

The Economist,

WEEKLY COMMERCIAL TIMES

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

Copies of the *Economist* may always be obtained in the City Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmons, 5 Birchin lane; Barker and Howard, 6 Fenchurch buildings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15 Cullum street; Willing and Co., Limited, 50 Copthall avenue, and 53 Finsbury pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brantano
37 Avenue de L'Opera. New York: *Economist* Office, 20 Bro-
street (Room 1,709).

THE MONEY MARKET.

As usual at this season, the market was saturated with funds that had been borrowed before the end of December chiefly in order to appear in balance-sheets drawn up to the end of the month. Large repayments to the Bank of England were effected on Tuesday and Wednesday, but nevertheless, the Bank return still showed an addition of about 24 millions to the Government and Other securities.

crisis, but in America, as in England, there is a lack of balance in the situation, owing to the relatively low prices which for months past the farming community have received for their crops. The prices of these farm products have, indeed, been rising latterly, but not nearly so much as the prices of metals, building materials, clothing, &c. Canada has, of course, shared in America's prosperity, but here, again, there are signs of nervousness, though as yet there has been no definite check in the situation. Swinging across from West to East, we gather that

ANALYSIS OF BRITISH WHOLESALE PRICES.

In discussing price movement, it is a great convenience to be able to generalise as to the average level, but, in fact, the movements of recent years have been so extreme that it is equally important to consider the changes in trade prices and to form, if possible, an impression as to what abnormalities exist and what adjustments may be necessary in the price schedule. We have therefore taken the commodities in our index number and set them out in order according to the proportion in which they have risen as compared with pre-war prices, taking the year 1913 for comparison. The figures, however, for this single year cannot be taken as an entirely safe basis, and we have therefore, in addition, shown the proportion in which the figures for that year had varied from the basis on which our index number is calculated—namely, the average prices of the quinquennium from 1901-05. In 1913 our index number was 22 per cent. above the base level, at the present moment it is 63 per cent. above the 1913 level. In the following tables the various commodities are grouped according to whether in the period between 1913 and the present day they have risen more or less than the average.

Primary Food Stuffs.—On the whole, the articles in this group rose less, both before and since the war, than other materials, and it is also noteworthy that since the war it is animal products which have risen most. The figures explain why, in this country, the old tendency has been resumed to produce meat rather than cereals; it is much easier to bring the latter from the distant corners of the earth than the former.

PRIMARY FOODSTUFFS.

	Increase or Decrease since 1913.	Comparison of Prices in 1913 with 1901-5.
More than average increase—	%	%
Mutton	+ 92	+ 10
Pork	+ 86	+ 24
Rice	+ 64	+ 28
Less than average increase—	%	%
Beef	+ 53	+ 18
Oats	+ 51	+ 9
English wheat	+ 49	+ 13
Flour	+ 36	+ 18
Foreign wheat	+ 35	+ 28
Barley	+ 16	+ 20
Potatoes	— 7	+ 8

Other Food Stuffs.—The tropical products, tea, tobacco, and sugar, show an abnormally large increase. The large expansion in the world output of sugar before the war had kept prices down below the average, but the great check to beet production has made sugar one of the scarcer products, and until beet production is resumed sugar prices can hardly be expected to fall into line.

OTHER FOOD STUFFS.

	Increase or Decrease since 1913.	Comparison of Prices in 1913 with 1901-5.
More than average increase—	%	%
Cane sugar	+ 381	— 7
Beet sugar	+ 162	+ 3
Tea	+ 111	+ 26
Tobacco	+ 91	+ 22
Less than average increase—	%	%
Coffee	+ 23	+ 54
Butter	+ 21	+ 17

Textiles.—Textiles, as a whole, are also above the average. This is undoubtedly the case with silk from the East and the flax of Russia; American cotton prices, though not Egyptian cotton, are also high. The competition of wheat and other cereals, and the ravages of

in China, after a setback of some months, signs are detected of a slight improvement in trade, notably in silk. In India, on the other hand, which also has experienced a check for the last month or two, there is no sign at the moment of improvement. Goods have for a long time past been absorbed fairly freely up-country, but they have been taken in the main from stocks. Export trade is still being hampered by the high level of prices of India's products, on the one hand, and the lack of buying in Europe.

the boll weevil, account for American cotton figures, and it is to be noted that English wool and Egyptian cotton would be on nearly the same level if we take the long view, for the prices of both these products were exceptionally high in 1913; the same observation applies to jute, the quotation for which was quite abnormal in 1913.

Metals and Minerals.—In this group the industrial price of coal is high, though the particular quotation given in the table overstates the rise, as it is an export figure, and for the moment South Wales quotations are at a famine level. The high industrial price of coal is, however, reflected in pig-iron, in which coal is a very large element of cost. Steel rails, on the other hand, which represent a very large number of steel products, stand relatively low under the pressure of the acute competition which has prevailed in international markets for the past two years. Tin and copper are weather-cocks which show the direction of the trade wind. Their basis of supply is, however, rather narrow, and their movements are particularly liable to be influenced by speculation and the condition of the stocks.

Miscellaneous.—This group shows an exceptional range; oils, chemicals, and dyes head the list with large increases, but all of them were very cheap in 1913. Our timber quotations show very little rise since 1913, but both were rather dear in that year. Rubber is, of course, the one product which has shown a steady continuous fall for the last decade.

THE DURATION OF AMERICAN PROSPERITY.

By R. G. SWING, London Manager of the Wall Street Journal.

THE arrest of the American boom cannot be submitted to the smooth analysis by which a downward phase of the business cycle is usually to be understood. Credit inflation, which traditionally precedes the downward phase, is conspicuously absent in America; in fact, the expansion of credit has been safely within the compass of the regular net influx of gold. Production is not in advance of consumption. There has been little or no buying on a rising market for future sale. Even the signs of extravagance, peculiar to the post-war boom, are not prominent. So it may be lax to speak of America's prosperity as having been a boom at all, or of its arrest as being more than cautious policy to keep it out of deep waters.

Herbert Hoover recently estimated (the number of labour vacancies in America at half-a-million. It is small wonder that labour has been utilising this formidable situation to increase wages. The average annual income of the employees of the Steel Corporation is now \$2,000, and their unskilled labour earns \$4 a day. In the New England textile industries, where wages were advanced by about 150 per cent. during the war boom, a cut of 22½ per cent. was made in December, 1920. From that level an increase of 12½ per cent. has now been agreed to. In the clothing industry increases have been granted restoring wages approximately to the war scale. Such increases have been added to a basic gain over pre-war wages, which held through, even during the depression. The average employed worker received in purchasing power 11 per cent. more in December, 1921, than in July, 1914.

In the building trades the upward wage surge was most pronounced, and it was here that it finally awakened the greatest alarm. Here, too, the immigration policy accentuated the shortage of workers by curtailing the supply of skilled craftsmen from Europe who formerly filled the ranks of recruits. The apprentice system had been weakening for several years in the face of union resistance and through the acceptance of low standards during the war. And contractors themselves discouraged it, wishing to build quickly rather than delay work by the employment of half-skilled mechanics. Union wages in the building trades now vary from \$9 to \$10 a day, but in New York the actual minimum is \$12, and the ruling rate is from \$14 to \$16. Plasterers on Long Island recently struck for \$27 a day, and bricklayers demanded a two-years' agreement on the present scale, plus a bonus for every man employed.

The experience of the building trades is not general for America, but it serves to magnify a general tendency. Increased wages up to the present may not have represented dangerous inflation, inasmuch as consumption has kept pace with production, and wage increases have added to the purchasing power of the most generous spending public in America. But they were swiftly heading toward the perilous moment when prices and wages both increased without creating any additional production and consumption.

To a degree business leadership is able to guide, and to a certain extent to control, such a movement, as it undoubtedly has done in co-operating for the arrest of the so-called boom. For the policy of caution which was emphasised in the case of the Construction Council was quietly promulgated in many branches of business throughout the country. Bankers sent out warning messages, which apparently were both needed and heeded. The wholesale price index finally dropped, and the Federal Reserve Board could announce that no increase of the discount rate would be required. Whether the influence of leadership will be stronger than the intrinsic position of labour, the summer and autumn have yet to show. But the indications point to only a slow decline of business which should maintain a prosperous volume of trade for many more months. The discrepancy between industrial wages and farm prices in itself implies an ultimate decline of business unless labour, as is improbable, accepts a considerable reduction. The farmer

America is a fundamental factor of steady prosperity,

and the prices he is receiving have not kept pace with industrial wages. Relatively more purchasing power has been added to the urban population, which is another way of saying that the farmer, in the face of higher costs, must reduce his purchases. A labour movement strongly centralised and intelligently led might read the signs and throw its influence into the scale of moderation. But the circumstances have prevented the rise of such a movement in the United States. Most of the headway made by unions during the war had to be relinquished during the post-war depression, and the open-shop campaign of manufacturers in that period found much more public encouragement than European countries, with their entrenched trade unionism, perhaps could understand.

Some predictions are that good business will continue through this year, some that it will survive on through 1924. The more optimistic of these presages is tantamount to saying that next year's presidential campaign will not, as usual, exert a retarding influence, a hope for which there does not appear to be substantiation beyond wild conjecture. Credit may harden during this autumn harvest-movement season, but comfortable conditions are anticipated for the remainder of the year, especially during the summer. Gold continues to flow into the country, April imports being \$8,533,235, compared with \$10,664,688 in April, 1922. If the rate of gold imports and exports for the first quarter, 1923, were maintained for the other nine months, the net gain would still be \$138,000,000. The Steel Corporation is operating nearly to full capacity, and stocks at mills and in warehouses are "very low," according to Judge Gary, who goes on to say:—"There is nothing in sight to indicate that there will be a substantial diminution of the demand for finished steel in this country during the next six months, to say the least." Even taking account of decreased building, and a complete failure in orders for structural steel during the next six months, he declared that apparently the steel business as a whole would be satisfactory. The Corporation booked nearly a million tons of new business in May. Car loadings continue close to the peak, mail-order business and railroad and railroad equipment work, all reliable as indices, still show no marked contrast to the best months of the winter. The decline of industrials in the stock market may be barometric, but long sweeps of stock movements are prophetic, not immediate, in significance. And, even judged by this guide, the vitality of American business, although jaded, is by no means spent.

Much has been made of America's sudden accumulation of an adverse balance on the visible trade account. It has been described both as a proof that America must quickly relinquish her hoarded gold, and that she was merely showing the normal symptoms of a creditor nation. Some of this comment ignores the fact that of the increased imports much the greater part is raw materials and semi-finished goods. In February raw materials accounted for \$46,587,000 of \$87,864,000 of increased imports, raw and manufactured foodstuffs for \$17,043,000, semi-finished manufactured goods for \$21,292,000, and finished goods for only \$2,942,000. Eighty per cent. of the import gain in that month was outside Europe, the greater part from North America.

The United States had last year, according to the Department of Commerce, a favourable merchandise balance of \$372,000,000, which was wiped out by invisible debits of \$400,000,000. And America exported \$550,000,000 of capital, against net capital imports \$246,000,000. True, on paper America is a creditor nation on a commanding scale. But interest on her foreign investments and credits, and her services to the world, are still not large enough to bring her into the position of England, whose invisible items handsomely reverse her unfavourable visible balance. Sterling is still the pivot of exchanges, and with sterling at par gold undoubtedly will begin flowing back to London. But to assert this is not to say it must begin at once, merely because the trade balance has recently gone against America on the visible account. American Government officials recently voiced the view that exports of gold throughout this year will be of small proportions, and more than offset by total receipts.

the French figure, in view of the remissions in the early years and the low rate of interest; but it is certainly the case that if there had been no other question at issue it would be possible to arrive at an agreed figure after an inquiry by economic experts; for it must not be forgotten that there has been no systematic inquiry into the German capacity to pay, nor have the figures of either party been justified in detail to the public. The French argue that while currency depreciation makes immediate payment impossible, Germany's capacity would recover at once if stabilisation were carried out. The view of the British Government appears to be that this would take rather a longer time; but this question, like the total amount, is obviously a point for expert discussion. The British delegates practically implied as much in suggesting that their figure of four years was open to modification.

The second point which has created very vigorous discussion arises out of the British suggestion as to the division of the proceeds. On this point the last word of the British delegation was to put right certain misconstructions of the British scheme, and particularly to counter the argument that its effect would be to leave France very much worse off than Great Britain, and, indeed, with less than the amount of her debts to the United States, whereas we should cover our American debt. The latest British statement, however, shows, as we think, correctly, that under the most favourable conditions to this country France would secure the cancellation of the debt to Great Britain and receive from Germany a sum whose present value would be 1,080 millions sterling, or 380 millions sterling in excess of the amount owed to America. If Germany proved unable to pay the supplementary total, the position would be relatively more favourable to France, though the margin over her American debt would, of course, be less. But again, this statement does not represent really the last word in the matter. We have always advocated in these columns that we should be prepared to forgo our share of reparations, and though Mr Bonar Law has repeatedly said that we could not surrender all claim to reparations, there is no doubt that if his plan had been accepted as a basis for discussion, he would have been willing to offer very much more liberal terms in regard to distribution than the full 22 per cent. which was arrived at several years ago. Secondly, this way of stating the case puts the American debt at full face value, and if America were willing to make easier the terms of repayment, the present value of the American debts would be very much reduced. It is, for example, being suggested in the United States that the discussions of our Debt Funding Commission on the basis of our ability to pay and America's ability to receive may well lead to an annual payment of between 25 and 30 millions. We do not know whether such a solution may commend itself to Congress; but if a similar arrangement were made with France, her margin of net receipts from Germany would be immensely increased, and a further concession by Great Britain on the percentage could easily be made that would raise her net figure to 1,000 millions sterling. This is substantially more at the present rate of exchange than France has spent in the devastated regions, but it is not more than the world's sense of equity would agree should be assigned to her, and we are confident it could have been reached by negotiation. Our criticism of the presentation of the British case is that it did not recognise the necessity from the outset of endeavouring to enlarge the net receipts of France to a figure more in proportion to her necessary expenditure on reconstruction.

The Conference, however, did not break down either on the question of the total German payment or on its distribution. The real difference was on the method of treating Germany. It is true that France has very greatly modified her attitude towards military action in the Ruhr, but her proposals did involve the taking over of certain areas of German wealth. Indeed, her scheme meant that there would be no moratorium at all, for the amount demanded for 1923 is more than Germany has paid during 1922, and as it could only be obtained by tapping certain sources of revenue which are needed for the German Budget, it would, in British opinion, make it impossible to restore German credit. It is unfortunate that the discussion has been prejudiced by side issues

such as the use by Great Britain of the gold transferred from the Bank of France to assist the Allied exchanges during the war—a point which should have had no bearing on the discussion, since the French Government was kept fully cognisant, not in general terms merely, but in detail, with the steps taken during these operations. But these points are very subsidiary to the main issue—namely, that France is still mixing up politics and economics, and is not yet ready to grant the real moratorium which is essential for the restoration of German credit and European stability. In these circumstances, it is important that the British Government should speak not merely fair words, but should say quite clearly, on the one hand what steps we are prepared to take in helping to lift from France the nightmare of insecurity, but, on the other, that we can have no part or lot, even to the extent of benevolent spectator, in a course of action which is likely to plunge Europe into deeper economic chaos.

BRITISH RAILWAYS: A NEW CHAPTER.

THE ordinary traveller on the railways noticed nothing new last Monday except that he was asked to pay a little less for his ticket than he has recently been asked, and season-ticket holders did not experience even this symptom of change. Yet January 1, 1923, marked the consummation of the greatest revolution in British railway history, and the opening of a new chapter fraught with issues of the highest importance, not merely to the huge body of stockholders or to the larger body of travellers, but to the wider interests of British economic life. On various occasions since the Railways Act was passed we have endeavoured to explain what the new system means in facts and figures, and to review the new railway position in a spirit of fair criticism. We do not propose to cover the ground again. But at the moment, when the railways are starting on a new era, it is appropriate to recall a few of the essential points about the new régime and their bearing upon the interests of the nation at large and of the stockholders.

From the physical aspect the immensity of the change in our railway system is illustrated by the following figures. About six score of companies have been turned into four companies, with mileage and capital approximately as follows:—

	Mileage.	Capital.
Great Western	3,753 ..	136,500,000
Southern	2,200 ..	145,000,000
London and North-Eastern ..	6,464 ..	348,000,000
London, Midland, and Scottish ..	7,464 ..	430,000,000

Obviously, the first essential fact is that by the creation of these four great concerns the railway monopoly is strengthened. The Railways Act provides safeguards designed to prevent the strengthening of monopoly from working to the disadvantage of the public. But in practice the public will depend for the observance of their interests more upon the attitude and policy of the four general managers than upon anything else. If these gentlemen can convince the public that their policy is aimed, not merely at furthering the interests of stockholders, but at serving the interests of industry, commerce, and the traveller, then they will vindicate the new system and it will endure. If their policy fails to create that impression, then nationalisation will quickly become a burning topic of public controversy. Obviously, the technical difficulties of transfer to the State have been very greatly lessened by the establishment of the new régime. It is on paper so much easier to arrange the transfer of four than of one hundred and twenty concerns, and we understand that Socialists are gleefully hailing the new system as a great preparatory step towards nationalisation. That is an aspect of the position that the "big four" will do well to bear always in mind.

We have just emerged from the first post-control period of 17 months, the lines having been handed back to the companies in August, 1921. During that period the Rates Tribunal, though technically in existence, has not in effect been functioning according to plan. The circumstances of the position have placed it at the mercy of the railway companies, and traders, through lack of detailed information as to the current progress of railway fortunes,

have found it impossible to work up a cohesive case for presentation to the Tribunal. Rates reductions have, in the eyes of traders, been unwarrantably slow, and one reason for their slowness is that agreement was difficult between a multiplicity of railway interests and railway managers. Now, under the new conditions, the four general managers should find themselves able to agree and act with much more speed. In any case, the public in general and the business community in particular, realising that obstacles to quick action have been eliminated, will watch their work with keen expectancy. We have referred above to urgent reasons why the general managers should strive to win the public's confidence. In our opinion they could best approach this task by yielding at once to the demand for greater publicity. Gross figures of railway receipts, as hitherto published, are practically useless as a basis on which to judge whether or not the railways are faring well enough to justify further reductions in fares and rates. No step that they could take would be more conducive to public confidence than the decision to publish regularly working costs as well as gross receipts. The trading community and the general public would then at last begin to feel that the cards were on the table; and as they would then be in possession of essential data as to current railway fortunes, and therefore able to state a considered case, the Rates Tribunal would become more of a reality and more of a safeguard. Under the present system by which detailed information is only vouchsafed once a year, and then in reference to so long a period as a year, the public are very largely in the dark and the Tribunal remains at the mercy of the companies. We trust that the urgent need for prompt and adequate publicity will engage the early attention of Sir Herbert Walker, Mr Felix Pole, Mr Arthur Watson, and Mr R. L. Wedgwood.

In connection with the publicity question, attention is deserved by an apologia put out this week by the Railway Companies' Association, defending the companies against criticism that fare reductions have not gone far enough. We quote the following from Wednesday's *Evening Standard*:—"In August, 1922, the tonnage carried was over five millions more than in August, 1921, while the receipts were one and a quarter millions less for the same month. To earn this lesser sum the railway companies had to run 1,065,000 more miles. The same process was repeated in September, 1922. The companies carried 5,176,498 tons more than in September, 1921. The receipts were £1,139,636 less, and in order to earn that the companies had run 1,675,376 more miles." On the basis of such figures as these, it is claimed that the companies have done all they could afford in the matter of reductions. They may have; but such figures do not prove it. The statistics quoted above are useless without a comparison of operating costs in the two periods. The attempt to convince the public by means of arguments based on insufficient figures conduces not to confidence, but to suspicion, and evokes the obvious question why, if the companies are doing for the public all they can afford, they do not publish the figures that would prove it. We lay no particular stress upon this statement of the Railway Companies' Association, nor do we lay the blame for its inadequacy at the doors of the "big four" whose names we have given above. But it is, perhaps, worth quoting as an illustration of the insufficiency of the information vouchsafed to the outside world.

Whether or not the strengthening of the railway monopoly furthers the public interest, it may be said, on the whole, to benefit stockholders. Here and there grumblings and grievances have been heard over some of the amalgamation terms. That was inevitable in the case of such huge and involved transactions. But although individual grievances may exist, stockholders in general have much reason to contemplate the new régime with satisfaction. Their security has been fortified—in the case of the stockholders of the lesser lines, tremendously fortified. They are assured of comparative stability of prices, when the initial excitement has died away, and of a readier marketability. They have been given what Sir Sam Fay, in the *Financial Times*, describes as a "dividend-earning charter." Receipts, being averaged out over large groups, will be steadier, and

deferred stocks less speculative. Of the initiation of the new Home Railway market we leave a Stock Exchange correspondent to write in a subsequent column, and conclude by expressing the hope that a system which appears in the main to be favourable to stockholders, will also prove capable of being worked to the public advantage under the wise guidance of the "big four." If this result is to be achieved, broad views must prevail. Many difficult problems will call for early attention, one of which, as the map clearly shows, is the tidying up of the considerable amount of overlapping between the four main groups that even now remains. But in our considered opinion, the provision of adequate publicity is the most urgent of all.

FOREIGN EXCHANGES IN 1922.

For the foreign exchange market the last 12 months have formed a period of many exciting movements, but of more restricted business than that to which dealers have been accustomed in the past few years. In part this decrease in activity is the natural consequence of a restriction in international trade, but to a larger extent it is due to a marked falling off in speculative operations. The mania for dealing in kronen, marks, and other speculative currencies with which masses of people, unaccustomed to such business, had become infected, has died away in the cold atmosphere of continual disappointment, and the markets, apart from normal trade demand, have been left largely to the activities of the professional operator. The exception to this has been the steady demand for foreign currencies by all classes in countries such as Germany, where belief in the national currency has been completely shattered at least for the time being, but it is difficult to say whether this is to be called speculation or a desperate attempt to obtain some firm footing in the business of daily life.

As is seen in the table below, the exchange movements during the year, measured by gold or dollar parity, fall

FOREIGN EXCHANGES, 1922.

Country.	Beginning.	Lowest.	Date.	Highest.	Date.	End.
New York	4.21 1/2	4.18 1/2	Jan. 5, 22	4.66	Dec. 13, 22	4.62 1/2

Rio	7.44	6.4 1/2	Dec. 22, 22	7 1/2	Jan. 4, 23	6 1/2
Valparaiso	40.40	30.80	Aug. 22, 22	46.70	Jan. 24, 23	33.30
Lima	16 1/2 pm.	34 1/2 pm.	June 14, 22	32 1/2 pm.	March 25, 23	32 1/2
Mexico	24 1/2	25	Dec. 19, 22	24 1/2	Jan. 3, 23	25

broadly into four classes. On the one hand, we have the more stable rates which have changed little throughout the year. One group of these, Switzerland, Holland, Sweden, and Japan, have remained close to dollar parity, while Spain has remained pretty steady at about 80 per cent. of parity. In the case of Switzerland, a sharp fall, the greater part of which has now been recovered, was occasioned in the third quarter of the year by fears of a capital levy. Two other currencies, which during the whole year have remained almost constant in relation to the dollar, are those of Estonia and Latvia; and there is good reason to believe that the new Lithuanian currency introduced a few months ago will also be maintained at a steady level with gold. A second group, in which fluctuations have been greater and more irregular, includes France, Belgium, Italy, and the

Argentina, together with Norway, while Denmark, which has varied between 75 per cent. and 80 per cent. of gold parity, might have been classed with the first group had it not been for the collapse during the latter part of the year as the result of the general economic strain accentuated by the difficulties of the Landsmann Bank. In the third and fourth group are currencies which show a radical change in position either in the direction of improvement, or the reverse. Among these first may be taken the Czech krone, which has improved from 277½ to 180. This appreciation has involved a period of intense industrial depression, which could perhaps have been avoided had the change been carried out more slowly and judiciously. But the change, at least, has been in the right direction, and as far as can be seen may be taken as marking a permanent improvement. Another currency, the value of which has been definitely raised to a new level, with a promise of permanency, is the Finnish mark, which at the end of the year stood at 186, as compared with 222½ at the beginning, after having reached 243 in the spring. In the fourth and larger group are those unfortunate currencies for which the year has only meant further depreciation. Among these we find a gradually descending scale from Belgrade and Bucharest down through Lisbon, all currencies which have nearly halved in value through the year, to Budapest and Athens, which are about one-quarter of their value at the end of 1922, Warsaw, which is about one-seventh, down to Austria, which is about one-thirtieth, and Berlin which is worth 40 times less than at the beginning of the year. In one case only—that of Austria—has stability been maintained at this new level. In others, for instance Bucharest, Belgrade, and Athens, the present level is hardly likely to be permanent, and an improvement may be expected with an anticipated change in local conditions. In the case of Poland, real progress has been made in economic recovery, but a corresponding movement in the exchange has been prevented, partly by fears of political instability and partly by the failure of the Government, up to the present, to introduce any effective system of State finance.

Among the exchanges on which the main interest of the market is concentrated, the course of the sterling rate in New York is, of course, by far the most important, and the developments throughout the year have been thoroughly satisfactory.

EXCHANGES, 1922 (Monthly Figures).

	January.		February.		March.		April.	
	Highest	Lowest	Highest	Lowest	Highest	Lowest	Highest	Lowest
New York	4-77½ (31)	4-24½ (1)	4-43½ (27)	4-28½ (1)	4-44½ (1)	4-29½ (1)	4-42½ (29)	4-37½ (1)

As will be seen from the monthly table, there has been, on the whole, a steady appreciation in value, with some pause after the turn of the half-year and again in September, culminating in a surprising rise at the end of the year, followed by another slight relapse, which, however, has left sterling some 40 cents higher than at the beginning of 1922. One of the most striking features of this movement is that in the course of appreciation the usual autumn adverse swing has been almost entirely obliterated, and in this way the expectations of many experienced observers have been badly upset. In part this recovery has been due to a relative improvement in

British foreign trade, but to a greater extent it is the result, on the one hand, of the financial policy in this country, with its consequent arrest of inflation and fall in prices, and the expansion of credit and rise in prices in the United States. Added to this has been the important sentimental effect of the growing belief in the United States and other countries in the strength of the British financial position and, in spite of unemployment, in its capacity for industrial recovery. Two more temporary influences may also be suggested—the first, the falling off in demand this autumn for American raw materials, as illustrated by the scarcity of cotton bolls; and, secondly, the beginning, towards the close of the year, of the movement of some large balances, formerly held in London, back to this country. This last movement has stopped for the time, but it may be expected that any further approach towards parity for other reasons would almost at once be accentuated by its renewal. The future, however, depends largely upon a satisfactory settlement of the reparation problem, for with an accentuation of the difficulties of Europe, it is almost impossible to hope for a further recovery in sterling.

Throughout this year, as, indeed, since the signature of the Versailles Treaty, reparations have hung like a cloud over the chief European exchanges, and the effect of this threat has been even more marked than before. It is hardly necessary here to recount the various stages in the demoralisation of the mark, culminating in the complete collapse which began in August. It may, however, be useful again to insist that, wrong-headed as has been much of Germany's financial policy during and since the war, the direct and immediate cause of this collapse has been a series of reparation demands impossible of fulfilment even had the best will been shown. The rate as it now stands is little more than a panic quotation, and the mark is ceasing to be even a speculative counter of any importance. Unfortunately, however, internal prices have become increasingly sensitive, and follow up the external value of the mark much more rapidly than before, so that any serious recovery in exchange quotation is rendered increasingly difficult.

The course of the franc has depended, as was to be expected, to a very large extent upon that of the mark. In the early part of the year, when the mark was relatively stable, and when the French trade balance showed signs of improvement, and no heavy payments were being made abroad, a carefully-nurtured optimism in France itself, coupled with the belief abroad in the recovery of the franc which has persisted since the war in spite of so many warning signs, and with the usual spring influx of visitors, brought down the quotation of the franc to 47.40 in April, and maintained it for a month or so not far above this level. But the collapse of the mark in the summer forced the French people finally to begin to realise that the hope of securing satisfactory reparations from Germany was an illusion, and directed increasing attention to the financial position of the French Government if deprived of the expected aid from Germany. Put crudely, the position of French finances is this, that together with expenditure which it is hoped may ultimately be recovered from Germany, the State is now spending about twice as much as it obtains from taxation and other revenue, and this apart from any provision for interest or amortisation on an enormous foreign debt. The balance has been made up by an increase in floating and other indebtedness, as up to now the Government has been able to rely on the remarkable investing power of the French people. But the confidence of the investor is becoming shaken, and if he holds back it is difficult to know to what the Government can turn. From this it is not far to a flight from the franc on the near analogy of the flight from the mark. With this prospect before them, it is not difficult to understand the reluctance both of the French Government and of the French people to face the hard facts of the reparation problem. It is, however, unfortunate both for Europe and themselves that they are unable to see that the one way of escape lies in a reasonable treatment of this question, by which would be gained the sympathy and assistance of America and of ourselves, without which the outlook is indeed a dark one.

On the solution of the reparation problem depends, then, not only the stabilisation of the mark itself, but the finding of its true level by the franc, and almost as much, as has been already suggested, the recovery of sterling itself.

THE BRITISH PROPOSALS FOR GERMAN REPARATION.

ALTHOUGH the Paris meeting has proved a failure—one more in the long list of Inter-Allied Conferences—we give for purposes of record a short *résumé* of the principal terms of the British proposals.

I. REPARATION.

The existing German bonds of Series 'A,' 'B,' and 'C' to be cancelled, and the schedule of payments annuities to be reduced to the amounts required year by year to provide the interest payable on the new bonds to be issued in accordance with these new proposals.

Germany to issue to the Reparation Commission new bonds, to be divided into two series:—

(a) First Series bonds to the amount of 50 milliard gold marks to be issued forthwith, repayable at par on December 31, 1954, and bearing interest at the rate of 5 per cent. per annum, payable half-yearly; the interest to be suspended in its entirety for the first four years (until January 1, 1927), and to the extent of 1 per cent. per annum for the next four years (until January 1, 1931).

This means an annual payment from 1927 to 1930 of 2 milliard, and subsequently of 2½ milliard marks.

"If at any time before January 1, 1927, the supervising authority provided for below decides unanimously that the condition of German finances is such that cash payments for reparation can be commenced, Germany to pay in cash such sums as the authority may prescribe in each of the calendar years, 1925 and 1926, not exceeding 2 milliard gold marks in either year.

"Any such payments to be applied to the cancellation of first series bonds at redemption price or otherwise in reduction of the aggregate liability under the preceding paragraph as the supervising authority may direct."

(b) Second Series bonds to the amount of 17.31 milliard gold marks (being the amount of the deferred interest on the bonds of the First Series compounded at 5 per cent. to April 1, 1933), or such lesser amount (if any) as the Arbitral Tribunal provided for in the next paragraph may determine, to be issued on April 1, 1933, repayable at par on March 31, 1965, and bearing interest at 5 per cent. per annum, payable half-yearly.

II. ARBITRAL TRIBUNAL.

"If before April 1, 1933, Germany proves to the satisfaction of an Arbitral Tribunal that the payments required to meet the interest upon the Second Series of bonds exceed her capacity, her obligation to issue such bonds to be cancelled in whole or in part as the Tribunal may decide.

"The Arbitral Tribunal to be appointed upon application by the German Government, to be made not later than October 1, 1932, and to consist of one person nominated by the Reparation Commission, one person nominated by the German Government, and a third by agreement between the other two, or, in default of agreement, by the President of the United States of America."

III. DELIVERIES IN KIND.

Treaty obligations to make deliveries of coal, dyestuffs, timber, &c., to continue, subject to the various conditions in regard to quantities and prices laid down in the treaty, but to an amount not exceeding the payments prescribed above.

IV. NEGOTIATION OF THE BONDS.

Germany to have the right to redeem bonds of the First Series as on any interest date after June 30, 1923, at the following prices:—

REDEMPTION PRICES OF FIRST SERIES BONDS.

Interest Date.	Price.
December 31, 1923	50
June 30, 1924	53
December 31, 1924	56
June 30, 1925	59
December 31, 1925	62
June 30, 1926	65
December 31, 1926	68
June 30, 1927, to December 31, 1930	69
Rising by 1 point per half-year to 76.	
June 30, 1931, to maturity (December 31, 1954)	76½
Rising by ¼ per half-year to par at maturity.	

The scale thus allows redemption on an 8 per cent. basis at the start, gradually falling to a 5 per cent. basis at the end of the 32-year period.

"As soon as, but not before, the First Series of bonds has been redeemed, Germany to have the right to redeem bonds of the Second Series as on any interest date at a discount of ⅓ per cent. for each unexpired half-year."

V. SUPERVISION OF GERMANY.

In return for these concessions Germany shall agree:—

(1) To stabilise the mark in accordance with the recommendations contained in the majority report of the Foreign Experts consulted by the German Government in November last, and to restore Budget equilibrium with limits of time to be prescribed (say, six months for the stabilisation and two years for the Budget reform).

(2) To accept such financial supervision as may be deemed by the Allied Powers to be necessary to see to the punctual carrying out of these reforms. The chief provisions for this supervision are that a Foreign Finance Council should be set up with its seat in Berlin. The Council will consist of persons appointed by Great Britain, France, Belgium, and Italy, with two other members of American and neutral European nationality respectively. The German Finance Minister will be ex-officio chairman (without a vote except in the case of equality of votes), and will be required by law to act on the Council's advice in regard to all matters affecting:—

1. Currency legislation.
2. The Budget, fiscal legislation, and public expenditure.
3. General Treasury administration.
4. Financial prohibitions, control of foreign remittances, &c.

"As regards the powers of the Council, the main object to be aimed at is to leave German administration as far as possible in German hands, and avoid direct responsibility for initiative in regard to details in the matter of legislation.

"It is desirable to give the Council very wide powers, but also wide discretion as to both the manner in which, and the extent to which, they are to be used."

Germany further shall agree—

(3) To submit, in the event of her failing to satisfy the supervising authority that the prescribed conditions are being observed, or failing to discharge her obligations as now revised, to any measures which Allied Powers, upon a report of such failure from the supervising authority, may unanimously decide to be necessary. Such measures may include the forcible seizure of German revenues and assets and the taking over of German fiscal machinery and the military occupation of German territories outside the treaty occupation area.

VI. ALLOTMENT OF THE BONDS.

Eighty per cent. of the bonds of the First Series to be distributed forthwith to the Powers entitled to reparations in the Spa Agreement percentages.

The remaining 20 per cent. to be retained by the Reparation Commission as a reserve for adjustment of accounts between Powers, and for the payment of miscellaneous treaty charges as provided below.

VII. EUROPEAN INTER-ALLIED DEBTS.

"The deposits of gold which are held by Great Britain as security for loans made to France and Italy for the purpose of carrying on the war to be applied forthwith towards the repayment of these loans.

"The French share of the German bonds applicable to the repayment of Belgian war debt to be transferred to Great Britain, and accepted by her as satisfaction of an equal amount of the French debt to Great Britain.

"One-and-a-half milliards of First Series German bonds to be transferred by Italy to Great Britain, and accepted by Great Britain in discharge of an amount of the Italian debt to Great Britain equal to the face value of the bonds.

"The balance of the French and Italian war debts to Great Britain to be written off; all counterclaims by France and Italy at the same time being abandoned.

"The Italian debt to France to be written off.

"Great Britain and France to transfer to the Reparation Commission as trustees the net war debts owing to

them by Serbia, Rumania, Greece, and Portugal, to be dealt with as provided below.

"On April 1, 1933, the bonds of the Second Series to be distributed as follows:—

Great Britain.....	The aggregate Spa Agreement percentages of these Powers.
France	
Italy	
Any other Powers which may accept the arrangements referred to below	
Belgium	Their respective Spa Agreement percentages.
Japan	
Any other Powers which may not accept those arrangements	

"The aggregate share assigned to the first-mentioned group of Powers to be divided in proportion to the respective debts of these Powers to the United States in respect of war advances, as on April 1, 1922."

The text of the British plan makes it quite clear, however, that "these proposals for dealing with Inter-Allied debts are put forward upon the understanding that the above repatriation plan is accepted, and all proposals for the taking of pledges ('gages') and application of sanctions (otherwise than as provided for in the above plan) are abandoned."

OUR INDEX NUMBER.—A YEAR'S PRICES.

In December our Index Number of commodity wholesale prices declined by 19 points, thus practically wiping out the increase of 23 points recorded in November, and the year closes with the total at 4264. A year ago it was 4357, so that on balance there has been a decline of 93 points. The highest point, 4396, was reached at the end of July, and the lowest, 4189, at the end of August, so that the widest fluctuation has been 207 points. This is in striking contrast to the movements of the three preceding post-war years. In 1921 the highest point was 5617 in January, and the lowest 4357 in December, a difference of 1260 points; in 1920 the highest was 8352 in March (the highest point ever touched), and the lowest 5924 in December, a difference of 2428 points; and in 1919, when prices were on the up grade, the highest was 7364 in December, and the lowest 5708 in March, a difference of 1656 points. It may therefore be said that a period of comparative general stability was reached in 1922. The table below shows the year's movements in each of the five groups:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, Ber, Oils, &c.).	Total.	Percentage Change.
Base (avg. 1901-5)...	500	300	500	400	500	2200	100.0
End July, 1914....	879	382	616	484	553	2855	116.6
Dec., 1915.....	897	446	731	711	848	3634	165.2
Dec., 1917.....	1286	686	1684	839	1348	5893	268.2
Nov., 1918....	1289	782	1848	908	1389	6212	282.6
Dec., 1918....	1303	782	1805	866	1337	6094	277.0
Dec., 1919....	1441	881	2442	1145	1453	7364	334.7
Dec., 1919....	1441	881	2442	1145	1453	7364	334.7
Mar., 1920....	1808	914	2974	1246	1709	8352	379.6
Dec., 1920....	1344	805	1284	1216	1275	5924	269.3
Dec., 1921....	921	636	1106	762	931	4357	198.0
Jan., 1922....	907	654	1066	730	925	4284	194.7
Feb., 1922....	948	640	1037	696	936	4259	193.6
Mar., 1922....	980	687	1038	700	892	4297	195.3
Apr., 1922....	1008	687	1010	709	890	4285	194.8
May, 1922....	1040	657	1079	710	885	4372	198.7
June, 1922....	1000	676	1135	690	887	4389	199.5
July, 1922....	994	669	1120	712	900	4396	199.8
Aug., 1922....	880	674	1123	691	887	4257	193.5
Sept., 1922....	873	682	1116	699	818	4189	190.4
Oct., 1922....	885	700	1150	712	813	4260	193.6
Nov., 1922....	864	703	1200	704	811	4283	194.7
Dec., 1922....	861	706	1184	705	807	4264	193.8

So far as the past month is concerned there have been no outstanding changes. In primary foodstuffs cereals have fallen, except foreign wheat, while meat is a little higher. Sugar and butter account for a rise in subsidiary foods. In the textile group American cotton and Australian wool are higher, but otherwise movements are in a downward direction. Iron and coal prices are practically unchanged, but steel rails were lower, and there was a slight rise in tin and copper. In the Miscellaneous

section a small decline in soda crystals was the only feature.

Turning to the year's comparison we find that the net decline of 93 points in the total has been produced by divergent movements in the individual groups. In the next table are set out the changes in the index for each commodity as compared with the end of December, 1921, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	89	- 3	Cotton, A	139	+ 32	Copper	54	- 1
English	72	- 7	Cotton, E	123	- 24			
Flour	83	- 9	Yarn	129	+ 17	Minerals	705	- 57
Barley	74	- 25	Cloth	128	- 9			
Oats	75	- 5	Wool, Eng.	123	+ 36	Baltic timber	100	- 14
Potatoes	45	- 42	Aus. Wool	118	- 41	Amer. timber	87	- 12
Rice	104	- 4	Silk	127	- 6	Leather	76	- 1
Beef	94	- 4	Flax	127	- 36	Petroleum	108	- 29
Mutton	105	+ 25	Hemp	47	- 8	Oils	77	- 1
Pork	117	+ 9	Jute	121	+ 37	Oilseed	78	+ 5
Cereals & Meat	861	- 60	Textiles	1,184	+ 78	Indigo	113	- 37
Tea	133	+ 23	Pig-iron	98	- 9	Rubber	14	- 35
Coffee	89	- 2	Steel rails	75	- 4			
Sugar cane	161	+ 21	Iron bars	81	- 15	Miscellaneous	807	- 124
Sugar beet	106	- 2	Coal, steam	123	- 13			
Butter	99	+ 27	House coal	93	- 24	Total	4,264	- 93
Tobacco	116	- 1	Lead	110	+ 6			
			Tin	71	+ 4			
Other foods	706	+ 70						

A year ago other foods and textiles stood furthest from the pre-war normal, and during the year this position has been exaggerated, these two groups rising by 70 and 78½ points respectively, while primary foods have fallen by 60½, minerals by 57, and miscellaneous commodities by 124 points. In the last-named group the decline has been fairly evenly spread over the year, apart from sharp decreases in September in petroleum, indigo, and soda, three commodities which are responsible for the greater part of the total fall in the group. Petroleum and indigo, however, are still at a figure very much above the average. Oils, oilseeds, and tallow show little change on balance, but timber is lower, the bulk of the fall having taken place in the first half of the year.

In the minerals group fluctuations in the minor metals have been small in comparison with those of the preceding years. Lead and tin are a little higher on balance, while copper is a shade lower. The bulk of the decline in coal occurred in the first half of the year. There was a very heavy cut in iron and steel in the second half of 1921, and movements in 1922 were much smaller. Pig-iron was reduced in January, and remained unchanged for the next six months. Steel rails moved for the first time in August, but the slight reduction then made was wiped out in the following month, and a reduction of 10s per ton in December accounts for the year's decline of four points. Iron bars were steady in the first half of the year, but there were two reductions in the second half.

In the textile group the most noticeable movements have been the recovery in wool prices after their abnormal drop in 1921, the fall in flax and the rise in jute. American cotton is considerably higher on balance, there having been a steady upward movement since the spring. The whole of the decline in Egyptian cotton, on the other hand, occurred in January, and since then the quotation has moved on similar lines to that for American, except that the latter rose in December, while Egyptian fell back. The monthly changes in yarn and cloth have been in the same direction, but yarn has shown larger movements when prices have been rising, and closes higher on balance, while cloth is lower.

In the subsidiary food group the changes principally represent reaction from the heavy declines recorded in 1921, though coffee is exceptional, with a slight drop. The history of wheat prices during the year was a steady rise until the end of the spring, and then an almost unbroken decline until the end of the year, on favourable crop reports, especially from America and Canada. Quotations for flour and other cereals have more or less followed the same curve. Potatoes have dropped by almost one-half, thanks to a record crop, the bulk of the decline occurring in August and September. Meat prices also rose in the first half, and declined in the second, but the upward movement was much more pronounced in mutton and pork than in beef.

The final table shows how each group stands in rela-

tion to the pre-war level, the figure for July, 1914, being taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
March, 1920	261	260	484	269	309	325.6
June, 1920	261	263	415	278	281	305.9
Dec., 1921	233	229	209	261	230	230.9
June, 1922	203	188	158	210	185	187.5
Dec., 1922	159	180	180	164	168	169.6
March, 1922	169	195	168	151	161	167.5
June, 1922	174	192	184	149	160	171.1
July, 1922	172	190	181	153	163	171.4
Aug., 1922	153	192	183	149	160	165.9
Sept., 1922	151	194	181	150	148	163.5
Oct., 1922	153	199	187	154	147	166.1
Nov., 1922	150	200	195	152	148	167.0
Dec., 1922	149	200	193	152	146	166.2

The increase of 66.2 per cent. over the July, 1914, figure, recorded for December, thus compares with one of 69.6 a year ago, the highest point of the year being 71.4 per cent. and the lowest 63.5 per cent., the latter being the lowest point reached since the Armistice. In March, 1920, when the highest point was reached, the increase over the pre-war level was 225.6 per cent.

THE NEW HOME RAILWAY STOCKS.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THE Home Railway market has benefited, not suffered, from the fact of having the number of its securities so drastically cut down this week through the formal advent of the grouping system as applied to the securities dealt in by the Stock Exchange markets. The list of preference stocks, for instance, has dwindled from 104 different securities to a modest 36, out of which a dozen are connected with the Tube railways not in any amalgamation, and another eight belong to the Caledonian Railway Company, because that undertaking has not yet completed its grouping arrangements. The ordinary and other stocks of the leading railway companies have been reduced in a similar manner, but in spite of this the market is one of the most active in the House, and all through the week has formed the focus of favourable attention from investor and speculator alike. An eager crowd assembled at half-past ten last Tuesday morning, when the Stock Exchange returned to work, brokers and jobbers being on the *qui vive* of expectation to see how prices would develop. North-Eastern deferred held most of the attention. The general expectation that dealings would begin in this stock on the basis of about 26 went by the board, as orders poured in to buy the stock at anything up to 30, which, in point of fact, proved the opening price, and which was left behind to the extent of about a point even before the end of the first day. Proprietors of railway stocks who make up their books in the ordinary way to the end of December are working out, for the New Year, the precise amount of their present holdings, and are endeavouring to compare these with the values at which they entered their investments a week ago. With so many different stocks to be dealt with, it was inevitable that wide divergencies of the prices should prevail as the market opened. This was peculiarly the case with some of the preference and preferred stocks. Some people think they gave too much, while the sellers in the market, with Stock Exchange philosophy, shrugged their shoulders, and said it could not be helped if they had sold at prices below those marked in the official lists, simultaneously, or immediately afterwards. No little confusion was created by the quotation ex dividend of all the stocks that were absorbed into others. Great Western is, of course, the principal exception, for Great Western ordinary remains untouched, and therefore the market rule remains the same as usual. Nearly all the others, however, which are concerned in the grouping are now ex dividend, and until this was explained the comparatively low prices of the London, Midland, and Scottish and other stocks were considered somewhat disappointing, though, when the dividends are allowed for, the actual movements on the week show advances.

The quotations of the ordinary stocks are given in our tables elsewhere in this issue, but, for the benefit of the large numbers of investors who hold the fixed-interest issues, it will be useful to set out in detail the prices at which stocks are now standing. Leaving out the Electric and Tube stocks, these are the current quotations for debenture, guaranteed, and preference stocks actually on offer in the market at the moment, together with the yields obtainable at the present prices:—

	Divs. Paid.	Price.	Yield.
DEBENTURES.			
London, Midland, and Scottish.....	4 J. & J.	84½xd	4 14 6
Great Western	5 J. & J.	106½d	4 15 6
London and North-Eastern	3 J. & J.	62½xd	4 16 0
Do.....	4 J. & J.	82½xd	4 17 0
Southern	4 J. & J.	83xd	4 16 6
GUARANTEED STOCKS.

Southern	5 F. & A.	97xd	5 3 6

Among the leased lines and joint issues there are small amounts of East Lincoln, Great Western Bristol and Exeter, and Humber Dock ordinary shares on offer at prices which yield from 5 per cent. to a shade over on the money.

From the purely mechanical point of view, holders of railway stocks who wish to dispose of their securities can send orders to their brokers telling them exactly what they, the clients, hold at present, and the brokers will work out the equivalents, selling those in each case. Transfer work is being facilitated as much as possible by the companies concerned. The Stock Exchange Share and Loan Department has lent its powerful aid to the smooth working of a change-over, which brings, of course, a host of complexities and knotty points. However, present indication points to the fact that within the course of a week or two at latest the market will have settled down into something like normal condition. To those, meanwhile, who are in some doubt as to whether they should send in their certificates or not to be altered by the companies into the new descriptions of stock, it may be suggested that they should wait until the first rush of buying and selling business is over. There is no immediate necessity for exchanging their certificates into new stocks which become theirs automatically, and the companies, already breast-high in detail work, will probably appreciate consideration shown to them, during the first part of the rush, by their stockholders.

BANKERS' CLEARINGS IN 1922.

THE grand total of the Bankers' clearings for the year 1922 shows an increase as compared with 1921 of £2,231 millions, which follows a decline in 1921 of £4,088 millions. As will be seen from the following table, there was a decline in both metropolitan and country clearing totals:—

	1921.	1922.	Increase or Decrease.
	£	£	£
Town clearing ..	30,268,214,000	32,780,635,000	+ 2,512,421,000
Metropolitan clearing	1,660,166,000	1,574,661,000	- 85,505,000
Country cheque clearing	3,002,179,000	2,806,165,000	- 196,014,000
Grand total..	34,930,559,000	37,161,461,000	+ 2,230,902,000

The town clearing figures indicate an increase in financial and commercial activity. Among the factors working in this direction may be mentioned the greater activity in the stock markets and the rise in security values, larger totals of capital issues, and considerable foreign exchange transactions. It is pointed out by the secretary in his report that it is impossible to obtain any clear

guidance as to the trade of the country from the town clearing figures, as the genuine trade transactions included therein are quite swamped by the enormous turnover of the money market and other purely financial operations. In the figures relating to the metropolitan clearing, the trade of the metropolis is reflected fairly clearly, and they show that, although the decrease for the year is £85,505,000, this decrease, when distributed among the quarters, shows a diminishing ratio, although the last quarter is not so satisfactory as the third. Of the year's total decrease, 59.4 per cent. occurred in the first quarter, 19 per cent. in the second, and 78.5 per cent. in the first six months. The figures of the country cheque clearing, where the movements of the general trade of the country are clearly seen, follow the same course, quarter by quarter, as the metropolitan clearing. Of the total decrease of £196,014,000, £137,594,000, or 70.1 per cent., is recorded in the first quarter, and £31,784,000, or 16.2 per cent., in the second quarter, while by far the larger portion of it, or 86.4 per cent., occurred in the first half of the year. The increases in the town clearing quarter by quarter show a progressive decline, having been 14.8 per cent. in the first, 14.3 per cent. in the second, 5.7 per cent. in the third, and 1.3 per cent. in the fourth quarters. Of the ten provincial clearings, four show increases and six decreases as compared with 1921. Increases are shown by Hull, 10 per cent.; Leicester, 2.3 per cent.; Manchester, 4.4 per cent.; and Newcastle, 3.4 per cent.; while the decreases are Birmingham, 6.2 per cent.; Bristol, 10.5 per cent.; Leeds, 5.4 per cent.; Liverpool, 4.8 per cent.; Nottingham, 5.6 per cent.; and Sheffield, 13.2 per cent.

The astonishing growth in the total of the clearings in recent years may be seen from the following table:—

ANNUAL TOTALS.			
	(Million £.)		
1868	3,425	1914	14,665
1873	6,071	1915	13,408
1880	5,794	1916	15,275
1890	7,801	1917	19,121
1900	8,960	1918	21,198
1905	12,288	1919	28,415
1910	14,659	1920	39,019
1911	14,614	1921	34,931
1912	15,962	1922	37,161
1913	16,436		

A census of the drafts passing through each clearing was taken on Wednesday, January 4th, and on Friday, November 24th, the number arrived at on January 4th was 1,305,000 articles (without much doubt a record), distributed between the three clearings as follows:—Town, 352,000; metropolitan, 341,000; country, 612,000; the average amount of each draft being—town, £335; metropolitan, £30; country, £29. January 4th was an exceptionally heavy day in consequence of the banks having been closed to the public on Monday, January 2nd, but November 24th may be regarded as a light day, and the number of articles then passing was found to be 478,000, divided between the three clearings, viz.:—Town, 91,000; metropolitan, 125,000; country, 262,000, giving the average amount of each draft in the town £1,152, metropolitan £31, country £28. It will be seen that the average amount of a town draft in November was more than three times that of January, but this is accounted for by the fact that on January 4th the average amount was greatly reduced by the large number of dividend warrants and subscription payments then passing through the town clearing. The almost identical average value of drafts, both in the metropolitan and country clearings, on the two dates is remarkable. The average daily number of drafts passing through all clearings may be taken to be not less than 550,000. These figures indicate the greatly the use of the cheque has supplanted the legal currency of the country, and this fact is further emphasised by other statistics which have been obtained bearing on the same point. The late Lord Avebury (then Sir John Lubbock, Bart.) stated in the *Journal of the Statistical Society*, in September, 1865, that out of £1,000,000 paid into his bank, only £21,500 consisted of banknotes and £6,210 of coin, notes and coin thus being only 2.7 per cent. of the total. Statistics taken recently at banks in the City show that the 2.7 per cent.

of 1865 has sunk to less than .7 per cent. in 1922, or, to express the ratio in the same terms as those used by Lord Avebury, out of a million paid into a bank only £4,260 consisted of banknotes and £2,640 of Treasury notes and coin; indeed, it may be stated that, except for the purchase of property, payment of wages, household and pocket expenses, legal currency has been almost entirely superseded by the cheque based on credit, a fact which cannot have been without its effect on the stability of the exchange value of the £1 sterling. The cheque system which has developed so remarkably in Great Britain has not been adopted to any appreciable extent by any other European country, and it is only in America that we find a corresponding evolution in the use of currency based on credit.

Notes of the Week.

The National Accounts.—It is unreasonable to attempt to draw any very definite conclusions from a comparison of the nine months' figures of revenue and expenditure with Budget estimates for the financial year, since the last quarter always contains the most surprises. It is, however, gratifying to find that, in spite of trade depression, the shrinkage in revenue is very much smaller than three-fourths of the total decline budgeted for, and that the reduction in expenditure for the same period is only £2 millions short of that anticipated in the whole 12 months. Below we set out the revenue figures for the past nine months, with the actual increase or decrease compared with the corresponding period of 1921-22, together with the Chancellor's original estimate of the changes in each item in the full year:—

	(000's omitted.)			
	Revenue April 1, to Dec. 31, 1922.	Actual Inc. or Dec. in Nine Months.	Budget Estimate of Inc. or Dec. in Full Year.	
	£	£	£	
Customs.....	95,199	— 3,286	— 17,802	
Excise.....	121,308	— 28,582	— 33,541	
Motor Duties	3,599	+ 317	— 496	
Estate Duties	43,821	+ 7,073	— 4,191	
Stamps	14,762	+ 2,873	— 1,338	
Land Tax and House Duty	650	+ 140	+ 410	
Income Tax	187,551	+ 12,891	— 69,887	
E. P. D.	954	— 28,760	— 2,652	
Corporation Tax	13,297	+ 3,007	+ 2,234	
Post Office	39,400	+ 400	— 1,775	
Crown Lands	710	+ 140	— 70	
Int. on Loans	8,308	— 516	+ 193	
Miscellaneous—				
Ordinary	18,912	+ 1,331	— 4,334	
Special	37,092	— 58,297	— 80,806	
	585,563	— 91,269	— 214,105	

Practically the whole of the actual decline is accounted for by the drop in miscellaneous special receipts, and in excess profits duty, the decline in the latter being so far much larger than was estimated. Income-tax, on the other hand, makes a very good showing, but it has to be remembered that the collections in the final three months will be at the lowered rate of 5s in the £. Customs receipts appear to have been better than anticipations, and estate duties, thanks, perhaps, partly to the rise in security values show up-to-date a substantial increase. Expenditure for the first nine months shows a reduction of over £167 millions, of which it may be mentioned £150 millions took place in the first six months. Debt service is over £12 millions lower, and supply services have fallen by £155 millions. The Budget estimate was for a total reduction in the full year of £169 millions. How far supplementary estimates for unemployment relief, naval and military expenditure in the Near-East, and other items will nullify the gain on the estimate so far achieved remains to be seen. At the best the most that can be hoped for is a balance at the end of March. As far as 1923-24 is concerned, it must not be forgotten that a full year's interest on the American debt will have to be faced, that the effect of trade depression on the yield of income-tax will become more marked, and that "miscellaneous" receipts which in recent years have provided the Chancellor with so useful a means of balancing his

figures must soon dwindle to nothing. The Treasury has this year helped to elucidate the State accounts by separating military from supply expenditure. For this concession we would show our gratitude by asking for another, viz., the separation of postal expenditure from that of the revenue departments. This is essential if the position of the Post Office is to be followed intelligently.

Cleansing the Honours List.—The report of the Royal Commission on Honours consists of a majority report signed by six members and a "note of dissent" signed by the remaining member, Mr. Arthur Henderson. The latter complains that the Commission, while acknowledging the existence of "touts," decided not to examine either these undesirable folk or the people whom they are known to have approached. The sensation-loving public will agree with Mr. Henderson's complaint, and will regard the report as a disappointing document. It deliberately refrains from digging into the murky past, and contents itself with explaining the way in which Honours lists are compiled, and with suggesting a checking system that might prevent future abuses. Whether it is a good or bad thing that the scandals of the past are not exposed to the public gaze, is a matter of opinion; but the Commission's decision not to undertake this task seems to be clearly defensible on the ground that their terms of reference directed their attention to the future. They were not appointed to unearth scandals, but to suggest safeguards against the repetition of scandals. But Mr Henderson has logic on his side when he writes:—"Had the investigation been pursued more thoroughly, I have no doubt that the evidence forthcoming would have led the Commission to realise the inadequacy of their recommendations." Had the Commission broken the fetters imposed upon them by their terms of reference, their report might have been sensational. Instead, they have hugged their fetters, perhaps unnecessarily tight. The class of Honours most open to abuse and scandal are what are commonly known as political Honours, and it is this class that the Commission has chiefly in mind in making its recommendations. These may be briefly summarised as follows:—(1) That a Committee of the Privy Council, of not more than three members (not being members of the Government) be appointed for the duration of the Government, with a secretary drawn from the Civil Service. (2) That before Honours lists are submitted to the King, they should be sent to this committee for scrutiny. (3) That the lists to be scrutinised by the committee should contain in respect of each name (a) a statement of services and reasons for honour; (b) a statement by the patronage secretary or Party manager that subscriptions to Party Funds, actual or in prospect, are in no way connected with the recommendation; and (c) the name and address of the original suggestor of the name. (4) That the committee should report on the desirability, or otherwise, of each name, and that if the committee reports unfavourably on any name and the Prime Minister still includes that name in his list, the King should be informed of the report of the committee. (5) That an Act be passed imposing penalties on anyone trafficking in Honours. The ostensible advantage of the proposed committee would be that it would remove the responsibility for scrutiny from the shoulders of the Prime Minister; its obvious disadvantage that it would presumably consist of members of the Government party. The recommendation that penalties be imposed for "trafficking" in Honours earns universal approval; but the recommendation under heading (4) above might place his Majesty on occasions in an extremely awkward position. On the whole, we suppose that the committee's recommendations must be accepted as a rather feeble attempt to make it a little less easy for abuses to occur. There are many who, like Mr Henderson, would like to see political Honours altogether discontinued. There are many more who, if they are to be continued, regard the publication of the Party Fund subscription lists as urgently desirable. The most unfortunate impression conveyed by the Commission's appointment and report is that while the penalty recommendation is a tacit recognition of past scandals, these scandals (rightly or wrongly) are not examined, and the safeguards suggested against their

repetition are scarcely cast-iron. We doubt whether anyone will be really pleased with the report, except those who had personal reason to fear an investigation into the past.

Manchester and Protection.—The members of the Manchester Chamber of Commerce have decided by an overwhelming majority in favour of the repeal of the Safeguarding of Industries and Dyestuffs Acts. The result of the referendum of this question was announced at the beginning of this week. On the voting papers the members were asked: (1) Are you in favour of the repeal of the Safeguarding of Industries Act? (2) Are you in favour of the repeal of the Dyestuffs Act? The ballot shows that 1,306 members voted in favour of the repeal of the Safeguarding of Industries Act, and 330 against, making the majority for the repeal 976. With regard to the Dyestuffs Act, 1,311 voted in favour of the repeal and 304 against the repeal, leaving a majority for the repeal of 1,007. The number of voting papers sent out was 3,787. It is not known at the moment what action will be taken by the directors in view of this decisive vote of the members, but it is understood that pressure will be brought to bear upon Lancashire members of Parliament and the Government to obtain the repeal of these two Acts at the earliest opportunity.

Switzerland's Finances.—A correspondent writes:—The Swiss franc showed great firmness during the war and after. A year ago it even established a premium over the U.S. dollar. The question is whether it will be able to maintain its high level. According to an article published by Professor Steiger, of Bern, the total debt of the Swiss Confederation amounted at the end of 1913 to £6,512,800, and at the end of 1921 to £16,910,400. There will be a considerable increase at the end of 1922, when the total will reach £180,000,000. The interest charge on the debt at the end of 1913 was £169,000, and at the end of 1921 £7,236,800. The important increase of the debt is largely due to the unsatisfactory working of the Government railroads, as shown in the following table:—

	1913.	1921.
£	£	£
Surplus of gross receipts	2,812,640	482,160
Interest charges	2,198,920	3,598,720
	+ 613,720	— 3,116,560

Of course, a gradual improvement of the situation could be expected if the railroadmen would be willing to accept a very important reduction of wages, and to work more than eight hours. The question is whether they will do it, being strongly organised. Prof. Steiger does not expect this possible railway improvement to occur, and believes that the debt of the Confederacy will increase within two years to the sum of £200,000,000. The customs policy of the Government of taxing foodstuffs and all other necessities of life has created a vicious circle. Whilst speaking of the debt of Switzerland, one should not forget that each of the 22 cantons has its own government, its own functionaries, and, naturally, its own debts. In approximate figures the debts of the cantons and the towns at the end of 1921 were as follows:—Cantons, £52,000,000; towns, £52,000,000; total, £104,000,000.

* "Bulletin Commercial et Industriel Suisse." Geneva.
December 15, 1922.

The total debt of Switzerland amounted, therefore, at the end of 1921 to £268,910,400, made up as follows:—

Confederacy	£ 164,910,400
Cantons	52,000,000
Towns	52,000,000
Total	268,910,400

This total is by no means a small matter for a population which is numbering less than four million souls, and for a country which is producing no more breadstuffs than are sufficient to supply home needs for one month in the year.

The American Motor Industry.—A correspondent writes:—The development of the American motor industry during the last twenty years has been astonishing. Five out of every six motor-cars in the world to-day belong to Americans; the taxes paid by American motorists in 1921 amounted very nearly to £70,000,000, or one-tenth of the Budget; in California one citizen out of every five possesses a car; while in the whole of the United States there is one car in use for every ten inhabitants. The annual output of cars in 1899 was 3,700; in 1914 it was 569,000; in 1920 it was 2,205,000, and during the first six months of 1922 it was over a million. There were nearly 11,000,000 cars in actual use on July 1st last. There are over 250,000 workmen employed in making cars (the Ford works alone employ 100,000 men); 400,000 men are engaged in contributive industries; 230,000 garage hands and nearly 1,250,000 professional chauffeurs and mechanics are employed. Thus there are well over 2,000,000 men engaged in the American motor industry. From statistics lately issued by the National Automobile Chamber of Commerce, it appears that 100 per cent. of the lorries and about 80 per cent. of the passenger cars are used for business purposes. The vast importance of the American motor industry is shown by the fact that the wholesale value of motor vehicles produced in 1921, including accessories and tyres, amounted to over £440,000,000, while the aggregate costs of running the cars amounted approximately to £1,000,000,000. It is estimated that the passenger mileage is about double that of the railways. The factories engaged in the actual work of manufacturing cars are 123, of which 90 per cent. are in the State of Michigan and 5 per cent. in Ohio. The remaining 5 per cent. are in Wisconsin, Indiana, New York, Illinois and Missouri. Nearly all the cars made in America are for home use, and in 1921 only about 5 per cent. of the total value was exported. Yet this export item was easily the largest among American exports of finished goods. The average value of the cars exported was £400, which shows that many high-grade cars were included to balance the large number of Fords which were sent to Europe and elsewhere. Of the total exports approximately one-sixth came to Europe, one-third to Canada and Central America, one-tenth to South America, and one-twelfth to the West Indies. America imports hardly any cars. The import duty of 45 per cent. for cars over £400 in value and 30 per cent. for cars costing less than this sum, destroys foreign competition. In 1911 the value of the cars imported was £400,000; in 1921 it was £175,000. In 1921 America imported 522 cars, while she exported to Europe alone 5,438. There are many reasons which account for the popularity of the motor-car in America. For one thing, the railway system is totally inadequate for so vast an area, and in the West especially practically everyone owns a car. Among the farmers, too, the car is regarded as indispensable—and there are over 8,000,000 farmers in the United States. Owing to cheap iron and coal, American cars can be produced for a much lower cost than is possible in this country. The Ford can there be bought for less than £60, the Chevrolet for £100, and the Overland for £120. More than 50 per cent. of the total output of cars in America are Fords, while 25 per cent. are Chevrolets and Overlands. Petrol and rubber are both cheap, and thus in addition to the small initial cost of a car the running costs are also low. It is estimated that the mileage cost of a Ford car in the United States is approximately a penny a mile. It may be mentioned that, efficient though the average American may be, he cannot claim great efficiency

as a motor driver, since during 1921 there were no fewer than 12,500 fatal motoring accidents.

The Public Trustee.—We are officially informed that the Public Trustee Office is now beginning to feel the full benefit of the economies effected by reorganisation during the last three years, and these economies, coupled with the drop in the Civil Service bonus, are rendering the financial position of the office considerably better than was anticipated. In his last annual report, issued in May, 1922, the Public Trustee stated that the present financial year ought to witness the disappearance of the deficit; but this proved to be a modest estimate, and shortly after the commencement of the financial year (April, 1922) it appeared likely not only that the deficit would disappear, but also that a surplus would result. Now that nine months of the year have elapsed, a substantial surplus is morally certain, and accordingly, although the cost of administration necessarily remains higher than it was before the war, some measure of fee-reduction becomes practicable. In order to avoid any misunderstanding, it should be stated that the deficits of the past few years on the Public Trustee work have been met entirely out of the surplus revenue earned by the Public Trustee as Custodian of Enemy Property. The fees selected for immediate reduction are the capital fees on the acceptance of new cases. These were the fees subjected to by far the heaviest increase in 1920 under the recommendations of Sir George Murray's Committee, and it has been obvious for some time, apart from all outside criticism, that they constituted a heavy burden upon the trusts. Reductions have now been effected varying from one-quarter to one-half at different points on the scales, the all-round reduction being about one-third. These reductions came into force on January 1, 1923, and they will extend, of course, to wills under which the Public Trustee is already appointed but which have not yet come into operation. The Public Trustee is now administering nearly 17,000 trusts, the total value of the trust funds being about £150,000,000.

First Bank Dividends.—The first of the bank dividends fulfil the expectation that no important changes would be made. Those of the discount houses, however, are raised in two cases, as may be seen from our table below:—

Name of Bank.	Amount of Share.	Paid Up.	Final Divs. Rate % per Annum.	Whole Year.	Price, Jan. 5, 1922.	Price, Jan. 4, 1923.	Present Yield.
Barclays, "A"	4	4	10	10	10	10	6 1/2
Do "B"	1	1	14	14	14	14	2 1/2
London Joint City and Midland	12	2 1/2	18	18	18	18	7 1/2
Do	2 1/2	2 1/2	18	18	18	18	7 1/2
Manchester & Liverpool	15	3	18 1/2	18 1/2	18 1/2	18 1/2	8 1/2
Williams Deacon's, "A"	5	1	12 1/2	12 1/2	12 1/2	12 1/2	2 1/2
Do "B"	1	1	12 1/2	12 1/2	12 1/2	12 1/2	2 1/2

a Includes bonus of 2 per cent., free of tax. b Includes bonus of 5 per cent., free of tax. c On old shares of £20, with £5 paid. d Includes bonus of 3 per cent., free of tax.

Barclays' profits show a drop of nearly £330,000, and the allocation to contingency account is reduced from £600,000 to £250,000, the dividend on the "A" and "B" shares being maintained at last year's rate. The City and Midland shows a drop of £200,000 in profits, and reduces the reserve allocation from £750,000 to £500,000, but £300,000 again goes to premises account, and the carry forward is increased by £11,000. The profits of the Manchester and Liverpool show a decline of £74,000, but the transfer of £100,000 to reserve made a year ago is not repeated, and after payment of a dividend at the same rate the carry forward is increased by over £31,000. The profits of Williams, Deacon's are £28,000 lower, and the reserve appropriation is reduced from £100,000 to £50,000. A final distribution of 13 1/2 per cent. on the "A" shares increases the dividend for the full year by 1/2 per cent. to 13 1/2 per cent. The profits of the discount companies have not yet been disclosed, but that they have risen seems evident from the figures so far published. Alexanders place £80,000 to reserve, against £55,000 a year ago, and slightly increase the balance forward, after raising the

free-of-tax bonus from 2 to 5 per cent. The Union Discount, after setting aside £138,000, or £23,000 more than in the previous year, increases the bonus from 3 to 5 per cent. free of tax, and carries forward over £15,000 more. The National Discount has had a rearrangement of capital, and it is not possible to compare the rates of dividend. The dividend for the first half-year was paid on the old capital, and it would appear that the dividend for the final half-year is the same as for the corresponding period of 1921, making the same total dividend for the full year. The pension fund gets £15,000, as against £10,000, and £52,000 more is carried forward.

Peter Walker and Robert Cain.—The company of Peter Walker (Warrington) and Robert Cain and Sons, Limited, was formed in September, 1921, to acquire, firstly, the brewery business of Robert Cain and Sons, Limited, which included the share capital of Harding and Parrington, Limited, and, secondly, the ordinary share capital of a brewery company known as Peter Walker and Son (Warrington and Burton), Limited. A prospectus was issued just after the formation of the company, when £2,000,000 7 per cent. first mortgage debentures were offered at 92 1/2 per cent., and 1,500,000 £1 ordinary shares at par. During the week the report and accounts of this fusion for the year ended September 30, 1922, have been issued, and a profit of £540,035 is recorded. From this sum, however, falls to be deducted for debenture services £134,490, and £160,000 for the 8 per cent. preference dividend. A final distribution is made on the ordinary capital, which brings the total ordinary dividend for the year up to 10 per cent. and a balance of £20,545 is carried forward. The directors, we are informed, propose to carry to a reserve account undistributed profits brought forward at September 30, 1921, amounting to £80,304. On the debit side of the balance-sheet a total of £7,009,770 is shown, of which £6,028,643 represents freehold brewery premises, investments, and goodwill. Formation expenses figure at £328,481, and an item of £150,000 appears as "discount on issue of debentures." A consolidated balance-sheet incorporating the balance-sheets of allied concerns is attached to the report. This is a step in the right direction, but it would be better perhaps if the directors could see their way clear to separate the main item in assets into (a) properties, (b) investments, and (c) goodwill. Recent quotations show that the debentures are marketable at round about par, while the £1 ordinary shares change hands at close to 18s 3d.

Mexico Mines of El Oro.—The procedure adopted by the directors of this Franco-British enterprise in regard to the presentation of information is certainly not such as will commend itself to the shareholders in England. Now the salient point in the position at the moment consists in the decision of the management to use up each month a high proportion of the rich ore recently discovered—this policy being rightly considered preferable to the employment of armed guards in order to prevent robbery. The natural result has been the inflation of the monthly profits, which have grown from \$113,000 for June to \$169,300 in November. This expansion in earnings has been reflected in a dividend of 4s per share in July, and another of 5s supplemented by a bonus of 2s 6d in November. Not the slightest reference to these circumstances is made in the report for 1921-22, just issued. The document in question shows a profit of £129,100, as against £91,750 for the year ended June 30, 1921. Yet the dividends are set out as three of 2s 6d each, absorbing £78,750; whereas for 1920-21 the total was 12s per share, or £126,000. Probably the dividend of 4s per share declared in July represented a final distribution on account of the 12 months then concluded; but the reader is left to guess. The manager reports that the rich ore is continuing from the eleventh to below the twelfth level in the Mexico mine, and that a rich but narrow vein was found to extend for a distance of 170 feet in an adjoining pro-

perty which is being worked under option. The ore reserves as a whole show a decrease of 37,100 tons—largely explained by the hindrance to development caused by a serious break in the north shaft. The total of 274,300 tons is equivalent to somewhat more than two years' supply for the mill. At about 4 1/2 the shares give a high yield, but the abnormal nature of the conditions requires to be taken into account.

The United General.—The United General Commercial Insurance Corporation has presented its shareholders with the worst figures ever issued by the directors of a London insurance company. With a paid-up capital of £282,628 it has succeeded in making in fifteen months a published loss of £112,747, to which every branch of the business has handsomely contributed. The premium income shown in the accounts is as follows:—

Fire	£ 68,886
Accident	67,427
Marine	13,375
Total	149,688

Against these premium figures the claims, losses, and expenses are:—

FIRE.		Per Cent. of Premiums.	
Claims	£ 47,706		69
Expenses	30,986		46
Commission	24,764		35
Total	103,456		150
ACCIDENT.		Per Cent. of Premiums.	
Claims	£ 49,676		73
Expenses	26,037		39
Commission	14,803		22
Total	90,516		134
MARINE.		Per Cent. of Premiums.	
Claims	£ 43,803		327
Expenses	15,565		116
Total	59,368		443

Altogether the ratio of claims, expenses, and commission to premium income is about 170 per cent. There is no need to comment on the disastrous character of these figures, or on the explanations given of them in the directors' report. What does require comment is the outrageously high level of working expenses and commission, which work out over all at about 75 per cent. of the premium income. In view of the management of the company, and the close relations existing between it and one firm of brokers, this feature of the accounts ought to be closely investigated. The balance-sheet is about as weak as any balance-sheet could be, the amounts being, for the most part, either worthless or extremely doubtful. There is £125,000 for the purchase of contracts from another insurance company, £109,506 for shares of the City Life, which are unquoted, and, presumably, unsaleable, £27,284 for preliminary expenses, £55,198 for brokers' balances. Deposits with the High Court are £20,000, and cash, £1,725, and these are the only amounts of which one can be certain. On the other side, there is a loan of £63,459 from the City Life, and another of £24,000 from the bank. The auditors' certificate is an anthology of qualifications:—"Certain of the contracts, the benefit of which was purchased, have not been fulfilled. The figures relating to the Paris agency are only approximate, consequent on the involved manner in which the accounts of the agency have been kept. A substantial proportion of the Corporation's business has been received through a firm of brokers of which a late director of the Corporation is a director. The item of agents' balances includes a considerable sum due from this firm, which, however, has since been materially reduced. Subject to the matters above referred to, and to the shares in the City Life Company being of the value stated, and also to the Fire and Accident funds being sufficient to cover claims and expenses, &c. . . ." This extraordinary certificate is a fitting conclusion to an extraordinary report. The outlook appears to be as bad as possible, and, unhappily, the City Life Company, which has a big liability on small life policies, is the largest

shareholder in this Corporation. It is a deplorable position, and it is difficult to see what there is to be gained by the continued life of the Corporation.

The English Insurance Company.—Founded in 1919, this company after an unfortunate career has escaped the last humiliation of being liquidated, but suffers a scarcely less humiliating end in recommending its shareholders to accept one share in the General Accident Insurance Company for every 100 shares in the English. The nominal capital of the company is £1,000,000, of which £589,396 has been issued and subscribed. Originally each of the shares had 10s paid on it, but last year the directors made a call of 2s 6d a share to supply the company with badly needed liquid capital, and at present there is 7s 6d per share uncalled. Before this call of 2s 6d the shares stood at a discount in the market, but at the end of the year they had a value of a few pence. The loss involved on the shareholders is over £300,000 if the purchase by the General Accident goes through, but they may think themselves lucky at having got out without losing £1 per share. The directors seem to throw the blame for the bad results on to their marine business, but this is probably unfair. What the company has suffered from is the mentality of its management, which started off with the impression that insurance was a Tom Tiddler's ground on which any one who splashed his money about freely enough could pick up a fortune. That notion is incorrect, and the shareholders have paid for it. An insurance connection worth having has to be worked up carefully, economically, and a young company cannot stand the expense of enormous premises and unwieldy boards. The General Accident, if the deal goes through, and assuming that all the English shares have been paid up to 12s 6d, will have to issue nearly 6,000 new shares, of which the present market value is between £36,000 and £39,000.

The Brussels Maritime Conventions.—So many business transactions are international that less divergence than in fact exists between the commercial laws of countries whose subjects trade with each other might have been expected. In some measure the "law merchant" is the same everywhere, but on many matters of detail, which are nevertheless often of importance, much harmonising remains to be done. The mortgage of a ship is an example of the kind of transaction in regard to which clearly it is desirable that national laws should be harmonised. Most people would agree on the desirability of reaching the position that mortgages of ships properly executed in the country of their origin should be accepted and recognised as valid all over the world. That, at all events, was the view put forward on behalf of the English banks at a conference of the Comité Maritime International held at Venice so long ago as 1907. The Comité has been working at questions of this kind for a considerable number of years, and, although the process of unifying commercial law has been slow, several notable results stand to the credit of the movement. Last October an official diplomatic conference, which met at Brussels, took up some of the preparatory work of the Comité, including the matter of mortgages of ships, and carried it a stage further. Presumably the Board of Trade will one day issue a report of this conference. A long series of shipping Acts have enabled shipowners to limit their liability, and the laws of most other countries contain rules similar in general purpose, but differing considerably in the consequences which flow from them. Under English law, a shipowner's liability for damage happening without his actual fault or privity is limited to £8 per ton of the ship, or £15 per ton in respect of claims against him for personal injury. This is a fixed limit not depending on the value of the particular ship. The laws of Continental countries, on the other hand, take the value of the ship and freight as the figure, and allow for damage, so that, if the ship is lost or abandoned, claimants may be unable to recover anything. The proposal considered and adopted at Brussels was that each country finally ratifying the convention should alter its law into conformity with the rules for limitation of liability set out in the convention, which were arrived at by a process of give

and take between the varying national laws. The English law may be regarded to some extent as the basis of the proposed new international law, inasmuch as the figure of £8 per ton would be maintained, the additional £7 per ton for personal injury claims being altered to £8. This last amount would be a figure not subject to diminution, but the limit for other claims would be on the Continental principle. That is, it would be the value of the ship, freight and accessories, with £8 per ton as a maximum merely. Freight would, however, not be the actual amount, but a fixed sum of 10 per cent. of the value of the ship at the commencement of the voyage. There would, therefore, be liability for at least that amount, whatever happened to the ship. The next convention lays down first of all a rule that mortgages and charges on ships duly effected in accordance with the law of the State to which the ship belongs, and publicly registered, shall be valid in all other countries. It then deals with liens, and its proposals on this head, which differ materially from those embodied in the draft convention brought forward from 1913, are open to the criticism that they abandon the objective of strictly limiting the kinds of claims in respect of which liens may attach to a ship. Our law recognises comparatively few maritime liens, but gives those which do attach special privileges in the way of priority. Both Continental and American laws recognise very many liens. The compromise adopted in the convention is based on the American system of preferred mortgages. It would allow only liens for certain official charges, for wages for salvage, and for damage to take precedence of duly registered mortgages, postponing to these last the shipmaster's lien for disbursements and contracts for necessities, and also other liens which national laws might allow without limit as to their number. Mortgagees would probably, under the convention, be less liable to find themselves postponed to other claimants holding liens, but the admission of a multiplicity of deferred liens has nothing to commend it from the point of view of ordinary creditors, who would suffer when anything went wrong, though on equitable grounds deserving of as much consideration as others protected by liens. Moreover, shipmasters are disposed, it would appear, to object strongly to being given a more deferred position. The third convention embodies a revision of the much-discussed Hague Rules. Substantially, it is that adopted at the Conference of the Comité Maritime International in London last October, just before the meeting of the official Brussels conference, as noted in the *Economist* of October 14th. This final version of the rules is expected to be made compulsory by legislation in this country as well as abroad.

Japanese Trade and Finance.—Cabled advices from Tokio state that the uneasiness caused by the run on several small banks in the districts of Osaka and Kyoto has nearly disappeared. Although the general conditions of all districts had greatly improved, the Tokio market had, as the end of the year approached, to face an unexpected monetary stringency. This condition was evidently due to the fact that, in order to strengthen their reserves and to meet the end of the year requirements, the banks in the West were not inclined to return the money which they had called from the Tokio market for the sake of emergency. The rate of short loans rose to 11 per cent., and accordingly the advances and discount of the Bank of Japan increased gradually. At the very end of the month, however, the market became rather comfortable, owing to the ample funds accumulated for the past few days in the vaults of banks throughout the country, and also in the anticipation of the more settled situation in the near future, day-to-day money being quoted at under 10 per cent., time money at 9½-10 per cent., and thus the market passed the end of the year quietly. While trade at the end of the year was exceptionally dull, reflecting the general depression, the tendency of the stock market was steady on New Year hopes, Government loans being in especially good demand. The rice and cotton yarn markets also had a favourable tendency. There being signs of some orders forthcoming, the raw silk market was firm. The note issue of the Bank of Japan at December 30th was 1,590 million yen, against 1,559 million yen a year earlier,

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned periods of the Year ending March 31, 1923, as compared with the corresponding periods of the preceding Year.

while discounts and advances at 580 million yen compared with 393 million yen at the close of 1921. A summary of Japan's foreign trade in 1922 reads as follows:—

	1921. Yen.	1922. Yen.
Imports	1,614,000,000	1,859,170,000
Exports	1,252,000,000	1,594,780,000
Excess of imports	362,000,000	264,390,000

The decrease in the import excess is 26.8 per cent.

THE University of London announces that Professor H. S. Foxwell will deliver a course of ten lectures on "The London Money Market," with special reference to its international position, and to the general causes of movements in the prices of securities, on Thursdays at 6.15 p.m., beginning January 18th. The lectures will be held, by consent of the governing body, at the School of Oriental Studies, Finsbury Circus, E.C. 3.

IRISH FREE STATE.—HOPES OF PEACE—DANGER OF HASTE—GREAT SOUTHERN AND WESTERN RAILWAY CRISIS—GOVERNMENT ATTITUDE—SLUMP IN STOCKS.

(FROM OUR CORRESPONDENT.)

DUBLIN, January 5.

THE general situation is somewhat improved. The principal danger is that the country is so anxious for peace that the chances of a real and really durable peace may be jeopardised by precipitancy. There are many selfish and short-sighted people who are so anxious to get back to business, to tranquillity, and to profit-taking that they refuse to realise that if order is temporarily restored by a quasi surrender on the part of the Free State Government the whole contest will have to be fought out all over again later on. Political science abhors the dominance of an intemperate and unstable minority as much as nature abhors a vacuum.

Railway policy in Ireland, like that in many other spheres, is in a difficult state of transition. Complicated difficulties arise from the isolation of North-East Ulster, and the provisions of the Government of Ireland Act, 1920, for a unified railway administration under the Council of Ireland. That Council, which can, since the Treaty, only control the railways of North-East Ulster—though the Free State will appoint half its membership—will not come into existence for five years except by consent of the Oireachtas and of the Northern Parliament. Again British railway control during the great war saddled Ireland with the highest rates of British wages for all her railways, and thereby most gravely unsettled labour and wages conditions. The railway managements declare that unless reductions are made they cannot balance their budgets. Upon these difficulties have supervened the wanton destruction of permanent-way, rolling-stock and buildings. The Great Southern and Western Railway Company, by far the largest company in Ireland, with a total mileage of 1,130 miles, has been one of the hardest hit. It has been capably managed, and is enterprising, as Irish concerns of that type go. Its loss of revenue during the year 1922 has been most serious. Recently it gave notice to practically all its employees that, in view of its losses due to public disorder, high wages, and the like it was about to close down unless the Government, which was alleged to be considering its financial plight, straightway came to its rescue. It shows a loss of upwards of £10,000 per week on revenue account, without making provisions for debenture interest and dividends on preference and ordinary shares. Of these figures no more than 10 per cent. represented the amount of wages alleged to be excessive. Unquestionably, the situation is one of extreme hardship for all concerned, especially the small investors, who will lose their income, and the employees, who might lose their means of livelihood. The case of the investor is often, indeed, the harder of the two—the widow, the orphan, and the invalid, whose trustees

selected a justly appreciated Irish investment. For them, in many cases, wage-earning work is impossible, and no unemployment dole provided. The Government undertook on Wednesday to keep the service alive in the public interest—the company to carry on under Government direction, and the Government to pay the weekly deficit, the arrangement to be from week to week during the crisis. It also intimated that it might do the same for other companies similarly circumstanced. This was merely the preservation of essential public services, and the Government was not justified in its one-sided view in providing dividends for the shareholders of a company which could not pay its working expenses. Round the latter part of this proposition a storm raged; Labour welcomed the proposition as leading inevitably to nationalisation, and as involving but little, if any, unemployment it was able to bear the sufferings of the shareholders with equanimity. Other sections with facile sympathy clamoured for Government aid for the shareholders, and in a debate of a low level of deliberative efficiency, financial propriety, and economic orthodoxy were overlooked, and members talked of loss of national credit and of repudiation of debt and confiscation of property in terms wildly inappropriate to the occasion. The company is entitled to and will receive compensation for the damage to its property. It proposes to close down because of its weekly deficit on revenue account. The Government, to prevent that closing down, in the interests of the public and of the public alone, thereupon undertakes to meet its deficit with a weekly cheque. How can it do more, unless it proposes to shoulder the impossible burden of giving full consequential compensation to everyone? If it did shoulder this burden, who would compensate the taxpayers for the resulting load of inflated taxation of the community, or the stagnation of business which that inflated taxation would inevitably produce? The clamour has overflowed into the Press to-day, and on the Stock Exchange the 4 per cent. guaranteed stock of the company fell from 60 to 52, and the ordinary from 44 to 35. Prophecy is ripe as to a glut of selling orders to-morrow. The small investors may suffer indeed if they are rushed into realisation at slump values by the outcry which has been raised in the hope of forcing the hand of the Government, which has thus far been commendably firm in most distressing circumstances.

But they will be the victims, not so much of the genuine loss of value in their property, for that will recover later on, as of an attempt to unload the company's total losses on to the taxpayer. It will be interesting to see, now that the Government has stood firm for financial propriety, whether the company will accept its weekly cheque together with Government direction and scrutiny of its financial methods.

[Our correspondent, telegraphing yesterday, adds:—This morning's papers announce that the company has decided to carry on its service without Government financial aid as offered. This sequel justifies the previous firmness of the Government's attitude, and puts the company on its defence as regards the *bona fides* of its previous decision to close down.]

UNITED STATES.—NOVEMBER EXPORTS—COTTON GINNING—CROP RESULTS—TRADE ACTIVITY—OUTLOOK FOR 1923.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 22.

EXPORT trade of this country in November, valued at \$383,000,000, according to Department of Commerce figures, surpassed the total of any month since March, 1921. It showed an increase of \$89,000,000, or 30 per cent., over November a year ago, and was more than \$100,000,000 above the total for any November before the war. So far as can be determined from statistics now available, about one-half of the increase last month was due to the larger shipments, at higher prices, of raw cotton, while heavy grain shipments were a contributory factor. Exports of cotton were about 30 per cent. greater than in November of last year, and prices of the staple were from 30 to 40 per cent. higher. Approximately 50 per cent. more wheat went abroad at prices some 10

per cent. above last year's. No official information has yet been published regarding the volume or value of imports under the new tariff. It is therefore impossible to state how the new duties have affected American foreign trade, or the trade balance. In its latest announcement the department calls attention to the great number of "defective entries" filed with collectors of customs since September 22nd, which have failed to give the information required by the new Tariff Act, and the revised statistical schedule. It is quite evident that many provisions of the law are as puzzling to customs authorities as they are to merchants.

The Census Bureau's cotton ginning report this week is interesting because it does not indicate any increase in this year's crop over the Agricultural Department's final estimate. During the two weeks ending December 13th the amount ginned was 175,000 bales, as against 150,000 bales in the same period a year ago, making the total for this season up to that date 9,493,296 bales. More than 400,000 bales must therefore be ginned to bring the total up to the Government's crop estimate. Last year only 123,000 bales were ginned after December 13th. The latest Census Bureau figures have strengthened the belief that the actual yield will be under rather than over the Government's forecast. Reflecting the continued high prices of the staple, cotton cloths and yarns have registered further sharp advances this week, and the upward tendency is still in evidence; printcloths and sheetings have been purchased extensively in the past few days—a development unusual at the end of the year, and due apparently to the belief that still higher prices will come.

The final Government crop report, recently issued, shows that seven out of 30 crops were smaller than those of last year, but that the main crops which showed decreases, namely, corn and winter wheat, were only slightly less, while sugar decreased heavily. Prices, however, were better than a year ago. The total December 1st value of all crops was 32 per cent. above that of a year ago. These figures are based on farm values at the date mentioned, and indicate that growers have fared much better than they did last year, but there is widespread complaint in agricultural communities outside of the cotton belt that the prices they are able to get for their products have not advanced sufficiently to affect the high costs of things they buy.

In this connection it is noteworthy that the Federal Reserve Board in Washington has rendered a decision making eligible for rediscount or purchase in the market by Federal Reserve banks acceptances with maturities up to six months (instead of three months as heretofore) drawn by growers or by co-operative marketing associations, for the orderly marketing of agricultural products. The new ruling is designed to give farmers longer term credits, and will be a material aid to crop financing.

Trade and industry generally have continued active in the closing weeks of the year. Retail trade, especially holiday distribution, has been better than in 1921, or 1920; in fact, the best since 1909. December mail order business has surpassed all records. Merchandise to fill depleted retail stocks has been re-ordered in large volume by jobbers, while seasonal purchasing for spring delivery has been fully up to normal. Exceptional activity is noted in most industrial and manufacturing centres, with unemployment in cities further reduced. Owing to greater shipments of merchandise and coal, car loadings have lately shown heavy increases.

Bradstreet's annual forecast, to be published here on January 6th, in commenting on the constructive side of the future, will say that "the big feature is naturally the notable degree of betterment shown, and the optimism generated thereby in the past year and a-half. Satisfaction arising from the surge forward in domestic trade and industry in 1922—perhaps best evidenced in the wonderful year's operations in building and allied lines—has strengthened the feeling that this activity will continue well into 1923. How much more might have been accomplished if the country had not had to shoulder the terribly expensive coal and railroad strikes is, of course, not a subject to dilate upon now. The rally in prices during the autumn, especially in leading farm products,

Every Description of Home and Foreign Banking Business transacted.

unquestionably served to hearten the agricultural interest, which had theretofore apparently profited little from the year's improvement. There is visible now a great deal less worry than a year ago as to all costs of operation in view of the apparently slight visible effect of these on business in the past year, this despite the feeling that labour will ask a great deal if present prices hold." Regarding export trade, the same authority remarks: "How much effect the general increase in all costs has had in further reducing the admittedly discouraging volume of export trade does not seem to attract the attention it deserves. There is, in fact, a disposition to charge the unsettled conditions in European politics, and consequently in exchange, with most of the responsibility for this unsatisfactory buying from abroad. In this respect the gains shown in trade with other parts of the world fail to satisfy entirely. Unquestionably, feeling as regards foreign markets for American products has been favourably influenced by the rise in British exchange, and the rumours that this country is going to abandon its much trumpeted, but apparently untenable, position of political and economic isolation.

"On the other hand," Bradstreet's remarks, "there is no shutting the eyes to the fact that organised labour, buttressed by existing immigration laws, and its successes of 1922, is inclined to press demands which can only result in much industrial friction in the year to come. The most direct threat of this kind," it adds, "is that the nation's fuel supply will be reduced by strikes again in April next. The agricultural interest, with the feeling that it has been most hurt owing to the low prices secured for most of its products, and with hopes of success from bloc movements, is reported aggressive in demanding special legislation. The prospects of a radical bloc in Congress which may possibly throw the country into politico-economic turmoil, are not reassuring." In conclusion, the authority quoted says: "With the most serious economic crisis that ever faced this country, apparently satisfactorily tided over, with the evidences of the excellent progress made since mid-year of 1921 in mind, and with three to six months of the new year's trade and industry fairly secure, the business world, imbued with a degree of optimism that verges upon confidence, faces hopefully the admittedly numerous uncertainties of 1923."

FRANCE.—THE PARIS CONFERENCE—THE FRENCH GOLD—M. LOUCHEUR AND EUROPEAN CURRENCY.

(FROM OUR CORRESPONDENT.)

PARIS, January 3.

No greater bombshell has fallen during any of the numerous Allied Conferences since the war began, from the French point of view, than that which burst yesterday, when Mr Bonar Law made known to the French, Belgian, and Italian delegates the British proposals for dealing with the Reparations and inter-Allied debt problems. The surprise that was manifested by the representatives of the three Continental Allies was experienced in an intensified form by their official experts, and this morning, when the details became known to French opinion as a whole, the effect was one that can only be described as stupefaction and consternation. Mr Bonar Law's statement was as unexpected as it was startling. When the first outburst

of incredulosity had passed, however, satisfaction was generally expressed that at last the worst was known, and that the Reparations problem has now been reduced to a clear-cut issue. It is now realised here that Great Britain, as Mr Bonar Law has frankly stated, looks upon the Reparations question purely from a British, and not from an Allied or European point of view, and that those Frenchmen who cherished the idea that the change of Government in England meant that what was always regarded here as the personal, dictatorial, and purely selfish policy of Mr Lloyd George had been abandoned, were labouring under an illusion.

It is also realised that, while France is convinced beyond all doubt of Germany's inherent bad faith and of her deliberate intention not to make reparation, unless compelled by brute force, British Reparation policy is based on the belief that, if Germany is only given breathing-space and does not have too heavy a burden imposed upon her, she will eventually honourably fulfil her obligations. This thesis is so utterly remote from the French conception of German ethics that it is not surprising, perhaps, that the British proposals were no sooner announced than they were condemned as impossible by everybody in this country, from Cabinet Ministers in Council assembled under the presidency of M. Millerand, down to the man in the street. As far as can be seen 24 hours after their announcement, there is not the slightest chance of the British scheme being accepted by either France, Belgium, or Italy. M. Poincaré himself, reticent as he invariably is in similar circumstances, took the unusual step this morning of announcing publicly that he would refuse even to discuss the British scheme in the Conference, and would insist that the Allied delegates should either accept his own proposals or break off the Conference. As matters stand to-night, it appears likely that the latter alternative will be adopted, as there seem to be equally fundamental objections on the part of the British against accepting the French plan, in spite of its support by the Belgians and Italians. The only probable species of compromise, apparently, is that Mr Bonar Law may be induced to consent to observe a policy of benevolent neutrality in the event of the French deciding, as they appear almost certain to do, to take independent action against Germany, with the tacit, or possibly active, support of their other Allies, on the lines of the proposals they have put forward.

The fatal defects of the British plan, from the French point of view, are manifold. In the first place, it not only premises that it is impossible to extract any kind of payment from Germany for four years, but it stipulates that France, Belgium, and Italy shall all hand over certain of their own tangible assets to Great Britain. Secondly, it provides no guarantee—except in the form of what is regarded here as a very doubtfully efficacious organism, in which the Allied Powers would control only 50 per cent. of the voting strength—to ensure that Germany, even at the expiration of her four years' respite, would make any attempt either to pay her creditors or effectively to reform her finances. Thirdly, there is the fear that France, in four years' time, ruined through having exhausted her borrowing power for the restoration of the devastated area, may find herself faced with a once more prosperous and aggressive Germany, who would be less inclined to pay than ever. In this connection, further, the suspicion is already publicly voiced in responsible quarters that, in the event of Germany, in such circumstances, provoking an armed conflict with her principal creditor, British naval and military power, for purely interested reasons, might possibly be found on the side against France. To sum up, French opinion regards the British proposals as primarily for the benefit of Great Britain, and secondarily, for that of Germany, and entirely to the detriment of this country, both in the present and the future.

The French plan, as the published details show, is based on the principle of extracting as much immediate payment from Germany as is possible, of compelling Germany to take such steps as will enable her to pay more in the future, and of placing such tangible and material guarantees under the control of the Allies that Germany will find it to her interest to carry out her engagements, or, in the alternative, that the Allies will be in a position to pay themselves, at least to a substantial extent, from

the bankrupt's assets. France, in a word, is in no way interested in any abstract proposition based on the alleged necessity for putting a guilty Germany on her feet again, but of securing reparation for herself and her Allies. If the obligation to make reparation results in Germany being made a hewer of wood and a drawer of water for the Allies for the next half-century, so much the worse for Germany. In French opinion, she has only herself to blame. Mr Bonar Law himself admits that, if Germany were swept off the earth, her disappearance would be a benefit to Great Britain and not a loss, as she is likely to be much more of a competitor with England than a customer. How much more reason, then, has France to take a similar view when, in addition to her economic and commercial aggressiveness, Germany is inherently inclined to trouble the peace of Europe by military onslaughts against her neighbours?

To the British plea that Germany must be allowed to get on her feet again, the French man in the street retorts with the argument that there is no reason why she should be allowed to do so, when there is every ground for believing that she will make use of her recovered strength only to make herself a military and economic nuisance to the rest of the world. The suggestion is, perhaps, not one the bishops would generally support; but French opinion, recalling the historic protests of the British trading classes between 1890 and 1914, and the anti-German legislation enacted during those years, in the then universally held belief that unemployment in England was largely due to successful German competition against British industries, is painfully surprised to realise that so little sympathy for the French Reparation plan is felt by Great Britain. To put Germany on her feet again, it is argued, means that she will flood the British market with her goods again to an extent that will be far more of a detriment to England than the amount of benefit a section of British traders will derive from selling their products to German consumers. Do British manufacturers and British working men wish to repeat their unfortunate experiences of the opening years of the century? It is sincerely believed here that, quite apart from any direct benefit France expects to obtain, the adoption of the French plan would in this particular direction prove of distinctively more advantage to Great Britain than would the proposals put forward yesterday by Mr Bonar Law from what, as he admitted, was a purely self-interested point of view.

These are, of course, entirely French arguments, in support of the French plan for dealing with the Reparation problem, and I give them for what they are worth, because it is necessary the English reader should be made aware of the French line of thought in regard to a situation which, it is feared here, may lead, if it is not now handled wisely, to endless difficulties for both France and Great Britain, and possibly to another war. From the purely French point of view, the most objectionable individual point in the British plan is perhaps Mr Bonar Law's proposal to seize, in part payment of the French debt to Great Britain, that part of the French gold reserve, amounting to some 1,864,000,000 frs., that was deposited in the Bank of England during the war as partial security for the advances of cash made to this country. Mr Bonar Law has since explained that the suggested seizure would be more apparent than real, as the actual gold was long ago shipped to the United States, in connection with other Allied indebtedness. The fact remains that the gold in question figures to-day in the weekly statements of the Bank of France as part of the assets of that institution. The French gold reserve appeared in the statement for December 28th as follows:—

	Fr.
Gold in hand	3,607,484,267
Do in foreign hands	1,864,344,927
Total	5,471,829,194

Whether the fears are well founded that are entertained here as to the effect the disappearance of such a substantial proportion of the French gold reserve would have on the situation of the franc is an open question, in view of the peculiar circumstances. It is argued, on the one hand, that such a substantial reduction would have a disastrous effect on the exchange. On the other hand, it is insisted that it has long been recognised that this part

of the reserve no longer exists except on paper, and that the reduction has long ago been effectively discounted so far as its relation to the exchange value of the franc is concerned. In this connection it may be noted that the official quotation of the franc, which stood at 62.86 yesterday before the British plan was disclosed, dropped to 64.27 to-day, and it was announced that a fresh attack on the franc had begun.

In an article contributed to the Paris edition of the *New York Herald*, Mr Loucheur, the former Minister for the Liberated Regions, makes the interesting suggestion that, as a first step towards the restoration of the Central European currencies, "a central institution of control and guarantee of the issue of paper money should be founded, with headquarters at, say, Berne, for the purpose of obtaining the foreign currencies and securities necessary for the purchase of the present depreciated currencies, and for putting into circulation in each country concerned a new currency with a gold standard. The national banks of issue would be continued, but these banks would not issue paper money except under the special control and with the specific authority of the central institution." Taking Germany as an example, M. Loucheur cites the fact that, in addition to the country's own resources, "the bankers recently called into consultation by the German Government estimated at 500,000,000 gold marks the sum necessary to realise this operation in its entirety. With double this amount, or, at any rate, with 1,500,000,000 gold marks, M. Loucheur estimates that the suggested central institution would be furnished with sufficient resources to enable it to carry out the consolidation of all the currencies of Central Europe. The total would represent only about \$375,000,000, he states. M. Loucheur recognises, however, that such an effort would be useless if the various countries did not at the same time balance their Budgets, and also secure a trade balance in their favour. In the same article M. Loucheur predicts that, with the increased area now under wheat, and the great fertiliser factories that are now under construction in operation, France will be able, in 1924 and 1925, "even in the worst years," to produce all the cereals she requires.

GERMANY.—REPARATIONS—FINANCE—EXCHANGE AND BOURSE—INDUSTRY—LABOUR—CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, January 2.

THE Reparations question suffers from the assumption that if statesmen cannot find a practicable settlement by purely economic means, matters will be bettered by assuming a German default, and by threatening political reprisals in advance. A good many Germans, whose opinions do not appear in the Press, think that were the currency trouble stayed by the redemption of the international mark holdings at around their present low gold value, and were a small international loan obtained for the correction of the present passive trade balance, considerable Reparations payments would be practicable within a very short time. The Finance Minister, Herr Hermes, lately committed himself to the theory that the Budget would produce a surplus if the mark exchange depreciation were stayed; and in view of the practical extinction of the Debt service and the small cost of army and navy, this view seems reasonable. The whole German gold liability for administration, including army and navy, and debt, has decreased, as compared with before the war, considerably more than (as far as can be judged) the taxable national income, even if from the taxable income is (as should be) deducted the greater part of the State gold debt, which has been transferred to citizens' shoulders. As long as production is as active as it has been in the last three years, a case for increasing national impoverishment cannot be made out; and even the whole annual liability, estimated at £150,000,000, of the London Ultimatum of May, 1921, is much smaller than the interest on war debt paid by other leading countries. Further, the present passive trade balance is in part a delusion, because the import excess has certainly been paid for to a great extent, if not altogether by the progressive expropriation of foreign mark-currency and mark-security holders. Whether

an export surplus could be created by taxation is a point on which different opinions are expressed. A great deal is made of the measures taken against German export by Ally and former neutral countries; and Herr Cuno, like his predecessors, considers that trade reciprocity is a condition precedent of Reparations; but, so far, German export has been checked not so much by foreign measures as by the enormous home demand, which is largely an outcome of distrust in the paper mark. At present German citizens are overstocked with goods, and were the mark stabilised, the home demand (as industrial leaders admit with fear) would, at least for a time, decline; so that export, despite foreign restrictions, would probably increase. Further, the declining mark does not tend to check the import of unnecessary goods. Certain foreign goods, of kinds which Germany herself produces, e.g., pottery, are bought in increasing quantities. The citizen who desires to get rid of his paper marks buys goods without asking whether they are native or imported. For these reasons the decline in home trade, which is expected from mark stabilisation, might easily lead to an improvement of the foreign trade, and therewith the foreign payment balance. In general, the Reparations question appears to be rather a question of the technical impossibility of making large gold payments to abroad as long as the mark is subject to erratic declines than a question of the impossibility of Germany making a sacrifice of a certain proportion of her production.

The Floating Debt on December 20th reached 1,445 milliards, against 1,289 milliards in the last report, and 311½ milliards on June 30th, when the new mark exchange decline began. The whole debt is 1,507,376,000,000 marks. Receipts from taxation during the financial year up to December 20th were 324,310,890,000 marks. The Forced Loan law, as amended, levies 1 per cent. on the first 200,000 marks of wealth, 2 per cent. on the next 300,000 marks, and so on progressively, the rate on wealth exceeding 2,000,000 marks being 10 per cent. The system of assessment is very unsatisfactory. The official rates for valuation of some kinds of property are far below the real values. A holder of stocks is sometimes assessed at a mere fraction of the Bourse value, and as he can borrow from his bank up to a considerable proportion of the Bourse value, and enter the borrowed money as a debt deductible from his assessable wealth, he may return himself as possessed of nothing and escape the levy altogether. The income-tax system contains a similar injustice, which, however, is to be remedied. From manual workmen's wages is deducted 10 per cent. upon payment, but other classes pay their nominally much higher percentages months later in very much worse money. The law against capital flight has been amended. For transfer of money abroad, except in case of persons with a Chamber of Commerce certificate, permission of the local office of the Finance Ministry is necessary. The sum which may be taken over the frontier by travellers is raised from 20,000 to 200,000 marks. The Government is stated to be considering repayment of the smaller parcels—up to 5,000 marks—of Federal loans, the ground being that the administration and payment of interest on these costs proportionately too much. The Customs gold surcharge has been reduced to 178,400 per cent., or 1,785-fold the nominal. The Communications

Ministry announces the discharge of 25,000 officials and workmen. In 1913 the railways employed 740,000 persons; last year, with a reduced area and service, the number was a million. A large number of important industrial concerns have given notice to repay their debentures. This measure frees the concerns from heavy debts contracted either in gold or in relatively good paper marks. The motive for repayment seems to have been the fear that either the mark will be stabilised at a higher gold value than the present, or that a special law (as has been reported) will be passed in favour of debenture holders and mortgagees.

The Reichsbank President has issued another warning against the increasing practice of using the Reichsbank as an instrument for creating artificial private credit. No new increase of the Bank rate was foreshadowed, and a new increase would have little effect. The Bank's return for December 23rd shows commercial bills totalling 393,448 millions, as against only 1,061 millions at the close of 1921. The Bank's holding of Darlehns notes rose during the week by 63,469 millions to 241,076 millions, as against 6,963 millions at end of 1921. Treasury bills increased by 142,829 millions to 971,571 millions, and note circulation by 166,707 millions to 1,136,909 millions. The Bank's deposit in the Bank of England is 50,032,000 marks (gold). This sum has remained unchanged since April, and it has no charge against it. The Stock Exchange and produce markets during the past week were inactive, owing to the holidays and the uncertainty as regards Paris. The Bourse year 1922 will be remembered for the extraordinary rise in stock quotations, and for the fact that certain, but not all, Home bonds underwent very great rises.

Business continues to be dull. The Ruhr coal production in 1922 is reported at 97,450,000 tons, against 94,100,000 tons in 1921. The Socialist Trade Unions have given notice to terminate the agreement for extra shift work in the mines. A report of the Trade Unions Association states that of 1,389,413 employees in different industries, 601,594 work the full legal eight hours, and 787,819 work from 42 to 47½ hours weekly.

Crops in 1922, 1921, and on the same area, 1913, are returned as:—

	Wheat. Tons.	Rye. Tons.	Potatoes. Tons.
1913	4,043,000	10,132,000	44,023,000
1921	2,934,000	6,799,000	26,157,000
1922	1,957,000	5,283,000	40,655,000

The total sales of potash in 1921 are estimated at 13 million double-centners of pure potash, the highest figure ever reached, against nine million double-centners in 1921. The total Central European production, including Alsace-Lorraine, in 1913 was 11 million double-centners. Sugar production in the season 1922-23 is estimated at 14,829,700 double-centners, against 13,346,730 double-centners in 1921-22, and the area under sugar-beet has increased from 338,289 to 364,714 hectares. The import of cotton cloth has been prohibited provisionally, owing to the fact that home mills can now meet the demand.

POLAND.—POLITICS—MURDER OF THE PRESIDENT —POPULATION—TEXTILE INDUSTRY.

(FROM OUR CORRESPONDENT.)

WARSAW, December 18.

In my last letter (*Economist*, November 25th, p. 988) I drew attention to the fact that one of the greatest political evils from which Poland is suffering is the equilibrium of forces in the Diet and in the Senate. Neither the Right nor the Left is strong enough to form a parliamentary Government, and experience has shown that a coalition of all Polish parties has equally very small chances of success. Under such conditions it is easy for the strong bloc of national minorities to play a decisive rôle in Parliament. The first meeting of both Houses seemed to prove that, contrary to all expectations, an agreement between the two strongest Polish parties had been reached. The Speaker of the Senate, Mr Trompczynski, belonging to the Christian National Union, was elected with the votes of the Peasant party of Witos. In the Diet the Christian National Union voted for the

candidate of the peasants, Mr Rataj. The understanding, however, was of brief duration. When on December 9th the National Assembly, composed of the members of the Senate and the Diet, was convoked for the election of the first President of the new Polish Republic every party put forward its own candidate. It was only after 8½ hours and five different votes that Mr Narutowich secured an absolute majority. Mr Narutowich was a no-party man. When Mr Grabski, belonging to the National Democratic party, was at the head of the Cabinet he offered to Mr Narutowich, who was at this time professor of the Polytechnic in Zurich, the portfolio of the Ministry of Public Works. Mr Narutowich accepted this office, and for years he remained at the head of this department. He was one of the Polish delegates at the Genoa Conference, and, when after his return Mr Ponikowski's Cabinet resigned, he replaced Mr Skirmunt as Minister of Foreign Affairs.

Mr Narutowich could have been candidate of the Right as well of the Left. He belonged to neither of them. The fact, however, that he had secured only a minority of Polish votes (186 out of 545), and that his victory was due to the national minorities, was exploited as a weapon against him by the Right. Hostile demonstrations were organised by the leaders of the National Christian Union with the purpose of influencing Mr Narutowich not to accept the Presidency of the Republic from the hands of the Jews, Germans, and Ruthenians. When the new President remained firm in his decision to respect the will of the National Assembly, a crowd of several thousands tried to prevent him on Tuesday (December 12th) from reaching the Parliament to take the oath. The neighbourhood of the Diet was the scene of wild disturbances. Socialist and Jewish Deputies were assaulted by the crowd. The leaders of the Socialist party were obliged to take refuge in a house. Shots were fired, and there were several casualties.

Order was quickly restored, and an appeal, signed by all parties, invited the population to abstain from all excesses. It then seemed that the political life of the country had entered again on a normal path, but the murder of the President of the Republic proved that there is still much explosive material in the minds of politicians. The murder has not been countenanced by any party, but the atmosphere of hatred created by members of the National Christian Union against the newly-elected President is responsible for the deplorable events of the last week.

According to the statistics of the census which was taken on October 30, 1921, Poland has a population of 27 millions, distributed as follows:—

	Population.	Density per Square Kilometre.	% of Poles.
Former Prussian Poland	2,913,500	67.77	81.8
" Russian Poland	11,216,400	81.35	84.8
" Austrian Poland	7,487,400	94.68	57.5
Eastern districts	3,609,900	33.24	29.0
Vilna	488,900	36.25	68.8
Principality of Teschen	145,200	143.94	76.3
Upper Silesia	980,300	303.97	69.1
Military persons	318,500	..	89.8
Total	27,160,100	70.31	68.7

In comparison with 1910 the population has decreased by about 1½ millions. The greatest loss is in the former Congress Poland, which in 1921 had a population of 11,200,000, compared with 12,700,000 in 1910. Only two-thirds of all inhabitants are Poles. The percentage of inhabitants belonging to other nationalities is especially great in the Eastern districts. The numbers of workmen occupied in the cotton industry is slowly approaching the pre-war level. Actually the percentage amounts to 90 per cent. The situation of the wool industry is less favourable. Here only 45 per cent. of the pre-war number of workers are employed. The Polish textile industry is producing, in the first instance, for the home market. Russia, which before the war was the best customer of the Lodz factories, is practically out of business. Polish textile goods have found another outlet in Roumania. From this country Polish fabrics are re-exported to Greece, Bulgaria, Turkey, and partly to the Russian ports of the Black Sea. Polish textile manu-

facturers have formed a special Export Syndicate for the purpose of obtaining a firm footing in the West and in the Baltic States. Special offices of this Syndicate have been opened in Hamburg, Danzig, and Rotterdam.

CZECHO-SLOVAKIA.—DECLINE IN EXPORTS— EXCHANGE AND SPECULATION—PUBLIC ECONOMY —NEW YEAR OUTLOOK.

(FROM OUR CORRESPONDENT.)

PRAGUE, December 22.

THE trade statistics for the month of October and for the first ten months of the present year for Czecho-Slovakia are worth careful study. The reports for October show a decline of some two million quintals, being 5,702 against 7,380 for 1921. The October figures show that wood and coal have gone back by 1,892 thousand quintals, sugar by 105, glass and glasswares by 47, chemicals by 36, minerals by 41, iron and machinery by 80 together. Grain and malt, fruits and plant show great increases, viz., 268 and 375 respectively. The most significant features of the October figures concern the amounts exported to the neighbouring countries, as compared with the year 1921, for the neighbouring countries are the natural markets for Czecho-Slovakia. Germany in October, 1921, took 3.3 millions against 2.40 in 1922, Austria 2.10 and 2.04 respectively, Hungary 1 and .40, Poland 218,000 quintals against 145,000 quintals in 1922, Jugo-Slavia 108,000 against 36,000, and Roumania 94,000 against 22,000. From this it appears that Austria is the only one of these natural markets that keeps up her demand. Some of the artificial markets in the West, such as France and Switzerland, have taken more. But the sinister fact remains that the natural markets appear to be disappearing. Germany began to cease buying coal in August, and has evidently not increased her import since; Hungary takes only 40 per cent. of her last year's requirements, and Poland not much more than half, Jugo-Slavia one-third, and Roumania less than one-fourth. The drop in the exports of iron and iron manufactures and machinery are probably connected with the rise of the production of agricultural machinery in Hungary, where important munition works have been transformed into manufactories of such things. It has been pointed out that Roumania and Jugo-Slavia and Poland had been buying large quantities of these machines of late from Hungary instead of from Czecho-Slovakia, and these figures appear to bear out this statement. It has been pointed out recently by a high financial authority that the sale of her surplus produce is a vital necessity for the Republic, and that, if she failed to do this, Czecho-Slovakia would have to export her men and her machinery, a state of things which would assuredly lead to catastrophe. These signs, therefore, of declining demand in natural markets are a very serious matter, and statesmen should lose no time in taking steps to counteract the movement. It is all the more necessary in that the returns for the ten months of 1922 show also reductions of sales to Austria, Hungary, Jugo-Slavia, Roumania, Italy, and Great Britain, i.e., in all the neighbouring countries with the exception of Germany, who, according to statements made, has even increased her imports from the Republic, in spite of having given up her demand for coal. The figures further suggest that the falling off in exports has been increasing monthly since August.

The imports show a falling off of something like seven million quintals in the ten months and about two millions in the month of October. For the latter month the chief fall is in grains, 437,000 quintals, fruits and plants 111,000, wood and coal 682,000, cotton 78,000, chemicals 42,500, liquors 31,800. Wool and cotton imports are less by 100,000 quintals, which was unexpected, as it is known that a good deal of "finishing" has been done for Great Britain in recent months. It is noteworthy that raw material has not been purchased to any considerable extent, in spite of the height of the crown, and from this it may be inferred that warehouses are full, but it does not bode well for the future. Great Britain in the ten months has taken 899,377 quintals, while her exports to Czecho-Slovakia are not more than 399,435 quintals.

ISSUES

THE BEST POLICY FOR A BUSINESS MAN

(Low Premiums. Limited Payments.)

FUNDS £17,000,000.

HEAD OFFICE: 6, St. Andrew Square, EDINBURGH.
LONDON: 3, Lombard St., E.C.3; 17, Pall Mall, S.W.1.

position has expressed an opinion that, as long as the system of importing by license continues, there will never be much import from Great Britain, for the reason that the British merchant objects to methods of trading which are tolerated by other countries. The same authority suggests that no imports from England should be permitted until the license rules are modified to some extent in favour of Britain, or entirely abolished. It would be a strong measure to take, but would undoubtedly work to the benefit of both countries in the long run.

That the present Finance Minister is determined in applying the "economy axe" is proved by the fact that the law with reference to reduction of the salaries of Government officials has been carried through in the teeth of violent opposition, and after a twenty-three hours sitting of the Legislative Assembly. Dr Rasini will gain in respect what he loses in popularity. His last speech on the financial position was more optimistic than are the views commonly expressed by business men. The crisis is generally reputed to have nearly reached its zenith, and not to be near the end. The Finance Minister in certain quarters is blamed for not reducing the coal tax, and, above all, the height of railway freights is condemned as making an improvement in exports well nigh impossible. On the other hand, if the crown breaks, as it appears to be doing, the pressure may be eased that way. This, however, is quite uncertain, as exchange fluctuates still, and the crown has again reached 15.90 Swiss centimes. The Government are taking very strict measures to stop speculation, and this may have caused the exchange fall. It does not appear to be recognised that possibly the same speculators who caused the rise have now brought about the fall by unloading crowns at what seemed a propitious moment. It is now confidently predicted that the position of the crown at 15 or thereabouts in the Swiss market will be maintained.

When Mr Bruce Lockhart, then British Commercial Attaché here, published his rather belated report in May, the statement then made that Czecho-Slovakia was one of the most stable States in Central Europe, probably encouraged the purchase of crowns for a rise, and speculators thought it a good time to buy. Meantime, much satisfaction is expressed at the trade balance continuing to show an excess of exports. On the whole, the prospects for the New Year are not bright. Prices must come down with a run if the officials (whose salaries have been reduced) are to be appeased, while the expected loan seems no nearer. The oil contract with the Standard Oil Company has been annulled, which may or may not be a good thing for the country; at the present time, probably, a bad thing, and the prospects of general improvement are dark. There are hopeful signs, however. The Government has paid off the Liberty Loan, and the reduction of salaries and pensions of officials will cause a saving of 750 millions for the year 1923, and should reach a milliard in 1924. This should have a very beneficial effect on next year's budget.

SWEDEN.—RISE IN STERLING—PRICES AND WAGES —TRADE BALANCE—NEW YEAR OUTLOOK.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, December 23.

THE chief of recent financial events has been the material appreciation in sterling. On November 3rd the pound was quoted here 16.60 and on the 19th inst. 17.20, a rise of about 4 per cent. This improvement is, in the first place, ascribed to the purchases made by the State bank of foreign values, the main object of which is said to be to maintain the dollar quotation at par. So far the State Bank has succeeded well, but at the same time this policy has had the effect of increasing the circulation of notes. The opportunity has naturally been seized by many Swedish holders of sterling funds to convert them into Swedish money, and it is to be assumed that these transactions have reached large dimensions. A further rise in sterling would naturally be hailed with satisfaction by Swedish exporters, who have suffered severely from the unfavourable position of the krone.

While there are signs here of an improvement in conditions, it cannot be expected that all trouble is over. On the contrary, it is feared that certain sections of industry, particularly shipping, still face a prolonged depression. There are many important factors which support this view. One reason is that Sweden is surrounded by countries with low exchanges, producing and manufacturing on the same lines and putting up a devastating competition. This state of affairs is liable to continue until a stabilisation of exchanges on a more normal footing has taken place. As to internal conditions, wages and costs of transport are still too high. In the State Departments the "axe" is working, and has lately resulted in the dismissal of a great number of committees. It is significant that amongst the committees which will be spared is the Socialisation Committee.

An obstacle which will help to retard progress towards brighter times in this country is the serious position of the farming industry. Although the crops this year have been satisfactory, the general fall in prices for grain have materially curtailed the prospects for the farmers of making both ends meet. In the farming industry the wages are still very high—even higher than in the manufacturing industries. Last November showed a further decline of 6 points in wholesale prices, this being due in the first place to the drop in prices for sugar and building materials, particularly cement, glass, bricks, and chalk. The price of sugar has been for a long time, and still is, controlled by the State in Sweden. A slight rise in prices was recorded for wood pulp and paper, also for textiles, raw materials and ready-made goods. As a consequence of the prospects of easier conditions, the Stock Exchange has shown greater activity, the turnover for November exceeding slightly that of the preceding month, and for the first eleven months there is a turnover of 182 million kr, as against 152 million kr in 1921, to be recorded.

An interesting report has been issued by the Swedish Manufacturing Association making a comparison of wages in different countries. Taking the price level of the different countries into consideration, the author of this report arrives at the conclusion that the labourer at Brussels must work 1,168 hours, and the London working man 1,187 hours (after the last reduction the London worker would have to work 1,415 hours), to earn the same as the Stockholm workman earns in 1,131 hours.

It is a little too early yet to take stock of the results of the past year, but it is an important fact to record that the Swedish trade balance has improved beyond expectation. During the whole of last year, except for two months, August and November, the visible trade balance was unfavourable. During 1922, up to and including October, the last five months have shown a material export surplus, and for the 10 months January-October, inclusive, there is an export surplus of only 37.5 million kr, as against an export surplus during the same period last year of 173 million kr. Amongst the export industries, timber, wood-pulp, paper, and match manufacturers can boast almost pre-war figures of quantities exported, and this is the case also with iron ore exporters, but prices have left much to be desired, and the net profits will consequently not show

proportional increase. In the banking world there is the reconstruction of the Wermlands Enskilda Bank to report. This bank has suffered losses to the tune of 44 million kr. The shareholders have been asked to subscribe 19 million kr fresh capital, and 7 million kr debenture bonds have been issued. In connection with the consolidation of the A.B. Svenska Handelsbanken, reported in my last letter, the issue of the 7 per cent. bonds, amounting to 40 million kr, which has been fully subscribed, was guaranteed by the Stockholms Enskilda Bank and the Skandinaviska Kreditaktiebolaget. Sweden's largest mining concern, the Trafikaktiebolaget Grängesberg Axelosind, has declared an unchanged dividend of 15 per cent., and the leading shipyard, the Götaverken, is able to distribute the old rate of 8 per cent., whereas the Stockholm Breweries only give 15 per cent., as against 18 per cent. last year. The year closes with better conditions in the labour market, and unemployment is on the decrease. A special committee appointed to combat this evil proposes to ask no further grants, and is even optimistic enough to put in view a surplus of 7 million kr from old grants after winding up.

SOUTH AFRICA.—BANKS AND CREDIT—THE CENTRAL RESERVE BANK—A REPORT ON THE RAND—HEAVY FIRE CLAIMS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, December 6.

THERE has been a good deal of criticism in Johannesburg of the banks curtailing facilities to their clients, more especially in respect of overdrafts on gold mining shares. A local finance article recently reported that a man who holds £10,000 worth of the very best mining stocks being refused an advance of £700, and one hears of other similar instances. As a private individual there is no business I would like better than to advance 60 per cent. of the market value of such shares as Government Areas, New Modders, and Modder Deeps. For they constitute a security which can be turned into cash at an hour's notice, and, in the remote event of not being saleable in Johannesburg, the business could be put through in London in the course of a day, and at trifling expense. This appears to be much better business than lending money on stocks of merchants affected by instability of commercial values, or on property. But apparently the banks do not think so, as the mining rate to brokers (inasmuch as the general public can obtain little or nothing) is 8 per cent., and the commercial rate only 7½ per cent.

Some think that it is unfair to blame the banks, as the stringency is due to conditions over which they have little or no control. It is pointed out that it is part of the policy of deflation pursued by the Union Government, but taking place at far too rapid a rate, and artificially intensified. It is asked how long deflation is to be tolerated, and it is said that the Government is beginning to realise that the economic medicine is too drastic.

Mr W. H. Clegg, now the Governor of the Central Reserve Bank, and who will be known to many of your readers from his association with the Bank of England, in a letter to the *Rand Daily Mail*, controverts the opinion expressed by a correspondent of that journal that "a further cause of the existing depression is the curtailment of facilities by the banks consequent on the commencement of operations by the Central Reserve Bank," a fallacy he had thought was dead and done for. On the contrary, Mr Clegg urges that its establishment has formed "an additional reservoir of credit, which can at any time be used for the expansion of credit should circumstances justify expansion." With no Central Reserve bank, the necessary reserves of the commercial banks lie unused and unfruitful in their strong rooms. But if these are deposited with the Reserve Bank, it can make new loans on the basis of such deposits. That more advantage has not been taken of this facility must be attributed to other causes of depression, chiefly the overbuying of commodities during the period of the boom. Overbuying with borrowed money means that part of the resources of the banks are locked up, the circulation of credit slackens in pace, becomes weak and languid, instead of strong and active. A slump in prices of primary

products always follows a boom, preventing producers from buying manufactured articles turned out at high prices.

Mr Clegg says it is easy to blame the banks, and makes the rather curious remark, "In blaming them for being too free lenders in a time of boom, one must not exempt those who were too free borrowers." Surely one could hardly expect merchants to decline the liberal facilities offered by the banks when they could make handsome profits on everything they bought. As a bank man put it to me, Mr Clegg's argument was rather like blaming a child for eating too many chocolates given him by an indulgent uncle. Surely the mother would blame her brother rather than her son! Developing this view, the Governor continues, "After all, the banks don't force people to borrow from them, and if the business..... proves unremunerative, it is hardly fair for the borrower to lay all the blame on the bank." In short, if borrowers had not lost their heads in the boom, and banks had adopted an attitude of restriction, the present position of commerce would have been easier.

The commercial banks owe a duty to the community not to create credit unduly, and one of the objects of the institution of the South African Reserve Bank was that the creation of credit should be scientifically studied, and controlled according to experience gained in older and more widely developed countries. Any suggestion that periods of inflation and depression are deliberately manufactured by those who control credit is mischievous and grotesquely untrue. No banker enjoys slumps, his interests are centred on having good sound loans, about which he need have no sleepless nights.

Mr Clegg's letter has a useful educational bearing on a matter which is but little understood by the public. In other correspondence which followed it was remarked by one writer that the "reservoir of credit" had little in it! The question arises whether the commercial banks are availing themselves to the fullest desirable extent of the facilities offered by the Reserve Bank to discount first-class bills endorsed by the commercial banks, or are they conducting such discounting almost exclusively from their own internal resources? According to the statement of the South African Reserve Bank, as at December 2nd, bankers' deposits amounted to £5,308,800. Domestic bills discounted figured at only just over £2,000,000, while £1,300,000 had been loaned to the Government, and £1,350,000 to other persons. It may be urged that the commercial position would be relieved by more extensive use of funds in hand for discounting of bills.

The report of the "Brace" Commission of Inquiry is regarded as a complete vindication of the policy of the Transvaal Chamber of Mines. The Mining Industry Board, to give the official title, finds that the proposals of the Chamber in November, 1921, were fully justified. A summary prepared and issued by the Chamber states:—"That the abolition of the status quo was justified. That the 'white labour' policy advocated by Colonel Creswell is an impracticable policy. That there were many redundant and inefficient men employed on the mines whom the industry was justified in retrenching. That the present contract system is an improvement on the old. That trade union officials, and more particularly shaft and shop stewards, interfered with the management of the mines to a deplorable extent. That it was essential for the proper working of the mines that these abuses should be ended, and the authority of the management restored. That no good reason exists for maintaining the embargo on the entry of tropical natives to the Union. That the colliery wage reduction was justified, and should have been accepted, and the Victoria Falls Power Company was right in refusing the demand for higher wages. (Note.—The Commission makes no recommendations whatever for any increases in wages on the Witwatersrand.) These conclusions endorse in every respect the contentions of the Chamber of Mines, which are therefore proved beyond any shadow of doubt to have been reasonable and right."

So serious have been the fire claims in the Orange Free State recently, a by no means insignificant portion of them, it is regretted to say, due to arson and incendiarism, that the fire insurance offices are refusing applications right and left, and in some cases relieving themselves of existing risks by refunding a proportion of premiums paid.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000

Paid Up Capital 1,050,000

Reserve Fund and Undivided Profits 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

Letters to the Editor.

THE GREEK REFUGEES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As a resident in Greece for close on ten years, with some knowledge of the country and of the present deplorable position of the refugees, may I be permitted to express an opinion with regard to the appeal made by His Majesty's Government, published in the *Times* of the 8th Dec., for support by private contributions for the relief of refugees in Greece, and so to avert what might otherwise prove to be, in the words of the appeal, "a disaster of unparalleled magnitude." It is stated that the British Government, which received invaluable help from the American Navy, expended £52,000 in the removal of refugees from Asia Minor; that it has given stores valued at £10,000 to the British relief societies, and has paid over £10,000 to the League of Nations for its relief work. Other Governments, particularly the American, have no doubt been just as munificent, possibly more so, in rendering relief. Many private individuals, too, have given generous donations. All very excellent in its way, and most gratefully received. But surely it is evident that, in dealing with a matter of such urgency and magnitude as the settlement of over 1,000,000 destitute persons in a country sorely impoverished by ten years of war, something more tangible should be forthcoming than mere charitable support. Welcome as it is, it can only be regarded as a temporary expedient. Simply to feed 1,000,000 people with the barest necessities of life must cost not less than £50,000 per day. It is obvious, therefore, that relief of a more permanent and comprehensive nature must be conceived to enable these refugees to become self-supporting as soon as possible.

The untapped resources of Greece are immense—agricultural, mineral, and water power. I refer particularly to Macedonia, Western Thrace, and the rich plain of Thessaly. The difficulty in the development of these resources in the past has been due largely to the lack of labour, coupled, no doubt, with the misgovernment of these districts when under the rule of the Turk. By the influx of these refugees into Greece an excellent opportunity now occurs of providing them with profitable employment for the development of these rich resources, the one lack being funds. I submit that, in the interests of humanity and for the peace and progress of this unhappy country, immediate measures be taken in consort with the Greek Government with a view to the raising of a loan to Greece, guaranteed by the British Government, for the above specific purpose of developing her resources, the expenditure of the loan and of the revenues arising therefrom to be controlled by a duly constituted Loan Commission. Unless some such steps are taken, and taken quickly, it is to be feared that the disaster portrayed in the appeal of His Majesty's Government must be inevitable.—I am, Sir, your obedient servant,

G. L. BAILEY.

THE MECHANISM OF COMMERCIAL CREDIT.

THE purpose of this book is to give a survey of credit practices in leading industries in the U.S.A., with special reference to the terms on which goods are sold and also to analyse the principles which govern these terms of sale. The author, Dr Steiner, has had the advantage as an official in the Division of Analysis and Research of the U.S. Federal Reserve Board of studying much of the material with which he deals, and the sections describing conditions in particular industries have been checked by authorities in these industries; it may therefore be taken that the description of business practice at the present time is of very definite value. The treatment of the subject, which is "addressed to the business man, the credit man, the banker, and the student," is in three parts. The first deals with the factors governing the length of the credit terms granted by business houses to their customers, as well as with the relation between net terms and cash discounts. The second deals with a question which has been widely discussed in the U.S.A. within the last seven years—namely, the use of the trade acceptance, which, in its economic characteristics at least, resembles the home bill of exchange. Dr Steiner subjects to a careful examination the arguments of the American business men who have tried to make a controversial issue of the question whether the cash discount and open account system is or is not to be preferred to the use of the trade acceptance. The third section consists of a survey of the actual credit terms in certain industries; it is the domestic, and not the foreign trade, which is considered, but a wide field is covered—foodstuffs, the metal industries, automotive, agricultural implements, electrical and fuel industries, textile manufacturing, and so on. The chief omissions are agricultural produce, raw materials, and the retail trade, which require special studies. There is at the end of the book a summary tabular statement of trade terms of sale which is useful for reference and for comparison.

From this brief outline it can be seen that Dr Steiner has analysed a side of business finance which is of great importance to all buyers and sellers of merchandise, and his investigation represents a type of study which has become usual in America, but which is almost entirely lacking in Britain, where the research method, as applied to the more detailed problems of commerce, is very slightly represented or appreciated. The main problem of the book is to explain how it comes about that goods are sold in one trade, say, at 2 per cent. discount for cash in 10 days and at 60 days net, in another trade at 2 per cent. 30 days, net 90 days, and so on. This involves two separate questions: (1) What determines the length of the net terms—why is it usual in some trades to give 60 days, in others 90 days? (2) What determines the amount of discount for cash within shorter periods? Dr Steiner argues that "net" terms depend chiefly upon three factors—the rapidity of the turnover reflecting the buyer's selling period and the rate of consumption of the goods, the length of the marketing period for each class of goods, and the general conditions of competition between buyer and seller; the cash discount is to be clearly distinguished from trade discounts, which are really price adjustments; it is a premium for prompt payment of accounts and a discount in lieu of time, and from the seller's point of view it depends upon the bank rate of discount, the cost of keeping the accounts which are not discounted, and the danger of bad debts. The cash discount period is meant to cover the time of transport and the buyer's examination of the goods. Coming to the trade acceptance, it is defined as "a time draft drawn by the seller of merchandise on the buyer for the purchase price of the goods, and accepted by the buyer, payable on a certain date, at a certain place designated on its face." The "trade acceptance" campaign of the last few years in the U.S.A. was to persuade business in-

terests to adopt this form of credit in place of the cash discount and open account system. The extent of its use is, however, very limited; it acts as a prompt collector of poor accounts than the open accounts system, it substitutes embodied for unembodied credit, and it gives a specific instrument to the seller; but these points do not get over the cash discount issue, which offers a useful option to good payers, and, as Dr Steiner points out, the fundamental factor is the credit worthiness of the recipient, not the form in which the credit is extended or the agency by which it is measured. The "trade acceptance" may therefore, from this point of view, be looked upon as supplementary to the other methods, and customers could be classed as (1) cash discounters, (2) open accounts, (3) trade acceptances.

There is a great deal of sound commonsense in this serviceable book, and it is to be recommended to British readers who wish to know American terms of sale or who are interested in sales-credit policy; there are many ideas which might be kept in mind in considering the terms of sale in industry in this country, of which no systematic account exists. The study could, however, be shortened in Parts I. and II. without any loss of clearness, and the bibliography would be more useful if put separately at the end instead of in the text; also one cannot help but feel that Part III., the basis of the study, has become rather disjointed from the earlier portion. It seems open to question whether it would not have improved Dr Steiner's argument to have used part of the data in Part III. to illustrate the arguments of Parts I. and II., and to have put the remainder into an appendix.

"SUPPORT" FOR RENTES.

FOR political even more than for economic reasons, it is desirable that the Government stocks of any State should stand virtually at par, or not much under it; and M. Buffet describes the methods by which French Governments have tried to keep up the price of Rentes, from the Ancien Régime to the post-war Ministries of the Third Republic. Rentes have been exempted from taxation—which was natural enough when real property preponderated greatly over personal, and the Physiocrats were maintaining that all wealth came from land; but the exemption now hampers Finance Ministers in raising revenue, and offers a bad example to public companies, who of late years have issued bonds free of present and future taxes, and so have imposed indefinite burdens on their shareholders. Rentes have also been exempted by legislation from seizure for debts due; and thus, by having invested in them, a bankrupt can escape his creditors, and a trustee can evade giving account of his stewardship. The law, indeed, has been modified by judicial decisions, but the modifications are illogical and the actual position is obscure. Then, of course, Rentes are the first—and in some cases the only lawful—"trustee stocks," though that method of favouring them is, we presume, legitimate. But French Governments, besides giving the holders these privileges, have interfered to keep up the price by purchases during a crisis in foreign affairs either secretly—as Napoleon did in 1804 and 1808—or openly, by providing facilities for sales by holders, as the other chief belligerents also did during the late war in various ways; or even by arranging for fictitious quotations during the same period. M. Buffet elaborately describes these various devices and shows effectively their futility and danger.

INSURANCE PUBLICATIONS.

ALL those who are engaged in insurance work, and in attempting to explain the principles and practice of insurance to the public, owe a great deal to Messrs Stone and Cox, Limited, of 188-189, Strand, London. As enterprising compilers and publishers of elaborate insurance year books and directories they stand in a class by themselves. To the "Bourne" series, which they took over some 20 years ago, they have added year books on fire and marine, accident, and other branches of insurance. Bourne's Insurance Directory, 1922-23 (price £1 1s net),

"Le Cours de la Rente Française et son Soutien par l'Etat." Par André J. Buffet, Docteur en Droit. (Paris) Librairie Générale de Droit et de Jurisprudence, 20 Rue Soufflet. 1922.

and Bourne's Handy Assurance Manual, 1922 (price, in cloth, 3s 3d, post free), deal with life assurance. They give analyses of the accounts of all the offices, valuation reports, bonuses distributed, and premium and annuity rates. In the larger volume, the Directory, are to be found many statistical details which could not be included within the scope of the smaller volume, especially in regard to surrender values and annuities. There is also, as the name implies, a directory of insurance officers and officials.

In the Fire and Marine Year Book, 1922-23 (price 21s net), analyses are given of the accounts of fire and marine companies and a directory of offices and officials. The larger part of the space is, however, devoted to the principles governing the valuation of buildings, fire prevention and extinguishing appliances, the classification of trades and their normal rates of premium, forms of policies, reinsurance, and so on. A useful feature is a list of underwriting members of Lloyd's divided into groups or "syndicates."

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
January 10.	January 11.

THE first week of the New Year has brought liveliness to a good many markets round the House. The political crisis that has arisen in regard to France over the Reparations question is counteracted by very substantial sums of money that have come forward for investment on the turn of the old year. Only such bonds and stocks are affected as are most closely connected with the countries involved in this crisis. The War Loan has spurred, and a good many other stocks in the Consol market have strengthened in sympathy. The large quantities of new Trustee securities in the Home Railway market which arise out of the grouping arrangements of the companies have the effect of keeping prices down to some extent in this department, though it is expected that when these issues become more familiar their absorption by the investor will be a matter of short time only. Talk is in the air of early loans from two, or, perhaps, three, of the colonies, and the Consol market still bears in mind the possibility of a new Local Loans, or of some other Government guaranteed security, that shall be offered to finance the various unemployment schemes in connection with transport work.

Chinese bonds are heavy, both the 8 per cent. issues giving way on sales by holders disappointed at the protracted character of the negotiations for payment of the coupons. French bonds went back by reason of the fall in the franc, but Germans have not been much affected one way or the other. South Americans are quiet, and the activity in Peruvian Corporations has sustained something of a check.

The Home Railway market is one of the most active in the Stock Exchange. Prices went ahead with a rush after the opening of business last Tuesday morning. The new North-Eastern deferred stock, which could have been bought at 30,

rose to 34 within a couple of days. A jump in Great Western is the feature amongst the Heavy issues. North-Westerns are ex the dividend yet to be declared, a fact which will explain to a good many investors the apparent discrepancy between the New Year and the Old Year prices. Undergrounds went ahead with the rest, and the reaction at the end of the week was comparatively light.

Mexican issues have improved, though the movement has so far failed to attract any particular public attention. Argentine Railway stocks threw off their recent attitude of caution, prices improving all round. Cordoba Second Debentures have gained several points, on the hope that some kind of cash payment will be resumed in July. A new issue of Buenos Ayres Central debenture stocks is due to be published to-day. Nitrate shares are all better, some of the rises being substantial, though, having regard to the scarcity of supply, it requires little demand to bring about a complete change of complexion in this department.

Rubber shares keep good, with the newly-issues Tamboras the most prominent feature. Lumuts have also risen sharply on a capital report, showing that costs have been reduced to a shade under 7d per lb. The market as a whole is infected with hopefulness, but the usual difficulty of dealing presents itself, in that holders are unwilling to sell at a time when the outlook is brighter. In the oil market, the forthcoming issue of Anglo-Persian new ordinary shares at 3½ led to a rise in the price of the old shares, and the market as a whole, buoyed by the expectations of better trade voiced by Mr Bonar Law, has rallied from its recent flatness.

Long strings of rises have occurred in various industrial groups, amongst which may be mentioned textile, iron, coal, steel, shipping, armament, and electric supply. Motor Unions advanced with a run in the insurance market. General Accidents remain unchanged on the proposal that the company should take over the English Insurance Company. Amongst land shares Sudan Plantations hold their recent big rise, and curiosity awaits the issue within the next week or so of the company's Kassala subsidiary. Hudson's Bays have reacted a little after their recent burst of strength. Various Argentine land shares are better. The banking market is steady, the first dividends from the Discount companies being regarded with satisfaction. Breweries are idle. Of the popular industrial favourites, Courtaulds stand out with another sharp advance. Tobacco shares are more or less marking time. Trust companies' stocks have further advanced. Good debenture stocks and preference shares in any of the industrial sections have become increasingly difficult to obtain. The New Year has brought in an obviously greater readiness on the part of investors to consider the claims to attention of the various industrial branches likely to benefit by the expansion of trade, to which reference was made above.

Kaffirs are a dry and dull market, most of the leading shares being lower. In Rhodesians, a pyrotechnical jump in Cam and Motors has started the market, and caught the bears. Paris supported diamond shares and Rio Tintos; the movements in the latter were violent and erratic. A few Mexican mining shares are stronger. Russians weakened on the developments at Lausanne. The three tin groups are very idle.

The price of Stock Exchange nominations is harder at £40, on the approach of the financial New Year in the House, which leads to the supposition that there may be a demand for membership on the part of more candidates than recent years have produced.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
4½ % Treasury Bonds (by Tender December 29, 1922).....	..	Nil	..	..
NATIONAL SAVINGS CERTIFICATES.

of countries which had been greatly helped by lower wages and rates of exchange, necessitating the acceptance for some of the company's products of prices below the cost of production. Their subsidiary companies, Port Talbot Steel Company, Limited, British Mannesman Tube Company, Limited, Brymbo Steel Company, Limited, and Associated Collieries, had contributed nothing to the year's results. Their Canadian works, among the best equipped of their kind on the American Continent, had been unable to obtain orders at prices which would justify the cost, and were at a standstill. At their new works at Margam, where they had one of the most modern plants for the production of coke and by-products, pig-iron, and finished steel, they had been only partially and intermittently employed. The plant had never had an opportunity of demonstrating to the full its many advantages, but even under the most unfavourable conditions it had borne out all their anticipations as to efficiency and economical working. Their other works, Landore Gowerston, King's Dock, Pantog, Midlands, and Blackwall, had enjoyed greater regularity of work than Margam, operating at rather less than 60 per cent. of their capacity.

NECESSITY FOR LOWER RAILWAY CHARGES.

Urging the need for further relief in railway rates and dock charges, the Chairman said that the charges on iron ore from ship to works were 130 per cent. above pre-war rate at Port Talbot, and practically 140 per cent. over at Swansea. Railway rates were still about 70 to 90 per cent. above pre-war level. The company had collieries capable of producing over a million and a quarter tons per annum of steam, coking, bituminous, and gas coal, and giving employment to approximately five thousand men. The period under review had been, from a trading point of view, one of the worst—he thought he might safely say the worst—ever known in the history of the coal trade. Outputs had increased since the miners' strike, but the increased quantities of coal placed upon the market through reduced steel production had intensified competition, and very few collieries in South Wales had been able to work at anything like full time, thus preventing the price reductions that alone could stimulate demand. For some time, miners' wages in South Wales had been at the minimum provided for in the settlement terms, and it had only been possible to maintain that level by the owners sacrificing the standard of profits to which, under the agreement, they were entitled. It was computed that a sum greater by £3,057,000 than the amount justified by the working results had been spent by the owners to make up the wage minimum.

PLEA FOR EIGHT-HOUR SHIFTS.

If the collieries, instead of the present seven-hours shift, worked the eight-hours shift as of old, the benefit to working costs might put the collieries in a position of holding their own. Was it too much to ask that the miners' leaders should, in the interests of the men and the country generally, command and support that proposal? Although great strides had been made since decontrol in the output per man, it was still far below the pre-war standard. Looking forward, there were, he said, certainly signs of some improvement in trade. It would, however, be absurd to suggest that anything like a boom was in prospect. All that could be said was that there were indications of a reviving flow of trade into normal channels. The situation, however, would have to be very carefully handled, and no efforts spared to create that settled atmosphere in which trade would thrive. He was glad to see that the new Government was anxious to assist industry, and he hoped it would not only relieve taxation, but avoid measures adding to the traders' burdens in other directions.

The report was adopted, and the election of Sir Robert Horne, M.P., as a director and vice-chairman of the board was confirmed.

GOVERNMENT RETURNS.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £50,000,000 in three months' Treasury Bills dated from Monday to Saturday, January 7-January 13, were opened on January 5, 1923, and the total amount applied for was £63,995,000. Tenders for Monday bills at £99 9s 4d and above in full, and Tuesday to Saturday bills at £99 9s 3d, and above in full. The average rate of discount for Treasury bills was £2 2s 7½d. The amounts allotted were as follows:—In bonds, £500,000; in bills at 3 months, £43,720,000.

(a) including Treasury Bonds.

Tenders will be received on Friday, January 12, 1923, for Treasury Bonds and Treasury Bills to be issued to the maximum amount of £50,000,000. The amount of Treasury Bonds issued will not exceed £5,000,000, but subject to that limit the total amount issued will be divided between Bills and Bonds in such proportions as the Lords Commissioners of His Majesty's Treasury may determine.

INDIAN TREASURY BILLS.

	March 31, 1922.	Dec. 23, 1922.
Outstanding with public	53,96,70,000	28,40,05,000
In paper currency reserve	57,89,00,000	49,65,00,000
Total	111,85,70,000	78,05,05,000

India Office, December 30, 1922.

The Secretary of State for India in Council has decided, after consultation with the Government of India, to offer for sale by competitive tender a limited amount of Council bills and telegraphic transfers (deferred and immediate). The first sale will be held on Tuesday, January 9, 1923, and the amount offered will be 50 lakhs of rupees. The holding of further sales at the present time, and the amounts to be offered, will be dependent on conditions of exchange. This resumption of the sale of Council drafts has been decided upon with a view to strengthening the Secretary of State's sterling resources against his requirements in 1923-4.

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended January 3, 1923, the stock of coin and bullion shows an increase of £50,183 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Other Countries	225		
Total value of imports of gold	1,035,550	Total declared value of exports registered in the week	2,334,947

Messrs Samuel Montagu and Co. write as follows on January 3rd:—

GOLD.

The Indian demand this week has been good, and the bulk of the available supplies has been taken for that quarter. Gold valued at \$7,784,000 has arrived in New York—\$7,427,000 from London and \$357,000 from France. Details regarding Indian imports and exports of gold during the financial year 1921-22 are shown below. The figures are in lakhs of rupees:—Total imports, 13.82; exports, 10.68. The following figures show the imports and exports of gold to and from New York during the month of November:—Imports, \$15,554,118; exports, \$550,796.

SILVER.

The market has been still to a large extent under the influence of holidays and business has not been active. The Indian bazaars have bought small amounts daily, whilst China and the Continent have contributed most of the supplies. The immediate tendency seems fairly good, but confidence in the more distant future is lacking. Advice from Washington under date of December 22nd last gave the total amount of silver purchased under the Pittman Act as 147,800,075 ounces. Unusual sources of silver are by no means exhausted, for we learn from the Soviet Press that, by persistent search, the authorities are obtaining from the churches considerable quantities in the form of vessels and ornaments. One church alone in the town of Volsk is said to have yielded to cwts of silver. The Times of June 7th last stated that a bell of solid silver, weighing 6 cwts, or 10,000 ounces, had been confiscated by the Soviet authorities from the Cathedral of Kharkoff, in Russia. Much of the church treasure has undoubtedly been secreted, and there is a likelihood of many private individuals having caches of their own, which will not be unearthed until

the advent of happier days. Statistics for the month of December are appended:—

	Bar Silver per Ounce Standard.	Bar Gold.
	Cash Delivery.	Per Fine Ounce.

No silver coinage was reported during the week ending 22nd ult. The stock in Shanghai on the 30th ult. consisted of about 27,000,000 ounces in sycee, 29,000,000 dollars, and 1,530 silver bars, as compared with about 28,300,000 ounces in sycee, 26,000,000 dollars, and 10 silver bars on the 23rd ult. The Shanghai exchange is quoted at 3s the tael.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as follows:—

NOTICES.

Barclays Bank, Limited, announce that they have opened a new branch at 92 South Ealing road, W. 5, under the control of Mr G. A. T. Evans, also manager Ealing (Broadway) branch. Their office at 179 Wood street, Walthamstow, has been converted into a full branch, under the management of Mr J. L. W. Duffield. They also announce the opening of a new branch at 401 Mile-End road, E. 3 (temporary premises), under the management of Mr C. F. Donovan, and a new branch at 44 Fore street, Tiverton, Devon, under the management of Mr E. V. Harris.

The National Provincial and Union Bank of England, Limited, announce that a branch of the bank is now open at Boston Spa, Yorkshire (resident officer, Mr A. B. Mackenzie), and a branch is also now open at 128 Edgware road, W. 2, under the management of Mr E. H. Symes.

Lloyds Bank, Limited, announce that branches of the bank are now open at Station road, Harrow-on-the-Hill, under the management of Mr H. S. Gill; at High street, Dunmow, under the management of Mr C. G. A. Brooks, of the Braintree branch; and that the sub-branch at Ripponden is now made a full branch, under the management of Mr F. H. Whiteley, of the Sowerby Bridge branch. The branch at Winchcombe has been transferred to larger premises at The Cross, Winchcombe, under the management of Mr J. W. Buve.

Bernhard, Scholle and Co., Limited, announce their incorporation as a private company, with a capital of £400,000, fully paid, to transact the business of bankers at Warfield court, Throgmorton street, E.C. 2, and 15 Boulevard des Italiens, Paris.

We are authorised to state that an amalgamation has been arranged between the well-known banking firms, Messrs Frederick Huth and Co., of 12 Tokenhouse yard, E.C., and Messrs Konig Brothers, of 1 St Michael's alley, E.C., as from January 1, 1923, and that the partners in the new firm will be Mr F. A. Konig, Mr Edward Huth, Mr L. Huth Walters, Mr L. E. Meinertzhagen, and Mr H. H. Konig. The business of the above firms will be carried on by the new firm under the name of Frederick Huth and Co., at 12 Tokenhouse yard.

The British Trade Corporation announces that it has opened a branch at Zagreb (Ygram), Yugo-Slavia. A branch of the corporation has already been in existence for some years at Belgrade.

The Swiss Bank Corporation, London, announce that Mr G. F. Blake has retired from the management, and, with their approval, is taking up other work in the city.

The National Bank of South Africa, Limited, announces with regret the resignation as at December 31, 1922, of Mr Douglas Cunningham, the manager of the bank's London office. Pending completion of arrangements for filling the vacancy, Mr H. Judson and Mr R. B. Edwards, at present assistant managers in the bank's London office, have been appointed to act as joint managers, with effect from January 1, 1923.

The London Joint City and Midland Bank, Limited,

announce the opening of new branches as follows:—6 West street, Horsham, Sussex, Mr F. Warren Dillow, manager; 5-7, Great Underbank, Stockport, Cheshire, Mr W. M. Douglas, manager; 7 High street, Whitechurch, Salop, Mr B. Thomas, manager. A new office is also now open daily at Beacon Hill, Hindhead, Surrey, under the supervision of Mr F. W. Lewis, manager of the Haslemere branch.

Brigadier-General Arthur Maxwell, C.M.G., D.S.O., and Mr Eric Gore Browne, D.S.O., have been appointed managing partners of Messrs Glyn, Mills, Currie and Co.

ELECTROLYTIC ZINC CO. OF AUSTRALASIA.—Production during four-weekly period ended Dec. 13th, 2,027 tons zinc; silver lead product for shipment to Port Pirie for realisation, containing 249 tons lead, 37,758 ozs silver.

MOUNT MOROGA Gold Mining.—For the six weeks ending December 26th treated 7,431 tons Mount Morgan ore, 54 tons Many Peaks ore, 7,571 tons concentrates, and 41 tons of purchased ore and secondary products; produced 657 tons blister copper, containing 650 tons copper and 7,983 ozs gold, including 1 ton copper and nil ozs gold from Many Peaks; also 20 tons copper and nil ozs gold from purchased ore and secondary products. Concentrator treated 23,357 tons ore for a production of 8,918 tons of concentrates, containing 456 tons copper and 5,663 ozs gold. In addition to above production, have matte on hand containing 21 tons copper and 210 ozs gold.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The estimated gross production of crude oil for the month of December was 49,481 barrels, equal to approximately 7,000 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 5,000 tons. The output has been regulated by the capacity of Trinidad Leaseholds, Limited, to take delivery of oil, but it is anticipated that increased deliveries will be accepted from now onwards.

COMMONWEALTH OIL CORPORATION, LIMITED.—Cable advice from Sydney reports for the four weeks ended December 29, 1922:—Shale mined, 1,279 tons; shale retorted, 1,696 tons; crude oil and naphtha produced, 167,362 gallons (equal to 68.6 gallons per ton of shale).

INDIAN TREASURY BILLS.

	March 31, 1922.	Dec. 23, 1922.
Outstanding with public	53,96,70,000	28,40,05,000
In paper currency reserve	57,89,00,000	49,65,00,000
Total	111,85,70,000	78,05,05,000

The Secretary of State for India in Council has decided, after consultation with the Government of India, to offer for sale by competitive tender a limited amount of Council bills and telegraphic transfers (deferred and immediate). The first sale will be held on Tuesday, January 9, 1923, and the amount offered will be 50 lakhs of rupees. The holding of further sales at the present time, and the amounts to be offered, will be dependent on conditions of exchange. This resumption of the sale of Council drafts has been decided upon with a view to strengthening the Secretary of State's sterling resources against his requirements in 1923-4.

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended January 3, 1923, the stock of coin and bullion shows an increase of £50,183 compared with the previous return.

Total value of imports of gold	Total declared value of exports registered in the week

Messrs Samuel Montagu and Co. write as follows on January 3rd:—

GOLD.

The Indian demand this week has been good, and the bulk of the available supplies has been taken for that quarter. Gold valued at \$7,784,000 has arrived in New York—\$7,427,000 from London and \$357,000 from France. Details regarding Indian imports and exports of gold during the financial year 1921-22 are shown below. The figures are in lacs of rupees:—Total imports, 13,82; exports, 10,68. The following figures show the imports and exports of gold to and from New York during the month of November:—Imports, \$15,554,118; exports, \$550,796.

SILVER.

The market has been still to a large extent under the influence of holidays and business has not been active. The Indian bazaars have bought small amounts daily, whilst China and the Continent have contributed most of the supplies. The immediate tendency seems fairly good, but confidence in the more distant future is lacking. Advice from Washington under date of December 22nd last gave the total amount of silver purchased under the Pittman Act as 147,890,975 ounces. Unusual sources of silver are by no means exhausted, for we learn from the Soviet Press that, by persistent search, the authorities are obtaining from the churches considerable quantities in the form of vessels and ornaments. One church alone in the town of Volsk is said to have yielded 10 cwts of silver. The Times of June 7th last stated that a bell of solid silver, weighing 6 cwts, or 10,000 ounces, had been confiscated by the Soviet authorities from the Cathedral of Kharkoff, in Russia. Much of the church treasure has undoubtedly been secreted, and there is a likelihood of many private individuals having caches of their own, which will not be unearthed until

the advent of happier days. Statistics for the month of December are appended:—

	Bar Silver per Ounce Standard.	Bar Gold.
	Cash Delivery.	Per Fine Ounce.

NOTICES.

Barclays Bank, Limited, announce that they have opened a new branch at 92 South Ealing road, W. 5, under the control of Mr G. A. T. Evans, also manager Ealing (Broadway) branch. Their office at 179 Wood street, Walthamstow, has been converted into a full branch, under the management of Mr J. L. W. Duffield. They also announce the opening of a new branch at 401 Mile-End road, E. 3 (temporary premises), under the management of Mr C. F. Donovan, and a new branch at 44 Fore street, Tiverton, Devon, under the management of Mr E. V. Harris.

The National Provincial and Union Bank of England, Limited, announce that a branch of the bank is now open at Boston Spa, Yorkshire (resident officer, Mr A. B. Mackenzie), and a branch is also now open at 128 Edgware road, W. 2, under the management of Mr E. H. Symes.

Lloyds Bank, Limited, announce that branches of the bank are now open at Station road, Harrow-on-the-Hill, under the management of Mr H. S. Gill; at High street, Dunmow, under the management of Mr C. G. A. Brooks, of the Braintree branch; and that the sub-branch at Ripponden is now made a full branch, under the management of Mr F. H. Whiteley, of the Sowerby Bridge branch. The branch at Winchcombe has been transferred to larger premises at The Cross, Winchcombe, under the management of Mr J. W. Buys.

Bernhard, Scholle and Co., Limited, announce their incorporation as a private company, with a capital of £400,000, fully paid, to transact the business of bankers at Warfield court, Throgmorton street, E.C. 2, and 15 Boulevard des Italiens, Paris.

We are authorised to state that an amalgamation has been arranged between the well-known banking firms, Messrs Frederick Huth and Co., of 12 Tokenhouse yard, E.C., and Messrs Konig Brothers, of 1 St Michael's alley, E.C., as from January 1, 1923, and that the partners in the new firm will be Mr F. A. Konig, Mr Edward Huth, Mr L. Huth Walters, Mr L. E. Meinertzhagen, and Mr H. H. Konig. The business of the above firms will be carried on by the new firm under the name of Frederick Huth and Co., at 12 Tokenhouse yard.

The British Trade Corporation announces that it has opened a branch at Zagreb (Agram), Yugo-Slavia. A branch of the corporation has already been in existence for some years at Belgrade.

The Swiss Bank Corporation, London, announce that Mr G. F. Blake has retired from the management, and, with their approval, is taking up other work in the city.

The National Bank of South Africa, Limited, announces with regret the resignation as at December 31, 1922, of Mr Douglas Cunningham, the manager of the bank's London office. Pending completion of arrangements for filling the vacancy, Mr H. Judson and Mr R. B. Edwards, at present assistant managers in the bank's London office, have been appointed to act as joint managers, with effect from January 1, 1923.

The London Joint City and Midland Bank, Limited,

announce the opening of new branches as follows:—6 West street, Horsham, Sussex, Mr F. Warren Dillow, manager; 5-7, Great Underbank, Stockport, Cheshire, Mr W. M. Douglas, manager; 7 High street, Whitchurch, Salop, Mr B. Thomas, manager. A new office is also now open daily at Beacon Hill, Hindhead, Surrey, under the supervision of Mr F. W. Lewis, manager of the Haslemere branch.

Brigadier-General Arthur Maxwell, C.M.G., D.S.O., and Mr Eric Gore Browne, D.S.O., have been appointed managing partners of Messrs Glyn, Mills, Currie and Co.

ELECTROLYTIC ZINC CO. OF AUSTRALASIA.—Production during four-weekly period ended Dec. 13th, 2,027 tons zinc; silver lead product for shipment to Port Pirie for realisation, containing 249 tons lead, 37,758 ozs silver.
MOUNT MORGAN GOLD MINING.—For the six weeks ending December 26th treated 7,431 tons Mount Morgan ore, 54 tons Many Peaks ore, 7,571 tons concentrates, and 41 tons of purchased ore and secondary products; produced 667 tons blister copper, containing 650 tons copper and 7,983 ozs gold, including 1 ton copper and nil ozs gold from Many Peaks; also 20 tons copper and nil ozs gold from purchased ore and secondary products. Concentrator treated 23,357 tons ore for a production of 8,918 tons of concentrates, containing 456 tons copper and 8,622 ozs gold. In addition to above production, have matte on hand containing 21 tons copper and 210 ozs gold.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The estimated gross production of crude oil for the month of December was 49,481 barrels, equal to approximately 7,000 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 5,000 tons. The output has been regulated by the capacity of Trinidad Leaseholds, Limited, to take delivery of oil, but it is anticipated that increased deliveries will be accepted from now onwards.

COMMONWEALTH OIL CORPORATION, LIMITED.—Cable advice from Sydney reports for the four weeks ended December 29, 1922:—Shale mined, 1,279 tons; shale retorted, 1,666 tons; crude oil and naphtha produced, 167,362 gallons (equal to 98.6 gallons per ton of shale).

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, December 27, 1922, amounted to 723 tons.

VENEZUELAN OIL CONCESSIONS.—The London management of the Venezuelan Oil Concessions, Limited, announce that the specific gravity of the oil produced from Los Barrosos No. 2 is .926; that of Las Flores No. 1, from 752 feet level, is .901.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated January 4th, is as follows:—Pig-iron: Business quiet. No pig-iron market held here this week. The price of No. 3 Cleveland G.M.B. is firmer at 92s per ton, whilst East Coast mixed numbers hematite remains at 93s per ton. Manufactured Iron and Steel: Steel makers regard the future hopefully, and have a fair number of moderate orders. No change in quotations. Steel ship plates, £9 to £9 10s; steel ship angles, £8 15s; iron bars, £10 10s; steel rails, £9 net. Iron ore: The inquiry is not large, but there seems to be no disposition on the part of sellers to anticipate any lower prices in the near

future. On the contrary, rather better prices are regarded as probable. Best Bilbao rubio is 22s 6d per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—Business in Sheffield has scarcely been resumed after the holidays, and a large number of firms have been taking stock. There is, however, ample evidence that the recent revival in the steel trade is being maintained. A scarcity in basic and foundry pig-iron is developing, so that to meet the demand it will be necessary to put into blast some of the idle furnaces. Makers of basic steel are fully employed, to a considerable extent on export account. There is a rapidly expanding demand for acid steel in various forms. A large part of the idle plant for making railway axles, tyres, and springs has been absorbed by recent orders, and there are indications that the Indian and South American railways, which have been buying heavily in Germany and Belgium, are about to resume business with British makers. The market for heavy steel scrap is running strongly owing to consumption having overtaken the supply, and prices are rising gradually. No further advances in raw and semi-steel are announced, and there is a general desire not to check the improvement in trade by putting up quotations unduly. Business in files and various small tools is unremunerative, owing to the existence of much idle plant and severe competition. American makers have secured a considerable share of the file trade in the Colonial market. Business in expensive tool steels and engineers' small tools is almost at a standstill in the principal European markets owing to the state of the exchanges. Business is moving in garden and farm tools, but agricultural engineers are doing next to nothing, either at home or abroad. The outlook for the coal trade continues bright, although little business has been done during the past week or two. Consumption in the manufacturing industries is steadily expanding, and there is an increasing demand for coke.

Our Cardiff correspondent writes:—The South Wales coal market this week has not shown the firmness that characterised it before the holidays. The collieries are extremely well stemmed on paper, but bad weather has impeded the movements of shipping, and arrivals of tonnage have consequently been very considerably delayed. The result has been not only a complete disappearance of the congestion which was so serious an evil in December, but an actual scarcity of vessels for prompt positions. For spot loading, therefore, prices have been generally easier; exporters have been able to obtain parcels, and even cargoes, at from 6d to 1s 6d per ton less than the prices which the collieries are quoting for shipment a week or so ahead. Moreover, shipowners have

GIRARD TRUST COMPANY

Chartered 1826.

Capital and Surplus - \$10,000,000.

Member of Federal Reserve System.

been holding out for higher freights, and they have been able to jump rates for United States, the Argentine, and the Mediterranean from 6d to 1s per ton. The United States is still the most spectacular buyer on the market. Orders have been placed from day to day, and certain heavy contracts have been arranged over the next three months; but the business has been so cleverly camouflaged by the diffusion of inquiries through so many different firms that it is impossible to form any estimate as to the actual quantity of coal that has been bought, and that there is a speculative element involved is proved by the fact that some of the tonnage chartered provides for optional discharge at the River Plate. Negotiations have been opened with the coal trimmers and trippers on the question of the introduction of a third shift. The workmen are still resisting the proposal of the employers, but they have at last agreed to the appointment of a sub-committee to inquire into the merits of the case of the employers for an extension of working hours. There is no improvement in the position of the patent fuel industry. The high price of pitch is rendering remunerative production impossible, and, pending the result of representations to the Roads Commissioners urging a less consumption of tar for road making, manufacturers have withdrawn quotations.

The following are the approximate current quotations:—Best Admiralties, 28s to 28s 6d; second Admiralties, 27s 6d to 28s; best drys, 27s 6d to 28s; Black Veins, 27s 6d to 28s; Eastern Valleys, 26s to 26s 6d; Western Valleys, 26s 6d to 27s; best bunker smalls, 17s 6d to 18s; ordinary cargo smalls, 15s to 17s; anthracite big vein, 35s to 40s; anthracite machine-made cobbles, 42s 6d to 47s 6d; French nuts, 17s 6d to 62s 6d; stove nuts, 55s to 62s 6d; rubbly culm, 14s 6d to 15s; coke for export, 37s 6d to 45s; inland blast furnace coke at ovens, 26s 6d to 27s 6d; patent fuel, 32s 6d to 35s; pitwood ex-ship, 30s 6d to 31s 6d.

In the tinplate trade the recent improvement is fully maintained. The high price of scrap iron is increasing costs of production, but the demand is active, and prices are very firm at from 20s to 20s 6d per basis box. There are also prospects of increased pig-iron production, for there have been large imports of iron ore during the past few weeks, and preparations are in progress at Blaenavon, as well as at Cardiff and Ebbw Vale, for the blowing in of blast furnaces.

THE COTTON TRADE.

MANCHESTER, January 4.

Most traders in the market have begun the New Year in an optimistic frame of mind, and the opinion prevails that business in Lancashire will be better in the near future. An increased demand has been experienced in piece goods for several outlets abroad. Freer operations have occurred in descriptions suitable for India, a feature of interest being the bigger turnover for Calcutta in light fabrics and shirtings. Advances from Bombay remain rather poor. Standard grey makes for China have been slow, but more contracts have been arranged in fancies for Shanghai. An irregular business has been done for Singapore, the Philippines, Egypt, and South America. The prices ruling at the moment are very unsatisfactory, and immediately manufacturers obtain a little relief quotations are advanced. A slight improvement has been reported

in the turnover in American and Egyptian yarns for home consumption, and demand in shipping yarns, chiefly for India, has shown some expansion.

(II.) Compared with Previous Years.

	Price, Jan. 4, 1923.
--	----------------------

the present scale that market will be cleared of good combing wool in less than three months. In sympathy with the advance in raw material values, topmakers are advancing their quotations for Capes. It is known that 5s 6d has been made by one firm for a full 12 months' top, and present indications are that this price will be exceeded. Australian merinos show a harder tendency, and many believe that values will steadily advance during the next few weeks. Apparently many spinners who had been holding off have recently been doing some quiet buying, for topmakers are again much more independent. Some firms are reported to have sold the whole of their output five months ahead, though probably the bulk of this business has been on speculative account. Crossbreds are still being favoured, and the recent advances are well maintained; indeed, medium and fine qualities are mostly quoted slightly higher on the week. Spinners are doing a very good miscellaneous business, demand for both botanics and crossbreds in all counts and qualities being good. Prices in this section of the industry are somewhat irregular, due, apparently, to the difference in the position of spinners with regard to commitments, but the general tendency is towards a higher level. Manufacturers report very little change in the demand for piece goods.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The new year opens under very favourable conditions, and quite a good tone characterises wool markets everywhere. Interest is very largely centred round Colonial wools; in fact, the probable course of merinos is still of paramount importance. Some very considerable sales were effected immediately after the Christmas holidays in Bradford of South African wools, one firm of spinners taking 1,800 bales in one purchase. This has had an immediate effect upon markets at the Cape, cables last Monday received in Bradford reporting a sudden advance, and whereas good 10-12 months' combing wools were offered last week at 50d and a fraction under, many firms to-day are quoting 53d to 54d, with full 12 months from 57d to 58d. This simply means that South African merinos are to-day above a parity with Australian merinos of similar quality and character, and the insatiable demand for South African wools is one of the most significant items in connection with the raw material market. About the middle of this month there is to be catalogued at the Cape a few thousand bales from the famous Graaf Reinet district, and advance samples that we have seen show that a splendid lot of wool will be offered, all the parcels being at least 4 inches staple. Among the samples received was the one that made 27½d in the grease at Port Elizabeth three weeks ago. This shows that the trade is prepared to pay fully equal to Australian prices for anything showing decent length and quality. The wools to be offered at Port Elizabeth will constitute a record, and, apart from the boom year, when prices were carried beyond reason, the figures that will be made will be among the best ever realised.

There is to be a sale of Tasmanian wool at Hobart and Launceston next week, when the bulk of the Tasmanian clip will be catalogued. No doubt excellent competition will be forthcoming for merinos, come-backs, and fine crossbreds, and in all probability the home and Continental trades will secure the bulk. This will mark the opening of the second half of the Australian selling season, and we fully expect that the competition will be of such a nature that prices will be fully maintained at the level seen before the holidays. Tasmania turns out some of the best come-back wools in the world, and anyone wanting 58-60's cannot do better than cable a buying order. At the same time one regrets very much that Tasmanian pastoralists have gone in so much for breeding crossbreds, for that part of Australia can produce excellent type merinos. For real fine spinning and producing fabrics of superior merit, Tasmanian wools will need a good deal of beating.

Very favourable news is to hand from across the Atlantic, and strong feelings of optimism are expressed regarding the trade for the coming year. American mills appear to be fairly well off for orders, and if prices keep reasonable, we think the year's trade will be one of the best ever known. Some very considerable sales of crossbred matchings to Boston houses were put through last week, and further sales have been made this week, and, as far as one can see, there is every likelihood of a keen demand for these wools at Hull all next week. Stocktaking results have been creditable as far as the spinning end of the trade is concerned, but manufacturers still complain bitterly. Wool is still paramount, and is likely to remain so.

VEGETABLE OILS AND OILSEEDS.

Trade is recovering quietly after the holiday, although, as usual, the turn of the year is a slack period, and too early for the consuming industries to make any considerable impression on the market. Notwithstanding high values and scarcity in new positions, a fairly good business is reported in linseed oil on home account, and about £39 per ton naked, ex Hull mill, is still current price for prompt, with £35 for January, April. Trade in cotton oils is on only moderate lines, and demand, on the whole, not so large as might be anticipated. Crude Egyptian is held for £38, but ordinary refined (soapmakers' grade) is inclined easier, and can be bought below this figure. Crude soya bean oil is in good request, and prices somewhat higher. Rape oil is scarce on spot, and fully late values are sustained; nut oils are steady but quiet.

In the oilseed section, linseed has, under the influence of a small consumptive demand, and lower Argentine options, been not so

firm, £18 being the value of Plate now loading, and £17 for December-January. Very little interest has been manifested in the January-February position, in which recent business was done round £16 5s, whereas still sellers. A fair trade has been done in Egyptian cottonseed to Hull at a decline of 5s per ton, Sakel larides commanding £11 7s 6d.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Hide auctions have been resumed after the holidays, and generally the position is steady in view of the improved outlook. Best ox sold from 7½d to 8½d at Thursday's Bermondsey auctions, cows, best, making from 6½d to 7d. Kips, from 2d to 4d, were a shade down, but best calf at 7½d to 11½d showed a fractional weakness in two classes. Wools sold from 5s 6d to 10s 9d, the demand having the effect of again hardening values. The demand for imported hides is moderate, and values are again firmer in the River Plate. Full prices are also asked for dry and dry salted, but tanners are still conservative, and are only buying for actual requirements. The Tanners' Federation are drawing attention to the prevalence of "tick" in hides of domestic origin, and the Board of Agriculture are being urged to take steps to eradicate this pest. Cables from Chicago report the American position as steady, with best heavy packers quoted at 20 cents.

The outlook for the leather trade is decidedly better, and as sellers have received many inquiries this week it seems that shoe manufacturers are short of stock. The demand is, however, for a low-grade bend, although the spell of wet weather has improved the trade in English bends suitable for repairs. Much is expected of the probable despatch of a further 750 tons of English bends to Russia, and at time of writing it appears the business will soon mature.

Optimism is also a feature in the upper-leather section, as a large parcel of glucé kid has been sold on Russian account, the business being done through an agency in London. This has firmed up the market for glucé and cleared stocks of certain grades which wanted moving off. Carriers are rather busier, but few of them are working full time. I hear application has now been made to the Board of Trade for inclusion of calf upper leathers under the Safeguarding of Industries Act, as tanners take the view that competition is impossible with German tanners in view of the low rates of wages paid.

The boot trade is improving, as orders have come in fair volume of late from overseas customers, and home retailers are again replenishing stocks.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, January 5.

SUGAR.—General steadiness characterised this market, and a moderate business transpired, chiefly in British descriptions of refined, while no weight of supplies is felt at the moment. Messrs Tate and Lyle's cubes sold, 55s 3d to 56s 3d; crushed, 52s 3d; granulated, 50s 1½d; yellow crystals, 44s 1½d. Granulated, February-March, 50s 6d; April-May, 50s 9d; and June-August, 51s. Crystallised West India sold from 44s 6d to 46s, according to sample. American granulated, spot, sold, 49s 4½d; ditto February-March held for 23s 6d, c.f. and i., London. White Java, spot, 47s 9d to 48s 6d, as to quality; ditto May-June, 21s 4½d; June-July, 21s 1½d, c.f. and i., London. White Mauritius, spot, 47s 6d to 47s 9d. English-grown granulated, 48s 10½d, ex works Cantley. Dutch and also Czechoslovakian sugars steadily held for shipment, and offers reservedly made. Cuban basis 96 per cent., February, quoted 17s 6d; Brazilian basis 80 per cent., January-February, 12s 6d, c.f. and i., United Kingdom. Terminal market steady. White, 22s 9d; August, 23s. Cuban stocks stand at 45,350 tons, against 901,760 tons last year. Liquid glucose, spot, 28s 6d.

COFFEE.—Spot market quite steady, though business proceeded quietly while largely under holiday influence. Future delivery market dull.

COCOA.—There was no new feature to record, business on spot being confined to a narrow compass at previous prices. Accra, January-March shipment, sold, 34s 6d to 35s, f.o.b. terms.

TEA.—Private contract market quiet, but very steady, with the lower qualities quoted at a comparatively high level.

RICE.—The market proved very featureless this week, actual dealings being more or less retail in extent, with quotations somewhat nominal. Two stars, spot, quoted 15s 6d to 15s 9d; new crop, February shipment, 13s 6d. Broken kinds dearer, with few sellers. Rangoon beans, spot, quoted 8s. Japanese peas, afloat, London, 27s.

THE "ALL-IN" LIFE POLICY.

Every married man should send for particulars of this new and advantageous form of Life Insurance, which provides for:

- (1) Educational benefits (cash payments);
- (2) Financial protection for family;
- (3) Income for life on retirement or at an agreed date;
- (4) The remission of premiums in case of total disability through accident or illness;
- (5) Rebate of Income Tax in respect of premiums paid.

Send a post-card to day. Address:—Life Dept.

EAGLE STAR & BRITISH DOMINIONS INSURANCE Co., Ltd.,
32, MOORGATE, LONDON, E.C.2.
ASSETS EXCEED £20,000,000.

SPICE.—Pepper, after showing a steady tone, became a shade easier, with regard to forward positions. Fair black Singapore, spot, sold, 4½d; January-March, steamer, 4½d; Aleppy, spot, quoted 4½d; Tellicherry, 4½d; Ceylon, 4½d; white Singapore, 6d; Muntok, 6½d; ditto, January-March, sold, 6½d to 6½d. Zanzibar cloves quiet. Fair quality, spot, sold, 8½d; October-December, 7½d-7½d; January-March, 7½d-7½d. Flake tapioca, spot, sold, 3d per lb; fair Penang, seed, spot, 23s 6d per cwt. Sago flour, January-March, done, 12s 9d to 13s and 12s 10½d. Desiccated coconut firmer, and fine cut, spot, sold, 37s; medium, 37s 6d to 37s 9d; halves, January-February, 37s to 37s 6d; February-April, 37s 9d. Ginger quietly steady.

FRUIT.—The market for currants ruled very steady, with a moderate demand. Pyrgos, spot, sold, 55s; Patras, 58s; Vostizza quoted 66s to 72s. Valencia raisins in half-boxes quoted 38s to 45s; quarters, 50s to 75s. Sultanias steadily held, but quiet.

JUTE.—Business moved quietly while under the influence of the holidays, and prices favoured buyers. First grade, afloat, continent, sold, £35 5s to £34 15s; January-February, £36 5s to £36; February-March, £36 15s to £36 10s. Lightning grade, January-February, done, £34 15s; and February-March, £35. Hessians, 10 oz, spot, 36s; 8 oz, 28s. A twills, spot, 8s 6d; B, sold, 7s.

HEMP.—Manila grades springly offered, and a fair inquiry predominated. G grade, December-February, sold, £36; J, £34 to £33 15s and £34; K, £33; L, £32 10s; and M, £31 10s. New Zealand slow, H.P.F., January-March, quoted £32; and fair, £31. African sisal, afloat, held for £35 ton.

SHELLAC.—Market generally steady. Fair T.N., spot, 37s 5d; A.C., garnet, 330s; G.A.L., 300s; T.N., March, sold, 355s to 347s 6d and 345s; May, 350s to 335s.

COPRA.—After ruling firmer, became quieter. F.M.S. Straits, November-January, Rotterdam, sold, £26 to £25 12s 6d; January-March, £26 5s to £25 12s 6d and £25 16s 3d; Ceylon, Jan.-Feb. quoted, £27 10s; Java, £26 2s 6d; Dutch East Indies, £25 15s; South Sea Islands, £25 7s 6d; Cebu sold, £26 to £25 12s 6d; miced, £24 12s 6d. Palm kernels, January-March, Liverpool, sold, £18 2s 6d to £17 16s 3d.

RUBBER.—Market, after showing firmer features, disclosed irregular movements, and slight weakness ensued. Standard crepe and sheet spot, also January delivery, sold, 1s 3d to 1s 2½d and 1s 3d; February, 1s 3½d to 1s 2½d and 1s 3½d; March, 1s 3½d to 1s 3½d and 1s 3½d; April-June, 1s 4½d to 1s 3½d and 1s 4d; July-September, 1s 4½d to 1s 4½d and 1s 4½d; October-December, 1s 4½d to 1s 4½d and 1s 5d. To New York, standard sheet, January-February, sold, 1s 2½d to 1s 3d; February-March, 1s 3½d to 1s 3½d; March-April, 1s 3½d, c.f. and i. terms. Fine hard Para, spot, 1s 1½d; soft fine, 1½d. Caucho ball, 1½d per lb.

EGG PRODUCTS.—Markets steady, but, at the same time, quiet. Prime liquid yolk, spot, 105s per cwt. Albumen, spot, 3s per lb.

OILS.—Linseed market quiet. Spot, net, naked, 39s; January, 37s; January-April, 35s; May-August, 32s. Rape steady. Crude, spot, 42s 6d; refined, 45s 6d. Cotton firmer. Crude Egyptian, spot, 38s; common edible, 43s 6d; deodorised (in barrels), 45s 6d. China-wood steady. Hankow, spot (barrels), 72s; shipment, 66s. Coconut firm. Ceylon, spot, 42s; January-February, 41s; Cochin, ditto, quoted 45s. Soya firm. Oriental, barrels, December-January, 37s. Japan fish steady. November-December, cases, 25s 9d. Cod inactive. English, spot, 29s 6d to 30s. Ground nuts steady. English crushed, naked, spot, 45s; deodorised, barrels, 55s. Turpentine firmer. American, spot, 107s; January-April, 108s 9d. Rosin quiet. American, grade B, 14s 6d; F, 14s 6d; G, 14s 6d; H to I, 14s 6d; W, 18s 6d; WW, 19s 6d. French, F/G, 13s 6d; W, 16s per cwt. Petroleum steady. American standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

OILSEEDS.—Market quiet, and prices easier. Bold Bombay, afloat, sellers, £21. Small Bombay, December, £20. Calcutta, afloat, £20; December-January, £19 7s 6d. Plate, loading, £18 5s; December-January, £17; January-February, new crop, sold, £16 5s to £16. Rapeseed quiet. Toria, afloat, £18 10s; January-February, £16 10s; real bold Ferozepore, December-January, £17 5s. Cottonseed firm. Egyptian black, January, £11 16s 3d, and white, £11 7s 6d paid. Bombay, December-January, £9. Gingelly steady. Chinese, new,

ABRIDGED PROSPECTUS.

The List of Applications will be Closed on or before Wednesday, the 10th January, 1923.
A Copy of this Prospectus has been filed with the Registrar of Joint Stock Companies.

THE KASSALA RAILWAY COMPANY, LTD.

(Incorporated under the Companies' Acts, 1908 to 1917.)

SHARE CAPITAL.

Shares of £1 each, fully paid: Authorised, £300,000; Issued, £300,000.
ISSUE OF £1,200,000 4½ per Cent. GUARANTEED DEBENTURE STOCK, 1924-1925, being part of a total authorised issue limited to £1,500,000.
Guaranteed as to Principal and Interest by His Majesty's Government under the Provisions of the Trade Facilities Act, 1921.
Interest payable half-yearly on the 1st February and 1st August. A first payment of £1 12s 6d per £100 will be made on the 1st August, 1923.

PRICE OF ISSUE £93 PER CENT.

Payable as follows:—

On Application	£	5 per Cent.
On Tuesday, the 23rd January, 1923	8	"
On Wednesday, the 21st February, 1923	15	"
On Wednesday, the 21st March, 1923	25	"
On Tuesday, the 24th April, 1923	40	"

£93 per Cent.

The Stock is an investment authorised by "The Trustee Act, 1893," for the investment of Trust Funds.

The Governor and Company of the Bank of England are authorised to receive applications for the above Stock.

The Stock will be repayable over the years 1934 to 1953 by the operation of a Cumulative Sinking Fund to be applied in purchasing Stock at or under par, or redeeming at par Stock selected in sums of £100 by drawings. For the purpose of facilitating drawings, each £100 of Stock will be given a distinctive number, and such numbers will be stated on the back of the relative Stock Certificates. In any year in which a drawing of Stock for redemption is necessary such drawing will be made in the month of October, and the Stock drawn will be repayable on the following 1st February from which date interest thereon will cease. Holders of Stock drawn for redemption will be advised by notices posted to their respective registered addresses not less than three months prior to the date of redemption. Stock not previously redeemed will be repayable on the 1st January, 1953.

The Stock is secured by a Trust Deed, dated 22nd December, 1922, in favour of the Whitehall Trust, Limited, as Trustees, constituting a first specific charge on the Company's railway concession and railway when constructed, and on the benefit of the construction and operating contract with the Sudan Government Railways below-mentioned, and a first floating charge on all the Company's other property and assets, present and future, including uncollected capital, the Company being prohibited from creating any mortgages or charges ranking in priority to or pari passu with the Stock. The Register of the Stock will be kept at the Bank of England.

The Stock will be transferable by ordinary transfer deed in sums of £100 or multiples thereof.

Interest until the 1st August, 1923, will be payable half-yearly on the 1st February and the 1st August. The final dividend will be payable 1st January, 1953, and will represent five months' interest. Dividend warrants will be transmitted by post.

Applications must be accompanied by a deposit of £5 per cent., will be received at the Bank of England Loans Office, 5 and 6, Lombard Street, E.C. 3. In case of partial allotment, the balance of the amount paid as deposit will be applied towards payment of the first instalment; should there be a surplus after making that payment, such surplus will be refunded by cheque.

Applications must be for sums of £100 or multiples thereof.

Installments may be paid in full after allotment under discount at the rate of 4½ per cent. per annum. In the case of full payments made before the 23rd January, 1923, discount will only be allowed from the later date.

Default in the payment of any instalment by its proper date will render the deposit and any instalments previously paid liable to forfeiture and the allotment to cancellation.

Script Certificates to Bearer with Coupon attached for the interest payable 1st August, 1923, will be issued in exchange for the Allotment Letters. Fully-paid Script Certificates may be registered on and after the 23rd January, 1923.

A commission of 5s. per £100 will be paid to Bankers and Stockbrokers on allotments made in respect of applications bearing their stamp.

Prospectuses and Application Forms may be obtained at the Bank of England Loans Office, 5 and 6, Lombard Street, E.C. 3, and at any of the Branches of the Bank; at the Office of the Company, 1, London Wall Building, E.C. 4; at the National Bank of Egypt, 6 and 7, King William Street, E.C. 4; and of Messrs. Mullens, Marshall, Street, Lawford and Co., 13, George Street, Mansion House, E.C. 4.

BANK OF ENGLAND.
London, E.C. 2.

5th, January 1923.

The following additional information is given to comply with the provisions of the Companies Acts:—

The Company has acquired a concession from the Sudan Government authorising the Company to construct and operate an extension line of railway from a junction with the main lines of the Sudan Government Railways at or near Thaniam, in the Sudan, to Kassala, a distance of approximately 217 miles.

The Auditors of the Company are Messrs. Deloitte, Plender, Griffiths and Co., 5, London Wall Buildings, E.C. 2.

A Copy of the Memorandum of Association of the Company is printed hereunder, and forms part of this Prospectus.

The Articles contain the following provisions as to Directors' remuneration:—

The remuneration of the Directors shall from time to time be determined by the Company in General Meeting.

The Directors shall be paid all their travelling and other expenses, properly and necessarily expended by them in and about the business of the Company, including their travelling and other expenses incurred in attending the Board Meetings of the Company, and if any Director shall be required to perform extra services, or go or reside abroad, or shall otherwise be specially occupied about the Company's business, he shall be entitled to receive remuneration to be fixed by the Board, or at the option of such Director by the Company in General Meeting.

The Directors may from time to time appoint one or more of their body to the office of Managing Director or Manager for such term and at such remuneration (whether by way of salary or commission or participation in profits or partly in one way and partly in another) as they may think fit.

The preliminary expenses of the company are estimated at £10,000, exclusive of the commissions and brokerage payable on the present issue.

The following contracts which are or may be material have been entered into:—

(i.) Dated the 27th November, 1922, between the Sudan Plantations Syndicate, Limited, and the Sudan Government.

(ii.) Dated the 16th day of November, 1922, between the same parties.

(iii.) Dated the 8th November, 1922, between the Sudan Government, the Sudan Plantations Syndicate Limited, this Company and the Lords Commissioners of His Majesty's Treasury, being the agreement for the guarantee of the present issue of Stock by His Majesty's Treasury.

(iv.) Dated the 5th December, 1922, between the Sudan Government and this Company, being the concession above referred to, which runs for a period of 31 years from 31st December, 1922. At the expiration of this period, the Railway and Works become the property of the Sudan Government without payment.

(v.) Dated the 7th December, 1922, between the Sudan Government Railways and this Company, being a contract for the construction and operation of the railway by the Sudan Government Railways. The consideration payable under this contract by the Company to the Sudan Government Railways for the construction of the railway (including provision of rolling stock and equipment) and payment of interest and expenses during the construction period is £1,550,000, payable in cash, plus any revenue earned by the operation of the railway up to the 31st December, 1925.

(vi.) Dated the 22nd December, 1922, between the Company and the Whitehall Trust, Limited, being the Trust Deed securing the Stock.

(vii.) Dated the 3rd January, 1923, between the Company and Messrs. Mullens, Marshall, Street, Lawford and Company providing for the underwriting of the present issue for commissions aggregating 8ths per cent. on the nominal amount of Stock now offered.

Copies of the above-mentioned Contracts, of the Treasury Minute dated the 9th November, 1922, guaranteeing the principal and interest of the Stock, of the Memorandum and Articles of Association of the Company, of the Trust Deed securing the Stock, and of the proposed form of Stock Certificate, may be seen by intending subscribers at the Offices of Messrs. Holmes, Son and Pott, Canal House, New Broad Street, E.C. 2, and Messrs. Linklaters and Paines, 2, Bond Court, Walbrook, E.C. 4, on any day whilst the list is open.

(Continued from page 39.)

January-February, quoted £21 15s. Continent: large Bombay ditto, £21 7s 6d. Castor, Bombay, December-January, £17 15s, sellers, to Hull; February-March, £17. Ground nuts steady. Coromandel, machine-dried, December-January, £21; ordinary, £20; Nigerian, £20 15s; bold Bombay, December-January, £20 5s. Chinese, December-January, £20 10s. Soya beans, Manchurian: new crop, December-January, £11 10s; January-February, £11 5s per ton.

METALS.—Tin: The market commenced the week with a steady tone, quotations being occasionally the turn dealer, while a fair business transpired. Standard cash sold at £182 7s 6d; January, £182 10s to £182 12s 6d, and three months, £184 5s to £183 15s. Cables report sales in the East on the basis of £187 5s, c.i.f. Later, an easier movement set in, but at the lower range of prices a good business occurred. By the middle of the week standard cash sold down to £180 10s; January, £180 10s, and three months at £181 12s 6d. The downward tendency continued at Thursday's session, business being on a large scale. Standard cash sold at £179, and three months at £180 to £180 12s 6d to £180 7s 6d. No material alteration took place at the final market. Standard cash sold at £179, and three months £180 to £180 10s to £180 7s 6d. English ingots, £178 to £178 10s. Copper opened a shade firmer, though some irregularity was noticeable at times. Business was on a liberal scale, comprising standard cash at £64 13s 9d; January, £64 15s; and three months, £65 10s. Later prices gave way on liberal offering, which, however, were well absorbed. Standard, cash, sold at £64 10s; January, £64 12s 6d; and three months, £65 3s 9d. Values were about steady at Thursday's meeting, with liberal trading. Standard, cash, sold at £64 10s, and three months at £65 to £65 5s to £65 2s 6d. At Friday's session an easier tone prevailed, with business on a fairly large scale. Standard cash sold at £64 5s to £64 2s 6d; and three months, £65 to £64 17s 6d to £65 2s 6d. Electros, £71 10s to £71 15s; best selected, £68 to £70. Strong sheets, £96. Wire bars, £71 15s. Antimony quiet. Ordinary brands, £27 to £29 10s. Aluminium, home trade, £95. Lead irregular, but firmer on balance. Quotations ranging from £26 12s 6d to £26 2s 6d, as to position. Spelter lower, at £35 5s to £33 10s, according to position.

TALLOW.—Messrs Colchesters and Woolner write on January 3rd, 1923, as follows:—The tallow market was firm during the week, and prices were mostly 6d dearer to-day. Operations in shipment parcels were checked by the colonial markets being practically closed for the holidays. The stock in London on December 31st, as returned by the wharves, amounted to 13,189 packages, showing an increase during the month of 3,580 packages. At auction to-day 1,687 casks tallow were offered, and 967 were sold. Quotations are:—Australian mutton: Fine, 43s 9d; good to fair, 42s to 40s; dull to dark, 37s to 36s; hard, 42s. Australian beef: Fine, 43s; good to fair, 42s to 38s; dull to dark, 36s 9d to 35s; sweet, 43s. Present shipment from Australasia: Mutton, fair coloured, 45 degs., 40s; and mixed, 43½, c.i.f. London, 38s 6d. The market letter is unchanged. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 14½; melted stuff, 26s 6d per cwt. Quotations are:—Town, 35s 6d net cash, naked, ex works. Country: Frial casks, 35s; home melted, shipping casks, net, f.o.b., good coloured, —; fair to dull, 36s 6d to 35s 6d. Bone fat: White, none; pale, none; benzine, 32s; melted stuff, 32s 6d, f.o.b.

street (Room 1,709).

THE MONEY MARKET.

REPAYMENTS by the market to the Bank of England have proceeded steadily, and were concluded on Thursday without making much, if any, impression on the abundance of credit. This was partly because the banks were extensive buyers of February and March Treasury bills, and also because, as appeared from the Bank return, the Government has had to increase its indebtedness to the

Bank of England, presumably in order to meet Treasury bills maturing in excess of sales. Discount rates remained easy, three months' bank bills being taken at 2½ per cent.

	Jan. 12, 1923.	Jan. 5, 1923.	Dec. 29, 1922.	Dec. 21, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount/Call	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notice	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	2½	2½	2½	2½	2½

The Bank return showed decreases of £7,000 in the stock of gold and £1,598,000 in the circulation, and a consequent increase of £1,591,000 in the Reserve. Repayments by the market were indicated by a decrease of 29 millions in the Other securities, but an increase of six millions in Government securities looks like renewed borrowing by the Treasury on Ways and Means advances. Public deposits having risen by half-a-million, there was a net decrease of 22 millions in Other deposits. There was a reduction of £5,677,400 to £289,737,000 in currency notes outstanding, which includes £1,518,100 for notes called in but not yet cancelled. The fiduciary issue is £240,068,800, or £30,115,000 below the maximum.

THE STOCK MARKETS.

Stock Exchange markets have been active and buoyant, the Reparations crisis having been apparently ignored and attention devoted to favourable developments at Lausanne and to the debt funding conference in the United States. President Harding's attitude has engendered considerable optimism. The gilt-edged market has been strong under the lead of Conversion loan, and there has been a steady demand for all the new Home Railway stocks. The slump in the exchanges produced a fall in the foreign bond market, but there was a recovery from the worst. Foreign rails have been fairly steady. A rise in the price of the raw material has turned attention to the rubber share market, and prices have gone up, and oil shares, after a dull opening, improved a little. Industrials have shown irregular movements, and there have been a few good features in the mining markets. Markets are not perturbed by the new issues which have already appeared this week, nor by the larger volume which is anticipated next week.

THE COMMODITY MARKETS.

Reports as to the effect of the Ruhr occupation on the coal trade are mixed. The actual and anticipated exchange movements are causing some hesitation, but on the other hand some sales have been made at higher prices to French buyers threatened with the suspension of Reparation coal deliveries. On the other hand, the United States—fearing a fresh strike—have been actively buying on the Cardiff coal market. Prices of pig-iron shows signs of hardening, while steel and iron undertakings are gradually increasing their activities. Conditions in the Manchester cotton trade are slightly better. In piece-goods for India, the turnover has been on a freer scale, but the demand for China is inclined to lag behind. Business has been rather quiet in the wool trade, but prices keep firm. In the hide market the general opinion is that values will remain steady, the demand for the best-grade hides being, it is thought, in excess of supply the world over. Business in sole leather is steadily improving, and tanners are making sales to Russia. The outlook for shoe manufacturers is reported as brighter on account of better orders being received, both for the home and export trades. Other details of markets and prices from special correspondents will be found on later pages.

FOREIGN EXCHANGES.

In the foreign exchange market, with the exception of the dollar, the movements of the more important currencies have been feverish and dealings restricted. The direct cause, of course, has been the action of France in the Ruhr, and uncertainty as to how far French penetration will be carried, and what its reaction may be in Germany itself makes it quite impossible to infer to what extent exchanges will be further affected. One thing

would appear almost certain, that for some time, at least, there can hardly be any appreciable recovery in the main currencies concerned. It is true that the Paris rate, after reaching nearly 70 in the early part of the week, showed yesterday morning, following on some sharp fluctuations, a tendency towards recovery, and at 66.85 was only some 60 centimes worse than the preceding week. There is, however, little confidence in the permanence of this movement, which may perhaps be interpreted as a reflection of the official determination in Paris to put the best face on a difficult position. At 73 the Brussels rate showed a still further widening of the spread between Paris and itself. In Paris, forward quotations have widened two centimes to 8 centimes per month over spot, while the Brussels rate has again moved up one centime to 4 centimes per month below spot. The lira has followed a similar development, and at 94½ was about 2½ lire above last week's quotation. In Germany the effect of French action was seen in a movement from 39,000 on the 5th to about 50,000 at one time on Monday. Since then there has been a slight recovery, but the rate is not much more than nominal at 48,500, with about 3,500 marks per month above spot for forward quotations. The dependence of Warsaw on Berlin has been shown by the rapid leap up of the Polish mark from 82,500 on the 5th to 95,500. In Warsaw, where the rate was still higher, dealings were prohibited for the time on the 11th. In the same way Vienna, where the rate has been stabilised for so long, was also affected, kronen being quoted yesterday at 330,000, as compared with 320,000 a week ago. On the other hand, the dollar, which has been influenced rather by sympathy with the British attitude over the Ruhr and by expectations of a satisfactory debt settlement than by any more direct trading factors, has shown a steady improvement from 4.65 on the 5th to 4.67½ yesterday, after being at one time on the 11th about 4.68. While undoubtedly an arrangement of our liabilities in America will have a favourable effect on the rate, the outlook in Europe is at present so unsatisfactory that it would be rash to rely too much on the continuance of this movement, at least in the immediate future. The forward rate at 1½ cents per month over spot has narrowed again on the week by ⅛ cent. Neutral currencies, following the dollar, have moved in our favour, and Amsterdam at 11.78½, Switzerland at 24.72½, Madrid at 29.71½ are all considerably higher. In Scandinavia also, Stockholm, which the National Bank by an active exchange policy is keeping at a stable ratio to the dollar, has moved up to 17.35½, while Christiania is higher at 24.97½, and Copenhagen has jumped to 23.12½. At 188½ Helsingfors shows little change. After its recent recovery Prague is moving up again to about 163, while Belgrade and Sofia have also depreciated, and Bucharest, although below the worst, is considerably higher on the week at 850. In the East, the rupee, at 1s 4½d, is about 1-32d dearer than last week, but the yen has depreciated to 2s 1d, following the movement of the dollar. The silver market has been uncertain and irregular, and was kept up for the greater part of the week by Indian spot demand, said to be in fear of a possible reimposition of an import duty on silver. With the dropping off in the Indian demand, prices, however, fell away at once. At 2s 2½d the Hong Kong rate is about 1d lower than last week, as also is the Shanghai rate at 3s 0½d. In South America, Buenos Ayres is ½d dearer at 44d, and Monte Video is also ½d dearer at about 44½d.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the six days ended January 6th:—

From Revenue	RECEIPTS.	Min. £	EXPENDITURE.	Min. £
.....		15,636		
			Interest on Debt	3,472
			Supply Services	8,672
			Sundries	850
			Reduction of Debt	3,272
			Added to Exchequer balances ..	170
		15,636		15,636

Revenue for the six days was £15,636,000, which compares with £19,448,000 for the seven days ended January 7, 1922. Expenditure amounted to £12,193,457, as against £23,751,449 a year ago. Customs yielded £2,581,000, and Property and Income-tax

£7,009,000. The week's operations reduced the National Debt by £3,272,424, and caused the following changes:—

National Savings Certificates ..	+ 200	Min. £	Bank of England Advances ..	— 456
Public Dept. Advances	+ 5,850		Sundries	— 966
			Treasury Bills	— 4,756
		+ 6,050		— 9,322

The floating debt was reduced by £3,395,000 to £937,656,500.

FINANCIAL YEAR, 1922-23 (April 1, 1922, to January 6, 1923).

Total spent	£ 584,827,917	Raised by revenue ..	£ 601,198,653
Dec. in balances	7,899,053	Net repayments	24,269,789

Total	£ 576,928,864	Total	£ 576,928,864
-------------	---------------	-------------	---------------

ESTIMATES for YEAR 1922-23.

Ordinary Expenditure	£ 823,846,000	Ordinary Receipts ..	£ 820,775,000
Special Expenditure	61,223,000	Special Receipts ..	90,000,000
Contingencies	25,000,000

THE GREAT GAMBLE.

We cannot recall a situation in which British opinion was so much at a loss to know what to think as it has been since the breakdown of last week's Reparation Conference. As to the financial results of France's action there is practically no difference of opinion; the general view being that of the German trade union leader, who observed to a *Times* correspondent that "We have long said in the Ruhr, you can do nearly everything with the bayonet—except pick coal. Herr Poincaré has yet to learn that the pick wielded by the free German workman anxious to do his share to fulfil his country's obligations is a better producer of Reparation coal than the bayonet." There are people in England, it is true, who think there may be something in the view that the Germans will work reasonably well under military control, and point to the Saar, where the French administration of the mines is producing fairly satisfactory results. But even if the French schemes do not justify the fears of those who look for a severe curtailment of production, we are still not in sight of a situation in which France's urgent budgetary needs would be satisfied; for that requires not merely production on the present lines, but a return to something like normal pre-war output for the whole of Germany, together with monetary stability and machinery for tax collection throughout the country. England is, frankly, sceptical of the ability of France to collect either goods or cash from the Ruhr, and there are very few who think that the German industrialists will be frightened into making a handsome offer.

There is even greater uncertainty mingled with a feeling of disquiet as to the political consequences of the move. Two years ago, when the entirely futile occupation of Dusseldorf, Dinsberg, and Ruhrort occurred, the results of the actual movement of troops was that a tense anxiety and feeling of high nervous strain was succeeded by an amazing calm, and life resumed a normal course as if by magic. It cannot be taken for granted that the same will happen in the mining villages of the Ruhr, but it is on the whole probable that there will be very little immediate and apparent break in the course of existence. At the same time, there is a definite danger which we dare not disregard, that the occupation may start a conflagration that would spread right through Central Europe and the Balkans. This danger is increased by President Harding's announcement of the withdrawal of American troops from Coblenz, which advertises to the world and to Germany the withdrawal of moral support from France and her colleagues. Warning of a less complacent attitude in Berlin is given by the unofficial withdrawal of the German Ambassador from Paris, the announcement that all Reparation payments to the "Treaty-breaking Powers" will cease, and the moonlight flit of the Coal Syndicate with its records and staff from Dusseldorf to Hamburg.

Finally, opinion is undecided as to the reaction upon the trade situation at home. In this respect the predominant feeling is one of profound pessimism, which anticipates that there will be an immediate slackening in demand from the Continent; that the exchanges will experience a new and drastic slump; and that confidence at home will thereby suffer a set-back and plunge us once more into further depths of trade depression and unemployment. This view we believe to be exaggerated so far as it concerns Great Britain. The unsettlement of Europe which French policy undoubtedly involves will certainly delay, perhaps indefinitely, the return of Europe to normal trading conditions; but there are two considerations which should prevent an immediate set-back in British trade. In the first place, further exchange depreciation in Europe, though it will affect trade on the Continent, has now got beyond the stage where it seriously influences extra-European commerce. It is generally recognised to-day that German internal prices follow the exchange rate too quickly to afford a premium on exports for more than a very short period; while, on the other hand, it has eaten up Germany's circulating capital, and made impossible the carrying on of trade in Germany, except for very short periods ahead. Recent experience in Germany, as well as in Austria, shows that beyond a certain point the depreciation of exchanges produces too great a demoralisation inside the country to enable it to be an exporter on a large scale. The other consideration is the corollary of this fact. There is a certain amount of foreign trade which cannot be indefinitely postponed, and the present situation, which is likely to continue if Central Europe gets into a worse state of demoralisation, is that such orders as are going about are coming to this country. This does not mean that it would be a good thing for us if Germany were economically wiped off the map, nor does it mean that employment here may be expected to recover to normal in the near future. But it does imply that there may be some immediate improvement on the recent situation in which the volume of employment has been in the neighbourhood of 20 per cent. below par. On the other hand, it means, on a longer view, that we may have to face a long-drawn-out depression of world trade, since we can hardly expect that extra-European trade can entirely replace our immense commerce with Europe in less than a decade.

But if there is uncertainty on the financial, political, and economic consequences of the Ruhr policy, and therefore on the attitude which Great Britain should adopt towards it, there are, in our opinion, two very important points which should be considered in this country. In the first place, as we pointed out last week, the scheme which Mr Bonar Law put forward in Paris must not be regarded as Britain's last word to France on the subject of Reparations. In particular, it is important that public opinion should be prepared to face the concession to France of a considerably larger proportion of any sums Germany may pay than the amount indicated in the British scheme. According to the final document issued

in Paris, it appears that the division of the Reparation receipts, according to the British plan, would have been as follows:—

	Total to be Received from Germany. Milliard Gold Marks.	Share of France. Milliard Gold Marks.	Share of Great Britain. Milliard Gold Marks.
Present value of 1st series Bonds— 80 % to be divided on Spa per- centages	31.6	16.4	7.0
Balance to be divided on "Armies of Occupation," Clearing House, Belgian War Debts, &c.	7.9	2.1	5.2
Present value of 2nd series Bonds— To be divided so far as France and Great Britain are concerned on basis of debts to U.S.A.	10.5	3.1	4.3
Gold lent to Great Britain during the War	..	..	1.5
Total	..	21.6	18.0
Approximate nominal amount of debts due to America (including accumulated unpaid interest) ..	..	14.	20.

It is quite evident that the receipts assigned to Great Britain on this plan are much larger than the very modest expectations which this country, in fact, now entertains, and the division clearly gives France far less than she must spend in Restoration unless the war debt due to America is entirely remitted. Some months ago France is stated to have spent in these regions 45 milliard francs (14 to 16 milliard gold marks—depending on the rate of exchange), and to be debiting to Germany double this amount on account of pensions, &c. The former figure may be swollen by unwise expenditure, but, on the other hand, the restoration is very far from complete. The proposed division of the Second Series Bonds is an endeavour to recover something for Great Britain out of the wreck of the war debts, and is a very problematical figure, while even the First Series are divided on the Spa percentages, which were agreed upon in days when statesmen—publicly, at all events—pretended to believe that much larger sums could be got from Germany than are now anticipated. If Great Britain is to persuade France to accept what we regard as a practical total based upon Germany's capacity to pay, we are satisfied that opinion in this country would support the principle of admitting, as a prior charge against whatever is received, the cost reasonably estimated of repairing the devastated areas. We ourselves believe that this means in fact that we must be prepared ultimately to surrender all hope of any further share of reparations than is sufficient to cover the cost of our Army of Occupation and the other items in the second line of the table. If, as is probable, the second series bonds do not materialise, but we surrender our claim to the 22 per cent. of the first series bonds, the receipts of France would be increased to 25½ milliard gold marks, and if, as we might hope would be the case, the postponement or easing of payments reduced the present value of her debt to America to say 7 milliards, she would secure a net 18½ milliards. We know of no estimate which makes the cost of restoration less than this. If after last week's breakdown we ever get back to the point of facing the real possibilities, we shall never reach a satisfactory understanding until we admit this claim to priority.

But there remains the possibility that we may not have an opportunity of making this offer, in which case Great Britain has the much more difficult problem of deciding what her attitude is to be towards France's present policy. In our opinion we can only reach clear ideas on this subject if we endeavour to follow France's action through to its logical conclusion. If France fails to collect the funds she requires by placing her officers in the Ruhr mines or collecting Customs duties either at the old frontiers or on some new barriers within Germany itself, we can see no logical reason why she should not extend her occupation to the whole of Germany, and endeavour to collect money either from all industrial undertakings in the country or by levying customs or direct taxes from the nation as a whole. There is little doubt that such extreme action, particularly if taken without the general consent of the

parties to the Treaty of Versailles, would be regarded as unwarranted either by the letter or the spirit of the Treaty, and would constitute an act of "aggression," or, at all events, one "which threatens to disturb international peace." At what stage is the policy of France in danger of overstepping the line? It is this question which is the source of embarrassment to Great Britain. We ask it, not out of any lack of sympathy for France in her failure to secure any substantial contribution from Germany towards repairing the wanton damage done in the war, or because we desire to see Germany escape the appropriate consequences of her militaristic policy; but because Great Britain, with all the other signatory Powers, has deliberately, and with a full sense of responsibility, signed the Covenant of the League of Nations, and in so doing recognised that we are under an obligation to take definite action to check international aggression and to endeavour to forestall and remove complications likely to result in war. The League of Nations Covenant implies a new doctrine of responsibility in international affairs, and unless we repudiate it we cannot return to the pre-war situation, in which it was open to any country to stand aside from international conflict. On the contrary, we are committed to use diplomatic, economic, and in certain cases may even be invited by the Council of the League to use military pressure, to prevent aggression; and, if the pessimists are right, we may soon have seriously to consider what action these undertakings impose upon us. Sweden has already given an indication that she will raise the issue at the forthcoming League Council meeting, and Great Britain must decide whether a position of benevolent neutrality can still be maintained, or whether, in association with other members of the League, she may be led to range herself in definite diplomatic opposition to her late ally.

PRICE STABILITY AND THE GOLD STANDARD.

It has long been recognised that the regulation of a monetary system so as to secure (at any rate, in the long run) a stable price level is in theory both feasible and comparatively simple. All that is required is to agree upon some system of index numbers for the measurement of prices; to take the price level ruling at some particular time as the *par* to be maintained; and then to provide that currency and credit shall be contracted whenever prices rise above this *par* level, and expanded when they fall below it. Various schemes have been suggested by which this might be done, but as none of them has seemed compatible with the maintenance of an orthodox gold standard, they have received little serious backing. It is not merely a question of conservatism or tradition, but of the sacrifice of the solid advantages of stable foreign exchanges. For experience shows that, between currency systems based on gold, an almost perfect exchange stability is secured, and it would not be easy to secure this otherwise. Even under Professor Irving Fisher's scheme, the mint *par* of exchange, though it would exist at any moment, would be liable to frequent alterations. Since the possibilities of exchange stability are a matter of experience, while those of a stable price level are necessarily a matter of speculation, there is a natural and general reluctance to contemplate novel monetary arrangements under which the former would be sacrificed to the latter. But are these two objects really mutually exclusive? In this connection two features of the present world situation deserve attention; first, the monetary programme evolved by the Genoa Conference last year, and, second, the singular monetary position occupied by the United States.

The first aspect of the matter was recently discussed in a remarkable article in the *Economic Journal* by Mr. Hawtrey, of the British Treasury.* The road back to a general régime of gold standards is beset with obstacles. Budget deficits must first be cleared out of the way, and most of the late belligerents must reconcile themselves to devaluation. But, even then, formidable difficulties will remain. A large part of the former gold reserves of Europe is now in the United States. Any attempt to bring them back again might cause a disastrous appreciation in the commodity value of gold. On the other hand,

a country which resumes gold payments on the basis of a slender gold reserve will run very considerable risks under the unsettled conditions which seem likely to prevail. Accordingly, it was recognised by the Financial Commission of the Genoa Conference that international co-operation will be necessary. There must be a convention under which some countries will become free gold centres, while others have recourse to the devices of a gold exchange standard. But, above all, there must be co-operation between the various central banks, and among the matters on which their mutual co-operation is required is the regulation of credit, "not only with a view to maintaining the currencies at par with one another, but also with a view to preventing undue fluctuations in the purchasing power of gold." Upon this resolution Mr. Hawtrey lays great stress; "the stabilisation of gold," he declares, "is essential to the whole scheme," and he has no doubt at all that it can be done by an appropriate use of the instrument of "bank rate" or "re-discount rate." But the possibilities of a great scheme of co-operation among central banks belong to a problematical future. Let us turn accordingly from the resolutions of Genoa to the drift of events already perceptible in the United States.

The gold reserves of the Federal Reserve Banks amount at present to well over 70 per cent. of their deposit and note liabilities combined. The minimum reserve which the law requires them to maintain is less than 40 per cent., and on ordinary banking principles a figure not much higher than this would be enough to satisfy the most extreme prudence. If, accordingly, the Federal Reserve Board are governed by ordinary banking principles, an immense expansion of credit and increase of prices in the United States is both immediately possible and, sooner or later, inevitable. We in this country expect that such an expansion will, in fact, take place, and we hope for it devoutly. It would make possible our return to the pre-war parity, without further disastrous deflation, consistently even with some recovery of our own price-level and a consequent easing of the Budget problem. It would reduce the real burden of our debt to the United States. But in American eyes the prospect is necessarily less attractive. Unpopular as a period of deflation is, no one can desire that it should be succeeded by a period of equally marked inflation. And the Federal Reserve Board are emphatic that this must not occur. In other words, they declare their intention of preventing any appreciable rise in prices, be the gold reserve at their disposal what it may. Fortunately for us, their declarations on the point are couched in vague and general terms, and the matter is one on which the utmost clarity of conception is required for effective action. The path of every expansion of credit and increase of prices is strewn thick with illusions. There is the illusion that so long as credit is supplied to meet only the "genuine needs of trade," no inflation of prices can result; there is the illusion that the rise in prices, which, in fact, takes place, is due to other causes than credit policy, causes which seem in some way "natural." All credit-controlling authorities contain members who are themselves subject to these illusions, and those members who take a different view seldom hold

it with sufficient confidence to be willing to urge strongly a restrictive policy, calculated, as it seems, to nip in the bud, perhaps unnecessarily, a period of active trade. While they hesitate, the rise in prices is gathering momentum. To these influences, it may be expected, the Federal Reserve Board will prove susceptible; they may issue appeals and warnings, but they are not likely to nerve themselves to use the unpopular weapon of a high re-discount rate before a considerable rise in prices has taken place, enough perhaps to send the sovereign in triumph back home to parity.

But what will happen then? For the story cannot end there. The potentialities of increased credit in the United States are so vast that prices might well rise 50 per cent. or more before ordinary banking principles would call for a curtailment of credit; and long before this the Federal Reserve Board will certainly take action. Probably their action will be severe enough to subject America once again to the evils of falling prices and depression. Then a situation will arise in which three features will be prominent. First, the objective of price stability will assume an urgent importance to a public weary of the round of alternating periods of inflation and deflation. Second, it will be established beyond a doubt that the movement of prices is powerfully affected by the action of the Federal Reserve Board. But, thirdly, it will be established with hardly less certainty that that body must have some more definite policy than a vague determination to prevent excessive increases, if any measure of stability is to be secured. It is not easy to predict the outcome of such a situation. One possibility is a general attack upon, and collapse of, the Federal Reserve system. But it is also possible that the Federal Reserve Board will retain their authority and will pursue their end of price stability with a new precision. They may then seek for some definite criteria for the guidance of their discount policy, and it is possible that they may adopt the devices indicated at the outset of this article; fix on an index number, fix on a *par* price-level, and announce that, whenever prices rise above that level (or fall below it), the re-discount rate will be put up (or down) as a matter of course.

But the point we wish to urge does not depend on events taking this particular turn. It is already the declared policy of the Federal Reserve Board to use their control of credit for the purpose of maintaining as much stability of prices as possible. What does this amount to? To an attempt to fix the purchasing power of gold, and so to stabilise prices not only for the United States but for all other countries, as and when they revert to a gold basis. Thus the possibility of combining the virtues of stable exchanges and stable prices is already the subject of a singular experiment, which a great country is being driven to undertake, not by any taste for academic Utopias, but by the ineluctable pressure of her own necessities. For America must endeavour to control the purchasing power of gold, on pain of the alternative of a huge increase in prices, which it is the general desire of her citizens to avert. If she succeeds she will have done much to prepare the ground for that ultimate inter-

national co-operation postulated by the Genoa Conference. If, further, she makes a good job of it, and gives precision to her policy by calling index-numbers to her aid, new possibilities will be opened out. How far would such a policy promote steadier conditions of trade and employment? This question we shall consider in a later article.

INDUSTRIAL PROFITS.

Our quarterly figures of the profits of industrial companies, compiled from the table of profit and loss accounts published each week in the *Economist*, show a slight increase in the net profits disclosed in company reports appearing in October, November, and December, 1922. These refer, for the most part, to the financial years ended June 30th or September 30th last, though in some cases the period covered is very much earlier. During the past quarter the reports of 319 companies, for which comparative figures were available, were analysed in the weekly table, and these show aggregate net profits, after payment of debenture interest, &c., of £24,228,700, as compared with £23,310,400 earned by the same companies in the previous financial years, an increase of £918,300, or 3.9 per cent. As will be seen from the table below, the net profits disclosed in the three other quarters of the year showed heavy decreases:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	No. of Cos.	Reports Published in		Increase.		Decrease.	
		1921.	1922.				
First quarter	442	47,368,926	26,785,962	..	..	20,582,974	43.4
Second quarter	401	38,044,790	25,195,690	..	..	12,849,100	33.7
Third quarter	209	16,853,920	12,120,153	..	..	3,733,767	23.5
Fourth quarter	319	23,310,452	24,228,719	918,267	3.9	..	..
	1,371	124,578,088	88,330,514	..	..	36,247,574	29.0

The increase shown for the last quarter of the year has to be considered, however, in the light of previous records. The average profit per company for the three months works out at just under £76,000, and although this compares favourably with £73,000 in the corresponding quarter of 1921, the comparison is not so favourable with the same quarter in 1920, when the average profit per company was £82,700. In fact, while the figures seem to indicate that the corner has been turned, the reaction so far recorded is a very slight one, for, as will be seen by the list of quarterly increases or decreases in net profits since the beginning of 1918, a year ago a drop of nearly 53 per cent. was recorded:—

	1918.	1919.	1920.	1921.	1922.
First quarter	-1.0	..	+10.4	..	+26.9
Second quarter	-5.8	..	-5.1	..	+37.8

Fourth quarter	+4.7	..	+10.5	..	+27.1
					-52.9

Taking the figures in the last line, which refer to the quarter of the year with which we are now most concerned, the changes show that the profits for the final quarter of 1922 are little more than two-thirds of what they were in the same period of 1918.

Analysing the figures for the 319 companies into 16 groups, the changes in net profits in each group are as follows:—

	Number of Companies	Reports Published in Quarter Ended Dec. 31.		Increase.		Decrease.	
		1921.	1922.				
Breweries	48	1,875,609	1,816,693	..	..	58,916	3.1
Hotels, restaurants, &c.	27	417,504	426,518	9,014	2.2	..	..
Iron, coal, and steel	23	3,362,195	1,168,491	..	..	2,193,634	65.1
Land, mortgage, &c.	12	332,643	1,236,195	903,552	27.5	..	..
Motor and cycle	12	639,160	651,705	..	..	12,545	1.9
Nitrates	7	220,831	63,665	..	..	157,166	71.2
Oil	3	3,465,432	3,402,680	..	..	62,752	1.8
Rubber, &c.	76	334,516	90,018	..	..	244,498	73.4
Shipping	6	738,119	786,233	48,114	6.5	..	..
Shops and stores	7	802,482	177,800	..	..	624,682	77.8
Tea	7	16,875	77,477	60,602	359.9	..	..
Telegraphs, &c.	6	2,215,106	3,046,401	831,295	37.4	..	..
Textiles	6	2,088,227	3,483,982	1,395,755	66.7	..	..
Tramways	4	124,111	123,364	..	..	747	0.6
Trust companies	19	404,010	536,544	132,534	32.7	..	..
Miscellaneous	66	6,352,736	7,368,293	1,015,557	16.3	..	..
	319	23,310,452	24,228,719	918,267	3.9	..	..

The most striking change in this table is the decline of over 65 per cent. in the profits of 23 iron, coal, and steel

companies. Only six of these companies, the bulk of whose reports refer to the year ended June 30th last, show better profits than in the previous year. A decline in retail trade is naturally reflected at a later date than the general depression in industry, and the fall of 78 per cent. under the head of shops and stores is therefore not very surprising. Waring and Gillow, Maypole Dairy, and Harrods (Buenos Aires) are chiefly responsible, small increases being shown by Debenhams and International Tea Co.'s Stores. A large increase is shown in the textile group, but this is due principally to the inclusion of the figures of J. and P. Coats, whose profits increased by £1,198,000. Both tea and rubber companies show a substantial recovery in profits, and the twelve investment trust companies have done better, largely, it is to be presumed, as a result of the rise in security values. Satisfactory increases are also shown by the land, mortgage, &c., and telegraph groups.

The next table shows how profits were distributed in each quarterly period of 1922:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1922.	£	£	£	£
First quarter	26,785,962	22,171,510	9,689,030	Dr 5,074,588
Second quarter	25,195,690	20,066,774	6,156,048	Dr 1,077,139
Third quarter	12,120,153	10,010,136	3,328,074	Dr 1,218,057
Fourth quarter	24,228,719	15,698,160	4,720,052	Dr 3,810,507
	88,330,514	67,946,580	23,893,204	Dr 3,509,270

There was a very material improvement in the method of distribution in the last quarter, and reserves and balances brought forward were not drawn upon as in the rest of the year, but were increased by a sum equivalent to nearly 16 per cent. of profits. The figures for the whole year, however, are still unsatisfactory, in that the amount distributed to shareholders exceeds net profits by nearly 4 per cent. In 1921 nearly 19 per cent. of profits was reserved or added to the balances carried forward. The distribution of profits in each group is shown in the next table:—

	Net Profits.	Ordinary Dividend.	% of Profits.	Pref. Dividend.	% of Profits.	Carried to Reserve, &c.	% of Profits.
Breweries	1,816,693	871,380	48.1	430,071	23.6	515,242	28.3
Hotels, restaurants, &c.	426,518	201,569	47.9	118,350	27.6	106,599	24.5
Iron, coal, and steel	1,168,491	607,834	51.8	906,336	77.2	345,679	29.0
Land, mortgage, &c.	1,236,195	752,972	61.0	289,728	23.4	1,334,995	107.9
Motor and cycle	551,705	317,500	57.5	59,705	10.8	174,700	31.7
Nitrates	63,665	37,486	58.9	..	..	26,179	41.1
Oil	3,402,680	1,454,970	42.7	795,000	23.4	1,152,710	33.9
Rubber, &c.	90,018	106,378	118.0	5,418	6.0	21,678	24.0
Shipping	786,233	707,813	90.0	201,602	25.6	Dr 129,192	16.6
Shops and stores	177,800	678,257	381.5	12,665	7.1	Dr 582,122	329.7
Tea	77,477	36,101	45.4	14,176	18.2	28,200	36.4
Telegraphs, &c.	3,046,401	1,238,509	40.6	70,000	2.3	1,737,892	57.1
Textiles	3,483,982	2,656,750	76.3	402,566	11.5	424,666	12.2
Tramways	123,364	72,523	58.9	14,625	11.9	36,216	29.3
Trust companies	536,544	253,634	47.3	221,419	41.3	61,491	11.4
Miscellaneous	7,368,293	5,702,784	77.4	1,166,391	15.8	499,118	6.8
	24,228,719	15,698,160	64.9	4,720,052	19.4	3,810,507	15.7

Five groups show a reduction in reserves or balances brought forward. The shipping group is in this category, largely owing to the figures of the Argentine Navigation Company. The most prominent figures are those of the shops and stores group, four of the companies having made heavy net losses, while the Maypole Dairy, whose net profits were £551,800, distributed £629,600 to ordinary shareholders. In the iron, coal, and steel group nine companies paid no ordinary dividend, and this partly accounts for the high proportion of profits going to preference shareholders. At the other end of the scale the telegraph group pays a comparatively modest proportion of profits to shareholders and reserves over 57 per cent. The tea, tramway, and motor and cycle groups show up fairly well in this respect.

We next show the ratio to total ordinary and preference capital of net profits and of amounts carried to reserve:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1922.	£	£	£
First quarter	442,936,400	26,785,962	Dr 5,074,588
Second quarter	350,840,200	25,195,690	Dr 1,077,132
Third quarter	205,481,600	12,120,153	Dr 1,218,057
Fourth quarter	268,105,000	24,228,719	Dr 3,810,507
	1,267,363,200	88,330,514	Dr 3,509,270

Profits in the last quarter show easily the highest ratio, but the ratio of 7 per cent. for the full year is a low one. In 1921 it was 10.3 per cent., and in 1920 15.2 per cent.

The average rates paid on the three classes of capital in the four quarters of each of the past three years are set out below:—

	On Debenture Capital.			On Preference Capital.			On Ordinary Capital.		
	1920.	1921.	1922.	1920.	1921.	1922.	1920.	1921.	1922.
First quarter	4.25	4.45	4.70	5.1	5.0	5.3	12.2	10.3	8.5
Second quarter	4.45	4.61	5.00	5.0	5.6	5.9	13.7	12.6	8.8
Third quarter	4.12	4.45	5.21	4.9	5.0	5.4	14.2	9.7	7.6
Fourth quarter	4.45	4.52	4.83	5.3	5.1	5.6	11.6	7.6	8.6

There is a distinct though somewhat irregular rise in average debenture interest, which is no doubt a reflection of the high rates at which debentures and short-term notes (which are included) were issued during the boom period. Average preference dividend rates have shown a steadier movement. Much wider fluctuations, of course, have occurred in average ordinary dividend rates, the very substantial figure of 14.2 per cent. having been reached in the third quarter of 1920. These percentages, it should be mentioned, do not include the bonus share distributions so popular during the post-war boom.

The final table shows the average rate paid in the last quarter of 1922 in each of the groups, together with the ordinary rates recorded a year ago:—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.	Rate a Year Ago.
Breweries	£	%	£	%	£	%	%
Hotels, restaurants, &c.	13,395,439	4.2	7,071,614	6.0	8,062,013	10.8	10.7
Iron, coal, and steel	2,987,721	4.5	1,940,000	6.1	2,486,545	8.2	9.5
Land, mortgage, &c.	14,347,515	5.9	15,007,302	6.0	36,529,342	17.3	39.9
Motor and cycle	11,225,375	4.6	6,323,655	4.6	13,478,182	5.6	6.3
Nitrates	50,000	5.6	1,038,929	5.8	3,727,264	8.5	6.0
Oil	383,980	5.4	50,000	6.0	1,328,069	2.8	8.8
Rubber	4,750,000	5.0	10,488,380	7.6	8,873,708	16.4	19.6
Shipping	156,776	7.0	390,000	1.4	10,064,649	1.1	1.3
Shops and Stores	6,644,760	4.8	4,383,380	4.6	7,710,698	9.2	8.3
Tea	2,143,490	5.7	3,802,849	5.7	9,090,978	7.5	1.3
Telegraphs	12,660	5.0	172,300	8.2	325,531	10.8	9.1
Textiles	3,685,575	4.0	2,000,000	3.5	12,817,175	9.6	8.2
Tramways	1,700,000	6.6	6,930,000	5.8	16,230,000	16.4	16.7
Trust companies	587,608	4.8	300,000	4.9	1,286,222	5.6	5.1
Miscellaneous	3,751,041	4.1	5,337,707	4.1	8,549,665	3.0	3.2
	5,067,206	5.3	19,394,114	6.0	42,914,703	13.3	10.0
	70,919,152	4.8	84,630,293	5.6	183,474,744	8.6	7.6

High rates of dividend are still the order of the day in the oil and textile groups, but apart from the miscellaneous section there are only two other groups which paid a higher average than 10 per cent.

FREIGHTS AND SHIPPING IN 1922.

The problem that confronted shipowners during the war period, and for some time after, was how to force a quart of cargo into a pint of carrying space, but conditions throughout 1922 were exactly the reverse, the shipping position being very similar to that witnessed in 1913 and early in 1914. At the beginning of last year over a thousand vessels, with a net tonnage of 1,308,000 tons, were laid up in this country, and, taking the whole world, the year started with something like eight to nine million net tons of merchant shipping unemployed. Of course, a lot of this was old shipping, which could never hope for remunerative, or, indeed, any, employment while trade remained depressed, but the general position was distinctly bad for owners everywhere, and in the circumstances it was not at all surprising that many of the newcomers who had jumped into the business when the post-war "boom" was at its height in 1920 with steamers for which they paid most extravagant prices found themselves in difficulties. Tonnage which had previously changed hands at £25 and more per ton was sold off for absurdly low figures under forced sales, and most of the smaller shipping concerns were weeded out. The older companies, with their tonnage written down to a reasonable figure, say, from £6 to £9 per ton, were able to weather the storm, and it became obvious as the year drew near its close that the leading shipping companies of 1913 were to be the shipping companies of 1923. Low freights, chaotic exchanges, the absence of cargoes, and a supply of mercantile tonnage far in excess of the world's needs

simply played havoc with the smaller shipping companies, with high-cost steamers and no reserves, and there is no doubt that this drastic clearing out of the weaklings has left the British merchant marine stronger than it was before. Certainly the position of the more important British shipping companies at the close of last year was much better than it was earlier in 1922, as can be seen by the confidence shown by the investing public in shipping securities and the all-round rise in the value of good shipping shares.

By the end of the half-year there was a moderate improvement in the general position, and further steady progress in this direction followed, the unemployed shipping by the close of the year having dropped to well below a million tons net. The United States merchant marine, however, found great difficulty in obtaining cargoes for the steamers working from the American ports, and very heavy losses were incurred by the State-owned merchant fleet, while France also had a large percentage of her merchant fleet tied up idle, owing to the dispute with the seamen and the general depression. Taking it all round, the shipping of this country was better employed than any other in the closing months of the year, and the recovery in the outward coal position did much to bring about this desirable state of affairs. Eliminating steamers which are old or obsolete, there is now a very small portion of the British merchant fleet off the active list, and the fact that shipping working from the home ports is now more equally distributed than it has been since 1914, means that British owners are in a very favourable position for supplying the carrying needs of any country at competitive rates, as British vessels of any size or speed can be placed on any loading berth in the world at short notice, or sent out in ballast if the freight tendered warrants such action. Taking the whole year all through, then, British ships were able to secure the bulk of the cargoes offering, but as rates were cut so fine in nearly every instance, the earnings of the merchant fleet were very low. In 1920 British shipping earned something like £275,000,000, but during the following year there was a very sharp falling off to about £80,000,000, while last year the average monthly earnings could not have been more than £5,000,000; this, however, compares very favourably with the results obtained by other countries. The British passenger ships did very well at one period of the year, but this traffic was curtailed by the restrictions in force in certain countries in connection with immigrants, and high fares checked travelling for pleasure, although late in the year all the leading shipping companies working to South Africa, Australia, India, and the East made a fairly big cut in their passage rates. It may be mentioned, however, that this country now owns the finest fleet of passenger liners in the world, and is therefore in a position to hold its own and more in the rate war which will undoubtedly loom large on the shipping horizon sooner or later, especially in the Transatlantic trade. It is known that certain movements are contemplated by foreign shipping interests, but it will be found that British shipowners are well placed and quite ready to meet any competition, whether it comes from countries working with State-aided tonnage or otherwise. In the cargo market, of course, the war never ceases, this being probably the most open market in the world, where knowledge, resource, and a firm grip on the intricate workings of the shipping industry count for much.

The movement in freight rates since the beginning of 1920 is shown below:—

Voyage.	Jan. '20.	Jan. '21.	Jan. '22.	Jan. '23.
Grain, Range/U.K. per qr.	10/	6/6	4/	3/6
Coal, Virginia/Plate per ton	914	85	84	83 1/2
Grain, Plate/U.K.-Cont.	145/	45/	32/6	27/6
Nitrates, Chili/U.K.-Cont.	200/	60/	30/	37/6
Bombay/U.K.-Cont. ...D/W ton	97/6	50/	22/6	28/
Australia/U.K.-Cont. per ton	105/	75/	47/6	43/9
Ore, Bilbao/Middlesbrough ..	27/	15/	7/	8/
Coal, Wales/Plate	40/	22/6	14/	12/

The outlook favours a continuation of an active demand for coal carriers, and should there be another strike among the American miners in the spring, great pressure would be put on the British loading ports. Rates from South Wales to the States have already risen this year from 7s to 9s 6d, and owners are inclined to take a very firm

stand. There is also the possibility of trouble breaking out in certain Continental coalfields, and everything points to active conditions in the coal-steamer market for some time to come. Homeward business will depend a lot on the political and exchange position, but there are many indications that better times are coming. The Argentine crops will call for tonnage, although there are unsold cargoes about at the moment, and there is every sign that nitrates, sugar, and other commodities will begin to move in greater quantity later in the year. The revival in the iron and steel industry and the shortage of scrap material will give the ore trade a useful fillip, and already there is more activity seen in the time charter market, with several steamers booked up for the States/West Indies and Transatlantic trade. Rates are not likely to rise much, but there should be more chartering done, and the first improvement will be seen in the outward coal section.

A YEAR'S OVERSEAS TRADE.

THE total turnover of British merchandise trade in 1920 was about £3,490 millions; in 1921, £1,897 millions. The Board of Trade returns just issued show a further drop in 1922—but this time a small one—to £1,828 millions. The recent comparative stability of prices causes a comparison of 1922 and 1921 value figures to be far less vitiated by price changes than was the comparison between the value figures of 1921 and 1920. Nevertheless, the factor of price changes, as will be seen from statistics presented in this article, has to be borne in mind. The summary of the past year's value figures for imports, exports, and re-exports, as compared with those of 1921, reads as follows:—

CALENDAR YEAR.				
	1921.	1922.	Decrease in 1922.	
	£	£	£	%
Imports	1,085,500,061	1,003,918,124	- 81,581,937	- 7.5
British exports	703,399,542	720,496,426	+ 17,096,884	+ 2.4
Re-exports	106,919,306	103,777,871	- 3,141,435	- 2.9
Total exports	810,318,848	824,274,297	+ 13,955,449	+ 1.7
Excess of imports over total exports	275,182,213	179,643,827	- 95,538,386	- 34.7

A fall of over £81 millions in imports coincides with a rise of £17 millions in exports, while re-exports are £3 millions down. In connection with the rise in the value total of British exports, it must be remembered that the prices of many leading British manufactures were severely cut early in the past year, and the increase in volume must be considerably larger than the increase in value would by itself suggest. To that subject we will return in a moment.

Perhaps the most remarkable feature of British overseas merchandise trade in the past two years is that in that period nearly £200 millions have been knocked off the excess of imports, the reduction in 1921 having been similar to that recorded above for 1922. The 1922 figure of £180 millions, or £15 millions a month, compares with an average of about £11 millions a month just before the war, and should be well within the capacity of our invisible exports to cover. It would, indeed, appear that Great Britain has worked back to a position in which she again enjoys a favourable trade balance of substantial, if not of pre-war, dimensions. How the balance of merchandise trade moved month by month in the past two years will be seen from the following table:—

MOVEMENTS OF MERCHANDISE TRADE BALANCE.				
Month.	Imports in 1922.	Total Exports in 1922.	Excess of Imports in 1922.	Excess of Imports in 1921.
	Million £.	Million £.	Million £.	Million £.
January	76.5	71.6	4.9	14.3
February	69.4	68.5	.9	20.8
March	87.9	74.7	13.2	18.1
April	80.6	64.7	15.9	21.6
May	88.8	67.0	21.8	36.0
June	84.3	60.9	23.4	43.0
First half-year	487.5	407.4	80.1	153.8

MOVEMENTS OF MERCHANDISE TRADE BALANCE.				
Month.	Imports in 1922.	Total Exports in 1922.	Excess of Imports in 1922.	Excess of Imports in 1921.
	Million £.	Million £.	Million £.	Million £.
July	81.8	68.7	13.1	28.0
August	82.6	67.5	15.1	27.3
September	76.9	68.9	8.0	23.1
October	85.0	68.7	16.3	12.1
November	95.6	75.6	20.0	16.6
December	94.9	67.4	27.5	16.8
Second half-year	516.8	416.8	100.0	123.9
Full year	1,004.3	824.2	180.1	277.7

The totals here given do not agree exactly with those given in the first table, the explanation being that the official returns give corrected totals in advance of corrected figures for individual months. The major part of the reduction in the import balance was achieved in the first half of the year, and it will be seen that in the last three months of 1922 the import excess was considerably larger than in the corresponding period of 1921. This feature of the trade of the last part of the year is a reminder that the import excess can hardly be expected to fall substantially in 1923. But the huge reductions of the past two years are an achievement of great financial importance, which has undoubtedly been one of the factors at work in lifting the exchange value of sterling.

In the following table we compare the quantities of a number of leading foodstuffs and raw materials imported in 1921 and 1922 and the average value per unit imported:—

IMPORTS.				
	Quantity.		Value per Unit.	
	1921.	1922.	1921.	1922.
Raw cotton.....centals	11,725,521	14,319,902	6.16	5.96

Tea.....lbs	447,583,002	418,819,789	0.052	0.062
Tobacco.....lbs	229,112,173	186,001,541	0.0995	0.101

Although the general price level has been much steadier than in 1921, the above figures show that the average prices of many of our leading articles of import were substantially lower in 1921 than 1922. Sugar, butter, and flax, hemp, and jute are the most notable instances, while cotton and wool show comparatively little change.

The next table illustrates the point mentioned above, that 1922 saw a substantial increase in the exports of leading British products. In reading the figures, however, it must be remembered that in 1921 the export trade was severely restricted for many months by the great coal stoppage and its effects:—

EXPORTS.			
	Quantity (000's omitted).		
	1920.	1921.	1922.
Coal	24,932	24,661	64,198
Pig-iron and ferro-alloys	579	136	794
Railway material	311	340	480
Total of iron and steel and manufactures thereof	3,251	1,697	3,401
Textile machinery	63	157	155
Total machinery	462	506	403
Cotton yarns	147,432	145,895	201,221
Cotton piece-goods.....sq yds	4,435,405	2,902,289	4,181,176
Wool tops	238	347	416
Woollen tissues.....sq yds.	187,233	76,556	121,489
Worsted tissues.....sq yds.	77,355	40,814	62,458
Linen piece-goods.....sq yds.	93,045	39,962	77,421
Boots and shoes	819	313	492
Leather	271	228	232
Paper and cardboard.....cwt.	2,350	1,463	2,455
Locomotives	4	7	32
Motor-cars and chassis	8	4	3

Coal is, of course, the feature of the list. The total export last year of 64,198,384 tons, which is nearly 2½ times the figure for 1920, compares with 73,400,118 tons in 1913. The exports increased in the latter part of 1922, and in the last quarter the monthly average coal export was comparable to that of 1913. These figures do not include bunker coal, or, as it is officially described in the returns, "coal shipped for the use of steamers engaged in the foreign trade." Under this head the 1922 figure is 18½ million tons, compared with 21 millions in 1913, and nearly 14 millions in 1920. For a time of trade depression the coal figures of 1922 are remarkably satisfactory, and they prove that this country has regained its hold on its overseas markets, and also its position in the bunker trade. This is an achievement of high national importance, which could not have been recorded but for the drastic reduction in wages to which British miners have submitted. The last remark applies also to the large measure of recovery enjoyed by iron and steel manufactures. It will doubtless come as a surprise to many that exports of iron and steel manufactures in 1922 exceeded those of 1920. The rise here, again, was progressive in the past year, and will, we hope, continue in 1923. Cotton yarns and woollen tissues are other noticeable items in a list which provides ground for encouragement.

The bullion and specie figures for the past three years compare as follows:—

	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
	£	£	£	£
1920	50,678,283	92,565,137	9,923,034	11,493,266
1921	49,676,047	59,348,158	10,264,443	12,045,422
1922	34,543,591	44,851,917	10,100,552	13,235,269

In 1922 the surplus of gold exports over imports at £9.7 millions is similar to that of the previous year. Gold imports last year from the Transvaal were £4.2 millions lower at £30.4 millions, while gold shipped to the United States was only £26.6 millions, as compared with £55.5 millions in 1921. British India, however, took from us £12.9 millions worth of gold, as compared with £1.5 million in 1921. The statistics of shipping tonnage engaged in overseas trade amplify the evidence of the returns themselves that a larger volume of commerce was passing in 1922. The tonnage cleared with cargoes from British ports in 1922 was 59.7 million tons, as compared with 36.4 millions and 36.7 millions in 1921 and 1920 respectively. For this large increase the big rise in exports of coal must be responsible in an important degree. Tables setting out the value figures of imports and exports in December, and the full years 1921 and 1922, will be found in the commercial section at the end of this issue.

NOVOROSSISK.

(FROM OUR MOSCOW CORRESPONDENT.)

In studying the present economic situation in Russia, and especially of the progress made under the new economic policy, attention should be given to the developments which are taking place not only in Moscow and Petrograd, but also in the outlying towns and ports of Russia. During a recent visit to Novorossisk, the only Black Sea port in Russia (excluding the Ukraine), and formerly one of the most important ports on the east of the Black Sea, I spent some time in examining the present state of the port as compared with its condition at the outbreak of war in 1914. Novorossisk, the expansion of a small and insignificant fishing port, came into existence about 40 years ago as the result of the Vladikavkas Railway Company having selected Zemess Bay as a suitable spot for the termination on the Black Sea of their railway system. In 1893 the Russian Government completed the large breakwaters which protect the harbour from the heavy seas caused by southerly winds, and the bay of Novorossisk now forms an excellent harbour with good anchor ground. Following the completion of the breakwaters, the railway company built five wooden jetties or piers for loading and discharging, three of which are fitted with overhead galleries for loading grain in bulk, one with pipe-lines for loading oil in bulk, and one pier fitted for discharging cargoes. These five piers have berths for 30 steamers, the depth at the end of the pier

being 27 feet. In addition, the Government built in the north-eastern part of the harbour stone quays with berths for four or five steamers, and in this part of the harbour there is also a large pier specially fitted for loading cement and discharging coal for cement works. A special pier also exists for coasting trade and passenger steamers. The Royal Dutch Oil Company also possessed their own pier for loading oil in bulk through pipe-lines laid down on the pier. Two new stone piers had been commenced before the war, but were left unfinished.

For the development of the considerable grain export trade the railway company built a large grain elevator on modern lines, with a capacity of 60,000 tons, together with a number of stone warehouses in connection with the elevator, and over 100 wooden warehouses for grain and other merchandise; all are connected with the loading and discharging piers by railway lines. For the storage of oil a number of tanks were installed by the railway company and by a private oil company which had a small refinery outside the town. For the discharge of steamers the railway company possessed several steam cranes running on rails, many of which are capable of lifting five tons each, two of 10 tons each, one of 15 tons, and one of 25 tons; there was also a floating crane capable of lifting 50 tons. Thanks to the favourable position of the port—the bay of Novorossisk never freezes, although the strong north-easterly winds during the winter months often lower the temperature considerably below zero—and the vigorous action of the Government and the railway company, Novorossisk secured the large transit trade from and to the North Caucasus and South of Russia, and became the winter port for the large and growing commercial centre of Rostof-on-Don. The following statistics of exports by sea in 1913 give an idea of the trade of the port before the war:—

	Tons.		Tons.
Grain and seed.....	975,630	Tobacco	2,130
Crude oil, benzine, and kerosene.....	213,075	Asphalt	650
Oilcake	149,780	Flour	530
Oak staves.....	17,540	Galoshes	425
Hay and straw.....	8,860	Coal	415
Carbonate of potash	6,780	Miscellaneous merchandise.....	400
Rails	3,220	Wool	165
Liquorice root	3,180	Sunflower seed oil	90

The pre-war imports consisted chiefly of agricultural machinery from the United States and Great Britain, machinery of all kinds, fire bricks, and fire-clay. The following are the statistics of imports by sea:—

	Tons.		Tons.
1904	27,165	1909	39,922
1905	30,340	1910	45,000
1906	32,575	1911	46,775
1907	30,075	1912	57,470
1908	37,265	1913	91,146

The port was in 1913 visited by 450 steamers, with a tonnage of 828,141 tons. Of these, 166 were British ships, whose tonnage was 355,547 tons.

Before the war the cement industry was highly developed in Novorossisk, and the surrounding districts. The raw materials are taken from the mountains surrounding the port. Novorossisk became the centre of the industry for the whole South-East of Russia, the annual production amounting to 4,550,000 barrels. The cement was exported entirely by rail, or by sea to other Russian ports, very little being shipped abroad.

I come now to the present position. With the outbreak of war in 1914, Novorossisk, dependent almost entirely on transit trade, was left without any business. In October, 1914, the town was bombarded from the sea by the Turks, and several oil storage tanks destroyed by fire. Further destruction followed during the civil war in the fighting between Deniken's troops and the Red Army. Early in 1920 some of the stone warehouses attached to the elevator and numbers of wooden warehouses were burnt. Since 1914 no repairs have been made to the wooden piers, and most of them are now unfit for use. The elevator is intact, but the railways are in bad condition owing to absence of material for repairs, especially for replacement of sleepers. With the famine in the Volga extensive utilisation of the port was made during 1922 by the American Relief Administration and the Nansen Organisation, which imported large quantities of grain and other relief supplies, and the port

resumed in a small measure its former activity. In the spring and summer of 1922 trade was commenced with Constantinople, and flour, sugar, beans, and other food-stuffs were imported; but in November this trade stopped. Recently, however, signs of returning life in the port are evident—materials are being brought forward to repair the piers, and about 5 million poods of grain have been stored in the elevator with a view to export to Transcaucasus and Black Sea ports. Foreign trade instead of being conducted only with Constantinople is now being commenced direct with Hamburg and London. Steamers may be sent with cargo to Novorossisk without any danger, and despatch is good when there are not many boats in the port. Two cranes of 10 tons and 18 tons, and a floating crane of 50 tons, are now in working order. Owing to the difficulty of remitting money and the fluctuating exchange freights should be prepaid. Stevedoring is paid for under the tariff of the Russian Labour Union, which does not always move in proportion to the rising exchange of sterling dollars and Turkish liras.

A cargo of 1,500 tons of oak props and logs, and about 500 tons of carbonate of potash, and 500 tons of unpressed and unwashed wool, were recently shipped to London, and a cargo of 1,000 tons of tobacco to Hamburg. In the middle of November there was also ready for shipment about 300 tons of carbonate of potash, and 2,500 tons of oak props and logs for London, and 1,700 tons of tobacco for Hamburg. Recent evidence of renewed importation is afforded by the arrival of a German steamer from Hamburg with German goods consisting of oil piping, tanning extract, and electric cables, and British steamers are discharging (one steamer every three weeks) tank wagons from Germany and England. The Italian regular lines have ceased to run to Novorossisk, and it is uncertain when they will recommence. Oil export has for the present more or less ceased. During 1922 four large tank steamers loaded cargoes of benzine at Novorossisk, and a further steamer is expected.

Cement works, which existed before the war (*i.e.*, "Zep," manufacturing capacity 1,000,000 barrels per annum, Black Sea Cement Factory, 2,000,000 barrels, "Orel" (Eagle) Cement Works, 300,000 barrels, Gelendjik Cement Works, 600,000 barrels, and four smaller cement works, 650,000 barrels) have been combined, under the new economic policy, into a trust. In fact, the only factory working at present is the first Government Caucasian Cement Works (formerly the Black Sea Cement Factory). A few cargoes of cement have been shipped to Constantinople, and a small quantity sent by sea and rail to other Russian ports and towns. The whole import and export trade is in the hands of "Gostorg" (Government Institution for Foreign Trade). The Vladikavkas railway is now the property of the State, but the commercial agency of the railway, into whose hands the management of warehouses and piers has again been placed, has been revived, and will probably in the future again become the leading commercial body in the port.

LATIN-AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

URUGUAY.—Economic affairs in Uruguay continued unfavourable throughout the past year, except for a partial improvement in general exports towards the close. Late advices, however, suggest that the determination of the Executive to exercise the strictest economy in national expenditure, a policy already put partly into effect, should show beneficial results during the current financial year. The Government had always claimed for Uruguay the most stable currency of the Latin-American Republics. During the war and even later, the *peso* stood well over *par* (as late as July, 1919, marking \$1.0342). Uruguayan currency, notwithstanding its unwieldy and inconvenient form, holding its own throughout the prolonged storm in Europe. The value of the Uruguayan External Debt held in the Republic rose from about \$32,000,000 to \$74,000,000 in the six years 1915 to 1920. Of the State's foreign debt (according to the Uruguayan delegate at the Brussels Conference, held in September, 1920), about 45

per cent. was held in Uruguay, the same amount in Europe, 5 per cent. in the United States, and 5 per cent. in other countries. The subsequent decline in the national currency is attributed to the after-results of the world conflict, and in no way, as may be perhaps urged against Brazil, is it the consequence of lack of thrift or financial imprudence. The national treasury has passed through a period of extreme difficulty, revenue diminishing while expenditure has unavoidably expanded. The result has been an ever-increasing deficit which is now estimated at over 1,700,000 pesos in excess of that provided for in the estimates as passed by the Chamber of Deputies, namely, 2,000,000 pesos. The striking change that has come about in Uruguay's economic prosperity can be gauged from a comparison of the budgetary figures between June, 1918 and 1922. At the close of the fiscal year 1918-19 there was a surplus of revenue over expenditure amounting to 635,848 pesos, while on June 30, 1920, the surplus stood at 772,400 pesos. Then it was that the reverse side of the situation began to assert itself. For the fiscal year 1920-21 there was a deficit of 4,980,780 pesos, a total subsequently reduced by 999,287 pesos, the proceeds of the surplus consolidated debt service held by Messrs Glynn, Mills, Currie and Co. At the end of June, 1922, the deficit amounted to 8,400,000 pesos, to cover which a loan of \$10,000,000 was sought. At the then-current rate of exchange this would have been equivalent to 6,888,000 pesos, and at *par* to 8,652,000 pesos. To raise a loan in the United States, in order to cover this deficiency, was not found so simple a matter as was anticipated. The offer of a group of North American bankers of \$6,000,000 at 8 per cent., redeemable in 30 years, was found unacceptable. But a loan of some kind, and upon some terms, must be arranged speedily in order to relieve the situation which has become considerably aggravated. The disastrous effects of an adverse exchange upon foreign—in this case British—enterprise was recently described by the chairman of the Central Uruguay Railway Company. It seems that while the net profits of that transport system had amounted, in Uruguay, to £400,300, or £332,400 more than for the year 1920-21, a loss of £182,134 was actually incurred in remitting surplus revenue to this side, necessitating the transfer of £50,000 from the general reserve fund merely to meet fixed and other charges. The significance of the decrease in the value of the Uruguayan peso may also be gauged from a comparison of the exchange value in 1913. At that period the value of the peso was 104 cents; by 1920 it had receded to 88 cents, and at the close of 1921 it stood at 72 cents.

CUBA.—Prospects of a greatly improved sugar crop, as regards both quality and quantity, and the fact that the public revenues of the new fiscal year have exceeded estimates, have created a distinctly optimistic feeling in Cuban business circles. For the first time in two years a spirit of hopefulness prevails. Two of the principal sugar concerns, the Cuban Cane Sugar Company and the Cuban-American Sugar Company, have presented satisfactory operating reports, showing, in the first case, a profit of over \$28,000, against a loss of nearly \$10,000 last year; and, in the second, a profit exceeding \$2,000,000, against a loss of nearly \$8,000,000 in 1921. The statistical position of the product has also improved, total stocks on hand being estimated at less than 625,000 tons, compared with 1,900,000 tons at the corresponding period of last year. It is thought that the quantity of Cuban raw sugar to be carried over to 1923 will not exceed 228,000 tons, against a carry-over of 1,381,000 tons in 1921. The island's second most important staple product, tobacco, promises less well with a production of some 50,000 bales below that of last year, which reached 355,000 bales. On the other hand, the present stock is fast diminishing, having been reduced from 450,000 bales, at which it stood twelve months ago, to less than 300,000 bales at present. It is hoped that in the unfortunate tariff war which appears to have again broken out between the United States and Cuba, and which is adversely affecting the island's principal export trade, British interests will not be made to suffer. The adoption of retaliatory measures threatened by the Special Commission of the Cuban House of Representatives would, not improbably, penalise indirectly a number of British goods; this would provide a sad commentary

upon the recently reduced tobacco duties introduced in this country upon the urgent representation of Cuban tobacco interests. The United Kingdom is still Cuba's best cigar market, shipments to this side on occasions exceeding, by as much as 50 per cent., those made to the United States, the island's second-best customer. In the seven months following the disappearance of the *ad valorem* duty, the number of Cuban cigars cleared increased by close upon 16,000,000, compared with the corresponding period of the previous year. During the Christmas season over 5,000,000 cigars are usually received from Habana, and this year, it is thought, has proved no exception.

COSTA RICA.—A notable example of economic organisation has been afforded by the Government of Costa Rica, which, in a decree recently issued, established an office of control of expenditures of Government funds. By the terms of this decree, all members of the Commission and their assistants must be appointed by Congress, while the Chief of the office, besides providing a bond of 20,000 colones (1 colon = 15 rod) to the State for his integrity, can hold no other remunerative office of any sort. Co-operating with the Ministry of the Treasury, especially in regard to the Budget, the Office of Control supervises all Government employees, mainly for the purpose of seeing that positions are filled by none but competent persons. Without the seal of the respective bureau chief, the approval of the Minister of Finance, and that of the Chief of the Office of Control, no cheque on the National Treasury can be honoured. Other duties include the auditing of Government collections and general supervision of the country's financial affairs. The effect of this new arrangement will be seen within the next few months, since Costa Rica seems destined to pass through severe economic trials owing to the comparative failure of the country's crops on account of adverse climatic conditions.

Notes of the Week.

THE BRITISH DEBT TO AMERICA.—At the opening of the Washington discussions on proposals for funding the British war debt to the United States, the Chancellor of the Exchequer made a speech which is endorsed by responsible opinion in the City of London, and has also created a favourable impression on the other side of the Atlantic. Mr Baldwin began by reiterating the statement—which has been made so often that it should scarcely need further repetition—that it is the intention of this country to honour the obligations it has incurred. He then gave a clear exposition of the British financial position, explaining how we had balanced our Budget and imposed heavier taxation per head than any other country. His speech then went on to examine the technical difficulties of repayment of the largest debt "ever contracted between two friendly nations," to explain the impossibility of paying in gold, and the implication of vast payments in goods and by the purchase of dollars. Having thus surveyed the ground, he urged the necessity of a quick and harmonious conclusion of a fair business deal. The right note having been struck, a response was not long in coming. It came in the shape of the announcement that President Harding had instructed the Commission, with which the Chancellor is dealing, not to consider itself bound by terms of the Debt Funding Act recently passed by Congress. This Act included in its provisions the stipulation that the lowest rate of interest to be permitted in any funding scheme for the repayment of foreign debts was 4½ per cent. President Harding, if cabled reports are correct, promises to send the recommendations of the Commission to Congress with a request that such amendments to this Act as may be necessary shall be passed. It is, perhaps, a little dangerous to assume that Congress will necessarily approve of anything and everything that the Commission may recommend. Nevertheless, the attitude of the Executive, revealed by the President's message to the Commission, is the first tangible ground of belief that the United States is now prepared to approach not only the British debt question, but the whole problem of international war debts, with a more open mind than heretofore, and is ready to treat these

problems as purely business matters to be solved on lines of economic expediency and common-sense. We, therefore, are inclined to regard this week's news from Washington as more promising than any that has come across the Atlantic since President Wilson disappeared from the political stage. At the same time, evidence is to hand that the position of Great Britain in regard to international war debts is being more clearly recognised by the American public. The Bankers' Trust Company of New York has just issued some statistics showing how much the United States and Great Britain respectively have been repaid of the huge sums lent to other countries for war purposes. These figures show that repayments (including both capital and interest) to the United States up to November 15, 1921, totalled \$641,607,543, and repayments to Great Britain up to March 31st last, \$447,620,128. Payments to the United States up to the date mentioned include \$358,526,326 from Great Britain alone, who since then has paid a further \$134,312,500. A British White Paper is quoted showing that of total debts owing to Great Britain of over £2,017 millions, less than £92 millions in principal and interest had been received up to March 31st last, and of this more than one-third came from British Dominions. The *New York Globe* remarks that these figures contain "surprising information for many Americans," and proceeds to remark:—"The fact that Great Britain is one of our debtors is . . . a fortunate fact for us. We are the better paid. England, with almost as large a debt and more need for her money, may well sigh for a few billions out on security as good as her own." The article concludes with an appreciation of British financial policy. Welcome evidence accumulates that closer and more sympathetic study is being devoted in America not only to our own financial position, but also to the intricacies of the whole international debt problem.

NEAR EAST PROBLEMS.—The break-up of the Lausanne Conference has again been threatened and again postponed. Each of these jolts and jars seems to have been more violent than its predecessor, and the repeated acrobatic performances by which all parties succeed, each time, in surmounting them indicate that nobody concerned is prepared for the alternative involved in a rupture—the immediate renewal of hostilities. This in itself is something to be thankful for; but, on the other hand, as the Conference creaks along on its uneasy course, it is becoming increasingly evident that its outcome will, at best, be a negative one. War may be avoided; peace and goodwill and the essential conditions for reconstruction hardly look like being achieved. Among the interesting incidents of the past week have been the letters in the *Manchester Guardian* from Sir William Tyrrell and from Mr Arens, the chief of the Press Service of the Russian Delegation. In effect, each side accuses the other of being unendurably provoking, and makes out a good case for its contention. But in this country, certainly, public opinion will hardly let matters rest there. Surely it is just the business of diplomatists to deal with impossible people, and the consequences of Anglo-Russian estrangement under present conditions must be serious for the British Empire. The public will want to know whether Lord Curzon has really tried his hardest to come to an understanding with Russia, not only at Lausanne itself, but during the negotiations preparatory to the Conference. We are threatened with the hitherto unknown combination of Russia and Islam. All through the 19th century the imponderable but powerful factor of Islamic sentiment was on our side against Russia. Now it is undoubtedly on Russia's side against us, and if there is one certain result of the Lausanne Conference, it is the failure of Lord Curzon's attempt to win Islamic sympathies back again by offering the Turks about half of what they ask instead of nothing whatever. In comparison with the developments in Anglo-Russian relations, the concrete events at Lausanne during the past week are of little account. The Allies have wasted their powder and shot over the secondary question of the Ecumenical Patriarchate, and the Turks have on this point, as on the Caliphate, adroitly proclaimed a concession which costs

them nothing, in order to be the more intransigent on points of real importance, like the effective protection of minorities. The Patriarch is to remain as a spiritual pastor at Constantinople, but his flock will, presumably, be limited to the orthodox Greek-speaking inhabitants of that city. The orthodox populations in ex-Ottoman territories definitely incorporated in Greece, Yugoslavia, Bulgaria, and Albania since 1912 will all now, presumably, be transferred to the ecclesiastical jurisdiction of the respective "autocephalous" State churches of these countries. The Turkish-speaking orthodox in Anatolia are also being organised into a separate church of their own. If the Patriarchate loyally accepts an exclusively "spiritual" position, all that has been achieved is the application of a grand old title to a very modest new institution. If it fails to keep its hands off politics it will probably end in the Greeks of Constantinople being driven into exile like their kinsmen of Eastern Thrace and Anatolia. The week has seen two other events of importance in connection with Near East politics. One is the death of ex-King Constantine, which removes a potential element of disturbance; the other the reiteration by the Colonial Office that the British Government adheres to the Balfour Declaration in respect of Palestine. This reiteration was made by the Duke of Devonshire on Thursday to a deputation of Palestine Arabs who interviewed him at the Colonial Office.

Banking Profits.—In recording last week some of the early dividend declarations of the banks we referred to the fact that the profits so far published showed a decline in comparison with those for 1921, while the dividends were maintained at the same rates as before, with the exception of Williams, Deacon's, who slightly increased the dividend on the "A" shares. The majority of the English joint-stock banks have now disclosed their net profits for 1922, and in no instance is an increase recorded. The decreases, however, show some interesting variations, as may be seen from the following three years' comparison:—

	1920.		1921.		1922.	
	Profits.	Div.	Profits.	Div.	Profits.	Div.
Bank of Liverpool and Martin's	£ 745,949	16	£ 548,528	16	£ 504,802	16
Barclays	2,927,523	A 10	2,201,662	A 10	1,873,731	A 10
Lancashire and Yorkshire	231,426	19	241,327	20	236,843	20
Lloyds	3,237,742	16	2,529,124	16	2,068,875	16
London Joint City and Midland	2,831,861	18	2,454,083	18	2,253,492	18
L. C. City and Parr's	2,915,708	20	2,167,845	20	1,888,021	20
Manch. and County	296,077	16	260,953	16	226,108	16
Man. and L'pool	561,783	18	539,275	18	465,245	18
Nat. Prov. and Union	2,762,515	16	2,054,686	16	1,854,190	16
Union of Manchester	341,027	20	293,738	20	337,175	A 13
Williams, Deacon's	463,353	12	365,231	12	337,175	A 13
Alexanders Discount	115,941	16	141,015	17	188,202	20
National Discount	123,005	14	165,505	16	190,682	20
Union Discount	197,019	16	165,505	18	190,682	20

The smallest proportionate decrease is shown by the Lancashire and Yorkshire Bank, whose profits in 1921, it may be mentioned, increased, while others were on the down grade. The movement in the profits of the "Big Five" are worthy of study. Lloyd's, for example, have dropped in two years from £3,237,700 to £2,068,900, while those of the London Joint City and Midland have fallen from £2,831,900 to £2,253,500. A general fall in profits was an almost foregone conclusion, for in a year of acute trade depression there is no room for expansion in the volume of loans and advances, which are the chief source of revenue, and although the banks have made up to some extent for this loss of business in other directions, there can be no doubt that gross as well as net profits were lower; but there can be no confirmation of the surmise, since only one or two banks think fit to publish figures of gross profits. But while profits have diminished for the second year in succession, dividends have again been maintained at the 1920 rates, and the reason is not far to seek. Thanks to the appreciation in security values, the banks have for two years been relieved of the necessity for allocating large slices of profits to meet the fall in the value of investment holdings, and while in 1921 large allocations to general reserves were still considered necessary, the need for

still further strengthening these funds is not regarded as so pressing, for the reason, it seems obvious, that the rise in the market value of investments has automatically made large additions to hidden reserves. The following table shows the appropriation of profits as disclosed by the preliminary statements:—

	Profits.	Investment Depreciation.	Res'erve	Pre-mises.	Staff Funds.	Carried Forward.
Barclays	£ 1,873,731	..	£ 250,000	100,000	50,000	— 34,986
Lloyds	2,068,875	..	250,000	100,000	..	— 47,800
Lon. City, Westminster & Parr's	1,888,021	..	300,000	350,000	..	+ 16,877
London Joint City & Midland	2,253,492	..	500,000	300,000	..	+ 11,714
National Provincial and Union	1,854,190	..	121,969	100,000	100,000	+ 42,725
Bank of Liverpool & Martin's	504,802	..	100,000	50,000	..	+ 21,020
Lancashire and Yorks.	236,843	..	..	..	..	+ 10,532
Manchester and County	226,108	..	50,000	..	..	— 1,549
Manchester and Liverpool	465,245	..	..	..	..	+ 31,427
Union of Manchester	337,175	..	50,000	30,000	..	+ 13,035
Williams, Deacon's	337,175	..	50,000	30,000	..	+ 13,035
Alexanders Discount	188,202	..	80,000	..	..	+ 2,201
National Discount	190,682	..	..	15,000	..	+ 75,352
Union Discount	190,682	..	100,000	18,596	20,000	+ 17,000

The allocations to reserve and contingency funds by the "Big Five" for 1922 amount to nearly £1,200,000, as against £2,470,000 a year ago, while total special appropriations are £2,522,000 against £4,150,000 for the previous year. The discount companies, whose increases in profits reflect great credit upon the management, use the larger earnings to strengthen their balance-sheets, as well as to raise distributions to shareholders. In the final table we show prices and yields on bank and discount company shares:—

Name of Bank.	Am't. of Share.	Paid Up.	Price's of 1922		Price Jan. 10, 1922.	Price Jan. 11, 1923.	Present Yield.
			Highest.	Lowest.			
Bank of Liverpool and Martin's	20	2	64	5	6	6	4 9 d
Barclays "A"	4	4	8	6	6	7	5 3 0

Do	7	2	8	7	..	7	..
Union	10	5	16	11	12	16	6 5 0

The bank dividend declarations were entirely in accordance with market anticipations, and prices have remained at the steady level at which they have stood for some while past. Present prices, however, are mostly higher than they were at this time last year. The increases announced by the discount houses, on the other hand, caused a sharp rise in the quotations for the shares, but the yields, as usual, are still much above those obtainable on bank shares. The yield on London Joint City and Midland partly-paid shares was, we regret, given in a table last week as £6 4s per cent. The correct figure is shown in the table above—namely £5 4s 3d per cent.

Manchester and Protection.—At the beginning of this week there was a special meeting of the directors of the Manchester Chamber of Commerce for the purpose of discussing the result of the recent ballot of the members on the Safeguarding of Industries and Dyestuffs Acts when the members decided by an overwhelming majority in favour of the repeal of the Acts mentioned. After a long discussion, the following resolution was carried by 22 votes to 3:—"The Board of the Manchester Chamber of Commerce, realising that the Safeguarding of Industries Act and the Dyestuffs Act are proving both injurious and irritating in their effects, and in view of the declaration of the members of this Chamber, on a referendum vote, in favour of their appeal, calls upon his Majesty's Government to repeal these Acts at the earliest possible moment. They further suggest that in so far as safeguarding of certain industries may be essential for national safety, such end can best be secured by means of subsidy." The resolution has been sent to the Government, together with the referendum figures which were given in our issue of last week. The action of the Board of the Manchester Chamber this week is very significant.

During the war in 1916, the directors, who were Free-traders almost to a man, issued a memorandum giving their views as to trade policy after the war. There was a big controversy, and as a result of a ballot of the members the memorandum was rejected. Practically the whole of the board then resigned, and new directors were elected who were understood to favour a system of protection. The complexion of the board has remained much the same to the present day, and such a resolution as that given above is therefore all the more significant. The decision indicates very clearly that after a trial Manchester traders are sick and tired of Government interference in trade matters, and it is safe to say that commercial Lancashire is stronger on the Free-trade issue to-day than ever before.

Lloyd's Shipbuilding Returns.—The shipbuilding returns compiled by Lloyd's Register show that the mercantile tonnage under construction in Great Britain and Ireland at the close of 1922 was 1,468,599 tons, as compared with tonnage of 2,640,319 building at the end of 1921. The latest total includes about 348,000 tons, on which work has been suspended, so that the work actually in hand is reduced to about 1,120,000. Rather less than half the mercantile tonnage under construction in the world is in the yards of Great Britain and Ireland, as the following figures show:—

	No. of Vessels.	Tonnage.
In Great Britain and Ireland	315	1,468,599
In other countries	500	1,485,719
Total for the world	815	2,954,318

The total of tonnage building abroad includes about 216,000 tons on which work has been suspended, the country most affected being Italy. The figures show that in Great Britain and Ireland the tonnage under construction at the close of the year was about 148,000 tons less than at the close of the September quarter. The returns illustrate clearly the great slump in shipbuilding that lasted on into last year, but they provide two reasons for satisfaction. In the last quarter of 1922 work was commenced in the yards of Great Britain and Ireland on 231,187 tons—a figure which was decidedly better than those for the preceding quarters; moreover, this figure of work begun in the British Isles represents roughly two-thirds of the total begun in the past quarter in the whole world, namely, 344,630. Also the figure of 231,187 tons commenced in the past quarter compares with only 55,290 tons in the last quarter of 1921. It appears, therefore, that the bottom of the depression in shipbuilding orders has been left behind. How far our yards are still away from normal activity is shown by a comparison with pre-war returns. The average tonnage under construction in the British Isles during the 12 months before the war was 1,800,000 tons, or 770,000 tons more than the present figure of work actually in progress. The figures of tonnage under construction in leading foreign countries are as follows:—Germany and Danzig, 463,877 tons; Italy, 211,499 tons; France, 188,523 tons; Holland, 142,969 tons; United States, 139,448 tons; and Japan, 139,448 tons.

Coal and Iron and Steel Output.—The figures of coal production from the mines of Great Britain for the last two weeks of the year were 5,506,200 tons and 3,427,900 tons, and make a total output for the year of 251,850,000 tons—a weekly average of 4,854,000 tons. This compares as follows with the output of the ten preceding years:—

	(000's omitted.)		(000's omitted.)
1912	260,416	1918	227,749
1913	287,412	1919	229,780
1914	265,643	1920	229,532
1915	253,206	1921	164,354
1916	256,375	1922	251,850
1917	248,499		

The 1922 total is the highest since 1916, and compares not unfavourably with the figure for 1912. The highest weekly output in 1922 was 5,741,600 tons for the week ended December 16th, and the lowest 2,681,800 tons for the week ended June 10th. The statistics of the National

The BANK OF ATHENS

draws the attention of British merchants and manufacturers to the very important markets of the

NEAR EAST

Traders contemplating opening up business in these countries are invited to apply for information and guidance, in addition to the usual banking facilities.

THE BANK OF ATHENS
Fenchurch Street, London, E.C.

Federation of Iron and Steel Manufacturers show that the December output of pig-iron was 533,700 tons, and of steel 546,100 tons. The pig-iron figure is easily the highest monthly total of the year, and makes the year's total 4,899,500 tons, which compares with 2,616,300 tons in 1921 and 10,260,300 tons in 1913. The steel production for 1922 amounted to 5,831,900 tons, which compares with 3,703,400 tons in 1921 and 7,663,876 tons in 1913.

Issues Under the Trade Facilities Act.—Towards the end of November last it was announced in Parliament that guarantees under the Trade Facilities Act totalled round about £22½ millions. It is now pointed out by the Trade Facilities Act Advisory Committee that the Treasury under the fresh legislation passed in the last session of Parliament have power to guarantee a further sum of approximately £27½ millions, and in order to make it clear who should apply for such guarantees, they have compiled and issued an explanatory statement which is being sent out to applicants in the form of a questionnaire. In the first place it is emphasised that the Treasury can only guarantee loans—they have no power to make a loan of any kind. The advantage of the guarantee is, it is pointed out, that with the aid of the Government credit so given the applicant should be enabled to obtain money on better terms than he otherwise would be able to do, although the Committee and the Treasury indicate the quarter in which the loan is to be raised. It is laid down that the Treasury have no power to guarantee a loan which is to be used in whole or in part for the provision of working capital, and it is stipulated that the whole of the guaranteed loan must be used solely for the purpose of carrying out works of a capital nature. Further, the Treasury have no power to give a guarantee in respect of any loan which will be used for the purpose of extinguishing existing liabilities or commitments; nor will they guarantee ordinary or preference shares. Naturally, searching and pertinent questions are put to applicants, and it is well to find that the Advisory Committee are so much alive to the necessity for requiring a high standard of security. During the week, under the provisions of the Trade Facilities Act, the Kassala Railway Company—a Sudan undertaking—offered £1,290,000 of debenture stock, principal and interest being guaranteed by the British Government. The yield to the investor worked out at but £4 19s 1d per cent., and the public could only be persuaded to take 17 per cent. of the total issue, the remaining 83 per cent. being left on the underwriters' hands. Thus it would appear that slightly more generous terms must be offered to the public when an undertaking is little known.

Irish Free State and the G.S.W. Railway.—Confidence is increasing in Dublin (writes our Dublin correspondent) that the end of Irregularism is rapidly approaching. Readers of the *Economist* will recollect the stages by which this most desirable consummation is being reached. With the declension of the bellicose endeavour to impose the will of the minority upon the majority, there has been a crescendo of peace tentatives which have recently been alluded to by President Cosgrave in trenchant terms. "These peace resolutions are all moonshine. How much peace is there in them? Peace to one section, a small minority, at the expense of the majority. The minority made war, and now when they are beaten they squeal. . . . It is easy for them to try to win the peace now when they have lost the war. . . . We are going to establish a People's Peace, which will last, and which will be a warning to all evil-doers—that Irishmen intend to be masters of their own country." There is but little doubt that the vast majority support the President in this. The mystery surrounding the action of the Great Southern and Western Railway Co., referred to last week, is heightened rather than dissipated by the subsequent statement of the directorate. The company issued notices of discontinuance to practically all its employees upon the grounds that owing to loss of revenue due to civil commotion and to high wages its receipts would not enable it to meet its expenses and debenture interest—its weekly deficit was given at upwards of £10,000. These notices were issued apparently while negotiations were pending as to financial aid sought from the Free State Government, and were perhaps regarded as a trump card. The Government had been asked to guarantee net receipts as the British Government had done when it took over railways for its own war purposes. On its refusal it was asked to guarantee debenture and preference stock dividends. As it was deliberating upon the terms of its compensation policy, soon to be introduced as a Bill, it refused to create precedents which might tie its hands, but it offered to give the company financial aid to the extent of its weekly deficit if the company would, instead of closing down, maintain certain minimum essential services and curtail its maintenance and renewals expenditure so far as it could be reasonably deferred. Thereupon the company refused the Government offer, withdrew its notices to its employees, announced its intention of carrying on in the hope that circumstances might improve, and apologised in advance to the public for any inconvenience which its efforts at economy might entail. But why refuse the Government's weekly cheque for the weekly deficit which had been paraded before the world as its reason for deciding to close down? Why carry on without Government assistance after the formal decision publicly announced to close down if the Government did not help? More mysterious still, why did the quotation of its ordinary stock fall on the Dublin Stock Exchange from £44 to £35 when the Government offer of help was made, and why did it rise again to £40 when the Government offer was refused? Inquiry has established the fact that these falls and rises were unaccompanied by any substantial selling or buying—indeed, it is doubtful whether £5,000 worth of stock out of nearly £14,000,000 changed hands during the operations. The fluctuations probably coincided with the opinions of prominent brokers, certain of whom anonymously gave views for prominent expression in the Press, and threatened the Government with all the unpleasant consequences of the public losing all confidence in its financial methods. It is to be hoped that no stockholders sacrificed their holdings as the result of so artificial a slump, and that some will make it their business to inquire why the Government money was refused. Most stockholders, it is to be presumed, would prefer the half loaf to no bread, and if they cannot get their net receipts on dividends guaranteed would like to see the weekly deficit, even if, and as, scaled down by the Government conditions as to economical working, discharged out of Government money so as to render brighter the prospects of ultimate dividends. The Government, on the other hand, issued a statement roundly accusing its critics in the Press of not having taken the trouble to read the Ministers' statements on the subject in *Dail Eireann*, or of having wilfully perverted them. And in truth certain journalists who should

have known better lent their voices to the clamour, none too accurate where it was articulate, with which the assault on the National Exchequer was conducted. It is certainly justifiable for the company to press the case of its stockholders for compensation on the most generous terms, but an attempt to "bounce" the Government in a time of acute national stress and emergency cannot be regarded as meritorious. And the ambiguous character of the tactics employed have not strengthened its case. It will be a pity indeed if the forces, public and private, which it can bring to bear succeed in driving the Government out of its position that all compensation cases must be considered as a whole and treated in accordance with a policy yet to be formulated in detail. Many shrewd observers hold that, far from injuring the national credit by its prudent attitude of reserve on this question, the Government has increased its prestige and its reputation for a jealous guardianship of the national resources and revenues. And such a reputation is the very foundation upon which alone the edifice of national credit can be erected and maintained.

Stock Exchange Transactions.—With Stock Exchange business broadening out again in all directions, and with the Home Railway market attracting a most unusual amount of speculative interest, writes a Stock Exchange correspondent, it may be of service to mention a few of the points regarding Stock Exchange transactions that are sometimes not entirely understood of the people. To the Stock Exchange mind accustomed to regular fortnightly settlements it may appear inexplicable that many clients are unacquainted with what, to the House man, are the first elements of his business. Nevertheless, brokers are constantly running up against instances of perfectly natural misapprehension and misconception on the part of buyers and sellers, a few points in regard to which may enable the smoother working of business relations between broker and client. In the first place, it may be said that many clients take it as a matter of personal slight when they are told that, having bought stock, their brokers are unable to carry it over if the purchasers are not in business for themselves. The Stock Exchange rule is very strict and very definite on the point. The costermonger who is his own master can buy any quantity of stocks and shares, and contango the lot, if he can find a broker willing to grant him the necessary credit, but the managing director of some powerful corporation is debarred from doing so for the simple reason that, being in a fiduciary position, Stock Exchange rules forbid the transaction of speculative business on his account. There is no question, therefore, of a broker wishing to insult a client if he refuses, under this provision, to carry over stock which the latter has bought, for severe penalties are visited upon any breach of the rule brought before the Committee. Nor is it altogether satisfactory to either party for a speculative transaction to be opened in the name of the wife of a man for whom speculative business cannot be transacted. It has its risks, just as the sale for one account and simultaneous purchases for the next settlement carry to the mind of the Stock Exchange agent. Settlements themselves offer a whole web of complexity to the client. If he buys mining shares which he desires to carry over, he must intimate his wishes on the Friday morning preceding the following Thursday on which the settlement falls. Nominally, each alternate Monday is the mining contango day, but Stock Exchange practice dictates that the mining carry-over shall be effected in the previous Friday. Unless instructions are left with the broker on the morning of that day, it is quite likely to happen that the client will find his broker unable to give on shares on the Monday, which is the actual day upon which such transactions are supposed to be carried out. Every alternate Tuesday is contango day in the general markets, and if a buyer intends to carry over railway stocks, for instance, or rubber shares, oil, or anything else other than mining, he must let his broker know on the Monday morning unless he is prepared to run the risk of not getting his contango done. These contango arrangements naturally control to a large extent the dealings for cash and new account. Unless mining shares are sold on the Friday before the following Thursday pay-day, the would-be seller

is quite likely to find himself at a disadvantage, both as regards price and facilities, upon sending an order to realise shares on Monday, the mining contango day; the same disability attaches to cash dealings on the Tuesday in the general markets at such dates as those which occur in the settlement weeks. Clients frequently fail to realise that, supposing they find themselves unable to carry over stock, or that it is necessary for them to pay for it unexpectedly, through having given instructions late or being unable to sell for cash, their own bankers will usually take up the stock upon provision of a modest margin, the stock going, of course, into the names of the bank's nominees. Brokers, however, will often take up stock in this way for their clients if asked to do so, though the expense of stamp and fee is heavy, and must always be considered in transactions of this nature. The longer notice which a client can give to his broker as to his intentions in regard to carrying over stock, the better is he likely to be served, and the natural corollary follows that, if a man wishes to sell shares for cash on the eve of a settlement, he is likely to deal at a more satisfactory price by sending his instructions well in advance of the actual pay-day.

Swiss Stocks and Shares.—The monthly bulletin of the Swiss Bank Corporation gives an interesting table of index numbers of stocks and shares, from which we have extracted the following particulars:—

Index of Swiss Securities.	45 Stocks.	21 Shares.	Total.
Par value.	1243.03	592.9	1835.9
(In millions of francs.)	= 100 %	= 100 %	= 100 %
End of Month.	(In percent)	(In percent)	(In percent)
1913—December	90.57	183.00	117.56
1914—July	90.85	179.23	116.28
1916—December	81.22	159.51	106.51
1917—December	77.61	160.38	104.34
1918—December	75.49	150.07	99.57
1919—December	67.02	107.10	79.97
1920—December	59.07	76.27	64.63
1921—March	67.02	87.13	73.51
June	68.12	83.75	73.16
December	71.26	69.80	70.79
1922—January	72.86	72.08	72.60
February	77.43	74.47	76.47
March	78.28	74.08	76.92
April	79.36	71.14	76.70
May	82.44	80.39	81.78
June	83.26	83.65	83.39
July	83.41	83.05	83.29
August	87.22	87.70	87.38
September	87.75	90.43	88.61
October	82.05	83.32	82.46
November	85.38	86.68	85.85
December	85.51	88.25	86.39

The year 1922 has been a particularly bad one for Swiss exports, owing chiefly to the depreciation of the currencies of the principal importing countries and to various artificial restrictions imposed by them on trade. Moreover, both the number of bankruptcies and the amounts involved have been unprecedented in the commercial history of Switzerland. The prices of bonds and shares alike, however, show a considerable improvement between January and September, this latter month representing the highest point of the year. Capital levy proposals are responsible for the sharp set-back witnessed in October, but with the referendum safely negotiated, security prices very largely recovered during the last two months of the year.

German Wages in December.—Wages in Germany, though ever rising, still lag a long way behind the falling mark. Month by month wages increase 50, 70, or even 100 per cent. without attaining a level that will provide the workman with anything more than the sheer necessities of life. In the Ruhr, the most important coal district of Germany, the average wages per shift have risen enormously, as will be seen by a glance at the following table of wages in marks per shift for coal-hewers and carriers, other underground workers and surface workers. The figures are for married workers, whose wages are slightly higher than those of single men:—

MINERS' WAGES.

	Hewers and Trimmers.	Other Underground Workers.	Surface Workers.
1922.			
July	277	234	239
August	374	298	302
September	719	571	579
October	897	778	768
November	1,744	1,521	1,501
December	3,053	2,663	2,627

It will be seen that the hewer's wage rose nearly 100 per cent. from October to November, and a further 80 per cent. from November to December, 1922. In 1914 the wage per shift for the three classes of workmen was six marks, four and a-half marks, and four marks 37 pfennigs respectively. In the metal trades there are likewise three classes of workers—skilled, apprentices (or semi-skilled), and unskilled—whose average weekly wages in marks are set out in the following table (the figures being for married workers as before):—

	Skilled.	Semi-skilled.	Unskilled.
1922.			
June	1,154	1,104	1,081
July	1,407	1,353	1,322
August	1,905	1,836	1,795
September	3,392	3,263	3,185
October	4,881	4,669	4,538
November	8,457	8,106	7,870
December	17,256	16,440	15,864

It is clear that wages in all classes of metal-workers have risen over 100 per cent. from November to December, 1922. The December figures relate to Berlin, as the general average has not yet been compiled. In the 14 principal centres of the German spinning and weaving industry the average weekly wage for men rose in November, 1922, to 8,011 marks, and for women workers to 6,143 marks. The pre-war weekly wage for men varied from 20 to 29 marks in different localities, and gave an average of 26 marks for men and 17.54 marks for women. The present wage is, therefore, 306 times the amounts paid to these workers in 1913-14 in the case of men, and 350 times in the case of women. In the cloth industry, of which München-Gladbach is the principal centre, wages at mid-December had attained an even higher level, and are still rapidly rising every fortnight. On November 20th a spinner was receiving a weekly wage of 10,610 marks, and on December 4th the figure had risen to 12,961 marks. The women workers' wages rose in the same period from 9,064 marks to 10,128 marks, and on December 16th further advanced to 11,491 marks. The general percentage increase from October to November, 1922, was 68 per cent.

Cotton Growing in Sudan.—In view of the threatened world scarcity of the cotton supply, a report just issued on the authority of the Sudan Government on the schemes for growing cotton in the Sudan is of considerable interest. Certain experts in this country and in America have stated that within a few years there is a possibility of the textile industry having to face a most serious position on account of the possible falling off in the amount of raw material available to be made into cloth. The British Government has guaranteed a loan to provide funds for the building of an extension of the Sudan railways to Kassala, about 217 miles in length, from a junction with the Red Sea line to Port Sudan. The line will be open for traffic in April, 1925. One of the main objects in building the line is to render possible the expansion of the cotton-growing area in the delta of the Gash, where excellent cotton has been successfully grown for a number of years. An immediate increase in the cotton output may be expected to follow upon the opening of the new railways. A further loan will shortly be raised for the building of the dam now under construction on the Blue Nile, and the area intended to be developed in the first place is 300,000 acres, of which 100,000 acres will be under cotton every year. It is estimated that this area will produce about 70,000 bales of long staple Egyptian cotton annually. In the Gezira district, for the last eleven years, exceptionally good cotton of this class has been successfully grown. The scheme is capable of vast developments, for it is estimated that there are some 3,000,000 acres in the Gezira district suitable for cotton growing.

Colonial Income-Tax.—The report of the Inter-departmental Committee on Income-Tax in the Colonies not possessing responsible Government, appointed a year ago, has lately been issued. Income-tax in the colonies is a comparatively new tax, and the Report contains a model ordinance which is recommended as the basis on which the Colonial Governments would do well to work. Taxes should be confined to income which either has its origin in the colony or, while having its origin outside the colony, is received in the colony. This rule will not only avoid the various difficulties inherent in an income-tax code under which the amount to be charged depends in part upon whether the person is resident or non-resident, but also will reduce the problems arising out of double taxation to comparatively small dimensions. At present few of the colonial ordinances contain any provision for giving relief from double income-tax as between themselves and parts of the Empire other than the United Kingdom, but it is recommended in the Report that Colonial Governments be invited to adopt a system of inter-colonial relief which is incorporated in the model ordinance. The profits of the preceding year—in place of the three years' average—will afford the best basis of assessment for the colonies, and it is proposed that a loss incurred in any year shall be carried forward as a set-off against the profits of the next year. If necessary, the same process will be repeated in each of the four succeeding years, subject to the condition that in no one of those years shall the deduction on account of this loss be allowed to exceed an amount which would reduce the amount of tax payable for any year to less than half the amount of tax which would have been payable if no deduction had been made for such loss. A recommendation is made for the appointment of an official resident in the United Kingdom as the recognised agent of each and every colony which imposes income-tax, and it is thought that the expenses of the London office might be equitably shared between the colonies. Every possible effort has been made to reduce the complexities of the subject to manageable proportions. But those who attempt to master the intricacies of this Report will sigh for the discovery of some new and more simple tax system. There already exists in this country a strong feeling among financial and commercial people in favour of an inquiry into the economic effects upon industry and employment of our whole present tax system. Is there any better practicable system available? Such an inquiry has never yet been held, and there is reason to believe that it might produce unexpectedly useful results.

American Railway Amalgamation.—If present plans are approved by the stockholders, writes our New York correspondent, five western railroads will be consolidated into one system. The merger is to comprise the New York, Chicago, and St. Louis, known as the "Nickel Plate," the Chicago and State Line, the Lake Erie and Western, the Fort Wayne, Cincinnati and Louisville, and the Toledo, St. Louis, and Western, commonly referred to as the "Clover Leaf." The directors of the respective roads have agreed upon a unification of those five companies into a single corporation, which will be known as the New York, Chicago, and St. Louis Railroad Company. The railroads to be merged have a combined authorised capitalisation of \$105,500,000, and operate 1,695 miles of track. Special meetings of stockholders have been called at different dates in March to ratify the proposed consolidation, which is designed to effect economies in operation and general administration, to enable the companies to compete more effectively with larger systems in the same territory, and to give better service to the public.

The Outlook for Kafirs.—Our mining correspondent writes:—The dividends for the past half-year being known, the minds of those interested in Transvaal gold mining enterprises now turn to the outlook for the future. So far as can be gauged there is every probability of a premium of several shillings

per ounce continuing for some time to come. There is also the prospect of a further reduction in working costs under the heading of stores. With regard to labour, the point has now been reached where little further economy can be expected. Stores and materials, however, have not yet fully reflected the process of deflation which has been in progress for some time. Any shareholder desirous of gauging the outlook for a mine will be able to do so much more effectually from an examination of the cost per ounce of gold produced than per ton of ore crushed; the latter, under certain conditions, is apt to be largely in the nature of a fallacy. There is obviously little profit in putting through a big tonnage of ore if it costs 20s for every £'s worth of gold. On the cost-per-ounce method the mines located in the Far Eastern section of the Rand occupy a very favourable position, their ratios per ounce of gold produced ranging from approximately 35s to 50s. This, obviously, leaves a very handsome margin of profit, even with gold at its normal figure of 85s per fine ounce. The companies which figure most disadvantageously are the East Rand Proprietary, Geldenhuis Deep, New Kleinfontein, and Simmer and Jack. On the basis of recent results these have been spending in mine working costs alone substantially over 80s per ounce of gold produced. Taxation and administration expenses have in all cases to be added, plus debenture interest and redemption in some half-dozen instances. The effect of the fall in the price of gold was vividly reflected in many of the outputs for December. By the way, some very extraordinary statements relative to certain mines on the Rand appear in a little pamphlet prepared by a well-known City statistical firm, and issued by brokers, &c. The figures as to yields and costs, taken from official sources, are indubitably correct. But it is amazing to find, for example, the Knight Central and the Roodepoort United each credited with a prospective "life" of 25 years, and the Consolidated Main Reef with 40. The former company is expected to go into liquidation at an early date on account of the unsatisfactory nature of the developments. Work at the Roodepoort was suspended several months ago. The Main Reef Company possesses a large area of undeveloped ground, but in view of the nature of recent results, the assumption of a lengthy life is distinctly venturesome.

Robinson Deep.—Full official particulars with reference to the projected debenture issue are now available. The issue is £250,000 at par, and the rate of interest 8 per cent. The net receipts from this, plus the cash on hand at the end of 1922, will total £462,500. Of this, repayment of the existing loan will require £300,000; the balance will cover the bulk of the contemplated expenditure upon shaft sinking and the increase of the crushing capacity to 75,000 tons per month. Developments during the past year are stated to have been highly satisfactory. Payment of the 4s declared on the "A" shares in December will leave 21s of arrears. Provided adequate labour is available, it is hoped that the dividend programme on these shares—fixed distributions on a diminishing scale—will be overtaken in four years. The market view is that this official expectation is ultra-conservative.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that the weather during the first half of December was mild and dry, and very favourable for all field work, but the last two weeks were wet and stormy, with snow on some of the higher lands and flooding in low-lying places. Rain, however, was very badly needed in many parts of the country, and has on the whole been beneficial, though here and there late-sown corn has lost colour through excessive wet. Winter keep has not been drawn on to any extent, and unless very severe weather is experienced in the next few months prospects are that supplies will be adequate. Cattle have done well during the month, the mild, open weather having enabled them to be kept out much later than usual. Ewes are generally in good condition, though the excessive wet at the end of the month

adversely affected them in some places, and there are occasional reports of footrot. Sheep on turnips have mostly done well, and are putting on flesh satisfactorily. Lambing among most Dorset Horn flocks is nearly finished; the fall of lambs is apparently satisfactory, and ewes are maintaining condition. The supply of labour is sufficient for all requirements, though there is still a demand for skilled men in places. Unemployment does not appear to have increased to any marked extent during the month, and is practically confined to casual and unskilled workers.

Transvaal Output in 1922.—The Transvaal gold mining industry opened the year badly, as the output was affected by labour troubles, with the result that the year's total could hardly be expected to reach the level of the preceding years. But a remarkable recovery has been made since April, and one has to go back to October, 1916, to find a better record of monthly output than was secured in December, 1922, when there was a yield of 790,712 ounces of fine gold, as against 764,476 ounces in November, and 681,847 ounces in December, 1921. With output on the up grade, the industry starts the year 1923 under better auspices than it did in 1922. The following table shows the production for a number of years:—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.

The number of natives employed at the gold mines has increased considerably during the past few months.

The London and Cambridge Economic Service.—We are informed that the Barometer of Economic Conditions in Great Britain, which has been published for some months past in the Reconstruction Numbers of the *Manchester Guardian*, is to be issued regularly to subscribers, together with other statistical statements and memoranda under the direction of a committee representing the economic schools of London and Cambridge. In putting forward the prospectus of this new service, which will be run in co-operation with the similar service of Harvard University, the committee observe:—"It appears that the time has come when the Universities, through their Economic Departments, may begin to render to business technical services, in the expert analysis of industrial conditions and the supply of statistics and memoranda, comparable to the services which they have long rendered in the field of chemistry, and other natural sciences." It is explained that the object of the service is two-fold: first, to issue every month a bulletin of carefully chosen statistics with tables and diagrams, showing clearly the movements of all the main elements in the financial and industrial position up to date, with a summary and analysis of the changes, and, so far as possible, a forecast of the near future; second, to issue periodically or occasionally memoranda on special topics, such as the volume and movements of foreign trade, the course of foreign exchanges, stocks of commodities, the condition of the money market, and the position of freights and shipping. The annual subscription has been fixed for the present at £6 for a single copy of all the documents.

Oversea Correspondence.

UNITED STATES.—ARMOUR-HOLDING CORPORATION — INDUSTRIAL CONDITIONS — FEDERAL RESERVE BANKING POSITION—MONEY SITUATION AND OUTLOOK.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 1.

FOLLOWING on much talk of mergers in the meat-packing industry, it now transpires that Armour and Co., of Chicago, have formed a big holding company to take over a large part of their existing properties and investments. A new corporation, known as Armour and Co., of Delaware, has just been organised under the laws of that State. Its authorised capital includes \$100,000,000 of 7 per cent. guaranteed preferred stock (of which only \$60,000,000 will be issued at present), \$60,000,000 of common stock, and \$50,000,000 first mortgage bonds. All of the proceeds of the sale of the preferred stock and the \$50,000,000 bonds to be issued later will go to Armour and Co., of Illinois, which will also hold all of the common stock of the Delaware corporation. The properties to be acquired by the latter (the holding company), either directly or through stock ownership, include the Fowler Packing Co. of Kansas City, the Hammond Packing Co. of St. Louis, the New York Butchers' Dressed Meat Co., the Anglo-American Provision Co. of Chicago, as well as the Armour packing houses at Denver, Col., Fort Worth, Texas, Jacksonville, Fla., Indianapolis, Ind., and Jersey City, N.J. It will also take over the cold storage plant of the North American Provision Co. at Chicago, the East St. Louis Cotton Oil Refinery, and various auxiliary plants. Other properties to be acquired are the Armour Fertilizer Works and subsidiaries, including 21 manufacturing plants and two large warehouses, the Compania Armour de Cuba, with its extensive distribution plant in Havana, and the entire South American properties. An immediate result of the new financing will be the retirement of the Illinois Co.'s outstanding 10-year convertible gold notes, amounting to about \$60,000,000, and its 6 per cent. serial convertible gold debentures, amounting approximately to \$3,720,000. The \$60,000,000 7 per cent. preferred stock of the new Delaware corporation, which is unconditionally guaranteed by Armour and Co., of Illinois, will be offered this week by a nation-wide banking syndicate. The subscription price, it is understood, will be \$99 per share. The \$50,000,000 first mortgage 5½ per cent. bonds of the holding company will be offered later. Mr Samuel McRoberts, president of the Metropolitan Trust Co. of New York, and formerly executive manager of the National City Bank, will become chairman of the finance committee of both the Illinois and Delaware companies.

In its statistical review of business conditions in 1922 the Department of Commerce shows that production of manufactured articles in this country during the past year was about 50 per cent. greater than in 1921. Textile mills were approximately 20 per cent. more active, the iron and steel industry increased its output from 60 to 70 per cent. over 1921, non-ferrous metals from 50 to 95 per cent., petroleum 15 per cent., coke 40 per cent., paper 20 to 30 per cent., rubber 40 per cent., automobiles 50 per cent., building construction 50 per cent., lumber 35 per cent., brick 50 and cement 15 per cent., leather 20 per cent., sugar 45 per cent., and meats about 5 per cent. Agricultural receipts generally were higher than in 1921. The only declines of importance were 7 per cent. in bituminous coal and 47 per cent. in anthracite. The increase in production, together with the decrease in immigration, the department points out, improved the labour situation to such an extent that a shortage now exists, and unemployment has almost been eliminated.

Transport conditions changed from a huge surplus of idle freight cars to a considerable shortage, while car loadings were 11 per cent. greater than in the preceding year. Prices to farmers increased about 17 per cent. during the year; wholesale prices advanced 10 per cent.,

and retail food prices, according to the Department of Commerce, declined 5 per cent. The summary shows that the principal grain crops were larger than those of 1921. Cotton consumption increased nearly 14 per cent. in the first 11 months, including the record month of November, when more cotton was used than in any month since 1917; prices of the staple were 12 per cent. higher on the average than in the previous year, while cotton cloths and yarns were up 20 per cent. The wool manufacturing industry was about 25 per cent. more active in 1922 than in 1921, consumption of wool being greater by 25 per cent. on a ten-months' comparison. Prices of unwashed wool rose nearly 70 per cent. in the Boston market, and finished woollen goods were higher by about 35 per cent. The Department says there are no serious obstacles in sight which should hinder further improvement during the early part of the new year.

Among the more important developments in the Federal Reserve banking position in 1922, it may be mentioned that credit liquidation, which had been under way for more than 18 months, came to an end, and the last three months witnessed increasing loan activity at member banks, as well as at the central Federal Reserve institutions, with the result that the condition of the Federal Reserve banks at the end of 1922 showed relatively little change from that at the beginning of the year, the reserve ratio now standing at 72.1 per cent., as compared with 71.1 per cent. at the beginning of last year. Taking the year as a whole, the Reserve banks show a decrease of \$483,000,000 in discounts, offset by increases of \$227,000,000 in Government securities, and of \$119,000,000 in acceptances. Total reserves increased \$139,000,000; Federal Reserve note circulation, \$59,000,000; and deposits, \$71,000,000. Discounts secured by Government obligations, which declined almost continuously from the last part of 1919 until the end of July, 1922, when they aggregated only \$115,000,000, gained rapidly in succeeding months, and at the end of the year stood at \$316,000,000. In 1922 gold reserves increased by only \$165,000,000, as compared with an increase of \$812,000,000 in the preceding year. During the past few months, gold reserves have shown a decided tendency to decrease. Last week the total was reduced more than \$5,000,000, making a reduction of nearly \$21,000,000 since the middle of December, and of \$50,000,000 approximately since the middle of October. Inasmuch as there was a heavy net gold import movement during that period, it is quite evident that the banks paid out a much larger amount of gold than the foregoing figures indicate. Some time ago reference was made in this correspondence to the fact that the banks were reducing their gold holdings by issuing gold notes, "yellow backs," and depositing the required amount of gold with the United States Treasury as security for such circulation. That practice has been followed to such an extent that gold certificates are now circulating quite freely, and have again become almost commonplace, whereas a few months ago they were seldom in evidence. In some quarters, including high Government circles at Washington, the opinion is expressed that conditions are gradually shaping toward a return flow of gold to various countries. Such a development would be most welcome to bankers here, but prediction is unsafe.

On the Stock Exchange prices of both railroad and industrial shares have lately moved in a very irregular and confusing fashion, but the general tendency in the past few weeks has been downward, so that current quotations for many stocks are well below the highest levels reached in the past year. Bonds, however, have recently shown a firmer tendency in anticipation of the usual January re-investment demand. Call money rates advanced to 6 per cent. last week, which occasioned no surprise in view of year-end requirements. Time money has continued steady at $\frac{1}{4}$ per cent. bid and 5 per cent. asked for all maturities, while business paper is still being discounted at $\frac{1}{4}$ per cent. for choice and $\frac{3}{4}$ per cent. for prime names, with less desirable paper moving at 5 per cent. In most quarters money is expected to be firm in the early part of the new year. There is considerable talk of a possible increase in discount rates of the Federal Reserve banks, but opinion is widely divided as to the advisability of taking such action. At

present, as for some time past, the discount rate in three of the Federal Reserve districts, namely, New York, Boston, and San Francisco, is 4 per cent.; in the remaining nine districts throughout the country it is $\frac{1}{2}$ per cent.

FRANCE.—IRON AND STEEL POSITION—PRICES BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, January 10.

THE seizure of the German collieries in the Ruhr basin by the French and Belgian troops, with the moral support of their Italian allies, marks not only another stage in the long struggle of the French to secure the payment of their reparation debt, but also in the effort of the leaders of the French iron and steel industry to place their undertakings on a more satisfactory footing, and of their German competitors to prevent them from so doing. Reduced to its simplest expression, the crux of the French metallurgical problem lies in the fact that, before the war, Germany produced a surplus of some 5,000,000 tons of steel for export purposes, which surplus ought, now that Alsace-Lorraine has returned to the Mother Country, to be available every year for the purpose of increasing the wealth of France. Owing to the destruction of her northern collieries during the war, however, France has not only been prevented from reaping the fruits of this important feature of her victory, but has not even been able to bring back her normal metallurgical output to the level at which it stood before the conflict. Not only has she been unable to extract from Germany even the reduced quantity of coal demanded by the Reparation Commission, but she has further suffered from the handicap of being unable, owing to the high rate of exchange, to make up for the shortage in her coal requirements by importing the coal she needs from England. From the French point of view, the situation is aggravated by the facts that the consumption of coal in Germany, in spite of the reduction of her territory owing to the loss of the industrial area of Alsace-Lorraine, has increased since the war by 101 per cent., and that between seven and eight out of every ten German blast furnaces are even now working to capacity, while 50 per cent. of the French furnaces are compulsorily closed down owing to the destruction of the French northern coalpits and the failure of Germany to deliver compensating quantities of coal. These facts largely explain the persistent manner in which the French Government has advocated the application of the policy that is meeting with so much adverse criticism on the British side of the Channel.

The figures that follow set forth the situation in concrete form. The table below gives the tonnage of the iron ore output for both pre-war France and Alsace-Lorraine during 1913, the last complete year before the war, as compared with that of the past three years:—

	Tons.
1913—Pre-war France	21,918,000
Do Alsace-Lorraine	21,136,000
	43,054,000
1920—Post-war France	13,871,200
1921 Do Do	14,106,100
1922 Do Do (first 10 months) ..	16,667,500

The iron ore output, after increasing by 1,400,000 tons by the end of 1920, fell off by 1,000,000 tons six months later, owing to the combined influences of the trade slump at that period and the falling off in the quantities of combustible in sight. The variations in the consumption of combustibles are shown in the following table, which sets forth the comparative pre-war and post-war quantities:—

	Coal and Lignite. Tons.	Metallurgical Coke. Tons.
1913—Pre-war France	59,503,500	..
Do Alsace-Lorraine	11,131,000	.. 6,892,000
	70,634,500	.. 6,892,000
1920—Post-war France	45,075,300	.. 4,755,500
1921 Do	40,800,700	.. 3,491,000
1922 Do (first 10 months) ..	42,935,600	.. 4,586,800

The following table demonstrates clearly that, although the French output of iron and steel has shown large in-

creases during the past three years, it still remains a long way below pre-war figures:—

	Iron. Tons.	Steel. Tons.
1913—Pre-war France	5,208,000	.. 5,093,000
Do Alsace-Lorraine	3,869,000	.. 2,286,000
	9,077,000	.. 7,379,000
1920—Post-war France	3,312,000	.. 2,964,000
1921 Do Do	3,417,000	.. 3,102,000
1922 Do (first 10 months) ..	4,300,000	.. 3,750,000

The number of blast furnaces in operation since 1920 indicates both the revival of the French metallurgical industry since the war and the effect the crisis of 1921 had on the industry. The comparative numbers in operation in the different regions at varying dates was as follows:—

	Jan. 1, 1920.	Jan. 1, 1921.	July 1, 1921.	Dec. 1, 1922.
Lorraine	21	29	22	41
East of France	21	33	27	45
Other parts of France	27	29	23	30
	69	91	72	116

Owing to the shortage of combustible, however, about 50 per cent. of these furnaces are now closed down. The remainder, like those in Germany, are producing more and more for export purposes, owing to the present limited domestic demand, consequent on the continued high selling price of this and all other materials in the highly protected French market.

Important negotiations have been going on for some time for an entire reorganisation of the French metallurgical industry, with a view to the development of a powerful and far-reaching organisation on the lines, more or less, of the American Steel Trust. The proposals, it is understood, provide for the formation of a central committee that would absolutely control French iron and steel production and the distribution of orders for both domestic and export trade, and foreshadow the absorption of many of the smaller firms by amalgamation with the more important undertakings. The threatened withdrawal of the important concern known as the Haute-Fourneaux de la Chiers from the Comptoir Sidérurgique a week or two ago, owing to its dissatisfaction with the circumstance that the latter body occupies itself only with the home market, and is asserted to be unable to help its members in the international market, was regarded as significant of the developments in progress. The formation of an important syndicate for the financing of French metallurgical exports, the constitution of which was spoken of as far back as last June, is also reported to be in course of development. The proposed initial capital is said to be 200,000,000, and the Société Générale, the Banque de Paris et des Pays Bas, the Crédit Lyonnais, and other important institutions are understood to be interested in the scheme. In consequence of the recent heavy purchases of French scrap iron on German account, the export of this material has been prohibited by Presidential decree, except under special permits. Special facilities are given in the case of exports of this material to Italy, in view of the Franco-Italian commercial agreement.

The index figures of wholesale prices in France for December have now been issued by the Statistique Générale, and are as follows (base: 100 in 1901-1910):—

	November, 1922.	December, 1922.
	(Corrected).	(Provisional).
General index figure (45 categories)	407.0	418.4
Foodstuffs (20 categories as a whole)	383.8	404.0
Vegetable foodstuffs (8 categories)	346.2	360.2
Animal foodstuffs (8 categories)	430.3	456.7
Sugar, coffee, cocoa (4 categories)	366.1	386.1
Sugar, coffee, cocoa (4 categories)	425.5	430.0
Raw materials (25 categories as a whole)	365.7	373.4
Minerals and metals (7 categories)	548.0	553.4
Textiles (6 categories)	399.2	401.1
Sundries (12 categories)	...	...

The figures indicate that there has been an appreciable rise in all classifications, without exception. Retail prices in Paris followed the same tendency during December; the index figure for 13 categories of foodstuffs shows that, while the retail prices of these commodities were represented in November by the figure 3191 (or an increase of 197 per cent. on the prices prevailing in 1914), this had risen in December to 3276 (or an increase of 205 per cent. on the 1914 prices). Taking France as a whole, retail

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

Gresham House, Old Broad Street,
London, E. C. 2

prices rose from 3135 in August to 3150 in November. Curiously enough, however, while there was a general rise in prices in the North, East, and West of France during the period in question, appreciable falls were recorded in the South and South-East and in Alsace-Lorraine.

The Bourse has started the New Year with a general marking up of prices all along the line and a remarkably firm tone, in spite of what is generally regarded abroad as unfavourable political conditions. Not only is there a generally upward tendency, but the volume of business continues increasingly large, as is shown by the surprisingly large revenue from taxation on securities, which continues greatly to exceed Budget estimates. The most satisfactory feature of the situation is that the volume of genuine investment business is immensely superior to that of speculative transactions. Whatever may be the opinion in England, it is an undoubted fact that French investors as a whole are now imbued with a thoroughly healthy optimism, and refuse to allow themselves any longer to be paralysed by purely political events. The curious fact is that the improvement in business on the Paris Bourse, which especially marked the closing weeks of 1922, and bids fair, from present indications, to continue indefinitely, dates from the failure of the Genoa Conference. Every political factor since then—the fiasco of the international bankers' conference, the Greek collapse, the failure of the London Conference, the recent Anglo-French differences that have resulted in this country resuming her liberty of action against Germany—has either failed to depress the Paris stock and share market or has had a stimulating effect upon it. Experts here incline to the belief that the experiences of the past six or seven months, in spite of the nervousness displayed in England and America, prove that the world has now passed the worst point, and that a general economic revival has already begun, in spite of the condition of Central Europe and Russia.

The amount of money accruing from dividends, &c., and available for investment is larger than it has been since the war began, and some of this, in spite of new issues

by the State and various financial groups, may be expected to reach the Bourse. From the technical point of view, the 60 milliards of short-term National Defence bonds that are in existence form an immense reservoir of easily mobilisable resources, and have placed the market in an enviable position, so far as money is concerned. At the same time, it must not be overlooked that a certain proportion of the improvement in prices, particularly in the case of international and "real" securities, has been due to the latest drop in the value of the franc. The increase of about 1,000,000,000 in the note circulation, which was reported in the Bank of France return for January 4th, is regarded as largely due to immediate and temporary end-of-the-year requirements, which will doubtless be offset in the near future, now that it is possible for money to be obtained from ordinary sources. A new Crédit National issue of 3,000,000,000, in the form of 6,000,000 bonds of 500f each, bearing interest at 6 per cent., was announced as from last Monday (until February 10th), for the purpose of providing further money for the reconstruction of the devastated regions. The issue price is 498f 50c. There will be four quarterly drawings every year, including six lots of 500,000f, 18 of 100,000f, 18 of 50,000f, and 7,158 others of smaller amounts.

GERMANY.—RUHR OCCUPATION—STATE FINANCES —EXCHANGE AND BOURSE—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, January 10.

The French measures for occupation of the Ruhr have created a political sensation, and at once had their effect upon the foreign exchanges and upon stocks; but nothing like a panic has so far occurred. It is doubtful whether the occupation will have as disastrous an industrial effect as was feared when it was first mooted, but the political effect has already been very great. Nationalism, which has since the war been very weak, has received a powerful impulse, and there are new signs of national unity. There is a general belief that the French invasion marks the beginning of a new period of unrest, which will ultimately lead to a national uprising; and this uprising, in the public mind, takes the form of a war of liberation. In nationalist and militarist quarters, the French move is publicly resented and denounced, but the suspicion lies that it is by no means unwelcome, the reasoning being that as no material or political advantage will accrue to France from a local occupation, her inevitable remedy will be to proceed farther in the same direction, and so to precipitate a struggle of a kind which, history shows, by no means necessarily ends with the success of the country with overwhelming organised force. This development is all the more likely because the interpretation of the Peace Treaty upon which the Ruhr invasion is based permits of further unlimited invasions, and, indeed, of any inimical act whatsoever. The Berlin official attitude is simply that France has torn up the Peace Treaty. The local Westphalian chambers of commerce proclaim that Germany is thereby freed from all Treaty obligations. Industry on the spot, however, does not seem inclined for the passive resistance of a strike; the Krupp and other concerns announce that they will continue to work, and the trades unions will do their best to keep the Ruhr coal-miners, who are not a very easy class to deal with, quiet. The Westphalian Coal Syndicate has held a meeting to consider whether it should transfer its headquarters from Essen to some centre in unoccupied territory, and whether it should adopt "special selling measures" of a nature so far un-
known.

The Federal finances for the first three quarters of the financial year 1922-23, ending December 31st, show that more than two-thirds of expenditure was covered by floating debt operations. In view of the fact that in May

last only about one-quarter of expenditure was uncovered by revenue, this report is very unsatisfactory; but the missing revenue has been really collected by means of currency depreciation, and the amounts of the real deficit and debt depend upon the rate at which the paper-mark is ultimately stabilised, and cannot, in any case, be great. The statement, in thousands of marks, is:—

	April-Dec. Inclusive. £
REVENUE.	
From Taxes, Customs, Stamp Duties, &c.	344,913,321
" Forced Loan	3,748,323
" Floating debt operations	1,223,009,812
	1,571,701,456
EXPENDITURE.	
Peace Treaty liabilities in foreign currencies	233,622,245
General administration and Peace Treaty liabilities in mark currency	1,011,420,432
Funded Debt floating	3,881,351
Interest on debt	46,982,744
" " Funded Debt	2,055,291
	1,297,962,063
Posts and railways deficit	273,738,350
	1,571,700,413

The deficit entry for Posts and Railways does not show the net loss on the nine months, but only the amount paid over from the general finances. The notable feature is the relatively low cost of service of debt, which in the whole nine months amounted to under 1-30th of the total expenditure, and was naturally relatively even less in the later months. Apart from the price-rise, a main cause of the heavily increased nominal expenditure was an entry of 238½ milliards for payment in advance of salaries and pensions, advance purchase of materials, and other non-recurring items.

A Bill adapting taxation to the new currency depreciation has been presented to the Reichstag. The Bill raises the limits of the progressive rates and also of the supplements of the property tax, the initial rate of the property tax, after an exemption of 200,000 marks, being 1 per cent. on the first 500,000 marks. Alterations in the same direction are made in the succession, capital yield, stamp duties, and other taxes. The State will in turn defend itself against losses from currency depreciation by imposing a 10 per cent. supplement on unpaid income-tax for every additional month of delay, and a similar measure is proposed for the corporation, property, succession, and turnover taxes. Property tax will be payable quarterly in advance. The Bill proposes the reintroduction of banking secrecy by freeing the banks from the present obligation to return lists of their clients, and abolishes the obligation of bondholders to draw their interest through banks. All parties, including the Socialists, agreed that these restrictions failed to attain their aim. The first gold dividend has been announced by a Weser milling company, which declares a dividend of 50 gold pfennigs, to be paid in paper marks at the Reichsbank's gold exchange rate. A semi-public company of Baden has raised a coal loan, taking coal as a commodity with a relatively stable relation to the general price-level. The 5 per cent. bonds have a total value of 125,000 tons of a specified kind of Ruhr coal, and will be issued in denominations of from half a ton to five tons, interest and redemption price being payable in paper marks, according to the future price of the same coal. This is an attempt to create what is called a "wertbeständig," or "value-stable," currency. The obvious course of issuing a gold mark loan, subscribable and redeemable in paper marks at gold exchange, is repudiated on the ground that the movements in the mark's gold exchange and in its home buying power do not coincide, so that a gold loan would really be an exchange speculation, whereas coal, it is held, keeps more or less in accord with the general home price-level. The method seems clumsy, because the value of coal in terms of other goods may easily vary very much in a long term of years. The State Credit Institution of Oldenburg lately raised a rye loan on the same principle.

The Reichsbank's statement for the end of 1922 shows note circulation exceeding 1½ billions, an eleven-fold increase during the year, as compared with less than two-

fold increase in each of the two preceding years. The last four statements (in 1,000 marks) are:—

	1919.	1920.	1921.	1922.
ASSETS.

Capital	180,000	180,000	180,000	180,000
Reserves	99,496	104,258	12,413	127,264
Note Circulation	35,698,369	68,805,006	113,639,464	1,280,094,831
Federal and State Deposits	17,071,857	22,327,114	7,591,343	153,190,991
Private Deposits	3,465,583	3,649,503	2,944,172	377,335,296
Other Liabilities				115,403,260

Reichsbank clearings in 1922 totalled 6,367,761 millions, against 1,072,144 millions in 1921, 644,758 millions in 1920, and 66,644 millions in 1914. The money market has of late been somewhat easier, and although the absolute totals of new Treasury bills remaining on the Bank's hands continue to increase, a somewhat larger proportion of the new discounts has of late been placed with private capitalists. In December 145 milliards were so placed, and in the last week of the year 25 milliards. This is partly the result of the high interest rate and partly of the slight depression which has prevailed in business since the mark exchange recovered from its low point of early November. The new mark drop, if it goes further, will probably enliven trade, aggravate the shortage of working capital, and bring new problems to the Reichsbank. At the recent rate of increase, the Bank's portfolio of commercial paper will very soon exceed its holding of Treasury bills.

The new State of Thuringia announces that it will found a central bank, by fusion of the public credit institutions in Gotha, Weimar, and other former State capitals. The Berlin banks have decided to abolish "commission-free accounts," which means that the various fees and commissions now charged on some classes of accounts will be imposed on all accounts, while the current-account interest—at present 4 per cent.—will be continued. This is regarded as a new measure to force out the small depositor, whose account rarely yields profit. The Dresden Bank's plan to double its capital from 550 to 1,100 millions has been sanctioned. The Reichsanleihe A.G., the company which intervenes to maintain the Bourse quotation of 5 per cent. War Loan, reports that, in spite of its propaganda, sales abroad of this loan last year were small. The company complains that the savings banks and co-operatives, whose support was counted on when it was founded, have been selling. Intervention purchases in 1922 totalled 6,939.9 millions nominal, costing 4,901 million marks, and the holding at the close of the year was 9,777.9 million marks nominal. The rise in quotation during the year from 77.50 to 81 was not due, it is stated, to the company's action, and it apparently occurred in sympathy with the general upward movement of Federal loans. The Kloeckner coal and iron concern, which until now has embraced, in loose collaboration, the Lothringen Smelting and Mining Company, the Hasper Iron Company, and four other large companies, announces a closer fusion, under the leadership of the Lothringen Company, whose shares will be issued in exchange for shares of the other companies. The Lothringen Company will increase its capital from 125 to 150 million marks. The total of new capital, including bonds raised in 1922, was 80,613 million marks, against 31,855.6 million marks in 1921, 46,029.8 million marks of the new capital being for increase of capitalisations of existing concerns. The number of share companies (Aktiengesellschaften) at the close of 1922 was 8,607, with nominal capital of 97.2 milliards, against 6,779, capital 54.7 milliards, a year before, and 4,800 companies, capital 16 milliards, at the end of 1916. Before the war the total capital was estimated at 14 milliards. It follows that at an exchange depreciation of 1-2000th, the nominal gold capital of all companies has fallen to about 1-300th.

The price rise in December was greater than was expected after the temporary fall which occurred in the middle of the month. The *Frankfurter Zeitung's* index

shows for January 1st 205,417, or 2,054-fold the last peace figure, against 161,412 on December 1st, 94,492 on November 1st, 4,217 on January 1st, 1922, 2,130 on January 1, 1921, and 1,965 on January 1, 1920. The highest price rise is for the group textiles and leather, which were 320,632, after which follow minerals 262,212, miscellaneous 177,752, food 175,845, and finished goods 151,193. The gold index on January 1st was 204,464, so that gold prices of two classes of commodities were higher than before the war.

CANADA.—ECONOMIC CONDITIONS IN 1922—POSITION OF FARMERS—UNEMPLOYMENT—PRICES—ONTARIO MINING—FRANCO-CANADIAN COMMERCIAL TREATY—PROSPECTS OF LOAN IN NEW YORK—VALUE OF 1922 CROP.

(FROM OUR CORRESPONDENT.)

OTTAWA, December 18.

The closing month of 1922 finds Canada able to report her economic position more healthy and encouraging than at any time since the outbreak of war. Her people are still carrying very heavy burdens and facing many grave problems, but there is general confidence in the country's ability to cope with them, and a widespread belief that the war can now have no permanently deleterious effects upon the future of Canada. Some of the most encouraging features are that people are working harder, that there is greater efficiency in business, and that there has come a cessation of the extravagant expenditure in which all classes indulged during the post-war years. With a public grown careful in its personal buying, both manufacturers and merchants have perforce to show moderation in their price lists. Industrial troubles are comparatively few, and, generally speaking, there is less poverty and more employment than was visible a year ago. The Labour Department reported the ratio of employment for November to be 95.81. Strangely enough, the province which is to-day suffering from the most serious depression is Nova Scotia, which usually enjoys a steady level of prosperity; but its iron and steel and its fishing industries have both been experiencing lean years, and not only is there serious unemployment in the cities and towns, but people are leaving in alarming numbers for the United States.

In no province of Canada is the farming community satisfied with its lot, but its misfortunes are only relative, and in no degree comparable with the fate which has overtaken vast congeries of urban populations in Europe. It is true that over 40,000 farmers in Western Canada have been foolish enough not to keep a single cow, and many have not taken the trouble to provide themselves with gardens; such people may suffer if their grain crop fails, but there is no reason why all the farmers of Canada, save a limited percentage who have been steadily oppressed by misfortune, should not be able this winter to offer their families good shelter and an abundance, at least, of plain fare. Since the farmers comprise almost 50 per cent. of the population, and people who cater for their wants 20 per cent. more, the problem of poverty in Canada is at once reduced to manageable dimensions. There has, moreover, been a very bountiful harvest, and if prices have been disappointing, the abundance has given some compensation. Moreover, it is calculated that the advance in grain prices during the past month has added 40 million dollars to the income of the western grain-growers, and they are now encouraged to hope that the bottom of the agricultural depression has been reached.

During November slight rises have occurred in the index numbers, both of wholesale and retail prices. In wholesale prices the index number was 221.7 for November, as compared with 219.8 for October; 227.3 for November, 1921; 356.6 for May, 1920 (the peak of prices); and 137.5 for November, 1914. The chief increases were in grains and dairy products, with slight increases in flour, sugar, fruits, textiles, metals, and building materials. There were decreases in cattle, poultry, coke gasoline, and raw furs. Calculated by retail prices, the average cost of a weekly family budget of 29 staple foods in 60 cities was \$10.29 for November, as compared with \$10.23 for October, \$11.08 for

November, 1921, \$16.92 for June, 1920, and \$7.96 for November, 1914. If fuel and rent were added, the weekly budget for November would reach \$20.88. Careful buying, however, can keep it well below this figure.

The year 1922 has seen very great activity in the Northern Ontario mining field. Not only have the great gold mines, like the Hollinger, done extremely well, but profitable new properties have been opened up. Again, there has been a very substantial increase in the production of silver. Nipissing, before the end of the year, will probably have produced 3,000,000 ounces of silver, while the returns of the Mining Corporation of Canada, the Coniagas, and the O'Brien are also excellent. One welcome feature of the year has been the steady decline in the cost of mining ore and extracting the silver. In some mines it has been reduced by 25 per cent. to 30 per cent., and thereby the margin of net profit is enormously enhanced.

The question of farm credits is still exercising the West. The Canadian Council of Agriculture has sponsored a scheme "to fund farmers' debts over a period of years at a low rate of interest to help them bear the financial obligations resulting from a considerable measure of crop failure for several years past in various parts of the prairie provinces." Simultaneously the Government of Manitoba, which is controlled by the farmers, has appointed a committee to examine the whole problem of governmental credit assistance to farmers. The agitation for drastic reforms in the Bank Act goes on apace in the West, and important agrarian leaders are openly advocating the establishment of a State bank on the lines of the Commonwealth Bank of Australia.

The new Franco-Canadian Commercial Treaty has been signed in Paris, and a rough outline of its terms is available. French imports will get the benefit of the Canadian intermediate tariff, whose rates are the next best to the British preferential; the benefits will accrue chiefly in connection with luxury goods like laces, silks, feathers, &c. On the other hand, the basis on which Canadian goods will enter France will be materially improved. 120 articles are accorded the French minimum tariff, and 326 are given the intermediate tariff. These latter articles will now enter France on the same terms as similar goods from the United States under the Franco-American trade treaty of 1921. From these reductions the main benefit will accrue to Canadian exporters of grain, pulp and paper, and asbestos. The treaty is to be permanent, but may be renounced by either party on six months' notice. Canada expects to gain profit by developing a trade in foodstuffs with the French colonies.

There is an expectation that the Federal Government may soon have recourse once more to the New York market. Mr Fielding has hinted at a domestic loan in the autumn, but he is still in Europe, and the season has now gone by when it could be floated with success. The money will be needed to cover railway deficits, and provide for contemplated expenditure on equipment for the national railways. During the past year the net debt of the Federal Government has actually increased, but temporary loans have been cut down from \$150,000,000 to \$95,000,000. The portion of the funded debt payable in New York has increased by almost 100 million dollars.

The Dominion Bureau of Statistics has just issued a preliminary estimate of the value of Canada's field crop for 1922 as compared with the values received in 1920 and 1921. The values per unit assigned to each crop represent the averages received locally by the farmers.

For the whole of Canada the total value of the principal field crops of 1922, as now preliminarily estimated, amounts to \$984,139,500, as compared with \$931,863,670 in 1921, \$1,455,244,050 in 1920, and \$1,537,170,100, the highest aggregate for Canada on record. The total for 1922 comprises \$333,966,000 for wheat, as compared with \$242,936,000 in 1921 and \$427,357,300 in 1920; \$197,783,000 for oats, as against \$146,395,300 in 1921 and \$280,115,400 in 1920; \$33,782,000 for barley, as against \$28,254,150 in 1921 and \$52,821,400 in 1920; \$21,235,000 for rye, as against \$15,399,300 in 1921 and \$15,085,650 in 1920; \$59,972,900 for other grains, as against \$48,036,920 in 1921 and \$86,296,700 in 1920; \$54,253,000 for potatoes, as against \$82,147,600 in 1921 and \$29,803,300 in 1920; \$205,075,000 for hay, clover, and alfalfa, as against

\$280,975,200 in 1921 and \$362,053,900 in 1920; and \$78,172,600 for other root and fodder crops, as against \$87,719,200 in 1921 and \$101,710,400 in 1920. With few exceptions, the average prices per unit do not differ greatly from those of last year, the prices being as a rule somewhat more. For wheat, the price for 1922 is 85 cents per bushel, as against 81 cents last year. Oats are 39 cents, against 24 cents; barley is 46 cents, against 47 cents; rye, 59 cents, against 72 cents; peas, \$1.81, against \$1.96; beans, \$2.86, against \$2.90; buckwheat, 80 cents, against 89 cents; flax, \$1.77, against \$1.44; potatoes, 54 cents, against 77 cents; turnips, &c., 27 cents, against 34 cents. The abundance of the hay crop, as compared with last year's scarcity, is reflected in the price, which is for 1922 \$13.45 per ton, as against \$23.56 per ton last year. Similarly alfalfa is \$12.84 per ton, as against \$19.95.

ITALY.—PUBLIC ECONOMIES—THE TASK OF THE EXTRAORDINARY RAILWAY COMMISSIONER—REDUCTION OF THE DUTY ON FLOUR—COST OF LIVING.

(FROM OUR CORRESPONDENT.)

TURIN, December 31.

THE Mussolini Government is working in earnest. The last meeting of the Cabinet produced a wholesale disbandment of committees and consultative councils created from time to time to give counsels to the Ministry of Agriculture; 21 committees with 332 members being abolished at one stroke. At the same meeting the Minister for Public Education reduced the total number of employees in his department from 1898 to 1159.

An experiment which will be watched with the utmost interest is the appointment of Mr Edward Torre, M.P., to the newly created post of Extraordinary Commissioner for State Railways. A medical man and a Fascist, Mr Torre is said to possess the will and the power to restore order in the railway administration, whose official deficit in 1921-1922 was upwards of 1,200 million lire, and whose true deficit, taking into account all expenses and losses borne by other departments, may be calculated to reach 1,600 millions lire. The commissioner will have all the powers of the dissolved Executive Railway Council. It is said that Mr Torre is determined to dismiss 50,000 railwaymen, and truly nothing short of such a drastic measure can save the railway budget. The increase in the number of railwaymen was as follows after the war:—

	1913-14.	1921-22.	Increase.
Clerks	16,713	18,054	8
Stations	39,485	61,531	56
Trains	11,748	22,750	94
Locomotives	11,245	19,278	71
Miscellaneous	68,098	82,812	21
Total	147,289	204,425	39

While the number of men employed increased, the work done diminished. Train-kilometers diminished from 153.7 millions in 1913-14 to 129.5 in 1921-22. The average number of hours worked by a man in the year varied as follows:—

	1913-14.	1920-21.	Decrease.
Stations	3,423	2,192	36
Trains	3,498	2,160	38
Locomotives	3,030	2,112	30
General workshops	3,220	2,040	37
Locomotive workshops	2,790	1,992	29

An application of the policy of the eight hours' day, and of the weekly rest, by which the hours of effective work done were sometimes reduced to two or three hours a day, is largely responsible for this lamentable state of affairs; but lack of discipline contributed no less to it.

The average number of days of sickness increased, per year and per man, as follows:—

	1913-14.	1921-22.	Increase.
Stations	13	19	46
Trains	14	22	57
Locomotives	20	25	25
General workshops	21	43	105
Locomotive workshops	21	43	105

Free-trade ideas are making some progress in Italy. The newly constituted group has published in the *Riforma Sociale* of Turin, which is its provisional organ, a long analysis of the new tariff of July 1, 1921, by Signor Repaci, who calculates the increase in the weight of general duties to be from 100 per cent. to 184 per cent. But the variations are extreme, and many examples are quoted of extraordinary and even ludicrous protection. One of the first acts of Signor De Stefani, the new Minister of Finance, has been the reduction from 11.50 to 4 gold lire per quintal of the duty on flour. The story of this duty provides an interesting example of the by-ways of protection. When foreign wheat was dutiable at 7.50 gold lire per quintal, flour was also dutiable at 11.50 gold lire. The duty on flour gave a protection to milling industry, as 10 gold lire would have sufficed to counterbalance the duty of 7.50 on wheat. During the war both duties were suspended, but it seems that, as from July 1, 1921, the duty on flour was tacitly re-established at the old figure of 11.50, while the duty on wheat remained in suspense. From this odd mistake the protection to the milling industry was raised from 11.50 less 10 (equivalent of the 7.50 duty on wheat) to the whole amount of 11.50 gold lire. Signor De Stefani, while maintaining the free importation of wheat, reduced the duty on flour to 4 lire. It should have been reduced to 1.50, but the tentative step is a good one. Millers are clamouring that they did not avail themselves of the protection, but the possibility was there, and in some cases was exploited.

The cost of living in recent months has been slowly increasing. The index number of the cost of living for a working man's family of five has varied thus:—

	Turin.	Milan.	Florence.	Rome.
First half of 1914	100	100	100	100
January, 1920	318.5	302.6	323.5	263.4
March, 1921	472.2	472.1	517.7	384.5
April, "	470.4	491.8	521.9	410.9
May, "	455.7	507.9	523.1	395.8
July, "	404.7	465.8	450.8	387.3
December, "	470.9	496.4	532	422.5
April, 1922	424.5	450.2	475	420.3
May, "	428.1	450.9	476	426.6
June, "	435.1	454.8	473	425.4

October, "	462.4	471.9	506	444
November, "	465.3	..	..	..

The maximum was reached between March and May, 1921. Some substantial declines took place in the summer of 1921 and the spring of 1922. But after the middle of the year the tide was again rising. Perhaps the improvement in the foreign exchanges will have a favourable influence on the December and January figures.

ROUMANIA.—EXTERNAL LOANS—EXPORT TAXES—EXCHANGES.

(FROM OUR CORRESPONDENT.)

BUCHAREST, December 28.

THE announcement has just been made in the Bucharest Press that the Roumanian Government is negotiating with French banking interests for a loan of 100,000,000f, and I hear on excellent authority that the negotiations will be successful. It is expected that the loan will run for 15 years; that the coupon rate will be 5 per cent., and that the Roumanian Government will pay a premium of 4 per cent. An important feature of the transaction, however—according to the latest information available—is that Roumania will not receive the 96,000,000f in cash, but that most of it will be represented by military supplies, aeroplanes, &c., with the further provision that the balance shall be used for purchases of merchandise in France. Provision is to be made for amortisation of the loan to begin after three years, the necessary funds both for interest and amortisation to be obtained—it is expected—from export taxes.

It is difficult to tell just how badly Roumania might need 100,000,000 francs' worth of military and other supplies; but 100,000,000f in cash could be most advantageously used in the present credit and currency crisis, which is so seriously hampering the nation's business.

HARRISONS & CROSFIELD, LTD.,

EASTERN MERCHANTS.

AGENTS and SECRETARIES of TEA and RUBBER ESTATES. GENERAL EXPORTERS and IMPORTERS.

1-4, GREAT TOWER ST., LONDON, E.C.3.

The situation in this respect shows practically no improvement, and credit—no matter for what purpose it is required—is still almost impossible to obtain; in fact, the National Bank has recently found it necessary to loan substantial sums—so far amounting to close on 100,000,000 lei—to industrial enterprises in Transylvania in an attempt to tide them over the present crisis.

The consolidation of Roumanian short-term Treasury Bonds held by private individuals abroad to the amount of £35,000,000 sterling (at the conversion rates agreed upon) is being carried out on the understanding that the interest (at the rate of 4 per cent.) and principal of the consolidated issue will be provided for from the proceeds of export taxes. The annual interest charge on this loan is, therefore, £1,400,000 sterling, which, at to-day's rate of exchange (805 lei to the £) amounts to 1,127,000,000 lei. The annual interest charge on the new French loan—presumably 5,000,000f—at to-day's rate of exchange (12.80 lei to the franc) would amount to 64,000,000 lei—or a total annual interest charge on both loans totalling 1,191,000,000 lei, without making any provision for amortisation.

The total value of all products exported from Roumania during the present year, calculated on the basis of the latest and most reliable figures available, will not exceed 7,000,000,000 lei, and will yield a total export tax of about 1,300,000,000 lei. Even if all revenue from export taxes, therefore, could be used for the service of the two loans above referred to, they would not provide for much more than the interest. The export tax, however, is at present the Treasury's largest individual source of revenue, and it is difficult to see how the Government could hope to finance its domestic needs if all export taxes were earmarked for the discharge of external obligations. For instance, in order to encourage the farmers to produce more wheat, the Ministry of Agriculture several months ago agreed to pay them, amongst other inducements, a bonus for each hectare sown, and this was to be provided for from export taxes.

Perhaps the new law on which the Ministry of Finance is now hard at work will succeed in making provision for raising more revenue from direct taxation than has so far been obtained, although no system has ever yet been successfully developed in Roumania for raising any considerable proportion of the country's budgetary needs by means of direct taxes. This is due largely to the difficulty of collecting from the farmers, who are by far the largest wealth producers in the country. It may also well be that the yield from export taxes this year is considered below the amount that the Treasury expects to collect in future years, and this possibility is strengthened somewhat by the fact that grain exports from Roumania in 1922 have fallen far short of the expectations raised during the spring months. But export taxes are already so high that they are distinctly harmful to the country's export trade, and are probably largely responsible for the decreasing volume of bread grains available for sale in foreign countries. Any attempt, therefore, to "milk" export taxes further would in time be quite likely to have the effect of completely killing the export trade of Roumania.

This outline of Roumanian indebtedness does not, of course, take into consideration the debts of the Roumanian Government to various foreign Governments for account of purchases and supplies necessary for war-time operations, the nominal value of which—according to an estimate made on April 1, 1921, by the Director General of the Ministry of Finance—amounted to 2,875,284,981 lei (gold). Presumably these would be taken up in any general discussion on inter-Allied indebtedness and war reparations.

Lei exchange continues to depreciate steadily, and is now around its lowest point of the year, against sterling,

at 805 lei to the pound. Until the volume of exports can be substantially increased, a more rigorous system of direct taxation instituted, and the greatest economy effected in Government expenditure, no substantial and lasting improvement in the exchange can be hoped for. In fact, confronted as they now are with such an urgent need for additional circulating currency and credit, and with no "new money" immediately in sight, it seems almost inevitable that the financial authorities will have to look for relief—even if only temporary—to further inflation of the currency, although they will be very reluctant to do so.

Letters to the Editor.

THE CAPITAL LEVY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I again ask your favour as an impartial arbiter to allow me to present one further point for elucidation by your correspondent, who spoke disparagingly of the "ignorant electorate," and who is therefore presumably capable of analysis where others are limited to generalities.

In the Labour party leaflet No. 15, issued for the late General Election, the subscribers to War Loans are described as "moneylenders," and mostly very rich people past middle age.

It is well known, on the contrary, that a vast number of officers, non-commissioned officers and men, in the services, were subscribers to the War Loans. These, presumably, under a capital levy, having already given their personal services, would be required to make sacrifice of their savings as well if their total capital exceeded £5,000. Widows and dependents of those killed would apparently be included in the general category of "moneylenders."

The Labour leaflet then goes on to say, "Who shall pay for the war?" Presumably not the "intelligentsia" and professional fighters with the pen, if it is possible to persuade an "ignorant electorate" that it is fair that those who risked their lives should do their part in lightening the burden of taxation for the large number, including a few of the Labour leaders, who risked nothing during the war. Has your correspondent a fellow sympathy with the latter?—Yours faithfully, C. HEWITT.
5 Lothbury, E.C.

THE PREMIER AND GERMANY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Bonar Law is reported as having stated, with reference to the recuperation of Germany, that this country had nothing to gain by it, "because that country (i.e., Germany) was very much more of a competitor than she was a customer." This statement of the Prime Minister has been widely circulated throughout the Press, and coming from the head of the Government, it is likely to have a far-reaching effect on public opinion throughout the country. Its immediate effect will be to create a feeling of indifference and lethargy with regard to the future of Germany, and, in fact, in some quarters to be welcomed, as indicating that by washing our hands of the whole business we were getting rid of a formidable competitor. I believe the statement of the Prime Minister to be only partially right, and that, on the contrary, the recuperation of Germany would be of immense benefit to this country. It is true that her recovery would certainly mean that she would be a competitor for a share of the world's trade, but the direct and indirect benefits which would accrue to our trade and commerce from the prosperity of a community of over sixty millions of human beings would far outweigh any loss which might be felt through competition in other markets. Mr Bonar Law is not alone in holding his opinion. In fact, it prevailed in many quarters before the war, and certainly helped to lessen the feeling of opposition to what the war would involve when that calamity overtook us. It is not a question of what we sell direct to Germany. If Germany is

prosperous, and is able to purchase a large quantity of wool from Australia, for example, that increases the purchasing power of Australia, and she in turn is enabled to purchase an increased amount of Bradford and Manchester goods from us. The hurt of one nation means the hurt of all, and the good of one nation means the good of all. The recuperation of Germany does mean, therefore, a gain to this country, a gain to France and a gain to the world. The contrary state means a loss to this country, a loss to France, and a loss to the world.

It has taken a great many people a long time to realise that in this country, and we have therefore need to be patient, and not hastily blame France. Time is a great healer, and the scales will fall from all eyes in due time. Meanwhile, I venture to support the suggestion of Mr Hughes, the Secretary of State for the United States Government, that we should proceed by way of an international financial commission. If France declines to take part, I would suggest that her place should be kept open, and that the Commission should proceed without her. There is no time to lose. We have over a million unemployed, and an improvement in trade is the only real remedy for the present distress. Considerations, then, first moral and secondly economic, all point to our giving to the suggestion of America our most enthusiastic support.—I am, &c., D. M. MASON.

Books and Publications.

PHASES OF CO-OPERATION.*

GREAT developments of co-operation in industry and agriculture are probable in many of the States created or transformed by the war, and these books are well timed. The first is a history of the movement in all its forms and in all countries, and of the efforts to make it international, which have been renewed since 1919 with increasing prospects of success. A second volume will examine the questions raised by it, including the conflict between the distributing societies and the retail traders; of the German phase of this conflict some account is given here. Half this volume is devoted to Germany, which gets 133 pages against 18 for the British Isles, five for Denmark, and 20 for Russia, so that outside Germany there is little room for anything beyond a statement of the numbers, objects, and functions of the societies, and the vicissitudes of some of them. Moreover, to begin with Germany somewhat obscures the historical order. But the book contains much well-condensed information, and covers all Europe, Japan, and America—though in America the co-operative movement is still in a rudimentary stage.

The excellent Verein für Sozialpolitik is dealing with co-operation country by country, and this volume on Russia is of peculiar interest at the present time. The movement, we learn, reached Russia some 55 years ago from Germany by way of the Baltic Provinces; a few years later it spread over Russia proper, but the members soon wearied both of meeting and of buying, and only two societies of that period survive. About 1897 there was a fresh start, and in 1912 there were in all some 6,730 societies, of which nearly 5,000 were rural. The railway servants' societies, however, were the largest; most of the rest, both rural and urban, contained members of all classes, until the Bolsheviks interfered with them, and many do so still. The rural societies, apparently, found the strict enforcement of cash payments impracticable, and depended to some extent on credit institutions for support; but the movement brought down retail prices, and the societies multiplied, especially in the early years of the war, when productive co-operative associations were formed to supply the army with clothing and military stores, and in the rural districts with food. Then the breakdown of transport and supplies and political controversies crippled the societies, and the Bolshevik Government abolished or

* "Die Genossenschaftsbewegung." Erster Band. Von W. Kulemann. (Berlin) Otto Liebmann. 1922. "Die Konsumvereine in Russland." Von B. Totomianz. Mit Einem Geleitwort von R. Wilbrandt. (Verein für Sozialpolitik.) (Munich and Leipzig) Duncker und Humblot. 1922.

fused them in its effort to co-ordinate the economic system with the political. But the failure of its militarised Socialism has converted the societies into the backbone of the Russian economic structure; they are now so far favoured by authority that dispossessed capitalists call their undertakings "co-operative" in order to recover them, and the revival of domestic industry enhances the need of co-operative unions. Since the spring of 1921 the Bolshevik Government has become more favourable to the societies, and many "nationalised" factories have been leased to co-operative organisations. Very interesting details are given of the "peasant university," primarily created as a training school for the societies' officials, and of the co-operative publishing and propagandist institution in Moscow, the largest in existence. Professor Totomianz is a veteran co-operator, and his book leaves the reader with renewed hopes for the future of Russia.

EDUCATION FOR BUSINESS.*

THIS book, by an assistant professor of commercial organisation, contains a very thorough "overview" of all that is being said and done with regard to business education in America. It is not a readable book, but the information which it contains will undoubtedly have considerable interest for those who are professionally concerned with commercial training on either side of the Atlantic. The rest of us will probably find it rather too technical for our taste.

Professor Lyon first gives us a comprehensive survey of what is required in commercial education by those who employ its products. He quotes a great variety of evidence as to what business men say they want, and as to what they really do want, as revealed by the relative numbers of employees in different kinds of commercial jobs. The former statements are not very helpful, and are well illustrated by the words of a school principal: "Generally if you can say a boy has pep and a girl is quiet, you have satisfied the business man."

Professor Lyon then compares what business wants with what it gets. The second part of his book is occupied with a detailed review of the facilities for business education in the U.S.A.—business colleges, corporation schools, high school commercial courses, &c. We learn that all is not quite as it should be, for "only a very small number of those who have had the usual type of business training are holding positions, or have ever held positions for which such training is the best preparation."

The author is evidently struggling to introduce a rather wider conception of education into a very narrow world. He hankers for at least a general business training as distinct from purely technical instruction, e.g., stenography. The aim is altogether laudable. His book suffers, however, from one rather serious technical drawback. It consists very largely of lengthy extracts adapted from other works, which are not printed in quotation marks. The result is that it is often difficult to disentangle the author from his material, and the reader inevitably finds himself ascribing to Professor Lyon opinions which he would be the first to disown.

* "Education for Business." By Leverett S. Lyon. University of Chicago Press. 1922.

STATE ACTION IN INDUSTRY.*

ALL interested in Labour problems have reason to thank Professor Frank Tillyard for presenting them within a small compass and in a readable form, with a comprehensive account of the existing law relating to the wages, hours, safety, and health of the worker.

After a short account of the common law rules relating

* "The Worker and the State." By Frank Tillyard, M.A., M.Com. (London) George Routledge and Sons, Limited. Price 10s 6d.

to contracts between employers and workmen, the author gives a useful summary of the evolution of industrial legislation prior to a more detailed consideration of State action as it is at present determined by various statutes. The subject is presented under four main headings. In the first place, State Interference in Regard to Wages is dealt with in an account of Minimum Wage Legislation; of statutory provisions for the ascertainment of wages; of statutory safeguards as to the payment of wages; and, finally, of statutory facilities for recovering wages. Secondly, the time conditions imposed by the State are grouped together, with special reference to recent legislation regulating the hours of labour for children, women and young persons, and adult males respectively. Statutory enactments dealing with the safety and the health of the worker form the two final sections, in which the question of regulations of industrial conditions and of compensation are adequately dealt with.

This bald outline may serve to indicate the scope of this book, which, while not intended as a detailed work of reference, is a successful attempt to summarise the many intricacies of "Industrial Law" in a form at once interesting to the general reader and useful for the student of economic conditions. The inclusion of clear and succinct *résumés* of the historical aspect of the various questions with which he deals is not the least service which the author has performed in this new book of his.

We have received from Messrs George Philip and Son, Limited, two very useful coloured maps. The first is a mercantile map of the world, measuring 48 by 38 inches. Railways are shown in black, with through routes in red. Sea routes are set out, and distinction is made between steamer and sailing routes, distances being given in nautical miles. Telegraphs, wireless and oiling stations, &c., are also depicted. An interesting feature is that time in various parts of the world is shown by clock-dials along the top of the map. The second is a mercantile map of Europe, which shows all the recent changes at a glance. Railways, steamer routes, and other useful information makes it an essential companion to the map of the world. The publication price is £1 1s for each map.

Foreign Branch: 168, Fenchurch Street, E.C.3.

With rubber over 1s 3d per lb, and talked to 1s 6d, it is natural that there should be a good deal of interest taken in the rubber share market. The difficulty is to buy shares. Prices have gone up in some cases by leaps and bounds on a mere modicum of inquiry. Possibly there is too much of the "buy-at-best" business going on now. It certainly forces up prices at a vivid pace. The outlook for the industry, however, is sufficient to encourage holders in keeping their shares. This is why the supply is scarce, and why the new buyers are called upon to pay handsomely if they want shares. The cotton market is better after being dull: Shells had touched £4, cum dividend, at one time. Amongst textiles, Courtaulds and Listers still hold the boards as the most active shares in the list. A drop in Siemens followed the company's announcement that consideration of the payment of the preference dividend due next week, is to be postponed until June. Newspaper stocks and shares are mostly higher. The shipping market remains quiet, and the banking share dividends have had

STEUA ROMANA (BRITISH), LIMITED, have received advice that the fields production of the Steaua Romana Company of Bucharest for the month of December, 1922, was 19,830 tons. This brings the production for the year 1922 to 227,798 tons, as compared with 223,430 tons during the year 1921, or an increase of 2,368 tons.

On the other hand, the past good seasons for wool, wheat, and other produce, coupled with excellent prices, especially for our

Inasmuch as more than half the fleet was constructed subsequently to 1914, and that nearly all ships are equipped for passenger or emigrant service, this figure may be regarded as very low.

low, outward journeys also have a tendency to improve.

"Without desiring to commit myself in any way, we may say that we look forward with full confidence to the results of the present year, which we believe will be considerably better than those for the past year. We cannot, of course, tell you what these results will finally be, but the first half-year appears to us encouraging. The position is perceptibly improving, especially with regard to outward sailings from Europe, in consequence of the remarkable manner in which exports are recovering. Freights on outward journeys also have a tendency to improve."

BRITISH-AMERICAN TOBACCO COMPANY, LIMITED. EXPANSION OF COMPANY'S BUSINESS.

"SOUND AND PROMISING FINANCIAL POSITION."

The twentieth annual general meeting of British-American Tobacco Company, Limited, was held, on the 11th instant, at the offices of the company, Westminster House, 7 Millbank, London, Sir Hugo Cunliffe-Owen, Bart., one of the deputy-chairmen, presiding.

The secretary (Mr A. M. Rickards, F.C.I.S.) read the certificate of Sir William Plender, of Messrs. Deloitte, Plender, Griffiths, and Co., chartered accountants, appended to the accounts.

The Chairman, in moving the adoption of the report and accounts, said: Since our last annual general meeting there has been one change in the directorate, Mr C. T. Hill having resigned to take up the chairmanship of one of our associated companies.

The vacancy caused by the resignation of Mr Hill has been filled by the election of Mr Kenelm Stanley Smith, who will come up for re-election at a later stage of the meeting.

Taking the assets side of the balance-sheet first, you will observe that the item of real estate and buildings at cost, less provision for amortisation of leaseholds, £490,588, shows a decrease of £60,392. This is mainly accounted for by the transfer from real estate and buildings of certain plant and machinery to machinery and fixtures account. We have also disposed of some house property at Liverpool, which it was unnecessary to keep.

Plant, machinery, furniture, and fittings, at cost or under, £529,246, shows an increase of £53,315, almost entirely due to the transfer to which reference has just been made.

Goodwill, trade marks, and patents remains at the same figure as last year—namely, £200,000—and in view of the value of the trade marks alone, the directors consider this figure to be a nominal one.

A number of our associated companies have during the past year materially reduced their indebtedness to us, and consequently loans to and current accounts with associated companies, £4,605,581, show a very substantial decrease of £852,395.

INVESTMENTS AND STOCKS.

Investments in associated companies show a decrease from £15,340,582 to £15,266,302. This is the largest item on the assets side, but shows a decrease this year of £74,280. We have made investments during the past year by increasing our holdings in various associated companies throughout the world. On the other hand, we have realised our holding in one of the associated companies, which represented an investment made for the purpose of ensuring supplies of certain material during the war.

Other investments, which stood last year at £4,058, is now increased to £4,648,53, and consists entirely of British Government securities, under which description they now appear in the balance-sheet.

Stocks of leaf, manufactured goods, and materials at cost or under now stands at £4,849,513, or a decrease of £2,023,552. The stocks of leaf, manufactured goods, and materials have been carried at cost or under, as in previous years. I may say, however, that our supplies on hand are ample for our present requirements.

Sundry debtors, less provision for doubtful debts and debit balances, now stand at £1,659,489, a reduction of £448,651. The amount in respect of assets in enemy countries, which, as you will remember, was included under this head last year, has now, of course, disappeared.

Cash at bankers, in transit, and at call, £4,495,610, shows an increase of £1,974,630, due partly to the receipt of cash in respect of our claim against the German Government.

THE CAPITAL.

Turning to the liabilities side of the balance-sheet, the issued capital of 4,500,000 preference shares remains the same, but the issue of ordinary shares is increased from 16,015,645 to 16,046,070, an addition of 30,425 shares. This is due to issues to shareholders in respect of belated acceptances of the various issues of shares, and to the issue to certain directors of 30,000 shares in pursuance of a resolution passed by the shareholders on January 11, 1922.

Creditors and credit balances, £5,161,822, represents a decrease of £1,078,021 on the figure at which it stood last year. This decrease is mainly accounted for by the fact that we have now no loans from our bankers as we had last year.

The item of reserves for buildings, machinery, and materials has been increased from £489,737 to £500,000.

Premium on ordinary shares issued has increased by £16,275 to £417,314, due to the premiums received on the 30,000 shares issued to the directors previously mentioned, and the sale of certain shares which were surrendered by one of the directors under the terms of the resolution of May 19, 1919, on that director's resignation.

Provision for redemption of coupons now stands at £48,445, or a reduction of £2,100.

Special reserve has increased from £1,254,230 to £1,256,398, a difference of £2,168.

GENERAL RESERVE.

It will be observed that the item general reserve, amounting to £1,500,000, set up to provide against possible losses arising from the war, has disappeared from the balance-sheet. The sum of £1,221,000 14s has been added to the balance brought forward from last year, and £278,000 6s has been charged off. The general reserve of £1,500,000 was set up out of the undivided profits of the company and not out of the profits of any particular year, and, in view of the steady expansion of the company's business, your directors, after careful consideration of what the future capital requirements of the company are likely to be, came to the conclusion that it would be to the best interests of the company that that portion of the general reserve not required to be written off should be brought back into the undivided profits of the company. Your directors were further influenced by the fact that world affairs, and particularly European affairs, are still in a very unsettled state, and in such times it is of vital importance to a company such as yours, whose business is entirely foreign, to conserve its cash reserves.

PROFIT AND LOSS ACCOUNT.

That brings me to the last item—namely, profit and loss account. You will remember that last year we carried forward a balance of £3,171,454 2s 9d, out of which we paid a final dividend of 8 per cent., amounting to £1,281,266 6s 5d, which left us with a disposable balance of £1,890,187 16s 4d. During the year some additional coupons have been deposited with us in respect of the shares issuable in pursuance of the extraordinary resolution of the shareholders of May 10, 1920, and we have allotted to shareholders 310 ordinary shares of £1 each and a sum of £310 is deducted from the balance, leaving £1,889,877 16s 4d. To this sum has been added a portion of the general reserve of £1,500,000, set up in 1914 to provide against possible losses arising from the war, not now required, amounting to £1,221,000 14s. To this must be added the net profits for the year, after deducting all charges and expenses for management, &c., and providing for income-tax and corporation profits tax, amounting to £4,400,783 14s 6d, less the preference dividend of £225,000 and the four interim dividends amounting to £2,566,555 11s 2d, which leaves a disposable balance of £4,721,105 13s 13d, out of which the directors recommend the distribution on January 18th instant of a final dividend (free of British income-tax) on the issued ordinary shares of 9 per cent., amounting to £1,444,153 8s 2d, leaving £3,276,952 5s 6d to be carried forward. This final dividend of 9 per cent. will make a total dividend of 25 per cent. for the year upon the ordinary shares.

The directors trust that the shareholders will consider the dividend satisfactory.

The company's claim in respect of a refund for excess profits duty against the Government under the Finance Act, 1921, has not yet been settled. The profit for the year under review does not include any amount in respect of this claim.

PROSPECTS.

During the past year we have passed through a period of some difficulty. The conditions in our business, however, have gradually improved, and are still improving, and during the first three months of our current year this improvement has been maintained.

I feel that we are in a very sound and promising financial position; our carry-forward is larger than last year.

Before moving the resolution, I should like to refer to the fact that during the year the holders of share warrants to bearer were asked to lodge their talons with the secretary at this office, to be exchanged for new sheets of coupons. I may say there are still a few holders of share warrants to bearer who have not done so. This means a certain amount of inconvenience to the registration department, and, of course, the holders of share warrants to bearer who have not exchanged as required are standing out of their dividends, as they have not the coupons to present to entitle them to dividends declared since June 30th last. I would also like to take this opportunity of saying that there are still a certain number of holders of share warrants to bearer who have not deposited coupon No. 79, which entitles them to one bonus share for each four held, and coupon No. 80, which entitles them to one Garland Steamship Corporation share for each 20 ordinary shares held. In this instance, also, it would be very much more convenient to the company, and of financial advantage to the shareholder, that these coupons should be deposited at once.

I now formally beg to move the adoption of the report and balance-sheet for the year ended September 30, 1922, including payment on January 18th instant of a final dividend of 9 per cent. upon the issued ordinary shares, free of British income-tax.

I may also mention that the directors have declared for the year 1922-23 an interim dividend of 4 per cent., free of British income-tax, also payable on January 18th, so that the shareholders will receive on that date 13 per cent.

Mr Albert G. Jeffress seconded the resolution, which was carried unanimously, and the usual formal business terminated the proceedings.

PETER WALKER (WARRINGTON) AND ROBERT GAIN AND SONS, LIMITED.

EFFECTS OF HIGH BEER DUTY AND UNEMPLOYMENT.

The first annual general meeting of this company was held, on the 11th instant, in London, Sir John S. Harwood Banner, M.P. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the directors considered the results of the working of the company satisfactory.

The balance of profit brought into the accounts amounted to £541,700, and after deducting debenture interest, one year's preference dividend, and setting aside £10,000 towards redemption of debentures, there remained a balance of £247,544. The directors recommended a final dividend of 5 per cent., making 10 per cent. for the year, carrying forward £20,544.

Turning to the manufacturing or brewing side, after consideration of the whole circumstances, coupled with reports not only from the company's own officers, but from independent experts, it had been decided, in pursuance of the policy of consolidation and concentration, to close the Walker brewery at Burton, to discontinue the manufacture of lager beer, and to withdraw from the London trade. This was one of the steps taken in pursuance of a policy which had for its ultimate object the brewing of the whole of the company's requirements of ales and stouts under one roof. The houses owned by the Walker Company in London had been disposed of by auction at highly satisfactory prices, and above what they stood at in the books. A contract for the sale of the Burton brewery had been entered into. The directors were confident that the net result would inure to the financial benefit of the shareholders.

The result of the maintenance at a high figure of the beer duty was shown in the continuous fall in the output throughout the country. The Excise returns for the quarter ended September 30th last showed the largest reduction seen since the exceptional declines which occurred during the war. For that quarter the total decline was no less than 1,100,000 standard barrels as compared with the corresponding period of 1921, practically 2,000,000 barrels less than for the same quarter of 1920, and 4,000,000 less than for the quarter ending September 30, 1914. Thus it was plain that the duty was ceasing to answer the purpose for which it was imposed—that of revenue production—and was tending towards prohibition by taxation.

In December, 1921, he (the chairman) told the shareholders that unemployment had affected their trade in common with most brewery companies, and unfortunately there was no improvement during 1922. Unemployment, short time, and falling wages in their districts had all tended to reduce consumption. So long as the beer duty remained at its present high rate there was no possibility of lowering the price of beer to the consumer in order partially to meet his decreased spending capacity.

In conclusion, the Chairman said he hoped that some day the directors would be able to complete an amalgamation of all the companies, so that there would be one preference and one debenture issue.

The report and accounts were unanimously adopted.

Jan. 12.....	(a) 50,000,000	(a) 76,575,000	2 3 5.68	99 6 372

(a) Including Treasury Bonds.

Tenders will be received on Friday, January 19, 1923, for Treasury Bonds and Treasury Bills to be issued to the maximum amount of £40,000,000. The amount of Treasury Bonds issued will not exceed £5,000,000, but subject to that limit, the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

ROYAL INSURANCE COMPANY, LIMITED

Other Countries	1,103	Norway	519
Total value of imports of gold	672,405	Total declared value of exports registered in the week	1,663,439

Messrs Samuel Montagu and Co. write on January 10th as follows:—

GOLD.

Practically the whole of the gold offered for sale this week with licence for export was sold to India. The demand was so large that more than double the quantity could have been taken for the same quarter had it been available. Gold valued at \$2,024,000 has arrived in New York \$1,354,000 from Alexandria, \$1,075,000 from London, and \$305,000 from France. During the ten months ending October last, the net import of gold into New York was \$109,185,305. The Reichsbank's purchase price for the 20-mark gold piece has been fixed at 26,000 paper marks.

SILVER.

Though the silver market has lately been steady, prices have shown considerable vacillation, and it has been difficult to foresee from day to day the quotations to be expected on a succeeding day. To-day, owing to a lack of Indian support and some speculative sales, there was a heavy fall of 3d in the quotation for cash silver and of 7d in that for forward delivery. Prices have been mainly sustained by the demand for immediate delivery, either for shipment to India or for covering bear operations, and the very wide difference between the prices for cash and forward delivery tended to check speculative sales for forward delivery which otherwise would have been more in evidence. America has been more disposed to sell, and China has placed considerable amounts for offer. A few Continental sales have taken place. The bulk of purchases have been on Indian account. The total amount purchased under the Pittman Act was reported from Washington on the 26th ult. as 149,390,076 ounces. This amount included a purchase of 1,500,000 ounces on that day. The following figures relate to movements of silver during the first ten months of last year:—Net exports from San Francisco to China (not including Hong Kong), 1922, \$16,417,012; to Hong Kong, \$11,320,694. From New York to England, \$7,025,126; to India, \$7,093,023.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Dec. 15, 1922.	Dec. 22, 1922.	Dec. 31, 1922.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There is no great show of activity, but a nice steady business is passing all the time, and values remain very firm. While merino tops are not quotably dearer on the week, most topmakers are standing out for full quoted rates. Average 64's tops are obtainable at 5s 1d, though some firms want about 1d more, everything depending on the top and the position of the seller in regard to commitments. For a good warp 64's a general quotation is about 5s 3d per lb. Most crossbreds are dearer compared with a week ago, a really good 58's comeback being 1d up at 47d, while the same rise is seen in 50's average at 28d. In order to show how values compare with those ruling before the war and a year ago, the following table has been prepared:—

Description.	d	Jan. 11, 1923.		Jan. 12, 1922.		July 30, 1914.	
		d	c	d	c	d	c
64's warp	63		54		32		30
60's super	54		48		30		24
56's average	36		28		15		16
46's carded	18		15		15		16
40's prepared	16		13		13		16

It is an undoubted fact that the good reports from the primary wool markets are contributing in no small degree to the firmness of values in the consuming centres. It seems certain that demand for raw material is going to keep up for some time to come, and there is a growing impression that prices of tops and yarns are more likely to advance than decline. Meanwhile, there is a steady consumption, and although during the last week or so spinners have found less new business, they have plenty of work in hand to keep machinery fully occupied for at least two, and in some cases three, months. Manufacturers are still complaining about the high price of yarns, but spinners' quotations are very firm, with, if anything, a hardening tendency.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The chief event of the week has been the opening of the second half of the Australian selling season, Sydney cables stating that on the resumption of the auctions last Monday merinos advanced generally 5 per cent. This was known on Bradford Exchange at the noon meeting, and created somewhat of a surprise. Apparently, all sections of the trade are still confident in the future of merinos, notwithstanding that last Monday some of the largest importers were willing to sell their standard 64's top at 5s 2d. The price is very reasonable, and but for the turn of political events on the Continent, would have been exceeded before many days had elapsed. However, there is a quiet confidence throughout the trade which is very significant. England and Japan are reported to be the chief buyers in Sydney, whilst a private cable states that at Wanganui, in New Zealand, Bradford and German buyers were the chief operators in crossbreds. Prices were also considerably higher, thus providing one other evidence of the great confidence which the trade generally has in the wool position. It is to be sincerely hoped that the movement of wool values is a safe indication of the actual state of the manufacturing end of the industry. Whilst the future of wool appears to give no cause for alarm, a larger move in the placing of new orders for piece goods in manufacturing centres would lend a greater air of security than is to be found at present.

A very surprising feature in connection with the Australian wool trade is the active competition of Japanese mills. Their buying has not been confined to Sydney, but has extended on a very large scale to South Africa. Everything points to the Cape season being over by the end of February, which will make it the shortest ever known. The Japanese buying deserves special mention in conjunction with the fact that mills are springing up in the Far East almost like mushrooms. As the years go by Japan will require more merino wool than ever. There are machinery makers in Yorkshire and Lancashire who can run full time for another two years, chiefly on export account, and it looks as if very large weights of wool will be consumed in the Far East, Australia, and New Zealand at no distant date. It is possible to employ Japanese labour at a quarter of what has to be paid in the West'Kiding, in consequence of which wool can be worked up and made into the finished fabric at a price with which no European country can compete. There is no wonder at the British piece trade with Japan not being brisk. Japan ought to have been buying a month ago in Bradford large quantities of heavy-weight goods for the next winter season, but purchases have so far been disappointingly small, and anything taken is almost entirely of a shoddy character. No doubt the bulk of the wool bought by Japan is being made into dress goods, but all the same, heavy coating looms are being exported, and men's wear fabrics are being made in considerable bulk. During the war Japan turned out some most creditable khaki cloths, and any firm who can make these is well equipped for producing good woollen tweeds.

The Craftsman lives in his Work

"If you would see my monument, look around," is the proud inscription on the tomb of Sir Christopher Wren in St. Paul's Cathedral.

The craftsman gives his life to his work—and his achievement is his reward.

Seventy years of patient and skilful craftsmanship have gone to the perfecting of The Chatwood Safe and Strong Room. Throughout all those years a determination to be satisfied with nothing less than the best attainable has animated everyone concerned with their construction.

The security afforded by The Chatwood Safe and Strong Room of to-day is the monument to the high ideals of Samuel Chatwood when he laid the foundation on which the present great business has been built.

THE CHATWOOD SAFE

Since 1858

The New Chatwood Safe Book contains full details of the security achieved and offered, also expresses in a simple manner the high ideals of the firm. A postcard brings a copy gratis.

THE CHATWOOD SAFE CO. Ltd.
Bankers' Engineers, BOLTON, Eng.

With regard to manufacturing developments in Australia and New Zealand, these have been slowly proceeding for years, though it is only comparatively recently that any serious attention appears to have been paid to it. There does not appear to be any probability of goods manufactured in Australia competing seriously with others, except in the Australian market itself. This, of course, is striking a blow at the export trade of Great Britain, but home manufacturers of the present generation need not be alarmed. Australia is a tremendous country, with almost unlimited possibilities in the way of increasing population and development in commercial enterprise. Moreover, if Australia ever develops manufacturing areas bearing any correspondence to those in this country, it will be due to a large extent to the emigration of skilled men from England.

VEGETABLE OILS AND OILSEEDS.

Market conditions continue quiet, and there is no great amount of business passing. Near positions of linseed are much easier, there being only a small demand from crushers, while the quantity afloat for Europe has sensibly increased. That on passage to the United Kingdom, and under "orders," is 33,200 tons, and to the Continent 35,200 tons—together 68,400 tons, which is 50 per cent. better than a week ago. Of this a good proportion is Indian, viz., 33,200 tons, and the remainder Argentine. Shipments of the new Plate crop appear to be improving, though only slightly, and it may be some little time before it moves off in anything like really substantial quantities. Meanwhile, transactions in it are limited, buyers evidently waiting until they are satisfied that a reasonable level has been touched. Current value of seed loading is about £17, while for January-February shipment to Hull £16 2s 6d has been accepted, and 2s 6d less quoted for April-May. Bombay linseed loading has commanded round £20 5s. Regarding the oil product values on spot have fluctuated somewhat, and are somewhat lower, though in view of scarcity £39 per ton naked ex-Hull mill is asked for prompt and £38 for month. Forward positions are easier, and up to 20s lower.

After a good business done at reduced levels, Egyptian cottonseed has firmed up again, £11 10s now being required for Sakelariadis on spot. Bombay is, however, about 5s lower on the week. Crude oil from Egyptian seed has been in good demand, and is scarce in near positions, current value being £38 10s naked ex-Hull mill. A good trade in edible refined is reported, and the figure for the common description has moved up to £41. Continental countries have been good buyers of this oil, and also of crude soya bean oil. Palm kernel oil has been in good demand, and higher prices have been paid, but ground nut oil is a quiet market. Rape oil in near positions is still scarce, and late values about maintained.

In view of the small quantity of seed crushed in recent weeks, linseed cakes are getting scarce, and are dearer for prompt delivery. Cotton cakes and meals generally are firm, and a slightly better trade is being done at the mills.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The home hide market is steady with a firm tone; best ox hides sold in Bermondsey on Thursday from 7½d to 8½d, slight advances in some cases being noted. Cows were firm at 6½d to 7d, with kips making 2d to 4½d. Calf sold readily from 7d to 11½d for best, and wools from 5s 6d to 11s each, the hogg class bringing 5s 1½d to 14s 6d per skin. The general opinion is that the hide market will remain steady, as the demand for best grade hides seems in excess of the demand all the world over. The market for salted hides in the River Plate remains very firm, and sales are reported on American account at a parity of 12d. Dry hides are still selling fairly well, as tanners are forced to make a cheap bend from these to meet the shoe manufacturers' demand. Latest cables from New York report the Chicago position as weaker, with best heavy packers now offering at 10½ cents.

The demand for sole leather is steadily improving, as tanners have received a good many orders and inquiries since the holidays. Business on Russian account is still talked of, and it is known that large parcels of bends have been sold by northern tanners to Russia through a London agency. Tanners are firm on prices, and very little in the way of concessions has been heard of since stocktaking. Dressing leather is meeting with a slightly better sale, as there is a fair demand for split hides from the motor and upholstery sections. Strap butts are selling slowly, but there is a fine demand for hide and kip splits for shoe and legging work. Upper leather seems more lively, and there is a report that large contracts for semi-chrome have been placed in the Leeds district for the overseas trade. Glacé kid is selling better, but tanners are handicapped by the high price of raw skins.

The shoe section seems brighter, following on the receipt of orders for both the home and export trade. Some anxiety is, however, felt at one or two failures in the shoe trade, as they show the old game of making and selling under cost is still in existence.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, January 12.

SUGAR.—The market continued generally quiet, and prices on the week are from 3d to 6d per cwt lower. Messrs Tate and Lyle's cubes quoted 54s 9d to 55s 9d; crushed, 51s 9d; granulated, fine and coarse, 50s 1½d; No. 2, also London, 49s 7½d; caster, finest, 53s 4½d; A, 51s 7½d; B, 51s; yellow crystals, 43s 7½d; granulated, second half February-March, 59s; April-May, 50s 6d; June-August, 50s 9d.

Crystallised West India steady at 45s to 46s. American granulated, 49s 3d; February-March, London, 23s. c.f. and i. terms. White Java, spot, 47s 6d to 48s 3d; ditto May-June, 21s; June-July, 20s 9d, c.f. and i., London. Belgian granulated, spot, 48s to 48s 6d. French crystals, 47s 9d to 48s 3d; W.S.R., granulated, prompt, 22s 3d; H.U.M., 22s 3d; J, 21s 9d, f.o.b., Amsterdam. Czechoslovakian granulated, prompt, 21s 9d, f.o.b., Hamburg. Cuban basis 96 per cent., February, sellers, 17s. Brazilian ditto, afloat, 16s 9d; ditto basis 80 per cent., January, 12s, all c.f. and i. terms, United Kingdom. Terminal market dull, and easier. March, sold, 21s 10½d; May, 22s 3d to 22s; August, 22s 3d to 22s. Cuban stocks stand at 49,340 tons new crop, against 21,780 last year. Liquid glucose, spot, 28s 6d per cwt.

COFFEE.—Steady absorption took place on home-trade account, at a full range of prices. Fair to fine bold Nairobi, sold, 95s 6d to 114s 6d; Costa Rica, ditto, 98s 6d to 118s. Future delivery market inactive, and largely nominal. March, sold, 58s 10½d.

COCOA.—At public sale over 6,000 bags were catalogued, and with buyers very reserved only a few unimportant parcels were disposed of. Accra, F/F quality, January-March shipment, quoted 35s 6d, f.o.b. terms.

TEA.—Market opened with a firm tone for Indian, and the bulk of the 46,600 packages offered during the week was disposed of. 24,300 packages Ceylon aroused active support, and prices ruled firm to occasionally dearer.

RICE.—Only a retail amount of business transpired this week, and quotations meantime are somewhat nominal. Two stars, spot, 15s 6d to 15s 9d; new crop, February, 13s 6d. Cable reports from Rangoon point to about three weeks' delay in the crop, with only small shipments anticipated during next month. Broken kinds very firm, and business hampered by lack of offers. Rangoon beans, spot, 8s. Japanese peas, afloat, 27s 6d, c.f. and i., London.

SPICE.—Pepper market quiet, but sellers required steady prices. Fair black Singapore, spot, 4½d; ditto, January-March, 4½d; Aleppo, spot, 4½d; Tellicherry, 4½d; white Singapore, spot, 6d; Muntok, ditto, 6½d; ditto, January-March, 6½d. Zanzibar cloves, spot, sold, 8½d to 9d; October-December, steamer, 7½d to 9d; January-March, 7½d to 8½d. Flake tapioca, spot, fair quality, sold, 3½d per lb. Fair Penang seed, spot, quoted 23s 6d. Sago flour, 3½d per lb. Fair Penang seed, spot, 13s. Desiccated coconut, spot, fine cut, sold, 36s 9d; medium held for 37s 3d. Ginger unaltered.

JUTE.—After a slight spurt in the early part of the week, this market developed a dull and weaker tone, as spinners almost withdrew from the market. First grade, December-January, usual continental ports, sold, £34 15s to £33 10s; January-February, £35 10s to £34 10s; February-March, £36 to £36 10s and £34 10s. Lightning grade, January-February, done £34 10s to £33 10s; and February-March, £35 to £33 10s. Hessians slow, 10-oz, spot, 36s; January-February, 34s 6d; 8-oz, spot, 28s 6d; January-February, 30s; A twills, spot, 89s; B, sold, 74s 6d to 75s.

HEMP.—Steady inquiries led to a fair amount of business regarding Manila descriptions, and prices responded. G grade, January-March, quoted £37; H, £36; J, sold, £34 10s to £34 15s; K, £33 10s; L, £33 to £33 10s; and M, £32 10s to £32 15s. New Zealand nominal. H.P.F., spot, £34; fair, £31 10s. African sisal, No. 1, G.E.A., January-March, £35 10s; B.E.A., £35. Italian, spot, quiet, and P.C. quoted £57 10s to £59 10s, as to quality.

SHELLAC.—Market rather unsettled. Fair T.N., spot, 375s; March sold, 352s 6d to 357s 6d and 350s; May, 347s 6d to 350s and 355s. T.N., January-February, steamer, 335s.

COPRA.—Market very irregular, and actual business confined to moderate limits. F.M.S. Straits, January-March, Rotterdam, sold, £25 12s 6d to £25 6s 3d and £25 10s. Ceylon quoted, £27 10s; Cebu, £25; Java, £25 12s 6d paid; Dutch East Indies, sold, £25 7s 6d; mixed quoted, £24 12s 6d; South Sea Islands, £24 10s. Palm kernels, January-March, Liverpool, sold, £17 13s 9d to £17 15s; February-April, £17 15s.

RUBBER. apart from slight fluctuations at times, presented firm features, and business proceeded with freedom. Standard crepe and sheet, spot, also January, moved up to 1s 4½d; February, 1s 4½d; March, 1s 4½d; April-June, 1s 5d; July-September, 1s 5½d, and October-December, 1s 5½d. To New York, standard sheet, January-February, sold, 1s 3½d to 1s 3½d; March-April, 1s 3½d to 1s 4½d, and crepe, April-May, 1s 4d to 1s 4½d, c.f. and i. Fine hard Para, spot, 1s 1½d;

THE MONEY MARKET.

MONEY has been still more plentiful, owing to the con-
tinued ebb-tide of currency from circulation and further
borrowing from the Bank of England by the Govern-
ment, presumably in connection with the payment of com-
pensation money to the railway companies. As the tax-
gatherer provides funds for the repayment of these
credits, and for the wiping out of outstanding Ways
and Means advances, it seems likely that the margin
between the market and poverty will become narrow

OILS.—Linseed market quiet and easier. Spot, net, naked, 38s
January, 38s; January-April, 38s 6d; May-August, 38s 4d. Rape
steady. Crude, spot, 42s 6d; refined, 45s 6d. Cotton firm. Crude
Egyptian, spot, 38s; common edible, 43s 6d; deodorised (in barrels),
45s 6d. China-wood firm. Hankow, spot (barrels), sold, 85s; January-
February, sellers, 76s. Coconut steady. Ceylon, spot, 42s; January-
February, 41s; Ceylon, ditto, quoted 43s. Soya firm. Oriental,
barrels, January-February, 38s. Japan fish steady. January-
February, cases, 25s 9d. Cod steady. English, spot, 29s 6d to 30s.
Ground nuts steady. English crushed, naked, spot, 45s; deodorised,
barrels, 55s. Turpentine irregular. American, spot, 107s;
January-April, 108s 6d. Russia quiet. American, grade B, 12s 6d;
F, 14s 6d; G, 14s 6d; H to I, 14s 6d; WG, 18s 6d; WW,
19s 6d. French, F/G, 13s 6d; WW, 16s per cwt. Petroleum steady.
American standard white, spot, 1s 1d; and water white, 1s 2d per
gallon. Castor oil firm. First pressure, spot, to June, quoted 49s;
second pressure, 46s, and pharmaceutical, 54s per cwt.

OILSEEDS.—Market quiet, and prices easier, especially for near
positions closing steady. Bold Bombay, afloat, sold, £20 7s 6d;
small Bombay, ditto, £20; Calcutta, afloat, £20 5s; January-
February, £18 2s 6d; and April-June, sold, £17 2s 6d to £17 5s.
Plate, afloat, sold, £17 10s to £17 7s 6d; January, £16 10s
to £16 12s 6d; January-February, new crop, sold, £16 5s.
April-May, £16 to £16 2s 6d. Rapeseed quiet. Toria, afloat,
£18 7s 6d; January-February, sold, £16 7s 6d; Jamba,
December-January, £14 2s 6d. Cotton-seed firm. Egyptian
black, January, £11 18s 9d, and white, £11 7s 6d to £11 10s,
paid. Bombay, February-March, £8 17s 6d. Gingly seed steady.
Large, Bombay, January-February, sellers, £21 7s 6d. Chinese, new,
afloat, £22 7s 6d; January-February, £21 10s 3d. Groundnuts quiet.
Coromandel, machine-dried, January-February, quoted £20 15s.
Chinese decorticated, f.a.q., December-January, £20 10s; Nigerian,
ditto, £20 15s. Soya beans firm. Manchurian, January-February,
quoted, £11 5s per ton.

METALS.—Tin opened with a quiet tone, but in absence of any
undue pressure to sell, rates maintained a steady level. Standard,
January, changed hands at £179 7s 6d; February, £180 5s; and three
months, £181 to £181 5s, while finally registered at £180 15s. Advances
from the East report holders as being very reserved. Subsequent
movements displayed slight irregularity, and prices on balance ruled
firm in sympathy with higher advances from the East, combined with
an improved demand in America. By the middle of the week stand-
ard, cash, sold at £179 7s 6d; February, £180; three months,
£181 10s to £181 15s to £181. Cables from the East report sales on
the basis of £183 15s, c.i.f., being an advance of 10s per
ton. Rates ruled firmer on Thursday, with a good inquiry,
standard, cash, sold at £181 5s to £181 10s to £180 15s;
and three months at £183 to £182 15s to £182 12s 6d.
The tendency was again firmer at the final market, with a liberal

business in force. Standard, cash, sold at £181 12s 6d to £182 5s to
£181 17s 6d, and three months at £183 to £183 10s to
£183 12s 6d. English ingots, £181 to 181 15s. Copper: With
reserved sellers, a steady tone ensued and a fair business transpired,
including standard, January, at £64 10s, and three months at £65 5s.
At Wednesday's session sellers offered with more freedom, but with
buyers well in evidence liberal dealings took place at slightly lower
prices. Standard, cash, sold, at £64 7s 6d to £64 6s 3d, and three
months £64 17s 6d to £64 12s 6d to £64 17s 6d. On Friday
steady trading ensued without material change in prices. Cash sold
at £64 7s 6d, and three months at £65 1s 3d to £64 15s.
Electros, £70 15s to £71; best selected, £67 10s to £69 10s; strong
sheets, £96; wire bars, £71. Antimony, ordinary brands, £27 to
£29 10s. Aluminium steady. Home trade, £95. Lead dealer at
£27 2s 6d to £26 12s 6d, as to position. Spelter quiet at £35 to
£33 10s, according to position.

TALLOW.—Messrs Colchesters and Woolner write on January 10th,
as follows:—The tallow market was steady during the week,
and prices are unchanged to-day. Spot supplies have been scarce,
but several ships have arrived and larger quantities will be available
soon. At auction to-day 1,314 casks tallow were offered, and 599 were
sold. Quotations are:—Australian mutton: Fine, 43s 6d; good to fair,
42s to 40s; dull to dark, 37s to 36s; hard, 42s. Australian beef:
Fine, 43s; good to fair, 41s to 38s; dull to dark, 36s 9d to 35s; sweet,
43s 6d. Present shipment from Australasia: Mutton, fair coloured,
48 degs., 40s; and mixed, 43s, c.i.f., London, 38s 6d. The market
letter is unchanged. Town tallow, 35s 6d per cwt. Rough fat, per
8 lbs, 13d; melted stuff, 25s 6d per cwt. Quotations are:—Town:
35s 6d net cash, naked, ex works. Country: Fair casks, 35s; home
melted, shipping casks, net, f.o.b., good coloured, —; fair to dull,
36s 6d to 35s 6d. Bone fat: White, none; pale, none; benzine,
32s; melted stuff, 32s 6d, f.o.b.

Market rate (3 months' bills)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	..

The Bank return showed a decrease of £1,219,000 in the note circulation, which with a small increase in the stock of gold added £1,224,000 to the Reserve. Government securities rose by $6\frac{1}{2}$ millions, and Public deposits declined by 3 millions, and so there was an increase of nearly 11 millions in the Other deposits. Currency notes outstanding were further reduced by £4,809,000 to £284,927,900, which includes £1,515,900 for notes called in, but not yet cancelled. The fiduciary issue is £235,262,100, or £34,921,700 below the maximum.

THE STOCK MARKETS.

The Stock Exchange has passed an active week, and business has been on so large a scale that next week's settlement is expected to prove the heaviest for some time past. Prices have shown a remarkable power of resistance to adverse political influences, and although affected to some extent by the report of a hitch in the debt funding negotiations at Washington, recovered quickly on semi-official reassurance on the point. The gilt-edged market in particular has maintained a firm front. French and German bonds have naturally felt the effects of the exchange movements, and Home Rails appear to be neglected for the moment in favour of the rubber market, which, after quite an old style boom in the earlier days of the week, has settled down to more stable conditions. Industrials have been irregular, but there have been one or two meteoric rises in the mining section. Rapid oversubscription has been the fate of the majority of the week's new issues offered to the public.

THE COMMODITY MARKETS.

Our Cardiff correspondent states that, although no new German business has been placed in South Wales coal market, the representatives of France, United States, and Italy have been very active, and as a result prices have hardened all round, best Admiralties moving up to 30s per ton. In the pig-iron market prices have improved, and No. 3 Cleveland G.M.B. is now quoted at 93s per ton. More demand is noticeable for manufactured iron and steel in shipbuilding circles, and steel prices are slightly firmer. A better market in the Manchester cotton trade is reported, substantial contracts having been arranged; the Indian trade has been good, and prices are well maintained. Values of wool—tops and yarns—are still moving upward, but our correspondent points out that there are "wide discrepancies in quotations, due to the obviously protective policy adopted by some firms." In the timber trade, prices of building woods are stated to be so high that importers are reluctant to buy forward. The demand, however, is not large for furniture woods, though quotations show no signs of weakness. Further details of markets will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

Throughout the week Continental exchanges have been completely overshadowed by the position in the Ruhr. The collapse of the mark had, of course, been anticipated, but even then quotations have run away at an unexpectedly rapid rate, and the mark would appear to have almost lost all value as a currency outside Germany itself. From a quotation of 48.250 on the 12th, rates have jumped up from day to day to 100,000 and over on the 18th, and

although yesterday morning there was rather more steadiness at 98,000, there would seem no reason why the rise should cease. Apart from the more general causes of this collapse, the hasty purchase of British coal was bound to be immediately reflected in exchange quotations. Forward rates have also jumped from 3,500 to 10,000 marks per month above spot. Although most currencies have been affected by this collapse, the one most directly influenced is the Polish mark, which has risen during the week from 94,000 to 145,000, one result of which has been an increase in the uneasy feeling which already exists in Poland as to the dangers of too close a political co-operation with France. The Paris rate has also moved up from 66.60 to about 70.30, and this in spite of determined attempts to steady the rate. The only matter for surprise is that the movement has not been more rapid in view of the disappearance in London and New York of that confidence in French currency which has done so much during the past few years to keep the Paris quotation low in spite of many indications that the franc was overvalued. Brussels has risen from 73.05 to 77.40. Quotations for futures are now five centimes per month above spot in Paris, and five centimes below in Brussels. Italy has also depreciated, although not quite so rapidly, from 94 to 97 $\frac{1}{2}$. Satisfaction over the progress of the Debt Commission in Washington went a long way to prevent any rapid fall in sterling, which from \$4.67 $\frac{1}{2}$ on the 12th had fallen only to \$4.65 $\frac{1}{2}$ on the 17th. The announcement of the adjournment of the debt negotiations brought a further fall on Thursday, but yesterday morning rates had again recovered to \$4.65 $\frac{1}{2}$. Uncertain prospects in Europe, however, are likely to delay the further recovery in sterling, which was expected with some confidence a few weeks ago. In the meantime, forward quotations have narrowed from $1\frac{1}{2}$ cents to $\frac{3}{4}$ cents per month over spot. In neutral countries Switzerland and Spain, at 25 and 29.87 $\frac{1}{2}$ respectively, are well above last week's rates, but Amsterdam is down from 11.79 to 11.75 $\frac{1}{2}$, and Stockholm is also lower. Copenhagen, however, has moved up to 23.75, while Christiania has changed little on balance. Helsingfors at 188 $\frac{1}{2}$ has remained steady, but the resignation of the president of the National Bank, apparently on a question of exchange policy, may perhaps herald a change from the recent plan of preferring relative stability to any too rapid improvement. Vienna at 330,000 has remained very steady, and appears unaffected by the German collapse. Prague is rather higher at 169, but Belgrade, in spite of progressive freedom from exchange restrictions, is again some 50 dinars higher at 520, while Bucharest, where special influences appear to be at work, has reached 900. In the East the rupee shows little change at 15 4 $\frac{1}{2}$ d, while Yokohama, in sympathy with the dollar, is rather more expensive at 25 1 $\frac{1}{2}$ d. Silver, as the result of a strong Indian demand, has shown an upward tendency, but the position may get rather weaker with the turn of the Chinese new year. Hong Kong and Shanghai, at 2s 3 $\frac{1}{2}$ d and 3s 1d, are both rather higher. In South America, Rio at 5 $\frac{1}{2}$ d is about the same as last week, Buenos Ayres at 43 $\frac{1}{2}$ d is 4d cheaper, and Montevideo has also dropped rather sharply, from 44 $\frac{1}{2}$ d to 43 $\frac{1}{2}$ d, while Valparaiso has also depreciated from 34.70 pesos to 36.10 pesos.

PASSIVE RESISTANCE.

The developments that have taken place in the Ruhr during the past week have made very little impression on the work-a-day world in this country. But this apparent indifference is deceptive, for the deeper sentiments of the nation have been deeply stirred by the situation, which recalls so vividly, because it is almost indistinguishable from, a state of war. Great Britain has far too vivid a recollection of her unhappy experiences in Ireland to make the mistake of supposing that it is necessary to have two formal armies face to face in order to produce the economic paralysis, the negation of law and liberty, and the actual bloodshed associated with a state of war. The Germans

may have little stomach and less opportunity for actual guerilla warfare, and it may well be that their best hope of achieving emancipation from the Treaty of Versailles is by a passive resistance which, though involving hardship, may prove extremely effective. But whatever form it may take, the conflict is definitely joined; and there is hardly anyone in this country who conceives that the policy of France has brought her appreciably nearer to either of her alternative objectives—payment or security.

The outline of the drama can be recalled in few words. On Monday, January 8th, the first French troop train passed through Cologne for the Ruhr. On the following day the Reparation Commission declared Germany in default on coal deliveries, a declaration to which Sir John Bradbury dissented. On January 10th the Germans, in view of the impending French advance, played their first defensive card, the directorate of the Coal Syndicate leaving Essen with technical records and sections of the technical staffs. Next day, January 11th, French troops occupied Essen, where on the following day "a state of siege" was proclaimed. January 12th brought the French up against the economic realities of their task. On this day the German Government issued a note protesting against the French advance, and announcing their refusal to continue reparation deliveries to the occupying Powers. At the same time, the French, following a first conference with the industrialists, realised that they would have to finance Ruhr coal deliveries, and on January 13th offered the mine owners to pay for coal delivered. On the 15th, however, orders were issued from Berlin refusing to permit any deliveries of coal, whether paid for fully or partially. On this day the French occupied Bochum, and on the next day Dortmund. On Wednesday, 17th, the German mine-owners informed the French that they must obey Berlin and refuse to deliver coal. On Thursday, 18th, Herr Thyssen and five other Ruhr magnates were summoned before a French military court at Dusseldorf, and ordered to consider themselves under police supervision and to hold themselves at the disposal of the French authorities, when required, under threat of definite arrest if the conditions imposed were not obeyed. The magnates left the court without reply. The comment of the exchanges on this course of events is a fall in the mark from 39,500 on January 5th to 115,000 yesterday, and in the franc from 66.95 to 70 in the same period.

Even if there is no intervention or negotiation, it is difficult to see to what result these events may lead. France is not only incurring a heavy military expense—the number of troops employed are put officially at 45,000 men—but it is also clear that to run the Ruhr mines under military control will be to run them at an enormous loss, for she must supply food to the miners as well as to the starving population of the district, and a small production of output per head soon turns a profit into a loss. Hitherto she has had the coal for nothing at the expense of Germany as a whole. It is said in Paris that the Government hope when the occupation is running more smoothly to levy by means of a coal export tax £6,000,000 a year, but it is added that the expense of collection will be much greater than this. What result can France hope to achieve from this drain upon her men and money? The issue to some extent turns on whether Germany can face a coal blockade, and in this connection comparisons have been drawn with the situation in Great Britain during the coal strike of 1921. But Germany has access to the coal of Upper Silesia, and it may be that for many months she can raise funds for purchasing in Great Britain and other European coalfields, and if the winter is not a hard one, it would seem probable that, given firm government and national determination, Germany could certainly hold out, though under conditions of some distress, until the summer. But such speculations assume that the Ruhr occupation will not involve "incidents," and that the French will refrain from marching to Berlin—a conclusion which we mentioned last week as the remotest of contingencies, but one which is to-day more freely spoken of among the French troops of occupation.

It is, however, difficult to believe that the situation will be allowed to drift to this stale mate. Intervention by any single Power or by the League will be difficult until France fully realises the futility of her present adventure. But as soon as her frame of mind is changed intervention may be

possible on one of two lines. On the one hand it is suggested that the question of the legality of her present action might be submitted for the judgment of the International Court, on the other, that the intervention of the League might be acceptable to both Germany and France on the merits of the Reparations question itself. The legal question is dealt with by a correspondent in a later column, and we would only add here that the action which is being taken by the French authorities, and in particular the placing under arrest of the Ruhr industrial magnates for obeying the instructions of their own Government, far exceed the carefully defined powers of the Allies exercisable under the Inter-Allied Rhineland High Commission in the original occupied area. The Agreement on this subject signed at Versailles limits the power of issuing ordinances which would override the German Civil Law to steps "necessary for securing the maintenance, safety," and requirements of the Associated Allied forces. This clearly does not include securing supplies for reparation. Further, under this agreement, the jurisdiction of the German courts over its own nationals is only superseded in respect of persons holding a pass from the officers commanding the Army of Occupation, or in the case of Germans who commit an offence against the persons or property of the Allied forces of the Associated Allied Powers. Power to declare a "state of siege" in the case of an emergency is also accorded, but this power rests in the Rhineland only in the hands of the Allied Commission. As against this carefully defined code, France claims that her interpretation of the Treaty authorises any individual Power to take any steps it pleases without any restriction whatever to enforce her claims if Germany defaults—an interpretation which apparently is not only unwarranted by any existing code of International Law, but removes from Germany such protection as would be afforded by the clause which says that interpretations of the Reparations Treaty must be decided by the unanimous decision of the Reparations Commission. The doctrine of France is, in fact, a claim to absolute and complete dictatorship and the negation of any conception of International Law. Our own action in taking part in the occupation of Dusseldorf two years ago was a doubtful concession to expediency, for while it admitted the right of the Allies to use military and not merely economic sanctions for default—which, incidentally, had not then taken place—it was in harmony with the view that the sanctions under the Treaty were exercisable only on the unanimous decision of the Allies concerned.

On the possibility of intervention or arbitration on the merits of the Reparation question, there is nothing new to be said. Everything depends upon the reactions which events in the Ruhr will produce upon French public sentiment. It is, perhaps, significant that the lessons of the past fortnight have been learnt very quickly elsewhere. The *canards* that have been current with regard to Signor Mussolini's activities are dealt with in the next article by an Italian correspondent; but there seems little doubt that the experiences of the past week will tend to bring Italian statesmen back to the position, generally favourable to the British view, which they have occupied since the Armistice. Meanwhile, the position of the British garrison in Cologne is untenable. It is of insufficient strength to exert any pressure on the French, even were such pressure deemed to be desirable; and, as France's military grip on occupied Germany tightens, its position will become increasingly impossible.

ANGLO-ITALIAN RELATIONS.

(BY AN ITALIAN CORRESPONDENT.)

At the Cabinet Council's meeting of yesterday Signor Mussolini gave a formal denial to rumours of a project of a Continental bloc against Anglo-Saxon countries. "The bloc," said the Premier, "simply does not exist. The Italian Government never made such a proposal, and never planned a French-Italian-German coalition against Great Britain. The importance which Great Britain has in the economic life of the European Continent would alone have forbidden this plan, to say nothing of the

special relations between Great Britain and Italy." There is thus an end to the wild talk which had been current for some days in the Italian and foreign Press about a resurrection of the ill-fated Napoleonic plan of a Continental bloc against England.

The interesting point is, however, whether there exist in Italy undercurrents of public opinion which warrant such a plan being spoken of. It would be useless to deny that, if the reception of the plan was far from enthusiastic, it met with a degree of favour in some sections of the Press, which in the common interest of England and Italy should not be ignored.

The first undercurrent is the old pro-German feeling, which was in 1914 and 1915 favourable first to war on the German side and afterwards to neutrality. Even the most obdurate pro-Germans were converted by the spectacular fall of the Austro-Hungarian Monarchy, which would not have been possible without the defeat of Germany. But, now that Italy has reached her natural boundaries to the Northern Alps, a feeling is becoming vocal that Germany was, after all, a great market for several agricultural products of Italian soil, and that this market will never be recovered till Germany herself is once again producing and consuming in full swing.

On the other side, Germany was our greatest supplier of machinery, chemicals, and industrial products, and many consumers are identifying old days of cheapness with the steady flow of cheap German goods. France and England have not taken the place, as buyers and sellers, of Germany. Italian producers are complaining bitterly against British duties on motor-cars, 33 per cent. on key industries products, and similar hindrances to our export. Perhaps British duties are not so bad as is said, especially when their action is wholly or partially suspended in virtue of existing treaties. But they have, nevertheless, done an enormous harm, and have furnished an eagerly seized weapon to the Italian Protectionists. England is said to be preaching Free-trade to other peoples, but practising rampant Protection at home against foreign imports. The Italian ultra-Protectionist tariff of July 1, 1922, was justified, therefore, on the score of British Protection. As in other countries, faith in the economic future of Germany was so strong in those circles which admired German thoroughness, system, strong government, plodding, industry, and inventiveness, that a large volume of marks was bought when the exchange was not unreasonably low. Warnings were in vain. It seemed impossible to people believing in the economic future of Germany that marks should not recover also. When the mark collapsed and got every day worse, it was not ascribed to the feeble financial policy of the German Government, but the responsibility was put on the shoulders of France, England, and the United States. Among some mark speculators the fall of the mark was attributed to a sort of conspiracy among gold countries, and as the franc could not be accused of fattening at the expense of the German mark it was, in some mysterious way, made out to be the fault of sterling and of the dollar.

Pre-war theories on old and new, rich and poor, nations were again in favour. Before the war it was a favourite doctrine with nationalists that new, rising nations, with a high birth rate, with an expanding emigration, with an incipient and growing wealth, such as Germany, Italy, Russia and Japan, were called to high destinies, to conquer territories, to become world-Powers. They would encounter the jealousy and the bitter opposition of old-established nations such as France and Great Britain, with great accumulated wealth, with a low or lowering birth rate, with territories exceeding the possibilities of the native population. The war of new and rising nations against old and stationary was the outcome of this theory, which was, even in pre-war times, erroneous both historically and economically; and events have demonstrated that in the world war so-called new and old countries fought side by side.

The theory is being resuscitated in a new form: countries to whom the war has given a heritage of debts should show a united front against creditor countries. And as the Continental powers, victors and beaten alike,

are groaning under the weight of debts, of Budget deficits, and of devaluated paper money, they should unite themselves against the predominance of the creditor gold countries. These are nebulous conceptions indeed; but, unfortunately, the popular mind is apt to be caught by shibboleths; and it was unfortunate that at the last Paris Conference there crept out suddenly, without previous discussion, the question of the French and Italian gold sent during the war to London, and thence shipped to the United States for the sake of the so-called "pegging of the exchanges" operation. The 420 millions of gold-lire sent from the Italian Banks of Issue to London was seized upon as a proof of a determined British policy of depriving Italy of her last remnants of gold. I do not know what were the exact terms of the transaction, as they have never been officially published in full in Italy; but I do know that the pegging of the exchanges was not an unmixed good as a means of maintaining the price of the pound sterling at about 37 lire. The operation was costly; and no one would begrudge the cost if the results achieved had been good. But the public debt incurred by the Italian Government still remains, and no one can predict at what rate of exchange it will be, if ever, repaid; so that, from the exchequer point of view, the operation is not yet closed. As to private Italian purchases of foreign goods made at 37 or thereabouts, if they were closed with payment at that rate, they were good for the private Italian purchasers who bought exchange at the low artificial price at the expense of the Italian exchequer. But many payments were left in suspense by purchasers who hoped to buy exchange at a still lower price, and many losses were incurred when the peg was removed and exchanges rose to 100 and over.

If you add that in Italy at the present time nationalism is in the ascendant; and nationalism means colonialism and accusations against Allied Powers who made vast colonial acquisitions in Africa, Mesopotamia, Oceania, and left nothing to Italy, you will have an almost complete picture of the causes which are unmistakably swinging the pendulum of Italian public opinion against the Allies.

The movement however is, as yet, superficial, and has an academic tinge. As Mussolini's pronouncements show, responsible statesmen are cautious, and do not favour a fundamental change of our policy. Editors of leading newspapers examined in a very critical spirit the Continental bloc plan, when it was first rumoured. It has been, from 1860 onwards, a fundamental principle of Italian foreign policy to maintain friendly relations with Great Britain. Both nations have the same interest—i.e., not to let Europe become the prey of a paramount Power, be it called Napoleonic Empire or Hohenzollern Germany. A paramount Power is alike distasteful to Great Britain and Italy. Both have to fear much, the first for the continuity of her world power, the second for her national independence from such a European ascendancy. The equilibrium of the various European Powers was destroyed by the world war, and is bound to be re-established by some means or other. Italy will work with England if such an end is in sight. But she needs to be previously freed from economic fetters.

The position of Italy as to reparations is somewhat different from France's position. France needs a certain amount of reparation in addition to a clear slate in the matter of inter-Allied debts. Italy needs, first and foremost, the cancellation of State debts to Great Britain and United States. Once this matter can be righted, Italy will very easily give her assent to a plan which should greatly decrease Germany's obligations. Italians always looked on their share of German reparations with the utmost scepticism. It will not cost much to them to make renunciations in this matter. But they are sorely grieved at the thought of being debtors for 22 or 23 billions of gold lire to peoples who were our allies in a common fight for world liberty. If other grievances are sectional, academic and superficial, this one grievance is strongly felt by all classes. Italians do not appreciate the game of give and take in this matter. The only policy which would disperse the clouds which have been allowed to accumulate on the British-Italian sky is a straightforward cancellation of war debts. Nothing short of this will satisfy average public opinion in Italy. Italians know that they have powerful allies who in England have embraced the cause of the complete cancellation of public debts.

THE LEGAL ASPECT OF THE RUHR OCCUPATION.

(FROM A LEGAL CORRESPONDENT.)

THE legal position of the French movement into Germany now taking place is obscure, and it is not easy for anyone who is not behind the scenes of the working of the Reparation Commission and the British and French Foreign Offices to state the position with clarity and confidence. It is, however, worth reminding ourselves that the situation which has now arisen is governed by the Treaty of Versailles, and that the French action, if it is lawful, must derive its justification from that document. Its expediency is another matter.

The French are taking action on two alleged "voluntary defaults" by Germany in the matter of making reparations in kind, timber and coal, and so we may turn to Part VIII. of the Treaty called "Reparation." Article 233 clothes a body to be called the Reparation Commission with the powers contained in certain Annexes to this part of the Treaty, including Annex II. This Annex contains the following relevant clauses:—

13. As to voting, the Commission will observe the following rules:—When a decision of the Commission is taken, the votes of all the delegates entitled to vote, or in the absence of any of them, of their assistant delegates, shall be recorded. Abstention from voting is to be treated as a vote against the proposal under discussion. Assessors have no vote. On the following questions unanimity is necessary:—(a) (b) (c) (d) (e) (f) questions of the interpretation of the provisions of this part of the present Treaty (i.e., Part VIII. Reparation). All other questions shall be decided by the vote of a majority. In case of any difference of opinion among the delegates, which cannot be solved by reference to their Governments, upon the question whether a given case is one which requires a unanimous vote for its decision or not, such difference shall be referred to the immediate arbitration of some impartial person to be agreed upon by their Governments, whose award the Allied and associated Governments agree to accept.

Sir John Bradbury was in the cases both of timber and coal in a minority of one on the Reparation Commission in regard to the question whether there had been a "voluntary default" by Germany within the meaning of Article 18 (below). But has the British Government insisted that this is a "question of the interpretation of the provisions of this part," and so requires unanimity among the delegates? Upon a difference of opinion on the question whether a given case requires unanimity, the remedy provided by Article 13 is arbitration. Has there been arbitration? If the question whether or not there has been a "voluntary default" is a question of the interpretation of that term (as we submit it to be), then unanimity is essential, and the French action now being taken is unjustified. If there is doubt on the question whether this is a case requiring unanimity, then any coercive action preceding arbitration is premature. It would be interesting to know whether these points were urged by the British delegate, and, if so, what the answer was.

To pass to other points. Articles 17 and 18 read as follows:—

17. In case of default by Germany in the performance of any obligation under this part of the present Treaty, the Commission will forthwith give notice of such default to each of the interested Powers, and may make such recommendations as to the action to be taken in consequence of such default as it may think necessary.

18. The measures which the Allied and Associated Powers shall have the right to take, in case of voluntary default by Germany, and which Germany agrees not to regard as acts of war, may include economic and financial prohibitions and reprisals, and in general such other measures as the respective Governments may determine to be necessary in the circumstances.

Several points arise on the language of these two articles. The French and English texts of the Treaty are expressly stated in the Treaty to be both authentic.

(a) Does the word "include" (*comprendre* in the French text) in Article 18 mean that there are other legitimate measures not covered by its terms? If that is the correct interpretation, the words "and in general such other measures as the respective Governments may determine to be necessary in the circumstances" become almost meaningless.

(b) At any rate, France apparently conceives herself to be enforcing measures provided for by Article 18, as is shown by the French contention that "the respective Governments" means each individual Government acting on its own accord. But is this view right? It is not all the parties to the Treaty whose Governments are in-

interested in the voluntary default by Germany to deliver timber and coal to France. It matters not to Japan, for instance. Does it matter to France, Italy, and Belgium alone, the recipients of the reparations in kind? The official *communiqué* issued by the Reparation Commission (the *Times*, December 28th) in connection with the timber default states that the Commission has in accordance with Article 17 "notified the default thus declared to the Governments concerned," that is, in the language of Article 17, "to each of the interested Powers." Surely the "respective Governments" of Article 18 are the "interested Powers" of Article 17? Are not, then, the Governments so notified (presumably Great Britain, France, Italy, and Belgium)* "the respective Governments" who must determine on the necessary action, and must they not all concur in joint measures? This view is strengthened by the statement in paragraph (3) of the same official *communiqué* that the Commission decided "to remind the Governments concerned that in its letter of March 21st, fixing the payments to be made by Germany in the current year, the Commission stated," &c. Everything points to other Governments in addition to the actual recipients of reparations in kind being "interested Powers" within Article 17, and "respective Governments" within Article 18. If this view is correct, the French contention that they are justified in taking measures determined by themselves and the Italian and Belgian Governments as "the respective Government" to be necessary under Article 18 must fail.

(c) Assume, however, that the view just suggested is wrong, and that these three are "the respective Governments" taking such other measures as they "may determine to be necessary in the circumstances." Must they not apply the *ejusdem generis* rule of construction, and confine these other measures to something of the same character as the "economic and financial prohibitions and reprisals" already mentioned in Article 18? (That is the view taken of this article by Mr Keynes in *Excursus II.* at the end of Chapter II. of "A Revision of the Treaty," published a year ago.) The professed object of the movement into the Ruhr is to impose a Mission of Control upon the mines and works of that district, and France disclaims any intention "at this moment of carrying out an operation of a military kind or an occupation of a political character." But the show of military force which is being made is certainly not *ejusdem generis* with the "economic and financial prohibitions and reprisals" of Article 18.

(d) Finally, it may be necessary to consider the consequences of a violation of the Treaty if such is being committed. The other parties to a Treaty are not compelled to regard themselves as continuing to be bound by it if a party commits a breach of it. "Violation by one of the parties," says Oppenheim (*International Law*, II§278), "does not *ipso facto* cancel the Treaty; but the other party may cancel it on this ground."

These views are put forward upon a complicated subject, not dogmatically, but merely because they seem to require consideration.

PRICE STABILITY AND THE TRADE CYCLE.

In an article last week headed "Price Stability and the Gold Standard," it was suggested that the idea of attempting to use the instrument of "Bank rate" or "rediscount rate" in order to prevent prices from moving far away from a definite general level may before very long come within the range of practical politics, in the United States if not in Europe. In the present article we propose to carry the question one stage further, and consider how far the successful application of this idea, which we previously discussed in regard to long periods of time, would also check short-period business fluctuations. Would it serve to eliminate, or appreciably to

diminish, those cyclical fluctuations of trade and employment, so baleful in their consequences, to which we have hitherto submitted helplessly, as to some inexorable phenomenon of nature? Upon this point the prevailing opinion of economists and business men alike is at present sceptical. In these variations the upward and downward movement of the cycle comprises together only a few years. On the other hand, it is argued, the sort of price stability which it lies within the competence of monetary policy to secure is a long-period stability, stability merely of the mean level about which the cyclical movements occur. The nature of this objection may be made clearer by an historical reference. From 1874-1896, wholesale prices fell by about 40 per cent. From 1896-1914, they rose by about 30 per cent. Both these broad movements were largely due to monetary causes, and could have been counteracted by an appropriate monetary policy. But 1874-1896 was not one unbroken period of severe depression, nor 1896-1914 of halcyon boom. There were years when prices were rising and trade was active in the first period, while the depressions which occurred in the second are still a matter of vivid recollection. If these depressions could occur when the general trend of prices were upwards, how, it is asked, could they be prevented by a policy which would merely eliminate the general trend in either direction? To take the post-war situation, the curtailment of credit in 1920 was one of the factors responsible for the present depression. But, after the depression had once got under way, has Bank rate or credit policy generally had any perceptible effect on its duration or intensity? For nearly a year the banks have been willing to grant credit upon easy terms, but this has not yet sufficed to cause a trade revival. Would the banks have pursued a different policy if it had been the intention of the authorities to stabilise prices at, say, the level ruling at the Armistice? And if not, how could it have made any difference to trade, if such an intention had been both formed and announced? Such are the questions which lead most people to dismiss the idea that any panacea for trade fluctuations is to be found in the adjustment of Bank rate.

But this line of thought leaves out of account one factor of cardinal importance. The movement of prices in a short period is powerfully influenced by *general expectation*. When prices are falling in the early stages of a depression, it is the expectation that they will continue to fall that is one of the principal reasons why the depression spreads and deepens. At a later stage it is insufficient confidence that bottom has been touched that delays a revival, and falsifies the hopes of the more optimistic prophets. Bank rate is one of the factors which affect the general expectation of price movements. For the sequences of a high Bank rate, lower prices; a low Bank rate, higher prices; have become fairly clearly established in the minds of the business community; and it is largely for this reason that, under ordinary conditions, comparatively moderate movements in Bank rate operate with the power they do. But the indications of Bank rate are too vague. No one can state exactly the point at which a rising Bank rate becomes a danger-signal or a falling Bank rate spells recovery. If, however, the movements of Bank rates were accompanied by a clear definition of a normal price-level, which it was the purpose of those movements to maintain; if it was made clear that, so long as actual prices were below that level, reductions of Bank rate would continue, but directly they rose above that level, a dear money policy would be pursued; there is good reason to believe that a new coherence would be given to the general expectation of the future of prices, and that, as the result of this, the actual movement would be powerfully affected in the direction of stability. In the economic, as in most other spheres, coming events (or those believed to be coming) cast their shadows before. If, in the matter of prices, it could be made clear beyond a doubt what was coming in the long run, the vagaries of short period movements might well almost disappear. Of course, such a policy could only work successfully under tolerably settled conditions, such as those which prevailed before the war. An attempt to stabilise prices in 1919 or 1920 would almost certainly have failed, just as the attempt failed to stabilise the rupee at 2s gold. But, given tolerably settled conditions, it is not clear that fluctuations in the general price level might not be con-

* The text of the *communiqué* referred to does not mention the Powers notified. But our correspondent's presumption is confirmed by the *communiqué* of January 16th dealing with the announcement by Germany that she had suspended reparation deliveries to France and Belgium, which concludes: "Notice of these defaults was immediately given to the British, French, Italian, and Belgian Governments." The British delegate took no part in the discussion, and abstained from voting.

finer within the same modest dimensions as those to which the rupee exchange was subject before the war.

Scepticism on this issue is, we have said, the prevailing attitude of both economists and business men. But there are distinguished exceptions; among them Mr. Hawtrey, to whose article in the *Economic Journal* we referred last week. It is Mr. Hawtrey's view that "the trade cycle is a purely monetary phenomenon"; for such alternative explanations as "variations in business confidence" amount really to no more than expectations of price changes. But, assuming the existence of other causes, Mr. Hawtrey's confidence in his solution is not thereby shaken. "Whatever other factors affect the purchasing power of the monetary unit, one, the volume of trade borrowing, is amenable to human control. By its means the agency which exercises control—that is to say, the central bank—can correct the effects of all the others." The same point has been put cogently in a recently published book, called "The Riddle of Unemployment,"* by Mr C. E. Pell. "The rate of discount, although the controlling factor, is only one factor in fixing prices, in much the same way that the rudder of a boat, although undoubtedly the steering instrument, is only one factor involved in the act of steering. Winds, waves, and currents have to be taken into account. To steer a given course diagonally across the Thames at Richmond it would be necessary to hold the rudder in a very different position if the tide was running out from that which would serve if it was coming in. Moreover, the rudder is not less the steering instrument because it can be shown that the boat sometimes fails to answer the helm properly, and that it may even be necessary at times to steer with the oars."

Mr Pell's book, the thesis of which is the possibility of eliminating cyclical unemployment by the scientific manipulation of Bank rate, deserves the open-minded consideration of everyone who is anxious to remedy that evil. It is marred by occasional minor fallacies and sciolisms, which stamp it as the work of a mind which has come fresh to the field of currency and banking policy without systematic training in the subject. But that very fact gives Mr Pell a refreshing vigour and directness; and on all essential principles his grasp is sure. His book contains perhaps the clearest exposure that has been written of the fallacies of the Douglas scheme, *et hoc genus omne*. But he is equally severe on the orthodox economists; and perhaps some of his shafts go home. When he writes that there is nothing in the phenomena of the trade cycle "beyond the mental range of an intelligent schoolboy," and mocks at the economist who will seek an explanation anywhere, even in sun-spots, rather than in what "is staring us in the face and shouting for recognition," it may be that he goes too far. But equally it may be that the economist, fearful of the charge of crudity, has been over-subtle. After all, a stable standard of value is logically an essential requirement of a society based on the division of labour operating through a money economy; and the failure to secure it hitherto is a defect deep-seated enough to account for the trade cycle, and possibly for other social ills.

THE POSITION IN THE TINPLATE TRADE.

(BY A CORRESPONDENT.)

THERE are very few long-established industries in this country which have experienced so many vicissitudes and emerged from them so successfully as that of the manufacture of tinplates. The chief seat of the manufacture of this article is South Wales and Monmouthshire. The industry has been one of the staples of that district for over 70 years, and is almost entirely the product of local enterprise. The main forms of consumption are those of the canning of fruit, meat, and oil, and as the canning processes are chiefly carried on in foreign countries the industry has been in perpetual conflict with the efforts of foreign countries to manufacture their own tinplates. The country where the greatest measure of success has been obtained in the development of native production is the United States. The first great stimulus to the manufacture of tin, terne, and black plates in America

* "The Riddle of Unemployment and its Solution." By Charles Edward Pell. London: Cecil Palmer. 7s 6d net.

was that provided by the MacKinley Tariff of 1891. Up to that year the United States was dependent exclusively on the United Kingdom for its supplies, and in 1891 the total quantity imported from the United Kingdom was 6,503,000 cwts of a value of £5,240,383. By 1912 the United States had not only become entirely independent of this country, but also its most formidable competitor. It had developed a production of 936,000 tons, and an export trade of 1,700,000 cwts. It captured the Canadian as well as its own market, and our own export trade fell from nearly 9 million cwts to 5 millions. Other foreign countries, including Germany, Russia, Spain, Italy, and the Far East followed the example of America by laying down their own plant and machinery, and protecting native production by tariff barriers. But in all these other countries the competition of the British tinplate has remained effective, and just before the outbreak of the war in 1914 the volume of the export trade of the United Kingdom had not only been restored to the pre-MacKinley figures, but had exceeded them. During the war the industry suffered terribly from the loss of foreign markets, and in 1919 the export of tinned plates and tinned sheets fell to 177,383 tons.

In the post-war period the experience of the industry has been very similar to that of the South Wales coal trade. Both were involved in the depression which set in during 1920, and both have since been strenuously engaged in a determination to re-establish business on a sound commercial basis. In the tinplate industry, as in the South Wales mining industry, the wages costs have been severely reduced, economies introduced, and prices adjusted to a level that was calculated to stimulate demand. Neither has been able to bring down costs to anything like the pre-war level. Even to day the wages cost in the tinplate trade is practically 60 per cent. higher than it was in 1913, that of steel bars over 60 per cent., of sulphuric acid 100 per cent., and dock and railway charges approximately 100 per cent. The basis price per box to-day is about 20s compared with 13s in 1913, or an increase of about 54 per cent.; but the price has been slightly lower than it is now, and during the most competitive period last year the production of tinplates was to a considerable extent unremunerative. The policy, however, pursued of cultivating markets by temporary financial sacrifices has been justified by the event, for the volume of the trade has expanded both in the foreign and in the inland market, and at present prices the industry is relatively more remunerative than it was under the low price conditions of 1913. In the eleven months ending last November the foreign export trade amounted to about 406,000 tons, compared with 196,000 tons in 1921 and 332,000 tons in 1920. The total trade for the year will probably amount to 445,000 tons, which will compare with an export trade in 1913 of 494,500 tons. It will thus be seen that the volume of trade last year was practically equivalent to 90 per cent. of the record volume of 1913.

The industry has long held a unique reputation for the perfection of its organisation, and for the success with which it has applied the principle of collective bargaining to the treatment of industrial disputes. The South Wales Tinplate Conference provided the model for the Whitley Councils, and it is a remarkable fact that over a period of more than 25 years there has been only one dispute involving a stoppage of work, and in that case the duration of the strike was only five days, at the end of which the matter in dispute was referred to arbitration. The current business of the industry is pooled. Each works is allowed a quota of the estimated production for a definite fixed period. That pooling system involved no regulation of prices. Prices were reached through the regulation of output. Any manufacturer who exceeded his quota was penalised by the imposition of a levy of a certain amount per box, and out of the fund thus created the manufacturer who produced less than his quota was compensated. In this scheme the whole of the South Wales tinplate industry was included, and it worked well on the whole. Latterly, however, there has been an important departure in policy. Nearly 75 per cent. of the tinplate works in South Wales are either owned or controlled by steel producers. The tinplate manufacturers and the steel producers had their own separate organisations. The Steelmakers' Association has for many years

regulated prices and wages by agreement with their employees' trade union organisations. The steelmakers owning tinplate works were naturally interested in the maintenance of the prices of steel bars at the highest possible levels, but the operation of the price-regulating scheme of the Steelmakers' Association was restricted to a certain radius, and anomalies were created by the competition within that area of steel works situated outside, and by the sale to tinplate manufacturers beyond the geographical radius to which their scheme applied, of bars at a lower price than that charged to manufacturers within the area. These anomalies have now been largely, if not entirely eliminated by an agreement between the tinplate manufacturers and the steel makers imposing conditions similar to those followed by the Shipping Conference Lines. Minimum prices have been fixed both for tinplates and for steel bars. The tinplate manufacturers have pledged themselves to take their supplies solely from the Steelmakers' Association, and the minimum prices are subject to a rebate at the expiration of each six months. The agreement is fixed for an experimental period of six months. It has been accepted by manufacturers representing between 95 per cent. and 97 per cent. of the total output; in fact, only one works has retained its independence and freedom; but in the opinion of Mr Frank Gilbertson, the chairman of the Steelmakers' Association, the agreement has worked so satisfactorily that its renewal is regarded as practically certain.

It is undoubtedly the case that the industry has undergone a substantial improvement since this agreement was entered into. The production of tin, terne, and black-plates, which in the first half of 1922 had a monthly average of 54,700 tons, has been increased to approximately 60,000 tons, and the demand for tinplates for export has been so good that the minimum prices both of tinplates and of steel bars have been increased. It is quite possible that the elimination of inter-competition and underselling has contributed to the improvement in the price of the tinplates, but one factor cannot be isolated from the many others which have been influencing the demand for tinplates during the past few months. Conditions abroad have stimulated the foreign demand for the article. In the United States, particularly, the coal strike, the transportation difficulties, and the enormous increase in the consumption of tinplates in that country have reacted very seriously, although one fears only temporarily, on its export capacity, and the result of that has been not only the recapture of a big share of the Canadian market, but an increased demand from other foreign countries. The improved financial position of the trade is probably due to a combination of commercial and administrative factors, and not entirely to the recent change in the organisation of the industry. One other point may be mentioned. The output capacity of the mills has been greatly increased in recent years. The crew of a mill has been increased by 50 per cent. by the addition of two skilled helpers for every four men employed. It is complained, however, that the improvement in output as the result of this change is not proportionate to the extra labour employed. A maximum estimate places it at an increase of 15 per cent. in production. It is calculated, however, that effective use is obtained out of the rolling mills during less than one full hour out of the eight hours during which a shift is at work. This wastage is now receiving the serious attention of some of the manufacturers, and we must look forward in the not distant future to an extension of the system of automatic manufacture.

AUSTRALASIAN LAND COMPANIES.

As is generally known, the prosperity of Australia is mainly dependent upon its agricultural and pastoral industry, and the progress of this industry in turn is reflected in the reports and accounts of a small group of important London undertakings engaged in developing land in Australia. Although some of these companies extend activities to New Zealand, their main operations are in Australia, and the analysed export figures of the latter country provide us with an index to the magnitude of the industry. Australian exports for the year ended June 30th last were £123,596,000, as against £126,431,000 for the

previous year. Of this total what might be termed agricultural and pastoral produce represented £107,202,000, as against the previous year's figure of £103,157,000. This, however, gives but a slight indication of improvement in agricultural industries. Analysed, the main items comprising exports were wool £47,935,000 as against £33,774,000 for 1920-21, wheat £28,644,000 compared with £34,473,000. Butter figures at £7,988,000, while skins and hides accounted for £3,142,000. Beef exports fell away from £3,820,000 to £1,868,000, a set-back to which reference is made below, while flour exports improved from £4,948,000 to £5,520,000.

Although a considerable improvement on the two previous years, weather conditions in Australia were not altogether satisfactory for agricultural and pastoral companies during the season 1921-22. Here and there, perhaps, districts could be found in which climatic conditions were favourable, but a shortage of rain was reported over extensive areas. New Zealand, on the other hand, had, on the whole, favourable weather, but the Dominion is still suffering from the effects of unremunerative prices for pastoral products, coupled with a serious fall in land values. The demand for wool during the year, contrary to the expectation of some people, has been exceptionally good, and proceeds from sales provided a substantial revenue for most companies, but prices of livestock were on a low level, and in some cases adversely affected results. However, results of operating companies, on the whole, have been very good, and though the proprietors may not have received any substantial increases in dividends, the additional revenue has enabled companies to place themselves in a position from which they are better able to face the future.

In the following table, earnings of 10 of the most important companies interested in land and produce, for the past three years are compared, together with rates per cent. of distribution on ordinary capital. Profits are struck after deducting loan interest:—

Company.	1921-22. Year Ending.	Profits.					
		1919-20.	Ord. Div. Rate.	1920-21.	Ord. Div. Rate.	1921-22.	Ord. Div. Rate.
Australian Agricultural	Dec. 31	£ 55,648	5	£ 41,614	5	£ 46,287	5
Aust. Estates & Mortgage	Dec. 31	£ 49,134	5	£ 48,889	5	£ 71,947	5
Aust. Merc. Land, & Fin.	June 30	£ 19,287	12½	£ 27,725	10	£ 169,855	10
Australian Pastoral	June 30	£ 92,006	8	£ 45,083	16	£ 61,425	10
Dalgity and Co.	June 30	£ 297,577	15	£ 140,606	10	£ 252,790	15
N.B.W. Land and Agency	Jan. 31	£ 7,072	5	£ 5,442	5	£ 3,156	5
N.Z. & Australian Land	Mr. 31/12	£ 176,060	10	£ 88,936	4	£ 69,962	5
N.Z. Loan and Mercantile	June 30	£ 156,746	10	£ 83,813	4	£ 71,143	12
Scottish-Aust. Invest.	June 30	£ 105,308	10	£ 90,700	10	£ 133,118	11½
South Aust. Land Mort.	June 30	£ 11,048	7½	£ 14,763	7½	£ 5,831	7½

* Free of income-tax.

If figures of profits, given above, are compared with our table of capital employed in these companies, it will appear strange, perhaps, that such substantial dividends can be declared, but these profits are usually shown after amounts required for Australian and British taxes are deducted. Dalgity and Co.'s accounts give some idea of the proportion of profits which goes in payment of taxes. This company shows a revenue of £933,870 for the year ended June 30, 1922; working expenses absorbed £362,475, and debenture interest £114,591, while Australian and English taxes swallowed £204,015, leaving £252,790 for net profits. The interim dividend for 1919-20 of the New Zealand Loan and Mercantile was 2½ per cent., less tax, and the final distribution for that year was 2 per cent., together with a bonus free of tax.

In our next table we show the total assets of these companies for the past year, with land interests and cash and investment items shown separately, compared with the figures of the previous year:—

Company.	Assets.					
	1920-21. Land, &c.	1921-22. Land, &c.	1920-21. Cash and Invest- ments.	1921-22. Cash and Invest- ments.	1920-21. Total Assets.	1921-22. Total Assets.
Australian Agricultural	£ 275,784	£ 271,118	£ 370,534	£ 370,884	£ 646,318	£ 642,002
Aust. Est. and Mort.	£ 1,981,126	£ 1,853,039	£ 557,234	£ 633,800	£ 2,538,360	£ 2,486,839
Aust. Merc. Land, & F.	£ 2,339,567	£ 2,481,721	£ 675,359	£ 787,509	£ 3,014,926	£ 3,269,230
Australian Pastoral	£ 1,941,520	£ 1,939,668	£ 387,070	£ 292,366	£ 2,328,590	£ 2,232,034
Dalgity and Co.	£ 4,429,592	£ 3,826,569	£ 1,927,996	£ 3,263,657	£ 6,357,588	£ 7,090,221
N.B.W. Land & Agency	£ 352,907	£ 310,598	£ 101,538	£ 123,564	£ 454,445	£ 434,162
N.Z. & Australian Land	£ 2,631,806	£ 2,693,125	£ 722,338	£ 587,017	£ 3,354,144	£ 3,280,142
N.Z. Loan and Merc.	£ 2,764,189	£ 2,439,511	£ 667,277	£ 1,524,613	£ 3,431,466	£ 3,964,124
Scottish-Aust. Invest.	£ 1,273,295	£ 1,142,110	£ 446,725	£ 466,725	£ 1,719,020	£ 1,608,835
South Aust. Land Mort.	£ 162,237	£ 157,658	£ 101,414	£ 76,988	£ 263,651	£ 234,646

In the assets of the Australian Agricultural Company, shares in Hebburn, Limited, are valued at £265,000, and are placed in the above table under cash and investments. But as has been explained by the Governor on several occasions at the annual meetings, the true value of assets shown in the balance-sheet is not revealed. In the item "Estates and properties account, £271,118," are included estates, the unimproved values of which fixed by the Government for taxation purposes amount to £797,707, and the improved values are stated to be substantially greater. The Australian Agricultural Company had all their original estates given to them for services rendered, and consequently the actual capital in the company does not represent the capital value of the estates. It may further be mentioned that the Australian Agricultural Company, unlike most of the other companies mentioned, is not a finance company. The Australian Mercantile has one rather large composite item, which is placed under "land, &c." This is "loans on land, stations, stock and other securities, fixed deposits with bankers, and properties owned by the company." It is somewhat curious, and it would be interesting to know why "fixed deposits with bankers" are not included at least under investments, although some might be inclined to place it under cash at bankers. Amongst balance-sheets, Dalgity's has many interesting features which are not revealed by our analysis. Firstly, although shown under land, the item of £3,826,569 consists of advances, the property owned by the company being of minor importance. Secondly, the item cash and investments does not adequately convey the liquid state of the assets, for £970,000 of this £3,263,657 represents investments which are earmarked for the reserve fund of £970,000, while the balance is cash at bankers, in hand, and at short notice. This latter item alone amounts to £1,632,648, and compares with £820,437 for the previous year. The balance-sheet of the New Zealand Loan and Australian Land Company still shows bank overdrafts and temporary loans, less cash at bank and in hand, at £38,703. This is a substantial reduction on the figures given a year ago, when overdrafts, &c., were £263,091. The New Zealand Loan and Mercantile Agency, as denoted by its title, is mainly a financial undertaking, and the item shown under "lands, &c.," consists of advances against wool and produce.

In the table given below the issued loan and share capital and reserves of these undertakings are given:—

SHARE AND LOAN CAPITAL AND RESERVES.

	1920-21. Loan Capital.	1921-22. Loan Capital.	1920-21. Pref. and Ordinary Capital.	1921-22. Pref. and Ordinary Capital.	1920-21. Re- servs.	1921-22. Re- servs.
	£	£	£	£	£	£
Australian Agricultural	1,928,949	1,911,390	800,000	800,000	157,248	159,535
Aust. Est. and Mort.	1,898,640	1,898,640	942,954	943,175	154,216	178,909
Aust. Merc. Land, & F.	110,000	110,000	900,000	900,000	534,556	629,411
Australian Pastoral	2,584,345	2,600,352	1,500,000	1,500,000	1,225,111	1,372,901
Dalgity and Co.	150,000	150,000	261,450	261,450	76,177	54,592
N.B.W. Land & Agency	677,400	677,400	3,000,000	3,000,000	520,636	512,564
N.Z. & Australian Land	1,700,000	1,700,000	2,000,000	2,000,000	662,306	563,448

Scottish-Aust. Invest.	30,450	29,150	139,415	139,415	75,706	43,591
South Aust. Land Mort.						

Share capital has not been increased, and it may be observed that debenture capital is being reduced in many cases. Dalgity, the one concern to increase its debenture issue, is a case of no special significance, as the increase is on account of its terminable debentures. As these are merely long-term deposits, it is only reasonable to expect an increase in this direction when conditions in Australia show signs of prosperity. Reserves shown in our table include sums at the credit of profit and loss accounts. In the accounts debentures of the New Zealand Loan and Mercantile show as £2,000,000, but this includes £300,000 held by the company; incidentally reserves of this undertaking have been depleted on account of a transfer of £100,000 to profit and loss account.

As will be seen from our final table, quotations for stocks and shares reflect the happier prevailing conditions. Based on prices current on January 18, 1923, some generous yields are still obtainable, and it must be remembered that these yields are in most cases free of tax:—

Name of Company.	Amount.	Paid Up.	Price July 30, 1914.	Price Mid of 1921.	Price Jan 18, 1923.	Yield.
Australian Agricultural	Stock	5	84	44	54	6 0 0
Aust. Estates & Mortgage, cons. ord.	Stock	100	84	52½	55½	9 0 0
Australian Merc. Land, & Finance	Stock	25	75	5	7	7 2 0
Australian Pastoral, ord.	Stock	100	112½	78	90½	6 12 0
Dalgity and Co.	Stock	20	5	7	10½	7 2 0
New South Wales Land and Agency	Stock	5	5	42	24	6 6 0
N. Zealand and Australian Land	Stock	100	111	136	146	8 8 0
N. Zealand Loan and Merc. Agency	Stock	100	96	82	74½	8 14 0
Scottish Australian Investment, L.	Stock	100	110½	102½	112½	8 18 0

* Price of Old Stock.

† Free of income-tax.

The price of 88½ in July, 1914, shown for the stock of the Australian Estates and Mortgage Company was before the increase of capital in 1919, so that the quotations for the stock in 1921 and 1922 are not comparable with that for 1914. Some competent Australian authorities are inclined to think that wool values will be maintained round about their present level. There are also possibilities of wider markets for meat and other produce. With weather prospects not unfavourable, the outlook for these companies is promising.

GOLD MINING ON THE WITWATERSRAND.—I.

(BY A CORRESPONDENT.)

JOHANNESBURG, December 19.

A PROMINENT feature in connection with the gold mining industry on the Rand in the past was the suspicion that the controlling interests devoted too much attention to the manipulation of the market value of shares. This suspicion was widely held, and, as a consequence, the industry still has a bad name with a large section of the European public. I am certain that the administration to-day of the five mines, details of which I will give in subsequent articles, is absolutely true, and that this remark applies to many other mines on the Rand as well. The shares of the five mines to be examined in succeeding articles, viz., New Modderfontein, Modderfontein Deep Levels, Government Gold Mining Areas, Van Ryn Deep and Crown Mines, in my judgment, well merit, amongst others, the attention of investors, provided they can be got at a suitable price.

The atmosphere of Johannesburg to-day is not one of share gambling. The mines are in charge of earnest and competent men, Britishers, and not foreigners, who keep their minds fixed on the problem of how to recover the gold at the lowest cost and in the quickest possible time. In other words, they act in the real interests of shareholders, and do not concern themselves with market manipulation. It is said—and I believe it to be the case—that financiers at home do not attempt to interfere with these men in their administration of the mines. At any rate, it is a fact that the cash positions of many of these companies, including those above mentioned, is very strong, and that they have reserves of payable ore blocked out for many years ahead, besides being laid out and equipped with a view to the most economical working.

The shares enjoy a free market, and experience wide fluctuations in market value. They may go higher than they are now, and probably will eventually. But I think they are more likely to fall in the next few months, owing to the rapid fall in the premium on gold, or, in other words, owing to the sudden drop in the selling price of their product combined with the fact that some time must elapse before the fall in the price of commodities, which is the necessary accompaniment of the fall in the premium of gold, will enable the mines to reduce their working expenses sufficiently to compensate for the loss of the premium on the selling price of the gold which they turn out. The fluctuations in the market value of the shares may be accounted for by causes over which the financiers in London have no control, such, for instance, as changes in the premium on gold, the price of commodities, with its reflex action on wages, the price of mining stores and materials, taxation, labour strikes, the ebb and flow in the available supply of native labour, railway rates, and the state of the world's money markets.

I was greatly struck with the personality of the leading administrators of the mining industry, whom it was my privilege to meet in Johannesburg. The obvious sincerity of these men, their keenness and ability, could

hardly fail to make a deep impression. The different administrative representatives of the several controlling groups work together in complete harmony, the only rivalry between them being apparently that of which group can work its mines on the soundest economic lines. A pleasant feature, too, is the complete absence of secrecy or of attempt to make things appear different to what they really are. Assay plans are produced for inspection without demur. And the reports issued to shareholders are models of close information and clarity. I saw no signs of redundant officials, whose salaries and expenses would constitute an unnecessary prior charge on shareholders' dividends. Though money is spent very freely on essentials, it is not wasted on non-essentials. And it is clear that expenses of administration on the Rand are kept down, since they are quoted officially as only 6d per ton milled, a very low figure. As regards the operation of these great gold mines on the Rand, the high figure of the percentage of extraction of the gold contents from their ore, and their low working costs, speak for themselves. This satisfactory state of affairs may reasonably be put to the credit of the much-abused group system of control, whereby individual mines in each group get the benefit of the highest class technical and financial advice of the carefully selected experts who are in the employ of the respective groups.

The cheerfulness and contented look of the coloured workers is also noticeable. These Kaffir "boys" are reported to be very competent. They are, in fact, the backbone of the entire industry, and one of the principal troubles on the Rand is that there is so often a shortage of them.

As in South Africa mining is almost the only industry which really pays, it is but human that it should have to bear more than its fair share of taxation, and that it should be most unpopular with the bulk of the population. Particularly is this the case with the gold mining industry. It makes no difference that this industry has always emerged successfully from the cross-examination of all kinds of commissions convened to inquire into its policy and methods. Its unpopularity does not decrease. This unpopularity is especially to be noticed in the Union Parliament, where the gold mines appear to be almost entirely devoid of friends, in spite of the fact that they contribute more in taxes than any other industry in South Africa. It seems to me that the fact that the gold mine owners have for such a long time had so little direct representation in the Union Parliament has something to do with this unfortunate state of affairs. Interests of such magnitude as those of the gold mine owners on the Rand call for adequate Parliamentary representation, and such representation by a competent man, enjoying the respect of all political parties in the Union House of Assembly, would do much to remove the prejudice against the industry, and would act as a clog against further unjust taxation, besides being an assistance and not a hindrance to the Government of the day.

Though the great strike of the white employees on the Rand at the beginning of this year finished with complete vindication of the policy of the mine-owners, the political future is none too bright and there is always a risk of further trouble. For the present, however, the extreme section of the Labour party at the mines has lost all control, with the result that efficiency in the handling of them has improved wonderfully. This is shown clearly by the fall in working costs. These are down 3s per ton since the strike, having been 19s 10d last October, or within 2s of pre-war level. And they are still falling. If the cost of mining stores and materials per ton milled falls 2s, as it probably will in time, in sympathy with the fall in the premium on gold, which will in turn be followed by increased purchasing power of the precious metal, mining costs will be down to pre-war level, even though wages remain higher. The fall of 5s in costs since the strike is due to the fact that the miners now do more work for their pay, and to the increased efficiency of the underground equipment of the mines, which, I am told, is particularly noticeable in the use of smaller rock drills and in the improved handling and lesser consumption of rock-drill steel.

Here I should say that, so far as the mines are concerned, there is no longer any premium on gold. This is

because of the high commission, viz., 3 per cent., charged by the banks for the mining companies' remittances back to South Africa after selling their gold in London. After debiting this commission to their monthly expenses, the mines get practically no premium on the sale of their output in London with gold at 88s per fine ounce, or thereabouts, as it is now. As this is only 3s above the par value of fine gold, the time is clearly at hand when the mines will cease to sell their output in London, but will sell in South Africa, and so save transportation charges and bankers' commissions on back remittances.

Notes of the Week.

The Re-Funding Commission.—The peaceful progress of the negotiations between Mr Baldwin and the American Financial Commission in Washington would seem to have been devised by capricious fortune in order to throw into relief the primitive and disastrous methods that are being adopted at the moment in Europe to secure payment from Germany. The fact that Mr Baldwin is returning without having clinched his bargain is only disappointing to those who have failed to appreciate the complexity and vast importance of the problem, and it does not seem to us at all unreasonable that he should hesitate to conclude a deal which will affect this country's finances for 60 years on behalf of a Government which has only been in office a couple of months without consulting his colleagues. The Americans seem to have admitted the force of the argument that in comparing the rate of interest payable by Great Britain to America with that payable by the American Government to its own citizens who put up the money, account should be taken of the fact that the American Government can, in fact, recover a substantial fraction of the interest it pays to its Nationals in the form of taxation, and this would alone account to a considerable extent for the low figures that are being discussed in Washington. This admission is, however, considerably offset in actual money when account is taken of the accrued interest which raises the original debt of 800 million (reckoning the dollar at par) to nearly 1,000 million. The fact remains, however, that if the debt had been incurred at 5 per cent. at the time the money was expended, we should have been far worse off than under any of the schemes now under discussion, which are equally an improvement upon the terms at present laid down by Congress. The proposals on the American side have not been formally discussed, but whatever they may prove to be, it is quite certain that they amount to an appreciable remission, partly on grounds of equity, but also on grounds of expediency, in the total which America is entitled to ask from Great Britain. The expectation that that very important and delicate matter would be settled to everybody's satisfaction in a few days was never reasonable; and equally unreasonable, it seems to us, is the gloom expressed in some quarters over the temporary adjournment of the discussions.

Lausanne and British Interests in Turkey.—The Lausanne Conference must be drawing to a close, and the consummation of two months' diplomatic labour may be regarded as satisfactory, whatever its nature, so long as it averts a renewal of war in the Near and Middle East. What, indeed, is there left to fight about there? Everywhere, except in the Mosul Vilayet, the Turks have secured their territorial demands, and the Mosul problem is apparently to be taken out of the sphere of the Conference (thus opportunely lightening its burden) and disposed of or not, as the case may be, by direct negotiation between Turkey and Great Britain alone. In return for a cheap concession over the Patriarchate, the Turks have got their way over Minorities, and have every prospect of getting it over Finance and Capitulations. Unless the Great National Assembly is extravagantly more unreasonable than its chosen representatives, agreement, at least in form, is in sight. The programme of the National Pact is substantially realised. Of these various chapters in the forthcoming treaty, the Capitulations are naturally most in the mind of the British community in Turkey—

not, perhaps, of the colony at Smyrna, who have suffered almost as much as they can already, but of the Constantinople community, who may still have some hope of carrying on. An English resident in Constantinople who was in London the other day reports that some time after the Mudania armistice he and some of his friends passed in review the fifty most prominent Western firms in Constantinople that first came into their heads. Of these they found that forty-four were already realising their assets and winding-up their business in Turkey, without waiting to see the outcome of Lausanne. Probably they did not so much expect the Conference to break down as to end in an agreement which would only exist on paper. Another Englishman in business in Constantinople writes that he, for his part, intends to carry on if he possibly can, scrupulously observing whatever laws and regulations the new Turkish régime may impose, never giving a handle against himself, and trusting to his knowledge of the country and people to pull him through. He is acutely aware that he is going to have a difficult time for some, perhaps many, years, and that in the end he may be defeated, but still he considers the hazard worth taking. Probably he will reap the reward he deserves, for the total abolition of the Capitulations will disarm the Turks' hostility far more than the substitution for them of some shadowy statute, ineffective for protecting the foreign resident, while efficacious in wounding the Turk's national pride. Indignation cannot be maintained indefinitely after the removal of the cause, especially indignation on behalf of an abstract idea like sovereignty, while in every act of his daily practical life the Turk will increasingly feel the inconvenience of foregoing the services of the Frankish business-man who used to provide him with the amenities of Western civilisation. Sovereignty is precious, but sewing machines, banking facilities, and fancy waistcoats are hardly to be despised when once one's national sovereignty is assured. All the same, the lot of these British merchants is a cruel one. First they were ruined by the war, between the hammer and anvil of Turkish requisitions and British blockade. And now they have been ruined by the Treaty of Sèvres (against which they loudly protested from beginning to end) and its catastrophic outcome. Their claims for damages during 1914-8 remain unpaid, and now the damages of 1922-3 follow hard upon them. Nominally compensation is payable by Turkey, and the reparations-liability of Turkey, like that of Germany's other ex-Allies, is piled, by the Treaty of Versailles, upon Germany's shoulders. But whatever French activities in the Ruhr may or may not bring to pass, they certainly will not eventuate in payments to British merchants in Constantinople and Smyrna; nor is the actual debtor any more likely to pay than his enforced guarantor. The merchants ask our Government to make them an advance in order to set them on their feet again; the Government reply that they have the slenderest prospects of recovery from Turkey, and no supplies voted by Parliament on which to draw. There is a report (which may or may not be well founded) that the French Government have already compensated the French community in Turkey, thereby smothering the extremely vocal protests of that community in regard to the Capitulations that were audible a few weeks ago.

Employment and the Cost of Living.—The *Labour Gazette* for January shows, as we anticipated, a fall in the volume of unemployment, whether measured by the trade union returns or by the returns of unemployment in insured trades. In the trade union series of figures the percentage is back to the October figure of 14 per cent., while the insurance figure has also dropped 0.2 per cent. to 12.2 per cent. on December 18th. Employment improved slightly in mining, iron and steel, and in engineering, shipbuilding and other metal trades, but in the whole of this metallurgical group it is still too soon to describe the situation as anything but bad. In the building trade the bad weather caused a not unexpected decline, and the cotton trade also was, if anything, a little worse than in the middle of November. The general run of reports in other trades is "employment fair," "slightly better in some districts," "slight seasonal decline," and so forth; and in general it cannot be said that there has been any appreciable change during the last two or three months.

transactions of every description.

Correspondents in all parts of the world.

In these circumstances, it is welcome news that there has been a decline in the cost of living, mainly due to a fall in eggs and butter. The present cost of living is therefore now given by the Board of Trade at 78 per cent., as compared with 80 per cent. a month ago. We shall deal with the Board of Trade's general survey of employment, wages, and prices during 1922 more fully next week.

The Progress of Austrian Reconstruction.—Amid the débâcle of European currencies the Austrian crown has up to the present retained the stability which has been so prominent a feature of the situation since November 18th, when inflation of the Austrian currency definitely came to an end. The task which was undertaken by the League of Nations is naturally giving rise to very many difficulties, which are discussed by our Vienna correspondent at length in a later column. Many of them are sufficiently serious to make it far from certain that the scheme could in any circumstances be carried out without shipwreck. At the same time, the efforts that have been made by the Austrian Government and the response of the people of the country have had such results as to encourage the view of those who have believed that if the country is really prepared to make a serious effort, it can save itself from financial disaster even though the outlook be extremely unpromising. The Budget problem has been tackled with energy, the Government having already dispensed with 27,000 officials—which exceeds by 2,000 the number demanded by the League—and this and other considerations, such as the raising of the railway rates, have already made a great improvement upon the deficit, which last September was at the rate of 460 million gold crowns a year. Austria has already found from her own internal reserves the 25 million gold crowns required as capital for the new bank of issue, while 47 million gold crowns, 30 supplied by the banks and 17 by the public, have also been subscribed against the new Treasury bills. As our correspondent points out, this response will not cover the deficit for very long, and it is essential that before the end of February some provisional advances should be made by foreign countries, since it is evident that the long awaited international loan cannot be negotiated in time to meet the situation by that date. The financial world, has, however, been favourably impressed by the efforts that Austria has made, and not least by the fact that in the last quarter the yield of the Customs and of the tobacco monopoly produced revenue at the rate of 135 million gold crowns a year, which is far in excess of the amount required for the service of the international loan. The return of the new Austrian bank relating to January 7th is printed for the first time in our analysis of Bank Returns. It will be seen that the holding of gold and of stable currencies amounts to 29.4 per cent. of the notes issued, and if this reserve is compared with the total liabilities, excluding the fiduciary issue (amounting to 200 million gold crowns issued against Treasury bills), the proportion is 43.8 per cent. It may even be questioned whether the note circulation is sufficient for the requirements of the country, for the total note issue only amounts to 48½ gold crowns per head of population. These considerations account for the fall in prices and for the stability of the exchange. It is, however, a point for serious consideration whether it will be possible for the situation to be maintained during the headlong collapse of the mark, whose vagaries are for the moment giving a very heavy export premium to all rapidly produced German goods. The mark's collapse also affects

the situation in other ways. For example, we are informed that through traffic from Poland to Western Europe is being routed through Germany in order to benefit by the low freight rates which are lagging behind the exchange, with the result that the Austrian railways are losing the traffic. Still less is it possible to foresee the intangible effects of despair as to the future of Germany upon the returning confidence of Austria. If the present German crisis is prolonged for many months it will put a strain upon the Austrian situation the resisting of which would be little short of miraculous.

The Rising in Memel.—The territory of Memel is a narrow strip of land, some hundred miles in length and on the average ten miles wide, running northward along the coast from the mouth of the Niemen at the extreme north-eastern corner of Germany. The land is agricultural and forest, and the only town of importance is the Port of Memel itself at its northern extremity. So long as it formed part of the German Empire the development of Memel was retarded by the fact that it was cut off from its natural hinterland of Russia by the tariff policies of the two countries concerned, and when the territory was detached from Germany by the Treaty of Versailles and placed under the administration of the Allied Powers, the intention of the Allies themselves is seen from the reply to the protests of Germany against its cession. "The Allied and Associated Powers," runs this official document of June 16, 1919, "reject the suggestion that the cession of the district of Memel conflicts with the principle of nationality. The district in question has always been Lithuanian. The majority of the population is Lithuanian in origin and speech, and the fact that the City of Memel itself is in large part German is no justification for maintaining the district under German sovereignty, particularly in view of the fact that the Port of Memel is the only sea outlet for Lithuania." At the time when Danzig was placed under the administration of British forces Memel was entrusted to French occupation, but whereas the British control of Danzig ended long ago with the establishment of the Free State, a French garrison and a French administrator have remained to this day in Memel. The technical excuse for the continuance of this provisional régime was that Lithuania was still not recognised *de jure* by the chief Allied Powers. The main reason, however, was an agitation, steadily growing in force during the past three years, from two main quarters. On the one side the German element, in the majority in the territory as a whole, have used every means to fight against incorporation in Lithuania and to oppress the Lithuanian element in the Memel territory itself. In this, strangely enough at first sight, they have been vigorously assisted by the French administration, which has openly favoured the German at the expense of the native Lithuanian element in the territory; and has maintained, practically without change, the old German administrative personnel. The explanation of this is the French desire to support the aims of Poland, which, not content with having repeatedly broken its agreements both with Lithuania and the Allies themselves with reference to the Wilna territory, and having obtained possession by trickery of Wilna itself, the old capital of Lithuania, has been using every means to prevent Memel from passing to Lithuania. The reason given is that Memel provides an alternative outlet for Poland to the Baltic, and that Poland could not rely on free access should the port come under Lithuanian control. The failure on the part of the Council of Ambassadors to decide the fate of Memel, particularly in view of the fact that Lithuania, after having long been recognised *de facto*, is now recognised *de jure*, can only be ascribed either to regrettable remissness or to the play of those forces referred to above. The erection of the Memel territory into a Free State has little to recommend it. Its territory is even smaller than that of Danzig, and it can make no pretence to being self-supporting. Again, whereas the population of the Free State of Danzig is almost entirely German, that of Memel is almost entirely Lithuanian, and is surrounded on all its land sides, except where it touches the Niemen, by Lithuania. The movement which has

recently occurred by which the Lithuanian inhabitants of the Memel territory have taken matters in their own hands is regrettable, but should cause no surprise in view of the events of the last few years. Relying on the promises of the Allies and of the League of Nations, the Lithuanian Government displayed an almost unjustifiable patience over the question of Wilna, and on each occasion their interests were sacrificed to those of Poland, who preferred presenting the world with a *fait accompli* to keeping their word. It is hardly surprising that after these experiences a decision on the question of Memel should at last have been precipitated by somewhat similar methods, and it is to be hoped that the justice of the Lithuanian claim will not be prejudiced by this act of violence of the natives of the Memel territory itself.

Mexico and Washington.—A correspondent writes:—Mexico has refused the Chilean invitation to the coming Pan-American Conference on the ground of the continued withholding by the United States of recognition from President Obregon's Government. The refusal, of course, precludes the long-expected loan from American financiers, which was to extricate Mexico from her difficulties, and leaves her to work out her own salvation independently of American diplomatic and official aid. Her reply to the invitation lays stress on her satisfactory relations with all the American peoples, including that of the United States, and on the evidence of her desire to meet her obligations given by the scheme of settlement with her foreign creditors which comes into operation in the spring. Meantime, the deadlock as to British and American recognition continues, but it is not now due to doubt as to the stability of her existing Government so much as to the apprehensions of the American oil companies—and also of the British Foreign Office—as to the rights of foreign landowners in the country under the Carranzist Constitution now in force. The Mexican contention is that they are safeguarded by the Constitution and confirmed by decisions of the Supreme Court. The American, and apparently the British, contention is that these decisions are not sufficiently clear or comprehensive, and there the controversy stands. Meanwhile, in spite of local riots and disorders in Congress, there are no reports of further revolutionary disturbance, and the Government has not hesitated to offend the powerful Catholic party by enforcing the provisions of the Constitution against the Apostolic Delegate. Apparently it expects that the resources of the country will be developed by immigration and the efforts of individual foreign business men and capitalists, and that the development will ultimately bring about British and American recognition.

The Rubber Revival and Reaction.—A Stock Exchange correspondent writes:—Precisely identical conditions prevail in the current excitement over rubber shares as those which have characterised every previous boomlet connected with this market. There has been the same indiscriminate rush to buy shares that were in scanty supply. There were the same orders to buy shares "at best," regardless of values or of the previous prices. The same readiness has been shown to take any wild tip that happened to be circulated from any irresponsible quarter. In the Stock Exchange a similar position prevailed. For several days a seething crowd of men struggled to buy shares at any prices. To get through the market has been a matter requiring patience and physical strength. In the middle of the week the excitement cooled down; the buying orders fell away, owing principally to the development of political trouble on the Ruhr; partly, also, to the obvious fact that it was impossible for the madness of the boomlet to continue indefinitely. Readers of the *Economist* have been kept in close and intimate touch with every step taken in connection with the rubber industry during the past few eventful months. The refusal of the Dutch Government to take action that should compulsorily bring into line of production restriction the Dutch-producing companies in the Netherlands West Indies; the publication of the important Stevenson Committee Report, together with its equally important supplement, have been discussed here at length. Warning

has been raised in regard to the need for caution, while it was pointed out that the complexion of the market might change, in a moment, from being stagnant or depressed into one in which hopefulness pointed the way to higher prices as a result of the proposal to restrict rubber production on the lines suggested by the Stevenson Committee. What has caused the latest bout of excitement is the fact that rubber, the produce, rose sharply to 1s 4d per lb, as against 7½d, the price ruling five months ago. This advance was accompanied by an impression which became widely general that America might be faced, in the quite near future, with a shortage of rubber. The American manufacturers have themselves to thank for this expectation, for some of them are talking of planting rubber estates in the Philippines, in order to guarantee to themselves an ample supply of the product at reasonable prices. Such a suggestion is interesting, if not particularly likely to be carried out, having regard to the fact that several years would be required before estates in the Philippines could be brought to a bearing stage, apart altogether from the possible unsuitability of the islands for this purpose. The stocks of rubber in London are but gradually diminishing, and although the American manufacturers are not taking rubber at the rate which the boomlet in rubber shares might appear to justify, it is evident that the demand, coming at a time when restriction is applied to production, may have the effect of forcing up the price of the commodity to eightpence or more per lb. As the price rises, more rubber is permitted to be exported under the Stevenson Committee recommendations, but the remarkable object lesson in the use of restriction, as shown by the rise in the price of the product, is sufficiently striking to render it unlikely that the bulk of the producing companies will break away from their policy of restriction. Therefore, it must be admitted that the supporter of rubber and the investor in the shares have a certain amount of reason for the faith which is in them, and which encourages them to refrain from selling. Meanwhile, the speculative buyer, anxious to be in the popular market of the moment, purchases at high prices the shares in companies of which he knows the names only. Upon any hint of the buying pressure being relaxed, the natural tendency is for reaction to take place in most of the leading shares. This has already come about, and, with the Stock Exchange settlement so near at hand, it will be interesting to see whether further realisations will have to be made on behalf of the speculator pure and simple, who cannot afford to take up what he has bought. Market considerations apart, there is reasonable justification for the statement that the best-class rubber shares should be worth holding, though a good many of the companies are still far removed from the stage at which dividends can be expected on the shares, a consideration which makes it more than ever essential for discrimination to be applied to selection in this particular market. The cry for removal of the Stevenson restrictions already arises. But the stocks of the produce are as high to-day as they stood a year ago, and any weakening of the attitude on the part of producers would entail grave risk of raw rubber once more swamping the market, and of the price reverting to the neighbourhood of a shilling per lb.

Certificates of Insurance.—"To arrange for an insurance upon the terms current in the trade which will be available for the benefit of the buyer" is one of the steps to be taken by the seller under a c.i.f. contract, writes a correspondent. The question whether a certificate of insurance or a broker's cover note is a sufficient document which a buyer is bound to accept under a c.i.f. contract has been a good deal discussed in commercial circles of late. The use of one or other of these alternative documents instead of a policy of insurance is a common practice, and had not been questioned until a King's Bench judgment in 1919 laid down that tender by the seller under a c.i.f. contract of a broker's cover note or a certificate of insurance is not performance of the seller's obligation under the contract. The judge (Mr Justice Bailhache) recognised that his judgment gave effect to an objection which commercial men might well consider a merely technical one, but he said that he nevertheless felt

bound to give effect to the objection because he thought it was sound in law. A buyer, the judge pointed out, has, under the alternative documents, apparently no right of action against anybody. It was made clear that American certificates of insurance were not referred to. They "stand on a different footing, and are equivalent to policies, being accepted in this country as policies." In 1921, however, Mr Justice McCardie held that a certificate of insurance issued by an American insurance corporation was not good tender in England under an ordinary c.i.f. contract, and that the insurance document must be an actual policy. More recently still, namely, in July last, Mr Justice Sankey in a case where the stipulation was for an "approved insurance policy" held that an American certificate was a policy to which no reasonable mercantile objection could be made on the point of its being a certificate, as distinguished from a policy. This, it should be pointed out, is in line with a note in "Scrutton on Charter parties," to the effect that "a certificate of insurance issued by an insurance company under a floating policy, upon which document the company could be sued, would suffice in any case." Of course, no question will arise if the contract provides, as is sometimes the case, for an insurance policy or certificate of insurance or broker's cover note. This practice of providing in the contract for an alternative, however, is not universal, and buyers would not be content unless satisfied that the document of insurance would give them proper cover. This a certificate of insurance may do, but a broker's cover note apparently does not. The common practice of accepting an alternative has been brought into doubt, and, pending some further judicial decision, the doubt may not be cleared away. The Council of the London Chamber of Commerce last week adopted a recommendation from the Merchants' Committee to the effect that all merchants making contracts which stipulate that the documents must include a "policy of insurance," are recommended to alter the wording of all such contracts to "policy and/or certificate of insurance."

Debenture Corporation.—The report of the Debenture Corporation for the year 1922 shows that an alteration in the form of the accounts has been made, the revenue account having been divided into two sections—A and B—on the lines recently adopted by some of the investment trust companies. The A account is for revenue on which there is a claim for corporation profits tax, and the B account for revenue not liable to the tax. The directors state the alteration has been rendered necessary by the pending claim of the revenue authorities that the Corporation is liable to the tax on a portion of its income. "This claim is not admitted, but the necessary reserves have been made." Revenue for the year, inclusive of arrears of £9,538, amounted to £160,617, as against £193,721 for 1921. There is a claim for corporation profits tax against £42,568 of revenue. The following table compares results for a number of years past:—

	1913.	1917.	1918.	1919.	1920.	1921.	1922.
Net profit....	£ 104,390	£ 101,634	£ 111,946	£ 116,501	£ 127,037	£ 137,101	£ 116,387
Pref. dividend	47,083	37,500	35,625	35,000	35,000	35,000	36,875
Ord. dividend	47,078	33,747	35,496	41,999	42,000	49,000	55,312
	(5%)	(4%)	(5%)	(6%)	(6%)	(7%)	(7%)
Income-tax...	6,697	21,823	31,112	28,439	32,370	38,898	8,969
Foundrs' shrs	3,531	2,160	2,052	..	..	..	..
Reserve	..	..	..	..	..	15,000	15,000
Depreciation ..	..	6,404	7,660	11,064	10,955	..	..

The decline in net revenue is less than £21,000, the amount paid for debenture and other interest having dropped from £51,358 to £37,928. The additional half per cent. paid on the ordinary shares requires £6,312 more, but the provision for income and corporation profits tax is lower by £30,000, and after placing £15,000 to reserve the balance carried forward is £230 higher at £6,246. A profit of £6,217 on realisations of investments has been added to capital reserve, which now amounts to £131,000. The balance-sheet shows an increase of £80,400 in mortgage debentures in various companies, while Foreign Government securities have been increased by £69,300, but share investments have

been reduced by £40,100, advances on mortgage by £16,000, and ordinary advances by £46,200. Cash is £42,800 higher at £88,400. The directors mention that, "although there is still considerable depreciation in the market value of the quoted investments held by the Corporation, in the opinion of the directors their security is not affected." The auditors qualify their report with a remark to the effect that no provision, beyond the reserve and capital reserve (together, £346,000), is made for investment depreciation.

An American Textile Amalgamation.—A correspondent writes:—The first consolidations in American industry were based on a desire to limit destructive competition, reduce overhead and distribution costs, and, in addition to these incentives, there was the opportunity for financial operations which often afforded very attractive profits for promoters and bankers. Such consolidations, labelled trusts, were very unpopular. Legislators and courts sought to destroy them; and in addition to these difficulties, the trusts themselves did not always realise the economies and advantages that were supposed to be inherent in combination. Now we have an example of another kind of combination represented by the "affiliation" just brought about between the Consolidated Textile Corporation, the largest cotton manufacturing and selling organisation in the country, and the American Woollen Company, occupying a similar position in the woollen industry. But in this combination there is no new financing, no element of monopolisation, no exchange of shares or change in stock control. It is a question of management. What the affiliation amounts to is that the two chief officers of American Woollen become the director-general and president of Consolidated Textile, and, with two other American Woollen directors, enter the directorate of the Consolidated. Consolidated Textile is not particularly well known outside the United States. It was chartered in 1919. Its nucleus was the old cotton house of Converse and Co., of which Frederick K. Rupprecht was the head. During the war he began buying Southern cotton mills, acquiring some nine or ten located between the Carolinas and Texas, in the midst of the cotton-raising territory. A little later he bought the 17 Knight mills of Rhode Island and Massachusetts, and the Windsor Print Works of North Adams, Mass.

British-American Mining.—Under this heading, writes our mining correspondent, the position of a number of undertakings was dealt with a couple of months ago. Within the past week or so one sensational incident and several interesting developments have occurred. Some years back the Selukwe Gold Mining Company, after a brief and not very profitable spell in Rhodesia, turned its attention to British Columbia, securing a 60 per cent. interest in an area adjoining the famous Premier gold and silver mine, controlled by the Guggenheim group. Exploratory work prosecuted for the purpose of ascertaining whether or no the property carried the continuation of the Premier lode has been attended with, at any rate, a measure of success. On Tuesday morning last a cable was posted up in the Stock Exchange announcing that the vein had been cut, although low grade at the point; prospects were described as excellent. In the course of the day the price of the shares practically doubled; yesterday it further appreciated to over 20s. Whether the area controlled by the Selukwe company's subsidiary contains ore corresponding to that of the Premier remains to be proved; meantime the possibilities are valued in the market at about £750,000. An advance of even greater extent, although less rapid, has taken place in the shares of the San Francisco mines, whose hopeful prospects were pointed out in our "Note" of November 11th. The operating profit for November was reported as \$58,000, and for December (five weeks) \$73,400. Duplication of the plant is in progress, and when treatment is proceeding on the full scale dividends of 20 to 25 per cent. are expected. The Mexican Corporation has lately declared profits in the neighbourhood of \$100,000 per month, and in March the output is due to be increased from 2,500 to 3,500 tons per day. Market men take a favourable view of the outlook. Then the

shares of the Plymouth Consolidated, whose property is situated in California, spurted sharply on the news of a good development at depth, following a long period of disappointing results. Here, as in the case of the Selukwe, further work should be awaited before optimistic conclusions are drawn. British Platinums have responded to the operation of an additional dredger. On the other hand, the hopes entertained of the discovery of another run of rich ore at the Esperanza have not been confirmed. The report lately issued by the Colombian Mining Corporation showed a deplorable financial position, and the speech of the Chairman at Thursday's meeting was a pitiable record of failures. This concern seems one of those which "never is but always to be blessed."

Deep Sea Fisheries.—The preliminary returns of the Board of Agriculture and Fisheries show that during 1922 there was landed at the ports of Great Britain direct from the fishing grounds by British vessels 17,747,756 cwt. of wet fish, as compared with 16,374,825 cwt. in 1921, an increase of 1,342,931 cwt., or 8 per cent. At the same time, the value or money realised for the fish fell off to the extent of over three million pounds, or nearly 15 per cent. The particulars are as follows:—

	Cwts.		Value.	
	1921.	1922.	1921.	1922.
England and Wales	11,174,596	12,158,558	£ 15,998,068	£ 13,817,857
Scotland	5,200,229	5,589,198	4,910,624	3,959,840

In addition, there were landed in England and Wales shell fish to the value of £472,207, against £558,929. Apart from the foregoing, foreign-owned trawlers, &c., landed in Great Britain direct from the fishing grounds wet fish having a weight of 799,356 cwt., and a value of £824,294, against 496,038 cwt. and £990,202 in 1921. The percentage of the aggregate landings by both British and foreign boats was 4.3, against 3 a year ago. The proportions of the various kinds of fish caught show practically no variation at all. The principal being cod, haddocks, and herrings, which together account for five-eighths of the total. The average realised by wet fish of all kinds landed by British boats at the ports of England and Wales was 22s 8½d per cwt, comparing with 27s 8½d in 1921. That landed in Scotland had, as usual, a much smaller average value, viz., 14s 2d per cwt, against 18s 10½d in 1921. The difference between the English and Scottish averages is probably due, writes a Hull correspondent, not to any great variation in quality, but to the better inland markets available to the English ports. During the past year the fishing industry has worked under steadier conditions. Working costs, prices of bunker coal, &c., have come down, but with lower prices realised for fish, the margin of profit has not been increased. Most of the fishing trawlers are now fitted with wireless installation, and it is therefore possible to regulate supplies in the market to some extent, and within certain limits to stabilise prices. Weather conditions, however, operate to a considerable degree, and when fishing operations are held up or seriously interfered with, vessels fortunate to arrive in time from Iceland or the White Sea are in the position of being able to command long prices. Only recently vessels from the White Sea, with big catches of plaice, have realised as much as £4,000 to £5,000 for a single cargo. These, of course, are exceptional cases, and set off the lean times when supply exceeds demand. Seine net fishing from motor-boats has been again experimented in by British fishermen with fair results. The grievance against foreign-owned vessels landing their catches at English and Scottish ports is heard now and then, but it would not be so acute if these vessels were able to find a market abroad as formerly, but this is denied them by reason of the fallen mark. In addition to the deep sea landings, Great Britain last year imported from Norway and other countries wet fish (mostly herrings) to the extent of 931,396 cwt., against £1,114,929 cwt. in 1921, the value being £1,386,090 and £1,507,050 respectively. The

value of all wet fish landed or imported at English, Welsh, and Scottish ports in 1922 was thus approximately £20,000,000 sterling.

Our Trade with Australia.—The Department of Overseas Trade has issued this week some figures of Australia's foreign trade, which provide encouraging evidence of the recovery of Australian markets by British traders. During the quarter ended September 30, 1922, Australia's imports from all countries were valued at £30,012,409, which compares with £21,043,171 for the quarter ended September 30, 1921. The following table shows the shares of the Australian import trade secured in the two periods by the chief competing countries:—

Country of Origin.	Quarter Ended—	
	Sept. 30, 1921.	Sept. 30, 1922.
United Kingdom	10,050,950	16,180,585
Canada	548,718	970,907
Japan	630,006	1,408,316
United States	4,772,889	5,580,598

The United Kingdom's share in the last September quarter was 53.8 per cent., which is larger than our share of 51.82 per cent. in the Australian import trade of 1913. In 1920-21 this percentage fell to 46.9, and the recovery now is, therefore, of significance. In 1913 the share of the United States was 13.68 per cent, and this figure rose to 22 per cent. in 1920-21, but it fell in the third quarter of last year to 17.7 per cent. The imports into Australia from Germany are now negligible, whereas in 1913 Germany accounted for 8.8 per cent. of Australia's takings. The bare totals of Australian exports and imports for October and November are also available, and are as follows:—October, imports £11,020,021, exports £10,425,002; November, imports £12,603,493, exports £12,394,990.

Japanese Trade and Finance.—Cabled advices from Tokyo report that since the turn of the year money has returned quickly from various districts, and the advances and discounts of the Bank of Japan have been rapidly reduced. Under these circumstances the tone of Government loans and bank shares has been strong, the volume of business in the former class being heavy. The fall in money rates has brought the quotation for day-to-day loans to 3½ per cent. A rise in raw cotton prices has led to a hardening in the market for cotton yarns; while the price of rice remains steady above 28 yen as a result of Government purchases. In the raw silk market buyers are cautious, but quotations are firm, because of a decrease in the arrival of silk from the country to the market. On January 15th the Bank of Japan's index number of wholesale prices in Tokyo was 241, as compared with 276 on the corresponding date of 1921. Japanese imports in December were 143,000,000 yen against 161,000,000 yen in December, 1921, and exports 158,000,000 yen against 146,000,000 yen, the figures revealing a change over from a passive to an active merchandise trade balance.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, W.C. 2, on Tuesday, January 23, 1923, at 4 p.m., when a paper on "The South-East Coast of Africa and Its Development" (with lantern illustrations), will be read by Allister Miller, Esq. Sir Harry Wilson, K.C.M.G., K.B.E., will preside.

THE London Chamber of Commerce announces that arrangements have been made for an address to be delivered to members of the Chamber and others by the Right Hon. Lt.-Col. Sir Samuel J. G. Hoare, Bart., C.M.G., M.A., M.P., Secretary of State for Air, on "Czecho-Slovakia as a Geographical Centre of European Trade," to be followed by Dr V. Mastny, Minister Plenipotentiary for Czecho-Slovakia in London. The meeting will take place at the offices of the Chamber at 97 Cannon street, on Wednesday, January 24th, at 11.45 a.m.

IRISH FREE STATE.—BANK RETURNS—COMPENSATION FOR MILITARY DAMAGE—THE REVENUE.

(FROM OUR CORRESPONDENT.)

DUBLIN, January 18.

It is important that in the welter of political polemics the essential factors as to the wealth and the revenues of the Irish Free State shall not be overlooked. The deplorable losses inflicted upon the community at large and upon corporate and private owners have bitten deep into fixed capital and into temporary earning power. But once order is finally restored it is self-evident that the process of recuperation will be rapid. The Irish Free State—it is the common case of controversialists of all hues—is most backward as to the development of its resources, agricultural, industrial, mineral, and the like; it has had, therefore, the less volume, and the less complicated type, of machinery of production and distribution for the sabotage of the irregulars to destroy or dislocate. It is a permissible consolation amidst rather dismal happenings. The inhabitants of the Irish Free State also have for long had large savings hoarded away or invested through the Dublin and London Stock Exchanges, or lying on deposit in the banks. The reports and balance-sheets of the banks for 1922, so far issued, once more confirm this in signal fashion. Fuller reference will be made to them next week, when the Bank of Ireland statement will be available to complete the series; of the latter, however, enough has already been made public to show that it has had a good year. The moral to be deduced from these facts, which are as incontestable as they are generally ignored, is that the restoration of order is most urgently desirable, and to that end the Government has just introduced further and most comprehensive measures of repressive severity.

In the *Official Gazette* of January 12th last is published a list of 424 awards by way of compensation for criminal and malicious injuries in the pre-truce period, and the money, in sums varying from £38,000 to a few pounds, is about to be paid over. It will be remembered that the British Government agreed to pay for all such damage done by its troops or other agents, and as the County Court decrees had very largely been the result of undetected cases, a Commission under the presidency of Lord Shaw was appointed to reinvestigate and reassess. Items of £61,000, £12,000, £10,000, &c., to merchants in Patrick street, Cork, of £37,956 and costs to a trader in Ballaghaderreen, of £31,050 and costs to the County Council of Kerry for the destruction of the County Hall at Tralee, and of £29,400 to a Tralee trader are painful reminders of the Anglo-Irish struggle, and of the fact that destruction of property as a political argument and as a method of executive policy owes its origin to non-Irish sources. The slavish following of a precedent which they bitterly condemned at the time shows up the Republicans in their pose of patriotism in a peculiarly imbecile and odious light, for while they are equally engaged in an attempt, foredoomed to failure, to break

the will of the Irish people, they are seeking to destroy, so far as they are able, the wealth of the country which they profess to love and serve.

The Exchequer returns for the period from April 1, 1922, to January 13, 1923, inclusive, shows total revenue as collected at £19,487,259, total expenditure (inclusive of certain advances on capital account) at £18,300,589, and balance in the Exchequer on January 13, 1923, at £1,186,670. Customs and Excise are responsible for nearly fourteen and three-quarter millions of the revenue. It will be remembered that the Minister of Finance anticipated a revenue for the whole year of some £27,000,000. It would appear, *prima facie*, as if this figure would be reached if not exceeded. There are still some two and a-half months before the end of the financial year, and upon the readjustment with the British Exchequer for the purpose of converting "collected" into "true" revenue, the Irish revenue, if things are as they used to be, will receive substantial accretions. It would be rash to attempt to forecast, as to detail matters, how as between the two Exchequers the subject of arrears, recoverable or irrecoverable, due to the country in which it is not collectable will be dealt with. On the broader aspects these Exchequer returns cannot be regarded as otherwise than satisfactory, and as further evidences of the solidity of Ireland's financial resources.

UNITED STATES.—NEW YEAR OUTLOOK FOR TRADE AND INDUSTRY—ACTIVE DEMAND FOR BONDS—NOVEMBER RAILROAD EARNINGS.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 5.

TRADE and industry generally have begun the new year in an auspicious manner, and most interests confidently expect that the next few months at least will be an active period in practically all lines. A significant feature is that stoppages of industrial plants during the holiday season have been of shorter duration than usual. In some primary markets, particularly in textiles, buying for future requirements has not yet developed to any material extent, and probably will not for a week or two, while inventories are under way. But in other directions an increasing demand since the first of the year has been in evidence for merchandise for spring delivery, with retailers, especially, placing a substantial volume of orders to replenish stocks both for current and later needs. Supplies in the hands of jobbers and retailers are evidently not burdensome, for January clearance sales and reduced price sales throughout the country are less numerous than for some time past. Among the more important industries, the iron and steel trades lead in activity, thanks to the continued heavy buying of equipment by the railroads, exceptionally large purchases by automobile manufacturers, and fair orders from implement makers, who appear to be more optimistic than they have been for a long while. Some idea of the extent of railway equipment buying during the past year may be had from the fact that one of the leading railroads expended \$25,000,000 for that purpose, and has just placed an additional order for 5,000 cars, while one of the largest locomotive builders is said to have \$45,000,000 worth of orders on its books. Orders for new cars (mostly freight cars) last year reached nearly 200,000, the largest total for five years, and one which compares with only 23,300, approximately, in 1921. Indications point to further heavy purchases this year, for the rolling stock on many railroads is insufficient to meet requirements. Manufacturers in other lines, notably cotton goods and cotton yarn mills, furniture, stone, brick, and lumber producers, are well sold ahead for periods ranging from one to four or five months. The automobile industry is again very active after a comparatively brief shut-down, while all lines of building materials display a degree of activity unusual at this time of the year. Complaints of car shortage are coming from many sections, and lack of adequate transport facilities is delaying shipments of coal, lumber, and grain, although the recent declines in prices are considered mainly responsible for the slower marketing of grain. Shoe manufacturers are busier, and retailers are buying more freely. Prices in virtually all markets continue high, and some,

particularly for finished and unfinished cotton goods, have shown further advances in the past week.

Money rates have become decidedly easier—a development which was not generally expected so soon after the turn of the year. On the Stock Exchange call loan fund dropped to 3½ per cent., as against 6 per cent. at the close of last year, but moved up to 5 per cent. to-day. Time money is now ¼ of 1 per cent. lower at 4½ per cent. bid and asked for all maturities, although banks are not offering money freely at that rate. Demand for accommodation is light, as usual in the first month of the year. While money may continue easy for a while, most authorities look for a resumption of borrowing, with slightly firmer rates, before long.

The bond market is quite active and strong, reflecting the January reinvestment demand and the easier tendency in money. New issues of both bonds and stocks are being offered in large volume, and thus far have met with a very satisfactory response from investors. In some instances the offerings have been quickly absorbed. The largest single issue this week was \$75,000,000 10-20-year Federal Land Bank bonds bearing a 4½ per cent. coupon; they were offered by a country-wide syndicate of investment institutions at 101 to yield 4½ per cent. to the redeemable date on the 10-year bonds, and 4½ per cent. on the longer maturities; the subscription books were soon closed. Another big offering consisted of \$60,000,000 7 per cent. preferred stock of the recently organised holding corporation, Armour and Co., of Delaware; the new stock was priced to investors at 99 and accrued dividend, and the entire issue was sold within a few hours. The \$13,401,500 30-year 6 per cent. first mortgage gold bonds of the International-Great Northern Railroad Company, offered at 97 to yield 6.20 per cent., were all disposed of in one day. Many smaller bond and stock issues were readily sold, and the bulk of the week's offerings was placed directly with investors. It is expected that early next week an underwriting syndicate will offer \$50,000,000 first mortgage 5½ per cent. bonds of Armour and Co., of Delaware, at 96, to yield 5.75 per cent.

For the month of November the Class I. railroads of the United States showed gross earnings of \$522,631,000, representing an increase of 12.2 per cent. over November of 1921, while operating expenses, amounting to \$409,146,000, were 11.2 per cent. larger. Net operating income totalled \$78,860,000, as against \$66,884,000. According to the Association of Railway Executives, the November net operating income was equivalent to an annual return at the rate of 4.40 per cent. on the tentative valuation of the carriers' property investment. Total net operating income for the eleven months of last year reached \$693,134,700, as compared with \$565,974,000 for the corresponding period of 1921, representing an annual return at the rate of 4.02 per cent. on valuation. At present more traffic is reported to be moving over the railroads than ever before at this season of the year. The Car Service Division of the American Railway Association, in its report for the week ended December 23rd, the latest returns available, says that 834,591 cars were loaded with revenue freight in that week, or nearly 168,000 cars more than were ever handled in the same period of any previous year.

Net earnings of the New York Federal Reserve Bank amounted to only \$1,862,509 last year, as compared with \$20,702,439 in 1921 and \$39,318,510 in 1920. During the past three years the shrinkage in the bank's gross income has been equally striking; the total last year was \$11,341,000, as against \$34,705,000 in 1921 and \$60,525,000 in 1920. In explaining the decreases in the amount of earnings and in the payment made to the Government in 1922 (net earnings are remitted to the Treasury Department in lieu of the franchise tax), an official statement says that the decline was due to the smaller volume of loans which the Reserve Bank was called upon to make, and to the lower discount rates prevailing during 1922. Member banks, it is pointed out, were in a more liquid position than in previous years, and were able to carry on without leaning so heavily on the resources of the Federal Reserve through the rediscounting of paper. The latter operation is the main source of revenue of the Federal Reserve institutions. The

decline in the volume of rediscounts, as shown in the New York Bank's annual report, is generally regarded as conclusive evidence of the improved condition of trade and industry throughout the United States. The fact that banking demands of business were apparently met without such an extensive use of notes and paper drawn on banks as in the two former years is taken to indicate the greatly strengthened credit position of industrial, manufacturing, and other concerns. During the past year the New York Federal Reserve Bank paid out \$1,652,000 in dividends to its stockholders, representing an increase of \$46,000 in such disbursements over the preceding year. The increase was due to the fact that as member banks (the stockholders) have increased their capital and surplus they have been required to subscribe, proportionately, to additional stock in the Federal Reserve Bank.

FRANCE.—BUDGET PROPOSALS—INCREASED TAXATION—INCOME-TAX—RECONSTRUCTION.

(FROM OUR CORRESPONDENT.)

PARIS, January 17.

THE Finance Minister, M. de Lasteyrie, in view of the failure of the Chamber to accept his previous supplementary proposals for getting rid of his estimated deficit of 3,500,000,000 in his 1923 Budget, has now proposed to adopt the heroic remedy of an all-round increase of taxation to the extent of 20 per cent. He suggests that this increase shall apply to practically all existing direct and indirect taxes, including the luxury tax, the tax on turnover and the income-tax (except in so far as concerns incomes derived from salaries, wages, pensions, annuities, or fees). Stamp duty on cheques and certain other minor imposts are also excluded. The price of ordinary tobacco, which was 12f 50c per kilo before the war, and is now 25f, it is proposed to raise to 30f. M. de Lasteyrie, in the preamble to his latest proposals, describes them as "a measure of public safety, which is indispensable for the purpose of fortifying the credit of the country, and which can have only the best effect on the situation of the exchange." His proposals, he states, are merely of a provisional character, and are intended to apply only to the Budget for 1923, it being understood they will be suppressed if Germany makes the payments that are expected from her. The Minister estimates that his proposals will bring an increased revenue of about 3,200,000,000, which, with the 300,000,000 to 400,000,000 which the Treasury expects to receive from the railway companies during 1923 in respect of material handed over to them at the time of the Armistice, will enable him to balance his Budget.

The following return of indirect taxation for 1922 has just been issued by the Treasury:—

	Actual Yield.	Compared With	
		Budget Estimates.	Inc. or Dec. on 1921.
INDIRECT TAXES.	Franks.	Franks.	Franks.
Registration duties	2,960,455,000	+ 7,620,000 +	255,039,000
Stamp duties	615,499,000	+ 88,568,500 +	52,173,000
Bourse operations	26,095,000	+ 7,648,500 +	6,670,000
Tax on securities	1,017,853,000	+ 280,010,500 +	91,428,000
Luxury tax	20,438,000	+ 7,438,000 +	7,324,000
Turnover tax	2,280,266,000	+ 764,734,000 +	382,809,000
Customs	1,610,952,000	+ 851,110,000 +	417,986,000
Wines, beer, spirits, mineral waters, amusements, motor cars, &c.	2,606,545,000	+ 96,638,000 +	202,130,000
Colonial foodstuffs	183,075,000	+ 32,538,000 +	5,941,000
Salt	36,016,000	+ 1,724,000 +	3,640,000
Sugar and saccharine . . .	564,140,000	+ 34,984,000 +	212,095,000
Motor spirit & petroleum	234,617,000	+ 136,017,000 +	67,912,000
Benzol	12,475,000	+ 5,567,000 +	622,000
GOVT. MONOPOLIES.			
Matches	111,621,000	+ 1,245,000 +	10,240,000
Mechanical pipe-lighters	1,634,000	+ 145,000 +	354,000
Tobacco	1,611,192,000	+ 7,920,000 +	56,285,000
Gunpowder	52,791,000	+ 11,646,000 +	6,796,000
Posts	709,191,000	+ 25,161,900 +	38,621,000
Telegraphs	186,535,000	+ 8,151,700 +	12,001,000
Telephones	240,860,000	+ 71,932,200 +	26,575,000
Sundries (Journal Officiel, &c.)	5,696,400	+ 1,332,400 +	1,158,100
Total	15,087,946,400	+ 853,832,900 +	1,854,238,900

Direct taxes in France are divided into two great categories, the first being the income-tax and the second being what are known as the "old taxes" (including the land tax) and the "assimilated taxes." These "old" and "assimilated" taxes, which are levied together, represent what in England is local taxation, but also include a minor proportion of taxation belonging to the National revenue. The total amount of these taxes levied for in 1922 was 2,450,996,900f (of which 1,794,355,000f was in respect of local taxation and 656,641,900f for the State), as compared with 2,401,523,400f in 1921 and 1,881,554,700f in 1920. The yield from these taxes in 1922 was 1,243,470,000f, as compared with 1,056,657,600f in 1921.

The total of the demand notes for income-tax issued during 1922 (in respect of incomes received during 1921 and previous years) was 2,633,165,900f (including 45,187,300f for Alsace-Lorraine). Of this total 2,075,024,200f was in respect of income-tax payable in 1922, and consequently on incomes received in 1921, 249,797,400f payable in 1921, 161,794,400f in 1920, 46,857,200f in 1919, and 54,205,400f in 1916, 1917, and 1918. Most of these long outstanding amounts represent income-tax due from people who have only recently been assessed for the first time, and from whom the Treasury is seeking to obtain payment for previous years. The amount of income-tax actually recovered, down to December 31st last, in respect of 1922 (that is, on incomes received in 1921) is reported as 772,735,300f, or only about 37 per cent. of the amount due. This must be read, however, in the light of the facts that not only are the majority of the declarations of income not sent in until after March 31st, but none of the demand notes are served before the end of September, with the result that a large number (as I can testify from personal experience) are only now being delivered. Evidence that the revenue authorities are exercising greater energy in following up persons who have hitherto evaded income-tax is seen in the fact that, according to M. de Lasteyrie's own statement, 910,000 persons are now liable to this tax, as compared with 740,000 last year, an increase of no fewer than 170,000, while the amount levied is already 787,678,000f in excess of Budget estimates. In addition to the yield from the general tax on incomes (in respect of which the demand notes for 1922 call for 993,923,000f, and which is of a progressive character), the amounts levied under the various schedules are as follows:—

Agricultural profits	16,904,200
Profits from liberal professions	41,766,200
Incomes from wages, salaries, and fees	273,358,500
Industrial and trading profits	748,879,200

The remarkable discrepancy between the scheduled rates imposed respectively on agriculturists and other traders has been the occasion of repeated protests by the trade associations and Chambers of Commerce, who complain bitterly that the differential treatment they receive is largely due to the composition of the Chamber, in which the agriculturists are normally always in the majority.

According to the official figures, down to the end of the

year, 420,000 out of a total of 500,000 houses that were seriously damaged had been repaired, but out of a total of 290,000 houses that were totally destroyed only 8,000 have been rebuilt, while the balance have been very inadequately replaced by some 160,000 purely temporary buildings. The progress of reconstruction may be further gauged by the following figures. Of the 5,500,000 acres of land under cultivation in 1914 (which had been reduced at the date of the armistice to 750,000), 3,000,000 acres had again been brought under cultivation on December 31, 1922, and the livestock in the ten ravaged departments, which had completely disappeared at the date of the armistice, had been restored to the extent of almost exactly 50 per cent. Means of communication that were destroyed down to the armistice (roads, railways, canals, &c.) amounted to 64,600 kilometres, together with 9,700 bridges, and other structural works. Of these 60,900 kilometres have been restored, and 8,200 of the bridges, &c. Of 22,160 factories of all kinds that were destroyed 19,920 have been reconstructed, and between 85 per cent. and 90 per cent. of those employing more than ten hands have resumed work, with a total personnel amounting to about 55 per cent. of its pre-war strength. Out of a pre-war population of 4,690,000, a total of 4,060,000 (or 85 per cent.) had returned by December 31st last, so that, if the war losses be taken into account, it is probable the whole of the fugitives driven out during the conflict have now returned. The amount expended in the way of direct advances to *sinistrés* amounted down to December 31st to 36,000,000,000f (14,200,000,000f in 1920, 10,800,000,000f in 1921, 11,000,000,000f in 1922), in addition to which the State has expended about 12,000,000,000f in reconstructing ways of communication, public services, and restoring agricultural land, &c., bringing the total amount expended to 48,000,000,000f. The State, during the same three years, has given its guarantee for loans to *sinistrés* (chiefly in the form of grouped industries) to a total of 4,500,000,000f. It is estimated by the Government experts that a further 60,000,000,000f of expenditure will be required, spread over the next five years, before the devastated area will be fully restored. This total, however, is apparently based on the present high prices of labour and materials.

GERMANY.—RUHR CRISIS—EXCHANGES—FINANCES—TRADE AND INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, January 16.

THE occupation of the Ruhr, if its real aim was to secure better Reparations deliveries, has so far failed, and it seems (apart from its doubtful political wisdom) to have been planned without taking into account the two factors which have caused the failure: the technical impossibility of enforcing a satisfactory delivery, if any delivery at all, without co-operation from the mineowners; and the Nationalistic sentiment which the occupation was bound to arouse. The sentiment was from the first extremely strong, and it has been strengthened by the French threats, by the first bloodshed, and by the suffering which has been entailed on private individuals, which is already felt outside the newly-occupied territory. The technical difficulty is very great; it seems that even if the French go to extremes and succeed in forcing all employers and all miners to co-operate, the compulsion system must prove insufficient. In the last few days, the Federal Ministry of Industry reports, the Ruhr production has declined 15 or 20 per cent. The French, no doubt, considered in advance the possibility of a general strike, and they probably counted, rightly, on its failure, because there are the strongest motives for not stopping all industry; but the strike of the mineowners and their directing employees has so far had the tactical advantages of a general strike without its disadvantages. The measures at present under way promise no result. The representatives of the mineowners, who have themselves mostly left the Ruhr, are threatened with court martial; but the prospect of being shot or thrown into prison is not very dreadful, and it is not likely that the French generals will venture to go further. In refusing to deliver, the representatives are obey-

ing German law, and there is further under the Peace Treaty—even if the occupation were regular—no compulsion upon any private producer to deliver anything. The French negotiations with the miners are also not promising; there is a minority of Communists to whom—for the present—the making of trouble for their own Government is more agreeable than making trouble for foreigners; but, as a whole, the working population is very anti-French. Co-operation by the miners only would help very little; the Ruhr industrial organisation is very elaborate, and is highly specialised; and even consenting workmen, directed by bayonets, would probably prove no more efficient than did the original conduct of Soviet Russia's industries by workmen—who at least wanted the experiment to succeed. That profits can be got from the experiment is hard to believe. At best they would be temporary and local profits, because the injury done to industry in general, and the cost of increased import of English coal, for which industry is preparing, will weaken Germany's position as payer of Reparations. It is not certain, though it seems likely, that the present firm stand of the Ruhr population will be maintained; it is perhaps possible for the French, if they resort to wrecking measures, to produce conditions which may break down even the present solidarity in opposition; but if this happens the losses on the whole undertaking will only be increased.

The mark exchange, which held fairly well in the first days of the occupation—apparently because the occupation was no surprise—has since fallen very badly. Prices are again rapidly rising. While the smooth working of industry in spite of the year's 99 per cent. currency depreciation, again warns against too pessimistic judgments of the effects of the new exchange movement, the mark drop will have unpleasant results for certain interests. During the lull after November, business largely adapted itself to the new standard of values; the speed of the price-rise was declining, wages and salaries were tending to catch up, and the supply of capital and money was approaching the demand. If the new fall goes further, all the difficulties of late 1922 will recur—in particular the shortage of working capital, which last year for the first time checked the productive activity normally caused by the "flight from the mark." Such lulls between two prolonged and headlong mark drops always act restoringly, most of all on the State finances, and it is never safe to predict that the currency depreciation may not some day precipitate really serious trouble.

Federal salaries have been again raised—to rates, however, which illustrate the extreme low gold cost of administration. They vary from 52,635 marks, about 14s a month, for a Reichswehr soldier, to 700,350 marks, or £9 10s, for the Chancellor. Railway fares will be doubled on February 1st. The Customs gold surcharge has been raised to 184,900 per cent., making 1,850-fold the nominal. Steel Syndicate prices are again up: ingots from 257,000 marks to 293,900 marks, bars 355,000 marks to 406,000 marks, thin sheets (under 1 mm.) 553,400 marks to 632,900 marks, other sorts correspondingly. Some of these prices are nearly 5,000-fold those of 1914; consumers continue to complain of them as too high, and there is an increasing tendency to import. Several more "wertbeständig" loans are announced, and the province of Schleswig-Holstein is raising a loan bearing variable interest of 1 per cent. under the Reichsbank discount rate, but not less than 6 per cent., or more than 15. The Reichswirtschaftsrat has recommended that exports of firms with foreign exchange debts to abroad should be freed from export duty. The remitted export duty would mean an increase of profit to the exporter, and help him to clear off the foreign-currency debts. The paying-off of mortgages and bonds proceeds rapidly; but the Government denies the report that it is preparing a Bill protecting mortgagees; no such measure would be reasonable, because other parties than mortgagees suffer equally from payment to them of old debts in bad money. Greater-Berlin Municipal Budget, it is now estimated, will total about 100 milliards, as against 100 millions for the (considerably smaller) pre-war Berlin. The Municipality is preparing to transfer its trams, which bring a heavy loss, to a privately organised company, and the leasing of the municipal harbours and quays is also under debate.

The Reichsbank report for January 6th shows for the first time since July 7, 1922, a decrease in the holding of discounted Treasury bills—from 1,184,464 to 1,096,471 millions. As the Government's Floating Debt borrowings have not ceased, this decrease means a certain relaxation in the private credit strain. Note circulation has increased to 1,336,500 millions; and the Darlehns "Kassenschein" portfolio to 291,225 millions. The "Darlehnskassen" administration has taken steps against abuse of its credit for speculation in stocks and wares. The maximum total of advances by these institutions—until lately 100 milliards—was increased recently by the Reichsrat. Under the new rules not more than 100 million marks may be loaned to any borrower without permission of the central administration; and advances on wares shall in general not be prolonged for more than three months. Stocks are very firm. The Bourse was closed to-day, but the rise of the exchanges yesterday caused active buying of stocks of shipping and textile companies, and of companies which are known to have large stocks of raw materials.

The November foreign trade report has been issued without values. Imports in weight were 4,551,200 metric tons, against 5,551,600 tons in October (monthly average in 1913, 6,069,300 tons); exports, 1,551,200 tons, against 1,539,100 tons (average 1913, 5,551,600 tons). Imports in the eleven months were 41,551,000 tons, and exports 19,800,200 tons. Imports in November, as compared with October, show declines of: Wheat from 187,180 tons to 66,600 tons; coal, 2,146,230 tons to 1,799,970 tons; brown coal, 127,970 tons to 54,690 tons; iron ore, 1,219,950 tons to 786,650 tons. Cotton imports increased from 16,070 tons to 25,360 tons; pulp wood, 92,860 tons to 134,540 tons; mineral oils from 65,080 tons to 108,310 tons; and chemicals from 19,120 tons to 27,830 tons. The staple exports do not show any great change. A curiosity is that while the import of food, raw materials, and half-finished goods is, with some exceptions, smaller than in 1913, there is a considerable increase in the import of finished goods. These in 1913 averaged 104,060 tons monthly, but in October last had risen to 215,820 tons, and in November were 192,340 tons. Of cotton yarn, imports in November were 5,750 tons, against 2,770 tons in 1913; cotton cloth, 2,820 tons, against 850 tons; tubes, &c., 3,010 tons, against 810 tons; railway permanent way material, 24,420 tons, against 40 tons. The imports of pig-iron, bar-iron, construction forms, sheets, and wire also largely exceed those of 1913.

Industry is still dull. The Pirmasens boot branch has discharged workmen, and some textile mills are working short time. On December 1st the unemployed among 6,407,454 trades union members numbered 129,271, against 89,309 a month before, the percentage being 2, against 1.4, and against a best figure for 1922 of 0.6. The number of publicly supported unemployed was 42,593, against 24,738. In November, the worst unemployment was in the tobacco branch, and after that in the textile, building and boot branches. A report of the Trades Union Association shows that of 1,389,413 industrial employees only 601,594 were working the legal maximum 48 hours' week, about half a million were working 46 hours or less, and over 200,000 only 42 hours.

AUSTRIA.—POLITICS—FINANCIAL RECONSTRUCTION—NOTE BANK ISSUE—UNEMPLOYMENT—FREIGHTS—PRICES.

(FROM OUR CORRESPONDENT.)

VIENNA, January 5.

THE Chancellor recently announced that he and his party desire a new General Election as soon as possible. They hope to weaken the Social Democrat party by an early election, since they expect this party to lose many votes on account of their policy in regard to the reconstruction scheme. The Social Democrats, on the other hand, wish to hold off the election as long as possible, as they expect the immediate result of the League of Nations' programme to be a more acute economic crisis in Austria. The German party, although they are allies of the present Government and the Christian Socialist party, do not favour the idea of a new election, since they fear the loss of some of their seats in the Parliament. At any rate,

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000
Paid Up Capital 1,000,000
Reserve Fund and Undivided Profits 1,267,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

this question of a new election will dominate the political situation for the near future.

The calm which, owing to the conclusion of the reconstruction agreement at Geneva, has characterised the political and financial atmosphere for the past few weeks has been succeeded by a slight unrest. The Government and the Parliament have passed a number of laws, in spite of the Social Democrat party's opposition, by which taxation has been heavily increased, and from which great internal economies are expected. All this was done in the hope that foreign assistance and the promises of the delegates of the League of Nations at Geneva would soon be realised. The bourgeois Government stands and falls with the realisation of the foreign credits. The realisation of the credits in the near future is very doubtful at present, even more so in view of the fact that Mr Avenol, a delegate of the League of Nations, has recently returned from London and Paris, where he negotiated in vain for the placing of 80 million gold kronen worth of 8 per cent. gold Treasury bills. He has submitted to the Government a rather unfavourable report of the impressions he received in these cities. This fact has, of course, provided the Social Democrat party with new points of attack.

The Austrian Government is making energetic efforts to carry through the reconstruction plan for cutting down expenses and increasing revenues. The provisional Budget, which was recently brought before Parliament, is based on the principle that the Government's expenditure for the year 1923 must not exceed 300 million gold kronen. This will, of course, only be possible if the number of the State's employees is drastically reduced and State enterprises are made paying concerns. Moreover, the reconstruction programme must not be disturbed by any other such disagreeable occurrences as the Reparation Commission's recent arbitration in regard to Austria's pre-war debts, which threatens to be very hard on the country's public finances. It was expected that in the distribution of the old Monarchy's pre-war debts Austria's share would be 20 per cent., but the Reparations Commission fixed it at 36 per cent. In so far as the pre-war debts in kronen are to be taken over in the depreciated paper currency, this high percentage is of no importance. The debts in gold kronen, however, which must be repaid to foreign creditors, represent a very heavy burden.

In this atmosphere of suspicion there are all kinds of alarming rumours in circulation, which, though exaggerated and unjustified, have a very unfavourable influence on public opinion. There is again talk of stamping the banknotes and of new compulsory loans, and discussion of the difficulties of the financial administration in meeting its demands is ceaseless. Though, no doubt, greatly exaggerated, they have their origin in the following considerations: the Government will have to make large payments during the month of January, 1923, one of which is the compensation for dismissed officials, and it was planned to meet these demands with the large amounts of the 80 million kronen worth of Treasury bills which were expected to be paid in by foreign countries. If the taking over of these Treasury bonds should be delayed, the State will be faced with a shortage of funds, as the Finance Ministry will not be allowed to receive any more uncovered credits from the new Note Bank. The Government, however, is receiving new means from the subscriptions to the internal loan at present, and also has the interim credits granted by

foreign countries at its disposal. It could also use its stock of foreign currencies, which has been greatly increased during the past few weeks by the public subscriptions and the banks' advance payment on the Treasury bills. All these means, however, will help the Government only a short time, and it is very important that the foreign credits be placed at the disposal of the Government as soon as possible.

The period for subscribing to the shares of the new Note Bank has expired, while that for the gold Treasury bills, i.e., short-term Treasury bonds to the amount of 20 million gold kronen (about £800,000), which should have expired on December 31st, has been extended to January 15th. Authentic figures showing the amount of both subscriptions have not yet been published, but it has been officially stated that the National Bank issue was fairly satisfactory and attained considerable success in foreign countries. In view of all these difficulties the success achieved has been considerable. As to the subscription of the gold Treasury bills, the amount of the issue, i.e., 6 million dollars, is so large in relation to Austrian conditions that it was foreseen it could hardly be subscribed in full. Up to the present only 3 million dollars worth of the Treasury bills are said to have been taken up. It is possible, however, that an improvement will be seen in the subscription since the period has been extended; at any rate, a great deal will depend upon the promised foreign credits really being paid in the near future.

The Austrian National Bank began activities on January 1, 1923. A great struggle took place about the presidency of the bank, as some political parties, wishing to impress foreign countries favourably, wanted to have a foreigner for the president. This was energetically opposed by the other parties, and resulted in the vice-president of the Boden Credit Anstalt, Dr Reisch, being elected to the presidency. It was originally intended to make Bank Director Jansen advisory assistant, but he declined this appointment at the last moment. Although his action was the subject of much discussion, both unfavourable and favourable, it was based on purely private reasons. Much comment has also been caused by the fact that Dr Zimmermann, the controller of the League of Nations, who has arrived in Vienna, has declared himself willing to take over this post for three months only. He has reserved himself the right of deciding later whether he will carry on for the two years originally intended. It is certain that the new Issue Bank will have large amounts in foreign currencies at the start, as large amounts have been sold to the State Clearing House by private individuals during the last few weeks.

In all concerns the employees who are being continuously dismissed are constantly swelling the numbers of the unemployed. In industrial circles it is affirmed that the present difficulties are being augmented by the railway freight rates and the State's dues and taxes. The following example shows how great an increase has been effected in the official freight rates: for one car of coal, weighing 10,000 kilograms, the rates below had to be paid from the German frontier to the Austrian industrial territory:—August 31st, K 265,000; September 1st, K 563,000; October 1st, K 2,000,000. All additional rates have been correspondingly increased. The consequence is that many industries, being unable to compete with German and Czecho-Slovakian concerns, have shut down their works and are buying no coal at all. This, of course, frustrates the State's efforts towards increasing the railway revenues.

The price of foodstuffs has again been reduced during the past weeks. The price of bread was reduced from K 6,900 to K 6,650, and will be again reduced shortly. Meat, fat, flour, and sugar are also getting cheaper. The index figure for the period November 15th to December 15th was fixed at 3 per cent. less than during the previous period. In general, one can say that the cost of living for a foreigner who is spending some time in Vienna has become 25-30 per cent. cheaper since October, on account of the considerable reduction in the prices of hotel lodgings.

But against this must be placed the increased cost to the citizen, caused by the law recently passed legalising the raising of house rentals. The present law for protect-

ing the tenants of houses, which was passed during the war, has become ruinous to house proprietors. Since this law prevented house owners from raising their rents, they received only a portion of the pre-war rent in depreciated paper kronen. For example, a house owner of our acquaintance who received 24,000 gold kronen (£1,000) before the war, has received a total rent of 8,000 paper kronen in 1922, for which he can buy just one and one-third loaves of black bread. The consequence of this measure has been a complete dilapidation of all houses in Vienna and Austria. To avoid further damages a new Bill has recently been passed, by which the house owners are entitled to demand 250 times the pre-war rent in paper kronen. Although this Bill will help the house proprietors but little, it will mean a heavy burden for the tenants with the present stagnation of trade and constant increase of unemployment.

The rates for foreign exchange have remained stable during the past fortnight.

NORWAY.—INDUSTRY IN 1922—THE OUTLOOK FOR THE NEW YEAR.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, January 6.

THE development of European politics is watched with intense interest in this country. So many issues, political, social, and commercial, are bound up with the present crisis that even a country comparatively so much outside the circle as Norway will be seriously involved. The year just ended has been one of anxiety and difficulty in the commercial world, just as its predecessor was, though probably not to the same extent, and certainly in a different manner. Generally, there has been an increase in the buying power of money, and a consequent shrinkage in the volume of business done; for the prosperity of the masses has been less on account of unemployment and drastic wage reductions. However, there has, no doubt, been more confidence in 1922 than in 1921. People have realised that things are going, and for some time must go, badly, and have been trying to adapt themselves to this hard fact.

With regard to the individual trades that make up the economic life of Norway, there have been wide variations in experience. The fisheries, which play so great a part in the life of the country, on the whole have been satisfactory. While potatoes yielded an exceptionally rich crop, cereals were rather poor, on account of cold and rainy weather. Some revival might be discerned in the wood trade, but the net results were not good. Wood pulp and paper and wood-pulp boards suffered greatly under an intense competition from Finland and Sweden. An outlet was found in America for quite large quantities, especially for newsprint, and although the competition was severe, and some specialties of paper no doubt had a very hard time, yet generally speaking 1922 cannot have been so very bad for the paper industry as a whole. Shipping has had a lean year, but better than last year, and comparatively little tonnage has been idle. As to banking, the results have not so far been disclosed; the year has been one of consolidation, and one must not be surprised to find that the banks have had to write off substantial sums for bad debts.

The turnover of the stock and bond exchanges, when finally made out, no doubt will show an amount far below what has been customary. On the whole, the prices of all kinds of shares are lower than those of a year ago.

During the year there have been few very serious labour troubles. A series of differences and disputes were brought before the competent courts. Considerable wage reductions were found necessary, and the workmen acquiesced. The wages here are higher than in Sweden, but so also, though not to the same extent, is the cost of living. The present index number of the Statistical Central Bureau has not yet been published. The municipal index number for foodstuffs for the City of Christiania during the month from November 15th to December 15th dropped only 2 points, from 221 to 219; the index number for the whole country will hardly be as high as this.

The weather hitherto has been very mild this winter; rain has come, and stoppages of factories for lack of water

do not seem imminent. On the whole one would be inclined to hope, as far as Norway is concerned, for improvement in the general economic outlook during 1923, if only the one great condition of peace can be fulfilled.

AUSTRALIA.—BANKING FIGURES FOR THE SEPTEMBER QUARTER.

(FROM OUR CORRESPONDENT.)

MELBOURNE, November 25.

THE quarterly average returns to September 30th of bank liabilities and assets within Australia and New Zealand (exclusive of the Commonwealth Bank of Australia) shows that as compared with the previous quarter deposits have decreased by £1,876,137, and advances by £15,401, this latter movement being the balance between an increase of £3,183,389 in Australia and a decrease of £3,198,790 in New Zealand. The following is a comparison of the principal totals with those for the previous quarter and a year ago:—

	Sept. Quarter, 1921.	June Quarter, 1922.	Sept. Quarter, 1922.
Deposits—			
Australia	£ 212,896,899	£ 219,600,338	£ 218,166,098
New Zealand	47,101,629	47,399,600	46,957,703
Total deposits	259,998,528	266,999,938	265,123,801
Advances—			
Australia	186,934,894	182,758,449	185,941,838
New Zealand	54,234,076	51,977,855	48,779,065
Total advances	241,168,960	234,736,304	234,720,903
Cash items—			
Coin and bullion (Australia and New Zealand)	27,559,664	27,333,068	27,565,466
Australian notes	27,955,160	25,577,119	22,856,735
Legal tender notes of other banks (New Zealand only)	643,773	1,109,907	541,806
Total cash	56,158,597	54,020,094	50,964,007

Deposits show an increase of £5,125,773 as compared with a year ago, Australia showing an increase of £5,269,199, but New Zealand a decrease of £143,926. The whole of this increase has been in fixed deposits, as current accounts are smaller by £3,893,197; and the proportion of fixed to total deposits is now tending in the direction of pre-war standards, which were affected for a time by the competition of war loans as a medium for investments. Advances (which include Government securities) show a decrease of £6,448,067 on the year, of which £993,056 is in Australia and £5,455,011 in New Zealand. In Australia there has been a substantial decrease in advances against war loan subscriptions, but the demand for accommodation from private borrowers has been active.

The decrease in cash is the result of the policy of contraction of the Australian note issue followed by the Commonwealth Bank issue department, by which the Government note issue is now managed, without a compensatory increase in gold. The total note issue has been reduced from £56,540,206 at September 26, 1921, to £52,038,073, and out of the total reduction of £4,502,133 only £235,709½ has been in the amount held by the public, while the amount held by the banks (inclusive of the Commonwealth Bank itself in its banking department) has been reduced by £4,266,423½, these figures being according to the monthly note issue returns, which differ slightly from the banks' quarterly average returns. The effect has been that the proportion of cash (coin and notes together) to banking liabilities has fallen somewhat below the usual standard, and that the total amount of currency in existence in Australia is below the amount that would exist under a freely operating gold currency, assuming that the same amount were held by the public, and that bank deposits were the same as actually exist. With the opening of the active export season, the result of the contraction of the note issue has been to cause some pressure, the position being somewhat anomalous in face of the exceptionally large balances held in London by the Australian banks. If gold were freely obtainable, instead of being at a premium, which for practical purposes is

prohibitive, the total amount of currency would be increased by an enlargement of the stocks of gold held by the banks in proportion to the growth of deposits, as happened regularly in pre-war years, but under existing circumstances this course is not practicable.

These developments have attracted attention afresh to the cumbersome nature of the centralised Government note issue, which was imposed upon Australia by the Socialistic Labour party about 11 years ago, especially when contrasted with the Canadian system, under which banks issue their own notes, in addition to those issued by the Canadian Government, with suitable provision for seasonal fluctuations. There is also a feeling that the Commonwealth Bank is not well adapted to regulate the system, and that if there is to be anything in the nature of a central bank, it should be established something after the model of the South African institution, which has a share capital and a representative board on which the banks as well as other parties are represented.

The principal figures (within Australia) of the Commonwealth Bank of Australia, not included in the table above, compare as follows:—

	Sept. Quarter, 1921.	June Quarter, 1922.	Sept. Quarter, 1922.
Deposits	£ 29,074,339	£ 30,048,727	£ 28,854,556
Savings Bank deposits	35,687,445	36,097,731	37,523,001
Discounts, loans, &c.	13,678,539	14,130,679	13,043,516
Government & municipal securities	33,575,297	34,760,870	35,233,595
Coin and bullion	1,718,611	2,349,869	2,330,619
Australian notes	6,271,218	4,730,492	7,344,568

Stocks of coin and bullion in Australia and New Zealand, including the ordinary banks £27,565,466, Commonwealth Bank £2,330,619, and reserve against Australian note issue £23,500,000 (approximate average), amount to £53,396,085, against £52,978,275 for the September quarter, 1921.

Books and Publications.

RECENT ECONOMIC LITERATURE—A MONTH'S SURVEY.

THE economic publications of the past month do not lend themselves to rigid classification; but there are one or two books of first-rate interest of various kinds.

First, from the point of view of the serious and instructed student, must be put Professor Irving Fisher's *The Making of Index Numbers* (Houghton, Mifflin, Boston, \$7 50c). This is an unique survey and criticism of the whole method of calculating index numbers. A very large number of formulæ are discussed, and expressed both in ordinary language, algebraically, and geometrically; and a formula arrived at as to which Professor Fisher hopes to achieve general agreement. It is not necessary at this time of day to say anything as to the importance of the accurate construction of index numbers, since the whole effort to bring wages into some sort of steady relation with the cost of living, to mention only one of many important fields, is dependent for its success upon the establishment of such a reliable measure. It cannot be pretended that Professor Fisher's book is one for the "general reader." On the other hand, Mr Hugh Dalton's *Principles of Public Finance* (Routledge, 5s) is expressly designed to make accessible to him an understanding of the general principles that underlie the whole subject, and to put him in a position to understand and criticise. Mr Dalton is a profound student of economic theory, and has succeeded in expressing general economic concepts in simple language, without being "tendencious." He does not give judgments; he suggests to the reader the lines upon which they can be correctly formed.

An American survey of economic facts and laws, predominantly from the business point of view, is Mr Henry Shearman's *Practical Economics* (McGraw Hill Publishing Company, 6 Bouverie street, E.C.). In *Business and Investment Forecasting* (Brookmire Economic Service, New York), Mr Ray Vence compares and analyses

the various systematic attempts at "forecasting" business "trends," specially associated with the United States, and endeavours to arrive at an agreed method. Mr Frank Tillyard's *The Worker and the State* (Routledge, 10s 6d) is not, as the title perhaps suggests, a theoretic discussion of social and economic relations and functions, but a very careful and useful survey of the legislative and administrative enactments that have in the last half century been passed for the protection of the worker; particularly of those which attempt to provide for his safety. It is, that is to say, essentially a practical handbook, and as such very valuable.

The tragic circumstances of the hour have caused *Ex-Præmieri Nitti's The Decadence of Europe* (Fisher Unwin, 10s) to be more widely read and discussed even than its predecessor, *Peaceless Europe*. It is a downright and instructed attack upon the whole policy of the Versailles Treaty; and, in particular, a definite attachment of responsibility to Mr Lloyd George for its disastrous consequences. The circumstances of the hour make it extremely topical, but those who have read Signor Nitti's previous volume are in possession of the main facts and arguments upon which he relies.

In *Great Britain's Economic Policy* (William Lea and Co., 2s 6d), Mr Henry R. Tennenbaum, now director of the Trade Department of the Polish Trade Ministry, analyses British pre-war trade, with special, indeed excessive, emphasis on Government activities. There is a good deal of political matter in the book.

The Handbook of Nyasaland, 1922 (London, Crown Agents, 5s), explains itself, as does *Canadian Municipal Statistics* (Toronto, Wood, Grundy and Co.), and Mathieson's well-known *Handbook for Investors, 1923* (16 Copthall Avenue, 5s net).

The *People's Year-Book* for 1923, published by the Co-operative Wholesale, at Manchester, contains, in well-arranged and convenient form, a mass of information on all departments of co-operative activity, as well as on the political side of the movement, and is, further, equipped with a considerable amount of useful statistical matter, as well as a large number of finely produced illustrations. Other year-books include that officially published for New South Wales, by the Government Printing Office, in Sydney, referring to 1921; the official survey of Belgian foreign trade *Tableau Annuel du Commerce de la Belgique avec les Pays Etrangers* (Brussels, Finance Ministry); also referring to 1921, and, of rather a different type, the *International Mercantile Diary and Year-Book* (Syren and Shipping, 7s 6d); a volume containing, in compendious form, most of the information which the export merchant requires. With these one may mention the *Handy Income-Tax Handbook*, prepared by Mr J. L. Ouns-worth, and published by Collins at 2s 6d.

There is much of great interest in M. Olivier's study of the coal industry, *La Politique du Charbon, 1914-21* (Paris, Alcan, 15f net). It contains a great deal of information that it is convenient to have collected together in a compact form. As a study of the politics of coal, however, it is by no means complete. Professor Stanley Jevons, *Money, Banking and Exchange in India* (Government Central Press, Simla, Rs. 2 8a.), primarily intended for Indian students, will be useful outside the country as well.

The *Doncaster Regional Planning Scheme* (Hodder and Stoughton, 10s) describes an experiment of first-class interest to all those who care for the amenities of town life. With it one may perhaps place *Trafford Park, Britain's Workshop and Storehouse*, the attractive book issued by the Trafford Park Estate Office, describing and illustrating the facilities offered by Trafford Park, the Port of Manchester warehouses, &c. Another social experiment of a very different kind is described in *Education in Africa* (African Education Commission, New York, Independence Avenue). The inquiry, whose results are here set out, suggests that the black race is capable of much further progress in education than used to be believed, that the results need not be purely mechanical and superficial.

Some of the most interesting material in the published matter of the month is contained in the reviews. The number of people in this, or any other country, who are sufficiently equipped, technically, to follow and appreciate the controversy going on in the pages of the *Economic*

Journal, under the fascinatingly ambiguous rubric, "Empty Boxes," is probably not enormous. For those, however, who can appreciate it, the article in the January number by Professor Pigou is, with the subsequent discussion, from the pen of Professor Cannan, of Dr Cassel's book on "Money and Exchange," the most important contribution to economic literature that the last few weeks have produced. In both there is a digging down to the essentials of argument that is highly stimulating.

The *Irish Economist*, (Plunkett House, Dublin, 2s) for January has, among other excellent articles, one by Mr Odon Por on "Co-op., the Co-operative Movement in Italy," and an excellent discussion by Mr J. Johnston on "Protection for Irish Industries" summing up against the suggestion. The Chicago University's admirable *Journal of Political Economy* is full of good stuff. Professor Viner continues his discussion of "Dumping," and Professor D. H. Macgregor, of Oxford, writes a survey of the position as to "Unemployment" in Great Britain. The *Empire Review* has, among other features worth looking at; an article by Lord Cowdray, who believes that an "ideal wage" can be found, and should be sought, within the limits of the present industrial system. In the *Edinburgh Review* there is an acute anonymous discussion of *European Finance*, and a very lively contribution from Sir Valentine Chirol on the career of Mr Lloyd George, who may have won the war, but, he says, assuredly "lost the peace."

In a reference in this column last month to *The Restoration of Agriculture in the Famine Area of Russia*—a translation of the interim report of the "State Economic Planning Commission of the Council for Labour and Defence of the Russian Socialist Federal Soviet Republic," published by the Labour Publishing Company, 5s—this book was by an unfortunate slip described by the rather similar title of the League of Nations report on Russian Agriculture and the Famine (Constable, 2s 6d), thus giving the fantastic impression that the latter document, which was fully reviewed in the *Economist* (December 2nd), was written by a Soviet Commission! We apologise for the confusion to our readers.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
January 24.	January 25.

THE present settlement to be concluded next Thursday will be one of the heaviest which the Stock Exchange has experienced for several years past, in spite of the alarms and excursions reported from the Ruhr district and from New York. Business has attained enormous dimensions, and, as a direct consequence of this, Stock Exchange shares, which were standing at 97 a little while ago, are now 105. Many stocks in the Consol market were eagerly taken at the beginning of the week, the Funding Loan especially coming in for attention. Nor did the price part with much of its rise when, a little later, the report of a hitch in the debt negotiations between this country and America led to a temporary dullness in the Consol market. This in its turn gave place to a harder tone upon semi-official reassurances on the point. Victory bonds had a dramatic rise.

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

The Bank has close working arrangements with Agents and Correspondents in all the principal towns throughout the world, and is in a position to offer complete banking facilities to merchants and others for the transaction of EVERY DESCRIPTION OF OVERSEAS BUSINESS.

Foreign Exchange transactions arranged.

Chief Foreign Branch - 168, Fenchurch Street, London, E.C.3
West End Foreign Branch - 1, Pall Mall East, S.W.1.
Liverpool Foreign Branch - 49, Castle Street, Liverpool.
Manchester Foreign Branch - 94, Portland Street, Manchester.

Prompt success attended the offering of the Dutch East Indies 6's and the Dunlop Tire debentures, the subscription lists closing very soon after they were opened. Of this week's introductions to the Stock Exchange, the new Chilean Transandine debentures have risen to 3½ premium, Buenos Ayres Central first debenture to 1½ premium (though the seconds, where the underwriters got left rather badly, stand at ¾ discount), and Anglo-Persian new ordinary at ¾ premium. Sudan scrip stands about ¼ discount; underwriters received 75 per cent. of their subscriptions.

French and German bonds have been going up and down in mercurial style, a fresh drop in exchange causing losses in the bonds of both countries. Turkish Unifed went back after a rally, and Peruvian Corporations are better.

Home Railway stocks are less in favour than they were at the beginning of the year. People have been selling these, in order to put the money into the more popular rubber market, with the consequence that the tendency is disposed to be dull, though Great Westerns and North-Westerns were conspicuously firm in the early part of the week. Undergrounds also spurted; the rise in their case also was partially lost.

Argentine Railway stocks have been swayed by the varying tendency of the daily atmosphere in the House. Mexican Rails went back. Brazilians are quiet. Grand Trunk Pacific debentures enjoyed a substantial rise.

The rubber market boiled at high pressure on Monday, gave way on Tuesday, and definitely broke on Wednesday. Then buyers came along again, and a more stable state of affairs intervened. Excitement has run to extreme lengths in this market during the week. Oil shares, after their recovery, inclined to weaken on a few French sales, and Shells have gone back to the neighbourhood of 4. Firmness is noticeable amongst textiles, with speculation in Courtaulds rather less active for the moment, on holders taking profits. Dunlops improved a shade, on the eager subscription to the company's new issue. The tobacco market is receiving but modest attention, and the wireless group, after a show of strength, shaded off from the best. Siemens and other electrical manufacturing shares remained somewhat heavy; the electricity supply group continues to improve. Gas stocks are firm, shipping issues little changed, banking shares, particularly those in the foreign list, advanced, and insurance shares are neglected. The recent buoyancy of iron and steel shares is scarcely so marked as it has been; prices exhibit a certain amount of irregularity. The tendency amongst semi-speculative industrials has been to go better during the earlier part of the week; then, later on, the approach of next week's settlement had the effect of bringing in the profit-takers.

Features in the mining markets have been confined to two or three shares, of which Akims stand out as the main example. The price rose in two days from 20s to 35s, from which latter figure it went back sharply. Rhodesians have given a fairly good account of themselves, although Chartered reacted in sympathy with a general dullness which overspread the Kaffir Circus, in consequence of the dissatisfaction felt with the French political outlook. This caused heaviness in most of the popular South Africans. The list finished the week above the lowest prices reached, but failed to attract any noticeable public buying. Rio Tintos, De Beers, and other inter-Bourse shares came under the same French influence as that which depressed other values. Russians are easier. A few Mexicans made some attempt to go better, but the effort was not very successful. The groups remain uninteresting, and nothing calling for attention has occurred amongst Indian mining shares.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liab.
Amount previously recorded	£ .. 6,242,566	£	£	£

1916 63,024,250	

Government of Dutch East Indies 6 per Cent. Loan, 1933-1963.—£5,000,000, of which £1,000,000 is reserved for Holland. This is an offer in this country of these bonds at £98 per £100. Principal and interest will be paid in London in sterling, free from all taxes of the Netherlands or the Dutch East Indies, and in Amsterdam at the rate of exchange of the day. A sinking fund of 30 equal annual instalments, commencing in 1933, will be established for the redemption of the bonds, to be applied by annual drawings at par or by purchases under par. The Government, however, have the right to repay at par outstanding bonds upon any interest date after February 15, 1933, subject to four months' notice. It is stated that applications have already been received for £2,000,000, which will be allotted in full. A letter is published in the prospectus, which states that "from 1906 to 1916 the ordinary Budget, exclusive of expenditure on capital account, showed a surplus aggregating for that period over £9,000,000," but proceeds to point out that "in the more recent Budgets, owing to an extension in Government activities and to large increases in salaries and wages, there have been deficits in the ordinary Budget." However, we are told that the "Netherlands Parliament has been informed that, as a result of a policy of retrenchment now instituted, the ordinary Budget will balance by the end of 1925." The proceeds of the loan will be used to reduce the unfunded debt. The total debt will then stand at £94,600,000, or under £2 per head of the population. More than two-thirds of the debt is payable in Dutch currency. Out of the surpluses of ordinary revenue up to 1912 and out of proceeds of loans a sum of not less than £108,000,000 has been expended on revenue-producing assets, including railways, tramways, telegraph and telephone systems, tin mines, coal mines, harbour and irrigation works. The estimated net income for 1922 from the revenue-producing assets is in excess of £10,750,000, while the total amount required for interest and amortisation charges on the entire debt (including the present issue) for 1923 amounts to £6,800,000. Conversions of guilders to sterling have been taken at 12 guilders to the £. Allowing for redemption at par in 1903, the yield, including profit on maturity, works out at £6 2s 8d per cent. An excellent foreign investment, regard being paid to all the surrounding circumstances. The issue was promptly oversubscribed.

Dunlop Tire and Rubber Corporation of America.—Incorporated under the laws of the State of New York. This is an offer for sale of £1,000,000 first mortgage and collateral trust sinking fund 7 per cent. convertible gold bonds (series "B") to bearer, on which principal and interest is guaranteed by the British Dunlop Rubber Company. The bonds now offered represent the "B" series of a total authorised issue of \$15,866,700, of which the "A" series, amounting to \$11,000,000, have been sold recently in America. Both series of bonds will be secured, *pari passu*, by trust deed as a first mortgage on the fixed assets of the company. The British Dunlop Rubber Company will also deposit with the trustee £3,000,000 of its own first mortgage 8 per cent. debenture stock as collateral security for the bonds of the company. On April 15th and October 15th in each year, commencing October 15, 1924, a sinking fund at the rate of 2 per cent. per annum for three years, and after at the rate of 4 per cent. per annum, will be provided for the redemption of the bonds by semi-annual drawings. The drawn bonds will be redeemed at 105 per cent. The company reserves the right to redeem the bonds at any time, on giving 30 days' notice, at 105 per cent. The series "B" bonds will be convertible at any time after December 1, 1924, into 8 per cent. cumulative preferred stock (redeemable at 110 per cent. at any time after December 1, 1937) and common stock of the company. Net assets of the American company are valued at £4,724,489, and of the British undertaking £7,543,201. The generous yield offered is a reminder of the strenuous struggle in front of the Dunlop Company to return to normal conditions. The issue, however, was quickly over-subscribed.

Cassell and Co., Limited.—Authorised capital £850,000. The issued capital consists of 350,000 7 per cent. cumulative preference and 397,740 ordinary shares, all of £1 each, leaving 102,260 ordinary shares unissued. This is an offer for sale of 350,000 preference shares at par. The company has debentures outstanding to the amount of £93,000, carrying interest at 4 per cent. per annum, repayable on or before December 31, 1925, or at an earlier date, at the option of the company. Provision for debenture repayment is to be made out of the proceeds of the present issue. No issue of debentures or debenture stock or other issues are to be made constituting a charge on the whole or part of the company's assets (other than to secure bankers' or other loans incurred in the ordinary course of business), without the sanction of holders of the preference shares. We have often asked what is exactly meant by the term "in the ordinary course of business." Further, the company has agreed not to create without similar sanction any further shares ranking in priority to or *pari passu* with the shares now offered. In addition to providing for the repayment of the debentures, the new capital is also required to pay a bank loan, which, in the balance-sheet of the company at December 31, 1921, amounted to £100,000. Net assets, without considering the proceeds of this issue, are valued at £432,406, and profits are given from 1918. The business of publishing as a commercial proposition is uncertain, although, perhaps, in this case a live directorate, combined with the prestige of Cassell and Co., may prove capable of grappling with the ups and downs of the industry.

Gadjah Rubber Estates, Limited.—Authorised capital £35,000, divided into shares of 25 each, of which 150,000 shares have been issued to the vendors, 89,257 have been issued for cash at par, and are fully paid, and 110,743 shares have been issued for cash at par, with 6d per share paid up. The company was incorporated in November, 1922, to acquire, through a holding company, the Gadjah Meuntah Estate, situated in the Langsa district, East Coast of Sumatra. The negotiations for the purchase of this estate were commenced late in 1921 during the worst period of the rubber slump. The holding company above referred to is the Langsa Rubber Undermining, which was registered in Holland in June, 1922, and all the issued shares of which are held by the Gadjah Rubber Estates, Limited. No cash was paid for the estate to the vendors, who accepted £15,000 in fully-paid up shares, but £3,000 was paid in cash to discharge certain liabilities in the Dutch East Indies. The total purchase outlay, therefore, amounted to £18,000 in cash and shares, or equal to £11 4s per planted acre. Of the balance of the capital, namely, £17,000, £3,000 has been paid for the expenses of registration and promotion of the company, leaving £14,000 cash available for the purposes of the company. An independent report is given, and though the prospectus is only published to comply with Stock Exchange regulations, the promoters are to be congratulated upon its frank and informative nature.

The Brentwood Gas Company.—Established in 1836 and incorporated by special Act of Parliament, 1905. The authorised stock capital is £80,000, of which, including the present offer, all is now issued. The authorised loan capital is £40,000, of which £21,000 has been raised on mortgage. This, however, is stated, will be repaid out of the proceeds of the present issue, which consists of £23,457 6 per cent. preference stock,

now offered at par, and repayable at par on January 1, 1933. The net revenue of the company for the year ended December 31, 1921, was £4,534, but it is pointed out that had it not been for the miners' dispute, the net revenue would have been £7,033. As, apparently, all preference stocks rank *pari passu* and the dividends for preference issue, including that now being offered, require but £1,907, the issue is reasonably well covered, from the dividend aspect.

The New Rhos Anthracite Collieries, Limited.—Authorised and issued share capital, £400,000, in ordinary shares of £1 each. First mortgage debentures have been authorised for £200,000, and this is an offer for sale at 97½ of £180,000 of these, bearing interest at the rate of 7 per cent. per annum. The balance, however, can only be issued with the consent of the trustees. These debentures are secured by a deed of trust, which constitutes a first specific charge on fixed assets and a floating charge on other property of the company. Redemption will be by means of a sinking fund, and the whole issue will be paid off by 1942 at 102½ per cent., the company reserving the right to redeem at 102½ on any interest date after December 15, 1929. Fixed assets are independently valued at £413,967, and profits are given from 1911 before making provision for depreciation. No mention, however, is made as to application for a Stock Exchange quotation, nor does the document in front of us disclose the price paid by the present vendors for these debentures.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

ALEXANDERS DISCOUNT COMPANY, LIMITED.

SATISFACTORY YEAR—RECORD PROFITS.

FAVOURABLE YEAR FOR DISCOUNT HOUSES.

NECESSITY FOR FINANCIAL STABILITY ON CONTINENT.

The fifty-fifth ordinary general meeting of shareholders of the above company was held on January 17, 1923, at the office of the company, 24 Lombard street, London, E.C., Mr Colin Frederick Campbell, the chairman of the company, presiding.

The secretary (Mr A. K. Bruce) having read the notice convening the meeting, and the auditors' report, and the minutes of the last ordinary general meeting of January 19, 1922, and of the extraordinary general meeting of February 9, 1922, having also been read and confirmed,

The Chairman, in moving the adoption of the report and accounts, said, I assume you will take the report as read as usual. I do not propose to attempt to disguise from you the fact that the past year has been a very favourable one for our company, and that the results attained have exceeded our expectations of a year ago. This is largely due to abnormal circumstances, which can hardly be expected to recur, and therefore I do not consider it is out of place to remind the shareholders that our principal business is the discounting and re-discounting of commercial and Treasury bills, and over a period of years it is from this business that we expect to draw our profit. We are also holders of and dealers in short-dated Government securities, and if from time to time we are able to make large profits from a careful selection of these investments, and by taking advantage of the rise and fall in the value of them, such profits must be treated as occasional and not to be looked for very frequently.

It is also significant that though the discount houses form an integral part of the delicate organisation known as the London money market, special prosperity seems to have been confined in 1922 to our section, as from all accounts bankers generally have not enjoyed a particularly favourable year.

CHEAPENING OF MONEY AND ITS EFFECT.

When we last met you, I referred to the gradual cheapening of money and its effect on the values of War Loan, Treasury Bonds, and other similar securities; this condition of things continued during the whole of the first half of 1922, as between January and July the Bank rate fell by 2 per cent., from 5 per cent. to 3 per cent., and it was in consequence of the steady rise in all short-dated Government securities through this cause that we were enabled to derive a considerable part of the profit we have earned.

During the second half of last year the value of money remained more or less stationary, with the result that the conditions so favourable to us ceased any longer to operate; in fact, during the last two months of the year money became less plentiful, and there was, in consequence, a distinct re-action in the value of short-dated securities.

BILL MARKET.

If we now turn to consider the position of the bill market, we find matters were by no means so good. The policy of deflation which commenced in 1920 became more pronounced in 1922, and was reflected in the steady reduction in the deposits held by banks generally. The figures of the deposits held by the clearing banks show this very clearly, as their deposits on December 31, 1920, were £1,892,000,000, on December 31, 1921, £1,853,000,000, while the averages for June, 1922, were £1,800,000,000, and £1,730,000,000 for November, 1922, these being the last figures available.

RESULT OF CONTRACTION IN DEPOSITS.

From these figures you will observe that during the year 1921 the fall was £39,000,000, while during the 11 months of 1922 the fall was no less than £123,000,000. The consequence of this contraction in deposits was that the margin which constitutes our profit between the rates for money and bills was extremely small; in fact, during the first half of the year there was practically none at all, and though it was better during the second half, the average for the whole year was only about 6s, whereas it was 12s in 1921.

At the same time the value of money was becoming steadily cheaper all the year, so that the whole situation was unusual, inasmuch as on the one hand during the second half of the year in particular the value of money was about 1½, while on the other the discount market frequently was unable to get what it required, except by borrowing from the Bank of England.

SIGNS OF TRADE REVIVAL.

What the present year has in store for us is very uncertain, but I am glad to be able to say that we see signs of a revival in trade

in several important directions, and there also seem to be rather more trade bills coming on to the market. Consequently, I think we are justified in hoping that the worst period in the depression of trade has passed, and that, given no political upheaval, we may look for a gradual and steady improvement.

It is, of course, a great disappointment that the recent conference held in Paris failed to produce any settlement of the all-important questions of reparations and of inter-allied debts, as the present state of uncertainty with regard to affairs on the Continent, which is reflected in the violent movements in the exchanges of the various countries, is largely responsible for the prevailing unemployment in this country.

Our manufacturers and merchants are only too anxious and ready to foster and develop trade, but before they can enter into engagements of any magnitude it is essential that some measure of stability should be created on the Continent to justify them in proceeding with any degree of confidence.

BALANCE-SHEET ITEMS.

If you will look now at the accounts in your hands and refer first to the balance-sheet, you will see that the total figures are nearly 10 per cent. less than they were a year ago, and that they are once more at about the level of December, 1920, which was 20½ millions. Our net holding of bills at £15,720,000 is smaller by £712,000, and the total of commercial bills rediscounted has fallen by £831,000 to £1,692,000.

Investments, all of which are short-dated, show practically no change in their total, which continues at £2,553,000.

Loans on security are rather less, and the decrease in the balance-sheet total amounts to £1,850,000.

PROFIT AND LOSS ACCOUNT.

Coming next to the profit and loss account, the gross profits at £429,000 are £52,000 higher than a year ago, and the rebate, which has always been maintained on a conservative basis, stands at £191,000, which is only £4,000 less than a year ago, and this reduction is due entirely to the change in the prevailing conditions.

The dividend of 15 per cent. that we propose to you is at the same rate as last year, though it will absorb £7,500 more in consequence of the £50,000 additional capital, which was issued as a bonus to the shareholders in January last year, and now ranks for dividend. The bonus, on the other hand, which we propose of 5s per share, free of income-tax, compares with 2s a year ago, and will require £16,000 more.

Of the increased profits, therefore, £23,500 will be distributed among the shareholders, and from the balance we propose to still further strengthen the financial position of the company by adding £80,000 to the reserve as against £50,000 a year ago, bringing it up to £400,000 compared with a paid-up capital of £600,000, making £1,000,000 in all.

The amount carried forward is also increased by about £2,000, and stands at £32,200.

INCREASE IN EXPENSES.

I do not know that I need refer to any other of the figures in the accounts, unless it be the expenses, which amount to £49,024, against £41,656 a year ago, when also £5,000 was transferred to the clerks' pension fund.

The increase this year is accounted for principally by the stamp duty paid on the increase of capital, and also by the expense connected with the bonus issue. The normal expenses do not show any material increase, though they again include a generous bonus to the management and staff, of which I am sure every shareholder will approve.

CORPORATION PROFITS TAX.

In addition to the expenses we have also had, in common with the rest of the community, to contend against the still heavy burden of taxation, and in this connection I would like to say a word about the corporation profits tax. This tax, which was imposed for different purposes and under different circumstances from the present, is now simply a tax on ordinary shareholders as such, and might with equal injustice be imposed on any other class of the community.

It is not defended, as a tax, by any independent expert. It clearly discourages initiative such as is now so badly needed, and is a retrograde step in the development of our financial machinery.

I sincerely trust that the Chancellor of the Exchequer will consider this matter seriously before he introduces his first Budget, as if he can see his way to remove the tax there are many who believe that trade and employment may benefit substantially.

YEAR'S PROFITS A RECORD.

To sum up, the profits, as I have already said to you, are very good, but they are more than this, they constitute a record in the history of the company both absolutely and relatively to the capital and reserve employed in the business. The policy of taking advantage of the rise in the value of investments bought when conditions were less favourable is largely responsible for this result, for the margin of profit on the bill business was less than we look for as an average over a period.

TRIBUTE TO MANAGER AND STAFF.

Before moving the resolution I would like to tell you once again how very highly the directors value the services of our manager and those connected with him in the management, to whom the excellent results are due, and also to express appreciation of the excellent work done throughout the year by the staff generally.

The report and accounts were unanimously adopted, the retiring director re-elected, the auditors re-appointed, and the proceedings terminated with a vote of thanks to the chairman.

NATIONAL DISCOUNT COMPANY, LIMITED.
ANOTHER SATISFACTORY YEAR.

The ordinary annual general meeting of the National Discount Company, Limited, was held, on the 19th instant, at the Cannon street Hotel, London, Colonel the Hon. Sidney Peel, D.S.O., chairman of the company, presiding.

The secretary (Mr Charles H. Gough) having read the notice convening the meeting and the report of the auditors,

The Chairman, after referring to the retirement from the chairmanship of Sir Sigismund Mendl, said:—The re-arrangement of our share capital has now been completed in accordance with the resolutions passed last year.

DIVIDENDS AND PROFITS.

We paid an interim dividend of 6s per old undivided share in July last, and to-day you will be asked to approve a distribution for the last half-year of 2s 6d per "A" share, and of a dividend of 5s 6d and a bonus of 2s per "B" share, all subject to deduction of income-tax. We have again had a satisfactory year. Our gross profits are down by £34,500, which is to be accounted for by the lower rates of interest and discount prevailing during the year. On the other hand, it is satisfactory to note that our expenses are £4,000 less. We propose, after paying £15,000 to pension fund, and paying the same dividend as before, to increase our carry forward by £75,000 on the amount carried forward last year.

Our balance-sheet is very good, and augurs well for the future of the company. The totals are the largest we have ever shown, and the amount of bills discounted shows an increase on December 31st of £1,371,000 over this same date last year. I might add that the total amount of bills discounted during the year shows an increase of more than £4,000,000 over the previous year. Our investments show an increase, due to the fact that with a low discount rate it becomes more profitable to hold investments.

I referred just now to the lower rates of interest and discount which have prevailed during the year. We began the year with a 5 per cent. Bank rate. The rate was lowered four times, till it reached 3 per cent. on July 13th. The average discount rate for all bills for the whole year was £2 13s, against £5 3s 3d, and the average rate of interest on deposit was £2 3s 7d, against £4 10s. That is a difference of 9s 5d against last year's difference of 13s 3d. It is interesting to observe that the average rate for fine three-months' bills began at £3 11s 6d in January, fell gradually to £1 19s in July, and has travelled up again, with some fluctuations, to £2 10s 4d in December. This rise in the rate is no doubt due in some degree to a revival in trade.

TRADE REVIVAL.

We are, of course, intensely interested in a revival of trade; we like to see plenty of trade bills offering. We play an important part in the trade machine. It is more important that the financial position of those whose names are on the bills should be sound.

I think it cannot be disputed that the general financial position in this country has improved during the last twelve months. We are, of course, particularly interested in the rise of the pound in terms of American dollars. Every rise in the pound strengthens the position of London as the financial centre of the world, a matter of first rate importance to the discount houses.

GOVERNMENT FINANCE AS A RULING FACTOR.

We are still far from pre-war conditions, but there is, indeed, one outstanding feature of the money market of to-day, as contrasted with pre-war days. I mean the overwhelming preponderance of

Government finance as a ruling factor. It must be long before this factor is reduced to small proportions. A very great reduction on the floating debt has been made, but the total of Treasury bills outstanding at the end of the year was from £710,000,000 to £720,000,000. This does not represent the full total of short-dated Government securities on the market. From time to time various Government bonds approach maturity and take on the character of bills. Clearly all this puts us very much in the hands of the Government and the Bank of England. They can at any time produce ease of money by allowing bills to run off, and they can also, though not quite so simply, produce a condition of tightness. As long as this state of things continues, it is impossible for any useful forecast to be made. You can foretell, if you are wise enough, the action of economic laws working uncontrolled; you cannot foretell the action of Governments and their advisers.

I do not mean to make any complaint of the action of the Government and the Bank of England during the last year; on the contrary, I think it has been very wise and prudent. I have no doubt that the policy of cheapening money, which has been pursued lately by the authorities, has been a great boon to traders, and is a powerful factor in the restoration of trade. I hope it will be continued. I hope, too, that the policy of diminishing the floating debt, whether by funding, conversion, or otherwise, will be actively pursued. The market can carry a far larger amount of Treasury bills than formerly, but when trade revives there will be great competition between commercial bills and Treasury bills, and both trade finance and Government finance will suffer accordingly.

The report and accounts were unanimously adopted.

Sir Albert Wyon, S.C.A., after thanking the meeting for the re-election of himself and his co-auditor, Mr Francis W. Pixley, spoke briefly upon the accounts, which he said showed the company to be in a very strong and prosperous condition.

GREAT INDIAN PENINSULA RAILWAY COMPANY.

DEFICIT GREATLY REDUCED.

BOMBAY SUBURBAN ELECTRIFICATION SANCTIONED.

The one hundred and forty-sixth half-yearly meeting of the stockholders of the Great Indian Peninsula Railway Company was held, on the 19th instant, at the company's offices, 48 Copthall avenue, London Wall, London, Mr J. E. Dallas, managing director, presiding.

The secretary (Mr R. H. Walpole) having read the notice convening the meeting,

The Chairman said:—Gentlemen,—Sir Charles Armstrong, the chairman, having gone out to India on the business of the company, it devolves upon me to address you on the subject of the report for the half-year ended September 30, 1922. You will remember that at the corresponding time in the previous year we had to deal with a heavy deficit of Rs. 144 lakhs.

YEAR'S RESULTS.

At the end of the half-year under review, in spite of an increase of 6.40 per cent. in gross earnings and a decrease of 5.70 per cent. in expenditure, we are still, after bringing interest charges to account, confronted with a deficit, but it is reduced to Rs. 84 lakhs. The ratio of working expenses to gross earnings for this period was 84.63 per cent., as compared with 95.49 per cent. in the corresponding period of the previous year, when conditions were abnormal. We are seen, therefore, to be progressing in the right direction, but not so fast as we anticipated. The long-wished-for revival of export trade did not materialise during 1922. This is all the more disappointing, inasmuch as there were excellent monsoons in 1921 and 1922, and India is ready to respond to a demand from the outside world if only exchanges would right themselves and enable the market for Indian products to revive. Glancing for the moment at the present year, the state of the European exchanges is not such as to encourage an early anticipation of a return to normal trade, but just at the moment news comes from India of excellent traffics, and there are other indications that trade is reviving.

EXPENDITURE.

While we are waiting for a real improvement in trade, we have not been idle in regard to the expenditure side of the account. This has been, and is still being, subjected to rigorous examina-

tion, and no pains are being spared to enforce every economy that can be effected without impairing efficiency.

TRAFFIC RECEIPTS.

The receipts from coaching traffic were 8 per cent., and from goods traffic 4.54 per cent., higher than in the corresponding period of last year. It is too early yet to report the final effect of the recently raised fares and rates on passenger and goods traffics. A return to normal trade will have to occur before the result can be correctly criticised.

BOMBAY SUBURBAN ELECTRIFICATION.

You will be glad to learn that sanction has now been received to proceed with the first 30 miles of the Bombay Suburban Electrification as far as Thana. Steps have been taken to start construction on the first 20 miles of this scheme. Preparations are far advanced, and contracts will shortly be let for the track work and special rolling stock.

As I have already mentioned, Sir Charles Armstrong, the chairman, has proceeded to India, and is now engaged in a series of inspections.

It only remains to add that the guaranteed interest of 1½ per cent. for the half-year, was distributed in December as usual. I now beg to move: "That the report of the directors, together with the accounts now submitted, be received and adopted," and I will ask Mr. Finlay to second that.

Mr. J. F. Finlay, C.S.I., seconded the motion, and, no questions being asked, it was at once put to the meeting, and was carried unanimously.

The proceedings then terminated.

SCOTTISH AUTOMOBILE AND GENERAL INSURANCE COMPANY LIMITED.

SATISFACTORY RESULTS DESPITE YEAR'S DIFFICULTIES. "INCREASED REVENUE AND ADDED PROFIT."

The fourth ordinary general meeting of the Scottish Automobile and General Insurance Company, Limited, was held, on the 15th instant, at the offices of the company, 136-138 Hope street, Glasgow, Mr Robert J. Smith, C.B.E., chairman of the company, presiding.

The secretary having read the notice calling the meeting and the auditors' report, the chairman, in moving the adoption of the report and accounts, said:

Gentlemen,—Your directors have again satisfaction in meeting the shareholders and submitting for your approval the results of our trading for the third year of our existence. We feel sure these will commend themselves to you. I have heard it said that the third year of an insurance company is its most trying period, and if that be so we should be gratified that we have passed through it with increased revenue and added profit.

1922 has been an abnormal year. The depression in trade and industry, and the lack of employment at home and the disturbed economic conditions throughout the world, have combined to make it a period of almost unequalled conditions. The power and the disposition to purchase cars has been restricted, and the motor industry, with which the interests of the company are closely identified, has severely suffered. Following on the artificial booms of 1919 and 1920 the reaction has been the more acutely felt.

It is very gratifying, consequently, to be able to record that our gross revenue for 1922, in spite of all such adverse circumstances,

rose to the substantial total of over £90,000, and the net premiums, as shown by the accounts, to £79,183. The difference between these figures is considerable, but is due to the large reinsurance contracts effected by the board in pursuance of their policy of protecting themselves against all but a comparatively small portion of each risk, and so ensuring that no claim or loss may arise which cannot be viewed with comparative equanimity. Caution and discrimination have also been applied to the selection of risks, and we have rigidly adhered to our policy of accepting only what we believe to be safe and select business, notwithstanding that this has meant the rejection of a large volume of premium income.

RATIO OF PROFIT TO PREMIUM INCOME.

The experience for the past year in the matter of claims, while slightly beyond that of the previous year, is still very satisfactory. The percentage of expenses, due to some special advertising, is also very slightly increased; but, on the other hand, having regard to the adjustment of the reserve for unexpired risks, the ratio of profit to premium income is almost 5 per cent. better than that of the two corresponding years. I think you will agree that the balance of £11,618 at credit of revenue account is a satisfactory result of the year's trading. It is equivalent to 30.9 per cent. of the paid-up share capital, and is substantially equivalent to the accumulated balances of profit which we are carrying forward to next year. That, as will be observed from the report, is £11,409 5s 3d, and has been steadily and almost uniformly accumulated. In 1920 £3,738 11s 2d was carried forward; in 1921, after payment of the dividend applicable to that year and directors' fees, a further £3,608 3s 5d was carried forward; while out of the credit balance of 1922, after providing for the year's dividend of 7½ per cent., and writing off £4,445 of preliminary expenses and the stock of policy forms and stamps, &c., the sum remaining to be added to the carry-forward is £4,062 10s 8d. It is consequently, I think you will agree, satisfactory that the third year has been able to provide for all these preliminary expenses and a satisfactory rate of dividend, and leave this substantial sum for accumulation.

BALANCE-SHEET ITEMS.

The balance-sheet requires little explanation. The net assets at the end of 1922, which are all liquid—that is, assets after deducting the preliminary expenses, stationery, &c., and after deducting all outstanding liabilities—are of an actual value of £87,557 0s 6d, as compared with £68,931 5s 10d at the end of the previous year, while the reserve for unexpired risks and accumulation of revenue balances, including an unrealised appreciation on our investments, but not, of course, including the reserve for outstanding claims, amount in the aggregate to £50,057 0s 6d, as compared with £31,431 5s 10d on the corresponding date in 1921. It will thus be seen that the increase of net assets and of reserves has improved the position of the company during the twelve months to the extent of £18,625 14s 8d. The net assets are now equal to 233 per cent., and the reserves equal to 133 per cent. of the paid-up capital. The income from the investments of the company now exceeds 10 per cent. of the capital, and has been more than sufficient to provide the dividend paid or proposed to be paid to the shareholders.

It is interesting to record, as showing the extent of the company's business and the manner in which the risks are spread, that the total number of policies in force represented by our premium income is 8,219, or an average of approximately £10 per policy, and the number of mechanically propelled vehicles insured has reached a total of 6,443, of a value of £2,228,749.

WORKMEN'S COMPENSATION INSURANCE.

Workmen's compensation insurance, which for some years has been a somewhat profitable department of underwriting, is again becoming, as in pre-war days, a source of worry and concern to

most companies. We are gradually getting back to the conditions which induced malingering, and to the days when the employee considered it was in his interest to keep on the injured list rather than return to his employment, and when many claims necessitate at some point or other a lump-sum payment to effect their final discharge. Coupled with this, there has been recently in some instances an almost insensate competition for business, and while we are reluctant to lose business which has been or is apparently profitable, we are not prepared to make the cuts which some offices and underwriters are presently making in order to retain business at rates which we think are most unlikely to be remunerative.

The prospects for the ensuing year are promising. There are indications on all sides of returning activity in trade and industry. One hesitates in a business meeting to mention a subject which has a taint of political opinion, but I think it will be universally agreed that it only needed the settlement of the vexed question of reparations on sane and reasonable lines to give that fillip to the confidence which is necessary to the restoration of commercial prosperity. Reparations to the extent of ability to pay are only reasonable and proper, but I am convinced that the prosperity of Europe and the peace of the world can only be secured through a rehabilitated Germany.

Notwithstanding all adverse conditions, the motor movement has progressed, and according to official returns the number of motor vehicles in this country at August 31st last amounted to 902,000, or 96,000 in excess of the number at that date in 1921. I have estimated that at the rate of normal increase that number will be 1,120,000 in 1923 and 1,300,000 in 1924, and this and the reduced prices of cars and the lessened running costs all combine to afford our company the promise of a wider field of enterprise and of a more extensive revenue in the year upon which we have entered.

Mr Miller seconded the motion, which was carried unanimously.

Mr Robert J. Smith and Mr W. H. Pryce having been re-elected as directors, and the auditors having been re-elected, the customary votes of thanks concluded the meeting.

APEX (TRINIDAD) OILFIELDS, LIMITED.

"RESULTS IN EVERY WAY SATISFACTORY."

The third ordinary general meeting of the Apex (Trinidad) Oilfields, Limited, was held, on the 15th instant, at Winchester House, Old Broad street, London, Mr Walter MacLachlan, one of the managing directors, presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The profits from the production and sale of oil during the year under review were £131,366, from which £30,243 has been written off in respect of depreciation of the wells, while the net head office expenditure amounted to £830, leaving a profit for the year of £100,292. Adding this amount to the balance of profit from last year—that is, £34,922—and deducting £20,000 reserve for income-tax and corporation profits tax, the balance at the credit of profit and loss account stands at £115,215. Of this, £42,000 has been distributed, leaving £73,215 carried forward. From these figures it is evident that a considerably larger dividend than 10 per cent. could have been paid, but we considered it prudent to pay only that rate of dividend as a start, in the belief and with the intention that we shall be able to pay a further dividend within the next few months. In concluding this review of the accounts, I trust you will agree with us in regarding the results and financial position they disclose as in every way satisfactory, more particularly in view of the early stage of the career of our undertaking within which these have been attained.

These results have been obtained from a production of 64,315 tons during the fiscal year. To this have to be added 6,639 tons in storage at the commencement of the year, a total of 70,954 tons. Of this tonnage, 65,357 tons were delivered to Trinidad Leaseholds and elsewhere and 1,493 tons were used on the property, leaving 4,104 tons in storage. During the year it was necessary to restrict production in order to regulate it to the tonnage with which the purchasers were able to deal, the average monthly deliveries—including advance deliveries—being 5,000 tons for the first nine months and 10,000 tons for the remaining three months of the year. During the first nine months only four wells on average were drawn upon to provide for these deliveries, after which other wells were reopened to meet the increased demand. Early in September, however, it was found necessary to shut down all the wells from which production is obtained by pumping, as the flowing wells alone were easily capable of sufficient production to provide for the delivery of 10,000 tons per month. Since September 30th we were again subjected to restriction, the purchasers being able to take delivery of only 20,000 tons during the last three months of 1922, but we are glad to be able to inform you that they have intimated that they hope to take 10,000 tons per month from now onwards. When it is borne in mind that the satisfactory results I have had the pleasure of submitting were obtained from dealing with some 65,000 tons, it will be

readily understood that even better results may be expected from the much larger output which we hope to deal with during the current year.

During the year eight new wells were drilled and brought into production. Our drilling operations have been attended with most satisfactory results, the method adopted by our management for bringing in wells under control having in every case met with complete success. As you are probably aware, a feature of the oil wells in the Fyzabad district of Trinidad, where our oilfield is located, and from which the main output of Trinidad oil is produced, has been the choking of the wells by sand under heavy gas pressure. So far as our experience has gone—and we hope it will continue to be so—this has been overcome by the use of perforated drill-pipe covered by screening, which permits the ingress of oil, but excludes the sand. It is only right to mention that this method, which was already in use on other oilfields than in Trinidad, was recommended by our consulting engineer, Dr Henderson, who also procured for us the services of Mr Tilbury, our drilling superintendent, who applied his previous experience of the method with great ability and success. In all 18 wells have been drilled on our property, from which approximately 135,000 tons have been produced to date, even under the restricted conditions which have been imposed on our operations.

Our drilling programme has been directed towards obtaining production and also proving the value of various portions of our property. There has been ample evidence of the success which has attended the first of these aims, and I have pleasure in assuring you that in every instance our work to further prove our property has been attended with most satisfactory results. Personally, I feel gratified to be able to confirm my statement, when I last had the pleasure of addressing you, that we possess a very valuable property, the development of which is yielding results up to our best expectations.

As I have already informed you, we have been obliged to restrict our operations so as to regulate our production in accordance with the facilities for its disposal. Of course, if Trinidad Leaseholds are able to accept regular deliveries of 10,000 tons a month, this position will be somewhat relieved, and we shall be able to continue to extend our operations. We are, however, closely engaged in considering means for dealing with the disposal of the entire output which we believe our property is capable of producing, and we have good reason to anticipate a satisfactory result of our efforts in that direction.

Mr George R. Airth seconded the resolution, which was carried unanimously.

RIO DE JANEIRO FLOUR MILLS AND GRANARIES, LIMITED SIGNS OF IMPROVEMENT IN TRADE.

The thirty-seventh ordinary general meeting of the Rio de Janeiro Flour Mills and Granaries, Limited, was held, on the 16th instant, at the Institute of Chartered Accountants, Moorgate, London, Mr Richard Foster (the chairman) presiding.

The secretary (Mr Nigel Charles East) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report, said that at the previous meeting he informed the shareholders that the

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

company had begun the year now under review with a bad quarter, but that it did not follow that they were in for a bad year. He thought the accounts now presented bore out that statement. Their trade had perhaps been on more normal lines than in any year since 1914. Prices had been more stable at a somewhat lower level on account of the reduced prices of wheat and freights, which had tended to assist the consumption of flour, but had exchange been higher there was no doubt that the demand would have still further increased. The cotton mill had made less profit in sterling on account of the lower rate of exchange, but the production had increased, and they had orders in hand which would keep it at full work for some months to come. With regard to the future, he saw nothing to worry about unduly. Competition was very keen, but both in Brazil and Argentina there were, to his mind, signs of an improvement in trade, and a perhaps more reassuring condition generally.

Mr S. C. Sheppard (managing director), in seconding the motion, said that as far as the wheat supplies were concerned, while they had had at times anxious moments, he did not think there had been a single stoppage of the mill for lack of supply throughout the year. Prices had varied a good deal, but, fortunately, last year's crop in Argentina was abundant and of excellent qualities, so that their annual grist, if only from a percentage of produce point of view, was perhaps one of the best they had had. As to this season's crop, their Buenos Aires managers estimated the total yield at about 5,400,000 tons, indicating an exportable surplus of 3,600,000 tons. They had just received a cablegram from the general manager as follows:—"Factories fully employed; new looms in the cotton mill are daily coming into use, and the steadier rates of exchange are helping business."

The report was unanimously adopted, and the final dividend and bonus recommended were declared.

(a) Including Treasury Bonds.

Tenders will be received on Friday, January 26, 1923, for Treasury Bonds and Treasury Bills to be issued to the maximum amount of £40,000,000. The amount of Treasury Bonds issued will not exceed £5,000,000, but subject to that limit, the total amount issued will be divided between Bills and Bonds in such proportions as the Lords Commissioners of His Majesty's Treasury may determine.

Reports and Notices.

Mr William Evans has been appointed managing director of Provincial Cinematograph Theatres, Limited, and is now in full charge of the company's theatres.

Sir Walter Roper Lawrence, Bart., G.C.I.E., C.B. (director of the Central London Railway and the Peninsular and Oriental Steam Navigation Company), Sir Reginald MacLeod, K.C.B. (chairman of the Fresham Life Assurance Society, Limited, director of the Shell Transport and Trading Company, Limited), and Mr R. B. Phillips, director of the Manila Railway Company (1905), Limited) have been elected members of the London Advisory Committee of the Canada Steamship Lines, Limited.

Messrs Slaughter and May announce that they have taken into partnership Mr Hugh Pettitt, B.A., LL.B., Cantab, who has been associated with them for many years past.

It is announced that the registered office of Mann, Byars, and Co., Limited, has now been changed to 20 Bucklersbury, London, E.C. 4. All communications should, as heretofore, be sent to the secretary's office at 21 Glassford street, Glasgow.

BANKS.

COMMERCIAL BANK OF THE NEAR EAST, LIMITED.—The company was incorporated on October 17, 1922, and we have received the first balance-sheet for the period ended December 31, 1922. The result for this short period shows an excess of expenditure over income of £396. The report points out that there has been no invitation to be public to subscribe for capital, and the issued and paid-up capital of £106,725 has been privately subscribed. The bank has acquired a branch at Constantinople. The total assets on December 31, 1922, are given as £259,193, of which £33,460 is cash in hand and at bank, while money at call and short notice is £180,740. Investments total £29,905, which are all in British Government securities. Advances amount to £5,727. With regard to liabilities, the subscribed capital is £106,725, deposits amount to £129,501, and drafts payable to £18,290. The first annual general meeting will be held at the offices of the bank, 1 Broad street place, London, on January 31, 1923, at 12.15 in the afternoon.

LONDON JOINT CITY AND MIDLAND BANK, LIMITED.—Average weekly position during December, 1922 :—

STANDARD BANK OF SOUTH AFRICA.—The statement of accounts to September 30, 1922, shows total assets of £65,899,504. Cash in hand amounts to £6,893,846, and cash at call and short notice to £3,145,000, making total cash £10,038,846. Remittances in transit stand at £1,290,345, while native gold in hand and in transit amounts to £303,052. Investments amount to £4,830,474. Bills of exchange to £4,688,153. Bills discounted amount to £36,336,515. Customers' bills are at £7,350,083. Bank property is given as £1,028,982, while stamps, stationery, and open policies are at £33,054. The principal liabilities are: Deposits, £50,947,024; capital called up, £2,229,165; reserve fund, £2,893,335; notes in circulation, £1,236,436; and customers' bills, £7,350,083. The directors have declared an interim dividend of 7s per share, subject to income-tax, out of the profits for the half-year ended September 30, 1922, and warrants will be posted on January 26, 1923. Sir William B. Peat, C.V.O., F.C.A., who has been one of the auditors of the bank for over 27 years, has resigned. The directors have in the meantime appointed his son, Roderick M. Peat, F.C.A., who will discharge the duty until the next meeting of shareholders in July next.

UNION BANK OF CANADA.—The fifty-eighth annual financial statement of the Union Bank of Canada for the year ended November 30, 1922, shows net profits for the year—after deducting expenses of management, interest due depositors, reserving for interest and exchange, and making provision for bad and doubtful debts, and for rebate on bills under discount—amounting to \$1,131,060, which, with the amount brought forward of \$541,686, makes an available balance of \$1,672,746. After the payment of the quarterly dividends of 2½ per cent., making 10 per cent. for the year, reserving \$300,000 for contingencies, allocating \$10,000 to officers' pension fund, and providing for war tax on bank note circulation, the sum of \$483,175 is carried forward.

INSURANCE.

NATIONAL MUTUAL LIFE ASSURANCE.—The report for the year 1922 is again the first life office report to appear in the New Year. The net new business, after deduction of re-assurances, is £548,100. The claims, less re-assurances, arising within the year are £162,600 by death, and £65,000 by survivorship. The average rate of interest earned on the funds, excluding reversions, was £4 12s per cent. after deducting income-tax. The balance of profit on securities realised and re-valued amounts to £263,000. The corresponding item in 1921 was £179,000. The Stock Exchange securities have been valued at their selling prices as at December 31, 1922. The society's funds have increased by £367,000 to £3,799,000.

MISCELLANEOUS.

FREEMAN, HARDY, AND WILLIS, LIMITED.—The result of the trading for year 1922, after the payment of all working expenses, debenture interest, &c., depreciation of shop fixtures, leases, and freehold buildings, and making provision for meeting corporation profits tax, is a net profit of £175,197, which, with £77,066 brought forward from last year, leaves an available balance of £252,263. It is proposed to appropriate the balance shown above in the following manner, viz.:—Dividend on 6 per cent. preference shares for the year (already paid), £11,062; dividend on ordinary shares at 12½ per cent. per annum, for half-year ending June 30th, paid in July last, £21,524; dividend on ordinary shares at 12½ per cent. per annum, for half-year ending December 31st, payable January 29th, £22,265; 5 per cent. bonus on ordinary shares, £23,750; amount due to directors and staff, £10,000; income-tax account, £40,000; bonus to employees, £20,000; local and other charities, £3,000; balance forward to next year, £100,662.

MICHAEL NAIRN AND GREENWICH, LIMITED.—The report for the year 1922 shows the amount of net dividends received from investments and interest, &c., for the year, less office expenses, audit, and directors' fees, is £173,315, and the directors have decided to write off from the preliminary expenses account the sum of £17,677, leaving a balance of £155,638. The directors recommend the payment of a final dividend of 5 per cent., less tax, absorbing £74,650, which, with the interim dividend of 5 per cent., less tax, paid on September 15, 1922, £73,598, making 10 per cent. for the year, leaves a sum of £7,390 to be carried forward.

SCOTTISH AUTOMOBILE AND GENERAL.—The report for 1922 shows that the net premiums taken were £79,183. Claims paid and outstanding amounted to £44,683, and expenses to £28,885. Dividends and interest yielded £2,888, and after providing for reserves against unexpired risks (40 per cent. of the premiums), a credit balance of £11,618 was carried down, making the total revenue credit £18,965. The dividend for the year (7½ per cent., less tax) absorbed £2,073.

J. SEARS AND CO. (TRUE-FORM BOOT COMPANY).—The profits for the year 1922 after charging all working expenses, including managing directors' salaries, and after deducting transfers to reserve account (including the sum required by the articles of association), stock, and other reserves, and providing for income-tax and corporation profits tax on the profits of the year, amount to £132,778; the balance brought forward from profit and loss account last year was £34,951, making £167,729, from which have been deducted directors' fees and additional remuneration £6,400—£161,329; less dividends paid on the preference shares to July 31, 1922, £12,250, interim dividend paid on the ordinary shares, £31,500, interim dividend paid on "A" shares £1,523; leaving the amount of £116,055, which the directors recommend should be appropriated as follows:—Provision for dividend accrued on the preference shares to December 31, 1922, £8,750; payment of a final dividend of 2s per share upon the ordinary shares, making a total for the year of 3s 6d per share, free of income-tax, £42,000; payment of a final dividend of 2s per share upon the "A" shares, making a total for the year of 3s 6d per share, free of income-tax, £2,031. Balance to be carried forward to next year, £63,274. The report states that the year's trading has been thoroughly satisfactory, each branch of the business having maintained a steady rate of progress throughout the year. The whole amount of goodwill standing in the books of the company has now been extinguished by the total accumulated reserve. Additions to freehold and leasehold property are chiefly in respect of shop premises. All assets, including buildings, fixtures and fittings, and machinery and plant, have been maintained in a proper state of repair and efficiency. The usual depreciation has been written off. Investments consist entirely of British Government securities, and are valued at or below quoted prices on the London Stock Exchange. There have been issued during the year to members of the staff 20,310 "A" shares of £1 each at par. Provision has been made for dividend upon these shares at the same rate as upon the ordinary shares.

UNITED INSURANCE COMPANY, LIMITED (AUSTRALIA).—The total receipts for the year ended September 30, 1922, were £542,575; less, agency and general expenses, commissions, discounts, and re-insurances, £334,665—£205,910. The expenditure was as follows:—Fire, marine and accident losses (including provision therefor), £99,140; expenses of management, &c., £49,906; balance for the year, £56,863; less, interim dividend paid April 26, 1922, £15,000; leaving an available balance of £43,863, which the directors propose to dispose of as follows: To reserve fund (making £143,000), £3,000; to special distribution, £25,000; to dividend for half-year at 10 per cent. per annum, £15,000, leaving balance, £863, which is transferred to contingent account. The board has decided, subject to confirmation by the shareholders, to issue 5,000 unallotted shares, and to distribute same in the proportion as far as possible of one new share for every 12 shares held, and to appropriate from profit and loss account the sum of £25,000 as a special distribution to be applied in payment of the sum of £5 per share on the above-mentioned 5,000 shares. This distribution will make the paid-up capital £325,000.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Seasonable weather conditions have prevailed during the past week with further rains, while sharp frosts were experienced at times. Winter wheat continues to make good progress, though in some districts excessive moisture has caused a lack of colour. Trading generally was on a limited scale, and tendency of prices in a downward direction. Native wheat was in moderate request, but rates as a rule were steadily maintained. Suitable milling samples quoted at 9s 8d to 10s, and inferior samples at 8s 10d per 112 lbs free on rail. Imported descriptions move off slowly, and values declined in sympathy with reduced forward offers. No. 1 Northern Manitoba quoted 50s 9d, No. 2 mixed Durum 47s 3d, and Rosafé 62½ lbs 50s 3d, all ex ship to arrive per 496 lbs. The cargo section remained inactive, buyers showing little or no interest in view of the depressed condition of Continental exchange rates, combined with lower American advances, consequently offers of most descriptions were made on easier terms. Steamer 63 lbs Baril afloat sold 46s 6d. Crop reports from most exporting countries continue satisfactory. Floating supplies also shipments are on a larger scale, while port stocks in the United Kingdom are increased by recent large arrivals. Flour remains quiet, and values easy in sympathy with the wheat position. London standard straight run quoted at 41s 6d, patents 43s 6d to 44s 6d, town households 39s 6d per sack delivered London area. All English country straights 32s to 34s delivered. Imported makes are more or less neglected, being unable to compete with home milled at the price. Manitoba export patents range from 39s to 42s 6d, Minneapolis good patents 42s 6d, and Australian 40s 6d, all per 280 lbs ex store. English barleys meet with fair attention respecting the better grades of malting, but inferior sorts neglected. Prices range from 7s 3d to 13s 9d, according to sample per 112 lbs free on rail. Imported steady, but quiet. Californian quoted 41s to 44s, Australian Chevalier 49s to 53s, both ex ship per 448 lbs. Persian 28s 3d, Plate 31s, and Danubian 30s 6d to 31s 6d. On c.i.f. terms a cargo of Dan-Bess-Kustendji f.a.q. loading sold at 28s 6d per 400 lbs. Maize in quiet request, and rates the turn in buyers' favour. Plate ex ship 35s 9d, ditto landed 37s, No. 2 mixed American ex ship 35s 6d to 36s 3d, and ditto landed 37s 3d. The cargo section ruled dull, and with resellers more in evidence prices moved in buyers' favour. Plate steamers January shipment sold 35s 10½d, January-February 36s 3d, 36s 4½d, and 36s, and February-March 37s to 36s 9d, all per 480 lbs c.i.f. terms. Oats in poor request and rates easy. English ranges from 8s to 10s per 112 lbs free on rail according to quality. Of imported, Plate f.a.q. 26s 6d, No. 2 Canada Western 29s 6d, No. 2 white clipped American 26s 6d, all landed per 320 lbs. Oatmeal in better demand on colder weather, and prices tend firmer. London made 17s 6d, coarse pinhead 18s., rolled oats also whole groats 17s 6d, flaked 20s 6d ex mill. Ordinary Scottish oatmeal 18s to 19s, and American all cuts 17s 6d to 17s 9d per cwt. Millers' offers in good request at full prices.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20 :—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated January 18th, is as follows:—Pig-iron: The market is firm, and prices have improved. Business is, however, confined to prompt requirements, as with increasing cost of production makers are averse to selling far ahead. No. 3 Cleveland G.M.B. is now quoted 93s per ton, and East Coast mixed numbers hematite is 94s per ton. Manufactured iron and steel: There is more demand for ship-building, and this is reflecting favourably on our steel works. Prices of steel have stiffened. Steel ship plates, £9 10s; steel ship

angles, £9; iron bars, £11; steel rails, £9 net. Iron ore: Prices of imported ore have advanced, but prices are still relatively low. Best Bilbao rubio iron ore, 23s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—The invasion of the Ruhr has affected the trade position here adversely in some directions, but it is undoubtedly diverting foreign orders for steel from Germany to this country. Confidence in Germany's ability to continue producing and delivering orders has almost disappeared, the result being that buyers are not prepared to place important business in that country. An Indian contract for wheels and axles worth £100,000 has just been given to a Rotherham firm which would have gone to a German house but for the recent developments on the Continent. The trouble has, however, failed to check the expansion of business in the various local branches of the steel trade. There are still a good many instances of slackness and much idle plant, but the quietest of the trades are beginning to book orders. There is a great scarcity of basic pig-iron and crude mild steel of all kinds, and idle furnaces are gradually being brought into requisition. The making of armour plate for the new warships has begun, and is providing a fair amount of employment. The armament firms are also giving out orders to nonfounders and steel founders, and will use large quantities of engineers' tools. The stagnation of the tool-steel branches continues, because of the considerable amount of surplus war stocks still being offered, but there is rather more doing at the crucible furnaces than for several years past. File makers, while experiencing a little improvement, are having the worst time in the history of their trade, as it is doubtful whether more than 20 per cent. of the available plant is occupied. Twist drills are also neglected. There has been a heavy demand for steel strip for over twelve months, and the wire trade is a little better. A moderate amount of business is passing in farm, builders', and engineers' tools. The Colonial markets appear to be recovering slowly from the depression caused by the aftermath of the war, but are not likely to buy considerably this year. The output of stainless cutlery last year exceeded all expectations, and this product is increasing in popularity at such a pace as suggests that the day of the ordinary cutlery is nearly over. French action in Germany has thrown the coal trade into somewhat of a ferment, and those interested are speculating as to what will be the effect of it. The export trade is very brisk with America and France and other places, and if France and Germany want much more home consumers may go short. Developments of new colliery workings are being pushed forward to meet the situation. Consumers of manufacturing coal here are apprehensive of prices going up, but, while quotations are very firm, no actual advances are reported. Coke is scarce and firm.

Our Glasgow correspondent writes:—In the manufacturing and

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."
Office: Granville House, Arundel street, Strand, London, W.C. 2.

Copies of the *Economist* may always be obtained in the City at Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmons, 5 Birch Lane; Barker and Howard, 6 Fenchurch buildings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15 Cullum street; Willing and Co., Limited, 50 Copthall avenue, and 53 Finsbury pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de L'Opera. New York: *Economist* Office, 20 Broad street (Room 1,700).

THE MONEY MARKET.

MONEY remained very plentiful, though, as the week went on, borrowers began to find that the funds in the hands of the banks were not quite as superabundant as they had been. This change was fully accounted for by the Bank return, which showed that Other deposits had shrivelled by 19 millions. Discount rates were easy at first, and fine three months' bills were taken at $2\frac{1}{16}$ per cent., but in the latter half of the week there was a slight harden-

ing. Yesterday the high rate at which the Treasury bills were allotted caused a good deal of surprise, and three months' bank paper was quoted, very nominally, at about $2\frac{1}{2}$ per cent.

	Jan. 26, 1923.	Jan. 19, 1923.	Jan. 12, 1923.	Jan. 5, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	(Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	(Jly. 13, '22)
Discount (Call)	1	1	1	1	(Jly. 13, '22)
Houses (Notice)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	(Jly. 13, '22)
Market rate (3 months' bills) ..	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	8

The Bank return showed decreases of £438,000 in the note circulation, and £2,000 in the stock of gold, and a consequent increase of £436,000 in the Reserve. Government securities declined by 18½ millions, and Public deposits rose by one million, leaving Other deposits 19 millions lower. Currency notes outstanding were reduced by £4,094,300 to £280,833,600, which includes £1,513,400 for notes called in but not yet cancelled. The fiduciary issue is £231,170,200, or £39,013,600 below the maximum.

THE STOCK MARKETS.

The Stock Exchange this week has again shown its faculty for ignoring international anxieties. Business has been on a considerable scale, gilt-edged stocks have shown a very firm front, while speculation has been very active in some markets, and the flatness of the foreign bond market did not spread to other sections. A rise in 5 per cent. War Loan was a feature of the week, and Victory Bonds also displayed strength. The New South Wales Loan was oversubscribed, and the Dutch East Indies new scrip has gone to premium. Home Railway prior charge stocks were good, though North-Eastern and Southern ordinaries fell back on realisation. Rubber shares showed animation, but the incidence of the carry-over brought a lull, and some attention was transferred to oil shares. Among industrials, tobacco shares, a few textiles, and cement shares were good features. In Rhodesia mining shares speculation is rife, the spectacular rise in Selukwes stimulating interest. The fortnightly settlement concluded on Thursday disclosed an exceptionally large turnover in some of the markets.

THE COMMODITY MARKETS.

Germany is buying for immediate requirements in the Cardiff coal market, but it is stated that the greater part of her coal orders have been placed in the North Country. France, however, has been a better customer, while the demand for Italy is reported as heavier than it has been at any period since the close of the war. Under these circumstances, prices of all classes of South Wales coals have been firm. An active demand for pig-iron has overtaken the present reduced output, and prices have been advanced 10s per ton. Our Middlesbrough correspondent states that on account of the lessened foreign competition in the steel trade prices have been advanced, and business inquiry is reported as good. In the Manchester cotton trade, the healthy tone noticeable during the past few weeks has been maintained; inquiry for cloth, principally for India, has been in considerable volume, and while bids in many cases are still below Manchester rates, there is a tendency to increase offers. The keen demand for wool, writes our correspondent, at the Liverpool sale last week was a clear indication that users are still in need of raw materials, and further competition at the colonial wool sales in London this week has freely borne out this assumption. For the first time this year signs of weakness were perceptible at the Bermondsey leather auctions. Further details of markets and prices will be found from our special trade correspondents on later pages.

FOREIGN EXCHANGES.

APART from one or two active days in the early part, the week has been a quiet one, and, as before, the shadow of the Ruhr occupation has been the outstanding influence. The movements of the mark, although irregular, have steadied a little, but business in this currency has become almost negligible. After being as low again as

94,000 on Tuesday, it made a rather sharp jump again yesterday morning to about 102,000, on fear of the complete cutting off of the Ruhr from the rest of Germany. Quotations for futures remain about the same at 10,000 per month above spot. The Paris rate, which over the week-end jumped to an average of 73.35 on Monday, has moved irregularly between about 71.30 and 72.30 on varying news from the Ruhr, and yesterday morning was rising again to about 72.50. Brussels, which was up to 81.85 on Monday, moved down to 78.75 on Thursday, as the result of some persistent buying, but broke sharply again yesterday morning to above 80. Forward rates in Paris remain the same at five centimes per month above spot; in Brussels they have narrowed $\frac{1}{2}$ centime to $4\frac{1}{2}$ centimes per month below. Italy, like Belgium, has shown some tendency towards recovery, which was maintained yesterday morning with a rate of 96½, as compared with 98½ on Monday and 97 on the 19th. In the New York rate no new feature has intervened, but the steadily depressing influence of the European situation has brought down the rate to 4.65½ from 4.66½ a week ago. Although, in view of what is happening in Europe, a rise can hardly be expected at present, the power of resistance to these influences is undoubtedly great. The forward rate remains about the same at $\frac{1}{2}$ cent. per month above spot. Among neutral exchanges Amsterdam has moved somewhat in our favour to 11.78, and Switzerland, although it has fallen again from the 25f reached on Monday, is still at 24.92½, rather higher than a week ago. Madrid, on the other hand, moved rather sharply against us on Wednesday. In Scandinavia, Copenhagen, at 23.65, has recovered somewhat from the high rates in the earlier part of the week, and Christiania, after also being higher, shows a similar recovery. Stockholm, however, at 17.40, has gone a little in our favour. In Central Europe, Vienna is unchanged, and Warsaw, after some recovery, is also about the same as last week. Prague has fallen slightly to 165, and Belgrade is also slightly better. The Roumanian rate, however, has shown a further rapid depreciation, and has reached about 1,000, an unfortunate development not justified by the present position and outlook of the country. In the East the rupee, after rising sharply to nearly 1s 5½d on the 24th, has had a set-back to 1s 4½d, but is still well above last week's figure of 1s 4½d, a result of the rapidly improving Indian trade position. At 2s 1½d the yen is very slightly cheaper than a week ago. After some weakness earlier in the week, the silver market firmed up on strong demand from India and a scarcity of immediate supplies. The outlook, however, is by no means clear. At 2s 3½d Hong Kong is unchanged on the week, while Shanghai is ½d cheaper at 3s 1½d. In South America, Buenos Ayres is ½d dearer at 43½d, Monte Video ½d dearer at 43½d, Rio ½d dearer at 51½d, while Valparaiso has depreciated from 36.10 to 36.50 pesos.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 20th:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	25,363	Interest on Debt	436
Amount borrowed	16,640	Supply Services	38,435
		Subsidies	2,953
		Added to Exchequer balances ..	179
	42,003		42,003

Revenue for the week ended January 20th last amounted to well over £25½ millions, as against £36 millions for the corresponding period last year. Excise brought in over £8½ millions, as against nearly £10½ millions a year ago, and Property and Income-tax £11½ millions, as compared with £14½ millions. Expenditure totalled nearly £42 millions, as against just over £16½ millions a year ago, the large increase being due to the payment of over £25 millions for railway compensation. The week's operations increased the National Debt by £16,639,775, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 1,000	Public Dept. Advances	- 5,200
4½% Treasury Bonds	+ 4,966	Unemployment Insurance ..	- 100
Bank of England Advances	+ 10,000		
Treasury Bills	+ 5,974		
	+ 21,940		- 5,300

The floating debt was increased by £10,740,000 to £935,716,500.

FINANCIAL YEAR, 1922-23 (April 1, 1922, to January 20, 1923).

Total spent	£ 634,301,040	Raised by revenue ..	£ 646,749,732

DEVELOPMENTS IN THE RUHR.

The unfolding of the drama that is being enacted on the Ruhr has naturally been less rapid in the last few days. What has actually been occurring is difficult to disentangle with certainty. Nothing like a complete or prolonged general strike has occurred or even been attempted, but local strikes appear to have succeeded in exacting some concessions from the French, such as a promise not to despatch trains into France from certain stations. French pressure has also been relaxed on banks and certain public services. Production has clearly fallen immensely, and the situation has perhaps been best described as one of creeping paralysis. The French army of occupation appears to have acted with as much forbearance as is possible in enforcing a policy which events are apparently showing to be unworkable, and industrial life appears to have received a blow from which it can only recover either by the abandonment of the methods now in force or by the abandonment by the population of their German patriotism.

But while the French plan of campaign has developed but slightly during the week, and, on the whole, has been singularly free up to the present from serious clashes between the occupying troops and the population, there have been three features of special significance. The first is the trial of the industrial magnates at Mainz; the second the apparent preparations of the French for instituting a coal blockade of Germany if no offer is forthcoming; and the third, and from the point of view of Great Britain the most significant, the arrest of an important German finance officer in Cologne. The trial of the industrial magnates is chiefly important because it has had the effect of stimulating the revival of a strongly nationalist feeling, and whereas the French set out with the hope of driving a wedge between the workpeople of the Ruhr and their employers, they have over-reached themselves by this episode, and produced precisely the opposite effect. The coal blockade of Germany, if put into operation, is, in our opinion, most

likely to have a similar result, for it is impossible to believe that a population which is certainly not now hostile to the rest of Germany would look with tolerance on a plan which would make of them a weapon for striking a mortal blow at the rest of the country. The policy is one which is bound to develop into a test of endurance, the result of which no one can foresee.

For Great Britain, however, the arrest in Cologne of Herr von Lawsener, with whom our troops of occupation have found it possible to work for the last few years in a co-operative spirit, has raised the question of our position on the Rhine in a form that calls imperatively for an answer. The French have expressed the desire to avoid such incidents in the future, but the question is bound to arise in this and a hundred other forms before long, and the Cabinet has therefore been forced to meet to decide upon its attitude. Attempts are being made in certain quarters in this country artificially to stimulate public sentiment to force the Government into an attitude more directly in line with the viewpoint of France. But we think this is hardly likely to succeed. This country remains perfectly conscious of the strength of the French case, which we have repeatedly urged in these columns. It is unlikely that Great Britain will forget for many years the memories of the war, and there are very few, moreover, who do not realise that the devastation which it caused has so far been almost entirely repaired by France's unaided efforts. Last week our Paris correspondent quoted some figures in this connection which it may be useful to summarise:—

Houses rebuilt: 8,000, plus 160,000 temporary buildings, out of 290,000 destroyed.

Houses restored: 420,000, out of 500,000 damaged.

Land cultivated: 3,000,000 acres, out of 5,500,000 devastated (of which 750,000 were under cultivation at the armistice).

Livestock: 50 per cent. replaced.

Roads, railways and canals rebuilt: 60,900 kilometres, out of 64,600 kilometres destroyed.

Bridges rebuilt: 8,200, out of 9,700 destroyed.

Factories rebuilt: 19,920, out of 22,160 destroyed or damaged, of which 85 to 90 per cent. are working.

Population repatriated: 4,060,000, out of 4,690,000.

This effort is a striking testimony to French perseverance and the effectiveness of French administration. Opinion in this country is also ready to make full allowance for the fact that Great Britain undoubtedly encouraged France in her illusion as to the possibility of securing a colossal indemnity from Germany. But when every qualification has been made, the fact remains that France, by her insistence on impossible demands, and finally by her endeavour to use the enforcement of her claims as a means for obtaining political security by breaking up Germany economically, has been the main cause of prolonging political unrest and economic depression in Europe and the world as a whole. There is practically general agreement in Great Britain that the present policy cannot hope to attain the end for which alone economic pressure is justified under the Treaty of Versailles, namely, the payment of reparations. The action, however, of France is not only one which is unlikely to attain the end desired; but it also, in our opinion, goes beyond what she is entitled to do under the Treaty of Versailles for reasons which we fully explained last week. While we remain at Cologne we can hardly hope to avoid being dragged into the present adventure. Unless, therefore, France is willing in the next few days to accept a reference of the question to the League of Nations, we can see no alternative for Great Britain but to withdraw our troops from the Rhineland.

In the meantime, it is becoming increasingly clear that the occupation is giving a temporary fillip to the British coal and iron and steel trades, and though some industries may soon be directly affected by losing their markets on the Continent, it looks as though, just for the moment, the net effect may be favourable for British trade. Such momentary advantage is, however, negligible as compensation for the wide and lasting disturbance caused to our foreign trade with all parts of the world; for, as Mr McKenna pointed out in his speech this week, world trade cannot be in a healthy condition while one of its members is sick.

SHOULD WE REDUCE TAXATION?

THE revenue accounts that have been recently issued have awakened a hope that a Budget surplus will be realised in the current financial year, and even that the Chancellor of the Exchequer may see his way to make some further reductions in taxation in the coming fiscal year. The prophets are, indeed, much more hopeful than a month or two ago, for it has been realised that, as we suggested at the time, this year's Budget estimates were framed on conservative lines. Moreover, there is still to come some saving on interest charges through the fall in the rate of interest; the pensions bill will be automatically lower, supply services will also show a little automatic fall, and if the economy campaign continues there may be substantial savings through the fall not merely in the rate of salaries, but in the numbers of persons employed in the Civil Service. There are, however, several flies in the amber. In the first place, the reductions in taxation made a year ago have not yet made their full effect felt on the Exchequer. This is particularly the case with income-tax, of which the first instalment was collected in July, 1922, at the rate of 6s in the £, and the second instalment is now being collected at 5s in the £. Altogether, the Chancellor estimated last May that the loss of revenue accruing from last May's tax remissions would be £20 millions more in a full year than in 1922-23. A still more serious consideration is that the assessments for income-tax on the three years' average basis will show a further fall, as they will now include two years of depression instead of one, as is the case in the assessments on which tax is now being collected. The large receipts from continued sales of war stores are also coming to an end, and, so far as one can see, there are no windfalls still to come to make good this loss. Finally, however successful the eventual arrangements with Washington may be, the payment due to America is not likely to be less than the £25 millions paid in the current year, and may be 10, or even, at worst, 20 millions more. We shall return to these points and discuss the figures more closely on another occasion. But, assuming that after balancing the two sets of considerations there is a prospect of a Budget surplus in the coming year, it is, we think, important to consider at this stage whether such a surplus should be used for the reduction of taxation or for the redemption of debt. The Federation of British Industries is girding on its armour to fight for further tax remissions; but there are cogent arguments, which will weigh heavily at all events in financial circles, for thinking that circumstances even more strongly demand the application of at least a part of any such surplus to debt redemption.

We are aware that there is a general inclination to postpone debt redemption until the general conditions are more favourable; but a policy of postponement, we think, is thoroughly unsound statesmanship. Among the reasons for adopting a clear and bold policy of debt reduction is this consideration:—the strength of the Labour appeal on behalf of a capital levy is based upon the fact that the burden of interest payments for an indefinite period on the present scale is one that weighs very heavily upon the country, and is likely for very many years to be a serious obstacle urged against any proposals for social or economic reform, however remunerative they might be in themselves from the standpoint of national welfare or even of material development; while, in any case, the taxation, both direct and indirect, which the war charge involves is bound to become increasingly irksome as time goes on. A hundred years ago the debt charge due to the French wars was, as we have previously pointed out, approximately the same in relation to the national income of those days as our present debt charge is to-day to our income. But the debt of the Napoleonic wars became a comparatively light burden through the rapid growth in the wealth of the country and in its population, which made the debt per head a very insignificant figure compared to the wealth per head. Such a proportionate increase cannot be expected to-day, and we cannot therefore contemplate that the burden will shrink through the automatic growth of the national income. We do not accept the view of the pessimists who think that Great Britain has passed the zenith, and that we must look to a steady decline of population and of material production in these islands. For the potential increase of the world's

material wealth is incalculable, and though we must inevitably retain a diminishing proportion of its total trade and industry, our geographical position, our history and our physical assets—coal, ports, climate, &c.—warrant us in expecting to play a leading part in the future as in the past. At the same time, we cannot expect ever again to attain the position of practically commercial monopoly which we enjoyed a hundred years ago. We must, therefore, make a very serious effort to disencumber ourselves of a handicap from which many of our competitors will be free. One way of doing this is by the road of inflation, which in effect means writing down the claims of the nation's creditors. But, apart from other considerations, this is a process very difficult to control, and involves a risk which a country dependent as we are on our international credit should be very slow to run. If we reject this solution, there is only one alternative to the Labour party's suggestion to get rid of a large block of the burden now, and that is to adopt a definite sinking fund policy. This is not so despicable a remedy as is sometimes supposed; for a sinking fund of £50 millions a year would at 5 per cent. amortise two-thirds of the National Debt (£5,000 millions) in about 37 years, i.e., about a single generation.

It may, however, be said that it is futile to attempt to maintain taxation if there is not a sufficient surplus of national production over national consumption. There is undoubtedly some force in this argument, but it is important to remember that taxation itself may exercise an important influence on consumption. For example, a graduated income-tax, with exemption for savings, such, for example, as life insurance premiums, is already, and can be made even more than at present, a means of restricting consumption. Moreover, the argument that such taxation limits the funds which keep the wheels of industry going overlooks the fact that money used for the repayment of internal debt is merely the transfer of purchasing power from one set of hands to another. The difference in the economic effect between transferring money from taxpayers to holders of War Loan, as compared with leaving it to be spent by the former, is not precisely calculable; but, generally speaking, it may be presumed that, on the whole, the transfer would tend to take money from people who would spend it on consumable goods forthwith and hand it to those who would re-invest it in industry. We suggest, therefore, to our friends of the Federation of British Industries that a bold policy of debt redemption would tend to increase the funds available for investment in industry, and not to diminish them.

The nature of the burden which such an annual contribution of £50 millions would represent would depend on the future of prices and production. For example, if prices remain as at present about 66 per cent. above the pre-war level, and if we restore our pre-war production, the national income would amount to about £4,000 millions, on which this sinking fund would be about 1¼ per cent. In itself, this would not be an intolerable figure; but it looks at the moment a formidable addition to a debt charge of 300 millions. Nevertheless, if it is decided that a debt redemption policy is preferable to the other two alternative possibilities, it is of the utmost importance that a definite scheme should be deliberately laid down and unwaveringly pursued, and, in particular, that the Chancellor should turn a deaf ear to the voice of the tempters who bless the scheme but whisper that it is not the time to do it now. Our concrete suggestion is that the expenditure side of the Budget should be divided into two categories. One should include interest on the debt and war pensions; the other all remaining items. In the first category all amounts saved through the fall in the rate of interest and the lapsing of pensions should be set aside as a sinking fund until the total reaches £50 millions per annum. Any savings in excess of this together with all economies on items of expenditure in the second category would be available for reducing taxation. This scheme would avoid the difficulty of setting up so large a sinking fund forthwith; but would enable a beginning to be made with debt redemption, and at the same time would leave a wide field for substantial reductions of taxation. It would increase the incentive to economise in expenditure, for that would in the near future be the only course available from which to satisfy the public demand for lower taxes. It would not

call for additional taxation; it would merely restrict the field for immediate reductions, in return for which it would relieve the country progressively of the weight of the debt and assure that large tax remissions will be possible after a number of years.

THE BANK BALANCE-SHEETS.

IN a previous issue we have summarised the net profits and dividends of the English joint-stock banks as shown in their preliminary statements (*Economist*, January 13th, p. 52). It was there shown that there was a substantial drop in net profits, but no reduction in dividends. Little further contribution to the details of profits already given is afforded by the full reports and balance-sheets which have now all appeared. In those cases where figures of gross profits and expenses are still given—and they are now unfortunately very few—a heavy decline in gross profits is accompanied by a small reduction in expenses, and it may be assumed that the unpublished figures of the remainder tell the same story. It is much to be regretted that the great banks do not set a better example in publishing a more detailed profit and loss account; some improvements have been made in the majority of the balance-sheets in the last few years, and we can only hope that better profit and loss accounts will follow in due course. If one of the great banks finds no harm in publishing more than the bare figure of net profits, it is difficult to understand the reticence of others. In the meantime, we must be grateful for the more satisfactory form of balance-sheet now adopted by the leading banks. Below we summarise the main items of the balance-sheets of 13 English joint-stock banks as at December 31, 1921 and 1922:—

	Capital and Reserves.		Acceptances and Endorsements.		Deposits (incl. Undivided Profits, &c.).		Total Liabilities.

* Includes money at call.

Among the improvements referred to are the separation from the cash item of balances with other banks and cheques in course of collection, and the publication of details of shares held in other banks; but the separation of Treasury bills from other bills discounted is not yet a general practice. As a whole, the figures show the movements which have been indicated by the monthly statement of weekly average balances. Capital and reserves show little change. The ratio of these items to deposit liabilities, which shrank to the abnormally low figure of 5.5 per cent. at the end of 1919, and rose in each of the two following years to 6.3 and 6.4 per cent. respectively, is now still higher at 6.9 per cent. Acceptances, which

are higher in the aggregate, do not show a general increase. In the monthly statements of the nine English clearing banks there was a steady decline in this item until September, but since then there has been a perceptible increase in most cases. Deposits, with which in the table we have included undivided profits, show a very appreciable decrease. According to the monthly figures, this reduction has taken place fairly steadily. On the assets side, the outstanding feature is the reduction in bills discounted, with which, in most cases, as already mentioned, are included Treasury bills. A very large part of this reduction took place in the first half of the year—again judging by the monthly figures—when the attractions of Treasury bonds accounted for a transfer of a large amount of the banks' investments from Treasury bills to the longer dated Treasury bonds. Mr McKenna, in his address to the London Joint City and Midland shareholders, to which further reference is made elsewhere in this issue, had much to say on the question of the decline in deposits and in the Treasury bills held by the banks, which he described as "a measure of deflation effected in pursuance of a declared policy, and resulting in a total reduced purchasing power of £200 millions." But we cannot follow Mr McKenna in his endeavour to prove that the Treasury's financial policy in 1922 is to any great extent responsible for the present condition of trade and unemployment. It is quite true, as he says, that a quick return to pre-war prices would be disastrous from a budgetary point of view, and that stability is the present desideratum. But he is on less firm ground when he blames the Treasury for taking advantage of the favourable movement of money rates to convert a substantial portion of the floating debt into longer dated bonds, and ascribes the decline in deposits to these operations. Bankers have not been unwilling to make advances to industry during 1922; but trade has been beset with too many difficulties to take advantage of the comparatively low money rates that have prevailed in 1922, and much of our floating capital has therefore been invested in the stock markets. This might to some extent have been checked by a deliberate policy of inflation; but in the absence of such an artificial stimulus, the openings in industry for profitable employment of purchasing power were very small. The cause of the reduction in the money turnover in trade cannot be found in the reduced supply of Treasury bills, and the consequent fall in deposits, but must be sought elsewhere. As a matter of fact, during the most severe part of the trade slump deposits were still increasing, while during the past year, when deposits have been falling, prices have been relatively steady after the sharp decline of the previous eighteen months.

As a result of the Treasury bill and bond operations, there was a considerable expansion under the heading of investments in the first part of the year, although the last three months saw a falling off in the total. Loans and advances are lower on the year, but the decline is very much smaller than it was in 1921. Indeed, the monthly figures for the last three months of the year showed a very sensible increase in this item. The cash item, which includes cheques in course of collection, shows a slight reduction, but the ratio to deposit liabilities is slightly higher at 16.6 per cent. Money at call is also lower on the year.

We show in the next table how the various items have fluctuated during the year. This gives the aggregate figures of the nine English clearing banks at the end of 1921 and 1922, together with the weekly averages for four separate months:—

	Weekly Averages.					Dec. 31, 1922.
	Dec. 31, 1921.	March, 1921.	June, 1922.	Sept., 1922.	Dec., 1922.	
Capital and reserves	115.9	115.9	115.9	115.9	116.0	116.1
Acceptances	59.1	57.1	55.2	49.9	72.8	73.0
Deposits (incl. undiv. profits, &c.)	1,813.5	1,746.9	1,755.2	1,650.6	1,684.7	1,587.8
Total liabilities	1,988.5	1,919.9	1,926.3	1,836.4	1,873.5	1,876.9
Cash, notes, balance at bank, and cheques in course of collection	295.7	245.8	251.3	233.2	253.0	279.9
Money at call	106.1	102.5	113.0	104.4	106.9	107.5
Investments	344.0	392.7	412.0	405.8	394.5	381.7
Discounts	409.1	350.5	346.1	295.9	298.3	278.9
Loans and advances	750.8	746.2	723.3	711.3	732.7	728.1
Cover for accept., premises, &c.	83.8	82.2	80.5	75.8	99.0	98.8
Total assets	1,988.5	1,919.9	1,926.3	1,836.4	1,873.5	1,876.9

At the end of 1920 the total deposits of these banks were £1,804 millions, and during the year 1921 there was a slight increase. The year 1922 is thus the first since the war period in which there has been a definite reduction in banking deposits. The movement in total bank deposits since 1913 may be seen from the following table, the figures in which are taken from our annual banking numbers, with the exception of those for 1922, which includes an estimate for those banks whose reports have not yet been published:—

DEPOSITS at DECEMBER 31st.
(Million £'s.)

	1913.	1916.	1917.	1918.	1919.	1920.	1921.	1922.
English	809.4	1,154.9	1,365.3	1,583.4	1,874.2	1,961.5	1,977.9	1,834.2*
Scottish	125.9	166.6	196.5	221.1	259.6	279.2	291.1	271.2*
Irish	70.7	83.7	99.3	131.6	166.2	200.4	212.9	203.9*
Private	27.1	39.2	44.7	51.3	56.2	50.9	48.3	42.7*
	1,033.1	1,444.4	1,705.8	1,988.4	2,356.2	2,492.0	2,527.2	2,352.0

* Partly estimated.

The decline in total deposits during the year is 6.9 per cent., the increase from the end of 1913 to the end of 1921 having been 144½ per cent.

In the final table we show the principal items of the balance-sheets of each of the three discount companies for the past two years:—

1921.

	Capital and Reserves.	Loans and Deposits.	Bills Rediscounted.	Cash.	Short Loans, &c.	Investments.	Bills Discounted.
Alexanders	£ 870,000	£ 18,931,991	£ 2,523,491	£ 477,054	£ 651,319	£ 2,511,777	£ 18,955,449
National	1,346,665	22,379,040	14,701,190	5,90,083	2,223,657	1,890,717	34,125,925

1922.

	Capital and Reserves.	Loans and Deposits.	Bills Rediscounted.	Cash.	Short Loans, &c.	Investments.	Bills Discounted.
Alexanders	£ 1,000,000	£ 17,756,879	£ 1,692,619	£ 471,141	£ 302,219	£ 2,553,308	£ 17,412,608
National	1,316,565	21,852,414	16,911,235	644,115	1,465,113	5,138,436	35,497,409
Union	2,200,000	33,139,416	6,793,272	1,274,377	2,300,940	4,819,914	37,484,422
	4,516,565	72,748,709	25,397,126	2,389,633	4,968,271	12,511,658	80,394,439

The net profits of these companies rose substantially in 1922—Alexanders' from £141,000 to £188,200; the National's from £165,300 to £190,700; and the Union's from £245,600 to £316,600—and this in spite of the lower profit margins in force. The chairman of Alexanders Discount Company, at the annual meeting last week, stated that a margin between the rates for money and bills hardly existed in the first half of the year (it was actually about 1s), and though it was better in the second half, the average for the whole year was only about 6s, as against 12s in 1921. The large increase in profits is, therefore, a very creditable performance. It is attributed by the chairman of Alexanders to "the policy of taking advantage of the rise in the value of investments bought when conditions were less favourable." The movements in the balance-sheet figures are by no means similar. The loans and deposits of the first two are lower, but those of the Union are slightly higher. Alexanders and the Union both show lower totals of bills discounted, and of bills rediscounted, but both these items are higher in the case of the National. The net amount of bills on the books is slightly lower in the case of Alexanders and the National and higher in the case of the Union, there being an increase of one million in the total. The chairman of the National Discount mentioned that the total amount of bills discounted by the company during the year shows an increase of more than £4 millions over the previous year, and added that investments show an increase owing to the fact that "with a low discount rate it becomes more profitable to hold investments." Mr Colin F. Campbell, chairman of Alexanders, professed to see signs of a revival in trade "in several important directions, and there also seem to be rather more trade bills coming on to the market." Colonel Peel, the chairman of the National, refused to make any forecast, but suggested that, while the market can carry a far larger amount of Treasury bills than formerly, when trade revives "there will be great competition between commercial bills and Treasury bills, and both trade finance and Government finance will suffer accordingly."

THE MOSUL QUESTION AND THE LEAGUE.

It is conceivable that, at the last moment, the Turkish Delegation at Lausanne may waive their refusal to refer the Mosul question to the League of Nations. But if they remain obdurate, the British Government will take this step of its own motion, as, under the terms of the Covenant, it is entitled to do, and in that case the efficacy of the League will be put to a more serious test than any that it has undergone hitherto. The relevant clauses of the Covenant are XI., under which any war, or threat of war, under any circumstances, is declared to be a concern of the League, and any member is empowered to bring matters threatening international peace to the attention of the Assembly or the Council; XVI., which binds all members of the League to institute economic sanctions, backed by military force, against any Covenant-breaker; and XVII., which provides for cases in which one party to a dispute is outside the League, like Turkey in the present instance. Such parties "shall be invited to accept the obligations of membership in the League for the purposes of such dispute, upon such conditions as the Council may deem just." Should the invitation be rejected and hostilities opened, then the offending State is to be subject to all the sanctions of Article XVI., just as if it were a permanent or a provisional member. Clearly the dispute over Mosul is precisely the kind of question envisaged in these Articles, and, indeed, in the whole Covenant. There is at present peace on the frontier between Iraq and Turkey; but the Turkish Government and the mandatory of Iraq have put forward conflicting claims in regard to a portion of the Iraq territory, and a danger of war has undoubtedly arisen out of their failure to reach agreement through direct negotiation. Moreover, the League is in this case doubly concerned, for the disputed province forms part of a country mandated by the League itself to Great Britain, and the frontier which the British Government wish to maintain and the Turkish Government to alter was approved by the League when the mandate was granted. Even if Great Britain and Turkey had agreed, no modifications in the *status quo ante* could have been made unless the League had also concurred.

The nearest precedent to the present case is the successful invocation—or, more accurately, threat of invocation—of the League when Albania was invaded by Yugoslavia. In this instance, though aggressive warlike operations (and that by a strong military power against a much weaker one) were already in full swing, the mere announcement by the British Government of its intention to summon a special meeting of the League Council was sufficient to secure the withdrawal of the invading forces. The augury is a good one, but it would be a mistake to be optimistic before thoroughly realising the differences between the two sets of circumstances. Yugoslavia, though militarily far better placed than Turkey, was amenable in a more than proportionate degree to economic sanctions. The mere threat of reference to the League set the dinar falling on the London market, and this was what induced the Yugoslav Government to give way so promptly. It may be doubted whether the economic weapon, even if wielded with its full force, will have the like effect upon the Turks. Of course, the Turks want, like any other nation, to reconstruct their economic life on something like a Western standard, but they may value their territorial aims more, and may elect, rather than abandon them, to see Anatolia sink to the economic level of Afghanistan or Abyssinia. And if they do not fear the economic sanctions of the League, still less do they feel its moral authority. They are already inclined to suspect it, on the double ground that it is an "Entente" and a "Christian" organisation. Certainly neither of these allegations is correct. The League contains one Muslim member, Persia, and several other non-Christian members, including one permanent member of the Council, Japan. It also now includes three "enemy" States and all the European neutrals. Still, it is broadly true that the three West European "Principal Allied Powers" have hitherto been predominant in its counsels, and the Secretary-General happens to be an

Englishman. The danger is that the Turks may regard the reference to the League as a device for restoring Entente solidarity in support of the British claims, and may therefore pin their own hopes on an "anti-League" combination of Powers, including Russia and possibly Germany.

LABOUR IN 1922.

The year 1922 has proved one of the most difficult ever experienced in the recent history of this country. Our index number shows a small decline in wholesale prices for the year (from 69.6 to 66.2 per cent. above the level of July, 1914), and the figure for September last (63.5 per cent.) represents the lowest point in the post-war depression. The adjustment of production costs to these new levels has naturally proved a most painful process, and the shaking down of wages which this necessitated is the outstanding feature of the year. Throughout 1921 wage reductions had been in full swing, and the movement continued on almost as large a scale during the first ten months of 1922. The Ministry of Labour Gazette states that these changes for those industries for which statistics are regularly compiled by the Department in 1922 "resulted in an aggregate decrease of about £4,200,000 in the weekly full-time wage rates of nearly 7,600,000 workpeople. The number of workpeople reported to have obtained net increases in wages during the year was only about 75,000, the aggregate increase being about £11,000. In 1921 the changes reported resulted in net reductions amounting to about £6,000,000 per week in the wage rates of nearly 7,200,000 workpeople, and in net increases amounting to nearly £15,000 per week in the wage rates of 80,000 workpeople. On the basis of the available information, it is estimated that weekly full-time rates of wages at the end of 1922 were lower by about 20 per cent., on average, than at the end of 1921." It should be noted that these statistics are exclusive of changes affecting agricultural labourers, police, Government employees, domestic servants, shop assistants, and clerks, and relate to wage rates for a full week, assuming full employment. In the building trades our official contemporary estimates that the wage rates ruling at the end of 1922 represent a fall of 18 to 23 per cent. of those prevailing in December, 1921; while in the coal trade "the only workpeople whose wage rates at the end of December were higher than at the beginning of the year were the lower-paid men, in receipt of special subsistence wages, in Cumberland, South Wales and Monmouthshire, and Scotland. In the case of the great majority of the men, rates of wages were considerably lower at the end of 1922 than at the end of 1921." This general fall in miners' wages varied in the different districts, but the last two months of the year showed some improvement in Northumberland, Durham, Yorkshire, and Scotland. In fact, this halt in the downward movement of wages in November and December was fairly general in all industries, the reduction in that period being less than in any month since March, 1921, even though the number of increases was small. The reduction in the case of iron and steel workers for the twelve months varied, in the case of blastfurnace workers from 8 per cent. in South Wales to 37 per cent. in Cumberland, process workers' wages falling from 8 per cent. in South Wales to from 16 to 34 per cent. in the other principal districts, while labourers' wages were reduced from about 20 to 30 per cent. on the rates of December, 1921. In the engineering industries the reductions for the year averaged between 24 and 26 per cent. on the rates ruling at the end of 1921 in the case of skilled men and about 32 per cent. in the case of labourers; while shipbuilding shows a fall of between 33 and 35 per cent. The total reductions in the cotton industry represent approximately 20 per cent. and in the wool textile industry from 12 to 16 per cent. calculated on the same basis. Of the total reduction of about £4,200,000 per week, to which reference has already been made, reductions amounting to over £4,000,000 were arranged without strikes or lock-outs.

This general fall was only partly compensated by changes in the cost of living. The Labour Gazette index number of retail prices of commodities entering into work-

ing class consumption shows a percentage increase of 92 per cent. over July, 1914, at the end of December, 1921, falling gradually to 80 per cent. at the beginning of June. Then followed a rise to 84 per cent. on July 1st, with a reaction to 78 per cent. at the end of September. A rise to 80 per cent. in November and December was followed by a return to 78 per cent. on January 1, 1923.

For the whole year the average fall of the wage rates of men in full employment was about 20 per cent., as we have seen, and the fall in the cost of living in the neighbourhood of 7.3 per cent. But against this it is necessary to bear in mind that in 1921 a general average fall of about 20 per cent. in wages was accompanied by a fall of approximately 44.2 per cent. in the cost of living, and when it is remembered that the cost of living somewhat outran the rise of wages in the boom, the figures really mean that to-day the real wages of workpeople in full employment are, on the average, about the same as those ruling early in 1920. Of course, the statement that wages have moved *pari passu* with prices is only approximately true as a general average, and makes no allowance for the fact that movements have varied considerably in the different industries, so that while some workers are better off, others are definitely worse off than before. The statement has also to be qualified by the consideration of the great increase in unemployment—for which allowance must be made in arriving at the total income of the wage-earners of the country.

Employment was bad in nearly all the principal industries in 1922. "There was a gradual improvement from February until the autumn, however, and notwithstanding a seasonal decline in certain industries in November, employment at the end of 1922, though still bad generally, showed an appreciable improvement as compared with the beginning of the year. The proportion of insured workers registered as unemployed had fallen to 12.2 per cent., and there was also a substantial reduction in the numbers working short time. The total number of applicants for employment on the live register of the Employment Exchanges in Great Britain and Northern Ireland at January 1, 1923, was 1,542,000, of whom 1,199,000 were men and 255,000 were women, the remainder being boys and girls. At January 10, 1922, the corresponding total was 1,882,000, of whom 1,440,000 were men and 332,000 were women. As some unemployed persons do not register at the Exchanges, these totals do not fully represent the total numbers unemployed, but they provide an indication of the improvement in employment in 1922."

The Ministry of Labour Gazette gives the following tabular summary of monthly changes during 1922:—

Date (End of Month).	Unemployment in Insured Trades.			Percentage Unemployed in Trade Unions Making Returns.
	Percentage of Unemployment Books Remaining Lodged.			
	Males.	Females.	Total.	
1921.	%	%	%	%
December	18.2	11.2	16.1	16.5
1922.				
January	18.0	11.0	16.0	16.8
February	17.5	10.7	15.5	16.3
March	16.5	9.2	14.4	16.3
April	16.8	8.6	14.4	17.0
May	15.9	7.3	13.5	16.4
June	15.3	6.1	12.7	15.7
July	14.8	6.0	12.3	14.6
August	14.4	6.1	12.0	14.4
September	14.2	6.3	12.0	14.6
October	14.2	6.3	12.0	14.0
November	14.4	6.9	12.4	14.2
December	14.0	7.3	12.2	14.0

The trade union figures include a disproportionately large number of returns for engineering and allied trades, in which employment was much worse in 1922 than in other industries. At the same time, these figures indicate an improvement, which would appear still greater if allowance were made for the reduction in the number of workers working short time.

The number of trade disputes was much smaller in 1922 than in any year since 1918. The total number of disputes in Great Britain and Northern Ireland was 565, as com-

pared with 763 in 1921; the number of workpeople involved approximately 555,000, as against 1,829,000 in 1921; and the loss of working days 19,900,000 (over 13 million being due to a lock-out in the engineering industry), as compared with 86,000,000 working days lost in 1921.

This summary of labour conditions in 1922 amply bears out the statement of Mr McKenna in his speech on Wednesday: "The relations between Capital and Labour," he said, "are on a far better footing than they were two or three years ago. Post-war illusions have been dispelled, and there is a general disposition to face realities."

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

THROUGHOUT last year the conditions prevailing in the Lancashire cotton industry were very unsatisfactory. The business done was larger than in the previous year, and the Board of Trade returns show much bigger shipments of yarn and cloth than in 1921. The demand, however, was not sufficient to keep all the spindles and looms at work, and unemployment was on an extensive scale. The year was notable for increased financial stringency, and numerous failures were reported. Trouble of this kind was largely due to the further depreciation in the value of goods, the drop in foreign exchange rates, and the refusal of dealers abroad to accept deliveries against old contracts.

The average price of American cotton in Liverpool last year was 12.5d per lb, against 9.97d per lb in 1921. The lowest quotation for Fully Middling on the spot in Liverpool was 9.51d on February 6th, and the highest price was 15.65d on November 10th. The American crop for 1921-22 was very disappointing, the actual growth being only 8,500,000 bales. The consumption during the twelve months was estimated at 12,800,000 bales, and stocks throughout the world were reduced by over 4,000,000 bales. It was estimated at the end of last July that supplies were about 5,000,000 bales. Last spring there was a hopeful feeling with regard to the prospects for 1922-23. During the summer, however, the plants did not do very well, and there was a tendency to reduce forecasts of the output. The crop will probably be about 10,000,000 bales. It is rather difficult to estimate the probable consumption, but it is not likely to be less than 12,000,000 bales, so that stocks throughout the world will again be reduced at the end of this season, and it is probable that the carry-over next July will be about 3,000,000 bales. The average price of Egyptian cotton in Liverpool during last year was 18.18d per lb, against 18.09d per lb for the previous year. The lowest quotation for Fully Good Fair Sakellaridis on the spot was 15.50d on February 6th, and the highest quotation was 22.25d on January 3rd. The Egyptian crop for last season was larger than expected, and amounted to 5,488,000 cantars. The prospects for 1922-23 are encouraging, and there is every likelihood of a yield of over 5,000,000 cantars.

Owing to the larger trade done in piece goods during the year, the home consumption of yarn increased. Shipments to foreign outlets were also much bigger than in 1921. From month to month, however, the position of spinners was very unsatisfactory. There was not sufficient trade to enable sellers to secure profitable prices for their production. Numerous companies experienced very severe losses. The trade situation was rather better towards the end of June, and in the following month there were indications of business becoming remunerative. The improved position, however, was not maintained, and towards the end of the summer the situation became worse. In September spinners engaged on American cotton decided to organise short time, and since then the mills have worked only 35 hours a week instead of 48. In all kinds of American yarn the demand, except on a few occasions, was of a dragging character. Users only purchased from hand to mouth, and at no period was there any disposition to anticipate future requirements. Speaking generally, spinners of Egyptian yarns did rather better than producers of American qualities. There was not the same amount of curtailment of production in

Bolton as in Oldham. The prices ruling, however, for fine yarns were not at all satisfactory.

The following is a comparative table of yarn exports:—

	Lbs.	£
1913	210,099,000	15,006,291
1920	147,432,400	47,585,814
1921	145,894,900	23,924,879
1922	201,220,800	26,436,489

The record year for yarn shipments was 1884, when 270,904,000 lbs were exported. Last year compared with 1921 we shipped on a freer scale to the Netherlands, Germany, Switzerland, Bombay, China, and the United States, there being small decreases in the takings of Roumania, Turkey, and Bulgaria. The average price paid for yarn by foreign customers last year was 31.53d per lb, against 39.36d per lb in 1921, 77.71d per lb in 1920, and 17.14d per lb in 1913.

On the whole, it may be stated that demand in piece goods last year was rather better than in the previous 12 months. But no buying movement was of long duration, and manufacturers were compelled to accept orders at prices which showed a loss, or only just covered the cost of production. The business done was not sufficient to strengthen the position of makers. On certain occasions a buying movement came to an end when there were indications of sellers getting into a stronger position, and being able to enforce remunerative terms for contracts. It was estimated a year ago that nearly half the looms in Lancashire were standing idle for want of work. In February inquiry broadened, and as producers were booking more orders there was an increase in production, and less unemployment amongst the operatives. The better demand kept up fairly well, and during the summer it looked as though a definite turn in the state of trade had taken place. By the end of July about 90 per cent. of the looms were working, and in certain sections of manufacture employers were booking orders at a profit. A quieter feeling then set in, and the slacker state of affairs was intensified by the political crisis in the Near East. Manufacturers as a body began to lose ground, and towards the end of the year there was a tendency for more machinery to stand idle. Demand for India during the 12 months was very irregular. The most encouraging market in India was Calcutta. Dealers in Bombay were slow to recover from the slump in prices, and much difficulty was experienced by Manchester merchants in effecting satisfactory arrangements relating to the taking up of goods against old contracts. Shipments of piece goods to China during the year were larger than in 1921. A fairly substantial business was done last February, but a little later further purchasing was checked by the unsettled political situation. Trade with Turkey, as can easily be understood, was considerably disturbed by political events. The crisis in September caused consternation to numerous Manchester firms, and many houses suffered severe losses. A fairly encouraging business was done for Egypt, and towards the end of the year there was an improvement in the demand for the outlets of Central and South America. A feature of interest was the export of large quantities of goods to the Continent for finishing processes, charges there being much lower than in England. Most of the home trade houses experienced a moderate year. A better state of affairs prevailed in the spring, but during the summer, owing to the unfavourable weather, clearances in light fancy materials did not come up to expectations. Calico printers, dyers and bleachers, were not able to run all their machinery, but they secured remunerative prices for the work done.

The following is a comparative table of cloth shipments:—

	Yards.	£
1913	7,075,252,000	97,775,855
1920	4,435,405,000	315,717,631
1921	2,902,288,900	137,132,298
1922	4,181,176,300	142,415,686

The average price paid for cloth last year was 8.17d per square yard, against 11.34d in 1921, 17.08d per yard in 1920, and 3.32d per yard in 1913. Last year, compared with 1921, exports were much larger to Switzerland, Bombay, Australia, Bengal, China, Germany, and the Argentine Republic. There was a decrease in

the takings of the Dutch East Indies, Morocco, Syria, and Egypt.

According to an analysis of the stocktaking reports of 270 spinning companies for 1922, the average dividend was 4.01 per cent. on ordinary share capital, compared with 7.83 per cent. for the same concerns in 1921. The total paid-up ordinary share capital of these companies is £38,877,340, and the factories contain 27,120,714 spindles. A very unsettled feeling prevailed throughout the year in the cotton mill share market. There was considerable nervousness with regard to calls. A few companies, owing to financial difficulties, had to go into liquidation or come to some special arrangement with loan holders.

The wages agreement between the employers and the trade unions expired in March, and the masters in both spinning and weaving departments put in a claim for a substantial reduction. The negotiations were of a protracted character. At the end of April a settlement was reached, which provided for an immediate reduction on list rates of 40 per cent., or 3s 3d in the £, on current wages, and a further reduction in six months of 10 per cent. on list rates, or 10d in the £, on current wages. It was agreed that no further change in list rates should take place for twelve months, wages thus being stabilised until next May. When the agreement expires it will be necessary for either side to give one month's notice of any proposed further change. The wages now being paid are 95 per cent. above the lists, and 90 per cent. higher than in 1914.

Since the turn of the year there has been a distinct improvement in the demand and the amount of business passing in cotton yarn and cloth in the Manchester Market. A trade revival has undoubtedly taken place. Owing to the severe depression spinners and manufacturers are rather slow in obtaining relief, and most of the contracts have been arranged at very poor prices. If the present activity is maintained it will not be very long before all the spindles and looms in Lancashire are running at full stretch. The political situation in Europe is a disturbing feature, but in other directions the outlook is promising. With regard to India the trade prospects are bright. The monsoon last season was very good. Food prices are low, and it is believed that the natives this year will have plenty of money for clothes. High prices for goods may prevent a big business, but there is every likelihood of freer buying during the next two or three months. It is difficult to estimate the probable demand for China during 1923. Stocks in the Far East are not heavy, but a very unsettled feeling prevails with regard to the Government. What may happen in the Near East is an unknown quantity, and probably it would be as well not to expect too much from Turkey and the Levant, but, on the other hand, Egypt is fairly prosperous, and should be in a position to absorb considerable quantities of cotton goods. It is reasonable to anticipate that the financial stringency will become less acute before very long. It is possible that the organised short time in the American spinning section will be abandoned at the end of January. In taking a broad view of the situation the year 1923 is not likely to be a period of booming trade, but there are grounds for believing that in less than twelve months the severe depression which now exists will have been relieved, and spinners and manufacturers should be in a position at an early date to secure prices which are profitable.

LAND AND PROPERTY IN 1922.

ALTHOUGH the general prevailing industrial depression had little further adverse effect upon conditions in the property market during the year when compared with the previous year's results, dealings continued to be transacted on a restricted scale mainly owing to the unwillingness of many owners to recognise changing circumstances and accept prices more in accordance with the general fall in values.

According to the official figures compiled by the Estate Exchange, recorded sales of property fell from £10,838,946 for 1921 to £10,436,793 for 1922, thus revealing a decline of £422,243, which, taking all the

existing circumstances into consideration, must be considered as highly satisfactory. In the tables given below these figures are grouped under three headings—(1) Sales of property during the year at the headquarters of the property market; (2) auction sales in other places, which are registered with the Estate Exchange; and (3) sales by private treaty of which the parties interested consent to publish details. As has been pointed out before these figures give but a limited view of the statistical picture, for while some auctioneers are inclined to preserve a discreet silence as to their sales, others, on the other hand, may possibly include in sales properties which were merely submitted to the public, but bought in. In private sales the position is even more uncertain, there being so many interests at work which often prevent the correct sale price from leaking out. In the first table we show a comparative summary of sales from 1912:—

COMPARATIVE SUMMARY OF SALES
(000's omitted.)

	1912.	1913.	1914.	1915.	1916.	1917.	1918.	1919.	1920.	1921.	1922.
Mart	2,554	2,346	1,866	8.4	929	1,546	2,299	6,251	5,655	5,730	3,042
Other sales	4,698	4,039	3,462	1,824	2,917	5,546	7,148	9,234	7,581	5,377	3,322
Private	1,837	2,189	1,357	1,942	1,232	1,435	1,935	6,067	5,040	4,451	4,075
	9,089	8,574	6,685	3,570	5,108	8,527	11,382	21,542	18,276	10,859	10,437

Sales began to decline, it will be noticed, in 1913. This was the year when a pronounced fall in property values took place, which continued until the end of 1915. Agricultural land, however, came into request fairly early in 1916, and the land boom continued until 1920. Figures for 1917 included sales of enemy bank and other property, while house property came into demand early in 1919. The commencement of the depression in agricultural land values is noticeable in the results for 1920; but the acute shortage of housing caused increased demand for residential property, and assisted to maintain the total volume of business at just a few millions under the figures for 1919. The totals for 1921 and 1922 show the aftermath of the artificial conditions prevailing in the more immediate post-war period.

The monthly and quarterly figures of property sales for the past year are as follows:—

1922.	The Mart and Winchester House.	London and Country.	Private Contract.	Monthly Total.	Quarterly Total.
January	143,943	102,501	123,300	369,744	
February	88,658	117,542	200,385	406,585	
March	327,756	86,686	123,275	537,717	
First quarter	560,357	306,729	446,961		1,314,047
April	56,965	199,724	201,225	658,314	
May	427,220	211,000	674,500	1,242,720	
June	337,830	373,444	751,570	1,462,844	
Second quarter	1,222,015	784,168	1,567,695		3,563,878
July	58,438	408,465	511,460	1,501,353	
August	2,000	443,159	239,854	684,833	
September	111,136	383,715	317,845	812,696	
Third quarter	696,574	1,235,339	1,068,969		3,000,882
October	335,507	166,929	241,000	743,436	
November	268,573	671,658	393,310	1,333,541	
December	160,746	157,513	364,600	682,919	
Fourth quarter	764,826	996,160	996,910		2,757,896
Grand total					10,436,793

Compared with results issued a year ago, the first quarter is up by about £50,000, but the second quarter, at £3,363,878, is £883,400 lower. The third quarter is £315,400 less, while the last quarter is about £100,000 higher.

A distinct falling off is noticeable for agricultural land, and buyers are now exercising considerable discrimination in purchasing. Indeed, it is now only possible to effect sales of indifferent farm land at comparatively low prices, but, on the other hand, selected areas in special districts are eagerly sought, and fully maintain their values. A few details of large agricultural estates are worth

recording. Thus, 19,363 acres near Linlithgow and Stirling belonging to the Duke of Hamilton sold for £350,000, while the Sarsden Estate of 9,000 acres in Oxfordshire realised £176,000; 5,900 acres of the Kipley and Ogle Estates, Morpeth, made £120,000, and in Surrey, 1,835 acres, the property of the Duke of Northumberland, brought in £70,000, the tenants securing many lots. The *Estates Gazette* estimates that prices averaging £45 to £50 per acre were paid for farms, and £80 to £100 per acre for accommodation land near Stockport, Cheshire; £500 per acre was obtained for market garden land in Haresfield, Middlesex; £125 per acre for land in Coulsdon, Surrey; £186 per acre in Kingsbury, Middlesex, and £57 10s per acre in Taunton Vale, Somerset.

Property in the City of London within the magic line of the "one square mile" continues to steadily improve in value. The offices of the Guardian Insurance Company, Nos. 10 and 11, Lombard street, were unsold, however, at £350,000, this sum working out at £83 per square foot. A building site in Gresham and Wood Streets made £5 9s per foot, and one in Fenchurch-street £4 6s per foot. A noticeable feature in the demand for City property is the steady improvement of values in Bishopsgate and Houndsditch areas, big banking and insurance institutions no doubt driving less opulent traders into these districts. Shops in leading positions, Messrs Hampton and Sons state, are still greatly in demand, and this firms proceeds to add, "we have but little difficulty in expeditiously placing any, not only in London but the chief suburbs and provincial towns that are placed in our hands for disposal." The large number of new buildings recently erected and in course of erection in the West-End has so increased the supply of offices that for the moment this is rather beyond the demand. It is considered, however, that this is a purely temporary phase; with increased business activity many firms that have, during the last year or two of difficult times, been marking time will launch out into larger and more modern premises, while better business conditions will also encourage the opening up of new branches and the launching of new ventures. A fair demand has been met for factory and warehouse premises, but naturally the general industrial depression has prevented any considerable demand in this direction. The most significant feature in town property has been the continued demand for flats. Messrs. Hampton and Sons, in their annual review of the estate market, state that flats of all descriptions have been greatly sought after, irrespective of rental, although premiums have tended to a more normal level. They point out that they "have had no difficulty in disposing of the few 'super' flats that have come into the market, and state that there is no doubt the demand for really fine suites with 8 to 10 bedrooms is greater than ever," adding that "flats in St. James's, Mayfair and Westminster are never many weeks in the market unless the terms are prohibitive." This firm also refers to many houses, "hitherto the town residences of families bearing old and honoured names having been purchased for offices, clubs, and business premises." The low-built, non-basement and "period" town and country house invariably finds a ready market; sales have been numerous, and prices, generally speaking, have been satisfactory. Large town houses continue to be purchased for the purpose of converting into maisonettes, and this latter class of housing accommodation shows no falling off in popular demand. Complaints, however, continue to be heard of unjust restrictions placed upon leaseholders by freeholders.

From the purely investment standpoint property has experienced a rather better demand during the year, but occupied property of the suburban villa type coming under the Rent Restrictions Acts is exceedingly difficult to sell. Large blocks of flats in the West-End and in the better class suburbs change hands in an increasingly greater volume at prices substantially above 1914 values. What is usually known as "working class property" has found an easier market. Possibly because investors are beginning to find that with the decline in repairing costs and the 40 per cent. rent increase permitted by the Acts, this description of property gives a fairly generous revenue yield.

GOLD MINING ON THE WITWATERSRAND.—II.

(FROM A CORRESPONDENT.)

JOHANNESBURG, December 19, 1922.

I WILL now do my best to set forth in language free of technicalities certain salient features about the five mines as to whose position I made investigations whilst on the Rand, and will state my personal views as to the value of their respective shares from the investor's point of view and on a conservative basis. But it must be clearly understood that the figures and conclusions which follow are in no sense official.

Attention is drawn to the fact that all these five mines except "Crown Mines" are situated in the Far Eastern Rand, where, owing to the flatness of the reef, working conditions are easier than either in the Central or Western Rand, and where, in consequence, there is far less chance of any shortage of native labour.

It should be noted that British income-tax on South African gold-mining shares is now about 2s 10d, and not 5s in the £. This is because the several companies are incorporated in the Transvaal, and pay the South African income-tax of 1s 6d, as also the dividend tax of 1s 6d, direct to the Union Government of South Africa, not deducting it from the actual nett figure declared and paid to shareholders. Holders on the London registers, therefore, have a varying amount, usually about 2s 10d in the £, deducted from the full amount of the dividends declared. And this is all which is deducted, as the balance of the tax due has been already paid direct by the companies in South Africa.

It should be noted, also, that in the calculations which follow as to values of shares, all reinvestments for amortisation are figured as being made in securities yielding only 4 per cent. net per annum, and that, in order to allow for income-tax at 2s 10d in the £, a sixth part of the sums which would have to be set aside annually for reinvestment on account of amortisation if there were no income-tax has been added to such sums. But the addition of this sixth only applies to shareholdings on the London registers. As South African shareholders have no income-tax deducted at the source, they can afford to bid a slightly higher price for shares than European holders, as—

1. Their net dividends are more.
2. They do not have to set aside so large a proportion of their dividends for amortisation, though it may be mentioned that a relatively small income-tax is charged on total incomes over a certain amount on assessment in South Africa.

1. *New Modderfontein*.—This mine of relatively high grade, situated in the favoured Far Eastern Rand district, has over six and a-half years' ore in sight, of about the same average grade as that which, before sorting out 11½ per cent., was treated in the year ending June 30, 1922. It has a probable future life of 19 years, and there are good reasons for believing that its unexplored portions will continue up to the average of the explored part. There has been an increase of the tonnage treated on this mine since June 30, 1922, which will, if continued, probably enable it to pay an average dividend of 10s a year for the rest of its life. But it is necessary for a shareholder on the London register to deduct 3s 7d a year from his dividend for amortisation of the present price of 85s a share, leaving a return of 6s 5d, or about 7½ per cent., on this price, without allowing for income-tax.

As the premium on gold is rapidly disappearing, it is essential to see how this will affect the financial position of the company. The premium on gold for the year ended June 30, 1922, accounted for 7s 7d per ton milled. Costs have already fallen 6s 2d per ton, and it may be assumed that they will fall another 1s 6d in time, owing to a further probable reduction in cost of mining stores and materials. When this happens, therefore, it will be seen that the position will be 1d per ton better, even when the premium on gold disappears altogether, than it was in the last financial year. But in spite of this indication that the average dividend of 10s per share can be maintained with the increased tonnage treated, even when the price of gold falls to normal, it should not be forgotten that all mining investments are risky. So the prudent investor needs a good return on his money to com-

pensate him for the risk run. I do not consider the yield on the present price sufficient, and therefore value the shares for European holders at no more than 70s, to yield about 10 per cent., without allowing for income-tax, but making the necessary allowance for amortisation of the capital invested, and assuming that taxation whether in South Africa or England will not be increased, and that freedom from further labour troubles is assured.

2. *Modderfontein Deep Levels*.—This mine, of relatively high grade, situated in the favoured Far Eastern Rand district, has seven years' ore in sight, of about the same average grade as that which, before sorting out 21½ per cent., was treated in the year ending December 31, 1921. It has a probable future life of 13 years, and it is almost certain that its unexplored parts will continue as good as those which have been exposed. This company paid dividends aggregating 7s 6d for the year 1921. But it is doubtful if it will be able to keep this rate up over the whole of its future life. It is safer to put the average dividend for the rest of its future life of 13 years at 7s only. And it is necessary for a shareholder on the London register to deduct 3s 5d a year from his dividend for amortisation of the present price of 49s a share, leaving a return of 3s 7d a year on this price, or about 7½ per cent., without allowing for income-tax.

The premium on gold for the year 1921 accounted for 11s 4d per ton. As costs have now fallen 4s only, it will be seen that the company will at first have a difficulty in keeping up the 1921 dividend of 7s 6d, if and when gold falls to standard price. It may be assumed that mining costs will in time fall another 1s 6d on further reduction of costs of stores and materials, leaving 5s 10d per ton, or 1s 1½d per share, to be made up before the old rate of dividend can be resumed, if and when the premium on gold vanishes. The present tonnage treated is about normal, and there is no suggestion of increasing it. So that it is probable that, as soon as the price of gold falls to normal, the dividend will be around 6s 4½d for a time, and gradually increase. The 7½ per cent. return on the present price of the shares is, in my opinion, too low for the risk run. So I value the shares for European holders at 41s only, to yield 10 per cent. without allowing for income-tax, but making the necessary allowance for amortisation of the capital invested, and assuming that taxation, whether in South Africa or England, will not be increased, and that there will be freedom from further labour troubles.

3. *Government Gold Mining Areas (Modderfontein) Consolidated*.—This mine, of relatively high grade, situated in the favoured Far Eastern Rand district, has between five and six years' ore in sight, of somewhat higher average grade than that which, before sorting out about 15 per cent., was treated in the year ending December 31, 1921. It has a probable future life of 25 years, though it is clearly speculative whether its unexplored part will continue to be as good as the part already explored. Though the total dividend for 1921 was only 11s, it should be noted that 11s 6d was earned, and that a higher tonnage is now being treated. So it seems right to assume that an average dividend of 12s can be paid over the 25 years of the mine's future life, provided that values keep up and taxation be not increased. But it is necessary for shareholders on the London register to deduct 3s a year from their dividends for amortisation of the present price of 109s a share, leaving a return of about 9s a year on this price, or a little over 8 per cent., without allowing for income-tax.

This is a mine leased by the Government, and, according to the terms of the lease, it is not liable to further taxation. Further, by the terms of the lease, only part of the loss which would be occasioned by a rise in working costs, or a fall in grade of ore milled, would be borne by shareholders, as the Government's percentage of the reduced profits occasioned by such adverse circumstances would be less than that of the shareholders. The latter are thus put in a favoured position in the event of things going badly, though the Government gets the best of it when things are going well, as then it gets a greater percentage of the profits. The favourable terms of the lease from the shareholders' point of view, and particularly the non-liability to further taxation, can be set off as partial compensation for the risk run in having over half of the mine's area unexplored and, even though developments in

adjacent mines indicate a favourable future, yet some stretches of the unexplored ground are certain to prove unpayable.

The premium on gold for the year 1921 amounted to 8s 6d per ton milled. Costs have since fallen 3s 5d. Allowing a further 1s 6d for future reduction in cost of mining stores and materials, it will be seen that there will still be 3s 7d per ton, or 2s per share, to be made up before the company will be able to keep up its past earnings on the basis of those of the year 1921, if and when gold falls to standard price. It is probable, therefore, that, when this happens, and if there is no further increase in the tonnage treated, the dividend will have to be slightly reduced. But it is likewise probable that sooner or later a still greater tonnage will be treated on this mine than that which is already being treated. This naturally means a shorter life, but bigger annual dividends.

I value the shares for European holders at 86s, to yield about 11 per cent., without allowing for income-tax, but making the necessary allowance for amortisation of the capital invested, and assuming that taxation, whether in South Africa or England, will not be increased, and that there will be freedom from further labour troubles.

Notes of the Week.

Bankers on the Trade Outlook.—Two of our leading bankers, Mr McKenna and Mr Goodenough, have this week, in their addresses to the shareholders of the London Joint City and Midland and Barclays respectively, delivered important reviews of the trade position and outlook; and these reviews are none the less interesting because these two authorities do not look through spectacles whose focus is quite identical. Both start from the premiss that the bottom of the trade slump has passed and that some recovery in general trade has set in, and both approach the question of how the recovery can be developed. Both recognise the blow to our trade caused by the chaos in Europe. Mr Goodenough lays stress, too, on the obstacle erected by the Fordney Tariff in the United States, and argues:—"The effect of the Fordney Tariff, however, must be to compel us to seek new sources of supply of foodstuffs and raw materials, and to develop markets in other parts of the world for our trade, especially in India, with its great population, and in the East, and in the Dominions and Colonies of the British Empire, who in their turn can send to America their raw materials and other merchandise which America cannot produce for herself." This leads him to his main theme, namely, the development of Empire trade, and so refreshingly optimistic is he that he can see in this field "a reassuring prospect in the face of what could not otherwise fail to be a paralysing blow." To optimism in this direction Mr McKenna's speech applies a cold douche of economic argument. The keynote of the latter's review is the interdependence of nations in trade. He combats the theory that loss of trade in Europe can be disregarded and recouped elsewhere. "A very brief study of the general course of foreign trade will show that whatever injures it in one part of the world has its reaction elsewhere, and that any confident hopes, based on the comparatively small proportion of our pre-war exports to stricken Europe, are not well founded. We shall find that the commercial breakdown in Central and Eastern Europe is not only destructive of our markets there, but must hamper our export trade more or less all the world over." This cardinal truth the ex-Chancellor proceeds to illustrate with some apposite figures. In 1913 we sold to India goods to the value of £70 millions, and received from her goods to the value of £36 millions, which left an export balance of £34 millions. In the same year our exports to Germany were valued at £41 millions and our imports from Germany at £76 millions, which left an import balance of £35 millions. Taking these two principal customers as one group, our imports and exports nearly balanced. Some approach to a balance was to be expected, for India, in her trade with Germany, had an export surplus of £20 millions, "which provided her with the means of paying for British goods." This illustration of "triangular trade" is capable of wide

application to our external commerce, which, before the war, according to Mr McKenna's estimate, "absorbed one-third of the labour of our people." Mr Goodenough rightly stressed the importance of London's resumption of large lendings abroad, but Mr McKenna pointed out the obvious limitations of trade expansion through lending abroad. The latter sees the best hope of trade improvement in the home market, and here, he remarks, "we may find a wise direction of financial policy of the greatest avail." This remark leads him on to the detailed study of deflation and its effects, to which reference is made in a previous column. Mr McKenna's view of the general disturbance of our external trade caused by Central European chaos is shared by Mr Glazebrook, who, in his chairman's address to the shareholders of the Bank of Liverpool and Martins, said:—"While I welcome such signs as there are of reviving trade, I confess I fail to see how that revival can proceed very far in the present distracted condition of Europe." The speeches of these three bankers, and also those delivered at the meetings of Williams Deacons, the National Bank, the Manchester and Liverpool and District, the Union Discount, and the Provident Bank of Ireland, will be found *in extenso* among the reports of company meetings on later pages of this issue.

Irish Free State Legislation.—The Oireachtas of the Irish Free State has resumed its session. The Seanad, under the chairmanship of Lord Glenavy, has busied itself, writes our Dublin correspondent, with the formulation of Standing Orders for the regulation of its business, and with the appointment of its secretariat and officials generally. After asserting its right to control the appointment and dismissal of its own staff, subject to the admitted constitutional right of the Dail to criticise or otherwise deal with its action in debating and voting on the estimates, it passed to the second reading of an Indemnity (British Military) Bill sent up from the Dail. After some discussion, the debate was adjourned "to give the British Government an opportunity, by a similar gracious act, to release every Irish prisoner under its control for a political offence connected with Ireland, in whatever country the offence may have been committed." Amongst others who supported the adjournment, which was proposed by Colonel Moore, a former colonel of the Connaught Rangers, were General Sir Bryan Mahon and Mr W. B. Yeats. Whether or not the procedure adopted was the most apt for furthering the object of the Seanad, it is clearly desirable that that object should be achieved. Other names that figured in the debate were Guinness and Jameson. Simultaneously the Dail was debating an Enforcement of Law (Occasional Powers) Bill, designed not so much for the repression of disorder as for the establishment of civil remedies and the suppression of abuses. The change of system resulting from the Peace Treaty and the civil and military conflicts which preceded and followed it, the conflicting jurisdictions of competing courts, the dislocations and uncertainty which disorder causes, have led to the withholding of money due, and the non-enforcement in many cases of civil decrees. The Government fully realises that the national credit is in a large measure founded upon its internal credit, and that commercial security is the indispensable condition of internal credit. Internal credit in its turn is of even greater importance to the weakest and humblest classes than to the merchant or the trader, for loss of credit means unemployment. The Minister of Home Affairs explained the various provisions for strengthening the sheriff's arm, and for the creation of special military units to afford "adequate—even impressive protection" to the sheriffs and their agents in the execution of decrees. Illicit distillation, "as a factor making for the degradation of our people," is marked down for ruthless suppression. The military arm was to be braced to deal with irregularism and its campaign of destruction. The Bill was duly read a second time, after criticism from Labour that it is unduly drastic. To-day's newspapers publish Government advertisements calling for recruits for one year's service for a large number of battalions—the highest serial number of the latter that is mentioned is 65—and a request is addressed to employers to facilitate recruiting. Earlier in the week the Dublin

Corporation distinguished itself by voting half-pay to all its employees absent from duty through arrest or otherwise in connection with Republican or Irregular activities. It will be recalled that the ill-starred Rory O'Connor, recently executed, had been a Corporation *employee* so paid. The vote was taken in a thin house, and the majority was due to large abstentions which the public attributes to timidity. Official notice has now been given that such payments, if made, will be illegal. And the Government has announced the suspension, temporarily at least, of certain housing grants due to the Corporation.

Trade Unions and Hours of Work.—Our Labour correspondent writes.—The trade-union movement is expecting a developing attack on the present working week. The post-war period saw substantial reductions effected in the hours of labour in almost all industries. Up to now, these gains remain intact. During last year, so far as the Ministry of Labour's knowledge goes, the number of workpeople whose normal weekly full-time hours of labour were increased was nearly 15,500, the increase amounting on the average to about two and a-half hours per week. The workers principally affected were bakers in Scotland. The present year, however, may witness more than one bitter struggle on the hours question. Rightly or wrongly, the trade-union world believes that there is to be a concerted attempt made by employers to lengthen the working day. Employers in many trades have declared that the railway workers and miners ought to submit to a longer working day, with the object of reducing coal prices and transport charges. The Treasury is already seeking to establish longer hours in the Civil Service, for the purpose, apparently, of reducing expenditure on overtime, whilst the building trade employers have formulated a definite demand for the extension of the working week from 44 to 47 hours. The National Federation of Building Trade Operatives has determined to offer the most stubborn resistance to this demand, and has now enlisted the support of the General Council of the Trade Union Congress. The view of the trade-union movement is that if the building trade workers are defeated, the longer hours campaign will be extended to other industries. It is possible that the employers, in view of the large wages reductions which have been secured without stoppages, believe that working hours may be increased merely by determined negotiation. In this, however, they are likely to be mistaken. The trade unions are unlikely to make concessions as regards the working day without putting up a very strong fight.

The Fall in Freights.—The decision of the Commonwealth Government Line of steamers to reduce cargo freights had been expected, and it will only hasten the general reduction in rates of merchandise from this country to the Australian ports, and also homeward rates as well. This naturally will be followed by lower freights to other destinations, and by stimulating the demand for goods overseas the movement will help the trade revival. There is now plenty of steamer space available from the Continental ports to all parts of the world on very cheap terms, and in many cases this works against British shippers when they are competing for business; thus an adjustment has inevitably to be made. In Australia, German shippers are giving preference to German steamers in respect of wool and other shipments, and this competition has to be faced. In the open market orders for grain and rice cargoes are now being given by firms having German connections on the understanding that French, Belgian, or Italian steamers are not employed; and it is perfectly obvious that an era of very fierce rate-cutting will be ushered in as soon as the German merchant marine is stronger than it is just at present. British shipowners are now well equipped for a campaign of this description, but the effects on a mercantile marine like that owned by the United States Shipping Board are bound to be disastrous. It is quite likely that passenger fares will also come under revision later on. They are still far too high, and with increasing competition from foreign steamship lines the British shipping companies now running to South America, South Africa, India, and the East will have to make further concessions. In con-

nection with the movement of coal from this country to France, Germany, Italy, the various bunkering depots, and South America, tonnage has been actively inquired for this week, but the homeward markets have had a very dismal appearance. All sections are glutted with unfixed tonnage, and rates have simply gone to pieces. For steamers to load heavy grain from the South American ports to the United Kingdom or Continent, rates as low as 21s 3d per ton have been taken from not above San Lorenzo, and steamers have been berthed from the up-river ports at 22s 6d, with 21s 3d down-river. This compares with 27s 6d to 30s paid late in December. Grain from the Northern Range has been very weak, with chartering interest stagnant. A re-let steamer took 10½ cents per 100 lbs from the Northern Range to Antwerp-Hamburg, and February steamers have been glad to fix up at 11½ cents per 100 lbs. Sugar from Cuba has dropped to 19s, U.K., at which a moderate business has been done. The Eastern markets have all been affected, and from Bombay nothing over 25s is offering. Rice from Burmah to the German ports has been closed at 30s, with wheat from South Australia to the U.K.-Continent fixed at 40s, which is a decline of 7s 6d per ton on business done late in 1922. Steamers from Wales to West Italy have been making 11s, and 8s 6d was paid to the States, but the demand for American account has dropped off considerably, the outlook for a settlement of the dispute between the coal-owners and miners being much brighter.

Labour and Index Numbers.—The Association of British Chambers of Commerce has revived the discussion about the Ministry of Labour's cost of living index number, and Sir Josiah Stamp has given expression to the ambitions of the association in his proposal for a "production" index number. The question, writes our Labour correspondent, is one of considerable interest to the Labour movement. It would be glad to see the basis of the Ministry of Labour's index number revised, and would, in all likelihood, welcome a discussion on the subject; but it would certainly oppose very strenuously any suggestion that new budgets as a basis for a new index number should be collected now, owing to the state of employment. Clearly, new budgets should be obtained during a time of normal trade. As regards Sir Josiah Stamp's suggested "production" index number, the general view is that it is impracticable. But whether practicable or not, there is not the remotest chance of the trade unions looking with favour on the proposed new index, and it is hardly likely that any Government would make its use compulsory in wages negotiations. It would, however, be a good thing to take the preliminary steps for the compilation of a revised cost of living index number, and it is anticipated that the subject will not now be allowed entirely to drop, especially as the Ministry of Labour has itself admitted the desirability of collecting new budgets.

The "Westminster" Bank.—Not only the City and the business community, but the public at large will welcome the news that one of the large banks is making a move in the direction of curtailing the cumbersome title which a series of amalgamations has produced. The London County Westminster and Parr's Bank, Limited, announces that after the annual meeting to be held next Thursday a resolution will be submitted that the name of the bank be changed to "Westminster Bank, Limited." Although the London and County Banking Company, with which the London and Westminster Bank was amalgamated in 1909, and Parr's Bank, which joined the combined undertaking in 1918, will lose their identity if the new title is adopted—and we cannot imagine that there will be any serious opposition on the part of shareholders—we consider that the name which has been decided upon is the best choice that could have been made, in that the London and Westminster can claim to be the senior joint-stock bank, having been established in 1834, or two years before the London and County Banking Company, while the alteration is not likely to lead to any mistakes, as might be the case were an entirely new title adopted. We sincerely hope that, now that a beginning has been made, the London Joint City and Midland, and the National Provincial and Union Bank of England will

follow this good example. We ourselves will welcome the day when it will be possible correctly to name the "big five" banks in five words.

Messrs Drummond's Balance-Sheet.—Following the example recently set by some of the hitherto reticent private banks, Messrs Drummond, of Charing Cross, whose business was founded as far back as 1717, have this week for the first time published a balance-sheet, which we reproduce below:—

STATEMENT OF ASSETS AND LIABILITIES ON JANUARY 10, 1923.			
Dr.	£	Cr.	£
Current and deposit accounts	3,657,311	Cash in hand and at bankers	383,860
Capital	400,000	Money at call	680,000
		British Government securities	
		at or under market value	677,296
		Colonial Government, railway, and other trustee securities	
		at or under market value	344,918
		Other securities do.	9,718
		Advances to customers	1,501,519
		Bank and adjoining freehold premises	460,000
	4,057,311		4,057,311

This, in common with those of other private banks recently published for the first time, shows a satisfactory position, the ratio of cash to deposits being 10½ per cent., while that of money at call to deposits is over 18½ per cent.

A Proposed Bank Purchase.—In making their announcement of a final dividend for the year 1922, the directors of the London and Liverpool Bank of Commerce have informed the shareholders that they have received from the British Overseas Bank, Limited, a conditional offer to purchase from the shareholders their shares in the London and Liverpool Bank of Commerce, Limited, at the price of £10 5s per share, ex-dividend, payable in cash. The full terms of the offer, with a recommendation to accept it, will be communicated to the shareholders at an early date. No change is contemplated in the general lines on which the bank's business with its customers has been conducted. This announcement has doubtless come as a welcome surprise to the shareholders of the London and Liverpool Bank of Commerce. The price of the £10 shares as recently as 1921 was as low as £4 15s, but since that time there has been a steady recovery. At the beginning of this week the quotation was 7½, and there was a rise on Wednesday to 8½. The bank was established in 1879, and has a total subscribed capital of £600,000, its business being largely that of an accepting house.

Coal Production and Costs.—The statistics now published of Coal Production and Costs are more complete than any data available for other industries, and the following tables give an interesting picture of the industry in a very critical period of its history:—

Production and Costs (Gross Figures).	1921.	1922.		
	Last Quarter.	First Quarter.	Second Quarter.	Third Quarter.
Tonnage raised tons	55,033,074	57,633,631	53,261,024	58,717,767
Tonnage disposable tons	49,634,464	52,213,331	48,416,513	53,694,293
Proceeds £	57,083,625	54,367,927	45,875,798	48,996,278
Wages £	39,291,872	34,827,153	30,540,289	30,533,993
Total costs £	56,684,826	51,704,431	46,129,768	46,333,723
Net profit (+) or loss (—) £	717,353	+2,963,904	34,685	+2,907,681

It should be pointed out that net profit or loss is not calculated as the difference between proceeds and total costs during the given period, as some of the coal sold was raised in the preceding period, and some of the coal raised will be sold in the ensuing period. The next table gives figures on a tonnage basis for the same period, together with the returns for October last:—

Period.	Proceeds per Ton.	Wages per Ton.	Total Cost per Ton.	Net Profit (+) or Loss (—) per Ton.
1921—1st quarter	33/3 25	29/8	40/3 25	— 7/0
2nd quarter	..	..	..	..
(Strike)				
3rd quarter	29/0 76	18/9 91	26/9 76	+ 2/3
Last quarter	23/0 02	15/9 99	22/10 09	+ 3/47
1922—1st quarter	29/9 90	13/4 08	19/9 66	+ 1/1 62
2nd quarter	18/11 41	12/7 39	19/0 66	— 10/17
3rd quarter	18/3	11/4 48	17/3 10	+ 1/1 00
October	18/4 47	11/3 14	16/10 31	+ 1/7 38

The average prices realised have fallen very considerably, even from the relatively low figure ruling at the end of 1921, and this has necessitated a great reduction in production costs. Wages per ton in October were a little over 71 per cent. of the level of the last quarter of 1921, while other costs had been brought down to about 78.8 per cent. of the earlier figure. This shaking-down has necessarily proved a most unpleasant operation, but the price level moved upwards in the last quarter of 1922 (for which full returns are naturally not yet to hand), and this, combined with a reduction in absenteeism, the elimination of the less efficient workers and the opening up of new mines, with a resultant increase in output, provides ground for hoping that the worst has definitely passed in the coal industry. The labour side of the problem is further illustrated by the following table:—

	Number Employed.	Total of Man-shifts Worked.	Total of Man-shifts Lost.	Output per Man-shift Worked.	Earnings per Man-shift Worked.
1921—Last quarter	1,026,965	62,082,826	4,311,536	Cwts. 17.75	12/7.89
1922—First quarter	1,020,207	63,236,314	6,171,819	18.23	11/0.18
Second quarter	1,027,592	59,831,062	4,677,752	17.80	10/2.51
Third quarter	1,027,853	65,446,658	5,476,180	17.94	9/15.97
On her	1,058,977	24,007,374	1,896,165	18.09	9/3.96

It will be seen that while the number employed has risen by over 4 per cent., the output per manshift worked shows a welcome increase. At the same time, the proportion of manshifts lost which could have been worked to the total number actually worked was less in October than in either the quarter ending September 30th, or in that ending March 31st. While there is still room for further improvement in this respect, the figures we have given show that a welcome step has been taken in the right direction by the workers.

German Coal Balance.—It is not without interest at this present juncture to review the statistics of German imports and exports of coal for the first 11 months of 1922, more particularly as the migration of the Kohlsyndikat has delayed the publication of the figures for December.

(In Thousands of Metric Tons.)

Average Monthly Excess of Imports (—) or Exports (+).	1913.	Jan.-May, 1922.	June-Nov., 1922.
Coal	+ 2,005	.. + 480	.. — 1,332
Coal and briquettes	+ 738	.. + 122	.. — 54
Lignite	— 577	.. — 187	.. — 164

In the second half of June, 1922, Upper Silesia was incorporated in Poland, and this at once changed the German coal position. At the same time the full effect was not felt until July; for whereas an export surplus of 368,200 metric tons of coal in May was turned into an import surplus of 261,000 tons in June, this latter had increased to 1,342,200 tons in July. These figures naturally do not include deliveries of Reparation coal, but are simply those arising from the normal course of trade. It follows that though they give a clear account of the present state of the German coal export and import trade, they cannot be looked on as proof that Germany is permanently condemned to an unfavourable coal balance. The totals for the period January–November are given below:—

(In Thousands of Metric Tons.)

Totals.	Exports.	Imports.	Balance.
Coal	4,938.2	.. 11,126.8	.. — 6,188.6
Coke and briquettes	1,263.8	.. 331.9	.. + 931.9
Lignite	14.4	.. 1,934.6	.. — 1,920.2

The significance of these totals becomes more apparent when it is remembered that during the same period 8,292,000 metric tons of coal, 5,809,800 tons of coke, and 588,000 tons of lignite briquettes were despatched from Germany on Reparations account. This is equivalent to coal deliveries to the extent of 16,583,800 metric tons; and had this been available for the purposes of normal trade, Germany would have had a considerable favourable coal balance to its credit.

The Growth of Gambling.—A Stock Exchange correspondent writes:—One of the periodical waves of speculation that arise from time to time is rapidly spreading over the community. Stock Exchange men know it best of all, as is natural, and the fortnightly settlement, which

ended with last Thursday, attained enormous proportions. The Stock Exchange Clearing House grappled with huge lists in Southern and North-Eastern Railway deferred stocks, in Rubber Trusts, and Imperial Tobacco shares. All of these issues attract the speculator and the speculative investor rather than the investor. The other stocks and shares which come within the scope of the Stock Exchange Clearing House were listed in unusual quantities, plain evidence of speculative revival. Equally tangible testimony to the rise of the gambling spirit can be found in the manner in which, on successive days, one share after another in the mining markets has been galvanised, bid for, and, in House parlance, "given a run." The amazing advances in Selukwes and in Cam and Motors are deemed sufficient excuse for unearthing half-forgotten Rhodesian shares. Ironical market cries of "Bring out your dead!" have greeted the reappearance of shares hitherto all but moribund. A newly introduced florin rubber share, which was supposed to start on Wednesday at 3s 3d, blazed into prominence at 6s, so eagerly had its advent been anticipated by orders given to brokers that they were to buy at best. In this rise of the speculative spirit is to be found the explanation for the apparent anomaly of Stock Exchange markets being strong while Franco-German crises filled the air. The General Election stopped, with a jerk, the rising tide of speculation which stimulated the later-autumn markets. Christmas followed, with window-dressing and seasonable expenditure, to emphasise the check laid upon public willingness to gamble. But this sentiment drew fresh inspiration from the violent rise in rubbers; it fed greedily upon the mad rush-up in Rhodesians; it frets excitedly around every market in the Stock Exchange that holds out a chance for "making a bit." Shipping is neglected, banking and insurance shares are exceedingly quiet, in spite of the investors' hunt for good stocks. It is demanded that there should be a dash of speculation in whatever a man and woman buy. No doubt a good many stocks and shares were unduly depressed in view of the possible trade revival, and much of the rise may be charitably deemed legitimate. But there is an enormous amount of speculation going on, some of it rather dangerous. The day of reckoning is usually heralded by advance hints that people might do well to confine their Stock Exchange transactions within the limits of their own financial capacities. Meanwhile, this word of premonitory caution may not be altogether lost upon those who are tempted to yield to the fatally easy attraction of going out of their depth while markets are, in the Stock Exchange word, "good."

The Speculation in Mines.—Our mining correspondent writes:—Amid the Stock Exchange activity in American and Rhodesian mining shares, West African gold and diamond, and Far-Eastern tin shares, are by no means overlooked. Reference was incidentally made last week to the hopeful prospects of two British-owned concerns operating on the American continent—the San Francisco and the Mexican Corporation. Each of these shares has since experienced a substantial gain, while Selukwes have attained a new high level to the accompaniment of rumours as to rich assays in the B.C. property controlled. The official news, although good, fell short of expectations, and a reaction in the share market followed. Talk of good developments has been responsible for sharp advances in the shares of the Mexico Mines and the El Oro. In the Rhodesian market, Cam and Motor shares continued record-breaking, and their procedure inspired practically the whole list. Shares which a few weeks ago stood in the "rubbish" category at a shilling or two, or even less, have been in strong demand, appreciating to the extent of 50 or 100 per cent. It is a kind of snowball movement, which gathers strength as it rolls. People who have made money out of one share naturally lend a ready ear to any fresh "tip"; certain shares are bid for because the companies hold scrip which has appreciated, and here and there manipulation is apparent. In the present temper of the public, the movement may easily go further, although in various cases quotations have reached a level which discounts a great deal. The surprising feature is that

this strength and activity should have developed under threatening political conditions.

Indemnity-Mutual Marine.—The first marine insurance account for last year to be issued, that of the Indemnity, shows some improvement in comparison with the results a year ago. The account of 1921 was closed by transferring £240,000 to suspense account for future settlements, and then showed a profit of £32,121 on a premium income of £1,206,315. In the account of 1922 there was no profit, and £200,000 was carried from profit and loss to suspense account in order to wind it up. The premiums on the 1922 account were £941,830, against £1,206,315 for 1921, and the first year's settlements £248,605 (26.4 per cent.), against £357,955 (29.7 per cent.). Expenses amounted to £35,119, against £34,440, and the balance carried forward was £658,105, against £813,919. The reserve fund, underwriting balance, and profit and loss account amounted on December 31st to £2,190,247, as compared with £2,313,398 a year before. The net interest receipts for last year were £107,742, and the amount paid in dividends to the shareholders (the Northern Assurance Company) was £107,200. A graph representing the premium income of the Indemnity from 1914 to 1922 would illustrate very well the ascent and decline due to the war and the subsequent peace. From £617,734 in 1914 the premiums rushed up to £3,295,927 in 1917, and have since then dropped to £941,830. The funds, illustrated in the same way, would show a movement from £993,974 up to £3,302,961 in 1918, and then a decline to £2,190,247 on December 31st last. The net result is a gain in the funds of about £1,300,000.

Treaty Re-Insurances.—This company, which was established after the war on the sound basis of ownership by three established insurance offices, has issued its third annual report. Reinsuring companies as subsidiaries of powerful allied offices have almost every advantage. They get skilled direction, they are assured of a steady volume of business, and their security is beyond question. The fire and general net premium income for the year ended June 30th last of Treaty Reinsurances was £374,858, against £377,321, and the claims were £223,573 (59.7 per cent.), against £188,805 (50 per cent.). The expenses were £111,197 (29.7 per cent.), against £115,979 (30.7 per cent.). After providing for unexpired risks on the basis of 40 per cent. of the premium income, £41,072 was transferred to profit and loss. In the marine account the net premiums were £113,520, against £90,786, and the claims on the year's account and previous years were £68,567, against £29,138. After providing for expenses the balance of the marine fund carried forward was £108,632 against £72,402. The position of the company is strong. A general reserve fund has been established of £42,500, and the credit balance carried forward at profit and loss was £11,959. The total funds, exclusive of capital, amount to £343,034, and all the contracts are guaranteed by the three insurance offices which between them own the capital.

Parent Tyre.—The net revenue of the Parent Tyre Company, Limited, for the 16 months ended December 31st last amounted to £53,321, which, when added to £15,960 brought forward, shows £69,281 available for distribution. It is now proposed to pay a dividend of 5 per cent. on the preference shares for the 16 months, which will absorb £48,298, and 8 per cent. on the ordinary capital, which will take £17,500, leaving a balance of £3,483 to be carried forward. The report points out that "no income has been received on the company's investment in Dunlop Rubber preference shares, and dividends have now accrued on those shares for two years, representing a total sum of £231,492, after allowing for the deduction of income-tax." It is added that "no credit is taken in the present balance-sheet for any portion of this outstanding interest," and the report proceeds to point out what it is possible to do with this sum when it "becomes available." It would, however, perhaps have been as well if details as to how

these arrears of dividends would be distributed had been left over until the cash was actually in the exchequer of the Parent Tyre Company. On one very important point shareholders may be well satisfied. Total assets amount to £2,686,650, of which investments represent £2,506,329. This item—investments—comprises securities the market value of which at December 31, 1922, was £2,530,069. The balance-sheet will be found analysed in our usual column.

R. E. Jones.—In the annual report for the year ended October 31, 1922, the directors of R. E. Jones, Limited, show profits of £15,702 for the year, which they propose to allocate to reserves, £10,000 going to a contingencies account and £5,000 for depreciation of leasehold properties, &c. They are constrained to remark that the "results of the year's trading, although not as satisfactory as your directors would wish, show that the corner has been turned, and the business has now been adapted so that it can be carried on at a profit even during a period of industrial depression." It is further stated that the bank overdraft of £31,357 has been converted into a credit balance of £23,113. This is so much to the good, but there are many points in the balance-sheet which call for serious attention. In March, 1921, the directors appealed to the public for fresh capital, and issued 700,000 10 per cent. cumulative £1 preference shares, with participating rights, at par, and those responsible for drawing up the prospectus estimated that the 10 per cent. preference shareholders should receive 14 per cent. per annum on their investment, while ordinary shareholders would have 56 per cent. per annum distributed amongst them. Shareholders who subscribed on the strength of these prospects by this time, perhaps, have had their hopes mellowed, and now possess a riper experience. If this is so, there should follow a not unnatural demand for more information about accounts. It may be interesting to know that a company with £1,647,080 capital can earn £15,702 in a year, but the shareholder is bewildered when he comes to follow the method by which the profits are revealed. Reserve for contingencies, which receives £10,000 of the profits mentioned, has been debited with £15,104, "in writing down stocks and sums written off during year." Meanwhile, on the debtor side of the balance-sheet the profit and loss debit balance, which at October 31, 1921, was £193,704, has now been increased to £194,021. The auditors' report also provides some instructive comment. We are told that "No provision has been made for depreciation of freehold property," and that "Investments stand in the books of the company at cost, a value, in our opinion, considerably in excess of their true value at October 31, 1922." This last item—investments—is by far the biggest asset, amounting to £723,250, and represents presumably holdings in subsidiary undertakings, for the directors' report mentions that, "Again no dividends have been taken from any subsidiary company," adding that "any profits earned" have been "carried forward or used to write down stocks." We would suggest that the directors should publish a consolidated balance-sheet which will show the actual assets and liabilities of the subsidiary companies revalued in the light of the changed industrial position.

Pensions Cost and Administration.—At the end of last week was issued the fifth annual report (No. 18, price 1s net) of the Minister of Pensions. The report covers the year ended March 31, 1922, and it is difficult to see why it should have taken nine and a-half months to compile. Greater promptitude is surely not impossible. Although dealing with ancient history, the report presents points of interest as regards both administration and cost. Adoption of the recommendations of the Departmental Committee appointed in November, 1920, appears to have borne some fruit in both directions. In the year under review the staff of the Ministry of Pensions was reduced by 3,126, and the total cost from £106.6 millions to £95.1 millions. The reduction in cost is attributable mainly to the natural workings of time and medical treatment, which between them reduced the total number of beneficiaries by 465,000 during the year, and the number of awards by 280,000. The pensions and gratuities them-

selves absorbed about £10½ millions less than in the preceding year, the decline taking place mainly under the head of disablement awards, "reflecting the success of the skilled medical and surgical treatment provided by the Ministry." Staff salaries, wages, and medical fees, however, also fell by nearly £650,000.

At a meeting of the Institute of Actuaries, to be held at Staple Inn on the 29th instant, at 5 p.m., Mr W. Palin Elderton will submit a paper entitled "Notes on the treatment of Extra Risk."

THE Corporation of Insurance Brokers announces a lecture by Mr. Walter Jackson on "The Evolution of Workmen's Compensation," which will be given on January 29th, at 5.45 p.m., at 59A, London Wall, London, E.C. 2.

Oversea Correspondence.

UNITED STATES.—LABOUR SITUATION AND OUT-LOOK—COMMODITY PRICES—RECORD BUILDING OPERATIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 12.

DURING the past week there have been some important developments in the labour situation. Many of the largest railroad systems have withdrawn their applications, filed with the Railroad Labour Board a while ago, for a reduction of wages and changes in working rules and conditions, involving some of the big railway brotherhoods. Besides asking for a cut in current wages, the applications sought to eliminate the punitive rate of overtime obtained by the employees during the period of Government control of the railroads, to require trainmen and enginemen to work eight hours within a spread of 12 hours, and to abrogate many working rules that have been in force for several years. About half of the railway companies which began such proceedings before the Labour Board, including the larger systems like the Pennsylvania, the New York Central, the New Haven, the Lackawanna, the Southern Pacific, and the Atchafalaya, Topeka and Santa Fé, have decided to take no further steps in that direction. Instead, they have completed, or are negotiating, individual settlements. Their action, which seems likely to be followed by other roads, seems to promise an era of more amicable relations than heretofore between the carriers and their workers. Some railroad managements, however, may press their applications, which will be opposed by the brotherhoods. Should the board grant the railways' demands, there may be strikes on such lines; but at present there appears to be no likelihood of a nation-wide stoppage of transport. In this connection it is not without interest that the Erie Railroad and its subsidiaries recently signed a new agreement with the federated shop crafts unions, applying to some 20,000 shopmen, which gives to the latter the wage rates authorised by the Labour Board. Among other features, the agreement establishes the eight-hour day, with time and one-half pay for overtime, and the same pay on holidays and Sundays as on weekdays; old employees are to be given preference for new jobs, and the new contract has been made retrospective to cover workers who have been receiving only 65 cents an hour since last October, as compared with the minimum of 70 cents which will prevail hereafter. The agreement is to run until November 1, after that date it will be subject to cancellation by either side on 30 days' notice. The Erie settlement has been made on the basis of the so-called Baltimore agreement, which was accepted last year by a number of railroads after negotiations with the shop crafts unions.

The textile labour situation in New England is causing manufacturers a great deal of concern. The union known as the United Textile Workers has started a movement in Fall River for a 29 per cent. increase in wages, despite the fact that last year's strike was settled

through a restoration of the 20 per cent. reduction announced at the beginning of 1922. The Fall River Cotton Manufacturers' Association immediately published in Fall River newspapers an advertisement announcing that the mills would not grant an increase in wages at this time, but would close if compelled to do so by the refusal of operatives to work. The statement made on behalf of the mill managements gives figures intended to disprove the union's assertion that "increased living costs require a return of wages to the war period rate." The present average wage in Fall River mills, it is pointed out, is approximately 40 per cent. higher than that paid by their southern competitors. The declaration of large stock dividends by New England mills has evidently given labour unions the impression that the "present condition of the industry enables it to make the increase demanded." The manufacturers declare they are not in such a position; increased wages would necessarily raise cloth prices, already abnormally high, and possibly cause a buyers' strike; mills, they add, cannot pay more for labour and materials than they get from the sale of cloth.

It is too early to draw any definite conclusions as to the possibility of another coal strike in this country during the coming spring, especially in view of the fact that conferences are yet to be held. Surface indications would seem to indicate the likelihood of a tie-up, and because of such indications it is understood that there has been considerable activity on your side in chartering vessels to bring English coal here later on. There have been some developments recently, however, of a reassuring nature, and it is by no means certain that there will be a coal strike. Miners are well employed, with every indication that they will continue so for a long time, and they may conclude that little, if anything, would be gained by another strike.

The average of commodity prices on January 1st showed very little change from that of December 1, 1922. Bradstreet's index number at the opening of this year being \$13.7011, which marked a decline of half of 1 per cent. from the preceding month, but disclosed a gain of 20.4 per cent. over January 1, 1922. As compared with June 1, 1921, the low point of the past three years, prices were 29 per cent. higher, while compared with the high point on February 1, 1920, they were 34.3 per cent. lower. The increase over August 1, 1914, was 57.3 per cent. During December, seven groups of commodities advanced, including live stock, fruits, textiles, metals, coal and coke, oils and building materials, while six groups declined, namely, breadstuffs, provisions, hides and leather, oils, chemicals, and miscellaneous products.

Building expenditures at 153 cities during December, according to Bradstreet's, amounted to \$224,850,090, as against \$201,920,201 for November, and \$136,124,811 in December, 1921. The aggregate expenditure for 1922, with only 14 cities missing for the last month of that year, was \$2,499,061,532, which exceeded the total for 1921 by \$885,049,000, or nearly 55 per cent., and was to that extent the greatest expenditure for house, office, factory and store building ever recorded in the history of the United States.

FRANCE.—RUHR DEVELOPMENTS—THE CURRENCY PROBLEM—IRON AND STEEL TRADE DIFFICULTIES — PROTESTS AGAINST INCREASED TAXATION.

(FROM OUR CORRESPONDENT.)

PARIS, January 24.

THE occupation of the Ruhr and the struggle that is going on there is, of course, the dominating subject here, and all others have sunk into insignificance beside it. For a great proportion of the French people the entry of their troops into the Ruhr has been to them for some years past—since long before the war ended, in fact—very much what the entry into the Promised Land was to the ancient Israelites, and this for two reasons: first, because the vast majority of Frenchmen are convinced that, by laying hands on Germany's "jugular vein," Germany can be made to pay; and, secondly, that with the Ruhr in French hands, it will be impossible for Germany to start another war. It is advisable that the foreign observer, in estimating the

present situation, should not overlook the fact that this second reason, quite apart from any question of securing Reparation payments, has been a very important factor in bringing about the *union sacrée* that has placed the whole country unanimously behind M. Poincaré in support of his present policy.

The result of that policy can scarcely yet be judged, although this is the fourteenth day since the French troops entered the Ruhr. There can be no doubt the French plans have been well laid, after extraordinarily careful consideration, and it is significant that every difficulty that has so far been encountered was plainly foreshadowed here, and discounted in advance. It was suggested last week that, although the miners might be induced, from patriotic reasons, to resent at first the intrusion of the Allied brokers' men, this would not be of long duration if the men were given reason to feel that their wages would be as well assured by their new masters as by those they have temporarily lost. So far this has been accomplished. On Saturday the French authorities procured 2,000,000,000 paper marks, and wages were distributed as usual. The political "general strike" proved to be a formal affair, and it is expected, at the time of writing, that the threatened strike of railwaymen, which is believed to be the German Government's last effort at direct action in the Ruhr, will be an equally complete fiasco.

What is not generally known, perhaps, is that one great factor which the French expect to operate in their favour is the fact that the workers in the Ruhr have certain characteristics that strongly differentiate them from their fellows in the rest of Germany. Psychologically, they belong to a different type. This was shown by the fact that the German Government has never dared to maintain great permanent garrisons in the industrial region. In 1920, it will be remembered, when the Berlin authorities sent troops into the district, there were frequent armed conflicts between them and the local workmen, and in the end the soldiers had to be withdrawn. The Ruhr miner, for instance, is much more individualist than the great mass of German workers, and much more given to think for himself, and to be less influenced either by appeals to his class consciousness or by attempts of his employers to dictate to him. Much of this individualism is probably due to the fact that he generally works single-handed, as in the Ruhr pits the team or gang system of labour is unknown. All this, provided the French continue to carry out their original programme of prudently conciliating the workers, as they have done hitherto, and prove that their objective is not militarist, but merely to extract payment from the workmen's reparation-shirking employers, is in the Allies' favour.

As matters stand to-night, it is becoming more and more obvious that the aim of M. Poincaré's policy is not merely to obtain possession of the coal in the Ruhr, but to use the Ruhr as a means to an end, that end being to bring effective pressure on the Berlin Government. That policy has now reached a point where the French Government has to decide whether it will cut off the Ruhr entirely from the rest of non-occupied Germany (by setting up an independent civil administration, erecting a distinct new customs barrier, creating a fresh currency system, &c.), or leave things as they are in the Ruhr for the time being, and complete the work that has been begun by marching on Berlin. The difficulties attending the installation of an autonomous government and administration would be serious, but the probable economic effects of such a step would appear to be much more valuable and much more easy of achievement than the more spectacular policy of a military occupation of the German capital. On the other hand, a march on Berlin would certainly render it possible for the worst of the many defects of the Versailles Treaty to be definitely and finally got rid of. In saying this I am, of course, merely reflecting the opinions that are now being expressed on every hand here.

One subject that is being discussed here with the deepest interest is the proposal that has been several times under consideration by Ministers during the past few days, for the creation of a special currency for the Ruhr area (which might also be utilised in the occupied territory on the left bank of the Rhine). The *Temps*, which often voices the ideas of the Government, put forward the suggestion

National Bank of Commerce in New York

President

JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

a few days ago that the standard coin might be a new local gold thaler, guaranteed by revenue from the Ruhr, and especially by the yield from coal. The objections that have been raised to this are that it would take a long time for a new currency to become adopted generally, and, above all, that such a form of new money—which would, of course, be legally German—would have a parity with gold, and would quickly become the standard currency in which all trade and financial transactions would be conducted, first in the occupied area and then throughout Germany at large. France would thus have endowed the Reich with sound money that would soon cause the valueless paper mark to disappear, and against which the French franc would stand at a heavy discount. Further, imports into France from the Ruhr would have to be paid for in this sounder money, which would tend still further to depreciate the franc. Users of these arguments insist that the only sound policy, from the French point of view, would be to extend the use of ordinary French bank notes and small change into the whole of the occupied area, including the Ruhr. This, it is held, would soon supersede the mark, and would probably strongly influence the population in favour of a permanent French occupation, in the same way as foreign holders of the depreciated mark, all over the world, are now keenly interested in the salvation of Germany. In this connection, by the way, the French have been given a striking object lesson in the Saar area, the tranquillity of which is alleged to be largely due to the use of the franc in payment of wages, &c. Although the trade returns have for some time past shown that the exports from the Saar are, roughly speaking, twice the volume of the imports, the financial situation of the Commission of Government is such that that body has just sent an appeal to the League of Nations urging that it is imperative a decision should be taken immediately as to whether the franc or the mark shall in future be the recognised legal standard of currency.

There are fears that the coal difficulty in the Ruhr may result in the near future in seriously hampering the French

iron and steel industries, as the available stocks of combustibles have for a long time been considerably below normal quantities. The French metallurgists, as is known, depend almost entirely on imported coke, and absorb, under normal conditions (according to *Usine*, one of the leading journals devoted to the industry), some 700,000 tons per month. The coke plants of the North of France, by working to capacity, are able to furnish not more than from 30,000 to 32,000 tons a month, while certain small plants in the French Midlands may perhaps supply 9,000 tons a month, or a total of about 40,000 tons in all. The deficit, therefore, owing to the failure of the German supply, would amount to some 660,000 tons a month, or over 20,000 tons a day. Heavy orders for coke have been placed in England by the Société du Coke de Hauts-Fourneaux, the distributing organisation which handles the coke supplies from France, Belgium, England, and Germany, delivered to the French metallurgical industry. This concern has already notified a substantial increase in the price of the combustible as from February 1st, from which it appears that the expected shortage will continue for some time. The fact that British coalowners are profiting substantially from the shortage of coke in both France and Germany is the subject of a good deal of bitter comment here. The present situation is regarded as another proof of British determination not to tolerate a powerful metallurgical rival on the Continent. The Germans, it is pointed out, would have been serious rivals to the British iron and steel producers so long as they possessed both the iron mines of Lorraine and the collieries of the Ruhr. The fact that, as a result of the Treaty of Versailles, the iron-ore deposits are now on one side of the Franco-German frontier and the coke on the other, is ascribed here to British astuteness.

M. de Lasteyrie is having no luck with his supplementary proposals for getting rid of the estimated deficit of 3,500,000,000 in his 1923 budget, and his latest suggested solution—an all-round increase of taxation by 20 per cent., as I recently notified—bids fair to share the fate of its predecessors. No sooner did the idea of the Finance Minister's heroic remedy reach the ears of the public than protests began to pour in from all classes of the public, but especially from the trading class, which is the most heavily taxed section of the body politic, as the figures given recently have shown. Many of the protests insist on the necessity for the suppression of fiscal frauds, and on a stricter enforcement of the income-tax law, which it is notorious (in spite of the fact that the number of income-tax payers has recently been increased by 170,000, or over 15 per cent.) is evaded by large numbers of people. Other protests are based on the present inequalities in the incidence of this unpopular tax, on the need for further economy in the public services (especially in the way of a reduction in the number of officials), and on the scandalous failure of Germany to carry out her obligations. The Finance Commission of the Chamber, after hearing the Minister in support of his proposals, were unanimous in their disapproval of the remedy he suggested, and have requested him to make yet another effort to solve the problem. It is now evident that there is no possibility of the Budget Bill getting through the two Houses before Easter, and it is even doubted whether the estimates for the financial year that began on January 1st will now receive approval before the end of June. It is now almost certain that at least six monthly Votes on Account (*douzièmes provisoires*) will be required. The novel suggestion, which has received the cordial approval of the Finance Minister, is made that for the future the country should adopt the method of two-yearly budgets, in order to avoid a repetition every year of the interminable debates and endless delays that characterise the normal French Finance Bill. The suggestion is that the Budget Bill for the current year, for instance, should be treated as that for 1924 also, and be automatically continued as law for the second of the two years. Another interesting proposal, which is backed by M. Dessein, the deputy for the Haute Marne, and a number of other members, is that the estimated deficit should be got rid of by a colossal national lottery. Tickets (at 100f each), it is proposed, should be issued for a total of 5,000,000,000f, of which amount 3,500,000,000f should be devoted to extinguishing

the deficit, and the balance of 1,500,000,000f to prizes, which would include range from 500f to 1,000,000f each. A similar proposal, which was the subject of a Bill some three years ago, was rejected.

GERMANY. — RUHR OCCUPATION — FINANCES — REICHSBANK — EXCHANGE AND BOURSE — TRADE AND PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, January 24.

THE Ruhr occupation crisis has made no progress towards settlement, and more and more takes the form of a general passive resistance struggle on the German side against a not very emphatic French policy of force. The Cuno Cabinet began tentatively and cautiously by prohibiting only the delivery of coal to France and Belgium; but, apparently encouraged by the success of this policy, it last week went much further, and issued several prohibitions; and the French are now opposed passively by the Reichsbank, railway, post, telephone, and other officials, so that French difficulties have increased. A complete ignoring by German Ruhr officials of the French and Belgian military and engineers is not in force; immediate considerations, such as the prevention of disorder and food supply matters involve negotiations, which on the German side are, however, conducted on an opportunist basis, reservation being always made against the right of the French to be on the spot at all. In these matters the French have so far not come out best, and their failure seems to spring from the half-nature of their enterprise. Numerous seizures of goods, money, and persons have been rescinded on German threats—usually the threat to strike. The court-martial threats have had no effect, except further to inflame national sentiment, while not presenting any real terrors; and apparently the French ignore the consideration that courts-martial cannot have any effect unless they shoot, when they at least have effect against the victims. Instead, there seems on the French side to be an uneasy feeling that they cannot achieve anything against the resistance, that they must nevertheless make a show of fighting the resistance, but that they cannot, owing to the odium involved, really go to extremes against individuals. This inherent weakness in the French position has encouraged the Cuno Cabinet and the Ruhr officials and population; on the German side are all the propagandist advantages of martyrdom, without, so far, any very great sufferings. The communications to the French of local German officials and of workmen's delegations are extraordinarily sharp, and even menacing.

The proposed cutting off of the occupied district from the rest of Germany by means of a Customs frontier will certainly not be successful at first; whether it is successful later depends mainly upon the amount of suffering and disorganisation caused; but the measure would have had more chance of success had it been tried at once. At best it could bring about a formal German surrender, which would be expressed only in a promise to make deliveries, which promise, for the old reasons, would not be fulfilled; but by this French prestige would be saved, and French prestige is at present the real issue. It is suggested that France would have been more successful had she merely occupied the Ruhr as a punitive measure, declaring that she would remain until her conditions were granted and guaranteed. That policy would have been entirely passive. It would have been the normal means, being merely a territorial extension of the Rhineland occupation, the aim of which is to hold a pledge for fulfilment of Peace Treaty conditions, and not to provide machinery for enforcing them. Had France pursued this policy, she could have waited and left the initiative to Germany. By putting in the foreground her compulsion on German officials and private individuals to work for her she made success dependent upon an active policy of repression, which from the first had small chance of effective working.

The result for German industry so far has not been very bad. Ruhr production, however, is declining; there have been several partial and temporary strikes; and the strike proclaimed by the Thyssen and Stinnes miners as a protest

against the arrests would reduce coal production by about one-fifth. The Ruhr coal industry is organised, under the Rhenish-Westphalian Syndicate, into 13 groups, in which the Rhine-Elbe (Stinnes), Harpener, Funke-Lothringen, Haniel, Hoersch, and Hibernia have the largest production; and there are further 36 single mines or small groups outside the largest combines. The stories of preparations for heavy imports of English coal are exaggerated. It is stated that the Government will permit such imports only to concern with only a few days' supply. The imports of English coal, which in 1913 varied between 594,000 tons and 867,000 tons per month, were, according to English statistics, 8,500,000 tons in 1922. The imports (German statistics) rose from 247,313 in January to 1,165,228 tons in August, after which they fell to 735,153 tons in November, the last reported month. The brown coal production is still rapidly increasing, being 136,292,000 tons last year, against 97,189,000 tons in 1913, the brown coal briquet output rising from 21,413,000 tons to 29,457,000 tons. Domestic heating, to which goes 52.7 per cent. of the brown coal briquet production, is fairly well secured. Of brown coal consumed in the raw condition, 22.7 per cent. last year went to electrical generation works, 22.4 per cent. to the chemical industries, 13.3 per cent. to paper and textiles, and 11.5 per cent. to the ore, iron, and metal industries. Germany has so far shown such skill in adapting herself to scarcity that it would be a mistake to expect a sudden collapse, even if the whole Ruhr supply were cut off from unoccupied territory. A crisis would be precipitated on the spot if the French garrison cut the supply to local industry; this, apart from the effect on the consuming industries, would automatically bring a strike in the mines; and both Germans and French show a desire to avoid the social and political complications of a general strike.

The Budget for 1923-4 last week submitted to the Reichstag has a provisional character, being based necessarily upon values at the time of compilation. The realised Budget will in no way resemble it. It shows a deficit of 621,961,944,000 marks. The Ordinary Budget for General Administration balances at 731,955,751,000 marks; the Extraordinary shows expenditure 84,597,763,000 marks and revenue 18,776,637,000 marks, the deficit on the whole Administration Budget being 65,821,126,000 marks, to be covered by borrowing. In the Undertakings Budget the Post shows a deficit of 165,101,328,000 marks and the Federal Printing Office a surplus of 14,284,000 marks. The Railways Ordinary account balances at 1,461,286,000,000 marks, the Extraordinary requires a subsidy of 284,226,587,000 marks. The whole Undertakings Budget shows a deficit of 449,327,915,000 marks. The third Budget—Execution of the Peace Treaty—is presented as a pure formality. After crediting 99,650,000,000 marks, proceeds expected from the Forced Loan, the deficit on this Budget is 106,812,903,000 marks. The Budget Bill authorises the Finance Ministry to raise 500 milliards by discounting Treasury bills. Part or all of the bills may be issued in foreign currencies, or in the mark equivalent of a foreign currency. This legalises the first Federal "Wertbeständig" Loan.

The Ministry of Finance's report for the ten days ending January 10th shows an increase of the floating debt of discounted Treasury bills by 116 milliards, to 1,611,948,557,000 marks. Revenue from taxation is rapidly increasing, being 45,895 millions, which is five times the average revenue in the November decades. Expenditure on general administration (Peace Treaty liabilities and the now very small service of debt omitted) was 51,843 millions. This shows the usual tendency of revenue to catch up on expenditure during times of relative mark stability; but the new mark exchange fall will put an end to the recovery. The Reichstag in Committee has sanctioned the increase of the sick insurance income limit to 2,400,000 marks. The Reichswirtschaftsrat has invited the submission of a Bill for control of cartels, a Cartels Council representing consumers to be created, with the right to advise the Government to veto specific measures of cartel policy. The Cabinet declared itself against such a measure. Berlin Municipality has imposed a head tax of from 600 to 1,000 marks per workman on employers with ten or more workmen.

The Reichsbank has raised its discount rate from 10 to

12 per cent. This measure is intended to check the private demand for credit, in particular in view of the fact that the Ruhr occupation, creating scarcity and raising prices, must accelerate the rise in the bank's holding of commercial bills. The rate was raised on July 28, 1922, from 5 to 6 per cent.; August 28th, to 7 per cent.; September 21st, to 9 per cent.; and November 13th, to 10 per cent. Since November 7th, the date of the last return before the increase to 10 per cent., the bank and the Darlehnskassen granted 1,328 milliards marks new credits. The new increase will probably have little effect. The bank's report for January 15th shows a rise in commercial bill discounts by 35,152 millions, to 470,763 millions, Treasury bill discounts by 81,220 millions, to 1,177,692 millions, and holding of Kassenscheine by 46,228 millions, to 337,453 millions. Note circulation rose by 101,279 millions, to 1,437,779 millions.

The mark exchange, after the last sudden drop of 50 per cent., has, in the last days, shown a new stability. The Bourse is active and rising, and banks and brokers again have difficulty in coping with business. The Reichsbank has placed a new minimum limit on the size of the orders which it will execute. The Deutsche Petroleum A.G. has fused with the Ruetgerswerke A.G., raising the joint capital from 250 to 450 millions. Both concerns have large oil and tar interests, and are actively engaged in distilling from brown coal from their own mines. In the week ending January 19th, the dividend-paying stock index rose from 421,515 to 630,215, and home loans, which were very active, from 3,887 to 4,878. Since October, 1922, the latter index has risen five-fold. Large purchases, reported to be English and American, have been made in Austrian Credit Bank shares. War Loan has had another sharp rise, to 90.50 on the 22nd, when Federal Fours were quoted 800, 3½ per cent. 505, 3 per cent. 2,325, while Colonial Fours rose on this day from 7,100 to 12,000, or over 100-fold the price of a year ago. Prussian Threes are also strong, having reached 495. Municipal bonds, of which in 1920 there was heavy foreign, mostly American, buying, still lag behind. Until lately most of these were between about 80 and a little over par; to-day the highest, Frankfurt-on-Main 4 per cent., is 212, and many are still below par.

The November Foreign Trade report, of which the weight statistics have already been given, shows imports 536.2 million gold marks, against 531.7 million gold marks in October; exports 255.2 millions, against 291.4 millions. After declines in August and September, the values of imports are again sharply upward. The January-November balance is: Imports, 5,610.7 millions; exports, 3,547.0 millions; imports excess, 2,063.7 millions. Prices are rising. Ingots have been put up (in marks per metric ton) from 293,900 to 417,000, blooms 327,200 to 464,200, construction forms 402,400 to 570,900, bars 406,000 to 576,000, thin sheets (under 1 mm.) 632,900 to 848,000. Pig-iron prices, which are due for a new rise, are: Hematite, 196,700; foundry iron I., 194,900; No. III., 194,500; Siegerland steel iron, 230,700; Spiegeleisen (6 to 8 per cent. manganese), 250,600. The Aniline Syndicate has doubled its prices. The Federal commodities prices index for January 15th is 213,100, being for home-produced goods 189,400, and imported goods 331,600. At the exchange rate of the 15th, prices of home-produced goods were still far behind those of high-exchange countries.

CANADA.—NEW YEAR OUTLOOK.—RAILWAY AND IMMIGRATION PROBLEMS.—FEDERAL REVENUES.—RESULTS OF TARIFF REVISION.—MINERAL PRODUCTION.—THE HUDSON BAY RAILWAY.—PULP AND PAPER EXPORTS.—FEDERAL FINANCING.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 1.

CANADA enters the year 1923 in a mood of sober optimism. One of the largest crops in Canada's history was harvested last year, and if the prices were disappointing it still realised a huge sum. Trade figures have shown steady improvement, and in recent months there has been a substantial favourable balance. Tonnage carried by the railways has reached record proportions.

bonds have found a ready market in New York at high prices. Significant proof of Canada's recovery is found in the fact that the Canadian dollar has been the first foreign currency to reach parity and sell at a premium in terms of the American dollar. The two most difficult Canadian problems concern the railway burden and immigration. High officials of the Canadian National system hazard the estimate that it will be found to have just paid operating expenses for the calendar year now ended, and that, when the fixed charges have been met, the deficit will be about 50 million dollars, which would be a welcome abatement of roughly 17 million dollars from last year's load. But the annual drain of the railway deficit would still be very serious, and there can be no real health for the national finances until this annual addition to capital charges is checked. One of the sovereign remedies is more traffic, and this can best be created by more immigration. But the immigration returns for 1922 have been woefully disappointing, and are only a fraction of the pre-war returns, and are over 30 per cent. less than the 1922 figures. The Government declines to develop any clear-cut policy, and any real progress will probably have to await the Imperial Economic Conference. The sad truth is that Canada does not want Britain's unemployed industrialists, and there are few agricultural emigrants available from the Mother Country.

The Federal revenues continue buoyant, and during December increases in every branch over December, 1921, figures gave a total increment of \$3,575,000 for the month. For the nine months ending December 31st there is a revenue increase of roughly 32½ million dollars, the exact figures being as follows:—

	Increase Over 1921.	Nine Months of 1922.
Customs import duties ..	10,563,307.39	99,191,281.73
Excise taxes	21,713,877.92	77,974,172.74
Excise duties	187,188.73	28,752,264.11
Sundry collections	108,350.82	854,512.28
	32,572,724.86	206,772,230.86

The Finance Minister, though finding this increase most acceptable, may expect to face criticism in Parliament on the subject of the Customs returns. Ministers have been going up and down the country claiming that last session they revised the tariff downward in the interests of the plain people. The actual facts do not bear out their contentions. For the eight months ending November 30, 1921, approximately 78½ million dollars were collected in Customs duties on 502½ million dollars' worth of imports. In the parallel period of 1922 the imports only rose by 4 million dollars, but the Customs duties rose 10 million dollars. The average rate of duty levied has risen at least 2 per cent., and the explanation is that while the Government pared down a few schedules, their 50 per cent. increase of the sales tax, which has markedly protectionist features, more than wiped out the benefit of the reductions. The Canadian consumer has, therefore, some right to pray to be saved from another "downward" revision by the King Ministry.

The mineral production for the year just ended has been very high. The preliminary estimate of the Bureau of Statistics places its total value at \$180,622,000, which is an increase of 6 million dollars over last year's figures. The value of metals has risen from \$49,343,222 to \$61,731,000; the total production of gold was 1,200,000 ounces, which is 31 per cent. higher than the 1921 returns, and is the best total since 1902, when the Klondike boom was in full swing. The production of fuels and other non-metallics dropped by 4 million dollars to \$83,891,000.

As the result of the traffic congestion at the head of the Great Lakes which impeded the outflow of western grain last autumn, an agitation has developed in the West for the completion of the Hudson Bay railway. Port Nelson, on the Hudson Bay, is as near Liverpool as Montreal, and it is as near Regina, the central point of the prairie region, as is Fort William, which is 1,000 miles from Montreal. Before the war over 200 miles of track were laid on a projected line from Le Pas on the C.N.R. to Port Nelson, but construction was suspended in 1914, and a gap of over 100 miles still remains to be closed, the estimated cost being at least 10 million dollars. Western Boards of Trade and politicians are arguing that

a new outlet is urgently needed, and that to-day the present expenditure represents so much wasted money. Let the line be completed, and a large proportion of the western wheat crop could be shipped out by it at much cheaper cost than is now involved. But the enemies of the scheme are very numerous, and are likely to prevail. Montreal and Quebec dread any diversion of traffic which would impair their position as ports of transshipment, the advocates of the St Lawrence waterway scheme dislike any rival plan, and Vancouver favours the development of the Pacific-Panama route for grain export from the prairies. The chief argument of the opponents of the Hudson Bay Railway is that the navigation season is too short to make it valuable, and the perils of the route from ice and fog will entail insurance rates which will make low freight rates impossible.

Tariff relations between Canada and the United States are not improving. Washington has announced that a provision in the Fordney tariff will be invoked to raise the level of the United States duties on a number of Canadian commodities to the same level as Canada maintains against similar American imports. Included in the list affected by this announcement are motor bodies and chassis, iron and steel stampings, paper board and leather board, sheathing and roofing paper, calcium acetate, and other chemical products. The suggestion is now being made that the wood pulp embargo, which is now restricted in Canada to Crown lands, should be extended to all forest areas, and all Canadian pulpwood reserved for Canadian mills. To-day, according to Chief Forester Greeley, of the American Service, American paper mills now draw one-third of their supplies from Canada, and such a move would embitter the American Press, and render more distant the prospect of improved commercial relations. However, in spite of the Fordney tariff's obstacles, exports from Canada to the United States are in many lines being maintained at a reasonable level.

The pulp and paper industry continues in a flourishing state, as the following figures will testify:—

	EIGHT MONTHS' EXPORTS.	
	1921. Value. \$	1922. Value. \$
Paper—		
Newsprint	42,127,725	45,435,172
Book paper	177,455	203,082
Other paper and mfrs.	2,675,005	4,128,169
	44,980,185	49,766,423
Pulp—		
Sulphate	4,959,144	6,249,331
Sulphite, bleached ..	4,316,251	8,268,673
Sulphite, unbleached ..	6,088,844	7,602,441
Mechanical	7,235,318	6,184,436
Total	22,599,557	28,304,881

It is commonly anticipated that the Federal Government will, early in the spring, come into the outside market for another loan, which will be needed to meet maturing obligations and provide for expenditure on the national railways. A domestic loan would be impossible till autumn, which would be too late, and the expectation is that, especially if sterling rises to within 10 points of par, the new loan will be split up between New York and London. Since the war the amount of Canadian securities placed in the London market has been negligible, but it is known that Mr Fielding is anxious to restore the old connection, and if Canadian and British funds were to reach an equality he might try to place the whole loan in London. Meanwhile he is still in Europe, and as a result the meeting of Parliament has been delayed till January 31st.

ARGENTINA. — BUMPER CROP — DEBT CONSOLIDATION PLANS — BANKING CONDITIONS — EXCHANGES AND MARKETS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, December 20, 1922.

At this time of year the subject of first importance in Argentine business circles, both financial and commercial, is the harvest. Failing some unforeseen cataclysm during the next fortnight, it is now safe to say that both wheat and linseed are likely to show a record exportable

surplus; local estimates, other than those issued by the great grain-dealing houses, putting the former at 4,000,000 tons as a minimum, with at least 1,300,000 tons of linseed available for sale abroad, and quite possibly a couple of hundred thousand tons over this figure. These are heavy totals, far in excess of the average shipments made, say, between 1911 and 1914, when wheat exports fluctuated between 980,000 and 2,800,000 tons, with linseed anywhere between 400,000 and 900,000 tons. Incidentally, comparison with shipments made between 1915 and 1920 are of little practical value to-day, for reasons which are too obvious to need detailed explanation. Government estimates are, unfortunately, very far from reliable, but Dr Le Breton, the new Minister of Agriculture, a man who is thoroughly up-to-date in commercial affairs, has now obtained the services of a leading American cereal statistician, at present in charge of the Division of Crop and Livestock Estimates of the Bureau of Agricultural Economics at Washington, to reorganise Argentina's cereal estimates and crop statistics in general. That such an appointment is of world-wide interest is evident when it is said that the actual Argentine wheat shipments for 1922 have reached in round numbers 4,000,000 tons, or some 1,500,000 tons over the officially calculated exportable surplus, published in January, 1922! Prices for both wheat and linseed tend to be weak; and when it is remembered that Argentina has no method of up-country grain storage, and only sufficient elevator service at the ports to meet the requirements of a few foreseeing private firms, it is safe to predict an unusually heavy strain on the railways, and a corresponding increase in the gross traffic receipts. It has been already said in shipping and grain circles that there is a strong likelihood of congestion in the port of Buenos Aires, and port congestion there is apt to react on the whole system of shipping cereals at present in vogue. There is, however, a possibility that this year will see much heavier movement from Bahia Blanca, the natural outlet for a large proportion of wheat from the South and Centre of the Republic, recent adjustments between the Buenos Aires and Pacific Railway and the Southern system materially aiding this movement. Crops in the areas just named are chance things until the grain is actually bagged, but by now danger is virtually past, and the long-suffering region served by Bahia Blanca promises to surpass all previous records, both as to quality and quantity.

The favourable outlook for the crops, and indeed for all Argentine produce, with the exception of cattle, lends additional interest to the Government plan for the consolidation of its floating indebtedness. Generally speaking, the particulars published agree with the forecasts that I have previously made. A hundred and fifty million dollars gold will be sought abroad, 200,000,000 dollars paper are to be offered for public subscription, and 500,000,000 dollars paper are to be placed with the Argentine banks in the form of a permanent and non-amortisable loan carrying 3 per cent. interest; the relative bonds being encashable at par through the Banco de la Nacion when necessary to reinforce the till money of the banks holding such securities. Pending Congressional discussion, there is little to be said on what is at bottom a highly important innovation. If the proposals are carried, special legislation must be passed, and it is to be presumed that this will include some form of official bank inspection, since the holding of the new bonds would be *pro rata* with the deposits held by the various institutions, and, given their convertibility at par, it is also reasonable to suppose that they will be regarded as being in some sort an official guarantee. It is evident that the scheme has the support of the Argentine, as distinct from the foreign, banking interests working here, and even some of the latter do not seem to be opposed to the innovation, though not in agreement with the low rate of interest suggested. Further discussion may, however, be postponed until the question has been fully dealt with by the Legislature, which is also due to consider the Budget estimates for 1923, the total expenditure being placed at \$604,000,000 Arg. paper, of which \$549,000,000 must be found in ready-money, the balance being met by the use of public credit. Increased Customs dues, particularly affecting articles of luxury, and a new tax of 5 per cent. on all interest or rent derived from stocks or shares, mortgages, bank deposits, &c., will, it is hoped, meet the additional outlay. This too, awaits Congressional sanction, though there is a

general feeling that the estimates will be passed without much delay, more especially since the Government has stated very plainly that in any case the figures prepared for the coming year's administrative outlay must only be regarded as provisional, pending complete revision of the whole fiscal system of the Republic. In the meantime, renewals of such short-date obligations as fall in are readily effected at 4½ per cent. per annum, and the market rate for first-class commercial discounts is naturally in accordance with this figure. Argentine banks are, indeed, passing through a very trying time; that is to say, those concerns which adhere strictly to the best financial traditions. Having before them the strong likelihood of the Government proposals affecting their available supplies of liquid loanable funds, they do not care to take any steps calculated to diminish deposits; the more so because at this time of the year there is usually a natural drain owing to harvest demands. Hence, for the time being, the margin between what they give and what they receive is very low; indeed, certain banks are actually renewing their holdings of Treasury bills at 4½ per cent., while paying 5 per cent. on fixed deposits for six months, though, needless to say, this is not general. As has been mentioned on previous occasions, demand for money by first-class signatures is so limited that rates are highly competitive. For good commercial paper and current account advances from 6 to 8 per cent. per annum is obtainable, though there is not the all-round demand that bankers would like to see, even in this direction.

Exchange during the past month has been important in volume as regards business done, and though fluctuations in the Continental currencies were marked, and the American dollar distinctly weaker on the appreciation of the pound in New York, sterling rates close almost unaltered when compared with the quotation a month ago, being but 44½, as against 44½. U.S.A. dollars—banks' sight drawing rate—are 116, as against 120, while the French franc is 11.60, as against 11.50. In view of the fact that export bills in sterling are now coming forward more freely, the manner in which the pound sterling maintains its appreciated quotation is worthy of remark. Prices for wheat have moved but little during the month. Export Rosafé is quoted at \$11.55 Argentine paper per 100 kilos, alongside in Buenos Aires for February shipment. Linseed is weaker, save for prompt delivery, which is firm at \$20, there being very little seed now on hand. In the wool market there has been a slight lull, but prices may still be considered firm for all clean good quality staple, coarse cross-breds included. Local stocks in the Central Produce warehouses are but 10,000,000 kilos, or half last year's total at this time of year. Hides are showing a weaker tendency, with a slackening of demand from the States, though in sheepskins there is more inquiry, and prices are steady.

Letters to the Editor.

THE RISING IN MEMEL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the article in your last issue on the rising in Memel, you conclude by favouring the claims of Lithuania, but you appear to overlook the fact that the parallel indicated by you between Danzig and Memel rather favours the solution of a free city than that it should be handed over to the Lithuanians. In Danzig there was a German city with a Polish hinterland; in Memel you claim that there is a German town with a Lithuanian hinterland. Why should there be one rule applied to Poland and another to Lithuania? I am sure that you are quite wrong in thinking that Poland desires to oppose the claim of

Lithuania to Memel on its merits. Poland certainly stands for the internationalisation of the Niemen and free access for Polish traffic to the port, and it is because this desirable result has been thwarted by the later policy of the Lithuanian Government of Kowno that Poland has in recent months been obliged to complain of the proceedings of Lithuania.—I am, &c., J. H. HARLEY.

AN ESSAY IN RECONSTRUCTION.*

THE States of Europe are essentially interdependent, and the more there are of them the greater is the prospect that this fact will be recognised; the "self-sufficing" State is an impossible ideal, and "economic hegemony" an illusion. These are the excellent foundations on which M. Hofmann bases his plan for the economic reconstruction of Western Europe. Briefly, Reparations are to cover only material damage, and not the cost of pensions; international debts are to be converted to pre-war gold parity and expressed in Swiss francs; and the sanctions provided by the Treaty of Versailles to secure the payment of Reparations are to be replaced by a collective guarantee on the part of the former belligerents. This, if we understand him aright, is to be provided by a system of small surtaxes imposed by the League of Nations, and collected by the respective Governments, on railway and postal revenues, imports and exports, certain raw materials, alcoholic beverages, and electric power, the proceeds to be applied to the payment of Reparations and the liquidation of inter-Allied debts. In this way the disturbance of trade and industry produced by payment in goods and services will be averted or minimised, and the various methods—collectively described as "dumping"—adopted by certain States in order to force their goods on one another by differential railway rates and otherwise, in contravention of the provisions of Article 23 of the Covenant of the League of Nations, promising liberty of communications and equitable treatment for the commerce of all its members, will be protected against evasion. Unfortunately, the leading Continental members of the League have taken a different road, so that criticism of M. Hofmann's scheme is no longer practical. But the book contains much interesting and ingenious, if occasionally questionable, economic exposition and discussion, notably on tariffs, on "dumping" in the comprehensive sense here given to it, and on the monetary standard. It is a pity that M. Hofmann translates the Greek word *autarkeia* by "autarchie," and so seems (but only seems) to confuse self-dependence with self-determination, and that, like all Continental publicists, he suspects Great Britain of sinister designs, in this case on the economic independence of other nations, and on the world's supply of gold. But his premises, though not his *obiter dicta* or all his conclusions, may some day be accepted by a saner world.

* "Interdépendance: Contribution d'un neutre à la Reconstruction en Europe." Par R. Hofmann. Paris: G. Oudin. Lausanne: Editions Spes, 1922.

THE SUBSTANCE OF ECONOMICS.*

At first sight this looks a small book, but it covers a lot of ground, and is much condensed; indeed, the chapters are more like lecture notes than essays. Mr Silberman evidently writes for the student, perhaps with too sharp an eye on examination results; the matter, however, is put clearly enough. It is doubtful whether we ought to point out that little essays, or answers to questions, could be written almost straight from Mr Silberman's notes and paragraphs, e.g., on value, Marxian theories, or monopolies.

Our author is particularly good on monopolies, and discusses railway rates most reasonably. He seldom sets out to defend a thesis, being content to tabulate the usual

* By H. A. Silberman, B.A. (Econ.). T. Pitman and Sons. 6s. net.

views on each side of a question, for example, piece-work and time-work. He writes scrappily on "Wages and the Cost of Living," as he fails to explain that the principle will not work just when you want it most, as in time of war, but he does better on the various theories of wages, his own being that wages "fluctuate between the minimum set by the standard of life and the maximum set by the productivity of the worker, according to the bargaining strength of the workers and employers respectively." Rent is one of the simple things often misunderstood; Mr Silberman observes that the annual sum paid for a house is not "rent" in the economic sense, but interest on the owner's capital; this is true of land also, "but over a long period capital improvements become 'absorbed' by the land, and the total charge closely resembles a real rent."

On fiscal questions Mr Silberman shares Mr Sidney Webb's views; thus he praises the system of "Grants-in-aid," without showing that the device is largely a method of bamboozling the ratepayer into paying for things like education, which he would cut down ruthlessly if he realised that he had to pay for them in his capacity of taxpayer. On war finance Mr Silberman might have written more strongly on the bad results of borrowing; we should be interested to know what grounds he has for stating (p. 308): "Thus the wealth of the country measured in money increased by nearly £10,000 millions during the war." He treats the capital levy very casually; the objection is not to its impracticability, but to its unfairness in laying most of the war burden on a single class—owners of property.

GREEK LOANS AND COMPANIES.*

THIS massive volume is at once a company directory and a guide to the labyrinth of the Greek Debt, including the currency and other loans contracted since 1914. To investors and business men it should be useful; and it contains some interesting facts. On July 31, 1921, the total Greek debt exceeded five milliard drachmas, of which nearly half was in gold; almost all the rest had been contracted since 1913. In the latter year over 48 per cent. of the debt was held in England, 27 per cent. in France, nearly 7 per cent. in Germany, and nearly 18 per cent. in Greece; but this estimate is based on the proportion of coupons presented in the respective countries, and the holders are not necessarily domiciled where their coupons are paid. Three companies have been formed to exploit the new territories, two being concerned with Macedonia, and lignite deposits are being worked in Eubœa. And the student of economics may reflect on the defects of an industrial system which copes with a glut of currants by converting the trade in them into a monopoly, and raising a loan to destroy the superfluous plants and compensate the owners of the plantations. Such is the reward of the too efficient cultivation of a product in which there is no foreign competition.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
February 7.

ACCOUNT.
February 8.

IN some of the Stock Exchange markets the settlement which concluded on Thursday afternoon proved to be nearly a record so far as volume of business during the past few years is concerned. Boom conditions prevailed here and there, and even in those departments where activity was checked by the foreign difficulties and the drop in exchanges, a good deal of trade went on during the fortnight. The gambling spirit is abroad, but the investor is ready enough to take a hand in supporting good stocks. The rise in the War Loan stands out as one of the features of the week, the more prominently on account of the Franco-German rupture. It becomes patent that the Stock Exchange and its clients no longer bow to the old law of sympathy which, in pre-war days, was considered to bind all the markets more or less loosely together, and to render one dependent upon another for its strength or weakness.

New South Wales easily secured her money for the new 5 per cent. loan, and big applicants received less than 50 per cent. of what they wrote for. The price opened at $\frac{1}{2}$ premium, and quietly improved. Victory bonds are strong, with other stocks in the Consol market presenting a very firm front, the rise in the War Loan being, as already mentioned, the outstanding feature.

French bonds of all kinds—Government, railway, and others—went flat on the further fall in the franc. Germans have been scarcely mentioned. Paris has been buying, curiously enough, a good many Rio Tintos, but other inter-Bourse bonds show little change. The Dutch East Indies scrip started at $\frac{1}{2}$ premium, but soon rose to well over 1 premium.

Home Railway pre-ordinary stocks are the firmest in this department, the deferred stocks of the North-Eastern and Southern lines being weak on stale bull realisations, apparently on behalf of people who wanted to put the money into some of the more active markets. The Undergrounds, however, are better. There is a fair amount of investment going on in the preferred stocks of the new groups. Mexican Rails are heavy. Argentines braced up and went ahead noticeably, with Antofagasta a good spot in the foreign railway market. Recent animation in nitrates has given way to a quieter feeling.

Rubbers are again extremely animated, but the incidence of the carry-over disclosed a fairly extended bull position, and difficulties in giving on shares brought a good deal of stock to market for cash. The absorption of this led to a check in the upward movement, and although rubber—the produce—continues to rise, the share market is hesitant. Oil shares profited by the lull in rubber, and have generally advanced. New Anglo-Persian ordinary keep about 3s. 9d. premium. Anglo-Ecuadorians and Venezuelans have risen substantially. A violent rise in Imperial Tobacco shares followed the declaration of dividend and bonus, making 22½ per cent., free of tax, for the year, an improvement of 5 per cent. above that for the corresponding period. Other tobacco shares improved a trifle. Courtaulds, Listers, British Cellulose, Crosses and Winkworth, and a few other textiles are good, and command increasing public attention. In the banking market, the strength of the colonial and foreign shares is the only feature, and in the shipping groups there is nothing much doing. Iron and steel shares keep hard, as a whole, daily movements being confined within narrow limits. Cement shares have advanced, and Marconis exhibit a robust tone, on the idea that the company must be making increased profits through its interests in the broadcasting and listening-in companies.

Rhodesians have occupied the middle of the stage as regards public interest in South African mining shares. There has been a colossal amount of gambling in a few specialised favourites,

the spectacular rises in Selukwes and in Cam and Motors directing attention to anything and everything which might conceivably be good to buy. Chartered advanced appreciably on the notion that it may not be long before the Imperial Government will grant a loan to Southern Rhodesia, which, if done, will be regarded as a bull point for Chartered shares. Diamonds have been fairly firm, in spite of the drop in the franc. Mexican mining shares suddenly blossomed into favour, and the gambling fever ran through all branches of the mining markets, including West Australians, and, to a lesser extent, West African shares. The Cornish tin group is better. Middle East tin advanced, and various copper shares improved with the rest of the base metal descriptions.

Stock Exchange shares, which were standing at a little under 100 at the end of December, have put on 10 points as the direct result of the increased business that is being done in the markets.

NEW ISSUES.

1916	77,029,960			

New South Wales 5 % Inscribed Stock.—Issue of £4,000,000 at £98 10s per cent. Interest is payable in London on March 1st and September 1st of each year. The principal is repayable at par on September 1, 1942, but the Government of New South Wales have the option to redeem the stock at par, on or after September 1, 1932, on giving three months' notice. The Government will, it is stated, comply with the requirements of the Colonial Stock Act, 1900, in order that trustees may invest in this stock subject to the provisions of the Trustee Act, 1893. The proceeds of the loan will be applied to public works, including rolling-stock for railways, railway and tramway construction, Sydney Harbour Trust works, and Metropolitan Board of Water Supply and Sewage works, and other purposes. It is pointed out that New South Wales Government debentures and inscribed stock issued and payable in London, the property of persons not domiciled in New South Wales, are not subject to any of the taxes imposed by that State. Yielding £5 2s 6d per cent., including profit on redemption, this is a stock with some attractive features, although a few of the earlier issues at present appear to be a more profitable investment. The success of the issue, at this comparatively low yield, is significant as reflecting the increased popularity of Australian State borrowings.

Corporation of Calcutta.—Issue of £500,000 6 per cent. debentures at 101 per cent., repayable at par on March 1, 1953. The loan is secured upon the rates, taxes, and dues imposed and levied within the Municipality of Calcutta, and ranks *pari passu* with other loans of the Corporation as a first charge upon their properties. The greater portion of the proceeds of the loan will be utilised for a scheme for the improvement of the water supply of Calcutta, and a substantial amount will be expended on contracts to be placed in England. The unredeemed loans of the Corporation on March 31, 1922,

amounted to £3,571,500, while the sum at credit of sinking funds on the same date was £469,380, the conversion rate being taken at 1s 4d per rupee. The yield, allowing for redemption in 30 years at par, is £5 18s 6d per cent., which is a fairly attractive return for this description of investment.

Press Caps, Limited.—Authorised capital £65,000 in ordinary shares of £1 each, of which 20,000 shares have been allotted to the vendors in part satisfaction of the purchase consideration, 40,000 have been issued for cash at par and are fully paid, and the balance of 5,000 are held under option. The company was incorporated in September, 1922, primarily to acquire the British patent rights of the "Upressit" metal cap. The "Upressit" cap is a patent air-tight closure suitable for sealing all classes of bottles. The considerations payable are £20,000 in cash to one party and £5,000 in cash and £20,000 in ordinary shares to another. This information is given in the daily Press to comply with Stock Exchange regulations, and is mainly of interest to those with some further knowledge of the undertaking.

Patent Wear-Proof Motor Tyres, Limited.—Authorised capital £50,000, divided into 47,500 10 per cent. preference shares of £1 each and 50,000 ordinary shares of 1s each. In all, share capital for £18,803 has been issued. This is an issue of £8,000 8 per cent. first mortgage debentures at the price of £95 per cent., "redeemable" at £105 in 1927, or "under guarantee" at £100 per cent. on January 1, 1926, and 10,000 to 10 per cent. preference shares of £1 each at par. Two points stand out very clearly. Firstly, in the prospectus the value of the assets on which the mortgage debentures are secured is not revealed. This alone should be sufficient to keep the prudent investor from subscribing. Secondly, the value of the guarantee is elusive. The guarantee is one made by the vendors—a limited company concerning which little information is offered in the prospectus. We notice that two directors of Patent Wear-Proof Motor Tyres are, according to the "Directory of Directors, 1922," on the board of the Chalk Fuel, Power, Gas, and By-Products Corporation, Limited. The fact that the debentures show an annual yield of £11 per cent., including profit on redemption, is rather an amusing commentary on a yield of 10 per cent. on the above-mentioned preference issue.

ACTIVE SECURITIES.

BROKEN HILL PROPRIETARY.—Report for four weeks ended January 3rd.—Steel foundry produced 16 tons castings. Remainder of plant still shut down. Broken Hill—Operations interfered with on account of severe storms on December 10th and also the holidays. Underground position unchanged. Ore-dressing mills produced 219 tons lead concentrates and 3,408 tons zinc. Zinc separation plant produced 1,205 tons of zinc concentrates. Slimes flotation plant produced 1,305 tons lead concentrates and 3,887 tons zinc concentrates.

BURMA CORPORATION.—Cable advices received report:—No. 7 level—West cross-cut 1 027 ft south—From 55 ft to 65 ft: 42 ozs silver, 37 per cent. lead, 18 per cent. zinc; from 65 ft to 78 ft: 62 ozs silver, 52 per cent. lead, 20 per cent. zinc; from 78 to 80 ft: 6 ozs silver, 11 per cent. lead, 1 per cent. zinc; from 80 to 90 ft: 12 ozs silver, 19 per cent. lead, 2 per cent. zinc; from 90 to 105 ft: 6 ozs silver, 10 per cent. lead, 1 per cent. zinc.

ELECTROLYTIC ZINC COMPANY OF AUSTRALASIA.—Production during four-weekly period ended January 10th:—2,009 tons zinc: silver-lead product for shipment to Port Pirie for realisation containing 265 tons lead, 38,471 ozs silver.

COMPANY MEETINGS, &c.

BARCLAYS BANK, LIMITED.

MR F. C. GOODENOUGH'S REVIEW OF FINANCIAL CONDITIONS.

IMPROVED INDUSTRIAL OUTLOOK.

FORDNEY TARIFF ACT AND EMPIRE DEVELOPMENT.

EXTERNAL LOANS AND THEIR ADVANTAGES.

SIR HERBERT HAMBLING ON AGRICULTURE'S CRITICAL POSITION.

The twenty-eighth ordinary general meeting of the shareholders of Barclays Bank, Limited, was held, on the 23rd instant, at the Cannon street Hotel, London, E.C.

Mr Frederick Craufurd Goodenough (chairman of the bank) presided.

The Chairman, in opening the proceedings, said: My Lords, Ladies, and Gentlemen,—I will call upon the secretary to read the notice of meeting, and the certificate of the auditors which appears at the foot of the balance-sheet and profit and loss account that has been submitted to you.

The Secretary (Mr W. N. Seeley) then read the formal notice convening the meeting and the report of Messrs Price, Waterhouse and Co., and Messrs. Kemp, Chatteris, Nichols, Sendell, and Co.

THE CHAIRMAN'S SPEECH.

The Chairman, who was received with cheers, then said: My Lords, Ladies, and Gentlemen,—Is it your pleasure that the report and accounts be taken as read? (Agreed.)

Before I invite you to consider those items in the accounts which deserve your particular attention, I wish to make special reference to the retirement from the board of our late colleague, Mr Seymour Pleydell Bouverie. Mr Bouverie has found it necessary to resign on the ground of ill-health, and the board have accepted his resignation with very great regret. He was formerly a partner in the well-known West-End firm of Ransom, Bouverie, and Co., of Pall Mall, and became a director of this bank at the date of the formation of the limited company in the year 1896. We have been much indebted to him for his services to the bank, and we valued his experience and sound judgment at all times.

I have also to refer with very sincere regret to the death of Mr William John Stokoe, who was an assistant general manager of this bank, having been a joint general manager of the old London and Provincial Bank, and an assistant general manager of the late London Provincial and South-Western Bank. He was a man for whom the directors and his colleagues had a very special regard and esteem.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, you will see that the current, deposit, and other accounts of the Bank on December 31st last amounted to the sum of £303,185,534, which compares with £321,167,217 on the preceding June 30th, and £339,942,299 on December 31, 1921, so that there has been a contraction of the deposits, which has been continuous throughout the year.

Contraction of deposits has been experienced by all the banks. It reflects the general depression which has prevailed in almost every industry and trade. It is due also to the clearance by traders and others of the accumulated stocks left on their hands after the boom period, with the result that many of the advances from the bank have been repaid, and this, so far as these stocks have been paid for without fresh accommodation being required, has also served to reduce the balances on the other side.

The prices of wholesale commodities have fallen by 28 per cent. during the past two years, and the ability of our customers to stand this fall in prices has been most remarkable, although there have, of course, been cases in which the bank has made a loss, for which in every instance full provision has been made.

SUBSCRIPTIONS FOR TREASURY BONDS.

Another factor which has served to contract banking deposits has been the subscriptions by the public for Treasury bonds, which subscriptions have been used by the Government for the reduction of floating debt. Here it is interesting to note that the total indebtedness of the country to-day is somewhat larger than a year ago. That is due to the conversion of short-dated into longer-dated debt, much of which has passed into the hands of the public. As debt, that of which has passed into the hands of the public, as liability, there has been a reduction of about £900,000 per annum in the interest charges payable by the Government. The total floating debt has been reduced from £1,260 millions to £941 millions—that is to say, whilst Treasury bills outstanding on December 31st

last were £719 millions, as compared with £1,060 millions at the end of December, 1921, Ways and Means advances were somewhat higher, being £222 millions, as compared with £200 millions. The Government debt, other than floating debt, stood at £6,894 millions, as compared with £6,539 millions—so that there has been an increase of 355 millions in that form of debt which is largely held by the investing public as distinguished from the banks and those who make use of bank funds for carrying the debt.

At the present time, advances to customers show a decline, owing to the prevailing inactivity and other causes to which I have already referred.

INVESTMENTS.

The investments of the bank now stand at £78,606,182, which represents an increase of £14,937,572 over the amount held on December 31, 1921. This increase is in the form of Government securities maturing at early dates, so that we shall be in a position to meet any requirements of our customers in the way of loans, which may be needed by them in the event of a return to industrial activity.

The book values of our holdings of shares in the Union Bank of Manchester and the Anglo-Egyptian Bank have been somewhat reduced out of the profits which we have realised from the sale of other investments from time to time. We have thought it to be desirable to write them down, but our actual shareholdings in both of those institutions remain undiminished.

We have lately acquired a controlling interest in the business of Cox and Co. (France), Limited, in which we previously had a substantial shareholding, and we have transferred the business to a new company, under the title of "Barclays Bank (Overseas), Limited." Our interest in this undertaking should appear in the next balance-sheet, when the necessary formalities should have been carried through. The bank, with its chief office in Paris and branches in other important cities in France and elsewhere, will provide banking facilities for many of our customers who have business and other connections with France, and also for French people interested in trade with Great Britain and other parts of the British Empire.

PROFIT AND LOSS ACCOUNT.

I will now turn to the profit and loss account of the bank for the past year. The contraction in deposits and lower rates of interest have resulted in lower profits than those of a year ago.

The Bank of England rate for discount has fallen during the year, and market rates for money and for discounting bills have been correspondingly reduced. The Bank rate was 5 per cent. in January, 1922, and reductions have taken place on different dates, the last having been made on July 13, when it came down to 3 per cent. The London deposit rate has been reduced from 3 per cent. to 1 per cent., and the average rate of discount at which Treasury bills have been allotted has been approximately £2 11s per cent.

With the cheaper conditions of the London money market there has been a great demand for fresh capital from abroad. To this subject I shall refer again later.

It has not been found possible to make any very great reduction in the expenses, which remain at a high level in proportion to gross profits.

STAFF WIDOWS' FUND.

As I have already stated, full provision has been made for all bad and doubtful debts, and out of the net profits, amounting to £2,408,982, which includes the brought forward, the directors recommend the appropriation of a further sum of £50,000 for the benefit of the staff widows' fund. This will be in addition to the sum of £100,000 which was appropriated last year for the same purpose, and these appropriations, together with previous donations, and the annual contributions from the staff, will enable the fund to provide larger pensions for the widows and orphans of those members of the staff who contribute to the fund. I feel sure that the shareholders will adopt this recommendation. With the amount now set aside, we shall have devoted £250,000 in all for this particular object. There is no greater benefit that we can confer upon members of our staff than to help them liberally

in making provision of this kind for their families, and I hope we may be able further to increase the fund from time to time in the future.

We have also made other appropriations, which are set out in the report, and we propose to carry forward a balance of £500,205, which is a little less than the amount brought forward from last year.

THE OUTLOOK.

As regards the outlook, although during the last few days it may have again somewhat altered owing to the political complications which have arisen on the Continent, yet there is a general feeling that we have reached the end of what has been undoubtedly a very bad time, and that we are entering upon a period of slow, but as we may hope, steady improvement.

There has been greater confidence, in consequence of which fresh orders have been placed. As financial conditions in other countries improve, this broadening of markets should continue. For example, the improvement in conditions in Czecho-Slovakia and, as we may hope, Austria should undoubtedly, in due course, have this result.

There has also been a favourable effect produced by the reduction in income-tax during the year, which has helped to revive industry. So long as an individual is required to meet heavy taxation, in one form or another, up to as much as one-half of his annual income or profit, while the cost of living and working expenses cannot be correspondingly reduced, it is clear that there can be nothing left over, either for saving or for betterment, or for the replacement of the capital which has been lost through the fall in values during the last two years.

A further reduction in taxation would help still more towards recovery, and it is to be noted that the revenue returns of the first nine months of the current financial year are encouraging, and that there is every expectation that the final figures will be at least as satisfactory as those anticipated in the Budget estimates.

HOUSING PROBLEM AND INDUSTRIAL POSITION.

The labour position has improved, but the housing problem has not yet been solved, and until some scheme can be devised which will make it possible for house-building to be undertaken upon an economic basis, there seems to be little prospect of improvement in that important industry. In the meantime, the demand for small houses continues to be very great.

In other industries there would appear to be, on the whole, a better outlook.

The output of coal has increased to 252,000,000 tons in 1922, as compared with 163,000,000 tons in 1921, the year of the coal dispute, and 229,000,000 tons in 1920, and prices have been steady and satisfactory.

The prices for iron and steel are now at a level when business can be secured in competition with other countries, and production has expanded. There is a great potential world demand for iron and steel.

Wool has been good, and prices have improved.

The cotton textile industry is still in an unsatisfactory condition, and though the volume of export trade shows considerable improvement, the level of prices and the high cost of raw cotton do not as yet allow of profits.

As the financial conditions of other countries improve, there should be a widening of markets, and international trade should be upon a sounder basis than was the case immediately after the war, when there was a period of great production at high cost, followed by a collapse, because the need for assisting the fallen countries of Europe to reorganise their financial position was neglected or not understood.

FORDNEY TARIFF ACT—AMERICAN DEBT.

The failure up till now to bring about a settlement of the Reparations problem still leaves the greater part of the Continent of Europe in financial and political chaos.

Apart from Reparations, perhaps the most important feature in the outlook for our trade is the Fordney Tariff Act, lately passed by the American Legislature, which came into operation on September 21st last. This Act imposes upon foreign-manufactured goods entering America such duties as seem bound to have a far-reaching effect upon the trade of this country, and may even lead to the diversion of our trade into new channels. It will also serve to raise prices in America and to hamper American trade. The duties amount in several cases to as much as 60 per cent. *ad valorem*.

The Act, if it remains in force, will make it more difficult even than would otherwise be the case, for this country to discharge its debt to America, even though there should ultimately be some reduction in the rate of interest and extension of the period for repayment, as a result of the visit to America of the Chancellor of the Exchequer which has just taken place.

Besides having to provide payment for our imports from America, our debt to her is a great burden, more especially as it consists entirely of unproductive debt, incurred solely for the purposes of the war. Yet, as the Chancellor has definitely stated—and in this he will have the universal approval of the people of this country—we shall discharge the debt in full, even though it was incurred in a common cause, and whatever may be the cost to ourselves.

The effect of the Fordney Tariff, however, must be to compel us to seek new sources of supply of foodstuffs and raw materials and to develop markets in other parts of the world, for our trade, especially in India, with its great population, and in the East, and in the Dominions and Colonies of the British Empire, who in turn can send to America their raw materials and other merchandise which America cannot produce for herself.

DEVELOPMENT OF EMPIRE TRADE.

In this way we shall still use the products of our industry to discharge our obligations to America, even although America will no longer accept our manufactures direct upon reasonable terms, owing to the operation of the Fordney Act. Moreover, in this way we shall reap the fruit of the policy of Empire development, upon which so much of British resource and enterprise has been spent in the past. It is a reassuring prospect in the face of what could not otherwise fail to be a paralysing blow. It is a prospect worthy of our energies and our ambitions, and of the great traditions of our race. It is a policy of consolidation, but coupled with expansion and progress. In the development of this great policy, we shall lighten and relieve the losses that we have suffered in the war and in its aftermath. It will afford great opportunities for employment and for advancement, both for men and for women who are ready to take advantage of them. It will afford our people an outlet to satisfy the natural desire for progress and for betterment, which is perhaps one of the fundamental causes of much of the unrest of the present time.

There are many ways by which such a policy may be encouraged and matured. The Dominions and Colonies of the Empire can invite our would-be settlers there. If they are experiencing a wave of depression to-day, it is partly for want of population, which is the first essential to trade, and we on our part can and should provide the funds for fresh development. The London market can make loans, but, besides this, direct advances might be made by the British Government to promote schemes of development in their initial stages until such a period as they are ripe for the attention of the permanent investor.

Railways can be built, and lands at present unproductive can be opened up for the production of those necessities which are indispensable to a growing population, and to the people of those other parts who cannot themselves provide for their daily needs.

Such a policy, backed by the credit and resources of this country, should serve to remove many of our present difficulties, and build up a strong position for the future.

EXTERNAL LOANS.

The floating of external loans by the British Dominions and by India, as well as by foreign Governments and Corporations, has been an important factor during the year. The total amount of new issues of this description on the London market has exceeded £100,000,000. Whereas foreign loans were discouraged up to a year ago, it is now recognised that all restrictions should be removed. The interest on these loans should materially assist in increasing our invisible exports.

In making these loans, we, of course, hope that they will result in direct orders to this country, but even if this is not always practicable, the loans have the effect of credits being opened in London in favour of the borrowers, and through the opening of these credits this country benefits, directly or indirectly, in many ways. For example, if a loan should be granted to Norway, and Norway should prefer, instead of spending the proceeds of the loan in the purchase of goods from this country, to use the credit for financing her purchase of wheat from the Argentine, it is possible that the latter country, having the credit transferred for her benefit, might use it for the purchase of steel rails from Middlesbrough. Alternatively, she might use it to finance her purchase of goods from America, in which case America would then have the credit in London, and might use it for financing cotton from Egypt to Boston, or in a variety of other ways. It would always remain a credit in London until discharged by the shipment of goods or of gold, or by repayment in some way or another, and meanwhile it brings profit to this country in various ways. The danger of too many credits being opened here is held in check, through the effect upon the foreign exchanges, which, in the event of too many loans being granted, would make credits too expensive for the borrower, and, therefore, of no practical utility.

From this you will see that it is important that there should be no hard and fast conditions that the actual proceeds of the loan must be spent here.

LOANS AND RESTRICTIONS.

The American bankers who investigated this question very closely have convinced their Government of the correctness of this principle, and no conditions or restrictions of the kind are now imposed on this particular ground, in the case of foreign loans granted in America. A condition that the proceeds of a loan granted here must be spent here might drive away our borrowers to another market. There seems to be no doubt that in all matters affecting the London money market the fewer conditions and restrictions imposed, the more will it be able to give assistance to the industry and trade of this country.

The question has also been raised as to whether this country should participate in any loan that may be granted to Austria or to Germany, to enable those countries to rehabilitate their financial position, and, in the case of Germany, to make reparation payments. I think it is clear that London can, and should, take her full share as and when these loans can be made upon a sound basis. Our failure to do so would deprive us of our proper share of the world's trade.

DUTY ON NEW CAPITAL ISSUES.

We are at the present time at a disadvantage in competing with America for foreign loans, because of the duty which is imposed here upon issues of new capital. This duty is fixed at 2 per cent., whilst in America there is no duty on fresh capital raised there, and, as a result, we have lost business owing to the disadvantage we are under as compared with America. I would respectfully invite the attention of the Chancellor of the Exchequer to this important difference, in the hope that he may be able to remedy it, and so help the London market in the competition for foreign loans.

PRICE LEVELS HERE AND IN AMERICA.

The prospect for trade improvement in the immediate future depends not only upon granting financial assistance to others, but it turns also largely upon price levels and exchange, and the approximation which has taken place towards a common level of prices in this country and in America, and the approach towards parity of the sterling-dollar exchange are features of great importance.

There has been contraction here since the boom, and a fall in prices and in wages and in cost of production, whilst sterling has to a considerable extent regained its relative purchasing power. On the other hand, there has been a rise in gold prices: that is to say, in prices as measured in dollars, which are the equivalent of gold.

The index tables of prices here and in America show that whereas during and after the war prices rose to a much higher level in this country than in America, they have subsequently fallen, whilst, on the other hand, prices in America, although lower than they were, have lately risen, so that to-day sterling prices and gold prices are within 5 per cent. of a common level.

Correspondingly, the sterling-dollar exchange has reached the equivalent of \$4.66 to the pound sterling, as compared with \$4.86 representing par of exchange. The difference in exchange is, therefore, about the same figure as the difference in the level of prices, viz., 5 per cent. This shows the close relationship which exists between price levels and exchange, and you can understand why, in order to reach a common level of prices with America, it has been necessary to reduce wages and costs of production here, and it is easy also to understand that it is necessary to reach a common level with America in order to prevent unemployment here.

NECESSITY FOR ECONOMY.

A personal effort of economy on the part of every individual in the country should serve to bridge the gap which still remains in price levels and in exchange, and there would then be a common standard of prices both in this country and in America.

After we have reached a common standard there will be many factors which are bound to affect subsequent price levels in both countries, and which may gradually tend to raise them to a yet higher level; on the other hand, there will be counteracting influences which will have the opposite effect.

It is not possible to forecast with absolute certainty the future of price levels. It is, however, without question that there never has been a war in which, as in the late war, so much of the accumulated production of human energy has been destroyed, and so great a burden of unproductive debt has been left to fall upon the shoulders of future generations. Further than this, there has never been any great war which has not left prices higher and the purchasing power of money lower than before, because of the unproductive debt that has been left upon the shoulders of the people whilst fresh debt was created to carry on future trade. There seems to be no reason to anticipate any other course of events to-day. So far as prices in this country in the immediate future are concerned, we cannot be sure that the downward movement

which has accompanied a period of deflation will not before long come to an end, if it has not done so already. In that case there may be an upward turn—at all events of wholesale prices, and a renewal of activity and expansion.

It would be of great benefit to the community that there should be a rise in wholesale prices, but on the other hand, every effort should be made through personal economy and through better organisation, to keep down retail prices, so as, if possible, to reduce them to even a lower level than that of to-day.

Returning again to the subject of the approximation which has taken place in the sterling-dollar exchange, we should be in a position to take gold from America so soon as sterling has reached a point slightly above the parity of exchange.

FREE GOLD MARKET.

Before, however, it would be safe for us to return to a free gold market, we should have to consider very carefully what would be the effect. So long as we continue to grant foreign loans—and it is, I think, admitted that it is desirable that we should do so—we are in effect in the position of giving long credit, whilst on the other hand, whatever we buy from abroad is more or less paid for in cash.

Exports resulting from such loans would not provide the immediate resources needed to pay for the imports which they necessarily entail. There would therefore be a danger of our favourable trade balance being negated, and if a free gold market had been restored, the tendency would be for gold to leave this country.

Such a position, if it is coupled with that of a free gold market, requires strong reserves, otherwise we might soon lose that which we had gained. It seems to me that not only would it be necessary to strengthen our reserves against currency, but also possibly to create additional gold reserves to be held by the Treasury or by the Bank of England, before it would be safe for us to return to a free gold market. This strengthening of reserves would serve to tide over a time of difficulty, such as might occur, and would help to make it certain that there never should be any question of our having to fall back upon prohibition of the export of gold, once we had resumed a free gold market, but even so, until our trade position is restored, and is again well balanced, there must be a great uncertainty as to our ability to return to free gold. Nevertheless, a return to a free gold market should be consistently before us, as one of our objectives.

AGRICULTURAL SITUATION.

Before leaving the subject of prices, I should be glad to say a word about the agricultural situation, which depends to a greater extent, perhaps, than any other industry upon price levels, because of the great importation of food into this country to meet the needs of an ever-increasing and largely industrial population, and the competition in prices from abroad.

The industry of farming has shown considerable loss through fall in values in the last two years, coupled with the bad seasons in many parts of the country in the years 1921 and 1922. Though in many cases even this leaves the position better than it was before the war, and only a part of the money made through the preceding rise in values has actually been lost, yet those who embarked upon farming at the commencement of or during the period of the boom have been heavily hit, and their capital has been greatly diminished. Capital also, which should have been kept in the industry as working capital, has been withdrawn for the purchase of the land at high prices, as it has been offered for sale, and where purchases have been made with borrowed funds, the debt on the land and the shortage of capital in the farm have, in some instances, left the farmer in a bad position.

If, however, there is now a steadying of prices, and even a tendency to improve, as seems not improbable, those who are not too burdened with borrowed money should have a better prospect, but it will take a long time, great skill, and close attention, for even the experienced farmer to build his position up once more to what he could show in 1919 or 1920.

RATING SYSTEM UNSATISFACTORY.

A committee appointed by the Government has been at work investigating the whole position, and its report will be awaited with interest and hope that some measure of relief will be forthcoming. It certainly seems that the system of rating of agricultural land requires revision. The relief of rating is based to-day upon a system laid down many years ago. Then, the proportionate values of the various classes of property in this country, which derive advantage from the benefits provided out of rates, was very different from what it is to-day. The value of other property has increased to a greater extent than that connected with agriculture, and therefore derives greater proportionate benefit from the rates than agricultural property itself. In other words, sufficient allowance is not made for the large percentage of total capital repre-

sented in agriculture by the land, as compared with the percentage of capital represented by rateable property in other industries. An increase in the relief of rates on agricultural land is therefore called for, and seems to be justified.

WAGES.

A great deal has been gained by freeing the labour market from artificial control, so far as wages are concerned, and the farmer will now be able to regulate the wages that he pays by the level of prices which he obtains for his produce, but there remains the difficulty that whatever prices are obtainable, it is absolutely necessary that the labourer should be sufficiently paid to enable him to live in reasonable comfort, and to bring up his family in accordance with modern standards. No one would wish to cut down the labourer to a low standard of living, nor would it be a sound policy to do so, because the work that is required of him makes health, strength, and intelligence imperative.

TRANSPORT COSTS AND CREDITS.

It seems that relief from high cost of transport would go further than any other thing to help the farmer to pay adequate wages. It must be remembered that railway charges are under Government supervision, through the establishment of the Railway Rates Tribunal. It would be of great benefit to the farming industry and would help agricultural wages if railway charges should be reduced.

So far as credit facilities for farming are concerned, the banks are ready and are able to provide all reasonable accommodation at fair rates and upon sound lines. I have no hesitation in saying that the farming industry has more consideration at the hands of the banks than perhaps any other industry in the country, because of the difficulties inherent to the carrying on of the business.

It has sometimes been suggested that new credit institutions should be formed for the express purpose of giving assistance to farmers, but it is obvious that this plan would not serve to increase the existing volume of credit.

Much must depend upon the case of each individual concerned, but speaking from personal experience, there is a desire amongst bankers and bank managers to acquire the most intimate knowledge of the prevailing conditions in the industry, and to meet the demands of each individual case on its merits as it presents itself.

Referring once more to the ownership of land, everyone will agree that small holdings are of great benefit to the country as a whole, as well as to those individuals who really understand the carrying on of that business. In the case, however, of larger farms there can be no doubt that the old system of landlord and tenant has much to recommend it, as it frees the whole of the resources of the farmer—both of capital, and personal knowledge and skill—for carrying on the business which he understands.

THE RESOLUTION.

My Lords, Ladies, and Gentlemen.—I now beg to move the following resolution:—"That the report of the directors produced, together with the annexed statement of the company's accounts as at December 31, 1922, duly audited, be received, approved, and adopted, and that a final dividend at the rate of 10 per cent. per annum on the 'A' shares and 14 per cent. per annum on the 'B' and 'C' shares, less income-tax, making, with the interim dividend paid on August 1st last, 10 per cent. for the year on the 'A' shares, and 14 per cent. for the year on the 'B' and 'C' shares, be declared, payable on the 1st proximo, to the shareholders registered in the books of the company on December 31st last."

I will ask Sir Herbert Hambling to second the resolution, and I hope we may have the pleasure of hearing a few words from him upon affairs generally.

SIR HERBERT HAMBLING'S SPEECH.

Sir Herbert Hambling (deputy-chairman), who was received with applause, said: My Lords, Ladies, and Gentlemen.—Before I second the resolution I think it would be your wish, as it is ours, that we should congratulate the chairman on his excellent speech. I think you will agree that he has made a very careful and statesmanlike review of the whole position. He has explained to you the figures of the bank, he has demonstrated to you that it is in a very sound and liquid position; he has had to admit that the profits have been lower because the expenses and the cost of administration are very difficult to keep down. The salaries are the great expense in a bank, and I am quite certain that none here—no shareholder—would like the directors to neglect the all-important duty of seeing that the interests of the staff are carefully looked after. Salaries are a huge figure, but the staff deserve it, and that figure will be constantly increasing as the bank progresses. The chairman's reference to what has been done for the widows I am quite sure meets with your entire approval.

CONTINENTAL SITUATION.

He has not touched on politics, because bankers as a rule endeavour to evade them, but unfortunately politics interfere with

business, and there is no question that the very unsatisfactory state of affairs at the present time on the Continent is doing a great deal to stop our business from getting on right lines. I said to you last year that until we had real peace we should not get back to really good business conditions, and I repeat those words to-day. The chairman is not quite convinced that we are going to have a good year. It is a very, very difficult problem, and the state of affairs at the present time causes very great anxiety. Britain made, as you know, certain proposals that were rejected; the French thought differently. We must admit this, that there is another side to the picture; it is possible that we may be wrong and that the French may be right. The future may show, but what I want to say, ladies and gentlemen, is this, that the action we took—I am speaking of the British action—was done in the firm and earnest belief that by that method we should be able to get from Germany a very much larger sum, principally for the benefit of France, than they can get by adopting their present attitude, but we may be wrong, and if we are wrong, and if the method adopted by France results in their getting a great deal more from Germany than we suggested, we shall, as a nation, say "Bravo, France; we are delighted that you have got more." It is our wish that she should get more, but we doubt—personally, I doubt whether the method proposed is a good one. I am sorry, gentlemen, to touch perhaps a little bit on politics, but politics are so mixed up with business that until we can get matters straightened out we can never get back to our pre-war trade.

AGRICULTURE—GOVERNMENT ASSISTANCE NECESSARY.

I wish the chairman had had more time to deal with the question of agriculture. That to-day is a very burning question, and I cannot help thinking that unless the Government can do something there is a very bad future for farmers and the agricultural interests in this country. At the present time, although, as the chairman suggests, some relief in rating, some concession as regards freights, will do something, it will not do enough. The farmer to-day is in this position, that he cannot produce at a profit the corn that he grows. He has not got down to an economical wage at the present time. The wages of the East Anglian farm labourers are now 25s a week—25s a week for a labourer and his wife and perhaps three or four children. Think of that; yet even that wage is more than the farmer can afford to pay. The unfortunate labourer can hardly exist, and I cannot help thinking that the big fall that has taken place in the wholesale article has not been properly reflected in the retail article. I do not think you can buy as much as you should for your money. Something will have to be done for the farming industry, or they will as a body refuse to grow corn. Financially, they will pull through, but they will lay down their fields with permanent pasture, they will get rid of 50 per cent. of their labour and of their horses, and this farm labouring population will go back to the towns and will simply add to the large army of unemployed there.—(A voice: "That is quite right")—and I only wish the chairman had had more time to develop the subject. I earnestly hope the Government Committee now sitting will consider all the circumstances of the case, and will see how the farmer can make a living.

TAXATION OF FOREIGN BARLEY.

I hate to suggest anything like tariffs. Your chairman has told you the effect of the Fordney tariff, but it is quite certain that if the foreign barley that came here was taxed to the extent of £1 per quarter, and if we could get wheat in but not flour; if we could grind our own wheat, and we could get our mills working; if we could get our offal as we should, at half the price, then we could grow corn and live, but at present the farming industry are paying more for their offal than they can get for their wheat. I am sorry, ladies and gentlemen, to take up so much of your time, but my excuse is that I take an intense interest in agriculture, and I do hope something will be done so that we may still be something of a corn-growing country, and that we may still have sufficient corn in hand, so that, in the event of future trouble, we shall not be starved in a few weeks. The principle involved is not that of protection—it is a question of the defence of the realm. With these few words, ladies and gentlemen, I should like to second the motion put forward by your chairman.

SHAREHOLDERS' CONGRATULATIONS.

Mr F. W. Cook congratulated the directors on the excellent balance-sheet which they had presented.

Mr C. Heath Clark said he was sure the shareholders would wish emphatically to express their appreciation of the report and accounts which had been laid before the meeting, and also of the chairman's address and the services which he had rendered throughout the past year. He ventured to think that those services reached very much farther than to the shareholders, because Barclays Bank and the other great joint-stock banks of this country had during the past few years rendered, perhaps, the greatest national service of any of our institutions. We were all

dependent upon the banks being and keeping right, and the service which the chairman of Barclays Bank had rendered from time to time in putting sound and right views with regard to the great questions of economic disturbance before this country and other countries, he felt sure they would all recognise, was a national service, and deserved gratitude far beyond the bounds of the present audience. They could, he thought, congratulate themselves from two points of view. First of all, as shareholders, they undoubtedly looked at their dividends, and they were getting their dividend unimpaired, and, what from a general point of view was more important, they saw the bank in as fine a position as ever, in spite of all the troubles and economic difficulties through which the country was passing. That was achieved, not by chance, but by the work, the foresight, and the brains of those at the head of this great bank, and he felt sure that every shareholder would wish to express his appreciation.

POSITION OF THE STAFF.

He was extremely glad as a shareholder of the bank that the directors had seen their way to make a magnificent contribution of £50,000 towards the staff widows' fund. He had attended these meetings for some years, and he was quite sure that both the directors and the shareholders were one in this: that they wanted the service of the bank to be a great and good service. In his opinion, it was to-day in the position of being—he was going to say, but, perhaps, ought not to say—a second Civil Service; it was, perhaps, in many respects even better than the Civil Service, so far as the position of the employees of the bank was concerned, and this, he felt sure, was the right policy to pursue. On the other hand, it had to be recognised—and he had not the least doubt the staff of the bank would recognise—that during the days of inflation salaries did go to a point at which they probably, as the price of living fell, could not possibly be maintained; but he had not the least doubt that, with the good feeling which had always existed between the directors and shareholders on the one hand, and the staff on the other, any modifications which might be forced upon them would be arranged in as convenient, just, and equitable a form as possible, and be accepted by both parties on those lines.

The Chairman thanked Mr Cook and Mr Heath Clark for their kind expressions of appreciation, which, he said, were very much valued by the directors.

The resolution was carried unanimously.

RE-ELECTION OF DIRECTORS.

Sir Herbert Hambling then proposed the following resolution:—"That Colonel Hugh Gurney Barclay, M.V.O., Mr Robert Leatham Barclay, C.B.E., Lieutenant-Colonel Alfred Gilbey; Messrs Frederic Craufurd Goodenough, Herbert Gosling, and Edmund Henry Parker, J.L.D.; Sir Hallelwell Rogers, Sir James Smith, and Mr Cecil Mercer Woodbridge, the retiring directors, be re-elected directors of the company."

Sir J. Fortescue Flannery, Bt., seconded the motion, which was unanimously agreed to.

Sir G. Rowland Blades, Bt., M.P., proposed the re-election of Messrs Price, Waterhouse, and Co., and Messrs Kemp, Chatteris, Nichols, Sendell, and Co. as auditors of the bank, and the motion was seconded by Mr C. Heath Clark and passed unanimously.

TRIBUTE TO STAFF.

The Chairman, in moving a vote of thanks to the staff for their services during the past year, said that the period had been a very difficult one, and the staff had done exceedingly well under trying circumstances, and had assisted the directors in bringing the bank to its present very satisfactory position. He begged, therefore, to move:—"That the cordial appreciation and thanks of the shareholders be given to the general managers, the assistant general managers, the secretary, and the whole of the staff of the bank for their excellent services during the past year."

Sir Herbert Hambling seconded the vote, which was unanimously accorded.

Sir William Carruthers said that, as a general manager of the bank and one who had risen from the very bottom of the banking ladder, he would like, on behalf of the staff, to thank the chairman for his kind words, and the shareholders for the way in which they had received the proposal. The slump in trade, as had been stated, had caused great difficulties in the carrying on of business, and in consequence the staff had had to be very careful in the execution of their duties. He was glad to think that they had got through all these troubles in such a very satisfactory way.

Sir Stephen Collins proposed a hearty vote of thanks to the chairman and deputy-chairman for their excellent speeches, and to the directors generally for their services during the past year.

The motion was cordially adopted, and a brief acknowledgment having been made by the Chairman, the proceedings terminated.

AUSTRALIAN PASTORAL COMPANY, LIMITED. SEVERE CRITICISM OF LAND ACT AMENDMENT ACT.

The thirty-fourth annual general meeting of the Australian Pastoral Company, Limited, was held, on the 23rd instant, at the Cannon street Hotel, E.C., Mr Francis A. Keating (the chairman) presiding.

The secretary (Mr C. Bright) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: The shareholders were to be congratulated on the fact that, in spite of the company having had to contend with some very unfavourable circumstances, which he hoped were only temporary, they were able to show a net profit slightly larger than that of the previous year, and to recommend a dividend which gave, at any rate, a moderately good return upon the capital. He regretted that they were again unable to make any addition to the reserves and that the profit of £57,226 remained much below what it was in the series of years from 1910 to 1920, during which it averaged £107,000. The less satisfactory earnings of the last two years were due to three main causes—namely, the reduction of the revenue from stock sales, the increase of the working expenses due to high wages and high shearing and transport rates, and the large sums they had had to pay to the Queensland Government for rents and arrears of rents under the Land Act Amendment Act of 1920, otherwise known as "the Repudiation Act."

Dealing with the Land Act Amendment Act, 1920, he said that this measure had not only enormously increased the rentals the company had had to pay to the Queensland Government since 1920, but had compelled them to pay arrears on the higher scale for as far back, in some cases, as 1914. There was a provision in the company's leases that at each decennial reappraisal the rents could not be increased to more than 50 per cent. above those of the preceding ten-year period. This was a vital condition, and in reliance upon it sums running in the aggregate to many millions had been expended by the Queensland pastoral lessees upon improvements of their leasehold properties. It had never occurred to anyone until the Ryan and Theodore Governments came into power that a contract of this kind between the Crown and its tenants could be deliberately set aside by an Act of Parliament without compensation, and he did not think that there was any precedent within the British Empire for such an instance of legalised spoliation. The effect of this Act had been to increase the rents of the company's properties greatly above the 50 per cent. which was the previous limit, and owing to this increase having been made retrospective, the company had already had to pay in increased rents and arrears since 1920 a total sum of £49,520 over and above the maximum they could have been called upon to pay if the conditions of their leases had not been violated. The Government which was responsible for this great injustice was still in office, but it had a majority of only one, and all the indications pointed to the probability that after the State elections a new Government would take its place.

Queensland had immense possibilities and should be one of the most prosperous and progressive states in the Commonwealth, offering a magnificent field for the employment of British as well as Australian capital, but if contracts were not honourably observed, and if Acts of Parliament were employed to cover confiscation and injustice, Queensland would never attain the position to which she was entitled. From any Government which might succeed that now in office they would look confidently for redress of the wrong done to them and to the other pastoral lessees by the Repudiation Act. What form this redress should take was, of course, open for discussion and negotiation. They had no desire to embarrass a new Government by extreme or unreasonable demands, but either a return to the *status quo ante*, or adequate compensation in some form, was necessary for the restoration of Queensland's credit and the re-establishment of confidence in the honesty of her Government.

As a set-off against the serious disadvantages of which he had just been speaking, the company had an important benefit from the steady improvement which had taken place in the price of merino wool.

The balance-sheet showed that the financial position was extremely sound. There was a note in the last balance-sheet that the market value of their investments on June 30, 1921, was only £321,421, or £44,591 below their balance-sheet value. This year there was no such note, because on June 30, 1922, the market value of the investments of the company then held was no longer below but was actually £14,000 above their balance-sheet value. This was a very gratifying feature of the present accounts. Altogether, in view of the present good season, the satisfactory state of the wool market, the downward tendency of costs, and the important sum expected to be realised upon the company's Bawra shares, their prospects for the current year were by no means unfavourable.

Mr Andrew Williamson seconded the resolution, which was carried unanimously.

LONDON JOINT CITY AND MIDLAND BANK, LIMITED.

SATISFACTORY RESULTS OF YEAR'S BUSINESS.

RIGHT HON. R. McKENNA ON TRADE POSITION AND PROSPECTS.

FOREIGN TRADE AND NATION'S PROSPERITY.

CRITICISM OF DEFLATION POLICY.

ADVERSE EFFECT ON TRADE AND EMPLOYMENT.

The ordinary general meeting of the shareholders of the London Joint City and Midland Bank, Limited, was held at the Cannon Street Hotel, London, E.C.4, on Wednesday, January 24, 1923, for the purpose of receiving the report and balance-sheet, declaring a dividend, electing directors and auditors, and transacting other ordinary business.

The Chairman (the Right Hon. R. McKenna) said:

My Lords, Ladies, and Gentlemen,—

In presenting the balance-sheet and report of the directors for the past year, I shall in accordance with the usual practice give you the figures necessary to enable you to form an opinion upon the work of the bank, which covers a field wide enough to give a faithful reflection of the country's condition as a whole. Although there is evidence of recovery in general trade, the improvement as yet is only partial, and we are still confronted with a terrible problem in the large amount of unemployment. One of the causes of our trade depression is the political and economic state of Europe; another, but more obscure cause, is the restrictive influence of financial deflation. Before I deal with the particular subject of our own bank I should like with your permission to say something on the general question of foreign trade, and on the effect of financial policy upon trade revival.

VITAL IMPORTANCE OF FOREIGN TRADE.

Our commerce is distinguished from that of any other country by its large proportion of foreign trade, which, it is safe to say, before the war absorbed one-third of the labour of our people, whether in production, transport, or clerical work. Although the proportion may be somewhat less to-day, this trade is still of vital importance to us. It is, indeed, a commonplace that under our existing organisation we cannot keep our industries in full employment unless we sell a very considerable part of our production in foreign markets. In the modern world this is true to some extent of every country, but with us foreign trade has such exceptional importance that anything which restricts it must deeply affect our national prosperity.

THE BREAKDOWN IN EUROPE.

If we begin by comparing our present foreign trade with that of the last pre-war year we find that the values of imports and exports for the 12 months ending September, 1922, the latest date for which we have the figures in detail, show a considerable increase over those of 1913. But if we are to have a true standard of comparison we must make proper allowance for the reduced value of money, and in the few figures I shall quote I have taken the values of 1922 on the basis of commodity prices current in 1913. On this basis retained imports show a decline of 19 per cent., and exports of British production of 34 per cent. Let us now look a little more closely at the drop in our exports and examine where our foreign markets has been curtailed. Dividing the countries which take our goods into three main categories, in the first we have the countries of Central and Eastern Europe, our exports to which have declined 62 per cent. The second group includes all other foreign countries, which took 30 per cent. less of our products in 1922 than in 1913; and the third group consists of the British Empire overseas, to which our exports fell 29 per cent.

DECREASED TRADE WITH EMPIRE.

In the existing state of Europe we may feel little surprise at the great decline of our trade with the Central and Eastern European countries; but the remarkable falling off in our exports to other foreign countries and to British possessions does not admit of so obvious an explanation. It is indeed, sometimes urged that until Europe is restored we should look to a development of our Imperial trade in order to make good our losses in the European markets. But it appears that though our Imperial trade has suffered less than our foreign trade, it has still been gravely impaired, and so far from reducing our loss has itself contributed to it. A very brief study of the general course of foreign trade will show that whatever injures it in one part of the world has its reaction elsewhere, and that any confident hopes, based on the comparatively small proportion of our pre-war exports to stricken Europe, are not well founded. We shall find that the commercial

breakdown in Central and Eastern Europe is not only destructive of our markets there, but must hamper our export trade more or less all the world over

INTERDEPENDENCE OF NATIONS IN TRADE.

Let us consider, for instance, the trade which this country carried on with its two largest customers, India and Germany, in the year 1913. We sold to India goods of the value of £70 millions, and we received from her goods valued at £36 millions. According to the current phrase, in our dealings with India we had a favourable balance of £34 millions. In the same year our exports to Germany were valued at £41 millions, and our imports from that country at £76 millions. Here we had an unfavourable balance of £35 millions. If for the purpose of foreign trade we were to take India and Germany together as one group, then in dealing with this group our imports and exports in 1913 almost balanced. It was only an accident that there was this close approximation, but we were certain to find some approach towards equality. Looking at the figures of trade between India and Germany in that year, we see that India's exports to Germany were £27 millions and her imports from that country only £7 millions. India had an excess of exports to Germany of £20 millions, and the surplus she thus obtained provided her with the means of paying for British goods.

FALSE ARGUMENTS.

I have given here a very simple illustration of triangular trade, but if we follow our external trade through its whole course we shall find everywhere the same conditions of interdependence between nations. We suffer a real and very severe loss by the breakdown in Europe, and I am afraid some of the arguments which have been used to minimise it have little solid foundation. It has been said, for instance, that the figures of our exports of manufactured goods in 1913 show that the proportion of this class of commodity taken by the European countries now in an unsettled condition was even smaller than the proportion they took of our exports of all kinds, and it is argued that as our industry benefits most from our export of manufactured goods, it will be comparatively easy by an extension of our Imperial and South American markets, where our manufactures have been readily imported, to make good the loss we now suffer from the condition of Europe. But this view of our trade leaves a very important consideration out of sight. To what extent should we have to lend the money to our Imperial and South American customers to enable them to pay for our manufactures? If we lent more, we should sell more. But we cannot conduct our export trade entirely on this basis; in large part, at any rate, our exports are needed to furnish us with the means of paying for our imports. We did not lend much to Europe before the war, and our exports to that Continent cannot be replaced by exports which represent the proceeds of our own loans.

DEVELOPMENT OF DOMESTIC TRADE.

The restoration of the European market is indeed of the greatest importance to us, but the condition of Europe is due to causes which in the main are beyond our present control. Wise policy on our part may, and I believe in course of time will, have an ameliorative effect, but it is not in our power to enforce such conditions as are indispensable to the recovery of general European prosperity. When, however, we turn to our home trade we find ourselves masters in our own house. Here we are more fortunate in the fact that the fundamental conditions are not unfavourable. The relations between capital and labour are on a far better footing than they were two or three years ago. Post-war illusions have been dispelled, and there is a general disposition to face realities. The public have a wider recognition of the necessity for national economy, of the crushing effect of excessive taxation on industry, and of the need for greater production. In these circumstances it is not merely possible for us to get back to the pre-war level, but we may perhaps look for a further development of our domestic trade so as to make up for part of the foreign decline. It is in this sphere that our best hope lies, and it is here that we may find a wise direction of financial policy of the greatest avail.

RESTRICTIVE INFLUENCE OF DEFLATION.

In speaking of financial policy, let me say at once that I am not referring to that expressed in the annual Budget. The policy I am discussing now has nothing to do with the imposition or remission of taxes. It deals with such questions as the issue and rate of treasury bills, the funding of floating debt, the issue of Treasury bonds, and other kindred matters. In recent years this policy has been frankly one of gradual deflation. Its responsible authors have defended it upon what they deem grounds of sound Treasury finance, and the opinions which have guided them deserve the greatest respect. If there were no other considerations to bear in mind, if under existing conditions the ends aimed at could, in fact, be achieved, if all we had to suffer from the medicine administered to us was a temporary inconvenience, we might perhaps accept the policy without complaint. But we cannot leave its influence upon trade and employment out of sight. Though not obvious and immediate, it is none the less certain, and if we are to form a sound judgment upon this policy as a whole we must view it in its full consequences.

CONFLICTING OPINIONS.

In discussing the question of deflation, I feel that I must begin with an apology. We are all familiar with the phenomenon of great trade activity arising from a speculative boom, and we have all been taught to understand its fleeting and illusory nature. We realise that great social evils spring from the soaring prices which accompany it; we know that the inevitable reaction sweeps away the swollen profits as rapidly as they were made; we recognise the intimate connection between speculative excitement and credit inflation; and we justly condemn any financial policy which has an inflationary effect. But when we turn our attention to the influence of deflation upon trade and employment we have no familiar body of accepted opinion to guide us. People are apt, indeed, to start with a preconceived idea that deflation must be meritorious since it is the reverse of inflation, and that, even though it be injurious to trade, we may find consolation in its superior virtue. Deflation, however, as a financial policy has no more to recommend it than deflation, the truth being that what we need to ensure healthy and prosperous trade conditions is stability in the value of money. My apology is due to you because any discussion of deflation cannot fail to be highly technical, and I am obliged in consequence to ask you for an exceptional degree of patience in listening to you.

EFFECT OF PURCHASING POWER.

It is necessary for me in the first place to call your attention to certain figures. At the close of 1921 the total deposits in British and Irish banks were £2,530 millions, and the estimated currency in the hands of the public was £370 millions. If we add together these figures we arrive at the purchasing power of the public, a total of £2,900 millions. At the close of last year the estimated deposits stood at £2,350 millions, the estimated currency in the hands of the public at £350 millions, and purchasing power at £2,700 millions, a reduction in purchasing power in the course of the year of just over £200 millions.

REDUCTION IN BANK ASSETS.

Any decline in bank deposits, which stand as liabilities in the balance-sheet, must be set off on the other side by a reduction of assets. What changes have there been in the assets of the banks in the course of the year? The figures for all British and Irish banks are not yet available; but I can give them for the London clearing banks, and these will suffice for the present purpose. There has been a very large reduction in bills, which have dropped by no less than £130 millions. Cash and money at hand are lower by £25 millions, and loans and advances are down by £30 millions; but on the other hand investments have increased by £50 millions. An examination of these figures show us that the fall in deposits, which in the case of the clearing banks was £135 millions, has been due to the great reduction in bills, and in millions, has been due to the great reduction in the year the Government paid off Treasury bills to an amount of over £300 millions, ment paid off Treasury bills to an amount of over £300 millions. Here of which the banks held between £100 and £200 millions. Here we see a decline in deposits related to a reduction in the Treasury bills held by the banks. The operation was in truth a measure of deflation effected in pursuance of a declared policy, and resulting in a total reduced purchasing power of £200 millions.

EFFECT ON TRADE AND EMPLOYMENT.

Now what is the effect of a decline in purchasing power upon trade and employment?

To answer this question we must bear in mind the relation between purchasing power and the price level of commodities. Price varies with three factors—amount of purchasing power, the amount of purchasable commodities, and the rate at which the purchasing power is exercised, which we may call velocity of ex-

penditure. If purchasing power declines, then until there is a change in the amount of purchasable commodities or in the velocity of expenditure, prices will fall. But when prices begin to fall manufacturers and traders who have bought raw materials and stock at the higher level are faced with a loss, and are compelled to restrict their operations. Fewer orders are given, trade declines, and unemployment grows. Thus the immediate effect of a reduced purchasing power is diminished trade and increased unemployment. If at this stage we made no further effort to deflate, trade would soon recover. With a diminished production, purchasable commodities would be reduced in amount; at the lower prices the velocity of expenditure would tend to accelerate; and trade would become active again. But if, whenever there are signs of trade recovery, a fresh dose of deflation is administered, we may prolong the depression for an indefinite period.

THE BURDEN OF THE NATIONAL DEBT.

I have shown here as briefly as I can the direct relation between a policy of deflation and trade depression. With regard to the trade depression from which we are now suffering, I know it is contended that, painful as the consequences may be, we are really only going through a period of unavoidable lassitude after the fever of the preceding years, and that we shall emerge from it in a far healthier condition, with prices definitely established on a lower level. I cannot help thinking, however, that this is a mistaken view of the possible results of deflation. It leaves out of account the budgetary difficulties which must confront the Chancellor of the Exchequer. A drop in prices leads to a decline in profits, and consequently in national revenue. It will be readily appreciated that if prices were to go back to the pre-war level no Chancellor could balance his Budget.

DEFLATION AND THE BUDGET.

An examination of the figures will show this at once. The charge in respect of our National Debt last year amounted to £332 millions, and income-tax at the rate of 5s in the £, together with the proceeds of super-tax, raised sufficient revenue to meet the whole of it. But if we get back to the 1913 prices and value of money, we shall get back also to the 1913 national income and yield of income-tax, on which basis a rate of over 8s in the £ would be required to meet the annual charge for debt alone. Lower prices increase the real burden of the fixed charges on the national revenue, which in interest on debt and war pensions amount to £425 millions this year. If last year's policy of deflation is continued we may find ourselves within measurable distance of being forced into the opposite and dangerous policy of inflation by the inability of the Chancellor of the Exchequer to meet his expenditure without having recourse to borrowing.

DEFLATIONARY POLICY REVIEWED.

In speaking two years ago on financial policy in relation to trade, I felt justified in saying that any attempt to carry through a policy of deflation could only end in the strangulation of business and widespread unemployment. At that time such a policy had already received public official sanction. The Bank rate, which had been raised to 7 per cent. in 1920, remained at that level for a year, and Treasury bills continued on tap at 6½ per cent. during almost the whole period. Already by the autumn of 1920 trade showed such a serious decline that we might have expected a lower Bank and Treasury bill rate, but the exigencies of deflationary policy demand a continuance of dear money. Unhappily, employment decreased month by month as this policy was enforced. In April, 1920, the records of the employment exchanges showed that we had 348,000 unemployed; by March, 1921, the total of unemployed had risen to 1,506,000.

TREASURY BILLS AND TREASURY BONDS.

The deflationary policy pursued in 1922, though far less obvious and far less drastic in its methods than that of 1920 and 1921, was bound to be not less certain in its results. No one has any difficulty in understanding that a high Bank and Treasury bill rate, maintained for a very long period, cannot fail to depress trade, but the task of relating cause and effect is very much harder in the case of the more modest deflationary effort of last year, which consisted in the weekly offer of Treasury bonds. It must, indeed, appear almost fantastic to allege that the conversion of a Treasury bill into a Treasury bond may have an adverse influence upon employment. And yet if we direct our attention to the actual course of events, I believe we shall find the argument to be well founded.

TREASURY BONDS AND THEIR EFFECT.

Let us go back to July, 1921, when the Treasury bills outstanding were over £1,200 millions, and the first issue of 5½ per cent. Treasury bonds was made. At that time Treasury bills were largely held by the public as well as by Government departments, the banks, and the money market. In the course of the ensuing nine months the Treasury bill rate fell from about 5 per cent. to

less than $2\frac{1}{2}$ per cent.; most of the Treasury bills held by the public were allowed to run off, and the proceeds were invested in gilt-edged securities carrying a higher rate of interest. We all remember the consequent great rise which took place in those securities. The Government found the means to pay off the Treasury bills partly by the sale of Treasury bonds and partly out of the surplus of revenue over expenditure. By April, 1922, over £400 millions of Treasury bills had been repaid, and nearly £400 millions of Treasury bonds had been sold. In effect, what had happened was that the public had changed their investments from one form of Government security to another. There had been some payment off of Treasury bills held by the banks, which had used the money to buy the very remunerative Treasury bonds, but the action of the public was the mainspring of the movement.

We come next to a time when the public had ceased to hold any notable amount of Treasury bills, which were then almost all, as they are to-day, in the hands of the public departments and the banks or money market. The problem which now confronts us is, what happens if the Government continue to offer Treasury bonds for the purpose of obtaining funds with which to pay off Treasury bills held by the banks? We shall deal with the problem more easily if we consider it in relation to a particular case.

SALE OF TREASURY BONDS TO PUBLIC.

Let us suppose that a member of the public, who has £10,000 on deposit in his bank ready for investment, applies for that amount of Treasury bonds. He will draw off his deposit of £10,000 and pay the money into the Bank of England to the credit of the Government. In his own bank the accounts will now show £10,000 less on deposit and £10,000 less cash. Next suppose the Government use this money to pay off a Treasury bill, and that the bill is held by the same bank. Clearly the bank's accounts will then show £10,000 increase in cash and £10,000 reduction in bills. If now we put the two transactions together the final result of the double operation will be, first, that the bank's deposits and bills will each be reduced by £10,000, and, secondly, that the Government will owe £10,000 on a Treasury bond instead of £10,000 on a Treasury bill. To the uninitiated it must look as if deposits, and therefore purchasing power, to the amount of £10,000 had been spirited out of existence, but there is no mystery about the proceeding. I have already called your attention to the published figures of the banks, which show a reduction of many millions last year both in deposits and in bills, and we have here a sufficient explanation of the reduced deposits. It is merely an illustration of the axiom that every bank loan creates a deposit and every repayment of a bank loan destroys one.

AN OBJECTION ANSWERED.

Someone may intervene here with an objection which must be answered. In the example I have given the bank would have less deposits than before, but the same amount of cash. It might, therefore, be objected that the bank would have more than its usual proportion of cash, and would be in a position to make fresh loans and so recreate its lost deposits. In reply, let me remind you that in actual practice the immediate use made by a bank of its surplus cash is to lend it to the money market. With additional resources available the discount brokers and other customers of the Bank of England are able to pay off loans borrowed from that Bank, and every such repayment not only cancels a deposit, but also cancels an equal amount of bank cash. Thus, just as when inflation is in process, loans by banks lead to an increase of borrowing from the Bank of England and an increase of bank cash, so when deflation is in action loans from the Bank of England are paid off and bank cash is reduced.

Returning to the subject of Treasury bonds, we will next consider what would happen if no offer were made of them to the public. In that case the intending investor of £10,000 would be obliged to find some other use for his money. He might apply for some new issue of debentures or shares, or he might purchase some existing security, whether a Government or an industrial issue. It is unnecessary to enumerate all the possible forms of investment, but it will be observed that in every case the investor's money would merely change hands. It would pass into the possession of the vendor of the security, who would pay the money into his bank, and there would be no reduction in bank deposits unless it were used to pay off a bank loan. Purchasing power would not be diminished; there would be no less demand for commodities and no fewer orders would be given.

CONTRADICTION POLICIES.

It is obvious that the first movement in trade comes from giving an order. Trade is set going by the expenditure of money, whether it be on goods for immediate consumption or on goods which are to be used in further production, such as plant and machinery. The argument in justification of the Trade Facilities Act, that by its assistance traders can do business which would otherwise have been beyond their present capacity, is a recognition

of the need, when we are suffering gravely from unemployment, to do what we can to promote the giving of orders. But, as we have seen, the issue of Treasury bonds to pay off Treasury bills held by banks reduces purchasing power and tends to restrict orders. Thus, in the course of last year two diametrically opposed policies have been pursued at the same time. In one case the paramount necessity to give a fillip to trade was recognised, and Government credit was used for the purpose; in the other the public were invited to invest their savings in a way which deprives trade of its natural stimulus. We know the defence of the first policy, the need to absorb our vast numbers of unemployed; it remains for me to state the argument advanced in defence of the second.

DIVERGENCE BETWEEN AMERICAN AND BRITISH POLICY.

The primary ground on which a policy of gradual deflation is recommended is that it raises the exchange value of the pound sterling in relation to the dollar, and hastens our return to the gold standard. As every measure of deflation tends to lower prices or, in other words, tends to increase the value of the pound sterling in terms of goods, it must raise the value of our currency in the foreign exchange market. The only exception would arise if other countries pursued the same policy, in which case there would be a fall in prices measured in all currencies. We had a partial illustration of this process in 1920 and 1921, when the United States adopted deflationary methods in concert with our own financial authorities. There were considerable fluctuations in the dollar rate during this period, but in April, 1920, when our Bank rate was raised to 7 per cent., the dollar stood at 3.88, and eighteen months later, after America had broken adrift from this policy, the exchange was nearly the same. Since the late summer of 1921, when British and American policy diverged, bank deposits in the United States have materially increased, prices have gradually risen, and the unemployed, who were then numbered by millions, have been steadily absorbed. During the same period the dollar has depreciated in relation to sterling more or less continuously, until to-day the two currencies stand to each other in a relation not far removed from parity.

DEFLATION AND THE £ STERLING.

It is admitted, then, that deflation in this country tends to improve the value of sterling. But does it in the actual circumstances of to-day do more than accelerate our approach to parity? Would our exchange not rise to par even if there were no deflationary efforts on our part, and we were spared all the evils of trade depression and unemployment which attend such efforts? I think it would, unless financial policy were again reversed in America. I think that in existing conditions the depreciation of the dollar is bound to continue. At present the United States is the only great market for gold. The bulk of the world's annual output is sold to that country, and, as the amount is greatly in excess of the normal currency and credit requirements, the effect of the over-supply is to force down the value of gold. Depreciation of gold means a rise in prices in the United States, and a fall in the value of the dollar measured in sterling. Even if prices rise here, as they will under improving trade, they will not rise as fast as they must in America under the influence of an excessive gold supply, and, if there be no deflation in either country, sterling will slowly appreciate until it finally reaches par.

INCREASED PRODUCTION THE REMEDY.

Let me remind you that just as inflation which causes prices to rise will always be ultimately checked by the refusal or incapacity of the consumer to pay, so deflation will be checked by the restriction of output which follows upon falling prices. Those who advocate the deliberate adoption of a policy of continuous deflation are oppressed by the fear that at any moment an excessive amount of credit may be created in consequence of the Government being compelled to borrow from the Bank of England in order to meet maturing Treasury bills. They regard deflation as a prophylactic against inflation, just as in former days it was the practice to bleed a patient as a precaution against the recurrence of fever. But all that is necessary to meet the danger of the Government being forced to borrow excessively is to raise the rate for Treasury bills to a point high enough to ensure the renewal of an adequate amount. The continuance of a high rate or the adoption of any other method for the purpose of forcing down prices is bound to strangle trade and reduce output, and must operate very unfairly upon the taxpayer, who is saddled with the burden of the National Debt. If we look for a revival of trade, for more abundant revenue and for a reduction in taxation, we must leave prices to take their own course under the normal pressure of supply and demand. We must not interfere with the natural flow of trade by any restriction of existing purchasing power, but must seek a general increase of wealth through a more abundant output.

OUR OWN BANK.

I turn now to our own balance-sheet, and with your permission will briefly explain the figures.

The paid-up capital on December 31st last was £10,860,852, and the reserve fund stood at the same amount. No new shares were issued during the year, and now that the outside reserve is equal to the paid-up capital we prefer when our profits permit of it, as they did last year, to strengthen our internal resources in order to meet future contingencies. There was thus no change in the figures of either capital or reserve.

CURRENT DEPOSITS AND OTHER ACCOUNTS.

But when we come to the amount owing to depositors and compare it with the figure of the previous year we see a considerable decline. I have already shown how the policy of deflation has greatly reduced public purchasing power, and we cannot be surprised that our deposits have fallen with those of the British banking system as a whole. Twelve months ago current, deposit, and other accounts were £375,117,002.

The bank has never shown a higher figure in an audited statement, though on many occasions deposits have been larger. On December 31st last they were £354,406,336. The reduction in the year of £20,710,756 is considerable, but we appear to have suffered less than our proportion. The bank's large connection with industrial enterprises would lead us to expect a greater proportionate reduction in a period of severe trade depression, and the fact that we do not appear to have lost our full share in the general decline in deposits seems to point to the conclusion that we are more than maintaining our relative position.

ACCEPTANCES AND ENGAGEMENTS.

Acceptances and engagements on account of customers at £25,862,341 are £6,014,019 up on the year. Our acceptances, drawn for the most part by or on account of first-class bankers, represent transactions in respect of foreign business, and are quite undoubted. These larger figures, with prices on a lower level, indicate that international trade is increasing in volume.

COIN, BANK AND CURRENCY NOTES, &c.

I have dealt with the four principal items on the liability side of our balance-sheet. Let me now turn to our assets, and show you how the liabilities are secured. The first line of defence is our cash reserve, or, in the accepted phraseology, coin, bank and currency notes and balances with the Bank of England, which stand at £54,254,534. This is 15.3 per cent. of the deposit liabilities, or one-third of 1 per cent. higher than the average figure shown in our monthly statement. In some countries banks are compelled by law to observe certain minimum reserve requirements. In this country they are under no such compulsion, and it is left to the respective managements to determine the necessary proportion with due regard to the nature of the bank's business.

BALANCES WITH AND CHEQUES IN COURSE OF COLLECTION.

Balances with and cheques in course of collection on other banks in Great Britain and Ireland are £13,548,935. These become cash from day to day. Money at call and short notice includes the accommodation we extend to the money market, and stands at £17,187,013, which is £5,535,516 higher than in December, 1921. The greater part of this amount is available as cash within seven days.

INVESTMENTS.

Investments, which are valued at less than market price, are slightly down on the year. Nearly all of these securities, amounting to £55,454,831, are British Government loans. During the first half of the year we temporarily increased our investments to a total of nearly £68 millions, but sold them again as opportunity offered.

BILLS DISCOUNTED.

The next item consists of bills discounted, and stands at £46,066,631. Our discounts for the most part are fine trade bills with less than two months to run; the remainder are Treasury bills with a maximum currency of three months. The decrease of bills with a maximum currency of three months. The decrease of £26,051,403 is accounted for largely by our smaller holding of Treasury bills, which amount to less than £7 millions, as compared with £28½ millions at the end of December, 1921. I have already dealt exhaustively with the effect of the repayment of Treasury bills held by banks, and will be content now to call your attention to a remarkable coincidence: our deposits are down nearly £21 millions on the year, and during the same period our holding of Treasury bills has been reduced by an almost identical amount.

ADVANCES ON CURRENT AND OTHER ACCOUNTS.

I come now to advances to customers and other accounts, which have increased from £176,779,261 to £182,307,521. In this respect our accounts differ from those of most other banks, as advances in the aggregate were lower at the end of the year. The increase in our figures, therefore, is the more remarkable, and is evidence of the bank's exceptional assistance to industry and of a reviving demand by trade for accommodation. Other indications

also show grounds for hope that industry is at length recovering. Prices temporarily seem to have touched their low level, exports are increasing, railway freight traffic is heavier, and bank clearings are greater. There are also distinct signs of an increased willingness on the part of the public to buy, which, if unimpeded, will result in a growing volume of orders between merchant and manufacturer. Such conditions cannot fail to lead to improved trade. I realise that the possibilities of the present movement are strictly limited, and that production cannot approach pre-war dimensions until former foreign customers are again in a position to buy our goods; but I do not think I am unduly optimistic in saying that there are many signs of coming expansion in our domestic trade.

AGRICULTURAL LOANS—BANK'S POLICY.

Before passing on to the next item in our balance-sheet, I should like to make particular reference to the policy of this bank in regard to loans for agricultural purposes. We have a large number of farmers amongst our customers, and I can state without hesitation that it is our invariable rule to treat them with the utmost consideration. We realise the seasonal nature of their business, and finance them freely until they receive payment for their crops and other products. I think I should be right in saying that no section of the community receives more generous consideration from the bank, and, judging from our own experience, I can also say that no class of borrowers observes more faithfully the strict letter of their undertaking.

BANK PREMISES.

Bank premises at £5,270,960 are £328,661 higher. We have now no less than 1,674 offices in England and Wales, and it is hardly necessary for me to assure you that the book value of our premises is below their real worth.

HOLDINGS IN AFFILIATED COMPANIES.

The remaining items in the balance-sheet relate to the bank's holdings in affiliated companies, the Belfast Banking Company, Limited, the Clydesdale Bank, Limited, and the London City and Midland Executor and Trustee Company, Limited. Of the two banks, let me say that you will see from the statements of their accounts, which have been circulated with our own balance-sheet, that their business continues to be well maintained. We are highly satisfied with their progress, and the managements are deserving of your highest commendation for their prudent administration. I am happy to be in a position to assure you that a spirit of mutual helpfulness and co-operation pervades the three institutions in their dealings with each other. During the year we have purchased the 41 shares of the Clydesdale bank which were outstanding a year ago, and we now own the whole of the share capital of the two affiliated banks.

EXECUTOR AND TRUSTEE COMPANY

You may have noticed that the shares of the Executor and Trustee Company are now shown separately in our balance-sheet. Previously we had included our interest in this company in the entry advances to customers and other accounts, but the business is expanding so rapidly that we decided to give it special recognition. You may remember that the company was formed by the bank in 1909 in response to a growing demand by customers and the public for a corporate trustee, which could offer the combined advantages and security, continuity of existence, and expert and inexpensive administration. In consequence of the expansion in its business, it has been considered advisable to increase the company's funds by the issue of new shares. The authorised and subscribed capital is now £1,000,000, the paid-up capital, £200,000, and the reserve fund, £100,000. The whole of the capital is held by this bank. The position of the company as on December 31st last has been set out on the inset statement sent to you last week with our own report and balance-sheet. I do not propose to analyse its condition in detail, or to make comparisons with the position a year ago, because I feel you will be content with my assurance that its business is growing at a rate which exceeds our expectations. The activities of the Executor and Trustee Company are becoming better known, and we are confident that an increasing realisation by shareholders, customers, and the public of the many advantages offered will attract much new business. The scale of fees is exceptionally low, the advantages very great, and the security undoubted.

PROFIT AND LOSS ACCOUNT.

I pass now to the profit and loss account. Full provision having been made for all bad and doubtful debts, the net profits for last year amounted to £2,253,492, which with £777,253 brought forward, gives us for distribution and allocation a total of £3,030,745.

that manufacturers have not generally been able to sell at prices which were remunerative, and if, in individual cases, they have been able to do so, it has often been at the expense of the spinner from whom they have purchased yarn at under the cost of production, and therefore the trade, as a whole, has suffered loss. For many years past, owing to the expansion of cotton spinning and manufacturing in other countries, there has been a tendency for our British producers to specialise in the finer types of yarns and cloths, but in times of financial stress such as we are experiencing, the impoverished consumer abroad has perforce to satisfy his needs to a considerable extent with the cheaper and coarser goods produced in other countries. The result, so far as 1922 is concerned, was that, in spite of an increase in shipments of cloth, any profits made have been small, and most of the business has been done at an actual loss. This is notwithstanding the fact that operatives' wages were substantially reduced during the year, and that short time has been run in almost every section of the spinning and manufacturing industry. Spinners have shared the same adverse fortune as manufacturers, except that mills spinning Egyptian yarn have done more business both for home and export than spinners of American and other types of cotton. The processing trades, such as calico printers, bleachers, and dyers, have had a remunerative year, and have, to some extent, made a welcome reduction in their tariffs. The position of the spinner and manufacturer has not been helped by the shortage in the American cotton crop and the consequent rise in price of raw cotton, but the effect of this shortage, which would have been alarming if the demand for cotton goods had been normal, has been to stimulate schemes for the growing of cotton within the Empire and in Brazil.

WOOLLEN INDUSTRY.

When we turn to the other great textile industry, viz., the woollen industry, I am glad to be able to report a more encouraging position. There has been a strong demand for raw material, and an advance in prices of all grades. While all sections of the trade are in a better position than they were 12 months ago, the improvement has been most pronounced in the case of firms dealing in raw material or engaged in the process of converting it into tops and yarns. Unfortunately, the process of recovery in the cloth section has been slow, and there are still idle looms in the woollen districts. One may congratulate those engaged in this important industry on the very distinct recovery which it has made, and while there is room for improvement, there is every prospect that the steady progress made in 1922 will continue. The unsettled political and economic situation on the Continent still remains the chief disturbing factor.

COAL TRADE.

In our north-eastern district we are brought into close contact with the coal trade. During 1922 the output of coal for the whole country was over 252,000,000 tons. While this is 35,000,000 tons less than the country produced in 1913, it is nearly 90,000,000 tons more than the output of 1921, which was the year of the great coal strike, and showed the lowest production since 1887. Fortunately, the weekly output tends to increase, and it is hoped that by the time the iron and steel industry regains its pre-war activity, the coal production of the country will be enough to supply both export trade and home industries.

SHIPBUILDING INDUSTRY.

In several of our districts we are affected by the prosperity or adversity, as the case may be, of the shipbuilding industry. The year 1922 was a disastrous one for shipbuilders. Probably there have never been so many shipyards in the country simultaneously idle, and the stagnation of this industry has been responsible, directly and indirectly, for much of the prevailing unemployment. Costs, including wages, have been substantially reduced, and towards the end of last year the situation began to be relieved by the placing of orders for a certain number of new merchant steamers and two battleships, one of which was secured by the Tyne and the other by the Mersey. It is probable that much of this new work was accepted at unremunerative rates in order to keep shipbuilders' organisations together, and it is obvious that tendering on that basis cannot continue long; but it is all to the good that the long spell of absence of contracts has at last been broken, especially because activity in shipbuilding entails the placing of a number of orders with other cognate industries.

IRON AND STEEL INDUSTRY.

The iron and steel industry passed through a most trying time in 1922, and many works were entirely idle, with the result that unemployment reached alarming proportions in the iron and steel centres. At the turn of the year, however, a better feeling sprang up, inquiries for business were circulated more freely, a number of contracts were placed, though often on a basis which showed little or no profit, blast furnaces were restarted, and engineering

prospects were brighter than they had been for a long time.

Textile machinists have again had a prosperous year, and their exports compare favourably with those of 1921. Orders for looms and spinning machinery are coming in from all parts of the world. The devastated areas of France and Belgium have had to be supplied, and large orders have been received from America and Australia, in spite of tariff barriers.

The machine tool trade, on the other hand, remains stagnant, and the disturbed state of Europe has also greatly interfered with the business of other sections of the engineering trade.

TIMBER TRADE.

The timber trade is one in which we in Liverpool are specially interested. The trade passed through a difficult time in 1921. Furniture makers, railway wagon builders, ship repairers and builders were doing next to nothing, and there was no demand for timber. While the year 1922 was also difficult, the volume of business, especially during the second half of the year, showed improvement compared with 1921. Fortunately, shippers accepted the position, and the market was not burdened by excessive shipments of timber. Latterly users of timber of all sorts have been getting to work again, and there is quite a healthy feeling in the market in consequence. It is to be hoped that supplies from abroad will continue to be regulated to meet the demand, and that the present year may restore prosperity to this important trade.

WHEAT.

Another trade which touches us pretty closely, especially in this district, and which affects everyone personally, is the wheat trade. The yield of the harvest of 1922 in Europe generally was poor, and of course Russia was entirely out of the market as an exporter. Had there been failures in any of the other great wheat-producing areas of the world the position might have been serious, but providentially the harvests in the United States, the Argentine, India, Canada, and Australia were beyond the average, and the safety of the wheat supply of this country for some time to come is assured.

PROVISION TRADE.

Another leading Liverpool trade is the provision trade. During the past year business, on the whole, has been of a satisfactory character, and movements of prices of bacon and other hog products have not been excessive. The prices of butter and cheese, however, advanced considerably, partly in consequence of the fact that Government stocks held a year ago had been absorbed during the year. It is a sign of trade revival, and of the gradual absorption of the unemployed into active work, that the demand tended to increase as the year closed. The business in canned goods was restricted in consequence of the decreased spending power of the industrial classes during last summer. The activity of these trades is so closely affected by the purchasing power of the working classes that increased turnover may be expected as unemployment diminishes.

RUBBER.

Turning to the rubber trade, one finds an interesting position. In order to prevent disastrous losses to rubber planters, restriction of output was agreed to, and in spite of the fact that the Dutch growers remained outside the agreement, it is anticipated that the present surplus stocks will be absorbed before the end of the year. The prospect of the rubber industry is thus better than it has been for some time past.

SHIPPING.

Closely bound up with the prosperity of all the separate trades of the country is the great industry of shipping. Fortunately the shipping depression, though still existing, appears to have passed the worst and a period of general improvement seems to be approaching. Twelve months ago there were 1,250,000 tons of shipping laid up in the United Kingdom. Of these about 500,000 tons are now running, chiefly in consequence of the revival of the export coal trade. Notwithstanding keen foreign competition, British owners have been able to secure the bulk of cargoes offering, but at freight rates so fine that the earnings of our merchant fleet have been very low. The outlook for shipping, taken all round, is brighter to-day than it has been since the depression began, and as the surplus tonnage of the world is brought into employment and obsolete vessels are scrapped, the prosperity of this leading factor in British commerce will return.

FARMING.

I should like to say a few words about the farming industry in the North of England. 1921 was a poor year, and 1922 not much better. Foot and mouth disease interfered with the cattle trade in the early part of the year, and the wet summer and autumn were bad for arable farming. Fortunately for the raisers of live stock the hay crop, though moderate in quantity and difficult to get in, was fair in quality, and there has been plenty of summer and autumn grass; but where farmers have been more dependent

upon grain crops they have suffered considerable losses. Taken all round the year was a poor one for farmers, and one can only hope that the year 1923 may be more kindly to this important section of the business community.

An impression seems to prevail in certain circles that bankers take narrow views in adjudicating upon advances to farmers. I do not think there is any foundation for this suggestion, and speaking for our own bank, I can say emphatically that we lend very freely to farmers; indeed, we regard farming advances as an important and valuable section of our business.

EXPORTS AND IMPORTS.

From the account I have given of these several leading trades it may be inferred that the country is slowly recovering from the acute depression of 1921, and this is borne out by the recent comparative stability of prices, and by the slight revival of the country's export trade, viz., £720,000,000 in 1922 against £703,000,000 in 1921. The improvement is even more pronounced when we look at the quantity of the exports instead of the value. In 1922 we exported 64,000,000 tons of coal against 24,000,000 in 1921; 3,400,000 tons of iron and steel products, against 1,700,000; 201,000,000 lbs weight of cotton yarns, against 145,000,000; 4,181,000,000 square yards of cotton piece goods, against 2,902,000,000; 184,000,000 square yards of woollen and worsted tissues, against 117,000,000, and so on, and one is glad to be able to draw the conclusion that trade is at last beginning to revive. On the import side of the account the figures have gone in the opposite direction, and show a reduction of £81,000,000 in 1922 as compared with 1921. It follows that the adverse balance of trade which in 1921 was £277,000,000 was in 1922 only £180,000,000, and this has doubtless had a considerable influence in the improved value of the £ sterling as compared with the American dollar. The continued existence of an excess of imports over exports, however, also bears another favourable interpretation, viz., that Great Britain still has substantial claims upon other countries for interest, freights, insurance premiums, and other unseen services.

TRADE PROSPECTS.

While I must disclaim any desire or intention of playing the part of a prophet, you will naturally expect from me on this occasion some expression of view as to the future trend of business. You will gather from the survey I have made of individual trades that any positive indications of the course which those trades are likely to take are in the direction of greater activity, and, it is hoped, greater earning power. Another element of supreme importance pointing in the same direction is that of the fusion, on the first day of this month, of the railways of this country. It is claimed by the authors of the Railways Act that it will lead to large economies, to greater efficiency, and to a reduction of railway charges. If these expectations are realised, and there is every indication that a determined effort will be made to realise them, the fusion of the railways will play an important part in the revival of British trade. A reduction of transport charges within the country will not only reduce the cost of the commodities which we may wish to export, but will also reduce the cost to our customers of commodities which we import from abroad, and the great thing at present is to get costs down in every direction.

WARNING AGAINST UNDUE OPTIMISM.

Thus far, all I have said points to a trade revival, but I should like to utter a word of warning against undue optimism. The close of the year 1922 finds Europe in a plight more desperate than at any previous time since the war. Currency depreciation has during the year been carried to extremes undreamt of when the year opened; the question of war or peace in the Near East is hanging in the balance at the Lausanne Conference; the rivalries of the Balkan States and of the States of Eastern Europe generally give constant rise to war-like rumours, and a flame might easily break out amid the combustible material of that part of Europe; the question of German reparations has reached an acute stage, and if not quickly solved may lead to startling and even calamitous developments; the question of Russia's relations with the rest of the world is still unsettled, and in the meantime any influence which she can exert on the other nations is of a hostile and disquieting order. International trade cannot be carried on with such a background of chaos or of great political and economic unsettlement, and while I welcome such indications as there are of reviving trade, I confess I fail to see how that revival can proceed very far in the present distracted condition of Europe.

AMERICA AND CO-OPERATION.

In these circumstances I welcome the indications, somewhat vague though they may yet be, of a desire by the United States to co-operate in measures for the restoration of the economic condition of Europe. If, for example, the Government of the United States and our own Government can effect a fair and reasonable

settlement in regard to the British debt to America, a distinct step forward will be taken towards the settlement of the still greater question of the cancellation of inter-Ally debts. Again, if the present experiment that France is trying in the Ruhr district were to prove abortive, the moment might be opportune for the convening by America of an economic conference, which might go a long way in reaching a settlement of the German Reparations question.

AUSTRIA AND LEAGUE OF NATIONS.

I also welcome the experiment which is being tried by the League of Nations in the case of Austria. If that experiment were to result in the stabilisation of the currency and of economic conditions in Austria, a similar experiment might be carried out with similar success in the case of other countries whose currencies have depreciated and whose budgets are in a chaotic condition. Thus it is conceivable that step by step a solution may be found for one European problem after another, but not until this has been done can we count upon such a revival of our overseas trade as will bring back normal prosperity to our business men and full employment to our working classes. In the meantime, it seems to me there are some signs that events are moving in the right direction. Military adventures are becoming discredited; the limitations of political action are becoming apparent, and it is gradually being realised that the salvation of Europe lies in the economic sphere and must be worked out by economic authorities. An international financial conference, working on purely economic lines and free from political bias, might find it possible to lay down the main lines of reconstruction and of currency reform. After this the resuscitation of European commerce would depend upon the individual efforts of business men with the co-operation of the banking world. The one vital consideration, however, is that measures of reconstruction shall not be too long deferred. The economic restoration of Europe is still possible, but every day that passes renders it more difficult.

I am sorry that I cannot hold out a more encouraging prospect for the present year than I have done. At the same time, it is one's duty to foster a spirit of courage and optimism wherever there appears any justification, and I therefore wish to conclude these remarks by reverting to the more hopeful signs which are visible to-day.

HOPEFUL SIGNS.

Trade is undoubtedly improving both in regard to volume and profit. The number of unemployed in this country is steadily diminishing, and every working man who exchanges the dole for a full wage swells the rank of consumers and enlarges the demand for commodities. The undigested stocks of goods in various parts of the world are being absorbed, and will have to be replaced by fresh exports from this country. Accordingly, I hope that the new year may be one of growing activity of trade and increasing prosperity, but my most earnest hope of all is that the year 1923 may witness a settlement of those great economic problems which have for so long been the chief obstacle to a revival of international commerce.

Mr R. M. Holland-Martin, C.B., one of the deputy-chairmen, seconded the adoption of the report and accounts, and the resolution was carried unanimously.

The retiring directors—Messrs Charles Booth, James E. Haggas, R. M. Holland-Martin, C.B., and John Rankin—were unanimously re-elected.

MR T. FISHER CALDWELL'S REPLY.

Mr T. Fisher Caldwell (assistant general manager), replying to a vote of thanks to the directors, management, and staff, proposed by Mr F. C. Bowring and seconded by Mr H. M. French, said that so far as it applied to the directors and committee of management, he might say that the year reviewed in the chairman's speech had no doubt been less difficult than the two years which immediately preceded it, but, at the same time, it had been by no means an easy one, and the directors and committee of management had had very many troublesome and difficult questions to consider and adjudicate upon. With regard to the special reference which the mover of the resolution of thanks had made to the General Manager (Sir James Hope Simpson) he might say that those who had been most closely associated with Sir James during the last few strenuous years best appreciated the heavy weight of responsibility and duty he had borne and the successful way in which he had performed his duties.

As to the management and staff, he could only say they had all endeavoured to do their best to further the interests of the bank, and it was very gratifying to them to know their efforts were appreciated by the shareholders. (Hear, hear.) Everyone in his own particular sphere materially assisted in the smooth administration of the bank.

The Chairman, acknowledging a vote of thanks for his conduct in the chair, expressed the hope that when they met next year some of the many difficulties they had had to encounter in the banking and economic world would be satisfactorily settled.

THE MANCHESTER & LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

EUROPEAN CONDITIONS — DIFFICULTIES TO BE FACED.

REPARATIONS AND INTERNATIONAL INDEBTEDNESS.

CHAIRMAN'S REVIEW OF INDUSTRIAL SITUATION.

The annual meeting of the shareholders of the Manchester and Liverpool District Banking Company, Limited, was held at the head office, Spring Gardens, Manchester, on January 26, 1923. Sir Christopher T. Needham, chairman of the board, presiding.

THE CHAIRMAN'S SPEECH.

In moving the adoption of the report and balance-sheet, the Chairman said:—

WORLD CONDITIONS.

Our meeting to-day must bring back to the mind of all the loss of our late chairman, Sir Edward Tootal Broadhurst. You will remember that illness prevented his presiding over the last annual meeting, and his death, very deeply regretted by all, followed shortly after. He was a citizen of whom Manchester was justly proud. Upright, able, versed in affairs, with wide sympathies, he had, above all, a high sense of the duty of public service which led him to give himself to so many good causes in Manchester. The admiration he inspired in those with whom he worked was touched, one might almost say, with affection. His death was a profound loss not only to the bank but to our city. For my own part, I treasure his memory, and shall ever be glad that during so many years I was privileged to work with him in the several interests we shared in common.

CHANGES ON THE BOARD.

You will have seen from the directors' report that Mr T. D. Barlow, managing director of Barlow and Jones, Limited, and Mr Kenneth Lee, who succeeded Sir Edward Tootal Broadhurst as chairman of Tootal Broadhurst Lee Company, Limited, have been elected members of the board of the bank. We are sure that each of these gentlemen, who are well known in Manchester, will prove of service to the bank, and that their election will be confirmed in due course by the shareholders.

May I now make a personal reference? I was in India when the sad news of the death of our late chairman reached me. On my return to Manchester in March last my colleagues unanimously asked me to take the vacant position, and under these circumstances I could not refuse. I deeply appreciate the confidence of my colleagues and the honour they have done me. I hope that the shareholders approve the action of the board. I feel it to be a special responsibility to have succeeded Sir Edward Tootal Broadhurst.

DIFFICULTIES AHEAD—REPARATIONS.

We look back upon the year 1922 as one fraught with anxiety and marked by trade depression, much unemployment and political confusion. We ask ourselves what the present year has in store for us, and why it is that after four years of peace the political, social, and economic conditions of the world are such as we find them, and in what direction lies the remedy for the chaos in which a great part of the civilised world appears to be involved. Those who are intimately concerned with the affairs of commerce and finance are under no illusions as to the root cause of the trouble. At the outbreak of war the machinery of international commerce, built upon a system of credit finance and exchange of the most delicate and complicated description, was seriously dislocated, and during the years of war was almost destroyed. Further than this, the established course of trade has been rudely disturbed by adjustments of territory, by Customs barriers, by national prejudices, by the existence of large international debts and reparations claims, by the uncertainties due to the political situation generally. After four years of peace it becomes increasingly evident that unless economic sense is brought to bear upon the situation to the exclusion of aggressive nationalism, the end of the fifth year will see Europe advanced yet another step on the road to ruin. It is essential that the problem of German

reparations and indemnities should be solved, and it must be solved on a basis of certainty as to the amount to be paid and the periods of payment by Germany. It is of good augury that responsible American opinion is in favour of a commission of experts to determine what sum Germany could pay; if America can be induced to lend her aid to a consideration of this problem Europe can only be the gainer. How far the independent action of France in entering the Ruhr Valley will help towards the settlement of the reparations difficulty, or what will be the consequences of that action, it is too soon to say, but the situation is excessively grave.

INTERNATIONAL INDEBTEDNESS.

Intermixed with the question of reparations and indemnities is that of international indebtedness, and unless and until arrangements on this head are come to, the course of international trade must be hampered by the uncertainties necessarily incident to obligations of such a nature. The matter is one surrounded by difficulties. International obligations were incurred as the result of goods and services supplied at high prices during the war, which have no earning power, for the simple reason that they are to-day non-existent, and it is difficult to see how, with the best will in the world, the debtor nations can produce and export goods over and above relative imports, by which alone claims can be met. It is, perhaps, too much to hope that the Allies will finally agree that the nations who, banded in a common effort, have made contributions in lives, in money, and material should now agree to waive such claims as they may have against each other. Such a solution would, nevertheless, be, from a material and economic point of view, the best in the interest of the Allied nations, creditor as well as debtor. If all questions of reparations, indemnities, and international obligations can be disposed of, the principal barriers to international trade would be removed, and it would remain to re-establish satisfactory exchange conditions. It appears to be beyond doubt that there must be devaluation of the currencies of certain of the nations of Europe. The first step to be taken with this end in view is to cease the multiplication of the currency, and so to stabilise it, and it is not until the currencies of the principal European nations have been brought into a definite relation to gold, or, perhaps, to a gold exchange standard as contemplated by the Financial Commission of the Genoa Conference, that there can be a sufficient basis of certainty to make possible satisfactory international trading. It goes without saying that all Governments must within a limited time so arrange their finances as to make their Budgets balance without resort to the printing press.

UNEMPLOYMENT.

The most serious domestic problem we have to face is that of unemployment and under-employment. While the figures shown at the unemployment exchanges are an improvement on those of January, 1922, there still remain nearly one million and a-half names on the live register. This state of affairs naturally produces unrest, and the position is one to which every thinking man is bound to give the most earnest consideration—a position that does not appear any less unsatisfactory when one remembers that there is little or no unemployment in America or in France, or, so far as one understands it, in Germany. It must be remembered that during the war there was practically no emigration from these islands, so that there are not less than one million persons seeking employment here who would in the natural course have found homes in British Dominions and foreign countries, and who are now competing with others for employment on a diminished volume of trade. Now that all countries are more dependent on themselves, owing to difficulties of foreign trade, we realise as never before the extent to which we, as a manufacturing nation, rely for our subsistence on foreign demand for the products of our industry. While other nations can support themselves wholly or very largely by agriculture, we are not in a position to support more than a fraction of our population on the land, and it is borne in upon us to-day that it is imperative, if we are to maintain the population of these islands in employment and comfort, that we should do everything humanly possible not only to maintain, but to increase vastly, our markets abroad even beyond the 1913 standard. To this end all must contribute, so that in the matter of technical

excellence and cheapness of the product, and the absence of all trade restrictions, we shall be in a position to outdistance our rivals. If we cannot do this, it is difficult to see how we can continue to maintain the level of subsistence which we now enjoy. And yet all our endeavours will only carry us a part of the way to the desired end until we get a real peace in Europe, bringing with it political and economic settlement and goodwill among the nations.

THE COTTON TRADE.

Since the cotton trade is the most important industry in Lancashire, I would like to make two observations upon recent developments. During recent years the tendency of the United States to absorb a greater percentage of its own growth of cotton has become more and more marked. For many years the British Cotton Growing Association has done fine pioneer work in starting and fostering "outside growths." It is worth recalling that the District Bank has been closely associated financially with its yearly movement of crops. We welcome the founding of the Empire Cotton Growing Corporation as the direct results of the cotton trade's activities and foresight. It is in the early stages yet of its arrangements, and I am satisfied that I am voicing Lancashire's hopes when I say that we trust that its efforts will be entirely successful. The other development to the cotton trade to which I wish to refer is the growth of scientific research. Excellence of production becomes yearly of more importance. The technical study of cotton which is undertaken at the Shirley Institute, with the founding of which Mr Kenneth Lee was prominently concerned, will, we hope, prove of the greatest value to our local trade.

THE TRADE POSITION.

During 1922, though we made some recovery of our trade, as shown in the increase in the number of commodities and a consequent diminution in unemployment, trading was extremely difficult, and in many cases unprofitable, and there were many failures. It was not a good year for the cotton trade, and in spite of an increase in shipments of yarn and cloth to overseas markets there was serious under-employment. Some branches of the trade suffered many difficulties and profound disappointments during the last two years, and I would like to pay a tribute to the courage with which they have been faced. This present year opened with the belief that the cotton trade has better prospects. India had a very good monsoon last year, following a good harvest the year before, compared with a year ago, conditions in India are greatly improved. I was in that country in January, February, and March, at which time food prices were high, and political unrest, as shown in the Gandhi movement, almost at its highest. Now political conditions seem to be more settled, food prices have dropped considerably, and there is reason to believe there will be more buying of our goods. China, unfortunately, is still in a state of political disorder, and the immense possibilities of trade with her cannot be realised until there is a nearer approach to stable conditions. Other markets are buying, and some good judges think that the cotton trade has "seen the worst."

The outlook in the iron and steel trades is more promising. Early in 1922 only 77 blast-furnaces were at work, as compared with 169 at the end of the year. The shipbuilding trade has revived somewhat, and there is less idle tonnage laid up. The coal trade, too, is on a firmer footing. Other important industries are well occupied, and we seem justified in the belief that trade in 1923 will be better than in 1922. The cost of transport enters so largely into the cost of production of manufactured articles that the effect in this regard of the recent amalgamation of our railways into a few groups will be watched with considerable keenness.

TAXATION.

We are still labouring under high taxation, which is a heavy handicap to the growth of savings—i.e., capital, which, in conjunction with labour, is necessary for the extension of trade. As has already been said, it will need all our united efforts to secure that profitable trade from which alone we can find the funds to pay our way. We cannot afford to have avoidable disputes between capital and labour. As to the proper distribution of the results of industry, there is and will be controversy, and undoubtedly it is an outstanding problem. But it must be clear to all that there is only one main source of revenue, and that is the production of the commodities on such conditions that they can be exchanged in the markets of the world with a profitable result both to capital and labour.

THE BALANCE-SHEET.

Turning to the figures of our balance-sheet, you will observe that our current and deposit accounts stand at £56,549,059, as against £62,116,777 a year ago. A similar drop is to be observed in the case of substantially the whole of the banks, and it arises owing to the deflation of currency during the past year. I use the

expression "currency" to include all deposits in the banks—in other words, the "spending power" of the nation. During the war spending power was created by Government borrowings from the banks, the proceeds of which borrowings came back to the banks in the form of deposits, and very largely through this process the deposits of the banks were more than doubled. The reverse process is now going on with the result that a portion of this created credit is disappearing and the total amount of the deposits in the banks is diminishing. To what extent this deflation is the result of a calculated policy on the part of the Government it is difficult to say, but it is clear that any such policy carried out too rapidly must, owing to the relative drop in prices necessarily accompanying it, seriously react upon the tax-paying capacity of the nation. It is at least arguable that deflation should be allowed to take place gradually without any artificial acceleration. You will observe that our bills of exchange, including Treasury bills, stand in our balance-sheet at £5,073,269, as against £12,918,933 a year ago. The British Government securities, on the other hand, amount to £17,138,029, as against £11,725,046 a year ago. The actual commercial bills which we hold show a diminution in amount due to lessened trade requirements. We hold considerably fewer Treasury bills than we did, but our income in British Government securities is due to the extent of our holding of short-dated Government obligations. I may say that we have not added to our long-dated British Government securities since this question was referred to in the chairman's speech of last year. I am glad to say that the British Government securities which we hold stand in the balance-sheet at considerably less than their actual market value. The loans stand at £24,052,740, as against £28,889,379 last year, and reflect the lessened trade demands upon us. The amount is equivalent to 42.5 per cent. of our deposits. Our acceptances for customers are slightly higher, but very much below the level we should like to see. I may add that we have in every case endeavoured to meet trade requirements to the fullest possible extent.

LESSENER DEMANDS FOR MONEY.

The year 1922 showed a set-back all round in banking profits, due in a measure to the lessened demands for money, and the consequent difficulty in finding a profitable use for deposits. Our expenses are still, and likely to remain, upon a high level, and this is the experience of all concerns of a similar nature. Notwithstanding the depression through which the trade of this country has been passing, our bad debts have been relatively small, and they have been provided for in the usual way out of the profits for the year; we have made all the necessary provision for such accounts as are in our view in any way doubtful. I may refer to the item of bank property on the assets side of the balance-sheet. It has stood, as you know, at the same figure for some years, but as you also know it does not in fact represent the real value of our properties, which is very materially higher. We do not see any advantage in writing up the value in the balance-sheet, but it may be desirable to increase this item at some future date by debiting to it important expenditure. In this connection I may mention that we are about to rebuild our property in Cornhill, London. When that property was acquired the ground floor of the old building was adapted to bank purposes, but the property is old, and as it stands has long been insufficient for our growing requirements. Our scheme for rebuilding will give us very convenient bank premises, and we shall also be able to obtain a handsome rental from the upper floors, which we shall not ourselves need.

THE STAFF.

We recently had an inquiry from a shareholder who wished to be assured that our staff were properly looked after in the event of being laid aside through serious illness, and that adequate pensions were afforded on retirement. This inquiry gives me an opportunity of speaking generally on the subject of the staff. I would like to say that there is very close association between the management and the staff of the bank. The managing directors themselves visit the branches, and make themselves acquainted with individual members of the staff of all ranks. In the event of prolonged illness of a member of the staff, leave is granted for so long as may be necessary and assistance is given in serious cases where means are not adequate to meet necessary medical or surgical treatment. The staff pensions scheme, which allows of retirement after a certain term of service, is a generous one, and I can say that the relations between the management and the staff of this bank are of the happiest description.

The Chairman then moved the adoption of the report and balance-sheet.

This was seconded, and carried.

The retiring directors were re-elected, and the auditors, Messrs Halliday, Pearson and Co., re-appointed.

After the usual votes of thanks the meeting terminated.

UNION DISCOUNT COMPANY OF LONDON, LIMITED.

MR. R. HOLLAND-MARTIN'S REVIEW OF AN EXCEPTIONALLY GOOD YEAR.

A SOUND AND LIQUID POSITION.

TRIBUTE TO MR. CHRISTOPHER NUGENT.

TRADE REVIVAL PROSPECTS.

The sixty-fifth ordinary general meeting of the shareholders of the Union Discount Company of London, Limited, was held, on the 25th instant, at the Cannon street Hotel, London.

Mr Robert Holland-Martin, C.B., presided.

The secretary (Mr W. B. Hobbs) having read the notice convening the meeting and the auditors' report,

The Chairman said:—I presume that, as usual, you will wish to take the report as read. Before, however, I proceed to tell you of the results of the past year and our expectations for the future, I should like to say how sorry I am to miss the presence to-day of three very old friends of the company, who have always, up till to-day, been present at our meetings—Mr Fraser, Mr Brand, and Mr Christopher Nugent.

Mr Fraser, as you all know, died in July last. Associated, as he had been, with the company from its earliest years, he may well be considered as one of its chief founders. His thoughts were always wrapped up in it. He watched its growth with pride, and I only wish he could be here to-day to see how well his child did this last year. We on this side of the table, who loved him as a friend and greatly appreciated his wise counsel and advice, know only too well what his loss means to us and to the company.

Mr Brand, I am sorry to say, is laid up with an attack of bronchitis, but hopes to be about again shortly.

TRIBUTE TO MR. NUGENT.

Mr Christopher Nugent, to whose insight and careful management we owe so much of our prosperity, is only absent, I am glad to say, for precautionary reasons. He came up to help us at the end of the year, and I hope that when spring comes he will again be at his old seat on the board and give us the benefit of that unique skill and experience of his in the discount market from which this company derived so much of its position to-day. Mr Nugent's connection with your company, as I think all present know, goes back to its birth in 1885, when the United Discount Corporation and the General Credit Company decided to join forces, an amalgamation for which Mr Nugent and Mr Brand were chiefly responsible.

Mr Nugent was appointed manager, and from that day forward his working hours, or rather his whole life, was spent in building up this company. No company ever had a more devoted manager, and under his skill and care it has grown from its modest beginnings in 1885 to the splendid position which we are so proud of to-day. Your company absorbed Messrs Harwood Knight and Allen, and thereby gained the services of Mr Fraser, so that from its earliest years the company has had the services of the three gentlemen whose absence we deplore to-day. It is, I think, the first time that any of them has missed being present at our meetings.

MR. WYSE A WORTHY SUCCESSOR.

There is one relentless enemy of human action—old age—who pursues us through life, and as the days go on insists that it is no longer possible for us to continue to work as hard as ever, so that gradually we are compelled to realise that man cannot renew his youth. But herein lies the difference between man and his companies. A company need never grow old. It can, if it is wisely managed, always renew its youth by the appointment of a new manager, and happy the company who, like we did in obtaining the services of and appointing Mr Wyse, are able to do so, with the complete unanimity and harmony with which our old manager, Mr Nugent, brought Mr Wyse from the Guaranty Trust and initiated him here as his successor.

After working for nearly two and a-half years with Mr Nugent, that he might absorb all the traditions of the company, Mr Wyse gradually took up the reins, till finally he was formally appointed manager, on Mr Nugent's retirement, in June last.

I would like to say here how greatly your directors appreciated the action of their friends in the discount market, who, on Mr Nugent's retirement, presented him with a magnificent piece of plate, in recognition of his services as chairman of the Discount Houses Committee.

Ever since he joined us Mr Wyse, by his energy, his hard work, his careful and studied calculations of the effect on trade and finance of all the many disturbing elements around us to-day, has

shown himself a worthy successor to Mr Nugent, and one who can be depended on to guide our company still further to success, as you will see from the balance-sheet to-day, which exhibits the result of Mr Wyse's first year of management and records the largest profits and strongest balance-sheet yet shown in the records of the company.

To fill the vacancy caused by Mr Fraser's death we have elected Mr Laurence Currie to your board. Mr Currie is so well known in the City of London that there is no need for me to introduce him to you. I will only say that we feel that in securing Mr Currie we have gained a most valuable colleague.

AN EXCEPTIONALLY GOOD YEAR

From the balance-sheet of this company and from the speeches of the chairmen of the other two discount companies, you will have learnt, which I expect most of you realised before, that the year 1922 has been an exceptionally good one for the discount market.

I use the word "exceptionally" advisedly, for, though the year has undoubtedly been the most prosperous in the history of the discount market, that has been due to most exceptional circumstances, which cannot be expected to occur again.

Before the outbreak of the Great War, which has shattered trade and broken down the financial systems of almost every country, the main business of a discount company lay in the discounting and re-discounting of trade bills, and the volume of business done in Treasury bills, or other short-dated Government securities, was very small. There was no large, regular, and constant issue of Treasury bills, and the class of short-dated Government bond so much in evidence to-day was practically non-existent.

EFFECTS OF WAR RAVAGES.

But as the ravages of war began to be felt, external trade ceased and internal trade was mainly dealt with, the Government being the chief purchaser, on a cash basis, with the result that the Treasury bill and the short-dated War Bond took the place of the almost defunct trade bill.

During the past few years, therefore, when the Bank rate was over 5 per cent., and the margin on which the market worked a fairly profitable one, the Treasury bill became the chief commodity in the bill market, and the discount market had, in trading in these bills, the additional advantage that British Government paper does not produce bad debts. Money, too, was growing cheaper, and with the advent of 1922 a new era began. Bank rate, which had been reduced from 5½ per cent. to 5 per cent. in November, 1921, was reduced on February 16 to 4½ per cent., and on April 13 to 4 per cent., and later by two more ¼ per cent. falls, to 3 per cent. In consequence, there was a rise in the price of all the short-dated Government securities. This enabled your company and others to deal and make large profits outside their ordinary portfolios. Had profits depended solely on the holding of bills, the year would have been a very lean one, for there was only a margin of 1s for the June half-year in favour of the bill against the short-money cost, a margin which in the December half-year was increased to about 13s per cent., so that the margin of profit for the whole year was only about 7s per cent.

BRIGHTER TRADE OUTLOOK.

Such, then, has been the financial history of the past year, as seen from the discount market, and I am not bold enough, in times like these, to take upon myself the rôle of a prophet. I will only say that there seem to be signs of life kindling in the dry bones of trade. Less tonnage is laid up idle; more blast furnaces are being blown in; more coal is being brought to bank; there is more inquiry for Manchester and other goods; the wool trade, on which the trade of England was originally founded, is prosperous.

There is less, but not nearly enough less, unemployment, and there is little doubt that the patient has at last taken a turn for the better. But there is no possibility of real and continued improvement until all the fever of war has died away.

Trade is for the mutual benefit of both producer and consumer, and is, and can only be, active when both are prosperous, contented, and peaceful. How, then, with all Central and Eastern Europe still racked with the fever of war, embittered by national hatred and mistrusts, can trade begin to thrive?

Till the events of the past few days, when France has, unfortunately, allowed her desire for revenge to outrun her discretion, there were hopeful signs of joint action (and it is in joint action that the hopes of the future rest) being taken, to repair the currency position of Austria, but in the present turmoil little can be done, and the Austrian and European exchanges must therefore continue to fluctuate and go from bad to worse.

THE AMERICAN DEBT.

With regard to the settlement of the debt that this country owes to the great English-speaking nation across the water, our hope ran high at the obvious good will that greeted the arrival of our representatives, and though the hoped-for settlement has not been arrived at without the return of the Chancellor, in order to consult his colleagues, yet there may be virtue in that delay when the matter comes up before Congress, and already much has been achieved in making it clear to the States that this country is resolved to pay to the full her debt at the earliest possible moment, and all that is in dispute is as to the fair rate of interest and date of redemption.

ANALYSIS OF ACCOUNTS.

From this short account of the happenings of the past year let us now turn to the audited accounts for the year, that I may give you an account of our stewardship.

At the close of 1921 you entrusted to our care a paid-up capital of £1,000,000, a reserve fund of £1,100,000, a provident fund of £154,600 (earmarked for the proper provision of pensions or grants to those of our staff who leave our service after years well spent in work, but subject to that debt the property of our shareholders), and a carry forward of £149,650, a capital sum, that is, of £2,404,250.

With this you will see, if you turn to the credit side of the profit and loss account, we were able to declare to you gross profits of £784,470, after fully providing for all possible contingencies, including provision for income and corporation profits tax. From this has to be deducted, on the other side of the account, for current expenses, which include salaries, rent, taxes, directors' fees, and all other charges, some £75,000, an increase on the previous year of just over £5,000, and the rebate of interest on the bills discounted, not due, carried to the next account, which amounts to £393,400, as compared with £643,535 in last year's accounts, a decrease of some £250,000. Deducting then this £75,000 and the £393,400 from the gross profits of the year, added to the balance brought forward, you will find that a sum of £465,720 remains, which is no less than £66,000 more than last year.

THE DIVIDEND.

This sum, we suggest to you, should be allocated as follows:—A dividend for the complete year at the same rate—15 per cent.—as paid in January last, which, less income-tax, will absorb £110,625. Next, for the welfare of the company, and as a help to increased earning power, we ask you to place £100,000 to reserve fund, which will then stand at £1,200,000.

PROVIDENT FUND.

Then, the year having been exceptionally good, we suggest the placing of £20,000 to the provident fund, which will bring it to £177,005, an increase on the year of £22,397; for, in addition to any annual grant, this fund is credited with interest at the rate of 5 per cent. before the deductions for the year's pensions and grants are made.

We also ask you to place £18,506 7s 4d to the account hitherto known as "freehold and leasehold premises, fittings, furniture at cost, less depreciation written off," in order that we may eliminate cost, less depreciation written off, in order that we may eliminate in future all reference to fittings and furniture, which, indeed, for some time have only stood at a very nominal figure in our books, but may also write down our freehold and leasehold premises, the latter of which are only a very small portion of our estate, to a figure which I believe to be much under the market value of our premises, if not indeed below the value of the freehold part alone, though I do not wish to suggest that the figure is one that will not continue to be made more and more nominal year by year.

THE BONUS.

Having thus provided largely to the resources of the company, we suggest that a special bonus of 5s per share, free of tax, be paid to the shareholders, and then, after the shareholders have participated in this £50,000, which is £20,000 more than they received last year, we propose to carry forward the balance of £166,499 6s 10d, which is £16,849 more than last year.

THE BALANCE-SHEET.

If you approve of these alterations, the balance-sheet will read as follows:—

On the debit side—			
To capital account	£1,000,000	0	0
Reserve fund	1,200,000	0	0

By freehold and leasehold premises	150,000	0	0
	£43,977,846	11	7

EXTREMELY SOUND AND LIQUID POSITION.

That, gentlemen, is a balance-sheet of which you may, indeed, be proud. It proves your company to be extremely sound and liquid. It has ample cash in hand. Its securities stand in the balance-sheet at a figure well below their market price; moreover, they all fall due in the near future, and will automatically run off in due course, as will also the bills discounted, which item contains a very large amount of Treasury bills and short Government securities, with only a few weeks or months to run.

But more than this, it has very live assets in Mr Wyse, Mr Nevill Jackson, and their assistant managers, Mr Langley, Mr Foucar, Mr Brown, its secretary, Mr Hobbs, and, indeed, its whole staff, to whose energy and work the excellent results of the past year are due.

With such a staff and such resources at its disposal we look forward to this company's continued expansion and prosperity.

The reports and accounts were unanimously adopted.

PROVINCIAL BANK OF IRELAND, LIMITED. IMPROVED PROFIT—DIVIDEND MAINTAINED.

The annual general meeting of the Provincial Bank of Ireland, Limited, was held, on the 24th instant, at 8 Throgmorton avenue, London, Capt. George L. Poë, R.N., presiding.

The Chairman said that the reserve fund had been raised to a total of £500,000 as a result of additions during the year of £35,000. Notes in circulation continued to keep at a high figure, and the total of £1,970,232 was slightly higher than that of a year ago, and showed also an increase on the figures at June last. While deposits had increased during the past six months by about £51,000, they were lower by about £32,000 than at December last. Advances at £8,441,733 were down by about £540,000. Against the smaller holding of cash in hand investments were higher by about £618,000. It was pleasant to point to an improvement in the profits, which for the past half-year showed an increase of about £15,000 in net results as compared with the period ended at December, 1921. The dividend was maintained at 13½ per cent. per annum, and after the addition of £20,000 to reserve and £5,000 applied to writing down bank premises account, with an addition of £10,000 to the contingency account, a slightly larger balance of £42,200 was carried forward.

As evidence of the bank's expansion in recent years, he recalled that in January, 1915, the reserve fund stood at £375,000, against the present total of £500,000, and the deposits were £6,752,422 in comparison with the present figures of £17,570,420. The balance-sheet at that time dealt with an aggregate of £8,870,000, against to-day's total of £20,650,000. Unfortunately, business conditions were still very unsettled and difficult, and the majority of the bank's sub-branches had not yet been reopened. The decrease in land under tillage, 67,000 acres, was a notable feature in the present agricultural position in Ireland, and was specially regrettable in the case of barley and oats. Since 1918 the land under the potato crop had fallen by 132,000 acres, and 110,000 acres of this total were in the six county area. The land under cultivation for flax showed a decrease for the year of about 15,000 acres, but the results as regarded price were sufficiently encouraging to growers to lead to a larger sowing for the coming season. The past year was a disappointing one for the linen industry, and the improvement recorded in the early season proved to be temporary, but prospects were thought to be again brightening.

The report and accounts were unanimously adopted.

WILLIAMS, DEACON'S BANK, LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.

POSITION AND PROSPECTS OF THE INDUSTRIES. INCREASED DIVIDEND.

The annual meeting of the shareholders of Williams, Deacon's Bank, Limited, was held in the board-room, Mosley street, Manchester, on Thursday last, the 25th instant, Captain Gerard Powys Dewhurst (the chairman) presiding.

The notice convening the meeting and the auditors' report were read by the secretary (Mr E. A. Williams).

The Chairman, in moving the adoption of the directors' report and statement of accounts, said:

Ladies and Gentlemen,—From the report in your hands you will have realised that since we last met you here we have to deplore the loss of two of our colleagues. Henry Garwood Seaman only survived his retirement from the board by a few months, though for some time he had taken no active part in the affairs of the bank. With regard to John McConnell, I am afraid that overwork and excessive strain told a tale on the heart, and his sudden collapse last summer came as a great shock to us all—he was a most efficient director, taking the keenest interest in all matters connected with the bank, and, both as a personal friend and colleague, we all miss him very deeply.

NEW DIRECTOR.

To fill his place we have invited Thomas Frederick Tattersall to a seat on the board. Mr Tattersall, as a member of Messrs C. Tattersall and Co., cotton merchants, Manchester, and a director of the English Sewing Cotton Company, Limited, hardly needs any introduction from me, but I am confident that his well-known ability and wide experience in all matters connected with the cotton trade will prove a great asset to the bank. You will be asked presently to confirm his appointment.

THE STAFF.

With reference to our staff, I should like to inform you that while we propose to adhere to our decision, reported to you at our last meeting, of only renewing their bonus on a sliding scale, corresponding to the index figure of prices fixed by the Ministry of Labour, we have made a slight adjustment of the basis of calculation, which should prove a distinct advantage to the members of the staff, and which I may say has been much appreciated. Whilst on this subject I should like to ask the proprietors to associate themselves with the board in a very hearty expression of thanks to the staff of the bank for their loyal and efficient service during the past year, and to assure them that we much appreciate the tangible results of their labour on your behalf.

INCREASED VALUE OF THE INVESTMENTS.

Reading between the lines of our report, you will probably have gathered that the diminution in the figures of our actual trading profit has been much more than offset by the increase in the value of our investments, so that we are now benefiting materially from our policy in recent years, of writing off out of profits investment depreciation as it occurs, and have arrived at a position where we can safely distribute a reasonable increase of dividend to the proprietors. In the period of abnormal profits we made corresponding allocations in this direction, as we did also to our general reserve fund, and we are now reaping the benefit. I need hardly add that the figures we show you to-day have only been arrived at after adequate provision has been made for any position of a weak or doubtful character.

NEW ACCOUNTS.

We are glad to be able to report to you that the number of new accounts opened during the past 12 months has again been encouraging, and shows a most satisfactory increase, especially in view of the hard times and the difficulty which many of our customers amongst the wage-earning classes have had in keeping open their banking accounts; but here our policy of branch extension is bearing fruit, and though expenditure in that direction has been heavy during the year, we feel it has been amply justified. Building costs are, in our opinion, still too high, and we have, therefore, made an increased allocation out of profits to our premises account.

At Mosley street we hope shortly to be in full possession of a portion of our recent purchase, which, when complete, will not only give the accommodation our foreign exchange, shipping, and agency departments require, but incidentally will give us an extremely fine banking hall.

THE BALANCE-SHEET—RESERVE FUND.

And now, if I may take the report in your hands as read, and turn to the balance-sheet, you will see that on the liability side our

capital remains the same, but our reserve fund has been increased to £1,150,000 by the addition out of profits of £50,000. This compares with an allocation of £100,000 last year, but, as I said before, during the abnormal conditions of recent years we made special efforts to strengthen this fund, and, under present circumstances, consider this provision adequate.

DEPOSITS.

Our deposits, at £37,626,000, show a reduction on 1921 figures of over 2½ millions, but you must remember those figures were in themselves a record for the bank, and a fall in Bank rate, and consequent reduction in bankers' deposit rates, has caused a considerable movement of money from deposits to investment in gilt-edged securities. A shrinkage in our figures was, therefore, only to be expected.

Liabilities for acceptances are less this year by nearly half a million, accounted for by the further reduction in our international war credits, and, owing to the stagnation of trade, by a lessened demand for the opening of fresh credits.

ASSETS.

Turning now to the assets side of the sheet, our cash shows a decrease on last year's figures of some £300,000, while balances with other banks are some £60,000 higher.

During the past year we have employed some two million less of our short-term money on the London Money market, which accounts for the decrease in the next item; whilst with regard to bills discounted at £3,587,000 a similar reduction is shown, the result almost entirely of our decreased purchases of Treasury bills.

INVESTMENTS.

Our investments in British Government securities at £6,400,000 show an increase on last year of £1,800,000, which may be regarded as a set-off to the previous item; in fact, the movement from bills discounted to investments has been much in evidence in all banking returns. Other investments show a decrease of nearly £200,000 as a result of realisations in certain directions.

ADVANCES TO CUSTOMERS.

Our advances to customers at over £10,000,000 show an increase on the previous year of over £500,000, the improvement in demand for facilities having been most apparent in the last quarter of the year, which I trust we may take as a sign of the coming improvement in trade.

Bank premises now stand in our books at the figure of £660,000, being an increase of over £13,000. This is after crediting the account with £30,000 out of the year's profits, as compared with £25,000 last year, the prudence of which I am sure you will all recognise.

PROFIT AND DIVIDEND.

Coming now to our statement of profit and loss, you will see our net profit, after making the usual provisions, gives us the total of £337,175, a decrease on the previous year of £28,000. This, after transferring £50,000 to the general reserve fund, and £30,000 to bank premises account, enables us to pay a dividend at the rate of 13½ per cent. on our "A" shares, our usual dividend at the rate of 12½ per cent. on our "B" shares, and increase our carry forward from £30,086 to £43,120.

FAVOURABLE FACTORS.

Before leaving the accounts, I should like to refer to one or two matters in connection with our work of the past year, which should give us cause for satisfaction.

First, if we take the London and Manchester Clearing House returns, we find that in both centres this bank is more than holding its own with regard to the amounts passed through the respective clearings; while in regard to returns of profits given by other banks, we find our decrease in that direction ranks, in proportion, amongst the best of the published figures.

Further, you may be interested to know that our percentage of expenses to gross profits, apart from income-tax, which, of course, this year is a favourable factor, shows a satisfactory decline.

THE COUNTRY'S TRADE.

Looking back at the trade of the country during the past year, I am afraid we can find little cause for satisfaction, though during the past few months there have been distinct signs of revival in some of our principal industries, sufficient perhaps to warrant us in hoping that the worst of the depression is passing. The coal

trade, for instance, has taken a distinct turn for the better, the export figures, in particular, showing an encouraging advance on the previous year, whilst statistics of output show a steady increase.

IRON, STEEL, AND COTTON.

Our reports from Sheffield on the state of the iron and steel trade also tend to show an improvement in demand, though the figures of unemployment in that part of the country are still too high to lay much stress on this. But, gentlemen, I think it is to the cotton trade that we look most anxiously for signs of improvement, and here I think the only help we can get is from our export figures, which show a fair increase on those of 1921, but are still some 40 per cent. in volume below those of 1913. On the other hand, expressed in sterling, our shipments of cotton piece goods for 1922 show an increase in value of some 45 per cent. over 1913. This, to my mind, is the worst feature, as it proves that so long as our costs of production remain at their present level, so long will our customers abroad curtail their purchases to their minimum requirements; and I think it is a matter for careful consideration on the part of employers of labour and Trade Union leaders that, while actual wages paid in the cotton trade are roughly 100 per cent. to-day above pre-war level, the cost of production, owing to idle machinery and lessened hours of running, is more than trebled, with the result that prices on this side are so much too dear for our customers' ability to pay, that not even the stimulus of a regular advance in the price of the raw material has had any effect during the past year of bringing out offers.

AMERICA AND FRANCE.

Looking further afield, it is a matter of keen regret to us all that the funding of our debt to the United States of America and the question of German Reparations still remain unsettled, but now that the points of difference between ourselves and the Americans have been narrowed down so materially, we can surely hope for a speedy settlement there, though I am afraid, while we all feel keen sympathy with France in her difficulties, her recent drastic action can hardly conduce to the stabilisation of exchanges and a restoration of credit on the Continent of Europe, without which there can be no permanent revival of trade in this country.

The Chairman concluded by moving the adoption of the report and accounts.

Mr B. G. Wood seconded the resolution, and it was carried unanimously.

Mr Herbert W. Arnold then proposed "That the appointment of

Mr Thomas Frederick Tattersall to a seat on the board be and is hereby confirmed."

Mr James Fortune seconded the resolution, which was agreed to unanimously.

Mr Lewis A. Orford moved, and Mr Schneider seconded, the re-election of Colonel Sir Robert Williams, Bart., and Mr William Francis Courthope as directors of the company, which was carried.

Mr Thos. Pilling moved, and Mr Ralph Morton seconded, the election of Messrs Ashworth, Mosley and Co., chartered accountants, as auditors of the company for the year 1923.

The resolution was carried.

VOTE OF THANKS TO THE CHAIRMAN.

Mr B. G. Wood then took the chair, when, upon the motion of Major Murray Marsden, O.B.E., seconded by Mr Hamlet Rothwell, the following resolution was put:—"That the best thanks of this meeting be tendered to the chairman for his conduct in the chair."

The resolution was carried with acclamation, and the Chairman having briefly responded, the meeting terminated.

THE NATIONAL BANK, LIMITED.

GENERAL TRADE CONDITIONS IN IRELAND.

The annual general meeting of the National Bank, Limited, was held, on the 25th instant, at the head office, 13 Old Broad street, London, Sir John Purcell, K.C.B. (chairman of the company), presiding.

The secretary (Mr M. J. Cooke) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Following previous and successful half-years, it affords your directors much pleasure to be able again to place before you a set of particulars which, I submit, show a sufficiently satisfactory record for the half-year to December 31st, with which I now propose to deal. During the course of it we, like others, have been faced with no small political and monetary uncertainties. Indeed, in my humble judgment, the times through which we are now passing make it more necessary than ever to walk warily and to act cautiously and conservatively.

I now turn to the balance-sheet, and will, with your permission, proceed to analyse the principal items and compare the figures with those placed before you twelve months ago. The paid-up capital remains at £1,500,000; £200,000 was added to the reserve fund during the past year, bringing that item up to the sum

well known in connection with the transshipment of cargo for ocean liners. Another branch of the company's business was freight contracting. During the past six months over 350,000 tons had been carried by outside vessels under charter to the Walford Lines, and they had secured over 120,000 tons of outside cargo for the current year at an assured profit. Since its inception the company's record had been one of sustained activity and enterprise, which in less adverse circumstances would have ensured profitable results. There should be nothing in the way of a profitable future if the financial position were now put right. The reconstruction scheme described in the documents which the shareholders had received might appear somewhat drastic, but the directors had been greatly exercised to arrive at a solution which would safeguard to the fullest possible extent the interests of the shareholders. The essential factor was to free the company from financial embarrassment and to ensure that, having made a sacrifice, the shareholders would be certain of reaping immediate benefit of a revival of prosperity.

The managers had contributed by agreeing to cancel the whole of the "B" shares, thus leaving only one class of share entitled to full dividend. It was also necessary, thoroughly to clean up the position, to secure new capital to pay off the indebtedness and relieve the company of financial charges. The directors had sought the advice of important financial houses in the City, and had also conferred with most of the large shareholders, who had commended the scheme. The proposed issue of £150,000 new capital had been securely underwritten after full investigation of the company's position. The new shares were to be offered to the shareholders, and the underwriters had agreed to release to those who subscribed a call for two years on half the number of shares subscribed. Application would be made to the Stock Exchange for permission to deal in the call certificates. The company's present unfortunate position had been brought about by the sudden and terrible depreciation in the capital value of ships; trading profit and trading losses practically balanced. Depreciation from the downfall of shipping values was another matter, and to that also must be attributed the big loss in connection with the John Harrison Line. It was impossible to ignore the fact that on the original 15 steamers of the company's fleet there had been a depreciation in value of £378,314. That depreciation was so enormous that even if the company had been making substantial profits it would have been out of the question to pay any dividends until the whole of that loss had been met out of profits. Although all deplored the heavy sacrifice involved, it was better to face the fact boldly and secure the future. On the reconstructed figures it would not require a very large profit to pay dividends, and there was every prospect of a profitable future.

After a brief discussion the report was unanimously adopted, and at subsequent extraordinary general meetings resolutions were approved for the reduction and reorganisation of the company's capital.

AGWI OIL MARKETING COMPANY, LIMITED.

REVENUE EARNING COMMENCED.

The statutory general meeting of Agwi Oil Marketing Company, Limited, was held, on the 17th instant, at Caxton Hall, Westminster, London. Sir Joseph Davies (the chairman of the company) presided.

The secretary (Mr. A. W. S. Douthwaite) having read the notice convening the meeting,

The Chairman said: Gentlemen, you will realise that this meeting is of an entirely formal character, being called to comply with the requirements of the Companies Act, 1908. From the statement of accounts which has been in your possession it will be seen that 250,000 "A" shares and 50,000 "B" shares have been allotted. The company, as you are aware, was formed to work in conjunction with the Agwi Petroleum Corporation, the special department of the Agwi Oil Marketing Company being to act as the distributing section of the joint undertaking. In pursuance of this object the first stage of our work has been to acquire main distributing depots. We are already in possession of and working a large depot at Fawley, Southampton, which we have acquired from the Agwi Corporation. This property includes an area of land with ample space available for developments as the business of our company expands. Sites have also been secured in other parts of England. These have been carefully selected, and are located at points where each site will be a convenient centre for distributing to the great areas of population. Each of these sites has access by water, so that petrol and all descriptions of oil and oil products can be sent by ships from the main importing depot at Southampton, thus obtaining the advantage of sea transport, which is the most economical method of conveying oil. On the land side, each site is served by railway, and has access to good roads.

ARRANGEMENT WITH NATIONAL BENZOLE COMPANY.

In regard to petrol, the Agwi Corporation is associated with

the National Benzole Company, which is dealing with distribution. We have, however, entered into an agreement with the National Benzole Company under which our depots will be utilised as main storage in the respective districts for the National Benzole Mixture. With respect to fuel oil, the Agwi Corporation has an agreement with Messrs. Lambert Brothers, under which that firm acts as sole agent for the sale of fuel oil for ships' bunkers here or abroad. Having regard to the fact that the consumption of fuel oil for inland transport is steadily increasing, it will be left to our company to act as agents for the Agwi Petroleum Corporation for all the products of the refinery at Southampton and for all oils imported by the Agwi Corporation. We have already commenced earning revenue through the operations of the depot acquired at Southampton, and also at a depot on the North-East Coast. The construction of other depots is being pushed forward with the greatest rapidity. It will be seen from this short summary that there is ample work awaiting our other depots immediately they are completed and come into commission.

THE DIRECTORATE.

Under the articles of association half the directors are to be appointed by the Agwi Petroleum Corporation, or, in case the total number of directors is increased to an odd number, the directors appointed by the corporation shall be the nearest number to, but in excess of, one-half of the total number. The corporation, accordingly, has nominated Mr. Harry Davies and myself as members of the board to represent their interests. In addition, Mr. D. P. Barnett and Mr. Newton Dunn, who are also on the board of Agwi Petroleum Corporation, were appointed directors of the Marketing Company by resolution at a meeting of the signatories to the memorandum and articles of association held on November 2nd last. The present constitution of the board, therefore, ensures the closest co-operation between the two companies.

The objects and interests of this company are to work in close association with the Agwi Petroleum Corporation. The work which we can carry out will prove of great public advantage, and will assist in the development of the refining and importing operations of the Agwi Corporation. Your directors, therefore, have every confidence that, in carrying out this work, they can secure a good and consistent revenue which will prove satisfactory to all who have invested their money in the undertaking.

There being no resolution to put before the meeting, and no questions being asked, the proceedings terminated with a vote of thanks to the chairman.

GOVERNMENT RETURNS.

(a) Including Treasury Bonds.

Tenders will be received on Friday, February 2, 1923, for Treasury Bonds and Treasury Bills to be issued to the maximum amount of £40,000,000. The amount of Treasury Bonds issued will not exceed £5,000,000, but subject to that limit, the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

On Tuesday, January 30th, Rs.75,00,000 will be offered by tender.

BULLION.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.		Gold Exported from the United Kingdom.	
Countries from which Consigned.	Week Ended Jan. 24, 1923.	Countries to which Exported.	Week Ended Jan. 24, 1923.
British South Africa	905,913	Belgium	2,700
Tanganyika Territory	10,300	British India	717,656
British West Africa	41,995	Kenya	1,000
Belgium	890	Denmark	300
Germany	25	Netherlands	5,400
Other Countries	855	Straits Settlements	3,416
		Other Countries	14
Total value of imports of gold	959,978	Total declared value of exports registered in the week	754,536

Messrs Samuel Montagu and Co. write as follows on January 24th:—

GOLD.

The whole of the gold on offer this week was taken for India. The tender for India Council allotments yesterday was very keen, especially for telegraphic transfers, which were allotted at 66 per cent.—is 4d for deferred, and is 4 1/2d for immediate (above in full). No allotment of bills was made. The strength of the Indian exchange, notwithstanding the heavy purchases of gold and silver for that country, is worthy of remark. At the time of writing the rupee is quoted at 1s 5 1/2d for T.T., the highest quotation since October, 1921. Gold valued at \$2,500,000 has been received in New York from London.

SILVER.

Owing to the continued pressure of Indian bazar orders for early shipment, supplies of prompt silver remain scanty. The fact has imparted a firm tone to the cash price. China has sent orders to buy forward silver, and sometimes on the same day orders to sell. The former have preponderated. America has not been a free seller; there have been speculative sales when the forward quotation became favourable. The main support of the market is the stringency for immediate delivery; this renders prediction as to future movements injudicious, though, of course, the fact does not give solidity to the distant future. The Times of India, under date of January 6th, thus comments upon the financial situation in India:—"It is highly anomalous that whilst the Bank of England rate is 3 per cent., the Imperial Bank's rate should stand at 7 per cent., with a prospect of its rising to 8 per cent. It is suggested that the Government should take immediate measures to stop a further rise in the Bank rate in India by promptly amending the Currency Act, so that emergency currency against trade bills can be issued to the extent of, say, 10 crores, and not limited to

a sum of 5 crores, as provided by the Act at present, and that such currency should be issued as soon as the Bank rate reaches 6 per cent. Such seasonal expansion of currency would be timely, and justified by trade requirements, and would be only temporary, and the notes would be withdrawn from circulation as soon as the trade pressure for money ceased."

INDIAN CURRENCY RETURNS.
(In Lacs of Rupees.)

	Dec. 31, 1922.	Jan. 7, 1923.	Jan. 15, 1923.

Securities (British Government)	584	585	584

No silver coinage was reported during the week ending 15th instant. The stock in Shanghai on the 20th instant consisted of about 22,500,000 ounces in sycee, 31,500,000 dollars, and 800 silver bars, as compared with about 23,400,000 ounces in sycee, 31,000,000 dollars, and 150 silver bars on the 12th instant. The Shanghai exchange is quoted at 38 1/2d the tael.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as follows:—

1923.	Gold.	Silver.		Silver.
	Per Ounce.	Cash, Per Ounce.	Forward, Per Ounce.	Cash, Per Ounce.

* Half-year.

† Free of tax.

(k) Sixteen weeks.

(m) Also additional distribution, being equivalent amount per share for relief from Dominion Tax.

Reports and Notices.

Mr W. J. Thomas, director-general of the American Express Company's organisation in Europe and the Near East, has been elected a vice-president of that company.

Mr Walter Burt has accepted a seat on the board of the Timber Wireproofing Company, Limited, and the directors have elected him chairman of the company, in place of the late Sir Richard V. Vassar-Smith, Bart.

At a general meeting of the Life Offices' Association, held on the 22nd inst., Mr A. Digby Besant, B.A., general manager and actuary of the Clerical, Medical, and General Life Assurance Society, was elected chairman, and Mr H. H. Trouncer, M.A., actuary and manager of the London Life Association, Limited, was elected deputy-chairman.

It is announced that the Imperial Continental Gas Association has received from the Clearing Office (Enemy Debts) a sum of £188,948 18s 1d, being a first payment (less commission) on account, in respect of the compromise award of £1,550,000 in settlement of the outstanding balance of the association's German claims under the Peace Treaty.

RAILWAYS.

BENGAL-NAGPUR RAILWAY COMPANY, LIMITED.—Holders of debentures, bonds to bearer, of this company, amounting to £500,000, and falling due on February 2, 1923, are notified that the directors, with the sanction of the Secretary of State for India in Council are prepared to renew such debentures at £99 2s 6d per £100 (17s 6d per cent. discount), for a further period of three years at the rate of 4½ per cent. per annum interest, provided the holders of the said debentures intimate their acceptance of this offer, and send their bonds to the office of the company, 132 Gresham House, Old Broad Street,

London, E.C. 2, for endorsement before noon, on Thursday, February 1, 1923. A commission of 5s per £100 will be allowed to brokers and other recognised agents.

DOMINION BANK (CANADA).—We are informed that the annual statement of the Dominion Bank, published on the 19th instant at Toronto, for the year ending December 31, 1922, shows profits of \$1,175,478, an increase of \$50,206 over the year 1921.

WESTERN AUSTRALIAN BANK.—It is announced by cable that at a special general meeting of shareholders held on 24th instant the following proposals, agreed to at a special general meeting on September 28th last, were confirmed:—1. That each of the existing £10 shares be divided into ten £1 shares. 2. That each shareholder for every £10 share held by him will receive two additional £1 shares. 3. That £50,000 be taken from the reserve fund to pay for such £1 shares. The necessary resolutions to amend the bank's deed of settlement, and also to authorise an increase of capital by the issue of an additional 200,000 £1 shares were carried unanimously. The directors propose to issue a first instalment of 50,000 £1 shares to shareholders and public at a premium of £1 10s, payable £1 5s

(Continued on page 185.)

RUBBER OUTPUTS AND DIVIDENDS

In the table below we give the December and past three years outputs, and dividends for four complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

Other information will be found in our Reports

French exchange. Developments are on hand in South Yorkshire and Nottinghamshire which, when completed, will add something like 10 million tons per annum to the output of coal. Local prices are firm, but not quotably higher. Durham foundry coke is still quoted 21s at ovens, but makers can get 30s for export. South Yorkshire steam coal is still 21s at pits.

Our Glasgow correspondent writes:—The industrial position in manufactured iron and steel is given this week by leading producing managements as more satisfactory than has been the experience since the year came in. But at the same time it is added that conditions are a good bit off what could be desired, and behind what was looked for a couple of months ago. Shipbuilders report a pronounced pause in the placing of contracts for new boats, and are disappointed, as the trade promise only quite recently, they say, was for a much heavier looking than has so far been realised. Official figures show that down to date (from last back-end) orders have been given out over the U.K. (say, since mid-October) for 283 new vessels, or 125 fewer than in the corresponding period 1922, a deficit that was not anticipated. Glasgow structural firms report a strong measure of inquiry for rails, bridge, and boiler plates, and for nearly everything that enters into engineering. In a normal state, they say (such as ruled pre-war) conditions would be regarded as really prosperous, but with productive and constructive capacities as they are, even good tonnage lines reckon for little, and capacities are still on the up grade. Several of the larger steel works in the West are still closed, while one or two (concerned mainly in the rolling of sections) are managing to run the larger part of their plant for two out of each three weeks, which is accepted as satisfactory in the circumstances. According to certain reports, an improved inquiry is noticeable for textile, agricultural, and other light and seasonal machinery. The turn-over in Scotch pig-iron is well sustained, thanks to the expansion in force in foundry departments. The important factor realised is the continued demand for the various brands for despatch to the United States. Last week total shipments from Glasgow to the States reached 4,742 tons, comparing with 300 tons in the corresponding week a year ago. Scotch hematite is called 5s 7s 6d, with an indifferent demand. Scotch crown bars stand again at 5s 10s, delivered Glasgow. The coal markets were excited in the first part of the week over extravagant talk of large orders and inquiries for fuel from France, but these have not materialised, and prices have slumped back to last week's level.

Our Cardiff correspondent writes:—The conditions on the Cardiff coal market have been more settled this week. The position created by the French occupation of the Ruhr still remains somewhat obscure, but the market has now had time to investigate the wild rumours of enormous orders that were current a week ago, and to form a better opinion of future possibilities of demand. Inquiries have been very active throughout the week, and these have been followed by the placing of a considerable volume of business. Germany is certainly buying, but only for her immediate requirements, and the greater part of the business placed has been for Yorkshire and North County coals. The orders secured by South Wales amount approximately to between 40,000 and 50,000 tons, and we are in a position to state that the whole of this, as well as of the recent business in Yorkshire, Northumberland, and Durham, has been fully covered. The terms are cash, and there has been little difficulty in arranging conditions of sale. France, however, has been a much greater buyer than Germany, and Italy is buying more than she has done at any period since the war. The demands of the French railways have been exceptionally heavy, probably the result of the movement of troops and of materials incidental to the occupation of the Rhensish-Westphalia coalfield. Italy has been compelled to buy more British coal in consequence of the cessation of overland deliveries by Germany, but she is still shipping German coal from Antwerp. The South American trade is also extending, and the new business secured in the North Sea markets is maintained. Under these conditions prices of all classes of South Wales coals have been very firm, and in the majority of cases have closed at higher levels than those of last week. The supply of shipping is as abundant as ever. All the docks are congested, and a considerable number of vessels are from day to day being detained in the Roads waiting their turn for loading stems. Patent fuel is the only weak spot in the market, and the situation of the local factories is more perilous than ever. The delivered price of pitch is now over 150s per ton, and at that price, and at the current value of small coal, fuel cannot be manufactured in the Cardiff district under a cost price of between 35s and 37s per ton, which is prohibitive with large coal selling at less than 30s per ton. The following are current approximate quotations:—Best Admiralties, 20s to 30s; second Admiralties, 28s 6d to 20s; best drys, 27s 6d to 28s; black veins, 28s 6d to 20s; Western Valleys, 28s 6d to 20s; Eastern Valleys, 27s 6d to 28s; best bunker smalls, 20s to 21s; ordinary cargo smalls, 18s to 10s; anthracite big veins, 35s to 37s 6d; machine-made cobbles, 45s to 47s 6d; French nuts, 52s 6d to 55s; stove nuts, 40s to 42s 6d; rubbly culm, 14s to 14s 6d; coke for export, 40s to 40s; inland blast furnace coke at ovens, 26s 6d to 27s 6d; patent fuel, nominal; pitwood, ex-ship, 27s 6d. The position in the iron and steel trade continues to improve. In-ports of iron ore have been exceptionally heavy during the past few weeks, and this is a precursor to a big increase in the output of pig-iron. There is a strong market for steel bars and tinplates at the recently increased minimum prices, and the orders placed recently have been so heavy as to ensure full employment for many weeks ahead.

CUMBERLAND IRON.

(FROM OUR WORKINGTON CORRESPONDENT.)

Business in the Cumberland and North Lancashire hematite pig-iron trade has been slower since the French entered the Ruhr valley, the uncertainty that has been created having had the effect, of course, of checking the extension of commitments, and until the international situation is clarified, it looks as though everybody will be content to mark time. Makers, however, were already sold three months ahead, and as there is still a fair volume of business dribbling in, the maintenance of the present activity until mid-April is apparently assured. The Continental and American buying is now on a smaller scale, though shipments on old contracts are quite substantial. Home requirements absorb the greater part of the output, most of the ordinary iron going to Scotland, the Midlands, and South Wales. Fuel prices, fortunately, have not risen, and makers, therefore, are unable to quote Bessemer mixed numbers at the old figure of 5s 10s per ton delivered at Glasgow and Sheffield, and for export at the same price. Values are not such as to make the smelting of iron a profitable proposition. On the other hand, the recovery that has gradually been taking place would be hindered by an advance in prices, and makers are content, in the circumstances, to let well alone. There is a sharper demand being experienced for low phosphorus iron by high-class steel manufacturers in the Midlands, but ferro-manganese at 15s 10s per ton, f.o.b., and spiegel at 17s per ton are both a dull trade. Things are just a little better in the steel trade, and there is a sufficiency of small orders to justify the rolling mills at Moss Bay at Workington in being maintained in operation for a few weeks longer. The outlook, however, is not very cheerful, and it may be late spring or early summer before the rail mills go on permanently. The iron ore industry in the west and south of Cumberland is better employed. Many of the pits, indeed, are raising normal outputs, though the demand is almost entirely local. Special ores command from 23s per ton to 24s 6d per ton, and ordinary sorts from 19s 6d to 22s 6d per ton. There is great briskness in the coal trade, needs on all sides being so large that they can scarcely be satisfied, in spite of the fact that the collieries are working at their fullest capacity and that production is increasing. Irish requirements are heavy, and best house coal for cross-Channel shipment is quoted at 27s 6d per ton, f.o.b. Horse coal for local consumption is 38s 2d per ton at pit. Best steam is 30s per ton and washer steam 20s per ton delivered. Gas-producing coal is 20s per ton. All the by-product coke ovens are at last working at top pressure to supply the local furnaces on ordinary iron, furnace coke being 22s 2d per ton. East Coast coke supplies for the furnaces on special iron are over 13,000 tons per week. By-products are in keen request.

Perfection of Finish

The expert Chinese ivory carver has carried his beautiful craft to a pitch of perfection that would be incredible, but for its visible and material results. He handles one of the most intractable of materials as though it were soft wax or silken thread.

A precision and finish of craftsmanship no less notable go to the making of The Chatwood Safe and Strong-Room. In every detail they represent the nearest approach to perfection that has yet been attained.

What The Chatwood Safe has—it holds, for delivery only to the keeper of the key. It is the cheapest safe that can be bought having regard to the contented security it offers.

THE CHATWOOD SAFE

The New Chatwood Safe Book, containing full details of the security achieved and offered, also expresses in a measure the high ideals of the firm. A postcard brings a copy gratis.

MANCHESTER, January 25.

The healthy tone has been maintained in the market during the past week, and traders generally have been in a better frame of mind than has been the case for many months back. Much-needed relief has been obtained by manufacturers, and more work is now available for the operatives round Blackburn, Preston, and Burnley way. The cloth inquiry, principally for India, has been of considerable dimensions, and encouraging sales have taken place in a wide range of fabrics. Of course, many of the offers are still below Manchester rates, but there is a tendency for the bids to improve. A feature of importance has been the rise in the Indian rate of exchange. China has been very disappointing, although recent mail advices have read rather better. Shippers to that outlet have been quite content to pick up small lines, chiefly in fancy materials. Staple makes have been in special request for Egypt and South America. The demand for the home trade has been easily satisfied. A larger inquiry has been about in American and Egyptian spinnings, and sales have been rather larger.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The very keen demand for wool at the Liverpool sale last week was a clear indication that users are still in need of raw material, and competition at the colonial wool sales in London this week has fully borne out this assumption. All wools are selling on a higher level than that ruling at the November-December series of auctions, but there is no further advance on Liverpool rates. Indeed, some members of the trade are inclined to think that full Liverpool rates are hardly being made in some cases. However, the wool position is sound, and in spite of the upheaval in Germany and the great uncertainty as to what may happen, buying proceeds steadily the whole time. Reports from the colonies indicate a general demand, America, the Continent, and Japan all participating. In this centre topmakers have been advancing their quotations in anticipation of dearer wool, and for the time being the limit has been reached; that is to say, users simply will not buy any weight of tops or yarns at to-day's level. Some topmakers are still quoting protective prices, and it is difficult to say what is the actual buying price of certain qualities. For instance, 64's tops can be bought at anything from 5s 4d to 5s 6d, and in fine crossbreds a difference of 3d per lb in quotations is no uncommon thing. It is obvious that both buyers and sellers need time in order to adjust their ideas, but if wool remains firm tops will undoubtedly have to come into line. Spinners assert that they cannot sell yarn on to-day's basis, but some big weights have been sold recently, and machinery is very well employed. It is reported that some spinners are not taking up deliveries of tops as they should do, which is rather significant. There is no material change in the piece goods trade. To-day's prices are too high for wholesale fabric buyers, but business is being done where manufacturers can give the benefit of cheap yarn purchases.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The first series of sales of Colonial wool for this year commenced in London on Tuesday. There was a large attendance of buyers, all countries, including America, being represented. The selection of offerings was not in any way superior, but there was an active sale, Continental representatives doing far more buying than might have been expected. The prices paid just about harmonised with recent sales in Hull and Liverpool, and we are glad to think that they were not carried beyond the level then paid; indeed, we think that merinos were scarcely up to that point, though compared with London there was an appreciation of about 5 per cent. The competition of Continental buyers was rather less marked, with the result that shabbier merinos showed considerable irregularity, and on an average were no dearer than at the close of the last London auctions. Good combing, greasy, and scoured wools were, however, dearer to the extent already named. The selection of crossbreds was fairly good, 56-58's appreciating 5 per cent., whilst medium descriptions were 15, and coarse qualities 10 to 15 per cent. above the rates current at the London sales in December. Scoureds were 5 to 7½ per cent., and slipes 7½ to 10 per cent. dearer. These opening results clearly indicate a very healthy situation, and harmonise fully with what we have been saying for weeks past. In view of the depreciation of the mark, franc, and lire, it is surprising that the Continent should be buying so freely, but French buyers say they have great faith in the future of wool. This section may be expected to buy liberally throughout the whole series, although taking less than they would have done if the rate of exchange had been more favourable.

One cannot fail to observe among buyers attending the auctions a somewhat more sober and subdued spirit compared with the last time they met in the same centre. This is due entirely to the gravity of the Continental situation. The Franco-German crisis is being watched with intense interest, as great issues depend upon it even from a purely wool trade standpoint. Besides this, impartial and unprejudiced observers of the recent course of trade are of the opinion that the recent advance, particularly in crossbreds, has been too quick. The present level of merino values is also well above an economic level. When 64's warp tops have got to 55 4d per lb and 2-48's yarn around 7s, it is obvious that, in view of the present purchasing power of the public, high-water mark has been reached. In the interests of the entire trade it will be well if no further advance takes place in any class of raw material during the next three months. Topmakers have not yet been able to command such an advance in prices as adequately recompenses them for the high figures they have had to pay for wool, whilst spinners and manufacturers are in practically the same position with regard to prices for their yarns and pieces. The bald fact is that the purchasing power of the retailer is so limited, in comparison with the amount of money required, that there is no justification at the present time for any further advance in either merinos or crossbreds. There are undoubtedly certain aspects to be recognised in connection with merino wool. The supply of good combing is none too large, and manufactured goods of fine quality still enjoy no little popularity in every country. These two facts point to higher prices being paid before the middle of the year, but for the time being we are satisfied that values are quite high enough. Before there is any further advance in any class of wool it is essential that the position among manufacturers should improve, and that they through the piece merchants shall be able to find wider outlets and command prices more in harmony with the level to which the raw material has already attained. It is also important for American buyers to cease forcing the pace, for they have done too much of this since last October.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Market hides showed signs of weakness for the first time this year at Thursday's Bermondsey auctions, as all the principal classes of ox hides remained unsold. One class only found a buyer, viz., the 59 lbs and under, and these made 7½d, a drop of ½d on last prices. Seconds were also weak, and when sold showed reductions of ½d to ¾d on last prices. Cows at 5½d to 5½d were ½d down, whilst calf showed reductions of from ¾d to ¾d down, best lights selling from 10d to 11d. Wools were firmer and made from 5s 6d to 15s per skin, fellmongers being eager to secure the limited supply. The price of foreign hides remains steady and firm, Liebig's having been sold at 11d, c.i.f., and Fray Bentons at 11½d. Dry hides are also selling at firm prices, the home trade being keen on picking up odd lots at a lower price than quoted by holders. Latest cables from New York report the Chicago hide market as steady, with best heavy packers making now 40¢ cents.

The demand for sole leather remains quiet, and shoe trade con-

sumers are determined to put off ordering for as long as possible. The demand runs on low-grade sole leather from shoe manufacturers, although merchants seem to have got tired of handling this rubbish, and are now stocking a better class of tannage. Tanners are firm so far in their quotations, although offers for large parcels at less money are often accepted. Repairers have again gone slow owing to the spell of wet weather, and few orders have come to hand of late.

The demand for upper stock is a shade better, although calf leather tanners are still unable to compete with the German box and willow calf. Curriers are better off for orders, but have to work for very little in view of the price they take for kip upper leathers. Fancy leather makers are much better employed, and I hear of good orders being placed for suede leathers for shoe and other purposes.

The boot trade is fairly busy in towns specialising on women's work, and orders are again coming in from abroad in moderate volume.

VEGETABLE OILS AND OILSEEDS.

Trade conditions on the whole are about unchanged, and in common with the consuming industries are influenced by the unsettled situation in Europe and the uncertain exchanges. In addition, high prices of the leading raw materials are a factor restricting business. On shortage on spot and in near positions, raw linseed oil has continued generally a firm market, though this week there has been some weakening, but not to any great extent. Owing to the very small crushing of linseed of late, supplies of oil are small, and prices are still round £30 to £30 10s for "spot" and "month" ex Hull mill, while London reports spot value down to £38 10s. A rather better demand from consumers and indications of a short account for January oil have assisted the market to maintain its firmness. Prospects for increased production in the rear future are good, and for February-April delivery £35 is quoted. Shipments from Argentina continue to improve, the quantity of seed on passage to the United Kingdom (Plate and Indian) having increased to 60,000 tons, and to the Continent 48,200 tons—together 108,200 tons, against 90,500 tons a week ago. For Plate on passage to Hull, £18 5s has been paid, and for January shipment £18, and January-February £17 5s. These about represent current value, but crushers are not buyers to any great extent, holding that shippers' ideas, which involve an increase of about 20s per ton over the price ruling in December, are too high. Cottonseed has again been a strong market, up to £11 15s having been paid for Sakellaridis on passage and January and February loading. A good business in Bombay is also reported round £9 5s for shipment. This has been followed by an easier tone and slower business. The oil product has been in only quiet demand, crude Egyptian quoting £38, and technical refined £37, ex Hull mill. For edible quality there is rather more request, and is dearer at £42. A fair trade in crude soya bean oil for forward delivery has been done. Rape oil continues in only poor supply. Demand for ground nut and palm kernel oils is limited, but prices not much affected.

Linseed cakes for prompt delivery are scarce and firm. Cottons are in fair demand, as are also meals, late prices being fully sustained.

OVERSEAS PRODUCE MARKETS.

Mincing lane, Friday, January 26.

SUGAR.—The market opened the week very quietly, but later a moderate amount of business was effected, chiefly in British refined at a general decline of 1s per cwt. Messrs Tate and Lyle's cubes, 53s 6d to 54s 6d, as to quality; granulated, 48s 4½d to 48s 10½d; caster, 49s 6d to 50s 4½d; finest, 52s 1½d; yellow crystals, 42s 4½d; granulated, March, 48s 9d; June-August, 49s 3d. Crystallised West India in small supply, and quoted 45s to 46s. American granulated, spot, sold, 48s; February-March, sellers, 22s 6d, c.f. and i., London. White Java, spot, 47s 1½d to 47s 4½d; May-June, 21s 1½d, c.f. and i., London. White Mauritius, spot, 40s 6d to 40s 9d. Cuban basis 96 per cent., February-March, sellers, 16s 9d; Peruvian, ditto, January-February, 16s 3d; and Brazilian basis 80 per cent., 12s 6d, c.f. and i. terms, U.K. Cuban stocks stand at 97,100 tons, against 73,400 same

NATIONAL PROVIDENT INSTITUTION
for Mutual Life Assurance.

the Division of Profit.

The Valuation is now proceeding and the result
will be made known early in March.

48 Gracechurch Street, E.C.3.

time last year. Terminal market steady. White, March, sold, 21s 1½d to 21s 9d; May, 21s 4½d to 22s 3d; and August, 21s 3d to 22s 3d. Liquid glucose, spot, 28s 6d.

COFFEE.—The market remained steady, but general course of trade moved slowly, while almost entirely confined to home-trade requirements. Nairobi, good to fine bold, sold 106s to 119s; Kilimanjaro, 105s; Costa Rica, 115s 6d. Future delivery market dull, and mostly nominal.

COCOA.—Market quiet, and with regard to the spot position business is quite retail on about former terms. Accra, F/F quality, February-April, quoted 34s, f.o.b. terms.

TEA.—Indian auctions this week produced some 47,125 packages, and very strong support was accorded all grades up to 1s 6d per lb and full to dearer rates. Finest tippy teas also sold well at higher prices than a week ago. Ceylon sales of 25,240 packages attracted active competition at full to occasionally higher values. Java and Sumatra sold readily at a full range.

RICE.—Spot market remained generally quiet; forward dearer. Two Stars, spot, quoted 15s 3d; February-March, 14s 1½d paid, c.f. and i., Holland. Broken kinds in small supply and firmly held. Rangoon beans, spot, 8s. Japanese peas, on spot, sold, 31s 6d to 30s 6d; January-February, 32s to 29s 6d.

SPICE.—Pepper market presented quiet features. Fair black Singapore, spot, sellers, 4½d; February-April, 4d; Aleppo, spot, 4d; Tellicherry, 4½d; white Singapore, spot, 5½d; Muntok, 6½d; February-April, 5½d; and March-May, 6d. Zanzibar cloves, spot, sold, 11d; January-March, steamer, 11½d to 10½d and 10½d. Flake tapioca, on spot, 3½d per lb for fair Singapore; fair Penang, seed tapioca, spot, 23s 6d; sago flour, February-April, 13s 9d; desiccated coconut, fine cut, spot, sold, 37s 3d to 38s 6d, and medium, 38s 6d to 39s. Ginger much quieter this week, but sellers required steady prices.

FRUIT.—Market quiet for all descriptions of dried fruit, but price changes were not of any importance.

JUTE.—Market hardened under reserved offers, and more disposition shown to purchase, though closing with a subdued tone. First grade, February-March, usual continental ports, sold, £34 15s to £35 10s, £34 and £34 10s; March-April, £35 10s, £36 5s, £35, and £35 10s; lightning grade, February-March, £33 15s value. 10 oz hessians, spot, 40s; January-February, 34s 6d; 8 oz, spot, 28s 6d; January-February, 29s 6d. A twills, spot, 89s; B, 74s 6d.

HEMP.—The market for Manila descriptions displayed a quiet but steady state of affairs. G grade, February-April value, £37; H, £36; J, £34 15s; K, £33 15s; L, £33 10s; M, £32 15s. New Zealand idles, at nominally unaltered rates. African sisal, No. 1 G.E.A., January-March, quoted, £35 10s; Kenya, £35.

SHELLAC.—Market steady on spot, but rather unsettled forward. T.N., spot, 37s 5d; March sold, 347s 6d to 352s 6d; May, 330s to 325s and 337s 6d.

COPRA.—Market steady at first, but some irregularity prevailed

later. F.M.S. Straits, February-April, Rotterdam, sold, £25 12s 6d to £25 8s 9d, and £25 17s 6d; Ceylon, ditto, quoted, £27 10s; Dutch East Indies, sold, £25 12s 6d to £25 10s 3d; Java, quoted, £26; South Sea Islands, £24 17s 6d; Cebu £25 10s. Palm kernels, January-March, Liverpool, quoted, £17 12s 6d.

RUBBER.—Market moved upward on sustained buying orders, and reserve shown by sellers, but eased. Standard plantation crepe and sheet spot, also January reached 1s 6½d, then 1s 5½d; February, 1s 6½d to 1s 5½d; March, 1s 7d, then 1s 5½d; April-June, 1s 7½d, 1s 6½d, to 1s 6½d, and 1s 6d; July-September, 1s 7½d to 1s 6½d, 1s 6½d and 1s 6½d; October-December, 1s 7½d to 1s 7d, 1s 7½d and 1s 6½d. To New York, standard sheet, February-March, sold, 1s 7d to 1s 7½d and 1s 6½d; March-April, 1s 7½d to 1s 6½d, c.f. and i. terms. Fine hard Para, spot, 1s 5d; soft fine, 1s 3½d; ball, 1s 2½d.

MENTHOL.—Spot, 40s. Japanese peppermint oil, spot, 7s 3d. Aniseed, 2s.

EGG PRODUCTS.—Market slow at recent prices. Prime liquid yolk, spot, 100s; albumen, spot, 3s; dried yolk, spot, 9½d.

OILS.—Lined market, after being firm, became quiet and irregular. Spot, net, naked, 39s 3d; January, 38s 3d; February-April, 35s 3d; May-August, 32s 10½d. Rape steady. Crude, spot, 42s 6d; refined, 45s 6d. Cotton firm. Crude Egyptian, spot, 39s; common edible, 44s; deodorised (in barrels), 46s. China-wood strong. Hankow, spot, (barrels), 100s paid; January-February, sellers, 79s. Coconut steady. Ceylon, spot, 42s; January-February, 40s 9d; Cochin, ditto, quoted 43s 3d. Soya steady. Oriental, barrels, January-February, 38s 6d. Japan fish steady. January-February, cases, 26s. Cod firm. English, spot, 31s. Ground nuts steady. English crushed, naked, spot, 47s 6d; deodorised, barrels, 55s. Turpentine irregular. American, spot, 105s; January-April, 106s 6d. Rosin steady for common and medium grades. American, grade B, 14s 3d; F, 14s 3d; G, 14s 3d; H to I, 14s 3d; W, 18s; WW, 19s 6d. French, 14s 3d; WW, 16s per cwt. Petroleum steady. American standard white, spot, 1s 1d; and water white, 1s 2d per gallon. Castor oil firm. First pressure, spot, to June, quoted 49s; second pressure, 46s, and pharmaceutical, 54s per cwt.

OILSEEDS.—Market quiet, and flat descriptions tend easier, but Indian shippers reserved and hold for full prices in view of the improvement in the rupee rate of exchange. Bold Bombay, afloat, quoted, £21; small Bombay, ditto, £20 10s; Calcutta, afloat, £20 10s; January, £19 15s; and April-June, £18 10s. Plate, £20 10s; January, sold, £18 5s to £17 17s 6d; January-February, new crop, sold, £17 5s; April-May, £17. Kapseed February, new crop, sold, £17 5s; January-February, quoted £17 7s 6d; firmer. Toria, afloat, £18; January-February, quoted £17 7s 6d; Jamba, January-February, £14 5s. Cottonseed firm for Indian. Egyptian black, January, £12 5s, and white, sold, £11 15s to £11 10s 3d. Bombay, February-March, sold, £9 5s to £9 6s 3d. Gingly seed firm. Large, Bombay, January-February, sellers, £21 15s. Chinese, new, afloat, sold, £22 17s 6d; January, £22 15s. Groundnuts firmer. Coromandel, machine-dried, Jan-Feb. quoted

£21 10s. Chinese decorticated, f.a.q., January-February, £21; Nigerian, ditto, £21 10s. Soya beans firm. Manchurian, January-February, quoted, £11 17s 6d. Castorseed firmer, Bombay, February-March, £18 10s 10d.

METALS.—Tin opened firm on higher Eastern cables and reserved sellers, while only a moderate business transpired at about 10s per ton advance. Sales included standard, cash, at £181 17s 6d to £182 2s 6d; February, £182 5s to £183; and three months, £183 15s. Sales in the East were reported at £186 15s, c.i.f., being a rise of 45s per ton. Subsequent movements displayed slight irregularity, but with stimulating advices from America and the East the upward tendency was maintained. By the middle of the week values improved to £184 5s for cash, £185 February, and £185 17s 6d for three months. Further sales occurred in the East at £180 5s, c.i.f. No material alteration took place on Thursday, though fair trading ensued. Standard, cash, sold at £183 15s to £184 5s; and three months, £183 10s to £185 5s, while finally at £185 17s 6d. At the final session the tendency was dearer. Standard cash sold at £184 15s to £185 2s 6d, and three months at £186 10s, £186 5s to £186 15s to £186 10s, while finally registered at £186 12s 6d. English ingots, £184 5s to £184 15s. Copper commenced with a strong demand, and a large turnover resulted at 10s to 12s 6d advance. Standard, cash, sold at £64 2s 6d, and three months £64 7s 6d to £64 12s 6d. Values further improved, due to a good demand from manufacturers and covering orders. Cash on Wednesday stood at £64 17s 6d, and three months £65 10s. On Thursday rates were again dearer, and a large business transpired. Cash sold at £65 2s 6d to £65 8s 9d, and three months £65 15s to £65 17s 6d; was actively supported at the final session, and rates ruled firmer. Cash sold at £65 12s 6d, and three months £66 to £66 5s to £66 2s 6d to £66 7s 6d, while finally at £66 5s 3d. Electro, £72 5s to £72 15s; best selected, £69 to £71; strong sheets, £96; wire bars, £72 15s. Antimony, ordinary, £27 to £29 10s. Aluminium quiet. Home trade, £100; export, £105. Lead

steadier at £28 5s to £27 17s 6d, as to position. Spelter dearer at £35 15s to £34 8s 9d, according to position.

TALLOW.—Messrs Colchesters and Woolner write on January 24th, as follows:—The tallow market was easier during the week, and prices are sixpence lower to-day. The general position is such that buyers find little to encourage them in operating. Shipments of tallow from Australasia during December amounted to 5,000 tons. At auction to-day 832 casks tallow were offered, and 503 were sold. Quotations are:—Australian mutton: Fine, 43s; good to fair, 42s to 40s; dull to dark, 36s 6d to 35s 6d; hard, 42s. Australian beef: Fine, 42s; good to fair, 40s to 38s; dull to dark, 36s 3d to 35s; sweet, 43s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 39s; and mixed, 43s, c.i.f., London, 37s 6d. The market letter is unchanged. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 14d; melted stuff, 25s 6d per cwt. Quotations are:—Town: 34s 9d net cash, naked, ex works. Country: Frail casks, 34s 3d; home melted, shipping casks, net, f.o.b., good coloured, —; fair to dull, 35s 6d to 34s 6d. Bone fat: White, none; pale, none; benzine, 31s 6d; melted stuff, 32s, f.o.b.

AN INTRODUCTION TO THE STUDY OF PRICES

with special reference to the History of the Nineteenth Century.

By WALTER T. LAYTON, M.A. 7/6 net

The Economic Review: "His excellent and clear little book ought to be in the hands of every student of social conditions."

The Practical Engineer: "This book should be valuable to the student of monetary values and prices, especially of the nineteenth century."

The Westminster Gazette: "Mr. Layton, who is one of the ablest of the younger Cambridge economists, has refrained deliberately from a long exposition of the theory of the relation between price levels and the quantity of circulating currency. He has adopted that historical method which appeals to the instinctive empiricism of the practical man. His tracing of the price fluctuations of the past ninety years in England, and his analysis of their causes and results are admirably lucid. And if the book secures the wide circulation which its merits deserve, it should do much to draw public attention to the vital importance of a neglected question."

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE LONDON JOINT CITY AND MIDLAND BANK LIMITED.
In accordance with the provisions of Sub-section 2 of Section 113 of the Companies (Consolidation) Act, 1908, we report as follows:-
We have examined the above Balance Sheet in detail with the Books at Head Office and with the certified Returns from the Branches. We have satisfied ourselves as to the correctness of the Coin, Bank and Currency Notes and Balances with, and Cheques in course of Collection on other Banks in Great Britain and Ireland, and Bills Discounted, and have verified the correctness of the Money at Call and Short Notice. We have also verified the Securities representing the Investments of the Bank, and having obtained all the information and explanations we have required, we are of opinion that such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

THE MONEY MARKET.

REVENUE payments and the demands incidental to the end of a month hauled in the end of the slack in the money market, and on Wednesday there was quite a keen demand for loans. On Thursday there was no reaction, interest payments being offset by revenue transfers, and 2 per cent. was occasionally paid for loans over the night. Discount rates hardened appreciably, three months' Treasuries changing hands at $2\frac{3}{4}$ per cent., while bank bills were quoted between that rate and $2\frac{1}{2}$ per cent. Yesterday the allotment of Treasury bills hardened the market still further, and $2\frac{1}{2}$ per cent. was the lowest rate quoted for three months' bills.

The Bank return showed an expansion of £1,219,000 in the note circulation and a small increase in the stock of gold, leaving the Reserve £1,217,000 lower. Government securities had declined by four millions and three millions had been added to the Public deposits. Other deposits thus being eight millions lower. Currency notes outstanding were reduced this week by £560,700 to £280,272,900, which includes £1,511,100 for notes called in but not yet cancelled. The fiduciary issue is £230,611,800, or £39,572,000 below the maximum.

THE STOCK MARKETS.

The volume of business in the Stock Exchange this week has been distinctly small in comparison with the rush in the three previous weeks, the influence of events abroad having at length produced a spirit of caution in both investor and speculator. The Cabinet's acceptance of the American debt terms was received on Thursday with no great enthusiasm, rumours from Lausanne being received with more gratification. Gilt-edged stocks recovered a little, but there was no expansion in the volume of business. The foreign market has been weak, French bonds being particularly flat, and Home and Foreign Rails suffered with the rest of the markets. Rubber and oil shares have been heavy. In the miscellaneous section, electric lighting shares were prominent, with a rise, but most of the speculative and semi-speculative issues are lower. The excitement in certain sections of the mining market has been maintained.

THE COMMODITY MARKETS.

Considerable activity continues at the various coal centres. Our South Wales correspondent reports that the Cardiff coal market has been inundated this week with new orders from the United States, France, Spain, Belgium, and Germany, and that in consequence prices are stronger. Our Glasgow trade correspondent also refers to a big continental demand for coal, and states that prices are from 3d to 1s per ton higher. Our Sheffield correspondent, however, points out that amongst South Yorkshire collieries there is nothing as yet in the nature of a boom, although steam coals are approximately 1s per ton higher, and he proceeds to add that "an endeavour will be made to prevent prices of manufacturing fuel rising unduly, lest such a movement should check the expansion in iron and steel." Makers of pig-iron have been obliged to raise prices, owing to advances of fuel costs, and a good demand is reported for iron. The best outlet for steel at the moment is for shipbuilding, orders being better. A distinct change is reported in conditions in the Manchester cotton trade. It is stated that there has been a decided falling off in the volume of business owing to the weakness of raw cotton rates, the fall in the value of the Indian exchange, and to the political situation on the Continent. A quietness is noticeable in the wool trade, while the hide position at the Bermondsey auctions was inclined to weakness. A sharp advance in linseed oil has taken place. Further particulars of markets will be found from our special correspondents on later pages.

FOREIGN EXCHANGES.

During the past week the effect of the Ruhr crisis and of the Turkish threat has been one of something very near demoralisation on the Foreign Exchange markets, and although there was a little more steadiness yesterday morning, the outlook is still threatening and obscure. The only cheering feature of the week is the decision of the British Government to accept the conditional American offer for the settlement of war debts, which has had the effect of bringing up sterling from below \$4.63, to which it fell at one time on Monday, to \$4.66½ yesterday, as compared with \$4.64½ a week ago. The forward rate remains about the same, at about ½ cent per month above spot. From 96,000 on the 26th the mark has plunged to a level not far short of the krone, and has already well out-distanced Polish

currency in the race of depreciation. On Monday it closed at about 155,000, on Tuesday at 220,000. From this point it has shown a slight tendency to recover, but more from complete lack of dealing than anything else, and yesterday morning's figure of 180,000 again suggested a reaction. The Paris and Brussels rates have moved in a similar way, the French franc rising from 72.85 to well over 80 at one time on Wednesday, and recovering a little to 78.80 on Thursday, while Brussels moved from 80.85 to 91.40. Yesterday there was a recovery to 76.80 for Paris and 80.65 for Brussels. It is, however, impossible to have any confidence in this recovery, especially as there are growing indications in both countries of an eagerness to get out of the franc into more stable currencies. The failure of the French Finance Minister's proposal for a 20 per cent. increase in taxation is also an unsatisfactory feature in the situation. Forward rates in Paris widened to 14 to 17 centimes per month above spot, while Brussels for one month ahead was about on a parity with spot. In this general collapse Italy has for the moment shown a relatively strong power of resistance, the movement on the week having been only from 96.90 to 97½. It is doubtful, however, whether the pressure of events will not cause a break in the near future. Among neutral countries, Holland jumped suddenly in our favour on Thursday from 11.79 to 11.91, and although yesterday there was a reaction to 11.87½, the rate was still very much higher than the 11.76½ of a week ago. Geneva at about 24.90 was much the same as last week, Madrid at 29.84 showed a move of about 20 points in our favour. Copenhagen moved sharply in our favour, and both Christiania and Stockholm were higher. Helsingfors at 180 was steady, with a fall of one point on the week. In Central Europe, Austria remained steady, and Warsaw also at 150,000 showed little depreciation. Prague moved down a little to 162, and Bucharest, after rising wildly to about 1,225, was considerably better at about 1,110. In the East the rupee reacted again after its recent high levels to 1s 4½d, and Yokohama was ½d cheaper at 2s 0½d. The slackening of Indian demand for silver coincident with the fall in exchange, brought down the price of silver below last week's levels, and the Hong Kong and Shanghai rates are also lower, at 2s 3d and 3s respectively. In South America, Buenos Ayres is ½d cheaper at 43½d, and Rio 1-32d cheaper at 51½d, while Montevideo has fallen from 43½d to 42½d. Over the same period Valparaiso has depreciated from 36.50 pesos to 38 pesos.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 27th:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	19,462	Interest on Debt	685
		Supply Services	7,698
		Sundries	300
		Added to Exchequer balances ..	104
		Reduction of debt	10,675
	19,462		19,462

Revenue during the week ended January 27th totalled about £19½ millions, as against about £27½ millions a year ago, the decline being due to special receipts, which amounted to but £388,103, as against £8½ millions last year. Estate duties yielded £1,730,000, as compared with £1,029,000, but receipts from Property and Income-tax, at £10,174,000, are slightly lower. Expenditure was £8,683,565, being well over £4½ millions under the corresponding figures a year ago. The week's operations reduced the National Debt by £10,674,825, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 650	Bank of England Advances ..	8,750
4½% Treasury Bonds	+ 4,918	Public Dept. Advances	4,950
		Treasury Bills	652
		Unemployment Insurance	280
		Securities Surrendered	861
		Funded Loan, &c.	750
	+ 5,568		16,243

The floating debt was reduced by £14,345,000 to £921,371,500.

FINANCIAL YEAR, 1922-23 (April 1, 1922, to January 27, 1923).

Total spent	642,984,605	Raised by revenue ..	666,211,717
Dec. in balances	7,290,215	Net repayments	30,517,327
Total	635,694,390	Total	635,694,390

ESTIMATES for YEAR 1922-23.

Ordinary Expenditure	£ 823,846,000	Ordinary Receipts ..	£ 820,775,000
Special Expenditure	61,223,000	Special Receipts ..	90,000,000
Contingencies	25,000,000		
Total	910,069,000	Total	910,775,000

THE EUROPEAN TANGLE.

UNDER any circumstances the acceptance by the British Cabinet of the American offer of the debt-funding plan, which we discuss elsewhere, would be an event of outstanding significance. But in the present deplorable position in Europe, in respect of which the outlook has unfortunately darkened this week, any event likely to enhance the prospects of Anglo-Saxon co-operation assumes a ten-fold importance. In the Ruhr events this week have developed slowly along expected lines, and it is no more possible than it was a week ago to weigh up the chances of intervention or arbitration. The régime of French military control has been tightened day by day, preparations have been perfected for drawing a cordon round the new area of occupation and cutting it off from the rest of Germany. Meanwhile, as we predicted, incidents have occurred which show the more clearly how untenable the position of the British garrison at Cologne has become. As regards the economic prospects of the French policy, Mr J. M. Keynes was only stating the obvious view when he expressed on Wednesday, at the annual meeting of the National Mutual Society, his grave doubts whether any substantial reparation payment will now ever be made. So far, it appears, France has in a fortnight of occupation actually received about half a day's output of coal from the Ruhr. The exiguous nature of these receipts is, of course, largely due to the railway stoppage, which will be resolved as time goes on. It is probable that when a succession of coal trains at last begins to run from the Ruhr into France, the spectacle will be hailed as a victory of the French policy. We would, therefore, remind our readers of a few simple economic facts in this connection. Before the advance into the Ruhr France was receiving free deliveries of coal from Germany. The coal which she now receives from the Ruhr mines she has to pay for, and the extraction of it can only be profitable to France if the Ruhr miners can be induced to produce more than they consume. In other words, France can only gain to the extent to which she can work the Ruhr mines at a profit. Even then from any profits there will have to be deducted the costs of military occupation and supervision. In so far as France breaks the German strikes and passive resistance she may claim a success; and this degree of

success is probable, because the population of the Ruhr cannot go on for long without working for wages and food. But it is almost inconceivable that, with unwilling workers and with the immensely wasteful overhead charges represented by military occupation, she can have any hope of making a real profit on the operation of the mines. There is in this country, as we have frequently said, a profound understanding of and sympathy with French disappointment and disgust over the whole story of the reparation question. Nor is there much disposition to apportion the responsibility for that disappointment. But equally profound is the conviction entertained here that the new French policy is economically impracticable and politically disastrous.

The anxieties aroused by French action in the Ruhr have been intensified this week by occurrences at Lausanne. After prolonged and persistent effort it began recently to appear that, thanks to Allied solidarity, so laboriously rebuilt since the Mudania Conference, Lausanne would produce the first agreed and practicable Treaty that has been signed since the war. We use the word practicable for two reasons; first, because it is the only Treaty which has been hammered out at a round table by representatives of all the parties concerned; secondly, because it contains no inherently impossible provisions. This moment the Quai D'Orsay apparently chose to make it known to the Turks (though in what terms is not exactly known) that, if agreement failed at Lausanne, France would be prepared to negotiate a separate agreement with Turkey. Fortunately, there is still hope that even in the face of this deliberate and powerful temptation the Turks will draw back from the disastrous decision not to sign the Treaty which has been so laboriously prepared. The proposed settlement is not perfect, and we have discussed from time to time its more obvious imperfections. But that the alternative to its signature is fraught with such incalculable possibilities of trouble for all parties concerned is surely a ground for hoping that at the eleventh hour wiser attitudes will be adopted, both in Paris and in Angora. Nevertheless, at the moment of writing we cannot rule out the possibility of a resumption of war and disturbance in the Near East; and it must be remembered that even after signature the progress of peace and reconstruction in that part of the world will still depend to no small extent upon the existence of a common attitude and policy by Great Britain and France. Naturally, through this deepening European gloom the better hope of Anglo-American harmony and co-operation looms up as a rock of salvation.

Under these circumstances it is a coincidence possessing both irony and political importance that Paris is the venue of the meeting of the Council of the League of Nations, which opened on Monday. It was originally the intention of M. Branting, on behalf of Sweden, to raise before the Council the question of the French occupation of the Ruhr; but he has postponed action, hoping, presumably, that in due course a more favourable atmosphere for his proposal may be created. It seems a distant hope at the moment, but it is all to the good that the meeting is taking place in the centre where M. Branting can quickly sense every reaction of French feeling to events in the Ruhr area. Meanwhile, the Council has been engaged on highly

important business. On Tuesday Lord Balfour gave notice to the Council that the British Government would, in the event of Turkey not agreeing to a joint appeal, herself lodge a request that the League of Nations should shoulder the task of determining the frontiers of the mandated territory of Iraq, and should invite Turkey to send delegates to discuss the question on terms of complete equality. This request is, of course, conditional upon a fair arrangement with Turkey on the Mosul question failing to be achieved at Lausanne. The proposal to refer the matter to the League, Lord Balfour pointed out, was supported by the delegates of France, Italy, and Japan, but was not, so far, accepted by the Turks. For the rest, Lord Balfour's speech was a clear exposition of the way in which the machinery of the League would secure perfect equality of treatment in a dispute of this kind for a nation which, like Turkey, is not actually a member of the League.

Whether the Mosul dispute will eventually provide the League with another opportunity of displaying its peace-giving ability remains to be seen. The other leading discussion in the Council this week referred to the great service which the League has already performed in respect of Austria. In reviewing Austrian progress with the task of carrying out her obligations under the Geneva protocol, both Lord Balfour and Dr Seipel, the Austrian Chancellor, struck a hopeful note. Difficulties, said the former, had been overcome which four months ago seemed insurmountable. Dr Seipel showed that in her programme for domestic reforms Austria was ahead of her promises. Our Vienna correspondent has recently described Austria's brave struggle. But, as Lord Balfour pointed out, Austria cannot extricate herself from her difficulties without external assistance. It was stated at the Council that, of the necessary guarantees for the promised external loan, 93 per cent. had already been given. It is to be hoped that no unavoidable delay will be allowed in the difficult task of its flotation. The progress of the League's Austrian experiment will be watched with the closer interest in view of the possibility that even more vital and complicated questions may eventually be brought under its purview.

FUNDING THE AMERICAN DEBT.

THE decision of the Cabinet on Wednesday to accept the terms for payment of our debt to America suggested by the American Commissioners is one which the City has celebrated not with sighs or gloomy forebodings of disaster, but by marking up the prices of British Funds. Sir Harry Goschen, at the meeting of the National Provincial and Union Bank on Thursday, voiced City feelings when he congratulated the Cabinet on their decision, which he described as "a landmark in our financial progress." It may seem a paradox that a decision binding Great Britain for 62 years to pay something over £32 millions a year should be so received; but the fact is that the American offer is an appreciable reduction in what the United States Government is entitled to ask us to pay—is, indeed, a writing down of our obligation, and as the London financial community had long ago made up its mind that it would and could pay the debt in full, any hesitation in accepting the American terms would have been regarded as a confession of weakness which for the sake of British credit it would be very undesirable to make. From the purely business standpoint it would be worth a considerable sacrifice to avoid having to make any such confession; but seeing that the American offer is something less than anything we had any claim to expect, opinion was practically unanimous that the offer should be accepted not merely with a good grace but with gratitude. It has been argued that more favourable terms might have been offered later when the difficulty of paying international debts has become more fully realised in all countries. But the arguments against such delay are, in our opinion, conclusive. In the first place, we doubt very much whether opinion would change in the way suggested so long as a settlement was postponed and the debt question the subject of constant political dispute and bickering. Indeed, we are sure that if a change is to come in American sentiment, it is much more likely to emerge when we have tested the results of

a settlement such as that now being negotiated. In the second place, the question whether the payment now proposed is as serious a burden as is sometimes represented depends very much on the future of dollar prices. If these rise and remain fluctuating about a high level, the burden will be much diminished. Finally, there is nothing to prevent a future revision of the present terms if the situation warrants it.

The Prime Minister and his colleagues, however, seem to have been misled into relying upon the opinions expressed by highly placed Americans visiting this country, that America would be willing to reduce the rate of interest on the British debt to 2½ per cent.—which would in effect have halved the annual charge; and having accepted these expressions of opinion have been disappointed to find the Administration at Washington bound rather by the decisions of Congress than those of unofficial persons in London. Indeed, the real outstanding question is not whether the American Commissioners failed to go as far as Mr Baldwin had a right to expect, but whether they went farther than Congress can be persuaded to accept.

There are, however, certain considerations which the Administration will doubtless impress as forcefully as possible when its proposals are put to Congress. In the first place, Great Britain has already set an example of a liberal attitude rather than of insisting upon her strict legal rights in the question of these debts in the case of her European Allies, for although this country has not gone nearly as far as we should have liked to see it go in this direction, the offer made last month in Paris by Mr Bonar Law did definitely write down to a very negligible figure the debts owed to us by various countries, and for the most part made them contingent upon the payment by Germany. This was done for the sake of a settlement in which Great Britain and the whole world is interested. The offer was quite properly made entirely irrespective of action by America; but it must be evident that it will be easier for Great Britain to offer still more liberal terms in any future negotiations on reparations, if such ever occur, if America has been moderate in her demands upon us. But this is an argument upon which we cannot insist. There are, however, two arguments which we may reasonably urge. In the first place, there is the point that our original loan was one payable on demand, and in funding such a loan, which quite clearly cannot be paid off in one single payment, the advantage may reasonably be claimed of the fall in the world rate of interest as compared with the rate at which our debt was originally incurred. Congress has recognised this argument so far as to authorise funding of the loan at 4½ per cent., which is the rate at which America borrowed from her own nationals the bulk of the amount raised by means of the Liberty Loans. (The first Liberty Loan of \$1,400 millions was raised at 3½ per cent., but this was convertible at the holders' option into 4½ per cent. Liberty Loan, the issues of which ultimately amounted to approximately \$13,000 millions.) These loans, however, are redeemable at par at various dates between 1927 and 1947, and in the event of the rate of interest falling, it is clear that the American Government, if the loan is not repaid out of revenue, would be able to convert into a lower rate of interest loan at these redemption dates. By funding to-day the British Government surrenders the right to take advantage of any further fall in the rate of interest.

Again, the borrowings of a Government from its own nationals are at a higher nominal interest figure than the net amount actually paid, since its interest payments are liable to taxation. Thus, when Great Britain pays 5 per cent. interest in this country, it recovers from most holders 5s income-tax, the net charge upon other sources of taxation therefore amounting only to 3½ per cent. When Great Britain pays interest to the American Government she has no such power of taxation, and the payment therefore of 3 per cent. is the equivalent burden upon our national resources as 4 per cent. in Great Britain. It is true, that this argument applies only in a modified form to the position of the American Government, for the Liberty Loans were issued at 4½ per cent., "exempt from all Federal State and local taxes except estate or inheritance taxes and Federal income sur-tax and profits tax." The taxation recovered is therefore only a small proportion of

BANKING FACILITIES

100 Broadway

New York City

the interest. But these considerations would make it reasonable that unless Congress wishes to see some profit to America from the loan, some concession at least should be made on the 4½ per cent. previously fixed.

The negotiations thus contain a number of points which may be urged in mitigation of the original charge payable by Great Britain. In this respect it is like the great majority of financial settlements between the two countries arising out of the war in which a strict adherence to the letter of the contract has not been enforced by either side, but has been replaced by general considerations of equity. We have never imagined that the United States would ever attempt to make a profit out of the British debt, and this principle inspired the Funding Act of 1922. As regards the proposed improvement upon these terms, we may perhaps regard the extension of the repayment period to 62 years (which means a reduction of one-half in the rate of amortisation) as being the off-set to the possibility that the United States may be able to convert its loans to a lower interest level in the next decade; and that the consideration that our payments will be tax free would justify some reduction in the rate of interest below perhaps 4 per cent. In offering 3 per cent. for 10 years and 3½ per cent. thereafter, with a ½ per cent. amortisation, the United States Government is offering us terms something below the net cost to itself, and this difference represents the contribution which America is making to ease the international situation. We are of opinion that when America comes to deal with the debt of the European Allies, and more particularly if this should happen in connection with any possible settlement of the reparation problem, Congress might be ready to offer more liberal terms to France and Italy. But so far as the present proposed arrangement is substantially less than the full 5 per cent. which America has been entitled to ask, and which accordingly we have hitherto presumed that we should pay, the arrangement will make it easier for us to offer better terms to Europe.

MR. McKENNA ON DEFLATION.

In his speech last week to the shareholders of the London Joint City and Midland Bank, Mr McKenna reviewed and criticised the financial policy of the Government, not with regard to the question of the imposition or remission of taxes, but as to "the issue and rate of Treasury bills, the funding of floating debt, the issue of Treasury bonds, and other kindred matters." In recent years, he said, "this policy has been frankly one of gradual deflation," by which he seemed to mean that the Government has been deliberately working to reduce the volume of purchasing power in the hands of the public, with the object of establishing a lower level of prices and so increasing the value of our currency and bringing it back to par with gold, and with the currencies of those countries that still have a gold standard, especially with the United States dollar. This policy Mr McKenna condemned as harmful in its effects on our trade, and unnecessary for securing

the objects aimed at. He dwelt on the evils of inflation, and then observed that "people are apt to start with a preconceived idea that deflation must be meritorious, since it is the reverse of inflation, and that even though it be injurious to trade we may find consolation in its superior virtue." In Mr McKenna's view, however, deflation as a financial policy has no more to recommend it than inflation, the truth being that "what we need to ensure healthy and prosperous trade conditions is stability in the value of money."

With this ideal most of our readers will probably be ready to agree, though in view of the great importance that used to be attached to the gold standard by our bankers it is possible that City opinion, on the whole, might be more inclined to consider that stability is certainly the end to be aimed at finally, but only after first having squeezed the water out of our currency and restored to it its old convertibility into gold, and parity with other currencies that are on a gold basis; and when we bear in mind the great though elusive value of financial prestige and the tremendous strain to which our financial prestige has been subjected during and since the war by official use of the printing press, this aspiration for a quick return to gold is not entirely theoretical and academic. But whatever ideal be most desirable, there seems to be some reason to doubt whether the Government has really been deliberately working with the ultimate objects in view that are credited to it by Mr McKenna, and still more whether the results of its policy in producing trade depression are as clearly traceable as he implied in his analysis. His speech has been widely applauded for its lucidity, and with good reason; but it is just possible that some of that lucidity was secured by omission to consider complicating factors, and also by the quiet assumption that of two simultaneous facts one was cause and the other was effect, whereas in truth they may both have been caused by something bigger. He showed that at the end of 1921 total deposits in British and Irish banks were 2,530 millions, and estimated currency in the hands of the public was 370 millions, making a total purchasing power of 2,900 millions; by the end of 1922 the estimated deposits were 2,350 millions, the estimated currency in the hands of the public 350 millions, and the total 2,700 millions, a reduction of just over 200 millions. Total bank figures not yet being available, Mr McKenna proceeded to analyse those of the London Clearing banks, in the case of which he found a decline in deposits of 135 millions, and a roughly corresponding decline of 130 millions in bills discounted, falls in cash money at call and loans and advances having been offset by an increase in investments. "In the course of the year the Government paid off Treasury bills to an amount of over 300 millions, of which the banks held between 100 and 200 millions. Here we see a decline in deposits related to a reduction in the Treasury bills held by the banks. The operation was in truth a measure of deflation effected in pursuance of a declared policy, and resulting in a total reduced purchasing power of 200 millions." The effect

of a decline in purchasing power is, as Mr McKenna proceeded to show, a fall in prices—until there is a change in the amount of purchasable commodities or in the velocity of expenditure; and when prices fall fewer orders are given, trade declines, and unemployment grows. "Thus the immediate effect of a reduced purchasing power is diminished trade and increased unemployment." And so we are led up to the conclusion, though Mr McKenna did not definitely state it, that at least a considerable part of the present depression in trade has been due to the policy of deflation deliberately pursued by the Government, which at the same time, with an inconsistency duly noted by its critic, has been trying to give a fillip to trade by putting purchasing power at the disposal of traders and by means of the Trade Facilities Act.

It is an interesting case, very effectively argued. But one would like to be quite sure before impaling the Government on the horns of Mr McKenna's dilemma, that it was really meaning to deflate. It may be noted that Mr Walter Leaf, in addressing the Westminster Bank shareholders on Thursday, roundly maintained that there has been no deflation. "Fiscally," he said, "we have been engaged in stabilising the pound. This has been effected by just balancing the Budget and leaving nothing over for the payment of debt. We have thus avoided adding to the suffering involved in deflation," &c. Mr Leaf seems to mean by deflation a fall in prices, while to Mr McKenna it signifies a reduction in the volume of money in our pockets and our bank balances. But, in any case, it is surely quite possible that all that the Treasury meant to do was to reduce the volume of outstanding Treasury bills, the huge figure of which was at one time a cause of some anxiety, which produced the abortive attempt at "funding" by the issue of Funding loan and Victory bonds. The effect of the Government's anxiety to reduce Treasury bills was the issue of Treasury bonds, and the subscription to the latter by the public led to the redemption of Treasury bills held by the banks and the consequent cancellation in the banks' balance-sheets of deposits on the liabilities side and bills discounted amongst assets. And so the object that was aimed at by the Funding loan was at last to some extent achieved, and the banks were freed from part of the burden, imposed on them by the war, of carrying advances to Government, and so were enabled, to that extent to increase their advances to traders, if traders had wanted them. As Mr McKenna admitted, after the repayment of Treasury bills held by a bank out of money subscribed to Treasury bonds by its customers, the bank would have less deposits than before but the same amount of cash; "it might therefore be objected that the bank would have more than its usual proportion of cash, and would be in a position to make fresh loans and so recreate its lost deposits." He answered this objection by pointing out that in actual practice the immediate use made by a bank of its surplus cash is to lend it in the money market, and that the discount brokers and other customers of the Bank of England are able to pay off loans borrowed from it, "and every such repayment not only cancels a deposit, but also cancels an equal amount of bank cash." But the market is not always in the Bank of England's debt, as Mr McKenna seems to assume, and he did not explain why the banks are obliged to adhere, in unusual times such as the present, to their usual practice of lending surplus cash in the money market. Some of it, at least, they seem to have invested, and hence the increase in their investments. Some of it, surely, might have been available for trade if trade had wanted it.

Trade did not want advances, and Mr McKenna shows us why. Analysing the trade figures of 1922, taking 1922 values on the basis of commodity prices current in 1913, he showed that our exports to Central and Eastern Europe had declined by 62 per cent., those to all other foreign countries by 30 per cent., and those to the British Empire overseas by 29 per cent.; "the commercial breakdown in Central and Eastern Europe," he added, "is not only destructive of our markets there, but must hamper our export trade more or less all the world over." But this breakdown can hardly be attributed to our Government's monetary policy, and it surely was the real cause of trade depression, and so of the diminished demand for currency for trade purposes which has diverted money into

longer dated investments, and so has assisted the Government in its eagerness to reduce Treasury bills, and has produced, not from definite intention, but by a side wind, the reduction in purchasing power which was implied by Mr McKenna to have been the cause of the depression. Surely, the declared policy of the late Government was best expressed by Sir Robert Horne's Budget, which deliberately faced the charge of unsound finance, with which it was plentifully pelted, by trying to encourage trade, and catch votes, by remitting taxation at the expense of debt redemption.

But if Mr McKenna invented, or overstated, a case against the Government by attributing to its deliberate act a process which was due to deeper causes, he was on surer ground when he called attention to the drawbacks of a lower level of prices because of its effect in increasing the burden of the debt charge, and he was interesting, if not altogether convincing, in his certainty that without any attempt at deflation on our part sterling will slowly rise to par in America owing to her excessive holding of gold. And all must agree with his last statement that we "must seek a general increase of wealth through a more abundant output," though the breakdown in our overseas markets, which his own figures illustrated, raises some doubt of our ability to dispose of it until there is once more peace.

OUR INDEX NUMBER.

THE year 1923 has opened with an advance in prices, our Index Number of commodity wholesale prices having risen in January by 60 points. The larger part of this increase is due to a sudden spurt in demand for iron and coal as a result of the Ruhr developments. The recent export demand has depleted the stocks which had accumulated in British coalfields last summer, and the present demand has therefore found the market bare. The minerals group, in fact, shows a rise of 34 points, the largest advance recorded in this section for many months. An immediate movement of this sort was only to be expected, but other influences, which do not operate at once, will undoubtedly begin soon to move prices downward. The collapse of the mark will reduce Germany's capacity to purchase abroad, and this is bound to have some influence on the price here of certain commodities. As will be seen from the table below, textiles have also assisted in the upward movement, but changes in the other three groups have been small:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5)...	500	300	500	400	500	2200	100.0

The total for cereals and meat is practically unchanged, though there have been several small movements in individual commodities. Flour and foreign wheat have fallen, but home-grown wheat and other cereals are higher. Since the beginning of the year, the *Gazette* average prices of British corn have been quoted in cwts instead of quarters, a welcome improvement. In subsidiary food-stuffs tea is again substantially higher, but sugar has fallen. In the textiles group there was a sharp fall in jute and a small decline in flax, but all other movements were in an upward direction. There has been keen competition at the wool sales, and buying has proceeded steadily in spite of international complications. American cotton is

higher on the month, though it closes below the top figure, but the advance in yarn and cloth is more pronounced. The inquiry for cloth, principally for India, has broadened considerably.

While pig-iron has advanced substantially, iron bars have as yet only increased slightly and steel rails are unchanged on the month. The difficulty with pig-iron appears to be that owing to the strong demand for fuel, it is not possible to start furnaces to cope with requirements. The coal quotations so far show no very great advance. Tin prices have been put up during the month principally as a result of the statistical position. The principal feature in the miscellaneous section has been the advance in the price of rubber from 1s 1d to 1s 5d per lb. In the next table are set out the changes in the index for each commodity as compared with the end of December, 1922, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For...	82	- 7	Cotton, A	144½	+ 5	Copper	54½	+ ½

Sugar beet	106	- 4½	Coal, steam	127½	+ 4½			
Butter	95	- 4½	House coal	94	+ 1	Total	4,324	+ 60
Miscellaneous	116½	- 1	Lead	118	+ 8			
Tobacco	116½	- 1	Tin	72½	+ 1½			
Other foods	711½	+ 5½						

The net result of these changes is an advance in the percentage increase over July, 1914, from 66.2 to 68.6 per cent. The present position of the five groups in relation to the pre-war level is shown in the table below:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1

Nov. "....	150	200	195	152	148	167.0
Dec. "....	149	200	193	152	146	166.2
Jan., 1923	149	201	196	159	146	168.6

The levelling process between the groups has not proceeded much further in January, miscellaneous commodities and cereals and meat being still far below the average.

In the final table we show the changes in the indices of wholesale prices in eight foreign countries, the base being the average of the year 1913:—

	United States.	France.	Italy.	Germany.	Switzerland.	Sweden.	Denmark.	Japan.

* Altered to include 16 finished industrial products.

As compared with the end of July, 1914, prices in the United States show an increase of 57 per cent., as compared with 68.6 per cent. in this country. French prices increased again in December, and the end of January figure may be expected to show a further advance. The German index number, which at the end of the year had

already reached a fantastic figure, will, possibly, at the end of January, with an increase in the exchange from 40,000 to 240,000 marks to the £, have expanded into seven figures.

LAND-HOLDING BY FOREIGN CORPORATIONS IN FRANCE.

(BY A LEGAL CORRESPONDENT.)

A Bill which has recently passed the French Chamber of Deputies and is now before the Senate is exciting a considerable amount of attention in business circles in this country. The effect of the Bill is to make it necessary before any foreign individual or corporation can acquire the ownership, or a life interest, or a lease exceeding nine years, of any land in France or in any of her colonies, to obtain the authorisation of the French Government by means of a decree granted by the Minister of the Interior. Commercial companies and firms are to be subjected to this obligation, and the Bill not only applies to future acquisitions, but compels the present holders of such interests in land to seek from the French Minister of the Interior the necessary decree of authorisation for their continued holding. Not even all companies and firms registered in France are exempt from this requirement; for to qualify for exemption it is necessary that the chairman of the board of directors, the managing directors, the general partners, the managers authorised to sign, the auditors, and more than one half of the partners, directors, members of the board of management or board of control should be of French nationality.

Such is the proposal. We are not concerned for the moment with the economic or political motives underlying it. The case for the Bill rests presumably upon allegations that the internal price level is lagging behind the external level and not keeping pace with the declining franc, so that foreigners are able to speculate in French land to the detriment and unfair advantage of French subjects. Apart from some cause of that kind, which, it is to be hoped, is temporary, it is difficult to understand the contemplated departure from what has been France's policy for over half a century. It is desirable to examine the international law and the British rules and practice bearing on the matter.

On April 30, 1862, there was signed a "Convention between Great Britain and France relative to Joint Stock Companies," of which Article I. provides:—

COMPANIES TO HAVE ACCESS TO TRIBUNALS.

The High Contracting Parties declare that they mutually grant to all companies and other associations, commercial, industrial, or financial, constituted and authorised in conformity with the laws in force in either of the two countries, the power of exercising all their rights, and of appearing before the tribunals, whether for the purpose of bringing an action, or for defending the same, throughout the dominions and possessions of the other Power, subject to the sole condition of conforming to the laws of such dominions and possessions.

This clause has been generally understood to give British companies and firms in France the same rights in the matter of owning and leasing land as French companies and firms.

Article III. (Duration of Convention) provides:—

The present Convention is concluded without limit as to duration. Either of the High Powers shall, however, be at liberty to terminate it by giving to the other a year's previous notice. The two High Powers, moreover, reserve to themselves the power to introduce into the Convention, by common consent, any modifications which experience may show to be desirable.

We are not aware that either party has terminated this convention, though France may be on the point of doing so.

Let us look at the British practice. The English common law, while permitting an alien to acquire and hold goods and other personal property, prohibited him from acquiring any land or even a lease of land, except that an alien merchant, being the subject of a friendly State, was allowed to hire a house to live in; any other attempted acquisition of an interest in land by an alien was void, and operated as a forfeiture to the Crown. (This did not, however, prevent a company registered in England, though composed partly or entirely of alien shareholders, from acquiring land in England on the same

terms as other companies.) Then in 1870 the Naturalisation Act enabled an alien to acquire and hold as fully as a British subject interests in land or any kind of real or personal property in England, with the exception of a share in a British ship, and these provisions are repeated in the British Nationality and Status of Aliens Acts, 1914 and 1918. In the matter of ships our law has for a long time been jealous to preserve the national character of the British mercantile marine, and the Merchant Shipping Acts (while, strangely enough, enabling a corporation registered in England but containing alien shareholders to own shares in a British ship) confine the ownership of shares in British ships to British subjects, either natural-born or naturalised. In addition, the British (Transfer Restrictions) Acts, 1915 and 1916, the operation of which determines on August 31, 1924, prohibit within that period the transfer of British ships to aliens or to "foreign controlled companies" without the approval of the Board of Trade. Apart from these limitations, the whole policy of England from the time of Magna Carta (which confers remarkable privileges upon alien merchants trading in England) has been one of encouragement to foreign traders and workmen to come to this country and bring with them their capital and their skill. The benefits accruing from this policy of enlightened self-interest are patent to any person having the most elementary knowledge of British industrial history.

Any country which chooses to deny reasonable trading facilities to foreigners (among which we include the power of ready acquisitions of interests in land) is at liberty to do so. International Law imposes no obligation upon a State to permit foreign traders to carry on business within its territory. But history shows that a State which bars the door to them or even makes it difficult for them to open it will generally suffer in the long run. If France chooses to adopt the more nationalistic policy embodied in the Bill under consideration, we may deplore her action but cannot complain, provided that British individuals, firms, and companies already holding interests in French land are equitably treated, as undoubtedly is the intention. If any hindrance is placed in the way of the employment of British capital in France, there are other outlets. But, should the Bill become law, it is sincerely to be hoped that no stupid policy of reprisals against French traders in this country will be entertained. Apart from the political aspect, that would be economic folly in the extreme.

FOREIGN TRADE STATISTICS.

At a time when it is essential for all British manufacturers to seek ways in which to increase their export trade, it is a matter of great regret that the data necessary for a complete analysis of the foreign trade of the United Kingdom are not published until 12 or 13 months after the close of the period to which they relate. The "Annual Statement of the Trade of the United Kingdom with Foreign Countries and British Possessions," to give it its full title, is usually issued in four volumes. Volume I., which analyses imports and exports, in the first part by commodity, and in the second by country from whence or to which consigned, appeared in October, but Volumes II., III., and IV. have only just been issued. The value of these volumes obviously diminishes the longer their appearance is delayed, but the delay is probably the most serious in the case of Volume III., which analyses the export trade of the United Kingdom in great detail, according to commodities, and, under commodities, according to the markets to which they are consigned.

We will admit at once that the "Monthly Accounts Relating to the Trade and Navigation of the United Kingdom" are more complete, better arranged, and issued more promptly than those relating to any other country, but that is not to say there is not great room for improvement, and we should like to point to some directions in which the trade statistics of the country could be made of more use to the business community. The figures given in the course of the article have been taken from the November issue of the Trade Returns, but the instances selected are typical, and not applicable only to one month.

In the first place, our readers scarcely need reminding of the two retrograde steps that have been taken during the past year—postponing the issue of the return until the tenth working day of the month, that is, two or three days later than formerly, and increasing the price of the volumes, so that, whereas they used to vary between 6d and 1s 6d, according to size, they now vary from 6s to 10s. It would be interesting to know what effect this has had on the sales of the publication, and whether the Exchequer has really benefited from the change.

Of longer standing, however, and more important is the lack of proportion that is shown in the amount of detail afforded to the different commodities. This is probably due to the pressure exerted by some of the bigger trade associations to obtain as much detail as possible for their own trade, but it is often at the expense of other and less well-organised trades. For instance, it is only fitting, since "cotton yarns and manufactures" are by far the most important item of our exports, that exports of these should be given in greater detail than any other, and, in fact, they occupy nearly 30 of the 103 pages of the volume devoted to the exports of the produce and manufactures of the United Kingdom. But it must be difficult to justify the allocation of two of those pages to the export of printed "flags, handkerchiefs, and shawls in the piece," when their value in November was only £24,000, and when out of 53 items 33 were blank, and six further pages to the same articles "not in the piece," the total value of which in November was less than £200,000. Similarly, no indication is given of the destination of the £648,000 worth of "electrical goods and apparatus," whereas the exports of "agricultural machinery," which follow, are analysed according to eight destinations, although the total value amounted to only £55,000. "Machine tools" are not allocated to markets, while "sewing machines," of much less importance, are. This latter case is one in which the part is greater than the whole, for "parts of sewing machines" were exported to the value of £386,000, while the value of the complete machines amounted to less than £40,000. No information is given, however, of the destination of the parts, although ten times the value of the complete machines.

Pig-iron makers have recently been much exercised by the scarcity and rising price of "metallurgical coke," but the trade return vouchsafes no information as to the destination of coke, although these exports were valued at £574,000 in November, while the exports of "china and earthenware," of £72,000 less value, are shown according to eleven different destinations.

Although for the sake of comparability a fair degree of rigidity in classification is desirable, a more frequent revision according to markets seems to be called for, as there are many instances in which the item "Other Countries" is a rather bigger proportion of the total than the amount allocated to markets, and many cases where that term conceals markets of much more importance than those which are specified. A glaring instance of this is the case of the recent large exports of coal to America consequent on the coal strike there. Although of such importance, these were included under the heading "Other Countries," because coal is not normally exported to the United States in any quantity, so that it is not possible from the published information to say exactly how much coal and coke went to America during the coal strike. In cases such as this, where any market becomes temporarily of importance, it is suggested that the details might be given in a footnote, but there are numerous other cases in which unimportant markets or markets of diminishing importance have been retained, while important markets, or markets of increasing importance are concealed under the item "Other Countries."

Exports of "asbestos manufactures," for instance, were valued at £70,000 in November, of which £20,000 is distributed amongst four countries, while the remaining £50,000 remains unallocated. Some other cases in which exports to "Other Countries" account for over 50 per cent. of the total are black plates, wire manufactures, anchors, bedsteads, scientific instruments, furniture and cabinet ware, jute yarn, jute sacks, &c., &c.

Another source of annoyance to the user of the returns is the ambiguity which exists between British India and the British East Indies. In the preface "British India" is stated to include "the whole of India, except French

and Portuguese possessions," while the term "British East Indies" includes "British India, the Straits Settlements (with the Federated Malay States and Labuan), and Ceylon." Sometimes goods are shown as being exported to British India, and in other cases to the British East Indies, so that it is impossible to arrive at any grand total for British India. For instance, asbestos is shown as going to British India, but cement to the British East Indies; steel bars are allocated to India, but iron bars to the British East Indies; galvanised sheets are shown as going to India, but tinned plates to the East Indies; silk piece goods to India, but other manufactures of silk to the British East Indies. India is such an important market for the goods of this country that it should be shown separately wherever possible, and in no case should it be merged with the East Indies.

The difficulty occasioned by the fact that an analysis according to markets is in many cases either entirely lacking or very incomplete is minimised to some extent by the readiness with which the Customs authorities are prepared, upon the payment of a fee, to furnish manuscript returns supplying the missing details. This means, however, that some traders and trade associations have to pay for information which, in the case of more favoured trades, is printed in the accounts; moreover, these manuscript returns are not furnished until a week or two after the printed trade returns, and we have recently received complaints that this interval is lengthening. The explanation given for the greater delay that is now experienced in supplying manuscript returns of exports, for example, is that electrical tabulation has been recently installed, and has so far proved less rapid than the former method. We are glad to know that an electrical system of tabulation has been adopted, for it seems to us that an adequate use of this system should remove the last and most serious of our complaints against the trade returns, viz., the length of time that elapses before the annual volumes are issued. Every month our exports are analysed in very great detail as far as commodities are concerned, and every quarter the total value of our exports is distributed among our various markets. With so much of the analysis already done, it is difficult to understand the delay that occurs in issuing the annual volumes, unless the returns are tabulated *de novo*. With the introduction of electrical tabulation the need for any re-tabulation (if such takes place) should be entirely avoided; all the facts required would be recorded on cards, which could be arranged and counted by machinery in any number of different combinations. It should then be necessary at the end of the year merely to summarise the information which had been tabulated month by month, and the annual volume should appear within three months instead of after the lapse of 12 months.

We are not quite sure whether to include the lack of a critical introduction to the annual volumes among the sins of omission on the part of the Board of Trade; sometimes the introductions to Blue-books are exceedingly well done, but in other cases they are often quite jejune. On the whole, we incline to the opinion that a brief introduction dealing with the significance of the figures would be worth while, if only for the reason that the volumes would probably receive more adequate and intelligent notice in the daily Press.

THE IRON AND STEEL INDUSTRY IN 1922.

THE year 1922 for the iron and steel trades may perhaps best be described as one of very hard work and very little profit. The best that can be said for it is that, as the result of the unceasing efforts to stimulate a revival and to recapture lost markets, there appeared at the end of it every probability of considerable improvement in 1923.

The number of furnaces in blast, which on January 1st stood at 77, steadily increased throughout the year until, on December 31st, there were 169 in blast; production of pig-iron, which in December, 1921, amounted to 275,000 tons, by December, 1922, had reached 533,700 tons, a figure which had not been touched since January, 1921. This progress looks considerable, until we remember that in 1913 there were, on the average, 338 furnaces in

blast throughout the year, and that production in December last represented but 62 per cent. of the average monthly production in 1913.

The production of pig-iron for the whole year amounted to 4,899,500 tons (except for 1921, the lowest since 1867), compared with 2,616,300 tons in 1921 and 10,260,000 tons in 1913. Great Britain had, for the second time, to give way to France for the third place, although not making such a bad fourth as in the previous year, and if expectations are fulfilled, it is perhaps not too much to hope that Great Britain may in 1923 occupy the second place, since Germany's production of pig-iron this year has been estimated at only 6,750,000 tons.

Steel production is always more fluctuating than that of pig-iron, and, having attained an output of 549,400 tons in March, this figure was not surpassed until September, since when there has been steady progress, broken only by the Christmas holidays. Production in November was over 90 per cent. of the monthly output in 1913, but this is too optimistic a way of stating the facts, since it ignores the enormous expansion of our steel-making capacity which was forced on us by the war. The biggest problem our steel makers have to face is how to utilise this increased capacity, for at the moment it is in many cases a serious burden. Steel production for the year amounted to 5,831,900 tons (except for 1921, the lowest since 1908), compared with 3,703,400 tons in 1921, 9,067,200 tons in 1920, and 7,663,900 tons in 1913.

Normally about 30 per cent. of the consumption of steel in this country is taken by the shipbuilding or ship-repairing industries, a further 30 per cent. in the production of tinplates and galvanised sheets, and the remaining 40 per cent. is distributed among railway material, motor vehicles, engineering, building, and constructional work, &c. Shipbuilding having been among the most depressed of our industries in 1922, the output of steel plates, which had been 1,654,700 tons in 1920, amounted to less than 600,000 tons in 1922. Since 80 per cent. of the country's output of plates comes from Scotland and the North-East coast, these areas naturally suffered most, and from being responsible in 1920 for over 40 per cent. of the country's output of steel (Scotland 23.9 per cent. and the North-East Coast 21.5 per cent.), in the past year they have been responsible for only 13.3 per cent. and 15.7 per cent. respectively of the much-reduced output. The tinplate and galvanised sheet trade, on the other hand, has been relatively prosperous, the output of the two combined amounting to about 1,300,000 tons, compared with less than 1,100,000 tons in 1920. South Wales, which provides most of the steel for these trades, has, as a consequence, produced up to 90 per cent. of the 1920 production in that area, whereas the production of the country as a whole was only 65 per cent. of that of 1920.

The natural step to take to revive industry is to reduce prices, but in the case of the steel trade these had been so drastically cut in 1921 as to leave little room for further reductions in 1922. Further cuts were, however, made, until prices in many instances were substantially below actual costs. Cleveland pig-iron No. 3, which had been reduced from 225s to 100s per ton in 1921, was further reduced to 91s; ship plates, which had been reduced from £22 to £10 10s, were reduced a further 30s; steel rails are now £9 per ton, having been £9 10s at the beginning of the year and £25 at the height of the boom. Prices in general are now only 20 to 30 per cent. above pre-war, while the *Economist* Index Number is 68 per cent. above.

Prices having been reduced in order to stimulate demand, attention was, of necessity, directed to reducing costs, the most important items in which are fuel, labour, transport, and ore. Since the whole of Europe has been short of coal, little relief could be expected from fuel, and, in fact, blast furnace coke in the North-East Coast area, which was 29s per ton in the early part of the year, was 30s and even 31s per ton by the end of it. The rise in price is explained by the increased export demand, for exports of metallurgical coke rose from 75,000 tons in January to an average of 170,000 tons per month in the last quarter of the year. Since approximately 24 cwt of coke are required to produce one ton of pig-iron from the Cleveland ores, it follows that about 40 per cent. of the present price of Cleveland pig-iron represents fuel.

Railway rates are also a substantial item in the cost of

iron and steel goods owing to the bulk of the materials to be assembled. In consequence of the pressure of the manufacturers, the railway companies have reduced the railway charges in successive stages, until they now stand at about 60 per cent. over pre-war charges, which, while comparing not unfavourably with the Index Number of wholesale prices, is much higher than the percentage increase in iron and steel goods generally. The high rate of imperial and local taxation also bears heavily on the iron and steel industry, and there is scarcely a chairman's speech in which attention is not drawn to this question with figures to show what this means per ton of steel produced.

But the most important item, after fuel, is the wage cost; wages in the iron and steel trade, as is well known, are governed automatically by sliding scales, and to quote only two of the many sliding scales in operation in the trade, the Cleveland blast furnace men's scale was 170½ per cent. above standard in January, 1921, 36 per cent. above in January, 1922, and 24 per cent. in December, 1922. The corresponding figures for the smelters' scale in the North of England (acid process) was 163½ per cent., 68½ per cent., and 11½ per cent. respectively.

The sacrifices which these reductions have involved for the workpeople have had the compensating effect of reducing unemployment and producing a very substantial improvement in the exports of iron and steel. As regards employment, the percentage of unemployed in the trade, according to the *Labour Gazette*, was 36.7 at the end of December, 1921, and 22.1 at the end of December, 1922, while the percentage working short time fell from 4.5 at the end of 1921 to 1.5 at the end of 1922. With regard to the export trade, in spite of the huge capacity of America and the advantages which the depreciated exchanges give to her Continental competitors, Great Britain was easily the biggest exporter of iron and steel in 1922, a position she has not held for many years.

Exports of iron and steel in December, 1922, amounted to 340,800 tons, compared with 205,300 tons in the same month in the previous year. Exports for the whole year amounted to 3,401,000 tons, or approximately double the total for 1921, and 150,000 tons greater than in 1920. As an indication of the slump in values, however, while the exports in 1920 were valued at £128,907,000, the rather larger tonnage exported in 1922 was valued at only £60,959,000. Of the total exports, 794,000 tons, or 23 per cent. in weight, were pig-iron (including ferro alloys), of which 378,000 tons went to America and 962,000 tons, or 28 per cent., were tinplates and galvanised sheets.

Shipments of tinplates and galvanised sheets, which represent about 75 per cent. of the production, were sent to all parts of the world, and markets invaded by the United States during the war have been recaptured during the past year. Exports of tinplates from the United Kingdom to Canada, for instance, which is the most notable case, amounted to 957 tons in 1920, 3,126 tons in 1921, and 41,895 tons in 1922, whereas the United States sent to Canada 20,915 tons in 1920, 24,045 tons in 1921, and less than 20,000 tons in 1922.

As far as it is possible to analyse the exports according to markets, it would seem that rather more than half—say, 52 per cent.—went to British Possessions in 1922, the remainder being almost equally divided between European and non-European foreign countries. Since the biggest items of exports to British Possessions are the more highly-finished forms of iron and steel—e.g., galvanised sheets, rails, structural steel, tinplates, wire, &c.—the proportion sent to British Possessions, measured by value, is 62 per cent. of the total value of the exports of iron and steel.

The French occupation of the Ruhr makes it somewhat difficult to estimate the prospects of the iron and steel trades for 1923. There are some who take the view that the demands of the Continent for coal will raise the price to the British consumer and check the revival in the iron and steel trades which has already undoubtedly set in. Other observers think that the disorganisation of the French and German iron and steel industries consequent on the French action will enable Great Britain to capture French and German markets. Before the European complication the investing public were certainly taking a more cheerful view of the prospects of the iron and steel in-

dustry, for an index number showing the ratio of current market value to nominal value of the shares of the leading iron and steel firms of Great Britain has been steadily increasing for the past few months, standing at 94.7 on October 31st, 98.3 on November 30th, 106.8 on December 31st, and 110.8 on January 15th. The shipbuilding position is distinctly brighter, and the railways have promised the Prime Minister to place orders for renewals and extensions at an early date. Whatever policy the Government adopts with regard to housing, they can hardly fail to take some measures directed towards the revival of the building trade, and the prospects for the engineering trade now that costs have been liquidated are more hopeful.

The industry having done so much itself to reduce costs and prices, is looking for external assistance in the form of further reductions in fuel and transport costs and reductions in Imperial and local taxation. There are, however, still some directions in which the industry might help itself, though considerations of space make it impossible to elaborate them. The first is in the direction of fuel economy. Starved for fuel, Germany has made great strides in this direction, and with fuel costs bearing such a high proportion, as has been shown, of the value of iron and steel products, iron and steel masters will be well advised to encourage research in this direction. A second step which might contribute to the revival of the industry is an improvement in its commercial organisation. Before the war, Great Britain endeavoured to meet the organised competition of the United States and Germany by the unorganised competition of individual firms. There are signs that in the near future Great Britain will have to meet organised competition not only in the United States and Germany, but also in France and Belgium; and it seems likely that the British iron and steel industry will have to reorganise commercially if she is to keep and extend her export markets. Lastly, there are some, of whom Lord Furness is the best-known exponent, who think that in actual amalgamation lies the chief line of safety for the industry, by which means orders could be allocated to the mills best suited to them, with resultant economies and increased efficiency in working, and there is little doubt that the steel trade will have very seriously to consider all these possibilities before long.

GOLD MINING ON THE WITWATERSRAND.—III.

(FROM A CORRESPONDENT.)

JOHANNESBURG, December 19, 1922.

4. *Van Ryn Deep*.—This mine, of relatively high grade, situated in the favoured Far Eastern Rand district, has over four years' ore in sight, of somewhat higher average grade than that which, before sorting out 25 per cent., was treated in the year ending December 31, 1921. It has a probable future life of 15 years. It is, of course, speculative whether its unexplored part will continue to be as good as the part already exposed. Consequently, an investor needs a high return on his money to compensate him for this risk. If values keep up, this company will probably pay an average dividend of 11s a year, viz., 12s most of the time, but less in the last few years of the mine's life. But it is necessary for a shareholder on the London register to deduct 4s 5d a year from his dividend for amortisation of the present price of 75s a share, leaving a return of 6s 7d on this price, or close on 9 per cent., without allowing for income-tax.

The premium on gold for the year 1921 amounted to 11s 3d per ton. Costs have since fallen about 5s 6d. Allowing a further 1s 6d for reduction in cost of mining stores and materials, it will be seen that there is still 4s 3d per ton to be made up, if gold falls to standard price, before the company will be able to keep up its past earnings on the basis of those of 1921. This 4s 3d per ton is the equivalent of nearly 2s 3d per share in dividends. The tonnage treated by this company has now been increased by about 12 per cent., and, provided ore of no

lower grade is treated than that treated in 1921, the loss will be neutralised, which would be incurred otherwise by the fact of gold falling to standard price. But there is an unfavourable factor, and that is the probable poor character of the undeveloped ground in the western section of the mine. This will probably affect the dividends adversely in the last few years of the mine's life. I consider, therefore, that a careful investor should expect a high return in this company, and I value the shares at 65s to yield about 11 per cent., without allowing for income-tax, but making the necessary allowance for amortisation of capital invested, and assuming that taxation, whether in South Africa or England, will not be increased, and that there will be freedom from further labour troubles.

5. *Crown Mines*.—This is a colossal low-grade property situated on the Central Rand. Conditions for mining are not as pleasant as they are in the Far Eastern Rand, and there are, therefore, risks of native labour shortage, in addition to the other risks common to mining. There are over three years' ore in sight, of higher average grade than that which, before sorting out 9½ per cent., was treated in the year ending December 31, 1921. This mine has a possible future life of 40 years. Though, so far, the advance developments at depth have proved better than was anticipated, yet obviously only time will show if the reefs in the unexplored claims are payable. It is likewise probable that the reefs in the Far Southern claims will be found at too great a depth for profitable, or even possible, working, even if they would be payable otherwise. However, from the favourable nature of the present developments in the lowest exposed reef area, a period of 10 years' profitable working beyond that of the three years of ore already in sight, or a total of 13 years, may reasonably be taken for granted.

During the year 1921 the company was entirely dependent for its profit on the premium on gold. If there had been no such premium, the year's working would have shown a loss. The premium amounted to a sum which represented 6s 4d per ton milled. But since then costs have fallen 5s 8d per ton. And a further fall of 1s 6d may be anticipated from a further reduction in cost of mining stores and materials. So that, barring accidents, this company will at some time in the future, when the premium on gold has run off entirely, be in a better position as regards its earnings than it was in the period ending December 31, 1921, when all its gold sold at a premium. During this period only 3s 3d was paid in dividends, though 3s 9d was earned. Hence it is practically certain that more will be paid in the future.

In order to get at the intrinsic value of the shares, let us imagine that gold has fallen to standard price, and that the company will treat ore yielding 25s per ton with costs reduced to 17s 10d, which is 1s 6d below those of November, 1922, and which is a reasonable figure to expect that costs will come down to, due to the further reduction to be expected in the cost of mining stores and materials. Treating 220,000 tons a month, a monthly profit of, say, £78,800 will be made, or, let us say, £945,000 a year. But it must be remembered that this company has considerable charges on its earnings in the shape of interest and redemption of debentures, as well as annuities due to the Government. These, however, will all terminate after a limited period. To allow for accidents it would be well not to allow for a total working profit of more than £920,000 a year. On this basis, after deducting all charges and expenses of every kind, there should be a yearly sum of £570,000 available for dividends. This represents an annual dividend of about 6s per share, which will be increased to 7s after the first four years, by the end of which time the debentures will all have been paid off. Thus, there will be three years of a 6s dividend, followed by 10 years of 7s. It is quite impossible to estimate with any pretensions to accuracy what amount should be allowed for the present value of the last

27 years of the company's possible life. One can scarcely expect that more than a moiety of the ground to be worked during these 27 years will prove payable. Taking into consideration the enormous expense of exploiting the reef at such great depth as that at which it will almost certainly be found in the Far Southern claims, and the fact that interest on the money will be lost for 13 years, I should say that the present value of this area is relatively small. But none the less it is almost sure that some dividend will be paid for at least some part of these last 27 years of the mine's life. And clearly this must be taken into account. I take it into account, therefore, by prolonging the period of amortisation to 20 years, but not allowing for any surplus, after the first 13 years, over the amount needed for amortisation. On this assumption I make the shares worth 48s 6d to shareholders on the London register, to yield about 10 per cent. for the first 13 years of the mine's life, and amortise the capital invested over a period of 20 years, but making no allowance for income-tax, and assuming that taxation whether in South Africa or England will not be increased, and that there will be no further labour troubles. Any further dividend paid during the last 27 years over and above what is required for amortisation, under this calculation, will be in the nature of a bonus. Under present conditions it is bad business even for Johannesburg shareholders to buy the shares at the present price of 60s, since the return on the capital invested, after allowing for amortisation, is, in my opinion, too small for the risk run, particularly in the case of a mine like this, where the menace of native labour shortage is always present, and where, owing to its enormous size, the difficulties of control are so great.

With the world's purchasing power so seriously impaired, as it now is, it looks as though we might be about to enter upon a cycle of lower-priced commodities, though this fall in prices will probably be broken from time to time by temporary periods of rise. Gold itself has already been falling continuously for some time, and it has now almost reached the point where it sells at the pre-war price of 85s per fine ounce. As gold falls in price its purchasing power increases, or, in other words, commodities fall. A fall in wages will follow eventually, since wages must fall in sympathy with the fall in commodities, because the fall of the latter automatically brings down the cost of living, and the cost of living is the standard which sets the price of wages. An accompaniment of such conditions is cheap money—that is, a low rate for obtaining bankers' credit. This rate may drop to even lower than it is now, and remain lower for a long time. With falling wages, cheap cost of commodities, and cheap money, all costs of production must come down. This is looking ahead, but, granted freedom from further wars and revolutions, these conditions must come about eventually. They are inevitable, provided that those who rule our financial destinies at home stick to their present policy of making our country pay its way and turn a deaf ear to the counsellors of inflation.

No producers will benefit more by lowered costs of production than owners of gold mines, particularly owners of low-grade mines, since, with lower working expenses, the profits of low-grade mines rise out of all proportion to those of high-grade mines. This applies in especial measure to huge low-grade propositions like Crown Mines, a property which can treat over two and a-half million tons of ore per year. The baneful influence of the extreme Labour Party in South African politics, especially if it continues hand in hand with the Nationalists, may cause the fall in working costs on the Rand to hang fire for a time, even after costs of production may have fallen appreciably in the Mother Country. But the laws of economics—and, I may add, the interests of the whole British Empire, particularly those of South Africa itself, whose own development is being retarded, *inter alia*, by the high cost of living—demand that gold should be produced more cheaply. With working costs down to the pre-war level of 15s 10d per ton, the shares of Crown Mines would be worth 63s, to yield 10 per cent., and allow for amortisation, assuming no increased taxation in South Africa or England, and immunity from further labour troubles.

Notes of the Week.

Peace Hopes in Ireland.—Our Dublin correspondent writes:—"It is an open secret that unauthorised, and, in some cases, rather amateurish negotiations are going on behind the scenes, and there can be no doubt that the less irresponsible of the irregular leaders—if, indeed, there can be comparative degrees of irresponsibility—are genuinely anxious for peace. But if not exactly stipulating peace on their own terms, they demand a formula to save their faces; and in the meantime wanton destruction goes on, destruction the more vexatious in that irreparable treasure is destroyed without the least tactical or other advantage for anyone, and the only direct consequences are exasperation and embitterment. Sympathy is generally expressed for Lord Mayo, Sir Horace Plunkett, and Captain Stephen Gwynn, whose residences have been burned this week. Mr Bagwell, a Senator and secretary of the Great Northern Railway, was kidnapped, but was free within a few hours. Behind and apart from the peacemongers and their semi-public operations, peace upon a basis which a self-respecting Government can accept is believed to be slowly ripening. There have also been peace tentatives in regard to N.E. Ulster, with which the name of Lord Glenavy, chairman of the Senate, has been associated. They have been repudiated in the Belfast Press, and have been closed by Sir Jas. Craig, the Northern Prime Minister, with a brusquerie verging on discourtesy. At the same time there is a great deal of sound sense in his demand that if any offer is to be made it is to be made by a constituted Government to the Government and Parliament of Ulster, to be laid before their people for decision. The sentiment will doubtless be echoed by those responsible for the policy of the Free State, whose appreciation of the situation leads them to more patient methods, and a reliance upon economic factors rather than an untimely tender of unwelcome concessions. The trade statistics for 1921 published by the Department of Agriculture and Technical Instruction illustrate how commerce shrinks when armed force attacks the economic life of a country. Total imports into Ireland in 1919 were valued at £158,716,000; in 1920 they were £203,750,000, and in 1921 £118,971,000. Total exports for the same years were £176,052,000, £204,715,000, and £129,621,000 respectively. It will be remembered that the Black and Tan policy obtained during the last quarter of 1920, and attained and maintained its full stringency during the first half of 1921 up to the truce which preceded the Treaty. The destruction of creameries, factories, and shops was, of course, reflected rather in the figures of the immediately succeeding period than at the exact date of its occurrence. At present, markets and fairs are being held as usual, race meetings taking place, and hounds meeting three or four days a week.

The Coal Blockade of Germany.—The importance of the coal blockade of Germany is illustrated by the distribution of the coal and iron and steel output of Germany by districts before the war. Part of the output of Silesia remains to Germany, but apart from this there only remains after deducting the Ruhr, the Saar, Lorraine, and Luxembourg, four districts producing 12 per cent. of the pre-war pig-iron output, 9 per cent. of steel and 8 per cent. of coal:—

1913.	Pig Iron.	Steel.	In million metric tons.
Rhenish Westphalia	8,209,157	10,112,042	114½
Upper Silesia	994,602	1,407,304	43½
Siegefeld & Hessian Nassau ..	994,927	388,297	15
N.E. and Central Germany ..	1,001,321	740,859	15
Saxony	331,125	253,020	13½
South Germany	320,456	2,079,825	3½
Saar	1,370,980	2,286,354	3½
Lorraine	3,869,866	1,336,263	190
Luxembourg	2,547,861	1,336,263	190
Total	19,309,170	18,935,089	190

The coal blockade will not, of course, limit Germany's resources to the production of these remaining areas, for her ports and her Eastern and Southern frontiers will remain open. Moreover, Germany succeeded in raising

her brown coal production (the calorific value of which is about ½ that of coal) in 1921 to 123 million tons, of which over 70 per cent. came from areas not affected by the occupation. But her capacity to maintain the new economic war depends upon her ability to buy abroad, and with the mark at nearly a quarter of a million to the £ this will strain her resources to the breaking point. This difficulty of buying abroad is naturally having an important effect in other markets. The recovery of the Chili nitrate trade, which was doing well largely because of German needs, has been nipped in the bud. The copper market is weak, and hides and timber are feeling the cessation of orders. These influences have hardly yet affected wholesale market quotations, but the falling off is becoming daily more marked.

Banks and Agriculture.—In the speeches of the bank chairmen some interesting information has been forthcoming over the much discussed question of farmers and their bankers. Dr Walter Leaf has pointed out that the London County Westminster and Parr's has advanced to farmers for the purchase of their holdings over two millions. Moreover, it is mentioned that this amount is not being called for. Indeed, it is stated that the amount outstanding under this heading at August, 1922, was actually higher than that recorded at August, 1921. Dr Leaf's reply to the charge that the small farmer is thrust aside by the banker in favour of the big man is that the average amount of advances to farmers of his bank is £800 per customer, and as this average is made up by including a good many large loans, it is pointed out that loans below £500 must be very large in proportion in order to make the average so low. With reference to the question of security, Dr Leaf is able to show that of the total number of borrowers, 28 per cent. were granted advances without security, while a further 13 per cent. only gave partial security. In other words, local managers advance, to 41 per cent. of farmers' money on their personal character and ability. Mr Beaumont Pease, in his speech, presents two very striking examples of Lloyds' activities in financing agriculture. These are in reply to the oft-repeated charge that the old country private banks gave better credit facilities than the modern joint stock bank. The first is a statement by the manager of a branch undertaking in an agricultural district, who also acted as manager to the concern when it was a separate private bank. This gentleman states that "The debit balance due from farmers in December, 1902, to the private bank was £15,462. This figure compares with £25,034 due to Lloyds Bank in December, 1922, and if advances to farmers for the purchase of their farms (£14,220) were added—and they might very well be—the total overdrafts of farmers at this branch would be £39,254 in December, 1922, against the £15,462 quoted above as due twenty years ago." But these figures do not represent the full amount available for farmers at this branch, because, later on in his letter, the manager points out that overdraft limits to the extent of £63,550 were sanctioned in December, 1922, though not fully availed of. In the case of the second example, the information was not so full. In 1880 the advances of a local undertaking (almost exclusively to farmers) were £107,000, in 1903 £117,000, and in 1922, under Lloyds régime, £145,800. On the subject of farm land purchase, Mr Beaumont Pease takes the view that this is one form, perhaps, of Government financial assistance which might be useful. He rightly, in our opinion, points out that the banks have advanced large sums for this purpose, and that these loans have been granted rather in defiance of strict banking principles, seeing that loans of this nature tend to become more or less permanent. In most cases, Mr Beaumont Pease continues, "borrowed money from some source has been used by the farmer for these purchases, and when money has been lent by private people on mortgage, the mortgage is always subject to being called in, necessitating fresh arrangements being made, with consequent costs and inconvenience to the farmer." We would, however, like to remind the able chairman that though a State scheme of land purchase might be useful to farmers, and that for the banks to make these practically fixed long-dated advances is a departure from sound

joint stock banking principles, there is an alternative scheme for the "big five" to found in association a land bank which could undertake this very necessary and useful work.

Australian Shipping Freights.—We referred last week to the announcement by the Commonwealth Government line of steamers of their decision to make a drastic reduction in freights to Australia. This decision suggested that one of two events would ensue: either that the Commonwealth Line and the Conference Lines would come to an agreement, or else that a fierce rate war would take place. The former result appears to have occurred. For the Board of Trade on Thursday issued the following announcement: "In connection with the present situation in the Australian shipping trade, Sir Alfred Halford Mackinder, chairman of the Imperial Shipping Committee, invited representatives of the Conference Lines and of the Commonwealth Government Line to meet him at the Board of Trade to-day. Accord on all cardinal points was reached, subject to the adjustment of minor details, thus ensuring the friendly co-operation of the two interests and eliminating all possibility of a rate war. The results reached are in harmony with the recommendations of the report of the Imperial Shipping Committee on the deferred rebate system. This report has been presented to the various Governments of the Empire, and its issue has been delayed owing to the necessity for simultaneous publication in the Dominions." This quick attainment of agreement will relieve the embarrassing uncertainties of those engaged in the Australian trade.

First Home Railway Dividends.—The first of the final dividends of the home railway companies, which are the last which will be paid on the old stocks, have been announced this week. They compare with those of the three previous years as follows:—

Name of Line.	Final Dividends.				Dividends for Whole Year.			
	1919.	1920.	1921.	1922.	1919.	1920.	1921.	1922.
Great Central 5% 1894, Pref. ..	Rate	%	per Ann.	um.	%	%	%	%
Great Northern, Deferred	24	24	24	24	24	24	24	24
Great North of Scotland	1½	1½	1	1½	1½	1½	1½	1½
Metropolitan, Ord.	1½	2	3½	4½	1½	1½	2½	3½
Do Surplus Lands	2½	3	3	3½	2½	2½	3	3½

In each case the distributions for the whole year are considerably larger than they were a year ago. This may be the result of substantial increases in net income and of the accumulation of balances which are not carried forward to the amalgamated accounts. Moreover, directors may not feel it so incumbent upon them to strengthen reserves as they would have been had the companies been facing the year 1923 as individual units. The report of the Great Northern shows an increase of £674,200, or 31 per cent., in net income, the ratio of expenditure to gross receipts being 80 per cent. The reserve fund is credited with £60,000, whereas last year £80,000 was taken from compensation reserve and £127,300 from net income suspense account. The Great Central last year took £225,000 from compensation reserve and £95,000 from suspense account to pay 2½ per cent. on the 1894 preference. Nothing is taken this year from compensation account, and a 4½ per cent. dividend is paid.

Cotton Trade Short Time.—Our Manchester correspondent writes:—"The improved conditions prevailing in the Lancashire cotton industry are reflected in the fact that organised short time working in the American section of the spinning industry came to an end on January 31st. The Master Spinners' Federation recently asked their members to ballot on the question of whether they were willing to adopt short time working by stopping mills on Saturdays and Mondays during the month of February. The result showed that 73½ per cent. of members were in favour of continuing the curtailment of production, 9½ per cent. of the members were against and 17 per cent. did not reply. As 80 per cent. of the members did not vote in favour of short time working, firms are now at liberty to run their spindles as their order books permit. In announcing the result of the ballot, the committee stated that a continuance of short time working was desirable; but as has been proved by recent statistics on the production of yarn, stocks, &c., the position of spinners as a body, compared with a month or six weeks ago, shows a good improvement.

Short time working was first adopted following the slump in trade two years ago, and has been continued with one break to the end of January. In September last firms were recommended to work machinery 35 hours a week instead of the usual 48. Even that curtailment of production was not considered sufficiently drastic by certain members of the trade, and half time working was proposed, but was rejected in favour of the Saturday and Monday stoppage.

Dividend Difficulties.—This is the season of the year at which dividend queries and difficulties invariably arise, writes a Stock Exchange correspondent. They come as a rule from people who have sold stocks and shares upon which dividends have accrued, and which, when sold, render the seller liable to hand over the distributions. There are few things which shareholders dislike more than signing a dividend cheque and parting with it to anybody except their bankers. For this reason, the Stock Exchange is well acquainted with that trait of human nature which prefers to sell ex dividend, instead of taking a cum dividend price, although when the market allowance for the dividend is made, the actual difference may quite easily be in favour of selling cum rather than ex. The Stock Exchange Rules are clear enough on dividend points except in one case, which, unfortunately, covers the widest circle of stocks and shares in which the public deal. All securities deliverable by deed of transfer, says the rule, shall be quoted ex dividend on the account day following the date of the closing of the books for the payment of the dividend; or on the account day following the date on which the dividend may have been declared, provided the dividend be made payable to the holders then registered. This does not apply to shares dealt-in in the oil, mining, or rubber markets, nor to registered debentures. In regard to mining, oil, and rubber shares, the special rule governing them is admirably plain. Their prices are to be quoted ex dividend on the account day following the payment of the dividend. With securities to bearer and registered debentures, these are to be quoted ex dividend on the day when the dividend is payable, except in a few cases of bonds bearing coupons payable only abroad. With Government stocks, the rule is that the prices shall be quoted ex dividend on the day after that on which the books close for the payment of the dividend. Owing to the enormous amount of work involved in the preparation of dividend warrants for the War Loan, the Bank of England closes its books about five weeks in advance of the actual distribution, and the stock is therefore quoted ex dividend on the day when this announcement in regard to closing the books becomes operative. With Consols, Colonials, and numbers of other inscribed stocks, it is the practice for the banks where the loans are domiciled to close the books in respect of the dividend payments precisely a month before the money is due, and therefore these securities are quoted ex dividend a month in advance of the payment. The simplicity of these rules is obvious, and were the rules more generally known, it would save not only a vast amount of work to brokers, bankers, and other agents, but also a good deal of perplexity to clients who are puzzled by the apparently arbitrary manner in which ex dividend markings are recorded. It is, as already mentioned, over the securities deliverable by deed of transfer, apart from the mining, oil, and rubber shares, where confusion is liable to arise, and this is due to the fact that the quotation of the stocks and shares ex dividend may be regulated by two alternatives, instead of being governed by a single consideration. The Home Railway market makes a practice

of quoting its stocks ex dividend on the account days (which now occur on alternate Thursdays throughout the year) following the date of the meeting at which a dividend is confirmed. In a good many other cases, however, it happens that the practice is controlled by the second clause of the rule, allowing the price to be marked ex dividend on the account day following the date on which it may have been declared, if the books of the company are closed. From the point of view of the public, the rule applicable to mines, rubbers and oils is certainly the best. A man receives his dividend, and knows that he must give it up if he sells the shares before the next account day. In other stocks and shares, however, there is too frequently a mild doubt left in the mind of the seller especially, as to whether or not he is fairly responsible for handing over the dividend to the buyer. It may solve a few uncertainties if we add that holders of stocks in the Home Railway companies which were grouped as at the end of last year are entitled to retain the dividends which they will receive this month in all those cases where new stocks were exchanged for the previous securities. Every new stock in the Home Railway market started ex dividend at the beginning of January.

German House Property.—According to our Berlin correspondent, the Prussian Government has submitted a Bill requiring municipal sanction for the sale of city houses, and the municipalities are given a prior right of purchase. The aim is to prevent purchases by foreigners, but under the Versailles Treaty the obligation to obtain sanction could not be imposed on foreigners only. The Bill is opposed by the houseowners, by the Berlin Chamber of Commerce, and by other interests. Sanction is to be refused where through sale the housing shortage would be aggravated, where the buyer's aim is speculation, or where the need of the seller is being exploited by payment of too low a price. The housing trouble gets ever worse, and the Bill will hardly improve it. Foreigners have bought heavily, in some districts as much as 75 per cent. of recent sales have been to foreigners. The typical five-storey Berlin dwelling-house, with about 20 flats, sells freehold and mortgage-free for some 10,000,000 marks, or £50, the value under normal currency conditions and with free rents being probably £20,000. The legal maximum net rent (landlord's profit) from the whole house at present exchange is about 2s, so that the capital value of the house as an investment is perhaps £2, and the seller for £50 gets many times the yield value. As the German owner does not really get the 2s, but has in most cases to pay a subsidy to keep the house going, and as he sees no prospect of this condition ending, he sells to a foreigner or to a rich native who is willing to face the risk of the expropriation being permanently maintained, and only such buyers keep their houses in order. Most houses are going rapidly to ruin. The exclusion of foreigners will accelerate the ruin of the houses, and further injure the German owners, who are mostly petty rentiers. In some cities owners have actually offered valuable houses to the municipalities for nothing, and, getting a refusal—the municipalities would not pay the necessary subsidies—they removed their names from the records and left the houses ownerless. Under these circumstances the agitation, on which the Bill is based, that foreigners exploit the needs of the German owners does not seem well founded. In fact, as the (theoretical but not actually received) maximum net rent under the present housing law is a varying paper mark value, a foreigner who bought two years ago will have lost about 200-300ths of his yield on capital, the gainers being the tenants. The legal maximum net rent of a middle-class six-room apartment is now about fourpence a year.

Electricity Commissioners' Report.—The Electricity Commissioners have now issued their second annual report. Most of the matter contained therein, however, has already been made public, seeing that the Report deals with the year ending March 31, 1922. Its appearance is, therefore, somewhat belated, and a good many matters dealt with in the report have considerably progressed since that date. The chief value, therefore, lies in its forming careful records of electoral progress dur-

ing the year under review. The most important matter dealt with is the formation of the schemes for the various electricity districts delimited under the Electricity (Supply) Act, 1919. The Electricity Commissioners have delimited 13 electricity districts in England and two in Scotland. With the exception of the North-East Coast, the districts thus delimited cover all the important industrial areas in the country. The several schemes are in varying stages of incompleteness, only three being in practically final form. Since the date of the report the Electricity Commissioners have issued special orders covering these three cases, namely, North Wales and Chester, South-West Midlands, and South-East Lancashire. It is noteworthy that in neither of these cases is it proposed to form a working Joint Electricity Authority, as delineated in the Act, 1919. In the North Wales scheme a joint authority will be formed, but its powers of generation and distribution are to be delegated to the North Wales Power Company. In the case of the South-East Lancashire, an Advisory Board is to be formed in lieu of a Joint Electricity Authority, and the same procedure is to be followed in the South-West Midlands, where the scheme is virtually a working agreement between the Birmingham Corporation Electric Supply and the Shropshire, Worcestershire, and Staffordshire Power Company. In connection with eight of the schemes submitted some interesting forecasts of electrical progress were made, though, as the Report points out, the dates given must be subject to a certain postponement, for when the estimates were made the recent set-back in trade had not assumed a serious character. However, the figures can be taken as generally significant. The total output from the districts in question in 1921 was 1,923 million units. By 1926 it was estimated that this figure would be increased to 3,799 million units, and by 1931 to 5,624 million units—that is, 100 per cent. increase in five years, and 200 per cent. in 10 years. This rate of increase, which can be broadly taken as applicable to the whole country, indicates very satisfactory progress. One of the results of the centralisation schemes mentioned above will be a material reduction of the amount of coal, a point which was very much emphasised by the Coal Conservation Committee upon whose report the Electricity Supply Bill, 1919, was in part founded. The total net expenditure of the Electricity Commission in their administrative functions for the year amounts to £39,893. This amount is not a charge on the National Exchequer, but is met by the industry. Under the provisions of the Act of 1919, each undertaking contributes proportionally to the number of units generated. This charge upon the industry, however, is much more than balanced by the great advantages accruing from the establishment of the Commission.

Austro-Hungarian Relations.—At the present moment when, in view of the German mark collapse, the ability of Austria to hold her own is being eagerly watched, it is important to notice signs that Austria and Hungary are beginning to turn their eyes a little more eastwards instead of northwards. Several overtures on the part of Dr. Benes for a satisfactory regulation of tariffs and commercial relations generally between Czechoslovakia and Hungary broke down in face of the intransigence of the latter, while political relations between Hungary and Austria were strained almost to breaking point by the question of the Burgenland, where Magyar irregular bands long operated to prevent the peaceful application of the Treaty settlement in this part of the world. At long last, however, peace—at least, in its restricted meaning of the absence of war and rumours thereof—seems in the offing, and recently the Austrian Chancellor together with the Minister for Foreign Affairs were received most cordially by the Hungarian Prime Minister at Budapest. The main object of this meeting was to establish more cordial relations between the two countries, and to initiate conversations on the various political and economic questions which await solution. The Austrian Chancellor, Dr. Seipel, has informed the Press that he sees nothing to prevent the conclusion of a general arbitration agreement between the two countries; though we may add that these pourparlers have caused no little stir in certain of the other

Succession States, where some politicians see sinister designs of a political Danubian Confederation behind almost every discussion, both political and economic. Sir William Goode summed up the position in an interview with the *Times* correspondent at Budapest. "This was," he said, "the most hopeful sign he had seen since the beginning of 1919, when he had to deal with these and other countries as British Director of Relief. Too much must not be expected in the way of concrete commercial treaty developments, but three years ago it would have been almost impossible to hope for what has recently happened. Perhaps the most encouraging factor in the meetings is that none can attribute to them any possibility of military alliance or intrigue. The friendship that Austria offers brings with it no military *quid pro quo*." We can only hope that this resumption of cordial relations will lead in time to something more definite in the economic sphere, and put an end to that policy of economic isolation which has done so much to hinder the recovery of Central Europe since the war.

The Financial Position in Chile.—Certain factors in the financial position of Chile, writes a correspondent, have occasioned among nervous holders some feeling of uneasiness as to the future. While it would be idle to deny that the recent material losses sustained by the disastrous earthquakes on the West Coast of South America, the frequency with which of late years new loan issues have been offered, and the general decline in the country's trade have created misgivings, there is little in the general situation to create alarm. Late advices from Chile, moreover, afford evidence of coming improvement in the economic position. Nitrate shipments, upon which the national revenues of Chile depend to the extent of 75 per cent., continue at remunerative rates, although the production has been below normal. Excellent crops have brought about a renewal of prosperity to the large agricultural community in the southern part of the country, while an appreciable balance of wheat remains over for sale from the last harvest, having been held upon the chance of higher prices. The wise provision of granting a railway freight reduction of 15 per cent. on all grain shipped between September 15th and December 15th has lent further encouragement; while, owing to the better prices obtained for copper, a substantial increase in the output of the mines is likely to be brought about, and a considerable lessening in the number of unemployed to follow. Fortunately for Chile, the two principal staple products, nitrate and copper, have remained unaffected by the Fordney-McCumber Tariff, a measure which has seriously interfered with exports from other countries, both in South America and Europe. Pressing as may appear the financial needs of the Government, the general prosperity of the country, judging from the number of depositors in the Chilean savings banks, seems to have been but little affected. At the end of June, 1922, bank depositors totalled 1,080,691, marking an increase of 48,564 over the number of the previous year, and representing an augmentation of 25,225,822 pesos in the value of the deposits, now standing at over 233,174,700 pesos. A favourable impression has been created by some evidence of thrift upon the part of the national expenditure departments. The Senate, in furtherance of this move for economy, has refused its authorisation of further Government loans or issues of paper money. It is the avowed intention of the present Administration, as it had been that of all its predecessors, to convert Chilean paper money "immediately public confidence in the Government has been established." Unfortunately, changes in the personnel of Chilean administrations occur with great frequency and unexpectedness, so that this promise seems hardly nearer to realisation than the Greek Kalends. In 1920 there were two changes of Government between the months of July and November; in 1921 there were Cabinet resignations on January 27th, May 15th, July 27th, and August 14th; while during the past year individual Ministerial resignations or the retirement of the whole Cabinet occurred on January 2nd, February 4th, March 23rd, and December 22nd. The Executive, elected by a very narrow majority (so narrow, indeed, that a Court of Honour was called into being in order to decide which of the two candidates had polled the greater number of

votes), has found no easy task in effecting economies, or introducing part of those financial reformation plans upon which he had set his mind. While something has been accomplished in the reduction of paper money, there has been little actual reduction in the country's expenditure. Chile's total national debt amounts to \$275,730,074 (gold) (approximately £55,146,015); of this sum the total foreign debt represents \$239,077,386 (£47,815,477). Of the considerable sterling debt (£34,875,299), it is estimated that one-fifth is now held in the United States. The 1923 budget carried a total of 57,571,226 pesos (gold) and 287,283,000 pesos (paper), compared with 78,239,878 pesos (gold) and 348,709,365 pesos (paper) in the 1922 budget.

The Finances of Ecuador.—The financial straits of the Government of Ecuador are chronic and notorious; their causes were frankly stated to Congress last year by the Minister of Finance. His account is summarised in the Report for 1922 of the Acting-British Consul-General at Quito. The effects of past revolutions and of the post-war depression are intensified by (1) frauds by the taxpayers and the spending authorities, (2) lack of Government responsibility for the collection of revenue and the details of expenditure, some revenues being farmed, others received and disbursed by autonomous boards; (3) most of all, the Congressional habit of over-estimating revenue and under-estimating expenditure, in order to gratify the universal demand for public works, often of merely local importance, a demand which, for political reasons, it fears to leave unsatisfied. Thus, ten new State railways were recently authorised, with only about £260,000 annually available between them all. The Minister suggested obvious and drastic remedies, and mentioned that attempts were being made to raise a railway loan, but that a loan large enough to consolidate and pay off the Foreign Debt (of about £3,671,000) is impossible at present, in view of the high rate of exchange and the advance in the rate of interest. Under the circumstances, it is not surprising that the revenue for 1921 was only 76 per cent. of the expenditure. But the evils specified seem to have been increased by the establishment last year of monopolies of spirits, tobacco, and other commodities, and the leasing of them to groups of native capitalists, with little benefit to the State and much popular discontent. In the last financial year public works absorbed 2,907 million sucres (at par £290,700), of which 1,112 million were spent on seven railways under construction, and 1,393 million on "the centenary of the Battle of Pichincha," which gave Ecuador her independence. Most of this was spent on paving and draining Quito. As to trade, we can only note that the latest figures available were those of 1920; that the

Government has set up riots by trying to fix exchange rates; that cocoa, though still the chief export, is no longer likely to be the mainstay of that trade; that the coastal lighting has been improved, and that the shipping facilities are on the increase. But British and American imports, formerly the largest in value, are now cut off by the high rate of exchange.

Certificates of Insurance.—Reference was made in the *Economist* of January 20th to several recent judicial decisions of considerable business interest bearing on the practice of tendering a certificate of insurance instead of an actual marine insurance policy as one of the shipping documents under a c.i.f. contract. The latest of the decisions, which it seemed difficult to reconcile with two earlier ones, was last week reversed by the Court of Appeal, and, as a result, the doubt which had arisen as to the legality of substituting a certificate for an actual policy has been confirmed. All the judgments have recognised the seriousness of possibly interfering with a commercial practice very generally followed, but apparently the objections in point of law are strong enough and sound enough to induce two King's Bench judges and three judges of the Court of Appeal to agree in saying that a buyer cannot, under the usual terms of a c.i.f. contract, be compelled to accept a tender of any other document than an actual policy as being equivalent to a policy. "An Actual policy," it is laid down in "Scrutton," "must be tendered, and an insurance broker's cover note or certificate that he has effected insurance is not sufficient," though the same work suggests that a certificate of insurance issued by the insurance company itself under a floating policy, and upon which the company could be sued, would suffice. This last suggestion must now be taken as practically negatived. Lord Justice Scrutton, it is of interest to note, was one of the members of the Court of Appeal which overruled Mr Justice Sankey last week. In the case in question (*Scott v. Barclay's Bank*), the bank, on behalf of the buyers (who had established a credit pursuant to a c.i.f. contract) had declined to accept an American certificate of insurance tendered by the plaintiffs, the sellers of the goods. In giving the leading judgment in the Court of Appeal, Lord Justice Bankes said he rested his decision on the fact that the document which was tendered was not a document which anyone, on inspecting it, could say whether or not it complied with the terms of the letter of credit. All that the certificate indicated was that a policy had been issued. It did not indicate the terms of the policy, the risks covered, the conditions of the policy in reference to shipment, or other matters which it was important to ascertain. Lord Justice Bankes referred to the decisions of Mr Justice Bailhache and of Mr Justice McCardie in earlier cases, expressing agreement with them, and disagreement with Mr Justice Sankey in the case before him. He held accordingly (Lords Justices Scrutton and Atkin concurring) that the certificate was not a good tender of an approved insurance policy. The law is, therefore, settled, and, if merchants find it convenient to use these certificates, it will be necessary that they should (as indeed the London Chamber of Commerce has suggested) specify this alternative in making their contracts.

National Mutual Life Assurance.—For many years past the National Mutual has been first in the field with its annual report, and has assisted to break down the foolish old practice under which life offices kept their books open for new entrants for a month after the end of each year. The National Mutual's new policies last year numbered 702, assuring £548,102 net, an increase on 1921 of £11,463, though considerably below the high-water mark, £635,046, of 1920. The new life assurances numbered 689 for £537,780 net, of which all but one related to business within the United Kingdom. Perhaps the most important features of life offices nowadays are the value of the assets, and the net rate of interest earned after deducting income-tax. The Stock Exchange securities, with the exception of Victory Bonds, allocated to policies, have been valued at their selling prices on December 31st last, less accrued interest, and the total funds show an increase of £366,661 to £3,798,916. Realisation and

revaluation showed a profit on securities of no less than £262,994. The net rate of interest earned on the funds, excluding reversions, was £4 12s per cent., as compared with £4 13s per cent. in 1921 and £4 8s 9d per cent. in 1920. The premium income was £274,033, against £270,259, and the total expenses were 17.1 per cent. of the premiums, against 16.8 per cent. At the end of 1918 the general distribution of the surplus was properly suspended, owing to the uncertainty of the financial outlook. At the annual meeting on Wednesday, Mr J. M. Keynes threw some light on the very favourable prospects of the next valuation. "The valuation and analysis of profit," he said, "which we make each year for our own information, show that the net surplus has been increased during the year by more than £337,000, and that the total surplus now amounts to £734,000, of which all but about £98,000 is realised profit, with one year of our quinquennium still to run." At the end of 1913, Mr Keynes pointed out, the total surplus represented rather less than 12½ per cent. of actuarial liability, whereas the surplus now disclosed (with one year of the quinquennium to run) is rather more than 24 per cent. This, as Mr. Keynes said, indicates that the prospects of the with-profit policy-holders are unusually good.

Sea Insurance Company.—We showed in the case of the Indemnity Mutual last week that the underwriting year of 1921 had worked out more favourably than that of 1920. The results of the Sea Insurance Company are similar. After carrying £120,000 to suspense account, there was a surplus on 1921 of £11,758, against a declared loss for 1920 of £1,672. There appears to have been a greater loss on 1920 than was allowed for twelve months ago, since an additional sum of £73,487, profit on investments realised, has been carried to suspense account, to meet claims on 1920 and previous years. Interest receipts in 1922 were £64,013, and a total surplus for the year, together with the underwriting profit of 1921, is shown of £75,771. Against this must be placed £23,420 provided for income and corporation taxes. A total dividend for the year is declared of 3s a share, less tax. The premium income for 1922 was £416,775, against £501,760 for 1921; the first year's claims were £102,465, against £132,745, and the expenses £41,773, against £49,553. In 1914 the premium income was £468,795; it rose to the peak of £2,285,626 in 1917, and has now fallen to £416,775. The reserve fund, underwriting account, and profit and loss balance amounted in 1914 to £651,712; they reached £1,486,663 in 1918, and have since declined to £912,948.

Gas Light and Coke Results.—Again the directors of the Gas Light and Coke Company are able to show better results, and in consequence it is proposed to distribute an ordinary dividend at the rate of £5 4s per cent., as against £4 13s 4d a year ago. This will absorb £853,039 out of the net revenue of £1,520,185 shown in the following table:—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.
Gross revenue ..	£ 6,052,366	£ 7,029,550	£ 7,740,844	£ 8,854,028	£ 12,790,821	£ 11,232,360	£ 10,110,354
Expenses	5,021,438	6,000,370	6,690,745	8,008,164	11,877,286	10,134,881	8,590,169
	(83 %)	(85 %)	(86 %)	(91 %)	(93 %)	(90 %)	(85 %)
Net revenue ..	1,030,928	1,029,180	1,050,099	845,864	913,535	1,097,479	1,520,185
Res., int., sinking fund, pl. div., &c.	440,865	520,880	436,862	417,668	421,939	519,102	591,700
Balance	590,063	508,300	613,237	428,196	491,596	578,377	928,485
Ordinary dividend	685,169	608,765	483,531	488,969	488,970	760,618	851,039
Rate per cent. ..	£4 14/8	£3 14/8	£2 19/4	£3 0/0	£3 0/0	£4 13/4	£5 4/0
Carried forward..	95,106	100,465	129,700	56,773	2,627	182,241	99,998

Expenses in relation to revenue fell from 90 to 85 per cent., with the happy result that though gross revenue fell away, profits, at £1,520,185, were nearly half a million higher. Sales of gas produced £7,488,848, as against £8,116,746 for 1921, and profits from residual products, at £1,886,635, were lower by approximately £600,000. The report points out that the price of the company's gas at the end of 1921 was 15 2d per therm, but that it is now 10d. It is also mentioned that the prices per 1,000 cubic feet at these dates were 5s 6½d and 4s 2d respectively. Including 16,766 taken over from the Ilford Gas Company, 29,206 additional consumers have been recorded.

Discount Corporation of New York.—The fourth annual report of the Discount Corporation of New York shows that, after making provision for taxes, the net profits for the year were \$548,428. Dividends at the rate of 6 per cent. per annum, amounting to \$300,000, were declared during the year, leaving \$248,428 to be added to the undivided profits account, which now stands at \$1,258,055. The capital and surplus is \$5,000,000. The volume of business transacted during the year 1922 was somewhat in excess of 1921, the diminution of business in bankers' acceptances being more than made up by greater activity in United States Treasury certificates and notes. It is stated that with the improvement in foreign trade already apparent, there is an increasing volume of bankers' acceptances coming on the market, which are readily absorbed at current rates, and that the rapid development of the New York discount market has greatly assisted the negotiability of dollar drafts in foreign exchange centres.

Premier Diamond.—This important South African undertaking, it may be remarked—unlike most of the others—has continued production during the past two years, although on a greatly reduced scale. The report now in the hands of the shareholders in Great Britain indicates that the sales last year fell off in an even greater degree than the output. Consequently the surplus on diamond account came out at no more than £23,000, of which the Union Government took 60 per cent. In point of fact, the income from sundries—£14,000—exceeded that from the sale of stones. With the sum in question, and that brought in from 1921, £101,000 was available. Practically the whole of this was absorbed in meeting the dividends on the preference shares; hence the possibility of distributions upon the latter in respect of the current financial period will depend almost entirely upon the condition of the diamond trade. On this point the directors remark that while an improvement in the demand was experienced in the last quarter of 1921-22, a complete return to normal conditions cannot for the present be expected. Development has been in abeyance, and is not likely to be resumed on a considerable scale in the near future, seeing that the quantity of blue ground available amounts to about 37½ million loads, sufficient for 20 years or so at the recent rate of extraction, and for about eight years at the normal rate. It may be recalled that the big De Beers concern recently increased its deferred capital and offered the Premier shareholders one share in respect of every two held. This step was taken for the purpose of further consolidating the diamond business in South Africa. In past years the distributions on Premier deferred have, of course, run into many hundreds per cent.

The sixth International Mining Exhibition will be held at the Royal Agricultural Hall in June, under the presidency of Sir John Cadman, K.C.M.G., and will be opened on June 1st by the Rt. Hon. Sir Philip Lloyd-Greame, M.P., President of the Board of Trade. Large spaces have been taken for French and Belgian sections under Government auspices. The Governments of Roumania, Mexico, and the Republic of Colombia will also make comprehensive displays, and there will be important exhibits from Holland, the Belgian Congo, and Zambesia.

Oversea Correspondence.

UNITED STATES.—EXPORT TRADE IN 1922—OCTOBER IMPORTS—ANACONDA-CHILE COPPER MERGER; LARGE NEW BOND ISSUES—CUBAN LOAN FLOATED.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 19.

STATISTICS published by the Department of Commerce show American merchandise exported in December at \$344,000,000, or \$39,000,000 less than in November and \$28,000,000 less than in October, but otherwise the

largest figure for any month in 1922. The falling off as compared with November was due largely to lower cotton exports. For the calendar year 1922 exports of merchandise reached an aggregate value of \$3,831,516,735, as against \$4,485,031,356 during 1921 and \$2,484,018,292 in 1913, which was the largest total of any year before the war. In reading the value figures, it may be remembered that *Bradstreet's* index of commodity prices on January 1, 1923, was 57.3 per cent. higher than that of August 1, 1914.

A few days ago the Department of Commerce issued the belated report on imports for October, but the figures for that month are found to include the last nine days of September following the enactment of the new tariff. The returns show that total imports for this period amounted to \$388,000,000, as against \$229,493,403 in the 21 days of September, \$281,376,403 in August, and \$188,007,629 in October, 1921. The Department estimates that imports during September, after the new tariff went into effect, were valued at \$69,000,000. To make the monthly figures truly comparable, therefore, that sum should be deducted from the October total as published and added to that of September. With that change, imports for October were \$319,000,000, and for September \$298,000,000, and those are the totals which should be used in making comparisons. The real total of October imports was nearly 80 per cent. greater, as compared with July of 1921, while the gain over October of that year was 70 per cent. Imports for the ten months ending with October, 1922, amounted to \$2,570,049,455, representing a gain of \$510,000,000, or 24 per cent., over the corresponding period of 1921, but a decrease of 45 per cent. from the same period in 1920.

Although the number of spindles active in December, 34,968,440, was the largest ever recorded, the consumption of cotton, according to the Census Bureau's figures, amounted to only 527,945 bales, or 49,616 bales less than in November; the decrease of 8½ per cent. is attributed largely to the curtailment of operations in December owing to the holidays. The consumption last month, however, was 3.3 per cent. larger than in December, 1921, and 78 per cent. greater than in the same month of 1920, which was the low point in many years. Exports of cotton in December fell off sharply, totalling only 607,853 bales, as against 858,337 bales in November, a decrease of 29 per cent., and 5 per cent. under December of 1921.

Negotiations, under way for some time past, have been completed whereby the Anaconda Copper Mining Company will acquire a majority of the stock of the Chile Copper Company; the deal is subject to the approval of the Anaconda shareholders at a meeting called for February 26th, but that is regarded as merely a formality. To provide necessary funds for the purchase, and partly for other purposes, the Anaconda has issued \$100,000,000 first consolidated mortgage, Series A, sinking fund 6 per cent. gold bonds and \$50,000,000 debentures, the entire amount having been underwritten by a banking syndicate. The Anaconda company, rated as the largest copper producer in the world, will secure control of the Chile corporation, which is known as the largest producer of low-priced copper. An official statement explaining the reasons for the purchase said that since the American Brass Com-

pany was acquired by the Anaconda a year or so ago, the increase in requirements of raw material for manufacture by the brass company had made it necessary to buy copper in the open market, because under existing labour conditions the Anaconda company had been unable to produce from its own mines enough copper to meet the demand. While the brass company's manufacturing plants in the Middle West and Far West could utilise the production of the copper refineries in Montana, it had become necessary, the statement added, to obtain an un-failing supply of the red metal for the seaboard plants of the company and for export. The Chile company owns and is producing from the largest known body of copper ore in the world. The ore is mined at a minimum of expense, and is transported to the world's markets at a cost said to be lower than that from any other important copper-producing centre. The ocean freight rate from Chile to North Atlantic seaboard points is \$4 per ton, as against an all-rail rate of \$16.50 from Montana and other western mining districts. The majority stock of the Chile company, amounting to 2,200,000 shares, is to be acquired from Guggenheim Brothers, who have heretofore held the controlling interest in that company; they will continue as large holders of the company's shares and of its convertible bonds. The price to be paid is understood to be \$35 a share, or \$77,000,000 for the stock thus taken over. The banking syndicate, which included representative investment houses in New York and other centres of the country, offered the \$100,000,000 first mortgage bonds, dated February 1, 1923, and maturing in 1953, for public subscription at 96½ and interest, to yield 6½ per cent. Although it was the largest issue of industrial bonds ever floated in the United States, the entire amount was quickly taken. The proceeds of that sale and of the subsequent offering of \$50,000,000 debentures will be used to pay for the Chile stock, as indicated; to redeem \$23,080,100 ten-year 7 per cent. secured gold bonds of the Chile Copper Company; to reimburse the Anaconda treasury for the previous purchase of the American Brass Company, and to provide additional working capital.

Another large offering this week consisted of \$50,000,000 Republic of Cuba external loan 30-year sinking fund 5½ per cent. gold bonds, which were issued "with the acquiescence of the United States Government under the provisions of the treaty dated May 22, 1903." The banking syndicate, which was the successful bidder for these bonds, was headed by J. P. Morgan and Co. The new bonds, dated January 15, 1923, are the direct obligation of Cuba, and are secured by a charge on certain revenues of that Republic, including Customs revenues, subject to existing charges, and by a first charge on 10 per cent. of the amount by which Cuba's gross revenues in each fiscal year exceed \$60,000,000. The bonds are not callable for twenty years, except under the provisions of the sinking fund. They were offered for public subscription at 99½ and accrued interest, to yield investors more than 5.55 per cent., and were readily absorbed.

FRANCE.—RUHR COAL SUPPLIES—THE YEAR'S FOREIGN TRADE—THE FRANC DECLINE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, January 31.

THE end of the third week since the French occupation of the Ruhr began leaves the struggle, so far as can be gathered from careful inquiries here, very much as it was at the beginning. If the attempt of the coal owners to induce their workmen to join in a general strike has failed, the fact remains that, now that the train loads and barge loads of coal that were ready for dispatch when the "invaders" entered the coalfield have been sent into France and Belgium, no combustible is coming out of the Ruhr into Allied territory, and none is likely to do so until German resistance has been much more definitely subdued than it is at present. Nevertheless, although the French iron and steel concerns are now receiving not even the reduced quantities of combustible they were getting from Germany a month ago, and a certain proportion of them have had partially to shut down, there is no sign of weakening in the determination of the French to main-

tain their grip on "the German jugular vein" until they attain their object.

M. Poincaré, during the past week, has made several points in the French programme clear. There is no intention, he has stated emphatically, of any advance further into Germany—unless, of course, the French forces should be attacked by armed German forces coming from the interior (in view of the possibility of which, it is asserted, the French troops on the eastern frontier of the Ruhr have already been reinforced). Further, the Premier has announced officially that the French have no intention of working the mines themselves, or of replacing the German civil administration by French officials, or of interfering in any way with the affairs of the population as a whole. They ask merely that coal, coke, and timber shall be furnished by German labour, in the ordinary way, in return for the usual wages, and handed over to the Allies under the provisions of the reparations clauses of the treaty. Finally, the Allied occupation of the Ruhr is to be merely temporary, until the German Government has manifested, by reforming its finances and delivering the stipulated quantities of coal, timber, &c., that it really intends to carry out the treaty. Another point M. Poincaré has made clear is that the French Government in no way objects to British colliery owners furnishing Germany with coal, and neither has nor intends to make any protest to the British Government in this connection. These points having been made clear, the French are prepared to cut the entire nerve centre of industrial Germany completely off from the rest of the Reich, to collect part of the Allied debt off every particle of product that Germany wishes to have sent out of the Ruhr, and to sit down, quietly if possible, and see whose patience wears out first.

The French foreign trade returns for the whole of 1922 are now available, and compare with those for 1921 as follows (in francs):—

	1921.	1922.	Inc. or Dec.
IMPORTS—			
Foodstuffs	5,748,316,000	5,800,002,000	+ 51,686,000
Raw materials	11,408,956,000	14,048,140,000	+ 2,639,184,000
Manufactured goods ..	4,910,636,000	4,052,469,000	— 858,167,000
Totals	22,067,908,000	23,900,601,000	+ 1,832,693,000
EXPORTS—			
Foodstuffs	2,070,850,000	1,920,799,000	— 150,051,000
Raw materials	4,091,598,000	5,443,077,000	+ 1,352,279,000
Manufactured goods ..	12,356,415,000	11,860,191,000	— 496,224,000
Postal parcels	1,253,649,000	1,417,124,000	+ 163,475,000
Totals	19,772,512,000	20,641,991,000	+ 869,479,000

The figures indicate that on the year, on a total volume of 44,541,000,000f, there was a trade balance against France of 3,258 millions, as compared with an adverse balance of 2,295 millions on a total volume of 41,839,000,000f in 1921, and of 1,541 millions on a total volume of 15,301,000,000f in 1913. On these figures it is evident that, although the adverse balance has actually largely increased, it is nevertheless much smaller, in proportion to the total volume of trade, than that of 1913, when the franc stood at par. A substantial proportion of the increased adverse balance on the year was due to the fact that in 1922 France had to purchase an additional 5½ million tons of foreign coal than in 1921, at an average price of 82f a ton, which inflated her deficit balance by over 400 million francs.

In view of the depreciation of the franc, the figures set forth above scarcely give an adequate idea of the enormous economic and industrial effort France is making to recover her commercial situation. Better evidence is to be found when the comparative weights of the merchandise in question are set forth, and these show that, although the value of her exports has increased by only 869,479,000f during the past year, the quantities increased by over 6½ million tons (from 16,035,000 tons to 22,615,000 tons), while the weight of her imports, with an increased value of 1,832 million francs, rose from 40,062 million tons to 51,366 million tons, an increase of over 11½ million tons. Indications that French trade is now steadily on the upward grade is offered by the fact that the second half of the year showed much better results than the first six months, while exports in December alone showed an advance of close on 2,779

million francs, as compared with 1,706 millions in November (which was also the average of the four previous months). The new American tariff has proved a serious blow to French export trade, and has already led to the closing down of a certain number of firms in this country who specialised in exports to that market. To some extent, however, this has been compensated for during the past year by the reopening of the Spanish market, which was closed for several months by the tariff war that preceded the signing of the new Franco-Spanish commercial agreement.

It is argued here that no adequate technical reason can be furnished for the recent fall in the franc. The French trade balance, as the figures already given show, was never more favourable; the revenue is coming in largely in excess of budgetary expectations, and will almost certainly show an advance of over two milliards, in comparison with the previous year, despite the fact that no new taxation was imposed; the situation of the French Treasury is more satisfactory than it has been for a long time past; the weekly statements of the Bank of France give no cause for alarm; while there is good reason to believe that before many months the Budget, apart from the expenditure required for the devastated regions (which is in the nature of things of an entirely exceptional character) will be satisfactorily balanced. The accusation is being openly made that the present serious fall in the franc is due to a deliberate attack on French interests by "international finance," representatives of which are alleged to have entered, on the side of Germany, the conflict now proceeding in the Ruhr, for the purpose of defending the heavy interests they have acquired in German industrial undertakings. The attack on the franc is asserted to be with the object of so disturbing French economic life that this country will be compelled to release the pressure it is now exercising on German industry. The attacking parties are stated to possess a reserve of from 14 to 15 milliards of francs as their weapon in the exchange markets of the world.

To-day's settlement on the Bourse passed off smoothly, and in no way brought about any reduction in the large volume of business which is every day recorded. Money was abundant and cheap (3½ per cent. in the Parquet and 5½ per cent. in the coulisse). Heavy purchases have been a feature for some days past as the result of the fall in the franc. South Africans benefited from the high price of sterling, and oils have been active. Metallurgical descriptions, in view of the deadlock in the Ruhr, have dropped appreciably, as might have been expected, while colliery shares, owing to the coal shortage, have correspondingly risen, Carmaux being marked up from 950 to 985, and Lens, Courrières, and the rest of the list similarly. Coppers have been in good demand during the week, particularly Rio Tintos, which have risen from 2,213 to 2,348 (on the facts that the miners are paid in pesetas, while the product is marketed in sterling, and that the pound now once more stands higher than the peseta). Rentes, on balance, fell off slightly during the week.

ITALY.—RESTRICTION OF RENTS TO END—FOREIGN TRADE: GREAT BRITAIN'S SHARE.

(FROM OUR CORRESPONDENT.)

TURIN, January 29.

THERE is probably no Italian family whose daily talk is not about house rents. This is the universal topic of discussion. By a Royal legislative decree of January 7, 1923, Signor Mussolini attempted to cut the Gordian knot which had grown about the Restriction of Rents Acts. A recent decree of October 23, 1922, the last days of the Facta Government, had prolonged for a year from July 1, 1923, to June, 1924, the war Restriction of Rents Acts, with fixed increases uniform all over the country. After June 30, 1924, till June 30, 1926, rents were to be determined, in case of disagreement, by an arbitration court. After June 30, 1926, absolute freedom was to return.

Public opinion interpreted the Facta-Alessio decree in the sense that after the first year a new lease of life would be conceded to the restriction system, and so on inde-

finitely. Nobody was troubled about the prospect of restitution of freedom to house landlords. The decree of January 7th, by the Mussolini Government, took the country by surprise. This decree provided that the restriction system was to be abolished at once, as from July 1, 1923.

Freedom of contract was the only remedy to the numerous grievances which had arisen out of the restrictions; uneconomic rents much below the market level; ruin of landlords crushed between fixed rents and high expenses; lack of encouragement to building; the retention of large flats by small families who could not move to other quarters owing to the absolute impossibility of finding vacant houses; the tragic position of new families of public employees and other people obliged to move by reason of their unemployment from town to town, &c. The new freedom is, however, not to be an absolute one. For an intermediate period of three years, from July 1, 1923, to June, 1926, the rents, in case of disagreement, will be fixed by an arbitration court of three members, a landlord, a tenant, and a judiciary umpire as president. Signor Mussolini solemnly admonished landlords not to abuse their restored freedom, as, in the event of excessive increases, restrictions would be re-established. In many cities general agreements have taken place between unions of landlords and tenants. For instance, at Turin the two unions agreed to recommend that, taking as a basis the rents paid in 1914, rents up to 1,000 lire per year should be increased 70 per cent. for yearly leases and 120 per cent. for three-year leases. Rents from 1,001 to 1,600 lire to be increased respectively 80 and 130 per cent. for one and three years' leases; rents from 1,601 to 2,400 to be increased 100 and 150 per cent.; rents from 2,401 to 4,000 respectively 130 and 220 per cent. Rents above 4,000 to be freely discussed by two parties without any general recommendations. All over Italy agreements more or less similar are taking place. It will be very interesting to follow the results of the courageous experiment made by the Government. Just as Signor Giolitti had the courage to abolish the ruinous bread subsidy which caused a loss of billions yearly and doomed the lira to the fate of the mark, and was not afraid to incur unpopularity among the Socialist masses on that score, so Signor Mussolini has not hesitated to arouse discontent among the working and the middle classes by the abolition of Restriction of Rents Acts. He paved the way to complete freedom by the method of the arbitration courts; but, none the less, his decision is bold and creditable.

The publication of statistics of foreign commerce is belated in Italy. The latest volume published refers to June, 1922, and from this volume we can extract the following figures on the direction of trade for five principal countries. The figures for Germany are exclusive of Reparation payments:—

MILLIONS OF LIRE.						
	First Half of 1922.	% of the Total Trade.	Whole Year 1913.	Whole Year 1919.	Whole Year 1920.	First Half of 1921.
Imports from—						
France	5370	69	73	46	84	60
Germany	6091	79	168	05	52	69
Switzerland	1345	17	24	22	21	14
Great Britain	9697	125	162	147	149	98
United States	21647	279	143	442	302	383
Exports to—						
France	6712	160	92	231	57	103
Germany	5081	121	137	14	49	80
Switzerland	5324	127	99	130	116	110
Great Britain	5107	123	104	127	113	79
United States	3781	90	107	104	84	129

On the import side, the share of the United States, though less than during the war, is greatly in excess of the pre-war share. Germany has not yet recovered her 1913 position. Great Britain is sending us less, especially coal. On the export side, we have almost recovered the old position in the German markets; France, Switzerland, and Great Britain are better customers for us, while the United States have put up high walls against our exports.

It is very unfortunate that Great Britain has abandoned the good practice of admitting our goods free, and is subjecting herself to obloquy by Safeguarding of Industries Acts and other protectionist measures, which are daily quoted by our protectionists as a proof that Great Britain is greatly obstructing our export trade.

RUSSIA.—BUDGET—LOTTERY LOAN—BANKS—TENTH PAN-RUSSIAN CONGRESS—TRANSPORT.

(FROM OUR CORRESPONDENT.)

Moscow, January 16.

THE State budget for the three months, October to December, 1922, has recently been approved by the Council of the People's Commissars as follows (in paper roubles, model 1922):—Revenue, 112,296,030,000; expenditure, 255,668,972,000; deficit, 143,372,942,000. It is hoped to reduce this deficit to 110 milliards (model 1922).

The Finance Commissariat has published statistics relating to the financial year ending September 30, 1922. State taxes accounted for 74.2 per cent. of the total revenue (205 trillion roubles, or 20,527 millions, model 1922). Of the State taxes, direct taxation accounted for 34.8 per cent., indirect 65.2 per cent., of which 44.4 per cent. excise duties and 20.8 customs. Of the total tax revenue 27.5 per cent. was collected in the Government of Moscow, 12 per cent. in Petrograd, and 20 per cent. in the Ukraine.

The Government, in pursuance of the policy of obtaining from the country itself as far as possible the resources necessary for economic reconstruction, issued a 6 per cent. State lottery loan in December. Under the decree of the Council of People's Commissars, the loan is payable in ten years, and the amount is 100 million gold roubles, issued in ten series of 10 million roubles each. The interest is payable twice yearly at the current rate for gold until 1928, after which it is payable once a year on January 1. Prizes for each drawing, to be held publicly in Moscow, in the first five years are to amount to 800,000 gold roubles. Interest and prizes are payable abroad at the pre-war rate of exchange in London and New York (\$1 equals 1.943 gold roubles), and in Russia the Soviet roubles at the current exchange. With reference to the State loan in wheat, issued in September for 10 million poods, and referred to in the *Economist* for December 23, the State Bank has announced the following results:—Bonds presented as payment of taxes in kind for R.S.F.S.R., 5,358,342 poods; for Ukraine Rep., 304,381 poods; for Turkestan, 8,806 poods; total, 5,671,529 poods. Bonds presented for repayment in wheat, 1,257,000 poods.

The loan is at present quoted in Moscow higher than the local price of wheat, which is explained by the fact that in many areas of Russia wheat is dearer than in Moscow. It is also interesting to note that the timber trust Severoless working in the Archangel region has purchased a considerable number of bonds for the payment of their workmen, whose salaries are payable on a wheat basis. The price of food in Moscow had in December fallen so far that in foreign values the food composing the standard food packages sent into Russia by American and European relief organisations could be purchased in the open market in Moscow for about 75 per cent. of the dollar face value of the package, and it was therefore in that month more advantageous to people in Russia for their friends abroad to transfer foreign money to the State Bank and enable individuals in distress to purchase in the open market the food they required.

On January 2 the Municipal Bank of Moscow, with a capital of 50 million roubles, 1922 model, was opened in the premises of the former Russian Bank of Foreign Trade on the Ilyinka, Moscow. The shares were subscribed principally by the Moscow Soviet. On January 1 the following additional banks were in operation: Pan-Russian Co-operative Bank, Russian Private Bank (Achberg), Industrial Bank, and the South-Western Bank in Moscow, Far Eastern Bank (Tchita), Crimean Agricultural Bank (Simferopol), Ukraine Bank (Kharkov). Plans are being laid for the creation in Moscow of a Northern Bank, to be founded by the former Commercial Bank of Riga and American and German groups, also of a Russian-Netherlands Bank and an Italian Bank.

The tenth Pan-Russian Congress of Soviets was opened in Moscow on December 23. The report prepared by Lenin, who, owing to bad health was unable to attend, was read by Kamenef. He stated that the present congress had as one aim the creation of the Union of the Socialist Soviet Republics (Socialisticheskyy), which includes the Russian, Ukraine, Transcaucasus, and White Russian Republics. On December 30 an agreement was reached

between these States that common action should be taken in matters relating to representation abroad, modifications of frontier, admission of new states to the Union, war and peace, international agreements, foreign trade, code of laws and weights and measures. The central authority will be the Vzik of the Union, which is to meet once a year. Decrees of the Vzik of the Union are binding on all the States.

Kamenef mentioned that in the past year more than 500 applications for concessions and "mixed" commercial organisations had been received, of which 25 had been granted, and 250 were being examined. He was of opinion that the Otto Wulf concession under the form of a mixed company, which divided results equally between German capitalists and Soviet Institutions, should serve as a model for the formation of mixed companies in the future. Speaking of the new economic policy, Kamenef said: "Our aim is to put at the disposal of private capital only those branches of industry which we have not concentrated in the hands of the State. Before proceeding to this new policy we had taken into our hands all the land and forests, while as much as 95 per cent. of the cultivated land is actually worked by the peasants. We have retained 63,000 versts of railroad, on which one million workers are employed. We have kept all the foreign trade in our own hands, and finally, we have conserved the fundamental branches of industry. We are thus entering into a struggle with private capital having in our control 430 trusts, comprising 4,100 enterprises, employing 1,300,000 workmen, and if we add to this the number of workers employed in various State enterprises and railways, we arrive at an army of three million workers. As for private capital, it disposes of what it can obtain from denationalisation and concessions." As to foreign trade, Kamenef observed that for the first time since the revolution Russia had this year exported naphtha (value 14 million gold roubles) and timber (16 million gold roubles). In 1921 Russia had covered 5 per cent. of her imports by exports; in 1922, 23 per cent. The transport situation is difficult, but improving. In 1913 30,000 wagons were loaded daily; in 1918, 7,500; in 1921, 9,500; and in 1922, 11,500. The position would further improve if the necessary materials for transport were forthcoming. In 1919 the railways consumed 88 per cent. wood, due to the failure of the coal output in the Danetz basin; in 1920, 64 per cent.; in 1921, 50 per cent., and in 1922, 40 per cent. wood, the balance being coal and naphtha. In respect of finance Kamenef urged the importance of a stable currency. "Everyone knows," he added, "that currency issue is merely a form of taxation, and of most disagreeable taxation. That is why the issue and a stabilisation of the rouble is the thermometer with which we measure the temperature of our national economy." In January, 1922, the issue was 90 per cent., i.e., taking all the revenue in kind on which we base our expenses, 90 per cent. of this revenue was covered by the printing press, only 2 per cent. being provided by taxes, and 8 per cent. by revenue from the State enterprises—railways, postal service, telegraphs, &c. In September the money issue represented 53 per cent., State enterprises providing 30 per cent., taxes 17 per cent. The sole method of securing a stable currency is to diminish the issue of paper money, and increase the revenue from taxes. Speaking of the budget, Kamenef noted that the deficit of 84 per cent. last year had been reduced in the first nine months of 1922 to 60 per cent., and in the last quarter to 50 per cent. As regards internal trade, Kamenef stated that in pre-war times the peasants took to the free market supplies to the value of 2 milliard gold roubles, in 1922 only about 375 million gold roubles (excluding tax). Bogdanoff, member of the Supreme Economic Council, on December 24th made a report on the industrial situation. He observed that the light industries, as compared with 1920, had increased their production fourfold, but heavy industry was still in difficulties. For enterprises indispensable to the State, but not requiring large capital, Bogdanoff proposed that foreign capital should be invited to assist. On December 25th Sokolnikoff, Commissar for Finance, stated that it was impossible to fix a budget for 1922-1923, for this could only be established for the year following having regard to experience in 1922-23. The number of persons in the pay of the Government must be reduced. While

six million people were in Government employ at the beginning of 1922, the number is now only about 2,800,000, and this will be reduced very shortly to 2,500,000. Sokolnikoff added that the taxes in kind for the period January to September represented 35 millions of gold roubles. This sum was insignificant, being equivalent only to 28 copeks per inhabitant, or 20 times less than before the revolution. From September an increase in the receipts from taxation was shown, and in December the receipts would represent the equivalent of 12 million gold roubles. This will lead to a diminution in the intensity of the money issue.

Orders abroad to the value of £24,000,000 for 1,200 locomotives, 1,500 tank cars, 77,500 tons of rails, 200 boilers, 10 water turbines, 18,500 tons of ties, have in large part been completed by the purchases in Germany, Sweden, Great Britain, and Canada. At the same time the Administration of the State machine construction works has recently reduced the number of employees engaged in wagon construction at Kolomna by 578 workers, and at Sormovo by 524, and anticipate the closing of the Mitichensky and Briansk works, the maintenance of which will nevertheless cost the State 35,000 gold roubles a month. From January 1st the railway tariffs for travellers and merchandise have been increased by 100 per cent.

SPAIN.—GOVERNMENT STOCKS—PUBLIC DEBT—BANK OF SPAIN—BANK LEGISLATION—EXCHANGES.

(FROM OUR CORRESPONDENT.)

MADRID, January 24.

DURING the past year the Madrid Stock Exchange saw a steady rise in Government securities. This is not surprising, as the industrial crisis, which was acute during 1922, caused capital to seek a sure investment, and in this respect it may be said that, in view of the impoverished finances of European countries after the war, Spanish interior loans can be classed as gilt-edged. The position of these securities would be even better were it not for the question of Morocco, which is the main cause of the deficit of the National Budget; but this question is now less formidable, and State borrowings have dropped from 2,706 millions in 1921 to 500 millions in 1922. There have been no consolidated loans issued in Spain since that of June 1, 1919, amounting to 1,656,000,000 pesetas; on the other hand, the floating debt increased from 893 million pesetas on the above-mentioned date to 3,077 million pesetas at the present time, a figure that had never before been reached in this country, and which renders urgently necessary a consolidating operation. While Treasury bonds have shown decided firmness, this prospect has somewhat checked the progress of the other Government securities.

The last annual balance-sheet of the Bank of Spain contains the following figures (in pesetas):—Gold reserves, 2,524,754,280 (increase 12 millions in round figures), note circulation, 4,136,958,850 pesetas (decrease 100 millions). In addition to the usual reserves of 33 millions appears for the first time a reserve for eventualities of 18 millions and a special reserve of 2 millions to finance intervention in the exchange market. The current accounts figure slightly higher than last year, with 1,072,500,000 pesetas. In round figures, the profits of the National Banking Institution in 1922 amounted to 100 million pesetas, against 136 millions in the preceding year. The State participates in this profit to the extent of 50 millions, of which 27 are allotted to the Treasury in virtue of the new Banking law, the advantages of which, to the Bank of Spain, are apparent in the dividend declared, which is 26 per cent. as against 23 per cent., and in the quotation of the shares, which rose 80 points.

Following the Stamp Law, which identifies cheques drawn in one town on another with bills of exchange and applies to the former half the usual bill stamp tariff, a decree has now been signed, on the recommendation of the Supreme Bank Council (*Consejo Superior Bancario*), whereby "crossed" cheques are exempted from bill stamps on compliance with the following conditions:—(a) Cheques must be crossed in accordance with the article 541 of the Spanish commercial code. (b) They must be paid through bank or bankers inscribed in the Royal Com-

MUTUAL LIFE ASSURANCE.

mission list of private banks. (c) Payment must be effected by way of compensation in accordance with indications to be made in due course by the Supreme Bank Council. The application of this measure depends, therefore, upon the establishment of one or more clearing houses, and to this end the above-mentioned council approved and remitted to the Ministro de Hacienda plans for establishing such clearing houses in Madrid, Barcelona and Bilbao. They contain no novelties, but are based upon the principles already applied to similar institutions in other countries. The same Supreme Bank Council, in virtue of powers conceded by Royal Decree, has fixed the maximum interest that may be allowed by Spanish Banks on current accounts at 2½ per cent. per annum and on savings accounts 3½ per cent. per annum. The rates ruling at the present time vary from 1 per cent. to 2 per cent. on current accounts, and 4 per cent. per annum interest is general on savings accounts.

The foreign exchange market has been much more active during the past month, and in view of the improved communications with London by wireless, the latter city has given the lead in the matter of quotations, instead of Paris, as was formerly the case. For the same reason, Barcelona has lost part of its independence in exchange, and follows the lead of Madrid, especially in connection with sterling quotations, as the former city does not yet enjoy rapid wireless communications with London.

SWITZERLAND.—NEW CAPITAL ISSUES—FEDERAL AND CANTONAL FINANCES.

(FROM OUR CORRESPONDENT.)

GENEVA, January 30.

STATISTICS of new capital issues in 1922, just published by leading banks, show that not less than 40 per cent. of all Swiss new issues in 1922 have been made by the Confederation. Under normal conditions the Confederation issued only about one-tenth of the loans offered to the Swiss investor. The demand for money by the cantons and the municipalities was always far larger than that made by the Confederation. The Federal Treasury is not yet by any means free from the results of the war. The deficits on the Federal railways and the postal services expenditure on unemployment relief, the interest on the debts contracted during the four years of mobilisation, are creating every year fresh deficits in the Federal accounts. The Budget for 1923 shows an estimated deficit of 8.1 million francs. The expenses of the Federal Treasury are estimated at 510 million francs, that is to say, two million francs more than in 1921, but 12 million francs less than in 1922. Deficits are now unfortunately considered as normal everywhere, but the Swiss financial crisis is peculiar in every respect.

In 1922 the Confederation received from direct and indirect taxes 170.3 million francs, but the Swiss taxpayer had at the same time to bear cantonal taxation. The direct taxation by cantonal Governments amounted in 1921 to 170.9 million francs. The bulk of normal Sta-

xpenses are discharged by the cantonal Governments. It was only during the war that Federal finance started to play a leading rôle. Under Swiss constitutional conditions the Confederation has to find its income from indirect taxation and import duties.

In 1921 indirect taxation yielded 34 millions for the Confederation, and 24 millions for cantonal Governments. Every attempt to reorganise Federal finances embarrasses the 24 cantonal Treasuries. As a matter of fact, the cantonal Budgets also fail to balance. Their Budgets for 1922 estimated aggregate expenses at 491.8 millions, and revenue at 430.9 millions; that is to say, the 24 cantonal Governments had in 1922 an estimated deficit amounting to about 60 millions. Nevertheless, the financial situation of the 24 cantonal Treasuries is by far more healthy than that of the Confederation. The consolidated debts of the cantonal Governments amount to a total of 1,363 millions, to which a floating debt of about 150 millions has to be added.

It must be taken into consideration that the cantons possess their own State banks, in which they hold a fully paid-up share capital of 401 millions of francs, on which last year the net income was 38 millions of francs. Furthermore the value of forests, electric power stations, and pastures owned by the cantonal Governments exceeds 300 million francs, so that the consolidated, as well as the floating debt of the cantonal Treasuries seems to be covered by productive assets. Under present conditions it is easy to understand why cantonal Governments jealously guard their right to keep the yield of direct taxation for themselves. They have every reason to believe that they will be able within a few years to balance their Budgets.

As far as the Confederation is concerned, the total of accumulated deficits amounts to 1,386 million francs, and will still increase during the next few years. The present project for increasing the income of the Confederation by way of indirect taxation, especially on alcohol, tobacco, &c., and perhaps also by an increase in import duties, although a dangerous matter, might cause some readjustment. But the more urgent task of the cutting down of expenses, and that can only be achieved by curtailing the activities of the Federal Government. During and after war the Federal State shouldered tasks which are better handled by the cantons, or better still by private enterprise.

The present situation in the Swiss bond market clearly shows that Swiss investors have not digested the huge quantity of Federal loans issued during the eight last years.

DENMARK.—ECONOMIC POSITION—TRADE BALANCE—BANKING.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, January 15.

REVIEWS of the result of the year's working have appeared from many quarters. It is generally admitted that it has been a year of crises, but at the same time the opinion appears to prevail that these have culminated, and that now Danish trade will once more improve, even if progress is slow.

One of the clearest and most comprehensive contributions has been published by the Statistical Department, which was able to advance its views immediately after the New Year. The following is quoted from the summary:—"The economic situation in this country at the end of 1922, generally speaking, appears to be that presumably the liquidation by the financial and banking world of errors and extravagances during the war, may now be considered practically completed. Agriculture, which is of such great importance in our economic life, appears to be well on the way to stable conditions, and even if great difficulties are still experienced in many branches of industry, other fields are showing improvement. Naturally, the economic life of a small community like the Danish is largely governed by conditions abroad. Accordingly, much depends upon how the present world-economic problems are solved. But the fact that England's position is steadily improving—as indicated by the continual improvement of the sterling rate in proportion to dollars and gold—must be an advantage to us, unless new and

unforeseen difficulties should arise, as thereby our exports may expect to fetch fairly firm prices. So far, the present condition of our trade does not appear to give reason for pessimism. But our imports of foreign goods have been far more extensive than is desirable, and the reduction of the international value of the Danish krone, which has taken place, must be considered very critical. Both these movements show that consumption has not yet been reduced to correspond to the income at present possible."

To illustrate the above, some figures may be given. The value of the surplus imports of Denmark for the entire year 1922 can be estimated at Kr.265,000,000, against Kr.140,000,000 in 1921. The increase is partly due to the fact that the imports in 1921 were so small that somewhat increased imports of certain goods have been required in 1922. Naturally, this development has had an unfavourable effect on the financial balance with foreign countries. In order to form an opinion of this, however, special note should be taken of the amount of gross freight earnings of vessels in foreign trade during the past year. In 1921 the average amount of Danish steamer tonnage laid up was about 246,700 tons d.w., which practically corresponded to the figure for January, 1922, when a total number of 91 ships were laid up. Subsequently, however, these figures were reduced at a rapid rate, and when, in August, the Steamshipowners' Association discontinued their usual reports on this subject, only six steamers, of an aggregate tonnage of 13,900 tons d.w., were laid up. It may, therefore, be taken for granted that practically the entire fleet of steamers has been active during the second half of the year. These good employment conditions have been counteracted by the downward movement of freights during 1922. As a consequence, it may be assumed that the gross freight earnings in foreign trade of the Danish mercantile marine do not show an appreciable increase on those of the previous year. But on the other hand they have to some large extent to offset the effects of the unfavourable balance of merchandise trade.

It is natural that the serious conditions in the banking world should be traceable in the balance-sheets of banks and savings banks. During the period January-November, 1922, the monthly reports show a decrease of about Kr.350,000,000 in the deposits in private banks, viz., from Kr.3,401,000,000 to Kr.3,055,000,000. At the same time the deposits in the saving banks have increased by just over Kr.300,000,000, and the aggregate amount of deposits in the Danish savings banks at the end of the year may be estimated to amount to Kr.1,800,000,000, or Kr.1,825,000,000.

During the last few months a decided improvement has taken place in the affairs of the Landmandsbank. During December, the balance-sheet total of the bank has been reduced from Kr.1,273,000,000 to Kr.1,252,000,000, but this decrease is due to the account "sundry creditors," as the continual writings off, according to the plan, have caused a reduction of this item by Kr.33,000,000, in which is included the old proprietor's capital. Deposits and current accounts show an aggregate increase of Kr.9,500,000, while during November they declined. This shows that the public have entrusted their means to the bank to an increasing extent. As a sign of the favourable development may also be mentioned that the Landmandsbank has been able to effect an increase of the amount of cash in hand, which is now Kr.39,000,000, the highest figure in 1922.

In the statistical review a series of reports are given concerning unemployment. This reached its maximum in February, 1922, when one-third of all workers, or a total of 100,000 men were without employment. During the next few months unemployment decreased, and after the settlement in April of the great labour conflicts, conditions showed considerable improvement. Even though, as usual, there was some increase in the percentage of unemployed during the last months of the year, conditions at the end of 1922, when about 20 per cent. were unemployed, are very much better than a year ago. Looking at the separate trades an improvement is found, for instance, in the cigar and the boot factories, for which the Act of August 4, 1922, provided possibilities for special protection. But the import regulation of these goods has been in force for so short a time that it is not yet possible to form a final estimate of its effects. In this connection it

should be mentioned that the committee appointed by the previous Minister of Commerce for the purpose of investigating the Swiss import tariff reported to the Ministry shortly after New Year. The report is mainly a review of the Swiss system, and does not make any recommendation. At the present time it appears improbable that the Danish tariff will be increased.

CANADA.—BUSINESS CONDITIONS—EFFECTS OF EUROPEAN SITUATION—PRICES—GRAIN MARKETING—BRITISH MANUFACTURES AND BRANCH FACTORIES IN CANADA—THE PROBLEM OF POPULATION—THE REVISION OF THE BANK ACT.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 16.

THERE is now visible in Canada the normal mid-winter lull in business, but plans are being energetically laid for the spring. Wheat prices, however, have recently sagged about 10 cents per bushel on the Winnipeg exchange, and the welcome advance of December has been lost. But many farmers took advantage of the rise, and the proportion of the crop still in the hands of its producers is smaller than is usual at this date. The grain trade is still uncertain what effect the Franco-German complications will have on grain values, but most Canadians are now convinced that further disturbances of the European situation can bode no good for the prosperity of Canada, and there is general endorsement of the attitude adopted by the British Government. Both wholesale and retail trade remain quiet; retailers' stocks are very low, but they are buying very conservatively, and industry is showing a reasonable activity for the time of year. Substantial orders for new equipment for the national railways have helped certain establishments, and steel products especially such as are wanted for the building industry are in good demand. The milling industry is quiet, owing to the dullness of the market for export flour. All the "forestry" industries are busy, but exporters of lumber find business with Europe a difficult problem. The coal situation is still causing trouble in Central Canada, and in many cities coal is being doled out in small quantities. There are recurring threats of an embargo on American anthracite by Washington, and its enactment would cause serious inconvenience.

There is a slight drift towards higher prices, especially in textiles; one contributing cause is that the gravity of the European situation is operating to the restriction of purchases abroad. The *Labour Gazette* records a small advance in the cost of living; the total of the combined average family budget of fuel, rent, and clothing was \$20.97 on December 1st, as compared with \$20.89 for November 1st, \$21.49 for December 1, 1921, \$26.92 for June, 1920, the highest point, and \$14.26 for December 1, 1914. Butter, eggs and other farm produce are higher materially in price.

The controversy over the wheat marketing problem still occupies the attention of the western farmers. At the Manitoba convention, Mr. T. A. Crerar, the ex-leader of the Progressive party, spoke against any further dalliance with the Wheat Board project, and declared that the hopes based upon it were quite illusory. But the delegates rejected his advice, and demanded a Wheat Board with compulsory powers for the 1923 crop. The provincial Government of Manitoba have somewhat reluctantly announced that they will co-operate in the establishment with the Saskatchewan and Alberta Governments, but before the experiment can be tried, some amendments to the existing legislation will have to be secured at Ottawa.

There is considerable disappointment that more British manufacturers are not examining the possibilities of the establishment of branch factories in Canada. American manufacturers have been fully alive to the opportunities, and to-day there are more than 700 branch factories of American firms operating in Canada. It is true that some British manufacturers have had unfortunate experiences in Canadian ventures, but a prominent Canadian capitalist who recently visited Britain in order to interest firms in

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

the project of branch factories in Canada made this interesting comment on the situation: "The United States manufacturer regards a branch factory in a foreign country, whether in Canada or Europe, as a decentralised portion, but still a unit of the organisation. As such the branch is subject to the same rigid inspection and management as the main or parent concern, and has, therefore, been a source of profit in the majority of cases. The British manufacturer, on the other hand, looks upon the branch as a foreign investment, an agency which will detract from the business of the home plant, for this reason not a particularly desirable form of expansion."

The problem of population is at present a matter of very acute concern in Canada, and it is gradually being realised that the allurements of immigrants is not its only aspect. In their annual addresses, the presidents of the banks all stressed the urgent need for more population, and politicians and railway executives have swelled the chorus. There is great dissatisfaction with the immigration returns, which up to the end of the year showed a fall of 26 per cent. from the parallel figures of 1921, and there is widespread complaint that the Federal Government has not formulated a vigorous policy. Last week it called in Ottawa a conference of the provincial authorities to discuss the problem, and plans were examined for the better co-ordination of immigration. The provincial Governments will undertake no financial responsibilities in connection with immigration, but they will help to compile lists of vacant lands and to locate settlers in suitable circumstances. The state of the Federal treasury does not permit any large scheme of assisted passages, but some attempt may be made to co-operate in the working of the British Government's Overseas settlement scheme.

But what is more alarming than the poor immigration returns is the steady exodus of population from Canada to the U.S. which is to-day in progress. With the revival of business south of the line, and the development in many areas of a boom in building, many kinds of labour have become very scarce in the U.S., and wages have risen. The application of the quota system under the new immigration law has curtailed the supply of labour, which used to come from Europe, and Canada, to which the quota plan does not apply, is now regarded as the best reservoir. The Ottawa correspondent of the *Toronto Star* reports that high wages in the building trade in the U.S. and the prospects of uninterrupted work all the year round, have depleted Canada of bricklayers, painters, plasterers, and other artisans. One third of the membership of some Canadian trade unions is to-day in the United States, and for the last three months fifty families per week have been leaving the Maritime provinces to seek work south of the line. A certain proportion of these emigrants will return, but the majority of them will stay under the American flag. One result of the migration is that there is now a glut of house accommodation in cities like Winnipeg and Calgary, and rents are falling. Simultaneously, however, many farmers in Western Canada, disgusted with the poor returns from the last crop, and their burden of debt, are also pulling up stakes and moving southward. Under such circumstances it is contended in some quarters that before any large sum is spent on immigration propaganda ways should be found to keep the existing population in the country. The general impression is that until the United States modifies its immigration laws the exodus from

Canada will be difficult to check, but if trade keeps reasonably good in the spring, the Federal Government will probably lower some of the present bars to permit the entrance of British artisans who might supply the places of those lost to the United States.

Editorials in papers which enjoy the confidence of the Government seem to indicate that the decennial revision of the Canadian Bank Act will be held over for another year. Mr Fielding has not yet returned from Europe, and the labour entailed in the preparation of the Budget will occupy all his time. Parliament will have to grant authority for the extension of the present bank charters of another year, and the Government may be pressed to investigate the whole banking and credit system through the agency of an impartial commission. Meanwhile in agrarian circles a campaign for drastic reforms is being pushed, and the United Farmers of Manitoba, at their annual convention last week, demanded the establishment of a national bank on the same lines as the Commonwealth Bank of Australia. Their brethren in the other provinces are likely to follow, and the whole Progressive party will come back to Ottawa pledged to support this project.

Letters to the Editor.

MR McKENNA AND CURRENCY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In his latest criticism of the policy of currency deflation, Mr McKenna assumes that the sum of bank deposits and currency is a true measure of the purchasing power in the hands of the public, and deduces from the estimated figures a loss of about £200 millions in the past year. Unless, however, the value of money at the beginning and end of this period is taken into account, the criterion is unsound. The smaller nominal amount, at a lower range of prices, may represent a real purchasing power equal to or even greater than the larger. He goes on to contend that the Government policy of paying off Treasury bills has the necessary effect of depleting bank deposits. In answer to the obvious objection that a bank so dealt with has a superfluity of cash which puts it in a position to recreate the lost deposits, he merely replies that it is the practice of banks to lend surplus cash to the money market, which uses it to repay sums borrowed from the Bank of England. But surely if the loss of deposits reaches dimensions which causes serious inconvenience, it is open to the banks to modify a practice which leads to such results? It is not the policy of deflation which is to blame, but the conservatism of bankers. Again, when the loan from the Bank of England is paid off, what is that bank to do with the cash? It cannot, obviously, lend it to the market, which doesn't want it. Apparently the only thing it can do is to increase its own deposits. Thus the deposits lost by the banks are made up by increased deposits at the Bank of England, and the purchasing power of the public, as a whole, is unaffected. So, at least, it seems to a layman.—Yours faithfully,

H. H. O'FARRELL.

January 29th, 1923.

THE CAPITAL LEVY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Why is it that advocates of a levy on capital refuse to face the facts? The war, as Mr Withers has pointed out, was paid for as it went on partly by the depreciation of the currency, partly by the continual issue of War Loans and Bonds. Depreciation of the currency acts as a concealed income-tax on all persons, without exemptions or allowances; the issue of war loans acts as a concealed levy on existing securities of nearly every kind, including mortgages.

Twenty or thirty years ago people used to talk about "permanent" and "precarious" incomes, and Sir Charles Dilke's Income-tax Committee boldly altered its terms of reference and substituted "unearned" for the first word and "earned" for the second. We now see that under stress of war the meanings are reversed, the income from investments sinks with every fall in the pur-

chasing power of the pound sterling, while wages and salaries can be, and, in fact, were, raised continuously. I am inclined to doubt whether wage-earners and the (lower) salaried classes made any direct contribution towards meeting the cost of the war.

People with large salaries, such as judges, ministers, and bishops, had their purchasing power cut down by more than one half; the same is true of people with small incomes from sound securities, while those unfortunate people who used to draw large incomes from land, houses, and cottage property hardly drew any net income at all. I admit that a few people made fortunes out of the war; perhaps wars would not last so long if some persons did not make money out of them. Such persons ought to have paid an excess income-tax, for some of them escaped the E.P.D.

Already property-owners pay a higher rate of income-tax than other persons with similar incomes, and they pay a special tax called Death Duties; why should they be asked to bear a further burden in order to relieve people who are just as well able to pay taxes?—Yours, &c.,

J. E. ALLEN.

1 Mitre court buildings, Temple, E.C. 4.

THE RISING IN MEMEL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Harley misrepresents the contrast, not, as he says, the "parallel," drawn in the *Economist* of January 20th, between Danzig and Memel. Danzig is a city with a territory of German inhabitants surrounded, for the greater part, by territory of which the inhabitants are also German. The somewhat shadowy Polish racial character of the "corridor" was hardly more than an excuse to give to Poland a much-needed access to the sea. On grounds of race alone, the separation from Germany of Danzig and its territory, and indeed of almost the whole Polish corridor, could not have been justified. In the case of Memel, the long strip of territory is purely Lithuanian, the hinterland is Lithuanian, and the port town alone, separated completely from any land of German inhabitants, is German in character. It would be unfortunate should a special privilege granted to Poland in the case of Danzig be made the excuse, by a false analogy, of a grave injustice to Lithuania.—I am, yours &c.,

THE WRITER OF YOUR NOTE.

London, January 29th, 1923.

Books and Publications.

PUBLIC FINANCE.*

A TEXT book of moderate length upon this subject, presenting modern developments and preparing readers for the future outlook has been badly needed. This need is well met in many respects by this volume. The author has obviously been at pains to subdue those advanced political views which are associated with his Parliamentary Labour candidature, and to win adherence by measured academic calm and poise, but he has not been invariably successful. The scarlet doctoral robe does not completely hide a decidedly reddish tie; *Cucullus non facit monachum*, indeed, but the hood may also cover more than a monk. Dr Dalton does not produce a highest common factor of all extant views on public finance, nor, indeed, claim to be giving the body of "received" opinion. This is one drawback for the unwary student, who will not always be aware when the author is speaking for Dr Dalton, and when he speaks for public finance professors in general. The open advocacy of the Capital Levy—the desire for the Rignano death duty taxation—and such a passage as: "There is much to be said for the extension of this principle (payment out of rates) to cover the supply of working class houses at uneconomic rents, and of bread, clothing, and other necessities of life, below cost price, and also in the

* "Principles of Public Finance." By Hugh Dalton, M.A., D.Sc. (Econ.), Cassel Reader in Commerce in the University of London. (London) George Routledge and Sons, Limited. 5s net.

interest of the development of human efficiency"—these features make one wonder whether this text book will be as readily received in academic and University circles as, on merits, it deserves to be.

The condensation of treatment and the wide variety of matter is often strikingly well done, although some passages, clear to the initiated, will suffer in clarity for the newcomer in consequence of it. There is a healthy and stimulating challenge to shibboleths, and a re-examination of catch phrases which is generally justified. Occasionally, however, the desire for an independent position betrays the author into discussing valuable and valid ideas with flimsy and indefensible debating points. I bought a piece of land, rent £20 (subject for the last 120 years to the old land tax £1), and I am told that the incidence of the tax is "upon" me. Why? Because if the tax were repealed I should get the benefit of the relief. This is playing with words. In the same way the capitalisation of a differential burden is disposed of, and a whole body of doctrine of great practical importance to-day is dismissed almost with a sneer. The incidence of the benefit of remission is, of course, a totally different thing from the incidence of the tax itself.

In discussing the proposal to substitute a variable for a fixed rate of interest, Dr Dalton fears that it would encounter prejudice on the part of a large section of investors who are still ignorant or distrustful of index numbers. We met recently a city merchant of wealth and long experience, who prided himself as a man of affairs, and who had never heard of an index number till to-day, and still less understood what it purported to do!

For the general reader, the book is interesting and valuable. For students who have to face unknown examiners with unknown views on open public questions, it would have been safer if the text had shown clearly where the officially accredited teaching of the London School of Economics ends, and Dr Dalton's personal adventures in political thought begin. It would be as well for the examinee to know at what point Professors Cannan and Foxwell of this University would cease to give him full marks.

INDEX NUMBERS.*

OF the making of index numbers there is no end. Professor Fisher discusses 134 forms, and so long a study of them is a weariness to the flesh; but, fortunately, it is possible to state the main arguments and results of this book in a fairly simple form. Professor Fisher has equally in mind the measurement of changes of prices and of quantities; the data can always be given in the form—price at first year (or place) p_0 , at second year (or place) p_1 ; quantities, marketed or otherwise brought into account, q_0 , q_1 . An index number is a weighted average of the price-ratios, such as p_1/p_0 , or of the quantity ratios, such as q_1/q_0 , the weights being obtained by some arrangement of the four letters p_0 , q_0 , p_1 , q_1 . A so-called unweighted index number is merely a particular case where the weights assigned in one of the years are equal. The geometric mean is for some reasons preferable to the arithmetic mean, but numerically it is often in different which is used.

With these general ideas the best form of index number is sought, by the avoidance of formulae which are liable to give erratic results, and in particular by the application of "Two Great Reversal Tests." Under Test I. "the formula for calculating an index number should be such that it will give the same ratio between one point of comparison and the other point, no matter which of the two is taken as the base." For example, the *Economist* index number of wholesale prices fails under this test, for it expresses prices in 1923 as percentages of those in 1901-5 without any adjustment, while if the calculation was made by expressing prices in 1901-5 as percentages of those in 1923, and taking the simple average, the resulting ratio would be different. Under the test, if the ratio 100:150 is obtained by the *Economist* method, the ratio

* "The Making of Index Numbers—A Study of Their Varieties, Tests, and Reliability." By Irving Fisher, Professor of Political Economy, Yale University. Pp. xxiii + 526. Boston and New York. Houghton Mifflin Company. Price, \$7.50.

Industrial Financing

obtained by working backwards ought to be 66 2-3:100, but, in fact, it would give a number greater than 66 2-3. In order to satisfy this test, it is necessary to use estimates of quantities at both dates, and to take some average of these quantities or of the index numbers resulting from forward and backward working. But this test, plausible as it appears, is not always valid. If we had applied it to a comparison of prices in 1917 and 1913, we should have assumed that the restricted war budget had equal importance with the normal budget. Also the test is too formal. The *Economist* number, worked forward, assumes that the 44 items included were equally important in expenditure in the years 1901-5. In working it backwards from 1923 we are not bound by our formula to assume equal importance in the latter year (as the Test assumes); and, in fact, we shall get a number equal to the forward number if we weight the ratios on the assumption that the new expenditures are proportional for each commodity to its price ratio, which would be true if the consumption of commodities changed all in the same proportion. Nevertheless, the index number would be improved, if its basis were frequently checked by production and consumption records, and the resulting number averaged with the existing number.

Professor Fisher is much too severe in condemning the *Economist* and *Statist* numbers as unweighted; for in both cases the items were so chosen that the weights implicitly given to sub-groups were in proportion to their importance. Weighting by aggregating entries of similar commodities may be preferable to weighting by applying factors to dissimilar commodities.

Professor Fisher's Second Test is not so simple in idea. He assumes that the index measuring change of price multiplied by the index measuring change in quantity ought to measure exactly the change in expenditure, a statement which, though plausible, requires analysis and proof. For instance, in the annual calculations on the previous year's trade given by the *Economist*, we have such a statement as the increase in the value of exports was 21 percent. (measurement of expenditure $p_1 q_1/p_0 q_0 = 1.21$) the average increase in price was 10 per cent. ($q_1 p_1/q_0 p_0 = 1.10$), and the increase at unchanged prices 10 per cent. (measurement of quantity, $q_1 p_0/q_0 p_0 = 1.10$). The product of the second and third measurements exactly equals the first, as by the Second Test it should. Professor Fisher, however, holds that, since quantities and prices enter symmetrically into the problem, the quantity and price measurements should also be symmetrical, obtainable one from the other by interchanging p and q —a postulate and a conclusion which require close examination. Since in the end it is generally only a minor difference in weighting that is involved, perhaps the Test is not of great importance.

As a consequence of the analysis, the geometric mean of the forward and backward weighted arithmetic index numbers is taken as the "Ideal Index Number," an certainly, if the necessary data are available, it is a ver-

good one, and has the support for special purposes of many statisticians. But it remains that the choice of the most suitable formula depends on the problem in hand, and that whatever the ideal the computer is limited by his data.

We recommend all serious students of the subject to work carefully through the book, for it contains very much that is important, new, and practical.

This publication is in four sheets, on the scale of $7\frac{1}{2}$ miles to 1 inch, and it is claimed to be the first comprehensive map of the Mexican oil regions to be published in Europe. It shows in colours the fields in operation, prospective fields, pipelines, ocean terminals, railways, &c. An inset map of the whole of Mexico, on a smaller scale, shows the oilfields in exploration and exploitation, prospective oilfields and prospective coalfields. The price of this publication in sheets, unmounted, is £2 2s.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
February 7.	February 8.

Business in the markets of the House has fallen away in remarkable fashion as compared with the rush which prevailed during the three previous weeks. Although the Stock Exchange is supposed to have shaken itself free from the sympathetic influence of localised foreign politics, the present week has demonstrated clearly enough that when serious events are abroad neither investor nor speculator will seek the markets of the House for profit. People have been cancelling their buying orders, and some of the weaker bulls, who went, perhaps, rather too far in their previous excursions, deemed it prudent to shorten sail. Towards the end of the week a better tendency became noticeable, but with another settlement in sight the disposition on the part of the public is to let stocks and shares alone for the moment, and to give the run of the markets to bargain-hunters on the one hand and to forced sellers on the other.

The acceptance by the British Cabinet of the American proposal for repayment of Great Britain's war debt to the United States led to a rise in stocks in New York, but was greeted without much enthusiasm on this side. Quiet satisfaction prevailed in the Consol market. The War and Conversion Loans put on a spurt, but the best levels were not held. More immediate gratification was felt at the release of the tension caused by the Turkish attitude at Lausanne. Amongst the newly-issued stocks in the Consol market, New South Wales scrip has gone back a little, while the Port of Calcutta bonds,

over-subscribed when the prospectus appeared, fell to a small discount upon the appearance of the allotments and the starting of the market. Home Railway prior-charge stocks gave way in a number of cases.

French bonds, Government and railway alike, have been acutely flat, and when the franc touched 80 on Wednesday afternoon both French Fours and Fives fell heavily. British investors who bought the bonds, and who still hold them, are frankly alarmed at the outlook, and the policy of France in the Ruhr district arouses grave apprehension amongst bondholders, however it may be regarded by others who are interested. German bonds are more or less a nominal market. Russians have been marked down in a few instances. Belgians are lower. The South American group is tolerably steady, considering all things. Chinese bonds remain heavy, and the premium on the Dutch East Indies scrip has gone back about a point from the top. Montenegro bonds are materially better on the week.

Home Railway stocks suffered with the rest of the markets, but the heaviness yesterday showed signs of passing off. The preferred remain firm, investors being attracted by the reasonable yield, combined with the security offered. Undergrounds advanced on the excellent Metropolitan Railway dividend. Grand Trunk Pacific debenture further improved; Mexican Rails have drooped. The Argentine railway market came in for a good deal of profit-taking, which made its effect felt upon quotations. Antofagasta, after a brisk rise, relapsed again, and the Brazilians moved down with the rest of the list.

Rubber touched 1s 6d per lb earlier in the week, but this favourable influence was more than counteracted by conditions prevailing elsewhere, and, upon a fall of a penny in the price of the raw produce, the market became heavy. Oil shares were lowered on what were described as sales from Paris, though these were certainly supplemented by others from quarters nearer home. The tobacco group is lower; textiles are mostly easier, with the exception of Bradford Dyers. Rumours of the profits which the Marconi Company is said to be making, through the extension of broadcasting, led to a recovery in the prices of various Marconi shares, a recovery which, however, was not entirely held, and the cable stocks show no change.

The gas market is dullish, in spite of an increased distribution from the Gas Light and Coke Company. Electric lighting shares show up brightly in the prevailing quietude amongst industrials, something like a dozen rises, and those fairly substantial, being scored by the shares in the leading London companies in consequence of the good dividends now being announced. There is nothing much doing in shipping shares, nor in the banking and insurance groups. Most of the speculative and semi-speculative issues are lower. Watney Brewery stocks hardened on the dividend announcement; Borax deferred also firmed up on the maintenance of the $12\frac{1}{2}$ per cent. distribution. Dunlops and motor shares have sagged.

The Kaffir market is quiet, with a heavy tendency for choice, though movements are small and unimportant. Copper and diamond shares are moving according to the way in which Paris pulls the strings. The excitement over certain Rhodesians, Cam and Motor and Selukwes especially, has been remarkably well maintained. Prices underwent fairly sharp fluctuations, according to the moods of the moment. A sharp rise in Akims occurred on news that the Russo-Asiatic Corporation is taking an active hand in the Akim companies. Mexican mining shares, after a burst of strength, subsided again as the speculators got out in consequence of the threatening aspect of foreign affairs. The tin-mining markets are very quiet.

Stock Exchange shares remain hard at 108; members are reminded that they should send in their applications for re-election to membership in respect of the year beginning March 25th next.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

1916	101,962,190			

Dominion of New Zealand (Wellington City Antecedent Liability Loan, 1922).—This is an issue of £340,000 5½ per cent. debentures of £100 each at £99 per cent. Capital and interest is payable in either London or New Zealand at the holder's option. The debentures now offered are for the purpose of extinguishing the antecedent liability of the Wellington City Council. This liability arose from the fact that the Council, finding it impracticable to raise loans during the late war, were compelled to carry out their capital works from funds provided out of revenue, temporary borrowings, and deposits received from the public. This liability has to be extinguished by March 31st next. The loan has a currency of 20 years, and is repayable by 1943. It, together with a sinking fund of 1 per cent. per annum, amounting to £3,400 per annum, is secured on a special rate of ¼d in the pound on the unimproved value of all rateable property in the City of Wellington. This special rate will yield an annual sum of £31,109, but the corporation has power to increase the special rate if necessary. The loan is free from all New Zealand taxes unless held by persons domiciled in the Dominion of New Zealand. A good debenture of its class.

Bolokow, Vaughan, and Co., Limited.—Authorised share capital £5,000,000, of which £4,227,720 has been issued and is fully paid up. The authorised debenture issue is £2,000,000, of which £1,000,000 has been previously issued and £1,000,000 is now offered for sale, bearing interest at 6 per cent., at 99½ per cent. The principal is repayable at par on July 1, 1943, the company having the option to repay at an earlier date, but not before January 1, 1928, at 102 per cent., subject to three months' notice. Although the debentures are but a first floating charge on the assets of the undertaking, the company agrees to refrain from creating any charges ranking in priority to or *pari passu* with the £2,000,000 debentures, except to secure bankers' loans or overdrafts in the ordinary course of business. The purpose of the present issue is to provide the cash consideration for acquiring an interest in Redpath, Brown and Co., to refund to the company moneys recently expended on improvements in plant, and to provide additional working capital for the company and its subsidiaries. Net assets are valued at £6,439,097, fixed assets being taken as £5,462,138. The company's mineral resources are excellent in extent and convenience of situation, but the drastic policy of the company in keeping most of its plant completely shut down during 1922 has given rise to critical comment in the trade. The issue, however, looks as if it was fairly well covered as regards capital, and in normal times as regards interest.

The Lancashire Electric Light and Power Company, Limited.—The authorised capital amounts to £1,100,000 in £1 shares, and consists of 599,975 6 per cent. cumulative first preference shares, of which 540,000 have been issued, 250,000 7 per cent. cumulative participating preference, of which 137,500 have been issued, and 250,025 ordinary, of which 152,363 shares have been issued. The issued capital of £829,863 includes the 75,000 6 per cent. first preference shares, but not the 7 per cent. preference and ordinary shares referred to below. An advertisement in the Press, made to comply with Stock Exchange regulations, states that the company has accepted an offer made by the Power Securities Corporation, Limited, to purchase the following shares:—(a) 75,000 6 per cent. (income-tax free up to 6s in the £) cumulative convertible first preference shares of £1 each, at the price of 21s per share; (b) 75,000 7 per cent. cumulative

participating preference shares of £1 each, at the price of 21s per share; and (c) 75,000 ordinary shares of £1 each, at the price of 20s per share. The company has also given an option to the Power Securities Corporation, Limited, to purchase up to June 30, 1923, an additional amount of 22,637 ordinary shares of £1 each at the price of 20s per share. The whole of these shares will rank *pari passu* with the existing shares of each class. Investors will naturally acquaint themselves with further details of the progress of the company before taking an interest in the undertaking.

Pandan Tea Company, Limited.—Authorised capital £300,000, divided into shares of £1 each, of which 210,000 are now offered for subscription at par. This undertaking has been formed primarily to acquire certain estates in Java. Two of these are registered in the names of Java companies and one in the name of a company incorporated in Holland. The shares in these companies are held by English companies, and it is intended that the Pandan Tea Company shall acquire all such shares, and will not take conveyances of the estates, but will work them through the agency of the registered holding companies, which will be under the control of the Pandan Tea Company. The total area of the three estates exceeds 9,000 acres, of which 5,050 acres are cultivated. The prospectus states that there are four large, fully-equipped tea factories, together with stores, offices, and houses. The purchase price has been fixed at £228,430. This price, it is stated, is based upon values of £45 per acre for tea, £15 per acre for cinchona, £10 per acre for timber, and £1 per acre for reserve land, and is payable as to £70,000 in shares and the balance in cash. This may be regarded as a fairly reasonable proposition.

Irvin and Johnson (South Africa), Limited.—Incorporated under South African laws. Authorised capital £750,000 in £1 ordinary shares, of which 550,007 have been issued. This is an offer for sale of £350,000 7 per cent. first mortgage debentures at £98 per cent. These debentures are secured by a trust deed in favour of the Standard Bank of South Africa, creating a first specific charge on its lands, properties, and fleet, and a general charge upon all other assets. They will be repayable at par before January 1, 1943, by annual drawings at par or purchases under par commencing in 1924, or the company may repay the whole or any part of the issue at 102½ per cent. on six months' notice. The company carries on the business of trawling and fishing, and its fleet is valued, on the basis of a valuation made in February, 1921, at £335,417. Total assets are given as £905,814, while profits are shown from 1913. A somewhat speculative proposition.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

LONDON COUNTY WESTMINSTER AND
PARR'S BANK, LIMITED.

MR. WALTER LEAF'S REVIEW OF FINANCE AND TRADE.

NATION'S IMPROVED TRADE PROSPECTS.

FALLACY OF INFLATION POLICY.

BANKS AND AGRICULTURE.

NAME CHANGED TO WESTMINSTER BANK, LIMITED.

The annual ordinary general meeting of the London County Westminster and Parr's Bank, Limited, was held, on the 1st instant, at the head office, 41 Lothbury, London, Mr Walter Leaf (the chairman) presiding.

The secretary (Mr F. Mytton) having read the notice convening the meeting and the report of the auditors,

CHAIRMAN'S SPEECH.

The Chairman, who was received with applause, said: Ladies and Gentlemen,—It is with somewhat mixed feelings that we must all look back upon the year through which we have just passed, and for which the board has now to render you an account of their stewardship. The world has still been suffering from the throes of unrest, and from the deferment of that peace for which we have long been yearning, and at the moment it is hard to see much hope, on the Continent at least, of any better times. But in England at least we have been endeavouring to do our duty, and not without some measure of success from the banker's point of view.

STABILISATION.

If we seek for a single word which may describe the past year, we may, perhaps, say that 1922 has been for this country a year of stabilisation. Fiscally, we have been engaged in stabilising the £. This has been effected by just balancing the budget, and leaving nothing over for the payment of debt. How this has worked out in practice is strikingly shown in figures which have been put before me on the highest authority. It appears from these that the capital repayments during the past year, mainly, of course, in War Bonds falling due, have amounted to £99.7 millions, while the issue of Treasury Bonds during the same period has been £99.5 millions. It would hardly be possible to contrive a closer approximation, a better example of exact stabilisation. We have thus avoided adding to the suffering involved in deflation, and, on the other hand, we have escaped the far greater evils which accompany inflation, ills of which Germany is at present giving us a terrible example. The result of this policy is that prices have during 1922 been remarkably steady; in other words, the purchasing power of the £ has been stabilised. And at the same time we have seen the \$ decreasing in purchasing power in the United States, and the outcome is that the £ and \$ have come close together, and to all appearances it will not be long before they meet at the gold parity. The fall, I take it, represents the decrease in the value of gold owing to its exclusion from use as a circulating medium, and is likely to be of a permanent nature. On this point, however, I need not dwell here. I will only take the opportunity to repeat what I have had occasion to point out elsewhere—that the recovery of the £ in terms of the \$, reckoned from the lowest point, means a diminution of our debt to the United States of over £432½ millions. This in itself is a justification of the policy pursued by our Government, and an emphatic warning against any siren voices which may lure us to depart from the strict road of fiscal honesty in order to gain a momentary stimulus to trade at the expense of a subsequent deadly reaction.

RESULTS OF RISE IN £.

This approach of the £ to the par of exchange means in the last resort that our excess of imports over exports must have been more than balanced by invisible exports, and that we must have had during the year a favourable balance of at least the amount of about £25 millions, which we have provided towards the repayment of our debt to the United States—a repayment which does not, I take it, represent an actual diminution in our total indebtedness, but has been rather a conversion of external into internal debt. The facility with which this large amount in \$ was bought, without in any way turning the exchange against us, was a matter of common remark. It was doubtless an effect of the coal strike in the United States, which stimulated our exports. But there must

be deeper causes than this at work; and I observe that Mr Hoover, looking at the question from the other side, has forecasted for the United States the near approach of the point at which their imports will balance their exports, and the gold accumulated in the United States' Treasury will begin once more to flow outwards. That is in itself a forecast of improvement in our own export trade, and the course of the last year has done much to strengthen the grounds on which this sorely needed improvement may be expected to realise itself in the not distant future. In other words, the efforts which have been made on the part of masters and men alike to reduce the cost of production are already bearing fruit, and, through reduced prices, we are on the way to recover the position which we held in international trade before the war.

UNEMPLOYMENT.

But we must not talk about good times while we still have unemployment on its present scale. It has, indeed, been much reduced during the year, but there are still nearly a million and a half of men crying out for work. Now, this dark cloud of unemployment is essentially a world phenomenon—at all events, a phenomenon which, in one form or another, reappears in all the countries which were deeply involved in the war, and in those which are most closely dependent on them. The United States, though they suffered comparatively little from the war, have had their experience of it; but in the position of comparative independence which their vast internal resources give them, they appear already to have passed through it successfully, and have given us good guidance in the path which we must follow—that of hard work and making the most of such opportunities as we have. The plain fact is that we are all much poorer after the gigantic waste of the war—how can it be otherwise?—and are feeling the pinch of poverty. Some countries are absolutely ruined: Russia, for instance, is economically moribund, and has ceased to produce the large contribution which she used to make to the subsistence of the human race. Germany, if I am not mistaken, is well on the road to ruin, and is probably not producing enough for her own needs. Turkey and the Near East are now out of the running. And in many other countries in Central Europe production has fallen to a low ebb. The total population of Europe has been diminished by the war, but not nearly so greatly reduced as its productive power. There is less being produced to-day per head, and thus there is less to go round. The standard of living has been lowered, and we are all feeling poorer.

BURDEN OF TAXATION.

And, of course, we feel the burden of taxation which honesty involves; we feel it very acutely, and it can be no cause for wonder if complaints are loud at times and the outcry for relief becomes urgent. So far as the cry takes the form of an insistence on reduced expenditure, the one means by which taxation can be legitimately reduced, it must have all our sympathy. One wishes one could feel more confidence that this reduction is being pursued and enforced with all the rigour which it requires. To that end we should strain all our energies. But when one sees suggestions that we should not attempt to pay our way, that we should accept a deficit in the Budget and borrow the money in order to relieve the burden of the moment by throwing it vaguely somewhere on the future, then it is time to raise the voice of protest. That is the start on the fatal slope of inflation. Germany shows us the end towards which it leads. It means a reduction of taxation by the most cruel and unjust form of capital levy, a levy the chief weight of which will fall on savings, irrespective of the capacity of the owner to bear the burden, a levy which will be as heavy on the owner of a single War Savings Certificate as on the proprietor of a million pounds' worth of stock, while it will spare entirely the gambler in oils or rubber or gold. That is a capital levy which no one can possibly defend except the industrial interests which look to profit by it.

INFLATION NO REMEDY.

Naturally there is everywhere a tendency to shift the burden on to one's neighbour, if it can possibly be done. In Russia the whole burden has been thrown on the well-to-do, who have been exterminated, with the result that the proletariat has been reduced to starvation and some two or three millions have died of famine. In Germany, by the device of inflation, the burden has been thrown upon the middle classes and the thrifty, who have seen their savings taken from them and handed over to industrial profiteers who have passed on to their workmen just a living wage. Unemployment has been avoided for a time out of the pockets of the steady-going citizens, but a larger sum by far has been passed on to men of the class of Herr Stinnes, and, one is inclined to believe, removed for investment outside Germany. Inflation in Germany has proved an extraordinarily wasteful and ill-applied dole for unemployment. Here at home we have at least avoided any camouflage in the matter. We have taken the ground that we must all stand or fall together; that every man has the right to maintenance if, by the working of our economic system, he becomes, by no fault of his own, incapable of earning it in the normal way; in short that, if there is not enough to go round on the old scale, all must contribute to the deficiency in proportion to their ability. In other words, we put the burden frankly on the taxpayer, and at the same time we endeavour to adjust our system of taxation so that it shall really reach every one according to his power to sustain the burden. Our system of doles and of assisted relief works, in spite of its obvious and very serious drawbacks, is at least honest: we know where we are. None the less, it is necessary to recognise in the alternations of abundance and shortage of work a grave defect in the existing industrial system, one which it behoves us to do all in our power to remedy. The ill has been greatly aggravated by conditions due to the war; but it is always with us; hunger-marches are no new phenomenon, and are the symptoms of a disease which sorely needs a remedy. It is a recurrent disease: it has its accesses and passes off. But each recurrence should teach us something. Had it not been for the disasters of the war, the Unemployment Insurance plan would have gone far to meet the evil, and it is in that direction, perhaps, that we must look for most help. But at all events there are grounds for hope in the growth of free and frank discussion of conditions between employers and employed. The evil is common to both sides, and it must be alleviated by co-operation. From this point of view it is all to the good that Labour should have taken its due place in the councils of the realm.

THE CONTINENTAL OUTLOOK.

But the immediate problem of unemployment depends on the prospect of such an early improvement in trade and industry as will afford the natural, and therefore most efficient, remedy for the present troubles. It must be confessed that the Continental outlook at least is not encouraging. The recent action of France on the Ruhr can only be viewed with the gravest anxiety, the more so as it serves to complete the economic collapse which Germany had already been to all appearances rapidly approaching. It is clearly impossible to hope for any great revival of trade from any of our old customers in Central Europe, whose recovery is entirely bound up with that of Germany; and we must draw what little consolation we can from the fact that so important an industrial rival as Germany has practically withdrawn from competition, except for certain classes of goods where she holds a monopoly—notably dye-stuffs. That, no doubt, counts for something, but it is only a short-sighted view which would see in this an equivalent for the general prosperity which was interrupted by the war. Looking further East, it is clear that Russia, in an almost moribund condition, is making tentative advances towards a revival of the capitalist system which has been so ruthlessly annihilated; but no recovery for our trade can be looked for in that quarter, so long as no confidence whatever can be placed in the good faith of the governing class. It is not likely that credit will be extended to those who, to judge from their actions in the past, will not hesitate to confiscate if they see a monetary advantage to themselves in so doing. In China, political chaos hinders the recovery of our trade; and in India, though conditions have improved, the return to prosperity is slow and uncertain.

PROSPECTS OF REVIVAL.

But in spite of all this there are definite signs of a strong trade revival, which is already doing something to diminish unemployment, and seems likely before long to do a great deal more. You will have seen the encouraging reports of recovery in the papers, and these are fully confirmed by the returns which we receive from our own managers in the different industrial centres. Perhaps the trade which is suffering most is cotton manufacture in its various stages; there the weakness of the demand from India and China stands in the way of active business. But in the iron trade

and its various great branches, from the blast furnace to the steamship and the railway locomotive, we hear on every hand of renewed activity. The coal trade is very active, and exports are growing. It is noteworthy that the United States and Canada are taking our coal, and offer markets which are largely new, and will, it is confidently hoped, be permanent. At the same time, it must be noted with regret that the profits are poor, and that the miners in many districts obtain their minimum wage only by heavy drafts upon the share of the surplus which is recognised as duly belonging to the owners. In the textile industries, though cotton is depressed, wool is doing well, and the hosiery trade has fully maintained the activity which was observable twelve months ago. The heavy chemical industry has made steady progress during 1922, home trade being assisted by reductions in railway rates and lower production costs. With the exception of South America, where the exchange has been adverse, exports have expanded. And, generally speaking, there is a tone of confidence for the future from many quarters. Blast furnaces are being blown in, works reopened and even extended, and new ships placed on order. It will be for the coming year to show if these hopes are to be translated into profits. For the moment at least they are mainly hopes, and have not affected our balance-sheet in the place where one looks with anxiety for trade revival, our advances to customers. These have been very steady throughout the year, but at a point below what we should like to see touched. That will not be reached when the new produce of extended industry comes forward to be financed for marketing.

POSITION OF AGRICULTURE.

There is one industry of which I wish in this connection to say a few words, the industry which is, in fact, the greatest in the country—namely, agriculture. That agriculture is not in a flourishing condition is unfortunately only too well known. But I sincerely hope that the conditions may not be so desperate as some would have us believe. We most heartily sympathise with farmers in the very heavy losses they have had to face in the drop in the value of stock of all sorts. But it must be borne in mind that this capital depreciation is to a great extent only a reaction from the great profits made by appreciation during the war, and I have heard it seriously questioned if the farmers are not, on the whole, better off, even after writing down their stocks, than they were before the war.

Another heavy burden from which many of them are suffering just now is that of the loans which they have incurred for the purchase of their farms. There was a great rush to buy at the very top of the market; the money was largely borrowed for the purpose, and the interest remains as a permanent charge. Now I have noticed with some surprise a tendency on the part of persons claiming to represent the farmers to blame the banks in this respect. It has, of course, always been the privilege of the farmer to grumble, and so long as his complaints were directed against his natural enemy, the weather, no one would grudge him his privilege. But the banks really have some cause of complaint when they find themselves treated just as if they were so much weather. After all they can show some reason for their actions.

You are doubtless aware that a committee has been appointed to inquire into the grievances of agriculture, including the supposed grievances against the banks. To this committee we have been pleased to show the figures for which they asked. I cannot, of course, anticipate their report, but it would surprise me if they found that there was any justification in the grumbles of which I have spoken.

THE BANKS AND AGRICULTURE.

One of the main complaints against us is, strangely enough, that we are pressing for repayment of the money advanced for the purchase of farms, regardless of the straits in which the farmers find themselves. Now if the complaint had been different—if it had been that by our extreme liberality in lending on very easy terms we had lured the farmer into buying at the top of the market, perhaps there might have been some ground for it. But the complaint is not of over liberality, but of undue severity. To meet this I will give you some of the figures that we have supplied to the committee. I may say that our own bank is, perhaps, less widely spread in agricultural districts than some of our neighbours. But we have very large farming connections in such districts as the Home Counties, Somerset, Cheshire, Derbyshire, and Yorkshire, and I do not doubt that our own experience is typical of that of other banks. We have, in fact, advanced to farmers for the purchase of their holdings over £2 millions. And this amount is not being called for. We have had the figures taken out for the two dates asked for by the committee, August, 1921, and August, 1922, and we find that at this latter date, instead of having been reduced, the total had actually increased. The complainants will hardly maintain that there has been much fresh buying of holdings during these twelve months. It therefore follows that instead of

pressing for repayment of old debts, we have actually been helping the farmers by increasing our loans on their property.

BANKS AND THE SMALL FARMERS.

So much for the first complaint. But there is another of a more far-reaching character, which is continually being urged against us, and with which I should like to deal now once for all. It runs to this effect: "The old private banker, living on the spot, knew his customers personally, and was not afraid to advance to them on the strength of his knowledge, without demanding full security. But these modern joint-stock banks, managed from London, and giving no scope to local and personal knowledge, must have full security for every penny they advance; the farmer, and more especially the small farmer, has no chance, and the coming of the joint-stock bank is a disaster for him." Now mark "how a plain tale shall put you down." To begin with, the small farmer is said to be thrust aside in favour of the big man. Now the average amount of our advances to farmers taken throughout is no more than £800 per customer. And this includes the Home Counties, where the farmers are, on the whole, bigger men. If we take what we call "Parr's districts," which include Somerset, Cheshire, and Yorkshire, the average over all is only a little over £500 per loan. And I need not point out that this includes a good many large loans, so that the number of loans below £500 must be very large in proportion in order to make the average so small. We have on our lists of borrowers farmers with so small a holding as two acres each. So you see there is no ground whatever for the complaint that the small man is not getting his fair share of what is going.

QUESTION OF SECURITY.

And now as to the rigid demands for security which the hard-hearted banks are supposed to make. We have had the figures taken out, and I confess they were something of a surprise to me. They refer, of course, to the loans we make for current business purposes. They show that of the total number of borrowers no less than 28 per cent. had their loans wholly unsecured, and a further 13 per cent. only gave partial security. In other words, 41 per cent. of the farmers who borrowed of us received credit on that personal knowledge by our managers of their character and business, which we are accused of totally ignoring. And I should like to add, to the honour of our managers and their judgment, that this is a class of business which we most willingly undertake, for it is one in which we make very small losses.

FARMERS' CONFIDENCE IN BANKS.

It is with confidence then that I assure you that it is not our fault if any farmer who thinks he ought to have credit fails to get it. And in confirmation of this, I may remind you of a scheme which was started by the Board of Agriculture in 1917 expressly in order to meet complaints such as those of which I have spoken. It was a scheme by which county agricultural executive committees were set up by the Ministry of Agriculture for the purpose of giving special credits to farmers, with a view of enabling them to increase their production of essential food stuffs. This clearly was a practical test of the public opinion among local farmers as to the way in which they were treated by the banks. The result of that scheme was, I believe, that throughout the length and breadth of the land applications were put in for less than £80,000, a mere trifle compared to what the banks are lending; and about half of this would have been granted willingly by the banks to their customers in the ordinary way of credit.

The general conclusion which I draw from the information before me is that the farmers are having a bad time, but that the conditions are not in any way ruinous. The good hard-working farmer with up-to-date methods is able to make a living under present conditions, though he has to see a capital shrinkage which is more or less wiping out what he had accumulated in the good times of the war. The crisis with which he is faced is a serious one, but it is not worse than many which have been successfully surmounted in the past. The state of agriculture is indeed very similar to that which followed on the great Napoleonic wars of the last century.

THE FOREIGN BANK.

Of the internal affairs of the bank there is not very much to say. Our two affiliated banks have shared fully in the difficulties of the times. Our foreign bank has suffered especially in Spain, both from the collapse in trade which has seriously affected all banking business, and from the policy deliberately adopted by the Government, with the active support of public opinion, the policy of severe discrimination against all foreign competition. This policy is displayed both in the refusal to foreign banks of the favourable rates granted by the Bank of Spain to native institutions and in the imposition of special taxation on foreign capital. These circumstances coming all together—there had been no indication of them when we opened in Spain—convinced us

that it was necessary to restrict our business there, and to concentrate in Madrid. Madrid is the centre of the financial interests of the Peninsula, and we have every reason to hope that we shall be able to continue there on remunerative terms to the benefit of international trade.

THE ULSTER BANK.

The Ulster Bank has had its share of trouble too. A year ago I spoke of the boycott from which it was then suffering. This continued for some months, and was enforced by numerous armed raids upon branches outside Ulster, which made demands upon the courage and resources of the managers—demands to which, I am proud to think, they showed themselves splendidly equal. One of them who had repelled an armed raid already, was marked out for vengeance, and shot dead in a second raid while heroically defending the bank's property. But we may hope that this particular form of atrocity is coming to an end. The boycott, which was, of course, not the work of the Free State Government, has ceased, and armed raids on branches are growing rarer. That there has been a real improvement, in the opinion of those whose business it is to inquire, is clear from the fact that the bank has been able to renew the policy of insurance against this form of loss at half the premium which was paid 12 months ago. In all other respects the business of the bank has been well maintained, and the balance-sheet and profit and loss account show little trace of the troubles. Though the linen trade in Belfast still remains depressed, there is no reason to anticipate any further losses beyond those for which ample provision has been made. And, generally speaking, the business of the bank goes on prosperously to an extent which is surprising in view of the deplorable conditions which prevail over large parts of that unfortunate country.

THE BANK'S BALANCE-SHEET.

Turning finally to the accounts we put before you to-day, you will notice a considerable shrinking on both sides of the balance-sheet. Like all other banks, we show a diminution in the amounts lodged with us. This I do not regard as evidence of continuing deflation, though it is a result of deflation in the past. The fact that prices have remained steady, with a slight tendency to rise, is in itself proof that there has been no deflation during the past year. It is evidence rather of stagnation of trade and the low rate of interest for short money, which has induced our customers to invest in the many tempting Government offers of securities the cash which was held with us on deposit. There has been no paying off of Government debts, which would be deflation, but simply a rearrangement of dates for repayment, which is a form of stabilisation.

The falling off in money lodged is almost exactly reflected in the decrease in our holding of Treasury bills, which have run down from the £77 millions of which I spoke a year ago to about £45 millions in the present balance-sheet, and this again is a reflection of the decrease in the total aggregate of Treasury bills from about £1,064 millions to £709 millions during the year. You will find that the amount of commercial bills which we have under discount is practically identical with that of a year ago, about £24 millions.

ADVANCES TO CUSTOMERS.

So, too, advances to customers are at nearly the same figure as a year ago, £106 millions against £110 millions at the end of 1921. The proportion of these to our money lodged is a little higher than a year ago—about 38 per cent. as against 35 per cent.—but still much lower than we should like to see it. It is to an increase in this item that we look for signs of reviving trade. May it soon come. The falling off in the amount of acceptances, endorsements, &c., is mainly due to the dullness in the cotton trade and the reluctance of manufacturers to take cotton at the present high prices, reflected in a large reduction in our acceptance of cotton bills.

When you look at our profit and loss account you will see that our total profit shows a shrinkage. This again is an experience we share with our competitors; but on the whole you will, I hope, feel that the results are not unsatisfactory. They have not been attained without a great deal of anxiety and hard work, and when I come presently to propose a vote of thanks to our staff, you will be justified, and I am sure very happy, in giving them the credit they have so well earned. The year has, for pure banking profits, been a rather lean one; but, on the other hand, the appreciation in the value of investments has made up behind the scenes for a good deal that we have missed in other ways. We have, of course, made full provision for bad and doubtful debts, but we think it wise to continue the prudent policy of laying aside a substantial amount to the contingent fund. The sums which we have appropriated to premises and rebuilding funds are also a continuation of the policy you have approved in past years, and need little comment. I may, however, in connection with the rebuilding fund, call your attention to the substantial progress which we have made with the first section of our new scheme in Angel court. We hope to be occupy-

ing the premises by the end of the year, and it is possible that this may be our last meeting in this room, which has so long served for our shareholders as well as our board.

THE BOARD AND THE STAFF.

In our own ranks in London, we have to deplore several losses. We have lost by death two of our directors, who were not only our first in seniority, but were to the last among our most active members. Mr O. A. Benecke died at the age of eight-five, after little more than a week's illness to interrupt his constant attendance at our boards and committees. He had been a director for forty-seven years, and his name is still green in the memories of the old Westminster staff, in whose sports and welfare he took unceasing interest.

Mr A. J. Fraser passed away quite peacefully and suddenly only a few hours after he had been actively engaged on his work for the board. Both of these gentlemen had endeared themselves to all their colleagues by geniality and goodness, and the loss of their ripe judgment and long experience is one which we greatly feel. Even more pathetic is the absence of our colleague Mr E. H. Cunard, stricken by a cruel and disabling illness in the prime of life. We still cherish some faint hope that he may yet be spared to rejoin our council.

In our new colleague, Sir Malcolm Hogg, we have found a man who has achieved distinction while still young. His large experience in India has been crowned by the important appointment of Commercial Member of the Council of the Secretary of State for India, and we look forward with confidence to his assistance on our board for many years to come.

Of our managers, we have lost Mr Inskip, who has reached the retiring age, and carries with him our most hearty good wishes and good will in the leisure he has well earned. He is succeeded by Mr. Philip Mortimer, whose abilities as a banker are backed by artistic gifts of a high order, and who illuminates any matter which he takes up.

With a general management such as we have, backed by the hearty devotion of a loyal and capable staff, we are prepared to approach with confidence the anxieties and the successes which the future may have in store for us.

Ladies and gentlemen, I beg to move "That the report and accounts be received and adopted."

Sir Montagu Cornish Turner (deputy-chairman) seconded the resolution.

A SHAREHOLDER'S CONGRATULATIONS.

Mr A. Gordon Bird congratulated the directors, managers, and staff on the satisfactory balance-sheet, especially in view of the terrible year through which the country had passed. He wished to emphasise that the financial position of the bank was really very much stronger than that disclosed in the balance-sheet. He analysed the figures, and while thoroughly endorsing the policy of the directors in making provision for all contingencies, yet ventured to put forth a suggestion that the directors should consider the advisability of distributing a larger proportion of the net profits among the shareholders in the way of an increased dividend. If they were unable to distribute an increased amount in cash, he suggested that they might give the shareholders a bonus every fifth year, and he hoped the first bonus would be next year. If the directors could not see their way to distribute a further amount in cash, perhaps they would think it well to declare a bonus by paying up some of the uncalled liability on the shares.

Mr William C. Edwards, in some observations on the position of agriculture in this country, remarked that it was a matter of keen regret to him that so much land in this country failed to be cultivated in contrast with other countries, where they were putting year by year a greater amount of land under cultivation. The industry, which was the basis of real prosperity in every country, was being destroyed in this country through the heavy burden of the way of taxation to which it had to submit. The industry would never see an improvement until this heavy load was taken off.

Mr Frederic Tomkinson felt that bankers were able to do very little in the way of remedying the grievances under which farmers conducted their business, but he was quite sure that the bank had done all that was possible to assist the industry.

The resolution for the adoption of the report and accounts was unanimously carried.

Mr Robert Hugh Tennant (deputy-chairman) proposed that Mr J. H. P. Goodden, Mr H. C. G. Batten, Sir George H. Murray, Mr V. W. Yorke, Lord Richard Cavendish, and Sir Montagu C. Turner be re-elected directors of the bank.

Mr Henry Parkman Sturgis seconded the resolution, which was unanimously agreed to.

Mr W. H. Skeel proposed, and Mr J. O. Williamson seconded, that Messrs Turquand, Youngs and Co., Messrs Kemp, Chatteris, Nichols, Sendell and Co., Messrs Price, Waterhouse and Co., and

Messrs Stead, Taylor and Stead be reappointed auditors of the bank for the current year at the present rate of remuneration. The resolution was carried.

VOTE OF THANKS TO THE BOARD.

Mr Eustace Erlebach proposed, and Colonel A. J. Vanrenon seconded, a resolution that the thanks of the meeting be presented to the board of directors for the able manner in which they had conducted the affairs of the bank.

The resolution was unanimously passed.

The Chairman, in response, said that the resolution was evidence that the great mass of the shareholders believed that the board, in maintaining the dividend at its present rate, had done well, and that it was not advisable on the part of the shareholders to press them too much to make an increase in the dividend. The directors were also shareholders, and naturally would like to see a larger dividend, but he would ask the shareholders to reflect for a moment on what were the enormous responsibilities in these days of those in control of one of the big banks, and to remember the great national interests dependent upon the absolute and undoubted stability of the large banks. That feeling of responsibility was never absent from the minds of the board, and the unquestioned stability of the bank through large reserves must be their first consideration.

THANKS VOTED TO STAFF.

He then moved: "That the thanks of the meeting be presented to the officers of the bank for their zealous and able services during the past year." In his main speech he had paid his tribute to the work of the staff. They were, he said, a loyal and capable body, quite able to look after their own interests. They had their own guild, which was constantly in consultation with the management and the board, and the staff had shown themselves very capable of defending their own interests, but all had been done in the most friendly way, and he thought, in the end, both sides had come to an equitable agreement, with the result that the bonds between the board and the staff had been strengthened.

Mr Charles Cross seconded the resolution, which was unanimously passed.

Mr John Rae (chief general manager): I beg to thank you, Mr Chairman, and Mr Cross, for the generous terms in which you have submitted this resolution; and for myself, for my excellent colleagues in the general management, and on behalf of my zealous co-workers in this great service, I thank you all for the warmth of your appreciative response.

In the concluding sentence of his speech Mr Leaf has said that "with such a staff the board are prepared to approach with confidence the anxieties and the successes which the future may have in store." I am glad that to-day's proceedings will be broadcasted throughout our service, so that there may be individual encouragement and renewed resolve to attain as nearly as possible to the high ideal set up by our chairman. It is in this spirit that we accept this vote of thanks, for which I have the honour and pleasure to respond for the bank's staff.

NAME CHANGED TO WESTMINSTER BANK, LIMITED.

An extraordinary general meeting was then held, at which the following resolution was submitted:—"Resolved that the name of the company be and is hereby changed to 'Westminster Bank, Limited.'"

The Chairman said: Gentlemen,—We now come to the special meeting to consider the extraordinary resolution for the change of the name of the bank.

The desirability of shortening the name of the bank is a question on which I can hardly imagine that there will be any serious difference of opinion. It is a matter which has been constantly pressed upon us by our customers and our shareholders alike, and there is not one of us who has not, whether in his individual or his official capacity, felt the inconvenience of a title which, whatever its merits as a historical document, is beyond all question cumbersome in daily use. The board have long had before them the advisability of bringing forward such a resolution as that which is now before you.

But we have been delayed by hesitation as to the form which the new name should take. We have had many conflicting interests and sentiments to consider and to reconcile, and the sentiments have been, perhaps, even more difficult to deal with than the practical interests. We have had under discussion from time to time I do not know how many possible alternatives, each with much to be said for it. There is, in fact, no part of our name to which a certain amount of goodwill does not attach, and there is not a word in our long name which we can surrender without a certain amount of regret. It is only because we strongly feel that the advantage of shortness outweighs the value of any part which we give up that we have put this resolution before you.

The same hesitation between various alternatives exists among our shareholders, as we know from the letters we have been re-

ceiving during the last few days. Though all express approval of the shortening, some have preferences of their own as to the way in which it should be done. One correspondent suggests that we might do it by omitting the word "Limited." That suggestion is, I think, original, as well as illegal, and has not been before us; but with that single exception I can say that every alternative form put before us by our correspondents has received sympathetic consideration by the board; several of them have had warm supporters among us.

"WESTMINSTER" DIRECTORS' UNANIMOUS CHOICE.

But we have come to the conclusion that the need for the abbreviation is such that we must all sink our individual preferences. The only name on which we were at last able to combine was the word "Westminster," which has received the unanimous support of the general managers, and is now put before you by the board as a whole. I ask you now to do what the directors have done, and to sink any differences of opinion you may have in the interest of the bank as a whole. To pass any amendment of the name would be simply to throw the whole question into the melting-pot again and to delay a change which, after the maturest consideration, the directors hold to be for the good of the bank.

Let me add that the change will not involve any alteration of the familiar names by which we are known in various districts. In Somerset we are still "Stuckeys," in Derbyshire we are still "Cromptons," in Yorkshire we are "Becketts," and so we shall be content and even anxious to remain, in common parlance, the "County" round London and "Parr's" in Lancashire. In the City of London and in the various Dominions of the Empire, our close connection with which we prize so highly, we shall still be as we have always been, "the old Westminster." I beg to move the resolution contained in the notice convening the meeting, and as the matter is one in which the sentiments of the staff are very largely involved, and deserve the very fullest consideration, I am going to ask Mr Rae, as representing the staff, to second it.

STATEMENT BY MR RAE.

Mr John Rae: Gentlemen,—I have pleasure in seconding this resolution, but before it is formally submitted for your approval you may permit me to say a few words, although after the clear statement which has been made by the chairman and the exhaustive treatment of the "pros" and "cons" which he has given to the subject of this important resolution, little remains to be said.

In consequence of the amalgamation of three large and individually important banks, we have had to accommodate ourselves for a time to the inconvenience of an unwieldy and cumbersome title. When the general managers unanimously recommended that sufficient time had elapsed to admit of an abbreviation in our name, I should like to say that an amount of sentiment had to be overcome far greater than can be felt by shareholders and customers for the cherished titles of our respective entities. An official who has given his life work, and in some measure impressed his methods and personality on a company, does not with a light heart surrender a name with such personal associations.

Sentiment apart, however, our customers and the public generally have found the length of our name cumbersome in correspondence and costly for telegraphic purposes; moreover, when they resort to the alternative of initials—not always the correct initials—correspondence tends to find a wrong destination.

Thus it is that the change which we had contemplated has become increasingly pressing, and to meet all the objections attaching to our present designation the selection of a title comprised of three words seemed essential.

Having restricted the problem to these dimensions, the solution was clearly either in finding an entirely new corporate name or selecting one word from the present title which would meet the case.

I shall not exhaust your patience by weighing afresh the reasons which moved us to recommend "Westminster," as against "County" or "Parr's" as the word best suited for our purpose, but I can assure you that our unanimous recommendation was not made without much thought and much discussion—abandoning personal sentiment for what we were convinced would be the best interests of the bank.

When we emphasise the desirability—I may almost say necessity—of changing our name to one of three words, practically all the alternatives suggested by individual shareholders and members of the public who have interested themselves in this matter are unavailing. There have, indeed, been comparatively few of our shareholders who have demurred to the proposed change; many have approved, and public opinion, as evidenced by Press comments, is whole-hearted in approval, not only as regards the desirability of abbreviation, but also in the selection of the Westminster Bank, Limited, as our new name.

After two or three shareholders had expressed their views on

the proposed change, the resolution was carried with three dissentients, and by the necessary three-fourths majority.

Mr Frederic Tomkinson proposed a cordial vote of thanks to the chairman for presiding.

The resolution, having been seconded, was carried with acclamation, and the proceedings then terminated.

COMMERCIAL BANK OF THE NEAR EAST, LIMITED.

DIRECTORS' SOUND AND CAUTIOUS POLICY.

The first annual general meeting of the Commercial Bank of the Near-East, Limited, was held, on the 30th ult., at the offices, 1 Broad street place, London, Mr C. H. D. Moberly (managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The report and balance-sheet only cover the period of under two months during which the bank has been working. The directors' policy is to confine ourselves to general banking on conservative lines, so as to build up a sound business, and to expand cautiously and only as we find profitable and reasonably safe business.

The balance-sheet shows a very liquid position. We have been appointed agents of the Commercial Bank of Greece, and they are our agents in Greece. The present understanding is that any branches we establish will be outside of the Kingdom of Greece, and that we will be appointed agents of the Commercial Bank of Greece for those places.

We have recently acquired, on favourable terms, a branch at Constantinople from the Commercial Bank of Greece, and as it is a profit-earning branch, it will doubtless be a source of satisfactory profit to us, provided, of course, that the coming settlement of the troubles there does not force us to close it. We understand that the Capitulations, which have existed for centuries, are likely to be abrogated in the new Treaty, although I believe that both British and foreign residents there are unanimous against this abrogation. It seems there is a feeling that, before abrogation, the Turks should prove their capability for fair dealing and justice, which it is said they have never done hitherto. It is also stated to be the fact that British merchants have been able only to establish themselves at places where there were Consulates. The Commercial Bank of Greece, head office, and branches, are doing a good deal of business with us, and this connection is undoubtedly a valuable one.

We have issued no appeal to the public for our capital, as times have not been propitious. We are receiving, from time to time, applications for shares and are allotting them. It is possible, I might almost say probable, that we shall make a public issue later on, and in that case ask for your consent to an increase of capital.

The report and balance-sheet were adopted.

The general meeting was preceded by the statutory meeting, at which the proceedings were quite formal.

MORTGAGE COMPANY OF THE RIVER PLATE, LIMITED.

The thirty-sixth ordinary general meeting of the Mortgage Company of the River Plate, Limited, was held, on the 30th ultimo, at 52, Moorgate, London.

Mr James Anderson, who presided, said that the company's mortgage business had not been very active during the past year. The loans outstanding at the close of the year amounted to £801,250, against £950,217. This was a lower figure than they had touched for many years past. To-day their investments in the River Plate only reached 45 per cent. of the total assets, the remaining 55 per cent. being represented by cash and investments in London. The transfer of money from the Plate to England had prejudicially affected their income, but not to any grave extent. If they had lost in income they had gained in security. For the time being they were deprived of the protection they formerly had in being able to send home gold if they wanted to. Their mortgage business had been a thoroughly sound and profitable one, and they would not willingly let it slip, but he was sure that, in view of the changed position, the board had not been unwise in withdrawing a substantial part of the company's capital from Argentina for the time being, thereby protecting it from all currency risks. The mortgage loans were all perfectly good, and gave no occasion for anxiety. Should the Argentine dollar be at par when the loans were eventually collected and remitted to England, they would realise some £50,000 more than the balance-sheet figure. There was no depreciation on the assets, and the whole of the company's capital, reserves and undivided profits were intact. The balance of profit for the year was £71,366, an increase of £5,230. The net profits enabled the board, after payment of the dividend on the preference shares, to declare the usual dividend of 15 per cent. on the ordinary shares, and to add £13,826 to the carry forward.

The report and accounts were unanimously adopted.

THE NATIONAL PROVINCIAL AND UNION BANK OF ENGLAND, LIMITED.

RESULTS SATISFACTORY DESPITE ADVERSE CONDITIONS.

NATION'S IMPROVED FINANCIAL POSITION.

WORLD FINANCIAL AND TRADE CONDITIONS.

IMPORTANCE OF OVERSEAS CUSTOMERS.

CRITICAL SITUATION IN EUROPE.

The annual general meeting of the National Provincial and Union Bank of England, Limited, was held, on the 1st instant, at the Cannon Street Hotel, London, E.C.

Sir Harry Goschen, K.B.E., presided.

The notice convening the meeting and the report of the auditors was read by Sir Alfred E. Lewis (senior general manager).

CHAIRMAN'S SPEECH.

The Chairman said:—My lords, ladies, and gentlemen,—Although there are this year no outstanding features in what I may call the history of the bank, there are one or two matters in our report to which I should like to refer before I pass to our balance-sheet.

We have to deplore the loss by death of no fewer than three of our local directors—Sir Charles D. Cave, Sir Prince Smith, and Mr A. H. Leslie Melville. They have all passed away full of years and honour, after many years of useful work in their respective spheres of activity, and we shall miss the keen interest they took in the bank's affairs.

We have, on the other hand, secured the services, as a member of the Bradford Local Board, of Sir Prince Prince-Smith, son of Sir Prince Smith, the late chairman and one of the founders of the Bradford District Bank. Sir Prince Prince-Smith is now the senior partner of the well-known firm of worsted textile machinery manufacturers that bears his name, and he will, we feel sure, worthily carry on his father's valuable work for the bank in that district.

We are also glad to announce the appointment of Mr R. W. Matthews to a seat on our local board at Sheffield. Mr Matthews, who holds the high position of Master Cutler for the current year, is intimately connected with the staple trade of that district, and his experience and advice will be of much assistance to the management in that branch of our business.

BISHOPSGATE PREMISES.

The alterations and rearrangements of our premises in Bishopsgate are, I am glad to say, now practically completed, and the results have fully justified our anticipations. Our general managers, with their staff, as well as the executive departments, are all conveniently concentrated under one roof in close touch one with another, an arrangement which not only tends to increased efficiency, but has resulted in economy both of time and money. In these arrangements the fullest consideration has been given to the comfort and convenience of our customers: the accommodation at their disposal has been largely increased, and the bank is now adequately housed for the conduct of its widespread business.

It will no doubt interest you to know that with the assistance and co-operation of the representatives of our staff, we have just brought into operation a new contributory scheme for providing pensions for the widows and orphans of the members of the staff at a cost to the bank which is not unreasonable in view of the benefits it confers. We believe the new arrangements will prove of great value to all the participants.

In the course of last year we have acquired the business of Messrs. Dingley and Co., of Launceston, and that of Messrs. Dingley, Pearce, and Co., of Okehampton, and we feel confident that the incorporation of these old-established and respected firms of country bankers with this institution will strengthen and consolidate our position in that part of the country. We are glad to welcome on our local board for Launceston two of the partners of these firms, Mr J. Dingley and Mr E. D. Pethybridge.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, on the liability side, our paid-up capital appears as before at £9,309,416, but we have brought our reserve fund up to £9,000,000 by the addition of £121,959 transferred from the year's profits, which I think you will agree is a step in the right direction.

Our current, deposit, and other accounts, amounting to £263,037,482 15s 10d, show an apparent diminution of nearly £10,000,000, but this decrease is not really as large as it appears to be at first sight.

Certain liabilities hitherto included in current, deposit, and other accounts have been transferred to liabilities for acceptances,

endorsements, engagements, &c., because it was felt that the latter item described their nature more correctly.

Had it not been for this transfer, there would only have been a decrease of some £6,000,000 in the amount of our deposits—a very satisfactory feature in view of the reduction in the total amount of deposits of all the banks.

COIN, BANK OF ENGLAND AND CURRENCY NOTES, &c.

On the other side of the balance-sheet, coin, Bank of England and currency notes in the United Kingdom, and balances with the Bank of England amount to £33,073,765 18s 5d, a slightly lower figure than last year, but one that gives us a percentage of cash to deposits of 12.6, and one which, if taken in conjunction with the next item of £8,539,811 1s 9d, representing our balances with and cheques in course of collection on other banks in the United Kingdom, cheques and drafts, &c., in transit, shows a percentage of total cash to deposits of 15.8.

MONEY AT CALL AND SHORT NOTICE.

Money at call and short notice at £13,000,102 7s 6d stands at a somewhat higher figure than last year, bills discounted, including Treasury bills, amounting to £45,581,858 7s 5d, show a reduction as compared with last year, whilst our investments, which, as usual, include a large proportion of short-dated maturities, stand at £52,639,155 4s 3d—an increase on the previous year's figures of over seven millions. The shares we hold in other banking institutions stand in our books at £2,678,750. Advances to customers on current and other accounts, £121,752,907 16s 6d, stand again this year at a somewhat lower figure than in last year's balance-sheet, indicating in a measure, I am sorry to say, slackness of trade rather than any disinclination on the bank's part to finance the legitimate requirements of our customers.

The increase in the figure at which the bank premises now stand, viz., £4,112,522 11s 2d, against £3,889,153 0s 5d in last year's accounts, is accounted for by the expense entailed by the alterations in our head office and by the addition of new branches as set out in the report.

The last entry on the sheet is a *per contra* entry, setting out our clients' liability on acceptances, &c., and agrees with the corresponding entry on the other side of the account.

PROFITS AND ALLOCATIONS.

I now come to what is, perhaps, to some of us the most interesting part of the balance-sheet—the profit and loss account—which shows (and I may say the balance is arrived at after not only writing off all realised bad debts, but after making, as far as the keenest scrutiny can foresee, ample provision for any doubtful accounts) an available balance of £2,743,440 2s 6d, including £889,249 13s 4d brought forward from last year's account.

The dividend of 8 per cent. paid in July last, amounting to £744,753 5s 8d, has already been appropriated from this amount, and the further dividend of 8 per cent. per annum, payable on February 2, will absorb a similar sum. After the deduction of these two items, the remaining balance at our disposal has enabled us (as I have already mentioned) to bring up our reserve fund to a round £9,000,000, to appropriate £100,000 to the pension fund, to transfer £100,000 to bank premises account, and to carry forward to next year's account the substantial sum of £931,974 11s 2d.

COUTTS AND CO.

The very satisfactory balance-sheet of Messrs Coutts and Co. which accompanies that of this bank, shows, in common with other banks, some reduction in the deposits, which amounted at the end of 1922 to £17,489,879 4s 8d, against £19,283,951 4s 4d in the 1921 accounts. On the other side, the coin, Bank of England and currency notes in the United Kingdom and balances with the Bank of England stand at £2,125,103 16s 5d, and show a ratio of cash to deposits of 12.15 per cent. or—including balances with other banks, &c., £2,773,720 18s 11d—15.8 per cent., a proportion equal to our own. Money at call and short notice, £2,717,750, shows a further 15 per cent. of liquid assets. The remainder of the balance-sheet calls for no further remarks except it be to congratulate Messrs Coutts' directors on the excellent position it discloses.

It has not been an easy year in which to earn profits; not only

has trade been bad, but the rates we have been able to obtain for our short money and in the discount of bills have been considerably lower than last year. The average Bank rate for 1922 was £3 14s, as against £6 2s 2d in 1921, which fall in rates is reflected in other directions. For example, the brokers' call rate in 1922 has barely averaged £1 14s 1d, against £4 1s 10d in 1921, and the year's average Treasury bill rate of £2 11s 1½d compares with £4 11s 6d in the previous year. I feel that in these circumstances the results we are able to lay before you are in themselves a high tribute not only to the economy with which our business has been conducted, but also to the unremitting care and ability which the general managers have devoted to the interests of the bank, as well as to the zeal and interest with which the managers and staff have worthily seconded their efforts.

NATION'S FINANCIAL POSITION.

We must, I am afraid, recognise that the somewhat sanguine anticipations of a revival of trade in 1922 have not been realised, and that it is only in isolated directions that there has been any semblance of prosperity.

In spite, however, of the depressed state of trade, I am glad to see there has been continued progress in the rehabilitation of our national finances. During the year that has passed the Chancellor of the Exchequer has been again able to effect repayments of our external debt amounting to £49,000,000, and during the same period £427,970,000 of maturing or short-dated securities have been converted into longer-dated stocks and bonds, with an annual saving of interest to the country of £892,000.

We are able to record again this year an improvement in the position of our currency. At the end of 1921 we held bullion to the extent of 34.9 per cent. against the Bank of England and currency notes available for circulation, and on the same basis of calculation this percentage of bullion has now risen to 37.62.

IMPROVED TRADE BALANCE.

Last year's Board of Trade returns also show a reduction in the adverse trade balance, which at the end of 1922 amounted to only 180 millions, against 277 millions in 1921, an improvement of 97 millions. It is only right to add that this reduction is chiefly due to the fact that our imports declined by 83 millions rather than to what I should have preferred to see, an increase in our exports, which are only 14 millions higher as compared with the previous year's figures, but notwithstanding this qualification, the result shows a further move in the right direction—and it must be remembered these figures reflect lower values.

The Board of Trade index number for wholesale prices for December stood at 155.3, as compared with 167.9 in the same month in 1921, and the cost-of-living index figure stood at 178, against 199 in the previous year.

RISE IN POUND STERLING.

There has been no better barometer of the state of our national finances than the American exchange, and the rise that has taken place in the value of the pound sterling, which, at the end of last year, was 4.64 dollars to the pound, as against 4.21 at the end of 1921, clearly proves that a progressive improvement in the credit of the country has taken place, a gratifying indication that the sacrifices we have made and the heavy burden of taxation we are still carrying are bearing some fruit in the shape of higher national credit abroad. It is almost superfluous to point out to you the advantages enjoyed by this country on account of the increased value of the pound sterling. The cost of commodities imported from other countries, whether for food or for our industries—for which cheap raw material is now more than ever an essential—is lessened, and the burden of providing for the service and eventual repayment of our debt to America is also materially lightened by an improved exchange. It is self-evident, and affords ample justification for the financial policy our Government has pursued.

AMERICAN DEBT.

The most important result of yesterday's Cabinet Council, as reported in this morning's Press, stands out as a landmark in our financial progress. Some people may think the rate of interest which we understand the American Commissioners are prepared to recommend for the funding of our debt to the United States is somewhat more onerous than might have been expected, when all the circumstances under which the debt was incurred and the purposes for which it was required are taken into consideration, but it is an honourable settlement for both sides, and I feel we should offer the Government our sincere congratulations for the courage with which they faced the situation and the decision they have come to.

Our thanks are due to the Chancellor of the Exchequer and the Governor of the Bank of England for the strenuous efforts they made at Washington to arrive at an agreement, and we also should appreciate the conciliatory and friendly spirit in which their suggestions were met by the President of the United States and the American Commissioners.

It would, to my mind, be unwise to embarrass the existing negotiations (for we must remember the terms of the agreement are subject to ratification by Congress) by entering into any discussion here as to what the terms of the arrangement might or might not have been. In my opinion, the definite settlement of our debt to America is of the highest importance, for I believe it will have far-reaching influence on the reorganisation of the finances of the world, and, indeed, may inspire other nations to efforts of a similar nature.

But whilst we may congratulate ourselves on the progress that has been made during the past twelve months in the rehabilitation of our national finances, a survey of some of our most important industries during that period cannot afford us the same satisfaction.

AGRICULTURE.

There is no doubt that at the moment agriculture is in a most unfortunate position. The present cost of living makes it almost impracticable that there should be any further reduction in the chief item of the farmer's expense—viz., farm labourers' wages; but, on the other hand, the prices at which he can dispose of his products are, as a whole, barely sufficiently remunerative to cover the cost of production.

Many suggestions have been made for affording assistance to the farming industry, and amongst them is one for the provision of extended financial facilities. This seems to me to imply that the banks have not afforded adequate assistance in this direction, and I do not think we should allow the matter to pass without comment.

Our farming clients—and although, of course, I naturally speak for ourselves, I am sure the same may be said of other banks—are amongst our most-favoured customers.

After reviewing the various proposals submitted to us during the past year, I have no hesitation in stating that the fullest consideration has been given to all applications for facilities in connection with the ordinary requirements of the farmer, such as foodstuffs, stock, payment of rent, &c. Indeed, I cannot call to mind any reasonable application that has been refused.

As you will appreciate, we have a large connection with this important industry, and you may be interested to know that at the present moment we are making advances to many thousands of farmers. This in itself is some indication of the widespread nature of the assistance we are affording that section of our customers, and it is unnecessary for me to assure you that every reasonable application will continue to receive generous treatment. This would seem to show that the banks are neither neglecting the industry as a whole nor the farmer as an individual, and that the cause of the present agricultural depression does not lie at the doors of the banks.

COTTON INDUSTRY.

In many other directions trade for the last 12 months has been very unsatisfactory. The cotton textile industry has not yet recovered from the accumulation of stocks, both at home and abroad, and orders at profitable prices have been few and far between. I am afraid that further liquidation has still to be faced, and that the high price of cotton and the keen competition from all parts of the world make business difficult, and leave but a small margin of profit, if any, to be divided amongst the manufacturer and merchant.

Our exports of cotton manufactures show an increase in volume ranging from 30 to 40 per cent. over 1921, but, notwithstanding the high prices prevailing for American cotton, the increase in value of the whole of these exports is only about 4 per cent., which gives some indication of the trying times through which the industry has been passing.

SHIPPING.

In shipping there has been unparalleled depression during the year. At the beginning of last July there were no fewer than 583 boats laid up (owing to the decline in freights), with tonnage of 1,112,000 tons, as compared with 484 boats laid up on April 1st, with tonnage of 836,000 tons, and the number of vessels launched by shipbuilders during 1922 was only 542, having a total tonnage of 1,040,000, as compared with 804 vessels in 1921, with a tonnage of 1,600,000.

A slight improvement, however, seems to be visible. Orders are forthcoming for new tonnage, and, at all events, this industry has retained its position in the world, as it is estimated that the amount of tonnage in hand in British yards is about equal to that now under construction by the rest of the world.

IRON AND STEEL TRADES.

In the iron and steel trades it has also been a year of poor profits; but it is satisfactory to know that we have, possibly through exceptional circumstances, secured a lead in the total amount of our exports. Twelve years ago Germany had acquired that position from us, and only five years ago the United States of America stood

at the head of the list. For the first eight months of 1922 our exports amounted to 2,060,000 tons, whilst the United States, during the same period, exported only 1,413,000 tons. From all quarters one hears of increased orders being placed. There is a better demand in what is known as the "small steel trade," but business has been carried on generally at a minimum (if any) profit, and often only to provide employment for men engaged in the industry.

In view of the great need all the world over for iron and steel productions for railways, other undertakings, and for the new enterprises which are being initiated, there are, in economic and political conditions prove favourable, grounds for hoping that this branch of our trade may enjoy an increased measure of prosperity.

WOOLLEN TRADE.

The worsted section of our textile trade has been one of our few industries to show some prosperity during the past year, and prices for wool tops have experienced a considerable rise. There is an increase also in the amount of wool imported into the country, of which 1,993,000 bales were retained for home manufactures, as compared with 1,122,000 during 1921. This increase is also reflected in the exports of tops from this country, which in 1922 amounted to 41,000,000 lbs, as against 34,000,000 lbs in 1921, and also in that of worsted yarns, which amounted to 42,000,000 lbs, against 23,000,000 lbs for 1921. In the manufacturing end, about 70 per cent. of the worsted machinery is now being employed.

COAL.

There was a large increase in our exports of coal in 1922, which reached 63,000,000 tons, against 25,000,000 in 1921; but this is still far below the 1913 level of 73,000,000 tons. However, the exports for the latter months of 1922 were up to the pre-war level, and the total production in last year of about 250,000,000 tons is approaching the 287,000,000 tons produced in 1913.

UNEMPLOYMENT.

The widespread unemployment throughout the country, due to the prolonged dislocation of our trade, is one of the most distressing features of the present situation. It is a problem that requires the most careful consideration. As the Prime Minister has said, the only permanent remedy for unemployment is an improvement in trade. There is no doubt that the measures adopted by the Government to stimulate enterprise should go far to alleviate the present state of affairs, and it is a distinct advantage that any assistance that may be provided should be directed to those undertakings which not only provide the maximum amount of employment, but serve some useful purpose in the shape of improved transport facilities—the provision of cheaper power and more economical methods of production.

As orders are placed for the various materials required by the undertakings which are in course of arrangement, we may hope to see large numbers of men again absorbed by our industries, as well as employed upon the actual work of construction. There has been already, I am glad to see, a progressive diminution in the number of men totally unemployed, for the return of January 15th shows again a decrease of 14,819 men wholly without work as compared with the previous week, and 365,133 fewer than at the beginning of January, 1922. I am glad to say also that the figures published yesterday, up to January 22, show a further reduction in the number of unemployed men of 18,872 as compared with the previous week.

CAUSE OF TRADE DEPRESSION.

It is, however, no good only looking back at what has passed, and I think what we ought to do—and what is more useful—is to consider what is the cause of this continued depression in trade, and to consider whether it is possible to find any remedy.

I can, however, offer no new explanation or suggest any new remedy. I am afraid there is nothing very novel in what appears to me to be the reason for the continued bad trade and stagnation of our industries. As far as our home trade is concerned, the high rate of taxation, both Imperial and local, has crippled, and is still impairing, the spending power of the community, and the reduced income which is consequently at the disposal of the taxpayer compels him to reduce his expenditure in every possible direction. We must also bear in mind that bad trade has a cumulative effect, and if the income a man derives from his occupation is, in consequence of the depression in his own trade, reduced, it naturally follows that he is unable to purchase the products of other trades to as great an extent as in prosperous times, thus producing a progressive aggravation in the area of depression.

DISTURBED CONDITIONS IN EUROPE.

But it is our foreign trade—the very life-blood of our industries—that causes me the most concern, and until some settlement has been effected in the distressed countries of Europe, I fear that we cannot hope for material improvement. Many of these countries

were accustomed in pre-war periods to take large quantities of goods from us, and their absence from our market accounts to a large extent for the lack of buyers for our productions. The economic condition of Germany has seriously interfered with her capacity to purchase fully manufactured goods. Austria is in a much worse position, and Russia as a potential buyer is practically non-existent. Furthermore, owing to the disturbed conditions in the Near East, very little trade is possible with that part of Europe.

Another feature that appears to me to be somewhat disturbing is that as any of these countries make some progress towards settled conditions, the whole of their energies and any resources that may be at their disposal are devoted rather to the re-establishment of their own industries than to the purchase of finished goods from this country. It is true that in the re-establishment of these industries machinery and other equipment are required, which may afford occupation for certain sections of our manufacturers, but the very fact that they are re-equipping their factories with the newest and latest machinery introduces a fresh element of competition to our trade.

The unfortunate condition in which the countries I have referred to find themselves has not only a direct, but also an indirect influence on the demand for our goods. Many European States were large buyers of raw material, food, and other commodities, which China, Japan, South America, and other countries were, prior to the war, accustomed to export to the Continent, and in view of the fact that these countries can no longer count to the same extent on the usual markets in Central Europe their purchasing power has also diminished.

INDIA AND CHINA.

India, always a good customer of this country, has hardly even yet digested the large shipments of goods made to her during the time of inflation. Political disturbances have interfered with trade, and the diminished demand for her productions, which in pre-war days were largely shipped to the Continent, affects the purchasing power of all her people. These conditions account for the decreased demand for goods from our Indian customers. Besides this, every year a larger proportion of the coarser textile products is manufactured in the country itself, and new mills are constantly being established for this purpose. There are, however, I am glad to say, some signs of improvement in her economic conditions. Crop prospects are good, and there is a larger acreage of exportable products under cultivation. Indian cotton is in better demand, and is again being exported in large quantities, so that with the more tranquil political and religious conditions that now obtain, we may anticipate a better demand for goods manufactured in this country.

In China trade is not good, and orders are scarce; political unrest there also exercises a deterring influence. The prospect of increased duties and surcharges and the absence of the pre-war demand from Europe continue to affect unfavourably her purchasing capacity.

CONDITIONS IN SOUTH AMERICA.

Conditions in South America—and particularly the Argentine—have somewhat improved, and the large shipments which were made to that country by British manufacturers during the period of inflation have, to a great extent, I believe, been absorbed; on the other hand, buyers, remembering the heavy losses they experienced on the fall in prices in 1920-1921, show distinct reluctance to place orders for cotton and wool productions on the basis of the prices now prevailing. Added to this, competition from German, Italian, and other Continental manufacturers is extremely keen, and textile productions from this country can only be placed there at the minimum margin of profit.

IMPORTANCE OF OVERSEAS CUSTOMERS.

May I add a word as to the importance of overseas customers to this country?

Owing to physical conditions, this country itself produces but a small percentage of the necessities of life. The remainder has to be imported, and can only be paid for by the goods we manufacture and sell to countries abroad. During the past year we imported foodstuffs alone to the extent of £424,000,000 in excess of the small quantity of food which was exported. This vast sum of £424,000,000 had to be paid for by our exports and services. In order to secure buyers for our goods, and, therefore, the means to pay for the food we need, it is, of course, essential that our manufacturers are able to compete successfully with other countries. But, capable as manufacturers are in producing goods at suitable prices, buyers cannot be created. Buyers themselves must have goods to sell in exchange for what they purchase. Unless they produce and can find a market for their products they cannot buy; but I think I have already said sufficient in this direction to show that in the end it is largely to the customer abroad that we have to look for a restoration of normal trade conditions in this country.

THE FUTURE.

I regret I can suggest no heroic remedy for the present condition of trade, and if I speak with some diffidence about the future, it is not that I regard it with any feelings of despondency, but that I do not wish to give expression to hopes that may prove illusory.

We have, I think, expected a more rapid recuperation of the trade of the world than has proved possible, but we have no reason to despair, and certainly some, though slow, progress has been made. When one considers the fall in production, the lack of transport, political unrest, and the disorganised state of national finance in many countries in Europe, added to all our domestic troubles, it is surprising that so much trade has been done during the past year. Since we last met, several of the new Continental States have settled down to work, and made arrangements for the settlement of their pre-war debts to this country, and in many directions trade within moderate limits is again possible. The arrangements in course of completion by the League of Nations for the assistance of Austria may have far-reaching results, and, should the outcome of the Lausanne Conference be favourable—as we devoutly hope it may—a vast field for our trade and enterprise will be reopened in the Near-East.

We note with satisfaction that an Imperial Conference of the representatives of all parts of the Empire is to take place in the near future, and although our faith in the results of conferences may be somewhat shaken, there is, I think, ground for hope that their deliberations may result in improved facilities for trade within the Empire, to the mutual advantage of all concerned.

GERMANY.

The Russian question, however, remains as difficult as ever. In Germany, perhaps the keystone of the Continental position, increased trade with the empire has been more evident than elsewhere. During the past 12 months Germany has bought and paid for considerable amounts of raw and semi-manufactured material both from this country and the Dominions overseas. It is interesting to note that in respect to claims of English creditors under Article 206 of the Treaty of Versailles, out of a sum of about 64 millions sterling (or with accrued interest, £71,000,000), £41,000,000 has been admitted by Germany and paid through the British clearing office. Of the remainder, £11,000,000 has been withdrawn and £19,000,000, most of which is in dispute, is still under consideration.

We should, I think, congratulate the administration of the Enemy Debt Clearing Office on the effective way in which they are discharging their difficult task. They have rendered incalculable service to British traders.

LLOYDS BANK, LIMITED.

TRIBUTE TO SIR RICHARD VASSAR-SMITH.

RESULTS OF A DIFFICULT YEAR.

BANKS AND FARMERS—ANSWER TO CRITICISMS.

TRADE POSITION AND PROSPECTS.

The sixty-fifth ordinary general meeting of the shareholders was held, on the 31st ult., at the Queen's Hotel, Birmingham. Mr J. Beaumont Pease (chairman of the bank) presided.

CHAIRMAN'S SPEECH.

In moving the adoption of the report, the Chairman said: The outstanding event in the domestic history of the bank during last year was the death of the late chairman, Sir Richard Vassar-Smith. He had been a member of the board for more than 33 years, and its chairman since 1909. His death was felt as a personal affliction by all his colleagues, and he was mourned by the staff, and by many who only knew him by name, in a manner and to an extent which can rarely have been equalled in business records. If in speaking of him, therefore, terms are used which are all too uncommon in a business connection, they are amply justified, for, apart from the esteem which his courtesy, his wisdom, and uprightness of life won for him, he inspired a genuine and deep personal affection in the hearts of even comparative strangers, and the lovable qualities of his personality endeared him in a very special degree to all those with whom he came in any intimate contact.

Of the feelings which he inspired in the staff it is not necessary to say more than to allude to the fund of over £10,000 which, entirely on their own initiative, they have spontaneously contributed as a lasting memorial of the position he had won for himself in their hearts and minds. You who have met him here year after year at our annual meetings know for yourselves his courtly and

The position in Germany at the moment is too obscure to discuss, and time only will show whether the policy we advocated or that which our friends across the Channel have adopted will produce the desired effect.

We cannot tell what the outcome of the present position will be, but at all events we have the great satisfaction of knowing that the deep feelings of friendship between our gallant Allies and ourselves have not been disturbed by inability to see eye to eye as to the best method of achieving our common aim.

KEEN COMPETITION CERTAIN.

In conclusion, whilst I can only repeat that the scarcity of foreign buyers for our productions is, in my opinion, the principal cause of our depressed trade, there seem to be, I am glad to say, some indications of an improvement in this direction. Let us take care that we are prepared to meet the keen competition with which any increased demand for manufactured goods will doubtless be accompanied. If we are to secure orders for this country, we must be in a position to satisfy the requirements of any prospective buyers on as favourable terms as, if not better than, anyone else. I feel confident that we can do this, but to do so successfully we must all be prepared, whether engaged in manual or intellectual work, to put forth our best energies in order to secure the maximum output of productive work at a cost that will compare favourably with our competitors. We shall then be in a position to take the fullest advantage of every opportunity of developing the trade of our country, on which the well-being and happiness of the entire community depend.

I now beg to move, "That the report and accounts, as presented, be received and adopted."

Sir Felix O. Schuster, Bart., seconded the resolution.

In the course of some discussion, the hope was expressed by a shareholder that the directors would raise the rate of dividend, to the pre-war level at least, as soon as possible; and it was also suggested by other speakers that the name of the bank should be shortened.

The Chairman, in reply, said that so soon as they could reasonably do so, the directors would be only too pleased to increase the dividend. He could hardly imagine that any shareholder at the present time, in view of the position of affairs at home and abroad, would suggest that this was the proper moment to pay a larger dividend. As to the name of the bank, he said that the board had been considering a shorter title, and the matter would not be lost sight of.

After the adoption of the report, and the re-election of the retiring directors and reappointment of the auditors, the proceedings terminated with the usual votes of thanks to the general managers and other officers of the bank, and also to the chairman for presiding at the meeting.

dignified bearing, and the sympathetic and kind manner in which he addressed you on our business and dealt with any question which arose.

You were able to appreciate the fact that, not only was Sir Richard a great banker, but that he had a long and varied experience in many kinds of business, and could bring to the deliberations of our board a sympathy with and a knowledge of the requirements and difficulties of many of our clients in trade. Countless numbers of these can testify to the sound discriminating judgment and charm of manner which he invariably displayed.

BANK'S PROGRESS UNDER LATE CHAIRMAN.

The extent of the debt which this bank owes to him it would, indeed, be hard to determine. Of the material prosperity which it has enjoyed under his chairmanship it is easy to find proofs. When he succeeded to the chair in 1909 the deposits of the bank amounted to £73,803,709. The last balance-sheet before his death showed this figure increased to £347,507,410. Our capital and reserve in 1909 was £7,171,600. In 1921 this amounted to £24,372,956, and our profits had increased from £843,038 to £2,529,124.

But it is not in these material facts and figures that we shall find the chief value of our heritage from him. It is in the unseen influence of his personality and character which permeated all classes, and in the atmosphere which he created wherever he was present, that the extent of our obligation to him can best be measured.

And in these matters the lesson of his life and work has a wider application than to this bank alone. It is commonly believed, or at any rate it is often said, that our present-day huge business organisations are mere soulless machines. We who know the value of Sir Richard's work and influence in our great institution can testify to the contrary. His life proved that there is room for a soul even in a business machine, and that a human sympathetic outlook has a place there, provides an inspiration which has an inestimable value in immaterial things, and can also be measured in pounds, shillings, and pence. Those into whose hands has been committed the torch which Sir Richard carried so high can say with all humility, but with sincere faith, that it will not easily be put out.

BALANCE-SHEET—LIABILITIES.

May I now ask you to pass to our balance-sheet and report, and to consider with me the figures contained therein?

Beginning on the liabilities side, the current, deposit, and other accounts, including rebate of bills and provision for contingencies, standing at £330,556,814, show a reduction of nearly £17,000,000. This is not a feature peculiar to ourselves, but is common to other banks in greater or less degree, and is a reflection of the deflation which has taken place during the year.

The next item constitutes the balance on profit and loss account, and I will deal with this when I come to it in a more detailed shape later on.

The acceptances, endorsements, guarantees, &c., show an increase of £7,386,036, and are an indication of the greater demand for banking facilities, and counteract the reverse side of the picture which we see in the reduced figure under advances on the other side of the balance-sheet.

Our capital and reserve remain the same.

ASSETS.

On turning to the assets we find the first two items are down in amount corresponding to the reduction in the liabilities to the public, but they retain the same ratio to these figures as they did last year—viz., 14.5 per cent.

Our money at call and short notice, standing at £17,310,496, shows an increase of £1,357,611, while the bills of exchange stand at £64,405,251, showing a reduction of no less than £26,214,211. This is explained by the fact that we have made a considerable change in our short investments from Treasury bills to Treasury bonds. We were encouraged to do this by the sharp fall in the return yielded by the Treasury bill allotment rate. At the present time this returns less than 2 per cent., and is not a very profitable investment.

We have made a change in the form in which we have set out our investments. The total of our investments in British Government securities, £89,684,337, shows an increase of nearly £18,000,000, and we thought it was only fair to the bank that this figure should be subdivided so as to show that the largest proportion—viz., £53,589,078—was in short-term Treasury bonds repayable over the next few years, and that the position, therefore, of our investment account was particularly liquid.

There have been some additions to our shareholdings in our affiliated companies. The National Bank of Scotland and the London and River Plate Bank, owing chiefly to purchases from the Public Trustee of enemy-owned shares in these companies which have been held up until now. It may interest you to know that we are holding our investments in these companies at the strict asset value, without taking any credit for goodwill.

I have already referred to the fact that our advances are down, and the figure at which they stand—viz., £123,388,678—shows a reduction of £7,458,452 from last year's amount. The reduced accommodation asked for by our customers under this heading has, as I have already stated, been made up by the increased facilities granted under the heading of acceptances.

Our bank premises account shows an increase during the year of £349,536, representing the building of new offices, a reference to which is made in our report, and alterations to old ones.

PROFIT AND LOSS ACCOUNT.

Turning next to the profit and loss account, the net profit for the year amounts to £2,668,874, a decrease in comparison with last year of £460,250. Although this is a substantial decrease, your directors are well satisfied with the result, considering the difficult conditions of 1922 for banking and other businesses. It is common knowledge that, while the returns from the employment of money were much less last year than in previous years, there was no corresponding reduction in expenses, and it was generally foretold that, while profits from the ordinary strict banking operations would probably be less this year than last, some recompense might be found in the fact that a profit had been obtained from the realisation of investments at the increased prices ruling during the same period. In our case, as we point out in the report, our profit figure has been obtained without including any profit arising

from the sale of investments—the whole of this latter figure has gone to strengthen our internal position.

Our charge for income-tax, owing to the three years' average on which it is assessed, is still very high, and has added to the normal expenses of the year.

Our net profit has been obtained, as usual, after making provision for bad debts, and in this connection I would like to point out that in a year when the record of failures has shown a considerable expansion even over that realised in the last two years—which had themselves suffered very severely—we have actually recovered more, during the past six months, from surpluses realised from provisions made in the past than we have had to provide for bad debts during the same period. We have, of course, made bad debts, as was inevitable, but they were less in amount than the sums which our previous liberality in providing for past bad debts has produced, and this is an eloquent tribute both to the care with which our advances are supervised, and also to the conservative policy that we have always adopted in the past in providing for anything which did not appear absolutely sound.

Out of the total amount available, £2,615,017, £868,366 has been used in paying the interim dividend for the half-year ended June 30th last, £250,000 has been placed to bank premises account and £100,000 to staff pensions fund. We recommend the payment of a further dividend at the same rate as that declared in June, absorbing £898,309, and leaving a balance to be carried forward to next year of £498,342.

SIGNS OF IMPROVEMENT IN TRADE.

These figures which I have just given you indicate the result of our operations during a year of unusual difficulty. As an appendix to my speech to-day I have collected reports on most of the main industries of the country, following in this respect the example of the late chairman. I do not propose to read them to you, but if you are interested to glance through them, you will find that, almost without exception, they tell the same tale of depression and trouble. The most cheerful records are those relating to the woollen, hosiery, and carpet industries, while others have shown some improvement on the previous year, and during the latter months of 1922 there were signs in nearly all of them of awakening activity and increasing demand. It is easy to exaggerate these, and I do not wish to say more than that they undoubtedly existed in varying degree, and that a distinct movement for the better was observable and could be seen reflected in an increasing demand for banking facilities and a more general inquiry for goods. Even in shipbuilding, generally one of the last industries to recover from a period of depression, one heard of new orders being placed in the latter months of the year and a spirit of hopefulness awakening.

AGRICULTURE.

I must, I am afraid, make one most important exception. Agriculture is still in a most critical and depressed condition, and I wish to make a special reference to it.

It is the oldest and greatest industry in the world. On it we depend literally for our daily bread, and to it is due all the sympathy and practical assistance possible in the difficult times through which it is passing. It is necessary to say this because in many letters to the Press, in public speeches, and in a recent debate in the House of Commons, it has been stated that bankers are not giving to farmers the financial aid which they ought to do.

The statement was made in the House of Commons a few months ago that "in the old days when they had little proprietary banks the banker knew every farmer, and he lent him money till the bad times were over, because he knew that the farmer was an honest man. They had got now a system of a different character." When an ex-Prime Minister and ex-Chancellor of the Exchequer commits himself to such a statement, so entirely erroneous and devoid of foundation, it is not to be wondered at that people of less importance, but of equal ignorance of the true facts, should write to the papers stating that "agriculture is suffering from the amalgamation of the big banks, and the position they are taking up in connection with the farming industry is that of practically affording no financial assistance to farmers."

"DEFINITE FACTS."

In the face of these extraordinarily untrue statements, I would like shortly to give you some definite facts. I have had the figures taken out, and they show that, as far as this bank is concerned, we are lending to 12,800 farmers sums aggregating £14,000,000, and I have no doubt that our banking neighbours have been similarly liberal. I would go farther than this and say that, if banks had been more liberal in the advances they made to farmers, at any rate for the purpose of purchasing their farms, there would have been a more legitimate ground for complaint, because farmers made these purchases—and in many cases were more or less compelled to do so, in order to avoid eviction—at prices very much higher than those of to-day.

STATEMENTS BY BRANCH MANAGERS.

As I wished to have some further facts in regard to this bank's action on this question, I wrote to the managers of two of our branches in the country. I chose these particular branches because they were both in the centre of agricultural districts, one in the North and the other in the Eastern Counties, and because the managers had been there under both a "small proprietary banking" régime and under the amalgamated joint-stock system.

This is the answer I received from one of them:—

"The debit balance due from farmers in December, 1902, to the private bank was £15,462. This figure compares with £25,034 due to Lloyd's Bank in December, 1922, and if advances to farmers for the purchase of their farms (£14,220) were added, and they might very well be, the total overdrafts of farmers at this branch would be £39,254 in December, 1922, against the £15,462 quoted above as due 20 years ago."

But these figures do not represent the full amount available for farmers at this branch, because, later on in his letter, the manager points out that overdraft limits to the extent of £63,550 were sanctioned in December, 1922, though not fully availed of, and he adds:—"These figures, I think, effectually dispose of the contention that banks are not as liberal in this respect as they used to be."

In further letters on the subject he states:—"There can be no question, I think, but that the facilities by way of overdrafts given by the joint stock banks are much greater than were formerly granted by the private banks," and in speaking of his own branch he says:—"No legitimate accommodation has ever been refused, no farmer has ever been pressed to sacrifice his stock until it was ready for sale, or to market his produce at an unfavourable time. He has been encouraged to buy fertilisers, and to farm his land to the best advantage, and when he has been doing so, we have stood at his back and waited patiently, sometimes for years, until he reaped his return."

All this, you must understand, was written by a manager who was himself in the same branch, and dealing with the same farmers, both in 1902, when the bank was a small private one, and in 1922, when it was Lloyds Bank, and my experience is that the natural inclination of private bank employees is to be sentimentally prejudiced in favour of the old régime, except when figures, as in this case, prove the contrary.

In the case of the second branch to which I wrote on this subject, the information was not so full, and did not prove my point to such a decided extent, but in that case, too, the figures confirm my view. In 1880 the advances (almost exclusively to farmers) were £107,000, in 1903 £117,000, and in 1922, under Lloyds' régime, £145,800. I think to any unbiased person these figures must be considered as convincing, and prove that, whatever may be the hardships of farmers—and they are many and serious—want of credit facilities is not to be counted among the chief. The contrary has, I know, long been the view in certain quarters, and periodically comes into prominence, only to be disproved on each occasion.

SPECIAL CREDIT SCHEMES AND THEIR RESULTS.

Arising out of a conference in 1915 or 1916 between Lord Selborne, then President of the Board of Agriculture, and representatives of certain of the banks, returns were made which it was considered went far to justify the claim that banks gave favourable credit facilities to their farmer customers. The old complaint, however, arose again in 1917, and a sub-committee of the Advisory Committee on Food Production considered the matter, and proposals were set on foot for giving special credit to farmers. At the request of the Government, the banks consented to co-operate in the scheme, and to give special financial assistance to farmers on a guarantee from the Government. The proposal was put into operation in March, 1917, and terminated on March 31, 1919. During the two years while the scheme was in force, 925 loans were approved, amounting in all to £77,537. Of this amount, the sum of £6,834 representing loans not taken up by the applicants. Up to March, 1921, the sum of £70,124 had been repaid, leaving only £579 outstanding and in arrear, most of which has been subsequently repaid.

It will be seen that the total amount of advances applied for at all the branches of the banks under this scheme is hardly in excess of the ordinary loan limits to farmers at a single comparatively small branch of this bank. It is true that there were a certain number of formalities in connection with the scheme which may not have added to its popularity, but if there had been any real shortage of credit to farmers by banks in the ordinary way, as was generally supposed, surely applications for assistance under this special scheme would have amounted to something infinitely more than the negligible figures which I have quoted.

Another scheme is provided under Section 18 of the Land Settlement

ment (Facilities) Act, 1919, by which a county council may make or guarantee an advance by way of loan to any tenant or prospective tenant of a small holding. Under this scheme, the total number of loans granted up to December 31, 1920, was 671, and the amount of such loans was £77,297. The loans have in all cases been made through a bank, repayment being guaranteed by the county council.

CONCLUSIONS.

The small extent to which these and similar schemes have been taken advantage of, and the very large amount of loan facilities granted in the ordinary way of business by the banks to the farming community, seems to me to confirm the proof already given that it is not want of banking help which is at the bottom of the difficulties through which the agricultural industry is struggling. The causes lie much deeper than this, and were enumerated in the House of Commons debate alluded to above as follows:—

The constantly decreasing population in rural districts; the high cost of living; the low returns from the labour and investment in land; the existence of an economic wage frequently lower than a living wage; the investment in some cases in the purchase of farms of capital required for the business of farming them; and the inequitable incidence of rates and the unfair burden of transport.

In short, agriculture is suffering from a rapid fall in prices, while there has been no corresponding fall in the cost of production.

To meet the situation the Government proposes to grant credit facilities, to encourage co-operation as well as agricultural education and research, and to take what steps it can in the direction of lessening the cost of transport and reducing local rates and the difference between producers' and consumers' prices. I am certain that banks will continue to do all that they reasonably can to assist this section of their customers, with whom they have every sympathy, in the difficulties confronting them through no fault of their own.

FARM PURCHASE LOANS.

There is one form, perhaps, of Government financial assistance, if this is to be given to farmers, which might be useful. This is with respect to loans for the purpose of purchase of farms. The banks, as I have pointed out, have advanced large sums for this purpose, but these loans have been granted rather in defiance of strict banking principles, seeing that loans of this nature tend to become more or less permanent. In most cases borrowed money from some source has been used by the farmer for these purchases, and when money has been lent by private people on mortgage the mortgage is always subject to being called in, necessitating fresh arrangements being made, with consequent costs and inconvenience to the farmer. If some credit machinery could be set up by which the farmer could be assured of more or less permanent loans, subject, of course, to reductions, but not liable to be suddenly called in, I think that possibly this might have some beneficial effect.

I must apologise for the length of my digression on this subject, but it seemed to me only fair and right that the real attitude of banks to the farming industry, and the assistance which we ourselves have given, should be made known.

CONTINENTAL SITUATION.

To return to the subject we were discussing. Undoubtedly signs of industrial improvement were discernible towards the end of the year, but trade is a delicate and sensitive plant, and cannot thrive in an atmosphere of unrest and uncertainty, and in any case the continued loss of such a large portion of our old markets would have prevented anything like a return to our full normal prosperity. It was all the more disappointing, therefore, to have our hopes, slight perhaps as they were, of a revival of trade seriously damped by the recrudescence of international disputes and difficulties. The actual loss of Central European and Russian markets, judged by figures alone, is not the most serious point. Russia, Germany, and Austria between them only took 14.8 per cent. of our total exports in 1913. Our trade is with the Empire and the whole world, but nowhere can trade be healthily flourishing if the general political and economic situation is uncertain. It is, therefore, bitterly disappointing, just when things appeared to be on the mend, that the unsolved problem of German reparations reached a stage more critical and more full of danger than it had previously done. We in this country can sympathise with France in her disappointment at the fruitless result of conference after conference, and we can understand the elementary desire which has inspired her to adopt more active and aggressive measures. We both, presumably, have the same ends in view—a recovery from Germany of the maximum which can safely be extracted from her, a final solution to the problems arising from the war, and a period of peace when we can devote our whole minds and activities undisturbed to the rebuilding of our shattered fortunes. But there is a great cleavage of opinion between us as to the methods best calculated to secure these ends, and the position is so desperately serious that it is

impossible to take a merely scientific and detached view of it. As it is, we are waiting with unconcealed anxiety to see what will be the outcome of France's tremendous experiment, and whether her attempt, in modern conditions of international interdependence, to extract material wealth from her neighbour by force will be crowned with success commensurate with the cost involved, or whether her belief in this method will be written down by history as the Great Illusion. Even if her objects were political rather than economic, which she has denied, it is difficult to believe that her security can be best attained in the way she has chosen when we consider the enormous risks of future disturbance which are involved.

BURDEN OF TAXATION.

The indications of improvement in trade which I have described as discernible towards the end of the year were all the more welcome as the country had had two bad years to face, and, at the same time, has been subjected to abnormally high taxation. I do not know whether the relative proportion between those who contribute the taxes and those who are benefited directly by them is generally known. A leader which appeared in the *Times* about a month ago stated that, during last year, with its lamentable extent of unemployment, more than half the nation were receiving help in one form or another from public funds, and that the other portion were bearing the burden. In 1922 the Poor Law relief reached the highest point ever touched in the social history of the country, and under our present system less than two and a-half millions of people pay more than one-half of the total revenue raised by the State. I do not mention these figures with the object of denying the necessity, which there undoubtedly is, for those who have possessions to contribute to the welfare of their less fortunate fellows, but I want to draw attention to the fact that we are gradually and quietly becoming more and more Socialistic in our actions, whatever we may be in our theories, and that a point may easily arise at some period when the individuals who at present provide the funds can no longer do so.

NEED FOR CO-OPERATION.

The Prime Minister, a short while ago, pointed out, in his conference with the unemployed in Glasgow, that the burden placed on the production of one ton of steel by rates and taxes (exclusive of income-tax) before the war was half-a-crown; to-day it is a guinea. It does not require much imagination to realise that, if the burden were lightened, the sales would improve and unemployment be reduced. Surely, therefore, it is the manifest duty of everyone, employers and employed, the Government and the public, traders and bankers, to do all that is possible in harmony and co-operation, with a wide sympathy towards the difficulties and necessities of their neighbours, and with a wise appreciation of economic facts, to restore our normal prosperity.

An opportunity will occur later on for me to refer to the work of the staff, and to express the board's thanks for their unvarying loyalty and support.

THE RESOLUTION.

I now beg to move:—"That the report just taken as read be received and adopted, and that, in accordance with the recommendation of the directors therein, a dividend for the half-year ended December 31st last of 1s 8d per share, being at the rate of 16½ per cent. per annum on the paid-up capital of the company, be declared, such dividend to be payable on and after February 1st, less income-tax."

Sir Austin E. Harris, K.B.E., deputy-chairman, seconded the resolution, which was carried unanimously.

The retiring directors, the Right Hon. Lord Bledisloe, K.B.E., Sir Richard C. Garton, G.B.E., Mr G. A. Harvey, Mr H. J. W.

Jervis, Mr Samuel Samuel, D.L., M.P., and Mr E. D. Vaisey, were re-elected, and Messrs Price, Waterhouse, and Co. were reappointed auditors for the year 1923.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

A vote of thanks to the chairman for presiding, and to the directors for their services during the past year, was carried unanimously. The Chairman, in acknowledging the resolution, asked that a vote of thanks to the general managers and staff might be passed. This was cordially agreed to, and the proceedings then terminated.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY.

STRONG FINANCIAL POSITION.

The ninety-third annual general meeting of the National Mutual Life Assurance Society was held, on the 30th ult., at the society's house, 39, King-street, London.

Mr John Maynard Keynes, C.B. (chairman), presided.

Mr Geoffrey Marks, C.B.E., F.I.A. (actuary and manager), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—In moving the adoption of the annual report and accounts, I need not comment at much length on the various points of interest, which are sufficiently evident in the documents themselves. New business and premium income are well maintained. The net rate of interest and the expense ratio are practically the same, and, though the claims are only slightly less in amount, our profit from mortality amounts to about £30,000, which is well above the average. We have a balance of nearly £263,000 appreciation and realised profit on our investments. All except a few hundreds of this has been obtained from our Stock Exchange securities, and amounts to 10.6 per cent. of the funds thus invested, which, added to the net interest earned—namely, 4.6 per cent.—represents a total contribution for the year of 15.2 per cent., free of tax. The large appreciation secured materially increases the strength of our position. Nevertheless, it is nothing out of the way in the special circumstances of the year, being almost exactly the average appreciation of fixed-interest-bearing securities generally. The board's investment policy has enabled them, over the last three years, to combine the avoidance of serious loss when markets were falling with taking full advantage of the opportunities of a rising market. Possibly we might have made somewhat more. But the political and business outlook was, and is, uncertain, and we have been more concerned to retain the handsome profits which we have made than to risk losing a part in the attempt to increase them further.

VALUATION AND ANALYSIS OF PROFIT.

The valuation and analysis of profit, which we make each year for our own information, show that the net surplus has been increased during the year by more than £337,000, and that the total surplus now amounts to £734,000, of which all but about £98,000 is realised profit, with one year of our quinquennium still to run. This is mainly due to the fact that over the last three years we have earned in interest and appreciation on our Stock Exchange securities an average of 10 per cent. per annum, free of income-tax. At the conclusion of the most prosperous previous period in the society's history—namely, the quinquennium which ended in 1913, our total surplus represented rather less than 12½ per cent. of our actuarial liability. The surplus now disclosed is rather more than 24 per cent. of the present liability, or nearly double the proportion at the end of 1913, although, as I have just reminded you, there will be a further year's profits to be

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

brought in before the distribution of bonus at the end of this year. This is an exceptionally favourable position for any society to be in, and, whilst there are many adjustments to be made and an adequate sum to be reserved as a carry forward, it is clear that the prospects for our with-profit policyholders are unusually good.

ENDOWMENT ASSURANCE.

Last year I referred to the growing popularity of endowment assurance, and expressed the opinion that in this form of assurance, supported by a sound investment policy, the most fruitful development of life assurance was to be anticipated. That the popularity of this class of policy has not diminished is shown by the fact that last year about 40 per cent. of our new business came from endowment assurances. This has no doubt been influenced by the consideration that, as you all know, a rebate of income-tax at one-half the standard rate is allowed, subject to the usual limitations, on all premiums paid on life assurance policies; whilst, at the same time, under the new income-tax arrangements, any member whose taxable income exceeds £225 pays tax at the standard rate on the balance of his income, so that to the extent that his income exceeds that sum he loses nothing from the fact that the society have to pay at the standard rate on the income from investments in their hands. But if we are to develop this form of thrift fully, we must make it clear to policyholders that savings by means of an endowment policy can be regarded as a provision not only against death and old age, but also against all the other sudden contingencies of life which require a financial reserve. The average investor must obviously be at a hopeless disadvantage in looking after his savings as compared with a well-managed mutual society. I urge every one of our policyholders, who is not specially well situated for looking after his own investments, to take our endowment policies up to the maximum rather than up to the minimum of his capacity to save.

MUTUAL SOCIETIES AND FUTURE DEVELOPMENT.

Excluding colonial offices, there are now 15 mutual societies in the United Kingdom, of which 10 had total funds of less than £8,000,000 each at the date of their latest published returns. This seems to me a healthy state of affairs. I am sure that the right line of future development is towards closer friendship and co-operation on many matters of common interest between existing societies, rather than the further aggrandisement of a few at the expense of the rest. There must be, I think, an ideal size for a mutual life office, a point at which its funds, its income, its outgo, its membership, its administrative staff, and its directorate are all in harmonious relationship one to the other, and so capable of their highest economic efficiency. In particular, practical experience of investment indicates that there is a definite limit to the amount of funds which an office can control to the greatest advantage, and I should put this limit not higher than £10,000,000 or £15,000,000. I am assuming that the investment policy of the office is an active one, in the sense in which I used the words last year. If our holdings in any particular security or class of security were very large, market limitations would come in to prevent the completion of our plans, for I need not tell you that there are times when even the London Stock Exchange is not anxious to buy or sell great blocks of securities, however good they may be. We could, of course, deal on a larger scale than we have any need to do at present, or are likely to need to do for many years. But I am sure that a society which does not go beyond the limits which I have indicated above has a very real advantage in the management of its investments over the vast insurance and banking aggregations which have grown up in recent years.

There is another factor where compactness and concentration are likely to be advantageous—in the directorate. You will no doubt have noticed the marked tendency in recent years, in financial and investment companies especially, but also in industrial and commercial companies, towards smaller boards, mainly composed of experts in the businesses which the companies are formed to exploit. On the investment side, where lies, as I said last year, the chief part of the directors' duties, there is room for the application of the principles which, in other forms of enterprise, commend themselves to those who are responsible for their control. We have taken some steps in the direction indicated, and later on we hope to be able to submit to you our considered proposals as to the future.

As a result of our present strong position, we are hoping, I think, justifiably, for a substantial increase in our business. We have prepared for it by taking over and reconstructing the upper part of the next house, thus securing more and greatly needed accommodation for our staff. We are now in a position to handle, even more rapidly than in the past, the business which comes our way.

Mr. Arthur Keane Tharp seconded the motion, which was carried unanimously.

PARENT TYRE COMPANY, LIMITED. THE DUNLOP CAPITAL REORGANISATION.

The 26th ordinary general meeting of the Parent Tyre Company, Limited, was held, on the 1st inst., at the Criterion Restaurant, London, Sir Arthur Du Cros, Bart., the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, and in dealing with the accounts, which cover the period of 16 months to December 31 last, said: I am glad to be able to report that satisfactory and encouraging progress has been made with the policy of the board previously explained to the shareholders. The proposed agreement with the Imperial and Foreign Corporation has been modified by mutual agreement as mentioned in the report. One effect of this modified agreement is that the responsibilities and advantages of the original agreement are reduced by one-half, and the directors are unanimous in believing that the arrangement which they now recommend will prove a satisfactory and advantageous one from the point of view of both companies.

Sir Arthur then reviewed the company's investments, and, referring to the holding of over 2,000,000 Dunlop "C" preference shares, said: In view of the dual position which I personally hold on the boards of the two companies, I have asked my colleagues to relieve me of the task of making any fresh statement on the affairs of the Dunlop Company, and of the further responsibility of taking part, as a representative of this company, in the discussions which must necessarily take place upon any scheme of reorganisation. My colleagues on this board have kindly assented to my wish, and have appointed a committee of the board, with power to adopt additional members, consisting of Sir Arthur Dickinson, Mr. J. Douglas Watson and Mr. J. H. Guy, to act independently for the company in this connection.

THE DUNLOP POSITION.

Sir Arthur Dickinson, M.A., F.C.A., in seconding the adoption of the report and accounts, said: It is desirable, as the chairman has said, that at this time I should lay before you rather fully the present position of this company's investment of over £2,000,000 in Dunlop Rubber preference shares, by far the largest single holding of these shares in the Dunlop Company.

Sir Arthur summarised the history of the Dunlop Company up to 1918, showing that over a period of 18 years it had increased its annual earnings from £34,000 to £640,000, and distributed substantial dividends, built up a reserve fund of £300,000, besides writing off its assets of goodwill to the amount of a further £200,000, and distributing as a bonus to its shareholders £500,000 in ordinary shares. In August, 1917, the Parent Tyre Company sold its holding of ordinary shares to a syndicate for £4 per share, with a stipulation that all other holders of ordinary shares should be offered the same price. As a result the syndicate acquired about £50,000 of the £1,000,000 issued ordinary capital, and this holding was formed by them into what became known as the Dunlop pool. The capital of the Dunlop Company was increased about the same time by the creation of £3,000,000 of "C" preference shares, which the Parent Tyre Company contracted to take up as and when issued. The progress of the Dunlop Company continued, and its profits for the year ended August 31, 1919, amounted to £1,368,000. In March, 1919, the management was entirely changed, but the effect of the change was not at once apparent. In January, 1920, £1,000,000 of ordinary shares were issued at £8 each. In September of the same year £3,000,000 of ordinary shares were issued at 30s each, and about the same time a bonus in shares of £7,500,000 was distributed to the ordinary shareholders, out of the premiums received on the former issue. This left the reserve fund standing at £2,768,000.

AMERICAN DEMANDS.

Unfortunately during this period of prosperity, when money was being obtained so easily, no effective steps were taken to raise sufficient capital for the needs of the American Dunlop Company, which was then in the process of erecting plant and establishing itself on an ambitious scale, and during the same period enormous forward contracts for rubber and cotton were entered into. Then the financial crisis occurred, which was not confined to this country. On February 2, 1921, with the annual report for the year ended August 31, 1920, which showed profit of £2,164,000, a circular was issued by the Dunlop Company calling attention to financial difficulties arising out of heavy purchases on forward contracts, and out of the difficult problem of financing the American company. It was not plainly stated that large losses might be expected, but it appeared that Mr. Szarvasy had been called in and appointed temporary chairman, and the resignations of several of the directors appointed by the pool had been accepted.

When the accounts for the year ended August 31, 1921, were published a loss of £8,300,000 was disclosed, due entirely to losses

on forward contracts for raw materials, and it was stated that further losses, which have been shown since to amount to, approximately, £2,400,000, were expected. There was thus a net loss in two years of the new management of over £8,500,000, taking into account forward contracts subsequently liquidated.

Had the bonus of £7,500,000 distributed in the autumn of 1920—just before the crisis—been allowed to remain in the reserve fund, the latter would, at the time of the crash, have amounted to over £10,000,000, or sufficient, with the profits of £588,000 earned in the ten months to June, 1922, to have written off the whole of the losses of £10,700,000 incurred on forward contracts. No scheme of reconstruction would then have been necessary, and the company would have weathered the storm with its capital intact.

Notwithstanding that the preference shareholders had had no share in the bonuses of the preceding years, they made the concessions in 1921 which subsequently saved the Dunlop Company from liquidation.

From the later reports of the company it appears that the business so strongly founded is once more attaining to a satisfactory and progressive position. The recent settlement of the American difficulty clears the decks for the consideration of a policy of reorganisation. Under reorganisation depends the dividends of all the shareholders, preference and ordinary alike.

The arrears of preference dividends amount to £751,250 up to December 31, 1922, and of this amount £322,032 is due to our company. The longer reorganisation of the Dunlop Company is delayed the greater this cumulative debt upon that company will become. It is a debt which can only be paid out of profits, and out of profits which must be earned after the date of reorganisation. There can, I think, hardly be room for two opinions, that the sooner reorganisation is carried through the better, and impartial and fair-minded consideration should be given to all the facts.

The wish and intention of the board of this company is within reasonable limits to work for a reorganisation on lines fair to all classes of shareholders, and the committee of your board, which has already been appointed for the purpose of dealing with the matter when it arises, will proceed on these lines. Should other preference shareholders of the Dunlop Rubber Company, from some of whom we have received communications, desire to act in co-operation with, or express their views to this committee, the committee would be very willing to hear from them, and, if asked to do so, would be prepared to act in this matter in the general interest of all such Dunlop preference shareholders. Shareholders who desire to communicate with the committee should address their communications to me at 9, Park place, St James's street, London, S.W. 1.

The Chairman having replied to questions, the report and accounts were adopted.

At an extraordinary general meeting of the company which followed resolutions adopting new articles of association and a modification of the memorandum of association of the company were approved.

(a) Including Treasury Bonds.

Tenders will be received on Friday, February 9, 1923, for Treasury Bonds and Treasury Bills to be issued to the maximum amount of £35,000,000. The amount of Treasury Bonds issued will not exceed £5,000,000, but subject to that limit, the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

A fair amount of gold has been on offer, and a good proportion was taken for India.

The London Joint City and Midland Bank announce that the office at 28 Market street, Rhosllanerchrugog, near Wrexham, has been converted into a full branch, under the management of Mr Edward Roberts, and that new offices have been opened at Carterton (Oxon) and Dolwyddelen (Carmarvonshire).

BRITISH BROKEN MILL.—Cabled mill returns for the fortnight ended Jan. 27th:—7,440 tons crude ore produced 1,210 tons lead concentrates, containing 734 tons lead and 23,428 ozs silver, also 1,040 tons zinc concentrates, assaying 85 per cent. lead, 10 ozs silver per ton, and 45 per cent. zinc. 150 tons carbonates raised. One day stoppage.

BURKA CORPORATION.—Cable:—Further extension No. 7 level west crosscut 1,027 ft south—From 105 ft to 110 ft, 26 ozs silver, 45 per cent. lead, 5 per cent. zinc; from 110 ft to 115 ft, 8 ozs silver, 30 per cent. lead, 0.3 per cent. zinc. Face in sediment.

MOUNT MORGAN GOLD MINING COMPANY.—For the four weeks ending Jan. 23rd treated 3,187 tons Mount Morgan ore, 57 tons Many Peaks ore, 2,656 tons concentrates, and 5 tons of purchased ore and secondary products. Produced 247 tons blister copper, containing 245 tons copper and 3,062 ozs gold, including 1 ton copper and nil ozs gold from Many Peaks, also 2 tons copper and nil ozs gold from purchased ore and secondary products. Concentrator treated 8,304 tons ore for a production of 3,502 tons concentrates, containing 163 tons copper and 2,314 ozs gold. In addition to above production, have matte on hand containing 26 tons copper and 264 ozs gold.

Reports and Notices.

Branches of the Meadow Dairy Company, Limited, have been opened at 24 Wellington place, Barrack road, Northampton; 12 Market place, Warwick; 62 Princes road, Holland park, W.; 19 Green street, Upton Park, E.

We are informed by the London secretary of De Beers Consolidated Mines, Limited (Kimberley), that the Right Hon. Edwin S. Montagu has been appointed a director of the company.

The Ministry of Transport announces that on the retirement of Sir William Marwood, K.C.B., which took effect as from January 31, 1923, Mr. J. R. Brooke, C.B., has been promoted to be secretary to the Ministry of Transport.

We are informed that Mr. J. E. McCulloch, of the London County Westminster and Parr's Bank, has accepted the invitation to undertake the duties of British Administrative Commissioner and acting representative of Great Britain on the National Council of the International Chamber of Commerce in Paris. The British members of the Council are Sir Albert J. Hobson, J.P. (vice-president), Mr. Walter Leaf, chairman of the London County Westminster and Parr's Bank, Limited, and Sir Felix Schuster, of Messrs Schuster, Sons, and Co., and director of the National Provincial and Union Bank of England.

BANKS.

IONIAN BANK, LIMITED.—The balance-sheet and profit and loss statement of the bank for the eight months ending August 31, 1922, shows that the profits (provision having been made for expenses of management, losses, all bad and doubtful debts, bonus for staff, rates, taxes, income-tax and corporation profits tax, both in Greece and England), amount to £37,693, to which has to be added balance brought forward from last year, £11,781—£49,474; from which there has been paid interim dividend for the eight months to August 31, 1922, at 2s per share, free of income-tax, paid July 25, 1922, £9,712; leaving available for distribution, £39,762. This the directors propose should be disposed of as follows:—Final dividend for the said period at 2s per share, free of income-tax, £9,712; bonus at 8d per share, free of income-tax, £3,237; transfer to reserve fund, making that fund £155,000, £5,000; transfer to premises redemption fund, £10,000; leaving a balance to be carried forward of £11,813. The dividend and bonus, if agreed to, will be payable on and after February 14, 1923. The report states that the further depreciation of the drachma has made it desirable to depart from the custom of converting the

drachma assets and liabilities of the bank at par, or drs 25 per lb. and their conversion at the current rate of exchange ruling on August 31, 1922, drs 140 per £, accounts for the apparent falling-off in the balance-sheet figures. The business of the bank has, however, continued to expand, and the directors are pleased to report satisfactory results for the period under review. The directors, having made more satisfactory arrangements for the storage of their customers' cotton, have disposed of the bank's shoonah (store) at Alexandria. They have opened a new account under the heading "premises redemption fund," to which they have transferred £10,000, the net profit resulting from this sale. Since August 31, 1922, the bank made arrangements for taking over the business carried on in Constantinople by the Guaranty Trust Company of New York, and a branch was opened there on October 1st. The investments of the bank stand on the books at figures considerably below the actual market value.

LONDON AND LIVERPOOL BANK OF COMMERCE.—The report for the year 1922 shows net profit for the year amounts to £16,993, to which is added £20,740 brought forward, making £37,733 available. The dividend of 4 per cent. for year absorbs £17,700, and £20,033 is carried forward. The report states that the bank's investments stand at or below market prices on December 31, 1922. This bank's indebtedness to the Bank of England against pre-war debts under the Government scheme of 1914 was liquidated in July last, though there remained, and still remains, a substantial sum due to this bank from ex-enemy and other countries. The collection of the German debts proceeds slowly, and no scheme has yet been agreed upon for the settlement of those due from Poland and certain other countries. The directors are pleased to report that they have received from the British Overseas Bank, Limited, a conditional offer to purchase from the shareholders their shares in the London and Liverpool Bank of Commerce at the price of £10 5s per share, ex dividend, payable in cash.

MISCELLANEOUS.

THE BRITISH INVESTMENT TRUST, LIMITED.—The accounts for the year ending January 1, 1923, show that the revenue for the year, after providing for interest on temporary loans, income-tax, expenses of management, &c., is £22,217. Deducting therefrom interest on debenture stock and debentures for the year, less income-tax, £63,101, there remains a balance of £158,116. Dividend on 5 per cent. preferred stock, less income-tax, absorbed £44,250, leaving £113,866. Dividend on the deferred stock of 16 per cent. for year, less income-tax, absorbed £94,400, leaving surplus revenue for the year £19,466, add balance brought forward from last year, £164,852, making amount to be carried forward to next year £184,318. A valuation of the investments, made in the usual way, shows a depreciation of about 1 per cent. on book cost against 13 per cent. last year. At January 1, 1923, the number of investments was 315, and the report shows how these investments, amounting to £5,428,222, are distributed.

LENNARDS, LIMITED.—The net profit for year 1922, after payment of all working expenses, debenture interest, corporation profits tax, and depreciation of fittings and fixtures, and leasehold properties and depreciation on stock, amount to £13,687; balance profit brought forward from the last account, £1,328; transferred from ordinary reserve fund, £15,000; making £30,016. Preference dividend absorbed £7,500, while the ordinary dividend of 12½ per cent. for the year absorbed £15,625. Directors' fees amounted to £500; donation to staff, £500; balance the directors recommend should be carried forward, £5,891. The ordinary reserve fund now stands at £35,000.

STERLING TRUST.—The report for the year ended December 31, 1922, shows that from the accounts it will be seen that the balance at the credit of revenue account (including £20,897 brought forward from the previous year), after meeting all expenses, and applying £95,417 in payment of interest at 5 per cent., less income-tax, on the "A," "B," and "C" debentures is £86,264. The directors recommend the payment of a dividend of 6 per cent. on the consolidated stock, less income-tax, requiring £55,313, leaving to be carried forward, subject to corporation profits tax, if any, £30,951. A list of investments held by the company at December 31, 1922, is shown in the report. Apart from the securities of the Alabama and Vicksburg and Vicksburg Shreveport and Pacific Railway Companies, which, being mainly held by the Sterling Trust, have no free market quotation, a valuation of the investments, based on official quotations where obtainable, and on an estimate for the small balance of other securities, shows the amount at which they stand in the books to be fully represented by value.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Winter-sown crops in the United Kingdom continue to make favourable progress, but recent heavy rains have hampered field work. Fairly large areas, however, are ready for drilling, and, given a spell of dry weather, spring sowings will soon be in full swing. Native wheat is in fair supply, both here and at provincial centres, and rates tend easier, in sympathy with the general wheat position. Suitable milling grades quoted at 9s 6d to 9s 8d, with inferior down to 8s 3d per 112 lbs, free on rail. Imported descriptions quiet of sale at a further decline, owing to lower forward offers. No. 1 Northern Manitoba quoted 49s, No. 2 mixed Durum 46s, and Rosafé, 62½ lbs, 48s 9d, all per 490 lbs, ex ship, to arrive. The cargo section still lacks animation, and values gave way on lower American advices, large Argentine shipments, and fluctuations in Continental exchange rates. Steamers of Rosafé, 62½ lbs, on passage, sold at 46s 3d, U.K. terms, to Germany, and Australian

bakers. All English country straights 31s 6d to 33s, delivered. Of imported, Manitoba export patents range from 38s to 41s as to quality, Minneapolis good patents 41s, Pacific 37s 6d, and Australian 40s 6d per 280 lbs, ex store. Maize, after being easier, improved, owing to higher forward offers. La Plata ex ship 36s 3d to 36s 6d, ditto landed 37s 6d, American mixed 35s ex ship, ditto landed 36s 6d. Firm conditions prevailed in the cargo market, and sellers required more money in view of adverse weather reports from the Argentine. Steamers of La Plata arrived sold 34s 9d to 35s, ditto on passage 35s to 35s 10d per 480 lbs. Barley remains quiet at about late rates. English slow, but prices steady for best malting descriptions. Prices vary from 7s to 13s 6d per 112 lbs, free on rail, as to sample. Of imported, 13s 6d per 112 lbs, free on rail, as to sample. 2 Canada feed 25s 9d, Canadian quoted 41s 6d to 45s, Australian Chevalier 49s to 53s per 448 lbs, ex ship to arrive. Danubian 30s 6d to 32s, Plate 31s, both landed, Persian 26s 6d ex ship and 28s 3d landed terms, all per 400 lbs. Oats quietly steady for native varieties at 8s to 9s 10d per 112 lbs, free on rail, as to sample. Imported lower on large arrivals from the Argentine. Plate f.a.q. 23s 6d, No. 2 Canada Western 29s 3d, No. 3 ditto 27s, No. 2 Canada feed 25s 9d, American white clipped 24s 9d, all per 320 lbs. Oatmeal quiet, and values occasionally the turn easier. London made, all cuts 17s 6d, rolled oats also whole groats 17s 6d, flaked oats 20s 6d ex mill. Ordinary Scottish oatmeal 18s 6d to 19s, American all cuts 17s 6d to 17s 9d per cwt. Millers' offals quieter, with rates tending in buyers' favour.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20:—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated February 1st, is as follows:—Pig-iron: Makers of pig-iron have been obliged to raise their prices owing to the rapid advance of fuel costs. The demand for iron is good, but there is very little chance of putting more furnaces in with the present scarcity of coke. No. 3 Cleveland G.M.B. is now quoted 105s per ton, and East Coast mixed numbers hematite is 100s per ton. Manufactured iron and steel: The best outlet for steel at the moment is for shipbuilding, and works have more orders. Steel ship plates, £9 10s; steel ship angles, £9; iron bars, £11; steel rails, £9 net. Iron ore: Prices have advanced, but buyers are rather slow in responding. Best Bilbao Rubio ore is now 24s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—The invasion of the Ruhr is likely to modify conditions in certain branches of the iron and steel trades to the advantage of manufacturers, but up to the present time its effect has not been very marked. During the past week further orders have come into the district for pig-iron, crude, and manufactured steel, as well as quite a crop of inquiries, and it is fair to assume that some part of this business has been diverted from Germany. A good many buyers of German material are holding back their contracts in order to see what happens, but those in urgent need of supplies are placing their contracts here. Owing to the pressure of orders, several works in this part of the country have ceased to book for delivery during the present quarter as regards basic pig and billets. There is a shortage of both these materials. More blast-furnace output is now needed, and idle furnaces will be put into operation as soon as sufficient coke is available. Last week's advances in prices are maintained, but the extravagant demands of holders of scrap have checked business. For heavy steel scrap, which two months ago was worth about 60s, the prices asked to-day range from 86s to 90s. Some of the crucible steel makers are now beginning to pick up orders, and steady progress is reported in special tool steels, garden tools, twist drills, engineers' hammers, picks, and so forth. Taking the finished branches as a whole, the improvement is not yet considerable enough to put business on a remunerative basis, and many firms are still losing money. Orders are being booked for railway steel, and the plants are occupied to about half their capacity. The cutlery and plate trades are quiet. Owing to a scarcity of washed slacks, the coke-ovens cannot produce their full capacity, and makers could sell spot lots at a substantial premium on contract rates if the fuel was available. Only a few such transactions are reported. South Yorkshire collieries are not experiencing anything in the nature of a boom at present, and an endeavour will be made to prevent prices of manufacturing fuel rising unduly, lest such a movement should check the expansion in iron and steel. Steam coal is, perhaps, a shilling better on the week, and cobbles, nuts, house coal, and gas coal are firmer. There is no surplus for manufacturing purposes.

Our Glasgow correspondent writes:—During the past week one or two interesting features have materialised in the Scotch steel trade, elevating the industry to the highest point of productive capacity and efficiency of any district in the United Kingdom. During the idle times experienced over the last two years, the respective managements have been directing their energies to the overhauling of plants and the fuller equipment of their machinery, so that, essentially, economy in output might be secured. Some of the establishments claim to have well-nigh revolutionised their positions, or at least effected improvements which will enable them to cope with any trade demand that may develop for years to come. Messrs. Colville, of Motherwell, have fitted up a boiler plate shed and mills that are said to be unequalled anywhere, and on Monday they effected a satisfactory start, after a two years' shut down. Then the Steel Company of Scotland, for the first time in their long history, has added a plate-rolling mill (capable of turning out 1,500 tons a week) to their plant at Blochairn, and negotiations have been opened for the transfer to a new proprietorship of an up-to-date works near Motherwell. It is given out that all concerned are in the fortunate position of holding well-filled order books, fairly well backed by a healthy list of inquiries, for all descriptions of structural materials. Consequent on the rise in coal costs, steel and iron makers have put 5s to 10s a ton on all products, so that now boiler plates are called £12, ship plates £9, and sections £8 15s. Ship plates under 1 in., £10; under 1½, £10 10s; bulb angles £8 5s; tees and sds., £9. Black and corrugated houses find inquiries from Australia and India on the increase and the results are on an improving scale. On Tuesday a new price list was issued, making quotations 7s 6d to 20s a ton higher than of late—at 1 in. to 1½, £11; 1½ to 2, £11 10s; 2 to 2½, £12 5s; 2½ to 3, £13; 3 to 3½, £13 15s; 3½ to 4, £14 15s. Galvanised corrugated b.g. 24, £18 15s. Scrap in request while stocks are low. In quotations, however, there are few changes; heavy melted steel about £4 a ton; basic steel, £3 15s; ordinary cast iron, £4 6s 3d. Makers of bar iron state that more is passing both on home and export accounts, all-Scotch crown,

£102 10s; best crown, £11; best horse shoe, £11 10s. The improvement seen for several weeks back in the Scotch pig-iron situation is fully maintained, reflecting the change for the better with founders. In the course of last week, 7,448 tons of mixed brands were exported, the largest weekly total shipped for years. The tonnage was distributed over Boston, San Francisco, and one or two Pacific ports, from which several fresh inquiries have just come to hand. Makers are hopeful of the South American demand being maintained. Values have stiffened, however, this week, mostly in sympathy with costs, and producers are concerned lest the buying, which has had free course for months, be adversely affected. No. 1 Scotch is up 2s 6d a ton on the week at £5 3s, and No. 3 also 2s 6d at £4 18s a ton. Scotch hematite unchanged at £5 7s 6d. There is talk of the make of hematite being increased. The Scotch coal market has been excited over the week, because of the big Continental demand in evidence, and prices are higher (from 3d to 1s a ton). Fears are entertained in consuming circles that if the advance proceeds, the industrial improvement will meet with a more or less serious check.

Our Cardiff correspondent writes:—The South Wales coal market has been inundated this week with new orders. These have reached the market from the United States, France, Spain, Belgium, and Germany, and their cumulative effect has been to exhaust the estimated outputs of the collieries during the next few months, and to impart to prices a greater strength than that possessed by them at any time since the war. Moreover, the ports continue to be abundantly supplied with tonnage. Indeed, the supply of shipping has been so unwieldy as to create serious congestion and to involve delays in the shipment of coal and interruptions in the working of the collieries. A joint committee of representatives of employers and workmen is considering the question of an improvement in shipment facilities, but it has not yet arrived at any decision, and the trade of the South Wales ports continues to be hampered by the restriction on the working hours of the trimmers and the tippers. The scarcity of small coals is particularly pronounced. During the past few weeks the demand of the blast furnaces for coke has increased. This demand has absorbed a fairly substantial percentage of the output of small coal, and has therefore contributed to the current scarcity. The French railways have been exceptionally active in the shipment of smalls for briquette making purposes, and under the influence of all these favourable factors the prices of some of the small coal steam qualities have been advanced to 21s 6d. Three months ago these coals were easily obtainable at about 16s per ton. Best large coals have improved to 30s 6d, but even at these prices it is difficult to obtain supplies. Coke prices are also rising rapidly, and some foundry descriptions are now quoted up to 50s per ton. Patent fuel continues to be adversely affected by the high price of pitch, but 37s 6d has been realised during the past few days. The current market quotations are as follows:—Best Admiralties, 20s 6d to 30s 6d; second Admiralties, 28s 6d to 29s 6d; best drys, 27s 6d to 28s 6d; black veins, 28s 6d to 29s 6d; Eastern Valleys, 27s 6d to 28s 6d; Western Valleys, 28s 6d to 29s 6d; best bunker smalls, 21s to 21s 6d; ordinary cargo smalls, 19s to 20s; anthracite big veins, 35s to 37s 6d; anthracite machine made cobbles, 45s to 47s 6d; French nuts, 47s 6d to 50s; stove nuts, 47s 6d to 50s; rubbley clum, 14s to 14s 6d; coke for export, 45s to 50s; inland blast furnace coke, at ovens, 27s to 28s; patent fuel, 35s to 37s 6d; pitwood, ex ship, 25s 6d to 26s. The strength of the market for tin plates has been firmly maintained during the past week. Current sales have been at prices from 6d to 9d in excess of the minimum, but a further increase in the basis prices has been temporarily deferred.

THE COTTON TRADE.

MANCHESTER, February 1.

Compared with a week ago there is a distinct change in the conditions prevailing in the market. There has been a decided falling off in the amount of business passing which has been due to the weakness of raw cotton rates, the fall in the value in the Indian rate of exchange, and to the political situation on the Continent. While the rate was quoted at 1s 5d and over, buyers for India operated on free lines, and during the first three weeks of the year quite a substantial business was done in piece goods. During the past week, however, only small transactions have resulted. Although the quotations for raw cotton have declined, spinners and manufacturers are firm in quotation. No increased activity is expected to be displayed for China until the New Year celebrations are over in about three weeks' time. Buyers for Egypt have not been altogether idle. Isolated sales have taken place in fancies for South America. Home trade buying has been unimportant. Prices for American and Egyptian counts on the week are nominally unchanged, but when actual business has been

THE "ALL-IN" LIFE POLICY.

Every married man should send for particulars of this new and advanced form of Life Insurance, which provides for:—

- (1) Educational benefits (cash payments);
- (2) Financial protection for family;
- (3) Income for life on retirement or at an agreed date;
- (4) The remission of premiums in case of total disability through accident or illness;
- (5) Rebate of Income Tax in respect of premiums paid.

Send a postcard to day. Address:—Life De'.

THE WOOL TRADE.

There is no great activity in any section of the industry at the moment; indeed, the market is quieter than it has been for some considerable time. The general tone remains fairly good, but there are indications that users are beginning to mark time and await further developments. Business for the most part is confined to the covering of pressing requirements, and as spinners appear to be well covered, there is not much need for anyone to force the pace. It must be admitted that so far the raw material market has shown very little weakness. The trouble in Germany is certainly affecting competition for typical Continental merinos at the London sales, and values have eased somewhat during the week, but good combing wools are still selling in London and in the primary markets at prices which do not allow of tops being sold at a profit. Users, however, appear to be determined to resist present quotations, and the tendency to-day is slightly in their favour. Some topmakers are still firm at recent rates, but

others will make concessions to obtain business. Crossbreds, on the other hand, are firm all round, and a nice steady trade is passing in practically all qualities. This is largely due to American buying of raw material in London and matchings in Bradford. Spinners are not booking very heavy weights of yarn under existing conditions. There is strong opposition to quoted prices, manufacturers contending that they cannot sell cloth in any market at prices based on current quotations for yarns. A moderate turnover is being done, but many of the orders are for comparatively small quantities, and some spinners are selling at prices below the general market level, being able to do this on account of tops which were bought at prices which look cheap compared with to-day's rates. The piece trade is unchanged.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales have continued to make good progress, but prices are hardly at the extreme point seen during the opening week. We have previously mentioned that the Continent was hardly displaying as great keenness to acquire wool as was seen at Liverpool, and the more cautious policy has been pursued up to the present. Not only is more discretion being shown, but the prices bid are hardly so extreme, French buyers naturally desiring to operate at prices which will as far as possible allow for the depreciation in the value of the franc. The same thing applies to Belgian buyers, with whom the continuance of the strike at Verviers is an untoward factor. This is limiting the consumption of wool, and although one expects some competition from Germany, the operations of that country are

VEGETABLE OILS AND OILSEEDS.

The feature of the market has been the sharp advance in linseed oil, a matter of 50s to 60s per ton on the week at Hull, but to a much lesser degree in London. This has been primarily brought about by the shortage of "spot" and "month" oil, in addition to which it is reported that Hull crushers have been compelled to enter the market, and buy oil to cover their January commitments. The consequence was, in the closing days of the month prices rose rapidly, a large business being done, the Hull market closing firm at £42 for spot oil on Wednesday. This, of course, is an abnormal position, and has since eased. February oil is quoted at £37 15s, and May-August £33. Trade demand has shown signs of improving, but the export business is still slow, and adversely affected by the unsettled political outlook in Europe. Production of oil, which during the past three months has been on very modest lines indeed, should soon begin to expand, as large quantities of linseed are now afloat and will soon be arriving in volume. That on passage to the United Kingdom is now computed at 64,500 tons, and that to the Continent at 50,200 tons—together, 114,700 tons, against 108,700 tons a week ago. Crushers have bought sparingly for shipment of the new Plate crop, high prices being an effective bar, but with an easier tendency in Argentine quotations the position in this respect may soon improve. Current value of Plate afloat to Hull is round £18 10s, and for January shipment £18, buyers offering £17 for January-February to April. Some business has been done in Indian linseed to London, up to £20 being paid for Calcutta, January shipment.

Rather more activity is reported in cotton oils, the demand being chiefly for soapmakers' grade of refined and crude Bombay, in which a large business has been done at advancing prices. Edible grade of refined has been a fair trade and is dearer. Egyptian Sakellaridis has been firmly held at about unchanged prices, and a good business done in Bombay at £9 5s for January-February shipment to Hull.

Crude soya beans oil has been in very good request, and a fair business has been done in the raw material. Rape oil is still scarce in near positions, and prime nut oils have shown some movement, and prices have been sustained at recent levels.

Linseed cakes are very scarce at the crushing centres, pending arrivals of seed. Cotton cakes and all kinds of meal are in good demand, and slightly dearer.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide position was again weak in Bermondsey on Thursday last; ox hides, which remained unsold last week, realised from 7½d to 8½d, and seconds from 5½d to 7½d. Cows were unsold, and kips made from 1½d to 4½d, a fall of ½d. Calf sold from 6½d to 10½d, and were down ½d to ½d on last week's prices. Seconds were weaker, and thirds headless were unsold. Wools were firm, selling from 5s 6d to 12s 9d each, the hogg class making 6s 2d to 15s 3d each. Provincial prices are also lower by about ½d, as tanners do not seem eager to lay in hides at present prices, owing to the difficulty of getting a better price for leather. The foreign market remains firm, with tanners buying few hides for forward shipment from South America. Latest cables from the U.S.A. report the Chicago position as steady, with best heavy packers selling at 20¢ cents.

Merchants and tanners are doing a small but steady trade in the lighter kinds of sole leather, the demand still running on the cheap grades. Pinned offal is dearer, and advances of ½d to 1d per lb are frequent. The lighter descriptions seem to be all gone from the market, and some tanners are heavily booked forward. Old clearances of Australian sides are also reported at low figures, which cannot have repaid the cost of tanning even in Australia. Dressing leather is dull, the fluctuation of the franc having stopped the export of split hides to France again for the time being.

Upper leather is in moderate request, but only in the common grades. Sales are at last reported of low-grade kip butts, but as the market for the rough goods in India is very firm, carriers are not finding it an easy thing to show a profit on transactions. Glacé in colours is wanted, and sampling is going forward in shades.

The boot section is in a more hopeful mood, and the demand for ladies' shoes especially has improved. The failures, however, in the Midlands do not inspire confidence, as it is clear certain firms have been selling at well below cost of production for some time.

OVERSEAS PRODUCE MARKETS.

Mincing lane, Friday, February 2.

SUGAR.—The market presented firmer features, steady buying orders being in circulation, and prices all round close higher. Of British refined, Messrs Tate and Lyle's cubes, 54s to 55s; crushed, 51s; granulated, fine and coarse, 49s 4½d; No. 1, 49s 1½d; No. 2, also London, 48s 10½d. Yellow crystals, 42s 10½d; granulated, one month forward, 49s; March, 49s 3d; April, 49s 9d; May, 50s. Crystallised West India in small supply, and quoted 45s 6d to 46s. American granulated, spot, sold, 48s 6d to 48s 9d; February-March, steamer, 23s 23d, c.f. and i., London. White Java, spot, 47s 9d, 48s; May-June, steamer, 21s 7½d, c.f. and i., London. White Mauritius, spot, 46s 6d to 46s 9d. Belgian granulated, 48s; Dutch ditto, 48s 3d. W.S.R. cubes, prompt, 26s 4½d; granulated, 22s 4½d; J. 21s 10½d, f.o.b. terms. Czech granulated, prompt, 22s, f.o.b., Hamburg. Terminal market firmer. White, May delivery, sold, 22s to 22s 10½d; August, 22s 1½d to 23s. Cuban, basis 96 per cent., February shipment, quoted 18s; Brazilian, basis 80 per cent., February, 13s, c.f. and i., U.K. Cuban stocks, 189,400 tons, against 175,800 tons same time last year. Liquid glucose, spot, 28s 6d.

COFFEE.—Spot market steady, and there has been a fair movement, chiefly on home-trade account. Nairobi, bold sizes, sold, 60s to 112s; do, Costa Rica, 106s to 118s. Future delivery market steady, quiet. May, sold, 60s to 60s 6d.

COCOA.—No public sales were held this week, and by private treaty only small transactions were effected at recent quotations. Accra F/F quality, February-April, value, 34s, f.o.b. terms.

TEA.—Indian auctions embraced some 44,400 packages, and while all the better qualities were well competed for at steady prices, common disclosed a rather quieter market with prices occasionally in buyers' favour. Ceylon auctions of 19,300 packages elicited fair competition, and where quality was maintained steady rates were secured, but generally speaking prices were a shade easier. Java and Sumatra quiet, and barely steady.

RICE.—In quiet support, and Burma in forward positions ruled easier under the influence of a lower rupee exchange rate. Two stars, spot, 15s; February-March, 13s 9d, c.f. and i., London. Saigon and Siam quiet, at late rates. Rangoon beans, spot, 8s 3d. Japanese peas, spot, 29s 6d; February-March, 29s 6d cwt.

SPICE.—Only quiet trading ensued with regard to pepper, but sellers asked steady prices. Fair black Singapore, spot, quoted, 4½d; February-April, 4d; Aleppy, spot, 4d; Tellicherry, 4½d; white Singapore, spot, 5½d; Muntok, 6½d; February-April, 5½d; March-May, sold, 6d. Zanzibar cloves, spot, 10½d, paid; January-March, rod to 9½d and 10½d. Flake tapioca, spot, 3½d per lb for fair Singapore; and fine Java, 4d. Fair Penang, seed pearl, spot, 24s cwt; sago flour, February-April, sold, 13s 4½d; desiccated coconut, fine cut, spot, 38s 6d; medium, 39s. Ginger quiet, at about late rates.

FRUIT.—There is no new feature to note in this market, business in all descriptions of dried being on a small scale, with but little alteration in prices.

JUTE.—Demand from spinners was reduced to a minimum, and though sellers refrained from unduly pressing, prices eased. First grade, January-February, Continental ports, quoted £31 10s; February-March, £32 5s; March-April, £33 5s. Lightning grade more or less nominal. Hessians and twills dull of sale.

HEMP.—Manila steady, but at the same time quiet. G grade, February-April, sellers, £36 10s; H, £35 10s; J, sold, £35 to £34 15s; K, quoted £33; L, £33 10s; M, £33. New Zealand quiet, and quotations nominal, unaltered. African sisal steady. No. 1, Tanganyika, February-April, sellers, £35, and No. 1, Kenya sold at £34 5s.

SHELLAC.—Market generally quiet, and forward rather unsettled. Fair T.N. orange, spot, sellers, 375s; March sold, 345s to 350s; May, 330s to 332s 6d.

COPRA.—Market steadier, though only moderate transactions were effected. F.M.S. Straits, February-April, Rotterdam, sold, £25 15s to £26 3s 9d. Ceylon, ditto, quoted £27 15s. Dutch East Indies, £26 5s. Java, sold, £26 5s to £26 12s 6d. South Sea Islands, quoted £25 5s. Cebu, sold, £25 17s 6d; mixed, £24 15s. Palm kernels, March-May, Liverpool, sold, £17 17s 6d to £18.

RUBBER.—Business proceeded with freedom, but prices fluctuated very considerably during the week. Standard plantation crepe, spot, sold, 5½d to 1s 5½d, 1s 5½d and 1s 5½d; March, 1s 5½d to 1s 6d, 1s 5½d and 1s 5½d; April-June, 1s 6½d to 1s 5½d, 1s 6½d and 1s 6d; July-September, 1s 6d to 1s 6½d and 1s 6½d; October-December, 1s 6d to 1s 6½d and 1s 6½d. Fine hard Para, spot, 1s 5d; soft fine, 1s 3½d; and cauchoo ball, 1s 2½d.

EGG PRODUCTS.—Market quiet at late rates. Prime hen liquid yolk, spot, 100s per cwt. Albumen, spot, 3s per lb.

MENTHOL.—Spot, 40s; forward, 32s 6d.

OILS.—Linseed market, after being firm, became quiet and irregular. Spot, net, naked, 39s 6d; February, 38s; March-April, 35s; May-August, 33s. Rape firmer. Crude, spot, 43s 6d; refined, 46s 6d. Cotton firm. Crude Egyptian, spot, 39s; common edible, 44s; deodorised (in barrels), 46s. China-wood strong. Hankow, spot (barrels), 105s; February-March, 78s. Coconut steady. Ceylon, spot, 42s; January-February, 40s 9d; Cochin, ditto, quoted 43s 3d. Soya steady. Oriental, barrels, January-February, 39s 6d. Japan fish steady. January-February, cases, 26s. Cod steady. English, spot, 30s. Ground nuts steady. English crushed, naked, spot, 48s; deodorised, barrels, 55s. Turpentine irregular. American, spot, 103s 9d; February-April, 104s 3d. Rosin easier. American, grade B, 13s 9d; F, 13s 9d; G, 13s 9d; H to I, 13s 9d; W.G., 17s 9d; W.W., 18s 9d. French, F/G, 13s 6d; W.W., 15s 6d per cwt. Petroleum steady. American standard white, spot, 1s 1d; and water white, 1s 2d per gallon. Castor oil steady. First pressure, spot, to June, quoted 49s; second pressure, 46s, and pharmaceutical, 54s per cwt.

OILSEEDS.—Market, after being firmer, became irregular. Bold Bombay, afloat, quoted, £21; small Bombay, ditto, £20 10s;

London Office 25 OLD BROAD STREET, E.C.2

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kinkiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

Calcutta, afloat, £20 10s; January, sold, £20; and April-June, £18 7s 6d sellers. Plate, afloat, sold, £18 7s 6d to £18 5s; January, £17 17s 6d; January-February, £17 10s to £17 7s 6d; April-May, £17 5s to £17. Rapeseed firm. Toria, afloat, £18 5s; February-March, sold, £17; Jamba, January-February, £14 5s. Cottonseed quieter. Egyptian black, January, £12 5s, and white, sold, £11 15s. Bombay, February-March, sold, £9 5s to £9 3s 9d. Gingly seed firm. Large, Bombay, January-February, sellers, £22 15s. Chinese, new, January-February, £23 10s to £24. Groundnuts firmer. Coromandel, machine-dried, January-February, quoted £22. Chinese decorticated, f.a.q., January-February, £22 5s; Nigerian, ditto, £21 15s. Soya beans firm. Manchurian, January-February, quoted, £12 5s. Castorseed quiet, Bombay, February-March, £18 2s 6d ton.

METALS.—Tin: The market continued firm, and a good business transpired in all positions at an advance of 17s 6d per ton on previous week's close. Cash was dealt in from £185 5s to £186 10s; February, £185 10s to £186 15s, and three months £187, £186 15s to £187 10s. Subsequently the market became irregular and easier due to selling pressure and a falling off in demand. By the middle of the week standard cash sold at £184 5s; February, £184 5s; and three months, £185 10s. In the East sales were reported on the basis of £191, c.i.f. On Thursday the tone was quiet, and values ruled easier respecting cash. Standard cash sold at £184 15s to £183 17s 6d, and three months £186 10s to £185 10s to £185 12s 6d. With sellers in evidence, the downward movement continued at the final market. Standard cash sold at £183 7s 6d to £183 2s 6d, and three months, £186 to £184 15s. English ingots, £182 5s to £182 15s. Copper opened dearer, with an active demand especially for distant positions; sales included standard cash up to £66 2s 6d; February, £66 5s, and three months, £66 17s 6d to £66 10s. Later movements were attended by irregularity and weakness, selling orders being more in evidence. On Wednesday, cash sold at £65 12s 6d to £65 15s, and three months, £66 7s 6d to £66, while finally registered at £66 2s 6d. On the following day the tendency was rather firmer, with fair dealings. Standard, cash, sold at £65 12s 6d to £65 13s 9d, and three months, £66 7s 6d to £66 6s 3d to £66 7s 6d. Rates were rather easier at the final session, with a good demand. Standard cash sold at £65 10s to £65 7s 6d, and three months at £66 5s to £66. Electros, £72 5s to £72 10s; best selected, £69 10s to £71 10s. Strong sheets, £72 10s. Wire bars, £72 10s. Antimony, ordinary brands, £27 to £29 10s. Aluminium, home delivery, £100, and export, £105. Lead £29 to £28 to £27 12s 6d, as to position. Spelter easy at £35 5s to £34 7s 6d, according to position.

TALLOW.—Messrs Colchesters and Woolner write on January 31st, as follows:—The tallow market was steadier during the week, though prices are sixpence lower to-day for inferior. There were more buyers than sellers at prices recently current, and an advance was occasionally paid. At auction to-day 1,200 casks tallow were offered, and 841 were sold. Quotations are:—Australian mutton: Fine, 43s; good

to fair, 42s to 40s; dull to dark, 36s 6d to 35s; hard, 42s. Australian beef: Fine, 42s; good to fair, 39s 6d to 38s; dull to dark, 36s 3d to 35s; sweet, 42s 6d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 39s; and mixed, 43s, c.i.f. London, 37s 6d. The market letter is unchanged. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 13d; melted stuff, 25s 6d per cwt. Quotations are:—Town: 34s 9d net cash, naked, ex works. Country: Frail casks, 34s 3d; home melted, shipping casks, net, f.o.b., good coloured,—: fair to dull, 35s 6d to 34s 6d. Bone fat: White, none; pale, none; benzine, 31s 6d; melted stuff, 32s, f.o.b.

H. B. SHAW, General Manager.

AUDITORS' REPORT.

In accordance with the provisions of sub-sections 19 and 20 of section 56 of the Bank Act, 1913, we report to the shareholders as follows:—We have audited the above Balance Sheet and compared it with the books and vouchers at Head Office and with the certified returns from the Branches. We have obtained all the information and explanations that we have required, and are of the opinion that the transactions of the Bank which have come under our notice have been within the powers of the Bank. We have checked the cash, and verified the securities representing the investments of the Bank, at its Chief Office and principal Branches at a date other than that of the verification at the Chief Office on the 30th November, 1922, and found that they were in agreement with the entries in the books of the Bank relating thereto. In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

Winnipeg, 29th December, 1922.

T. HARRY WELSH, E. S. HEAD, Auditors,
of the firm of GEORGE A. TOUCHÉ AND CO.

The Bank has over 350 Branches in Canada, and Agents in the principal Cities in America.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."

Office: Granville House, Arundel street, Strand, London, W.C. 2.

Copies of the *Economist* may always be obtained in the City at Messrs Davies and Co., 95, Bishopsgate; Leathwait and Simmons, 5, Birch Lane; Barker and Howard, 6, Fenchurch buildings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15, Cullum street; Willing and Co., Limited, 50, Cophall avenue, and 53, Finsbury pavement.

Paris: Calignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de L'Opera.

THE MONEY MARKET.

EARLY in the week it was evident that the repayment of the Bank of England's advances by the Government and the cancellation of credit had, as usual, left the market very short of money. Purchases of March Treasury bills by what the discount houses call the "hidden hand," presumably acting for the Bank or the Government, were effected in order to ease the position with a view to the weekly sale of Treasury bills; but, in spite of these efforts, the market had to borrow from the Bank, and the three months' discount rate rose to 2½ per cent. Yesterday the

market had an unusual surprise in an allotment of Treasury bills at a much lower rate than had been expected. Business was to a great extent checked, and three months' bank paper was quoted nominally $2\frac{1}{2}$ - $\frac{3}{8}$ per cent.

	Feb. 9, 1923.	Feb. 2, 1923.	Jan. 26, 1923.	Jan. 19, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3 $\frac{1}{2}$ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1 $\frac{1}{2}$ (Jly. 13, '22)
Discount/Call	1	1	1	1	1 $\frac{1}{2}$ (Jly. 13, '22)
Houses (Notice	1 $\frac{1}{2}$	1 $\frac{1}{2}$	1 $\frac{1}{2}$	1 $\frac{1}{2}$	1 $\frac{1}{2}$ (Jly. 13, '22)
Market rate (3 months' bills)	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	..

The Bank return showed a reduction of £537,000 in the note circulation, and, with a small decline in the stock of coin and bullion, there was an increase of £536,000 in the Reserve. Public deposits rose by £3,294,700, while Other fell by £2,979,000 to £103 millions, which is £51 millions lower than at this time last year. Government securities were reduced by £352,500, and Other securities rose by £204,000. Currency notes outstanding were increased by £614,200 to £280,887,200 this week, which includes £1,509,800 for notes called in, but not yet cancelled. The fiduciary issue is £231,227,300, or £38,956,500 below the maximum.

The statement of average weekly balances of the London clearing banks, printed in detail on a later page, shows further slight increases both in deposits and in acceptances. In the table below we compare the aggregate figures of the nine English banks for January with those of previous months:—

	Dec., 1921.	March, 1922.	June, 1922.	Sept., 1922.	Dec., 1922.	Jan., 1923.
Capital and reserves	115.9	115.9	115.9	115.9	116.0	116.2
Acceptances	65.3	57.1	55.2	49.9	72.8	76.3
Deposits (incl. undiv. profits, &c.)	1,818.6	1,746.9	1,755.2	1,660.6	1,684.7	1,692.8
Total liabilities	1,999.8	1,919.9	1,926.3	1,826.4	1,873.5	1,885.3
Coin, notes, balance at bank, and cheques in course of collection	273.5	245.8	251.3	233.2	253.0	246.5
Money at call	105.7	102.5	113.0	104.4	106.0	108.0
Investments	343.3	392.7	412.0	405.8	384.5	382.0
Discounts	424.3	350.5	346.2	295.9	298.3	320.0
Loans and advances	762.3	746.2	723.3	711.3	732.7	726.5
Cover for accept., premises, &c.	50.7	82.2	80.5	75.8	99.0	102.3
Total assets	1,999.8	1,919.9	1,926.3	1,826.4	1,873.5	1,885.3

The increase of £8 millions in deposits follows one of £17 millions in December, while acceptances in January were £11 $\frac{1}{2}$ millions higher than in November. The principal change on the credit side is an increase of over £21 millions in discounts, which is offset by reductions in advances, investments, and cash. The detailed figures show a variation in the matter of investments, some recording a small increase on the month, while others show a considerable reduction.

THE STOCK MARKETS.

The volume of business in the Stock Exchange has been restricted this week, but there has been no pressure to sell, apart from the usual selling by the weaker bulls at the account. New issues continue to be promptly subscribed. The gilt-edged market remains firm, and in the foreign market French issues have rallied substantially from the lowest prices touched. Home Rails have improved under the stimulus of the excellent dividend announcements, and Argentine rails moved up. Rubber shares are quiet, but oils are distinctly better. In the industrial market electric lighting shares have again been a feature, and textile, cable, and tobacco issues have been strong. Little interest is being taken in Kaffirs, but De Beers and Rio Tintos have been fairly firm.

THE COMMODITY MARKETS.

The South Wales coal export trade has been very active, but otherwise the Cardiff market has been without feature. Our Sheffield correspondent reports that the home consumption of industrial coal continues to increase, adding that "there is almost a famine in coke." It is stated that the demand for pig-iron is greater than the present supply, makers having sold out for February; the price is firmer at 105s for No. 3 Cleveland for March and April delivery. East Coast hematite mixed numbers are at about the same figure, good orders having been received from abroad. The demand for steel continues to improve, although prices have not, so far, materially advanced. The Manchester

cotton market has again had a very quiet week, buyers generally continuing to hold aloof. Our Manchester trade correspondent reports that "the fluctuation in raw cotton rates and the political situation on the Continent have been disconcerting factors," optimistically adding, however, that traders "are of the opinion that a larger business will be done in the near future." There appears to be a general slackness in the wool market, and prices have weakened to the level of the December auctions. A "downward tendency" is referred to in the hide market by our Bermondsey correspondent. The good demand continues for linseed. Further details of markets from our special trade correspondents will be found in later pages.

FOREIGN EXCHANGES.

After an improvement at the end of last week, the foreign exchange market was depressed again on the news of the failure of Lausanne, and since then rates have been erratic and dealings restricted. The dollar, however, moved up to \$4.68 $\frac{1}{2}$ on Tuesday, after which it has fallen back quietly again, but showed some recovery yesterday morning at \$4.67 $\frac{1}{2}$, as compared with \$4.67 a week ago. At about 1 cent per month over spot forward rates have widened slightly as compared with last week. The immediate future of the dollar depends, of course, largely on the attitude of Congress towards the debt funding proposals. Should these be accepted a further improvement may perhaps be expected. The Paris rate, after its sharp recovery at the end of last week, due, it is suggested, to intervention, which frightened bear operators and caused hasty covering, has relapsed again, with very irregular movements; but yesterday morning, at 74.80, as compared with 75.30 a week ago, seemed rather more inclined to move upwards than downwards. The Brussels rate at 84.80, as compared with 86.10, shows a greater proportionate recovery. In neither country is the position satisfactory. The lack of results from the Ruhr adventure is becoming increasingly widely recognised, and less attention is paid to official optimism, while a heavy demand for foreign securities would suggest that even at the sacrifice involved in the present rates of exchange an increasing number of French and Belgian citizens prefer to have their money abroad than at home. Forward rates in Paris are rather narrower at 10 to 13 centimes per month above spot; in Brussels they have moved down slightly to about 1 centime per month below spot. In spite of the absence of any improvement in the situation, the mark quotation has shown a decided tendency to improve, and yesterday morning was down at 142,000, as compared with 180,000 a week ago. The only explanation is that the panic movement in Germany itself has been more or less overcome, but the rapid rise in prices and the greatly accelerated issue of notes would suggest that any further considerable improvement is unlikely. Dealings on this side remain much restricted. Among neutral countries, Holland reacted sharply to 11.80 $\frac{1}{2}$ on Wednesday, but began again to move up, and yesterday morning stood at 11.83 $\frac{1}{2}$, as compared with 11.80 $\frac{1}{2}$ a week ago. Madrid has gone again in our favour, from 29.74 to 29.91, but seems now to be moving down a little; Switzerland also has moved up from 24.86 to 24.90. In Scandinavia, Stockholm, after going against us, has moved up again, but at 17.60 is still six points below last week's figure. Christiania has again depreciated from 25.17 $\frac{1}{2}$ to 25.37 $\frac{1}{2}$; Copenhagen, however, at 25.07 $\frac{1}{2}$, shows some improvement on news that the Government is to stand behind the Landsmann Bank. Helsingfors at 180 $\frac{1}{2}$ shows some six points appreciation. In Central Europe, Vienna remains steady at 330,000, the prospects of a short loan in London not being allowed to interfere with the policy of stabilisation. Prague has recovered from 162 to 157 $\frac{1}{2}$, and Bucharest, after moving down sharply, has crept up quietly again to about 1,000. Athens and Constantinople rates remain more or less nominal. In the East, the rupee is slightly lower at 1s 4 $\frac{1}{2}$ d, and Yokohama shows little change at 2s 0 $\frac{1}{2}$ d. Silver is lower on the absence of Indian inquiry. China having been active, with a preponderance of sellers. Hong Kong has moved down from 2s 3 $\frac{1}{2}$ d to 2s 2 $\frac{1}{2}$ d. Shanghai from 3s 0 $\frac{1}{2}$ d to 3s 0 $\frac{1}{2}$ d. In South America, Rio has got slightly cheaper, from 51 $\frac{1}{2}$ d to 51 $\frac{1}{2}$ d, Buenos Ayres from 43 $\frac{1}{2}$ d to 43 $\frac{1}{2}$ d, while Montevideo is unchanged at 42 $\frac{1}{2}$ d. Valparaiso, however, has depreciated from 38 to 38.80 pesos.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 3rd:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	25,108	Interest on Debt	9,748
		Supply Services	7,532
		Sundries	359
		Added to Exchequer balances ..	92
		Reduction of debt	5,377
	25,108		23,108

Revenue for the seven days amounted to just over £23 millions, as against £35 $\frac{1}{2}$ millions for the corresponding period last year. Property and income-tax contributed about £15 $\frac{1}{2}$ millions, Customs £1,759,000, and Excise £969,000. Under Miscellaneous £1,800,000 came into the accounts. The week's operations reduced the National Debt by £5,377,254, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 250	Bank of England Advances ..	— 6,250
4 $\frac{1}{2}$ % Treasury Bonds	+ 3,478	Public Dept. Advances	— 1,250
Sundries	+ 914	Treasury Bills	— 715
		Unemployment Insurance ..	— 180
		Telegraph Money	— 450
		Exchequer Bonds Repaid ..	— 274
	+ 3,742		— 9,119

The floating debt was reduced by £8,170,000 to £913,201,500.

FINANCIAL YEAR, 1922-23 (April 1, 1922, to February 3, 1923).

	£		£

THE COMING SESSION.

THE two months of Parliamentary recess which will come to an end next Tuesday have been crowded to repletion with political events of first-class importance, and have at the same time been abnormally devoid of Ministerial speeches. The country, therefore, awaits with more than usual interest the renewal of contact between the Government and the House of Commons. Ministers who have been handling delicate affairs in an atmosphere of comparative tranquillity would perhaps be hardly human if they did not regret the necessity of submitting themselves to the turbulence of Parliamentary controversy. But in the eyes

of the country it is high time that matters gravely affecting its future should be restored to the arena of public and responsible discussion. When Parliament went on holiday in the middle of December members may have separated with comparatively light hearts. Hopes at that time were entertained that Lord Curzon would send us a Christmas gift of peace from Lausanne; that in the early New Year the Allies would at last hammer out a practical and united Reparations policy; that Mr Baldwin would make in Washington a satisfactory agreement for the funding of the British war debt to the United States; and that the new Free State Government was rapidly stamping out rebellion and outrage in Ireland. Only one of these hopes has been fulfilled; the other three have been sadly disappointed. It was felt also, two months ago, that, given a favourable development in international affairs, the improvement already noted in British trade might in 1923 develop into substantial and sustained recovery. To-day, although signs of momentary continuance of better trade are not wanting, the encouragement that they give is damped by the realisation that in the long run the renewed and growing unrest in Europe must exert a restricting effect upon our trade all the world over. The comparative cheerfulness of mid-December, therefore, is replaced by grave anxiety, and Mr Bonar Law must expect to face an insistent demand for clear statements of policy and searching criticism of Cabinet decisions during the recess.

On their respective successes and failures at Washington and Lausanne, Mr Baldwin and Lord Curzon may well feel their case powerful enough to resist most of the arrows of criticism which may be fired at them from certain quarters. The publication of the terms of the American Debt Funding plan, which we set out on a later page, has strengthened the City in its belief that the arrangement is a fair and business-like deal, while the country as a whole will agree with President Harding that there is far more in it than the mere technicalities of funding the largest international loan ever contracted. "It is," said Mr Harding, in submitting the Agreement to Congress, "a recommitment of the English-speaking world to the validity of contract. It is, in effect, a plight against war and war expenditure, and a rigid adherence to that production and retrenchment which enhances stability precisely as it discharges obligations." Above all, this country will see in this debt Agreement the removal of the last obstacle to effective Anglo-American co-operation—a co-operation on which in the present state of European affairs the future hopes of the world must seem in no small measure to depend. Nor, we think, should Lord Curzon be less certain of approval for his untiring and skilful labours which so narrowly failed to bring to fruition at Lausanne the first practicable and negotiated Treaty which has been produced since the war. We do not know how far Lord Curzon will go in revealing the causes which led to an eleventh-hour failure, but we have little doubt that he will prove beyond all question that the blame for failure cannot be laid at his door, or at that of the British Cabinet.

But when the main question arises of the failure of the Paris Reparation Conference and of the subsequent French action in the Ruhr, Mr Bonar Law will not find himself in so easy a position. With regard to the Paris Conference failure, he may, it is true, plead with some effect that even had he gone at the outset to the furthest limits of concessions possible to this country, even then agreement with France would not have been attainable. That, of course, is a hypothetical point around which controversy may rage without arriving at a definite conclusion. But on the question of the British attitude towards the French occupation in the Ruhr criticism will be searching and insistent. It is comparatively easy to sit on the fence in the seclusion of Downing Street, but to maintain a balance is not so easy when buffeted this way and that in the hurly-burly of Parliamentary question time and debate. To define an attitude is comparatively easy when decisions are recorded only in the confidential dispatches of the Foreign Office, but the task presents a difficult problem when the spoken word is broadcast in the world's Press and scanned by enemy and friend. Before the

Session has been alive for a few hours, Mr Bonar Law may expect to be called upon to state a policy not only with regard to the British garrison in Cologne, whose position apparently grows week by week more untenable, but also with regard to the main question of the French policy which is now developing. The first requirement of the country in this matter is that the policy of the British Government should be that which is conducive to the maintenance of the world's peace, or rather to the restoration of the peace and confidence which Europe so conspicuously lacks. That, we believe, is the first and unanimous demand of this country. But while the attitude to be struck on this matter must be based on infinitely broader considerations than the fear of wounding French susceptibilities, it is of almost equal importance that no position should be created in which Allied solidarity of policy in the Near East should become more difficult or impossible. We have recently seen how the appearance of Allied differences with regard to Turkey led up to the failure at Lausanne, and if real peace is to be restored in the Near East, the united front typified by the action of the British and French Admirals in the Ægean Sea must have its counterpart in Downing Street and the Quai d'Orsay. It is a difficult path to tread, and no man perhaps could tread it to the complete satisfaction of any school of critics.

Foreign affairs may be expected to dominate the session in its early days; but the Government will by no means be free from pre-occupation over domestic policies. The days of the estimates and the Budget are approaching, and while the cry for retrenchment in general is universal, retrenchment in any particular always finds strenuous opposition; while in preparing the Budget Mr Baldwin will be assailed—indeed he is being assailed already—by powerful interests demanding tax relief such as can only be granted at the expense of sound finance. A grave unemployment problem is still with us, and in view of the European confusion is likely to remain, although not quite, we hope, on the present scale. The question of Rent Restriction will provide another domestic bone of vigorous contention; while Free Traders will not, we trust, cease their attacks upon the Safeguarding of Industries Act, in which they are fortified by the publication this week of yet another demand for the Act's repeal by a strong association of business men. Altogether the session promises anything but tranquillity, and the vital importance of the questions to be debated will provide an unusually severe test not only of statesmanship, but also of the calibre of the House of Commons.

LAUSANNE AND SEVRES.

THE Treaty of Sévres, the defunct predecessor of the Lausanne Treaty, was drafted without the participation of any Turkish negotiations, and when representatives of an already impotent "Sublime Porte" were invited to comment on the ready-made instrument, their counter-proposals were rejected by the Supreme Council in a sarcastically worded reply. A sufficient number of amenable Turks having been discovered and transported for the purpose to France, the signatures were then solemnly affixed. But the control of nine-tenths of Turkey (outside the former Arab provinces) had already passed into the hands of a Turkish Government that repudiated the Allies' terms altogether, and the treaty was neither ratified nor carried out. The substitute for the Treaty of Sévres, which now, more than two years later, has been drafted at Lausanne, has not so far been signed; but anyone who argued from this that it was as dead as its still-born predecessor would be ignoring the important and salutary differences in the conditions under which it has been worked out. For this has been a negotiated treaty—the first of its kind since the Armistice of 1918—and since, in this Eastern theatre, an additional four years of war have somewhat confused the rôles of victor and vanquished, the parties have met on an equality, and reasonable compromises have been struck out by real negotiation. In fact, the palm of courtesy and concession has been carried off this time

by the nominally victorious side, and the nominally beaten party have admitted, though they are in an exacting mood, that 80 per cent. of the terms offered them are acceptable. We need not, therefore, be unduly pessimistic if Ismet Pasha has momentarily withheld his signature. The gesture is humiliating for us, and undignified in him, but, after all, his signature (unlike that of his unfortunate compatriots who underwrote the Treaty of Sévres) is a weighty matter, for he is the influential representative of a Government that effectively rules in Turkey. If he does sign, it may be assumed with some confidence that the instrument he honours will be executed, and delay need not be regretted if the signature, when it comes, leads to material results beyond the mere blackening of paper. There is still some reason to hope, in spite of the truculence of Angora this week, that the new treaty will actually be signed, and will come into force, substantially as it stands; and a comparison of the two documents gives the best grounds for optimism. It will be seen that while no Turk could have been expected to accept the former treaty so long as he was capable of resistance, the Lausanne document (to judge from the official summary) offers Turkey an opportunity of prosperous and self-respecting existence, such as has not come her way for a century and a-half.

One may consider, first, the difference in the territorial provisions. The Sévres Treaty brought the European frontiers between Turkey and Greece to within gunshot of Constantinople, placed the European shores of the Dardanelles under Greek sovereignty, and gave Greece a bite out of the west coast of Anatolia, which included the indispensable port of Smyrna and would have crippled Turkey economically in her "home-lands." On the other side, President Wilson was asked to make another bite for the benefit of the Armenians (which he did in generous measure), and Kurdistan east of the Euphrates and north of Mesopotamia was to be "semi-detached" from the Turkish State. On the south, the track of the Baghdad Railway, from the eastern border of Cilicia eastwards to the railhead, was wholly included in Syria, though it was as vital, commercially, to the neighbouring parts of Turkey as it was to the French mandated territory. Finally, all that was left of Turkey-in-Europe, including Constantinople, as well as the entire Asiatic shore of the Bosphorus, Marmora, and Dardanelles, was placed out of bounds for the Turkish army, and was to be permanently garrisoned by the fleets and armies of the three principal European Allied Powers, as a sanction for the authority of an international Straits Commission, on which Turkey was to have no more than one vote out of sixteen.

The new treaty gives Turkey the mainland of the Anatolian Peninsula in its entirety, and an ample bridge-head, covering Constantinople, on the European side of the Straits up to the line of the Maritsa. The islands off the mouth of the Dardanelles and the west coast of Anatolia, from Samothrace to Samos, are to be demilitarised (an equitable provision, which Turkey demanded in vain after the Balkan War), and two of them—Imbros and Tenedos—are to be given back to Turkey, with the reservation of local autonomy. On the East, the Allies no longer claim any voice in the settlement of Turkey's frontiers, and thereby tacitly recognise those Russo-Turkish treaties under which Turkey has recovered Trans-Caucasian districts which she lost in 1878. On the South, the terms of the Franklin-Bouillon Agreement are incorporated in the treaty, and the new frontier will thus start from the Mediterranean just north of Alexandretta, and will follow, for the most part, the line of the Baghdad Railway, leaving the permanent way itself in Turkish possession. On the Mesopotamian side, the disposal of the Mosul Vilayet is to be left over, by agreement between Turkey and Great Britain, and is to be decided after a year's interval by the League of Nations in the event of the two parties failing to come to a direct agreement within that term. No more is said about autonomy for Ottoman Kurdistan nor (unhappily) about

a national home for the Ottoman Armenians. These are immense changes in favour of Turkey, and on the balance they are just and practicable. On the other side, it is satisfactory to find that the Turks have abandoned their claim to a plebiscite in Western Thrace, and have contented themselves with a tiny strip opposite Adrianople, containing the terminus of the branch railway between that city and Karagach (which is left to Greece).

The régime of the Straits, again, has been modified in an equally striking way in Turkey's favour, though the desirability of these changes from the international point of view is a more debatable question. Having recovered the sovereignty over the entire shores of the waterway in all its sections, Turkey is to be relieved of many of the servitudes which were imposed on this zone at the time when the sovereignty was divided between her and Greece. The demilitarised areas have been reduced to four narrow and disconnected strips on either side of the Bosphorus and the Dardanelles; and from these Constantinople is excepted, the Turks being permitted to keep there a garrison of 12,000 men. As a final concession, the Allies have abandoned the limitation of the Turkish forces in Thrace, and the demilitarised areas are to be available for their lines of communication, while the Turkish fleet is to be free of the Marmara. The Allied garrisons disappear altogether, and Turkey is given the permanent presidency of the Straits Commission, while the security of Turkey, in so far as it is affected by the Straits Commission, is guaranteed by the Powers.

The naval, military, and air control by the Allies (which occupied 56 articles out of 433 in the former Treaty) simply drops out, and so do the capitulations, which the Sévres document reaffirmed *in toto*, though it contemplated the appointment of a commission, on which Turkey was not to be represented, to frame a substitute for them, which Turkey was bound over in advance to accept. The Lausanne Treaty abolishes extra-territorial jurisdiction altogether, save in matters of personal status, and merely stipulates that foreign nationals shall not be subject to discrimination (especially as regards taxation), as compared with Turkish citizens. The position of Allied religious, scholastic and educational institutions is to be respected, and Turkey is asked to sign a unilateral declaration that she will select *conseillers légistes*, three of them to be judges of the Permanent International Court of Justice, as assessors to her higher judiciary in cases in which foreign subjects are concerned. Even this is only to last for a transitional period of five years, and it is significant that these modest reservations to the surrender of ancient and substantial privileges have been the main obstacle to a Turkish signature.

Minorities in Turkey are to be secured rights similar to those established in the European minority treaties, under the guarantee of the League of Nations, and the amnesty clauses of the Sévres Treaty (now more necessary than ever) are repeated. But the perpetuation of the "millet" system is dropped, as is also the right previously asserted by the Allies to take guarantees themselves. Nor are Turkish nationals to have unrestricted licence (as they were given under the Sévres Treaty) to acquire foreign nationality—a privilege, incidentally, that loses its value with the disappearance of the capitulations. But the most significant provision about minorities is a separate convention, already signed by Turkey and Greece, for the enforced interchange of all Greek minorities in Turkey except at Constantinople and all Muslim minorities in Greece except in Western Thrace, a ferocious remedy for an incurable disease.

The comparison might be carried on into the Reparation clauses, and worked out in detail, but the general impression produced by the examination of the more important headings holds good of the whole. The Treaty gives Turkey at least all that she ought to have, and almost all that she demands, and it will be strange if she throws away her good fortune. If, as we hope, the Lausanne Treaty is eventually signed, future peace and progress in the Near East will still, as we pointed out last week, depend in no small degree upon events in Western Europe and the solidarity of the Near Eastern policy of Britain and France. Events at Smyrna this week serve to emphasise this fact.

THE PRICE OF NEW CAPITAL.

In our issue of December 30th we set out the amount of capital raised in the London market in 1922, analysing the purposes for which it was raised and the countries by which it was borrowed. In this article it is our purpose to show the form in which that new capital was raised and the average rate of interest offered upon the securities for which it is possible to calculate a definite percentage of return. The rates of interest given below, it should be mentioned, are all "less tax," the rates on "free of tax" securities having been converted to the comparable figure. Profit on redemption has been allowed for where necessary. An analysis of the classes of public issues in London in the years 1912, 1913, 1920, 1921, and 1922 reads as follows:—

PUBLIC ISSUES OF CAPITAL IN LONDON.

	Year 1912.	Year 1913.	Year 1920.	Year 1921.	Year 1922.
	£	£	£	£	£
Debentures, bonds, &c.	123,064,600	139,920,400	134,184,300	347,517,400	526,730,900
Preference stocks and shares .	26,674,400	22,955,600	78,235,100	21,045,300	30,807,800
Ordinary stocks and shares	59,111,000	33,661,300	156,130,200	20,415,500	16,136,900
Total	210,850,000	196,537,300	368,549,600	588,978,200	573,675,600

Loans by Governments and municipalities at home and abroad account for £462 millions in 1922, as against £306 millions in 1921, leaving £64½ millions raised in the form of debenture stock, bonds, &c., by other borrowers, as against £41 millions in the previous year. Excluding Government and municipal borrowing the total has risen from £83 to £111½ millions, debentures and bonds accounting for £23 millions of the increase. Of the other two classes, ordinary shares have gone still more out of favour, while preference issues have a little more than held their own. The next table shows the manner in which borrowers of various kinds raised their capital in 1922:—

NATURE OF CAPITAL OFFERED ON THE LONDON MONEY MARKET.

	1921.		1922.		Total.
	Total.	Ordinary Stocks or Shares.	Preference Stocks or Shares.	Debentures, Bonds, &c.	
	£	£	£	£	£

Stores and Trading	3,800,000	15,500	555,000	50,000	4,420,500
Estate and Land	818,900	1,026,700	..	672,500	1,518,100
Rubber	1,134,900	..	5,000	125,700	1,265,600
Oil	15,221,700	2,790,000	14,275,000	100,000	32,381,700
Iron, Coal, Steel, & Engineering	4,773,800	4,043,300	1,405,000	8,594,500	18,816,600
Electric Light, Power, and Telegraph	5,677,800	650,300	1,446,700	2,754,800	10,529,600
Tramway and Omnibus	774,000	31,300	57,000	470,000	1,332,300
Motor Traction and Mnf'g.	96,000	nil	nil	nil	96,000
Gas and Water	2,447,600	..	1,311,000	782,300	4,540,900
Hotels, Theatres, &c.	2,528,400	539,200	920,000	169,700	4,157,300
Patents & Proprietary Articles	131,400	..	..	..	131,400
Docks, Harbours, and Shipping	5,183,200	19,800	3,557,400	12,070,000	20,830,400
Banks and Insurance	3,579,000	2,968,700	..	..	6,547,700
Miscellaneous	3,447,200	2,866,600	2,569,700	5,718,900	14,592,400
Total	388,978,200	16,136,900	30,807,800	526,730,900	573,675,600

It will be seen that foreign railways alone account for over £14 millions of the increase shown under debentures in comparison with 1921. Shipping companies account for another £7 millions. The oil companies have raised the bulk of their money in the form of preference shares, whereas in 1921 £7½ millions were in the form of ordinary shares, £6½ millions in preference shares, and £1½ millions in debenture stock.

Turning to the rates which borrowers had to pay for their money, we find that the average rate paid on Government and municipal stocks and company debentures, &c., works out at 5.78 per cent. for 1922, as compared with

6.39 per cent. in 1921, 6.97 per cent. in 1920, and 5.07 per cent. in 1913. This is not at all surprising in view of the substantial decline in money rates during the past year and the very much lower rate at which the large volume of Government borrowing has been made. With a view to showing more clearly how this reduction has been made, we analyse first the rates paid by the three classes of Government borrowers in the past two years:—

BRITISH, COLONIAL, and FOREIGN GOVERNMENT SECURITIES.
(000's omitted.)

	(a)	British Government Loans.		Colonial Government Loans.		Foreign Government Loans.		Total.	
	Year 1913.	Year 1921.	Year 1922.	Year 1921.	Year 1922.	Year 1921.	Year 1922.	Year 1921.	Year 1922.

Total	52,437	197,547	369,628	73,650	58,582	5,905	14,254	277,102	442,464
Average yield	4.77%	5.7%	5.59%	6.42%	5.66%	7.49%	7.85%	6.49%	5.65%

† Represents borrowing at over 6%. (a) This total of £52,437,000 represents £26,279,000 on behalf of Colonial Governments, at an average yield of 4.15%, and £26,158,000 on behalf of Foreign Governments, at an average yield of 5.31%.

The figures for the British Government include the net sales of National Savings Certificates, amounting to £58 millions, the yield on which for the year works out at about 7.4 per cent., less tax. This, of course, accounts for the apparently small decrease in the cost of British Government borrowings in comparison with 1921. In 1920 the average rate, however, was 6.98 per cent. Foreign Governments, it will be seen, had to pay slightly more last year than in 1921, and very much more than Colonial Governments, whose average rate was but a trifle over that of the British Government. Colonial and foreign municipalities each borrowed £7 millions at an average rate of 5.88 and 6.78 per cent. respectively, as against 6.66 and 8 per cent. in 1921. The £6 millions borrowed by British railways, shown in a previous table, was obtained at the low rate of 4.95 per cent., but the bulk of this was a Government guaranteed issue under the Trade Facilities Act. Foreign railways borrowed their £14½ millions at an average of 6.92 per cent.

British municipalities had to pay 5.74 per cent., as against 6.22 per cent. in 1921 and 6.24 per cent. in 1920. The rate for industrial debentures fell sharply last year to a figure which is appreciably lower than the average rate at which the British Government borrowed two years ago:—

INDUSTRIAL and COMMERCIAL BONDS, DEBENTURES, &c.

	Year 1913.	Year 1921.	Year 1922.
Yielding over 3½% to 4% ..	60,000	..	..
" " 4% to 4½% ..	1,182,000	..	..
" " 4½% to 5% ..	2,582,000	..	218,700

" " 8% to 8½% ..	..	7,655,700	789,000
" " 8½% to 9% ..	..	3,837,900	337,700
" " 9% ..	..	1,935,100	236,400
Total	25,086,000	39,896,000	43,845,600
Average yields	5.5%	8.09%	6.72%

† Represents capital yielding over 6 per cent.

Two years ago the rate was 7.92 per cent., but even after last year's substantial decline the average rate is for 1922 substantially above the 1913 rate.

There is also a substantial fall to be recorded in the average rates of preference stock and share issues. The average rate paid on new issues of preference stocks and shares was 7.17 per cent., as compared with 8.39 per cent. in 1921, 8.09 in 1920, and 5.74 in 1913.

The final table gives the average Bank rate, the average three months' bill rate, and the rates paid on industrial

debentures, and on all Government borrowings, in 1913, 1920, 1921, and 1922 respectively:—

	Average Bank Rate.	Average 3 Months' Bill Rate.	Average Rate on Issues of Industrial Debentures.	Average Rate Paid by all Government Borrowers.
	£ s d	£ s d	£ s d	£ s d
1913	4 15 5	4 7 5	5 5	4 77
1920	6 16 4	6 7 11	7 92	6 05
1921	6 2 4	5 4 3	8 09	6 49
1922	3 13 10	2 13 0	6 72	5 65

The fall in the rates paid for new capital does not appear to be so large as might have been expected, but it may be pointed out that more than half the total new capital was raised in the first quarter and four-fifths in the first six months, before the full influence of declining money rates had made itself felt upon the new capital market.

EXPENDITURE AND CONTROL.

WITH Parliament soon about to meet, and to resolve itself, in its popularly elected House, into Committee of Supply to consider the estimates for the ensuing year, it is natural and right that Budget anticipations should be very much in the air, and that the Federation of British Industries, Chambers of Commerce, and other bodies should prepare to wax eloquent in the ear of a sympathetic Chancellor of the Exchequer on the subject of the burden imposed on industry by taxation, and the urgent need of its relief. Most of us are only too sincerely convinced that we are unconscionably taxed, and also that a large part of the money that is wrung from us is wasted or ill spent; but as soon as the question is seriously discussed of definite economies to be effected, differences of opinion become so acute that it is generally easy for the executive to reduce the economists to dissatisfied silence by knocking their heads together and answering them out of one another's mouths. What we all want to know is, whether some more effective system of control over expenditure is possible, whether Parliament is really capable of controlling in detail the outlay of the departments, and if not, whether some outside body such as the Geddes Committee could be made a permanent check on official extravagance.

On the subject of official extravagance there has lately appeared an opportune reminder in the shape of the first, second, and third reports from the Select Committee on Public Accounts [39, 48, 167, £1 5s net], the third of which reviews the accounts of the year 1920-21, the first which have been submitted to the Public Accounts Committee since the passing of the Exchequer and Audit Departments Act of 1921. This Act relieved the Comptroller and Auditor-General of a statutory obligation to conduct a detailed and complete audit of all accounts not included in Schedule B of the Act of 1866, so giving statutory authority to a practice by which, in recent years, and especially during the war, the literal and inelastic provisions of the 1866 Act had been evaded. Nevertheless, the Comptroller and Auditor-General has informed the committee that, in fact, he has made no departure in his examination of the accounts for 1920-21 from the practice of recent years. These reports had already been published, and the new matter in the new publication consists chiefly of evidence, much of which is very interesting, and an impressive record of careful examination, and certain appendices. Old as it is, however, the third report is well worth a glance, with its curious glimpses of muddle and waste which were revealed during the period of after-war cleaning-up, and the minuteness with which they were investigated. The committee found, for example, that large expenditure had been incurred from Army funds in connection with the purchase and adaptation of a residence for the High Commissioner at Baghdad. "Until the work was far advanced neither the War Office, nor, indeed, any Home Department, was aware of this project, which has involved an expenditure of £135,000. We understand that it has been agreed between the Colonial Office and the War Office that the

expenditure is not a proper charge to Army funds, but we have not yet learned how it is proposed to provide for it. We must express our surprise that a work of this magnitude should have been undertaken without, apparently, any reference to the Home Government. The War Office have asked the local military authorities under what authority such services as a racecourse and certain works for civilians were undertaken." It is also interesting to find that British troops in Bulgaria had been able, by use of the official machinery of exchange and unauthorised traffic in canteen stores, to make large profits for themselves, the official rate of exchange departing widely from the market rate. Then there was the deficit of over a million on the Ordnance Factories account, attributed to the decision arrived at, when the demand for munitions suddenly stopped at the Armistice, that alternative work should be provided at the factories in order to avoid the throwing of excessive numbers of workmen out of employment. Included in this work was the manufacture of 100 locomotive engines, "for which no definite purchaser was, or is yet, in view." And the case of the drifter "Colonel" was a bad example of lack of co-ordination between branches. The Admiralty meant to hand her back to the owners, paying them a lump sum in lieu of repairs, but the dockyard authorities set to work on repairs without, apparently, even telephoning to headquarters on the matter.

By the time the Admiralty had agreed on £3,500 in lieu of repairs, the dockyard had already spent £1,300 on them. The owners refused to make any allowance for this expenditure, and so the Admiralty bought the boat outright for £4,800; repairs cost, in all, just under £3,000, and so the total cost of the boat was £7,797. She was finally sold for £750. All these things, however, happened long ago, and were a more or less necessary part of the cost of the war, and the dislocation that it brought with it. Moreover, we have to remember before we put them all down to "official" muddling that the services were then full of amateur helpers, who often wasted public money much more recklessly than the trained civil servant who had been brought up in the true tradition. And the report is by no means all in one key. We find, for instance, that the new form of Army account, though its full advantages are not yet fully apparent, is likely to prove a valuable instrument for control and economy. Through it it was possible to learn "that Army expenditure in Mesopotamia in 1920-1 cost £37,000,000..... that a student officer at the Staff College, Camberley, costs the country £1,393, including his pay and allowances, and so on, not forgetting the economies shown to have been made in other directions."

All this is to the good, and the work of this investigating committee, though it is only able to find out and pillory irregularities that are already committed, is clearly a most useful deterrent, by the fear of subsequent detection that it inspires in those who might be inclined to make careless use of public funds. But it acts after the event, and does not meet the wishes of those who want somehow to impose a check on the misuse of the taxpayers' money before it happens. Whether anything more can be done to secure this end is, unfortunately, very doubtful. The Committee of Estimates has not been a great success. It hardly could be so, because it was inevitably barred from discussing items of expenditure which involved questions of policy—clearly no Government could allow these to be revised by any committee—and so the field over which it is enabled to range is exceedingly narrow. The idea of the permanent establishment of an outside body such as the Geddes Committee may be dismissed as impracticable, since it would be out of the question to expect Parliament thus to delegate one of its chief duties and so still further to weaken its prestige in the eyes of the nation. In fact, gossip says that the Geddes Committee only came into being because the late Administration was terrified by the popular clamour for economy, and at the same time dared not face the fury of the supporters whom it had "placated" at the expense of the public purse, that it was certain to cause if it cut down comfortable posts, except at the bidding of a quite exceptional body called in to advise from outside. However this may be, the fact remains that its appointment was a serious confession of weakness which Parliament is

unlikely to repeat. As things are, the best checks on extravagance seem to be the revival and strengthening of Treasury control, which we believe to have been satisfactorily re-established as far as has been permitted by the gigantic figures that have now to be handled, and above all a Government that really means to take care of our money, backed by a House of Commons full of the same determination, and an electorate in the same mood. Whether our present systems of taxation and representation are likely to produce this temper in the country and in the House is very doubtful; they almost seem to be designed to promote generosity to electors who are free from the direct weight of taxation at the expense of taxpayers whose electoral weight is much lighter than their fiscal liability. Within limits this political redistribution of wealth, though perhaps not without its demoralising side, is not wholly an evil. For the present, however, the craving for economy is sufficiently widespread and strong to raise the hope that, at least for some time to come, real economy may be ensured as the result of public opinion acting through the executive, backed by the House of Commons in Committee of Supply.

THE VOLUME OF OVERSEAS TRADE.

ALTHOUGH the changes in commodity prices were far less violent in 1922 than in 1921, the price-change factor was still sufficient to vitiate comparison of the value figures of the two years. In order to afford the opportunity for comparing the volume of trade, the *Board of Trade Journal* has re-calculated the trade of 1922, 1921, and 1920 on the basis of the prices current in 1913. These calculations make it possible to see at a glance not only the progress in trade volume last year, but also the amount of leeway which our export trade still has to make up before overtaking its pre-war volume. Re-valued on the basis of 1913 prices, the trade of the last four years is shown by our contemporary to compare with that of 1913 as follows:—

	—Values on Basis of 1913 Prices.—		
	Total Imports.	Re-Exports.	Exports.
	Thousand £.	Thousand £.	(U.K. Goods) Thousand £.
Trade of 1913.....	768,735	109,567	525,254
Trade of 1919.....	679,786	85,726	288,105
Trade of 1920.....	679,274	98,909	372,476
Trade of 1921.....	570,912	86,127	261,647
Trade of 1922.....	659,391	89,318	361,836

From these figures it is deduced that the volume of imports in 1922 was 85.8 per cent., in 1921 74.3 per cent., in 1920 and 1919 88.4 per cent. of the volume in 1913. The percentages of the 1913 volume attained by British exports were 68.9 last year, 49.8 in 1921, 70.9 in 1920, and 54.9 in 1919. It will be seen that the volume of exports, although substantially larger than in 1919 or 1921, fell a little short of 1920. As compared with 1913, the volume of exports for 1922 shows a deficiency amounting to 31.1 per cent.

In the course of a detailed examination of these figures, our contemporary shows how the price levels of imports, exports, and re-exports have moved, how the main classes of trade have contributed to the aggregate, and, as regards 1922, how the volume of trade increased quarter by quarter. As regards the first of these matters, it is shown that, taking the price level of 1913 as 100, the average price level of imports in 1922 was 152, as compared with 190 in 1921 and 285 in 1920; of re-exports, 116 last year, compared with 124 in 1921 and 225 in 1920; of British exports, 199 last year, compared with 269 in 1921 and 358 in 1920. The fact that the average price level of exports of United Kingdom goods fell from 169 per cent. to 99 per cent. above the pre-war level is a somewhat striking reminder of the big cuts in quotations made during the year by leading branches of manufacture for export. It is further explained by the *Board of Trade Journal* as follows:—"The course of price changes of British exports bears little resemblance to that of imports or of general wholesale market prices in this country. Export prices relate mainly to manufactured goods, into

the cost of which enter not merely raw materials, but also costs of manufacture. Moreover, goods exported during any period mainly represent business arranged some time before, so that a considerable time lag is to be expected between prices of exports and general prices in the wholesale markets of the same classes of commodities." The low price level of re-exports is largely due to heavy re-exports of rubber at prices far below those of 1913.

From further figures given by our contemporary we compile the following table, showing (1) how various classes of imports and exports contributed to the aggregate results, (2) how trade progressed quarter by quarter, and (3) how each figure compares with the appropriate figure for 1913. The 1913 figure in each case is given in brackets:—

(In Millions of £'s.)

1922.	Imports			Exports.		
	Food, Drink, & Tobacco.	Raw Materials &c.	Manufactures, &c.	Food, Drink, & Tobacco.	Raw Materials &c.	Manufactures, &c.
First quarter	65.7 (62.3)	33.8 (59.9)	27.9 (42.2)	4.4 (6.9)	13.3 (15.5)	66.3 (102.5)
Second quarter	69.2 (68.5)	42.2 (42.2)	33.3 (43.2)	4.4 (7.3)	15.2 (16.8)	63.3 (103.3)
Third quarter	63.6 (72.2)	39.0 (40.2)	33.5 (42.8)	4.4 (9.1)	16.3 (16.4)	71.3 (105.4)
Fourth quarter	77.8 (75.9)	48.7 (63.9)	33.3 (43.3)	4.6 (10.6)	17.9 (17.4)	74.1 (102.6)

As regards the import figures, retained imports of food, drink, and tobacco were greater in volume in the last quarter of 1922 than in the last quarter of 1913. In the second and third quarters, raw materials imported and retained approximated in volume to the pre-war figure, but the comparison was by no means so favourable in the last quarter. On the export side, raw materials in the last quarter, thanks largely to coal, exceeded the volume recorded in the last quarter of 1913. Exports of British manufactured goods advanced in volume, except in the second quarter, when a disconcerting effect was produced by the dispute in the engineering industry. Apart from this temporary influence, the volume of our exports of manufactures showed steady expansion.

In 1922 our total imports of food, drink, and tobacco were 99.5 per cent. of those of 1913; of raw materials, &c., 80.8 per cent.; of manufactures, &c., 72.4 per cent., judged in each case by quantity. Exports of United Kingdom produce, taking 100 to represent 1913 in each case, show 52.7 as last year's figure for food, drink, and tobacco, 94.7 for raw materials, &c., and 66.5 for manufactures. Turning to individual items, it is found that coal exports were 85.3 of the 1913 volume, iron ore and scrap 132 per cent., non-ferrous metalliferous ores and scrap 884.5 per cent., wool 154.3 per cent., oilseeds, nuts, oils, &c., 131.4 per cent. Among exports, British manufactures (again taking the 1913 figure as 100), coke and manufactured fuel comes out well with 116.1, rubber manufactures with 93.3, non-ferrous metals and manufactures thereof with 93.5, and paper and cardboard with 92.4. For exports of iron and steel and manufactures thereof the figure is 69.4, for machinery 57.6, for woollen and worsted yarns and manufactures 84.2, for cotton yarns and manufactures 65.5. A detailed examination of the re-export figures shows food, drink, and tobacco figuring for last year at 106.6, raw materials, &c., at 85.2, and manufactures at 59.8, compared with 100 for 1913 in each case. In the case of grain and flour, meat, tobacco, wool, rubber, silk, and manufactured oils, fats, and resins, the volume of 1922 re-exports was above that of 1913; but the aggregate volume of the entire re-export trade was 18.5 per cent. below that of the last full pre-war year.

LATIN-AMERICAN NOTES.

(BY OUR OWN CORRESPONDENT.)

BRAZIL: As might have been expected, the tardy but long overdue advance in the cost of raw rubber has occasioned concern among the larger users of that material, with the consequence that many alternatives to its use or expedients for cheapening it have been advanced. The president of one United States tyre company is said to be seriously contemplating a scheme to acquire rubber planta-

tions in Brazil, to be worked with imported Chinese labour; and we are told that plans have progressed to a point where the question of "supplying labourers with rice for food is being investigated." It is to be feared that those who have put forward this proposal can possess but little practical knowledge of actual conditions prevailing in the rubber-growing districts of Brazil. Owing to the severe depression among producers in the Amazonas and Matto Grosso, the two largest of the rubber-growing States, and the unprecedented extent of unemployment there, the Governments of both provinces have for some time been compelled to provide large credits for the maintenance of those actively engaged in the industry. In May, 1921, the Federal Parliament voted a credit of £125,000 to assist the population of the Amazon, whose position had been rendered precarious owing to the fall in rubber; while in January of last year a further credit of 25,000 contos of reis (nominally £1,250,000) was voted for the same purpose. It is hardly probable, therefore, that Governmental consent would be given to the importation of hordes of Chinese to compete with native Brazilians. Moreover, prices of even the cheapest food-stuffs remain abnormally high, and imported rice would prove no exception. When rubber was 12s per lb the price of foodstuffs was of little importance; but to-day, with the best Amazonas product selling at less than 1s 3d per lb, and considerable stocks on hand at Pará and Manaus, the whole industry is suffering. While it is true that plantation rubber from the East realises considerably less in the market than fine hard Pará, expenses of living, collection and preparation are much lower in the Malay States and Java than in South America. The Pará crop of July, 1921-June, 1922 showed, at 21,500 tons, little difference from that of the previous period (1920-21), but the 1922-23 crop promises some slight improvement. Similar conditions are believed to prevail in Bolivia and Peru, where a number of plantations, unable to meet the high cost of production and transportation, have been temporarily abandoned. On the other hand, many of these estates have kept open avenues between the trees so that it would be possible to renew production when prices recover. Before any new plantations could be brought to cultivation, or even laid out, as proposed by American consuming interests, these abandoned estates in Brazil, Bolivia and Peru would again come into activity, thus serving to keep down the price of rubber to a reasonable figure, and render new enterprise unprofitable. Moreover, the cultivation of *Hevea* in Brazil must always remain handicapped by insurmountable local conditions. Good drainage and loose soil, which are more important for normal development of the trees, are there sometimes lacking; thus (Brazilian) *Hevea* culture is more expensive than that of other varieties, although in some measure compensation for the additional expense may be obtained from subcultures, such as bananas, coffee, or cacao. But this applies equally to production elsewhere.

GERMAN TRADE COMPETITION: From the day that peace was proclaimed, and Germany left free to resume her world-trade, her indefatigable people began to pick up the somewhat scattered and disorganised, but never abandoned, threads of their South American trade. The flow of her emissaries was resumed. Again were launched numerous subsidised and always well-equipped steamship lines, serving direct or touching at all the chief ports of Latin-America; not one was overlooked, nor regarded as too insignificant to call at. Even British shippers availed themselves of such means of transport, for there existed few others—and fewer of their own. A chain of German banks throughout the Latin-American countries—some genuinely Teutonic, others disguised under various Spanish and Portuguese names—continued to protect and promote the overseas commerce of the Fatherland. For these monetary institutions no transaction has ever been deemed too small, nor is any applicant readily turned away. The whole laboriously constructed German commercial edifice in South America, disturbed—like an ant-hill—by the war, suffered but momentarily. The busy denizens—the first shock encountered—have now set to work with more zeal than ever to promote and restore, to cement and to solidify.

To what extent Germany has recovered, and is recovering, her Latin-American trade the subjoined figures show:—

DISTRIBUTION OF LATIN-AMERICAN TRADE.

	Total Trade.	United Kingdom.		Germany.	
	£	£	%	£	%
1913—Imports	264,372,239	64,551,515	24.42	43,765,574	16.55
Exports	310,550,190	65,960,709	21.24	38,440,854	12.38
1920—Imports	560,238,500	93,566,101	16.70	18,999,831	3.39
Exports	658,587,555	118,155,956	17.94	11,904,150	1.80
1921—Imports	366,951,899	64,698,256	17.62	26,100,335	7.11
Exports	379,022,925	92,783,976	24.47	23,408,466	6.17

PARAGUAY: There is reason to hope that the revolution which broke out in May of last year, following immediately upon the resignation of President Ayala, has now come to an end, with the result that economic conditions in the country are rapidly returning to normal. Testimony to this effect is afforded by an official decree of the Minister of War demobilising the artillery. It has also been possible to present to Congress the estimated expenditures for the fiscal year September 1, 1922, to August 31, 1923. These are placed at 1,011,058 pesos (gold) and 90,338,252.16 pesos (paper). To cover these expenditures the estimated revenues are placed at 778,116 pesos (gold) and 99,805,100 pesos (paper), derived principally from Customs duty (630,000 pesos gold and 45,400,000 pesos paper); general internal revenues (2,700 pesos gold and 41,152,000 pesos paper); other receipts, including income from posts and telegraphs and extraordinary revenues (145,416 pesos gold and 13,253,100 pesos paper). It will be gratifying to the British shareholders in the Paraguay Central Railway to know that, notwithstanding the damage occasioned last July, when the principal bridge over the Tebicuary River, which rested on timber piling, was destroyed, repairs have been effected in so satisfactory a manner that traffics have been almost re-established, and communications between the country and the principal provincial centres, as well as with the neighbouring Republic of Argentina, will shortly be completed.

Notes of the Week.

The Debt-Funding Terms.—The United States Government is losing no time in pressing on with the debt funding proposals. Within a day or two of the British Cabinet's acceptance of the Washington proposal the detailed terms were issued from the White House, and on Wednesday President Harding submitted them to Congress. The detailed statement shows that the terms are more favourable to this country than had been thought. The principal of notes to be refunded is set out as \$4,074,818,358. Interest accrued and unpaid to December 15, 1922, reckoned at 4½ per cent., and not 5 per cent., as had been supposed, amounts to \$629,836,107, making with the principal a total of \$4,704,654,465. From this total have to be deducted payments made on October 16th and November 13th, with interest thereon at 4½ per cent. to December 15, 1922, making \$100,526,380. This leaves a net amount of \$4,604,128,085, of which the odd \$4,128,085 is to be paid in cash, so that the total principal of British indebtedness, for which British Government bonds are to be issued to the Government of the United States is \$4,600 millions. Interest is payable on December 15th and June 15th of each year, at the rate of 3 per cent., from June 15, 1923, to December 15, 1932, and thereafter at the rate of 3½ per cent. until final repayment. Sinking fund payments will increase regularly from \$23 millions in the first year to \$175 millions in the 62nd and final year. The debt total is somewhat lower than most previous estimates. In the matter of options granted to the British Government, the detailed terms also take on a rather more favourable aspect than had been expected. These options may be divided under four heads:—(1) The British Government may tender in payment either of principal or interest any United States Government bonds issued

since the United States entered the war. (2) On giving 90 days' notice the British Government may repay extra amounts in excess of the scheduled sums. (3) Sinking fund payments need not necessarily be made at the regularly half-yearly dates, but may be made triennially, if desired. (4) For the first five years half of the annual interest may, if desired, be funded and added to the principal. The arrangements in general give the impression of a fair, square, business-like deal. Believers in sound finance will hope that the last-named option will not tempt the British Government at the outset to postpone obligations in order to lighten the current budget. But one or other of the other options may well be made valuable by the course taken by money rates. Of the prospects of the agreement receiving final sanction, it is possible to speak with high hope, but not with certainty. President Harding is reported to be sanguine of obtaining a majority for the proposals in both Houses of the Legislature, and they have had a good Press. Some doubts have, however, been aroused by the existence of political cross-currents in Congress. For our part we shall not believe, unless or until it is an accomplished fact, that Congress will stultify the efficient and careful work of the negotiators, or that they will take the grave responsibility of rejecting a unique opportunity for cementing Anglo-American harmony.

Irish Peace Overtures.—Our Dublin correspondent writing on Thursday, says:—The community is still seething and bubbling with peace talk. Readers of the *Economist* are aware of the differing values of the peace-makers and peace-mongers, of the differing motives underlying their tentatives, and of the differing objectives towards which they are directed. It is known that Ministers consider that definite harm has been done to the cause of an ultimate reunion with N.-E. Ulster by some of the overtures—quite unofficial and unauthorised—recently made by well-intentioned Senators to N.-E. Ulster, which procured for their authors a public snubbing by Sir James Craig, the Northern Prime Minister. Other peace talk has been originated from Republican sources, where the pinch has been felt with an ever-increasing pressure. More, again, comes from defeatists, busybodies, and the frankly selfish, who care nothing for the future or for fundamental principles, so long as they can be rid of present fear and continuing inconvenience. But even though the protracted nature of the struggle may affect Government prestige, and may allow a certain body of grievances and criticisms of Government action to accumulate, experienced judges are convinced that the determination of the public is fixed—and that, as has been said before, it will support the Government in any measures of repression, however severe, that it may adopt, so long as it is satisfied that the severity is even-handed, systematic, and persisted in long enough to give it a reasonable chance of success. Naturally enough, responsible business men and publicists who are under no definite obligation to express their opinions publicly practise a discreet reticence. Therefore it is the peace-makers and peace-mongers who are most heard—but it would be easy to over-estimate their importance. The frantic hunt which they are conducting behind the scenes for—to use their favourite phrase—a formula to save Mr de Valera's face, arouses but little enthusiasm in the average business man, even though some fear of his normal leaders are involved in it. A not unusual comment is: "If the job is not completed now, it will have to be done all over again another time." Others literally shudder at the prospect in some labour agitation hereafter of a recrudescence on the Labour side of de Valera tactics, of anarchical sabotage masquerading as idealism, and constraining moderates to compromise and the State to acquiesce by the gentle suasion of bullet, torch, and bomb. Some of them remember that Mr James Larkin is about to return to Ireland—a magnetic mob orator and organiser who has just been released from gaol in America, where he had been imprisoned on a charge of revolutionary anarchy. The recent confidence in Government circles is explained by the publication yesterday of the statement that Liam Deasy, a prominent Irregular leader, who was recently captured, accepts and is working for an immediate and unconditional surrender of all arms and men as required

by the Minister of Defence. Furthermore, overtures made in a somewhat similar sense were signed by 12 responsible leaders of 500 irregular prisoners at Limerick, and on Thursday a local detachment of 25 in Westmeath laid down their arms. The Government published yesterday a formal offer of amnesty for those surrendering unconditionally on or before Sunday, the 18th inst.

Austria's Need for Credits.—Our Vienna correspondent has from time to time described Austria's brave struggle to extricate herself from her financial and economic troubles. Lord Balfour and Dr Seipel, the Austrian Chancellor, both dwell upon this subject at the League of Nations Council meeting in Paris last week, when the former stated that 93 per cent. of the necessary guarantees for the promised international loan to Austria had been obtained. But of necessity the actual operation of floating a loan on a guarantee of a mixed nature, such as that which is proposed in the case of the Austrian loan, presents obvious difficulties; and, as further delay in receiving external financial assistance might prove disastrous to Austria, it is welcome news that negotiations have been proceeding this week in the City for the raising of temporary credits to tide over a crucial interval. It is hoped that London will participate in an issue of £3½ millions of twelve months' Austrian Treasury bonds. In an interview published in Wednesday's *Morning Post*, Dr Kienboeck, the Austrian Minister of Finance, who, with the President of the Austrian National Bank, is in London for the purpose of these negotiations, emphasised Austria's immediate need for credits. After describing his Government's efforts at financial reform, he said: "But this is about all we can do without aid. We have lasted longer than the Geneva Programme really expected. We have been compelled to raise money on our share in the gold assets of the old bank of about 15 million gold-kronen. In fact, it is absolutely necessary for us to get the new loan by the end of the month, in order to provide the necessary money for carrying on the Government of the country and for preventing a return of the old distrust of the population for the Krone. You know that the establishment of a new bank of issue was the pivotal point of the Geneva Programme. We have started a new bank; its statements are satisfactory, as has been repeatedly pointed out in the English Press. This success, however, was entirely dependent on the population's confidence that the Krone would remain fairly stabilised. Were this confidence to vanish the flight from the Krone would begin again, and all the work and the money spent in establishing the new bank would have been in vain." The Austrian Government has done its best to carry out the arduous task of self-help imposed under the League of Nations plan. It is greatly to be hoped that the necessary assistance from outside will be forthcoming before it is too late.
