment. It was not until 1920-21 that we reached the stage of balancing our Budget—chiefly by selling great quantities of war stores and carrying the proceeds to revenue—and the New Sinking Fund for the service of the old debt was again put at 24½ millions. Of this amount 7.3 millions nominally went to redemption in 1920-21. Besides this allotment the

national revenue was charged with the statutory sinking funds, under which War Loans and bonds had been issued. The figures for 1921-22 are interesting. Though the fixed service of the old debt remained at 24½ millions, of which between 7 and 8 millions was redemption money, no less than 70.7 millions of revenue, chiefly by operation of the Old Sinking Fund, was actually issued from the Exchequer for the repayment of the old and new debt. Sir Robert Horne's remarkable contribution to national finance in the following year, 1922-23, is still remembered. He raided the New Sinking Fund in the style of many earlier Chancellors, but the operation of the Old Sinking Fund of 1786 and 1866 (revenue surpluses to debt redemption) and the statutory terms of the war debt issues caused no less than 126 millions to pass out of revenue to the funds for national debt redemption. More than 100 millions of this contribution was Sir Robert Horne's undesignated surplus.

Now in 1923-24 we have Mr Baldwin's effort, the latest of a long series of similar efforts, none of which have been permitted to bear fruit as conceived by their authors. He has laid down 40 millions as a sinking fund to repay debt in 1923-24, and proposes to fix the allotment for 1924-25 at 45 millions, and for 1925-26 and subsequent years at 50 millions. When we are comparing the figures of this Newest Sinking Fund with Sir Stafford Northcote's New Sinking Fund we must note two points. Out of the 24½ millions (1921-22) of the Northcote Sinking Fund not more than 8 millions was available for redemption of the old pre-war debt; besides these 8 millions the new statutory debts absorb some 20 millions annually in debt repayment. What Mr Baldwin has done has been to consolidate the provisions for old and new debt (except terminable annuities), and to increase the provision for repayment by some 10 to 12 millions for 1923-24, 15 to 17 millions for 1924-25, and some 20 to 22 millions subsequently. The Old Sinking Fund of 1786 and 1866, which requires that revenue surpluses should pass automatically to the National Debt Commissioners for debt redemption, remains undisturbed. That Fund is not easily to be raided, for no one knows what the surplus of a year will amount to until long after the Finance Act for that year has been passed and the opportunity has gone by for raids to be legally effected. This will explain the immunity from plunder for nearly 60 years of the Old Sinking Fund. It has not escaped from motives of financial virtue, but because Chancellors have not been granted the opportunity to raid it.

THE BULGARIAN REVOLUTION.

IN the absence of definite news as to the whereabouts of the former Prime Minister, M. Stambouliski, it is not easy to predict the future course of events in Bulgaria. The latest telegrams suggest that affairs are settling down quietly; but apprehensions cannot fail to continue with regard to a movement in which monarchist wire-pulling may be detected or suspected, and which runs the most hazardous risk of providing excuse or occasion for action among the heavily armed populations of the surrounding territories. The *coup d'état* of Saturday last, planned and executed by certain Army officers, placed Sofia in the hands of a revolutionary bourgeois Government under Professor Zankoff, a man without a political past. The capital has always been the principal stronghold of the Bulgarian bourgeois parties, and has never submitted willingly to the rule of the Agrarians. Bulgaria itself, however, is essentially a country of small peasant proprietors, and we have yet to learn whether the rural population will quietly accept the *fait accompli* or whether it will take up the cudgels on behalf of its popular hero, Stambouliski, who is himself the son of a peasant. This may well prove a test case to decide the relative effective strength of town and country, though, in any event, the outlook is far from bright. The significance of this latest of revolutions may perhaps be best explained by a short recapitulation of the policy hitherto pursued by M. Stambouliski himself. A strong opponent

of the German alliance, he was imprisoned by the ex-Czar Ferdinand for the duration of the war. But for the great prestige he enjoyed even then among the Bulgarian peasantry, it is certain that he would have been condemned to death for his pacifist leanings. At the conclusion of hostilities the tables were turned and M. Stambouliski emerged from gaol to become the leader of the Agrarian party, which came into power soon after. As Prime Minister he did everything in his power loyally to fulfil the obligations imposed on the country by the Treaty of Neuilly, and attempted, in particular, to establish friendly relations with the neighbouring kingdom of Yugoslavia. At the congress held at Nish some months ago, he even undertook to co-operate with the Serbs in repressing the Macedonian Komitajis, who had caused many serious frontier troubles between the two countries, but who commanded a considerable degree of sympathy among Bulgarian chauvinists. The Sofia agreement on reparations, while representing in some measure a triumph for M. Stambouliski, still awaits ratification by the Reparation Commission in Paris; while the cession of Karageatch by Greece to Turkey appeared to mark the complete failure of the foreign policy of the Agrarians.

Though respect for treaties does not appear to be either sound or popular in this enlightened age, it is certain that M. Stambouliski would not have fallen on account of his foreign policy alone. At the same time this has certainly played its part in the recent revolution, which is assured of the active support of the Macedonian Bulgars. The real grievance is rather to be sought in the internal policy of the Stambouliski Government. Peace abroad and punishment of war criminals at home were the two watchwords of the Agrarians, who proceeded to imprison ex-Ministers and repress the bourgeois elements, which almost alone had shown any keen sympathy for Ferdinand's diplomacy. The army was greatly reduced in numbers in accordance to the treaty terms, and little was done for the demobilised officers, whose plight was in many cases a very sad one. This is undoubtedly one of the explanations of the fact that the recent revolution has been in origin a military movement. In addition the former Prime Minister, though supported by a large majority of the nation, behaved in a very dictatorial fashion, and appeared to aim at little less than the complete annihilation of the small middle-class. (There is no aristocracy in Bulgaria.) At the moment the country is in the hands of a Provisional Government, which enjoys the support of all the bourgeois parties. It will be interesting to see whether the peasants will be the more interested in politics or agriculture, for their farms certainly require their attention for the next few months. The revolution was well-timed, and the Agrarians appear to have been taken completely by surprise. The new Ministers have made protestations of good intentions, and declare themselves anxious for peace and friendly relations in the Balkans. There appear, however, to be reasons for doubting whether these will be taken at their full face value by the neighbouring States, and it should not be forgotten that South-Eastern Europe resembles in many respects an armed camp. Moreover, by increasing the number of men under arms, the new Government has already broken the Treaty of Neuilly. Whatever judgment one may pass on the Stambouliski régime, there can be no doubt but that it made for peace. Time alone will show whether the new Government—if it can succeed in maintaining itself—will continue the traditions of its predecessor in this respect, or whether it will indulge in adventures which will destroy once again all hopes of a peace with understanding in this war-ridden corner of Europe.

OVERSEAS TRADE IN MAY.

THE trade returns for May have been hailed with enthusiasm by the Press as evidence that trade is booming at last, on the strength of a very substantial increase in British exports. But this is a misleading conclusion for two reasons. In the first place, the May exports are the results of past orders, and reflect the spurt in trade which reached its height two months ago; and in the second place, for the last two months the returns have included the trade of Great Britain and Northern Ireland with the Irish Free State, while the direct foreign trade of the latter has been excluded. Direct comparison with figures referring to periods before April 1st last is therefore vitiated, and to some extent also a fair comparison cannot even be made between the figures for April and May of this year, for, as was pointed out in the Board of Trade *Journal* last month, trade with the Irish Free State in April was not on a normal basis, as anticipatory shipments of dutiable goods were reported, and, "as a further element in the confusion of accounts, the collection and transmission of returns, the making of which was a novelty to those concerned, cannot be supposed to have settled down to the regular routine established in regard to our trade with other parts of the world." Hence for the first time the returns include in full not only exports from Great Britain, but also exports from Belfast to the Free State. In the May bulletin of the "London and Cambridge Economic Service" it is suggested that by the new method of tabulation total imports and total exports may be raised by 5 per cent.

The published figures show an increase in imports of £3 millions, as compared with April, and of less than £1 million as compared with May, 1922, while exports are nearly £9 millions higher than April and £13½ millions higher than May last year. Re-exports are three-quarters of a million lower than April, but nearly £3 millions better than May, 1922. For each of the past two months the total of re-exports has been well above the figures for immediately preceding months, but how far this is due to the Irish figures it is impossible to say. The import surplus for May was just over £6 millions, as against £21½ millions in May, 1922, but, as will be seen from the tables below, the adverse balance for the five months is still over £20 millions greater than for the corresponding period of 1922. In reading these tables, allowance has to be made for the effect of the new method of dealing with the Irish figures mentioned above:—

MONTH OF MAY.				
	1922.	1923.	Increase or Decrease in May, 1923.	
Imports	£ 88,725,569	£ 89,478,996	£ 753,427	% 0.9
British exports	58,045,353	71,554,864	+ 13,509,511	+ 23.2
Re-exports	8,964,899	11,773,426	+ 2,808,527	+ 31.4
Total exports	67,010,252	83,328,290	+ 16,318,038	+ 24.2
Excess of imports over total exports	21,715,317	6,150,706	-15,564,611	- 71.3

FIVE MONTHS ENDED MAY 31.				
	1922.	1923.	Increase or Decrease in 1923.	
Imports	£ 402,953,895	£ 449,470,157	£ 46,516,262	% 11.5
British exports	299,615,854	319,795,468	+ 20,179,614	+ 6.7
Re-exports	46,951,311	52,908,852	+ 5,957,541	+ 12.7
Total exports	346,567,165	372,704,320	+ 26,137,155	+ 7.6
Excess of imports over total exports	56,386,730	76,765,837	+ 20,379,107	+ 36.0

Taking the figures at their face value, a disappointing feature of the May imports is a reduction as compared with May, 1922, of over £1½ millions in imports of raw materials, and an increase of nearly £1½ millions in imported manufactures. The former is accounted for entirely by cotton and wool, while the latter is spread all over the list. On the export side, coal figures largely with an increase of over £4½ millions, but exports of manufactures are also up by £7½ millions, of which iron and steel

and manufactures thereof account for over £2½ millions, machinery for over a million, cotton manufactures for £1½ millions, and chemicals for £800,000. A decrease of £1½ millions under vehicles is entirely accounted for by new ships, exports of which fell in value from over £2 millions to less than half-a-million, and from 256,700 tons to 145,800 tons.

In the table below we show the quantities of some of our principal exports this year in comparison with the corresponding periods of 1922 and 1913:—

BRITISH EXPORTS.—QUANTITIES.

	Five Months Ended May 31st.		
	1913.	1922.	1923.
Coal.....tons	29,519,825	22,390,312	33,220,230
Pig iron	454,443	175,174	404,037
Railway material.....	293,144	256,014	189,568
Total of iron and steel & manufactures thereof ..	2,090,411	1,303,640	1,850,495
Textile machinery	72,349	65,908	66,995
Total machinery	307,732	171,424	188,966
Cotton yarn	89,422,300	90,565,200	60,196,400
piece goods	*2,967,231,200	1,538,952,700	1,806,199,500
Worsted yarn.....lbs	21,018,100	16,867,100	14,320,300
Wool tops	195,132	173,413	169,568
Woollen tissues	*39,682,300	46,109,500	56,446,800
Worsted	*25,805,800	26,756,100	27,807,200
Boots and shoes.....doz pairs	586,207	173,647	247,854
Leather	101,525	91,636	112,842
Locomotives	17,877	17,188	13,892

* Yards.

The heavy increases in coal and iron and steel exports in comparison with 1922 is to a considerable extent due to the dislocation in the Ruhr, and to that extent satisfaction with the appearance of the figures must be tempered. An examination of the accounts suggests that exports of coal to Ireland are to some extent also responsible, the total for "other countries" last month being nearly 100 per cent. greater than in May, 1922. Cotton and woollen piece goods make a very favourable comparison with last year, and in several other items there are increases in the volume. In comparison with 1913 this year's figures are distinctly encouraging, but again it must be emphasised that the figures for this year are swollen by the artificial boom which resulted from events on the Continent, and which, judging by the reports of empty order books, has already practically worked itself out.

We have already expressed the hope that figures will speedily be introduced into the returns which will enable true comparisons to be made. We are glad, however, to note that the shipping figures have given the tonnage figures for the Irish Free State for the past two months. In April there were 247,523 tons entered and 324,726 tons cleared, of which 241,363 and 323,752 tons respectively were British vessels. In May the figures were 263,865 tons entered and 345,227 tons cleared, of which 258,873 and 340,603 tons respectively were British. The bulk of foreign vessels in each month were American. The shipping figures for Great Britain show an increase in the total cleared in May, 1,166,000 tons, compared with May last year, while for the five months the increase amounts to 6,669,000 tons, the total cleared up to the end of May being 28,578,100 tons.

THE POSITION OF THE BUILDING TIMBER MARKET.

(BY A CORRESPONDENT.)

IN view of the present hopeful prospects of the house-building trade—and, for that matter, the hopeful prospects of all other industries in which sawn and planed timber, or, in trade parlance, deals, battens, boards, and floorings, take a prominent part—a brief survey of the present position of the market should be of interest to those of our readers engaged in industrial concerns.

To present a true reflex of the market it would be as well to give a brief survey of the situation a couple of years ago. After the boom years following the war the United Kingdom importers and the Swedish and Finnish

timber producers were at a deadlock—trade generally had fallen off, and the former refused to pay in May the Swedish basis rates of £30 a Petrograd standard for 3 by 9 red deals, unsorted, representing a "cut" of £10 compared with the f.o.b. asking prices of the previous January. The result of the deadlock was the breaking up in July of that year of the Swedish and Finnish selling unions and the bringing down of f.o.b. prices with a crash, to the great distress of shippers, as well as occasioning heavy losses to our own importers and merchants. After a short time, during which some timber changed hands at or near the pre-war level, the Swedish basis became fairly established at about £17 for deals, rising towards the end of 1921 to £22 to £23 a Petrograd standard.

In the early months of 1922 the market became still more firmly settled. It was recognised that importers, at the "break" in the previous July and after, had secured extremely cheap timber out of the wreck, and that the July slump prices were as unhealthy for trade as the too high values of the foreign exporters a few months earlier. Swedish shippers in the early months of 1922 were asking £26 for their deals and Finnish shippers the usual £3 to £4 less, and, thanks to the demand on the Continent and from the United Kingdom, this basis was not only maintained, but the market became firmer for popular sizes, excepting deals, of which there were good stocks and a falling demand. Throughout the year merchants found it almost impossible to keep pace with the gradual increase of shippers' prices, for, as they were able to get a little advance on spot goods, the f.o.b. market went up another notch.

The imports in 1922 of sawn and planed soft woods were greatly in excess of those of the previous year, especially from Finland, which has made remarkable headway in the export of timber to this country. In all, 3,998,700 loads of sawn wood were imported in 1922, compared with 2,057,580 loads in 1921, and of planed wood 381,700 loads, against 235,620 loads the previous year. Of the sawn, Sweden shipped to our ports 1,148,260 loads, Finland 1,026,660 loads, Russia a modest 392,000 loads, with Canada 467,000 loads.

At the beginning of this year the country was faced with a fairly large stock, but the consumption, though better than a year ago, was far from satisfactory, and competition was very keen. Shippers' asking prices were on a basis of £27 10s to £28 for Swedish 3 by 9 unsorted red deals (we think it better to keep this basis than to bewilder our readers with the multifarious quotations of the many sizes and qualities imported), and this basis not only has been maintained, but the volume of sales has been extraordinary for post-war times.

The Swedes and Finns have done good business for f.o.w. and immediately after. It is estimated that Sweden has already disposed of some 500,000 out of an average annual cut of close upon a million standards, whilst Finland has sold 425,000 standards out of what is hoped to be an output this year of something like 900,000 standards; and while Russia is still so much out of the market, it would appear as if the first two-mentioned countries, with their well-organised selling combinations, will once more have the control of the consuming markets of Europe, particularly if there is a sudden call for greater supplies of building woods than we have been accustomed to see since the Armistice. Importers, however, are fully aware that boom prices of timber would stop, or at least greatly hinder, any rush in trade if such were to come upon us, and, knowing this, after supplying the country with its present and early future needs, are holding off in the hopes that other European countries will rise to the occasion and, finance permitting, send the necessary supplies to this country to ease the f.o.b. and spot markets. Russia is looked to in this connection, and though statistics of expected shipments appear large, it is likely that some 200,000 standards will be shipped from that country this season.

We give below a table showing the imports of sawn and planed wood into the United Kingdom during the first four months of 1921, 1922, and 1923:—

IMPORTS OF SAWN AND PLANED SOFT WOODS, JANUARY 1ST TO APRIL 30TH.

	Quantity.			Value.		
	1921.	1922.	1923.	1921.	1922.	1923.
Sawn, soft—						
Russia.....	2,835	32,189	20,068	14,250	200,922	123,010
Finland.....	27,651	39,162	34,002	245,711	174,791	183,968
Latvia.....	19,825	53,912	99,933	185,269	228,993	465,272
Sweden.....	94,027	146,487	145,972	1,033,462	872,651	780,627
Norway.....	19,277	47,747	41,405	230,271	254,844	247,057
Poland (inc. Danzig).....	7,010	20,942	47,663	76,166	99,014	251,938
Germany.....	21,350	12,101	16,865	221,632	69,310	72,537
United States of America.....	28,878	40,298	83,451	421,529	391,256	756,869
Canada.....	50,334	40,293	68,277	452,210	265,829	390,624
Other countries.....	28,276	77,535	67,375	272,496	391,739	347,103
Total, sawn, soft.....	299,463	510,666	625,011	3,152,996	2,949,359	3,619,005
Planed or dressed—						
Russia.....	811	55	11	9,814	285	6,483
Finland.....	32,649	35,738	48,581	434,571	239,973	342,449
Sweden.....	26,186	46,414	45,856	332,222	301,622	317,779
Norway.....	166	437	15	2,612	3,679	215
Germany.....	528	911	2,042	14,351	14,005	26,381
United States of America.....	333	313	1,970	3,691	2,398	20,521
Other countries.....						
Total.....	60,553	83,898	99,740	802,261	561,968	713,891

The figures are not of any great value, bearing, as they do, upon perhaps the four dullest months of the year, when navigation is closed, but they are useful as showing that the minor timber exporting countries have already made an improvement in shipments of wood to this country. Russia, Finland, and Sweden have, up to the end of April, shipped less—due to the late opening of the ports. But it will be noticed that Latvia has largely increased her exports of wood to the United Kingdom, and as many cargoes have come to hand from Riga and Libau within the past few weeks, we predict much larger figures to follow in forthcoming trade returns. Poland (including Danzig) has also shipped much larger quantities than last year. Given good opportunities, Poland can help the import wood trade of this country well during the present season, and Danzig cargoes have been frequent round our coast this past week or two; from Memel we shall get increased shipments, as likewise from Reval in Esthonia and from Roumania.

Across the Atlantic, although we wish the contrary, we cannot expect too much. The United States do not play a very prominent part in our supplies of house-building wood material, whilst Canada has such an attractive market over her border—so near, while so far from our natural European sources—that we do not anticipate too much from there, unless prices advanced considerably, a movement which we should greatly regret to see. Nevertheless, we hope there will be always fair quantities of spruce, a wood appreciated particularly in our western areas, as well as silver spruce for aeroplanes and the Canadian pine, so greatly esteemed for its sweet and mild nature.

At the least, 90 per cent. of our timber requirements must come in from overseas. We want to get those supplies as cheaply as possible, to encourage and cheapen the products of all industries that are users of wood. To obtain that end (not forgetting the encouragement of our small native timber industry) we must encourage—as we have already stated in these columns—shipments from the minor producing countries. In this the timber importer is working unostentatiously but effectively. Oftentimes he advances a large part of the purchase money to the timber exporter before the wood comes into port, and his profits are often dampened down by losses.

We have endeavoured to show that the rising prices of timber have not been effected within our own shores, but abroad, owing in great measure to dearer foreign labour and equipment, whilst keen competition at home has stopped any further rises than those made by foreign exporters. By tact, business ability, and plenteous supplies from all quarters of the globe, we ought, at the worst, to be able to stop f.o.b. prices from rising, and at the best get them down to about 33 per cent. above pre-war level.

CANADA'S POTENTIALITIES AS WHEAT PRODUCER.

(BY A CORRESPONDENT.)

CANADA'S wheat-producing powers are of great importance to the British Empire. When those powers are questioned, as they have been recently, an investigation is not out of place for the purpose of determining whether Canada's claim as a great, and prospectively greater, corn country, has any solid foundation in fact. I have therefore secured information, from a Canadian authority, which goes far to substantiate the Dominion's claim to pre-eminence as a wheat-producing country. There is evidence which suggests that Canada will, in time, produce more wheat, and of a higher grade, than any other country in the world.

That Canada is entitled to be called the "granary of the Empire" is borne out by the following figures, which show the wheat production of the principal producing units of the Empire for the year 1921 (or 1921-22):—

	Bushels.
Canada.....	300,858,100
India.....	250,469,333
Australia.....	146,606,000
Great Britain and Ireland.....	74,000,000
South Africa.....	8,689,000
New Zealand.....	6,000,000

That Canada will continue to hold this title is evidenced by the fact that not more than 15 per cent. of her wheat land is now under crop. The production in 1922 amounted to 399,786,400 bushels, an increase of 98,928,300 bushels over the 1921 figures given above. While actually India is a close second, relatively she is far behind, inasmuch as Canada produced about 35 bushels per head in 1921, as compared with India's less than one bushel per head.

There is another question in dispute. It has been declared that the attempt to push the wheat belt northward in Canada has been a failure. If that were so the future of the Dominion, as a wheat producer, would still be of first-rate importance, as the rest of Canada, about which there is no question, is capable of an enormous annual production. But, as a matter of fact, excellent grain is now grown in these northern districts. The expansion of the wheat belt northward in Canada is by no means a failure; but, on the contrary, has been a decided success. Wheat from the Peace River Valley, in Alberta, took the first prize at the World's Columbian Exhibition in 1893, and the area of wheat grown in that district is rapidly increasing. In those northern latitudes four and five grains are found to the cluster, as against two or three in the United States or more southern countries. As to the climatic conditions of the two countries, those of Canada are superior to those of Great Britain for the production of wheat. The British Isles have too much moisture to produce the hard wheat grown in Canada. Excess of moisture produces wheat lacking in protein content and baking strength.

Owing to the large amount of British capital invested in wheat lands, elevators, railways, steamships, and other allied interests in the Western Provinces of Canada, it becomes a matter of the utmost importance as to whether Canada is to go forward or backward in the work of feeding the American and European Continents. The popular impression has been, and still is, that Canada, if adequately developed, can produce enough wheat to make sure the world's supply of bread for a great many years to come, an impression which is founded on irrefutable data. As to whether the Dominion of Canada is likely to be the greatest wheat-growing country in the world, there can be only one answer. That country is now the second largest producer of wheat, and will assuredly become the greatest producer and exporter within a very few years. With but 15 per cent. of her available wheat areas under crop, and a rapidly increasing area being brought under annually, the Dominion should before long out-distance the United States in wheat production.

In view of the attitude of the Labour party in this country in opposing migration to Canada, it is an interesting question whether English farmers going out can make money by wheat-raising, or whether the Canadian picture generally has been overdrawn. I may say in

this connection that English farmers who have sufficient capital to engage in farming in Western Canada can, undoubtedly, engage profitably in wheat growing. True, the price of wheat at the present time is at rather a low level. But, even under present conditions, the skilled farmer who is comparatively free of debt, and in a position to give personal attention to his farm, should certainly succeed in growing wheat at a profit. Lands can be purchased now at low prices, and the settler will probably reap the benefit of increased values in his land holdings. There is no justification for throwing cold water on Canada as a land for the British migrant who looks to farming for a livelihood. If there is an idea that better opportunities for extensive wheat-growing exist than are to be found in that country, an analysis of the situation in different lands will tend to confirm Canada's claim to a foremost position in this respect. The quantity and value of Canada's wheat crop for the past few years is a most interesting study. From 1911 to 1922, inclusive, the figures are:—

	Acres.	Yield per Acre.	Total Yield.	Total Value.
	Bushels.	Bushels.	Bushels.	\$
1911.....	11,100,673	20-80	230,924,000	148,123,000
1912.....	10,996,700	20-38	224,159,000	139,090,000
1913.....	11,015,000	21-04	231,717,000	156,462,000
1914.....	10,293,900	15-67	161,280,000	196,418,000
1915.....	12,986,400	28-93	376,303,600	312,569,000
1916.....	15,369,709	17-10	262,781,000	344,096,400
1917.....	14,756,850	15-75	233,742,850	453,038,600
1918.....	17,353,902	11-00	189,075,350	381,677,700
1919.....	19,125,968	10-00	193,260,400	457,722,000
1920.....	18,232,374	14-50	263,189,300	427,357,300
1921.....	23,261,224	13-00	300,858,100	242,936,000
1922.....	22,422,693	17-75	399,786,400	339,419,000

The quality of Canada's wheat may be gathered from the fact that out of the total volume of 189,000,000 bushels inspected during the crop year 1920-1921, 117,911,000 bushels were graded under the two highest grades of Nos. 1 and 2, a percentage of 62 per cent.

In an estimate published by an English statistician in a London paper in 1920, Canada's ultimate maximum wheat crop was placed at a thousand million bushels. It was also suggested that half a century or more would elapse before that figure could be reached. It is, of course, somewhat difficult to make an accurate forecast of the probable production of wheat in Canada in the future, but if it is estimated that 75 per cent. of the available wheat land will be under crop in 30 years, this would give an enormous production—in the vicinity of about 2,000,000,000 bushels—and the quality of northern grown wheat will always create a demand in all the markets of the world.

The statement has also been repeatedly made that owing to the rapid growth of the United States, that country will ultimately absorb the greater part of Canada's wheat. It certainly seems probable that the United States will cease to be an exporter of wheat before very long. But with Canada's rapidly increasing production there would also seem to be little chance of the American market absorbing all of the former's exportable surplus, so that Canada will always be an important, if not the principal, factor in the European market.

THE HOME RAILWAY MARKET.

(BY A STOCK EXCHANGE CORRESPONDENT.)

FOR several weeks past the Home Railway market has been in a condition of quiet dullness. During the past fortnight this has tended to deepen into depression. The market is heavy, with very occasional rallies to mark its vitality. Prices, compared with the best levels touched this year, are disappointing. The market appears to have lost what power of attraction it possessed in the early part of the year, and stockholders are asking, with a note of anxiety in their requests, how it is that there should be this continual shrinkage, which tends to wear away patience and confidence as the dropping of water wears away a stone. The dividend outlook is being discussed with timidity rather than anxiety, and there can be no doubt that the evidences of unrest recently prevalent amongst some of the big trades unions have played their part in laying a restraint upon the inclination of investors to put their money into Home Railways. That this

should be the case at a time when money is flowing freely into the Stock Exchange, when industrial shares, ordinary and preference alike, stand at high figures, and when the feature of the day is the demand for anything of the sound investment character, renders the more noticeable this indifference of the public to this section. That there is no doubt as to the abstention of the public from the markets is proved by the fact that the jobbers do comparatively little from day to day. They are not asked to take big lines of stock; it is not these which are keeping down prices. The dullness is caused simply by neglect, and, as always happens at a quiet time, what may be called the daily round of sales—on behalf, that is, of deceased accounts, and of people who want the money for something else—is not balanced by purchases on the part of investors. It is useful, in order to gain a correct perspective of the present position, to set out the few Home Railway ordinary and deferred stocks that still remain, with the prices at the beginning of the year, the highest and lowest, and those now current. The details contained in this short statement are well worth consideration by those who are feeling disturbed by the dry condition of the market in Home Railway stocks:—

Stock.	Prices.			
	Jan. 2.	Highest.	Lowest.	Now.
London & North-Eastern def...	30½	39½	28	33½
London, Midland, and Scottish	103½	118½	102½	112½
Great Western.....	109½	118½	108½	114½
Southern deferred.....	35½	43½	34	39
" "A" ordinary.....	33	41	31½	36½
Metropolitan.....	61	74½	59½	73
Districts.....	46½	57½	45½	54½

The last two prices, those for Districts and for Metropolitan, are added as matters of interest. They are governed by conditions different from those which affect the other stocks; nor have we included Caledonian deferred, which after being 18½ this year and 11, now stands about 11½, in consequence, of course, of the recent decision of the Railway Tribunal in regard to the distribution which is to be made to holders of "Cora" stock.

It will be seen that the fall from the highest prices is not, after all, of any great account. It can be explained readily enough by reference to the quietude of business in the more speculative markets of the Stock Exchange. There is something of a stale bull account remaining in Home Rails as a result of the optimism which prevailed earlier in the year, when prices were rising sharply. Too many of the buyers overstayed their market; upon the prices beginning to recede there have been steady sellers, often, as usual with the public, at prices a shade above those actually current. Selling limits at such prices contribute to the atmosphere of dullness which has intervened by reason of the labour possibilities, and other reasons alluded to above. The two stocks in which speculation is most apparent are the London and North-Eastern deferred and Southern deferred, in neither of which is there anything "to go for" in the shape of dividend until early next year. To wait another six months before dividend prospects begin to make their influence felt upon the market is more of a trial than speculative nerves can stand in quiet times. The result has been that stock comes in constantly from tired and rather exasperated bulls. So far as North-Westerns and Great Westerns are concerned, the stamp duties and commission on these Heavy stocks serve to underline the caution already existent amongst prospective buyers, and the fact of Great Western yielding practically 7 per cent. on the money, London, Midland and Scottish a little more, on the basis of the last dividends, fails to arouse any interest, or any readiness on the part of the investor to buy the stocks. To the close observer of the market there is no particular reason why the position should undergo any dramatic change as things are at present. The day will come when 7 per cent. on Home Railway ordinary stocks will once more appeal as attractive and desirable. The famine in sound securities which pay anything like this rate on the money is already sufficiently marked to render it certain that the Home Railway list will harden up again sooner or later. It is not the pre-ordinary stocks that suffer. They stand at virtually the highest prices they have seen for many a year, but in regard to the more speculative issues, financial fashion decrees that they shall

be out of favour for the time being, a fact which deserves to be noted, possibly acted upon, by those who believe in the Stock-Exchange axiom that the time to invest in particular stocks and shares is that when they are out of favour, unbefriended, listless and dull.

Notes of the Week.

Our British Tariffs.—Year after year the opening debates on the annual Finance Bill produce discussions upon tariffs and Free-trade, and usually the arguments on the two sides proceed along the traditional line of well-worn controversy. A certain piquancy has, however, been added to the debates in the House of Commons this week; for the subject of Imperial Preference attracts renewed interest because Imperial trade is to be discussed at an Imperial Conference in the early autumn; while the attack on the so-called "McKenna" duties is given fresh point by the expectation that their author is about to return to the office of Chancellor of the Exchequer. Monday's discussion on Imperial Preference presented no new feature. It produced the old familiar, but none the less dangerous, nonsense about preferential duties being cement to bind the Empire together and the old appropriate retorts. It produced also the old and irrefutable argument that the only preference that is of real substantial importance to the Dominions would be preference on raw materials and foodstuffs, which would require as a precedent the imposition by our Government of taxes on such commodities. The people of this country have clearly shown that they will not have such taxes; the present Government has clearly stated that it will not propose them, and we still look in vain for evidence that the Dominions have the slightest desire that the Mother Country, in order to afford them preference, should shoulder taxes which her own people would regard as disastrous. While the Commons debate on Preference was thus normally academic, the interest of Tuesday's discussion of the "McKenna" duties centred around the personal position of their parent. It is a pity that the debate could not have been deferred until Mr McKenna takes his seat, if he is to take it, on the Treasury Bench; for, as Mr Asquith remarked, the debate "was like nothing so much as the play of Hamlet with the Prince of Denmark absent." Captain Wedgwood Benn provided the sensation of the debate by producing the following letter written by the Chancellor-Elect on May 31, 1921, to an organ company, whose business had been destroyed by these duties. Mr McKenna's letter ran as follows:—

I deeply regret that the Government have not given effect to my promise, which was publicly made in the House of Commons, that the *ad valorem* duties on imported luxuries should be imposed for the period of the war only. The best advice I can offer now is that you should appeal to the Chancellor of the Exchequer to remove the tax, which I am well aware operates very injuriously to your business.

When Mr McKenna penned that most sensible letter he was a banker, probably without any idea that he would ever return to a position of political responsibility, and the life of Ministers would be almost impossible if they were expected to live up to every private expression of opinion made some years before assuming office. Nevertheless, Mr McKenna will find himself in a very anomalous position if, as Chancellor, he takes responsibility for continuing these duties, which two years ago he was denouncing. Last year Mr Bonar Law, when confronted with his pledges that the duties were for the duration of the war only, rode off on a side wind. Mr McKenna, in view of the letter quoted above, will not find it so easy. Is it too much to hope that when he joins the Government he will insist upon their abolition at the earliest possible moment, that is in the Budget of next year?

The Russian Crisis Passes.—The rupture of trade relations with Russia, which a few weeks ago seemed only too likely, has now been definitely averted. We pointed out a fortnight ago that the Soviet reply to the British "ultimatum" was surprisingly conciliatory. The British Note sent in response has provoked an even more conciliatory memorandum from Moscow, and from the first it seemed impossible that the Government could find

therein any ground for justifying any breach. The first interchange of notes settled immediate differences with regard to three main questions, namely, the letters of M. Weinstein, compensation for "repressive measures" against two British subjects, and the dispute over fisheries and British trawlers. There remained, as the only bone of contention, the question of anti-British propaganda. In this connection the Soviet Government is ready to enlarge the undertakings to refrain from propaganda, which are contained in the Anglo-Russian trade agreement, on condition that Great Britain reciprocates with an undertaking "in the sense that it should be evident from the text itself, beyond any doubt, that there can be no possibilities in future of any assistance by the British Government or by the Governments of its Colonies, Dominions, Protectorates, &c., to any monarchic, 'White Guard,' or other hostile designs against the Russian Socialist Federal Soviet and its allies." So far as they could be expected to go, short of abject humiliation, the Moscow Government has gone. The latest Note lays fresh and enhanced stress upon the value set by Moscow on the Anglo-Russian Trade Agreement, and in order to maintain relations exceedingly far to meet the views of the British Government. This claim is a fair one, and we are glad to see that Lord Curzon admits that the essential British demands have been complied with, and regards the interchange of notes as finished. Thus the crisis has passed. The Russian reply closes with a reasoned plea for the restoration of normal channels of diplomatic negotiation, which, of course, would entail official recognition of the Soviet Government. That is a further question which will have to be very seriously considered in the near future.

The Indian Debate.—The House of Commons took occasion of the introduction of the India Office vote on Thursday to debate the action of the Viceroy in certifying the salt tax and using his emergency powers to pass the Budget over the heads of the Legislative Assembly. Earl Winterton, the Under-Secretary for India, defended Lord Reading's action in a speech which was entirely unconvincing. He properly laid stress on the importance of a Budget balance in India; he affirmed that the Viceroy in certifying the tax was acting within the powers conferred upon him by the Government of India Act—a fact that was not in dispute; he made light of the burden of the salt tax. But he failed to meet the real criticism of the Viceroy's action, which is that in using in the case of a small item in revenue the special powers obviously designed to meet a great emergency, he was gratuitously playing with fire. In the course of the debate, it was stated that Lord Reading's action had had no evil effects. We hope this is a correct estimate, but fear that such optimism is premature. In an article in last week's *Economist* we discussed the new campaign of Mr Das, the aim of which is to obtain strong representation in elective assemblies in order to wreck the machinery of constitutional government. Mr Das, we may be sure, is duly grateful to the Viceroy for putting into his hands a formidable weapon likely to conquer many votes. Mr Trevelyan, in moving the reduction in the India Office vote, adopted the line of criticism which we have indicated, and argued that "the use of these reserve powers was not intended for the ordinary and inevitable collisions between the Executive and the Legislature, and ought only to have been used to save the Government from wreckage in a supreme crisis." Mr Trevelyan also quoted with effect the words of Sir Malcolm Hailey, uttered two years ago when initiating the first Budget debate in the newly-constituted Assembly: "If we incur expenditure it will be under your mandate; if we impose taxation it will be by your vote." Nothing that was said by the Government speakers in this debate has altered our opinion that Lord Reading's action was ill-advised, unnecessary, and dangerous, and we are more than surprised that no protest was made from the Liberal benches. The only leading Liberal of either section who took part in the debate was Mr Fisher, and he, after saying that "nobody living in a constitutionally-minded country could fail to feel that the Viceroy's act was one that could not be often repeated," gave his definite approval to Lord Reading's decision in this case.

The Austrian Loan.—The success of the Austrian loan on Monday is one of the milestones on the road to European recovery. All those concerned have reason for great gratification in an event which proves what can be done by disinterested international co-operation, and is bound to have an important reaction on other problems of Central Europe, and even possibly on that of Germany. In particular, the Governor of the Bank is to be congratulated on achieving during his term of office two such notable events as the American debt settlement and the first international loan for Europe. The lists were closed for cash in an hour and a quarter, and it was subsequently announced that the loan had been subscribed many times over—allotments being made at the rate of about 10 per cent., except in the case of small applicants, who received a larger proportion. This success was so overwhelming that the promoters have been criticised on the ground that it was issued on terms too favourable to the lenders, and this criticism is supported by the market view, which has immediately put the loan to 5 premium. But the objection does less than justice to those responsible. For one reason or another Great Britain was saddled with a good deal more than her share of the loan, her final figure being half of the total. If it had failed here, the scheme would have collapsed elsewhere. It was imperative that London should give a confident lead in what was a great experiment in international control.

Coal, Iron, and Steel Output in May.—Figures just issued by the National Federation of Iron and Steel Manufacturers show that there was a further increase in the production both of pig-iron and steel in May. The production of pig-iron rose from 652,200 tons to 714,200 tons, and of steel from 749,400 tons to 821,000 tons. In both cases this is the highest attained since September, 1920, but whereas in September, 1920, there were 300 furnaces in blast, at the end of May there were only 223 furnaces in blast. This is evidence of the fact that since the coal stoppage the more efficient and economical furnaces have been blown in first, for it gives an average output of 2,470 tons per furnace in September, 1920 (82 tons per day), compared with an average of 3,250 tons (105 tons per day) from a much smaller number of furnaces in May. Production of pig-iron is now at over 80 per cent. of the 1913 rate, and steel production is considerably in excess of it. Obviously a great part of the increased production in Great Britain is due to the loss of production on the Continent, and the uncertainty as to when the Ruhr trouble will be settled and lead to increased production in France and Germany has resulted in very quiet market conditions in the last few weeks. While orders on the books are being rapidly completed, the new orders coming forward are not sufficient to take their place. Prices, therefore, have fallen in many cases, and Cleveland No. 3 is now 7s 6d per ton cheaper than at the beginning of May, soft billets 10s to 20s cheaper, tin bars 17s 6d, and so on. Exports of iron and steel in May amounted to 424,500 tons, and constituted a post-war record; they were, in fact, 10,000 tons more than the average monthly exports in 1913. Exports of pig-iron amounted to 93,000 tons, which is just about the 1913 rate, but exports of tin plates and sheets (54,100 tons) were in excess of the monthly average in 1913 by about 30 per cent. Complete details as to the destination of the exports are not yet available, but the export of 3,458 tons of tin plates to Canada and of 3,050 tons to Japan, in both of which markets there is severe competition from the United States, is worthy of comment. The output of coal is well maintained, chiefly on account of the export demand, but no doubt also partly owing to the continuance of the domestic demand due to the inclement weather. Production in the four weeks ended June 2nd amounted to 26,191,000 tons, or, if Whitsun week be omitted, an average of 5,614,000 tons per week. Exports of coal amounted to 7,684,000 tons, and of bunker coal to 1,560,000 tons. Of the exports, which were higher than in any previous month since the end of the war, 1,773,000 tons went to France and 1,726,000 tons to Germany, but there is evidence that these are now falling off. Exports of metallurgical coke remained high, and amounted to 161,000 tons, compared with 175,400 tons in the previous month.

The Outlook for the Home Wool Clip.—Our Bradford correspondent writes:—The country fairs, at which the first consignments of domestic wool will be offered, begin this week. The sale of their clips is an event of very considerable importance to thousands of sheep farmers in this country, and in the aggregate the clip of the United Kingdom should be worth about seven millions sterling. It is noteworthy that the value of sheep has not fallen anything like so much as that of other classes of live-stock. So far back as 1909 the sheep stocks of the United Kingdom were no less than 31,839,799, but when the last census was taken the number was only 23,816,000. This reduction is too large to be lightly regarded, and those who have stuck to sheep farming are to-day reaping the benefit in the enhanced value of both the carcase and the fleece. In view of the fact that depreciations have taken place in the value of other classes of farm stock, it is encouraging to know that the outlook for the domestic clip of wool is, on the whole, good. During the past 12 months down fleeces have advanced substantially in value, so have half-breds, the appreciation being anywhere from 3d to 6d per lb. Deep wools, such as Lincolns, have appreciated 2d to 3d, and as many farmers have two or three years' clips to offer, they should be able to reap a considerable financial benefit as the result of their determination to hold in the hope of making better prices. A close relationship exists between colonial crossbred wool, particularly anything of New Zealand origin, and the home produce. Each competes very keenly with the other, and apart from English downs (with which Punta Arenas wool comes most keenly into competition) and Scotch blackface, there is no class of British-grown wool which cannot to a large extent be replaced by the wools of New Zealand. The past year can be described as very satisfactory when viewed from the domestic wool-growers' standpoint. Values have advanced continually, and, best of all, there is practically no stock from last year in the hands of country staplers or Bradford users. Export trade has been remarkably well maintained, so much so that no less than 61,359,700 lbs, which amounts to fully half the present production, was exported. America has been a very good customer, taking no less than 30,166,000 lbs. Before the war Germany was always a big buyer of downs and half-breds, whilst Belgian and Italian mattress manufacturers purchased big weights of scoured blackface. The last-named class of wool has made relatively better prices than any other deep staple, and, given a reasonable amount of trade with the Continent and America, there is no reason why a large export business should not be done during the next 12 months. The outlook for the new clip is moderately good. Values to-day are generally much higher than a year ago, but trade in home consuming centres has become much quieter, and there will be a certain speculative element in any buying which is now done, a circumstance which will militate very decidedly against the payment of extravagant prices. It should also be remembered that the British Australian Wool Realisation Association still hold over 600,000 bales of colonial crossbreds, a quantity which is about twice as much as the home clip, and by next September another New Zealand clip will begin to be shorn.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that on the whole wheat gives satisfactory promise, though the crop is now rather backward and on cold land has an unhealthy appearance. Winter oats have also grown slowly for some weeks, but are usually healthy and promising. Most of the early sowings of spring oats and barley germinated well, and are good, strong plants. Later sowings, especially those drilled into a rough seed-bed, came up slowly and unevenly, and look starved. These crops have been at a standstill as regards growth, and in several districts have been damaged by wireworm, so that there are many thin and patchy fields. The area of wheat is estimated to be very slightly less than last year, and the acreages of barley and oats about the same as in 1922. Beans, though short in the straw, are flowering well, and satisfactory crops may be anticipated. Early-sown peas have suffered from the frosts, but later sowings are healthy though backward. The planting of

main crop potatoes was late, and at the end of May only a small proportion was showing above ground. In all parts of the country the acreage of potatoes is estimated to be much less than the large area of last year. Yields of seeds hay will be above average, especially if warm weather comes quickly. In the south and east stock were taken out of the meadows in good time, but with the slow growth during May heavy yields of meadow hay are not expected. In the north and west meadows were not cleared early owing to the shortage of fodder, and rather under-average crops are forecasted. The area reserved for seeds hay is estimated to be appreciably greater than last year, especially in the east, where the area was very small in 1922. Rather more meadow land also appears to be intended for hay. In the south-eastern counties hops are strong and healthy, though growth has been slow. All classes of small fruit have been damaged by the frosts. Strawberries blossomed well, and, though backward, an average crop seems possible on the whole, in spite of serious damage by frost in some districts. The prospect for apples is far less promising than a month ago, owing to serious damage by insect pests and some injury by frost. Pears are practically a failure; there was little or no blossom, and the set of fruit is small. Prospects for plums are very variable, but generally are not favourable. The set was affected by the cold, and serious damage by brown rot is reported in many districts. The supply of labour continues sufficient for requirements. Rather more men are in work than a month ago, as extra men have been taken on for hoeing in some districts.

Company Law Revision in Denmark.—Statements have recently appeared in the Danish Press to the effect that Danish banking, insurance and company laws are likely to be revised in the autumn. The necessity for the revision of the existing laws, which is not a new subject of discussion in the Danish Parliament, became the subject of lively discussion during the last session of the Rigsdag, as a result of the impression created by the investigations into the Landmandsbank affairs, and owing to the disclosures made in connection with the liquidations and reconstructions of a number of other Danish enterprises in 1922. Further, the existing insurance law applies only to life insurances. The three new laws which are promised for the autumn are expected to contain radical alterations in the direction of defining more precisely the responsibility of the directors for the activities of the undertakings.

American Cotton Standards.—There has been an important conference this week at Washington between cotton representatives from England and European countries, and the officials of the United States Government with regard to cotton standards and the effect of the Fulmer Act, which was passed by the American Legislature a few months ago, and should come into operation in August. It may be pointed out that in the buying and selling of cotton transactions are based upon certain accepted standards. Hitherto Liverpool standards have been the basis for trading on this side of the Atlantic. The Fulmer Act provides for standards fixed by the United States Government, and there has been some anxiety in Lancashire as to the effect of this measure upon the Liverpool standards. On Wednesday, however, a cable was received in Manchester from Washington to the effect that the conference had agreed to adopt the United States standards. It is understood that foreign countries will have certain rights of appeal when disputes take place, but fuller details of the arrangement will not be available until the English delegates return at the end of next week. At present disputes between English and Continental buyers and exporters in America are dealt with by the arbitration committee of the Liverpool Cotton Association. It must be said that arbitration in Washington would be very inconvenient and expensive. It is anticipated that, whatever agreement may have been reached at the Washington conference, it will not abolish the Liverpool standards, and it is extremely probable that the discussions which have taken place will result sooner or later in the establishment of international standards which will be recognised throughout the world.

Life Policies Payable in War Stock.—The Prudential Assurance Company announce that the improvement in the market value of War stocks and bonds has caused the directors to review the position of life policyholders under whose contracts the sums assured are payable in these stocks or bonds. It has been decided to pass on to claimants under War Stock, War Bond, and Victory Bond policies in both branches, the benefit of the improved cash values now obtaining. In the case of all claims, whether by death or maturity, occurring under the policies referred to, every claimant who desires a cash settlement of his claim is to be allowed an amount based upon the middle market price of the security mentioned in the policy, less a slight deduction for expenses such as brokerage. The price, in the case of death claims, is to be the quotation ruling on the day preceding that on which the company receives at its chief office the advice that cash settlement is desired, and in the case of maturity claims, the quotation on the date of maturity of the policy. This method will be continued so long as the present high values of Government securities are maintained. Further, in order that there may be no differentiation, it has also been decided to review all claims paid since February, 1922, in both branches under the policies of the type mentioned, and in due course the representatives of the company will be authorised to pay a cash balance representing the difference between the amount already paid and the market value, as already defined, of the particular security at the time the claim occurred, less the slight deduction for expenses. The minimum sum payable under this concession has been fixed at the very low figure of 5s; differences below this amount will not be dealt with. Before February, 1922, the company paid the full amount of the cash option, although this was at times considerably in excess of the market value of the security; those interested in these assurances have been thereby fully protected from the effects of depreciation in the past, and should there be a fall in future values, policy-holders will still have the benefit of this protection.

Bleachers' Association.—A further substantial recovery in profits is shown in the report of the Bleachers' Association for the year ended March 31, 1923, there being an increase both in trading and in net profits of about £135,000. The trading profits are shown after charging £410,500 for repairs and maintenance, as against £405,700 a year ago. Net profits, as will be seen from the table below, at £788,500 are only £25,000 below the high record of the year 1919-20:—

Year Ending March 31.	Trading Profit.	Net Profit.	Prof. Dividend.	Ordinary Dividend.	To Reserve, &c.	Inc. or Dec. to Carry Forward.
	£	£	£	Amount.	Rate.	£
1907.....	457,938	266,415	125,464	91,564	4	55,000

1923.....	1,084,714	788,464	135,988	474,216	20	175,954

The reserve appropriations consist of £125,000 to general reserve, raising it to £1,575,000, and £50,954 to superannuation fund, raising it to £200,000. The ordinary dividend is advanced from 12½ to 20 per cent., a rate only once previously paid, and the carry forward is slightly increased. The profits, after deducting all charges prior to debenture interest and preference dividend, are equivalent to 9.99 per cent. on the share capital and reserve fund, as compared with 8.61 per cent. for the year 1921-22. The balance-sheet, analysed in detail in another column, shows no striking changes, the most noteworthy being increases of £289,700 and £113,000 in cash and investments respectively, and decreases of £126,600 in stocks and of £134,700 in debtors.

Anglo-Argentine Tramways.—The report and accounts of the Anglo-Argentine Tramways Company, Limited, always form an informative and interesting document. It is good to see that results for 1922 are much better than those for the previous year, a profit of £527,297 being shown, as against £303,647. The preference shares obtain a distribution of £313,500, while £175,000 is placed to a contingencies reserve, and £32,000 to writing down investments, leaving £12,829 to be carried forward, as against £6,032 brought into accounts. Working expenses amounted to 71.39 per cent. of the receipts, as compared with 76.25 per cent. in the previous year and 75.60 per cent. in 1920, while traffic expenses were £1,264,703, against £1,223,358, owing chiefly to increases in wages caused by the high cost of living. Traction expenses show a substantial reduction, being £562,083, as compared with £644,724 in 1921, and, with cheaper fuel, it is hoped, the reduction may be continued. It is stated that "the reduction in net receipts has been further adversely affected by the rate of exchange, the loss incurred during the year, through remittances of funds to meet our standing charges, having reached £86,082." Results are summarised below from 1908:—

	Gross Receipts.	Gross Receipts per Car Mile.	Expenditure.	*Net Revenue.	Interest, &c.	Balance.
	£	£	£	£	£	£
1908.....	1,264,841	13.37	750,687	474,154	191,449	282,705

* Including income from interest on investments and deposits.

Some interesting information is given with reference to the relations of the company with the municipality. The report states that "the company applied to the municipality for an extension for six months of the 12 cent fare, so that the position should not be prejudiced pending the consideration of the larger question. The municipality, very unreasonably, as the company considers, refused this application, with the result that, as from April 10th last, the universal 10 cent fare again came into operation. This surprising decision, which affects seriously the company's revenues, appears to have been arrived at without consideration of the accepted rule that those who provide public utilities are entitled to a fair return on the capital employed. The board, relying on an ultimate recognition of the equities of the situation, trust that what has happened may prove to be only a temporary, if regrettable and costly, interruption, and still hope that a careful study and consideration of the proposals submitted for the construction of the second subway line may result in a permanent arrangement which will be beneficial to the municipality, the public, and the company." The balance-sheet of the company will be found fully analysed in another column.

City of Riga Bonds.—With reference to the default of interest and suspension of sinking fund payments on City of Riga bonds, during 1920 and 1921 Messrs Lazard Brothers and Co., in a detailed memorandum just issued, state that they were in correspondence with the city of Riga authorities, and ultimately, in the month of June, 1922, the mayor, Mr A. Anderson, and the chief of the Finance Department of the city, Mr Sadovsky, came to London at their own suggestion to negotiate an arrangement with them on behalf of the bondholders. Upon arriving in London, the mayor wrote Messrs Lazard Brothers and Co. a letter detailing the successive misfortunes of the city. He suggested that the arrears of interest should be funded, and that internal city loans, repayable in marks and roubles (representing at the depreciated exchange then ruling a value of about £12,000), should be redeemed by the city, and asked that a new loan should be made to the city to enable it to repay its internal loans together with its remaining capital obligation—namely, a

debt in roubles to the Government of Latvia, and also to enable it to extend its electricity works. After negotiation a provisional arrangement was arrived at, which, briefly summarised, was as follows:—(1) The city to commence paying interest coupons in cash as from May 14th, 1923; (2) interest coupons in arrear, then amounting to £288,414, to be funded in new 6 per cent. bonds of the city; (3) until 1931 the city to be given some latitude in applying the sinking fund for the redemption of the bonds, but after that year redemption to be resumed in accordance with the sinking fund table endorsed upon the bonds. The City Parliament, however, refused to ratify the agreement. In April, 1923, a representative of the city stated that he would be prepared to recommend the city to accept a settlement on the following basis: Capital, interest, and sinking fund of the bonds to be calculated in the future on the basis of one gold franc or lat for one Russian rouble—that is, 10 gold francs to the £, or approximately 8s in the £; payment in cash of the interest and sinking fund on the reduced basis to be resumed as from May, 1924, but all arrears of interest to be cancelled. He also suggested that the city electricity works should be given as specific security for the loan. Messrs Lazard Brothers and Co. conclude their memorandum by stating that: "We informed Mr Kalning [the representative of the City of Riga] at once that we could not recommend the bondholders to accept any such drastic revision of their capital rights.....Mr Kalning, however, is not prepared to modify in any respect his proposal, and the negotiations have therefore broken down." Messrs Lazard Brothers and Co. add that: "If a substantial number of bondholders desire it, we shall be very glad to arrange a public meeting in the city, at which any further information desired would be given and a discussion could take place."

Lyons' Profits.—The report of J. Lyons and Co., Limited, for the year ended March 31st last makes no comment on the year's trading beyond the brief remark that "the business done has been satisfactory." The financial results, however, show that the company's remarkable progress has been maintained. The accounts are not as detailed as we should wish, the profit and loss account merely giving the balance of trading account after payment of interest and all expenses, allowing for depreciation, &c., and providing for contingencies. This figure shows an increase of over £36,000 in comparison with the previous year, as may be seen from the table below:—

Year Ending Mar. 31.	Gross Profit.	Ex-penses.	Ratio.	Net Profit.	Depr-e-ciation.	Reserves &c.	Divi-dends.	Ord. Rate.	Carried For-ward.
	£	£	%	£	£	£	£		£

* And 10 per cent. in preferred ordinary shares. † In addition to share bonus.

The allocation to reserve is restored to £100,000, but the dividend rates are maintained at the previous level, the distribution on the preference and preferred ordinary shares requiring £206,400, and on the ordinary and proportional profit shares £310,600, the latter being £15,000 more owing to the issue during the year of £225,000 "B" proportional profit shares. The balance-sheet shows an increase of £912,000 in creditors, while the property item has risen by £1,126,000, debtors by £158,200, and cash by £141,800. To provide further capital to meet "the rapid extension of the business" the directors propose to create one million 7 per cent. additional preference shares, to rank *pari passu* with the million 7 per cent. preference shares already existing, and to offer 500,000 of them, if sanction is obtained, for subscription

among the shareholders of the company. It is added that it will probably be found desirable to issue the remaining 500,000 later in the year.

Robinson Deep.—The financial position of this Rand gold-producing company, as indicated by the balance-sheet now in the hands of the shareholders in Great Britain, has been entirely changed by the issue of £250,000 debentures made in January last. This left the company with £162,500 cash in hand, available for capital expenditure after the extinction of other indebtedness, and permitted the payment of 4s upon the preference or "A" shares, which have the low denomination of 1s each. The arrears to be cleared off before the "B" shares rank for dividend stood at 21s prior to the declaration a few days ago of 4s, whereof 1s 6d is due in respect of the current year. The "B" shares are fancied by speculators; but, obviously, some little time must elapse before any return can be expected. Appended is a contrast of the salient points in the operations of each of the past three years:—

	1920.	1921.	1922.
Ore crushed, tons	624,600	695,200	635,200
Yield per ton	35/2	31/8	29/2
Costs per ton	29/2	26/6	21/4
Profit per ton	6/-	5/2	7/9
Working profit	£108,650	£179,800	£248,000
Dividends	£50,000	..	£100,000
Rate per share	2/-	..	4/-
Ore reserves, tons	1,597,000	1,936,000	1,846,000
Value dwts	6 59	6 7	6 7

Capital expenditure has absorbed much of the earnings of each of the past three financial periods, and but for the financial arrangement above referred to the "A" shareholders would not be getting more than half the rate now announced. It is a satisfactory feature that, despite the curtailment of the development footage by fully one-third owing to the labour trouble, the ore reserves at the end of last year showed only a small decline. At the annual meeting the chairman took the occasion to rebut the rumours in circulation that further heavy outlay on plant, &c., was contemplated; the present programme, he stated, will place the equipment in a position to deal with 75,000 tons per month.

Oroville Dredging Group.—Our mining correspondent writes:—There are several points of interest in the position of this group of gold-dredging enterprises operating in South America. The parent undertaking—the Oroville—shows a considerably increased profit for last year, the amount, after deduction of greatly enhanced taxation, figuring at £194,300, as against £145,000—and this in the face of decreased earnings on the part of the Nechi Mines. The explanation is that, partly in connection with an exchange of shares, the last-named company distributed a large amount of accumulated profits in addition to current earnings; this considerably more than offset a decline in the dividends from the Pato. The directors followed what appears to be a conservative policy in the distribution of profits, last year's total being 3s per share, in place of 4s for the 12 months ended September 30th, 1921. As against a carry forward of £140,500, however, the company has surplus cash assets to the amount of no more than £42,150, and it will doubtless require the bulk, if not the whole of this, for the completion of the Dos Bocas road. It may be recalled that the Oroville Company took over from the Colombian Corporation a concession for the construction of a road which would be of general, as well as particular, utility. In consideration of the former point, the concessionaire is to be allowed to levy tolls. The balance-sheet shows £83,650 expenditure under this heading, some two-thirds of the distance having been completed. The Colombian Corporation property, which the road in question will serve, is situated in the Zaragoza district. Development is in progress, and the machinery will be transported as soon as the new road is available for traffic. With regard to the Nechi Mines, it appeared twelve months ago that little more than another year's work was in prospect unless a certain possibility then merely hinted at became concrete. It now transpires that drilling has indicated the existence on an elevated portion of the area of a narrow, but rich, streak of gold-bearing gravel which should give better returns than any other part of the re-

maining dredgable ground. The position of the Pato Mines is that there are from eight to ten years' work in the proved ground, and the remaining unprospected area "will give a few years of profitable dredging." It may be noted that all along the results secured have been better than indicated by the drilling. The position of shareholders in the Oroville Company, therefore, is that good returns should be made by the Pato for nearly another ten years, while the Nechi, as a revenue-producer, will be replaced by the Colombian Corporation, in which the company holds 225,000 ordinary shares. It is possible, of course, that dividends from the one source may not immediately replace those from the other. This is the element of uncertainty in the position which accounts for the quotation of the shares at a small discount.

Transvaal Gold Output.—The May figures of gold output in the Transvaal make a very good showing. The output amounted to 786,564 ounces of fine gold, which is the best total since the month of December, 1922. In April the output was 743,651 ounces, while in May, 1922, it amounted to 629,786 ounces, so that considerable progress has been made during the past year. The following table shows the production for a number of years:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.

Total	187,842	185,499	189,088	197,871	198,927	197,456	195,237	193,42

There has been an increase in the number employed at the coal and diamond mines, but a decline in the number employed at the gold mines.

Oversea Correspondence.

UNITED STATES.—COTTON CROP PROSPECTS—FEW BIDS FOR GOVERNMENT'S SHIPS—NEW LIQUOR REGULATIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 4.

THE Government's first report on the 1923 cotton crop estimating the condition on May 25th as 71 per cent. normal, was slightly better than had generally been expected. That percentage compares with 69.6 a year ago, 66 in 1921, and 73.6, the average May 25th condition for the past decade. Preliminary private estimate averaged 70.5 per cent., and an indicated yield of about 11,500,000 bales. The condition percentage of 71 is much the highest reported at this time in any year since 1919. In 1920, when the initial condition was placed as low as 62.4 per cent., the crop exceeded 13,000,000, due to the exceptionally large acreage planted in that year and to highly favourable weather conditions. Since considerable part of the acreage sown to cotton is usually abandoned after May 25th, the Government has not yet estimated this year's planted area, and will not do so until the result of the June 25th canvass is announced on July 2nd. Various private estimates, however, have generally indicated that this year's acreage will be from 9 to 12 per cent. larger than last year's, which would bring the total close to the record maximum. While no definite figures can be given, the total of this year's area

judging from all data at hand, is not likely to exceed 36,500,000 acres, if it reaches that figure. Should that prove approximately correct, competent authorities estimate that, even with a material improvement in condition this month and early in July, the maximum yield may not exceed 12,500,000 bales, and may be some 2,000,000 less than that if weather conditions prove unfavourable. A great deal depends, also, on the extent of weevil damage this year. It has been supposed that the exceptionally cold winter in the South killed weevils in large numbers, but the freezing temperatures did not occur until January and February, when the insects had hibernated, and reports indicate that they are now as numerous in many sections as they were last spring. Another serious development this season is the acute shortage of farm labour throughout the South. In Georgia alone there are said to be more than 13,000 abandoned farms. Many communities in that State and elsewhere throughout the cotton belt have been depleted of coloured labourers, who have been attracted by the higher wages available in the North and Middle West. Some authorities estimate that at least 100,000 negroes have left the South this year. The Department of Agriculture estimates that the world's supplies of all kinds of cotton on July 31st will amount to only 4,369,500 bales. Present indications are that the carry-over of American cotton in all positions in this country at the end of July will be about 1,700,000 bales, although estimates vary widely, depending upon methods of calculation, including stocks of American mills.

The response to the Shipping Board's call for bids for its fleet has been disappointing. The Board received about twenty communications from prospective purchasers of its ships. Of those communications, only four or five appeared to offer possibilities of sales, and they were more or less general, requiring personal conferences on details. One offer of \$1,000,000,000 for the entire fleet received from a small manufacturer was not taken seriously by the Board or anyone else. As a result of a conference held last week between the Shipping Board and private shipping interests, it is understood that the Board has received definite tenders of more than \$20 a deadweight ton for about seven of the eighteen consolidated trade routes. That price, it is said, is the minimum which the Board would consider under any conditions. Aside from the identity of some of the bidders, little authentic information is available at this writing.

The Treasury Department has promulgated its regulations for enforcing the Supreme Court's decision barring liquor for beverage purposes on all ships while the latter are in territorial waters of the United States. Whatever hope may have been entertained that some way would be found to meet the main objections by foreign nations to the Court's ruling is apparently dissipated. Three of the most important sections of the new regulations are as follows:—"No merchant vessel, domestic or foreign, may lawfully carry as cargo within the territorial waters of the United States any liquor for use for beverage purposes. Liquor for non-beverage purposes may be transported within the territorial waters of the United States under permit, in accordance with the provisions of Section 93 of Regulation 60, as amended by Treasury Decision 3350. It is unlawful for any United States or foreign merchant vessel within the territorial waters of the United States to carry or possess as sea stores any liquor whatever for beverage use." The regulations allow vessels to have liquor for medicinal purposes, but in such cases a permit must be obtained from a medical officer of the American Public Health Service. Section 14, for instance, provides that if the laws of a foreign country specify the kind and amount of liquor to be carried by a vessel for medicinal purposes, American medical officers are to issue permits covering "such kind and not less than such amount of liquor." It is a question whether or not that section can be construed to permit the carrying of wine or liquor rations for crews. Such rations have heretofore been carried as ships' stores, and the latter are specifically barred under the new regulations, as indicated. It is quite possible, however, that such supplies would be allowed if the laws of foreign nations described them as "medicinal liquor." It seems certain that the matter will be brought up at the next session of Congress.

FRANCE.—FINANCE BILL—TAX REVENUE—TRADE BALANCE—PRICES—NEW CREDIT NATIONAL BONDS.

(FROM OUR CORRESPONDENT.)

PARIS, June 13.

THE Senate Finance Commission has now terminated its consideration of the report drawn up by its Rapporteur-Général, M. Henry Bérenger, and within the next few days the Upper House will begin its discussion of the Finance Bill for the financial year which began on January 1st last. As the Bill will then have to go back to the Chamber for approval and possibly further modification, all hope has now been abandoned of avoiding a seventh monthly vote on account, and it is even possible an eighth may prove to be necessary, as the drastic reductions which the Senate Finance Commission recommends in several of the Departmental budgets are certain to meet with strenuous opposition in the Lower Chamber. This was evident, indeed, from the statements made by several of the Ministers who attended before the Commission during last week, and who expressed their disagreement with the "cuts" made in their respective estimates of expenditure for the current year. The most notable of these was M. Poincaré himself, who insisted on the maintenance of the military credits asked for in regard to Syria, which the Commission propose to suppress. It may be remembered that it was owing to the proposed reduction of the vote for military purposes in Syria that General Gouraud some months ago resigned his post as French High Commissioner there.

The one principle that has dominated the Senate Finance Commission during the whole of its consideration of the Budget Bill has been to avoid any kind of loan for the purpose of balancing the ordinary Budget. This policy has been adopted admittedly in conformity with the conclusions of the Brussels international financial conference of 1920. (The Chamber, it will be recalled, has voted in favour of balancing the Budget by means of a loan of approximately 3,700 or 3,800 millions.) This, the Commission believes, can be done by cutting down estimated expenditure to the extent of over 1,816 million francs, by taking advantage of the fact that the revenue from taxation is coming in very much better than the Finance Minister anticipated when he drew up his estimates, and by the possibility of securing this year the payment of 500 millions due to the State from the railway companies (for material furnished to them after the Armistice), and 60,000,000 from the profit made by exploiting the Saar district. In this latter connection the Commission take the view that, although the capital value of the Saar mines belongs to the Reparations account, any profits that may be made from exploiting them should form part of general budgetary receipts. By these means the Commission claims that it is possible to transform the deficit, which the Chamber estimated at not less than 3,700 million francs, into a surplus of 896,857,510f. M. Henry Bérenger, basing his calculations "on known results, and applying them to the whole financial year, by serious methods which limit the margin of error to the minimum," estimates that not less than 2,210 million francs may be expected to be received from existing taxation during the present year over and above M. de Lasteyrie's estimates of revenue from this source.

The return of the yield from taxation for the month of May, which has been issued this evening, gives an opportunity of judging to some extent whether M. Bérenger's expectations may be regarded as well founded. The total yield for the month, including that from direct and indirect taxation, stocks, Government estates, State monopolies, tax on war profits, &c., is returned as 1,771,522,400f. Of this total 168,547,700f represents the yield from income-tax, 136,662,400f from land tax, and 170,055,000f from the sale of war stocks and from other sources apart from what are usually included in the category of indirect taxes and under the heading of monopolies. How these three sums compare with Budget estimates is not shown, but the return sets forth that the yield during May of 1,278,993,000f from indirect taxes and State monopolies was actually 152,224,500f, or 13.5 per cent. in excess of Budget estimates of revenue from

these sources. Registration and stamp duties are 11 per cent. above the estimated yield, and Customs duties 29 per cent. (although 12 per cent. below those of May, 1922, from this source), while the yield from the tax on turnover is nearly 20 per cent. higher than was expected, and that from the luxury tax over 30 per cent. higher. The actual yield from taxation during May (exclusive of that from income-tax and the other two categories mentioned above) was 152,224,500f larger than the Finance Minister expected when he drew up his estimates, and brings the total increase over Budget estimates from these sources alone since the financial year began up to 581 millions.

La Situation Economique et Financière, which is one of the few French journals of its class that may be accepted as unbiased, takes the French Customs Department sharply to task in its last issue in regard to its new method of valuing exports. Basing its action on the fact that the average value of the imports during the first four months of the year (as assessed by the importers themselves, for the purpose of fixing the amount of the tax on turnover for which they are liable) has been found to be 11 per cent. higher than for the corresponding period of last year, the Department, in its latest trade returns, as I announced recently, has raised its valuation scale, as hitherto applied to exports, by a similar percentage. The result, of course, is to reduce substantially the apparent adverse balance in French foreign trade.

The French Government's index figures for wholesale prices at the end of May, 1923, have now been issued, and are as follows, as compared with those at the end of April (the base figure of 100 representing the mean for the period 1901-1910):—

	End of April (Corrected).	End of May (Provisional).
General index figure (45 categories)	479.4	469.9
Foodstuffs (total for 20 categories)	454.5	444.8
Vegetable foods (8 categories)	386.0	372.9
Animal foods (8 categories)	486.7	482.3
Sugar, coffee, cocoa (4 categories)	527.3	513.8
Raw materials (total for 25 categories) ..	499.3	489.3
Minerals and metals (7 categories)	467.8	452.3
Textiles (6 categories)	619.6	628.0
Various (12 categories)	457.4	442.8

The exceptionally high figure for textile products is strikingly suggestive of the effect of the present exchange rates on certain commodity prices. As was to be expected, the rise in wholesale prices of a few weeks previously was reflected during May in an increase in retail food prices in Paris. The index figure representing the retail price of thirteen categories of foodstuffs in Paris during May is returned as 3,496 (or an increase of 225 per cent. on 1914), as compared with 3,439 in April (which represented an increase of 220 per cent. on 1914).

The subscription lists will be opened on June 15th for a new issue of 2,000,000,000f of Crédit National Bonds, to provide funds to meet the immediate demands of the devastated regions. The last issue, it may be remembered, produced a total of 3,000,000,000f. Since the beginning of the present year, however, 2½ milliards of this sum has been paid out to *sinistrés*, therefore it has become urgent to find the money to meet the requirements for the second half of the year. The Finance Bill authorises a further issue during the current year of an additional three milliards, but the Minister of Finance, in view of the present high cost of money, has decided to limit the present issue to two milliards only. The type of bond chosen is analogous to those of the November, 1921, and January, 1923, issues, namely, 6 per cent. 500f bonds, with quarterly drawings for prizes of 500,000f, and 100,000f, plus 1,200 smaller prizes, every year to each million of bonds (that is to say, 12 prizes per annum to every 10,000 bonds). The dates of the drawings have been so arranged that subscribers to the new issue who are also holders of those of previous issues will henceforth participate in a drawing during each month of the year. The new bonds are to be issued at 490, with a first coupon payable in October, which brings the real price slightly lower. In view of the fact that the issue of January last was substantially oversubscribed, little doubt is felt as to the result of the present effort.

GERMANY.—REPARATIONS—FINANCES—CURRENCY—TRADE—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

BERLIN, June 9.

THE new Reparations Note, having been discussed with the parties before despatch, is in general well taken. A newspaper declares that the offer is "in the main based on suggestions from Entente quarters." The abandonment of the fixed capital sum is approved of, though it seems that the real reason for this was tactical—it was useless to repeat the 30 milliard mark offer in view of the rejection, and home opinion would have been against an increase, which would further have brought the charge—which is true—that the Government's experts had no real data for fixing the earlier sum. The present capital value of the new offer is problematical. The Customs to be pledged, the tobacco, beer, wine, and sugar taxes, and the State brandy monopoly, which the Government (brandy monopoly excepted) puts at 800 million marks before the war, yielded in 1921 13,450 millions paper marks, in 1922 (according to estimates and supplementary estimates) 146,800 millions, and 1923 (according to estimates) 681,500 millions. The last estimate will be very far exceeded owing to the currency depreciation, in part owing to a new project for increasing the rates of the sugar and other indirect taxes. The Government estimate of 200,000,000 gold marks as the present normal yield from these sources is considered by experts as much below the yield to be attained if the mark were stabilised or if the remaining weight or volume assessments were replaced by *ad valorem* assessments. The whole annual payments are estimated at a minimum of 1,200 millions, and a maximum of 1,800 million gold marks. The fact that the international loan no longer appears in the Note is taken by sound judges with relief. As long as an agreement concerning the total of and means of raising Reparations was far out of sight, the easy assumption that a big loan could be had did no harm; but the sound judges foresaw that as soon as an agreement as to total and means was come to, the loan, as roof of the edifice, would not look so secure.

Assuming a general recovery, the 500,000,000 gold marks to be contributed by industry, agriculture, trade, and banking does not seem excessive. This is the sum at which the interested groups assessed themselves. It is impossible, despite numerous calculations, which differ enormously, to show what proportion the industrialists' 200,000,000 gold marks share would be of industry's profits, and still harder in the case of agriculture; but distributed *per capita* among the number of producers it makes a small sum. The confusion produced by ever-varying paper-mark valuations of production should not blind one to the fact that at least as high a percentage of the population as before the war is producing, apparently producing almost as intensively, and, if anything, producing goods of higher average value (e.g., home consumption of a larger proportion of iron and steel). Similarly, when one avoids paper-mark estimates, it is hard to see that industry will in future bear abnormally heavy taxes, in view of the low armaments expenditure and the practical obliteration of the federal, State, and municipal debts. Naturally the shifting of these burdens on to other shoulders is here taken into account; but in calculations for the future it must be assumed that (as has already been partly the case) the loss of income and capital by the expropriated classes will be in the end made up for by the enforced productive activity of these classes.

The railways guarantee is here considered high, in view of the long term which experience shows is necessary for the restoration of large railway systems which are in a losing condition. Here, however, must be taken into account the great improvement of the last four years, and the fact that the railway operation budget surplus. The present heavy losses are due partly to French measures, partly to the recent exceptional currency depreciation. The railways in 1922 lost 2,041,825 million marks; but the greater part was on the Extraordinary Budget, and represents capital improvements which normally would have been paid for out of surplus

or loans. In 1913 the operating surplus (interest on railway debts not deducted) of all the State railways was 1,066 million marks gold, which is twice the sum proposed as their future Reparations yield. The first deficit, in 1918, was 1,306 million marks paper. The present capital value of the railways, assuming normal operation conditions, is put as high as 30 milliard gold marks, or about 50 per cent. more than the pre-war investment; but this estimate takes into account the general rise in gold prices, and assumes that with normal conditions profits would rise in proportion to the new gold price level.

Given normal conditions, the railways ought to produce the estimated 500,000,000 gold marks surplus, but it is probable that Herr Cuno has no precise data for assuming this to be possible within four years. The diversion to Reparations of profits which formerly went to the State treasuries will not cause any damage to public finances, because the railway debts have been wiped out, and the real payers of this part of Reparations will ultimately be the holders of State bonds.

Opinions as to the fate of the new Note are not optimistic. The parties hold to the belief that France will either not consider the offer, or will persist in demanding the abandonment of the resistance on the Ruhr. There is so far no sign of such abandonment, and an official agreement in this sense would probably only introduce a new confusion, as the employees will not work under French violence. Further, the issue is complicated by the French proclamation that the Ruhr will be evacuated only in measure as payments are made. The finances and currency are in a worse muddle than ever. In the Reichstag there have been many official utterances which yielded instructive facts but show no clear policy in either matter. Owing to the price rise the Government is obliged to make an advance payment averaging 300,000 marks to every one of its official and unofficial employees. The Socialists, with good reason, are pressing for a new reform of direct taxation. The *Geldentwertungsgesetz* of last winter, which was supposed in some measure to adapt tax rates to the new nominal values, has been made wholly worthless by the much higher nominal values of the last weeks, and once more those citizens (nearly all, with the exception of manual workers) who did not pay their taxes immediately are escaping almost altogether. Herr Hermes, the Finance Minister, has proposed to decuple summarily the forced loan, keeping the old valuations of property, and even to increase twentyfold the quarterly advance payments made on account of income-tax. The forced loan has already yielded 225 milliard marks of varying values, and will altogether yield 300 to 350 milliards. The proposed tenfold of this sum would not materially help the finances. These expedients fail simply because they take into account only accomplished depreciation. More depreciation is accomplished before the Government can make use of the increased nominal yields, and when the transaction is fully through still further depreciation comes.

The plan to centralise all exchange dealings has been abandoned. The Customs gold surcharge has been raised to 1,431,900 per cent. The big banks are so overworked that they are refusing to take new clients, except where the business promised is big and profitable. The Reichsbank's statement for May 31st beats all records in borrowings and in inflation, the reason being partly the month-end settlements, but mainly the new higher price-level. The holding of discounted commercial bills increased by 464,246 millions, Treasury bills by 1,070,474 millions, and circulation by 977,103 millions. Total circulation is now 8,563,749,470,000 marks. The gold reserve has declined by another 75 million gold marks, owing to the despatch of 53 million gold marks to New York to meet the Belgian Treasury bills due on the 15th and to borrowing on security of 22 million gold marks of the gold deposits held abroad. Foreign trade figures for April (values not yet reported) were, in metric tons:—

	Imports.		Exports.	
	April.	March.	April.	March.
All	6,396,100	5,220,100	1,028,800	938,200
Thereof—				
Food	330,900	330,900	100,100	78,700
Raw and half-finished goods ..	5,950,800	4,807,700	800,000	502,600
Manufactures	108,500	77,500	328,700	356,800

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

Coal imports were 4,500,000 tons, against 3,400,000 tons in March, and a monthly average of 1,000,000 tons in 1922. Business has slightly improved, as always after mark exchange falls, and unemployment is decreasing, though somewhat irregularly. The Prussian crop reports show for June 1st an improvement in all important crops since May, and the conditions index is very much better than in June, 1922.

AUSTRIA.—FOREIGN CONTROL—STATE FINANCES—INTERNAL LOAN—INDUSTRIAL CONDITIONS—PRICES—UNEMPLOYMENT—VIENNA BANKS.

(FROM OUR CORRESPONDENT.)

VIENNA, June 1.

THE foreign control for Austria provided for in the reconstruction programme is beginning to manifest itself more strongly. Besides the Commissioner General, Dr Zimmerman, the Swiss bank director, Schnyder, has been appointed as adviser of the Austrian National Bank, and Sir William Acworth arrived in Vienna a few days ago in order to work as expert on the reorganisation of the Austrian State Railways. A foreign expert for the reorganisation of the State tobacco monopoly is also expected. Since the Austrian Treasury is not able to carry on with the normal revenues, it is being obliged to draw on the foreign credits. The consent of the Commissioner General is necessary in order to do this, and this official is thereby gaining a decisive influence on the whole financial administration. During recent months there have been some rather fierce encounters between the Social Democrats, Christian Socialists, and Nationalists, which resulted in some casualties. After all three parties had convinced themselves that they were equally well armed, they agreed not to disturb each other's meetings.

The Government are continuing their endeavours to conclude commercial treaties with the neighbouring States, and a commercial treaty with Italy was signed

recently. This treaty has called forth very strong criticism in Austrian economic circles, since the opinion prevails that it was concluded under Italian political pressure, and contains clauses unfavourable for Austria. At present negotiations for a commercial treaty with France are in progress. Meanwhile, the French Government has decreed a Customs tariff reduction for a number of Austrian imports without demanding any counter concession. Economic and political relations between Austria and Germany have become slack of late, and it can be said that both public opinion and the Press in Germany follow the economic and political occurrences in Austria with much less interest than formerly.

The reorganisation of the Austrian State Railways now occupies the most important place in State finances. As long as the railways are run with such an enormous deficit a lasting improvement in State finances is impossible. The Government has brought before Parliament a Bill which provides for separating the railways from the State administration and for converting them into an independent company controlled by the State. The Government recoils from the idea of converting the State railways into a private company, and hopes business-like management will suffice to reduce the deficit. It is hoped that the English expert will be able to help the Government in eliminating, or at least considerably reducing, the deficit. Another difficulty in State finances is caused by the necessity of increasing the salaries of State employees, inasmuch as private employees in banks and industries have succeeded in increasing their salaries considerably, partly by threats of strikes. The deficit in the Budget for the first three months of this year amounts to 1,019 milliard kronen—i.e., 142 milliard kronen less than was estimated.

In the course of the month of June subscriptions for the Austrian shares of the League of Nations' loan will be carried through. An amount of \$13,000,000 is to be raised, and it is hoped that the greater part of the Gold Treasury Bonds, which becomes due on June 1st, will be converted into shares of the new loan. Although the securities for this loan are very good owing to the international guarantee, the subscription of the loan here will be more a patriotic deed than a profitable business transaction, since the loan will pay only 7 per cent. interest, whilst three or four times as much can be obtained for a cash loan at present owing to the great stringency of money here.

Stormy conflicts are now taking place amongst manufacturers, since some of them are in favour of introducing high protective duties, whilst the others are afraid that such a policy would prejudice export and lead to a further increase of prices in the country. The recent fall of the mark has caused some Austrian products—especially iron and coal—to be reduced in price for reasons of competition. The Alpine-Montan Company, for instance, has of late had to reduce its tender to the Austrian State Railways for rails considerably since it was underquoted first by the Stinnes works and then by the Deutsch-Luxembourger works. Unemployment has decreased still further. In Vienna the number of the unemployed in May was 76,230, against 83,208 in April. The brisk export activity of Austrian industry is shown by the fact that the export of Austrian industrial products for the first three months of this year shows an excess of 52 million gold kronen over the import. The balance of trade for the same period, however, shows a deficit of 140 million gold kronen owing to the necessity of importing food, raw materials, and semi-manufactured goods.

The balance-sheets of the larger Viennese banks, which have just been published, give clear evidence of the consequences of the money depreciation last year. The Oesterreichische Credit Anstalt's balance-sheet, for instance, shows an increase of 27 milliard kronen on the profits derived from interest and 34 milliard on those deriving from commissions, as against the profits of the previous commercial year; the net profit, which was about one milliard in 1921, rose to 21.7 milliard kronen in 1922.

There has been no change in the management of the older Viennese banks, except in that of the Union Bank, the most conservative of all, which has come under the influence of a newly-rich financier, Mr Bosel, who has really made it his private bank. Several Viennese bank managers, who went to the United States during last

month, succeeded in placing considerable blocks of shares in their banks and of other Austrian companies. Generally speaking, foreign capital's interest in Austrian enterprises has continued to increase since the political and economic conditions have become more consistent and social disturbances are no longer feared. It is worth noting that German capital has also carried through large purchases on the Vienna Stock Exchange. This is due to the Germans' endeavours to acquire foreign holdings, since they fear a complete crash of their currency.

During the last month the index figure again rose 5 per cent. The increase in the cost of living caused thereby has naturally produced new demands for higher wages and salaries. First the bank clerks succeeded in getting an increase of 20 per cent. in their salaries by threatening a general strike, and this movement has now spread to the employees of the various industries. The State officials are also claiming higher salaries, which, of course, will increase the State deficit still further.

GREECE.—THE RISE OF THE DRACHMA—A PANIC—HEAVY LOSSES.

(FROM OUR CORRESPONDENT.)

ATHENS, June 6.

WITH the opening of the Lausanne Conference the foreign exchanges began moving slowly downwards. While some people thought that the Conference would fail again, the majority believed that either peace or—what seemed more probable—war would be the result. In either of the latter cases a fall in the exchanges was anticipated; a smaller one in the case of peace, a greater one if the hostilities were resumed. The heavy fall of the foreign exchanges at the most critical moment of the Conference, when war was thought almost unavoidable, strange though it may seem, is fully explained by the psychology of speculators in the exchange market. The re-occupation of Eastern Thrace, the menace to Constantinople, and the Allies at the side of Greece, seemed to them certain occurrences in the event of a new war, which would be bound to change the situation entirely in favour of Greece. The news of an external loan of £10 millions, to be granted to Greece under the auspices of the League of Nations on behalf of the refugees, published early in May, brought down the rate of the pound suddenly to 309 drachmæ. At the same time large sums of dollars were poured into the market for the purchase of tobacco, and these forced the rates still lower. Finally, the arrival in Lausanne of the Greek Minister of Foreign Affairs, and the strong attitude taken by the Greek Delegation at the Conference regarding the indemnity claimed from Greece by the Turks, were the most decisive factor in the tumbling down of the rates. These facts, and the excitement of the market, were successfully grasped by speculators (among whom was the Athens agency of an American bank), who began to sell openly huge sums of foreign exchange. A panic ensued. Bulls tried to cover at any rate, while from the most remote corners of the country the holders of foreign currencies—who, since 1920, when the flight from the drachma commenced, had been carefully hiding their holdings—hastened to realise them at whatever loss, fearing a further collapse of the rates. Having stood for nearly five months around 400 drachmæ, the rate of exchange on London fell during May and the first days of June to 170 drachmæ, say an improvement of 57.5 per cent. The sharp and sudden appreciation of the drachma upset the general level of prices, which had adapted themselves since November last to an external value of the currency equivalent to 400 drachmæ the pound sterling. Wholesale prices of imported articles followed closely the movement of the exchanges. The disorder brought about by this development is the more serious as speculation was rampant all over the country. Consequently, heavy losses were sustained not only in all branches of economic life, but by the general public as well. Failures and closings down of banking offices and business houses took place. Trade and industry came to a standstill. Unemployment is threatening thousands of workers. And were it not for the big reserves created from the exceptional profits realised by traders since 1914, the effects of the panic would be disastrous.

Though the shock was serious, the ultimate effects of which cannot be foreseen, the economic strength of the country enabled it until now to weather the storm with the minimum loss. Fortunately, the rumours put into circulation by speculators concerning the position of some important local banks were unfounded. A run was made on them by panic-stricken depositors. Owing, however, to their sound position, and thanks to the assistance granted them by the National Bank, these banks repaid their depositors without realising at a big loss their assets in foreign currencies and gold securities. Assistance will be given also by the principal banks to the Stock Exchange dealers for facilitating the fortnightly settlement, as they also have been severely hit by the fall of the prices of securities consequent upon the fall of the exchanges.

The untoward events of recent weeks could have been avoided had the Government been more willing to listen to the appeals of the business community, who requested it to retard the exchange fall through purchases by the National Bank at reasonable rates of the exchange offered for sale, and had it been less eager to espouse the popular view of the matter, which ignores the seriousness of the evils and of the risks entailed by such violent movements in the purchasing power of the currency, especially when, as in the present case, it is not certain whether the improvement will be permanent and stability of the currency at its new levels attained. It has, nevertheless, been proved again that the country possesses important liquid reserves in foreign currencies from the surpluses which the balance of foreign accounts shows each year.

NORWAY.—THE NEW PRIME MINISTER—INDUSTRIAL CONDITIONS—BANKING—EXCHANGES.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, June 7.

THE greatly regretted death of the Prime Minister, Otto B. Halvorsen, has necessitated some changes in the Cabinet. The Minister of Finance, Abraham Berge, has become Prime Minister. Mr Berge is a remarkable instance of a self-made man. By birth a peasant boy from Western Norway, he became a schoolmaster, and then advanced, step by step, to the highest posts in the civil administration. For many years he was a member of the Storting, and also for a certain period a member of the Cabinet. He is a Liberal, but is highly esteemed by all the political sections of the Storting, and though 72 years of age, seems to be in full vigour. As Prime Minister he will retain his office as Finance Minister.

Unemployment is decreasing. On May 25th the number of unemployed was given as 14,800 persons; on April 24th the number was 19,300. While this is encouraging, it is a pity that there are symptoms of unrest among those who are, or might be, employed. In the printing trade a strike has lasted for nine weeks. Frequent attempts have been made at conciliation, but in vain. The employers in various other branches now have given notice of a lock-out, embracing 12,000 hands, in order to force a decision. Most likely this will help, for fresh negotiations have been opened. At the same time, the workers in the pulp, paper, and allied trades have given notice of strike as from June 12th; but there is a possibility of a compromise.

Pulp and paper prices are firm, and as for wood pulp, there is scarcely any appreciable quantity unsold. The weather is dry, and the outlook with regard to power for the mills is by no means bright. The weather is also chilly, so that the vegetation is far behind, but spring work is about finished, and came off under very favourable circumstances.

One may now feel justified in saying that the anxiety of the public with regard to the late bank difficulties has subsided, but one of the more lasting effects of the scare is that the deposits have been transferred from a number of the private banks to the savings banks, and to a few of the more powerful private banks. The deposits in the Christiania Savings Bank have reached a total of 400 million kroner, and for such banks there is an *embarras de richesse*. It will take time, of course, before confidence in the private banks is completely restored, and also before the public accustoms itself to seek

HARRISONS & CROSFIELD, LTD., 1-4, GREAT TOWER STREET, LONDON, E.C.3.

WITH BRANCHES AND ASSOCIATED COMPANIES THROUGHOUT THE FAR EAST AND IN NORTH AMERICA, AUSTRALIA AND NEW ZEALAND.

THE COMPANY ACTS AS AGENTS FOR MANUFACTURERS AND OTHERS, AND INVITES CORRESPONDENCE WITH THE VIEW OF DEVELOPING FOREIGN TRADE

for employment of their superfluous capital in bonds, &c. The foreign exchanges have been fluctuating down from day to day, and so have bonds and shares. Industrials, such as the Hydro, have shown a firmer tone lately, indicating, perhaps, that people are on the outlook for what are considered the best securities.

CANADA.—CROP REPORTS—ROYAL COMMISSION ON LAKE FREIGHT RATES REPORT—THE BUDGET DEBATE.

(FROM OUR OWN CORRESPONDENT.)

OTTAWA, May 24.

THE first crop reports of the various Government bureaux, the C.P.R., the *Manitoba Free Press*, and other students of the agricultural situation are now available, and are being scanned with great interest. The spring has been abnormally cold and late, and the bright, sunny days which usually characterise the Canadian May have been comparatively few. Even in May there were some belated snowstorms in the West, and in the East there have been very heavy rainfalls. The result is that on an average the seeding season is a fortnight later than the normal. By way of compensation, however, the moisture conditions which are most important have rarely been more favourable, and if a spell of warm, "growthy" weather comes during the next month the lateness of the seeding will have no serious effects. Reports from the West, which is the most important grain area, all agree that there will be a certain diminution of the wheat acreage, but that it will be smaller than was at one time feared. The Western farmer was deeply disgusted to find that last year's abundant wheat crop yielded such negligible profits, and now there is an obvious tendency to turn to more mixed farming. Farmers in many areas in the West, but especially in Manitoba, are sowing less wheat and more oats and barley, and are giving more attention to fodder crops. Many of them have increased their dairy herds, and are going to devote more time and energy to the raising of poultry and hogs.

In Manitoba the seeding of wheat has been practically completed, and in the southern districts it is appearing above ground. The seed bed has been excellent, and the cool weather has been beneficial in allowing the grain to secure sturdy roots; 30 to 40 per cent. of the oats and other coarse grains have been seeded. Rye has wintered well, and is now up about 6 inches. Pasture is improving daily, and the wet spring probably presages a good hay crop. In Saskatchewan about 80 per cent. of the wheat and between 40 per cent. and 50 per cent. of the coarse grains has been sown, and the wheat sown earliest is now above ground. It will be risky to sow any wheat after the end of the present week, but oats, barley, and flax can be planted for at least another fortnight. It is only the lack of a large supply of really good seed which prevents an extensive acreage of flax being sown. In Alberta wheat seeding is 95 per cent. completed, and about 75 per cent. of the other grains have also been sown. Operations in some of the northerly townships have been retarded by night frosts, and in other areas in the south there is complaint of a lack of moisture.

In British Columbia growing conditions are reported to be ideal. Fruit is setting on the cherry and plum trees, and pear and apple trees are in full bloom. There also are indications of an abundant and early strawberry crop, and, with the inauguration of the new co-operative organisation which the fruit farmers of British Columbia have been constructing during the past winter, there are distinct hopes of better times for the fruit industry, which has been hard hit during the past two years.

The Royal Commission which was appointed to investigate the problems of traffic and freight rates on the inland waterways of Canada has just published its report, and

finds that an oppressive combine has been in existence on the Great Lakes for the purposes of securing extortionate freight rates. It recommends, among other things, that lake freight rates be brought under the jurisdiction of the Dominion Railway Commission, and that the Government be given authority to suspend the Canadian coasting laws whenever it is deemed necessary to encourage competition to break a local monopoly.

The Budget debate is, as usual, a long-drawn affair, and the Government are sailing in somewhat difficult seas. The Progressives have flatly refused to endorse its proposals, and have moved an amendment which condemns the principle of Protection, and demands the immediate increase of the British preference to 50 per cent. of the general tariff, and other more drastic reductions, than the Budget offers. Mr. Fielding's declaration about fiscal stability, which has been construed by everybody as an intimation that the Government had finally jettisoned the 1919 platform, has been repudiated by many Liberal papers. Mr. Dunning, the Premier of Saskatchewan, who is the virtual leader of Western Liberalism, has stated that he cannot accept it, because it spells ruin for the Liberal Party in the Prairie Provinces. What is more immediately serious for the Government, two of the ablest Liberal private members in the House, Mr. A. R. McMaster, K.C., of Montreal, and Mr. A. B. Hudson, K.C., the leader of the Manitoba Bar, have both spoken against the Budget and for the progressive amendment. Mr. McMaster, indeed, has crossed the floor of the House, and as he commands a large following in the country the loss to the Government is very serious.

Books and Publications.

GERMANY DEMOCRATISED.*

WRITTEN Constitutions, though often based ostensibly on abstract political theory, are always largely shaped by the actual political environment and by their framers' interests and aims. It is from this point of view that M. Brunet treats the German Constitution of 1920, beginning with the revolution of 1918, and dealing very fully with the debates in the National Assembly at Weimar and the compromises effected between the conflicting views of the Majority Socialists, the bourgeois Democrats, and the Catholic Centre, the three parties who controlled the process of Constitution-making. The book is introduced by Prof. Charles A. Beard, late of Columbia University, whose attempt to explain historically the respect shown by the Constitution of the United States to the rights of property startled America some years ago. The original was published in 1921, the translation in the United States a few months later; and the domestic history of Germany has been so thrust out of sight by international happenings, that we cannot say precisely how far the provisions of the Constitution have since been developed, as its framers intended, by further legislation, though we believe the Referendum and Initiative have been thus provided for. But three characteristics of that instrument are clearly brought out. It is thoroughly democratic; it makes a great advance towards centralising the German Federation, and it goes far towards economic "socialisation," though the further work of the Constituent Assembly in this direction was cut short by its dissolution through the after-effects of the monarchist rising known as the "Kapp Putsch" in the spring of 1920.

Being democratic and socialistic, the Constitution was necessarily an advance towards centralisation, so as to check reaction in the constituent States, and also to make the whole resources of the Reich available for reconstruction, to break down the predominance of a possibly militarist Prussia, and to ensure social reforms. Hence it permitted readjustment of State boundaries by the Reich with the consent of the populations directly affected, even against the will of the State which lost territory by the change; and it gave the Reich concurrent

* "The German Constitution." By René Brunet. With a Foreword by Charles A. Beard. (London) T. Fisher Unwin, Limited. 1923. 6s. 6d. net.

power with the States in legislation on taxation, labour, economic and social questions, reserved to it the full control of railways, waterways, main roads of inter-State importance, motor and air traffic, and endowed it with "normative" power over State legislation on Church organisation and education—though here the Centre made its own terms, securing the maintenance of the Church organisations and the right of religious teaching, and preserving denominational schools. The Government is Parliamentary and Democratic; a Reichstag elected by universal suffrage with proportional representation—thus recognising parties as mechanisms for converting individual wills into a general will—aided by a Reichsrat representing the States, but now only consultative; checked by the Referendum and Initiative, and by a President directly elected by the people; guided by a Chancellor and Ministers responsible to it, and protected against presidential encroachments by provisions as to its meeting and dissolution, and by the institution of a Foreign Affairs Committee and a Permanent Committee to sit during the Parliamentary vacations. Any citizen may vote in a Parliamentary election wherever he happens to be, and it is a disputed point whether the States have not ceased to exist as States and become merely "autonomous bodies" which the central Government may override at its will.

If compromise is visible in the political details, it is even more so in the economic features of the Constitution. It guarantees the right of property, but asserts correlative duties, for the sake of the general welfare; the State supervises the distribution of land, regulates expropriation, reserves the right to tax unearned increment, directs the abolition of entailments (*fideicommissa*), protects labour, recognises the "right to work," and, in default of work, to public support; directs that provision shall be made for maternity and child welfare and for the welfare of illegitimate children; and reserves the right of "transferring to public ownership private enterprises adapted for socialisation." It even recognises the "workers' councils," which the Independent Socialists desired to organise as the sole legislative authority, but it provides also for district economic councils, culminating in a consultative chamber empowered to recommend or initiate economic legislation; and it mentions other "autonomous bodies," which, in fact, will be councils administering "socialised" industries. A beginning has been made with the coal trade, but the existing "economic Parliament" is only provisional and inchoate, and the organisation of the whole is incomplete. On this section of his subject M. Brunet gives full details, which we have no space to summarise. His work is an excellent account of the genesis of the German Constitution, and he closes with a discussion of the probability of its permanence. Its applications are mostly left to be fought over hereafter, and there is no check from the Supreme Court. The political part may last: the economic part is an experiment, as to which a forecast is impossible. The text of the Constitution is appended, and readers may be warned that the book is hardly intelligible unless the main provisions of that document have been mastered first.

THE THEORY OF A FAIR WAGE.*

THIS is an honest, serious little book by a man who can think for himself, but who has not read much of the modern work on his subject. It is a very healthy sign of the times that an engineer (as Mr Batten presumably is) should be giving his thought, not without effect, to the study of the problem of industrial reform. His theory (which needs much closer analysis than he has given it) may be briefly presented as follows:—(1) We ought not to regard wages merely as part of the costs of production. Only one element in wages is legitimately so described—the cost of bare subsistence for the worker on the minimum scale demanded by the social standards of the time; this ranks with cost of materials, upkeep of plant, and a bare rent for capital, as irreducible costs without which production cannot take place. When these charges have been met, all further wealth produced

* "A Fair Wage: Being Reflections on the Minimum Wage and Some Economic Problems of To-day." By Edward Batten, M.I.M.E. Pitman. 2s. 6d.

ould be regarded as "profits," to be divided on such terms as may be determined between the active partners of the industry, labour and capital, and part of most ages is, in fact, drawn from "profits" in this sense. The basic elements in the computation—the minimum subsistence wage of labour, and the bare rent of capital ought to be scientifically determinable, the first in relation to the cost of living, the second in relation to the interest on gilt-edged securities. The profits (in Mr. Batten's sense of the term) would then remain to be divided between capital and labour on an equitable basis. How is this basis to be found? Mr. Batten suggests, by dividing in a uniform proportion the profits of individual concerns, because this would make the remuneration of labour variable with the skill of the management; but by fixing the rates of remuneration for industries as a whole, in relation to the average rate of profit. By this means, while the worker would directly gain by the prosperity of the industry, the firm which showed exceptional enterprise would obtain exceptional profits, as to-day, and the lack firm would be penalised. (3) In order to make this adjustment possible, three things are necessary:—(a) The establishment of Industrial Councils with the power of fixing legally enforceable wages; (b) a sufficient publicity of accounts to provide these Councils with the materials for determining what the average profits of the industry are, and what wage rates (over and above the subsistence minimum) they render possible; and (c) the fixation of a statutory minimum wage, varying with the cost of living, as the basis of all these computations.

On a multitude of points Mr Batten shows that he is not acquainted with recent work on the subject, theoretical and practical, and that he has not sufficiently analysed the difficulties of his theory. But the main line of his thought is in accord with some of the best thinking of to-day. His little work deserves to be treated respectfully, as an honest contribution by a thoughtful man to the most vital of our problems. We welcome the intervention of a man of his type in a discussion which is too much left to theoretical economists, labour leaders, and the organisers of big business.

BOOKS RECEIVED.

Money. By William Trufant Foster and Waddill Catchings. (Boston) Houghton Mifflin Company. \$3.50.
Report of the Controller of the Currency, 1922. (Washington) Government Printing Office.
Social and Economic Conditions in the Dominion of Canada. (Philadelphia) American Academy of Political and Social Science.

Atkin's Manual, 1923. (London) Geo. D. Atkin and Co., 1 Draper's gardens.
The Cotton-Growing Countries. Production and Trade. (Rome) International Institute of Agriculture. 5s.
A very useful volume, showing cotton areas, production, dates of planting and picking, classification and consumption throughout the world.
Merchants, Manufacturers, and Shippers of the World. (London) Kelly's Directories, Limited. 64s.

The Directory is in two volumes. The first deals with foreign countries and their dependencies, while the second gives information concerning England, Scotland, Ireland, and Wales, and the British Dominions and Possessions. Under each town heading are given, in carefully classified lists, the names (arranged alphabetically) of all those engaged in trade and commerce, with the class of goods in which they deal. This information is given in respect of practically every country of the world. The book consists of some 5,000 pages, and gives information as to 20,000 foreign and colonial cities and towns, under which over 1,500,000 trade descriptions are given. It is indexed in four languages.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
June 27.

ACCOUNT.
June 28.

THERE has been a certain liveliness in some of the Stock Exchange markets this week, although the air of activity proved to be circumscribed. Business came very fitfully to the Consol market, prices moving sharply and irregularly under the influence of substantial dealings in the War Loan, Conversion, India scrip (largely on account of speculators), and even in Consols. Some of the selling is said to have been German. The course of negotiations in regard to the Ruhr district is being awaited with keenest attention, though there have been too many false alarms and false starts in the immediate past for the Stock Exchange to repose much confidence in any indefinite developments. The principal speculative areas, oil, rubber, mining, are deserted by the public. Many hundreds of bargains were done in the new Austrian scrip. A premium of 5 points rapidly developed, and stags—the smaller of whom received liberal allotments—have been very happy.

Prompt subscription continues to be the feature which characterises most of the new issues. Something like a furore was created by the issue of the Austrian loan. A large Tokio electrical appeal is pending in the near future, and several London companies are known to be preparing prospectuses of new issues. The Urban Electric scrip is quoted at 2½ premium, and Electric Supply Corporation preference shares, left with underwriters to the extent of 82 per cent., soon wiped off a small discount which developed at the start of dealings.

Conversion stock was sold, by the hundred thousand at a time, in the early part of the week, yet as soon as the selling stopped the price rallied, and the gilt-edged market is firm as a whole. German Threes have been a little better, and French bonds, Government, municipal, and railway, followed the varying messages from day to day which dealt with the political kaleidoscope. Chileans are generally harder, while Brazilians mark time. The success of the Austrian loan inspired buying of Czech and Greater Prague bonds. Riga 4½ per cent. are flat, on the breakdown of negotiations which had for their object the rearrangement on a better basis of the city's finances.

Home Railway stocks continue to be neglected by the public, and are accordingly lower in most cases where prices moved at all, although a slightly better tone intervened on the publication of satisfactory Board of Trade returns for May. Grand Trunk Pacific debenture weakened on an unofficial statement to the effect that the *pourparlers* between the British Mission and the Canadian Government have been postponed. Antofagasta stock further advanced by reason of the good dividend recently declared. Argentine railways have recovered materially from the weakness produced by an attack upon them from a provincial outside broking firm.

There is nothing much doing in rubber shares, but the tea market keeps strong, and further rises have occurred in some of the leading issues. The oil market is dull as a whole, the Shell dividend disappointing a good many holders. Renewed apprehensions in regard to the dividend led to sales of Mexican Eagles. A few of the Trinidad descriptions went back in consequence, it is said, of realisations on behalf of a deceased account. Tobacco shares are unusually quiet. Imperials will be quoted ex rights early next week. Courtaulds gave way on extensive profit-taking sales. Other textiles are maintained steadily in consequence of good dividends. Aerated Bread shares underwent a sharp fall, from which, however, they recovered, and Lyons drooped a trifle, the 25 per cent. dividend, the same as that for last year, failing to realise the expectations of the optimists. Hotel shares are a little better.

A severe slump in Hudsons Bays, from which there was a sharp recovery, followed the announcement of a cut in the dividend. Sudan Plantations, with their satellites, Kassala Cottons, have gone back on heavy profit-taking. Banking, insurance, and shipping issues are holding their ground, though without much alteration from week to week. Debenture and

preference issues, especially in the shipping market, are quietly improving. The electric lighting market is better, for which the cold and dull weather of the first part of this year is directly responsible. Gas stocks have moved hardly at all. The iron and steel market shows narrow and unimportant fluctuations. Babcocks, in the engineering group, are higher, the new shares being quoted at practically the same price as that of the old. Nitrates continue to attract a little support, and most of the preference shares in the industrial market forge steadily ahead, the supply becoming noticeably less week by week. De la Rue debentures rose to 62, after being nearly to points less.

Kaffirs remain in the doldrums, the public neglectful, the professionals indifferent. In Rhodesian and diamond shares interest is of the most languid order, Paris providing the main-spring for the daily movements in De Beers. Rio Tinto shot up, in consequence of a rumour to the effect that a closer co-operation is contemplated between the sellers of pyrites. An effort to make Russians firmer on the strength of the conciliatory tone adopted by the Soviet Government in its latest Note led to no fresh business on the part of the public. The various tin markets are quiet, and Mexicans almost lifeless. Some of the dealers in mining shares have said, with a laugh, that they are forced to move their prices up and down by 1/3d a day in order to let it be seen that their markets are not entirely dead.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscriptions.	First Payment.	Further Liability.
Amount previously recorded	£152,433,966	..	..	..
4% Treasury Bonds, 1931-33 (by tender June 8, 1923), £1,500,000, at 95 1/2 to 76d per cent.	..	1,429,975	..	..

NATIONAL SAVINGS CERTIFICATES.

NET RECEIPTS INTO THE EXCHEQUER WEEK ENDING JUNE 9, 1923.

1923	1916

Austrian Government Guaranteed Loan.—Issue of £14,000,000. The Bank of England is authorised to receive applications for £10,881,100 in 6 per cent. guaranteed sterling bonds, the balance of the issue of bonds to the nominal value of £3,118,900 being issued to his Majesty's Government in satisfaction of sums due. Capital and interest are free from all Austrian taxes, present or future. Austrian Government guaranteed sterling Treasury bills, due March 1, 1924, may be tendered in lieu of cash for payments for fully-paid allotments of this issue. The bills will be accepted at the rate of £97 10s cash for each £100 nominal of bills surrendered. We dealt with this issue at some length in last week's *Economist* (see page 1293). The issue had a remarkably good reception.

Port of Calcutta.—This is an issue of £1,000,000 5 per cent. debentures at 97 per cent. and repayable at par in July, 1923. Power, however, is reserved to repay the loan in whole or in part at any time after the expiry of 30 years from the date of issue. A sinking fund for this loan will commence to operate on January 1st next. The debentures will rank *pari passu* with other loans of the Commissioners as a first charge on the properties, which at March 31st had an unimproved value of £12,854,000. The capital debt at that date was £9,798,000, after deducting £1,371,000 already to the credit of the sinking fund. Since 1916 the annual income has increased from a million sterling to practically a million and three-quarters sterling. A good investment in its class.

The Second Scottish Western Investment Company, Limited.—Authorised capital £500,000, divided into 50,000 shares of £10 each, which are now offered for subscription at par. The shares, when fully paid up, are to be converted into preference and ordinary stock, in the proportions of 60 per cent. of the former and 40 per cent. of the latter—i.e., each share is to be converted into £6 of preference stock and £4 of ordinary stock. The preference stock is to be entitled to a cumulative preferential dividend at the rate of 5 per cent. As denoted by its title, this undertaking has been floated with a view to investing in promising securities. The power of the directors to borrow money on debentures and debenture stock, or otherwise, is limited to the amount of the subscribed capital. In addition, the directors have power to borrow up to £100,000, but for temporary purposes only. The articles of association provide that not more than one-twentieth part of the combined subscribed share and debenture capital, or more than one-tenth of the subscribed share capital, shall be invested in any one security. The enterprise appears to be in careful hands, and should make good progress.

Associated London Flour Millers, Limited.—Authorised share capital, £1,750,000, of which £1,126,006 has been issued. The issued capital consists of 833,043 £1 ordinary shares and 292,963 £1 7/8 per cent. cumulative preference shares. This undertaking was formed to take over six old-established flour-milling businesses. Very brief information is given in connection with an application to the Stock Exchange to deal in the shares of the company, and it is difficult to gauge the value of the shares from these details.

Waxed-Papers, Limited.—Authorised share capital £250,000, equally divided into 7 1/2 per cent. cumulative preference and ordinary shares of £1 each. Of the latter shares 70,000 have been privately allotted for cash, and a further 23,235 will be allotted to the Anglo-Canadian Wax Paper Company in payment of the purchase price of that company's business. This is an issue at par of the preference shares. The company has been formed to amalgamate two waxed-paper manufacturing businesses—namely, Geo. Church and Co., Limited, and the Anglo-Canadian Wax Paper Company, Limited. The profits of Geo. Church and Co. are stated to have averaged £25,694 per annum for the last five years, and £31,628 for the last three years, before charging taxation and loan interest, while those of the Anglo-Canadian Company, computed on the same basis, amounted to £5,315 for the year 1922. Surplus assets of the Anglo-Canadian Wax Paper Company are given as £23,235, including lease, patent, and trade-marks, and goodwill at £5,000. This has been fixed as the purchase price, payable wholly in ordinary shares. Surplus assets of Geo. Church and Co. are valued at £169,736, reckoning goodwill as worth £60,000. The former sum has been fixed as the purchase price, and is payable in cash. Possibly the company may render an excellent account of itself, and, anyway, investors can read and understand the prospectus.

Pyne Bros., Limited.—Authorised capital, £110,000 divided into 55,000 7 per cent. cumulative preference and 55,000 7 per cent. preference shares at par. This is an issue of drapery and furnishing business, which has been carried on for the last fourteen years at Lewisham. Net assets, including £25,000 for goodwill, are valued at £100,905. Profits are satisfied as to £45,900 in cash, and as to £55,000 by the allotment of all the ordinary shares. Preference shareholders have voting rights as regards principal, as well as interest, and have equal extent, preference shareholders are in a favourable position.

Anglo-Eastern Finance Corporation, Limited.—Authorised capital £250,000, divided into shares of £1 each, of which 125,000 shares have been issued and 10s per share has been paid up. The company has been formed for the exploitation of the 125,000 shares issued, 62,000 were allotted at par in August, 1922. A further 63,000 shares were offered to existing shareholders on May 7, 1923, at par, 3,500 shares being reserved for Eastern holders. This information is taken from an advertisement made to comply with Stock Exchange Regulations.

ACTIVE SECURITIES.

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM.—Production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of May amounted to 59,309 barrels.

We are advised by the CALEX OIL COMPANY that they have received a cable from Mexico giving the company's production for the month of May as 20,799 barrels, or 3,301 tons.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

COMPANY MEETINGS, &c.

BURMAH OIL COMPANY, LIMITED.

SIR JOHN CARGILL'S REVIEW OF A SATISFACTORY YEAR.

VITALITY OF PROVED FIELDS.

CHAIRMAN'S REPLY TO ADVERSE PROPAGANDA.

INCREASED SCALE OF OPERATIONS.

The annual general meeting of the Burmah Oil Company, Limited, was held, on the 12th instant, in the Merchants' Hall, Glasgow.

Sir John T. Cargill, Bt. (the chairman of the company), presided. The secretary (Mr F. G. Holdsworth, F.C.I.S.) having read the auditors' report,

The Chairman said: Ladies and gentlemen, I was able last year with some confidence to tell you that on balance prospects for 1922 were not unfavourable, and the accounts now in your hands will, I venture to think, be accepted generally as very satisfactory.

The result closely confirms our anticipations. Further falls in petrol prices in the markets of the world took place shortly after I addressed you, but the new contracts referred to protected us against the full effect of these. As to other products, prices of paraffin wax remained at a very low level, and while our prices in India for kerosene and petrol—which for a long time past we had kept below the level of the world's market prices for both these products—were unchanged, the much lower level of values for lubricants and jute batching oils there continued throughout the year.

REASONS FOR IMPROVED RESULTS.

The improvement in our results, therefore, has been accomplished mainly through the increased scale of our operations, lower taxation and charges, and increased income from outside investments. The volume both of crude oil produced and refined and of products marketed constituted records in the history of the company, and important economies both in the fields—partly due to the greater utilisation of gas and partly to the electrification of the Yenang-yung area—and in the refineries were effected by reductions in the consumption of fuel oil.

PROFIT AND LOSS ACCOUNT.

So much for the factors responsible for the results before you. I now come to a closer examination of the balance-sheet and profit and loss account.

You will have seen from the accounts that we have departed from our previous practice of showing our expenditure on drilling and deepening, &c., as part of our profits and then writing down our fields block account by the same amount. This method was open to the suggestion that the figure representing this might be considered as profit—to some extent at any rate available for reserves or distribution as might be decided from time to time. This, as you are well aware from my previous speeches, is not our view of the position. The charging of such expenditure in the year in which it is incurred is, in our opinion, essential. It is the price we have to pay to maintain our production, and is actually as much a part of the cost as is the expenditure on pumping and producing generally.

PROFITS AND DIVIDEND.

The profit available, after charging income and corporation profits taxes, contribution to employees' provident fund, directors' fees, &c., writing off £50,000 (being one-third of the cost of issue of the £3,000,000 8 per cent. preference shares), paying the dividends on 6 per cent. and 8 per cent. preference shares for the year, and the interim dividend of 2s per share, free of tax, on the ordinary shares, and placing £200,000 to general reserve and £20,000 to insurance reserve, amounts to £1,365,279 5s 3d. Out of this the board recommends the payment of a final dividend on the ordinary shares of 4s per share, free of tax, on June 22nd, absorbing £1,030,216 8s, and leaving £335,062 17s 3d to be carried forward subject to corporation profits tax estimated at £145,000.

The final dividend on the ordinary shares now recommended makes the total for the year 30 per cent., free of tax, or the same as last year.

INDIAN TAXATION.

There are one or two further items in the accounts, or connected with them, to which special reference might be made. In addition to United Kingdom taxation in the shape of income and corporation profits taxes, amounting to some £539,000, we shall have paid, in India and Burma, in the form of income and super-tax, royalties, Excise, and Custom duties, &c., a sum of, roundly speaking, £1,500,000. This latter figure represents some £2 10s

per ton on the volume of our products marketed in India. I am not for a moment suggesting that Government can be carried on without taxation. My point is that the extent of indirect taxation and its incidence, in the selling prices of commodities, are all too easily overlooked, both by consumers and Governments themselves. In this country we are happily continuing our progress towards retrenchment and lower taxation. The provisions in this year's Budget for reductions in income and corporation profits taxes are naturally welcome, although one cannot avoid voicing the almost universal regret that the Chancellor did not completely remove the corporation profits tax. In India, too, thanks to the Inchcape Committee, welcome steps have now been taken in the direction of reducing costs of administration and the securing of a balanced Budget.

You will notice the addition of £41,870 7s 8d to the fields block account. This represents purely capital expenditure on new buildings, &c., and in view of the low figure at which this account stands, its special depreciation is not considered necessary at present.

FIELDS ELECTRIFICATION SCHEME.

Fields electrification account has been increased during the year by £162,948 15s 3d to £835,193 5s. We hope the whole of this scheme will be completed by December 31st next. Initial supplies of energy from the power station were being made when I last addressed you. You will now be gratified to learn that the application to drilling as well as pumping was smoothly and successfully made from the start. Employees, both of Western and Eastern origin, took to this new motive power and its operation on the wells as if they had never known any other, and the hopes of increased efficiency and speed, and of reduced costs of operating through the more economical use of fuel, and otherwise, which were estimated when the scheme was decided upon, promise to be fully realised. Our consulting engineer on the work, Mr McCarthy Jones, has been for many years past a keen advocate and a convinced believer in its advantages and economies, and to him, to suppliers of plant, to our electrification manager and his staff in Burma, and to our own engineering staff in London great credit is due for making this development the success which is now assured.

NEW TANKER.

Your board considers the depreciation provided for refineries, pipelines, tankers, and installations ample. The addition of £150,499 15s 7d to the tankers and tank installation account is in the main represented by the final payments on account of our new 10,000-ton tanker, the "Badarpur." This tanker has now been running in the East for very nearly a year, and has given every satisfaction. The usual £20,000 has been added to insurance reserve, bringing this up to £400,000, and the fire and marine insurance account, which now stands at £518,685 19s 10d, has been increased by £81,923 10s 2d, this being the amount of premium on risks carried internally.

Interest and dividend account has yielded some £75,000 more than last year.

Employees' provident fund and profit-sharing scheme receives £121,455 9s 11d, as compared with £108,781 3s 5d in 1921. Both this fund and the subsidiary provident fund for lower-paid and more casual labour continue to be much appreciated, and are increasingly taken advantage of by employees.

PRODUCTIVE AREAS AND EXTENSION TESTS.

So far our efforts and our expenditure to extend materially the known productive areas of the Burma old fields have unfortunately continued abortive. But as I have said on previous occasions, wherever, either in Burma or in India, there is reasonably encouraging geological evidence, tests must continue to be made, if for no other reason than the protection of our position in India. These tests are never undertaken except after the most careful examination and on the best geological advice. We must, therefore, face a continuance of this expenditure hoping that we may yet meet with some success to compensate for the disappointments to date.

Production from our Lower Assam field declined still further despite vigorous efforts to maintain and increase it. So far we have not succeeded in proving any extension of the productive

area. In the Punjab our efforts have also so far not succeeded either in proving oil or definitely that it does not exist in our concessions, and drilling is being continued.

ASSAM OIL INTERESTS.

As regards our interests in the Assam Oil Company, Limited, I was able to tell the shareholders of that company at its recent annual meeting that there has already been a distinct improvement in crude oil production which it is hoped still further to add to during the current year.

You may think that I have not painted too bright a picture of the producing side of our business. As regards the potentialities of extensions of the known productive areas this is so. Despite these disappointments I can, however, confidently assure you that the company's proved fields continue to show such vitality that we have no doubt of their ability not only to stand the increased withdrawals from them, but they will be capable of doing so for very many years to come.

LABOUR TROUBLES.

Before leaving our fields I would like to refer briefly to the labour troubles which we and the other producing companies in Burma have recently been experiencing, commencing with the withdrawal of all Burmese workers for quite a month in the first instance. It was a "lightning" strike without ostensible excuse or warning, and without prior attempt to state grievances to the companies or to have them discussed and remedied. The fact of the matter is that the great majority of the Burmese labour went out without knowing what grievances they had. And as is almost invariably the case with strikes in which native labour is involved, intimidation was carried out on an extensive and intensive scale, and a large number of the workers who were anxious to remain at work—or to return to work—were prevented from doing so. They were brought out by the professional agitation of outsiders, and grievances were not discovered or formulated until they were out. Clearly we could not stand that sort of thing, and all companies decided that there would be no discussion until work was resumed, making it clear that while there would be no victimisation there would be no strike pay.

Quite voluntarily—in steady pursuance of our regular policy, and without being asked by the men, and without their knowledge—the companies had been already considering advancing rates of pay for certain classes of labour on the wells which had recently been entrusted with more responsible operations. It has been our hope and our policy more and more to educate Eastern labour to greater technical knowledge and responsibility in all parts of our business, and to recognise efficiency in every case by improved status and remuneration. We are constantly on the watch to guard against the existence of any real grievances or unfair treatment. I merely mention this because we have—I think not without reason—hitherto had the reputation of being among the best employers in the East.

LOYALTY OF THE STAFF.

Fortunately our Indian native labour largely stood loyally by us, and with their assistance and the wholehearted and enthusiastic day-and-night co-operation of our British and American staff—to all of whom the thanks of the company are due—we succeeded in maintaining production throughout the strike at something like two-thirds of normal. The result was that the men went back to work on our terms of "resumption before discussion." At the subsequent discussion we brought forward our proposals for increased remuneration and status to those now doing more responsible work, and generally undertook the removal of minor grievances within our control and accepted by us as legitimate. In the end the companies and the men's leaders came to agreement on all points, but unfortunately owing to the action of agitators and to intimidation the strike was later resumed, and is still being carried on in a sporadic and half-hearted fashion. The lesson to the men clearly is—ventilation and discussion before "downing tools." Many of them have lost fully two months' wages and gained no more than prior discussion would have yielded—in fact, much of what they gained was about to go to them in any case without even discussion.

Here also I might refer to the strike which took place in the autumn of last year in our refineries. Again the men went, or rather were "agitated," out without knowing what grievances they had or what they lacked or wanted. We were satisfied that they had no cause to complain either of wages or conditions generally, and made it clear that we would move on neither. They soon returned to their employment on the old terms, and have been working steadily and contentedly ever since.

As mentioned in the report, electrically driven pumps have been added to Nyounggha pipe line pump station with satisfactory results, and the pipe line worked steadily and successfully throughout the year.

REFINERY RECONSTRUCTION SCHEME.

I have already referred to our record volume of crude oil dealt

with by the refineries, where operations—apart from the strike just mentioned—were carried on steadily and with the energy and thoroughness for which we never look in vain to the manager and staff there. Besides the routine work of meeting our requirements of products promptly and satisfactorily, our works manager, Mr Allan, and superintending engineer, Mr Moore, have done much original thinking and proving out of new methods of refining, and valuable work in the way of the practical application of these and of other improvements to the plant and processes in connection with the refinery reconstruction scheme. Good progress has already been made with this scheme, and it is now in a state where pretty well uninterrupted progress towards completion should be possible. Already we are beginning to secure some of the fuel economies aimed at, and these and other advantages will gradually increase with the completion of the scheme—we hope towards the end of next year.

In my earlier remarks the marketing side of our business in the period was briefly reviewed. Again the volume of our products created a record in our history, and but for our excess petrol and wax production over India's requirements the market there readily absorbed the whole of them. Kerosene, of course, is by far the largest part of our production, and it is very gratifying to record the continued expansion of the Indian market for this product.

TRINIDAD INTERESTS.

The prospects of our interests in Trinidad are still obscure. Despite considerable expenditure and the assistance of the best technical experience and advice, the original expectations have not been realised. As you are aware, members of this board take an active part in the administration of the Trinidad company, and nothing within the financial resources available has been left undone to improve production, but the volume and stability of production necessary to put the undertaking on a dividend-paying basis are still denied to it.

As to our investment in the Anglo-Persian Oil Company, Limited, the progress and prospects of that company were fully reviewed by its chairman at the company's last annual meeting.

Such fears as were felt as to the successful rolling of black plate and production of tinplates in such a country as India have been completely dispelled by the technical success secured by the Tinplate Company of India, Limited, at Golmuri, in which we have a large interest, and they are already delivering to us a portion of our tinplate requirements fully up to the quality and finish of our supplies from other sources.

CURRENT YEAR'S PROSPECTS.

As to the prospects of the current year, we shall have some further relief from United Kingdom taxation in the lower income-tax and the reduced corporation profits tax. There should also be further economies from the fields electrification and the partial reconstruction of and improvements in the refineries. These are the known or confidently anticipated favourable factors. Among the incalculable ones are the possible world market effects of the considerable over-production of petroleum in America, while political and economic conditions on the Continent continue obscure and unsettled. So far as we are concerned, however, these should be confined mainly to the comparatively small volume of our surplus petrol and to our wax production, and it is more than doubtful whether either of these products could under to-day's producing costs be offered materially below ruling prices without having a very serious reaction on the volume of future production. Naturally we have lost ground as a result of the two strikes I have referred to, but we have reasonable hopes of largely recovering it before the end of the year, so that, subject to the qualifications I have felt it necessary to make, we should finish the current year not materially differently from the last.

APPRECIATION OF THE STAFF'S SERVICES.

You will, I know, wish me to convey to all our staff and employees engaged in the fields, refineries, tankers, and administration and marketing in Burma, India, and on this side, whether they be of the West or the East, your high appreciation of the results of their labours during the past year. Apart from the two incidents I have referred to we have been well, loyally, and ably served. And I would also like to express our appreciation of the unfailing courtesy, helpfulness, and advice which the Governments of India and Burma, and of the other provinces of India in which we operate, display through their officials on all questions affecting us. We are fully alive to the increased labours and difficulties thrown upon them by the initiation of self-government following upon the Reform Acts, and through the active participation of members of our staff in the new Councils, and in other ways, we are doing all we can to assist India in successfully shouldering its new responsibilities. We consider that it is the duty and privilege of those conducting important commercial undertakings in India to assist in laying on a sound basis the foundations of India's new Constitution. In this connection in the recent list of Birthday Honours his Majesty was graciously pleased to confer on the Hon. Mr Adam

B. Ritchie—senior partner in Rangoon of Messrs Finlay, Fleming and Co., the managing agents in Burma of your company—a knighthood in recognition of his services to Burma and India. As a member of the Legislative Council of Burma and chairman of the Burma Chamber of Commerce, Sir Adam has not only rendered services of the greatest value to the province, but has also sacrificed a great deal of his own time which he would otherwise have had for much-needed rest and relaxation, and I am sure you will desire to be associated in the congratulations on this well-deserved honour which we have already conveyed to him from the officials and staffs of the company on this side.

BOARD'S KEROSENE OIL POLICY.

I am afraid I must ask you for some further indulgence in time. This is really the company's only platform from which to address its constituents—its consumers—and to meet attacks or adverse propaganda.

As I think most of you are aware, we decided as far back as 1905 that our special responsibilities as indigenous producers to the Indian consumer could best be recognised by the adoption of a policy aiming at relatively cheap supplies of that product most essential to the largest body of Indian consumers which could least afford to pay normal prices for its requirements. That product was kerosene oil. It is almost a necessary of life in India. We therefore decided as far as possible to adjust our selling operations so as to place a large volume of our kerosene production on the Indian market at a price at maximum ordinarily well below world market values. Necessarily the decision was conditional. It was a voluntary one based on cost conditions ruling when it was made, and in full realisation that its continuance depended on our circumstances otherwise permitting of it, and particularly on the world market values available for the balance of our products. I have previously told you of the great difficulties we had in maintaining our maximum price policy during the war, for we never had, and have not to-day, the volume of indigenous kerosene necessary to meet India's full requirements, but we managed successfully to overcome these, and finally in 1919 we were able to make an arrangement securing for India, if need be, the full difference between her requirements and our supplies, but recognising the right of our indigenous kerosene to the first call on the Indian market. By this means our policy was resecured, and has thus been maintained unbroken now for over seventeen years.

ADVANTAGE TO INDIAN CONSUMER.

Without going further back than June, 1919, when this arrangement was made, you—and I hope a wider audience—will be interested to learn that on India's kerosene consumption from then until the end of last year the saving which this policy of ours has enabled her to effect in her kerosene bill as compared with kerosene prices in India based on world market values in that period amounts—taking exchange at 1s 4d to the rupee, and it was at times during that period much higher than that—to over £22,000,000—of which the Burma Oil Company's contribution—i.e., the difference between its supplies valued at the average cost in the period of foreign kerosene and the price at which "the Burma" actually sold its kerosene—was fully £16,000,000.

These figures speak for themselves. They show the colossal protection we have given the Indian kerosene consumer, and indicate some of the self-sacrifice our policy has involved. I venture to say that the history and effects of this policy of ours are unique in commerce, and in the case of a country which is not self-supporting in the commodity in question, it stands out as possibly the solitary example of a consumer not paying for an import duty where one exists.

INCREASED COSTS.

As I have said, this policy of ours aims at the greatest good of the greatest number. It has been of inestimable political and economic advantage to India, but it has always been, and must continue to be, conditional on our ability to pursue it. Our own costs have enormously expanded. The costs of others—not excepting Government and Port Authorities, &c., in India, which affect our prices before the product reaches the consumer—have advanced, or been advanced, but we have maintained our policy. This, however, has been possible only because by the increase and improvement of our operations we have effected relative savings, and because we have been able to secure for the rest of our products, at any rate, the values resulting from the operation of the law of supply and demand. If we cannot have that, the maintenance of the policy must be seriously jeopardised.

CAMPAIGN AGAINST PETROL PRICES.

And this brings me to my point. There has recently arisen in India an expensive and intensive campaign by pamphlet, full-page advertisement in its daily Press, cinema, public meeting, the Legislative Assembly and Council against our prices for petrol there. Quite apart from the situation as to kerosene, which I have just described, there is no substantial justification for it. Stripped of the Excise duty and its cost of 6½d per gallon, our

prices in India are below what they are here, and on the average India's supplies from Burma occupy almost as long and as expensive a voyage as do those of this country from America. Even with the Excise duty, they are lower than those ruling in every other country in the East, not excepting countries there much nearer to a source of supply than is India to Burma. The agitation has urged an export duty, arguing that India is subsidising in its petrol exports the foreign consumer. Of course, not a gallon of our petrol or of any other product is exported that India can absorb. Equally of course, in the circumstances of the petrol market of the world, an export duty on Burma exports would not be paid by the foreign consumer. It would come out of the industry. As far as possible it would have to be recovered in prices of products selling in India. To the extent that this might be impossible it would hamper the development of indigenous production by ourselves and by others, already inadequate over all to meet India's requirements. And, far from the foreign consumer at present being subsidised, little reflection is necessary to enable one to realise that it is just this foreign outlet for surplus production at such prices as it will yield that makes even present prices in India possible.

INDIA'S INADEQUATE INDIGENEOUS INDUSTRY.

Fortunately for India, and its already altogether inadequate indigenous industry, wiser counsels prevailed, and the proposal to put an export duty on petrol was not accepted by Government. But the agitation continues for lower petrol prices there, either by the withdrawal of the Excise duty or by actual price reductions, or by both. We are not responsible for the former. I have given the position as regards the latter.

Does the motorist in India wish cheaper petrol than he could get elsewhere in the East at the expense of the mass of the poor kerosene consumer, and does Government desire this? I am confident that in both cases the reply would be in the negative, and, as I have said, it has to be one or the other, for our policy of prices lower than the parity of world values cannot at one and the same time be carried to both products without placing the serious position and prejudicing the already inadequate volume of indigenous production.

"HARMFUL THREATS."

Suggestions have even been made in the Assam Provincial Council that concessions should only be granted subject to price limitations. And this in face of the fact that the only company producing and refining there—the Assam Oil Company, Limited—has paid no dividend on its ordinary shares for the past two years, and has even had to pass its preference dividend for 1922! And in Burma itself there are, as you well know, companies which are either making no profit at all or are only able to maintain an uncertain and precarious existence, even with petroleum products there and in India at their present prices.

Inducements are necessary to exploration for oil in India, and threats of the nature above referred to are bound to be harmful. Capital for such operations will dry up if, as has been suggested, restrictions limit the reasonably legitimate rewards of the risks run.

NO FOREIGN PETROL.

Every gallon of indigenous petroleum is required by India. As it is, she is heavily dependent on foreign imports for kerosene and lubricants and fuel oil, and from the petrol she cannot consume to the indigenous industry, helping to foster its expansion and—as I have already said—making possible the prices at which it is available in India to-day. In this latter respect the position presents an almost complete analogy with our own coal industry here.

It has never been our policy to attack our producing neighbours, either in Burma or India. As I have already pointed out, and it cannot be too often emphasised, all the indigenous production available, and more, is required to meet consumption in India, and our policy has steered as straight a course as is possible compatible with giving the advantages in price which we do for the while making it reasonably possible for the smaller, struggling, indigenous producers to continue in business.

Let this agitation put the same amount of energy and expense into a campaign to increase petrol consumption in India, for if India, which at present only consumes about half the production of whole, of that production, that would undoubtedly pave the way to lower prices. And the very fact that not a gallon of foreign petrol has been imported into India for a considerable number of years clearly proves that we have not been charging unreasonable prices for ours.

I now beg to propose: "That the report of the directors and audited statement of accounts, including the balance-sheet and profit and loss account to December 31, 1922, presented to the meet-

ing, be received, approved, and adopted." I shall call on Mr R. I. Watson to second this motion, and after it is seconded an opportunity will be given to you to ask any question, or make any remarks that any of you care to make.

Mr Robert I. Watson: I have much pleasure in seconding the motion.

There being no questions, the Chairman declared the motion adopted unanimously.

DIVIDEND RESOLUTION.

The Chairman: I now beg to move: "That the dividend on the ordinary shares recommended by the directors of 4s per share, free of tax, making, with the interim dividend paid in December last, 30 per cent. for the year, be adopted, and that the same be hereby authorised to be paid on June 22nd, and that the balance of £335,062 17s 3d, subject to corporation profits tax, estimated at £143,000, be carried forward.

Mr David Tweedie: I beg to second the motion.

The Chairman: I think we may take it that this is unanimous.

Sir Campbell Finlay: I beg to move: "That Sir John Cargill be re-elected a director of the company.

Mr John Henderson: I beg to second Sir John Cargill's reelection.

The Chairman: I take it this is also unanimously carried. I would thank you just in a word for the confidence you have placed in me.

Continuing, the Chairman said: I now beg to move, "That Mr H. S. Ashton be re-elected a director of the company.

Mr D. Brodie Macleod: I have much pleasure in seconding the reelection of Mr Ashton. This motion was also adopted.

The Chairman: I have much pleasure in moving, "That Mr R. A. Murray be re-elected a director of the company."

Mr R. J. Wilkinson: I beg to second the motion.

The motion was adopted.

Mr John G. Carruthers: I beg to propose the reappointment of Mr James Herbert Wilson, C.A., as auditor for the current year.

Mr John Watt: I beg to second the motion.

The motion having been adopted, the Chairman said: That is all the business, and I beg to thank you, ladies and gentlemen, for your attendance.

VOTE OF THANKS TO THE CHAIRMAN.

Colonel D. S. Morton: Before we separate, I would like to propose a vote of thanks to our chairman, Sir John Cargill. He has, with his usual lucidity and wealth of detail, given us a most interesting account of the affairs of this company—the working of the company during the past year—and I am sure we all congratulate him heartily on the result obtained. He has also hinted at the prospects for the present year with, shall I say, his customary Scottish caution. He has every reason, I think, to be extremely proud of the success of this great company, and we shareholders all know how much we owe to his wise administration of its affairs, and we hope and trust that for very many years to come he will continue to guide its affairs and preside at this annual meeting. I move that we accord him and the directors a very hearty vote of thanks, and I am sure we should also like him to convey our thanks to the staffs at home and in the East.

SIR JOHN CARGILL'S REPLY.

The Chairman: Ladies and Gentlemen,—I must thank you most sincerely for the very cordial way in which you have received the vote of thanks which Colonel Morton has proposed to me in such a kindly way. I feel he has said more than I deserve. I think all of us have moments in our lives that we call "red-letter days," and for the last 19 years, since I succeeded my late father as chairman of the Burmah Oil Company, I have looked upon the annual meeting of the Burmah Oil Company as the "red-letter day" in my history. I find myself every year looking forward to it for some time ahead, and thinking what I will say to you, and, after it is over, I find myself looking back upon it with the most pleasurable recollection of the attentive hearing and the very kindly reception you always give me. It has not been my custom to treat you to unduly optimistic speeches and to paint the future in too glowing terms. My idea has always been that I would prefer to give you something in the nature of pleasant surprises—although I have rather come to the conclusion that it is impossible to give Burmah shareholders a pleasant surprise—than to give you anything in the nature of a disappointment. I have no doubt that, if I live long enough, some day I may have to give you a disappointment; and if I do, but I am convinced of this, that when, and if I do, you will all receive that disappointment in the same resigned, philosophical, and truly Scottish unemotional fashion in which you have received all the good things which it has been my good fortune to hand out to you during the last 19 years.

TRIBUTE TO MANAGEMENT AND STAFFS.

There is only one other thing I would like to say, and that is this: you have authorised me to convey your thanks to all the

staffs of this great business. I, on my part, would like to take this opportunity of publicly conveying to all those associated with me in the management and running of this great and successful business, and, if I might be invidious and mention names, I would like to mention Mr R. I. Watson, your managing director, and Mr Gilbert Whigham, whom we have just appointed assistant managing director—I would like to convey to them all my own personal and grateful thanks for their unfailing loyalty, not only to the company, but to me personally, and for their magnificent work on behalf of the company, which has made it the great success it is, and which makes my position as chairman of the company one of the greatest pleasure and intense pride, and also, I may add, one nowadays of comparative ease. I thank you again for your very kindly reception of me to-day, and for the attentive hearing you have given me, and I would only express the hope that when we meet next year we shall have as pleasant and delightful a meeting as we have had to-day.

The meeting then terminated.

ROYAL BANK OF AUSTRALIA, LIMITED.

"HEALTHY ALL-ROUND PROGRESS."

Addressing shareholders of the Royal Bank of Australia, Limited, at the half-yearly general meeting held in the Chamber of Commerce rooms, Melbourne, on April 26th last, the chairman of directors (Mr R. J. Alcock) said:—

The last half-year has been characterised on the whole by somewhat quiet trade. When the wool season opened, owing to the accumulation of money in London, difficulty was experienced in some quarters in financing the usual seasonal movement of produce, but that position is being adjusted by the increased flow of imports; indeed, some apprehension is being now felt lest the volume of goods arriving on a somewhat dull market may prove to be in excess of requirements. The position, however, depends largely on the season, which has been very dry for some months in Victoria, while a drought may be said to prevail over a considerable portion of New South Wales and Queensland. There is time, however, for a bountiful rainfall to come and relieve the situation. Fortunately, country interests on the whole have been prosperous of late years, and, as stocks are understood to be generally light, pastoralists and farmers should be able to stand up to a drought if it should come. Merino wool has been fetching exceptionally high prices, while crossbreds and the rougher wools have made a substantial recovery. A considerable portion of the surplus wools from previous seasons in the hands of "Bawra" have been realised, and it is even predicted by some authorities that a world shortage of this staple will be experienced before long.

WHEAT, DAIRYING, AND MEAT, &c

The wheat harvest has been somewhat disappointing in most of the States, particularly in New South Wales, and prices are lower than farmers have been accustomed to in recent years, but they are still remunerative. The spring and early summer were favourable for dairying, and this interest has done well. The raisers of fat cattle, on the other hand, have had a disastrous experience—the current prices for frozen beef in the European markets being below the cost of placing it there. The Federal Government came to the assistance of the graziers with a subsidy, and other interests handling the meat have made concessions, but it would appear that, unless the market widens, the outlook is still unsettled. This was pointed out by the Federal Government when granting temporary assistance.

THE FRUIT INDUSTRY.

Government assistance has also been extended to the fruit industry, but here, again, it is said that the grading and packing leaves much to be desired, and this must be attended to if the industry is to prosper, as competition is very keen in overseas markets, and the production largely in excess of local requirements. It is understood that the Government will make heavy losses by guaranteeing advances against canned and pulped fruit, which is said to be to a large extent unmarketable. It does not seem to me that this kind of assistance is a real help to the industry; manifestly it cannot be continued on the same lines in fairness to the general taxpayer who has to foot the bill, and it would be better, therefore, that the fruitgrowers and canners should work out their own salvation like other traders. They should study improved methods of marketing and explore fresh outlets for their produce.

Cotton-growing has been commenced in the northern States with apparently fair results, but it cannot be regarded so far as fully established, and caution would seem desirable before embarking in the industry on a large scale. Immigration has come prominently to the front since the Imperial Government decided to actively assist, and a steady flow of new settlers is setting in. Provided that the immigrants are of the right class, and provided due preparation is made for them and they are not introduced in greater numbers than can be readily absorbed in suitable occupations, much good should result.

INDUSTRIAL METALS.

A considerable improvement has taken place lately in the price of industrial metals, notably tin, and work has been resumed in some quarters where it has been stopped for a considerable time. The Newcastle steel works have been reopened, but the expected all-round reduction in coal prices has not come about, and it may not be possible to continue operations. The high price of coal is a serious handicap to all industries, particularly where world competition has to be met.

During the half-year the building trade has been very active. There appears to be still a scarcity of dwelling-houses in the capital cities, while there is also a decided lack of warehouse and shop accommodation in these centres, and rents have been forced up to a high figure, with the natural corollary of high prices for freehold property. Whether these high prices can be maintained is doubtful, and I think the situation should be viewed with caution in case there may be a reaction. Owing to the introduction of fast electric trains and the extension of tramways, there has been a decided move of the population into the more distant suburbs, and residential sites are bought there with an avidity that brings to mind the land boom.

Several Government loans have been issued recently in London on favourable terms, and the Federal Government has recently issued a prospectus for a conversion loan to redeem the stock and debentures of the War Loan maturing on September 15th next, and as the terms offered are attractive, it will no doubt prove successful.

The appointment of an advisory board to assist the Minister in the administration of the Post Office is to be commended, and it is hoped will lead to greatly reduced charges. As I stated in my last remarks, the practice of using the Post Office as a taxing machine instead of giving users the maximum of convenience at a minimum cost cannot be too strongly deprecated.

DIVIDEND AND ALLOCATIONS.

Referring to the balance-sheet, you will observe that the figures show a healthy all-round progress, although there are no great alterations from six months ago—the business is sound and the profits satisfactory. Your directors recommend the usual dividend of 10 per cent., and the addition of £20,000 to the reserve fund, bringing it to the substantial amount of £520,000, which, I am sure, shareholders will be pleased to see.

The report and balance-sheet were adopted unanimously. Messrs A. MacNeil and A. E. Bright were re-elected to the directorate. The auditors, Messrs T. Kidd and L. A. Cleveland, were reappointed.

ELDER DEMPSTER AND COMPANY, LIMITED.
WEST AFRICAN TRADE—UDI COALFIELD.

The thirteenth ordinary general meeting of Elder Dempster and Co., Limited, was held, on the 12th instant, at 23, Billiter street, London, the Right Hon. Lord Kylsant, G.C.M.G. (chairman of the company), presiding.

The Chairman said: Gentlemen, the record of this company shows that our steamship services have always been carried on at very moderate rates of freight, and that the company has never earned large profits, either during the war or in times of peace. The shipping industry is not infrequently held to blame for various difficulties experienced by traders, for which, as a matter of fact, the shipowners are usually in no way responsible.

The accounts which are submitted to-day set out the position clearly, and justify the sound financial policy we have always pursued. After making provision for depreciation and taxation and paying the interest on the debenture stocks and the dividends on the preference shares, the directors are able to recommend the transfer of £50,000 to general reserve and the payment of a dividend on the ordinary shares of 7 per cent. for the year ended December 31, 1922. Our reserve accounts will thus amount to £1,375,000, while the ordinary, preference, and debenture capital and reserves total over £10,500,000.

With the object of keeping our fleet thoroughly up to date we recently placed a second new motor-passenger vessel, the "Adda," in our express service. The "Ediba"—our first motor cargo-boat—is also now running to and from West Africa. Both these motor vessels are giving satisfaction. The new steamer "Bompata" has taken her place in the West African service, in addition to three new steamers for our Canada-Cape trade.

Owing to continued disturbance in all markets, the trade of West Africa is still suffering from the universal depression in business. The natives, having become accustomed to the high prices of former years, are not so willing to accept the reduced local prices; but the reports from the Colonies generally as to the

volume of exports may, I think, be considered, under existing conditions, to be encouraging. Freight rates, which were reduced in March of last year, and again since the beginning of the present year, are in some cases actually lower to-day than they were in 1914, notwithstanding the fact that the cost of carrying on a steamship service with British vessels at the present time is still nearly double what it was in pre-war days.

UDI COALFIELD.

At Udi, Nigeria has a valuable coalfield of a very large area, which, if thrown open to development by private enterprise, would, in my opinion, do much to help forward the general progress of West Africa, but the coal in Nigeria is entirely owned by the Government, who also own the railway from the coalfield to the port of shipment.

Private colliery enterprise being, in fact, prohibited in Nigeria, Socialists (who, of course, object to private enterprise) no doubt consider this an ideal state of affairs. But what is the result of the present prohibition of private enterprise? The West African coalfield is practically undeveloped, for, although coal in Nigeria was discovered before the war, there is still only one colliery, consisting of three mines, now being worked.

I feel confident that if attention were drawn to this neglected opportunity of great development, this state of affairs would be quickly remedied, and private enterprise would not only be permitted, but welcomed and encouraged, as the present British Government is, I understand, desirous of doing all in its power to assure the development of all possible Empire resources, and to give the utmost scope to individual initiative, enterprise, and energy.

I cannot help comparing the relative stagnation which has taken place in this great State-owned Colonial coalfield with the enterprise and developments in the great British Dominions of Australia, South Africa, and Canada, where private enterprise in the development of the coalfields has not only been permitted, but encouraged. I venture to put one question—is the British Government going to open this great Colonial coalfield to private enterprise?

Your company has always been closely associated with many of the British Dominions and Colonies, and has throughout its 54 years of existence sought to develop trade and commerce within the Empire—a subject now much in the public eye.

In the West African Colonies, progress has been intimately bound up with the question of transport, and in order still further to promote development we have always designed our fleet of passenger and cargo-carrying vessels and subsidiary craft for the special requirements of the trade.

While the future depends largely upon the restoration of European affairs upon a sound basis, I think that when this is achieved we may look forward with confidence to the further development of the West African Colonies, which are richly endowed with products needed by the rest of the world.

The report and accounts were unanimously adopted.

FORESTAL LAND, TIMBER, AND RAILWAYS COMPANY, LIMITED.

LARGE REDUCTION IN COSTS—IMPROVED PROSPECTS.

The ordinary general meeting of the Forestal Land, Timber and Railways Company, Limited, was held, on the 14th instant, at River Plate House, Finsbury circus, London, Baron Emile B. d'Alanger, the chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, dealt with various changes in the administration which had taken place, as a result of which considerable economies had been effected. Dealing with the company's assets in Argentina, he recalled that until 1920 the company had been very extensive owners of ranches and cattle. In that year practically the whole of the company's cattle industry, land and herds had been sold for a sum of £2,500,000, payable by instalments. That sale had been followed by a very serious slump in the price of cattle and cattle land, and certain concessions had had to be granted to the buyers. Accordingly, it had been necessary to adjust the item representing the full profit on the sale in the reserve account. That had been reduced by the sum of £171,250, and £126,200, representing balance of profit on payments outstanding, had been transferred to suspense. Events had justified the wisdom of selling the land. The company still carried on a large cattle business to maintain the supply of working bullocks, and to feed the company's workmen. The company's primary business, however, still was the exploitation of Quebracho forests and extracting from the felled trees a tanning material called Quebracho extract. Up to the present timber had been derived from three sources, leased forests, the company's own forests, and purchases in the open market, but so far as they had endeavoured to save their own forests as much as possible. In the matter of transport they owned approximately 450 kilometres of narrow-gauge railway, and the whole of the

capital stock of the Ocampo Railway, a line of some 51 kilometres. For making Quebracho extract the company owned four factories in full working order, with a productive capacity of about 100,000 tons of extract per year. Besides those factories they owned the whole share capital of the Fontana Company, and, to sum up the Argentine position, the company's aim to-day was to reconquer the position which had been temporarily lost, of being the largest producer of extract in the Argentine, and also the cheapest producer compared with independent factories.

REDUCTION IN COSTS.

He was glad to be able to inform the shareholders that they had succeeded in reducing the all-in cost of extract by very nearly 50 per cent. of the cost to which it had risen during the past two years, and that they were at present able to sell their extract at a satisfactory profit. Outside the Argentine the company's heavy individual investment was in Natal, where they had £1,100,000, represented by three extract factories for wattle bark, various bark plantations, and stocks of extract and bark. They had entered into that proposition at an unpropitious time, having paid an excessive price for the assets acquired. The only course to follow was to face the position and write down the value of the investment, and the board had decided to withdraw from reserve a sum of £800,000 for that purpose. At present only one of the factories in Natal was operating, but the material was likely to be called upon ultimately by the force of circumstances to play an important part in the leather industry. The company also possessed the whole capital stock of the New York Tannin Corporation, and the intrinsic value of that investment was considerably higher than the book value. The investment in the Calder and Mersey Extract Company had already given a fair return, and he had no doubt would continue to yield satisfactory results. He was also satisfied that the company had secured full gold value for their investment in the share capital of the Renner Company of Hamburg. That company, and its allied company of Gebrüder Muller, were proving a source of direct and indirect profit to the Forestal, which fully justified the acquisition. He might also say that whereas formerly all sales of Quebracho extract and wood in Europe had been made in Hamburg, the whole of the company's production from the Argentine and Africa was now sold by the London office, and it was also from the central office that all shipping arrangements were made.

PROSPECTS.

Generally he would say that he entertained strong hopes that as far as the company's producing centres were concerned, everything was now moving in the right direction towards economical and full capacity production at a profit. With anything like a revival in the leather industry, with a settlement of the reparation crisis, and with even the mere shadow of a return in Russia to normal conditions, the demand for tanning extracts should be great, and present prices not only maintained, but slightly increased. So far, they had disposed of between 60 and 70 per cent. of the current year's production at a profit, and he was in hopes that when next they met the board would be in a position to declare a reasonable dividend on the ordinary shares.

The report and accounts were unanimously adopted.

BRITISH ELECTRIC TRACTION COMPANY, LIMITED.
IMPROVED RESULTS—5 PER CENT. DIVIDEND.

The twenty-seventh ordinary general meeting of the British Electric Traction Company, Limited, was held, on the 15th instant, at the Holborn Restaurant, London.

Mr J. S. Austen, chairman of the company presided, and, in moving the adoption of the report and accounts, said that during the past year the company had done a little better than in the previous year, and the directors were able to recommend the payment of a dividend of 5 per cent., the first distribution at that rate for some years. During the year they had redeemed £60,000 of their debenture stock, and the discount on that, amounting to £11,000, had been applied to reducing the value of their securities. In addition to that they had realised a considerable profit—about £70,000—from sales of securities, and that had also been applied to the reduction of stocks.

With regard to the companies the management of which was in their hands, in the tramway and omnibus undertakings the receipts in 1922 had been adversely affected by the general trade depression, unfavourable weather, reduced railway fares, the engineers' lock-out, competition, and some reduction in fares, and against all that they had to set only a reduction in expenses. In the result their profits were about 20 per cent. below those of the previous year, and on the whole he was quite satisfied with that result.

With regard to their electricity supply undertakings, the trade depression in the early months of the year had caused a diminished demand for electricity, but the demand had increased during the latter part of the year, so that in the result more units

were sold than in 1921, but at a lower average price. An interesting feature was the improvement which had taken place in the small electric lighting undertakings, of which they owned a fair number. In pre-war times those companies had been strangled by the low rates which they were obliged to charge. They were now allowed to charge fair prices, and the result was that they were earning a moderate return on the capital invested in them, and a curious result of that increase of prices was that more units had been sold. It really was not unfair to say that the increased charges had conferred a benefit both on the companies and on the public. The companies had been enabled to develop their business, and as a result a great many people were now supplied with electricity who had been deprived of it previously.

Taking their federated companies—those which they managed—as a whole, there was at the moment no visible reason why the present year should not show an improvement on the past. With regard to the tramway and omnibus companies, during the first three months of the year the results, compared with those of the corresponding period of 1922, showed a substantial increase in all sections. That indicated that the results for the whole year should be better than those of the previous year.

The report and accounts were unanimously adopted.

UNION CORPORATION, LIMITED.

INCREASED PROFIT—REDUCED WORKING COSTS.

The annual meeting of the Union Corporation, Limited, was held at Johannesburg on May 17th, Mr P. M. Anderson presiding.

The Chairman, in the course of his remarks, said: In comparing our profit and loss accounts for 1921 and 1922 note should be taken of the fact that in the former year we wrote off amounts from both sides of the account, while in the latter we wrote off from the revenue side only. Allowing for this, you will see that our gross profit rose from £237,561 to £284,412, or by 20 per cent.; our expenses fell from £58,044 to £42,288, or by 27 per cent.; and our net profit advanced from £179,517 to £242,124, or by 35 per cent. After making the same addition of £30,000 to reserve, we have paid two dividends, totalling 3s per share, or £210,000 for the year, an increase of 50 per cent., and we have carried forward £79,996 to new account, as against £77,872 brought in. This result is very satisfactory, and in some respects constitutes a record. We have secured a large holding in the San Francisco Mines of Mexico, Limited, and a first dividend on that holding should be declared at the end of this year. All being well, we expect an appreciable revenue from this source.

As regards the balance-sheet, the liabilities at £948,866 compare with £1,097,299 at the end of 1921, and cash assets and sundry debtors at £1,078,748 compare with £1,237,775, the excess over liabilities being £129,882, against £140,475. Omitting sundry debtors, our cash assets total £850,350, or practically 90 per cent. of our total liabilities, so that our financial position is strong. Though in the annual report we merely repeat last year's remark that at present market prices our shareholdings, &c., show a very substantial surplus over the amount at which they stand in the balance-sheet, I may mention that during 1922 there was a large increase in this surplus.

The operations of all mines on the Rand were seriously interfered with by the miners' strike. On the resumption after the strike, however, new conditions came into force, which is reflected in a substantial decrease in the average working costs of the whole Rand from 25s 8d per ton in 1921 to 21s 2d in 1922 and 20s 8d in March, 1923. As regards the San Francisco Mines of Mexico, we have every reason to be satisfied. The substantial rise in the market price of the shares which took place recently has led to the whole of the debentures being converted into shares, while the other indebtedness has also been liquidated. The March return showed an operating profit at the rate of £200,000 per annum, and, by reason of favourable prices received for the newly-produced zinc concentrates and the doubling of the present rate of production, which should be fully achieved by the autumn, the profits should be further materially enhanced.

The report and accounts were adopted.

THE MODDERFONTEIN DEEP LEVELS, LIMITED.

(REGISTERED UNDER THE LIMITED LIABILITY LAWS OF THE TRANSVAAL.)

RESULTS OF A DIFFICULT YEAR.

The twenty-second ordinary general meeting of shareholders of the Modderfontein Deep Levels, Limited, was held in Johannesburg, on Tuesday, May 15, 1923.

Mr P. M. Anderson (chairman of the company) presided, and in the course of his remarks said that in submitting the reports and accounts for the year it is usual to make comparisons with the working results obtained during the preceding year. When

the scale of operations is similar for the two periods such a comparison affords an easy means of detecting the variations in detail which contribute to any alterations in the dividend distributed to shareholders. On this occasion it is necessary to look more closely into the position and, in order that the results may be viewed in their proper perspective, I will here mention the unfavourable and favourable factors which contributed thereto. There were three of each, and the latter negated about two-thirds of the effect of the former.

UNFAVOURABLE FACTORS.

The unfavourable factors were:—Firstly, the general strike of European mine workmen on the Rand, which resulted in the closing of our mine for rather more than two months; secondly, the accident to the rock-hoisting engine, which prevented the hoisting of ore for a further seven weeks; and lastly, the serious fall of 13s 5d per ounce in the average selling price of gold. This last factor alone would more than account for the decrease in the dividend. The premium on gold last year was £84,517, as against £287,290 in the preceding year. But the effect of the first two factors was even greater, as they entailed a loss in hoisting time of nearly four months, with a consequent reduction in ore stoped of nearly 200,000 tons, or one-third of the 1921 total.

FAVOURABLE FACTORS.

The favourable factors which I would place before you were:—In the first place, the existence on the surface of the dump of ore containing some 175,000 tons, of which 102,000 tons were used during the period that the hoisting engine was out of commission, and for a short period during the strike. The second item on the bright side of the picture is the reduction in provincial taxation of nearly £33,000, due to the abolition of the Provincial Gold Profits Tax Ordinance, 1918, and the substitution thereof of the Employers' Tax Ordinance, 1922. The last favourable feature, and the one to which I would particularly draw your attention, is a reduction of 3s per ton in the working costs, not only because of its effect on last year's profits, but also because of its influence on future dividends.

YEAR'S PROFITS.

On reference to the reports and accounts before you, you will see that the year's operations resulted in a total profit of £693,113, or nearly £240,000 less than for the previous year. After providing £38,040 to meet expenditure in connection with the strike and £94,192 for taxation, as well as £3,050 for charitable donations and depreciations, the balance of £557,831 was carried to appropriation account.

Two dividends, totalling 120 per cent. on the capital of the company, were declared for the year, and an amount of £6,463 was appropriated for expenses in connection with the purchase of ex-enemy shares. The unappropriated balance at the end of the year was £129,824, being £49,632 less than the amount brought forward from the previous year's account. You will agree, I feel sure, that this reduction is entirely justified in view of the company's strong financial position, more especially as most of it was to meet abnormal expenditure in connection with the strike and the purchase of ex-enemy shares.

DEVELOPMENT WORK.

With regard to the development of the mine, you will see from the technical reports that, although the footage advanced shows a substantial reduction due to interruptions on account of the strike and the accident to the hoisting engine, the tonnage of developed ore reserves is substantially greater at 4,800,000 tons, valued at 9.3 dwts over an estimated stoping width of 76 inches. The value is the same as in the previous year, but the width is one inch less. In view of the large ore reserves which stand in the balance-sheet at 9d per ton, it is unnecessary to spend money on further increasing them. Therefore on the recommendation of the consulting engineer the rate of development work has been reduced from the ore reserve position. The charge of working costs has also been reduced from 1s 6d to 1s per ton milled, which is sufficient to cover current expenditure.

As pointed out by the consulting engineer, a certain amount of development is being done in exploring areas at present believed to be low-grade. This fact, coupled with the reduced footage, may lead to erratic results as to percentage payable and the value of development as published in the quarterly reports.

CURRENT YEAR.

As regards the current year's operations, which have resulted in a gross profit of about £250,000 for the past four months, there are no outstanding features except for a further fall of about 3s 6d per oz. in the price of gold and a further reduction in working costs of 1s 3d per ton milled. This latter feature is, as I have already mentioned, most gratifying.

The report and accounts were adopted.

GEDULD PROPRIETARY MINES, LIMITED.

(REGISTERED UNDER THE LIMITED LIABILITY LAWS OF THE TRANSVAAL.)

SATISFACTORY RESULTS OF A DIFFICULT YEAR.

The twenty-second ordinary general meeting of shareholders in the Geduld Proprietary Mines, Limited, was held in Johannesburg, on Tuesday, May 15, 1923.

Mr P. M. Anderson (chairman of the company) presided, and in the course of his remarks said that an increase of nearly a shilling per ton in the yield, taking gold at its standard value, and a decrease of about 3s 2d per ton in the working expenses, are the features of the past year's operations revealed by the reports and accounts in your hands. Under ordinary circumstances such results would have produced a considerable increase in the working profit, but unfortunately the benefits were more than offset by the falling price of gold and the loss of tonnage during the strike period. The net premium obtained totalled only £57,777, as against £196,650 for the previous year, part of this decrease of £138,873 being, of course, due to the lower tonnage treated. The loss of mill tonnage due to the strike is estimated at 87,500 tons, and despite greatly improved efficiency all round since the resumption of operations, it has not been possible to reduce this by more than 10,400 tons, leaving a net deficiency of 77,100 tons as compared with the previous year.

YEAR'S PROFIT AND ALLOCATIONS.

The total profit for the year was £322,625, or £63,500 less than in 1921. This represents a drop of 4½d per ton milled, which must, I think, be considered highly satisfactory, bearing in mind that the gold premium fell to the extent of 4s 0½d per ton milled. On referring to the directors' report you will note that, out of the profit of £322,625, provision had to be made for the following charges:—Expenses during the strike period £53,757; taxation, £32,780; expenditure on development in excess of the amount charged to working costs, £16,125; expenses in connection with the purchase of ex-enemy shares, £10,633; and sundry smaller items the total amount appropriated being £118,065.

Two dividends, totalling 16½ per cent. were declared, and the appropriation account balance carried forward to this year was £118,219.

CAPITAL EXPENDITURE.

The expenditure on capital account during the year totalled £187,192, and the balance of working capital available at the end of the year was £149,673. You are no doubt aware that the capital expenditure programme is nearing completion, and it will be gratifying to you to know that the funds in hand for this purpose are sufficient.

The ore reserves as re-measured at the end of the year amounted to 3,800,000 tons valued at 8.1 dwts over a stoping width of 63 inches, and, in addition, your consulting engineer estimates that there were developed in the mine at the same date a further 2½ million tons payable but low-grade ore valued at 4½ dwts over a stoping width of 62 inches. The total available tonnage is therefore 6,300,000 valued at 6.6 dwts.

REDUCTION PLANT.

Although all details are not yet completed, the enlarged reduction plant was put in commission three weeks ago, and is running satisfactorily. As you are aware, the capacity was estimated at 65,000 tons per month, but, though it is too soon to prophesy, it would not surprise me if this figure were exceeded by at least 5 per cent. in two or three months' time without impairing the extraction aimed at. The enlarged reduction plant is more in keeping with the area of the property, and the increased scale of operations should lead to a material further decrease in working costs. Furthermore, serious capital expenditure is at an end, for the time being, at any rate; consequently shareholders may look forward to a substantial advance in the dividend-earning capacity of the mine.

As regards the working results during the current year, up to the end of last month 186,500 tons has been milled, yielding an estimated gross profit of £122,000. The yield at standard value improved 7d per ton milled owing to an increased proportion of ore being drawn from the No. 7 shaft area, which, however, is not yet supplying its full quota. Working costs at 20s 4d per ton milled give a figure slightly below that of 1922. The total development footage was 8,137, of which 5,250 feet were sampled and showed an estimated payability of 1,905 feet, for which the value was 559 inch dwts, or rather better than the ore reserves.

The report and accounts were adopted.

PREMIER OIL COMPANY, LIMITED.

REDUCTION OF CAPITAL APPROVED.

The adjourned second ordinary general meeting was held, on the 11th inst., at River Plate House, London, Mr R. Sewell, C.A., F.F.A., chairman of the company, presiding.

The Chairman, after referring to the accounts, said that with regard to the position in Poland, the report of M. Vilter, the general manager, which was before the shareholders, afforded evidence of satisfactory progress under circumstances of very considerable difficulty. The most important feature, perhaps, of that report was the erection of a central power station and the electrification of many of the wells, which had resulted in an important saving of crude oil and a proportionate increase in the amount of oil available for the companies. The actual increase in gross production was comparatively small, and of the oil treated by the company's refineries about 35 per cent. was the company's own and 65 per cent. was purchased from outside sources. Every effort was being made to speed up the rate of drilling at Rypne and Borislav, and the experiment was being made of instituting rotary drills, which, of course, worked much more quickly than percussion drills.

He was not going to make any prediction with regard to the Indo-Burma Oilfields. What he could say, emphatically, was that the position to-day was a very interesting and hopeful one. On the large area of ground controlled by that company work had been practically confined during the last 18 months to two points—Padaukpin and Yenamma—and the fact that over 12,000 tons of oil had been produced since work was started last year was most encouraging. The developments during the next six months would be of great interest and importance.

The Chairman then dealt briefly with the subject of the proposed reduction of capital. He thought that to-day shareholders were agreed that the capital should be reduced from its present unwieldy proportions to a figure representing more truly the value of the company's assets.

The scheme was simplicity itself. Shareholders would receive 1s per share and have their shares reduced from 15s to 4s. The return of 1s per share would absorb £213,178 2s, a sum which could be met out of the cash and liquid resources of the company without involving any forced realisation of assets.

As to future policy, it was the intention of the board ultimately to effect a further reduction of capital to 2s 6d per share, and to make an additional cash distribution of 1s 6d per share as and when this was practicable.

The report was adopted, and at an extraordinary general meeting held to consider the proposed reduction of capital, the resolution was unanimously agreed to.

LOUISE AND CO., LIMITED.

"FINANCIAL STANDING BETTER THAN EVER."

The 28th annual general meeting of Louise and Co., Limited, was held, on the 11th instant, at Winchester House, London, Mr Edgar Cohen (the chairman) presiding.

The secretary (Mr Charles Beavis) read the notice convening the meeting and the report of the auditors.

The Chairman pointed out that the loan from bankers had been reduced by £10,000 and now stood at £35,000. Leasehold

(d) Repayment of capital, 100 francs net per share.

ASSAM RAILWAYS AND TRADING.—The Assam Railways and Trading Company has declared dividends on "A" stock at rate of 8 per cent. per annum, payable June 22nd, for half year ended Dec. 31st; on pre-preference "A" shares at rate of 8 per cent. per annum, payable July 4th, for half year ended June 30th; and on new 6 per cent. preference shares at rate of 6 per cent. per annum, payable July 4th, for half year ended June 30th.

BURMA CORPORATION.—During the month of May 18,626 tons of ore were mined; 21,720 tons of ore were milled in the treatment plant, producing 11,096 tons of lead concentrate; 11,574 tons of lead-bearing material were smelted in the blast furnaces, producing 4,070 tons hard lead for treatment in the refinery. Refinery products were 5,644 tons refined lead and 380,332 ozs refined silver. Tonnage milled includes re-treatment 2,019 tons tailings.

KNIGHT CENTRAL, LIMITED (in liquidation).—A first liquidation distribution of 3s 6d per share will be paid, as from July 19, 1923, against surrender of scrip.

RANSOMES, SIMS, AND JEFFERIES.—Net profit of Ransomes, Sims, and Jefferies for year ended March 31, 1923, after making provision for depreciation, bad and doubtful debts, and interest on debenture stock and deposits, was £5,895, plus £42,059 brought in, making £47,954. Report states that during year trade conditions both at home and abroad have continued to be unfavourable, and it has been necessary to transfer £70,000 from general reserve to meet further fall in value of stock-in-trade. Directors regret that they are unable to recommend dividend on ordinary shares or on preference shares for 18 months ended December 31, 1922. Stocks of manufacturing goods and raw materials have been valued at or under cost.

UNION TURNER BROS.—The directors have decided to postpone the payment of the dividend on the second cumulative preference shares until the result of working for the current six months is before them. The dividend on the first cumulative preference shares for the half year to June 30, 1923, will be paid on July 6th.

BURMA CORPORATION.—May—Mined 18,626 tons of ore; 21,720 tons of ore were milled, producing 11,096 tons of lead concentrate; 11,574 tons of lead-bearing material were smelted, producing 4,070 tons hard lead for treatment in the refinery. Refinery products were 5,644 tons refined lead and 380,332 ozs refined silver. Tonnage milled includes re-treatment 2,019 tons tailings. [April, 2,631 tons, 367,531 ozs.]
 ELECTROLYTIC ZINC.—Production during four-weekly period ended May 30th:—containing lead 575 tons, silver 80,000 ozs.
 SAN FRANCISCO MINES OF MEXICO.—May—Ore treated, 7,500 tons; lead concentrate smelter return on lead, \$90,337 U.S. currency; estimated net smelter return on

zinc, \$54,020; total net smelter return, \$144,367; operating expenses, \$45,762; estimated operating profit, \$98,595; capital expenditure (including development), \$10,246. (London office note.—The zinc return includes correction for under estimates on the earlier shipments.) [April profit, \$79,470.]

THE BROKEN HILL PROPRIETARY.—Report for four weeks ending May 23, 1923:—Iron and Steel Works.—Coke ovens produced 22,440 tons of coke; No. 2 blast furnace produced 18,439 tons; No. 3 blast furnace produced 17,450 tons; rail mill produced 11,750 tons; 18-inch mill produced 3,173 tons; 12-inch mill produced, 1,585 tons; 8-inch mill produced 1,694 tons. Rod mill—Resumed operations May 1st, produced 1,731 tons. Steel foundry produced 356 tons of castings. Iron Knob—Shipped 32,641 tons. Broken Hill (Underground)—Position unchanged. Ore Dressing Mills—Produced 207 tons of lead concentrates and 4,128 tons of slimes. Zinc Separation Plant—Produced 1,495 tons of zinc concentrates. Slimes Flotation Plant—Produced 2,015 tons of lead concentrates and 4,968 tons of zinc concentrates. UTAH COPPER.—From report for quarter ended March 31st:—Ore shipped, 1,945,668 tons; ore treated, 1,774,700 dry tons, averaging 1.17 per cent. copper; recovery, 83 per cent.; produced 34,489,073 lbs copper gross and 33,103,190 lbs net; average cost, \$825 cents per lb; net profit from copper production, \$1,797,521; add miscellaneous income, \$443,590; total income for quarter, \$2,241,111.
 ZINC CORPORATION.—May.—Mining department—Lead concentrator treated 15,432 tons of ore, producing 3,176 tons of lead concentrates, assaying 64.7 per cent. lead and 6,580 tons of zinc middlings.

Reports and Notices.

Mr. Henry Alexander Trotter, on relinquishing the position of Deputy-Governor of the Bank of England, has rejoined the Board of the Cordoba Light, Power, and Traction Company, Limited.

We are officially informed that arrangements have been made whereby as from July 1st next the London Assurance will act as underwriters for the acceptance of marine insurance for the Automobile Insurance Company, of Hartford, Connecticut. The latter company is one of the affiliated companies of the Aetna Life Group, which comprises the Aetna Life Insurance Company, the Aetna Casualty and Surety Company, and the Automobile Insurance Company.

The Rt. Hon. the Earl of Stair, D.S.O., has been elected vice-president; Sir Henry P. Maybury, K.C.M.G., an extra-ordinary director; and Sir H. Arthur Rose, D.S.O., an ordinary director of the Scottish Equitable Life Assurance Society.

The Right Hon. Viscount FitzAlan of Derwent, P.C., G.C.V.O., Deputy Earl Marshal, has joined the board of directors of the London and Lancashire Insurance Company, Limited.

We are informed that the entire share capital of the Washington Coal Company, Limited, of Sunderland, has been acquired by Wm. France Fenwick and Co., Limited, of London. On and after July 1st, France Fenwick Tynes and Wear Company, Limited, of Mercantile Chambers, Newcastle-on-Tyne, will be the fitters of the colliery, and the registered office of the Washington Coal Company, Limited, will be at that address.

Messrs. Leathwait and Simmonds, the well-known advertising and newspaper agents, will on June 23rd remove from 5, Birchin lane to more commodious and up-to-date premises at 34, Throgmorton street.

GOVERNMENT STOCKS, &c.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £17,563 is 6d, being the moiety of the balance of the debt service payable to the council in respect of the half-year ending June 30, 1923.

BANKS.

(1) Accounts for two years.

confirm the good promise of the wheat crop, which is undoubtedly the best of the year, but the area under cultivation is estimated to be slightly under last season. Steady conditions prevailed at market, with prices slightly firmer in some cases, but general course of trade marked no appreciable expansion. Native wheat continues in short supply, and late rates were maintained. Best milling samples quoted up to 11s 3d, and inferior 10s 2d to 10s 6d per 112 lbs, free on rail, as to sample. Imported qualities were rather more firmly held, owing to firm forward offers. No. 1 Northern Manitoba, ex ship, quoted at 50s 9d to 51s 3d, Rosaf 6½ lbs 49s 6d, Barusso 6½ lbs 48s 9d, and choice white Karachi 50s 6d, all ex ship, per 496 lbs. There was more inquiry for floating and forward cargoes, and general stability governed the market. Steamers of Pacific August-September sold at 46s, choice white Karachi June 46s 3d to 47s, Rosaf 6½ lbs, expected to load 25th inst., 46s, ditto afloat 46s 7½d, and Barusso 6½ lbs on passage 45s 3d. Of maize cargoes, Plate (in bags) August-September sold to Antwerp at 35s 6d, ditto afloat 35s 9d, June 20th loading 35s 6d, July 10th 35s 4½d, and No. 6 yellow African expected to load at end of June at 34s 1½d, all per 480 lbs. North American stocks of wheat continue to decrease rather sharply, but floating supplies are on a larger scale both to this country and Continent. Crop reports from the principal exporting countries remain favourable, and larger acreages are mentioned in Australia and Argentina. Flour, home-milled, steady but quiet. London standard straight run quoted at 40s, patents 42s-43s, town households 38s per sack delivered in Metropolitan area. All English country straights 34s-35s per sack delivered to London stations. Imported, dull and tendency easier. Manitoba patents range from 35s 6d-39s 6d, Minneapolis good patents 30s, Australian 36s-37s per 280 lbs, ex store. Millers' offals, dull. Broad bran quoted 6s 6d, ordinary ditto 5s-5s 6d, middlings 7s 3d-7s 6d, bags included ex mill, light oats 5s 9d, powdered oat husks 5s 9d, feed oatmeal 7s 9d, ground oats 13s 3d, all per cwt, free on rail. Barley, English, steady at 8s-11s as to sample, with malting kinds 10s-12s per 112 lbs, free on rail. Imported, dull. Californian 42s-45s 6d, Australian chevalier 40s-48s, New Zealand 35s-45s as to sample, all landed, per 448 lbs. Persian 26s 3d, Karachi 28s 3d, Danubian 29s, Plate 27s 6d, No. 4 Canadian Western 27s 6d, American malting 48 lbs 27s 6d all landed per 400 lbs. Maize steady. Plate new ex ship 38s, landed 42s. East African landed 37s 6d per 480 lbs. Oats, English, firm at 8s 2d-10s 4d per 112 lbs, free on rail, as to sample. Imported, dearer. Plate f.a.q., ex ship, 22s 9d, landed

23s 9d, No. 1 Canadian feed landed 26s 9d, No. 2 ditto, ex ship, 25s 3d, landed 26s 3d, No. 2 Canadian Western, ex ship, 27s 9d, landed 28s 9d, No. 3 ditto landed 27s 3d, New Zealand A grade 38s 6d, B grade 37s 6d, both landed, all per 320 lbs. Oatmeal, steady. London-made all cuts quoted at 18s, rolled oats, also whole groats 18s, flaked oats 20s 6d, ex-mill, ordinary Scottish oatmeal 19s 6d-20s 6d, American all cuts 17s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated June 14th, is as follows:—Pig-iron: The absence of buying is very disconcerting to our pig-iron makers, who are now obliged to stock part of their output and hope that ere long there may be a revival. A little business has been done at the last price of 117s 6d for No. 3 Cleveland G.M.B. East Coast hematite mixed numbers is at the same figure. Manufactured iron and steel: The strike of the boilermakers is still interfering seriously with work at the rolling mills, and the shipbuilding demand is quiet. Steel ship plates, 10 to 10s; steel ship angles, 10 to 10s; iron bars, 12 to 12s; steel rails, 10 to 10s. Iron ore: Business is extremely quiet, and the price of best Bilbao Rubio ore is practically nominal at 24s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—Stagnation is general throughout the iron and steel trades of the district, as buyers, although beginning to want material, regard the outlook as too uncertain to justify them coming on the market. Inquiries are numerous. Makers are dropping their prices somewhat to tempt business, and are getting some relief in costs of production by cheaper pig-iron and scrap. Soft basic billets have been reduced to 18s 1s, and prices are being cut for other semi-manufactured steel. Makers declare that current quotations are unremunerative.

owing to the high prices of fuel and railway carriage, but they are encountering a revival of Continental competition. Developments in the Ruhr have added to the uncertainty of the situation, and is further holding back buying. A good deal of price cutting is taking place in various classes of material. The coal trade is weaker in several branches owing to a decline in exports, but prices are being firmly held at home, and some large users have contracted for supplies to the end of the year. Current quotations per ton at pits are: Best South Yorkshire hards, 22s to 24s; rough slacks, 12s to 14s; smalls, 7s to 9s; best hand-picked branch, 32s 6d to 34s; best Blyth steams, 27s 6d to 28s 6d; ditto Tynes, 28s to 30s.

Our Glasgow correspondent writes:—Dealings this week have been recorded in Scotch hematite at £6 3s 9d, in No. 1 foundry at £5 18s 9d, and in No. 3 foundry at £5 13s 9d—drops, in each case, from last week, of 1s 3d per ton. The steel trade lacks stability, chiefly because of the tribulations in the boiler-making trade. These have completely demoralised construction in some departments. But still, in the circumstances, there is a good deal of smelting proceeding, and the hope is entertained that by the end of the month the totals turned out will bear favourable comparison with recent results. It is rumoured that one or two steel-makers have made moderate breaks in their prices. This is doubtful. But there is no question as to consumers pressing for concessions backing up their claims because of the lower terms now ruling for coals. The standard rates, therefore, may be taken as still near to £13 for boiler plates, £10 5s for ship plates, £10 for heavy rails, £12 10s for steel hoops, £10 for channels, £10 5s for joists, £15 for black sheets 24 g., £13 10s for 18 b.g. to 20 b.g. Export quotations for same are 20s to 25s lower. Malleable iron and steel bars are in very poor request, with crown sorts offering at £12 10s a ton. Bridge-builders are busy on export contracts, and the same applies to bolt, nut, and rivet makers, steel tube makers, wire rope makers, nail makers, and light forgers. Demand for large and small coals, for both home and export, is quieter than it has been for a season, and values are on the decline. They have lost ground by from 5s to 6s a ton in recent months, and the value of the reaction can be appreciated when

OVERSEAS TRADE RETURNS.

SUGAR.—British refined sold steadily at late decline. Messrs

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

had additional support in expectation of a tight squeeze next week at the turn of the half-year. Even forward business in bills to be delivered in July was not reported below 2 per cent. Yesterday money appeared to be very plentiful, but discount rates were kept steady by the result of the Treasury Bill allotments.

	June 22, 1923.	June 15, 1923.	June 8, 1923.	June 1, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount (Call)	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notices)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills) ..	2½	2½	2	1½	..

The Bank return showed an increase of £362,000 in the Reserve, almost entirely due to the return of notes from circulation. Other securities expanded by 3 millions, but Government securities declined by rather less than a million. There was thus a net increase of nearly 2½ millions in the deposits, Public being 6 millions higher, while Other declined by 3½ millions. Currency Notes outstanding were reduced this week by £1,486,200 to £286,458,100, which includes £1,472,500 for notes called in, but not yet cancelled. The fiduciary issue is £235,535,600, or £34,648,200 below the maximum.

STOCK MARKETS.

The stock markets generally have been more depressed than for some time past, owing in large measure to international political conditions. Financial failures in America have also contributed to the heaviness of prices. The gilt-edged market has been dull, and some of the premiums recently established on new Colonial issues have dwindled. There was much activity in the scrip of the new Austrian loan, the highest point touched being 7 premium. Interest in Home Rails is lacking, and prices have dwindled. Rubber and oil shares have been dull, but shipping, insurance, and banking shares remain fairly steady, while electric lighting descriptions maintain their prices. The announcement of a further batch of satisfactory Kaffir dividends has failed to stimulate the market, and other mining markets are stagnant.

THE COMMODITY MARKETS

Sagging prices and little business is the keynote of the majority of reports from industrial centres and commodity markets. Sugar has led the way with a sharp fall, and wheat prices are lower following a similar movement in America. Lower prices for vegetable oils and seeds have produced a little more business in the home market, but the export side is quiet. The leather and hide markets are weak, and a further slight fall has occurred in rubber, in which business is on a very limited scale. Business in the Manchester cotton trade has been unsettled by the wide fluctuations in raw cotton rates, the upward movement being followed by an easier tendency. Amongst fibres, Manila hemp hardened on account of smaller deliveries. The wool trade is faced with the anomaly of wool selling at good prices, while tops and yarns cannot be sold to cover costs of production. The continuous fall in coal values in South Wales has at last been checked. Our Sheffield correspondent mentions that although the export trade for fuel is so dull it has not benefited home consumers, coke prices being actually harder. Pig-iron prices are still sagging, and no forward contracts are being placed; the market for steel continues quiet.

FOREIGN EXCHANGES.

In the foreign exchange market the week has again been one of uncertainty, with little business and fluctuating exchanges. In view of the general depression, the dollar rate has been satisfactorily firm, and at \$4.61½ yesterday morning is about ½c higher than last week, although it has fallen back again from the figure of \$4.62½ reached on Tuesday. Forward rates at ½c per month above spot are very slightly narrower than a week

ago. In the early part of the week the mark continued rapidly to degenerate, under the influence mainly of German selling, and on Monday at one time was as high as 740,000. Afterwards there was a recovery to about 560,000 on Wednesday, since when it has been in a torpid state round about 630,000. It is reported that a new attempt is to be made by the German Government to stop this rot, although it is by no means clear what effective measures they can undertake. Forward rates are quoted nominally at 60,000 per month above spot. The dependence of Warsaw on the German mark has been shown again by a rapid rise to 600,000 on the 20th, when it was announced that the Finance Minister had prohibited exchange dealings and had requested the banks to hand over their supplies of foreign currency. Since then the rate in London has been quoted at about 500,000. The Paris rate has been extremely uncertain, moving from 72.75 on Friday last up to 75 on Monday, after which it fell back to 73.75 on Wednesday, to rise again to 74.85 by yesterday morning. Apart from the effect of the German collapse and a growing uncertainty as to the success of France's action, the Budget position continues to give uneasiness, and there is a general expectation that the autumn demand for raw material imports will press heavily upon the exchange, while rapidly rising prices in France itself are making it increasingly difficult to export at present levels. Brussels, as usual, has moved in close sympathy, and now stands at 87.80, as compared with 84.65 a week ago. Forward rates in Paris have narrowed ½c to 4½c per month over spot; in Brussels they have widened slightly to 1c below. The lira has been also affected, although to a smaller extent, by this general fall in values, and has risen over the week from 99.60 to 101½. Among neutral exchanges, Amsterdam, after being up to 11.79 under the influence of the Dutch India loan in London, is back at 11.77½, some ½ higher than last week. Switzerland, at 25.71, is 2 centimes higher than the 15th; Madrid, after some fluctuations, is 31.10½, as compared with 31.09. In Scandinavia, Copenhagen, after moving higher, is down again to 25.77½, which, however, is still well above the 25.66 quoted on the 15th. Stockholm, at 17.41½, maintains its parity with the dollar; Christiania, at 27.77½, is 7½ points above last week. In Central Europe, the Vienna rate is still wisely maintained at the rate of 325,000. Prague, at 154½, is much the same, Belgrade shows some improvement, but Bucharest is depreciating again. In the East the rupee is ½d cheaper at 1s 4 3/32d, and Yokohama has depreciated slightly to 2s 1 1/8d. The silver market has been quiet, but bear covering and the absence of immediate stocks has kept the price steady. Hong Kong is ½d cheaper at 2s 3 1/4d, Shanghai 1d lower at 3s 2d. In South America, Rio is ½d dearer at 5½d, Buenos Ayres ½d cheaper at 42½d. Monte Video is slightly lower at 42½d, and Valparaiso has fallen back again from 34 to 33.70 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 16th:—

EXPENDITURE.	Min. £	REVENUE.	Min. £
Supply Services	3,860	From Revenue	13,361
Sundries	381	Amount Borrowed	7,951
Interest, &c., on War Debt	16,971		
Increase in Balances	100		
	21,312		21,312

Interest on War Debt continues to be the most remarkable item in the Revenue returns. This week nearly £17 millions goes out on account of the first American Debt payment out of a total expenditure of approximately £21½ millions. Revenue provided about £13½ millions, to which Customs contributed £1,855,000 as against £1,892,000 for the corresponding period last year, while Excise yielded £2,023,000 as compared with £5,937,000. Property, Income and Super Taxes brought in £23,190,000, while under Miscellaneous £2,993,700 came into the accounts. The week's operations increased the National Debt by £7,950,975, and caused the following changes:—

	Min. £		Min. £
Bank of England Advances	4,000	National Savings Certificates	500
Treasury Bills	4,534	Public Department Advances	14,480
		Treasury Bonds	1,430
		Sundries	75
	8,534		+ 16,485

The floating debt was increased by £5,935,000 to £822,325,500.

FINANCIAL YEAR, 1923-24 (April 1 to June 16, 1923).

	£		£
Total Expenditure ..	188,291,073	Raised by Revenue ..	158,775,689
		Net Borrowings	26,441,686
		Decrease in Balances ..	3,073,698
Total	188,291,073	Total	188,291,073
ESTIMATES FOR YEAR 1923-24.			
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

The Week in Parliament.—Two days of House of Commons time have again been given to the Committee stage of the Finance Bill. Certain concessions relating to the revaluation of house property were made, otherwise the Finance Bill is passing without material change. Wednesday was occupied with the Committee stage of the Housing Bill, and on Thursday Mr Adamson's Bill to amend the Coal Mines Minimum Wage Act was defeated after a second reading debate. Yesterday the Commons discussed the Universities of Oxford and Cambridge Bill. The House of Lords discussed food supply in war, and financial relations with the Irish Free State.

Company Meetings of the Week.—On later pages of this issue will be found reports of the meetings of the following companies:—Suez Canal Company, Anglo-Argentine Tramways Company, Crown Mines, City Deep, J. Lyons and Co., Channel Tunnel, Antofagasta (Chile) and Bolivia Railway, Molassine Company, Tamplin and Son's Brewery, Madras Electric Supply, and Oroville Dredging Company. At the meeting of the Anglo-Argentine Tramways Sir George Touche had much to say on the action of the Buenos Aires Municipality on the question of fares. Mr Samuel Evans, at the meeting of Crown Mines, Limited, put forth lengthy arguments in favour of a return to the gold standard. At the meeting of J. Lyons and Co., the chairman explained the reasons for a new issue of 7 per cent. preference shares to be made to shareholders only. Baron d'Erlanger, at the Channel Tunnel meeting, was still optimistic as to the ultimate accomplishment of the scheme.

EUROPE'S SUSPENSE.

HAD we been living in a more superstitious age we might have been inclined to regard the eruption of Mount Etna as a portent or an omen. For days the streams of lava belched forth from new fissures in the mountain, steadily swallowed up the fertile country-side and threatened to engulf one after another of the flourishing little townships which cluster around the lower slopes. To-day the fear of ruin from a renewed vehemence of eruption still remains, but there is hope that some at least of the threatened towns will be saved from the ruin that seemed to be impending. Even the most matter-of-fact observer may trace in this week's story of Etna's behaviour a parallel with the course of events in Europe. Out of the Franco-German impasse has sprung a series of events that threatens to plunge Germany into a collapse that must involve her creditors in grievous loss, and could not fail to check indefinitely the return of prosperity the world over. But just as there is hope that the threatened Sicilian towns will be saved, so there remains still a chance, if statesmen can at last seize it, that the destroying stream of economic lava may be stayed in Europe. The chance in the case of Europe is one that may not last very long, and may not recur.

Nothing very definite has as yet been permitted to emerge from the interchange of diplomatic discussions between the Allied Powers, but it is all to the good that so much time has passed without any word or action from Paris that would make impossible the arrangement

of an armistice in the Ruhr and a reopening of discussion of the terms of a reparations settlement. A Ruhr armistice, it is true, may appear to have been made more difficult by the tightening up of the French occupation and the intensified "blockade" of the rest of Germany; and it might also be argued that the more aggressive the French occupation becomes the wider grows the gap between the French and British positions. But we are not without hope that such a view of the position is deceptive. Intelligent forecasts of the French reply to the German offer foreshadow a very distinct change of tone, and at least some considerable movement in the direction of the British view—changes that may be attributed not merely to the British questionnaire or neutral representations, nor to developments in the Belgian attitude, but also to the clear warning of acute danger which the course of economic events has forced upon French attention—a warning which at last seems to have secured for the purely economic aspect of the reparations problem a less disproportionate share of attention across the Channel.

In Germany the riotous fall of the mark and the decline of morale has undoubtedly brought the economic situation a stage nearer to the precipice. But there is still time to avert any irretrievable collapse. In order to secure a restoration of confidence, through which alone the collapse can be avoided, the German Government would, we believe, be prepared to go a very long way to obtain an agreement with the Allied Powers. Unless usually well-informed prophets are wrong, the chief emphasis of the French reply will be laid upon the inadequacy of the guarantees offered in the latest German Note. If more specific guarantees are demanded, Berlin will be found ready, we believe, to clothe the guarantees already offered in a far more substantial and satisfying garb. The German Government, unless we are seriously mistaken, will show itself ready to accept something approaching the form of international control, which, under the auspices of the League of Nations, has already been put into force in Austria. One of the specific guarantees offered by Germany is that of the State railways; and the obvious comment made by her creditors was that the railways are at present a liability rather than an asset, and that no proof existed of the German Government's capacity to turn them into a substantial revenue-earning asset. Dr Cuno is now credited with full recognition that his Government is too weak to make the necessary increase in rates and fares to turn the railway guarantee into a tangible security, or to impose sufficient taxation to ensure the annuities from other sources reaching a proper figure. When such recognition has dawned, it is no very great step—and one which we believe Germany will be ready to take—to submit to international control more or less in the Austrian shape, in so far as it is clear that only by external pressure can the guarantees that she has already offered be made really effective. But, if such control were to be accepted, there is one essential condition that Germany would inevitably demand; namely, that the predominating influence in it should not be French. Germany's distrust of international control is not unnatural, for it is derived from such incidents as that of the Saar, where a régime purporting to be international, and under the League, has, in fact, proved to be equivalent to French domination. It cannot be doubted that Germany would prefer to face even the unknown perils of collapse and probable disintegration rather than run any risk of seeing the Saar tragedy reproduced on the grand scale in the "fatherland."

As every day passes the situation becomes more acute. The sands are running out. But there are, we believe, three grounds for hope that the gordian knot may at last be cut. The first is that the arrangement of terms, acceptable both to France and Germany, for an armistice in the Ruhr during discussions of the reparations problem, is possible; the second, a growing will for a settlement in France; the third, the probability that Germany is prepared to go to great lengths to make effective the rather vague and unsubstantial guarantees that she has offered. Here at least is material on which the good offices of the British Government may be employed with some hope of success. We have indicated often the lines of settlement which we believe opinion in this country would sanction. There seems at last to be some possibility that

something not vitally foreign to those lines might become the basis of negotiations. So far Mr Baldwin has, probably with wisdom, refrained from showing his hand in public. He will require for the part he has to play, as he remarked in a speech at Oxford last Saturday, "the courage of a Pitt and the faith of a Lincoln." Both in courage and faith he should be sustained by the knowledge that the people of this country, irrespective of party, are behind him in any contribution that he can make towards a settlement which conforms with economic laws and holds good promise of future peace and confidence in Europe.

THE DOUBLE TAXATION REPORT.

SIGNED by Professors Bruins, Einaudi, Seligman, and Sir Josiah Stamp, a report on Double Taxation, submitted to the Financial Committee of the Economic and Financial Commission of the League of Nations, has an imposing mass of authority behind it. It was perhaps inevitable that a treatise signed by all these distinguished names should be difficult reading for the layman. The four experts were invited to state what are the economic consequences of double taxation from the point of view (a) of the equitable distribution of burdens, (b) of interference with economic intercourse and the free flow of capital, and were then further asked to what extent are these consequences similar in the different types of cases commonly described as double taxation. Evidently if the first question is fully and clearly answered it contains the answer to the second, and whoever drew up the terms of reference began with a muddle, which was communicated to the minds of the reporting authorities, and has come, through them, to the mind of at least one of their readers, after a perusal of their enlightened opinions. The report is exasperatingly dull and difficult, and when one considers how important and interesting the subject is, and how admirably qualified the four experts are to elucidate rather than obscure it, it does seem a pity that some bright young secretary or journalist, or somebody practised in putting things before the public in a way that it can understand, was not employed to manage and express the ideas of these economic high-mightinesses. As it is, we are treated to such information as that, "so far as concerns taxation in existence at the time when an investment is made, the 'burden' of double taxation is a misnomer. It can only be rightly called a 'burden' if a hindrance to free action is a 'burden.' As a matter of fact, it is rather a 'barrier,' and the appearance of double taxation is, in fact, for the most part negated by the ordinary operation of economic forces. If, however, to be debarred from such an extensive or profitable operation as one might have had if the 'barrier' did not exist is a 'burden,' then in this sense the barrier is a burden," and so on.

And yet there has evidently been an effort to make the discussion concrete and practical, and, as will be seen, the assembled experts did succeed in arriving at a definite, if rather tentative, conclusion. A country called "Morania" was created or plagiarised, and "had the advantage of not raising (subconsciously) any prejudices or presumptions which might cling round the use of an actual or specified country"; moreover, as Gilbert says, it lent an air of verisimilitude to an otherwise bald and unconvincing narrative. The experts decided, in agreement with an anonymous memorandum prepared for Sir Basil Blackett and already published as "League of Nations document No. E.F.S. 16a, A. 16a, dated May 31, 1921," that any non-resident making an investment in Morania, knowing that it will be subject to taxation there, throws back upon the borrower the burden of the Moranian tax, and so escapes it. This seems to be true in the main, and in so far as investors do their business as investors with due care and inquiry—that is, by no means always, but generally. The next conclusion, however, seems to be slightly inconsistent, for it is to the effect that "taxation imposed in Morania on investments placed there by investors of other countries will

act as an impediment to the movement of capital to Morania." If investors are able to throw the burden back upon the borrower, it is not easy to see why the burden should in this example act as a barrier, unless the Moranian borrower finds the cost of the loan so great, owing to the tax, that he cannot afford it, just as the import of goods may be checked by a high tariff. Perhaps that is what is meant by the next sentence, which endeavours to elucidate the paradox by saying that "the reason of this restriction of movement is that a marginal quantity of the (e.g.) British capital has, by reason of the imposition of the Moranian tax (contrasted with freedom from such taxation), been induced to seek other fields of investment." How the Moranian tax can have been contrasted with freedom from such taxation is not clear, or why British capital should have gone elsewhere if its owner can make the Moranian borrower pay. But it is clearly right, as decided by the economists, that "taxation imposed in the country of investment, after the date of investment, of a weight greater than that anticipated or provided by the investor, will impose double taxation in a true sense, from which the investor will find it difficult to escape." In other words, the Governments of countries that import capital can only tax such capital after it has been imported. From which it follows that when once this principle has been grasped and acted on by the Governments of countries that export capital, borrowing countries will be very ill-advised to tax imported capital, because by so doing they are merely raising the price of capital to their own citizens, who will have to pay the tax on any capital that is imported after the tax has been imposed.

Putting the matter in a concrete form, Morania, by taxing interest earned on British capital in Morania, can tax the foreigner very pleasantly as far as all the many millions of British capital already there are concerned; but she will not be able to tax any new British capital that comes in, unless our own Inland Revenue authorities make an allowance for Moranian tax, in which case Morania is simply helping herself to British revenue. If the British Government takes a firm stand, and makes its citizens pay tax on their incomes wherever earned and however much taxed abroad, then it forces British investors to exercise their power of throwing back upon the borrower the burden of the Moranian tax. To Morania it becomes a question whether it is worth while to get revenue out of the British capital already in its borders, and only to be renewed, in most cases, at a loss which represents the burden of the tax; or whether it is better to assist industry's future development by refraining from putting on a tax which will fall apparently on foreigners, but really on its own borrowing citizens. When Governments want to borrow themselves they recognise clearly that they cannot tax the foreigner. As the report points out, many loans have lately been sought in the British money market by foreign borrowers—"Australia, New Zealand, France, Brazil, have each issued their securities yielding fixed rates of return. One and all are distinguished by a common feature—namely, the exemption of the yield from all taxation, present or future, of the borrowing country. The United Kingdom itself, when under the necessity during the war of raising all the money it could abroad, offered its Government war securities to persons not domiciled (and, as respects income taxation, even to persons not ordinarily resident) in the United Kingdom, free of all internal taxation. These practical examples strongly confirm the general principle already reached in theory that, as respects fixed-yield investments at least, the investor throws back on the borrowing country the burden of that country's taxation." And so theory and practice combine to show the man of common sense what is behind what the report describes as method for dealing with the problem, namely, that the "country of origin [of the income] should exempt all non-residents from taxation imposed on income drawn from sources within its borders." This principle "recognises the theoretical fact that the country wanting the money cannot successfully 'tax the foreigner'; it can only shut him out." If the League of Nations can convince borrowing countries of this simple but elusive fact, and persuade them to shape their fiscal policy by it, it will have done a great work.

BETTING AND THE LAW.

(BY A LEGAL CORRESPONDENT.)

THERE are indications that, in the events of the Betting Tax Committee recommending a tax, and of the acceptance by the Government of that recommendation, it will be stoutly opposed by a minority section of the public on the ground that such a policy would amount to State legalisation or recognition of betting, and connote active encouragement by the State of that vice or pastime. It seems desirable, therefore, to examine dispassionately before the controversy breaks out (if it ever does) what has hitherto been the attitude of the State towards betting. In doing so we must travel ground that is familiar to the lawyer but not to every layman. We shall consider, firstly, the civil aspect of the matter—namely, (a) how far bets themselves have been and are enforceable by the State through its courts of law, and (b) what the position is of cheques and other securities given in respect of sums lost and won in betting. We shall then consider, briefly, (c) how far, and in what circumstances, betting is at present a crime.

(a) At common law—that is, before the Legislature took a hand in the matter, gaming or wagering agreements (apart from certain insurance policies and certain unlawful games—such as ace of hearts, pharo, baccarat, roulette, or roly-poly, &c.) were enforceable at law, unless the particular wager offended against morality or decency or public policy. Thus the judges refused to enforce a wager upon a person's sex, or a wager on the life of Napoleon Bonaparte (on the ground that it encouraged his assassination and therefore provoked reprisals upon British monarchs); but Lord Mansfield felt himself able to enforce an agreement made by two young "sparks" at Newmarket "to run their fathers (to use the phrase of that place) each against the other"—that is, to see which would live the longer. In fact, to quote the late Professor Dicey, "A wager is at common law an absolutely lawful contract," albeit exposed, like other contracts, to the penalty of not being enforced if it offends against morality or public policy; but a wager was not intrinsically contrary to public policy. Then in 1845 a deepening sense of the abuses connected with gaming and wagering, and the reluctance of the judges to be used as the means of enforcing the resulting agreements, led to the passing of the Gaming Act, 1845, whereby (in addition to many changes in the criminal law) the State adopted a neutral, if not discouraging, attitude towards these practices by removing them from such legal protection as they then enjoyed, and nullifying any obligations arising under them: "All contracts or agreements.....by way of gaming or wagering shall be null and void, and no suit shall be brought or maintained in any court of law or equity for recovering any sum of money or valuable thing alleged to be won upon any wager....." So, if I make a bet with a bookmaker, I cannot sue him if I win, and he cannot sue me if I lose.

But if I employ a turf agent to bet for me, my agreement with him is not in itself a gaming or wagering agreement, but only collateral to such an agreement. So I can recover the amount of bets laid by him on my instructions and won, while until the Gaming Act, 1892, he could recover from me the amount of bets laid on my instructions and lost. Since that Act, however, it is a case of "Heads I win, tails you lose," if I choose to enforce against my turf agent my legal rights and ignore my moral obligations—which would lead to a speedy change of agent and perhaps a difficulty in finding a successor.

(b) We have now to consider the attitude of the State towards promissory notes, cheques, and other securities given in respect of money lost at gaming or wagering. It is said that a great impetus was given to horse-racing in England by the importation of horses from Tangier, which formed part of the dowry of Charles II.'s Queen Catherine of Braganza. This led to a great improvement in the breed of horses, and racing soon became a national pastime. A statute was passed in 1664, entitled "an

Act against deceitful, disorderly, and excessive gaming." The Act then punishes dishonest gaming, and limits excessive gaming by providing that losses exceeding £100 at any one time incurred in "playing at or with cards, dice, tables, tennis, bowles, kittles, shovelboard, or [at] cock-fightings, horse-races, dog-matches, foot-races, or any other game or pastime, shall not be recoverable, and all contracts, bonds, bills, &c., in respect thereby are made "utterly void and of none effect."

The next stage is reached when an Act of 1710 (9 Anne c. 14) goes far beyond the Act of Charles II., and makes all notes, bills, bonds, and other securities for money won by gaming or playing at a number of games utterly void. Horse-racing is not specifically mentioned, but has frequently been held to be within the statute; in 1748 the judges were asked to include within it a cricket match in which certain persons styling themselves the "County of Kent" played against certain others who called themselves "All England," and it was argued that cricket was a "manly game and not bad in itself." The point stood over for further argument, but there is no doubt that both cricket and football matches are within this statute.

Thus the position of cheques and other securities given in respect of bets won at the games and pastimes specifically mentioned in or judicially included within these statutes was that they were utterly void and of no effect even in the hands of bona fide third party recipients who gave value for them. This state of the law was productive of much hardship, and accordingly the Gaming Act, 1835, provided that instead of being utterly void they should merely be "deemed.....to have been.....given.....for an illegal consideration"; which may sound to the layman much worse than being merely void, but is in reality much better, for it enables the third party, who gives value for a cheque and takes it without knowledge of its objectionable origin, to recover upon it. This statute, which is still in force, is the basis of the law regarding cheques for bets to-day, and accounts for the distinction which has to be drawn between a cheque in payment of a bet on a football match or a horse-race and a cheque in payment of a bet on a bye-election. Neither can be sued upon by the payee of the cheque, for that would be contrary to the Gaming Act of 1845. The former cheque can be sued upon by a subsequent holder for value, having no notice of the objectionable origin, while the latter, not being within the Acts of Charles II. or Anne, can be sued upon by a subsequent holder for value in spite of his knowledge that it originated in a bet on a bye-election.

Moreover, between the passing of the Gaming Act, 1835, and its partial repeal by the Gaming Act, 1922, the loser of a bet who gave a cheque in settlement of his loss and subsequently had to meet that cheque, could recover the amount so paid from the winner, even though he had actually paid it to the winner or the winner's bank.

(c) Turning to the criminal law, the crux of the position is this: Betting in itself is not a criminal offence. As Mr Justice Darling has said: "Betting is a legal act which is made illegal if it is done in certain localities which the [Betting] Act calls 'places.'" The two principal Acts are the Betting Act, 1853, and the Street Betting Act, 1906. The criminal legislation is marked neither by consistency nor by clarity, but the net result may be stated to be that a bookmaker may keep an office for the purpose of betting on credit by means of letter, telephone, or telegram, but not for the purpose of enabling his customers to resort to it in person. As regards ready-money betting, it is a criminal offence for a bookmaker to carry on betting in any "place" within the meaning of the Betting Act, 1853—that is, any spot over which he has established some kind of monopolistic, though temporary, possession. Thus a race-course in itself is not such a "place," but a portable booth erected upon it, a moveable box upon it, and even a capacious umbrella fixed into the ground and affording shelter to the bookmaker and a group of his customers, have been held to be "places." Moreover, betting, whether for credit or for ready money, carried on by a bookmaker in a street is criminal, and special provisions prohibit betting upon licensed premises and in clubs and public libraries.

It is perhaps also relevant to mention that the State abandoned, exactly 100 years ago, the practice of raising

money by lotteries, the last State lottery being held under the Lottery Act, 1823; that a bankrupt who has aggravated his insolvency by "gambling" within two years of the presentation of a bankruptcy petition against him is guilty of a misdemeanour; and, further, that it is an indictable offence to send to an infant (knowing him to be such) a circular or other document inviting him to bet.

From this much-compressed summary of the present legal situation it is difficult to extract any consistent principle which may be said to underlie State action in the matter. The State has now refused for a long time to enforce bets in the courts, and in that way has attached what has been called the "sanction of nullity" to such transactions. Nor does it seem to follow that if the State is to tax betting, bets must become enforceable in the law courts. But it has refrained from branding bets as such as criminal or even as illegal, which is clear from the fact that a collateral transaction, such as a turf agent's liability to account to his principal, is enforceable by the courts. When, however, betting, by reason of the circumstances attending it, appears to constitute a social evil, the Legislature has stepped in and made it a criminal offence—with results that are quite illogical and frequently unfair as between one class of betting business and another. In short, the attitude of the law is one of hardly benevolent neutrality to betting in general, coupled with a rather capricious condemnation of certain of the more democratic and mischievous forms of carrying on the business.

THE SEA CARRIAGE BILL.

THE Sea Carriage Bill came on Thursday before the Select Committee to which, as noted in the *Economist* of the 2nd inst., it had been referred. The Committee (which will hear further evidence on Monday) comprises four members each from the Lords and the Commons, including Lord Sterndale, who has been elected chairman. The Board of Trade, as the department responsible for this measure, is apparently determined to pass it into law if possible, and thereby finally dispose of a controversy which has smouldered on for 40 years or more between merchants and shipowners. The present indications are that, unless anything unforeseen occurs, the Bill will go through. There can be no doubt whatever that the great majority of commercial men, including the bankers, approve of the provisions as to shipowners' responsibility for goods carried under bills of lading set forth in the revised Hague Rules scheduled to the Bill, and shipowners themselves, as an organised body, are supporting the measure. If this country, by legislation, confirms the rules, the probability is that pending proposals for legislation elsewhere will be brought into line, and effect thus given to the intention that the scheme shall be international in its operation. In the United States a Bill to give effect to the rules was introduced some time back. France, Germany, and Japan might be expected to follow suit, and then the Scandinavian countries, where of late some opposition to the scheme has been manifest, could hardly do otherwise than take the same course.

The Scandinavian objections have come from shipowners and merchants interested in the tramp trades—in bulk cargoes as distinguished from liner traffic—and apparently their point of view is similar to that of the British coal exporters who took exception to the Parliamentary proposals but are now understood to be disposed to accept certain alterations which may be made in the clauses of the confirming Bill, leaving the international rules as they stand. It may, therefore, be assumed that the adjustment which has been arrived at, besides satisfying the coal exporters, will in due course result in the withdrawal of Scandinavian opposition. The whole matter has been under discussion during the past week at the annual meeting of the Baltic and White Sea Conference—the members of which are shipowners of various

nationalities interested in the short-sea trades—which has been held at Gothenburg. The president, Mr Salvesen, of Leith, expressed objection to Government interference with freedom of contract and preference for the existing method, whereby, in the tramp trades, the conditions of shipment are arranged between representative bodies of merchants and shipowners. He urged that the tramp trades should be excepted from the operation of the rules. In another speech at the same meeting reference was made to the amendments of the Bill now before Parliament, which have been proposed in order to meet the case of British tramp shipowners in the coal export trade and the coasting and short-sea trades, and the statement was made that British owners must regard themselves as bound to support the Government. The shortcomings of the Imperial Shipping Committee, whose report in 1921 more or less set the ball rolling, were also referred to at the meeting of the Baltic Conference. The Committee, it was pointed out, basing its findings on imperfect information, failed to distinguish between bulk cargoes and the mixed general cargoes carried usually by liners.

These eleventh-hour discoveries after two years of international discussion are indeed surprising, and the same remark applies to the criticism bestowed on the Rules themselves by the learned editors of "Scrutton on Charterparties and Bills of Lading." The preface to the new edition of that standard work was (as mentioned in a previous article) communicated to the Press in advance. The new edition* has now been published, not, it appears, so much because of development of the law as because the last edition had been completely sold out. Still, there were some 60 new cases calling for notice, besides alterations necessitated by recent legislation, and business men concerned with shipments, as well as members of legal circles, will welcome the eleventh issue of this authoritative book, which has passed so rapidly through its editions. In the preface the same objection to interference with freedom of contract as was put forward at Gothenburg this week is urged, regardless of the terms of the merchants' long-standing complaint that in actual fact they have no option, when shipping smaller consignments, but to accept the shipowners' printed bill of lading, which hitherto has excluded liability for negligence.

In the broad sense the arguments for freedom of contract are conclusive. "The school in which I was brought up," said Lord Sumner on the second reading of the Bill, "taught one that the sheet anchor of trade was freedom of contract," adding that, of all trades, the great parties were quite able to make contracts for themselves which the law would interpret and enforce. The fact stands, however, that the parties have of late shown a definite preference for a collective bargain in this particular matter of responsibility for cargo during the voyage, and for legislative sanction to the bargain. Whether they are wise in allowing their agreed terms to be stereotyped by legislation, not merely nationally but internationally, so that it will be difficult afterwards to revise them, is a question which has disturbed some minds, but the course of events has swept this doubt out of the current of practical politics. Matters have reached the stage at which legislation must be passed embodying the best international compact which, in the circumstances, it has been possible to work out as a compromise of present conflicting interests. The alternative, in the former state of chronic complaint and irritation, with added bitterness, and probably separate unco-ordinated (and therefore conflicting) legislation in the various maritime countries. There are thus very strong reasons why the present British measure, though open to some criticism, should be passed. The members of the Baltic Conference, as a result of their discussion, adopted a resolution urging further delay and yet another international conference, but perhaps the most significant thing about this resolution was that British and American representatives abstained from voting for it. In order

* "The Contract of Affreightment as Expressed in Charter Parties and Bills of Lading." By Sir T. E. Scrutton. Eleventh Edition. By Sir T. E. Scrutton and F. D. Mackinnon, M.A., K.C. (London) Sweet and Maxwell, Limited. 1923. 36s net.

that the scheme may work internationally it must be general, and not subject to exclusion of any classes of shipping. In that form the proposals before Parliament command, as already indicated, the support of the great majority of the business interests concerned.

THE WORLD'S PRODUCTION OF CEREALS.

THE virtual exclusion of Russia from the world market, together with the disorganisation of production throughout Eastern and South-Eastern Europe, seemed immediately after the war to threaten serious consequences for those industrial countries which depend to a greater or lesser extent upon imported foodstuffs. The rapidity with which this deficiency has been made good by an increase in production in extra-European countries thus appears as one of the most significant events of the post-war period. Supply, in fact, has overtaken demand, though demand itself has fallen off considerably on account of the impoverishment and the resultant fall in the standard of living of the peoples of Central Europe. It is not, however, easy to say with any degree of certainty whether supply will continue to prove adequate, for not only must it be remembered that the American harvest was very satisfactory in 1921, as well as in 1922, but the temporary price guarantees given by the American Government also stimulated sowings to a very large extent. As world demand now draws on less varied sources of supply the incalculable vagaries of the weather may well prove much more inconvenient than in pre-war days; while in the absence of price guarantees on the part of the Government it is hardly conceivable that the area down to cereals in the United States can long be maintained at last year's level.

The crop statistics collected by the International Institute of Agriculture illustrate in a striking fashion the manner in which the New World has redressed the balance of the Old:—

WHEAT CROP.

(In Thousands of Metric Tons.)

	1921.	1922.
Western Europe—		
England and Wales	1,899	1,665
France	8,803	6,405
Germany	2,934	1,957
Italy	5,248	4,370
Spain	3,950	3,414
Eastern Europe—		
Bulgaria	1,157	934
Czechoslovakia	1,052	915
Hungary	1,434	1,226
Poland	1,018	1,150
Roumania	2,138	2,504
Yugoslavia	1,410	1,149
TOTAL EUROPE (excluding Russia)	33,476	27,549

It will be seen that, with the exception of Poland and Roumania, last year's crop was inferior to that of the previous year in all the principal producing countries of Europe for which statistical returns are available. In Russia the 1922 crop was certainly decidedly better than that of the famine year 1921, though the production of all the Eastern European countries was well below the pre-war average.

If, on the other hand, we turn to the extra-European producing countries, the contrast is most striking:—

WHEAT CROP.

(In Thousands of Metric Tons.)

	1921.	1922.
Canada	8,188	10,880
United States	22,178	23,302
India	6,813	9,970
	1921-22.	1922-23.
Argentina	4,916	5,281
Australia	3,600	2,857

In the case of all these exporting countries, save only Australia, the 1922 figure was in excess of that for the previous year. While the United States more than maintained the enormous total of 1921, India showed an increase of over 46 per cent., and the Canadian total was one-third greater than in the previous year. It is, moreover, interesting to notice that Canada and the United States between them produced more wheat last year than all the European countries (except Russia) together.

The rye crop was, on the whole, decidedly inferior in the European countries last year as compared with the previous year (with the single important exception of Poland), though American production of this cereal was on the increase. The same general tendency is also noticeable in the case of barley and oats, though the Roumanian output of these crops showed a marked increase, due primarily to the export duty levied on wheat. The yield of oats in North America was considerably greater, a crop of 7½ million metric tons being registered for Canada last year as compared with 6½ million in 1921, while the United States crop was over 17½ million metric tons, as against some 15½ million in 1921.

The maize crop was decidedly inferior in the three principal producing countries for which returns are to hand, as will be seen from the following table:—

MAIZE CROP.

(In Thousands of Metric Tons.)

	1921.	1922.
United States	77,944	73,426
Roumania	2,817	2,808
Italy	2,458	1,950

The abundance of extra-European supplies of wheat last year combined with reduced purchasing power in Central Europe to bring world prices down to a level less than a third higher than that of 1914. This has naturally had an effect on current sowings. The report given by our Canadian correspondent last week stated that there has been a marked diminution in the acreage down to wheat this year, though this has not been quite as great as had been feared some weeks ago. Their experience last year seems to have led Western farmers to go in more and more for mixed farming—dairying, poultry and hogs thereby gaining at the expense of wheat. While spring sowings have been delayed on account of snow and rain, the weather has since provided favourable moisture conditions, and prospects seem quite good.

In the United States low prices have had a similar effect, and spring wheat sowings apparently amount to less than 84 per cent. of the average of the last five years. The cultivation of flax, on the other hand, has been stimulated by the firm prices still ruling, and the acreage down to this crop is over 162 per cent. of the corresponding average. In the Southern States again there has been a reduction in the acreage down to maize, for Southern farmers are devoting more attention to cotton.

Reports from Russia, which require to be used with some caution, are, on the whole, decidedly optimistic. Sowings in 1922 showed a considerable reduction as a result of the previous year of famine. In a recent speech to the Soviet Food Congress, Rakovsky stated that sowings in the Ukraine, which is much the most important producing centre, are from 15 to 20 per cent. above those of 1922. The autumn sowings are described as being good, though cold has delayed the spring sowings. The Crimea and the Volga are both stated to be good, with the exception of the South Volga area, where the weather has been too dry and too cold. There appears to have been a further shrinkage in the area down to wheat in Roumania, though the position in Bulgaria seems to be still better than last year, while May reports state that the winter seedings are doing well in that country.

The first wheat crop to arrive is that from India, and it is gratifying to learn that the preliminary estimates for wheat are better than last year by nearly 20 per cent. While many things may happen between now and the time of harvest, it seems at present to be unlikely that there will be any serious shortage this year, though, with the reduction in acreage in North America, it is even less probable that prices will remain at the record low level for the post-war period which was established last year.

THE LEATHER TRADE OUTLOOK.

(BY A CORRESPONDENT.)

ALTHOUGH the leather trades as a whole are in a sound condition, the improvement hoped for at the opening of the year has not been very pronounced. The uncertain state of the hide and skin market has caused tanners a good deal of anxiety, especially as the price obtained for leather has borne no real relation to the cost of production. Both imported and domestic raw material has been very dear, and even when tanners abstained from buying, the demand from overseas was sufficient to maintain high values. This is shown by the recent Board of Trade statistics, as no less a quantity than 65,735 cwts (value £191,839) of raw hides and skins left our markets in five months for overseas consumption, a remarkable feature being that Germany took 10,109 cwts of the total of a value of £19,347. America also has been a big buyer of British raw hides and skins, her bill during the past five months amounting to 30,684 cwts, valued at £101,094. The export of sheep pelts has also been on a large scale, as these amounted in value from January to the end of May to £226,351, as compared with £91,981 for the same period of 1922.

The imports of hides show an increase, the totals of wet hides for the first five months of 1922-23 being 184,500 cwts and 210,559 cwts, and of dry hides 174,691 cwts and 325,300 cwts. The above figures show that tanners are regaining confidence in spite of adverse conditions, and as prices of hides are now weakening all over the world, they hope their productions will soon show a reasonable margin of profit. South American hides are gradually coming down in price, the decline in one week being quite 4 per cent., probably owing to the abstention of American tanners from the market. Sales of Argentine ox are, in fact, reported to have been made on a basis of 8½d c.i.f., whilst latest cables from New York describe the Chicago hide market as very weak, with best packers now selling from 15 to 16 cents. It seems safe to assume that values of the raw material are at last finding their true level, and as the demand for leather shows signs of increasing, there is no apparent reason why the easing of hide prices should be followed by a general slump in the values of leather.

As quite a large proportion of the better grades of sole and dressing leather is made from British market hides, tanners have noted with satisfaction a steady drop in the value of this class of raw material during the past few weeks. At the opening of the current year best ox hides were selling in British markets from 7½d to 9d per lb, and although tanners were quite aware there was little or no profit in turning them into leather at this price, they were obliged to take a certain quantity to keep their yards going and their liquors in working order. Even combined action in regard to buying hides seemed to have little effect, and in some cases the input was much reduced, with the result that certain classes of tanned leather were comparatively scarce, so that there was no great decline in values, in spite of the poor demand from consumers. Market hides, however, are following the slump in international values, and at the Bermondsey auctions, held on June 14th, best ox hides sold from 7d to 8½d per lb, and the prospects are that a further fall in prices will soon be noted. The general view of tanners is that raw hides are not worth more than 6d per lb, but it is a very open question if this low figure will be reached, bearing in mind the fact that there is always a fairly brisk competition for certain classes from America and the Continent.

Coming down to the sole-leather tanner, it is safe to say he has had a difficult time during the past two or three years. As stated above, he has had to pay a very high price for his raw material, and although wages have been slightly reduced, his overhead charges are very much higher than in pre-war days. Tanning materials, it is true, have been cheaper, but French chestnut extract, a very popular tanning agent with the big Northern tanners, is still nearly twice the price it was some years ago. It must be also remembered that many tanners greatly extended their premises and plant during the war,

so much so that when the slump set in it was found to be quite impossible to dispose of the output either in the home or foreign markets. Many wealthy firms then found they had locked their capital up in bricks and mortar, and there is no doubt several large firms have had a desperate struggle to finance their businesses. As a matter of fact, there has been a good deal of capital written off, and one large and well-known concern reduced its capital by something like three-quarters of a million on a capital of two and a-half millions, and also reduced the value of its ordinary £1 shares to 10s. Great losses were also made by depreciation of stocks a year or two ago, the one satisfactory thing about all this, however, being the fact that no great financial trouble has resulted. Few tanners—either large or small—have closed down, most of them being content to reduce their input of hides as far as possible and to await better times.

As the United States have not been in a position to send much sole leather to this country during the past year or two, the competition from this source, formerly of a very real kind, has not been formidable, and has materially helped our own tanners to maintain prices fairly well. Some amount of Continental sole leather has, however, been imported, and the smart appearance and moderate price of French and Swedish bends has made them popular with a certain class of shoe manufacturers.

That merchants have been scouring the world for cheap leather seems proved by the increase in the imports, these amounting to 124,079 cwts and 196,184 cwts, valued at £864,206 and £1,288,758 for the first five months of 1922 and 1923 respectively. Up to the end of May this year Germany has managed to send Britain 10,561 cwts, France 3,611 cwts, America 47,100 cwts, Australia 17,288 cwts, and other countries 20,065 cwts. The statistics schedule this class of imports as "Undressed Leather," but the bulk of the goods probably consist of finished sole leather, and the volume and value of the import is sufficient to show that, in spite of international financial conditions, the British sole leather tanner has plenty of competition to face even in bad times. On the other hand, the latest statistics show that our own tanners are gradually increasing their export of undressed and sole leather, as the total weight sent overseas during the first five months of 1922 was 65,851 cwts (value £724,264), as against 77,748 cwts (value £829,597) in the corresponding period of this year. As the figure for the January-May period of 1921 was only 49,166 cwts (value £474,697), there is clear proof that the export trade is steadily recovering itself, and that in spite of increased tariffs and financial stringency, our tanners are forging ahead in the markets of the world. Including dressed leather, the value of the export for the first five months of 1922 and 1923 amounted to £1,556,013 and £1,741,626 respectively, a result which augurs well for the future of the British export trade in tanned and dressed leather.

As regards upper leathers, it is certain that British tanners of chrome calf and glacé kid have had a lean time during the past year. Prices of skins have been high, whilst the demand has been for low-priced leather. To meet the shoe manufacturers' demand for a cheaper boot. A few concerns have gone out of business, others simply working with a skeleton staff just to keep their trade together. Imports have been on an increasing scale, the total values for the first five months of 1922 and 1923 being £2,627,828 and £2,896,897. America has been the biggest exporter, her bill for glacé kid up to the end of May being £714,612, and for patent leathers £291,790. German competition has been especially felt in chrome calf, this being included in "All Other Sorts," and amounting to £306,798 up to the end of May this year. Germany has also sent an increased quantity of patent and glacé leather to this market, the value of the latter being £39,285 for the first five months of 1923. The import of belting shows an advance at £38,971, as against £28,714 for the January-May period of 1922.

As the prosperity of the British tanner and leather dresser depends to a large extent on the demand for footwear, the falling off in the demand of late caused by the unseasonable weather has caused considerable anxiety. Centres such as Northampton, Kettering, and Bristol, which specialise in men's boots, have had a very slack

time this year; on the other hand, Leicester and Norwich, which make ladies' shoes, have been fairly busy until quite lately, and up till Whitsuntide were working at high pressure. Suedes and patent shoes have been in great demand, followed closely by coloured and black glacé shoes. Stocks in makers and retailers' hands are, however, rather heavy just now, but it is thought a return of bright weather conditions will soon deplete these. The demand for sport shoes has also been a great feature of the year's business, and very large quantities have been sold on home and overseas account. In connection with this section of the leather trades, an attempt is being made to popularise an all-British boot made exclusively from British leather. The goods have been on exhibition at one of the great London stores, and have excited considerable interest in view of their excellence.

The export side of the shoe business is steadily making toward improvement; during the first five months of 1922 and 1923 the number of pairs sent overseas totalled 173,647 and 247,854 dozen, with a respective value of £1,002,315 and £1,307,346. The chief customers so far this year have been British South Africa, £206,678; New Zealand, £312,657; Netherlands, £47,181; British East Indies, £47,400; and other countries £391,712. As last month showed an increase from £219,928 to £319,747, as compared with May, 1922, the result, in view of conditions abroad, may be regarded as very satisfactory. The glove trade is dull just now, and makers are suffering from cheap Continental imports. Exports fell in value from £53,896 to £44,443 for the first five months of 1922 and 1923, imports advancing from £483,115 to £560,562.

Taking a general view of the allied leather trades, signs are not wanting that the period of depression is almost over, and that a return to prosperity may soon be looked for if only some way is found of stabilising conditions on the Continent.

LATIN-AMERICA AND THE MONROE DOCTRINE.

WHEN Gibbon started to write the "Decline and Fall" he debated (being as methodical as he was learned) which European language he should use as his medium, and eventually decided against French, although it was at that time the leading cultural language in Europe, because English was destined to be spoken by the future millions of the as yet unpeopled North-American continent. Did the possibility of Spanish, one wonders, ever occur to his mind? In Gibbon's day Spanish was more widely studied in England than it has been during the last century. It then held its own against Italian, and was far more familiar than German. But if Gibbon did consider its claims, we may be certain that the Spanish dominions in South America did not enter into his calculations, for they were a forbidden land—not merely to foreign settlers and traders, but to foreign authors. In the 1770's, indeed, it was probably more difficult for an English book to run the gauntlet of the Spanish Customs, and find its way to La Plata or Peru, than it was for an English bale of cloth or consignment of slaves. On the threshold of the twentieth century Spanish is again attracting European students. Perhaps no language was so popular among young Englishmen and young Germans improving their education in internment or prisoner camps during the Great War, and the same tendency has been reflected since the Armistice in the growth of the Spanish departments in our universities. But these young men are not allured, like their predecessors in Gibbon's generation, by the classical literature of Spain so much as by the commercial prospects of her former American dependencies.

To realise what a change this means, one must study the introductory chapters to books like Mr Robertson's or Mr Koebel's*. The system established by the Spanish

* "Hispano-American Relations with the United States," by W. S. Robertson. Publications of the Carnegie Endowment for International Peace: Division of Economics and History. (Oxford) University Press, 1923. Humphrey Milford, pp. xii. + 470.
"The New Argentina," by W. H. Koebel. (London, 1923.) Fisher Unwin. 15s net; pp. xxx. + 276.

monarchy in Mexico and South America after the overthrow and extinction of the native civilisations, has probably no parallel in history except the Carthaginian system, which in ancient times held in its tentacles North Africa and Spain herself. It was the system of colonial monopoly in all its completeness—or, rather, in theoretical completeness, for so unnaturally rigorous a monopoly could not be watertight, and the Spanish Main was poached upon by the English, French, and Dutch very much as the Greeks, Etruscans, and Romans violated the sanctity of the Carthaginian coasts and waters in the Western Mediterranean. On paper, however, there was monopoly within monopoly. The privilege of trade with the Indies was originally reserved to Castilians alone, and it was not without a struggle that it was extended to the merchants of Navarre and Arragon. Such efforts were made to give preference to Spanish manufactures by prohibiting manufacture in the Americas or imports in foreign cottons, that Spanish industry languished for want of competition, and the merchants of the step-Mother Country took to buying goods cheap in the Italian, French, and English markets, and making a profit as middlemen which depended purely on the physical power of the Spanish Navy to exclude competitors (a phenomenon that also has its counterpart in the purchase of cheap goods by the Carthaginian merchants from the Greek States of Sicily). Immigration, even of Spanish subjects, was discouraged in the colonial period, and that of foreigners virtually prohibited. The passport formalities required of a would-be Spanish settler rivalled those of our post-war dispensation, and he had also to produce certificates that he was a *bona-fide* "good Catholic." The Catholic Church was, of course, the monopolist religion (an anachronism which lasted on in several Spanish-American countries for half a century after their emancipation), but the Spanish Crown stood between Rome and the local ecclesiastical authorities, and had the last word in patronage and ecclesiastical administration.

Such a *tour de force* was bound to break down in time. The fact that Spain managed to maintain it for nearly three centuries was, perhaps, her most remarkable achievement, and the source from which destruction overtook her empire in the end was equally surprising. Spanish America might have been expected to attract foreign imperialism as a vacuum attracts matter, and the natural heir of Spain appeared to be France, who was more and more overshadowing her southern neighbour politically from the time of Louis XIV. to that of Napoleon. France did, in fact, break up the Spanish Colonial Empire—not, however, by arms, commerce, or colonisation, but by her political and philosophical ideas. Napoleon, when he overran Spain, did not succeed in getting possession of her overseas dominions. The making of the Balance of Power protected them, as it has ever since protected the independent States built on their ruins, though in themselves these States have lain peculiarly open to foreign aggression—at any rate, until within the last few years. What broke up the Spanish Empire was the spirit of the French Revolution, which somehow or other had leavened the minds of this remote and scattered Latin population, in spite of the worst that the obscurantism of Madrid could do. How did this leaven work its way? It is a pity that Mr Robertson, who records the fact and its result, has not given us a more detailed explanation of the process. It is germane to his subject, for French ideas seem to have been the principal factor, other than United States foreign policy and British trade, that has moulded Latin-American history during the past century.

To judge by a comparison of the two books before us, we should conclude that the influence of Latin-Europe on Latin-America since her achievement of independence had, on the whole, been more important than that of the Anglo-Saxon peoples. Mr Koebel has some interesting things to say about French influence in the Argentine and its limits. It is paramount in the political constitution of the country; French is the second language of the educated class, and Paris their second home when they come to Europe. But he notes that inter-marriages are rare (though, owing to the religious barrier, they are rarer still between Argentinos and English or Americans), and he has little to say about French immigration. No one can miss the parallel between this and the form

which French influence has taken in Roumania, Greece, Turkey, Egypt, Syria, and other countries of the Near and Middle East. In the Argentine, there is indeed an important Latin immigration, which is rapidly increasing the population and ensuring that the Republic shall be a "white man's country"; but this comes not from France, but from Spain and Italy. The French colonist, who cannot keep pace with the Italian even in French North Africa, is naturally feebly represented in this distant corner of the world, while the Spaniard and the Italian are making the Argentine into a Latin counterpart of the United States and the British Dominions.

A perusal of Mr Robertson's rather massive work would seem to show that the intellectual and educational influence of the United States upon Latin-America was negligible, and her influence upon politics and constitutions in no way comparable to the French, and indeed surprisingly small altogether, except for the single case of the Federal constitution of Mexico; though one would like a fuller discussion of how far the concrete example of the American War of Independence combined with the doctrines of the French philosophers to produce that almost unanimous movement for independence which manifested itself in the Spanish colonies on the news that Napoleon had overthrown the Monarchy at Madrid. Even the commercial and industrial enterprise of the United States in Latin-America are still in their infancy, though Mr Robertson shows very clearly what an impetus they have received in consequence of the adversity into which German, and to a lesser extent British, business interests in this area fell with the outbreak of the European war. But, of course, the most important embodiment of American influence has been the Monroe Doctrine. It is exceedingly hard to estimate the positive effects of this cardinal principle of United States policy upon international affairs during the past century, because the alternative lines of development, assuming it never to have been put into practice, are hypothetical. Would British policy (which in a sense suggested the American doctrine) and British sea-power (which in normal times has tacitly but effectively assisted in upholding it) have sufficed to preserve the independence of the young Latin-American Republics, had the United States taken no hand? The case of Venezuela in 1895-7 makes it more probable that, but for the attitude of the United States, the balance of power in Latin-America, as in China and Africa, would have been maintained by the European Powers, not through mutual abstention, but through equal participation in the spoils.

Mr Robertson is particularly interesting when he traces the evolution of the Monroe Doctrine under the influence of the proverb that "Prevention is better than cure." The thin end of the wedge of Imperialism is notoriously very thin indeed, but proportionately penetrating and adhesive. Annexations are preceded by the protection of nationals or the collection of debts, and it is obviously better politics, for those on whom Monroe's mantle falls, to forestall these preliminary interventions rather than attempt to reverse the accomplished facts which would inevitably follow in their train. Hence, in Central America and San Domingo, the United States have intervened themselves rather than offer possible excuses for intervention to other people; and gratitude for United States championship has become mingled in some Latin-American minds with an uneasy premonition of a United States imperialism. Where will this end? One of the most remarkable features in Latin-American history during the last century has been the differentiation between the "A B C" group of Republics, who have made steady political and economic progress after the first inevitable half-century of inexperience and confusion, and the States clustered round the Equator, or between the Equator and the United States border, which have remained stationary or even, like Mexico, suffered relapses. Will the "A B C" States emerge into complete independence, while the rest fall under more and more openly acknowledged United States control? The latterly increasing activities of the United States at Panama, as well as in other parts of Central America and in islands like Cuba and San Domingo, point in this direction; but there is one post-war factor which may work the other way, and that is the League of Nations.

Membership in the League gives the Latin-American Republics a new status, as it gives it to the British Dominions, and they have taken their membership seriously. The League and the Monroe Doctrine are perfectly compatible, but in the long run the League may prove the more important of the two in shaping American international relations.

Notes of the Week.

The Lausanne Conference.—The Near Eastern situation is not so threatening as it was a week ago. Though the exact aims of the Bulgarian revolutionaries and the character of their supporters remain hardly less obscure, the danger of foreign intervention has unmistakably diminished. In this both British and Italian representations to Yugoslavia seem to have played their part, but an important rôle has also been ascribed to the Roumanian Government. The motive assigned for this Roumanian attitude is hostility to the agrarian cause for which M. Stambolisky stood. It is not the best of reasons, but we shall not be inclined to quarrel with it so long as it contributes to the preservation of peace in Central Europe. The Lausanne Conference drags along in a way that must be weary for the participants, but which is not without diversion for lookers-on. The situation there has just undergone another of its kaleidoscopic transformations. A few weeks ago the Greeks were portentously massing a formidable army on the west bank of the Maritsa, and the Allies were imploring them not to slip it from the leash. Now, apparently, it is the Greeks who are anxious to demobilise and the Allies who are begging them to keep their Maritsa concentration in being. The reason is that, in the interval, the Greeks and Turks have proved themselves more successful diplomats than the representatives of the Western Powers. The apparently insoluble controversy over Reparations has been settled to the satisfaction of both parties by the cession to Turkey of a small strip of Greek territory on the west bank of the Maritsa opposite Adrianople. But this again has caused acute dissatisfaction in Bulgaria. All outstanding differences between the two late belligerents have thus been disposed of, and there is no reason, so far as they are respectively concerned, why, at long last, they should not each go home and attend to their own affairs. Nothing keeps the Conference going except the controversy over the currency in which the foreign bondholders of Turkey are to be paid—a point on which Turkey and the Powers are, ostensibly at any rate, as much at loggerheads as ever. In these circumstances, M. Venizelos has proposed that Greece and Turkey should make what would virtually be a separate peace, or, at least, a provisional compact sufficiently clear and binding to enable the two Governments to demobilise their armies without having to wait for the signature of the general and more formal instrument. For the moment the Allies seem to have frustrated this proposal, but if the financial deadlock lasts much longer, it is to be hoped that it will be carried through over the heads of the Powers. At first sight their argument looks plausible. We backed Greece, they say, against the Turkish claim to reparations, and now it is her turn to back us when our interests are in question. The answer is that the moral claim of the Allies to considerate treatment at the hands of either selfish and blundering Near Eastern policies of the Powers from the Armistice down to the present moment, Greece and Turkey would have been spared the catastrophe of a war-after-the-war. Their only chance of avoiding the repetition of such catastrophes is to compose their local differences and oppose a united front to their great neighbours. The direct agreement between Greece and Turkey over reparations, and its first-fruits in the shape of M. Venizelos's proposal, are, perhaps, the most encouraging symptoms in Near Eastern politics for the last dozen years.

Miners' Wages.—On Thursday of this week Mr Adamson moved the second reading of the Coal Mines (Minimum Wage) Amendment Bill. The object of the Labour Party in introducing this measure was declared to be the estab-

lishment of a minimum wage which would at all times be equal in purchasing power to the wages paid in July, 1914; and the extension of the same principle to colliery surface workmen, who were excluded from the operation of the Act of 1912. The issue involved, which is no less than the payment of wages in accordance with the cost of living—taking, moreover, the rates ruling in a prosperous period as the basis of the calculation—is too wide for treatment in this place. The principle, Mr Adamson contended, was not a new one, as it had already received statutory recognition in 1912. But there is the world of difference between a definite minimum and one which varies with the cost of living; while the actual level decided upon is of the essence of the question. The mover mentioned the fact that the principle of a minimum is, in fact, in operation in accordance with the terms of the national agreement now in force, and stated that his proposals required the raising of that minimum from 20 per cent. to 70 per cent. over the 1914 wage. The agreement itself, however, provides for a distribution of the profits of the industry destined to make the ratio of wages to profits as 85 to 15. In fact, the owners only took 7 per cent. of the proceeds last year, as Mr Gould pointed out in an able speech; and the idea of stabilising real wages at the 1914 level is proposed regardless of the fact that during this period of depression the proceeds of the industry do not attain the corresponding level. The whole question at issue therefore really resolves itself into a consideration of ways and means. How, in fact, is this increase to be paid for? Mr Adamson's long experience of the industry led him to reply that "so far as the question of finding the money was concerned, he did not think that a single Member need let that fear keep him from voting" for this Bill. This answer was described, as we think not unjustly, by a later speaker as being "more or less an insult to the intelligence of the House of Commons." The rights and wrongs of the question cannot adequately be discussed in an atmosphere of thinly veiled threats of industrial action—which still remains the favourite method of argument of some of the miners' leaders. Everybody must admit that the wages paid in this industry are often deplorably low. It is an unfortunate fact, however, that they are still lower in many other trades—such as the iron and steel trade and engineering—as Sir Robert Horne pointed out. But under the terms of the agreement they are moving steadily upward, and it is no secret that this movement will be continued in the next two-monthly period, especially in Scotland and the North-Eastern fields. The rates do not react as rapidly as they might to improvements in trade; but this lack of elasticity is due, as we have often pointed out, to the fact that the miners' leaders insisted upon a two-monthly accounting period instead of a monthly basis, with the result that there is a considerable time-lag. But, despite this defect—which, by the way, is not irremediable—the agreement marks a considerable step forward in the industrial history of this country. Under its terms, as Mr Baldwin pointed out, a considerable portion of the profits which had not been shared hitherto by the wage-earner became available for distribution as wages; and, in addition, the wage-earners were enabled, for the first time, to get a "complete knowledge" of the costs and expenditure of the business. It has contributed to a remarkable increase in production, and has acted as a stimulus to managerial efficiency. If a minimum wage is fixed at so high a level that it cannot be paid out of the proceeds of the industry, the agreement would naturally break down. A subsidy stands condemned, and an increase in price would do much to hinder that very revival of trade upon which the future of the coal-mining industry, in common with all the other industries of the country, so largely depends. The position in the industry is decidedly better than it was last year, and we are glad that a considerable majority of the House of Commons were of opinion that the agreement should be given a fair trial.

The Reassessment of House Property.—On Monday last the Financial Secretary to the Treasury made a statement in the House of Commons which was welcomed alike by Unionist, Liberal, and Labour speakers. A little over six weeks ago the issue of a Blue Paper, which

is by now a classic, with notice of the reassessment of house property for income-tax purposes, started a Press campaign (which some have described as a Press "stunt") of almost unparalleled intensity. This week the Government, as had been anticipated, thought it wise to bow before the storm by introducing two new clauses into this part of the Finance Bill. Sir William Joynson-Hicks pointed out in his speech on Monday that instructions had already been given to inspectors of taxes "months ago" that the high prices that had in many cases been paid for house property since the war were not to be taken as a criterion of their present annual value for assessment purposes. Moreover, the rule-of-thumb method of adding a certain percentage to the previous assessment, which has been widely advertised during the recent campaign, was also marked out for official disapproval. Perhaps more important, in that it probably looms larger in the public eye than anything else, is the concession announced as to the right of appeal. The Blue Paper followed previous precedents in stating that any appeal against an assessment must be made within 21 days. This, which was far from being an innovation devised by unscrupulous young officials, was nevertheless welcomed by torrents of abuse, and the Government has now stated that notice of appeal may be made up to August 31st, and even longer in certain cases. A discontented taxpayer will henceforth be able to give notice of appeal to an inspector of taxes, and, in the event of no settlement being arrived at, will afterwards be able to appeal to the General Income Tax Commissioners. What is held to be highly significant is the fact that in any such appeal the appellant may appoint any agent he likes to represent his interests, while there is to be no onus of proof. In Sir William's words, "the fairest thing is that both sides should give whatever evidence they have in their power, and that the commissioners should then decide on which side the right lies." As a change in the assessment—which appears in many cases to be long overdue, as the last assessment was made in 1908—may make a considerable change in the incidence of the Inhabited House Duty, this, too, comes within the scope of the new proposals. The exemption limit is raised from £20 to £30; in the case of houses with an annual value of between £30 and £60 the rate is to be 3d in the £; between £60 and £90, 6d in the £; and over £90, 9d in the £. These concessions alone are estimated to cost about £500,000 in the coming year; but much more important are the changes envisaged in what is very properly described as "the difficult question of repairs." The allowance of one-fourth of the annual value which has hitherto been made in respect of houses whose annual value does not exceed £20 is now extended to houses with an annual value not exceeding £40. This latter figure was previously the outside limit which entitled the owner to an allowance of one-fifth, but in its place £100 has been chosen as the limit. Finally, under the old system houses of a value exceeding £40 were entitled to an allowance of one-sixth, whereas under the new schedule the allowance will be of one-fifth up to £100, and then of one-sixth of the amount by which the annual value exceeds this amount. This concession on repairs is estimated to cost a little over £1,000,000—a by no means inconsiderable sum, even today. Many aspects of the "reform" are most welcome, as, for example, amongst other things, the right of an owner to appeal against his assessment before the five years for which the present reassessment is made expire, in the event of a fall in value in the meantime. At the same time, the recent campaign in the Press has been in many ways misleading to the public in a highly technical matter which certainly lends itself to misrepresentation, and the Financial Adviser to the Treasury cited the case of a meeting in which "taxpayers were urged, all of them, to fill up forms of appeal, in order to embarrass the Department to get the tax postponed for a year." This kind of thing is not cricket, and certainly adds enormously to the already heavy duties which fall upon the officials concerned at such a time. It may well be that the Inhabited House Duty is a rather stupid relic which should be abolished; and it may equally be argued that the whole question of taxation of house property, both central and local, stands in need of drastic revision. A stunt campaign, however, is hardly the manner in which

problems of this kind can best be discussed, and it should not be forgotten that the reduction in taxation involved by the new Government scheme has got to be made good somewhere else. For our part, we sincerely hope that we have heard the last of an unpleasant business.

Employment in May.—The statistics published by the *Ministry of Labour Gazette* show that the decline in unemployment which had been in steady progress since November received a check in May. At May 26th the total number of workers registered as unemployed in Great Britain and Northern Ireland was 1,261,000, exactly the same figure as that recorded at the end of April. The Trade Union percentage of unemployed also remained stationary in May, as will be seen from the following table:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.

* Excluding coal miners.

The percentage unemployed among all workers insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland shows a slightly better result, the figure dropping from 10.9 at April 23rd to 10.7 at May 21st. As regards the position in individual industries, the chief changes were a decline in the demand for labour in the wool textile industry, worse conditions in the shipbuilding industry, owing to the lock-out of platers, riveters, &c., and a slight improvement in pig-iron manufacture, at the iron mines, and in some branches of the metal trades. In general the figures support other evidence that the trade recovery has received a check.

Cost of Living.—The cost of living continued to fall in May, but the calculations of the *Ministry of Labour Gazette* show that the decline was only one point as compared with a drop of four points in April. On June 1st the Ministry of Labour index figure of the cost of living was 69 per cent. above the level of July, 1914, as compared with 70 per cent. above that level at May 1st. How this percentage has moved month by month over recent years is shown in the following table:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.	1923.
January 1st..	85-90	120	125	165	92	78
February ..	90	120	130	151	88	77
March	90	115	130	141	86	76
April	90-95	110	132	133	82	74
May	95-100	105	141	128	81	70
June	100	105	150	119	80	69
July	100-105	105-110	152	119	84	..
August	110	115	155	122	81	..
September ..	110	115	161	120	79	..
October	115-120	120	164	110	78	..
November ..	120-125	125	176	103	80	..
December ..	120	125	169	99	80	..

For food alone the May 1st and June 1st percentage increases over 1914 were 62 and 60 respectively. This slight reduction in retail food prices was mainly due to an average reduction of about 2d per lb in butter, and an average reduction of about 1½d per lb in cheese.

The Labour Party Conference.—A Labour correspondent writes:—The annual Labour Party Conference and the Trades Union Congress, the former held in June and the latter in September, are important as reflecting the mind of organised labour. The Labour Party Conference is attended by representatives of affiliated trade unions and

Socialist societies and representatives from local Labour Parties and Trades Councils. The Trades Union Congress, on the other hand, is confined to the delegates of the affiliated unions. Practically all the large trade unions in the country are affiliated to both the Party and the Congress. Some unions, however, are affiliated to the latter, and not to the former; some others, again, are affiliated to the Labour Party and not to the Congress. The chief difference between the Party Conference and the Trades Union Congress as regards composition is to be found in the representation at the former of the Socialist societies, such as the Independent Labour Party, the Fabian Society, and the Social Democratic Federation, and of the local Labour bodies—Labour Parties and Trades Councils. Though the Labour Party Conference is a political Labour gathering and the Trades Union Congress an industrial Labour assembly, there has been a good deal of overlapping as regards the matters discussed at the two meetings, though the Party Conference has always been predominantly political in character. The annual Labour Party Conference, which is to take place next week, will be called upon to deal with the report of the Labour Party Executive, a special report on the liquor trade, the report of the National Joint Council, with the work of the departments carried on jointly by the Labour Party and the Trades Union Congress, and then with a long agenda of resolutions submitted by affiliated bodies and covering the whole range of politics. The Executive Committee has itself submitted four reasoned resolutions dealing with finance, housing, unemployment, and education. Special reference may be made to the motion on finance, as it defines the attitude of the Labour Party on the question of taxation. The resolution protests against "the financial policy of the present Government in maintaining the annual expenditure on armaments at so colossal a figure as £120 millions, in failing to pay off a large proportion of the War Debt, in cutting down the urgently required social services, and in continuing the excessive taxes on the food of the people." Then follows a quite specific statement declaring that the policy of the Labour Party on national finance is to redeem a substantial portion of the National Debt by a capital levy on a graduated scale on fortunes of over £5,000. It is argued that, "with the saving in annual interest and sinking fund thereby effected, and with other economies—notably on armaments—and by the taxation of land values, it will be immediately practicable to reduce taxation and provide more adequately for the social services." In the first place this policy would, it is suggested, permit the abolition of the taxes on food; secondly, the burden of income-tax could be reduced by raising the exemption limit, increasing the abatements, and lowering the rate of the tax; thirdly, the entertainments duty and corporation profits tax could be abolished. These proposals summarise, in point of fact, the amendments put forward by the Labour Party in the House of Commons in the debates on the committee stage of the Finance Bill. The Executive's resolutions on housing, unemployment, and education follow the lines familiar to those acquainted with Labour policy. The remaining resolutions, and by far the larger number, are submitted by affiliated organisations. One interesting suggestion is that an international economic council and secretariat should be established for the control of the main raw materials, minerals and food-stuffs of the world. This part of the motion has a bearing on another resolution emphasising the need for "the international organisation of supplies, manufacturing facilities, transport and purchasing power." It is proposed that "the British Government should take the initiative in securing the establishment of an impartial and international body—(i.) to ascertain the true facts as to the available supplies, on the one hand, and the needs of the various countries on the other; (ii.) to control the distribution of raw materials, in the case of a shortage or threatened shortage, so that supplies may be distributed in the order of vital need; (iii.) to investigate the operation of trusts and combines engaged in the production, transport, or distribution of indispensable commodities; and (iv.) to extend the area of free trade." The resolutions dealing with international problems and international organisation are, perhaps, of special importance. They indicate the growing belief in the Labour move-

ment regarding the significance of international factors and the view now widely held that the solution of many national problems is impossible except on international lines.

Home Output of Iron Ore.—An interesting statement has just been issued by the Mines Department showing the output and employment at iron ore mines and quarries in the fourth quarter of 1922. It shows that in that quarter the average percentage of iron ore content of our home ores was 32 per cent., varying from 52 per cent. in the case of the West Coast hematite to 22 per cent. in the Frodingham ores. The Frodingham ores, though low in iron content, have the great advantage of being self-fluxing. They are also easily worked, so that the average value at the mines of the Frodingham ores in the last quarter of 1922 was only 2s 9d per ton, compared with 20s 11d for the hematite ores, and an average for the whole country of 7s 2d. Output improved steadily throughout the year from 1,246,000 tons in the first quarter to 2,183,000 tons in the fourth quarter. Of the latter total, 306,000 tons were of West Coast hematite, 1,729,000 tons were obtained from the Jurassic ironstones, and 126,000 tons from the coal measures. Employment at the ironstone mines and quarries improved from 9,800 persons at the end of the first quarter to 13,800 at the end of the fourth quarter. In the following table the figures for the four quarters of 1922 have been summarised for comparison with the previously published figures for the years 1913, 1920 and 1921. The imports and values of foreign ores are also given for comparison:—

Home Ore.		Imported Ore.			
Output. Tons.	Value per Ton.	Tons.	Value per Ton.		
1913.....	15,997,300	5/8	1913.....	7,442,249	18/11
1920.....	12,706,900	15/8	1920.....	6,499,551	50/11
1921.....	3,478,000	12/8	1921.....	1,887,574	39/7
1922.....	6,871,800	7/-	1922.....	3,472,645	25/-

These figures furnish an interesting sidelight on the vicissitudes of the iron and steel industry in those years.

The Belgian Franc.—Our Brussels correspondent writes:—The position of the Belgian exchange, and more particularly the relation between the French and Belgian franc, has given rise to some discussion recently. The balance of trade between Belgium and France is against the former, and, unfortunately, this is also true of the total balance of her trade with all countries. Instead of improving, it appears that the position in this respect has grown steadily worse, whereas in France there was an appreciable improvement in 1921 over 1920, though last year's returns were slightly less favourable than those of 1921. During the first three months of 1923 the position in France was very good, and during February and March the value of exports practically equalled the imports, whereas in Belgium they were only about 73 per cent. The following is a comparison of the figures of the two countries:—

	Belgium.			France.		
	Import.	Export.	%	Import.	Export.	%
1920	12,782	8,692	77.6	35,405	22,435	63.4
1921	10,051	7,140	71	22,068	19,773	89.6
1922	9,077	6,060	67	23,900	20,642	86.4
1923—						
January	929	485	52	2,144	1,696	79
February	801	587	73	2,343	2,329	100
March	988	713	72	2,487	2,474	100

It is evident that allowance must be made for other factors, but, nevertheless, the balance of imports and exports has the greatest influence in determining the rate of exchange. Apart from coal and cement, however, the country has few raw materials, while the amount of corn produced is not even sufficient to feed the population for one-tenth of the year. Before the war raw materials were imported to be manufactured and then exported, and the finished product frequently returned to the country which supplied the raw material. It has been a great mistake to limit work by statute to the "eight hours day," having

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorized £3,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,332,105

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

regard to present abnormal conditions. It is interesting to note that many Belgian workmen have gone to work in the devastated areas in France, where this law is not in force. Although the French external debt is heavy, and in comparison that of Belgium is relatively small, this has no active influence on her exchange at the present time, as, generally speaking, France is not effecting any repayment or even paying interest. So long as she does not sell francs for the purchase of sterling or dollars for the purpose of debt repayment, and on condition that her imports and exports nearly balance, the enormous burden of her foreign debt has absolutely no effect on the rate of exchange. If speculation can cause a temporary depreciation, the purchase of French goods abroad would soon bring the rate of exchange back to the level of its real purchasing power. Belgium is producing practically as much coal as in 1913, but at present she has only reached one-half the figures for her monthly production of cast iron and steel in 1913. On the other hand, France has reached 75 per cent. of her production of coal in 1913, if we include the figures from the Sarre, while the coal received from Germany practically accounts for the remaining 25 per cent. As regards steel and cast iron (figures for the Sarre included), she was producing 1,030,000 tons a month in 1922, as against only 800,000 tons monthly in 1913. Her position is thus better than that of Belgium, for although many factories and mines were destroyed in France during the war, this is easily compensated by the exploitation of the Sarre. Although Belgium was able to resume work much more quickly in the mines and the few factories left intact by the Germans, the lack of workmen being less felt than in France, this state of affairs did not continue, and thus we see that, whilst the percentage of exports over imports in 1920 was 77.6 per cent. for Belgium and 63.4 per cent. for France, the Belgian franc being at a premium of 5 to 7 per cent. on the French franc, the position was completely reversed in favour of France in 1921, the percentages being: Belgium, 71 per cent.; France, 89 per cent. During the same year the French franc depreciated abroad less than the Belgian franc, and thus the premium of the Belgian franc, which was still 5 per cent. in January, 1921, was transformed into a discount of 4 per cent. in December, 1921. In 1922 the percentages were: Belgium, 67 per cent.; France, 86.4 per cent., further increasing the advantage in favour of France, and resulting in a further depreciation of the Belgian exchange, which was quoted in Paris in December, 1922, at 92 per cent. For the first three months of the current year the percentages were: France, 90 per cent.; Belgium, 66 per cent., causing a further decline of the Belgian franc in Paris to 85 per cent.; whereas the French franc has remained the same in New York in April as in January, at about 6.60, the Belgian franc has declined from 6.00 to 5.70 during the same period.

French Reconstruction Loans.—The Department of Overseas Trade has received information that three new loans are being issued for reconstruction purposes in the devastated areas of France. One of these loans is being issued by the General Confederation of the Reconstruction Co-operative Societies in the devastated regions. It amounts to 51,725,000 in 103,450 bonds of 500f each, bearing interest at 6½ per cent. The issue price of the bonds is 480f. They are repayable at par in 30 years as from June 8, 1923. The service of the loan, as in the

case of similar issues by the French coal, sugar and other industries, is guaranteed by State annuities. A second loan, which is being issued by the association of persons who have suffered war damage in the Department of the Oise (Groupement des Sinistrés de l'Oise) amounts to 50,622,500f in 101,245 bonds of 500f each, bearing interest at $6\frac{1}{2}$ per cent. The issue price of the bonds is 480f. They will be repaid at par in thirty years as from June 5, 1924. The third loan is being issued by the association for the reconstruction by the national industry of equipment damaged during the war (Groupement pour la reconstitution par l'industrie nationale de l'outillage sinistré). It amounts to 52 million francs in 104,000 bonds of 500f each, bearing interest at $6\frac{1}{2}$ per cent. The issue price of the bonds is 480f. They are repayable at par in 30 years as from June 15, 1923, by annual drawings. The service of this loan, like that of the loans mentioned above, is guaranteed by State annuities. Its object is to enable persons and firms who have suffered war damage to procure the equipment which they may need from French manufacturers. The annual report of the "Crédit National pour faciliter la réparation des dommages causés par la guerre," which has just appeared, states that in 1922 the work of assessing the damage done during the war was continued without interruption, and that 1,450,948 new beneficiary claims (*titres de créance*) were issued, as against 1,556,373 in the previous year. On December 31, 1922, the number of payments made by the Crédit National amounted to 5,487,411, to the value of 17,614 million francs, as against 2,689,379, to the value of 9,805 millions, on December 31, 1921. On April 30th last the number of payments had risen to 6,011,910, to the value of 19,591 millions. The value of the loans granted to manufacturers and traders amounted at the end of 1922 to 256,269,500f, as against 353,971,061f at the end of 1921. The net profits of the Crédit National for the year 1922 amounted to 10,610,542f.

New Indian Rupee Loan.—The India Office announces the issue of a Government of India Rupee Loan for 24 crores of rupees, the application lists opening on July 4th next and extending to July 23rd. Lists will be closed, however, without previous notice as soon as the loan is subscribed for in full. Subscriptions can be made either in cash or Indian War Bonds in London or India. The loan will take two forms: (1) in ten-year 5 per cent. bonds, repayable at par on September 1, 1933, and issued at Rs. 97 for every Rs. 100 of bonds applied for; and (2) in a long-term 5 per cent. loan, repayable at par (1945-55), and issued at Rs. 96 for every Rs. 100 applied for. There will be created a depreciation fund of $1\frac{1}{2}$ per cent. when the market value falls below 96 per cent. Subscriptions may be made in the following forms:—(a) Cash; (b) Indian Treasury Bills at their face value, less a discount calculated at the rate of 4 per cent. per annum on the unexpired portion of the currency of the bills; (c) Indian War Bonds at their nominal value subject to the following conditions, viz.: (1) 1923 War Bonds will be accepted as subscription to both forms of the loan; (2) 1925 and 1928 War Bonds will be accepted as subscription to the long term loan only; and (3) War Bonds tendered in subscription to this loan will carry interest at $5\frac{1}{2}$ per cent. up to the day preceding the date of tender.

The Ottoman Railway Claims.—Mr McNeill's reply to Mr Grattan Doyle in the House of Commons on Wednesday of last week has led the Ottoman Railway Company to circulate a letter to the Foreign Office, which we regret to be unable to publish in full. The position is this. The company claims damages from the Turkish Government for the seizure of the line and stores, the appropriation of its revenues, and damage to its equipment during the world-war and up to the Armistice, and is negotiating for compensation, with the approval of the Foreign Office, directly with the Ankara Government. On March 27th of this year it was assured by the Foreign Office that Turkey would be warned towards the close of the treaty negotiations that, should her treatment of foreign concession-holders prove unsatisfactory, steps would be taken to secure their existing rights by the treaty of peace. But it now appears that, the Turks

having consented to forgo their claims against Greece for damages in the period since the Armistice, Great Britain does not intend to give the warning or press the pre-Armistice claims of the company and other concession-holders against the Turks. A fund of £5,000,000 is set aside for compensation to British subjects whose property has suffered damage, but the company is apparently not to be admitted to participate in it in the same proportion as other claimants. In his letter to the Foreign Office the company's secretary points out that, relying on the Treaty of Sévres, the draft Treaty of Lausanne, and the assurance of March 27th, it has assured its debenture holders that Great Britain would safeguard their rights, and that the Turkish Finance Minister, now representing his country at Lausanne, has admitted Turkey's liability; and it protests against the sacrifice of its interests to secure a political bargain benefiting foreigners at the expense of British subjects, and demands admission to participate *pro rata* in the compensation fund. Mr McNeill's reply promised that the Government would defend any just claims of concessionary companies, but stated that peace depended on a number of inter-related questions, and it was impossible to give a pledge as to any one of them. But, if the protection of the just claims of the company is to be jeopardised as a sacrifice to wider interests, it may fairly expect compensation in some other form.

The Position in Hungary.—The decision of the Reparations Commission to delay granting facilities for a foreign loan to Hungary and to require that the proceeds shall be partly earmarked for reparations has evoked a Note from Count Bethlen's Government, protesting that the loan is thereby rendered impossible. The amount needed—550 to 650 million gold coronas (£23,000,000 to £27,000,000) cannot be raised without the co-operation of London and New York; neither of these money markets will provide funds unless revenues free of reparation charges can be assigned for the service, nor will they dispense with the support and sanction of the League of Nations' Finance Committee. Relief loan charges, some £600,000 annually, already take precedence of reparation payments, and the knowledge that the slight concession (the despatch of a mission of inquiry) is useless, must further depreciate Hungarian credit and exchange. The need of foreign currency for payments abroad is hampering both the Government and private traders; between April and June her paper currency increased from 88 milliard coronas to 119.3 milliards—over 35 per cent.; without a foreign loan she cannot pay her debts, nor can her Government be responsible for order. These contentions are supported by the Report (dated March, 1923), just issued by the Overseas Trade Department, from the Commercial Secretary of H.B.M. Legation at Budapest. He notes "a certain steadiness of character" in the Hungarian people (assuredly needed now); but he points out that, in spite of various signs of improvement, Hungary's condition depends largely on her neighbours, who take most of her exports, and a poor harvest made her balance of trade more adverse. Attempts were made to stabilise the currency by controlling exchange, to raise new revenue by varied and onerous taxation, and to satisfy her foreign creditors, but the stabilisation was merely an imperfect brake on note issue, and, with the restrictions on imports and exports, hampered foreign trade, decreased purchasing power, and increased labour unrest. The heavier taxation contributed to this result, especially the very productive tax on sales; the capital levy made more disturbance than it was worth. It stopped saving, and set up wild speculation on the Bourse, as the only means of making a living. The estimated Budget deficit in 1922 equalled about £3,600,000; one-tenth of the population consists of civil servants and their dependents, largely from the ceded regions, but the Government hopes to reduce their numbers this year by 20 per cent. Hungary relies mainly on the export of her surplus of very varied agricultural products; milling is the leading industry, canning food is largely developed, farming suffers from lack of capital and skill, and of cattle, through reparations in kind. Machine construction is important, especially of agricultural implements and electric appliances; a textile industry has been nursed by Protection. Navigation on

the Danube is hopelessly hampered by inter-State rivalries; the railway deficit was about £1,800,000. The hope for foreign trade lies in commercial agreements, of which several are concluded, and others pending; and much good work has been done by Chambers of Commerce, among which the British and Hungarian is prominent. It is to be hoped that the delay caused by the Reparations Commission will not wreck the process of recovery.

Cotton Trade Depression.—For a long time now the Federation of Master Cotton Spinners' Associations has striven very hard to relieve the depression in the Lancashire industry. The trade position early this year showed some improvement, and organised short time was abandoned. In February, however, users of American cotton were recommended to restrict output from the beginning of March by 50 per cent. At the time of writing there is some uncertainty as to what will be done from the beginning of July. It is being suggested in some quarters that instead of continuing the 50 per cent. restriction of output the Masters' Federation should recommend the closing down of all the mills using American cotton during the month of July. It may be mentioned that out of the 56,000,000 spindles in Lancashire about 40,000,000 are in the American section. The mills using Egyptian cotton are doing fairly well.

Manchester Spot Cotton Market.—Our Manchester correspondent writes:—For a long number of years there has been an agitation in Manchester for the establishment of a spot cotton market, but developments have been very slow. In view, however, of the increasing importance of the Manchester Ship Canal and Manchester as a distributing centre of raw cotton, there now seems to be a possibility of some definite action being taken at an early date. In this connection it is reported that the Manchester Raw Cotton Company, Limited, has been registered with a capital of £1,000,000 in shares of £1 each to carry on the business of importers, exporters, and merchants. The chairman of the company is Captain W. C. Bacon, the chairman of the Manchester Ship Canal Company, Limited. Another director is Mr Fred A. Tomlinson, an ex-president of the Manchester Cotton Association. Other directors are Mr E. Latimer, the managing director of the Manchester Ship Canal Company, Limited, and Mr Harry Dixon, a leading Lancashire cotton spinner. It is the intention of the company to promote larger imports of raw cotton direct to Manchester, and although most of the attention will be centred on American cotton, arrangements are being made for consignments from Egypt and Brazil. It is expected that trade developments as a result of the formation of this company will eventually result in the establishment in Manchester of a spot cotton market.

The "Shell" Report.—The profits of the "Shell" Transport and Trading Company depend on the dividends declared by the companies in which it is a shareholder. For the year 1922 these amounted to £4,477,100, as against £5,143,600 for 1921. The directors state, however, that they are satisfied that ample provision for depreciation has been made over the numerous companies in which they are interested. Total profits, including £461,000 for interest on other investments, amount to £4,938,100, which compares with £5,626,700 in 1921. Expenses increased from £139,300 to £304,900, owing to the cost of a new issue of preference shares. As will be seen from the summary below, the peak was reached in 1920, but the fall in profits last year was not so sharp as in 1921:—

	1913.	1917.	1918.	1919.	1920.	1921.	1922.
Balance forward	£ 265,194	£ 459,384	£ 1,239,032	£ 1,136,877	£ 1,242,622	£ 2,007,588	£ 2,069,596
Profits	1,581,189	2,774,631	2,893,603	4,762,724	7,668,642	5,626,673	4,938,084
Expenses, &c.	1,849,383	3,225,015	4,132,635	5,899,601	8,911,264	7,634,261	7,007,680
Interest on loans	46,124	40,702	40,659	49,354	41,222	139,251	304,925
Balance	1,800,259	3,088,443	4,091,976	5,850,247	8,870,042	7,495,010	6,702,755
Prof. dividend	81,250	100,000	100,000	100,000	100,000	100,000	316,542
Ord. dividend	1,389,283	1,749,411	2,815,976	4,507,625	6,762,454	5,325,414	4,357,157
	(35 %)	(35 %)	(35 %)	(35 %)	(35 %)	(27½ %)	(22½ %)
Reserve, &c.	3,162	41,172	41,172	41,172	41,172	41,172	41,172
Balance forward	326,564	1,239,032	1,136,877	1,242,622	2,007,588	2,069,596	2,029,056

The dividend on the new 7 per cent. second preference shares requires £216,500, but the ordinary dividend is reduced from $27\frac{1}{2}$ to $22\frac{1}{2}$ per cent., paid free of tax, and costs nearly one million less. The company's financial position, in the opinion of the directors, is as strong as ever, and they point out that the present dividend is paid without in any way trenching on reserves, and represents the result of the working of the year. The balance-sheet, analysed elsewhere, is certainly a strong one. Investments in British Government securities stand at well over £12 millions, as compared with less than £7 millions twelve months ago, while the reserve fund figures at £5 millions.

Hudson's Bay Report.—The report of the Hudson's Bay Company for the year ended May 31st last shows a substantial decline in profits in all spheres of operation. Total fur collections, it is stated, have been well maintained and better prices realised than had been anticipated, but the profit on the fur trade at £196,300 was £41,000 less than in the preceding year; salesshops and other trading brought in only £15,900, as against £77,900, and the Winnipeg head office £56,000, against £61,500. The profit shown for the land account was £18,300, as against £70,000 for the previous year. Farm land sales comprised 24,976 acres for £75,300, an average of £3 os. 3d. per acre, compared with 33,594 acres for £112,100, an average of £3 6s 9d per acre in the previous year. Sales of town lots amounted to £15,900, compared with £33,600. Total net profits amounted to £346,800, as compared with £520,500. Results for a number of years past are compared in the table below:—

Year Ending	Net Land Receipts.	Fur and Trading Profits.	Total Net Profits.	Ordinary Dividend.
May 31—	£	£	£	£
1909	175,476	80,391	255,867	260,000
1910	240,045	166,156	406,201	400,000
1911	548,512	159,966	708,478	400,000
1912	273,268	196,070	469,338	400,000
1913	589,926	228,324	818,250	500,000
1914	297,302	86,636	383,938	400,000
1915	2,697	30,641	33,338	nil
1916	24,652	266,662	291,314	200,000
1917	140,777	279,708	420,485	300,000
1918	367,841	315,964	683,805	400,000
1919	262,126	406,414	668,540	450,000
1920	174,276	331,757	506,033	400,000
1921	154,161	300,049	454,210	400,000
1922	69,987	450,468	520,455	450,000
1923	18,340	328,440	346,780	195,000

The distribution on the ordinary capital amounts to 19½ per cent., as compared with 45 per cent. for the year 1921-22 and 40 per cent. in each of the two preceding years. It is made up of 17½ per cent. from the profits of trade and 2 per cent., free of tax, from the Land Department. The question of Colonial income-tax has complicated matters, however, for, in accordance with the ruling in the case of *Sheldrick v. South African Breweries, Limited*, under Section 27 (5) of the Finance Act, 1920, by which shareholders receive direct relief in respect of Colonial income-tax, instead of such relief being in the hands of the company, the company is making a refund of income-tax to both preference and ordinary shareholders. This involves a sum of about £65,000, equivalent to 8½ per cent. on the ordinary shares. On March 31st last the unsold lands in the possession of the company amounted to 2,804,500 acres, but the balance-sheet has no amount against "unsold lands and instalments to be received on sales," the last item on the credit side. The balance-sheet, an analysis of which will be found in a later column, shows a reduction of £715,800 in creditors, cash is £474,900 lower, and there is a decline of £201,900 in the amount invested in the fur trade.

John Brown's Profits.—Very little change in the net profits of John Brown and Co., Limited, is shown in the report for the year ended March 31st last. Gross profits rose by over £7,000, but debenture interest required £5,000 more, and net profits were less than £2,000 higher at £212,300. The directors refer to the continuance of the trade depression in the various departments of the company's operations with the exception of the coal trade, in which there was an improvement in the

latter part of the financial year. A comparison of results reads as follows:—

	1913-14.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
Gross profit ..	£ 437,834	£ 552,190	£ 468,704	£ 418,836	£ 304,740	£ 311,838
Interest, &c. ..	60,336	85,019	89,895	86,915	94,333	99,544
Net profit ..	377,498	467,171	378,809	331,921	210,407	212,294
Brought fwd.	89,722	164,394	192,308	178,929	179,600	180,632
Reserves, &c. ..	467,220	631,565	571,117	510,850	390,007	392,926
Prof. dividend ..	100,000	100,000	100,000	100,000	100,000	100,000
Ord. dividend ..	87,500	87,500	87,500	87,500	87,500	87,500
	182,300	251,757	304,688	243,750	121,875	121,875
	(10 %)	(12½ %)	(12½ %)	(10 %)	(5 %)	(5 %)
Carried forward	97,420	192,308	178,929	179,600	180,632	183,551

No allocation is again made to reserve, and the ordinary dividend is maintained at 5 per cent., the balance forward being increased by nearly £3,000. The balance-sheet shows a slight reduction in the property item, which includes investments in other companies, and stock of work in progress at £204,400 shows a drop of £125,000. There has been a reduction of £252,600 in debentures, but creditors are £122,000 higher. The report says that there are some signs of improvement in business at the present time, "but prices remain abnormally low when compared with the high cost of production."

Guest, Keen, and Nettlefolds.—Again we have to record a good trading year for Guest, Keen, and Nettlefolds, Limited. In the report and accounts for the year ended March 31, 1923, profits of £918,039 are revealed after providing for income-tax. Results over a number of years are as follows:—

	1913-14.	1915-16.	1917-18.	1918-19.	1919-20.	1920-21.	1922-23.
Gross profits ..	£ 401,722	£ 494,480	£ 446,645	£ 417,141	£ 334,530	£ 884,121	£ 918,939

Brought forward	239,016	357,319	405,712	475,316	535,687	261,605	206,080
Available for distribution	573,190	777,779	778,337	818,437	806,197	1,071,706	1,050,999
Preference dividend ..	86,000	86,000	86,000	86,000	86,000	200,756	290,928
Reserve ..	70,000	100,000	130,000	50,000	50,000	50,000	50,000
Ordinary dividend ..	144,750	144,750	144,750	144,750	144,750	516,686	537,887
Rate ..	15 %	15 %	15 %	15 %	15 %	10 %	10 %
Carried forward	270,441	377,029	417,587	235,687	261,605	264,098	209,66

As last year, the dividend of 10 per cent. is free of tax. It may be recalled that last year the date of the end of the financial year having been changed from June 30th to March 31st, the accounts related to a period of nine months, and the present figures are not therefore comparable. Net profits for the nine months, after payment of debenture interest, amounted to £567,200, and the available balance, including the balance brought forward, was £831,300. On turning to the balance-sheet it is instructive to find that out of total assets amounting to about £18 millions, £13,266,821 represents investments in subsidiary companies. This is, therefore, another case where a reconstructed balance-sheet might be issued showing actual assets and liabilities of subsidiary undertakings when wholly under control of the parent concern.

Howard and Bullough.—Exceptionally good results are shown in the report of Howard and Bullough, Limited, makers of textile machinery, for the year ended May 31st last. The net profit amounts to £587,200, which compares with £383,100 for 1921-22, and £148,700 for 1920-21, but no explanation of this very substantial expansion is vouchsafed in the report. A summary of past results is appended:—

	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
Gross profits ..	£ 165,066	£ 301,152	£ 125,408	£ 128,218	£ 158,749	£ 393,058	£ 597,247
Debit interest ..	10,000	10,000	10,000	10,000	10,000	10,000	10,000
Net profit ..	155,066	291,152	115,408	118,218	148,749	383,058	587,247
Brought forward	31,464	39,078	91,061	53,989	57,207	50,956	94,014
Available balance ..	186,530	330,230	206,469	172,207	205,956	434,014	681,261
Dividend ..	15,000	15,000	15,000	15,000	15,000	15,000	15,000
Reserve ..	75,000	112,500	100,000	100,000	100,000	175,000	200,000
Ord. dividend ..	64,530	111,649	37,500	..	40,000	150,000	300,000
Carried forward	30,000	91,081	53,989	57,207	50,956	94,014	166,261

The ordinary dividend is maintained at 10 per cent., but the bonus is increased from 7½ to 10 per cent., free of income-tax. The dividend reserve is credited with £100,000, as against £50,000 a year ago, and £200,000 goes to reserve, as against £100,000, the carry forward being increased by over £72,000. Reserve funds now total £850,000, while the total paid-up ordinary and preference capital is £1,250,000. The auditors' report, moreover, states that "adequate depreciation has been written off the buildings, plant, and machinery, &c., accounts, and provision has been made for doubtful debts." An analysis of the balance-sheet will be found in a later column. The directors propose to capitalise £250,000 of the reserve fund, and distribute £1 bonus shares to ordinary shareholders at the rate of one share for every four held.

Malacca Rubber.—Again shareholders in the Malacca Rubber Plantation will be disappointed with results. In the accounts just published for the year 1922 of this company, although the directors have been able to show a profit of £35,340, as against a loss of £15,343 for the previous year, no distribution is made to ordinary shareholders, while the dividends on the 7½ per cent. cumulative preference shares are now three years in arrears. Results in past years are compared below:—

	1914.	1916.	1917.	1918.	1919.	1920.	1921.	1922.
Profit ..	£ 144,224	£ 230,749	£ 188,379	£ 50,199	£ 182,733	£ 18,581	£ 15,343	£ 35,340

In order to provide for depreciation of buildings and machinery and debit balance brought forward from previous year, £30,827 was transferred from reserves. Rubber production costs have fallen from 11.23d per lb for 1921 to 9.68d per lb for 1922, and the total crop harvested was 3,584,678 lbs, against 3,515,705 lbs for 1921. Since the close of the financial year the directors have made an issue of 171,036 ordinary £1 shares at 30s per share, and have repaid £150,000 8 per cent. seven-year notes.

The Mexican Railway Report.—Some light is thrown on the situation in Mexico by the half-yearly report of the Mexican Railway Company, to be submitted to the shareholders at their meeting on Wednesday next. For the half-year ending December 30, 1922, gross earnings fell to \$6,754,158, as compared with \$8,567,289 for the corresponding period of 1921; but the working expenses also declined by \$1,105,286 to \$5,505,974, owing to the reduction in the goods traffic and smaller expenditure on the hire of rolling stock. Net revenue is thus \$707,845 lower, at \$1,249,084. At the standard rate of 24d to the peso this is equivalent to £124,908; adding £3,740 for profits in exchange, and £1,701 for interest and transfer fees, the total credit to net revenue account is £130,349. The debit balance on June 30, 1922, was £508,156; after payment of debenture interest (£85,517), and reserving £8,000 for taxation, there is a deficit to be carried forward of £471,323 in net revenue account. On July 1st the company will distribute £62,697 in anticipation of profits payable to holders of the registered "A" stock, which, with the two previous distributions, will reduce the amount of that stock by 30 per cent. The electrification of the mountain section will probably be completed early in 1923. The jubilee of the line was celebrated last January, the President inaugurating the festivities. The country is quieter than at any time during the last ten years; the excessive stock of imported goods is being sold off, more land along the lines is being cultivated, and the harvest prospects are promising. Apparently, therefore, the peasantry are better off. So are the working classes in general, judging from the greater quantity of pulqué

(the strong drink of the masses), which was (unfortunately) carried, and the higher wages which the company had to concede. On the other hand, the decrease in the amount of goods carried, and in the first-class and express passenger traffic shows that the upper classes were still feeling the depression.

Zinc Corporation.—Our mining correspondent writes:—The shareholders in this Broken Hill undertaking lately had an agreeable surprise in the shape of the declaration of a dividend of 1s per share on the ordinary shares, involving a balance dividend of like amount on the participating preference issue, making 2s per cent. for the year. The report indicates that the earnings were swollen by abnormal profits on the residue of the zinc tailings, the cost of which had previously been written off. At £176,400 the surplus for 1922 scores an expansion of nearly £75,000 upon the 1921 total. The sum of £50,000 (as against £30,000) is appropriated for new plant, and after payment of the increased dividends an enhanced balance will remain to go forward. The last preceding distribution on the ordinary shares was 1s per cent. in 1919, making 30 per cent. for 1918. It may be recalled that the corporation was originally formed for the exploitation of a new process for the extraction of zinc from the Broken Hill tailings, and for this purpose acquired large accumulations of the residues in question, which had previously not been amenable to treatment. Considerable difficulties had to be overcome in practice, but eventually success was achieved. In 1911 the directors—doubtless with an eye to the then somewhat distant future—formulated a scheme for the absorption of the company owning the South Blocks mine; this was carried into effect. Subsequently the two branches of activity have been carried on more or less—as labour conditions permitted. As already indicated, the company has come to the end of its accumulation of residues, and will henceforth be dependent for its income upon the South Blocks mine, whose ore reserves are computed at 2,115,700 tons, value 14.6 per cent. lead, 2.6 ounces silver, and 9.4 per cent. zinc. There is also another lode chiefly carrying zinc. The corporation has substantial holdings in several associated undertakings, together with numerous miscellaneous interests. On the basis of last year's dividends the yield on the preference shares is about 12 and on the ordinary 8 per cent. The quotation of the two classes of capital is scarcely proportionate.

St John del Rey.—As only to be expected, in view of the decline in the gold premium, the profits of the year ended February, 1923, fall considerably short of those for the preceding twelve months. Moreover, operations were adversely affected by shortage and high cost of labour, these factors more than offsetting the abnormally low rate of exchange, which averaged rather less than 7d per milreis. In the event the profit of £148,800 is fully £108,000 below that of 1920-21. Holders of ordinary shares again get a bonus, but it is of 2½ per cent. instead of 5 per cent., making the total for the year 12½ per cent. The sum transferred to capital works account is now £60,000 as against £70,000, and there is no appropriation to reserve, which in respect of the preceding year got £30,000. The financial position is, however, strong, the balance-sheet showing net surplus cash assets to the amount of £181,000, invested in gilt-edged securities. The development position at the moment is a little uncertain; still, on a new method of computation, the ore reserves are placed at the expanded total of 1,381,400 tons, representing about 7½ years' supply. The reduction in temperature obtained in the deeper workings by means of the spraying process, although not so large as at first shown, continues at every point. The exploration of neighbouring areas has given discouraging results.

The Institute of Bankers announces that a paper on "The Place of Money in Economics," will be read by Prof. Gustav Cassel, on Monday, June 25, at 5.30 p.m., in the theatre of the School of Oriental Studies, Finsbury circus, E.C. 2.

Oversea Correspondence.

THE NEXT MEETING OF THE LEAGUE COUNCIL.

(BY A SPECIAL CORRESPONDENT.)

GENEVA, June 20.

It is difficult to keep pace with League developments within the limits of reasonable space, and since my last letter much has happened to add to the confusion of those unfriendly critics who seem to imagine they have said the final word when they ask in superior tones, "What is this League doing?" and who, for the most part, do not know even what the League is. The Council, which met towards the end of last April, is to assemble again on June 29th, and it will have a good deal of additional business to review and transact, short though the interval is between the two sessions. Presumably, Lord Robert Cecil will, for the first time, be the British representative, a fact significant not so much of Lord Robert's own special personality, but of the recognition by at least one of the Great Powers, that the League is part and parcel of foreign policy, and must be treated as such through a definite Minister, who to all intents and purposes becomes League Minister for Great Britain. It is to the credit of Mr Baldwin and the Conservative Government that they should have taken such a step, which was long overdue, and that, incidentally, they should have ended the farce by which one of the best living authorities on the work and procedure of the League was a participant in its labours only through the public spirit of the South African Premier in appointing him as one of the Dominion representatives. There is one regret. As a delegate of South Africa, Lord Robert was able to take an attitude of considerable independence in the Assembly. As a delegate of the British Government, he will hold a position of less freedom and greater responsibility, though it can be no secret that the French, remembering his League work, are a little apprehensive about it all, especially because of his recent speech on the Ruhr (before he took office), and because of the British Government's proposal on the agenda of the next Council meeting that a commission of inquiry be sent into the Saar. The latter is a difficult one, and an argument against it is that it comes rather late in the day, and follows British acquiescence in much that should not have been permitted, at any rate with British consent, during the past few years.

But it is now a new British Government, not responsible for what the Coalition thought fit to do, and it is clearly entitled to act differently. Other Governments on the Council remain, however, the same, and it will not be easy for them to admit uncertainty about their past wisdom. Personally, I do not consider there is a great deal in the matter. What was of more significance was that the House of Commons showed itself awake to the question, that the whole thing was widely ventilated, that very soon afterwards the strike was settled, and that the way was left open for the withdrawal, or at least the great modification, of the obnoxious decree which the governing commission took upon itself to issue. That is a point upon which the British Government should, and doubtless will, require precise information. Public opinion and Parliamentary opinion—these are the hopeful indications of this affair, both in relation to their effect on our own Government, and through them, it is to be hoped, on other countries. The history of the past few years has shown that the chances of agreement within the League are greater than they are without; the League has not only certain binding rules of conduct and procedure, but most distinctly a certain spirit of approach, which is not so evident outside, and this is facilitated by the continuity of League machinery.

A great step forward is the success which has marked the Austrian long-term loan. Twelve months ago no investor would put a halfpenny into Austria. To-day there have been complaints from those who failed to get allotments in the loan. That is the contrast which the League represents, and though it would be idle and foolish to pretend that all difficulties are over—there is no greater mistake than to belittle the difficulties of League work in any direction—it means almost everything to Austria

that this money is forthcoming. She had to fulfil a considerable part of her side of the bargain before this prospect could be realised, and she could not be absolutely confident. Now she knows, and can go ahead with assurance. It is unfortunate that politics prevented some similar application of sane financial reconstruction to Hungary, but it may have to come yet. The reconstruction of Europe would be comparatively simple if Europe were in a mood to face it with common sense instead of political passion.

The Council will have the gratifying task of reviewing the bright development of their Austrian scheme, and another important matter will be the consideration of the work of the Opium Commission, which has interesting political significance. The chief point of the problem is to reduce the production of raw opium to the amounts necessary for medicinal and scientific purposes. This is difficult, on account of the difficulty of control in Eastern lands, and of the social habits, but the Commission reached agreement with the Americans in principle, and called for international conferences for the purpose of reaching practical results in the limitation of production to medicinal and scientific requirements, and in the gradual suppression of opium smoking in China and Far Eastern colonies.

The Temporary Mixed Commission on Armaments has again been studying definite schemes for reduction and guarantees. Data are being gathered, and ideas threshed out that furnish the background from which a final policy may be formed as soon as the question becomes one of practical politics. There has also been a meeting of the Health Committee, which is in the full swing of highly valuable work, both of a technical and general public health character, and its tasks have been increased by Governmental applications for various kinds of scientific inquiry. It was decided, for example, at the instance of the British member, Sir George Buchanan, to consider the causes of the pronounced difference in certain forms of cancer mortality revealed in the vital statistics of England, Wales, Holland, and Italy. This is of great interest to public health, particularly when the problems of cancer are being actively studied in many countries. The work, study, and assistance of the health organisation extends to many parts of the globe, and, like several other non-political but vital international activities, in which the League is continuously engaged, this has the whole-hearted backing of official America.

UNITED STATES.—GOVERNMENT'S SHIPPING PROBLEM—INTERNATIONAL MERCANTILE MARINE PASSES PREFERRED DIVIDEND—COMMODITY PRICES—CROPS.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 11.

In a letter to President Harding, made public to-day, A. D. Lasker, who will retire to-morrow as chairman of the United States Shipping Board, states that most of the bids which the board has received for some of its vessels will be inadequate, and that the Government will be forced to maintain in some way the various trade routes now being operated at its expense. In his opinion, the comparatively higher cost of operating American ships is still the main reason why private American capital does not enter the overseas carrying trade. Mr Lasker expresses his conviction that "there are inherent in any form of Government ownership of a merchant marine marked disadvantages as compared with private ownership which cannot be overcome," but under present circumstances he sees no alternative other than direct Government operation. He recommends, therefore, the creation by the Emergency Fleet Corporation of 12 to 18 subsidiary corporations in which existing freight lines will be consolidated, the Fleet Corporation, as the parent body controlling the general policies of its subsidiaries. To operate such trade routes, he says, there will be required at the outset about 250 ships, replacing almost 400 now in those services, the 250 ships representing approximately 2,000,000 deadweight tons. The Shipping Board, after allotting the 250 bottoms, will still have on hand more than 1,200 surplus steel ships. Several

hundred of those vessels, built for war purposes, cannot be operated under peace conditions, according to Mr Lasker. He recommends that about 200 vessels, or approximately 1,750,000 deadweight tons, be selected "as a reserve to be employed in highly competitive routes if, and when, foreign owners actively oppose the expansion of our marine activities." He urges that some of these reserve steamships be refitted with Diesel engines. Vessels so equipped have an advantage, he says, of about 25 per cent. in operating costs as compared with the highest type of oil-burning ships, and the economies thus effected will, he believes, more than compensate for the disadvantage in physical operating costs under which American ships now labour. If the foregoing plan is adopted, there will remain between 900 and 1,000 ships "for which we have no present employment, and the existence of which acts as a depressant upon the merchant marine of the world, and most of all upon our own." Mr Lasker, therefore, recommends the sale of these surplus ships at the best prices obtainable, not only to private American, but also to foreign shipping interests. Stabilised conditions, he argues, can only be brought about by the elimination of this surplus tonnage, and he suggests that the Shipping Board be authorised to scrap all of these vessels for which it is unable to find a purchaser at home or abroad.

In common with all shipping companies, the International Mercantile Marine Company had a very lean year in 1922. The action of the directors in passing the semi-annual dividend on the 6 per cent. cumulative preferred stock, usually paid on August 1st, came as no great surprise to the financial and investment community, especially since reports submitted at last week's annual meeting of stockholders showed a heavy deficit for the year, after charging off full depreciation on all steamships of the company and its subsidiaries. The company's annual report has not been completed, but the preliminary statement of operations in 1922, compared with actual results in 1921 follows:—

	1921. Actual. \$	1922. Estimated. \$
Net earnings, including insurance fund surplus for 1922, after deducting operating and general expenses, taxes, and interest on debenture bonds of subsidiary companies	14,069,053	6,971,130
Interest on I.M.M. Co. bonds	2,153,725	2,256,253
Profit before depreciation	11,915,327	4,714,877
Depreciation on steamers	6,117,980	5,948,660

Net result

* For proper comparison with results of previous years, the earnings of the British companies have been converted at \$4.85 per £ sterling.

† Deficit.

The preliminary report of the International Marine Company alone is as follows:—

	1921. Actual. \$	1922. Estimated. \$
Total net earnings of I.M.M. Co. plus dividends from subsidiary companies, after deducting taxes and general expenses	8,329,309	6,534,838
I.M.M. Co. bond interest	2,153,725	2,256,253
Depreciation on steamers directly owned	6,175,583	4,098,584
Surplus	998,834	398,834

* Dividend received from foreign subsidiary companies were converted at the market rate of exchange on date received.

P. A. S. Franklin, chairman of the board, told stockholders that the marked decrease in the consolidated earnings for 1922, as compared with 1921, was caused largely by the decrease in the movement of third-class passengers, both east and west bound, owing to the United States immigration laws and the unsettled conditions in Europe. That heavy loss was only slightly offset by a moderate increase in the movement of first and second-class passengers. There was also a decided petitive freight rates had fallen to a point where in many cases the actual cost of loading and discharging the cargo was hardly covered. For the first four months of this year, he said, business shows even less satisfactory results than for the corresponding period of 1922, and is likely to continue depressed until the European political situation materially improves and the present serious

economic difficulties are remedied. It is quite generally agreed here that, in view of the many factors which have discouraged travel and traffic, such as restriction of immigration, vexatious passport regulations and increased competition, including that of Government-owned ships, the company, as Mr Franklin points out, did well to earn during 1922 its expenses, taxes, and bond interest, and in addition a substantial part of the yearly depreciation on its fleet. Among holders of the company's first mortgage 6 per cent. bonds, due October, 1941, some uneasiness has apparently developed because of the marked decline in the company's earning power, with the result that the bonds have fallen to around 82, as compared with last year's high point of 99½. The bonds, however, are protected by large equities, and officials express confidence that the company will be able to maintain interest payments which have always been earned.

Commodity prices continued to decline in May. Bradstreet's index number as of June 1st was \$13.3841, representing a drop of 2 per cent. from May 1st, which, in turn, was 2 per cent. below the April 1st number. While the June 1st index figure is the lowest recorded since November 1st, 1922, it is 12.4 per cent. higher than that of June 1st a year ago, and 26 per cent. above the low point on that date two years ago, when the 1920-21 decline culminated. The present index number is 35.8 per cent. below the peak point of February 1, 1920, but 37.5 per cent. higher than the August 1, 1914, level. During May only one group of commodities—namely, building materials—showed a gain, and that was small; only one group, fruits, remained unchanged, while 11 of the 13 groups declined to a greater or lesser extent. The principal recessions were in prices of metals, textiles, provisions, and naval stores.

The Government's crop report, as of June 1st, forecasts a much lighter yield than last year's harvest in the case of all small grains, with the exception of oats. The following table gives the June 1st condition of the principal crops, as reported by the Department of Agriculture, the estimated yields in bushels, as indicated by the June 1st condition, and the actual harvests in 1922 and 1921, three ciphers being omitted:—

	Condition June 1, 1923.	1923 Forecast.	1922 Yield.	1921 Yield.
Winter wheat	76.3	581,000	586,000	587,000
Spring wheat	90.2	236,000	270,000	208,000
All wheat	79.9	817,000	856,000	795,000
Oats	85.6	1,256,000	1,215,000	1,061,000
Rye	81.1	72,000	95,500	58,000
Hay	84.4	99,000	112,800	97,000

During the past week good progress has been made by all crops. Private estimates of the winter wheat crop range from 579,000,000 to 612,000,000 bushels; of spring wheat, 217,000,000 to 237,000,000 bushels; of total wheat, 796,000,000 to 849,000,000 bushels; and of oats, 1,275,000,000 to 1,330,000,000 bushels. Reports from leading corn-growing States are unfavourable. In many sections an unusual amount of replanting has been necessary; elsewhere cultivation has been delayed by slow growth and wet fields, and heavy rains have caused considerable damage in various parts of the corn belt, particularly in Texas and Oklahoma.

FRANCE.—BUDGET—PUBLIC DEBT—TRADE RETURNS.

(FROM OUR CORRESPONDENT.)

PARIS, June 20.

THE Senate, which began its general discussion on the Budget on Monday afternoon, completed this part of its work yesterday morning, and is now busy with its final consideration of the individual departmental budgets. When this has been completed, the revised Budget will, of course, be sent back to the Chamber, with what results it is at present impossible to make any suggestion. The difference between the Budget for 1923 as it left the Chamber and as it now stands before the Senate, as the result of the recommendations of the Finance Commission

INTERNATIONAL BANKING
IN ALL ITS BRANCHES

BANKERS TRUST COMPANY

16, WALL STREET, NEW YORK

PARIS OFFICE
3 & 5, PLACE VENDOME

CABLE ADDRESS: BANKTRUST, PARIS

of the Upper House, may be seen at a glance from the following brief table:

	Chamber. Francs.	Senate. Francs.
Estimated expenditure ..	23,971,099,877	22,154,713,522
Estimated revenue	20,281,832,261	23,051,571,032
Estimated deficit ..	3,689,267,616	896,857,510 (Estimated surplus.)

This replacement of an enormous estimated deficit by a substantial surplus the Senate Finance Commission has effected (1) by considering itself justified, in view of the manner in which revenue is coming in in excess of the Finance Minister's estimates, in estimating that the Treasury will receive from taxation by the end of the year an additional sum of 2,210,000,000 more than M. de Lasteyrie budgetted for, plus 500,000,000 from the railway companies, and (2) by drastically cutting down the estimated expenditure of the majority of the departmental budgets by a total of 1,816,386,355f. Whether these departmental reductions will be translated into fact rests almost entirely with the Chamber, but it is already evident that nearly all, if not all, the Ministries affected will put up a strong fight to obtain authority to expend as much as the Chamber has already agreed to.

It is now becoming clear, however, that the greater part of the 1,816 millions which the Senate Finance Commission counts upon by cutting down expenditure is merely a matter of bookkeeping. It is proposed that the budgets of the various civil services shall be cut down by a total of 560 millions, and the military estimates by 336 millions, or 896 millions in all. The remainder of the proposed saving is in connection with the public debt service, in which connection it is proposed to relieve the Budget to the extent of 920 million francs by the simple device of transferring from the ordinary Budget to the budget of expenditure which is recoverable from Germany an equivalent amount of liability incurred through the failure of Germany to carry out its treaty obligations. The Senate Finance Commission, contrary to the view hitherto taken by the Government, recommends that all interest charges on sums that have had to be advanced by France on Germany's account down to December 31, 1922, shall be passed to the Budget of recoverable expenditure. These advances amount to a total of 31,679,000,000f for damage to persons, pensions, &c., 53,651,000,000f for damage to property, and 12,410,000,000f for interest, or a grand total of 97,740,000,000f. On its real Budget, apart from expenditure due to Germany's default, it is contended that France would have a surplus of 4,200,000,000f, therefore it is argued that it is both unfair and illogical that the taxpayer should be called on to carry such an enormous artificial burden.

In introducing his report to the Senate, M. Henry Bérenger gave an interesting statement. Of over 400,000,000,000f of debt, he said, there are 150 milliards of unredeemable rentes of which the capital is not repayable. A further 100 milliards represents purchases of munitions and supplies from the other Allies during the war, and will, according to M. Bérenger's view, be due for payment only after the general settlement of inter-Allied indebtedness. Then there is the ordinary foreign

debt, which is provided for in the usual way, and also the advances made by the Bank of France, in connection with which nothing of a special character need be said. The only serious element, according to M. Bérenger, is the fact that there are now in existence defence and Treasury bonds representing a capital of 83,000,000,000. The constant increase of the public debt, he insisted, was a matter that requires urgent attention.

The French foreign trade returns for the first five months of the year, which were issued yesterday, disclose that during the month of May, for the first time for many years, French exports were in excess of imports. The exports for the month amounted to 2,675,045,000. In consequence of the change in the basis of valuation, however, to which I referred recently, it is impossible to give comparative figures in regard to previous months. A statement issued with the returns nevertheless shows that the exports during May exceeded the imports by 78,000,000. On the first five months of the year the total exchanges, which amounted to 23,863,200,000, showed an excess of imports over exports amounting to 449,049,000, as compared with 275,000,000 during the corresponding period of 1922. The detailed returns for the five months, as compared with the corresponding period of last year, are as follows:—

	First Five Months of		Inc. or Dec.
	1922.	1923.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	2,131,745,000	2,804,919,000	+ 673,174,000
Raw materials	4,993,666,000	7,567,577,000	+ 2,573,911,000
Manufactured goods	1,658,127,000	1,758,627,000	+ 100,500,000
Total	8,783,538,000	12,131,123,000	+ 3,347,585,000
Exports—			
Foodstuffs	698,186,000	1,234,970,000	+ 536,784,000
Raw materials	2,092,190,000	3,638,792,000	+ 1,546,602,000
Manufactured goods	5,223,467,000	6,149,003,000	+ 925,536,000
Postal packages	542,139,000	659,309,000	+ 117,170,000
Total	8,555,982,000	11,682,074,000	+ 3,126,092,000

It may be useful, perhaps, on this occasion, to give the comparative returns of weights also, which for the same period are as follows (in metric tons):—

	First Five Months of		Inc. or Dec.
	1922.	1923.	
Imports—			
Foodstuffs	1,855,330	2,243,643	+ 388,313
Raw materials	17,560,384	17,864,943	+ 304,559
Manufactured goods	708,316	650,840	- 57,476
Total	20,124,030	20,759,426	+ 635,396
Exports—			
Foodstuffs	333,612	493,126	+ 159,514
Raw materials	6,802,231	7,980,610	+ 1,178,379
Manufactured goods	842,196	1,114,341	+ 272,145
Postal packages	11,017	12,827	+ 1,810
Total	7,989,056	9,600,904	+ 1,611,848

The most striking feature of the return, perhaps, is the fact that since the beginning of the year French exports of manufactured goods have reached the proportion of nearly five times the value of the imports of goods of a similar category, and have increased by over 18 per cent. as compared with the corresponding period of last year, while imports of manufactured goods increased only 6 per cent. in value during the same period, while they actually declined by about 6 per cent. in weight. These figures are vitiated to some extent by the new method of valuation adopted by the French Customs authorities, as to which there is a certain amount of controversy here. At the same time, there is no doubt that, owing to the high rate of exchange and other factors, French purchases abroad are now falling off considerably.

French imports of coal and other combustibles, which rose temporarily during the earlier part of the occupation of the Ruhr, are now on the down grade again. During the first five months of the year the total quantity of this category of raw materials imported was 11,420,396 tons (valued at 1,300,074,000), as compared with 12,160,978 (valued at 960,662,000) during the corresponding period of 1922. The deliveries of coke from the Ruhr,

indeed, have now become so satisfactory that purchases of British coke have been entirely suspended, so far as the wants of the French metallurgists are concerned. The question has been raised by M. Fernand Engerand, before the Foreign Affairs Commission of the Chamber, as to whether the metallurgists in the Eastern part of France have not adopted a mistaken policy hitherto in calling on the Government to furnish it with already manufactured coke from the Ruhr instead of coal from which to manufacture coke themselves. The reason for the policy hitherto adopted, however, is clear, and has been due to the fact that Westphalian coke reached the blast furnaces at a price far lower than it could have been produced on the spot. In 1921, for instance, when the quotation for French coke at the retorts was 100f per ton, coke from Germany was being sold to the metallurgical industry in this country at from 38f to 40f a ton, the then price in Germany itself. When the German home prices in July of the same year rose to 110f a ton, the French Government arranged to furnish metallurgists in this country with combustible on the basis of 75f a ton. M. Engerand pointed out to the Commission that this policy rendered it possible for Eastern metallurgists to do without French coke, and, as a consequence, paralysed the local coke industry to such an extent that the coke plants at Lens, Béthune, and Anzin were to a large extent shut down, while projected development plans were abandoned. French metallurgists, in M. Engerand's opinion, would have been much less hampered by recent circumstances if, instead of eagerly accepting supplies of coke from Germany, they had insisted on receiving coal instead, and put themselves in a position to manufacture their own coke.

GERMANY.—CURRENCY—FINANCES—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, June 19.

With the mark depreciated to one-twentieth of its very low gold value of early January, the Currency question obscures all others. Though in general currency is regarded as inseparable from Reparations, there is a growing feeling that measures might be taken which, accepting the depreciation as a fact, and further depreciation as likely, would avoid at least some of the evil consequences. The public finance and the wages questions are directly connected by the condition of direct taxation. The State is losing worse than ever from the depreciation of direct taxation before it is paid; the workmen complain, with reason, that the nominally low rates of income-tax which they bear, being paid at once in the form of deduction from wages, are very much heavier than the nominally high rates imposed on the rich, and paid long afterwards. It is certain that were the direct taxes really got in, the present enormous State deficit would decline or disappear altogether; and put an end to the inflation. The need for ending the inflation is to-day even more clearly seen than before, because the movements of the exchange market in the last months and the facts brought out before the Reichstag Exchange Enquiry Committee agree in showing that a main factor sending up the foreign exchanges is the enormous amount of free marks in public hands, which money the public, foreseeing its further depreciation, insists, despite prohibitions and restrictions, in securing by purchase of stable currencies. The Government itself told the Reichstag last week that the temporary success of the February-April stabilisation was made possible only by the shortness of money at that time, and admitted that the output of paper marks then and later proceeding was bound to kill the experiment. A concrete instance of the abundance of marks above current needs, and of the ease of drawing these from the owners' pockets if only there is a guarantee against depreciation, is the fact that the new Berlin Rye Loan is known to have been oversubscribed at least 60 times on the first issue day, and when all bank reports are in will probably prove to have been oversubscribed 100 times on the first day.

Loans of this kind, the new "savings goldmark" of the savings bank, and other measures, some by the Federal Government itself, have provided partial remedies for the failure of the paper mark as a medium

of exchange and means of capital accumulation; and have made a break with the universal validity of the paper mark. New instances are:—A law, already accepted by the Reichsrat, providing for mortgages in coal, rye, or wheat units, with power to the Government to increase the list of unit commodities; mortgage banks are empowered to issue to the public coal, rye, or wheat mortgage bonds, and are required to secure the bonds with mortgages expressed in the same commodity. This measure is expected to revive the mortgage business, and therewith to facilitate building. The official comment on this is instructive. It "is the first step toward breaking with the legal theory held so far that a mark is always equal to a mark. As a consequence, the new principle must be applied to other domains, because it would be unreasonable to protect the private business men by fixed value (werbestaendig) systems of trade, while allowing the State to continue to suffer from the currency depreciation." Berlin Municipality yesterday adopted this logic by deciding to collect its real estate tax and some minor taxes on the basis of the price index. The paper mark tax will increase automatically in measure as the mark's buying power declines. Everywhere in private business, and increasingly in public business, this system, or the goldmark index system, which is in principle the same, is practised overtly, and where it violates the law, secretly; and every citizen who secures his marks by investing them in commodities, stable currencies, or "fixed value" loans, profiteers on his direct taxes at the expense of the State, and ultimately at the expense of the private pure-mark interests which pay the State's inflation tax. The Federal Government's policy, though supposed to be based on the "mark is a mark" system, is itself ambiguous; by the customs gold surcharge, the new 30 per cent. a month interest on unpaid direct taxes, and other measures it makes up more or less imperfectly for its losses as a creditor in marks; but there is no sign of its going as far as the Berlin Municipality, which will simply fix a normal rate of real taxation on a price basis, and get in this real tax by increasing the nominal mark tax when prices rise. The strong Socialist demand for "werbestaendig" direct taxes is supported by calculations showing that in the financial year 1922-23 the yield of an income-tax, which theoretically rises to the high rate of 60 per cent. (and this on very modest gold incomes) was at exchange of payment dates only £25,310,000, and that of this sum £16,450,000 was paid by the workmen in shape of deductions from wages.

The latest report shows how badly the finances are going. In the ten days preceding June 10th the Floating Debt increased from 12,123,739 to 14,469,943 millions—a new record. Expenditure in the ten days was 1,795,432 millions, against 1,646,077 millions in the preceding period, while revenue was only 226,578 millions, against 283,558 millions. The big direct tax payments, which yielded over a billion marks in the first two ten-day periods of May, have ceased. In the new decade only one-eighth of expenditure was met. This, of course, means a decline in real revenue; real expenditure has not increased since May, 1922, in which month the ordinary Budget balanced, and the deficit on all Budgets was only about 20 per cent. Apart from the Ruhr occupation, only the fall in the value of the direct tax yield can explain the aggravation. As the indirect taxes, which are assessed on weight or volume, have also dwindled with the dwindling mark, some of these are to be put on an *ad valorem* basis. The match tax is to be 20 per cent. *ad valorem*. The salt tax remains on weight, but may be raised if the price of salt rises more than 50 per cent. The sugar tax is to be raised to 30,000 marks per 100 kilos—since this measure was drafted the price-rise has made the new rate much too low. A Bill before the Reichsrat at last releases trustees from their obligation to invest in fixed-interest bearing papers. Under this obligation most of the old trust funds have disappeared. The Reichsbank statement for June 7th shows the influence of the new price-level. Commercial bills increased by 604,473 millions, Treasury Bills by 426,491 millions, and the circulation by 745,670 millions. The normal weekly increase in circulation, which two months ago was 300-400 millions, is likely soon to be over a billion. The limit of 20,000 marks per dollar borrowable on security

of the Dollar Treasury Bills has been removed. The Reichsbank reports that between March 1st and June 9th it delivered \$80,000,000 worth of foreign currencies to 15 big banks to enable them to meet the demand. The gold reserve is now 756,914,000 gold marks, of which 180,032,000 gold marks is deposited in foreign central banks.

Stocks last week and yesterday went up violently. The *Frankfurter Zeitung's* dividend-payers index for the 15th shows 8,060,700, against 5,075,650 a week earlier and 376,685 on January 5th. This rise is somewhat greater than the currency depreciation. Yesterday some stocks rose 30,000 per cent. Some of the Federal loans, led by Threes, have had big rises, Threes yesterday nearly doubling their quotation. Quotations yesterday and those of the 11th are:—War Loan, 95.50 and 92; Fours, 3,300 and 2,100; 3½ per cents., 2,250 and 900; Threes, 38,000 and 11,000; Savings and Premium, 600 and 510. Forced Loan quotes only 32, although, except for the loss of interest in the first three years, it is as good as Threes, which stand more than 1,000-fold higher. The buying of Threes was, as usual, largely foreign.

CANADA.—SMALL BUDGET MAJORITY—FURTHER CHANGES—THE BANK ACT—TRADE CONDITIONS—DIFFICULTIES OF FISHING INDUSTRY—PROPOSED EMBARGO ON PULP-WOOD EXPORTS—RETURNS OF TRADE WITH U.S.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 4.

The King Government, after days of anxiety, secured on May 23rd, in face of a combination of Conservatives, Progressives, Labourites, and two Liberal insurgents, passage for their Budget by 8, the smallest majority given to a Canadian Budget since Confederation. Even this was only obtained by the help of three Progressives and an Independent, and in view of the precariousness of the Ministry's situation there is some talk of a general election. A more serious blow than the small majority was the defection of Messrs. Macmaster and Hudson, two Liberal K.C.s, who took the ground that the terms of the Budget recorded a decision on the part of the Ministry to abandon the Liberal platform of 1919 and conform to the desires of the manufacturing interests and their political allies. The tariff reductions conceded are immaterial, and new doses of bounties and protection have been conceded, while the changes in the sales tax will increase the cost of living. The spokesmen of the Government claim that they have materially lowered the tariff, but they made the same claim a year ago, and the Customs returns for 1922-23 reveal the grim fact that the average rate of duty collected has actually risen a few points.

Meanwhile, however, Mr Fielding has announced some changes in the Budget, and as he has held back the resolution stage, it is thought some more are contemplated. The sales tax has been put back upon newspaper, but its general operation will not begin till

January 1, 1924. A wholesaler who sells 50 per cent. or more of his turnover to manufacturers will be allowed a license, and will not, as originally arranged, pay the sales tax when buying his goods. Only in the event of a sale to an unlicensed manufacturer or retailer will he impose and collect the tax—not, however, on the sales price, but on his purchase price of the goods. As a result, the manufacturer will be the chief collector of the tax in the eyes of the Excise Department. The woollen manufacturers have been protesting fiercely against the new preferential discount on British goods. They declare that the 2½ per cent. cut in the woollen duties made last year resulted in a great increase in the import of British woollen goods, such as hosiery, underwear, &c., and their own sales were seriously impaired. Manufacturers of natural silk are also claiming that the same protection as has been accorded to the artificial silk industry be accorded to them, and there is a rumour that they have been pacified with a duty.

Meanwhile the Banking and Commerce Committee have been sitting every day. The hearing of witnesses was completed ten days ago, and the committee is now engaged in the dissection of the Act clause by clause. The Progressives, who are backed by almost the whole Western Press, have demanded that the banks be given a renewal of their charters for a year and the legislation postponed till next session. At a party meeting, however, the Liberals decided to force the Bank Act through at any cost this year, and as they can rely on Conservative help for this purpose, they voted down the Progressive motion for delay. By way of retaliation the Progressives have adopted delaying tactics in the committee, and have fought clause after clause. However, they cannot outnumber the combination ranged against them, and ultimately the Act will reach the House more or less in the original form drafted by Mr Fielding. However, the Progressives, who are 64 strong, can then renew their blockade on the floor of the House, and if they manage it skilfully, can delay the Act's passage for many weeks. They will not base their obstruction on any demand for a radical bouleversement in the financial system, but will concentrate upon a few drastic reforms, which they regard as imperative. They want, for instance, some guarantees about a national system of rural credits analogous to the scheme devised for the United States, provisions that future bank mergers must require the authority of Parliament, better protection for farmer borrowers, and other changes. If these were conceded, they would drop their obstruction and let the Bill pass, but they fear that once the banks get a clear field for another ten years, they will turn a deaf ear to all demands for reform.

The advent of summer has not brought about the improvement looked for in general trade, although the retail sale for summer fabrics has been up to the average. There is an evident lack of money in circulation in the rural areas, and the country storekeepers will not place orders till there is greater certainty of a good crop. However, the mining boom still continues, and the demands for supplies from the north country are helping business in Toronto and elsewhere.

The Federal Government, by the confession of the Minister of Marine and Fisheries, are contemplating certain measures of reprisal against the United States in connection with fisheries. By the provisions of the Fordney Tariff, Canadian fishermen on the Atlantic coasts were very hard hit; they are faced with a tariff duty before they can sell their catches in the American market, and lose the benefit of a reciprocal arrangement which enabled them to take their fish direct to American ports like Boston. The result is that large numbers of Canadian fishermen who catered for the American market have been compelled to move from their old bases of operations in Nova Scotia to some New England port. Meanwhile, American fishermen are still making use of the other end of the reciprocal arrangement whereby they can land their catches and secure supplies at Canadian ports on payment of a nominal fee. Frightened by the loss of fishing population, public opinion in the Maritime provinces has been demanding the cancellation of the privileges now enjoyed by the Americans, and as the only opposition seems to come from a few traders and merchants who profit by the present arrangements, they may be can-

celled chiefly in the hope that the Americans will then offer some concessions.

Simultaneously with this agitation, another of a parallel kind is on foot for a general embargo upon the export of pulpwood to the United States. At present the important timber provinces have already embargoes on the export of pulpwood grown on Crown lands, where it is cut under Government license. But vast timber areas are owned outright by private individuals and corporations, and the argument is that the million odd cords of pulpwood which are annually cut on these lands, and exported to the United States, should be brought to a higher state of manufacture in Canada, with a resultant addition of perhaps 50 or 60 million dollars per annum to the country's income. Mr Meighen has publicly supported the proposal of such an embargo, and leading Liberals have also endorsed it. Mr Fielding in his Budget speech promised that the subject would be investigated this summer, but was obviously conscious of the difficulties involved in a general embargo. The United States might easily retaliate with an embargo on anthracite coal which would cause great inconvenience to central Canada. Moreover hundreds of settlers who are hewing farms out of the bush in the north country rely during their early struggles on their pulpwood income, and do not wish to be left at the mercy of local rings of Canadian mills. Again statistics indicate that there has been very little increase in the export of pulpwood from Canada; in 1914 1,089,384 cords were exported, and only 7,000 odd more in 1923. Meanwhile, the export of printing paper had grown in the same period from 294,578 to 1,006,230 tons.

However, the trade returns for the past fiscal year once more demonstrate the futility of fiscal devices to check trade between two countries whose interest lies in free commercial relations. Despite the Fordney Tariff, Canada exported in 1922-23 to the United States goods worth \$380,347,721, as compared with \$304,104,721 in 1921-22. Canadian imports from the United States also showed an increase of roughly 25 million dollars.

NORWAY.—TARIFF INCREASES—NEW LOAN PROPOSED.—PAPER STRIKE.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, June 16.

THE necessities of the Exchequer have caused the Finance Minister to look for fresh sources from which to replenish his coffers. At a secret meeting of the Storting he proposed an increase of the duty on articles, the duty on which was not fixed in conformity with treaties with foreign Powers. The increase was adopted, involving 10 per cent. higher duty on coffee and sugar, and 33½ per cent. addition to the duty on other articles. The increase is calculated to yield an advance on the present duty income of about 11 million kroner per annum.

The Finance Minister at the same time signalled the plan of raising a fresh loan of 250 million kroner. Of this sum, 200 millions were intended to clear up all deficits to date, and the remaining 50 millions were to be used as working capital. The Minister did not mention whether he intended launching the loan in the home market or offering it for subscription abroad—that is, in England or America. The latter plan, of course, would help to bring down the exchange, whereas the former would have the great advantage attached to it that the money for interest and amortisation—about 25 million kroner annually—would remain in the country. There is, no doubt, money enough in the country. Two Christiania banks alone—one savings bank and one private bank—have deposits which now exceed 400 millions each. The latter—Christiania Bank and Kreditkasse—has found it necessary to increase its funds by a fresh subscription, because its bye-laws stipulate that it may never receive deposits to a larger amount than ten times its share capital and reserves, but the deposits exceed this limit at present. When, by means of this loan, the ground has been thoroughly cleared, strenuous efforts will be made, by the greatest economy, to keep the budgets down and to balance them without any recourse to fresh loans on the part of the Government.

Attempts have been incessantly made to avoid the strike in the paper industry which has been threatening

for some time. Unless these succeed at the last moment, the strike will commence at 10 o'clock to-night, throwing about 12,000 people out of work. There is no doubt that many of the workmen resent the wanton attitude of their leaders in this special case.

Books and Publications.

A STUDY OF WORLD PROBLEMS.*

EARLY in 1917, before America had entered the war, and before the Russian revolution, a German professor had set down in writing his views on world affairs. They have been translated by an American professor and published by the Carnegie Endowment for International Peace. The German professor, Dr Nippold, preferred to be a Swiss citizen, and had already, before the war, a reputation as a writer of note on international law. He did not spare his Fatherland. There he saw "forces at work to turn the course of international law backwards to the advantage of the military system," and he regarded militarism as "the antipodes of international law."

That a German should condemn the opinions prevalent in Germany will commend him to English people still obsessed by narrow nationalism. But this writer is careless of nationality. It is the thing—the tendency—whether towards law and order or towards anarchy, with which he concerns himself. His outlook is bigger and more broadly based than to be influenced by the catchwords to which some folk hitch their opinions. The book is, in the words of Dr James Brown Scott, who contributes an introductory note, "a commentary on the League of Nations before its birth." It is, indeed, a most interesting commentary, though Dr Nippold, in one point at least, assumed a course of events which did not occur. Writing in the middle period of the war, he discussed developments which might take place "provided that there be a real peace conference." In his view a treaty of peace not containing stipulations for the international supervision of the manufacture of munitions, ships, and so on, "would never be able to offer any guarantee that it actually is a peace treaty." No such peace treaty was concluded. This German writer could not foresee that at Paris the leading figures would be preoccupied with other issues, one "to crush the economic life of his enemy," another "to do a deal and bring home something which would pass muster for a week." Nippold, on the contrary, looking forward to the end of the struggle, considered that leading statesmen had, when he wrote, manifested their plain intention to start, after the war, such a work of peace as that of which he foresaw the possibility. His programme, which, by a coincidence, was contained in 14 points long before the American President had launched his proposals, presupposed that "in the future peace treaty the war preparations of the individual Powers should be reduced to a reasonable degree, so that no single State would any longer be in a position to bid defiance to the might of the League."

Nippold's scheme seemed to contemplate, in effect, the establishment of a world super-State, as well as recognition of the principle that international disputes should be submitted to an international court. As we know, neither his "powerful league of States" nor his court has materialised. To the latter the States were to be pledged to refer all disputes except those concerning vital interests, and these excepted disputes were to be compulsorily submitted to mediation or investigation. Yet the Professor cannot be dismissed as a visionary. He has grasped the fundamental need. He would have us escape from militarism, have us be free, and he quotes another German writer—"Liberty can only arise out of a liberal state of mind." Like Lord Brougham a century ago, he would trust the schoolmaster rather than the soldier (though it must be admitted that many public schools encourage militarism). His book, as a contribution towards bringing about a liberal state of mind, is well worth reading, but will his ideas ever reach the

* "The Development of International Law After the World War." By Otfried Nippold. Translated from the German by Amos S. Hershey, Ph.D. Oxford Clarendon Press. 1923. 7s 6d net.

multitude? The book is admirably produced, but its style is not calculated to make a wide appeal. Multitudinous references to and lengthy extracts from other learned writers are given in footnotes on almost every page, and the author himself frequently interjects remarks and side comments of his own in other footnotes. The thread of the argument is so broken up in this way that it is difficult to follow. There are, moreover, no cross headings to subdivide the text, so that the massive flood, with all its swirling side eddies in footnotes, is apt to bewilder the reader instead of carrying him along. Still, the book is well worth the attention of those who can tackle it.

UNEMPLOYMENT.*

THIS brochure (it is little more) is characteristic of Mr Cole's method. With an air of sweet reasonableness and scientific precision, he begs every question that his preconceived conclusion requires him to beg, and slurs over every difficulty on the plea that in a small book it is impossible to go into detail: perhaps this is why Mr Cole always writes small books. His simple doctrine is that unemployment is the necessary concomitant of capitalism, and will vanish when Socialism replaces capitalism. True, the war (and the wicked peace) have made it worse; but then the war (and the wicked peace) were themselves, like every other human ill, due to capitalism. Capitalism causes unemployment in four main ways. (a) It causes a mal-distribution of wealth, which leads to under-consumption of consumable goods and over-production of "constructional" goods. Mr Cole here adopts and distorts Mr J. A. Hobson's theory. (b) It produces the alternate booms and slumps of the trade cycle; and it seems that while labour never gains from a boom, it always loses during a slump. There would be no booms or slumps under Socialism; but the book is too short to let Mr Cole explain why. (c) Capitalism leads to the deliberate restriction of output for the sake of swollen profits; which Mr Cole seems to regard not as an exceptional, but as an all but universal practice. (d) Capitalism leads to inflation of capital on a wholesale scale; and this causes unemployment because, paradoxically enough, the capitalist has to reduce his output in order to earn dividends on his inflated capital. Lancashire may fondly suppose that many of its mills are closed because Turkey, India, and China are not buying their goods. Mr Cole knows better. The mills are closed in order that they may in that way earn bigger dividends for inflated capital! After this cogent demonstration, and after dismissing with contempt every "palliative" except that adopted by that "courageous body of men determined to do justice at all costs"—the Poplar Board of Guardians—Mr Cole comes to his final chapter, which is impressively headed "The Solution." It runs to a little over four pages. "The Solution" is, of course, Socialism; but if you hope to obtain from these pages any answer to the question how Socialism would prevent unemployment you will be disappointed. The hoary catchword about "producing for use instead of profit" is trotted out again; but that is all. No doubt Mr Cole was prevented by the limits of space. He really ought to write books big enough to enable him to answer the irritated questions that rise to the lips of every intelligent reader.

* "Out of Work." By G. D. H. Cole. Labour Publishing Company. 2s 6d and 1s.

THE WORKERS' REGISTER OF LABOUR AND CAPITAL.*

THIS is evidently meant to be the first of a yearly series of volumes, designed to equip "the working-class leader, spokesman, negotiator.....both for stating the workers' case and for understanding and penetrating the case of Labour's enemies." The use of the phrase "Labour's enemies" shows, what is apparent throughout the volume, that its fundamental assumption is the existence of an ineluctable conflict between labour and capital. It is a survey of the fortunes of this swaying conflict, and of the organisation and resources of the

* "The Workers' Register of Labour and Capital, 1923." Prepared by the Labour Research Department. Labour Publishing Company, Limited. 5s. 224 pp.

rival armies. The first half of the book is devoted to labour, the second half to capital; and (especially in the second half) every development of business organisation is interpreted as a device to "down" and to plunder labour. Given these assumptions, the book is very well done, and it can be profitably used by those who do not share these assumptions. It is clear, concise, and well arranged; it contains a large amount of useful matter, conveniently analysed, which cannot be easily obtained elsewhere; it is invaluable as making quite plain the advanced Labour position on such subjects as the inflation of capital or the working of trusts and price rings. It is, in short, an excellent illustration both of the service which a research department can render to a political party, and of the temptation to which such a department is exposed—that of using statistics to support a predetermined conclusion.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
June 27. June 28.

Ascot week is seldom a busy one in the Stock Exchange, and, although the attractions of racing have been marred on this occasion by the weather vagaries, the condition of slackness in the markets has been amply maintained. Business has come patchily and unevenly, but on the whole it is not likely that many Stock Exchange firms have had to complain of over-work, and the settlement which starts on Monday, the last in the first half of the year, will be of moderate dimensions. The principal feature of the week, from the market point of view, was the activity and the fluctuations in the price of the new Austrian scrip. A general depression round the House is due to the Continental impasse; financial failures in America contributed to the heaviness of prices.

The Consol market fell under a cloud through the realisation of fairly large blocks of stock, for which homes were the less readily available by reason of the mild window-dressing that is still indulged in at the end of June. Colonial scrip stocks have been heavy, the New Zealand falling to 1½ discount. The premium on new India scrip, which rose at one time to 3, gave way sharply to 1. Investment of substantial amounts of money was met by sales of still larger quantities

of stock, and prices of gilt-edged securities lean to the dull side.

Reparations are rightfully regarded as the main handicap to anything approaching confidence on the part of the investor and activity in the Stock Exchange markets. Foreign bonds have been weak, thanks largely to the attitude which France continued to adopt in regard to the political conversations. Speculation in the Austrian scrip proved popular. The price touched 7 premium, and went back to 5 premium. Mexican Government bonds are flat. Other foreign bonds exhibit a dull tendency, with no particular feature. Yet German Threes are harder on balance.

It may be of passing interest to mention that one man in the Stock Exchange who put £100 into shares of an Austrian bank three months ago has since received £270 in cash and 1,200 shares which can be sold at £1 each. In such remarkable fashion has the credit of Austria been rehabilitated, within so brief a time, by the concerted action of the Powers.

Home Railways dwindled in price, interest in them being of very slender dimensions. Therefore it is not surprising to find modification of the optimistic estimates current in the earlier part of the year in regard to probable dividends on the deferred stocks of the North-Eastern and Southern groups. Grand Trunk Pacific debenture gave way on what is regarded as the equally unfair and discourteous treatment awarded to proprietors of Grand Trunk Railway junior issues, which are to receive not even a compassionate allowance in return for the money invested in these descriptions. Argentine Railways are heavy, but United of Havana braced up as the speculative investor again took a hand in the market. Antofagasta rose to 90 before a slight reaction occurred. On the other hand, Brazilian railway stocks, more particularly San Paulo, are sluggish. The Mexican Railway report caused falls in the two preference stocks.

Rubber shares sympathised with the heaviness that over-spread industrials as a whole. The oil market spent an unsettled week, professional activity in the leading shares failing to stimulate any public attention worth mentioning. Disappointment with the Shell dividend was partly neutralised by the issue of a moderately good report from the Royal Dutch company. The Mexican Eagle dividend announcement is expected at any moment. Courtaulds weakened on selling said to emanate from New York, where the Wall Street Stock Exchange suffered disturbance through a fairly large failure in the middle of the week. Shipping, insurance and banking shares hold their ground with a certain degree of tenacity. The recently-introduced Bank Holdings rose from 8s 3d to 12s 3d before reacting to 10s. Imperial Tobacco shares, quoted ex rights, have been the centre of lively dealings in both directions. The iron and steel market lacked supporters, and prices shed small amounts in most cases, nor have the good results achieved by the textile companies during the last half-year served to prevent a sympathetic dullness in the list. John Barkers and Lyons eased off on the announcement of new issues of preference shares, but Liptons remain hard, thanks to the declaration of a dividend, making 12½ per cent. for the year; other stores shares are listless. Marconis gave way under the pressure of moderate selling; the cable group is a little lower. Electric lighting shares hold their prices, thanks to the second winter which the companies, if not the public, are enjoying.

Kaffir shares have failed to benefit from the declaration of another batch of dividends from the leading companies, the announcements being satisfactory in the majority of cases. The Johannesburg Consolidated Investment has declared a dividend of 2s 6d net, the highest paid for many years. Some disappointment is felt at the Randfontein Estates not having announced any dividend in respect of the past six months. Rhodesians, diamonds and other South African mining shares have been dull, the diamond market continuing, as usual, at the mercy of Paris moods. In the markets for the various tin shares stagnation is described as summerlike. Mexican movements have been confined mostly to falls of halfpennies, and Russians attracted no public interest. Falls in copper shares are ascribed to Paris and American sales.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Government of Dutch East Indies 5 per Cent. Loan 1933-1962.—Issue of £6,000,000 bonds at 92 per cent Principal and interest will be paid in London in sterling, free from all taxes of the Netherlands or the Dutch East Indies. A sinking fund, beginning in 1933, will be established for the redemption of the bonds, to be applied by annual drawings at par or by purchases under par. The Government will, however, have the right, upon giving four months' previous notice, to repay at par outstanding bonds upon July 15, 1933, and upon any coupon date thereafter. It is stated that the proceeds of this issue will be used to reduce the National Unfunded Debt. An excellent security, which was well received.

Amalgamated Anthracite Collieries, Limited.—Authorised share capital £2,500,000, divided into £1 shares. This is an issue of 1,600,000 shares at 21s per share. The company has been formed to acquire an interest in the South Wales Anthracite Coalfields and as a first step the issued share capital of two collieries in that district. Surplus assets of the two concerns are valued at £1,779,041. It is a pity, perhaps, that the actual purchase price is not more clearly stated. However, the company will not, as far as can be gathered from the prospectus, be over-capitalised. Profits are given from 1916. The names on the board indicate that the company will start its career under the auspices of some skilled industrial magnates, and to that extent investors are well protected.

Salts (Saltaire), Limited.—Authorised capital £2,200,000 divided into 1,200,000 7 per cent. cumulative preference and 1,000,000 ordinary shares, all of £1 each. There is also debenture stock for £1,200,000. This is an offer for sale of £1,200,000 6 per cent. first mortgage debenture stock at 99 per cent. and the whole of the preference shares at par. The company has been formed to acquire the business of Sir Titus Salt, Bart., Sons, and Co., Limited, which is interested in the woollen trade. Net assets have recently been valued at £2,972,000, exclusive of goodwill. There are, however, certain unspecified items amounting to £863,000, which will not be taken over by the new company. A statement of the profits of the old company for six years is given. The purchase price is £3,400,000, including £427,650 for goodwill, and is payable in cash, the bulk going to three directors of the old company. The debenture stock is secured by a first specific mortgage upon lands, buildings, and fixed plant, valued at £1,535,565. This

appears to be a fairly reasonable flotation, but it would be interesting to know why the "offer for sale" was employed.

Rapson Tyre Company (of Europe), Limited.—Authorised share capital consists of £150,000 in 8 per cent. cumulative participating preferred ordinary shares of £1 each and £200,000 in deferred ordinary shares of £1 each. Loan capital for £200,000 in 7½ per cent. first mortgage debenture stock has been authorised. This is an issue of £150,000 first mortgage debenture stock at £95 per cent., and 150,000 8 per cent. cumulative participating preferred ordinary shares at par. The company has been formed to acquire the business of the Rapson Tyre and Jack Company, Limited, the purchase consideration being £300,000, payable two-thirds in deferred ordinary shares and one-third in cash, debenture stock, or preferred ordinary shares. The preferred ordinary shares are entitled to a cumulative dividend of 8 per cent. in priority to any dividends on the deferred shares, and also to one-fourth of any further profits which may be distributed. They will also have priority to capital over the deferred shares. The debenture stock will be redeemed at £105 per cent. not later than December 31, 1945, but may be redeemed at that price after 1930. Mr Rapson is a life director of the company, and is to receive 2 per cent. of gross trading profits after deducting debenture interest, in addition to £2,000 a year and director's fees. A well-known motor-car expert also takes a commission of 1 per cent. Incidentally, it would be interesting to know what past profits actually have been.

The Enfield Edison Cable Works, Limited.—Authorised capital £450,000, consisting of 200,000 7½ per cent. cumulative preference shares, now offered at par, and 250,000 ordinary shares, of which 202,056 have been issued. The undertaking was formed in July, 1919, as a private company, to acquire the business carried on by the Enfield Electric Cable Manufacturing Company, Limited, but has now been converted into a public company. Without goodwill, existing net assets amount to £230,743, to which must be added the proceeds of the present issue, making a total of over £400,000. Trading profits amounted to £18,310 for the year ended June 30, 1920, to £5,657 for the succeeding year, to £38,296 for 1921-1922, and to £30,022 for the nine months ended March 31, 1923. The proceeds of the present issue will, it is stated, be utilised in extensions to the existing plant, and as well as in paying off a loan by the company's bankers. Preference shareholders have limited rights. A fair industrial risk.

West Hampshire Water Company.—Incorporated by Act of Parliament, 1893. Authorised share capital £100,000, of which £78,514 has been issued. Existing borrowing powers amount to £39,257, and £38,533 has been raised. This is a sale by tender of 1,000 £10 5½ per cent. "redeemable" preference shares at the minimum price of par. The shares, which will be redeemed at par on June 30, 1933, are being issued to provide capital for extensions of the company's works, plant, and mains, and for the redemption of £2,808 5½ per cent. debenture stock on October 1st next, and other purposes. The net revenue of the company for the year ended June 30, 1922, after deducting interest on the outstanding debenture stock (excluding that to be redeemed) amounted to £2,001, while the dividends on the preference shares, including the present issue, will require £1,713. Subject to the smallness of the flotation and, in consequence, the narrow market, the shares appear to be fairly cheap at the minimum price of issue.

The Colonial Gas Association, Limited.—This is an issue at par of 33,720 7 per cent. preference shares and 40,000 ordinary shares, all of £1 each. The shares will rank *pari passu* with the existing ordinary and preference shares. The capital now being raised will be used for the repayment of an overdraft obtained from the company's bankers in Australia for extensions to works, mains, &c., rendered necessary by the increasing demand for gas. Dividends on the ordinary shares have progressively advanced from 6½ per cent. in 1918 to 9 per cent. in 1922. A well-established Australian gas undertaking.

Kepong Dredging Company, Limited.—Authorised capital £120,000, in shares of £1 each, of which 110,000 have been issued. The company was formed in April, 1923, to acquire tin-mining land in Selangor, F.M.S. The purchase price is placed at £55,375, to be satisfied wholly by the issue of shares. This looks a reasonable scheme from the information published, but the shares, when they do find their way on the market, should be left to those intimately acquainted with tin mining conditions in the F.M.S.

Prince John Mining Company, Limited.—Authorised capital \$2,500,000, in shares of \$1 each. Fully-paid shares to the number of 2,499,900 have been issued, but 1,189,537 are held by the company for future sale. Application is being made to the London Stock Exchange to deal in 850,266 shares, and this information is published in connection therewith. The company was incorporated under the laws of South Dakota in December, 1922, and "registered in British Columbia as an extra provincial company." The future of the company will be watched with interest by investors.

COMPANY MEETINGS, &c.

J. LYONS AND CO., LIMITED.

SUCCESSFUL YEAR—INCREASED PROFITS.

"RECORD OF STEADY GROWTH."

NEW PREFERENCE SHARE ISSUE APPROVED.

The twenty-ninth ordinary general meeting of J. Lyons and Co., Limited, was held, on the 18th instant, at the Trocadero Restaurant, Shaftesbury Avenue, London.

Mr Alfred Salmon (chairman and managing director) presided.

DIRECTORS' REPORT.

The report of the directors for the year ended March 31st last states that the balance from trading account shows:—

A profit of	£	s	d
Amount brought forward from last year	631,816	8	6
	15,421	2	11
	£647,237	11	5

From this amount is to be deducted:—

Dividend on 5 per cent. preference shares paid to November 30, 1922, and proportion provided for period to March 31, 1923	32,353	5	0
Dividend on 7 per cent. preference shares paid to March 31, 1923	70,000	0	0
Dividend on 8 per cent. preference shares paid to March 31, 1923	80,000	0	0
Dividend on the 6 per cent. preferred ordinary shares paid to September 30, 1922, and proportion provided for period to March 31, 1923	24,000	0	0
Interim dividend (2s per share) on the ordinary shares and "A" ordinary shares already paid for the half-year ended September 30, 1922	16,835	8	0
Interim dividend (4.8d per share) on proportional profit shares already paid for the half-year ended September 30, 1922	10,000	0	0
And the directors propose to deal with the balance as under:—			
To place to reserve	100,000	0	0
To pay a dividend of 3s per share on the ordinary shares and "A" ordinary shares for the half-year ended March 31, 1923	163,287	0	0
To pay a dividend of 7.2d per share on the proportional and "B" proportional profit shares for the half-year ended March 31, 1923	28,500	0	0
To carry forward to next account	30,239	6	5
	£647,237	11	5

The business done has been satisfactory.

During the financial year the following establishments have been opened:—

- 268-270 Seven Sisters road, Finsbury Park.
- 26 High Holborn.
- 81 Buckingham Palace road.
- 164 Victoria street.
- 4 Princes parade, Muswell Hill.
- 2 The Triangle, Palmer's Green.
- 21 Camberwell Green.
- 506-508 Brixton road.
- 52 High street, Sutton.
- 361-363 Station road, Harrow.
- 17 Colmore row, Birmingham.

Additional premises have been acquired and will be opened in due course, and negotiations for other depôts are proceeding.

The board and the company suffered a great loss during the year by the death of two directors, Mr Montague Gluckstein, the chairman, and Mr C. W. Oatley, who was also the manager of the construction department. They were both held in the highest esteem and affection by their colleagues, and their loss is felt very keenly.

the company's formation, and it continues a record of steady growth, although the year just past has been a difficult one. We are satisfied that you will be pleased with the results shown in this report and accounts.

The increase in the profit amounts to some £36,000, and after paying the various sums due for the preference interests, and paying a dividend at the same rate as last year on ordinary shares and proportional profit shares of both classes, there remains a balance of £114,000, £100,000 of which we place to reserve, the remainder being added to the amount carried forward last year, thus making the reserve £600,000 and the carry-over £30,239. The amount required for dividend has increased by £15,000, a portion for additional "A" shares and a larger amount in respect of the "B" proportional profit shares, for the half-year ended March 31st last. The dividend for the corresponding period from the Strand Hotel, Limited, in respect of the shares for which these "B" proportional shares were issued in payment, is not received until after the close of our financial year, and will, therefore, come into next year's accounts.

BALANCE-SHEET: ASSETS.

I will now just run briefly through the items of the balance-sheet, pointing out to you in round figures the variations in the respective accounts.

On the assets side there is an increase in freehold land, buildings, &c., of £1,126,000, making a total, after providing for estimated depreciation and contingencies, of £5,324,064. This additional amount arises from expenditure on extensions of the Greenford and Cadby Hall factories, the Coventry street Corner House, and new depôts. Stock-in-trade, at £1,966,000, is £210,000 more than it was last year. The increase is only commensurate with the growth of business, but, notwithstanding its large total, the stock might almost be called negligible, for its ratio to turnover is small; indeed, considered in terms of money, it may be said to have been consumed and replaced before the auditors have signed the balance-sheet. Sundry debtors' account, at £586,000, is £149,000 more.

Investments in associated companies, &c., stand at £791,000, and are £76,000 less than last year. We have added to this account the purchase of the Strand Hotel shares and shares in a new company, Millal, Limited, formed for the development of a dried-milk business, in which we hold a controlling interest, the balance of the shares being held by United Dairies, Limited. On the other hand, the amount has been substantially reduced by the sale of Government stock, the proceeds of which have been absorbed in our several developments. Cash at bankers and in hand amounts to £540,000, an increase on last year of £142,000.

LIABILITIES.

On the liabilities side, the capital issued now stands at £4,860,000, and shows an increase of £232,000. The reserve was increased from £409,000 to £500,000. The mortgage liabilities, which stand at £1,192,000, are £286,000 more than last year. Watching the trend of rents, we decided that it would be sound policy for the company to become, where possible, the owners of its premises. Not desiring to lock up too much of the company's capital in this direction, we have mortgaged a number of them—hence this increased figure—thus converting rent into interest. The figure of trade and other creditors, bills payable, &c., including credit balances and reserves, now stands at £2,316,000, an increase of £900,000. I shall have something to say about this later.

Dividends unclaimed are £140 more than last year, and the balance remaining in the profit and loss account, amounting to £344,810, is £38,400 more than last year. The major part of the growth in our trade creditors and bills payable is occasioned by the fact that we are providing through the usual credit facilities finance for a much greater proportion of our current day-to-day needs than we have done hitherto, the whole of our various surpluses having gone into the additions to our numerous properties.

NEW ISSUE OF CAPITAL.

You will have seen in the report a paragraph announcing the intended issue of a further £1,000,000 capital, in order to make good those surpluses of the company which have been absorbed in fixed capital, and thus free them for further extensions. We do not think it advisable to provide capital of that nature by short-term credits.

You will note, too, in the report that during the year we have opened further depôts, and since the close of the year we have opened the large extension to the Coventry street Corner House, and we are also proceeding with numerous other establishments, the total requirements in respect of which call for a large outlay of capital. The establishments already opened are showing satisfactory returns, and we have no doubt that those to be opened will be equally remunerative.

THEIR MAJESTIES' VISIT TO GREENFORD FACTORIES.

We were recently honoured—as you, no doubt, all know—by a visit of their Majesties the King and Queen to our Greenford factories and to the staff club house and playing fields at Sudbury, and they were graciously pleased to express their satisfaction with what we were able to show them. These factories have been added to continually since their opening in 1920, and are still in process of enlargement. The goods which are produced there (tea, coffee, cocoa, custard powder, chocolate, confectionery, toffee, &c.) have all met with the approval of the public, and the demand for them is steadily increasing. The products are all the first of their kind; the basis of the company's prosperity is in supplying what the public wants and giving the very best value that can be given at the price charged. That we are giving such value, and that it meets with public approval, is shown by the constantly increasing business.

It is true that, as has been said before, the margin of profit is extremely small, but it is certain, and the volume of trade grows steadily larger from year to year. You will readily understand that, with so small a margin of profit and so large a volume of trade it needs the most careful handling, calling for great technical ability and a thorough costing system, so that there may be no mistakes either in the production of the right quality article or in the calculation of its net cost. But, of course, these remarks apply equally to all the company's products, and, as you are aware, the Greenford premises do not produce all that the company sells.

CADBY HALL.

There are large factories—perhaps kitchens and bakeries would best describe them—at Cadby Hall, mainly concerned with the goods required by the retail side of our business. When we removed several departments to Greenford we thought we had freed space at Cadby Hall which would amply provide for expansion of the departments remaining, but already they cry aloud for more elbow room.

I have spoken of the technical skill required in the manufacture, but to maintain the company in the forefront of commercial enterprise, where we intend it shall remain, something more than mere technical skill is demanded—there must be imagination and foresight—the reaching out to an ideal. These qualities your board is always seeking to stimulate and to cultivate throughout all its industries, and we believe we can claim a certain degree of success therein.

Perhaps this will be a suitable point to mention that the board has repeated the privilege of allowing the managing directors to apply for the same number of "A" shares at par as was granted them last year in acknowledgment of their services.

NEW ISSUE EXPLAINED.

With regard to the proposed new issue, we have decided on a 7 per cent. preference share, which we propose to issue at such premium as, whilst taking into account the market value of the share, will represent an advantageous investment for the shareholder. We do not need the whole of the money at once, and shall therefore only issue half a million to begin with, about the end of the month, but the remainder will be issued before the end of the current financial year. These shares will be offered to shareholders only, and all classes of shareholders will be included. Shares will not be transferable until fully-paid. There are no rights; allotments will not necessarily be *pro rata*, and there will therefore be no power to renounce in favour of others. I have been asked why such a sound enterprise should consider it necessary to create cumulative preference shares bearing a rate of interest as high as 7 per cent. Well, the answer is that these shares will not give a return of 7 per cent.; they will be issued at a premium, and the return will be nearer 6 per cent. than 7 per cent.

In conclusion, may I again repeat what has so often been said by my predecessors—that this institution of ours, great as it has become, is still a growing concern, with illimitable possibilities opening out from day to day before us.

TRIBUTE TO STAFF.

But I must not sit down without a word of thanks to our loyal and efficient staff, and I use the word "staff" to include everybody, from departmental managers down to the humblest position in the company. We all recognise the great part they play in the successful conduct of our business.

I now propose the first resolution, namely, "That the payment of an interim dividend of 2s per share on the issued ordinary and 'A' ordinary share capital of the company for the half-year ended September 30, 1922, be, and it is hereby, confirmed; that the report of the directors and the balance-sheet submitted to this meeting be and are hereby adopted; and that a dividend be paid for the half-year ended March 31, 1923, of 3s per share on the issued ordinary and 'A' ordinary share capital of the company."

SIR EDWARD SMITH'S SPEECH.

Sir Edward Smith, J.P., D.L., in seconding the resolution, made a sympathetic reference to the loss sustained by the com-

pany in the death of two of its directors, and expressed the hope that such vacancies might not be frequent, or occur in the near future. He desired to congratulate the board on the excellent choice they had made of a chairman, and to say that, in his opinion, no more statesmanlike or businesslike statement could have been made by anyone than the speech to which the shareholders had just listened. He hoped that Mr Alfred Salmon would have a very long and happy career in the distinguished position which he filled, and it was interesting to note that that gentleman had given them evidence of his broadmindedness in suggesting that it was not his intention to occupy the chair in perpetuity. It was particularly satisfactory to have such a statement, because it emphasised the fact that this was not a "one-man show." He had a great dread of a large institution with a great deal of money involved where the whole of the activities depended very largely upon the inventive genius of one individual. Lyons and Co. was an undertaking where any director might qualify himself to become a managing director, and ultimately chairman, and as he looked around he wondered how many of them would attain that position.

MARKED SUCCESS.

It was very gratifying that the company had met with such marked success during the past year, notwithstanding the difficult conditions prevailing. It seemed to him, upon looking at the balance-sheets, that the history of J. Lyons and Co. had been one unbroken succession of financial triumphs, and he was delighted that they had not been satisfied with past successes, but had continued to develop. He ventured to say that therein lay the secret of their success, always provided that the expansion was entered upon with due care and wisdom. He maintained that this company, apart altogether from the financial side of its operations, had performed a great national work in the direction of temperance, and in thus altering the outlook of a large number of people. When the public remembered the company's 200 establishments, including its large cafés, and the nature of the business done there, he thought they would realise that the country owed a debt of gratitude to the shareholders and directors of Lyons and Co. for the magnificent work they had done.

The results achieved were a splendid testimonial to the whole of the directors and the staff, and, although the progress in the past had been most remarkable, there was, in the words of the chairman, an illimitable prospect before the company. As yet there were only about a dozen provincial towns which had been invaded by the company, and even in London there was still plenty of room for expansion, and, so long as the wisdom at present displayed in the management of this great concern continued, he had no hesitation in saying that the shareholders and the public would be perfectly willing to come forward with the money necessary for the development of the business. The security was good, and he was delighted to feel that in the chairman and those who so ably assisted him there were the vision and initiative which, after all, were so necessary in directing a large institution of this kind.

The resolution was supported by Mr Wallis Mansford and Mr Shearme, and carried unanimously.

The Chairman next proposed: "That the payment of an interim dividend of 4.8d per share on the proportional profit share capital of the company for the half-year ended September 30, 1922, be and is hereby confirmed, and that a dividend be paid for the half-year ended March 31, 1923, of 7.2d per share on the proportional profit and 'B' proportional profit share capital of the company."

Mr J. G. Shield seconded the resolution, which was unanimously adopted.

RE-ELECTION OF DIRECTORS.

Mr Harry Salmon (one of the managing directors) proposed the re-election of Mr J. Joseph and Mr S. M. Gluckstein as directors of the company. In doing so, he remarked that the abilities of those gentlemen were so well known to the shareholders that the resolution needed no commendation from him. He would merely like to say how much their colleagues appreciated the privilege of having two such agreeable and competent men as fellow directors.

The motion was seconded by Mr A. J. Wood, and unanimously agreed to.

Mr J. Joseph thanked the shareholders for the honour they had done him in re-electing him to the board, and said he would continue to do his best in the interests of the shareholders.

Mr S. M. Gluckstein, M.C., also expressed his thanks, and added that he greatly appreciated the references which had been made to his late revered father, the late chairman of the company.

Major Isidore Salmon, C.B.E., D.L. (one of the managing directors), in proposing the re-election of Mr G. Dee and Mr G. A. Pollard as employee directors of the company, said that both those gentlemen had done valuable work for the company for many years past, and he and all the other directors were delighted to have them as colleagues.

Mr Maurice Salmon seconded the motion, and it was passed unanimously.

Mr G. A. Pollard thanked the shareholders on behalf of Mr Dee and himself for this mark of their continued confidence, and said that it would be their constant aim to deserve it.

On the proposition of Mr Hughes, seconded by Mr Shield, Messrs Turquand, Youngs, and Co. were reappointed auditors.

THE NEW CAPITAL.

The Chairman then moved:—

"That the capital of the company be increased to £6,325,000 by the creation of 1,000,000 additional 7 per cent. preference shares of £1 each, and that accordingly the following provisions in regard to the said 7 per cent. preference shares shall have effect (that is to say):—

"(a) The 1,000,000 7 per cent. preference shares hereby created shall carry the right to a fixed cumulative preferential dividend at the rate of 7 per cent. per annum on the capital for the time being paid up or credited as paid up thereon respectively, and such dividend shall be payable half-yearly on October 1st and April 1st of each year.

"(b) The said 7 per cent. preference shares shall rank both as regards dividend and return of capital to the extent of the amount paid or credited as paid thereon *pari passu* with the existing 7 per cent. preference shares in the capital of the company already issued and with any other 7 per cent. preference shares created as hereinafter mentioned next after the 5 per cent. preference shares in the capital of the company already or hereafter to be created or issued and in priority to all other shares in the capital of the company, but shall not have any further right to participate in profits or assets.

"(c) The company is to be at liberty from time to time to create and issue further 7 per cent. preference shares ranking in all respects *pari passu* with the said 1,000,000 preference shares hereby created and the said 1,000,000 existing preference shares.

"(d) The said 7 per cent. preference shares shall not confer on the holders the right to attend or vote either in person or by proxy at any general meeting of the company nor to have notice of any such meeting unless the dividend on such 7 per cent. preference shares or any part thereof is and so long as it is in arrear for twenty-eight days in any year nor shall such 7 per cent. preference shares qualify any person to be a director of the company."

Mr Errington seconded the resolution, which was carried unanimously, and on the proposition of Mr Hughes, seconded by Mr Arnold, it was further resolved:—

"That the directors be and they are hereby authorised to issue the said 1,000,000 7 per cent. preference shares to such persons at such time or times and on such terms as the directors shall from time to time determine."

VOTE OF THANKS TO THE CHAIRMAN, DIRECTORS AND STAFF.

Mr C. E. Nuthall proposed a hearty vote of thanks to the chairman and directors, as well as to the staff, for their able conduct of the business of the company, and, this having been seconded by Mr Shield and passed unanimously, a brief acknowledgment by the chairman concluded the proceedings.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY, LIMITED.

IMPROVED RESULT—INCREASED DIVIDEND.

The thirty-fifth ordinary general meeting of the Antofagasta (Chili) and Bolivia Railway Company, Limited, was held, on the 19th instant, at Winchester House, Old Broad street, London.

The Chairman (the Hon. Charles N. Lawrence) said that the directors were very pleased to be able to come before the proprietors with a statement of affairs which showed a considerable improvement upon that for the preceding year, 1921. There had been a steady improvement in the nitrate situation dating from about August of last year, and he thought this should still continue. Not only was the increase of £256,358 in the gross receipts all retained as net, but the working expenses were reduced by £66,460, making a net improvement of £322,818 on the year's working. Put another way, the net profit on the working of the railway and waterworks combined for the year 1922 was £616,186, compared with £293,368 in 1921, or just over double on a 24.85 per cent. increase in gross receipts.

Last year, although they paid a 3 per cent. dividend on the consolidated ordinary stock, they had only earned 1 per cent., and had to encroach on the carry forward. This year they were paying 5 per cent., had added to the reserve, and slightly increased the carry forward, which he thought was a good augury for the time when the markets for the commodities which they carried had still further improved, as he believed they must do at no distant date. The balance-sheet showed that the liquid resources of the company were considerable, and in the items of temporary investments, bills receivable and cash they had nearly £1,200,000. With regard to tariffs, the directors were convinced that these were on a fair

basis, given the conditions which had existed for some years and seemed likely to continue. They wished to make their tariffs as low as possible with due regard to a reasonable return on the capital invested, and also to give a first-class service.

PROSPECTS.

As to the prospects for the current year, to date there was an increase in the gross receipts of £362,095 compared with last year. Their latest advices were that four or five more oficinas were expected to restart the manufacture of nitrate in the next few weeks, which should materially assist the company, and sales of nitrate for delivery after July had been considerable. The markets for tin and copper also bore a fair outlook. It was too early yet to talk of working expenses, although they were of a favourable ratio so far. It was the custom of the company, when circumstances permitted, to declare an interim dividend about October on the ordinary stock, and it was the board's intention to again take this into consideration this year when they had before them the results of a sufficient portion of the year's working. He trusted the result might be a resumption of a practice to which he thought they had every right to look forward, as no one appreciates waiting a full year for some return on his investment, and the payment of a dividend in two portions is desirable in the interests of the ordinary investor.

The report and accounts were unanimously adopted.

CHANNEL TUNNEL COMPANY, LIMITED. BENEFIT TO THE SOUTHERN RAILWAY.

The ordinary general meeting of the Channel Tunnel Company, Limited, was held, on the 20th instant, at the Cannon Street Hotel, London, Baron Emile B. d'Erlanger presiding.

The Chairman, in moving the adoption of the report and accounts, referred to the questions which were asked in Parliament in December last with reference to the Channel tunnel scheme, and to the correspondence which had subsequently taken place between himself and the then Prime Minister, Mr. Bonar Law, in which that gentleman stated that if adequate guarantees were forthcoming that the money was or would be available he would be prepared to have the question reconsidered. He (the chairman) came to the conclusion that the best form of guarantee he could give that the money would be forthcoming would be by means of a deputation consisting of representatives of the Southern Railway, one of the leading contractors of the country—he had in his mind Lord Cowdray—and himself as chairman of the Channel Tunnel Company and senior partner of his own firm. Unfortunately, it had not been possible to form that deputation, owing to the heavy work thrown upon the board of the Southern Railway in connection with the regrouping scheme. The Southern Railway was, however, the entity which was most interested in the construction of the tunnel and would derive the greatest benefit from the completion of the scheme, which, in the opinion of those who had studied the question for many years, would completely revolutionise the whole of the traffic of that system, and in his view lead to an increase of profits which would exceed every kind of expectation so far entertained. He hoped, therefore, that the board of the Southern Railway would take the matter into immediate consideration, and give him the opportunity of discussing the matter thoroughly with them. On the technical side, the machine which had been made on purpose for the construction of the tunnel had fulfilled their expectations, and their engineer, Mr. Tempest, had given him the assurance that the British portion of the "pilot" tunnel could be constructed for something like £1,250,000, an equal sum being necessary for constructing the French portion. Such sums were not unmanageable, and he was confident that if the proposition were favourably enter-

tained by the House of Commons and the House of Lords they would be able to bring the scheme to fruition.

Sir Robert Perks remarked that it was to the interest of the Southern Company now to see the Channel tunnel scheme a great success, because they had no longer conflicting interests in handling the cross-Channel traffic.

The report and accounts were unanimously adopted.

ANGLO-ARGENTINE TRAMWAYS COMPANY, LIMITED. TARIFF QUESTION—COMMITTEE'S REPORT. MUNICIPALITY'S SURPRISING DECISION.

The thirty-ninth ordinary general meeting of the Anglo-Argentine Tramways Company, Limited, was held, on the 19th instant, at Winchester House, Old Broad Street, London, Sir George A. Touche, Bart. (the chairman), presiding.

The Chairman, after expressing regret at the death of Mr. W. F. Hamilton, K.C., a director of the company, said: We have been fortunate in securing the services of two new directors, whose names will command universal confidence. I refer to Mr. Bernard Dudley Frank Docker and Mr. Arthur Statham Jecks. He then dealt with the report and accounts, and continuing, said: I now turn to the unfortunate situation which developed in Buenos Aires recently, when the Municipal Council resolved that we must now revert to the old fare of 10 cents. This is the tariff of pre-war days. When it was fixed, many years ago, coal, upon which the price of electric energy for our system is based, was 27s per ton delivered at Buenos Aires. With a fare of 10 cents we were then able to meet all our standing charges and to earn sufficient to pay dividends on our ordinary shares, the last payment being 6½ per cent. out of the earnings of the year 1913. The difficulties we laboured under during the war years are well known. Coal reached £8 per ton, working costs had greatly increased, many new burdens were cast on the company, and the loss of net earnings compelled it to default on both the first and second preference shares. The situation was precarious, and, after many friendly discussions with the Buenos Aires Municipality, we received authority, in January, 1920, to increase the uniform fares from 10 cents to 12 cents. We desired this increase to be permanent, but there was a belief in some quarters that affairs in Europe would recover rapidly after the war, and that something approximating to the economic conditions existing before the war would be re-established. In consequence of this view, which we did not share, the increase of 2 cents per paper was limited to a provisional period of three years, when the position was to be revised.

COSTLY CONDITIONS.

This increase of 2 cents was accompanied by various costly obligations:—(1) The establishment of a minimum daily wage. (2) A maximum working day of 8 hours, and for the subway of 7½ hours. (3) An increase of 10 per cent on all salaries and wages to meet the increased cost of living. (4) An immediate contribution of 8 per cent. on all salaries and wages towards the formation of a pension fund for the personnel. (5) The construction of 30 kilometres of new track. (6) The limitation of earnings to 8 per cent. on the invested and approved capital employed by the company. (7) The maintenance of a workmen's tariff of 5 cents and of transfer tickets at 15 cents.

The Municipality, on its side, undertook to set aside 25 per cent of its gross receipts from the Tramway Companies towards the construction of workmen's dwellings. If the increased fare was not continued at the end of three years, expiring April 9, 1923, an arrangement was to be come to with the Municipality as to the manner of providing the pensions charge. The various

obligations placed on the company, with all of which we have complied, absorbed by much the greater part of the increased revenue, and left it still unable to pay in cash all the arrears of dividend on its second preference shares, while its ordinary capital remained wholly unproductive. As time wore on it became obvious that, if the company was to receive fair treatment, a beneficial revision, rather than a diminution of tariffs, would be required.

RELIEVING TRAFFIC CONGESTION.

In the meantime it was found that the enormous growth of traffic in Buenos Aires called urgently for relief. The surface lines in the centre of the city were hopelessly congested. We opened one east to west subway in 1913 (from Plaza Mayo to Plaza Once de Setiembre), and a second subway was in contemplation when the war broke out. The war, of course, upset all these plans, and it was agreed that the construction of the second subway should be postponed until such time as the economic situation in Europe had again approximated to normal conditions. This situation is far from having been reached. But, owing to the pressing need of further travel facilities in the city, our engineers have, for a long time past, been studying how best to relieve it. The question was examined most thoroughly, and elaborate plans were prepared and matured. These involved the construction of a second, north to south, subway (from Retiro to Constitucion) at an early date. It was a bold programme, because the cost of materials is high, and the wages of workmen have to conform to the high cost of living. The financial obligations involved were, therefore, onerous, and had to be provided for in some way. To meet these new obligations, while continuing and extending the benefits granted in 1920 (instead of being compelled to reduce them), it was necessary to ask for a certain readjustment of tariffs.

COMMITTEE'S REPORT.

Our proposals, which were to the advantage of the public, were formally submitted on January 5th, although there had been many unofficial discussions of the problem before that date. A special committee of inquiry was appointed to examine the position. After a lengthy study the four gentlemen forming the Commission presented the results of their investigations in a voluminous and detailed report. We, of course, gave them every facility. Their report acknowledges the help so given, and contains a high tribute to the perfection of the company's accountancy and organisation, and the excellent way in which the books and records are kept.

The report itself is an able document, which commands my admiration. It is partly statistical and partly conjectural. Without accepting all its figures, I may say that, as a statistical record, it is a model of excellence. I have no doubt the reporters, who make no claim to infallibility, would be the first to admit that its inductive conclusions, like most hypotheses, are speculative. So obviously eager were the authors of this valuable report to attain absolute accuracy that they will forgive me for pointing out that it is incorrect to refer to the recent plan for the satisfaction of the arrears of dividend on the second preference shares as a "fictitious increase of capital."

The plan did not involve the addition of a single sovereign to the issued capital of the company. I do not mention this from any desire to find errors, but merely because the statement, if left uncorrected, might create prejudice.

When we come to the deductions to be drawn from the figures so carefully and accurately compiled our own day-to-day knowledge compels us to differ in some respects from the reporters. The report says that the present economic situation of the company is good, and that the causes of the bad situation which prevailed in 1920 have disappeared. Yet we are faced with the facts (1) that for ten years an ordinary share capital of £3,250,000 has been without any dividend, and (2) that the earnings have been insufficient to pay even arrears of dividend on £2,500,000 second preference shares. The report states that our profits in 1922, if based on a 10 cent fare, would be \$3,567,884. It is also shown that the profits were \$3,740,000 in 1919 with a 10 cent fare, and the 2 cent increase was granted because of the manifest insufficiency of this larger revenue to meet the expenses and the service of the capital. Since that date new charges have been imposed, and it is impossible to accept the view that the factors which called for an increase in 1920 have disappeared. There is no suggestion that we are yet earning, or are likely to earn, the authorised rate on the total invested and approved capital. The authorised rate on the 1922 profits, if a 10 cent fare committee's own estimate of the 1922 profits, if a 10 cent fare had been in force, does not represent 4 per cent. on the capital employed, whereas the Ordinance of 1920 contemplated a return equal to 8 per cent. on the invested and approved capital. In so far as the economic situation is good it is because of the 12 cent tariff. Of all the deductions which our own experience teaches us might be made I should be prepared to say, apart from any question of the subway, that the case for the retention of the 12 cent

tariff was overwhelming, that the case for an increase was strong, and that there was no case for a decrease. On the important question of subway construction between Retiro and Plaza Constitucion, the finding of the committee was that, from a traffic point of view, it represents an undertaking of immediate and absolute utility.

TEMPORARY EXTENSION REFUSED.

It was hoped that a decision on the company's construction and tariff proposals would be arrived at before the expiration of the provisional arrangement on April 9th. When it became obvious that this could not be done an application was made for an extension of the existing arrangement for six months, so as to leave the situation unprejudiced pending a decision on the larger question. We had every reason to believe that so fair a proposal would be granted. It was therefore a surprise and disappointment to us, and I think an equal disappointment to many who are not interested in the company, but are concerned in the progress and well-being of Buenos Ayres, when the request was refused by a vote of the Municipal Council on April 6th, and we had consequently to revert to the 10 cent fare on April 10th, although at a 12 cent tariff we were giving the cheapest public service in the city. A standard 10 cent fare is equal to 2.1d. Some of our suburban routes are eight to ten miles in length. No city in the world provides such cheap accommodation. The city was smaller and the lines were much shorter when the concession was granted and the 10 per cent fare was fixed. Routes will continue to increase in length, and a revision of the original fare is imperative. In New York the lowest tramway fare is 5 cents gold, or 2.4d. And Buenos Ayres is a city where the cost of living and consequently the working costs are high. To carry passengers at a standard rate of 10 cents per paper is not business, but philanthropy. It should also be noted that the reduction of fare was not preceded or accompanied by any alternative method of providing for the contribution of 8 per cent. to the pension fund.

I think there can be no doubt that the members of the Municipal Council were influenced by the statement that the present economic situation of the company is good. The Council may have received the impression that the company could suffer a reduction in the fare from 12 to 10 cents without detriment. Our manager had no opportunity of pointing out to them, before the vote, that the argument that the economic situation is good (I would rather say moderately good), if well founded, was one for maintaining, and not destroying, the situation which had made it good. To take away the 12 cent fare, just when we hoped we were turning the corner, and could look forward, as we were entitled to do, to the resumption of dividends on the ordinary capital at an early date was the surest way of making the economic situation bad again. A reduction in the source of gross revenue by ⅔ or 16⅔ per cent., is enough to make all the difference between moderate financial ease and stringency, and is not an encouraging preliminary to a scheme of larger development and heavy capital commitments.

EMBARRASSING SITUATION.

The vote of the Council placed the company in a situation of considerable embarrassment. It deprived us, for the time being, of means whereby to grant advantages to the public and benefits to our men beyond a limited period. It is almost bound to make it more difficult and costly to finance any large programme of subway construction. It was a shock to the men in our employment when they learned that the ordinance under which we had been able to ameliorate their lot was terminated. Up to the present we have not withdrawn these benefits, but are attempting to face the situation, in spite of the loss the new tariff entails. We are doing this for two reasons—(1) in the interests of the men; and (2) in the hope of avoiding any disturbance of service which would inconvenience the public. We wish to do our duty by the travelling public, and we do not believe they have any desire to be carried, at our expense, below cost, which, of course, includes interest on all the capital employed. They are not so unreasonable as to expect to get at a pre-war price something which now costs a great deal more. If matters remained as they are now, the results would be injurious not only to the company and its employees, but to the public also. Advantages given would have perforce to be withdrawn, however reluctantly. Wage concessions, workmen's fares, combination and workmen's tickets, and many other things would have to be reviewed, not because we wish to do it, but because there is a rigid economic limit to what can be paid out of a fare which shows no elasticity. It is not we who will be responsible, but the laws of arithmetic, which spoil so many visionary programmes. We hope the setback is temporary only. Even so, it will prove costly to us.

HOPE OF JUST ARRANGEMENT.

I trust I have made it clear that it is the temporary extension of the 12-cent fare which has been refused. The larger question is still under consideration, and we are hopeful that a just arrangement may yet be reached, beneficial alike to the public, the municipality, and the company. The need for some arrangement is

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

supported by the report of the special committee. They have emphasised the importance of the proposed subway between Retiro, the terminus of the Central Argentine and the Pacific Railways, and Constitucion, the terminus of the Buenos Ayres Southern. With willing minds on both sides an arrangement which should admit of its early construction may yet be reached. It would, indeed, be a misfortune, from the public point of view, if the city, which is suffering from an acute and ever-increasing traffic congestion, had this means of relief been discarded, or even delayed. The question is one which concerns the good of the community. Any permanent refusal to permit a transport company to make remunerative charges must necessarily militate against the provision of capital for extensions and developments which are urgently needed. No community was ever yet benefited in the long run by a policy which repelled capital, whereas the world is full of examples of the immense benefits and increase of riches secured by countries which have

succeeded in attracting capital. But we do not rest our case on that alone. The company also has a right to be considered, and we put our trust in the sense of fair dealing which animates the Argentine authorities. The efficient services we render, the good treatment of our staff, our mutual benefit societies, and our cheap fares entitle us to sympathetic treatment. We are dealing with the enlightened representatives of one of the most progressive capitals in the world. We are confident of the friendly and honourable intentions of the civic authorities. It is impossible to believe that we shall look to them in vain for safety and security in our investments. We do not seek to minimise our disappointment at what has happened, but still regard it as a passing, if unfortunately costly, incident. And we look forward hopefully to reaching an arrangement creditable alike to the city and the company.

Lord Wargrave, P.C., seconded the motion, which was carried unanimously.

SUEZ CANAL COMPANY.

REVIVAL OF ECONOMIC ACTIVITY.

LARGE INCREASE IN TRAFFIC.

INCOMPARABLE PRESTIGE.

The annual general meeting of this company was held in Paris, June 4, 1923, M. Jonnart (the president) presiding.

In dealing with the annual report, an abstract of which appeared in the *Economist* of June 9th, the President said: You will remember, gentlemen, last year's report of the Council of Administration. This year's report is its justification, for it proves that events have not belied our expectations, and that an amelioration of the economic crisis was sufficient to cause a notable progress of the traffic of the Canal.

FORECAST VERIFIED.

I said last year: "There are numerous indications which appear to show that the economic crisis reached its maximum of intensity in 1921. Certainly the crisis is not over, but in the United States there is a definite movement towards recovery. Even in Europe—at least Western Europe—the movement, though not so pronounced, is not negligible."

Events have proved that I was right. In the United States, where the crisis started in 1920, it is stated to-day that there is an intense industrial activity; prices are high, and the unemployment has given place to a shortage of labour.

BRITISH FISCAL POLICY.

Great Britain, for her part, reaps the benefit of her admirable effort to rehabilitate her industrial and financial position. Lower costs of production, and her budget economies have had the most happy result, and you know, perhaps, that it was with the help of our new colleague, Sir Robert Horne, and our eminent vice-president, Lord Inchcape, that England was enabled to make considerable reductions in her own and the Indian Budgets, thus showing a magnificent example of the rarest type of heroism, that is to say, fiscal heroism. (Applause.)

The success of English policy, the essential features of which I pointed out in a rapid review at our last meeting, is reflected in the balance-sheets of most of the large companies across the Channel. Those balance-sheets show a more and more marked improvement when compared with those published a year previously. Consequently the proportion of unemployment has steadily decreased; England has regained her place in the different markets from which she was driven out. It is interesting to note that her export of products to Australia and New Zealand now surpass the figures of 1913.

That leads me to reassure you that the development of Australia and its increased importance will bring us new chances of traffic which the future will intensify.

INCREASE IN CANAL TRAFFIC.

You will perceive, gentlemen, the consequences of this revival of economic activity. Much of the shipping which had to be discontinued has now been restarted. In England, where one finds the largest proportion, the tonnage has diminished by 50 per cent. since July, 1922. And this recommencement of shipping traffic is accompanied by a renewal of orders for construction. The total tonnage in construction, which had been steadily decreasing since 1921 to the end of 1922, has increased, even in the first three months of 1923, by 25,614 tons. As the Suez Canal may be regarded as the barometer of the commerce of the world, it is not astonishing to find that we gained an increase of 17½ million francs from the receipts of traffic in 1922.

It is true that tariffs are higher than before the war. But our satisfaction is not only based on the increase of the receipts, but on the increase of shipping through the Canal. During the war, the traffic through the Canal was decreased by eight million tons, whereas between 1911 and the beginning of the war more than 20 million tons annually passed through the Canal. In 1922 the net tonnage reached a record. It rose to 20,743,245 tons, and this figure surpasses by 469,125 tons the previous most important record, that of 1912.

The industrial revival continues, and since the beginning of this year we have registered an increase of 6½ millions from receipts compared with the corresponding period of 1922.

You will notice that while these favourable symptoms exist there are many factors which still hinder the course of industry and trade; the instability of money values, the necessity to exact the just reparations which are owed to us by the aggressors of 1914, uncertainties in the Near East and the disappearance of certain great markets. We are still very far from normality. Our traffic is developing, however; our receipts are increasing, and the outlook for the future is such that we can now rely on the progress of traffic to counterbalance to a large extent the decrease or loss through the exchanges, when the world will have regained equilibrium and the regularity of normal life.

This is why we have not decided to propose to you an increase in our reserve. In addition to 40,500,000 of an ordinary reserve, 40 millions have been allocated, as you know, to an extraordinary reserve to guarantee against sharp variations in dividends. We do not wish to add anything to it. We are not a savings society. We hope to be able to profit by the numerous opportunities which are offered for the employment of our funds in the future and to avoid as much as possible new charges.

AUTHORISED LOAN NOT ISSUED.

A year ago I expressed myself thus: "In asking you to authorise the flotation of a loan for 50 million francs in order to execute deepening and enlarging works, we do not say that we are going to issue this loan immediately. We are cautious, for the moment, borrow." The fact is that we have not found it necessary to borrow, and I hope that we will not borrow for some time yet. Companies, like individuals, have to conform to the principles of wise and prudent administration, which commands them to borrow as little as possible. In consequence, we propose to you to allocate out of profits 25 million francs in order to write off immediately the cost of improvement works.

In addition to a fresh allocation of 5 million francs for depreciation of material, we desire to augment the special fund for construction of houses in Egypt by the same amount as in 1922—i.e., 10 millions. This allocation will be absolutely the last. There have been in all 50 millions written off profits in previous years for the construction of houses for our employees and workmen. I desire to say that the solicitude of the company for its personnel, which it has always encouraged, has earned the devotion which it deserves. Our personnel has reason to be satisfied; all ranks of workmen and employees participate in profits; they have healthy, comfortable and cheap houses, frequent holidays, and other advantages too numerous to mention seriatim. All of which reflects your preoccupation in the accomplishment of social duty, the practical application of the humane, generous, and fruitful ideas which

characterised the spirit of the illustrious founder of the company, Ferdinand de Lesseps, and which, by elevating the mind above the restraints of public duties, illuminates and ennobles our daily task. (Loud applause.)

EGYPTIAN POLITICS.

Gentlemen, you will recall that last year a member of this assembly, justly preoccupied with the political situation in Egypt, questioned me as to the possible consequences of the evolution which it reveals. The situation is not greatly modified. It is not yet very clear, and it seems to me as difficult this year as last year to predict what possible repercussions there may be to the evolution of Egyptian politics. It is quite certain, however, that it cannot affect the prosperity of our company, which possesses the rights and organisation through concessions and statutes independent of the Egyptian régime.

A new development has manifested itself—the promulgation of the constitution which should serve as the foundation of the future government of independent Egypt. Elections will take place soon, and it is only then that negotiations can be definitely opened between England and Egypt on the reserved questions other than the proclamation of independence.

Whatever may occur, be assured that no detail of this situation will escape us. We do not doubt, however, that the relations which we entertain with the Egyptian Government will be the most confident and the most cordial.

THE PRESTIGE OF THE COMPANY.

Do you realise, gentlemen, that the strength of our company rests not only in the security of contracts? Its power and influence are due to its incomparable prestige. The high regard which it commands is merited by the reliability and vigilance shown in its work. It has justified the confidence of Governments and shipowners. It has never hesitated to adopt new ideas. Possessing a monopoly, it has used it with a moderation which commands admiration, and with an exact sense of the requirements of international shipping and the higher interests of commerce. In brief, it has fulfilled all obligations, and our friends, the English, as well as the Dutch and all other clients of the Canal have given full credit to that fact.

You have powerfully assisted us in the accomplishment of our task. Thanks to you, we can face the world with heads erect and conscience at ease. The great work accomplished by the genius of Ferdinand de Lesseps is part of patrimony of glory; you may count on us, as we count on you, to safeguard it and defend it. (Loud and continued applause.)

CROWN MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

CONDITIONS AND PROSPECTS.

SOUTH AFRICA AND THE GOLD STANDARD.

CRITICISMS OF GOVERNMENT'S CURRENCY POLICY.

The twenty-seventh ordinary general meeting of shareholders was held in Johannesburg, on May 25, 1923.

The Chairman (Mr Samuel Evans) said:—Our gross revenue, which amounted to £2,819,172 4s 7d, was derived from: Gold, £2,778,424 13s 5d; silver, 63,716.00 fine ounces at 2s 9.82d per fine ounce, £8,978 5s 2d; other revenue, interest and exchange, freehold revenue, forfeited dividends, receipts under the *Bewaarplaatsen* Moneys Application Act, 1917, and sundry receipts, £31,769 6s; or a total revenue of £2,819,172 4s 7d. At the beginning of the year we had to the credit of the appropriation account £502,559 16s 8d. Adding this to the total revenue gives a grand total of £3,321,732 1s 3d. Our disbursements for the year were £2,942,970 0s 10d, leaving the balance to the credit of the appropriation account at the end of the year, £378,822 0s 5d.

This balance is made up of cash (£126,092 9s 9d), stores and materials on hand, interest in co-operative and other concerns, sundry debtors, and payments in advance.

It will be noted that the difference between the amounts at credit of the appropriation account at the beginning and end of the year respectively, namely, £123,737 16s 3d, is almost entirely accounted for by the amounts expended on the purchase of claims and lease of undermining rights and the purchase of ex-enemy shares made during the year. On the other hand, we were only able up to the date of the drawing to purchase in the open market £30,500 debentures, and, as the total amount to be redeemed during the year was £85,000, it was necessary to have a drawing of £54,500 debentures. After the drawing took place a further £1,050 were purchased. The drawing took place in London on November 17th last, and the debentures drawn were due to be paid on January 1st this year, and this payment will appear in the accounts for the current year.

The debenture debt now stands at £228,650, and will, therefore, be entirely liquidated before the end of 1925. The annuity of £19,979 payable to the Government for the undermining rights of the Ferreira *bewaarplaatsen* claims also comes to an end in three years' time, so that our annual disbursements will be reduced

under the two heads mentioned by approximately £105,000 a year, plus interest on debentures.

You will observe from the directors' report that during last year we purchased 546,6587 additional mining claims, bringing our total claim area up to 2885,5515 claims.

As you will note, we have 147 unworked main reef leader claims and 160 unworked South Reef claims more than we had when the Crown Mines came into existence. Of course, in most of our intact claims the ore is at a considerably greater depth than the ore mined in the past 14 years, but, on the other hand, the grade of the ore developed in our deeper ground, on the whole, better than was anticipated when the company was formed.

Dr. E. T. Mellor, consulting geologist to the Central Mining and Investment Corporation, Limited, has gone into the question of the probable depth of the reef in the areas which we have recently acquired from the Government. Dr Mellor concludes his report with the following paragraph:—"A careful survey of the ground indicates that the south reef in the new areas will range in depth from 3,250 feet to 6,250 feet, and that, with the exception of a small portion of Vierfontein (West) area, the reef in the new areas will be above the 6,000 foot level."

The reefs on the southern boundary of our mining ground will probably be about one thousand feet nearer the surface than was anticipated at the time of the amalgamation, and we are therefore justified in concluding that if the grade continues as good as it is in the lowest areas developed to-day, we shall be able to mine at a profit the whole of our ground, except perhaps a small strip of about 100 claims which extends south of our main southern boundary on the farm Vierfontein.

ORE RESERVES.

At the end of December last our ore reserves totalled 8,882,100 tons, estimated to carry 6.1 dwts, of which 7,382,600 tons carrying 6.0 dwts are available for stopping, being an increase since December, 1921, of 179,800 tons in the quantity of payable ore available. A careful examination of the assay plans and records shows that during the last five years there has been no falling off in the value of the South Reef developed, and that the value of the South Reef ore reserves has remained practically constant. The South Reef in the western section of the mine, that is, west of No. 7 shaft, in the lowest levels has had a remarkably high percentage of payability. As yet no serious attempt has been made to develop the South Reef from No. 5a shaft. As the capacity of the shaft is limited, it was considered more advisable to push on development on the Main Reef Leader, which has exposed highly payable ore. The total footage of Main Reef Leader sampled during the current year in the 5a shaft area was 2,330, of an average value of 394 inch-dwts. Of this, 95 per cent., or 2,200 feet, is payable with an average value of 402 inch-dwts. During the current year, January to April, the total footage developed and sampled on both reefs south of the South Rand Dyke was 1,610, of which 61 per cent. is payable, with an average value of 342 inch-dwts.

LABOUR AND WORKING COSTS.

At our last annual meeting I dealt rather fully with the labour upheaval and prolonged strike that took place in the first quarter of 1922. The strike lasted from January 10th to March 17th, and involved the company in a loss of £89,663, in addition to the loss of profit. As the consulting engineer points out, it was not until the end of June that the native labour force was brought up to our requirements. Under these circumstances, a comparison of the results of our operations with those of former years is of little value.

Apart from the high working costs, a comparison of recent results with 1914 shows, on the whole, a gratifying state of affairs. The most satisfactory feature is the improvement in the yield per ton milled, which is roughly a quarter of a dwt. better than in 1914. Another satisfactory feature of recent operations is the fact that during the past nine months we have been developing at the rate of approximately 5,000 feet per month, as compared with an average of 3,140 feet in 1914.

High working costs constitute the most unsatisfactory feature of the present situation of the gold-mining industry. The present scales of wages of Europeans in the mines, on the railways, and in the industrial centres of South Africa, are undoubtedly too high, and tend to retard the development and expansion of the country. For the first four months of this year our costs averaged 20s 4.5d per ton milled, as compared with 15s 5.7d in the first four months of 1914 and 14s 7d for the Crown Deep in the six months (January to June) immediately preceding the amalgamation.

It has been suggested that the mining industry has gained more from the premium on gold than it has lost through the increase that has taken place in working costs. That is not the case. Up to the end of last year the premium derived from the sale of gold produced by the Crown Mines amounted to £2,092,000, while the increase in our working costs on the ton milled basis since the commencement of the war amounted to £4,785,000.

The health conditions on the property continue satisfactory. Miners' phthisis cost us last year £107 16s 3d per underground employee, or 6s 7.1d per shift worked. As I pointed out at our last annual meeting, the reckless prodigality of the Union Legislature in this matter is unprecedented in the history of the compensation of industrial disease.

At several of our previous annual meetings I have dealt rather fully with the relation of gold to the monetary systems of the world. This still remains the supreme issue as far as gold mines are concerned. The value of gold in terms of commodities and services depends to a great degree on its use as money. If its use for currency purposes ceases or is severely curtailed, its value in goods and services is bound to depreciate. It is increasingly recognised that the general restoration of the gold standard is the only practical solution of the exchange and currency troubles of the world.

PAPER MONEY IN SOUTH AFRICA.

The paper money of South Africa is very nearly on a parity with gold, but unfortunately the Government and Parliament of the Union have just decided against a return to the gold standard at the end of next month, and in favour of extending and consolidating the use of inconvertible paper money for a further period of two years. This decision has been taken on the recommendation of a majority of the members of the board of the South African Reserve Bank. The main purpose of the Currency and Banking Act Amendment Bill appears to be to place and maintain our inconvertible paper money on a parity with the inconvertible paper money of the United Kingdom. In order to accomplish this, our paper money is made legal tender (hitherto only gold and certificates fully backed by gold have been legal tender), its inconvertibility is extended to July 1, 1925, and the Reserve Bank is given power to issue currency notes against the deposit of British and South African Treasury bills to the extent of 35 per cent., provided 40 per cent. of the issue is backed by gold and 25 per cent. by commercial paper. That is, Treasury bills will take the place of gold in balancing our exchange transactions with the United Kingdom, and will be, apparently, the means whereby the purchasing power of the South African paper pound will be kept on a level with that of the paper pound of the United Kingdom.

UNITED KINGDOM'S CURRENCY POLICY.

Now, what is the present currency policy of the United Kingdom? There is now some evidence in support of the conclusion that the British Government are disposed to abandon the policy outlined in the reports of the Cunliffe Committee, although, as far as I know, there has been no official pronouncement to that effect. The recommendations of the Cunliffe Committee involved deflation, and Mr Walter Leaf, chairman of the London County, Westminster and Parr's Bank, recently declared that the national policy of the United Kingdom is "a policy of stabilisation but not deflation." The chairmen and directors of other English banks have also condemned the deflation policy of the Cunliffe Committee. In the *Economist* of the 21st of last month the Editor, in reviewing Mr R. G. Hawtrey's book on "Monetary Reconstruction," states that "it is commonly believed that the Treasury and the Bank of England would like to translate into practice" Mr Hawtrey's managed currency doctrine. Mr Hawtrey holds that "the wisest course for the time being might be to concentrate on the stabilisation of sterling in terms of commodities rather than tie the pound to a metal, the vagaries of which cannot be foreseen" (page 22, "Monetary Reconstruction"). "Further deflation," he writes, "is out of the question, and all we can do is to stabilise our currency at its existing purchasing power till the redundant supplies of gold now in America have brought down the commodity value of the dollar to the corresponding level" (page 147, "Monetary Reconstruction"). I should mention that in the *Economist* of April 28th Mr Hawtrey writes: "The views expressed in my book have no relation whatever to those entertained by the Treasury or the Bank of England. They are entirely my personal opinion, written in a spirit of scientific inquiry." On the recommendation of the Financial Commission, of which Sir Robert Horne, the then Chancellor of the Exchequer, was chairman, the representatives of the Powers at the Genoa Conference held in April last year recommended that a meeting be called in London of the representatives of central banks to consider, amongst other things, a scheme for an international convention based on the gold exchange standard and designed with a view to stabilising prices and "to prevent undue fluctuations in the purchasing power of gold." According to the Editor of the *Economist*, Mr. Hawtrey "inspired the Genoa resolutions on currency."

GENOA PROPOSALS.

As I pointed out at our meeting last year, even the temporary and partial success of the Genoa proposals might prove very harmful for gold mining, and it is possible that the contemplated conference of central banks has not been called because it was realised that when the matter came to be thoroughly thrashed out there

might be considerable opposition from South Africa, Australia, and perhaps Canada, to the adoption of the gold exchange standard or any other managed currency plan. Having regard to all the known facts, it seems not unjust to conclude that the present intention of the British Government is to avoid going back to the gold standard as it existed before the war, and to pursue a currency policy which will maintain, or possibly enhance, the existing level of prices of commodities and services. If it can be made a success, which I question, there are obvious advantages for the British Government in such a course. It will lighten the burden of the debt and of taxation, and will mean a very substantial reduction in terms of commodities of the debt of the United Kingdom to the United States of America. I do not believe in the possibility of any managed currency plan being made a permanent success.

CURRENCY BILL AND THE BANKS.

It is fairly certain that a persistent and prolonged attempt to establish a managed currency in the British Empire might do considerable harm to the Rand gold-mining industry and to South Africa generally, and for that reason it is regrettable that the Government and the Parliament of the Union should be adopting a policy which may tend to prolong and aggravate our currency and exchange troubles. The Currency and Banking Act Amendment Bill was referred to the Select Committee on Public Accounts for consideration and report. That committee examined six of the directors of the Reserve Bank, the Secretary for Finance, and Dr Bruwer—eight witnesses altogether. Apparently the supporters of the Bill considered that gold is only a fair-weather currency, and that in times of trial and trouble inconvertible paper is the money to use and to rely on. Much attention was paid to the bearing of the balance of trade on exchange rates, and stress was laid on the fact that South Africa is a debtor country, and that the bulk of our external trade is with the United Kingdom. In the discussion in Parliament it was made clear that the bankers were entirely responsible for the Bill. It does not appear to have been realised that bankers are dealers in currency, and that usually they can make more profit out of paper money than out of gold money. Under these circumstances, it is not likely that the time to revert to the gold standard will ever arrive if bankers are to have their way. However, I am not so despondent about the future of gold as this criticism of the action of our Government and Parliament might lead you to conclude. I have no doubt whatever that the eventual upshot will be that we shall be forced to drop all managed currency plans and to revert to a self-regulating gold money, the value of which cannot be controlled by Governments and bankers.

The report was carried unanimously.

CITY DEEP, LIMITED.

[INCORPORATED IN THE TRANSVAAL.]

INCREASED ORE RESERVES.

CURRENT YEAR'S SATISFACTORY RESULTS.

The twenty-second ordinary general meeting of City Deep, Limited, was held in Johannesburg on May 22, 1923. The Chairman (Mr F. R. Phillips) said: A true comparison of the year's results with those of the previous year is not possible on account of the great strike. Although the total working profit for 1922 was considerably less than that for 1921, the working profit with gold at 84s per ounce—and it must be remembered that half the year was abnormal—showed a very substantial increase from £270,140 in 1921 to £389,094 in 1922. The corresponding figures giving the additional revenue represented by the difference between the price of gold at 84s per ounce and the actual price realised amounted to a no lesser sum than £441,376 in 1921 and to only £114,050 in 1922.

With the tendency of the price of gold to revert, perhaps more quickly than was anticipated, to its standard value, it is clear that the action taken in effecting a reduction of working costs was not only fully justified, but was essential if a large portion of the gold-mining industry was to be saved. The average working costs 20s 11d for the previous year; but during the last six months of the year under review—that is to say, after the reorganisation had been effected—the average working costs amounted to 23s 10d per ton, or a decrease of 6s 1d per ton as compared with the previous year. The average working costs during the last quarter of the year amounted to 23s per ton milled. This last figure does not compare unfavourably with the average working costs for the year 1914, amounting to 22s 5d per ton.

ALLOCATIONS.

The balance of working expenditure and revenue account amounted for the year to a total of £510,188. This amount, together with the unappropriated balance of £326,292 brought forward from the previous year and a small sum in respect of forfeited dividends, gave a total of £837,255, and was allocated as follows:—Expended

on capital account, £86,383; purchase of ex-enemy shares, £117,997; Government and provincial taxes, £68,314; dividends Nos. 20 and 21 (together 27½ per cent.), £337,231; total, £609,925. This leaves a balance unappropriated at December 31st last of £227,329, of which balance £66,955 was represented by net cash, after allowing for liabilities.

With reference to the ex-enemy shares, you will remember that last year I said the board considered that the interests of shareholders would be best served by cancelling these shares, and thereby reducing the capital of the company by a corresponding amount. Since then, the board has considered and approved of a simpler and better procedure. It has now been decided to retain these shares for the company in the names of two trustees, and to show them on the asset side of the balance-sheet. By this means the capital of the company remains unaltered, thereby avoiding the necessity and expense of calling a special meeting for the purpose of effecting a reduction of capital. At the same time, the company benefits, in so far as the payment of dividends is concerned, to the same extent as though dividends were payable on a reduced capital, and the procedure has this further advantage, that the company retains complete freedom in the matter of dealing with these shares at some future date, should the occasion arise, either by way of reissue or cancellation.

ORE RESERVE.

Turning now to the operations of the past year, I would like, first of all, to draw your attention to the improved ore reserve position, which, as recalculated at December 31st last, amounted to 2,815,000 tons, valued at 8.4 dwts. Thus, compared with the previous year, the ore reserve showed an increase of 386,700 tons, though the value was 0.4 dwt per ton lower. The increase in tonnage is very gratifying, and is greater than was anticipated.

There is every prospect of the ore reserve position being still further substantially improved during the current year. Monthly development footages are being well maintained, the average being 2,807 feet a month during the first four months of the year.

While the ore reserve position showed an increase in tonnage at the end of the year, in value it was 0.4 dwt lower than in the previous year. The reasons for this are given in the consulting engineer's report, and are briefly as follows:—(1) The ore developed during the year was of slightly lower value than that of the 1921 reserve. (2) Certain high-grade blocks in the upper levels of the mine are becoming rapidly exhausted. On account of rock pressure and for other reasons it has been necessary to mine out these blocks without delay, so as to remove the possibility of their being lost. (3) As a result of the reduction of working costs, the pay limit used in the valuation of the ore reserve was lower than that of the previous year, so that certain lower-grade blocks have now been included in the reserve, thus reducing the average value.

MINING OPERATIONS IN THE CURRENT YEAR.

I will now deal briefly with mining operations during the current year. For the first quarter profits have been well maintained, except for the month of February, when, apart from it being a short month, a serious accident, which I deeply regret to say entailed some loss of life, occurred through falls of rock caused by a pressure burst. Apart, however, from unforeseen eventualities like the foregoing, it is expected that profits, after taking into consideration the lower price obtainable for gold, will be well maintained throughout the year.

The position with regard to the exposure of development values is very encouraging. Hitherto a large area to the west of No. 2 shaft, extending over a distance of about 2,000 feet, has been uniformly unpayable. It would seem, however, that from below the 17th level this zone of unpayability has been passed.

Dividing the lowest workings of the mine into the following sections (a) from the western boundary to No. 2 shaft, (b) the area between Nos. 1 and 2 incline shafts, (c) east of No. 1 shaft, the value of the payable ore exposed up to the end of last year over a stoping width of 50 ins has been respectively 7.9 dwt, 8.0 dwt, and 7.5 dwt.

Owing to the faulted nature of the reef in the area east of No. 1 shaft, development has, in the past, lagged behind; it has, however, been accelerated recently, and the above figures show that good values have been exposed.

The 19th level winze No. 1 which has been sunk to a depth of 480 feet roughly in line with No. 2 shaft, has exposed values throughout this distance equivalent to 9.0 dwt over a stoping width of 54 ins. As this is the deepest development heading in the mine, these exposures must be considered highly satisfactory.

Since the end of the year under review, the values exposed in development have, on the average, continued at the recent standard.

While east of No. 1 shaft the grade of ore developed is not quite so good, that exposed in the western and central areas is considerably better than during the past year. To the west, in the above section (a) the reef exposed indicates a value of 10.2 dwt over a

stopping width of 50 ins; similarly, in the central section (b) the values exposed average 8.6 dwt over the same width.

During the first four months of the current year the average percentage of payability in development work accomplished has risen to 79.2 per cent.

The report was unanimously adopted.

MADRAS ELECTRIC SUPPLY CORPORATION, LIMITED. SATISFACTORY DEVELOPMENT OF THE BUSINESS.

The ordinary general meeting of the Madras Electric Supply Corporation, Limited, was held, on the 20th instant, at 1, Queen Victoria street, London, Mr James Gray (the chairman) presiding.

The Chairman said that rupees having been converted at 1s 4d instead of the standard rate of 2s, comparison of the revenue figures with the previous year was impracticable. In rupees there was an increase in revenue of 11 per cent., and in expenditure of 14 per cent. The B.T.U.s sold showed an increase of 14.8 per cent. The greater part of this increase arose from power, which was very satisfactory, for the increased demand during the hours of light load improved the load factor. The balance carried to net revenue account was £56,097, compared with £59,246 for 1921, the apparent decrease being due to the adjustment of exchange, and the net profit was £21,959, apart from £9,727 brought forward. The preference dividend amounted to £4,199, and the directors recommended a dividend on the ordinary shares of 8 per cent. (free of income-tax). The additional remuneration payable to directors amounts to £168, and it was proposed to write off £2,000 from the cost of the issue of second mortgage debentures, leaving £8,038 to be carried forward.

The return from the investment in the tramways showed improvement, a dividend of 7 per cent. per annum, free of income-tax, having been paid on the ordinary shares for 1922, compared with 5 per cent., free of tax, for 1921. A new extension along Mount road and Bodyguard road was proving popular, and a considerable acceleration in traffic had been rendered possible. Some years ago a scheme of extensions was provisionally agreed upon, but in consequence of the war they had remained in abeyance, with the exception of the one just mentioned. Negotiations, however, had commenced regarding the remainder, and there was little doubt that there was ample room for expansion if satisfactory terms could be arranged with the Corporation of Madras.

The directors considered the development of the business quite satisfactory, and the only regret was that they had not been able to take advantage more rapidly of the large demand for electrical energy both in new areas and in areas where their mains were laid. They were still restricted from increasing the number of consumers in certain districts, but this was gradually being overcome by additional sub-stations, and the restrictions would, they expected, be entirely removed at an early date. Another anxiety was fuel, a great scarcity of coal having prevailed in Southern India for some months. They had, however, purchased a quantity of Transvaal coal, which, it was expected, would prove satisfactory and be more economical.

The report and accounts were unanimously adopted.

TAMPLIN AND SON'S BREWERY, BRIGHTON, LIMITED. RECORD PROFITS AND DIVIDEND.

The thirty-fourth annual ordinary general meeting of Tamplin and Son's Brewery, Brighton, Limited, was held, on the 21st instant, at Brighton. Mr Alexander Miller-Hallett, the chairman, presided.

The Chairman, in moving the adoption of the report and accounts, said: It is my fortunate privilege to be able to congratulate you on the most satisfactory report this company has ever known. In spite of a slight falling-off in our trade, which we share with all the other breweries of the country, we are in the happy position to recommend an increase in our dividend in the form of an extra bonus. We are proposing, therefore, to pay you 1s 2d per share, making, with the 10d paid last December, 2s (or 10 per cent.), less tax. To this sum we are adding a bonus of 1s, equivalent to 5 per cent., and at the same time placing £5,000 to general reserve and increasing our carry forward to £28,079 14s 9d. This makes the total for the year equivalent to 15 per cent., the highest dividend ever paid by this company, and while I should not like to hold out hope of further increase, yet your directors have every expectation of being able to maintain our position.

The advantage which in the two previous years I have fore-shadowed from the taking over the supply of the Southdown and East Grinstead properties has during the last 12 months fully materialised. The further reduction in working expenses which we have been able to make in spite of the difficulties with which we have been faced during the past year has had no small share in producing the satisfactory result which we have before us.

The hope that I expressed last year of a reduction in the duty

which still presses so hardly on our industry has been partially fulfilled, the Government having allowed us 20s. on the understanding that brewers should reduce the price 1d per pint, equivalent to 24s per barrel, the difference being borne by us. So much misunderstanding exists on this subject that I should like to emphasise the fact that the trade generally has accepted the Chancellor's proposal in the spirit as well as in the letter, and that in no case has any self-respecting firm reduced in any way the quality or strength of the article which they are supplying. As a matter of fact, we have actually raised the gravity of certain of our cheaper beers.

You will all have received notice of the new issue we are proposing to make, in connection with which a meeting will be held on the conclusion of this one, giving sanction to the operation. We are fully convinced that the results attained by this issue will place us in such a sound position that our hands will be freed to deal with future possibilities in a way that could not be done otherwise.

The report was adopted, and a resolution was unanimously agreed to increasing the capital of the company to £740,000 by the creation of 400,000 "B" preference shares of £1 each.

MOLASSINE COMPANY, LIMITED.

CHAIRMAN CONFIDENT OF THE FUTURE.

The sixteenth annual general meeting of the Molassine Company, Limited, was held, on the 19th instant, at Tunnel Avenue, East Greenwich, London, Mr John Prosser (chairman and managing director) presiding.

The secretary (Mr Edward C. Puplett, F.C.I.S.), having read the notice convening the meeting and the report of the auditors, The Chairman, in moving the adoption of the report and accounts, said:

The trading for the year shows a profit of £18,638 15s 7d, out of which your directors have considered it advisable to allocate £3,392 8s 1d for depreciations, leaving £15,245 13s 6d (subject to corporation profits tax), which, with £507 2s 5d brought forward last year, makes an available balance of £15,752 15s 11d. Of this sum £8,000 has been placed to the reserve fund, and it is proposed to pay one year's dividend on the 7 per cent. preference shares, which will absorb £7,000, leaving £752 15s 11d to be carried forward.

The dog and poultry food business continues to be satisfactory. Our established policy of insisting upon "quality" as the first essential in the manufacture of Molassine dog and poultry foods is widely appreciated by dog-owners and poultry-keepers, and is justified by the unrivalled reputation which these foods have gained. Rito trade has not been good, the demand having fallen off in consequence of the much-reduced demand for fertilisers. The Molassine Meal sales, I am very glad to say, show a satisfactory increase over the previous year.

Considering the awful depression that has existed in agriculture during the year, I hope you will not think that the results are unsatisfactory. It has been a most anxious trading year. Apart from the many failures among farmers, the buying capacity of those who have continued trading has been much lessened, and, while we are in the happy position of having a larger number of customers on the books than ever we have had before, the tonnage that farmers individually are capable of purchasing is very much less.

With regard to the future, a good deal depends upon the improvement in agriculture. The Government are making some effort to lessen the difficulties of the farmer, and I do think, as one who is constantly moving amongst the agricultural community, that the feeling is general that the worst is over, and that conditions are generally improving. Should this be so, and I hope and see no reason why it should not, we are advantageously fixed for taking advantage of any improvement, as our Molassine Meal is giving absolute and entire satisfaction. We never turned out a better article, if so good. We have every confidence as we look forward to the future.

The report and accounts were unanimously adopted.

OROVILLE DREDGING COMPANY, LIMITED.

CONSTANCIA MINE MANAGER'S CONFIDENCE.

The twelfth ordinary general meeting of the Oroville Dredging Company, Limited, was held, on the 20th instant, at River Plate House, London.

Mr Fredk. W. Baker, who presided, first referred with deep regret to the death of Mr W. A. Prichard, the consulting engineer, and, proceeding to deal with the report and accounts, said that the total available credit balance was £244,582. After deducting the four dividends of 9d. per share which had been paid, they had £140,510 remaining, subject to excess profits duty (if any) and corporation profits tax. A considerable portion of this large surplus was now invested in the Dos Bocas Road Concession and in their steamboat asset. Dealing with the company's shareholdings, he

explained that the falling off in the earnings from the Pato Mines during the past year was attributable to the fact that the dredge had been operating in a part of the area which was low in elevation and low in values. The credit to profit and loss account in that company at September 30, 1922, was £172,702, after payment of £70,000 in dividends during the year. The company, after paying £220,500 in dividends during the year, carried forward £5,889. With regard to the Colombian Corporation, very little development work had been done at the Constancia Mine since the previous meeting, when he explained that, as the construction of the Dos Bocas Road was a matter of prime importance—for without it no equipment of the mine could be carried out—the board had decided to utilise all available labour on the completion of this road. They had experienced, however, continuous delays, owing mainly to shortage of labour, a good deal of malaria among the workmen, and big rises in the Nechi River, which had necessitated the keeping of the low end of the road very high, thus requiring more bridges and culverts than had been originally anticipated. The latest news was that they were doing big things against time and money, that the unwatering of the Constancia Mine had reached the bottom level, that development had been resumed in the upper levels, and that the general manager was confident that the new mill would be very successful and cheap to operate. The adit driving was giving good results, for on May 24 a cable was received indicating that a vein 16 metres wide had been cut 430 metres west of the shaft giving payable values. The telegram stated that "this development proves extension of body of ore." It also stated that the steamer and road should be in operation in August, and the mine equipped by March. In addressing the shareholders last year Mr Prichard was as confident about the future of the mine as any mining man could have been, and the directors had received nothing from him since then to indicate any change of view.

The report and accounts were unanimously adopted.

in the United States winter belt fine weather is reported for harvesting, while conditions are quite satisfactory with regard to the young plants in the Southern Hemisphere. North America stocks have further decreased, but floating supplies to Europe continue on a liberal scale. Flour continues in quiet request, though no official change was made in quotations of home milled. London standard straight run quoted at 40s, patents 42s to 43s, town households 38s per sack delivered in Metropolitan area. All English country straights in small supply, and held for 34s to 35s per sack delivered to London stations. Imported dull and tendency of values weak. Manitoba patents range from 35s to 39s, Minnea-

polis good patents 38s 6d, and Australian 39s to 37s per 280 lbs ex store. Millers' offers quiet. Broad bran quoted at 6s-6s 6d, ordinary 5s-5s 6d, middlings 7s 3d-7s 6d, bags included ex mill, light oats 13s 3d all per cwt free on rail. Barley.—English steady at 8s-11s as to sample, with malting kinds quoted at 10s-12s per 112 lbs free on rail. Imported dull. Californian 42s-45s, Australian chevalier 40s-48s, New Zealand 33s-45s as to sample, all landed, per 448 lbs. Persian, 26s, Karachi 28s 3d, Danubian 29s, Plate 27s 6d, No. 4 Canadian Western 27s 6d, American malting 48 lbs 27s 6d all landed per 400 lbs. On c.i.f. terms a cargo of Dan-Bess-Kus-

tendje August-September sold at 26s 1½d per 400 lbs. Maize steady. Plate new ex ship 38s, landed 42s, old landed 40s 6d, East African landed 37s 6d per 480 lbs. Oats steady. English 8s 2d-10s 4d per 112 lbs free on rail as to sample. Imported firm. Plate f.a.q. ex ship 23s, landed 24s 3d, No. 1 Canadian feed 20s 6d, ex ship 25s 3d, landed 26s 6d, No. 2 20s 6d landed, No. 2 ditto ex ship 25s 3d, landed 26s 6d, No. 3 ditto Canadian Western ex ship 27s 9d, landed 28s 6d, B grade 37s 6d both landed 27s 3d, New Zealand A grade 38s 6d, B grade 37s 6d both landed all per 320 lbs. Oatmeal steady. London-made all cuts quoted 18s, rolled oats also whole groats 18s, flaked oats 20s 6d ex mill, ordinary Scottish oatmeal 19s 6d-20s 6d, and American all cuts 17s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, 1921-22, 1920-21, and 1919-20:

IRON, STEEL, AND COAL.

Our Glasgow correspondent writes:—The quotation for corrugated 24 b.g. sheets remains near to £19 10s. Demand for Scotch pig-iron—for home and export—is described by those interested as exceedingly poor. Buyers are taking in on very small lines, and there is a revival of rumour as to the shutting down of furnaces. At this week's meeting of the association there were sellers of Scotch No. 3 foundry at 11½s, and of No. 1 at £5 10s, with mixed numbers East Coast hematite at £5 17s 6d. No recorded trading was disclosed. All over the business position the prominent factor was the unanimity of opinion in favour of a break in the prices of raw and manufactured iron and steel materials. Given a reduction in these prosperity might safely be taken as assured. But iron and steel producers and finishers hold that existing rates and charges afford them no profitable return, and that a further recession is out of the question. Coals are quieter again this week; demand from France, Belgium, Italy and Northern Europe is off a bit, with stocks heavy in smalls and rounds.

Our Middlesbrough correspondent's report, dated June 21st, is as follows:—Pig-iron: Prices of pig-iron are still sagging. There is, of course, business being done for prompt requirements, but no forward contracts are being placed. Prices are as follows:—No. 3 Cleveland G.M.B., 116s per ton; East Coast hematite m/n, 115s per ton. Manufactured iron and steel: The market for steel continues to be very quiet. Another local mill has restarted, but orders generally are very scarce. Steel ship plates, £10 10s; steel ship angles, £10; iron bars, £12; steel plates, £10 10s. Iron ore: No sign of any improvement in the rails, £10 10s. Iron ore: No sign of any improvement in the demand yet, and no forward inquiry. Best Bilbao Rubio ore is nominally 24s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—The absence of buying in the iron and steel market continues, and the prevailing dullness is accentuated by the preparations for stocktaking at the end of the month. The steel furnaces have now very little work on hand, and a good many of them will close down next month for stock-taking, and the resumption of operations will depend upon the way in which orders come in during the next week or two. Should a buying movement fail to come, there will be a considerable amount of idle plant in the country, and at the moment, the outlook for next quarter is ominous. Some people are hopeful, however, of a revival shortly. Prices generally are easier, but with no drop in fuels a substantial reduction is out of the question. The export of fuel still tends downwards, but this has not benefited home consumers, and coke prices are actually harder. Small fuels are rather scarce. Current quotations are:—Best South Yorkshire steams, 22s to 24s; do. Derbyshire, 21s and 21s 6d; Blyth steams, 26s and 27s; Tyne steams, 26s to 28s; rough slacks, 12s to 14s; smalls 7s to 9s; best washed branch 32s 6d to 34s; best silkstones, 22s to 24s.

Our Cardiff correspondent writes:—The "rot" in the South Wales coal market has been of exceptional severity, but there were indications at the end of this week that it has been definitely checked. Admiralty coals, which in the middle of May were quoted firmly at from 42s 6d to 45s, have been actually done during the past few days at 30s, and smalls, which have been scarce at over 30s, have been changing hands in the neighbourhood of 20s. The general situation is still somewhat unsettled. After so panicky a

period of falling prices, some time must elapse before settled conditions and stable prices can be restored, but on Thursday buyers were finding it, in some cases, impossible to secure coals at the prices at which they had bought earlier in the week, and were being quoted from 1s to 1s 6d higher. Current approximate quotations are as follows:—Best Admiralties, 32s 6d to 33s; second Admiralties, 30s to 32s 6d; best trys, 33s to 34s; Black Veins, 29s to 32s 6d; Western Valleys, 28s to 32s 6d; Eastern Valleys, 27s 6d to 30s; best bunker smalls, 22s 6d to 25s; ordinary cargo smalls, 20s to 22s 6d; anthracite big vein large, 52s 6d to 55s; machine-made cobbles, 62s 6d to 65s; French nuts, 60s to 62s 6d; stove nuts, 55s to 56s; rubbly culm, 17s 6d to 18s 6d; coke for export, 55s to 62s 6d; inland blast furnace coke at ovens, 35s to 40s; patent fuel, 37s 6d to 39s; pitwood, ex ship, 30s to 30s 6d. In the tinplate market the position is practically unchanged. Demand is rather quiet and prices easy, and some doubts are entertained as to whether the price stabilisation scheme will survive up to the end of the year. Current prices are at the minimum.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—It is becoming more and more difficult to size up the position. The demand for wool is well maintained, and prices are being paid for the raw material with a freedom that suggests almost unlimited scope, yet in the West Riding trade can only be described as stagnant. Men with many years' experience frankly state that they have never before known such a complete deadlock, for even during the worst period of the post-war slump business could be done at a price, and, of course, raw material values fell in sympathy with the general depression. But now we have the anomaly of wool selling at good prices, while tops and yarns cannot be sold to cover costs of production. Allowing for the ease in values at the Liverpool sale last week, good

The prices in the following list are revised with the assistance of an eminent firm in each department.

Dated 22nd June, 1923.

A BANK OF ISSUE FOR BRAZIL.

Dr. Cincinato Braga, President of the Banco do Brasil, interviewed by the "Jornal do Commercio."

THE PROJECT EXPLAINED IN DETAIL.

To the *Jornal do Commercio*, in virtue of its traditions and programme, falls the duty of shedding light on all national questions which directly interest the commerce of the country. It is clear that under this title comes, in first place, the question relating to our circulating medium.

Within the category of questions of general interest, perhaps the most discussed at the present moment in Brazilian financial circles is the institution of a Bank of Issue. This problem is receiving the serious attention of the Government, and has been thoroughly grappled with by the President of the Republic, with the earnest collaboration of Dr. Sampaio Vidal, Minister of Finance, and Dr. Cincinato Braga, President of the Bank of Brazil. We gave in our edition yesterday our opinion, in general terms, of this reform.

But to us it seems that the best method of satisfying Brazilian opinion on such an important reform in public administration would be to obtain from the most representative bodies of commerce the objections to the creation of a Bank of Issue, and to then place them for elucidation before a financier who to-day is one of the most competent representatives of Brazilian commerce, Dr. Cincinato Braga, actually holding the high position of president of our greatest bank—the very bank it is proposed to transform into the projected Bank of Issue. We requested an interview, in which we proposed to place before Dr. Cincinato Braga these objections and to hear his opinion on them. H.E. promptly acquiesced to our suggestion, for which we desire to express our deep gratitude and appreciation.

Our representative declared to Dr. Cincinato Braga that those who contested the project feared that the Bank of Issue would increase excessively the circulating medium, causing inflation which would depress exchange to record low rates.

Dr. Braga's reply was prompt and convincing: "This fear has no foundation in fact. The paper money in circulation, issued by the National Treasury, is almost all founded in the simple art of lithography; its issues are not measured by commercial necessities, but by deficits in the National Budget. This system of issuing, however, so far followed has not so far terrified those who fear inflation; they are scared of a system by which it is only possible to issue against collateral composed of first-class commercial paper in the proportion of two-thirds of the amount issued, and metallic gold in the proportion of one-third of the same amount."

"It is curious! It is thought dangerous that a serious bank, organised not as a public department, but as a commercial house—as a limited liability company—under continuous and rigorous fiscalisation of representatives of the National Treasury, of the Commercial Association of Rio de Janeiro, and the shareholders of the Bank itself, should issue against first-class commercial paper and gold, and not thought dangerous that the National Treasury should continue the methods so far practised!"

"Never will the Bank issue a single note without having as assets the following two elements:—(1) Gold bullion corresponding to one-third of the value of the issues it may make (gold at the fixed price of 20,000 to the sovereign); (2) commercial paper of the most solid houses in Brazil for the remainder."

"To make it clearer: For the Bank to issue paper money, for example, to the amount of 60 contos of reis, it is absolutely essential that it has in its strong-room, unarmarked in any way, £1,000 gold (which at 120 corresponds to 20 contos) and 40 contos more of guaranteed first-class commercial paper, endorsed by two solid firms."

"So bridled, the Bank will never be in a position to inflate circulation with superabundant and unnecessary paper money. As guarantee for the emission, the pound sterling has a fixed legal value—that is, 20,000. The Bank has no interest whatever in buying sovereigns, the actual value of which is over 40,000, whereas their value as guarantee of the Bank's notes is only 20,000."

"As to commercial collateral, if the banks have them to dispose of and bring them to the Bank of Issue—endorsed—with which to obtain money, it is a sign that commercial operations represented by these securities have expanded to such an extent as to absorb the available resources of the banks and that more money is temporarily required to facilitate the movement of crops and exports. The Bank of Issue, with this good security, will supply the money necessary, and once the necessity has passed, again withdraw the money from circulation. These notes would only cause inflation if they were left permanently in circulation and were not required to aid economic production of the country."

"It must be remembered that it is to the interest of banks not to take first-class paper to the Bank of Issue, where it will only be accepted if endorsed—which no bank likes to do—and still less to pay interest on any loan granted. It will, therefore, be seen that banks in general will do all possible not to take their paper to the Bank of Issue."

The Rediscount Department is a glaring example of this. The made for rediscounting legitimate commercial paper are innumerable; they do not amount to 50,000 contos of the 350,000 contos the Department has in circulation.

"Once the Bank of Issue is created, the Treasury will have to find other means of meeting its urgent needs 'than by making fresh issues'; it will have to negotiate loans, reduce its expenditure and increase taxation—methods recognised as the functions of public treasuries in all advanced countries. In this sense the policy adopted by the President of the Republic, Dr. Arthur Bernardes, and the Minister of Finance deserve the approbation of the nation."

"But the creation of the Bank of Issue is not yet fully understood by well-meaning elements. The chief function of such a bank is not to issue paper money, even should same be guaranteed by unquestionable security. Its main object, in my opinion, is to take care of the financial interests of the nation—that is, to withdraw the paper money issued by the National Treasury that is not necessary or guaranteed. It is in this that the greatest benefit to the nation will accrue from the creation of a bank of issue such as the Government of Dr. Arthur Bernardes is about to initiate."

"Ever since the first Imperial Government the withdrawal of paper money has been one of the most debated questions. And what has happened beyond the circulation being continually increased? And why? Because the elements for withdrawal have been included in the Federal Budgets, which almost always show a deficit, and naturally leave no margin for the Government to put the clause into operation—i.e., the incineration of paper money."

"This is now going to be altered. The withdrawal of paper money will no longer be a function of the National Treasury, but of the Bank of Issue. With what resources? With the huge net profits of the Bank, as stated in the contract with the Government. From now onwards, the paper money for which the Government is responsible—issued merely on a nominal basis—will be slowly but surely withdrawn; not with grants from a Budget already showing a deficit, but with the sure and certain profits on commercial banking, for the most part independent of aid from Union Budgets. The nation will shortly witness—probably commencing in 1924—the methodic withdrawal and burning each month of inconvertible paper money. This currency will gradually be replaced by bank notes guaranteed by the resources of the country's greatest credit institution. With but little exaggeration, the new institution could be called a Bank of Redemption instead of a Bank of Issue."

"Constant use of a heavy pipe makes a crooked mouth"—and similarly the outlook has become crooked of the Brazilian who advocates the use of unguaranteed issues by the Treasury."

"It is a disgrace to the country in face of the policy of other cultured nations. Abroad the condemnable issue of notes by national treasuries has ceased to be discussed. Congresses and financial conferences, as well as books and journals dealing with economics and finance, no longer discuss the utility of such procedure any more than in astronomy anyone argues that the sun goes round the earth. It is only in Brazil that there are persons who advocate the continuance of issues by the Treasury and contest the initiative of the Government of Dr. Arthur Bernardes to create a central bank of issue."

"All the small and new nations, born as a result of the recent European conflagration, now understand the vital necessity to their economic life of a bank of issue. They have already been created in Lethonia, Lithuania, Czechoslovakia, Estonia, Finland, Yugo-Slavia, new Bulgaria, Poland, Austria, Hungary, new Roumania, and Egypt. The European statesmen recognised the absolute necessity of founding central banks of issue simultaneously with the political organisation of their countries. They did nothing more than apply to each of these new countries the eloquent lessons of the banks of issue in the more advanced countries, such as France, England, the United States, Italy, Spain, Holland, Switzerland, Sweden, Norway, Belgium, Denmark, Portugal, Germany, Australia and Japan."

"It can thus be appreciated how successful this system has been in the civilised world, for after being in use for over a decade it cannot be far from perfect."

This argument was convincing and final, but, as it was our purpose to get the opinion of the president of the Bank of Brazil on all objections which have been raised, we took the liberty of informing Dr. Braga that, although some opinions admitted that notes issued by a Bank of Issue were preferable to those of the Treasury, they feared that the amount of gold bullion to be held as guarantee would be too small for the purpose."

Dr. Braga gave our representative a complete explanation, as follows:—"This argument also has no foundation in fact. The emissions to be made by our Bank of Issue will be covered by gold equivalent to 30 per cent. of the amount of notes issued. Do you consider that percentage small? Let us take the examples of other advanced nations which already have banks of issue in operation and find them of inestimable value to their economic life. That excellent financial organ, *The Economist and Weekly Commercial Times*, a banker's journal, in its edition of March 10th last, pub-

A Bank of Issue for Brazil (continued).

lishes the percentages of gold held by the banks of emission in the following countries:—

	Percentage.
1—Bank of Japan	90
2—Bank of Lethonia	80
3—Bank of Spain	60
4—Bank of Holland	60
5—National Bank of Switzerland	60
6—Bank of Sweden	50
7—National Bank of Greece	50
8—Bank of Lithuania	40
9—Bank of Norway	40
10—Bank of France	14
11—National Bank of Egypt	10
12—Bank of Italy	10
13—Bank of Czechoslovakia	9
14—Bank of Estonia	5
15—Bank of Belgium	5
16—Bank of Finland	2.8
17—National Bank of Austria	2
18—Bank of Yugo-Slavia	1.2
19—National Bank of Bulgaria	0.9
20—Bank of Portugal	0.8
21—National Bank of Roumania	0.3
22—Bank of Hungary	0.03
23—Bank of Poland	0.004
24—Imperial Bank of Germany	0.003

"This table shows that should a Bank of Issue be created in Brazil on a basis of 30 per cent. gold, we shall be in a much better position than many of the banks above mentioned."

"But if we consider that the tendency for our exchange is to rise, and that the Bank of Brazil, in its present financial position—should rates continue to rise—could easily convert its reserves into gold bullion, you can easily understand that we are creating a bank of issue which will soon figure amongst the most important in the world, not only on account of its solid position, but also on account of the amount of gold it will have in guarantee of its note issue."

Our representative asked Dr. Braga if the gold stock, though insignificant, accumulated with much trouble by the National Treasury, should ever leave there, as it was our only war chest—the reserve against a calamity to which all nations are subject?

Dr. Cincinato Braga replied: "Under whose care is the gold stock in the National Treasury? Of two officials of the Caixa de Amortisacao, under the orders of the President of the Republic and the Minister of Finance. In the Bank of Brazil it will be in the charge of the directorate of the bank, composed of seven members, three of whom—the president, the director of the issue department, and the director of the exchange department—are direct representatives of the President of the Republic, appointed or dismissed at his will. The remaining four members are elected at a general meeting of the shareholders, where the Government has the controlling vote, as holder of more than half the shares of the bank—non-transferable shares. The bank's directors are thus men in whom the Chief of the State and the Minister of Finance have absolute confidence, and are naturally men of great probity, administrators of the largest accumulation of funds amassed in any one institution in Brazil, in which Brazilians, as in no other similar institution, deposit their savings—a sum that now exceeds 1,200,000 contos of reis! Is it reasonable to suppose that the £10,000,000, or say 300,000 contos of reis, can be more faithfully, more zealously, more honourably guarded by the employees of the Caixa de Amortisacao (where it is at present deposited) than by the Bank of Brazil?"

"Recent events in our history do not commend the guarding of gold by politicians, who always look upon such a deposit as an excellent means from which to help the Treasury to meet budgetary deficits. Large amounts of gold were deposited in the Treasury by former banks of issue, which deposits not otherwise pertaining to the Treasury were deviated to meet these deficits."

"Worse than that, one of the Ministers of Finance of the Republic, without legislative authorisation, spent £9,000,000 entrusted to the Government's care, in artificially raising exchange, to prove to the country the faultlessness of his financial doctrines. I have not the slightest doubt that the Bank of Brazil, with its responsibility as an establishment subject to the Commercial Code, will know how to defend the guarantee of its note issue with much more zeal and courage than a Government Department. Besides, the example of all the great banks of issue of the world strengthen us in this conviction. It may be said: It is not a question of confidence in the probity of the personnel in charge of the gold, but in the application of this gold in the two instances; guarantee of emission in one and war chest in the other."

"This is a great misconception. Our laws never created a war chest. On the contrary, they assigned this stock of gold for one purpose only—guarantee for the redemption of paper money."

"This story of the war chest is a phantom invented to arouse the sentiment of patriotism in the Brazilian nation. We never had a war chest; neither is it the custom of other nations to have one. Germany had one, consisting only of the indemnity paid to her by France in 1870. Do you know what Germany did with this treasure in the hour of danger, when the European War broke out in 1914? Removed it immediately to the strong rooms of its Bank of Issue—the Reichsbank."

"The reason for this is that the Government cannot make rifles, cannons or battleships of gold. These and all other expenses of a war are effected from the whole nation's assets and its credit. This

credit is constituted by its great banking establishments, which furnish the sinews of war, as necessary to its success as the generals who do the fighting. A country without a stable banking organization is a country *a priori* defeated in a modern war. The most stable banking organisations the world knows are those that have as a basis a central bank of issue."

"Observe the recent lesson which the world received. Germany, who had all the most powerful nations arrayed against her, resisted during that time because of her superior financing of the war, executed almost miraculously by its bank of issue. And what would have become of France without the Bank of France, with its sure and ready assistance to the Minister of Finance, to support the army. This being so, to say that in a case of war with a foreign Power it would be better to have the gold in the Treasury than in the Bank of Brazil is an absurd statement, very excusable, as it is not the result of bad faith, but ignorance."

"When war breaks out the first measure taken by a wise Government is to secure mobilisation and to prohibit, without exception, the exportation of gold, precious stones, and metals, whether the property of the Central Bank of Issue, other banks, or private citizens. In case of necessity, the Government commandeers same, no matter whether the property of banks or private persons. In this manner, no matter where gold is deposited in the country, the Government requisitions it for the common good."

"This occurs in ordinary cases, even though the gold or precious stones are the property of foreigners. What, then, of the deposits in the vaults of the Bank of Brazil, almost an official bank? It is sincerely to be hoped that it would be unnecessary in case of war, even though the Bank of Brazil be a semi-official bank, that it places all its resources in gold and paper at the disposition of the Government in the defence of Brazil—it is enough that it is, as it is bound to be, a bank administered by sons of this great country. As much also can be said of other national banks."

Our representative then mentioned the apprehensiveness entertained of the possibility of the above gold being despatched to foreign countries in time of peace as a guarantee of imprudent commercial operations realised by the Bank."

To this question Dr. Cincinato Braga replied with assurance: "Only those who ignore that Law 4,635 foresaw and forbids such operations can express such arguments. Article 1, letter b, stipulates: 'The Bank must maintain in deposit the gold which has been transferred in virtue of this law, and must not transfer, pledge, or remove same outside the country.' That is to say, this gold has a specified purpose—to meet the notes issued under its guarantee."

We also informed His Excellency that some people are apprehensive that holders of notes issued will change them for coin at the bank counter, and that in this way the gold will disappear in a very short time."

Dr. Braga responded in the following terms:—"The deposits in guarantee of issues are destined for that purpose. They are always exposed to this contingency in all parts of the world. It is from this that the convertible bank note obtains its prestige. Governments meanwhile impose certain injunctions to conversion, which inculcates greater confidence in banks of issue."

"In the present case, according to the contract of the Bank of Brazil with the Government, the notes issued by the Bank will be legal tender (Article 1, letter b, of the said law), but cannot be exchanged for gold at the wish of the holder until such time as the following circumstances in Brazil coincide simultaneously:—

"(1) The official exchange to have been maintained at 120 or over for a period of not less than three years."

"(2) The reserve of gold (bullion) at the bank to be equal to 60 per cent. of the value of notes issued."

"(3) The Government to have decreed same, after having investigated the economic conditions of the country and judges that such conditions warrant conversion."

"The coincidence of these circumstances will serve to prove that Brazil is in the position of an international creditor nation, in place of its present position as a debtor nation. That position will assure the permanency of our stock of gold in the country, as is usually the case in a country with a gold currency."

"Besides the hypothesis of the loss of gold through conversion, the same applies as much to issues of notes by the Treasury as to the Bank. Such hypotheses, however, cannot serve as a motive for preference to an issue by the Treasury, as it is always exposed to the same eventualities as a bank."

"Then, Mr President," we inquired, "with these elements the Bank of Brazil will become a Bank of Issue as stable as any similar bank in other countries?"

"Assuredly so," responded Dr. Braga, and added: "I have had occasion to declare in public that those most interested in the National Bank of Issue being a financial power of the first order are not the shareholders of the Bank, but the National Treasury, the State and Municipal Treasuries, and directly or indirectly connected with these is the whole nation."

"Since the essential function of a Central Bank of Issue is the upkeep of the value of the circulating medium, it is obvious that all Brazilians who carry notes in their purses have a direct interest in the prosperity of the bank. This interest is no less a part of the National Treasury, which annually is the largest holder of notes in circulation, seeing that all taxes are paid in that form. The same reasons oblige the State and Municipal Treasuries to interest themselves in its prosperity. In short—a bank in these conditions cannot fail, or only after the National State and Municipal Treasuries, men of wealth, and all holders of its notes have also failed. It is clear that no one can predict for Brazil—a new country full of life and progress, overflowing with natural riches—a future of this description."

SATURDAY, JUNE 30, 1923.

No 4166.

A Bank of Issue for Brazil (continued).

"Among the nations suffering from the most serious adversities known is Austria, whose currency has reached the lowest limit of devaluation—possible—its crown (kroner) being worth less than the paper it is printed on.

"In the midst of this colossal catastrophe the League of Nations intervened. What measures were judged necessary for its restoration? The creation of a Central Bank of Issue, constituted in accordance with the League of Nations, by Austrian Federal Law of July 24, 1922. A creation of yesterday, its influence is already apparent in the recovery of Austria, as demonstrated in the articles published in the *Economist* of February 17th, page 330, and more so in the article published in that journal of March 31st last, page 673.

"The results realised in such a short time by the Austrian Bank of Issue is an eloquent precedent for us to follow, particularly when we consider the extremely low level of currency in that country."

We also asked Dr. Braga if there is any foundation in the statements repeatedly made that the bank will break our monetary standard?

"Statements also without foundation," replied Dr. Braga emphatically. "The same criticisms were made when the Caixa de Conversao was created, but our monetary standard was not broken, it is still the same and very much so. The law creating the Bank of Issue purposely evades any possibility of altering the monetary standard, which continues to be that established by Law 401 of September 11, 1846, and promulgated by Decree 487 of November 28th of the same year.

"The rate of 12d per milreis on which issues will be based is, one can say, a provisional one. It will be but a pause in the march onwards to a higher rate, brought about step by step with increased confidence. During this interval, more gold will enter our vaults, to be stored in the country, as was done with the Caixa de Conversao, guaranteeing for several years a stable exchange. Some years hence (how many no one can tell), the country will become strong, both economically and financially. At that time nothing can prevent the Government, for example, authorising the National Treasury to deposit in the Bank of Brazil—additional to that guaranteeing the 12d rate—gold sufficient for the Bank to withdraw its issues at a higher rate, let us say 15d per milreis, this rate ruling for conversion from then onwards. If in this manner the rate can be raised to 15d, like measures can be adopted to increase the rate to 18d, 20d, 24d, or 27d per milreis, thus serving as an accurate indication of the real and progressive increase in the wealth of the country, and not mere transitory rises, attained through speculation in exchange. On the other hand, the contract for operating the new Bank of Issue will continue in force for 10 years only. At the end of that period the Government may insist on the redemption of the issue made at 12d and effect another at a higher rate.

"At present the rate is established at 12d because it is a middle term in exchange tables, and in the unanimous opinion of experts represents the true economic condition of the country. But it will not be immutable in the future."

It appears from the terms of the contract with the Government that there is the possibility of stability in exchange before the time fixed for conversion is reached?

"That is true," replied Dr. Braga. "It has been decided to constitute a gold fund in London as a basis for the exchange operations of the Bank. To this fund will be placed English Consols to the value of £1,000,000 sterling, now deposited with Messrs. Rothchilds. Brazilian bonds, the property of the National Treasury, of the nominal value of £1,451,400, deposited with the same bankers, will also be placed to this fund—bonds the Treasury is to realise to subscribe to new shares in the increased capital of the Bank of Brazil. The same fund will also be credited with the amounts in gold which, in the Bank's balance-sheets, represent cover for the devaluation of its paper assets to gold, as well as all disposable money or collateral of the Bank's assets. The Government also anticipates that in the near future it will further strengthen this fund from its own gold resources. Thus, in a comparatively short period, the Bank will have a large gold reserve on which it can draw during the interval between Brazilian crops—that is, during the period when gold export bills are scarce."

Dr. Cincinato Braga, President of the Bank of Brazil, in the two portions of an interview which we have already published, says the *Jornal do Commercio* has dissipated all doubt on many questions of primary importance relative to the creation of a Bank of Issue and Rediscount.

Our representative further asked Dr. Braga if it was proposed to include in the contract for the creation of a Bank of Issue a clause which permitted the organisation of a National Mortgage Bank (Banco Hipotecario), and that it was of great interest to know what the objects of such an institution were?

Dr. Braga favoured our representative with the following reply: "I can give you an answer in two words. Strictly speaking, the object of a central bank of issue should be exclusively confined to assuring the proper function of the circulating medium as a bank for bankers, and not for private individuals. This advanced state of finance has yet to be brought about in Brazil, where progress has endowed the country with thousands of private banks; in the United States there are over 30,000 of them. Then the central bank of issue can restrict its operations exclusively to other banks. Under actual conditions, however, this is not possible, and it is necessary,

therefore, for the bank of issue to transact every kind of banking business. The Bank of Brazil has always been a great commercial bank for both deposits and discounts, with branches in all the States and all the important Municipalities of the Federation. Its services to commerce, agriculture, industry, and public departments are of such magnitude that they can only be appreciated if—by a stretch of imagination—you could see the bank ceasing to operate.

"But a Bank of Issue must not, cannot—if it complies with the scientific principles which inspired its organisation—deal with a multiplicity of transactions. However, in the absence of a complete banking system—without banks which specialise in one class of business—agriculture, industry and commerce of the country, having no other institution to turn to, almost daily appeals for assistance from the Bank over which I have the honour to preside. This applies equally to the various States as to the Federal Capital.

"In many cases I and my co-directors are reluctantly forced to refuse even business which is most solidly guaranteed—some of which are indispensable to the development of the country—but absolutely outside the sphere of our banking operations. Among these there is an extraordinary proportion of requests for capital for a period exceeding six months. It is a national calamity that powerful banking establishments do not exist which could deal with these requirements.

"These considerations give birth to the idea of the immediate organisation—a twin with the Bank of Issue—of a national mortgage or credit bank. The Bank of Brazil already contains an Agricultural Credit Department—created by law—with a capital of 400,000 contos, in Federal apolices (bonds) issued by the National Treasury. But, with the transformation of the Bank into a Bank of Issue, it was immediately recognised that it was undesirable that such a department should continue to work as a component part of the institution. Besides this, the hypothecary credit or long credit is a class of banking which should be directed by men who are specialists in this particular business.

"On the other hand, the offering of such a huge amount of Federal bonds on the market might cause serious loss, not only to actual holders, but to the National Treasury as well, the latter naturally requiring liberty of action as to the disposal of such collateral according to its requirements.

"It would be unjust, however, to deprive the Bank of Brazil of a privilege, expressly granted by law, without compensation. To avoid this, it is proposed that the Bank of Brazil shall participate in the profits earned by the great credit bank—which it will organise, though giving it autonomy—and facilitate its working through its agencies throughout the country. The new bank, therefore, will have the credit of the new institution.

"This method is by no means original. Belgium recently founded a bank on similar lines. There the National Issue Bank organised a long credit institution in which it has the controlling voice. Again, in France, the Bank of Algiers founded the Industrial Bank of North Africa on similar lines."

This was certainly information which carried great weight.

Our representative then asked the president of the Bank of Brazil if a Mortgage or Hypothecary Bank was to be organised, what was the basis, the amount of capital, and what class of industry will it accommodate?

To all these questions, as usual, Dr Braga had a prompt reply:—"Such questions are too lengthy to be fully explained in a few words. However, I can briefly outline the scheme, as they are but natural queries.

"The National Credit Bank will be organised with two distinct objects in view: (1) To grant credit to agriculture and industry; (2) to grant credit to the National Treasury. It will have no capital—or, better still, it will have no shareholders. Its organisation will follow the lines of a project which I, when a member of the Finance Committee of the Chamber of Deputies, suggested to National Congress in 1921, on the lines of the Argentine Credit Bank. The agriculturalist or owner of a factory can mortgage his property to the bank and obtain an advance in mortgage bonds up to one-half of the value of same. This mortgage will bear interest and have an amortisation service to be paid every six months to the bank in Rio, or any of the agencies of the bank in the country. Both the interest and amortisation will be guaranteed by the National Treasury, and rank equal to bonds of the National Debt. These bonds would be an excellent 'long' investment for private capital.

"The mortgages will always be for long periods, and bear interest lower than current rates. They can be repaid before maturity by purchase of mortgage bonds in the market, if such means will be in cash. The half-yearly payments will be in cash.

"In addition to the large loans against mortgage by bonds, the bank will also grant loans in money, but this only to the small agriculturalist or small farmer, for periods under one year; these loans will correspond to the value of the crops expected during the year.

"To grant these small loans in money the bank will receive 50,000 contos of bonds of the public debt from the National Treasury, to be sold gradually by the bank in the market. To meet the demand for mortgage loans the bank is authorised to issue bonds to the value of one million contos of reis.

"The bank will operate:—(1) Agricultural and pastoral pro-ways being worked at a profit; (2) in real estate and suburban pro-erty on which sanitary dwellings are to be erected; (3) on iron ore mines that show an average of over 50 per cent. pure metal, and for the erection of smelting works or foundries, and on the iron and steel mills, for improvement and expansion of output.

THE MONEY MARKET.

ALTHOUGH there was no real pressure at the beginning of the week, borrowing from the Bank of England began on Monday, and went on steadily in anticipation of heavy withdrawals on the last day or two of the half-year. Discount rates at the same time continued to harden, although bills were by no means plentiful; in fact, on one or two days there was hardly a buyer to be found. The market appears to have made up its mind that the comfort-

able margin between money and the bill that it has lately enjoyed cannot be counted on to continue, and that higher money rates in New York and the recent weakness of the American exchange are factors that must not be ignored. Yesterday, September bank bills could just be placed at $2\frac{1}{2}$ per cent., but for October bills the rate was practically $2\frac{3}{8}$ per cent.

	June 29, 1923.	June 22, 1923.	June 15, 1923.	June 8, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	$3\frac{1}{2}$ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	$1\frac{1}{2}$ (Jly. 13, '22)
Discount/Call	1	1	1	1	$1\frac{1}{2}$ (Jly. 13, '22)
Houses/Notice	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 13, '22)
Market rate (3 months' bills)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	..

End of the half-year requirements were writ large over the Bank return. Circulation had increased by £1,363,000, leaving the Reserve £1,280,000 lower, gold having risen by £83,000. Other securities had been swollen through the market's borrowings by £9½ millions, but Government securities declined by £2¼ millions. Private deposits were nearly £9 millions higher, and Public had fallen by £3 millions. Currency notes outstanding were increased this week by £44,800 to £286,502,900, which includes £1,470,500 for notes called in but not yet cancelled. The fiduciary issue is £235,582,400, or £34,601,400 below the maximum.

THE STOCK MARKETS.

Business in the stock markets has been slack, but the disclosure of a bear account at the carry-over on Tuesday caused a rally in some of the markets where stock had been oversold. Conversion loan was a strong feature in the Consol market, and War Loan kept steady, but other gilt-edged stocks have given way a little. Home Rails have recovered a little after their recent relapse, and there was a rally yesterday in Argentine rails. Rubber shares are heavy owing to another fall in the price of the raw material, and oil share quotations have weakened. Shipping shares and the banking and insurance markets are heavy, a sharp fall in National Bank of South Africa shares, owing to the disclosure of further heavy losses, being a feature. In the mining markets business shows no recovery, and prices remain dull.

THE COMMODITY MARKETS.

The general course of trade this week has been quiet, the demand for raw materials and manufactured goods being, on the whole, weak. Conditions are steadier in South Wales, and there is evidence that the recent drop in prices has checked the flow of orders for coal to the United States. Makers of pig-iron at Middlesbrough are stated to be losing orders to other districts because prices are not low enough. The unsettled boilermakers' strike continues to interfere with steel rolling mills, and in consequence quotations remain unchanged; in Sheffield trade in basic billets is suffering from Continental competition. Business in the cotton trade continues to be irregular. Our Manchester correspondent mentions that, on the whole, advices from Calcutta are not favourable for improved trade. A good demand for wool was noticeable this week at London auctions, owing mainly to Continental buying. Contrary to expectation, the hide market has shown no further sign of weakness, and prices tend to harden. There is a fairly good demand for vegetable oil and oilseeds. Wheat prices have fallen slightly; sugar values were fairly well supported, but prices became easier towards the end of the week. Indian tea was inclined to be firmer in price, but rubber prices were lower. Tin and copper are both down.

FOREIGN EXCHANGES.

In the foreign exchange market the earlier part of the week was dull, with little business, and although later "reparation currencies" became feverish again, there was little real increase in dealing. The outstanding feature has been the sudden movement in dollars at the end of the

week. For some two months now the rate has been fairly steady round about \$4.62, but towards the end of last week a weaker tendency began to make itself quietly felt. By the 26th the closing rate had run down to \$4.61½; the next day, after being lower, it was \$4.60½, on the 28th \$4.59½, and yesterday morning appeared to be moving downward again at \$4.58½. Various explanations have been given for this change: the selling out of American investments here and the purchase of further dollar securities from this country, and the marked difference in short money rates between the two currencies. The suddenness of the movement, however, seems to be due to some special cause, and it is suggested that the recent comparative steadiness of rates had encouraged people not to make adequate provision for their dollar requirements, and that when a demand came through the removal of funds to New York in connection with requirements at the end of the half-year, the market was found to be very short. It will be interesting to see whether the rate will recover again quickly from this temporary influence, or whether the break will be followed by reversion to comparative stability on a lower level. At present it is impossible to say. Forward rates at $\frac{1}{16}$ cent per month over spot are $\frac{1}{16}$ narrower than a week ago. After a sharp recovery to 510,000 on Saturday last, the Berlin rate, in spite of frenzied attempts to stop the rot by new and vigorous regulations, broke away again, and by the 28th was well over 700,000. A slight recovery brought down the closing rate on that day to 685,000, and yesterday morning there was some slight demand at 680,000. With a currency so demoralised, however, as the mark now is there would seem little to expect except further depreciation until such time as the reparation problem becomes more clear. Forward marks are quoted nominally at 130,000 per month over spot. The Paris rate moved up on Tuesday to 75.20, after which there was some recovery, but the quotation has again started to move up, and yesterday morning stood at 74.90. Apart from the heavy demand on the exchange for import purposes natural at this time of the year, there is a growing uneasiness at the poor promise of the harvest, and the general outlook is not improved by the unsatisfactory discussions concerning this year's budget, and the proposal to make next year's budget merely a repetition of the current budget, not yet passed, without any provision of new revenue to meet the gap levied by non-recurrent receipts for the present year. Brussels, at 87.95, as compared with 87.25 a week ago, again has moved, as usual, in sympathy. At $\frac{1}{2}$ centimes per month over spot, forward rates in Paris are the same as last week, while Brussels is also about the same, round 1 centime per month below spot. At 103½ Italy shows some further depreciation from the 102½ of a week ago, but is better than the 104½ quoted on Tuesday. Among neutral currencies, Amsterdam moved sharply against us on Thursday, in sympathy with the dollar, and yesterday was quoted at 11.72½, as compared with 11.76½ a week ago. Stockholm also, which remains close to dollar parity, has moved down from 17.39 to 17.36, but both Christiania and Copenhagen have moved again in our favour, the one from 27.75 to 27.87, the other from 25.75 to 25.95. Helsingfors, after going against us, is back at last week's quotation of 167½. Switzerland shows a further depreciation from 25.74½ to 25.86, and Madrid has also moved sharply upwards, from 31.10 to 31.36. In Central Europe, Vienna remains stabilised at 325,000, Prague has appreciated $\frac{3}{4}$ to 153½, and Bucharest is also better at about 880. Budapest and Belgrade have both depreciated. Warsaw, where exchange restrictions consequent on the recent collapse, make the position very obscure, is quoted rather better again at 500,000. In the East, India, where the bank rate has again been lowered, is slightly cheaper, at 18 4½d, and Yokohama has moved from 2s 1 15-32d to 2s 1½d. The silver market has been dull, and prices lower on a considerable weakness in Indian demand, due to fears of an unsatisfactory monsoon. Hong Kong has fallen from 2s 3½d to 2s 3d, and Shanghai from 3s 1½d to 3s 0½d. In South America, Rio has appreciated from 5½d to 5¾d, but Buenos Ayres is ¼d cheaper at 41¾d. Monte Video, after some movement, is the same again, at 42½d, but Valparaiso has depreciated from 33.90 to 34.60 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 23rd:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Apply Services	7559	From Revenue	16175
Interest, &c., on War Debt	1187	Decrease in Balances	45
Grants	826		
Auction of Debt	6657		
	16220		16220

Revenue came in very well last week, amounting to 16,175,400, as against £14,994,900 a year ago. Expenditure was reduced from £11,956,400 to £9,563,500, the main reason being a reduction of about £2,000,000 in supply Services. The yield from Excise is a prominent feature of this week, amounting to £7,140,000, as against £4,201,000 in the same week last year. Special Receipts amounted to £1,161,100, as compared with £405,000. Property and Income-tax and Super-tax yielded £2,053,000, as against £2,090,000 in the corresponding period. The week's operations reduced the National Debt by £6,657,000, and caused the following changes:—

	Min. £		Min. £
Bank of England Advances ..	3000	National Savings Certificates ..	300
Public Department Advances ..	4750	Treasury Bills	713
		Sundries	80
	7750		1093

The floating debt was reduced by £7,025,000 to £815,300,500.

FINANCIAL YEAR, 1923-24 (April 1 to June 23, 1923).

£	£
Total Expenditure .. 197,854,587	Raised by Revenue .. 174,951,099
	Net Borrowings..... 19,784,686
	Decrease in Balances 3,118,802

ESTIMATES FOR YEAR 1923-24.

	£		£
Ordinary Expenditure	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure..	15,603,000	Special Receipts...	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

The Week in Parliament.—Monday in the House of Commons was occupied by the third reading of the Housing Bill. On Tuesday the Prime Minister made a statement on Air policy, and the Scottish estimates were also discussed on that day and on Wednesday when a disorderly scene ended in the suspension of four Labour members. Other debates of the week concerned the Ministry of Health estimates and the Agricultural Credits Bill. The House of Lords has had an interesting week, of which the feature was the debate on the dry ship controversy introduced by Lord Birkenhead. Lord Carson raised the question of Irish compensation on Thursday, while Lord Buckmaster's Matrimonial Causes Bill was debated and read a second time on Tuesday.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the meetings of the following companies:—Mexican Railway Company, Bank of Adelaide, Western Australian Bank, London and Edinburgh Re-insurance, Great Indian Peninsular Railway, Hudsons Bay Company, Consolidated London Properties, Bleachers' Association, John Brown and Co., Maltby Main Colliery, Dinnington Main Coal Company, Guest, Keen and Nettlefolds, Lake View Investment Trust, Zinc Corporation, Selangor River Rubber Company, Rio de Janeiro Land Mortgage and Investment Company, Great Boulder Proprietary Gold Mines, Mortgage Company of Egypt, Calcutta Tramways Company, Edison Swan Electric Company, and Fanti Consolidated Mines. At the meeting of Guest, Keen and Nettlefold, the chairman mentioned, in connection with the increase in the company's coal output, that the output per man had appreciably increased at all the pits. There has, also, according to the Maltby Main Company's chairman, been an increase in output in that company's pits. The chairman of the Mexican Railway spoke of a very distinct improvement in general conditions in Mexico. The London and Edinburgh Re-insurance Company, it was stated, may ask for powers to transact direct fire business,

while the chairman of Consolidated London Properties, Limited, naturally had a good deal to say about the control of rents. At the meeting of the Selangor River Rubber Company, the chairman described the present statistical position "as satisfactory and hopeful as it could be." The chairman of the Zinc Corporation spoke at some length on labour questions. The address of the President of the Argentine Republic to the Legislative Assembly, in which he gave a review of the financial position, will also be found on a later page.

AIR POLICY AND EUROPEAN PROBLEMS.

THE pronouncement on air policy made by the Prime Minister in the House of Commons on Tuesday is a sad commentary upon the failure of European statesmen in the four and a-half years that have followed the greatest war in history. It illuminates the fact that after years of effort to establish peace and security the old competition in armaments is being resumed. Fortunately, the Washington treaty has saved us from the more costly competition of battleships. The new competitive building is to concern the cheaper weapons of the air. In essence, if not in cost, it is equally disquieting and regrettable. Yet it is impossible to condemn Mr Baldwin's statement. "In addition," he said, "to meeting the essential Air power requirements of the Navy, Army, Indian and overseas commitments, British air power must include a Home Defence Air Force of sufficient strength adequately to protect us against air attack by the strongest Air Force within striking distance." No purpose can be served by blinking the fact that the last seven words of this sentence mean in plain language "the French Air Force." In this new competition France, for reasons not yet adequately explained, has set a hot pace which our Government is now slowly and reluctantly following. The reluctance is, we believe, shared almost unanimously by the entire country. The new home defence force is to consist of 52 squadrons "to be created with as little delay as possible," and the result will be to add 34 squadrons to the authorised strength of the Air Force. According to the estimate of the Air Minister the cost will be £500,000 this year, rising eventually to £5½ millions per annum. According to Mr Baldwin, "the details of the organisation will be arranged with a view to the possibility of subsequent expansion, but before any further development is put in hand the question should be re-examined in the light of the then air strength of foreign Powers." The plans for immediate defence are to be such that they can form the basis of more extensive participation in the new armaments race. Of stopping that race there is only one hope. "In conformity," said Mr Baldwin, "with our obligations under the covenant of the League of Nations, His Majesty's Government would gladly co-operate with other Governments in limiting the strength of air armaments on lines similar to the Treaty of Washington in the case of the Navy." Obviously the chances of such co-operation depend entirely upon France. The last thing the people of this country wish is to enter into any form of armament competition with France or any other country. Is France really prepared to let this unwelcome and perilous race proceed? At first sight an affirmative answer is indicated by the passage in the early hours of yesterday morning of a huge French Air Budget. But that there may be second thoughts we derive some hope from an article in the *Temps*. That journal, after recognising clearly that it is France that Mr Baldwin has in mind, expresses a preference for an Anglo-French air defence pact rather than a ruinous race. But—and here lies the significance of the article—it does not rule out the possibility of international limitation. "Mr Baldwin in his speech alluded to a general treaty which might be negotiated for a general world limitation of air forces. It is the idea that the United States Congress had already put forward last January. We do not know that it is practicable owing to the difficulty of distinguishing between commercial and mili-

tary aircraft. But, in any case, before attempting such a treaty there must be Anglo-French conversations. It is for such conversations that we continue to hope." We share the hope that conversations will be opened without delay. But unless and until France is willing to discuss an international limitation plan on Washington lines they can be of little use. There is no satisfactory alternative between that and a full-blooded resumption of the old armaments race, the results of which history has taught us to contemplate with well-founded horror. Here, as in other leading questions affecting world peace, the key to the door is in French hands.

It is, perhaps, all to the good that Mr Baldwin has brought the vital question of world-limitation of armaments into the limelight in a way that cannot be misunderstood by the French Government. The comments which his statement have aroused show that the danger of "arming" Germany is still the great obsession of French opinion, and the question of security is more than ever to the front in discussions of a possible settlement with Germany. With the dubious exception of such passages as that which we have quoted from the *Temps*, French ideas of security appear still to be as remote as ever from the contemplation of international agreement as preferable to individual pacts and alliances. When we see in France a growing appreciation of the view that international limitation of land and air forces would be the surest approach to world peace, and incidentally to French security, we shall begin to believe that a European settlement is in sight. But at the moment there is little sign of progress. The old saying that no news is good news is only applicable in a limited sense to the Ruhr and Reparations crisis. It is a relief that so far nothing has been said or done that definitely slams the door on fresh negotiation. But as weeks slip by the German position tends to get more and more dangerously out of hand, and Mr Baldwin doubtless spoke with fervour when in answer to a question in the House of Commons whether France had sent her reply to the British question he said, "I wish I could get it." Meanwhile, such gleanings as can be picked up are not encouraging. A search for a formula for a Ruhr truce—the essential preliminary—has made no headway. Nor is there any indication that France is really making up her mind to enter upon negotiations on any basis that would promise well of economic settlement; while the Pope's appeal for a settlement appears to have produced little but irritation in Paris. So long as progress towards rapprochement by diplomacy seems possible, the silence of the British Government is entirely defensible. But a statement of policy cannot be indefinitely delayed. Three weeks have already passed since Germany's last offer. While diplomacy is at work economic currents do not stand still.

THE TACTICS OF INFILTRATION.

In the later stages of the Great War there was developed that method of penetrating an enemy's defences which was named "infiltration." Generals no longer made attempts first to blow their opponents off the earth and then to follow up a bombardment with masses of assaulting infantry. What they did—especially the German generals between March and July, 1918—was to push great numbers of small bodies of men through weakly held gaps in the enemy's lines, and gradually, sometimes very rapidly, to "infiltrate" his successive lines of defence, much as the *teredo* insect used to infiltrate the oaken timbers of an uncoppered sailing ship. There are some indications that our old opponents, the late Tariff Reformers and upholders of Mr Joseph Chamberlain's policy of Imperial Preference, have imported the new tactical methods of war into their political operations. Those who are convinced more strongly in these unhappy days than ever that what the stricken world needs is freedom for international trade and not tariffs and artificial barriers, should note carefully the signs that subtle infiltration of our Free Trade position is being adopted as a policy, and is being practised wherever the keen eyes of opponents detect a gap in our lines.

The heroic frontal attack of Mr Joseph Chamberlain will not be repeated. No candidate for an industrial constituency now dares to go before men and women voters and utter the Chamberlain slogan: "If you want to give a preference to our colonies, you must put taxes on food." No advocate of sheer Protection—which is quite a distinct thing from Imperial Preference—dare nowadays run an open campaign in the constituencies in favour of general tariffs. The last thing which either advocates of Imperial Preference or of Protection desire is a general election on the straight fiscal issue. They know that the only possible result would be a landslide and an immense majority for Labour and Liberal candidates. Their chief anxiety, therefore, is to prevent the constituencies from declaring their views, and at the same time by methods of infiltration in Government Departments to infuse the trade policy of the country with an atmosphere favourable to the spread of Imperial Preference and also of crude Protection. Every little position gained helps the attackers to slip forward to another position. It was really a stroke of genius to abolish the Tariff Reform League, which was a permanent advertisement and a warning that the Chamberlain attack was still being pursued. It was so much more adroit to have an organisation like, say, the Empire Development Union, whose representatives could hob-nob with permanent officials and blandly talk Tariff Reform in the language of economic Imperialism. Perhaps the cleverest move of all was the self-denying ordinance under which Mr Bonar Law, while putting aside the old Chamberlain policy, brought over Mr Lloyd George and his Liberal supporters to the side of Imperial customs preference on existing taxation, and of measures alleged to guard against "dumping" and the destruction of "key industries." Mr Austen Chamberlain, though wiping out the famous slogan of his father—"you must put taxes on food"—gave a preference of one-third of the duty to any imports from the British Empire which were subject to customs duties. Thus, by infiltration, and not by the will of the electorate, the base of Imperial Preference was laid. It was similar with Protection. The direct attack was abandoned, but pleas were set up which in the late Coalition Parliament produced the licensing for ten years of imported dyestuffs, and the notorious two parts of the Safeguarding of Industries Act. The opponents of Free Trade, at a time when the world had gone mad with nationalism, and the tariffs which are nationalism's fruit, had penetrated the lines of defence of British Free Trade policy.

The supporters of Mr Baldwin's Government have not changed their skins with the change in the personality of their leader. There is no overt hostility towards the traditional Free-trade policy of this country. Mr Bonar Law pledged himself last October not to introduce in the present Parliament any measures of fundamental fiscal change. Mr Baldwin is the inheritor of that pledge, and one does not doubt at all that it will be substantially kept. But his followers are as intent as ever upon infiltration, and the coming Imperial Economic Conference will give them a great opportunity. The policy of our Dominions is protective. They have deliberately determined to establish local industries by means of a tariff upon imported manufactured goods. They allow to British goods preference is not allowed to interfere with the main purview area, whose chief wealth is drawn from agriculture and natural resources, may, if it seems good to them, subsidise industries by tariffs in any manner which they think fit. That is their privilege and responsibility. But whatever policy they may adopt does not affect, or should not affect, the policy of this country. We have our own problems to face, and must face them in the manner which is approved by the mass of our own people. The British Isles are a hive of industry, with some four-fifths of the need is markets in which to sell our goods, and Protection for home industries and Imperial Preference upon Empire products cannot help us in the slightest degree to keep or to extend our markets. In so far as they may raise the cost of living here and add to the cost of producing goods they are, both of them, not a help, but a

hindrance. The British popular mind is quite clear upon this question. We have no apprehension at all of any electoral change which would establish in office an openly Protectionist Government. But what is to be feared is infiltration, a going to and fro between interested organisations and Government Departments, secret conferences between our Ministers and those from the Dominions, in the course of which further Free-trade positions would be surrendered behind the backs of the people.

Imperial Preference, represented as preferential trading between members of a common family, is an appeal to sentiment, and a very effective appeal to young generous minds. Protection is totally different; it is a blunt appeal to human greed. The advocates of Imperial Preference and the advocates of Protection, though they are allied, have little in common. Ever since the beginning of Mr Joseph Chamberlain's campaign the advocates of Imperial Preference have supplied the honest enthusiasm for an ideal, and the Protectionists have supplied the cash. "Give us," said the Protectionists, hard-faced men, "tariffs on manufactures which compete with our own, and you may have all the pretty Imperial Preference that you choose. The Empire does not produce manufactures which seriously compete with ours." And the advocates of Imperial Preference, who could not get support except from the Protectionists, had to accept the humiliating conditions. As the alliance began, so it has continued, and so far Imperial Preference has had the best of the bargain. For the principle of it has become incorporated in our fiscal system, whereas the crumbs gathered by the Protectionists—the McKenna duties on motor cars, &c., and the Safeguarding of Industries Act—have not as yet gone far to satisfy stomachs that crave for general tariff protection.

The specious plea that an extension of Imperial Preference will aid the development of the Empire, and through reciprocal preference increase our Imperial markets, will be worked for all it is worth in connection with the Economic Conference. But it is of interest to note that the Federation of British Industries in their memorandum this week, entitled "The Future of Inter-Imperial Trade," do not make much play with it. They say candidly that there is a "deep difference of opinion in the industrial world as to the principle of Imperial Preference on the part of the Mother Country," and that the Federation cannot, in consequence of this deep difference, put forward a unanimous opinion on the subject. But the Federation does put forward the opinion that "in the long run the volume of trade must depend more upon economic factors and upon the law of supply and demand than upon any sentimental or racial affinity." Precisely so; we agree. The Governments and peoples of all countries, whether they be British Dominions or foreign States, grope in their blind human way after policies and practices best suited to their several conditions. Government, when all is said, is a game of trial and error. The Dominions have tried one policy—a very natural policy to men with immense undeveloped resources at their back—and think that it has paid them to do so. We, old in experience, tried much the same

policy as theirs for several centuries. During the past two generations, under conditions wholly different from those of new and undeveloped countries, we have tried a different policy. We think that it has paid us to do so. There the matter stands. It would be as irrational for us to change our policy to suit the views of the Dominions as it would be irrational for the Dominions to change their policy to suit our views. What is sauce for the sprightly young goslings may not be sauce for the sedate old goose.

THE MONETARY HALF-YEAR.

If happiness really consists in the absence of history, the London money market must have spent a most beatified half-year. There has been no change in Bank rate or in deposit rates, and the market has been in a state of somnolent stagnation during the greater part of the time, varied by intervals of very mild excitement on occasions when it was found that the margin between ease and poverty was still a very small one. The new feature introduced into the state of the money market since the war, which involves its dependence for anything like ease on the existence of a certain amount of credit created by the Bank of England, either for the Government or for members of the market, is still evident. As our readers will remember, that was by no means true for many years before the war, though at the time when Walter Bagehot wrote *Lombard Street* he was able to state that there is never quite enough money in Lombard Street to discount all the bills that come to market. The interesting revival of this feature, that has frequently been noted in our columns, since the war, is naturally a considerable source of strength in the hands of the Bank of England, increasing its power to control the market if at any time a return to the gold standard should make it desirable for the Bank to exercise this control.

It may, in fact, be said that the chief event in the market's history during the past half-year has been the negative one of almost complete absence of any considerable disturbance due to the large interest payments on War Loan on June 1st, involving a gross amount of over £50 millions, from which income-tax is, in some cases, deducted. Thanks to highly ingenious arrangements made by the Bank and the Treasury, this huge transfer, and the temporary credit that has to be created in order to carry it through, produced extraordinarily little effect. Expectations that extreme ease would be prevalent throughout the greater part of June owing to this disbursement were by no means borne out, and within a very short time after the payment had been made all advances from the Bank of England to the Government on Ways and Means had been liquidated, and the market was once more finding that there was a very small margin between

it and poverty. It was believed that some very heavy purchases of Treasury bills maturing in the first few days of June had been semi-officially made in the early weeks of the quarter. The effect of these purchases was that the market had practically received assistance from the Bank, without apparently borrowing from the Bank, and the repayment of the credit so granted thus counteracted the effect of the interest payment at the beginning of June.

A glance at the following table, showing the results of the tenders for Treasury bills and Treasury bonds which have been offered since the beginning of 1923 is evidence of the narrow fluctuations that have marked the course of the half-year. The average rate on Treasury bills rose to a shade over 2½ per cent. at the beginning of February, and declined early in April to almost as low as 1½ per cent., but the average rate on January 5th was 2½ per cent., and the average rate on June 29th showing very little variation between the beginning and end of the quarter:—

† 4½% Bonds.

While on the subject of Treasury bills it may be mentioned that there has been a small increase during the past quarter in the total of the floating debt. The fluctuation is so slight in the total amount that we have to wait for the final figure of the half-year before we can be sure what has really happened; but it may be noted that, largely owing to the payment on account of American debt, the excess of expenditure over revenue is considerably higher during the current financial year than was the case during the first quarter of 1922-23, and thus the almost continuous reduction in the volume of Treasury bills which has been the feature of our public finance since the end of 1919 may now perhaps be expected to slacken:—

Treasury Bills	719,040,000	616,045,000	609,540,000
	941,051,500	809,942,500	815,300,500

The following table shows the daily averages for discount rates and money rates during the first half of this year and the previous four years:—

DAILY AVERAGES for FIRST HALF-YEAR.

	1919.	1920.	1921.	1922.	1923.
Bank rate	£ s d	£ s d	£ s d	£ s d	£ s d
Market rate (3 months)	5 0 0	6 8 7	6 16 0	4 7 1	3 0 0
Margin	3 10 0	6 2 2	6 2 7	2 19 0	2 4 0
Short loans	1 10 0	0 6 5	0 13 5	1 8 1	0 16 0
Deposit rate (banks) ..	£ s d	£ s d	£ s d	£ s d	£ s d
Margin	3 4 7	4 16 0	5 7 2	2 18 0	1 10 1
	3 0 0	4 8 7	4 16 0	2 7 1	1 0 0
Margin	0 4 7	0 7 5	0 11 2	0 10 11	0 10 1

If history has been conspicuous by its absence in the London market, this has been by no means the case in foreign centres, where changes in Bank rates, both upward and downward, have been frequent, and in the case of Poland, Germany, and Hungary on a very large scale. The rise of 6 per cent. in the German Bank rate to 18 per cent. on April 23rd is only too violent a symptom of the demoralisation that has taken place in Continental currencies, chiefly owing to political considerations during the past half-year. It will be noted that in Prague two reductions have taken place, bringing the Czechoslovakian rate down from 7 to 4½ per cent. The Spanish rate has come down once by ½ per cent., and there have been three reductions in the Indian rate from 8 per cent. to 5 per cent., which followed an increase early in January from 7 to 8 per cent. Otherwise the movements have all been upward, the most important being one of ½ per cent. in the New York rate, which took place in the latter half of February, and caused some apprehension on this side, lest the authorities here, owing to the dislike which they are believed to feel for seeing England quoting lower rates for money than her creditor, the United States, might think it necessary to raise Bank rate here following New York's lead. In view of the great reduction that has taken place in the last three years in the outstanding volume of Treasury bills and the failure of commercial bills to fill the gap that has so been made in the supply of paper coming forward for discount in Lombard Street, the technical position of the money market would seem to indicate declining rates rather than advancing, apart from precautionary measures as suggested above; and possibly this is the cause which has, in spite of advances in other centres, left our Bank rate in a position of dignified stabilisation during the course of the half-year:—

CHANGES in OVERSEAS BANK RATES, 1923.

1923.	Jan.	Feb.	March	April	May	June
11 Indian Bank Rate	raised 1% to 8%					
13 Prague " "	reduced 2% to 5%					
14 Greek " "	raised 1% to 7½%					
18 German " "	" 2% to 12%					
22 Belgian " "	" 1% to 5½%					
10 Polish " "	" 5% to 12%					
21 United States Federal Reserve Rate	" 4% to 4½%					
23 Spanish Bank Rate	reduced 4% to 5%					
23 German " "	raised 6% to 18%					
25 Hungarian " "	" 4% to 12%					
1 Danish " "	" 1% to 6%					
1 Norwegian " "	" 1% to 6%					
1 Portuguese " "	" 1% to 8%					
26 Indian " "	reduced 1% to 7%					
28 Prague " "	" 4% to 4½%					
31 Indian " "	" 1% to 6%					
7 Indian " "	" 1% to 5%					
28 Indian " "	" 1% to 4%					

With regard to fluctuations in exchange, the figures given in the following table show a movement in the Berlin rate which would be appalling were it not that the experience of the last few years has proved that changes in the relative values of currencies such as ten years ago would have been thought to be incredible and impossible, can happen without altogether disorganising international trade:—

Centre.	Method of Quoting.	Par Level.	Rate, June 30, 1922.	Rate, Dec. 29, 1922.	Rate, June 29, 1923.
Paris	Francs to £1	25.22½	52.77.82	63.92½	75.25
Berlin	Marks to £1	20.43	1654.1658	34.500	730.000
Vienna	Kr. to £1	24.02	82000-85000	320.000	325.000
Amsterdam	Florin to £1	12.107	11.47.48	11.68½-69½	11.704.71
Copenhagen	Kroner to £1	18.159	20.57.60	22.48.53	25.95½
Rome	Lire to £1	25.22½	94.94½	91.92	103½-103½
Switzerland	Francs to £1	25.22½	25.26	24.47.51	25.96.89
Madrid	Pesetas to £1	25.22½	28.31.34	29.49.52	31.46½
Greece	Drachmas to £1	25.22½	152½	397½	150
Lisbon	Pence to escudo	53½	53½	28.2½	24.2½
New York	Dollars to £	4.86½	4.41.3½	4.63½-63½	4.58½-58½
Buenos Aires	Pence to dollars	47.58	44½	44½	41½-41½
Rio de Janeiro	Pence to dollars	18	51	44½	54½
Montevideo	Pence to dollars	13.33	43½	44½	42½-43
Valparaiso	Dollars to £	10 to 10 to gold sov.	35.00	35.20	34.60
Calcutta	Ster. to rupee	1/3½-1/4	1/3½-1/4	1/4½	1/4½
Hong Kong	Ster. to dollar	2/7½-1/2	2/7½-1/2	2/3	2/3½
Shanghai	Ster. to yen	24½	3/7½	3/10	3/11
Yokohama	Ster. to yen	24½	2/2½-1/2	2/1½	2/1½

The Paris and Italian rates also indicate severe depreciation, but otherwise, apart from a slight reaction in the value of sterling in New York and a considerable movement in our favour in the Swiss rate, the most notable movement was the improvement in the value of the Greek drachma.

OIL V.—THE OIL TRUST, AND THE "INDEPENDENTS."

THE saying of the woman of Canaan that "the dogs eat of the crumbs which fall from their master's table" aptly illustrates the domestic condition of the oil industry. Substitute for "dogs" the words "small Independents," and for "masters" the word "combines," not forgetting that dogs also snatch morsels from the masters' table when the masters are not looking, and you have a picture of life in the oil business which is true more or less the world over. In the United States the "masters" are the Standard Oil Companies, together with a few big "Independent" combinations, such as the Sinclair group, and the Royal Dutch-Shell subsidiaries. In Great Britain there is a triumvirate of masters—the subsidiaries of the Shell, Standard, and Anglo-Persian groups. To give an exact definition of "small Independents" is impossible, except in the negative sense that they are the companies of limited scope and small capital, in which the "combines" have no financial or other interest. Even so, it is not always easy to pick them out. Secret relations exist between some and the combines, and there are always rumours of impending control of the one by the other. But this "master and dog" relationship exists in fact, and is indicative of the peculiar economic conditions of the industry.

Both from an administrative and a financial point of view, the oil business lends itself to the formation of trusts or large combinations. Administratively, it embraces the four operations of production, transport, manufacture (refining), and distribution (wholesale and retail), each of which is independent of the usual agencies of production, transport, manufacture, and distribution employed in other industries. The crude oil is no sooner produced than it must be contained in a special kind of storage. It cannot be moved except in special conveyances—pipe-lines or tank-cars or tank-ships—which are useful for the carriage of no other form of merchandise. And it cannot be sold until it has been subjected to a special refining process, and has been handled through a highly specialised system of distribution. So the one activity leads on to the other—into complete administrative integration. And not only is it more efficient and economical to handle all these special operations under one roof or organisation, but it is from the financial standpoint much safer. The balance between oil supply and demand is so unstable that oil prices tend to be either soaring to the boom level or sinking to the slump level, but never remaining in between. To operate in any one branch of the industry independently of the others is thus to be exposed to chronic market catastrophes. Indeed, these price storms peculiar to an industry that cannot control its production, because of the element of chance in it, can only be safely weathered by the large combination which embraces the four operations of producing, transporting, refining and marketing. Nowhere is this more true than in Great Britain, where the three "combines" account for 90 per cent. of the business. Oil freights and prices sooner or later kill the "independent" who attempts to enter the British markets in force without owning production and transport. Let us examine the situation in the United States, which is perhaps more instructive, in some detail.

In 1911, as everyone knows, the Standard Oil Trust, which had early discovered the economic merits of an oil combination, was financially disintegrated by a judgment of the Supreme Court. The Standard Oil Company of New Jersey was thus forced to make a distribution of its holdings in 33 subsidiary companies, but still retained control of 29. What is more important, all the 62 or more continued to work in economic collusion, that is to say, they still trade with the same economic policy and transact business with each other in the same way as before the disintegration. The United States Fuel Administration reported in 1919: "After eight years the dissolution decree has been found neither to have destroyed nor to have lessened the influence of the so-called Standard Oil Companies in their respective territories. It

has simply proved that legislation cannot change the operation of economic laws." In other words, you cannot unscramble eggs.

Of the crude oil output in the United States, about 21.3 per cent. is produced by the nine Standard Oil producing companies, 38.1 per cent. by large independent companies (of over a million barrels annual output), and 40.6 per cent. by the smaller independent companies. Of the total crude oil refined, about 43.8 per cent. is handled by Standard Oil companies, 41.1 per cent. by the large independent companies, and 15.1 per cent. by the smaller.† Of the pipe lines, 69 per cent. is controlled by the Standard Oil companies, and nearly 30 per cent. by the big "Independents." It is not necessary to quote Senator La Follette's Sub-Committee of the Senate Manufactures Committee, whose recent investigation into the oil industry has been accused of bile and bias, to show that Standard Oil is supreme in the American markets. It was claimed by one witness before that Committee: "The Standard Oil purchasing agencies dominate the markets and fix the prices they will pay for crude oil, which are the basic prices for all sales of crude. In turn, different Standard Oil Companies.....fix the price of gasoline and kerosene all over the United States. Fixing prices to the producer and fixing the prices of the manufactured product, it cannot help following that Standard Oil is the dominant factor." More precisely, it is the 69 per cent. or more control of the common pipe-lines that gives Standard Oil its real strangle-hold of the smaller independent companies. Although Congress imposed on the pipe-line companies the obligation of common carriers, most of the oil produced is purchased by the pipe-line companies at the producers' tanks, or even at the wells. The small producer, without pipe-lines of his own to carry his crude oil to the markets, has to take the carrier's price.

It is interesting to find the Standard Oil Company (New Jersey), in the current issue of its journal, *The Lamp*, disclaiming any thought of domination. It argues that the oil industry is free, and that the most intense competition exists. As evidence, it points to the endless procession of new companies which have entered the oil business in the last ten years, financed chiefly by the sale of securities to the public. The total investment in the American oil industry has increased, it is said, in that period from \$27,000,000 to nearly \$8,000,000,000. This plausible argument needs some scrutiny.

It may first be remarked that the capitalised value of the American oil industry signifies very little on account of the large number of unsubstantial concerns that appear on record. The oil business unfortunately lends itself to unscrupulous stock promotions. At this moment, in two towns alone of Texas (Fort Worth and another), there are about 400 individuals indicted for fraudulent oil promotions. Does the Standard Oil figure make allowance for this element? An American economist (independent), taking 885 million dollars as a fair measure of the actual investment in the oil industry in 1913 which could be substantiated, and taking the growth in the value of the crude oil produced each year as an index of the increasing capital requirements, calculated that the tangible investment in oil in 1920 was about 6 billion dollars. But let us take, for the sake of argument, the Standard Oil figure of 8 billion dollars, and divide it into the four parts of production, refining, transportation (pipe-line and tankers), and marketing. If we apply the units of cost of capital investment per barrel produced or refined, arrived at by the Federal Trade Commission, to the crude oil output and refinery throughout in 1922, we arrive at the following:—

ESTIMATE of INVESTMENT in AMERICAN OIL INDUSTRY in 1922.		Millions of Dollars
Production	3,250	
Transport (a) Pipe lines.....	550	
(b) Tankers.....	300	
Refining	2,400	
Marketing	900	
Add investment of foreign holdings	600	
	8,000	

* In the United States any company that is not a Standard Oil company is called "Independent."

† Report of the Federal Trade Commission on the Pacific Coast Industry, 1921.

This calculation leads to interesting conclusions. In the sphere of production, in which more money can be sunk (and lost) than in any other branch of the oil industry, the Standard Oil has cunningly allowed "Independents" to enter and take about 80 per cent. of the business. Fools rush in where angels fear to tread. In refining, which calls for the next largest investment, Standard Oil has left 60 per cent. of the business to "Independents." But the significant fact emerges that in pipe-line transportation, which requires the smallest capital outlay of any of the domestic operations, and which is nevertheless the key to the whole business, Standard Oil has retained control of nearly 70 per cent. (Also, in tankers for foreign operations Standard Oil has by far the biggest fleet.) With what ingenuity has Standard Oil allowed the "Independents," or the public through the "Independents," to put up the money, while it retained for itself control of the markets and made the big profits! Mr Bedford, chairman of the board of the Standard Oil Company (New Jersey), practically gave himself away before the last meeting of the American Petroleum Institute when he said: "The various Standard Oil Companies could not have retained control of the 85 to 90 per cent. of the business which they collectively held in 1906 without maintaining prices at a level which would have prevented the accumulation and reinvestment of any surplus earnings whatever, and which would have called for the creation of billions of new capital—a manifestly impossible proposition." In this wise, while the "Independents" were calling for, and to a large extent losing, the savings of the public, this Standard Oil Company was able to amass such profits as to declare last year a stock dividend of 400 per cent. for each common stock outstanding. There seems to be a very definite relation between Standard Oil fortunes and "Independent" losses. Which is the economic expression of the "master and dog" relationship between the big combines and the little "Independents" in the oil industry.

THE HALF-YEAR'S NEW CAPITAL.

THE amount of new capital raised on the London market during the past six months is considerably less than the amount issued in the corresponding period of last year. Our figures, however, include British Government borrowings (with the exception of Treasury bills and Ways and Means Advances), and if these be eliminated the discrepancy is very much smaller. The total issued in the second quarter of the year was substantially larger than in the first three months, and without British Government issues the increase is over 75 per cent. This increase, however, is due almost entirely to colonial and foreign Government borrowings, and not to any appreciable expansion in money raised for industrial and other purposes, as may be seen from the table below:—

Description.	Total, First Half-year, 1922.	First Quarter, 1923.	Second Quarter, 1923.	Total, First Half-year, 1923.
British Government loans	304,258,900	43,775,200	19,951,800	63,727,000
Colonial Government loans	41,582,300	12,567,300	27,370,600	39,937,900
Foreign Government loans	13,066,600	5,594,000	19,967,900	25,561,900
British Municipal and County loans	5,565,300	nil	nil	nil
Colonial Corporations	2,889,100	1,495,500	1,761,700	3,257,200
Foreign Corporations	6,107,500	nil	nil	nil
Railways	2,872,000	nil	nil	nil
Colonial Railways	nil	1,199,700	nil	1,199,700
Foreign Railways	14,687,500	523,000	1,440,000	1,963,000
Australian mines	16,500	522,500	nil	522,500
South African mines	409,200	773,600	883,200	1,656,800
Other mines	1,131,000	130,000	648,000	778,000
Exploration, financial, and investment trusts	3,902,300	1,790,700	2,153,900	3,944,600
Breweries	784,000	3,480,000	495,000	3,975,000
Merchants, importers, &c.	100,000	nil	nil	nil
Manufacturing	5,690,000	1,719,000	4,916,000	6,635,000
Stores and trading	175,000	990,000	392,000	1,382,000
Estates and land	125,000	684,800	71,000	755,800
Rubber	120,700	1,593,900	447,100	2,041,000
Oil	16,490,000	3,562,500	669,200	4,231,700
Iron, steel, and engineering	5,385,000	1,793,200	5,117,500	6,910,700
Electric lighting and power	1,715,300	1,175,000	5,392,000	6,567,000
Tramways, omnibuses, &c.	490,000	nil	nil	nil

Banks and insurance	2,870,700	230,100	nil	230,100
Unallocated	3,893,600	1,980,500	2,848,000	4,828,500
Total	448,774,200	86,251,500	95,050,100	181,301,600

British Government borrowings in the half-year were little more than one-fifth of the total raised in the first half of last year, when Treasury bonds were being bought on a heavy scale. In the past half-year Treasury bonds have produced £55½ millions and National Savings Certificates £8 millions, but in each case the figures for the first quarter were much larger than those for the second, the totals for the latter being just over £17 millions and £2,850,000 respectively. The expansion in overseas Government borrowings as between the two quarters is accounted for by the Indian Government loan for £20 millions at 90, which produced £18 millions of money, by the Austrian loan for £14 millions at 80, which produced £11,200,000, and by the Dutch East Indies £6 million loan at 92, which produced £5,520,000. The Dutch East Indies Government was in the market with a £5 million loan in January, but the only other foreign Government loans during the past quarter were the Roumanian Government's issue of £1,620,000 in 4 per cents, at 67, to which was added the attraction of annual drawings at par, and the Argentine Government's issue of £2½ millions in 5 per cents, at 86½. In the Colonial Government category, New South Wales, Western Australia, and New Zealand have been the only borrowers in the London market in the past quarter, apart from the Indian Government. Without these home and overseas Government borrowings the amount raised in the London new capital market in the past three months was approximately £28 millions, as compared with £25 millions in the previous quarter. Two Indian and one Australian municipality were in the market, and the Central Argentine Railway issued £1½ millions in May in 5 per cent. ten-year notes. In the manufacturing group three textile concerns are responsible for the bulk of the total, namely, £3,973,000 out of £4,916,000. The Tokyo Electric 6 per cent. bonds are responsible for more than half the total under electric lighting and power, while an Indian company, the Andhra Valley Power Supply, accounts for a further £980,000. In the miscellaneous group, Horne Bros. and Boots Pure Drug Company were the principal borrowers.

A comparison of new capital applications quarter by quarter since the beginning of 1910 reads as follows:—

Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
1910.....	£ 99,355,600	£ 88,721,400	£ 28,111,600	£ 51,250,500	£ 267,439,100
1911.....	61,245,000	56,238,800	14,914,500	59,361,200	191,759,400
1912.....	47,966,100	62,377,500	48,687,100	59,819,300	218,850,000
1913.....	50,344,700	70,014,900	29,961,800	46,216,000	196,537,000
1914.....	97,610,200	54,739,100	20,265,200	339,908,100	512,522,600
1915.....	46,313,500	25,693,200	586,772,500	26,462,500	685,241,700
1916.....	156,251,200	131,022,500	111,578,000	186,584,700	585,436,400
1917.....	825,925,200	221,254,300	57,054,400	214,362,100	1,318,596,000
1918.....	475,258,700	220,921,500	329,674,000	367,527,200	1,393,381,400
1919.....	291,901,400	93,879,000	536,502,200	113,776,800	1,036,059,400
1920.....	135,094,500	98,011,700	61,195,600	73,247,800	367,549,600
1921.....	63,382,100	65,281,900	57,890,600	202,423,600	388,978,200
1922.....	286,207,100	162,567,100	61,920,200	62,981,200	573,675,600
1923.....	86,251,500	95,050,100	..	..	..

The amounts for the first two quarters of this year are above the averages for the years immediately preceding the outbreak of the war, but in those days the British Government's activities as a borrower in the open market were practically negligible. Moreover, the decline in purchasing power vitiates a direct comparison, and if allowance be made for this and for the British Government's presence in the new capital, it will be seen that the amounts raised this year compare unfavourably with those of the last pre-war years.

From the final table, however, which analyses the destination of new capital issued in London, it will be seen that the amount going overseas has expanded considerably in the last three years:—

	DESTINATION OF NEW CAPITAL.					
	First Half of Years.					
	1912.	1913.	1920.	1921.	1922.	1923.
United Kingdom—						
Government	£ nil	£ nil	£ 17,190,000	£ 20,067,000	£ 304,258,900	£ 63,727,000
Other	24,159,400	20,324,400	190,552,400	50,174,000	44,444,400	28,627,600
British Possessions—						
Government	5,422,900	14,324,300	7,970,000	27,609,600	41,582,300	39,937,900
Other	22,503,300	28,678,300	13,571,100	9,959,000	7,917,000	12,250,700
Foreign countries—						
Government	4,834,500	22,629,500	Nil	5,450,000	13,066,600	25,561,900
Other	53,417,500	34,403,100	3,822,700	15,314,900	37,905,000	11,196,500
Grand Total	110,343,600	120,359,600	233,106,200	128,574,500	448,774,200	181,301,600

The amount going to foreign countries has not yet reached pre-war dimensions, but capital raised for overseas dominions is substantially larger and shows a steady expansion over the past three years.

RATES ON FARMS.

(BY AN AGRICULTURAL CORRESPONDENT.)

THE claim of the "agricultural interest"—using the term in its customary but unwarrantable sense, as including only landowners and farmers—for relief from local taxation, has been more persistently and unanimously pressed than any other. The demand for Protection has been equally persistent, but it has long ceased to be equally unanimous. The more intelligent owners and occupiers have for a generation past recognised the futility of asking for Protection, even if they have not admitted its injuriousness. For at least half a century, however, the belief that agriculture is unfairly burdened by local rates has been universal among owners and occupiers of agricultural land. It is perhaps not surprising that the belief is not shared by other classes of ratepayers. The various measures which have from time to time been adopted, whereby differential treatment in the assessment for local rates has been given to the agricultural interest, have not been popular amongst those whose contributions to local taxation were consequentially increased. The principle of differential treatment is, however, of old standing. The Lighting and Watching Act, 1833, provided that owners and occupiers of houses, buildings, and property other than land should pay a rate three times greater than owners and occupiers of land, and under the Public Health Acts the general district rate levied in urban districts for sanitary purposes is charged in respect of tithes, agricultural land, canals, railways, &c., at one-fourth only of the valuation. The Agricultural Rates Act of 1896, which applied to those rates to which none of the previous abatements extended, provided that occupiers of agricultural land should pay one-half only of the rate payable in respect of buildings and other hereditaments.

The Departmental Committee on Local Taxation, whose report, published in the early part of 1914, contains a succinct and suggestive analytical summary of the whole question, stated the elements of the case clearly:—

Rates are the contributions made by the individual constituents of a local government community to the expenses incurred in co-operative action for common purposes. The amounts to be levied are arrived at by apportioning the net expenses incurred by the executive body among the ratepayers according to the values of their respective occupations of real property. These values, therefore, constitute the measure or gauge according to which they contribute, and the amount which each person has to pay is a proportion of the total amount to be raised. It follows that, with a given amount to be raised, if one man's assessment is lowered, the others remaining unaffected, the first has to pay less and every body else has to pay more, while if all assessments are raised or lowered in the same ratio the amount paid by each ratepayer will remain unchanged, though the poundage will be altered. That this method of raising contributions to local expenditure is not fairly applicable to certain cases has been recognised in Acts of Parliament, which have provided that in the case of contributions and expenditure for certain purposes, agricultural land and other property of a similar nature shall either be rated or assessed at a lower figure than house property.

In proceeding along the line of the differential treatment of agricultural land, therefore, the Government are following precedent. In other words, the Agricultural Rates Bill now before Parliament, which provides that for general rates agricultural land shall be charged at one-fourth instead of one-half the amount at which other property is rated, is strictly Conservative in its principle and method.

It is sometimes argued that taxes and rates are essentially the same, and differ only in the objects for which they are levied, and the methods by which they are collected. The argument is supported by the fact that taxes and rates are, in fact, levied to a considerable extent for the same objects. The complicated tangle of the local taxation accounts arises largely from the fact that many services of a national character, such as education, are locally administered. The charge would naturally fall entirely upon the Exchequer, but for the obvious objection that to entrust the control of expenditure to an authority which has no responsibility for finding any of the revenue is to offer an inducement to extravagance which would try too highly the financial probity of local authorities.

This confusion of national and local services obscures the fact that there is a real difference between national and local taxation. The fundamental principle which, after a long, and already half-forgotten, struggle is now firmly established as the basis of national taxation is that of ability to pay. The necessary cost of running the country as a civilised community falls upon its inhabitants collectively, each of whom shares, more or less equally, in the advantages of living under an ordered scheme of Government, and of receiving the protection of the State for his personal liberty and rights. His contribution to the cost of such advantages and protection bears no relation to the benefit which he individually receives. On the whole, the poor man may be said to benefit more directly than the millionaire, who can readily remove to another country if he is dissatisfied with his own. But any attempt to charge rich and poor equally would not only be impracticable, but is now universally acknowledged to be inequitable. Thus, giving full effect to the canon laid down by Adam Smith, the implications of which were but slowly accepted, our system of national taxation is based on a scheme of graduation devised to fit the burden, so far as reasonably possible, to the back. Local taxation, on the other hand, is mainly based on the principle that a particular community charges itself with the cost of certain advantages which are limited to its own area, and are in the nature of amenities, or even luxuries, not, in strict terms, essential to a civilised existence, but greatly ameliorating its conditions. The supply to every house of gas, electricity, or water, the arrangement of a system of sanitation, the scavenging of the roads and streets, &c., are objects for which it is equitable that the cost should be borne by those who receive the benefit, and not by those who are outside their range. Thus while ability

to pay is the fair basis for national taxes, benefit received is the fair basis for local rates.

It is on the principle of benefit received that the claim for differential treatment of agricultural land is mainly founded, and it is on a rough-and-ready application of this principle that the present proposal of the Government is based. As a general rule, farmers, being situated on the outskirts of the area charged, participate in a much less degree in the benefits accruing from local expenditure than those inhabitants who live nearer the centre.

This, however, is only a part of the case for the differential treatment of agricultural land. While it is true that the principle of benefit underlies the system of local taxation, it is also true that the famous Act of Elizabeth, which established the basis of assessment still in force, ostensibly adopted the principle of ability, and applied it on the assumption, at that time substantially true, that a man's visible possessions—in other words, land and houses—were a measure of his wealth. But it is fairly arguable that, whether designedly or not, this basis of assessment did distribute the charge approximately on the ground of benefit. All local improvements made at the cost of the community at large tended to increase the value of the land and houses within the area, and consequently were directly advantageous to the owners.

The fact that rates are paid, sooner or later, by owners of the property on which they are charged, cannot be seriously disputed. The main contention of all those who have so long demanded a readjustment of local taxation is that it is charged on one kind of property and not on another. This is an admission that it is a charge on property, and, consequently, on property-owners. There has been, however, in all discussion of the subject a tendency to argue as though taxes or rates were paid by things, whereas, of course, they are paid by persons. One reason why it is possible to dispute about the ultimate incidence of rates is that they are actually paid by the occupiers, and not by the owners of the property on which they are charged. That being so, and property being held on all sorts and conditions of tenure, the extent to which the occupier is, in fact, able to recover from the owner rates paid by him is complicated by many and varying factors. In other words, friction is introduced in the working of an economic law, and the result, in any given case, frequently differs from the logical conclusion.

On the assumption that land and houses are a measure of income the owners and occupiers of shops or factories are not convinced that the business of farming should be treated more favourably than any other business. A farm, it is urged, is in the same position as a factory—premises necessary to, and occupied for, business purposes. Why should the rateable value of the one not be as good a measure of ability to pay as that of the other? In both cases it may be bad measure, but why is it not an equal one? This is a fair question, and one which agriculturists seldom attempt to face. They frequently compare the position of a professional man rated, say, at £50, with that of a farmer rated, say, at £250, but they do not face the position of the factory-owner, or the shopkeeper who is charged on a rateable value which may be relatively as high—in relation to income—as that of the farm.

In moving the second reading of the Agricultural Rates Bill, Mr. Neville Chamberlain touched this point without elaborating it. The case for the farmer is that he pays full rates on his house and buildings, and that the latter represent his business premises. The land is an extension of his business premises, and an essential part of them, spread over a wide area, and its value for productive purposes is very small in proportion to any corresponding extension of a factory or shop.

It is evident that an attempt, however well-meant, to arrive at an equitable adjustment of the present system is likely to create as many anomalies as it removes. The conclusion is that the system itself needs revision from the root. In moving the rejection of the Government Bill, Mr. MacLaren appears to have claimed for the Labour party the construction of an alternative policy in the rating and taxation of the value of land, which involves the exemption from rates or buildings and improvements. Like many of the other items in the programme of the Labour party, which are in any way practicable, this proposal is

appropriated from the policy of the Liberal party as defined before the War. Here it must suffice to say that among the consequences which would follow from the adoption of the principle of taking land values as the basis of assessment to rates would be a substantial advantage to the owners and occupiers of land used and suitable only for farming.

THE FAILURE OF STATE-OWNED SHIPPING.

(BY A CORRESPONDENT.)

As anticipated, the reported offer of a billion dollars for the American State-owned merchant fleet has turned out to be no more than a sorry jest, and Mr. Lasker in resigning his position as chairman of the U.S. Shipping Board has had to admit that it is impossible to sell the major part of the Government-owned tonnage into private ownership; therefore he recommends that the best of the vessels should be worked by the State and that the remainder should be sold or scrapped. In June, 1914, the United States owned 3,174 vessels, with a gross tonnage of 5,368,194 tons. Of this quantity less than three million gross tons were sea-going vessels; thus the mercantile fleet owned by the United States was of no great importance compared with the 11,328 vessels aggregating over 21 million gross tons owned by the British Empire. The war, of course, brought about certain changes, and under great pressure the war-built merchant fleet came into existence. On June 30, 1922, the United States could boast of a mercantile fleet of 5,480 ships, with a gross tonnage of no less than 17,062,460 tons. Thus while the merchant tonnage owned by the British Empire increased during the eight years from June 30, 1914, to June 30, 1922, only by 997,471 tons, the shipping registered in the United States increased by no less than 11,694,266 gross tons to 17,062,460 gross tons, the American mercantile fleet having more than trebled itself during the period mentioned. Yet, notwithstanding this fact, the United States paid away last year millions of dollars in freight money to foreign shipping, and tonnage owned within the British Empire secured fully one-third of this big sum. The losses made by the United States State-owned mercantile shipping have been enormous, and even now it is impossible to say with any degree of correctness what sum has been taken from the pocket of the American taxpayers by this attempt to carry out a large State enterprise in the face of all economic laws. To begin with, the shipping cost a huge amount of money to build, capital being laid out without any regard to economy; then the management was in the hands of a Shipping Board which was constantly changing its personnel, and it is an astounding fact that very few of the many names that have been connected with this ill-starred State adventure during the last few years have had any practical experience of shipping. Seeing that the management of shipping on a large scale is one of the most difficult industries in the world to carry out successfully, this is a very astounding thing, but it would perhaps be unwise to attribute the failure of American shipping to this cause alone, although no doubt the methods employed have done much to increase the losses.

Quite recently an attempt was made to bolster up the shipping scheme by means of a subsidy from the State for ten years, but this was defeated. Then the mercantile fleet was offered for sale, but out of 20 offers received by the U.S. Shipping Board, only four or five, as our New York correspondent pointed out, were worthy of serious consideration. The majority of the bids received were full of reservations and conditions which made their acceptance impossible; thus the position is almost as it was before. Mr. Lasker, the retiring chairman, has admitted that it has been impossible to attract private capital to the shipping, and not even patriotism, or the desire to own a powerful mercantile marine as an aid to the navy in time of war, has had the slightest influence on the decision of the business men of the United States. Mr. Lasker has thus to fall back on a suggestion that has been often before the Board—viz., that the Government shall form a number of subsidiary shipping

companies to take over the existing shipping services and allow them to work the vessels on time-charter basis, or what is known as the "bare boat" system. The only alternative to this is for the Government authorities to make another effort to work the steamship lines themselves, and, in view of the succession of failures that have accompanied former attempts in this direction, there is very little enthusiasm for this plan. The best idea is that the fleet should be carefully sorted over and a large number of vessels scrapped. It is estimated that fully 40 per cent. of the war-built ships are worthless from a freight-earning point of view, and seeing that most of them have been idle for a lengthy period, it certainly would not pay to recondition them, even if the world's shipping position improved considerably during the next year or two. The retiring chairman has admitted that the very existence of this huge amount of merchant shipping has a very depressing influence upon the merchant marines of the world, and most shipping people will agree with him. Further, it may be stated that the United States suffers, and is likely to suffer, the most by keeping 17 million gross tons of shipping afloat when her needs could be adequately covered by less than half that amount. The ships built between 1917 and 1919 should be regarded as a war charge, and every one that is unfit for service should be ruthlessly scrapped.

The American desire for a big merchant fleet, one that would show the Stars and Stripes in every port throughout the world, was only natural, but the United States now realises that she is not destined to take first place among the shipping Powers of the world. The British merchant fleet, as far as tonnage is concerned, is now less than a million tons larger than it was when war broke out in 1914; but it is very efficient, and its distribution over the world is designed to make it earn the largest amount of freight money possible in these difficult times. Great Britain is a coal-producing country with vast foreign markets, and this gives the British mercantile marine a great advantage over every other merchant fleet. Ships working from British ports can usually start with a cargo of coal, and as a rule they can arrive at a homeward loading port with something in hand. The long connections enjoyed by British coal exporters and shipowners are extremely valuable, and such connections could not possibly be made by a Government department. British shipowners and merchants all over the world work hand in hand, and they have behind them powerful banking and financial interests. Most orders for steamer space come on to the London market, and British shipowners always know where cargoes are to be found, this information coming through their agents abroad. The coaling stations scattered about the earth are mostly under British control, and most of the shipbroking and marine insurance business comes through British hands. The merchant tonnage of the world now amounts to about 65 million gross tons. There is work for about 50 million tons, or possibly less than that, and while the outlook for merchant shipping is improving, there will be a shortage of cargoes for a long time to come. Hampered by red tape and inexperience, the United States merchant shipping scheme has failed just as the Canadian and Australian and other Government-owned shipping schemes have failed. India, Russia, and Ireland at the present time are the only countries wishful of establishing State-owned shipping enterprises, and these countries do not represent the last word in industrial progress. The shipping trade more than any other owes everything to personal enterprise and initiative, and there is no room for bureaucratic methods and State-made rules. The British merchant marine will continue to maintain its premier place, because it is owned and run by private capital free from Government interference. Thus, although times are very bad, and cargoes are difficult to find, the tendency in this country is to look ahead and make ready for the future. At the Baltic recently six steamers changed hands for over £200,000, and the Loans Guarantee Advisory Committee have recommended that a sum not exceeding £2,300,000 shall be guaranteed for new ships for the Royal Mail Steam Packet Company. The leading British shipping companies are, on the whole, in a very strong position, with their tonnage written down to quite a reasonable

figure, and certainly the failure of the American selling scheme has strengthened their position. If a large number of the American war-built vessels were scrapped the world's shipping position would be greatly improved, and no merchant marine would feel the benefit of the long-looked for improvement in trade that is expected when the Reparations question is settled more than Great Britain's. This month orders have been placed by some of the leading British shipping companies for several new cargo steamers to be built. These vessels will be about 8,000 tons, and the contract price runs about £9 to £9 5s per ton. In view of the fact that besides the large amount of tonnage offered for sale by the U.S. Shipping Board the Canadian Government has decided to sell off 27 steamers with a deadweight capacity of over 100,000 tons early in August, this is a very encouraging feature, as it shows that shipowners on this side have every faith in the future of their industry.

ARGENTINE INVESTMENTS AND SPECULATIONS.

THROUGHOUT all the ups and downs which foreign Government bonds have undergone of recent months, those of the Argentine Republic have presented a comparatively unmoved front. Prices have advanced in sympathy with investment securities, but without dramatic fluctuation, without any trace of excitement in the market. To-day the external and the soundest issues stand at levels which give the purchasers a yield of about 5 per cent. on the money invested. Prices of the various bonds, which are subject to current annual drawings, range from 96 to 101; the 4½ per cent. sterling conversion and the 4½ per cent. internal gold loans are quoted at 92. The 4 per cent. railway guarantees rescissions are 77. Most of the internal bonds command lower prices, and afford a correspondingly higher return, but the best-trusted loans (with drawings) of the Republic are priced, broadly speaking, upon a 5 per cent. platform, and enjoy a measure of investment support which deserves to be noted by those people to whom 5 per cent. from a good bond, free of stamp duty, makes appeal. The latest issued Argentine 5 per cent. Port of the Capital came out at 86½, and is now 87½.

It is in the Argentine railway market where speculative investment has done so well during the past year. Although the ordinary stocks have receded from their recent highest prices, the gains of the principal stocks are worth setting out. They illustrate the fact, almost as frequently iterated as ignored, that speculation can pay handsomely when the buyer selects stocks in companies of sound character, not likely to be more than temporarily laid low by circumstances and able to face lean periods without feeling undue strain. But speculation itches for its stocks to rise within a week or, at most, within the period covered by a Stock Exchange fortnightly settlement. Therefore, the Argentine railway market was left to its own thick-and-thin supporters, nor was it until a substantial advance had taken place in its stocks that general public attention sensed the market. The course of a year's prices can be seen from this table:—

	1922.		1923.	
	July 1.	Sept. 29.	Jan. 2.	Now.
Argentine Great Western	65	67	81	80
B.A. and Pacific	51	55	83	84½
B.A. Western	75	67½	81	83
B.A. Great Southern	77	75	85	87
Central Argentine	67½	64	76	74½

Dividends on these ordinary stocks are subject to fairly sharp fluctuation, and it would serve no good purpose to set out past records. Traffic returns are the pivots of market interest, and even these are affected, sometimes more and sometimes less, by the variations in the Argentine rate of exchange. This, of late, has been moving against the railway companies, but the market view, which is generally a fairly correct guide in this department, looks for 7 per cent. this year upon the middle three stocks in the above table, 6 per cent. upon Central Argentine, and a possible 6½ per cent. upon Argentine Great Western. That the public regard these estimates

as leaning to the side of optimism, the prices of the stocks show, for 7 per cent. at 81½ would give a yield of 8½ per cent. on the money. Prior charge securities of these companies are regarded as excellent investments, and from the first debenture stocks not much above 5 per cent. on the money can be secured.

Lively interest arose not long ago over the discovery of petroliferous indications in the Argentine. The mere prospect of the railway companies being able to draw supplies of liquid fuel from the country itself was sufficient to influence the prices of the stocks. So far, however, the oil industry has not made good, though its exploitation is being carried on by several companies. Pastoral activities are, of course, a long-established feature in the Republic. The Argentine Southern Land Company pays 5 per cent. on its £1 shares, which are quoted at 20s, and Argentine Land and Investments of £1 each stand at 30s, ex a recent dividend of 6d per share. The Argentine Eastern and the Argentine Northern Land Companies have proved disappointing hitherto, and the £1 shares last changed hands around 4s and 7s 6d respectively, while the 7 per cent. preferred ordinary shares of Argentine Estates of Bovril, which have gone nearly three years without a dividend, are about 8s 6d.

Of the utility companies, the Anglo-Argentine Tramways is one of the best known. The company appeared to have turned the corner of its bad luck; it paid off all the dividend arrears which had accrued on the first preference shares, and most of the back dividends on the seconds. Lately, however, friction developed between the Municipality of Buenos Ayres and the company over a question of fares, and complete agreement between the two parties has not yet been reached. Of the other industrial concerns, the Argentine Iron and Steel Company has passed through a barren patch since 1920, and the £1 6 per cent. preference are down to 2s 9d. Argentine Navigation 6 per cent. cumulative and participating shares carry 2½ years' arrears of dividend; the price is 11s 6d, and the ordinary shares stand at 7s, the latter having received no dividend since 1913.

The foregoing are, of course, but a very few of the many companies financed with British capital which function in the Argentine. What handicaps most of the undertakings is the high cost of materials. The once recurrent locust plague has been brought down to minor proportions through the agency of science, but science cannot control weather vagaries, and these in a pastoral country are the vital factor in conditions year by year. Enlightened government has eradicated the once martial spirit which led the Argentine into continual strife with Chile, with the result, as already demonstrated, that the British investor readily places his money in Argentine Government bonds. The speculative investor finds ample scope for his predilections in the railway stocks. And the industrial companies, like those in other parts of the world, are expected to revive their prosperity when "things have settled down" more peaceably all round.

Notes of the Week.

The Dry Ship Controversy.—The debate in the House of Lords on the United States' action towards liquor on foreign ships entering American waters was conducted on a high level of restraint. But while it avoided, we believe, any word or phrase that could wound American susceptibilities, it revealed a position which, to quote Lord Curzon, is "undoubtedly disagreeable, and ought not to be allowed to continue." The strict legality of the American action of seizing liquor on British ships entering New York harbour was admitted by Lord Curzon, and not disputed by Lord Birkenhead. As the Foreign Minister remarked, the present difficulty is one that is not to be resolved by an appeal to law, but by "tactics of diplomacy." The debate made very clear what is apparently insufficiently realised, that the main motive underlying the recent American action is to evolve a policy that will effectually check the very considerable contraband trade which has sprung up, almost inevitably, since Prohibition was introduced across the Atlantic. With that desire the British Government should, and does, sympathise. But, on the other hand,

the British Government cannot possibly ignore (and has not ignored) the serious embarrassments suffered by British trans-Atlantic shipping. The essence of the position is this. The United States Government is not going outside international law, but it is going beyond the limits usually prescribed in international practice, which customarily employs a wide discretion as regards difficult and delicate cases. Shipping is a case in point. A ship, as Lord Curzon said, "is a travelling unit which passes from one State to another, and therefore cannot escape the necessity of complying with other legal systems which may not be in every respect consistent with the law of the particular country which it is happening to visit at the moment. It is also universally recognised that a ship stands in a particular class of relationship to the State whose flag she flies, and that on many matters it is to the general convenience that Governments should recognise the law of the flag State as paramount." This may be slightly overstating the case, but at least international practice and commonsense both support Lord Curzon's plea that matters of this kind "should be regulated in rather a wide spirit." Here is a matter surely that with good will is capable of friendly settlement by a little give and take. The British Government is ready to assist, so far as it can, and the British shipping authorities will doubtless be ready to co-operate, in stopping the smuggling of which the United States complains. On their part, the United States Government could surely devise methods of effecting their purpose which are less drastic and irritating than the present. Certainly the first proposal of Washington for the extension of the right of search to the twelve-mile limit is one that is unacceptable to this country, and was rightly rejected. But there are others, and diplomacy will prove itself to be a poor thing if it cannot find a quick way out of a controversy which, if allowed to continue, will act as an increasingly serious irritant of Anglo-American relations. After agreeing on the huge and complicated debt question, it would be an unthinkable absurdity to quarrel over one of those minor questions which are essentially soluble by the amenities of international practice.

Conditions in Ireland.—Our Dublin correspondent writes:—Recent weeks have witnessed steady and substantial progress in the Government's programme of legislative, administrative, and executive action. Order has been restored—temporarily at least. The gun, the bomb, and the torch of the guerilla irregulars are no more seen. Mr de Valera having failed to exact for himself the status of a negotiating belligerent has, in fact, made peace by an unavowed submission. Everyone knows that the fighting is finished, and will remain finished so long as the Government and the Irish people behind it insist on its remaining finished. The activity of the wholesale houses and the filling up of stocks by the country retailers in themselves are enough to show that, whatever the phrasemongering malcontents may say, the community realises that it is getting back to business. In the meantime, Mr de Valera and his faction screen their activities behind a small band of feminist agitators whose immunity hitherto has rested upon Government disdain. The new tactics to be adopted after a breathing space are known, it is said, to include strikes and sabotage and co-operation, whether avowed or not, with Mr James Larkin fresh from incarceration in America on the charge of criminal anarchy. Abundant funds are available. In all this there is desecrated by competent observers the promptings and the pecuniary assistance of propagandist agents of militant Communism from the Continent of Europe. It may be a stroke of luck for Ireland that matters should shape thus. In no country in the world is revolutionary Communism more certain to fail than in Ireland, with its great preponderance of peasant proprietors and its Catholicism. In addition, Mr Larkin is at open war with all the other Labour leaders who have controlled the machine for the last eight years. All over the country the farmers are organising for the protection of their own interests by political action, and their weight will be felt when the General Election comes. Some such stimulus was required to render them active in the discharge of the obligations of their citizenship. The Com-

munist-Republican concert has thus generated the antidote to its own poison. Rumours have been current both as to the date of the General Election and as to a National Loan. The subjects are closely connected. The Government, of course, needs money, and while on the one hand it needs time to complete its legislative programme, there has been hesitation to embark on a National borrowing on the eve of an important General Election. It has been ascertained that, while the new Register is complete, the further arrangements for an election could not be ready before the end of July, and—August being the month for holidays—there could scarcely be an election before September. Again, it is said that the banks have agreed to finance the Government by a temporary loan until after the Election, and, if this be so, there is no reason why the legislative programme should not be completed. But, of course, the banks may have sought assurances as to an early election. In the circumstances, there are many who urge strongly that a moderate issue of premium bonds would have been (and would be) a wise and courageous step. Dublin opinion in all circles is confident that such an issue would produce more favourable results than any other form of borrowing. It is perhaps necessary for general readers of the *Economist* to contradict a rumour current in certain of the daily papers that the visit of the Governor-General of the Irish Free State to London and the Colonial Office means that he is the bearer of a request for financial assistance from the British Government. The Irish Government, rightly or wrongly, does not desire such assistance, and purposes to raise its money otherwise. There is already a sufficiency of money on offer from more than one source, and the only question is that of terms.

The Labour Party Conference.—Mr Sidney Webb in his address as chairman of the twenty-third annual conference of the Labour party, described it as on the threshold of power, and stated that, if the statistical curve recording its previous advance proved reliable, it should be in an absolute majority by 1926. Ten years ago, writes a Labour correspondent, when the conference last met in London, it represented an electorate of under half a million; to-day it has four and a quarter million votes behind it, and an organisation in all but six of the 603 constituencies in Great Britain. Mr Webb, who proved an efficient chairman, stated very clearly his own view, which is that of 90 per cent. of the party, that it was only by the consent and the intelligent co-operation of a majority of the electorate that the social transformation for which they stood could be effective; the tactic of violence was twice cursed. Mr Frank Hodges, later in the proceedings, stressed this view, and the renewed rejection by a majority of practically eight to one (2,880,000 to 366,000) of the Communist application for affiliation, like the support of the refusal of the Parliamentary party to send its whips to Mr Newbold, showed that it is fully endorsed by the rank and file of organised labour. The conference, on the whole, has been occupied with political rather than with industrial issues. In this respect, too, it reflects faithfully enough the attitude of its members; their hopes are set mainly on political action. It has been a quiet, uneventful conference, on the whole; except for the breezes which swept across it on Thursday, the afterblast of the scene in the House of Commons on the preceding night, there was little or no excitement; and on that point an overwhelming majority was behind the leader of the party. He secured a hearing for Mr Maxton, who himself endorsed Mr MacDonald's request to the conference to leave the question of discipline in the hands of the Parliamentary party, which meets next week. It may perhaps succeed in convincing the scene-makers that their uncontrolled individualism is out of place in a party whose watchword is co-operation. The emergency resolution, condemning the increase in the Air Force, was passed with enthusiasm. The best speech of the conference, and the one which held it most strongly, was that of Mr Ramsay

MacDonald, who moved the executive's resolution on foreign policy. On each occasion his intervention in debate afforded a demonstration of his hold over the party.

The Outlook in Mexico.—A correspondent writes:—In his interesting articles in the *Morning Post* last week, Sir Basil Thomson states that "those who know Mexico best are full of pessimism"; but he mentions several features in the situation which suggest a more hopeful view. The people, as has long been evident, are eager for peace; there is a marked growth of purely political activity, as is shown by the formation of a "Fascist" party (too weak), however, for Fascist methods, and the development of nationalist feeling; there is a large supply of docile labour, and striking instances are recorded of faithfulness to their duty on the part of railway and postal employees; and the mestizo population of Mexico is decidedly superior to the Cuban mulatto. The growth of labour unrest and agitation is disquieting, and the distribution of land is attended with irregularities and disorder; but the Government, while dealing sternly with foreign agitators, is led to make light of the native agitation by its Radical sympathies and by electoral considerations, and some of the State Governors are even more tolerant. He apparently expects that the election next year will result in a reversion to the old type of adventurer-President, whether General Elias Calles or some as yet unknown rival, supported by military force; but it may fairly be expected that this development will be impeded by the counteracting influences above mentioned, and by the distribution of land to the peons. The speech of the chairman of the Mexican Railway at the meeting on Wednesday was avowedly optimistic. Labour unrest, he stated, is the chief difficulty; the company is forced to employ an excessive number of men at extravagant wages by the action of the Government managers of the National railways; but this would be stopped by the return of the National system to its owners. Were outside support assured to the Government, he believes that it would deal fairly with foreign enterprise; as things are, it has to seek support by giving way to the demands of labour, and to pass over much that it would not otherwise tolerate. The difficulty, therefore, would be cured by the recognition by the United States of President Obregon's Government. We note that in the New York Press the negotiations are said to be impeded by the difficulty of finding a mode of protecting the rights of foreign capitalists without discriminating unfairly against native owners. But this problem can hardly be insoluble.

Canadian Government's Railway Policy.—Our Ottawa correspondent writes:—The reply of the King Government to the appeal of the Grand Trunk shareholders apparently has caused great disappointment and not a little irritation in Britain, but it would be a mistake to assume that it does not meet with widespread approval in Canada. The general feeling is that the unfortunate Grand Trunk shareholders have still a wholly inadequate idea of the condition to which the late management had reduced their property, or they would divert their wrath to other targets than the Canadian Government. As the report of Messrs Bell, Ruel, and Yates shows, Mr Justice Taft's estimates about the probable prosperity of the Grand Trunk are still far from fulfilment. Since the beginning of the present year there has been a very sub-

tantial advance in the gross traffic returns of the Canadian National system, but operating expenses have been very high, and the *Financial Post*, of Toronto, maintains that the rate of deficit so far is greater than last year. However, Sir H. Thornton is not dismayed, and is pursuing an aggressive policy. He has laid before Parliament an extensive programme of construction of new ranch lines which will entail an addition of at least 27 million dollars to the system's capital charges. He has also financed the purchase of the Hotel Scribe in Paris as a headquarters for the C.N.R. on the Continent of Europe. Mr Meighen and his followers severely criticised his transaction in Parliament, and the Minister of Railways expressed the opinion that other methods ought to have been pursued in connection with it. Apparently the hotel, which was bought by Mr Aaronvici, now European manager of the C.N.R., is to be taken over by a New York syndicate, and the railway will lease part of it. The Government took the view that they must allow Sir H. Thornton the same latitude as is accorded to the president of the C.P.R. Admiral Harrison-Smith and Mr G. Forsdike have recently been in Ottawa to lay before the Government the claims of the G.T.P. debenture-holders, whose bond interest, guaranteed by the Grand Trunk, has not been paid. They have interviewed a committee of the Cabinet, and were promised sympathetic consideration for their case, but the Ministry's decision will not likely be published till the session ends.

The Greek External Debt.—The preliminary statement issued by the Greek Debt Commission of the results for 1922, and summarised in our columns on March 17th, showed that the total revenues under its administration amounted last year to 462,544,543 drachmæ, an increase over 1921 of 203,349,266 drachmæ, and that the interest on the old Gold Loans would be maintained at the same rate as last year, and on some of them slightly increased. The full report, distributed this week, shows that Customs revenue formed 270,292,334 drachmæ of the total. The yield of the Piræus Customs almost doubled, that of Salonica and the other five ports whose revenues the Commission controls more than doubled; but this was due to the increase of certain duties, and still more to the higher rate fixed for conversion of the paper drachma into gold, this rate having been increased during the year by several stages from 2.50 to 1 at the beginning to 10 to 1 at the close. At the Piræus the volume of imports of most commodities was reduced, wheat and flour being the chief exceptions, but this is ascribed to the adverse movement in exchange. Sterling exchange in January was 97 drachmæ to the pound; in December 245. This fall also prevented the bondholders from benefiting by the increased revenue; the benefit which reached them was caused by the payment by the Greek Government of 4,000,000 drachmæ as compensation for the depreciation of the currency consequent on the issue in 1921 and 1922 of additional notes without communicating with the Commission, and, as the irregularity was repeated thrice last year, the Commission apprehends further difficulties in the future. On the other hand, the total of the "plus values" increased; the increased prices of salt, tobacco, petroleum, cigarette paper, and matches have not reduced the consumption, nor, apparently, has the total volume of imports fallen below that of 1921. The Greek people, therefore, is bearing up against its disasters. The Report mentions that the improvements projected in the management of the Piræus Customs have not yet been effected; the Commission has endeavoured to eliminate the middlemen and speculators from the Naxos emery trade, and to improve the communications between the mines and the ports of the island. The output in 1922 was only 6,330 tons, as against 12,709 tons in 1921, owing to a strike of the workmen undertaken in order to force the Government to effect the improvements in question. Nearly half the output went to Great Britain, and more than half of the remainder to France.

Cotton Trade Short Time.—Our Manchester correspondent writes:—At the beginning of this week the general committee of the Federation of Master Cotton Spinners'

Associations in Manchester considered once again the state of trade in view of the continued depression. Since the beginning of March all the mills in the American spinning section, that is to say, 40,000,000 spindles out of the 56,000,000 in Lancashire, have only worked half-time, on the recommendation of the Masters' Federation. It has recently been suggested that, owing to spinners not having experienced any relief, the curtailment of production should be increased, and in some directions it has been proposed that all the mills should close down for a month. After a full discussion, however, the committee has decided to recommend all the members using American cotton to continue the 50 per cent. restriction of yarn output during July and August, exclusive of the holidays. It is possible, therefore, that tens of thousands of operatives during the next two months will only work three weeks. It is quite impossible at the present time to increase yarn production, as larger supplies are not wanted by users. Spinners of yarn cannot improve their position until more looms are running in North and North-East Lancashire, and manufacturers of cloth are finding it very difficult to secure fresh contracts at present prices. The problem for Lancashire is how to get over the difficulty of manufactured articles being two and a-half to three times dearer than in 1914, and dispose of large quantities to the natives of India and China, whose earnings are little, if any, higher than in pre-war days. A solution of this problem can only be found by cheaper raw material, but there are few indications at the moment of any marked fall in the price of cotton.

The South African Reserve Bank.—Our Johannesburg correspondent writes:—The annual meeting of the South African Reserve Bank is convened for June 20. The net profits for the financial year amount to £105,631. For the half-years ending September 30th and March 31st dividends at the rate of 6 per cent. per annum have been declared, absorbing £60,000. Of the balance of £45,631, it is recommended that £5,000 be appropriated to the pension fund, £2,000 to the widows' fund, and £1,000 to the staff guarantee fund. The Currency and Banking Act, 1920, requires that any surplus profits shall, under existing conditions, be placed in a special fund for strengthening the gold reserve of the bank, and the balance of £37,631 will be treated accordingly. Mr Samuel Evans, at the Crown Mines annual meeting, expressed the belief that "a considerable portion of the profit which the Reserve Bank is now making out of paper currency would disappear if gold came into circulation again, and also that the other banks can make a much larger profit out of exchange transactions when the gold standard is not in operation." He further pointed out that the bankers were entirely responsible for the Currency and Banking Act Amendment Bill; the Minister of Finance, in the course of the discussion in the House of Assembly, said, "The whole of the Bill is the product of consideration and resolutions taken by the board of the Reserve Bank, without the faintest intimation by Government on any one of these matters. The resolutions submitted to the Government and put into the Bill were resolutions which emanated solely and entirely from the board of directors of the Reserve Bank." As at June 2nd, the ratio of the Reserve Bank's cash reserve to liabilities to public was 69.1 per cent. Notes in circulation figure at £9,931,370, bankers' deposits £5,598,027; on the assets side, gold certificates, £10,089,285; bills discounted, domestic, £2,104,943; foreign, £749,883; loans and advances to Government, £2,000,000; and to others, £1,000,000.

Spain in 1922.—Last year, according to the report of the Commercial Secretary to the British Embassy at Madrid, just issued by the Overseas Trade Department, the foreign trade of Spain was greatly interfered with by tariff revision and its consequences; the harvest was deficient, owing to drought and locusts; there was again a Budget deficit and the floating debt showed a large increase. But for 1923 the outlook was more promising: foreign trade was recovering after the tariff settlements, labour agitation was less active, revenue was likely to increase, and expenditure would fall through the substitution of civil for military rule in Morocco. For 1921-22 the

final Budget deficit was 1,101 million pesetas, 41 millions above the original estimate; for 1922-23 the initial deficit was estimated at 427 million pesetas, but 52 million pesetas of revenue was to come from "Treasury means"—presumably loans. No new taxation was imposed, but revenue would increase from Customs, the tobacco monopoly, and the lotteries, which last had been stimulated by the trade depression. The floating debt rose from 2,700 to 3,077 million pesetas; a funding scheme was barred by the high rate of interest necessary to induce conversion. State and private banking was very prosperous; foreign banks and companies were being eliminated by differential taxation, but a separate agreement covering British establishments was in preparation. Foreign trade suffered through the uncertainty set up by tariff revision and the seven months' tariff war with France; but the three-year commercial treaty with Great Britain (achieved after much difficulty), and the one-year agreements with France, Switzerland, and Norway, promise improvement for a time. Very full particulars of imports are given—official, but unpublished elsewhere—and important suggestions are made for the pushing of British goods, for which the country districts afford promising markets, which must be opened up by personal effort and careful selection of travellers and agents. The intricate Customs regulations are full of pitfalls, liberal credit must be given, and advice should be sought as to the most suitable seaports. The railway problems are still unsettled, but the traffic improved; two of the new Transpyrenean lines, the Canfranc and the Ripoli-Puigcerda, are complete on the Spanish side, the Lerida-St Giron line well advanced; the underground railways in Madrid and Barcelona and interurban transport by tram and motor are developing, and the direct Madrid-Valencia project is said to have been taken up by British and American capitalists. Roads will not improve generally until the two-wheeled bullock cart disappears. Large sums—this year 103 million pesetas—are being spent on public works, chiefly at the ports, and shipping is recovering, at least at Bilbao. Hydro-electric power at present yields about 800,000 h.p.—one-tenth of the total potential amount; but dry years, of which 1922 was one, have to be faced, and coal was too dear to be used to supply the deficiency. In Alicante 99,000 acres are being brought into cultivation by a combined power and irrigation scheme. Interesting particulars are given of social and labour conditions; the standard of life has risen, but the cost of living has not declined. The Report should be of high value to British exporters, and is full of interest to students of Spanish economic life.

New Zealand Industries.—A New Zealand correspondent writes:—The steady development of the Dominion necessarily brings with it an increasing variety of secondary industries and manufactures. The progress made by these industries is recorded fully and in great detail in the annual Statistical Report on Industrial Manufactures, which embodies the main results of the annual census of industrial production. It is a matter for regret that similar statistics are not available for the basic rural industries, and for the general commercial activities of the Dominion. The report for 1921-2 just to hand discloses the effect of the post-war slump on certain industries, but, at the same time, the figures are an emphatic testimony to the economic stability of the Dominion. There is some difficulty in comparing the statistics for 1921-2 with those of 1920-1, since alterations have been made in the methods of calculation. The aim of the census is apparently to be as inclusive as possible, since all establishments using motive power, or employing more than two hands in manufacture, are required to send in returns. For this last year, however, several minor industries, such as dressmaking and millinery, have been excluded from the returns. The number of persons employed in the secondary industries has decreased from 63,410 to 61,068, the decrease being spread over most of the industries. Similarly, the amount paid in wages has decreased by just over a million pounds to £11½ millions, though there is an apparent rise in the average wage from £179 to £187. This is due mainly to the exclusion of many lower-paid occupations, such as dress-

ESTABLISHED 1836 General Manager W. J. BORMANN, F.I.A.

making. There has, however, been a fairly substantial expansion of industry as measured by the capital values of plant and buildings, and the motive power available; and an interesting feature of the expansion is the continuous increase, both absolutely and relatively, in the use of electric energy. An interesting table shows the average power available per productive employee, which has increased consistently from 0.83 in 1901 to 3.57 in 1921-2. Of the total power available almost one-fourth is provided by electric energy derived from the various governmental hydro-electric schemes. The most prominent feature of the detailed statistics of individual industries is the dominating position of those manufactures which are engaged in preparing the raw products of the Dominion for overseas markets. A significant table shows the value of output produced in the chief industries by the expenditure of £100 on wages. The dairy factories lead the way with £2,197. Tanning, fell-mongering, and wool-scouring comes next with £690, and is followed by meat-freezing with £673. The nearest approach to these figures is printing, £404. The four chief industries, which are so engaged, viz., meat-freezing, dairy factories, sawmilling, and tanning, &c., between them employ 35 per cent. of the workers, pay 36 per cent. of the wages, use 39 per cent. of the motive power, and are responsible for 40 per cent. of the added value of the products which results from manufacturing. The strength of their position is sufficiently indicated by these figures, and is reinforced by consideration of the fact that the materials upon which they work form 55 per cent. of the total value of all the materials used. Those industries which, under the cover of a protective tariff, have to meet the competition of strongly-organised manufactures in older lands, show a lower average wage, a lower productivity per worker, a smaller use of capital, as represented by motive power, and a lower proportion of increased value as compared with the raw materials operated upon.

Customs Regulations in Peru.—A correspondent writes:—The constant alterations and additions to Peruvian Customs regulations is occasioning some disquietude among traders in, and with, this South American country, who already find themselves discouraged by an almost unrelieved economic depression. Among more recent decrees have been instructions compelling exporters to fill in lengthy and complicated shipping documents containing a mass of particulars hitherto considered unnecessary, and imposed by no other trading nation of Latin-America. A mere general description of goods imported into Peru will no longer be accepted; consignors are now obliged to provide details with some of which ordinarily they would not be well acquainted, and in others needing explicit and even expert knowledge upon the part of the shipper. Another innovation is the prohibition of all but regular Consuls to certify parcel post invoices, whereas honorary Consuls have hitherto enjoyed this trifling authority. In view of the comparatively few regular Peruvian Consuls now appointed to the United Kingdom, and the time involved in seeking for one duly authorised to perform this duty, a considerable proportion of the parcels post trade between this country and Peru is likely to be lost. Fresh taxes have been imposed upon cotton exports, so computed that—like existing export dues—every trifling rise or fall in prices affects its value,

which, again, is controlled by the variety of cotton in question. Other revisions respecting export taxes on rubber, balata, chicle, and similar products are proposed. It is contended that it is the uncertainty rather than the magnitude of the new taxation that occasions dissatisfaction among traders, the propensity for introducing provisional rather than permanent Customs dues leading not infrequently to misunderstandings and disappointments. Again, certain departments would seem to enjoy immunity or relief in disparity with others less favoured. It is hoped that the Government, when introducing future taxation measures, will take into consideration what appears to be a legitimate cause of complaint among the trading community in Peru.

The Decline in Non-Ferrous Metals.—A market correspondent writes:—The weakness seen in the non-ferrous group of metals during the first half of May has again been in evidence, and this week all markets have displayed a very uncertain undertone, with marked selling pressure from numerous quarters. The standard copper position has deteriorated very seriously, and those speculators who bought on the theory that the Reparations question would be solved within a reasonable space of time have made heavy losses. The market has been manipulated by American metal interests, and the liquidation has resulted in warrants accumulating in a few hands. There is now some talk of shipping copper to the States, and this, in view of the statistical position, would create a very dangerous situation, both for users and the short interest alike. Compared with the best touched this year, copper shows a fairly heavy fall, and there should be a smart reaction as soon as the selling pressure relaxes. Tin, after tending firmer, suddenly turned very weak and near dates were freely offered on talk of an unfavourable monthly showing. American consumers have been taking very little interest in the market: the home tin-plate trade is dull, but the bearish talk may be overdone. Leading interests were inclined to support the forward positions, and this is rather significant. Compared with the best prices touched in March, there has been a loss of over £50 per ton, and the turn of the half-year should bring about a change of sentiment. Soft foreign pig lead has been weak, but there has been more doing at the lower level, and some good sales of September, October, and even November metal have been made from £24 2s 6d to £24 5s. The spelter market at one time was very weak, with large sales from a quarter usually associated with American interests, but after dropping to below £28 per ton there was more resistance displayed, and the undertone became harder. Selling rates having fallen below the cost of production, the Belgian producers will be forced to curtail output, and the market will thus have a chance of recovering. The trade demand for all non-ferrous metals just now is very poor; recent speculative operations have turned out badly; the position on the Continent hampers consumption, but generally speaking, the statistical situation of all metals is healthy, and this would count in any revival in the trade demand. Well-informed opinion favours the view that there will be a change in the coming month.

The Rand Midsummer Dividends.—Our Mining correspondent writes:—Owing to the labour trouble, with its aftermath of revolution, operations upon the Witwatersrand Goldfields were virtually suspended for about one-third the first six months of 1922, and conditions did not become really normal until the turn of the half-year. During the concluding six months of the year a marked improvement took place, labour being more efficient as well as less expensive than in 1921, while benefit was felt from the lower charges for stores. On this point some interesting figures were given at the annual meeting of the City Deep, a full report of which is just to hand by mail. For convenience of contrast we tabulate the items mentioned:—

	1921.	Second Half— 1921.	1922.
Total labour force	9,526		8,985
Average monthly tonnage crushed.....	87,000		90,000
Tonnage handled per native	16.7		18.3
Cost of producing 1 oz gold	69/7		55/4

Interest, therefore, will consist in a contrast of the distributions for the past half-year with those relative to the concluding rather than the initial period of 1922. Our usual tabulation is appended:—

Company.	Total, 1921.	Total, 1922.	June, 1922.	Dec., 1922.	June, 1923.

* Tax free.
This table does not include declarations made at dates other than June and December.
It will be noticed that while the shareholders in two companies will receive larger amounts than they did six months ago, in half-a-dozen examples an opposite state of affairs prevails. In this connection it must be remembered that there is a tendency for the balance dividend to be at a higher rate than the interim; still, the saving in costs last half-year scarcely kept pace with the decline in the price of gold. It is satisfactory to find that the December rate has been maintained in so many cases. The absence of any declaration on the part of the Consolidated Langlaagte is due to the absorption of that company by the Langlaagte Estate, while the Consolidated Main Reef has had to contend against various difficulties. The December announcement of the Witwatersrand Deep included 7½ per cent. in respect of the proceeds from the purchase and sale of ex-enemy shares. New Unified and Robinson are shortly closing down. The declarations of the "Johnnies" company are for the year ended June 30th; they are not paid until the end of September.

Lake View Investment Trust.—Although the shares of this company are dealt in in the West Australian section of the mining market, it is really a cosmopolitan concern, holding shares or prior securities in well over one hundred different undertakings, mostly British, but including a fair proportion of foreigners; there is also a sprinkling of foreign bonds. The largest individual interest, however, comprises 980,000 shares in the Burma Corporation, which has recently declared its first dividend equivalent to 4d per 10-rupee share. Largely on the strength of the commencement of returns by this enterprise the directors of the Trust intimate the probability of half-yearly dividends in future. Last year's profit of £19,500 scores a modest increase upon that for the 12 months ended March 31, 1922, and the dividend has been raised from 5 to 6 per cent. On the latter basis the yield does not much exceed 4 per cent., the 10s shares being quoted at about 15s; but the market value of the investments is calculated as equivalent to something like 25s per share.

Mexican Eagle Oil.—A substantial fall in trading profits for the year 1922 is ascribed by the directors of the Mexican Eagle Oil Company in the annual report to the large

and unexpected falling-off in the quantity of crude oil produced, to the decrease in prices and quantities sold, and to the exceptionally low freight rates which prevailed during the year. In 1921 the date of the end of the company's financial year was altered from June 30th to December 31st, and, as will be seen from the table below, the profit for the year 1922 was actually slightly less than that for the six months ended December 31st, and less than one-third of that for the year 1920-21. The figures are given in Mexican dollars, which have a par value of 24½ pence:—

	Year Ended June 30.			Half-Yr. Ended Dec. 31, 1921.	1922.
	1919.	1920.	1921.		
Profit, after providing for administration expenses and interest on debentures	\$ 37,194,427	\$ 59,453,574	\$ 85,320,429	\$ 26,818,322	\$ 26,815,709
Brought forward	2,219,054	3,543,282	3,814,190	1,373,181	1,682,130
Field redemption and reserves	39,413,481	62,996,856	89,134,619	28,191,501	28,497,839
Provident fund	10,061,707	7,452,318	49,615,671	6,610,231	7,666,958
Distributed in dividends	29,351,774	55,544,538	39,518,948	21,581,272	20,830,881
Carried forward	1,000,000	1,500,000	1,500,000	500,000	500,000
	28,351,774	54,044,538	38,018,948	21,081,272	20,330,881
	24,808,492	50,230,349	36,646,767	19,379,142	12,786,726
	3,543,282	3,814,189	1,373,181	1,682,130	7,544,155

The participating preference and the ordinary shares receive a dividend of 8 per cent. for the year, as against 15 per cent. in both cases for the preceding half-year. Total reserves now stand at \$155 millions, the total issued capital being \$199½ millions. Of the balance of profits remaining, \$2,911,000 is written off expenses of the issue of first preference shares, leaving \$4,632,600 to be carried forward. The production of crude oil in 1922 was 12,390,400 barrels, as against 10,449,900 barrels in the second half of 1921 and 38,298,700 barrels in the year to June 30, 1921. In the last-named period no oil was purchased by the company, but in the second half of 1921 it purchased 4,303,900 barrels, and in 1922 5,418,900 barrels. The report mentions that the company's long-term charter, at a fixed rate, of the whole of the fleet of tank steamers belonging to the Eagle Oil Transport Company resulted in a serious loss during the year, but a considerable improvement in the tanker freight market has taken place since the end of 1922. A large amount of exploration work was carried out during the year, but results proved "disappointing, and the knowledge of conditions thus obtained will probably lead to the relinquishment of certain large areas." It is added, however, that the trading of the company for the current fiscal year should show an appreciable increase in volume over that of the year 1922.

Lipton's Profits.—The report of Lipton's, Limited, for the year ended March 31st last states that business in the home trade has shown an increase in volume, and that the export trade has also improved. The fall in the value of stocks has been borne in the year's trading, and this accounts for a slight decline in gross profits, but, thanks to a reduction of over £30,000 in management expenses, net profits are £12,600 higher. The following table summarises results for some years past:

Year Ended March.	Gross Profits.	Expenses, &c.	Net Profits.	Depreciation.	Div.
1902.....	£ 228,202	£ 39,441	£ 188,761	£ 19,063	% 8
1908.....	274,335	83,935	190,400	27,624	8
1912.....	307,207	103,922	203,285	51,341	6
1913.....	315,606	111,967	203,639	41,095	6
1914.....	314,949	131,461	183,488	23,202	6
1915.....	272,182	149,509	122,673	262,274	nil
1916.....	295,089	125,645	169,444	45,104	nil
1917.....	442,776	140,189	302,587	44,057	7½
1918.....	544,322	126,222	418,100	44,055	12½
1919.....	579,678	130,902	448,776	47,411	12½
1920.....	644,564	177,005	467,559	51,866	12½
1921.....	433,230	158,061	275,169	57,103	12½
1922.....	561,833	167,521	394,312	82,601	12½
1923.....	547,342	140,374	406,968	69,912	12½

* Including £220,889 drawn from "premium on shares account."
Management expenses have dropped from £155,000 to £124,700, but bad debts have risen from £4,000 to £7,200. Depreciation on leaseholds, plant, fittings, &c.,

requires a little less, and the amount available for distribution, including the balance brought forward, is £354,900, as compared with £339,500 at this time last year. The ordinary dividend is maintained at 12½ per cent., and absorbs £156,250, but the balance carried forward is only £1,000 higher at 38,600, owing to the fact that the new 9 per cent. preference shares now rank for full dividend, and this absorbs £14,000 more than was paid out a year ago. A revaluation of premises, plant, machinery, &c., and of property in Ceylon has been made, and a portion of the surplus over the book values has been applied in writing off the expenses of issue of 9 per cent. preference shares, the depreciation of foreign currencies and the deficiencies on subsidiary companies, and in writing down trade investments, the balance remaining of £26,100 being credited to a special reserve account. The balance-sheet shows an increase of £200,900 in property and goodwill, and of £97,900 in plant and machinery, but stocks are £234,200 lower. Savings bank deposits at £151,900 show an increase of £17,000, while cash at £273,800 is £17,200 lower. Investments stand at £220,000, or £33,500 lower, but what proportion of these are gilt-edged, and how investments are valued, is not stated. An analysis of the balance-sheet will be found in a later column.

UNITED STATES.—NEW YORK CENTRAL DIVIDEND—KANSAS INDUSTRIAL COURT—AMERICAN SMELTING DIVIDEND—GOVERNMENT FINANCING.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 18.

MUCH attention is being paid to the action of the New York Central Railroad directors in declaring a quarterly dividend of 1¼ per cent. on the company's stock, thus raising the annual rate to a 7 per cent. basis, as compared with 5 per cent., which has been paid continuously since 1908. The new basis is, in fact, the highest that has prevailed since 1884, when the predecessor of the present company paid 8 per cent. In 1907 stockholders received 6 per cent., but only for that year. While a few other railroads may decide upon increased distribution to shareholders, there is nothing at present to indicate that carriers generally will adopt such a course. The New York Central occupies a rather unique position. In addition to its large earning power and the good condition of its property, the major part of the company's capitalisation is in long-term bonds bearing low rates of interest, the rate on the funded debt averaging 4.4 per cent. per annum. That fact makes it possible to pay a higher rate to stockholders than might be the case were the funded debt interest heavier.

Another dividend development, namely, the resumption of quarterly dividends upon the American Smelting and Refining common stock, directs attention to the marked improvement during the past six months in the mining industry. The directors declared a quarterly dividend of \$1.25 a share on the common; the last previous dividend on the common was \$1 a share paid March 15, 1921. The resumption, therefore, is at the annual rate of \$5 instead of \$4. Much significance is attached to this action by the company's directors, for they are probably in closer touch with the country's mining industry than is any other directorate. It is reliably stated that the company has been earning lately at the rate of about \$15 on the common stock after all charges except depreciation. Earnings for the first half of this year will probably make a better showing than those for the second half, since the company has been working its silver and silver-lead mines overtime in order to produce as much silver as possible for sale to the Government before such purchases

(under the Pittman Act) were discontinued. Since the Government has now suspended silver purchases authorised by that statute, the American Smelting and Refining Company, in common with other domestic producers, will no longer have a domestic market for its production of the white metal at the prescribed price of one dollar an ounce—or at 99½ or 99⅓ cents, to be exact, the difference representing the transportation charge which varied according to the location of the mint where the silver was delivered. Although the United States Government is not likely to re-enter the market on any extensive scale for some time, the price has not suffered the severe decline which many interests had feared or predicted.

Last week the United States Supreme Court rendered a decision which is likely to have far-reaching effect upon industry in this country. The Court unanimously held unconstitutional the provisions of the Kansas Statute, which created the much-discussed Industrial Court in that State, in so far as the law permits that tribunal to fix wages of workers engaged in food, clothing, and fuel industries. Briefly stated, the Kansas law in question grouped with public utilities and common carriers in the public interest, the manufacture and preparation of food for human consumption, the manufacture of clothing, the production of any substance commonly used for fuel, and the transportation of such articles or products. Furthermore, the Statute gave to the Court, created by it, authority to hold hearings in any dispute concerning wages or terms of employment in the industries mentioned, and in case it found the public health or peace imperilled thereby in any particular instance, to make findings and to fix wages to be paid for a prescribed period. The case before the Supreme Court was that of a certain packing company *v.* the (Kansas) Court of Industrial Relations. After hearing a complaint by a meat cutters' union regarding wages paid by the packing company, the Industrial Court issued an order increasing the wages of the employees over the figures to which they had previously been reduced. The packing company refused compliance, and after the Kansas Supreme Court had overruled the report of a Commission appointed by it, and sustained the Industrial Court, appealed to the United States Supreme Court. The latter's opinion, written by Chief Justice Taft, holds that the action of the Kansas tribunal curtailed the right of employers and employees to contract, thus infringing part of the liberty of the individual protected by the guaranty of the due process clause of the Fourteenth Amendment to the Constitution. Although there is no such thing as absolute freedom of contract, the Chief Justice said, restraints thereon must not be arbitrary or unreasonable, freedom being the general rule, and restraint the exception, to be justified only by exceptional circumstances. The Court takes the view that the mere declaration by a legislature that a business is affected with a public interest does not conclusively settle the question whether its attempted regulation on that ground is justified, nor does it determine what regulation may be permissible in view of the private rights of the owner; nor does it mean that the public may take over the entire management of the business and run it at the expense of the owner. The extent to which regulation may reasonably go, the Court points out, varies with different kinds of business, the regulation of rates to avoid monopoly being one thing and the regulation of wages another.

The Government's recent offering of about \$150,000,000 Treasury certificates of indebtedness, dated June 15th, and maturing December 15, 1923, was heavily oversubscribed, the total subscriptions approximating \$343,000,000. The amount allotted was \$189,833,500, of which \$38,344,000 represented allotments on subscriptions for which certificates maturing June 15, 1923, were tendered in payment. No additional Government financing is likely to be undertaken during the summer months. The latest offering of certificates of indebtedness, together with the Federal income and profits taxes received this month and the surplus in the general fund, has apparently been sufficient to take care of maturing obligations, pay interest on indebtedness, and meet current expenditures during the summer. The fact that the certificates just offered bore interest rate at 4 per cent., as against 4½ per cent. carried by those issued last March, is generally taken to indicate that the Treasury Department expects money rates will show an easier tendency during the next few months.

FRANCE.—BUDGET DELAYS—TRADE FIGURES—THE WINE TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, June 27.

THE Senate yesterday, by a final vote of 303 against two, adopted the text of the amended Budget, and the Finance Bill has gone back to the Chamber. It is generally expected that the Lower House—under pressure of a desire to avoid both a seventh *douzième provisoire* and possibly an eighth, unless the two Houses are to remain sitting beyond the middle of July, when they should rise for the summer recess—will hurry through its final consideration of the Senate's modifications before the end of the current week, so that the measure may be passed into law before July 1st. As matters stand, there is apparently every intention to take this course. Even before the Bill left the Upper Chamber, the Finance Commission of the Lower House had begun its examination of the changes that have been made in it, and by Saturday night it is almost certain the Bill will have become law.

Considering that the French financial year begins on January 1st, and that the period covered by the Bill in question has already half expired, it is not surprising that the suggestion has been put forward in more than one quarter that if it is impossible to pass the Budget before the beginning of July in each year, it is advisable that in future the financial year should begin at that date. This proposal was actually put forward in the Senate yesterday by M. Peytral, himself a former Finance Minister. M. de Lasteyrie adduced abundant reasons against such a step, however, and the matter dropped. A much more definite proposal is that advanced by the Government itself in the shape of a Bill which was laid before the Chamber yesterday by the Finance Minister, proposing that an additional clause shall be inserted in the Finance Bill, extending it to cover 1924 as well as 1923, so far as the bulk of its provisions are concerned. This was one of the most striking propositions, it may be remembered, in M. Poincaré's recent speech, in which he defined the limits of the majority he desires to have behind him, and one which the Chamber tacitly approved when, at the close of his speech, it accorded him the vote of confidence he asked for.

The argument M. Poincaré put forward in support of his proposal on that occasion was that it will not be desirable that next spring, on the eve of the General Election, the Chamber shall be engaged in a debate which cannot perhaps be finished before the electors are actually called on to vote. He also hinted at another reason, which was that, with the elections immediately in front of them the deputies (although the Premier was careful not to put the point quite so bluntly) might be tempted to indulge in electioneering under the pretext of discussing the Budget. So far as can be seen at present, opinion in political circles is by no means enthusiastic in support of the proposal. It is admitted to be little short of scandalous that, although the Finance Minister presented his estimates in March last year, it has been found impossible to pass the Budget into law before the end of the present month; nevertheless, it is argued that some other remedy than a biennial Budget ought to be feasible. A similar attempt was made, it is recalled, by Baron Lafitte, during the Restoration, but without success, while Bismarck made a like proposal to the Reichstag 40 years ago and also failed. Unfriendly critics of the Government insist that the proposal is an insult to the Chamber, as it seems to imply that the House is impotent to vote the Budget for 1924 before the elections.

Detailed figures are now published showing the total value of the foreign trade between France and the principal foreign countries during the first four months of 1923, as compared with the corresponding period of last year. These are as follows (in thousands of francs):—

	Imports.		Exports.	
	1922.	1923.	1922.	1923.
Sweden.....	1,000Fr. 75,878	1,000Fr. 87,857	1,000Fr. 11,140	1,000Fr. 32,737

Totals.....	6,985,117	9,534,242	6,777,718	9,007,029

These figures are peculiarly interesting just now, in view of the controversy that has arisen owing to the effort of the French winegrowers to bring about a large increase in the import duties on Spanish, Italian, Portuguese, and other foreign wines, for the purpose of increasing the consumption of the home-grown product. The proposal is due, at bottom, to the fact that, in spite of the abundant wine crop last year, the middlemen in the French wine trade have succeeded in maintaining the retail price of wine (sold before the war at from 25c to 45c the litre) at 1f 10c to 1f 20c the litre, whereas the growers complain they are compelled to sell their product at a loss. The cost of production, they insist, is from 45f to 60f per hectolitre, while the present quotation at the vineyard is between 30f and 40f only. The middlemen allege that much of the difference between the price paid to the grower and that charged to the consumer is due to the excessive transport charges imposed on French wines, as compared with those that have to be paid by the foreign wine importer. Last year 1,076,000 hectolitres of Portuguese wine alone entered the port of Rouen, most of which was blended with and sold as native French wine. The amount of freight levied on this foreign wine, it is alleged, so far as transport in this country is concerned, would be from 5f to 6f a hectolitre, whereas the cost of transporting native French wines to Rouen, Nantes, Brest, and other points at which foreign wines enter would be at least 20f.

The French winegrowers, who are asserted to be 1,408,951 in number, and who form a very influential section of the French agricultural majority in Parliament, point to the loss of their American and Russian markets, and are insisting that unless the import duties on foreign grown wines are tripled, their industry will be ruined. M. Chéron, the Minister of Agriculture, recently announced that their cry has been heard by the Cabinet, and that they will shortly receive satisfaction. This announcement has produced a storm of protests against practically the whole of the French exporting industries, who insist that if such a blow is dealt at Spanish, Italian, and Portuguese wines, the importing countries are certain to resort to reprisals, which would do much more harm to the economic interests of France than the whole wine industry is worth. That this view is to a great extent justified is evident from the fact that threatening articles have been published in Italian, Spanish, and Portuguese newspapers since the idea was publicly mooted. There are widespread fears that, if the winegrowers press their demands, France will find herself involved in a series of tariff wars that may prove even more harmful to her foreign trade than did the conflict with Spain a year or so ago (the extent of which is indicated in the table given above).

The demand made by the winegrowers has focussed the attention of the industrial and trading community on the danger that always faces this country of finding itself suddenly embroiled in a tariff war, owing to the fact that it is possible for a French Minister, under the influence of a particular class of the community, to induce his colleagues to allow him to bring about a serious modification of existing Customs duties merely by the promul-

Gresham House, Old Broad Street,
London, E. C. 2

gation of an arbitrary decree, and without being under the necessity of previously obtaining Parliamentary sanction. *La Journée Industrielle*, which voices the opinion of the metallurgical and other important industries, announces to-day that "the French Government, following the policy of the Minister of Agriculture, has allowed a new breach of our commercial agreements to be accomplished," and decided, some days ago, on a tariff war with Greece. The journal protests "against the sabotage of commercial agreements," which it alleges is going on under the auspices of the agricultural party in the country.

GERMANY.—EXCHANGE REGULATION—FINANCES—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, June 26.

THE Cabinet has made yet one more attempt to check by means of a prohibition the rise in the foreign exchanges. More properly it has made a feint, because past experience, and in particular the Reichsbank's and the Cabinet's experts' statements to the Reichstag Inquiry Commission, give no reason to hope that prohibitions and restrictions will be any more effective here than they have been in other countries. The public's demand, however, that something should be done goes with a public belief that the mark depreciates because of speculation; and as the something to be done is not, or cannot be, aimed at the real causes of the depreciation, a bold blow against speculators is devised in order to propitiate opinion. This was the process when Dr Wirth last autumn reintroduced exchange regulation after three years of complete freedom. The mark has since depreciated even more rapidly under regulation than under freedom. The only real speculation done by Germans in exchange consists in buying and selling foreign bills and notes for the sake of the relatively

small day-to-day differences. The process against which the public outcry is directed is not speculation at all; it consists in buying exchange to keep, with the aim of preventing a loss, and is in the same class as buying goods, buying the new Dollar Treasury Bills with paper marks, or buying any of the rye, wheat or coal loan stock. The citizen who keeps his paper marks in a bank is not really a non-speculator modestly content with his lot; he is a victim of real speculators, active or passive, who make profits out of the currency depreciation. The exchange regulation system is nevertheless pressed on the Cabinet by Socialist demagogues, who ignore that it prevents petty savers from keeping their real capital intact, while big companies and big business men save their capital by putting their marks into foreign currencies and foreign goods.

The new exchange "Verordnung," issued under Art. 48 of the Constitution, and therefore ostensibly to prevent disorder, prohibits the purchasing of exchange except when it is officially quoted in Berlin, and then allows it to be purchased only at the Berlin official rate. This automatically prevents dealing in Polish marks, and in some other Eastern currencies not officially quoted, and it has already deranged the Frankfurt and Hamburg exchange bourses, and led to complaints. These two defects will probably be remedied by a new decree. The main effect is to kill entirely free dealing in exchange. Up till now exchange was bought and sold all day long at varying rates, often much above or below the official rate, which is determined at a fixed hour on the basis of supply and demand. Most small dealings were done at the free rate, and numerous small banks did little except such exchange business; but the Reichstag inquiry brought out the fact that also very large purchases by business concerns were sometimes done at free rates. When the new decree appeared, the fear was expressed that at times when shortage of foreign bills compelled the Reichsbank to ration the supply at the official rate, the applicants would protect themselves by applying for more than they needed; and this fear seems to have been justified, because to-day witnessed an enormous demand, London was rationed with only 25 per cent., and sterling and the other exchanges had a new big rise. That the need of the public for some means of protecting their capital is unabated is shown by selling of the Dollar Treasury Bills at 147,000 marks, though the dollar was quoted at only 126,315. Apart from the two unsettled matters above mentioned, the Government is considering the issue of one more decree, which will probably further limit the number of persons entitled to buy exchange, and may also forbid the purchase of foreign securities abroad.

No good except temporary blinding of the public's eyes can be expected from these measures. The Government admitted to the Reichstag Commission that the February stabilisation attempt could have succeeded only in connection with the shortage of money then prevailing. The last Reichsbank report shows that the new abundance of money is being rapidly supplemented. An attempt, however, is being made to increase the Reichsbank's resources for the next intervention coup. The amount originally subscribed of the \$50,000,000 gold Treasury Bills was \$13,138,600, to be brought up to \$25,000,000 by the bankers who guaranteed the subscription of half the total. Negotiations are proceeding for the taking up by industry of the greater part of the remaining \$25,000,000. The Federal Minister of Labour is discussing the so-called "fixed value" wage with representatives of the trades unions. The employers declare that the granting of such a wage will hasten the price rise. The compilation of an official cost-of-living index, to be issued at short intervals, is necessary as a first condition. The Customs gold surcharge has been raised to 2,146,900 per cent. The Reichstag has sanctioned the 25-folding of the quarterly advance payments of income-tax, and 35-folding of the company income-tax. The new rates come into force for the November, 1923, and February, 1924, quarterly payments. This measure is a bad substitute for the automatic increase of taxes in proportion to the rise in nominal values, because it can at most take into account the rise

in values up to date, and there remains no guarantee that a 25-folded payment six or nine months hence will be more valuable to the State than a simple payment to-day.

The yield of taxes in the first two months of the current financial year (April-May, 1923) was:—

Taxes on property and business—	Marks.
Recurring taxes	1,555,038,192,263
Non-recurring	414,793,192
	1,555,452,985,455
Customs and taxes on consumption ..	641,794,144,676
Other taxes	79,617,150,291
	2,276,864,280,422

A comparison of tax receipts with those of the same months of 1922 shows, as might be expected, a much larger increase in those taxes which increase automatically than in those which have to be put up from time to time by legislation. Customs receipts in May fell not far short of 200-fold those of May, 1922, and the coal tax nearly 100-fold, while the sugar tax, being assessed on weight, increased only about 30 per cent., and some taxes actually yielded fewer paper marks than they were yielding a year ago, despite the more than 100-fold price rise. As a result of the Government's neglect to put these taxes on an *ad valorem* basis, the only reasonable basis when money loses all but 1-100th of its value in less than a year, many taxes, among them some which ought to play big rôles in the revenue, are not worth collecting. Thus the May yield (at exchange of 200,000) was approximately:—

	£
Sugar tax	400
Salt tax	28
Matches	70
Lighting apparatus	10
Playing cards	14
Mineral waters	10
Beer	500

For all these taxes an elaborate official mechanism is maintained. The Reichsbank's statement for June 15th shows the very large increase of 1,595,526 millions in circulation, total circulation having passed the ten billion stage to 10,905,091 millions. Commercial bills increased by 414,935 millions to 5,034,102 millions, and Treasury Bills by 1,978,206 millions to 10,426,602 millions. Outstanding Darlehnskasse advances are now 2,172,100 millions.

Stocks last week were active and firm, but did not rise as much as in the preceding week. An agitation is proceeding against the transfer of large stock interests to foreigners, or, as the Socialist newspapers describe it, the veiled smuggling abroad of capital in shape of a fictitious transfer to foreigners. This agitation was caused by the allotment to a Dutch syndicate of the whole 300,000,000 marks new shares issued by the Phoenix Company, an important iron and coal concern associated with the Otto Wolff Trust. Socialist newspapers allege that many supposedly foreign holding companies which buy up German stocks and shares are in reality foreign creations of Germans, who thereby get their interests out of Germany. One such holding company in Switzerland has large interests in seven important German companies. The market for federal and Prussian bonds continues to be a theatre of queer speculation, largely foreign, and there have been sudden big rises and some drops. Until lately Prussian Loans lagged far behind Federal, but they have lately risen, and yesterday Prussian Threes jumped from 2,000 to 6,500, Prussian Threes and a-Half per Cents. from 700 to 4,000, and Prussian Fours from 600 to 3,000, while Bavarian Threes touched 1,300, and Hamburg Staats Rente 1,000. No other State loans quote as high as 1,000. Federal Loans yesterday were: War Loan, 99. Fours, 7,000; Three and a-Half per Cents., 5,500; Threes, 28,000; Colonial Fours, 35,000; Savings and Premium, 555. Municipal bonds mostly quote between 100 and 300.

Unemployment is slowly decreasing. The crops, which were in very good condition on June 1st, are threatened with serious damage, and will at best be weeks late, owing to the exceptional wet and cold. The export duties which were reduced during the spring stabilisation period are again to be increased. The attempt to adapt them to the ever-varying differences between native and foreign gold prices has been a complete failure.

CANADA.—CROP REPORTS — OFFICIAL ACREAGE FIGURES — THE BUDGET — CRITICISMS AND MINOR CHANGES—THE BANK ACT—IMMIGRATION RETURNS — BUSINESS AND FINANCIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 17.

CROP reports, especially from the West, continue to be highly flavoured with optimism. The mid-June survey of the *Manitoba Free Press* is a very cheerful document, and the column devoted to remarks of the local observers teems with such phrases as "Crops never looked better," "Conditions ideal," "Best outlook since 1915," and "Exceptionally favourable." Under the heading moisture, the recurrence of the word "plenty" is almost monotonous. Out of 270 points which reported, only 11 expressed any desire for rain, and apparently the prairie regions have this year's abnormal reserves of moisture in the soil, which is a most hopeful augury. However, it is quite premature to guarantee any bumper crop for Western Canada in mid-June, because many vicissitudes have still to be faced.

The Dominion Bureau of Statistics estimates the area sown to wheat at 22,165,100 acres, as compared with 22,422,693 acres in 1922, and an annual average of 18,545,863 for the five-year period 1917-21; the decrease is only slightly more than 1 per cent., which is much smaller than was anticipated. The following are the comparative figures for the acreages of the other crops:—

	1922. Acres.	1923. Acres.
Oats	14,541,229	14,410,000
Barley	2,105,367	2,556,200
Rye	2,160,467	2,045,900
Peas	189,890	179,600
Mixed grains	779,800	778,900
Hay and clover	10,001,667	10,160,600
Potatoes	683,594	652,200

The Budget resolutions have not yet been completely disposed of, and in committee Mr Fielding has made several minor changes. The British preferential discount will be available for goods transhipped through a port in a British colony, like Hongkong, if they are consigned direct to Canada. A drawback of 60 per cent. will be given on artificial silk tops and yarns for use of manufacturers in Canada. Following upon this concession it is announced that Courtaulds, Limited, will establish at once a branch factory in the vicinity of Quebec for the manufacture of artificial silk goods. The woollen manufacturers and their political allies have made strenuous efforts to get their industry exempted from the effect of the new preferential discount on the ground that more British competition, which is now felt to be inevitable, will imperil its future, but Mr Fielding would not yield. Fresh protection has been given to the natural silk industry. There was a sharp debate over the reciprocity offer to the United States, which is embodied in the Budget. Mr Meighen contended that it was hypocritical, because the Government, under pressure from the coal interests of Nova Scotia, declined to avail itself, as it could at any time, of the standing offer of the U.S. for reciprocity in bituminous coal. Mr Fielding defended the tactics which had been adopted, argued that the offer had already produced excellent educative results in the U.S., and prophesied that sooner or later an election would be fought on this issue in Canada, and have a very different result from the contest of 1911. Protests against the new form of the sales tax, which will undoubtedly be a much heavier levy than the old plan, and be less capable of absorption by the manufacturer, have been raining in upon the Government, and further consideration of it has been suspended for the moment.

The Banking and Commerce Committee have now concluded their labours, and the Bill will be reported on the 18th. It will reach the floor of the House in virtually the same form as it was originally drafted by the Government. The Progressive members, who were consistently aided by the Father of the House, Mr W. F. Maclean, a Tory of Radical tendencies, have put up a long and strenuous fight for drastic reforms, but the combination of Liberals and Conservatives who were ranged against them, and were skilfully marshalled by experienced lobbyists, has

easily defeated their efforts. The changes made during the committee stage are comparatively unimportant, and although the Progressives have been threatening to organise in the House a systematic obstruction to the Bill, the enthusiasm necessary for such a blockade rarely survives the sultry heat of the Ottawa midsummer, and probably after the Progressives have once more unburdened themselves of their protests against the present financial system, honour will be held satisfied, and the Act will be passed. What the Progressives have as their chief aim is to secure from the Government, and if possible from the representatives of the banks, a definite pledge that the possibilities of a nationwide system of rural credits will be investigated and considered with an open mind. The more enlightened of the younger generation of bankers freely admit that there is a gap in our financial structure between the services performed by the banks for farmers and the work of the long-term mortgage companies, and express a willingness to co-operate in some scheme which would fill this gap. The banks are understood to be well satisfied with the new Bank Act, but they also realise that their critics are very numerous, and not confined to the farming classes. One interesting episode in connection with the later sittings of the Committee was the voting down of a proposal to hear the evidence of Mr D. C. Macarow and Sir Montagu Allan about the circumstances surrounding the failure of the Merchants' Bank. It is an open secret that Mr Macarow was anxious to testify, and some illuminating disclosures would have been inevitable, but Mr Fielding objected to what he said would be the equivalent of a re-trial of the case, and the proposal was voted down.

Immigration returns are markedly better, and in the five months ending May 31st 39,417 immigrants entered Canada, which is 41 per cent. above the total for the parallel period of 1922. The British arrivals have actually increased 100 per cent., although the American inflow has fallen off. But the numbers are still unsatisfying to the country, which would like to welcome 200,000 immigrants per annum as a minimum. Good crop prospects are always a factor in the business situation, and there is already evidence of a disposition on the part of country merchants to buy more freely. However, June is normally a month of diminishing trade; the spring retail business has subsided, and plans for the autumn have not matured. Trade reports from the majority of points report wholesale trade "fair to quiet," and retail trade, especially in summer clothing, affected by the wet weather. The financial world shows tendencies towards reaction. Money is cheap, and the stock markets last week reached their lowest ebb of trading for the year. At one of the closing sessions of the Banking Committee the Finance Minister broadly hinted that in the autumn there would be issued a domestic loan bearing 5 per cent. interest; considerable obligations have to be met, and apparently the Government have decided to appeal to the domestic market for at least part of the necessary funds. In the mining regions of Northern Ontario there is still enormous activity, and the Ontario Department of Mines has published returns showing the total value of metalliferous production in the province for the first quarter is \$9,241,853, as compared with \$7,227,322 in the corresponding period of 1922.

SWITZERLAND.—THE ALCOHOL MONOPOLY—FEDERAL SUBVENTIONS — THE GREAT COMMERCIAL BANKS — THE SWISS MARCONI COMPANY.

(FROM OUR CORRESPONDENT.)

GENEVA, June 20.

On June 3rd the Swiss people was invited to express its view as to the extension of Federal legislation respecting the control of alcoholic liquors. Since 1887 the Confederation has had the monopoly of the manufacture, importation, and sale of alcoholic beverages distilled from potatoes and cereals; partly the aim is to combat alcoholism by making spirits dearer and thus encouraging the consumption of less dangerous beverages, such as wine and beer; partly it is to provide new sources of revenue for the Confederation and the Cantons. From 1887 to 1913 the profit realised by the Federal Alcohol Monopoly averaged 6.2 million francs annually; during the war years it varied

between 5.7 and 7.6 million francs. In 1919 it reached 8.2 millions, and then fell abruptly to 1.1 million. The accounts for 1922 close with a deficit of three millions, due, indeed, partly to the great increase in the cost of administration, but mainly to the complete change since 1887 in the conditions of production. The monopoly has never been extended to the distillation of spirits from fruit, to avoid arousing strong agriculturist opposition. Besides, the private distillation has increased rapidly from year to year. Of the 3,612 communes of Switzerland, there are distilleries of fruit spirit in nearly 3,000, not counting the household stills. In some communes every peasant has his own. Moreover, along with this increase in distilleries, fruit plantations have greatly multiplied of late years, while the export of fruit, previously as much as 10,000 carloads annually, was cut off by the war. Hence the sales of beverage alcohol by the Monopoly Administration—in normal years 70,000 hectolitres—fell to 7,172 hectolitres in 1921. It is not surprising that the account for 1922 closed with a heavy deficit, or that the Federal Government took the occasion to introduce a Bill extending the Federal control of the manufacture and sale to all alcohol produced in Switzerland, the distillers being required to deliver their output to the Monopoly Administration. As a concession to the agriculturists, the Confederation undertook to ensure to Swiss producers that all material for distillation unsuitable for other purposes should be taken over at a fair price. The Bill also provided that part of the spirit distilled from fruit should be converted into industrial alcohol, but sold only at a loss, to be compensated by the profit realised on beverage alcohol. The future yield of the monopoly was estimated at 25 million francs annually, part of which was to be devoted to old age and invalidity insurance. Unfortunately, the Bill was rejected on a popular vote by a large majority [336,163 votes to 225,203, and 14 Cantons to nine.—Ed.]. The opposition did not come merely from the trade or from those who regarded the reform as the first step to complete prohibition, but was due largely to the resentment unquestionably now current against any extension of the functions of the State—a resentment misplaced in the case of a reform of importance for public health. The revenue thus shut off will have to be provided by some far less rational and justifiable method, unless the Swiss people, having seen the consequences of its vote, rallies to the support of a new Bill which the head of the Finance Department is understood to contemplate, which will have regard both to the struggle against drink and the fiscal needs of the Confederation and the Cantons. Meanwhile, the Federal Council has just lowered considerably the price of spirits, and interest is felt in the use to be made of this year's fruit crop, which promises to be especially good.

To be consistent, the Swiss people should recognise that the progress of centralisation, the extension of State functions, and the abnormal growth of public expenditure are largely due to the fact that it has itself forced the State into extravagance by constantly demanding subventions. The message of the Federal Council accompanying the Budget of 1923 says in so many words that the increase of the Budget comes largely from the extraordinary development of subsidies, which in 1922 reached 45 million francs, and are estimated to amount to 52.6 millions in 1923, while they were not over 12 millions in 1901. These figures are only those of the ordinary subsidies; at least as much must be added for the extraordinary subsidies granted since 1917 to meet the economic crisis—unemployment, cost of living, housing, fall in exchange, and so forth. A scheme of reduction already prepared by the Finance Department will probably be dealt with by the Chambers in the autumn.

Commercial banking has fared better in 1922 than has industry, and considerably better in the second half of the year than in the first. Various mortgage banks, on the other hand, considerably involved in countries with which the exchange is depreciated, have been compelled to propose arrangements with their creditors and bondholders. Taking the eight great commercial banks, the total of their balances is less by 215 million francs, while the fall from 1920 to 1921 was about twice as much. The fall of prices has had an important influence. In consequence of the smaller volume of business (113 millions in 1922 against 123 in 1921), the gross profit has fallen to 139.4

millions, corresponding to a fall of 7.7 million francs. These results arise more especially from the smaller amount of bills held, the reduction of the rate of discount, the lessened volume of exchange transactions, and the decline in interest and commission (6 per cent.). The extinction of obligations, though less than in 1921, amounts to 7½ per cent. of the gross profit; it has not been necessary this year to take special measures in this direction. On the other hand, taxes have been a heavy burden (6 per cent. of the gross profit). The total net profit of the eight great banks shows a slight decline, in spite of the reduction in general expenses, which did not produce its full effects till nearly the end of the financial year. It reached 41.46 million francs, of which 38.5 millions were distributed among the shareholders, the dividends varying from 5 to 8 per cent. The dividend of three banks out of the eight was 1 per cent. below that of the previous year.

The Marconi Radio station—a Swiss joint-stock company established at Berne, and directly connected with the Marconi Wireless Telegraph Company, Limited, of London—has just published its first annual report, covering the period from the opening (April 12) to December 31, 1922. The equipment has been largely furnished by the London company, and the instruction of the operators has been carried on in London. Direct communication has been established successively with London, Spain, Poland, Czechoslovakia, and Russia. The last-named service was organised provisionally during the Lausanne Conference, and continues to ensure regular communication with Moscow. In the first nine months of its existence the Swiss Marconi Company has sent 95,600 telegrams. Though the development of the traffic has not fully met the expectation of the management—the reason being the too frequent lack in other countries of stations provided with the most recent improvements—the accounts of the working close with a surplus of receipts over expenditure amounting to 55,512f 39c, which has been credited to the renewal fund.

POLAND.—THE NEW CABINET—EXCHANGES—FINANCES—BALANCE OF TRADE—SUGAR EXPORT—STINNES' ACTIVITIES.

(FROM OUR CORRESPONDENT.)

WARSAW, June 18.

The Coalition formed by the Peasant party "Piast" and by the National Democratic party has finally succeeded, after a struggle of nearly six months, in overthrowing General Sikorski's Cabinet. The new Government is headed by the leader of the "Piast," Mr Witos. The position of the new Cabinet has been much weakened by the secession of the left wing of the "Piast." Mr Dabiski, with 15 members, has joined the Radical Peasant party "Wyzwolenie," and is strongly attacking the Coalition now in power. The majority backing the new Cabinet is very small, and in consequence it will be difficult to pursue any decided policy. Mr Witos like his predecessors will be obliged to steer a middle course, so as not to provoke a strong opposition. The pact signed by the National Democratic party and the "Piast" is kept secret, and in his official *exposé* Mr Witos declared that he will continue to respect the leader of the "Piast" Cabinet. Only in one the policy of the former Government. Two million acres of land (400,000 morgen) are to be allotted among the peasants out of the property of the great land-owners. It is certain that the realisation of this plan will entail a break-up of the Coalition, which is dependent on the support of the gentry, who naturally are strongly opposed to such a radical agrarian reform.

The change of the Cabinet has been followed by a rapid decline of the mark. It would be wrong to make the new Government responsible for the collapse. The coincidence is simply fortuitous. In my last letter I drew attention to the fact that the stabilisation of the mark since the end of April was largely the result of the intervention of the Polish National Bank, which maintained reserves. In April the amount of foreign currencies (including foreign accounts) fell from 42.7 to 37.4 million gold marks. In May a further decrease of 11.8 millions

took place, so that the Polish National Bank was obliged to abandon its policy of artificial stabilisation.

Left to itself, the mark began to decline by leaps and bounds, as may be seen from the figures below:—

	End of May.	June 9.	June 16.
Paris.....	3,570 ..	4,625 ..	6,650 ..
Zurich.....	9,775 ..	12,950 ..	19,400 ..
London.....	249,750 ..	332,500 ..	475,000 ..
New York.....	53,500 ..	71,300 ..	105,000 ..
Berlin.....	0.86 ..	0.81 ..	0.93 ..

In a fortnight the Polish mark lost nearly 50 per cent. of its value. The downward tendency is much accentuated by the great demand for foreign bills necessary for the payment of imported raw materials. Industry is passing again through a period of great activity. The number of unemployed, which amounted to 114,000 at the beginning of April, fell to 96,000 at the end of May, and is now only 87,000.

The banks are not able to meet the increased demand of the industry, and at the market rate it is impossible to obtain foreign bills. It may be expected in consequence that in the near future the mark will continue to decline.

Beneath the surface, however, it is possible to discern a current of financial recovery which will probably entail a marked improvement in the second half of the year. The financial situation is becoming better every month. In 1919 the revenues of the State covered only 17 per cent. of the expenditure. In 1921 the percentage rose to 30 per cent., in 1922 to 56 per cent., in April of this year to 68 per cent., and in May to 78 per cent. If the Diet had voted in time, the property tax, the turnover tax, and the new ground tax, introduced three months ago by Mr Grabski, the revenues would already be covering the whole ordinary expenditure. These Bills have only now been passed, and it may be expected that in July or August the printing press will be brought to a standstill. The advances made to the Government by the Polish National Bank have been decreasing since March. They amounted in that month to 662 millions, in April to 409 millions, and in May to 205 millions.

The balance of trade is also becoming more favourable. In January of this year the imports were by 26 million gold francs greater in value than exports. In February the surplus of exports over imports amounted to 12 million gold francs, and in March to 46 millions. This improvement is largely the result of temporary causes. The occupation of the Ruhr made the export of great quantities of coal from Polish Silesia to Germany possible. In March, out of a total export of 1,655,000 tons of coal, 1,288,000 were exported to Germany. The changed conditions in the Reich, in the first instance the fall of the German mark, affected this export very unfavourably in April, when it decreased by more than 50 per cent.

It is estimated that during the present campaign sugar exports will reach 120,000 tons, and that out of this source the Polish National Bank, which is financing these transactions, will receive £3½ millions. The progress of sugar production is very rapid. In 1922-23 it amounted to 2,683,400 metric centals, as compared with 1,508,900 metric centals during the previous campaign. This is an increase of 77.8 per cent. Production will have to be doubled before the pre-war level is regained.

The Polish Press is much alarmed by the news that Stinnes has acquired control of some important undertakings in Polish Upper Silesia—the Kattowitzer Bergbau Aktiengesellschaft and the Bismarckhütte. The majority of shares of these two companies has been purchased by the German mining and electric trust, in which Stinnes plays a dominant rôle. By a transfer of these shares to the Alpine Montan Gesellschaft the Upper Silesian works have passed nominally into Austrian hands, though in reality Stinnes gains a large measure of control.

Reports are also current that Stinnes is making equal efforts to obtain control over the Lodz textile industry. The *Republika*, published in Lodz, announces that a representative of Stinnes has during a visit in Poland been in contact with the representatives of the great industry. It is intended to open in Lodz a great bank, with the assistance of foreign capital. This bank would try to acquire the most important undertakings of the district, which would be united into a great textile trust. It seems that the Polish Government intends to make use of the powers it possesses on the basis of the Treaty of

Letters to the Editor.

CREDIT CONTROL AND UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I point out the great significance of the present economic situation in the United States, as outlined in your number of June 23rd, from the point of view of regulating industry by issuing credit in a direct ratio to the output of goods. Mr Swing mentions that when the inflation and boom threatened to proceed to dangerous lengths, "banks sent out warning messages which apparently were both needed and heeded. The wholesale price index finally dropped, and the Federal Reserve Board could announce that no increase of the discount rate would be required." Now it is objected against proposals for controlling prices by regulating issues of credit according to index numbers (for instance, by Mr Rowntree in his recent articles on unemployment in the *Times*) that as the bankers are competing for business it would be impossible to expect concerted action by them. But here we have them initiating the necessary action of their own volition in spite of the fact that bankers in the United States are numbered by the thousand.

Moreover, the matter need not be left to the discretion of the bankers at large. They can be compelled to conform almost automatically to the policy of the central bank by the simple expedient of limiting the output of legal tender to the amount necessary for the basis upon which to maintain the superstructure of credit which would keep the index numbers at the required level. It would then be impossible for the bankers to inflate, since they would not be allowed the legal tender upon which to base inflated credit. So long as index numbers showed a rising tendency, no further issues of legal tender need be allowed, and bankers would be compelled to trim their credits to the amount of their reserves. In this country we are peculiarly well placed to carry out such a policy, because we already have a central bank, a splendidly developed cheque system, a very limited number of banks, and an inconvertible paper currency in actual operation.

So long as the United States successfully pursues her present policy she need never have another serious slump. There can be no slump so long as money is issued on a scale sufficient to purchase, at the accepted level of prices, all the goods produced. But, as index numbers have been declining since last November, it is time that she lowered her bank rate and stopped the downward movement, otherwise she may bring on a quite unnecessary slump through declining values checking enterprise. What is wanted is stabilisation, not falling prices. Apart from that her only serious danger in the future will lie in the exhaustion of the amount of credit possible upon the basis of her available gold supplies, or the bringing on of a contraction of credit through the withdrawal of gold for abroad. An inconvertible paper currency would obviate these dangers.

We ourselves could permanently abolish our own unemployment problem within a few months by simply lowering the bank rate and pursuing a policy of inflation until such time as the million and a quarter at present unemployed are absorbed, and then stabilising prices at the higher level. The evils of a moderate amount of inflation would be as nothing compared with the advantages of abolishing unemployment, and obtaining the hundreds or even thousands of millions of additional wealth per annum which would automatically result. We have the remedy available for unemployment, and the greater part of our social evils whenever we like to put out our hands and take it.—Faithfully yours, CHARLES EDWARD PELL.

21 Westbourne avenue, Acton, W. 3, June 27th, 1923.

Books and Publications.

RECENT ECONOMIC LITERATURE—A MONTH'S SURVEY.

ECONOMIC facts rather than economic theory account for most of the books published in the last five weeks. They are descriptive, that is to say, rather than speculative. Where there is speculation it is political rather than academic.

Two of the outstanding volumes, both for their general and their particular interest, are *The Life of George Cadbury*, by Mr A. G. Gardiner (Cassell, 10s 6d), and that of Henry Ford, by himself (Heinemann, 12s 6d). It is certainly remarkable that one should be able to read, within the same month, the stories of two men of business, both highly successful in the worldly sense, but each conceiving himself to be directed by a quite unworldly purpose. As contributions to the study of "incentive"—a question quite fundamental both to the economist and the statesman, as well as of surpassing interest to the general student of business and politics—these two books are extremely significant. Both George Cadbury and Henry Ford made a great deal of money, but in neither case was the making of money the driving motive. In the mind of each one feels a sort of mystical, religious impulse as dominant. In George Cadbury, Quakerism was simple, obvious, direct. It was the strongest motive in his life—the determining characteristic. Henry Ford is a more ambiguous case. He talks a great deal about the idea of service, and undoubtedly believes in it. There is an idea behind the Ford car which is not simply commercial. At the same time, even in his own book, one feels the domineering egotism of the man: the mentality of the captain of industry in its clearest, most ruthless expression. He hardly needs to say that he has "no use for democracy," or a contempt for any notion of "human" relations between himself and his employees, or that the conception of joint responsibility fills him with angry derision. At the same time his discussion of the ethics, as well as of the economics, of high wages has the note of sincerity, though one cannot imagine him conducting family prayers for his workers, as did George Cadbury until Bourneville grew altogether too big for such a regular practice. Henry Ford remains an ambiguous figure; about George Cadbury there is nothing ambiguous at all. Of him one is tolerably certain that there is no "other side"; as Mr. Gardiner here shows him, so he was. Of Henry Ford, on the other hand, there certainly is another side, and one which, in the opinion of good judges, would make his election as U.S. President a disastrous adventure.

Perhaps the most interesting part of both these studies is that which deals with business; and there are, in particular, pages in Henry Ford's volume which may very usefully be considered in relation to such a book as *Business Cycles and Unemployment* (McGraw Hill Publishing Company, Limited, 20s), and especially to the introduction which Mr Herbert Hoover has written to the report and recommendations of the U.S. President's Conference on Unemployment. Mr Hoover is not an impressive or original writer: one has passed from the sharp outlines of an etching to the blurred effect of wool-work in turning to him from Henry Ford. His general attack is more like that of Professor Otfried Nippold, whose *Development of International Law After the World War* (Clarendon Press, 7s 6d) is a plea for a League of Nations, written before the end of the war—indeed, in 1917—by a German professor who had escaped to the asylum of Switzerland. Even in the excellent translation, one feels all the typical disadvantages of the German mind and style. A modern view of the League, excellent in its clearness and frankness in facing the difficulties, while thoroughly optimistic in general tone, is given by Mr Roth Williams in his *League of Nations To-day* (Allen and Unwin, 6s). A vigorous attack on the Board of Trade, and, indeed, on the Cabinet, for allowing Germany to continue to get supplies through neutrals, and permitting British firms to profit by this export, is the

substance of *The Triumph of Unarmed Forces*, by Rear-Admiral Consett (Williams and Norgate, 15s). The gallant Admiral brings together a large number of facts, some of them of considerable interest.

The economic bearing of none of these books is direct; nor is that of Mr Sidney Osborne's *The Saar Question* (Allen and Unwin, 12s 6d); Dott. Pietro Gorgolini's very friendly account of the Fascist Movement in Italian Life (with a preface by Mussolini) (Fisher Unwin, 10s 6d); nor of M. Brunet's careful analysis and exposition of *The German Constitution* (Fisher Unwin, 10s 6d). Each of them, however, in its different ways, helps to fill in the background which the economic student must not forget. He is, however, likely to be more specifically interested in a group of volumes dealing with various aspects of the great currency question. At their head may properly be placed the edition of Ricardo's *Economic Essays* (Bell, 6s), for which Sir E. C. K. Gonner prepared the notes, and wrote an introductory essay. There is much in the essay on the high price of bullion that, though accepted and familiar, is frequently forgotten. Next come Professor Irving Fisher's *Theories Regarding the Value of Money* (New York: Academy of Political Science); and Mr R. A. Lehfeldt's *Restoration of the World's Currencies* (P. S. King, 6s), a more or less popular exposition. An American volume which in some ways is particularly well done—and has, incidentally, excellent diagrams—is *Money*, by W. T. Foster and W. Catchings (Houghton Mifflin, \$3.50). It is intended as an introduction, and is both clear and concise. *The Nationalisation of Credit*, by Frank Lock (Sydney: obtainable from Simpson, Marshall, Hamilton, Kent, and Co., London, 7s 6d) has a subtitle, "A Cure for Industrial Unrest," which shows its point of view accurately enough to save some readers further trouble.

Mr Batten's *Fair Wage* (Pitman, 2s 6d) is a very careful and honest enquiry by a man who knows what he is talking about. There is more hard thought in it than in many stouter volumes. But Mr Batten will probably disappoint both sides in the great industrial argument. In *The Law of Property Act* (Sweet and Maxwell, 7s 6d) Mr E. J. Harvey sets out the effects of the revolutionary legislation in relation to real property, for which Lord Birkenhead was mainly responsible. *Secretarial Practice* (Heffer, 9s) is a revised and enlarged edition of the Manual of the Chartered Institute of Secretaries. The *Directory of Directors*, 1923 (Skinner, 23s); the *Directory of Shipowners, Shipbuilders, and Marine Engineers*, 1923 (33 Tothill street, 20s); and *Merchants, Manufacturers, and Shippers of the World* (Kelly, 2 vols., 64s) explain themselves.

The *Economic Journal* for June contains, among other valuable articles, one by Professor Verrijn Stuart on "Metallic and Non-metallic Standards of Money," in which the view is definitely advanced that "the development of currency systems tends definitely towards a non-metallic standard"; and one by Professor Pigou on prices and wages between 1906 and the outbreak of war, the enquiry being mainly in relation to the question of the effect on wages of gold movements.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
July 11. July 12.

The Stock Exchange settlement that finished on Thursday proved none too happy from the point of view of the bulls. Rumours of difficulties in the City and in the provinces contributed to the uneasiness generated by foreign politics and domestic capital requirements. Business has been slack, but the exhibition of a bear account, as disclosed by the carry-over on Tuesday, caused a rally in some of the markets where stock had been over-sold. New issues continue to be taken readily enough. The three million pounds 6 per cent. debenture offered at 94 by the Tokyo Electric Company was over-subscribed within an hour after the lists had been opened. There is some talk of an impending big issue from the British Government.

Conversion stock is the outstanding feature of strength in the Consol market. The price touched 80, but sharply rebounded on purchases of large lines of stock said to be on behalf of holders of the 5 per cent. War Loan, who were exchanging their security. The War Loan itself, however, gave no indication of being realised in blocks, because the price kept steady throughout the week. Victory bonds are quoted ex the drawing which took place last Monday. A good deal of quiet speculation goes on in India scrip, and the price, after its rise to 3 premium and descent to $\frac{1}{2}$ premium, is now about $\frac{1}{2}$ premium. Some of the gilt-edged stocks in the Home Railway market, together with those of high-class investment securities in other parts of the Stock Exchange, have yielded a little, the inference being that people have had to sell these in order to meet calls on new issues, and to satisfy the demands of the Inland Revenue for the second instalment of income-tax due next week.

Germans and Prussians have been put up, and French bonds, after very jerky movements, recovered from a fairly sharp fall that occurred earlier in the week. The new Austrian scrip, which had been up to 7 premium, fell back to $3\frac{1}{2}$ premium. The Dutch East Indies new scrip, the issue of which was heavily staggered, dropped to $1\frac{1}{2}$ discount, but soon recovered to nearly par. Other foreign Government bonds reflect the dullish conditions prevailing in the House, Brazilian, Chinese, and similar loans being easier for choice on the week.

On Great Western ordinary, the contango began at 5s per cent., but ran off to a backwardation of half-a-crown. On other stocks in the Home Railway market, the contango rates showed that not only had the bull account been reduced, but bears have been taking liberties with the stocks; consequently

there was a prompt recovery throughout the list. No improvement has occurred in Grand Trunks; indeed, the 4 per cent. debenture stock is lower. Mexican railways remain weak. Argentine rails further sagged at the opening of the week, to enjoy a swift recovery on a little buying based on dividend hopes. Brazilian railway stocks have begun to revive from previous weakness.

The rubber market is heavy, owing to another fall in the price of the raw material. The oil market shows further contraction in prices, due to the Mexican Eagle report, which announced the passing of the dividend on the ordinary shares. This caused a drop to 19s in Mexican Eagles, and Shells gave way in sympathy, because of the large holding which the company is known to possess in the Mexican Eagle. Anglo-Persians, Burmahs, Lobitos and other good oil shares have been lowered as tired holders got out of their stock. United British of Trinidad proved an exception to the general flatness, strength developing on the bringing in of a new well.

Courtaulds bent to 64s 6d before a bear squeeze served to rally the price. Tobacco shares also gave way, though later their persistent supporters in Bristol, coming in with substantial buying orders, put up the prices again. The shipping market is quiet, Cunards falling to a trifle under par, though Indo-Chinas are better, on buying said to come from the East. The banking and insurance markets are heavy, by reason of sales made to provide money for people who wanted to make use of it in other directions. National Bank of South Africa shares are acutely flat. Trust companies' stocks are again strong, rises of 1 to 5 points occurring in the leading ordinary stocks. The tea market shows irregularity, with Assams a strong feature; some of the lower-priced shares are a trifle easier. A drop in Marconis was followed by improvement on Signor Marconi's statement that important new developments are likely to ensue in connection with wireless. The cable group is lower to a slight extent. In the stores and catering group, Lyons and Barkers have both been dull in advance of the new preference issues to be made by the companies. Breweries are practically unchanged, with hotel shares inclined to be a trifle better. The general tendency of the industrial market synchronises with that prevailing in other parts of the House.

No improvement either in business or prices has occurred in the Kafir market, although a spurt in Chartered came as a pleasant relief to the dullness of the Rhodesian market. Gossip promptly associated the advance with the possibility of the British South African Company arriving at an early settlement with the Government. With tin, the metal, falling persistently, the shares in various companies connected with tin mining have naturally been weak. The copper group holds its prices fairly well. Diamonds were disposed to go lower; in other mining shares, Russian, Mexican, Indian, and Columbian, there has been so little going on that movements were confined to the smallest proportions where they occurred at all.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded	£	£	£	£

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Tokyo Electric Light Company, Limited.—Incorporated under the laws of Japan. Taking the yen at 2s, the paid-up share capital is £19,377,000, while the issued capital amounts to £25,800,000. The loan capital at present is £925,000. This is an offer for sale of £3,000,000 6 per cent. sterling bonds at 94, being part of an authorised issue of £6,000,000. The company was established in 1886, and has paid a dividend in every year of its existence. The area served is 9,375 square miles, including the cities of Greater Tokyo and Yokohama. Profits for the year ended November, 1922, are stated as £2,293,949, while surplus assets are given as £23,283,398, including the proceeds of the present issue. Principal and interest will be payable in London in sterling, free from all Japanese taxes, and the company has undertaken to apply £75,000 per annum, commencing with the year ending December 15, 1929, in the redemption of the bonds, any bonds not previously redeemed to be repaid on June 15, 1948, at par. The company may, however, after December 15, 1936, redeem all or any part of the outstanding bonds at par on giving six months' notice. This appears to be a well-secured issue in the foreign industrial class.

The Skoda Works.—Incorporated under the laws of the State of Czechoslovakia. Share capital 194 millions Czech crowns, equivalent, at current rate of exchange, to £4,240,329. Debentures for £2,000,000 have been authorised, and £1,000,000 8 per cent. first mortgage sterling debentures are now to be offered at 92. The issue is redeemable at par over 25 years, and interest will be paid free of Czechoslovakian taxation. The security offered is (a) a first charge on property and plant, and (b) a first charge upon £1,200,000 Roumanian Government 4 per cent. sterling consolidation bonds of 1922. Excess of assets over liabilities, possessed by the company, is given as £9,034,034, while a fairly good record of profits is given. The measure of risk entailed is denoted by the high yield obtainable, but subject to political considerations, the debentures are not without attraction.

Staffordshire Potteries Waterworks Company.—Offer for sale by tender of £150,000 5 per cent. perpetual preference stock, the minimum price of issue being £92 10s. per £100 stock. Capital already issued amounts to £571,434. A revenue surplus for the year ended March 25, 1923, is shown of £43,746, as available for preference dividend. Thus a comfortable margin for dividend payments is assured.

The Borhat Tea Company, Limited.—Capital authorised and subscribed £180,000, in shares of £1 each. To comply with Stock Exchange regulations, particulars are advertised in the Press of the Borhat Tea Company, an undertaking originally formed in 1903, and reconstructed in 1920. The estates are in Assam, and comprise an area of about 6,000 acres, of which 1,621 acres are planted, 1,546 acres being mature. A first dividend of 4 per cent. was paid for 1921, and there has been an interim distribution of 2 per cent. on behalf of 1922. The information is insufficient to form a close idea as to the value of the shares.

The Western Electric Distributing Corporation, Limited.—Authorised share capital £100,000, divided into 50,000 6 per cent. cumulative preference and 50,000 ordinary shares, all of £1 each. Of these shares, 12,245 preference and 31,538 ordinary have been issued fully paid, while 35,755 preference are 10s paid and 18,462 ordinary shares 2s 6d paid. The Western Electric Distributing Corporation, Limited, was incorporated in November, 1903, to carry on the business of an electric lighting and power company in Chippenham, Cirencester, Melksham, Stroud, Trowbridge, and other places. Surplus assets are valued at £47,751, while proceeds from sales of shares provide an additional £52,614. Fairly good dividends have been paid on the ordinary shares since 1914, and, as far as can be judged from the advertised notice (which is published to comply with Stock Exchange regulations), the company appears to be in reasonably prosperous state.

The Anglo-American and Brazilian Mines Trust, Limited.—Authorised capital £60,000, of which £40,100 has been issued. There are 24,100 "A" ordinary shares of £1 each with 10s paid, 6,000 "A" ordinary shares, fully paid, and 200,000 "B" ordinary shares, fully paid. These particulars are advertised in the Press to comply with Stock Exchange regulations. How profits are to be divided, and the arrangement of voting powers, are set out in detail, which investors should carefully read. The objects of the company are denoted by its title, and it is obviously a speculative proposition.

The Fairbanks Gold Dredging Company, Limited.—Authorised share capital £150,000, in shares of £1 each, of which 138,187 have been issued. The object of the company can be gathered from title. Details are given in the public Press to comply with the Stock Exchange authorities in connection with a quotation for its shares.

will bring together some aspects of these observations in the conviction that various reforms in our institutions are necessary, and for these, as such, we claim the co-operation of Congress. In the Estimates Bill, which awaits your sanction, some of these suggested reforms are dealt with. These will be completed by means of complementary legislation, which will engage your attention as and when it may be required for better serving its purpose, and they will be supported by the Executive Power when it is so demanded.

PUBLIC SERVICES.

I might say at once that I think it necessary in the organisation of the public services that a discipline based on ability is a matter of necessity, and, if possible, offices of all categories should be filled so that competency and devotion may become the only forces bringing recognition in what should be a real administrative career. My Government has endeavoured to spread these ideas, and will devote itself to settle these matters by public opinion.

I place particular importance on this matter, as I believe that, however much laws and regulations may tend to ensure the smoothest working for our institutions, the personal factor which functions in such legal provisions is a decisive factor as to their practical efficiency. Such were my ideas when I had the honour to share the duties of my present hearers, and I still hold them. I believe that the work of those men responsible for the affairs of State will be ineffectual if they do not, in their administrative departments, count upon that necessary and adequate collaboration for the purpose of carrying on those daily and constant relations between the Government and public and private interests.

Upon this basis of real democracy at home, and of peace and frankness with regard to international relations, and of progressive improvements in our administrative life, I trust that my Government will succeed in resolving those fundamental and urgent questions which affect the progress of the country.

I am of the opinion that the nature and object of the Annual Message of the Executive Power does not require that such a document should make an unmeasured claim to being a general Government programme. It is more suitable that it should be a review of the principal matters of the period to which it refers, and which the records of the State Departments will in due course confirm, and of the ideas of the Executive Power relating to questions which will probably subsequently occupy the attention of the public powers. In conformity with these ideas, and bearing in mind that there are under the consideration of Congress matters connected with the economic situation of the country, I am pleased to bring to my recollection the fact that the Executive Power has shown in various ways its pre-occupation in this direction.

IMPROVEMENT OF CATTLE INDUSTRY.

Government and Congress have given very special consideration to the condition of the cattle industry, which has at all times attracted the best attention and the capital of the Argentine people. The recent and still existing crisis has given an opportunity for judging this industry better than in the times of prosperity. The attention which the Government and Congress have given to this matter has contributed to the adoption of measures which tend to procure better conditions for the great interests at stake, and to formulate better legislation ensuring better and more productive working. I think that we shall reach a point which will at least to a great extent prevent the almost periodical repetition of these crises.

The conditions pertaining to our geographical and economical situation make cattle and agriculture the principal sources of our public and private wealth. But we must admit that, notwithstanding the progress which we have made, there is still much that is wanting in the matter of improving our methods of labour, our transport, and the utilisation of the products of these industries.

ECONOMIC POLICY.

The present position of the national economy, and its connection with world economy, requires that our country should clearly define an economic policy, so that we may not fall behind in the development of our industries and in that industrial improvement in

which progressive countries are interested. After defining this policy, we must apply ourselves with energy and consistency to the carrying out of these developments which may proceed from such policy.

The international conditions which tend to modify our economic policy are only partially unfavourable to us. They can benefit the country by rendering it less difficult for us to commence a new stage in the development of our resources and of our industries, which will be of great and incalculable value to the nation. It is necessary to make constant efforts in order to ensure a more diversified and increased production, both in respect of labour and in the matter of more independent commercial life, so that progress is made and we may become dependent upon ourselves.

It must be understood that this economic policy of development and expansion cannot exclude commercial and financial relations with other nations, nor even decrease our active trade with foreign countries. It must tend solely to the increase and improvement of our own production.

I think that the efficacy of a national economic policy, in the fullest sense of the term, will lie in the degree of co-operation existing between the administrative power, on the one hand, and producers—that is, the workers, capitalists and technical experts—on the other.

DIVERSIFIED PRODUCTION NECESSARY.

There is no doubt that excessive production in some lines at the expense of many of the other various sources of wealth, presents a grave handicap to the country's trade. It is necessary for production to be more diversified and that assistance should be given to those who endeavour to provide the country with products which have not yet procured an extensive market, but which are as valuable as those which constitute the bulk of our present production. We shall thus avoid the present lack of economic equilibrium between the various political divisions of the country, and the different zones of production, which lack of equilibrium entails an economic injustice needing adjustment, and constitutes a political and social problem which calls for solution.

Our manufacturing industries, and the arts in general, are beginning to develop in a very satisfactory manner, and they must be stimulated so as to give as efficient results as possible. My Government considers the development of industries the best medium for the advancement and cultivated progress of the country.

The executive power holds that it must specially protect those of our industries employing raw material produced in the country. It is necessary to prevent competition from abroad destroying these industries, thereby cutting off valuable outlets for labour and bringing down the level of the life of our workmen. Invested capital must be encouraged, work must be protected and individual ability likewise encouraged. But all this will certainly not prevent the encouragement of industries which, although employing foreign raw material, may be of benefit to the country.

QUESTION OF POPULATION.

The problem of the development of industries involves, in addition to its economic aspects proper, the question of population. With a weak and small population it is difficult to solve this problem. Hence the necessity of improving the physical surroundings of our people by better sanitary conditions and by encouraging suitable conditions for small holding cultivation. This is quite apart from the factor of emigration. This latter opens up a series of questions, grounded upon the necessity of selecting such emigrants as shall become useful and remain in the country. It will be necessary to carry through legislation to ensure the indispensable factors for the object that we have in view, such as skilled advice, easier means of transport, social safety, credit organisation, &c.

MEANS OF CREATING WORK.

We can create work by three means—namely, by colonising, by increasing the volume of production, and by developing the industrial application of national wealth in the form of raw material.

The work is complex, but in many of its aspects it is being realised. The Government believes that it must foster this new economic policy and take upon itself without hesitation that part of the task which it may be possible for it to directly carry out.

My Government believes that any scheme of official colonisation must comprise the following characteristics—namely, it must embrace all parts of the country, in order that, in the new colonies, we may produce all the products which our immense territory allows, thereby helping to avoid the present excessive uniformity of production, and that each colony should be sufficiently strong to form a kind of co-operative society. The colonies would thus command the confidence of the credit institutions and the support of other necessary institutions. Further, the holding of land should not be of only one form, but rather be leasehold or freehold, facilities being afforded for purchase by means of mortgage loans.

PRIVATE INITIATIVE IN COLONISATION.

The development of private initiative for colonisation purposes will be a matter for the Government's earnest consideration. We must not exclude joint action on the part of the State and of private individuals, more particularly when the latter may desire to give up their lands, so that, with the State's co-operation, these may be set apart for colonisation under a satisfactory regime as regards economic, judicial and social matters.

As we make progress with the complex work outlined, and which will be assisted by the financial methods, to which I am referring later, we hope to create a sense of general welfare indispensable and proper to an intellectual and intelligent life, thereby multiplying the factors of a higher civilisation, together with individual and collective expressions of a more advanced culture.

FOREIGN AFFAIRS.

I have already stated that the condition of the international relations of the Republic with all the civilised countries of the world is one of perfect cordiality. This tendency is so conclusive as to allow us the assurance that our happy tradition of fraternity will not change. We shall contribute to this with the sincere and earnest desire, which I entertain, for maintaining for our country the high consideration which it has obtained, and to which it is entitled by its moral and material importance.

I particularly desire to place on record that this spirit of reciprocity of a friendly nature characterises very specially the relations with our sister republics of America. The Embassies extraordinarily appointed especially to Buenos Aires upon the transfer of Government corroborate this condition of frank cordiality and high esteem. We, on our part, have reciprocated in due and proper form, and in some cases, such as for the celebration in memory of Artigas and the change of Government in the sister Republic, we associated ourselves by sending special embassies.

The appointments of the persons who have to discharge the offices of permanent ambassadors in Brazil and in Chili, which have been made in accordance with the initiative of the previous Government and the proposal for the appointment of ambassadors to Mexico and from Mexico to this Republic, are facts which serve to show the satisfactory condition of American fraternity.

FIFTH PAN-AMERICAN CONFERENCE.

In accordance with this unchanging sentiment of continental concord, the Republic has contributed to the labours of the Fifth Pan-American Conference, which met at Santiago de Chile, whose decisions I am sure have helped to strengthen the principles of justice and solidarity which guide our democracies. The Argentine Delegation has contributed to this by interpreting the directions of this Government in consonance with the honourable traditions of our international relations.

The Executive Power will forward you in the course of the ordinary sittings, to take place during this term, information which will enable you to appreciate and deliberate upon the situation of the Republic in connection with the League of Nations, to which it has adhered in principle with the democratic spirit and ideas that inspire Argentine foreign policy. The Republic has taken part in the international conferences held at

Washington, Paris and Geneva, where it was demonstrated that the principal resolutions adopted already formed part of our legislation for the protection of the labour of men of goodwill who give their best efforts for the development of their country.

In order to intensify this happy state of our foreign relations, the respective department has within the brief period of time to which this address refers put into practice measures which will be pursued in order that our diplomatic and consular representatives may be able to perform their duties with the maximum degree of efficiency and prepare themselves for whatever may be required in connection with their delicate business.

The Executive Power will, in all cases, endeavour so to act that the higher representatives of the Church may preserve the traditions which have hitherto characterised them.

With regard to the work carried on by the official benevolent institutions, although Government opinion is quite favourable to the action taken, it is of opinion that it is necessary that an endeavour should be made to vary the bases of their working.

JUSTICE.

After reference to the new penal code, from the application of which the Executive Power expects good results, we feel the necessity of a law authorising the building of prisons in conformity with modern requirements, as well as the provision of some means of protection for released prisoners.

During the present sitting of Congress, a memorandum will be submitted with reference to rents.

I must not close this reference to matters of justice without urging upon your consideration the great need that is felt for the reorganisation of the judiciary of the peace for the capital upon a basis that will not only be in keeping with the interests discussed there, but also with the degree of culture which the metropolis has reached.

EDUCATION.

In the year 1922 there were in operation in the country 9,940 elementary schools with 1,227,400 pupils, and an average registered attendance of 960,849 pupils and 40,169 teachers. With regard to the pupils of school age, out of a total of 1,786,250 approximately, calculated during the last year, the schools were attended by 1,230,037; that is to say, 68.86 per cent., as against 65.79 per cent. for the year 1921.

I call attention to the excess of teachers admitted annually, and suggest the advisability of devoting some schools to purposes other than those for which they are used at present.

During the year 1922, 174 secondary instruction institutions were in operation, being both normal and special schools, with a total of 72,837 registered pupils and 5,912 teachers.

PUBLIC WORKS.

Reference must be made to the present conditions of the private railways and to the larger revenue as compared with the period of five years from 1917 to 1922. The sum of 60,000,000 gold dollars of net profit in round figures obtained during the last year is, without doubt, a sure sign of vitality and a demonstration of progress.

If we add that working expenses decreased by 30,000,000 gold dollars as compared with 1920, and by 21,000,000 as compared with 1921, the above statements are fully justified, as they prove that the productive capacity of the country demands a progressive increase of traffic undertakings, and offers great commercial possibilities for private capital invested in work of this kind.

Passenger traffic has increased to an appreciable extent, and goods traffic also shows greater tonnage as contrasted with the year 1921.

NATIONAL RAILWAYS.

The length of the National Railways now working, including those belonging to the State, to the Provinces, to the Ports, industrial railways, and branch lines for private services, reach a total of 37,368 kilometres. This figure places our country ahead of all South American countries, exceeding by more than 6,000 kilometres the figures for Brazil and Mexico.

As regards lines belonging to the State the Executive Power

has given special attention to these, and has forwarded to Congress a Bill setting forth a new organic law to enable them to discharge without inconvenience or difficulty the purpose for which they were created.

A plan has also been submitted to the consideration of the legislative power for a general reconstruction which will entail economy in administration.

The construction of new lines has gone on regularly. We must endeavour to arrange that the short-term loans by which these works are paid for be replaced by other loans for long terms, so that these works, which will produce permanent future benefits, shall be paid for in the future by those who will derive benefit from them. For this purpose the Executive Power will submit a suitable plan.

BRIDGES, ROADS, AND IRRIGATION.

An analysis is being made of the work done by the Office of Bridges and Roads, the Office of Architecture, and the Department for the Survey of Riachuelo. We shall shortly be considering the work done by the Harbours Offices, having in view the construction of a modern harbour at Bahia Blanca and the acceleration of work at the Port of Comodoro Rivadavia.

With reference to irrigation work, this has been continued with the means at our disposal at San Carlos, La Cienaga, Rio Perico, Dique del Neuquen and Lago Pellergrini, Rio Regro Superior, Famatina, Villa Mercedes, and Rio del Valle.

The sanitary services are working in a normal way, both in the capital and in the towns of the interior, and with a view to providing for the future a scheme is being prepared which will meet the requirements of a population of 6,000,000 in the Federal capital.

HOME AFFAIRS.

In its relations with the Provinces the Executive Power has been careful to maintain that spirit of the constitution which ensures to the former autonomy in all local matters, without prejudice to the powers appertaining to the Federal Government for the benefit of the nation as a whole.

When the present Presidency came into power two Provinces were under the control of the Federal intervention—that is, those of San Luis and San Juan. Both these have now returned to the enjoyment of their normal institutions.

The Province of Cordoba was in a peculiar position. The National Executive Power had ignored the Governor, who had been elected unconstitutionally. Congress has had in hand a law for intervention in the said Province in order to reorganise its public powers. Matters being on this basis my Government thought that it ought not to change the state of affairs, and that it ought to wait for Congress to give its decision, as the power for intervening in the Provinces should only be exercised by the Executive during the recess of Congress when the matter is urgent and admits of no delay.

CORDOBA AFFAIRS.

In consequence of this the Executive Power included the Cordoba affair in its notice convening an extraordinary session of Congress, in order that this matter might be dealt with as early as possible. However, consideration of the matter has not yet ended. It is still pending at the opening of the ordinary session.

In the Province of Jujuy the political unrest created by the election of the National Senators still continues. This and many other previous cases occurring in various Provinces suggests the advisability of modifying the form of electing Senators by transferring from the Legislatures to the people the right of making such elections, as is already done in the United States, from whence the Argentine adopted the system which still guides us. I am not in favour of frequent revisions of constitutions, but I think that these ought to be gradually perfected by means of partial amendments as counselled by experience. I shall in due course submit to you a Bill on the subject.

POSTS AND TELEGRAPHS.

The service of postal and telegraphic communications has shown more activity. The postal service had a total of 1,472,441,978 items

—that is to say, 185,764,818 more than in the year 1921. The national telegraphic lines transmitted 20,414,426 messages, there being an increase of 172,716 over the total for the year 1921.

The income of the post office was 18,614,106.43 pesos, this being an increase of 1,529,914.18 over the previous year, and the telegraph office income was 7,143,353.98 pesos, an increase of 189,973.04 pesos. At the end of the year the extent of the telegraphic lines was 41,554 kilometres.

HYGIENE AND PUBLIC HEALTH.

The sanitary condition of the country has shown no disturbance of a grave nature, but it is necessary to intensify the fight against malaria and other infectious diseases in the Northern Provinces.

With a view to organising sanitary defence and unifying this by the middle of the year, a National Sanitary Conference will be held, which will be attended by members of the National Hygienic Departments.

We expect to be able to carry out in an efficient manner the repression of drug-taking, and this will be done so soon as a proper law, now in course of preparation, is passed. This matter will be considered at the Sanitary Conference.

NATIONAL TERRITORIES.

Administration and development of the national territories forms a subject of careful study on the part of the Executive Power, and urgent measures required for the carrying out of the organisation laws have been adopted with the object of preventing conflicts which take place owing to their non-observance.

Places which attained a population according to the number required by law in order to obtain a Legislature of their own will this year exercise this right.

At Pampa, Misiones, Chaco, and Chubut new municipalities have been recently formed.

AGRICULTURAL AND CATTLE INDUSTRIES.

With regard to agriculture, it is necessary to enlarge our area of cultivation and to increase the production per hectare. It can be stated that during the last 15 years cultivation and production have remained at about the same figure.

The selection of seeds, the improvement of methods of cultivation, harvesting and marketing of products, will aid in strengthening our agricultural industry.

The crisis in the cattle industry has from the very commencement engaged the earnest attention of the Government by reason of the great interests involved, and because of the effect on credit exchange and the public revenues. Measures which have received the sanction of the Chamber of Deputies, if passed into law, will, it is hoped, contribute to a greater stability in the cattle trade.

EMIGRATION.

Emigration into the country continues to be on a good scale, but it is necessary that it be organised in order that we may assimilate it and control by careful selection. A law providing for these needs is now ready, and will be submitted to the consideration of Congress.

PETROLEUM.

The petroleum deposits have been the subject of special attention. We have succeeded in attaining increased production and in reducing costs. Control has been organised by a Commission, which watches over and promotes the interest of the industry.

A general law relating to petroleum and hydro-carbons will shortly be placed before you, and we hope before long to instal a large refinery to deal with these valuable products. The object is to give to the country an autonomy of combustibles, and it is my aim that this shall take place at the earliest possible date.

FINANCIAL POSITION.

My Government has the firm intention of economising in all the expenditures of the nation, so as to bring them within the annual estimates and in accord with the real and effective resources, so

that there may not be too heavy a burden on the various sections of our national life.

Expenditures under special laws or Government resolutions should be avoided, as in both cases there would inevitably be deficits, and the consequent resort to credits to cover such deficits.

The public debt of the nation increases year by year on account of deficits relating to unproductive expenditure. I do not here refer to outlays intended to augment our national wealth, such as those connected with public works; it is only just that future generations who are fully to enjoy the benefits of these works should contribute part of the expenses incurred upon them.

My Government has given special study to the financial situation, and notwithstanding the brief time at our disposal introduced during the first days of December an Estimates Bill for the present year. This included all actual outlays which were being made, and which owing to lack of time the Government Departments were not able to examine closely as to whether they were capable of a decrease.

These estimates were planned with all the necessary resources in hand to produce a perfect equilibrium without any fundamental reforms in taxation. It is to be regretted that this Bill did not receive your sanction at the proper time, for we should then have avoided the special resolutions voted for the first four months of this year.

BUDGET FOR 1924.

I am of opinion that, according to the spirit of our constitution, the approval of the Budget should be effected during the ordinary sessions, and that the Executive and Legislative Power should endeavour to attain this end. I have already taken the necessary measures so that at the first sittings to be held by you the Budget for the year 1924 should be laid before you.

I desire to place before you a Budget which, besides providing as far as possible for all the expenses which may be required for the proper working of the administration, shall be perfectly balanced, shall be clear and methodical, and shall simplify the numerous and varied items which have always made it confusing and inharmonious.

TAXATION REFORM.

The taxation laws, as well as those controlling Exchequer receipts and outgoings, are the subject of study. The reform of the first is indispensable, and should contain the following three essentials: The rearrangement of taxation in order to be more in harmony with the economic capacity of the taxpayer; the co-ordination of the taxation laws of the nation, the provinces, and of the communes; and a declaration of the limits of the taxable capacity of the country.

My Government thinks that the present national taxation weighs too heavily on the necessities of life, and too little upon the excess of individual resources.

Although the requirements necessary for balancing the national estimates may demand resources producing more immediate results, my Government thinks that the centre of future taxation reform should be the tax on income on the basis of an equitable arrangement previously arrived at with the Provinces, which shall lead to the suppression of Provincial internal taxes, thus removing the drawbacks against free circulation between the States, and permitting the levying of general taxation on the whole of the country.

An arrangement with the Provinces, which shall establish their participation in the national internal loans and in taxation on income, and also on estates of a national character, will not only be for the benefit of taxpayers, but also lead to economy in the public funds.

Together with more productive industrial resources, particularly in the case of petroleum, making the latter part of our future wealth, this will allow of a gradual reduction in taxation.

CONSOLIDATION OF FLOATING DEBT.

At the request of the Chamber of Deputies, particulars relating to the amount of the floating public debt were sent to Congress, and

subsequently schemes which my Government deemed to be necessary in order to consolidate this debt, which weighs so heavily on the public treasury, were also forwarded.

The difficult condition of the national finances was justified by the abnormal circumstances which the money markets of the world experienced during the war and the period immediately following, but it would not be reasonable to maintain that situation now. At the present time our country could obtain advantageous terms for carrying out important operations, and I consider it my duty to call the attention of Congress to the urgent need there is for sanctioning the suggestions I have submitted to your consideration, and which will enable the Government to adopt methodical plans for the consolidation of the public debt, for commercial development, and for public works.

With the balancing of the Budget, the consolidation of the floating debt, together with a watchful eye on the revenue, and the most careful control over public expenditure, it is to be hoped that the finances of the nation will return to a normal condition.

REVENUE IN 1922.

During the year 1922 the general revenue as estimated and the subsidy fund produced 440,800,000 pesos.

The extraordinary resources of which use was made during this period are as follows:—

	Pesos.
Negotiation of securities	41,634,000
Proceeds of 27,000,000 dollars	60,417,000
Profits on sale of drafts	11,415,000
Credit used in the country	74,400,000
Various items	11,056,000
Total	198,922,000

The total revenue during the year was 639,722,000 pesos.

EXPENSES AND DEFICIT.

The following was the authorised expenditure during the same period.

	Pesos.
Estimates	510,101,000
Transfer of credit from previous years	18,330,000
Special laws	19,542,000
Government authorisations	83,517,000
Various items	1,935,000
	633,434,000

On account of this sum there were paid up to December 31, 1922, 542,323,000 pesos, and on account of balances of charges for years previous to 1922 97,399,000 pesos.

The following unpaid balances have been carried forward to the present Budget:—

	Pesos.
From previous years	10,633,000
From the year 1922	91,111,000
	101,744,000

This latter was on March 31st of this year reduced to 35,238,000 pesos by means of funds from the previous year.

NEGOTIATION OF SECURITIES.

I must make reference to the placing of securities authorised by the 1922 Budget and to the sale of a part of the Port of Buenos Aires bonds negotiated in order that the Government be reimbursed for the sum paid in cash for works executed.

As the conditions of the London market were not at the time advantageous for the placing of these securities, the transaction was postponed, and instead the Government accepted an offer made by a banking establishment of that city to advance the sum of £500,000, at interest of 5 per cent. per annum, on the understand-

ing that the same be paid off later by the sale of the said securities at a price to be agreed upon.

STATE DEBT.

The consolidated public debt of the nation amounted on December 31, 1922, to 1,294,888,500 pesos, and during that year 60,000,000 pesos were issued and 42,837,889 pesos paid off.

On the same date the unconsolidated debt without including that on the State railways or that arising from the difference in exchange on the British loan of \$50,000,000, was as follows:—

	\$
North American loan of 50,000,000 dollars gold	117,772,727
North American loan of 27,000,000 dollars gold	63,597,272
Short-term loans contracted in the country	430,339,000
Banco de la Nacion Law No. 10,251	71,999,663
Banco de la Nacion current account	46,346,683
Treasury Bills	10,227,111
Total	740,282,456

Deducting from the debt of 46,346,683 pesos to the Banco de la Nacion the total of the official deposits in the bank, there remains a balance of 1,712,832 pesos to the credit of the Government.

On March 31st last the unconsolidated debt referred to had been reduced to \$702,000,000 in consequence of the redemption of Treasury Bills and the account current at the Banco de la Nacion with funds and resources carried forward from the year 1921.

ARMY AND NAVY.

One of my purposes when assuming charge of the Executive Power was to pay great attention to the progress of the Army and Navy. During the short time which has elapsed since then it has not been possible to visualise more than a part of the studies required for a solution of the different questions involved. The result of those studies will be submitted to your consideration in the shape of Bills to be presented at the beginning of your sittings.

Many circumstances which are within the knowledge of the public have influenced us within these last years to limit the expenses for war estimates, to the detriment of the training of our troops, as it has been impossible to carry out the programmes for their instruction. Also, and this is more serious, no opportunity has offered itself for our officers to exercise in due form their multifarious and difficult functions. And in reference to this it should be borne in mind that if the experience of war has demonstrated that several months are required for the instruction of soldiers, the same experience also teaches that officers also are instructed in only one way, and that is by assiduous and constant practice in time of peace.

REFORMATION OF SOME LAWS.

Law No. 4,707, even if applied without diminution as regards the terms that it fixes for the stay of the soldier in the ranks, has become old, and must be reformed.

This has been recognised by my predecessors and the Chamber of Deputies, one of the Committees of which latter studied a Bill of reform, which, however, the Chamber did not sanction.

The whole of the people must come forward for the defence of the nation. Young men require to be physically trained to be able to support the fatigue of intensive military instruction, and it is also necessary that citizens not incorporated in the peace Army should submit to a physical training which may transform them into useful units for defensive purposes in case of mobilisation. It is also necessary to better distribute the burdens borne by the citizens in this respect. The new law which the Executive Power hopes to lay before you at the present sittings will deal with these points.

PROMOTION OF OFFICERS.

If there is an urgent need of reform in the law for recruiting for the Army, there is still more need for reform in the law relative to promotions. Law No. 9,675 proved to be almost unworkable in practice, and this was already recognised by you when dictating Law No. 11,079, which suspended one of the former's fundamental provisions, and which at the same time altered in such a manner

the spirit of the law that it no longer answers the purposes for which it was passed.

If all matters relating to officers are important, those referring to the non-commissioned officers are no less so. The preponderance of automatic arms, the new technical elements introduced into the Army, such as radio telegraphy, aviation, &c., and the complexity of the new forms of war require a staff of expert and professional non-commissioned officers, and these can only be obtained by improving their position and the remuneration for their services. A consequent improvement in the morale of the latter would follow, and this latter is necessary to ensure proper treatment of citizens who join the Army.

It is for these reasons that at the first sitting of this legislative period a scheme will be laid before you which will be supplemented by another meant to secure the positions of those concerned.

WAR MATERIAL.

Matters relating to war material of which we dispose are of importance for the efficiency of the Army, and in this connection I have to confess that present conditions are not equal to those prevailing amongst most of the South American nations.

The Executive Power has stated, and it now confirms that statement, that it is far from its mind to enter into a competition for armaments, this being in no way justified in this part of the world. The cordiality of relationships with all nations, the traditional policy which has always guided, and will in future continue to guide, the international relations of our country, and the ambition of the Argentine people to devote the whole of their efforts to bring about the internal greatness of the country, and to create for themselves the best possible conditions, rule out the possibility of a competition with other countries in regard to armaments.

But this must not impede the nation making adequate preparations for its defence.

Since the year 1911 no war material has been acquired, and the great transformations which have taken place since then render necessary a complete renewal of that which is now in service. This must be done as and when it may be required. This is perhaps one of the questions with which you will have to deal with urgency, since a good part of the training of a soldier is lost, and sacrifice made by the country is sterile, if under the present system of compulsory service a soldier who passes to the reserve without knowing the material which he may be called upon to use becomes a combatant to be deducted from mobilisation strength.

MARINE.

The direction and development of this branch of the national defence will be attended to with all possible interest, so that material may be kept in the best condition either by modernising it or by introducing such improvements as are possible in order that it may supply the needs of the service.

Taking into account the importance of our maritime commercial activity it is advisable to increase the Navy transports and encourage by every possible means the development of the merchant marine, not only for ocean navigation but also for river navigation, by means of laws and regulations which may protect and promote it.

PERSONNEL OF THE NAVY.

With regard to the personnel of the Navy, the training is excellent and the enthusiasm and patriotism with which it discharges its duties is perfectly satisfactory, but it is essential that every opportunity be afforded for navigation work.

With this object, one of the first measures taken by the Naval Department was to give orders for the Second Division of the Fleet to make a voyage to the southern seas, crossing the channels of Tierra del Fuego and the Straits of Magellan, and making a general visit to the whole of our Patagonian coast. Other ships of the Fleet visited the ports of this zone.

The cadet training ship "President Sarmiento" recently put to sea on one of her frequent training voyages.

The charting of our coast is being continued by officers who are contributing work of real importance and value.

The lighting up of the coast has been well attended to, and the lighthouses are in first-rate order. We are endeavouring to increase the number of these in order that navigation and access to our ports may be safe.

One of our ships has recently made an interesting voyage to the Polar regions, taking a competent staff to relieve that which has been kept at the Orcadas Islands, where there is an Argentine Observatory, which has for the last 21 years conducted meteorological studies of high value.

The Marine Administrative Department is being reorganised in uniformity with the conception that we have of this most important branch of the Service, to the end that the managements of the Army and Navy may possess that autonomy which is conferred upon them by Law No. 3,305, which they must have in order that they may be in the position to develop, and the maximum of efficiency be attained.

APPRENTICES' MECHANICAL SCHOOL.

Without prejudice to that attention which we shall pay to the better organisation of the institutions connected with the Navy, and which contribute towards the preparation of the staff, I deem it expedient to proceed at once to the adequate installation of the Apprentices' Mechanical School. This is in need of a suitable site and requires to enlarge its scope. It is an institution which, besides providing the Fleet with an expert staff, also offers to capable men a special line of activity.

I think I have covered all matters which a message of this description permits within its scope, and I trust it will suffice to convince you that my Government is desirous of the most active endeavours, and requires the whole-hearted collaboration of Congress in order to ensure the efficiency of its work, to which I shall devote myself with that patriotism which we all owe to our country. With my best wishes that this may be so I now declare the legislative period open for the year 1923.

BLEACHERS' ASSOCIATION, LIMITED. GRATIFYING RESULTS OF A DIFFICULT YEAR. STAFF PENSION FUND ESTABLISHED.

The twenty-fourth ordinary general meeting of the Bleachers' Association, Limited, was held, in the Memorial Hall, Albert square, Manchester, on Friday, June 22, 1923.

Lieut.-Col Sir Alan J. Sykes, Bart., presided. The Secretary read the notice calling the meeting, and the report of the auditors.

The Chairman said: Ladies and gentlemen,—I have much pleasure in submitting to you the 23rd annual report of Bleachers' Association, Limited, covering the accounts for the period ending March 31, 1923.

I feel sure that you will be gratified with the figures that the directors are able to place before you, particularly in view of the difficult times through which the cotton trade has passed during the twelve months under review.

THE ACCOUNTS.

The accounts which have been sent to you have been drawn up in the form to which you have been accustomed in previous years, and they do not call for much comment. You will notice that after charging £410,499 to repairs and maintenance, as against £405,655 a year ago, and after making the usual deductions, including estimated amounts for income-tax, corporation profits tax, special repairs, and other contingencies, and charging the same amount as last year for depreciation and debenture interest, there remains a net profit of £788,464, which, with the balance forward from last year, gives an available balance of £1,147,870.

RESERVE AND DIVIDEND.

Out of this balance, after paying the preference dividend, the directors recommend that £125,000 be placed to the general reserve fund, £50,953 12s 8d to the superannuation fund, and a final dividend of 15 per cent. (actual) be paid, making 20 per cent. for the year. These deductions will leave a balance to be carried forward of £361,711, which is slightly in excess of the amount brought into the accounts.

As regards the superannuation fund, you will notice that the transfer now recommended will bring the total up to £200,000.

STAFF PENSION FUND.

A year ago I gave you some details of a proposed staff pension fund which the directors were then contemplating. I have the pleasure to inform you that this staff pension fund has been duly formed, and has been established for the benefit of the members of our staff as from January 1, 1923. The scheme, as I told you a year ago, is open to managers, sub-managers, engineering, chemical and clerical staffs, townsmen and foremen, between the ages of 21 and 65 years. It is contributory both by the member and the company, and provides pensions at the age of 65 years, or at a later date in the case of original members who joined after the age of 55.

The pension fund is regulated by a trust deed, and the moneys contributed to the fund are placed in the hands of trustees, and cannot under any circumstances be returned to the company. The scheme has been approved under the Finance Act, 1921, and has been warmly welcomed by the members of the staff who were eligible to join, and it may interest you to know that about 98 per cent. of those so qualified took the opportunity of joining the fund.

SUPERANNUATION FUND.

The superannuation fund, to which I have referred, is not, as I indicated last year, now required in connection with the staff pension fund, but the directors recommend that the fund should be increased to £200,000, to be applied for the benefit of any of the employees of the company who may require assistance either through infirmity or age, and whose cases are ineligible for or are not fully dealt with by the staff pension fund.

At the present time a number of pensions are being paid to old servants of the company who have retired after long service, and while it is not now the intention to give the employees a right to claim on the fund, the directors wish to have a fund at their disposal by means of which they can in the future—as they have done in the past—deal sympathetically with all deserving cases that may be brought to their notice.

I have no doubt that the shareholders will approve the application of this sum for the purposes indicated.

CORDIAL RELATIONS WITH THE STAFF.

When I addressed you a year ago I was able to refer to the very cordial relations existing between the managing directors and our workpeople during the year, and it is a matter of much satisfaction to me to be able to tell you that the same good relations have continued during the year covered by the accounts.

In this connection, I wish to express, on your behalf, to the managing directors and central office staff, and to the managers, staff and men of all our branches, and I include our engineering and transport branches, our hearty appreciation of their hard work and loyal co-operation, without which an association such as ours cannot hope to succeed. We appreciate the fact that all of them have so co-operated, and we hereby tender them our hearty thanks.

GENERAL POSITION.

In conclusion, I will add one word about the general position of our company.

We have now been established twenty-three years, and while I have been able to deal with a very satisfactory year's working, it must not be forgotten that since our formation we have had our vicissitudes of fortune. There have been years when no dividend has been paid, and it is well to remember a point which is often overlooked, that many of us who, like myself, were founders of the concern, have on the average—even including this good year—only received an average of 6.21 per cent. per annum on our ordinary shares, while the preference shares have only received 5½ per cent. and the debentures 4½ per cent.

THE FUTURE.

As to our future, I will not prophesy. Our trade is dependent on the world's markets, and these in turn are at the moment largely influenced by the unstable political conditions abroad.

I can, however, assure you that we are keeping our works in first-class order, and we are prepared for—and I feel sure we shall get—our full share of any trade revival that may come along.

I now beg to move: That the report of the directors and the statement of accounts to March 31, 1923, be and they are hereby approved, and the shareholders hereby declare a dividend at the rate of 5½ per cent. per annum on the preference shares to March 31, 1923, and at the rate of 15 per cent. per annum (actual) on the ordinary shares for the half-year ending March 31, 1923, making, with the interim dividend at the rate of 5 per cent. (actual) paid in December, 1922, 20 per cent. on the ordinary shares for the year.

The report and accounts were unanimously adopted. The formal business having been transacted, a cordial vote of thanks to the chairman terminated the proceedings.

MEXICAN RAILWAY COMPANY, LIMITED.

"RECORD OF QUIET AND STEADY PROGRESS."

IMPROVED CONDITIONS IN MEXICO.

The one hundred and sixteenth ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 27th instant, at River Plate House, London.

The secretary (Mr C. Tennant) read the notice convening the meeting and the report of the auditors.

Mr Vincent W. Yorke presided, and, in the course of his speech, said: The report submitted is again a record of quiet and steady progress in the right direction, though that progress is not so rapid as we should all of us wish it to be. Excellent work, however, has again been done in the rehabilitation of the property, which is now in very good condition, and has, I believe, reached a higher standard than at any period of its history. The serious falling off in gross receipts need cause you no alarm. It is really entirely due to the fact that we are comparing with a half-year in which two exceptional conditions prevailed. Since our last meeting I have paid a visit to Mexico and spent nearly two months there. It is two years since I last visited the property, and during that time very rapid progress has been made in making good the damages of the revolutionary period. The whole of the track of the main line and older branches may now be said to be in excellent order, and, speaking generally, the track may be said to compare favourably with that of almost any railroad in the United States south of St Louis.

LABOUR PROBLEMS.

The most difficult element in the situation is our relations with labour. I shall hardly exaggerate if I say that labour problems in one form or another were occupying nine-tenths of the time of the general manager and the heads of departments while I was in Mexico, to the great detriment of the business. The whole of the employees of the railways are organised in unions, which again are controlled by a central body called the Confederation. This body, which is politically very powerful, insists on a rigid enforcement of the new labour laws. These laws are founded on the new Constitution, but various interpretations which are valid locally are placed upon them by the various States. The rates which the men have been receiving hitherto have been practically the same as those ruling for similar duties in the United States, but their recent demands, which we have had in most instances to concede, will bring them well above this scale. There is really no justification for the increases that have been insisted on, but, unfortunately, they have already been granted by the National Railways, which are still under the control of the Government, and there has been no course open to us but to follow suit. To put the matter shortly, we are employing to-day many more men than the business requires, and are paying them very high rates of wages, while I regret to have to add that the efficiency of their services is very much inferior to what it has been. There appears to be only one remedy for the present state of affairs, and that is the return of the National Railways to private management. The management of the railways by the State has not been any more successful in Mexico than in other parts of the world, possibly even less so. The return of the railways has been promised under the agreement with the International Committee, and, though possibly not in sight to-day, will, I believe, ultimately come about. If it does, it will be found necessary, both in the interest of the railways and of the public, to alter materially the rates of pay and conditions of service of the employees. If this is once accomplished, similar changes on our system will follow as a matter of course.

GENERAL CONDITIONS.

As regards general conditions, the country appeared to me to have improved very distinctly during the last two years, and the Government is undoubtedly more firmly established and more in popular favour. It remains to be seen whether the improvement in general conditions can be maintained and continued, but personally I am distinctly optimistic about it. A great deal must depend on the resumption of relations between Mexico and the United States and the reopening of the money markets of the world to Mexico as a borrower, and, although some ground still remains to be covered, I think that you may take it that real progress has been made during the last six months in the adjustment of the differences between Mexico and the world outside her. To the adjustment of these differences I myself attribute the greatest importance. I believe that the views of those who govern Mexico to-day are perfectly sound, as judged by our standards, on all questions such as the agrarian question and the labour laws, and

that if they felt they had the support of the outside world they would deal fairly and justly with the problems involved. Without this support they prefer to ride the easier of two horses, as President Obregon put it to me, and shut their eyes to many things of which they really do not approve.

RECENT ACQUISITIONS.

You will probably like me to say something about two recent acquisitions, which I was able to inspect—as regards the greater portion, at any rate—for the first time. With regard to the Huajuapán branch, which we purchased very cheaply in 1913, I believe that it will be opened for public traffic on July 1st next. We do not propose for the present to do more than operate the 90 kilometres constructed, and will await results before pushing the line on any further. The Pachuca-Tampico Railway, which we bought early last year, is a broad-gauge line, the same as our main line, and at present runs for 83 kilometres from Pachuca to near Ixmiquilpan. The purchase carries with it the concession for the prolongation of the line to Tampico. I am glad to say that I was very favourably impressed with the state of the new property, the character of the country which it traverses, and the prospects for traffic. The line is well constructed and in good order, a good proportion of the land along it is well cultivated, and while passenger traffic is both brisk and increasing, there are possibilities of large quantities of minerals being consigned from the present terminus. As regards further extensions towards Tampico, it is difficult for me to speak at all positively at present. Soon after leaving the present terminus, the line, if extended, will get into very mountainous and broken country, and though we have now three parties at work surveying the district, it will not be possible to determine the best route to be followed, the probable cost, and so forth, for at least another six months. As to the desirability of the extension, I have no doubt in my own mind it is by far the most attractive railway proposition which Mexico still has to offer, but further developments must necessarily await fuller investigation of the physical conditions, to say nothing of the command of the necessary financial resources. At any rate, we are losing no time, and are pushing on our surveys as rapidly as possible.

CABLE FROM GENERAL MANAGER.

If I may now revert to the business and its immediate prospects, I will first of all read you a cable just received from the general manager:—

"Crop conditions very favourable, larger area under cultivation, recent rains great benefit, expect good local traffic, but imports are likely to be dull."

"Negotiations regarding recognition proceeding, and no hitch apparent, great difficulty will be agrarian question, but solution appears probable."

The information that it contains appears to me quite satisfactory. As regards our local traffic I may point out that the manner in which it has increased in the last two and a-half years is very remarkable, and would suggest that the country is becoming more self-supporting. Whereas in 1911 local traffic represented less than 50 per cent. of our takings, in the last half-year it represented 64 per cent. It is, therefore, now the most important of the factors governing our prosperity. It is also most satisfactory to know that the negotiations in Mexico City are proceeding well, as I do not think that it is possible to lay too much stress on the importance of their being brought to a successful conclusion. As regards the actual net earnings for the four months of the present half-year, though they cannot be considered brilliant, they do not compare unfavourably with those of a year ago, and it should be remembered that, under the new arrangement for the increase in rates, the payments on account of indemnity have been considerably accelerated, and we are collecting in local cash payments on this account at the rate of about £500 a day, and these payments are not included in the net earnings published.

The Chairman concluded by moving the adoption of the report. Mr C. J. Cater Scott seconded the motion.

In reply to a question, the Chairman said that the company had received on account of the indemnity about £250,000 out of an amount which would come to between £2,500,000 and £3,000,000. The report and accounts were unanimously adopted.

BANK OF ADELAIDE. SATISFACTORY RAINS THROUGHOUT.

The fifty-seventh annual meeting of shareholders was held in the board room at the head office, Adelaide, on May 2, 1923. The chairman, Mr Arthur Waterhouse, presided.

The Chairman, in moving the adoption of the report and balance-sheet, said: The balance of profit for the year is £117,200, compared with £114,800 last March, which is a satisfactory result, as the London exchange conditions were somewhat adverse to us, and very low rates prevailed in London for short call money. You will notice that the amount of the dividend for which your approval is asked is £5,000 more than last year. This is to meet the payment of 10 per cent. per annum on the amounts of the instalments paid on the new shares. Turning to the other figures of the balance-sheet, the capital has been increased to £875,000 by the issue of £250,000 new capital which was authorised in October last, and the reserve fund has been raised to £700,000 by the premium of £1 per share on the 50,000 new shares issued. Profitable employment for the fresh capital will be found in the expansion of our operations in Melbourne, Sydney and Perth, as well as in this State. The carry-forward balance of profit and loss account will be £7,388 more than last year. Deposits show a decrease of £692,000, due to the repayment of Government funds and to the seasonal withdrawal of money for financing the harvest, &c.

The absence for many months past of rain to replenish the water supply in country districts, and the want of a good general fall last month to bring up the grass and enable farmers to get on with their seeding and to dispel the drought condition in the pastoral areas, is causing grave anxiety. We must hope that a good general fall will take place in all the States to relieve us of the growing fear of a drought, with its attendant great losses and sufferings. The resolution was carried.

NOTE BY LONDON OFFICE OF BANK OF ADELAIDE.

Since the chairman's speech satisfactory rains have fallen throughout the State of South Australia and over most areas in the other States also.

WESTERN AUSTRALIAN BANK. SUCCESSFUL RESULTS—INCREASED CARRY FORWARD.

The one hundred and sixty-third half-yearly meeting of shareholders was held on May 2nd, at the Banking House, St George's terrace, Sir E. H. Wittenoom, chairman of directors, presiding.

The Chairman, in moving the adoption of the report and balance-sheet, said that they could congratulate themselves on a satisfactory half-year. In addition to the declaration of the usual dividend they also carried forward some £7,000 more than last half-year. This would provide a comfortable nest egg towards the half-year. These results had, however, not been achieved without considerable care and caution, as the conditions of finance throughout the world were constantly changing, and the question of exchange was one which always carried some anxiety, as were also the varying values of securities. The net profits (£31,848) were £1,572 better than in September last, but not quite so good as March, 1922, and the amount carried forward (£27,948) was £6,849 better than September last and £12,126 better than March, 1922. Deposits (£3,641,921) were £495,575 better than September, 1922, and £315,249 better than March, 1922, an obvious testimony to the confidence the public had in the institution. Advances

(£3,280,874) were £47,133 more than in September, 1922, and £117,280 more than in March, 1922. Specie, bullion, &c. (£964,504) were £401,473 more than September, 1922, and £146,854 more than March, 1922. Balances from other banks (£275,726) were £43,361 more than in September, but less than in March, 1922. Referring to some of the industries with which the bank was closely associated, he said that the pastoral industry had experienced a very trying period, owing to want of rain. Fortunately, relief had come to a large portion, as some time ago good rains had fallen north of the Murchison, along the Gascoyne, Ashburton, and north-west districts, and in consequence feed for stock was plentiful.

Mr O. Burt seconded the resolution, which was carried.

THE LONDON AND EDINBURGH REINSURANCE COMPANY, LIMITED.

CHAIRMAN'S CONFIDENCE IN THE FUTURE.

The annual general meeting of the London and Edinburgh Reinsurance Company, Limited, was held, on the 27th instant, at the Cannon street Hotel, London.

The Chairman said: In presenting these accounts it is a matter of great regret to the directors that the balance to the debit of profit and loss account amounts to the sum of £67,178, but a little consideration of the figures will show that the present position of your company and its outlook for the future is not so bad as that figure would seem to indicate.

FIRE AND ACCIDENT DEPARTMENTS.

In the fire department the premium revenue has decreased from £101,000 in 1921 to £96,000, and the fact that part of this is shown as being without further liability means that a certain amount of treaty revenue has been cancelled, an experience which is not uncommon amongst the unattached reinsurance companies. The ratios of claims and commission and expenses of management to premium income are inflated in consequence, and the reserve is made up to 40 per cent., necessitating the transfer of £10,916 to profit and loss.

In the accident department the premium revenue was smaller and the claims experience heavy. The unprofitable portion of the business has now been completely cut out, and the reserve, which has been made up to 40 per cent., should, in the circumstances, be ample to meet the requirements, but here, again, a transfer of £4,250 has to be made to the debit of profit and loss account.

MARINE DEPARTMENT.

As explained already, your company, in common with the majority of the offices, had a very unfortunate experience with marine business in 1920. This account has now been closed, and the balance of £37,740 taken to the debit of profit and loss account. The company, prudently cut down its commitments considerably in 1921, and the underwriting account for that year shows a balance of £17,455, representing 22 per cent. of the premium income, which, being a second year reserve, should be sufficient to run off the account. The 1922 account is still smaller, and, after payment of the first year losses, shows a balance of 45 per cent. of the premium income—a result which may be considered as quite good.

The item of £3,188 appearing in the profit and loss account as "loss on exchange" is caused by the serious fluctuations in the foreign exchanges before premiums were finally accounted for to us.

The reserve of £10,000 for bad and doubtful debts, the directors consider a very full provision. Included in the amount is a claim against another company for about £7,000. There is litigation in regard to this sum, and your directors have every hope that a large portion of it may be recovered, although they have considered it desirable to make a provision for the whole sum.

FURTHER CALL.

The directors have given the position of your company very serious and careful consideration, and to meet the losses in the various departments, and in order to strengthen the cash resources of the company, they have decided that it will be necessary to make further calls to the extent of 3s per share, making the shares 10s paid. The further capital, thus introduced, will place the company in a strong financial position. Your directors wish to make this call in such a way as will cause least inconvenience to the shareholders, and propose to make it payable in three instalments spread over six months.

Your directors have effected a thorough reorganisation of the departmental management of the company, and considerable economies have taken place. They have also agreed to reduce their fees by one-half as from January 1st of this year.

MAJESTIC INSURANCE COMPANY.

There have been considerable developments in connection with the Majestic Insurance Company during the last six months. Applications were received for 54,000 further shares which have

been allotted, and that company is now doing an increasing business. The fact that outside interests have considered it worth while to apply for such a large block of shares at par would show that our investment of 5,050 shares fully-paid in that company, valued in our balance-sheet at £3,228, should be fully worth that amount, and your directors are hopeful that their association with the "Majestic" will be of very considerable benefit to the "London and Edinburgh."

DIRECT FIRE BUSINESS.

Your directors are at the present time carrying on negotiations for the purpose of increasing materially the company's business, and it will also probably be necessary for your board to ask the shareholders to give them powers to transact direct fire business. Your directors are of opinion that a fair volume of this business could be developed without increasing expenses or involving an extension of the existing organisation. This business would be proceeded with on very careful lines, and no branches would be opened.

It is generally felt that conditions affecting world fire insurance are improving, and your company will undoubtedly share in any improvement, and as soon as the trade of the world recovers insurance is bound to benefit.

The director retiring by rotation at this time is Mr Frederick Childs, and while for private reasons he does not offer himself for re-election, he is entirely in agreement with the policy of the board. In the expectation of possible developments in connection with the negotiations your directors now have in hand, they do not propose to fill the vacancy caused by Mr Childs' retirement at the present time.

After some discussion the meeting was adjourned till July 25th, and a committee of shareholders formed to confer with the directors and report to the shareholders at the adjourned meeting.

GREAT INDIAN PENINSULA RAILWAY COMPANY.

CHAIRMAN AND MR. INNES' ACCUSATIONS.

The 147th half-yearly general meeting of the Great Indian Peninsula Railway Company was held, on the 29th instant, at 48 Copthall Avenue, London, Sir Charles H. Armstrong, chairman of the company, presiding.

The secretary (Mr R. H. Walpole) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of moving the adoption of the report and accounts, said:—A year ago I had to report a deficit on the year's working of 240 lacs, due mainly to increased cost of coal and working expenses. During the past year the position has improved, but there is still a small deficit of 8.20 lacs, and consequently no surplus profits to divide. The guaranteed interest for the half-year of 1½ per cent. is being paid as usual, together with a dividend of ½ per cent. which we are able to make from a small fund we have in hand. The return for the year is therefore 3½ per cent.

Although rates and fares were raised at the beginning of the year, traffic on the whole have been disappointing.

Arrangements are now being made to electrify the suburban passenger services. This will be a great boon to the business community of Bombay and to the public generally. The completion of the Harbour Branch Railway, which serves the new trade depot of Sewri, is being rapidly pushed on, and the long over-bridge at Wadi Bunder Yard is well in hand. The electrification of this section of the line is likely to be completed by the end of next year, when a regular service of trains will be run to Kurla via the Harbour Branch. Extensions to Thana and Kalyan have received the financial sanction of the Government of India. This will complete our suburban scheme comprising a system of 43 miles.

MR INNES' CRITICISMS.

We have been passing through rather a difficult and anxious time, and I was hopeful that our efforts on behalf of the Indian taxpayer would have been appreciated, but in a speech made by Mr Innes, the member for Railways and Commerce, in the Legislative Council on March 13, rather sweeping accusations were made against the G. I. P. Railway. His first point was that "the working of the Great Indian Peninsula Railway, as judged by its operating ratio, is certainly more extravagant than that of other lines," and he then proceeded to say that the line had been allowed to get into rather a bad state, and that traffic had consequently to be restricted. His next point was that as the company had not much longer to live, they would naturally "look more to getting revenue than to keeping the line in good repair."

I do not deny that our working expenses are higher than other Indian railways, but they are not necessarily "extravagant." Our ratio of working expenses to gross receipts in 1913-14 was 60.13 per cent.; in 1919-20, 62.34 per cent.; in 1920-21, 76.66 per cent.; and in 1921-22, 91.02 per cent. The heavy increase in 1920-21

was mainly due to a greatly increased wages bill. Our coal bill in that year was also increased by 75 lacs of rupees, owing to the efforts of political agitators in the coalfields. There was also in that year a great increase in general working expenses, due to the rise in wages and the high cost of materials. Foreseeing a great increase in these, we wrote on several occasions early in 1920, urging an increase of rates and fares, and if this had been allowed the position would have been different.

The second point raised by Mr Innes "that the line is not in good order," refers really to a question of relaying with heavier rails a section of track on the main line between Bhusawal and Khandwa. We had been advised by our engineers that with the exception of a section immediately north of Bhusawal, this track, if strengthened with additional sleepers, would last for another 15 years at least, and, looking at the matter from the point of view of the Indian taxpayer, who has to make good a deficiency in the cost of working, we decided to strengthen or reinforce this portion rather than relay. Mr Innes admits that the question is one for "a fair difference of opinion," and, looking at the matter from the point of view of our finances, we came to the conclusion that the course we decided to recommend was the most prudent under the circumstances.

STOCKHOLDERS' RETURNS SINCE 1900.

I have already mentioned the statement by Mr Innes that as the company had not much longer to live, they would naturally "look more to getting revenue than to keeping their line in good repair," but you know as well as I do that there are no surplus profits; You know also that the average dividend received by our stockholders as their share of surplus profits since 1900, when the present company was formed, has barely reached 1½ per cent., and that as in two years the contract ends there is little or no chance of any improvement in this respect, even if we are able to return as much. In all we have done our effort has been to reach equilibrium, so that we may be able to hand over the line to our successors in sound working condition.

Prospects for the current year are, I regret to say, not altogether favourable, as traffic returns are disappointing, and until trade revives I do not think there is much chance of increased receipts.

The report was unanimously adopted.

CONSOLIDATED LONDON PROPERTIES, LIMITED.

CHAIRMAN ON RENTS RESTRICTION ACT.

The ordinary general meeting of Consolidated London Properties, Limited, was held, on the 26th instant, at Cannon Street Hotel, London, Mr J. H. Podmore (chairman and managing director) presiding.

The secretary (Mr J. H. White) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Copies of the report and accounts being in your hands, with your consent we will take them as read. The system we adopt of putting last year's figures in the margins enables you to see at a glance a comparison of the two accounts. The balance-sheet shows a debenture liability of £243,850—the original issue was £360,000. In our investments you will find £30,989 of these debentures ready for cancellation, which assures the satisfactory working of the debenture redemption scheme for some years and reduces the outstanding debentures to £212,861—less than 60 per cent. of the original issue. On the other side of the accounts, the total of our reserve funds and other investments amounts to £103,043, and the reduced bank balance is explained by the increase of £25,862 in other investments. Bank deposit interest being so small, we have invested in advance.

Turning to the revenue account, the gross rentals show an increase of £4,021. This is satisfactory when noting that the loss on St Stephen's House, which was commandeered for war purposes, is only in course of being made good. Several substantial lettings are of recent date, and do not come into these accounts. We may hope, therefore, for a further improvement in this item, next year.

On the other side of the account, rates are less. It should remind the shareholders that our increased balance arises, in part, from circumstances which are not permanent, rising rents and falling rates. The former due to the increased cost of building, the latter to public demands for economy. When you have these two important items of property investment working in your favour you get results which mislead. We take advantage of the circumstances to add to our reserves and strengthen the company, so that in normal times we shall be protected, and, I hope, in a position to face any losses, and continue the steady advance which has now become a regular feature in our accounts.

RECORD BALANCE OF RENTS.

Cost of upkeep is less. It necessarily varies; the recent high figures were in part due to the arrears consequent upon war

restrictions. The balance of rents is shown as £47,746, which is £11,418 more than last year, and is the highest in the history of the company, the more important when that balance is subject to a debenture interest charge, nearly £6,000 per annum less than originally. It is a practical demonstration of the power of recuperation which I claimed for property companies some 20 years ago, when writing a criticism on the security given by this class of investment with a model balance-sheet, "free from all jumbled up and unsaleable assets."

There is an increase of £319 from dividends and deposit interest, and a reduction of £446 in debenture interest, thanks to the redemption scheme. We are able to restore the contingency fund, upon which we drew to enable us to carry out that scheme, to write off the depreciation on our reserve investments and provide £6,599 necessitated by the Corporation of London (Rating of Reclaimed Lands) Act, 1920, leaving us with a net balance of £26,020, which is £5,710 more than last year. We propose to complete the £40,000 reserve fund required by the debenture trust deed, and pay a final dividend of 5 per cent., making 8 per cent. for the year, as against 6 per cent. last year, and we carry forward a balance of £6,577, which is an increase of £2,282.

The shareholders are reaping the reward of patience, and I hope will see that the directors are not departing from the policy which has done so much to restore the financial position of this company. With an appreciation of future prospects we are satisfied that the dividend we propose this year is justified.

RENTS RESTRICTION ACT.

The Rents Restriction Act is a matter of conflicting interests, but many people only see one side, and those whose chief aim is to do away with private interests try to turn it to account and talk in the spirit of the Yorkshireman's advice:—"See all, hear all, say naught, eat all, drink all, pay naught, an' if ever tha does aught for naught, do it for tha sen (thyself)." But the spirit of grab all is dangerous. It is all very well for those comfortably placed to ask for power to ignore the owners' rights, but it is difficult to justify it five years after the war. The housing question is important to the rising generation. If you stop building you are making trouble for the future, since the growth of population will bring greater difficulties. It is an attractive cry, "Houses first" before decontrol, but to whom is it directed? Is it to the building owner? Is it a reasonable position to assume that you can take control of the owner's property and ask him to

build more as a condition of decontrol? The *Times* says of this: "It is a policy—and a vain and hopeless policy—of wait and see."

I was pleased to read Mr Neville Chamberlain's speech when moving the second reading of the new Rents Bill. Several arguments I disagreed with, but it is a comfort to see that he is willing to state both sides, which he did, generally speaking, in a most able manner. He said they "had got into a sort of vicious circle, and the problem which lay before them was how to break out of that circle with the least disturbance and hardship," and that "after a lapse of time we would find ourselves with a shortage aggravated by the increase of population." But surely it is the shortage caused by the increase of population and the suspension of building work during the war which is the present trouble.

ATTENDANCE AND SERVICE.

Again, on the matter of attendance, he spoke of some claims as a scandal. I think he might have stated the fact that the Act was not drafted to include any sort of attendance or service, and that when it was amended to cover the higher rateable values, it was overlooked that in flats there are lifts, porters, and in some cases even hot water is supplied to the tenant. The cost of these services was as easy to ascertain as the rates. The assessment valuation would show in many cases the cost to be 20 per cent. or 30 per cent. of the rent paid, and this, after allowing for rates, would be, say, 45 per cent. of the net rent. The Act made no reference to these costs, but it referred to both a rent and a rateable value, and the difference between the gross assessable value and the rent paid was, allowing for rates, the cost of the services.

The new Act says attendance must be a substantial portion of the whole rent. What a confused and indefinite statement. It is cheap sarcasm to make light of porters' services. I think the scandal was in the careless wording of the Act, which only quoted attendance as allowing exemption from the Act, and made no reference whatever to the various classes of flats and the different services included with the rent. There was no excuse if these flats were intended to be included in the Act, since the valuation lists showing the rateable value showed also the estimated costs of the services included. The 15 per cent. allowed by the Act was intended as compensation for the reduced value of money. To say the percentages allowed make good the increased cost of services is no defence, since it would obviously give different results and be a mere coincidence if it worked out all right. However, we are glad

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves exceed £13,000,000.

to know the matter is in the hands of a man of great ability, and not in those who say "The real object of the Bill is to increase the rents mainly in order that the financial class might extract additional wealth from the pockets of the people." There is no argument in an obviously false statement. I now move: "That the report of the directors produced, together with the annexed statement of the company's accounts at March 25, 1923, duly audited, be now received, approved and adopted."

Mr William Warren seconded the motion, which was carried unanimously.

The Chairman next moved: "That a final dividend of 5 per cent. on the share capital be now declared out of the net profits of the undertaking for the twelve months ended March 25, 1923, making 8 per cent. for the year, such dividend to be paid to the shareholders on July 2nd next."

Mr William Warren seconded the resolution, which was unanimously agreed to.

The retiring director (Mr William Warren) was re-elected, and the auditors (Messrs Singleton, Fabian and Co.) were reappointed.

A vote of thanks was accorded to the chairman, directors, and staff, and the proceedings terminated.

SELANGOR RIVER RUBBER ESTATES, LIMITED.

SATISFACTORY RESULTS OF THE YEAR.

The third ordinary general meeting of the Selangor River Rubber Estates, Limited, was held, on the 26th instant, in the Council Room of the Rubber Growers' Association, Idol lane, London, Mr Noel Bingley (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the net profit for the year was £12,345. He thought the shareholders would agree that the results of the year's working were, on the whole, very satisfactory; all the more that they were based on a crop some 200,000 lbs short of what could have been produced under normal conditions of output. They proposed placing to income-tax reserve the sum of £5,000, and paying shareholders a final dividend of 3½ per cent., free of tax, making a total dividend for the year of 6 per cent., free of tax, and leaving £10,025 to be carried forward. The crop harvested amounted to 802,842 lbs; the manager's original estimate was 1,000,000 lbs of rubber, but this was voluntarily restricted to 750,000 lbs, and in November and December they came under the official scheme for restriction of output.

The issued share account now stood at £264,604, in place of £248,417, an increase of £16,187. These shares had been issued to the vendors of the Tennamaram Estate as part of the purchase price, and represented up to the amount of the face value of the shares a portion of their total investment of £22,687 in the Edible Nut Oils, the company now holding the Tennamaram Estate.

For the current year their crop under the restriction of exports would be based on the standard production of 990,462 lbs, and was for the present quarter 65 per cent. of that standard, the previous period of restriction being at 60 per cent. The f.o.b. cost was estimated at 6.70d per lb, on the 60 per cent. restriction basis.

From a statistical point of view the present position of the rubber industry seemed as satisfactory and hopeful as it could be. The London stock, which must be regarded as the barometer of the position, was returned on the previous day as 51,084 tons, as compared with 71,450 tons a year ago, and 73,361 tons at the end of January, a decrease of 22,277 tons in less than five months.

The latest returns from America showed quite abnormal activity in the production and delivery of tyres and tyre-using vehicles. As regarded the restriction scheme, he was convinced it would prove to have prevented the collapse of the industry.

Mr V. R. Wickwar seconded the resolution, and it was carried unanimously.

MALTBY MAIN COLLIERY COMPANY, LIMITED.

LARGE INCREASE IN OUTPUT.

Lord Aberconway, presiding at the annual meeting of shareholders of the Maltby Main Colliery Company, Limited, at Sheffield, on Monday, the 25th instant, said that the colliery worked practically full time during the whole of the year ended March 31 last. The output had showed a very substantial increase, even after taking into account the fact that in the previous year a stoppage occurred throughout the country lasting three months.

INCREASING THE OUTPUT.

A satisfactory working cost cannot be reached unless they turn out at least 750,000 tons, and what they wanted to see was an output of a million tons, which would mean that they would make a good thing out of the colliery, and would employ about 1,000 more men

The board were making every effort to increase the output, both in the colliery working, and by providing accommodation for additional men, which was the root of the whole position. They had 124 houses more now than at this time last year; 350 more had been started, and they were prepared to go on building to give them the required output of one million tons per annum.

COAL PRICE AND WAGES.

The demand for coal had been satisfactory during the year. Now, however, there had been a considerable check. Wages had varied in accordance with the agreement with the men, which, in his opinion, was of the greatest value to the men as well as the employers. He was sure that they all welcomed the fact that the men's wages were increasing in accordance with the price of coal; it was only fair that it should be so, and he thought the fact that the men now saw that the agreement gave them increased wages without the risk of strikes was of enormous advantage to the coal trade as a whole.

Coke had risen to a price which practically damaged the pig-iron and steel trades, and this was a very serious factor for their friends in those trades. He thought it was in the interests of everybody that it should be sold at a fair and reasonable price.

BRIGHTER PROSPECTS.

Looking at the balance-sheet, he thought that the year's working was much better than the previous year, the loss per ton being less than half. Everything seemed to him to point in the right direction, although he did not wish to embark on prophecies.

The report was carried, and Mr W. H. McConnel and the Right Hon. Sir Henry Norman, Bart., M.P., were re-elected directors, and Messrs Alfred Tongue and Co., chartered accountants, of Manchester, were reappointed auditors.

DINNINGTON MAIN COAL COMPANY, LIMITED.

IMPROVED RESULTS OF THE YEAR.

The annual meeting of the Dinnington Main Coal Company, Limited, was held at Sheffield on Monday, the 25th instant.

Mr Maurice Deacon, the Chairman, said that the results were more satisfactory than the previous year, the main reason being that in the previous year the stoppage for three months had made an enormous difference.

IMPROVED PRICES.

Prices were low during part of the financial year, but later the shipping trade developed and prices for export increased. The demand for inland consumption had been fairly satisfactory, having regard to the condition of trade. The working costs were comparatively high, owing to increased wages. The goods purchased by collieries—timber, iron and so on—were still from 50 to 60 per cent. above pre-war rates.

The rates levied by local authorities and paid by the company in the year were £22,000, as compared with £7,000 in 1913.

MERCHANTS' PROFITS.

He referred to the question of merchants' profits, stating that the price of "Brights" in London was something about 46s per ton. The coal at the pit cost 24s, the railway rate from Yorkshire was about 10s 6d, wagon rent, &c., 2s, which left less than 10s to cover numerous expenses undertaken by the merchants. It did not appear that the merchant was taking very much for himself after he had paid his expenses.

He mentioned that the company had still nearly 8,000 acres of coal to work, which would last probably 60 years.

The company had taken further shares in the Firbeck Main Collieries, Limited, who were about to start sinking pits.

The Right Hon. Sir Henry Norman proposed a final dividend of 7½ per cent., and the addition of £15,000 to the reserve fund.

The Right Hon. Lord Aberconway, P.C., Mr W. B. M. Jackson and the Right Hon. Sir Henry Norman, Bart., M.P., were re-elected directors, and Messrs Alfred Tongue and Co., chartered accountants, Manchester, were reappointed auditors.

RIO DE JANEIRO LAND, MORTGAGE, AND INVESTMENT AGENCY COMPANY, LIMITED.

DEVELOPMENT OF COMPANY'S PROPERTY.

The adjourned eighth ordinary general meeting of the Rio de Janeiro Land, Mortgage and Investment Agency Co., Limited, was held, on the 29th instant, at 11 Angel court, London, the Earl of Orkney (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that distinctly optimistic views had recently been expressed with regard to the business prospects of Brazil. That country had passed through an adverse period, but latterly beneficial influences had been at work, the most important of them being a favourable commercial balance of exports during the year 1922, which showed a surplus of exports of nearly £20,000,000,

after two years of an adverse experience in that respect. For the current year a further improvement in the monthly balances had taken place, so that there was reason to hope that the year would show a further increase in the trade balance in comparison with last year. That more favourable outlook was beginning to make itself felt internally.

The demand for land and housing accommodation in Rio de Janeiro was at present very considerable. The properties owned by the company's subsidiaries were in a very favourable situation to meet the demand, but the area of the estates was so considerable that they had considered it advisable to concentrate their energies for the present on one of them only, the Boa Esperanca, and in order to make a success of that proposition, it was necessary to budget for larger expenditure on the development of the property. The dearth of housing accommodation in Rio had become so acute that intending buyers preferred to buy a plot of land with a house ready for their occupation, rather than merely the building plot. In order to accelerate the exploitation of the property, they had, therefore, found it advisable to erect on certain parts small residences such as were required in that neighbourhood. They had started with a set of twenty houses, which were now in course of erection. They expected to complete the first chapter of their building programme in a very short while, and would then, after building programme had been justified by results, extend their building their estimates had been justified by results, extend their building programme considerably as the surest means to get a profitable return from their properties in the shortest possible time.

The general adverse conditions in Brazil had brought about a very heavy fall in the exchange, and it was not yet possible to foresee when the better outlook would bring about a marked improvement. They had lately heard some very hopeful expressions on the part of leading Anglo-Brazilian bankers, and, in view of the enormous resources of the Republic, it might be expected that within a reasonable time those opinions would prove true, and that they would see the milreis again at a higher level.

The report and accounts were unanimously adopted.

HUDSON'S BAY COMPANY.

RESULTS OF A DIFFICULT YEAR.

A general court of the Hudson's Bay Company was held, on the 26th instant, at the Cannon street Hotel, London.

Sir R. M. Kindersley, G.B.E. (the governor), said that on the credit side of the profit and loss account all the principal items showed a decline. The fur trade profit of £196,304 compared with £237,082 in the previous year. The profit on salesshops and other trading showed a reduction from £77,871 to £15,920, while the profits at Winnipeg head office amounted to £56,006, against £61,471. Receipts from interest on instalments and rents, less taxes and collection expenses, were £110,655, against £119,570. Interest on loans and investments had declined from £12,120 to £9,495. The profits from fire and marine risks had increased from £8,577 last year to £16,566, after the addition of £10,000 to the insurance reserve, which now stood at £100,000, and was ample to meet all contingencies.

The net result for the year was a profit of £328,440, which, added to £20,000 from land account and a carry forward of £122,660, left a disposable balance of £471,110. The directors recommended a dividend of 17½ per cent. out of trading, subject to recommended a dividend of 17½ per cent. out of trading, subject to tax, and 2 per cent. from land, free of tax. But for the fact that they had had to return to both preference and ordinary shareholders certain income-tax previously deducted from their dividends, the directors would have been in a position to declare a further 8½ per cent. on the ordinary shares, which would have made a total declaration from trade of 26 per cent., or 1 per cent. more than the dividend paid for 1919, 1920, and 1921.

FUR TRADE AND LAND SALES.

In the fur trade their total collections had been well maintained, and, taking the year as a whole, had realised better prices than had been anticipated. Their fur commissioner warned them, however, that since January 1st, owing to climatic conditions, their collections had commenced to fall off, and he reported keen competition. This arose largely owing to the great depression in petition. This arose largely owing to the great depression in business generally in the West, which had forced many country merchants, real estate dealers, agricultural implement agents and others to adopt this means of earning a livelihood. The department for selling furs on consignment was making steady progress, and was likely to prove a remunerative and permanent source of revenue. Their experiment in the development of fur collection outside Canada was also progressing, and they had completed an agreement for 1923, giving the company under licence the monopoly of the furs collected in Eastern Siberia. If the results proved satisfactory the agreement might be extended for a longer period.

In the land department the acreage sold was the smallest, with two exceptions, for 20 years, the sales having amounted to only 24,977 acres. The harvest itself was abundant, but the fall in the price of wheat and the high wages which had had to be paid

left the farmer with either a loss or a very small margin of profit, and the result had been that there was practically no margin for the purchase of new lands. The prospects for this year's crop up to the present were encouraging, but it was evident that before Canada could restore her prosperity she must reduce the cost of living as well as her taxation. Townsite operations still showed a deficit, but this was reduced compared with 1921 and 1922.

ALBERTA MINERALS TAX.

The Government of Alberta had passed a Bill taxing holders of mineral rights 3 cents per acre, irrespective of surface ownership. The owners of mineral rights of any land thus had to pay a mineral tax of 3 cents an acre on it, quite irrespective of whether it contained any minerals or not. In conjunction with the Canadian Pacific Railway and other companies affected this company had entered a strong protest against those proposals before they became law, and they were now co-operating in fighting for a repeal of the tax. The total taxes paid by the company in Canada during the last seven years amounted to £2,100,000, apart altogether from the municipal taxes they paid on their large store buildings, which were very considerable. The directors had recently taken up the question of grants from the Dominion Government of further lands which they regarded as still due to the company under the terms of the deed of surrender, and a statement had accordingly been prepared and submitted to the Government authorities at Ottawa. He was glad to be able to report that there seemed to be indications of a more active policy as regarded immigration by the Government. During the last few years whatever efforts had been made had been mostly in the direction of restriction of immigration—in his opinion, a most disastrous policy. No new country could afford to check the flow of immigrants to her shores.

The results in the stores department were unsatisfactory, but not more so than should be expected, considering the adverse factors to which he had referred in dealing with the land department.

The report and accounts were unanimously adopted.

JOHN BROWN AND CO., LIMITED.

LOCAL RATES BURDEN—NECESSITY FOR ECONOMY.

The annual meeting of shareholders of John Brown and Co., Limited, was held, on the 26th instant, at the Royal Victoria Hotel, Sheffield, Lord Aberconway (chairman) presiding.

Lord Aberconway, in moving the adoption of the report and balance-sheet, said that after the year of political and trade depression through which we had passed the shareholders would not have expected better results than those which they would find in the figures before them. Trade in this country and all over the world had really been marking time, and the three months' engineering strike did much to keep back the development of trade.

The figures in the balance-sheet reflected to some extent the effect of the strike. They would agree that the political atmosphere in the last six months over Europe had not been conducive to what might be called vitality in business, but there had been in the twelve months an undoubted improvement in trade. More coal had been raised in this country, more furnaces had been put into blast, and there had been more shipments of raw materials and finished products both from and to this country. He was glad to say that John Brown and Co. had had a full share of the improvement. There had been less unemployment, and at the Atlas works and at their collieries there had been a very marked change.

BURDEN OF RATES.

At the same time, the cost of all manufacturing remained high, and he did not see much prospect at present of a reduction in costs. Wages formed the principal item, and there was no chance of getting wages down except in accordance with the fall in food values. Rates of wages must be governed by that. So far as they could see, those values were not showing much sign of falling away. One of the most serious things they had to contend against was the extent of local rates and increasing taxation. Taxation was bad in itself, but local rates, both in their incidence and their amount, were worse still. He dare say shareholders could hardly realise what a heavy charge taxation was in the Sheffield district alone. John Brown and Co. were now paying nearly £100,000 a year in rates, a sum which would have been regarded as impossible ten years ago. If they took the output and turnover of the Atlas works they would find that the rates levied in Sheffield meant not less than £2 for every ton of material used at the works. It meant that in competition with districts rated on a lower basis and foreign countries there had to be charged £2 per ton more for every ton they sold. That meant all the difference between getting and losing a contract. They would thus see the importance of ratepayers looking into the question and striving in a town like Sheffield to see whether it was not possible to abandon all extravagant schemes and reduce the rates so that the cost of Sheffield productions might be cheaper, and in that way the volume of Sheffield trade might be improved.

It was a very serious matter for the shareholders of John Brown and Co., for the actual rates the company were paying were half the dividend the shareholders would receive. They got no assistance from the Imperial taxation, yet Sheffield was the great arsenal during the war, the place where tens of thousands of workpeople flocked in to help in the production of war material, and now Sheffield and the companies such as theirs were hardly hit by having to keep a large number of those people on the rates.

They were penalised, too, through the operation of the Treaty of Washington, which had practically put a stop to the building of capital ships, for which Sheffield did very much large work. The remedy was in their own hands; it was especially important that working people should realise that unless they sent to the local authorities representatives pledged to economy they were really suffering both ways in wages and the extent of their employment.

Lord Aberconway reminded the meeting that last year he mentioned they had succeeded in bringing down the price of pig-iron and steel to Continental figures. That was a great achievement, and it held good still.

PROSPECTS.

Their prospects for this year were by no means to be despised. Sir William Ellis had made many trips abroad in the interests of the company, establishing many connections in some of the countries that would require material in periods of reconstruction, railway material principally. Alluding to the colliery side of their business, he indicated many improvements, and said that it would be deplorable to the trade of this country if any successful attempt were made to break that national agreement and go back to the old system of strikes and disputes. At their Clyde Bank works work was very scarce, but that was the case with most shipyards. The outlook for shipbuilding was not promising, the real fact being that the world had not the money to buy the goods. Things would improve when there was a clearer political atmosphere, but the Continental semi-revolutionary conditions were most detrimental to all trade. He had the greatest faith in the future of the coal trade of the country, because there was a shortage of coal all over the world, and their coal was much superior to that of their competitors abroad.

Turning to the balance-sheet, he pointed out that their reserves amounted to over £1,000,000. That was a very fine position to be in.

The report and balance-sheet were adopted.

GUEST, KEEN, AND NETTLEFOLDS, LIMITED.

LARGE INCREASE IN COAL OUTPUT.

The ordinary general meeting of Guest, Keen, and Nettlefolds, Limited, was held, at the Queen's Hotel, Birmingham, on the 28th instant, Mr Edward Steel, chairman and managing director, presiding.

The Chairman, in moving the adoption of the report and accounts, said: During the year there has been a better demand for our products and manufactures, but it has been a varying and fluctuating demand, and has never developed into that regular and steady flow of business to all our departments which is necessary in order to ensure the best results.

Our total output of coal, including that of our subsidiary colliery companies, during the 12 months we are considering, was 2,545,000 tons, as compared with 2,062,000 tons for the 12 months ended March 31, 1921. I take the latter year for comparison because the corresponding period to March 31, 1922, included the unfortunate three months' coal strike, which began in April, 1921, and lasted until the beginning of July of that year.

A very gratifying feature of this improved production is the fact that the output per man during the year appreciably increased at all our pits.

RESULTS OF THE RUHR OCCUPATION.

In February last the indirect results of the Ruhr occupation began to make themselves felt, but it was not until later that the Welsh coal trade came fully into its own, when, from all quarters, especially from France, Italy, and Germany, the demand became very great, and we ended our financial year with two months' increased demand at fair prices, and with a good order book, thanks to the experience and foresight of our subsidiary company, L. Gueret and Co., Limited, who are responsible for the sale of the outputs of our Dowlais, Cyfarthfa, and Cwmbran Collieries.

It should be borne in mind that miners share to a considerable extent in the profits of the colliery owner. Under the present wages agreement the amount forfeited by the coalowners of Monmouthshire and South Wales to the operatives during the 12 months ended March 31, 1923, was not less than £2,000,000.

I might mention that a vast amount of reorganisation has taken place during the past two years in the Nettlefold, or screw, section of our business; and as a result of our labours the relations with our customers in this department are of the most satisfactory nature,

and the traditions of this valuable part of your business are fully maintained.

With a view of consolidating our position still further in the bolt and nut trade, we have recently acquired the whole of the share capital of three of the oldest established Darlaston firms—viz., Horton and Son, Limited, Enoch Wilkes and Co., Limited, and James Simpson and Sons (Bolts and Nuts), Limited. These works are all in close proximity to our Darlaston works of F. W. Cotterill, Limited, and they have direct access to the railway.

The reconstruction of these works is now being planned, and when the whole of the reorganisation is completed we expect to be able to effect substantial economies, which should bear good results as soon as trade recovers.

One essential factor in stimulating trade, and incidentally in reducing the number of unemployed, is the rate at which the country can accumulate new capital available for the extension of industrial enterprise, and any reduction in income-tax and corporation tax is of help in that direction.

Looking at the very heavy obligations of this country, it is abundantly clear that the Government will have to exercise more and more economy in the spending departments if we are to return to anything like a normal Budget, which is so urgently needed in the interests alike of employers and employed.

The concessions in railway rates since our last annual meeting, while not nearly so important as manufacturers and traders generally could have wished, should help to provide some stimulus to trade.

After dealing in detail with various items in the balance-sheet, the Chairman proceeded:

YEAR'S PROFIT.

The balance of profit and loss account for the 12 months amounts to £844,919, which, added to the amount brought in from last year of £206,079, gives a disposable balance, after deducting the interim dividends already paid, of £630,295, and the report shows how the board recommend this should be appropriated.

As respects the future, anything like full recovery in trade cannot be hoped for while the present high rate of taxation obtains in this country, and economic conditions in Europe and the Near East remain as they are.

So far as our export trade is concerned, it is very unfortunate that, while freights from Great Britain generally are lower than they were, they are still substantially higher than those ruling from some Continental ports, thus aggravating the severe competition we have to meet in securing business.

Mr F. W. Keen seconded the resolution, which was adopted.

EDISON SWAN ELECTRIC COMPANY, LIMITED.

CAPITAL REDUCTION SCHEME APPROVED.

The thirty-ninth ordinary general meeting of the Edison Swan Electric Company, Limited, was held, on the 27th instant, at Cannon street Hotel, London.

Mr C. F. Spencer (the chairman), in moving the adoption of the report and accounts, said that they met that day to consider the report and accounts for the past year and resolutions dealing with the reduction of the share capital by writing off 16s per share from the ordinary shares.

Dealing with the accounts, he said they had a net amount of £765,741 to provide for. It could not be of any advantage to the shareholders to retain shares of the nominal value of £1 when the assets of the company showed so large a deficiency.

Unless a scheme of reduction of capital was carried into effect, any profits would have to be utilised in writing off the deficiency until it was extinguished, and consequently the prospect of the payment of any dividend would be remote. In the scheme the ordinary shareholders were asked to make a large sacrifice, and the preference shareholders were invited to agree to modifications which were not unfair, embracing the cancellation of participating rights and eleven months' arrears of dividend. It was proposed to add $\frac{1}{2}$ per cent. to the 7 per cent. fixed cumulative dividend.

The board had endeavoured to effect economies, and had made substantial reductions in works establishment charges, cut down the sales cost by placing each sales branch on as nearly a payment-by-results basis as possible, reduced general standing charges substantially, cut down the ratio of unproductive labour to productive labour, turning losing departments into profit-making sections, and, last but not least, established a system of co-operation throughout the whole of the principal members of the staff.

The company produced efficient lamps, including the "Ful-lite"—"the light without the glare"—their vacuum cleaner, the "Little Glutton," was a household name; their wireless valve was unexcelled; their wireless instruments were known for their efficiency; their fittings were of the best design; their improved types of switchgear and motors were being increasingly adopted

by public authorities, and they had a staff able to sell their products.

With regard to the current year's trading, when the accounts were presented they would show that substantial profits had been earned.

Mr A. F. Berry seconded the motion, which was adopted, and resolutions were passed approving the capital reduction scheme.

LAKE VIEW INVESTMENT TRUST, LIMITED.

IMPROVEMENT IN TRUST'S POSITION.

The third ordinary general meeting of the Lake View Investment Trust, Limited, was held, on the 29th instant, at River Plate House, Finsbury circus, London, Mr F. A. Govett (chairman and managing director) presiding.

Mr Charles Lloyd, O.B.E., F.C.I.S. (one of the joint secretaries), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the time of waiting was at last drawing to a close, and that it would not now be long before they would see some compensation for the fearful time that they had waited. The Burma Corporation had declared its first dividend; it was now earning large net profits, and that after all provision for the interest and amortisation of its debenture stock, and for future capital expenditure. A fair and reasonable estimate of what might be expected of that corporation, working its still limited scale of about 700 tons per day, seemed to indicate the payment of half-yearly dividends, starting, say, at 4d per share in August, with the expectation of gradual increase on that, for they were earning more. As the Trust owned approximately one-fourteenth of the total capital, their participation in those dividends would more than double their present revenue, with good hopes of better things, for their present scale of operations must also surely be increased as time went on.

POSITION OF THE CORPORATION.

During the last year the position of the Burma Corporation had steadily improved in every way. Gradually the difficulty about sufficient labour appeared to be being overcome, and that accomplished there would only remain the difficulty about sufficient transport. Altogether the position of that large interest which the Trust held was vastly better, and before next year the Trust would themselves no doubt be able to pay a second dividend of 6 per cent. about the end of December, with reasonable assurance that that might be the forerunner of regular half-yearly dividends. This year, before the declaration of a Burma dividend, they had raised their rate from 5 per cent. to 6 per cent., and, with half-yearly dividends of even only 4d on their Burma shares, their revenue would amply cover a second dividend, which would raise their annual distribution from 5 per cent. to 12 per cent., with hopes of more.

Although they had realised their holding in the ordinary shares of the Zinc Corporation, in view of the unpromising outlook of Australian labour, they still held the large block of the preference shares. The National Mining Corporation was now in a happier and stronger position than it was, though so far it had not achieved any very large and striking success. However, developments on the Fresnillo Mine of the Mexican Corporation were most encouraging. In addition to the surface mine, with its large tonnage of low-grade ore, out of which the present profits were being made, on the first unwatered level of the old mine they appeared to have opened up about a million tons of 10-oz ore, and had still the expectation of developing below the big rich mine which had been the original object when they had embarked. Altogether they had about 6,000,000 tons of reserves of ore.

OTHER HOLDINGS.

With regard to the remainder of their holdings, which were mostly in trust investment stocks, notwithstanding the unfortunate moment at which they had started out on the new line of business, and notwithstanding general depreciation, they were well on the right side, much to his satisfaction. During the past year the yield obtainable from all classes of first- and second-class investments had steadily diminished, that was to say, there had been a general rise in price. It was going to take a very long time to reconcile manufacturers and retailers to content themselves with the moderate scale of profits which must sooner or later come back, under the inexorable laws of supply, demand, and competition, and, therefore, it would seem as if the present era of high profits and high prices would continue, which was the point which concerned an investment company.

The result of all that, however, was that their position was now much better than last year.

The chairman concluded by moving the adoption of the report and accounts, and, after some discussion, it was carried *unanimously*.

The Chairman then proposed the re-election of Mr J. R. Govett and Mr W. F. Turner, two of the retiring directors, announcing that Mr Tyndale White, the other retiring director, had placed his resignation in his (the chairman's) hands, and that his name would therefore not be put forward.

The re-election of Mr W. F. Turner and Mr J. R. Govett was carried on a show of hands, but a poll was demanded by Mr A. Hyman.

Mr A. Hyman, in supporting his candidature for election as a director, vigorously attacked the policy of the board, and declared that he wished to become a director solely for the purpose of forcing the company into liquidation with a view to the distribution of the assets among the shareholders, as, in his opinion, the latter could do better by adopting that course.

The election of Mr A. Hyman as a director was put to the meeting, and lost on a show of hands, and again on a poll being taken, the figures being: In favour of Mr Hyman, 71,555 votes; against 179,730 votes, a majority against of 108,175 votes.

A vote of thanks to the chairman for his conduct in the chair brought the proceedings to a close.

ZINC CORPORATION, LIMITED.

CHAIRMAN'S CRITICISMS OF LABOUR'S ATTITUDE.

The twelfth ordinary general meeting of the Zinc Corporation, Limited, was held, on the 27th instant, at River Plate House, Finsbury circus, London, Mr F. A. Govett (chairman and managing director) presiding.

The secretary (Mr F. A. Crew, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the most noticeable points of last year were, first, that the dumps of tailings, the purchase of which was the object of the original Zinc Corporation, were at last exhausted; and, secondly, that after being shut down for about three years they had decided to make a trial and reopen the mine and lead concentrator as from January 1st of this year. As to the wisdom of that step they were by no means sure, and therefore, in notifying their decision, they were careful to describe that as an experimental business, for with no alteration in the hours or cost of labour it seemed that, even though they might work at some profit with lead at present prices, that profit might not be sufficient to justify the enormous operations of their great mine and the consumption of their reserve. But he did not feel too happy, for even if they could make some modest profit, the greater the profit the less chance of any effective steps towards the modification of the present extravagant demands of labour. A dividend of 10 per cent. for a wasting asset like a mine was not adequate remuneration at all, as it left no room to provide for redemption of capital. Many times he had raised the question of profit-sharing, but had failed to get a following. But without some sliding scale or profit-sharing arrangement he thought it was not too obviously wise to open up. Still, they had had to do it, and would no doubt go on until a fall in lead revived the trouble, which seemed pretty sure to come.

EQUALISATION OF WEALTH—UNIVERSAL POVERTY.

It would not be so bad if labour would only abandon its "go slow" attitude and give a real day's output for a day's high pay. As he had said last year, the only counterpoise to high wages was high output, and that they did not get. He admitted that labour recently had been much more efficient, but they had had the pick of the best labour on the field, and as the less efficient were taken on he questioned if that level would be maintained. On that occasion he only proposed to make some short addition on the subject of labour to his address last year, when he then said that the rich—even the very rich—were an essential part of the social organisation. Quite naturally he had been misunderstood, and had been held up as a sort of plutocrat. His only desire or possible use for superfluous wealth would be that he might live without being compelled, after over 40 years of work, continuously to labour under conditions which to him were deadly, but still more that it might give him time and means with which to try to do something more than talk. In the social structure the rich were absolutely indispensable, and every step taken towards the socialistic idea of equalisation of wealth was nothing more or less than the gradual destruction of wealth, the reduction of purchasing power, leading inevitably to unemployment and poverty, the final act of which progression would be not equalisation of wealth but universal poverty.

Last year he had spoken at some length on the tyranny of the trades union. That was the basic trouble with English industry, English prosperity and recovery of trade. They could not get the output because the men were tyrannised by the unions, who would not allow the men to work under the Government permit of "peaceful picketing" forsooth. The trouble was

just as bad in Australia as it was in England, but here in England there was still just a gleam of hope.

COMPANY'S AFFAIRS.

Turning to the company's affairs, the profits for the year had come entirely, except for the receipt of £24,000 from Aron Hirsch and for interest on invested money, from the products from the remaining zinc tailings. As he had warned the shareholders last year, they had had to notify them in March that those dumps of tailings were then exhausted. With their exhaustion the work of the zinc concentrator had come to an end, and, as part of the lead mill was more or less worn out, the zinc plant was now being converted into a combination mill which would more efficiently produce both the lead concentrates, which now would be their largest and chief product, and also concentrate the comparatively small amount of zinc middlings thereby produced. That was estimated to cost some £40,000, and the plant should be ready to take the output about the beginning of next year. They hoped in that way to effect some appreciable economy in the working costs.

They had taken an interest jointly with the Goldfields and National Mining in the Mill Close. That had been taken on the strong recommendation of the well-known geologist, Dr McLaren. If Dr McLaren was right, that mine would be a profitable business.

The report and accounts were unanimously adopted.

GREAT BOULDER PROPRIETARY GOLD MINES, LIMITED. SUGGESTION OF AMALGAMATION OR CO-PARTNERSHIP.

The twenty-ninth annual general meeting of the Great Boulder Proprietary Gold Mines, Limited, was held on the 26th instant, at Webster House, Old Broad street, London, the Hon. Sir Newton J. Moore, K.C.M.G., M.P., presiding.

The Chairman, in moving the adoption of the report and accounts, said: The value of the gold produced at the standard rate is only about £4,500 less than last year, but the gold premium shows a falling off to the extent of £63,466, and there is an increase in the mine charges of £32,946, the latter increase being due to the extra tonnage put through and the inclusion of the mining expenses at the O.K. mine. The net profit carried into the balance-sheet is, therefore, less than in 1921 and figures at £110,474. Income and other taxes amount to £44,476, so that it is only by making use of our reserve funds that we have been able to pay the two dividends of 6d each per share during the year. As doubtless you will have observed, the income and other taxes are very excessive, taking more than one-third of our net profits.

The tonnage extracted and treated was 114,669 tons in 1922, against 94,051 tons in 1921, an increase of 20,618 tons for that year. This is due to the extra days worked in the year. In 1922 the mill was stopped for fifty-one days, against ninety days in 1921.

The reserves of ore at December 31st last were 182,724 tons, containing 120,023 oz, the average being 13.13 dwt per ton. This compares with the reserves for 1921 of 192,065 tons, containing 142,870 oz, of an average of 14.87 dwt. It is satisfactory that although the tonnage put through the mill was 114,669 tons, the reserves have only decreased to the extent of 9,341 tons. The total sterling value of the ore reserves, taken at £4 4s per ounce, is approximately £500,000.

In connection with the future working of the mine, your directors have given consideration to the question of whether it would not be advantageous for us to discuss the question of amalgamation with some of our neighbours. It seems to us, with the large low-grade ore bodies which most of the big mines at Kalgoorlie possess, that if a system of amalgamation or co-partnership could be effected, this ore could be treated on an extensive scale by one large crushing plant, and the costs thereby so reduced that ore of a very much lower grade than that at present payable could be treated and profits made from it. Shortly, the idea is that by reduction of overhead charges, increase and modernisation of plant, elimination, where possible, of costly shaft sinking, costs could be brought so low as to enable ore of the value of a few pennyweights to be treated at a profit.

The report and accounts were adopted.

MORTGAGE COMPANY OF EGYPT, LIMITED. INCREASED PROFIT—REDUCED EXPENDITURE.

The fifteenth ordinary general meeting of the Mortgage Company of Egypt, Limited, was held, on the 28th instant, at the Cannon street Hotel, London, Sir Henry Babington Smith (chairman of the London committee) presiding.

The Chairman, in moving the adoption of the report and accounts, expressed the hope that, under the new constitution,

Egypt, as an independent State, under a hereditary and constitutional monarchy, would enter upon a period of continued prosperity and renewed contentment. Referring to the economic position of Egypt, he stated that after the violent fluctuations of recent years the price of cotton had remained fairly steady, at 30 to 35 talariis per cantar in Alexandria. The season of 1922 was not unfavourable. The amount of cotton sent to Alexandria up to May 25th exceeded 6,500,000 cantars, of which nearly the whole was shipped. The expenses of cultivation and transport had increased, but at the present price the results to the cultivator should be fairly satisfactory. In other respects the economic condition of the country was satisfactory. Dealing with the balance-sheet, the Chairman pointed out that the amount of debentures redeemed stood at £741,460, as against £648,480 last year. The total reserves, together with the profit on sales in suspense, now amounted to £393,198, and would be increased to over £427,000 by the proposed allocation to special reserve. The amount of new business offering had been somewhat less than in preceding years. The board had continued to follow a policy of very careful scrutiny and selection, and had only entertained applications for loans upon lands or buildings which offered unimpeachable security. The total amount invested in mortgages was now £3,001,441, compared with £3,122,024 last year. Throughout the past year the affairs of the company had been controlled, managed, and conducted by the board of directors in Egypt, in accordance with the new arrangement adopted in March, 1922. The reduction of expenditure was about £14,000, with the result that the balance of profit, after providing for debenture interest and preference share dividend, and also for the compensation paid to directors who retired, was £64,105, as against £46,354 last year. This enabled the board to recommend an allocation of £34,726 to the special reserve, in place of £15,000.

The report and accounts were unanimously adopted, and a dividend of 12 per cent. on the amount paid up on the ordinary shares was declared.

CALCUTTA TRAMWAYS COMPANY, LIMITED. SATISFACTORY RESULTS DESPITE STRIKE TROUBLES.

The ordinary general meeting of the shareholders of the Calcutta Tramways Company, Limited, was held, on the 26th instant, at 1, Queen Victoria street, London, Mr John G. B. Stone (chairman of the company) presiding.

The Chairman said that the accounts were made up at 1s 4d per rupee, exchange having become more or less stabilised at this figure. The principal capital expenditure was in connection with the rotary converter plant for taking bulk supply under their contract with the Supply Company, which necessitated writing off of the account the estimated cost of that part of the old d.c. plant (1,150 k.w.) which had been displaced, the balance of 500 k.w. being retained as a stand-by. The new plant installed during 1922 was represented by a charge of £23,261, while the old plant written out was shown in the £20,000 transferred to depreciation account. After crediting proceeds of the issue of second debentures, £250,000 capital account showed a credit balance of £92,020.

It was difficult to make useful comparison of the results of 1922 with those of 1921, on account of the increase of fares from February 1, 1922, and the strike, which covered 57 days in 1921 and 11 days in 1922. However, the results might be considered satisfactory, for, with an increase of 16 per cent. only in train miles run, the receipts were greater by 39 per cent., in spite of the loss of traffic during the last 11 days of 1922. Dearer coal was mainly responsible for the increase of 22 per cent. in the Indian working expenditure. Considerable saving was now being effected under the agreement with the Calcutta Electric Supply Company for the supply of power formerly produced by the d.c. unit referred to at the last general meeting.

In regard to the strike in December and January last, the company refused to concede the unreasonable demands made, and a strike followed, which almost entirely suspended the Calcutta service for the last 11 days in 1922 and the first 22 days in 1923, at the end of which time the strikers returned unconditionally. It was to be hoped that the firm attitude of the company would have its effect in preventing any recurrence of the trouble.

Both the political and trade outlook were fairly good, and they were within Rs. 11,954 of wiping off the deficiency, due to the strike, of Rs. 245,651 with which they started the year. There would be a considerable saving in power expenses, and in addition they had the advantage of the absence of loss on exchange. They were in close touch with the Calcutta Improvement Trust with a view to providing additional transport facilities in connection with the extension and improvement of the city.

The report and accounts were unanimously adopted and a dividend of 5s per ordinary share, free of income-tax, was declared, payable on the 4th prox.

THE NATIONAL BANK OF SOUTH AFRICA, LIMITED.

REASONS FOR THE UNSATISFACTORY RESULTS.
EXCEPTIONALLY SEVERE CONDITIONS.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

GOVERNOR OF RESERVE BANK'S SATISFACTORY REPORT.

"BUSINESS CONDUCTED ON SOUND AND PRUDENT LINES."

The following is the text of the address delivered by Mr James R. Leisk, C.M.G., chairman and managing director, at the annual meeting of shareholders of the National Bank of South Africa, Limited, held at Pretoria yesterday.

Gentlemen,—I regret that, as on the occasion of my first appearance in the chair of the bank a year ago, I have once more to deal with a situation that must necessarily be disappointing to the shareholders. However, I hope and believe that when you have heard what I am about to say on the subject this morning you will take a more favourable view of the situation than it is possible from a perusal of the condensed statements reflected in the directors' report and balance-sheet for the year ended March 31st last.

In its opening stages the past financial year gave some promise of happier conditions, but, unfortunately, these indications continued only for a very limited time and were succeeded by a spell of exceptionally severe conditions which immediately reacted very adversely upon that large volume of outstandings in the bank's books which was a legacy of the reconstituted board from the imprudent days to which I had occasion to refer at some length in the course of my last year's address. Incidentally, I may remark that, notwithstanding these exceptionally severe conditions mark that, notwithstanding the advance business undertaken to which I have just alluded, the year 1922 has proved to be perfectly sound, and has scarcely involved any addition to our contingent reserves.

CAUSES REMOVED.

I need hardly say that it is very distasteful to have to make comparisons of this nature between the character of business undertaken during these respective periods, but there seems to be no option. It is only by such means that the shareholders can realise that the present position of the bank is due to the cumulative action of causes which have now disappeared, and that they can obtain the necessary reassurance that the business of the bank is now being conducted on lines which are calculated to place it within the shortest possible time in a stronger position than it ever before has occupied.

When I delivered my maiden address to the shareholders last year I stated that to the best of their knowledge and belief the year 1921 had made full provision for bad and doubtful debts as at board had made full provision for bad and doubtful debts as at March 31, 1922. I need hardly say that before arriving at that conclusion the board were at pains to satisfy themselves by an examination of all available data that the provisions then recommended were adequate to the needs of the case.

I think that it will be obvious that if, at that time, they had thought it necessary, the directors would not have hesitated to recommend a much heavier provision, since it would have been no more difficult or unpleasant to appropriate a much greater sum than to withdraw the £300,000 that was the measure of our inroad into the reserve account at that time. What, then, were the general circumstances that so completely altered that outlook?

TWOFOLD EXPLANATION.

In South Africa there was a twofold explanation. In the first place, the settlement of the grave industrial troubles which demoralised the reef in March, 1922, was not so rapidly succeeded by prosperity as was the general expectation. On the contrary, while individual gold mines derived benefit from that settlement, the community in general which depends for its prosperity upon the principal industry of the country is still suffering from the effects of the upheaval. Large numbers of firms and individuals were unable to survive the strain, and the official record of liquidations and insolvencies bears testimony to the severity of the depression. Secondly, the fall in values generally which, it was thought, had come fairly near to finality a year ago continued, in many lines, to be a feature of last year's trading experience, and in consequence merchants' stock sheets disclosed further heavy writtings down, which have had a serious effect upon many balance-sheets. Then, in Portuguese East Africa, where, as you know, we are very largely interested, merchants have had to suffer from the additional embarrassment occasioned by the currency deadlock,

which, I am sorry to say, shows no immediate sign of disappearing.

NEW YORK AND ENGLAND.

As regards our New York business some addition has had to be made to the provision against bad and doubtful outstandings at that point which were specifically mentioned by me last year, our experience having been that various liquidations are turning out less favourably than was anticipated twelve months ago.

In England we received several unpleasant reminders that the strain of post-war conditions is still a serious factor. In particular I have in mind a firm of world-wide connections and reputation which, since our last annual meeting, has had to go into liquidation.

The announcement of their voluntary assignment came as a shock to all concerned, as their commercial rating had continued to be of the highest order right up to the date of their assignment. Their liquidation is turning out very badly, and I regret to say we are faced directly and indirectly with a heavy loss, which constitutes a considerable item in the additions now being made to our contingent reserves.

It was these conditions that suddenly transformed outstandings which, years ago, seemed to be no more than doubtful, into ascertained bad debts, and brought advances which could then be described as fair business risks into the doubtful category. Moreover, there is no doubt that our experience of the past twelve months has rendered us doubly determined on this occasion to guard against any further disappointments, and this determination is reflected in the very heavy provisions which we recommend to the shareholders to-day.

PROVISIONS MADE.

You will have perceived from the balance-sheet and the directors' report that the provisions considered necessary in the past year's accounts, in order to replenish our reserves against bad and doubtful debts to a point in keeping with dictates of prudent finance, absorb not alone the whole of our reserve fund, but involve the writing down of our paid-up capital from £10 to £7 a share.

This is, of course, very unpleasant news for the shareholders, and it is a matter of profound regret to the directors.

In the circumstances, we felt that the shareholders were entitled to have evidence from an impartial and undoubted authority that the amounts which we were to propose to the meeting as necessary provision for our legacy of unsound business represented bedrock, so far as that could be ascertained by a most careful and deliberate scrutiny; and accordingly, with the knowledge and approval of the Union Government, we submitted the bank's accounts for examination by the governor of the South African Reserve Bank.

The outcome of that examination is indicated in the directors' report, but it is desirable that I should quote to you the full text of the communication in which the governor of the Reserve Bank summarises the position.

MR CLEGG'S LETTER.

Mr Clegg's letter, which is dated Pretoria, June 23, 1923, and is addressed to the chairman and managing director of the National Bank of South Africa, Limited, reads as follows:—

"DEAR SIR,—
In accordance with your request, I and two of my colleagues on the board of the Reserve Bank have investigated the financial position of the National Bank as shown in the balance-sheet dated March 31st submitted to us. In conjunction with that investigation, we have carefully considered what amount should be set aside as provision for doubtful debts over and above what you have already set aside for bad and doubtful debts, and we are of opinion that, after the amounts standing to the credit of the profit and loss and reserve accounts have been applied to that purpose, and after the shares have been written down to £7 with the same object, the remaining £2,075,500 of the capital will represent a true surplus of assets over liabilities.

"In these circumstances, I have to say that the Reserve Bank, being satisfied that the business of the National Bank is now being conducted on sound and prudent lines, are prepared to extend to

the National Bank all facilities which it may require for meeting its engagements and carrying on its business.

"I have further to inform you that the Government, who have been made acquainted with the facts of the situation, fully approve this decision of the Reserve Bank, and will be prepared to give them any support which may be required to make it effective.

"Yours faithfully,

"W. H. Clegg, Governor."

The shareholders will readily appreciate that this investigation by Mr. Clegg and his colleagues necessitated a large amount of personal labour, seeing that, *inter alia*, it comprised a close scrutiny of the advance, discount, and other similar accounts, which are represented in our balance-sheet by the large figure of nearly £22,000,000.

The directors tender their grateful thanks to the governor of the Reserve Bank and his colleagues for their ready and ungrudging response to our appeal, and we feel sure that the shareholders will wish to associate themselves with this acknowledgment.

Now let us consider in greater detail the terms of the reserve bank letter of the 23rd instant.

ASSETS SURPLUS OVER LIABILITIES.

In the opening paragraph it definitely expresses the opinion that after the adjustments have been effected which are reflected in the balance-sheet as at March 31 last, the remaining £2,075,500 of the capital will represent the true surplus of assets over liabilities. In other words, it affirms that in the opinion of the reserve bank the allocations proposed fully provide for all contingent risks with which the bank is faced. Here, therefore, the shareholders have the necessary evidence that in the opinion of an impartial and qualified authority these proposals represent the fullest provision for all contingencies.

There are, however, other and equally important statements in the reserve bank letter.

The Governor states that as the reserve bank are satisfied that the business of the National Bank is now being conducted on sound and prudent lines, his institution is prepared to extend to the National Bank all facilities that we may require for meeting our engagements and carrying on our business, and he concludes by remarking that the Union Government approve of this decision on the part of the reserve bank and are prepared to afford them any support that may be required to make it effective.

RESERVE BANK'S CONFIDENCE.

I venture to think that neither the shareholders nor the depositors will want more definite or authoritative assurances regarding the value of assets shown in the balance-sheet in your hands, and it is, of course, a matter of peculiar gratification to the directors to have from the reserve bank this expression of confidence in the business policy now being carried out by the reconstituted board. Shareholders and depositors alike will be reassured by the knowledge that in view of these combined factors the reserve bank, with the support of the Government, are fully prepared to extend to us all facilities that we may require for meeting any monetary demands that may be made upon us.

I have, however, a further and most compelling example of the invaluable support that in time of stringency may be obtained through the Central Banking System.

The Governor of the reserve bank, whom we welcome at our meeting this morning, informs me that he is authorised to state that the Bank of England are prepared, if necessary, to discount in London acceptances of the National Bank of South Africa, Limited.

REDUCTION OF CAPITAL.

As regard the reduction of capital that is involved in these proposals, you will notice that it is the intention of the board to issue immediately notices calling the requisite extraordinary general meeting.

Before proceeding to the examination of the balance-sheet I should like to say a few words about the delay which has occurred this year in publishing the results of our operations to March 31 last. This delay was due to the fact that the South African reserve bank was engaged upon the investigation to which I have just alluded. Your directors considered it would be inadvisable to issue a balance-sheet until they were in a position to publish simultaneously the conclusions of the investigating authority.

LATER MEETINGS PROBABLE.

While on this subject I should like to acquaint the shareholders of the fact that present-day conditions and our connections in distant countries render it increasingly difficult to complete our annual accounts in time for the general meeting at the end of June in each year. The directors have in mind, too, the desirability of so arranging these matters that oversea shareholders may receive the annual balance-sheets and reports in time to allow them to make by proxy or otherwise any representations that they may desire at each annual general meeting. In all the circumstances the directors anticipate that in future years our annual general

meeting will probably be convened some weeks later than has been the past practice.

THE BALANCE-SHEET.

We may proceed now to the examination of the figures appearing in the balance-sheet. Let me say at once that from the point of view of liquidity the statement before this meeting exhibits a more healthy situation than at any time since the year 1909. When the shareholders reflect that this substantial improvement has been effected during a period of exceptionally trying conditions, they will agree, I think, that it is a very tangible outcome of the policy of the present board. In the aggregate figures of the balance-sheet there has been a shrinkage of some £5,750,000. This is due, of course, to the fact that the year under review continued to record a restriction in trade and readjustment of commodity values. The same progress has been felt by nearly all banking institutions, and our shrinkage is certainly not out of proportion to the general experience of others in the same business.

LIABILITIES.

On the liabilities side of the balance-sheet you will be struck by the large decrease in our note circulation. This is due, of course, to the operation of the Currency and Banking Act of 1920, in terms of which commercial banks in the Union ceased, as at June 30, 1922, to have the right of issuing their own notes, a right which is now vested solely in the South African Reserve Bank.

NOTES IN CIRCULATION.

During the 12 months ended March 31st last, our own notes in circulation were reduced from £4,426,098 to the figure of £548,264 appearing in this balance-sheet—a reduction in our liabilities under this heading of £3,877,834.

In addition to that, we have entirely replaced by notes of the Reserve Bank, for which we have been obliged to put down pound for pound, the large holding of our own notes which at March 31, 1922, was maintained by us for currency purposes, or "till money" at all Union branches. The amount of £548,264 shown in the balance-sheet represents the portion of our own note issues that has not yet come in from circulation. To meet this obligation placed upon us by the Currency and Banking Act of 1920, we availed ourselves to a substantial extent of the opportunity afforded by the same statute of rediscounting with the Reserve Bank our holdings of trade paper. At March 31st last the amount of trade bills so rediscounted by us was £2,494,000, and the item is included in this balance-sheet under the fourth entry on the liabilities side, viz., the entry indicating drafts issued, acceptances outstanding, and bills rediscounted.

DEPOSITS.

You may have noticed that our deposits show a drop of nearly £2,000,000 during the financial year. Having regard to the trade conditions which existed during the year, a shrinkage of less than 4½ per cent. must be regarded as exceedingly satisfactory.

ASSETS.

We may now turn to the assets side of the balance-sheet, and a brief survey of the figures will at once reveal a material improvement in the liquidity of the bank's position.

The form of the balance-sheet has been improved, I think, by the method which is now followed of indicating separately under the heading of "investments" the portion of the bank's securities which consist respectively of gilt-edged Government investments and other holdings.

PERCENTAGE OF LIABILITIES.

If you take the grand total of our cash remittances and gold in transit, money in London at call and short notice, and our investments, it will be found that it works out at a snare under 48 per cent. of our liabilities in respect of deposits and notes. A corresponding calculation for the previous year shows that at March 31, 1922, the bank's resources represented approximately 40 per cent. of its deposit and note liabilities, and, as already indicated, we have to go back 14 years for a parallel to the satisfactory ratio reflected in this balance-sheet.

BRITISH AND COLONIAL GOVERNMENT SECURITIES.

In passing, I might mention that of the £7,000,000 standing against the heading "British and Colonial Government Securities," approximately £5,100,000 is represented by Treasury Bills. The item, "Bills of Exchange" represents the financing of both exports and imports. It shows a shrinkage of rather more than £1,100,000. In comparison with the previous year, this shrinkage denotes mainly a decrease in import transactions, but it has another aspect that is worth mention—viz., the healthier note in trade conditions that is evidenced by shortened currency bills and more prompt payment.

BILLS DISCOUNTED, ADVANCES, ETC.

I would now ask you to look at the items "Bills Discounted, Advances, &c."

As compared with last year's figures, you will notice a reduction of nearly £4,000,000. This shrinkage, like other figures in our balance-sheet, naturally denotes the restrained enterprise that characterised the past financial year. It also reflects, however, the exceptional provision that we have deemed it necessary to make for contingencies arising out of business undertaken prior to the year 1922.

For a clearer comprehension of the meaning of this last remark I should, perhaps, explain that the provisions held as against ascertained bad and doubtful debts have been deducted from advance figures before the latter are entered in the balance-sheet.

FACILITIES FOR CLIENTS.

Throughout the year we have continued to meet the reasonable and legitimate requirements of our clients, and the strength of our cash position indicates that we are well equipped to meet whatever may be their further requirements of this character whenever trade conditions hold out a prospect of more stable and remunerative employment of funds.

BANK PREMISES.

The heading "Bank Premises," £859,000, reflects the position of this account after writing off £30,000 for the year under review against a similar provision to the extent of £25,000 in the preceding year.

It is worthy of note that the aggregate valuation of our premises is greatly in excess of the figure appearing in the balance-sheet.

PROFIT AND LOSS ACCOUNT.

We can now give a few minutes to the consideration of the profit and loss account.

ADVERSE CONDITIONS.

The adjustments necessitated by the extensive provision for bad and doubtful debts introduce an element of complexity into this account which makes it difficult to draw a comparison with the published figures of previous years. I may state, however, that our gross revenue for the past year under all headings is considerably below that of the years immediately preceding. Nor was this unexpected, seeing that, apart from general restriction in trade conditions, we lost during the twelve months under review the bulk of our note issue, and were obliged to pay charges running into the very substantial total involved in the consequential rediscounting transactions with the Reserve Bank. As if these factors were not enough in the way of adverse conditions, the trade situation occasioned a considerable accumulation of funds in London, where it was impossible to employ the money except at very low rates, nor was it practicable to move these surplus balances to this side except at a heavy loss. Nevertheless, the directors are entirely satisfied with the gross earnings of the year, which bear testimony to the value of our business connections. Even under the adverse conditions of the year under review, the expenditure appearing in the profit and loss account shows the substantial reduction of £174,000 over the corresponding figure of last year. This decrease occurs under the majority of headings of our administrative costs, but is mainly due to the disappearance of the cost of living allowances.

The vital necessity for further reducing our expenditure is never absent from the minds of the management, and every avenue through which economy can be exercised without loss of efficiency continues to be diligently explored.

ALLOCATIONS.

The credit carried forward from the profit and loss account, as you will observe, is £75,136, and the directors recommend that of this amount £50,000 should be allocated to the staff pension fund, the balance being carried forward to the financial year now current. This proposed allocation to pensions is the same as for the previous year. Incidentally I may observe that the actuarial valuation of our pension funds, which was foreshadowed by me last year, is in hand, and is expected to be completed in a couple of months' time.

The last remark that I have to make on the profit and loss account, although the fact must be obvious to all, is that in all the circumstances recited by me this morning, no dividend can be paid for the financial year ended March 31st last.

THE FUTURE.

So far I have dealt mainly with the past financial year. It is now permissible to make a brief survey of the future. In so far as the interests of the bank are concerned, our experiences during the past year have been such as to induce a spirit of extreme caution in venturing an estimate of what the future holds in store for us. Even so, there are so many encouraging features in the

present situation that it is impossible to restrain a feeling of quiet optimism.

Let me mention some of these encouraging features.

ENCOURAGING FEATURES.

You have confirmation by a very high authority that our contingency provisions, as reflected in the present balance-sheet, are adequate. The same authority endorses the policy now being followed in the conduct of the bank's business, and, if any further confirmation of this policy were required, it can be found in the fact that the business undertaken since the beginning of 1922 has proved to be sound and devoid of risk. Our earning capacity has been well maintained, notwithstanding all the adverse conditions against which we have had to contend; the liquidity of our position is self-evident from the balance-sheet. We are still applying the pruning knife to the expenditure services, and can see our way to effecting further substantial economies without impairing efficiency. There is no doubt, too, that the economic conditions of the country at the moment offer distinct indications of recovery.

POSITION OF INDUSTRIES AND TRADE.

The wool situation is buoyant. The recent bountiful rains have ensured an excellent maize crop.

The diamond industry is slowly but steadily recovering its position, and the gold-mining industry, on the whole, is enjoying a considerable measure of tranquility and prosperity. The gap between our exports and imports, which was one of our embarrassments last year, is gradually being narrowed, and in the House of Assembly last week the Minister of Finance struck an encouraging note regarding the economic outlook.

NECESSITY FOR ECONOMY.

Both the Finance Minister and the Minister of Railways, however, stressed the vital necessity for further economies in public expenditure, and in their efforts to secure this essential object they will have the sympathy and support of all responsible sections of the community. That there is plenty of room for further substantial economies in public expenditure no reasonable individual will deny, or that the machinery of public expenditure erected in the Union is far beyond the resources of the relatively small white population that has to bear the burden. If, as seems probable, the Government are successful in their efforts to reduce expenditure, and they are thus enabled to lighten the burden of taxation in South Africa, the result cannot fail to be most beneficial to all established industries in this country. Moreover, it will give health and vigour to those young industries such as the cotton and fruit production, which are promising extremely well at present, and will attract fresh capital from overseas for development of resources as yet untouched. So that with these encouraging prospects in view, with the bogey behind us of contingent provision for the imprudent days that have disappeared, I feel that I am justified in believing that we have definitely seen the worst of the bad times, and that more prosperous conditions will now be our experience.

RESERVE FUND.

Disagreeable as it must be to shareholders to be deprived for the time being of income from their investment, I do not think that any of them will fail to appreciate the fact that in their own best interests our reserve fund must be re-established to some extent before there can be any serious thought of distribution of profits, and shareholders must not expect any dividend announcement at the end of the coming half-year.

REPAYMENT OF FROZEN OUTSTANDINGS.

I should like to say a word to shareholders regarding our policy in endeavouring to effect repayment of frozen outstandings. If the client has any prospect whatever of winning through, and if he has shown a determination and capacity to recover his position and meet his obligations, we regard it as our duty both to that client and to ourselves to afford him all the reasonable encouragement that he may require, but in case of an involved obligant who may have no prospect of recovering his position, it must be acknowledged that we have no alternative but to put the insolvency laws in operation, and thus prevent him from prejudicing our position by contracting further losses. There is also the class of debtor who, finding himself in difficulties, persists in preferring other creditors at the expense of his bankers. Towards this class there is only one policy to pursue, and we intend to follow it in all cases of this nature that may present themselves.

PROMINENT EXAMPLES.

I have a particular object in view in making these remarks. Unfortunately, we have before us at the moment one or two rather prominent examples of both these classes of frozen outstandings, and my object is to acquaint shareholders with the situation, so that when they hear of our having taken action on the lines indicated they will know what are our reasons, and will also know

that full provisions for possible shortfalls in these connections are included in the allocations for contingencies that we have been considering this morning.

BRANCHES.

On the subject of branches you will see from the report that during the past financial year 19 branches were closed entirely and eight were converted into agencies.

On the other hand, one sub-branch was raised to the status of a full branch.

In my address to the shareholders last year I enlarged upon this policy of contraction in areas, which showed no prospect of profitable banking for years to come, and the figures quoted above demonstrate that we have been vigorous during the past year in safeguarding the interests of the shareholders in this respect; nor are we by any means at the turning of this lane of contraction. It would be quite impossible to defend the retention of small country branches which exhibit losses and offer remote prospects or no prospects of these losses being converted into profits or even of balancing expenditure and revenue. I regret to say we have still a considerable number of branches in this category, and in suitable rotation they are steadily being dealt with.

THE DIRECTORATE.

During the past year there has been no change in the personnel of the board. As you will see from the annual report, Messrs. H. O'K. Webber, A. Oliff, and W. S. Webber retire automatically, but are eligible and offer themselves for re-election. Mr Oliff's absence from our meeting this morning is due to a recent operation, from which, I am glad to say, he has already recovered, although not to an extent that permits him to face the journey from Maritzburg at this season.

The past year has been one of considerable anxiety for the board, involving exceptional demands upon their time and attention, and I wish to take this opportunity of recording my very grateful thanks for the invaluable assistance which, individually and collectively, my colleagues have freely given to me.

MR AIKEN JOINS THE BOARD.

It affords me great pleasure, too, to announce that, in response to the invitation extended to him by the directors, Mr Alexander Aiken, of Johannesburg, has signified his willingness to join our board.

Mr Aiken is so well known and respected throughout the Union as one of the foremost financial experts and economists that he needs no introduction to you. His unique attributes and experience will assuredly prove of the greatest assistance in the conduct of the bank's affairs.

A few months ago I paid a short visit to London to make myself conversant with that important section of our business.

CHANGES IN LONDON ORGANISATION.

This afforded me a welcome opportunity of making the acquaintance of those members of our London Committee whom I had not previously met. As the result of the personal exchange of views thus rendered possible, certain necessary changes in the organisation of our London office were agreed upon, while a relationship was established with the committee which, I venture to think, is very much to the bank's advantage.

CHANGES ON THE COMMITTEE.

During the financial year two vacancies occurred in the ranks of the committee. The first of these vacancies was caused by the resignation of Mr O. R. Dunell, who has been associated with the National Bank since the absorption of the Bank of Africa, of which he was a director. The other vacancy was occasioned by the untimely death of Mr Kitzinger. These two vacancies were filled by the appointment of our joint managers in London as official members of the committee, an arrangement which seems to be working well.

The London committee have not escaped the cares and worries inseparable from these trying times, and I am confident the shareholders will share the board's gratification that their interests are in such capable hands.

GENERAL MANAGEMENT.

The demands made upon the general manager, assistant general managers, and the head office staff generally during the past financial year were exceptionally arduous, the heaviest strain having been, of course, upon the general manager, and accordingly the board have agreed most willingly to his suggestion that he should enjoy a spell of overseas furlough as soon as this can be conveniently arranged.

Mr. Dunlop will seize this opportunity of visiting our New York Agency in addition to studying conditions in London, and, therefore, his vacation promises to be of specific value to the bank as well as healthful and reinvigorating for himself.

QUESTION OF NEW HEAD OFFICE.

At last year's annual meeting certain speakers advocated the early construction of a more suitable building for the accommodation of our head office staff service. That I readily admit was sorely needed. Since then I have received representations from various shareholders to the effect that they will feel aggrieved if a service of this nature is undertaken before circumstances admit of a resumption of dividend payments. Their view is readily appreciated by the directors, who accordingly decided not to take any action in that regard for the present. This decision has been come to the more readily owing to the fact that the building costs are still abnormally high.

WAR MEMORIAL.

On July 19 there will take place the unveiling of a tablet which the Board have erected to the memory of eighty-six officers of the bank who made the supreme sacrifice during the great war. The Prime Minister has graciously consented to perform the ceremony. The precise hour of the ceremony has not yet been fixed, but shareholders who desire to be present should inform the secretary, who will see that they are duly notified of the arrangements. The tablet is being given a temporary resting-place in the Banking Hall underneath us, but its ultimate destination is, of course, our projected new administrative block.

THE STAFF.

At the risk of trying your patience I must offer a few words on the vital subject of establishments. In April, 1922, the staff on our registers, male and female, numbered 3,472. At the end of March last this number had fallen to 3,230, a decrease of 242 officers, of whom, roughly, two-thirds were from the ranks of our lady assistants. The consequent decrease in our salary sheets is £36,363, a figure that shareholders will regard as small in comparison with the numerical decrease in personnel.

The explanation is, of course, that under what is known as the Grading Award we are obliged each year to pay to graded officers salary increments which in the aggregate amount to a very large sum. It is contended in certain quarters that this obligation in the matter of annual increments remains unalterable, notwithstanding bad times and diminished revenues. My purpose is not, however, to argue the legal aspect. The practical aspect is, of course, that in the present circumstances we simply cannot afford the consequential drain. The problem is to find an alternative scheme which, while it will continue to assure to efficient officers the necessary encouragement to advance in their profession, will at the same time introduce barriers which will automatically check the salary progress of the inefficient until by his own efforts he has removed his disqualification.

AMENDED GRADING SCHEME PROPOSED.

The existing grading award has been in operation for two and a half years, long enough, that is, for its demerits as well as its merits to be discerned. It would have been a superhuman achievement if the authors of the award had been able in the relatively short time at their disposal to produce a perfect piece of administrative mechanism, and I take leave to express my admiration for the work that they created in an atmosphere that did not make for the submission of thoroughly impartial evidence by either of the two opposing parties. In the circumstances we intend to approach the Society of Bank Officials at an early date with a proposal for a friendly discussion of an amended grading scheme which we have in preparation. We are fully conscious that it is in our own interests to have a contented staff, and the underlying idea of this amended scheme will be to give our efficient officers the maximum of salary encouragement within the limits of our ability. I have not the least doubt that the society will meet us in a reasonable spirit, and in order to allay any feelings of apprehension which the foregoing remarks may create in the minds of our graded officials, I would add that during the first year of its operation this amended scheme is not expected to produce a greater reduction than £5,000 in the salary bill of our graded officers, a reduction that amounts to only about 1 per cent. of the salaries paid to graded officers at the present time. In point of fact, the alternative grading scheme is not designed to effect immediately any material saving in our establishment charges. Its main object is to raise the level of efficiency, and thus to economise expenditure in later years by diminishing the need for so large a staff as we support at the present time.

REVISION OF LOCAL ALLOWANCE REGULATIONS.

But we cannot wait for such a slow decrease in our establishment charges as is expected from the revised grading proposals, and accordingly some other means must be found of meeting the situation. We think that a solution lies in the revision of local allowance regulations, and we shall put our ideas before the society in due course. It will be our earnest endeavour, however, so to frame any such revision as to bear as lightly as possible upon our married officers. In the year 1920 three com-

mercial banks formed themselves into an organisation styled the Associated Banks for the purpose of dealing on joint and uniform lines in matters of salary, &c., with the Society of Bank Officials. In the year 1921 this partnership was reduced to two, and as the exigencies of the present situation mainly concern themselves, we have decided to give notice to our partner and to the society of our intention to retire from the partnership, a step that will automatically involve the disappearance of the Associated Banks' organisation.

TRAINING OF YOUNGER OFFICERS.

The organisation served a useful purpose, but the conditions under which it came into being have altered, and we must have liberty of action to solve establishment problems that are of a more vital and immediate concern to us than to our more fortunate partner. In regard to the staff position generally, it will interest you to learn that greater attention is now being paid not only to the educational qualifications of candidates for entrance to the bank's service, but also to their potential value and to their antecedents, and that special attention is being paid to the training and development of our younger officers along systematic lines, so that when vacancies arise in higher positions we shall be well equipped to fill them. Certain selected officials are now being given special opportunities of improving and developing their banking knowledge by periods of intensive service at the head office and at suitable points. During this year we have lost several of our senior men, and we have been obliged, therefore, to call upon some of our younger men to fill important positions. It affords me pleasure to state that the men thus called upon have responded in a most creditable manner to the responsibilities of their new posts. No doubt shareholders have from time to time seen reports in the public Press of defalcations by members of our staff. Active measures are being employed to minimise the risk of such happenings, and I am glad to say with excellent results. Certain of these defalcations were made possible by slackness on the part of officers whose duty it was to carry out well-understood rules for the maintenance of an effective system of checking, rules which are not only laid down in unmistakable terms in our instruction book, but which have been repeated in circulars to our branches.

It is hardly necessary to add that officers who may display negligence whereby defalcations have been made possible or facilitated are being subjected to disciplinary action of a very stern character, no matter what may be the length of their service or the position in it that they have reached.

THE CURRENCY AND BANKING ACT, 1920.

During the closing stages of the session of the Union Parliament that terminated on Saturday last, a measure became law which amends in certain important respects the Currency and Banking Act of 1920. The features of this amending statute that more particularly affect commercial banks in the Union are the extension for two years—that is, until June, 1925—of the inconvertibility of gold certificates and the alteration (which remains in force for five years) of cover that may be held by the Reserve Bank for its note issue.

REPLY TO MR SAMUEL EVANS.

The first-mentioned alteration gave rise to considerable criticism, and in particular I would mention the views of Mr Samuel Evans. In addressing shareholders of the Crown Mines, Limited, recently, Mr Evans charged the bankers in the Union with self-interest and disregard of the needs of the country in supporting the proposal which ultimately became law. I venture to think that Mr Evans may already have found cause for regretting such a sweeping statement. The support given to the amendment by the representatives of commercial banks was dictated by the conviction that the interests of South Africa as a whole would be seriously endangered if the Union, under the existing circumstances, were to make a solitary attempt to go back to a free gold basis. Naturally, if the Union as a whole suffered from a precipitate action of this nature, the banks established in this country would also suffer, as there is an obvious community of interest between the two.

NO SELFISH MOTIVES.

But this is no ground for the implication that the attitude of the commercial banks was conceived from selfish motives, and notwithstanding the consciousness that the measure would be detrimental to the country. As a matter of fact, if conditions were ripe in South Africa to return to a gold basis, the change would be hailed with delight by the commercial banks. Their present embarrassments in the matter of exchange would thereby be reduced by a very material extent, while their profit-earning capacity would be increased as a result of the expansion in trade that would flow from the greater measure of stability thus introduced. With regard to the other alteration in the currency and banking legislation to which I referred a few moments ago, this admits British

and Union Treasury bills as a limited portion of cover against the note issue of the Reserve Bank. The amendment introduces a great degree of flexibility in the matter of obtaining currency in the Union, and to that extent is a useful and desirable provision. For instance, under the conditions at present prevailing, the commercial banks, by investing in British Treasury bills, may employ their surplus funds in London for the purpose of supplementing their surplus of Union currency. This facility may possibly enable the commercial banks on occasion to postpone or even dispense with the balancing of their exchange transactions in gold, but it will not effect any actual movement of these London balances. The substitution of Treasury bills in part for commercial bills has become necessary owing to the dearth of good trade paper exchange.

TELEGRAPH TRANSFERS AND DRAFTS.

The commercial banks are criticised very much by the exporting community on account of the rates which have prevailed during the past years for the purchase by the banks of telegraph transfers and drafts on London. As this criticism appears to be founded on a misconception of the situation, it is desirable to set out the facts as they present themselves to us. It is common knowledge that during the past year the accumulated funds of the South African banks in London reached an abnormal level. To correct this position, the South African banks might have suspended the purchase of bills on London, or they might have shipped sovereigns to this side. Both of these remedies had previously been tried. In 1921 an attempt was made to restrict the purchase of overseas bills, a course which was received with a storm of protest from exporters, and in 1919 and 1920 gold was imported at enormous cost to the banks. This cost amounted to as much as 25 per cent., if not more, and, in accordance with the usual exchange practice, the proper procedure was to have passed on this cost to the exporters by adjusting exchange rates. The banks, however, refrained from adopting this procedure, otherwise selling and buying rates in South Africa at that time for £100 on London would have been approximately £76 and £75 respectively.

Obviously, both of these alternatives would have been contrary to the interests of the bank's exporting customers, and of the country, and accordingly, at considerable risk of serious embarrassments to themselves, the banks continued to meet the requirements of these customers at rates which were very much below the margin of business expediency.

REDUCTION OF RATES.

Fortunately, the trend of trade recently has been such as to relieve the banks to a considerable extent from these embarrassments, and as the situation improved the banks have correspondingly reduced their rates for purchasing exchange on London. Within the last four months this reduction amounted to 1 per cent., following the usual law of supply and demand, with a superabundance of South African funds in London and a corresponding scarcity in the Union. The South African pound in the Union naturally appreciated, and the British pound depreciated. This was reflected in the exchange rates, and in December, 1922, £97 in the Union was sufficient to purchase £100 in London. At that time gold was approximately 89s per ounce, and had the exchange rate been based on the price of importing sovereigns the local buying rate of £100 in London would have been approximately £95. It is said that exchange rates are arbitrarily fixed by the banks, but the deciding factor is the trend due to trade as reflected in their balances in the respective countries.

British West Africa	Egypt
British South Africa	Other countries
Other countries	
Total declared value of imports	Total declared value of exports

Messrs Samuel Montagu and Co. write on June 28th as follows:—

GOLD.

As the Indian demand has fallen off considerably, quite a large proportion of the gold this week will be sent to the

United States. A notification in the Press that the New South Wales branch of the Royal Mint will be closed as from January 1st next is premature, as the proposal is, we understand, under consideration by the Treasury. The reason of this change seems to be the reduced Australian gold output, which has caused a loss in the working of the Mint. Moreover, as the first issue of subsidiary coins required in Australia has been completed, there is a greatly reduced demand for further new coinage.

SILVER.

The market has lacked animation during the week. The Indian bazaars have not betrayed much interest. This has doubtless been owing to the monsoon movements, which at present are rather disappointing. Reuter reports that the monsoon has been practically general in Bengal, but that the current is feeble, and more rain is needed in the West, whilst in Bombay bazaar dealers in commodities have been deterred from operations by a prolonged break, which is causing uneasiness. These early adverse conditions, however, may easily be remedied by more favourable developments at a later date; if so, the effect upon the silver market would naturally be the more stimulated by a temporary abstention from purchases, and by a desire to liquidate bear positions which might have been built up. Most of the support has come from China, which has made purchases at the lower level at which we now stand. Supplies have come freely from the Continent, but America still stands aloof. To-day's prices—31 1/2 cash and 30 1/2 two months' delivery—are the lowest fixed since February 23rd and 24th last respectively. We are informed that the exports of silver from San Francisco to China during the month of May totalled 3,545,000 ozs.

INDIAN CURRENCY RETURNS.
(In Lacs of Rupees.)

	June 7, 1923.	June 15, 1923.	June 22, 1923.

Reports and Notices.

The directors of the South African Mutual Life Assurance Society have appointed Mr Charles Cosmo Monkhouse, B.A., F.I.A., to the position of general manager of the society. Mr Monkhouse, who is at present actuary to the United Kingdom Provident Institution, leaves this country at the end of September next to take up his new appointment.

The Governor and Committee of the Hudson's Bay Company announce the following changes in their staff:—Mr Frank C. Ingrams, having tendered his resignation as secretary after 35 years' service, will continue his association with the company in connection with their fur trade. Mr Patrick Douglas Stirling has been appointed London manager. Mr John Chadwick Brooks has been appointed secretary.

As from July 1st next the registered offices of Djember Rubber Estates, Limited, are being removed to those of Messrs Begg, Roberts and Co., Rochester buildings, 138 Leadenhall street, E.C. 3. Branches of the Meadow Dairy Company, Limited, have been opened at 14 King street, Darlaston, and 49 Pimlico road, London, S.W.

In view of the increased activities and enlargement of the Department of Colonisation and Development of the Canadian Pacific Railway, Mr. T. E. Roberts has been appointed assistant manager of the European organisation.

GOVERNMENT STOCKS, &c.

GUAYAQUIL AND QUITO RAILWAY PRIOR LIEN BONDS.—The Council of Foreign Bondholders have received a telegram from their agent at Guayaquil stating that the sum of \$107,000 is being remitted for the service of the above bonds in respect of the past half-year.

RAILWAYS.

ASSAM-BENGAL RAILWAY COMPANY, LIMITED.—The directors, with the sanction of the Secretary of State for India, offer to the holders of the £430,000 debentures of the company, maturing on July 4, 1923, the option of renewal on the following terms:—Period, four years; rate of interest, 4 per cent.; price, £97 7s 6d (2½ per cent discount). A commission of 5s per cent. will be allowed to brokers and other agents. This offer will remain open until 12 o'clock on Tuesday, July 3, 1923, and debentures for renewal must be lodged at the offices of the company, Bishopsgate House, 80 Bishopsgate, E.C. 2, before that time.

BANKS.

NATIONAL BANK OF NEW ZEALAND.—The net profit for year ended March 31, 1923, after paying a bonus to the staff of £13,600, providing for bad and doubtful debts, and including £142,121 brought forward from the previous year, amounts to £370,867. The interim dividend at the rate of 12 per cent. per annum, paid in January last, absorbed £72,700. The sum of £20,000 has been placed to premises account, leaving now available for distribution £278,167, which the directors propose to allocate as follows:—In payment of a dividend at the

rate of 12 per cent. per annum for the half-year ended March 31st last, £75,000; in payment of a bonus of 2 per cent., £25,000 (both free of income-tax); to reserve fund (which will then stand at £1,260,000), £10,000; to pension and gratuity funds, £22,600; balance to be carried forward, £145,567. A branch has been opened at Tuatapere, and the agency at Newmarket (Auckland) has been converted into a branch. The agency at Kaihu has been closed.

THE BANK OF TAIWAN, LIMITED.—Balance-sheet, December 31, 1922:—

MISCELLANEOUS.

BENZOL AND BY-PRODUCTS, LIMITED.—The audited balance-sheet and profit and loss account of the company from April 1, 1921, to March 31, 1922, has just been issued. The year's operations resulted in a trading loss of £44,493, due to strikes and trade depression. Deducting therefrom £7,201 profit brought forward from the last account and £8,000 written back from income-tax and excess profits duty reserve, leaves a net loss of £29,292, which is carried forward. The directors point out that they are satisfied that ample provision has been made for depreciation. The report states that in comparison with the previous financial period the value of the company's assets has decreased in the period under review by £55,963. This is mainly due to stock-in-trade, which is reduced by £35,746, owing to non-production during the strike period and subsequent fall in values. The balance of the £40,000 6 per cent. mortgage on Crigglestone Colliery (viz., £20,000) has been entirely discharged. With regard to the company's claim on the coal mines department, a settlement was effected, leaving a balance due to the company of £14,389; this balance has since been received. The company has no bank overdraft or charge upon its undertaking, whilst its present liquid cash position is, in the opinion of the directors, highly satisfactory. The trading outlook is bright, and the board has in hand business which if successfully completed should bring considerable additional revenue to the company.

OHLSOON'S CAPE BREWERIES.—The report for the year ended March 31, 1923, just issued, shows that the company experienced a better year's trading. In the previous year a loss of £12,136 was experienced, and the ordinary shareholders received no dividend. The latest report shows a net profit of £43,250. The ordinary dividend is 5 per cent., and the carry-forward is £12,081, against £6,581 brought in to the accounts. The improved results shown are largely due to the lower costs of materials and other savings, and the directors speak hopefully of prospects for the current financial year. The meeting will be held at the Great Eastern Hotel, Liverpool street, on July 5th, at 2.30 p.m.

PATON AND BALDWIN, LIMITED.—The profits of Paton and Baldwin, Limited, for the year amounted to £668,543, to which is added the balance brought forward from the previous year £68,075, making a total of £736,618. There has been paid on the preference shares a dividend at the rate of 6½ per cent., less tax, £66,641; an interim dividend on the ordinary shares at the rate of 2½ per cent., free of tax, £30,982; leaving a balance of £629,995. It is recommended to write off £90,000 for trade-marks and goodwill, which extinguishes it, and to pay a final dividend of 10 per cent., free of tax, making 12½ for the year and a bonus of 2½ per cent., free of tax on the ordinary shares. £250,000 is to be added to the reserve, making it £500,000, leaving a balance to be carried forward of £100,083.

PLATT BROTHERS AND CO., LIMITED.—The report for the year ended March 31, 1923, shows a net profit, after payment of debenture interest, of £708,808, as against £821,620 in the preceding year. The dividend for the year is 20 per cent., which compares with 22½ per cent., when a bonus of £206,120 was paid in shares in addition to the dividend. The general reserve is strengthened by the allocation of £237,978, which brings the general reserve fund up to £1,000,000. The sum of £130,000 is put to taxes reserve fund, making it £380,000. The sum of £66,447 is carried forward, which compares with £69,876 brought in. The annual meeting will be held at Hartford Iron Works, Oldham, on July 5th, at 2.30 p.m.

WILLIAM COOKE AND CO., LIMITED.—The directors state that it is not possible, at the moment, to issue a balance-sheet, because a settlement has not been come to with the Inland Revenue authorities, but the auditors say they will be able to authorise the publication of balance-sheets for the last two years in a short time. The directors report that the year ending March, 1923, was another disappointing one in the iron and steel trades, with falling prices until the end of January, and the volume of trade much below the capacity. They are, however, pleased to say that although a balance-sheet cannot be presented, they are satisfied that a small profit is the result of the year's working, and with help from the reserve fund the losses in the bad years can be wiped out, a small dividend can be paid, and a respectable sum carried forward. For these purposes they suggest transferring the amount of the special reserve fund, £30,880, and £9,120 from the general reserve fund, making a total sum of £40,000, which, so far as can be ascertained at present, is thought to be sufficient for the above-named purposes. This appropriation will still leave the reserve fund larger than it was before the war. They therefore recommend that a dividend of 2½ per cent., free of income-tax, on the ordinary share capital of the company be paid.

THE COTTON TRADE.

† Tax free. (b) Also share bonus of £206,120.

Our Sheffield correspondent writes:—The trade in basic billets is suffering from severe depression, owing mainly to the competition of Continental material. Stocktaking and lack of confidence are also acting adversely upon the situation. Hopes are entertained that the competition referred to will disappear, or largely so, in a short time, and cause a revival in the demand for British material. The current quotations for billets are admitted to be unremunerative, and works which do not own their fuel supplies are operating at a loss. An increase in the number of local unemployed this week may be attributed to the stoppage of plants for stocktaking. Producers are clamouring for cheaper fuel and lower railway rates, as without such concessions a recovery from the prevailing slump is held to be impossible. The mills have still work on hand from old contracts, and in a minority of the finished departments bookings have tended to improve of late. There has been no buying of pig-iron for a long period except in small lots, and as stocks are accumulating at some of the producers' works a stoppage of a number of blast furnaces is probable during the next week or two. The coal market is easier, both in exports and home sales, British consumers' specifications being reduced owing to stocktaking operations. Supplies are plentiful. Quotations are much the same, and coke is firm at 30s at ovens. Prices at pits are:—Hand-picked South Yorkshire branch, 32s 6d to 34s 6d; best silkestone, 28s to 30s; best South Yorkshire hard, 21s to 23s; Derbyshire ditto, 20s to 21s; rough slacks, 12s to 14s; smalls, 7s to 9s.

Our Middlebro' correspondent's report, dated June 28, 1923, is as follows:—Pig-iron: There is no doubt that orders for pig-iron are being lost at our present price level. Other districts are offering cheaper, and foreign iron is again commencing to come in. Makers are prepared to reduce their quotation of 112s 6d for Cleveland No. 3 G.M.B. somewhat, but buyers still regard the iron as too dear. East Coast hematite mixed numbers are about 112s 6d per ton. Manufactured iron and steel: The unsettled boilermakers' strike interferes very much with our steel rolling mills. Steel ship plates, £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £10 10s. Iron ore: Prices have about reached the downward limit, and the sellers' price for best Bilbao Rubio is maintained at 24s per ton, c.i.f. Tees.

Our Cardiff correspondent writes:—On the Cardiff coal market this week quotations have shown a much steadier tendency. The view was expressed in this column last week that the "rot" in the market prices had been checked. That view has been confirmed by the course of events this week. There has been no great activity either on current sales or contract account. New orders have been placed, but they have been for relatively small amounts, and collieries in need of spot tonnage have been prepared to make concessions in order to release wagons to prevent stoppages. Buyers, however, are coming into the market again, and the volume of trade is being restored to the high level of the weekly returns during March and April. Moreover, there is evidence that the drop in prices has checked the diversion of orders to the United States, whence latest reports admit a diminished export activity. The approximate current quotations are as follows:—Best Admiralties, 30s to 32s 6d; second Admiralties, 27s 6d to 30s; best drys, 30s to 31s; black veins, 28s 6d to 29s 6d; Western Valleys, 28s to 28s 6d; Eastern Valleys, 27s to 28s; best bunker smalls, 22s 6d to 23s 6d; ordinary cargo smalls, 18s to 20s; anthracite big vein, large, 20s to

1477

55s; machine-made cobbles, 62s 6d to 65s; French nuts, 60s to 62s 6d; stove nuts, 55s to 56s; rubbly culm, 18s to 18s 6d; coke for export, 50s to 57s 6d; inland blast-furnace coke at ovens, 35s to 40s; pitwood, ex ship, 27s 6d to 27s 6d. In the patent fuel, 35s to 38s; pitwood, as well maintained, and the exports iron and steel trade production is well maintained, and the exports last week were one of the heaviest recorded. They totalled nearly 32,000 tons, and that quantity has been exceeded in only one other week this year. Prices, however, are barely steady at the minimum schedule. That schedule is operative up to the end of September, and some merchants were inclined to discount prices for the last three months of the year. It is now generally believed, however, that the stabilisation agreement will be renewed for the last quarter of the year, but the prices for that period have still to be decided.

CUMBERLAND IRON

(BY OUR WORKINGTON CORRESPONDENT.)

(BY OUR WORKINGTON CORRESPONDENT.)
A disagreeable change has come over the Cumberland and North Lancashire hematite pig-iron trade during the past three or four weeks. Forward business has dried up to a large extent, and one furnace has in consequence between Workington and Carnforth 17 however, in operation between Workington and Carnforth 17 however, and these, it is now hoped, will be able to maintain their furnaces, and these, it is now hoped, will be able to maintain their production through July, if only to satisfy the needs reaching smelters from day to day. What future prospects are to be must smelters from day to day. What future prospects are to be must national situation. Certainly, so long as no satisfactory progress is made with regard to the reparations problem, consumers, is made with regard to the reparations problem, consumers, whether on the Continent or at home, are not disposed to enter into commitments far ahead. Trade of a hand-to-mouth character, therefore, is likely to be all to be secured for some little time to come. Changes in prices have, of course, taken place, and Bessemer mixed numbers have fallen during June to £6 5s per ton, delivered at Glasgow and Sheffield, and to the same figure for export. Ferro-manganese, on the other hand, being in firm request, especially by American users, commands the old rates, and is quoted at £18 per ton, delivered at home works, and £20 per ton for export, while spigot is also steady at £10 and £9 10s respectively. The steel trade is exceedingly dull, and such spasmodic activity as is exhibited at the rail mills at Workington is concerned with the execution of old contracts. Prices are a little easier, since there is little new business being booked, and heavy sections of rails are now quoted at £10, lighter sections at £11, and billets at £9 per ton. There is a somewhat smaller production in the native hematite iron ore industry, nearly all the privately owned mines having closed down, but owners are well sold, and so far there has been no depreciation of values, best sorts of low phosphoric ores commanding 26s to 28s and ordinary kinds 22s 6d to 24s 6d per ton. The coal trade is very brisk, but it is due in part to the diminution of output—the Whitehaven pits having been idle for three weeks—that supply is unequal to requirements. Irish merchants are having to be rationed, and the whole of the smalls has to be reserved for the local coking plant. Best round for export is 27s 6d, house nuts 24s, and washed nuts 25s. Best house in the coal market is 38s 2d, 27s, and washed steam 30s, and washed steam 29s per ton. The make of coke best steam 30s, and washed steam 29s per ton. The make of coke just suffices to cope with local smelters' requirements. The price is unchanged at 24s to 30s, according to carbon content. By-products are in steady request, road tar is in firm demand, and creosote and tar acids are a fair trade.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The opening auctions in London this week have revealed a good general demand for wool, and although it is obvious that Continental support is the mainstay of the market at present, it is none the less gratifying to know that confidence in raw material section spinners are contending the yarn cases orders are being held up remains unshaken. In many a good deal of price-cutting with great difficulties. In many and a good deal of price-cutting on account of lack of particulars, who need new business to keep is being indulged in by firms who need new business to keep machinery running. Quotations are merely nominal, and prices in many cases are anything but remunerative. The piece goods trade remains quietly steady.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The quantity of wool available for the fourth series of London sales, which commenced on Tuesday, is 220,300 bales, the British Australian Wool Realisation Association offering 60,000 bales of crossbreeds. The remainder is being put up on growers' account. In view of what has happened during the interval, the commencement of the sales was watched with much interest, and anticipation of the course of prices based on the position of the home trade, could not have justified anything better than a fall of 10 per cent. The actual position, however, is that practically all descriptions. The unsatisfactory state of the home sales have opened most creditably, and it has again been demonstrated that, in spite of the industry are able to buy. With regard to prices, merinos and crossbreeds were practically 5 per cent. cheaper, this being due more to the Continental exchanges than anything else. When the value of the franc is taken into consideration, French and Belgian buyers are paying prices fully on a parity with the close of the May series. The sale of Queens-land greasy merino combing at 3rd and West Australian at 20th shows that there is nothing wrong with fine wools, and whatever may be the attitude of home trade buyers, Continental representatives are not likely under present circumstances to show much hesitancy.

MANCHESTER, June 28.

The market during the week has not displayed much activity and business has been very irregular. A fair amount of inquiry has been dealt with, but in most sections the prices required have been out of the reach of buyers. Further operations have occurred

in light fabrics for India, but the recent turnover in dhooties appears to have been exaggerated. On the whole advices from Calcutta are not favourable, and the monsoon rains are not coming up to expectations. Offers in standard cloths for China have been fairly numerous, and moderate lines have been booked, chiefly in whites and fancies. For the Continental and Near Eastern outlets demand has been slow. American yarns for home use remain firmer in quotation, owing to stocks not being quite so heavy as a month ago, but business does not broaden. A steady trade continues to be done in Egyptian spinnings.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

Although prices of timber for building requirements have kept steady throughout the past month, with a decided firmness for batten sizes, the trend of affairs has been to some extent in favour of the consumer, inasmuch as nearly all descriptions, including hard wood logs and hard and soft sawn woods, have arrived in much larger volume compared with the two preceding years, thus making it easier for users of goods to have no little say in prices on the spot. Also, in accordance with the predictions given in the special article in the *Economist* a fortnight ago, it is worthy of notice that Latvia and Poland have considerably increased their imports of building and packing-case wood. Russia is making a big effort for f.o.w. deliveries, and Sweden and Finland are sending larger quantities now that the shipping season is in full force.

In the furniture wood market the position shows no great change to that last reported. For mahogany logs the market is very firm (as was evidenced at the public auction sale in London on Tuesday), stocks in first hands being low, with not too much to come forward. In the other hard woods supplies sawn lumber has been coming freely from the U.S.A., and to a much lesser extent from Canada. For the first-named imports some American shippers are a little more reasonable in their demands, which should attract more buying by merchants.

In all sections of the trade the feeling is growing that prices ought not to rise even with a better consumption, but shippers are not of this opinion. The present moderate demand for f.o.b. requirements for England is due to the fact that importers here are not sure of the market at present foreign offers, and the cheaper lines that they have been able to pick up from the principal shippers' Southern competitors, though welcome, does not warrant them taking too rosy a view.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Contrary to expectations the hide market in Bermondsey showed no further signs of weakness on Thursday; in fact, one or two slight advances were noted. Best ox sold from 6½d to 8½d and seconds from 5d to 7d, whilst best cows at 6½d remained unchanged. Second cows, however, at 5½d showed ½d advance on last week. Calf were also a shade firmer, best selling from 4½d to 11d, and showing a few advances of ½d to 2d. Wools were steady at 5s 6d to 12s 6d, hogs from 6s to 14s 6d, and lambs 2s 1d to 6s 6d. Pelts sold from 3s to 4s 8d each. The business doing in imported hides is quiet in view of the fall in frigorifics; these are now below pre-war rates at 7½d, although latest quotations from the River Plate are 7½d to 7¾d, as the United States appear to have again started buying. All other sorts are dull, and quotations lower for dry hides generally. The Chicago market is cabled as weak, with best heavy packers now offered at 14 cents.

The shoe trade has fallen quiet, especially for ladies' goods. Men's boots are, however, selling better, whilst the demand for export is steadily increasing. The exhibition of the all-British boot in London has been successful, and the goods are now on show at a prominent Bristol retailer's.

VEGETABLE OILS AND OILSEEDS.

Conditions in the markets for vegetable oils continue steady and have been helped by a fairly good demand. Lower prices of raw linseed oil have brought in consumers, and a good trade has been done chiefly on home account. Export demand, however, is still on very moderate lines.

The better tone in regard to cotton oils continues, and there has been again a slight advance in values for both crude and refined. Other vegetable oils are in moderate request, and values on the whole are about maintained.

In the oilseed section attention has been given principally to Indian linseed, values of which as with Plate are lower on more inclination on the part of shippers to trade. Business done is, however, small, crushers being well supplied for the present Egyptian cottonseed has been firm, but has since eased.

OVERSEAS PRODUCE MARKETS.

General course of trade proved quiet, demand for both raw and manufactured goods being without appreciable revival, but prices in most instances maintained a steady level as no undue pressure of supplies was felt.

SUGAR.—All spot parcels of refined opened with fair support, British descriptions being again favoured and stability characterised the market, but eased later. Messrs Tate and Lyle's cubes, spot, No 1, 60s 10½d; No 2, also London, 60s 7½d; ditto, August, 58s 9d; September, 57s 9d; October, 56s 3d; November-December, 53s 6d. Yellow crystals, spot, 55s 7½d. American granulated, spot, 58s 9d. float, 32s, c.f. and i., London. Czecho granulated, spot, 58s 9d; November-December, 22s 6d, f.o.b., Hamburg. White Java, spot, 56s 6d to 57s, as to sample; May-June, steamer, sold, 27s to 24s 6d; June-July, 26s to 24s; July-August, 25s 3d to 23s 6d, c.f. and i., London. Dutch sugars mostly nominal. Cuban, basis 96 per cent., ing firmness, developed irregularity and weakness. August, sold, and 23s. Cuban stocks stand at 608,900 tons, against 1,406,000 same time last year. Liquid glucose, spot, 30s 6d.

COFFEE.—A quiet tone pervaded this market, partly due to supplies submitted to auction being largely unattractive. Prices on balance, however, manifest little or no change. Futures idle.

COCOA very quiet, with actual transactions on a retail scale. Accra, F/F quality, July-August, quoted 31s 6d; and new crop, October-December, 33s, f.o.b. terms.

TEA.—About 37,300 packages Indian were catalogued, and elicited active support. All good to fine qualities fetched firm to occasionally dearer prices, while a steady range resulted regarding medium and commoner descriptions. 24,830 packages Ceylon were also brought forward, and while all the finer invoices command good support at firm rates lower qualities were not so well competed for and disclosed easy.

RICE.—With no improvement in demand, only retail transactions were effected on about former terms. Two stars, new crop, spot, 13s 6d to 13s 9d; afloat, 13s 1½d, c.f. and i. Spanish, on spot, 21s 6d. Rangoon beans, spot, scarce, and quoted 11s 6d for hand-picked. Japanese peas, spot, 25s 6d.

SPICE.—Business in the pepper section is kept down, but there is no pressure on the part of sellers, leaving quotations in most cases quite unchanged. Cloves steady. Zanzibar, spot, allowed, quoted 1s 0½d; May-July, 1s 1d; August-October, 1s 1½d lb. Tapioca steady. Sago flour, May-June, sellers, Singapore flake, June-July, Havre, 25s 9d. 12s 3d; September-November, 12s 6d. Desiccated coconut quiet. Fine cut, spot, 41s 6d; medium, 42s 6d; May-June, 39s 6d; June-July, 38s 3d cwt. Ginger unaltered, but business remains slack.

JUTE.—Market easier for old crop, but new comparatively steady. After a very quiet opening, buyers became more prominent. First grade, June-July, Continent, sold, £27; new crop, August-September, £27; September-October, £26 15s ton. Hessians and twills quiet.

HEMP.—Manila quiet and featureless. J grado, July-September sellers, £33; K and L, £29 10s; M, £28 10s ton.

SHELLAC.—Easier. T.N., fair, on spot, 270s to 275s; August, sold, 242s 6d, 232s 6d to 235s; October, 235s to 230s.

COPRA.—Market quiet but firmer. F.M.S., Straits, June-July.

values opened in buyers' favour. Small dealings comprised standard cash at £66 15s to £66, and three months, £66 7s 6d. Values marked a further decline, at which a larger business resulted. Standard cash quoted at £64 17s 6d to £65, and three months sold at £65 5s to £65 10s. Again lower on Thursday, and a large business took place. Cash sold at £64 10s to £64 7s 6d, and three months £65 2s 6d to £64 17s 6d to £65. While some irregularity was noticeable forward on Friday, prices on balance ruled 10s per ton dearer. Sales were on a large scale, including Standard, cash, at £65 to £64 17s 6d; and three months, £65 5s to £65 12s 6d, to £65 7s 6d to £65 8s 9d. Electros, £71 10s to £72 10s; best selected, £69 to £70 10s; strong sheets, £98; wire bars, £72 10s per ton. Antimony quiet. Ordinary brands, £30 to £32. Aluminium steady. Home trade, £115; export, £120. Lead easier at £24 7s 6d to £23 15s, as to position. Spelter steady at £28 10s to £28 19s 6d, according to position.

TALLOW.—Messrs Colchesters and Woolner write on June 27, 1923, as follows:—The tallow market was steady during the week, and prices are fully maintained to-day. There is more competition for the lower priced sorts than for fine qualities. At auction to-day 1,354 casks tallow were offered and 544 were sold. Quotations are:—Australian mutton: Fine, 42s; good to fair, 41s 6d to 41s; dull to dark, 38s to 36s 3d; hard, 42s. Australian beef: Fine, 42s; good to fair, 41s to 38s 6d; dull to dark, 37s to

THE NATIONAL BANK OF SOUTH AFRICA, LIMITED

Established 1890 and Registered in the Transvaal. With which are incorporated the National Bank of the Orange River Colony, Limited (Established 1877), the Bank of Africa, Limited (Established 1879), and the Natal Bank, Limited (Established 1854). Bankers to the Government of the Union of South Africa in the Transvaal, Orange Free State and Natal.

Head Office:—PRETORIA.

LONDON OFFICES: Circus Place, London Wall, E.C.2. 111, St. Martin's Lane, Trafalgar Square, W.C.2. NEW YORK AGENCY: 44, Beaver Street, Wall Street District.

Report of the Directors for the Year ended 31st March, 1923. Presented to Shareholders at the Ordinary General Meeting, held at Pretoria on Friday, the 29th June, 1923.

The Directors beg to submit the Balance-Sheet of the Bank for the financial year ended 31st March, 1923. Unfortunately the promise of better conditions with which the year opened was not fulfilled. On the contrary, the period under review proved to be in many respects one of the worst that the country has experienced. The effect on the Bank has been that many debts created prior to the year 1922, which last year looked fair, have now become doubtful, and many which then looked merely doubtful have now become bad. Prudent finance demands, therefore, a heavy addition to the funds which should be held against contingencies of this character. For this purpose the Directors have decided to appropriate the whole of the Reserve Fund and to recommend Shareholders in Extraordinary General Meeting that a reduction be effected of the paid-up capital of the Bank from £2,965,000 to £2,075,500 by an alteration of the nominal value of the shares from £10 each fully paid to £7 each fully paid. Under the circumstances, of course, no dividend can be paid for the past financial year. As the Directors deemed it essential in the interests of Shareholders and clients alike to obtain the opinion of a qualified and impartial authority regarding the measures to be adopted in order to meet the situation they, with the knowledge and approval of the Union Government, submitted the Bank's accounts to the Auditor of the South African Reserve Bank, who authorised the statement that he had investigated by himself and some of his colleagues they are of opinion that the adjustments as specified above fully provide for all the contingent risks with which the Bank is faced, and further, that in consequence of these conclusions the Bank's proof of their confidence that the business of The National Bank of South Africa, Limited, is now being conducted on sound and prudent lines, the South African Reserve Bank having agreed to extend to The National Bank of South Africa, Limited, all the facilities that it may require to meet its obligations and to carry on its business, and that the Union Government, who have been made fully acquainted with the facts of the case, are prepared, should the occasion require, to support the South African Reserve Bank in any steps they may deem necessary for the carrying out of this decision.

With regard to the Extraordinary General Meeting for shadowed in this Report

the Bank's Articles of Association require that sixty days' notice shall be given if the intention of the Directors to issue the requisition is to effect a reduction of the Balance Sheet shows a balance at credit of Profit and Loss Account of £15,136 6s 6d. This figure is arrived at after taking into account:—

- The balance of £24,241 10s 10d brought forward from the previous financial year.
- Transfer of £100,000 from Reserve Fund.
- The appropriation of £33,000 in reduction of Bank Premises Account, and
- Provision for bad and doubtful debts.

The Directors recommend that the Profit and Loss Account balance be appropriated as follows:—

To Pension Fund	50,000 0 0
to be carried forward	25,136 6 6

Branches.—During the year, Seapoint, formerly a Sub-Branch to Strand Street (Capetown) Branch, was converted into a full Branch, and the following Branches were closed—those indicated by italics having been replaced by Agencies:—Cape of Good Hope: *Balfour*, *Bizana*, *Garies*, *Kei Road*, *Linton*, *Montagu*, *Prince Albert*, *Riebeck*, *Kasteele*, *Riversdale*, *Struydensburg*, *Vosburg*, *Willmore*, *Natal*, *Edenburg*, *Orange*, *Free State*: *Hobhouse*, *Luckhoff*, *Transvaal*: *Cleveland*, *Coligny*, *Rooiberg*, *Vrededorp*. *Rhodesia*: *Shabani*, *Portuguese East Africa*: *Chinde*, *Inhamitane*, *Mocimboa*, *Mocimboa*, *Quelimane*, *Vila Pery*, *St. Helena*, *St. Helena*.

Directors.—The Directors retiring by rotation are: Mr. H. O'K. Webber, The Hon. A. Oliff and Mr. Walter S. Webber, M.L.A., who, being eligible, offer themselves for re-election.

Auditors.—You will be asked to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year in place of Mr. Robert Baikie and Messrs. Dougal, Lance and Hewitt, who retire. Since the notice convening the Meeting was issued Mr. Robert Baikie has indicated that it is not his intention to seek re-election.

JAMES R. LEISK,
Chairman and Managing Director.
EMRYS EVANS, Vice-Chairman.
C. P. MATHEWS, Secretary.

PRETORIA,
21st June, 1923.

The Economist

MONTHLY SUPPLEMENT.

SATURDAY, JUNE 23, 1923.

We resume to-day the publication of a Monthly Statistical Supplement, which has been a feature of the "Economist" for many decades, but was suspended during the war. At one time the "Economist" printed in extenso our foreign trade returns. At others, special importance was attached to the internal consumption of articles such as tea and coffee, or to trade in specific commodities which at the moment were of special importance in economic development. But to-day there is an immensely wider range of economic statistics which need to be followed by those who endeavour to keep their finger on the pulse of the world's commerce. The figures for a single nation are quite insufficient; but at the same time to follow the progress of other nations in any considerable detail is an extremely difficult task. In the following Supplement we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and though we cannot hope to have solved the problem, we have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Bulletin of the Economic Section of the League of Nations, supplemented from our own statistical records. It is becoming a common practice to reduce these figures to three or four indices, and by their study to endeavour to forecast forthcoming economic changes. This science is, however, yet in its infancy, and the special influences operating at any moment are so "lawless" that it may be doubted whether an attempt to apply scientific rules will obtain a better forecast than the best opinion of the business world when furnished with the requisite information. We, therefore, propose, in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

THE STATE OF TRADE AT HOME AND ABROAD.

The feature of the trade situation is that the very substantial expansion in the volume of production, which has been taking place both before and after the Ruhr occupation, seems definitely to have been checked. The fact that there has been no dramatic price rise has led people to under-estimate the extent of the expansion of the last eight months; it is, therefore, worth while to recall some indications of it.

In the first place, there has been a very substantial absorption of the unemployed, which was sufficient to neutralise the ordinary seasonal increase of unemployment during the winter, and since Christmas has reduced the numbers very substantially. Thus, if we take the figures at intervals from January 1st of last year it will be seen that the number unemployed in insured trades has fallen by about 700,000.

NUMBER OF UNEMPLOYED REGISTERED IN INSURED TRADES.

January 1, 1922	1,934,000	January 1, 1923	1,431,900
July 1, 1922	1,503,000	April 1, 1923	1,303,500
September 1, 1922	1,427,300	June 1, 1923	1,261,700

The absorption has been greater than these figures indicate, seeing that the natural increase in the population of adult age has been absorbed in addition to these figures. It is true that hours of labour have been shortened, but against that there has taken place, particularly during the last year and a half, an increase in output per man-hour in some of the most important of our industries. We may therefore assume that production in recent months has been not very far, if at all, behind the rate of production prevailing before the war. This conclusion is supported by the statistics of internal transport. It is very much to be regretted that the figures of goods carried are so extremely out of date, but some allowance must be made for the statistical difficulties raised by the amalgamation of the railways, which has necessarily involved a change, not only in the channel, but in the basis of the return. Up to the end of the year, however, the figures (set out on page 7) were showing a rapid expansion. Again our current coal output is at about the pre-war rate of 280 million tons a year. Pig-iron output in May was still only at a rate of 8½ million tons, against the pre-war minimum of 10 million tons; but the steel output is at the rate of 9½ million tons, against 7½ millions before the war. A most significant figure is the amount of coal retained for home consumption, which has increased as follows in recent months:—

(In Million Tons per Month.)

1912	14.80	1922, third quarter	13.44
1913	16.08	1922, fourth quarter	15.11
1922, first quarter	14.85	1923, first quarter	15.93
1922, second quarter	13.06	1923, April	14.77

[The figure for April is, of course, reduced by the closing of the pits over Easter.]

The volume of our export trade is less easy to gauge. The Board of Trade does not summarise the figures on a tonnage basis, and for the moment our foreign trade statistics have suddenly become useless for comparative purposes because they now include British trade with the Irish Free State, and the Board of Trade has not yet told us how much this represents. An estimate by the London and Cambridge Economic Service is that it has added some 5 per cent. to our foreign trade figures. For the first quarter of the year the volume of our exports was estimated at about 76 per cent. of the figures for 1913, though it is to be remembered that the figures of that year were on an exceptionally high level.

We may sum up the situation at home, then, by saying that production is now at a rate approximating pre-war level, that this expansion has been achieved without unduly raising prices, it has been financed by the money markets without unduly raising rates or compelling employers to sell out the securities in which they had invested their circulating capital during the depression, and that until recently the expansion had been continuous.

But the paralysing effect of the Ruhr occupation, which at first gave a temporary impulse to our trade recovery, has at last succeeded in balancing the favourable influences. During recent weeks the absorption of the unemployed has been checked, prices have shown a sagging tendency, notably in the iron and steel markets, and, most serious of all, there is a definite slowing up in the placing of orders reported from many centres. Many trades are still doing very well—for example, the electrical and motoring industries, both of which are helping to stimulate many of the smaller trades of the Midlands, but in the textile industries the depression in Lancashire, which alone of our great centres has failed to share in the recent improvement, shows signs of spreading into Yorkshire, which in the last few weeks has experienced a rapid change of tone. Manufacturers are, in fact, loudly complaining, and for the moment trade is going to the Continent, where prices are too low for them to meet, while the central European market is completely dead.

So far as the situation abroad is concerned, there is little worth noting in the European situation apart from political influences, which have been fully discussed from time to time in the "Economist". The effect upon prices, production, and the exchanges can be seen at a glance in the tables published in this supplement.

Outside Europe the important factor is the development in America, which is dealt with in a special article on page 3. In many quarters there is continued confidence that, in spite of a temporary setback, the improvement will continue throughout the calendar year. In any case, the volume of trade is very large, and there is nothing in the situation to suggest a sudden

crisis, but in America, as in England, there is a lack of balance in the situation, owing to the relatively low prices which for months past the farming community have received for their crops. The prices of these farm products have, indeed, been rising latterly, but not nearly so much as the prices of metals, building materials, clothing, &c. Canada has, of course, shared in America's prosperity, but here, again, there are signs of nervousness, though as yet there has been no definite check in the situation.

Swinging across from West to East, we gather that

ANALYSIS OF BRITISH WHOLESALE PRICES.

In discussing price movement, it is a great convenience to be able to generalise as to the average level, but, in fact, the movements of recent years have been so extreme that it is equally important to consider the changes in trade prices and to form, if possible, an impression as to what abnormalities exist and what adjustments may be necessary in the price schedule. We have therefore taken the commodities in our index number and set them out in order according to the proportion in which they have risen as compared with pre-war prices, taking the year 1913 for comparison. The figures, however, for this single year cannot be taken as an entirely safe basis, and we have therefore, in addition, shown the proportion in which the figures for that year had varied from the basis on which our index number is calculated—namely, the average prices of the quinquennium from 1901-05. In 1913 our index number was 22 per cent. above the base level, at the present moment it is 63 per cent. above the 1913 level. In the following tables the various commodities are grouped according to whether in the period between 1913 and the present day they have risen more or less than the average.

Primary Food Stuffs.—On the whole, the articles in this group rose less, both before and since the war, than other materials, and it is also noteworthy that since the war it is animal products which have risen most. The figures explain why, in this country, the old tendency has been resumed to produce meat rather than cereals; it is much easier to bring the latter from the distant corners of the earth than the former.

PRIMARY FOODSTUFFS.		
	Increase or Decrease since 1913.	Comparison of Prices in 1913 with 1901-5.
More than average increase—	%	%
Mutton	+ 92	+ 10
Pork	+ 86	+ 24
Rice	+ 64	+ 28
Less than average increase—		
Beef	+ 53	+ 18
Oats	+ 51	+ 9
English wheat	+ 49	+ 13
Flour	+ 36	+ 18
Foreign wheat	+ 35	+ 28
Barley	+ 16	+ 20
Potatoes	— 7	+ 8

Other Food Stuffs.—The tropical products, tea, tobacco, and sugar, show an abnormally large increase. The large expansion in the world output of sugar before the war had kept prices down below the average, but the great check to beet production has made sugar one of the scarcer products, and until beet production is resumed sugar prices can hardly be expected to fall into line.

OTHER FOODSTUFFS.		
	Increase or Decrease since 1913.	Comparison of Prices in 1913 with 1901-5.
More than average increase—	%	%
Cane sugar	+ 381	— 7
Beet sugar	+ 162	+ 3
Tea	+ 111	+ 26
Tobacco	+ 91	+ 22
Less than average increase—		
Coffee	+ 23	+ 54
Butter	+ 21	+ 17

Textiles.—Textiles, as a whole, are also above the average. This is undoubtedly the case with silk from the East and the flax of Russia; American cotton prices, though not Egyptian cotton, are also high. The competition of wheat and other cereals, and the ravages of

in China, after a setback of some months, signs are detected of a slight improvement in trade, notably in silk. In India, on the other hand, which also has experienced a check for the last month or two, there is no sign at the moment of improvement. Goods have for a long time past been absorbed fairly freely up-country, but they have been taken in the main from stocks. Export trade is still being hampered by the high level of prices of India's products, on the one hand, and the lack of buying in Europe.

the boll weevil, account for American cotton figures, and it is to be noted that English wool and Egyptian cotton would be on nearly the same level if we take the long view, for the prices of both these products were exceptionally high in 1913; the same observation applies to jute, the quotation for which was quite abnormal in 1913.

Metals and Minerals.—In this group the industrial price of coal is high, though the particular quotation given in the table overstates the rise, as it is an export figure, and for the moment South Wales quotations are at a famine level. The high industrial price of coal is, however, reflected in pig-iron, in which coal is a very large element of cost. Steel rails, on the other hand, which represent a very large number of steel products, stand relatively low under the pressure of the acute competition which has prevailed in international markets for the past two years. Tin and copper are weather-cocks which show the direction of the trade wind. Their basis of supply is, however, rather narrow, and their movements are particularly liable to be influenced by speculation and the condition of the stocks.

Miscellaneous.—This group shows an exceptional range; oils, chemicals, and dyes head the list with large increases, but all of them were very cheap in 1913. Our timber quotations show very little rise since 1913, but both were rather dear in that year. Rubber is, of course, the one product which has shown a steady continuous fall for the last decade.

THE DURATION OF AMERICAN PROSPERITY.

By R. G. SWING, London Manager of the Wall Street Journal.

THE arrest of the American boom cannot be submitted to the smooth analysis by which a downward phase of the business cycle is usually to be understood. Credit inflation, which traditionally precedes the downward phase, is conspicuously absent in America; in fact, the expansion of credit has been safely within the compass of the regular net influx of gold. Production is not in advance of consumption. There has been little or no buying on a rising market for future sale. Even the signs of extravagance, peculiar to the post-war boom, are not prominent. So it may be lax to speak of America's prosperity as having been a boom at all, or of its arrest as being more than cautious policy to keep it out of deep waters.

Herbert Hoover recently estimated the number of labour vacancies in America at half-a-million. It is small wonder that labour has been utilising this formidable situation to increase wages. The average annual income of the employees of the Steel Corporation is now \$2,000, and their unskilled labour earns \$4 a day. In the New England textile industries, where wages were advanced by about 150 per cent. during the war boom, a cut of 22½ per cent. was made in December, 1920. From that level an increase of 12½ per cent. has now been agreed to. In the clothing industry increases have been granted restoring wages approximately to the war scale. Such increases have been added to a basic gain over pre-war wages, which held through, even during the depression. The average employed worker received in purchasing power 11 per cent. more in December, 1921, than in July, 1914.

In the building trades the upward wage surge was most pronounced, and it was here that it finally awakened the greatest alarm. Here, too, the immigration policy accentuated the shortage of workers by curtailing the supply of skilled craftsmen from Europe who formerly filled the ranks of recruits. The apprentice system had been weakening for several years in the face of union resistance and through the acceptance of low standards during the war. And contractors themselves discouraged it, wishing to build quickly rather than delay work by the employment of half-skilled mechanics. Union wages in the building trades now vary from \$9 to \$10 a day, but in New York the actual minimum is \$12, and the ruling rate is from \$14 to \$16. Plasterers on Long Island recently struck for \$27 a day, and bricklayers demanded a two-years' agreement on the present scale, plus a bonus for every man employed.

The experience of the building trades is not general for America, but it serves to magnify a general tendency. Increased wages up to the present may not have represented dangerous inflation, inasmuch as consumption has kept pace with production, and wage increases have added to the purchasing power of the most generous spending public in America. But they were swiftly heading toward the perilous moment when prices and wages both increased without creating any additional production and consumption.

To a degree business leadership is able to guide, and to a certain extent to control, such a movement, as it undoubtedly has done in co-operating for the arrest of the so-called boom. For the policy of caution which was emphasised in the case of the Construction Council was quietly promulgated in many branches of business throughout the country. Bankers sent out warning messages, which apparently were both needed and heeded. The wholesale price index finally dropped, and the Federal Reserve Board could announce that no increase of the discount rate would be required. Whether the influence of leadership will be stronger than the intrinsic position of labour, the summer and autumn have yet to show. But the indications point to only a slow decline of business which should maintain a prosperous volume of trade for many more months. The discrepancy between industrial wages and farm prices in itself implies an ultimate decline of business unless labour, as is improbable, accepts a considerable reduction. The farmer America is a fundamental factor of steady prosperity,

and the prices he is receiving have not kept pace with industrial wages. Relatively more purchasing power has been added to the urban population, which is another way of saying that the farmer, in the face of higher costs, must reduce his purchases. A labour movement strongly centralised and intelligently led might read the signs and throw its influence into the scale of moderation. But the circumstances have prevented the rise of such a movement in the United States. Most of the headway made by unions during the war had to be relinquished during the post-war depression, and the open-shop campaign of manufacturers in that period found much more public encouragement than European countries, with their entrenched trade unionism, perhaps could understand.

Some predictions are that good business will continue through this year, some that it will survive on through 1924. The more optimistic of these presages is tantamount to saying that next year's presidential campaign will not, as usual, exert a retarding influence, a hope for which there does not appear to be substantiation beyond wild conjecture. Credit may harden during this autumn harvest-movement season, but comfortable conditions are anticipated for the remainder of the year, especially during the summer. Gold continues to flow into the country, April imports being \$8,533,235, compared with \$10,664,688 in April, 1922. If the rate of gold imports and exports for the first quarter, 1923, were maintained for the other nine months, the net gain would still be \$138,000,000. The Steel Corporation is operating nearly to full capacity, and stocks at mills and in warehouses are "very low," according to Judge Gary, who goes on to say:—"There is nothing in sight to indicate that there will be a substantial diminution of the demand for finished steel in this country during the next six months, to say the least." Even taking account of decreased building, and a complete failure in orders for structural steel during the next six months, he declared that apparently the steel business as a whole would be satisfactory. The Corporation booked nearly a million tons of new business in May. Car loadings continue close to the peak, mail-order business and railroad and railroad equipment work, all reliable as indices, still show no marked contrast to the best months of the winter. The decline of industrials in the stock market may be barometric, but long sweeps of stock movements are prophetic, not immediate, in significance. And, even judged by this guide, the vitality of American business, although jaded, is by no means spent.

Much has been made of America's sudden accumulation of an adverse balance on the visible trade account. It has been described both as a proof that America must quickly relinquish her hoarded gold, and that she was merely showing the normal symptoms of a creditor nation. Some of this comment ignores the fact that of the increased imports much the greater part is raw materials and semi-finished goods. In February raw materials accounted for \$46,587,000 of \$87,864,000 of increased imports, raw and manufactured foodstuffs for \$17,043,000, semi-finished manufactured goods for \$21,292,000, and finished goods for only \$2,942,000. Eighty per cent. of the import gain in that month was outside Europe, the greater part from North America.

The United States had last year, according to the Department of Commerce, a favourable merchandise balance of \$372,000,000, which was wiped out by invisible debits of \$400,000,000. And America exported \$550,000,000 of capital, against net capital imports \$246,000,000. True, on paper America is a creditor nation on a commanding scale. But interest on her foreign investments and credits, and her services to the world, are still not large enough to bring her into the position of England, whose invisible items handsomely reverse her unfavourable visible balance. Sterling is still the pivot of exchanges, and with sterling at par gold undoubtedly will begin flowing back to London. But to assert this is not to say it must begin at once, merely because the trade balance has recently gone against America on the visible account. American Government officials recently voiced the view that exports of gold throughout this year will be of small proportions, and more than offset by total receipts.

The Investor's Monthly Manual

ESTABLISHED 1864.

THE MOST COMPLETE PERIODICAL RECORD in existence of the dealings, throughout the United Kingdom, in every description of stocks and shares.

Over 4,000 securities are dealt with each month, showing recent dividends and yields at latest prices. The *Manual* also contains a valuable summary of Profit and Loss Accounts each month.

IT IS ABSOLUTELY FREE FROM ANY CONNECTION WITH ANY FINANCIAL HOUSE OR SPECULATIVE AGENCY.

Annual Subscription - £1.1.0

**HALF - YEARLY
DOUBLE NUMBER
TO BE PUBLISHED ON JULY 3rd
POST FREE - - - - 2s. 3d.**

The Double Number will give in addition to the usual information, the highest and lowest prices of all stocks and shares for 1919, 1920, 1921 and 1922, and for the first six months of 1923; the latest quotations for 1923, a tabulated chronicle of the half-year's events, the names of the markets where each security is chiefly dealt in, besides memoranda relating to the financial position of Foreign and Colonial Governments, to Railways, etc., etc. In addition, there will be furnished the addresses of the various companies, with the names of the Chairmen and Secretaries, or Managers.

TO ADVERTISERS

The *Manual* will be found specially suitable for advertising debentures of every kind, prospectuses of limited liability companies, and investments of all descriptions; and for giving publicity to the announcements of banking, insurance and other companies, publishers and auctioneers. Its importance to the general advertiser can hardly be over-estimated.

The above number has a LARGE ADDITIONAL CIRCULATION, and being greatly used as a work of reference, it affords an excellent opportunity for giving a PERMANENT PUBLICITY for advertisements.

Orders, to ensure insertion, should reach the Office on or before Saturday, June 30th, 1923.

Publishing and Advertisement Offices:

3, ARUNDEL STREET, STRAND, LONDON, W.C.2
