Business Men and Safeguarding of Industries.—The Executive Committee of the Imperial Commercial Association, of which Lord Inchcape is president, has issued a memorandum containing a strong and reasoned attack upon the Safeguarding of Industries Act. Here are some of their conclusions:—"There can be no doubt that the scope of the Act has far exceeded the utmost limitations of those who were responsible for its drafting. More particularly does this observation apply to that part of the Act dealing with chemicals. It is not proposed here to enter into the details, complications, and effects of the measure, either in part or as a whole, but rather to draw attention to the fact that the administration of the Act has failed. It has established the almost overwhelming power of the bureaucracy over certain classes of trade; it has entrenched a few employers in a more favourable position in trade than they otherwise might have been, and it has done this at the expense of the general community and without regard to our national prosperity as a whole." The committee agree with the promoters of the Act that "the possession of certain industries is essential to the welfare of the State"; but they call for the repeal of the present Act, and suggest a plan which could be substituted in order to retain industries essential to national safety. Their proposal is

that free trade and free competition should be restored, and that the cost to the State of maintaining "necessary" industries should be charged to the estimates of the departments in charge of National Defence. The taxpayer would then know exactly what the cost of maintaining such industries is, and industry, with freedom restored, would be relieved of irksome fetters. Readers of the *Economist* will not need to be told that we are in hearty agreement with the general tenour of this memorandum.

The Channel Islands and Imperial Expenditure.—A correspondent writes:—In spite of the Geddes Report, the request of the Home Secretary for an annual contribution to the Imperial Exchequer has startled both the public in the islands and their Governments. Guernsey, with 40,000 inhabitants, is asked to contribute £275,000 yearly, but its population is really 38,000, as the larger figure includes the population of Alderney and Sark, who do not pay the Guernsey taxes. Jersey, with 49,500, is invited to provide yearly £325,000. That some contribution is justly due from them is admitted; the Bailiff of Guernsey, indeed, in announcing the request, said that "all loyal Guernseymen would have been hurt if they had been left out," but there is some resentment at the issue of the Treasury memorandum without consultation with the island authorities, who would have shown that some of its figures are far too high. No doubt more revenue could be raised from alcohol and tobacco—possibly, if consumption were not affected by other causes than the increase, £115,000, as the memorandum suggests, in Guernsey, and in Jersey £101,000—but the other estimates of increase are questionable. Death duties might conflict with the working of the island laws of inheritance, and (as is suggested in Jersey), with seigniorial rights; the yield from stamps could never approach the British rate per head of population; "other indirect taxes" would overlap the existing import duties of 2s 6d per ton on all merchandise, and the calculations on which the hope of an additional revenue from income-tax is founded are fallacious—at any rate as regards Guernsey. Jersey levies no income-tax; Guernsey 6d in the pound. Retired Indian officials and others have settled in both islands to escape the British impost, but increased taxation (as the memorandum admits) might drive them away, for, as food supplies come largely from England, the cost of living in the islands is higher. The income-tax calculations of the memorandum, based on the Guernsey Budget of 1921, give the yield at £33,400, or 16s 6d per head, but the Budget for 1923, prepared before the incomes of the fruit and flower growers were ascertainable, puts the figure at £20,000, and hints that it may be less. The yield per penny in Great Britain is 2s 2d per head; in Guernsey, on the 1923 figures, it is not 2s 9d per head, as stated in the memorandum, but 1s 9d or less, and the British abatements if allowed in Guernsey would reduce the yield—there is good authority for the estimate—to 1s per head of population. Almost all the incomes are small; probably in both islands together there are not twenty persons who reach super-tax level, and the islands depend on agriculture, especially cattle-breeding and potato growing, the cultivation of fruit, flowers, and tomatoes, tourists, and the stone trade. The last-named has not recovered from the war; the cattle trade is depressed, and the growers are believed to be making no profits at present. In any case, their incomes are subject to great fluctuation. "Rateable value" is high, because land is scarce, and the number of domestic servants is partly due to the "tourist industry," so that these are not trustworthy indices of taxable capacity, as the memorandum regards them. At present, indeed, it seems impossible to state an average on which a fixed contribution can be based. The islands already contribute to Imperial expenditure (a) income-tax on pensions and interest or dividends paid through Great Britain; (b) Crown rents (rent charges on land, which, we believe, are mostly Church revenue secularised at the Reformation); (c) a contribution to Imperial defence in the shape of the island militia, at a cost in Guernsey of about £6,000 yearly. However, they will do what they can.

Lloyds and Cox.—The announcement that, with the approval of the Treasury and of the Army Council, an agreement has been entered into under which Lloyds Bank, Limited, have acquired the business of Messrs Cox and Co., the well-known Army agents and bankers, and have assumed all their liabilities, shows that some of the recent rumours of a forthcoming banking amalgamation were not entirely groundless. The official announcement states that the businesses of Messrs Cox and Co. and of Messrs Henry S. King and Co. (which, as announced in October, Messrs Cox and Co. had agreed to acquire) will be carried on as branches of Lloyds Bank. Some or all of the directors of Cox and Co. will continue to give their assistance in its management, in association with Sir Seymour King, K.C.I.E., one of the directors of Lloyds Bank, who is also the sole partner of Henry S. King and Co. It is understood that the purchase will not involve any issue of additional shares by Lloyds Bank. The business of Cox and Co. was established in 1758, and registered as an unlimited company in May, 1909, with a capital of £350,000. This was increased in 1911 to £400,000, in 1913 to £450,000, and in 1918 to £650,000, in 5,000 ordinary and 1,500 4 per cent. preference shares of £100 each. The reserve fund stands at £600,000. In addition to the head office at Charing Cross, the company has a City office and nine branches in India and Egypt. Its business, of course, expanded enormously during the war. Deposits in April, 1914, were £4,088,800, in October, 1918, £19,265,400, and in September, 1919, £22,552,400. By March 31st last they had dropped to £16,543,700. In 1915 Cox and Co. (France), Limited, was established, with which the London and South-Western Bank was associated. Later on the National Bank of South Africa, the British Bank of South America, the Bank of Taiwan, Messrs R. Mees and Zoonen, of Rotterdam, the Bank of Athens, the Privatbanken i Kjobenhavn, and Fortitudo Skandinaviska Kreditaktiebolaget became shareholders, the whole of the capital being held by the nine institutions. The company, which had twelve branches in France and one in Algiers, has since been acquired by Barclays Bank (Overseas), Limited. Lloyds Bank, therefore, does not acquire any Continental connections by the present purchase. It is, however, well represented on the Continent, holding half the shares in Lloyds and National Provincial Foreign Bank, Limited, which has fourteen Continental branches. As measured by deposits, Lloyds Bank is the second largest English joint-stock bank, being second only to the London Joint City and Midland Bank. On December 31st last Lloyds' deposits were £330,556,800 and the London Joint City and Midland's £354,406,300.

Stock Exchange Money.—It has now become established, without more than a shadow of doubt, that the re-introduction of contangoes into the Stock Exchange, and the return to pre-war conditions of dealing as regards fortnightly settlements, are a decided advantage in the way of increasing business in the markets, through the quickening of public interest and the greater facilities offered for free dealing in stocks and shares. Genuine suspicion arose about a year ago, writes a Stock Exchange correspondent, as to whether a reversion to pre-war practices in these respects would be an advantage to the Stock Exchange; firstly, in the matter of the credit of members—which war conditions had raised to a remarkably high standard—and secondly, in that of increasing or diminishing the confidence with which the public had grown to regard the Stock Exchange under its system of cash dealings. It will be remembered that a good many firms in the House announced their intention of refusing to carry over stock for anybody, a determination to which some still cleave to-day. The majority opinion amongst established brokers and jobbers was possibly a little hesitant, while the younger members, and especially those recently back from the war, thirsted for any system that would whet the public's appetite for speculation, and, therefore, persuade the more trade into the House. Since then, a revival of the gambling spirit has occurred in a few of the markets, and, not very long ago, there were quiet doubts entertained as to whether this reckless speculation might not reflect upon the stability of members engaged in it. The hammer, however, remains silent, as it has done for the past eight

and a-half years, and there is no gainsaying the fact that the ability to contango stock does prove a great attraction to those who buy more than they can conveniently pay for. In one way, the ease with which speculative accounts are financed nowadays is a matter for surprise, having regard to the fact that, with the banks in close correspondence of policy, the buyer of shares finds it none too easy to obtain money on such stocks and shares the security of which the lenders may regard as risky. The consequence is that, instead of being able to play off one bank against the other, the would-be borrower on such sketchy shares as certain Rhodesian mines, for instance, is thrown upon his own resources if his banker declines to lend him money upon his purchases. Before the war the bull of shares was either compelled to sell them if he could not carry them over on a contango-day, or to borrow the money with which to pay for them. Otherwise he had to give stamps and fees, and a money rate to members of the Stock Exchange or other lenders who might feel disposed to take up the shares for him at this extremely onerous cost. The Inland Revenue, however, has unintentionally done a good deal to facilitate the convenience of people who find themselves bulls of more than they can take up, for by allowing Stock Exchange dealers to take stock into their own name for a couple of months upon a nominal transfer stamp of 10s, the cost of contangoing is reduced very substantially. As an illustration, it need only be mentioned that, to pay for 500 Selukwes at 1½, costs £7 10s in stamps, or 3½d per share; under the Inland Revenue concession the charge of 10s works out to something negligible per share. The result is that if jobbers know their man well, and are ready to trust him, they will pay for shares, provided they have the money over, and the bull finds himself called upon to pay 7½ per cent. contango instead of anything between 15 to 20 per cent. With the abundance of money which is available at the present time, the money-lenders are by no means averse from taking anything like 7½ per cent. upon what they regard as reasonable security, this security being, in nine cases out of ten, the credit of the man with whom they are dealing quite as much as that of the shares upon which they lend their money, and which they take into their own names. With Home Railway stocks, the security is naturally protected by the better class of the stocks concerned, and the banks will always provide accommodation to their approved customers upon such securities as these. Of course, the full stamp and fee is charged in these cases. Had it not been for the 10s nominal transfer-stamp concession, possibly the speculative movement would not be quite so easily manageable as it is to-day. The fact remains, however, that the return of the Stock Exchange to pre-war contango conditions, plus the assistance afforded by the Inland Revenue stamp concession to dealers, have enabled the buyer of stocks and shares to finance his commitments without much trouble, a fact which contributes materially to that increase of business which enabled markets to attain a cumulative degree of flexibility and elasticity.

More Home Railway Dividends.—A further batch of dividends on the stocks of the old railway companies has been announced this week. In the table below we compare the 1922 dividends so far declared with those of 1921, 1920, and 1913:—

Name of Line.	Final Dividends.				Dividends for Whole Year.			
	1913.	1920.	1921.	1922.	1913.	1920.	1921.	1922.
Caledonian, Ord.	Rate 3½	4½	7	7	3½	4½	7	7
Do Deferred	..	..	..	..	..	..	..	..
Great Central, 5½ 1894 Pref.	..	..	..	..	2½	3	2½	2½
Great Eastern	4½	4½	4½	4½	2½	2½	2½	2½
Great Northern, Def.	..	..	..	..	3	2½	2½	7
London and S. Western, Ord.	7½	8	8	12	5½	6	6	8
Do Deferred	..	..	..	..	18	2	2	..
London, Brighton, and South Coast, Ord.	7	8	8½	10	6	5½	5½	6½
Do Def. Ord.	..	..	..	..	4½	4½	4½	6½
Do Contingent Rights	..	..	..	..	nil	nil	nil	1
London, Chatham, and Dover, 4½ % Second Pref.	..	..	..	..	1½	3	4½	4½
Do Arbitration Ord.	..	..	..	..	nil	nil	nil	..
Midland, Deferred	5½	5½	6½	8	4½	4½	4½	6
North Eastern Consols	8½	8½	9	8½	7½	7½	7½	7½
South Eastern, Ord.	6½	6½	7	9	4	4½	4½	5½
Do Def. Ord.	..	..	..	..	2	2½	2½	5

With the exception of the Great Eastern and the North Eastern, which pay the same as in the two previous years,

the dividends on ordinary and deferred stocks are substantially larger than last year. Moreover, in most cases these dividends are paid without making withdrawals from reserves, whereas last year compensation money was heavily drawn upon. The Great Eastern, however, takes £256,400 from Railway Compensation Account Reserve, and the North Eastern £300,000. The dividend on London, Chatham, and Dover Arbitration ordinary stock is the first ever paid, while the Contingent Rights of the London, Brighton, and South Coast, which now get 5s per cent., have received no other distributions since 1899.

The Underground Dividends.—The dividends announced by the Underground group of railways on Thursday indicate that the companies have had a profitable year. The table below compares the rates and balances carried forward with those of the previous year :—

	Final Dividends. Rate % per Annum.		Dividend for Whole Year. Per Cent.		Carried Forward.	
	1921.	1922.	1921.	1922.	1920.	1921.
Central London (Def. Stock) ..	3½	4½	4	4	£ 15,161	£ 59,644
London Electric (£10)	3½	4½	3½	4	22,350	39,743
City and South London	2½	4½	3½	4	18,820	25,276
London General Omnibus	7½	9½	8½	8½	58,843	67,928
Met. District, Ord.	2	3	1	3	20,537	60,550
Do 5% 2nd Pref.	5	5	5	5		77,075
Underground, 6% Inc. Bonds ..	4½	6½	4½	5½	20,137	26,600
						47,799

† Paid free of income-tax.

Apart from the dividend on Central London deferred, all the distributions for the full year are increased. For the first time for four years the dividend on Underground Electric income bonds for the second half of 1922 is at the full rate of 6 per cent. The improvement in the American exchange should reduce the cost to the company of the option given to holders to cash coupons in New York. In all cases, it will be seen, substantial additions are made to the balances carried forward.

Irish Free State Banking.—Amongst the Free State banks which, in spite of all factors tending apparently to a different result, produced excellent results for the year 1922, there is a small agitation as to the Government patronage of the Bank of Ireland, writes a Dublin correspondent. Unlike the Bank of England, the Bank of Ireland is a trading institution in active competition with the other joint-stock Free State banks. Whether as a temporary or as a quasi-permanent arrangement, it is carrying on the whole Government banking business of the Free State. The National Bank has publicly challenged this position in a statement which claims merit for itself as having been founded as a result of efforts made by Daniel O'Connell as a Catholic and Nationalist bank, but which betrays some embarrassment at the fact that its head office is in London and several most important branches are in England. It is thus, in fact, despite its name and connection, a British rather than a Free State bank when Free State Government business has got to be considered. On the other hand, it pleads that this handicap is set off by the fact that it alone possesses direct representation in the Bankers' Clearing House in London. The suggestion was made long since in these columns that the time had come when the Irish banks would be well advised to put their heads together and think out, as far as might be, a common policy and joint action on the new current problems in Ireland that affect their interests. Their interchange of views and their co-operation in action might have small beginnings, and certainly should not aim at grandiose results. But if prudently and tactfully managed, it should result beneficially for the banks themselves, and for the State and for the general public. The matter of the monopoly of Government business would better be adjusted by private arrangement than by a somewhat undignified altercation and scramble in public. It would be all to the good if the small jealousies and personal factors which stand in the way could be effectively eliminated.

The Position in Peru.—Like other Spanish-American States, Peru has suffered greatly from the trade depression in Europe. According to the Report just issued from the Acting British Consul at Callao, the export trade in 1921 fell 56 per cent. in value below that of 1920, the import trade, however, only 16 per cent., owing probably to the after-effects of war-time prosperity; but in the first half of 1922 there was a further decline. The Customs duties, the chief source of public revenue, were £2,000,000 lower in 1921-22 than in 1920-21. The total public debt exceeds £9,000,000; "it cannot be said that the financial position of the Government is favourable," and a large proportion of the population, especially in the capital, "is dependent on the spending capacity of the Government." The country, no doubt, has vast resources, but their development must be slow. In the rainless coast strip, one very large irrigation scheme near Canete was completed last August; another, covering some 87,000 acres, is projected. The mountain region, "containing almost every known mineral," cannot be adequately opened up without railroads or settled because of the danger of attack from Indians, and the extensive Dunsuir railway concessions are apparently still unratified. The Transandin region, which may some day be only from three to four days' distance by rail from Lima, contains vast areas suitable for agricultural settlement, and might more than supply the world's demand for paper pulp; but at present Iquitos is a month's journey from Lima by land and 80 days *via* the Panama Canal and the Amazon from Callao, and rubber has been virtually abandoned in favour of balata. Sugar and cotton head the list of export values; the production of both is likely to increase in the current year. The export of wool, including alpaca, is apparently recovering; that of copper, controlled by one American company, is unprofitable at present prices; and there are great hopes of an increase in the output of petroleum in a few years' time under the law of 1922. But a large increase in any other product seems unlikely in the near future.

Borax Consolidated.—A year ago a slight setback was experienced by Borax Consolidated, Limited, after a period of progressive annual increases in profits. In the accounts just issued for the year ended September 30th last net trading profits amounted to £417,900, after deducting £41,691 for administration expenses. A summary of the company's results for the past 12 years is given below :

Year Ended Sept. 30.	Net Trading Profit.	Depreciation and Reserves	Debt-ture Interest.	Total Dividends Paid.	Carried Forward	Rate on Deferred Ordinary
1911.....	£ 293,086	£ 27,880	£ 65,000	£ 194,750	£ 75,995	13½
1912.....	293,598	56,732	69,000	194,750	43,297	13½
1913.....	361,921	78,297	74,164	207,361	45,397	15
1914.....	344,050	90,692	82,909	147,500	68,345	7½
1915.....	349,357	81,290	87,678	170,000	74,171	10
1916.....	569,907	227,331	87,850	215,000	112,913	15
1917.....	385,527	96,267	87,850	215,000	92,703	15
1918.....	431,342	115,825	87,850	215,000	105,370	15
1919.....	442,023	103,697	87,850	252,500	103,348	15
1920.....	476,581	120,062	87,728	252,440	119,639	15
1921.....	378,966	70,825	86,392	223,750	117,638	12½
1922.....	417,900	101,738	86,157	223,750	123,893	12½

* Excess profits duty, £134,470, included in these figures.

Again a distribution of 12½ per cent. on the deferred ordinary shares is proposed, while £101,738 is allocated to reserves, as against £70,825 a year ago. Total assets are now £6,197,386, as against £6,248,529; other details of the balance-sheet will be found on a later page. The directors complain that "the European demand for its products is affected by Continental conditions, and is not likely to increase substantially until these improve and exchanges settle down to a reasonably permanent basis."

The National Provident's Valuation.—We have reached the stage in the after-war recovery of investment values at which life assurance companies no longer have to provide large sums to meet depreciation. Interest earnings are also steadily improving and mortality rates continue to be low. The result of all these factors is a resumption of bonuses to policyholders. The National Provident

Institution suspended its general distribution five years ago, but now, after a valuation as at November 20th last, is able to return to the full pre-war rate of bonuses. The liabilities were valued by the British Offices tables at 3 per cent. interest, and after making all necessary reserves the surplus of assets disclosed was £1,077,159 in excess of liabilities of £6,907,168. The life funds increased during the five years from £7,117,313 to £7,984,327, and the net interest earnings reached £4 11s 5d per cent. for the past year, against £3 17s per cent. in 1916-17. It is stated that no Stock Exchange security stands in the books at a higher value than that based on the market price on November 20th last, and that there is, in the case of the majority, a substantial margin, which will serve as a reserve for possible shrinkages in prices when the trade of the country improves. For the past year the ratio of expenses to premiums was 12.875 per cent., and the mortality experience was 78 per cent. of that expected. The directors have decided to divide £914,542 of the ascertained surplus, leaving £162,617 to be carried forward.

Jute Industries.—The directors of Jute Industries Limited, in their second annual report for the year ended September 30th last, are able to show that with assets totalling £5,990,391, a net revenue, free of tax, of £258,761 has been secured. The dividend on the £3,000,000 participating preference shares absorbed, at the minimum rate of 9 per cent., £197,156; preliminary expenses, standing under assets in the balance-sheet at £160,000, obtained relief to the extent of £60,000, and including the balance brought forward £14,298 was carried forward to next year's accounts. The report states that "the total profit, after making allowances for depreciation, earned by the associated companies for the year to September 30, 1922, together with the profit made on merchandising by this company, amounts to £606,224. Out of this sum the claims for Imperial taxation have to be provided, and these will require no less a sum than £205,000. The dividends, £248,865, shown as received from the associated companies in the profit and loss account have been wholly declared out of profits earned up to the close of the first half of the year only, leaving the profit earned during the second half of the year undistributed." In the balance-sheet investments in subsidiary companies are taken at cost and amount to £5,505,225. In connection with this item it is stated that "the directors have given most careful consideration to the advisability of publishing particulars of the assets and liabilities of the associated companies. They are of opinion that it would be prejudicial to the best interests of the company to publish the balance-sheet separately." Although the statement of free liquid assets is of interest, we would remind the directors that the publication of a consolidated balance-sheet of the associated companies would not necessarily disclose the position of any particular company, and at the same time it would enable shareholders in the parent concern to learn a little more about their actual assets and liabilities. The balance-sheet will be found fully analysed on another page, but it reveals little about the actual financial position of the company.

Copper and Copper Companies.—During the past three months, writes our mining correspondent, transactions in copper on the London Metal Exchange have ruled upon a considerably larger scale for some time previously. This week's turnover, for example, totalled 5,700 tons, as against 6,700 tons for the preceding week, and 10,000 tons during the week ended January 26th. The price has also risen, Friday's quotation of £66 12s 6d for standard cash, compared with £61 15s at the end of November. The strength and activity of the London market is in the main, of course, a reflection of conditions in the United States, where the consumption has been increasing, and scarcity of labour has prevented a corresponding expansion in production. The somewhat improved home trade demand has, however, been a factor; while, despite political and exchange complications, the Continent has bought considerable quantities of the metal. In these circumstances there is naturally a tendency on the part of the speculative investor to purchase the shares of

copper-producing companies. Appended is a list of the better-known undertakings, with the highest and lowest points of the past two years; also Thursday's closing quotations :—

	1921.		1922.		Latest. (Approx.)
	Highest.	Lowest.	Highest.	Lowest.	
Arizona (5/ shares)	33/	13/	20/6	13/9	20/
Esperanza	6/3	3/	7/6	3/9	7/
Hampden Cloncurry ..	7/6	4/	10/	4/	8/6
Mason and Barry	57/6	26/3	55/	32/6	2½
Mount Elliott	21/3	7/	29/6	5/9	7/6
Mount Lyell	17/	10/	21/6	11/9	21/6
Mount Morgan	14/3	10/6	14/9	10/9	13/6
Namaqua (£2 shares) ..	25/6	12/6	37/	18/9	32/6
New Guinea	..	..	..	..	15/6
Pilbarra (5/ shares)	33½	23	30½	24½	32½
Rio Tinto (£5 shares) ..	12/	4/6	12/6	4/3	16/6
South American (2/ shs)	3½	2½	2½	2½	2½
Tharsis (£2 shares)	..	..	..	..	..

It will be seen that as a general rule current quotations are about on a level with the best of 1922, when, however, conditions were less favourable to producers than they are now. Of the companies whose properties are situated in Europe, the Rio Tinto announced an interim distribution of 10s in November last—the first since the 20s, making 40s for 1919. The Tharsis company, which markets considerable quantities of sulphur as well as copper, broke its hitherto uninterrupted record by paying no dividend for 1921, although 5 per cent. could have been squeezed out. For 1920 the rate was 15 per cent. The last payment by the Esperanza company was 5 per cent. in June, 1921. Each of these three companies operates in Spain. The history of the Mason and Barry, whose scene of activity is Portugal, closely resembles that of the Tharsis, except that 50 per cent. was disbursed for 1921, following 25 per cent. in respect of the previous year. The latest dividend of the Namaqua (South Africa) was 7s in June, 1917, making a total of 25 per cent. for that year. Smelting, which had been in abeyance since 1918, was resumed in September last. The undertaking of the Arizona Copper Company, it may be recalled, was transferred to the Phelps Dodge Corporation of America at the end of 1921; the first dividend under the new régime comprised 1s per share paid in November last. The accounts showed it to have been partly provided out of the sum brought forward. The South American Copper Syndicate owns a rich and extensive property in Venezuela. In the past it has paid very large dividends on a small capital from the sale of crude ore and the operation of an antiquated smelter. A modern smelter recently started up, and in Stock Exchange circles an extremely favourable view is taken of the prospects. All the remaining companies work in one part or another of Australasia. The Mounts Lyell and Morgan are in the producing list; their latest distributions were 1s each in December, 1922, and April, 1920, respectively. The Hampden and the Mount Elliott properties have been shut down for some time pending an improvement in conditions—and in the case of the latter a scheme of financing, which has lately been arranged. The New Guinea is approaching the output stage. The Pilbarra—a reorganisation—has large ore reserves. An important announcement regarding the adoption of a suitable treatment process may be expected in the very near future.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that January was a mild month and, on the whole, favourable for the farmer. The rains experienced early in the month delayed field work, but cultivations were already well forward. Winter corn has maintained its good promise and crops which were backward improved during the latter half of the month. Live stock have done well, and winter keep has been saved. Frosts would now be well come, not only to bring the ground into better condition but to check some of the winter corn, which is rather forward. There are plenty of workers available in a parts of the country, with some unemployment amongst the less skilled men. In the north-eastern and south-eastern counties rather more men are out of work than a month ago.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, Northumberland Avenue, W.C. 2, on Tuesday, February 13, 1923, at 8.30 p.m., at which a paper on "Canada and the Empire" will be read by Sir Campbell Stuart, K.B.E. His Grace the Duke of Marlborough, K.G., will preside.

A MEETING of the Royal Society of Arts, John Street, Adelphi, London, W.C. 2, will be held on Friday, February 16, 1923, at 4.30 p.m., when a paper on "The Indian Census of 1921" will be read by J. Marten, I.C.S., M.A., Census Commissioner for India. Sir Edward A. Gait, K.C.S.I., C.I.E., Member of the Council of India, will preside.

SIR EDWARD A. GAIT, Member of the Council of India, will preside at a meeting of the Royal Society of Arts (Indian Section) on Friday, February 16th, when a paper by Mr J. T. Marten, I.C.S., Census Commissioner for India, on "The Indian Census of 1921" will be read by Mr L. Middleton, I.C.S., Provincial Census Superintendent, Punjab. The chair will be taken at 4.30 p.m.

A SERIES of four advanced lectures on statistics has been arranged by the University of London to be given at the London School of Economics on Tuesdays at 5 p.m., as follows:—(1) "Population," by Mr S. P. Vivian (Registrar-General); (2) "Income and Wages," by Sir Josiah Stamp, K.B.E.; (3) "Prices," by Mr A. W. Flux; and (4) "Food Supplies," by Sir Henry Rew, K.C.B. Admission will be free, without ticket.

Oversea Correspondence.

UNITED STATES.—NEW COAL WAGE AGREEMENT—LEGISLATION AGAINST TAX-EXEMPT SECURITIES.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 29.

PEACE in the soft coal industry of this country now seems to be assured for at least one year from April 1st. As a result of conferences held in this city, last week, between the bituminous coal operators and miners, new wage scale contracts were signed, which are understood to be the same as those at present in effect, and which, it is provided, are to continue in force until April 1, 1924. The new agreement applies only to what is known as the tri-State competitive field—Illinois, Indiana, and Ohio—where approximately 36 per cent. of the country's soft coal is produced; but it is intended to be used as a basis for fixing wages, and working rules in other bituminous coal fields. Present indications are that similar agreements will shortly be made covering the latter. Among the main provisions of the contracts just signed are the continuance of wages at the rate of \$7.50 a day for day work, and \$1.08 a ton for mining by hand (where payment is on the tonnage basis); the eight-hour day, the six-hour week, the check-off system, guarantees against contract violations, and arrangements for settling disputes growing out of local conditions. A resolution was adopted calling for a meeting of the joint sub-committee, as now constituted, on or before January 8, 1924, to consider the advisability of holding an inter-State conference for the purpose of making an agreement for the next year. The joint committee may then be made permanent. In many quarters this move is looked upon as a long step towards stabilisation in the soft coal industry. The conferees expressly stated, in announcing the result of their deliberations, that the agreement was entered into at the urgent solicitation of the United States Coal Commission in the interest of all concerned.

Soft coal production in the United States for the week ended January 20th, according to preliminary returns, approximated 10,950,000 tons, as compared with 11,172,000 tons in the preceding week and 8,302,000 tons in the corresponding week a year ago. Anthracite was produced to the extent of 2,000,000 tons in the week ended January 30, as against 2,113,000 in the previous week, and 1,643,000 in the same week of 1922. Final

returns show that last December's output of anthracite, totalling 8,430,000 net tons, was the largest December production on record, although it was less than in November and October. Anthracite production for 1922 is placed at 52,485,000 net tons, or 45 per cent. less than in 1921, and 43 per cent. below the average annual output in the nine years 1913 to 1921.

There has been considerable agitation here in recent months against the issuance of Federal and State securities which are exempt from taxation, because individuals and corporations, by investing in such securities, are able to escape income-taxes to a large extent. The Government, therefore, loses a great deal of revenue each year which it would otherwise receive. The movement to close that loophole made further progress last week, when the House of Representatives passed the proposed constitutional amendment to prevent the issuance of tax-exempt securities. In the form in which it was approved by that branch of Congress, the amendment was in two sections, one referring particularly to the United States and the other to the individual States. The first stipulates that the United States "shall have power to lay and collect taxes on income derived from securities issued" after the ratification of the amendment, "by or under the authority of any State, but without discrimination against income derived from such securities, and in favour of income derived from securities issued 'after the ratification,' by or under the authority of the United States or any other State." The other section provides that each State shall have like authority to lay and collect taxes on income derived by its residents from securities issued after the ratification of the amendment, "by or under the authority of the United States, but without discrimination against income derived from such securities, and in favour of income derived from securities issued" after the ratification, "by or under the authority of such State." The proposal was adopted by a vote of 223 to 101, or more than the required two-thirds. The strong arguments advanced by President Harding and Secretary of the Treasury Mellon were considered largely responsible for this action by the House. Party lines were not very clearly drawn in the vote in the House of Representatives, for many Republicans opposed its passage, while almost as many Democrats favoured it.

FRANCE.—BUDGET—INFLATION OR FRESH BORROWING—SYNTHETIC AMMONIA—STOCK EXCHANGE.

(FROM OUR CORRESPONDENT.)

PARIS, February 7.

THE Budget Bill for 1923 has now been formally adopted by the Chamber, but under such curious circumstances that the Senate has declined to begin the consideration of the measure until the Lower House has rendered the situation of the Bill more understandable. This remarkable state of affairs is due to the fact that the Chamber, after three different attempts, has so far found it impossible to get rid of an estimated deficit, which, after repeated modifications in both estimated expenditure and estimated revenue, still remains at over 3,500 million francs. (This deficit, as I have more than once mentioned, represents the equivalent, roughly speaking, of the interest and other annual charges which France has to meet on the money that has had to be borrowed, in consequence of Germany's failure to meet her obligations, for the purpose of reconstituting the devastated area.) Finding it impossible, for the time being, to balance the Budget, the Chamber decided to approve the various estimates as modified, passed by a majority of 468 votes to 66 resolutions sanctioning total credits amounting to 23,956,169,600f, and sent the measure for consideration by the Senate, it being agreed that a Fiscal Sub-Commission of the Chamber, which has been specially constituted for the purpose, should consider and recommend as soon as possible the best means to be adopted to get rid of the estimated deficit and make the Budget balance.

The various transformations the Budget estimates have undergone will be seen from the following comparative figures (the first column indicating the Finance Minister's original estimates, the second the modifications effected

by him in October at the request of the Finance Commission of the Chamber, and the third the still further modified proposals of the Minister, after they had been subjected to revision by the Commission):—

(In Millions of Francs.)			
Expenditure for 1923.....	23,244 ..	22,925 ..	23,871
Revenue for 1923.....	19,285 ..	19,217 ..	20,376
Deficit	3,959 ..	3,708 ..	3,495

"Now that we have finished with the Budget," M. de Lasteyrie remarked, with unconscious irony, at the end of the discussion, "it remains to make it balance!" and he expressed the belief that this would not be difficult, although he has allowed no hint to drop (since the rejection of his last proposal, which was to increase the existing taxation by 20 per cent.) as to how it is to be done. It is believed by many Parliamentarians that the Minister still favours the 20 per cent. increase of the present taxes, which was received with such a storm of protest that the Finance Commission "hung the proposal up" in a manner that was practically equivalent to rejection. M. de Lasteyrie has gone so far, indeed, as to inform a Parliamentary deputation that, if his proposal is not adopted, it will become necessary so to inflate the note issue that a further fall of the franc, and a further appreciable rise in the cost of living, will be inevitable. The alternative appears to be a fresh resort to borrowing, and it is becoming increasingly probable that such a way out of the difficulty may ultimately have to be adopted. At the same time, it must not be overlooked that quite a substantial percentage of the deputies are known to favour an extension of "inflationism," although practically every financial authority in the country, including the present Finance Minister and several of his recent predecessors, are emphatically opposed to anything of the kind.

Meanwhile, stimulated by the attitude assumed by the Senate in refusing to discuss the Budget Bill in its present form, the specially-appointed Fiscal Sub-Commission has lost no time in submitting proposals to solve the problem, and the discussion of these was begun by the Finance Commission of the Chamber yesterday. The first recommendation took the form of a revival of the proposal for the creation of what is known as the *carnet de coupons*, an idea that has long been advocated without success by M. Bokanowski, who is the sub-commission's rapporteur. The object of "this inquisitorial fiscal project," as its opponents term it, is to enable the revenue authorities to obtain such indisputable information as to the sources of income that at least a large proportion of the numerous cases of non-declaration or under-declaration of income that are at present known to exist would be rendered impossible. It is proposed that every owner of interest-bearing, French or foreign, shares or bonds shall be compelled to inscribe a list of his holdings in a specially designed register, bearing his name, address, and an individual number, which he must present to the banker or company by whom any dividends due to him are to be paid, and without the presentation of which he would find it impossible to secure payment. This register, or *carnet de coupons*, would be the personal property of the holder, and would have to be *visé* by the supervisor of inland revenue for the district in which the holder lives, by whom also the latter would be allotted his individual number. All persons paying out dividends would be required to enter in the *carnet* of the payee the date and amount of the payment and the official number of the person to whom payment is made. It is proposed that these *carnets* should be kept by their holders for at least five years, and that they must be presented to the revenue authorities on demand. Persons owning bonds or shares deposited in banks would be required to present their *carnets* before March 1st in each year, for a list of their holdings to be entered therein, failing which the bank would be required to send a list of such bonds, with the name of their owner, to the revenue authorities. Heavy penalties—both fiscal and penal—are provided for infractions of the law in regard to the use of these *carnets*. M. Bokanowski estimates that the adoption of his proposals would result in an increased yield of about 1,200 million francs per annum from income-tax.

The Finance Minister informed the Commission that he was emphatically opposed to the principle of the proposal

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

put forward, which he considered both impracticable and unworkable. It would have to be applied to something like 15,000,000 persons, and would result in an enormous amount of red tape and complexity, while yielding little in the way of results. The Finance Commission, by a vote of 13 votes to 11, out of 44 members who form the commission, gave a very hesitating approval to the proposal, the majority of those present pronouncing themselves in favour of the anodyne suggestion that the *carnet* should be permissive, but not obligatory. The matter is to be considered further next week, when a definite decision will be come to, but it may already be taken for granted that the proposal, which the Finance Commission, the Chamber itself, and also the Fiscal Commission have already once rejected, is foredoomed to failure. French mentality is so constituted and the income-tax is so recent an institution here, that this nation of investors would be the last people in the world to accept such drastically inquisitorial methods, as those foreshadowed by the *carnet de coupons*.

In an endeavour to free itself from foreign supplies the Government is now pressing forward its proposals for the acquisition of the French patents in the Haber process for the production of synthetic ammonia, with a view to increasing the yield of wheat. At present France produces within her own frontiers only 12,000 tons of nitrates per annum, and is compelled to import 58,000 tons of sulphate of ammonia from Great Britain and nitrates from Chili. Experts estimate that the soil of France requires some 500,000 tons of nitrates per annum, and that if that amount could be secured this country would not need to import a single bushel of wheat. In 1919 the French Government acquired from the Badische Anilin, the well-known German company, an option (which it subsequently took up, against an agreed payment of 2,500,000f) on the French patents in the Haber process. The Government is now asking authority from Parliament to ratify an agreement passed with the Badische Anilin, permitting the exploitation of these patents in France, and to facilitate the creation of a financial organism not only to exploit the German process, but all others as well, in order to meet the requirements

h of national defence and of agriculture. The agreement with the Badische Anilin renders it possible for the plant to produce forthwith 100 tons of nitrate per day at cost 2½ times cheaper than the price hitherto paid by this country; while the German firm undertakes not to export nitrate product into France for a period of 15 years. With the ratification of this agreement France, so far as needs of her national defence are concerned, will be at a level with Germany, which would have been unable, for the existence of the Haber process, to have continued the war for four and a-half years. The benefit to French agriculture will, it is estimated, be even more important.

It is significant of the fundamental change that has occurred on the Bourse since the war that, whereas ten years ago a single telegram announcing the illness, for instance, of the Austrian Emperor would have caused little or of a financial crisis, the news of the developments in the Ruhr and of the interruption of the Lausanne Peace Conference have had only the merest superficial effect on the volume of business or on quotations. Turks, it is true, broke six or seven points on the news, but even these descriptions did not remain seriously depressed for long. Speaking generally, prices have continued steady, and it has once more been demonstrated that present-day investors are much less inclined to be pessimistically influenced by unsettled foreign political conditions than were their predecessors. The principal reason for the readiness of the Bourse under such events as the Lausanne incident lies probably in the fact that speculative operations are now quite limited in volume, while genuine investment business is larger than it ever has been. Under the influence of the heavy drop in the franc, French Government Funds and other gilt-edged descriptions, paying fixed rates of interest, have naturally been a good deal neglected and have eased off slightly. For the same reasons industrial shares have been unusually well sought after, and banks, French and foreign rails, electrical, gas, and metallurgical undertakings and most of the rest of the industrial list have all been substantially marked up. In oils, Shells and Mexican Eagles both progressed appreciably, but Royal Dutch, under the influence of depressed conditions in Amsterdam, fell back. Coppers all made a substantial advance.

GERMANY. — RUHR OCCUPATION — FINANCES — CURRENCY — BOURSE — PRICES — TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, February 6.

THE Ruhr crisis has settled down into a lasting trial of strength. Disorganisation in the communications did not progress so rapidly last week as the week before; but in the newly occupied district conditions are slowly getting worse, and a heavy decline in coal production must soon be caused by lack of storage room, and perhaps also by lack of money, if the coal not consumed on the spot is transported neither to France nor to unoccupied Germany. In unoccupied Germany there is so far no sign of disorganisation or of injury to production. It seems, however, that the failure of the first French aim of compelling increased deliveries will be countered by France with new steps. These will probably make Germany's position more difficult; but, up to a certain point, they will also increase the irritation and the resolution to resist. The seizure of the two Baden towns is in some quarters taken as a hint that an attack will also be made on Germany's other frontiers; in fact, the Treaty basis proclaimed for this measure would justify Poland and Czecho-Slovakia—and, indeed, any country that cares—to proclaim a Treaty breach in attacking German territory or ports. No such measures can have any success, unless they bring economic pressure to the breaking-point, after which a German surrender might be possible. But as success requires very serious injury to German industry and trade, a German surrender would bring no profit to Reparations. Ultimately the French measures must be considered as aimed at starving Germany into surrender, because, as long as the food supply is suffi-

cient, a German breakdown is out of the question, and the French aim can only be to damage Germany so seriously that she will be unable to import or distribute food. The Government has so far taken no measures of importance indicating that the food situation in the country as a whole, or the coal situation in the unoccupied districts, is considered serious. The Nationalistic anti-French movement is growing stronger.

The Local Taxation Law (*Landessteuergesetz*), an amendment of Herr Erzberger's law defining the taxation relations between the Republic and the States and municipalities, has been rejected by the Reichstag, owing to opposition to its main provision, raising the Sales Tax from 2 to 2½ per cent. This tax is imposed on all turn-overs. The Socialists have all along opposed the increase on the ground of its effect on prices, and the non-Socialist parties took the same attitude. The municipalities depended upon the increased yield from the Sales Tax for a betterment of their finances. The further currency depreciation has brought confusion into the relation between taxes paid and the values upon which they are assessed. Some taxes, such as the Profits Tax upon sales of real estate, are unreasonably over-paid, the nominal paper mark profits—which often mean heavy losses—being treated as gold mark profits. Other taxes, such as income-tax, paid long after the basis of values on which they were assessed has changed, are under-paid; and manual workers, with good cause, complain that they have been paying, by means of immediate deduction, a real 10 per cent. of their wages, whereas the 60 per cent. of the rich man may have declined to 1 per cent., or less, before it is paid. A Government Bill before the Reichstag provides in principle that nominal paper-mark assessments shall be adapted from time to time, separately for the different taxes, to the currency depreciation. Income-tax is at present paid quarterly in advance on the assessment of the preceding year. It is now proposed that, after the declaration for the current year has been made, but before it is officially fixed, provisional payment shall be made immediately on the basis of the declaration. The Forced Loan taxation rates are in confusion. The officially fixed Bourse quotations on which stock and share investments are to be taxed have already been exceeded tenfold and more, and the effective burden on the taxpayer is correspondingly reduced. The Customs gold surcharge has been raised from February 7th to 474,900 per cent. (4,750 the nominal), against 186,900 per cent. at the beginning of the year. After catching up on the mark's gold depreciation last year, the surcharge has now fallen materially behind. The "Reichswirtschaftsrat" has approved of the Unemployment Insurance Bill. Insurance is compulsory upon all persons insured against sickness. Employers and employees will together pay two-thirds of the premiums, and the Republic, States, and municipalities the remaining third. No agreement has been come to on the dispute between employers and employees as to whether strikers and locked-out workers should count as unemployed in the meaning of the Bill. A Bill authorising local authorities to take measures against drinking, against excessive entertainments, and against "Schleibers" and usurers, has been sanctioned by the Reichsrat. Measures against Bourse speculation and against breaches of the Exchanges Decree of October, 1922—which is everywhere violated—are foreshadowed. The object is rather to propitiate a part of the public which considers these abuses as causes and not effects, than to bring a real remedy, which few persons expect.

Both cash and capital are again short. The banks are rationing cash payments. Advances on Treasury bills were yesterday being made at 8½ per cent., at 13 per cent. on stocks. The newly-occupied district is keeping a grip upon money, and demanding more. The sum required weekly for wages in the whole Republic was a week ago put at 250 milliards, but it is rapidly rising—an 80 per cent. wage increase for coal miners is under way. The note issue limits of the private note banks have been increased to 30-fold those of 1914, and these banks are freed, as the Reichsbank was freed two years ago, from the obligation to secure issues in cash. The Bavarian Note Bank's tax-free issue is raised to 12 milliards, the Saxon to 6.6 milliards, and Württemberg and Baden to 3.9 milliards each. Several new "wertbeständig" loans, in which the

fixed value is usually coal, have been issued, and the first of such bonds has been admitted to Bourse quotation. Capital raised in January totalled 33,548 millions, against 21,314 millions in December, the largest item being bonds for 20,013 millions, of which 9,900 millions were "wertbeständig" loans in coal units. The Reichsbank must now enter upon inflation on a much increased scale. The statement for January 23rd shows 216,794 millions increase in circulation, the biggest recorded, while bills increased by 85,817 millions, and Treasury bills by 184,306 millions. Darlehns advances outstanding now total 385,900 millions, an increase during the week of 35 milliards.

The Bourse boom continues, quotations at the close of last week being about 200 per cent. above those at the beginning of the year, but the gold prices of stocks have fallen considerably. The *Frankfurter Zeitung's* index for home dividend payers showed 923,795 on January 26th, since when there has been a big rise, against 376,685 on the 5th. There are large foreign purchases, particularly of South German and Silesian stocks, and yesterday saw a great demand for bank stocks and for Norddeutsche Lloyd and some other shipping stocks. The chief speculative Federal and State loans had rises during the week, but yesterday this market was irregular.

The price movement in January was much the most violent recorded. The rise in the last week of the month was particularly great. In the following table from the *Frankfurter Zeitung's* wholesale commodities index the gold (dollar) index is given, and it will be seen that, as always in times of particularly rapid mark exchange declines, gold prices have of late fallen:—

	Gold.	Food.	Textiles and Leather.	Minerals.	Miscellaneous.	Manufactured Goods.	All 98 Commodities.
July, 1914.....	100	100	100	100	100	100	100
January 1, 1920.....	1,190	1,972	2,611	2,749	1,101	1,465	1,965
January 1, 1921.....	1,771	2,019	2,325	2,780	1,776	1,704	2,130
January 1, 1922.....	4,476	5,840	5,789	5,178	3,149	3,347	4,217
January 1, 1923.....	204,464	175,845	320,632	262,212	177,752	151,798	205,417
February 1, 1923.....	932,381	1,555,006	1,431,673	931,239	534,734	476,564	715,884

The gold prices of manufactured goods are almost exactly 50 per cent. less than pre-war gold prices. The separate index for ten home-produced commodities shows 466,558, also under half pre-war gold prices, while for ten wholly imported commodities the figure is 986,278, a little over pre-war gold prices. The Federal Statistical Office has adopted the Austrian practice of compiling its cost of living index on the basis of 1 for 1913-1914. The index figure for January, on the basis of reports on the 10th and 24th, was 1,120.27, against 685.06 in December, an increase of 63.5 per cent. An index for the end of the month would show a much higher figure.

The provisional foreign trade report for December is so far without values. Imports were 4,320,000 metric tons against 4,550,000 metric tons in November, and exports 1,760,000 metric tons against 1,550,000 metric tons. Imports of coal, coke, and mineral oils declined, but most other raw materials show slight increases, pig-iron and semi-finished metal large increases, and food products mostly decreases. The export increase is due mainly to larger exporting of finished products, machines, &c., also bar iron, sheets, and wire. Total trade in weight in 1922 was: Imports 45,870,000 metric tons, exports 21,560,000 metric tons. A comparison with 1921, for which the January-April figures are still lacking, cannot be made. Imports in 1913 were 72,830,000 metric tons, and exports 73,710,000 metric tons. An official inquiry into the practices of the Foreign Trade Boards (*Aussenhandelsstellen*), which grant import and export licences and fix minimum export prices, confirms some of the charges brought by the Hamburg Chamber of Commerce, including charges of falsification of documents and some times of corruption. Remedies are suggested, and it is required that the minimum export prices be more rapidly adapted to world market prices.

Great activity prevails in the iron and steel markets, the only product not sought after being thick sheets. The shortage caused by the boycott of French, Belgian, and Luxembourg heavy iron and steel has to be made up, and increased imports are expected from Czecho-Slovakia. The demand for home ores is heavy. The Pig-Iron Syndicate has opened an office in Hanover, with the object of directing business from a free centre.

SOUTH AFRICA.—TRADE CONDITIONS—THE BANKS' POLICY—DEPOSIT AND OVERDRAFT RATES—S.A. RAILWAYS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, January 17.

MR W. G. WICKHAM, H.M. Senior Trade Commissioner, has just arrived in Johannesburg from Cape Town, and remarks in an interview with the *Star* that, while Great Britain is starving for orders for its factories, South African stores, especially in Cape Town, were short of stocks. There was a reluctance to import, as merchants were still doubtful if bottom had yet been reached. This reluctance, of course, has considerable influence in maintaining the high exchange rate against South Africa. Mr Wickham attributed much of the trouble to the banks. "There appears to be plenty of money in the Union, but people will not part with it except on sufficiently advantageous terms, and I gather that there is a lot of dissatisfaction at the disparity between the deposit rate allowed by the banks and the rate they charge for advances." He instanced the fact that one of the municipalities was paying 8 per cent. on overdraft, occasioned by a number of big public works. Experimentally the Council advertised for short period loans at 5 and 5½ per cent. There was from the locality an immediate response to the extent of £600,000.

Mr Wickham went on to say that the banks were now admittedly adopting a less conservative policy than a few months ago, "when, following a period of excessive generosity, which encouraged reckless trading enterprises, they suddenly went to the other extreme, to the great discomfiture of many people who had launched out on the strength of the banks' liberal facilities." Against this idea of more liberal facilities I may mention the case of a customer who asked for an overdraft of £1,000 on security of mining shares valued at £2,500, but was refused. Naturally, if banks decline business of that nature it implies that their own funds are limited, and this must tend to check enterprise (for which the money is wanted) in other directions. In this particular instance one of the financial corporations was glad enough to do the business, and on a smaller margin of security if required. The general rate on overdraft is from 7½ to 8½ per cent.

Gold mines are getting back to their stride, the diamond industry is restarting; "all that is wanted now is more money freely circulating. Farmers particularly want all the help they can get. Many were badly caught by the slump in prices, and many are tied up to the neck."

Some interesting "gleanings" may be made from the report of the Controller and Auditor-General on the State Railways and Harbours Accounts for the financial year 1921-22. This period included the disastrous Rand strike. Expenditure figured at £24,970,000, against earnings of £23,380,000. This deficit of £1,590,000 is a round million less than that shown in the previous year, and brings the total deficit to £4,189,000. Previously deficits were financed temporarily from balances to the credit of renewals and other departmental funds. In the year under review the Treasury advanced £1,500,000 as temporary additional working capital, while £2,000,000 has been transferred from Renewals Fund towards meeting the deficit. The period included nine months in which the cost of living allowance remained operative, accounting for £1,222,300, a figure, it will be observed, within £370,000 of the year's deficit. In the previous year this item was nearly three millions sterling, while the total sum spent since 1916 has been £7,677,000. This charge and the incidence of the eight-hour day, since abolished except in dense traffic centres, constituted a very heavy handicap on a large system with comparatively small traffic. In expenditure is included £3,911,000 interest on the capital of £115,725,000 (there is also £5,000,000 capital not bearing interest).

A renewals fund of £3,600,000 has been built up (of which harbours are credited with £808,000). The Auditor-General points out that in the last ten years the value of new rolling stock charged to revenue has been £12,219,000, as compared with £1,292,000, the value of stock actually withdrawn from service. "As the life of rolling stock is estimated at 25 years, on this basis

placement expenditure must be regarded as excessive, imposing a burden on revenue far beyond that which it is entitled to bear." The Select Committee on Railways and Harbours advised that, "in the absence of a practical solution of rolling stock, the most satisfactory method of assessing depreciation, the whole position should be viewed by the technical officers."

The Administration carries its own insurance against fire, charging a flat premium of 2s 6d per cent., since reduced to 2s. It also ensures the marine risks of its steamers. The fire fund now exceeds £250,000, "and seems desirable that a limit should be placed to the amount of the reserve which may be accumulated. For the last two years the interest alone has more than covered the claims, the figures in the year reviewed being £8,300 and £3,260. Doubtless managers of public insurance offices will argue that this favourable state of affairs is bound to change in the natural course of events. The position of the superannuation and pension funds is anything but satisfactory. The balance of the former is £3,805,200, and the Actuary on revised data reports a deficiency of £1,854,000; of the latter £1,731,600, the valuation of 1919 reveals a deficiency of £1,410,000.

Some remarkable figures are given as to the increased cost of locomotives, which was subject to adjustment on the rise or fall of wages and materials. Engines contracted for at £11,700 cost up to £15,380, while on 50 engines £158,000 was expended above the contract amount. On two Garrett engines the increases were stupendous, for one tendered at £8,425 a claim of £21,200 was preferred; for another at £5,950, £15,155 was asked. The claim for £36,400 was eventually settled at £25,760, on the basis of the excess cost involved in the case of the larger batch.

ROUMANIA.—TARIFF CHANGES—TAXATION—COST OF LIVING.

(FROM OUR CORRESPONDENT.)

BUCHAREST, January 16.

Two fiscal measures of considerable importance have recently been enacted in Roumania. Firstly, in the closing days of 1922 the Ministry of Finance, with the approval of the Council of Ministers, announced considerably increased import duties on a number of commodities—chiefly for the protection of those industries which are now being developed in Roumania. The commodities mostly affected (on which the import tax has been increased in some cases by as much as 1,000 per cent., and by at least 100 per cent. in all cases) are the semi-manufactured products—such as unbleached and undyed jute, flax, hemp, ramie, &c.—for use in the manufacture of cotton cloths, shirtings, and linens. The duty on cord transmission belts has been increased by 100 per cent., on certain classes of pumps by 150 per cent., and on electric light bulbs by 1,000 per cent. The export tax on a number of articles (including walnuts) has also been substantially increased, though export taxes on cereals are unchanged, and no announcement has as yet been made of increased taxes on exported lumber and refined petroleum products. The export tax on petroleum is not likely to be raised until the Government increases the present maximum prices for refined oil products sold to the domestic trade, which are still absurdly low when compared with world prices.

Secondly, the budget for the fiscal year beginning April 1st next will make provision for considerably increased revenue from direct taxation. A new law has just been adopted by the Chamber, and although full details will not be available until the final measure has been approved by the Senate, it is understood that a new graduated scale of income-tax will reach as high as a maximum rate of 40 per cent., while an increase will also be made in the tax on business turn-over. The new law is believed to follow closely that introduced by the former Finance Minister, M. Titulescu, in June, 1921, which may be regarded as the first serious effort to place the national budget on a sound basis by having recourse to direct taxation.

The present Government is evidently determined upon a more rigorous system of tax collection, and it will be

interesting to see how successful this policy will be. With a population overwhelmingly agricultural, and schooled by centuries of Turkish misrule in the art of evading the tax collector, the collection of direct taxes on a large scale in Roumania presents a difficult problem.

The budget for the fiscal year beginning April 1, 1922 (totalling Lei 10,498,283,482), made provision only for Lei 650,000,000 from direct taxes, but, on the basis of the figures recently made public for the first quarter of the fiscal year, this amount will probably be exceeded; in fact, it was recently stated that the tax on business turnover alone is now yielding revenue at the rate of Lei 600,000,000 per annum. The budget for the coming year is to be largely increased, and will probably be for at least Lei 13,000,000,000.

It is generally expected that both of these fiscal measures will accelerate the steadily increasing cost of living, although, with the internal purchasing power of the leu remaining at about one twenty-third of its gold value, whereas its present foreign value (measured in terms of the dollar) is only one thirty-sixth, it would seem that a rise in domestic prices is inevitable under any circumstances. The Bucharest *Argus* index number of the cost of living, with a base of 100 on August 1, 1916, shows a general average of 2,292 at the end of December, 1922, as against 1,649 at the beginning of the year. The imported articles (especially clothing) included in this index, however, are in practically all cases from 50 per cent. to 100 per cent. higher than the general average of 2,292. But off-setting this are the low Government-controlled prices for several important commodities, such as meat and bread, which are also included in the *Argus* list.

Although the leu at the close of 1922 showed but little depreciation compared with exchange rates prevailing in December, 1921, the imported articles included in the *Argus* index number show an average increase during the past year of 50 per cent. This would seem to bear out the contention of responsible business men here that, up to the present, it has taken retail prices in Bucharest from six to nine months to adjust themselves to world values. Such a condition naturally subjects legitimate business to considerable risk, and is probably largely responsible for the growing tendency to buy and sell on a dollar or sterling basis. Even Polish textile goods are now being quoted here in those currencies.

SWEDEN.—LABOUR TROUBLES—WAGES AND PRICES—THE BUDGET—BANK PROFITS.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, January 22.

This year has started with great uneasiness on the labour market, and it is not unlikely that we may have a lock-out before long of not less than 65,000 labourers, including the workers at the pulp factories, the sawmills, and the workshop and building material industries. The increased liveliness in timber and pulp export this year seems to have greatly stimulated the labourers not only to maintain present wages, but even to claim considerable increases. For instance, the workers at the pulp factories are claiming not less than 34 to 45 per cent. increase on present wages, while the employers want a reduction of 11 per cent. Should the employees win, it would mean an increase in the production costs of the pulp of 12 to 13 crowns per ton, or, in all, 12 to 15 mill. crowns for the annual output. In this industry about 16,000-17,000 workmen are employed, and a great percentage of them are now on strike, and more are joining them every day. The sawmill industry employs about 27,000 labourers, the workshop industry 20,000, and the building material industry about 4,000. As far as this last-mentioned industry is concerned, there have just recently been some local settlements in various parts of the country. The workshop industry has in recent years been working without agreement, but now the employers want to settle the question, and to make some wage reductions varying a little at different factories, but the workers have bluntly declined, and conflicts are going on at several places. It is about a year since wages were

discussed last in this industry, and during this time the cost of living index number has fallen rapidly; besides this, the workshop industry is the one which has suffered most severely by the present depression, and the very heavy competition from abroad, and the present outlook is far from bright. This industry is only working to 40 or 45 per cent. of its capacity, and the wages are very much higher here than in any other country. Another conflict, which has been going on for some time in the North of Sweden, is the stoppage of timber cutting, arranged by the Communists. This conflict, however, does not seem to be very effective, as the Communists and Syndicalists are, fortunately, in the minority, and the timber cutters are very largely recruited from the peasants, who do not want to be deprived of their usual additional income. In some districts those willing to work have formed special "unions for freedom." Now, however, the Government is to interfere for the settlement of this labour trouble. Another branch of industry which seems to have trouble in store for April 1st is the building trade. This industry has lately shown great activity, and it has been almost the only trade without any unemployment. Socialist members of the town council, especially in Stockholm, have pushed through grants for several million crowns to municipal building undertakings. Thus the workers have no fear of lack of work, and have given notice to terminate the agreement expiring April 1st, claiming higher pay; as far as the bricklayers are concerned, they claim an increase of 30 per cent. Building costs have certainly been reduced by the drop in prices of building materials, but are still too high in comparison with the rents the public can afford to pay at present.

There has been a drop in the quarterly index number (including all necessities of life) from 190 on October 1, 1922, to 183 on January 1, 1923 (the basis being 100 for July, 1914). The fall is due to the drop in prices of certain foodstuffs. The Government will save about 3 mill. crowns during the first three months of this year on the war bonus paid to their officials, owing to the fall in the index. The Riksdag has now been reopened again, and the budget for the year July 1, 1923-June 30, 1924, has been opened by the Minister of Finance. As expected, it shows signs of great reductions in all directions, strict economy having been exercised. Compared with the last budget, there is a reduction of not less than 200 mill. crowns in expenditure, the total amount now being 737.6 mill. crowns. The axe has been working, and has resulted in cutting down of the expenses for the hundred and one committees, and by the withdrawal of most of them. The reduction in the number of Government officials has not saved more than 1.4 mill. crowns. The sum of money granted for unemployment funds last year was not less than 85 mill. crowns. No new taxes will be introduced, but some existing duties, such as those on malt liquors and tobacco, will be altered or increased. To make both ends meet, however, there has to be heavy cutting down of the expenses. A further sum of 32 mill. crowns will have to be saved by cutting down the war bonus.

Some of the banks have announced their results for 1922, and it is encouraging to see that those who have hitherto issued their figures have been able to declare more or less substantial dividends, although large allocations for depreciation have had to be made. The State Bank for depreciation have had to be made. The State Bank has never before shown so good a result, the net profit for 1922 being 18,528 mill. crowns, which means an increase of a little more than 3 mill. crowns compared with previous year. The first one among the big private banks to announce the result for last year was Stockholm Enskilda Bank, which maintains its 15 per cent. dividend. The net profit for 1922 is 7.36 mill. crowns, against 9.76 the year before. Total depreciations amount to 7.54 mill. crowns (13.5 mill. previous year). Stockholm Inteckningsgarantiaktiebolag shows a net profit of 3.15 mill. crowns, as against 3.20 for 1921, and also maintains its 15 per cent. dividend. Skandinaviska Kreditaktiebolaget has made big depreciation allowances, amounting to nearly 34 mill. crowns (20 mill. crowns last year). The gross profit for 1922 was 35.06 mill. crowns, compared with 39.95 mill. crowns for 1921, and the net profit 8.19 to 10.56 per cent., 17.6 per cent. for previous year) is proposed, for which a total sum of 9.21 mill. crowns is

needed. Aktiebolaget Malarbanken shows a net profit of 1.9 mill. crowns, and declares a dividend of 5 per cent. This bank has during the past year undergone a very drastic reconstruction.

GREECE.—CIRCULATION AND FOREIGN EXCHANGES—PUBLIC FINANCES—OBLIGATORY CESSION OF GOLD TO THE STATE—SALONICA PORT FREE ZONE—THE REFUGEE PROBLEM.

(FROM OUR CORRESPONDENT.)

ATHENS, January 24.

The issue in December last of National Bank notes for 600 million drachmæ, covered by an equal amount of State bonds, has brought the total of the authorised note issue as on December 31, 1922, to 3,700 million drachmæ, as against 2,508 million drachmæ at the end of 1921, or an increase of 47½ per cent. for the year. On the other hand, the rate of exchange on London, which on December 31, 1921, was 100 drachmæ, stood at the end of 1922 around 380 drachmæ, or an increase of 280 per cent. Though the issue of new currency during the past two years has undoubtedly contributed to the depreciation of the drachma, the influence of political and psychological factors has been greater, as the above figures prove. In this connection, it is worth mentioning that the market had each time discounted the effect of the new issues on the rates of exchange, so that when the issues were actually announced, the rates were little or not at all affected.

The Minister of Finance, in his interviews with the Press, has emphatically declared that, as long as he is in office no uncovered issues of new currency will take place. Though his declarations are received with scepticism, it seems that his optimism is based on the heavy taxation which has been recently imposed, and on the latest measure regarding bank deposits and debts of every kind in actual gold. By new taxation, which he estimates for the moment at 600 million drachmæ, and by economies in administrative expenses, he professes to be able to make the Budget balance. On the other hand, the amount which the Treasury will collect from the obligatory cession to the State of the gold representing bank deposits and claims in actual gold, against payment to the beneficiaries at par (1 paper for 1 gold drachma), he intends, in all probability, to utilise for strengthening the specie cover of the notes in circulation—and perhaps also as a basis for the issue of new currency for the needs of the Treasury. As regards balancing the Budget, it should be observed that the deficit for the financial year 1921-22 was originally put at 1,678 millions, and that that of the period 1922-23 is unknown, since no Budget has been voted. Meanwhile, the cost of living is rapidly increasing. The Government itself in December increased to 10 the ratio of the paper to the gold drachma for collecting Customs duties, and has recently put it up to 15 for certain articles. In consequence of these increases, the prices of goods imported from abroad have risen. The obligatory cession of gold is expected to bring into the Treasury a considerable amount of gold, estimated at 100 million gold drachmæ. The measure is criticised, however, by many people, who argue that, whereas, contrary to official expectations, the revenue yielded will be small, the harm which this enactment is doing to credit by its coercive character, and by the mistrust it will inspire, is very great.

The question of facilitating Yugoslav trade by the creation of a free zone at the port of Salonica, which was pending since 1914, is now nearing a satisfactory solution. On its advent to office, the present Greek Government expressed its willingness to bring into force the respective agreement of 1914, and the matter has since been the object of friendly negotiations between the two Governments. A final agreement is expected soon, by which

Serbia will secure a commercial outlet to the Aegean Sea, and the mutual interests of the two countries thereby served.

According to official statistics, the number of refugees from Turkey and Asia Minor landed in Greek ports up to the end of December amounts to 870,000, those *en route* being not less than 50,000, or in all a total of 920,000 souls. Of this figure, 90 per cent. are Greeks, the rest being Armenians, Circassians, and anti-Kemalist Turks. The Greek refugees are mostly children, women and old men, the proportion of men to the whole being 15 per cent. The problem of feeding, sheltering and preserving these unfortunate people, the majority of whom are helpless, from epidemics, is a cause of very grave concern to the Government. In view of the present situation of Greece, any help from abroad, in whatever form it may be given, would greatly facilitate her in performing this most difficult task.

AUSTRALIA.—PUBLIC FINANCE—COMMONWEALTH AND STATE ACCOUNTS.

(FROM OUR CORRESPONDENT.)

MELBOURNE, December 30, 1922.

THE public accounts of the Commonwealth and the six States for the year ended June 30, 1922, include duplications arising out of transactions between Commonwealth and States to a somewhat larger extent than in previous years. Making an allowance for these duplications, the net result may be summarised as follows:—

	Revenue.	Ordinary Expenditure.	Loan Expenditure.	Debt, June 30, 1922.
	£	£	£	£
New South Wales	35,637,820	36,966,525	11,049,189	180,796,322
Victoria	19,871,466	*19,871,466	11,880,927	109,099,198
Queensland	12,311,378	12,499,970	2,599,573	85,691,228
South Australia	7,771,752	7,828,921	2,589,421	54,388,588
West Australia	6,907,107	7,639,242	2,454,925	54,959,778
Tasmania	2,181,395	2,302,077	2,145,807	21,945,411
Six States	86,680,918	87,105,521	32,819,842	506,880,625
Commonwealth	56,158,642	56,368,545	6,175,901	416,070,509
Total, 1921-22	140,839,560	143,474,066	38,995,743	922,951,134
1920-21	138,449,777	139,154,629	54,136,130	1922,951,134

* Including expenditure under Surplus Revenue Act.
† Deducting £62,417,088 for duplications, the net total debt is £860,534,046, against £808,249,280 at June 30, 1921.

The aggregate ordinary expenditure for 1921-22 (which included redemption and sinking funds amounting to £3,899,601 for the Commonwealth and four of the States) exceeded revenue by £2,644,506. Of the total ordinary expenditure of £143,474,066, interest on debt amounts to £38,508,677, of which £18,075,693 is interest on war debt and £20,432,984 is on debt represented by railways and other public works, the net earnings of which partly provide for the interest on capital cost. The total interest, £38,508,677, shows an increase of £3,388,307 on the previous year. Ordinary expenditure also includes working expenses of Government railways and tramways, £33,350,999, or an increase of £419,485. The total revenue, £140,839,560, includes taxation, £67,361,729, or a decrease of £2,957,192, and gross earnings of Government railways and tramways, £42,093,960, or an increase of £2,261,364. The net earnings of the railways have thus made a larger contribution towards meeting interest on capital in 1921-22 than in the preceding year. As compared with pre-war figures, however, the difference between the net earnings of railways and other works and the interest payable has widened substantially, owing to the increase in working expenses, the additional interest on fresh loan expenditure during the interval, and the higher rates of interest payable on loans raised both for fresh expenditure and for the redemption at maturity of various old loans originally floated at low rates, 4 per cent. or less. This largely accounts for the increase in taxation, apart from that resulting from the war. The total taxation collected in 1913-14 was £22,892,742, compared with which the 1921-22 total of £67,361,729 shows an increase of £44,468,987, of which £31,337,164 represents interest on war debt, pensions, and other expenditure resulting from the war, and £13,131,823 is for other purposes.

Expenditure of loan money includes soldiers' land settlement and certain other forms of repatriation, mostly appearing under the heading of the various States by

which this expenditure is conducted, the funds being supplied by the Commonwealth Government out of its borrowings. This form of expenditure is rapidly declining, but loan expenditure on public works has been on a full scale, being partly provided for by the loans raised in London during 1921-22. The net public debt, £860,534,046, compares with £326,994,110 in 1914. The increase in eight years is £533,539,936, of which £367,574,753 is war debt and £165,965,183 has been incurred for other purposes.

The estimated revenue of the Commonwealth and the six States for 1922-23 is £136,815,939 and expenditure £140,523,074, these being net figures, after making allowance for duplications. The Commonwealth estimates show a deficit of £2,705,443, the Government having decided to draw upon the accumulated credit balance to enable taxation to be reduced. Queensland shows an estimated deficit of £576,840, and Western Australia £389,609.

Letters to the Editor.

MECHANICAL SORTING OF STATISTICS

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the very interesting leading article in the *Economist* of February 3rd, on "Foreign Trade Statistics," it is stated that the delay in supplying manuscript returns of certain exports is attributable to the lessened rapidity of electric tabulation. To one who has had a considerable experience of the use of electrical machines for sorting and tabulating statistics, this appears to be a clear case of *post hoc sed non propter hoc*. Electric methods were introduced into statistics simply because they are ever so much more rapid than the old-fashioned methods of tabulating by laborious copying on to specially ruled forms, adding and summarising on to other specially ruled forms. I suggest that if the change of system gives slower results, there is room for revision of the organisation to suit the newer methods of electrical tabulation. If electrical tabulation is installed, it is necessary to modify the organisation to suit the newer method, if the best results are to be got out of it. There is no question but that the automatic electrical tabulation is quicker, but obviously the organisation must be revised to fit in with the very much faster process.

In one establishment which I inspected the other day, the introduction of machines for doing the mechanical part of their statistics has been followed by a reduction of the time taken from three months to a fortnight.—Yours faithfully,

J. I. CRAIG.

TURKEY.*

In his very modest preface Lord Eversley points out that he has not attempted to write the history of the Ottoman Empire from the original sources. Like Sir Edward Creasy's older work on the same lines, his is mainly a *précis* of von Hammer-Purgstall, or of intermediaries who have themselves derived their material from that great Ottomanist. Of more recent studies on particular parts of the subject, the author has made use of Mr H. A. Gibbons' illuminating book on the "Foundation of the Ottoman Empire," but Mr Lybyer's "Government of the Ottoman Empire in the Time of Suleiman the Magnificent" seems to have escaped him, though it is, perhaps, the most brilliant among modern works on Ottoman history. Apart from his written sources, Lord Eversley has been able to draw upon his own long experience (starting with travels in 1855-7), and the result is a book

* "The Turkish Empire": from 1288 to 1914, by Lord Eversley, and from 1914 to 1922, by Sir Valentine Chirol. Second edition. Fisher Unwin, 1923. 21s net.

which thoroughly fulfils the task which it undertakes. It gives a popular account, within reasonable compass, of the extraordinary history of the Ottoman Power in its rise and decline, and if it accepts more often than it criticises the established tradition—specially the tradition of sweeping and somewhat rhetorical moral judgments—it at least gives indications of the other side, and may stimulate many novices to form their own judgment by deeper study of the evidence.

The new feature in this second edition is the group of additional chapters by Sir Valentine Chirol, covering the period from the intervention of Turkey in the European War down to the opening of the Lausanne Conference. This narrative of events, which are not only dramatic and unpleasant, but extremely important for the future of the British Empire in the East, is probably the best and most convenient that is yet accessible to English readers. In the apportionment of blame (the main task of any historian who deals with these years), Sir Valentine Chirol by no means spares the Allied Governments, including the late Government in Great Britain. But his regret at the revival of Turkish power, perhaps, makes him less than just to the Turkish National Movement. It may be a pity that Mustafa Kemal Pasha and his associates have succeeded so well, yet, at the same time, it may be highly creditable to them to have initiated and persisted in their struggle. One of our chief difficulties in dealing with the Turks is their fixed belief that we are hopelessly prejudiced against them. When they read Sir Valentine's chapters they will possibly feel that he condemns as crime on their part what in the case of other nations he would applaud as patriotism.

THE FOUNDATIONS OF CZECHOSLOVAK FINANCIAL POLICY.*

DR. ALOIS RASIN, the author of this book, was the first Minister of Finance of Czechoslovakia and, until recently, when his health was much impaired by a dastardly attack made upon his life by a young fanatic, remained the most prominent figure in the financial circles of the Republic. Whether one agrees with his policy in every detail or no, one cannot but admire the energy with which he resisted the follies of inflation, and insisted, in season and out of season, on the supreme need of leaving no stone unturned to make revenue balance expenditure. It is above all thanks to Dr. Rasin that Czechoslovakia is to-day the only sound currency country in the Danube basin, and it is safe to add that but for him—for he is nothing if not a strong man—currency disorganisation would almost certainly have proved the preliminary to the spread of Bolshevism right into the industrial heart of Central Europe.

In this book Dr. Rasin reviews the financial history of the Republic from its foundation down to the end of 1921. It is a reasoned statement of the difficulties with which the country was confronted at the moment of the disruption of the old Habsburg Empire, and of the steps that were taken to build up a sound currency amidst the turmoil of weltering chaos. The reader will not always agree with the author's reasoning, but this, too, has a definite historical value coming, as it does, from the pen of one who was the principal actor in the events he describes.

Before the war ended the flight from the krone had begun. The true state of the Austro-Hungarian Bank (which was not known at the time, as the bank was no longer under an obligation to publish regular returns) had become most serious. The note circulation, for example, had risen from 2,129 million kronen on July 23, 1914, to over 30,679 million on October 26, 1918. Foreign currency had been bought on a wide scale, and the hoard of goods continued. Our author quotes the case of a peasant near Pisek, who, having bought everything he

* "Financial Policy of Czechoslovakia During the First Year of Its History." By Dr. Alois Rasin. Pp. 160. Clarendon Press. Published on behalf of the Carnegie Endowment. Price 7s 6d.

could conceivably want, ended by buying himself a coffin with his superfluous paper kronen.

At the time of the Armistice Dr. Rasin proposed that an International Commission should be appointed to control the German Imperial and the Austro-Hungarian banks, and so prevent further inflation. As nothing came of this, he proceeded to negotiate direct with the Austro-Hungarian Bank to maintain the common currency for a while, provided that no advances were made on war loans. His representations proved unavailing, however, for, in the period from October 26, 1918, to February 26, 1919, the advances on war loan rose from 4,094.5 million to 9,319 million—no slight achievement for the printing press in four months. It soon became obvious that Czechoslovakia must break away from this vicious circle, and by the end of February arrangements were completed for the stamping of all banknotes circulating within its territory.

In this book the reader will find a succinct account of the measures adopted for gradually raising the currency, "the taking over by the State of the banknotes to their full amount, and the amortisation of the State debt by means of a progressive property tax. This progressive rate was intensified by levying an increment tax on the growth of property, that is on the difference in value between the pre-war estate and that held at March 8, 1919, so as to hit the war profiteers." The gradual emancipation of the Czech crown from the German mark on the foreign exchanges is explained, while the author dwells with considerable satisfaction upon the successive steps by which industry and trade were freed from war-time restrictions, and a return made to a *régime* of free competition.

While it may well be felt that too much stress has been laid during the last 12 months upon the need for raising the crown rather than aiming at stabilisation at a lower level, it must not be forgotten that during the first year or two of its existence the prime need for Czechoslovakia was the restoration of confidence in the national currency, and that this has been achieved in large measure due to the work of Dr. Rasin. Moreover, our author was one of the few men to realise how essential it was to free the commerce and industry of his country from the baneful traditions of the Austrian *Polizeistaat*, and the future may well bring improvements in industrial technique and efficiency which will be due in no small degree to the re-establishment of free competition, and the abolition of spoon-feeding by the State.

This book should prove of very great value to the student of Central European economics, and must remain an authoritative account of one of the most satisfactory chapters in the history of the liquidation of the disastrous heritage of the former Habsburg Empire.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. February 21. ACCOUNT. February 22.

Foreign politics conspired to lay a firm hand of restraint on Stock Exchange activity in all markets during the week now ended. The House and its clients are too familiar with these minor crises for selling to be stimulated by Turkish, German or French news. The effect is to check fresh buyers from coming forward, and, in an account-week, there is always a certain amount of selling on behalf of the weaker bulls, who are either unable or unwilling to finance speculative commitments opened when the markets were more buoyant. The vagaries of the French exchange are having a certain amount of influence over markets as a whole, and the reported breaking-up of negotiations by the Turks at Lausanne caused a general fall throughout the House in the early part of the week.

Subsequent developments showed that this rupture was not more than might have been expected, and recovery occurred in various directions. The prompt subscriptions to new issues testifies to the ready availability of capital for investment, and the Consol market keeps good, with the longer-dated stocks more particularly in demand.

French Government bonds, railway and shipping securities have rallied substantially from the lowest prices recently touched. Authoritative French opinion is prayed in aid of a fairly general impression that the drop in the franc has been overdone. Consequently, a fair amount of speculative buying occurred, and this served to put a better aspect upon foreigners generally. Brazilians advanced; there is a more willing disposition to buy Argentine, Chilean and other foreign bonds, a material rise in Czechoslovakia Eights being one of the features of the week.

Home Railway stocks have gone ahead under the cheerful influence of excellent dividend announcements. Chatham's first and last dividend of 15s per cent. created almost as much amusement as astonishment. Southern Railway deferred has got ahead of the North-Eastern deferred, while in the heaves, Great Westerns stand out with a good rise. Undergrounds are firm, and the prior-charge stocks are once more in request. Grand Trunk 4 per cent. debenture stock put on several points, on the hope that an early start will be made in the payment of interest. Argentine railways spurred strongly under the leadership of B.A. and Pacific ordinary, where hopes are entertained that, at the forthcoming meeting, the chairman will have something very pleasant to tell his co-proprietors in regard to dividend prospects, &c. Brazilian Railways shared moderately in the strength of Argentines. Mexicans remain neglected.

The Rubber market is very quiet. Although the price of the produce has risen to 1s 6d per lb, the market is feeling the effects of last month's over-anxious rush of buyers, and something of a stale bull account exists. The Oil market is better. With the bringing-in of fresh wells on the Mexican Eagle property, and a good deal of support from Holland for Royal Dutch, a better complexion became imparted to the market, and leading shares advanced. Textiles are prominent by reason of a brisk rise in Bradford Dyers on dividend hopes, this serving to stiffen the group as a whole, though Courtaulds, the dividend on which is expected to be announced next month, are keeping no more than steady. Marconis enjoyed another rise, while the cable group is hard. Bovrils improved, on the increase in the dividend, and big gains occurred amongst some of the London Electric Lighting shares, in consequence of the bumper dividends now in course of announcement. The Banking market is quiet; insurance shares, with shipping, present few features of interest. The tobacco list keeps good, and such speculative shares as Associated Portland Cement, Dunlops, &c., while showing a fair amount of animation, are not greatly altered in price on the week.

The Kaffir market received a little encouragement from the announcement that a new automatic drilling machine has been invented that is likely to supersede hand drilling, and, therefore, to reduce costs. This would assist more particularly the low-grade propositions. There was a flicker of life in the market on the news coming through, but public interest is lacking, and the market as a whole continues listless. The Rhodesian boomlet has given place to a quieter feeling, with the leading shares lower in price. De Beers and Rio Tintos have been fairly strong. Several Mexicans managed to provide excitement in their own particular market, Tominils, for instance, doubling in price within the course of a few hours. Several West Australians are better. West African, Middle East and Cornish tin shares have dropped, owing to the apathy of the public, and in Russian mining shares no fresh animation occurred.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded	£ 37,808,301	£ ..	£ ..	£ ..
ISSUES OF THE WEEK—

1917 .. 21,317,806	1916 .. 585,436,853
1916 .. 101,962,190	

Government of South Australia.—This is an offer of £2,000,000 South Australian Government 5 per cent. stock at £99 per cent. to holders of £1,035,200 South Australian 5 per cent. bonds and £964,800 5 per cent. registered stock due April 1, 1923. This is a conversion into an equal amount of South Australian 5 per cent. registered stock, 1932-1942. Holders of bonds and stock due April 1, 1923, will receive an immediate cash payment of £1 per cent., being the difference between the par value of the maturing bonds and stock and the issue price of the new stock. The half-year's coupons, due April 1, 1923, on the bonds converted to be retained by the holders for payment in due course, and warrants for the interest due on that date on stock converted will be issued in the usual way. Holders of 5 per cent. bonds and stock, exercising the option to convert, will receive preferential allotment, and must lodge their bonds or certificates of stock and the prescribed form of assent with the Commonwealth Bank of Australia, 36-41, New Broad street, London. Any bonds or stocks not converted will be paid off on April 1, 1923. The principal of this new issue is repayable at par on October 1, 1942, but the Government of South Australia has the option of redemption at par, on or after October 1, 1932, on giving three months' notice. It is stated that the Government of South Australia will comply with the requirements of the Colonial Stock Act, 1900, in order that trustees may invest in this stock, subject to the provisions set forth in the Trustee Act of 1893. South Australian stock issued and payable in London, the property of persons not domiciled in South Australia, are not subject to taxes of that State. The yield on this issue, allowing for profit on redemption at the latest date, works out at £5 is 9d per cent. This is a rate which compares not unfavourably with existing South Australian Government stock standing at a discount, allowance being made for the earliest date of redemption in each case.

Nobel Industries, Limited.—Authorised capital £18,000,000, of which £15,903,550 has been issued and is fully paid. This is an offer for sale of 1,750,000 5½ per cent. first mortgage debenture stock at £99 per cent. The stock now offered forms part of an authorised issue of £2,000,000, and will be repayable by the operation of a sinking fund of 30 annual instalments of £58,334, to be applied to the purchase of stock on the market at or under par, or by drawings at a pre-

mium. The issue is secured by a trust deed constituting a first mortgage on 999,170 preference shares and 902,969 ordinary shares of £1 each in Nobel's Explosives Company. These, it is stated, are valued at £5,250,000. Provision is made in the trust deed against Nobel's Explosives issuing further capital, "except to secure bankers' loans or overdrafts." The £3,000,000 short-term notes now outstanding will be redeemed on May 8th next. The vendors have paid £95½ for £100 stock, the vendors bearing all charges in connection with the offer. The margin of security appears to be sufficient both as regards capital and interest.

Selama (Kedah) Rubber Estates, Limited.—Authorised capital £45,000, divided into shares of 2s each. This is an issue of 350,000 shares at par. The company is purchasing a rubber estate in the Selama district of Kedah, about 2½ miles from the boundary of the State of Perak, F.M.S. The area of the estate is stated to be 710 acres, all of which is planted with Para rubber trees from 2½ to 5½ years old. The ½ year rubber comprises 300 acres, taken at \$580 per acre. The estate has been valued at £39,000, and the purchase price is given as £23,400. An expert report, which in other respects is very favourable, mentions that "the only doubtful factor is the climatic condition," Selama being a wet district, and no rainfall figures obtainable.

Southdown Motor Services, Limited.—Authorised share capital £151,250, of which £150,000 is in ordinary shares of £1 each and £1,250 in ordinary shares of 1s each. All of the latter and 125,000 of the former have been subscribed and paid up. This is a statement published in the Press to comply with Stock Exchange regulations. Southdown Motor Services, Limited, is a road-transport company operating in Sussex and Hampshire, with headquarters at Brighton. The company runs regular services as carriers of passengers and goods between towns in these counties, and owns for the purpose motor vehicles, freehold and leasehold offices, workshops, &c. The undertaking was converted from a private to a public company in 1917. Recently both classes of shares have received a 15 per cent. distribution. Although the details are more informative than those usually given in these notices, the financial position of the company is not set out.

COMPANY MEETINGS, &c.

THE GAS LIGHT AND COKE COMPANY.

CHEAPER GAS: THE THERM SYSTEM.

NO INCREASED DANGER FROM GAS.

BRIGHT PROSPECTS FOR THE INDUSTRY.

The 216th ordinary general meeting of the proprietors of the Gas Light and Coke Company was held, on the 2nd inst., at Horseferry road, Westminster, London, Mr D. Milne Watson (the governor of the company) presiding.

The secretary, Mr. W. L. Galbraith, read the notice convening the meeting. The report and accounts were taken as read.

The Chairman said: Before proceeding to deal with the accounts in detail, I would like to refer to the great loss which the directors have sustained during the past year by the death of their late colleague, Sir Daniel Ford Goddard. Sir Daniel had been a director of the company for six years, and during that time not only endeared himself to us as a man, but was a most valuable aid in our counsels, having great experience and influence both in the gas industry and in the political world. His loss is deeply deplored by us.

The directors have filled the vacant place on the board by electing Mr Harold Brewer Hartley as a director. Mr Hartley has had lifelong experience in chemical matters, and his knowledge will be of the greatest benefit to this company, which, as you are aware, has a large chemical side to its activities.

Dealing now with the accounts,

I should like to point out that from July 1st they include the figures of the Ilford Gas Company, with which we amalgamated at that date, and this must be borne in mind in considering the details.

Taking first the capital account, you will see that we have spent £54,820 on new and additional mains, £84,549 on new and additional meters, and £186,732 on new and additional stoves, making a total expenditure of £326,101—against which we have written off the sum of £416,000—£329,000 of which was in respect of special depreciation of ships, which we have now written down to a reasonable figure per ton.

There has, therefore, been a reduction in the fixed capital of the company of £90,000.

The total capital of the company, including Ilford, now amounts to just under £30,000,000.

I propose now to pass to the revenue account.

LARGE INCREASE IN BUSINESS.

It is gratifying to report that there has been an increase of 8½ per cent. in the business of the company during the year. This, I think you will agree with me, is very satisfactory, considering the industrial depression which exists in London as generally throughout the country.

The receipts for residuals may also be regarded as satisfactory, though there is a decrease in the revenue from coke of £576,000, due to the fact that the prices for coal and other fuels have gone down very materially during the year.

FALLING COSTS.

On the debit side of the account you will see that, after having made a charge in respect of depreciation of ships, to which I have already referred, we have made a saving in coal of £1,070,000, and have also made a saving in oil of £317,000; wages and salaries, both in manufacture and distribution, show a decrease, though from the figures given in the report the salaries do not appear to have come down to the same extent as wages. This is not, however, actually the case, as there has been a considerable addition to the number of officers owing to transfers from the weekly staff during the past year. Large reductions in salaries have been made.

You will see that repair and maintenance charges were nearly the same as in 1921. In one or two cases the expenditure was even a little higher. The reason why there has not been a decrease is that, as you are probably aware, the company had enormous arrears of repairs to overtake after the war. These deferred repairs in the case of works and plant, I am glad to say, are almost completed, and there should be a reduction of expenditure under this heading in the future.

CONTRIBUTORY PENSION SCHEME.

You will notice there has been an increase in the charges for annuities to officers and workmen. This is due to the initiation of a contributory pension scheme for the workmen which commenced its operation on January 1st of the current year. In order to start a fund of this description it is necessary that a lump sum

should be placed to its credit, and part of the total amount required has been accumulated and charged against the item of annuities during the year under review.

IMPROVED FINANCES.

I am glad to say that the past year has been a successful one, not only from the point of view of sales of gas, but also from the point of view of the company's financial position. At the end of 1921 we owed our bankers over three-quarters of a million; now the position is that we have on deposit the sum of £400,000, and £207,364 invested. This shows that the company is in a strong and healthy position. This is most important in view of the troubles at present existing in Europe, and the great uncertainty as to markets generally.

The results of the past year are eminently satisfactory, not only for the shareholders, but also for the consumers.

STEADY FALL IN PRICE OF GAS.

Look at the price of gas. At the end of 1921 it was 15 2d per therm, and is now 10d per therm, or, for the benefit of those who prefer to think in cubic feet, at the end of 1921 the price per thousand cubic feet was 5s 6½d, and now it is 4s 2d. The reductions made during the year represent an actual saving to the consumers of the company of £1,306,000. The accounts, it is true, only show £628,000, but the reason for this is that there has been an increase in the consumption of gas.

ANOTHER REDUCTION ANNOUNCED.

As was announced in the papers on Wednesday and Thursday of this week, the directors have given notice of a further reduction in the price of gas from 10d to 9.2d per therm, or from 4s 2d to 3s 10d per thousand, as from the taking of the meter indices in March. I am sure that this reduction will give general satisfaction.

The price of gas in 1913 was 2s 6d per 1,000 cubic feet, therefore our price just announced will be very little more than 50 per cent. above the 1913 price. The increase in the cost of living is now stated to be about 80 per cent., so that the price of gas is well below the general average price of commodities in this country at the present time.

There should be nothing but satisfaction with this price, and I look forward with confidence to the use of gas for all purposes being considerably extended.

THE DIVIDEND.

Coming now to the dividends, the company paid a dividend of £5 4s in respect of the half-year ending June 30th, and they now recommend a similar dividend for the December half-year. This, together with dividends on the preference and maximum stocks and the other charges recommended, will absorb £599,000, leaving a sum to be carried over to the credit of the next year of £244,000, as against £148,000 for the year before. We have carried £50,000 to the special purposes fund, and propose placing the sum of £22,000 to the reserve fund.

To sum up, the accounts for the year show that in respect of the June half-year, dividends have been paid at the rate of £4 per cent. per annum on the 4 per cent. preference stock, £3 10s per cent. per annum on the 3½ per cent. maximum stock, and £5 4s per cent. per annum on the ordinary stock, and out of the available balance of £843,000, the directors recommend payment of the following dividends in respect of the December half-year:—

£4 per cent. on the 4 per cent. preference stock, £3 10s per cent. on the 3½ per cent. maximum stock, and £5 4s per cent. per annum on the ordinary stock, together with the sum of £22,000, to which I have already referred, to be carried to the reserve fund and a sum of £20,000 to the redemption fund.

With regard to £5 4s per cent. dividend which we recommend for the December half-year, no doubt some of the shareholders may have expected the distribution of a higher dividend, as the present standard price would have permitted the payment of a dividend of £6 10s 8d per cent. It should be remembered, however, that this latter figure is in accordance with the standard price of gas fixed in March, 1921, when circumstances were altogether different. The directors feel that it would not be in the best interests of the shareholders themselves if they were to pay a dividend at a rate

that might be proved to be excessive, and in the circumstances they consider it is the wiser policy to maintain for the second half of the year the same dividend as was paid for the June half-year. The directors believe that the policy of paying a moderate dividend, which it is hoped can be maintained, is the wiser one to pursue. The sum of £22,000 which has been carried to the reserve fund will be available for the purpose of paying dividends should at any time the profits of the company prove insufficient for the purpose.

THE THERM SYSTEM OF CHARGE.

The last six months of 1922 have been marked by attacks on the gas industry in the Press and elsewhere with regard to the therm system of charging, and latterly with regard to carbon-monoxide in the gas.

With regard to the therm system of charge, in July last it happened that the accounts for gas for the June quarter were in many cases larger than usual, and someone wrote to the Press saying that this was due to the therm system of charging. This view was strongly taken up by a number of newspapers, and, needless to say, was seized upon by a certain number of gas consumers whose bills were higher than usual, and who considered, for that reason, they had a grievance.

It is interesting to mention that each quarter as it comes round finds a certain number of consumers who contend that their gas bills are too high, and who write complaining to the company. On this occasion the suggestion in the Press that the therm was responsible provided a convenient but ill-founded excuse.

What, then, were the real reasons for the June accounts last year being higher in some cases? First, the weather in that quarter of 1922 was exceptionally cold, whereas in 1921 it was exceptionally warm; secondly, there were no restrictions in the use of gas, whereas during the corresponding period in 1921 the national coal stoppage was taking place and consumers were directed to reduce the use of gas to a minimum; thirdly, in the case of this company a larger number of days were included in the June quarter, 1922, than usual, as it was not feasible on that occasion to read the meters at the usual date.

Fortunately, the great majority of the consumers who complained were perfectly satisfied when they understood the cause of the higher bills, and, so far as this company is concerned, the complaints practically died away, and are now less than usual.

The agitation in the newspapers having been started, however, on the assumption that the therm was to blame, was continued, and ultimately such pressure was brought to bear upon the authorities that the Board of Trade appointed a committee to inquire into the system of charging by the therm. This committee has held five sittings, and a great mass of evidence has been given before it.

ALL AUTHORITIES APPROVE THE THERM.

It is particularly interesting to note that there is practically a unanimity of opinion that the therm system of charging for gas is the correct and fair one. This is the view, not only of such well-known scientific men as Professor Boys, Mr Butterfield, Sir Dugald Clerk, Professor Cobb, and Dr Landor, but also of such representative large users of gas as the London County Council, Corporation of London, and the railway companies. The only people who appeared to be opposed to the therm system were those who were obviously misinformed. One witness said: "We do not want heat in gas," showing that the witness was not aware of the simple fact that it is on the heat content of gas, whether for lighting or heating, that its modern utility depends.

During the course of the inquiry, however, other points were dealt with by witnesses, though not within the terms of the reference to the committee, and the question of gas apparatus was discussed at length. More than one witness suggested that consumers of gas were dissatisfied because their appliances were not suitable for the gas now being supplied. On that point I would say, first of all, that no change has been made in the calorific value of our gas that has affected the efficiency of consumers' appliances. The company has pursued the policy, extending over many years, of supplying suitable appliances for burning this company's gas, and employs a large staff on the work of installing apparatus and maintaining it. As the report shows, last year there was an increase of nearly 65,000 in the number of gas stoves sold and on hire, and these were all up-to-date appliances. Naturally, immediately after the war it was very difficult to get new apparatus, but this difficulty has been at an end for some time, and all apparatus issued by the company is thoroughly up to date. I may add that no piece of apparatus is ever fixed without being thoroughly examined and adjusted.

CONDITION OF MAINS.

Coming now to the question of carbon-monoxide. This question has been raised at this time mainly owing to the most unfortunate accident at Bethnal Green, in which three persons, to our great regret, lost their lives. With regard to the particular main from which the gas escaped, it was laid in the year 1880, and when examined after the accident was found to be in perfectly good con-

dition. The accident was caused by the subsidence of the soil in which it was laid, and of which there was no evidence on the surface of the road, and by a portion of the pipe being held up by brickwork, thus causing an undue strain. The condition of the main had nothing whatever to do with the accident.

I can assure the public that the mains in the company's district are in good condition, and that examinations which, day in, day out, and all the year round, are made by our expert main inspectors when the streets are being repaired prove that this is so. The number of fatal accidents due to escaping gas from mains in the streets finding its way into houses is a total of only 19 during a period of 22 years—or less than one a year in a population of four to five millions.

Last year, when I addressed you, an agitation with regard to carbon-monoxide had just been taking place, and I dealt with the question fully at that time, but in view of what is being said at the present moment, it is well that I should once more state the position clearly.

Carbon-monoxide is present in both coal gas and water gas, of both of which it is a combustible and essential ingredient, and cannot be removed.

NO CHANGE IN GAS SUPPLIED.

The percentage of carbon-monoxide in the mixed gas now being supplied by the company is the same as was supplied when the war broke out, and for many years before that, and it is quite wrong to say that any of the accidents that have occurred recently have been due to any alteration in the composition of the gas.

There has been no change in the method of manufacture for over 30 years.

As has been pointed out before, in America some of the most important cities are supplied with carburetted water gas only.

Had we, during the past 12 months, been supplying coal gas only containing 7 per cent. of carbon-monoxide there is no reason whatever for assuming that the number of accidents would have been any fewer. Compulsory limitation in this respect would impose upon this company, and upon the vast majority of gas undertakings in this country, a heavy financial burden in the provision of additional coal gas plant, with the inevitable result of increasing very considerably the price of gas, and that without any corresponding advantage to the public.

The public, I think, have been impressed by the number of fatalities which have occurred recently, but I would point out that the majority of these cases are cases of suicides. There are, unfortunately, always bound to be people who desire to do away with themselves, and there are many methods which can be employed. It is my firm belief that the publicity which has of recent years been given to every case of suicide by gas is directly responsible for the method having been employed with greater frequency.

THE COMPARATIVE SAFETY OF GAS.

In a matter of this kind one is in difficulty, because one does not wish to appear unsympathetic, but facts must be looked straight in the face. We would all be only too glad if gas could be made perfectly innocuous, but it must be remembered also that practically everything we use or do has an element of danger—as instances, petrol, electricity, coal fires, oil lamps and stoves, motor traction, railway travelling, &c., &c.

With regard to accidents as distinct from suicides, the following figures show a very favourable comparison between accidents due to gas and other causes:—

Deaths due to gas represent about 2½ per million per annum of the population.

Deaths from railway accidents, 22 per million per annum.

Deaths due to street accidents in London, 100 per million per annum of the population.

Deaths from coal fires are many times more numerous than from gas. In the year 1919 (the last year for which the Registrar-General's complete figures are available) not less than 992 inquests were held on children under five who had been fatally burnt through accidents with domestic coal fires (conflagrations excluded).

It should not be forgotten that the use of gas is one of the most important means for abolishing smoke and its attendant fogs.

It has been clearly shown that in our large cities one day's fog causes as many deaths as are due to gas in the whole country in twelve months. Fog has been known almost to double London's normal death-rate—but that is taken as a matter of course.

NO "ODOURLESS GAS."

It has been suggested that there is some mysterious difference in the composition of the gas supplied before and since the war, and that the gas as now supplied is odourless. This is not so, the gas being the same as it has been for many years past. The company does not supply odourless gas. There is no cause for the consumers to be nervous, and they may go on using gas as they have been accustomed to do in the past and as their forebears have done.

Another subject which has given rise to a certain amount of discussion is the question of the calorific value of the gas, and it may be well for me to say something on this subject to-day.

GAS NOW PRE-WAR QUALITY.

Before the war the company was working to a penalty standard of 500 B.Th.U. per cubic foot, but in point of fact was supplying gas of somewhat higher quality. During the war, owing to the shortness of coal, and owing to the fact that the company was called upon to extract benzole and toluol from the gas, the quality was reduced to something like 480. When it became necessary for the company to declare, in April, 1921, a standard of calorific value of the gas to be supplied, it was decided to declare a standard of 475 B.Th.U., which was the quality then being supplied. Moreover, as at the time this decision was made the coal stoppage was taking place, it was not wise to declare any higher quality. As a permanent standard, however, a gas of 475 B.Th.U. was in the opinion of the company's technical staff considered to be too low, and a report was presented to the directors urging them to declare, at an opportune time, a quality more closely approximating to the pre-war quality. Accordingly, in June last, the company increased the calorific value of its gas to 500 B.Th.U.

Before I sit down, I should like to take this opportunity of saying how well the staff, both indoor and outdoor—officers and men—have worked during the last trying twelve months. It is difficult to differentiate between persons who have all done their duty faithfully, but I think special reference should be made to the good work done by the chief engineer and the engineering staff generally, which has resulted in very considerable economies and improvements in our business.

A RECORD YEAR—A HEALTHY PROSPECT.

In conclusion, though we have been through such a sea of troubles, in my opinion the company was never in a more healthy condition than it is at present. In the past year we have sold more gas than ever before, and have had one of the largest increases in the sale of gas appliances, and, considering the national work that is being done by the gas industry in the direction of coal conservation, smoke abatement, and the production of useful by-products, so essential to the development of the country, there can be no real fear for the future prosperity of this company and of the gas industry generally.

The report and accounts were adopted.

LONDON AND LIVERPOOL BANK OF COMMERCE, LIMITED. BRITISH OVERSEAS BANK'S OFFER.

The forty-fourth ordinary general meeting of the members of the London and Liverpool Bank of Commerce, Limited, was held, on the 8th instant, at the offices of the bank, 34 Old Broad Street, London, the Lord Ritchie of Dundee (chairman of the company) presiding.

The secretary (Mr H. Hopkins) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen, no doubt you will be more interested to hear what I have to say about the conditional offer which is now in your hands from the British Overseas Bank for the purchase of your shares than in what I may say about the history of the bank during the past year, and my remarks on the latter subject will, therefore, be short. We, like everyone else, have suffered from the trade depression, and that fact is reflected in the small amount of our acceptances on December 31st. They amount to no more than £791,000, and, though the figure at that date is smaller than at any other period throughout the year, it may be taken generally as an indication of the contraction in business. For the first time for eight years you are enabled to see exactly what our acceptances on account of current business are.

BANK OF ENGLAND'S ADVANCES.

Since 1914, after the outbreak of the war, there has been included under the head of acceptances the amount of the advances from the Bank of England under the Government scheme. Those advances have now all been liquidated. They were due, under the Government scheme, for repayment at the end of August last, but we anticipated that date by a month or two, and provided out of our own resources what was necessary to meet the liability to the Bank of England on account of those pre-war debts which still remained outstanding. Since that date payments have been coming in on account of pre-war German debts, but only slowly, and there still remains a substantial sum to be collected. As to our other pre-war debtors on the Continent, of which Poland is the principal, we are no nearer any settlement than this time last year, and I cannot see any hope of repayment, even in part, for some time to come.

Now that the Bank of England account is closed, I can speak with more freedom on the subject. I have been asked on several occasions at these meetings what the advances from the Bank of England amounted to and I have always refused—politely, I hope—

to give the information. I can now tell you that in the early days of the war they amounted to approximately £1,000,000, and, though they did not remain at that high figure very long, they continued to be uncomfortably large until within the last year or so.

LIQUID POSITION.

On the other side of the balance-sheet you will also see a considerable change from last year. We are very liquid, showing cash, £44,824; money at call and short notice, £105,000; bills receivable and bills discounted, £32,969; and investments, £476,177; or a total of £658,000. Last year there was on this side of the account a large sum which we had on deposit with the Bank of England against advances under the Government scheme. That account is now closed, with the result that assets have been released and have gone to swell the amount of our investments, which exceed last year's figure by considerably more than £200,000. I think every one will agree that we show a very good balance-sheet.

It is when we come to the profit and loss account that things are not so satisfactory. We have not only suffered from lack of business, but rates for money have been very low, and our profits show a reduction even on the moderate figures of the few preceding years. We are glad to say, however, that we were able to pay an interim dividend last July of 3s per share, and that we can now recommend a final dividend of 5s per share, making a total distribution at the rate of 4 per cent. for the year, and carrying forward £20,032, against £20,739 brought in.

OFFER FROM BRITISH OVERSEAS BANK.

I will now deal with the offer which you have received for your shares from the British Overseas Bank. The offer is the outcome of protracted negotiation with the bank, and it is only after the most careful consideration that we have recommended it to you for your acceptance. In our opinion, it is a fair one for both sides. The price of our shares when we first notified you of this offer was £8, but it must be remembered that they stood at about £6 10s only a few weeks ago, when these negotiations were opened. We were extremely careful not to breathe a word about them to anyone, but I cannot think of any other explanation for the sudden and substantial rise in the price than that some rumour must have got abroad. However that may be, the shareholders should bear in mind, when they are considering the offer, that the price of the shares stood at £6 10s last autumn, or £3 15s per share less than they are being offered for them to-day.

This is not the first negotiation which we have entered into during the last few years. Many suggestions have been made to us; some of them have not been worth consideration; others have led to more or less prolonged negotiations, which have fallen through for one reason or another. We have long felt that some such solution as this must be found for the problem with which we have been confronted. Our business has been handicapped, and continues to be handicapped, by pre-war debts remaining unpaid. We are not large enough for these expansive days, and we do not feel justified in launching out in new directions. You will remember that we have power to issue further £400,000 capital, thus bringing our total issue up to £1,000,000. During the year before the war our business had grown so greatly that we were hoping to make that issue shortly. To-day it is impossible to contemplate it with our shares at a discount and no prospect, in the near future at any rate, of paying a higher dividend than 4 per cent.

For these reasons we recommend this offer for your acceptance. On the other hand, we think the British Overseas Bank are making quite a good bargain for themselves. They are taking over a very liquid balance-sheet, and they are acquiring an old-established business with valuable connections in all parts of the world. I have no doubt that they will make a success of it, and that, in course of time, the business will once more expand, and even exceed the volume to which it had attained when the war broke out. We understand from those who control the British Overseas Bank that they intend carrying on the business on the lines that we have followed, and we believe that all our customers may rest assured that they will receive the same consideration from the British Overseas Bank as they have hitherto received from us.

Sir Felix Schuster, Bart., seconded the resolution, which was carried unanimously.

CANADIAN BANK OF COMMERCE.

YEAR'S RESULTS SATISFACTORY DESPITE TRADE DEPRESSION. IMPORTANCE OF SOUND IMMIGRATION POLICY.

The fifty-sixth annual meeting of the shareholders of the Canadian Bank of Commerce was held in Toronto on January 9th, 1923. The president (Sir Edmund Walker) took the chair, and after the report, which has recently been made public, had been read, the general manager (Sir John Aird) addressed the shareholders.

GENERAL MANAGER'S ADDRESS.

Sir John Aird spoke in part as follows:—

The year has been a trying and strenuous one, marked by a continuation of the decline in banking profits, due to the general depression in business, the efforts of provincial Governments and others to secure deposits at high rates of interest, and the strong competition for all banking business. Notwithstanding this decline we have been able to show net earnings of \$3,002,435. This has enabled us to make the usual provision for dividends and pension fund, to write \$400,000 off bank premises account, to provide \$325,000 for Government taxes, and to add \$150,707 to profit and loss account, the balance of which now stands at \$2,097,502.

The figures of the general statement which we submit to you to-day would indicate that Canada has made some further progress towards a return to normal conditions, which must take place before there can be any marked revival of business activity. Our liabilities to the public, notes in circulation and deposits again show decreases, although only slight as compared with the decrease during the previous year. The principal part of the decrease in our deposits has taken place in those not bearing interest, and this is perhaps only a natural outcome of the quiet condition of business during the past year.

One of the interesting changes on the asset side of the statement is the increase in our holdings of gold, which are nearly five millions larger than a year ago. Indeed, we hold more than sufficient gold to cover every dollar of our note circulation. Our total holdings of coin and Dominion notes have been well maintained, standing at 15.23 per cent. of our liabilities to the public.

We have in the past considered that about 50 per cent. of our total resources should be in the form of readily available assets, and we regard this as a reasonably safe basis.

IMMIGRATION AND AGRICULTURE.

Our national income has been reduced as a result of the war, not only by the amount of the heavy taxes which we have to pay, but in all the thousand and one ways which result from the post-war depression in business. As a result we are finding that the carrying out of the magnificent plans we had formed for the future before the war is beyond our means, and we are come to the point where we must decide whether to abandon them in part or to call for outside assistance in carrying them through. It is said that if we are to secure outside assistance it must be in the form of selected immigration of men who will go on the land and help to bring our large areas of unsettled fertile lands under cultivation, thereby providing traffic for our railways and a home market for our manufactures. But of what avail will it be to place these newcomers on the land if those already settled there are unable to make farming pay? The cost of our manufactures cannot indefinitely continue to be higher than the farmer and the majority of the consumers in the home market can afford to pay. Both capital and labour must co-operate in seeing that costs are reduced, and this process must be carried to an extent that will enable the farmer to obtain his requirements at a price within his means, after he has sold his produce at prices fixed by the world markets.

PRESIDENT'S ADDRESS.

Sir Edmund Walker, C.V.O., in the course of his address, said:—

In North America there has been a very remarkable recovery during the year, especially if we consider the scanty buying power of Europe and the low prices consequently obtained for farm and pastoral production, in which respect, however, there is now some improvement. During 1922 the recovery has brought many of the basic materials back to or above the normal. In like manner, manufactured goods have in many cases risen sharply in price.

Turning to the foreign trade of Canada, we have in the fiscal year March, 1921, to March, 1922, made the lowest record since 1916, the total being only \$1,501,731,000, with the trifling sum of \$6,122,000 in favour of exports, as compared with an excess of imports in the previous year of \$29,730,000.

The principal field crops of Canada for 1922 are estimated by the Dominion Bureau of Statistics at \$984,139,000, as compared with \$931,863,000 in 1921, and \$1,537,170,000 in 1919, our best year. The actual result for 1921 fell short of the estimate by about \$85,000,000.

It is unfortunate that at a moment when the results in money from our field crops are so unsatisfactory, the results from cattle are equally so. From this season's operations we shall have shipped the largest quantity of wheat on record, but at an inadequate price, and we shall have marketed the largest number of cattle, also at an inadequate price. The embargo by Great Britain being still in force, the value of these cattle was clearly determined by the price in the United States, less duty.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves exceed £13,000,000.

Affiliated Institutions:
THE BRITISH BANK OF SOUTH AMERICA, LTD.
AND
THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

● BRANCHES OF THE ANGLO-SOUTH AMERICAN BANK, LIMITED.
▲ BRANCHES OF THE BRITISH BANK OF SOUTH AMERICA, LIMITED.
○ BRANCHES OF THE COMMERCIAL BANK OF SPANISH AMERICA, LIMITED.

The revised figures of our mineral production for 1921 are \$174,315,000, as compared with the estimate of \$170,000,000. The estimate for 1922 is \$180,000,000. It is in gold mining that we are making the most striking progress and attracting the most attention from the outside world. The increase in production for the year is about 31 per cent. as compared with 1921, and the output of several of the most important mines is being enlarged, and promises to be much greater in future.

The public debt of the Dominion on March 31, 1922, was \$2,422,135,000, as compared with \$2,340,878,000 at the same date in 1921.

CANADIAN IMMIGRATION.

Having regard to our national debt and to our national position generally, no question is more important than that of immigration, and perhaps no national question presents so many phases for consideration. The number of immigrants entering Canada in our last fiscal year fell, doubtless mainly because of our severe regulations, to 90,000, as compared with 148,000 in 1921 and 402,000 in 1913. Clearly, however, we need to recast our opinions as to what our immigration policy should be.

In any event, we require a policy of land settlement, both for newcomers and for our own farmers' sons, or a wider application of such satisfactory systems of land settlement as we have already tried, in order that we may secure as many as possible of that always too small class who wish to have the chance to make a living on the land. We should seek for them in Great Britain, the United States, and in Northern Europe, never forgetting that this problem as a whole is one of service, first to Canada, and second to the immigrant.

Canada is frequently complimented by students of taxation in the United States and Great Britain on its sales tax, but a much larger revenue, in a form much less hurtful to production, would result from a turnover tax of 1 per cent. Such a revenue would make it possible to lessen the scale of super-taxes now imposed on incomes and other unfair taxes on enterprise, the ruinous result of which is evident to all who give any thoughtful attention to the matter.

BANK'S MONTHLY LETTER.

During the year the usual careful attention has been given to the bank's monthly letter, which, in addition to its very large circulation in North America, reaches all parts of the world. We have tried to give in as compact a form as possible, by text and graph, a true picture of Canadian trade and finance, and our wholesale price index is now widely accepted as a standard of information. We have during the year issued with our letter seven supplements, covering exhaustive information regarding trade possibilities between Canada and Mexico, Brazil, Cuba, Jamaica, Trinidad, Barbados, and Great Britain.

The usual votes of thanks to directors and staff were passed. The meeting then adjourned.

THE STERLING TRUST, LIMITED.

APPRECIATION OF TRUSTS' INVESTMENTS.

The sixth ordinary general meeting of the Sterling Trust, Limited, was held, on the 6th instant, at Winchester House, Old Broad Street, London, Baron Emile B. d'Erlanger, the chairman, presiding.

The Secretary (Mr B. R. Tomlinson) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: I have first of all, with very great regret, to refer to the death of one of those gentlemen who joined the board when the Trust was formed—namely, Mr C. C. Macrae, who died on November 28 last. The directors heard of his death not only with regret that they would no longer enjoy the benefit of his able counsels, but with a feeling of deep personal loss. The board appointed Sir Vesey Holt to fill the vacancy thus created, and the board consider that his services will be of benefit to the company. I have every confidence in recommending him to you for re-election.

THE ACCOUNTS.

Coming now to our accounts for the year, and taking first the balance-sheet, we find our capital and debenture debt unaltered at £1,350,000 and £2,607,892 respectively; accrued interest on "A" debentures is also unaltered at £6,240; sundry creditors and credit balances amount to £2,030; unclaimed dividends and interest amount to £6,376; the reserve fund is unaltered at £100,000; and the balance of revenue account is £86,263. On the credit side, our investments, after deducting contingent fund, which includes profits on sales of investments, and so on, stand at £3,968,128.

At the general meeting in 1921 I had to refer to a depreciation at December 31, 1920, of some £200,000 on the balance-sheet value

of our investments, after allowing for the reserve fund of £100,000. At the meeting in 1922 I was able to tell you that this depreciation had decreased to £121,197, after again allowing for the reserve fund. I am now pleased to be able to state that a valuation of our investments made at December 31, 1922, taking, as before, our American railway holdings at the figure to which they were written down when the Trust was formed, shows not only that the depreciation has entirely disappeared, but that there is a surplus of something like £83,000 over and above the figure at which the investments stand in the balance-sheet, and that, in addition, our reserve fund of £100,000 is intact.

These investments may be divided up approximately into British Government securities, 27 per cent.; our American railway holdings, 30 per cent.; other bonds, debentures, debenture stocks, and notes, 27½ per cent.; preference and preferred ordinary stocks and shares, 10 per cent.; ordinary and deferred ordinary stocks and shares, 5½ per cent. The British Government securities represent something over £1,000,000.

Sundry debtors and debit balances at £14,099, and cash at bankers and in hand call for no special remark.

INCOME FROM INVESTMENTS.

Turning to the revenue account, we find that income from investments, less income-tax, amounts to £171,849. You will notice that a sum of £2,998 has been charged against the amount brought in from the year 1921 in respect of an adjustment of income-tax account to which year it properly applied, and, if this is taken into consideration as reducing the income of that year, there is shown an increase for the year 1922 of about £10,000.

An improvement in the dividends received from the American companies, which I foreshadowed last year when I explained the poor results which had been then experienced, has taken place. Our receipts from that source would have been better had it not been for the disastrous strike of shop employees which occurred on all railroads in the United States on July 1, 1922. Up to that time business had been satisfactory, and is again attaining satisfactory proportions, and I have every hope and expectation that for the current year, in the absence of unforeseen occurrences, our receipts from the sources in question will be at least maintained, and, in fact, although one hesitates very much in present times to express opinions as to the future, that they will show further improvement.

The other items in the revenue account call for no particular mention; general charges amount to £11,088; "A," "B," and "C" debenture interest, less tax, to £27,301, £38,222, and £29,893 respectively; and there remains a balance of £65,365, to which falls to be added the carry-forward from the previous year of £20,897, making a total of £86,263 for allocation. From this we propose to you the distribution of a 6 per cent. dividend for the year, absorbing £55,312, and leaving £30,951 to be carried forward, subject to corporation profits tax, if any.

Mr Robert Fleming seconded the resolution, which was carried unanimously, and, the formal business having been transacted, the proceedings terminated.

THE METROPOLITAN TRUST COMPANY, LIMITED.

SATISFACTORY RESULTS OF THE YEAR.

AMERICAN WAR DEBT SETTLEMENT.

The twenty-fifth ordinary general meeting of the Metropolitan Trust Company, Limited, was held, on the 6th instant, at the company's offices, Gresham House, 24 Old Broad Street, London, E.C., Mr. Robert Fleming (the chairman) presiding.

The secretary (Mr H. Carlisle) having read the notice convening the meeting, and the report of the auditors,

The Chairman said: Gentlemen, I presume that, as usual, you will take the report and accounts as read. (Agreed.) The chairman of our big banks—five have deposits of £1,728,000,000, so I am surely justified in calling them big—have during the past fortnight made speeches in this city of a very instructive and illuminating character, dealing with the economic situation of our country and the world. You have probably read these speeches, and will not want further time occupied by one much less fitted to deal with so great a subject.

OUR DEBT TO THE UNITED STATES.

Only one important feature in the financial situation, in view of our company's past relations with America, I might refer to, viz., the War Debt settlement with the United States.

In this room in June, 1919, I said:—

"The repayment of money lent by rich Allies to weak ones must take a subordinate place in the final settlement if the world is ever to be restored. It will be an evil basis for a League of Nations if, as between the Allies themselves, the cost of making the world 'safe for democracy' should con-

tinue a millstone round the necks of those who have been in the colossal struggle from the beginning, and so have well-nigh exhausted both life and treasure."

I still think as I thought then, and I would have been better pleased to see our settlement with America await a general world settlement of inter-Allied debts on the lines proposed by Lord Balfour in August last.

The settlement reached, no doubt the best possible under present conditions, I am glad to see, includes a possible reduction of cash payments by half during the next five years. That may prove to be a very great relief during a period when we, burdened with a debt of crushing dimensions outside of that owing to the United States, may be still struggling to get on our feet again.

RESULTS OF THE YEAR.

Returning to our own company's report for the year, you will, I think, regard it as satisfactory.

As to capital values, we are in market price some £8,000 short of the book cost of £2,133,146, but, as you know, we make our valuation at the middle quoted price, and without adding stamp duty or brokerage, so in point of fact we could not on January 2nd last have bought the securities we hold at so low a cost as that at which they stand in our books.

This contrasts favourably with last year, when the market depreciation was 14 per cent. The rise in prices on the Stock Exchange during the year has, as you know, been caused mainly by bad trade and consequent cheap money. In 1923 I hope these causes may not operate so strongly.

REVENUE.

I need not say that with an investment trust company, just as with a private trust, fluctuations in market value of the securities held in the trust fund are of minor importance. The main thing is the divisible revenue which they yield.

As to revenue, we have, as you see, earned about 18½ per cent. on the ordinary stock, and been able to increase the dividend from 14 per cent. to 15 per cent. I had a feeling that this was hardly a year for increasing dividends, but we made, as usual, a careful estimate of what we might expect for the year on which we have now entered, and, as there did not seem any likelihood of our having to reduce it next year, we thought you would not object to receive the 15 per cent. for 1922.

THE DIVIDEND.

With these remarks, gentlemen, I beg to propose: "That the report and accounts as presented be and they are hereby received, approved, and adopted, and that a dividend of £8 10s per cent. on the ordinary stock, less income-tax, making, with the interim dividend, £15 per cent. for the year ended January 1, 1923, be and the same is hereby declared."

Mr Henry A. Vernet seconded the resolution, which was carried unanimously.

The Chairman next moved the re-election of the Rt. Hon. Viscount St. Davids as a director of the company.

Mr Vernet seconded the motion, which was unanimously agreed to.

Messrs Deloitte, Plender, Griffiths, and Co. were reappointed auditors of the company for the current year, on the motion of Mr G. P. Balfour, seconded by Mr W. Jones.

On the proposition of Mr George Collis, a cordial vote of thanks was passed to the chairman and his colleagues for the excellent report they had presented, and the proceedings then terminated.

Since July 21, 1920, notes and certificates outstanding include notes called in but not yet cancelled. Maximum fiduciary issue for 1920 fixed at £390,600,000, for 1921 at £317,555,200, for 1922 at £309,988,400, and for 1923 at £270,183,800.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in three months' Treasury Bills dated from Monday to Saturday, February 11-February 14, were opened on February 9, 1923, and the total amount applied for was £63,590,000. Tenders for Monday bills at £99 7s 10d, and above in full, Tuesday bills at £99 7s 11d, about 59 per cent. above in full, and Wednesday bills at £99 7s 11d, about 59 per cent. above in full. The average rate of discount for Treasury bills was £2 9s 7 1/2d. The amounts allotted were as follows:—In bonds, £1,500,000; in bills at 3 months, £30,000,000.

(a) Including Treasury Bonds.

Tenders will be received on Friday, February 16, 1923, for Treasury Bonds and Treasury Bills to be issued to the maximum amount of £30,000,000. The amount of Treasury Bonds issued will not exceed £2,500,000, but subject to that limit, the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

* Half-year.

Reports and Notices.

Mr G. E. B. Bromley-Martin has been elected chairman of the London Board of the Liverpool and London and Globe Insurance Company, Limited.

The London financial agents of the Mexican Eagle Oil Company, Limited, received cable advice from Mexico that a new well, San Geronimo No. 12, came in on January 24, 1923. The announcement has been withheld pending production tests, which now indicate a potential capacity of 13,000 barrels daily.

Mr Charles Caryl Baker, F.C.A. (Ball, Baker, Cornish, and Co.), Finsbury court, Finsbury pavement, E.C., has been appointed receiver of Lamag Rubber Estates (1913), Limited.

BANKS.

DOMINION BANK (CANADA).—The report for the year ended December 30, 1922, shows a profit for the year of \$1,175,478, to which is added \$715,480 brought in, making \$1,890,958 available. The total distribution of 13 per cent. for the year absorbed \$780,000. Contribution to officers' pension fund amounted to \$45,000; Dominion and Provincial Government taxation amounted to \$157,795, while \$150,000 has been written off bank premises. The balance of \$758,163 is carried forward.

INSURANCE.

NATIONAL MUTUAL OF AUSTRALASIA.—The new business for the year ended September 30, 1922, amounted to 13,232 policies, assuring \$2,007,567, yielding new annual premium of £200,198, and single premiums of £13,386. The net premium income was £1,833,686,

against £1,748,241, and the expenses amounted to 14.67 per cent. of the premiums, as compared with 15.12 per cent. The rate of interest earned was £5 8s 3d per cent., after deducting income-tax. The life funds increased during the year by £1,486,304, to £16,587,659.

SUN LIFE OFFICE.—The report for 1922 shows that the net new assurances numbered 11,764 for £5,067,338, at annual premiums of £212,935, and single premiums of £22,513. The net premium income was £1,578,467, against £1,441,342, and the expenses and commissions amounted to 19.5 per cent. of the premiums, as compared with 19.9 per cent. The rate of interest earned was £4 12s 6d per cent. after deducting income-tax. The life assurance fund increased by £484,133 to £12,494,125.

THE SCOTTISH LIFE ASSURANCE COMPANY, LIMITED.—The report for 1922 states that the proposals for life assurance numbered 1,295 for a capital sum of £1,016,652, of which proposals to the extent of £181,999 were declined or not completed. The assurances granted were 1,056 for £834,653, and of that amount £124,510 was reassured, leaving a net new business of £710,143. The net new premiums were £36,742, of which £9,758 were single premiums. The directors regard these figures as satisfactory, especially in view of the continuance of commercial and industrial depression. The life premiums of the year amounted to £393,178, of which there was paid away under reassurances £27,854, leaving a net premium income of £365,324. The mortality experienced has been very low, the claims by death having amounted, with bonus additions, to £84,258. The endowment assurances paid on survivorship amounted, with bonus additions, to £75,126. The consideration received for annuities was £7,951. By the occurrence of 15 deaths among the annuitants, the company has been relieved of an annual charge of £817. The life funds increased to £3,502,450; the addition during the year was £263,252, being a greater addition than has been made in any previous year. Having regard to the strength of the reserves, and to

the steadily accumulating surplus, the directors have increased the rate of intermediate or prospective bonus on full-profits policies from £1 per cent. to £2 per cent. in respect of each of the remaining three years of the current quinquennium. The directors recommend a dividend of 15 per cent., less tax.

MISCELLANEOUS.

HOME AND COLONIAL STORES.—In presenting their annual report with the balance-sheet and accounts for 1922 the directors are again able to record an improvement in the volume of trade. As usual, the premises of the company have been maintained in an efficient state of repair, and depreciation of leaseholds, plant, fittings, &c., has been adequately provided for out of revenue, at a cost together of £62,023. The net profit for the year as shown in the accounts amounts to £341,969, to which is added the balance brought from the previous year, £46,531, making the total £388,500. There have been deducted quarterly dividends paid for the year on the 6 per cent. cumulative preference shares, the 15 per cent. cumulative preference shares, and the 15 per cent. cumulative ordinary shares, £129,000; interim dividend paid July 1, 1922, of 1s 3d per share on the 400,000 ordinary shares, £25,000; amount added to reserve, £34,196; leaving a balance of £200,304. The directors recommend that this balance be appropriated as follows:—To the payment of a final dividend on the 400,000 ordinary shares of 1s 9d per share, making 15 per cent. for the year, £35,000; to the payment of a special bonus on the 400,000 ordinary shares of 1s 6d per share, £30,000; to the company's benevolent fund, £10,000; to provide for income-tax, £25,000; to provide for corporation profits tax, £18,000; to reserve for equalising dividends, £32,000; to carry forward, £50,304. The total of the reserve fund is now £566,885. The report goes on to say that "reference was made in the last directors' report to the re-valuation of the company's plant, machinery, fixtures, fittings, freehold and leasehold properties and leasehold values made in 1921 by Messrs Burrows and Richards, Limited, of 88 Bishopsgate, E.C. The valuation very largely exceeded the book values of these assets after adjustment of the depreciation reserves. A portion of this excess has been utilised to write down the balance-sheet value of the company's goodwill, as shown in the balance-sheet. The thanks of the shareholders are again due to the company's staff, both at the head office and the branches, for their work during the past year; and the shareholders will be asked to approve a special bonus of £15,000 paid to the staff for 1922, which has been charged before arriving at the net profit."

SOUTH METROPOLITAN GAS.—The following is extracted from the report and accounts for 1922:—The directors are pleased to report that the gas supply of South London has been regarded with extended favour by the consumers, whose numbers and requirements have both increased. This is not surprising when it is remembered that while in 1920 the method of charge was changed from the cubic foot to the therm basis, the quality and composition of the gas have been maintained at not less than their pre-war standards. The method of gas manufacture employed by the company to-day is identical with that established over half a century ago, except that it is now practised with the greater understanding which a highly trained scientific staff has brought to bear upon the subject. It is very gratifying to be able to state that complaints relating to gas bills have shown no increase over the small numbers received in previous years. The world-wide demand for coal arising out of the uncertain position of the mining industry in America and Germany has stiffened the English market, and has for the present deferred the reduction of coal prices to an economic basis. The proportion of surplus profits earned for the year is sufficient to enable a dividend to be paid upon the ordinary stock of 5½ per cent. per annum, and the directors recommend that this be paid less the amount of the interim dividend. The pre-war rate of dividend will thus have been reached for the first time since June, 1914. After several years' omission a copartnership bonus has been credited to the weekly and salaried staff. The renewal of this feature of a copartnership, which includes not only capital and labour but also the consumer, has been received with great satisfaction by the employees, whose devotion to the interests of the company calls for the highest commendation.

SOUTH SUBURBAN GAS.—Report for 1922 states that three reductions were made in price of gas during year, lowest price in company's area being now 11 4s 3d per therm, or 4s 6.28d per 1,000 cubic feet. Downward tendency of coal prices appears to have been arrested. Sales of gas show increase of 3.66 per cent., while number of consumers has increased by 3,770, and of cookers, gas fires, &c., on hire, by 4,158. After providing for all debenture and other interest charges and payment for first half of year of statutory dividend at rate of 6 per cent. per annum, less tax, there remains £57,919. Directors recommend second half-year dividend at rate of 6 per cent. per annum, less tax, carrying forward £25,285. The meeting will be held at Cannon street Hotel, February 16th, at noon.

YORKSHIRE ELECTRIC POWER.—The statement of account for the year 1922 compares with the two previous years as follows:—

	1920.	1921.	1922.
The net profit after payment of interest and discount charges is	£ 64,739 11	£ 74,316 0	£ 101,003 16
And the balance brought forward is	17,596 9 7	20,938 15 1	23,259 16 4
Making a total of	82,336 0 8	95,254 15 2	124,263 12 10

The directors recommend a dividend on the cumulative preference capital at the rate of 6 per cent. for 1922, amounting to £23,529; a dividend on the ordinary capital at the rate of 8 per cent. for 1922 amounting to £49,196; the sum of £25,000 has been placed to the general reserve fund (increasing this fund to £129,000); carrying forward the balance of £26,538. The report goes on to say that the works of the company have been fully maintained out of revenue,

Economies effected during the year, more especially by the new generating plant installed, have resulted in a satisfactory improvement in the balance available for disposal. There has been a substantial increase in the amount of electricity sold, accompanied by a large reduction of price to customers of the company, following the price of coal in terms of their agreements. New generating plant has been set to work at Barugh, and a new 12,000 k.w. turbo-alternator is nearing completion at Thornhill. Co-ordination of supply in the company's area progresses by agreements entered into with the Corporations of Leeds and Rotherham and the Urban District Councils of Holmfirth and Mexborough. The amount of electricity supplied in bulk continues to increase, and it is satisfactory to note from published statements of local authorities that definite economies have resulted from taking a bulk supply from the company. In February last an issue of £58,360 6 per cent. cumulative preference shares was made and considerably over-applied for. The amount of 5½ per cent. redeemable debenture stock issued has been increased to £550,000, a further £190,000 having been taken up at par in August last.

ducer seems to be, may find it difficult to meet the unexpectedly low prices which the latter has made. If the object sought was volume production, the result of the offering was fully up to expectations. During the week after the opening, all of its fall lines of women's wear fabrics were sold up and withdrawn, according to an official announcement, and it is understood that numerous lines of its goods for men's wear, notably woollens, have already been ordered to the full extent of available production.

VEGETABLE OILS AND OILSEEDS.

Linseed has continued a firm market, and, on the whole, prices have been maintained at last week's level, though business has been far from active, and consumers unwilling to enter into commitments far ahead or in excess of oil requirements. Plate linseed is inclined to fluctuate. A fair business has been done at £18 7s 6d for seed loadings, £18 for January-February, and £17 15s for February-March and March-April shipment. Some trade has also been done in Indian at £21 for Bombay afloat. Although linseed is still scarce on spot and at a substantial premium, arrivals are improving, and the volume on passage steadily increasing, the quantity (Plate and Indian) afloat this week being 66,200 tons to the U.K. and 69,900 tons to the Continent, together 136,100 tons, against 123,700 tons last week, and 86,800 tons a year ago. The new Plate crop appears to be moving off pretty well, the shipments for January being 177,100 tons. Indian shipments for the month were 15,000 tons, bringing the total up to 192,100 tons, against 110,025 tons in January, 1922. A good proportion will come to hand during the present month, and will bring more employment in the mills, and make good the deficiency in the production of oil.

Linseed oil has continued in short supply on spot and for February delivery, and, with a good demand from the consuming trade, prices remain firm round £41 to £42 per ton naked, ex Hull mill, for spot, and £39 to £40 for February, £37 being quoted for March-April. For May-August, prices have advanced, America having come into the market for large quantities for delivery over this period. This is noteworthy in view of the fact that there is an impost duty of 3.3 cents per lb (equal to £16 per ton) on linseed oil sent to the States. This is set off by a duty equal to £3 10s on linseed imported, which is equivalent to £10 10s per ton on the oil produced, from which it may be inferred that cost of production is increasing, and is thus enabling English linseed oil to again get a footing, despite the high tariff.

Cottonseed maintains recent value round £11 15s to £11 16s 3d paid for Sakellarides. A good trade is reported in crude Bombay and technical refined, with a better inquiry for edible quality, prices ex mill varying only slightly. Crude soya beans and other vegetable oils are in fair request at about unchanged figures.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The general tone of the hide market is steady, with a downward tendency. Best ox hides sold in Bermondsey on Thursday from 7½d to 8½d, and seconds from 5½d to 7d, the latter class showing a drop of ½d to ¾d on last prices. Best cows sold from 5½d to 6d, and kips from 2½d to 5½d. Calf were firmer, best selling from 7d to 12d in face of a strong demand. Wools made from 5s 6d to 12s 6d, and hoggs from 6s to 15s each. The foreign hide market remains firm, and sales of S.A. fregorifics have been made at S.57. Saladeros are less active, values being too high to meet tanners' views. All classes of dry hides are required, and sales of dry-salted Queensland are reported at 9½d c.i.f. Latest cables from New York report the Chicago hide position as weaker, with best heavy packers now selling at 20 cents, and fregorific steers to the U.S.A. at 57 Argentine dollars. Prices of raw goat skins, and sheep linings, still remain very firm, and light leather manufacturers find it very difficult to make a profit on their leather.

The trade passing in sole leather seems to have fallen off this week, orders are for very small parcels, and for the commonest grades of material—dry hide bends being in constant request. Prices all round are being well maintained, as tanners are firm believers in the future of the leather market. Little American sole is arriving, quotations being well above the home production.

Upper leathers are still a slow sale, but London sellers report a better call for the higher-class grades. German competition seems again out of the market, as little chrome calf has come to hand this week. In glacé kid the medium and cheap grades are the best sellers, whilst samples of suedes are leaving warehouses pretty regularly.

The boot trade is patchy; some centres appear to be fairly well employed, whilst others are working short hours. Women's foot-wear, and sports shoes, are going overseas in good quantities, but the demand for good and medium men's boots seems to be badly affected by the number of men out of employment.

OVERSEAS PRODUCE MARKETS.

Mincing lane, Friday, February 9.

SUGAR.—The market developed increased firmness, and prices of British refined since our last are 3s 6d to 4s per cwt dearer on the spot, while in good demand, owing to a marked paucity of supplies respecting imported. Messrs Tate and Lyle's cubes sold, 5s 6d to 5s 8d; granulated, fine and coarse, 5s 4½d; No. 1, 5s 2½d; No. 2, also London, 5s 10½d; yellow crystals, 4s 10½d; granulated, one month forward, 5s 1s; April-May, 5s 3d. Crystallised West India in limited

supply, and quoted 46s to 47s. American granulated, spot, moved up to 51s 9d; ditto, February-March, steamer, sold 24s 6d to 25s, c.f. and i., London. White Mauritius, spot, 48s to 48s 6d; white Java, 49s 6d to 49s 9d; May-June, sold, 22s 1½d; and June-July, 21s 10½d, c.f. and i., London. The general position regarding continental parcels for shipment is quite nominal in the absence of definite offers. Cuban, basis 96 per cent., February-March shipment, sold, 18s 6d to 19s 7½d; Peruvian, ditto, quoted 19s 3d; and Brazilian, basis 80 per cent., 14s, c.f. and i. terms, U.K. Cuban stocks stand at 274,130 tons, against 163,670 same time last year. Liquid glucose, spot, quoted 28s 6d. Terminal dearer. May, sold, 23s 3d; August, 23s 4½d.

COFFEE.—Market remained fully steady, with fair inquiries, chiefly arising from home-trade buyers. Nairobi, bold sizes, sold, 99s to 109s; peaberry, 99s to 117s; bold Costa Rica, 101s to 111s 6d. Futures remain slow.

COCOA.—A quiet state of affairs governed the market, but the small volume of business put through disclosed no essential change in prices. Accra, F/F quality, February-April, quoted 34s, f.o.b. terms.

TEA.—Nearly 47,000 packages Indian were catalogued this week, and while good medium and finer descriptions met with steady support at recent rates, low medium and common passed quietly into consumers' hands at irregular and slightly weaker rates. 18,250 packages Ceylon were offered, and manifested similar features to Indian. All the finer sorts were well competed for at a steady range, but common declined ½d to ¾d per lb. Java and Sumatra quiet, and prices generally in buyers' favour.

RICE.—Market quiet, and rates easier in forward positions for Burma. Two Stars, spot, quoted 15s; February-March, 13s 6d; No. 1 garden Siam, February-March, 14s; and Saigon, ditto, 12s 6d to 12s 9d, c.f. and i. terms. Broken kinds steady, quiet. Rangoon beans, spot, 8s. Japanese peas, spot, 29s; February-March, 29s 6d.

SPICE.—Pepper market steadier on balance, chiefly forward, with a fair inquiry. Fair black Singapore, spot, sold, 4½d; February-April, steamer, 3½d; Aleppo, spot, quoted 4d; Tellicherry, 4½d; white Singapore, spot, 6d; Muntok, 6½d; ditto, February-April, 6½d; and March-May, 6½d. Zanzibar cloves, spot, sold, 10½d; January-March, steamer, 9½d to 9½d. Flake tapioca, spot, 3½d per lb; fair Penang, seed pearl, spot, 24s 6d; sago flour, February-April, 13s 4½d, with earlier positions January done 14s. Desiccated coconut, spot, fine cut, sold, 38s 3d to 39s; medium, 39s 6d cwt. Ginger slow, unaltered.

FRUIT.—General quietness again characterised this market, but prices for currants, sulhanas, and also raisins showed no essential change.

JUTE.—With a spinning demand still rigidly confined to wants of pressing necessity, a dull tone predominated and prices tended downward, closed firmer. First grade, January-February, due steamer, sold down to £31; more distant, £31 10s to £32; February-March, £32 to £33; and March-April, £32 15s to £33 10s. Lightning grade purely nominal, though business was recorded during the week to an output at about £2 per ton premium on first grade. Hessians and twills very slow, but sellers adhered to fairly steady asking prices.

HEMP.—A moderate amount of business was effected in Manila sorts, and prices tend firm. G grade, February-April, sold, £37 10s; J, November-January, £36; February-April, £35 15s; and buyers, K, afloat, £34 15s; February-April, £34 15s; L, quoted, £34 5s; and M, buyers, £33 5s. New Zealand steady, quiet. Fair, February-April, buyers, £31 10s. African sisal steadier. No. 1, G.E.A., January-February, held for £35 10s; and B.E.A., £35. Indian hems were held above buyers' views. Itarsi, February-April, sellers, £30; Sewnee, £29; Jubileepore, £25 10s; Dewghuddy, £30, c.f. and i.; Philibit, nominal.

SHELLAC.—Market dull. T.N., spot, 360s; March, 340s; May, 320s.

COPRA.—Market hardened under good support accorded and reserve of sellers. F.M.S. Straits, January-March and February-April, Rotterdam, sold, £27 7s 6d. Ceylon quoted £28 15s Cebu, January-February, sold, £26 8s 9d to £26 12s 6d. Dutch East Indies, £27 7s 6d. South Sea Islands, £26 to £26 7s 6d; mixed, excluding Padang, sold, to Marseilles at £25 18s 9d to £26 7s 6d. Palm kernels, January-March, Liverpool, sold, £18 5s to £18 12s 6d; and March-May, £18 8s 9d to £18 10s.

RUBBER. steady, but at the same time quiet, and chief business in spot parcels of plantation crepe and sheet at 1s 5½d; February, 1s 5½d to 1s 5¾d; March, 1s 5½d; April-June, 1s 6½d to 1s 6d and 1s 6½d; July-September, 1s 6½d to 1s 6¾d; and October-December, 1s 6½d. Wild quiet. Fine hard Para, spot, 1s 5d; soft fine, 1s 3½d; and ball, 1s 2½d.

MENTHOL.—Spot, 39s; forward, 31s. Japanese peppermint oil, spot, 7s; forward, 6s; aniseed, spot, 2s; slab camphor, spot, 3s 9d; crude, 3s 4½d lb.

ALEXANDERS DISCOUNT Co., Ltd.,

24, LOMBARD STREET, E.C.3.

Telephones: 1892 & 225 Avenue. Telegrams: "Alexanders, Thread-London."

CAPITAL AUTHORISED £1,250,000 CAPITAL PAID UP £600,000
CAPITAL SUBSCRIBED £1,100,000 RESERVE FUND £400,000

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

EGG PRODUCTS.—Market quiet, but sellers asked steady rates. Prime liquid yolk, spot, 100s per cwt. Albumen, spot, 3s per lb.

OILS.—Linseed market firmer, but irregular. Spot, net, naked, 42s 6d; February, 41s 9d; March-April, 38s 6d; May-August, 36s 3d. Rape firm. Crude, spot, 43s 6d; refined, 46s 6d. Cotton firm. Crude Egyptian, spot, 39s; common edible, 44s; deodorised (in barrels), 46s. China-wood strong. Hankow, spot (barrels), 115s; February-March, 78s. Coconut firmer. Ceylon, spot, 43s; February-March, 41s 9d; Cochin, ditto, quoted 44s. Soya steady. Oriental, barrels, January-February, 39s 3d. Japan fish steady. January-February, cases, 26s. Cod steady. English, spot, 30s. Ground nuts steady. English crushed, naked, spot, 48s; deodorised, barrels, 55s. Turpentine firmer. American, spot, 106s 9d; February-April, 107s 9d. Rosin quiet. American, grade B, 13s 9d; F, 13s 9d; G, 13s 9d; H to I, 13s 9d; WG, 17s 6d; WW, 18s 9d. French, F/G, 13s 6d; WW, 15s 6d per cwt. Petroleum steady. American standard white, spot, 1s 1d; and water white, 1s 2d per gallon. Castor oil steady. First pressure, spot, to June, quoted 49s; second pressure, 46s, and pharmaceutical, 54s per cwt.

OILSEEDS.—Market somewhat unsettled, but firmer on balance. Bold Bombay, afloat, quoted, £21 15s; small Bombay, ditto, £20 10s paid; Calcutta, afloat, sold, £20 12s 6d to £20 15s; January-February, £20 10s; and April-June, £18 17s 6d to £19. Plate, afloat, £18 10s to £18 7s 6d and £18 10s; January-February, £18 7s 6d; April-May, £17 15s to £17 12s 6d and £17 17s 6d. Rapeseed firm. Toria, afloat, £18 5s; February-March, sold, £17 2s 6d; Jamba, January-February, £14 2s 6d. Cottonseed firm. Egyptian black, February, £12 5s; and white, sold, £11 15s to £11 16s 3d. Bombay, February-March, sold, 9s 5s. Gingelly seed firm. Large, Bombay, January-February, sellers, £24. Chinese, new, January-February, sold, £23 7s 6d to North Europe. Groundnuts firmer. Coromandel, machine-dried, February-March, quoted £22. Chinese decorticated, f.a.q., January-February, £22 5s; Nigerian, ditto, £21 15s. Soya beans quiet. Manchurian, February-March, quoted, £11 17s 6d. Castorseed firmer. Bombay, February-March, £19 ton.

METALS.—Tin was in fair demand at the week's commencement but prices displayed slight irregularity while the turn dearer for forward position. Standard cash sold at £183 to £182 17s 6d; February fluctuated between £183 to £182 10s and £183; and three months at £184 15s to £184 12s 6d. Eastern advices report sales on the basis of £188 10s, c.i.f. Firm conditions since prevailed, due to higher Eastern cables and reserved sellers. By the middle of the week cash sold at £184 5s; February, £184 2s 6d; and three months, £186 5s to £186. Further sales in the East occurred at £190, c.i.f. At Thursday's session no material alteration took place, and only moderate sales transpired, including cash at £184 2s 6d to £184 5s, and three months at £186 5s to £185 17s 6d, while finally registered at £186. The market was firmer at the final session. Standard, late February, sold at £184 10s to £183 10s; and three months, £185 15s to £186 15s to

£186 10s. English ingots, £184 5s to £184 15s. Copper: Market opened the week with a good demand, and rates fully steady in the absence of selling pressure. Sales transpired in standard cash at £65 to £65 7s 6d; March, £65 10s to £65 12s 6d; and three months, £65 17s 6d to £66. Values further improved on liberal buying orders, standard cash on Wednesday ruling at £65 12s 6d; March, £65 15s; and three months, £66 5s. On the following day a good demand prevailed, prices on balance being without change. Standard cash sold at £65 12s 6d to £65 10s to £65 11s 3d, and three months £66 7s 6d to £66 5s. Values ruled dearer on Friday. Standard cash sold at £65 12s 6d, and three months £66 7s 6d to £66 8s 9d. Electros, £72 10s to £73; best selected, £70 to £72; strong sheets, £68; and wire bars, £73. Antimony, ordinary, £27 to £29 10s. Aluminium, home trade, £100; export, £105. Lead steadier at £28 5s to £27 17s 6d as to position. Spelter rather easier at £34 15s to £34 2s 6d according to position.

TALLOW.—Messrs Colchesters and Woolf write on February 7th, as follows:—The tallow market was steady during the week, and prices average 9d dearer. The advance was most pronounced on fair coloured mixed sorts. The stock in London on January 31st, as returned by the wharves, amounted to 17,513 packages, showing an increase during the month of 4,324 packages. At auction to-day 1,189 casks tallow were offered, and 838 were sold. Quotations are:—Australian mutton: Fine, 44s 6d; good to fair, 43s to 41s 6d; dull to dark, 37s 6d to 35s 6d; hard, 42s. Australian beef: Fine, 41s; good to fair, 40s to 39s; dull to dark, 37s 3d to 35s; sweet, 42s 6d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 39s 6d; and mixed, 43½, c.i.f., London, 38s. The market letter is unchanged. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 1½d; melted stuff, 25s 6d per cwt. Quotations are:—Town: 35s 3d net cash, naked, ex works. Country: Frail casks, 34s 9d; home melted, shipping casks, net, f.o.b., good coloured,—; fair to dull, 36s to 35s. Bone fat: White, none; pale, none; benzine, 31s 6d; dull, 32s, f.o.b.

The Economist,

WEEKLY COMMERCIAL TIMES,

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

Vol. XCVI.

SATURDAY, FEBRUARY 17, 1923.

No. 4,147.

NOBEL INDUSTRIES, LIMITED.

(Incorporated under the Companies Acts, 1908 to 1917).

CAPITAL:
Authorized £18,000,000. Issued and fully paid £15,903,559.
£3,000,000—Short Term Notes which will be redeemed on the 8th of May, 1923.

OFFER FOR SALE OF

£1,750,000 Five-and-a-half per Cent. First Mortgage Debenture Stock at £99 per cent.

(Interest payable half-yearly—1st May and 1st November.)

The Stock now offered forms part of an authorised issue of £2,000,000, and will be repayable by the operation of a Sinking Fund commencing in 1924 and consisting of 31 equal annual payments of £58,334 to be applied at any time in purchasing the Stock on the market under par or in drawings at 103 during the five years from May, 1928, to May, 1933, or at 102 during the five years from May, 1933, to May, 1938, and thereafter at par. The Stock cannot be repaid by the Company earlier than 1928 but the whole can be paid off on three months' notice in writing being given at any time after 1st May, 1928, in the following manner:—

At 103% after 1st May, 1928, but before 1st May, 1933.

.. 102% 1933, 1938.

.. 100% any time thereafter.

The Debenture Stock will be secured by a Trust Deed constituting a First Mortgage on 900,170 Preference Shares and 902,969 Ordinary Shares of Nobel's Explosives Company, Ltd., all of £1 each and fully paid, valued as stated in the Chairman's letter at £5,250,000, and a charge ranking as a floating charge on all the remaining Ordinary Shares of Nobel's Explosives Company, Ltd., owned by Nobel Industries, Limited, constituting together 91 per cent. of the former company's capital. The Trust Deed provides that without the consent of the Debenture Stockholders, given at a general meeting, the Company will not permit Nobel's Explosives Company, Ltd., to issue further shares or to charge its assets except to secure Bankers' loans or overdrafts. The Company has further undertaken that none of its constituent Companies shall increase any mortgages.

Trustees for Debenture Stock Holders:

THE BRITISH TRUSTS ASSOCIATION, LIMITED, 32, Bishopsgate, London, E.C.2.

Directors:

TERMS OF SUBSCRIPTION.

Quarterly, 14s 6d; Half-yearly, £1 9s 6d; Yearly, £2 18s 6d. Colonies and Abroad, £3 15s 6d per Annum. Single copies, post free, 1s 1d.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist." Office: Granville House, Arundel street, Strand, London, W.C. 2. Copies of the Economist may always be obtained in the City at Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmons, 5 Birchin lane; Barker and Howard, 6 Fenchurch buildings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15 Cullum street; Willing and Co., Limited, 50 Cophall avenue, and 53 Finsbury pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de L'Opera.

THE MONEY MARKET.

BUSINESS was at a very low ebb in Lombard street, most of the discount houses reporting a sparse supply of commercial bills. There was consequently little demand for money, with the result that the attenuated funds now at the disposal of the market were sufficient for its requirements. On Thursday a large sum that fell due to the Bank of England was paid off, but the whole of it had to be renewed. Discount rates hardly moved from the lower level established at the end of last week by the Treasury bill allotment. Yesterday's allotment of Trea-

surey bills put market rates on a still lower level, three months' Bank bills being quoted at $2\frac{3}{16}$ per cent.

	Feb. 16, 1923.	Feb. 9, 1923.	Feb. 2, 1923.	Jan. 26, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	5½ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount (Call)	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	$2\frac{3}{16}$	$2\frac{3}{16}$	$2\frac{3}{16}$	$2\frac{3}{16}$	..

The Bank return showed that the note circulation had declined by £762,000 and the stock of gold had risen by £2,000, making the Reserve £764,000 higher. The market's borrowings of last week had added 4½ millions to the Other securities, while Government securities were half-a-million lower. There was thus an increase of 5 millions in the deposits, of which £3,382 went to Other and the balance to Public. Currency notes outstanding were reduced by £895,800 to £279,991,400 this week, which includes £1,507,900 for notes called in but not yet cancelled. The fiduciary issue is £230,333,100, or £39,850,700 below the maximum.

THE STOCK MARKETS.

The Stock Exchange has had a quiet week, the slackness of business contrasting sharply with the great activity of a few weeks ago. But there has been nothing like general weakness or heavy selling. The gilt-edged market has maintained complete steadiness. In the foreign market German bonds improved sharply on the great rise in the mark, while French bonds improved towards the end of the week. French railway bonds, after a sudden jump, fell back owing to selling. Argentine railways have been showing conspicuous strength, but other markets, generally speaking, have had an uninteresting week. Industrials, as a whole, are stagnant, but tobacco shares and electricity supply shares improved. Rubber shares are dormant again. In the oil and mining sections conditions are dull.

THE COMMODITY MARKETS.

The South Wales coal market has been considerably strengthened during the week by further foreign demand, more especially from the Continent. Our Sheffield correspondent records the chief feature of the coal market as the famine in coke, the price of which has moved up from 20s 6d per ton to 30s for odd lots, higher prices even being mentioned for export. In consequence, the scarcity of foundry pig-iron, for prompt delivery, continues, relief by increased output not being possible on account of the dearth of necessary fuel. No. 3 Cleveland G.M.B. is now quoted as high as 112s 6d per ton for prompt delivery. The steel trade is good, although the desire is expressed for a larger demand for orders for the immediate future. Our Cardiff correspondent says that "Buoyant conditions continue to prevail in the South Wales iron and steel trades." Although there has been no pronounced activity in the Manchester cotton trade, a firm tone has prevailed, the undercurrent of inquiry keeping up fairly well. From Bradford our correspondent reports some perceptible slackness in the wool trade, but no real weakness has developed. Linseed continues to maintain a high level of value. Fuller details of markets and prices will be found from our special trade correspondents on later pages.

FOREIGN EXCHANGES.

In foreign exchange markets have again been restricted, and movements extremely erratic. The most spectacular event has been the recovery of the mark from 145,000 on the 9th to 82,000 early yesterday morning. As on January 30th, the mark stood not far short of 250,000, its value has been about trebled in not much more than a fortnight. As far as can be understood at present, this recovery is due to the action of the German Government working on a market which, after the collapse of the last few weeks, had become almost nominal. It would appear that considerable foreign balances had been accumulated out of the proceeds of the export taxes with a view partly to normal Reparation payments, partly to the offer of a sum in connection with the last German Reparation proposals. These balances the Government is now said to be using in order to bring the mark quotation down to

a workable figure. It is also reported, but this is by no means certain, that part of the Reichsbank gold has been pledged in return for foreign credits, to be used for the same purpose. A more effective measure has been the instructions issued to the banks that no advances in marks must be made against the security of foreign currency. Owing to the pressure of rapidly increasing prices, more marks than before are needed for the conduct of business, and foreign currencies have by force been brought upon the market. While it is excellent that exchange should be taken in hand, the drastic nature of the present action would appear most unwise, and has already resulted in a new form of panic in Germany itself, where prices are said in many cases to be already well above world level. In the meantime, the note issue is being increased at a still more accelerated rate, and as the foreign balances at the disposal of the Government are of necessity limited, it is doubtful whether a serious reaction may not follow in the near future. In the meantime it may be noted that quotations for forward marks are 25,000 to 30,000 marks per month above spot. Apart for a large number of violent fluctuations within each day, the franc from 75.20 on the 9th rose to 77.85 on the 14th. On Thursday the rate closed rather better at 77.10, but opened at 78 yesterday, recovering during the morning to 77.65, and still moving most erratically from hour to hour. The most important incidents during the week, apart from the developments on the Ruhr, have been the refusal of the Finance Minister's taxation proposals by the Budget Committee and the substitution of several weak alternatives, and later the decision to raise the rate of interest on National Defence Bills by ½ per cent. The buying of securities in London appears to have slackened, but there is no new factor which would lead to any feeling of confidence in the future of the franc. The Brussels rate has moved up with similar fluctuations from 85.25 to 88.30, thus again widening the spread between the two currencies. Forward rates in Paris remain about the same at 11 to 13 centimes per month above spot; in Brussels they are par to 2 centimes below. The New York rate has moved rather jerkily within relatively narrow levels, and yesterday morning at \$4.67½ was at its best for the week. The exceedingly rapid rise of American as compared with English prices should form the basis for a further appreciation, if the debt settlement proposal receives final approval. At 11.86, as compared with 11.84½ a week ago, the Dutch rate has moved in our favour, although still well below recent levels. Sterling has also appreciated slightly in Switzerland to 24.97, while the Madrid rate has also moved in our favour to 29.97. All three Scandinavian countries, on the other hand, have moved somewhat against us, while Helsingfors has remained stable at 179. In Central Europe Vienna, at 330,000, maintains the same rate as before. Warsaw, however, has moved up from 160,000 to 185,000, having rapidly lost its superiority over the mark. Prague and Belgrade show little movement, but Bucharest is again back at 1,020. In the East the rupee is 1s 4½d, as compared with about 1s 4½d the week before; the yen at 2s 0½d is slightly cheaper. Silver has been a little higher on some moderate buying from China, but, with the turn of the Chinese year, prices are likely to sag again somewhat. Hong Kong is unchanged at 2s 3d, Shanghai ½d cheaper at 3s 0½d. In South America, Rio has been unchanged through the week at 5½d, Buenos Ayres at 43½d is also the same as the 9th, as also is Monte Video at 42½d. Valparaiso, however, has depreciated again from 38.80 to 39.40.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 10th:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	32,350	Interest on Debt	1,894
		Supply Services	7,543
		Road Fund	4,735
		Added to Exchequer balances ..	985
		Reduction of debt	17,977
		Sundries	166
	32,350		32,350

The total revenue for the seven days amounted to £32½ millions, as compared with £35½ millions a year ago, while expenditure amounted to £14½ millions, as against just over £16 millions. Property and Income-tax produced

£19½ millions, as against £21½ millions. Motor vehicle duties contributed £4½ millions, as against £801,000. Special receipts, under miscellaneous, fell from £5 millions a year ago to £1½ millions. The week's operations reduced the National Debt by £17,976,968, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 400	Public Debt Advances	— 20,450
Unemployment Insurance ..	+ 310	Sundries	— 6
Treasury Bills	+ 1,769		
	+ 2,479		— 20,456

The floating debt was reduced by £18,680,000 to £894,521,500.

FINANCIAL YEAR, 1922-23 (April 1, 1922, to February 10, 1923).

THE NEW SESSION AND THE OUTLOOK.

THE Prime Minister must be looking back to his election speeches of last November a little wistfully. Passivity, tranquillity, was the ideal to which his new Government aspired, and it was an ideal most palatable to an electorate jaded with international crises and domestic legislation. But seldom has hope of attaining an ideal vanished so quickly. Quietude is as impossible for any Government to-day as it is for the skipper of a ship tossed in stormy and uncharted seas. Since Mr. Bonar Law took office he has had to face a crisis in Europe growing steadily more grave, while at Lausanne Lord Curzon has vigorously, and so far unsuccessfully, fought to restore peace in the Near East, that great breeding ground of European war. In the case of the large British debt to the United States, the Cabinet has been forced to take a decision affecting generations of taxpayers. Indeed, it would be difficult to find a period of three months in which any British Government has been so incessantly beset and harried by international problems of the first magnitude. But that is not all. Tranquillity at home is equally proving itself to be a vain dream. The King's Speech, delivered at the opening of the new

Session on Tuesday, is unusually crowded with references to domestic legislation and domestic problems. Unemployment, agriculture, housing, rent restriction, local taxation, and other fruitful fields of legislation are opened up; while the time-honoured phrase addressed to the House of Commons, "The estimates for the public service in the coming year will be laid before you in due course," is a reminder that finance will be the main business of the Session. It is to be hoped that every member of the House, whatever his preoccupation over foreign affairs, will remember that the next two months will provide the acid test of the professions of economy which lay on the lips of all parties at the election. It is already obvious that proposals for the gradual decontrol of house rents on the lines of the Select Committee's Report will be the object of pitched battles in Parliament. The programme as regards domestic affairs is probably larger than the Government will be able to carry, and it is one that will be of peculiar interest in determining the lines of future Conservative policy towards questions of social reform.

The debates on the Address are ranging over many of these topics, but foreign affairs have naturally been the principal theme. It cannot be said that Ministerial statements have either thrown any new light, or kindled any new hope. Lord Curzon did not lift the veil on the mysterious events leading to the Lausanne failure. The Prime Minister adopted the rôle of sincere but candid friend of France, and did not disguise how precarious is the British balance on the fence of benevolent neutrality. The debates have shown clearly enough that the country is as solid behind our Government's refusal to participate in the Ruhr adventure, as French and Belgian opinion is apparently behind those Governments in their new policy. The hope of intervention by Great Britain or some other Power, and the suggestion of mediation by the League of Nations put forward by Mr. Asquith and Mr. Ramsay Macdonald were the only attempts at constructive thought, and neither is practicable at present, so long as French opinion believes tangible results can be secured by the road France has chosen. Nevertheless, significance lies, we think—over and above the significance of a further approach to Liberal unity—in the joint amendment agreed upon by the two wings of the Liberal Party. This amendment reads as follows:—"Inasmuch as the future peace of Europe cannot be safeguarded, nor the recovery of reparations promoted, by the operations of the French and Belgian Governments in the Ruhr, it is urgently necessary to seek effective securities against aggression by international guarantees under the League of Nations and to invite the Council of the League without delay to appoint a Commission of experts to report upon the capacity of Germany to pay reparations and upon the best method of effecting such payments; and that in view of the recent indications of willingness on the part of the Government of the United States of America to participate in a conference to this end, the British representative on the Council of the League should be instructed to urge that an invitation be extended to the American Government to appoint experts to serve upon the Commission." At the moment these

proposals are not practicable, because France is not ready for them. But it may be that in the policy of this amendment lie the seeds of future solution. When, as now seems probable, the League has succeeded in floating the long-term international loan to Austria, French opinion of the League and its capabilities may undergo a favourable change, and this change is likely to be quickened as difficulties and disappointments over the Ruhr occupation increase. It is fairly certain, too, that out of the amendment quoted will grow proposals for the use of the League machinery in a form more possible of French acceptance.

But we cannot afford to wait long, for the situation is to-day very serious, not merely because of the possibilities of actual social and economic break-up in Germany, but because of the drifting apart of British and French opinion. It is easy to say it is better for each of us to regain a free hand, but that may make the settlement more difficult. There are symptoms in some British quarters, though at present not very widespread, of definite antagonism to France, while among the industrial population there is a growing tendency to attribute to French policy in Europe our present economic ills. The counterpart in France of this view is, of course, that represented by M. Tardieu, who complains that the reason for the present deadlock is that Great Britain never has shown any sign of really helping France to secure Reparation. The truth is, of course, that Britain is not indifferent on this point; for Europe cannot settle down unless some reparation is paid to France, and the majority of Englishmen would undoubtedly regard with alarm the complete collapse of the Reparation scheme, leading to the emergence before long of a truculent debt-free Germany. But England is now convinced that the Reparation ideas of 1918 were conceived in illusion; that the policy of France, which should in general have been to strengthen the hands of the German "Government of fulfilment," was in numerous small matters irritating and provocative; that, with the, perhaps, natural psychological reaction of victory and emancipation from the shadow from the East, she has acted in a way to make as difficult as possible the co-operation which is essential for carrying out so difficult an economic operation as the payment of an unprecedented indemnity; and that as France has preserved her illusions longer than the rest of the world, she has found herself increasingly out of touch with the currents of world opinion, and finally has acted in a way that seems to challenge the whole basis of international law and co-operation represented by the League of Nations.

For this widening gap we are partly responsible, and it may at once be admitted that the final parting in January seems to have been made inevitable not merely by the defects of the British plan as a final settlement, but by a certain tactlessness in its hasty presentation, and even more by the failure to prepare the ground in advance. If any progress at all is to be made, it must be by renewed contact not merely between Governments, but between business and industrial circles of France and Great Britain, with a view to thrashing out a common agreement on the principles of an ultimate settlement. The viewpoints are not, we believe, so far apart as appears on the surface. But unless this is done, not merely will France reject intervention of any sort or kind, but any Conference will certainly prove abortive. The settlement must, however, be political in the sense of meeting France's demand for security, as well as covering the financial and industrial aspects of the problem.

AN ESTIMATE OF BRITAIN'S REAL TRADE BALANCE.

FOR many years past the value of our imports has regularly exceeded the value of our exports, but it is well known that when account is taken of the so-called "invisible exports" the "unfavourable balance" has, as a rule, been converted into a favourable balance, signifying an export of capital. During the war this was, of course, not the case; ordinary and "invisible" exports were quite inadequate to pay for the enormous quantity of goods purchased abroad, and it became necessary to sell

securities and contract loans in various countries. But now that the war is over, and the world is settling down, however slowly, to normal conditions of trade, it is to be expected that this country will return to something approaching the pre-war position as a supplier of capital for investment overseas. There will, of course, be differences. America is likely to play a more important part than before in the international capital market, and our position in relation to America will no longer be that of an important creditor, but of a debtor. On the other hand, it seems likely that London will be even stronger than before relatively to the European financial centres. In any case, however, the underlying conditions which have made it both possible and necessary for this country to export large quantities of capital for investment in all parts of the world will remain. Our productive power is as great as ever, our need for raw materials is not less, and the quantity of foodstuffs required is even larger than before the war, in view of our increased population. Quite apart from any effects of our debt payments to the United States in making it more difficult to obtain food and materials over there, America has for years been tending to consume a larger part of her own raw produce and to buy increasing quantities abroad, so that the necessity to bring about an expansion of supplies may before long become pressing. In connection with cotton cultivation the problem is urgent already, and even the grain situation cannot be viewed with equanimity while Russia is in a state of chaos. In several other directions it seems likely that a revival of industrial activity may before long reveal a position of considerable tension as regards supplies and price.

For these reasons the problem of our real trade balance is of the greatest importance; for overseas development must be resumed if we are to assure the future supplies of raw materials and foodstuffs without which this country cannot support its existing population. Fortunately there is evidence that we are already exporting capital on a considerable scale, though not yet on as large a scale as before the war. The evidence which we seek here to produce is that to be derived from an analysis of our trade balance, comparing 1913 with 1921 and 1922. We shall start from the values of imports and exports as officially published, and proceed to make allowances in the traditional way for various "invisible" items.

The imports and exports of merchandise (including gold and silver) in the three years in question, together with the excess of imports over exports, are as follows:—

	Year 1913.	Year 1921.	Year 1922.
	£'000.	£'000.	£'000.
Imports	842,763	1,145,440	1,048,562
Exports	696,962	881,712	882,361
Excess of imports	145,801	263,728	166,201

The principal "invisible exports" are (a) net income from British capital invested overseas, (b) earnings of the British mercantile marine engaged in overseas trade, and (c) financial, commission, and insurance earnings. There are also some minor items to which reference will be made. On the other hand, there are, especially since the war, some important "invisible imports."

With regard to the earnings of British capital invested overseas, it was fairly generally accepted that at the outbreak of war our receipts amounted to about £200,000,000 per annum. As a result of war losses, of sales of securities (especially dollar securities) during the war, of borrowings in the United States and elsewhere, and of the commercial depression which has reduced the productivity of a good deal of our remaining investments, the net amount of income from overseas is certainly now much diminished. In estimating the amount of our present income, it is to be noted that the Inland Revenue authorities identified some £120,076,000 of income as being derived from overseas in 1910-20 (the latest year for which information has been published). In 1921 and 1922 the amount may possibly be rather less, owing to the trade depression, but probably not below £110,000,000. In 1913-14 the amount was £116,382,000, a figure which for purposes of comparison should be increased by probably £7,000,000 in consequence of the enlargement in 1914-15 and subsequent years of the taxpayers' liability with regard to income re-

ceived outside the United Kingdom, and not remitted to this country. A large amount of income derived from overseas is not identified as such by the income-tax authorities, being included among "Businesses, professions, &c., not otherwise detailed" in Schedule D. The amount of this unidentified income may be put in 1913 at £84,000,000 (i.e., £200,000,000 less £116,000,000 identified by the income-tax authorities), a figure which would have been reduced to, say, £77,000,000 had the alteration first adopted in 1914-15 been in force. To what extent has this income been eaten into as a result of the war, and the post-war depression? No exact answer can be given, but it is clear that there has been a substantial reduction. The income represents the more variable part of our receipts from investments consisting of the profits of many companies (e.g., tea and rubber, oil, mines, public utilities, but not railways, carrying on business abroad which have their seat of management in this country); and of foreign and colonial branches of banks, insurance companies, and mercantile houses. Perhaps £40,000,000 would be a reasonable estimate of the "unidentified" income in 1922. Adding this to the £110,000,000 expected to be identified as derived from abroad, we get £150,000,000. From this, however, must be deducted interest on our external Government debt, and on any additional foreign capital invested here since the outbreak of war. This would absorb £50,000,000 or a little more (including interest at 4½ per cent. on our American debt), and leave, say, £100,000,000 as the net income derived from capital invested overseas. The net income in 1921 was probably much the same.

The second most important "invisible export" is the earnings of British shipping. An estimate of the Board of Trade put these at some £94,000,000 in 1913, after deducting expenditure of British vessels abroad. In making estimates for 1921 and 1922, account must be taken on the one hand of the increase in the level of freights, and on the other hand of the reduction in the volume of trade. With regard to the level of freights, the following figures taken from the annual freight circular issued by Messrs. Cairns, Noble and Co., Limited, of Newcastle, are of interest. The figures represent estimated average rates of freight paid for steamers in the open market from the Tyne, &c., and also homewards from certain ports in the years stated:—

	1913.	1921.	1922.	1921 as per Cent. of 1913.	1922 as per Cent. of 1913.
OUTWARD VOYAGES.					
Stockholm	5 2½	10 7	7 10½	204	152
Riga	5 6½	..	9 7	..	172
Hamburg	3 9½	6 10½	5 8½	182	151
Havre	4 8½	7 5½	5 11	159	126
Bilbao	7 3½	12 10	11 6	176	158
Marseilles	8 10½	15 3	12 2	172	137
Genoa-Savona	9 3½	15 10½	12 0½	171	130
Piræus	9 8½	17 9	15 7	183	161
Alexandria	9 6½	16 11	15 2	177	159
River Plate	18 6½	19 10	14 10	107	80
HOMEWARD VOYAGES.					
Calcutta	24 6½	25 0	22 1½	102	90
Bombay (d.w.)	21 2½	24 10	22 3	117	105
Danube	12 1½	25 10	16 8	213	137
River Plate (Lower Ports)	16 2½	35 8	26 6	220	163
Bilbao	5 3	8 3	7 10	157	149
Archangel	48 7	..	62 6	..	129
Lower Bothnia	30 7	61 10	47 6	202	155

Averages obtained by adding together the actual rates of freight shown above point to outward freights being 60 per cent. above the level of 1913 in 1921, and 34 per cent. above the 1913 level in 1922. On the same basis of reckoning homeward freights would appear to be 65 per cent. above the 1913 level in 1921 and 30 per cent. in 1922. These rough calculations suggest that in 1921 freights were 60-65 per cent. above 1913 level, and in 1922 30-35 per cent. above 1913 level.

It has been estimated that the weight of British imports and exports in 1913—partly owing to the coal stoppage of April-June, 1921. As coal is a comparatively low freighted cargo it does not follow that shipping receipts in 1921 fell to only 80 to 82½ per cent. of the receipts in 1913 (i.e., 50 per cent. of freights increased by 60-65 per cent. upon the 1913 level). But in view of

specially heavy expenditure incurred abroad upon purchases of bunker coal and upon construction and repair work consequent upon the prolonged joiners' strike in the British shipyards, it can hardly be supposed that the net receipts of this country for shipping services figured at as high a figure as in 1913. Sir Frederick Lewis, in his speech at the annual meeting of Messrs. Furness, Withy, and Co. in August, 1921, estimated that the amount of the "invisible exports" represented by freight earnings would be only £60-70,000,000. Having regard to the considerable trade recovery which took place in the autumn of 1921, however, this estimate is probably too small, and the amount of freight earnings in 1921 may perhaps be put at £80,000,000.

The revival of trade in 1922, including as it does a noteworthy recovery in our coal exports, has doubtless raised the earnings of the mercantile marine fully to pre-war level. Figures as to the weight of imports and exports are not available, but it is estimated by revaluing 1922 imports and exports at 1913 prices that the volume of trade (reckoning imports and exports together) was about 80 per cent. of the 1913 volume. In view of these facts we put shipping earnings in 1922 tentatively at the same figure as in 1913, namely, £94,000,000.

A third "invisible export" of importance is represented by the services performed by London in financing and insuring the movement of goods, both in our own overseas trade and in inter-foreign trade. Sir Robert Giffen estimated the amount of these earnings at 2½ per cent. upon the aggregate value of our imports and exports, of which he reckoned that 155 per cent. would represent insurance, 55 per cent. bankers' commission, bill stamps, and minor charges, and 1½ per cent. all other charges. With regard to insurance charges, it appears that the figure taken by Giffen was a gross charge taking no account of underwriters' losses, and some reduction would be required on this account. Moreover, the method of reckoning London's earnings from the financing and insurance of trade by taking a percentage of our total imports and exports is obviously unsatisfactory, though it is difficult to see what other course can be adopted. The method leaves out of account the fact that a good deal of inter-foreign trade is financed and insured in London, and, on the other hand, that some British trade is no doubt financed or, at any rate, insured elsewhere. If we put these charges at only slightly over 2 per cent. upon the value of our imports and exports in 1913 we reach a total of £30,000,000. The corresponding amounts for 1921 and 1922 would be £40,000,000 in each case, but in view of the extremely high rate of discount in 1921 it is hardly possible to avoid raising the estimate for that year, say, to £50,000,000. The figure £40,000,000 is retained for 1922, although it might perhaps not be difficult to justify some increase here, too.

In addition to the three items of "invisible" export already considered, there are a number of minor items. One of these is exports of old ships, since these are excluded from the trade accounts. The tonnage involved was rather less than 500,000 net tons in 1913, and possibly as much or more in 1921 and 1922. The value would not exceed a few millions. Another item is the cost of the management of British capital invested overseas, a cost which is met by payments from abroad. The service of foreign and colonial loans issued in London, and of the management, legal and similar expenses of British companies with a head office in this country, but operating overseas, can hardly be less than £10,000,000. Other items are expenditure by foreign tourists in this country (though this is largely, if not entirely, balanced by expenditure of British tourists abroad), and remittances by emigrants and officials stationed abroad to their relatives in this country. There is also some expenditure here by the Government of India upon pensions and other services in this country. The amount of these miscellaneous "invisible" exports may possibly amount to £20,000,000.

On the other side of the account must be set certain "invisible" imports. These have been particularly large since the war in connection with military and naval expenditure. The net expenditure on so-called foreign and colonial services in 1913-4 amounted only to £1,518,000. The corresponding amounts as appearing in the estimates for 1921-2 and 1922-3 are £33,279,000 and £13,802,000,

of which £28,955,000 and £10,363,000 respectively are for the Middle Eastern Services. The Army Estimates included in 1921-2 £32,739,000 in respect of forces in the colonies, and abroad—notably forces in the Middle East. The amount given in the 1922-3 estimates is £13,802,000. Small amounts representing expenditure abroad also appear in the Navy and Air Service Estimates. All these amounts are no doubt to some extent subject to deduction on account of stores shipped from this country on Government vessels, and to remittances to this country by officers and men, while the expenses of our Army of occupation in Germany have been met for the most part, it is understood, out of reparation payments. The amounts at which these “invisible” imports should be put are to a considerable extent a matter of conjecture. Possibly £50,000,000 for the calendar year 1921 and £25,000,000 for 1922 may not be unreasonable guesses, with £15,000,000 for 1913.

We are now in a position to set out, so far as may be, the real trade balance of the United Kingdom. The figures for the three years chosen for comparison are as under:—

	1913.	1921.	1922.
	Milln. £.	Milln. £.	Milln. £.
Exports (incl. gold and silver), as returned	697	882	882
Add invisible exports—			
Net Income from investments	200	100	100
Shipping earnings	94	80	94
Financial and insurance charges	30	50	40
Miscellaneous	20	20	20
Total visible and invisible exports....	1,041	1,132	1,136
Imports (incl. gold and silver), as returned	843	1,145	1,049
Add invisible imports	5	50	25
Total visible and invisible imports....	848	1,195	1,074
Final balance	+ 193	- 63	+ 62

The excess (+) of visible and invisible exports over visible and invisible imports in 1913 and 1922 signifies that capital was being exported in those years; the deficiency (—) in 1921 signifies that capital was being imported, either by obtaining loans or advances abroad, or by diminishing balances. The figures suggest that while we exported close on £200,000,000 of capital in 1913, we exported only £62,000,000 last year, and we actually imported £63,000,000 in 1921—a consequence no doubt of the coal stoppage in that year. The reduction in our foreign capital in 1921 would have been almost nil if it had not been for the interest on our debt to the United States, which was added to the principal of the debt. In 1922 we exported some £62,000,000 of capital, in addition to the amount required to meet interest charges on the American debt—whether actually paid or added to the principal. These estimates are of course tentative, and subject to a wide margin of error in either direction. They confirm, however, other evidence that we are now exporting a considerable amount of capital, and it is to be expected that with the revival of trade the export of capital will make rapid progress. Such progress is essential if we are to assure the supplies of food and materials necessary for our future.

AN AMERICAN VIEW OF THE RUBBER POSITION.

(BY A NEW YORK CORRESPONDENT.)

A WORD of warning to the British growers of rubber may not be out of place in view of the rapid and substantial advance in prices since the announcement that the Stevenson Committee's restriction plan had been adopted by the Colonial Office and then put into legislative effect in the East.

Apart from the extent of this rise, the most important result of the restriction plan has been the complete change of sentiment throughout all branches of the industry for which it was largely responsible. For a long period American manufacturers had been accustomed to the abnormally low levels at which plantation rubber had fallen, far below its production cost. These low prices were by no means considered as an unmixed blessing, for

the American manufacturers are a highly intelligent and broad-minded body of business men, and they recognised that the situation, if unduly prolonged, was a danger to their sources of supply, besides entailing an eventual “swing of the pendulum” which would be most detrimental to their real interests.

For these reasons most of them looked with sympathetic approval on the declared objects of the restriction plan, particularly after being assured by the Rubber Growers' Association in London that the idea was to stabilise rubber around 1s 3d per lb as an average for 1923, and understanding that there was no intention to hold up supplies unreasonably.

Following the general change of sentiment which commenced with the advancing prices in the late autumn, it became apparent that the consumption of rubber in the United States and Canada had been very considerably larger than anticipated. As contrasted with a total consumption in 1919 (a record year of activity) of about 202,000 tons, the consumption for 1922 was found to approximate closely to 300,000 tons, with every indication of a substantial increase for the current year.

The recognition of this highly important factor came at a period when the manufacturers had purchased only an unusually small proportion of their future supplies. Formerly many manufacturers had purchased contracts on their books at this time of the year for about 30 to 60 per cent. of their anticipated requirements for the ensuing twelve months, but at the present time a very much smaller percentage has been acquired, for during the period of depression they had been virtually forced into buying their supplies on a hand-to-mouth basis, and were carrying only small stocks. Consequently, just at the time that a marked change of sentiment became apparent and prices were steadily rising, a strong demand from consumers appeared. Moreover, many importers and dealers had sold “short” for forward delivery, so that their anxiety to cover added materially to the rise.

Under these circumstances an advance in about three months from 13c or 14c to 36c and 37c per lb is hardly to be wondered at. But there is no doubt that the rapidity of the increase in prices since January 1st has taken the manufacturers by surprise. While many are prepared to buy substantially, even at these higher levels, they are met with an increasing reluctance from producers to sell, and they find it hard to believe that the assurances of stability and reasonableness are being carried out in the spirit in which they understood them to be given. It is generally recognised that the average cost of production probably exceeds 20c per lb, and there is such a wide margin of profit in present levels that it is not difficult to sympathise with the consumers' view that the advance is hardly justified, and that, at all events, there should be little difficulty in buying their requirements, if willing to pay on such a greatly improved basis. It is to be hoped that the delegation from the Growers' Association now here will make it clear to these best customers of ours that there is every intention to provide supplies in a more liberal volume from now on. Manufacturers can easily be made to understand that the rapidity of the advance has also taken producers by surprise; that estates, which have incurred such heavy losses during the last two or three years, can hardly be deemed unreasonable in seeking to secure the utmost profit from a changed situation in order to restore their financial position; and that the restriction plan itself provides for an increased production of the raw material, and therefore more stability, as prices justify.

The necessity for emphasising the advantage of a mutual understanding of the respective difficulties of producers and consumers in the situation with which the industry is confronted is obvious. Wisely or unwisely, and opinions on the subject differ considerably, the restriction plan has received legislative effect; whether or not it can be administered in practice in a sufficiently reasonable manner to produce a more stable market remains to be seen. Even if the percentage restriction on production is reduced, will not the difficulties arising out of a shortage of labour on the estates be such as to render it unlikely that a corresponding increase in output will be forthcoming? In any event, the estates will probably have to face a substantially higher cost for their labour, besides being compelled to replace portions of

their acreage and re-incur necessary expense in management, which they temporarily cut down during the period of depression. These and many other important considerations should be impressed on consumers here.

Government interference in any shape with commerce is looked upon with disfavour by the Anglo-Saxon mind, and many of those who were in favour of the restriction plan are now probably regretting its enactment. But if administered wisely it may prove of great, even permanent, advantage to the industry, and with a proper mutual understanding of the difficulties on both sides of the Atlantic no undue friction need be anticipated. The restriction plan is undoubtedly an artificial expedient interfering to some extent with the operation of the law of supply and demand, and from the first was resented by certain interests here, who endeavoured to enlist the United States Administration in opposition. It speaks volumes for the reasonableness of the American consumer that this movement was not generally supported, mainly in the belief that the British producers would be ready to deal with the situation fairly.

It is to be hoped that this view will be clearly understood and respected by rubber interests in England. If present prices do, in fact, provide a satisfactory profit to the estates, those in control should readily realise the advantage of meeting the consuming demand freely. The mere appearance of holding up supplies in the apparent hope of securing better prices will have mischievous and dangerous results. Should conditions hereafter justify higher levels, the American manufacturer will be the last to complain; but he resents the, to him, unjustified rapidity and extent of the recent advance, which has not given him time to readjust his manufacturing problems after having himself passed through a period of great stress and difficulty.

MORE LEGAL ASPECTS OF THE RUHR OCCUPATION.

(FROM A LEGAL CORRESPONDENT.)

A MONTH ago we placed before our readers some of the legal data which must be considered in determining whether or not the French occupation of the Ruhr is illegal or not. So far as we can judge, opinion is hardening to the effect that both the action of France in invading the Ruhr and the methods employed by her there constitute a breach of the Treaty of Versailles. Possibly the reassembling of Parliament will compel the Government to disclose the advice on these points which they must by this time have received from their law officers.

Assuming for the moment that this growing body of opinion is correct, and that the action of France and her co-operators, Italy and Belgium, is in breach of the Treaty, what are the consequences to which these Powers have thus exposed themselves? It may not be fully realised in France that the events of the post-armistice years are turning the minds of many of us in this country back to the pre-Entente days, when our European commitments were confined to the guarantee of the neutrality of Belgium and Luxemburg, and very little else of living importance. To those who are thinking in this fashion the Treaty of Versailles (excluding the Covenant of the League of Nations) has caused a steadily growing uneasiness, culminating in the anxiety of the past two months. It is, therefore, not surprising that responsible thinkers are beginning to inquire in all gravity whether the events of the past six weeks do not afford Great Britain a unique opportunity of disentangling herself from the Treaty of Versailles and nearly all that it means, with the exception of the League of Nations. We do not believe that this opinion is yet dominant in this country, but, however much we may sympathise with France in her desperate attempt to take for herself her long overdue reparations, it would be idle to ignore the fact that the past six weeks have witnessed an almost incredible revulsion of feeling in this country. Were events in the Ruhr to take an uglier turn, the British Government (and it would be difficult to form in this country a Cabinet more naturally disposed to be sympathetic towards France) might at any moment be faced with an angry

and insistent demand for the withdrawal of British troops from the Rhine, and for the denunciation of the Treaty of Versailles. Difficult legal questions would then arise, and it is out of no unfriendliness to our Allies that we attempt to consider them in advance.

There is but little doubt that International Law recognises the violation of a treaty, or, at any rate, a material part of a treaty, as entitling the other parties to it at their option to cancel it and declare themselves no longer bound by it. That we may not be thought guilty of an unfounded assertion, we cite some recognised authorities. Hall (International Law, seventh edition (1917), p. 361) says:—

The general rule, then, is clear that a treaty which has been broken by one of the parties to it is not binding upon the other, through the fact itself of the breach, and without reference to any kind of tribunal.

The question, however, remains whether a treaty is rendered voidable by the occurrence of any breach, or whether its voidability depends upon the breach being of a certain kind or magnitude.

Later, on p. 362, after discussing the difficulties raised by that question, he says:—

All that can be done is to try to find a test which shall enable a candid mind to judge whether the right of repudiating a treaty has arisen in a given case. Such a test may be found in the main object of a treaty. There can be no question that a breach of a stipulation which is material to the main object, or, if there are several, to one of the main objects, liberates the party other than that committing the breach from the obligations of the contract.....

Reparation is certainly one of the main objects of the Treaty of Versailles, and the procedure laid down in it for obtaining reparations is certainly material to that object.

Oppenheim (International Law, 3rd edition, 1920, Vol. I., page 606), while admitting the absence of unanimity amongst international lawyers on the subject, states his opinion to be that “violation of a treaty by one of the contracting States does not *ipso facto* cancel the Treaty; but it is within the discretion of the other party to cancel it on this ground.”

Turning to the French authorities, we find Professor Mérignac, of the University of Toulouse, in his “Traité de Droit Public International,” stating (page 789), in discussing the termination of treaties:—

Si une des parties n'exécute pas ses obligations, l'autre est en droit, comme dans tout contrat synallagmatique, de ne point exécuter les siennes et de dénoncer le traité après des observations non suivies d'effet. Chaque Etat apprécie alors, librement et sous la responsabilité, quelle conduite il doit tenir en présence de la résistance de son co-contractant.

Bonfils is even more explicit (Manuel de Droit International Public, 859):—

L'inexécution d'un traité par l'un de ses contractants autorise l'autre partie à se considérer comme déchargée de ses obligations. Contrats synallagmatiques, les traités publics sont affectés d'une condition résolutoire tacite, comme les conventions synallagmatiques du Droit civil; mais avec une importante différence néanmoins. En Droit civil, l'inexécution de la convention par l'une des parties autorise seulement l'autre à intenter une action judiciaire à fin de résolution avec dommages-intérêts. En Droit international public, en l'absence d'un pouvoir judiciaire commun et supérieur aux Etats, chaque Etat apprécie librement, à ses risques et périls, s'il peut ou non se considérer comme déchargé de toutes ses obligations par suite de l'inexécution, souvent partielle, quel quefois totale, imputable à l'autre Etat, son co-contractant.

No purpose is served by the multiplication of such citations. But the reader who has followed us so far will probably have come to the conclusion that the weak spot of the rule stated by these authorities is that the party not in default must itself decide, à ses risques et périls, as Bonfils puts it, whether to regard itself as freed from the treaty by reason of the other party's breach or not. If events in the Ruhr should go from bad to worse, and the people of this country should decline to remain in alliance with a France that looks like settling down in the Ruhr *sine die*, then the British Government may be compelled to act upon this rule of international law and denounce the Treaty. If, however, the Government are unwilling to take the serious responsibility of this course without an impartial declaration of their right to do so, then the recently instituted Permanent Court of International Justice is available for this purpose. This Court was created in 1921 under Article 14 of the Covenant of the League of Nations, and has already got to work. The Statute creating the Court provides for two kinds of jurisdiction—(1) compulsory, and (2) voluntary or permissive. The jurisdiction described as “compulsory *ipso facto* and without special

agreement," and comprising, among other matters, "the interpretation of a treaty" and "any question of international law," was not at first, and it is believed has not yet been, accepted by any of the Great Powers, but in pursuance of the voluntary jurisdiction, many of the Great Powers have already jointly submitted questions to the Court for decision. Only last week the Court gave a decision on a question referred to it by Great Britain and France affecting the rights of British subjects in Tunis in the face of the French law of compulsory service in the Army. If the British Government is in doubt as to the legality of the French action in entering the Ruhr and while in the Ruhr, and as to the effect of that action upon the Treaty of Versailles, an opportunity thus exists to invite France, Italy, and Belgium to refer these matters to the decision of this impartial tribunal which they have co-operated with us and other signatories of the Treaty of Versailles in creating. From their refusal to concur in the submission of these questions to the Court an unfavourable conclusion would be drawn.

THE UNDERGROUND GROUP.

THE excellent dividends declared last week by the railways in the Underground group are explained by the reports now published. Traffic receipts were £220,300 lower at £12,278,300, but there was a larger reduction of £482,900 in expenditure to £9,943,000. The total net income of the five companies, including the London General Omnibus Company, was £317,200 higher at £2,976,900. The net receipts and appropriations for 1921 and 1922 are given below:—

	1921.	1922.	Inc. or Dec.
Net receipts	£ 2,072,711	£ 2,335,298	+ 262,586
Miscellaneous receipts (net)	586,916	641,578	+ 54,662
Total net income	2,659,627	2,976,876	+ 317,248
Deduct—			
Interest, rentals, & fixed charges	867,628	865,104	— 2,525
Appropriations to reserves	530,000	747,500	+ 217,500
Dividends on guaranteed and preference stocks	389,477	389,477	..
Total deductions	1,787,105	2,002,081	+ 214,975
Balance	872,522	974,795	+ 102,273
Add balances from last year's accounts	135,711	253,142	+ 117,431
Total amount available for dividends on ordinary stocks and shares and for other purposes	1,008,233	1,227,937	+ 219,704
Amount paid in dividends on ordinary stocks and shares representing an average rate of 4.69 per cent. in 1922 and 3.92 per cent. in 1921	755,091	902,983	+ 147,892
Balances carried forward to next year's accounts	253,142	324,954	+ 71,812

The reserve appropriations include £82,500 "for equalising the charge in respect of interest on the 4½ per cent. redeemable second debenture stocks." For several years these companies have been working under an arrangement whereby the net earnings of the five companies are put into a common pool and divided in agreed proportions. According to the above table the amount going to the "common fund" would be £974,795, but the actual amount shown in the accounts is £1,029,795, the difference being explained by the fact that after the operation of the common fund, reserves were increased by £55,000. The division of the common fund between the five companies in each of the past three years was as follows:—

	1920.	1921.	1922.
Central London	20	18	16
City and South London	6	6	6
London Electric	30	35	41
Metropolitan District	12	12	12
London General Omnibus	32	28	25
	100	100	100

A further modification in the proportions of the common fund receivable by each company has been made, and the

share of the Omnibus Company, which in the first years of the pool received the largest percentage, has again been reduced, while the London Electric takes 41 per cent., as against 30 per cent. two years ago. The latter, however, makes the largest contribution of the railways to the common fund. Reference to the report of the Omnibus Company will be found in a Note on a later page.

Each of the four railways suffered a decrease in total revenue, but this was accompanied by a larger reduction in expenditure, as may be seen from the next table:—

	Revenue.		Expenditure.		Fixed Charges.	
	1922.	Inc. or Dec.	1922.	Inc. or Dec.	1922.	Inc. or Dec.
Central London	£ 685,282	— 44,269	£ 413,590	— 54,838	£ 46,325	+ 286
City and South London	437,272	— 44,036	212,445	— 88,996	47,039	+ 228
London Electric	2,116,263	— 60,551	1,137,595	— 231,176	259,505	+ 3,961
Metropolitan District	1,944,045	— 69,716	1,218,826	— 132,381	328,214	+ 1,452

The issues of £6 millions of debenture stock, under the Trade Facilities Act, do not figure in the 1922 accounts for interest. Fixed charges, in fact, show very little change. There was thus a satisfactory increase in net income in each case, as may be seen from the following table, which also gives preference and ordinary dividends:—

	Net Income Less Charges.		Pref. Dividend.		Ord. Dividend.	
	1922.	Inc. or Dec.	1922.	Inc. or Dec.	1921.	1922.
Central London	£ 225,367	+ 10,284	£ 21,600	..	£ 120,000	£ 120,000
City and S. London	177,788	+ 44,732	42,500	..	48,100	59,200
London Electric	679,163	+ 166,664	126,947	..	303,158	373,118
Metropolitan Dist.	357,005	+ 61,213	198,430	..	32,250	97,050

After payment of dividends, each of the companies is able to increase its balance carried forward, the total amount carried to the next accounts being £68,000 higher. The total amount spent by the five companies on improvements and additions during the year was £1,334,000, of which £415,000 was spent by the omnibus company on motor omnibuses and equipment.

Our final table shows the movements in the securities of the Underground railways:—

Name.	Year 1913.		Year 1922.		Price Feb. 15, 1922.	Price Feb. 14, 1923.
	Highest.	Lowest.	Highest.	Lowest.		
Central London, Def. Stock	86	72½	44½	32½	37½	42½
Do Pref.	..	..	59½	40	43½	59½
City and South London 5% Pref., 1903	110½	94½	89½	59½	68½	92½
London Electric, Ord. (£10)	80½	70½	79	55	60½	77
Do 4% Pref. Stock	44½	27½	47	21½	23½	49

Underground Electric Income Bonds, red. 1948	..	..	..	..	..	..

* Dividend free of tax.

As in the case of other home railway securities, present prices are very much higher than they were twelve months ago. Metropolitan District ordinary stock, which until 1921 had received no distribution since 1882, stands considerably higher than the highest of 1913. Underground Electric 6 per cent. income bonds are also nearly at the highest of 1913, thanks to the full payment of 6 per cent. interest for the second half of 1922.

OFFICIAL LIST MARKINGS.

THE Stock Exchange Committee have passed a rule, subject to confirmation on Monday week, that will, if confirmed, gravely affect the present system of marking bargains done by brokers in the Stock Exchange. Under present conditions, writes a Stock Exchange correspondent, brokers are charged with the duty of marking all bargains in stocks and shares where the amount involved comes to over £100. It is not compulsory to record transactions where the money passing is less than £100, and bargains between jobbers need not be marked. The rule now passed, however, declares that bargains may (and not "can," as in the present rule) be marked between 10.45 and 3.30, &c.; that there is no compulsion laid upon them to mark any-

Notes of the Week.

Overseas Trade in January.—The trade returns for January confirm the impressions obtained from other sources that the improvement in trade which was under way towards the end of last year was maintained in January. The total value of exports was the highest recorded for two years. The import surplus on the merchandise figures was considerably higher than the average monthly excess of 1922. It was £23 millions in January, as compared with £9.9 millions in January, 1922, and a monthly average of £13.8 millions for last year. But it is noteworthy that the imports last month were heavy, our receipts of food, drink, and tobacco being £3.4 millions higher than a year ago. Value figures for January, 1923 and 1922, are compared below:—

	January, 1923.	January, 1922.	Increase or Decrease in January, 1923.
Imports	£ 76,499,947	£ 99,699,855	+23,199,908
British exports	63,146,949	66,938,908	+ 3,791,959
Re-exports	8,458,866	9,797,961	+ 1,339,095
Total exports	71,605,815	76,736,869	+ 5,131,054
Excess of imports over total exports	4,894,132	22,962,986	+18,070,854

Conclusions reached in an article on an earlier page of this issue suggest that this country's "invisible exports" are at a rather lower rate than the £23 millions which is shown as the unfavourable merchandise balance for last month. An examination of the exports of British produce and manufactures shows that in most cases the leading export industries shipped abroad a larger volume of goods than in 1922. The following table gives quantity figures for certain exports for January of the past four years and for January, 1913:—

	Jan., 1913.	Jan., 1920.	Jan., 1921.	Jan., 1922.	Jan., 1923.
Coal	6.07	3.36	1.70	4.02	5.6
Iron and steel	437	257	232	253	353
Cotton piece goods	649	415	249	339	399
Cotton yarn	19	16½	7.2	14.8	12.8
Paper	323	158	221	147	335
Jute piece goods	15.7	15.6	5.1	8.6	13.6
Linen piece goods	20.8	14.5	2.3	7.8	8.0
Woolen tissues	11.6	18.5	9.8	8.9	14.7
Worsted do	8.1	5.9	4.0	6.7	7.3
Boots and shoes (thousand doz. prs)	12.70	78.3	38	28	49
Soap	15.52	25.94	54.2	103.2	119.1
Machinery	58.9	29.8	55.4	39.8	46.2
Oilcloth	1677.9	815.1	272.7	1225.8	..

As a result of the events in the Ruhr the demand for British coal has become very strong, and the result will probably be reflected more clearly in the February than in the January figures. Iron and steel exports were largely in excess of those of the corresponding month in any of the past three years. Cotton piece-goods and worsted tissues also show up well in the comparison. The increase over a year ago in re-exports is largely due to heavier shipments of cotton and wool. In view of reports of the growing consumption of rubber in America the January re-exports of rubber to that country were surprisingly small, being 17,454 centials, against 126,780 centials in January, 1922. The bullion and specie figures show imports at £6,438,897 and exports at £9,110,308. Gold was sent last month to India to the value of £4,772,981, and to the United States to the value of £2,337,198. Statistics of shipping engaged in the foreign trade reveal a larger movement, the tonnage cleared with cargoes from British ports being 5,280,533, as compared with 3,920,547 in January of last year.

Effect of the Ruhr Occupation.—As was expected, the occupation of the Ruhr by the French is having a serious effect upon the iron and steel industries of France, Luxemburg, Belgium, and Germany. Lorraine and "the East" are normally responsible for about 75 per cent. of the output of pig-iron and steel in France, and this region is almost wholly dependent for its supplies of coal and

coke upon the Ruhr. The result of the cessation of these supplies has, therefore, been that at least 35 out of the 83 blast furnaces that were in operation at the beginning of the year have had either to be damped down or blown out. Belgium is less dependent than France upon the Ruhr, for out of 2,500,000 tons of coal used in the production of coke in Belgium in the last eight months of last year, half was raised in Belgium and the other half imported, mostly from Great Britain and Germany. In addition, Belgium and Luxemburg together imported 1,638,000 tons of coke, mostly from Germany, in the same period. Belgium, therefore, has so far only had to damp down three furnaces. Luxemburg, which is largely dependent upon Germany, and to a less extent upon Belgium, for coke, has had to damp down 10 furnaces. Up to the present the German industry has been the least affected, as since the third week of the occupation the French have prohibited the export of coal and coke to unoccupied Germany, and the resistance of the Germans has prevented fuel going to France in any quantity, so that except for five or six furnaces on the west bank of the Rhine, which have had to be blown out or damped down, all the furnaces in the Ruhr are operating at full blast.

The Deferred Rebate System.—It will be recalled that the rate war recently threatened in the Australian trade was averted because the Commonwealth Government Line, which had unexpectedly notified substantial reductions in freights, came to terms with the Conference Lines. In an announcement issued by the Board of Trade (given in the *Economist* of February 3rd) it was stated that the agreement reached was in harmony with the recommendations of the Imperial Shipping Committee on the deferred rebate system. These recommendations had been awaited for some time, but the report was to be simultaneously published in the Dominions, and so its issue had been delayed. The report was published last Saturday. It is in the nature of a supplement to that of the Royal Commission on Shipping Rings, issued in 1909. The recommendations of that Commission, it is pointed out, have not been exhausted, or even to any considerable extent adopted, and the Imperial Shipping Committee therefore treated its inquiry as supplementary to that of the Royal Commission. By no means all shippers, it appears, are opposed to rebates (in the West African trade some of the smaller merchants pressed for the reintroduction of rebates after the war), but many shippers object to the monopoly which the rebate system is alleged to enable established lines to maintain, and "the complaint of the Government of the Commonwealth of Australia is of the same order." Shipowners, on the other hand, claim that the system enables them to confer advantages on their customers, inasmuch as deferred rebates conduce to regularity, frequency, and efficiency of service, with stability of freights, equality of treatment, and abstention from shipment on owners' account. The majority and the minority reports of the Royal Commission agreed on the desirability of the formation of associations representative of merchants and shippers. This is a better means than State interference to remedy or prevent grievances. The only bodies of importance formed on the lines recommended (it is remarked) are the Manchester Association of Importers and Exporters, and the Shipping Committee of the East African Section of the London Chamber of Commerce. The Imperial Shipping Committee now recommends that, for every trade route, the shippers should form representative associations to meet the conferences, and the other main suggestion made in the present report is that the "agreement" system (which has come into use in the South African trade) should be given to shippers as a running option. Recent legislation, both in South Africa and in Australia, it may be explained, prohibits rebates. The representative organisations, the formation of which is recommended, could settle with the shipowners the terms of the "agreement," whereby individual shippers would undertake to support the regular lines, in return for regular berth sailings, stability of freights, and equality of rates to large and small shippers. The Committee does not recommend legislation to enforce the option between the two systems. If they were instituted side by side, the difficulties with

the Australian Government Line might, it is suggested, be overcome. There is a proposal for an Imperial Shipping Board to deal with cases of disagreement, but it may be doubted whether this is required. As the report itself remarks: "Conferences between the respective associations of traders and shipowners will in general achieve the necessary measure of understanding and agreement in regard to any questions arising out of the deferred rebate system, the agreement system or the option to be given between them."

The French and Belgian Exchanges.—Recent movements in the French and Belgian exchanges call for some explanation. In an article in the *Economist* of November 25th last an attempt was made to account for the margin between French and Belgian currency, and since that date this discrepancy has become even more marked, both absolutely and relatively. In this connection it should be noticed that a selling movement from America affects the French franc considerably more than the Belgian, for American holdings of the latter are almost negligible. If the selling movement comes from the Continent, however, and especially from Germany, the Belgian franc is relatively more affected, owing to the proximity of the two countries and the important business relations existing between them. In this latter case, therefore, the margin between the French and Belgian franc must tend to be widened (especially since Brussels is a much smaller market than Paris), and this is probably one of the causes which has determined the recent movement. At the same time, however, there have been signs of what seems suspiciously like the first beginnings of a flight from the Belgian franc. At one time it appeared that the purchase of British securities for Paris account might be attributable in part at least to the same sense of uneasiness. But the "carnet de coupon" proposals, which had been devised to ensure the payment of income-tax on the part of bondholders, to which reference was made last week by our Paris correspondent, might well have caused some uneasiness in certain French circles; and as it is now virtually certain that these proposals will not be adopted, it may have been premature to have referred to an incipient flight from the French franc. The steady fall of the franc, however, cannot really surprise anyone who considers the serious financial position of France at the present moment. The recovery of the mark, on the other hand, which might naturally have had a reaction from the panic quotations ruling at the beginning of the month, has been largely caused by deliberate action on the part of the Reichsbank and by French purchases for use in the Ruhr.

Coal and Iron and Steel Output.—The output of coal from the mines of Great Britain in the week ended February 3rd was 5,601,200 tons; this compares with 5,644,200 tons in the previous week and 4,803,100 tons in the corresponding week of last year. The weekly average for the first five weeks of 1923 is 5,365,000 tons, as compared with a weekly average in 1922 of 4,854,000 tons, and in 1913 of 5,527,000 tons. The definite signs of recovery in the iron and steel industry observable at the end of the year have received a great stimulus by the developments in January. To the slightly reviving export demand and the orders for British railways, which were the main causes of the original movement, there has been added the rush of orders from France and Belgium for semi-finished material, and the situation has brought out a big crop of orders at home from people afraid of being caught on a rising market. According to statistics issued by the National Federation of Iron and Steel Manufacturers, the production of pig-iron in January amounted to 567,900 tons, and of steel ingots and castings to 624,300 tons. While the production of pig-iron was the highest since January, 1921, it still compares unfavourably with production in the last pre-war year, when output averaged 855,000 tons per month. The steel production is within measurable distance of the 1913 rate, but is much less than the rate attained in 1920 (viz., 755,600 tons per month). Furnaces in blast at the end of January numbered 183, an increase of 14 during the month; more furnaces would doubtless have been blown in but for uncertainties with regard to the price and supplies of coke owing to the big continental demand. Exports of metallurgical

coke in January amounted to 180,851 tons, compared with 73,000 tons in January, 1922, France taking 45,300 tons, compared with 26,500 tons in the previous month. Exports of iron and steel during January amounted to 353,400 tons, a figure only exceeded twice in the post-war period, and 85 per cent. of the average monthly rate in 1913. Pig-iron exports (88,700 tons) were practically the same as in the previous month, a decline of 17,000 tons in exports to America being compensated for by increased exports to Italy, Germany, and France. The increased prices of coal and coke, together with the increased demand for pig-iron and steel (which is partly due to the complications on the Continent), is causing iron and steel prices to rise, and Middlesbrough pig-iron, No. 3, for instance, is now quoted at 105s (and for immediate delivery up to 112s 6d), as compared with 91s per ton at the end of last year. A rise was, however, inevitable in view of the extremely low level to which prices had fallen, and one gratifying feature of the increase is that increased wages will automatically follow. A small rise in the wages of blast furnacemen on the North-West Coast has already been announced.

London Electricity Supply.—The report of the London County Council Special Committee on London electricity supply, which came before the meeting of the Council on Tuesday last (the 6th), contains a feature, writes a correspondent, which is particularly interesting to all electric supply companies—namely, the consideration of extension of tenure. Under the Electric Lighting Act, 1888, electric supply companies are purchasable by the local authority at the end of 42 years from the date of their provisional order at their "then value." Under the London Electric Supply Act, 1908, a modification was made in respect of the 13 London companies operating in the administrative county of London, the purchase powers over these companies being transferred to the London County Council, and the year 1931 fixed for all these companies as a common date. In view of the reorganisation of the electricity supply of London proposed by the Electricity Commissioners under their "London and Home Counties Electricity District" scheme, the London County Council have from time to time intimated their willingness to extend the period of purchase, subject to certain safeguards. Such extension of period would, of course, be a valuable concession to the electric supply companies in question, and would certainly place them in a much better position to give a "cheap and abundant supply" in accordance with the ideal of the London Electricity Supply Act, 1919. The Report of the Special Committee of the London County Council deals with this question of tenure in connection with the London Electricity Supply Bill—Session 1923—which is promoted by the London Electricity Joint Committee (1920), Limited, the Bill being a proposal on behalf of nine of the London electric supply companies to form a body representing the London companies to deal with the centralisation of the generation of electricity so far as the company portion of London is concerned, leaving the local authorities similarly to deal with their own section. Under the Bill it is proposed that extension of tenure should be extended from 1931 to 1971. The Electricity Commissioners are empowered to grant extension of tenure, but under Section 14 of the Electricity Supply Act, 1922, this is subject to the consent of the London County Council or the Local Authority interested. Formally, of course, the Bill is to be opposed by the London County Council, but so far as the extension of tenure is concerned the Report deals with this as a question of conditions, the main point being that machinery must be provided which will "adequately protect the rights of the public qua consumers and the rights of the ratepayers qua potential purchasers of the undertakings." The whole matter, however, will probably be dealt with in detail in the draft Special Order of the Electricity Commissioners (following the inquiry last June), which will shortly be circulated. The second inquiry will take place in the near future, after which the Order will be given its final form before being passed on for Parliamentary sanction. The London and Home Counties electricity district, of course, covers a large number of smaller supply companies in addition to the 13 companies in the

transactions of every description.

Correspondents in all parts of the world.

administrative county, and the principle of extended tenure would apply equally to such companies in so far as they form part of the reorganisation. The extension of tenure will undoubtedly lift one at least of those legislative burdens which have always laid heavily on the industry, and the benefits will be reflected not only in the increased prosperity of the companies, but naturally in the lower rate at which they will be able to give electricity supply to the general public. The period of tenure, of course, has in fact been once generally lengthened, since in the first Electric Lighting Act, 1882, the period was only 21 years, but it was found that under such conditions companies could not possibly operate successfully, so in the later Act of 1888 the period was changed to 42 years. Now that many companies are coming within measurable distance of the termination of their period of tenure the disadvantages both to them and consumers of the present limitations is becoming apparent, so that the need for readjustment in the interests of everybody concerned is universally admitted.

Another Bank Amalgamation.—Within a very short time of the announcement of the absorption of Messrs Cox and Co., the well-known bankers and Army agents, by Lloyds Bank, has come notification that another private bank, which also acts as Army, Navy, and Air Force agents, is to be absorbed by one of the clearing banks—Messrs Glyn, Mills, Currie and Co. The official announcement states that a provisional agreement has been entered into for the amalgamation, which will date as from January 1st last. Sir Vesey Holt will become one of the managing partners in the amalgamated bank. The business of Holt and Co. will, as heretofore, be carried on at 3 Whitehall place and 44 Charing Cross, under the direction of Sir Vesey Holt, with whom Mr Martin Holt and Mr A. V. Barber will continue to be associated. The business of Holt and Co. was established in 1809. In 1884 Messrs Lawrie and Co. were absorbed, and in 1915 Messrs. Woodhead and Co. The first balance-sheet to be published by Holt and Co. appeared last October. This showed that the capital was £100,000, and that the deposits on September 30, 1922, were £2,243,500. There was cash in hand of £296,000, and money at call of £240,000. British Government securities at or under market value stood at £1,426,300. The business of Glyn, Mills, Currie and Co. was established in 1753, and the company registered in 1885. According to the *Bankers' Almanac*, the number of shareholders whose liability is unlimited is nine. The paid-up capital, according to the last balance-sheet, is £1,000,000, and the reserve fund £500,000. Deposit and current accounts totalled £26,435,300. Cash and money at call amounted to £13,881,200, and British Government securities to £8,144,200. This is the first time for many years in which the bank has figured in an amalgamation, having passed unscathed through the epidemic of the last decade.

Cotton Consumption.—Our Manchester correspondent writes:—There is increasing apprehension at the present time in Lancashire with regard to future supplies of raw cotton. The outturn in the United States during the last two seasons has been very small, and the disappointing crops have come at a time of increasing consumption in America. According to statistics published this week, the consumption in the United States during January was 610,375 bales. The figures nearly constitute a record, the amount only being surpassed by 614,000 bales in

March, 1916, and 615,000 bales in May, 1917. Last month's consumption compares with 528,000 bales in December, and 527,000 bales in January last year. The consumption during the six months ended January, including linters, amounted to 3,619,000 bales, against 3,317,000 bales in the same period of the previous season. On the basis of these figures the United States will use this season 7,238,000 bales. This total includes outside growths, but does not allow for Mexican cotton, which should about balance the imports from Egypt. The seriousness of the figures given above will be realised when it is pointed out that the American crop for this season will be only 10,000,000 bales. The remedy for this state of affairs is the seeking of fresh sources of supply. The Empire Cotton-Growing Corporation is hard at work in furthering projects in different parts of the British Empire, and it is satisfactory to know that the Government has promised to give all necessary facilities in the current Session of Parliament for the promotion of a Bill to make compulsory the levy of 6d. a bale upon all cotton imported into the United Kingdom, the fund created to be used in financing the work of the Empire Cotton-Growing Corporation.

Manchester Ship Canal.—Although reductions were made during the year in the rates of Ship Canal Tolls and Wharfage, Ship Dues on Vessels, and other charges, there was an increase of £135,415 in the receipts of the Manchester Ship Canal, the weight of seaborne traffic on which tolls were paid having increased by 964,102 tons. The following table shows traffic receipts since 1910:—

Year.	Sea Borne Traffic. Tons.	Barge Traffic. Tons.	Total Tons.	Ship Canal Tolls, Ship Dues, and Miscellaneous Receipts. £
1910 ..	4,618,070	319,561	4,937,631	555,735
1911 ..	4,894,670	323,142	5,217,812	580,841
1912 ..	5,021,691	318,193	5,339,884	605,179
1913 ..	5,457,218	322,943	5,780,161	654,937
1914 ..	5,109,285	315,447	5,424,732	656,237
1915 ..	5,115,954	318,092	5,434,046	757,268
1916 ..	4,540,167	318,582	4,858,749	831,684
1917 ..	3,843,324	309,430	4,152,754	861,996
1918 ..	3,229,293	268,702	3,497,995	990,923
1919 ..	3,313,620	275,423	3,589,043	1,203,361
1920 ..	4,099,326	288,037	4,387,363	1,461,909
1921 ..	3,117,469	176,201	3,293,670	1,197,075
1922 ..	4,081,571	191,973	4,273,544	1,332,490

The gross receipts of the whole undertaking, including the Bridgewater canals and the railways, amounted to £1,964,800, as against £1,861,100 in 1921, and expenditure at £1,186,300, compared with £1,324,500, so that net revenue amounted to £778,500, as against £536,600. After payment of rentals and other fixed charges, there was an available balance of £432,600, including £34,400 brought forward. The 3½ per cent. dividend on the corporation preference stock requires £37,100; the preference dividend is raised from 3 to 5 per cent., and the ordinary dividend from 1½ to 4 per cent., a balance of £45,400 being carried forward. The directors attribute the decrease in expenditure to reductions in stores, materials, and wages. The working of the railways produced a credit balance of £24,500, as against a loss of £9,250 for the previous year. This was the result of a considerable increase in the tonnage carried, which was accompanied by lower expenditure. The report mentions that arrangements have been made with the London, Midland and Scottish Railway for the lease of the docks adjoining the Ship Canal at Ellesmere Port, "on terms which, it is believed, will be mutually advantageous." In the table below we show the highest and lowest prices of the ordinary and preference shares since 1910, together with pre-war prices and present prices and yields:—

	Prices 1910-1922.		Price July 30, 1914.	Present Price.	Div. for 1921.	Div. for 1922.	Yield.
	Highest.	Lowest.					
Manchester Ship Canal Ord. £10	7½	1½	1½	6½	4	5	8 10
Ship Canal Pref. £10	6½	1½	1½	7½	3	5	6 13 3

Present prices are very much higher than they were 12 months ago, but the yields still look rather high. Until war conditions brought prosperity to the canal, no dividends had been paid for 14 years, and there was naturally a rapid appreciation in prices when distributions were resumed.

London General Omnibus.—The accounts of the London General Omnibus Company for the year 1922 show traffic receipts, "after the operation of the common fund" of the Underground group, of £7,501,425, which compares with £7,500,572 for 1921. The company is now entitled to 25 per cent. of the common fund, which amounted to £1,029,795, its share being, therefore, £257,449. After payment of expenses and placing £375,000 to reserve for contingencies and renewals, as against £335,000 a year ago, there is a balance of £369,953, as against £386,260 at this time last year. Interest brought in slightly more, and £9,000 more was brought forward, so that the balance available for debenture interest and dividends is only £2,500 lower at £469,398. The following table summarises results for a number of years:—

	1913.	1917.	1918.	1919.	1920.	1921.	1922.
Total receipts ..	3,258,198	3,401,708	3,979,799	5,924,905	7,066,137	7,657,342	7,705,525

† Paid free of income-tax.

Interest on 4½ per cent. first debenture requires £62,053, against £39,909 a year ago, £500,000 of the stock having been sold during the year. Loss on realisation and depreciation of investments, on the other hand, absorbed only £50, as against £37,816 a year ago. The ordinary dividend is raised from 8 to 8½ per cent., free of income-tax, and the carry forward slightly increased. The net amount expended on capital account for the year amounted to £212,100. The balance-sheet shows that the reserve fund for contingencies and renewals amounts to £1,593,766, as against £1,427,073 a year ago, while investments stand at £1,680,124, as against £1,317,636. The number of passengers carried in 1922 was over 846½ millions, an increase of 85½ millions, as compared with 1921. The daily average was just over 2½ millions, the fleet of omnibuses owned by the company being 2,809, and the routes operated covering 722 miles of roadway. The number of passengers conveyed by the four railways of the group—the Metropolitan District, the London Electric, the City and South London and the Central London—was 325½ millions, a decrease of over 13½ millions.

Bovril's Profits.—Bovril, Limited, had a satisfactory year in 1922. Although gross profits were about £30,000 lower, and dividends from associated companies brought in less, there was a very large drop in general expenses, and last year's net profit, after paying interest on debentures and short-term notes, comes out £56,600 better than in the previous year. Below are summarised the financial results for the past seven years:—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.
Gross profit	341,405	349,164	384,087	512,016	609,709	650,274	620,188

* 7½ per cent. † 7½ per cent. ‡ Free of tax.

A sum of £20,000 is again taken from profits and placed to staff pension fund, while the general reserve receives £60,000 against £40,000 a year ago. The rate of dividends had been paid for 14 years, and there was naturally a rapid appreciation in prices when distributions were resumed.

depend on the deferred shares remains at 9 per cent., as for 1921, but this time it is paid free of income-tax—a concession which cost the company over £24,000. The balance-sheet, which is analysed in the usual column of this issue, shows a rise of over £241,000 in the composite assets item in which properties, Government stock, interests in associated companies, goodwill, trade marks, &c., are all lumped together. We should like to see this well-managed and prosperous company set an example in the matter of clearer balance-sheets by separating up this item and showing the various component parts separately. The directors report that the sales of Bovril last year exceeded all previous records, and there can be little doubt that the company is reaping the benefit of the policy of not raising its prices during the boom period.

Imperial Tobacco Profits.—The Imperial Tobacco Company (of Great Britain and Ireland) has made an important alteration in its method of disclosing profits. Hitherto net trading profit has been disclosed before payment of bonus to customers, an item which in 1919-20 and 1920-21 was not far short of one million sterling. In the accounts for the year ended October 31, 1922, the net trading profit is shown after payment of bonus to customers. In reading the table below this change has to be borne in mind. The net trading profit for last year of £7,199,100 actually compares with £6,048,700, after allowing for bonus to customers of £879,000 paid in 1920-21:—

† New ordinary shares. ‡ New "C" 10 % non-cum. pref. shares. § Free of income-tax.

The allocation to general reserve is very much smaller, but £200,000 goes to pensions as against £100,000 a year ago. The increase of £1,150,400 in profits is nearly absorbed by the additional 5 per cent., free of income-tax, paid on the ordinary shares, the amount saved by the reduction in the reserve allocation being added to the balance carried forward. The balance-sheet, which is analysed in detail in a later column, shows no very important changes on the debit side; on the credit side cash at £4,716,400 is nearly £1½ millions higher, and investments in associated companies at £6,017,600 are nearly half a million higher. Stock-in-trade has been reduced by £723,100 to the still enormous figure of £31,998,900. For the shareholders the report of this great undertaking must make pleasant reading, but it is not exactly comforting for the consumer, who is still paying boom prices for the company's goods, to see an addition to profits of well over a million sterling.

Pekin Syndicate.—The report of the Pekin Syndicate for the year ended June 30, 1922, records receipts of £24,068, "comprising interest on loans, deposit and current accounts, dividend on shares, &c." Expenses in London amounted to £15,887, in Paris to £3,841, and in China to £15,387. Amounts of £6,055 and £3,454 were transferred to reserves against debtors and shares in other companies respectively, leaving a debit balance of £20,555. There was also a debit balance of £45,819, "being difference in exchange in respect of adjustment of the syndicate's floating assets and liabilities in China and Paris." These debits being transferred to the balance-sheet, reduce the credit balance of profit and loss account to £455,295. At the end of 1921 operations at the Jamieson pits were suspended, and, while working costs

were thereby reduced in the latter half of the period covered by the report, the directors report favourably of the operations at the Li Feng collieries and of the type of coal produced therefrom. The total output for the year amounted to 564,538 tons, as against 698,071 tons in the previous year. Military occupation of the railways interfered with coal transport. The report contains a reference to the reorganisation of the Banque Industrielle de Chine, which "is now under the management of a company specially formed for that purpose, called the 'Société Française Gérance de la Banque Industrielle de Chine,' the capital of which has been subscribed by a group of some of the most influential banks in Paris, whose head is the Banque de Paris and des Pays-Bas, and the Chinese Government." The Pekin Syndicate holds 391 founders' shares and 17,208 ordinary shares of 500 francs each in the Banque Industrielle. These are entered in the balance-sheet at cost, "as it was not possible to form an opinion as to their value at the time of closing the accounts." This item is £242,380, and under the heading Banque Industrielle de Chine are also the items "cash balances in Paris and China," £169,615, and "claim in respect of Chin Yu Bonds," £17,642. Floating assets and liabilities in China and Paris were for the purposes of the balance-sheet converted into sterling at the rates of 2s 6½d per dollar, and 52.80 francs to the pound.

S.T.D. Motors.—On assets amounting in value to £4,022,661 the directors of S.T.D. Motors, Limited, show a profit of £56,017 for the year ended September 30th last, after writing off depreciation of buildings and other charges. The report states that "in 1921, despite the general trade depression prevailing during that year, the directors distributed the full dividend of 7 per cent. per annum on the preferred ordinary shares without calling on any of the company's reserve funds, and without lessening the amount of the profits carried forward from the previous year. At the same time they looked forward to being able to submit a satisfactory year's trading for the past year. Unfortunately, this anticipation has not been realised for reasons entirely outside their control." The report then proceeds to observe that not only were hundreds of orders for cars for immediate delivery lost, but the series of cars then in course of production were not available for sale until late in the selling season, when a slump in prices of cars commenced, with the result that prospective purchasers held over their orders until the show in November. The dividends on the cumulative preferred ordinary shares are now 12 months in arrears, but it is hoped that these will be soon paid. This is a holding company, and one which we think might reasonably publish a consolidated balance-sheet showing the combined assets and liabilities of constituent companies. A further complicating point about these accounts are that fixed investments in France are taken at 25.20 francs to the £. The balance-sheet will be found fully analysed in another column.

Ashanti Goldfields.—Our mining correspondent writes:—The shareholders in this, the doyen of West African gold mining enterprises, have enjoyed several periods of high prosperity; but during the past few years they have fallen upon lean times—lean, that is, comparatively speaking, for in themselves dividends of 20 or 25 per cent. are not so very bad. In 1920-21 difficulties of various kinds were encountered, while during the twelve months ended September 30th last the results were seriously affected by the heavy decline in the gold premium, and to an extent by the alteration in the method of treating the ore. Some time ago it became apparent, in view of the difficulty of obtaining fuel for the furnaces, that the simple and satisfactory roasting process hitherto employed would have to be abandoned in favour of a raw treatment, which although not yielding so high an extraction, would ultimately prove a better method economically. Last year the change-over was effected. During the second four months the ore was treated partly by the old and partly by the new process; during the last four months entirely by the latter. For the whole year costs averaged 70s 10d per ton as against 84s 5d in respect of the preceding financial period. It is expected that when the new plant settles down the expense ratio will average about 60s per

ton. There will thus be a saving of some 25s per ton in costs as against a loss of about 17s in extraction. But the main point is that the modification had to be effected anyhow. For the current year the earnings are foreshadowed at between £60,000 and £70,000, irrespective of any premium value which gold may still bear. These figures would appear to indicate the probability of a dividend of 15 or 20 per cent., after allowing for taxation. The accounts show that the payment of 25 per cent. last year entailed a heavy draft upon the carry forward, the net earnings being £36,500, whereas the distribution called for £62,500. It is satisfactory to note that, although no shaft sinking was performed during the period under review, the general reserve of ore shows a slight increase, standing at 512,100 tons, gross value £2,457,500 on the basis of gold at par. The quantity represents nearly five years' supply for the mill.

Transvaal Output in January.—The output of gold of the mines of the Transvaal during the month of January, 1923, amounted to 764,469 ounces of fine gold, which compares with 790,712 ounces in December, 1922. There was no declaration of output in January, 1922, in consequence of the strike, but it will be seen from the table below that the output for the first quarter of 1922 amounted to 639,728 ounces. The following table shows the production for a number of years:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.

Totals ..	9,018,004	8,418,392	8,330,091	8,153,625	8,114,516	7,020,111	764,469

NUMBER OF NATIVES EMPLOYED at the End of Last Eight Months by Members of the Witwatersrand Native Labour Association and Contractors.

	June, 1922.	July, 1922.	Aug., 1922.	Sept., 1922.	Oct., 1922.	Nov., 1922.	Dec., 1922.	Jan., 1923.
Gold mines....	170,464	178,886	175,054	174,565	175,129	173,173	176,834	181,985
Coal mines....	19,117	12,571	12,370	12,000	11,495	11,899	11,001	14,664
Diamond	1,211	1,211	1,219	1,234	1,218	1,237	1,253	1,222
Total	193,792	192,668	188,643	187,799	187,842	185,499	189,088	197,871

It will be noted that the native labour force increased both at the gold and coal mines. The increase in the number employed at the coal mines is stated by the Chamber of Mines to be due to the creation of the Breyten Ermelo labour district.

Austrian Pre-War Debts.—The Board of Trade announces that March 31, 1923, has been fixed as the last date for lodging with the Administrator of Austrian Property, Cornwall House, Stamford street, London, S.E. 1, proofs by British nationals of debts due to them by Austrian nationals, or of pecuniary obligations of the Austrian Government under Article 248 of the Treaty of St Germain-en-Laye, in order that their claims may be put forward through the Clearing Offices. As an exception, however, in the case of claims of the existence or amount of which claimant shall become aware only at a date subsequent to March 1, 1923, the Administrator has power to extend the period for lodging the proof of claim with the Department until two calendar months after the claimant shall have become aware of the existence and amount of the claim in question. It will be recalled that under Article 248 of the Treaty and Section 1 (ii. and xiv.) of the Treaty of Peace (Austria) Order, 1920, the debts therein referred to can only be settled and enforced through the Clearing Offices, except in so far as a direct settlement may after due lodgment and admission of the claim be permitted by the Administrator. The Administrator of Austrian Property announces his intention to declare a first dividend of 2s in the £. An individual notice will be sent to each creditor as and when he becomes entitled to participate in this dividend, showing the amount of such dividend to which he is entitled and when and how it is payable.

Oversea Correspondence.

UNITED STATES.—STEEL CORPORATION'S EARNINGS—CONTINUED TRADE EXPANSION—HEAVY BANK CLEARINGS.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 2.

NET earnings of the United States Steel Corporation, which reflect conditions in one of the most important basic industries of this country, amounted to \$27,552,392 for the last three months of 1922, as compared with \$27,468,339 for the quarter ended September 30th, and \$19,612,033 in the fourth quarter of 1921. After allowing for a credit adjustment of \$952,346 the amount available for dividends was \$11,283,346. After paying the preferred quarterly dividend of 1½ per cent., the sum left for distribution to the common stockholders was equivalent to only 97 cents a share on the \$508,302,500 common stock outstanding, or 28 cents a share less than the regular quarterly dividend of \$1.25. For the sixth consecutive quarter, therefore, the corporation had to draw on its accumulated surplus to meet its full dividend requirements. The official report, issued this week, showed a deficit of \$1,375,356 for the quarter after the payment of regular dividends on both the preferred and common stocks, as against a deficit of \$1,339,002 for the preceding quarter, and of \$5,280,901 for the last quarter of 1921. The net profits for the final three-months period of 1922 were much smaller than financial and steel trade interests had expected. Predictions of a more favourable exhibit had evidently been based largely upon the freer movement of steel products from the mills, following the termination of the railway shopmen's strike, and upon the advances in steel prices in the closing months of last year. It is quite apparent, however, that the increased operations did not fully offset the 20 per cent. advance in wages, which came into effect September 1, 1922, and the greater cost of fuel and coke. With respect to the higher prices for steel products, there is reason to believe that the corporation had booked a large volume of business for delivery during the last quarter of 1922 at the old price levels, and accordingly did not reap much benefit in that period from the advances. The latter will be reflected in the returns for the present quarter, which should be more favourable, since it is authoritatively stated that the corporation has now filled most of the orders which were accepted on the old price basis. In view of that fact, and also in view of the large amount of new business booked since the first of this year, predictions are being made that the leading steel producer will earn its dividends during the current quarter, and perhaps even show a substantial surplus.

Net earnings, expenses, and other details for the full year 1922, as compiled from the quarterly statements and compared with the preceding year, are shown below:—

	1921.	1922.
Net earnings.....	\$ 92,726,058	\$ 101,647,661
Dep., sinking fund, &c. ..	36,768,226	42,785,229
Net income	55,957,832	58,862,432
Int. U.S.S. bonds	20,427,044	20,107,383
Balance	35,530,788	38,755,049
Adjustments	1,086,229	952,982
Balance	36,617,017	39,708,031
Preferred dividends.....	25,219,677	25,219,677
Common dividends	25,415,125	25,415,125
Deficit	14,017,785	10,926,771

How the corporation has fared in the matter of net earnings each year since 1913 is shown in the following table:—

	\$		\$
1913	137,181,345	1918	187,135,680
1914	71,663,614	1919	143,589,062
1915	130,396,012	1920	176,686,898
1916	333,574,177	1921	92,726,058
1917	295,292,180	1922	101,647,661

After deducting all charges and preferred dividend payments from the year's total net earnings of \$101,647,661,

the balance available for the common stock in 1922 was \$14,488,354, equivalent to \$2.85 a share, as compared with \$2.24 a share in 1921.

January witnessed a marked increase in activity in most lines of trade and industry, especially in eastern, central, and southern centres, as is shown by the exceptionally heavy bank clearings for that month. The latter, according to *Bradstreet's*, reached an aggregate of \$36,339,936,000, or 7.4 per cent. larger than in December, 3.7 per cent. in excess of the peak total for 1922, which was recorded last October, and more than 23 per cent. above January a year ago. Reasons for the big gain in bank clearings are found not only in the greater activity in most industries, but also in the heavy buying by railroads, unprecedented sales of building materials, increases ranging from 25 to 50 per cent. in the volume of jobbing trade, and the 38 per cent. increase in mail order sales, as compared with January of 1921. Bank clearings last month were, in fact, the largest for any month since October, 1920. It is worth noting, too, that there was a pronounced increase over recent months and years was the rule in all parts of the country. Clearings outside of New York in January gained 36.5 per cent. over a year ago, while the gain at New York was only 14.3 per cent.; the total outside of New York was the largest for any month since March, 1920. The improvement in general business conditions is also reflected in the reports of January failures. The total of failures last month, while showing an increase of about 16 per cent. over December, is 20.4 per cent. smaller than the peak total reached in January of last year. The aggregate of liabilities for January is 11.7 per cent. greater than for December, but only about one-half the total for January a year ago, and 18 per cent. less than the total for January, 1921. In the North-West and Far West failures were more numerous in January of this year than last, while the number in New York City was about as large as a year ago. In New England, the middle Atlantic, and central western States there were fewer failures as compared with January of 1922, while in the south, which for two years recorded the largest totals, the number was almost 40 per cent. smaller than in January of last year. Liabilities in all parts of the country, including New York City, were well below those of the corresponding month of 1922.

FRANCE.—BUDGET PROPOSALS—TAXATION PROBLEMS—DIRECTION OF TRADE—PRICES—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, February 14.

THE problem of balancing the Budget for 1923 now appears to be well on the road to solution, and the Finance Minister and the Finance Commission of the Chamber have at last, apparently, found between them a means to get rid of the estimated deficit of 3,700 millions that figures in the Budget Bill for 1923, as passed by the Chamber a week or two ago. The Minister is now prepared to present recommendations to the Chamber to-morrow, which, it is hoped, either with or without modification, will get rid of the problem. M. de Lasteyrie presented a fourth list of proposals to the Commission last Thursday, and these are generally accepted as marking a distinct advance on his previous efforts. It is now seen that he has given up his proposals for an increase in a large number of Customs duties, in the import tax, and in the tax on turnover, against all of which strong opposition was manifested by the trading community. Instead, the Finance Minister has gone back to some of his old proposals for further economies, and for the reorganisation of the State monopolies. While scouting all idea of sympathy with M. Bokanowski's project for the creation of the much-discussed *carnet de coupons* (with which I dealt at length last week), the Minister once more put forward his proposal to collect 1½ milliards of additional revenue by increasing a large number of the existing taxes by 20 per cent.

The Finance Commission has now adopted some of the Finance Minister's proposals in their entirety and others in part, and has tabled recommendations for adoption, from which it expects to secure an additional 20 millions by revising upwards the State tax on the sale of *fonds*

de commerce; 40 millions by similarly modifying motor-car duties; 125 millions by further increasing the sale price of tobacco; 400 millions by stricter measures to suppress certain fiscal frauds; 500 millions by calling on the now-once-more-prosperous railway companies to pay for rolling stock handed over to them by the Government at the close of the war; a further 500 millions from direct taxation (based on the fact that the revenue from this source is at present coming in greatly in excess of Budget estimates); and 225 millions from economies to be realised in connection with interest payments on the floating debt. Instead of increasing a large number of existing taxes by 20 per cent., the Commission recommend that certain registration duties shall be raised by 10 per cent., which is estimated to produce an additional 298 millions. In the way of revenge, the Commission insists on retaining its proposal for the creation of a *carnet de coupons*, but recommends that taxpayers shall be exempt from including in this *carnet* income derived from National Defence and Treasury bonds, and that, once the *carnet* has been established, the revenue authorities shall not be able to make retroactive use of it for the purpose of penalising hitherto fraudulent declarers of income. From this new machinery the Commission estimates an additional yield of 700 millions in income-tax during 1923 (assuming that the proposal is agreed to by the Chamber and the Senate, which at present appears extremely doubtful), and that another 225 millions of economy may be effected in this connection by reason of the fact that the right to omit National Defence and Treasury bonds from the *carnet* will enable the Treasury to reduce the rate of interest on these instruments by ½ per cent. Further, if the Budget is balanced, there will be no need for any loan, the Commission suggests; therefore an estimated expenditure of 127 millions in that connection may be omitted. Altogether, these proposals are estimated to produce in economies and additional receipts equivalent to 2,935 millions, as compared with a total estimated deficit of 3,700 millions. As the latter includes the sum of 820 millions, representing the cost of redeeming Rentes to that value which is expected will be tendered in payment of the special tax on war profits, it would only be necessary (the Commission argue) to raise the remaining 765 millions (representing the rest of the deficit) by loan, and thereby bring about a balance in the Budget, not only without any increase in the debt, but even with a supplementary redemption of 55 millions of Rentes. The weak point in this ingenious edifice, as already suggested, lies in the attitude Parliament will adopt as to the ticklish proposal for the creation of the *carnet de coupons*.

The Finance Minister yesterday laid before the Chamber a Bill to authorise the issue during 1923 of 13 milliards of francs of short-term Treasury bonds, for the purpose, firstly, of providing money to pay off short-term and Treasury bonds of various kinds that will mature during the current year (including five milliards that will be due for payment in June next), and secondly, to provide money for the devastated regions. It is explained that the introduction of this Bill is due to the delay in passing the Finance Bill for 1923. Articles inserted in the *douzièmes provisoires* granted on Decem-

ber 31 authorised the issue of four milliards of short-term Treasury bonds, but as the recent Crédit National issue absorbed three milliards of fresh money, the Treasury has refrained from appealing for the whole of the sum authorised, and its present proposal is really equivalent to a reduction of the amount of new short-term loans to be contracted during 1923 from 16 milliards to 13 only. Instead of asking for authority fraction by fraction, and thereby running the risk of placing the Treasury in a tight position at a moment when it would need all its elasticity, the Ministry is really asking to be given authority for the whole amount for the year at once and for all, on the understanding that the rate of interest, amount, duration, and other details will be left to be settled by the Treasury from time to time, according to circumstances as they may arise, under the reserve that the whole of the bills to be issued this year will come to maturity within ten years at the outside.

The index number for wholesale prices, as issued by the Statistique Générale for January, shows that during the past month prices again rose substantially. The comparative figures for the past two months (based on 100 as the figure for the period 1901-1910) are as follows:—

	December, 1922. (Corrected.)	January, 1923. (Provisional.)
General index figures (45 categories) ..	418.4	447.3
Foodstuffs—		
General index figure (20 categories) ..	404.0	424.8
Vegetable foods (8 categories) ..	360.2	386.1
Animal foods (8 categories) ..	456.7	457.6
Sugar, coffee, cocoa (4 categories) ..	386.1	436.1
Raw materials—		
General index figure (25 categories) ..	430.0	465.4
Minerals and metals (7 categories) ..	373.4	415.6
Textiles (6 categories) ..	553.4	624.0
Various (12 categories) ..	401.1	415.1

This sharp rise in wholesale prices may be regarded as directly due to the serious fall in the value of the franc to new record low levels that occurred during January. The increase in prices, as might have been expected, was most plainly felt in connection with imported products (coffee, cocoa, copper and other minerals, and cotton and wool). The index figure for the retail prices of 13 categories of foodstuffs in Paris is returned as 3321 for January (or 200 per cent. increase on 1914), as compared with 3276 for December, when the figure was equivalent to an increase of 205 per cent. on that of 1914.

The Bourse during the past week has continued its confident course. The principal effect of the continued low condition of the French franc has been a great increase in arbitrage business in the Paris market, which has resulted in the disappearance from it of a large number of foreign descriptions, such as Spanish rails, &c. One great reason for the remarkable activity that now characterises this market is, of course, the enormous increase during recent years in the amount of money available for investment. The tendency to leave on one side for the moment securities bearing fixed rates of interest and to take up sound industrials, with good prospects of high dividends, consistent with the improvement in economic conditions in various directions, has been still further emphasised this week. Securities based on real values (raw materials, industrial plant, land, &c.) are increasingly sought after, and electrical, metallurgical, chemical, and similar descriptions have practically all been substantially marked up.

GERMANY.—RUHR—FINANCES—EXCHANGE AND BOURSE—INDUSTRY—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, February 13.

The Ruhr situation gets steadily worse, without, however, showing any signs of such an acute crisis as might compel settlement. The position of France has not got better, and a realisation of this fact is showing itself in acts of violence, which are no longer directed against officials and citizens who refuse to obey orders, but against the whole population. The German Press declares that these acts are ordered from Paris with the aim of provoking a revolt, but that is hardly in accord with the somewhat nervous and temporising policy shown by France so far. The embargo on the transport of general manufactures

to unoccupied Germany will not have any immediate effect, as it is a much less inconvenient measure than the cutting off of coal supplies, after which it came as an anti-climax. If, however, France carries out the plan, now foreshadowed, of taking over the whole Ruhr railway system, and making the food supply dependent upon the submission of German railway officials, as a Paris despatch declares is intended, the situation may become very threatening. At present the railway officials seem determined not to collaborate with the French, but it is impossible to predict that measures aimed at starving the population may not enforce a formal surrender. The Federal Food Minister promises that supplies will be distributed by motor-car, but the French authorities could easily prevent that being done. The boycott against the French soldiers is now almost general in most towns, the hotels refuse to receive French guests, the shops refuse to sell, and every obstacle that can be raised by mere passivity is being raised.

Industrial activity in unoccupied Germany continues without change. Sooner or later, however, the metal-consuming finishing branches will have to look to new sources for their supply of raw materials. The mere boycott against France and Belgium, together with the stoppage of the Ruhr supplies, makes Germany more than ever dependent on foreign sources for her heavy iron and steel. In January-November last year she imported 261,099 tons of pig-iron against 144,788 tons exported; 538,914 tons of scrap against 76,880 exported; 274,531 tons of ingots, blooms, slabs, &c., against 80,783; 712,655 tons of bars, girders, &c., against 405,823 tons, while the old excess of exports of finished metal goods over imports has been maintained. The importation of these heavy materials from England and America is thought of; and this, unlike the necessary increased import of coal, would not put a new strain upon the balance of foreign payments. All results of the occupation that are visible so far, however, are merely destructive; they mean not only a loss to Germany from lower production and from the great decline in the efficiency of distribution, but also serious losses, which can hardly be made good later, for all countries with Reparations claims.

The cash and credit shortage continues. The Reichsbank's note printing capacity at the end of this month will be about 125 milliards daily, which is probably more than sufficient for the demand at the present price level. The first 50,000 mark notes have been issued. The Floating Debt on January 31st was 2,781 milliard marks, of which 2,081 milliards were discounted Treasury bills. Revenue is rapidly increasing, the total receipts from taxation in the last ten days of January amounting to 49,625,836,000 marks, as against 556,571,876,000 marks in the first nine months of the financial year, while 1,809,701,642,000 marks was raised in the form of Floating Debt. Expenditure for the nine months was as follows:—General administration and mark liabilities from the Peace Treaty, 1,486,335,875,000 marks; Peace Treaty liabilities in foreign countries, 417,580,055,000 marks; interest on Floating Debt 76,546,705,000 marks, and on the Funded Debt 2,316,137,000 marks; while subsidies to State undertakings amounted to 387,759,769,000 marks. The total was thus 2,374,767,946,000 marks. The following table shows the development of Budget expenditure, including Reparations and subsidies to State undertakings, since 1920:—

	(In Milliards of Marks.)					
	1920.	1921.	1922.	1922.	1923.	1923.
	Realised.	Realised.	Esti- mated.	Estimated and Sup- plementary Estimates.	Esti- mated.	Esti- mated on Price- Level of Jan., 1923.
Ordinary Budget ..	58.7	83.6	103.2	442.2	732.0	..
Extraordinary Budget ..	140.9	172.5	185.2	892.5	740.3	..
Totals ..	199.6	256.1	288.4	1,334.7	1,472.3	4,000-5,000

Railway freight rates will be doubled on February 15th, passenger fares on March 1st. The Government has submitted a Bill prolonging the coal tax law, which expires on March 31st. The Finance Ministry is empowered to moderate or increase the normal rate, which remains at 40 per cent. on the sale price. The yield in 1923, on the

basis of present prices, will be 250 milliards. In addition, the Customs gold surcharge has been raised from the 14th from 474,900 to 709,900 per cent., and the Reichsrat has raised the limit upon the total of Darlehns advances to 1,000 milliard marks.

The great improvement in the mark, which has risen nearly 100 per cent. from the lowest quotation of 48,877 to the dollar, reached on January 31st, is put down to Reichsbank intervention. The value of foreign exchange which was sacrificed has been estimated unofficially at £400,000. Apart from this, however, a reaction was due, as the mark fell about 80 per cent. in January alone. The intervention is stated to have been carried through by Mendelssohn and Co. The effect of this on the Bourse yesterday was considerable, but last week stocks continued to rise, the *Frankfurter Zeitung's* index for home dividend-payers moving from 1,276,315 to 1,567,965 between February 2nd and 9th, while home bonds also rose. Yesterday the Bourse was weak, with the exception of some special securities, and some of the leading stocks lost as much as 10,000 points. On the whole, however, there were signs of a considerable power of resistance, due to expectations of a further decline in the mark, and the gold prices of stocks are therefore much higher than a week ago. As in all times of mark recovery, the Bourse is in an unsettled mood.

Industry is again complaining of a shortage of working capital. The Prussian Trade Ministry's monthly report for January shows no marked change either towards depression or improvement. The demand for ore, scrap, and heavy iron, and particularly for semi-finished material, was very great; the railway permanent way producers are fully occupied, having big State orders; while there is a great demand for thin sheets and a revival in the thick sheet market, which has for months been dull. Conditions in the non-metal-using industries are less favourable. In some textile branches few new orders are coming in; the silk trade is injured by a decline in home buying, and production is being reduced, while the linen branch is suffering from shortage of raw material. Although chemicals in general are booming, with a demand far in excess of the supply, the dye market is depressed. The table glass branch is depressed, but a revival is expected shortly. Depression also prevails in rubber, where the supply of raw materials is insufficient, and production has had to be reduced.

The fusion in the Klockner concern, comprising the Hasper, Königsborn, Salinen und Solbad, George Marien Werkes, Huttenverein Osnabruck, Düsseldorf Eisen, and Fassonisen Companies, has been carried through. The Aquila Syndicate, of Frankfurt on the Main, which embraces numerous iron, steel, coal, and chemical companies, has taken over and will reopen the steel works in Vienna Arsenal. Several new deals with German companies are mentioned in the Russian Press, but most of these have not yet been completed.

The value figures of foreign trade in December were: Imports, 589,800,000 gold marks, against 536,200,000 gold marks in November; exports, 423,000,000 gold marks, against 255,200,000 gold marks. With the exception of July, when imports were 684,800,000 gold marks, and the December imports are the highest of the year, and there has been an unbroken increase since September, when imports were only 421,800,000 gold marks. Except as against January and February, 1922, when imports were only 330,400,000 and 359,600,000 gold marks, there is no marked sign of a general increase in the gold value of imports, but the big increase since September, and the maintenance of values during a year of very bad currency depreciation tend to confirm what has been stated more than once in these columns that the fall in the mark exchange, taken by itself, does not reduce buying capacity in foreign markets. The whole foreign trade account for 1922 is: Imports, 6,200,400,000 gold marks; exports, 3,970,000,000 gold marks, thus leaving an import surplus of 2,230,400,000 gold marks. Again, if January and February, 1922, are omitted, there is no tendency towards an increase in the surplus of imports, the highest import surplus was in July, with 348,500,000 gold marks, while the December figure was 166,800,000 gold marks. A comparison with 1921 is impossible, as for that year no gold figures are available, and all figures for the period

MUTUAL LIFE ASSURANCE.

THE SCOTTISH PROVIDENT INSTITUTION

UNDER ITS
DISTINCTIVE SYSTEM
ISSUES

THE BEST POLICY FOR A BUSINESS MAN

(Low Premiums. Limited Payments.)

FUNDS £17,000,000.

HEAD OFFICE: 6, St. Andrew Square, EDINBURGH.
LONDON: 3, Lombard St., E.C.3; 17, Pall Mall, S.W.1.

January-April, inclusive, are still lacking. Imports in quantity in 1922 were 45,880,000 metric tons; exports, 21,570,000 metric tons. Imports in 1913 were 72,830,000 metric tons; exports, 73,710,000 metric tons. In comparing these figures allowance must be made for the reduction in the area and population of the country, and for the fact that Alsace-Lorraine produced mainly heavy goods (iron and steel). Moreover, the figures for 1922 do not include Reparations deliveries. According to the official *Wirtschaft und Statistik*, if these two facts are ignored, imports have fallen 60 per cent. and exports 30 per cent. since 1913, while if coal imports and exports are omitted from both years, imports have declined 47 per cent. and exports 48 per cent.

BELGIUM.—REPARATIONS AND THE RUHR—FINANCIAL POLICY—BANK REPORTS—INDUSTRIAL CREDITORS.

(FROM OUR CORRESPONDENT.)

BRUSSELS, February 14.

THE Reparations question and the occupation of the Ruhr are still the most important problems of the day. The visits to Brussels of French Ministers and generals are becoming more and more frequent, but from this it must not be concluded that a certain amount of pressure is being brought to bear on the Belgian Government in its action with France. On the contrary, there is a strong current of both official and public opinion which insists that no weakness should be shown regarding the measures to be adopted.

It will be remembered that under an arrangement recently concluded Belgium accepted as payment from Germany, under her priority claim, bills accepted by the Reichsbank payable over several months. The first instalment of 50 million gold marks matures on February 15, 1923, and it is now certain that this payment will be made.

In spite of the gravity of the political situation, the Government is actually now examining a scheme for the reduction of the number of regiments and the length of the period for military service (ten months). The object of the scheme is principally to effect economies in the military estimates. The official comment accompanying the proposed law clearly indicates the policy of the Government in this respect. It calls attention to the state of the public finances, which imposes the urgent necessity of restricting the budget charges to a minimum. Fresh fiscal measures now being considered include:—(1) Increase of Customs tariffs. (2) Increase of 5 per cent. on the coupon tax. (3) Several new taxes on sugar, matches, &c., and increase of existing taxation on other goods. All this is in addition to the measures already existing, which are heavier than is generally supposed.

Another interesting law is that which is to decide the steps to be taken with a view to the creation of a special fund to redeem the Government debt to the Banque Nationale de Belgique. This debt was contracted for the

purpose of exchanging the marks in circulation in Belgium at the time of the Armistice at the pre-war value of 125c, as well as in the districts of Eupen and Malmédy, where the marks were also redeemed on the same conditions. The debt in connection with the latter has already been repaid to the Banque Nationale.

The Government account with the issue department of the Banque Nationale is always in credit, never overdrawn, which means that it never has recourse to advances to cover ordinary or extraordinary expenditure. It is important to recognise that all the reconstruction work in Belgium—everybody realises what an enormous effort has been made—has been done without the slightest assistance from the printing press. The Government's sole debt to the Banque Nationale is, therefore, that resulting from the exchange of the marks. It amounted in all to 5,864,000,000f, and although the Government borrowed on this occasion, it did not depart from its usual policy, as it firmly believed that the Peace Treaty would force Germany to redeem these marks, which she had forced Germany to redeem the occupation at the rate of 125c on the population during the war for all damages suffered. Reparation made during the war for all damages suffered by Belgium are far from being realised. It must not be forgotten that 464,000,000f have already been repaid to the Banque Nationale, which thus reduces the amount to 5,400,000,000f, and an additional payment of 500,000,000f has been made to cancel the debt contracted by the Germans during the occupation and left unliquidated at the Armistice. This overdraft resulted from the scandalous manner in which the Germans directed the State controlled concerns—e.g., railways; appropriating the revenue, but refusing to pay the interest on the Belgian Government debt, which constituted the capital invested by the Government in the various concerns.

The official comments accompanying the proposed new law referred to above affords sufficient proof that Belgium is quite decided not to avail herself of the momentary advantages of inflation, and the policy adopted by the Banque Nationale in this respect is equally convincing.

If the idea of the "man in the street" is that Germany will pay either nothing at all or be forced to pay everything, it is plain that in governing circles the general opinion is far from touching either extreme. There the actual state of affairs is considered calmly and methodically. The Government is endeavouring to extract the maximum possible from a recalcitrant Germany, but at the same time is busy putting its own house in order. The annual report of the Société Générale de Belgique, the oldest and most important bank in the country, has just been published, and it proves that the same point of view is also prevalent in financial circles. This report calls attention to the fact that there will be a very large deficit in the amount of reparation payments to be received from Germany, and it is only by the goodwill and earnest endeavours of the population that Belgium will be able to last the present crisis as she has already successfully triumphed in many others, and then only on condition that everybody shoulders his proper share of the burden of taxation. This financial institution has just celebrated its centenary. The Banque de Bruxelles has decided to increase its capital from 103,000,000f to 150,000,000f by the creation of 94,000 shares of the nominal value of 500f. This new capital is justified by the increasing expansion of the bank's operations.

Although industrial position has greatly improved, we are still, generally speaking, below the figures of production for 1913, and although it is true that unemployment is negligible, this must be attributed in a large measure to the fact that a large number of workmen have emigrated—especially to France—where they can, in certain districts, work 10 and even 12 hours a day, and thus earn wages which they could not hope for in Belgium, where the eight hours law is strictly enforced.

The Bourse has been uneventful during the past week, the rates remaining fairly stationary. It has not been the same with the exchanges, and although fluctuations have not been so violent as have been experienced lately, the market has nevertheless been very agitated. The pound sterling has fluctuated between 84.50 and 86.50, and the mark has risen from 0.04 to 0.065, which is a great improvement.

AUSTRIA.—FINANCIAL POSITION: URGENT NEED FOR FOREIGN CREDITS—THE NEW BANK—INDUSTRIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

VIENNA, February 1.

THE position and prestige of the present Austrian Government depend largely on whether the foreign credits are realised in the near future. The bourgeois parties have done their utmost to support the Government, regardless of the fact that the Social Democrat party has prophesied that foreign help would not be forthcoming, and that all the sacrifices of Austria would be in vain. The Government is carrying on extensive propaganda, in order to still anxiety and to maintain the belief in the ultimate salvation of Austria. It cannot be concealed that the failure to place 80 million gold kronen worth of gold Treasury bills in foreign countries has been disappointing. Political occurrences in foreign countries, such as the French occupation of the Ruhr district, have raised new doubts as to the actual payment of the promised foreign credits. Any further aggravation of the situation will no doubt prejudice the position of the Cabinet.

The Social Democrat party is endeavouring to keep in touch with the Communist party, as the latter is making a great deal of propaganda, and the Social Democrats have, therefore, again begun calling their followers out to demonstrate in the streets. The delay of the promised foreign credits, the difficulties arising from the dismissal of State employees (the so-called "Abbau"), and ever-increasing unemployment are furnishing the Socialist party with plenty of material for attacking the Government. Much dissatisfaction has been produced by the League of Nations' demand for hastening the dismissal of State employees, especially as there is a Bill before Parliament which provides for a decrease in the pensions of those employees who have found private positions. At any rate, the fate of Dr Seipel's Cabinet depends solely on the result of the credit negotiations abroad.

The condition of State finances has of late become more difficult. The Government is constantly being compelled to make large payments: the dismissal of the State employees, desirable as it is, entails great expense in the pensions and compensations, which the Government cannot afford to pay without the help of foreign credits. Subscriptions to the gold Treasury bills have been closed, with about 4.2 million dollars worth subscribed. This amount is 1.8 millions of dollars short of the sum intended to be placed in Austria. A larger participation was hardly possible from Austrian capital, as the hopes of a foreign participation were not realised during the period of subscription. Since the Government is not allowed to draw on the new Issue Bank without giving security, it is compelled to apply to the banks for loans. The banks, which have already advanced almost 140 milliards to the State, submit their bills to the National Bank for payment, and this, of course, increases the banknote circulation. Even the loans already made have been insufficient, and negotiations for new ones are imminent. In the meantime, the Government has been obliged to extend the period of repayment of the large advance it received from the Viennese banks. The banknote circulation increased 146 milliards during the third week of December, and 222 milliards during the fourth week. The old Austro-Hungarian Bank ended its activity on December 31st with a note circulation of 4.08 billions of kronen.

The new National Bank published its first report on January 13th. This report shows a gold reserve (bullion and bills in high-valued currencies) representing a value of 1,195,190,603,219 paper kronen, against a circulation of 4,053,689,483,759 paper kronen, so that the note circulation is covered 26.7 per cent., a very satisfactory figure. This circulation shows a decrease of 27 milliards during the first week of the new National Bank's management.

The stagnation in commerce and industry still continues, but a slight improvement is to be seen in some industries. This is a consequence of reductions in wages and salaries. The situation has grown even more unfavourable for employees, since the great number of people seeking employment has enabled employers to lower salaries and wages still more than corresponds with the index figure. Negotiations regarding further reductions in wages and salaries are pending. Prices, however, no longer show a falling tendency on account of the doubtful opinions regarding State finances. Several banks have, therefore, advised their industrial debtors not to sell their goods at any price, but to await the further development of the situation.

At present about 130,000 persons are receiving the unemployment dole. Of these about 81,000 are inhabitants of Vienna. The number of unemployed who receive no State support and workmen on short-time are not included therein. A threatening movement for higher wages in the metal and textile industries was settled by the Government in time. Employers in these industries intended again reducing wages 15 per cent., but they had to be satisfied with a reduction of only 5 per cent., as the Social Democrat party interfered and disturbances were anticipated. Some branches of industry expect a slight improvement in the near future on account of the political and economic crisis in Germany, which has considerably reduced German competition on foreign markets. Some improvement is to be seen already in the iron and textile industries, and some branches of the engineering industry. Austrian exports to Jugo-Slavia have also increased since the strict exchange regulations of that country have been somewhat modified.

The reconstruction programme provides for further increases of taxes, and a new rise in tariff rates. A decided reduction in the State deficit had been expected from these revenues, but the taxes and tariffs have now reached such a height that trade and transport are throttled, and revenues have been accordingly lessened. The railway tariffs will have to be considerably lowered, because travelling has become a luxury for an Austrian, and Austrian industry is unable to bear the high freight rates on coal. The railway passenger tariff will soon be reduced 30 per cent., transportation charges for coal 10 per cent., and those for coke 20 per cent. Tobacco consumption has also fallen off considerably, because tobacco products have almost reached the world parity. Interesting evidence of the bad conditions prevailing among the lower classes is the decrease in the consumption of sugar. When the rationing system was still in force some years ago, about 1,000 truck-loads of sugar were consumed per month, at present only 500-600 truck-loads.

In spite of the considerable increase of the new National Bank's stock of high-valued currencies the rates for these currencies have not yet been reduced. The doubts felt about the possibility of further help from the League of Nations are clearly shown by the fact that higher prices are being paid privately for these currencies than those quoted by the National Bank, which has taken over the functions of the "Devisenzentrale." The dollar, for example, is 4,000-5,000 kronen higher when bought in "Schleichhandel" (illicit trade). During the last few days the price of gold was increased 4½ millions, and that of silver 2 millions per kilogram.

Conditions on the money market have again become worse of late. Exorbitant rates of interest are charged on the Stock Exchange and by the banks for short-sight loans. Even first-class firms must pay the Viennese banks about 35 per cent. for interest and bank charges. These are exceptions, however; ordinary merchants are unable to get money for less than 50 per cent. interest per annum, and must sometimes pay even higher rates. The foreign exchange market showed a gradual increase in high-valued currencies during the last fortnight, whilst the currencies of France, Italy, and Central European States were decidedly cheaper. Illicit trading in exchange has recommenced recently, as private persons, industrialists, and merchants, in view of the uncertain political situation, are endeavouring to rebuy the foreign currencies they were obliged to sell through the Clearing House.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised ... 43,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits ... 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

CANADA.—THE ECONOMIC POSITION—DISQUIETUDE ABOUT EUROPEAN EVENTS—EXODUS FROM CANADA—REVISION OF THE BANK ACT—THE NEXT BUDGET—MR ROBB'S COMPLAINTS—PRODUCTION STATISTICS—THE NATIONAL RAILWAYS.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 28.

THE developments of the European situation are being followed with great anxiety in Canada. The failure of the most abundant crop in the history of the Western provinces, on whose prospects Canada has mortgaged her future, to give anything more than a modest stimulus to the recovery of real prosperity has been a serious disappointment, and there is spreading among all classes a realisation that the real source of Canada's economic troubles lies in Europe. A parallel process of education is in progress in the United States. The Western prairies were brought under the plough to supply the food demands of European industrialists whose local supplies had become inadequate. Now that European industrialism is in a state of comparative debility, and the standard of living for huge masses of people has materially fallen, the demand for the produce of the food-exporting countries has lessened, and it is only the collapse of Russian agriculture which has saved Western Canada from complete temporary ruin. Her farmers are further from tide-water, and burdened with heavier fixed charges for housing, clothing, and other things, than any of their competitors, and a decline in the European demand which cut down the margin of profit was bound to hit them hardest of all. Authoritative experts calculate that if Russia had this year been able to export at her pre-war scale, No. 1 Northern wheat would have been selling last autumn in Winnipeg at 50 cents per bushel. As things are, the complications on the Rhine, which make hopes of improvement in the European situation and, simultaneously, the prospect of better times for the Western provinces recede, are checking the buoyant optimism with which Canada has faced each recurring spring, and it would be well for British statesmen to realise that one certain reaction of a continuance of the European chaos will be continued stagnation for Western Canada. There is very definite evidence that a southward exodus of population is in progress on an alarming scale. One irrefutable proof of it is available—the Customs returns for the year ending December 31st show that exports under the head of settlers' effects were a million dollars greater than the imports.

Since no announcement has been made to the contrary, it is assumed that the decennial revision of the Bank Act will be proceeded with during the session which begins on January 31st. It is generally understood that its close will see Mr Fielding's withdrawal from active political life, and, in view of the attacks which the Bank Act will face from its critics, the Government probably are unwilling to leave the task of piloting the revision measure to less experienced and authoritative hands. The presence in the Cabinet of a director of the Bank of Montreal in the person of the Minister of Justice, Sir Lomer Gouin, is a blind spot in the Government's position, and impartial opinion thinks it should have been remedied ere this by his resignation from one or other of the offices. The Progressive Party will be the chief proponents of reform schemes, but they are not unanimous about any definite plan. The majority of them favour the establishment of a State bank, and the whole party will probably support this demand. It will be rejected by a combination of the

Liberals and Conservatives, and in the end the changes are likely to be very few. But greater stringency of audit will be provided for.

Speculations are rife about the character of the forthcoming Budget. The receipt tax, which came recently into effect, is very unpopular, and a powerful deputation, representing the Canadian Manufacturers' Association and other mercantile bodies, waited upon the Finance Minister last week to demand its abolition and a number of other changes in the tax system. The business community in Canada has come to regard the double tax burdens imposed by the Federal and provincial governments as almost intolerable, but Mr Fielding was unable to encourage any hopes of immediate alleviation. The Federal revenues for the current fiscal year will be slightly higher than for 1921-22, and the substantial sum which has this year accrued from the arrears of the business profits taxes will not be available next year. Since the Liberal Party had been out of power for 10 years, constituencies of a Liberal stripe have been ravenous for public works, and as a result the Government have signally failed to fulfil their pledges of enforcing drastic economies. For their failure they have been severely attacked by the *Manitoba Free Press* and other papers, and Mr Fielding is now engaged in trying to curtail the swollen estimates even at the expense of his popularity. Some unofficial hints have lately been given that fresh taxation will be necessary. The tariff changes necessitated by the commercial treaties just carried out will be made, but few other alterations are expected. Since the average tariff rate has actually been higher under Mr King than under Mr Meighen, the Progressives are certain to wax eloquent upon the Government's fiscal backslidings and demand heavy cuts, but the Imperial Economic Conference will be a most useful excuse for delay.

Mr Robb, the Minister of Trade and Commerce, has returned empty-handed from his Australian mission, but he has not improved the solidarity of the Empire by a cable message to the effect that the opposition of British firms was largely responsible for the failure of the negotiations. He asked the same preferential terms for Canadian goods as are now conceded to British, and claims that British interests thwarted these concessions. His disclosure has created considerable stir in Canada, but the *Ottawa Citizen*, an independent paper of high standing, roundly rebukes Mr Robb, declaring that as long as Canada maintains a high tariff against British goods, she should not complain if objections are raised to the detriment of the value of the present Australian preference to Britain. The episode, insignificant as it is, illustrates the fallacies of the theory that preferences must invariably be a form of Imperial cement.

The estimated value of the production of some of the chief lines of Canadian industry shows in the subjoined figures a respectable gain over last year's returns:—

	1921.	1922.
Grains.....	931,863,670 ..	962,616,200
Fisheries.....	34,930,735 ..	42,000,000
Mineral.....	172,327,580 ..	180,622,000
Wool.....	2,975,000 ..	3,250,000
Forest.....	296,000,000 ..	316,000,000
Fur.....	10,151,594 ..	9,250,000
Fruit.....	496,272 ..	535,000
	1,448,744,851	1,516,273,200

The comparative values of the wheat and other grain crops so show general betterment:—

	1921.	1922.	Five Years' Average.
Wheat.....	23,261,224 ..	22,422,693 ..	18,545,868
Barley.....	300,858,100 ..	399,786,400 ..	236,025,200
Average per acre ..	13 ..	17½ ..	12½
Value.....	\$242,936,000 ..	\$339,419,000 ..	\$392,546,320
Other values—			
Oats.....	143,395,300 ..	185,455,000 ..	270,406,080
Barley.....	28,254,150 ..	31,335,300 ..	57,487,799
Rye.....	15,399,300 ..	18,703,200 ..	12,744,150
Grain.....	\$931,863,670 ..	\$962,616,200 ..	..

Mr Henry Thornton has just returned from his Western tour of inspection, and will meet his directorate this week to make several important decisions. There is intense rivalry between Montreal and Toronto for the headquarters of the national system, and Ottawa is also putting forward claims. When the decision is made Sir Henry Thornton will only be popular in one of these three cities.

JAPAN.—FOREIGN TRADE—ADVERSE BALANCE LOWER—DIRECTION FIGURES.

(FROM OUR CORRESPONDENT.)

TOKYO, January 10.

Now that complete statistics for the year's foreign trade of Japan have come in, it is seen that though there has been a satisfactory increase in the volume of trade for the twelve months the adverse balance still persists, and now totals 252,344,000 yen, as compared with a total adverse balance of 300,955,000 yen in 1921. This comparison reveals a gain of considerable extent for exports. The total trade of the year amounted in value to 3,526,864,000 yen, as against an aggregate of 2,865,961,000 yen for the year before, which represents a gain of 660,903,000 yen. Of this sum, exports represent 1,637,260,000 yen, or 384,757,000 yen more than in 1921; while imports amount to 1,889,604,000 yen, which is 276,146,000 yen above the previous year. The situation for the year, as compared with 1921, may be more clearly seen from the following summary:—

	1921.	1922.	Increase.
	Yen.	Yen.	Yen.
Exports	1,252,503,000 ..	1,637,260,000 ..	384,757,000
Imports	1,613,458,000 ..	1,889,604,000 ..	276,146,000
Total	2,865,961,000 ..	3,526,864,000 ..	660,903,000
Balance	360,955,000 ..	252,344,000 ..	..

Looking into the year's trade a little more in detail, it is seen that increase in exports is due mainly to expansion of the raw silk output, exports of which rose from 417,124,000 yen in 1921 to 670,334,000 in 1922. Next in importance comes cotton yarn, amounting in value to 114,624,000, as against 80,436,000 yen for the previous year. Other important gains were starch, which rose from 433,000 yen to 1,442,000 yen; tea from 7,699,000 yen to 17,828,000 yen; refined sugar from 15,799,000 yen to 19,092,000 yen; waste silk from 10,367,000 yen to 14,513,000 yen; braids from 7,031,000 yen to 11,308,000 yen; while silk fabrics jumped from 89,893,000 yen to 107,919,000 yen. Hosiery experienced a gain of over five million yen on the previous year; hats and caps some two million yen; buttons over three million yen, glass two million yen, porcelain one million yen, wire four million yen, iron ware three million yen, tyres one million yen, and machinery two million yen.

Turning to import trade, the largest gains were in such items as rice, which rose from 28,764,000 yen in 1921 to 61,924,000 yen in 1922; wheat imports grew from 31,551,000 yen to 58,865,000 yen; woollen yarns from 15,172,000 yen to 48,468,000 yen; wool from 32,183,000 yen to 55,367,000 yen, and lumber from 43,498,000 yen to 81,647,000 yen. The largest decreases in imports were in rubber, which fell off by 2 million yen, raw cotton, which declined some 10 million yen in value, and machinery, which saw a decline of about 5 million yen.

Japan's total exports to China, however, amounted in value to 319,847,000 yen, as against 274,816,000 yen for the previous year; while imports from China totalled only 175,644,000 yen, as compared with a value of 178,610,000 yen the year before. China thus continues to be one of Japan's best customers, leaving her a favourable trade balance of 144,203,000 yen for the year. Japan's trade with other nations may be briefly analysed as follows:—

	1914.	1921.	1922.
	Yen.	Yen.	Yen.
ASIA.			
Imports	288,445,000 ..	591,122,000 ..	671,180,000
Exports	252,291,000 ..	567,140,000 ..	610,687,000
EUROPE.			
Imports	150,885,000 ..	247,363,000 ..	390,195,000
Exports	82,171,000 ..	63,471,000 ..	138,054,000
NORTH AMERICA.			
Imports	81,806,000 ..	452,416,000 ..	567,213,000
Exports	185,907,000 ..	436,968,000 ..	668,502,000
SOUTH AMERICA.			
Imports	2,625,000 ..	4,735,000 ..	6,925,000
Exports	485,000 ..	4,035,000 ..	9,282,000
AFRICA.			
Imports	6,741,000 ..	15,971,000 ..	15,470,000
Exports	2,272,000 ..	8,121,000 ..	10,170,000
OTHERS.			
Imports	19,834,000 ..	40,837,000 ..	82,497,000
Exports	15,970,000 ..	27,030,000 ..	42,307,000

An examination of the above table will show that export trade with Asia increased in value about 8 per cent. compared with the previous year, but as much as 150 per cent. compared with 1914, while exports with other countries show an encouraging increase. In imports there was also a general increase, except with Africa. The enormous gain of over 74 per cent. in raw silk exports is due to a decline in China and increased purchases in the United States. The increase in cotton yarns is also due to decreased output in China.

It will be seen that Japan's foreign trade is only just beginning to recover from the enormous inflation during the war, which left the country at the close of the war encumbered with vast quantities of manufactured goods and raw materials obtained at high costs. The holders attempted to dump their holdings on the foreign markets they had built up during the war, but not with great success. Indeed, a very large proportion of the markets gained during the war were lost through unsatisfactory prices and unequal goods. The trade gains during the war, however, were very large, the excess of exports piling up a favourable balance of some 1,400,000,000 yen between 1915 and 1918, while the national gold holdings increased from 353,000,000 yen to over 2,000,000,000 yen. With continued unfavourable trade balances since 1919 this total from excess of exports during and since the war has dwindled to about 300,000,000 yen, and indicates that the foreign markets captured during the war may be lost. The specie holdings have now declined to 1,833,000,000 yen, owing to payment of interest on loans abroad and sale of bullion to merchants. Of the sum in hand 670,000,000 yen is owned by the Government and 1,163,000,000 yen by the Bank of Japan, and of the total 1,215,000,000 yen is in Japan, and the balance, amounting to 618,000,000 yen, is abroad, chiefly in England and the United States.

Letters to the Editor.

STOCK EXCHANGE MONEY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The attention of the Committee of the Stock Exchange has been called to the concluding portion of an article headed "Stock Exchange Money," which appeared in your issue of the 10th instant.

They have directed me to inform you that they have ordered to be re-posted their notice of June 12, 1922, to the following effect:—

NOTICE.

In answer to an inquiry, the Committee for General Purposes have ruled that the provisions of Clause 3 of Rule 120 (now Rule 128(3)) do not apply to continuations. —I am, Sir, yours truly,

EDWARD SATTERTHWAITE, Secretary.

Committee Room, The Stock Exchange, London, E.C. 2, February 12th, 1923.

[Rule 128 Section 3 reads as follows:—A dealer requiring a Transfer to himself or his nominee under the provisions of Section 42 of the Finance Act, 1920, shall issue a numbered Ticket bearing a certificate in the following terms signed by the Dealer:—"Delivery on a Ten Shilling Stamp under the Finance Act, 1920, Section 42. I (We) certify that the purchase referred to in this Ticket was effected by me (us) in the ordinary course of my (our) business as a Dealer(s) on The Stock Exchange." The re-posting of this notice will call attention to a rule which does not appear recently to have been strictly adhered to.—Ed. Econ.]

FOREIGN TRADE STATISTICS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I be permitted to say how welcome your article on the above-named subject has been to readers of the *Economist* of all classes. Firstly, it has been welcomed by students who have long irked under the delayed issue of the annual statements of trade, and have lately been victimised by the increased price of the more bulky publications. Secondly, it has been welcomed by the very numerous body of clerks, overseers, &c., who have had to furnish to the civil authorities the much more

ample information—often descending to a meticulous nicety—that has been required in order to tabulate the over-grown details. And, finally, it has been welcomed by the over-burdened taxpayer, who neither uses and often never knows of these publications, but who has to pay the salaries of all civil servants alike, whether they are useful or redundant. By bringing the Blue Books back in size to that prevailing before the war an enormous reduction of staff can be effected and the swollen estimates will be reduced. As a case in point, which I consider is a fair sample of how the volume of statistics has grown, I would submit the instance of our imports of glass. In Volume I. of the Annual Statement of the Trade of the United Kingdom for 1913 [Cd. 7401], on pages 122 and 123, GLASS is dealt with under five headings, viz.:—(1) Window and German Sheet (including Shades and Cylinders); (2) Plate; (3) Flint, Plain, Cut, or Ornamented, and Manufactures of Flint Glass (except bottles); (4) Bottles; (5) Manufactures, unenumerated. These details of the weights of the imports of glass are given as coming from certain countries, and a very slight increase, from one page (as it was in 1913) to two, would have afforded a great deal more information. But what excuse for the waste of public time and money, and for the taxation upon students and those who have to supply the information to the Civil Service, can be advanced. Turning to page 175 of Volume II. of the Annual Statement of Trade for 1920, we find glass imports occupy pages 175 to 181, and are enumerated under 27 distinct headings.

It is pertinent to mention that the 1913 volume was published at the price of 5s 8d, but the 1920 volume was sold at £2!

In the hope that the *Economist* will justify its name, and help to put an end to the overgrown staff employed in producing such monstrosities.—I beg to remain, Sir, your obedient servant,

H. JAMES ROBINSON.

Isleworth, February 7th, 1923.

Books and Publications.

A LONDON DIRECTORY.*

THIS is the 124th annual publication of this excellent London directory. It is stated that the present volume contains over 300,000 corrections, which are practically all caused by the changes which have taken place in the population of London in the 12 months which have elapsed since the previous edition was published. Among the new trades which have made their appearance for the first time are the following:—Arseno-argentum manufacturers, box-strapping machines, cocktail shakers manufacturers, esparseno manufacturers, galalith merchants, hotel keeping (instruction in), Laddknit machine manufacturers, motor-hearse builders, osmiridium makers, preservers of ferns and flowers, spirit vapour (spirit gas) lamps, steel drum reconditioners, sugar technologists, table-cloth manufacturers (waterproof), town planning consultants, and additional headings relating to the wireless trades. The Parliamentary section contains names and addresses of the members of the newly-elected House of Commons, together with particulars of all changes in the personnel of the Ministry, &c., consequent on the change of Government. The book contains over 3,900 pages, deals with the whole of the administrative County of London, and forms a reliable and up-to-date guide to the commercial, professional, political, municipal, official, legal, postal, banking, and private life of the County of London. In short, a necessity in every busy office.

An Economic Survey of Present-Day Russia. By Captain A. H. Mitford. (London) Association of Secretaries of British Chambers of Commerce.

This is an interesting, short but comprehensive survey of present-day conditions in Russia, although statistics in many instances should not be accepted at their face value, it being well to apply some measure of discount. For instance, in the Soviet official harvest estimates and estimates of food requirements we note that figures are given which, when compared with statistics published by the League of Nations, appear to be very optimistic.

IV. Statistical Appendix.....

THE PAST YEAR.

THE past year is one in which the economic life of the nation has been at a very low ebb. In 1921 the temperature dropped suddenly when the war and post-war fever had spent itself. But the crisis past, the patient has been lying in an exhausted but quiet condition, and without being unduly hopeful, we may say that he has been slowly but surely gaining strength. In an ordinary trade depression the pointers which we should need most carefully to scrutinise at this stage are the rate at which stocks have been liquidated, the adjustment of wages and other costs to the new price level, the credit situation, &c. These factors are to-day of first-class importance, but they are overshadowed by political considerations. Indeed, if it were necessary to summarise the situation in 1922 in a sentence, we should say that it was a year in which, so far as Great Britain and most of the countries of the world are concerned, a trade recovery for which the economic conditions were favourable was held in check and delayed by the state of international politics. These disturbing influences have been found in Europe and the Near East, for outside Europe political conditions have been fairly normal, while in India and Egypt, the former of which exercises an immense influence on British prosperity, the political conditions have definitely improved. In Russia the great famine of 1921 was succeeded by a much better harvest, but though some small beginnings of trade have shown themselves, Russia remains practically outside the orbit of the world's commerce, and that fact alone remains a very depressing influence. The main source of trouble, however, has been Central Europe, where the failure to reach satisfactory settlement of the Reparations question has kept the exchanges in a state of chaos, the mark having fallen during twelve months from 795½ to the £ on January 1, 1922, to 33,500 to the £ on January 1, 1923, and to 192,500 on February 1, 1923. This collapse has been so serious and caused such unsettlement that whereas previous reductions in the value of the mark have stimulated German export, there has been no similar movement in 1922. Germany's population has been fairly well employed, but it has been engaged upon making things for consumption rather than for the development of industrial plant, &c. Circulating capital has been steadily dwindling, and as foreign speculation in the mark has finally ceased, her foreign balances have been to some extent used up in paying for the

necessary imports that she has purchased abroad. Some of the minor States of Europe have made a valiant effort to balance their budgets, while at the end of the year Austria, which at one time seemed, next to Russia, to be in the most parlous condition of the European States, has, with the help of the League of Nations, put into effect a scheme of drastic reform, which had the effect of stabilising the krone. But with these exceptions the monetary condition of Europe remains precarious, and her purchases from other continents are still greatly reduced. This has limited the demands for the products of the countries producing food and raw materials, and, when taken in conjunction with the fact that every one of these countries has had to liquidate stocks to cope with a heavy fall of prices, and to regularise a state of over-trading, accounts for the restricted demand overseas for British goods. America and, to a less extent, Canada have enjoyed a marked recovery of trade, but even in America the inability to dispose of raw products in Europe has kept prices low, limiting the buying power of the farming community, and prevented the recovery from gaining momentum or becoming a boom. Most of the countries of the world outside Europe have indeed experienced ample harvests, but the world's lack of buying power has kept their prices at a low and unremunerative level. A short statement of the situation in each of the main countries of the world follows this outline of the situation in Great Britain.

But if the lack of overseas orders has been the overriding influence and has kept trade depressed, the indices of the economic situation all show a small definite improvement. The figures of overseas trade show that in volume our exports, though over 30 per cent. below the pre-war level, practically recovered to the level of 1920, coal output was the highest since the war, while iron and steel production, which reflects the ups and downs of trade in perhaps a more exaggerated form than any other industry, rose, in the case of steel, from an output in January at the rate of 40 per cent. of our maximum production to 70 per cent. of our maximum production in December, 1922. The tonnage of goods handled by railways was better, bankers' advances for financing trade showed an improvement, and finally, the recovery was reflected in a drop in the unemployment percentage, which fell from 17 per cent. at the beginning of the year to 14 per cent. at its close. This process of recovery was assisted by a steady adjustment of wages to retail prices, which, in their turn, fell in the early part of the year nearly to the level already reached by wholesale prices, the adjustment fortunately being carried out with very few open ruptures, with the one important exception of the engineers' lock-out in the spring. Indeed, the wage movements of the year included not merely the reduction in accordance with the falling cost of living in miscellaneous employment, but it actually saw a rise in the two trades where the depression was most acute, namely, iron and steel and coal, so that at the end of the year the relations between the wages of various groups of workpeople had become once again much more normal. Unfortunately, this process has meant that, in the case of agriculture, earnings in some parts of the country had sunk to the exceedingly low standard which was driving men from the land before the war. In the cotton trade also, earnings at one time recovered appreciably above the level to which they fell during 1921, but in the autumn Lancashire had a set-back, which began with the crisis between England and Turkey in the Near East. At the close of the year there were renewed signs of improvement, and the figures for the twelve months show an export comparable with those of 1920.

The rapid fall in prices, and the deep trade depression of 1921 played havoc with the Budget estimates

for the year that ended on March 31, 1922. Total receipts at £1,124,880,000 were over £91 millions below estimate, while total expenditure, at £1,079,187,000, fell short of estimate by nearly £67 millions. The chief cause of the revenue falling below estimate was the fact that, owing to bad trade, the corporation profits tax and arrears of excess profits duty were very disappointing. The Budget for 1922-23, introduced by Sir Robert Horne at the beginning of May, had as its chief features the reduction in the standard rate of income tax by 1s in the £, and the remission of 4d per lb in the standard rate of duty on tea. The Chancellor estimated for a drop of £87 millions in the yield of taxes and of £81 millions in "special receipts," while the expenditure estimate of £910 millions was £169 millions below the actual expenditure figure for the preceding year. Up to the end of 1922 the revenue and expenditure figures were sufficiently favourable to raise the hope that the result to be declared next March 31st will be better than the estimates. But whether that hope will be realised, and also how the new Chancellor will meet the revived demand for further reduction of the tax burden, are two questions to which the history of 1923 must be left to provide the answer. To the story of the current year belongs also the agreement between this country and the United States on a plan for funding the British war debt—an agreement which it is hoped will pave the way to a growth of co-operation and harmony between the two nations.

OVERSEAS TRADE.

The total turnover of British overseas merchandise trade in 1922 was £1,828 millions, as compared with £1,897 millions in 1921 and £3,490 millions in 1920. Although prices were more stable than in 1921, the factor of price changes again vitiated the comparison of value figures, which for 1922 and 1921 read as follows:—

	Calendar Year.		Decrease in 1922.
	1921.	1922.	
Imports	£ 1,085,500,061	£ 1,003,918,124	- 81,581,937 - 7.5
British exports ..	703,399,542	720,496,426	+ 17,096,884 + 2.4
Re-exports	106,919,306	103,777,871	- 3,141,435 - 2.9
Total exports	810,318,848	824,274,297	+ 13,955,449 + 1.7
Excess of imports over total exports	275,182,213	179,643,827	- 95,538,386 - 34.7

These figures refer to merchandise only, and the bullion and specie figures compare as follows:—

	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
1920	£ 50,678,283	£ 92,565,137	£ 9,923,034	£ 11,493,266
1921	49,676,047	59,348,158	10,264,443	12,045,422
1922	34,543,591	44,851,917	10,100,552	13,235,269

Perhaps the most remarkable feature of British overseas merchandise trade in the past two years is that in that period nearly £200 millions have been knocked off the excess of imports, the reduction in 1921 having been similar to that recorded above for 1922. The 1922 figure of £180 millions, or £15 millions a month, compares with an average of about £11 millions a month just before the war, and should be well within the capacity of our invisible exports to cover. It is, indeed, beyond doubt that Great Britain has worked back to a position in which she again enjoys a favourable trade balance of substantial dimensions, though the margin is still far below that of pre-war years. How the balance of merchandise trade has moved since 1913 may be seen below:—

	Excess of Imports.		Excess of Imports.	
	Mins. of £		Mins. of £	
1913	133.9		1918	783.8
1914	171.7		1919	662.8
1915	367.9		1920	375.4
1916	344.6		1921	275.2
1917	467.4		1922	179.6

From £783 millions to £179 millions is a long journey to have accomplished in four years.

The following table of British exports shows the substantial increase that took place in 1922:—

	EXPORTS.		
	Quantity (000's omitted).		
	1920.	1921.	1922.
Coal	24,932	24,661	64,198
Pig-iron and ferro-alloys ..	579	136	794
Railway material	311	340	480
Total of iron and steel and manufactures thereof	3,251	1,697	3,401
Textile machinery	63	157	155
Total machinery	462	506	403
Cotton yarns	147,432	145,895	201,221
Cotton piece-goods	4,435,405	2,902,289	4,181,176
Wool tops	238	347	416
Woollen tissues	187,233	76,556	121,489
Worsted tissues	77,355	40,814	62,458
Linen piece-goods	93,045	39,962	77,421
Boots and shoes	819	313	492
Leather	271	228	232
Paper and cardboard	2,350	1,463	2,455
Locomotives	43	47	32
Motor-cars and chassis	8	4	3

Coal is the most remarkable feature, exports having recovered to within measurable distance of the pre-war level. Iron and steel exports, with an increase over 1920, are also satisfactory. In both these industries activity increased in the later months of the year. While it must be remembered that comparison with 1921 is vitiated by the long coal stoppage that took place that year, the recovery in exports is pronounced in many cases. Statistics produced by the Board of Trade Journal show that in volume last year's imports were 85.8 per cent., re-exports 81.5 per cent., exports of United Kingdom goods 68.9 per cent. of the volume passing in 1913. Exports have increased in volume relatively to 1913 quarter by quarter (with the exception of the second quarter of 1922, when the effect of the engineering stoppage was felt) since the low point reached during the coal stoppage of April to June, 1921. The statistics of shipping tonnage engaged in overseas trade amplify the evidence of the returns themselves that a larger volume of commerce was passing in 1922. The tonnage cleared with cargoes from British ports in 1922 was 59.7 million tons, as compared with 36.4 millions and 36.7 millions in 1921 and 1920 respectively. For this large increase the big rise in exports of coal must be responsible in an important degree.

HOME TRADE.

The improvement indicated in the foreign trade figures, especially for the later months of the year, finds its counterpart in such precise data of home trade as are available. The production figures for coal, iron, steel, shipbuilding, given in later pages, show the gradual process of recovery that has been achieved; the imports of wool and, in a lesser degree, of cotton confirm the substantial character of the improvement that set in towards the close of 1922. The process of climbing up from the dead level of 1921 has been a painful one; but in the case of nearly all our major industries, it can be traced in the trade reports. Shipping and shipbuilding remain depressed, and the high unemployment figures show how much leeway has still to be worked off; but even here the whole tendency is upward, and at the close of the year it was possible to feel that, provided no new blow were levelled at it, home trade had turned the corner.

So far as they are available, the statistics of the profits of industrial companies also show that the corner has been turned. The following table compares the profits disclosed in 1922 with those disclosed in 1921 by 1,371 industrial companies, from which it will be seen that the profits disclosed in the last quarter were higher than in the corresponding quarter of 1921:—

the corresponding

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).						
	No. of Cos.	Reports Published in		Increase.		Decrease.
		1921.	1922.	£	%	
First quarter	442	47,368,926	26,785,952	£	%	20,582,974 43.4
Second quarter	401	38,044,790	25,195,690	£	%	12,849,100 33.7
Third quarter	209	15,453,920	12,120,153	£	%	3,333,767 21.5
Fourth quarter	319	23,310,452	24,228,719	918,267	3.9	
	1,371	124,578,068	88,330,514	£	%	36,247,554 29.0

These figures should be read in conjunction with the next table, which shows the increase or decrease in net profits disclosed in each quarter since the beginning of 1918:—

	1918.	1919.	1920.	1921.	1922.
First quarter	- 1.0 ..	+ 10.4 ..	+ 26.9 ..	+ 3.5 ..	- 43.4
Second quarter	- 5.8 ..	- 5.1 ..	+ 37.8 ..	- 8.4 ..	- 33.7
Third quarter	+ 12.3 ..	- 3.4 ..	+ 41.9 ..	- 42.4 ..	- 23.5
Fourth quarter	+ 4.7 ..	+ 10.5 ..	+ 27.1 ..	- 52.9 ..	+ 3.9

The small increase shown in the last quarter of 1922 follows, it will be seen, a decline of nearly 53 per cent. in the last quarter of 1921, and too much importance must not be attached to it. At the same time, it indicates that the decline has been checked. The percentage earned on ordinary and preference capital, and the distribution on ordinary capital has naturally been reduced, as may be seen from the figures below:—

PROFITS ON CAPITAL.

	Return on Preference & Dividend on Ordinary Capital.	Preference Capital.	Dividend on Ordinary Capital.
	%	%	%
1909	7.4	4.3	6.3
1910	8.2	4.5	7.0
1911	9.9	4.9	8.5
1912	10.2	5.2	8.5
1913	11.7	5.1	10.2
1914	10.9	5.0	10.0
1915	10.2	4.8	9.0
1916	13.2	5.1	11.0
1917	13.3	5.1	10.3
1918	13.6	5.1	11.1
1919	13.0	5.3	10.7
1920	15.2	5.0	12.6
1921	10.3	5.2	10.2
1922	7.0	5.2	8.4

The average rate paid on ordinary capital in the third quarter fell to 7.6 per cent., but there was an increase to 8.6 per cent. for the last quarter. The average for 1922 is the lowest since 1910, and well below the averages of 1913 and 1914.

While the total figures of Bankers' clearings cannot be taken as a definite index to the state of trade, since the "town clearing" figures are so large, and reflect principally the enormous turnover of the money market and other financial operations, those for the metropolitan and country cheque clearing can be regarded as some criterion. As will be seen from the following table, there was a decline in both metropolitan and country clearing totals, some of which must be attributed to the influence of lower commodity prices:—

	1921.	1922.	Increase or Decrease.
	£	£	£
Town clearing	30,268,214,000	32,780,635,000	+ 2,512,421,000 + 8.3
Metropolitan clearing	1,660,166,000	1,574,661,000	- 85,505,000 - 5.1
Country cheque clearing	3,002,179,000	2,806,165,000	- 196,014,000 - 6.5
Grand total	34,930,559,000	37,161,461,000	+ 2,230,902,000 + 6.3

In the figures relating to the metropolitan clearing, the trade of the metropolis is reflected fairly clearly, and they show that, although the decrease for the year is £85,505,000, this decrease, when distributed among the quarters, shows a diminishing ratio, although the last quarter is not so satisfactory as the third. Of the year's total decrease, 59.4 per cent. occurred in the first quarter, 19 per cent. in the second, and 78.5 per cent. in the first six months. The figures of the country cheque clearing, where the movements of the general trade of the country are clearly seen, follow the same course, quarter by quarter, as the metropolitan clearing. Of the total decrease of £196,014,000, £137,594,000, or 70.1 per cent., is recorded in the first quarter, and £31,784,000, or 16.2 per cent., in the second quarter, while by far the larger portion of it, or 86.4 per cent., occurred in the first half of the year. The increases in the town clearings quarter by quarter show a progressive decline, having been 14.8 per cent. in the first, 14.3 per cent. in the second, 5.7 per cent. in the third, and 1.3 per cent. in the fourth quarters. Of the ten provincial clearings, four show increases and six decreases as compared with 1921. Increases are shown by Hull, 10 per cent.; Leicester, 2.3 per cent.; Manchester, 4.4 per cent.; and Newcastle, 3.4 per cent.; while the decreases

are Birmingham, 6.2 per cent.; Bristol, 10.5 per cent.; Leeds, 5.4 per cent.; Liverpool, 4.8 per cent.; Nottingham, 5.6 per cent.; and Sheffield, 13.2 per cent.

The figures of the tonnage carried by the railways of Great Britain can be taken as a further guide to the state of internal trade. A comparison with 1921 is, however, vitiated by the disorganisation caused by the three months' coal dispute of that year. The figures for the full year are not yet available, and in the table below, therefore, we show the figures up to the end of November in 1921 and 1922:—

FIRST ELEVEN MONTHS.				
	1921.	1922.	Increase.	
	Tons.	Tons.	Tons.	%
General merchandise	51,143,479	53,762,478	+ 2,619,099	+ 5.1
Coal, coke, and patent fuel	119,889,306	192,436,387	+ 72,547,081	+ 60.5
Other minerals	37,661,558	46,941,647	+ 9,280,089	+ 24.6
Total	208,694,243	293,140,492	+ 84,446,249	+ 40.5

In the full year 1913 the total was over 366 million tons, general merchandise accounting for 69½ million tons. A good deal of the difference between this and the 59 million tons which will probably prove to be the figure for 1922 is to be accounted for by the transfer of a considerable amount of short-distance traffic to the roads.

COMMODITY PRICES.

After nearly two years of rapidly falling commodity prices some degree of stability was reached in 1922. The net change in our Index Number was 93 points, the year closing with the total at 4264, which compares with 4357 at the end of 1921. The highest point, 4396, was reached at the end of July, and the lowest, 4180, at the end of August, so that the widest fluctuation was 207 points. This is in marked contrast to the movements of the three preceding post-war years. In 1921 the difference between the highest and lowest points was 1260; in 1920, 2428, and in 1919, 1656. The following table shows the year's movements in each of the five groups:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Base (avg. 1901-5)	500	300	500	400	500	2200	100.0
End July, 1914	879	332	810	404	553	2568	116.6
Dec., 1915	897	446	731	711	848	3634	165.1
Dec., 1917	1286	686	1684	839	1348	5845	263.2

Dec., 1921	921	636	1106	762	951	4357	198.0
Jan., 1922	907	654	1066	730	925	4284	194.7
Feb., 1922	948	640	1037	696	936	4259	193.6
Mar., 1922	980	687	1038	700	892	4297	195.3
Apr., 1922	1008	667	1010	709	890	4285	194.8
May, 1922	1040	657	1079	710	885	4372	198.7
June, 1922	1000	676	1135	690	887	4389	199.5
July, 1922	994	669	1120	712	900	4396	199.8
Aug., 1922	880	674	1123	691	887	4257	193.5
Sept., 1922	873	682	1116	699	818	4189	190.4
Oct., 1922	885	700	1150	712	813	4260	193.6
Nov., 1922	864	703	1200	704	811	4283	194.7
Dec., 1922	861	706	1184	705	807	4264	193.8

Thus, while three of the groups fell substantially there were considerable increases in the other two. Primary foodstuffs as a whole rose in the first part of the year, and declined in the second. In subsidiary foodstuffs, the changes principally represent reaction from the heavy declines of 1921. In the textile groups, the principal movement was the recovery in wool prices after an abnormal drop in 1921. American cotton rose on balance, but Egyptian cotton was lower. Cotton yarn was higher, but cloth fell slightly. The monthly changes in the last two were in the same direction, but yarn showed larger movements when prices were rising. In the minerals section the largest declines were in iron bars and coal. The movements in iron and steel in 1922 were much smaller than in 1921, when heavy cuts were

made with the object of countering foreign competition. The minor metals showed very little change on balance. The decline in the miscellaneous group was fairly evenly spread over the year, apart from sharp reductions in petroleum, indigo, and soda in September.

At the end of 1922 our Index Number showed that wholesale prices were 66.2 per cent. higher than at the outbreak of war, which compares with 60.6 per cent. at the end of 1921, and 225.6 per cent. at the end of March, 1920, the highest point reached. The table below, in which the indices at the end of July, 1914, are taken as 100, shows the movements in each group:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914 ..	100	100	100	100	100	100.0
Dec., 1918 ..	226	222	293	186	241	237.5
Dec., 1919 ..	249	250	396	247	263	287.1
Mar., 1920 ..	261	260	484	269	309	325.6
Dec., 1920 ..	233	229	209	261	230	230.9
Dec., 1921 ..	159	180	180	164	168	169.6
June, 1922 ..	174	192	184	149	160	171.1
July, 1922 ..	172	190	181	153	163	171.4
Aug., 1922 ..	153	192	183	149	160	165.9
Sept., 1922 ..	151	194	181	150	148	163.5
Oct., 1922 ..	153	199	187	154	147	166.1
Nov., 1922 ..	150	200	195	152	148	167.0
Dec., 1922 ..	149	200	193	152	146	166.2
Jan., 1923 ..	149	201	196	159	146	168.6

Other foods and textiles are thus still the furthest from the normal as they were a year ago, and the miscellaneous group has dropped to the lowest place, being only 46 per cent. above the pre-war figure.

The next table shows the position of wholesale prices in some of the principal foreign countries, the average for 1913 being taken as 100:—

	United States.	France.	Italy.	Germany.	Switzerland.	Sweden.	Denmark.	Japan.
Nov., 1918	205	358	438	..	367	292	214	322

* Altered to include 16 finished industrial products.

There was a further steady decline in retail prices, as may be seen from the Ministry of Labour's cost of living index, which gives the average percentage increase since July, 1914, in food, rent, clothing, fuel, and light, &c.:—

	1920.	1921.	1922.	1920.	1921.	1922.

				December ..	169	99

As in the case of wholesale prices, movements during the year were much smaller than in 1921.

Railway and shipping freights, which are important elements in the cost of production, are not covered in our index number. Except for a small reduction in the rates for iron ore and limestone for blast furnaces and steel works, which took effect on November 1, 1921, industry went through the depression of that year with railway rates at 100 per cent. over the pre-war level, with a flat-rate addition. With wholesale prices tumbling, this was more than the industries of the country could stand, especially those which required the assembling of bulky raw materials in the manufacture of their product.

Many negotiations, therefore, took place towards the end of 1921 and during 1922 between traders and the railways for reductions in rates, and concessions came into force on January 1, May 22, August 1,

and December 1, 1922. On account of the volume of the traffic concerned, and the comparatively low value of the material, the biggest concessions were granted to iron ore and limestone for blast furnaces and steel works, which since December 1, 1922, have been at 40 per cent. over pre-war, with a flat-rate addition of 2d per ton and a maximum increase of 1s. Next come coal, coke, and patent fuel and iron and steel, which are 60 per cent. above pre-war, with a small flat-rate addition, while the bulk of goods traffic has been, since August 1st, at 75 per cent. above pre-war, also with a small flat-rate addition.

The reductions for general merchandise which took effect on August 1st were negotiated by the Federation of British Industries, who undertook that they would ask for no further reduction to come into operation before July 31, 1923. The concessions taking place on December 1st, therefore applied only to the iron and steel industry, which was not a party to the general settlement. The increased railway dividends recently announced, however, will probably lead traders generally to hope that the railway companies will volunteer some reductions without pressure from outside.

Passenger fares, which were raised some time after goods rates, have had to wait longer for revision, but when the reduction came it was to a level of 50 per cent. above pre-war, compared with 75 per cent. for goods traffic generally.

Owing to the excess of tonnage and the limited volume of goods to be carried, shipping freights continued to fall for the first nine months of 1922.

Taking 1920 as 100, the average of freights during 1921, according to the Chamber of Shipping, was 37.6; in January, 1922, the index number stood at 33.0, and by September had fallen to 26.7. With increasing overseas trade many laid-up ships were recommissioned, and freights began slowly to increase until in December the index number was 31.0. The amount of idle tonnage laid up in the 36 principal ports of the United Kingdom on January 1, 1923, was 732,000 tons, or nearly 600,000 tons less than on January 1, 1922.

MONEY MARKET.

The year 1922, so far as the money market is concerned, will be remembered for the fall in money rates in the first seven months of the year. Bank rate, which was 5 per cent. when the year opened, was lowered to 4½ per cent. on February 16th, 4 per cent. on April 13th, and 3½ per cent. on June 15th; on July 13th 3 per cent. became the official minimum, and has remained so from that date. There was a slight upward tendency in money rates in the second half of the year, which was manifested in the last quarter by a stiffening in the rates at which the weekly parcels of Treasury bills were issued by tender. Important features of the money market's history during the past year have been the reductions in the deposits and securities held by the Bank of England, and in the volume of outstanding Treasury bills. Both these movements have had the effect of reducing the amount of purchasing power in the hands of the public, though in the case of each of them the deceptive half light thrown on monetary matters by banking and official figures makes it dangerous to draw very definite conclusions about the extent to which this reduction of purchasing power has proceeded.

To the discount market the year has been fairly comfortable, for although the margin between it and poverty was narrow, it received a handsome bonus from the hands of the banks at the expense of their depositing customers, because when Bank rate came down to 3 per cent. the banks, nevertheless, still kept the wide margin of 2 per cent. between it and their published rate on deposits, which came down to 1 per cent., and consequently, according to the modern convention, made weekly advances to the bill brokers at 1½ per cent. often at times when they were paying the Bank of England 3½ per cent. for loans.

The year was a profitable one for the discount companies, whose net earnings showed a considerable in-

crease on those for 1921, thanks largely to the appreciation in the value of gilt-edged securities. The banks were not able to make such high profits as in the previous year, but dividends were maintained at the same rates, allocations to reserve funds being on a smaller scale. The balance-sheets give strong evidence of contraction, deposits for the first time since the beginning of the war showing a considerable decrease in the year. The following table gives the weekly average balances for the last month of each quarter for the nine English clearing banks, and also the balance-sheet figures at the end of 1921 and 1922:—

	Weekly Averages.					Dec. 31, 1922.
	Dec. 31, 1921.	March, 1922.	June, 1922.	Sept., 1922.	Dec., 1922.	
Capital and reserves	115.9	115.9	115.9	115.9	116.0	116.1
Acceptances	59.1	57.1	55.2	49.9	72.8	73.0
Deposits (incl. undiv. profits, &c.)	1,813.5	1,746.9	1,755.2	1,660.6	1,684.7	1,687.8
Total Liabilities	1,988.5	1,919.9	1,926.3	1,826.4	1,873.5	1,876.9
Coin, notes, balance at bank, and cheques in course of collection	295.7	245.8	251.3	233.2	253.0	279.9
Money at call	105.1	102.5	113.0	104.4	106.0	107.5
Investments	341.0	392.7	412.0	405.6	384.5	385.7
Discounts	409.1	350.5	346.2	295.9	298.3	278.9
Loans and advances	750.8	746.2	723.3	711.3	732.7	728.1
Cover for accept., premises, &c.	83.8	82.2	80.5	75.8	99.0	98.8
Total assets	1,988.5	1,919.9	1,926.3	1,826.4	1,873.5	1,876.9

Acceptances, which may generally be taken as some criterion of the state of foreign trade, are higher on the year, having increased substantially in the last quarter. Advances, on the other hand, are very much lower on balance, though there was here also an increase in the last quarter. Discounts have fallen, while investments are higher as a result partly of a change in investment holdings from Treasury bills to Treasury bonds, the former being included under bills discounted.

land, Sweden, and Japan have not fluctuated far from dollar parity, while Spain has been steady at about 20 per cent. below parity. In the case of Switzerland, the greater part of the fall in the third quarter, caused by fears of a capital levy, was recovered before the end of the year. Another group in which fluctuations have been wider includes France, Belgium, Italy, Norway, and Argentina. The Prague and Helsingfors rates registered a very definite improvement, but the majority of the remaining European currencies have shown a further depreciation of greater or less degree. The course of the sterling rate in New York, the most important in the exchange market, was satisfactory from this country's point of view. As will be seen from the table below, giving the highest and lowest of each month for dollars, French francs, and German marks, there was a fairly steady appreciation in the value of sterling in terms of the dollar, with slight relapses in July and September:—

At the close of the year sterling was some 40 cents higher than at the beginning. The recovery is due to a relative improvement in our foreign trade, to the fall in prices here and the rise in prices and expansion of credit in the United States, to a growing faith in the financial and economic position of Great Britain, and to lower purchases of raw materials from America by this country. Towards the close of the year the transfer of large balances, formerly held in this country, back again to London was responsible for some sharp upward movements.

The principal European exchanges have been under the cloud of reparations difficulties, and the movement of the franc has depended largely upon that of the German mark. While the former was fairly steady, with an improving tendency during the first five months, the collapse of the mark in the summer began to crush the hopes of the French of securing the substantial payments of reparations, and drew attention to the state of French public finances. Hitherto the French Government has been able to rely upon the remarkable saving power of the French people, but it was becoming apparent in the autumn that the confidence of the investor was losing its strength, and with the French Government spending about twice as much as it was obtaining from taxation and other revenue, the outlook was distinctly unsettling. There was some slight recovery in the franc towards the end of the year, but the occupation of the Ruhr at the beginning of January caused a further collapse, both in the franc and the mark.

The following table is extracted from statistics published by Messrs Samuel Montagu and Co.:—

RATE OF EXCHANGE AS COMPARED WITH PRE-WAR PARITY OF THE £ STERLING.

	Pre-War Par Value.	December 31, 1922, Middle Rate.	Compared with its Pre- War Par Value the £ Sterling is at a Premium of		Purchasing Power of the £ Sterling as Compared with its Pre War Value.

NEW CAPITAL ISSUES.

New capital applications in the London market in 1922 amounted to £573.6 millions, against £388 millions in 1921. Of last year's total the British Government took £369 millions, as compared with £202 millions in the previous year. Colonial Governments absorbed £58 millions, or about £15 millions less than in 1921. The figures for each quarter for a number of years, and the purposes to which the new capital issued during the past year was put, are set out in an appendix to this supplement.

British Government borrowings were made up as follows:—5½ per cent. Treasury bonds, £115.1 millions; 5 per cent. Treasury bonds, £110.1 millions; 4½ per cent. Treasury bonds, £68.9 millions; National Savings Certificates (net sales), £58.4 millions; 3 per cent. Local Loans stock, £17.1 millions. These figures, it will be seen, exclude temporary borrowings by Ways and Means advances and Treasury bills. The proceeds of the large issues of Treasury bonds mentioned above were used to replace Treasury bills, the outstanding amount of which was reduced in 1922 by about £300 millions. Five foreign Governments visited the market, and a number of foreign municipalities. Four French railways raised loans, but the

only Home railway issues were on behalf of London's underground railways. Turning to industrial borrowers, we find a big drop in the manufacturing class, but the shipping list is heavier, and there was a larger demand for new capital from the iron and steel, coal, and engineering group. Oil issues were large. Of the 1922 total of £573.6 millions, £443.5 millions were destined for home employment, £74.9 millions for British Dominions and possessions, and £55.2 millions for foreign countries. The average rate paid on new industrial debentures was 6.72 per cent., as compared with 8.09 per cent. in 1921 and 5.5 per cent. in 1913. Of the year's total applications, £526.7 millions took the form of bonds or debentures, £30.8 millions of preference shares or stocks, and £16.1 millions of ordinary stocks and shares.

GOLD PRODUCTION.

Again a decline in the world's gold output has to be recorded. Unfortunately, the total output of £65 millions for 1922 shown in the table below was affected by the deplorable labour dispute on the Rand, which lasted from January to March. This is estimated by one prominent authority to have decreased the Rand output during the year by £6 millions. As the previous year's production amounted to £68 millions, but for this set-back the corner would have been turned and we should have been able to record figures of gold production as once more moving in the upward direction. Indeed, the monthly figures of production for the Transvaal from July last show a continuous improvement when compared with the corresponding month in 1921.

The table given below is taken from Messrs Samuel Montagu and Co.'s annual bullion letter for 1922, and shows the world's estimated production from 1913 to 1922:—

GOLD PRODUCTION.

(Million £'s.)

Year.	Transvaal.	The Rest of the Empire.	Foreign Countries.	World.	Drop as Compared with 1915 (the Max'm) Output.
					Transvaal. British Empire. World.
1913	37.4	21.4	58.8	35.9	94.7
1914	35.6	20.9	56.5	33.9	90.4
1915	38.7	22.0	60.7	35.7	96.4
1916	39.5	20.1	59.6	33.9	93.5
1917	38.3	17.8	56.1	30.2	86.3
1918	35.8	15.2	51.0	28.0	79.0
1919	39.4	14.6	50.0	29.0	75.2
1920	34.7	13.3	48.0	21.0	69.0
1921	34.5	12.9	47.4	20.6	68.0
1922 (est.)	29.8	14.2	44.0	21.0	65.0

For the purposes of this table gold is taken at 84s 11½d per fine ounce. In the British Empire, as before-mentioned, the Transvaal is lower and Australian production also declined by about half a million; slight decreases are also shown for India and West Africa. Canada, however, continues to increase its output, the figures improving from just over £3¼ millions to over £5¼ millions. Rhodesian output has also expanded slightly. From 1916 to 1919 the United States production has tended to fall away, dropping from 4,479,000 ounces in 1916 to an estimated 2,375,019 for 1922. Yields from Russian and Mexican mines are comparatively unimportant, Russia contributing in 1913 1,282,000, and Mexico 934,000 ounces.

THE STOCK EXCHANGE.

The most important event, perhaps, in the Stock Exchange year is the fact that all restrictions imposed during the war were removed in May. Thus with few exceptions all pre-war facilities for free dealing in stocks and shares were restored. The most important exception is that the system of cash dealing is still retained in the gilt-edged market. During the year, naturally, the reduction in money rates led to a rise in the quotation of most fixed interest-bearing investment securities. But slight waves of depression during the latter half of the year caused quotations of gilt-edged stocks to react a little from the highest levels touched. In the *Bankers' Magazine* for January a statistical review of Stock Exchange values appears, and it is pointed out that "there have been few years when the

rise in public securities has been so remarkable as in 1922." Since December, 1921, there has been a net improvement in its list of representative Stock Exchange securities of no less than £712 millions, or 13.2 per cent., in the market value of the 387 securities, 94 fixed stocks increasing by £395 millions, or 11 per cent., and 293 variable dividend securities by £317 millions, or 17.6 per cent.

Movements in investment values may be judged in detail by examining the quotations of a few of the most important British Government securities during the year. For instance, Consols finished up the year 1921 at 50½, at which price they gave a yield of £4 19s 6d per cent. At the half-year the quotation was 57½, giving a yield of £4 7s 3d. At the end of the year the price had fallen to 55½, with a yield of £4 10s. Five per cent. War Loan opened at 92½, and closed the half-year at 99½; at one time 102½ was touched, but the quotation in December had dipped to 99½. In 1920 War Loan fell as low as 82. The 3½ per cent. Conversion Loan—the representative long-dated British Government security—opened at 66½, moved to 77½ in June, but drifted away to 76½.

As in previous post-war years, once again movements of foreign Government stocks closely followed the exchanges, French and German securities responding without fail to the violent fluctuations of the exchange barometer. For a time the substantial offerings on the London market of French railway securities, backed by the French Government, caused mild excitement, and premiums were secured, only however to be lost, as pessimistic views were taken of the financial outlook in France. French 5 per Cents. at the end of 1921 were quoted at 42. During the year they rose as high as 48½, and fell as low as 24½, a marking of 32 was obtained at the end of 1922. German securities have gradually fallen in value, and the position has now been reached when holders are not troubling to detach interest coupons for collection purposes.

Home railways received remarkable attention from the public during 1922, both investors and speculators giving support. The various railway grouping schemes were responsible for immense market activity, and a huge volume of business was transacted as a result of rumours and official grouping announcements. Ordinary and deferred issues were specially sought after, but prior-charge stocks were also in demand. The latter, however, followed the course of other fixed interest-bearing securities. As in other markets, prices show improvements for American and Canadian railway securities. The increase in the value of the £ sterling in New York once again brings into sight the possibility of dealings on this side in greater volume. Details of price changes during the year in railway and other stock and share quotations will be found on later pages. (See Appendix G, page 382.)

The market for foreign railway securities was mainly interested in dealings in stocks of Argentine railways. Our statistical tables show the chief movements during the year, and it will be noted that the ordinary stock of Buenos Ayres and Pacific has advanced from 36½ at the end of 1921 to over 80. This substantial rise, however, was probably assisted by the announcement that negotiations were in progress for the transfer of the lease of the Bahia Blanca and North-Western Railway from the Buenos Ayres and Pacific Railway to the Buenos Ayres Great Southern Railway. But Argentine railway stocks all round made big advances, benefiting by the improvement recorded in their reports and accounts, and also by the prospects for the future.

The various industrial markets were very active during 1922, prices generally advancing all round. Oil investments, however, experienced a set-back, while prices fell away for a number of securities of undertakings which during the boom period were over capitalised or followed a reckless policy of finance or trading. Many industrial shares moved upward, in accordance with prospects and estimated profits of the promised trade revival. Banking shares improved on the year, and prices of insurance shares were higher, while a substantial appreciation in gas and electricity

supply securities and nitrate companies is to be found. Upward movements have been recorded in tobacco and textiles. There was a notable advance during December in iron and steel shares. Rubber has shown considerable activity, and small parcels of shares were easily absorbed at higher prices.

In spite of the better labour outlook on the Rand, the public was apparently not to be enticed, in numbers at least, into the mining markets, for although prices are higher on balance, markets were mainly supported by the professional element.

THE AGRICULTURAL YEAR.

As in 1921, farmers in 1922 had to face a dry spring, and when rain came at last it spoiled to a considerable extent the June hay crop. The latter half of the summer was without much sun, and caused haymaking to last until October. Late in September a short spell of settled weather was experienced, but the summer as a whole was a dismal affair, although crops eventually proved to be better than expected in some quarters. Indeed, the wheat yield eventually turned out to be at about pre-war standard, though not so good as the very heavy harvest secured in 1921. The farmer's pre-occupation was not, however, so much with his production as with the price he has been getting for his crops. The year 1922 was the first complete year of decontrol of agricultural prices, and the level of the price of wheat, which, though a small part of our agricultural output, is, on the whole, representative, was lower than at any time since the beginning of the war. English wheat opened at 10s 5d and closed at 10s per cwt, as compared with 20s at the beginning of 1921 and 16s 9d at the beginning of 1919. The year's price level, therefore (which is now quoted in hundredweights instead of quarters), represents a little over 40s a quarter, and is less than 20 per cent. above pre-war level. These reduced prices for agricultural produce have brought the agricultural question to the forefront in the political field, and the new Government at the end of the year, on Mr Lloyd George's suggestion, has appointed a Committee of Economists to examine the economic situation of agriculture in Great Britain in its widest possible aspects and with particular reference to its possibility of remaining an important source of employment; while a second Committee is also inquiring into the possibility of reducing the margin between the price received by the farmer and the price paid by the consumer.

The depression of prices in agriculture has had a serious effect upon agricultural labour, and as the Agricultural Board lost their compulsory powers more than a year ago, wages have fallen steadily to such a degree as to raise once more the economic problem which has troubled Great Britain for the greater part of the last 100 years—namely, that of maintaining an adequate standard of living in country districts. Economic forces are, in fact, exercising great pressure on the increased agricultural enterprise which was brought into existence by the war. It should, however, be added that the situation is in some respects relieved by the progress being made in poultry and egg farming and in some other forms of small agriculture in which the severity of international competition is less acutely felt.

The total arable land under cultivation fell from 11.6 million acres to 11.3 million acres, the area under wheat being practically unchanged. The year's yield of the principal crops is estimated to have been as follows:—

PRODUCE OF CROPS IN ENGLAND AND WALES.

Crops.	Estimated Total Produce.		Average Estimated Yield per Acre.		Average of the Ten Years 1912-1921.
	1921.	1922.	1921.	1922.

* Hay from clover, sainfoin, and grasses under rotation.

† Hay from permanent grass.

EMPLOYMENT, WAGES, AND DISPUTES.

From the point of view of the wage-earner, 1922 is a black year. Although the actual reductions in wages have been less than in 1921, their cumulative effect has been more severely felt, inasmuch as the burden of prolonged unemployment continued after savings had been exhausted. The dole has prevented distress of anything like the severity of 1908 or 1909, but the actual rigour of unemployment itself has been of unprecedented severity. Throughout 1922 the mean of unemployment was 15.4 per cent. (against 15.3 in 1921, 3.3 in 1914, 2.1 in 1913, 3.2 in 1912, and 7.8 in 1908—the previous "record"). Although there has been in the latter months of the year a gradual falling off in the numbers, the percentage has never fallen below 14 per cent. for trade unionists, or 12 per cent. for industry as a whole, so far as covered by the insurance scheme. This latter figure leaves out those whose benefit has at the moment run out, or who are excluded as benefiting under National Health Insurance; leaves out agricultural workers, railway men, and local authorities' employees; leaves out those on short time, which has been general throughout the year in many branches of production. What is more serious is the exceptionally high proportion of skilled men unemployed in our major, key, industries. Throughout the year over 20 per cent. of the men in shipbuilding, engineering, the iron and steel trades, toolmaking, iron mining, and constructional industry were idle. In shipbuilding the ratio of unemployment was one in three; in engineering and the iron and steel trades, one in four. At the end of the year a definite improvement set in, but the appended table (based on figures given in the Ministry of Labour's *Gazette*) shows how much ground remained to be made up:—

End of—	TRADE UNION UNEMPLOYMENT PERCENTAGES.							
	1913.	1917.	1918.	1919.	1920.	1921.	1922.

* Excluding coal miners.

† Revised figure.

Figures such as these represent not only a mass of distress of which the demoralising effect is bound to be cumulative, but a very heavy charge on production. The 12 per cent. of normally employed men who have, throughout the year, been unable to find employment, have to be supported by the rest. The basis of the insurance scheme is the contributions from employers and employed: the rest is made up by the taxpayers.

When unemployment is severe the man who remains in work is regarded as lucky. But the employed have paid their share in the bad years since the fictitious post-war boom collapsed, no less than the workless. From this point of view wages reductions in 1922 have not been so striking as in 1921, when the biggest of the war-time bonuses were lopped off; but in the aggregate 7,600,000 workpeople lost £4,200,000 on their weekly wages, a cut that came on the top of a £6 million reduction in the previous year. "In nearly all industries substantial reductions in wage rates were made during the year, and in the great majority of cases two or more separate reductions took effect," says the official report. Every coal-mining area was on the minimum established by the 1921 settlement by August; in seven of the thirteen areas, the effect being modified by the grant of subsistence rates to the lowest paid men. The end of the year, however, showed a slight improvement, and, speaking generally, the wage reductions in November and December were smaller than in any month in the preceding eighteen. The *Labour Gazette* summarises the position:—

The amount of reduction in rates of wages during 1922 varied considerably in different industries and occupations. In some exceptional cases, e.g., newspaper printing in London and coal mining in certain of the smaller coalfields, no general

reduction in rates of wages occurred. On the other hand, reductions equivalent to as much as 30 per cent. on the rates prevailing at December, 1921, were reported in some trades, e.g., in the case of coal miners and iron and steel workers in certain districts and of men in the shipbuilding industry. If allowance is made for the relative importance of the various industries represented, the general average reduction would appear to be approximately 20 per cent., leaving the average percentage increase over pre-war rates at about 70 to 75 per cent., as compared with 110 to 120 per cent. a year earlier. These figures relate to rates of wages for a full normal week, and take no account of changes in earnings resulting from alterations in the state of employment, the effect of which varied considerably in different industries.

Far the most serious dispute in 1922 was the engineering lock-out, lasting from the middle of March to the end of June. Some quarter of a million men were locked out, apart from the very large number of engineers and members of associated trades unemployed when the dispute began. It turned on the regulation of working conditions, and ended in the victory of the employers. The shipyard dispute (March-May) and the printing dispute (July-August) arose out of wages reductions, accepted in both cases.

A.—EUROPE.

FRANCE.

General.—The outstanding features of the economic conditions of France during 1922 included a remarkable revival of trade and industry, largely increased production all round (except as regards wheat), a total disappearance of unemployment, an unusual absence of industrial crises and serious strikes, an exceptionally low number of business failures, a notable recovery of investment business on the Bourse, accompanied by a substantial rise in wholesale commodity prices, while retail prices have remained approximately steady.

Trade and Production.—French foreign trade, both in exports and imports, showed an appreciable increase both in values and in weights. The trade balance against France showed an actual increase on the year, largely owing to heavy enforced imports of coal under costly exchange conditions; nevertheless, it was much smaller in proportion to the total volume of trade than in 1913, when the franc stood at par. Industrial production was largely in excess of that of the previous year in almost every category. Increases of from 25 per cent. to 50 per cent. were registered in the output of coal, coke, and iron ore, and of about 50 per cent. in steel and iron, while imports of copper, lead, and zinc (and to a lesser extent in the case of tin) were more than double those of 1921, and either equalled or exceeded their 1920 figures. Similar conditions attached to the chemical trades. The textile industry, notwithstanding exceptionally high prices of raw materials, had an extremely prosperous year, and purchases of wool, cotton, and silk exceeded those of both 1921 and 1920. Sales of motor cars largely surpassed those of pre-war years. Railway receipts rose from 5,770 million francs to 6,250 million francs. Shipping, on the contrary, remained seriously depressed.

Crops.—The crops of cereals (with the exception of wheat, which yielded only 65,230,000 quintals, against 89,580,000 in 1921), potatoes, wine, and forage were all greatly superior to those of the previous year. The sugar beet area being nearly all in the devastated regions, this crop was necessarily small, and France had again to rely largely on foreign grown sugar, which helped to swell her adverse trade balance, as did for similar reasons her large purchases of foreign coal. The national supply of livestock returned during the year to within measurable distance of its pre-war total.

Prices and Employment.—Wholesale commodity prices, which had an index figure of 444 in December, 1920, and fell to 313 in February, 1922, rose again to 360 in December last, whereas retail prices dropped progressively until just before the end of the year. Wages reached their lowest point of reduction in the middle of 1921 (with cuts of from 20 per cent. to 25 per cent.), since when they

have remained on the whole unchanged. With the exception of the metalworkers' strike at Havre, no serious labour upheaval occurred. Unemployment, which involved about 135,000 workers in March, 1921, fell to a shade over 10,000 by the end of that year, and to 2,640 by December 31st last, and has since disappeared.

Money and Stocks.—Savings bank deposits (now over 10 milliards francs, against 5,830 million francs in 1913) were again increased by about 2½ milliard francs in 1922, as in the two previous years. During April the Rente market was once more thrown open, with stimulating effect on the Bourse, and the abundance of capital awaiting investment—owing to a greatly reduced number of non-Government new issues (seven milliard francs only, as against 11 milliard francs in 1921)—resulted in a notable increase in genuine investment business, and a progressive and consistent marking up of quotations all round (since April last) that was still in progress when the year ended. Reduction of the Bank rate from 5½ per cent. to 5 per cent. proved another stimulating factor. National Defence Bonds were so well taken up that the Treasury was able to reduce the rate of interest from March last by ½ per cent.

Public Finance.—The public finances, if they have not improved during the year (as it was scarcely possible they should), have not seriously deteriorated. The State found it impossible to reduce by the agreed sum of two milliard francs its debt to the Bank of France, which stood at the end of the year at practically the same level as at the beginning, while the note circulation was similarly unchanged. The floating debt of the State, however, has been largely increased by an issue of long term Treasury bonds. The key to the situation of the French public finances lies in the failure of Germany to pay her Reparation debt. Taxation, which is showing a satisfactory yield, is sufficient to meet all normal expenditure and to provide interest on the ordinary national debt. The chief reason for the huge French Budget deficit is that, through Germany's default, the country has had to raise an enormous sum to restore the devastated area. The interest charges on this sum amount, roughly, to 3½ milliard francs, which is equivalent to the deficit in the French Ordinary Budget. The enormous expenditure on restoration and on pensions, which is equivalent to the whole Ordinary Budget, is, of course, still having to be raised by borrowing.

Exchange.—The value of the franc, which was quoted at 57 to the £ in January, 1922, rose to 47 in April, fell again to 71.80 in November, and stood at the close of the year at 63.89.

GERMANY.

Currency Depreciation.—The outstanding features of 1922 in Germany were accelerated currency depreciation, deterioration in the position of the public finances, increased activity of trade and industry, and declining unemployment. Mark exchange, after comparative stability in 1920, fell sharply in 1921; but in 1922 the fall was exaggerated. Although the year ended before the failure of the Paris Reparation Conference, the dollar quotation rose in 1922 from 182 to 9,172, whereas the difference between extreme quotations in 1921 had been only from 55 to 310. Sterling opened the year at about 790, and closed at over 30,000.

Public Finance.—Although revenue was also swollen by the currency depreciation, expenditure rose faster. The deterioration in the Budget position can be briefly illustrated. In the year ended March 31st, revenue from taxation was 82,559 million marks, and expenditure 188,291 millions. In the next nine months, ended December 31, 1922, revenue from taxation was 344,913 million marks, and expenditure 1,571,700 millions. The deterioration was mainly the work of the later part of the year. In the month of May, for instance, revenue covered three-quarters of the expenditure, whereas in the nine months' period April 1st to December 31st, only 21.9 per cent. was covered. For these nine months the expenditure was covered by floating debt operations to the extent of 1,223,009 million marks.

Inflation.—The great currency and credit inflation of 1922 was due, in the first place, to the Government's necessity of covering a gap, that the price-rise was ever widening, between revenue and expenditure, and secondly, to the increase in the private demand for credit, owing to the falling purchasing power of their monetary resources. These two threads of the story of inflation may be traced in the balance-sheet of the Reichsbank:—

(In Millions of Marks.)

	End of 1921.	End of 1922.
Circulation	104,567	1,280,094
Deposits	32,905	530,526
Commercial bills	1,061	422,235
Treasury bills	132,330	1,184,464

Increases came by leaps and bounds in the last few weeks of the year. A noticeable feature is the great revival of commercial bills.

Commodity Prices.—The rise in commodity prices outstripped the depreciation in mark exchange. The *Frankfurter Zeitung's* index number at the close of the year was 205,417, as compared with 4,217 at the beginning of the year. The index number at the close of 1922 was 2,054 times the last figure recorded before the war. As compared with 100 for each group before the war, textiles and leather, at the end of 1922, were 320,632, minerals 262,212, food 175,845, and finished goods 151,193.

Industry, Employment, and Production.—Although the last three months of the year saw some check, trade and industry were very active indeed throughout the year. In the late summer the percentage of unemployed in trade unions fell to 0.6, and at the close of the year it was only 1.4, or about one-third of the pre-war average for mid-winter. Nevertheless, trade and industry encountered many obstacles, of which the chief were, of course, the wide exchange movements, the tightness of money, the scarcity of capital and credit, deficiency of fuel supplies, and the housing shortage, which hampered the mobility of labour. German coal production for the first 11 months was 120,648,000 metric tons, as compared with 136,222,000 for the full year 1921. Other industries report improved individual output, due to better technical methods, to better work by employees, and to better relations between employers and employed. The figures of the principal crops in 1922, 1921, and, in the same area, 1913, are as follows:—

	Wheat. Tons.	Rye. Tons.	Potatoes. Tons.
1913.....	4,043,000	10,132,000	44,023,000
1921.....	2,934,000	6,799,000	26,157,000
1922.....	1,957,000	5,283,000	40,655,000

Money and Stocks.—The stringency of money grew steadily during the year. On July 28th the Reichsbank raised its rate from 5 to 6 per cent., on August 28th to 7 per cent., on September 20th to 8 per cent., and on November 13th to 10 per cent. The monetary stringency prevented stock prices from rising as in former years, in proportion to the currency depreciation. The *Frankfurter Zeitung's* stock price index number was 30,071 at the beginning of the year, and 469,593 at the end, the major portion of the rise taking place late in the year. Large rises occurred in Federal and State loans, but municipal bonds did not participate to any great extent. Federal Three per Cents. rose from 103.25 to 1,050, Prussian Three per Cents. from 56.50 to 363, Colonial Four per Cents. from 106 to 5,000 in mid-December.

Trade Balance.—Imports in 1922 were 45,870,000 metric tons, and exports 21,560,000 metric tons. The publication of value figures was suspended in November; but for the 10 months ended October 31st imports are given as 5,074,400,000 gold marks, and exports 3,215,200,000 gold marks, leaving an import excess of 1,859,200,000 gold marks. Comparison of trade volume with 1921 is not possible, the figures for January to April, 1921, not having been issued. In 1913 imports were 72,830,000 and exports 73,710,000 metric tons.

ITALY.

Foreign Trade.—For the first eight months of 1922 Italy's imports were valued at 9,928.5 million lire and exports at 5,572.4 million lire, leaving an import excess of 4,356.1 million lire. This balance was smaller than that for the corresponding period of 1921, which was 5,292 million lire. Of the imports last year wheat accounted for about one-third.

Crops.—Generally speaking, crops were not so large as in 1921, Northern Italy in particular suffering from drought. Wheat production was 43.7 million quintals against 52.5 million quintals in 1921, corn 18.0 million quintals against 23.5 million quintals, but grapes, with 53 million quintals against 50 million quintals, were better than in 1921.

Industry and Employment.—Industrial production was not interrupted by strikes. The silk industry, favoured by a good crop of cocoons (311,000 quintals against 309,000 quintals in 1921), had a good season, except for the last two months, when the foreign markets were bad. Cotton and wool had a good year. Idle spindles were estimated at 10-12 per cent. in the first half-year, and decreased to 6 per cent. in the autumn. Sugar produced was 2,600,000 quintals against 2,030,000 quintals in 1921. Very good profits were reaped by the milling industry. Sulphur, iron and steel, chemicals, and shipbuilding had a bad year, owing to American competition in sulphur, low freights for ships, and the cessation of war demands for iron, steel, and chemicals. Unemployment has been declining during the past year. The official figure of the total number of unemployed was 541,775 in January and 354,238 in December. The number of strikes was the lowest since 1900. The labour market was not eased to an appreciable extent by emigration. Transoceanic emigrants were 31,291 in the first half-year against 122,390 in the corresponding period of 1921. Emigrants to European countries were 61,293 against 28,424 in 1921. Wages have been lowered.

Prices.—Prices were lower than in 1921. *Bachi's* Index Number shows an almost continuous decrease up to May, 1922, when the total was 83.8 per cent. of the average for 1921. At this point reaction set in, and in October the maximum level of 96.2 was reached. The decline in foreign exchanges following the formation of the Fascist Government exercised a favourable influence on prices, which closed at 92.8. Textiles,

minerals, metals, and chemicals were below the average, while food and meat went down.

Exchanges.—The average price of the dollar started at 23 lire in January, decreased to 18.7 lire in April, increasing afterwards in October to 24 lire, owing to the combined influence of the autumnal pressure and political unrest. With the usual easing of foreign purchases and the better political outlook dollars went down afterwards to 19.9 lire. The curve was not differently shaped in the case of London and Swiss exchanges; but Paris cheque was naturally influenced by the vagaries of the franc. Starting from the maximum of 187.1 lire for 100 francs in January, the exchanges oscillated between 180.2 lire and 172.5 lire till October. In November the quotation fell abruptly to 151 lire, and in December to 143.7 lire. To-day, owing to Ruhr affair, the franc is even lower.

Money and Stocks.—The official Bank rate was reduced on July 11th from 6 to 5½ per cent. The volume of payments passing was less than in preceding years. The clearings at the Italian clearing-houses, which in 1921 had a maximum of 63,672 million lire in January and a minimum of 49,639 million lire in July, had in 1922 a maximum of 69,978 million lire in November and a minimum of 40,820 million lire in September. The paper circulation was 21,476 million lire at December 31, 1921, and was gradually reduced during 1922 till at November 10th it amounted to 20,479 million lire.

The improvement in stock exchange quotations is an index of increased hopes in the future of the country. The 3½ per cent. Rentes remained stationary between 71.93 and 71.65 in the first ten months of the year, but rose suddenly to 77.58 in November and 77.96 in December. In the variable dividend bearing securities market the tide was also rising. Taking as a basis (100) the average of prices for December, 1921, the index number of 135 leading securities (with an issued capital of 6,893 million lire) was 96.61 in January, decreased to 88.43 in April, rose to 103.01 in August, to 11.94 in November and 112.91 in December. Prices are, however, as yet at a lower level than in December, 1918. Taking that level as 100, the index was 63.84 in December, 1921, and 72.08 in December, 1922.

Public Finance.—Public finance is slowly improving. The figures for the three last budgets are as follows:—

(In Millions of Lire.)

	Expenditure.	Revenue.	Deficit.
1920-21.....	36,229	18,820	17,409
1921-22 (about)	26,000	18,000	8,000
1922-23 (estimated)	23,000	18,000	5,000

Public internal debt, which was 88,423 million paper lire at October 31, 1921, rose to 92,997 million paper lire at October 31, 1922, and was probably about 95,000 million paper lire at end of the year. External debt (to Great Britain and United States) at October 31, 1922, was 21,811 million gold lire. The decrease in the budget deficit, which has been rapid in the last three years, is bound to continue, though perhaps somewhat more slowly. The last billion of deficit will be the hardest to cancel.

RUSSIA.

General.—The year 1922 saw at last some slight recovery from the depths of chaos in the economic life of Russia, this improvement being due to the new economic policy introduced in 1921, which restored freedom of exchange, and also, in some rather limited degree, freedom of production. The reopening of shops and the resumption of retail business removed the impression of deadness; the volume of exports and imports has increased a little, and interest in commercial life has revived. But the improvement was held in check by a succession of difficulties. The financial situation became more and more entangled, and the currency position more desperate, while the transport position is another factor holding back any fundamental improvement.

Foreign Trade.—For the first nine months of 1922, Russia's imports were valued at 223.6 million pre-war roubles and exports at 50.7 million, leaving an import excess of 172.9 million pre-war roubles. The comparable figures for the whole year 1921 were imports 248.5 millions, exports 20.2 millions. Exports, which in 1921 amounted to only 5.3 per cent. of imports, thus rose in 1922 to 22.6 per cent. Imports of foodstuffs, amounting to 24 per cent. of total imports, were influenced by the famine conditions prevailing during 1921-1922. The weight of imports amounted to 1,734,000 tons, and of exports to 616,500. These figures compare with a pre-war average (1909-1913) of 1,003 million roubles for imports and 1,422 million roubles for exports.

Crops.—Official Soviet statistics show the yield of the 1922 harvest as 2,820,000 poods, or 47,000,000 tons. The 1922 harvest was undoubtedly far better than that of the previous year. Although the Soviet Government has announced its intention to export grain from Russia and small quantities are already said to have been exported, reports from the area famine-stricken in 1921 indicate that there are still districts urgently needing surplus cereals.

Industry and Employment.—For the period January-September, the output of coal in the Donets Basin was 6,000,000 tons as against 20,000,000 tons in 1912. A disquieting factor is the fall of production from 3,000,000 tons in the first quarter of 1922 to 1,000,000 in the third. This has affected adversely the South Russian metal industry. During the first nine months of 1922, the production of pig-iron in the Ural, South and Central metallurgical areas amounted to 130,000 tons, of martenite to 240,000, and of rolled steel to 180,000 tons, the general results being about 30 per cent. better than in 1921, notwithstanding the difficulties caused by the presence of famine both in the Ural and in the South. October returns showed a 40 per cent. increase on those for September, 1922. Oil production amounted during the first three quarters of 1922 to 3,452,000 tons, or 50 per cent. of that for 1912. The output of yarn for the first six months of 1922 amounted to 28,000 tons as against 10,000 tons in 1921, cotton-cloth was manufactured to a length of 190,000,000 yards as against 57,000,000 yards for the corresponding period the year before, while finished cotton goods rose from 92,000,000 yards in the first six months of 1921 to 181,000,000 yards for the same period of 1922. In regard to sugar, as a result of an excellent beet harvest, it was hoped to produce 200,000 tons of sugar, or four times the 1921 production, and about 1-10th of the pre-war production. Agricultural machinery was produced in 1922 to the value of 5,570,000 pre-war roubles, representing about 10 per cent. of the pre-war production. As a result of the great reduction in the number of Civil Servants and the closing down of factories formerly run by the Government, unemployment begins to present an important problem in Russia. Wages, which according to the Central Soviet of Trade Unions constituted in the early part of 1922 only 15 per cent. in some instances of pre-war wage value, are now said to have risen to 80 per cent. of the latter value.

Prices.—The All-Russian Index of wholesale prices was published for the first time in March, 1922, and appears on the 1st, 10th, and 20th of each month, beginning again on the 1st of the following month. The Moscow Index of retail prices is published weekly. The Moscow Index for March, 1922—taking 1913 as 1—shows 2,169,000, the All-Russian Index for April 1st being 1,950,000, the amount of pre-war roubles needed to purchase a given quantity of goods bought with 10 gold roubles at the March-April prices being 4.97 roubles, according to the All-Russian Index, and 4.21 roubles according to the Moscow Index. In spite of the easing effect on the summer season on the cost of foodstuffs and of a good harvest, prices rose rapidly. The All-Russian Index on August 1st stood at 5,206,000, the Moscow Index for the preceding

month being 6,332,000, and the purchasing power of 10 gold roubles on August 1st being 3.87 and 3.20 according to the respective indices. Although after the harvest food prices showed signs of falling, the exhaustion of stocks of manufactured goods caused a fresh break, and the All-Russian Index by January 1, 1923, registered 15,790,000, the Moscow Index for December standing at 20,573,000, the difference between the two indexes thus constituting 25 per cent. The purchasing power of 10 gold roubles on January 1st had risen to 10.63 in the case of the All-Russian Index, the Moscow Index for December showing 7.78 roubles. It may be noted that one pood of sugar (40 Russian lbs) exchanged for 235 lbs of rye in 1913, for 312 on January 1, 1922, and 632 on October 1st, and one pood of wool for 452.5 lbs of rye in 1913, 114 on January 1, 1922, and 354 on October 1, 1922, the January figures reflecting the premium on cereals caused by the famine.

The official rate of 10 gold roubles in Moscow rose from an average of 4,000,000 in January to 160,000,000 for December, 1922. On December 30th the dollar stood at 32,250,000 and sterling at 143,500,000 roubles at the official rate of exchange, the unofficial rate being respectively 45,250,000 and 200,300,000. The gold rouble exchange on that day was officially 174,000,000, and unofficially 221,000,000.

Public Finance.—The following table covers the Soviet Budgets for 1918, 1920, and 1922:—

	(In Millions of Paper Roubles.)		Deficit.
	Expenditure.	Revenue.	
1918	49,706 ..	15,580 ..	31,126
1920	1,215,159 ..	159,604 ..	1,055,555
1922	2,613,967,000 ..	1,047,277,000 ..	1,566,690,000
	(In Millions of Gold Roubles.)		
	Expenditure.	Revenue.	
1918	600 ..	266 ..	394
1920	200 ..	26 ..	174
1922	747 ..	303 ..	444

The value of these Budget figures is, however, somewhat dubious. The amount of paper money in circulation was 1,230,000 million roubles in January, 1922, and had risen by October, 1922, to over 1,000,000,000 millions.

HOLLAND.

Trade and Industry.—The effects of the reaction after the high prices and commercial activity of the war and the year following it were seen in industrial and commercial depression, extensive unemployment, and a decline in foreign trade. Industry felt the competition of countries with depreciated currencies. Industrial dividends fell off, or were maintained with difficulty; in May several banks were in trouble, and two failed. In the first nine months the bankruptcies numbered 43 per cent. more than in the corresponding period of 1921. Industrial output was felt to be restricted by short hours and high wages, and the working week was extended by law to 48 hours instead of 45 under the law of 1919. "Summer time" was only retained by a narrow Parliamentary majority.

Foreign Trade.—The values for 1921 and 1922 were in guilders:—

	1921.	1922.
Imports	2,240,219,213	2,026,578,760
Exports	1,369,508,600	1,221,231,211
Difference	880,710,613	805,347,549

Prices and Employment.—For the first ten months of 1922 wholesale prices, taking the average for 1901-10 as 100, were represented by 182.6, as against 206 in 1921. The cost of living in Amsterdam on the average of the first nine months of 1922 was 140, as against 100 in August, 1914, and 180 in 1921.

The provisional figures for the year showed a larger percentage of unemployment among the workers covered by the return than at the corresponding periods of 1921, viz.:—

	1921.	1922.
March	13.9	14.1
June	8.1	9.5
September	6.8	9.0

And on December 30, 1922, at employment agencies in communes with a population of 5,000 or over, 99,727 men and 6,801 women were registered as unemployed.

Exchanges.—Sterling exchange started at 11.44 in January, reached 11.66 in February, fell to 11.26 in September, and was 11.55 at the end of the year. Dollar exchange showed some fluctuation in March and September; at the end of the year it was at par.

Stocks and New Issues.—The trade depression left large sums free for investment, though some of the capital required was sought in the United States. Three Dutch East Indian 6 per cent. loans of \$40 millions each were offered, and readily taken up, in New York in January, February, and May. So was a Netherlands Government loan of 150 million guilders in 50-year 6 per cent. bonds, issued half in the United States and half at home. A record loan of 350 million guilders, to be issued in both countries, was contemplated early in 1923. Issues of 6 per cent. bonds were also made by local authorities, the Netherlands Railway, and the Holland-America Steamship Company, the last named partly in the United States. In all, the issues placed at home totalled 382 million florins, mainly State and local authorities' loans. A Czechoslovak and a Chinese Government loan were offered, but the response was unsatisfactory. In December the prices of leading securities were lower than in January, but above the lowest of the year.

Public Finance.—Retrenchment in national and local expenditure was urgently demanded by the Press and public, and foreshadowed by the Queen's Speech at the opening in July of the States-General. But the Budget showed a deficit of 52.7 million guilders on the ordinary estimates, and, on the ordinary and extraordinary estimates taken together, of 226.3 millions. Certain public departments were amalgamated, and there were other economies, but the public expectations were not realised, and (though shipping was rather more active at the end of the year than at the beginning) the general commercial and financial outlook had not become brighter otherwise. Direct taxation, local and national, was said to be the highest in the world.

BELGIUM.

Foreign Trade.—With a population of 670 persons to the square mile, it is obvious that Belgium must depend for her existence very largely on export. Before the war, in spite of many natural disadvantages, Belgium could successfully compete with Germany and Great Britain because of the cheapness of her labour (low wages and long hours of work), but during the war Belgium lost her foreign markets, and her workers learnt to expect higher wages and shorter hours. It is unfortunate that, owing to the economic union with Luxemburg, the trade figures for 1922 do not permit of accurate comparison with previous years, but for the last eight months of the year the visible adverse balance of trade for Belgium and Luxemburg combined amounted to 2,295 milliard francs (imports 6,681 milliards and exports 4,386 milliards), and it is clear that the adverse balance is considerably greater than before the war. So seriously is the need for increasing exports regarded that a National Congress on the question has been held and a permanent Export Committee set up, which, among other things, has decided to take steps to educate the working-classes and the youth of the country on the importance of the export trade, to undertake propaganda on the same subject, to improve the Customs statistics and the consular service, and to encourage trade missions, &c. A trade mission, for instance, is just about to set out for China and Japan.

Public Finance.—The National Debt, which before the war amounted to 4.6 milliards of francs, amounted at the end of the year to about 36.8 milliards, of which 30.1 was internal and 6.7 external debt. That the country is doing its best to set its financial house in order is evident from the fact that the Budget for 1923 was submitted in November, the first time since the Armistice that it has been presented to Parliament

within the legal period. By dint of strict economy in administration and in the State undertakings (railway, shipping, post, and telegraph offices), the ordinary Budget and the expenditure and receipts from State undertakings will approximately balance, but there is naturally a heavy deficiency under the heading of "recoverable expenditure." M. Theunis estimates that 12 to 13 milliards of francs are still required for reconstruction purposes.

Industry and Production.—The industrial depression of 1921 was extended into the first few months of 1922, but with a wage reduction of 10 per cent. in April a revival set in, which continued steadily until October, when further progress was arrested by the Anglo-Turkish complications and the constant fluctuation in the exchange. The production of coal in 1922 amounted to 21,234,200 tons (metric), compared with 21,807,200 tons in 1921, and of coke to 2,707,500 tons, compared with 1,390,950 tons in the previous year, the production of coke rising from 136,860 tons in January to 287,400 tons in December. The increased production of metallurgical coke is explained by the increased demands for blast furnaces, 34 of which were in blast at the end of the year, compared with only 14 at the beginning. The production of steel rose from 86,500 tons in January to 150,600 tons in December, and of crude zinc from 8,250 tons in January to 11,380 tons in December. The textile industry was also in full swing at the end of the year.

Employment and Prices.—The percentage of trade unionists unemployed, which at the beginning of the year had amounted to 6.6 per cent., had fallen by the end of November to 1.4 per cent. The wholesale price index number, taking April, 1914, as the base, steadily fell between January and May from 366 to 348, and then rose to 408 by November; the retail price index number was also falling until May, but by the end of the year had returned practically to the level of January (387).

SPAIN.

Public Finance.—The economic depression, due mainly to causes affecting all Europe, was aggravated in Spain by the cost of pacifying Morocco. The Budget accounts for 1920-21 closed with a deficit of 633.5 million pesetas, against less than 377 millions for 1919-20; and for 1922-23 the estimated expenditure was 3,044 million pesetas, with the estimated revenue 2,617 millions—a deficit of 427 millions. But in December it was definitely announced that "pacific penetration" would be substituted as far as possible for subjugation.

Foreign Trade.—The foreign trade figures for the first eight months of the year were:—Imports, 1,954.84 million pesetas; exports, 870.85 million pesetas; excess of imports, 1,084 million pesetas. Both imports and exports were lower than for the same period in 1921. The new Customs tariff, more Protectionist than its predecessor, was passed in the spring, but the Government was empowered to conclude commercial treaties largely reducing certain duties, and treaties were concluded in April with Switzerland, in July with France, and in September with Great Britain. The last-named treaty was delayed by the opposition of the Spanish coalowners to the proposed relaxation of the restrictions on the import of British coal, which was needed by the iron and steel industry; but the opponents were placated by export premiums and by certain remission of taxation. A treaty with Norway was delayed by a dispute as to the quantity of Spanish wine to be admitted, in view of the restrictions imposed there on intoxicants. But the Spanish demand was granted provisionally.

Exchanges.—Sterling exchange varied, with some fluctuations, between 28.10 at the end of January and 29.50 in the middle of December; dollar exchange was 14.88 at the beginning of the year and 15.32 at the end, but in March it reached 16.04, and nearly touched 16 in May.

Banking.—A belief that the Government would discriminate against foreign banks, together with the

trade depression and the new Customs tariff, led to the closing of the Spanish branches of the London County and Westminster and Parr's Bank, except that in Madrid. The bank was believed to have operated in Spain chiefly with Spanish deposits, but its closing was undoubtedly a loss to the national trade.

Industry.—There was serious depression in the iron and steel industry; a strike in May among the mining and metallurgical workers in the North was settled by Government arbitration. In February a serious strike took place at Granada, and in October there was a postal strike, which closed, broke out afresh, and was terminated by a lock-out and the submission of the strikers. In Barcelona the labour and political unrest was less than in previous years. All labour disputes had ceased at the end of the year. The crops were, on the whole, satisfactory; the fruit crop excellent.

Prices.—Taking the index number of wholesale prices in 1913 as 100, the average for the first ten months of 1922 was 176.1, as compared with 190 in 1921 and 221 (the highest point) in 1920. In the same ten months the index number of food prices in Madrid was 181.4, as compared with 184 in 1921 and 100 in 1914.

Money and Stocks.—As in other countries, the commercial and industrial depression left capital free for investment in stocks. At the end of October 5 per cent. Treasury bonds for one year to the amount of 500 million pesetas were issued and over-subscribed. Earlier in the year the issue of a Government loan in the United States had been contemplated, but the terms were said to be prohibitive. But a number of issues—railway, shipping, and municipal—were made at home at prices returning rather more than 6 per cent. interest, and were readily taken up. The Stock Exchange was more active in the last half of the year.

SWITZERLAND.

Industry.—The year was marked by severe agricultural and industrial depression, extensive unemployment, and a decline in foreign trade (on the figures of the first nine months) of some 16 per cent. in imports and 19 per cent. in exports, as compared with the corresponding period of 1921. The high exchange interfered with exports to Continental markets, and caused migration of industries (notably engineering and clothing) to South Germany. Embroidery and watchmaking suffered severely, the large firms most; the hotel industry in the summer was thrown back by bad weather, but in the winter showed recovery. These three industries received Federal assistance, which increased the exported products of the two first. The legal eight-hours' day being found to limit output, the Federal Executive was authorised by law to extend the working week to 54 hours in certain contingencies for specified trades. Agriculture felt the decreased demand of the neighbouring countries for cattle, cheese, and condensed milk; the fruit crops and the vintage suffered from the spring and autumn bad weather, and the latter in the Valais from phylloxera.

Prices and Employment.—The index numbers of wholesale prices were:—August, 1914, 100; 1921 (average), 190.3; 1922 (ten months' average), 164.4. It was generally agreed that the cost of living had declined; one estimate put it for August and September at 30 per cent. below the highest figure reached since August, 1914, and about 50 per cent. above the level at that date. But it was stated that all the calculations were on too narrow a basis. Unemployment reached the maximum on record in February, with 99,541 workers wholly and 46,761 partly unemployed. There was then a steady decline till October (48,218 and 21,565). A rise in November (51,128 and 21,900) was ascribed to the discharge of "seasonal" workers, especially in the building trade.

Exchange.—Sterling exchange rose during the year (with some fluctuations) from 21.68 at the beginning to 24.47 at its close. The American dollar was round

about par in May and July, and was approaching par again at the close of the year.

New Issues.—The trade depression diverted capital to the stock markets; the rate of discount fell from 4 to 3 per cent. during the year. A Federal Loan of 300 million francs was issued in January at 5½ per cent.; two others (for the railways) of 150 and 200 millions respectively were offered, the first in June at 4½ per cent., the second in September at 4 per cent., and were readily taken up. Several cantons and municipalities also raised loans. In August the proposed Capital Levy—designed to fall on less than 1 per cent. of the population—depressed the stock markets, and sent much capital abroad. It was intended to provide funds for social legislation; but it was rejected by all the cantons, and by 731,478 votes to 109,421.

Public Finance.—The Budget estimates for 1922 showed a deficit of 100 million francs, those for 1923 of 84 millions, exclusive of extraordinary expenditure, on which the deficit for the two years together was 230 millions. It was felt that subsidies to industry and unemployment allowances could not continue indefinitely; but forecasts varied, and the rise in gilt-edged stocks and the decline in unemployment and food prices were regarded by some observers as ground for hope.

SOUTH-EASTERN EUROPE.

General Conditions.—The countries of the Danube basin and the Balkans have passed through a critical year, which would have proved even more disastrous but for the fact that this region is in the main devoted to agriculture, and thus self-sufficing at least as far as essential foodstuffs are concerned. The mutual hatred of rival nationalities shows no appreciable signs of diminution, while the conflicting interests of the great Powers and the lack of a coherent policy towards Russia and the Near East have contributed to the general uncertainty of the political situation. The harvest this year has, on the whole, been far from satisfactory, and tariff walls and export restrictions still impede the economic recovery of these countries and of Europe generally.

This state of things is well illustrated by the following table of exchanges (the rates being for the first Friday in each quarter and for the last Friday of the year):—

FOREIGN EXCHANGES in 1922.

London on	Par.	Jan. 6.	April 7.	July 7.	Oct. 6.	Dec. 29.
Prague	24.02	257½	228½	217	130	148
Vienna	24.02	13,000	33,000	93,000	315,000	315,000
Budapest	24.02	2,450	3,875	5,000	10, 00	11,000
Belgrade	25.22½	295	360	355	275	430
Sofia	25.22½	612	635	675	750	655
Bukarest	25.22½	550	610	760	725	815
Athens	25.22½	96	100	170	155	397
Constantinople ..	110	675	650	730	730	810

CZECHOSLOVAKIA.

In Czechoslovakia the first half of the year witnessed considerable industrial activity, and a large balance of exports over imports (for the period January to June, exports, 10,513 million crowns; imports, 7,497 million crowns). With the rise in the crown, however, Czechoslovakia—which is primarily an exporting country, containing as it does over 75 per cent. of the industries of the former Dual Monarchy—was faced with a serious crisis, and the beginnings of unemployment on a considerable scale. The readjustment in prices and wages which then became necessary was nevertheless carried out without any social or industrial convulsion. Taking July, 1914, as the base (= 100), wholesale prices in the Republic fell from 1675 in January to 1464 in July, and to 999 in December. Foodstuffs and necessities of life have not, however, fallen as much as textiles, boots, and shoes, and other manufactured products.

The figures of agricultural production, while well above those of 1920, are inferior to those of 1921 for all crops save potatoes and sugar beet—though this latter crop was slightly greater in 1920 than in 1922.

The output of coal has, on the whole, improved steadily since the Armistice, though the final figures for 1922 are not yet available.

The budget deficit has been reduced from 4,851 million crowns in 1920 to 727 million crowns in 1921, and 929 million crowns last year. The estimated deficit for the financial year 1923 is 506 million crowns, and considerable economies are promised in the public administration. The total of notes in circulation has decreased perceptibly during the year (from over 11,603 million crowns in December, 1921, to 9,610 million crowns at the end of 1922), while the outstanding feature of the financial year has been the successful flotation of a reconstruction loan in London and New York, this being the first loan made on the open market to a Central European State since the war.

AUSTRIA.

In Austria conditions were bad at the beginning of the year, and grew worse and worse as the months rolled by. The climax was reached towards the end of the summer, when it appeared to many careful observers that a social revolution could not be much longer delayed. Fortunately, however, the adoption of the League plan to save the country did much to restore confidence and to arrest the "flight from the Crown"; while the hope of international credits and the beginnings of economy in the various government departments actually led to a relative stabilisation of Austrian currency in the exchange market. The first results of this were that Austrian manufacturers were undersold by Germans in their own market, and half-time and unemployment increased considerably. However, the trade balance for the first three months of the second half of the year shows some improvement on that for the first six months (exports amounting to 72 per cent. of the imports instead of 62 per cent.). On November 23rd the bank returns showed a decrease in the note circulation for the first time since the Armistice, while prices fell considerably in the last quarter of the year. When the League plan is carried out in its entirety there are reasons for hoping that Austria will at last be able to settle down to normal economic activities, though the preliminaries are hardly likely to be devoid of unpleasant consequences for many sections of the community.

HUNGARY.

The inhabitants of what remains of the once mighty kingdom of Saint Stephen have not yet resigned themselves to their fate, and political instability has combined with economic isolation and a second-rate harvest to make of 1922 a rather lean year. The Finance Minister, M. Kallay, has made considerable efforts to increase the yield of taxation and balance the Budget, but this has not prevented an increase in the notes in circulation from over 25 milliards of Hungarian crowns on December 31, 1921, to 33½ milliards Hungarian crowns on June 30th, and to nearly 76 milliards by the end of the year.

Agricultural production suffered this year from the drought that prevailed throughout the Danubian lands, though post-war production has not been equal to that of pre-war days. This falling-off may be due in part to the greatly increased cost of improvements, and attempts are being made to bring about the adoption of more scientific methods of farming. This year, however, the decline in agricultural production has led to a further increase in the excess of imports over exports (an estimate of 50 milliard Hungarian crowns for 1922, against 21 milliard Hungarian crowns in 1921).

ROUMANIA.

Roumania is also predominantly agricultural, and her exports have suffered in consequence. Transport facilities leave much to be desired, as the work of reconstruction and unification is proceeding rather slowly. Moreover, an inelastic export tax on cereals has added to the complications of a fluctuating exchange precisely at a time when cereals have been unexpectedly cheap in the world markets. The change in production resulting from the sub-division of the large estates has further tended to reduce the yield per hectare, while the peasant

proprietor has attributed the great fluctuations in price to fraud, and frequently refused to sell in consequence. Yet another cause of the decline in the export of cereals is to be sought in an increased consumption of agricultural produce by the peasants themselves—whose standard of living left much to be desired in pre-war days—and the stimulus which has thus been given to stock raising.

There was a slight increase in the quantity of barley exported, and a considerable increase in oats for the first ten months of 1922 as compared with the same period of 1921; but the total shows a diminution of about 33 per cent., the 1922 figure being 857,143 metric tons as compared with 1,281,945 metric tons for the same period in 1921. Moreover, autumn grain plantings were on a considerably reduced scale last year. The export of timber and oil, however, shows a marked improvement in 1922.

The total of notes in circulation shows an increase from 13,741 million lei at the beginning of January to 15,184 million lei in the middle of December last.

BULGARIA.

The problem of Reparations has hung like a cloud over Bulgaria throughout 1922. No solution is as yet in sight, but the Reparation Commission at Sofia performed at least one service to the country when it induced the Bulgarian Government in June last to restrict the activities of the note printing press. The immediate consequences were most unpleasant, for there followed an acute shortage of currency, with offers of 20 per cent. and over for short loans. There has been some improvement in the last few months, and the trade position for the year is much more satisfactory than was anticipated. The harvest was relatively better than in the other Danubian countries, though the threatened tariff policy of the new Turkish Government may largely succeed in cutting off Bulgaria from its natural market at Constantinople. The tobacco output was very satisfactory, while there seem reasons for believing that the sugar crop is well in advance of that of 1921. The production of attar of roses was approximately 2,000 kilograms in 1922, which is about 500 kilograms more than in the preceding year.

The influence of an active export trade combined with a considerable decline in imports has been most marked on the foreign exchanges, where quotations have been on the whole remarkably steady. At the same time, while this has led to something approaching stabilisation during a good year like 1922, with a favourable harvest, there seem to be grounds for fearing that, unless the Reparation question is settled once and for all in accordance with Bulgaria's capacity to pay, the outlook for the future will be far from bright.

SCANDINAVIA.

General Conditions.—In Scandinavia generally, 1922 was a difficult year, marked by deflation and falling prices. Nevertheless, slow recovery can be recorded, and also some increase in production. These countries, thanks to the relatively high level of their currencies, have been faced with increased competition in many of their staple products in foreign markets from some of the neighbouring depreciated currency countries. The year as a whole has witnessed a considerable shake-down in prices and production costs, thus making Scandinavian sellers once more able to compete effectively in world markets. The final result, however, has been fairly satisfactory, for 1922 marks a slow but sure recovery from the depression of the preceding year, and increased production in many directions is a welcome sign that Northern Europe is at last emerging from a somewhat painful period of convalescence.

SWEDEN.

The labour year opened badly, for proposals for wage reductions met with considerable resistance, and led to a series of strikes and lockouts which paralysed the economic activities of the country. In May a compromise agreement for a general cut of 33 per cent.

in wage rates provided a way out of the *impasse*, and from that date till the end of the year there ensued a real revival in production. Unemployment, which had reached the phenomenal figure of 34.8 per cent. for all trades at the end of January, was reduced to 14.4 per cent. by the end of November, while the exports of timber for the period January-November amounted to some nine-tenths of 1913 quantities. Paper production for the same period was even some 25 per cent. greater than before the war; while exports of iron ore, matches, and pulp were within measurable distance of normal pre-war dimensions.

The Index Number of wholesale prices moved slowly from 172 (base of 100 in 1913) to 165 in July; but from that date there was a further decline to 154 in November, relieved by a rise of one point to 155 in December.

The Bank of Sweden has pursued a policy of deflation which resulted in a slight decline of the note circulation for the year. The rate on London, which opened at 16.97½ to the £ in January, reached its lowest point of 17.25 at the beginning of June; while a decline in November gave place to a slight reaction, which left the rate at 17.16½ on December 19th, or some 19 öre down on the January quotation.

Bank returns are proving much better than was expected, but there have been large allocations for depreciation.

NORWAY.

In Norway, too, 1922 marks a definite advance on the preceding year, for though shipping has remained depressed, there has been a very considerable improvement in fisheries. While the yield of cod increased noticeably, the improvement in the herring fisheries was even greater, for not only was the catch much larger than in 1921, but prices were also considerably higher, with the result that there was a yield of 7.2 million kroner, as compared with 2.7 million kroner in the preceding year.

Drastic wage cuts have been effected with few serious labour troubles, and there was a definite increase in general confidence over 1921. The harvest was, on the whole, unsatisfactory, though the potato crop proved an important exception. The trade balance remained unfavourable, despite the fact that the increase in exports was greater than the upward movement of imports.

The Bank of Norway proceeded with its policy of deflation, with the result that the note issue was reduced from nearly 410 million kroner at the end of 1921 to nearly 385 million kroner at the end of December last. The exchange on London moved fairly steadily in favour of Norway right down to the beginning of December (27.00 to the £ at the beginning of January; 24.42½ at the latter date), though the last month of the year witnessed a slight reaction to 24.54½.

DENMARK.

The general disorganisation of Germany, which is normally one of Denmark's principal customers, has made her rely almost exclusively on the British market as an outlet for her exports of dairy produce. Nevertheless, America has come on the scene as a buyer of butter, though this has not sufficed to check the natural fall in price. Thus while there has actually been an increase in the exports of agricultural produce as compared with 1921, the year has not been a prosperous period for Danish farmers. The general trade balance has proved rather more unfavourable than in the previous year, for though the figures for the first ten months show a reduction in imports, the falling off in exports was even greater.

The disclosures in connection with the Danish Landmanskbank, of which a second reconstruction became necessary in September, dealt a severe blow to the credit system of the country. Gradually, however, public confidence has been restored, and conditions at the end of the year were, on the whole, better than they were at the beginning.

The process of deflation has continued through the year, notes in circulation falling from nearly 471 million kroner at the end of 1921 to over 459 million kroner on December 31st last. The exchange on London moved

from 21.12½ to the £ in January to 20.37 in June; but there has been a steady fall during the second half of the year to 22.50½ at the end of December.

THE BALTIC STATES.

General Conditions.—With the exception of Poland, where political insecurity and party strife, together with budgetary deficits and wholesale inflation, have led to a general uncertainty and malaise, the year 1922 has been a period of consolidation for most of the new Baltic States. The exchange rates for the first week of each quarter and for the end of the year show an actual appreciation of Finnish currency, while Estonian marks and Latvian roubles have remained nearly constant in terms of English pounds—and this, it must be remembered, has happened in a year when the pound has itself appreciated in terms of the dollar, and when most European currencies have moved further away from the gold parity.

EXCHANGE RATES IN 1922.

Rates on London in	Jan. 7.	April 7.	July 7.	Oct. 6.	Dec. 29.
Poland	12,000	17,000	23,000	40,000	84,500
Finland	225	231½	203	196½	185½
Estonia	1,522	1,480	1,465	1,525	1,586
Latvia	1,010	1,118	1,135	1,142	..

The bank returns of these countries throw some light on these exchange figures. In Poland the note issue was fairly constant during the first six months of the year (approximately 230 milliards Polish marks on December 31, 1921, and 286 milliards P.m. on June 30th); but it rose rapidly during the second half of the year, and totalled nearly 729 milliards P.m. at the end of December. In Finland there has not been any considerable change from this point of view (1,409 million Finnish marks on December 31, 1922, as against 1,356 million F.m. at the end of 1921); but, while the gold reserve has increased very slightly, the total of "balances abroad and foreign bills" has risen from nearly 225 million F.m. on December 31, 1921, to over 803 million F.m. on December 31, 1922. In Estonia, however, the note circulation has increased nearly four-fold (from 350 million Estonian marks to 1,300 million E.m. on November 30th); but the cash reserves have risen from nearly 159 million E.m. to over 610 million E.m., and balances with foreign banks from over 207 million E.m. to over 1,445 million E.m. The proportion of cash and foreign balances together to the note issue show a rise from 104 per cent. to 158 per cent., indicating a remarkable improvement in the financial position of the country.

On November 1st last the Bank of Latvia began its activities, and a new national currency, the lat (equal to the gold franc) was issued. The old Latvian rouble had remained fairly steady in terms of gold during the first ten months of the year, and the new currency kept very close to the dollar for the first two months of its existence, actually appreciating from 5.21 to 5.16 (lats to the dollar) between November 29th and December 20th last. The Bank returns for the latter date showed a note circulation of nearly 9 million lats, backed by a gold reserve of over 13 million lats.

ESTHONIA.

Estonia, which is in some respects the most stable of the new Baltic States, has had a fairly satisfactory year, of which steadiness and marking time have been the chief characteristics. The harvest, as in the other Baltic countries, has not been up to expectations, though there has been a brisk export of potatoes to Finland. Owing to the efforts of the Russian Government to encourage trading direct with Petrograd, the entrepôt trade of Estonia (like that of Latvia) has fallen off somewhat. Organised smuggling, however, continues on a large scale with Russia, and this is a considerable element in the prosperity of Estonian commerce. Textile mills have been started at Narva

during the year, and the export of dairy produce, which should prove a source of considerable wealth to the country, has increased and the organisation of the trade greatly improved. Investigations as to the possibility of utilising the oil shale resources of the country are proceeding, but have not as yet passed the experimental state.

LATVIA.

Latvia has benefited to some extent from the choice of Riga as headquarters for the handling of American relief supplies for Russia; but disputes with the Soviet Government as to conditions for transit have greatly restricted the volume of ordinary trade. The trade returns for the first two quarters of the year show a surplus of imports, though in the third quarter there was a small export surplus.

The budget of Latvia, like that of most of the other Baltic States, very nearly balances; and Latvian currency has slightly appreciated in terms of gold, owing to the refusal of the former Finance Minister to provide exchange towards the end of 1921, and the prevention of further inflation. The index number of internal prices fell from 100 in January (the base) to 84.5 in November. Lack of capital has hampered production during the year, and most of the country's industries are almost idle.

LITHUANIA.

Lithuania may be regarded for practical purposes as a purely agricultural country. The principal articles of export are timber, poultry, eggs, and flax; and in 1922, for the first time in the history of the new State, there was a favourable trade balance, estimating on the basis of the figures for the first ten months of the year. Remittances from Lithuanians living in the United States have been very regular of recent years, and form a very important part of the national income.

The loss of Vilna is a serious handicap to Lithuania, and the Allied occupation of Memel, which has recently been contested by Lithuanian irregulars, has deprived the country of its only harbour.

The chief event of the financial year was the establishment of a national currency—the lita (equal to 10 cents gold)—in place of the mark, which was a relic of the war period. This has been remarkably stable, and its inauguration fortunately came before the most catastrophic movement of German currency. With a budget that nearly balances and a stable exchange, the year 1923 should prove even better than 1922, if only outstanding political differences can be adjusted.

FINLAND.

For the first time for many years Finland has shown a favourable trade balance. The following table of imports and exports for the last four years shows clearly how great the improvement has been in this respect:—

Year.	(In Millions of F. Marks.)			Balance.
	Imports.	Exports.		
1919	2,509.9	880.4		- 1,629.5
1920	3,626.5	2,926.4		- 700.1
1921	3,585.7	3,389.4		- 196.3
1922	3,953.1	4,461.1		+ 508.0

The Finnish mark, however, has appreciated too rapidly, and this has caused considerable inconvenience to traders. Towards the end of the year the State Bank reduced the rate of discount from 9 to 8 per cent., and came on the market as a buyer of foreign currency, in order to check a further appreciation of the national currency.

Industry has on the whole been brisk, though the metal and glass trades have been going through a period of depression. Traffic returns on the railways show that the country's internal trade has been improving, while shipping returns give signs of increasing commercial activity. Paper, wood, and meat and other animal food products are the principal exports, while imports include cereals, colonial goods, and textiles. Several commercial treaties have been concluded during the year, perhaps the most important being that with Germany and the conventions with Russia.

POLAND.

In Poland the chief event of the year from the economic point of view was the incorporation of Upper Silesia in the Polish Customs boundaries which took place in June.

It is unfortunately impossible to obtain as yet a satisfactory statistical view of the year's trade. Although 1922 has witnessed the inauguration of a new service by which value figures (converted into Swiss francs) of imports and exports are published for the first time, it is unfortunate that disagreement with the authorities of the Free City of Danzig—through which port in all probability passes about 15 per cent. of Poland's external trade—makes the returns which have been published for the first half-year somewhat unreliable. For the six months January to June exports amounted to 44.9 per cent. of the imports, the adverse balance being a little over 163 million gold francs. Raw materials, noticeably cotton, coal and wool, formed 47 per cent. of the total imports, while metal goods and yarn were the principal manufactured goods imported. Manufactured goods, the chief amongst them being petroleum (23 per cent. of the total) and textiles, constituted the principal exports. The incorporation of Upper Silesia has undoubtedly modified this adverse trade balance during the second half of 1922, for instead of importing coal—this item formerly constituting 12 per cent. of total imports—Poland has now become a coal exporting country.

The harvest in 1922 was quite satisfactory, though there is room for further improvements in agricultural technique, while more acreage still remains to be brought under cultivation.

The transport services seem to be progressing favourably, and are becoming much more reliable, though it may well take years for the new country to construct a really adequate national railway system. The chief need of the present, however, is that the budgetary position be strengthened and an end made to the present chaos of the country's currency.

B.—BRITISH DOMINIONS.

CANADA.

General Position.—The year 1922 has been devoid of signal occurrences in Canada's economic life; it has been a period of marking time after the sharp reaction which began in 1920, and continued through 1921. Price readjustments have been continued at a markedly slower pace, and commodity stocks have been brought down to a parity with current consumption. The most bountiful harvest in the country's history was reaped, but the great flaw in the economic situation was the continuing depression of agricultural prices, the disparity of their decline to that of other commodities making agricultural operations unprofitable both in 1921 and 1922 for the majority of Canadian farmers. The diminution of the purchasing power of the rural population, which forms one-half of the total, reacted adversely upon industry, and many factories were unable to utilise their normal productive capacity. The iron and steel industry had a very poor year, and agricultural implement firms found orders scarce, but the textile mills were fully employed. In the industrial sphere the main source of salvation was the prosperous activity of the mining, the lumber, and the pulp and paper industries.

Trade Balance.—Imports were valued at \$762 millions and exports at \$898 millions in 1922. In the previous year imports were \$799 millions and exports \$816 millions, so that, in spite of a small reduction in imports, the favourable merchandise trade balance improved substantially. This represents a very substantial improvement, and the most satisfactory feature of the eight months' returns is that an excess of imports, amounting to \$450,000, has been turned into an excess of exports of, roughly, 115 million dollars. There has been a notice-

able increase in the proportion of trade done with Great Britain.

Crops.—The value of Canada's principal field crops for 1922 is officially estimated at \$962,616,200, as compared with \$931,863,670 for 1921, and \$1,537,170,100 in 1919, the record year. The acreage planted with crops was normal, but the yields of most crops were well above the average. Unemployment was serious in the opening months of the year, but it vanished when outdoor work became possible, and so far this winter has not reached the same dimensions.

Commodity Prices.—In the earlier half of the year the trend of prices was slowly downward, but after June there began an upward movement in many commodities, and, luckily, wheat participated in it to a slight degree. The official index number (taken as 100 for 1913) sagged from 154 in December, 1921, to 146 in December, 1922, and the average family budget, which the Labour Department compiles, dropped from \$21.53 in January to \$20.88 in November, 1922.

Money, Stocks, and Exchange.—Stock Exchange records show a distinct reversal from the trend of 1921, and in a list of 58 domestic stocks most active on the Montreal Exchange, there has been a net gain in value of \$158,000,000 during the year. Most of the banks show a fall in deposits, but money has been reasonably plentiful. Canadian bonds were placed in large quantities, and at good prices, in the American market, and their sale materially helped to restore the Canadian dollar to par in New York. Sterling rose from \$4.40 in January to \$4.68 in December.

Public Finance.—The increased taxation of the last Budget has not produced the expected results, for the Federal revenues at the end of December showed at the official figure of \$300,174,050, an increment of about six million dollars only, and the national debt, which stood on December 31st at \$2,412,496,151, has increased nearly 45 million dollars in 1922. Mr Fielding cannot hope to balance his budget, but there are signs that the railway deficit will be cut at least 15 million dollars. If Canada could solve her railway and immigration problems, and see Europe restored to economic health, an early recovery of her old prosperity would be assured.

AUSTRALIA.

Trade.—The year 1922 was, on the whole, a period of steady progress towards more normal conditions in the economic sphere after the disturbances of the war period.

In 1921-22 there was a fall in exports, but an even larger fall in imports:—

Year.	Imports.	Exports.
	£	£
1913	79,749,653	78,571,769
1920-21	163,801,826	132,158,912
1921-22	101,063,661	127,949,455

It will be seen that the visible balance, which was unfavourable in 1920-21, was turned into a surplus of over £26 million in the following year. The statistics for the next four months, however (July-October, 1922), show a swing round in the other direction:—

July-October.	Total Imports.	Total Exports.
	£	£
1921	27,932,005	35,334,279
1922	42,271,941	32,505,020

The share of the United Kingdom in the import trade rose from 46.9 per cent. in 1920-21 to 49.27 per cent. in the first nine months of 1921-22; while imports from the United States fell from 22.0 per cent. to 18.63 per cent.

Production.—The wool season was a good one, the clip being excellent, and prices considerably above what had been anticipated. The wheat harvest for 1922-23, though about 26 million bushels less than that of the previous season, is turning out an excellent one in point of quality. Agricultural co-operation is spreading

amongst the farming community, and the Producers' Wholesale Co-operative Federation has opened a London office. Attempts at cotton growing in Queensland seem to be progressing favourably, though it is not yet certain whether the crop can be raised in large quantities on an economic basis.

Labour.—The readjustment of wages and prices to world conditions has not been achieved without a certain amount of friction in the world of labour. Wage disputes have been particularly noticeable in the wool and mining industries, where a settlement was only brought about by Government intervention. Moreover the general problem cannot yet be regarded as finally settled.

Public Finance.—The accounts of the Commonwealth and State Governments for the year ending June, 1922, do not present an altogether satisfactory picture. Ordinary expenditure has risen more than revenue, as compared with the previous year, and the total debt figure is very high. Victoria and South Australia have the smallest public debt per head of the population, but Western Australia is in the unenviable position of leading in this respect with a debt per capita of over £137.

(In Thousands of £'s.)

1921-22.	Revenue.	Ordinary Expenditure.	Loan Expenditure.	Debt, June 30, 1922.
	£	£	£	£
Six States	84,681	87,106	32,819	506,881
Commonwealth	56,158	56,368	6,176	416,070
Total	140,839	143,474	38,995	922,951
1920-21	138,449	139,154	54,136	..

The heavy debt burden, incurred very largely on behalf of capital construction, will only become bearable if a successful immigration policy is carried through.

NEW ZEALAND.

General.—The year 1921 closed in gloom. The high costs of production combined with heavy freights to make New Zealand's position on the world market a most difficult one. In 1922, however, serious efforts were made to restore order in Government finance, and to restore industry to a competitive basis.

Public Finance.—The Government is making very serious efforts to lead the way in the national economy movement. The revenue for the first seven months of the fiscal year (April-October, 1922) showed an increase of £229,111 over the corresponding period in 1921—this being the first occasion for some time past in which an increase has been shown—while the total reduction in expenditure for the same period, due to economies and savings, amounted to £2,291,766.

Trade.—The trade balance has now become favourable, as the country has gradually recovered from the excessive importations of recent years.

	Imports.	Exports.	Balance.
	£	£	£
1920	61,595,828	46,441,946	- 15,153,882
1921	42,942,443	46,828,827	+ 3,886,384
1922 (9 months)	25,292,170	35,145,795	+ 9,853,625

The share of the United Kingdom in imports improved from 56 per cent. in 1920 to 61 per cent. in 1921, and there seem to be indications that the 1922 figure will approximate still more closely to the pre-war proportion of 67 per cent.

Production.—The output of butter and cheese showed considerable improvement as compared with 1921, while in the meat trade lamb fetched much better prices, though the year has been far from satisfactory for beef. The Meat Export Control Board, constituted in 1921, has eased the situation somewhat by effecting reductions in freight and freezing charges, and by affording improved conditions of marketing.

INDIA.

General Conditions and Trade Balance.—In India the first five months of 1922 were good months. The end of January of the year under review showed an unenviable trade position. Imports stood at Rs.27,61 lakhs, against exports totalling Rs.23,00 lakhs, and there was an adverse balance, covering a period of ten months, of Rs.33,35 lakhs. By the beginning of March more goods were going out of the country than were coming in; there were indications of a rich monsoon; the rupee had seemingly settled itself in the vicinity of 1s 4d. April saw a complete recovery. In merchandise alone the trade balance veered round to the extent of Rs.6,02 lakhs in India's favour, and funds balanced on the right side to the extent of another Rs.2,00 lakhs. At the completion of these first five months of the year India's favourable balance of trade totalled Rs.7,62 lakhs, and by the end of September rose to Rs.13,16 lakhs. Throughout the Peninsula an optimistic view of the future prevailed. The monsoon had proved as bountiful as was anticipated. It appeared that the trade turn had at last been negotiated, and that the rupee, following the appreciation of sterling in New York and India's then promising trading condition, would definitely move in the direction of the officially fixed level of 2s. Now, however, outside influences began to be felt, including Near Eastern troubles and Reparations. Internally India was experiencing disorganised share markets, resulting from rash speculation and a severe crisis in the raw cotton bazaar. And to add to the general unsettledness, the Indian Fiscal Commission thrust a report half-heartedly advocating Protection before the bewildered commercial community. In one month the favourable trade balance dropped 3,86 lakhs, and the end of the year did not find India in such a flourishing condition as was anticipated six months previously. The final and corrected figures for 1922 are not yet to hand; the impression is that the merchandise movements will reveal a favourable balance of a few million pounds sterling against an adverse balance of £77,000,000 (at Rs.10 to the £) at the end of 1921. Treasure imports into India increased considerably during 1922, and nearly £13,000,000 worth of gold was taken from the U.K. alone.

Production and Prices.—Crop conditions during the year under review improved. A good monsoon was responsible for a general increase in the main soil products, and in some cases the 1916-20 averages (the last to be compiled) were exceeded, although the acreage under rice was a million short of the 1921 total. The year closed with expectations of good spring crops, particularly in the northern districts. The year's industrial activities call for no special comment. The average number of strikes at mills, mines, and workshops were indulged in, and in all cases where the employers held firm the malcontents eventually resumed work without gaining any concessions. Trade unionism is in its infancy in the country, and there is no organisation amongst the vast armies of workers. Prices of the principal pulses and cereals that constitute the Indians' staple diet moved downwards, and in some instances touched pre-war levels. For Europeans the cost of living was, on the average, 50 per cent. higher than it is in England at present.

Money and Stocks.—Money in India has, throughout the year, shown a tight tendency. Official circles, however, obtained all they required. Of the two big Indian loans floated in London, the second—£20,000,000, at 4½ per cent., issued at 85 in October—involved the underwriters with large holdings. The general seasonal scarcity prevailed at the year-end, and the closing rate of the Imperial Bank of India—7 per cent., with its increase of two points in two months, and subsequent rise to 8 per cent.—was a fair indication of the money market's trend. Steadiness was the chief attribute of the rupee, and during the year it appreciated exactly 7-32d to 1s 4 5-32d, without undergoing any fluctuations of note. Government securities without exception showed to advantage. Low-rated paper (3 per cent. and 3½

per cent.), mainly as the result of favourable recommendations from committees appointed to consider the rehabilitation of these submerged securities, grew active, and moved upwards in the face of keen competition from new and heavier yielding issues. The short-term 6 per cent. and the 5½ per cent. 1928 bonds both closed at a premium. Corporation loans gave a very satisfactory average yield per cent. of over £6. All investment securities were firmly held, whilst the general industrial and trading scrips were, in the main, left to the mercies of the speculator or neglected. Throughout the year the chief stock exchanges were restless as the result of flagrant and undesirable speculative coups on the part of groups of members; much money was lost, and many operators and their "backers" failed. The Bombay exchange was particularly hit by the two incidents referred to above, viz., a gigantic "bull" raid on cotton mill shares, which failed, and the attempted corner of a growth of raw cotton.

Public Finance.—The condition of public finance did not improve during the year. Like its predecessors, the last Budget was an "economy" one, and was framed to yield a slight surplus. But the Legislative Assembly, as a protest against Army expenditure, refused to vote certain taxes, and the Budget as finally passed had a prospective deficit. It is anticipated, however, that the financial year will end in March next with a balance, as great efforts at "retrenchment" are being made, and the opportunities for economy are being scientifically investigated by a committee under the chairmanship of Lord Incheape. Towards the close of the year Sir Basil Blackett, Controller of Finance at the Imperial Treasury, left for India to take up the post of Finance Member of the Viceroy's Council, in succession to Sir Malcolm Hailey.

SOUTH AFRICA.

Public Finance.—The public debt amounts to approximately £200 millions, interest and general service charges requiring an annual sum of roughly £8 millions. But of these figures productive works represent a debt of about £55 millions, with an annual interest service charge of £5½ millions. Briefly considered, the estimated revenue for 1922-23 was put at £28,695,000, with an estimated expenditure of £29,044,000, revealing a deficit of £349,000. This, added to an accumulated deficit of £1,220,000, gives a total estimated deficit for March 31, 1923, of £1,569,000. But this is an optimistic estimate, and there are signs that a larger deficit will result. Unemployment relief is expected to absorb another £450,000, while the cost of the Rand labour troubles will add a substantial sum to the Government's expenditure. To make matters worse, it is stated that receipts from income-tax have been over-estimated.

Foreign Trade.—Apart from adverse conditions brought about by the unfortunate revolution on the Rand, the effects of the world's trade depression were reflected in the official trade returns, which showed that for the nine months ended September 30th last exports had fallen to just over £43½ millions, as against nearly £46½ millions recorded for the corresponding period in 1921, while imports for the nine months fell from £47½ millions in 1921 to just under £40 millions in 1922. Gold exports for the nine months ended September 30, 1922, consisted of 5,582,096 ounces, valued at £21,698,453, as against 6,547,636 ounces, worth £27,338,607, for the same period in 1921. The figures for wool tell an interesting story. For the nine months of 1922 exports were 142,221,699 lbs, valued at £6,360,644, as compared with 137,917,827 lbs valued at £4,727,235 in 1921. Latest advices show that taken at £4,727,235 in 1921. Latest advices show that for October an excess of imports of £1,029,000 is recorded, for November £2,228,000, December £2,782,000, and January this year £2,592,000.

Banking.—During the year an important experiment in South Africa's banking system has been tried. It may be recalled that under the Currency and Banking Act, 1920, the South African Central Reserve Bank was established. This has now been working for over

six months. Commercial banks operating in South Africa after July 1, 1922, could no longer issue their own notes, and these are now gradually being replaced by an issue of the Central Reserve Bank. The chairmen of the two big rival banking undertakings—the Standard and National—have both placed on record some interesting remarks as to the working of this experiment. The chairman of the Standard reported that the change was being effected smoothly "without having recourse to facilities from the Reserve Bank," while the chairman of the National in the course of his annual speech pointed out that "it must make for a greater degree of stability in the monetary system." In a recent return of the Central Reserve Bank, bankers' deposits amounted to over £5½ millions and domestic bills discounted totalled just over £2 millions; Government borrowings figured at over £1½ millions, and £1,350,000 was on loan to other persons.

Industry.—Gold mining was restricted by the Rand labour troubles, 639,728 ounces being produced in the first three months of the year, as against 1,880,853 ounces in the corresponding three months of the previous year. Once work was resumed, however, a recovery soon set in, and in the last six months of the year the monthly record showed substantial gains over the figures of the previous year—the year's total output amounting to 7,020,111 ounces as compared with 8,114,516 ounces for 1921. The wool market has been unusually good, the demand for mchair being well sustained. The need for a satisfactory outlet for the country's surplus cattle became noticeable in the last few months of the year.

C.—OTHER COUNTRIES.

UNITED STATES.

In spite of labour troubles in the spring and summer, the economic recovery was marked and general.

Money and Stocks.—The industrial depression of 1920-21, and the accumulation of gold, had left vast sums free for investment. Money rates in February fell to 3 per cent. for call loans, and 5 per cent. for time loans, or, with collateral security, rather less. In December they were somewhat higher, through the expansion of industry and the unprecedented issues of new bonds and stocks, totalling \$5,080,345,054—nearly 15 per cent. above 1921. Apart from refunding issues, the new capital was \$4,273 millions, against \$3,388 millions in 1919, when borrowing for other than war purposes was resumed. Foreign Governments raised \$431 millions; Canada, Queensland, Holland (for the kingdom and the Dutch East Indies), Czechoslovakia, Jugoslavia, Norway, Brazil, Bolivia, and Argentina; French railways, European and Canadian cities, and European industrial and shipping companies, also appeared as borrowers. Of American issues, Farm Loan bonds totalled \$386.4 millions; railroad, industrial, and public utilities, apart from stock dividends, \$3,066.4 millions; State and municipal loans, however, were \$1,072.4 millions, against \$1,208.7 millions in 1921. Naturally, the stock markets declined towards the end of the year.

Foreign Exchanges.—Sterling rose, with some fluctuations, from \$4.20 in January to \$4.64 in December; a little earlier it had been 4.69½. The French, Belgian, and Italian exchanges rose till April, but declined on the failure of the project for an international Reparations loan; in December they momentarily rose. The German mark fell from .6 cent. in January to nearly .01 cent. in November. The neutral European exchanges rose consistently, the Canadian reached par.

Foreign Trade.—Export values were the lowest in seven years—\$3,831,516,735, against \$4,485,031,356 in 1921. Wheat exports were reduced by the competition of an excellent Canadian crop. Import values, January 1st to October 31st, totalled \$2,570,069,455. The Fordney tariff, a compromise between the Houses of Congress, became operative September 22nd; it greatly increased most rates, but the anticipatory im-

ports fell short of expectation. Its effect on the trade balance is not yet clear.

Production and Industry.—Production generally expanded; building broke its record with a total value in 164 cities exceeding \$2,474 millions. Its demand stimulated the steel trades, and some other industries (notably motor-car construction) were very active. But the New England textile strike (February to August), the soft coal and anthracite strikes (April 1st to end August), and the railway shopmen's strike (July 1st to end September), all wholly or mainly against wage reduction, reduced the expansion. About a million persons in all left work. The coal strikes were settled by agreement favourable to the workers, the railroad strike having interfered with transportation; the shopmen, unaided, contrary to expectation, by other railroad workers, and the textile strikers returned gradually, or had their places filled. But some textile mills did not reduce wages after all. The U.S. Steel and other steel enterprises raised day wages; increased industrial activity and immigration restrictions had practically, by Christmas, eliminated unemployment. Railroad net traffics rose through reductions in working expenses, but were well below the amount needed to give the 6 per cent. regarded as a fair normal return. *Bradstreet's* price index number (covering 96 commodities) rose from \$11.3127 in December, 1921, to \$13.7835 in December, 1923. Business failures numbered 22,400, with liabilities nearly \$647 millions; this latter figure had only been passed in 1921, when the failures were 20,014, and the liabilities \$755.77 millions. Retail trade improved, especially at Christmas.

Crops.—The crop yield was estimated at 8 per cent in quantity and 34 per cent. in value above that of 1921. Wheat, corn, and oats did well; potatoes, rye, and hay broke records. Cotton was estimated ultimately at 9,954,000 bales, the smallest in 20 years except in 1921. The value, however, was put at \$1,134 millions, the fourth highest recorded. The acreage was larger, but the crop suffered from boll weevil and droughts.

Public Finance.—The latest Budget estimate for the fiscal year 1922-23 puts expenditure at \$3,703,801,671, revenue at \$3,429,862,959, a deficit of \$273,948,712. In July last it was forecasted that the deficit would be \$697 millions, so that the latest estimate shows a marked improvement. In the year ending June 30th last there was an excess of receipts to the extent of \$313 millions. The Secretary of the Treasury advised a reduction of income sur-taxes to check evasion and the diversion of capital to tax free bonds, a security of which he hoped a pending Constitutional amendment would forbid the issue.

JAPAN.

General.—In Japan the post-war boom assumed the most exaggerated form, and it was in that country that the subsequent world-wide slump began. In proportion as the boom had been exaggerated, so the losses in the slump were severe. The year 1922 still found Japan struggling with the work of readjustment. It was a year of difficulty, but some progress was recorded. The adverse trade balance was somewhat reduced.

Public Finance.—The budget estimate for the fiscal year 1922-23 balances with a revenue and expenditure of 1,482,420,000 yen. On the revenue side, 1,245,458,000 yen represents ordinary and 236,962,000 yen extraordinary revenue. On the expenditure side, 941,830,000 yen is ordinary and 540,590,000 yen is extraordinary expenditure. The actual revenue and expenditure account during the eight months ended November, 1922, showed an ordinary revenue of 566,299,000 yen, an increase of 73,000,000 yen, against the corresponding period of the previous year, whilst the extraordinary revenue of 599,693,000 yen showed a decrease of 56,000,000 yen, against that of the previous year. The increase in the ordinary revenue

comes from taxation and State trading, the decrease in the extraordinary revenue being due to a reduced surplus carried forward from the previous financial year. During the same period, the actual expenditure was made up of 496,080,000 yen ordinary and 268,608,000 yen extraordinary expenditure, the former being an increase of 62,000,000 yen, and the latter a decrease of 59,000,000 yen, compared with a similar period in the previous year. The reduction in extraordinary expenditure was mainly due to a curtailment of naval expenditure by 170,000,000 yen.

Trade Balance.—In 1922 exports were 1,637 million yen and imports 1,889 million yen, the import surplus being 252 million yen. The import balance for 1921 was at a higher figure of 361 million yen. In 1922 imports increased by 276 million yen, and exports by 384 million yen.

Commodity Prices.—The regulation of the price of commodities has been a problem to which great attention has been given in both official and unofficial circles, as the high price level in Japan, compared with foreign countries, has had a detrimental effect on the industrial prosperity of the country. Some success has crowned the efforts made, and the price index number fell from 207.7 in January to 189.6 in November, although there had been a slight upward tendency in June and July.

Currency.—The convertible note issue of the Bank of Japan at the end of 1922 amounted to 1,596,000,000 yen, of which 1,050,000,000 was covered by the specie reserve, and the balance by securities. The note issue at the end of 1921 was 1,546,000,000 yen, although it was at one time only 1,100,000,000 yen.

Money and Stocks.—Owing to the recent slump in industrial and trading circles many establishments in Japan experienced slackness of business, and some financial difficulties. In spite of the extremely low rate at which money was available in the home money market, there was almost a cessation of activity, with a resultant downward tendency in the stock market of 10 to 30 per cent. below the prices ruling in the previous year.

Staple Commodities.—Raw silk: Owing to the sluggish export business in raw silk during the spring, short time on production was resorted to, but the steady increase, which had set in just before the coming into force of the new Customs Tariff of the United States, was subsequently maintained. The total export of silk for 1922 was 180,000 bales, an increase of 30 per cent. against 1921. The market price of silk was at one time down to 1,500 yen, but rose again towards the end of the year, when the price ruling was 2,100 yen. In view of the current cost price, this figure may be regarded as reasonable. Rice: The rice crop is estimated as 60,580,000 koku (a koku equals 4.9629 bushels), the price falling gradually from 41.7 yen to 26.2 yen in sympathy with the general downward trend in commodity prices. Cotton yarn and cotton tissue: Owing to the high price of raw cotton and slackness in demand, manufacturers found difficulty in disposing of their goods, but in view of the high quotations for European goods, the export trade showed a marked increase over that of the previous year. Pig-iron and steel: In consequence of general retrenchment in business undertakings, there was a falling off in the demand for these products, and a great drop in the market price. Manufacturers were in some cases obliged to cease the production of pig-iron and steel.

CHINA.

General Conditions.—The country for years has been at the mercy of two factions, North and South, which have carried on a senseless warfare. This has sorely hindered economic development, and has brought her almost to the verge of bankruptcy. China lacks a sound Central Government; governments come and go, and each one seems as ineffective as the other. This fact hampers the material progress of the country. The

present financial position is serious. The total debt, internal and external, is estimated to be not less than \$1,800,000,000, of which \$364,000,000 is practically unsecured. Of this latter figure, \$216,000,000 represents foreign debt, and \$148,000,000 indebtedness to native banks and individuals.

Public Finance.—Local revenues that reach the Central Government from the provinces are negligible, and some of the provinces have ceased to make any contributions at all. In the circumstances it is fortunate that China has two reliable sources of revenue, both under European direction or control. The first is the salt revenue. After meeting administrative expenses, the total collection in 1922 amounted to \$85,789,000 (£9,532,000). Despite the disrupted state of the country, this sum represents an increase of \$7,801,000 (£866,800) over that collected in 1921. Various foreign loans are directly secured on the salt gabelle, and all these obligations for 1922 were met. The surplus was then released to the Government, and amounted to \$78,862,000 (£8,762,500), though this is stated to include some £3,444,400 retained in local centres, or appropriated by the provincial authorities or the militarists. The Chinese Imperial Maritime Customs has been a fruitful source of revenue, and the total collection may be taken as a reliable index to the foreign trade of the country. For 1922 the customs revenue amounted to Haikwan taels 58,600,000, which at the average sight exchange of 35 gd is equal to £10,987,500. The total in taels is 4,100,000 higher than the 1921 collection, though the sterling amount is only £215,235 more, but in 1921 the average exchange for the Haikwan tael was 35 11.4375d. The Inspector-General for Customs, Sir F. A. Aglen, reports that the service of all foreign loans, including that for the Chinese Reorganisation Loan, and the Boxer Indemnity obligations, directly secured on the customs revenue, have been fully met. All domestic loans indirectly secured on the customs collections, of which the loan service is under the control of the Inspector-General, have also been met in full.

Trade in 1921.—Trade statistics from China are always belated, and those for 1921 reached England only a few months ago. The net sterling value of the foreign imports for that year was £179,100,763, and that of the exports £118,841,914. The tael figures were: Net imports, Hk. taels 906,122,439; exports, Hk. taels 601,255,537. As compared with 1920, the imports from Great Britain increased by 18.2 million taels, but the exports declined by 14.9 million taels. That Great Britain has not lost headway in the China trade is, however, apparent from the figures for the first nine months of 1922, which we are able to give. Our imports from China were valued at £6,867,000, and our exports to China at £18,818,000, both of which totals are considerably higher than those for the complete year in 1921, when our exports to China were valued at £14,845,000, and our imports from China at £4,672,000.

Silver and Exchange.—Exchange with China has been fairly stable throughout the year, but has followed, as usual, the fluctuations in the price of bar silver. The highest price for silver was 37½d per standard ounce, and the lowest 30¾d, the range of price being 7d, which compared with 12½d in 1921, when the highest quotation was 43¾d and the lowest 30¾d. The average quotation for the Shanghai tael in 1922 was 3s 4.226d, and in 1921 3s 6.3044d, the average price for "spot" silver in the two years being 1922, 34.4055d; 1921, 36.8409d. As a matter of fact, 1922, 34.4055d; 1921, 36.8409d. As a matter of fact, China was the principal operator in the London silver market during 1922, and very large transactions in both spot and forward silver, speculative and otherwise, were carried out. Not all of this silver was shipped, but the quantity that did go to China, some 22,000,000 ounces, is sufficiently indicative of the amount of the white metal needed to finance the trade of the country, and given stable conditions China's overseas commerce would undoubtedly make rapid strides.

ARGENTINA.

Trade and Prices.—Only towards the close of the year did Argentine trade show signs of revival. Both imports and exports declined, with balance against Argentina. Among exports, corn, linseed, and wool decreased; increases occurring in wheat, flour, sheepskins, beef, dried hides, quebracho logs, and quebracho extract. The agricultural year was expected to yield 3,000,000 tons of maize, 4,000,000 tons of wheat, 1,500,000 tons of linseed, and 700,000 tons of oats, roughly valued at £80,000,000 sterling. Ruling prices of raw export products were generally higher.

Agriculture.—Better agricultural conditions prevailed than for several years. A 25 per cent. increase in the wheat acreage found reflection in better general trade. Russia's elimination from the list of exporters, coupled with abundance of natural production, benefited the agriculturist. On the other hand, costs of handling, grading, transporting, and marketing grain rose steadily. The meat industry remained depressed. Owing to increase in local consumption of petroleum and firewood, coal imports declined heavily.

Industry.—Industrial production, a notable feature of recent years, advanced more slowly, but at fair prices, except for foodstuffs, lumber, metallurgy, and building. With respect to stocks on hand, building and construction were normal. In railway traffic and most classes of shipping, improvements occurred; the charter market stood high, while a considerable amelioration was shown in labour conditions, the number of strikes being comparatively few and unemployment less. Only minor commercial failures occurred.

Bank deposits fell off slightly, such reduction being confined to private institutions. The Banco de la Nación reported an increase. The percentage of cash reserves to deposits was 25 per cent. in the case of the national and 34 per cent. in the case of private institutions, against 21 per cent. and 35 per cent. respectively in 1921. Banking transactions displayed steady increase, especially the more active loan market.

Public Finance.—Public finances showed no improvement, the 1923 budget betraying an estimated deficit of 172,000,000 paper pesos. Total estimated expenditure 604,000,000 paper pesos (£52,520,000), ordinary receipts 431,700,000 paper pesos (£37,450,000). Exchange fluctuations towards the end of the year were little more than normal. The Argentine peso continued to climb steadily in value as compared with the American dollar. Discount rates continued much about the same level.

BRAZIL.

Trade and Exchange.—The Exchange situation dominated every phase of Brazilian commerce and industry. Of the 14 principal commodities exported, only four—cacao, tobacco, meat, and rice—were shipped in smaller quantities during the year than in the same period of 1921. Coffee stocks on hand remained high, the market being greatly disturbed. For the first eight months exports amounted to 7,812,000 bags, exceeding 1921 exports by only 37 bags. Coffee valorisation operations ordered by ex-President Pessoa resulted, it was claimed, in a profit of 900,000 contos of reis. It was decided to continue the policy. Adverse exchange affected imports, both Government and private buying being restricted. The trade balance of the country represented a gain of £21,449,000. Industrial production likewise maintained its advance, especially in textiles.

Sugar and Cotton.—Sugar cultivation expanded and the 1922-1923 crop was estimated at 635,000 tons, while the 1922-1923 cotton crop was estimated at 520,968 bales. British representatives offered to buy all the cotton Brazil could supply—but at market prices. The State of Sao Paulo exported during the first half of 1922 cotton goods valued at £380,000, compared with £860 in corresponding period of 1921. For the same period cotton cloths imported decreased in value from £508,000 in 1921 to £370,800.

A favourable financial balance was again shown by the four principal railroads in the State of Sao Paulo, having a combined mileage of 5,241 kms. Shipping improved sensibly owing to Centennial Exhibition traffics, rates remaining approximately the same.

Public Finance.—The public debt amounted to 6,639,000 contos; paper money in circulation was 2,226,000 contos. The Government was called upon to fund large loans absorbing 300,000 contos of reis and the floating debt of 700,000 contos; the Budget, which was voted, showed an estimated deficit of at least 200,000 contos.

CHILE.

Trade and Industry.—Dullness in general trade and an unsettled exchange situation characterised Chilean conditions. Total Chilean imports for the first six months of 1922 reached £7,400,000, leaving a trade balance of £3,200,000, compared with £3,400,000 in 1921. Foreign trade was but slightly affected by losses of capital in recent earthquakes. A tax of 10 centavos per 100 kilos or fraction thereof, imposed on all import and export merchandise passing through her maritime or frontier cities, and applying also to shipments by parcel post, obstructed greater commercial progress. The enforcement of the new coastwise shipping law met with considerable opposition, having occasioned increased charges and inferior service. Shipping rates proved so high that it was cheaper to import supplies from abroad formerly purchased within the country. A Presidential decree, issued in June, limited the profits of wholesale and retail merchants to 10 per cent. Wool moved more

freely than during the previous year, but exceptionally large stocks remained on hand in the Punta Arenas district. Additional native mills, producing good practical qualities which sold at appreciably lower figures than foreign fabrics, affected textile imports. Exports of chemicals and allied products for the first nine months fell below the totals of 1921, but proportion of decrease diminished, until the margin reached only one-half of 1 per cent. The tanning industry made remarkable progress, only three or four other industries in Chile showing a heavier capitalisation figure. Congress provided for the following expenditures during 1922:—348,709,365.61 pesos (paper) and 74,239,878.79 pesos (gold).

Public Finance.—The 1923 Budget was expected to balance for the first time in recent years. Proceeds of the last foreign loan for purposes of meeting the Budget deficits were left abroad to meet the service of the exterior debt. Paper money in circulation showed an appreciable reduction from previous figures. In the month of December last the Senate refused to authorise any further Government loans or issues of paper money in its move for economy. In October 11,000,000 pesos' worth of bank-notes were issued to replace old notes not yet obsolete.

Nitrate and Exchange.—Rising exchange cut nitrate profits, the oficinas receiving only 31 pesos for each £1 of sales instead of 40 pesos received shortly before. Prospects of a nitrate shortage were reported. World's consumption (July, 1922-June, 1923) was expected to exceed previous year's total (1,544,000 tons). At the end of 1922 stocks reached 1,231,000 tons, of which 405,000 tons had been sold for shipment January-April, 1923.

I.—THE CORN TRADE.

FIRST YEAR OF FULLY DECONTROLLED TRADE.

The wheat trade for 1922, for the first time since 1915, presents the commercial world with authentic statistics. Last year at this period we were quoting from a technical journal which with remarkable moderation of statement deplored an obvious discrepancy of 14 million cwts as "a degree of inexactitude." The control of wheat had not ceased till March 31, 1921, that of flour had endured till August 13th, while feeding-stuffs showed a variety of dates of decontrol.

In the following review, therefore, it will not be journalistic exigencies of space alone that will induce us to make no comparisons with the control period of 1915-1921. The comparison with 1914 has, however, a special value due to the stationary character of bread consumption. An increase of three millions in the population has not led to any increased call for overseas wheat, and the home production, after a brief spell of subsidised cultivation, largely on unfit ground, has reverted to its pre-war standard. The net result, of course, is that bread consumption per head of population must have undergone a positive decline, and bakers are practically unanimous in noting this to be the case.

PRODUCTION OF WHEAT.

Wheat imports for the year 1914 were, in millions of cwts, the sole legal denomination since January 1, 1923, 114, and for 1922 were 110; the stocks to-day are a little smaller than they were in February, 1915, but not much, and the home supplies are probably closely alike in total. In 1914 only 1,904,932 acres were under wheat, but an over-average season gave 33,401,120 cwts. In 1922 the season was less propitious, but 2,080,000 acres were cultivated, and it is estimated that the yield is almost identical

with that of 1914. The *Mark Lane Express* (August 27th) estimated the British Isles at 34,240,000 cwts. The Ministry of Agriculture (November 2nd) put England and Wales at 32,737,720 cwts. Official returns for Scotland and Ireland are not yet to hand, but are more important for wheat; with respect to barley and oats, the loss of "United Kingdom statistics" is a far more serious matter.

Overseas production of wheat in 1922 is not yet the subject of any definitive return, except in the cases of Canada and America, but the trade estimates are generally received for the other leading countries. In 1914 the returns presented two remarkable features, the Australian crop in December, 1914, being the smallest for a generation, and the Argentine being strangely over-estimated. The figures here given are the revised ones of a severe inquiry, but in February, 1915, operators had before them a Government statement of the December, 1914, crop at 110,800,000 cwts. The German crop estimate for 1922 is even lower than the figures accepted by the British corn trade. It is admitted that there is grave decline in production, but the Berlin picture is thought to be painted too deep a black.

WHEAT PRODUCTION (Millions of Cwts.).

	1914.	1922.
British Isles	33.4	33.5
U.S.A.	477.3	460.0
Canada	86.0	207.0
India	171.2	197.0
Argentina	85.6	116.0
Australia	20.0	68.8
Germany	77.4	42.8
France	154.8	129.0
Total (incl. other countries)	1,105.7	1,254.1

These totals show a net decrease of 148,400,000 cwts in world production. For the five years before the war the average Russian exportation of breadstuffs was 100 million cwts.

THE RISE OF CANADA.

The Canadian effort to capture the market left vacant by Russia is the chief wheat trade event of 1922, and to-day Canadian wheat is the dominant type offering at Mark Lane. At Liverpool and at Glasgow its preponderance is absolute. French crops have, of course, been badly reduced by the war; her wheat production is down by 25,800,000 cwts. But the German fall is at least 34,600,000 cwts, and in proportion to 1914 production the decline is much more steep.

THE HOME POSITION OF WHEAT.

The following brief presentation of the home position shows that the advance in wheat prices is not much out of accord with the general index numbers for the post-war costs of living, freights by rail and sea, and of general commodities:—

	1914.	1922.
	Per Cwt.	Per Cwt.
English wheat	8 1	10 7
Canadian	9 1	13 1
SUPPLIES (Millions of Cwts.).		
British wheat	28	30
Imported	114	110
Total breadstuffs	142	140
Wants—estimated	142	142
Theoretical stocks	unchanged	down by 2
Actual	increased by 1.6	4

The monthly changes in wheat prices during 1922 may be briefly summarised. From January to May the market was rising, and those who held over the depressed period of mid-winter, when new crops in Argentina and Australia discouraged most holders, had their full reward. From May to August the loss of ground was irregular, but as soon as the large crop of Canada was assured, offers to ship freely before the old "close of navigation date" (November 30th) were so utterly beyond precedent, at 2s to 2s 6d per cwt decline on old crop prices, that the market went more or less to pieces. There was some rally in November owing to the American farmer's resistance to decline, but the new crops of Argentina and Australia once more asserted their mid-winter influence, and since January 1st there has been an unbroken record of depressed markets.

LARGE TRADE IN MAIZE.

Traders in maize have found in 1922 a year of reassurance, for after the extraordinary war interferences—which, by favouring one competing feeding-stuff at the expense of another, provoked a deep feeling of trade resentment. Maize was denied shipping when other feed for cattle, horses, and poultry was helped to arrive. In 1914 the country had consumed 39 million cwts of maize, but by 1917 restrictions had cut this down to 25, and further "control" reduced the 1918 imports to 15 millions. The following returns, however, will show that the maize interest's fears of a lost market being hard to revive were groundless, if natural. The staple is needed.

FEEDING-STUFFS IMPORTS (Millions of Cwts.).

	1914.	1922.
	Per Cwt.	Per Cwt.
Maize	139.0	138.1
Barley	16.1	12.9
Oats	15.2	9.5

Barley is regarded as having lost ground solely with respect to the maltsters' and distillers' requirements, and these are conditioned by taxation of beer and spirits. The story are conditioned by a decline in imports of oats is a very different one. The produce is outclassed. Argentine oats, in 1914 a 320 lbs to the quarter sample, now seldom weigh 304 lbs, while America and Canada proffer a profusion of 288 lbs corn. As quality and weight go very closely together, and as practically no English farmer grows oats of less than 312 lbs standard, the difficulty of finding this of lower overseas stuff a market is manifest. It is now inferior to 8s per cwt, English oats being worth half-a-guinea. The imports of rye remain as in 1914, too small to call for comment.

FEEDING-STUFFS PRICES.

The Corn Sales Act is already beginning to have practical results, the competing feeding-stuffs for the first time showing at a glance their values per equal weight. References to the past gain in instructiveness from the disappearance of the old standards based on measure.

PRICES OF FEEDING-STUFFS.

	1914.	1922.
	Per Cwt.	Per Cwt.
Feeding rice	12 0	15 0
Maize	8 6	8 6
Oats, English	7 9	8 0
Imported	8 0	9 0
Middlings	5 0	6 6
Bean		

It will be seen that feeding barley is back to a pre-war price, so that its production in Great Britain is no longer

profitable, farmers' expenses being at least as much again as in 1914. Middlings are cheap, largely because of Argentine consignments, which have been a feature of the past year.

CROPS OF MAIZE, BARLEY, AND OATS.

Space unfortunately forbids our giving the crops of maize, barley, and oats for 1914, as well as for 1922, but the increased cultivation of maize in Argentina, of feeding barley and oats in Canada and the United States, are noteworthy, and the loss of Russian exports—once very considerable—has been completely made up. In matters of exports it may almost be said that nothing repeats itself, nor could a renaissance Russia rewin the trade which has now passed to growers who send their produce by the cheaper direct seaway of the Atlantic.

PRODUCTION IN 1922.

	Maize.	Barley.	Oats.
British Isles	none	220	480
U.S.A.	1,453.4	88.0	378.0
Canada	7.3	36.0	170.0
Australia	4.0	1.6	3.0
Argentina	106.0	3.2	15.0
Germany	none	34.0	80.0
France	6.0	18.0	78.0
Total	1,575.7	202.8	772.0

It will be observed with interest that the two great rivals, France and Germany, run a neck-to-neck race in the production of feeding-stuffs, and that Germany, despite her inability to grow maize, has a lead. Barley, however, is grown by her largely for beer, and the French vineyards, of course, immensely exceed in production those of Germany. The maize figures suggest an American preponderance which by no means extends to our markets; Argentina grows mostly for export, America only ships 5 per cent. of her maize. Canada has made immense strides as a grower of barley and oats for export, but Australia neglects both oats and barley, and her culture of maize is restricted by the laws against yellow labour. The tropical areas of Australia still await development.

MARK LANE PRICES IN 1922.

Reduced to the Uniform Cwt in Accordance with the Corn Sales Act, 1921 (compulsory from January 1, 1923).

	First Qtr.	Second Qtr.	Third Qtr.	Fourth Qtr.

FRUIT AND VEGETABLES.

In 1922 apples yielded slightly below average crops, but realised comparatively low prices. In January few dessert apples of last year's crop were left to be sold, but cooking varieties, such as Bramley Seedling and Lane's Prince Albert, averaged about 34s and 29s per cwt respectively. In August and September this season's fruit sold at decidedly lower prices, cooking varieties making about 10s per cwt during the latter month. Prices recovered slightly when the better quality apples came on the market, but any appreciable advance was prevented by the large quantities of imported fruit which arrived on the markets, and at the end of the year average quotations were only 7s 1d per cwt. Pears were very plentiful, and sold cheaply, trade for this fruit also being affected by the competition of imported fruit, while the large crops of plums and damsons also realised low prices, Victoria plums in September averaging about 10s per cwt. Bush fruit sold well, while raspberries and strawberries were rather scarce, owing to the spring drought, and prices were decidedly higher than those ruling before the war, the former in July averaging 10½d and the latter 7½d per lb.

The very dry summer of 1921 was reflected in the high prices realised for all classes of vegetables in the early part of the year, carrots and onions, for example, being very scarce and realising extremely high prices. In January carrots averaged 11s and onions 30s per cwt, while in April quotations for the former rose to 25s 6d per cwt, or over eight times as much as the price ruling before the war. The season suited root crops very well in 1922, and onions did much better than in 1921, so that during the latter part of the year these vegetables were much cheaper, and in December carrots sold at 2s 6d and onions at 4s 10d per cwt. Green vegetables were very plentiful after the wet summer, and were decidedly cheaper than in the spring. In February Brussels sprouts realised 43s 6d per cwt, cabbages 3s 3d per dozen, and cauliflowers 5s per dozen; but in December Brussels sprouts were making only 13s 6d per cwt, and cabbages and cauliflowers 8d and 2s 2d per dozen respectively. Good quantities of beans and peas were marketed, scarlet runners averaging from 2d to 2½d per lb, market garden peas from 19s to 26s, and field peas 15s to 20s 6d per cwt in August, while prices became easier towards the end of the season. Other classes of vegetables, especially vegetable marrows, were also plentiful, and sold at relatively low prices.

POTATOES.—The range of potato prices during the year which is just closing has been very great, first quality Arran Chiefs making as much as £12 per ton and King Edwards £13 10s per ton in London in the middle of May, whereas in the closing months of the year the prices of similar varieties were only £3 5s and £4 10s per ton respectively.—*The Agricultural Market Report.*

LIVESTOCK.

The following table is published by the Board of Agriculture, showing livestock in England and Wales in 1921 and 1922. These figures are collected annually by this Department on June 3rd:—

	1921. No.	1922. No.	Inc.(+) Dec(-) No.
Horses—			
For agricultural purposes (including mares for breeding)	822,700	804,700	- 18,000
Unbroken horses (including stallions)	232,700	231,200	- 1,500
One year and above	92,300	83,800	- 8,500
Under one year	236,900	220,600	- 16,300
Other horses	1,384,600	1,340,300	- 44,300
Cattle—			
Cows and heifers in milk	1,876,100	1,933,600	+ 57,500
Cows in calf, but not in milk	251,800	288,600	+ 36,800
Heifers in calf	373,500	299,200	- 74,300
Other cattle	1,001,500	923,200	- 78,300
Two years and above	893,500	1,166,600	+ 273,100
One year and under two	1,120,300	1,110,600	- 9,700
Under one year	5,516,700	5,721,800	+ 205,100
Sheep—			
Ewes kept for breeding	5,336,500	5,424,400	+ 87,900
Other sheep	2,850,900	2,296,900	- 554,000
One year and above	5,644,100	5,715,400	+ 71,300
Under one year	13,831,500	13,436,700	- 394,800
Pigs—			
Ewes kept for breeding	335,900	301,700	- 34,200
Other pigs	2,169,600	1,995,000	- 174,600
Total of pigs	2,505,500	2,296,000	- 209,500

HORSES.—*Shires.*—At the only sale of a stud prices ruled low, a three-year-old filly making the top price of 135 guineas, followed by a stallion of the same age at 115 guineas, the general average working out at £47 3s 3d. Sir Berkeley Sheffield, who sold 19 at Peterborough, realised some of the highest prices of the season, making also the highest average—£124 12s. His best prices were 500 guineas for a mature stallion and for a two-year-old—the top price of the year—two of the latter averaging £215 19s, and five of the former £163 16s. The brood mares ranged

up to 250 guineas, and the yearling fillies to 155 guineas. Nine head sold at the same fixture for Messrs Clark and Sons averaged £50 7s 8d. Here the two-year-old fillies headed the list with 100 guineas. Mr C. Keovil's 12 averaged £33 7s 3d.

Hackneys.—The Dorking sale of Mrs Van Hattum found a gelding making 1,000 guineas, another 300 guineas, brood mares going up to 112 guineas, and fillies to 175 guineas, an average of £110 7s 8d being realised for 22 head. At a second sale of the same vendor 54 head averaged £101 2s 7d, brood mares making 200 guineas, three-year-old fillies 500 guineas, yearling fillies 100 guineas, pony stallions 1,500 guineas and 300 guineas. Another average exceeding the century was Mr M. St Clair's, who sold 23 at £101 19s, the stallions making up to 400 guineas for three-year-olds, 200 guineas for two-year-olds, and 450 guineas for mature stallions, brood mares, making 105 guineas and yearling fillies 108 guineas. At Mr Kenyon's sale at Crewe, stallions made 630 guineas, and brood mares 255 guineas.—*Extracted from the Farmers' Red Book.*

Store Stock.—Most of the markets were closed to store stock for about two months from early in February, so that average prices are not available for this period. The low prices offered for milk for the six summer months caused the prices of dairy cattle to fall very appreciably, and in April they were about £10 per head less than at the beginning of the year. Prices recovered by about £4 per head within a few weeks, after which they remained fairly steady until towards the end of September. With the better prices for milk for the winter the trade for dairy cattle improved, and a further rise of about £4 was recorded by December.

The rise in the price of fat cattle during the spring of the year caused a good demand for store cattle, especially those in forward condition, but trade slackened quickly in June, when the spring drought reduced grass keep.

Owing to the scarcity of sheep in the country and the high prices ruling for mutton, the demand for store sheep has been good throughout the greater part of the year. At the summer lamb sales trade was keen at high prices, the prospects of good supplies of sheep feed during the winter having a very material effect on the prices. There was, however, a temporary slackening in the market about the end of August, which seems to have been due to the late harvest delaying the realisation of the crop. On the average, store lambs sold at about 4s per head more than in 1921.

Prices of store pigs have been at a high level for the greater part of the year, but the chief feature of the trade during 1922 for this class of stocks has been the very keen demand in the last few months of the year. At the end of the year first quality store pigs of 12 to 16 weeks old were about 15s per head dearer than at the beginning of January. Shipments of livestock from Ireland to England and Wales during the week ended December 16th were rather smaller than in the previous week, except in the case of pigs. Fat cattle totalled 9,094, a reduction of 800; other cattle 8,080, a reduction of 1,871; and sheep 7,490, a reduction of 1,243. The number of pigs shipped amounted to 12,536, or 45 more than in the preceding week.

Except in the case of other cattle, these numbers show an appreciable advance over those of the corresponding week last year, when shipments totalled 8,617 fat cattle, 8,001 other cattle, 5,375 sheep, and 3,353 pigs. Summarised from the *Agricultural Market Report.*

POULTRY.

Mr Edward Brown in his review of the poultry industry in 1922 writes:—It is not too much to say that those engaged in egg and poultry production have come through the year under review better than was at one time anticipated. Declining prices, heavy taxation, reduction of income in multitudes of households, and unemployment to an appalling extent combined to produce a condition of affairs which was bound to influence consumption as well as demand, and also to reduce returns. On the other hand, costs of feeding stuffs and materials generally have fallen. Therefore, although profits in 1922 were not equal to those of the preceding years, when everything was inflated, yet these have, as a rule, been good. We are now reverting to normal and more reasonable conditions. In that respect the interests of the nation at large have to be kept in view. The drop in prices of eggs last spring, due mainly to lessened purchasing ability, owing to the causes already mentioned, brought home to producers the imperative need for preservation during the season of maximum production. Prices were steadied, and the business proved profitable. Mr Brown, after quoting lengthy statistics, arrives at the result that of the eggs and poultry consumed in Britain during 1922, inclusive of what may be used for processes not food, 43 per cent. in values were brought overseas.

II.—COLONIAL AND FOREIGN PRODUCE
TEA.

Messrs Brooke, Bond and Co., Limited, in their annual review of tea in 1921-22, write:—

The progress of the tea industry during the year under consideration was attended, as for many years past, by many and various difficulties, which hampered the trade from the plucking of the leaf to the delivery of the tea to the consumer. Some of the previous years' difficulties were somewhat lessened, but many remain and some are very serious, particularly with regard to production in India, the country from which we receive the greater part of the tea consumed in this country.

The following table gives the exports from India for the last two seasons and for 1913-14, the last pre-war year:—

	1913-14. Lbs.	April 1st-March 31st 1920-21. Lbs.	1921-22. Lbs.
United Kingdom	196,334,273	212,528,282	240,584,430
Australia	9,795,053	5,111,072	7,054,210
Canada	6,052,551	7,842,903	12,013,949
United States	1,997,740	3,007,725	7,815,763
South America	78,900	2,072,222	589,064
China	11,415,690	21,270	60,183
Russia	33,672,196	1,000	13,790
Continental ports	5,264,550	12,465,329	10,955,070
Hombay	1,615,228	6,423,704	2,150,934
Persian Gulf	4,483,192	4,300,137	7,625,039
All other places	271,879,358	253,926,792	289,247,966
Total	271,879,358	253,926,792	289,247,966
From South India—			
United Kingdom	12,914,998	25,361,409	25,172,947
Colombo	3,889,234	3,446,329	4,122,432
Other ports	5,223,686	190,238	479,880
Total	22,027,918	28,997,976	29,775,259
From all India	293,907,276	282,924,768	319,023,225

The chief trouble with the planters in India is labour. The unrest stirred up by Ghandi had disastrous results in some tea districts—thousands of coolies left their gardens, and brought upon themselves nothing but privation, and in many cases death. This entirely dislocated the garden work in these districts, but the appalling results deterred others from following suit and stirred the Government to strong action. The result is that much tea has been left unplucked, much cultivation neglected, and any progress in the opening of new gardens almost entirely stopped.

There has been less difficulty about exchange this year. The value of the rupee has fallen from 1s 11d in September, 1920, to 1s 3d in September, 1922, but the fall has been steady without any sudden variations, and is to the advantage of the planter. The freight question has also been settled favourably for the exporter, the Conference Steamship Lines having agreed to carry tea from Calcutta and Chittagong to London for £2 2s 6d per ton measurement. The agreement is for three years, dating from May 15, 1922, and is to continue from year to year until terminated by three months' written notice by either of the parties, given so as to take effect on May 15th of any year, that date being regarded as the close of the season.

The following table gives the distribution of the Ceylon crop for the last two years. The normal crop from Ceylon is about 200,000,000 lbs:—

	September-August 1920-21. Lbs.	1921-22. Lbs.
United Kingdom	110,299,049	116,560,418
America	22,131,809	20,480,728
Australia	18,831,399	18,639,656
Continent of Europe	1,045,354	1,905,682
Other places	12,219,326	11,268,343
Total	164,526,937	168,854,827

Freight from Colombo to London has been reduced from 60s to 47s 6d per ton measurement. Ceylon, like India, suffered from labour shortage, but in a lesser degree. In the early part of the year quality was rather inferior, but latterly much tea of the finest grade has been on offer.

The following tables give exports from Java for the last two seasons:—

	1920-21. Lbs.	1921-22. Lbs.
United Kingdom	20,272,000	18,780,000
Holland	24,196,000	20,568,000
Australia	11,744,000	21,818,000
United States	5,496,000	6,830,000
Canada	258,000	788,000
Singapore	102,000	178,000
Other places	656,000	1,230,000
Total	62,724,000	70,192,000

No detailed figures of exports from Sumatra are available, but it is understood that they are now about 10,000,000 lbs per annum.

Planters in Kenya have, after many experiments, come to the conclusion that tea can be profitably grown in that colony. Kenya imports about £80,000 worth of tea annually, and consumption is rapidly increasing, as the natives are acquiring a taste for the beverage. The colony possesses large stretches of uncultivated land, much of it of great natural fertility. A start has been made in planting,

and there would be a good demand in the country, without considering the possibility of exporting.

The China tea trade has naturally been adversely affected by the differential duty on non-British-grown tea coming into Great Britain. Indeed, the quantity that came to this country in 1920, the year after the alteration in the duty was made, was only one-third of that of 1916. Generally speaking, however, the year 1921-22 has been good for the Chinese tea traders and growers. Owing to the policy of restricting output, assisted by similar restriction in India and Ceylon, it was possible to dispose of almost the whole of last season's stock. The quality of the crop has been good, and the tea was quickly absorbed by the markets.

The following table gives the exports from China for the years 1921 and 1922 to the end of July:—

	1921. Black. Lbs.	1921. Green. Lbs.	1922. Black. Lbs.	1922. Green. Lbs.
United States and Canada	174,929	1,774,263	1,820,135	1,205,599
Great Britain	636,928	17,066	2,057,834	229,333
France	2,270	150,665	151,067	827,387
Europe (excluding France) and North Africa	89,339	555,466	566,400	1,807,999
India and the Persian Gulf	19,500	565,000	186,400	648,533
Total	923,066	3,082,460	4,781,936	4,516,731

Turning to the question of consumption, we find that, taken altogether, there is an increase throughout the world.

In Great Britain the increase is considerable, in spite of enhanced prices. Also people are drinking better tea. In the United Kingdom and Ireland consumption rose from 312,250,000 lbs in 1914 to 409,000,000 lbs in 1920, but fell in 1921 to 394,500,000 lbs. The Irish keep up their reputation for liking really good tea. They willingly give 5s or 6s a pound for it, where English people would give 2s 6d or 3s. In West Ireland particularly the people consider themselves connoisseurs, and will have nothing but the best. In Great Britain consumption is said to have increased owing to the high price of alcohol.

Manchester continues its efforts to become a competitor of London for the importation of tea, and with some success. A steamer leaves Calcutta and Colombo once a month for the port, and always carries fair cargoes. Several of the big distributors have enlarged their facilities for dealing with tea at the port, so that they can supply their customers in the North quickly and economically.

Prohibition has not affected the consumption of tea in the States to the extent anticipated; imports are, however, rising during the current year. Stringent regulations are in force in the States with regard to the tea allowed to enter. Certain standards of purity, quality, and fitness are determined by the Board of Tea Experts. During the fiscal year ending June 30, 1921, out of 71,000,000 lbs imported only 350,000 lbs were rejected—not quite 5 per cent. The percentage rejected in Great Britain was .2 in 1921 and none at all in 1920.

The Tea Cess Committee continues its work. As is generally known, the cess is a voluntary tax paid by exporters, collected by Government, the money thus raised being devoted to popularising Indian tea. The rate last year was 4 annas per 100 lbs; this year it is raised to 6 annas. Last year the money was entirely spent in India. This year it is proposed to allot a considerable amount to France and Belgium, and possibly to the United States.

The Board of Trade figures for the United Kingdom for 1913, 1921, and 1922 are as follows:—

	1913. Lbs.	1921. Lbs.	1922. Lbs.
Imports—			
British East Indies (except Ceylon)	203,459,657	286,585,218	284,968,972
Ceylon	110,936,427	118,755,568	111,662,394
China (including Hong Kong and Macao)	16,272,548	4,646,074	11,086,363
Java, Sumatra, and other Dutch possessions in the Indian Sea, and Netherlands	32,052,717	37,027,383	38,900,821
Other countries	2,322,115	568,759	2,233,519
Total imports	365,043,464	447,583,002	418,819,789

	1920-21. Lbs.	1921-22. Lbs.
Entered for home consumption—		
British East Indies (except Ceylon)	172,843,911	261,208,736
Ceylon	91,517,923	110,531,594
China (including Hong Kong and Macao)	9,682,515	4,780,722
Other countries	31,646,194	34,196,561
Total	305,690,543	410,717,643
Stock of all kinds at Dec. 31st	138,005,000	205,420,000
Re-exports total	57,556,651	34,734,686

COFFEE.

Messrs McMeekin and Co. write:—Generally business in coffee during 1922 was quiet, and export demand was most disappointing, as will be seen from the figures given below. The statistical position has shown a steady improvement throughout the year. The world's visible supply at December 31, 1922, was 7,877,000 bags, as compared with 9,461,000 bags at December 31, 1921. During the six months January to June, 1922, the actual world's deliveries

was a surprise to many people in the trade, and can only be accounted for by the assumption that mutton, as an article of diet (probably as a result of its scarcity during the war) has been steadily gaining in popularity in recent years. It is quite evident that much larger supplies could have been absorbed last year at satisfactory prices, had they been available. Indeed, there was a very serious shortage of mutton and lamb towards the latter part of the year, and what would have been a critical situation was only averted by the arrival of unusually heavy shipments of lamb from Australia, which, though mostly small in carcase and of poor quality, went rapidly into consumption at high prices. Unfortunately, it is not possible to comment upon the course of the frozen beef market in the same tone of congratulation. The burden of the complaint throughout the whole year was excessive supplies and poor demand, resulting in an average of prices very little, if anything, over the pre-war level. That quotations were not further lowered was only because traders apparently realised that any further reduction would have been ineffectual in stimulating the demand. It is true that much of the frozen beef offered for sale last year was inferior in quality and conformed to the requirements of the rationing period to take the bulk of their requirements in the form of beef, owing to the scarcity of mutton and lamb. This view is borne out by the fact that the retail trade is prepared to pay twice as much money for mutton and nearly three times as much for lamb. The number of cattle in the United Kingdom in June last was increased by 168,725 head, or 1.4 per cent. over the preceding year's total, but sheep in the home pastures were unable to maintain the increase shown in 1921, and fell away by 512,470 head, or 2.1 per cent. British stock raisers, although still complaining loudly, seem to have done moderately well out of the year's operations.

Importations of frozen and chilled meats into the United Kingdom in 1922 totalled 821,666 tons, as compared with 917,414 tons in 1921, 810,415 tons in 1920, and 720,257 tons in 1919.

While Australian and River Plate shipments were more or less the same as in 1921, arrivals from New Zealand show a reduction of 32 per cent. on the preceding year's inflated total, and the proportion therefore supplied by the Empire sources was only 35 per cent. of the total quantity received from overseas, as compared with 40 per cent. in 1921. The total quantity of frozen mutton and lamb imported in 1922, although 51,524 tons less than the record port of 1921, was 98,658 tons, or 53 per cent. more than the average of the five years previous to 1921. Frozen beef shipments were drastically curtailed, and amounted to little more than half of the preceding year's total, but the deficiency was almost made good by heavily augmented imports of chilled beef, which reached the record total of 299,064 tons, or 99 per cent. more than in 1921. To the imports of frozen and chilled meat must be added 11,072 tons of fresh killed beef and mutton from the Continent and 15,029 tons in the form of live stock from North America, against 4,612 tons and 21,718 tons respectively in 1921. Out of last year's imports of frozen meat, 44,507 tons, or 5.26 per cent., were re-exported to the Continent, as compared with 37,507 tons in 1921. Thus the net quantity of imported meat available for consumption in the United Kingdom was 804,070 tons, which, added to the estimated quantity of home-grown meat consumed, brings the grand total up to 1,825,970 tons, the proportions being 56 per cent. home-grown and 44 per cent. imported. This figure is 136,667 tons, or 7 per cent., less than the estimated total for 1921, and brings out clearly the extent to which the consumption of meat must have been reduced by trade depression and prolonged unemployment. The total weight of beef, mutton, and lamb exported in 1922 by the various freezing works of the world is estimated at 948,600 tons, as compared with 970,300 tons in 1921, 1,076,700 tons in 1920, and 1,111,500 tons in 1919, revealing a steady decline since the end of the war, due mainly to the falling away in the Continental demand. Importations from all sources amounted to 6,031,230 carcasses, against 8,596,863 carcasses in 1921, a decrease of 2,565,633 carcasses, or 29.8 per cent. In 1921 Australia had been the only country showing a decrease. Last year the position was exactly reversed, the only increase being in respect of Australian shipments, which were 619,378 carcasses more than in the preceding year. The decreases were 2,300,469 carcasses from New Zealand, 144,363 carcasses from Argentina, 25,837 carcasses from Uruguay, and 652,103 carcasses from Patagonia. Another record has been established in lamb supplies, the arrivals for the year having reached the enormous total of 8,504,169 carcasses, an increase of 1,011,262 carcasses, or 13.3 per cent. over the previous record

total of 7,582,907 carcasses received in 1921. Australia heads the list of increases with 1,123,356 carcasses added to the preceding year's total, but New Zealand shipments were reduced by 149,705 carcasses. A decrease of 74,313 carcasses from Patagonia has to be set against increases of 117,632 carcasses from Argentina and 1,088 carcasses from Uruguay. Adding together frozen mutton and frozen lamb from all sources, importations into the United Kingdom in 1922 aggregated 14,625,399 carcasses, as compared with 16,179,770 carcasses in 1921, a decrease of 1,554,371 carcasses, or 9.6 per cent., but the drop in the weight of these arrivals amounted to 51,524 tons, or 15.3 per cent.

A heavy decline occurred in receipts of frozen beef, the total for the year amounting to only 2,601,726 quarters, against 5,108,900 quarters in 1921, a reduction of 2,507,174 quarters, or 49 per cent. There was no increase from any source. Although frozen beef arrivals were cut down by half, a counterbalancing increase has to be recorded in chilled beef imports, which amounted to 3,516,350 quarters, as compared with 1,883,362 quarters in 1921, an increase of 1,632,988 quarters, or 86.6 per cent.

A record of the weekly top quotations of the various descriptions of frozen and chilled meats, as well as English beef and Scotch mutton, is given on the diagram which accompanies this review. The prices shown are those obtainable for the best qualities of the descriptions named. Inferior qualities of all kinds of meat realised very much lower prices, the margin being greater proportionately than ever before. The average price for the year of each description of meat, compared with the corresponding prices in 1921 and 1913, is set forth below:—

	Australia.			New Zealand.			Argentina.		
	1913.	1921.	1922.	1913.	1921.	1922.	1913.	1921.	1922.

Before the close of 1921 it became evident that prices of mutton and lamb had been allowed to drop too low, having regard to the moderate supplies available, and the increased consumptive demand which had sprung up as soon as the great slump in the autumn of that year had had time to react upon retail prices. The month of January, therefore, witnessed a very sharp upward movement, which in the case of lambs continued, though at a more moderate pace, throughout February. Thereafter prices were maintained at a fairly steady level until the end of April, when heavy arrivals from all three sources produced a steady decline in mutton quotations during May, June, and July. At the end of that period prices were back at the level from which they started to rise at the beginning of the year. Again, however, the consumptive demand came on at the lower values, quickly swallowing up the accumulated stocks, with the result that, with lighter arrivals from August onwards, prices of mutton experienced an almost continuous rise during the closing months, finishing the year at the highest point reached, with a still further advance in prospect. As regards frozen lamb, the demand for this popular article remained remarkably good throughout the whole year, enabling prices to be maintained at a surprisingly high level from February onwards, despite the arrival of huge supplies from all sources. When these became more restricted in September and October a further rise of 1½d per lb took place, and, although a certain amount of weakness manifested itself later on, as a result of colder weather, the year closed with stocks moving off comfortably, and prices again tending upwards. Frozen beef quotations showed much more stability than those of either mutton or lamb, but that was because the overstocked condition of the market prevented any material advance from rock bottom. The demand was dominated largely by the variations in the supply of chilled beef. When chilled was scarce buyers turned on to the better qualities of frozen, but when supplies of chilled became plentiful the trade in frozen beef almost ceased.

TOBACCO.

The year 1922 has been surprisingly good for the tobacco trade, seeing that business might have slumped with the rest and that it has not done so. The Treasury officials predicted a decline in consumption in the year ended March 31, 1922, and their low estimate was exceeded by £2,208,000. Certainly the consumption for the calendar year 1922 showed a falling away, 133,613,513 lbs being retained for home consumption against 130,812,300 lbs in 1921, the decrease being 6,108,877 lbs. Notwithstanding this, producing companies have done, on the whole, exceedingly well. The Imperial Tobacco Company, who are responsible for over three-quarters of the tobacco-making in this country, have shown that a slight drop in consumption does not materially affect them financially. A net trading

profit for the year to October 31, 1922, of £7,199,076, an increase of over a million pounds, gives them an abundance of resources for paying the usual handsome dividends and a bonus. This result is another rung in the ladder up which this successful concern is always climbing. The fact is, however, that the figures are not merely a reflection of a successful year's manufacturing, they indicate also the natural result of a widely invested reserve fund of more than 12 million pounds. The other great combine in this country, the British-American Tobacco Company, notwithstanding a difficult year, had a disposable balance of £4,721,105, and at their annual meeting in January, 1923, paid a final distribution, making a total dividend of 25 per cent. for the year on the ordinary shares. This is the outcome of purely export trade, none of the products of this company being marketed in this country.

Reverting to the domestic trade, a glance at the results of trading by independent companies shows business to be still in a flourishing condition, especially having regard to the industrial depression and its damping down of the spending power of the masses. It is this catering for the million which spells success or defeat for tobacco and cigarette manufacturers. The effect of the continued high duty (8s 2½d per lb on the raw leaf containing 10 per cent. of moisture) has, generally speaking, driven smokers to the cheaper goods. As the Imperial Tobacco Company have so many brands at popular prices, this high duty has done them no harm, compared with some of the firms who specialise in the more expensive cigarettes. High-class brands have become more of a luxury than ever, and though they hold a strong patronage, this is being severely shaken by the continued high duty.

A tendency which set in soon after the Armistice—that of increased pipe smoking—has during 1922 become intensified. The production of pipes and pipe mixtures has increased. Never was there such a choice of good briar (or rather bruyere) pipes as now. Some of the firms who specialise in their production are put to it to supply this market and also America. The British pipe is gaining ground there, in spite of a 60 per cent. duty under the new tariff.

Christmas, 1922, saw a wholesome revival of the cigar habit, both Havana and British houses having done better than expected.

The tobacco trade, though it deals in a luxury, has weathered the stormy period of 1922 better than many other industries. On the other hand, the retail tobacconist, with his high rents, rates, and taxes, has had, on the whole, a bad year.

A small duty reduction would be no good to the trade or the smoker; a substantial one, which could be handed on to the consumer, is unlikely in the present state of national finance.

† December shipments estimated.

The chief features in the rubber trade during 1922 have been the big increase in output of the plantations and the much larger shipments to America; in fact, America has taken the whole excess over 1921. With the 25 per cent. restriction, which had been voluntarily carried out by the majority of the members of the Rubber Growers' Association during 1921, coming to an end at the close of the year, the output of rubber increased materially, and we estimate the increase in output was fully 20 per cent., principally in Malaya; the shipments will be about 85,000 tons over 1921.

It was evident to all concerned that more rubber was being produced than could for the present be consumed, and the Government was early approached by the Planters' Association in the Malay and the Growers' Association here to bring in some form of restriction, in response to which the "Stevenson" Committee was appointed. This Committee submitted two restriction schemes to the Dutch Government, on the understanding that they would also participate. The Dutch Government after some delay refused, but on September 11th a resolution was unanimously passed by the Growers' Association that the Government should be invited to bring in restriction in spite of the refusal of the Dutch, provided that a sufficient proportion of the British growers in the Dutch East Indies would voluntarily restrict. This support was forthcoming, and our Government at once recommended a restriction scheme to the Malay and Ceylon Governments, who passed it, bringing it into force on November 1st.

The scheme, as is well known, starts with a restriction to 60 per cent. of the 12 months' crop from November 1, 1919, to October 31, 1920. The total crop figure for November, 1919, to October, 1920, accepted by the Committee, is 330,000 tons; of this voluntary or Government control exercises restriction on 266,000 tons. We are glad to say that 80 per cent. of the total acreage owned by British companies in the Dutch East Indies has provisionally agreed to support voluntary restrictions. Allowing for cases of special hardship and for the young areas coming into bearing since 1920, both provided for by the scheme, we calculate that the output of plantation rubber from the East in 1923 will be about 280,000 tons, allowing for 80,000 tons of unrestricted rubber.

We estimate the imports into America in 1922 at 282,000 tons, against 180,000 in 1921 and 249,000 in 1920 (according to the American Customs statistics). America has this year, no doubt, replenished her stocks of manufactured goods, and has rather increased her stock of raw rubber. In estimating the consumption of America accurately a longer period than one year must be taken into account, and it is evident that over the past three years there is a natural average increase in the consumption there of 10 per cent. per annum, although we must not forget that at the moment there is a period of great activity and inflation of prices in the United States. But in taking this into account sight must not be lost of the largely increased output of cars—the number given for the first 11 months of the year being 2,344,000, the previous highest year being 1920, when 2,205,000 cars were produced in the whole year.

The total shipments from the East for 1922 we estimate at 356,000 tons. The official stocks in the United Kingdom are increased by 650 tons, but the invisible stocks must be greatly reduced on account of large sales by a manufacturer. We estimate that the stock in America has slightly increased; at the end of 1921 it was returned as 95,000 tons, and in June last as 82,100 tons, but some returns for the latter period were not made. The stocks in the East are much reduced, as shipments were hurried forward before the restriction of shipping was put into force.

Germany has also taken fully one-third more—21,137 tons January to September, against 21,583 tons in the whole of 1921. Japan has taken less—January-September, 1922, 11,719 tons, against 16,368 tons for the same period of 1921. These figures, considering the economic situation in Europe, are very satisfactory, and show that when the financial position improves there is room for considerably increased consumption.

The low price with which we started the year—11½d for spot standard crepe and sheet—became still worse, until in February it touched 7½d per lb. There was little improvement in the market in the following months, except that in April and June the price rose to 9d on rumours of restriction, falling away again rapidly, until in August the lowest price, 6½d, was reached. In October, on the news of the Government here recommending the restriction scheme to the Ceylon and Malay Governments, the price rapidly rose to 1s 0½d, and with moderate fluctuations we close at 1s 2½d for crepe and sheet on the spot.

From Brazil, the Amazons, Bolivia, Peru, and (Wild) Medium Rubber.—The last year's crop of Para rubber—1920-21—was practically the same as in 1921, 1922, to June, 1922—was practically the same as in 1920-21—about 21,500 tons. This crop shows the slight increase of about 500 tons since July. The fine Para market followed the course of the Eastern plantation market, but there was very little speculation. Prices fell from 1s 1½d at the beginning of the year to 9½d, which was touched in June. The market remained stationary until October, when the advance in Eastern Plantation took place, and the price advanced to 1s 1½d, since when it has kept firm. The use of fine Para does not show any increase. Caucho ball has been scarce, and is relatively at a high price—11d per lb. There has been very little trade in the other medium Para descriptions, and wild rubber generally from other parts of South America has almost ceased to be shipped—a small trade has been done in the last few months in old imports at slightly better prices. The supply from Brazil shows a slight increase. The total receipts in Para from the Amazons, Bolivia, Peru, &c., were:—

1916.	1917.	1918.	1919.	1920.	1921.	1922.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
36,500	39,350	34,350	34,300	28,160	20,217	21,512

Shipments from Para, of Para grades, including Cauchoball:—

1917.	1918.	1919.	1920.	1921.	1922.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
40,300	25,400	38,500	29,000	17,900	21,700

Imports of medium descriptions from all countries except the Amazon district have practically ceased. There has been a certain quantity of old imports sold during the past two or three months at slightly better prices, but the range of values still remains very low, and can scarcely pay the cost of collection.

West Coast Africa and Congo.—Shipments from the Congo to Antwerp were about 1,150 tons, against 700 tons in 1921 and 2,100 tons in 1920.

Sarawak Jelutong has been slow of sale during the year, owing to the low price of rubber, and shipments have consequently been small, being estimated at 1,500 tons, as compared with 2,400 tons in 1921. To-day's value about £34 per ton c.i.f., Palembang £47 10s per ton c.i.f., and compressed Jelutong 8d per lb.

Balata.—The market for both sheet and block was very quiet for the first six months of the year, and prices fell from 3s 6d to 2s 11d for sheet, and from 2s 9d to 2s for Venezuelan block on the spot; but in July more demand sprang up, and with the reports of a very small crop, particularly from Venezuela, prices advanced to 3s 4d for sheet and 2s 6½d for block. The market kept firm, until at the end of November there was a rapid rise, and sheet sold up to 3s 7½d and f.a.q. Venezuelan block up to 3s 5d per lb. Some parcels of fine quality block have come from the Amazon district, and these have sold well, even through the dull period, at a considerable premium on f.a.q. Venezuela. Panama, small shipments have come regularly, generally of good quality, and have sold relatively well.

Gutta-percha was in limited demand at steady prices throughout the year.

India Rubber Statistics for 1922.—Total imports, &c., of all sorts were:—

III.—BEER, WINES AND SPIRITS.

BEER.—Messrs White, Tomkins, and Courage write in their annual review:—"The year 1922 was a period of anxiety for brewers, for the important reason that the consumption of beer decreased continuously. Whereas the number of standard barrels on which duty was paid in the year 1913-14 was over 36 millions, the number in 1921-22 was about 23½ millions. The main reason for the decrease was the continuance of the extraordinarily high duty which was imposed in 1921—namely, 100s, as compared with 7s 9d before the war. That high duty continued in face of the payment of lower wages in nearly every industry in the Kingdom, the result being that the consumer was forced to curtail his purchases of his favourite beverages."

From the same source we obtain the following figures as regards barrelage and beer duty:—

Year to March 31.	Standard Barrels.	Rate.	Beer Duty: Total Paid.
1914	36,057,913	7 9	13,622,971
1915	33,099,411	23 0	15,856,412
1916	30,292,977	23 0	13,747,269
1917	26,626,039	24 0	13,567,940
1918	13,816,173	25 0	19,106,653
1919	19,925,087	50 0	25,423,393
1920	25,115,196	70 0	71,276,230
1921	26,729,883	100 0	123,393,903
1922	23,513,774	100 0	121,865,000
1923	20,000,000	100 0	100,000,000

* Chancellor's estimate.

The price of beer to the consumer has not been increased since control was abolished at the end of August, 1921, but the gravity has been increased. The authorities quoted above state:—"In 1913 on a pint of good beer costing 3d about 4d was paid in duty; in 1922 a similar beer, costing 7d, paid about 3½d in duty." The 1922 Budget made no change in the beer duty.

WINES AND SPIRITS.—The Budget disappointed the wine and spirit trade by failing to provide any relief from the heavy duties in force. The general slackness of trade

was another adverse factor. Nevertheless, as will be seen from a table presented below, clearances of wine from bond were larger than in 1921 or in 1913, though well below the 1920 figure. The following table is compiled from statistics published by *Ridley's Wine and Spirit Trade Circular*, from which source also is extracted and condensed the information which follows:—

Exports of foreign and colonial wines from Great Britain in 1922 were 613,614 gallons, against 2,005,716 gallons in 1921. Exports of British and Irish spirits in 1922 were 5,701,424 gallons (value £7,858,701), as against £6,070,920 gallons (value £8,648,206) in 1921.

For the first 10 months of the year business was of a humdrum order. For certain descriptions of wines there was a fairly good demand, in others poor, and in the remainder stagnant. But there was a distinct improvement in activity in the last few weeks of the year, dating from the time when the disturbing element of the General Election was removed.

FRENCH STILL WINES. The chief feature in this branch of the trade was an increasing appreciation of white as against red descriptions. The situation in Bordeaux has become difficult, for large stocks are held there, and the outlets have become restricted. With prohibition in the United States and the markets of Russia and Central Europe practically closed, shippers at the source of production have to look to the United Kingdom as their chief market.

FRENCH SPARKLING WINES. Clearances of champagne, although 220,938 gallons less than in 1920, were better than in 1921. Similarly, clearances of Saumur and sparkling Burgundy were better than those of 1921, although well behind the level of 1920. The champagne trade has not assumed the proportions of pre-war days, but has seen some revival of activity, which was especially marked in the last months of the year. The year's business concentrated largely on the wines of the 1914 vintage, which are rapidly becoming placed, and there has also been activity in 1911's. The demand for non-vintage wines showed some improvement.

PORT. Portuguese wines had a better record in 1922 than French and Spanish. As will be seen from the figures given in the above table, port regained its 1920 position as regards clearances. The total was swollen by much poor-class wine. The feature of the year was the storing and the shipment of the 1920 vintage. The steady reduction in the prices asked by shippers for their ordinary flasks has had a beneficial effect on the demand, and business in them during the latter part of the year showed a decided improvement.

SPANISH WINES.—As shown in the above table, the imports of white wines from the Jerez district were half-way between those of 1920 and 1921, the past year having seen a substantial recovery. The consumption of Spanish red wines increased slightly.

THE VINTAGE.—On the whole, 1922 was favourable to viticulture, and the season was notably free from pests and diseases. Bordeaux growers did not realise the very high hopes entertained, but the net result was an abundant crop, though of uneven quality. Of fine wines there was an average yield. In the Burgundy districts a similar story has to be told. In champagne growing districts there was a fairly abundant vintage with a good average quality, but here, too, early hopes were not fulfilled. As regards port, the crop in the Douro district was a little below the average in quantity, but was of superior quality. The year 1921-22 was favourable to the vineyards of Australia, the crop there being about 20 to 25 per cent. less than the abnormally large yield of the previous year.

SPIRITS.—The market for brandy was very dull throughout the year, but improved towards the close. The high duty was the principal obstacle. Apart from some increase in inquiry in February, the rum market was inactive till the middle of November, when activity improved. As regards Irish whisky, there was no striking feature in 1921 as regards supply and demand. Malt whisky distillers had a prosperous year, and Highland distilleries worked at

The year 1922 takes an unenviable place among the bad years in the history of the cotton market. Opening with a pretty general belief that the worst was over and a recovery might be expected, it has seen most of these hopes frustrated, partly owing to internal causes—over capitalisation of the home mills; more to external—the continued collapse of the European market and the slow recovery in India, marked only in the latter portion of the year. Thus the *Manchester Guardian's* cotton exchange correspondent wrote, dealing with the first cause:—

"A few months of declining trade and high prices for the raw material placed the majority of these concerns in an impossible position as regards the ability to pay for actual cotton, spin at a profit, and produce dividends on their inflated capital. The harm caused by the so-called reorganisation of mills is incalculable, and its unfortunate results are still with us. Consequently, when prices of American cotton reacted downwards to a reasonably low level in January and February (around 9½d a pound), there was no purchasing power available on this side of the Atlantic to take advantage of what would otherwise have been a good opportunity.

"The effect upon Liverpool was to bring about an immediate restriction of imports amongst merchants usually relied upon to provide selection for all branches of American spinning, and only the barest necessities were catered for in the shape of fresh supplies from the growing districts. The stock of American cotton in Great Britain, which was 639,000 bales at the commencement of 1922, was therefore reduced to 544,000 bales at the end."

On the consumption side, the outstanding feature in the year's history has been the American textile boom. In the latter half of 1922, especially, mills in the U.S. have been "eating up cotton" at a rate alarming to those who fear an approaching shortage. Since the 1921-22 crop was short and that for 1922-23 not expected to be better, American mills bought and consumed the pick of the balance of the old crop and then ear-marked the new; by the end of the season they had taken 6,545,000 bales and spun 5,645,000. Japan, on the other hand, only took 300,000, against 566,000 last year. The world consumption is estimated at 12 million bales. The new American crop is estimated at under 10,000,000 bales, with a carry-over of round about 5,000,000 from last year. In view of this, great interest has been felt in Peruvian, Brazilian, and African cottons. The probability of shortage is, however, the dominating feature in the 1923 outlook.

Prices, month by month throughout the year, are given in the following table:—

	Cotton, Fully Middling American.	32's Twist.	American Yarns. 40's Weft.	50's Weft.	Cotton, Egyptian E.G. Pair Sakellaris 60's Twist.
1922.					
January 5	11-39	18½	17½	17½	21-50
February 3	9-70	17	16	16	16-25
March 3	10-28	17	16½	16½	17-00
April 7	10-60	18	17	20	17-50
May 5	11-15	18½	17½	20½	17-75
June 2	12-15	19	18½	21½	19-25
July 7	13-65	20	19	23	20-00
August 4	13-16	19½	19½	23½	18-00
September 1	13-80	20½	19½	23½	18-00
October 6	12-52	19½	19	22	17-15
November 3	14-65	21	20½	23½	17-75
December 1	14-79	21½	20½	23½	18-25
December 29	15-21	21½	20½	23½	17-80

The highest price paid for fully middling in 1921 was 15.17d, the lowest 7.13d; against a highest in 1922, 15.65d (November 10th), and lowest 9.51d (February 6th). The following figures give particulars as to raw material supply:—

	(Million Bales.)	Jan. 1,	July 31,	Dec. 31,

With 1922 wool, speaking broadly, reverted to normal, in the sense that in this year extraneous political forces ceased to operate, and trading was determined on economic lines. Gradually the problem left by the war—with abnormal accumulations of raw material at the supply end being added to by normal growths, and demand in many purchasing centres paralysed by currency difficulties—has worked itself out. So far as Great Britain is concerned, 1922 has been a fairly good year. The awful prospect fore-shadowed by Mr. W. M. Hughes, who saw a "mountain of wool trembling on the edge of a precipice," has not been realised. Raw material has been redistributed, and, to quote the *Yorkshire Observer*, "with the restoration in this respect of something like the normal state of affairs, wool is in the position of providing a bedrock foundation for confidence such as many other staple industries in the U.K. would gladly possess."

"The most salient feature of the past year," say Messrs Schwartz Buchanan, "has undoubtedly been the extraordinary consumption." The total sales of Australian wool in the Commonwealth in the season closing on June 30th were 2,226,758 bales, against 701,400 in the previous season. Since the production was 1,041,130, sales exceeded the season's production by 285,622 bales. New Zealand in the same season exported 926,000 bales. South Africa's exports for the year were 788,634 bales, or more than twice the previous year's total. Argentina sold 476,247 bales and Uruguay 99,753 bales (of which the greater part went to Hamburg and Dunkirk). So far as Great Britain is concerned, the quantity of wool retained was 1,892,816 bales, against 1,222,637 in 1921. The stocks held by R.A.W.R.A. were reduced during the year by some 900,000 bales, and now total less than a million bales.

The following table shows the quantities taken by the home trade, the Continent, and the United States during the eight series of sales held in London during the year:—

	Total Sales.	Home Trade.	Continent.	U.S.A.
First	183,000	111,000	70,000	2,000
Second	208,700	123,700	85,000	1,000
Third	155,100	102,100	60,000	3,000
Fourth	144,500	91,500	60,000	3,000
Fifth	133,000	70,000	62,000	1,000
Sixth	117,000	72,000	42,000	3,000
Seventh	134,000	76,000	50,000	8,000
Eighth	208,000	124,000	64,000	20,000
Total	1,284,300	770,300	473,000	41,000

An advance in price was, of course, the correlative of the strong demand for raw material. There was a substantial rise during the year in the prices of wool sold in London. When the Australian season opened in July the effect of the growing demand was seen in a considerable jump from the prices ruling at the close of the 1920-21 season, while when the New Zealand season opened in November the effect of

General Manager and Secretary: HUGH LEWIS

the extending demand for crossbred wools was to be observed in higher prices than those ruling at the close of the preceding season.

An indication of the course of values in Coleman street during the year is given in the following table, which shows in percentages the movements in values for various classes of wool as recorded at the close of each of the eight series, all the figures representing a rise, except where an asterisk denotes a fall:—

	Merino.	Crossbreds.	Fine.	Med.
First	10-20	15	10	15
Second	par to 5	par	par	par
Third	5-15	15	15	15
Fourth	*par to 15	*5-10	*10-15	*10-15
Fifth	5-10	5	5	5
Sixth	5-10	5	par	par
Seventh	7½-15	15	15-20	15-20
Eighth	*5-10	7½	15-20	15-20
	Crossbreds.	Cape.	Puntas.	
First	Low.	5	10	
Second	par	5	10	
Third	20	5 7½	5-10	
Fourth	*10	par	*par to 15	
Fifth	5	5	par	
Sixth	par	par	5-10	
Seventh	7½-10	5-10	5-10	
Eighth	10-15	*par to 5	10	

There was a very heavy turnover in tops, a large demand having been experienced, either on home or export account, or for merino or crossbreds, throughout the year, with the exception that in the past few weeks this has not been quite so marked in respect to Botany tops. Originally the chief demand was for merinos, business in which showed signs of sound improvement when, in the latter half of 1921, values reached the lowest point, with one exception, since the peak of the boom was turned in 1920.

Taking 64's as an illustration of the movement in merinos, values began a steady rise in July, 1921, and since then, notwithstanding considerable fluctuations, there has been a substantial mean advance. The feature of the situation in this period is that no fall reached the preceding lowest point. Throughout 1922 raw material forced the pace, with the result that between the end of 1921 and the close of the seventh series of London sales on October 26th average 64's had risen from 48d to 61d, an advance of 13d.

Business in tops on an expanding scale dates from the time when in July, 1921, 64's were down to about 3s, and some trade was done at 2s 9d. During the rise that has occurred in the interval Botany yarns have always lagged behind tops, and it has been difficult to get manufacturers to follow the advance, but they did so relatively until a definite check was administered as the result of the marked rise in merino wool on the occasion of the London sales in October, when wool prices forced quotations for fine tops so high that some makers were asking 5s 4d to 5s 6d for 64's warp, and the London basis for wool represented even higher prices.

This proved the high peak, and the tide turned. Nevertheless, taking the year as a whole, it may be said that prices, especially for merinos, for which a strong preference, which still goes on, was developed during the war, have steadily risen. Compared with July, 1914, good combing wools are now 100 per cent. dearer. The following table shows average prices for good average selections of wool during December, 1921, and at the end of the December, 1922, London series:—

	Dec., 1921.	Dec., 1922.	Percentage Increase Compared with Dec., 1921.
Australian—			
Scoured merino fleece	32	44	38
Grease merino fleece	12½	26½	43
New Zealand—			
Grease half-bred fleece	14½	22	52
Grease medium crossbred	7½	12½	67
Grease coarse crossbred fleece	6	8½	42
South African—			
Coarse combing	13	20	54
East London scoured	24	35	46

For good home-grown wools prices are about 50 per cent. above pre-war.

The following table gives present Bradford prices for a few leading descriptions of English wool compared with the beginning of 1922 and 1913:—

	Jan., 1913.	Jan., 1922.	Jan., 1923.
	Per lb.	Per lb.	Per lb.
Lincoln hogs	11½	9½	12
Nottingham hogs	11½	7½	9½
Wethers	11½	9½	12½
Irish hogs	13½	11½	15½
Wethers	13½	11½	15½
Cheviot hogs	13½	11½	17½
Wethers	13½	11½	17½
Southdown tugs	12½	10½	15½
Wethers	12½	10½	15½
Hampshire Down tugs	14	15	21
Wethers	14	15	21
Selected Welsh fleeces	11½	8½	10½
Handwicks	8	5½	8
Scotch blackface	8	6	9½

Medium and coarse crossbreds had a very precarious existence up to October, at which time the commencement of American buying of medium crossbred matchings altered the entire position. Prices for merino tops have been very high all through the year, but medium crossbreds are now approaching a more profitable basis. There has been a large movement of tops, both on home and export account, the exports approximating the level of 1913. Given more settled conditions in Germany, the usual export trade in tops should be recovered. The following table shows the movement of top prices on the dates given:—

	Jan. 5, 1922.	June 29, 1922.	Dec. 28, 1922.
	Per lb.	Per lb.	Per lb.
80's	66	72	78
70's warp	57	58	66
70's average	54	56	64
64's warp	51	54	63
64's average	49	53	61
60's super	46½	48	54
60's ordinary	42	46	52
64's Cape long	50½	54	64
64's Cape medium	47½	53	62
58's comeback carded	37½	41	46

36's	12½	13½	15½
32's	12½	13	14½

JUTE, FLAX, AND HEMP.

The fibre markets have shown much greater stability during the past year.

ITALIAN HEMP.—Italy started the year with a very large carry-over of hemp from 1920 and 1921, and the market was dominated by this supply, causing depreciation in prices until summer, when it became evident that the growing conditions of the crop were unsatisfactory. When the hemp was harvested, it proved to be one of the smallest crops on record for the area, estimated at about 50 to 60 per cent., but a carry-over of 40,000 to 50,000 tons brought the supply up to the required quantity. The Italian hemp mills were prosperous, and were able to sell their production for many months ahead at satisfactory prices. The sufficiency of hemp in Italy assured them against a rise, and enabled them to work on comparatively small stocks without raising market values. France, Germany, and Belgium have accounted for most of the export trade.

FLAX.—The trade has had a difficult year, and spinners have almost continuously found the price above the parity of the sale price of their yarns. There is no doubt that the linen trade is slow to recover, but the scarcity of supply, which is only one-sixth of the pre-war quantity, explains the maintenance of a high level of prices, flax being about 200 per cent. above pre-war level, against an average of about 100 per cent. for cotton. At the same parity as cotton, the flax supply would not long satisfy consumers' requirements.

On the whole, the Continent has experienced better trade than the U.K., and the fine end in Belfast has been more active than the coarse in Scotland. The outlook at the moment is not bright for the New Year, and a change for the better will depend on the general trade situation, which may give the public greater buying power to resume the use of linen and to replace their depleted stocks.

EAST INDIAN HEMP.—Interest in this article has widened, and it is no longer so neglected as in the years 1920 and 1921. A healthy demand for practically all varieties, including tows, has substantially reduced the stocks held in this country, and the absence of selling pressure from Bombay has kept prices steady. The one exception in the demand has been dressed hems, but with higher values ruling for jute and hard fibres, there is the prospect of an improved demand for the coming year. Unfortunately, the price of Indian hemp has been forced down far below a remunerative level, and the cultivation has consequently been largely abandoned. This discouragement resulted in a rapid rise from £15 to £23 in Benares Sunn, which would clearly show that the low artificial level of prices which was reached cannot be maintained under existing conditions. Until remunerative prices are obtainable for Bombay hemp, production may be still further curtailed.

CALCUTTA JUTE.—Last year's review indicated a reduction of the crop of that period from 9,000,000 to 4,000,000 bales. The results in 1922 were little better, the crop being far below the average, with the yield per acre exceptionally low. A year of wide fluctuations has raised the level £10 per ton, and even higher prices might have been reached but for the curtailed consumption of the world. Present reports indicate that the crop in certain districts has come

The most desirable form of INVESTMENT is one in which the CAPITAL is guaranteed and one which gives an adequate return on the money invested.

AN ENDOWMENT ASSURANCE IS AN INVESTMENT OF THIS NATURE

The capital is assured from the moment the first premium is paid, the benefits are secured by an annual charge on income, and the return is always adequate. It is thus an excellent method of saving for those who lack capital.

For your savings you require first-class security; this is obtained by an assurance with

to an end several months earlier than usual. Many consider that Calcutta will require the bulk of the unsold jute, and that the demand for Europe, whether light or heavy, will have little influence on the ultimate course of the market.

MANILA HEMP.—The year under review may be considered as one of healthy activity, with a 40 per cent. increase of consumption in Britain, and 140 per cent. increase in the United States. Japan has been an important factor, having absorbed 200,000 bales, of which four-fifths were used for rope-making and one-fifth for paper making. America and Japan bought practically the whole supply of fine grades, leaving little for export to Europe. Our manufacturers had, therefore, little opportunity of competing for this class of material.

The Philippine Government have been taking active steps to stamp out the inferior grading of Manila, which had resulted in heavy allowances, and the quality has steadily improved, so that weak hemp is as rare now as it was common last year. Last June the Agricultural Department in Manila rescinded the order which prohibited the grading of material below "J." Far from resulting in a reduction of prices, the lower grades, "K," "L," and "M," have risen since that date. The Department has been urging manufacturers to pay higher prices for the better grades of Manila, on the plea that the prices now ruling do not correspond to the actual increase in the cost of the preparation of these grades. To a great extent their wishes have been fulfilled, as "C," "D," and "E" have risen 85 per cent. in contrast with 35 per cent. increase in the lower grades.

SISAL.—1922 has been a year of great activity in Sisal, and the increased shipments from East Africa have gone into consumption as fast as they came forward. The stability of the price of this article, assisted by the action of the Comision Exportadora in fixing the price of Henequen, has had a salutary effect on the trade. The steady reduction in freights from the beginning of the year until the autumn made it possible to accept orders for large quantities of African sisal for America on fairly satisfactory terms, but the price has been undeniably too low to be remunerative to a large number of plantations, especially in districts far removed from the coast, and heavy losses have been registered by several companies. Nevertheless, the cultivation of sisal on the East Coast of Africa is extending, and this popular fibre is likely to continue to meet a healthy demand during the coming year.

MEXICAN (HENEQUEN) SISAL.—The very unsatisfactory situation of this article alluded to in our last annual circular has, fortunately, entirely changed, and the stabilisation of the price, which was accomplished at the end of last year, has been maintained, with results which should prove satisfactory both to producers and consumers, including the farmers, who depend upon a supply of binder twine at reasonable rates. Growers in Mexico complain that after the deduction of the production tax of 3c per lb, little remains for the maintenance of their estates, but there is no accumulation of stocks beyond the balance of the old material, which will shortly disappear. Owing to the reasonable price of the article, a considerable quantity of Henequen has been imported to Europe, and reports indicate that a great improvement has been effected in quality, enabling manufacturers to extend its use. In December the price was advanced ¼c per lb.

NEW ZEALAND HEMP.—Interest in this fibre has continued to flag, and it appears to have lost the ground which has been gained by sisal. The high wages in New Zealand and the more remunerative employment in other industries tell against the production of that fibre, so that there has been a considerable curtailment in the output, and the consumption is more and more confined to New Zealand and Australia. Lower freights might help restore the export trade.

MAGUEY FIBRE.—Although the Philippine Government have been making an effort to alter the system of production of this fibre, there is no visible improvement. Attempts to prepare the fibre in an up-to-date way with decorticators, and to grade the sisal separately from cantala, have not proved a success, owing to the mixture of the plants in the field, and the difficulty of separating the leaves in the cutting and preparation. The trade in Maguey, however, continues on about previous lines, and the price has varied little throughout the year.

HIDES AND LEATHER.

From the business point of view, the verdict on 1922, so far as the leather trades and the boot and shoe trades are concerned, has been a failure. If the year closed with a brighter outlook, the reason is mainly that, at the cost of much hardship, costs of production, including wages, have been brought into closer relation with the prices purchasers can afford. During 1922, however, failures and composition arrangements have been more numerous than for many years past, and though some big firms have done fairly well, others of repute have had difficulty in weathering the storm. Although the export figures in the boot and shoe trade have been steadily rising, they are still far below the 1919-20 mark. How essential is an export revival can be gauged from the fact that the home demand can, in the general opinion of the trade, be satisfied in six months; indeed, some put it as low as four months.

"Unsatisfactory as experiences have been, they would," writes the leather correspondent of the *Yorkshire Observer*, "have been infinitely worse had the hide markets fluctuated as violently as during 1921. In January of that year auction prices for home-grown hides commenced at slightly lower figure than in pre-war days, and continued so for several months. Then followed a period of extraordinary inflation, and at one time tanners were paying almost double the prices obtaining in the early part of the year. Heavy-weight ox and heifer hides in January last commanded about 8d per lb, and although quotations receded slightly by the end of the first quarter, they rallied as the months went by. By October they reached the maximum of about 10d per lb, which was 1d to 1½d per lb lower than the previous year's quotations at that date for the dearest of English growth."

"There has not been any noticeable variation in the imported hide and skin sections. The landings of wet salted hides have been steady, and, on the whole, quotations have been fairly easy. Argentine hides have from time to time hardened when the United States brokers were the determining factor in the matter of prices. There is a growing tendency to break away from old customs in the regulation of prices for leather."

For the English leather market 1922 began, as did 1921, with an incubus in the form of a large supply of East Indian kips—a post-war accumulation in the hands of the Government. By April, however, the sales of the kips were opened for competition among dressers, instead of, as before, being offered through the agency of leather factors; and by August the stocks were cleared off. The clearance, however, came too late to permit of an average year's trading.

In the boot and shoe section, trade with New Zealand has been steadily improving, and this is now regarded as the best market. In South Africa, good at the moment, the future is uncertain; while the Australian market is to a large extent closed by tariffs. Prices, which have fallen somewhat during the year, are now, under influence of a rising leather market, tending to increase. Wages were cut by 10s, in two instalments, during the year; towards its close an agreement under which they remain at that level was arrived at.

The following is a statement of imports and exports of hides and leather during 1913, 1921, and 1922:—

ANNUITIES GRANTED ON FAVOURABLE TERMS.

General Manager - R. Y. SKETCH.

In the early months of the year, therefore, sulphate of ammonia was in strong demand, and, owing to the cold and wet spring, it found a ready market until well into May. Unfortunately for the British maker, however, his supplies of ammoniacal liquor were very much less than in a normal year, so that he was unable to take full advantage of the position. It was a period of bad trade, factories were shut down, gas-burning plants were standing idle, and the mass of the people were using as little gas as possible, the need for economy was great. Nor was this all. Many of the coke-ovens closed down at the time of the coal strike had not been reopened. Probably less than 50 per cent. were working, and consequently the sulphate maker was deprived of raw material from this source. The shortage had its due effect upon the sulphuric acid industry, the greatest part of whose product goes to the sulphate maker, and upon other industries whose activities are linked up with sulphate of ammonia. So the influence of the coal strike continues. It has been felt throughout the sulphate of ammonia and allied trades in the past year, and it continues still, for ammoniacal liquor is still in short supply, and sulphuric acid, consequently, is in decreased demand.

Soda ash has been in strong demand, and as the manufacture of this substance by the prevailing process necessitates the use of ammonia, manufacturers of ammonia liquor have had a better demand for their product than they have experienced for some time. Business in ammonium chloride has improved with the better outlook in the galvanising industry, and there has been a fair demand for this product, and also for ammonium carbonate for export in the later months of the year. The smaller production of ammonia had an exact parallel in the shortage of tar for the tar distiller, and, from the same cause—the coal strike. Men who might have been employed on the roads in 1921 were deprived of work on account of the short supply of tar from the coke-ovens. Road tar was scarce, and business in it was very active. The probability is that the shortage will be felt in 1923. There was a good market for pitch and carbolic acid during the later portion of the year, and it is interesting to note that carbolic acid has been supplied to Russia, though the difficulty of doing any business at all with that country is very great.—*Yorkshire Post*.

Business at the commencement of the year opened quietly, and buyers operated cautiously, orders in the main being for small quantities for near delivery, and this state of affairs lasted until well on into the month of April. In May signs were not wanting that the demand was steadily improving, and this was more noticeable in some of the heavy consuming industries, more especially in the textile trade. During the holiday period the demand was maintained, and in September commenced to expand further, and this expansion has continued down to the time of writing this report. The tendency of Continental exchanges to affect the price of chemical products which were in the main imported has not been nearly so marked during the current year, and it has been noticed that even violent fluctuations in the chief Continental exchanges fail to produce more than a momentary effect on the English price.

The position in the fine chemical industry has, perhaps, not been quite so favourable. Export trade to a fairly con-

siderable extent covers the demands for fine products, and export trade has admittedly not been all that could be wished. The result has been that stocks have taken a long time to liquidate, while orders have been relatively for small quantities, and the result has been that prices have tended to still further depreciate, in some cases, to figures below the present cost of production. Signs are not wanting, however, to show that these conditions are coming to an end, and with a broadening in the demand we should find the trade quickly coming back to the normal, as stocks are none too heavy, while, naturally, under prevailing conditions, production has been reduced to a considerable extent.

The export position is now distinctly interesting. Demand over the early months of the year was poor in the extreme, and apparently the majority of the orders passing were placed on the Continent. During the last two or three months, however, the position has entirely changed, and there is now a relatively satisfactory volume of business passing, while the inquiry at present in the market is distinctly greater than is usually the case at this period of the year. Orders are now being placed in this country by markets that have placed practically nothing for the past year or two, and it is indicative that in most cases these orders are accompanied by the proviso that shipment be made immediately, which goes to show that a number of consuming markets have left it to the last possible moment before replenishing their stocks.—*Chemical Age*.

VEGETABLE OILS AND OILSEEDS.

From the point of view of the quantity of raw material handled by the oilseed crushing mills of Great Britain and Ireland, the year 1922 slightly exceeded the average of the two preceding years, but was some distance behind 1919, in which year a record for the industry in these islands was established. The gross imports of oilseeds, nuts, and kernels were 1,367,399 tons, or, after deducting re-exports, 1,327,810 tons net, comparing with 1,296,799 tons and 1,343,892 tons net (revised figures) in 1921 and 1920 respectively. The most notable feature is the steady increase in the quantity of oilseeds (as distinguished from oilnuts and kernels) and the decline in the imports of ground nuts and palm kernels. The former last year exceeded a million tons, the principal items being cottonseed, 483,623 tons, an increase of 106,000 tons over 1921, and linseed 358,884 tons, a decline of 111,000 tons. The increase in cottonseed was contributed to by much larger arrivals from Egypt and British India, while the falling-off in linseed is accounted for by the much-reduced imports from Argentina—viz., 178,095 tons, against 401,978 tons in 1921. Oilnuts and kernels totalled 365,085 tons gross (333,217 tons net), against 345,471 tons net and 454,767 tons net in 1921 and 1920. There were larger arrivals of copra, about 26 per cent. being re-exported. Less than 1 per cent. of the gross imports of oilseeds and 10.8 per cent. of nuts and kernels were re-exported.

Work in the mills throughout the country was variable, but, on the whole, moderately good, though neither the mills nor the refineries were operated to anything like full capacity. Wages and working costs have fallen since a year ago, but raw material has been at a comparatively high level. With regard to trade conditions, the promise of the

earlier months of the year was not realised, the disturbed situation in Europe and the depressed state of the consuming industries at home militating against a real recovery. The export trade in vegetable oil, manufactured or refined, in this country was in the aggregate only slightly below that in 1921, but had it not been for an unusually large demand for linseed oil from the United States the export figures would have been disappointingly small. Out of a total of 89,608 tons of unrefined oil shipped abroad during the year 59,548 tons were linseed oil, and of this fully 80 per cent. was destined for North America. With the enactment of the Fordney tariff a heavy import duty was imposed on linseed oil (equal to £17 per ton), and had the effect of the bringing imports from Great Britain to an end. The scarcity and high prices of American refined "butter" oils enabled English refined cotton and other oils to compete successfully in the principal European consuming centres. Generally, however, the trade with the Continent, especially in linseed oil, showed considerable contraction, attributable in some part to depression and to the fact that Continental crushing mills have been active. In fact, towards the close of the year, when English mills were handling very little linseed and oil for prompt delivery was scarce, Continental linseed oil found its way in substantial quantities on to the English market. The exports of vegetable oils, the product of English mills in the past three years, were as under:—

	1920.	1921.	1922.
	Tons.	Tons.	Tons.
Unrefined oils	100,010	93,433	89,608
Refined oils	17,678	12,931	13,149

In the home market there was a reduced demand for technical oils in the soap, paint and varnish, and linoleum industries; while the requirements of edible oils for margarine and compound lard, &c., were also on a smaller scale. The refineries, however, had a fairly satisfactory year. Owing to the poor price realised for cakes against the Indian article, ground nut oil could not be produced at a competitive price; and there was difficulty in selling palm kernel oil, which suffered from the competition of imported coconut oil. Prices were much steadier and free from the wild fluctuations of the first two post-war years. Raw linseed oil advanced from £27 10s in January to £44 10s per ton, naked, ex Hull mill, in May, the price ranging between £34 and £39 in the last four months of the year, when the American demand had ceased. Soapmakers' grade of refined cotton oil ranged between £32 10s and £42, crude soya bean oil between £31 10s and £41, and crude rape oil between £38 and £45.

The production of vegetable oils in Great Britain and Ireland in 1922, estimated from the commercial yield of oil from the net imports of oilseeds, oilnuts, and kernels, was 393,845 tons, or slightly less than that produced in 1921. The comparative figures are as follow:—

	1920.	1921.	1922.
	Tons.	Tons.	Tons.
Linseed oil	125,000	155,000	117,450
Cottonseed oil	75,300	63,000	81,000
Other seed oils	21,585	25,503	39,000
Palm kernel oil	128,200	95,700	92,920
Ground nut oil	49,200	33,750	24,845
Coconut, &c.	26,700	26,350	38,630
Total	425,980	399,300	393,845

As usual, there were substantial imports of vegetable oils from abroad, the total of unrefined being 140,708 tons,

principally coconut, palm, and soya bean oils, which together accounted for 120,172 tons, or 85 per cent. Refined oils imported totalled 18,170 tons, consisting of coconut, olive, and cotton oils. The re-exports equalled 15 per cent. of the gross, the net imports being 136,554 tons, or somewhat less than in 1921. The following summary shows the position of the nation's vegetable oil supply:—

	1920.	1921.	1922.
	Tons.	Tons.	Tons.
Home production	425,980	399,300	393,845
Deduct British exports	128,665	106,364	102,757

The important position of the oilseed crushing industry in relation to agriculture is best shown by the fact that the annual production of oilcakes and meals for cattle food in Great Britain and Ireland in the past three years has been between 950,000 and 1,000,000 tons. Of this only a small proportion is exported; last year, 42,119 tons. The home production was, moreover, supplemented by a net import of 316,366 tons. Owing to the poor trade in oil, the cake residue has not shared to the extent it otherwise might have done in the lower levels which have been gradually reached for the world's oilseed crops. Prices of concentrated feeding stuffs are still 45 to 65 per cent. above pre-war, but it is hoped that in the ensuing 12 months further reductions will be made. There is not likely to be any dearth of raw material for the crushing and extracting mills, for 1922 has produced bountiful crops. The world's linseed now being harvested is likely to establish new records as to volume. A reduction in the Egyptian crop of cottonseed is expected, but this will be more than counterbalanced by large supplies from India, while a revival in the crushing of soya beans in this country seems most probable.

TURPENTINE.

Messrs Lowden Connell and Co. write:—Supplies of turpentine in the year 1922 have not been plentiful in any country. During the latter months of 1921 the home demand in the United States of America had been heavy and increasing. In the spring of 1922 it became evident that this demand was being maintained, and as the new crop did not show promise of being any larger in volume than that of the previous year, there appeared to be every prospect of a world-wide shortage. During the months of May and June there was never much more than one month's supply of turpentine in tank in London. This position of affairs was not helped by the fact that it was impossible during the first six months of the year to obtain French turpentine at prices which would compete with American c.i.f. prices. France had enjoyed a good demand at home and from other Continental countries, and appeared to be independent of London for the marketing of her output of turpentine. Consumers both in America and the U.K. were reported to be none too well supplied, and forward business—apart from purely speculative transactions—had diminished greatly. A principle of "hand to mouth" buying became prevalent. This created a steady demand, which helped to maintain prices at high levels.

During the month of June the spot price of turpentine in London rose from 67s to 119s per cwt. These high prices,

however, made the import of French turpentine possible, and by the middle of July London stocks were augmented by over 1,500 barrels of the French product, with further shipments expected. Prices eased off considerably during the summer months, but October found Savannah and London with rapidly advancing markets, in consequence of the prospect of supplies being inadequate to meet the probable demand over the ensuing six months. During November and December, however, the demand in America fell off considerably, and receipts from the scrape crop exceeded expectations. By this time the London stocks had been considerably augmented—both from America and France. Prices declined on both sides of the Atlantic, although the last few days of the year found the markets rising once more. The total London deliveries for the year 1922 were 84,658 barrels, as against 94,880 barrels in the previous year—a decrease of 10,231 barrels. Of the total 1922 deliveries, 11,021 barrels were French.

ROSIN.—Demand for rosin has been steady throughout the year, and prices have not varied to any great extent. Prices of the dark grades in France have frequently been high in comparison with similar grades of American, and consequently the imports from France figure considerably under those of past years. Import of French rosins was also often a question of exchange rates.

TIMBER.

The imports of timber for 1922 show a very marked improvement on 1921, the worst year in its history, though they are still far behind the 1920 figures. Swedish and Finnish shipments have been getting back to normal after the painful experiences of 1921, when huge losses had been made by holders of stocks on purchases effected in the previous year. Business was not unnaturally extremely cautious at first; and this caution, modified in the latest months by a returning hopefulness, has been the note of 1922 so far as all branches of the trade are concerned. At the beginning of the year softwood prices, although considerably below those of 1921 first-open-water purchases, were still considered by importers as at too high a level. The basic figures for Swedish U/S red 7-inch battens were from £18 to £20, f.o.b., with Finnish at £14 10s to £15, declining later—in February-March—to £17 and £13 respectively.

As the year progressed shippers began to attempt advances, which were resisted for a time by importers. But the latest figures issued with specifications are from £20 to £22, f.o.b., for Swedish U/S red 7-inch battens; and Finnish £17 10s to £18, payment in the ordinary way, or £16 cash payment up to 90 per cent. on signing of contract. Practically the same conditions apply to all other softwoods.

Floorings for a good part of the year were an erratic market. Prices fluctuated, especially in spot goods, according to the disposition or necessity of the seller. But the year closed with quotations firmly established at £19 to £19 10s for 7-inch p.s.c., c.i.f. West Coast.

Messrs Denny, Mott, and Dickson, in their annual circular, give the following particulars:—

The timber trade experienced during 1922 a marked improvement in softwoods and a very gradual recovery of hardwoods from the dull apathy caused by the suspended demand with which the year opened. The suspension of demand still applies, as although shipbuilding is once again beginning in a very modest way, the building of rolling-stock in this country still largely waits on the railway merging arrangements getting to work.

The Continental demand for the pressing need of reconstruction also waits on some adjustment of the exchanges, sufficiently sound to enable timber and other material to be bought and paid for.

The New Year starts with unsuitable old stocks reduced to dimensions no longer formidable to the market, while fresh and good stocks are quite moderate, and, though sufficient for the present volume of demand, will require appreciable additions as trade opens out, which it is certain to do when the suspense mentioned above is ended by a settlement or a serious modification of the political unrest of the world, and a consequent return of the power to carry out the reparation and reconstruction which are demanded in all directions.

CANADIAN TIMBER.—*Waney Pine.*—There has been little or no improvement in the demand for this timber. The marked apathy that has characterised the market during the whole course of the year is still in evidence. *Oak.*—Steady progress is being made with the sale of the limited quantity of Quebec oak available on this side. As the ice has now put an end to further shipment, and many months must elapse before fresh supplies can come in, the encouraging expectation that production during this winter will almost certainly be abnormally small. *Rock Elm.*—There is very little really first-class rock elm on hand, and for this there is a quiet, but well-sustained, demand.

Spruce.—Stocks in the United Kingdom are, generally speaking, light, and there is an upward tendency of prices from the low levels ruling during the greater part of last year. Even in the case of 11-inch wood—a size which has been more depressed than any other—holders of stocks purchased at the lowest levels ruling last year are in the satisfactory position of being bound to see a good profit on their purchases in the early part of this year if they have but patience to wait for the improvement, signs of which are already evident.

Pitch Pine.—The outstanding feature of this market has been the great caution shown by buyers in this country, owing to the uncertainty of the volume of consumption and the consequent risk in respect to the high c.i.f. prices demanded by shippers. During the year just closed values have been advanced by some 16 per cent. for 30-foot average wood, the cost of which is now approximately 100 per cent. above pre-war level. The chief consumption came from the Thames and Mersey, the Clyde and Tyne proving disappointing owing to lack of trade activity.

Oregon Pine.—In the closing period of 1922 a little more movement was apparent, and a revival in the trade of this important commodity is anticipated.

BALTIC GOODS.—On the whole, the past year has been satisfactory to importers on account of the steadily advancing market value throughout the whole period. At the end of 1921 a considerable quantity of goods had been sold for the following season's shipment on the terms of "cash on signing contract." To these were added further contracts at the beginning of 1922 upon the same conditions, but at a level of prices which, though ultimately proving satisfactory to the purchaser, appeared at the time somewhat high.

SILK.

Messrs Chabrieres Morel and Co., of Lyons, write:—At the close of 1921 silk prices were, in dollars and Swiss francs, about 100 per cent. higher than before the war, and, in French francs, five times higher. That level was not maintained during the first three months of 1922. However, the increase in the cost of production, made worse here by the exchange, did not warrant a decline in prices. Besides, consumption had grown in America and was improving in Europe, whilst fashion favoured crape which requires more silk per yard than most articles. But the general economic uneasiness made manufacturers cautious; the

USE TO-DAY WISELY

To-morrow you may forget—and life assurance is a vital necessity for those who realise their responsibilities in the right light. Risks increase as we grow older—the best physique may fail—nerves may give under life's strain. Take thought, then, to-day—it is a wise precaution. Be fair to yourself, just to your dependents, and know that your future is assured.

The life of every man has a definite Capital Value. The Capital Value of your life is governed by the amount you earn. Every £100 of earned income represents a Capital Value at 5 per cent. of £2,000.

You insure your house, your stock, your machinery—all part of your Capital. Why not the principal Capital Asset of all—your life—and to its full value?

arrivals from the Far East, increased by stocks carried over from the previous season, were much larger than had been anticipated; at the same time, the exchange was declining in China and Japan. Under the pressure of consumption, prices began to rise in April on all markets; that advance was strengthened at the time of the crop by the high cost of cocoons, and made almost continuous progress until November. It was the more striking in Lyons owing to a further decline in the franc exchange and to a sudden rise of the Italian lire. During those seven months, and particularly in May, transactions remained active, the old stocks were almost entirely disposed of and silks of the future crop were confidently contracted for months in advance. Strikes among miners and railway employees prevented the U.S. from playing, as usual, the leading part in that move; they bought with more reserve and later than Europe.

From the middle of October until quite recently, transactions have been very scarce and prices heavy. Silver and exchanges have declined. Speculated parcels have been resold at a profit below nominal quotations. Manufacturers have lived upon their previous purchases; the new American tariff has interfered with their exports to the U.S., and they have found it very difficult to sell their goods on the basis of the higher value of silk. One of the leading buyers of silk goods in Paris has suspended payments. Last, but not least, in the whole world, prudence is the order of the day in face of the difficulties of all sorts which the war has left behind and which it is taking so much time to solve. Nevertheless, the position of our article is statistically so strong that the opening of 1923 finds prices about as high as the highest of early 1922 and distinctly higher than the average of 1921. A new element strengthens the position of silk: production and consumption are no more balanced. The figures of imports of silks, of entries in the conditioning establishments, of exports of silk goods, show that in Western Europe, and above all in Lyons, whose articles are favoured by fashion, the consumption of silk is much larger than in 1921. But it is curtailed in Central Europe owing to the exchange, and almost stopped in Russia, but elsewhere the progress upon last year is certain.

Whether it is looked at from the standpoint of owners or of miners, 1922 has been a tragic year in the coal mining industry. Again and again impartial reviews of working conditions in the coalfields have had to conclude with the admission that they are deplorable. Throughout the year wages have been in practically every district on the minimum fixed by the 1921 settlement. To maintain that at this satisfactory level, owners' profits have had to be raided, with the result that in many great areas the miners are actually heavily in debt. From the owners' point of view, the agreement is regarded as bad; from the men's, there have been repeated attempts to get it reconsidered on terms that would improve the miners' living conditions.

From the point of view of output, the monthly figures show steady improvement, especially during the last half of the year, and the 12 months' total is hardly behind that for 1913. The rate of production per worker has increased; the working cost per ton diminished, yet at the end of the year there were still 60,000 unemployed miners. The Coal Advisory Committee, reporting in the beginning of the New Year, stated that in the pithead price of a ton of coal—16s 10½d—the element represented by wages was 62 per cent. above that of 1913, whereas the cost of living was still

78 per cent. above it; "other costs," on the other hand, are 133 per cent. above 1913. In them the most important element is transport; railway rates are still 60 per cent. above pre-war. It is these costs that mainly account for the large discrepancy between the pithead price and that paid by the consumer. In general, the coal trade suffers from two main causes: (a) the export market, despite the spurt afforded in the autumn by the American transport and coal strike, throughout the year continued to reflect the unhappy and disorganised state of Europe; (b) the home market, the slow and difficult recovery of domestic trade. At the same time, the export figures show a remarkable recovery from the shattering blows of the Spa Agreement and the 1921 dispute, notably in the figures of exports to Germany.

The total export of coal (excluding bunker) for 1922 was 64,198,384 tons, against 24,931,853 in 1920 and 73,400,118 in 1913—an average monthly shipment for the year (excluding bunker) of 5,349,865 tons, against 6,116,000 tons in 1913. During the last half of 1922 exports have been on very nearly the same level as in the same period in 1913; in September—7,082,729—they were actually above any month in that year.

EXPORTS OF COAL TO EUROPE in the YEARS 1913 and 1920 Compared with 1922.

Destination.	1913. Tons.	1920. Tons.	1922. Tons.

Italy	9,647,161	2,905,217	6,341,743

Total to Europe .. 55,782,723 .. 12,516,221 .. 48,288,089
NOTE.—Austria-Hungary imported 1,056,634 tons in 1913. Austria imported 3,373 tons in 1922 and Hungary nil.

Of the coal going to "other countries," round about 4,000,000 tons went to the United States and Canada. According to the *Iron and Coal Trades Review*, during 1922 Germany imported nearly as much British coal as in 1913, and possibly more; for probably a considerable proportion of the large tonnage imported by Holland also was for German consumption. France continues to import heavily from this country, and in 1922 her purchases exceeded the 1913 tonnage. Italy imported more than twice the amount of coal purchased in 1920, and nearly double the tonnage of 1921, but the total for 1922 is still only about two-thirds the amount recorded for 1913. Exports to Europe as a whole in 1922 were about 86 per cent. of the tonnage in the last pre-war year, and represents a marked recovery compared not only with 1921, but with 1920, when exports to Europe aggregated much less than half the quantity dealt with in the past year.

The South American trade is expanding, the total tonnage of British coal imported in 1922 being 3,621,157 tons. Some of this business was secured owing to the American strike, and it remains to be seen whether this volume is maintained. We still have much ground to regain before reaching our pre-war position in this market. However, the United States have suffered a set-back in a temporary increase in production costs resulting from the coal strike, and wages remain at a high level.

EXPORTS OF COAL TO SOUTH AMERICA in the YEARS 1913 and 1920, COMPARED WITH 1922.

Destination.	1913. Tons.	1920. Tons.	1922. Tons.
Chile	588,526	7,122	84,311
Brazil	1,886,871	158,144	1,013,221
Uruguay	723,936	117,480	502,533
Argentina	3,693,572	273,668	2,021,092
Total	6,892,905	556,414	3,621,157

Exports of coke during the year amounted to 2,513,978 tons, about double the tonnage shipped in 1913. Of this quantity "other sorts"—mainly metallurgical—accounted for 1,602,671 tons, the bulk of which went to the Continent. Manufactured fuel exports amounted to 1,227,114 tons. The output has been restricted, owing to the high price of pitch occasioned by the heavy demand in that commodity for roadmaking and repairs. With increasing foreign trade, bunkers record a larger tonnage, being 18,259,027 tons, compared with 10,926,444 tons in 1921 and 21,023,693 tons in 1913. Large quantities of fuel oil have been shipped for bunkers during the year, representing an equivalent of about three-quarters of a million tons of coal; a comparatively small amount compared with the total coal bunkers, but nevertheless representing so much work lost to British miners.

The following table shows the amount of coal exported in 1921 and 1922 during the month of December from the various main ports in Great Britain:—

So far as tonnage goes, the export returns, taken as a whole, are good. Prices, however, have been at a low level compared with production costs and the general level of prices.

AVERAGE MONTHLY F.O.B. PRICES of EXPORT COAL during TWELVE MONTHS Ended DECEMBER 31, 1913, 1920, and 1921 compared with 1922.

IRON AND STEEL.

The past year, though not so bad as 1921, has been a dark and difficult year. Opening with conditions of depression unparalleled, both in character and intent, in the whole history of the industry the year has been marked by a long, slow struggle, which, at its close, can be seen to have been moving gradually upward. Looking back over the two years 1921-23, it is possible to discern the months round about the coal lock-out of 1921 as the bottom point in depression, from which, by stages almost imperceptible at the time, the industry has been climbing at the cost of very heavy sacrifices.

The close of the war found the iron and steel trade, regarded as a whole, with a productive capacity immensely

greater than it possessed in 1913; and markets, on the other hand, were restricted to a point far below that normal in pre-war years. At the same time, the productive capacity of the United States had expanded in like measure. To these two main general causes the disastrous slump reflected in unemployment and wage reductions, declining output, and disappearing profits must be referred. In 1922, as in 1921, the process of recovery was retarded by the state of Europe, with the consequent curtailment of buying power and the general depression at home. In the year just passed particular adverse factors were the protracted engineering and shipbuilding stoppages of April, May, and June. In the shipbuilding slump the whole iron and steel trade and all its affiliated industries (engineering, electricity, &c.) was involved. Normally, shipbuilding and marine engineering account for 30 per cent. of the home consumption of iron and steel goods.

So far as foreign trade is concerned, high production costs hampered our firms in competition, especially with Germany and Belgium, though the U.S. transport strike gave them a brief spurt in the autumn. From this point of view, the story of 1922 is one of a steady and continuous effort, involving very severe sacrifices on the workers' part, to reduce costs. If this effort has not yet gone far enough, the reason lies in circumstances over which manufacturers have no control—i.e., heavy taxation and heavy transport charges. Whereas the selling price of steel is only 25 per cent. above pre-war, railway rates still vary from 60 per cent. to as high as 200 per cent. above for iron and steel, coal, and various other raw materials required for the industry. The result is that, as Sir Arthur Dorman has just put it, the bulk of the heavy steel produced in this country to-day is being made at a heavy loss. The sacrifices of the workers are sufficiently indicated by the fact that although throughout the year nearly a quarter of the men in the whole iron and steel trades have been unemployed, the average wage has been reduced from £5 7s 11d per week in 1920 to £2 17s 8d in 1922.

Production statistics, taking output as a whole, afford reasonable ground for hope that these sacrifices have not been in vain. The unemployment figure has fallen steadily from 37 per cent. in January to just over 22 per cent. in December. Output of pig-iron has climbed from 288,000 tons in the first month of the year to 533,700 in the last; of steel from 327,500 tons to 546,100. The year's pig-iron production is close on five million tons, against just over 2½ million tons in 1921; of steel, 5.8 million tons, against 3.6 million. It is true that these figures are painfully relative; in 1913 our output of pig-iron was 10,250,000 tons; of steel, 7,664,000. The year's production of pig-iron is, with the exception of 1921, the lowest recorded for over fifty years; of steel, the smallest aggregate for 14 years, and nearly 4 million tons behind the 1917 maximum. Nor can one overlook the fact that the North-East Coast steel production for 1922 is actually less than in 1921, owing to the unprecedented shipbuilding slump; that the number of furnaces in blast, at the close of the year, was barely half the normal average capacity. The best that can be said is that, even then, the year closes more hopefully than it began; our figures, read in comparison with those for the United States, give ground only for such qualified optimism.

On the export side the iron and steel trade shows a real advance, notably during the latter months of 1922. This improvement has been made at a heavy sacrifice, and the *Iron and Coal Trades Review* wrote (January 19, 1923):—"Manufacturers cannot long afford to continue operations by spending capital to keep their works open merely to provide employment. Unless substantial relief is soon forthcoming from the burdens at present bearing heavily on the industry, there is danger of works having to close down, not through lack of orders, but through the inability of firms to cover working expenses at prices which must be quoted if foreign orders are to be secured in face of the enormous advantages that continue to favour European manufacturers." Fortunately, European competition is limited by uncertainty of delivery, and American did not materialise in any serious form in 1922. The following table, from the Cleveland *Iron-Trade*, shows no such great discrepancy between United States and United Kingdom exports as there is between their outputs:—

MONTHLY EXPORTS OF IRON AND STEEL, INCLUDING SCRAP, FROM GREAT BRITAIN AND THE UNITED STATES.

MINOR METALS.

SILVER.

We extract the following from Messrs Samuel Montagu and Co.'s Annual Bullion Letter:—

No events of special interest have taken place in the year under review. The weekly chronicle has been a monotonous report of purchases for India or China, or for both, the demand, with the exception of that for trade requirements, having been almost entirely from these countries. Occasionally, however, especially during the earlier part of the year, America was disposed to check a sagging tendency by temporarily taking silver off the market. The range of prices compared with those of recent years has been narrow,

7d for cash and 7½d for two months' delivery. The welcome improvement in the value of sterling in the United States of America has not tended to improve the price of silver, for a considerable portion of our supplies is, of course, derived through American channels. Two items are worthy of remark—the huge accumulation of coined rupees in the Indian Treasuries, and the high level at which China visible stocks have been maintained (about 60,000,000 ounces) until the close of the year.

The price of silver on the first working day—January 3rd—was 34½d for cash and 34½d for two months' delivery, about 2½d and 2d respectively below the average quotations of 1922. Fluctuations during nearly all the first two months ranged between 34½d and 35½d. In the early part of February the market became unsettled owing to the fear in the Indian bazaars that a duty was likely to be reimposed on the import of silver, and 32½d and 31½d were reached on March 2 for the two respective deliveries. This spasm of weakness did not last much more than a week. A steady improvement set in during the month of March, which carried the cash price over 34d. After some slight set-back, pressure of purchases for the Bombay April settlement, coincident with a run upon some of the China banks owing to fears of civil war, caused a very sharp rise of 2½d on the 19th, bringing the quotations to 35½d for both deliveries. Of this leap 1½d was lost next day, but the tendency of the market remained good. From the commencement of the month of May, owing to persistent demand from China, where political affairs were much disturbed, prices showed a distinct tendency to advance. By the 22nd of the month 37½d was quoted for both deliveries—the highest price fixed during the year. Until the middle of July prices were well maintained for cash delivery, mostly between 36½d and 35½d. During the next three months the level was about a penny lower, but the last three months of the year, chiefly owing to the cessation of activities at the Canton Mint, witnessed a more or less continuous decline, during which the lowest quotation of the year for cash was recorded on December 15th—30½d, and on December 22nd—29½d for two months' delivery.

The silver output of the world is on the increase. Canada is producing nearly half as much again as last year, and encouraging reports are received as to the discovery of new mine-fields. Mexico has been enjoying freedom from civil strife, and the mining industry has gone apace, probably to the extent of creating a record output. Miners in the United States of America have strained every nerve to extract silver from silver-bearing ores, in order to profit by the dollar an ounce, the price under the Pittman Act, a valuable bonus of about 50 per cent. over the world market price. The approaching end of repurchases of silver under this Act (only some 60,000,000 ounces more are needed) causes some fluttering in the dovecotes of the U.S. mining interests, but there is no talk of reviving bimetallism. Visible stocks of gold are really in excess of the world's absorption at present, and there is no advantage in the purchase of silver for currency purposes, for payment would have to be made in gold, which would have to be purchased first. In the present impoverished condition of Europe, it is likely that an artificial coinage value will be imparted to metals less expensive to acquire.

Now that silver is forthcoming from demonetisation as well as from mining, it is necessary to combine the amounts derived from each source in order to arrive at the grand total of world supplies. A good deal of demonetised metal is undoubtedly employed on the Continent for industrial purposes, as well as shipped to London for sale, so it is only possible to make a rough estimate of such supplies. Assuming that the amount of Continental demonetised silver about equals that obtained from the partial demonetisation taking place within the British Empire, we estimate the combined total as 50,000,000 ounces. The figures work out thus:—

Demonetisation.		Ounces.
Production—		50,000,000
Mexico.....		..
U.S.A.....		75,000,000
Canada.....		60,000,000
Burma.....		17,000,000
Rest of world.....		5,000,000
Total.....		30,000,000
Grand total.....		187,000,000

This, be it observed, is considerably in excess of the record world production in 1911—namely, 226,000,000 ounces. The Federal Reserve Board's estimate of the 1921 production was as follows:—

United States of America.		Ounces.
Canada.....		50,000,000
Mexico.....		10,000,000
Other countries.....		70,000,000
Total.....		165,000,000

UNITED KINGDOM.—IMPORTS AND EXPORTS OF BAR SILVER,
TWELVE MONTHS ENDING DECEMBER 31, 1922.

	Imports. Ounces Troy.	Exports. Ounces Troy.
Netherlands	2,432,677	2,013,170
Belgium	1,530,757	139,112
France	3,343,804	2,385,166
China (including Hongkong)	23,809,992	21,682,030
United States of America	322,786	176
Other American countries	81,882	70,053
Egypt	3,658,968	45,927,546
British India	5,093,499	1,481,317
Canada		
Other countries		
Total	40,274,365	73,698,570

On balance about 8,000,000 fine ounces of silver in the form of coin were imported. The surplus bar silver exported was derived from the reduction in quality of U.K. silver coin.

A fair estimate of the world stocks at the end of 1922 is as follows:—

	Ounces.
London	1,000,000
Shanghai (including dollars)	50,000,000
India	3,000,000
On the sea (from and to London and from San Francisco)	11,000,000

COPPER.

The following figures show the comparatively steady condition of the copper market during the past year. The quotations are for standard cash:—

	Jan. 1.	Highest.	Lowest.	Closing.
	£ s d	£ s d	£ s d	£ s d
1921	71 12 6	75 12 6	65 5 0	66 17 6
1922	65 17 6	66 2 6	57 2 6	64 2 6

There is plentiful evidence that the course of values on the copper markets during the past year has not come up to the expectations of most of the producers in America. In January spot electrolytic in New York stood at 13.75 cents per lb, and the situation in the United States appeared to be definitely improving, several mines being on the point of resuming operations. Prices throughout remained very steady, and although the low point of 12.62½ cents in April caused some depression, it proved short-lived, as by mid-summer 14.12½ cents was recorded, from which level the price has since only slightly receded, closing strong at 14.62½ cents per lb. In spite of the broadening demand, prices have not been forced up unduly, with the result that there has been a comparatively steady turnover, whereas in former years each wave of buying was met by an increase in price, which promptly scotched the demand.

A feature of the year was the actual shortage of copper for domestic use in the United States, and in May 14.12½ cents was freely paid for electrolytic for home consumption. During the coal stoppage and the railway trouble the United States mines and refineries continued active, while the consuming trades operated on a far larger scale than in pre-war days. Export business, which had been fairly satisfactory for the greater part of the year—with Germany the best customer—began to fall off in October, and this, combined with the increasing outputs of South American mines, caused some apprehension in leading copper circles in the United States, though the purchase of a controlling interest in the Chile Copper Company by the Anaconda Company has to some extent quieted the fears of some United States producers.

On the London standard copper market comparatively steady conditions have prevailed, and price movements have been extremely narrow. The best price of the year was obtained in January with cash at £66 2s 6d, dropping to £57 2s 6d, the lowest, in early April. The demand for British-manufactured copper goods was very poor in the early days of the year, and buying of the virgin metal was slow, but an improvement gradually set in, and the turnover each month has been generally satisfactory. The con-

ditions during the whole period have been healthy, and a very real help to the market has been the absorption of the huge stocks of war scrap, which weighed so heavily upon the market in the previous year.

The refined copper market has, as usual, been peculiarly sensitive to the fluctuations in sterling exchange. Electrolytic was at its best in January, the quotation standing at £74, falling about £10 by April, after which prices moved only fractionally, closing at £71.—*Glasgow Herald*.

LEAD.

The feature of the year in the lead market was the very heavy backwardation, which has prevailed over a long period. Commencing in January with a premium of 2s 6d on good soft foreign near dates, the price of which then stood at £24 7s 6d, values fluctuated within a narrow range until October, when the extreme stringency of near metal forced the price up to £27, thus showing a premium of 30s. over forward, which was quoted at £25 10s. The following shows the range of prices for foreign prompt compared with last year:—

	Jan. 1.	Highest.	Lowest.	Closing.
	£ s d	£ s d	£ s d	£ s d
1921	24 5 0	26 0 0	16 10 0	25 12 6
1922	24 7 6	27 0 0	19 10 0	25 15 0

Although the price of lead has been well above pre-war parity, there is no indication that prices will fall to a lower level. The advanced basis of values has no doubt done something towards stimulating production, but supplies are still far from adequate. Until 1897 Spain was the principal lead producer, when it was surpassed by the United States, which is now the largest producer and consumer, Spain and Australia being the principal exporters, though the United States has shipped considerable quantities of lead produced from Mexican ore. The Australian output has been seriously curtailed by labour troubles and high costs of production. In the absence of an adequate domestic supply the United Kingdom is the world's largest importer. Stocks of lead in official warehouses at the end of November totalled at only 198 tons, the smallest stock of the year, and at no time were they larger than 686 tons.

Supplies from Spain have been disappointingly small, but shipments from Australia show a tendency to increase. Pending a substantial increase in supplies, values are expected to remain steady around the present level.

Lead has held the strongest position of the non-ferrous metals in America, commencing the year at 4.75 cents per lb; prices rose month by month until they are now at practically the highest point of the year at 7.22½ cents per lb.—*Glasgow Herald*.

TIN AND TINPLATE.

TINPLATE.—The following is extracted from the annual report of Messrs Sim and Coventry: During the year 1922 the tinplate trade has passed through somewhat varied experiences. The efforts of the masters to win through have been well seconded by the workmen, who have shown an ability to realise the facts of the situation. The Joint Council has once again more than justified its existence during the year. One consequence of this co-operation has been the gradual recovery by Welsh makers of their old markets, a process which has made considerable progress during the year.

The year 1922 opened under rather depressing conditions, and in the early months of the year the trade was distinctly under a cloud, some 60 to 75 per cent. of the mills being at work from time to time, and some works were reported as altogether closed for a period. It should be borne in mind, by the way, that the average output per mill has been considerably increased, so that when we read, e.g., that the number of mills working is 75 per cent. of pre-war,

this probably means that the total output is substantially the same as pre-war.

In May the idea of the pool system was revived among the makers, and the pool came into force shortly afterwards, when there were about 70 per cent. of the mills working. The new move apparently strengthened the position somewhat for a short time, but the trade was not by any means in a satisfactory state, and in September we were told that unless there was an improvement shortly many mills would have to close, the depression being acute and prices not covering cost.

On October 16th a conference took place between the steel makers and tinplate makers, when a scheme was propounded, discussed, and finally adopted with something like unanimity, which has resulted so far in putting the makers in a much improved position. The scheme is a joint one, including steel makers and tinplate makers, and involves a special rebate of 7s 6d per ton from the former to those tinplate makers in the agreement, which binds them to observe minimum selling prices, to be fixed by a committee from time to time. Previous attempts by Welsh makers to stabilise prices artificially have been hopeless failures, but there appears to be an element of permanence in the present scheme, which may avoid the inevitable rocks and shoals which have wrecked similar efforts in the past. For the time being, at any rate, it has produced a healthier state of affairs—the real testing time will come when the amount of available business is markedly insufficient to go round.

The American mills have been kept busy during the year, probably more so, on the whole, than our own. They were reported to have practically 90 per cent. of their mills at work in January, and this means a good deal when it is realised that the capacity of the United States works increased in the eight years from 1914 to 1922 by 40 per cent. In July it was stated that their exports had considerably decreased, and yet in December they were reported as working to almost their full capacity, so that it would appear that the American consumption must have been very large, especially as we ourselves have increased our exports to the States, and have also supplied so much to Canada that used to come from them. About 70 per cent. of their consumption is supposed to be used in the packing of food.

Prices.—This has been a year of very small fluctuations, the extremes being 18s 3d to 18s 6d in March, and 20s in December. Opening at 19s 9d, the price gradually gave way by successive small reductions, owing to the scarcity of orders, until the lowest limit was reached in March. An improvement followed, which carried the price to 19s 6d, or 19s 9d, in June, only to gradually recede once more to about 18s 7½d in October. Then came the stabilising agreement, under the influence of which the market has shown a much firmer front, and the schedule minimum price of 20s is frequently over-quoted. The present indications point to the probability of a further advance before long.

Bars.—There has been very little fluctuation in price during the year. During the first half of January the official price was reduced from £7 15s to £7 7s 6d, and has continued at this figure to the end of the year, with the special rebate arranged in October, as mentioned above. In December it was announced that the price would be advanced to £7 13s 9d in January. In April the makers decided to quote the same price for delivery to all works in South Wales and Monmouthshire.

The import of foreign bars has not been so large as in 1921, but in early October, just before the date of the stabilising agreement, they had been done at about £6 per ton, c.i.f. The agreement, however, has put a serious obstacle in the way of foreign bars, as it binds the tinplate works to the home steel makers, if they are to secure their 7s 6d per ton rebate.

Wages.—There has been only one change during the year. For the three months up to February 5th the men were working on a 10 per cent. sliding scale bonus, plus 7½ per cent. on base rates special allowance. On February 5th the 10 per cent. bonus was cancelled, leaving the 7½ per cent. allowance, and this arrangement has continued up to date. As mentioned in our last report, the base rate was increased by 25 per cent. in July, 1920.

As is known, the tinplate wages are based on the price of steel bars, and although the present price would not carry any wage bonus under the agreement, the tinplate makers recognised that its cancellation would reduce the wages to an inadequate margin with the present cost of living, and agreed to allow the bonus to stand, when it would otherwise have disappeared automatically.

Tin.—The fluctuations in the tin market have been even smaller than in 1921, the extreme limits being about £50 apart, viz.:—£140 on February 21st, and £187 7s 6d on November 6th. The average prices for the four quarters of the year were:—January to March, £152 1s 2d; April to June, £150 16s 10d; July to September, £158 14s 9d; October to December, £176 3s 11d; the yearly average being £159 9s 2d.

There has been a good deal of agitation during the year with regard to Cornish tin mines, resulting in the Government coming to their aid with a grant, upon terms, in one or two specific cases. The rise in value ought to help the mines to hold their own; in fact, it was stated in December that several were reopening, and it is to be hoped that it may be found possible to continue the industry there on an economic basis, which, after all, is the only sound policy. The chairman of one of the mines stated that they would make a profit at £150 per ton. This seems to be much on the same basis as in the Malay States, where appreciable profits, we are told, can be made at £160 per ton.

Exports.—A remarkable recovery in these figures is shown, foreshadowing a rapid return to pre-war quantities. Our best customer is still British East Indies, closely followed by Canada, whose increased takings are very noteworthy. There is a large increase to Germany, and the only countries showing a diminution are Japan and China. The large increase to European countries are very striking, considering the unsettled conditions that have prevailed.

The basic fact which has kept the shipbuilding industry, and the other great industries largely dependent upon it, notably iron and steel and engineering, in the trough of depression throughout the course of 1922 is the actual excess of tonnage in the world. This excess was due in the first instance to the immense increase in the output of tonnage during the latter half of the war, especially in the United States. In the nine years 1905-13, 22½ million tons were added to the world's merchant navies by new construction. In the nine years 1914-22 the total addition was nearly 34 million tons. The position at the end of the war was aggravated by the Treaty provision compelling Germany to hand over its fleet. Germany has been building feverishly to replace this lost tonnage, and is the only country whose output of ships does not show a substantial decrease.

During 1922 235 steel merchant vessels of 1,031,081 tons have been launched in Great Britain and Ireland, or 506,971 tons less than in 1921. This represents 41.8 per cent. of the world's output, against 35.5 per cent. in 1921, 58 per cent. in 1913. Lloyd's Register quarterly returns show that at the opening of the year 2,640,319 tons were under construction in Great Britain and Ireland. These figures—the lowest since June, 1919—show a reduction of 1,158,274 tons as compared with the record reached at the end of March, 1921. The returns issued during 1922 showed a steady decrease quarter by quarter, and the tonnage under construction at the end of 1922, viz., 1,468,599 tons, is 1,171,720 tons lower than the total in hand at the end of 1921. The total decrease in the tonnage under construction in Great Britain

Foreign	1,422	3,440,691	3,155,279	1,300	1,865,479	1,667,163
	2,407	5,190,453	4,552,643	1,963	2,987,886	2,512,776

The United Kingdom retains its place as the first shipbuilding country in the world—a place which America threatened to claim in its great year or two of war work. The United States now takes third place, with a total much less than half that of Germany, and a very little more than that of Holland. Last year America had more than double the tonnage of Germany, while Japan followed Germany closely. The following is the order of the leading countries:—

	Vessels.	Tons.	I.H.P.
United Kingdom	542	1,043,590	812,466
Germany	240	631,485	356,080
United States	178	259,747	319,135
Holland	402	245,168	98,269
France	136	220,049	127,372
Japan	101	149,587	383,064
Italy	64	117,900	99,250

Like the United Kingdom as a whole, the River Clyde keeps its old-time position of supremacy in output, although with a very low total as compared with those of recent years. The Tyne is closer up than it usually is, but it is still behind by over 140,000 tons, while the whole of the North-East Coast of England has only some 42,600 tons more than the Clyde. The Clyde has more tonnage than any foreign country, with the exception of Germany:—

	1921.			1922.		
	Vessels.	Tons.	I.H.P.	Vessels.	Tons.	I.H.P.
The Clyde	249	511,185	478,760	143	388,481	345,729
The Tyne	73	356,947	283,202	46	241,649	188,610
The Wear	30	144,868	63,083	26	125,772	47,075
The Lagan	13	93,494	70,100	9	86,943	69,000
The Tees	34	160,508	133,800	21	63,656	68,560

The position on the Clyde is tragically typical of the whole shipbuilding industry. There has, according to the *Glasgow Herald*, been no year anything like so poor since 1897, when the output was only 340,347 tons, for even among pre-war years 1908 was exceptional, and its figures represent not a year of normal work, but one in which there was a sudden drop from what was then the record level of about 620,000 tons, to be succeeded later by year after year of fairly regular advance until the high-water mark of over three-quarters of a million tons was reached in 1913. The year now closing really takes the river back to the average level of between 20 and 30 years ago, when something less than 400,000 tons represented a very satisfactory amount of activity, and little or no unemployment in the industry. Now, such a total means that a large proportion of the producing capacity of the yards has not been utilised, and that there has been a very large amount of unemployment. It is hardly necessary to say that this interpretation of the figures is fully borne out by the facts. The industry was not working, and is not yet working, at half its maximum capacity, because the demands made upon its resources were not half what they would require to have been.

Throughout the year unemployment has been severe in shipbuilding and engineering. In no month throughout the twelve has it been under 34 per cent.—which means that one man in every three is out of work—and still stood at 35.6 at the close of the year, when of the 358,640 persons employed in the industry, 127,547 were registered as unemployed. This heavy toll of unemployment has been accompanied by drastic reductions in the wages of the men remaining unemployed. The whole of the 26s 6d war bonus has been sacrificed, and since January, 1921, shipbuilders' wages cut by 5s 7d per week.

The price of tonnage has suffered something of the same catastrophic fall. For instance, the average price of 70 steamers, many built during the last 10 years, sold in the first quarter of 1922 was £5 10s 11d per ton. Ninety-six vessels sold in the second quarter fetched an average price of only £5 8s 6d. In June, 1922, builders were accepting £8 5s per ton for a ready boat for whose cost they had quoted £10. Compare these prices with the £34 10s paid per deadweight ton in March, 1920, and it is plain that the construction of new tonnage was not throughout the year upon an economic basis—it did not, that is to say, allow a reasonable margin for contingent losses, let alone a fair margin of profit. All that can be said is that if the year closed without any general anticipation of an increase, the fear of a further fall was likewise excluded. The main factors making 1922 a black year in shipbuilding history unfortunately remain in operation—the excess of world tonnage, the reduction in the volume of international

trade, the instability of the European situation, and, above all, of its currency, and the disproportion between construction and operating costs and freights. Against these may be set the gradual recovery in British trade, and the reduction in wages, dock dues, and rail transport.

The course of 1922, from the point of view of shipping freights, has been disappointing. High hopes were felt in the opening months of the year that the unrelieved blackness of 1921 had been definitely and permanently left behind, and steady rates in the first quarter seemed encouraging. In April, however, a break began. Rates fell down and down, until, in September, the impetus given to the carrying trade by the U.S. coal strike, coinciding with heavy grain shipments, arrested this tendency, and at the close of the year there was little but hope for charterers to feed upon. Throughout the year "it is doubtful whether the British mercantile marine earned on an average £5,000,000 a month" (*The Times*). The most hopeful feature in the year is the gradual recovery of our coal export trade, this more than any other circumstance brightens the 1923 outlook.

The underlying difficulty in shipping is the same as in shipbuilding. "The basic fact in the shipping situation," "Fairplay" wrote in June, 1922, "is that before the war 40,000,000 tons afloat were sufficient for the world's needs. This has been increased by 15,000,000 tons, whereas trade volume is down about 50 per cent. Though there are many millions of tons laid up, no vessel, so far as Great Britain is concerned, is earning a profit." In January, "Fairplay" was hardly more optimistic: "To-day there is a loss on every voyage, and every additional vessel will ultimately make the position worse."

For 1921 the average freight index (as prepared by the Chamber of Shipping on the basis of 1920 = 100) was 37.0; for 1922, 28.8; that is to say, the average freight for 1922 was 23.4 per cent. below 1921. Time charter rates for tramp shipping declined even more sharply, ranging for the year round 4s per ton, or 20 per cent. below the 1913 average of 5s. These figures register the fact that the actual improvement that took place in the volume of trade in 1922 was inadequate to provide for the excess tonnage (15½ million gross tons over 1914, 2½ million tons over 1921).

The reductions in passenger rates on the one hand and in dock charges on the other are to the good, but the general opinion is that expenses are still much too high. Confidence is shown by the fact that in 1922 £10,384,000 capital was subscribed to the shipping industry in the form of new issues, against £6 million in 1921. First-class shipping shares have also maintained themselves well, and in nearly every case closed below the highest level reached during the year.

That the engineering year has been a dismal one follows from what has elsewhere been said of the iron and steel trade on the one hand and shipbuilding on the other. The strike of May-June coincided with the worst period of depression, both for employed and employers. The third and

final instalment of the 12½ per cent. bonus to engineers was withdrawn on January 1, 1922, and the war wage addition to basic rates further reduced to 10s in three equal instalments in the summer, so that by the end of the year engineers had during 1922 sustained an average reduction of 24 per cent. in the case of skilled men, 32 per cent. in the case of labourers, on the 1921 time rates.

Measured in terms of output and export, the year has nothing much to show. The gradual increase in the export figures, the slow decline in unemployment, indicate a long and difficult struggle. From the technical point of view, on the other hand, progress is steady and real. Thus, to quote Professor Mellanby in the *Glasgow Herald*:—

MOTORS.

This industry, the trade surveys agree, is now suffering from over-production, as the home market cannot absorb the great variety and number of models turned out.

In addition to his home difficulties, the British motor-car manufacturer, despite the fact that he is protected by a 33½ per cent. import duty—on pleasure cars, that is—has to face considerable outside, principally American, competition. Imports have fallen away tremendously from the high level of 1920, when eager buyers took the first car to hand in preference to the long wait for British productions; but notwithstanding the lowering of values, more money went abroad for touring cars during 1922 than during 1921. Imports of motor cycles are, of course, relatively very small, and the British maker has far less outside competition to face.

On the export side, the tale is not cheerful. The export of motor-cars, never very large, has fallen off considerably during the year. There is a common opinion that English makers do not sufficiently study the needs of the Dominions and India. The price of spares and the large stocks which have to be carried to meet quick needs at great distances from the factories is no doubt another reason. There is good authority for saying that New Zealand is importing motor-cars every year to the value of over £1,500,000, practically every penny of which goes to America, partly because of the cheaper price of the American car, but also because of the better service system and the distribution of stocking and spare parts. In India, of course, the American car is everywhere.

The figures given in the Board of Trade Returns as to exports and imports for the 11 months ending November are instructive. They are as follows:—

IMPORTS (Eleven Months).				
	1920.	1921.	1922.	
Touring cars.....	7,037,157	1,204,870	2,119,743	
Commercial vehicles.....	3,092,484	615,187	164,761	
Chassis for motor cars.....	4,168,210	1,028,857	1,441,295	
Motor-car parts.....	7,720,704	2,739,152	1,765,174	
Totals.....	22,018,555	5,487,866	5,490,973	
Motor cycles and tri-cars.....	277,528	61,906	49,296	
Parts.....	113,081	120,648	63,177	
Totals.....	390,609	182,554	102,473	
Cycles and parts.....	419,888	168,569	214,500	
Tractors.....	660,129	458,682	35,619	
EXPORTS (Eleven Months).				
	1920.	1921.	1922.	
Motor spirit.....	233,113,971	287,563,943	22,529,542	19,271,966
Fuel oil.....	504,027,279	364,468,362	12,598,879	5,393,937
Motor cars and parts.....	7,435,512	4,333,271	2,490,915	
Motor cycles and tri-cars and parts.....	2,89,939	939,718	700,237	
Tractors.....	931,966	807,044	394,351	
Cycles and parts.....	4,473,938	1,666,208	1,924,334	

It will be seen that the imports of motor spirit have been much greater than in 1921, though at a lessened value, due to the fall in price. That decline in the price of petrol and the substantial fall in the price of cars have been the two outstanding features of the year.

With regard to commercial vehicles, the past year has unquestionably been a bad one. The wet summer season interfered greatly with road excursion traffic, and the indifferent state of trade generally has been reflected in the difficulties of motor transport organisations. The maker of commercial vehicles is still suffering from the effects of the disposal of the huge accumulation of transport vehicles after the war.

BUILDING TRADE.

The conditions of the building industry throughout the year presented a tragic paradox: on the one hand an acute housing shortage, on the other severe and continuous unemployment. The minimum estimate of the number of houses required to be built at the end of the year was half a million; the number of men out of work was round about 150,000 throughout the year. In every part of the country, both in industrial and rural areas, the dearth of working-class dwellings is acute, and producing most evil

social consequences; the demand for accommodation has, however, absolutely failed to call forth the supply. Before the war the provision of working-class housing by the speculative builders had become more and more precarious. The abandonment of Dr Addison's housing policy stopped building by local authorities. The main reason for the economic difficulty in the way of building is the excessively high price of materials. Bricks are still 80 per cent. above the pre-war price; cement, 70 per cent. above; Portland stone, 93 per cent. above; building timber is from 73 to 116 per cent. up; ground blue lias lime, 192 per cent.; best bricks, 124 per cent.; Thames ballast, 134 per cent.; Thames sand, 127 per cent.; and turpentine, 260 per cent. Wages, on the other hand, have been reduced from 2s 4d to 1s 8d per hour for skilled men, and, according to the *Yorkshire Post*, the improvement in the output of labour in the building trade, which was noted in 1921, was maintained during 1922. It is now fully equal to the pre-war standard, and as good as can reasonably be expected.

Broadly speaking, however, it must be said that, apart from big contract work, the trade, so far as it is concerned with ordinary house-building, remained during 1922 in the trough of post-war depression.

VII.—TEXTILES.

THE COTTON TRADE.

Cotton, unlike wool, lives on foreign trade, 70-80 per cent. of the cotton cloth produced in Lancashire is exported. Although exports have improved by more than 30 per cent. on the 1921 figures, they have not been sufficient to keep mills going. Trade with India—far the most important section—improved, and the relative supremacy of Britain over all other countries in the Indian market was strongly reasserted. Japan and the U.S. have done much less than in 1921. The exports of grey cloth to the Continent, notably to Switzerland and Germany, also increased. On the other hand, the Dyestuffs Act has restricted the finished goods trade. The appended table gives three years' exports of grey, bleached, printed, and dyed cloth, in thousands of square yards:—

	1920.	1921.	1922.
Grey.....	968,435	955,657	1,519,389
Bleached.....	1,414,812	957,031	1,312,832
Printed.....	895,998	433,912	542,817
Dyed.....	1,156,159	555,679	806,217

For manufacturers and workers the year was unsatisfactory. Mr F. W. Tattersall, reviewing it in the *Yorkshire Post*, says:—"Spinners and manufacturers were not able to secure profitable prices for the goods produced, and no buying movement was of long duration. There has also been the increased financial stringency. More failures have taken place than in any twelve months for a very long time. Many firms were compelled to slaughter stocks, and this action had a very weakening effect on prices generally. Considering the downward movement in prices for most commodities, values in raw cotton were maintained on a fairly high level, and continue much dearer than in pre-war years. Costs of production did not give way to the extent anticipated, and undoubtedly all firms in Lancashire are being severely handicapped in being unable to place goods in consuming outlets abroad on a cheaper basis. Much disappointment is expressed at the slow progress made throughout Europe in the way of reconstruction; it was never expected that four years after the armistice the industrial situation on the Continent would be so unsettled."

Although some of the new conditions have been helpful, the trade outlook in India, for instance, improving decidedly towards the end of the year, and the home demand gradually strengthening, while at the same time there were reductions in income-tax, wages, interest rates, mill stores prices, bleachers', printers', dyers', finishers', and packers' charges, together with low freights to all the great markets, the benefits accruing have been more than counterbalanced by the rising price of raw cotton and the continued chaos and disorganisation of Europe. There have been months in which mills were doing nothing, and even in their busiest period (the early summer) output never rose above 90 per cent. of the trade's capacity. Short time was universal up to the close of the year.

In 1921 even big losses could be regarded with a certain amount of equanimity, because most of the people who sustained them could recover the money out of previous excess profits duty payments. That sheet anchor, however, has disappeared now, and heavy losses mean either a writing down of capital, where the reserves are small, or resort to the bankruptcy court. There have not, as a matter of fact, been as many failures as might have been expected, but that has been largely due to the feeling that firms must not bring one another down if they could avoid doing so by showing an accommodating spirit. Financial weakness, however, has undoubtedly made the depression more severe than it otherwise would have been. Heavy taxation when profits were being made, and the heavy slump in the value

of stocks when the boom had collapsed, left many firms ill-fitted to face a prolonged period of depression, and they could only continue in business by realising on their production as they went on. Buyers soon discovered which firms were in that position, and the prices obtainable were so low, especially for yarns, that in many cases they involved losses.—(*Manchester Guardian*.)

The course of prices during the year is indicated in the appended table:—

WOOLLEN AND WORSTED TRADES.

Since 60 per cent. of its output is consumed at home, the position of the woollen and worsted trade is among the indices of home demand. Thanks in part to the great activity in the hosiery section, 1922 opened hopefully, and the year has proved a prosperous one. A big volume of business has been done in partly and fully manufactured materials: the supplies of wool that a year ago seemed likely to smother the trade have been cleared with remarkable activity, and little apprehension is felt even about the 1,000,000 bale surplus still held by B.A.W.R.A. That there are adverse features, and that the renewed upset to confidence caused by France's adventure in the Ruhr cannot be discounted in any estimate of the future, is suggested by the *Yorkshire Post* survey. After referring to the inability of Yorkshire's one-time Continental customers to purchase, it says:—

In the home market, the situation has not been quite so acute. Even here, however, the growth of business has been slow, and stocks, especially of men's wear, have at times accumulated. This in a measure arose from the consideration displayed by employers towards the operatives. Rather than let machinery stand idle, and bring the trade organisation to a complete standstill, looms were kept running, and goods put into stock. Many firms anticipated a loss on the goods thus produced. But, fortunately, wool values during the greater part of the year advanced, and when piece merchants were compelled to buy, prices had moved up to a point which generally enabled manufacturers to realise a profit where at one time loss appeared certain.

Fine Worsted.—In Huddersfield conditions were very variable; better as the year moved on. Owing to the excessive demand for fine wools and yarns for men's wear, and also for the ladies' costume and hosiery trades, prices rose considerably, and at the end of the year botany yarn was round about 18d a lb in advance of quotations in December, 1921. Long deliveries were required by the spinners, and, naturally, prices of worsteds hardened.

There was not, however, sufficient work to keep all the looms in each of the sections fully employed throughout the year. Probably not more than 60 per cent. of the looms were kept fully engaged in the manufacture of worsteds for men's wear. In the woollen section the proportion running on men's goods was much smaller, although there was a considerable production of women's woollens.

Heavy Woollens.—At the beginning of 1922 only 50 per cent. of cloth manufacturing plant was running full time; later the U.S. tariff struck a hard blow at Dewsbury's trade. Blankets and rugs have, however, done fairly well, though the rag and shoddy trades have been depressed. In Scotland the year was very much better than 1921. Over 75 per cent. of tweed mills were running in December, against 60 per cent. in January, and in many cases at full time.

JUTE TRADE.

The following is extracted from Messrs W. F. Soutar and Co.'s circular:—

JUTE.—The past year has shown a marked improvement on the previous one. A year ago first marks were at £28 per ton, and now they are at £38—showing a rise of £10 per ton, which has been maintained, and expectations point to a higher level before many weeks. The demand has been for medium and lower qualities, and the present crop of jute being undoubtedly a small one, spinners incline to keep up the large stocks they have been holding for the past three years. These stocks are big considering that consumption is curtailed; there is a good deal of machinery standing, and at the trade is still on short time. Dundee has in sight, at present rate of consumption, more than a year's supply of jute, and it is mainly held by spinners, not dealers.

Cloth and yarns have dragged lifelessly for the greater part of the year. There has been a want of confidence in the future, caused, no doubt, by the unsettled financial state of Europe; but there are clear signs of steady improvement. Hessian 40 inches 10½ ounces at the beginning of the year was at 3½d per yard, and at one time during the year the price reached 5½d, but the present price is only 4½d per yard. 8-lb cops were selling at 3s per spindle at the opening of the year, and got down as low as 2s 7½d, but are now quoted 3s 5½d to 3s 6d per spindle. The demand for cloth at the moment is largely for light-weights of hessian and narrow goods, but considerable quantities of broad linoleum foundations have found a ready outlet.

Stocks of jute in Dundee have been fully maintained, and with the heavy arrivals presently at the quays the total supply in warehouse will be increased.

Estimated stocks in Dundee (including unsold in brokers' hands and standing stock in spinners' hands):—

	1919.	1920.	1921.	1922.
	Bales. 800,000	Bales. 750,000	Bales. 750,000	Bales. 800,000

Careers for your Boys

The problem of finding a CAREER FOR AN ENERGETIC BOY who is not adapted to follow an indoor occupation is one confronting many parents. Men in a position to assist their sons with moderate capital are invited to consider the prospects presented by a thorough training in an Agricultural College in NEW SOUTH WALES, which, with further working experience on various farms should fit the boys, to invest the capital in LUCRATIVE FARMS—under CLIMATIC CONDITIONS NOT SURPASSED in any country in THE WORLD.

NEW SOUTH WALES is a Promising Field for the Investor, Farmer, Skilled Artisan, etc., and its Products are favourably established on the World's markets.

NEW SOUTH WALES, AUSTRALIA

exports enormous quantities of WOOL, WHEAT, MEAT, BUTTER, CHEESE, BACON, FRUITS, WINE, also Minerals, e.g. COAL, IRON, COPPER, LEAD, TIN, ZINC, etc., etc.

For further information, call or write:

THE LINEN TRADE.

There is every indication that the linen industry has passed the worst of the depression, and has entered upon a period of more activity. The great shortage of flax, more especially in the past two or three years, is being gradually overcome, and there are good grounds for hoping that substantial as has been the improvement in imports in 1922, the ensuing year will witness still further expansion. The gross imports of flax and codilla or tow into the United Kingdom from abroad are returned by the Board of Trade as follows:—

	1921.	1922.	1921.	1922.
Flax	Tons.	Tons.	£	£
Tow	16,275	31,069	3,124,207	3,327,580
	2,376	8,474	225,322	633,205

In 1918 the imports of flax were 18,418 tons, and of tow 2,370 tons. Thus last year there was an increase of roughly 100 per cent. over the average of the two preceding years. There was also a very marked decline in cost, the average value of flax imported in 1922 being £107 per ton, against £192 in 1921. In January last year the average was £140 per ton; in December it had fallen to £105. Tow in 1922 averaged £74 14s 6d per ton, against £94 16s 6d in 1921. A significant feature is the large increase in the imports from Russia—viz., 12,877 tons flax, against only 662 tons in 1921, and 4,786 tons tow, against nil. Belgium sent 7,230 tons, or 2,500 tons less. Of the total imports of flax and tow, Russia stood for 44 per cent. There are prospects of larger quantities being available from this source in the coming year, though whether they can possibly reach pre-war level seems doubtful. According to information from Moscow, the area under flax in the past season was 1,215,000 acres, or 45 per cent. of the 1914

acreage. Definite ideas as to the extent of the yield and the surplus for export cannot at present be formed, or until shipment begins in the spring, when the ports are free of ice. Larger crops are also reported in the independent Baltic States. In pre-war times the quantity of flax imported into Great Britain and Ireland was normally 100,000 tons, of which 80 per cent. was derived from Russia. The linen industry was, in fact, mainly dependent upon outside supplies, the quantity grown at home being almost infinitesimal. The area sown in Ireland was enormously increased when, under stress of war conditions, abnormally high prices were paid for flax, and it was regarded as a remunerative crop. It has, however, since shown a great diminution to about 40,000 acres in 1921 and 35,000 acres last year, with a yield of 5,000 to 6,000 tons annually. In Yorkshire 1,000 acres have been sown, and the harvest therefrom is now being dealt with in the two factories at Selby and Staddlethorpe. The capacity is, however, equal to dealing with the produce of 2,000 acres, and efforts are being made to induce farmers to pay more attention to flax. The Linen Research Society in Belfast is also endeavouring to cultivate or evolve seed which shall give a better yield per acre. A difficulty that can only be overcome by maintaining a certain price level or by devising satisfactory means of pulling the crop is that of labour. Linen manufacturers, however, demand cheap flax as essential to the revival of their industry and the recovery of markets abroad. In these directions some progress appears to have been made in the past year, the figures of exports from the United Kingdom being as under:—

	1921.	1922.	1921.	1922.
Piece goods	yds.	yds.	£	£
Handkerchiefs doz.	39,962,400	77,421,500	5,248,658	7,068,631
Other manufactures ..	1,407,771	1,955,789	742,662	762,011
			3,699,755	3,764,519
Total			9,651,075	11,595,161

Though the quantity of piece-goods exported was doubled, the value showed an increase of only 20 per cent. As usual, America was the largest customer, taking of piece-goods 44,995,400 square yards, or 58 per cent., against 24,381,000 square yards in 1921. We also exported 3,395 tons of flax and hemp yarns, having a value of £961,067; and, on the other hand, imported from abroad 4,655 tons, with a declared value of £876,417. In each case the quantity is in excess of that of 1921. Our imports of linen manufactures last year had a value of £339,558, against £301,974 in 1921.

APPENDIX.

(A) WHOLESALE PRICES OF COMMODITIES.—SELECTED DATES, 1913-1921; AND MONTHLY, 1922.

NOTE.—The following tables give the variations in prices of the commodities on which the *Economist* Index number is based. In cases where the exact quotation ceased to be given during the war the nearest available quotation has been given.

(B) WHOLESALE PRICES (MAINLY IN LONDON AND MANCHESTER) 1906 TO 1922.—PROPORTIONATE RESULTS 1901-5=100.

EXPLANATORY NOTE.—In the following table the average price of the various commodities in the five years 1901 to 1905 is taken as basis (100) in each case, and the market price at the various dates given is calculated as a percentage of the basis price. In this way the various quotations are reduced to a common standard, by means of which their respective fluctuations may be compared.

G. S. CAMPBELL, Vice-President.

AUDITORS' CERTIFICATE.

H. A. RICHARDSON, General Manager.

We have examined the books and accounts of the Bank of Nova Scotia at its Chief Office and have been furnished with certified returns from the Branches, and we find that the above statement of Liabilities and Assets as at December 30th, 1922, is in accordance therewith. The Bank's investments and the securities and cash on hand at the Chief Office and at several of the principal Branches of the Bank were verified by us as at the close of business, December 30th, 1922. In addition we visited the Chief Office and certain Branches during the year, when we checked the cash and verified the securities and found them to be in agreement with the books. We have obtained all information and explanations required, and all transactions of the Bank which have come under our notice have, in our opinion, been within the powers of the Bank. And we certify that the above statement of Liabilities and Assets as at December 30th, 1922, is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

A. B. BRODIE, C.A.
 D. McK. McCLELLAND, F.C.A. } Auditors.

THIRD IMPRESSION WITH ADDITIONAL CHAPTER AND STATISTICS.

AN INTRODUCTION TO THE STUDY OF PRICES

with special reference to the History of the Nineteenth Century.

By **WALTER T. LAYTON, M.A.** 7s. 6d. net.*The Economic Journal*:—"The high qualities he possesses and exhibits will, we are sure, recommend his 'Introduction' to all who would make at once the easiest and the safest approach available to the fascinating but complicated 'study of prices.' That is, perhaps, the most crucial of present popular economic questions, and it must always occupy a prominent place in the scientific discussions of professional economists."*The Westminster Gazette*:—"Mr. Layton, who is one of the ablest of the younger Cambridge economists, has refrained deliberately from a long exposition of the theory of the relation between price levels and the quantity of circulating currency. He has adopted that historical method which appeals to the instinctive empiricism of the practical man. His tracing of the price fluctuations of the past ninety years in England, and his analysis of their causes and results are admirably lucid. And if the book secures the wide circulation which its merits deserve, it should do much to draw public attention to the vital importance of a neglected question."*The Economic Review*:—"His excellent and clear little book ought to be in the hands of every student of social conditions."*The Practical Engineer*:—"This book should be valuable to the student of monetary values and prices, especially of the nineteenth century."**MACMILLAN & CO., LTD., LONDON, W.C.2.**

THE DOMINION BANK.

(CANADA)

At the Fifty-second Annual General Meeting of the Shareholders of The Dominion Bank, held at the Head Office, in Toronto, on 31st January, 1923, the following statement of the affairs of the Bank as on the 30th December, 1922, was submitted:

E. B. OSLER, President.

C. A. BOGERT, General Manager.

AUDITORS' REPORT TO SHAREHOLDERS.

We have compared the above Balance Sheet with the books and accounts at the Chief Office of The Dominion Bank and the certified returns received from its Branches, and after checking the cash and verifying the securities at the Chief Office and certain of the principal Branches on December 30th, 1922, we certify that, in our opinion, such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs, according to the best of our information, the explanations given to us and as shown by the books of the Bank.

In addition to the examinations mentioned, the cash and securities at the Chief Office and certain of the principal Branches were checked and verified by us at another time during the year and found to be in accord with the books of the Bank.

All information and explanations required have been given to us and all transactions of the Bank which have come under our notice have, in our opinion, been within the powers of the Bank.

Toronto, January 18th, 1923.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
February 21. February 22.

SUCH a quietude has fallen over the Stock Exchange as would seem almost impossible after the raging activity of a month ago. There is nothing much doing in rubber shares; industrials, as a whole, are fallen upon stagnation. A few Argentine railway stocks show animation; the mining markets are dry and uninteresting. Yet there is plenty of money about for investment, and an issue of St Maurice Power 6½ per cent. bonds, made at 99½ on Wednesday, was snapped up in half-an-hour. One or two fairly large issues are declared to be on the eve of making their appearance. Rumours on Thursday afternoon that the Turks had signed the Treaty led to an improvement in some markets.

The War Loan has scarcely varied from 100½ all the week. It moved a sixteenth one way or the other every now and then, but the amount of business in it has been so small as to render the price almost motionless. Consols are a good market, and other gilt-edged stocks keep up well, a rise in Sudan scrip being noticeable. The King's Speech at the opening of Parliament had no Stock Exchange influence.

The foreign market has obvious troubles with which to contend, but German bonds are distinctly harder, the Threes rising to 20s, while French railway bonds, after a dramatic jump, fell back again, on sales by people glad enough to have the opportunity of getting out on an improvement. French Government bonds strengthened towards the end of the week. Czechoslovak Eighties and City of Prague bonds were advanced sharply, on the expectation that Austria will be granted a loan before long, which, it is argued, would strengthen the security for these two bonds. Chinese Railways issues are weak, on fears in connection with payment of the next interest on some of them. Brazilians went better, New York supporting the market, and amongst the rubbishish stocks, Honduras improved on Thursday, the rise creating a little amusement. Turkish bonds advanced sharply for the reason mentioned above.

The last batch of Home Railway dividends had no marked effect upon prices, the course of which has been more governed by general conditions making for slight dullness. The declines did not amount to much. Mexican Railways improved, in company with various other Mexican issues, some anticipation having been raised that the scheme dealing with Mexican indebtedness will be published at the end of the month. Argentine Railways further advanced, all classes of the stocks rising sharply, and, although the best prices were not held, there is a good improvement left in them on balance. Brazilian Railway bonds moved in sympathy. Grand Trunk Pacific debenture lost part of its recent recovery. It is said that the Continent is buying American Rails through London.

The rubber market is almost dormant again, in spite of the fact that rubber itself is firm at about 15 6d per lb. The oil market has come under the influence of the international crisis, with its restraint of investment and speculative enterprise. Royal Dutch went ahead on American purchases. The price of the Courtauld dividend kept the textile market in a ferment of mild excitement throughout the week. Tobacco shares improved, on the excellent report of the Imperial company. Electricity supply shares have again gone ahead, in consequence of the declaration of further bumper dividends by the companies. Gas stocks are steady; shipping, banking, and insurance descriptions being exceedingly quiet. Good preference shares are hard to get. Dividend anticipations have caused fluctuations in Cements, Brazilian Warrants (which have had a sharp rise), and, as already mentioned, in Courtaulds. Movements in iron and steel shares have been confined to rises and falls of 3d to 6d per diem, the changes being as irregular as they are small.

South Africans are more or less dormant, neither the Cape nor Paris taking much interest in them, while the public on this side decline to support the market with the price of gold steadily falling. Nevertheless, prices are maintained. The recent effervescence in Rhodesians has subsided, Chartered, however, enjoyed a little flutter of activity. Mexicans are mostly lower. Tominils, which rose from 5s to 10s 6d in a day, went back to 7s 6d. The Broken Hill group awaits a fresh lead from the Colony. A few West Australians are slightly better, and the copper list is hard, under the leadership of Rio Tintos. Tin, the metal, improved towards the end of the week, without affecting the prices of shares in tin-producing companies.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

St Maurice Power Company, Limited.—Registered under Canadian law. Authorised share capital \$8,000,000 in common shares, of which \$7,200,000 have been issued. This is an offer for sale of £200,000 first mortgage 30-year 6½ per cent. sinking fund debenture stock at 99½ per cent. The stock offered represents the equivalent (at the rate of exchange of \$4.86½) of \$973,400 of a total authorised issue of \$12,000,000, of which \$9,026,600 in the form of first mortgage 30-year 6½ per cent. sinking fund gold bonds have already been sold in Canada and the United States. Both the debenture stock and the gold bonds will be secured *pari passu* as a first mortgage on the St Maurice Power Company's real and immovable properties. The mortgage provides for a sinking fund which will require the payment of \$50,000 per annum, beginning February 1, 1930, until February 1, 1934; of \$75,000 per annum from February 1, 1935, until February 1, 1939, and of \$100,000 per annum thereafter until maturity. This debenture stock is redeemable at the option of the company on 60 days' notice at 110, and accrued interest up to February 1, 1928; at 107½ during the next 11 years; at 105 during the next four years; at 102½ during the next five years, and at 101 thereafter until maturity. Income-tax will not be deducted from dividends on stock paid to holders at registered addresses outside the United Kingdom. The issue was quickly over-subscribed.

Pirelli-General Cable Works, Limited.—Authorised share capital, £500,000, in shares of £5 each, of which £300,000 has been issued. The loan capital consists of £300,000 6 per cent. first mortgage debenture stock, of which the whole amount has been issued. The principal, interest, and sinking fund of this stock are unconditionally guaranteed, jointly and severally, by Societa Pirelli and the General Electric Company, Limited. There are now outstanding £200,000 7½ per cent. three-year notes. These were due for repayment on August 16th next, and will be paid off out of the proceeds arising from the issue of debenture stock. The company, which was formed in 1914 to manufacture electric cables, undertakes to redeem this debenture issue in 1943 at par, but reserves the right to pay off outstanding stock at par after 1930. The issue has been sold to an undertaking at 90 per cent., who in turn has resold it at 92½, and as these facts have been extracted from information published in connection with Stock Exchange Regulations, it is possible that stock will eventually find its way into the hands of the public. Perhaps more information will be forthcoming by that time.

The Tavoy Rubber Company, Limited.—Authorised capital £60,000, divided into shares of 2s each. The company was formed in 1917, and acquired 2,123 acres of land in 1919 in Tavoy, Lower Burma. The whole of the shares have been issued for cash, 300,010 being fully paid up and 141,250 with 1s 6d per share paid. Five hundred and eight acres were planted in 1918, and 547 acres in 1919. Total planted acreage is 1,612. The paid-up share capital represents about £27 10s per acre. Transport is stated to be good. This information is given in connection with an application made to the London Stock Exchange for a share quotation.

COMPANY MEETINGS, &c.

SOUTH-EASTERN AND CHATHAM RAILWAY COMPANIES. FINE RECORD OF MANAGING COMMITTEE.

The joint general meeting of the proprietors of the South-Eastern and London, Chatham and Dover Railway Companies was held, on the 15th instant, at the Cannon street Hotel, London, Mr H. Cosmo O. Bonsor (the chairman) presiding.

The secretary (Mr Charles Davis) read the notice convening the meeting.

The Chairman said that the accounts presented had been made up in the same manner as had been the practice during the existence of the Managing Committee. They practically showed the earnings of the year. He mentioned that fact because a suggestion had been made that the dividends which the separate companies proposed to pay were bonus dividends. So far as the Managing Committee was concerned, there was no bonus whatever. Under the scheme for the amalgamation of the two companies every particular of the published accounts was taken into consideration, including all the reserves, secret or otherwise, and they belonged to the new Southern Railway Company. The earnings of 1922 had not been taken into consideration because they had not existed. Those earnings were the property of the two companies, and would be distributed among their shareholders. Practically, therefore, the earnings disclosed were those which had been made during the year 1922. It might interest stockholders to know, however, that during the first six months of 1922 the Managing Committee did not earn the 1913 income; they were not working at a profit; it was not until the holiday months commenced that the profits which appeared in the balance sheet were made. The result was that they were dividing between the two companies £2,040,000 odd, as compared with £1,861,000 divided in 1921. In that year they were taking money from the compensation fund, whereas they were taking nothing from that source to-day. Practically all their reserves, including the large cash balance from the Government compensation fund, were handed over to the Southern Company.

SERVICES TO THE NATION.

At this, their last meeting, he would claim on behalf of the Managing Committee that it had more than justified its creation. Shareholders might possibly say that the Committee had not given them any profits that would justify such a statement, but he would claim that the services rendered to the public and to the nation had more than justified the creation of the Committee. Proceeding, the Chairman recalled that when the Managing Committee became a statutory body by Act of Parliament in 1899 both the railways were singularly unpopular; their services were bad, and there were many complaints as to the unpunctuality of the trains. At that time they borrowed a locomotive from the Caledonian Railway with a view to testing the capacity of their own locomotives to keep time, but they were warned that neither the road nor the bridges would carry that locomotive, nor had they a turntable that would take it. The Caledonian locomotive was accordingly returned, but it had really done its job, because it had brought home to the directors in the most emphatic manner the work that they had to tackle in bringing the line up to date. It had been a herculean job. Four tunnels had had to be reconstructed, the whole of the main line laid with heavier rails and ballasted with Kentish stone; 588 bridges had had to be rebuilt and strengthened at a cost alone of something over a million sterling, and they had brought up to date the Dover Marine station and had replaced their cross-Channel fleet with up to date turbine steamers. With the completion of the Dover Marine station their large capital expenditure had practically come to an end. That station was finished in 1914, and he claimed that all that work had been of considerable public service, and that it would have been impossible to have carried the military traffic that was thrust upon the companies in 1914 had they not anticipated needs and spent that money. It was a matter of regret that owing to the war they had not been able until to-day to show to the stockholders any return on that expenditure.

RAILWAY AND POLITICIANS.

He had to acknowledge that all through the committee had had the kind support of the stockholders, but he had to say, at the same time, they had not received very great consideration from the politicians, because whenever they had gone to Parliament for power to carry out any work of improvement they had always met with restrictions. However, that was the position of the companies as they handed them over to the Southern group. Their lines and everything were up-to-date. At the moment, it was true, the system was absolutely full; it was impossible in the

business hours of the morning and evening to put on additional trains, but the initial difficulties in connection with the scheme of electrifying portions of the line had been overcome, and it was hoped to get to work on the electrification scheme practically in the next few weeks. Consequently they were in that way handing over to the new Southern group the possibility of giving additional facilities to the public and, in his opinion, considerable additional revenue to the shareholders of the new group. It was with mixed feelings that he appeared before them for the last time. There was satisfaction in knowing that they were handing over to the Southern Railway an up-to-date line, fully equipped and ready to earn profits for their shareholders, and with a considerable cash balance, which would be of use in strengthening the position of the new company. On the other hand, there was the natural regret in severing a connection and giving up work in which one had taken such a considerable interest during the last 25 years. It was also hard to part with old friends, and he did wish to emphasise the fact that in parting with the company's staff both he and his colleagues on the board wished to thank them for the loyal support which had always been received in good times and in bad.

Sir Robert Perks and Mr E. M. Rodocanachi both spoke in appreciation of the results of the efforts of the managing committee on behalf of the stockholders.

SOUTH-EASTERN RAILWAY.

The separate meeting of the South-Eastern Railway was then held, Mr H. Cosmo O. Bonsor again presiding.

In moving the adoption of the report and accounts, he recalled that it was on November 10, 1836, that the first general meeting of the South-Eastern Railway was held. The first line opened was between a position near Reigate, which he took to be Redhill, and a point near Dover. It was not until 1843 that the railway was taken into Dover and that running powers were obtained for getting through Croydon to London. That practically was the commencement of the now defunct South-Eastern Railway Company. He had great hopes that Mr Rodocanachi's prophecy as to the future prosperity of the Southern Company would be a comfort and consolation to those who carried on their shares into the new group, and he personally had no intention of selling his shares.

Sir Alfred W. Smithers (the deputy chairman), in seconding the motion, said that ten years ago the South-Eastern Railway Company formed a benevolent fund. He believed they were nearly the only company which had a benevolent fund conducted on the businesslike broad way that their fund was, and he hoped that not only would its methods be extended to the other companies, but that it would become general in connection with railways throughout the country, for he was sure that it had had a very considerable effect in maintaining the good feeling that had existed between the management and the staff of this company.

The report and accounts were unanimously adopted, and a vote of thanks to the Chairman, directors, and staff concluded the proceedings.

LONDON, CHATHAM, AND DOVER RAILWAY.

The ordinary general meeting of the London, Chatham and Dover Railway Company was held, on the 15th instant, at the Cannon street Hotel, London.

The Right Hon. Viscount Chilton, G.B.E., the deputy-chairman, presided, and, in moving the adoption of the report and accounts, said that the report which was submitted that day was perhaps the best in the history of the company. The result of the year's working of the two companies was a revenue balance of £2,040,000 odd, divisible as to £1,203,814 to the South-Eastern and £836,548 to the Chatham Company. That compared with a balance for the previous year of £1,068,155 for the South-Eastern and of £763,125 to the Chatham Company.

Mr Nathaniel Spens, in seconding the motion, said that the increased amount of £73,423 received from the Managing Committee was due largely to the decrease in the cost of working, the augmentation of the rent roll of the railway, and an addition to the account for general interest. Future dividends would depend upon the results of the Southern Railway Company, in which they were now merged. That company had been formed on the strongest possible financial basis. The Railway Act had removed the rigid rates which cramped the fair dealing with employees and threatened the modest interest return of shareholders. The results of the independent companies this year showed that to maintain the dividends earned a return varying from 4½ per cent. on the South-Western to over 5½ per cent. on the South-Eastern would have to be paid on the new deferred stock. Such a return would mean a continuance on their new security of at least some dividend to Chatham ordinary shareholders. Their new stock carried nearly 18 per cent. of the total profits made over 3½ per cent. on the deferred stock of the

new company. In his opinion, that right gave holders intrinsic value far in excess of anything they had hitherto possessed. There had been a large recovery in the value of railway stocks because of the settlement effected between the companies, the State, and the public by the new Railway Act. He believed that its provisions would secure, in due course, great benefits alike to shareholders and the public.

The report and accounts were unanimously adopted.

IONIAN BANK, LIMITED.

BANK'S STRONG POSITION—CONDITIONS IN GREECE.

The ordinary general meeting of the Ionian Bank, Limited, was held, on the 13th instant, at the offices, Basildon House, Moor-gate, London.

Sir John Stavridi (the chairman) presided.

The secretary (Mr Wm. A. Shaw, Litt.D.), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that, in view of the decision of the directors to close the books in future on August 31 in every year, the present accounts covered a period of eight months only. He wished to remind the shareholders that the necessary meetings had been called in July last for approving the new memorandum and articles of association. As soon as the sanction of the Court was obtained they would be on the same footing, so far as their constitution and powers were concerned, as the most advanced banking institutions in this country. The past year, if, perhaps, a little less trying than the previous one, had not been without its serious difficulties. During the whole period covered by the accounts Greece had been at war.

BANK'S CONTINUED PROSPERITY.

In the case of nearly all the British banks, the profits had been materially reduced, and, if he was able to congratulate the shareholders once more on the continued prosperity of the bank, he warned them frankly that in the past eight months their profits had benefited largely by the high rate of interest at which it had been possible to employ money in Greece, and equally by the unhealthy stimulus to trade arising from the depreciated state of her currency. No banker and no economist wished for the continuance of such conditions. They were abnormal and intrinsically unsound. They must look forward to the return of healthier conditions in the matter of the value of the drachma, and, provided the recovery was gradual, the sooner it came the better. When it did come there was sure to be a drop in the gross profit earnings of all banks in Greece.

The prospects with regard to the course of the drachma turned on two factors—the nation's finances and the currency issue. As to the former, Greece was the only country which had deliberately imposed upon herself the sacrifice of a forced loan. The necessity for that step was explained by the fact that credits granted to her by the Great Powers had been suspended. She had accepted the inevitable and taxed herself. The latest available figures of the public debt showed that Greece had a Budget deficit, ordinary and extraordinary, of, roughly, 1,700 millions, and a debt of probably 7,000 millions at the close of 1922. The fate of the Lausanne Conference still hung in the balance, but, presuming that peace was signed, and was followed by complete demobilisation, Greece would be spared a war expenditure which in September, 1921, ran into eight millions a day, or 2,900 million drachmas per annum. That economy alone would more than balance her Budget. Her National Debt problem would still continue formidable, but he looked upon the figures of her revenue and taxation as proof that with a return to peace and normal conditions the country would rapidly rehabilitate itself. When once Greece had solved the problem of resettling the refugees from Smyrna, Thrace, and Anatolia, and when she had absorbed the newcomers into her population as a wealth-producing element, her prospects were bound to be still brighter.

CURRENCY DEPRECIATION.

With regard to currency depreciation, it was common knowledge that during the war Great Britain, France, and the United States had guaranteed a joint loan to Greece, in return for which Greece had issued paper currency in Salonica for the benefit of the Allied troops, the Great Powers granting credits against the issue of currency. It was not too much to say that Greece had thus made possible the whole of the operations of the Allies on the Salonica front. After the return of King Constantine the Powers had suspended those credits, and Greece had been forced to shoulder the burden herself, and was carrying nearly 1,000 millions of watered currency, for the retirement of which the Great Powers were responsible. If the Great Powers would renew the credits, and peace and demobilisation came, he saw no difficulty in forecasting the rehabilitation of the drachma.

The forced loan of 1922 ought to have resulted in the retirement

you, gas has to be paid for in advance, and not at the completion of the quarterly periods. Under all the circumstances a total increase in consumption of 3½ per cent. for the year cannot be regarded otherwise than as satisfactory.

In connection with the dividend, I ought to explain how this is arrived at. It is no longer dependent upon a sliding scale, which one of the most astute Presidents of the Board of Trade avowed he could never understand, and which has certainly proved a convenient camouflage upon more than one occasion. Just as your employees are entitled to their standard wages, so you are entitled to a standard interest on your investment, and this has been prescribed by Parliament at 5 per cent. A basic price for gas has been fixed at 11d per therm. If, from time to time, any profit is made over and above what is necessary to provide these obligations, three-fourths of such profit is deemed the consumer's share, and automatically goes to him by way of a reduction in the price of gas, and the remaining fourth is divided equally between you and your employees. This year your share is equal to ¼ per cent. additional dividend on the ordinary shares, and a similar aggregate amount has been credited to the co-partnership fund. With better times we have every hope that these allocations will increase.

We endeavour to cultivate that happy relationship, to give the consumer what he wants, to satisfy his requirements, and to meet his difficulties in a helpful spirit. And we are on no less good terms with our employees, who, after all, provide most of the channels of communication through which good will circulates as between ourselves and the public. And the board are no less sincere in congratulating them on a return to bonus years than they are in announcing a somewhat higher return upon your investment than the merely nominal one you have been so long receiving.

The resolution was carried unanimously, and the formal business having been transacted, the proceedings terminated.

BORAX CONSOLIDATED.

INCREASED PROFIT—STRONG FINANCIAL POSITION.

The twenty-fifth ordinary general meeting of Borax Consolidated, Limited, was held, on the 15th instant, at the Cannon street Hotel, London, the Right Hon. the Earl of Chichester (chairman of the company) presiding.

The secretary (Mr H. T. Daniell) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the net profits for the past year amounted to £417,900, and, with the amount of £117,638 brought forward, there was a total of £535,538. It was proposed to allocate £25,000 to general reserve fund, £25,000 to reserve for income-tax, and £5,000 to pensions and grants fund, and to pay a final dividend of 1s 6d per share on the deferred ordinary shares, making 12½ per cent. for the year. This would leave £123,892 to be carried forward. The trading profit for the year was about £39,000 more than that of the preceding year, and, looking to the conditions which had prevailed in Europe, this could not be considered unsatisfactory. The reserve now totalled £853,563, including the premium on the deferred ordinary shares, and to this figure would be added the £25,000 now proposed to be written off from profit. The amount standing in the balance-sheet under the head of "Mines and goodwill" was fully represented by the value of mines and deposits, which value naturally was largely consequent upon their earning power, and if they looked at the profits made during the past twenty-five years from the material obtained from these properties, it was evident that, based upon such profits, they alone were worth substantially more than the figure at which mines and goodwill appeared, and that the goodwill attaching to the company, large as it must be, was not represented in figures in the balance-sheet. For all practical purposes,

the company's mines and deposits were of such number and extent that they could be considered as inexhaustible. Advances, investments, &c., at £1,094,887 showed an increase of £153,652. This was almost entirely due to increased holdings in British, Colonial, and United States Government loans. Cash at bankers and in hand, £403,399, showed an increase of £55,541. It would be seen that the company had built up a very strong position. Their liquid assets were large, but they were necessary to a business which was carried on in so many different countries.

TRADE AND PROSPECTS.

Referring to the company's trade and its prospects in the immediate future, the Chairman said that the home trade had shown lately some improvement, but a rapid increase did not seem probable. Manufacturers who bought the company's products, owing to the position due to exchange, which in some countries fluctuated violently from day to day, and in extreme cases even from hour to hour, had great difficulty in doing business abroad, and the company was naturally affected by this. They had had the same problem to deal with in conducting their own export business to protect themselves against serious loss owing to the extraordinary fluctuations in exchange, and, in fact, they had had in many instances to refuse to do business unless for payment in sterling, as it had become almost impossible to trade without loss where sales were not made in this manner. They were certainly passing through one of the most difficult periods which had arisen from the war. The course of business in some of the most important Continental countries had been practically destroyed by the political conditions and consequent exchange upset. Their business in the United States had shown considerable increase, and there appeared every probability of its continuance during the current year. They had continued to reduce their selling prices as costs had come down, a fundamental part of their policy being to keep prices as low as cost permitted. Every effort had been and was being made to decrease costs both at the mines and at the refineries by the installation of up-to-date plant, and most satisfactory results had been obtained from recent additions.

THE MINES.

At the group of mines in the United States which they were at present operating considerable development work had been done during the year, and the reserves of ore in sight showed a very substantial increase on those of the previous year. From their South American deposits they had shipped an increased amount of borate of lime during the year at a decreased cost. From their Asia Minor mines they had also produced an increased quantity of ore, but these were at present shut down owing to the situation in Turkey and consequent disorganisation of the workers and the staff. Also the railway by which their ore was sent to Panderma for shipment was partially destroyed during the retreat of the Greeks, and consequently the company's means of transport had been interrupted. He was glad to say that their Constantinople manager reported that but little damage had been done at the mines. They hoped shortly to be in a position to reopen them and to ship ore to their works. In the meantime they were filling the gap by increased supplies from their mines and deposits in other countries.

The report and accounts were unanimously adopted.

SOUTH SUBURBAN GAS COMPANY.

PRE-WAR DIVIDEND REINSTATED.

The ordinary general meeting of the South Suburban Gas Company was held, on the 16th inst., at Cannon street Hotel, London, Mr Charles Hunt, chairman of the company, presiding.

The secretary (Mr Wilfrid Wastell, F.C.I.S.), having read the notice calling the meeting and the auditors' report,

The Chairman in the course of his speech said: We owe wholly to coal and labour that in the short space of not much more than one year our dividend has been restored to the pre-war one of 6 per cent., and proprietors will no doubt recognise in this the farseeing policy which in the past encouraged gas undertakings to reduce the price of gas by giving them a premium for so doing in the shape of a larger slide dividend. As regards the future, let me say that we continue to rest our case upon the Gas Regulation Act, 1920, by no means unmindful of the fact that we are not proposing for this half-year to pay what may be called our full statutory dividend. We desire, if I may say so, to rest our case for increment of dividend upon rather more solid ground than that of reductions—accidental or otherwise—of coal or wages. We feel that this company has now made what may be called a fresh start, and are hopeful that from now onwards each year will show improvements in working results that will justify not only the recent rather heavy expenditure on works and mains, but the policy also which during all these years has been kept steadily in view, that gas making has no "abiding city" in Lower Sydenham. In fact, a start has already been made at Belvedere, and expenditure in that direction will henceforth continue to grow apace. In this connection attention may be called to paragraph No. 3 of the report indicating a purchase of land from the trustees of Christ's Hospital for the purpose of a housing scheme, which is likely to be in demand at the very commencement of our operations, since suitable houses for gasworks operatives are an immediate necessity. The consumption of gas continues satisfactory, notwithstanding the falling off in demand for industrial purposes. There is an average increase of 3.66 per cent., while the number of meters also shows a satisfactory increase, there having been only one previous increase exceeding this in number. That was in 1913, which followed the taking over of the West Kent district. This is not an uninteresting comment upon the disparaging remarks recently made in the public Press regarding the prevailing use of gas for domestic purposes, with regard to which I should like to say that we have just completed for the London County Council a very important housing scheme, comprising 2,089 houses, each house being fitted with a slot installation, comprising meter, cooker and the necessary pendants, brackets and burners for lighting.

The report and accounts were unanimously adopted.

HOME AND COLONIAL STORES, LIMITED.

GRATIFYING RESULTS OF YEAR'S TRADE.

The twenty-eighth ordinary general meeting of this company was held, on the 15th instant, at 2 and 4 Paul street, London, the chairman (Mr H. G. Emery) presiding.

The Chairman, in moving the adoption of the report and accounts, said that in times like these it was gratifying to the directors to be able again to present a report and balance-sheet showing such good results. The net profit for the year amounted to £341,968, and, adding the amount brought forward from the previous year, they had a total of £388,499. This had been dealt with by providing the dividends on the 6 per cent. cumulative preference shares, the 15 per cent. cumulative preference shares, and the 15 per cent. cumulative ordinary shares, the payment of a final dividend of 1s 9d per share on the ordinary shares, making, with the interim dividend, 15 per cent. for the year, and also a special bonus of 1s 6d per share; to the company's benevolent fund £10,000; to provide for income-tax £25,000, and for corporation profits tax £18,000; and to a separate reserve for equalising dividends £32,000, leaving £50,303 to be carried forward. The business of the company during the past year had been good. Things moved very quickly now, and it was rather difficult for the company's buyers to decide what was likely to happen in their respective markets beyond a few days ahead. The Chancellor of the Exchequer reduced the tea duty by nearly 4d per lb on May 1st. The company's prices on that day were 2s 6d, 2s 2d, and 2s. On May 8th these prices were reduced to 2s 2d, 1s 10d, and 1s 8d. The consumer had the benefit of these reductions for a few months only, as, owing to advancing markets, they had again to make their selling prices 2s 4d and 2s, and it was their well-bought stocks that allowed them since the New Year to sell even at these prices. Those stocks had gone, with the result that their prices on the following day would be 2s 6d for the very best and 2s 2d for their family tea. The lower quality would thus be 2d per lb dearer than it was before the reduction in the duty last May. Therefore, so far as the consumer was concerned, the Chancellor might just as well have left the tea duty alone, for if selling prices had remained as they were before the duty was reduced tea would not have advanced to the extent it had, because any price over 2s 6d would have caused a reduction in consumption, and thus stayed to a large extent an advance such as had been experienced. The reduction of nearly 4d per lb by the Chancellor represented an annual loss to the Exchequer of £7,000,000, the greater part of which was now going into the pockets of the producers. The great advance in the value of tea shares on the Stock Exchange confirmed this.

The report and accounts were unanimously adopted.

(a) Including Treasury Bonds.

Tenders will be received on Friday, February 23, 1923, for Treasury Bonds and Treasury Bills to be issued to the maximum amount of £40,000,000. The amount of Treasury Bonds issued will not exceed £5,000,000, but subject to that limit, the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

Total declared value of exports registered in the week	867,984	642,238

Messrs Samuel Montagu and Co. write, on February 14th, as follows:—

GOLD.

The price for exportable gold on the 12th inst.—namely, 87s 11d—is the lowest since a quotation per fine ounce has been fixed for such gold. The bulk of the supplies this week was taken for India and the Continent. The following were the United Kingdom imports and exports of gold during the month of January, 1923:—Imports, £4,836,805; exports, £7,179,572. The Reichsbank has fixed the purchase price of the gold 20-mark piece at 140,000 paper marks for the period from February 12th to 18th. Mr Crissinger, the Comptroller of the United States Currency, so cabled the New York correspondent of the *Times*, states, in his annual report, that:—“The United States has too much of the world's gold, and is suffering from a plethora almost as much as other countries are suffering from a lack of the precious metal. Nearly half of the total supply of 4½ billion dollars (nearly £1,000,000,000) is held here,” he said, “though without a free movement of gold there cannot be economic stability.” The excess of gold was reacting against American business, and for illustration he called attention to the drop in America's balance of trade. He made no suggestion for dealing with the problem beyond the observation that gold exports must be expected from time to time. In this connection there is some importance in the fact that Mr Crissinger was recently appointed Governor of the Federal Reserve Board, which has considerable power over the discount rates of the reserve banks.

CURRENCY.

The French Ministry of Finance, according to the Bankers' Trust Company, is of the opinion that the 300 million francs in bronze-aluminium coins (face value 2f, 1f, and ½f) now in circulation, will not be sufficient to meet the needs of commerce and industry. Their production, which now averages 25 million francs a month, is to be continued until July, 1923. At that time there will be nominally 450 million francs worth in circulation. That amount is slightly higher than the amount of the silver money in circulation in France in 1914.

SILVER.

The Indian bazaars have taken little interest in the market this week. Had it not been for some moderate buying orders coming from China, prices would hardly have been sustained. Meanwhile the excellent up-country off-take in India, about 300 bars a day, must be absorbing some of the heavy supplies converging upon that market, and, should prices ease off, it is reasonable to expect some fresh inquiry from that quarter. The Chinese New Year, which falls due on Friday, will probably indicate a cessation of support from China for a week or so. Supplies have not been on a large scale; silver has been sold on China account, and a few speculative sales have taken place on any tendency of the price to rise to any substantial extent.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

NOTICES.

The London Joint City and Midland Bank, Limited, announce the opening of new branches at 45 Blackburn road, Church, Accrington, and 1 Market place, Wells, Somerset, under the management of Mr W. E. Hindle and Mr R. M. Stewart respectively. The office at Abersoch, Carnarvonshire, has been converted into a full branch, with Mr W. Norman Hughes as manager. They also announce the opening of a branch at 25 Broad street, South Molton, Devon, under the management of Mr Malcolm Raleigh, and the transfer of the business formerly carried on at 17 Moorgate street, Rotherham, to 35 College street, Rotherham, which is now under the joint management of Mr Albert E. Rawson and Mr Charles Newton Hodgson.

The National Provincial and Union Bank of England, Limited, announce that a branch of the bank is now open at 35-36 Hamilton square, Birkenhead, under the management of Mr J. F. Culverwell.

Barclays Bank, Limited, announce that they have opened new branches at 119 Mount street, W. 1, under the management of Mr W. G. Feiron, and at 82 Sandgate road, Folkestone, under the management of Mr H. S. Coatsworth.

A branch of the National Bank of Australasia, Limited, will be opened on Thursday, the 15th inst., at Australia House (Aldwych entrance), Strand, W.C. 2.

Mr. John L. Webb has been re-appointed chairman of directors of the Commercial Bank of Australia, Limited, Melbourne, for the year 1923.

A branch of the Western Australian Bank has been opened at Bunceburn, an agricultural township, situated at the terminus of the spur line, 52 miles from Wyalcatchem, on the Dowerin-Merredin railway line.

The National Bank of South Africa, Limited, London, advise that their Antwerp office has been removed from 25 Place de Meir, to 2 and 4 Rue Leys.

We are informed that the Chairman of Banco di Roma, Count Santucci, finding that, owing to his age, he could no longer both conduct the business of the bank and attend to his professional duties, has resigned his position, and Prince Antonio Boncompagni Ludovisi has been elected in his place. Comm. Vicentini has been appointed vice-chairman, Comm. Carlo Vitali succeeding him as managing director.

The London County Westminster and Parr's Bank, Limited, announce the opening of a new branch at 694, High road, Leytonstone, E. 11, under the management of Mr. H. A. Etheridge.

The change of name of the London County Westminster and Parr's Bank, Limited to Westminster Bank, Limited, was confirmed at an extraordinary general meeting held yesterday, and it is proposed that the alteration shall take effect on March 1st.

BANKS.

BANK OF NOVA SCOTIA.—The report for the year ended December 30, 1922, shows that assets total \$221,647,324. Cash and investments amount to \$126,986,092 of the assets. With regard to liabilities, notes in circulation amount to \$15,399,640; deposits not bearing interest, \$35,172,569; deposits bearing interest, \$137,252,031. With regard to profit and loss, the balance December 31, 1921, was \$65,328; net profits for year, losses by bad debts estimated and provided for, \$2,122,682; making \$2,188,010; dividend No. 209 at 16 per cent. per annum, paid April 1, 1922, \$388,000; dividend No. 210 at 16 per cent. per annum, paid July 3, 1922, \$388,000; dividend No. 211 at 16 per cent. per annum, paid October 2, 1922, \$388,458; dividend No. 212 at 16 per cent. per annum, payable January 2, 1923, \$392,925; war tax on circulation to December 30, 1922, \$97,464; contribution to officers' pension fund, \$75,000; written off bank premises account, \$250,000; transferred to reserve fund, \$35,000; balance carried forward, December 30, 1922, \$173,163. The position of the reserve fund is—Balance December 31, 1921, \$19,000,000; premium on new stock, \$465,000; transferred from profit and loss, \$35,000; balance forward December 30, 1922, \$19,500,000.

SOCIÉTÉ GÉNÉRALE DE BELGIQUE.—The balance-sheet of the Société Générale de Belgique as on December 31, 1922, reads as follows:—

LIABILITIES.	Francs.	Assets.	Francs.
Capital and reserves	338,384,143.70	Cash in hand and at Bank	20,000,000.00
Bonds in circulation	115,280,501.00	Current accounts	134,374,826.18
Current accounts	1,173,901,566.58	Bills discounted	350,393,379.61
Sundry accounts and stocks deposited	3,916,789,316.32	Bonds	432,564,125.00
Profit	17,931,221.72	Shares	323,421,055.00
		Current accounts	356,661,287.91
		Deposits Société d'Avances aux Combattants	11,177,000.00
		Sundry accounts and stocks deposited	3,916,789,316.32
		Sundry	16,966,148.30
	5,562,347,138.32		5,562,347,138.32

The item "Bonds" is composed chiefly of Belgian Government securities, of which the majority are short dated. Further, the actual value, at the current prices of the Bourse, of the item "Shares" is 250,000,000 in excess of the value stated in the balance-sheet, and which really represents an additional reserve. As regards the item "Property," the value is certainly vastly greater than the figures given. The gross profit amounts to 40,832,780.60f, distributed as follows:—Working expenses and taxes, 12,612,772.70f; interest on bonds, 4,917,571.98f; rebate on discounts, 1,659,714.20f; staff profit sharing, 551,500f; 5 per cent. on the 100,000 capital shares, 5,100,000f; reserve, 2,608,683.25f; dividend of 240f on the 100,000 "parts de réserve," 14,880,000f; management, 381,538.47f; benevolent fund, 31,000f—40,832,780.60f.

INSURANCE.

ROAD TRANSPORT AND GENERAL.—The fire premiums last year were £13,557, and the net claims £6,621, or 48.8 per cent. After reserving 40 per cent. of the premiums against unexpired risks, there was a profit in the fire account of £2,913. In the employers' liability and general account the premiums were £106,450, against £62,028, and the net claims absorbed 39.9 per cent. of the premiums. There was a net profit of £11,823 in the account. Transfers were made from profit and loss of £2,500 to the fire reserve, and £5,000 to employers' liability and general reserve. The issue of 20,000 fully-paid shares of £1 each at 25s a share was made to the shareholders in December; these shares were taken up, and the proceeds increased the company's funds by £25,000. The credit balance at profit and loss of £10,229 has been carried forward. The company appears to be steadily building up its business on a firm financial basis.

THE SUN LIFE ASSURANCE COMPANY OF CANADA.—The new assurances effected in 1922 amounted to £18,657,257, bringing the total to £129,740,727. The premium income for the year amounted to £5,359,345 and the total income to £7,715,775, an increase over the previous year of £1,189,428. The funds show a gain of £9,199,000, and now amount to £34,999,042.

MISCELLANEOUS.

LEIBNIZ'S EXTRACT OF MEAT COMPANY, LIMITED.—The directors, having decided to adopt as closing date August 31st, submit herewith their fifty-seventh annual report, together with the balance-sheet and profit and loss account for the five months to August 31, 1922, duly audited. The balance of the profit and loss account is £379,571, out of which has already been paid:—Dividend at the rate of 5 per cent. per annum on 200,000 preference shares, paid on October 1, 1922. The proportion, corresponding to the five months April 1 to August 31, 1922, amounts to £20,833, and the directors propose to appropriate the balance in the following manner:—To pay a dividend on the ordinary shares of 6s 3d per share, free of income-tax, amounting to £75,000. This dividend, which is for the period of five months April 1 to August 31, 1922, corresponds to a dividend at the rate of 15s per share, free of income-tax, for a full year; to carry to reserve £25,000 (making the total £1,025,000); leaving the sum of £28,737 17s 4d to carry forward to profit and loss new account. The dividend on the ordinary shares will be payable on February 28th. Coupons Nos. 78 and 79 of the ordinary share warrants to bearer will be received at Messrs Glyn, Mills, Currie, and Co. on and after February 24th. In order to bring the date of the coupons for the future into line with the new closing date, it is necessary to treat coupons 78 and 79 as one coupon. They should, therefore, be detached together and listed as one coupon.

TEMPERANCE BUILDING SOCIETY.—This society has just issued its sixty-ninth annual report. Its advances in 1922

amounted to £321,446, being £29,809 more than in 1921. The amount secured on mortgage at the end of the year was £1,414,622. Attention is called to the circumstance that of 5,590 mortgage securities no fewer than 5,124, or 91 per cent. of the whole, are for sums not exceeding £500. The schedule of mortgages shows that there are only four exceeding £3,000, and the total indebtedness on these is only £15,555. The share capital has increased by £112,768, and now stands at £1,323,135, while the deposits have increased by £74,873, and now amount to £290,645. After paying all working expenses and the usual dividend free of income-tax, there was a surplus profit of £18,522, which was added to the reserve, raising it to £183,406.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20:—

	1922-1923.	1921-1922.	1920-1921.	1919-1920.
Estimated sales of home-grown wheat—				
1 week to February 10	Cwts. 428,999	Cwts. 452,358	Cwts. 232,480	Cwts. 429,533
22 weeks to February 10	10,595,598	9,550,313	7,928,627	7,266,367

1921	292,479	286,889	42,844	18 11	17 9	14 0
1922	452,357	213,321	65,640	10 10	12 0	10 4

Preparations for spring sowings are well advanced, but operations were hampered by continued wet weather. Reports from most quarters are favourable with regard to winter wheat, the plant being strong and of good colour, while oats also present a healthy appearance. Quiet conditions prevailed at market, but in the absence of selling pressure prices were generally maintained. Native wheat, however, met a quiet sale at barely steady rates. Suitable milling grades rule at 9s 3d-9s 8d, with inferior descriptions from 8s-8s 9d per 112 lbs free on rail. Imported sparingly offered and commands full rates. No. 1 Northern Manitoba quoted 49s 6d-49s 9d, No. 2 mixed Durum 46s 6d, and Plates 48s 9d-49s 6d, all ex-ship to arrive as to position per 49s lbs. The cargo section ruled quiet, owing to holidays interrupting business in the United States and Argentina. Prices remained nominally steady, as sellers were not disposed to press. Sales comprised steamers of Rosafé 62½ lbs afloat at about 46s to Germany, white Pacific arrived 48s, Australian March 50s, choice white Karachi afloat 47s 9d, soft red ditto 47s 3d per 480 lbs. Crop reports from the principal exporting countries continue favourable, with improved advices from the United States. Visible supplies in North America are increasing, while larger quantities are reported on passage. Flour steady, but quiet. London standard straight run quoted 40s, patents 42s-43s, town households 38s per sack delivered to London bakers. All English country straights 37s 6d-37s delivered. Imported dull. Manitoba patents range from 37s 6d-41s, Minneapolis good patents 40s 6d, Pacific 37s 6d, and Australian 39s 6d per 280 lbs ex store. Maize firmer, and holders more reserved in sympathy with the forward position. Plate ex ship 37s 3d-37s 9d as to position, ditto landed 38s 6d, American mixed ex ship 35s 9d, landed 37s 3d, all per 480 lbs. The cargo market remains quiet, owing to higher limits imposed by sellers, the tone being influenced by lighter Plate shipments and firm cables from the other side.

No cargo sales were reported. Barley: English remains steady, with a fair demand for best malting descriptions, prices ranging from 7s-14s as to sample per 112 lbs free on rail. Imported neglected and without material change. Californian quoted 42s to 45s, Australian chevalier 48s-53s, both ex-ship per 448 lbs, Danubian 30s-31s, Plate 30s, both landed, Persian ex-ship 26s 6d, ditto landed 28s, all per 400 lbs. To arrive cargoes on Danubian afloat sold at 27s, 28s, and Persian May-June 24s 6d per 400 lbs to Bristol Channel. Oats: Native quietly steady at 8s-9s 10d per 112 lbs free on rail as to quality. Imported the turn dearer, but buyers continue reserved. Plate f.a.q. 23s 9d, No. 2 white clipped American 25s, No. 2 Canadian Western 29s, No. 3 ditto 27s, No. 2 Canadian feed 26s 3d, all 320 lbs landed terms. Oatmeal remains steady, with a moderate trade in force. London-made all cuts quoted 17s 6d, rolled oats also whole groats 17s 6d, flaked 20s 6d ex-mill, ordinary Scottish oatmeal 18s 6d-19s, and American all cuts 17s 9d per cwt.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report dated February 15, 1923, is as follows:—Pig-iron: The scarcity of prompt foundry pig-iron continues to be acute, and cannot be relieved by increased output, as the necessary fuel is not available at the present time. No. 3 Cleveland G.M.B. is 110s per ton for prompt delivery. East Coast mixed numbers hematite pig-iron is also firm at 107s 6d, and makers are well sold for prompt delivery. Manufactured Iron and Steel: The steel trade is good, but would welcome a larger demand for orders for the immediate future. Steel ship plates, £9 10s; steel ship angles, £9; iron bars, £11; steel rails, £9. Iron ore continues firm, with a fair demand. Works are, however, chary about buying much beyond their immediate requirements. Best Bilbao Rubio is 24s 6d to 25s per ton.

Our Sheffield correspondent writes:—The position of the pig-iron market has not changed much since last week, except that the scarcity of all kinds of this material has become even more acute. Famine conditions now obtain in the hematite, basic, and foundry departments. Users are keenly booked at the rates of a month ago, but odd lots are frequently wanted promptly, and for these big prices are being asked and given. Makers are not disposed to book even forward contracts owing to the great uncertainty of the future. Derbyshire foundry is quoted at £4 15s and Lincolnshire basic at £4 17s 6d at furnaces. No further advances in billets are reported, although makers are quoting premiums upon the official rates, and the same remark applies to wire rods. Steel hoops have been advanced 10s to £12 15s, and iron hoops from £14 to £15. The call for billets has increased considerably during the present week, and it is almost impossible to obtain deliveries in excess of the contract quantities. Another 60-ton basic furnace in this district has just been lighted. Makers of railway axles, tyres, and springs are booking increased business from the home railways, with prospects of even larger orders in the future. Not much is coming in from overseas sources at present, but a revival is believed to be on the way. Trade in fine steels and tools made thereof is sagging again after the recent recovery, and the deflation of the franc is causing considerable loss of business to a good many of the local manufacturers. The tone is also less confident than lately. Much more work is on hand than a year ago, but there is still a great amount of idle plant, and few of the works are running with regularity. There is much disparity in the distribution of business among the local works. The cutlery and electro-plate branches are inactive. The chief feature of the coal market is the famine in coke. Most of the blast furnaces covered themselves for coke at 20s and 21s per ton, whereas any producer having odd lots to dispose of could now get 30s for it. Even higher prices are mentioned for export. The starting of several idle blast furnaces is being held back because it is not possible to obtain the necessary coke. Foundry coke has gone up to 30s at ovens. There is a brisk home demand for steam and gas coke, but the house coal market has never this season reached the normal level.

Our Cardiff correspondent writes:—The South Wales coal market has developed considerable strength this week, and particularly for the more bituminous of the steam coals and for coking small coals. There has been another spurt in the foreign demand, and more especially in that from the Continent. The exports last week were substantially in excess of the pre-war weekly average, and considerably above the weekly average in 1922. It had been hoped that the conference held this week between the employers and the trimmers and tipplers on the question of extending dock working hours would have ended in some agreement to relieve the pressure of a dock congestion that has become chronic. The employers submitted certain proposals by which the two-shift system as well as the eight-hour principle would be maintained, but which would have extended operative hours practically all day and all night. This scheme, however, the workmen's representatives rejected, and the prospects of a settlement of this vexed question has been further delayed. The workmen's leaders are stated to favour the introduction of a partial third shift, but they have to receive the assent of the workmen to this counter proposal, and even if that assent be given it is impossible yet to say whether it will be acceptable to the employers. It is unquestionable that an extension of effective working hours would add considerably to the volume of the export trade, for the collieries are not only sold but, in many cases, considerably oversold, and there is available more tonnage than would be necessary to meet an expansion of 20 per cent. to 30 per cent. in the quantity of coal shipped. Prices for all classes of coal have stiffened, and in the case of smalls, and especially of washed and coking smalls, quotations have been marked up. Offers up to 23s and even 24s per ton have failed to attract supplies, and an increasing proportion of these qualities is now being retained by the collieries for coke manufacture. The demand for coke is very strong, and prices are advancing. The production of patent fuel is suffering severely from the high cost of pitch, and makers have temporarily withdrawn quotations. The pitch that is being imported from the Gulf of Mexico at a price which is stated to be less than half that demanded for British pitch will not arrive in South Wales for another week or two. Pitwood closed the week slightly firmer.

The following are the current approximate quotations:—Best Admiralties, 20s 6d to 30s; second Admiralties, 28s to 20s; best drvs, 27s 6d to 28s 6d; Black Veins, 28s 6d to 29s 6d; Western Valleys, 28s 6d to 29s 6d; Eastern Valleys, 27s 6d to 28s 6d; best bunker smalls, 21s to 22s; ordinary cargo smalls, 18s 6d to 20s;

anthracite big veins, 35s to 37s 6d; anthracite machine-made cobbles, 45s to 47s 6d; French nuts, 47s 6d to 50s; stove nuts, 47s 6d to 50s; rubbly culm, 14s to 14s 6d; coke for export, 47s 6d to 52s 6d; inland blastfurnace coke at ovens, 27s to 28s; patent fuel, nominal; pitwood, ex ship, 25s to 25s 6d.

Buoyant conditions continue to prevail in the South Wales iron and steel trades. The price stabilisation agreement entered into between the steel bar makers and the tinplate manufacturers at the end of last October has been renewed for another three months, and the minimum price of tinplates has been further increased by 6d to 21s f.o.b. per basis I.C. box, and the minimum price of tinplate bars by 5s to £8 6s per ton f.o.b., subject to a rebate of 7s 6d to the tinplate manufacturers who are parties to the stabilisation agreement.

CUMBERLAND IRON.

(BY OUR WORKINGTON CORRESPONDENT.)

The present outburst of buying in the Cumberland and North Lancashire hematite pig-iron market is regarded only as a flash in the pan, following upon the artificial stimulus applied by the French adventure in the Ruhr, and many people believe that the steady recovery which was taking place will in the end be retarded by the events of the past few weeks. Much of the home business has come from home users anxious to anticipate the rise in prices that it was foreseen must result from the scarcity and dearth of coke, but in no way eager to accept delivery of the iron. There has undoubtedly been a large amount of Continental buying, and the requirements of Scotch, Midland, and South Wales consumers are also very substantial, but after making all allowances, it is feared that conditions prevailing in the market are not healthy, and that a reaction will be witnessed. Bessemer mixed numbers are now quoted 7s 6d per ton higher at £5 15s, delivered at Glasgow and Sheffield; at £6 per ton, delivered at Birmingham and South Wales; and at £5 17s 6d per ton for export. Ironmasters, it is recognised, have been powerless to prevent the appreciation of values. East Coast coke is 6s per ton higher at 40s per ton, and it will not be surprising if this figure is raised again. Low phosphorus iron is a livelier market, the home demand having improved, and commands £15 10s per ton, f.o.t., and spiegel is a better trade at £7 10s per ton. There is still next to nothing doing in the steel trade. Orders are not being released, and unless there are developments as sudden as they are surprising, there is no prospect of the steel works in this district, which resume operations next Monday, being able to work longer than for three weeks at a stretch. The iron ore industry is more satisfactorily employed, and there are indeed few mines that are not now working. The demand is almost wholly local, though special ores are wanted by East Coast smelters. Special ores are quoted at 23s to 25s per ton, and ordinary grades from 20s to 22s 6d per ton.

Affairs in the coal trade are exceedingly brisk, Irish, and local industrial and land sale needs are very considerable, and absorb the whole of the production. Prices are as yet unchanged, best house coal for shipment to Ireland being 27s 6d per ton, and for the local land sale market 38s 2d per ton at pit. Best steam is 30s per ton delivered; and washed steam 20s per ton. There is no small coal available except for the by-product coking plants, all of which are drawing full loads. There is a keen Continental inquiry for this coke at 32s 6d per ton, but there is practically no surplus for export after the wants of the Cumberland and North Lancashire smelters of ordinary iron are satisfied. By-products are all a good market. The chemical industry is busier.

THE COTTON TRADE.

MANCHESTER, February 15.

A firm tone has prevailed in the market during the past week, but trade has not been at all active. The under-current of inquiry keeps up fairly well. Buyers, however, are not in any hurry to arrange large contracts at current rates. In the cloth section manufacturers of fancies and specialities are more favourably situated than producers of plain goods. Scattered sales have occurred for India, chiefly in bleaching and printing materials, the bulk of the demand being for Calcutta. Some shippers to China have displayed rather more interest, but only isolated lots have been put through in standard makes, with a fair turnover in fancies. Poor trade advice has come to hand from the Near Eastern markets. Special styles have been wanted for the United States and the Continent. Home trade buying has been limited. American yarns for home use have moved off slowly at about late rates. Egyptian spinnings remain firmer, with a moderate turnover. Most of the demand in export numbers has been for India.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—This market appears to be passing through a period of slackness, which is all the more noticeable inasmuch as it follows a long spell of activity. There does not seem to be any real weakness; raw material in the primary markets is still selling well, and at prices which make current quotations for tops look cheap, yet there is no disposition on the part of users to do anything in the nature of speculative buying. The general impression appears to be that trade will revive in the course of a few weeks, but that meanwhile it is safest to go slowly and avoid heavy forward commitments. In practically all tops the position favours the buyer, and as stocks of fine tops are beginning to accumulate, one or two weak sellers are to be found. This accounts for a certain amount of irregularity in quotations. Generally speaking, average 64's tops are quoted at about 5s per lb, but it is understood that sales have been made at a lower figure. In the yarn section an easier tendency is also noticeable, and discrepancies in quotations are again becoming frequent. Spinners have plenty of orders on their books, but many are experiencing difficulty in getting particulars, the result being that offers of quick delivery are being made here and there at prices which look attractive. The unsettled conditions on the Continent are affecting the export trade to some extent, although it is possible that the closing of several German mills may divert a certain amount of trade to the West Riding from other countries. The piece trade remains quiet, and financial difficulties continue to hamper development. Manufacturers and merchants complain of the lack of new orders, and where business is offered it is generally at prices well below the present cost of production.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Since last writing the first series of London sales of Australian and New Zealand wool for this year have closed, and whereas that centre was, figuratively speaking, a warm place, the temperature being well above normal, home trade buyers who have returned to Bradford state that there is a coldness in the Northern centre which compares ill with London. It is a remarkable fact that after three weeks of sales of the raw material conditions in consuming centres are anything but inspiring, prices showing an easier tendency. Yet this is the actual state of affairs, and instead of there being a movement in tops and yarn which corresponds to the activity in the raw material, there is distinct quietness in the two former commodities, with prices decidedly on the easy side. Their price for warp 64's has been brought down by one of the largest top-making firms to 5s 2d, and yet wool cannot be bought in any market in the world to bring in that quality of top at such a low price, the cost in London being on the basis of at least 5s 4d for 64's tops. The home trade, however, appears to have fallen on one of those quiet periods which are occasionally experienced, and it may be that a repetition of such conditions is coming at an opportune moment to sober the views of those who have been unduly optimistic. If the present lull is succeeded by the placing of more business by wholesale fabric buyers, real good will have been done. Cable information from Australia this week indicates a continued buying movement, with prices no easier, and if the trade can absorb the weight of wool that is to be offered between now and the end of March without prices declining further, greater activity will follow in all branches of the industry. It is confidently stated that by the end of next month the season will be over in Australia, New Zealand, and South Africa, and in view of this justifiable expectation, we cannot see that much, if any, decline in the raw material will take place. As we have already indicated, the upward tendency of values has for the time being spent itself, and it may be assumed with a fair degree of confidence that users are adapting themselves to what will eventually turn out to be sounder and healthier conditions than those prevalent to-day. In the meantime, machinery is being kept fairly well occupied, although reports are received from some sources of an accumulation of tops and yarns. Several Bradford topmakers admit that they are carrying heavier stocks than at any time since the slump, but there is a quiet confidence which is of some significance to those who observe it.

Some statements made by Sir Arthur Goldfinch have been published which deserve consideration. There is much to be said in favour of his contention that all the world is faced with a demand for wool for actual consumptive purposes which is actually greater than the quantity grown per annum, but we doubt very much whether the production is too little by 500,000,000 lbs, which, expressed in terms of bales, amounts to 1,500,000. It may be readily admitted that the trade absorbed a huge weight of wool last year,

the quantity easily constituting a record, but the buying done was induced not so much by actual consumption as by the prevalence of the opinion that prices were safe from a buying standpoint, and that there would eventually be an upward movement which would guarantee satisfactory profits. Sir Arthur Goldfinch is probably aware that from April, 1920, when the slump began, to well into 1921, the trade did not absorb much more than one-third of the normal quantity of wool. The buying movement commenced at the September, 1921, series of London sales, and continued all through last year. In that period prices were at a tempting level, and good profits were made by those who had the pluck to buy during the Australian season of 1921-22. It is not to be expected that anything like the same weight of wool will be absorbed this year. At the same time, we think that as soon as the British Australian Wool Realisation Association's stocks are out of the way wool supplies will be no more than sufficient to satisfy machinery requirements.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

The arrivals of building and furniture woods have been heavy over the past month, the mild weather in the north of Europe giving opportunities for the shipment of large quantities of building timbers, which has had the effect of keeping prices steady.

Deliveries of wood from the docks for consumption shows an improvement compared with a year ago, but taking the spot market generally merchants are not at all satisfied with the demand for building timber, and are anxious as to the future—particularly what is going to happen in the building trade as a result of the suggested wage cuts and a longer working day. If the dispute is not amicably settled a large source of consumption will be cut off.

Stocks in the metropolitan area are heavy, and the arrivals above mentioned have somewhat upset the calculations of large holders of stock, but prices have remained steady to firm—especially firm for timber for joinery requirements. Consumers, however, are buying only for immediate wants, although they are able to secure wood at less than merchants can replace them from abroad.

Swedish and Finnish exporters, flushed with their victory in the f.o.b. market of 1922, view with confidence the coming season, and are basing their demands accordingly, but English soft-wood importers are operating very cautiously—if at all. In these times anything might happen, and the higher the rise in prices the greater the fall, should one occur. The opinion of the trade generally is that timber should be cheaper this season, and consumers are waiting for prices to fall. Last year f.o.b. values steadily increased; whether they will do so this year it is difficult to prophesy.

For Canadian spruce the spot market is somewhat quiet. The demand from case-makers in the Lancashire districts is only fair, whilst as to the better qualities used in the building trades on the West Coast the call is by no means heavy. Stocks which are only moderate are in firm hands, business of f.o.w. being held back on account of advancing f.o.b. prices.

In furniture woods the market for mahogany logs quietened down after a period of activity, but a decidedly better feeling was shown by buyers at the sales this week, particularly for Honduras and African logs.

Hard woods of various descriptions in planks and boards have arrived in large quantities over the month, particularly from the United States, and stocks from there are now of considerable volume, while the demand has slackened off. American shippers, like those from other lands, maintain a firm attitude.

Native timber merchants report an improvement in the demand for their material, which is satisfactory, as they have had a bad time. The increasing prices of foreign timber, however, must have an influence on the call for native-grown woods, and should give a stimulus to those who trade in this commodity.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The home hide market remains steady, with a slightly weak tendency. Best ox sold from 7½d to 8½d at Thursday's Bermondsey market, seconds making from 5½d to 7½d per lb. Alterations on previous prices were merely fractional in one or two cases. Best heavy cows sold at 6d and seconds at 5d. Calf were decidedly firmer, best making from 7½d to 12½d and seconds from 6½d to 10½d, increases of about ½d being noted. Rumours are current that buying is again going on for American account. Woolskins made from 5s 6d to 12s 6d and hogs from 6s to 15s each, the tone being slightly easier. Tanners are buying very cautiously in the River Plate, the U.S.A. taking the bulk of the frigorifics. Trade in dry sorts is moderate, tanners being forced to use this class of stock in view of the low price sole leather demanded. Latest cables report the American hide position as steady, with best heavy packers now selling at 20 cents.

The general opinion in Bermondsey is that trade has fallen flat during the week. There are, however, exceptions, and the writer was told by one of the largest merchants that he personally had little to complain of. The demand is still for low-grade sole, and I have even heard of a case where soles have been stamped out of cheeks, the lowest rung of the sole leather ladder! Prices are still very firm, as tanners do not look for any substantial reduction in the price of hides. Shoulders are scarce in certain weights, whilst some tanners have sold their output of pinned bellies forward.

Business in upper stock remains quiet, and here, again, the demand is for the lowest grades. A few carriers seem busy on side leathers and wax butts; on the other hand, there are those who are talking of closing down for a time until prices are more in line with costs of production. Imports of dressed leather for the month of January were valued at £373,635, as against £256,751 for January, 1923.

The boot and shoe trade is moderately well employed, and those who cater for women's shoes and sporting goods are the best off for orders. Exports of British-made footwear for last month were valued at £276,245, and for January, 1922, at £179,497—a very satisfactory increase.

VEGETABLE OILS AND OILSEEDS.

Linseed continues to maintain a high level of values, the presence of the United States in the Argentine market as a good purchaser having induced a certain amount of firmness and a higher level of prices. Shipments from the Plate to North America in January were substantial, and to February 10th are returned at 73,000 tons, against only 17,000 tons in the same period of last year. There is also some talk of a revision of the Argentine yield by 200,000 reduction of the estimate; but, even so, there will remain very large quantities for shipment over the coming season, and considerably in excess of last year. At the time of writing the market is steady, but to a large extent inactive, English crushers not being eager buyers at present prices. Some little business has been done in Plate at £18 January-February and £17 15s April-May to Hull, and in Calcutta at £20 10s for seed shipping/shipped, and this about represents current value. Raw linseed oil on spot and in near positions is easier on larger arrivals of seed at the mills, and is cheaper to the extent of 3s to 4s per ton ex Hull mill on the week. The home trade is buying steadily for near delivery, while forward positions are firm on further inquiries from the United States for May-August shipment.

Trade in Egyptian cottonseed has been done at a reduction of 5s and more as compared with a week ago, £11 10s having been accepted for Sakellaridis to Hull (any position), but is dearer again. Bombay is quiet, sellers asking 2s 6d more money. The demand for oil is moderate, but prices for crude Egyptian not quite sustained at £38. Technical refined (soapmakers grade) has advanced 40s per ton to £40 10s, ex Hull mill. Crude soya bean oil is in fair request, and palm kernel oil has been sold at 20s per ton advance. A good trade has recently been done in oils of refined edible quality for shipment to the Continent, but this would have been much larger had not exchange and other conditions been so unsettled.

The January imports of oilseeds, nuts and kernels at 134,955 tons were substantially above recent average, and compared with only 88,012 tons in January last year. The largest item was cottonseed 58,499 tons, making 169,197 tons for the past three months, thanks mainly to heavy shipments of the new crop from Egypt. Linseed at 18,796 tons was again considerably below normal, even for this time of the year. Nuts and kernels totalled 35,101 tons. Exports of oils, manufactured or refined, in the U.K. during the month were:—Unrefined, 9,745 tons (including 2,806 tons linseed oil), against 6,908 tons a year ago; and refined, 3,257 tons, against 2,702 tons. Imports of oil from abroad were:—Unrefined, 8,112 tons; and refined, 1,219 tons. The unrefined included palm 3,270 tons, coconut 1,990 tons, and linseed oil 984 tons, the latter an unusually large item.

OVERSEAS PRODUCE MARKETS.

Mincing lane, Friday, February 16.

SUGAR.—The strong upward movement observable in this market for some little time past made rapid development throughout the week under review. Under a lead set by American manipulations prices were driven up smartly in all directions; in fact, under peace conditions, the advances recorded on Wednesday last form a precedent. Taking a calm survey of the general situation, it would appear that for the moment speculative commitments weigh more heavily than such minor considerations as supply and demand, as apart from stocks in the U.K. being on a larger scale than at corresponding period last year, fair quantities are held by distributors. True, Mr Guma reduced previous estimate of Cuban crop by 393,000 tons, but for some time past it was considered that this authority had previously overestimated same. Political events in Europe also, doubtless, form

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiangsu, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

a factor for the upward movement, and this has been taken full advantage of by American operators. That the general statistical position is sound is admitted, but not to the extent to warrant such rises as have been registered. During the week British refined marks a rise on the spot of 8s per cwt, while forward positions of granulated were withdrawn. Imported kinds very sparingly offered, and from 5s to 7s per cwt higher, with steady absorption of available supplies. Such a strong development in the month of February came as a surprise to most members of the trade, despite the knowledge of the sound financing of the important Cuban crop, and providing no untoward incident takes place in European politics, sowings of beet-root should receive a marked fillip, while one may rest assured that the very attractive level of prices now current will induce useful quantities to the U.K. from most other sources of supply. The white terminal market disclosed a good deal of excitement at times, with transactions actively carried on at widely fluctuating prices. Of British refined, Messrs Tate and Lyle's cubes, 67s to 68s; crushed, 64s 6d; granulated, fine and coarse, 62s 10½d; stoved, 63s 4½d; No. 1, 62s 7½d; No. 2, also London, 62s 4½d; caster, 63s 6d to 64s 4½d; finest, 66s 1½d. Yellow crystals, 50s 4½d. Since reduced 4s all round. Crystallised West India, sold, 53s to 55s. American granulated scarce on spot, and retail sales passed at 60s to 58s; February steamer, sold, 30s 9d to 31s 6d and 27s, c.f. and i., London. White Mauritius, spot, changed hands at 54s; and some long lines of Czechoslovakian granulated, spot, at 59s, and later at 60s, then 55s. White Mozambique, spot, 56s 6d. White Java, spot, sold up to 56s, and later 51s, then 52s 6d; May-June steamer, 28s 3d to 24s 6d; June-July, 28s to 24s, c.f. and i. terms, London. Raw refining kinds scarce, and Cuban, basis 96 per cent., February-March, quoted, 23s, c.f. and i., U.K. Brazilian not offered. Cuban stock stands at 336,000 tons, against 227,000 same time last year. Terminal: White, March, sold up to 29s 9d, down to 24s 9d, and later 26s; May, up to 30s 10½d, down to 25s and 25s 9d; August, 31s to 24s 9d and 26s 3d. Liquid glucose, spot, 28s 6d cwt.

COFFEE.—Spot market firm, and there is a sustained demand from the home trade. Fair to fine bold Costa Rica sold 102s to 117s; peas up to 126s. Future delivery market steady, but slow.

COCOA.—Only a quiet spot trade ensued on about former terms. To arrive, Accra, 1½ quality, sold to a moderate extent at 34s to 34s 6d, f.o.b. terms February-April, also March-May.

TEA.—Public sales of Indian this week embraced some 44,680 packages. Proceedings were somewhat a reflex of last week. Good to fine grades experienced a ready market, especially Darjeelings and tippy broken orange Pekoes, for which full to occasionally dearer rates were secured, but low medium and inferior qualities went off quietly at rates tending in favour of the buyer. Java and Sumatra teas were slightly against the seller.

RICE.—Was again a featureless market, there being quite a lack of confidence on the part of buyers. Two stars, spot, 14s 6d to 14s 9d; February-March, 13s 6d; No. 3 cleaned Rangoon, February-March, Levant ports, sellers, 13s 6d, double bags. Broken kinds dull for all descriptions on about former terms. Rangoon beans, spot, 8s. Japanese peas firmer. Spot, 30s; January-February, sold, 30s 6d to 31s 9d.

SPICE.—Moderate trading in pepper and a steady tone governed the market. Fair black Singapore, spot, 4½d; March-May, 4½d; Aleppo, spot, 4½d; Tellicherry, 4½d; Ceylon, 4½d; Lampong, March-May, London, sold, 4½d, c.f. and i. terms. White Singapore, spot, quoted 6d; Muntok, ditto, 6½d; ditto, March-May, sold, 6½d to 6½d. Zanzibar cloves advanced sharply, under stimulating cables from the other side. Fair, spot, sold, 11d to 1s 1d; January-March, 10½d to 1s 1d; March-May, 10½d to 1s 1d. Tapioca fully steady. Fair Singapore flake, spot, 3½d; fine Java, 3½d per lb. Singapore, February, Havre, sold, 30s 9d; February-March, 29s 6d, c.f. and i. Fair Penang seed pearl, spot, 25s; ditto, February-March, London, sold, 25s. Sago flour, January, sold, 14s; February-April, 13s 9d; and March-May, 13s 6d. Dedicated coconut firmer. Fine cut, spot, sold, 39s; medium, 39s 9d to 40s; halves, February-March, 39s 6d. Ginger steadily held, but there is not much response from buyers.

FRUIT.—Currants, also sultanas and raisins, sold quietly this week, but prices maintained a steady level. Dates: Good Hallowee, spot, 20s 9d.

JUTE. continued very quiet, and prices eased, though sellers refrained from pressing their sales. First grade, January-February, Hamburg, sold, £32; ditto, Antwerp only, £33; February-March, Hamburg, £32 10s; Antwerp, £33 5s; March-April, Hamburg, £33 10s to £33, £33 15s. Hessians dull, unaltered. Twills steady, quiet, and B, on spot, changed hands at 74s 6d.

HEMP.—Manilla qualities very steady, but only moderate transactions were effected this week. G grade, February-April, quoted, £37; J, £35 5s; K, old, £34 5s; L, buyers, £34; and M, £33 5s. New Zealand, also African sisal, steady, unaltered. Indian hems mostly held above buyers' ideas.

SHELLAC.—Market steady, though general trade ruled quiet. T.N., spot, 360s; March, sold, 347s 6d; and May, 322s 6d.

GOPRA. firm, while reserve again marked on the part of sellers, and actual trade was of fair dimensions, closing easier. F.M.S. Straits, January-February, Rotterdam, sold, £28 to £27 15s; February-April, £27 17s 6d to £27 10s; March-May, £27 15s to £27 8s 9d; April-June, £27 6s 3d. Ceylon, February-April, Rotterdam, quoted £29 5s. Dutch E.I., £27 12s 6d. Cebu, sold, £27 5s to £27. South Sea Islands, £27. F.M. Straits, February-April, Marseilles, £27, and mixed, £26 17s 6d. Palm kernels firmer. March-May, Liverpool, sold, £19 5s to £19 7s 6d.

RUBBER. was a quiet and rather featureless market despite London stocks on the week being reduced 1,180 tons. Standard crepe and sheet, spot and February, sold, 1s 6d to 1s 5½d; March, 1s 6½d to 1s 5½d; April-June, 1s 6½d to 1s 6½d; July-September, 1s 6½d to 1s 6½d; October-December, 1s 7½d to 1s 7d. To New York, standard sheet, March-April, sold, 1s 6½d, c.f. and i. Fine hard Para, spot, 1s 5d; soft, 1s 3½d; ball, 1s 2½d.

EGG PRODUCTS.—Market steady, quiet. Prime liquid yolk, spot, 100s cwt. Albumen, spot, 3s 1b.

OILS.—Linseed market irregular and easier. Spot, net, naked, 40s 6d; February, 39s 3d; March-April, 36s 3d; May-August, 34s 4½d. Rape firm. Crude, spot, 43s 6d; refined, 46s 6d. Cotton steady. Crude Egyptian, spot, 39s; common edible, 44s; deodorised (in barrels), 46s. China-wood easier. Hankow, spot (barrels), 110s; February-March, 75s 6d. Coconut firmer. Ceylon, spot, 43s; February-March, 42s 6d; Cochin, ditto, quoted 44s. Soya steady. Oriental, barrels, January-February, 39s. Japan fish steady. January-February, cases, 26s. Cod steady. English, spot, 30s. Ground nuts quiet. English crushed, naked, spot, 45s; deodorised, barrels, 55s. Turpentine easier. American, spot, 104s 9d; February-April, 105s 9d. Rosin steadier for medium grades. American, grade B, 13s 9d; F, 14s; G, 14s; H to I, 14s; W/G, 17s 6d; WW, 18s 9d. French, F/G, 13s 6d; WW, 15s 6d per cwt. Petroleum steady. American standard white, spot, 1s 1d; and water white, 1s 2d per gallon. Castor oil steady. First pressure, spot, to June, quoted 49s; second pressure, 46s, and pharmaceutical, 54s per cwt.

OILSEEDS.—Market quiet, and prices tend easier. Bold Bombay, afloat, quoted, £21 5s; small Bombay, ditto, £20 5s; Calcutta, afloat, sold, £20 10s; January-February, £20 5s; and April-June, £18 12s 6d; Plate, afloat, £18 2s 6d; January-February, sold, £17 17s 6d to £17 15s; April-May, £17 15s to £17 10s. Rapeseed dearer. Toria, afloat, £18 12s 6d; February-March, £17 17s 6d; Jamba, January-February, £14 5s. Cottonseed steady. Egyptian black, February, £12 5s; and white, sold, £11 10s to £11 11s 3d. Bombay, February-March, sellers, £9 7s 6d. Gingelly seed firm. Large, Bombay, January-February, sellers, £24. Chinese, January-February, £23 10s to £24 10s, to Continent. Groundnuts firmer. Coromandel, machine-dried, February-March, quoted £22 10s. Chinese deodorated, f.a.o., January-February, £22 2s 6d; Nigerian, ditto, £22 12s 6d. Soya beans firm. Manchurian, February-March, quoted, £12 5s. Castorseed dearer. Bombay, February-March, £20 ton.

METALS.—Tin: Ruled dearer at the week's commencement in sympathy with higher cable advices from the East, combined with liberal buying orders on this side. Sales comprised standard, cash, at £186 10s to £186 15s, and £186 2s 6d; March dates, £187 to £188; and three months, £188 to £188 15s, to £188 2s 6d. Following a further improvement values showed a good deal of irregularity, and by the middle of the week an easier tone was apparent due to selling pressure and lower Eastern cables. Standard cash, sold down to £186 15s; March, £187; and three months, £188 5s. Sales occurred in the East on the basis of £193 5s, c.i.f. At Thursday's market the tendency was firmer with a good demand, standard, cash, sold at £186 10s to £187 12s 6d; and three months, £188 10s to £189 10s to £189 7s 6d. The market was active and stronger, though somewhat irregular at the final meeting, with a good inquiry. Standard, cash, sold at £192 to £191 10s to £190 10s to £191, and three months at £193 10s to £192 10s to £193 10s. English ingots, £190 to £191. Copper: Opened with a firm tone, and a good business transpired at a slight advance. Standard, cash, sold, at £65 15s; March, £66; and three months, £66 10s. The upward tendency continued under the influence of good buying orders, and on Wednesday cash sold at £66 5s; March, £66 16s 3d; and three months, £67 2s 6d. At Thursday's market values were again dearer, with liberal dealings in standard cash at £66 10s to £66 13s 9d, and three months at £67 2s 6d to £67 10s, while finally at £67 7s 6d. At Friday's meeting the tone was firmer. Standard, cash, sold at £67 15s to £68 to £67 12s 6d, and three months at £68 5s to £68 15s, while finally registered at £68 10s. Electrode, £74 10s to £75; best selected, £71 10s to £73 10s; strong sheets, £98; wire bars, £75. Antimony firm. Ordinary brands, £27 to £29 10s. Aluminium steady. Home trade, £100; export, £105. Lead steadier, at £28 7s 6d to £28, as to position. Spelter dearer, at £35 5s to £34 17s 6d, according to position.

bills to hold out for better terms, but the effort was fruitless, the movement in New York being optimistically attributed to special measures taken to check speculation. The result of the Treasury bill allotment was made known about an hour later than usual, but was not expected to affect the market materially.

	Feb. 23, 1923.	Feb. 16, 1923.	Feb. 9, 1923.	Feb. 2, 1923.	Previous Rate and Date Changed.

Discount (Call)	1	1	1	1	1 (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills) ..	2½	2½	2½	2½	2½

The Bank return showed that, in accordance with the recent Order in Council, £1,300,000 worth of securities have been transferred to the Issue Department and notes issued against them. These notes have gone into the Currency Notes Department's reserve, and so have caused an apparent increase in the circulation, and left the Bank's reserve practically unchanged. Other securities rose by nearly 4 millions, but Government securities declined by over a million. Public deposits were 2½ millions higher, Other being unchanged. Currency notes outstanding were reduced by £608,200 to £279,383,300, which includes £1,505,500 for notes called in but not yet cancelled. The fiduciary issue is £229,728,000, or £40,455,800 below the maximum.

THE STOCK MARKETS.

Prices remain good in the stock markets, but the volume of business is restricted. Gilt-edged stocks have been firm, and are a trifle higher on the week, but colonials have not benefited from the new South Australian 5 million loan. French bonds have rallied, but otherwise the foreign market has been irregular. Both home and foreign rails have been good, Undergrounds coming in for some attention. In the industrial section textiles have been the feature. Electric lighting shares continue strong, and banking and insurance shares are a little better. Interest in the rubber market has waned, but oil shares are a little firmer. The Chartered Company's report had no effect on prices, and elsewhere in the mining markets there were few features of interest.

THE COMMODITY MARKETS.

Inquiries for coal in the Cardiff market have been very active and prices firm, Germany pressing for supplies of coking coals and coke; best Admiralty steam coals are now quoted at 29s 6d per ton. Business in pig-iron has been restricted, makers being practically sold out for early delivery, and buyers apparently dislike to commit themselves for forward delivery. No. 3 Cleveland G.M.B. is firm at about 115s per ton. Steel makers point out that the price of their product has not increased in proportion to the rise in the cost of fuel, and, in consequence, they are not inclined to accept forward business. Conditions in the cotton trade are quiet, and manufacturers' sales are not equal to the output; our Manchester correspondent points out that leading buyers expect that the present level of values will not be maintained. All sections of the wool industry are experiencing a quiet time, and prices are slightly lower. The tone of the Bermondsey hide market was firmer on Thursday, and prices moved up slightly. Other details of markets will be found from our special trade correspondent on later pages.

FOREIGN EXCHANGES.

In the Foreign Exchange market, although rates have moved quite widely, business has been very quiet indeed, and speculative action seems much restrained. The main feature has been the further marked appreciation of sterling in New York, the rate on the 21st having at one time been as high as \$4.72½, although the closing rate for the day was \$4.71½. Since then it has weakened somewhat again to \$4.71½ yesterday morning, but there is still a firm undertone on the settlement of the debt question and the continued upward movement of American prices. The quotation for forward dollars is 1 to 1½ cents per month above spot. The Paris rate, after moving up to 78.75 on Saturday, improved quietly until, on Wednesday, it closed again at 76.75. Since then, however, it has

again depreciated to 77.55 yesterday, the same rate as on the preceding Friday morning. At 87.20, as compared with 88.45 a week ago, Brussels shows a marked narrowing of the spread between the two centres. At 11 to 13 centimes per month above spot, the Paris rate for forward francs is the same as last week. Brussels at 2 to 4 centimes below is 2 points lower. There is a feeling at present that some slight improvement may be seen in the franc for a little time to come, but no confidence is felt in its stability over a longer period. The mark quotation has again been irregular, having moved up from 88,500 a week ago to 111,000 on Tuesday, since when it has been on a level of about 105,000. Forward marks are on a level of 30,000 to 35,000 per month above spot. The first panic effects of the rapid improvement in quotation are now wearing off, but in spite of Government assistance it is doubtful whether the rate can long be maintained at the present level. Among neutral exchanges the Swiss rate moved sharply against us at the beginning of the week, owing, it is said, to the repayment of German Reparation bills, which had been discounted in Switzerland. Since then, however, the rate has reacted, and, at 25.04½, is considerably higher than the 24.97 of a week ago. Amsterdam has, as usual, moved in sympathy with New York from 11.85½ to 11.88½. Madrid is 30.67½, slightly higher than a week ago. In Scandinavia, Christiania has risen rather rapidly from 25.14½ to 25.32½, whilst Copenhagen has appreciated from 24.61 to 24.17½. Stockholm, however, has moved up sharply from 17.63 to 17.69½. Helsingfors has been in request, and has moved down from 178½ to 175½. In Central Europe, Vienna remains at 330,000, while Warsaw has moved up sharply again from 175,000 to 230,000. Prague is steady about 158½, Belgrade has risen again, but Bucharest at 950 is being asked for as against a rate of 1,030 a week ago. Sofia shows some improvement, but Athens, at 410, is again higher. In the East the rupee at 1s 4½d is a little cheaper than a week ago, and the yen has also fallen ½ to 2s 0½d. The silver market has been exceptionally quiet, with prices barely maintained by some bear covering and a slight demand from China. The outlook for the immediate future would suggest some sagging in prices. Hong Kong and Shanghai are unchanged on the week at 2s 3d and 3s 0½d respectively. In South America, Rio, after some variations, ends the week unchanged at 5½d, Buenos Ayres, after being cheaper, is also the same at 43½d. Montevideo, however, is a little dearer at 42½d, as compared with 42½d, and Valparaiso has also appreciated from 39.40 to 38.50 pesos.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 17th:—

Receipts.	Min. £	Expenditure.	Min. £
From Revenue	30,564	Interest on Debt	8,250
		Supply Services	765
		Road Fund	387
		Added to Exchequer balances ..	20,622
		Reduction of debt	250
		Sundries	30,564

Revenue for the seven days totalled £30½ millions, as compared with about £36½ millions for the corresponding period a year ago. Expenditure was £4½ millions lower at £9½ millions. Property and Income-tax yielded £18½ millions, being slightly in excess of the last year's figures, while Excise produced about £6 millions, against £9½ millions; special Receipts fell from £3½ millions to £143,700. The week's operations reduced the National Debt by £20,621,600, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 500	Public Dept. Advances	15,000
4½% Treasury Bonds	+ 1,491	Treasury Bills	7,183
		Sundries	430
	+ 1,991		22,613

The floating debt was reduced by £22,230,000 to £872,291,500.

THE ATTITUDE OF BELGIUM.

DEVELOPMENTS of the Ruhr situation in comparison with recent weeks have been comparatively unexciting. The episode is settling down to a test of endurance on the part of unoccupied Germany, the life of the Ruhr itself having adjusted itself rapidly to the new conditions. Work is being carried on with occasional incidents, and the French claim to have worked out a plan for the vital railway control. Though the steel trades of France and Belgium cannot carry on much longer in the present fashion, it is still impossible to say what results will mature. In the meanwhile, the Belgian and French Prime Ministers have been meeting in Paris, and though we can only speculate as to their deliberations, it is clear that they must have been formulating their plans for a prolonged occupation. The political motives of the occupation figure increasingly in the Paris Press, though M. Jaspard informed the Belgian Socialist deputies on Thursday that the occupation was purely economic. When so many motives are present it is perhaps not always the same one that is uppermost, but a clear understanding can only be obtained by disentangling them.

This is particularly important in the case of Belgium, for the part that is being played by that country in the Ruhr drama has been given less attention in this country than its importance deserves, and a study of the position of that country may perhaps help to explain the difficulties which stand in the way of a settlement. It is often supposed that Belgian interests and those of France are very much the same; but, in fact, it is important to recognise that from the economic point of view the Belgian situation is much more like that of Great Britain than that of France. Belgium is a densely populated industrial country, living mainly upon imported supplies of food, which she secures by the export of her manufactured goods. Like Great Britain, therefore, she is peculiarly susceptible to the general trade condition of the world. She is also likely to feel, with Great Britain, some hesitation in desiring to encourage the export of German goods to such an extent as would intensify competition with her own products. For these reasons Belgium is disposed to sympathise with the British view of Reparations, and at the same time lean towards free trade rather

than towards the strong protectionist spirit which to-day pervades French commercial policy. While, therefore, there are some Belgians who think that it would be to her interest to throw in her lot altogether with France and come within the French tariff system, most Belgians think that any advantage to be derived from that policy would be gained by too great a sacrifice of her trade relations in other directions, and particularly with overseas sources of raw materials and food. For these reasons Belgium is not anxious to see herself completely within the French orbit, or even to be encircled by France and cut off from her approaches to Central Europe, as would be the case if the British departed from Cologne and the French alone were in occupation of the Ruhr.

On the other hand, Belgium feels that on the Reparations question her interests are more akin to those of France than to those of any other country. The actual devastation she shares with France, as also the danger, if it be a danger, of being a frontier neighbour of Germany. She, like France, has immensely strengthened her army against possible aggression by Germany, and, on the other hand, has herself been finding the funds to repair the devastation of her industries and territory. The disappearance of the German merchant marine and of the German fleet and the transfer of German colonies have appeared to benefit Great Britain, but not France or Belgium. Moreover, there is a fairly widespread opinion in the latter country that in the early days after the war, when German production was low and deliveries of reparation coal non-existent, British policy, which raised to prohibitive levels the export price of British coal, seriously delayed the recovery of Belgian industries. The strong feeling that prevailed at the time of the Armistice that Britain was the friend of Belgium has been steadily cooling, and its place has been taken by the idea that of the Great Powers, France alone understands the point of view and the feelings of her smaller neighbour. Such sentiments are more readily developed in the popular mind than the more difficult conception of the ultimate economic interests of Belgium, and it is therefore not surprising to find that there is a stronger pro-British feeling in the Belgian Chamber than in the country.

In all these circumstances the diplomatic position of Belgium for some time past has been based on the desire to exert every possible influence to reconcile these two streams of thought by maintaining the Entente between England and France. It must not be forgotten that the Belgian vote counts equally with that of England and France on the Reparations Commission, and in the recent crisis she could have prevented a decision being given in favour of the French view. In the circumstances, it was unlikely that she would actually vote against France on the Commission; but even if we could hardly expect her vote, she might easily have become the means of reconciling the opposing views. In any case, it is extremely doubtful whether France would have embarked upon the Ruhr policy unless she could have carried Belgium with her.

It is, therefore, of the utmost importance to understand why Belgium has followed France in the Ruhr adventure. In this connection the point already mentioned with regard to the encirclement of Belgium is not the vital consideration; for it is quite clear that while Belgian statesmen have been very unwilling to embark upon this policy, the British proposals of January were rejected by Belgian opinion almost as unanimously and as forcefully as they were rejected by French opinion. To some extent the circulation of the French Press in Belgium may account for this, but the real reasons are more deep-seated, and most of them are the same as those which affected France.

Briefly, they are that while Belgian finances are strained to the uttermost and are involving increases of taxation which are much heavier than any burden which the Germans have yet supported, the various Governments in Berlin have made no adequate attempt to put their finances in order. While many Belgians are quite prepared to recognise the real difficulty involved in stemming the tide of depreciation when once it has set in vigorously, they feel that the German Government has given no sign of wishing to wrestle really seriously with the position. Moreover, there is the feeling that the Allies

have for the last two or three years been bluffed into dealing with a man of straw, and that they have never come to grips with the real industrial rulers of Germany. In addition, the Belgians, like the French, have witnessed during the last twelve months the spectacle of Germany, with her population fully employed under the intoxicating influence of inflation, pleading inability to help Belgium, whose industry has been wrestling with the acute problems arising from world depression. Opinion in Belgium has been baffled by the paradoxes of the Reparation situation, and inclined to attribute all the difficulties to German cunning. Under such circumstances the British suggestion that Germany should be given a four years' moratorium—and by a moratorium we really meant a complete suspension of payments and not a partial suspension as M. Poincaré meant—came like a buffet in the face to Belgian opinion, for it seemed to postpone indefinitely the hope of any further payment. The Allies were not likely to be more united in their views at the end of the moratorium period than they are at present, and no amount of explanation has been able to disabuse opinion either in France or in Belgium of the idea created by the Paris Conference that Great Britain had no intention of exercising any effective pressure, whether economic or political, upon Germany during the moratorium.

There remains a special reason why Belgium rejected the British scheme, and that is that it proposed that Belgium should sacrifice the balance of her priority claim to £100,000,000 of Reparations. The amount involved by this proposal was not very great, but it figures very largely in Belgian thought. It is remembered that during the war constant assertions were made by British statesmen that they would never make peace until the restoration by Germany of the damage done to Belgium was assured, and that country has looked to Great Britain more than to any other Power as the country which has, so to speak, underwritten her claim to Reparation. At the Peace Conference the claim to priority was admitted, and regarded by Belgium as a symbol of the world's abhorrence of the crime committed against Belgian neutrality. Therefore the proposal made by Great Britain, apparently without any prior consultation with the Belgian Foreign Minister, that this balance should be foregone, came as a great shock to Belgian susceptibilities, and seemed to emphasise Great Britain's lack of understanding. These feelings are all the more marked since, while Mr Bonar Law's offer is considered a great inducement to France in that it practically wipes out the French debt to this country, there is no corresponding inducement to Belgium, as the Belgian debt to us is negligible. Mr Bonar Law later agreed to modify his suggestion. But the mischief was done and the bad impression created. This is, of course, only one side of the case. Belgium has very little war debt; her casualties were small, and apart from the actual destruction of property, which has been more nearly completed than in France, she has come lightly out of the war. But it is more important in diplomacy to understand what a nation thinks than what others think about it.

While, therefore, Belgium unquestionably stands with France, and has at the present moment the feeling that there is nothing to be done but to stand firm, there is no doubt that it would be easier to harmonise the divergent views of Great Britain and Belgium than those of Great Britain and France. The situation of Belgian finance is by no means happy, and the fact that the German bonds given to Belgium last autumn were paid in Switzerland only yesterday does not go far towards improving matters. It should not be beyond the power of diplomacy to ensure that, before any further Conferences are entered upon, this harmony of view is attained.

THE DIRECTION OF OVERSEAS TRADE.

IN these days of uncertainty and change in the world's economic affairs special significance attaches to the figures which show what is happening to British industry in various markets and to the extent to which we are acquiring a credit or a debit balance with various countries of the world.

Figures published in the January Trade Returns showing the countries of origin of our imports and of destination of exports and re-exports enable us to make an analysis of the adverse merchandise trade balance for 1922. The latter amounted to just under £180 millions. Of this total our trade with the United States accounted for no less than £146 millions, or 81 per cent. In trade with other foreign countries outside Europe we had an excess of imports of a little over £22 millions, while with the British Empire there was an import surplus of nearly £17 millions. In trade with Europe, on the other hand, we had an export surplus of £5½ millions. The following table shows how these figures compare with a similar analysis for 1921, 1920, and 1913:—

From—	1913.		1920.		1921.		1922.	
	Excess of Im-ports.	Excess of Ex-ports.	Excess of Im-ports.	Excess of Ex-ports.	Excess of Im-ports.	Excess of Ex-ports.	Excess of Im-ports.	Excess of Ex-ports.
Europe	£ 68.3	£ 83.1	£ 437.3	£ 165.8	£ 211.5	£ 146.2	£ 5.7	£ 179.6
U.S.A.	..	..	..	..	..	..	..	..
Other foreign countries ..	..	11.5	73.5	..	28.7	..	22.2	..
Brit. Dominions ..	..	6.0	33.8	..	19.3	..	16.9	..
Total	133.9	..	378.8	..	276.4	..	179.6	..

In reading this and later tables the important consideration of price fluctuations must, of course, be borne in mind. In 1919 the visible adverse balance was £669 millions, there being a surplus of imports from the United States of £481 millions, from other foreign countries of £99 millions, and from the Dominions of £369 millions, and a surplus of exports to Europe of nearly £280 millions. These figures, as may be seen from the table, were much reduced in the following year in the cases of Europe and the Dominions, but the excess of imports from the United States was much larger than the total adverse trade balance. In 1921, thanks to the coal trade dispute, and the consequent reduction in exports of coal, iron and steel, and other commodities, there was an excess of imports in each of the four groups. The change over to an export surplus in trade with Europe in 1922 is entirely accounted for by the recovery in coal exports, the increase in 1922 in the value of exports of coal, coke, and patent fuel to the principal Continental countries being more than £22½ millions as compared with 1921. The adverse balance in trade with America in 1922 does not make a very unfavourable comparison with the figure shown for 1913 when allowance has been made for price changes, but it must not be forgotten that not only was America's export trade upset last year by labour troubles, but that our purchases of raw materials from her have been at a low level. We still have an import balance in trade with the Dominions and other foreign countries, whereas before the war we were the creditor in both these divisions.

The next table shows our merchandise imports from Continental countries, including their overseas possessions, in 1922 and preceding years:—

* Includes Finland, Estonia, Latvia, and Lithuania.

It is, perhaps, remarkable that, in spite of the breakdown in Central Europe and Russia, Europe, as a whole, has sufficiently recovered from the effects of the war to supply

us with nearly one-third of our total imports. This, it will be seen, is a substantially lower proportion than in 1913, but the steady growth from the low-water mark of 1918 is significant. Moreover, the actual value of imports from Europe was higher in 1922 than in 1921, in spite of the lower level of prices. The next table shows that in trade with other countries the movement has been reversed. In 1918 more than half our total imports came from foreign countries outside Europe, but in 1922 the proportion was 35½ per cent., which compares with less than 31 per cent. before the war:—

There was a further fall in the total value of imports from the Overseas Dominions, but the ratio to the total is not only higher than it was in 1921, but well above the figure for 1913. The only increases in value of imports in 1922 are in the cases of India, Ceylon, and Egypt.

Turning to the export side of the account, we show in the next table our exports to the Continent:—

RENT CONTROL AND HOUSING.

ONE of the most intractable problems which war-time finance has left behind in almost every country in Europe is that of rent and housing. Lack of building during the war and an increased adult population, together with popular unwillingness during a period of rising prices to concur in a rise in the value of property, brought about without any effort on the part of the landlord, and appearing, therefore, to be nothing but unearned increment, has resulted in placing housing accommodation outside the range of free contract.

The position of State control of housing is reduced to an absurdity in Germany. To take a case in point: a block of flats, stated by our Berlin correspondent (see *Economist*, February 3rd, p. 211) to be worth £20,000 under normal currency conditions, to-day produces a maximum legal rent of 2s per annum. But even this rent is a fiction, as the owner has actually to pay a subsidy to keep the property in order. "In some cities owners have actually offered valuable houses to the municipalities for nothing, and, getting a refusal—the municipalities would not pay the necessary subsidies—they removed their names from the records and left the houses ownerless."

Interesting progress towards abolition of rent restriction has recently been made in Italy, which country has experienced as much inconvenience as any other in this direction. All restrictions are to end as from July 1, 1923, after which date a measure of freedom of contract will begin. In most Italian cities we learn that general agreements have been already arrived at between unions of landlords and tenants' associations. For instance, at Turin the two unions agreed to recommend that, taking as a basis the rents paid in 1914, rents up to 1,000 lire per year should be increased by 70 per cent., from 1,000 to 1,600 lire should be increased by 80 per cent., from 1,600 to 2,400 by 100, and from 2,400 to 4,000 by 130 per cent. Rents above this amount are to be considered by arrangement. However, as a precautionary measure against harsh demands by landlords, for three years, which will end in June, 1926, an arbitration court of three members—a landlord, a tenant, and a legal referee—will decide, if necessary, any disagreement. Compared with price movements the increases are very small, but the point of interest is the local treatment of the problem.

In this country the return to freedom of contract over housing has been slow. State control has undoubtedly been detrimental to speculative building, and we are surprised that the signatories of the minority report of Lord Onslow's Committee should have questioned the fact. The majority of the Committee state that "it has been strongly represented to us that in spite of the fact that the present Act does not apply to new houses, this supply will never be forthcoming until all restrictions on dealings in house property are removed. This, it is said, alone can restore confidence in house property as an investment." With these views we are in accordance. It is not possible for large numbers of new houses to command an economic rent while existing houses are at a much lower level. The Restrictions Acts have without question been the main, though not the only, factor in determining the price that can be got for letting new houses. On the other hand, we fully recognise that it would be folly at the present moment, when unemployment is rife and cuts in wages have been made, to release working-class property from control. Decontrol in stages should have the effect of providing more of the better-class type of housing, which would in turn free some of the older type of houses to be farmed out in rooms to others.

The majority of the Committee therefore recommend that houses in the London area with a standard rental value between £70 and £105, houses in Scotland between £60 and £90, and elsewhere between £52 and £78 shall be decontrolled next June, and those between £35 and £70 in the London area, in Scotland £30 and £60, and elsewhere £26 and £52 in June, 1924, and finally that protection should be withdrawn from remaining houses at Midsummer, 1925. But apparently these dates vary daily

according to the barometer readings taken daily at the Mitcham bye-election by Government agents. Two minor proposals are also to be noted. These are (a) that willing parties shall have power to contract out of the Act, and (b) that as houses fall vacant they shall be withdrawn from the scope of the Act.

The minority indicate their attitude by the remark that "the object of a Restriction Act is to protect tenants against the rapacity of landlords." But when money has depreciated and values in general risen, it is surely not equitable to single out one form of material wealth and keep it at an uneconomic value. When such a rise in the general level of prices occurs, creditors who are owed a debt in money are, in fact, paid back less real value than they lent. But that long term creditors whose assets are reckoned in money are made poorer by inflation is no argument for applying the same process of impoverishment to property owners in order at their expense to ease the situation of the mass of the working and middle classes, most of whose incomes have followed the price movement. And if there is no case in equity for keeping rents down to 40 per cent. over pre-war values, while the level of general prices and wages is 70 per cent. up, the practical disadvantages are even more obvious. The Committee's recommendation has been met with a great outcry from those who are likely to be affected; but the slogan, "Houses before decontrol," is a denial of the only force that can produce houses unless the taxpayer pays for them. Let us be honest with the problem. Unless we are going to have another spell of deflation, which for many reasons is undesirable, the supply of houses will only increase if the price of housing accommodation is allowed to rise. There is every reason for making the rise gradually and with circumspection. But the Government will find it has failed to break through the vicious circle if it commits itself to the doctrine that it will not allow the limitation of rents to be removed until after an adequate supply of new houses has been produced.

THE PUBLIC FINANCES OF SOVIET RUSSIA.

THE statements published for the tenth Assembly of the Soviets, which took place at the end of December, permit of a closer examination of the financial position of Soviet Russia than has been possible hitherto, although it must be added that even now the picture is far from distinct.

The first Soviet budget, which was drawn up for the first nine months of 1922, and which, by the way, was laid before the Hague Conference by the Soviet delegation, estimates the expenses at 1,132 million pre-war roubles*, plus the expenses to be paid in metal or foreign currency at 126 million gold roubles. As the gold rouble was two-thirds of the pre-war rouble, or of the "goods" rouble, at the time when the estimates were made, the budget, if calculated in pre-war or "goods" roubles, amounts to a total in the neighbourhood of 1,200 millions. Of this sum, 984 million roubles were surmised to be covered by various receipts on revenue account (both in kind and in money), leaving a deficit of only 256 million roubles, which was to be met by the emission of paper money to the sum of 138 million roubles, and by drawing 78 million roubles from the gold reserve of the Republic.

Facts with regard to the result of this budget were given by Larin in *Pravda* of December 1, 1922. It appears that during the period January-September, 1922, the total revenue amounted only to 270 million "goods" roubles, of which 160 million roubles were paid in kind and 110 millions in cash. The enormous deficit of 930 million roubles was covered to the extent of 234 million roubles by the emission of paper money, and the balance was not covered at all, as, according to Larin's article, only 504 million "goods"

* The "pre-war" or the "goods" rouble is, according to Soviet terminology, a unit of calculation equal to the buying power of the Russian rouble before the war and defined by Index Numbers. Unfortunately the indexes taken for the calculations are very varied and not always real.

roubles were actually spent, i.e., about 42 per cent. of the budget.†

The reduction of real expenditure compared with the previous estimate is accounted for principally by the non-payment of salaries to Government workmen and officials, and by the fact that payment was delayed for many months, with the result that the real value of the sums actually paid was greatly decreased, owing to the rapid depreciation of the rouble in the meantime. It is not to be wondered at that many branches of State administration have been ruined under the influence of such a state of things; thus as regards the schools, primary education has practically ceased to exist.

Of the 504 million roubles actually spent, the deficit, covered by the emission of paper money, amounts, as has been shown, to 234 million roubles, or about 46 per cent. of the total. This, however, does not complete the deficit of the Soviet State, as the nationalised industries have a budget of their own, which is not included in the general budget, to which reference has been made above. These industries are for the most part run at a loss, though, as the Soviet accounts are very incorrectly made out, it is difficult to detect these losses when examining the books. The Soviet economists, therefore, calculate the deficit roughly, according to the stocks of raw materials and manufactured articles at the beginning and end of the business year. It was shown that the value of such stocks diminished from 550 million "goods" roubles on January 1st to 380 million roubles on October 1st, representing a loss of 170 million roubles. It should be added that in the general budget expressed by the above-mentioned sum of 504 million roubles, the operations of the People's Commissariat for Foreign Trade and the payments made under the various international treaties are not included, and they amounted to a total of 214 million roubles drawn from the gold fund of the Republic during the accounting period. Thus the general State deficit for the first nine months, which was covered by the printing press and by drawing upon the available stocks of gold and goods, may be calculated roughly at 618 million goods roubles (234 + 170 + 214), which is the total given by the Soviet economist Larin.

Such sorry results call for more modest estimates for 1922-23. A real budget for this year, however, was not given by the Finance Commissar to the tenth assembly of the Soviets, as it was stated to be impossible to do so in view of the falling value of the rouble. But they said that the total expenses for the twelve months (October 1, 1922-October 1, 1923) must be calculated at one milliard roubles (gold or "goods" roubles), as the price of gold lately reached the level of goods' prices. This sum again does not include either the estimates of State industry or those of foreign trade.

The People's Commissar supposes that only some 200-

† There are signs that the pre-war roubles in which the estimate was made cannot be compared exactly with the roubles in which the real expenditure is expressed, as when the estimates were made the co-efficients were taken at a lower level than the real Index Numbers. If allowance is made for this factor the Budget will be 850-900 million real "goods" roubles, i.e., the real expenditures will be between 55-60 per cent. of the estimates.

300 million roubles of this total will have to be covered by note emission. Thus it is anticipated that 700-800 million roubles will be covered by taxes and other forms of revenue. It should not be forgotten, however, that for the first nine months of 1922 these sources provided only some 270 million roubles, or an annual yield of about 360 million roubles. The People's Commissar of Finances bases his optimistic calculations, firstly, on the fact that taxes in kind brought in more than last year; and secondly, that the amount of money taxes and State revenue is gradually growing. Thus, whereas in the first quarter of 1922 the money taxes and revenues gave only 15.2 million goods roubles, while note emission amounted to 89.4 millions, in the period October-November (for two months) the taxes and revenues were about 44 million roubles, while the note emission was about 64 million roubles. In other words, the proportion of the emission to taxes and revenue had diminished considerably.

As regards the tax in kind, we must remember that the greater part of it will probably rot, as it did last year (as is admitted by the Soviet Press), thanks to the lack of storehouses, sacks, and trucks in good repair. With regard to money revenues, we must remember further that they are to a certain degree fictitious. The fact is that money taxes fall chiefly on industry and trade, and, as Kamenoff stated to the tenth assembly of the Soviets, 97 per cent. to 98 per cent. of the industries and 70 per cent. of all the trade undertakings are in the hands of the State. Hence the greater part of the money taxes are paid to the Commissariat of Finances by other Government institutions controlling industry; and as this nationalised industry is run at a loss, which is covered by Government subsidies and the using up of old stores, which together greatly exceed the yield from the tax itself, it is clear that these taxes fall not on the private consumers of the goods but on the State industrial undertakings. From the financial point of view, therefore, it is simply a question of transferring money from one pocket to another. The same applies to the State revenues from transport, post and telegraphs, and similar services. Owing to the very feeble development of private enterprise, the railways only transport the merchandise of the State. The posts and telegraphs are used chiefly by the Government institutions themselves. Therefore, the revenues from railways, telegraphs, &c., come to the State chiefly from State institutions and are paid in paper money which is received by those institutions in their turn from the State. Such a position, which may seem a paradox from the point of view of the West, shows clearly that the increase in money taxes and revenues in the budget does not by any means mean a proportional real improvement in the finances.

Besides taxes and revenues, the Soviet Government is issuing this year a home loan in gold for 100 million roubles, with prize drawings. The future alone will show to what degree this first great attempt to secure home credit will prove successful, but we must note that the Soviet authorities themselves regard this more as an educational effort for the masses rather than a source of revenue. In reality, the only important real resource of the Soviet Power is the tax in kind paid by the peasantry.

Besides this, however, there is the using up of the old reserve, which decreases each year, and the emission of paper money. The revenue from this latter source, however, is also largely fictitious owing to the leading part taken by the State in industry, and thus the newly-printed paper money really depreciates to a great extent in the hands of Government institutions. Hence, the Government in a certain degree pays the "emission tax" itself. Nevertheless, as this is the easiest means of income for the Soviet Power, it is clear that the printing of paper money will play an important part in the Soviet budget for the coming year (and an even more important part than the Soviet Commissar himself admits).

HOME RAILWAY RESULTS.

THE reports and accounts of the railway companies of England and Scotland for the year 1922 are invested with peculiar interest. In the first place they are the last that will be published by the old companies, which have now been merged into four large groups, under the terms of the Railways Act, 1921. In the second place, the dividends announced at the beginning of February were in nearly all cases higher than had been generally anticipated, and it is only in the annual accounts that a definite explanation for this is likely to be found. It was surmised that, in the general clearing up of the accounts before the amalgamations were consummated, various balances, which had accumulated and were not provided for in the terms of the various schemes, had been transferred to revenue account. On this point it is not possible to gain any enlightenment from the accounts. They do show, however, that there was a very substantial increase in net revenue, thanks to the reduction in expenditure being much larger than the drop in gross receipts. The figures of the tonnage carried in December, published by the Ministry of Transport, are not yet available, but for the eleven months there was an increase of more than 40 per cent. over the corresponding period of 1921. This has counteracted to some extent the lowering in freight rates, while the fall in wages and in the cost of coal have undoubtedly been the principal factors in the drop in expenditure. In the table below, in which the companies are arranged under their new groups, we compare gross receipts, expenditure, and total net income with the 1921 figure. Gross receipts in that year included seven months of Government subsidy, which amounted to £20 millions, so that the real increase in net receipts is larger by that amount than the £6 millions shown in the table. Miscellaneous net receipts comprise rents, tolls, &c., and interest, and are included with net operating revenue:—

Total	229,370	-46,805	184,792	-52,399	49,964	+ 6,189

The Great Western accounts for 1922 embrace the operating results as from the beginning of the year of the whole of the constituent companies, and of certain of the subsidiary companies, and also, as from July 1, 1922, of some of the subsidiaries. In the comparisons we have given we have included the separate figures of the constituent companies for 1921, but not those of the subsidiaries. To this extent, therefore, the comparison is not a true one.

The percentage of error, however, is probably small. The ratio of expenditure to gross receipts, for all the companies in the table, works out at 80.2 per cent. for 1922, which compares with 85.9 per cent. for the year 1921. Government control, it will be recalled, was not relaxed until August 15th of the latter year, and the receipts included the Government subsidy during the period of control. In an analysis a year ago of the reports for 1921 we made an estimate, from the meagre figures available, of the approximate earnings and expenses of the controlled and free periods. Our figures showed that, without the Government subsidy, receipts from January to July, inclusive, were £115½ millions, and expenses £135½ millions, the ratio of expenses to receipts being 117 per cent. From August to December, inclusive, receipts were given as £104½ millions and expenses as £90 millions, the ratio being 86 per cent. There has thus been a very substantial reduction in the ratio of expenditure. The 1922 figure of 80.2 per cent., however, compares with 64 per cent. for 1913.

Owing to the resumption of publication of certain accounts omitted in recent years, with the authority of the Ministry of Transport, we are able to give the following analysis of working expenditure and receipts:—

ANALYSIS OF WORKING EXPENDITURE AND RECEIPTS.

	Proportion of Receipts Spent on Various Purposes.						Proportion of Receipts Obtained from	
	Maintenance of Way and Works.	Maintenance of Stock.	Locomotive and Traffic Expenses.	General Charges.	Local Rates.	Total Expenditure.	Passenger Traffic.	Goods Traffic.

London and South-Western	16.85	12.16	39.14	3.86	4.56	78.26	69.97	30.03
L. B. & S. Coast	13.04	14.64	42.00	2.55	5.35	79.17	77.15	22.85
South-Eastern and Chatham	15.33	10.46	42.01	3.05	4.27	78.67	74.98	25.02
Great Western	15.14	15.10	42.17	2.89	4.58	81.29	43.99	56.01

In the absence of comparative figures for 1921 it is not possible to show in which directions economies have been effected, but a comparison with 1913 indicates a general and similar increase in the first three items. The railways in the Southern group show a slight increase in the percentage of receipts from passenger traffic as compared with 1913, but the Great Western has increased its percentage of goods traffic. The other lines show little appreciable change.

In the next table we show how net income was distributed:—

* On deferred stock.

It will be seen that the two Northern groups withdrew £820,000 from compensation funds, but of this amount the Scottish lines and two smaller English Companies account for nearly half. Neither the Midland nor the North-Western touched these funds, and the only large amounts were withdrawn by the Great Eastern and the North-Eastern, whose ordinary dividends were maintained at the previous year's rate. A year ago nearly £4 millions of compensation money was used by the railways for dividend distributions. The Southern and Western companies have neither drawn upon the compensation money nor reduced their balances forward, and the Southern shows a slight addition to reserves. The increase of over 25 per cent. in the ordinary dividend payment looks substantial, but on the total invested capital the additional £4,384,000 paid out last year to ordinary shareholders represents less than one half per cent.

In the final table we show total capital expenditure and depreciation, reserve, and other funds, together with total holdings of Government securities and cash:—

	Capital Expenditure to Dec. 31, 1922.	Depreciation and Reserve Funds.	Government Securities (at Cost).	Cash in Hand and on Deposit.
Caledonian	£ 56,305,498	4,498,358	2,312,549	1,576,139

Great North of Scotland	6,435,626	353,119	...	88,495
North British	52,281,552	3,166,462	...	628,853
Southern—				
London and South-Western	51,617,222	4,779,699	3,449,952	1,460,178
London, Brighton & S. Coast	33,549,373	2,218,921	305,543	1,629,931
South-Eastern & Chatham	58,292,143	3,403,135	126,094	3,382,272
Great Western	158,579,992	23,881,108	14,374,305	6,459,763
Total, 1922	1,056,386,437	121,594,435	53,806,435	33,012,131

The ratio of reserves to total capital expenditure is highest in the case of the Great Western, and lowest in the Southern group. The latter, however, shows a strong cash position. Government securities are in all cases taken at cost. The 1913 balance-sheets showed comparatively small items under this heading, and although the latest balance-sheets mention, in some cases, that Government investments include consols, the depreciation on such small amounts is probably more than offset by the appreciation in the value of other Government securities purchased in the last year or two. The 1913 balance-sheets of the above companies make a striking comparison; total reserves amounted to £17½ millions; investments in Government securities were £836,000; and cash stood at £13½ millions.

The distribution by the Government of some £23 millions to these companies in January last will enhance the strength of the balance-sheets, for this payment will have more than covered the amount of cash required for payment of final dividends. The distribution of this final instalment of compensation (there is still a small balance of about £1 million to be apportioned) as divided among the constituent companies gives the following amounts, in round figures, to the four companies:—London, Midland, and Scottish, £8 millions; London and North-Eastern, £7 millions; Southern, £3 millions; and Great Western, £5 millions. The new companies thus start in an exceedingly favourable financial position. The gloomy forebodings of the railway chairmen at the annual meetings two years ago, when the Railways Bill was under discussion, as to the serious "financial crisis" which would arise if the railways were decontrolled in August, 1921, have been belied by the results of the first complete year of free working. The tax-payer may, perhaps, be inclined to think that the £51 millions (equivalent to eighteen months' service on the American Debt), which the railways succeeded in obtaining from the Government by way of compensation was a very generous payment, while the trader who

scans the accounts may wonder whether the agreement not to ask for further freight rate reductions until July 31st next was not too hasty. Already, indeed, the chairmen's speeches show that the companies themselves are contemplating immediate reductions. The investor, on the other hand, has every reason for complacency. He has just received substantial dividends, and there is every prospect of a good return on his money in the future. Moreover, the majority of junior stockholders have done well by the exchange into the stock of the new companies. For example, as Viscount Chilton pointed out at the meeting of the London, Chatham and Dover Railway, the exchange into Southern Railway stock gave Chatham ordinary shareholders "intrinsic value far in excess of" anything they had hitherto possessed.

COAL AND STEEL IN CANADA.

(BY A CORRESPONDENT.)

IN Canada we have secured, during the past year, a highly promising new market for British coal, and the market for steel and engineering goods seems likely to expand. Coal and steel conditions in the Dominion merit special attention, for more reasons than one. Since it became clear that Canada has immense reserves of coal, and much iron ore, coupled with huge and rich deposits of ore in Newfoundland, we have been told that the Dominion would build up a great steel industry that would challenge that of the Old Country. But the probabilities are that for years to come the consumptive demands of the Dominion will outstrip production, that imports will increase, and that the United Kingdom will gain much trade at the expense of the United States in that market.

Taking coal first, we see a remarkable development. For many years Canada has been a heavy importer of American coal; but when the United States miners went on strike last April the Dominion imported some British coal. The quality was found highly satisfactory, and the conditions regarding grading, screening, sizing, washing, and so forth were much appreciated. The price was also favourable. The freight from Britain to St. Lawrence and other Eastern ports was far less than the rail cost from American mines. Moreover, American coal is now abnormally dear. The pit-head cost to-day is fully 50 per cent. higher than the 1920 top prices, and nearly 150 per cent. above pre-war. For various reasons, United States coal is likely to remain abnormally dear.

The scope of the trade may be gathered from the fact that Canada imported an average of 4,817,536 tons of anthracite, and 13,816,457 tons of bituminous coal annually in the three years, 1919-20-21. The protracted American strike caused a serious shortage of coal in Canada last year, and the Dominion imported 178,482 tons of anthracite, and 638,843 tons of bituminous coal from Great Britain. Negotiations are proceeding for much heavier supplies of British coal as soon as the St. Lawrence navigation is resumed in the spring. Meanwhile, Canada is suffering something like a fuel famine. With American coal so unusually costly, as it is bound to be under the latest mining labour agreement, plus the high rail rates for the long trip, there is a good chance of the Old Country capturing a growing proportion of Canada's coal import trade. If our prices and freights are kept within reason a big trade is assured, and ships taking the coal out will mostly have ready cargoes of grain, timber, &c., for the return voyage, besides which our blast furnace interests might take big tonnages of Newfoundland ore now that the German contracts for that material have lapsed. However, the big point is that for about the first time in history British coal is being delivered in Canada more cheaply than American coal.

Turning to steel and related products, we have equally remarkable conditions. Many times within the past 15 years we have been told that Canada had such reserves of coal and iron ore that she would speedily become a second United States in the steel trade. Four years ago we were told on "expert" authority that the Dominion would very soon be making 10,000,000 or 12,000,000 tons

of steel a year, and actively competing with Britain in neutral markets. To-day we read of preparations for steel developments in Canada. But what are the facts and probabilities? Canada holds immense reserves of coal, it is true. She holds much ore, and in the neighbouring Newfoundland there are enormous deposits of rich material. But it requires something more than the raw materials to make a big steel industry. It also requires something more than cheap land, low taxes, and bounties and tariff protection—all of which the Canadian iron and steel industry has enjoyed. Efforts were made 125 years ago to develop an iron industry in Canada. Last century enterprise after enterprise failed. In 1882 the Government began to pay bounties on the production of iron and steel, besides affording protection, and since then some quite ambitious enterprises have been founded. In the last pre-war year Canada managed to produce 1,000,000 tons of steel. The war gave the industry a unique chance, and, within the limits of its labour supply, it did well. For the first time in history the Dominion exported more value of manufactures (chiefly in the shape of munitions) than agricultural products. In the first two post-war years the industry did well, owing to inflated prices and short supplies of outside steel. But since the approach of normal competitive conditions the Canadian industry has declined. Here are the figures—

CANADIAN STEEL PRODUCTION IN TONS.

1913.....	1,044,000
1920.....	1,242,000
1921.....	667,000
1922.....	467,000

Canada is, and must long remain, pre-eminently agricultural, and must, therefore, be an importer rather than an exporter of steel goods. There is no adequate supply of iron and steel working labour. Wages last year even, in spite of the depression, averaged over £6 a week per man the year round, and there must have been very much lost time. The output per man was very low. Although 102,000 men were employed, at these high wages, only 467,000 tons of steel were produced and worked up. And for that small output the capitalisation was no less than \$642,904,322. It may also be mentioned, in passing, that Canada is handicapped, so far as the heavy trades are concerned, by the long haulage distances which separate the various raw materials and manufacturing plants. It will pay the Dominion better to import than to produce. The meagre output of 1922, after more than a century's efforts, aided by many years of bounties and protection, proves it.

In the last fiscal year Canada imported \$225,000,000 worth of steel products from the United States alone. That indicates the extent of the market. But as with coal, so with steel—Canada is decreasing her purchases from America. The new United States tariff is one factor. As a prominent Canadian statesman has declared, if the States will not buy from Canada they need not expect to sell to Canada. In the current fiscal year, so far as the records are available, it is seen that the imports of American steel have declined by no less than \$126,000,000 compared with the corresponding months of the last fiscal year. In the same months British exports of tinplates and galvanised sheets have increased by about 250 per cent., and there is a growing market for a wide variety of steel goods. Great railway extensions, huge power schemes, big house and other constructions, and farming needs will all call for heavy tonnages of steel products. British manufacturers and engineers, like British coal exporters, have a fine chance.

SOME NITRATE COMPANIES' RESULTS.

THE results of the year ended June 30th last of the selection of nitrate producing companies, which we present below, makes melancholy reading. Six companies between them record an aggregate net loss of over £60,000, as compared with an aggregate net profit of over £223,000 in the preceding 12 months. It was, indeed, a very bad period for nitrate producers. Among the disheartening comments on the year's doings is the following, in the report of the Amelia company:—"The crisis in the nitrate industry

continued unabated during the whole period covered by these accounts, and no nitrate sales whatever were made for the company's account, the profit shown being entirely derived from iodine." The Liverpool, Pan de Azucar, and London companies record a cessation of nitrate manufacture during the entire year, and although some of these concerns marketed existing stocks to some considerable extent, there was obviously nothing in the year's conditions to cause satisfaction. The following table of profits is, therefore, perhaps no worse than might have been expected:—

Name of Company.	Net Profits.		Dividends, Ord. and Pref.		To Reserve, &c.		Carry Forward.	
	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.
	£		£	£	£	£		£
Amelia	11,651	Dr 13,195	13,920	3,000			49,907	3,712
Lagunas Synd.	15,054	21,689			15,054	21,689		
Liverpl. Nitrate	113,843	Dr 79,536	51,148				96,771	17,221
London Nitrate	28,554	12,238	15,000				20,730	17,967
Pan de Azucar.	29,646	24,061	11,550	11,756	7,144		32,088	44,393
Santa Catalina.	30,879	4,390	15,800	7,900	10,000	Dr 5,000	6,669	722
	223,627	Dr 62,573	107,418	37,656	32,198	16,689	206,165	84,015

The item "stoppage expenses" is a serious one in the accounts of several of the companies. This amounts to £15,850 for the London, £43,574 for the Liverpool, £5,459 for Santa Catalina, and £34,862 for the Amelia company. We may pass from this table with the remark that Lagunas has done noticeably well in a bad year, and that in such times any profits at all are welcome. In the next table are analysed some of the principal items in the various balance-sheets:—

Name of Company.	LIABILITIES.			ASSETS.					
	Share Capital.	Debs. and Loans.	Re-serves.	Pro-perties.	Stocks.		Cash & Bills.		
					1920-21	1921-22	1920-21	1921-22	
	£	£	£	£	£	£	£	£	
Amelia	206,000		176,091	94,869	275,942	265,263	15,290	2,636	
Lagunas Syndicate	550,000	233,980	74,780	700,655	162,502	113,661	225,100	85,899	
Liverpool Nitrate.	73,069	188,969	379,056	569,737	231,102	289,035	80,263	22,722	
London Nitrate.	200,000	213,716	142,000	476,881	105,907	164,936	4,497	2,618	
Pan de Azucar	110,000		51,312	92,370	114,814	69,820	121,602	34,879	
Santa Catalina	79,000		25,000	44,648	25,338	29,964	47,039	36,048	

The year's experiences have made inroads on the cash position. Fortunately, if we turn from the figures for 1921-22 to the present outlook, we find reason for reassurance, for since these accounts were closed a very decided improvement has come over the nitrate position. In the opinion of expert observers the year 1923 has opened with greatly improved prospects. The improvement that the last six months have brought about can be seen from the following statistics of the position, which are compiled from figures given by Messrs Aikman (London), Limited:—

(In Thousands of Tons.)

	1913.	1914.	1921.	1922.	1922.
	2nd Half.	1st Half.	2nd Half.	1st Half.	2nd Half.
Shipments to Europe and Egypt..	1,194	831	198	103	455
" U.S.A.	236	311	74	141	437
" Other Countries....	46	41	52	37	102
Production in Chile	1,367	1,455	456	421	624
Visible supply in Europe and Egypt at December 31st	1,098		903		427
Visible supply in U.S.A.	71		251		192
Visible supply in Other Countries	18		19		41
Stocks in Chile at end of period ..	498		1,449		1,231
Total supplies in sight at Dec. 31st	1,685		2,622		1,891

The decline during 1922 is substantial both in the world's aggregate of visible supplies, and also in supplies in Europe and Egypt, and the United States, and in the Chile stocks. Shipments from Chile in the last half of 1922 were about 3½ times as large as the shipments in the first six months. Messrs Aikman (London) state in their annual report that in the second half of 1922 consumption of nitrate of soda increased by 105,500 tons in Europe and Egypt, and by 168,000 tons in the United States. The statistics, however, reveal clearly enough the effect of the chaos in Central Europe on the nitrate position. Deliveries of Chilean nitrate to Germany and the Baltic ports in the year ended June 30, 1914, were 960,000 tons; in the last six months of 1922 they were a mere 19,000 tons. Political developments since the beginning of the year have apparently killed the prospect of a revival of demand from that quarter. It is hoped,

however, that this disappointment will be balanced by a growth in consumption in the United States and Japan. The nitrate share market has shown some signs of confidence that the bad conditions of 1921-22 have been left behind. The market improvement is shown by the following table:—

Name of Company.	Am't of Share.	Dividends.			Prices of 1922.		Price Feb. 22, 1923.	Present Yield.
		1919-20.	1920-21.	1921-22.	High'st.	Lowest.		
								£ s d
Amelia	10	20	7	nil	3½	3½	3½	nil
Lagunas Synd.	1	nil	nil	nil	3½	2½(t)	3½	nil
Liverpool.....	1	140½	100	nil	2½	1½	2½	10 6
London.....	1	7½	7½	7½	1½	1½	1½	7 10 0
Pan de Azucar.	1	10½	15	15	2½	1½	2½	6 19 3
Santa Catalina..	1	20	20	10	1½	1½	1½	6 19 3

† Paid free of income-tax. (t) 5s shares.

Thus it will be seen that the nitrate share market has recently displayed more strength during the past month or so, and prices have advanced since the beginning of 1923.

One of the most notable features of 1922 in the nitrate industry was the dissolution at the end of June of the Pool formed at the end of 1920 for the control and marketing of the huge accumulated European stocks. For the last six months of the year the market was free, within the limit of control imposed by the Producers' Association's prices. In other words, there has been restored a free market in Europe. In reviewing the market in the second half of last year, Messrs. Henry Bath and Son, Limited, write:—"In August the association withdrew its price of 18s 6d per metric quintal for June, 1923, shipment, and remained out of the market until the 19th instant, when it commenced to offer again at 19s 1d, and very shortly sold about 100,000 tons at the new price. The policy of buying June shipment so far in anticipation contains a considerable element of speculation, but is obviously founded on the expectation not only that prices for July, 1923, and later shipment will eventually be fixed at something higher, but also that the current term of the association, which ends in January, 1924, will be extended at least until June, 1924, in accordance with a proposal now under discussion. Failing such extension, a position of great instability might arise in the very crux of the consuming season; for the reduction of the present heavy coast stock is likely only to be gradual, and so long as the stock remains excessive in comparison with prospective requirements it is difficult to imagine any method but controlled prices for dealing adequately with the situation." According to Aikman (London), Limited, with the fall in price of oil, coal, bags and other materials and stores, and also in the cost of labour, costs of production have now been reduced to levels ranging from 5s 9d to 7s 6d per quintal. "With the big reduction in the world's stocks," write these authorities, "and the probability of an increasing consumption the future outlook is much more favourable, and a general reopening of oficinas in the second half of next year (i.e., 1923) may be expected." Although some allowance must be made for the deepening of the European economic gloom, it appears reasonable to assume that the great Chilean industry starts the year 1923 with far better hope than that with which it began 1922.

MORE LEGAL ASPECTS OF THE RUHR OCCUPATION

(FROM A LEGAL CORRESPONDENT.)

LET us sum up the position as far as we have gone. In the first place the view is widely held that the action of France and her co-operators in occupying the Ruhr, and the method of their occupation once there, constitute a breach of the Treaty of Versailles on one or more of the following grounds:—

(a) That before action can be taken against Germany under Part VIII. (Reparation) of the Treaty, unanimity is required (by clause 13 of Annex II. to that Part) on the Reparation Commission to the effect that there has been a "voluntary default" by Germany. There has been no such unanimity. To our mind there is less doubt upon this point than upon (b) and (c) that follow. The Treaty expressly demands unanimity on the Reparation Commission upon "questions of the interpretation of the provisions of this part [Reparation] of the present

Treaty." Consider the case of a contract for the sale of goods containing a *force majeure* clause and a provision that any question arising upon the applicability of this clause must be referred to arbitration; surely such a question would be a question of the interpretation of the contract. And surely a question whether Germany has made a "voluntary default" is a "question of the interpretation of the provision of this part of the present Treaty." (See the *Economist*, January 20th.)

(b) That even if the decision had been unanimous, the action against Germany must be taken by all the Powers interested in obtaining reparation jointly, which include Great Britain (Clauses 17 and 18 of Annex II.).

(c) That the measures contemplated under the Reparation part of the Treaty (under which France claims to be acting) are "economic and financial prohibitions and reprisals" and similar action falling short of a definite military and political occupation such as has taken place (Clause 18 of Annex II.).

Mention should also be made of Article 248 of the Treaty, which makes reparation a first charge upon all the assets and revenues of the German Empire and its constituent States.

In the second place, we must be guided in the construction of treaties as far as possible by the rule: applicable to private contracts, and as we think is demonstrated by the international lawyers whom we quoted last week, if one or more of the parties to a treaty violate it at any rate in a material part, the other parties may in their discretion regard themselves as liberated from the obligations of the treaty as regards the violating parties.

Now, there we have a series of complicated legal questions, and it is the duty of the British Government to obtain from its Law Officers a pronouncement upon them. If the "rule of law" is to prevail throughout the world as it does in Great Britain, it is essential to the understanding of an acute international situation that we should know as far as is humanly possible what the law is, however unpleasant and embarrassing it may be. It is idle for the Government to tell the House of Commons, as the Prime Minister did last Thursday, that the opinion of the Law Officers had not been taken on the legality of the French action. It would be incredible if the Prime Minister had not said it. The psychology of the man who refrains from consulting his medical adviser because he does not relish the anticipated verdict is familiar, but it ill befits a country whose strength has lain in being ready to look unpleasant facts in the face instead of imitating the ostrich. Only the adherents of the two extremes of political thought, who meet in their contempt for law and their exaltation of force, are prepared to approach a difficult political problem without having previously ascertained the law bearing upon it so far as that can reasonably be done. If it be, then, that the action of France, Italy, and Belgium has entitled us to reconsider our obligations under the Treaty of Versailles as regards those Powers, and to demand its revision, the path would lie open for the substitution for the methods of the Treaty of Versailles of a more truly mutual and international system of guaranteeing integrity and independence, so that it becomes useful to examine what our principal European commitments now are apart from that Treaty. (We must bear in mind, too, that the Empires of India and four of our self-governing Dominions are also parties to the Treaty of Versailles.)

(i) *France*. The first outstanding fact—indeed, it is one which, in the opinion of many, is largely responsible for the present deplorable situation—is that the Treaty of June 28, 1919, between the British Empire and France whereby the former Power agreed to come immediately to the assistance of the latter "in the event of any unprovoked movement of aggression" by Germany—a pact ratified by British Act of Parliament in the same year—has failed to become operative because the corresponding treaty between the United States of America and France of the same date was not ratified by the American Senate. The Treaties contain no time limit within which ratification must take place, and it is difficult to say what would be the effect upon the British treaty in the unlikely event of the American Senate ratifying the American Treaty.

(2) *Belgium.* The second outstanding fact is that the Treaty of 1839, between Great Britain, Austria, Belgium, France, Prussia, and Russia, guaranteeing the independence and permanent neutrality of Belgium, has gone. Belgium requested the Powers, in the course of the Versailles Conference of 1919, to put an end to her neutralised status as guaranteed by that Treaty, and to allow her to become a fully Sovereign Power. To this the other Powers consented, and Germany was made by the Treaty of Versailles to consent to the abrogation of the Treaty of 1839. Thus Belgium threw away, rather improvidently we incline to think, a Treaty which saved her from being overrun in 1870, when Mr Gladstone concluded a special treaty with each belligerent, containing a solemn promise to respect Belgian neutrality, and to co-operate with Great Britain in the event of the other belligerent violating it; a Treaty which in 1914, at any rate, left no alternative to Great Britain but to come to her rescue. Belgium has thus relieved us of one of our heaviest Continental treaty commitments.

(3) *Luxemburg.* Our obligation as co-guarantors of the neutrality of the Grand Duchy of Luxemburg under the Treaty of 1867 was never so serious as the obligation towards Belgium owing to the different form of the Treaty. The Earl of Derby, as Prime Minister, explained in 1867 that whereas the guarantee given to Belgium was an individual guarantee, that given to Luxemburg was a "collective guarantee," which is "one binding on all the parties collectively, but of which, if any difference of opinion should arise, no one of them can be called upon to take upon itself the task of vindication by force of arms." By the Treaty of Versailles Germany was made to assent to the rescission of the neutrality of Luxemburg, and to such other arrangements as the Allied Powers might make.

(4) *Poland.* Apart from the Treaty of Versailles, a certain obligation towards Poland exists under the Treaty of June 28, 1919, made between her and the British Empire, United States of America, France, Italy, and Japan.

(5) *Greece.* Our obligations in this direction are at present in the melting pot owing to the suspension of the negotiations with Turkey. Meanwhile, our rights and duties under the Protocol of 1830, the Treaty of 1830, and the Treaty of 1863 guaranteeing Greece as a "monarchical, independent, and constitutional State," presumably remain.

(6) *Austrian Succession States.* We are also under a certain degree of responsibility to the Succession States which arose from the break-up of the Austrian Empire.

(7) *League of Nations.* By Article 10 of the Covenant of the League of Nations we have, together with the other members, undertaken "to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League."

It is clear that the present European mess will only be satisfactorily cleared up by a joint conference of the European Powers, including Germany, and in our opinion it is equally clear that this joint conference should be summoned and managed by the League of Nations. Part of the task of that conference should be the revision of the Treaty of Versailles. We are all very much wiser than we were in 1919, and it is a mistake to bolster up artificially the immutability of a Treaty embodying serious blunders. Great Britain, in supporting a revision of the Treaty, should most emphatically reaffirm her adherence to the Covenant of the League, which is in no way involved with the durability of the Treaty; and, having entered the conference, our guiding principle should be to strengthen the League and to make the League itself the guarantor of peace in Europe, instead of relying upon individual and collateral pacts between the several Powers such as the ill-fated Treaties between France and the British Empire and France and the United States of June 28, 1919. That the system of individual guarantees was regarded as only a temporary makeshift is well illustrated by a clause contained in both of these Treaties to the effect that the Treaty "will continue in force until, on the application of one of the parties to it, the Council [of the League], acting if need be by a majority, agrees that the League itself affords sufficient protection."

Notes of the Week.

Irish Peace Moves.—Our Dublin correspondent writes:—

During the past fortnight there have been considerable surrenders of fighting men individually and in bands, and equally significant captures of unarmed fighting men, that is, of men who, unwilling to surrender with their arms, allow themselves to be captured without the arms, which if found upon them when captured would entail the risk of the death penalty. The irregular leaders are openly and notoriously at variance with one another. On Wednesday there were attacks of the familiar type upon four different houses and on outlying Government offices for the collection of taxation, &c., in the middle of the day. Some papers were destroyed, but the fires were all extinguished, and a number of the raiders captured. Nevertheless, Ireland is on the way to peace, if signs and portents be not misleading. Yet this beneficial progress is due not to the peace-mongers, but to the mingled firmness and clemency of the Government. Great efforts have been made by the peace-mongers to stampede the Government, and if they have not succeeded they have heartened and comforted the party of violence. No one will deny that the Government may have, or, indeed, has made mistakes, but it is at the moment the only possible Government, and it has shown great courage and regard for principle, and it unquestionably represents the predominant elements of political thought. But it is an open secret that negotiations with De Valera have been going on behind the back of the Government. The "Republicans," drawing ever nearer to collapse, were nothing loth, seeing in such negotiations a chance to save De Valera in office. Ruling out as impracticable the picking of a quarrel with England over the boundary commission, De Valera would have been satisfied with one of two things, viz., an alteration of the oath prescribed by the Treaty, or the nominal adhesion of North-East Ulster to the Irish Free State. Hence came the embarrassing and unauthorised negotiations with North-East Ulster previously alluded to in these columns, De Valera—caring always more for words than for actualities—being apparently willing to procure the perpetuation, in fact, and substance of partition, if a nominal unity could be secured and his own face saved. Hence also came missions by amiable and, fortunately, ineffective gentlemen to London in the hope of persuading the Prime Minister to assent to a nominal change in the oath of allegiance. As might have been expected, the British Government was unable to lend itself to an effort to hamstring the friendly Government, which has staked its existence literally upon the Treaty, and the Free State Government itself stood firm. The general public here sees the issue simply as an uncompromisable struggle between order and anarchy, between the supremacy of the State and the destruction of the State, and the State and the cause of order are daily growing stronger. From April 1, 1922, to February 17, 1923, according to Irish Exchequer returns, total revenue collected amounts to £23,417,328, and the balance to credit, after providing for Supply services and certain advances on capital account, is given at £1,396,513.

The Problem of Iraq.—It would be difficult to find in Parliamentary history any series of Debates on the Address in which the fundamental cleavage of opinion between the Government and the parties of opposition was less marked than that revealed by the discussions of the past week in the House of Commons. The debate on Mesopotamia was a case in point. Mr Lambert moved an amendment urging that "There should be an immediate and drastic curtailment of British responsibilities in Mesopotamia." On the desirability of such curtailment there was apparently complete agreement in all quarters of the House, and Mr Bonar Law prefaced his speech with the remark: "The amendment itself is in a form which I think everyone in the House would accept." The vehement remark of Mr Banks that Mesopotamia was "the worst mongrel" of "a whole litter of pups" that

we purchased at the Peace Conference found a more dignified echo in the Prime Minister's reiterated wish "that we had never gone there." With Mr Asquith's eloquent plea for curtailing our responsibilities and expenditure in Iraq there will be universal agreement; and Mr Bonar Law's assurance that "there is no question of oil, and never has been," is comforting. Unfortunately, at the moment the Government is tied, as a correspondent points out in a later column, by pledges given by its predecessor, and by the acceptance of a Mandate. We do not share the enthusiasm for Mesopotamia or the faith in the advantages of continued occupation which are expressed by the correspondent referred to. But we agree with him that obligations undertaken must be fulfilled. The only course for the Government to pursue is to make sure that the most rigid economy prevails in this sphere of activity, to avoid any extension of the burden, and to seek diligently for the earliest possible opportunity for obtaining honourable release from our costly and embarrassing undertakings. That the Government is prepared to pursue this course Tuesday's debate in the House of Commons leaves little doubt.

Parliament and the Ruhr.—There is very little to be said about the House of Commons' debate on the Liberal Amendment to the Address which could not have been said in advance, and which, indeed, we did not say in these columns last week. It served once more to emphasise the universal dislike of the French action and, at the same time, the almost equally universal realisation of the grave dangers of a breach between Britain and France. The amendment received over 200 votes, but was, of course, defeated by a handsome majority. The debate produced some plain speaking. It elicited from Mr Lloyd George the confession that his former threat to occupy the Ruhr was "bluff," and was marked by an inaccurate statement on Reparation figures by the same speaker. But the only sensation was provided by the attitude taken up by Lord Robert Cecil. Lord Robert is, of course, known to the people of this and other countries primarily as the chief protagonist of the League of Nations. It, therefore, came as a great surprise to find him speaking in opposition to the proposal that the League should be asked to try its hand at a solution of the Franco-German impasse. The surprise was the greater since Lord Robert a comparatively short time ago was an open advocate of this suggestion, and League enthusiasts were naturally mystified by his apparent belief that League intervention to settle the Reparations problem was desirable a while ago, and might be again, but was undesirable now. A careful reading of Lord Robert's speech is necessary to remove the misunderstanding which this apparent inconsistency inevitably aroused. On such careful reading it becomes clear that his faith in the League's ability eventually to settle the Reparations problem is as strong as ever. "I believe myself," he said, "that if this question once got into the atmosphere of Geneva it would be settled without the slightest difficulty." He thinks also that the security which France desires could be provided by the League. But in his opinion it would be an unwise action for the House of Commons to command the Government to make immediately the proposal for League intervention. Moreover, Lord Robert is so well satisfied in general with the attitude of the Government towards the present very delicate position that he would take no part in supporting an amendment, which, if carried, would be regarded as a vote of censure, and lead to the Government's resignation. When viewed on these lines Lord Robert's attitude becomes intelligible to all but the blindest of League devotees, and we hope that this reading of his speech will prevail, and will stifle the undeserved and unworthy, if natural, first impression that Lord Robert was ready to compromise his League views in order to bid for a seat on the Treasury Bench. We can well imagine that Lord Robert's collaboration would be very welcome to Mr Bonar Law, but although the former has laid himself open to grave misunderstanding, his speech, if closely studied, reveals him as an unshaken champion of League ideals and League machinery. The upshot of the whole debate may be summarised thus:—It

emphasised the national belief that France is wrong, and the national wish to help France into the path of security and salvation; it crystallised and strengthened the belief that eventually the *dénouement* may come through the League. So far, so good; seeds have been sown that may bear fruit in due course. But for the moment the debate has carried us no further.

The Internationalisation of the Ruhr Coalfield.—Considerable attention has been attracted by the suggestion of four Scottish Labour men who have recently visited the Ruhr that the coalfields of the district should be brought under the international control of the Powers (including Germany), who would allocate its enormous fuel resources. The suggestion will, of course, be very acceptable in France and Belgium, both for political and economic reasons, and it is quite possible that the policy of these two nations will steadily tend in this direction, but that it will be resisted to the last by Germany will be evident to all those who noted the statistics of Germany's resources which we published the other day in the *Economist*. Germany has lost the greater part of her Silesian coal and all her Lorraine and Saar mines, and if she loses the Ruhr field she will have practically nothing left. Yet even in unoccupied Germany, in Saxony, and in the neighbourhood of Berlin, and in many other important centres Germany has built up a great industrial population. But she would only have left coal resources under her own control roughly comparable with those of Belgium. The plan would undoubtedly produce important political results, but it would not solve the problem of getting reparations. International control, at the utmost, could only secure surplus profits after paying costs of production and the expenses of the international administration, and this surplus—which would undoubtedly be far less than the surplus which might be secured from the surplus of the 60 millions of the German population—would be quite insufficient to meet the needs of France and Belgium. But the Labour tourists have evidently also been affected by the idea that the possibility of France securing control of the Westphalian coalfield is a serious menace to Great Britain, for it is added that by their scheme "Britain would be safeguarded against the overweening advantages in the world's markets which a monopoly of the Ruhr coal with the Lorraine ore would give to any nation." But at bottom this is really a bogey. Before the war Lorraine ore and Westphalian coal were united under the very efficient administration of the German iron and steel magnates. But, in spite of all the advantages of differential railway rates, &c., Great Britain managed to maintain her position as the world's chief iron and steel exporter. It is to be expected that one day the coal and ore of this part of Europe will be brought together in some efficient and economical way; but the British iron and steel industry need not despair. The ore and coal lie hundreds of miles apart, and the finished product is produced far from seaboard. Given efficiency of management, our steel industry, with its coal supplies on the coast and the most abundant supplies of ocean shipping at its door, has no cause to be afraid of extinction in the long run in the markets of the world.

Dr Rasin: A Great Finance Minister.—A Prague correspondent writes:—Attacked more than six weeks ago by a young Czech communist, Dr Rasin, the Czechoslovak Minister of Finance, succumbed to his wounds on Sunday last. Alois Rasin was a man whom the Czech people could ill spare. The smaller nations of Europe have produced few great men since the war, and even fewer great finance ministers, and Rasin had considerable claims to both titles. In the obituary notices which have appeared in the Czech Press, he has been likened on several occasions to Cromwell. The comparison may seem exaggerated. Rasin, indeed, was of a more excitable nature than Cromwell. But in his courage, his tenacity of purpose, his absolute disregard of popular favour, his puritan devotion to what he considered his duty, and his almost fanatical belief in his own powers, he had many points of resemblance with the great Englishman. When the new Republic came into existence, he

was its first Minister of Finance, and had not long entered upon his second term of office when he was assassinated. But whether in office or out of it, he was the virtual dictator of the Czech State finances. He had a plan where other people had only theories. He saw order where others saw only chaos. A full tribute was paid to the financial services which he rendered to his country in the *Economist* of the 10th instant. These services need not be recapitulated here. The best proof of them is to be found in the daily foreign exchange quotations, where Prague stands out among its neighbours like a lightship in a sea of murk and chaos. Rasin taxed his people as no other people in Europe save the English has been taxed. One might almost say that he gloried in unpopular measures. He certainly never shrank before them. And yet with it all he became a popular hero, and is now regarded as the man who by his financial reforms consolidated the independence of his country. Like Dr. Kramar, Rasin was a great Slavophile. But, first and foremost, he was a great Czech, and as a Czech patriot, striving for the independence of his people, he was the arch-opponent of Berlin and Vienna. Viennese control, like inflation, was his great bugbear. Rasin fought both evils with the zeal of an early Christian martyr. From the first day of the war he placed all his faith on a victory of the Allies, and began forthwith to plot the overthrow of the Austro-Hungarian Empire. His efforts on behalf of the liberation of his people led to his arrest, and in 1917 he was condemned to death by a military court at Vienna. His political feelings made him sympathise strongly with France, and he always blamed the Allies for failing to establish control commissions in the German Reichsbank and in the Austro-Hungarian Bank immediately after the Armistice. He was, however, a great admirer of English finance, and strove to inculcate English methods into the minds of his own people. On Englishmen his blunt outspokenness made an excellent impression, and it was largely due to the soundness of his financial theories that in the spring of last year the Czech Government was able to realise a State loan on the London market. His energy was almost superhuman. He was journalist, banker, lawyer, politician, and Minister at once, and found time somehow to devote the energy of a whole-time man to each profession. Above all, he was a great fighter, with tremendous thrust. But with it all he was a clean fighter. A German newspaper, the *Prager Tageblatt*, says of him:—"His opposition to everything German was characterised by his straightforwardness, which won the respect even of his enemies. Even his most bitter opponent could not deny that Rasin was a man who, with fixed purpose and fearless mind, was prepared to sacrifice everything, including his own life, for his country." When one bears in mind the fierceness of racial hatreds in Central Europe, this tribute in itself is the most striking proof of the almost irreparable loss which the Czech nation has suffered.

Pensions.—Pensions in two forms have been discussed by the House of Commons this week, war pensions and old age pensions. The former question was raised by Mr Adamson, who on Tuesday moved an amendment to the Address asking for a thorough inquiry by a Select Committee into pensions administration. The amendment was rejected by a majority of 131, and the detailed review of the Ministry's procedure given by Major Tryon cleared the air of some misunderstandings. Two sets of figures given in his speech are worthy of notice. Before the war a totally disabled ex-Service man with a wife and two children received 17s 6d per week. To-day a man similarly placed gets 63s 6d. Before the war a widow with two children received 8s a week, to-day she receives 42s 2d a week. On the following day a motion with regard to old age pensions was moved by Mr Maxton:—

That, in the opinion of this House, the recommendation of the Departmental Committee on Old Age Pensions in favour of the repeal of the provisions of the Old Age Pensions Acts as to the calculation of means should be adopted and the Old Age Pensions Acts amended accordingly, thereby enabling applicants for, and recipients of, the old age pension to derive the full benefit of their

thrift and personal provision for old age, and to receive assistance from friends, employers, and organisations without reduction of, or disqualification for, the full pension.

On at least three grounds—namely, equity, the desire to encourage thrift, and the wish to attain the objects with which the original Old Age Pensions Act was introduced, the terms of this amendment must receive the sympathy of everyone who has had any experience of the anomalies and injustices which exist under the present system. The widespread nature of this sympathy was illustrated by a fall in the Government majority to 22. Unfortunately, the present exigencies of the Exchequer bar the way to the much-desired removal of the "means calculation," which, Mr Baldwin estimated, would cost the country an additional £17,000,000.

Employment in January.—A further slight improvement is shown by the Trade Union figure of unemployment during January, as given in the *Ministry of Labour Gazette*, but, on the other hand, the unemployment percentage figure for all workpeople covered by the Unemployment Insurance Acts in Great Britain and Northern Ireland rose from 12.2 at December 18th to 12.7 at January 22nd. The corresponding figure for December 31st is not available, but it is stated that unemployment was higher at that date than on December 18th. From these facts it may be deduced that there was little real change in employment conditions during last month. The Trade Union percentage figures month by month for 1913 and the past five years are set out below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8	13.7
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3	..
March ..	1.9	0.3	1.2	2.9	1.1	10.0	16.3	..
April ..	1.7	0.3	0.9	2.8	0.9	17.6*	17.0	..
May ..	1.9	0.4	0.9	2.1	1.1	22.2*	16.4	..
June ..	1.9	0.4	0.7	1.7	1.2	23.1*	15.7	..
July ..	1.9	0.4	0.6	2.0	1.4	16.7	14.6	..
August ..	2.0	0.5	0.5	2.2	1.6	16.3	14.4	..

October ..	2.2	1.1	0.4	2.6	5.3*	15.6	14.0	..
November ..	2.0	1.1	0.5	2.9	3.7	15.9	14.2	..
December ..	2.6	1.4	1.2	3.2	6.0	16.5	14.0	..

* Excluding coal miners.

† Corrected figure.

The figure of 12.7 for insured workers at January 22nd compares with 16.8 at the end of January, 1922, and 17.0 per cent. at the end of last April, which was the worst figure recorded last year. The number of workers registered as unemployed at January 29th was 1,460,000, of whom 1,138,000 were men, the comparable figures for January 1st being 1,542,000, of whom 1,199,000 were men, and for the end of 1921 1,925,000, of whom 1,546,000 were men. The net result of the past twelve months seems to have been to absorb some 400,000 men workers into industrial employment. In connection with this absorption of workers by industry, it is important to watch the rise in production in leading industries which is taking place. Coal production in January was 24.1 million tons, the monthly average for the four quarters of 1922 having been 20.7 millions, 19.2 millions, 21.1 millions, and 22.9 millions respectively. Steel production in January, at 0.62 million tons, was nearly half of the total production in each of the four quarters of last year. Pig-iron production in January fell little short of the average production per quarter in 1921, and well above the monthly average in 1922. The facts, combined with the unemployment figures, are strong evidence of steady, if slow, trade improvement.

Cost of Living.—According to the calculation of the *Ministry of Labour Gazette* January saw another slight decline in the cost of living for an average working-class family. The Index Figure for February 1st showed an increase of 77 per cent. over the level of July, 1914, as compared with 78 per cent. on New Year's day and 88 per

cent. a year ago. Monthly movements since the beginning of 1918 are shown below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.	1923.
January 1st..	% 85.90	% 120	% 125	% 165	% 92	% 78
February ..	90	120	130	151	88	77
March ..	90	115	130	141	86	..
April ..	90.95	110	132	133	82	..
May ..	95.100	105	141	128	81	..
June ..	100	105	150	119	80	..
July ..	100.105	105.110	152	119	84	..
August ..	110	115	155	122	81	..
September ..	110	115	161	120	79	..
October ..	115.120	120	164	110	78	..
November ..	120.125	125	176	103	80	..
December ..	120	125	169	99	80	..

For retail food prices alone the index figure at February 1st was 73 per cent. above the pre-war level, having been 75 per cent. above that level a month earlier. Eggs, bacon, and, in a lesser degree, fish, became cheaper, while cheese, tea, butter, and mutton became dearer. Special inquiries into the effects of the Increase of Rent and Mortgage Interest (Restrictions) Act, 1920, indicate that the average increase in rents of working-class dwellings between July, 1914, and February 1, 1923, was about 50 per cent. Of this increase, it is stated, somewhat less than one-half is accounted for by increases in rates and water charges.

The Coke Position.—The export of coke to the Continent is causing considerable concern to owners of blast furnaces and foundries on account of its effect upon home supplies, and the continuing increase in price. Last year the price per ton of blast furnace coke on the North-East coast opened at about 29s per ton, fell by the middle of the year to 26s, and rose again by the end of the year to 30s or 31s. Owing to the increasing demand, the price now asked for export is 65s to 70s per ton, and is increasing, and although a considerably lower figure (37s 6d) is accepted for home delivery, the premium on export threatens to upset equilibrium in the home market. Great Britain is the only considerable producer of coke which does not publish monthly statistics of production; while the figures of coal production are issued weekly and figures of pig-iron production monthly, the intermediate figure of coke production is only published annually, although for a time during the period of coal control the figures of coke production were collected monthly. The latest figures available, therefore, with regard to the production of metallurgical coke relate to 1921, and obviously cannot be taken as a guide. The maximum production was recorded in 1917, when 13,555,000 tons were produced, and the maximum post-war production was 12,611,000 tons in 1920. No doubt some of the older plant was dismantled at the time of the coal stoppage in 1921, but there would appear to be a coke making capacity in the country somewhat in excess of 12,000,000 tons per annum. Assuming 24 cwt of coke to a ton of pig-iron, and allowing for the Scottish furnaces which use raw coal, approximately 600,000 tons of coke would be required for Britain's January pig-iron production. If we add to this the 181,000 tons exported and a comparatively small amount for the use of foundries, there would appear to be a balance of capacity over production of some 200,000 tons a month. This cannot, however, be brought quickly into the market, for coke ovens, when once allowed to cool, require from two to three months of preparation before output can be resumed. It is not to be expected that the recovery of the steel trade will be jeopardised by an actual shortage of coke; for at to-day's export prices, plus long transit charges, foreign consumers could not afford to carry on with British coke for many weeks, or take very large quantities. Indeed, in recent weeks exports of coke have been slightly falling. A rise in coke prices may, however, prejudice the situation by seriously affecting the price of steel, for apart from the emergency demands of the Continent the steady trade improvement which has undoubtedly occurred in the last few months has been fostered by the lowness and stability of prices.

Trade Facilities Act Guarantees.—A White Paper issued last Session gave as the total of guarantees under the Trade Facilities Act as £18,188,645. Another White Paper (No. 4, price 2d) issued this week carries the information on this point up to December 31st last. By the withdrawal and reduction of applications the total of £18,188,645 previously shown is reduced to £16,868,645, but fresh additions, as shown below, bring up the total at December 31st last to £22,243,645:—Newfoundland Products Corporation, £2,000,000; Kassala Railway Company, Limited, £1,500,000; Harland and Woolf, Limited, £95,000; Lanner Syndicate, Limited, £25,000; Dalcoath Mine, Limited, £50,000; London Electric Supply Corporation, Limited, £650,000; Ipswich Dock Commission, £12,500; Tata Power Company, £850,000; Colliery Cottage Company, Limited, £55,000; Oxford Electric Company, Limited, £25,000; making a total (with the previously mentioned sum) of £22,243,645. The maximum figure of guarantees under the Act of 1921 was £25,000,000, but this sum was raised to £50,000,000 by a new Act last Session.

India's Overseas Trade.—The official figures of India's overseas trade for the nine months ended December 31st last show that an adverse balance on the merchandise figures of nearly Rs. 25 lakhs in the corresponding period of 1921 was turned into a favourable balance of over Rs. 20 lakhs. The merchandise value for the two periods compare as follows:—

	Nine Months Ended Dec., 1921.	1922.	Ino. (+) or Dec. (—) in 1922.
	Rs. (Lakhs).	Rs. (Lakhs).	Rs. (Lakhs).
Imports ..	197.24	173.22	24.02 .. + 12.2
Exports ..	161.99	208.51	46.52 .. + 23.7
Re-exports ..	10.03	11.32	1.29 .. + 12.8

The import and export figures of gold and silver during the nine months ending December, 1922, compare as follows with those of the corresponding period of last year:—

	Nine Months Ended Dec., 1921.	1922.
	Rs. (Lakhs).	Rs. (Lakhs).
Gold imported ..	8.44	24.81
" exported ..	16.59	6
Silver imported ..	11.26	12.52
" exported ..	2.14	2.34

In December, 1922, the balance of trade was in favour of India to the extent of Rs. 5.62 lakhs, as compared with Rs. 5.97 lakhs in November, 1922, and an adverse balance of Rs. 2.34 lakhs a year ago. In the nine months ended December, 1922, there was a favourable balance amounting to Rs. 20.42 lakhs, as against an adverse balance of Rs. 24.97 lakhs in the corresponding months of the preceding year. The share of the United Kingdom in the total imports rose to 65 per cent. in December, 1922, from 62 per cent. in the preceding month, and 56 per cent. a year ago, while her share in the export trade was 29 per cent. in December as against 27 per cent. in November, 1922, and 28 per cent. in December, 1921. The shares of Japan and the United States were 7 and 6 per cent. respectively under imports, and 12 per cent. each under exports, as against 4 and 7 per cent. under imports and 24 and 10 per cent. under exports in the corresponding month of last year. The tonnage of vessels entered into British India and cleared outwards with cargoes from and to foreign countries and British Possessions during the month of December, 1922, amounted respectively to 534,000 and 639,000, as against 541,000 and 559,000 in November, 1922, and 693,000 and 546,000 a year ago. The tonnage entered into and cleared from British India in the nine months ended December, 1922, was 4,910,000 and 5,447,000 respectively, which compares with 5,097,000 and 4,679,000 in the corresponding period of last year.

National War Bond Conversion.—Holders of 5 per cent. National War Bonds maturing on April 1st next—there are about £28 millions outstanding—are offered the right of conversion of the whole or part of their holdings into 4½ per cent. Treasury Bonds, repayable at par on April 15, 1932, at the rate of £100 of the Treasury Bonds and a cash payment of £2 15s (payable on completion of conversion) for each £100 of National War Bonds sur-

rendered. The Government reserves the right to redeem the Treasury Bonds at par at any time on or after April 15, 1930, on giving three months' notice. The market price of the bonds, the interest on which is free from Corporation Profits Tax, is 99½, so that a slight "turn" on the transaction is given to those who take advantage of the conversion offer.

Chamber of Shipping Report.—In view of the interest shown in the position of world shipping at the present time and the efforts made to force the U.S. Ship Subsidy Bill through the American Senate, the annual report of the Chamber of Shipping of the United Kingdom issued this week and the speech of its president on Thursday, reported in a later column, have attracted considerable attention. The report states that at the opening of 1922 British shipping was in the trough of the worst period of depression of modern times, and all who follow the fortunes of the shipping industry will agree with this. That the industry has succeeded, in such large measure, in surmounting the manifold difficulties which have confronted it is attributed to the sound organisations ashore and to the conservative financial policy which British shipowners have steadily pursued. The point is made that had the policy of "nationalisation" been carried out at the conclusion of the War, shipping, managed less efficiently by the State than under conditions of private enterprise, would have become a millstone round the neck of the Government, and that it has only been by close organisation, strict economy, and the free play of individual initiative that the shipping industry has been saved from shipwreck during the months when cargoes were very scarce and freights continued to fall. The Chamber of Shipping statistics show that freights measured by the Chamber's index number declined from an average of 100 for 1920 to an average of 30 for 1922, while the time-charter rate dropped from an average of 100 in 1920 to an average of 27 in 1922. This was to have been expected, as, obviously, with voyage business hard to find, very few time-charterers were to be found. The index number of shipping freights, which reached its maximum of 141 in March, 1920, fell to 27 in September last, but during the autumn rates steadily improved, and at 31 in December the index was 14 per cent. better than in September. The time-charter rate in December was 24, as compared with the average of 100 for 1920. This corresponds to rate of 45 per deadweight ton, which is 20 per cent. under the 1913 average of 55. The report goes on to say that in spite of all the adverse influences which handicapped the British shipping industry in 1922, there are indications that the worst is past, but in view of the deplorable condition of things witnessed in the homeward markets this month, due to the cessation of grain and other shipments, this is by no means certain. There was, it is true, every sign of a revival in December and January, but there has been a very serious setback during the last few weeks. At the time of writing the River Plate market has something like 250,000 tons of shipping unfixed, and business from the North American and Australian loading centres is at a standstill. According to the Chamber of Shipping report the gross earnings of British shipping were probably a little less in 1922 than they were in 1913.

The Activity in Textile Shares.—For several weeks there has been increasing activity in the shares of textile combines in Lancashire, especially those connected with the finishing industry. The boom has been accelerated this week since the publication of the Bradford Dyers' report, announcing a dividend on the ordinary shares for the year of 35 per cent. The rise in prices is shown in the following table:—

	Dec. 29, 1922.	Feb. 15, 1923.	Feb. 22, 1923.
	s d	s d	s d
Bradford Dyers	43 9	44 9	47 3
Bradford Dyers	46 3	54 3	61 0
Bradford Cotton and Wool Dyers ..	8 9	11 3	12 1½
Cotton Printers	21 10½	23 10½	26 0
Five Cotton Spinners	42 0	45 9	47 6

The remarkable rise in prices has surprised many Lancashire traders, writes our Manchester correspondent, as there does not seem to be any justification for the important advance. Because the Bradford Dyers are paying a dividend on the ordinary shares of 35 per cent. for the year it by no means follows that other textile combines are likely to be able to distribute large amounts in the way of dividends. Cotton spinners and manufacturers in Lancashire for a long time have criticised the policy of calico printers, bleachers, finishers, and dyers in maintaining their prices on such a high level, and undoubtedly the dear rates for these processes have had an adverse effect upon our foreign trade in textiles with Eastern markets. A conference has been arranged between the committee of the Master Cotton Spinners' Federation and bleachers, finishers, and dyers, for the purpose of considering the situation, and it is hoped that as a result of the representations now being made the employers in the textile finishing industries will see their way to reduce their charges.

The Dutch East Indies.—The report of the Java Bank, an institution controlled by the Colonial Government, for the year ending June 30, 1922, gives information as to the trade and finance of the islands, of which the interest is enhanced by their recent borrowings abroad. The world-wide depression has affected them less than the Straits Settlements; even Atchin was free from political disturbance, and the Mohammedan party has become more moderate, the Communists have been eliminated from it, and a decline of nearly 17 per cent. in the number of pilgrims to Mecca indicates an abatement of fanaticism. The figures of import values have apparently declined since 1919-20, but the high prices expected were not realised; losses have been heavy, and credits contracted, but the import trade is declining to its normal pre-war level. The exports from Java and Madura fell off greatly, except kapok (which is doing well everywhere) and copra, now the chief colonial export, and the increase in the latter is set off by a decline in that of coconut oil, owing to the stoppage—probably final—of the local oil mills. From Sumatra the exports show great relative changes, but from the east coast, at any rate, the total quantities are nearly the same. From Celebes there was an increase of about 40 per cent. in the export of coffee, and of nearly 38 per cent. in birds of paradise. Industrial development was held up by the scarcity of capital, but an electro-metallurgical establishment was contemplated in Celebes, German capitalists are busy with iron construction works at Cheribon, and the Government is investigating the iron fields in Celebes and Borneo. Coffee profited by the higher Brazilian prices, but suffered from a parasite; tea, to some extent, from the British preferential tariff, but it finds a market in Australia, and the position had improved at the end of the year. Rubber suffered from local over-production and the world-wide fall in price; tobacco partly from the fall in the German exchange, but chiefly from drought and storms. Deli tobacco, which supplies Havana and Key West with cigar wrappers, was unaffected by the Fordney tariff, and the "forest-land" tobacco is attracting attention in America. Of tin and cinchona the output is artificially limited; that of coal, petroleum, and gold increased; the last named is nearly 8 per cent. of the world's total. Money rates were exceptionally low; the Bank supported exchange on Amsterdam with its metallic reserves outside the colonies, and had its reward in an unprecedented profit, though the Government intervened to prevent the distribution of a dividend of 166 per cent. on the share capital, and the matter was referred to arbitration. The report exhibits alike the economic strength of the colonies and the financial strength of the bank.

The Dinar Exchange.—In an interview with a correspondent of the *Prager Presse*, Mr Stoyadinovitch, the new Finance Minister of the Kingdom of the Serbs, Croats, and Slovenes, outlined his exchange policy. He stated that the recent fall of the dinar was due to political causes, such as the general instability of Europe resulting from the occupation of the Ruhr, and especially to rumours of a war with Hungary and of the impending mobilisation of Yugoslavia—rumours totally devoid of

any foundation in fact. "On taking office," he said, "I introduced a régime of almost complete freedom in exchange dealings. I shall maintain this policy, because it is the only right one. As a necessary consequence, however, the dinar, which had previously been maintained at an artificially high level by various restrictions, regained its natural level. Thus the dinar fell considerably when this new policy was introduced. Owing to a series of international complications, however, it was driven down to a lower level than was warranted by the economic position of the country, though now a reaction has taken place which is leading to its recovery and to more normal conditions. I shall not raise its value by any artificial means, for my sole purpose is to stabilise the exchange. I am a Free-trader and an opponent of any artificial restrictions. The free course of trade will restore the dinar to its proper level, though a permanent improvement can only be attained by increasing our exports and by various economies at home. With this end in view we have just freed dealings in three important articles—pigs, maize, and railway sleepers—in which dealings were previously subjected to severe restrictions. The export of these commodities will doubtless have an important influence on our economic position." It is much to be hoped that this policy, based as it is on an attempt to realise the facts of the situation rather than on an endeavour to camouflage the facts for reasons of prestige, will receive a fair trial, and will be adopted in other countries where an artificial exchange situation is being maintained at the expense of the economic life of the nation.

Unemployment Insurance.—The *Times*, on the 5th inst., published a letter from Mr J. J. Bisgood, of the *Insurance Record*, suggesting a system of administration of unemployment insurance under which approved societies now dealing with health insurance would take under their wing unemployment insurance also. In the eyes of the trade union movement, writes a Labour correspondent, "this revived scheme is not feasible, but it is expected that an attempt will be made to popularise it. Mr Bisgood may understand insurance, but he appears woefully ignorant regarding unemployment, and his proposals are not likely to carry weight outside the interested circles of approved societies and certain groups of employers. But whether a workable scheme can be hammered out on these lines or not, the trade union movement, it may be predicted, will have nothing to do with it, and any effort to transfer unemployment insurance administration to the insurance companies and the so-called 'employees' approved societies' will be met by the most stubborn opposition. The proposals put forward by Sir William Beveridge in the *Manchester Guardian Commercial* recently are, on the other hand, worthy of consideration. The scheme is put forward tentatively as 'a suggestion for criticism,' and it will undoubtedly require a good deal of thought before trade unions commit themselves to it. Its main attraction from the Labour point of view is that it is non-contributory, so far as the workers are concerned. The cost would be borne by employers and the State. Benefit would be paid out to an unemployed worker by the employment exchange, which would recover the amount from the worker's late employer. There are features in the scheme which need to be more fully worked out, and a Note such as this does not allow of lengthy comment. But coming as the scheme does from one who has a profound knowledge of the subject, it cannot be turned down out of hand."

The "Chartered" Report.—The report of the British South Africa Company issued this week will be scanned especially for news of political developments in relation to the future of Southern and Northern Rhodesia. The facts set out with regard to the rejection by referendum in Southern Rhodesia of the proposal to join the Union of South Africa have been previously discussed in these columns. This rejection, of course, caused the provisional agreement between the Union of South Africa and the company to fall to the ground, and as regards the future the directors have little information to offer. "At the date of writing this

report," they say, "the Board has no knowledge of what may be the precise intentions of His Majesty's Government with regard to constitutional changes, either in Southern or Northern Rhodesia; but it is evident that the end of the company's administration cannot now be long delayed." Two years' accounts are embodied in the present report. The interest attaching to the figures is small compared with that appertaining to the general position and prospects of the Chartered Company; nevertheless, several points are worthy of mention. The commercial statement discloses a fairly sharp drop in the surplus, which for the year ended March 31st last comes out at no more than £105,350, as compared with £162,400 in respect of 1920-21, which itself represented a small decline. The receipts from mining, estates, and cattle were well maintained, and although no dividends were received in South Africa, the deficiency was fully made up by expansion in the London income. Increase in expenditure is entirely responsible for the reduction in the surplus. A greatly improved record is set up by the administrative accounts, that relative to Southern Rhodesia indicating a surplus of £255,550, as against £72,100 for the previous year, and a deficit of £32,200 for 1919-20; while in respect of Northern Rhodesia the deficit was reduced from £96,600 to £62,100. The foregoing balances, together with the net receipts from the sales of land in Southern Rhodesia during the two years—£320,700—have, in accordance with the decision of the Judicial Committee of the Privy Council, been deducted from the amount which would have been due by the Crown to the company if the administration of Southern Rhodesia had been determined on March 31, 1922. The entry under this heading, together with public works and buildings (for which the company will be entitled to claim compensation) now stands at about 4½ millions. There are also claims totalling over 2 millions in respect of Northern Rhodesia. Investment and interests total £2,664,700, irrespective of Rhodesia Railway Trust shares at cost, £1,281,000. Of the former £1,199,400 is represented by holdings in mining, agricultural, and other undertakings. A note states that the quoted securities as a whole at the date of the balance sheet showed a depreciation of £442,500. Since then, however—and especially of late—a distinct recovery has occurred in many Rhodesian shares, the cash and first-class securities on March 31st last aggregating not far short of £2,000,000. Shareholders will look to the chairman's speech at the forthcoming meeting on March 1st for further information, and for some attempt at estimating the effect of probable political developments upon future financial prospects.

Selfridge's Profits.—While appearing at first sight to record a decline in profits for the year ending January 31, 1923, the accounts of Selfridge and Co. in reality show an increase of £27,644. For the 1921-22 profits of £342,66 included £50,000 reserved for E.P.D., but not required whereas the 1922-23 profits include nothing from the source. This fact should be borne in mind when reading the following summary of the financial results of this enterprising concern:—

	Profits.	Deb. Int.	Prof. Div.	Ord. Div.	Prof. Ord. and Staff Part. Shares.	Balance
	£	£	£	£	£	£
1909-10	14,984	19,310	23,998	.. *	..	Dr. 28,2
1910-11	36,261	17,099	23,998	..	..	Dr. 4,8
1911-12	50,247	19,810	23,998	..	..	64
1912-13	104,029	19,668	24,000	..	..	60,2
1913-14	131,547	19,151	24,000	25,000	..	63,3
1914-15	134,791	18,960	32,337	25,000	..	58,9
1915-16	150,222	18,627	42,000	30,000	..	59,6
1916-17	225,137	18,175	42,000	35,000	..	129,9
1917-18	258,763	17,932	42,000	35,000	..	163,8
1918-19	322,825	17,130	42,000	35,000	..	228,6
1919-20	372,479	16,744	63,360	50,000	..	242,3
1920-21	375,031	16,210	77,882	50,000	23,899	207,0
1921-22	312,665	15,943	78,000	50,000	104,996	93,7
1922-23	320,310	15,654	78,000	50,000	106,615	70,0

* 10½ months. * Not including £28,500 contributed by Mr Selfridge. Allocations to depreciation and reserve take £71,000 against £91,500 a year ago, the writing down of inve

ments requiring only £10,000 against £25,000, and depreciation of fixtures £10,000, against £15,000. The balance-sheet, which is analysed in the usual column, shows an increase of £55,542 in the property item, and of £63,510 under the heading of "investments in subsidiary companies," and a decline of £71,635 in stocks, which are valued at cost or under. The directors refer to the difficulties encountered during the year, and attribute the increased profit to "a more complete stabilisation of prices, together with the extremest care and attention to the details of this business, and especially that very important point—the suspense account." The results achieved certainly support this claim to careful and attentive management.

Bradford Dyers.—It is a pity perhaps that the directors of the Bradford Dyers' Association were compelled to publish their accounts covering a period of two years, as it is difficult to follow the progress made by this big undertaking year by year at a time when annual comparisons are of considerable interest. It is, however, significant to find that the dividend on the ordinary shares has been raised to 22½ per cent. for 1921 and 1922, as against 20 per cent. for 1920. Moreover, it is evident that the directors must have had a good year in 1922, for the dividend for the last six months of last year is recommended at the full rate. These accounts just published are for the two years ended December 31st last, and in the following table results for the past 17 years are summarised:—

	Net Profit.	Depreciation & Reserve.	Prof. Div.	Ord. Dividend.	Carried Forward.
	£	£	£	Amount, Rate.	£
1906.....	366,086	80,000	91,403	94,953	7 + 3,592
1907.....	415,141	110,000	104,700	94,953	7 + 22,221
1908.....	271,375	70,000	116,724	67,824	5 — 51,373
1909.....	357,061	70,000	125,000	67,824	5 + 33,855
1910.....	407,311	140,000	125,000	67,824	5 + 14,148
1911.....	428,456	150,000	125,000	81,389	6 + 4,591
1912.....	410,861	90,000	125,000	81,389	6 + 49,737
1913.....	430,081	160,000	125,000	94,953	7 — 17,842
1914.....	387,923	90,000	125,000	67,824	5 + 35,409
1915.....	568,623	244,628	125,000	135,648	10 — 6,021
1916.....	741,181	310,000	125,000	203,472	15 + 102,709
1917.....	748,938	390,000	125,000	237,383	17½ — 3,445
1918.....	583,804	145,909	125,000	237,383	17½ + 75,411
1919.....	848,241	305,249	125,000	305,207	22½ + 112,784
1920.....	892,445	491,102	125,000	271,296	20 + 5,048
1921 & 1922 ..	1,677,554	749,139	250,000	610,415	22½ + 68,000

It will be observed that profits have been well maintained, in spite of the trade slump, and that the carry-forward has been increased by £68,000. Profits for the two years, after deducting all charges except debenture interest, but including excess profits duty recovered, represent a return of 9.5 per cent. on capital employed, which compares with 10.6 per cent. for 1920. The balance-sheet will be found analysed on another page; the most striking feature is the reduction of stock-in-trade from £1,369,180 at December 31, 1920, to £466,675 at December 31, 1922.

San Francisco Mines.—The history of this British-American enterprise, writes our mining correspondent, constitutes a romance of its kind. The ore, although rich, is of highly complex character, containing gold, silver, lead and zinc. Time after time, in the past, a successful treatment process was believed to have been evolved: but operations on a working scale failed to confirm the results of laboratory experiment. Some ten years ago a second reorganisation was arranged on the basis of giving each member one 10s share credited fully paid, while an issue of £200,000 debentures was made with the co-operation of a well-known Kaffir finance house, the Union Corporation. After three half-yearly interest payments had been met, the next twelve half-yearly payments were deferred, six per cent. interest being allowed on the postponed interest. Debenture

holders became entitled to convert both principal and deferred interest into shares at par, also to subscribe at the same price for 80 shares in respect of every £100 bond—a right which has since become so valuable that the debentures now stand at about £350. The funds provided still proving insufficient to carry out the programme, the Union Corporation advanced £100,000 at 7 per cent., securing an option on 200,000 shares at par until March, 1926. Under the direction of a New York firm of consulting engineers a "pilot" treatment plant was installed. All difficulties having been overcome, new works having a capacity of 250 tons per day were installed and commenced operations in January, 1922. Naturally, various adjustments were found necessary; but during the period ended September 30th a mine profit of £58,100 was earned. Practically the whole of this was devoted to amortizations, &c. Since November the returns have been swollen by the shipment of zinc concentrates, although the probable profits have not been fully allowed for. During the four months October-January the mine profits totalled about £48,700, and current earnings are stated to be at the rate of £145,000 per annum. Duplication of the plant is proceeding; a good part of the extension will be at work by May, and the full output should be attained in July. The conduct of operations on the larger scale will result in a reduction in the cost per ton, as the expenditure under several headings will be no larger than it is now, while in other directions it will not expand correspondingly to the growth in tonnage. Possibly, ore of somewhat lower grade will be dealt with; but it would seem reasonable to expect the present rate of profit to be doubled. To pay 30 per cent. upon the capital which will be in issue when all the options, &c., have been exercised—some £750,000—would call for £225,000. The issued capital now stands at £334,900, and the outstanding debentures (including interest) at £204,800; there can be little doubt that the latter will shortly be converted into shares, thus freeing the way for dividends. In view of the outlay upon the additional plant, repayment of the comparatively small balance of the loan from the Union Corporation has been postponed. The consulting engineers report the fully developed ore reserves on September 30th as 204,000 tons down to the fifth level; the reef has since been cut at the sixth level, showing the normal width and value. Provided, of course, that metal prices keep good—and of this there is every indication so far as the near future is concerned—the shareholders in the San Francisco Mines appear to have a prosperous future ahead of them. It may be added that the price of the shares has risen from 21s to 24s since the last reference was made in our columns to the company's prospects on January 20th.

Irish Cheque Stamps.—The Dublin Chamber of Commerce points out that the affixing of English stamps to Irish cheques which already bear an Irish Free State stamp is unnecessary, and quotes the following from a circular issued by the Commissioners of Customs and Excise and Commissioners of Inland Revenue in Great Britain, dated December 11, 1922:—"Inland Revenue (Income-tax, Super Tax, Corporation Profits Duty, Death Duties, Stamp Duties, Mineral Rights Duties, and Corporation Duty).—The basis of charge, liabilities to pay or account for tax, or to deduct or allow deduction of tax, &c., will continue as before. The establishment of the Irish Free State will not give rise to any double taxation as between the Free State and Great Britain and Northern Ireland—e.g., income charged to income-tax in the Free State will not be charged a second time in Great Britain or Northern Ireland, and documents, including cheques, duly stamped in the Free State (whether with stamps of the existing designs or with stamps of new Free State designs) will not require to be stamped a second time in Great Britain, nor will documents duly stamped in Great Britain require to be stamped a second time in the Free State. Due notice will be given of any change in the position as stated above," which holds good at least until the end of the current financial year.

Oversea Correspondence.

UNITED STATES.—COMMODITY PRICES—GOVERNMENT'S RAILWAY LOSSES—U.S. AND CANADIAN WHEAT EXPORTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 9.

ALTHOUGH commodity prices showed some rather sharp changes during January, the advances and declines were so evenly balanced that the net result was only a slight increase in the general index number as at February 1st, which, according to Bradstreet's, was \$13.7236. The gain over the January 1st number was only one-tenth of 1 per cent. In the preceding monthly period there was a decrease of one-half of 1 per cent. Individual price changes accurately reflected the differences between domestic and foreign trade in those periods; domestic buying has been brisk, whereas trade for export account has been mediocre. The February 1st index number shows a gain of 20 per cent. over February 1st of last year and of 29.8 per cent. over the low point recorded on June 1, 1921; it is, however, 34.2 per cent. below the peak point of February 1, 1920, but is 57.5 per cent. above that of August 1, 1914.

On all sides one hears complaints of the high cost of living—the cost of actual necessities. The index numbers, as stated, have shown only slight changes in the past few months; but they are based on wholesale prices of articles of common consumption, and bear little relation to retail prices which the public have to pay. While profiteering is much less in evidence, it is a fact that retail merchants, in many instances, have raised their prices to a far greater extent than is warranted by any increases in wholesale markets. Retail prices of meats and many other foods continue abnormally high. Wearing apparel, especially men's clothing, is now cheap compared with the prices asked a year ago or even last autumn; but offerings at low prices consist almost entirely of winter suits and overcoats, which retail clothiers do not wish to carry over into the next heavyweight season. On the other hand, coal, particularly anthracite, continues very expensive and hard to get at any price; consumers are allowed to purchase only small quantities at a time, and are obliged to use a certain percentage of soft coal mixed with anthracite. Many large apartment dwellings and hotels are burning soft coal almost exclusively, owing to the scarcity of hard coal. Rents have not come down to any appreciable extent, notwithstanding the marked increase in building construction here and elsewhere throughout the country, and real estate values generally are still greatly inflated, as compared with prices three or four years ago.

Preliminary returns of building operations during January show that there was a seasonal decrease from the month of December, but indicate a heavy gain last month, as compared with January a year ago. The total value of the building for which permits were granted in January of this year at 136 cities in the United States was \$166,162,643, as against \$188,244,400 for December and \$121,594,461 for January, 1922. The extensive construction work completed in recent months, as well as that now under way or planned, accounts in large measure for the continued heavy demand for carpets, rugs, and other floor coverings, hardware, household furnishings, and similar products, besides building materials of all descriptions. According to the report of James C. Davis, Director-General of Railroads, submitted to Congress during the past week by President Harding, total losses sustained by the Government from federal operation of the railroads during the war will approximate \$1,800,000,000, including settlements of claims and payments made under the guarantee provision of the Transportation Act. That estimate is based on actual results in liquidating accounts between the Government and carriers representing 80 per cent. of the railroad mileage which was placed under federal control. The report indicates that the losses incurred through direct operation of the railroads and in the subsequent adjustment of capital investment and other claims, now practically completed, will probably

A New Argentine Loan.—Cable advices from Buenos Aires state that the Government has sent a message to Congress in support of the three bills for the consolidation of the floating debt, which, it is estimated, amounts to 1,000 million paper pesos. The first Bill fixes a guarantee fund required from the banks in 10 per cent. of the total public deposits, which can be invested in 3 per cent. Treasury bonds created by the Bill. The bonds will be issued at par to banks applying for them. The bond issue will be 500 million paper pesos, redeemable by the Banco de la Nacion at par at any moment. The second Bill refers to the issue of a 200-million paper pesos internal loan, in two series, bearing interest at not more than 6 per cent., amortisation 1 per cent., and at a price of not less than 92 per cent. The third Bill represents a 150-million gold pesos external loan, bearing interest at not more than 5 per cent., amortisation 1 per cent., and the price of issue not more than 92 per cent. for foreign bankers offering the best tenders.

The Year's Shipbuilding (a Correction).—One or two serious errors unfortunately made their appearance in the section of the "Commercial History" devoted to shipbuilding. The headings "Output" and "Export" above the first two columns in the table belonged to a standing form, and should have been deleted. December wages should read 48s 8d, not 42s 8d; and at the end of the descriptive matter (p. 368, last paragraph but one) it should have been stated that the whole of the war bonus has been sacrificed by tradesmen, while wages reductions as follows have been effected:—Skilled, 42s 7½d (not 58s 6d, a printer's error); semi-skilled 35s 6½d, and unskilled 32s 4½d. The entry under Prices for the second quarter of the year was an average price for the sale of 96 vessels sold of varying ages. In June the builders' price for a ready boat was about £10, but instances were given of sales effected at £8 5s, and at the end of the year current quotations by shipbuilders ranged from £8 10s to £8 15s for cargo-carrying steamers of 4-5,000 tons gross, the pre-war cost being round about £6 10s. The table should therefore read:—

	Tonnage Under Construction (Ex. Warships).	Tonnage Launched.	Prices Per Ton.	Unemployment.	Shipwrights' Earnings.
1913.....	Average 1,890,000	1,932,152	£ 6 10 0	..	41 4
1920.....	(End) 3,798,593	2,055,624	34 10 0	..	{ Dec. 31, 91 3
1921.....	(End) 2,640,319	1,538,052	8 10 0	..	79 0
1922—January.....	2,235,998			35.2	..

October.....				37.6	..
November.....				35.6	..
December.....				48 8	..
..	..	1,031,081	..	..	..

At a meeting of the Institute of Actuaries at Staple Inn on the 26th instant, at 5 p.m., Mr P. H. McCormack will submit a paper entitled "Damaged Lives and Options."

A PUBLIC lecture on "The Economic Position of Poland" will be given by Professor Roman Dybowski, Ph.D., at the London School of Economics, on Thursday, March 1st, at 5 p.m. Chairman, His Excellency the Polish Minister.

A COURSE of three lectures on "Political Developments in India from 1920 to 1922" will be given at the London School of Economics and Political Science (Houghton street, Aldwych, W.C.2), by Sir William Vincent, K.C.S.I., K.C.I.E. (Member of the Council of India), at 6 p.m., on Thursdays, March 1st, 8th, and 15th. At the first lecture the chair will be taken by Lord Meston, K.C.S.I. Admission to these lectures will be free.

aggregate \$1,250,000,000. To that total there will be added, it is explained, between \$525,000,000 and \$600,000,000, which has been paid, or will be paid, to short-line roads and Class 1 carriers, and which includes payments guaranteed to the railroads during the six months of 1920 after they were returned to private control and operation. An outstanding feature of the report is the remarkably heavy reduction, shown in the final settlements, of claims originally made by the railroads against the Government. Up to December 31st adjustment of claims totalling \$731,921,814 involved a net expenditure by the Government of only \$171,815,541. Mr Davis expects that the remainder of unadjusted claims, amounting to \$220,720,253, will be settled by October of this year without much, if any, additional expenditure. While considerable litigation had been feared, thus far only one carrier has appealed to the courts from the Director-General's decision, and it is now thought that there will not be more than half-a-dozen railroads unable to agree with the Government in adjusting their claims, and perhaps fewer. From the financial showing already made it is quite evident that no further appropriations by Congress will be required to complete the settlements. On the contrary, it may be anticipated, the Director-General says, that after all the Government's liabilities of whatever nature arising from federal control and operation have been liquidated, the Railroad Administration will be able to return to the Treasury Department approximately \$400,000,000 in cash and collectable obligations of solvent companies.

From statistics now available of the foreign trade of Canada and of the United States for 1922 Canada seems to have supplanted the United States as a wheat exporter. Our neighbour on the North actually exported more wheat, although the Canadian crop was less than half that of the United States. The exports of wheat, including flour in terms of grain, from the United States and from Canada in 1922 and 1921 compare as follows:—

	U.S.	Wheat, Bush.	Flour, Bbls.	Total as Wheat, Bush.
1921	280,057,601	..	16,800,805	.. 355,661,223
1922	164,691,565	..	15,044,628	.. 232,302,391
Canada.				
1921	146,855,156	..	7,278,001	.. 179,606,160
1922	209,339,225	..	9,484,725	.. 252,020,467

Values of these exports from the two countries in the same years were as follows:—

	U.S.	Wheat.	Flour.	Totals.
1921	433,053,336	..	117,698,225	.. 550,751,561
1922	206,338,408	..	85,482,851	.. 291,821,259
Canada.				
1921	214,604,099	..	60,110,059	.. 274,714,150
1922	246,029,977	..	56,277,992	.. 322,307,969

The increase in Canadian exports was due to larger shipments, which offset much lower prices. Canadian exports in bushels gained 40 per cent., while the value increased only 17.5 per cent. American exports of wheat fell off 34.6 per cent. in quantity and 47 per cent. in value.

FRANCE.—BUDGET DEBATE—CARNETS DE COUPONS—MONEY AND INTEREST RATES—STATE REVENUE—RUHR FINANCE—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, February 21.

THE Chamber yesterday began the discussion of the recommendations put forward by the Finance Commission of the House for the purpose of balancing the Budget for 1923, but it has already become clear that there is little hope of some, at least, of these proposals (which I detailed last week) being adopted, and that yet another effort will have to be made to get rid of the estimated deficit of over 3,500 million francs disclosed in that part of the Budget Bill that has already been passed by the Chamber. The crux of the problem with which both the Finance Commission and the Chamber itself are struggling is to balance the Budget without having to impose any new taxation worthy of the name, and without recourse to further borrowing, in view of the strong opposition throughout the country against any increase in fiscal burdens. The Finance Minister, M. de Lasteyrie, announced early last

year that he did not intend to propose any additional taxes or any new loan. As a natural consequence, he presented estimates showing an enormous deficit, which he left to the nation's elect to consider. The Minister, as I have already set forth, has since been compelled to put forward proposals for an increase in the bulk of the existing taxes by 20 per cent., but this the Finance Commission (and the country at large has shown its entire agreement with that body) has emphatically refused to consider. The proposals that are now under discussion are stigmatised by experts, such as M. Edmond Théry, for instance, as "fiscal follies," which "have the double inconvenience of being practically unrealisable and of upsetting the mind of all taxpayers, both large and small."

The Chamber yesterday devoted most of its time to considering the proposed creation of what is known as the *carnet de coupons*, from which its real author, M. Bokanowski, the Commission's *rapporteur*, estimates a yield of 700 million francs during the present year. M. Emmanuel Brousse, one of the acknowledged financial experts in the Chamber, hit the nail on the head at the outset by insisting that if this project is approved by the Chamber it will be equivalent to a defeat for the Government, as M. de Lasteyrie is strongly opposed to it, while if it is rejected the work of balancing the Budget will have to begin over again. His argument that the real remedy was to be found in ruthless cutting down of expenditure received the warm approval of a large portion of the Chamber.

The unfortunate *carnet de coupons* was assailed from every quarter of the House. It was pointed out that French taxpayers would never admit of the use of such a vexatious and inquisitorial device, that the banking world is unanimously opposed to it as unworkable, and that even if it is brought into existence it will still be quite easy for astute holders of interest-bearing scrip to deposit it in foreign banks, out of reach of the French fisc. In this connection it was pointed out that the Chamber, some months ago, unanimously passed a resolution proposed by the Finance Minister for the institution of rigorous international legislation for the express purpose of preventing evasion of this kind referred to (although it was admitted that nothing further had been done to bring the proposal into practical form). The success of the debate, so far, has been M. Bonnefous' proposal for the issue of a "lottery loan" of four milliards. The author of the suggestion pointed out that in 1921 39,350,119,000 of the French savings were invested in new issues in this country, and 15,298,000,000 (in spite of the economic crisis) during the first quarter of 1922, from which he argued that there could be no question but that the money would be forthcoming for a lottery loan of the kind proposed, which he suggested should be redeemable by half-yearly instalments, in 20 years. The scheme comprises 16,120 "prizes" to a total of 23 million francs every year.

In spite of many reports to the contrary, the Finance Minister, by a decree promulgated on February 15th, has raised by $\frac{1}{2}$ per cent. the rate of interest payable on short-term Treasury and National Defence Bonds (which, it may be recalled, was reduced to the same extent some few months ago). The average return from interest-bearing securities in France, which dropped to 6.02 per cent. in July last, rose again to 6.41 per cent. in October, and to 6.59 per cent. in November. The Minister points out that he has merely followed the fluctuations in the price of money, and that the new measure is only of a temporary character, as the rate will be again reduced as soon as circumstances permit. Another reason, of course, is the desire to stimulate the sale of the new issues of these bonds, for the purpose of providing ready cash, both to pay off the heavy amount that will mature for redemption in the near future and for other pressing purposes. There has been a strong desire here, particularly on the part of the great banks, that the Bank of France should simultaneously raise its discount rate. The Governors, however, in spite of the strong support given to the proposal, have formally decided not to change the existing rate.

Meanwhile, M. de Lasteyrie has every reason to be satisfied with the manner in which the revenue is continuing to come in. The returns published this week show that the yield from indirect taxation during January reached the record figure of 1,512,096,000, or more than

100 million francs more than the Finance Minister's Budget estimates for the month, and 180 millions more than in January last year. Direct taxation during the same month produced 375,180,400, which was also considerably in excess both of Budget estimates and of the receipts for the corresponding month of 1922. If to these figures be added the yield of 136,415,000 received from the tax on war profits, liquidation of war stocks, and other exceptional sources, it will be seen that the total revenue for January reached 2,023,692,300. The revenue from normal taxation during the month amounted to 243,193,200 above Budget estimates.

Although little that is definite has been allowed to become public on the point, inquiries show that one of the principal objects of the visit of the Belgian Premier, M. Theunis, to Paris to-day is to confer with M. Poincaré on the subject of the creation of a special currency for use in the Ruhr and the occupied area of the Rhineland. What is known is that leading officials of the Bank of France, the Bank of Belgium, the Banque de l'Union Parisienne, and other experts have been studying this question for some time, and that there is a great probability that a new currency will be created that will have for standard a new thaler of a rather lower value than the old coin of that denomination, which was worth 3 marks, or 3f 75c, at the old rates of exchange. I understand that a special Franco-Belgian bank will be organised, having behind it the guarantee of both Governments, and that, whatever form the new Ruhr currency may take, it will be based on a gold deposit. The proposed new and special bank of issue for the occupied area, it is proposed, shall be for the Ruhr and the Rhineland what the Bank of France is to this country. Once the bank is established, orders will be issued that all banking and trading accounts shall be established in the new money.

The French foreign trade returns for January, although they show a substantial increase in both exports and imports, as compared with the corresponding month of 1922, nevertheless disclose a serious falling off under both headings, in comparison with December. They also indicate that, since the French entered the Ruhr, the foreign trade of the country has fallen to a lower level than that recorded for some months previously. The bulk figures for each of the past seven months are given below for the purpose of comparison:—

	(In Thousands of Francs.)	
	Imports.	Exports.
1922—		
July	1,995,746	.. 1,433,042
August	1,959,729	.. 1,676,314
September	1,893,121	.. 1,741,062
October	2,108,272	.. 1,937,467
November	2,348,245	.. 1,706,499
December	2,923,256	.. 2,778,947
1923—		
January	2,144,294	.. 1,695,898

It must be remembered that December was, for several reasons, an entirely exceptional month, and it is probable that the figures for that period were swollen by arrears that ought properly to have been included in those for previous months. The January returns, compared with those for the corresponding period of 1922, are as follows:—

	(*Thousands of Francs.)		
	January, 1922.	January, 1923.	Inc. or Dec.
IMPORTS—			
Foodstuffs	345,888	457,976	+ 112,088
Raw materials	869,205	1,374,222	+ 505,017
Manufactured goods	244,433	312,096	+ 67,663
Totals	1,459,526	2,144,294	+ 684,768
EXPORTS—			
Foodstuffs	132,530	187,004	+ 54,474
Raw materials	383,447	434,786	+ 51,339
Manufactured goods	864,009	944,740	+ 80,731
Postal parcels	63,432	129,368	+ 65,936
Totals	1,443,418	1,695,898	+ 252,480

The notable increase in the imports of raw materials and in the exports of manufactured goods are the outstanding features of the returns. Comparison with previous months' figures show that the balance of trade against this country was increased on the month to 448½ million francs, as against 144 millions in December, 642 millions in November, 171 millions in October, and only 16,000,000

National Bank of Commerce in New York

President

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

in January, 1922. The influence of the high foreign exchange rates on French foreign trade may be gauged from the fact that, whereas the value of the merchandise imported last month was nearly 47 per cent. higher than in January, 1922, the tonnage was only 22 per cent. greater.

Detailed figures are now available showing how French foreign trade was distributed among the various countries of the world during 1922. The total imports amounted to 21,613,535,000, as compared with 19,654,921,000 in 1921. The total exports were to the value of 17,525,628,000, as compared with 17,121,609,000 in 1921. The following table gives the detailed figures of the exports to and imports from the principal countries interested in French foreign trade during 1922 and 1921 (except in the case of certain countries in respect of which the figures were not published for 1921):—

	(In Thousands of Francs.)			
	Imports.		Exports.	
	1921.	1922.	1921.	1922.
Sweden	..	399,512	..	73,961
Norway	..	134,879	..	45,340
Great Britain	3,038,915	3,403,146	3,179,375	3,865,538
Germany	2,163,019	1,299,036	1,876,942	1,761,788
Saar	..	653,180	..	314,098
Holland	..	700,012	..	380,853
Belgium	1,788,886	1,725,842	3,249,907	3,796,098
Switzerland	464,733	537,582	1,092,498	1,099,121
Spain	477,064	350,231	562,660	520,434
Czechoslovakia	..	291,170	..	45,876
Italy	568,719	803,960	685,650	748,423
Japan	..	409,677	..	110,160
United States	4,065,466	3,853,618	2,192,815	1,972,889
Brazil	451,518	470,025	165,422	153,333
Argentina	595,912	792,739	270,666	300,433
Canada	..	162,969	..	113,331

The total French imports from French colonies and protectorates amounted to 2,287,066,000 in 1922, as compared with 2,412,987,000 in 1921, while France exported

goods to these colonies and protectorates in 1922 to the value of 3,116,368,000, as compared with 2,650,003,000 in 1921.

GERMANY.—RUHR—MARK EXCHANGE—PRICES—FINANCES—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, February 20.

THE French still fail to make any headway against the passive resistance of the Ruhr officials and population; they are resorting increasingly to attacks upon single individuals and to violations of private property rights, and they adopt methods which are not allowable in actual warfare, and are not habitually practised even in the most embittered wars. As there is no likelihood that these methods of terrorism will succeed, the prospect is the slow destruction of the Ruhr industries and the impoverishment of the people, against which France will gain less than no advantage.

The raising of the mark exchange by Reichsbank intervention is regarded here with mixed feelings, and a controversy is raging as to how far, and with what means, the same policy should be pursued in future. The business classes foresee great difficulties. The only mark recovery of equal dimensions since the Armistice (the fall in the dollar from 104 to 35 in early 1920) was followed by months of depression, with difficulty in exporting and in home selling, the closing down of many factories, and a great increase of unemployment. For a short time the prices of many commodities exceeded those of the world market, and activity revived only late in the year when the mark again fell. The mark recoveries of late 1921 and late 1922 were less pronounced, and world market gold prices were not exceeded at home. Since 1920 manufacturers and exporters have generally held that active measures by the Reichsbank should be confined to holding the mark if possible at its level of the day, and it was believed that even for this the bank would never have the necessary resources. The bank's policy this time seems to have succeeded too well, owing to the fact that the intervention took place immediately after a more than normally rapid fall, when, judging by precedent, a reaction would have come without any intervention. With the present price-level the dollar at around 20,000 marks is considered too low. Oscillations in the exchange, which go too far in one direction, are, however, not successfully cured by violent oscillations in the other direction, and the present expectation is that the Reichsbank will attempt to maintain the present level. The Government is considering a home gold loan of an amount unofficially stated at 200 million gold marks. Some newspapers press the Reichsbank to continue intervention with the aid of part of its gold reserve, which at present exchange is worth about 5,000 milliard paper marks, or slightly over double the note circulation; but this policy, which until now the bank has opposed, is strongly condemned in other quarters. The gold reserve, it is true, is dormant, and since the bank's obligation to secure part of its circulation with cash was suspended two years ago, the gold has not even a theoretical use. The opponents of the plan claim that the intact reserve has a great psychological value, and that further it will serve as a foundation for a new currency. The *Bank-Archiv* points out that the use of gold for buying up marks might drive the mark higher than is expected, so that the success of the policy might involve the exhaustion of the whole reserve. Ultimately, if the mark's exchange were established at about its home value, the continuing inflation, which up till now has had no visible influence upon the exchange, would begin to operate *via* the price-level, and with it the passive trade balance would operate, so that after exhaustion of the gold reserve things might be no better than before.

The price fall has so far been very moderate. This is explained by the fact that in January prices could not keep pace with the mark exchange depreciation. Whereas the foreign exchanges rose about sevenfold, the commodities index rose only about threefold, so that gold prices on the eve of the mark recovery were lower than ever, and the drop of the dollar from about 50,000 to

20,000 only equalised things. In the ten days February 5th-15th the Federal index figure fell from 5967 to 5388, or only 10 per cent., industrial products dropping 2.5 per cent., imported goods 28.7 per cent., and food products, which were not imported are governed by the prices of imports, 16 per cent. The Iron Industry Union reduced hematite only from 779,100 to 775,800 marks per metric ton; but the prices of some other kinds of iron were raised; the Steel Syndicate reduced ingots from 955,000 to 849,000 marks, blooms from 1,068,000 to 949,000 marks, bars from 1,331,000 to 1,183,000 marks, and thin sheets (under 1 mm) from 2,104,000 to 1,870,000 marks; but prices are still 20-30 per cent. above those of the end of last month, when the dollar stood over 100 per cent. higher. On the 18th the index for wholesale commodities stood 11.63 per cent. above the dollar exchange appreciation, and some commodities were well above world market prices. Manufacturers and traders are doing their best to keep prices up, in order to avoid losses and in the belief that the mark exchange will sooner or later again decline. The Prussian Minister of Trade has issued a complaint against this policy. The general effect of the Reichsbank's move has been to introduce a new confusion into business. Business men had got used to the official system of leaving the exchanges alone, and they had a certain system of their own for meeting price risks. Violent intervention without any warning, which makes a new revolution in the values of money and goods, is therefore resented; all the more so because it was a private undertaking of the Government and the Reichsbank.

The floating debt of discounted Treasury bills increased by 334,035,440,000 marks in the first ten days of February, and reached a total of 2,415,672,247,000 marks. Revenue from taxes was 150,309,890,000 marks, which is more than three times the 49,624,836,000 marks received in the preceding period. The maintenance of the new mark level would lead to a great improvement in finances, as most taxes will for a time come in more or less on the basis of lower money values than the present. The Customs gold surcharge has been reduced from 709,900 to 595,400 per cent., but it still exceeds the mark's gold depreciation. The income, property, and succession taxes and the forced loan have been adapted to the new currency level. The deduction from manual workers' wages for income tax from an income of 250,000 marks a month is now for an unmarried worker 20,200 marks per month, for a married worker with two children 11,400 marks. All limits of the progressive rates of the new property tax have been doubled, the annual tax now rising from 1 per mille on the first million marks to 10 per mille on property exceeding 100 millions. The assessments for stocks, which had fallen far below the Bourse values, have been amended by summarily trebling them, the assessments of other values being doubled, with the exception of home fixed-interest securities, house property, and other property on a paper mark basis. The limits for the different rates of the succession tax have been doubled. The new forced loan rates are 1 per cent. from the first 400,000 marks, 2 per cent. from the next 600,000 marks, and so on up to 10 per cent. on wealth exceeding 4,000,000 marks. The official *Wirtschaft und Statistik* estimates the nominal gold mark value of foreign securities held by Germans at 2,157 million gold marks. As held on August 23, 1916, there were registered at the Reichsbank 16,248 millions. Of these, in 1916-19 there were exported an estimated 6,180 millions; taken and sold by the Federal Government for purposes of payment for imported necessities in 1917-19 were 832 millions (mostly Russian, Austrian, and other low-exchange securities); expropriated in enemy countries 3,887 millions; delivered under the Peace Treaty 792 millions; exported between April 1, 1919, and December 31, 1922 (estimated), 1,000 millions; and unsecured Austro-Hungarian pre-war loans 1,400 millions.

The Deutsche Bank announces the increase of its capital from 800 to 1,500 million marks, of the increase only 300 millions being put on the market, while the remaining 400 millions will be held by a syndicate, apparently with the aim of preventing foreign attempts to gain control. The Bourse has been heavily reactionary, without, however, experiencing anything like the panic which overtook it at time of the mark exchange recovery of November-December, 1921. The *Frankfurter Zeitung's* index for home

dividend payers shows 963,965 on February 16th, against 1,567,265 on the 9th, and 1,276,315 on the 2nd, while home loans fell during the week from 8,538 to 6,607 (6,605 on February 2nd). Home stocks now average about 35 times higher than at the beginning of 1922. The Bourse yesterday had a considerable recovery, caused by rebuying by speculators who got out near the top, and most home loans also rose, but the speculative favourites, Colonial Fours and Federal Threes, are still well behind their highest level of the year. Quotations were War Loan 91, Federal Fours 1,090, Three and a-Half 660, Threes, 4,500, Colonial Fours, 12,000, Savings and Premium 300, Prussian Threes 395, Hamburg-Staats-Rente 475, Berlin Fours 1,904, Ser. 2, 190. Forced Loan, which has now been quoted for a week, but is little dealt in, has sold at 40 to 48, and yesterday rose to 60. The new "wertheständig" local loans in terms of coal, wheat, &c., have been well subscribed.

The largest gains this year have been made by shipping stocks. Hamburg shipping in both directions in January exceeded that of January, 1913, arrivals being 1,142,472 net tons, against 1,075,055 tons, and departures 1,104,392 tons, against 1,108,489 tons. Bremen's shipping has also recovered, arrivals in January being 342,415 tons, against 282,568 tons in January, 1922, and 362,915 tons in January, 1914; departures 352,352 tons, against 260,083 and 370,877 tons.

DENMARK.—LANDMANDSBANK RECONSTRUCTION—STATE GUARANTEE—ECONOMIC CONDITIONS—AN EXCHANGE CONFERENCE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, February 15.

THE third phase of the reconstruction process of the Landmandsbank has been completed. The writings off considered necessary last summer and in September proved insufficient, and in compiling the annual balance-sheet of the Bank additional heavy losses had to be taken into consideration. According to the latest, very careful, compilation, the losses have been increased so as to show an amount of Kr.137,000,000 written off on large special engagements, Copenhagen and provincial branches, and engagements in the shares of the Bank itself. Further, Kr.13,800,000 have been lost on more ordinary bank advances, Kr.56,100,000 on stock exchange engagements, Kr.22,100,000 on bonds and shares in hand, and Kr.2,700,000 on the "Hypothek" branch of the Bank. This makes an aggregate of Kr.231,900,000, which is Kr.47,700,000 more than was presumed at the September reconstruction. Of the final increases, the majority comes under the heading Stock Exchange Engagements, for which the amount to be written off was computed in September to be Kr.34,000,000, while mainly owing to further decline of the quotations it has now been necessary to write off about Kr.56,100,000. The writings off on engagements with the five stock exchange firms in liquidation now amount to Kr.24,500,000, of which the share of one firm amounts to Kr.17,000,000.

As previously mentioned in this paper, the principal cause of the very serious difficulties for the Landmandsbank has been the relation to the Transatlantic Company and its numerous affiliated companies all over the world—which fact also appears from the legal investigation now in progress. The total loss in this concern—apart from the Russian interests—has now been computed to be Kr.132,000,000, and on the claims of the Bank on these companies the total amount written off in 1922 is about Kr.52,000,000. These writings off in connection with the loss to be borne by the share capital of the Transatlantic Company—Kr.30,000,000—and those of the shares in the affiliated companies which are in foreign possession, in addition to the amount credited the Transatlantic Company in respect of the so-called "Recoil Rifle Rights," as well as previous writings off, will fully cover the total loss.

When the above final writings off, totalling

Kr.232,000,000, are taken into consideration, the accounts do not show cover for the reserve fund of the Landmandsbank and for Kr.31,500,000 of the preference capital of Kr.70,000,000. As the losses have encroached heavily upon the means provided by the September reconstruction, further action was deemed imperative.

Accordingly, the new board and the bank inspector declared that a guarantee—which might be considered fully effective—could only be arrived at through the grant by the State of a full guarantee for the depositors and creditors of the Bank for a certain period. The bank inspector maintained in his report that otherwise the liquidation of the Landmandsbank would be unavoidable and that this would mean increased loss for the Bank and incalculable difficulties for the trade of the country. These views were immediately accepted by the Government, and after a debate lasting about two days the full State guarantee, valid until April 1, 1928, was passed by the Rigsdag. Before the Bill was presented and passed rather considerable withdrawals of means were made from the Landmandsbank, and this had to be met by advances by Nationalbanken. As might be expected, however, the unlimited guarantee has effected perfect reassurance, the business of the Bank is working smoothly, and two of the other leading banks, who had their cash in hand increased out of proportion, have a few days ago shown their appreciation of the arrangement by depositing in current account with the Landmandsbank an amount of Kr.75,000,000.

During the coming years the Landmandsbank will adjust its business all over the country in accordance with the new conditions. Its dominating position is a thing of the past, but it is universally acknowledged that the basis of the activity of the Landmandsbank—its far-reaching normal bank-functions—is an asset for the country as a whole. It was this asset which it was intended to save, while, at the same time, the necessary safety for the depositors and creditors of the Bank has been created by the intermediary of the State.

Otherwise there has been no important change in economic conditions. There are, however, indications of an impending rise of prices, also owing to the foreign exchange situation. The last wholesale price index showed a not inconsiderable rise, and the index of the cost of living for the first week of January was only 1 point below the figure for July, 1922, which was 199. Subsequently the prices of several classes of goods have undoubtedly been increased.

During the last few days the problem of the rise in the foreign exchange quotations and their wide fluctuations has been taken up for discussion by a joint committee of representatives of the merchants and the banks. Negotiations, however, are still at a preliminary stage, and it is not yet possible to say whether any measure for intervention can be agreed upon.

NORWAY.—BANKING IN 1922—BUDGET—INCREASED CUSTOMS DUTIES—ARBITRATION COURTS—INDUSTRY, STOCK MARKETS, AND EXCHANGES.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, February 16.

ALL the principal private banks and savings banks of this country have now published their accounts for 1922. The results, on the whole, are better than might have been expected. The gross revenues in most cases have been reduced, but so have expenses. Apart from the regular trading of the year, there has been very heavy writing-down of losses incurred mainly in consequence of transactions entered into during the war and the first post-war years, to meet which in several cases recourse has been had to the reserve funds. A distribution of 10 per cent. dividend generally has been made. It is confidently hoped that, although, no doubt, very considerable losses have still to be written off, the banking and general business life of the country has passed through the roughest part of the sea it has to sail.

The Storting, which has recently reassembled, will have a very hard task in coping with present financial problems. The Budget now put before it by the Government amounts to about 546 million kroner (ordinary about 494 and extraordinary about 52 millions), which is about 76 millions less than the total of the previous Budget. After deduction of various amounts that are covered by receipts the real net ordinary Budget amounts to 300 millions. The reduction is still considered too small, and urgent appeals to the Storting are made to curtail expenses far more drastically. The ordinary pre-war Budget (for 1913) totalled 139 millions. The amount of the Government debt is about 1,400 million kroner, the service of which absorbs 57 millions. Balance in the Budget is obtained by the Government partly through some altered arrangements of the taxes, and partly through a general increase of all Customs duties of 20 per cent., excepting only such rates of duty as are fixed by treaties with foreign powers, and those on coffee and sugar.

In the last few years a provisional Act has been in operation by which any dispute between employers and employees, if conciliation by negotiations between the parties had proved abortive, was to be settled with a binding effect by a Court of Arbitration. Neither of the parties mostly concerned have liked the Act. Besides, the very fact of the existence of the Court has made almost any attempt at amicable conciliation and settlement quite hopeless. The Government are, however, of opinion that the provisional Act has operated in a salutary manner, and, therefore, have now put before the Storting a proposal for definite legislation regarding the Court of Arbitration. Meanwhile, wages, where they are not fixed by the said Court (generally so high as to be out of proportion to what they are, e.g., in Sweden), are slowly going down, which is also the case of the cost of living, though more slowly still. The abnormal state of middle Europe has a detrimental influence on the state of the wood market, and the paper market also is having a difficult time, with falling prices. Wood-pulp, on the other hand, is improving, and circumstances of various kinds seem to point to continued and even increased prosperity of this particular market.

The stock market this week has been quite lively. Banking shares have been the main feature, and prices have been generally maintained. The exchanges have been constantly moving, though within rather narrow limits. As a special feature may be noted that the Norwegian and Danish kroner, after years of considerable differences in the favour of the Danish krone, have come very near to—and for some days even reached—par, that is to say, the pound sterling has cost as many kroner as was in Copenhagen as in Christiania. After a long spell of mild weather, very severe frost has set in, and some mills—notably wood-pulp mills—have had to shut down for lack of water.

BULGARIA.—AGRICULTURE—CURRENCY SHORTAGE—BUDGET—NATIONAL DEBT—OUTLOOK.

(FROM OUR CORRESPONDENT.)

SOFIA, February 8.

AGRICULTURAL production has always been the basis of Bulgarian economic life, and the situation at present is on the whole satisfactory. The yield of the principal crops in 1922, compared with that of the previous year, was as follows:—

	(In Million Quintals.)	
	1921.	1922.
Wheat.....	11,569.3	9,346.7
Maize.....	8,734.4	4,254.4
Barley.....	2,882.8	2,626.0
Rye.....	2,131.1	2,225.4

The tobacco crop of 18,471,000 kgr. showed a decided improvement on that of 1921 (15½ million kgr.), while the cereal crop generally was considerably better than in most of the Danube lands.

The prospects for 1923 are encouraging. In spite of the delivery of live stock to the neighbouring States, which has been carried out according to the terms of the Treaty of Neuilly, and in spite of the great rise in prices (a pair of oxen now costs 20,000 leva as against 1,000 leva in 1914), agriculturists have for the most part succeeded in obtaining sufficient animals for their most urgent needs. Moreover, the supply of agricultural implements has now been made good, and there are welcome signs that mechanical reapers and binders are gradually being introduced in districts where their use was previously unknown. There has been practically no progress, however, in the introduction of artificial manures, or of improved seed; and there can be no doubt but that the operation of the law of May 12, 1921, limiting the maximum holding of a family of two adult persons to 3 ha. (approximately 7½ acres), has restricted the initiative of the larger proprietors in this respect. Whether the co-operative societies will make good this deficiency time alone will show.

The reduction in the area put down to cereals is largely due to the increase in the cultivation of tobacco, which is now one of the principal articles of export. Essence of roses, with a production of 2,000 kgrs. in 1922, is made exclusively for export; and the lucrative nature of this crop gives grounds for anticipating a still further increase in production this year.

The Bulgarian peasant is very thrifty, and his savings are used for the most part in improving his farm. Unfortunately, however, he distrusts bank deposits, and prefers hoarding. The restriction of credit facilities and the fluctuations of the exchange combine with hoarding in making the currency position one of extreme difficulty; and credit institutions suffer enormously, as their resources have diminished considerably, instead of increasing, with the depreciation of the leva. It is almost impossible to obtain credit under these conditions, and the rate of discount has risen in practice to between 18 per cent. and 20 per cent. This monetary crisis threatens to increase in intensity, and will almost certainly contribute to a further rise in prices, strange though this may seem from the theoretical point of view. Unfortunately, this position makes living very burdensome for Government officials and the salaried class generally; and the situation of the public finances will make it practically impossible to do anything to ameliorate their lot in 1923.

Variations in the rates of exchange form a further serious hindrance to trade. The quotation for the £ in Sofia, for example, moved from 563 leva on December 11th last to 688 at the end of the year, with a further appreciation to 762 on January 30th. Serious business is naturally very difficult under such circumstances.

The budget showed a considerable deficit last year. The actual figures for the period January 1st to December 31st were:—

	Leva.
Expenditure	5,025,123,884
Revenue	4,066,335,187
Deficit	958,788,697

In the expenditure are included the various expenses connected with the maintenance of the Reparation Commis-

HARRISONS & CROSFIELD, LTD.,

1-4, GREAT TOWER ST., LONDON, E.C.3.
EASTERN AND GENERAL MERCHANTS.

The Company offer the services of a world-wide organization to manufacturers and others desirous of establishing new connections.

The banks ascribe this heavy rate to the growth of their balances in London arising from South Africa's paucity of imports in recent years. Formerly it was possible to adjust balances by shipment of sovereigns, but that course was prevented by the premium on the metal. Before the war the exchange was not an important factor, and even as recently as December, 1919, the Chamber of Mines expressed the opinion that "the rate should not exceed 8s 3d per cent. for telegraphic transfer, and 12s 6d per cent. for sight drafts."

Mr Buckle, the President of the Chamber of Mines, at the recent quarterly meeting, though refraining from commenting on the charges made by the banks, complained that the South African Railways, while making reductions on certain classes of freight, had given no relief to gold producers. The industry, he declared, paid the railways about £25,000 a year for carrying 360 tons of gold from Germiston to Cape Town—i.e., approximately £70 per ton. But it seems a trifle futile to talk of a "ton" of gold, and more so to compare this rate, not perhaps, with the £36 charged for silver, but with the 34s 5d charged for the transport of mealies and wheat, and the 21s for coal. The world over railways "take it out of" the gold mines, in conformity with the principle of charging "what the traffic will bear." It would be as unreasonable to expect the railways to charge the same rate for high-class silks as for the coloured cotton prints for native wear. But to be fair to the S. A. Railways, it is worth pointing out that they are more moderate in their charges than those of the next greatest gold-producing centre in the Empire, Western Australia. There the rate is based on a unit of 100 ounces. It is true that, the volume of traffic is not so great as between the Rand and Cape Town, and possibly the cost of running the railways is higher—coal in particular would be more expensive. The rate for 1,000 miles, a similar distance to that between the Rand and Cape Town, in Western Australia is 24s 9d per 100 ounces. In a colonial or short ton of 2,000 lbs (Troy) there are 24,000 ounces, or 240 times the Western Australian unit, and, on the rather grotesque, if "popular" ton the charge would work out at no less than £297, or over four times that obtaining in South Africa. It is understood that the local railway charges include escort expenses, whereas in Australia a charge of actual cost plus 20 per cent. is added for this service.

The President of the Chamber said that notwithstanding the fact that freight charges for practically all classes of goods had been greatly reduced during the war and immediately after, the Union Castle Company had recently demanded an increase of a little more than 50 per cent.—i.e., from 4s 3d to 6s 6d per cent. for gold freight. The Chamber had been unable to find any reason to justify this heavy increase. The amount of gold forwarded annually is about 8,000,000 ounces, say, with packing 360 tons. The cost of transport from Cape Town to London is about £150,000, and therefore the rate per ton is £371. For silver the charge would be £25 8s 2d, for wool £3 15s; for base metals, copper, £2 7s 6d, lead £1 12s 6d, while among agricultural products mealies go for £1 2s 6d and wheat for £1 7s 6d. In this connection it may be pointed out that the rate on mealies represents 12½ per cent. of the f.o.b. value of about £10 per ton at the port, or nearly forty times that charged on the value of the gold! So the farmers may be complaining next.

SOUTH AFRICA.—RAND GOLD REALISATION COSTS—EXCESSIVE CHARGES.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, December 20.

THE cost of realising the Rand's gold is an expensive matter, but the mines should be relieved of these heavy charges when, owing to the metal falling to standard price, namely, 85s per fine ounce, it will be practicable to sell the gold to the Treasury or the Central Reserve Bank at Pretoria, as may be the procedure decided upon, for gold certificates which would be readily convertible into currency notes. Naturally one would prefer a substantial premium on the metal, and to pay the incidental charges, but it is some consolation to know that if the premium has disappeared, now virtually the case, the charges (as now involved in selling gold in London) will also have diminished.

The Rand mines produce gold to the value of about £40 millions a year, of which it is officially calculated over £30 millions in value must be brought back from Europe to meet the cost of production. The banks have continually raised their rates of exchange; on December 9th the T.T. buying rate on London was 3 per cent. discount, and the sight rate 3½. The premium on remitting to London is 2½, and, for amounts of over £500, 2½ per cent. The margin thus ranges from ½ to 1 per cent., which is distinctly high. At the present time the banks charge the mines for exchange an amount which is equal to £675,000 a year. In consideration of their refraining from exchange operations outside the banks, the latter give the mining companies a special rate ½ per cent. below the current quotation to the general public. The present rate is, of course, abnormally high, but, be that as it may, it represents just over 6d per ton of ore milled. It is pointedly remarked that "when these few pence are added to mining costs from all directions they amount to a figure which makes all the difference between very large bodies of ore being transferred from the payable limit to the unpayable, with great disadvantage to the country and shareholders."

could have been sent by post (adequately insured, of course, by separate policy) for something like 5s.

It is undoubtedly excessive that the present cost of realisation one way and another should be at the rate of upwards of a million a year, or not very far short of the entire profit for November. It is to be expected that the Government, the mining companies, and the banks will make urgent representations to the shipping companies to reduce freight rates, whether for unmanufactured gold or for sovereigns, and to Sir Owen Philipps, chairman of the Union Castle Line, on his forthcoming visit to South Africa in connection with negotiations for the renewal of the mail contract. But Sir Owen, on his part, will be able to argue that the railways have greatly increased their tariffs on the bunker coal required for his ships (though such charges since have been reduced), and that the banks are making considerably more out of Rand gold for mere book entries than his company is doing for a definite and not inconsiderable service.

While on this subject of gold realisation, one may conveniently allude to the Rand Refinery, which in June was dealing with the whole output. Its capacity is sufficient to cope with the whole of the gold produced in South Africa, and it is hoped that producers who were not members of the company would send their gold to the refinery, a mutually advantageous course. It is understood that the Rhodesian mines prefer to keep to the old methods of realisation, namely, selling to banks and refining in London. The gold is now boxed and railed by the refinery. It is proposed to use its own vehicles to collect gold from the mine offices, superseding the present system of the mines sending their gold to the nearest station for transport by railway. The gross profit last year was £7,800, but this was converted into a loss of similar amount by provision for a full year's interest. In a year of normal production (it dealt with only 64 per cent. thereof owing to the strike) the refinery is expected to show substantial profits on the existing scale of charges. Bars under the trade mark of the refinery were being dealt with in India, and presumably were in circulation in other countries abroad.

Letters to the Editor.

GREAT BRITAIN AND IRAQ.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Tuesday's debate has shown that we cannot contemplate either withdrawal from Iraq or even that immediate and drastic curtailment of our commitments demanded by the Liberal amendment to the Address. Even if Turkey ratifies the Treaty of Lausanne, we must see whether the Ankara Government can prevent frontier incidents and cut off aid from her subjects to conspirators against the Arab State. We are bound by our promises to the Arabs during the war to prevent the restoration of Turkish rule. We are bound by the mandate of the League of Nations to maintain and advise the existing Arab Government until it can stand alone. We have supplemented this obligation by the Treaty with King Feisal, now awaiting ratification. If the Arabs reject it, we can only leave after negotiations safeguarding them from Turkey and protecting our position in India and our trade in the Persian Gulf. If, as is probable, the Treaty is ratified, we shall be bound to remain for 20 years, and thereafter till Iraq can stand alone. The rising of 1920—pace Mr Asquith—was set up not so much by the elaborate administration established by Sir Arnold Wilson as by the apparent contrast between its working and the British promise of an independent native Government. It was the outcome of impatience and misunderstanding worked on by Muslim fanaticism and tribal feuds. And it scared the wealthy Baghdadis so thoroughly as to check their militant nationalism. Meanwhile, British administration has saved several thousand Arabs annually from death in tribal conflicts, and their produce from local tolls resembling those levied by the mediæval robber-barons on the Rhine. It has constrained the tribes to cooperate in local irrigation works for their joint benefit, and so greatly increased their crops and wealth. The increased direct taxation is only pro-

portionate to this increase. Our army has left them with some 700 miles of railways, supplemented recently by a line from Baghdad towards Kerbela, financed by the native Government. The railways are welcomed by the sheikhs, and will carry a large pilgrim traffic to Kerbela and towards Najaf from all parts of Iraq and from Persia, and probably hereafter a large cereal freight for export from Basra. Our political officers, now "advisers," have done what the Turks never did, and what the Nationalists could not have done unless they had been shown the way. And the Baghdadi Nationalists are being brought into contact with the tribesmen, and both are losing their reciprocal ignorance and distrust.

Two popular European and American delusions were finally disposed of by the debate. Tribes are not bombed because they are in arrear with taxes; a tribal rising involves non-payment, but it is the more active manifestations of hostility that are met with bombs—the most expeditious method, and, on the whole, the most merciful. And we are not there for the oil. Were we to leave, the wells and the pipe-line would doubtless be protected by subsidies to possible disturbers, as in Persia and Mexico. Were the Turks to get Mosul, a company subsidiary to the Anglo-Persian holds a pre-war Turkish concession, and, since the pact with rival American interests, there is no likely competitor. And if the mandate was first offered to the United States—presumably in conversation at the Versailles Conference—Great Britain from the first has freed herself from suspicion. Iraq has cost us £150,000,000, but the period of extravagance is past. Of the £11 millions in the Supplementary Estimate, nearly ten is for defence against the Turks. Of the remaining £463,000 for the railways £129,000 represents purchases of stores from the Disposal Board—an avoidance of a heavy loss—and of this £69,000 represents a re-vote. Then £310,000 covers the deficit on working for 1921-22, and half of it will eventually be repaid by the Iraq Government. The railways now are paying working expenses; further capital expenditure may be needed, but it will be profitable by and by. Cheaper fuel oil will come from Mosul; and the Tigris is difficult to navigate and incredibly tortuous, so river competition is improbable save for slow and bulky traffic. If all goes well Iraq in a few years may be coming to London or New York for a loan.—I am, Sir, your obedient servant,

AN OPTIMIST.

REPARATIONS AND EXCHANGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Is it not time that some effort should be made to separate the two problems of Reparations and the exchanges? Hitherto they have been inseparably linked together. Germany has been looked upon as the keystone of financial Europe, and the failure to find a definite basis of agreement between the Republic and the Allies has left the more general question of exchanges somewhat in the air. Agreement regarding Reparations has now become impossible, or at least has been indefinitely postponed. France, with some assistance from Belgium and the moral support of Italy, is acting alone. England has taken up an attitude of dignified protest, while America is more of a spectator than ever. It is evident, therefore, that no progress towards world reconstruction can be made by conferences on Reparations. Before such conferences could again become useful France must have become convinced of the futility of the forceful methods to which she has committed herself. The recognition of this fact, however, should not mean that efforts to stabilise the world's currency must cease. Indeed, with the indefinite postponement of Germany's restoration to economic soundness there seems even greater need than before to bring the nations surrounding her into monetary agreement. Stability of exchange is the great need of the moment. On it depends the full resumption of the world's commerce. Stable exchange is the machine by which international commerce is manufactured. It is the language of overseas trade. To-day the world is a monetary Tower of Babel. Efforts to do business are handicapped, and often frustrated, because there is no common denominator in which the results of negotiations can be plainly understood by all parties concerned. Values which may mean something

to-day become meaningless to-morrow, because exchange rates have changed. Business of any extensive character is therefore impossible.

The world is divided to-day into two sections—those countries which still have their currencies within measurable distance of the gold parity, and those which have lost touch with gold. It is true that some are on the border line. Our own currency is still 5 per cent. below par, while in some quarters the cases of France, Belgium, and Italy may not be regarded as hopeless. For practical purposes, and for any effort that seeks to bring stability within a reasonable period, the division may be made as follows:—

IN TOUCH WITH GOLD.	OUT OF TOUCH WITH GOLD.
America.	France.
Great Britain.	Belgium.
Spain.	Italy.
Switzerland.	Portugal.
Holland.	Finland.
Norway.	Germany.
Sweden.	Austria.
Denmark.	Czecho-Slovakia.
Japan.	Roumania.
Argentina.	Serbia.
	Bulgaria.
	Hungary.
	Brazil.

I the course of the exchange in the countries appearing under the heading "Out of Touch with Gold" during the past year is analysed the serious nature of the position will be realised. Not only, with a very few exceptions, has the depreciation in value steadily continued throughout the year, but the wide variations have been of such a nature as to render the resumption of business relations extremely difficult and dangerous. The following table illustrates this:—

	Parity to £.	1922.		Jan. 4, 1923.
		Highest.	Lowest.	
France (francs)	25.207	47.35	72.65	65.42
Belgium	"	50.15	80.00	70.60
Italy (lire)	"	80.25	117.50	90.60
Roumania	"	420	830	800
Finland (F marks)	"	158.50	244	188.25
Germany (marks)	20.418	695	42,000	37,125
Poland	"	11,000	430,000	320,000
Austria (kroners)	24.02	11,000	89,000	82,500
Czecho-Slovakia	"	118	280	156.50
Hungary	"	2,300	12,000	12,000
Portugal	d 52½ ..	d 5½ ..	d 1½ ..	d 2½
Brazil	15½ ..	7½ ..	6½ ..	6

It is obvious then that the problem facing the world, especially the Old World, is that of stopping this depreciation and variation in exchange values. This problem is one for experts in finance and not for politicians. The politician will have to be called in to administer the remedy if one can be found, but until the needs of the situation are clearly and definitely elaborated he is only grappling with the unknown in his efforts to find a solution. America has tentatively suggested a grand conference of financiers and economists. In that suggestion lies the hope of Europe. No time should be lost in calling that conference together. If such a conference should lead to a Union of European States, pledged to carry through whatever remedies are put forward by the experts, the world will have achieved a real step towards reconstruction.

To-day we are obsessed by the word Reparations. New conditions are now facing us. France has forced our hands in this matter. For the time being Reparations cannot interest us. This leaves us with time and opportunity to study the real problem—that of the exchanges. It is the problem for 1923, and no effort should be spared in solving it.—Yours, &c.,

LONDON.

ONLOOKER.

THE CITY AND MIDLAND BALANCE-SHEET.

TO THE EDITOR OF THE ECONOMIST.

SIR,—On page 192 of your issue of January 27th appears the balance-sheet of the London Joint City and Midland Bank, Limited, which shows the following as one of the assets:—

The London City and Midland Executor and Trustee Company, Limited. Shares, 200,000 of £5 each, £1 paid, plus 10s premium, £300,000. On these shares, therefore, there is an uncalled liability of £800,000.

In the Chairman's speech on page 161 of the same issue he refers to this investment in the following words:—

"You may have noticed that the shares of the Executor and Trustee Company are now shown separately in the balance-sheet. Previously we had included our interest in this company in the entry 'Advances to customers and other accounts,' but the business is expanding so rapidly that we decided to give it special recognition."

It has, therefore, been officially intimated to the shareholders, depositors and the public that previous balance-sheets included under the heading "Advances to customers and other accounts" an investment with an uncalled liability. Such a practice seems indefensible, and surely such an example should not be set by one of the five great banks or assented to by its auditors. In the case of the bank in question every one may accept that the risk at present is negligible, and the investment sound, but the principle involved is important, and through its disregard the public has suffered, as proved in the Farrow's Bank and the City Equitable Insurance Company cases.—I am, &c.,

A CREDITOR OF THE BANK.

LONDON, S.W., February 17th, 1923.

Books and Publications.

STATISTICS OF ESTHONIA.*

THIS book embodies the first two numbers of a monthly publication issued by the Esthonian Statistical Bureau, instituted in 1921. It deals with the demography, agriculture, and commerce of the new nation; but it is mainly of interest as an earnest of future progress. Esthonia means to revive and increase her pre-war share of Russian transit trade, and the through traffic despatched to that country was three-fourths of the total during the first nine months of 1921. Her Government is coping with a house famine, but the relative increase during recent years in wooden buildings indicates the need of rapid construction to make good war damage. The agricultural statistics are full, but hardly up to date; and, except for the numerous figures and diagrams, and some French column-headings and very brief summaries, the book is in Esthonian, which resembles Finnish, but is totally unlike any language of Western Europe. The design and arrangement are excellent, but the Bureau should be less rigidly Nationalist. However, the Irish Free State will publish a statistical abstract some day; and we dare not hope that it will deign to append any translation at all.

TWO NEWSPAPER DIRECTORIES.

Two useful newspaper directories made their appearance last week, both of which possess distinctive features. The first, the Newspaper Press Directory, is compiled and published by Messrs C. Mitchell and Co., Limited, 1 Snow hill, London, E.C. 1, at 5s. It contains 650 pages, and is an excellent five shillings' worth for advertisers and others. This directory has been appearing year by year since 1846, and claims "to have made newspaper and advertising history." The second is the 1923 edition of "The Advertiser's A. B. C." now in its thirty-seventh year of publication, issued by T. B. Browne, Limited, 163 Queen Victoria street. The new volume fully upholds the reputation gained by previous issues of this publication, many of its features being almost indispensable to those who have business with the newspaper world.

* "Eesti Statistika." Recueil Mensuel du Bureau Central Statistique d'Esthonie. Nr. 1-2. Tallinn, 1922.

BOOKS RECEIVED.

Skinner's Cotton Trade Directory, 1923. (London) Thomas Skinner and Co. 12s 6d net.

This is a useful book. Its chief aim is to provide more detailed financial information relating to cotton spinning and manufacturing, and lace and hosiery companies. There are upwards of 3,350 such concerns, a large proportion of which are public companies, and yet comparatively few publish balance-sheets. Notwithstanding the absence of information, a big business is done from week to week in the shares of the cotton companies in particular. Connected with the financial details will be found commercial information regarding each undertaking, such as the nature of the products manufactured, the number of spindles and looms, and the make of machinery used, together with names of directors, managers, &c.

The Third Winter of Unemployment. The Report of an Inquiry undertaken in the Autumn of 1922. (London) P. S. King and Son, Limited. 6s net.

The results of a study of the unemployment problem undertaken in August and September, 1922, by Major the Hon. J. J. Storer, M.P., Professor A. L. Bowley, Professor Henry Clay, Messrs Robert Grant, W. T. Layton, P. J. Pybus, B. Seebohm Pountney, Lieut. Colonel George Schuster, and Mr F. D. Stuart. The book also contains the results of a series of inquiries into unemployment in nine selected localities, and constitute an invaluable contribution to an understanding of the present emergency.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
March 7.	March 8.

The Stock Exchange is a little tempted to complain that there is more tone than trade. Prices are good in most parts of the market, and substantial rises have occurred in some of the leading markets. Subscription lists for good new issues are promptly closed, and premiums develop as soon as dealings start in the stocks. Nevertheless, the volume of actual business is small compared with what it was a month ago. It is surmised that investors have scarcely yet departed from the cautious attitude imposed upon them by the Continental political position. The raising of the Bank rate in New York had an effect as slight as it was transitory.

The War Loan has again been over 101, and its satellites, Victory Bonds, now ex dividend, Conversion, ex dividend yesterday afternoon, Funding, and similar stocks, are mostly under on the week. South Australia's new 5 million loan has checked a previous improvement which had occurred in colonials, but Home Railway prior-charge stocks are better, the demand for debenture and preference issues being persistent.

French bonds, Government and railway, rallied substantially from the worst. In Germany there has been little doing. Turkish Unified spurred on renewed hopes of Turkey taking a sane view of the situation. Better prices in Brazilian and Chilean bonds reflect the absorption of stock by speculative investors, but Chinese issues continue heavy, on apprehensions in regard to payment of coupons on the loans not specifically secured on the Customs.

Home Railway stocks are decidedly good, mild buoyancy developing in the Heavies and in the Undergrounds. The decline of the Welsh miners to work three shifts a day, instead of two, is held as a precursor to cheaper coal and more of it, likely to compensate for the forthcoming cut in railway rates. Canadian and Mexican are unchanged. Argentines, with other railway stocks, have gone ahead, San Paulo being a particular feature of strength. Lord St Davids' speech at the

Buenos Ayres and Pacific meeting served to fortify the market for Argentine Rails. Nitrate rails and nitrate-producing shares are better.

There is nothing doing in rubber shares, interest having ebbed to a low pitch. The oil market is firmer, and conspicuous strength in textiles, on a first-rate Bradford Dyers dividend, stands out as one of the principal items amongst industrials. Courtaulds made another forward stride. The Marconi parent shares improved, though some of the subsidiaries leaned to the duller side. A few motor shares are better, Dunlops, however, being somewhat easier. Amongst electric lighting shares, South Londons rose 22s 6d on a bumper dividend, and the whole of the list is strong. Gas stocks remain firm, with modest rises in the leading stocks. Banking shares are a little better, London and Brazilians being put up to the accompaniment of rumours as interesting as they are nebulous. The insurance market is decidedly harder. Movements in iron and steel shares have been small in extent, confined, as a rule, to rises and falls of 3d to 9d per diem. Tobacco shares are better, buying again setting in after the meeting of the Imperial Company at the beginning of the week. Tea investments have steadily risen. The shipping list remains neglected. Various hotel shares are better.

The Kaffir Circus remains uninteresting, and the few minor factors which have made for more cheerful feeling went almost without notice. The Chartered report had no effect upon the price of the company's shares, unless it was to cause a dullness, owing to the lack of information in regard to what is likely to be done in the immediate future. The company's meeting, however, will no doubt illuminate most of the present obscure points. Rhodesians are but tolerably active. A rise in tin—the metal—has galvanised various groups, Malayan, Cornish and West African, that are concerned with the industry. There is a fair amount of trade doing in the Malayan shares, most of which show rises on the week. Mexicans are disposed to dullness. Rio Tintos spurred to the best price they have attained for several years past, and other copper shares are good, on buying from Paris, supplemented by a rise in the metal. Diamonds have also enjoyed French support. West Australians continue to harden. Colombian mining fell abruptly, and Russian mines are featureless.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

Offer of Conversion to Holders of £5 per Cent. National War Bonds, due April 1, 1923.—Under "Notes of the Week" we refer to this offer.

Government of Victoria 5 per Cent. Inscribed Stock—Issue of £5,000,000 at £99 10s per cent. The proceeds will be devoted to construction of railways and rolling-stock, irrigation works, water supply, and other purposes. Ten shillings per cent. of the amount of stock issued will be provided annually towards the redemption of such stock. The principal is repayable in London at par on October 1, 1942, the Government of Victoria having the option to redeem at par, on or after October 1, 1932, subject to three months' notice. The revenue of the State for the financial year ending June 30, 1922, showed a surplus of £34,938. It is stated that this is the fifth consecutive year in which a surplus has been realised, the aggregate for the five years amounting to £935,000. These results were attained without any increase of taxation. Victorian Government debentures and stock issued and payable in London, the property of persons not domiciled in the State of Victoria, are not subject to any taxes of that State. This is a trustee security, and should prove an excellent investment.

Liverpool Corporation Bills.—The Corporation of Liverpool give notice that tenders will be received at the Bank of England, London, on February 27th, for Corporation bills to be issued to the amount of £1,000,000, in replacement of bills falling due on the 4th proximo. The bills will be in amounts of £1,000, £5,000, or £10,000. They will be dated March 3, 1923, and will be payable at 12 months after that date.

The Lima Light, Power, and Tramways Company.—Incorporated under the laws of Peru. The following information is taken from an announcement in the press to comply with Stock Exchange regulations. The issued capital consists of 500,000 8 per cent. cumulative participating convertible preference shares of £1 sterling each, 290,924 ordinary shares (part of 500,000 authorised) of five Peruvian pounds each, and three special shares of one Peruvian pound each. The 8 per cent. cumulative participating convertible preference shares entitle the holders to a dividend at the rate of 8 per cent., and to the further right to participate with holders of ordinary shares in any surplus profits, after payment of a dividend of 8 per cent. upon ordinary share capital. The dividends on the preference shares will be payable in sterling in London, or, at the option of the holders, in Lima, Milan, Geneva or Zurich, in the sterling equivalents at the exchange of the day. Dividends will be paid free of all present and future Peruvian taxes. The company is entitled to redeem the whole of the preference shares at par, plus accrued dividends, upon giving six months' notice, but holders are entitled during the currency of such notice to exchange their preference shares at par for an equivalent value in ordinary shares of the company of five Peruvian pounds each. The voting powers of the three special shares are worthy of notice. We are informed that they were specially created, and allotted to the trustees for the holders of the 5½ per cent. first mortgage debentures of the company, and conferred upon them a right to 800,000 votes when the issued capital of the company was £1,500,000. Upon any increase in the issued capital, the voting power of the special shares is proportionately increased, so that when the full authorised capital of £3,300,000 is issued, these shares will be entitled to 1,600,000 votes. The special shares will be cancelled when the existing 5½ per cent. first mortgage debentures have been paid off in full. The concluding portion of this notice will interest English investors. "One hundred thousand preference shares have been purchased by Messrs J. Henry Schroder and Co. from Messrs C. J. Bruppacher and Cie., of Zurich, Switzerland, at the price of 18s per share, less 6d per share commission. Messrs J. Henry Schroder and Co. have also acquired from the same firm an option expiring on February 28, 1923, to purchase a further 50,000 preference shares at the price of 18s 6d per share, less 6d per share commission." But more information will be wanted by investors than is contained in this statutory announcement.

Robert Lomas (Proprietors), Limited.—Authorised share capital £72,000, divided into 120,000 8 per cent. cumulative preference shares of 10s. each and 240,000 ordinary shares of 1s each. There are also £30,000 6½ per cent. five-year registered notes. This is an issue of all the above-mentioned shares at par and of the notes at 95 per cent. The company has been formed with the object of acquiring the whole of the issued shares of Robert Lomas, Limited, "and thereby to obtain the control of the long-established business of that company." The business was founded in 1886 by Mr Robert Lomas, and was carried on as a private firm under his own name until February 4, 1920, when it was converted into a private limited company, under the name of Robert Lomas, Limited, of Man-

chester, carrying on business as vendors of ladies' mantles, &c. Of the ordinary shares 120,000 have been subscribed in cash, and 60,000 further shares are reserved for cash applications by underwriters of the preference shares. No application for the 60,000 ordinary shares now available will be entertained unless accompanied by an application for preference shares, but each subscriber for preference shares is entitled to apply for one ordinary share for every two preference shares subscribed for. No further shares ranking in respect of dividends or repayment of capital in priority to or *pari passu* with the preference shares now offered can be issued in excess of £30,000 without sanction of the preference shareholders. The notes are to be paid off at par on July 1, 1928, but the company has the option to make repayment at any time earlier. Holders of not less than three-fourths of the notes outstanding have the right to oppose the creation of any mortgage or charge on the company's property, except banking credits made in the ordinary course of business. Profits of the trading company are set out from 1918, but are shown before deduction of "remuneration to the proprietor" and "governing director's salary." A balance-sheet is also submitted in a prospectus which is certainly voluminous. But the short-terms notes are not attractive; the margin of security for the preference shares is not excessive, and the ordinary shares will only appeal to a restricted circle of investors.

Rangalla Consolidated, Limited.—Authorised capital £100,000, divided into shares of £1 each, of which 74,000 shares are now offered for subscription at par. The company has been formed to acquire the Rangalla group of tea and rubber-bearing estates in Ceylon. The total area is given as 4,619 acres, of which 1,813 is tea and 120½ is rubber. The purchase price is £82,000, payable as to £50,000 in cash and £26,000 in fully-paid shares, representing an average price of £35 per cultivated acre. An important omission in the prospectus is the absence of any independent expert report as to the condition of the estates.

The J. P. Restaurants, Limited.—Authorised share capital £150,000, of which £100,000 has been issued and is fully paid. This is an issue of £50,000 6 per cent. first debentures. Applications are invited for 1,000 £50 debentures at the price of £48 15s per debenture. This is at the rate of 97½ per cent. These debentures bear interest at the rate of 6 per cent. per annum, and constitute a first floating charge upon all assets. Although it is agreed that the company may not mortgage any asset to the prejudice of the present issue, it should be noticed that the company has power "in the ordinary course of business" to deal with its property in any way it may deem fit. The debentures will be redeemed at the rate of 100 per cent. by annual drawings, which will extend to 1953. The company, which was formed in 1905, owns, it is stated, the freehold of two of its restaurant premises within the City of London. The remainder of its 51 depots are held under leases, generally for 21 years, of which the average term unexpired is 10½ years. In the balance-sheet published in the prospectus property is valued at £26,975, while furniture is taken at £97,347. Although the company has paid substantial dividends in the past five years, it is impossible to recommend these debentures in view of the elusive nature of the security.

Tri idad Sagar Estates, Limited.—Authorised capital £175,000, divided into 150,000 7½ per cent. cumulative participating preferred ordinary shares of £1 each and 500,000 deferred ordinary shares of 1s each. It is stated that the directors and their friends have subscribed for at par, and will be allotted, 75,000 preferred ordinary and 150,000 deferred shares. This is an issue at par of 150,000 7½ per cent. preferred ordinary and 300,000 deferred shares. The preferred ordinary shares are entitled to 25 per cent. of the surplus profits distributed in respect of each year after paying a dividend at the rate of 7½ per cent. per annum on the deferred shares. The articles provide that no debentures or mortgages shall be created, except such as may be necessary to give security for crop advances, without the consent of the preferred ordinary shareholders. Applicants for preferred ordinary shares are entitled to apply for not more than two deferred shares for each preferred ordinary share, but no applications for deferred shares alone will be entertained. The purchase price has been fixed at £150,000, of which £140,000 is payable in cash and the balance in deferred shares. Surplus assets to be taken over by the company are valued at £206,000. This is a speculative proposition, and the table of profits shown from 1915 displays very wide fluctuations. The management on this side is in good hands.

Dwa Plantations, Limited.—Authorised capital £45,000, divided into 440,000 shares of 2s each and 10,000 "B" shares of 2s each. Of these 290,000 2s shares and 10,000 "B" shares have been issued. The company was formed in 1916, to purchase the Dwa estate. The original capital of the company was £30,000, divided into 29,000 ordinary shares of £1 each and 1,000 "B" shares of £1 each, of which 10,200 ordinary shares of £1 each have been issued for cash at par, and 9,800 ordinary shares have been issued at a premium of 5s per share and all are fully paid up. Nine thousand ordinary shares of £1 each were allotted as fully paid up in consideration of the sale to the company of land and buildings in British East Africa

and 1,000 "B" shares of £1 each were allotted as fully paid up in consideration of services rendered in the formation of the company and the acquisition of property at Dwa. In 1922 each of the £1 shares was divided into ten shares of 2s each. In February, 1923, the capital was increased to £45,000 by the creation of 150,000 new shares of 2s each, ranking in all respects *pari passu* with the existing ordinary shares. £18,000 7 per cent. debentures in bonds of £50 each were created in 1922, repayable on December 31, 1929, redeemable by the company by six months' notice at a premium of 5 per cent. after September 30, 1925, and carrying an option expiring December 31, 1925, to convert into ordinary shares at par by three months' notice. This information is extracted from an announcement made in the press to comply with Stock Exchange regulations. An optimistic speech by the chairman of the company is reported on page 463.

The Rhodesian Congo Border Concession, Limited.—Authorized capital £150,000, divided into £1 shares, of which 50,000 have been issued. The company was formed in February, 1923, primarily to acquire a concession and prospect for minerals on an area granted by the British South Africa Company for five years in Northern Rhodesia along the border of the Congo State. The consideration for the sale of this concession is 100,000 fully-paid shares of the company of £1 each, of which 15,000 shares are to be allotted to the British South Africa Company in accordance with the terms of the concession. A speculative proposition, but as the information is given in connection with an application to the London Stock Exchange for a quotation, it may be that more facts will be forthcoming later on.

The Franspoort Exploration Company, Limited.—Authorized capital £30,000, divided into shares of 2s each, of which 100,000 are fully-paid and on the remaining 200,000 1s per share has been paid. The company was formed in April, 1921, to acquire property near Pretoria, and to develop it. About 2,360 acres have been purchased for £6,500. This, together with other information, is published in connection with an application to the Stock Exchange authorities for a share quotation.

which will be held in the near future, so that you will recognise we have had a period of extremely strenuous work, and have accomplished a very great deal in preparing and agreeing schemes for submission to the Amalgamation Tribunal. I may say, personally, that we have got very much further than I anticipated twelve months ago.

NEW COMMERCIAL DEPARTMENT.

In setting up our organisation special steps have been taken to provide means whereby the public can be supplied with information regarding our facilities. We have formed a commercial department, both for goods and passenger traffic, and the officers in charge of these departments will lay themselves out to deal promptly with any inquiries they may receive, and make every possible arrangement for the speedy transit of all descriptions of traffic, and we are satisfied that this action will have the effect of bringing the public and ourselves into much closer contact with mutually beneficial results.

Having regard to the size of the new undertaking it was thought desirable to delegate the management of the section north of the Tweed, where different conditions of law and trade are met with, to a body of gentlemen intimately associated with those special conditions, and the work of the Scottish portion of the undertaking, therefore, will be carried on by a Scottish local committee representative of the principal Scotch companies in our group, on which four members of the central board will sit. In this way our Scottish business will be looked after in the most efficient manner, as your directors are, of course, most anxious that Scottish traders and the public generally shall in every respect obtain the best possible advantages from the amalgamation.

We are passing over to the new company a line as well equipped as any in the country; our financial position is also stronger than it ever has been in the history of the company, ample provision having been made for contingencies.

RESERVE FOR MAINTENANCE WORKS.

I may say that practically the whole of the money we have received from the Government payable under the Railways Act, 1921, has been preserved intact, and is now safely invested in Government securities, where it will remain as a reserve for carrying out deferred maintenance works which are overdue, and the provision of increased facilities for traders and the public generally. As some of you may be aware, under Section 11 (5) of the Railways Act, income-tax must be paid on the amount utilised for the payment of dividends out of the money received as compensation under the Act, at the rate in force when it is distributed, whilst any sums not so utilised will be liable for tax in the assessment for the year 1924-25. We are hopeful that income-tax in the future will be less than at the current rate, and as, with the exception of a very small proportion which was utilised in connection with the dividend for the year ending December 31, 1921, this money is still undistributed we shall gain by keeping it in hand if the tax is reduced.

On the question of taxation, twelve months ago I referred to the Corporation Profits Tax, which was imposed in the Budget of 1920. I am glad to say that during the interval the railway companies have received exemption for a further period of three years, i.e., to December 31, 1925, and we have under consideration at the present time the question of the most effective means of influencing the Chancellor of the Exchequer to grant railway companies permanent exemption from what we regard as an unfair burden on the ordinary shareholders. In my opinion, he would be well advised to repeal this tax entirely, as I believe it is fully admitted in business circles that it is an undesirable burden upon trade, as well as being unfair in its incidence, and does not bring in anything like what was expected.

ROAD MOTOR TRANSPORT.

As you are aware, the companies forming the North-Western and Midland group approved an application to Parliament for powers to conduct road motor transport, and so far as this company was concerned, this action was endorsed by a special general meeting of the shareholders, held on February 28, 1922. After a long debate in the House of Commons, the Bill received its second reading, and was committed to a Select Committee of the House, which took evidence at length from all parties interested, including the Ministry of Transport, whose representative at a very late date suggested certain amendments in regard to charges which, if adopted, would have rendered the Bill valueless to the promoters. The Bill was, therefore, withdrawn.

The Select Committee, in a special report to the House of Commons, drew attention to the unnecessary expense caused to the parties owing to the delay on the part of the Ministry of Transport in notifying their objection to the principles of charging suggested in the Bill, and intimated that, subject to the possibility of eliminating unfair competition, they were unanimously of opinion that it would be in the public interest to allow the railway companies of

the group, and all competitors, to participate in the service of road transport. As is well known, railway companies are amongst the largest, if not the largest, payers of rates to local authorities, and it is not too much to expect that they should be allowed to use the roads to which they contribute such large sums to maintain.

IRELAND.

When we met in this room a year ago, I referred to the change that had taken place in the Government of Ireland, and expressed the hope that that change was destined to bring peace and prosperity to that unfortunate country.

I am sure that everyone here to-day will share my regret that our expectations have not been fulfilled so far as certain parts of the country are concerned. Our traffic returns prove that the carryings under the various heads between England and Ireland are generally much below what they were in normal times.

I have always held that Ireland is capable of great development in agriculture, fisheries, and in many other ways, and I can only again express my most sincere wish that Irishmen will recognise this and, without further loss of time, work heartily together for the intensive development of their country and the prosperity of its people, many of whom have large interests in our company. When the time comes, no matter how soon, it may safely be relied upon that the new company will be fully prepared to give every possible and necessary facility for satisfactory transport and assist in the development of that country in every way.

Whilst it is not within my province to discuss political affairs at a meeting of this kind, I think the commercial community can congratulate themselves on the change of Government, and I hope that the new administration, whose initial watchword was "tranquillity," will allow us, in our very difficult task, to pursue our own way with a view to consolidating our interests, which are in every way identified with the trading prosperity of the country.

There have been, as you will know, reductions in the company's rates and fares, the latter of which only operate from the beginning of this year. I may tell you that at the time the reductions were agreed to the railway administration did not consider that in itself the traffic justified such reductions, but fortunately the improvement in trade which was at that time being manifested developed to some extent, with the result that our fear of having to face a serious decline in revenue was not realised. The better tendency in trade, though slight, still continues, and with a view to facilitating a return to more prosperous times, your directors are of opinion, having regard to the results of the past year's working, that the time has arrived when a further substantial reduction in rates, &c., should be considered by the boards of the new group companies.

I regret to inform you that during the year the chairman of the Rates Tribunal, before which these matters must be heard, Sir Francis Gore Browne, has died. He was a man in whom both the railways and the traders had every confidence as being eminently fair to both sides, and it is a matter of deep regret to all of us that his death has removed one to whom such an important duty as fixing the rates was committed. Mr W. B. Clode, K.C., has been appointed as his successor, and I am confident that the high standard set by Sir Francis Gore Browne will be followed by him.

WORK FOR UNEMPLOYED.

You will doubtless have seen in the Press particulars of works which are being commenced immediately with a view to finding work for the unemployed. In conjunction with other railway chairman and general managers, I attended a conference in November last with the Prime Minister and other members of the Government with the object of seeing whether the railway companies, as large employers of labour, could provide some remunerative work for the benefit of the unemployed, who, as such, are drawing very heavy sums for their maintenance, such sums being in the nature of doles, and having no regard to ordinary economics. During the war, railway construction was of necessity largely restricted. Most railway boards had many schemes under contemplation which would add to the amenities of railway travel and transit. We, of course, sympathise with the men out of work, particularly those who fought in the war, and fully appreciating the anxiety of the Prime Minister we decided to put such necessary works in hand at once—some are already begun, and others will be proceeded with in the early future. These measures will not only relieve a certain amount of unemployment, but to some extent will help to stimulate the trade of the country. I may say that in every case we were quite satisfied that the expenditure which would be entailed was thoroughly justified. In addition to meeting the wishes of the Government and providing work for the unemployed, the best interests of the undertaking are being safeguarded.

DIRECTORATE, OFFICERS, AND STAFF.

Dealing with the future, twelve members of your board will join the board of the new company, which, as at present constituted, will consist of 26 members. The inevitable consequence of a

merging of this character is that certain of our colleagues on the board, whose faces have long been familiar to you, must retire. They have rendered yeoman service to the company in the past, and I feel sure it will be your pleasure, as well as your duty, that in addition to voting them a certain sum as compensation (and on this point a resolution will be moved in due course), that you should also pass them a very cordial vote of thanks for the very valuable services they have rendered to you, in many cases over a long period of years.

So far as the officers are concerned most of them become officers of the new company, and whilst on this topic it affords me much pleasure to express our very deep indebtedness for the effective work they have performed during the past 12 months. The general manager, officers, and staff have worked loyally and hard, and but for this fact the results we present to you to-day would have been far different, and we should not be in anything like the advantageous position we are in completing our arrangements for the working under the new conditions. You will be doing less than your duty if you do not authorise me to express to them, on your behalf, your very heartfelt thanks.

Whilst on this phase of our work, I would also like to express my very hearty appreciation of the relations which exist between ourselves as a board and our employees. For a short time after the termination of hostilities our men were not working well, but in the last year or two the relations have improved very considerably, and I have no hesitation in stating that we have now got past the worst, and can look forward to most harmonious working, which will prove of lasting benefit both to them and to you.

In the past we have heard a great deal of this country being fit for heroes to live in—I should prefer to take a less exalted attitude, and say we want a land for honest and industrious men to live in—men who will trust to their own individuality, character, and enterprise to make their lives a success. It is useless to talk of pre-war standards of living, either for rich or poor. We have all of us to work harder and to live more economically. We have to look upon sport as a pastime, not as the main object in life, and if we accept those principles, I believe we will gradually be able to re-establish our industrial supremacy, and become prosperous again, and in that prosperity and its achievements the railways of this country will have their share.

CERTIFICATES.

Each holder of stock in this company, and well as any other company that has been absorbed or amalgamated, will no doubt be anticipating that new certificates will be issued in exchange for the certificates that are now held, and I am, therefore, taking this opportunity of calling attention to the fact that under the amalgamation scheme, approving the formation of the London Midland and Scottish Railway Company, the certificates of stock in the several railway companies that are now held are deemed to be certificates of the stocks of the new company for the proportional amount allocated.

This provision was made in the scheme because there are some hundreds of thousands of certificates held by proprietors, and although they must be exchanged ultimately, the work will have to be spread over a considerable period. Shareholders will, however, be communicated with as and when it becomes necessary for them to forward their certificates for the purpose.

Perhaps proprietors will note this, as it will save them making inquiries as to the exchange of certificates.

Under the provisions of the Railways Act, with which I dealt very fully in my remarks a year ago, we are commencing a new era in railway work. The changed conditions are not of our seeking, but have been imposed upon us by the Government of the country. We have loyally accepted their verdict, and shall do our best to make the new conditions successful.

It is too early yet to make any forecast as to whether the amalgamations will result in the economies prophesied in Parliament. One thing certainly you can rely on—the directors will leave nothing undone to administer the new undertaking in the most economical way consistent with proper maintenance and efficiency, and with the utmost endeavour to stimulate the trade of the country.

The interests of the public will in no way be sacrificed, and it may be interesting to you to hear that there is in no sense a monopoly. I wish to dispel the idea that has been circulated that the result of the grouping under the Railways Act will be the disappearance of competition, as there is no doubt the result will be quite the reverse. Competition will be just as keen under the new conditions, and the London Midland and Scottish Railway will do its utmost to please its customers and encourage trade development. The railway has access practically to the very edge of the South Coast; on the East the great ports of Tilbury, Lowestoft, Goole, and Hull, &c.; on the West, Cardiff, Holyhead, Liverpool, Fleetwood, Barrow, and the West Cumberland ports, and when you come to Scotland, all the West Coast besides Edinburgh on the East, and the far North with Thurso and Wick.

Your directors hope, by dint of giving facilities and showing the public that their interests are yours, to obtain at least a fair

share of the traffic, and it will be our endeavour to render proper service without in any way sacrificing the interests of the shareholders, as public efficiency and financial stability will always be the goal held in view by the London Midland and Scottish board of directors.

I now beg to move:—

"That the report of the directors, now read, be received and adopted, that the proceedings at the special general meetings be approved and confirmed, and that the accounts to the December 31st last be passed."

Mr E. B. Fielden (Deputy Chairman) seconded the resolution.

CONGRATULATIONS TO BOARD.

Mr E. Hamilton Hargreaves said he thought they ought to congratulate the directors and officials of the company that they had been able to carry through this grouping scheme almost in its entirety without reference to the Tribunal. Differences had been settled—and there must have been many—and this was a good omen for the future. He believed that the amalgamation would save tens of millions per annum, simplification would reign where formerly there were complications and jealousies, the State would be better served, and the prospects for the shareholders and employees would become more secure. Traders were crying out for still cheaper freights, and they must have them if this country was to be in a position to compete economically with foreign nations, but traders must give the companies time, because they had only just emerged from Government control with that ruinous standardisation which classified boys as men, and compelled the industry to have 76,000 more employees than before the war, with the result that the labour bill rose from 47 millions to 173 millions. That was the result of Government control. If the colliery owners would give them cheaper coal—they made a fortune during the war—the companies could afford to carry their coal and their merchandise at lower freights. The railway companies must want to give cheaper freight, for they desired to get back their trade which was now going over the road. Towards the upkeep of those roads the railways were paying something like 10 millions per annum, though they were not allowed to use the roads. This, he considered, was an immoral subsidy. At the same time, shareholders must have a return for their investments, otherwise new money would not be forthcoming for new lines—electrification, &c. He trusted that employees and officials would work amicably together, so that the country could regain its pristine greatness.

Mr Stevens said that entrusted as he was with proxies from holders of over £1,400,000 stock of the company, he desired to thank the chairman for his address, which was a most encouraging and statesmanlike review of their prospects. At this last meeting of this great railway, with such a fine record, he would like to be permitted to thank the board for the excellent dividend of 8½ per cent. for the year, and also for the splendid record of results which accompanied the dividend. Last year's splendid performance showed the advantage of being entirely free from Government control. He wished to draw attention to a vital matter which concerned the ordinary stockholders. He referred to the fact that they had at present an ordinary capital of no less than 87½ millions in the new group company, of which their proportion as holders of old London and North Western stock would be 57½ millions. As the chairman would be chairman of the new group company, and would be supported on the joint board by 11 other directors, any recommendation from them would come with great force. It would appear that ultimately the group ordinary stocks would amount to nearly one hundred millions, and that the dividend on that capital would amount to about £8,000,000 per annum. This would, of course, be much the largest income attached to any of the new group securities, and it seemed to many stockholders that it would form a solid basis of security for a preference or preferred ordinary stock of the new company. What the exact form of such rearrangement must be was a matter on which the new board could form their own opinion, but it would be a useful guide to observe that the new 4 per cent. second preference of the London and North Eastern stood on a 5 per cent. yield basis at the price of 80 ex-dividend, and the new 5 per cent. preferred ordinary stock of that group and of the Southern railway group stood on a 6 per cent. yield basis, where at the present time their ordinary stock in its original form stood on nearly an 8 per cent. yield basis. It would be ridiculous to suggest that there was any less security attaching to the new ordinary stock; on the contrary, it would represent a wider basis of security than any other junior stock of any of the new groups, and there was no doubt that a London and North Western 4 per cent. second preference or a 5 per cent. preferred ordinary would attract equally large numbers of conservative investors who were debarred for various reasons from holding the ordinary stock as a whole with the fluctuating dividend attached to it. There was not much doubt that a London and North Western preferred ordinary stock would be superior in the estimation of the investing public to either the London and North Eastern or the Southern

preferred ordinary stock, but leaving that matter out of account it might be pointed out that at the present moment the original ordinary stock of the North Eastern Railway in its present form was valued at 136 ex-div. That was the valuation of a stock which for last year received $7\frac{1}{2}$ per cent. dividend. The London and North Western ordinary stock, in receipt of $8\frac{1}{2}$ per cent., was quoted at 110, so that with 1 per cent. more dividend and equally good prospects, their stock actually stood 26 points below the North Eastern security, or its equivalent in the new form. The enhanced value of the North Eastern stock was entirely due to the fact that a considerable proportion of the ordinary dividend had been allocated to a secure fixed dividend stock. That there was a considerable body of opinion in favour of some such action by the North Western was shown by the fact that he had been entrusted with proxies presenting over £1,400,000, and was requested to ask the directors to use their great influence with the new board to secure some rearrangement of the capital on lines similar to those adopted by the other group. It would cost the company nothing, and if carried out under the Railways Act, 1921, would save a very large sum indeed in stamp duty. It would also add approximately £20,000,000 to the market value of their stocks, and enable capital to be raised in the future at a lower rate of interest than would otherwise be the case.

Sir William Fry said that they had every reason to congratulate themselves on the report which had been presented, and on the masterly and clear statement which the chairman had given to the proprietors. They knew a great deal more about the affairs of the company now than they did before that speech was delivered, because the chairman had gone back to the year 1846 and traced the growth of this great and important company, until to-day it rejoiced in the proud position of being the premier railway of Great Britain. The shareholders were in the proud position of being proprietors of this great concern. As an Irishman he wished also to express his gratification to the chairman for the feeling terms in which he had referred to that unhappy country. The chairman had expressed the hope that they would soon see Ireland emerging from its present position. He knew from past experience, having lived for many years in that country, how this railway company had in the past endeavoured to serve Ireland and open up its resources. He quite concurred with the chairman as to the value of the resources of Ireland. Then as regarded the harmonious relations which had existed between the company and its employees, it was a grand thing to think that they had had no trouble with their workpeople for many years. This showed that there was confidence between the men and their masters; it showed also that good pay was given for good work, and the chairman had now given a public declaration to their employees that every care would be taken to recognise their efforts in developing the great resources of this company. The chairman had also made a gratifying announcement that in the opinion of himself and his colleagues the time had come when rates and fares should be reduced. That was an announcement that would be welcomed by all. With regard to the pressure of taxation, he pointed out that they would now have 300,000 proprietors in that great combination, and he thought that surely they could use their political influence to get the pressure removed.

The Chairman thanked Mr Hargreaves and Sir William Fry for their remarks, and with reference to the proposal of Mr Stevens, it was out of order at that meeting, but would no doubt be considered in due course by the board of the new company. The resolution was then put to the meeting and carried unanimously.

THE DIVIDENDS.

The Chairman then moved:—

"That final dividends for the year ended December 31st last be hereby declared (less income-tax) as follows:—

"£2 per cent. upon the consolidated 4 per cent. guaranteed stock.

"£2 per cent. upon the consolidated 4 per cent. preference stock.

"£2 per cent. upon the 4 per cent. preference stock (1902).

"£2 5s per cent. upon the 4½ per cent. redeemable preference stock.

"£2 10s per cent. upon the 5 per cent. redeemable preference stock (1916).

"£5 10s. per cent. upon the consolidated stock, making with the interim dividend of £3 per cent. paid in August last £8 10s per cent. for the year."

The Deputy-Chairman (Mr. Fielden) seconded this, and it was carried unanimously.

Under the Railways Act, 1921, clause 3 (d) power is given to pay compensation to those directors who cease to hold office owing to amalgamation or absorption, subject to the consent of the proprietors.

The directors of the London and North-Western Company, who retire in consequence of the amalgamation are:—

Mr C. J. Cropper,

Capt. the Right Hon. Viscount Elveden,

Col. the Right Hon. Lord Kenyon,

Col. the Right Hon. Lord Lambourne,

The Hon. Sir Arthur Lawley,

Lieut.-Col. E. W. Stanyforth, and

Sir Robert Turnbull,

The Chairman then moved:—

"That the sum of £24,430 be paid out of the assets of the company to the seven directors of the company who will retire, not as remuneration in respect of past services, but as voluntary compensation for loss by abolition of office. The division of the sum to be at the discretion of the board."

"Since 1851 it has been usual at this meeting to submit to you a resolution of the proprietors' audit committee recommending the election of an auditor of the accounts of the company, but on this occasion this course will be unnecessary, as under Clause 28 of the North-Western, Midland and West Scottish Group Amalgamation Scheme, 1922, it is provided that from January 1, 1923, until the first ordinary meeting of the new company, the auditors shall be the persons who were the auditors of the North-Western and Midland companies immediately prior to amalgamation.

Mr Stevens seconded the resolution, and it was carried unanimously.

A vote of thanks to the chairman terminated the proceedings.

GREAT WESTERN RAILWAY COMPANY.

YEAR'S RESULTS "COMPLETELY SATISFACTORY."

COMPANY'S SOUND FINANCIAL POSITION.

RAILWAY RATES AND FARES.

The annual general meeting of the proprietors of the Great Western Railway Company was held, on the 22nd instant, at Paddington Station, London, the Rt. Hon. Viscount Churchill, G.C.V.O. (the chairman), presiding.

The Secretary (Mr A. E. Bolter) having read the notice convening the meeting,

The Chairman, who was enthusiastically received on rising to address the meeting, said: Ladies and Gentlemen,—The accounts which are submitted for your consideration to-day embrace the great bulk of the undertakings which, under the Railways Act, constitute the Western Group. The group is composed of seven constituent companies, viz.: The Great Western Company itself, with the five principal railway and dock companies in South Wales, and the Cambrian Railways Company in Central and North Wales, which, under the preliminary amalgamation schemes approved by the Railways Amalgamation Tribunal, became amalgamated with this company as from January 1, 1922, and 26 subsidiary companies, of which five became absorbed as from the same date, eight as from July 1 last, and nine as from January 1 this year, leaving four only remaining to be dealt with.

Of these four, terms have been agreed with one—the Didcot, Newbury, and Southampton Company—and an absorption scheme will be submitted for your approval at a special general meeting to be held at the conclusion of the business of this meeting—leaving the Exeter Railway, the Midland and South-Western Junction Railway, and the Forest of Dean Central Railway to be dealt with by the tribunal.

We should have been glad to have been able to settle terms by agreement with every one of the companies in our group, but we have not been able to accomplish it, and as the tribunal will have the duty of settling the terms in these three outstanding cases, I think it as well that I should not enter into any particulars concerning them.

It will also fall to the tribunal to settle our final amalgamation scheme, which will be in effect to constitute the Great Western Company the Amalgamated Company of the group—a mere formality required to give effect to the provisions of the Act.

I am explaining the position so that you may understand that, for all practical purposes, the Great Western Group has been in operation for the period covered by the accounts now laid before you, and that these represent, therefore, as nearly as may be the

results of the working of the group as a whole, and the alteration in the capital accounts which the grouping has involved.

CAPITAL ACCOUNTS.

Dealing first with the capital accounts, the effect of the amalgamations and absorptions has been to increase the amounts of the various stocks of the company as follows:—

The debenture stock has increased from £25,651,441 to £35,291,095; the rent charge stock from £7,610,002 to £7,708,241; the consolidated guaranteed stock from £17,946,891 to £23,816,537; the consolidated preference stock from £11,936,348 to £25,998,613; and the consolidated ordinary stock from £37,082,220 to £42,830,336. The result is that the total amount of the capital of the company, including debenture stocks, has increased from £100,226,902 to £135,644,822.

You will observe—and I think it is a matter to be regarded with satisfaction—that the simplicity of the capitalisation of the company has remained undisturbed. The operation has been carried through by increasing stocks of existing denominations without the creation of fresh classes; and what also is, I venture to think, a very satisfactory feature is that the amount of our ordinary stock still represents a very substantial proportion of the total capital.

It has been the policy of the company, as you are aware, extending over a period of many years, to maintain the capitalisation of the undertaking on as broad a basis of ordinary stock as is reasonably possible, and this policy has been pursued in carrying through the grouping arrangements.

REVENUE AND DIVIDENDS.

Turning now to the revenue accounts, I would draw your attention to the figures set out in account No. 8 on page 10, and in doing so I would mention that, this being the first year of the operation of the undertaking under the new conditions, no comparative figures can be introduced.

You will see that the receipts for the whole year amounted to £38,523,415, and the expenses to £31,102,076, leaving as net receipts £7,420,439. The miscellaneous receipts from rents, interest, &c., amounted to £856,185, thus increasing the net revenue to £8,276,624. This is carried to the next account (No. 9), and, with the balance of £260,417 brought forward, makes a total of £8,537,041. After payment of interest on the debenture and rent charge stocks, rents of leased lines, &c., particulars of which are shown, and which amount together to £2,403,719, a balance is left available for dividend of £6,133,322. After allowing for the dividends on the guaranteed and preference stocks, amounting to £2,451,246, a balance of £3,682,076 remains available for dividend on the ordinary stock. The interim dividend of 2½ per cent., which was paid for the half-year to June, absorbed £1,151,496, leaving a balance of £2,530,580, which enables the payment of a dividend on the ordinary stock for the last half-year of 5½ per cent., making a dividend of 8 per cent. for the whole year, and carrying forward a balance of £304,932.

This, you will recollect, compares with a dividend of 7½ per cent. for 1921, when we took £125,000 from Government compensation account.

SATISFACTORY RESULT.

I hope that this result of the first complete year free from Government control and, as I have already said, of the working of the Group as a whole, will be regarded as entirely satisfactory, and it is desirable, perhaps, that I should mention briefly the relation of this dividend to the standard net revenue provided for in the Railways Act of 1921.

You will remember that the companies are to be entitled to earn a standard net revenue which the charges in operation are designed to produce, equivalent to the aggregate net revenues of the railways in the Group for the year 1913, with the addition of certain allowances, the chief item being interest on the amount of capital expenditure brought into use since 1912, upon which the company were allowed interest at the termination of the period of control.

As a matter of fact, the working for the year 1922 has produced a net revenue which, with the substantial amount of interest earned upon funds in hand, approximates to the amount of 1st revenue which the charging powers in force during the period were calculated to yield in conformity with the provisions of the Act, and therefore there has been no need to draw upon the Government compensation money—again a very satisfactory feature.

COMPANY'S RESERVES.

I would refer also to the figures of the balance-sheet, which have materially increased in recent years, and particularly as the result of the payments on account of this company's share of the compensation of £60,000,000 under the Railways Act. The moneys in hand, including investments in Government securities, have reached very substantial figures. While these, of course, are largely earmarked for meeting liabilities for arrears of maintenance, renewals, and other obligations, it is very desirable that the company should have ample reserves to meet the period of adjust-

ment and uncertainty which has to be expected in connection with the formulation and settlement of charging powers, and it is satisfactory that the company is in the position of financial stability which the balance-sheet indicates.

It will be of interest to you, too, to hear that as a result of the grouping the mileage of the undertaking has increased from 3,005 miles to 3,702 miles, in addition to which the company has become possessed of the whole of the railway-owned docks of South Wales, the most important being those at Newport, Cardiff, Penarth, Barry, and Port Talbot.

The total number of staff employed, of all grades, has increased from about 87,000 to about 108,000, and the number of proprietors' accounts is now nearly 120,000, as against approximately 95,000.

Now, turning to the matters referred to in the report—I have already dealt with the figures on the front page.

Paragraph 2 contains a complete statement of the whole of the railways embraced in the Western Group, to which I have already referred.

Paragraph 3 relates to the works of the Clydach, Pontardawe, and Cwmgorse line—the principal item of expenditure now in hand.

DEVELOPMENT WORK.

On the question of expenditure, as I have stated on previous occasions, the developments which were in contemplation were arrested by the outbreak of war and the Government control of the railways. The time, however, has come when the more pressing problems must be taken in hand if the company are to be in a position to accommodate their traffic, and to be able to deal with it expeditiously and economically. As a commencement it is proposed to improve and considerably enlarge the goods depot at Temple Meads, Bristol, with the latest modern equipment for handling the large general traffic dealt with at that place. A very substantial improvement is also to be carried out at the High street Station, Newport. The passenger traffic at that station having long since outgrown the accommodation, additional provision has become absolutely essential.

The requirements at other centres are under investigation, and will be dealt with in turn as circumstances may enable them to be taken in hand.

Judicious expenditure in facilitating the passage of the traffic over the line and in preventing congestion and delays is essential if the railway is to be utilised to the greatest advantage, and with the best regard to economy.

I may mention that in response to a request by the Prime Minister that the railway companies should assist the Government in their schemes for relieving the difficulties of unemployment, we have been doing our best to accelerate the carrying out of the works which we had in hand or in immediate contemplation, and we hope to give still further aid in this direction by commencing as soon as we can the works at Bristol and Newport to which I have just alluded.

ADDITIONAL POWERS BILL.

Paragraph 4 relates to the Bills to be submitted to the Wharfedale meeting to follow this meeting, and it will be convenient perhaps that I should refer to them now.

The first Bill—viz., the Great Western Railway (Additional Powers) Bill, 1923—seeks powers to construct a second tunnel, alongside the existing Colwall Tunnel, through the Malvern Hills. This is a single-line tunnel which is in need of extensive repair, and with the increased traffic passing through it the ventilation has become so unsatisfactory that relief is essential, and the solution of the difficulty is to construct a second tunnel which will have a better gradient.

Power is also sought for the acquisition of further properties which are required in connection with the enlargement and improvement of the High street Station, Swansea—a very necessary work which has been long delayed and which is to be carried out in conjunction with improvements of access to the station to be effected by the Corporation of Swansea.

The Bill also contains clauses empowering the utilisation for the erection of buildings (including shops and offices) of lands and premises belonging to the company, but not immediately required for the purpose of the railway, and conferring the right to grant leases, &c., in connection therewith.

STAFF AND HOUSING ACCOMMODATION.

Another important provision of the Bill is to vest the company with authority for meeting the needs of the staff with respect to housing accommodation. That, I am sure you will agree with me, is an admirable thing to do. For some time past representations have been made as to the great difficulty which is experienced by the staff in finding suitable dwellings for their occupation, and the inquiries which have been made have shown only too clearly that large numbers are at present housed in conditions which are very far from satisfactory or even creditable. This state of affairs, as you will appreciate, gives rise to considerable difficulty in transferring men from one part of the system to another

—a course which is frequently necessary in the circumstances of our business, and it results, moreover, in heavy expense being incurred in payment of housing and subsistence allowances. Steps have already been taken to assist individual employees to purchase houses by granting loans on mortgage, repayable with interest spread over suitable periods. This meets the wants of the men in certain cases, but it is desired in addition that the company should be able to support the formation and extension of utility societies to undertake the building of houses, particularly in localities where large numbers of men are employed by the company and where the shortage is most pronounced; and powers are contained in the Bill to enable these very desirable objects to be accomplished.

ACQUISITION OF SWANSEA DOCKS.

The other Bill is for the purpose of sanctioning an arrangement which has been made with the Swansea Harbour Trustees for the transfer of the Swansea Docks to this company. These docks, not being a railway undertaking, were not included in the grouping arrangements under the Railways Act. The company have, however, been approached to take them over, and as it was felt that it would be advantageous in the general interest that they should be brought under the management and ownership of the company—thus coming into line with the other docks in South Wales—negotiations were pursued, with the result that terms have been arranged which are embodied in the Bill, and which are set out in the report.

Paragraph 5 refers to an application to the Minister of Transport to extend the time for the construction of certain authorised works and the acquisition of additional lands, the powers for which would otherwise expire in the current year, and speaks for itself.

NEW DIRECTORS.

In paragraph 6 the names are given of the directors of the constituent companies who were nominated to and are now members of the Great Western board. It is a very great pleasure to me personally to say, after the number of months that we have been associated here with our new colleagues, that although I deeply sympathise with them in losing the individuality—if I may so call it—of their own companies, I think I see by their faces that they are by degrees feeling at home at Paddington, and I am sure you would wish to join with me in offering them a most hearty welcome, and in thanking them for the great help they are giving to us in those parts of the system which they know so well.

Paragraphs 7 and 8 refer to the directors whom we have lost.

Paragraph 9 refers to the remuneration of the auditors of the company. The present fee is £200 a year for each auditor. This was originally fixed as far back as 1863, when the undertaking was a comparatively small affair—something like one-fourth of its magnitude before the grouping, and, of course, now greatly enlarged by that operation.

It is not necessary for me to dwell upon the importance of a thorough and efficient audit of your accounts, and the great responsibility which rests upon the auditors, and I venture to think that your interests could hardly be better served than by Sir William Plender and Mr Honoratus Lloyd.

The proposal is that the remuneration should now be fixed at £300 a year for each auditor—to apply to the accounts of the past year—and a resolution will be submitted to you for the purpose.

Paragraph 10 refers to the report of the audit committee.

RATES AND FARES.

You will expect me to say something in regard to railway rates and fares. Last year I pointed out that, while the railway industry was the last to be released from Government control, yet in the short space of six months which had elapsed since the companies resumed possession of their property there had been a substantial cut in the rates for coal and raw materials used in the steel and iron industries. I also expressed the hope that it would be possible to make further reductions. My forecast in this respect was correct. Reductions of rates and charges for goods traffic were made on four occasions last year. In making these reductions the companies adopted the policy of dealing first with such basic industries as coal, iron, and steel. Subsequently they were able to lower the rates for practically all classes of goods traffic and for parcels and perishable traffic, while on January 1 this year passenger fares were dealt with, the broad effect being to reduce the increase as compared with pre-war fares from 75 per cent. to 50 per cent., with corresponding effect upon excursion and other forms of cheap tickets.

As regards the very large section of our business, viz., the docks in South Wales, the same policy has been pursued, and the tonnage rates on vessels and the charges for wharfage and coal tipping have been brought down very substantially.

I am glad to say that the business done by the company, particularly in the latter part of last year, showed a highly satisfactory expansion, and I am assured by those who are in daily

touch with the trading community that there is every reason to be hopeful as regards the future. I am sure the companies will continue the policy of passing on to the traders the result of reductions in the price of stores and of wages, and in this connection I would again emphasise the fact that rates and fares were not increased for the benefit of the shareholders, but solely to enable the companies to pay the increased cost of stores and materials and the higher wages, and for improved conditions of service of the employees.

WAGES.

With regard to wages, you will be aware that what was known as the "Scottish Award" of the National Wages Board was extended to the English and Welsh Railways in April last, with the result that the sliding scale reductions of wages became 2s for each five points fall in the cost of living instead of 1s, and certain small modifications were made in the conditions of service, but we are still faced with a wages bill far in excess of 1913. The salaries and wages paid by the Great Western and the companies which have been amalgamated or absorbed in the Great Western Group amounted last year to nearly £20,000,000, as compared with only £8,000,000 for 1913, an increase of 150 per cent.

We realise the necessity for contributing to the re-establishment of the trade of the country by reducing rates to the fullest extent which may be found to be practicable, and we have under consideration, in conjunction with the other companies, the question of making a further cut in the rates at an early date, but the extent of any reductions necessarily has to be considered in connection with the prospects of reduced expenses and the probabilities of increasing the turnover.

I am glad to say negotiations are still in hand with the unions and are proceeding satisfactorily, and I am hopeful as to the results.

GREAT WESTERN TRADITIONS PRESERVED.

Now, ladies and gentlemen, the work of carrying through the financial and other arrangements for effecting the great addition to the undertaking which has been brought about during the last year and for assimilating the various concerns into the Great Western organisation has involved great consideration, care, and forethought. Happily, the work is virtually accomplished. Last year I was able to tell you that we had managed to preserve our name—"Great Western Railway Company." I am now able to tell you that we have also preserved our old form of departmental organisation, the only new feature being the formation of a "docks department" under a chief docks manager, this being necessary in consequence of the extensive dock undertakings which now form part of the Great Western system. In short, our desire has been to preserve our old traditions and to maintain the high reputation which our staff have established for efficiency of service and of working, and for civility. Our officers, too, have greatly distinguished themselves during this trying time by their great skill, their tact and their energy, which reflect the very highest credit not only upon themselves personally, from the general manager downwards, but also upon the Great Western, and I know that you will join me at this moment in offering the staff and others who have been engaged in these most arduous duties our most hearty and grateful thanks.

I am sure you will feel that the position which we are able to lay before you in this the first year of our enlarged company under the new conditions is completely satisfactory, and I think we are fairly entitled to look to the future with every anticipation of con-

tinued prosperity, and the maintenance of our undertaking in the position of financial strength and stability which it now enjoys.

I now beg to move:—"That the report of the directors and the statement of accounts for the year ended December 31, 1922, be received and adopted."

The Deputy-Chairman (Sir S. Ernest Palmer, Bart.) seconded the resolution, which was carried unanimously, and the further

resolutions submitted to the annual meeting were also passed unanimously.

At a special general meeting of the proprietors the two Parliamentary Bills referred to by the chairman in his speech were unanimously approved.

A vote of thanks to the chairman and directors, as well as to the officers and staff of the company, concluded the proceedings.

MIDLAND RAILWAY COMPANY.

SATISFACTORY RESULTS—INCREASED NET INCOME.

RAILWAY RATES AND EXPENSES.

QUESTION OF FURTHER REDUCTIONS.

Sir Guy Granet, chairman of the Midland Railway Company, presided over the annual general meeting of the company held at Derby on the 22nd instant, and, in moving the adoption of the report and accounts, said:—

Ladies and Gentlemen,—I have sealed the register of shareholders, and there are now 104,796 shareholders and 21,292 debenture holders, a total of 126,088.

You usually take the report and accounts as read, and I take it that you will follow your usual practice to-day, but, with your permission, I should like to make a few observations on both before dealing with other matters.

NET INCOME COMPARISON.

First of all, comparing 1922 with 1921, you will see that the total net income for 1922 was £6,894,000, as compared with £6,401,000 in 1921. But comparison with 1921 is illusory, because for 7½ months of the year the company was under Government control, and for three months we were suffering from the great coal strike. Therefore I prefer to compare our position with 1913, a year which is specially important to us, because it was a record year of prosperity, and it is the year which under the Railways Act is to be regarded as the standard for the purpose of regulating our rates. In 1913 our total net income was £6,362,000, against the £6,894,000 of 1922.

In dealing with our accounts for this year, I think that the point ought to be emphasised that satisfactory as are the results, they are still more satisfactory when you analyse the way in which those results have been arrived at.

If you will look for one moment at Abstracts A and B you will see that abundant provision has been made out of revenue to strengthen the depreciation funds. For instance:—

Under Abstract A there is a transfer to depreciation fund of £140,000.

Under Abstract B (locomotives) there is a transfer to depreciation fund of £207,000.

Under Abstract B (carriages) there is a transfer to depreciation fund of £288,000.

Under Abstract B (wagons) there is a transfer to depreciation fund of £403,000.

We recommend a dividend of 6 per cent. on the deferred stock, which, with the 2½ per cent. on the preferred stock, makes a total equivalent to 8½ per cent. on the old undivided ordinary stock.

In 1913 we paid 4½ per cent. on the deferred stock, which, with the 2½ per cent. on the preferred, was equivalent to 6½ per cent. on the old undivided ordinary stock.

BOARD AND LOWER CHARGES.

Now I want you to look at the other side of it. Railways are like other business concerns, they depend not only on the goodwill and favour of their customers, but upon their prosperity. If the trade of the country languishes, railways cannot prosper. There is no question but that at the present time, though there are indications of some improvement, trade and industry are labouring under great difficulties, and it is because we think that the present high level of railway rates is a factor in those difficulties that the Midland Board have stated in paragraph 9 of their report that "substantial reductions of charges will be justified at an early date."

My board have unanimously come to this conclusion, not because they wish to be regarded as altruists and philanthropists, but because, as business men, after very careful thought, they think a substantial reduction in charges is a fair business risk which ought to be taken.

It is a risk, of course, from two points of view:—

(a) From the point of view of the loss of revenue, which a reduction of rates will necessarily entail. How much that will be on any given reduction it is impossible to calculate. In order to show what I mean, and also to show that railways have not been

insensible to their duty to the community, I will just give you a list of the reductions in charges which have been made since the end of 1921.

REDUCTIONS SINCE 1921.

As from September 1, 1920, goods and coal rates generally reached a figure of 100 per cent. over 1913 charges, subject to the operation of certain maxima, with an addition of flat rate charges ranging from 6d to 1s per ton, and an additional cartage charge of 1s 6d per ton at each end.

In November, 1921, the increase in the rates on iron ore to blast furnaces and steel works was reduced by 25 per cent., the flat rate from 6d to 3d per ton, and the maximum increase from 4s to 2s per ton.

In January, 1922, the increase of 100 per cent. in respect of coal, coke, limestone, &c., was reduced to 75 per cent., the flat rate from 6d to 4d per ton, and the maximum increase of 4s per ton on coal and coke to blast furnaces to 3s.

In May, 1922, Class A rates, other than coal and coke and Class B rates generally, were reduced from 100 per cent. increase to 75 per cent.; the flat rate on all Class A and B traffics, including coal, was reduced to 3d, and certain other reductions made. The additional cartage charge of 1s 6d per ton at each end was reduced to 9d.

In August, 1922, the increase on coal and coke was reduced by a further 15 per cent., and the flat rate to 2d.; traffics in Classes C and 1 to 5 by 25 per cent., and other modifications made.

On December 1, 1922, the maximum increase on coal and coke to blast furnaces was reduced to 2s., and at the same time the percentages of increase in rates for raw materials, &c., used in iron and steel making, and for certain classes of manufactured iron and steel were materially reduced.

RESULTS OF REDUCTIONS.

Now, on the basis of the traffics we were carrying at the time these reductions of charges were made, it was calculated that the cost to the Midland Company of these reductions would be £2,900,000 for the year.

As you will see, most of these reductions have not been in force for a year; therefore, even if 1921 were a normal comparable year, it would have been extremely difficult for us to discover what the full effect of the reductions had been on the revenues of the company. But, as I have said, 1921 is not a year which can be compared with 1922, first, because for seven and a-half months the company was under Government control, and, secondly, because in the months of April, May, and June, 1921, we had a coal strike, which not only destroyed our coal traffic during that period, but also crippled to a very large extent the general trade of the country. This fact alone makes any comparison between 1922 and 1921, either in respect of tonnage carried or revenue earned, totally misleading.

I cannot, therefore, give you the comparisons of the trading of the two years, because of the disturbing elements operating in 1921, but it will be obvious to everyone that a substantial reduction in charges does involve a considerable risk of net loss to the revenue of a railway, even if you take into account possible increases of traffic arising out of the reduction.

PASSENGER FARES.

I think it important also to point out that, over and above the reductions in rates which became operative in 1922, a substantial decrease in passenger fares—from 75 per cent. to 50 per cent. over pre-war figures—came into operation on January 1, 1923. This reduction, calculated in the same way as the rates reductions, is estimated to produce a loss of net revenue to the Midland of £950,000.

(b) In the second place, it is a risk because of the still very high level of our expenses as compared with pre-war times.

To illustrate what I mean, I will give you a few figures comparing expenses in 1913 and 1922:—

SALARIES AND WAGES.			
	Salaries.	Wages.	Total.
1913	£ 1,399,084 ..	£ 4,503,925 ..	£ 5,903,009
1922	3,020,995 ..	10,461,682 ..	13,482,677
Increase, 1922 over 1913	1,621,911 ..	5,957,757 ..	7,579,668
	116 %	132 %	128 %

COST OF COAL, STORES, &c.

	1913.	1922.
Coal	10s 8½d per ton ..	20s 1½d per ton
Steel rails	£6 10s 2d per ton ..	£9 1s 5d per ton
Sleepers	4s 11d each ..	5s 7d each
Clothing	£56,789 ..	£135,823
Stationery	£74,199 ..	£146,786

COST OF RELAYING ONE MILE OF MAIN LINE.

1913	£ 1,420
1922	2,680
	Net.

When we talk, then, of a substantial reduction in charges, it is obvious that, in order to justify such a policy, we must look first to a considerable increase of traffic, and, in the second place, to some substantial relief in respect of the principal items of expenditure to which I have referred.

LAST MEETING OF "MIDLAND" SHAREHOLDERS.

Now, I think I have said enough on the subjects referred to in the report and accounts, and I would like to make a very few remarks upon a subject that must be present to the minds of all of us. To-day's meeting is the last occasion on which a Midland chairman can address Midland shareholders. After to-day we cease to exist—in our present form.

But, as I told you last time, I do not regard the passing away by Act of Parliament of the Midland Railway as the occasion for a funeral oration.

We are not dead; we take on a new name—probably one which nobody likes, but under that name I trust and believe that all the best attributes and traditions, not only of the Midland but of our partners, the London and North-Western Company and the other great companies with whom we are merged, will not only be kept alive, but will be developed to the best possible advantage.

We must not be too self-centred. We hate losing our name and our individuality, but remember that the companies that are forming part of our group have their own historic names, their *esprit de corps*, their record of achievement.

It is a hard thing for all of us, but the more generously we think of our partners, and the more wholeheartedly we concentrate on thinking of the interests of the new entity, the more quickly will the new machine get to work. At first it cannot be expected to work sweetly. There must be a period of trial. But as to the ultimate result—so long as we have faith, good will and hard work, I have no doubt.

My only regret is that to the new organisation we cannot bring over the whole Midland team.

DIRECTORS AND OFFICERS.

As regards the directors, the statute intervenes. I will only say about those of the Midland board who do not accompany us to the London Midland and Scottish Railway that there is not a single one of them whom we shall not miss. They have worked loyally and well, and it is to me a matter of personal grief that they cannot accompany me to the new board.

As regards the officers, matters are still, to some extent, in the melting pot, but I hope that the new company will have the advantage of the services of most of them.

Mr Briggs is retiring after having served the company with the utmost zeal and success for over 50 years. For his great services to the Midland, we thank him.

Mr Bancroft, our secretary, and Mr Loney, our goods manager, are also leaving. I greatly regret the fact. Each man has made a name for himself among railway officials, and has done long, loyal and efficient service to the company.

As regards Mr Tatlow, what can I say? For a long time he let us know that on the carrying out of the new grouping, he would regard his active railway career as over. No one man can regret this more than I do, for I think it is impossible for any one man to know and appreciate another as I do Mr Tatlow.

He goes at the zenith of his powers. There is no railway man in the country who is his equal. Happily, for a short time, at least, his abilities are not altogether lost to us, for he has consented for a few months, at a purely nominal fee, to act as consultant to the new company.

I am sure you will join with me in wishing him, as well as the other officers who are retiring, God speed and many years of health and happiness.

TRIBUTE TO STAFF.

To all of the officers, and to the whole of the staff, I desire to express the very great appreciation of the board, and of myself, for the loyal and efficient service they have given to the company. I am sure you will desire to be associated with this imperfect tribute which I pay to the men who have done so much for the Midland Railway.

The Chairman proceeded to answer several questions put to him in writing by stockholders, and then formally moved the adoption of the report and accounts.

UNDERGROUND RAILWAYS GROUP.

METROPOLITAN DISTRICT—LONDON ELECTRIC—CITY AND SOUTH LONDON—CENTRAL LONDON—LONDON GENERAL OMNIBUS.

Meetings of the proprietors of the Metropolitan District Railway Company, London Electric Railway Company, City and South London Railway Company, Central London Railway Company, and the London General Omnibus Company, Limited, were held on the 22nd instant, at Caxton Hall, London.

Lord Ashfield, in the course of his speech, said: All through last year the depression in trade and industry continued, and in London the number of unemployed varied between 180,000 and 120,000 people. There has been a slight but continuous improvement in trade conditions, and there are indications that a revival is coming, though only very slowly. This depression readily accounts for the falling off in the passengers carried by the railways from 330 millions a year ago to 325 millions in this last year, or by about 4 per cent. Yet against this must be set the increase of 85 millions in the omnibus passengers. This increase is attributable to the increased number of omnibuses in service this year over last, and to the larger modern omnibuses which were placed on the streets in growing numbers throughout the year.

RECEIPTS AND EXPENSES.

The gross receipts from passengers carried by the five companies are £12,028,000, compared with £12,287,000 a year ago. The reduction amounts to £259,000, or 2 per cent. Other traffic receipts amounted to £250,000, as compared with £211,000, so that the final gross result of traffic operations was only £220,000 worse than a year ago. This is a very slight fall, you will agree, bearing in mind the circumstances of the time. Fortunately expenses continued to decline throughout 1922. The economies to which I made reference when last I spoke to you have borne fruit. The total expenditure was £9,943,000 in 1922, against £10,426,000 in 1921—a decrease of £483,000, or 4½ per cent.

It will help you to understand what has happened if the expenditure for last year is analysed into its main items. It is found that £5,340,000, or 54 per cent. of the total, is spent in salaries and wages. These are down £454,000, or 8 per cent., compared with the previous year. £621,000 is spent on electric current supplies, which sum is down £357,000, or 37 per cent. £947,000 is spent on petrol, which is down £8,000 compared with the previous year, but then the quantity consumed has been greater. Taken together, electricity and petrol have cost £1,508,000, or 16 per cent. of the total expenditure. Other materials and supplies have cost £1,124,000, or 11 per cent. of the total expenditure, and show a fall of £95,000, or 8 per cent., as against the previous year. Altogether these items account for 81 per cent. of the total. The remainder of the expenditure is made up of rates, taxes, compensation, insurance and miscellaneous expenses, and amounts to £1,905,000, or 19 per cent. of the total. This includes certain extraordinary expenditure connected with a programme of overhaul and reconstruction of cars and station equipment necessary to bring them up to a post-war standard. In consequence the amount is not comparable with that of the previous year.

If we summarise the position to-day as compared with the pre-war standard we find that, for the same service given, operating costs have increased on the railways 172 per cent., and on the omnibuses 150 per cent. On the other hand, fares have only advanced some 70 per cent.

Miscellaneous receipts net, being the receipts from advertising, surplus properties, &c., increased from £587,000 in 1921 to £642,000 in 1922, or by £55,000, equivalent to 9½ per cent. The net income, therefore, was £2,977,000, or £317,000 more than a year ago.

DIVIDENDS.

The total distribution by way of dividends upon the ordinary stocks and shares amounts to £902,983, and is equivalent to 4½ per cent., approximately, upon the whole of this capital, as compared with less than 4 per cent. a year ago. This is the best result which has so far been achieved in the record of this group of companies, and is one which gives to your boards considerable satisfaction. When the accounts are finally closed and the dividends paid, £325,000 will be carried forward to next year's

accounts, as compared with £253,000 brought in, an increase of £72,000.

We have come to the conclusion that a forward policy is once more the right policy for the Underground Railways.

A programme of new works is being pushed forward with rapidity. It has been necessary to close the northern half of the City and South London Railway because of the difficulty of the reconstruction work on this section, but while this robs a part of London of its traffic facilities for the moment, it will result in those facilities being restored to a greatly improved standard much more speedily. It is expected that through trains will be running from Moorgate to Hendon by October of this year, and that the portion between Hendon and Edgware will be completed by the close of the year, and the whole programme by the latter part of the following year. I am glad to say that the works have already meant the employment of many thousands of men, and in a very short while the numbers will markedly increase. This is a material contribution towards the relief of the unemployed which we are glad to be able to afford.

When this programme is completed I do not think that we should stop. We have prepared another programme, which is a needful supplement to the first programme, and is embodied in three Bills now before Parliament. It represents a further expenditure of over £8,000,000.

Turning to the omnibuses, the same forward policy has been pursued. The "B" type is disappearing from the streets of London this year. At first it was replaced by the "K" type, seating 46 passengers. This gave place to the "S" type, seating 54 passengers, and now we are building the "N.S." type, which will appear in large numbers on the streets in the spring, and represents, in my opinion, as great an advance on the "S" type as the "S" type represented on the "B" type.

UNFAIR COMPETITION.

The other question of policy upon which I must speak to you relates to the omnibuses, and involves the whole problem of London transport. You may have noticed that after an absence of many years certain odd omnibuses have appeared upon the streets in coats of divers colours. They have entered into competition with the fleet of omnibuses which we have at some pains and no little cost consolidated together out of the crowd of competitors which jostled one another up to 1911. I am no believer in competition in urban transport, but equally I am no believer in a protected monopoly. It seems to be assumed that there is nothing between the two, but surely this is a mistake. The door is always open for new concerns to come in and offer traffic facilities, if the old does not give them on fair terms, but if the old does give them on fair terms, where is the merit in the new? What is needed is some responsible and judicial authority, able to say what is required, stage by stage, for the development of London's traffic facilities, and able to secure these requirements, if not from those already engaged in the business, then from those who are willing to enter in, as they are needed.

Competition is a dangerous weapon. It may seem to offer immediate gains, but they are at the expense of future losses. This is the universal experience. We are willing and have always been willing that some reasonable measure of control should be enforced. We do not seek inordinate profits. We seek no more than a reasonable return upon the capital invested. When we fail let others take our place, but while we are efficient and progressive, do not for the sake of this specious notion of competition let others come in to weaken and prejudice the orderly progress of London's transport.

Fortunately, we are in a strong position to meet any competition. We have ample reserves in the Omnibus Company; the accumulated reserves of all companies which are available now amount to £3,500,000. We have a new and powerful fleet of omnibuses coming upon the streets. Circumstances are favourable to us. But it is regrettable if, instead of being able to give our whole attention, to devote our whole resources to meeting the public requirements, we have to waste a part of them because of these needless competitive services.

The usual resolutions were then put and carried.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED.

ARRANGEMENT WITH GREAT SOUTHERN APPROVED.

An extraordinary general meeting of the Buenos Ayres and Pacific Railway Company, Limited, was held, on the 20th instant, at Winchester House, London, E.C., to consider a resolution approving two agreements made between the company and the Bahia Blanca and North-Western Railway Company and the Buenos Ayres Great Southern Railway Company, and the Buenos Ayres Great Southern Railway and the Bahia Blanca and North-Western Railway Company.

The acting secretary (Mr C. Ellison Rich) having read the notice convening the meeting,

Viscount St Davids, who presided, said that he had seen a statement that the Pacific Company lost £200,000 a year over the Bahia Blanca. The receipts and expenses of the two companies were so mixed up together that it was impossible to say exactly what at any given time the Pacific had made or lost out of the Bahia Blanca. They could only guess the result, and he had no doubt that in bad years they had lost as much as £200,000, but in the present year he would say that the Pacific Company was making a very nice profit out of the lease of the Bahia Blanca line. The position was that, whatever might happen in the Bahia Blanca district itself, the main line, called the Nueva Roma Line, was going to become more and more valuable. In transferring the Bahia Blanca they were transferring a thing over which they had lost money, and might lose money for years, but a thing out of which, if they held on long enough, they would do well. If they did not transfer the line, in bad years they would lose less than at present and in good years would make more. The trouble was that in good years they did not need the profits from the Bahia Blanca, and in bad years the losses from that line were a heavy drag upon them.

ADVANTAGES OF THE DEAL.

As to the advantages of the deal, they lost the chance of losses in bad years, and the capital spent upon that line would be repaid to them. If the deal went through, the Southern Company would take over their interests in certain subsidiary companies, amounting to £119,000, and altogether they would get in cash from the Southern £380,000. If, in addition, that company took their stores, they would get £500,000. Another advantage was that the Southern Company had to pay them a perpetual annuity of £25,000 and a further £25,000 in any year in which the Southern Company paid 6 per cent. on its ordinary stock. His own opinion was that he ventured to regard that as a fairly safe £50,000 annuity.

As to the position of the Southern Company, it was not good business unless both parties made money out of it. The Southern would take over a great many useful assets, and he thought that they would find this company's harbour at Galvan of immense value. They would take over from this company valuable terminals, their market at Bahia Blanca, and other assets, and they would be able to work the system more cheaply than the B.A. and Pacific had been able to work it themselves.

With regard to the position of the Pacific, his last speech in October had been described as optimistic, but he had made it very carefully, and it was moderate. Indeed, in view of recent results, it might almost be called unduly pessimistic. They all knew what the traffic had been, and he was of opinion that good traffics were likely to go on for a long time ahead.

The scheme was unanimously approved.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED.

An extraordinary general meeting of the Buenos Ayres Great Southern Railway Company, Limited, was held on the 20th instant, at River Plate House, London, for the purpose of submitting resolutions authorising the taking over from the Buenos Ayres and Pacific Railway Company, Limited, the working of the railways, port, and other properties of the Bahia Blanca and North-Western Railway Company, Limited.

Sir Albert E. Bowen, Bt., who presided, said there was no question but that the transfer, which was subject to the approval of the Argentine Government, must be of advantage to the country generally. The main traffic carried by the Bahia Blanca system had its natural port for export and import at Bahia Blanca, and this port, the creation of which was due to the Southern Railway, was more and more becoming the centre of the activities of the Southern Railway system.

It was proposed that the "Southern" should step into the shoes of the "Pacific," undertaking their obligations and taking over the whole of the Bahia Blanca Line and its appurtenances, including the port of Galvan, with its moles and elevators, the produce market, waterworks, tramways, and land, and they agreed to pay them an annuity of £25,000, with a further £25,000 in any year when the Southern paid 6 per cent. or more to its ordinary shareholders. The whole transaction could be completed by the Southern without the slightest difficulty out of their own cash resources, and they would not have to ask the stockholders to provide any further capital for the purpose.

With regard to the present position and the prospects of the company for the current financial period, it would have been seen from the published weekly traffic figures that up to the present they were enjoying a satisfactory year. In October last he expressed the hope that, having an average harvest, they would be in a position this year to resume dividends at something like

pre-war rates, and the results up to the present had confirmed his anticipations. Traffic continued good, and the outlook generally might be considered favourable. It was the board's intention to declare an interim dividend of 3 per cent. actual (less tax) on the ordinary stock in respect of the current financial year. The resolutions submitted were passed unanimously.

BAHIA BLANCA AND NORTH-WESTERN RAILWAY. TRANSFER OF LEASE APPROVED.

An extraordinary general meeting of the Bahia Blanca and North-Western Railway Company, Limited, was held, on the 20th instant, at Winchester House, Old Broad street, London, for the purpose of considering and if thought fit passing a resolution approving agreements providing for the transfer of the lease of the undertaking from the Buenos Ayres and Pacific Railway Company, Limited, to the Buenos Ayres Great Southern Railway Company, Limited. Viscount St Davids, P.C. (the chairman of the company), presided, and, in moving the resolution, said that the Bahia Blanca line was leased to the "Pacific" some 18 years ago, during the whole of which time the guarantee had been duly paid. The position as far as it could be made out was that in two or three years the "Pacific" had made money out of the Bahia Blanca, but, in the overwhelming majority of the 18 years the Pacific had lost money, and in some years those losses had been heavy. Prospects were now getting brighter, and in this particular year his opinion was that the "Pacific" was making a substantial sum of money, because there was the biggest crop on the Bahia Blanca line that there had ever been within their recollection. It was at this particular moment that the "Southern" had come along offering to take a transfer of the lease, and to pay an annuity to the "Pacific" for agreeing to the transfer of the line. It had been suggested that that annuity should be paid to the Bahia Blanca, but for several years, while the Bahia Blanca had been having their guaranteed dividend regularly at the expense of the "Pacific," the latter had paid no dividend on its ordinary stock. The "Pacific" had borne the burden and heat of the day, and it was only reasonable if something was being paid as compensation when such a proposal was made that the "Pacific" should get it. In any case, the Bahia Blanca was leased to the "Pacific" in perpetuity, and they would not dream of giving up the lease unless they received this payment. Comparing the current prices for the various Bahia Blanca

stocks with those of the day before the notice was sent out stating that negotiations had been opened, the Chairman said it was clear that the Stock Exchange attached a greater value to the "Southern" guarantee than to that of the "Pacific," and it seemed that the great bulk of the stockholders were of the same opinion.

Mr J. A. Goudge seconded the motion, which was carried unanimously, and the transfer was also approved at the meeting of the first debenture stockholders.

In the absence of a quorum, the meeting of the second debenture stockholders was adjourned to a date to be fixed.

THE SCOTTISH LIFE ASSURANCE COMPANY, LIMITED. INTERMEDIATE BONUS DOUBLED.

The annual meeting of the Scottish Life Assurance Company, Limited, was held on the 20th instant, in Edinburgh, the Duke of Atholl, K.T., D.S.O., presiding.

The Chairman said that the figures for 1922, like those of 1921, disclosed a state of prosperity which made some amends for the trying years which they, in common with other life offices had to pass through as the result of the war. During 1922 the new assurances amounted to £834,000, of which £124,000 was reassured, leaving a net new business of £710,000. The net life premium income was £365,000, showing the substantial increase of £19,000. The interest on the funds, after deducting income-tax, exceeded £151,000, showing a yield of £4 12s 2d per cent., being the largest rate yet attained by them. Although this figure might not convey much to the public, it was extremely significant to the insurance expert. The reason was that their actuarial valuation was based on the assumption that the funds earned a net rate of £3 per cent., and consequently all that was earned above that rate was profit.

FAVOURABLE MORTALITY EXPERIENCE.

The claims by death showed a ratio of actual to expected of only 53 per cent.; in other words, the claims came to little more than one-half of the amount expected under the mortality tables employed by the company. The directors were more concerned with the quality than with the quantity of the business which they transacted, and the record of the company's mortality experience showed the excellence of the business done. The ratio of expenses (including commission) to premium income was 15.16 per cent.,

being a reduction of nearly ½ per cent. The life funds had increased to £3,502,000 by the addition of £263,000, which was a record increase. The present market value of the investments of the company was largely in excess of the total which appeared in the balance-sheet.

A HOPEFUL OUTLOOK.

Theirs was a life company; it specialised in life assurance; it had always been its aim to do everything it could for the welfare of its policy-holders; of this it had given ample evidence in the past. It gave more to-day because, owing to the present strength of the office reserves, and to the steadily accumulating surplus of the company, the directors had decided to increase the rate of the intermediate or prospective bonus on full-profits policies from £1 per cent. to £2 per cent. in respect of each of the remaining three years of the current quinquennium. The war had seriously affected two quinquennial valuations, but notwithstanding this, on each occasion they declared a bonus, although it was restricted to £1 per cent.; and now the time had come when the directors considered that an increase in the intermediate bonus was an equitable arrangement for their policy-holders, in view of the improved prospects of a return at next valuation to the £2 per cent. declared bonus which was so creditable a feature of the company for a period of 30 years prior to the war. It would be understood that the directors could give no guarantee that the declared bonus at next valuation would be £2 per cent. because unforeseen events might arise, but the present position gave a most hopeful outlook. He felt sure that this decision would be welcomed as fresh evidence that the interests of the policy-holders were always the first concern of the directors.

Sir John M. Clark, Bart., the chairman of the board of directors, seconded the adoption of the report, which was unanimously carried, and a dividend of 15 per cent., less tax, was declared.

NATIONAL PROVIDENT INSTITUTION.

SATISFACTORY YEAR—PREMIUM INCOME INCREASE.

The eighty-seventh annual meeting of the National Provident Institution for Mutual Life Assurance was held, on the 23rd instant, at the Cannon street Hotel, London.

The Hon. Vicary Gibbs, who presided, said that the figures of the new business transacted during the year compared favourably with those of the previous year. The new sums assured amounted to £1,072,343, against £897,445, and the new annual premiums £42,594, against £38,369, and there was also an increase of £10,000 in the amount of single premiums. He thought that those increases must have been partly due, at all events, to the favourable bonus forecast that he had been able to make last year. There had been some substantial decline in their expense ratio. Last year he had recorded a fall from £13 13s per cent. of the premium receipts to £13 10s 6d per cent. This year the percentage was only £12 17s 6d.

The general progress of the institution was also proved to have been steadily in the right direction, by the increase of £22,000 in the premium income, £24,000 in the gross interest income, and by the addition of £185,000 to the assurance fund. The net interest income had increased from £316,000 to £352,000, and the latter amount represented a net rate of interest earned by the fund, invested and uninvested, of £4 11s 5d per cent. That was the highest net rate of interest ever recorded in the history of the institution.

With regard to the quinquennial report, the figures furnished evidence of the steady growth of the institution during that period. The actuary's report disclosed a surplus of £1,077,159, of which sum it had been decided to divide £914,542, leaving £162,607 to be carried forward. The sum divided was sufficient to provide bonuses at the full pre-war rate. For the whole life policyholders they had added to the ordinary flat rate of a simple reversionary bonus a further bonus, commencing after the lives had survived the expectation of life for their age at entry, gradually increasing that flat rate bonus of £2 per cent. per annum up to £3 per cent. That method of distribution, as far as they knew, had not been adopted by any other office.

As regarded the endowment assurance policyholders, the institution had always been famed for the liberal bonuses given to that section, and the full pre-war rates had again been declared. As from November 20th last, interim bonuses would be paid on death claims, irrespective of the form in which profit had been previously taken, at the full rate of reversionary bonus last declared. The report and accounts were unanimously adopted.

CHAMBER OF SHIPPING OF THE UNITED KINGDOM. INTERDEPENDENCY OF NATIONS.

The forty-sixth annual general meeting of the Chamber of Shipping of the United Kingdom was held on the 22nd instant, at Leathersellers' Hall, London.

In the course of his presidential address, Sir Ernest Glover said that it had been a year of successive disappointments, and although last autumn there was a ray of light, hope waned as winter progressed and the outlook was now much less promising than it appeared to be three or four months ago. The political situation on the Continent had been a strong factor in arresting the commercial and economic development which was essential to the shipping industry. Before there could be lasting improvement in the industry the laid-up tonnage of shipping must be absorbed; and the first step must be to get a larger tonnage at work without further depressing freights. There was reason to see that some progress had been made towards absorption of the surplus British tonnage.

Having referred to the problems of reparations and the exchanges, the President said that satisfactory conditions in international trade could not return until exchange was established. Steady trade would suit this country better than the receipt without payment of large quantities of goods from Germany, and if it could be established that the payment of reparations and the payment of our allied debts to us involved the continuance of exchange difficulties and the prevention of the resumption of normal trade it would be a strong argument in favour of dropping reparations and inter-allied debt altogether. Economically all nations were increasingly interdependent, but the tendency of political groups had been to deny free play to the natural development of economic interests. Political aspirations based on racial grouping must make allowance for economic needs, or the world would be faced with the danger of disruption. The growing ramifications of political and racial interests must march step by step with the development of the economic interdependence of the world.

Referring to Government interference with trade and shipping, the President observed that the Shipping Subsidy Bill of the United States, if passed, must lead to rising prices in America for all imports, while the American exporter would lose the benefit of the open freight market, involving higher charges on his shipment. Thus the result, whilst clearly disadvantageous to other countries, might well prove to be of very doubtful advantage to America. In British Dominions similar action was being taken at a time when Great Britain was urged to obtain her supplies of grain as far as possible from within the Empire; but Australia must realise that to further her trade with the world she must remove difficulties of transport, not increase them. India was seeking to follow the example of Australia.

On the subject of unemployment the President emphasised the desirability of making seamen's employment more continuous, with advantage to the men and to shipowners. Wages were still much above pre-war level, while freights tended to approximate to pre-war level or less. Much British tonnage now laid up might be brought into service if expenses were lower, and to do this and so reduce unemployment a further reduction of wages might be necessary. Negotiations to that end would be easier if reduction were coupled with some arrangement whereby practical continuity of work could be relied upon.

In the course of the proceedings the report and accounts were adopted, on the proposition of Sir Frederick W. Lewis, Bart., the retiring president, seconded by Sir Ernest W. Glover, Bart.

Sir Ernest W. Glover was unanimously appointed president for the ensuing year, and Sir Alan G. Anderson, K.B.E., was elected vice-president.

Sir William H. Raeburn, M.P., proposed a resolution expressing satisfaction with the efforts successfully made during the past year by all parties concerned to restore trade by reducing operations and working expenses, and calling attention to the fact that such reductions would only bear fruit in a revival of trade prosperity and consequent increase of employment if they were followed up during the present year by further substantial reductions in all charges incident to overseas transport.

The resolution was carried unanimously. The Hon. Alexander Shaw, M.P., then proposed a motion expressing the satisfaction of the Chamber at the favourable recognition accorded by Parliament to the proposal for mutual exemption as between all countries of profits of shipping from foreign taxation, and urging the importance of translating such recognition into definite legislation. His resolution also drew attention to the unsound and inequitable methods of taxation employed by certain Dominion Governments.

The resolution was carried unanimously, as was a further resolution, proposed by Sir Kenneth Anderson, Bart., K.C.M.G., advocating a well-considered joint effort at Empire settlement.

The proceedings terminated with a vote of thanks to the president.

RAILWAY DEBENTURE AND GENERAL TRUST COMPANY, LIMITED.

APPRECIATION OF INVESTMENTS.

The fiftieth ordinary general meeting of the Railway Debenture and General Trust Company, Limited, was held, on the 22nd instant, at the Cannon street Hotel, London, Sir Vesey Holt, K.B.E. (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: A valuation has been made upon a similar basis to that adopted last year, and the results show an all-round improvement. You will recollect that last year we reported that there was a depreciation of 8 per cent. on the amount at which the investments stand in the balance sheet, after taking into account the amount of the reserve. The values of our holdings have improved by about 10 per cent., and we are therefore glad to be able to report that the ordinary stock is now fully represented by assets.

One of the ordinary shareholders has made a comparison between the revenue account for the year ended January, 1914, the last pre-war year, and the present year, and in his comparison he shows that the book value of the investments has fallen from £2,340,000 to £2,276,000, and that the gross income has only risen by the small sum of £140—namely, from £119,487 to £119,622. In case any other shareholder might extract the same figures from the accounts, and as interest rates are still higher than they were in 1914, draw the inference that the company has not progressed, I think it well to state that it is not correct to compare the gross income for these two periods if you want a true comparison, as the amount of capital employed in the business has been reduced by the paying off of the debenture debt.

Owing to the continuance of the corporation profits tax, which forms such an unjust burden, falling as it does wholly upon the ordinary stockholders, we still continue to show our revenue account in two parts, and for that reason comparison is made difficult. If you will add together the items of revenue shown in the two accounts, you will find that our gross revenue from investments shows a small increase, despite the fact that we have reduced the debenture issues during the year by a sum of £37,059, and the charge for debenture interest is £1,300 down. After payment of expenses, and writing off the difference between par and the issue price of debentures, and making other provisions, the net revenue is about £1,500 higher at £39,161. After transferring £7,122 to the reserve account and paying the fixed dividend of 4½ per cent. upon the £500,100 preference stock outstanding, we recommend a dividend at the rate of 6 per cent. per annum upon the ordinary stock, carrying forward £13,717.

The report and accounts were unanimously adopted.

RAILWAY SHARE TRUST AND AGENCY COMPANY, LIMITED.

COMPANY'S REVENUE-EARNING CAPACITY.

The thirty-fourth ordinary general meeting of the Railway Share Trust and Agency Company, Limited, was held, on the 22nd instant, at the Cannon street Hotel, London, Sir Vesey Holt, K.B.E. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: The investments in this company have always been of a different character from those of the sister company, whose meeting we have just held, and the return on its securities is of a more fluctuating character than would obtain if a larger proportion of its holdings was in fixed interest-bearing securities. We have not escaped the effects of the trade depression, and the revenue this year shows a fall of about £3,000 compared with the previous year; but when I tell you that our total number of investments is 260, and that this fall has been occasioned by the passing of dividends which had been received in the previous year on eighteen holdings, and of these eighteen holdings that the reductions on two of them amount to £2,700, I think you will agree that the revenue-earning capacity of the company is one that can be relied upon, despite the fact that it holds a large number of junior securities.

After payment of expenses and interest upon debenture stock we are enabled to transfer £3,196 8s 1d to the reserve account, and after payment of the 7½ per cent. fixed dividend upon the preference stock to recommend a dividend for the year on the ordinary stock amounting to 5 per cent.

The company has to pay an exceptionally high rate of interest upon its "B" preference stock, which is very nearly half the share capital of the company, and to lessen this handicap you agreed in 1913 to an alteration of the articles of association authorising the directors to issue 4½ per cent. first debenture stock up to an amount of £400,000. Out of that sum, as you will see by the balance-sheet, only £254,426 has been issued. Since the close of the accounts now before you the directors received an offer for the balance of the stock which they considered desirable to accept, and consequently they have agreed to issue £145,574 4½ per

cent. debenture stock, thus completing the total amount of stock which the shareholders authorised, unless, of course, more share capital is issued.

A valuation of the investments has been made on the usual basis, and shows that the reserve account is more than sufficient to take care of any depreciation that exists, and consequently we are pleased to inform you that your capital is intact.

Mr R. S. Guinness seconded the resolution, which was duly carried.

WINTERBOTHAM, STRACHAN, AND PLAYNE, LIMITED.

COMPANY'S STRONG POSITION.

The third ordinary general meeting of Winterbotham, Strachan and Playne, Limited, was held, on the 23rd instant, at the registered office of the company, 7 Argyll street, London. Mr Herbert B. Winterbotham presided.

The secretary (Mr Ernest B. Barrett) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that it would require the optimism of a Mark Tapley to discover on the stormy and uncharted seas they were now navigating any near prospect of a rapid return to those conditions of peace, goodwill, and confidence for which traders had so long and wistfully yearned. Europe and the Near East continued to exert a disturbing influence inimical to the resumption of the world's commerce, but elsewhere the past year had witnessed a gradual and general revival in trade and in economic conditions. There had undoubtedly been some clearing up of the difficulties which had faced businesses last year. Old stocks had been liquidated, wages adjusted, and a competitive basis of prices established, but a satisfactory credit situation could not be reached, nor more activity than mere "marking time" be accomplished until an acceptable solution of the Reparations question be found.

PROBLEM OF UNEMPLOYMENT.

Unemployment, though less than in 1921, was the most vital problem with which the country was faced, and the exceptionally high figure of one man unemployed in every five skilled men was one which indicated how severe the depression had been, and how the general lack of buying power arose. That loss of effective purchasing power was bound to be felt by all trades, and presented a serious obstacle to the resumption of the full production, without which there could be no cure for unemployment. The prolonged period of depression had decreased the normal number of learners entering the woollen trade, and that shortage undoubtedly left them with the risk in the future of an insufficiency of skilled hands, which it would be impossible to make up at short notice.

The mills had been well employed during the year, and the relationship with labour had been cordial, and he would like to emphasise the advantage and benefit their West of England Woollen Industrial Council had been to the trade. It had again worked admirably. The 12 months' trading with which they were dealing had seen the Bank rate fall from 5½ per cent. to 3 per cent.; income-tax reduced from 6s to 5s; a General Election; but above all, excess profits duty had gone to its last rest, and they hoped that the Chancellor might be enabled to abolish the corporation profits tax this year.

The old merino stocks, which last year were 700,000 bales, and had hung like a thunder-cloud over the trade, had practically already disappeared, and they were, except for the small quantity of the last clip, still unsold, actually on the sheep's backs for supplies, and any buying movement must reach the manufacturer quickly. The position of manufacturers and merchants of piece goods still remained the least satisfactory feature in the woollen trade, the revival having not yet extended beyond the spinner and topmaker, and in those circumstances it was perhaps not remarkable that advanced values of wools and yarns were being strongly resisted. The statistical strength of the wool position pointed to the correctness of Sir Arthur Goldfinch's forecast of the wool market made last autumn, that "whoever sold last would sell best." The manufacturers, however, would feel greater confidence were the price of wool governed more from their end of the trade.

IMPROVED PROSPECTS.

The past year had been an anxious one, bristling with difficulties, and, in times such as these, the directors considered the results shown highly satisfactory. Though not yet out of the wood, the woollen industry had shown great recuperative powers, and, provided no fresh crisis arose, might be considered to have turned the corner. It must be remembered that the company was a shareholding company, and derived its profit from the dividends received and paid by its associated companies. To provide the sum of £46,062 profit for the year, it had been necessary for the associated companies to set aside, with the addition of the income-tax and Corporation Profits Tax on the amount, the sum of £84,831. In addition £33,241 had been written off as

depreciation, whilst the total reserves of those companies amounted to £56,292, and a further sum of £5,458 had been expended in additions and improvements.

A summary of the combined assets and liabilities of the associated companies showed that the surplus assets acquired by the company for £467,285 stood at November 30th last, after deduction of all liabilities, at the sum of £553,737, an increase of assets of £16,109 over those of last year. After deducting the dividend declared by the associated companies and payable to this company, there remained an excess of assets over liabilities of £553,737. If to that they added the advances to associated companies and interest, and the amount of cash at bank and in hand, the company's holding in War Loan, and excluded altogether from the assets any amount for preliminary expenses, it would be seen the assets totalled £662,210. If from that figure be deducted creditors and the amount distributed in dividends to date, it would be seen the sum of £623,569 remained as representing the £550,000 issued capital.

The report and accounts were adopted, and a dividend of 10 per cent., less tax, was declared on the ordinary shares.

PEKIN SYNDICATE, LIMITED.

REORGANISATION OF BANK INDUSTRIELLE.

RESULT OF NEGOTIATIONS.

The ordinary general meeting of the Pekin Syndicate, Limited, was held, on the 19th instant, at the Cannon street Hotel, London, Colonel Brinsley J. H. FitzGerald, C.B. (the chairman), presiding.

The Chairman said that the receipts for the year ended June 30th last were £24,067, as compared with £37,977, the decrease being due mainly to the loss of interest on cash balances with the Banque Industrielle de Chine through the suspension of that bank on June 30, 1921. The balance of expenditure over receipts amounted to £11,048, to which must be added the amount of £6,054 reserved against debtors and £3,453 reserved against shares in other companies, making a total debit balance of £20,555. This, together with the debit balance of £45,819, being difference in exchange in respect of the adjustment of the floating assets and liabilities in China and Paris, was carried to the balance-sheet, and deducted from the credit balance of £521,669 on profit and loss account. The economies from the rearrangement in administration in London, Paris, and China, referred to by the managing director at the last meeting, had been carried out, the reduction in expenditure being about £10,000 a year, but the full effect of this saving would not be seen until the next accounts were presented. The necessary arrangements had been made to issue a colliery profit and loss account in respect of the financial year ending June 30, 1923, which the directors had every reason to believe would be satisfactory.

With regard to the balance-sheet, the liability on capital uncalled on shares has been reduced from £105,531 to £10,625. This decrease is due to the amount of the liability of 250 frs. per share on our share holding in the Banque Industrielle de Chine, which has been called up, being added to the cost of our shares in that bank; the present amount of £10,625 represents the syndicate's liability on its share holding in the Chinese Central Railways, Limited.

After dealing with the other items in the balance-sheet, the Chairman said: With regard to the Tientsin Wharf and Godown Company, Limited, in which we hold a controlling interest, although their operations, in common with those of other firms in China, were restricted owing to conditions being far from normal, the results, in respect of their financial year ended June 30, 1922, were satisfactory, a dividend of 8 per cent. being paid on the shares.

Referring to the coal mines, I wish to emphasise the fact that the difficulties of transport have been, and are still, very serious. This alone is responsible for the very limited tonnage of coal sold, and, as you will readily understand, the larger the output the bigger is the profit per ton. Notwithstanding these difficulties, I am glad to be in a position to inform you that the latest telegram from Mr Kenrick, the managing director, reports a very satisfactory profit for the seven months ended January 31st.

In connection with our agency for the Yang-Tse Corporation, Mr Barson, before leaving China, visited Szechuan, and started negotiations in reference to the concession. Since then these negotiations have been carried on by Mr Kenrick, and we are hopeful that something satisfactory may result.

BANQUE INDUSTRIELLE.

As to the contingent liability of 12,500,000f mentioned in the balance-sheet, this is a very delicate matter, but I have made up my mind to tell the shareholders the whole of the facts connected with this unfortunate transaction. When the Banque Industrielle began to get into difficulties certain bankers came forward to prevent a failure, and large advances were made on the condition that everything available should be pledged to the lenders by the Banque Industrielle. Your company, at that time, had approximately 12,000,000f on deposit with the bank. M.

André Berthelot was then your managing director, and also president of the bank, and in order to provide additional security to the lenders he endorsed accommodation notes on behalf of your company in favour of the bank amounting to 12,500,000f. He did this without consulting or informing your board. In 1915 a resolution had been passed by your board to the effect that all endorsements must bear the counter-signature of the secretary, and notification of this resolution was sent to and acknowledged by the Banque Industrielle. Acting under legal advice, your board repudiated any liability on these bills. The case, however, came up for trial, and judgment was given against your company in the Lower Court in Paris. We, of course, decided to appeal, and, if necessary, carry the latter to the Court de Cassation, but litigation would have lasted a long time, and, what was for us far more serious, litigation might have seriously interfered with the reconstruction of the Banque Industrielle, in which your company has such a large interest.

THE AGREEMENT.

Here was the position: (1) Your company were liable for a call on Banque Industrielle shares amounting, roughly, to a sum of £83,000. (2) A very large proportion of your cash resources was on deposit with the Banque Industrielle, and on this money an embargo had been placed in connection with the judgment already referred to. (3) Without reconstruction your shares in the bank were valueless. Confronted with this position, your board left it to me to see what could be done by negotiations. An agreement was arrived at between the institution which had got judgment against us, the Réglement Transactionnel (acting for the Banque Industrielle), and the Pekin Syndicate, by which the judgment for 12,500,000f against us was withdrawn, in so far as this debt has, in the first instance, to be repaid out of proceeds derived from Bons de Repartition, which are to be given as security by the Banque Industrielle, and your company will only be liable for any balance which may remain due after a period of ten years. The market value of the shares mentioned in your directors' report as being extra security deposited for repayment of the 12,500,000f is at present about 4,000,000f. As to the calls payable on Banque Industrielle shares held by your company, I was able to make arrangements to meet these calls, and in the opinion of your board these are quite satisfactory.

THE RECONSTRUCTED BANK.

The reconstructed Banque Industrielle is to be managed by a Société Française de Gérance, consisting of a group of some of the most powerful banks in France, at the head of which is the Banque de Paris, and of representatives of the Chinese Government. This society will receive for management 5 per cent. of the profits after making certain reservations. The remaining 95 per cent. will go to the Banque Industrielle, which will issue to its creditors Bons de Repartition for the exact amount of its debts. Out of the 95 per cent. of the profits and the gradual realisation of assets, it is hoped that the annual distribution to the holders of these Bons de Repartition will wipe out the debt for which they have been apportioned within 25 years. You will be able to appreciate that it is quite impossible for your directors to fix any value on these bonds. Their value is entirely dependent on the business of the reconstructed bank, and in this connection it will interest you to know that six branches of the bank have already been reopened, and on the 26th of this month four more branches will be reopened. My information convinces me that, at any rate, at two of the branches already reopened the business being done is most satisfactory.

Turning again to the balance-sheet for one moment, and to the figure under Banque Industrielle of £429,637, I think the note sufficiently explains why this figure is allowed to stand, but I would like to say that it would have been far more in accordance with the wishes of the board had they been able to fix a proper value on these assets. I think that at our last general meeting I threw out a pretty clear hint that it was quite possible we might lose everything that we had invested in the Banque Industrielle. All I can now say is that the losses incurred are almost certain to be very heavy, but the position might have been far worse. This whole situation was brought about by the control of your company having gone into the hands of a group whose interests in the Banque Industrielle were so large that they overshadowed their interests in this company. At present this state of things is altered, but I want to take this opportunity of stating that, so long as I have the honour to be one of your directors, if any attempt is made, either directly or indirectly, to revert to the old order of things I shall at once appeal to the body of the shareholders, and leave the issue in their hands.

THE CHAIRMANSHIP.

I should like to say a few words about the chairmanship of your company. It will have been quite obvious to you that, owing to the uncertainty of our position, it would have been impossible to secure a chairman such as I had hoped we could get when I last addressed you, but I am still of the opinion that it would be in your interests to have a chairman who is closely associated with

one or other of the big banks, and I am hoping that before long the sky may clear sufficiently to enable us to secure such an alliance.

Mr Birn asked whether the chairman could enlighten the shareholders as to the nature of the negotiations which were being conducted by the syndicate on behalf of the Yang-Tse Corporation, and also whether the option on a certain number of shares in that corporation had been exercised.

The Chairman, in reply, said that the Pekin Syndicate were only agents for the Yang-Tse Corporation. He understood that that corporation would hold a meeting very shortly, and he had no doubt that their chairman would then deal with the question of the negotiations. The answer to the second question was: "No, we have not subscribed for the shares to which we have the right to subscribe, and I see no reason to exercise our option till near the end of the time, unless by doing so we can be of assistance to the Yang-Tse Corporation by providing them with funds. The work we are doing is with the object of being closely associated with them in what we hope may develop into a big business."

The report and accounts were unanimously adopted.

IMPERIAL TOBACCO COMPANY (OF GREAT BRITAIN AND IRELAND), LIMITED.

SATISFACTORY RESULTS—INCREASED PROFIT.

COMPANY'S COMING OF AGE.

The annual meeting of the Imperial Tobacco Company (of Great Britain and Ireland), Limited, was held, on the 20th instant, at Bedford, Bristol, Mr George A. Wills (chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: You will have seen that we record in our report the names of three directors of the company who died during the year under review. Mr E. S. Carlton's death occurred just before our last annual general meeting, and when I addressed you a year ago I made reference to his great services to the company and the loss which his sudden death had been to us. The other two names are those of Mr H. H. Wills and Mr R. Dalton, both of whom were well known to you. Mr H. H. Wills was an active leader in the tobacco industry before this company was formed, and he took a very prominent part in the events which led to its formation. He was a man of vision and of unbounded energy, the fruits of which are to be seen not only in our own business at home, but also in the worldwide export business which is now carried on in our brands by companies associated with us. In this export business he was a pioneer, and for many years a moving spirit. Of his public work in his native city this is perhaps hardly the place to speak, but many of you are aware of the devotion with which he laboured, almost to the day of his death, to perfect in every detail the schemes which he had conceived for the benefit of his fellow-citizens and their posterity.

Mr R. Dalton, whose death we also have to record with deep regret, was the managing director of the Mardon, Son, and Hall branch of the company. Our printing branch is of vital importance to our business, and it has been largely due to Mr Dalton's outstanding ability and foresight that that branch has never failed to meet the increasing calls which have been made upon it. Throughout a long business career he never spared himself, and he died, as I think would have been his wish, in harness.

BALANCE-SHEET ITEMS.

Turning now to the balance-sheet, you will observe that on the credit side the total assets of the company at October 31st last amounted to £64,448,980, an addition of about £1,069,000 to the corresponding total at October 31, 1921. The first item of land, buildings, plant, and machinery has been reduced by £23,803, as, although additions have been made to the various assets, the depreciation provided during the year has exceeded these additions. As usual, depreciation of buildings and plant has been provided for in the accounts at normal rates, and, in addition, we have written off out of profits a sum of £500,000 in reduction of buildings, having regard to the high costs of buildings erected during and after the war period. Goodwill and patent rights remain unchanged at their book figure.

The investments in associated companies stated at cost, or below cost in those cases where depreciation has taken place, stand at £6,017,612—an increase during the year of £479,204. As stated in the balance-sheet, the aggregate market value of investments in associated companies is largely in excess of the book figure. Stock-in-trade stands at a net figure of £31,008,850, as compared with £32,721,906 in the previous year's balance-sheet—a decrease of £1,713,056. Payments on account of leaf in transit, &c., stand at £1,246,673, as compared with £1,004,736 for the previous year—an increase of £241,937. This item is necessarily a fluctuating one. Debtors amount to £5,860,413, and show a decrease of £282,100. Investments in Government and other stocks, valued at prices ruling on October 31, 1922, stand at £1,019,416—an

increase of £173,749, due to appreciation in value since October, 1921. Corporation loans, which amounted to £200,000 in October, 1921, have been repaid during the year under review. Cash at bankers and in hand (£4,716,365) has increased by £1,493,068.

LIABILITIES.

Turning to the liabilities side of the balance-sheet, you will notice that the issued capital of the company remains at £35,330,594—the same as last year. Creditors, including provision for taxation, bonus to customers, estimated capital liability under dividend guarantees, employers' liability, marine and other funds, have increased by £595,514, as compared with last year.

The provision for pensions, &c., £1,610,362, has increased by £199,995. This increase is made up of £200,000 which we have transferred from the profit and loss account less £5, being the difference between the pensions paid during the year and the year's interest upon the fund. The premium of £1 per share received on the issue of ordinary shares in April, 1920, remains at £5,595,446. In this year's balance-sheet you will notice we have grouped this premium with the general reserve account, the two items, together with a sum of £225,677 transferred from the profit and loss account, making up a round figure of £12,000,000.

PROFIT AND ALLOCATIONS.

I will now turn to the profit and loss account. The net trading profit for the year, including a large sum derived from dividends on investments in companies operating abroad, and after fully providing for all charges, including income-tax and corporation profits tax and bonus to customers, amounted to £7,109,076, as compared with £6,927,641 for the previous year. On the debit side of the profit and loss account are charged the items of "provision for pensions," "amount written off freehold buildings," and "transfer to general reserve," to which I have already referred, leaving a balance of profit for the year of £6,273,399 18s 3d.

In the appropriation account you will notice that the profit for the year, added to the balance of undivided profit from the previous year (less bonus to customers paid thereout), gives an amount of profit to be dealt with of £6,477,000 15s 11d. Out of this sum the dividends upon the preference capital have been, or will be, paid—that is to say, 5½ per cent. upon the "A" cumulative preference shares, 6 per cent. upon the "B" non-cumulative preference shares, and 10 per cent. upon the "C" non-cumulative preference shares. Upon the ordinary shares an interim dividend of 7½ per cent. was paid, free of income-tax, on September 1, 1922, and it is now proposed to declare a final dividend of 7½ per cent. and a bonus of 1s 6d per share, both free of income-tax. After providing for these dividends, there will remain a balance of £568,444 2s 1d to be carried forward.

I think I may say that the results of this year's trading are very satisfactory, when we remember that the country is still passing through a period of trade depression and consequent shortage of employment. The duty on tobacco still remains at the high war figure of 8s 2d per lb, and it is for the Chancellor of the Exchequer to consider whether such a rate can long be maintained without detriment to the revenue and to the public interest.

GIFT TO STAFF AND WORKPEOPLE.

As you are aware, we have thought it well for a number of years past to mark our appreciation of the loyal and willing service of our employees, both at home and abroad, by a gift over and above the ordinary salary or wage. This policy has always received the hearty approbation of the shareholders, and it has undoubtedly tended to enhance the good feeling which has existed among our employees.

Since the war this country has passed through difficult times, and the industrial community has had to face problems certainly as complex as any which existed in the years before the war. We have seen an abnormal boom followed as a natural consequence by abnormal depression. These opposite conditions are almost equally hostile to the sound state of trade which we all desire, and which demands stability as its first condition. Looking back over these last five years of disturbed economic conditions, we find no little cause for gratification in the fact that throughout that period the harmony of the company's relations with its workpeople has been unbroken, and we have to-day as loyal a body of employees as exists anywhere. It gives me, therefore, the greatest pleasure to be able to tell you that the board have again decided to make a gift to staff and workpeople in respect of the financial year under review. Under this gift each person who has been in receipt of a salary or wage from the company during the 12 months, or any lesser period, ended October 31, 1922, and who still remains in the service of the company to-day, will receive a sum equivalent to 15 per cent. of the salary or wage received by him or her during the said 12 months or lesser period. The general conditions of the gift will be the same as in past years, the directors reserving to themselves a discretion to grant or withhold a share in the gift in any case which may appear to them to demand exceptional treatment.

THE COMPANY'S COMING-OF-AGE.

I think that is all that I need say in connection with the year's trading, and our proposals for dealing with its results, but before I put the formal resolutions to the meeting I should like to say a few words of a more general nature. I feel that our meeting to-day marks something more than another completed year in the life of the company. Meetings, like birthdays, are not all equally noteworthy, and when, like birthdays, they recur with unfailing regularity every 12 months, one is apt sometimes to be a little at a loss to find some distinguishing point of interest. To-day, however, is our twenty-first annual general meeting, and I, for one, am old enough to take a parental pride in the coming of age of our company. I recall its birth at a time of some anxiety for the tobacco trade in this country; I recall also our hopes that it would prove a worthy heir of the long traditions of honourable trading built up by its forerunners. Looking back now over the twenty-one years of the company's minority, I am thankful to be able to say that it has been a period of sure and steady growth, and that, as the company has attained a more and more prominent place in the trading community, so it has gathered increasing strength to sustain the responsibilities which such a position involves. I can ask for no better or more encouraging record.

The resolution was carried unanimously, and the formal business having been transacted, a vote of thanks to the chairman terminated the proceedings.

S.T.D. MOTORS, LIMITED.

POSITION AND PROSPECTS.

The seventeenth annual ordinary general meeting of shareholders of S.T.D. Motors, Limited (formerly A. Darracq and Co. (1905), Limited), was held, on the 20th instant, at Winchester House, London.

Mr James Todd, J.P., F.C.A. (chairman of the company), presided.

The Chairman moved the adoption of the report and accounts. He said that a year ago the board had every reason to look forward to being able to submit a satisfactory result at the end of the then current year. It was unnecessary to dwell on the almost universal trade depression which continued throughout the year 1922. The continual fall in market values of stocks all over the world had had an important bearing on the trading results now submitted. This fall in market value made it inevitable that the concerns having the largest productive capacity and carrying the largest stocks must, as a consequence, be the worst sufferers. The directors had dealt drastically with the various stocks, feeling that this policy was much more in the true interests of the shareholders. Another factor, only secondary in importance to the depreciation of stocks, was the regrettable lock-out in the engineering industry which occurred at the very height of the company's selling season.

With one exception, the few companies who had shown trading profits were confined to the small car production. It was impossible immediately to adapt the works to small car production, but gradually the difficulty had been overcome, and two of their principal works were now almost entirely engaged on the manufacture of small cars, with satisfactory results. It was the board's intention further to extend their programme in this direction, and they were fully conscious of the ever-increasing demand for the small efficient motor-car appealing to purchasers of moderate means.

WORKS AT SURESNES.

Dealing with the works at Suresnes, in France, the Chairman said that two years ago the directors decided that a very thorough reorganisation of the works and redesigning of the cars made in France were necessary to meet the present-day competition. This had been done, and although it had proved a very expensive process, the result was an unqualified success. For the first time in the history of the Darracq Company in France, they were in the position of being able to dispose of the larger part of their production in that country. In the past the larger part of the production of the French works had been sent over to this country.

With regard to the Sunbeam Company, it had not been found necessary as yet to enter into the small car production at these works. The company owned in the Sunbeam Company a name which was certainly one of the first in the motor industry. The sales since the making up of the last balance-sheet were in excess of those of the previous year, and the board saw no reason to alter, at the present time, the Sunbeam programme.

RACING AND EXPERIMENTAL WORK.

There was an important question which several of the shareholders had mentioned to him from time to time, and that was the subject of racing and experimental work generally. A year ago they were hopeful of securing a very large business in aviation motors from the French Government, as the aviation motor

designed by Mr Louis Coatalen at Suresnes was the first motor to emerge successfully from the 50-hours' test by the French Technical Authorities. Although, as a result of this, the company had a number of orders, they had not yet been such as to justify the large amount of money which it was necessary to spend on experimental work for a highly technical production of this nature. There was another item—namely, racing, which he was well aware had been criticised. There was no question but that in the past both the Sunbeam Company and the Darracq Company had benefited by their racing successes, and in France there was no question but that these successes had had a very big effect on sales.

The small Talbot-Darracq racing cars had been an unqualified success, and had won every race in which they had ever competed, including the French Grand Prix for Light Cars, two years in succession, the 200 miles race at Brooklands, two years in succession, the Tourist Trophy Race in the Isle of Man, and the Spanish Grand Prix.

It was a pleasure to record that the company's non-subsidiary investments now stood at a greater market value than the amount shown in the accounts. It would be a satisfaction for the shareholders to know that even after dealing with the question of depreciation in the drastic way the board had done, the reserves provided by the companies are far more than ample to cover any question of trading losses which any of the companies may have incurred. The profit-earning capacity of their companies was such that the picking up of the twelve months' arrears of dividends on the preferred ordinary shares ought not to be a difficult matter, given an uninterrupted period of trading under normal conditions.

The Right Hon. Lord Queenborough seconded the motion, which, after some discussion, was carried unanimously.

BOVRIL, LIMITED.

AMERICAN DEBT REPAYMENT.

Presiding at the twenty-sixth annual general meeting of Bovril, Limited, held on the 22nd instant, Sir George Lawson Johnston (chairman) congratulated the shareholders on the record results of the past year's trading, and on the strength of the position the company had now attained. The net profits were £305,709, or £56,603 more than for the previous year.

BURDEN OF THE AMERICAN DEBT.

Apparently the repayment of the War Debt to America was to be an important factor in their taxation for the next 60 years. When he saw them last February he had just returned from the States, and he mentioned to them how seriously our debt position had been worsened owing to Congress having by law fixed the period of repayment and the interest. The most serious factor in the matter as now arranged is that we must pay capital and interest in United States dollars. It was generally admitted that the improvement in exchange from the British sovereign point of view during the last year was not so much on account of an improved trade balance, as on account of American purchases of British securities. Such securities, if interest-bearing, must eventually mean still further sums going from this country to the United States. There could be little doubt that efforts to pay America by direct remittance would turn exchange against us and seriously increase the number of pounds we should have to pay per annum, and, unfortunately, it would be just during our worst period of depression and bad trade that we should have to pay most pounds to buy the dollars.

A DOLLAR RESERVE IN CANADA.

He would like to put forward a suggestion which might assist in this matter. It was that we should build up in Canada a reserve towards the payment of the American debt. The Canadian and United States dollars were not likely to vary seriously in value, therefore any fund we could build up in the Dominion would be comparatively free from exchange fluctuations. Canada was capable of being developed at a much more rapid pace than the present capital and man power at its disposal could develop it. Our Government could now borrow at a lower rate than it has been able to do for a good many years. If it could obtain grants of land from Canada, it could utilise, say, one hundred million pounds in developing wheat areas, and probably certain industries in that Dominion; and this work, in conjunction with some considerable emigration scheme of selected unemployed, should develop in Canada a reproductive asset that would, after a while, annually supply dollars towards the payment to the States. Furthermore, every bushel of wheat bought from Canada instead of from the States would help to keep our exchange better with the latter.

We might thus accelerate the pace at which Canada was growing strong, and, at the same time, build up an asset that would much reduce the burden of the American debt, and probably, in the process, some of the money we provided would purchase from our manufacturers agricultural implements and other machinery, &c.

His own experience in Canada convinced him that any such scheme to be successful would have to be planned and brought forward by Canadians to meet their own views as regards the directions in which development should take place. If it was put forward at present they could feel, at any rate, that Canadian conditions would be understood by a British Premier who was born in Canada, and a Colonial Secretary who had recently served as Governor-General.

SIR JAMES CRICHTON-BROWNE ON DEFICIENCY DISEASES.

Sir James Crichton-Browne said that Bovril was steadily extending its usefulness and strengthening its hold. It was now being recognised more and more that many of the ills that flesh is heir to are what are called deficiency diseases, due to the want of some essential element in the food. Now there are in Bovril certain substances, amino acids, for instance, which the body cannot synthesise or form for itself, but which are essential to vigorous growth and vigorous health, so if they would ward off deficiency diseases, which might end in constitutional bankruptcy, they should take plenty of Bovril. If they would ward off the wear and tear of excessive fatigue, it was also invaluable.

We sometimes saw a food or remedy recommended on the strength of a few problematical cases, but the testimony in favour of Bovril was overwhelming. Its merits were attested by millions—by what might almost be called a universal referendum.

Special testimony to its virtues was constantly coming in, and he would like to quote the testimony of Mr. Ratcliffe Holmes, of the "Wildest Africa" film, now being exhibited at the Philharmonic Hall. Mr. Holmes said: "In our travelling through fly belts and swamps, Bovril was our great standby. I have used it in previous African trips with the greatest success in cases of malaria and dysentery, and it is not too much to say that our camera man, Mr. Plowman, was actually kept alive by Bovril and by Bovril alone."

The report and accounts were unanimously adopted.

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED. "A STRONG BALANCE-SHEET."

The fifty-eighth ordinary general meeting of Liebig's Extract of Meat Company, Limited, was held on the 23rd instant, at the Cannon Street Hotel, London, Mr C. E. Gunther, the chairman and managing director, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the balance-sheet reflected the strong position of the company.

He thought the shareholders would agree that the balance of profit, amounting to slightly over £120,000 for the five months covered by the accounts, was satisfactory, particularly when they considered the years of difficulty and complication through which commercial undertakings had passed.

DIVIDEND.

The dividend of 6s 3d per share on the ordinary shares now recommended was at the rate of 15s per share, free of tax, for the full year, and was by way of interim and final dividend for the period under review. It was the intention of the directors to declare a dividend on the ordinary shares again about next July, which would be the interim in respect of the year ending August 31, 1923, to be followed, if all went well, by a final dividend after the next annual general meeting.

The sales of the company's various products had been well maintained in this country, on the Continent, and in other parts of the world.

Their products were purchasable in all markets where business was possible, and were a standing testimony of the object which had been foremost with them ever since the company commenced business some 58 years ago, namely, to manufacture goods of the very highest quality, and to sell them at as small an amount of profit as practicable.

CONTINENTAL CURRENCIES.

The depression in the Continental currencies had been a disturbing feature, but their trade on the Continent had been showing a very gratifying expansion, the turnover recording higher figures than ever previously experienced.

He hoped that a satisfactory solution would be found for the difficult conditions on the Continent, and that with improved currency values, they could continue to develop their trade there.

The £600,000 of redeemable notes were repaid in December last, and the present year should enable the directors to decide whether or not it would be advisable to further consolidate the company's capital by means of a share issue.

The stock valuation was taken on a most conservative basis. The new freezer installation at Fray Bentos had commenced work, the first consignment of refrigerated product now being in course of shipment.

The investments had been increased by the value of shares taken up in their allied sales company, Oxo, Limited, while ample reserve had been made in the sterling valuation of the holdings in their Continental Sales Companies.

The strength of the balance-sheet would be apparent to the shareholders, and he need not say it was the policy of the directors to maintain and improve upon the position as time proceeded. The first step in this direction would be taken that day, with the approval of the shareholders, in the appropriation of £25,000 to the reserve fund.

BOARD'S CONSERVATIVE POLICY.

Although there was generally a more settled feeling in their business, the board had considered it wise, in view of the uncertainty of the exchanges, to maintain the carry forward, which would thus remain available for use should necessity arise.

The Argentine and Uruguayan estancias had rendered valuable service in providing supplies of fattened cattle, and they were following up their policy of supplying pedigree animals from time to time to maintain and improve the quality of their livestock, both in the River Plate and in South Africa. Many successes had been gained by the company's stock at the local cattle shows in Argentina and in Uruguay.

Referring to the visit which he and Mr Follett Holt had paid to the company's African properties, the chairman spoke of the excellent condition in which they found the company's cattle, and said that they left South Africa in full confidence that the company was laying a good and solid foundation for the future.

The report and accounts were unanimously adopted.

ASHANTI GOLDFIELDS CORPORATION, LIMITED. CHAIRMAN OPTIMISTIC OF THE FUTURE.

The twenty-sixth ordinary general meeting of the Ashanti Goldfields Corporation, Limited, was held, on the 20th instant, at the Holborn Restaurant, London.

Mr Jeremiah Colman, J.P., chairman of the company, who presided, said that the profit and loss account showed a balance of £79,330 net profit on 15 months' work—some £10,300 less than the corresponding figure in the preceding 12 months. Although in the former period a larger tonnage was treated at a lower cost, there was a less yield per ton, principally due to the reduced gold premium, and to some extent to lower grade and extractions. It was an unfortunate coincidence that the gold premium slipped away to so large an extent during the time when operations were in a transition state.

Every reasonable provision had been made against future interruptions to mining operations by reason of fuel shortage. The power account was, however, one of the largest individual items of cost, and had received the constant attention of the board. The merits of a new type of wood-gas producer had been carefully examined, and as a result it had been decided to instal one pair of these wood-gas producers, and this trial plant would be extended if the results warranted it.

The changes in the metallurgical treatment and the operation of the wet crushing process had been fully dealt with by Mr Feldtmann, and cable advices from the mines confirmed the consulting engineer's forecast that more immediate improvements were on the eve of fulfilment. Post-treatment of the sands was now in operation and yielding 1½ to 2 dwts more than in the period covered by the reports. Crushing with cyanide solution had commenced, and with the post treatment of the slimes yielding about 1 dwt of

gold additional, there was now a total extraction from all sources of 80 per cent. This 80 per cent. was, of course, a big drop from the 90 per cent. extracted by dry crushing, but at 80 per cent. the new and cheaper process gave on balance as good an economic result and ensured greater regularity in output, the main object in making the change; moreover, this 80 per cent. extraction was not the best extraction anticipated, as improvements would suggest themselves in course of regular work.

ORE RESERVES.

The ore reserves in Ashanti Mine were practically unchanged as compared with the previous report, lateral development having, without any shaft-sinking, made good all tonnage removed during the 15 months. Owing to certain shaft rearrangements which would interfere with development work, it was not expected that the coming 12 months would show a similar result, but the large ore reserves provided a margin for such periods of restricted lateral development, which could be faced with equanimity. Increased haulage facilities were necessary to maintain the present monthly tonnage, and to provide for a larger tonnage in the likely event of the ore bodies in the lower levels lending themselves to more rapid mining.

Including depreciation, working costs for the 15 months covered by the accounts were 78s per ton, as compared with 99s 3d in the preceding 12 months, a reduction of 21s 3d per ton. For the first three months of the current financial year the costs were 61s 9d, a further decrease of 16s 3d per ton on last year's average. Therefore, in 18 months the costs had been reduced by 37s 6d per ton as compared with those ruling in the abnormal period 1920-1921. Sixty-one shillings and ninepence, which included depreciation, might be taken as fairly covering the present total cost of working with the new treatment plant. Further reductions were, however, quite anticipated as the plant settled down.

Before concluding his remarks, he wished, on behalf of the board, and he was sure on behalf of the shareholders as well, to pay a tribute to Mr Feldtmann. He (Mr Feldtmann) had not spared himself in his efforts to make the new treatment a success; it had been no light task, and the past two years had been particularly anxious and trying for him. The process was at last an economic success, and he was confident that extractions would be gradually improved as experience was gained in the working of the plant.

NEW CONSTRUCTION WORK.

In addition to the routine work of the mine during the past four years, extensive new construction work, rendered necessary by changed conditions, had been carried out at an expenditure of about £130,000. They had now to complete the scheme of shaft enlargement and erection of new gas-producers, costing approximately another £30,000; £67,000 towards this total of £160,000 had been provided by the issue of the balance of share capital three years ago, the remaining £93,000 being so far met out of current resources, and the capital of the company still remained at £250,000.

The reasons for the disappointing results of the 15 months were of a temporary character, and had to a large extent already disappeared. In the immediate future the profits mentioned by the consulting engineer should be earned, with the prospect of considerably improved results later on.

The report and accounts were unanimously adopted.

DWA PLANTATIONS, LIMITED.

IMPROVED PROSPECTS OF SISAL PROPERTY.

Mr Henry Portlock, the chairman, presiding at the annual general meeting of Dwa Plantations, Limited, held on the 22nd instant, stated that the board were glad to lay before the shareholders a report and balance-sheet which gave hopeful augury of future profits and dividends. They had in Dwa a property growing exceptionally fine fibre, giving a longer leaf, a somewhat higher yield, and a more parallel fibre than could be grown in the East African Highlands. Their planted areas were in large adjoining blocks, economical to work, and for transport. The factory was being connected with the Uganda Railway by the company's own light railway. From Mombasa they had regular shipping facilities with through bills of lading to all the principal centres.

The financial position of the company had improved considerably. The issued capital was £30,000, and they had 15,000 shares in reserve, of which they anticipated 10,000 would be absorbed by the conversion of debentures. The remaining 5,000 shares they hoped circumstances would justify issuing at a substantial premium, but the rights of shareholders would be carefully considered whenever the matter was dealt with.

The past two years had conclusively proved the merits of Dwa as a fibre-growing locality, and they were obtaining a premium on current prices for the bulk of their output. The average c.i.f. prices were £5 18s 4d a ton less in 1922 than in 1921, but fortu-

nately freight and charges fell £1 10s 10d per ton, so that the net difference was only £3 17s 6d, which they had been able to counteract by economies in production. For 1923 exceptionally favourable freight contracts had been made, so that their transport charges would be less. Recent rainfall had been exceptionally favourable, and the plantations had recovered remarkably from the drought of 1921. They had 2,774 acres of sisal planted, which they hoped to increase by 190 acres during March, and in October and November, 1923, they aimed at planting a further 400 acres. These areas should keep two machines fully occupied, and ensure a steady output in the future. They had had many unexpected difficulties to surmount, including the unfortunate currency legislation, but he thought they could look forward with confidence to the future. Output was on an average 50 tons a month, and within the next few months it should increase to 70 tons per month, rising to over 100 tons monthly. He hoped that the factory extensions, the additional machinery, and the light railway system would be completed and working before the end of June. The company had paid its way on a 400-ton output in very difficult times, and he thought they could expect a fair return on their capital under the improved conditions.

The report was adopted.

GOVERNMENT RETURNS.

PUBLIC INCOME AND EXPENDITURE

RECEIPTS INTO AND ISSUES OUT OF THE EXCHEQUER.

	Estimate for the Year 1922-23. (See Note.)	Total Receipts into the Exchequer from April 1, 1922, to Feb. 17, 1923.	Receipts from April 1, 1921, to Feb. 18, 1922.	Week Ended Feb. 17, 1923.	Week Ended Feb. 18, 1922.

Other countries	399	720,570
Total value of imports of gold	1,475,576	1,006,098

Messrs Samuel Montagu and Co. write, on February 21st, as follows:—

GOLD.

The price for exportable gold on the 21st instant—namely, 87s 5d—is the lowest since a quotation per fine ounce has been fixed for such gold, due, of course, to the rise in the quotation for sterling in New York. A fair amount of gold was available, of which India and the Continent took small amounts. The remainder will be exported to America. Gold valued at \$475,000 has arrived in New York from London. The Reichsbank has fixed the purchase price of the gold 20-mark piece at 85,000 paper marks until further notice. Statistics of India's overseas trade for the nine months ending December are appended:—

OIL OUTPUTS

OIL OUTPUTS.

STEARA ROMANA (BRITISH), LIMITED.—The approximate gross fields production of the Steara Romana Company for the month of January was 17,910 tons. This decrease in production is largely due to the Roumanian Christmas and New Year holidays.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, February 14, 1923, amounted to 924 tons.

JOHN BARKER AND CO., ROTHERHAM.—The Directors of John Barker and Co., Rotherham, regret severe trade depression has impelled them not to pay dividend on 6 per cent. cumulative preference shares.

THE LEATHERHEAD AND DISTRICT WATERWORKS COMPANY recommend payment, together with current dividends, of the balance of arrears of dividend for the half-year ended June 30, 1887, at the rate of 5 per cent. per annum, less tax at 5s. The company, which was incorporated in 1883, has paid maximum dividends for the 35 half-years to June, 1922, and from time to time has made payments in order to bring up dividends distributed in the earlier years to the maximum rates, the most recent distribution having been 2 1/2 per cent. on the 10 per cent. shares in February, 1917, which left about £11 outstanding on each of the 10 per cent. shares.

Reports and Notices.

We are informed that Mr Bernard Edward Halsey Bircham, of the firm of Messrs Bircham and Co., has been elected a director of the Equity and Law Life Assurance Society.

INSURANCE.

PROVIDENT MUTUAL.—A valuation was made as at December 31st last by the British Offices, taken at 3 per cent. interest, the same basis as five years ago. The Stock Exchange securities were taken at their book values (less than their market value), and the investment reserve fund of £160,000 was preserved intact to cover any future depreciation. The surplus shown was £377,712, on funds of £3,931,655. This permits of a reversionary bonus to be declared at the rate of £1 5s per cent. per annum. No bonus was declared at the valuation five years ago. In the course of the five years ended December 31st, 76,128 new policies were issued, assuring £8,237,393.

MISCELLANEOUS.

MAPLE AND CO., LIMITED.—The annual report for the year ended December 31, 1922, states that the profit for the year has again been affected by a fall in prices of furniture and fabrics, though to a considerably less degree than that of 1921. This has induced a further reduction in selling prices and writing down of stocks to present market values. The South American and French companies have suffered through the adverse exchanges. In the circumstances the directors recommend the retention of £100,000 from the reserve set aside last year for excess profits duty, contingencies, &c., for the purpose of providing for the continual fluctuation in foreign currencies. After payment of debenture interest and the dividends on preference and management shares there will remain a balance available for distribution to the ordinary shareholders of £227,231 2s 7d, out of which an interim dividend of 2 1/2 per cent., absorbing £45,000, has already been paid. The directors recommend the payment of a final dividend of 7 1/2 per cent., making 10 per cent. for the year, and the carrying forward of a balance of £47,231 2s 7d to the credit of the ordinary shareholders.

MATHER AND PLATT, LIMITED.—The net profits for the year 1922, after charging depreciation, directors' remuneration, and making provision for doubtful debts, are £365,534, from which the directors have transferred to income-tax equalisation account £53,604—£311,840. To this must be added the balance brought forward from December 31, 1921, £287,662, showing an available total of £599,502. The interim dividends for the half-year ending June 30, 1922, were:—On the preference shares 2 1/2 per cent., £10,000; and on the ordinary shares 3 per cent., free of income-tax, £40,909. The directors recommend that the balance be appropriated as follows:—Dividends for the half-year ending December 31, 1922—on preference shares 2 1/2 per cent., £10,000; on ordinary shares 7 per cent., making 10 per cent. for the year, free of income-tax, £95,456; on ordinary shares, bonus of 5 per cent., free of income-tax, £68,183; transfer to reserve account, £200,000, leaving to be carried forward to next account £174,954. The dividends will be payable on March 1st next.

THE MERCHANTS' TRUST, LIMITED.—The report for the year ended January 31, 1923, shows that the net revenue, after charging interest on debenture stock, management expenses, dividend on preference stock for the year, income-tax, &c., amounts to £52,920, to which is added £43,397 brought forward from last year, making £96,317 to be dealt with. The ordinary dividend of 9 1/2 per cent. for the year absorbs £48,440, and the balance of £47,877 is carried forward. The general reserve stands at £260,000, and the dividend fund remains at £43,750.

W. T. HENLEY'S TELEGRAPH WORKS COMPANY, LIMITED.—The accounts for the year 1922 show that a profit has been made during the year of £249,351, from which must be deducted directors' and auditors' fees, debenture interest, and amount written off for depreciation on buildings, machinery, &c., £43,012, leaving £206,339, to which has to be added the amount brought forward from 1921, £260,244; profit on realisation of investments, £7,525—making a total of £474,108; deducting income-tax, £18,620; transfer to reserve account, £25,000; dividend on preference shares to December 31, 1922, £9,000; interim dividend on ordinary shares, £32,500, leaving an available balance of £388,988. The directors recommend the payment of a final dividend on the ordinary shares of 2s per share, less income-tax, making 3s for the year; this will require £65,000, leaving to be carried forward to next year £323,988. The report states that provision has been made in the accounts in respect of the liability for corporation profits tax to the end of the year 1922. Henley's Tyre and Rubber Company, Limited, has had an improved year's trading as compared with the year 1921, but the condition of the tyre trade remains very unsatisfactory to British manufacturers.

Commercial Reports.

THE CORN TRADE.
COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20:—

Mark Lane, Friday Evening.

Unsettled and colder weather has prevailed over the United Kingdom during the past week, which has hampered field work. Although preparations are well advanced, only restricted sowings of spring cereals were made in early districts. Reports continue favourable with regard to winter crops, and the spell of wintry weather will tend to check undue growth and strengthen the plant. Supplies of native wheat are on a lighter scale, but trade remains quiet and values easy. Suitable milling grades quoted 9s 1d to 9s 6d, with inferior at 8s 3d to 8s 6d per 112 lbs, free on rail. Imported descriptions are still sparingly offered on the spot, but values weak. No 1 Northern Manitoba quoted 49s 9d, and Rosafé 63 lbs 4s 6d per 406 lbs, ex ship to arrive. The cargo-section remains without improvement, the demand being quiet and values the turn in buyers' favour. Steamer of Rosafé 62 1/2 lbs, January-February, sold at 46s to Germany, and a part cargo ditto to Bristol Channel at 46s 3d per 480 lbs. Meanwhile liberal quantities on passage tend to depress the market. Visible supplies in North America show a small increase, and the quantity afloat is on a larger scale, while Plate shipments are now also proceeding with more freedom. Crop reports from the principal exporting countries are mostly favourable. Flour experienced a moderate demand, and prices of home-milled were advanced by 1s per sack. London standard straight run now quoted at 41s, town households 39s, patents 43s to 44s per sack, delivered in London area. All English country straights 31s 6d to 33s 6d per sack, delivered at London stations. Imported dull and values weak. Manitoba export patents quoted from 37s 6d to 41s as to quality, Minneapolis good patents 40s 6d, Pacific 37s 6d, and Australian 30s per 280 lbs, ex store. Barley: There is a fair demand for good class English malting descriptions at steady rates, but other classes move off slowly. Prices range from 6s 9d to 13s 6d per 112 lbs free on rail as to sample. Imported sorts are only in limited request, and prices nominally unaltered. Californian quoted 42s to 45s 6d, Australian Chevalier 47s to 53s per 448 lbs, both ex ship. Danubian 30s to 31s, Plate 29s, both landed. Persian ex ship 24s 9d, ditto landed 26s, all per 400 lbs. On c.i.f. terms a cargo of Danube-Bess-Kustendji arrived sold 29s 13d per 400 lbs. Maize quiet, and with more pressure to sell prices moved in a downward direction. Plate ex ship 36s 9d, ditto landed 38s, American mix ex ship 35s 6d, ditto landed 37s, all per 480 lbs. Cargo market quiet, and values barely steady owing to more favourable weather reports from Argentina. Steamers of La Plata February-March sold at 37s 3d, and a sailer of South African No. 6 yellow, expected to load March 1st, at 37s per 480 lbs. Oats.—Native steady with a fair inquiry, values ranging from 8s to 9s 10d per 112 lbs free on rail. Imported quiet but rather more firmly held. La Plata f.a.q. new crop quoted 24s 3d, No. 2 white

clipped America 35s, No. 2 Canada Western 29s 6d, No. 3 ditto 27s 6d, and No. 2 Canadian feed 26s 3d all per 320 lbs landed terms. Oatmeal in moderate request at steady rates. London-made, all cuts 17s 6d, rolled oats also whole groats 17s 6d, flaked oats 20s 6d, ex mill. Ordinary Scottish oatmeal 18s 6d to 19s, and American, all cuts, 17s 9d per cwt.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated February 22nd, is as follows:—Pig-iron: Business in pig-iron is restricted. Makers are practically sold out for early delivery, and buyers are timid about committing themselves for forward delivery. No. 3 Cleveland G.M.B. is firm at about 115s per ton. Supplies of East Coast hematite are also very short, and makers ask from 110s to 120s for mixed numbers. Manufactured iron and steel: Steel makers say that the price of their product has not increased in proportion to the rise in the cost of fuel, and the uncertainty of the latter prevents them undertaking forward business. Steel ship plates, £9 10s; steel ship angles, £9; iron bars, £11; steel rails, £9 10s. Iron ore: A fairly good business has been done in iron ore. Some sales of best Rubio are reported at 24s 3d to 24s 6d, and sellers now quote 25s. 6d.

Our Sheffield correspondent writes:—The heavy steel and pig-iron trades have again increased in strength and activity, partly from the diversion of business from the Continent. It is reported that producers in Germany, France, and Belgium are cancelling British contracts, which were placed at low prices, and the buyers are faced with the necessity of getting their wants supplied in the inflated home market. The current high prices are checking the placing of business, but producers stand firm, and expect to get their way when current contracts are completed. The high figures relating to pig-iron are largely nominal, as consumers booked heavily forward when foundry pig could be obtained at 82s 6d or thereabouts. The output of basic steel is approaching full capacity, and greatly exceeds the pre-war level. Several additional furnaces went into operation this week. Railway orders for steel are increasing, and several big contracts are being negotiated. The rolling mills up and down the country are now becoming busy, some large ones being on full time. The extreme depression in tool steels and manufactures of crucible steel, which had prevailed ever since the war ceased, has come to an end. There is still a great amount of quietude in this branch, but a proportion of firms are now booking orders on a moderate scale. The wire and forging branches are looking up. Cutlery and plate is disappointing, and the outlook for the year is regarded as unpromising.

Travellers for silver and electro-plate firms are picking up only moderate business, and report that shopkeepers are buying with extreme caution. The majority of factories both in Birmingham and Sheffield are on short time, while a few are fully employed. The prospects for the present year are regarded as unpromising. A Sheffield firm has taken up the plating of spoons, forks, and knife handles with chromium, a metal which will neither rust nor stain. The famine in coke continues, and it is reported that foreign buyers have paid as much as 50s for spot lots of blast furnace coke. Several blast furnaces have had to be damped down through lack of fuel. Collieries are fully sold for the majority of their outputs, some of them for several months ahead, and prices are firm. House coal is comparatively quiet.

Our Glasgow correspondent writes:—The industrial position continues to gain strength, and according to expert opinion presents more evidence of healthy animation than has been the case for over a couple of years. Reports from the Clyde district for the week indicate that the laying down of keels is on the increase, and it is also stated that prospects in that connection are distinctly encouraging. Messrs John Brown and Co. (of Sheffield and Clydebank) have just received instructions to proceed with specifications for a large Orient liner, while other yards have under consideration various plans for building powerful tramps. As regards these, however, it is added that the prices named are higher than owners are prepared to meet, and that they are inclined to hold off until quotations ease a bit. That easing will take effect is far from assured; in fact, is scouted by steelmakers, who all the same are well provided with work. Some of the larger constructional steel producers raised steam for the first time for about two years on Monday, and that on a three-shift-a-day employment arrangement. This firm (Clydebridge) is said to be on an excellent footing as respects orders, and as regards productive capacity have attained an equipment power stage unequalled in the United Kingdom. Nominally ship plates are called and can command £9 5s to £9 10s per ton delivered Glasgow stations, with sections £9, and boiler plates £12, while joists are £9 7s. A healthy trade is passing in black sheets at £11 10s, and in corrugated sheets (24 gauge) at £19. India, Japan, and Australia are amongst the buyers of black sheets. Operations in bar-iron are on the increase, and for Scotch crown £11 is asked, with sellers to the firmish side. A large shipment of Scotch brands of ordinary pig-iron was made from Glasgow harbour last week, no fewer than 6,732 tons, mainly for South American (Pacific) coast. This movement has stiffened values—Scotch No. 1 by 2s 6d a ton at £5 12s 6d, and No. 3 by 2s 6d at £5 7s 6d—both sorts f.o.t. makers' works. Scotch production it appears is going away readily, and there are no stocks, yet makers do not see their way to relight more furnaces. A large quantity of engineering work is said to be in the West of Scotland structural market, and most houses at the moment are well off. The new work embraces inquiries for powerful locomotives of the hill-climbing type. Messrs Babcock and Wilcox have received an

order for two 60,000 lbs marine type boilers, with super-heaters, &c., for the St Marylebone Borough Council electricity works. Contracts for supply of locomotives and rolling stocks for East India railways are to be fixed next week, and Glasgow firms expect to participate substantially in the allocations. The engines are to be of a very large size. The feature in the coal trade is the continued request for Scotch sorts for France and unoccupied Germany.

Our Cardiff correspondent writes:—The South Wales coal market has shown great firmness this week again. The negotiations for an extra tipping and trimming shift have broken down. The employers had proposed an extended two-shift system that would have secured the working of the docks over the whole of the 24 hours instead of 17 hours, as is the case under the existing system, and the workmen's representatives came forward with a counter proposal for the introduction of a partial third shift for an experimental period of three months, subject to safeguards against any reduction in the wages of the tipplers and trimmers employed in the present two continuous shifts of eight and a-half hours each, and guarantees that the men employed on the third shift would be paid wages equal to those received on the morning and afternoon shifts. The employers refused to accept the liability of these conditions, and appealed to the Ministry of Labour to appoint a court of inquiry under the Industrial Courts Act. Under that measure a Court of Inquiry in 1920 granted the workmen the system of two continuous shifts, that is still in force, subject to the condition that the employers would have the right to call for a third shift if circumstances of trade warranted it, and the new inquiry was asked for to determine this point. The Minister of Labour, however, has asked the parties to meet him in joint conference in London next Tuesday. All that now stands in the way of a settlement is the adjustment of terms. Under the prevailing restricted hours dock congestion continues very acute, and the export trade has also been adversely affected by sectional stoppages on the non-unionist question in the coalfield. Inquiries for coal have been very active, and prices very strong. The greatest strength, however, has been shown by high volatile coals, and this has been due to a heavy demand from Germany for coking coals. Germany has also been pressing for supplies of coke. The production of coke in South Wales is relatively so small that the effect of these German coke inquiries has been seen mainly in an advance in prices. The current rate of production of colliery coke in South Wales is about 22,000 tons, of which about 16,500 tons are furnace coke, and 5,500 tons foundry coke, and the normal proportion exported is about 18 per cent. A week ago coke for

export was quoted at between 475 6d and 525 6d; at the end of the present week the quotations had been increased to 705 to 805. Best Admiralty steam coals are ruling between 295 and 305, and leading second Admiralties between 285 6d and 295, with best small steams quoted up to 235. Other good steam smalls, however, have been changing hands at 205 and 215. Another feature of the market has been a recent slump in the price of pitwood. The temporary glut of supply and wagon scarcity has driven spot prices down to the neighbourhood of 245 per ton, although at current f.o.b. Bordeaux prices and current homeward rates of freight the ex-ship price is about 325. The following are the current approximate quotations:—Best Admiralties, 295 6d to 305; second Admiralties, 285 6d to 295; best drys, 275 6d to 285 6d; Black Veins, 295 to 305 6d; Western Valleys, 285 6d to 295 6d; Eastern Valleys, 275 6d to 285 6d; best bunker smalls, 225 6d to 235; ordinary cargo smalls, 195 to 215; anthracite big vein, large, 325 6d to 375 6d; anthracite machine-made cobbles, 405 to 455; French nuts, 405 to 455; stove nuts, 405 to 455; rubbly culm, 145 to 145 6d; coke for export, 705 to 805; inland blast furnace coke at ovens, 275 to 285; patent fuel nominal; pitwood, ex-ship, 235 6d to 245.

In the iron and steel trade the conditions have been a little quieter, but with prices firm, and quotations for tinplates 9d above the minimum of 21s per basis box. The advance in the price of tin is a source of anxiety, and may, if maintained, lead to a further rise in the prices of tinplates.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The past week has been exceedingly quiet in all sections of the wool textile industry, and although there are no signs of anything in the nature of a collapse, it is an undoubted fact that values have receded all along the line, and the position generally is greatly in favour of buyers. Unfortunately, there are not many firms willing to buy at present, the general tendency being to wait for the full force of the adverse factor to be revealed before entering into further commitments. Stocks of wool are heavy, stocks of fine tops are growing, and spinners find increasing difficulty in getting particulars for the orders already on their books. There has also been a slight easing tendency in the raw material markets during the past few days, but it is noteworthy that even now wool cannot be bought to bring in a 64's top at a price that can be made in Bradford. How long this inactivity will continue it is impossible to say, though there is every reason for believing that a settlement of the trouble between France and Germany would immediately impart new life to this market. The wool textile industry is international in character, and anything that tends to interfere with trade on the Continent must react on trade throughout the world. Spinners complain that there is practically nothing to be done at to-day's prices, and a certain amount of cheap selling is again in evidence, due to financial stringency and the accumulation of stocks. Yarn prices are, therefore, more or less nominal, it being extremely doubtful if full quoted rates could be made in any direction. The piece trade remains in a depressed state. Manufacturers and merchants are experiencing grave difficulties arising from the financial troubles of their customers, and the outlook shows no sign of improvement.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Wool markets everywhere continue to decline. Even Sydney advises this week report a weak market. The same news comes from South Africa and New Zealand, although one Sydney cable reported last Monday that good topmaking wools were selling on a clean basis, landed Bradford, of 91d. Every topmaker knows that to-day conversion costs are at least 11d on the top of the clean scoured wool, while the majority reckon in case the "tear" shrinks below 6 to 7. It has to be good sound lengthy combing wool to give such a result, and with noils being lower in price conversion costs must be reckoned at 12d to be on the right side. Even if we reckon 1d reduction since Monday it means that tops are going to cost 5s 2d delivered and combed Bradford, a price that to-day is practically impossible to make. We very much doubt if the best topmaker could make that price for warp 64's, a clear proof that the raw material is still fetching better prices relatively than tops are worth. This has been the case all through the season, due largely to the fact that spinners and manufacturers have never been able to freely follow the course of the raw material. It is well known that the nearer one gets to the fully manufactured article the less satisfactory the price. It is now apparent that the opposition to the recent advances has succeeded, and it is useless disguising the fact that wool will have to come cheaper to satisfy the demands of the actual consumer. At the same time we think that if the Ruhr question had not arisen and affected all Europe wool values would have remained firm at the last London sales level, and it is just possible that even yet there may be a recovery at no distant date. It is well known that neither France nor Germany are fully satisfied with wool. Stocks of both wool and tops are lighter than usual for this time of the year, it being reported that stocks of tops in German combing establishments are not more than 10,000 packs, while stocks of tops at the combing establishments in Roubaix and Tourcoing at the end of January were no more than 8,382,042 kilos. All this clearly indicates that political and economic considerations are exercising the most potent influence upon wool markets. At the end of this week a sale is taking place at Hull, where 30,000 bales of B.A.W.R.A. wool is to be offered. The entire

offering is crossbreds essentially suited to the home trade, though we fully expect a fair amount of buying by France and possibly Germany. It is very significant that cables received in Bradford from New Zealand, reporting the last three sales in the Dominion, indicate that Germany has been well to the front as a buyer, a clear proof that the Fatherland can find the sterling to pay for wool. A feeling has arisen during the past fortnight that B.A.W.R.A. would have been wisely advised to have cancelled the Liverpool sale next Thursday and Friday, for it is becoming increasingly apparent that the trade can do with a less offering of wool at the present. At the end of April the season will be over in Australasia, South Africa, and South America, and by that time the outlook should be distinctly clearer for the rest of the year. We certainly think that there is no need to push wool upon the market rapidly, particularly in face of what is happening on the Continent. France will have to make a further move or retrace her steps, all of which will materially affect the textile industry. France maintaining a big army means the production of big weights of cloth for soldiers' uniforms, and this all helps in the consumption of crossbreds.

MANCHESTER, February 22.

The tone of the market this week has been quiet. Demand has been of a limited character, and there has been a tendency for spinners and manufacturers to lose ground. The sales at the moment are not equal to the output of the machinery. The chief reason for the inactivity is that leading buyers cannot operate freely at current prices, there being a fear of the present level of values not being maintained. Only retail transactions have been reported in piece goods for India, most of the buying being in fancies. Now the holidays in China are over, a few more cables have come to hand asking for quotations, but actual business has been quite small. The minor outlets of the Near East and South America have given no support worth mentioning, and restricted operations have occurred in home trade goods. American yarns have been flat and weaker in price when tested. Egyptian spinnings remain steady but slow.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The tone of the hide market at Thursday's Bermondsey auctions was slightly firmer, and best ox hides at 7 1/2d to 8 1/2d, showed slight advances in two or three classes of 1/4d to 1/2d. Seconds made from 6 1/2d to 7 1/2d, and cows from 6d to 6 1/2d, heavies showing an advance of 1/4d on last week's prices. Calf were firmer, best selling from 7 1/2d to 13 1/2d, one light class making an advance of 1/4d. Wools at 5s 6d to 12s 6d and hogs from 6s to 15s showed no alteration on last rates. The imported hide market remains quiet, but a sale of 70,000 fregorifics is reported at \$7 to the United States. Fregorific killings are reported to be very heavy, no less than 260,000 being advised for last month. Dry hides are a rather slow sale, but prices remain firm at sources of origin. Cables from New York report the Chicago position as easier, with best heavy packers selling at 20 cents.

There is a good deal of grumbling in Bermondsey at the slow state of trade, as shoe manufacturers are taking little interest in the better-class leather. The wet weather, however, has brought a better inquiry from repairers, and bends of 8 lbs to 12 lbs average have gone out in small parcels. Here and there one hears of sales of the better-class tannages of butts, but the main demand is for cheap sole from dry hides. Shoulders and bellies are still selling well, and prices are firm.

The demand for upper stock has slightly improved, although in this direction the demand is for low-grade material as a rule. Carriers have few orders in hand for wax butts, but if they are in a position to supply grain finishes at a very low price, business is possible. The price, however, of E.I. kips remains very firm, and this makes the position difficult.

The shoe section is better on the whole, as the wet weather has found out the shoddy goods so many people have been wearing of late, and have sent them to the retailers for new boots. Anxiety is felt, however, at the failures in the Midlands, which point to the fact that boots are being sold to distributors at a loss in many cases.

VEGETABLE OILS AND OILSEEDS.

Only moderate activity has been experienced during the week in oilseeds. Linseed has been steady to firm, and is little changed on balance, except on spot, which, with better arrivals, is losing value against seed afloat and distant. For Plate, £18 has been paid this week for on passage and January-February shipment to Hull, and £18 2s 6d to London, and some business has been recorded at £17 12s 6d to £17 15s for April-May, but all positions have since advanced. Calcutta has been in fair demand for London round £20 to £20 5s. Shipments in the second week of February were below recent level, and consequently, with good arrivals on this side, the quantity afloat for the U.K. and Continent have decreased to 150,300 tons, against 164,600 tons the week before and 104,200 tons a year ago. Of the total, 139,300 tons are from Argentina. The depression in linseed oil in the near positions continued in the early days of the week, the market being affected to some extent by profit-taking on the part of speculators, since when a firmer tone has made itself felt, values having recovered 20s and more per ton. The Continent has also offered freely, and America does not appear to have again been in the market. The forward positions have about maintained late values.

Egyptian cottonseed has been a dull trade, and prices have again declined until below £11 was accepted for Sakellaridis in any position. Bombay has also been easier, and fell to £8 15s for

shipment. Trade in the oil product has been more or less inactive, and prices have been barely maintained, crude Egyptian being 10s lower on the week. Palm kernel oil has been a strong market, but most other vegetable oils are in only fair request at about unchanged values. Trade in refined oils for export to the Continent is not so good as it was.

Oilcakes are meeting with a disappointing demand, and prices of both linseeds and cottons are easier. Meals are, however, in favour, and firm.

OVERSEAS PRODUCE MARKETS.

Mincing lane, Friday, February 23.

SUGAR.—There was decidedly less excitement in this market during the week, the general tone, however, being firmer, with a fair amount of business in force. British refined advanced 1s 6d per cwt, making Tate and Lyle's cubes 64s 6d to 65s 6d; crushed, 62s; granulated, fine and coarse, 60s 4 1/2d; No. 2, also London, 59s 10 1/2d; yellow crystals, 53s 10 1/2d; caster, 61s to 61s 10 1/2d; and finest, 63s 7 1/2d. Crystallised West India ranges from 53s 6d to 55s, as to quality. American granulated, spot, sold, 58s 6d; February, sold, 29s 9d to 30s 6d, c.f. and i., London. White Java, spot, sold, 56s to 56s 6d, as to quality; May-June done, 27s to 26s 9d and 28s; June-July, 26s to 26s 9d, c.f. and i., London. White Mauritius, spot, 54s 6d. Cuban, basis 96 per cent., February-March, quoted 27s, c.f. and i., U.K. Brazilian nominal. Terminal market active, but very unsettled. May sold up to 28s 10 1/2d to 28s 4 1/2d, 29s 10 1/2d and later, 30s 7 1/2d. August up to 29s 1 1/2d, 28s 6d, and 30s 3d. Cuban stocks stand at 387,000 tons, against 308,000 tons same time last year.

COFFEE.—There is a good demand chiefly from the home trade, and dealer prices were secured for all the really fine qualities. Bold Costa Rica sold, 107s to 137s 6d; peaberry, up to 155s 6d. Kilimanjaro, bold, 99s 6d to 113s. Future delivery market firm, but quiet.

COCOA.—Spot parcels were dealt in more freely, on about former terms. Accra, F/F quality, February-April, sold, 35s 6d to 36s 3d, f.o.b. terms.

TEA.—In auction during the week, 45,600 packages Indian were brought forward; but while good to fine qualities were well competed for at a full range of values, low medium and common, in comparatively large supply, were only saleable at easier rates. 16,000 packages Ceylon were submitted, and aroused fair competition. All the finer qualities were fully steady, but common moved against sellers.

RICE.—Market very quiet, demand being rigidly confined to pressing requirements, and general position at the moment is nominal. Two stars, spot, 14s 3d; February-March, 13s 4 1/2d, c.f. and i. Broken kinds held above buyers' ideas. Rangoon beans, spot, 8s. Japanese peas, spot, sold, 31s 6d to 31s 9d; and February-March, 32s 3d.

SPICE.—Pepper market commanded fair support, and a firm tone governed the market. Fair black Singapore, spot, sold, 4 1/2d; March-May, 4 1/2d; Aleppo, spot, quoted 4 1/2d; Tellicherry, 4 1/2d; white Singapore, spot, 6 1/2d. Muntok, sold, 6 1/2d; ditto, March-May, steamer, 6 1/2d to 6 1/2d, c.f. and i. Zanzibar cloves unsettled. Spot, sold, 1s 1d to 1s 1 1/2d; January-March, 1s 1 1/2d to 1s 1 1/2d; March-May, 1s to 1s 1d, c.f. and i. Flake tapioca, fair Singapore, spot, sold, 3 1/2d; fine Java, 3 1/2d per lb. Fair Penang seed tapioca, spot, 2s 5d; sago flour, February-April, done 13s 9d. Desiccated coconut, fine cut, spot, sold, 40s to 39s 9d; medium, 40s 6d. Ginger steadily held, but trade slow.

JUTE.—Apart from some little interest shown in spot and near at hand parcels on continental account, the market ruled quiet and featureless. First grade, February-March, Continent, quoted £32; and March-April, sold, £33 5s to £32 15s. Hessians and twills dull on about former terms.

HEMP.—Manila in good support, and with reserved sellers, a firm tone ensued. G grade also steady, February-April, sold, £37 5s; J, January-March and February-April, £35 10s to £35 15s; K, £34 5s to £34 15s; L, £34 10s to £34 15s; and M, £33 10s. New Zealand dull unaltered. African Sisal steady. No. 1, G.E.A., February-April, £35 10s.

SHELLAC.—Market quiet, but steady. T.N., spot, 360s; March, 340s; May, 315s.

COPRA.—Market steady, but business throughout the greater part of the week ruled quiet. F.M.S. Straits, February-April, Rotterdam, sold, £27 7s 6d; April-June, £27 2s 6d; Ceylon, February-April, quoted, £29; Java, £27 12s 6d; Dutch E.I., £27 7s 6d; South Sea, £26 15s; mixed, £26 12s 6d. Palm kerpels, March-May, Liverpool, sold, £19 5s.

RUBBER.—Steady, but trade quiet. Standard crepe and sheet, spot, sold, 1s 5 1/2d to 1s 5 1/2d; March, 1s 5 1/2d to 1s 5 1/2d; April-June, 1s 6 1/2d to 1s 5 1/2d, and 1s 5 1/2d; July-September, 1s 6 1/2d to 1s 6d; October-December, 1s 6 1/2d to 1s 6 1/2d. Fine hard Para, spot, 1s 5d; soft fine, 1s 3 1/2d; ball, 1s 2 1/2d. London stock of plantation, 71,100 tons. EGG PRODUCTS meet with continued quiet support. Prime liquid

5 Birch Lane; Barker and Howard, 6 Fenchurch buildings, Sugar
Loaf court, Leadenhall street; Pottle and Son, 15 Cullum street;
Willington and Co., Limited, 50 Cophall avenue, and 53 Finsbury
pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's,
37 Avenue de l'Opera.

THE MONEY MARKET.

STRINGENCY reigned until the end of February, though
in its last days it was relieved by considerable purchases
of May Treasury bills by one or two of the banks. The
usual demands at the end of the month were accentuated
by rapid tax gathering, and also by payments for the new
Austrian bills, applicants for which had to pay for them
a day before receiving the security. On Thursday the
market was relieved by the disbursement of interest on

yolk, spot, 100s; April-June, 85s per cwt. Dried yolk, spot, 94d;
native dried whole egg, 83d; spray, 94d; hen albumen, spot, 3s;
April-June, 2s 9d per lb, c.f. and i. terms.

ESSENTIALS.—Business moves very slowly, but prices show but
little alteration. Menthol, spot, 37s; forward, 30s 9d; Japanese
peppermint oil, spot, 6s 9d; forward, 5s 10d; aniseed, spot, 2s;
Ceylon citronella, spot, 3s 3d; Java, 3s 6d; cassia oil, 80-85 per cent.,
8s 3d; slab camphor, spot, 3s 9d; crude, 3s 5d per lb.

AGAR.—Agar remains dull. No. 1 Kobi strips, spot, 6s 6d; No. 2,
6s 14d; and forward, 4s 14d and 4s per lb, c.f. and i. respectively.

FRUIT (DRIED).—A steady market resulted this week. Of currants,
Pyrgos quoted 54s, Panarati, 55s to 62s; good Vostizza, 70s. Sultanias,
fair to good Smyrna, 90s to 95s; fine, 110s to 125s. Valencia raisins,
halves, 35s to 40s; quarters, 45s to 60s. Dates in slow request.
Good Hallowee, 20s; Siar, 16s.

EVAPORATED FRUITS.—California apricots, extra choice, quoted
155s; fancy, 167s 6d. Pears, extra choice, 72s. Peaches of various
growths, 57s 6d to 65s. Apple rings, extra choice, Californian, 58s
to 60s. Bosnian plums, 35s to 40s; Californian, six grades, from 58s
to 88s per cwt.

OILSEEDS.—Market quiet, but prices firmer on balance. Bold
Bombay, afloat, quoted £21 10s; small Bombay, ditto, £20 5s; Cal-
cutta, afloat, £20 10s; January-February, £20 10s; and April-June
sold, £18 17s 6d to £19; Plate, afloat, £18 2s 6d to £18 5s paid;
January-February, sold, £18 to £18 5s; April-May, £17 15s to
£17 17s 6d. Rapeseed dealer. Toria, afloat, £18 15s; February-March,
£17 17s 6d; Jamba, January-February, £14 5s. Cottonseed easier.
Egyptian black, March, £11 15s; and white, sold, £11. Bombay,
March-April, sold, £8 10s. Gingly-seed firm. Large, Bombay,
January-February, sellers, £24. Chinese, January-February,
£23 17s 6d, to Continent. Groundnuts firm. Coromandel, machine
dried, February-March, quoted £22 15s. Chinese decorticated,
f.a.q., January-February, £22 5s; Nigerian, ditto, £22 12s 6d. Soya
beans firm. Manchurian, February-March, quoted £12 5s. Castorseed
quieter. Bombay, February-March, £18 15s ton.

OILS.—Linseed market irregular, but firmer. Spot, net, naked,
41s 6d; February, 40s 3d; March-April, 38s 3d; May-August, 36s 4d.
Rape firm. Crude, spot, 43s 6d; refined, 46s 6d. Cotton steady.
Crude Egyptian, spot, 39s; common edible, 44s; deodorised (in
barrels), 46s. China-wood quiet. Hankow, spot (barrels), 110s;
February-March, 79s 6d. Coconut firm. Ceylon, spot, 43s 6d;
February-March, 42s 6d; Cochin, ditto, quoted 44s. Soya firm.
Oriental, barrels, February-March, 39s 6d. Japan fish steady. Feb-
ruary-March, cases, 27s. Cod steady. English, spot, 30s to 31s.
Groundnuts quiet. English crushed, naked, spot, 46s; deodorised,
barrels, 54s. Turpentine irregular. American, spot, 10s 9d; February-
April, 10s 6d. Rosin steady. American, grade B, 13s 9d; F, 14s; G,
14s; H to I, 14s; W, 17s 6d; WW, 18s 9d. French, F/G, 13s 6d;
WW, 15s 6d per cwt. Petroleum steady. American standard white,

spot, 1s 1d; and water white, 1s 2d per gallon. Castor oil steady.
First pressure, spot, to June, quoted 49s; second pressure, 46s, and
pharmaceutical, 54s per cwt.

METALS.—Tin opened the week with a very firm tone, and a large
business transpired at about 40s per ton advance, the tendency
being influenced by higher Eastern advices. Sales were concluded in
standard, cash, at £192 15s; March, £195 to £193; and three months
fluctuating from £196 to £195. Subsequently a good deal of irregu-
larity prevailed, but values were fully steady on balance. By the
middle of the week cash stood at £193 5s; March, £193 10s; and
three months at £195. Sales occurred in the East on the basis of
£199 10s, c.i.f. The tendency was active and dealer at Thursday's
session, standard, cash, being sold £198 10s to £198 15s to £197 15s;
and three months at £200 to £201 to £198 15s to £199 5s.
The market was again active, and dealer at the final meeting.
Standard, cash, sold at £200 to £201, and three months at £200 10s to
£201 10s to £201 5s to £202 10s. English ingots, £200 to £201.
Copper was also a firm market, with active dealings, especially
with regard to distant positions, values showing a rise of about
22s 6d per ton on previous week's close. Standard, cash, sold at £69.
March at £69 10s, and three months, £69 10s to £70 5s, while finally
at £69 15s. Later prices gave way, in sympathy with lower American
cables and selling pressure; but at the lower range of prices buyers
were more in evidence with regard to forward positions. On Wed-
nesday, standard, cash, registered £68 10s; March, £69 2s 6d; and
three months at £69 10s. A large business occurred at Thursday's
session, and rates dearer. Standard, cash, sold at £69 10s to £69 15s
to £70 5s to £70 2s 6d, and three months at £70 10s to £70 7s 6d to
£70 17s. Values were again firmer at the final meeting, with liberal
trading. Standard, cash, sold at £71 to £71 15s to £71, and three
months at £71 10s to £71 17s 6d to £71 10s, while finally at £71 15s.
Electros £77 10s to £78. Best selected, £73 10s to £75 10s. Strong
sheets, £100; wire bars, £78. Lead steadier, at £28 10s to £28 5s,
as to position. Spelter, firmer, at £35 16s 3d to £35 18s 9d. Aluminium
home trade, £100; export, £105. Quicksilver steady, at £10 to £10 5s
per bottle.

Victory and National War Bonds, and discount rates were distinctly weak, partly owing to the surprisingly low level at which a batch of £1,000,000 Liverpool twelve months' bills had been placed—£2 5s 8.5d per cent. Glasgow was less fortunate, placing £500,000 in six and twelve months' bills at 2½ per cent. and 2½ per cent. respectively. Yesterday the market was still further weakened by the low rate at which the Treasury bills were allotted, and three months' bank bills were quoted at 2½ per cent.

	Mar. 2, 1923.	Feb. 23, 1923.	Feb. 16, 1923.	Feb. 9, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (Jly. 13, '22)

Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills) ..	2½	2½	2½	2½	2½

The Bank return showed increases of £5,000 in the stock of gold and £1,899,000 in the circulation, leaving the Reserve £1,894,000 lower. An increase of £4½ millions in the Other securities was difficult to account for by the market's operations, since its net borrowings during the week were not believed to have amounted to anything like this sum. Public deposits had declined by over a million, and the private deposits were thus £3¼ millions higher. Currency notes outstanding were reduced by £281,600 to £27,910,700, which includes £1,503,200 for notes called in but not yet cancelled. The fiduciary issue is £228,147,400, or £42,036,400 below the maximum.

THE STOCK MARKETS.

Taking the Stock Exchange as a whole, there is a very fair amount of business going on, but it is of a somewhat spasmodic nature, and so well scattered over various sections that no single market can be called especially active. Some influence towards restraint is exercised by the foreign situation, and by a vague idea, based on the raising of the New York rate, that money may become dearer here. Nevertheless, War Loan is steady and Consols harder. The foreign market as a whole is quiet, with Peruvians a good feature. Home railways continue to advance, special attention being given to the preferred stocks, while Argentine rails are stronger. Textiles are the object of lively attention, with Courtaulds the centre of attraction. Electric light shares hold their big rise. Rubber shares remain inactive. Diamonds, copper, and tin shares are absorbing the chief attention in the mining sections.

THE COMMODITY MARKETS.

The prices of practically every description of coal advanced this week on the Cardiff market, and the demand is so heavy that Germany and Italy are now buying from the United States. Makers are sold out for prompt pig-iron until the end of April; prices are 117s 6d to 120s per ton for Cleveland No. 3 G.M.B., and 115s to 120s for East Coast hematite. Steel prices have been raised by 10s per ton this week, and steel billets by 20s. Our Middlesbrough correspondent reports that there is an active demand for manufactured iron and steel, although costs have risen. Buyers are not inclined to place orders at present in the Manchester cotton trade, and conditions are dull. Our Bradford correspondent states that all sections of the wool textile industry are experiencing a very quiet time, while the immediate outlook does not hold out much promise of any great improvement. Linseed continues in steady demand, although prices show a slight variation. A firmer tone is noticeable in the hide market, and our leather trades correspondent mentions that the boot trade appears to be improving, some Leicester and Norwich firms having good spring orders in hand.

FOREIGN EXCHANGES.

During the past week the foreign exchange market has again been extremely quiet, and not only has business been more restricted, but rates have moved within considerably narrower limits than those to which we have become accustomed recently. The dollar, after weakening to \$4.60½ on Monday, and recovering the next day to \$4.71½, has been very steady round about \$4.70½, as compared with \$4.71½ on the 23rd. Forward rates at 1½-1½

cents per month above spot also show little change. The rise in prices in the United States shows little sign as yet of being checked, but in the meantime price levels here also are moving up rapidly. Berlin at 106,000 shows very little movement, the policy of stabilisation under the present extraordinary circumstances having so far at least proved successful, and a further step having been taken in the decision to issue an internal gold loan to an amount of \$50,000,000, through which it is hoped to tap private holdings of foreign currency. Quotations for forward marks show a remarkable narrowing on the week to 8,000 to 13,000 per month above spot. The Paris rate, although irregular, has moved within narrow limits, but a recovery to 76.60 on Tuesday was not maintained, the rate yesterday morning of 77.60 being actually some 5 centimes higher than the closing rate of the 23rd. Brussels, which moved up exceptionally on Friday and Saturday of last week, recovered again, but is back once more at 88.35, as compared with 88.00 a week ago. Forward rates, in Paris, 10 to 12 centimes per month above spot, and in Brussels 2½ to 3½ centimes below, show little change on the preceding week. Amsterdam, moving, as usual, in sympathy with the dollar, has reacted from 11.89½ to 11.88½. Italy again remains remarkably steady at 97½, while Spain at 30.13 also shows little movement. In Scandinavia, Christiania gave a jump upwards on Thursday, and at 25.65 yesterday was well above the level of 25.35 on the 23rd. Copenhagen at 24.42½, as compared with 24.17½, shows rather less depreciation, and Stockholm at 17.70½ is almost unchanged. There has again been some demand for Finnish marks, which at 17½ is 4 marks below last week's level. Vienna has been kept steady at 330,000, in spite of the success of its short-term issue, while Warsaw at 200,000 is for once some 30,000 better on the week. Prague, at 158½, shows little change, but Budapest, where the financial position is becoming increasingly difficult, has again depreciated. In the East the rupee, at 1s 4 5-32d, shows little change, as does the yen at 2s 0½d. The silver market has been firmer, on a steady absorption by India, which was accompanied by both buying and selling from China, but the future is still obscure. Hong Kong, at 2s 3½d, and Shanghai at 3s 1d, are each ½d dearer on the week. In South America Rio at 5½d is about 1-32d cheaper, after being below this figure; Buenos Ayres is about the same, after being a little higher. Monte Video has risen from 43d to 43½d, while Valparaiso has again appreciated from 38.50 to 37.90.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 24th:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	29,762	Interest on Debt	727
Taken from Exchequer Balances ..	467	Supply Services	10,051
		Road Fund	950
		Reduction of Debt	18,938
		Sundries	463
	30,229		30,229

Unless some unlooked-for expenditure is included in the accounts before the end of the year, a respectable surplus would seem to be assured to the Chancellor. Revenue appears to be coming in well, and at present is but £113 millions behind the figures for the similar period of 1921-22, although it was reckoned that Revenue would reveal a decline of £214 millions. Expenditure up to date is £695½ millions, as against £918½ millions in the like period of the preceding year. Supply Services falling from roughly £590 millions to nearly £391½ millions. Thus, with an estimated expenditure of approximately £902½ millions, a comfortable margin for a surplus is assured here. Although Sir Robert Horne had estimated that by pegging income-tax down to 5s a loss of £70 millions could be looked for, income-tax is £299 millions, as against nearly £294½ millions for the corresponding period of last year. Last week £18,141,000 came into the accounts from this source, and there are five weeks as yet to go to make good the estimate of £329 millions under this heading. Customs at nearly £113 millions is already over the estimate, but Excess Profits Duty, which is down to provide £27,800,000, so far has only brought in £954,000, while Special Receipts, estimated at £90 millions, shows an income of just under £43 millions.

The week's operations reduced the National Debt by £18,937,900, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	350	Public Dept. Advances	9,900
4½% Treasury Bonds	994	Treasury Bills	10,541
Anglo-Persian Oil Dividends ..	775	Telegraph Money	600
		Sundries	516
	2,119		21,057

The floating debt was reduced by £19,945,000 to £852,346,500.

FINANCIAL YEAR, 1922-23 (April 1, 1922, to February 24, 1923).

	£		£

THE RIDDLE OF THE RUHR.

The effects of the French occupation of the Ruhr, both upon the political situation and upon trade, remain exceedingly obscure. So far as the economic reaction on Great Britain is concerned, it appears that up to the present the favourable effect considerably outweighs any opposite influences. In some markets, notably in the case of wool, where the German demand is one of the chief features of the export trade, the suspension of business with Germany has affected other buyers and has produced a waiting tendency. Even in the coal and metallurgical industries the increased buying and the hardening of prices is not by any means entirely to be attributed to the direct effect of reduced production in the Ruhr and Lorraine, but is due also to the fact that this additional stimulus has occurred at a moment when stocks were low and the market was beginning to take an upward turn not only at home, but in non-European markets overseas. Indeed, in November, the last date for which comparative figures are available, British iron and steel exports had risen nearly to pre-war level, and were nearly equal to those of Germany and the United States combined. But in these trades there is evidence not merely that orders that would have been placed in the Ruhr are coming to England, but that orders already placed there are being transferred by German manufacturers for completion in Great

Britain. What is happening to production in the Ruhr it is difficult to ascertain exactly, but it seems that whereas in the first weeks of occupation normal production continued, the interference with the German railways is paralysing production in a region of heavy industry which is largely dependent on rail transport. Thus it is reported that out of 125 blast furnaces on the right bank of the Rhine 75 were in blast on January 1st, but there are to-day only 25 working, and these are on slack blast. Among the many reasons given for this state of affairs is mentioned the inability to get limestone to the furnaces, though the distance involved is comparatively short. Again in the engineering shops the output of the past few weeks cannot be cleared, and production is being stopped as a result of congestion. The result of transferring orders to Great Britain is, as our index number shows, already beginning to react upon prices, and we are threatened with a situation which may reproduce, on a small scale, some of the features which caused the boom of 1920. Two among the many reasons which caused the excessive price rise of that year were:—The shortage of stocks after the great war—or rather the fact that such stocks as were in existence were locked up in Government hands or in distant countries, and, secondly, the fact that Europe had not resumed anything like adequate production. The bubble burst as soon as German, French, and Belgian products began to come on to the market. At the moment world stocks are again low, and the reduction of European output is in danger of sending prices rapidly up. Any such result is very much to be regretted. The action of the New York Federal Reserve Bank in putting up its discount rate when its reserves were ample and there was no sign of over-speculation is an almost unique event, which can only be explained by the desire to nip in the bud any upward movement of the price level. Its significance lies in the proof which it affords of the realisation by the business world that, while big inflationary movements may be of temporary benefit to some, the aftermath is a very troublesome business. A rise in prices based upon so incalculable an influence as the stopping of French and German production is a peculiarly undesirable one; for not only is it certain that unfavourable influences will sooner or later increase in strength, but also the very fact that stocks are accumulating in the affected area means that at some moment they will be released and upset the equilibrium of the market.

When we turn to the question of French policy, the situation is even more involved. Opinion in this country has constantly been baffled in the attempt to disentangle what appear to be the very mixed motives that have prompted the actions of France. But in spite of oft-repeated assertions, both public and private, that France has no annexationist designs, current events appear to be driving the French Government, perhaps unwillingly, into a position in which the hope of securing reparations, either with or without the co-operation of Great Britain, is becoming of minor importance compared with the task of compelling a German surrender, if need be, by methods of increasing ruthlessness. In this connection Mr Bonar Law made an admission of great significance in the House of Commons this week when he said that France's avowed

intention was to stay in the Ruhr until Germany paid 132 milliard gold marks. M. Poincaré is fully aware that collection of this sum is quite impossible—as indeed is evident from the fact that the various reparation plans which he has himself worked out during the last nine months have, in fact, implied substantial reductions of this figure. If France is to stay in the Ruhr until this sum is paid, she will stay there indefinitely. Again, the French demand that the cost of the present adventure is to take priority over any other claims upon anything Germany may pay means breaking up the existing understandings between the Allies on the allocation of Reparations. Finally, the attempt to run increasing sections of the complicated railway system of the occupied area by French officials means that for the present the productivity of the whole area must be reduced, the hope of material gain abandoned, and the whole adventure turned into a plan for making things unendurable for Germany.

With this change in the objective of the campaign, increasing attention has been devoted in Paris to the idea of a political regrouping in Europe—a matter on which we put forward some speculations in a subsequent article. But we venture to doubt whether Frenchmen are as satisfied with the situation in which they are placed as a reading of the Paris Press would suggest; for it must be obvious that the developments which are taking place must make it increasingly impossible for France to get back to the sort of understanding with Great Britain which would have been possible two months ago. France is having her fling, and her actions are slowly but surely eating into those immense reserves of sympathy and friendship which existed in this country towards her. Those Frenchmen who do not realise this would be well advised to study carefully the temperate and sober letter from Mr St. Loe Strachey to the *Times* on Thursday, in which he begs France to realise that they are making a profound mistake if they suppose there is any considerable body of opinion in England which supports their present policy. "In the Commons the Liberals, both Independent and National, are opposed to the policy and action of France. That is the view of the whole Labour Party. What of the Conservatives who form the rest of the House? There are, perhaps, 50 Conservatives who both approve the Ruhr policy and believe it will succeed. Of the rest, some are regretfully, but none the less strongly, opposed to the French policy; some are openly hostile and indignant; others are as full of anxiety and forebodings as I am; while others, again, though they dislike showing disapproval, look upon the action of France as suicidal for France, injurious to her Allies, and ruinous to Europe as a whole. In a word, there are not 10 per cent. of the House of Commons who would not rejoice to hear that France had abandoned her enterprise, given up her ill-advised scheme, and began the evacuation of the Ruhr."

THE SHIFTING BALANCE.

DURING the late European war both parties agreed in disparaging the old balance of power by which the war had been preceded. Germany, being the acknowledged leader in her camp, looked forward to a Continental bloc under her single hegemony; the Allies, being partners, worked for a joint supremacy of "the Principal Allied Powers"—in harmony, if possible, with the neutrals and America, but with the German factor eliminated from the triangle of forces. The Allies won the war; they put their system into operation, and we have been attempting to live under it for the last four years. Was it ever likely to work? That question was not seriously discussed by those in whose hands the settlement lay. Who, in 1918, would presume to suggest that Germany ought to be left with any particle of power? Or that the Allies would not be blood-brothers for ever? Or that those who had fought for right, and had proved their right by winning, would not be perpetual heroes in the eyes of the world? Besides, if the balance was being destroyed, it was being replaced by the League of Nations—as if, when you had emptied

one pan of the mighty scales, you could prevent the other from falling by attaching it with a thread to the clouds.

The scale is falling now, with a rapidly increasing momentum, and no one can tell how far it is going to move, or how long it will remain in its next uneasy position. It is certain, however, that it will make fresh havoc throughout Europe, as it heaves and plunges, and that it will not return to anything like stability until the weights have been redistributed so thoroughly as to leave hardly a trace of their previous grouping. How far will the balance swing over? Will the seizure of German territory by France be limited to the Rhineland and the Ruhr? And if the French military plenum hangs suspended at this line over the German military vacuum, how long will that miracle last?

Probably no one in the world, and least of all those responsible for French policy, can even guess, as yet, at the answer to these questions, for it depends on the interplay of complicated psychological forces. Will the passive resistance in the occupied area break down? And if it does, will that affect the resistance in the vastly greater part of Germany that lies beyond the French outposts? Will France accept stones for bread, and shoulder new financial burdens in place of receiving reparations, if thereby she sees the prospect of breaking Germany for ever? And if she is prepared to make sacrifices for that end, is she prepared to make them in the form of rising taxation? These factors are at least as important as the purely military one, on which the French Government appear to be basing their calculations. Militarily, it is obvious that France can seize, hold, and sever from the rest of Germany both the Rhineland and the Ruhr. But cannot unoccupied Germany make it impossible for France to halt comfortably in that position? "No," say the French, "for we now hold all Germany by the throat, and the consequences of resistance to us would be excruciatingly painful to her." But, then, the hedonistic calculus is not the whole mechanism of human nature. If Germany were entirely cold-blooded and cool-headed, she might lie down under this treatment for fear of worse. But all the news that comes from Germany points to a closing of the ranks, and a rapidly rising temper, and history shows that whenever a community is driven beyond a certain extremity it fights without counting the cost. After the first Punic War, the Carthaginians ceded a province, and paid an indemnity; after the second they did both again; but the third time they were attacked they fought till they were annihilated. As for Germany, she could not have been more completely in the grip of France than she was when she rose against her in 1813. In such cases the herd struggles for its life, and cares little for the casualties among its members, and history proves, again, that the herd's instinct is usually right from the herd's point of view. Cases like the extinction of Carthage by Rome are rarer than those like the overthrow of Napoleonic France by the insurgent peoples of Europe.

Possibly, therefore, unoccupied Germany may force France (by economic obstruction or guerilla warfare or both together) to choose between evacuating the Rhineland and the Ruhr or advancing further, and if that happens, the real test of forces will have come. In such an event, France would doubtless call up her satellites—Poland and the two nearer members of the Little Entente—and Germany would be overrun from every quarter. But could so large a country, so densely populated and so complicated in its economic life and its system of communications, be completely held down for an indefinite period even by the combined efforts of its neighbours? All that can be said is that such a thing has never yet been achieved in the history of Western Europe, and if it be answered that the armed Powers now possess unprecedented methods of organisation and means of destruction, the answer to that, again, is that Germany, too, is an industrial country, and that industrialism will put the means of resistance into her hands if she is prepared to pay the price of using them. A highly organised industrial area is no doubt a valuable pledge in an enemy's hands so long as the owner is not reckless about losing it. But if passion seizes him, and he becomes a Samson pulling

ing down the pillars, might not a district like the Ruhr or Chemnitz, or any one of the dozen other local concentrations of industrial energy in Germany become an exceedingly dangerous place for an army of occupation? So far, we have not explored the potentialities of industrial countries as theatres for guerilla warfare. But if Europe comes to that pass, we may discover that they are no less effective for the purpose than the South African veldt, or the Libyan Desert, or the Anatolian Plateau.

Thus, the necessity for occupying the whole of Germany is a contingency which France may be compelled to face, and it is exceedingly doubtful whether the combined strength of her own forces and her auxiliaries would be equal to the task. From Paris to the Ruhr is rather a shorter distance than from the Ruhr to Berlin; the strain upon lines of communications is in geometrical proportion to their length; and this is especially so when they run through a highly populated, hostile and desperate country. At the utmost, the French could hardly hope to get further than the line of the Elbe, with Berlin occupied as a bridge-head beyond it, and with the Poles joining hands with them there from the direction of Posen and Silesia. Baltic Germany—the citadel of Prussian monarchism and militarism—might in those circumstances take its stand on some "National Pact," and look, as Angora did, towards Russia. Would or could Russia fish in these troubled waters as successfully as she has done in those of the Near East? As the two principal defeated Powers and the two chief victims of the aggrandisement of Poland, Russia and Germany have now the strongest bonds of interest to draw them together. Russia's decision would probably depend on the precise degree of Poland's weakness, and that is a factor which French statesmen can hardly contemplate with any peace of mind. Poland, weighted down by her subject populations, her abysmal exchange, and her lack of definite frontiers, and of administrative traditions, might possibly survive if Europe remained peaceful; but could she possibly weather such a storm as her French patrons are assiduously raising around her? In the Poincaré system, as in the Napoleonic system, Poland is the weakest member, and the collapse of Poland might bring the whole structure tumbling down. The situation just suggested would, indeed, be extraordinarily similar to that of 1813. France, exhausted by years of war, would have on her hands a rebellious Germany, a defiant Russia, and a Great Britain who (whether "neutral" or "enemy") could not afford to see the Continent permanently subjected to the military domination of any single Power. Is it likely that contemporary France could achieve what was beyond the strength of Napoleon?

No doubt the French are averting their minds from these unlimited military liabilities. "With the Rhineland and the Ruhr in our hands," they are saying to themselves, "the Germans must give in, and the moment they are cowed we can cease to coerce them. They will become clay in our hands, and we will build them into a continental bloc under our hegemony." Frenchmen who are thinking on these lines have perhaps been influenced sub-consciously by the recent German attitude towards France. "Poor France," the Germans used to say between 1914 and 1918, "why does she persist in this ruinous resistance? We only want to detach from her the Briey Basin and her Allies. On these terms she can come into our system, and we will make it our business to heal her wounds." The dreams of imperialists are monotonously similar, and since the shattering of the dream in one nation's mind is apparently no hindrance to its repetition in another's, it may continue to be dreamt until eventually it comes true. The ultimate destiny of Europe may, in fact, be the permanent military domination of one Power over the remainder, as the ancient Mediterranean World finally fell under the domination of Rome. Who would venture to say that this melancholy end is impossible? It is, however, improbable that if one among us is to be cast for the part of Rome, that one can now be either France or Germany. As aspirants to the Empire of the Continent, both these Powers have surely had their day—France when she failed under Louis XIV. and Napoleon; Germany when she failed under Wilhelm II.; Russia, if any Power, is the future scourge of God for whom the Poincaré policy is paving the way.

PRESIDENT HARDING AND THE PERMANENT COURT OF INTERNATIONAL JUSTICE.

It was known in Washington last week that President Harding was preparing an important statement, and it will be generally acknowledged that the result is profoundly interesting. In a message to the Senate, which is elaborated in an accompanying letter from the Secretary of State, Mr Hughes, the President recommends the Senate to adopt the Statute of the recently constituted Permanent Court of International Justice, "but not the optional clause for compulsory jurisdiction." It will aid us in understanding the significance of this step, and of the limitations and conditions attached to it by the President, if we first examine this new and important Court, which, with too little publicity and no self-advertisement, has recently taken its place in the international machinery of the world.

Article 14 of the Covenant of the League of Nations, signed at Versailles in June, 1919, reads as follows:—

The Council shall formulate and submit to the members of the League for adoption plans for the establishment of a Permanent Court of International Justice. The Court shall be competent to hear and determine any dispute of an international character which the parties thereto submit to it. The Court may also give an advisory opinion upon any dispute or question referred to it by the Council or by the Assembly.

Pursuant to this article a committee of jurists was appointed in the summer of 1920, and the result of their labours was a draft project which, after amendment in one important respect, was adopted by the League of Nations Assembly in the same year. The important amendment was the substitution for the compulsory jurisdiction proposed in the draft project of merely permissive jurisdiction, in accordance with the view urged by some of the Allied Powers that the world was not yet ripe for coercive or compulsory jurisdiction. Accordingly it was provided in the Statute that—

The jurisdiction of the Court comprises all cases which the parties refer to it and all matters specially provided for in Treaties and Conventions in force.

Many disputes have already been referred to the Court, and already this year the Court has heard, and delivered judgment upon, a difference between Great Britain and France regarding the liability of British citizens (mainly Maltese) in Tunis to French military service. But in addition to this voluntary or permissive jurisdiction, which is all that President Harding recommends the Senate to accept, the Statute contains a clause providing for what may be termed optional compulsory jurisdiction; that is to say, any country may agree in advance to submit to compulsory jurisdiction any dispute of certain comprehensive classes in which it may become involved with another country that has in the same manner adopted compulsory jurisdiction. This is done when a country agrees to recognise as compulsory *ipso facto* and without special agreement

in relation to any other member or State accepting the same obligation, the jurisdiction of the Court in all or any of the classes of legal disputes concerning: (a) the interpretation of a Treaty; (b) any question of International Law; (c) the existence of any fact which, if established, would establish a breach of an international obligation; (d) the nature or extent of the reparation to be made for the breach of an international obligation.

Eleven judges and four deputy judges have been appointed, and the former include Viscount Finlay and Mr J. Bassett Moore, Professor of International Law at Columbia University.

President Harding proposes to exclude the clause just quoted, and, although some people regretted at the time that the League of Nations Assembly substituted permissive for compulsory jurisdiction in the draft statute, it is now fairly obvious that the chance of the United States coming in on a compulsory basis would have been remote.

The four conditions which President Harding proposes to attach to American adhesion to the Court fairly reflect his present attitude—(a) No adhesion to the League and no assumption of any League obligations are to be implied. (b) The United States are to have due share in the proceedings of the League for the appointment of judges and

deputy judges. (c) The United States are to pay their share of the expenses of the Court; and (d) the statute constituting the Court is not to be amended without their consent.

Whether the Senate will act upon the President's proposal or not will not be known for some time, as the adjournment of Congress is imminent. It is being suggested in some quarters that the proposal is the President's contribution to the solution of the question, "To be or not to be" a member of the League, and indicates a concession to the swing towards Europe which has been discerned in the United States by some observers. This suggestion, perhaps, goes too far. The United States have been pioneers in the matter of international arbitration treaties, and the present proposal is not out of line with the traditions of their pre-war foreign policy. The vision of the United States being about to enter the League, even on the instalment plan, is at least premature. The attitude of that country towards Europe and the League would be much better understood in this country if it were more widely realised that the Monroe Doctrine has two barrels. One of them proclaims "European hands off the American continent!" and that is the barrel on which European eyes have been focussed since the enunciation of the famous Doctrine by President Monroe in December, 1823. The other barrel says, "No American fingers in the European pie!" and that has been the corner-stone of American policy throughout the nineteenth century. An appreciation of that fact would enable Europeans to realise better than they do the reluctance with which the United States came into the recent conflict in 1917, and with which, having got out of it, they will take any steps in the future that is likely to embroil them once more in the European vortex. At the same time it must be admitted that both friends and enemies of the League in the United States are attaching great significance to the President's move, which is openly described as a step toward the League. The United States is already co-operating in the work of the League in minor matters, such as welfare work; the reception of the President's new proposal will decide whether the basis of this co-operation is to be expanded. There is certainly an increase in the body of American opinion which considers that the new world must come to the help of the old. Further, the Anglo-American debt settlement clears one of the principal obstacles out of the way of Anglo-American co-operation, and, in view of these facts, public and official opinion on the other side of the Atlantic may well be influenced by the agreement among all parties in our House of Commons that the only way in which Great Britain can consider intervening to restore peace and sanity in Europe is through the League and its machinery.

THE SITUATION IN THE COAL TRADE.

(BY OUR CARDIFF CORRESPONDENT.)

A SOMEWHAT disquieting situation has arisen in the coal trade of the United Kingdom. The demand for steam and coking coals has been very good for months past, as a steady expansion in foreign requirements has coincided with an increasing home demand. The productive power of the industry, however, has failed to keep pace with consumption. The miners are working very hard; the low wage rates prevailing in the majority of the coalfields are stimulating individual effort, and the output per person employed is greater than it has been in any year since 1916. But the Seven Hours Act is proving an insuperable impediment to increased production, for the collieries appear to have reached the limit of their output capacity under the disabling provisions of that Act. If the weekly returns of output issued by the Mines Department of the Board of Trade are closely examined, they will be found to show very little variation in normal working weeks. Thus, for instance, between the week ending January 13th and the week ending February 10th the maximum weekly output in the United Kingdom has been 5,644,200 tons, and the minimum 5,566,900. It will be seen that the difference between the maximum and

the minimum production in these five weeks has been only just over 1 per cent. As it is in this period that the pressure of the demand has been greatest since the war, the natural consequence has been a rise in the price of coal. In the upward movement of prices there has been no uniformity. Fluctuations have been most violent in the coal exporting districts, and particularly in South Wales, and least violent in those coalfields the greater part of whose outputs are absorbed in the home market. The extent of the rise in the prices of South Wales coals may be gathered from the following facts: The average f.o.b. price of best Admiralty large coals in January was 28s 9½d; this coal is now quoted up to 32s 6d; Monmouthshire semi-bituminous coals have, in the same period, increased from 27s 8d to 31s; best steam smalls from 19s 2d to 23s 6d; inferior small coals from 15s 2d to 20s; washed smalls from 20s 4d to 25s; coking smalls from 15s 3d to 22s 6d and (better qualities) from 20s 9d to 25s, while coke for export has risen from 42s 8d to 80s. The export collieries are benefiting considerably from this rise in export values, and when it is borne in mind that the average rate of profit in the South Wales coalfield over the whole of 1922 was less than 5d per ton compared with a pre-war rate of profit of anything from 1s 2d to 1s 6d per ton, it is only natural that they should be trying to make hay while the sun shines. This improvement in price is still more welcome to the miners in the South Wales coalfield, where the general wage rate has been at the minimum since November, 1921, and where, under the audit arrangements of the National Coal Board, there is no prospect of an increase in wages before May or June at the earliest. But the coal-consuming industries are suffering. The blast furnaces are experiencing increasing difficulties in obtaining supplies of coke, and the blowing out of some of them is already in contemplation; for colliery owners in command of so profitable an export trade are preferring to dispose of their small coal for shipment to foreign countries rather than to reserve it for inland consumption either as raw coal or as coke. In a lesser degree these conditions exist in the other coal exporting districts of the country, and British manufacturing industries are consequently threatened both with scarcity of supply and with much higher prices.

The foreign demand is general, but the measures taken by France in the Ruhr have so disorganised both the production and the distribution of the output in that coalfield that France and Germany have come into the English market for supplies in excess even of the increased exports to those countries last year.

In 1922 the Ruhr sent nearly 8½ million tons of hard coal, nearly 6½ million tons of coke, and over 600,000 tons of brown coal, representing a total quantity in metric tons of 15½ million to France, Belgium, and Italy as reparation supplies. These deliveries have recently been suspended. Moreover, Western Germany depended mainly on the Ruhr for its coal and coke supplies, but the export of coal and coke from the Ruhr to unoccupied Germany is now prohibited. There is, therefore, an acute shortage of fuel, both in France and Germany, and it is this that explains the pressure of the demand for British coals during the past two months. British coal companies are fully sold for two or three months ahead, and, in view of the inelasticity of our coal productive power under the restrictions of limited working hours, there are many who fear an acute shortage for inland consumption in this country. This fear has induced some alarmists to appeal to the Government to intervene for the protection of home industries, but the Secretary for Mines has replied that he has no power either to control prices or direct distribution, and that the Government is definitely opposed to such a policy. The country is confronted with the choice of two evils. If an increased export trade reacts unfavourably on home industries, it benefits the foreign trade of the country by improving the trade balance, strengthening the sterling rate of

exchange, and increasing our command over the supplies of foreign foodstuffs and raw materials. Moreover, the Government is under a pledge to the miners to allow them to benefit from any improvement which may take place in the general revenue earning capacity of the industry. Last August every coalfield in the country was working on the minimum wage, and that minimum, according to the Coal Advisory Committee, represented a wage equal to only 42 per cent. above the average wage of 1913. The position of the miner has appreciably improved since then. The percentage increase payable in January on the standard rates of 1888 in Scotland was 125.4 per cent., compared with 110 per cent. in August; in the same period the general wage rate in Northumberland increased from 80 per cent. on the 1879 standard to 98.72 per cent.; in Durham from 89 per cent. to 97.02 per cent.; and in the Eastern Federated area from 32 per cent. to 49.61 per cent. on the 1911 standard. These increases raised the average wage per person per shift from about 9s 2d to approximately 9s 9d. Then, again, more persons are employed in the industry than was the case in August, the number of working days per week has increased and the payment of subsistence wages has been extended, while unemployment in the mining industry in January was only 4.5 per cent., compared with an average percentage for the country as a whole of 12.7 per cent. The miners, therefore, have benefited from the improvement in the coal trade, and they are likely to benefit still more by the recent increase in the export price of coal. The average wage, however, to-day has a purchasing power appreciably less than that earned in 1913-14, and on Tuesday the Executive Committee of the Miners' Federation of Great Britain waited upon the Prime Minister and repeated their demand for assistance or for an inquiry into the condition of the industry. Mr Bonar Law again refused these demands, and the Federation has convened a conference to consider the expediency of serving notices for the termination of the National Agreement under which wages have been regulated since the termination of the general strike in 1921.

It is impossible to foresee the duration of the present export boom, but the country must reconcile itself to the prospects of restricted inland supplies at high prices so long as that boom continues and the Government refrains from altering the present statutory limitations on the working hours in coal mines. An extension of the double-shift system, the increased use of mechanical coal-cutting and coal-conveying appliances, and, among other improvements, better and cheaper railway facilities, would doubtless increase output, augment inland supplies, and bring lower prices. Most of these, however, are improvements which cannot be carried out except by the expenditure of considerable capital, while in the South Wales coalfield there is still a great deal of opposition to the working of the double shift. There are two conditions, however—one physical and the other economic—which for some time to come will exercise a restraining influence both on the upward movement of prices and on the volume of coal exports. The physical condition is the limited shipment capacity of our docks, and the economic condition the competition of American and other coals. The railway companies are spending a great deal of money just now on dock improvements, and negotiations are in progress between the employers and the dockworkers with a view to an extension of working hours. The coal shipment capacity of the docks will increase as these improvements are completed, and it is estimated that extended dock working hours would alone add from 12 per cent. to 20 per cent. to the trading capacity of the ports; but it will be many months before the improvements which the railway companies are now carrying out will become effective, while the dockworkers are strongly opposed to any extension in working hours which will deprive them of their present eight-hour day. The check of foreign competition is already operative. The rise in the f.o.b. prices of British coals has driven Germany to more distant sources of supply, and on one day this week vessels of a deadweight capacity of between 50,000 and 60,000 tons were chartered for the conveyance of American coals to Germany. The fact, however, remains that British coal prices will remain relatively high, and there is every indication that they will continue high for many months to come.

OUR INDEX NUMBER.

THERE was a sharp upward movement in commodity wholesale prices in February, owing principally to advances in coal, iron and steel, and other metals, in continuation of a movement which started in January as a result of the Ruhr developments and a sudden increase in demand. Our Index Number, as at the end of February, shows a rise of 78 points to 4,402, which is actually the highest point recorded since the end of November, 1921, when the index number was 4,458, though at the end of July last the total rose to within 6 points of this figure. The table below shows the movements in each of the groups:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Base (avg. 1901-5) ..	500	500	500	400	500	2200	100.0
End July, 1914	879	352	616½	864½	553	2865	116.6
" Dec., 1915	897	446	731	848½	848½	3634	166.1
" Dec., 1917	1286½	686	1684½	839½	1348½	5845	263.2
" Nov., 1918	1289	782½	1848	903	1389½	6212	282.6
" Dec., 1919	1303	782½	1805½	866	1337	6094	277.0
" Dec., 1919	1441½	881½	2442½	1145	1453½	7364	334.7
" Mar., 1920	1508	914	2974½	1246	1709½	8352	379.6
" Dec., 1920	1344	805	1284	1216	1275	5924	269.3
" Dec., 1921	921½	636	1106	762	931½	4357	198.0
" Dec., 1921	1000½	676½	1135	690	887	4389	199.5
" June, 1922	994	669	1120	712	900	4396	199.8
" July "	880½	674	1123½	691½	887½	4257	193.5
" Aug. "	873½	682½	1116	699	818	4189	190.4
" Oct. "	885	700	1150	712	813	4260	193.6
" Nov. "	864	703	1200½	704½	811	4283	194.7
" Dec. "	861	706	1184½	705	807½	4264	193.8
" Jan., 1923	860	711½	1205½	739	808	4324	196.5
" Feb. "	847½	746	1201	797½	810	4402	200.1

It will be seen that in addition to an increase of 58½ points in the minerals group, there was also a rise of 34½ points in other food products. Practically all of the latter was accounted for by an increase of 9s per cwt in the price of sugar, a result of market speculation, which began in America. Primary foodstuffs are lower on the month, principally owing to a slight drop in cereals, though foreign wheat is practically unchanged. Textiles are also lower, though movements in the individual commodities which compose the groups were irregular. American cotton was a little higher on balance, but Egyptian cotton and cotton cloth were lower, cotton yarn being unchanged. The cotton trade during February has experienced a distinct setback after the revival of demand which occurred in January. Our Manchester correspondent writes that "the state of trade was considered by the Master Spinners' Federation at a special meeting of the committee held in Manchester on Tuesday last. It was officially announced at the close of the meeting that after careful consideration it had been decided that the present deplorable state of trade called for drastic action to be taken, and a resolution was carried to the effect that members of the Federation using American cotton should be recommended to curtail yarn production to the extent of 50 per cent. during the month of March. It is understood that individual firms will be left to make their own arrangements as to how this restriction of output shall be arranged. This policy of organised curtailment of production is being criticised in some quarters, but it is recognised that over-production is taking place at the moment, and stocks of yarn increasing rapidly in first hands. There is little probability of any real revival of Lancashire trade until prices are on a lower level, but at the time of writing there is a tendency for raw cotton rates to advance, chiefly as a result of the industrial activity in the United States and the heavy consumption there." In the minerals group, the largest rise was in

steam coal, though iron and steel prices were also advanced. There was also a spectacular rise in tin on the last day, after a steady rise throughout the rest of the month. The principal factor has been the large increase in consumption without any prospect of larger production for some time to come. America is a keen buyer, and demand from this quarter is expected to grow in the next few months. There was a net reduction of stocks in 1922 of 14,000 tons, and visible reserves are now small. Copper and lead have also risen.

The next table shows the changes in the index for each commodity as compared with the end of January, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	83	+ 1	Cotton, A	150	+ 5½	Copper	60½	+ 6
Englab	70	+ 1	Cotton, E	120½	+ 3½	Minerals	797½	+ 58½
Flour	80	+ 1	Yarn	135	+ 3	Baltic timber	100	..
Barley	69½	+ 5½	Cloth	134½	+ 3	Amer. timber	87½	..
Oats	78½	..	Wool, Eng.	128	+ 2½	do. Aust.	70	..
Potatoes	47	..	Leather	118	+ 2½	Petroleum	108	..
Rice	103	..	Silk	117	+ 6	Oilseed	80	+ 2½
Beef	94	+ 2	Hemp	101	+ 1½	Tallow	66	+ 2½
Mutton	107½	+ 1½	Jute	106½	+ 3½	Indigo	113	..
Pork	115	+ 2	Textiles	1,201	+ 4½	Crystals	89½	..
Cereals & Meat	847½	+ 12½	Pig-iron	123½	+ 10½	Rubber	17½	..
Tea	137½	+ 4½	Steel rails	79	+ 4	Miscellaneous	810	+ 2
Coffee	194½	+ 32	Iron bars	88½	+ 20½	Total	4,402	+ 78
Sugar cane	106	..	Coal, steam	94	+ 4			
Sugar beet	101	+ 6	House coal	122	+ 9½			
Butter	116½	..	Lead	82	..			
Tobacco	116½	..	Tin	82	..			
Other foods	746	+ 34½						

Changes in the Miscellaneous section, it will be seen, were small and unimportant.

As a result of the month's changes, the increase in wholesale prices now amounts to 71.6 per cent. over the level obtaining at the outbreak of war, as against 68.6 per cent. a month ago and 66 per cent. twelve months ago. The present position of the five groups in relation to the pre-war level is shown in the following table:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec., 1920	233	229	209	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6
June, 1922	174	192	184	149	160	171.1
July	172	190	181	153	163	171.4
Aug.	153	192	183	149	160	165.9
Sept.	151	194	181	150	148	163.5
Oct.	153	199	187	154	147	166.1
Nov.	150	200	195	152	148	167.0
Dec.	149	200	193	152	146	166.2
Jan., 1923	149	201	196	159	146	168.6
Feb.	146	211	195	172	146	171.6

Primary foods and miscellaneous products stand at less than 50 per cent. over the pre-war level, but other foodstuffs are well over double, while minerals have now reached the average figure.

The final table shows the changes in the indices of wholesale prices in some of the principal foreign countries, the base being the average of the year 1913:—

	United States.	France.	Italy.	Germany.	Switz'r-land.	Sweden.	Denmark.	Japan.
Nov., 1918	205	358	438	..	325	367	292	214
High, 1920	227	591	679	..	325	366	403	332
End of—	(Jan.)	(April)	(April)	(Jan.)	(June)	(Oct.)	(Mar.)	
Dec., 1921	123	326	594	3,585	176	172	178	209
June, 1922	131	326	537	9,140	161	164	180	197
July	131	326	558	13,935	163	165	180	201

Sept.	136	330	582	44,089	163	158	176	192
Oct.	144	338	601	94,492	163	155	180	190
Nov.	149	354	596	166,495	171	154	182	188
Dec.	148	363	580	205,417	175	155	181	186
Jan., 1923	149	388	..	715,881	..	156	..	183

* Bradstreet's.

Prices in America show little change in the last three months, but there was a sharp upward spurt in France in January with the fall in the value of the franc. At the end of January the German mark was about at its lowest point, and the February index number, which is not yet available, may perhaps show a decrease as a result of the mark's recovery.

THE SUGAR POSITION.

(BY A CORRESPONDENT.)

QUITE recently a very sudden rise occurred in the price of sugar. This in the space of a few days amounted to no less than 9s 6d per cwt, and naturally trade buyers were much perturbed, the market both for raw and refined sugar being temporarily disorganised, with the undertone very unsettled. The impetus for the movement came from the United States, where a big gamble was started in the commodity on the strength of the large increase in consumption and the reduced estimates for the Cuban crop. Well-informed opinion takes the view that for all 1922 the consumption of sugar in the United States went up no less than a million tons to well over five millions, and that a further expansion will be seen this year. This factor has naturally been made the most of, and it explains the eagerness displayed by the American sugar interests to absorb the new crop Cuban sugar as early as possible. The surplus of the old crop disappeared with the turn of the year, and the new crop movement was late in starting; thus with reserve stocks of raw sugar in American refiners' hands somewhat depleted, the way was opened for an aggressive movement on the part of certain syndicated interests who were rather badly hit by the slump due to the setback which overtook the 1920-1 season, and resulted in an unsold surplus in Cuba of more than 1,500,000 tons. This surplus hovered about the market for a long time, and was not dispersed until early in 1922. Raw Cuban sugar about that time was obtainable for shipment to the United Kingdom at about 10s 6d per cwt c.i.f., and the American refiners were securing all the supplies they needed at less than 2 cents per lb cost and freight to the American ports, these figures comparing with about 27s to 27s 6d and 5½ and 5¾ cents registered late in February.

The Cuban sugar industry underwent a striking change for the better in the first half of 1922, owing to the big increase in the consumption, especially in the United States, where the low prices and the small import duty of less than 1d per lb, against 2½d in this country, made themselves felt. Speculators were attracted to the possibilities of the situation, and the result was a big gambling movement in the commodity, although it would be folly to deny that the American operators were not clever enough to foresee the possibility of a world shortage of sugar being witnessed this year unless higher prices keep down the demand to a certain level. All estimates respecting this season's world output of sugar have had to be revised very drastically, and the figures issued some months ago no longer stand. The last crop of American beet sugar only yielded about 650,000 tons, against close on a million tons in the previous season, and this was a very serious blow to the American refiners, who had to look for additional supplies elsewhere. Thus the balance of the old crop Cuban sugar was easily disposed of before the new crop became available in any quantity, and both France and Germany have also been compelled to import considerable tonnages of cane sugar in order to make up for the deficiency of their own short crops. The revision of Guma's estimate from 4,193,000 tons to 3,800,000 tons, a reduction of nearly 400,000 tons, or nearly 200,000 tons below the actual outturn for last season, happened to synchronise with the publication of figures proving that the American consumption was rapidly expanding, and thus conditions favoured a sharp upward movement in prices, which duly took place.

After making due allowance for the fact that the sugar gamblers in the United States turned the situation to their own advantage, it would be futile to overlook the danger of a sugar shortage being seen later on. The Continental crops of beet sugar are not turning out according to anticipations. In Belgium and Holland alone there will probably be a falling off of a full million tons from the original estimated tonnages, and after all the figures are collated

and carefully sifted it is difficult to see how the world's output can exceed 16½ million tons. This may be compared with 17½ million tons—the actual yield in the previous season—to which must be added the large surplus of old-crop sugar which has now been wiped out. Last year the world's consumption of sugar showed a big increase, and it did not fall much short of 18½ million tons. In the United States alone there was an increase of more than a million tons in the consumption, while in this country the home consumption, based on the duty-paid entries as issued by the Board of Trade, was about 1,600,000 tons, against 1,400,000 tons in the previous year, and 1,100,000 tons in 1920. It will thus be seen that while production is decreasing, consumption is increasing, and in a prosperous country like the United States, where prohibition favours the free use of syrups and sweetstuffs, the demand for sugar this year may bound ahead still further. In this country there has been an increase in the consumption of 500,000 tons in two years, while consumption in most of the Continental countries, more especially France and Germany, has also shown a steady expansion, although, of course, the movement in this respect is bound to be somewhat circumscribed by the higher prices. In fact, something of this sort has already taken place here, the big rise seen in the wholesale market in the closing months of 1922 having cut down the demand, judging by the shrinkage shown in the returns for the first month of the current year and the reports issued by the trade quite recently. In some quarters the views are expressed that a comparatively high level of prices will have to be reckoned with for some time to come, and if this is correct the suggested reduction of the sugar duty in the coming Budget becomes of more than ordinary interest to the trade, as one factor would help to counterbalance the other. It is too early yet to say what the final yield of the Cuban crop will be. Weather and other conditions in the island have been favourable for some time past, yet estimates of the yield have had suddenly to be cut down. Obviously, both the Cuban planters and the American sugar gamblers are fully alive to the fact that the world's sugar markets now turn more or less on Cuba, and that they will continue to do so as long as the European beet-sugar producing countries fail to re-establish themselves on their pre-war footing. Even if the Cuban crop realises 4,000,000 tons, or 200,000 tons more than the latest revised estimate, it is difficult to see, assuming that there is no very marked setback in the consumption, where this season's needs are coming from. Belgium during the first four months of the season produced about 70,000 tons less than in the previous season, but there has been a little increase in the figures for Germany and Czechoslovakia. The returns for Holland show that during the five months ended January 31st the production only amounted to about 250,000 tons, against 375,000 tons in the corresponding period of last season, and that the Dutch stocks are down to a little less than 100,000 tons, or 50,000 tons under the figures for last year. The French and Belgian Governments have both placed an embargo on sugar exports, and this seems to suggest that the position in those two countries is worse than it is elsewhere. There was recently a very big rise in the price of sugar in France, and naturally the position of the franc makes the commodity very expensive to the consumers working with the imported article. The French Government made certain investigations concerning the jump in values, and decided that it was hardly warranted; but the fact remains that the general position in France favoured a higher price level. The French consumption from September 1, 1922, to January 31, 1923, amounted to 330,000 metric tons, which is about 66,000 tons per month. There remain another eight months before the end of the present season, and as there is very little new sugar available before October, something like 528,000 tons will be needed to get through the remainder of the season. The French stocks at the end of January amounted to 180,000 tons, and this, with the balance of the crop yet to be secured, would give the available resources as something like 200,000 tons. There is thus bound to be a deficit of fully 328,000 tons, which must be obtained either from the French Colonies or from foreign countries. In these figures no allowance has been made for the sugar exports

usually made to Algiers, Tunis, and Morocco, which, as a rule, are on a considerable scale; nor have exports allowed under special licence, in conformity with the recent export prohibition, been included. It is possible, of course, that the French consumption of sugar will decrease owing to the enhanced prices, but even placing the domestic consumption at 60,000 tons per month, very large quantities will necessarily have to be imported by France before the next crop is available. It will therefore become necessary for the French market to adjust itself to outside parity movements, otherwise sugar bought and not yet shipped might be re-sold by French importers to their own advantage.

Thus, after making all due allowance for the speculative activity and the possibilities of the commodity being the centre of further gambling, it will be seen that there is some ground for the fear of a prospective shortage, and this theory has been confirmed by the fact that practically the whole of the setback which took place after the extraordinary rise mentioned above has been recovered, and that all sugars at the time of writing are near the top. Cuban resources are now under great pressure from exporters, especially for shipment to the United States, and there is quite a big fleet of steamers working on time charter between Cuba and the States ports. This country has now plenty of raw sugar on hand, the present stocks at the principal ports amounting to over 115,000 tons, against 35,000 tons a year ago. The imports for some time past have been on a very liberal scale, but for the week ended February 24th they dropped away sharply to 832 tons, against 13,886 tons in the same week of 1922. The prospects of the home refining industry are excellent, and its position is likely to be satisfactory for some time to come. It is, for the time being, practically free from any outside competition, Continental sugar being quite a negligible item. Speculation, obviously, cannot be eliminated, and thus this country may have, as time goes on, to protect itself from the effects of parities established in the United States. The Cuban position will dominate the whole position during the next few months, and in view of the importance of Cuban supplies, values here will have to be based on the cost of importing raw sugar from Cuba. Steamers to the United Kingdom have been in demand lately, and several have been fixed on the basis of 10s 6d to 10s 8d to London, Liverpool, and Greenock; thus, with the full stocks in hand, there is no fear of any shortage here in the near future. But prices must inevitably remain sensitive in such a peculiar market.

THE TRUSTEE'S CHOICE OF INVESTMENT.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THERE may seem a touch of the ludicrous in talking about a shortage of stock in cases where millions of that particular security are in issue. Nevertheless, that this is an every-day state of affairs is a commonplace in the Stock Exchange markets, where lists of securities on offer are confined to a comparatively small number of stocks, having regard to the full list of issued securities. The War Loan is the most prominent example, with its two thousand million pounds of stock in existence, but which, nevertheless, is sometimes reported in the market as being in short supply. Of the Conversion Loan, there always seems to be plenty obtainable, but Victory Bonds have a tendency to become very scarce at times, nor are there always large amounts of Funding Loan available for the buyers. As for such stocks as the 4½ per Cent. War Loan, the opportunities for acquiring them are very limited now.

It may be useful, in these circumstances, to set out what stocks are actually obtainable in the gilt-edged lists, and it will be observed that the return ranges from 4½ to 5 per cent. upon full Trustee stocks. The War Loan returns the round 5 per cent., owing to the fact of its liability to redemption in 1929 at 100, but the yields on Consols, Conversion, Victory, and other such stocks are

process would be much accelerated by the suggested amalgamation. The proposal is, however, a long way from being a completed transaction.

Public Contracts and British Industries.—We have been favoured by the British Empire Producers' Organisation with an account of the visit of a deputation of that body to the Board of Trade. The object of the deputation was to urge "that it should be obligatory on every Government Department, and every railway and public body authority in the United Kingdom, to purchase goods entirely of British Empire origin, and to employ only British labour on their contracts and work." This plea was based mainly on the existence of widespread unemployment, but Mr Ben Morgan, who introduced the deputation, allowed his argument to stray into the slippery fields of imperial preference. Mr Morgan claimed that the deputation "represented a preponderating majority of the industries of the British Empire." "This prodigious body of opinion," he said, "was unanimously in favour of the proposal" put forward. That British producers of goods which the British Government and local authorities, &c., have to buy should seek to eliminate their competitors is not altogether unnatural. Moreover, the desire to foster home and imperial trade is, under existing domestic and world economic circumstances, particularly deserving of the sympathy which Sir William Joynson-Hicks (receiving the deputation on behalf of the President of the Board of Trade) extended to it. Nevertheless, the deputation must surely know that their request is one that is too far-reaching for any Government, or any public body to grant. The Government and all local authorities are under the elementary responsibility of securing for taxpayers and ratepayers the best value for money. Tenders from home and imperial contractors may be viewed with a sympathetic eye; but where contractors of other countries can offer better value for money expended, their duty is obvious. We can hardly conceive even Mr Morgan suggesting that, for instance, the Australian Government would or should purchase British locomotives, if it should be proved that America could provide a better article at a cheaper price. In so far as the argument may be based on the desire to relieve unemployment, or to maintain industries necessary to Britain, it may be met by the answer that grants and subsidies are fairer to the taxpayer or ratepayer, and are less dangerous. In effect the deputation was asking for protection in its most insidious form, namely, elimination of competition on grounds of sentiment, and at the cost of the tax and ratepaying public—an elimination which also is not calculated in the long run to serve the best interests of home and empire industries themselves.

Capital Issues and the Trade Balance.—In a recent issue we considered in some detail the principal "invisible" items in the trade balance-sheet of the United Kingdom, and endeavoured to estimate in respect of the three years 1913, 1921, and 1922 the final credit or debit balance. The conclusion reached was that, taking everything into account, including interest on our American war debt (whether actually paid or added to the principal of the debt), there was a final credit balance last year of approximately £62 million, compared with a debit balance in 1921 of about equal amount (£63 million). In 1913 there was a credit balance estimated at £193 million. These figures appear *prima facie* to conflict with the figures of new issues of capital in London for British Possessions and Foreign Countries, which are as follows:—

	£
1913	160,586,000
1921	112,802,000
1922	130,157,000

With regard to 1913, the discrepancy might easily be explained by private investment of capital abroad, by the purchase of securities from abroad and the increase of balances held abroad, or decrease of foreign balances held here, which might quite possibly raise the export of capital from £160,000,000, as suggested by the capital issue figures, to £193,000,000, as suggested by the analysis of the trade balance. But what of 1921 and 1922? Even

allowing for the fact that our final trade balance was struck after taking into account interest accrued but unpaid on the American debt, we find capital subscriptions for British Possessions and Foreign Countries in 1921 of over £112,000,000, compared with a slight debit balance estimated from the analysis of the trade figures. In 1922 there is also a considerable, though smaller, difference between the figures—say, roughly £45 million, after allowing for that part of the interest on the American debt which was not paid in cash. The fact is that the two sets of figures are not closely related. This becomes clear when the following points are considered. The time chosen to float a new issue on the capital market depends largely upon the condition of the market at the time, *i.e.*, upon the likelihood that the public will be willing to subscribe capital on reasonable terms. But the time when the capital commitment is first undertaken may be earlier. In times of stringency in the capital market borrowers may prefer to finance their undertakings with money borrowed for short periods from banks or other lenders, even though they may have to pay heavily for such accommodation. On the other hand, when the capital market is easy, there will be an inducement to offer for public subscription all that is required, and even possibly to borrow ahead of actual needs. As a result of the greater ease in the money market during the later months of 1921 and during 1922, borrowers were no doubt encouraged to fund their floating indebtedness incurred in earlier years, as well as to borrow from the public for current capital requirements, and the relatively large volume of new issues is probably in the main due to this cause. It has, of course, also to be borne in mind that new issues of capital may in part be subscribed by foreigners, or may be taken up by British investors to replace securities redeemed on maturity or securities sold abroad. No close correspondence between the figures relating to capital issues for British Possessions and Foreign Countries and the final trade balance representing export (or import) of capital is therefore to be expected for any given period.

Trade Union Organisation.—A Labour correspondent writes:—At the last Trades Union Congress the question of the organisation of the trade union movement came up for discussion. There was a general recognition of the need for more trade unionism and fewer trade unions. The General Council of the Congress has now taken up the question actively. Propaganda meetings are being arranged in various centres for the purpose of increasing trade union membership and strengthening interest in the work of the movement. What is perhaps more important is that the General Council is now promoting conferences of unions in the same industry and allied trades to discuss the possibilities of amalgamation. It marks a significant step forward that the General Council of the Congress should take the initiative in this matter, as its standing may enable it to set amalgamation negotiations in progress where action taken by the unions themselves might fail. During the recent weeks two conferences have taken place, one at Manchester and the other at Bradford. At the former there attended representatives of 800,000 workers in the engineering and allied trades, whilst the latter was attended by representatives of the wool textile unions. In both cases serious attempts are to be made to carry the process of amalgamation, which has already accomplished something in the engineering and wool textile industries, a stage further forward. The method which is being adopted is for each conference to appoint a committee representing the unions concerned to investigate the possibilities of amalgamation and to report to a further conference. It is anticipated that the General Council will in the near future convene conferences of unions in other industries.

Canada as Wheat Producer.—The final estimate of the Dominion Bureau of Statistics places the yield of the Canadian wheat crop in 1922 at slightly under 400 million bushels. According to figures given in the February circular of the Royal Bank of Canada, this new record in wheat production by the Dominion places Canada second in the list of the world's wheat producers. Here are the figures given for 1922:—

	Bushels.
United States	865,211,000
Canada	399,786,400
British India	366,352,000
Argentina	215,318,833
Australia	105,000,000

The second best figure for Canada was achieved in 1915, when the wheat harvest yielded 393,542,600 bushels. According to the Government's estimate, the value of Canada's 1922 wheat crop was \$339,419,000, as against \$242,936,000 in 1921, and an average of \$392,542,320 for the five-year period 1917-1921.

Indian Cotton Crop.—The final official forecast of the crop now being dealt with has recently been received by cable. The area is stated to be 21,119,000 acres, and the yield estimated at 5,196,000 bales of 400 lbs, increases respectively on last season of 14 and 16 per cent. The area is less by 766,000 acres, or 3.5 per cent., than the mean of the previous five years, but the outturn larger by 724,140 bales, or 16.2 per cent. Earlier in the year, we understand, Bombay shippers were calculating on a crop of about 5,300,000 bales, and a supply, including 150,000 bales from stock, of 5½ million bales. Assuming that the home consumption—mills and local—would amount to 2,750,000 bales, Japan and China require 1,850,000 bales, the available supply for Europe would not exceed 900,000 bales. For fuller particulars we must await by mail from India the final official memorandum.

Argentine Meat Companies.—British controlled freezing companies in Argentina have learned, without dismay, of the appointment of a Government Commission to investigate, *inter alia*, the profits made by the *frigorificos*, and the conditions under which they carry on business. The position has long been a difficult one. The British companies have had to fight insistent and costly competition from the United States on the one hand, and protect themselves against exploitation by the native pastoralists on the other. It is not without interest to recall that whereas governmental intercession is now being sought by members of the cattle-raising industry, ten years ago (June, 1913) the authorities were approached by six out of the nine large meat companies for protection, these alleging that, "owing to the burdensome conditions created by three other (United States) companies in the country preparing an absolute monopoly by selling Argentine meat in the English markets below cost price," they would be compelled to close their factories. Upon that occasion the Government refused to interfere, the Minister of Agriculture declaring that, after examining the situation created by the alleged meat trade monopoly, he considered that he ought not to take any action against the freedom of the industry; but he promised that, if fresh facts should come to light showing that it was intended to create combinations disadvantageous to the country, he would take the necessary measures. That the British companies' competitors were also losing heavily at that period was proved from actual transactions recorded during one week, when Argentine exports of 70,000 quarters were sold in London at a loss of 15s per quarter. In other words, meat was being retailed in this country at the price of cost in Argentina, without taking into account selling expenses in the United Kingdom, freight, insurance, export duties, or difference in exchange. The contest between American and British exporters carrying on business in Argentina continued for several years, resulting in the passing of dividends by many of the British companies—even the oldest—engaged in the trade. Nor did the menace to the industry cease until the demand brought about by the war, and the ever-increasing requirements of the United States, relieve the freezing companies of their chief burden. From a financial point of view, the difficulties arising from disastrous competition between British and United States companies vanished. No sooner was the war terminated, however, than a fresh agitation broke out elsewhere, the Federal Trade Commission of the United States threatening an international control of meat products, which, had it been pursued, would have inflicted lasting harm on the industry in the British Empire. Quite recently the Argentine Government despatched a Special Commissioner to the United Kingdom

to study present conditions governing the sale of Argentine meat in this country. The freezing companies express themselves quite willing to abide by the report, which should shortly be presented to the Argentine Government, since they believe that it will be shown therein that no exaggerated profits have been, or are being, made by the *frigorificos*. The present agitation is caused by the fact that Argentine pastoralists have been receiving for their cattle exceptionally low prices (averaging no more than 9½ centavos per lb). This has arisen from an over-supply of steers, a condition, it is contended, in no way brought about by any action of the freezing companies. The native pastoralists, however, have not stood alone in incurring losses; these have been shared by British-owned companies engaged in cattle raising. These interests, like those of the *frigorificos*, must be further affected by the decision recently arrived at by a number of English firms controlling the importation of South American meat, to restrict the quantity of frozen meat received from the Argentine and South America generally.

U.S.A. Wool Imports.—According to the official trade figures compiled by the United States Bureau of Foreign and Domestic Commerce there was a large decrease in the receipts of fine wool, with a corresponding increase in the coarser grades, during the first nine months of 1922. Total imports of clothing wool at American ports during this period were 29,000,000 lbs, compared with 201,000,000 lbs during the corresponding period of 1921. Of the 1921 imports of clothing wool, 195,000,000 lbs were imported before May 28, upon which date the Emergency Tariff Act became effective. Imports of combing wool, on the other hand, increased from 10,000,000 lbs during the period January to September, 1921, to 110,000,000 lbs during the corresponding period of 1922, while imports of carpet wool increased from 74,000,000 lbs to 134,000,000 lbs. These figures reveal that while about 70 per cent. of the wool imported into the United States during the first nine months of 1921 was clothing wool, the percentage of the total of this kind of wool

imported during the same period of 1922 was only 10.4 per cent. Imports of combing and carpet wool, on the other hand, increased from 3.5 per cent. and 25.7 per cent. respectively in the first nine months of 1921 to 39.4 and 48.1 per cent. respectively during the corresponding period of 1922. It is the general opinion in the trade that imports of combing and carpet wool were augmented in anticipation of the passage of the permanent tariff.

Czecho-Slovakian Industry and Exchange.—The Department of Overseas Trade have received from the British Vice-Consul at Prague (Mr J. W. Taylor), a report that the iron and steel industry in Czecho-Slovakia suffered a period of unparalleled depression during the past year. The total number of blast furnaces in Czecho-Slovakia is 27, with a yearly capacity of 1,608,600 tons. Of these the following were in action:—

	Furnaces.	Output. Tons.
1919	13	648,000
1920	16	694,000
1921	17	543,000
1922	6	93,000

About 60 per cent. of the output is pig-iron, the remainder being divided between steel and hematite. Unemployment increased seriously during the second half of 1922. The figures of unemployment in the metal trade for September last were 14,320, and during the past year 1,671 metal workers and their families emigrated, principally to Germany and the United States. Practically all branches of the metal industry were affected. The output of agricultural machinery fell to a very low level, and a British company was able to do good business there in spite of the heavy Customs tariff. The Vice-Consul is informed that the engineering section of the Skoda Company at Pilsen had no orders last autumn, with the exception of a few English orders for turbines, &c., contracted for long in advance for delivery to time. The Skoda Company have delivered up to date about 400 new locomotives to the Roumanian Government, and repaired an additional 250; but, owing to difficulties in obtaining payment, this work was suspended at the end of last year. The crisis in this industry is primarily due to the rise of the Czech exchange, the loss of the old home market through new political frontiers, and the curtailment of purchasing power in the surrounding countries. In justification of a restriction of output, employers have pointed out that the transport and labour charges are excessive. This, of course, is a direct result of the exchange situation. For the moment, Mr Taylor states, a number of contracts have been turned over from Germany to Czecho-Slovakia, and newspaper reports express optimistic opinions for the future of the industry. The present improvement, however, in Mr Taylor's opinion, rests on rather a frail basis, and a permanent improvement can only be hoped for when the many municipal and Government contracts for public works, &c., are put in hand, and trade with Russia is resumed on a commercial basis. At present both these developments seem likely to be held up for a considerable time through lack of funds.

Trade Depression in Spanish America.—A batch of British Consular Reports dealing respectively with Cuba, Panama, Costa Rica, and Paraguay, shows how their trade and finance have suffered from the decline in the purchasing power of Europe, and through the reaction from the hopes set up by the conclusion of peace—a reaction intensified in Paraguay by the continued political unrest. Recovery, however, may not be far off; in Costa Rica it seems to have begun. The following table gives in round figures the difference in the percentage of the exports and imports of three of the countries as compared with the year preceding:—

	Cuba, 1920-21.	Panama, 1921.	Paraguay, 1921.
Exports.....	— 54	— 30	— 39
Imports.....	+ 8	+ 35	+ 27

The rise in Cuban imports was apparently the aftermath of the prosperity set up by the war in the sugar industry, the chief element in the island trade. As all three countries drew their revenue mainly from Customs, the de-

cline gravely affected their public finance. In Cuba, drastic Budget reductions promise a small surplus for 1922-23; the floating debt of some £50 millions will be covered by a loan issued in the United States, but 17 per cent. of the expenditure is on the army and navy, which seems excessive in an American Protectorate. The Panama deficit in 1921-22 was nearly \$1,895,000; the projected expenditure for 1922-23 has been modified by \$1,750,000. In Paraguay the estimated expenditure for 1921-22 was equivalent to £782,070, and the estimated deficit to £93,315, but these amounts have been certainly exceeded and the floating debt considerably increased. The service of the foreign debt, irregular during the war years, has been suspended altogether since 1919. But in Panama, and in a less degree in the other two countries, the natural resources are largely untapped; and recovery may come partly through immigration. In Cuba the rate has risen from 26,000 in 1908 to 80,000 in 1919, mainly from Spain, reinforcing the white population of 72 per cent. out of a total of 2,889,000. In Paraguay there is a small but appreciable inflow of assisted immigrants, mainly German and German Swiss, and also of Germans with some capital. Panama has depended for labour largely on West Indian negroes, whose immigration is now discouraged by their Governments, but some of those unemployed are being given land in the canal zone. In contrast with these three States, Costa Rica is prosperous. Imports fell off in 1921 by 35 per cent. as compared with 1920; exports, however, increased some 20 per cent., the growth of the banana traffic having compensated for the decline since 1919 of the export of coffee, and raised the export trade in value to a point some 19 per cent. above that of 1920, and 20 per cent. below that of the boom year 1919. Revenue in 1921 exceeded expenditure by about \$50,000, and the assigned revenues produce about four times the amount needed to cover the two chief foreign loans. The Reports contain much information as to the possibilities of increasing the British import trade.

Mexican Finance and Trade.—The report of H.B.M. Consul in Mexico City, just issued by the Overseas Trade Department, tends rather to moderate the hopes of a speedy revival of prosperity set up by the prospect of a resumption of the service of the External Debt. The post-war depression of foreign trade has been aggravated by abrupt increases of import duties, with the aim of augmenting the revenue; and the efforts to establish a peasant proprietary, though in some districts they may have increased intensive cultivation, have set up a fear of expropriation among the large landowners, and have checked rural production, so that the supply of cattle, grain, and even eggs has had to be supplemented by imports from the United States. So will that of cotton, owing to the shortage caused by drought and floods, and the Government control of the henequen of Yucatan has reduced production to 50 per cent. of the normal. Moreover, the output of oil, after two record years, has been seriously affected by salt water in many wells. Still, the severe taxation imposed in 1921 (mainly for the benefit of the foreign bondholders) was mitigated shortly afterwards, and the potential production was then estimated to be equal to thrice the actual world-total. Mining is more promising, through the rise in the price of silver, the removal of the Customs duty on dynamite and machinery, and the easier conditions of payment of taxes in arrears. The manufacturing industries have not been suffering severely, in spite of widespread labour unrest. The position of the foreign banks is satisfactory, though at present there is hardly enough business for them all; first-class firms can borrow at from 9 to 12 per cent., but loans are not granted on real estate. The railways can only recover after their return to the companies, but the importation of locomotives and the electrification of part of the Mexican Railways are hopeful signs; road construction would aid development, but is unlikely at present. British trade suffers from American and German competition, from the employment of American agents, and, unfortunately, from lessened confidence in the "word of an Englishman," and the share of British shipping in the overseas trade is relatively small. Interesting particulars are given of the attitude of the Government towards

labour. Unemployment at home has been relieved by encouraging migration from the oil regions abroad, by repatriating 24,000 labourers from the United States, and by checking Oriental immigration. Several States have passed laws instituting profit-sharing, and one factory has been taken over by the authorities during a strike, the owners recovering it after compensating the workmen and the Government. Labour unrest is widespread, and stimulated by foreign organisers. We may remark, however, that President Obregon's Government, unlike that of President Diaz, is striving to better the condition of the masses, and that agrarian legislation has been repeatedly promised throughout the revolution, and has helped to quiet the revolutionaries. The problem is now to reconcile these efforts with the need of attracting and retaining foreign capital.

The Honduras External Debt.—The position in the negotiations for a final settlement is now, we believe, as follows: Honduras proposes to pay £1,000,000. The scheme arranged by Sir Lionel Carden, when Minister to Central America in 1909, but superseded by an American plan which proved abortive, provided for 40 annual payments of £40,000 each. The Council of Foreign Bondholders now asks for £1,200,000 in 30 annual payments of £40,000, secured on the Customs revenue, and applied, as under the Carden scheme, to the purchase and cancellation of bonds with the coupons in arrear—or, rather, of the certificates of deposit representing them—tendered at a price in the earlier years not exceeding 20. These certificates are being now dealt in at about 8; it is apprehended that the tenders would be considerably below 20 in the earlier years, so that the figure could be raised later, and the saving on the amortisation price would go to the bondholders. All the four outstanding loans would be treated alike. Their aggregate capital is nearly £5,400,000; the arrears of interest raise the total to more than £28,000,000. But nearly the whole amount was issued at 75 or 80, and the debt was from the first utterly disproportionate to the resources of the State. Honduras urgently needs to restore her credit, and will find it worth her while to assent to the Council's proposal.

Finnish Currency Since the War.—The new Baltic States compare very favourably with those of Central Europe in the quotations ruling for their currencies on the exchange markets of the world. Moreover, general economic conditions in these countries are on the whole surprisingly stable, despite the fact that their *entrepôt* trade with Russia has been reduced to very small dimensions. The general policy of these new Governments in relation to questions of currency and finance is, therefore, of considerable interest at the present time, and the case of Finland is well analysed in an article in the Bank of Finland *Monthly Bulletin*, from which we have extracted the following particulars:—Early in 1919 the dollar exchange was not so far removed from par, in spite of the fact that internal prices had risen to over six times the pre-war level. This state of things was largely maintained down to the month of May, 1919, when the dollar was quoted at 9.86 marks, so that Finnish currency still stood at 52.6 per cent. of its par value. This was due above all to the fact that the Bank of Finland was well supplied with foreign currency. From the month of May, 1919, to the end of the year, however, a rapid fall set in, owing to the operation of three main causes. Inflation was proceeding apace; the country was faced with a very unfavourable trade balance; and political conditions in Eastern Europe added immensely to the general uncertainty. The result was that by December, 1919, the dollar rate had risen to 32.57 marks, while the year 1920, despite a marked improvement in the first four months, witnessed a further decline to 41.67 marks in December—a rate slightly better than the lowest point of the year. By the beginning of 1921, inflation had virtually ceased, and since that time, after making allowance for seasonal fluctuations, the note issue has remained nearly constant, while the internal price level has changed but little. Nevertheless, the other two causes making for a low exchange rate remained in operation. During the course of the year 1921, the Finnish mark, after improving slightly

in the first two months, fell rapidly to the lowest point it has ever reached (a monthly average of 70.8 marks to the dollar) in September. While world prices were falling rapidly, the internal price level remained practically unchanged, and this fact was naturally reflected in the exchange position. During the last quarter of 1921, however, and throughout 1922, a steady appreciation set in, broken only by a slight relapse in April, and an even smaller relapse in December, with the result that by the end of the year the dollar stood at 40.25 marks, as compared with 53.25 marks at the end of 1921. This change is explained above all by the fact that the balance of trade, which was unfavourable during the first half of 1921, became favourable in the second half of the year; while the year 1922, despite a marked increase in imports, witnessed an even greater increase in exports, with the result that the country enjoyed a favourable trade balance for the first time for many years, as is shown by the following table:—

	(In Millions of Marks.)		
Year.	Imports.	Exports.	Balance.
1919	2,509.9 ..	880.4 ..	— 1,629.5
1920	3,626.5 ..	2,926.4 ..	— 700.1
1921	3,585.7 ..	3,389.4 ..	— 196.3
1922	3,953.1 ..	4,461.1 ..	+ 508.0

The greater part of the foreign currency which was received by the country in payment for its export surplus in 1922 was taken up by the Bank of Finland. This fact prevented a too rapid rise in the exchange value of the Finnish mark; while the possession of these foreign balances has enabled the Bank to meet the demand for foreign currency, which is greater during the winter months and the spring than during the rest of the year, because part of the payments for exports were made in advance, and because the balance of trade is usually unfavourable during the winter. Exchange fluctuations have become much less violent of recent months; while the net result of the movement seems to have been to bring the external purchasing power of the country very close to its internal value.

Underground Electric.—The report for the year 1922 of the Underground Electric Railways Company, of London, now purely a holding concern, shows an increase of £117,600 in income from investments, owing to increases in dividends on its holdings in the electric railways and bus companies. Expenditure fell by £41,400, so that net receipts were £159,000 higher. The following table gives the company's financial history since 1918:—

	1918.	1919.	1920.	1921.	1922.
Revenue from—					
London Electric Railway	232,543	198,932	154,118	364,878	410,874
District Railway	76,650	61,950	47,320	94,485	126,025
City and South London	45,687	46,374	38,385	65,542	74,884
London General	179,758	160,048	114,380	251,483	253,815
Metropolitan Railway	250	250	300	450	700
London and Suburban Traction	3,800	3,800	3,800	3,800	3,800
Associated Equipment Co.	205,468	208,571	208,571	..	..
Surpluses (including income-tax returnable)	16,109	16,239	16,734	9,763	9,859
Appropriation—					
Directors, &c., fees and expenses	760,265	692,364	579,678	770,001	887,256

Interest on 6 per cent. income bonds	445,910	361,717	180,859	361,717	427,824
Interest on 6 per cent. income bonds	(5 %)	(4 %)	(2 %)	(4 %)	(5 %)
Inc. or dec. in balances forward	+ 5,265	— 13,754	— 2,803	+ 6,109	+ 48,579

Thanks to the improvement in the value of sterling in New York and Amsterdam, the loss involved in the encashment of coupons in these places has fallen from £82,900 to £24,200. In the first half of 1922 2 per cent. only was paid on the 6 per cent. income bonds. The directors now state in the report that, as at the end of the year more revenue was available than is required to pay the full 3 per cent. for the second half-year, and as each half-year stands by itself, "it was thought proper to transfer to special reserve a sum of £60,000 to provide for the equalisation of interest on the bonds, and on the 6 per cent. income debenture stock. This, together with the amount set aside last year, makes a total of £86,200. The balance-sheet shows a decline of £205,500 in the value of investments, which now stand at £15,056,900.

This is due to the sale of £250,000 London Electric Railway 4 per cent. debenture stock, and to the voluntary liquidation of the Gearless Motor Omnibus Company. Temporary loans from bankers show a reduction of £190,000 at £910,000.

Harrods' Year.—A very substantial increase in both gross and net profits is disclosed in the accounts of Harrods, Limited, for the year ended January 31st last. Gross trading profit amounted to £1,833,300, as compared with £1,581,900 in the previous year. Dividends on investments brought in £81,100, as against £32,600, the former including dividends from Swan and Edgar, Limited, declared eight days after the closing of the Harrods' accounts. While gross profits increased by over £300,000, expenditure rose by only £17,000 to £1,440,200, and the net profit after payment of £4,400 to buyers' pension fund, was £283,700 higher at £479,750. The following table compares results for the past five years:—

Year Ended Jan. 31st.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
	£	£	£	£	£
Gross profit	1,204,700	1,879,201	2,209,213	1,623,392	1,924,290
Net profit	335,143	552,955	532,503	196,072	479,750
Brought forward	35,102	66,481	208,890	220,768	10,985
Reserve	370,345	619,436	741,393	416,840	490,735
Prof. dividend	77,514	79,295	39,000	286,233	300,000
Ord. dividend	60,000	60,000	142,500	95,750	153,200
Carried forward	166,250	261,250	335,125	57,500	8%
	(17½%)	(20%)	(17½%)	(5%)	(8%)
	66,481	218,890	224,768	34,857	37,535

In 1921-22 the heavy depreciation in the value of stocks was responsible for the drop in net profits, that year's balance-sheet showing a reduction of £543,000 in the book value of stocks. The latest balance-sheet shows a reduction of only £138,700 in this item. A year ago, it will be seen, the ordinary dividend at the reduced rate of 5 per cent. was only made possible by a reduction in the carry forward. This year the balance carried forward is substantially increased after the dividend has been raised to 8 per cent., but again no allocation is made to reserve. The principal changes in the balance-sheet, apart from the reduction in stocks already mentioned, are an increase of £165,100 in investments and reductions of £209,800 in cash, and of £112,700 in debtors. The deposit and current accounts in the "banking" department stand at £921,800, or £156,600 less than a year ago. Goodwill stands at the low figure of £90,000, while the reserve fund figures at £669,100, and sinking fund at £199,300.

Courtaulds' Profits.—The dividend declaration of Courtaulds, giving a rate for the full year of 15 per cent. against 11½ per cent. (both free of tax), disappointed market optimists. But the accounts now issued show that, had the directors been less laudably cautious in their policy, they might easily have raised the dividend to a substantially higher level. Profits in 1922 were £3,018,432, against £1,684,593 in 1921. The 1922 figure is struck after writing off £550,000 to meet present and possible further falls in values of buildings and plant. The 1921 accounts did not specify the amount written off, before profits were struck, in order to bring three years' additions to plant and buildings down to current values. Therefore an exact comparison between the profits of the two years is not possible. Financial results for six years are summarised below:—

	1917.	1918.	1919.	1920.	1921.	1922.
	£	£	£	£	£	£
Profit	1,173,891	1,184,938	2,280,861	1,804,796	1,684,593	3,018,432
Brought forward	315,894	62,935	148,211	229,078	383,874	418,467
Debenture int.	1,489,785	1,247,873	2,429,072	2,033,874	2,068,467	3,436,899
Ordinary div.	3,028	650,002	1,200,001	1,450,000	1,350,000	1,800,000
Reserve	512,502	(32½%)	(30%)	(25%)	(11½%)	(15%)

* Free of tax.

It will be seen that the reserve allocation is raised from £300,000 to £1,000,000, and the carry forward strengthened by over £218,000. The directors, while hopeful of the immediate outlook, "have thought it wise, in view of disturbed world conditions and the growth of competition, to strengthen reserves rather than to recommend the distribution of a larger proportion of the increased profits." Such caution is obviously justified by circumstances, and the report adds:—"Up to the present time, with the exception of short intervals, the demand for artificial silk has grown continuously, and has kept ahead of supply. These conditions can hardly be permanent, although we may confidently expect that any cheapening of the article will lead to its increasing use. We therefore look forward to an eventual lowering of the margin of profit, and we shall rely upon increased production and constantly improving methods to maintain our hold upon the industry. Considerable extensions are in progress at the present time." A welcome point about the balance-sheet, which is analysed in a later column, is that among investments, "shares in the American Viscose Corporation" are shown separately. In the December, 1921, balance-sheet all investments were lumped together in one item, totalling £13,229,216. In the 1922 balance-sheet "British Government securities and other investments" are shown at £6,909,803, and "shares in the American Viscose Corporation" at £7,804,021. It is stated that "the value taken for the shares in the American Viscose Corporation received in exchange for shares in the Viscose company is the same as that put upon the latter in November, 1920." The directors express satisfaction at the exchange, and state that "the total par value of the shares received in exchange by Courtaulds, Limited, is \$85,014,900, consisting of \$37,784,400 preferred stock and \$47,230,500 common stock." The American company, it is stated, reports a strong demand for its product, and that its productive power is being further expanded. The other investments are taken at last year's valuation, or at market price, whichever is lower, except in the case of additions during the year, which are taken at cost or market price, whichever is lower. The shares strengthened on the issue of the report, which was more convincing than the dividend declaration suggested.

United Kingdom Provident Institution.—In the course of last year the new policies issued numbered 3,975, assuring £1,826,307 at premiums of £71,708. This amount was slightly less than in 1921, and a good deal below the figure of £2,156,369 reached in 1919. The net premium income increased by £35,864 to £1,005,242, and the working expenses were 13.7 per cent. of the premiums as compared with 14.6 per cent. in 1921. The funds increased by £623,362 to £11,332,223. The mortality experience of this society is always of considerable interest, especially as the "temperance section"—a notable feature of this office—is kept distinct from the general section. In the temperance section last year the mortality claims were in number 56.3 per cent. of those expected by the British Offices tables, and in amount were 66 per cent. of those expected. In the general section the corresponding figures were 68.7 per cent. in numbers, and 65.9 per cent. in amount. The total claims in both sections—the most useful figures for comparison with the experience of other life offices—were 62 per cent. in number, and 65.6 per cent. in amount. The last valuation was made as at December 31, 1920. It has been decided for the future to make triennial valuations, instead of at intervals of five years, so that the next investigation and distribution of profits will be as at December 31st next.

British and Foreign Marine Insurance Company.—A fairly good result is shown by this company for the underwriting account of 1921. The premiums were £827,477, the first year's claims £203,353, the second year's claims £287,187, and the provision for risks still to be run off £140,000. After providing for expenses, £141,135, there was a profit on underwriting of £55,801. The net interest receipts were £119,645, and the total sum available for profit and loss £185,322, which with £164,808 brought forward made a credit balance of £250,130. The dividend of 45s a share, less tax (payable to the

Royal Insurance Company), absorbed £111,178, leaving £238,952 to the credit of profit and loss. For last year the premiums were £619,964, the first year's claims £151,150, and expenses £130,567, leaving £338,246 to be carried down. This company appears now to have settled down after the delirious years of war. In 1914 the premiums were £495,343; they reached £1,237,914 in 1920, and are now back at £619,964. The profit for 1914 was £106,771, and for 1917 £263,413. The lowest point in respect of profits was reached on the 1920 account, when the surplus on premiums of £1,237,914 was no more than £13,701.

We have received from the International Chamber of Commerce of Paris a valuable publication containing a list, with the names of the chief officials, of the chief International Organisations of an Economic character, which should prove useful for reference to all interested in these matters.

In connection with the annual meeting of the Sound Currency Association, a public meeting will be held in the Pillar Hall, Cannon Street Hotel, London, E.C., on March 6th, at 3 p.m. Lord Beauchamp, president of the association, will take the chair, and will be supported by Sir Charles Hobhouse, Sir Hugh Bell, Mr Henry Bell (who has been elected as a vice-president of the association), Sir George Paish, Mr J. M. Hogge, M.P., Sir George M'Crae, Mr P. A. Molteno, and Mr D. M. Mason (chairman of the executive committee). Tickets of admission may be obtained from Mr F. C. Goodall, hon. secretary, Sound Currency Association, 115, Cannon street, London, E.C.

Overseas Correspondence.

UNITED STATES.—SOUTHERN PACIFIC—CENTRAL PACIFIC MERGER UPHELD—1922 RAILROAD EARNINGS—STEEL CORPORATION'S UNFILLED TONNAGE—JANUARY COTTON CONSUMPTION.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 19.

THE Southern Pacific Company is allowed to retain its present control of the Central Pacific Railroad, through ownership of the latter's stock and lease of its lines, under a decision handed down a few days ago by the Interstate Commerce Commission. While the Commission's conclusions must receive court approval before they can become effective, the decision just rendered is generally considered the final chapter in litigation which has been in progress for about eleven years over the close relationship of those two big systems, and which culminated last year in the United States Supreme Court's decree, holding them to be a combination in restraint of competition, and ordering them to be separated. The Southern Pacific's application to the Commerce Commission for permission to continue to exercise its ownership and control of the Central Pacific was virtually, though not in a legal sense, an appeal from the Supreme Court's dissolution decree. As is well known, that body's decisions are absolutely final, since it is the court of last resort in this country. In granting in full the Southern Pacific's request, the Interstate Commerce Commission, with only one member dissenting, ruled that the merger in question was necessary in the interest not only of Western States, traversed by those two railroads, but also of the country as a whole. The majority opinion, furthermore, declared, for the first time, that the former policy (under the Sherman anti-trust law, as it was applied to railroad combinations) of insisting upon the maintenance of competition in transportation service had been reversed by Congress when it passed the Transportation Act of 1920, which not only authorises, but actually provides for consolidations of railroads into different groups, such mergers to be effected under Governmental supervision. The Commission holds that traffic agreements concluded between the Union Pacific and Southern Pacific systems, and between the Western Pacific and the

Southern Pacific, allowing reciprocal rights for the maintenance of traffic service over the Central Pacific lines, have removed practically all the objections which western shippers, States, and communities have heretofore made to the Southern Pacific-Central Pacific combine. In ordering the merger dissolved, the Supreme Court directed that certain tracks, terminals, and facilities be used jointly by the two railroads after their separation. The Commission, however, became convinced that if everything of that nature were done, the result would be a more expensive and less efficient service. The two systems, it concluded, would be weakened both financially and from the standpoint of service. The cost of operation, the Commission held, would be increased, while it was "doubtful whether for a time at least the Central Pacific, if operated as an independent carrier, would have the earning capacity, credit, and financial stability to sustain the heavy burden of its fixed charges and provide the new capital for its equipment and improvement necessary in the future to meet the requirements of public service. Indeed," the Commission remarked, "there are reasons for grave doubt whether the interests of the country as a whole would not be adversely affected by the financial problems and results consequent upon such a separation." The Commission has, therefore, authorised the Southern Pacific Company to own the capital stock of the Central Pacific Railroad, and to lease until December 31, 1984, the lines owned by the latter company. The authority thus granted, however, may be terminated at any time by the Commission, and is contingent upon the maintenance of the traffic agreements mentioned. It is stipulated also that the unification of the two systems will become null and void if the Southern Pacific disposes of the Central Pacific stock, or if the Interstate Commerce Commission itself decides that the merger interferes with the consummation of plans for railroad consolidations contemplated by the Transportation Act.

Total earnings of the first-class railroads of the United States made a much better showing for December than had been expected, especially in the matter of net operating income, which amounted to \$79,154,900, representing a return at the annual rate of 5.15 per cent. on the tentative valuation of their property investment, or only six-tenths of 1 per cent. below the figure (5½ per cent.) regarded by the Interstate Commerce Commission as a fair and reasonable return; it compares with \$49,656,600 for December, 1921, which was equivalent to a return of only 3.23 on the valuation. Gross earnings reached \$513,575,800, an increase of 20.8 per cent. over December of 1921, while operating expenses totalled \$404,898,100, an increase of 15.2 per cent. For the full calendar year of 1922, operating revenues of the Class 1 carriers aggregated \$5,616,284,800, according to a compilation by the Association of Railway Executives, based on reports filed with the Interstate Commerce Commission. That total represents an increase of only .8 of 1 per cent. over 1921. Operating expenses were \$4,454,939,700, or 3.2 per cent. less than in the previous year. In view of the railway shopmen's strike during last summer and early autumn, the decrease in such expenses was unexpected. The freight rate reductions, effective July 1st, were

largely responsible for the small gain for the year in operating revenues. The net operating income of \$776,421,400 for the entire year compares with \$615,945,000 for 1921, and is equivalent to a return of 4.14 per cent. on the tentative property valuation, as against 3.28 per cent. in the preceding year. The operating ratio for all the first-class railroads combined in the United States was 79.32 per cent. in 1922, as compared with 82.61 in 1921. The most marked improvement during the year was shown by carriers operating in southern territory. Their net operating income for the entire year was equivalent to an annual return of 5.04 per cent. on their valuation, against 2.64 per cent. for the preceding year. The rate of return shown by eastern roads was 4.02 per cent., against 3.20 per cent. in 1921, and by western lines 4.03 per cent., compared with 3.54 per cent. in the previous twelve months.

The United States Steel Corporation's unfilled orders on January 31st, totalling 6,910,776 tons, showed an increase of 165,073 tons over the total at the end of December. It was the first net increase in the volume of unfilled business on the corporation's books, as compared with the preceding month, since last October, while the aggregate tonnage remaining to be filled was the largest for any month since February of 1921. As compared with January 31, 1922, the latest report shows a gain of 2,669,098 tons, and the increase from the low total of last February is 2,769,707 tons. The corporation's output and shipments were much larger in January than in the final month of 1922; otherwise the increase in unfilled tonnage last month over December would have been greater. In view of the more active operations during January, it is quite evident that the gain over December represented new business.

Cotton consumption last month was exceptionally large, the total, namely, 610,375 bales, having been exceeded only twice in the past—in March, 1916, when 613,754 bales were used; and in May, 1917, when the record monthly total of 615,171 bales was established. The gain in January over December was 15.7 per cent., and over January of 1922, 15.9 per cent. For the six months from August to January, inclusive, consumption totalled 3,272,579 bales, as compared with 3,011,457 bales in the like period of the preceding year, or a gain of 8.6 per cent. According to the Census Bureau's latest report, the number of cotton spindles active last month passed the 35,000,000 mark for the first time, the total being 35,240,853. The increased activity is attributed largely to the growth of the spinning industry in cotton-growing States, which, in January, consumed more of the staple than in any month in their history.

FRANCE.—BUDGET PROBLEMS—WAGES AND COST OF LIVING—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, February 28.

THE Chamber is still occupied with the problem of finding the means to get rid of the deficit of 3,800 million francs shown by the estimates of revenue and expenditure in the Budget Bill for 1923, and is still, apparently, as far off from a solution as ever. Indeed, as the *Temps* remarks wearily, "there seems to be no reason why the Chamber should ever finish with the Budget for 1923." Following the speech of M. Bokanowski, the *rapporteur général* of the Budget Commission of the Chamber, who laid before the House the recommendations of his Commission for getting rid of the deficit (and who, incidentally, strenuously defended his proposal for the creation of the much-discussed *carnet de coupons*), the Finance Minister, M. de Lasteyrie, in his turn, put forward the proposals by means of which the Government insists the deficit may be disposed of. These two statements show that the Commission and the Minister are agreed as to the best method of finding means to extinguish the greater part of the deficit, and that, assuming these suggestions on which both parties to the controversy are agreed to be accepted, the

real difference between them is as to how a balance of 1,500 millions is to be found. The Commission urges the creation of the *carnet de coupons* and other devices, which the Minister absolutely refuses to consider. Instead he is insisting on the increase of certain direct taxes by 20 per cent. to fill the gap, and this the Commission is equally resolutely opposed to. As a relief in the midst of the deadlock, the Chamber has taken refuge in the discussion of a third monthly vote on account, and has accorded a further *douzième provisoire*, to enable the Government to carry on for the time being.

All the discussion that has so far taken place on the Budget makes it more and more clear that in all probability the country will have again to resort to borrowing to meet the current year's expenditure. All parties (with the exception of the Finance Minister) appear to be agreed that the imposition of any substantial amount of increased taxation is not to be thought of, nor does there seem to be any marked enthusiasm for any drastic further cutting down of expenditure for the purpose of bringing the cost of carrying on the various services within the limits of the present revenue. One of the most striking features of this week's discussion has been the speech of M. Loucheur, on Tuesday, who once more insisted that the Budget that has been sent up to the Senate, although still far from being balanced, "does not show any real deficit." The so-called deficit, he urged, about which so much has been said, arises solely from the failure of Germany to carry out her treaty obligations. In other words, from M. Loucheur's point of view, the Budget proper actually balances; if the Budget of recoverable expenditure had been made to include the 3,500 to 4,000 millions which represents the annual charge on the country due to Germany's default, there would be no question of any deficit. This course was taken in previous years, it may be recalled, and the question of how the expenditure on the devastated regions must eventually be met (as it is obviously impossible for the old system of loans to continue indefinitely) was left over for settlement later. In the opinion of M. de Lasteyrie and other experts, the time has now come when the question must be faced definitely, and it was largely for this reason that the Finance Minister included in his Budget Estimates for 1923 the interest charge on the cost of the reconstitution of the devastated area. The result is the deficit of roughly 4,000 millions in this year's estimates.

M. Loucheur pronounced boldly for a 3 per Cent. Lottery Loan, "with a great number of prizes." He agrees with M. de Lasteyrie's opinion of last spring that, in view of the existing taxation, no further increase of fiscal burdens ought to be considered for the present. "To vote new taxes in the present situation," M. Loucheur insisted, "would be a great mistake"; hence the only alternative is a loan. M. Loucheur was equally emphatic in repudiating the statement often made in England that the French taxpayers escape with a much lighter burden than their British fellow sufferers. So far as the income-tax on large incomes is concerned, he insisted that the Frenchman pays practically at the same rate as the Englishman. If, as the debate has shown, the real deficit has now been reduced to 1,500 millions, the real remedy was a loan. So far as can be gathered down to the present, this appears to be likely to be the solution that will be adopted, provided the Senate falls into line with the opinion of the Lower House.

The discussion on the new monthly Vote of Account has revealed that the State proposes to fix the amount of credits to be asked for in respect of the devastated regions for the present financial year at 11,000,000,000, as compared with 10½ milliards last year. Six milliards of this will be raised in cash by a further issue of Crédit National bonds, 3½ milliards by an issue of ten-year bonds, and 1½ milliards in 30-year bonds.

The possibility of arriving at anything like exact data in regard to the relation between wages and the cost of living is in no country, perhaps, more difficult than in France, where the fluctuations in the purchasing power of the franc, owing to varying exchange rates and other factors, are complicated by the ever-increasing profiteering of which consumers here are victims. In the circumstances, figures that have been recently pub-

lished by the Statistical Department of the French Government showing the comparative index numbers of real wages (that is, figures which represent the change in purchasing power of the nominal wages of various classes of workers) are of exceptional importance. Unfortunately, the figures available have not been brought down further than the spring of 1921, nevertheless, the variations shown are illuminating:—

Industrial Categories—	Index Nos. of Real Wages.	
	1911.	1921.
Agricultural workers	100	117
Building trade	100	113
Colliery employees	100	117
Public officials	100	71
Metallurgists	100	115
Textile workers	100	120

(The index number for the cost of living during 1921 was 307, as compared with a basis of 100 in 1911.) The outstanding feature of the table is that real wages for every category, with the notable exception of public officials (and that in spite of substantial "allowances" to meet the increased cost of living) were substantially higher than before the war. What this means may be gathered to some extent from the following very interesting table, which has been taken from an instructive study recently published by M. L. Dugé de Bernouville, for the purpose of demonstrating the trend of nominal wages in the case of several typical categories of workers, in 1916 and 1921, as compared with pre-war time (based on average ordinary daily wages):—

AVERAGE ORDINARY DAILY WAGES, in Francs.

Trades.	Paris.			Other Towns.		
	1911.	1916.	1921.	1911.	1916.	1921.
Carpenters	9.00	10.12	28.00	5.05	6.10	20.24
Smiths	10.00	10.00	32.00	5.12	6.11	20.53
Masons	8.55	9.67	28.00	4.80	5.84	19.72
Joiners	8.00	10.00	30.00	4.70	5.60	19.45
Agricultural workers	3.35	7.00	14.25	..	..	..
House painters	7.22	7.65	28.00	4.76	5.61	19.43
Locksmiths	8.00	9.45	26.00	4.65	5.64	19.18
Excavators (navvies)	7.60	8.77	26.00	3.82	4.95	17.22
Weavers	..	..	..	3.32	4.08	14.33
Compositors	7.20	9.05	27.60	4.94	5.71	15.54
Average for men's trades ..	7.78	8.95	27.52	4.61	5.56	18.92
" " women's " ..	4.10	4.75	16.00	2.29	2.57	9.44

The figures show that, proportionally, the Paris workers received a smaller increase than those in the provinces, and that the rise in women's wages was, comparatively speaking, greater than those of men.

To-day's settlement on the Bourse revealed a considerably larger number of speculative positions than has recently been noted, but the general trend of the market is still very largely in the direction of genuine investment business. Carrying over was effected at 4½ per cent. in the parquet and at from 7½ to 7¾ per cent. en banque. In view of the present level of the franc and the pound, the week has been marked by a large volume of purchases of international descriptions on foreign account. Quotations, after their recent fall, have again firmed up substantially, and the feeling of optimism is again distinctly in the ascendant.

GERMANY.—RUHR—FINANCES—REICHSBANK—BOURSE—PRICES—INDUSTRY—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, February 26.

CONDITIONS on the Ruhr get steadily worse. No constructive measures and no measures that can bring in any money or goods worth collecting have been taken by the French, and the enterprise has developed into a scheme for terrorising peaceful citizens. The only results so far are local irritation, with ever greater danger of an outbreak, and increased obstinacy in Berlin and in the unoccupied parts of the country. The injury to trade is serious, but not so far serious enough to cause a German breakdown; the January trade statistics show that goods of which unoccupied Germany is deprived can be imported. The mails are disorganised; English letters and news-

HEAD OFFICE: 6, St. Andrew Square, EDINBURGH.
LONDON: 3, Lombard St., E.C.3; 17, Pall Mall, S.W.1.

papers sometimes come a week late, and many letters have disappeared altogether. The whole right bank of the Rhine is now occupied, which means that the main roads running east, as well as the railways, are controlled. Until now the embargo on the transport of goods to unoccupied Germany has been, with the exception of coal, imperfect; goods have been still coming by road. The licence system by which the embargo is qualified is ignored by Germans, and a few firms which asked for licences have been boycotted. Within the occupied districts manufacturers are now compelled to produce largely for stock; and the chief German measure is the organisation of credit, ensuring the payment of wages; but the French seizures of public and private moneys make this difficult.

The Gold Loan Bill has been passed on third reading by the Reichstag. The loan is to be in the form of gold Treasury bills, with the term 1923-26, to be bought with high-exchange currencies, that is, English, American, and neutral, to be reckoned on purchase and redemption at current dollar rates, the total being 200,000,000 gold marks. This sum is only one-fifth of the gold Compulsory Loan of one milliard originally proposed by Dr Wirth, which is still pending in the revised form, however, of a compulsory paper mark loan, without a maximum limit, assessed on total wealth. The redemption price of the bills, including interest, will be 118 to 120. The Reichsbank guarantees the bills, and will, therefore, if necessary, be obliged to redeem them out of its gold reserve. It is proposed to form a Federal Loan Company, with those banks which have underwritten half the loan as shareholders. The bills, it is stated unofficially, will be offered for sale in Holland and Switzerland. The Floating Debt on February 20th totalled 2,929,859 millions, having increased by 514,187 millions in the preceding ten days. Revenue from taxes in the ten days totalled 93,143,921,000 marks, which is more than one-tenth of the total receipts from taxes of 925,045,170,000 marks since April 1, 1922. The State debts taken over by the Republic in exchange for the cession of railways are now reported at a little over 15 milliard marks, of which 10.5 milliards are Prussian, 2.41 milliards Bavarian, 0.99 milliard Saxon, 0.67 milliard Baden, 0.54 milliard Hesse, and 0.11 milliard Mecklenburg-Schwerin, so that at a capital gold cost of, at present exchange, about £120,000, the Republic owns railways which are now paying their way, and have a potential net earning power of some £45,000,000 a year.

A new increase of the Reichsbank rate is being considered. The last increase—from 10 to 12 per cent.—took place on January 18th. The Reichsbank president, Herr Havenstein, has advised the Reichstag to restore banking secrecy completely; by the pending Bill the obligation to furnish lists of clients and to draw interest and dividends only through banks is abolished, but there remains the general obligation of banks to give information to the taxation authorities. The Bank's statement for the 15th is about the worst so far. It shows that in one week over a billion marks were granted in new credits. Private

discounts increased by 444,009 millions to 1,345,142 millions, Treasury bill discounts by 376,654 millions to 2,301,048 millions, Darlehns-Kasse advances by 214,200 millions to 606,800 millions, and note circulation by 450,831 millions to 2,703,794 millions. Large sums of money were taken for the Ruhr, and large credits demanded by Ruhr manufacturers. The Reichsbank has largely increased its rates of fees and commissions.

The Bourse last week was again reactionary, but much less so than in the former week, and to-day there was a moderate recovery. The *Frankfurter Zeitung's* index for home dividend payers on the 23rd was 860,415, against 963,965 on the 16th, and 1,567,265 on the 9th. In general, speculators and the public show reserve, owing to a belief that the mark exchange may be held at around the present level for a time, and that the Gold Loan, the yield of which at present exchange would cover more than a third of the note circulation, can effectively be used for this object. The Reichsbank seems still determined not to part with its gold for the direct support of the mark. The chief feature of the bond market is the recovery of Colonial Fours, which eight days ago fell to 8,000, to 16,000 to-day (18,000 on the 23rd). War Loan to-day was 90, Fours 1,175, 3½ per Cent. 670, Threes 4,400, Savings and Premium 300, Forced Loan 59, Prussian Threes 365, Hamburg Staats-Rente 425, and Berlin Fours 300.

Prices continue to show a moderate downward tendency. Pig-iron (hematite) is 678,300, against a maximum of 779,100 marks per metric ton; ingots, 749,000, against a maximum of 1,011,000; blooms, 837,000, against 1,068,000; bars, 1,034,000, against 1,331,000; and thick plates (5 mm and over), 1,176,000, against 1,501,000. The price of nitre, after being thrown by the mark recovery above world-market price, has been reduced, and chemicals, leather, and textiles have had sharp drops. On retail prices these reductions have so far had little effect; prices of some necessities have risen, and of others remained unchanged since the mark recovered, but goods that are wholly imported have gone considerably back. So far more injury seems to be threatened to production by the decline in public buying than by the Ruhr embargo. The Eastern Fair at Königsberg has been a great success, having attracted many purchasers from the Baltic countries. The annual reports of the six chief companies composing the Stinnes Electro-Metal Trust show large increases in paper mark net earnings, but much reduced gold mark earnings. Gelsenkirchen, Deutsch-Luxemburg, Siemens and Halske and Siemens Schuckert have announced 80 per cent. dividends, against 16 to 20 per cent. in 1920-21, Bochum Cast Steel announces 90 per cent., and Schuckert and Co. 66⅔ per cent. In the shipbuilding industry shorter hours of work are threatened by lack of iron. Shipbuilding not only depends directly upon Ruhr deliveries, but through fusions is in association with the leading Ruhr heavy industry companies. Financially, the shipbuilding companies are in a strong position, and they have plenty of repair work, and further work in breaking up home and foreign ships.

The provisional foreign trade report for January, issued as usual without values, shows imports of 4,730,000 metric tons, against 4,330,000 metric tons in December, while export was 1,310,000 metric tons, against 1,760,000 metric tons. The tendency towards increasing imports and decreasing exports in weight is marked; the monthly average in all 1922 was:—Imports, 3,820,000 metric tons; exports, 1,800,000 metric tons. Coal imports in January rose to 1,870,000 metric tons, against an average last year of 1,050,000 metric tons, while coal exports fell to 90,000 metric tons, against an average of 420,000 metric tons. As compared with December, coal imports have largely increased, also imports of brown coal, building wood, iron and iron alloys, and food, while imports of manufactured goods fell off. The export of textiles, wood, cement, potash, and semi-finished iron declined.

The imposition of special taxes on foreigners in violation of the Peace Treaty, and as a rule also in violation of federal law, continues, and now that, through the great rise in mark exchange, coming after a rapid rise in prices, the cost of living is nearly as high as abroad, the excessive rates of these taxes are severely felt; at least, by foreigners with mark incomes, and by persons who are here for

short periods on business, and who travel into certain States, and live in hotels. The Berlin Municipality has aggravated its hotel tax by enacting that the extra rate of 80 per cent., which only foreigners pay, and which until now had to be paid only during the first month's stay, shall be paid for the whole stay, and many foreigners are paying a rooms tax of £400 a year or even more. Berlin has also imposed a new foreigner tax by enacting that sellers of real estate who did not reside in Germany before a certain date shall pay a much higher profits tax than is levied on permanently resident Germans. The rooms tax is being ruthlessly exacted from many Allied subjects of small means, who earn their living in marks, and these foreigners, owing to the illegal refusal of the rent offices to enforce the rent restrictions law where foreigners are concerned, pay as much as fifty fold the legal rent, and an 80 per cent. tax thereon.

RUSSIA.—BANKS—AGRICULTURE—CONCESSIONS—EXPORTS AND IMPORTS—TRANSPORT.

(FROM OUR CORRESPONDENT.)

MOSCOW, February 8.

To popularise the circulation of bank-notes the State Bank proposes to put into circulation notes in smaller units than 10 gold roubles for use in payment of Customs, transport, and other charges fixed on a gold basis. On January 2nd a 10-rouble gold bank-note was quoted at 174 roubles (1923 model, i.e., formerly 174 million roubles); on January 31st at 210 roubles.

The Industrial Bank, founded in October last, and recently reconstituted into the Commercial and Industrial Bank with a capital of 15 million gold roubles, has just completed an agreement with the Commissariat for External Trade with regard to financing foreign trade. Under the agreement the Commissariat for Foreign Trade acquires shares in the bank for two million gold roubles, and the bank will in general act as the banking agent of the Commissariat. The foreign section of the bank will make advances to cover export of raw materials, and will finance import operations, will purchase and sell goods abroad on commission, conduct exchange operations, &c. The commercial operations of the bank will be conducted through the RSFSR commercial representatives abroad, who will also act as commercial correspondents of the bank. Representatives either of the bank itself or the Commissariat for Foreign Trade will take places on the board of all banking organisations founded in Russia or abroad on the initiative of the two institutions. The Pokobank (Bank of Co-operatives) has just been reorganised into the Pan-Russian Co-operative Bank, the aim being to establish closer contact between co-operative societies engaged respectively in production and distribution. The Presidium of vzik (Pan-Russian Central Executive Committee) and Council of the People's Commissaries have approved a plan of the Finance Commissariat for establishing provincial banks to assist in the reconstruction and development of the economic life of the gubernias, and to give short-term credits to local State institutions, co-operatives, and private persons. Fifty per cent. of the shares of the bank are to be set aside for local executive committees.

To assist in the development of agriculture and to increase the spring 1923 sowing area, the Russian Government have granted an advance of seed of 20,572,000 poods. Mr Scheller, member of the College of the Commissariat of Agriculture, has announced that this advance of seed has as aim not the relief of the population, but the reconstruction of agricultural economy on a new basis. The peasants will repay the advance, plus 25 per cent. (10 pounds for every pood advanced). This 25 per cent. will be divided between the Commissariat for Agriculture (19 per cent.) and local institutions (6 per cent.). Taxes in kind amount to two-thirds of the revenue of the State, and as the advance of seed is equivalent to 15 per cent. of the revenue, the Government's decision is evidence of the serious efforts now being put forward towards agricultural reconstruction. A further testimony is furnished by the decree of December 21, 1922, whereby the Government has decided

to create a special committee for the development of agricultural economy. This committee will be attached to the Pan-Russian Central Executive Committee (vzik), and will proceed to organise a series of agricultural credit societies on the following basis. The founders of the agricultural credit societies are the State Bank, the Commissariat for Agriculture, and the recently organised Pan-Russian Co-operative Bank referred to above. Other State institutions, organisations, and private persons interested in the development of agriculture are also permitted to found agricultural credit societies. The peasants will be asked to take shares at reduced cost in the societies. The participation of the Commissariat for Agriculture and the State Bank will be covered according to the decision of the vzik by a credit of 20 million gold roubles, which will be put at the disposal of the agricultural section of the State Bank during the course of the year 1923. A scheme of organisation has been drawn up by the Commissariat for Agriculture, and specimens of the statutes of the agricultural credit societies prepared. The credit of 20 million gold roubles will be divided between agricultural credit societies to be founded at first in Kharkov, Rostov, Krasnodar, Simferopol, Tachkent, Saratov, Kazan, Novo-Nikoliaiewsk, and Ekaterinberg.

As regards agricultural concessions, according to the new Agrarian Code approved on October 30, 1922, by the 4th Session of the vzik, and which is a collection and in substitution of all the laws and regulations which have appeared since the revolution, the State, through the Commissariat for Agriculture, remains the sole proprietor of the land, which is divided up as follows:—(1) Territory allotted to workers on the land (including former proprietors who are prepared themselves to work the land) and unions of agricultural workers; the land to remain at their disposal as long as it is worked efficiently. (2) Territory allotted to towns and State institutions. (3) The balance which the State may dispose of on special conditions to institutions, companies, organisations, or private persons.

It is in this last category that fall the various concessions granted and to be granted by the Government to foreign capitalists. Those already made are principally to Krupp, to Sinclair (an American company), to the Jewish Colonisation Society, and to the American "California" commune. The principal points in the two first concessions are as follows:—Under an agreement of January 16, 1923, the Russian Government put at the disposal of Krupp 25,000 dessiatines of land in the Saalski district of the Don gubernia. The concessionaire has the right of sub-letting the land conceded without necessarily asking the authority of the Government. Under the agreement the concessionaire should during the six years following the date of the agreement work up to 23,500 dessiatines, commencing with a minimum of 1,400 dessiatines in the first two years. Taxes in the form of rent will be paid on the basis of the area estimated to be worked, and will amount to 17½ per cent. of the crop harvested, delivered free in wagons at the nearest station, half on November 30th and half on February 15th. The Government has the preferential right of purchasing the balance of production at the market price of wheat at Rotterdam after deduction for difference of freight and other expenses. In addition to taxes in kind and labour taxes the concessionaire has also to pay the usual general taxes in force. At the expiration in 36 years of the agreement, the concessionaire undertakes to return to the Government the whole undertaking, which is always subject to State inspection, in good order, which should correspond to the state of the undertaking from the 12th to the 18th year after the date of the agreement. At the end of the 12th year the Government has the right of repurchasing the whole concession. The capital of the company (Krupp) is provided in the proportion of ⅓ by Krupp and ⅔ by an English group (Russian Land Concession Manytsh, Limited).

Under the Sinclair 36-year Concession Agreement (not a purely agricultural concession) this company will receive a maximum of 1,000 square verst of land in the Island of Saghalin, and has the right to construct two ports on the east side of the island. The company undertakes to spend during the first five years 400,000 gold roubles, and

THE MERCANTILE BANK OF INDIA, LTD.

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

to pay an annual rent to the Government of 5 per cent. of the naphtha, natural gas, and by-products sold during the first year either in Russian Saghalin or beyond. If at the end of the fifth year no sale has taken place the company undertakes to pay the Government a rent of not less than 100,000 gold roubles a year. In addition the company agrees to pay the Government in respect of all the naphtha and by-products sold during the course of a year a tax in poods on the following scale:—1 per cent. of the first 40 million poods of naphtha sold during the year, 2 per cent. of the second 40 million poods sold in the same year, 3½ per cent. of the third 40 million poods, and 7½ per cent. of the quantity exceeding 120 million poods sold during the same year; 1 per cent. of the value of by-products will also be turned over to the Government. In addition the Company must pay to the Government for transfer to local institutions the equivalent of 30 per cent. of the tax in poods paid by the company for naphtha and by-products sold during the year.

Dr Nansen during his recent visit to Moscow has made an agreement with the Government under which model agricultural stations will be opened in the Ukraine and in Russia; tractors, tools, and agricultural supplies are to be furnished by the Nansen Action against repayment in kind over a period of five years; the railway transport and supplies, &c., will be furnished by the Russian Government on credit to the Nansen organisation against repayment from the surplus crop on the areas worked.

The value of exports from and imports (excluding relief supplies) into Russia for the first ten months of 1922 in millions of pre-war roubles were:—Imports, 249.7; exports, 63.8; excess of imports over exports, 185.9.

The financial results of the Commissariat of Ways of Communication from October, 1922, to October, 1923, have just been presented to the Finance Commissariat. The revenue is equivalent to 332,781,840 gold roubles, and the expenses, 639,536,190 gold roubles, deficit, 306,754,350 gold roubles. In the face of this grave deficit the Commissariat, in addition to rate increases in November and December, doubled on January 1st the December tariff, and on January 20th added a further 25 per cent. At present the journey from Petrograd to Moscow (610 verst) costs, 3rd class 99 roubles (1923 model); 2nd class, 198 roubles; and in wagons lits, 254.90 roubles, the equivalent of £1 5s. This, with the depreciation of the paper rouble, is not an expensive fare for foreigners, but is a serious increase to the Russians. The postal and telegraph tariffs were increased on November 1st by 100 per cent., and on January 1st by a further 150 per cent.

SPAIN.—PUBLIC FINANCE—A TRADE CONGRESS—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

MADRID, February 20.

THE return of the prisoners of war after a captivity of more than 18 months in the hands of the Moors, and the realisation by the Spanish people of the humiliation involved in the purchase of their liberation, is likely to give the present Government some trouble. Military circles are particularly uneasy, as they feel they have lost prestige with the nation, and it is possible that they may

make an effort to regain public esteem if the Government will allow them, which is doubtful.

The general receipts of the Treasury from all sources during November last were 237,503,346 pesetas, and payments during the same month amounted to 321,877,125 pesetas. In the first eight months of the financial year 1922-1923 the total receipts were 1,998,514,338 pesetas against disbursements 1,872,929,555 pesetas, but the excess of the former over the latter disappears on taking into account sundry receipts and payments of a provisional nature, and leaves a deficit of 386,460,000 pesetas.

Private banks, through the medium of the Superior Bank Council, have made a protest against the clause of the revised Statute of the Bank of Spain, which authorises that establishment to buy or sell securities in the market for account of its clients! It is feared that the banks will suffer severely from the competition in this direction of the National Banking Institution, and the reply of the Minister of Finance is awaited with considerable interest and some anxiety.

By Royal Decree dated July 30, 1922, a Congress of Spanish Oversea Trade was officially convoked, and is to take place as follows:—First period, Barcelona, March 21st to 27th; second period, Madrid, April 1st to 8th; third period, Seville, April 10th to 16th. The object of this Congress is—(a) To group Spanish producers and merchants established in America and the Philippine Islands around the Spanish Chambers of Commerce, which are to be reorganised to meet the present-day needs of trade; (b) to study the development of Spanish over-sea trade, and to establish a record of mercantile customs and laws in the different American republics; (c) to study the question of exhibitions and sample fairs to take place in America and in Spain; (d) to examine the general interests and aspirations of Spanish traders in America, and the means of eliminating any difficulties now experienced. In these conferences the State is to be very largely represented by its various ministries and departments, whilst the Chambers of Commerce in America have all been requested to send representatives, as also the different corporations and federations interested in Spanish-American trade. Whatever the practical outcome of the Congress itself may be, it is undoubtedly an excellent idea to bring into touch with one another the representatives of Spanish commercial interests disseminated throughout America, and it is anticipated that Spanish foreign trade will receive some impetus from the meeting.

The only capital issue made this month is that of 20,000,000 pesetas nominal 6 per cent. mortgage bonds of the Union Electrica Madrileña, announced for February 28th; but a further loan of the international Tangiers-Fez Railway is expected shortly in the form of 6 per cent. bonds issued at 97 per cent. The foreign exchange market was fairly active at the beginning of the month, but afterwards the influence of the intervention of the French Government restricted business, and at the present time the calm is almost complete. In securities there was also less business done than usual, and the general tendency was weak, even gilt-edged securities losing ground.

CANADA.—BUSINESS CONDITIONS—LUMBER BUSINESS ACTIVE—SPRING PROSPECTS—STOCK AND BOND MARKETS—BANK ACT REVISION—FRENCH AND ITALIAN TREATIES—FEDERAL REVENUES—C.N.R. HEADQUARTERS AND PLANS—O. P. R. EARNINGS—PULPWOOD SALES—ELECTRIC POWER DEVELOPMENTS.

(FROM OUR CORRESPONDENT.)

OTTAWA, February 11. JANUARY is always a quiet month in Canada, but as spring approaches a note of restrained optimism is once more visible. There is in sight a large amount of new construction work which will keep the building trades in employment, and provide orders for many industrial plants, and the mining and "forest" industries are looking forward to a busy year. Extensive orders have recently come to the lumber mills on the Pacific Coast; New Zealand, Australia, and South Africa have come into the British Columbia market for heavy timbers of all kinds, China for railway sleepers and bridge timbers, Japan for

cedar squares and heavy lumber, Mexico for long piles, and India for creosoted sleepers. The British Columbia lumbermen have been afraid of the effects of a retaliatory duty under the powers conferred by the Fordney tariff, but they will now be able to face it with comparative equanimity. The farmers are still very pessimistic, and many of them threaten to curtail their acreage of cultivation till prices improve, but in the end they will probably sow just as much as usual. Mr Forke, the agrarian leader, declared in the House of Commons that no immigrant who had farming experience need lack employment this spring. There has been a good deal of seasonal unemployment this winter, but only in Montreal has it really constituted an acute problem. The worst feature of the Canadian situation is the drain by emigration southward, which is steadily going on, and seems likely to continue for some time.

Business conditions vary throughout the Dominion. The farmers of the prairie provinces had to use their returns from last year's crop to liquidate their indebtedness to the banks and mortgage companies, and consequently did not make the expected amount of purchases from local merchants. Many of the latter are left with substantial stocks, and are disinclined to add to them for the moment. In the East, however, wholesalers report that their travellers find a reasonable plenitude of orders. In the towns and cities merchants have been trying to stimulate the retail trade by a series of bargain sales, which, in many cases, proved sufficiently alluring to the consumers. The latter hope that the reductions offered may form part of a permanent deflation in the prices of certain commodities which has been too long delayed. The index figures of the Labour Department show that there was a slight increase in the cost of living in the January household budget.

During the past week the stock markets have been very lively. Since the beginning of the year there has been a continuous rise in the price of bonds, but there is a feeling abroad that the rise has gone a little too far, and that some readjustment of prices may be expected in the near future. There is once more a small premium ranging between 1 and 2 per cent. on the American dollar in Canada, and as long as it persists our bond market is likely to remain steady, but if it drops there will be a tendency to bring issues from the U.S. to Canada which will weaken the local market. Mr Fielding was attacked in the House for increasing the obligations of the Canadian Government in the U.S., but he defended his course on the ground that he could secure the money at cheaper rates in New York, and that he left Canadian money free for domestic private enterprises.

The Government have decided to go ahead with the decennial revision of the Bank Act, and its critics and defenders are preparing for a prolonged controversy. Many of the Progressive members from the West are very bitter at the policy pursued by the banks, but they will probably be overmatched by the political support that the latter can command. The commercial treaties which Mr Fielding negotiated with France and Italy have now been tabled in the House of Commons, and are likely to be ratified without much criticism. The terms of the French Treaty have been public for some time, and the pact with Italy is very short, and does little more than give Canada the benefit of the most-favoured nation clause.

Parliament met on January 31st, and in the debate on the Address the King Government were faced with two amendments from the Progressive benches, one calling for substantial reductions of the tariff, and the other demanding drastic economies. Both were defeated, the first with Conservative help, but the Ministry found themselves in a very difficult position, and if the Progressives keep reminding the country that Mr King and his colleagues have failed to live up to their fiscal pledges, their credit will slowly decay. Mr Fielding could not deny the charge that the average rate of duty was higher than under the Conservative régime, and his main line of defence that a fall in values had increased the average rate of the many specific duties was very unconvincing.

With ten months of the fiscal year elapsed, the increase in the Federal revenues is less than was at one time promised. On January 31st revenues totalled

\$328,142,085, which is an increase of \$9,652,196 over the parallel figures for last year. Ordinary expenditure was \$263,072,228, which is a betterment of \$6,241,022. But the railway deficit and capital expenditure continue to swallow up any nominal surplus, and in January \$7,483,842 were added to the net national debt, which now stands at \$2,419,979,993.

The decision has now been made to place the headquarters of the Canadian National system in Montreal, and it has provoked some protests, especially from Toronto, on the ground that the location of the head offices in an environment impregnated with hostility to railway nationalisation is bound to spell disaster for the system. On the other hand, Sir Henry Thornton and the Government contend that Montreal is the real transportation nerve centre of Canada, and therefore the only possible place for the headquarters. The new directorate have embarked upon a policy of improving the efficiency of the road's equipment. In addition to large orders for steel rails, 1,000 new cars have been ordered from a Nova Scotia company, and further orders, which will help industrial plants, are anticipated. It has also been announced that the Grand Trunk Railway between Toronto and Niagara Falls will be electrified, and a better and cheaper railway service thereby provided. During 1922 the net earnings of the C.P.R. were \$2,099,951 higher than in 1921, and the company has just declared its normal 10 per cent. dividend. The gross earnings were \$6,346,818 less than in 1921, but this was accompanied by a reduction of \$8,446,769 in operating charges.

American interests are still buying heavily in Canada's pulpwood areas. The Ontario Paper Company, of Thorold, Ont., which is really the Chicago Tribune in disguise, has just contracted to purchase 2,000 square miles in the River Manicougan district on the north shore of the St Lawrence. The price paid is \$3.35 per 1,000 feet, in addition to the stumpage tax of \$2.70 per 1,000 feet, and the total figure is regarded by forestry experts as being practically double the best previous price paid for Government limits. At this rate the valuation now set on good pulpwood in the form of standing timber is over \$2,500 per square mile. The contract calls for the erection of a pulp mill and the development of water-power. It is understood that the second highest offer came from a representative of Lord Rothermere.

Many new developments of electrical power are afoot. In addition to the vast scheme whereby Price Brothers of Quebec and Mr J. B. Duke, the American tobacco magnate, have formed an alliance to develop the water powers of Lake St John and the Saguenay River, the Hollinger Gold Mines are about to develop 16,000 h.p. at Island Falls on the Abitibi River in North Ontario at a cost of between three and four million dollars. The Ontario Hydro-Electric Commission have also ordered three fresh generators capable of supplying between 150,000 and 175,000 h.p. for their Queenston-Chippawa plant, in order to meet an increasing demand. The hydro-electric power now used in Canada is equivalent to the consumption of 27 million tons of coal, and the capital invested in its development is placed at \$620,000,000.

Letters to the Editor.

UNEMPLOYMENT INSURANCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Labour correspondent whom you quote in to-day's issue of the *Economist* cannot know that, in common with many others, for example, the I.L.P. leaders, who are neither employers nor employed, I have given long and continuous thought to this very serious problem. It was first forced upon me as a member of a local authority of some importance.

Everyone should try to find some scheme to prevent the daily gatherings of the unhappy men out of work at the labour exchanges. Nothing could be more fraught with danger than men with a grievance listening to seditious speeches from the agitators who hang around the doors of these places.

The real objection to my suggestion is that at present neither approved societies nor trades unions are willing

THE BRITISH LINEN BANK.

to administer unemployment pay. Some have tried the experiment, but, as it was coupled with a demand from the Government that they should also be responsible for the unemployment registers, they found the task impossible.

If this duty were left to the exchanges, and unemployed pay treated as benefit, such bodies might, for patriotic reasons, change their minds. Such a course would not suit the Socialists, who like to have the men under their hand at the labour exchanges. But it would suit the trades unions well enough as strengthening their position with their members.

Sir W. H. Beveridge's suggestion of throwing the whole cost on to employers and the State is merely ridiculous. The views of the great groups of employers are perfectly well known. They would require a *quid pro quo* in the shape of increased and steady production, to which trades unions will never consent as a condition of action. If, which is difficult to imagine, such a proposal became law, then unemployed benefit should be paid at the employers' works, when the weekly wages are paid. The idea that the workless man should go to the exchange for his money, and that the exchange should get it back from the employer, is very typical of Sir William Beveridge's complicated way of thinking. Why the double entry?—Yours faithfully, J. J. BISGOOD.

The *Insurance Record*, 1 Tudor street, E.C.4.

[Mr. Bisgood is unjust to Sir William. He forgets that work cannot be found at the employer's works who are paying benefit; and that any system will fail which does not afford means for offering work when available instead of benefit.—ED. ECON.]

INTERNATIONALISATION OF THE RUHR COALFIELDS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the paragraph written on this subject in the *Economist* of February 24th there are some statements which, in my opinion, cannot be accepted without protest.

You state in one sentence that Lorraine ore and Westphalian coal were united under the very efficient administration of the German iron and steel magnates; and in another that the "iron and coal lie hundreds of miles apart, and the finished product is produced far from sea-board." Apart from the fact that it is difficult to reconcile these two statements, it has been forgotten that the Lorraine iron field was divided almost equally between France and Germany before the war, and that the control exercised by the German iron and steel magnates could only apply to little more than half of the iron ore of Lorraine.

In the second place, examination of transport between Lorraine and the Ruhr will show that the total distance between the Lorraine field and the Ruhr is not more than 200 miles. From Metz to Mannheim, the nearest point on the Rhine, the distance by rail is not more than 100 miles. These figures compare with your vague statement of "hundreds of miles." It should also be remembered that transport on the Rhine still constitutes the cheapest and most efficient means of conveying goods Europe, and the statement that "the finished product produced far from sea-board" takes no notice of the fact that navigation on the Rhine as far as Karlsruhe is open to steamers of considerable tonnage. The closest analogy to the river ports of the Rhine and their connection with the sea in this country may be found in Manchester at the Ship Canal.

France now controls both sections of the Lorraine iron field, and is therefore stronger than Germany before the war in this detail alone. When we consider that a large part of the ore used in Germany and France came from Spain and Sweden owing to the partial nature of the control of the Lorraine field, it is only reasonable to believe that concentration of these supplies will give the French iron and steel industry greater competitive power than even German iron and steel industry before the war.—I am, yours faithfully,

HUGH QUIGLEY.

The Manor House, Didsbury, Manchester,
February 28th, 1923.

[It is quite true that the Lorraine ore fields were split by the pre-war frontier. But though the output of the Briey field was growing fast, much the largest output was still being produced on the German side in 1913. The reserves of ore in German Lorraine were enormous, but Germany naturally purchased from over the frontier when there was a margin in favour of the French mines in cost of working. She purchased Swedish and Spanish ores not because Lorraine supplies were inadequate in quantity, but because they were inferior in quality. The Swedish ore was bought because it is high in iron (58 to 70 per cent. against 32 to 40 per cent. in Lorraine), and the Spanish ore because it is free from phosphorus.—ED., *Economist*.]

THE RUBBER POSITION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Finding no reference in your current issue to the interesting comments of a New York correspondent appearing on page 298 of February 17th, I offer the following remarks as to the "rapid and substantial advance in prices."

Your correspondent recognises that plantation rubber was "far below its plantation cost"; and, it may be added, still further below the cost of bringing wild rubber to market. That the "surprise to producers" was no less than to manufacturers is evidence that there was no "reluctance from producers to sell." Rubber could be bought any day in any reasonable quantity; though, naturally, there may have been a reluctance to sell "forward" on a rising market. The shipments witness that there has not been any withholding of supplies. The sliding scale arranged for increased production on a three months' basis is but judiciously gradual.

The regulation of production only "received legislative effect" after voluntary action had proved ineffectual, in order that the requisite restraint might be fair in its incidence, and, particularly, for the general welfare of the colonies, with a view to prevent the threatened ruin of planters and their employees. The alleged "unjustified rapidity" of the recent rise in price is but a reaction from the rapidity of the previous ruinous fall in price, which would most probably have resulted eventually in prices higher than they are at present, as many plantations and their staffs would have gone.

One needs to consider the peculiar character of rubber production, involving lock-up of capital for six or seven years with no return.

But let it be understood that growers have no object other than meeting consumers fairly and "freely"—no "holding up"—but action became necessary to preserve our existence.—I am, Sir, your obedient servant,

A RUBBER GROWER FOR 30 YEARS.

March 1st, 1923.

Books and Publications.

RECENT ECONOMIC LITERATURE—A MONTH'S SURVEY.

TROUBLE with the bookbinders has held back all sorts of publications in the last weeks. The student of economics, however, has little to complain of. The publication of a new volume from the pen of Professor Alfred Marshall, the first living British economist, long recognised as the father of the modern school of economic

thought, not in this country only, is a notable event for students and economists. In his preface to *Money, Credit and Commerce* (Macmillan, 10s), the author states that his previous monumental volume, *Industry and Trade*, published in the autumn of 1919, was "designed to be followed by a study of the influences on the conditions of man's life and work which are exerted by the resources available for employment; by money and credit; by international trade and by social endeavour." The present volume deals with the first part of the task which Dr Marshall there set himself: as to the second he hopes that though the years are slipping away, "some of the notions which I have formed as to the possibilities of social advance may yet be published."

Neither *Money, Credit and Commerce* nor the other book that claims a place beside it, Mr R. G. Hawtrey's *Monetary Reconstruction* (Longmans, 9s), can be described as easy reading in the popular sense. "Beautiful things are hard," says the proverb; and monetary reconstruction is no game for the inexpert. But Mr Hawtrey's lucid style is the counterpart of a lucid mind, and for the reader who will give himself the pain of thinking there is pleasure as well as profit to be got out of these essays. Written at various times, evoked by special occasions, they have, nevertheless, the interest of expressing throughout a consistent view, a definite and constructive theory. Certainly, a writer who dares to say that "unemployment is due to a defect of organisation, a maladjustment of the monetary machinery," is not lacking in courage, or in the power to pull his reader up sharp. Not the causes, but the course and the results of unemployment are surveyed in the exceedingly interesting volume, *The Third Winter of Unemployment*, just published by P. S. King (6s). It contains the results of an investigation undertaken last autumn by Major Astor, M.P., Professors Bowley and Clay and Messrs R. Grant, W. T. Layton, P. J. Pybus, Seeborn Rowntree, Schuster, and Stuart. The first part is a general survey, gathering up results and demonstrating, broadly, that, thanks to the dole, the unprecedented unemployment has caused little physical distress, though much mental and moral strain, misery, and social loss. Then follow more detailed reports on special centres, and a mass of useful statistical material. Whether or no Sir Allan Smith is right, and the third winter is to be followed by a fourth, this is an important and helpful book.

In the second volume of his monumental work on *Seaborne Trade* (John Murray, 21s) Mr Ernest Fayle continues his authoritative story of this aspect of the great war from the opening of the submarine campaign to the appointment of the Shipping Controller in the end of 1916. The whole survey, written for the Committee of Imperial Defence, and enlightened by access to official Admiralty documents, will be completed in one more volume.

In this same category there may be mentioned Mr E. G. Peake's *Academic Study of Some Money Market and Other Statistics* (P. S. King, 6s 6d), a work to which the reader whose familiarity with the special subject has worn a trille rusty may pass after he has refreshed his mind with Mr W. F. Spalding's *The London Money Market* (Pitman, 10s 6d), reviewed in the *Economist* (December 16th) on its first appearance, and already in a second edition. *The International Trade Balance in Theory and Practice*, by Theodore H. Boggs (Macmillan Company, New York, \$2), is a study of an extraordinarily important subject on which we have recently made some estimates. It contains valuable data for a number of countries. A historical study of a critical period in International trade is *The Continental System—An Economic Interpretation*, by Eli F. Heckscher, edited by Professor Harald Westergaard (Clarendon Press, 10s 6d). The Carnegie Endowment is also responsible for a volume of remarkable interest, economic and historical, *The Financial Policy of Czechoslovakia during the First Year of its History*, by Dr Alois Rasin. He is there describing his own work, a work happily accomplished before his lamented death the other day. This valuable volume was reviewed in the *Economist* of February 10th, to which

readers may be referred. The Clarendon Press, which issues it (at 7s 6d), also publishes a collection of five monographs, edited by Professor Charles Gide, on *The Effects of the War Upon French Economic Life*.

Works of Reference.

Two useful volumes, perhaps hovering on the difficult borderline between books meant to be read and works of reference, are *A Critical Analysis of Industrial Pensions Systems*, by Luther Conant, jun., published in New York by the Macmillan Company, and obtainable, in London, from Macmillan at 8s 6d; and another American survey, *Public Welfare in the United States*, comprising one of the volumes in the admirable series, *Annals of the American Academy of Political and Social Science*, issued from Concord, N.H. A work of reference that one would wish to possess is the magnificent four-sheet *Chart of the Mexican Oilfields, 1923*, published by Edward Stanford (£2 2s.), showing, in colours, the fields in operation, prospective fields, pipelines, ocean terminals, railways, &c. Another chart, which only needs to be mentioned, is that of the *Money and Discount Rates in London during the Year 1922*, published by Page and Gwyther. That *Company Law and Practice*, by Herbert W. Jordan and Stanley Borrie (Jordan and Sons, 7s 6d) is in its fifteenth edition says more for its value than any words here could do. In the same way, *Mundy's Earning Power of Railroads, 1922* (Oliphant, New York; obtainable in this country from Messrs Mathieson, 16, Copthall avenue, at 12s 6d), and *The Swedish Year-Book* (Almqvist and Wiksell Company, Stockholm) are of established reputation. *Skinner's Cotton Trade Directory, 1923* (T. Skinner and Co., 12s 6d), is a mine of useful information about the cotton trade, both in its financial and industrial aspects.

Political.

To separate history from politics, at the present hour, is well-nigh impossible. *The Turkish Empire*, by Lord Eversley and Sir Valentine Chirol (Fisher Unwin, 21s) is as impartial, as purely historical in its point of view, as any work dealing with such a theme can hope to be. The book is in a second edition, and deservedly so. Mr Arnold Toynbee would not claim to have kept politics out of his *Western Question in Turkey and Greece* (Constable, 18s), a work likewise in a second edition; his is essentially a political study, and a deeply interesting one. Mr. Norman Angell, in *If Britain is to Live* (Nisbet, 2s 6d) is, of course, out to convince; his is a most cogent and closely argued plea for economic internationalism, and, indeed, for the general Free Trade case, which is in danger of going by the board in the minds of many. The book is an admirable example of the difficult art of making a piece of reasoning of close texture accessible to the many, without compromising the integrity of its logic. Mr Hugh Dalton's *The Capital Levy Explained* (Labour Publishing Co., 1s) is a straightforward exposition of the Labour Party's main plank in the 1922 election, a long chapter being devoted to answering objections.

Of articles in periodicals that on Unemployment which Professor Macgregor contributes to the January number of *Economica*, deserves special mention. It is a penetrating study of the question, how far could, or should, municipalities endeavour so to arrange their work as to dovetail it into the movements of the cycle of employment, so that they may be employing as many men as possible at times when general trade is slack. The article has more than this specific interest; it raises, incidentally, most of the questions which lie at the root of a serious attempt to grapple with unemployment.

BOOKS RECEIVED.

Life of Sir William Harcourt. By A. G. Gardiner. In two volumes. (London) Constable and Co., Limited. 45s net.
The Capital Levy Explained. By Hugh Dalton. (London) The Labour Publishing Company. 1s.
Germany and Her Debts. A Critical Examination of the Reparation Problem. By L. L. B. Angas. (London) Harry J. Simmonds. 6s.
Food Production in War. By Thomas Hudson Middleton, K.B.E. (Oxford) Clarendon Press.

The Bank of England and the State. A Lecture delivered November 14, 1905, by Sir Felix Schuster, Bart. (London) Longmans, Green, and Co. 3s net.
The Mining Manual and Mining Year-Book, 1923. By Walter R. Skinner. (London) Walter R. Skinner. 20s net.

A valuable work of reference. This year's issue contains full particulars of 1,350 mining companies—gold, diamond, silver, copper, tin, iron and coal—also exploration and mining investment companies, arranged in alphabetical order. The particulars given of each company include names of directors and other officials, date of formation, seat of operations, description of the property, with the purchase consideration, plant erected or in course of erection, present working results, ore reserves, details of capital, calls, dividends paid, and the financial position as disclosed by the latest accounts. Highest and lowest prices of the shares for the last three years, also latest price. Lists are also given of the officials connected with the companies, and comprise 3,700 directors and 900 mining and consulting engineers, their addresses, and the names of the companies with which they are connected.

Department of Railways, Government of Japan. Annual Report for the year ending March 31, 1920. (Tokyo) Minister of Railways.

The Mystification of the Allied Peoples. By André Cheradame. Translated by John A. FitzGerald. (Evreux, Eure, France) Hérissay Press. 12s 6d net.

Selling Expenses and their Control. A Study in the Retail Distribution of Clothing. (New York City) Prentice-Hall Inc.

South Wales Journal of Commerce, Commercial, Industrial, and Financial Review, 1922. (Cardiff) Offices of the Journal. 2s.

To those interested in Welsh industries in particular this is a valuable guide. The general British review of allied trades, however, lends an additional interest to the issue, which is an excellent two shillings' worth.

STOCK EXCHANGE NEWS. SETTLING DAYS.

TICKET.	ACCOUNT.
March 7.	March 8.

The Stock Exchange finds that business comes sporadically. There is a spasm of activity for an hour or two in one market; after which interest seems to die down altogether, and the business fearfully flies to another part of the House. This goes on every day, bemusing members, perplexing them and their clients alike. In one way and another a good deal of trade is afoot, but it is so spasmodic and scattered that no part of the House can be called active. Foreign politics continue to play their part in checking activity. A vague idea that money may possibly become dearer, owing, of course, to the action of the New York Federated Reserve Board last week, continues to exert an influence in the gilt-edged market.

The War Loan remains steady in the neighbourhood of 101, but Consols are distinctly harder, the price rising to 58½. This had a sympathetic effect upon Annuities and two or three other British Government issues. The foreign market is quiet. Russian loans, Government, Municipal, Railway, are better, several of them having put on a point or two this week, the buying being described in the House as professional. French and German issues are attracting less attention than usual. Brazilians have moved narrowly and irregularly. Peruvians advanced and the Czech loan maintained most of its recent rise.

Home railway stocks have been going ahead, investment being attracted to the market for the preferred stocks, while the deferred are held to contain, even at present prices, prospects of further improvement. Undergrounds stand out as one of the best features, Metropolitan especially being in favour owing to revived rumours that the Great Western is angling for control of the line. Grand Trunk Pacific debenture stock has recovered from its flatness. In Mexican railways there is nothing doing. Argentine rails are better on the whole; amongst Brazilians, San Paulos again hardened up owing to the additional rates which the company is now authorised to charge.

Rubber is better at 1s 6d per lb, without its having any favourable effect upon business, which is very sluggish. Nor are people taking much interest in oil shares, although a little professional dealing gave an appearance of life to some of the lower-priced varieties. London and Thames Haven enjoyed a spectacular rise, with a reaction almost equally dramatic, on rumours that the Port of London Authority will make a bid for the company's property. Courtaulds are the centre of lively interest, and textiles as a whole are well to the fore in attracting public attention in consequence of the good dividend declarations by some of the companies and the capital showing made by the accounts of others. A sharp rise in Cook, Son and Co. ordinary shares followed the excellent report. White-

leaves went better on the dividend announcement, and this group generally is firmer on the demonstration made by one industrial company after another that last year's trading did much to compensate for the losses sustained in the previous twelve months. People are not buying shipping shares, and both the banking and the insurance markets are somewhat cold-shouldered. The tobacco group is steady, though for the moment it has lost some of its speculative attraction. The wireless group took a languid turn for the better; cable stocks are quiet. The brewery market is uninteresting. Electrical lighting shares hold their big rises, though the City of London dividend, making 15 per cent. less tax, disappointed the hopes of those who were going for a higher rate. Good preference shares are difficult to buy. A number of debenture stocks in well-known companies are in course of being placed semi-privately, without the medium of a prospectus issue, and they are readily taken on a basis, roughly, of 6 per cent.

Diamonds and base metal shares have shown the most activity amongst mining shares, there being strong buying from Paris, the Cape, and, as regards diamond shares, from Hatton Garden. The rises in base metals have brought in substantial support for copper shares more particularly. Tin issues followed the upward direction, and Cornish, West African, and Middle East descriptions are all better. Mild excitement accompanied a boomlet in De Beers, Jagers, Consolidated Diamonds and Premiers, but the dealing was largely professional. The public are taking little interest in mining shares at all. The Chartered meeting on Thursday caused a slight drop in the price, in consequence of what was regarded as the colourless character of the chairman's speech. Mexican mines have been advancing, in consequence of the improvement in silver. Broken Hills are quiet. A good deal of discrimination, it may be observed, is eminently desirable just now in the matter of buying low-priced copper and tin shares. Some of those most actively pushed are certainly best left to people who know most about them.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Bill.
Amount previously recorded	47,371,123	..	..	..
ISSUES OF THE WEEK—				
4% Treasury Bonds by Tender Feb. 23, 1923, £4,000,000, at £99 9s 11d	..	3,978,195	..	..
NATIONAL SAVINGS CERTIFICATES.				
Net Receipts into the Exchequer Week ended February 24, 1923.	£	350,000	£	350,000
April 1 to Feb. 24, 1923, £32,208,000	..	..	..	..

To the Public—				
Austrian Government Guaranteed Sterling Treasury Bills Issue of £1,800,000, at 12 months' date, at fixed price of 93% (Feb. 26)	1,800,000	1,674,000	1,674,000	..
Chulsa Tea Co., 23,200 Ordinary Shares, £1, at par (Feb. 26) ..	23,200	23,200	5,800	17,400
Shakomato Tea Estates, 60,000 Ord. Shares, £1, at par (Feb. 26) ..	60,000	60,000	7,500	52,500
Rosehaugh (Ceylon) Rubber Co., 120,000 Ord. Shares, £1, at par (Feb. 26) ..	120,000	120,000	15,000	105,000
Total offered to public	1,877,200	1,702,300	..	174,900
To Shareholders only—				
Trust Union, £100,000 5% Conv. Deb. Stock, at 98½	100,000	98,500	10,000	88,500

Total offered for subscription to date in—	Total offered for subscription for whole year—
1922	553,675,018
1921	236,210,484
1920	37,549,992
1919	89,719,034
1918	261,376,387
1917	254,156,881
1916	645,055,831
1915	129,516,190

Austrian Treasury Bills Issue.—We deal with this issue under "Notes of the Week."

The Malacca Rubber Plantations, Limited.—Authorized capital £1,000,000, divided into 115,000 7½ per cent. cumulative participating preference shares, and 885,000 ordinary shares, all of £1 each. All the participating preference and 238,964 ordinary shares have been issued. There is also loan capital outstanding consisting of a debenture stock of £199,590 and seven-year notes for £150,000. This is an issue of 171,036 ordinary shares at 30s per share, the proceeds of which will be used to repay seven-year notes and to carry out improvements. The quotation on March 1st for existing £1 shares was £2½, so that it will be interesting to judge the effects of the new issue on the market quotation. This is one of the most popular of rubber-growing concerns, and though final figures have not yet been completed, the total rubber output for 1922 is placed at 3,363,846 lbs, while the all-in cost is approximately 9½d per lb. For 1921 costs were 11.23d per lb. Thus with rubber—the raw material—firm at round about is 5½d per lb, there is a prospect of a bumper year. We anticipate a good reception for this issue, from existing shareholders especially.

Kassala Cotton Company, Limited.—Authorized and issued share capital £300,000, divided into 250,000 6 per cent. non-cumulative preference shares of £1 each and 1,000,000 ordinary shares of 1s each. There is also loan capital consisting of £500,000 6 per cent. debentures. These debentures, it is stated, are secured upon assets of the company by a floating charge. In an advertised statement made to comply with Stock Exchange regulations, much information is given about the activity of this company, but little is mentioned about its assets or liabilities.

Rosehaugh (Ceylon) Rubber Company, Limited.—Authorized capital £400,000, divided into shares of £1 each. This is an offer for subscription of 120,000 shares at par. The company has been formed to acquire from the Rosehaugh Company, Limited, seven rubber estates in Ceylon. The total area of these plantations is 5,676 acres, of which 4,892 acres are planted with rubber in bearing. Crops have varied from 1,984,795 lbs in 1918 to 2,288,980 lbs in 1922. The purchase price is £350,000, payable as to £70,000 in cash and the remainder in shares. This works out, it is stated, at approximately £70 per planted acre, and the company will be capitalised at about £80 per acre, excluding 570 acres of buildings, reserve, and waste lands. For 1922, it is added, the cost for the nine months ended September 30 was just under 2d f.o.b. It is estimated in the prospectus that, with rubber selling at an average price of 1s 3d per lb, a profit of £50,000 will be made on a restricted output of about 1,500,000 lb during the year 1923. A reasonable proposition, which was quickly oversubscribed.

The Chulsa Tea Company, Limited.—Authorized capital £300,000, divided into 225,000 ordinary and 75,000 8 per cent. cumulative preference shares, all of £1 each. Of these issues, 201,800 ordinary and 74,783 preference shares are to be allotted in payment of properties to be acquired, and 23,000 ordinary shares are now offered at 27s 6d per share. The company has been formed to acquire tea estates, with an approximate total area of 8,587 acres. Profits are given from 1911, and while these have fluctuated severely at times, they total, for the 11 years, £427,646, or an average of £38,877 per annum. The present issue of shares, after payment of preliminary expenses, will provide about £26,000 as working capital. In addition, the minimum sum of £333,333 is to be transferred by the Chulsa Tea Company (Dooars) and the Zurrantee Company (Dooars) from floating and other assets not included in the "block" accounts taken over. The purchase price, as will be observed above, is payable in shares only, and works out at about £45½ per planted acre. A promising prospectus.

Shakomato Tea Estates.—Authorized share capital £60,000, divided into shares of £1 each, all of which are now offered for subscription at par. The company has been formed to acquire the tea estates now owned by Shakomato Tea Company, Limited, which is a company incorporated in India. About 3,000 acres to be taken over, of which approximately 1,060 acres are at present under cultivation, and for the current year it is estimated that 528,000 lbs of tea will be produced. Production costs are estimated at close to 7d per lb, and the prospectus states that, taking costs in Calcutta at to annas, and tea at 1s 4d per lb, it is anticipated that a profit of £9,000, subject to London expenses, should be shown. The purchase consideration, payable in cash, is £45,000, and the estates are valued at about £64,400. The capitalisation is approximately £56 per planted acre.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

ACTIVE SECURITIES.

THE MINING MANUAL & MINING YEAR BOOK, 1923

By WALTER R. SKINNER.

The Standard Reference Work on Mines. Price 20/- net.

Post free (Inland). 21/- Post free (Abroad). 21/6. 1,000 pages. In Demy 8vo, bound in RED Cloth.

A Recognized Indispensable Work of Reference for MINING INVESTORS, MINING ENGINEERS, MINING MANAGERS, BANKERS, STOCKBROKERS, DIRECTORS, or anyone interested in the MINING INDUSTRY.

COMPLETE AND UP-TO-DATE PARTICULARS concerning 1,850 Mining Companies operating in all parts of the world. Gold, Diamond, Silver, Copper, Tin, Iron and other Mines. Collieries, Exploration, and Mining Investment Companies, arranged in alphabetical order.

PARTICULARS given of each Company include the Directors and other officials; date of establishment; seat of operations; description of property, with the date of establishment; plant erected or in course of erection; present working results; ore reserves; details of capital; calls; dividends paid; and the financial position as disclosed by the latest accounts. Highest and lowest prices of the shares for the last three years, also latest price.

Directors (8,700) and Mining and Consulting Engineers and Mine Managers (900), their addresses and names of the Companies with which they are connected.

SUPPLEMENTARY INDEX of public, dormant or Companies which have ceased to be of public or market interest. One of the most useful and important features of the book. It is the only list of its kind published.

CRUSHING T. BLES and Outputs from the principal Gold mines are given as commencement of the volume, showing tons treated monthly, results obtained and yield per ton; also annual yield.

DICTIONARY OF MINING TERMS.—An up-to-date glossary covering 487 mining terms by the use of which mining developments can easily be followed. The difficulty of understanding technical phraseology is thus easily mastered.

To be obtained from all Booksellers, or direct from the Publishers. WALTER R. SKINNER, 15, Dorgate Hill, London, E.C.4, and "FINANCIAL TIMES," 72, Coleman Street, London, E.C.2.

COMPANY MEETINGS, &c.

SELFRIDGE AND COMPANY, LIMITED.

HIGHLY SATISFACTORY RESULTS.

IMPROVING TRADE PROSPECTS.

PLANS FOR NEW EXTENSIONS.

The 15th annual ordinary general meeting of Selfridge and Co., Limited, was held, on the 27th ult., at the company's store, Oxford street, London, Mr H. Gordon Selfridge (chairman and managing director) presiding.

The secretary (Mr A. H. Youngman) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—

The year isn't a very long affair when reduced to actual hours or minutes. A business such as Selfridge's, with its fixed time for opening and closing, has less than 2,600 hours in which to do its entire year's work, and into these few hours—or only a little over 150,000 minutes—we must crowd all the energy, the thought, the imagination which may bring about the results as shown in a desirable balance-sheet.

SPLENDID RESULTS DESPITE DIFFICULTIES.

No one feels that business conditions in Great Britain have been very happy in 1922, but we are able to show for that period one of the best results in our history. If everything is taken into consideration 1922 has proved—except the boom 12 months of 1919—our best year. We have also been delighted to see excellent and improved results shown in the balance-sheets of many other businesses in this country. All of which helps to prove that the commercial atmosphere is growing better.

But these results of ours—which many friends call very good, and which we are in no way over-impressed with—have not come of themselves. They have only been brought about by great care and attention to the multitudinous details which make up such a business as this. Things don't do themselves in these difficult times as they did in 1919. No one can run as fast a race on a rough, rocky course as on a smooth, easy one, and for this reason, if we were at all inclined to be over-pleased or self-satisfied, we should be so now. But we are not.

MORE SELLING SPACE ESSENTIAL.

Any business of this kind, and especially this business which we know so absolutely and minutely, is as strong, as solid, as safe as the rock of Gibraltar if managed intelligently and well. Its progress and development each year depend upon certain requisites—in our own case we have reached a time when more selling space is very essential. As will be remembered, we built the first section of our new building two or three years ago, but at a cost so high that we concluded to stop all building until these abnormal costs were reduced to reasonable limits. We are now asking for tenders, and if they prove satisfactory, we hope soon to add to our premises the second section—extending from the present new building along Orchard street to Oxford street. The result of these tenders we shall know in a few days.

We want to give to London—the greatest city in the world—and to ourselves as well the best, the finest, the largest distributing business on earth, and with our new building finally complete we feel sure we shall be able to accomplish this laudable ambition.

The present largest distributing businesses are in Paris, Chicago, New York, Philadelphia, and certainly London, with its eight or ten million population, should top them all—and it will, if we have our way.

But about the balance-sheet which you have had before you for several days.

PROFIT AND APPROPRIATIONS.

It shows, as you have seen, a balance, including amount brought forward from the last year's accounts, of £463,778 4s 4d. From this amount must be deducted for debenture interest paid and accrued to date £15,654 10s, for dividend on preference shares £78,000, for dividend on preferred ordinary shares £100,000, for dividend on staff participating shares at rate of 6 per cent. £3,299 16s 10d. There has also been set aside for reserve for corporation profits tax £16,000, for depreciation of fixtures £10,000, for writing down investments £10,000, for writing down leaseholds, &c., £10,000, for adding to the reserve fund £25,000.

These appropriations total £267,954 6s 10d, which, deducted from sum available, leaves the remainder of £195,823 17s 6d. From this it is proposed to pay the dividend of 10 per cent. as heretofore on the ordinary shares and a further 6 per cent. on the staff participating shares—the two amounting to £53,315. This will leave for carrying forward £142,508 17s 6d.

The balance-sheet calls for very little further comment.

BALANCE-SHEET ITEMS.

The amount charged to depreciation and to reserve continues to grow each year; during the past nine years no less a sum than £750,000 has been marked off or included in the reserve fund, which means that that large amount has been retained in the business as working capital rather than paid out in dividends. This policy, we hope, will continue on even a greater scale. We prefer to feel that every credit on the balance-sheet is worth more—decidedly more—than is shown. And, indeed, this fact is very true in the balance-sheet before you.

Our preference and preferred ordinary shareholders number about 20,000. The great majority have £100 or under, and it will therefore be seen that these shares are widely distributed. Of course, in the share market they are continually away above par. We look upon this part of our capital as practically borrowed money, and we regard the payment of their dividends and the protection of the principal as trusts, which we guard before anything else.

STAFF PARTICIPATING SHARES.

Another detail to which we direct your attention is the item of "staff participating shares." These have been created to allow members of the staff to participate in the success of the business up to 12 per cent. per annum. On these shares are paid a fixed 6 per cent. and a bonus, which brings their percentage up to 2 per cent. more than is paid on the ordinary privately-held shares up to 12 per cent.

This to us seems to be a scheme of profit-sharing far superior to the usual systems. It encourages members to save money in the first place—to invest it, and then to receive a very high return. We venture to commend this method to other businesses, and will be glad to show any who may be interested the entire details.

TRIBUTE TO STAFF.

It is further very pleasurable to us to show in this substantial manner appreciation of the delightful loyalty and spirit of goodwill which is universal in the personnel of our staff. We believe that loyalty is a sentiment which demands reciprocation, and a house to their members as they expect from those members. This, too sides has grown and matured into a genuine and deep friendship and sincere respect.

The secret, we believe, of the successful control of a great organisation is to "treat each and every member of that organisation as we ourselves would reasonably like to be treated if conditions were reversed"—and thus bring the golden rule into the practical business ethics of to-day, and clothe it in twentieth-century commercial language.

I will conclude by moving the adoption of the report and accounts.

Mr Alfred E. Cowper seconded the resolution, and after the chairman had replied to shareholders' questions, it was carried unanimously.

Mr Ellis W. Davies then proposed: "That a dividend at the rate of 10 per cent. per annum, free of income-tax, be paid on the ordinary shares for the year ending January 31, 1922, and that it be paid forthwith."

The resolution was seconded by Mr Percy A. Best, and unanimously approved.

The Chairman then moved: "That an additional dividend of 6 per cent. per annum on the staff participating shares for the year ending January 31, 1923, be paid on July 31, 1923."

The motion was seconded by Mr Thomas Anthony, and unanimously agreed to.

The retiring directors, Mr Ellis W. Davies and Mr Thomas Anthony, were re-elected; the auditors, Messrs Deloitte, Plender, Griffiths, and Co., were reappointed, and the proceedings terminated with votes of thanks to the chairman and directors, and also to the staff for their work during the past year.

PRUDENTIAL ASSURANCE COMPANY, LIMITED.

SUCCESSFUL RESULTS OF YEAR'S BUSINESS.

CHAIRMAN OPTIMISTIC OF TRADE REVIVAL.

The annual general meeting of the Prudential Assurance Company, Limited, was held on Thursday, March 1, 1923, at the chief office, Holborn Bars, London, Mr A. C. Thompson, the chairman of the company, presiding.

The secretary, Sir George May, K.B.E., having read the notice convening the meeting and the auditors' report,

The Chairman said: Ladies and gentlemen,—It is my privilege to present to you the accounts and statements of the company for the past year.

TOTAL INCOME OF THE COMPANY.

Those familiar with the records of the company will not be surprised to hear that the total income derived from all sources during 1922 has exceeded the figures of the previous year. The income is, in the main, made up of the premiums paid periodically by our policyholders, and the interest received on account of the investments of the funds which must necessarily be held by us in order that the liabilities under our policies may be met as they emerge. The total annual income has now reached £32,349,378, made up as follows:—

Premiums, industrial branch	14,386,588
Premiums, ordinary branch	9,615,590
Premiums, general branch	815,704
Consideration for annuities granted	195,884
Interest and dividends	6,678,348
Payment received for administration of the approved societies	657,204
	£32,349,378

Each of the foregoing items except the last shows a substantial increase over the corresponding figure for last year. The solitary exception arises in regard to an item which is really the return of money disbursed by the company on behalf of our approved societies for the administration of National Health Insurance.

It is worthy of note that the amount received during the past year as purchase money for immediate annuities was very nearly double that for 1921, and is a record for the company in this class of business.

INDUSTRIAL BRANCH.

In the industrial branch the increase in the premium income obtained during the year was equivalent to £6,861 per week, or £356,772 per annum, which considerably exceeds the increase obtained in the previous year. You are aware that premiums in the industrial branch are payable either weekly or monthly, and the relative proportions of the two classes remain the same as a year ago, namely, 57 per cent. weekly and 43 per cent. monthly.

ORDINARY BRANCH.

Turning now to the ordinary branch, we are again able to record the writing of a very large new sum assured for the year, namely, £14,862,074, under 86,541 contracts producing a premium income of £1,080,890. In this branch there are no fewer than 1,130,000 policies now in force, assuring nearly £160,000,000. From these figures it will be seen that the average sum assured under all existing policies is £133; under the new business secured during 1922 it is £171—the same as for the preceding year.

CLAIMS.

From the point of view of our policyholders who are insured under the 25 million policies in force, the business of the Prudential is to pay claims. During the year under review the amount paid to the company under this heading in all three branches amounted to almost £13,000,000, or £2,500,000 more than in 1921. The balance of our income after meeting these claims was in part directed towards payment of necessary items of expense, but the greater portion was utilised for the purpose of building up the reserves of necessary to meet future liabilities, these reserve funds being, of course, held in trust for our policyholders. The increase in the amount paid in claims is larger than usual, and may be traced to the huge sum we have disbursed on account of endowment assurances maturing in the ordinary branch. In 1922 the amount paid under this heading exceeded £5,000,000, or over £900,000 more than in the previous year. The corresponding figure in the industrial branch is less imposing than that for the policies of larger amounts already referred to, but the increase is considerable. As the

popularity of endowment assurances in the industrial branch has been extending considerably during recent years, we may in the near future look for a much augmented total under this item of outgo.

The amount paid in death claims exceeded £5,250,000, being nearly £500,000 more than for 1921. We expect as a matter of course with the growth of our business to record each year increases in the aggregate amount of death claims, but we know that the claim rate at the beginning of the year was, owing to the prevalence of influenza during that period, higher than in 1921.

VALUATION REPORT.

The financial results of the year's operations are given in the valuation report, which shows that the actuarial reserve required against the whole of the company's liabilities is £136,610,949, or £9,426,328 in excess of last year. Of the former amount £64,271,222 has reference to the ordinary branch, £71,603,350 to the industrial branch, and £736,377 to the general branch.

ORDINARY BRANCH BONUS.

In the ordinary branch the surplus is £2,047,337, and of this £500,000 is carried to the investments reserve fund, to which I shall refer later, £177,186 is carried forward to this year, and the balance is being distributed according to the company's articles of association. The proportion of surplus available for distribution to policyholders is sufficient to enable us to declare a reversionary bonus of 32s per cent., or 6s per cent. more than that declared last year, a result which will doubtless be warmly welcomed by our ordinary branch policyholders. You may remember that a year ago I intimated that the period of reduced bonuses which we had experienced during the war was rapidly coming to an end. We have not yet reached our pre-war rate of bonus, but if favourable conditions operate I see every reason to anticipate that a participating policy will, in the future, prove to be at least as profitable as before the war.

Turning to the industrial branch, the expense ratio, which in 1921 had been reduced to 36.92 per cent., was last year further reduced to 32.12 per cent., which is a ratio much lower than has ever been achieved by an industrial assurance company doing a large business. We believe we are entitled to congratulate ourselves and also our staff, both here at chief office and in the field, on this solid achievement, and we are looking forward to still further progress in this direction as the results of our endeavours mature.

INDUSTRIAL BRANCH BONUS.

The valuation report shows an increased surplus amounting to £1,737,631. Of this amount £250,000 has been transferred to the investments reserve fund, and a like amount to the common contingency fund, to both of which reference will be made later. It will be remembered that last year we were for the first time since 1915 able, through the medium of our profit-sharing scheme, to grant bonuses to our policyholders in this branch. The amount thus available for distribution was not so large as before the war, but the allocation we are able to make this year—viz., £500,000—exceeds by £100,000 the largest sum given in any year since the inception of the scheme.

The amount allocated this year to industrial branch policyholders is sufficient to allow the following additions to the sums assured under policies entitled to participate:—

- After 10 years' premiums paid, £5 per cent.
- After 20 years' premiums paid, £7½ per cent.
- After 30 years' premiums paid, £10 per cent.
- After 40 years' premiums paid, £15 per cent.
- After 50 years' premiums paid, £20 per cent.

The additions include the bonus of £2½ per cent. declared last year, and are guaranteed for a period of three years. You will remember that a year ago we initiated the method of spreading the bonus over a period of years in order to make it more permanent in form. The bonus then declared was for a period of two years, and now, as I have already stated, the bonus declared this year is guaranteed for a period of three years. Further, we have been able to increase the additions for policies of longer durations. This method of bonus distribution will, in future, be applicable only to policies issued before January 1, 1923, and we hope year by year to extend the period over which the bonus is guaranteed.

REVERSIONARY BONUSES IN THE INDUSTRIAL BRANCH.

Your directors feel, however, that with the reduction in our expense ratio, which, there is every reason to believe, will persist, the time has now arrived when we should adopt a method of distribution by which a bonus once allotted to a policy becomes a permanent addition to the sum assured. It has, therefore, been decided to institute in respect of all policies issued on or after January 1, 1923, a system of reversionary bonuses.

The allocation of profits under the scheme will be made, in the first instance, by means of a simple reversionary addition to the sum assured, with the proviso that the bonus will not vest until the policy has been 15 years in force. Should a claim arise under the policy before the expiration of 15 years the reversionary bonus will not be payable. It is the intention to supplement this reversionary bonus with an interim bonus in respect of policies which become claims by death or maturity upon which premiums have been paid for not less than five years and less than 15 years. The first declaration of reversionary bonus according to this method will be made out of the surplus available in March, 1924. This epoch-making event in the conduct of our business is directly traceable to the introduction 10 years ago of the block system of collection, and is, as you will recognise, in conformity with the principle, which we have adhered to for many years past, of giving to our clients at the earliest possible moment any advantages accruing from the economies and increased efficiency effected in our administration.

GENERAL BRANCH.

Coming now to the general branch, I am happy to be able to report considerable extension in this class of business. The premium income, which I have already quoted, for the year in this branch—viz., £815,704—is £129,405 in excess of the corresponding item last year. In regard to the quality of the business which we accept, I think, when I tell you that our claim ratio is now 44 per cent., you will agree that in view of the upward tendency usually shown in this figure when trade is falling our determination to accept only the highest class of risks has been adhered to.

Turning now to the investment side of our business—a side which calls for the most unremitting attention and careful judgment on the part of your directors—it is with pleasure that I am able to report a state of affairs which is in all respects worthy of comparison with the high standard set up by the Prudential in previous days.

SUPERVISION OF INVESTMENTS.

Before proceeding to an examination of the actual figures, it may not be out of place, in view of the prominence that has recently been given to the unsatisfactory condition of one or two insurance companies, if I remark that, in addition to the entire freedom of examination and inquiry that is always accorded to our auditors, the system adopted by us of supervision by the directors of all dealings with securities, and the general method of checking imposed, make it impossible for transactions to take place which are not in accordance with the best traditions of the insurance world.

INCREASE IN FUNDS.

A comparison of the accounts for 1922 with those of the previous year will show that the total of our invested funds has been increased by £11,307,000, compared with an increase of £10,374,000 in 1921. The problem of suitably investing this new money, together with the amounts made available by the maturity or sale of existing holdings, presents difficulties which change with every variation in general financial conditions.

INVESTMENT POLICY.

In framing our general policy of investment, we always bear firmly in mind that the essential consideration is to attain the maximum degree of stability, and we are helped in our efforts in this direction by two outstanding features of our business—namely, the magnitude of our existing funds, and the large increase, both actual and relative, that takes place in these funds each year. The former circumstance enables us so to distribute our investments as to minimise the risk of depreciation; the latter circumstance, accompanied where necessary by a judicious realisation of existing holdings, helps us to neutralise the effect of any depreciation which may result from a rise in the general rate of interest, by enabling us to take immediate advantage of the higher yield obtainable.

Dealing now with the present situation, it is not without interest to notice that last year saw a further substantial fall in the yield from high-class fixed interest-bearing securities, and the main problem to be faced at the moment is to find sound investments which will give an adequate return.

INTEREST YIELD.

The rapidity and extent of the change that has taken place in this respect may be gauged from the fact that, whereas during 1920 our new investments yielded a rate of interest of about 7 per cent. before deduction of tax, the corresponding yield during 1922 was only £5 16s per cent. This reduction in the interest yield

has not, of course, been without its compensation, since it has naturally brought in its train a further substantial appreciation in values.

It will be remembered that according to clause 122 (b) of the company's articles of association the directors are empowered to create a common contingency fund capable of application to the support of all or any one of the branches; if so applied, suitable provision is to be made for repayment or recoupment to the fund.

COMMON CONTINGENCY FUND.

You are aware that in accordance with this clause a common contingency fund has been set up, and a year ago stood at £400,000. During the year it was considered desirable to transfer £350,000 of this amount to the general branch, and as £250,000 has been added from the profits of 1922, the amount of the fund is now £300,000.

From the foregoing remarks you will appreciate that our financial position is even better and stronger than it has been for some years past, and I hope that no world event will occur to weaken credit or adversely affect the conditions existing in this country.

DISTRIBUTION OF INVESTMENTS.

As a result of the year's operations we have once again increased our holding of British Government securities, which now stand at £70,649,000, and form as much as 48 per cent. of the total assets. This is rather an astonishing fact, when it is recalled that so recently as 1913 the figure was only 2 per cent. It may also interest you to know that of our total assets 82 per cent. is invested in home securities, 12 per cent. in Indian and colonial securities, and only 6 per cent. in foreign securities.

INDUSTRIAL ASSURANCE BILL.

You will expect me, before concluding my address, to say something in reference to the Industrial Assurance Bill now before Parliament. We have ever been mindful of the fact that the continual growth of industrial assurance would in course of time make it necessary to bring up to date the law relating to its conduct, and we have always made it equally clear that any legislation which had for its object the improvement of the business would be heartily welcomed by us. In our opinion, this Bill does in a large measure do this, although it would be idle for me to say that in all its provisions it is ideal from our point of view. Nevertheless, seeing that Lord Parmoor, who you will remember presided over the recent Committee of Inquiry, stated in the House of Lords the other day, on the occasion of the second reading of the Bill, that "I have examined very carefully the terms of the Bill and compared them with the proposed reforms which we advocated in our Report, and I have not been able to find a single instance in which a reform which we suggested has not found its place in the present Bill," the Prudential does not propose to offer any opposition to the principles upon which the Bill is based.

The reasons for this attitude are, we believe, well founded, since the Bill does in several respects emphatically endorse the policy which we have been endeavouring to carry out in the management of our business for many years past. The particulars I have given you of the progress of our business during the past year will have shown you that, without interference or pressure of any description from outside sources, we have achieved results—as, for instance, in the reduction of expense—far more favourable to our policyholders than even our critics have suggested were possible.

INCREASED BENEFITS IN INDUSTRIAL BRANCH.

These results have been obtained by diligent reconstruction of our organisation carried on for a number of years; they are, we are convinced, permanent in character, and in consequence I am able to announce, in addition to the improvements already indicated, the issue of new tables giving increased benefits to policyholders.

It will occasion no surprise if the announcements I have made have the effect of considerably increasing our new business. Under the system of administration we have now adopted, an increasing business must in the years to come still further reduce our expense ratio, which, leading in turn to still better benefits, should enable our efforts to progress with cumulative effect towards the ideal at which we are aiming.

The year 1922 has, in fact, been in some respects a turning-point in Prudential history, but, as has frequently been pointed out at these meetings, our operations are so national in character that our future progress is largely conditioned by the commercial and general financial situation of the country as a whole. What, then, are the indications as to the future course of events in our national affairs? I am not without hope, in spite of some prophecies to the contrary, that 1922 will also prove to have been the turning-point from the period of acute depression that characterised its immediate predecessors. As you know, a very favourable feature has been the recovery in the value of the pound sterling on the American exchange, and the steps recently taken to fund the

debt owing by this country to America, so far as they reduce uncertainty and the annual charge on the national resources, can hardly fail to prove beneficial.

There are indications of a revival of industrial and commercial activity in many directions, and, if these continue, as they should, providing the difficulties that have arisen on the Continent in regard to reparations are not prolonged to an inordinate length, then I think we may look forward with anticipations of better times both for the company which we serve, and for the country to which we are proud to belong.

I beg to move: "That the report of the directors and the accounts certified by the auditors be received and adopted, the statutory report of the auditors having been previously read to the meeting," and I will ask the deputy-chairman to second the motion.

INTEREST ON THE FUNDS.

The deputy-chairman (Mr W. Edgar Horne) said: In seconding the report I should like to say a few words on the subject of the interest on our funds. You will have noticed from the valuation report that the net rate of interest earned on the combined life assurance funds, exclusive of reversions, was £4 9s 9d per cent., but I wish to emphasise the importance of considering the gross rates of interest. The inertia of a fund amounting to nearly £150,000,000 is not easily overcome, and the advantage that we have obtained during the last few years in investing substantial sums at rates varying from 5 per cent. to 8 per cent. is not clearly reflected in the net rate of interest referred to. Nevertheless, the effect of these favourable investments is not lost, and as the inertia is gradually overcome the rate slowly improves as momentum is gained. From this argument you will appreciate the fact that the converse holds good, and that the full effect of a fall in the current rates of interest would not make itself felt for a number of years.

Mr H. C. Willis said that he considered the present report to be the best which they had ever had, taking into consideration the conditions of the country as a whole. The continued increase of business which the Prudential secured in the face of all difficulties was now, and always had been, wonderful. He attributed it to the fact that there was a great sympathy between all connected with the company and the management—a sympathy which could not exist if the management were not fair and just. The most important point in the balance-sheet was the wonderful reduction in the expenses of the industrial branch. In the arguments which had been used for many years by the opponents of industrial assurance the question of costs had always been formidable, but the Prudential had brought them down to a reasonable figure, thus disarming the attacks of those people.

CONGRATULATIONS TO THE DIRECTORS.

Sir William H. Davison, M.P., said he would like to join in congratulating the directors on the admirable report. It was indeed a wonderful record of achievement and success. What always struck him as extraordinary in the reports submitted year after year was the fact that every year there was some improvement to record. He noticed that in the ordinary branch no fewer than 86,541 policies had been issued, assuring a sum of nearly £15,000,000. That was really a remarkable result, showing an increase in premium income of nearly a quarter of a million. In the industrial branch they had received in premiums the colossal sum of nearly £15,000,000, an increase in premium income of very nearly £400,000, and the total number of policies in force was, he believed, about 24,000,000, which indicated that nearly, if not quite, half the industrial classes in the country were insured in the company—a fact of which they might be proud.

With an income of over £32,000,000 a year, with assets of £146,000,000, with invested funds increased last year by £11,000,000, and with an expense ratio of only 32.12 per cent., they had every reason to be proud and satisfied.

Several other speakers congratulated the board on the results shown.

LETTER FROM SIR WILLIAM PLENDER.

The Chairman said that he had received a letter from Sir William Plender, F.C.A., containing the remarks which that gentleman would have made had he been able to be present at the meeting. In that letter Sir William congratulated the company on having had an extremely good year. The increase in gross assets of £11,307,706 constituted, he said, a record. He would specially note the fact that out of total assets amounting to £146,000,000, over £70,000,000, or nearly one-half, was in British Government securities. The system of control and custody of the investments exercised by the directors continued to be most stringent.

The resolution was carried unanimously.

The retiring directors, Mr Edgar Horne, Sir John Luscombe, and Mr Frederick Schooling, were re-elected, the auditors were re-appointed, and votes of thanks were passed to the chairman, directors, and staff.

Sir Joseph Burn, responding on behalf of the staff, said that the reduction in expenses meant that industrial insurance had taken a new lease of life, and it might bound forward in an extraordinary manner.

W. T. HENLEY'S TELEGRAPH WORKS COMPANY, LIMITED.
SUCCESSFUL YEAR'S TRADING.

The forty-fourth ordinary general meeting of W. T. Henley's Telegraph Works Company, Limited, was held, on the 2nd instant, at the Abercorn Rooms, Great Eastern Hotel, London, Sir George Sutton, Bart., M.I.E.E. (chairman and managing director), presiding.

The secretary (Mr A. E. Salmon) having read the notice convening the meeting and the report of the auditors,

The Chairman said the liability side of the balance-sheet needed no comment, it was practically the same as it was a year ago. On the assets side additions amounting to £81,083 had been made to buildings, machinery, and plant. The other items which were noticeable as differing from the last account submitted was that they had realised their gilt-edged investments, that stock was at £442,000, a reduction of £80,000; debtors at £334,000, a reduction of £88,000; cash in hand, Treasury bills, and trading bills £709,000, an increase of £318,000. Those figures gave an exact indication of the condition of trade during the past year, reductions in stock and debtors, and an increase in cash, and he hoped they would be of opinion that they also indicated the sound methods by which the business was conducted. The decline of trade might have produced a large amount in unsaleable stock, debts which could not be collected, and a corresponding shortage of cash.

Coming to the profit and loss account, the debit side showed an increase of £4,000 over last year in the amount for depreciation, and on the credit side a trading profit of £249,000, against £263,000. The final result was that with a credit of £7,525 profit on realisation of securities there was, after providing for the reserves and dividends recommended, a carry forward into 1923 of £323,988, against the sum of £260,243 brought in.

BOARD'S DIVIDEND POLICY.

Some shareholders might think that a larger dividend should be paid, that with so large an amount of available cash and so handsome a carry forward, an increased dividend might have been recommended without endangering the financial stability of the

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

business. That might be so, but the directors had preferred to recommend the adoption of the cautious policy which for so many years past had ensured that the proprietors of the company, whilst covering handsome dividends, should have a sense of security in regard to the value of their capital. It should be borne in mind that a strong financial position, as well as the dividend paid, had an important bearing on the market value of a security. No doubt three-quarters of a million sterling was a large sum to have, but it was not equal to six months' turnover of the business. It had accumulated by reason of the depression of trade. They hoped that depression was not going to continue for long, but they would be wise to keep large cash resources to meet the improvement when it came. Considerable sums had yet to be paid on account of past and present taxation, all provided for before arriving at the balance of the profit and loss account—but cash must be in hand to meet the liabilities.

They had been and were expending large sums in the provision of facilities for increased output and general development. The large expenditure on the new research laboratories had not yet been entirely paid, and although expenditure on capital account was being reduced year by year, in the last four years it had aggregated roundly £400,000. There was a possibility that the costs of buildings and machinery might get much lower than the high prices which had ruled since the Armistice, and larger sums than usual might have to be provided for depreciation. They were able to keep in close touch with the position, because they kept a complete record of their property, showing original costs, amounts written off, and the present charge on the capital account of each unit.

He expected that the shareholders would congratulate the directors upon a successful year's trading. Such congratulations would be well deserved. A great result had been achieved. In a period of great depression, which had weakened many great trading houses and destroyed, or nearly destroyed, some, they showed an unimpaired dividend and a stronger financial position.

FUTURE PROSPECTS.

As to the prospects for the future, probably the first half of the year under review was more greatly depressed than for some years; but in the autumn of last year it began to improve, and was continuing to improve slowly, but they hoped for that reason the more surely. These remarks did not apply to foreign trade, but that the foreign trade would come back he did not doubt. In the meantime, they were of opinion that the development of electrical engineering in the future would be greater than they could measure, and with good management and direction he saw no reason why the business should not continue as prosperous as it had been in the past.

Dealing with the Tyre and Rubber Co., he spoke of the disadvantage to tyre makers of the restriction of rubber output. It meant that the Government action would be responsible for higher prices for motor tyres, and probably for a considerable advance in the cost of electric lighting wires.

The resolution was carried unanimously.

UNITED SERDANG (SUMATRA) RUBBER PLANTATIONS, LIMITED.

BRIGHTER PROSPECTS.

The fifteenth ordinary general meeting of the United Serdang (Sumatra) Rubber Plantations, Limited, was held, on the 27th ultimo, at 2-4 Idol lane, London, Mr C. Heath Clark (the chairman) presiding.

The Chairman said that the board had recently arranged to acquire an estate on the East Coast of Sumatra, comprising 637 acres of rubber in bearing and 895 acres immature, all in excellent condition. This property, with cash sufficient to bring it to maturity, was purchased for fully-paid United Serdang shares, and its capital cost when in full bearing was estimated at about £26 per planted acre. The combined planted areas of the company would then, it was estimated, stand at under £51 per acre, as compared with the capital cost of about £54 per acre for the existing acreage. These figures placed no value on the very fine unplanted land on the properties to be acquired, which consisted of over 5,000 acres, and which should prove a valuable reserve in the event of extensions to or replacements of any of the existing areas.

During the year they had adhered to the policy of voluntary restriction of output. The crop of 2,562,227 lbs was about 11 per cent. less than in the previous year, but the f.o.b. cost was reduced by rather over 6½d per lb, partly through reduction of loss on rice and partly through economies in working, which had been carried out without allowing the property to deteriorate. The profit of £18,753 compared with a loss of £60,607 in the previous year, and with a refund of E.P.D. there was an available balance of £59,847 after deducting Netherlands East Indies war profits tax. It was proposed to write off the expenses connected with last year's increase of capital, to place £20,000 to taxation reserve, and to pay

a dividend of 5 per cent.—a very modest distribution, justified in view of the improvement in the market for rubber.

Excepting ravines, where grass was allowed to grow to prevent wash, the planted areas were maintained in clean-weeded condition at very moderate cost. Thinning out the older areas was continued, and fair progress made on most of the estates. All the estates roads were in good condition, drains satisfactory throughout, bridges and culverts in a reasonably good state, buildings in fairly good repair, and factories in good condition, while the machinery and engines ran satisfactorily during the year. The estates were very little troubled by disease, and the visiting agent reported them in good order and condition.

The prospects of the industry, he thought, were clearer and brighter. Absorption was likely to increase, in which case the surplus stocks would be mostly exhausted by the end of the year. He thought, therefore, that shareholders were justified in viewing the future with confidence.

The report and accounts were unanimously adopted.

JEREMIAH ROTHERHAM AND CO., LIMITED.

TWENTY-FIVE YEARS' RECORD.

The twenty-fifth annual general meeting of shareholders of Jeremiah Rotherham and Co., Limited, was held, on the 28th ultimo, at Shoreditch Town Hall, London. Mr Frederick Snowden, chairman of the company, presided.

The secretary (Mr Joseph Hockley) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said, in the course of his remarks:—The first half of the year was so encouraging as to make us feel justified in paying you an interim dividend on your ordinary shares at the rate of 10 per cent. per annum. The latter half of the year was not quite so hopeful, but still quite good enough to again pay a like dividend at the rate of 10 per cent. per annum, and, in addition, a bonus of 2 per cent. for the year, making a total distribution of 12 per cent., and, moreover, adding £20,000 to reserve fund, and also carrying forward a balance of £78,891, or, within a few pounds, £20,000 more than was brought in.

The first item on the assets side of the balance-sheet is that of freehold and leasehold premises and goodwill, which now stand at £368,186, against £360,926, or less by £1,740. Book debts owing to us are down by £53,359, partly owing to lower values of goods sold and a falling off of trade in the latter part of the year. They have, however, been turned over more times than last year. It may be interesting here to remark that, whereas we have owing to us £397,222 on book debts, all that we owe to trade creditors, as shown on the liabilities side, is £49,651, or less than last year by £66,660. Cash at bankers and in hand is more by £34,726—namely, £143,102, against £108,376.

This is the twenty-fifth annual meeting of the shareholders, and at every one, and also every supplementary one, of which there have been 13, making in all 38, I have been blessed with health and strength to preside. This twenty-fifth meeting marks a quarter of a century of your company's existence. When it was incorporated in 1898, we foreshadowed a dividend on the ordinary shares of 7 per cent. per annum, which was paid at that rate to 1911, and the distribution has never been less than that, but has varied from that figure to between 11 and 18 per cent., and during the year 1920 as high as 25 per cent.

So far as the present reserves are concerned, you will see that our stated reserve accounts, including the £20,000 we now propose to place to general reserve, amount to £121,000. The two amounts of contingencies—namely, £12,858 and £20,395—(under the control of the directors), total £42,253. Besides these, you have the balance carried forward of £78,891, so that you have the substantial figure of £242,144.

Mr William Ellis seconded the resolution, which was unanimously adopted.

MAPLE AND COMPANY, LIMITED.

SATISFACTORY RESULTS—INCREASED DIVIDEND.

The thirty-third annual general meeting of Maple and Co., Limited, was held, on the 1st instant, at the company's premises, Tottenham Court road, London.

Mr C. H. Regnart, J.P., presided, and, in moving the adoption of the report and accounts, said that he was pleased to be able to place before the shareholders a brighter and more encouraging report. They were proposing to pay a final dividend of 7½ per cent., which, with the interim dividend paid in September last, would make 10 per cent. for the year, as against 7½ per cent. for 1921. The gloom of 1921 was gradually disappearing, and there had been a distinct improvement in trade generally since June last. Prices had come down nearer to the normal, and, consequently, were within the means of thousands of people who were before excluded

from the market by the extravagant cost of articles which they otherwise would have been glad to buy. The home trade since June, 1922, had been excellent, and the bulk of goods sold and delivered had been hugely in excess of that for any other period since 1913. They had the further satisfaction of knowing that when the foreign exchanges got more settled that portion of the foreign business which was done direct from their London house would attain its original magnitude.

If shareholders would visit their showrooms they would find a wonderful collection of all sorts of articles which would be sure to interest them, and their visit would be fully repaid. One had to realise nowadays that their customers had serious problems of their own to contend with. Income-tax had come down but little, and the prices of all the commodities of living were still high, while general taxation was as bad as ever, so the company had set itself out in every way to supply the wants of their customers to the best possible advantage. He hoped that their customers would appreciate that fact.

Turning to the balance-sheet, it would be seen that the reserve account stood at £583,000. The balance available for dividend was £227,231, and after providing for the dividends recommended there remained £47,231 to be carried forward. Their business was equipped for anything and everything. They knew what its capacities were, and were not content unless they felt that every unit was producing to its fullest limit. He was hoping that conditions would soon right themselves, and that they would be able to render a better account of their efforts for the present year.

The report and accounts were adopted.

SPENCER, TURNER AND BOLDERO, LIMITED.

The 29th annual general meeting of Spencer, Turner and Boldero, Limited, was held, on the 1st inst., at the offices, 18 Duke street, London, Mr John Boldero (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said the directors were very pleased indeed to lay before the shareholders such an excellent result, and he hoped and believed they were all more than satisfied. A trading profit of £65,405, as compared with £6,292 last year, was very gratifying. For the first eight or nine months business was healthy and brisk; in the last two or three months a slight falling away was to be noted, and the only explanation one could offer was that the purchasing power of the public was lessened. The prices of the commodities dealt in by the company had tended, on the whole, to a slightly lower level, more especially in silk, wool, and leather. The volume of goods sold had been greater than last year, but the full benefit of that increase was not reflected in sterling. The trading profits were £65,405 13s 10d, and the dividends on reserve fund £1,829 17s 1d, transfer fees £37 10s, and profit on sale of funding loan £557 15s, making a total of £67,830 15s 11d, to which had to be added £14,788 7s 5d brought in, giving a grand total of £82,619 3s 4d. They were left with an available balance of £60,342 3s 2d, out of which they proposed to pay a dividend of 3 per cent. actual on the preference shares, making 6 per cent. for the year, and a dividend of 4½ per cent. actual on the ordinary shares, making 8 per cent. for the year, while they were reserving for corporation profits tax £3,650, which would leave £30,749 13s 2d to be carried forward to next year. The total reserve funds stood at £140,600 3s 6d, and with the amount carried forward they had a grand total of £171,439, which represented exactly 5s 5d in the £ on the total capital of the company, which was surely a very satisfactory position.

The report and accounts were unanimously adopted, and the dividends as recommended were declared.

GOVERNMENT RETURNS.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £40,000,000 in three months' Treasury Bills dated from Monday to Saturday, March 5-March 10, were opened on March 2, 1923, and the total amount applied for was £53,770,000. Tenders for Monday to Friday bills at £99 8s 11d, and above in full, and Saturday bills at £99 9s 0d, about 60 per cent., and above in full. The average rate of discount for Treasury bills was £2 2s 10½d. The amounts allotted were as follows:—In bonds, £2,500,000; in bills at 3 months, £35,000,000.

Date.	Amount Offered.	Amount Applied.	Treasury Bills. Average Rate.	4½% Treasury Bonds, 1923. Average Price.

(a) Including Treasury Bonds.

Tenders will be received on Friday, March 9, 1923, for Treasury Bonds and Treasury Bills to be issued to the maximum amount of £40,000,000. The amount of Treasury Bonds issued will not exceed £5,000,000, but subject to that limit, the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

		Netherlands	17,650
		U.S.A.	176,600
		Egypt	2,000
		British India	428,911
Total value of imports of gold	9,169	Total declared value of exports registered in the week	625,306

Messrs Samuel Montagu and Co. write on February 28th as follows:—

GOLD.

A fair amount of gold came into the market and was acquired mainly on Indian account. The importation of gold into the United States of America continues to be on a very substantial scale. The January figures (larger than those of any month in 1922 except March and July) were \$32,820,163. The exports were \$8,472,198. If the net imports were maintained at a similar rate throughout the year the United States would increase its already swollen currency gold reserves by an amount equal to about 90 per cent. of the whole world production of the metal. The Times New York correspondent cables the following details as to how the imports were composed:—"The gold came from thirty different countries. Canada sent \$18,279,316, Great Britain \$9,403,211, Egypt \$1,010,670, and France \$1,070,032. The principal items in the exports were \$6,388,029 to British India, \$1,325,000 to Switzerland, and \$479,775 to Mexico."

SILVER.

China has sent both buying and selling orders during the week, sometimes even on the same day, though buying has predominated. The Indian bazaars have nibbled almost daily, rather cautiously, for often limits were given, and China fished away the supplies. The Continent sold a fair amount, but America has not operated freely, owing probably to some China demand coming upon the San Francisco market. Competition between the two great Eastern consuming countries had the natural effect of stiffening prices, and imparted—for the time being, at any rate—a measure of confidence in the near prospects of the market. A general bulletin of the American Mining Congress states that the Governor and Legislature of Utah have petitioned Congress for legislation to assist the silver mining industry. It adds that the strengthening of the lead market is discounting the possible decline in the price of silver, which some Mexican mining interests fear will take place when the silver output of the United States is placed upon the world market on the cessation of Government purchases under the Pittman Act.

INDIAN CURRENCY RETURNS.

NOTICES.

With reference to the recent appointment of Messrs H. Judson and R. B. Edwards as acting joint managers of the London office of the National Bank of South Africa, Limited, it is now announced that the confirmation of these gentlemen as joint managers has been approved, with effect from March 1st.

Lloyds Bank, Limited, announce that a branch of the bank is now open at 1 Bell Vue place, High street, Uckfield, under the management of Mr Campbell Harris, of the Lewes branch. The sub-branch at Rowlands Gill is now open daily (except Saturdays).

Barclays Bank, Limited, announce that they have converted their office at Skewen, Glam., into a full branch, under the management of Mr E. M. Morgan; also that they have opened a new sub-branch at Post Office terrace, Pontrhydyfen, near Port Talbot.

The Standard Bank of South Africa, Limited, announce that, as from March 1st, the address of their New York agency will be 67 Wall street.

A branch of the Commercial Bank of Australia, Limited, has been opened at Ipswich (Queensland).

The London Joint City and Midland Bank, Limited, announce the opening of a new branch at 55 and 57 Mount Pleasant, Tunbridge Wells, under the management of Mr Thos. H. Skeddall.

The death is announced in New York, on Saturday, February 24th, from pneumonia after a short illness, of Mr Frederick B. Francis, senior New York agent of the Canadian Bank of Commerce.

* Half-year.

† Tax free.

supplies. Suitable milling grades rule at 9s 3d to 10s, and inferior descriptions 8s 6d to 8s 9d per 504 lbs free on rail. Imported grades moved off slowly, and values were the turn in buyers' favour. No. 1 Northern Manitoba quoted 49s, No. 2 mixed Durum 40s 9d, and Rosafé 63 lbs 4s, all ex ship to arrive, with Australian 53s ex store, all per 406 lbs. A quiet tone also characterised the floating and forward cargo section, but sellers showed no undue anxiety to press, consequently prices were fairly steady. Steamers of Australian afloat sold 47s 9d, loading at 49s, No. 1 Northern Manitoba shortly due 40s 6d, and Barusso 62½ lbs on passage at 45s per 480 lbs, the latter to Germany. Crop prospects in the United States have improved on liberal rains in the winter belt, while advices from other exporting countries continue satisfactory. Floating supplies are on a liberal scale, and imports into this country quite equal for requirements. Flour in slow request at about late rates. London standard straight run quoted 41s, patents 43s to 44s, town households 39s per sack delivered in Metropolitan area. All English country straights 31s 6d to 33s 6d per sack delivered at London stations. Imported quiet, and tendency weak. Manitoba export patents range from 37s 6d to 41s, Minneapolis good patents 40s 6d, Pacific 37s 6d, and Australian 37s 6d to 39s, all per 280 lbs ex store. Maize ruled easier on

selling pressure and absence of inquiry. La Plata 35s 9d ex ship to arrive and 37s 3d landed, American mixed ex ship 35s and 36s 3d landed. On c.i.f. terms business remains largely in abeyance, and values ruled in buyers' favour, especially with regard to distant loadings. A steamer of La Plata May-June shipment sold at 35s per 480 lbs. Barley remains dull and weak. English malting of best quality met with fair attention, but other grades more or less neglected. Prices range from 6s 9d to 12s 6d per 112 lbs free on rail as to sample. Of imported, Californian quoted 42s 6d to 45s 6d ex ship, Australian Chevalier 47s to 53s landed, both per 448 lbs. Danubian 30s to 31s, River Plate 29s, both landed, Persian ex ship 24s 9d, ditto landed 26s, all per 400 lbs. On c.i.f. terms a steamer cargo of Dan-Bess-Kustendji f.a.q. on passage sold at about 28s 9d to the Continent per 400 lbs. Oats quiet, but generally steady. English ranges from 8s to 9s 6d per 112 lbs free on rail according to quality. Of imported, Plate f.a.q. 24s, No. 2 white clipped American 24s 9d, No. 2 Canada Western 28s 9d, No. 3 ditto 27s, and No. 2 Canadian feed 25s 9d, all landed per 320 lbs. Oatmeal in fair request at steady rates. London made all cuts quoted 17s 6d, flaked 20s 6d, ordinary Scottish oatmeal 18s 6d to 19s, and American all cuts 17s 6d to 17s 9d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated March 1st, is as follows:—Pig-iron: Makers are quite sold out for prompt iron, and largely until the end of April, and prices are 117s 6d to 120s per ton for Cleveland No. 3 G.M.B., and 115s to 120s for East Coast hematite. Efforts are being made to increase the output of pig-iron, but the extreme scarcity of furnace coke is a hindrance. Manufactured iron and steel: Steel prices have been raised by 10s per ton this week, and steel billets by 20s. There is an active demand, but costs have risen. Steel ship plates, £10; steel ship angles, £9 10s; iron bars, £12; steel rails, £9 10s; Iron ore: The demand is quiet again, but prices are steady. Best Bilbao Rubio 24s 9d to 25s 6d per ton.

Our Sheffield correspondent writes:—The scarcity of pig-iron and crude mild steel continue to dominate the trade situation, and those features become more pronounced as Continental supplies fall off. Steel makers are taking advantage of the position to enforce remunerative prices. Basic hard billets are 20s higher on the week, and wire rods have gone up 2s, while an additional 20s is being quoted for rolled steel. Hematite iron is scarcely procurable, and extravagant figures are asked for odd lots. The amount of actual business passing, however, is comparatively small. Users are heavily booked until the end of the quarter, and there is no disposition to place orders beyond that period. In fact, the rise in the market has checked business. Moreover, the outlook for the second quarter of the year is so obscure that neither producers nor buyers care to speculate upon it. Hence both are "waiting to see." The booking of orders for railway steel is increasing steadily, the low prices now being quoted having stimulated the placing of contracts for private wagons. The amount of overseas business is not large. The open-hearth steel plants in this district are working within about 10 per cent. of their capacity. Business is brisk in steel strip, wire rods, wire rope, and various kinds of manufactured steel. Little, if any, improvement can be reported in fine steel, and many kinds of steel tools, including files, the revival in December and January not having been maintained. Taken on the whole, some amount of progress is in operation, but the pace is scarcely perceptible. The scarcity of coke continues to check the production of iron, and fabulous prices are being offered by Continental users for this fuel. Extensive ranges of coke-ovens were allowed to go derelict during the slump, and cannot be quickly renewed. The home price is from 25s to 27s at ovens. There is a good demand for steam and railway coal.

Our Glasgow correspondent writes:—Demand for Scotch pig-iron remains strong, with the drawback that supplies of all qualities are exceedingly scarce, wholly inadequate to requirements, with no prospect of an early increase of supplies. For ironmasters are not prepared to expand on their outputs, which are controlled by the costs of raw materials—ores, coals, and furnace coke. On Wednesday Scotch hematite was marked up 7s 6d a ton, at £5 17s 6d a ton (Glasgow stations), and No. 1 foundry was called £6, a rise of 7s 6d a ton, No. 3 £5 15s, also an advance of 7s 6d a ton, both f.o.t. on makers' trucks at works. Business is described as active in the black and corrugated sheet branches on account somewhat of the wants of the Far Eastern and Australian colonies. Sheets ½ inch to ¾ inch are commanding £11 10s a ton and corrugated 24 gauge (f.o.b., Glasgow), £19 10s, 10s more than last week. Ship plates are a little variable, and while consumers are standing out against advances, makers are striving after a 2s 6d rise, which would fix £10 for ship plates, £13 for boiler plates, and £10 for angles. The steel tube trade has done a good stroke of business in Messrs Stewart and Lloyds having secured an order

for 37 miles of piping intended for the conveyance of oil from Meme to the Venezuelan Coast. Relative work has yet to be allotted (here it is expected) for controlling and pumping machinery, tanks, &c. It is a notable feature at the moment (say authorities) that the greater part of the work coming out emanates from foreign markets—Mexican, South American, and Pacific regions—which for long years (before the war) favoured the British market for steel, iron, and engineering manufactured materials.

Our Cardiff correspondent writes:—The price of practically every description of coal on the Cardiff market have advanced this week. The demand has been very active and pressing, but South Wales has not been able to meet it. The collieries have for weeks past been producing apparently to the limit of their trading capacity. Quite possibly they could add a little more to their outputs if the shipment capacity of the docks at Cardiff and Newport were greater, but the wagons and the sidings are their only storage accommodation, and when this resource is exhausted the collieries can only produce what the docks can take. Shipments this week have been very heavy, except on one day, when a heavy gale impeded the movements of shipping in dock, and buyers have had to be satisfied with such odd parcels for prompt shipment as they have been able to pick up. In these circumstances, it is not surprising that Germany and Italy have again gone to the United States for coal. The margin between the c.i.f. prices of British and American coals has now been reduced to a very small figure. With best steam large ruling up to 32s 6d and best steam smalls up to 24s, and the rate of freight to Hamburg and Rotterdam at 8s, and hardening at that figure, and with American coals at about 7 dollars f.o.b. Hampton Roads, and a freight to the Continent of 2.75 dollars, the difference is still a few shillings in favour of South Wales coals, but despatch is better in the United States. This competition from the United States has not been entirely unwelcome. South Wales colliery companies have had too bitter an experience of the reactionary effects of high prices on trade volume, and the American exports are likely to have a steady effect on South Wales and other British coal export prices. Moreover, the South Wales collieries are solicitous of the welfare of the local iron and steel industries. They recognise that any big rise in the price of coal will check the improvement in those industries, and at a meeting of the Coke Ovens Association this week it was decided to recommend the makers to continue delivery of the customary quantities of coke at reasonable prices. The export price of coke at Cardiff this week is about 80s, f.o.b., but the blast-furnaces in South Wales are being quoted 32s 6d and 35s at ovens, and engineering works 40s to 45s at ovens for foundry coke. The pitwood position has improved. The supplies are not so heavy as they were in January, and prices have advanced to 30s for spot supplies, and to 31s 6d for next week's deliveries. The anthracite coal market remains very dull, and the prices of coals and nuts have been marked down by from 5s to 7s 6d per ton. The following are the

MONTHLY BULLETIN OF STATISTICS.

The Monthly Bulletin of Statistics publishes statistics concerning the Financial, Economic and Labour conditions of those countries for which monthly figures are obtainable, so as to show the fluctuations in their economic situation from month to month. It provides bankers and business men with just the information necessary to enable them to keep track of exchange fluctuations and market possibilities in the various countries of the world. Annual Subscription, 18s. net; Single numbers, 1s. 6d. net.

OFFICIAL JOURNAL. The Official Journal contains the complete Minutes of the Sessions of the Council of the League of Nations, the text of the Reports and Resolutions adopted by the Council, as well as the principal official documents received or dispatched by the Secretariat of the League. Annual subscription 1923, £2 10s. All subscriptions must date from

current approximate quotations:—Best Admiralties, 32s to 32s 6d; second Admiralties, 30s to 32s; best drys, 28s 6d to 30s; black veins, 31s to 32s 6d; Western Valleys, 30s to 31s; Eastern Valleys, 30s to 31s; best bunker smalls, 24s to 26s; ordinary cargo smalls, 20s to 23s 6d; anthracite big veins, 35s to 40s; anthracite machine-made cobbles, 40s to 45s; French nuts, 40s to 45s; stove nuts, 40s to 45s; rubbly culm, 14s to 14s 6d; coke for export, 8s; inland blast-furnace coke at ovens, 32s 6d to 35s; patent fuel, 37s 6d; pitwood, ex ship, 29s 6d to 31s 6d. Apprehensions of an early rise in the price of tinplates, due to dearer tin and coal, have stimulated the placing of orders, and business this week has been done up to 22s per basis box I.C., f.o.b., or 1s per box above the minimum, while for the near future 23s is regarded as possible. Both the home and export demand is active, and in the week ending February 23rd the exports of iron and steel goods was greater than in any other week this year.

CUMBERLAND IRON.

(BY OUR WORKINGTON CORRESPONDENT.)

It was not contemplated that while the French adventure in the Ruhr would increase the demand for Cumberland hematite pig-iron, it would also curtail the means of satisfying it; but that is what has happened, and smelters are thus unable to take full advantage of the opportunities presented to them. A furnace was damped down at Workington last week, and it is not certain that production may not further have to be reduced. As a result the steel-works at Workington, which were restarted only a week ago, are laid idle again, and it is extremely improbable that there will be any resumption of operations as long as iron smelting is in any degree a more remunerative proposition than steel-making. The scarcity of coke, which is at the root of smelters' difficulties, is chiefly that of East Coast coke. Practically the whole of the make of West Cumberland coke is reserved for the furnaces between Workington and Carnforth; what is being reported is a very negligible quantity indeed. But the supplies of East Coast coke are substantially diminished, and will remain so, of course, as long as Germany and France can afford to take them. The position of smelters, it is scarcely necessary to say, is one of great difficulty, and with more business at command than they can deal with, they are naturally averse from selling forward. Such trade as is now being done is principally of a hand-to-mouth character. Old customers alone are securing other than the accommodation that it is usual to give in perplexing circumstances. Germany and France, and also Italy, are all buying ordinary iron; there are some American needs to cope with, and home requirements are strong, South Wales having considerable orders to place. Bessemer mixed numbers are quoted at £6 per ton delivered at Glasgow and Sheffield, £6 5s per ton delivered at South Wales and Birmingham, and £6 2s 6d per ton for export. The make of low phosphorus iron is likewise insufficient to satisfy the demand by Midland users, and prices, which vary according to analysis, are proportionately higher. Ferro-manganese is a sharper trade at £15 10s per ton, f.o.b., American having begun to take larger supplies, and spiegel commands £7 per ton. The steel trade merits little comment, business being on a very restricted scale. Native hematite iron ore, the output of which is rising, is in keen local demand, and the East Coast is bidding for low phosphoric ores. Special ore is quoted at 25s to 27s per ton, and ordinary sorts at 21s 6d to 24s per ton. The coal trade is booming. Irish and local wares are heavy, and best round coal stands at 27s 6d per ton, f.o.b., for shipment, and at 38s 2d per ton at pit for local consumption. Best steam is 30s per ton delivered, and washed steam 29s per ton delivered. Gas-producing coal is 29s per ton. All the small coal is going to the by-product ovens, and Irish coking coal is having to be imported to keep the coking plants working at top pressure. Coke to the local iron smelters is 22s 6d per ton. From 37s 6d to 40s per ton can be obtained easily from Continental users. By-products are a healthy market. The tar is all going to the chemical works. Creosote and pitch are being exported. Chemical products are mostly in sharp demand, but naphtha is on the slow side.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—All sections of the wool textile industry are experiencing a very quiet time, and the immediate outlook does not hold out much promise of any great improvement. The French occupation of the Ruhr seems to have brought business almost to a standstill, and firms engaged in the export trade are at a loss to know what to do. The German market for raw wool and semi-manufactures is almost pivotal in international trade, so that anything that upsets business in that direction is bound to react unfavourably upon the entire industry. Lack of confidence is resulting in users in this country following an extreme hand-to-mouth policy, and it looks as if this state will continue till such time as the political situation becomes less involved. An outstanding feature of the trade, however, is the comparative strength of the raw material markets. Wool in the Colonies has eased somewhat during the last few weeks, but it is still impossible to buy good combing wool to bring in tops at a price that users will pay. This is strikingly shown in the quotations from Sydney, where topmaking 64's is costing about 50d, or something like 5s 1d in the top. But in Bradford to-day one could buy very heavy weights of average 64's at about 4s 10d, while for a good warp top 2d more would find plenty of sellers. Taken all round, merinos and finer crossbreds have dropped about 1d since last Thursday, but there is not much change in medium and low crossbreds. Spinners complain of the absence of new business, and this, combined with the fact that many firms cannot get particulars

for orders already on their books, results in very erratic quotations. There is not much change in the piece-goods trade, but in all sections the position favours the buyer.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The wool trade is moving somewhat heavily, the distributive and consumptive centres being out of joint. The Bradford trade appears to have struck a quiet period, and many are wondering whether to accept the lower prices that are being offered for tops and thus cut their losses, or to hold on in the hope of doing better at a later period. There is no little discomfiture among manufacturers, for conditions among them have apparently not been more unsatisfactory since the slump three years ago than is the case to-day. It is quite true that prices for 64's tops have come down 4d to 6d per lb, and crossbreds a full 1d to 2d during the recent decline, but wherever the raw material is offered for sale buyers are keen, all sections still being prepared to operate. This is an anomaly which no one seems able to explain. The Hull sale last Friday was a great surprise, for Bradford buyers went to that centre expecting an all-round decline of 15 per cent., but the fall was no more than 5 to 7½ per cent., this being seen in exceptional cases, and chiefly affected greasy medium crossbreds and slipes. France and Belgium took the greater part of the offerings. Last Thursday another sale was held at Liverpool, 40,000 bales being brought forward, and here again the offerings sold exceedingly well, which goes to show that, in spite of the dissatisfaction generally revealed, there is really great confidence in the future. The political disturbance and semi-military movements on the Continent are the chief cause of the arrested consumption, particularly in Germany, and account very largely for such weakening of confidence as has been brought about. Another adverse development, which really arises out of French and Belgian policy in regard to Germany, is that the Governments of the two former countries have imposed a 10 per cent. duty on all goods sent into the occupied area. The first intimation of this step came as a great surprise to exporters in this country, for they only heard of it after having consigned goods which they expected to go through in the ordinary way, but which their clients were not prepared to take up under the new conditions. The occupation of the Ruhr by the French is also preventing the free movement of wool into important manufacturing areas, and has resulted in many mills being closed for want of coal and other supplies. The result of all this is that serious injury is being done to an important section of the trade of this country. The institution of a Parliamentary inquiry is needed to thrash out the whole problem, and, if possible, place the trade on a more generally sound footing than exists to-day.

Next Tuesday another series of London sales will commence, the quantity available being over 200,000 bales. This seems to be more than the trade can absorb at the present time, and the last week of the auctions could easily be knocked off without anyone being any the worse. The position will need to be very carefully handled by the Wool Importers' Committee and the British Australian Wool Realisation Association, otherwise serious injury will be done to the entire trade. Though wool is arriving in consuming centres in large quantities, the rate of machinery absorption has become smaller, and the financial resources of many firms are strained to the utmost. We hardly expect America to be such a keen buyer at the coming sales as at the last series, though France may easily be an extensive operator. No great keenness is likely to be shown by the home trade, hence the wisest course will be to offer wool judiciously. Just when manufacturers were beginning to see a better prospect, and wholesale fabric buyers were on the point of purchasing more liberally, wool values declined, and this has naturally created a more cautious attitude. A further fall in the raw material would make matters worse, but if a wise course is pursued the present ease may be expected to be only temporary. If the present quiet period can be safely got over, and general conditions as affecting British and Continental trading relationships can be improved, all the wool which comes forward will be readily absorbed at satisfactory prices.

THE COTTON TRADE.

MANCHESTER, March 1.

The conditions prevailing in the market during the past week have not shown much change. A fair amount of inquiry has been dealt with, but buyers have not been in the mood to place orders with any freedom. A few more contracts have been put through in piece goods for China, certain well-known styles being purchased. Operations for India have been irregular. Light

THE "ALL-IN" LIFE POLICY.

Every married man should send for particulars of this new and advantageous form of Life Insurance, which provides for:—

- (1) Educational benefits (cash payments); (2) Financial protection for family; (3) Income for life on retirement or at an agreed date; (4) The remission of premiums in case of total disability through accident or illness; (5) Rebate of Income Tax in respect of premiums paid.

Send a post-card to day. Address:—Life Dept.

ASSETS EXCEED £20,000,000.

bleaching cloths, printing materials, and fancies have attracted a fair amount of attention, but only odd lots have been sold in grey staples. The Near Eastern outlets have given very little support. Fancies of various kinds have been in steady request for European countries, Australia, and Canada, and finishing goods have moved off rather more freely for the outlets of Central and South America. It has been a struggle, however, for most manufacturers to prevent loss of ground. There has been a slight improvement in yarn inquiry, but users of American counts have not been frightened by the proposed big stoppage of production during March, and a restricted business has been done. A moderate turnover has occurred in Egyptian spinnings. Some fair lines have again been booked in bundle yarns for India. Much satisfaction has been expressed at the decision of the Indian Government not to make any change in the import duties on cotton goods.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The home hide market remains fairly steady, with a firmer tone. Best ox sold from 7½d to 8½d in Bermondsey on Thursday, two classes advancing ½d, whilst one fell ½d. Seconds were a shade firmer, three classes showing an advance of ½d. Cows were steady at 6d to 6½d for the best class. Calf were erratic, but the tone

was decidedly firm. Best sold from 7½d to 1½d, most classes showing fractional advances of ¼d to ½d. Wools were sold at last week's prices, viz., 5s 6d to 12s 6d each, the hog class also making again from 6s to 15s each. Imported hides are firm, with British tanners not inclined to operate on a large scale. 13,000 S.A. dry hides arrived in Liverpool last week, and full prices are being asked by holders. Sales of frigorifics are reported on American account at \$44 to \$48, according to origin and condition. Saladeros are also firmer, and Montevideo Ferres ox have been sold at \$54, as against a January price of \$52. The Chicago market is calmed as quiet, with best packers still nominally quoted at 20 cents.

Business, although quiet, in Bermondsey seems a shade better, as many small orders have come along of late for sole leather. The demand runs still on very cheap bends, although well-known tannages are regularly wanted by bootmakers of repute. Prices are very firm, a fact which shows tanners have faith in the stability of the market. Pinned offal is scarce, and the demand so great for some weights that tanners have booked ahead in some cases. Little American sole is arriving, and this keeps the home market firm—a fact for which tanners are thankful.

There is little change in regard to upper leathers; glacé kid is quiet, and the demand seems to have now turned on the better grades. Low grades seem to have been almost sold out, and tanners hold prices all round will soon show an advance in view of the firmness in the goatskin market. Curriers are still slack, and are now refusing orders at buyers' price, so firm is the E.I. kip market.

The boot trade seems patchy, but improving. The chief demand is for ladies' shoes, and some firms in Leicester and Norwich seem to have good spring orders in hand.

VEGETABLE OILS AND OILSEEDS.

Linseed, on firm Argentine advices, has continued a steady market. On the whole, values show only slight variation. A fair business has been done on crushers' account for shipment at £18 to £18 2s 6d February-March and £17 15s to £18 for April-May to Hull, while Calcutta to London offers round £20 5s February-March. Trade has been stimulated somewhat by the improved oil demand and the need for crushers to provide against their commitments in that direction. Larger arrivals and more seed on passage is causing a reduction of the premium paid for "spot." The quantity (Plate and Indian) afloat for the U.K. has increased to 70,300 tons and to the Continent to 92,200 tons, together 162,500 tons, against 150,300 tons a week ago and 107,000 tons same week last year.

The appearance again of America as a buyer of linseed oil, this time for March shipment, led to a strong market at the close of last week, and a large business was done at advanced prices, speculators likewise being prominent. America's purchases include one lot of 800 tons in bulk per tank steamer from Hull to New York, March shipment, and further inquiries for forward positions are circulating, the high import duty apparently having ceased to be an insuperable barrier. Prices subsided somewhat from the highest, but are again very firm, and have risen sharply.

The decline in Egyptian cottonseed was further accentuated by the reports of a yield larger than previously estimated, and as low as £10 10s per ton has been accepted for Sakellaridis for March loading and £10 11s 3d for seed about due, since when the market has steadied, and sellers are asking more money. Bombay cottonseed, after declining below £9, has firmed up again to the extent of 5s and more per ton. Cotton oils have been dull, and crude Egyptian has lost 20s on the week. Some re-sale refined oil has offered, but only a moderate interest has been shown in this article.

More attention has been paid to soya beans, and large transactions are reported at £11 17s 6d for first half March and £11 12s 6d March-April to Hull and £12 8s 9d loading to Hamburg. Quite a good demand is reported for crude soya bean oil, values of which are about maintained.

Linseed and cotton cakes continue in disappointing demand, and prices are lower in consequence. Supplies are steadily increasing now that the mills crushing the seed are actively engaged in dealing with the large arrivals of seed.

OVERSEAS PRODUCE MARKETS.

Mincing lane, Friday, March 2.

SUGAR.—The general tone of this market during the week ruled quieter, but prices for actual parcels were steady. Of British refined, Messrs Tate and Lyle's cubes quoted 65s to 66s; crushed, 62s 6d; granulated, fine and coarse, 60s 10d; No. 1, 60s 7d; No. 2, also London make, 60s 4d; caster, 61s 6d to 62s 4d; finest, 64s 1d; yellow crystals, 54s 1d; pieces, 45s to 55s 3d, as to quality. Granulated, one month, 60s 3d; April, 60s 6d; May, 61s; June, 61s 3d; July-August, 61s 6d. Crystallised West India, 54s to 55s, according to sample. American granulated, spot, 58s 6d; ditto, February-March shipment, 31s 6d to 32s, c.f. and i., London. White Java, spot, sold, 56s for medium qualities; ditto, May-June, steamer, 28s to 26s 3d and 27s 9d; June-July, 26s 3d to 25s 3d and 26s 7d; July-August, 25s to 24s 3d and 25s 6d, c.f. and i., terms, London. White Mauritius, spot, changed hands at 54s 6d. Continental parcels for shipment more or less nominal in absence of definite offers. Cuban basis, 96 per cent., March, quoted 26s 9d; Brazilian basis, 80 per cent., March-April, sold, 19s, c.f. and i., U.K. Cuban stock totals 417,900 tons, against 414,500 same time last year. Terminal market active, but very unsettled and lower while influenced by heavy liquidations of the March position in New York. White May, sold, 29s 4d to 27s 9d and 29s 10d and 29s 6d; August, 29s 3d to 27s 6d, 29s 10d, and 29s 6d.

COFFEE.—A steady demand was experienced, and Costa Rica descriptions are dearer on the week, being well competed for in auction. East India quietly steady. Good to fine bold Kilimanjaro, sold, 100s to 111s 6d. Costa Rica, bold sizes, 109s 6d to 141s 6d. Future delivery market very dull.

COCOA.—A quiet but steady tone characterised this market. Spot prices remained without material alteration. Accra, F/F quality, March-May, sold, 36s, f.o.b. terms. **TEA.**—Rather over 47,000 packages Indian were catalogued in auction this week, and with competition generally active and better distributed, general firmness governed proceedings. Ceylon sales of 14,100 packages engaged good support, and prices in most cases advanced 3d to 3d per lb. Java and Sumatra sold with a steadier tone.

RICE remains in the same slow condition. Two Stars, spot, 14s to 14s 3d; March-April, 13s 3d. No. 1 garden Siam, March-April, 13s 10d, c.f. and i. Broken kinds slow, while mostly held above buyers' views. Rangoon beans, spot, 8s; Japanese peas, spot, 32s.

SPICE.—A quiet state of affairs prevailed in the pepper market. Fair black Singapore, spot, 44d; February-April, 44d; Aleppy, spot, quoted 48d; Tellicherry, 48d; white Singapore, 64d; Muntok, 63d; February-April, sold, 64d; and March-May, 68d. Zanzibar cloves, spot, done 1s 1d; January-March, 1s 1d to 1s 1d; March-May, 1s 1d to 1s 1d. Pimento, spot, 24d; flake tapioca, spot, 34d for fair Singapore; and 34d per lb for fine Java. Fair Penang seed tapioca, spot, 26s; sago flour, February-April, 13s 9d; desiccated coconut, fine cut, spot, 39s 9d; medium, 40s 3d cwt. Ginger dealer. Fair washed rough Cochon spot, sold, 67s 6d to 70s cwt.

FRUIT.—Currants steady, with moderate inquiries. Pyrgos, bags, quoted 53s; quarter-cases, 54s 6d. Sultanas steady, but trade moved quietly. Half-boxes of Valencia raisins quoted 33s to 36s cwt.

JUTE.—With demand from spinners still confined to pressing needs, the market remained in a dull state and quotations favoured buyers, but improved later. First grade, February-March, Hamburg, sold, 131 10s to 132; March-April, 132 to 132 10s; April-May, 132 10s to 133 10s and 133. Hessians and twills very quiet and featureless.

REMP.—Manila firm, but at the same time quiet. G grade, February-April, quoted 138; J, 136 10s; K and L, 135 10s; M, 134 5s. New Zealand quiet, at recent rates. African sisal, No. 1 G.E.A., March-April, sold, 136 7s 6d.

SHELLAC.—Market continued quiet, but steady, as sellers were not pressing. Fair T.N., spot, quoted, 360s; March, 350s; May, sold, 317s 6d to 322s 6d.

COPRA.—Market slightly unsettled, and general course of trade ruled quiet but dearer. F.M.S. Straits, February-April, Rotterdam, sold, 127 7s 6d to 128 15s; steamer named, 128 5s to 129; March-May, 127 5s to 128 13s 9d; Ceylon, February-April, quoted, 130; Dutch East Indies, steamer named, sold at 128 17s 6d; February-April, 128 15s 6d; Java, quoted 129; South Sea Islands, sold, 127 5s; ditto, Cebu, 128 2s 6d; F.M.S. Straits, February-April, Marseilles, sold, 127 17s 6d; mixed, ditto, 126 17s 6d to 127 12s 6d. Palm kernels, April-June, Liverpool, sold, 119 12s 6d.

RUBBER.—Steadier, with a fair trade doing. Standard plantation crepe and sheet, spot, all-o March, sold, 1s 5d to 1s 6d, 1s 5d; April, 1s 6d to 1s 5d; April-June, 1s 6d to 1s 6d, 1s 6d; July-September, 1s 6d, 1s 6d; October-December, 1s 6d to 1s 6d. To New York, standard sheet, March-April, sold, 1s 6d, c.f. and i. terms. Fine hard Para, spot, quoted 1s 4d; soft fine, 1s 3d; ball, 1s 2d.

KAPOK.—Market firm. Business done in Java quality, spot at 1s 7d; March-April, 1s 6d; new season's, October-November, 1s 4d, c.f. and i. terms.

EGG PRODUCTS.—Market slow, but sellers require previous prices.

OILS.—Lined market irregular, but firm on balance, with a fair demand. Spot, net, naked, 42s; March-April, 38s 9d; May-August, 37s 3d; September-December, 36s 6d. Rape firmer. Crude, spot, 44s; refined, 47s. Cotton quiet. Crude Egyptian, spot, 39s; common edible, 44s; deodorised (in barrels), 46s. China-wood quiet. Hankow, spot (barrels), 106s; March-April, 78s. Coconut firm. Ceylon, spot, 43s 6d; March-April, 42s 9d; Cochon, ditto, quoted 44s. Soya firm, Oriental, barrels, March-April, 39s 6d. Japan fish steady. March-April, cases, 27s. Cod steady. English, spot, 30s to 31s. Groundnuts quiet. English crushed, naked, spot, 46s; deodorised, barrels, 54s. Turpentine irregular. American, spot, 109s 3d; March-April, 109s 6d. Rosin easier for common grades. American, grade B, 43s 6d; French, F/G, 13s 9d; H to I, 13s 9d; W/G, 17s 6d; W/W, 48s 9d. French, F/G, 13s 9d; W/W, 15s 6d per cwt. Petroleum steady.

American standard white, spot, 1s 1d; and water white, 1s 2d per gallon. Castor oil steady. First pressure, spot, to June, quoted 49s; second pressure, 46s, and pharmaceutical, 54s per cwt.

OLSEEDS.—Market quiet, but prices firm. Bold Bombay, afloat, quoted 121 10s; small Bombay, ditto, 120 7s 6d; Calcutta, afloat, 120 10s; February-March, 119 15s; and April-June, sold, 119 to 119 2s 6d; Plate, afloat, 118 7s 6d paid; February-March, 118 5s; April-May, 117 15s to 118. Rapeseed firm. Toria, afloat, 118 15s; February-March, 118; Jamba, February-March, 114 5s. Cottonseed easier. Egyptian black, March, 111 17s 6d; and white, sold, 110 10s to 110 16s 3d. Bombay, March-April, sold, 119 7s 6d. Gingly-seed firm. Large, Bombay, February-March, sellers, 124. Chinese, March-April, 124 to 124 10s, to Continent. Groundnuts firm. Coromandel, machine dried, February-March, quoted 122 5s to 122 15s. Chinese deodorised, f.a.q., February-March, 122 2s 6d; Nigerian, ditto, 122 12s 6d. Soya beans firm. Manchurian, February-March, quoted 112 5s. Castorseed quiet. Bombay, March-April, 118 15s ton.

METALS.—Tin: Market opened strong in sympathy with higher Eastern advances, but later, however, a reaction occurred on selling pressure, and values closed 15s to 20s lower on previous week. Standard cash, sold, 1200 5s; March, 1202 10s to 1201 15s; and three months, 1205, 1201 10s, and 1201 15s. Advances from the East report sales on the basis of 1210 5s, c.i.f. Market subsequently became excited, and prices marked a sharp advance on liberal buying orders and a further rise in Eastern quotations. By the middle of the week standard cash sold up to 1209 10s; March, 1209; and three months, 1210 10s. Eastern business was reported at 1212, c.i.f. At Thursday's session values further hardened with a steady demand, standard cash sold at 1209 to 1212 10s to 1211 10s, and three months at 1211 to 1212 to 1210 to 1212. The tendency was easier at the final meeting. Standard, cash, sold at 1210 to 1209 15s, and three months at 1210 to 1212 to 1210. English ingots, 1208 5s to 1209. Copper ruled firmer, and a good business transpired at 15s advance of previous week's close. Standard cash sold at 171 17s 6d; March, 172 2s 6d; three months, 171 17s 6d. Values continued on an upward course, with liberal dealings. On Wednesday, cash reached 172 2s 6d, March, 172 5s, and three months 173. At Thursday's market prices were again firmer, with a large business. Standard, March, sold at 173 7s 6d to 173 5s to 173 10s, and three months, 173 7s 6d to 174. Antimony, ordinary brands, 127 to 129 10s. At the final session rates were fully steady, with an active demand. Standard, cash, sold at 173 10s, and three months 174 5s to 174 10s. Electro, 180 10s to 181 10s; best selected, 176 10s to 178 10s; strong sheets, 1104; wire bars, 181 10s. Aluminium, home trade, 1100; export, 1105. Lead quiet at 129 5s to 128 15s, as to position. Spelter firmer at 137 to 137 10s.

TALLOW.—Messrs Colchesters and Woolner write on February 28th as follows:—The tallow market was steady during the week, and prices are mostly unchanged. Inferior qualities meet with a considerable demand and fully maintain their value, while good sorts are not saleable without some concession. At auction to-day 1,443 casks tallow were offered, and 953 were sold. Quotations are:—Australian mutton: Fine, 44s 6d; good to fair, 43s 6d to 41s 6d; dull to dark, 39s 6d to 36s 6d; hard, none. Australian beef: Fine, 43s; good to fair, 42s to 40s; dull to dark, 37s 9d to 36s; sweet, 43s 3d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 42s 6d; and mixed, 43s, c.i.f., London, 39s 9d. The market letter is unchanged. Town tallow, 36s 6d per cwt. Rough fat, per 8 lbs, 2d; melted stuff, 26s 6d per cwt. Quotations are:—Town: 36s 3d net cash, naked, ex works. Country: 35s 9d; home melted, shipping casks, net, f.o.b., good coloured, 40s; fair to dull, 37s to 36s. Bone fat: White, none; pale, none; benzine, 34s; melted stuff, 33s 6d, f.o.b.

Chief Office: HOLBORN BARS, LONDON, E.C.1.

Presented at the Seventy-Fourth Annual Meeting, held on March 1st, 1923.

A bonus addition will be made to the sums assured under all policies entitled to participate under the Bonus Distribution Scheme, on which ten years' premiums have been paid and which become claims by death or maturity of endowment between 2nd of March, 1923, and the 4th of March, 1926, both dates inclusive as follows:—

The four Prudential Approved Societies have during the year paid to their members benefits amounting approximately **£3,138,000**, making a total of over **£18,197,000** paid since National Insurance was introduced. The number of persons admitted to membership of the Societies during the year was **328,080**, of whom **146,903** were men and **181,177** women.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."
Office: Granville House, Arundel street, Strand, London, W.C. s.
Copies of the Economist may always be obtained in the City at Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmonds, 5 Birchin lane; Barker and Howard, 6 Fenchurch buildings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15 Cullum street; Willing and Co., Limited, 50 Copthall avenue, and 53 Finsbury pavement.
Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de l'Opera.

PRESSURE soon made itself felt again in the Money Market, the whole of the March interest payments having been met out of revenue. A small amount had been borrowed by the Government from the Bank of England in Ways and Means advances, in order to take up maturing Treasury bills, but this little operation appeared to have been very quickly cancelled, as no trace of it appeared in the Bank return. Tax-gathering and window-dressing thus produced their full effect on the

market, which found itself obliged to increase its indebtedness to the Bank. Discount rates were talked rather firmer, but there was no appreciable advance. The surprisingly high rate at which the Treasury Bills were allotted yesterday produced a very nominal market, quoting three months' bank bills at $2\frac{3}{8}$ per cent. discount.

	Mar. 9, 1923.	Mar. 2, 1923.	Feb. 23, 1923.	Feb. 16, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1 (Jly. 13, '22)
Discount (Call)	1	1	1	1	1 (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills) ..	2½	2½	2½	2½	2½

The Bank return showed a decrease of £472,000 in the note circulation, an increase of £4,000 in the stock of gold and a decrease of £476,000 in the Reserve. Last week's mysterious increase of £4½ millions in the Other securities was followed this week by a still more mysterious decrease of £8½ millions. Deposits thus shrank by over eight millions, more than five of which came out of Public. Currency notes outstanding were increased by £2,055,400 to £281,156,100, which includes £1,500,000 for notes called in but not yet cancelled. The fiduciary issue is £230,206,000, or £39,977,800 below the maximum.

The February statement of average weekly balances of the London clearing banks shows a substantial drop in deposits. The statement is printed in full on another page, and below we summarise the figures for the nine English banks for a number of months:—

(Million £'s.)

	Dec., 1921.	March, 1922.	June, 1922.	Dec., 1922.	Jan., 1923.	Feb., 1923.
Capital and reserves	115.9	115.9	115.9	116.0	116.2	116.2
Acceptances	65.3	57.1	55.2	72.8	76.3	76.8
Deposits (incl. undiv. profits, &c.) ..	1,818.6	1,746.9	1,755.2	1,684.7	1,692.2	1,643.9
Total Liabilities	1,999.8	1,919.9	1,926.3	1,873.5	1,885.3	1,836.9
Coin, notes, balance at bank, and cheques in course of collection ..	273.5	245.8	251.3	253.0	246.5	234.5
Money at call	10.7	102.5	113.0	106.0	103.0	103.0
Investments	243.3	392.7	412.0	384.5	382.0	373.4
Discounts	42.3	350.5	346.2	298.3	320.0	286.4
Loans and advances	763.3	746.2	723.3	732.7	725.5	736.5
Over for accept., premises, &c.	90.7	82.2	80.5	99.0	102.3	101.1
Total assets	1,999.8	1,919.9	1,926.3	1,873.5	1,885.3	1,836.9

The present total of deposits is the lowest touched since the monthly figures were resumed, the previous lowest being £1,660 millions in September. A year ago there was a drop of £24 millions in deposits in February, and this and last month's drop of £50 millions are to be ascribed in some measure to the activities of the tax gatherer. On the credit side the principal movement is a reduction of £34 millions in discounts, which is accompanied by declines of £9 millions in investments and of £12 millions in cash. Advances, on the other hand, have risen by £10 millions.

THE STOCK MARKETS.

A firm tone prevails in most sections of the Stock Exchange, but the volume of business is hardly as good as the movements in quotations might suggest, and is somewhat spasmodic in its incidence. War loan is firm, and Consols have been a strong feature in the gilt-edged market, where the general tendency was slightly upward. The foreign market has seen no wide movements this week, but German 3 per Cents. have again improved. Among Home Railway stocks, London Midland and Scottish and Great Westerns have been in keen demand, while there has been some buying of American rails. The rubber share market remains very quiet, but oil shares are decidedly harder. In the commercial markets the public are buying shares in companies that are believed to have turned the corner of war depression. Electric light shares continue to improve, and a relapse in Courtalds contrasted with strengthening in other textile shares.

In the mining sections the chief feature this week has been the strong speculative attention paid to tin shares.

THE COMMODITY MARKETS.

Remarkable variations in prices have been noticeable on the Cardiff coal market. Our South Wales correspondent mentions that conditions are reminiscent of the boom days of 1919-20. A week ago the top price for best Admiralties was 32s 6d per ton, but to-day some of these coals are quoted at 37s 6d. Our Sheffield correspondent states that the famine in coke continues; more steam coal is going into consumption. The demand for prompt pig-iron cannot be met, and prices have advanced further, No. 3 Cleveland G.M.B. having been sold for 125s per ton. There are plenty of enquiries for steel at recently advanced prices, and from Sheffield it is reported that the demand for steel material from home and overseas sources continues to increase; our Glasgow correspondent mentions that orders are "fairly numerous." Buyers in the Manchester cotton trade are apparently not in a position to deal at current quotations, and purchasing is confined to immediate needs. Wool values are being fairly well maintained in view of the unsatisfactory manufacturing condition in Yorkshire. It is perhaps significant that Continental buyers are operating with comparative freedom at the Colonial Wool Sales in London. Other details of markets will be found from special correspondents on later pages.

FOREIGN EXCHANGES.

In the foreign exchanges markets have again been restricted and dull, with practically no outstanding features. There was a slight reaction in the middle of the week in the dollar rate, which on Tuesday and Wednesday was down at \$4.69½, mainly as the result of purchases from this side of dollar securities, but this has been overcome again, and the quotation yesterday morning of \$4.70½ was actually rather better than seven days before. Forward rates, at 1 to 1½ cents per month over spot, are very slightly narrower than for the previous week. The German mark, after being steady now for about a fortnight round 106,000, showed a sudden recovery on the 7th to 96,000, from which it has reacted again to about 98,000. This movement is due, of course, primarily to official intervention, and it is impossible, in view of the political situation, to feel any certainty that it can be successfully prolonged. At the same time, should the French Government ever be brought to consider the necessity of a reasonable settlement, the present rates cannot be considered too low. Forward rates this week have moved down again from 8-13,000 marks to 4-6,000 marks per month above spot. Paris, after some appreciation on Monday to 76.92½, has moved up again quietly to 78.10 yesterday morning, as compared with 77.55 the preceding week, while Brussels is up to 90.45, as compared with 88.35, in both cases the highest rate since the beginning of February, with the exception of the 17th of that month. No new factors have intervened, and the fluctuation can be sufficiently explained by the movement of opinion with regard to the German problem. Forward rates in Paris, at 8-10 centimes above spot, are about 2 centimes narrower than a week ago. Brussels, at 3-5 centimes below, is rather wider. Among neutral exchanges, Amsterdam at 11.89½ shows little change. Madrid at 30.24½ is higher than the 30.16½ of the 2nd, but shows some recovery on Thursday's rate of 30.28. Switzerland has moved decidedly in our favour to 25.20, Christiania at 26.02½ and Copenhagen at 24.57½ have both depreciated, while Stockholm has moved against us to 17.65½. Helsingfors, which is at present in a very strong position, has again appreciated slightly to 169½. In Central Europe, Warsaw has stayed about 200,000, and Vienna is absolutely unchanged at 330,000, and Prague remains steady at 168½. Belgrade, Bucharest, and Sofia also show little change, but are all more or less nominal. In the East the rupee is practically unchanged at 1s 4½d, while the yen also shows little movement at 2s 0½d. Silver has been firmer on some Chinese demand, with India as a less heavy buyer. Shanghai is up to 3s 2½d, but Hong Kong is unchanged. In South America there has been no movement of importance to record.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 3rd:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	25,098	Interest on Debt	14,693
Taken from Exchequer Balances ..	919	Supply Services	9,398
		Reduction of Debt	933
		Sundries	933
	25,117		25,117

Perhaps the most significant point about the week's revenue and expenditure statement is the fact that expenditure is down to just over £24 millions, as against £30½ millions for the corresponding period a year ago, interest on War Debt taking £14,693,000, as against £16,916,000, and Supply Services £9,398,000, as against £12,788,000. Revenue produced £25 millions, as compared with £38 millions. Income-tax at £18,723,000 shows a sharp decline on last year's £26,413,000, although keeping close to the figures of £18,141,000 recorded for the previous week.

The week's operations reduced the National Debt by £932,900, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 200	Treasury Bills	- 25,386
4½% Treasury Bonds	+ 3,978	Funding Loan, &c.	- 1,761
Bank of England Advances	+ 1,500	Anglo-Persian Oil	- 775
Public Department Advances ..	+ 21,450	Sundries	- 139
	+ 27,128		- 28,061

The floating debt was reduced by £2,440,000 to £849,906,500.

FINANCIAL YEAR, 1922-23 (April 1, 1922, to March 3, 1923).

THE BUDGET PARADOX.

It is almost certain that the Budget situation, which in a few weeks the Chancellor of the Exchequer will have to lay before Parliament, will present two sharply contrasted features which the public will find puzzling and paradoxical. On the one hand, the accounts for a year

of bad trade and reduced taxation will close with a very handsome surplus, which may amount to 90 millions; while on the other, the accounts for the coming year will show that there is no margin from which to make concessions for the taxpayer except by resorting to unsound methods of finance. The apparent mystery is, however, readily explained if the national accounts are examined with care. We will take first the current year's surplus.

The reasons for the substantial margin which the Chancellor has in sight are, on the one hand, the payment of very large arrears of income-tax, which is swelling the revenue, and, on the other, a large reduction in interest charges, as a result of the fall in the rate of interest on the floating debt and a reduction of expenditure on the supply services below the estimate. The leading features of the accounts are as follows:—

Revenue.—On Customs receipts the Chancellor expected to lose nearly 13 millions through trade depression, and a further five millions through remission of tea, &c., duties. Probably he will only lose about six millions, which shows that consumption of dutiable goods has been as good as in the previous year. Excise receipts should not be far short of the estimate. The Motor Duties are yielding more than the estimate. Estate Duty receipts are also up, and Stamp Duty receipts, largely on account of active business on the Stock Exchange, will also show an increase. But the largest excess is in regard to income and super-tax, the yield of which is likely to be 50 millions above the estimate. The explanation of this is mainly, no doubt, the fact that a large proportion of the very considerable arrears that had accumulated twelve months ago have been paid during the year. Individual taxpayers have been pressed to get more up to date with their payments, while many big firms which had outstanding claims against them, and not having a profitable use for their resources in their own business, have paid their arrears from their liquid reserves. Against these advantages the Chancellor has received practically nothing from E.P.D., and, further, will probably be considerably down in his "special receipts"—the least calculable item in the Budget.

Expenditure.—The Budget included an item of 25 millions for contingencies, but so far the Supplementary Estimates have not equalled this amount. Including this margin for contingencies the Budget Estimate for Supply Services was 546½ millions. But including supplementaries up to date the estimate for these services is only 539 millions. It is possible that the Treasury has some exceptionally large payments to make which the accounts do not disclose, but the largest payment under the head of "Special Expenditure," viz., the payment to the railway companies, has already been incurred, and unless there is some surprise in store, expenditure on Supply Services should not exceed 500 millions—a saving of 46 millions over the original estimate, and 39 millions on the revised estimates. Again, nearly 30 millions will probably be saved on the reduction in the rate of interest on Government Debt, the net result being that gross expenditure should not exceed 835 millions.

Both on the revenue and expenditure sides the figures for the last few months of the year are peculiarly heavy, and may vary within fairly wide limits, according to whether the screw is being put on or not to hasten the payment of direct taxes, and in the case of Customs and Excise, whether importation or taking of goods out of bond is being hastened or delayed in expectation of a change in the taxes. For these and other reasons, many items in the account are still very doubtful, but we anti-

ate that if the accounts show normal changes, the annual statement will work out somewhat as follows:—

FORECAST OF COMPLETED BALANCE-SHEET, 1922-3.

REVENUE.		EXPENDITURE.	
Budget Estimate.	Probable Realisation.	Budget Estimate (inc. Supplementary Estimates).	Probable Realisation.
Min. £.	Min. £.	Min. £.	Min. £.
Customs.....	112½	124	
Excise.....	160½	155	
Motor Duty.....	10½	13	
State, &c., Duties.....	48	57	
Stamp Duties.....	18½	21	
Land, House Tax.....	5	3	
Income, Property, & Super Tax.....	329	380	
Excess Profits Duty.....	28	1	
Corporation Profits Duty.....	20	19	
Post Office.....	54½	55	
Crown Lands.....	1	1	
Interest.....	14	14	
Miscellaneous—			
Ordinary.....	22	22	
Special.....	90	60	
	910½	925	

Actual Revenue and Expenditure to March 3, 1923..... 807..... 720

The surplus of £87 millions already accrued is, of course, merely an accounting one, and has already been used in the reduction of debt. It is true that during the current twelve months the debt has increased in nominal value by some 30 to 40 millions, but this is due to conversions, which added £134 millions to the nominal value of the debt in the first six months of the year. The process, however, saved the Government nearly a million a year in interest, and the increased total has been reduced again automatically as the surplus on the budget has gradually materialised. No recent return is available showing in detail the extent of conversion of debt in recent months, but the changes of the year appear to have been as follows:—

Increase in nominal value of internal debt other than bills—		Min. £
By conversion (chiefly into Conversion Loan).....		+ 134
By issue of Treasury bonds for Treasury bills (£161 million issued in year, of which £14 million in respect of Conversions, and £65 million to balance redemption of 5% Exchequer bonds and 1922 War bonds).....		+ 82
Total increase.....		+ 216
Reduction in Treasury Bills outstanding—		
By effect of Budget surplus to 24/2/23.....		— 86
By substitution of Bonds for Bills.....		— 82
By substitution of other floating debt.....		— 7
By reduction of balance with Bank of England.....		— 7
Total decrease of Treasury Bills.....		— 182

The reduction of the floating debt by non-renewal has already saved the country a considerable sum of money in interest, say, the equivalent of £4 millions in a full year. Indeed, the results achieved mean that while the Government took power a year ago to suspend the obligatory sinking funds, the year's revenue has enabled them to do more than double the debt reduction which the sinking funds would have achieved—but that the reduction has been made in the floating instead of in the permanent debt.

When we turn to the problem of the coming year we are on less sure ground. But the estimates published this week enable us to form a fairly clear idea of the prospects. Our rough forecast is as follows, the most uncertain items being printed in italics:—

FORECAST OF BUDGET OF 1923-4.

REVENUE.		EXPENDITURE.	
Min. £.	Min. £.	Min. £.	Min. £.
Customs.....	125	Debt, Permanent.....	16
Excise.....	155	" Unfunded.....	300

Land, House Tax.....	3	Land Settlement.....	3
Income, Property, and Super-tax.....	310	Other Consolidated Fund Charges.....	2
Excess Profits Duty.....	20	Supply Services—	
Corporation Profits Duty.....	20	Civil Services.....	314
Post Office.....	55	Military Services.....	125
Crown Lands.....	1		
Interest.....	14	Obligatory Sinking Funds..	35
Miscellaneous—Ordinary.....	22		
Special.....	20		
	810		820

The most doubtful points on the revenue side are income-tax and "special receipts." As regards income-tax,

there seems no reason to think that the reduction from 6s to 5s in the £ has had, or will have, any substantial effect in increasing the yield of the tax. The reduction is not nearly large enough to affect the general trade situation, and in the preceding table we assume a fair trading year, but not a big trade recovery. We believe the present surplus on income-tax to be almost entirely due to arrears, but we can hardly expect this year's experience to be repeated. We assume that the Chancellor last year was correct in anticipating that, apart from these arrears, he would have lost 40 millions through declining trade, and another 30 millions through the reduction of 1s in the £. This second loss was estimated to be 50 millions in a complete year, which would make the estimate for a whole year with income-tax at 5s, say, 310 millions. From this there is something more to be deducted owing to the fact that two bad years instead of one will be included in the forthcoming assessments; but this loss may perhaps be offset against the payment of any arrears that still remain. We have, therefore, estimated income-tax at 310 millions, though this is, if anything, a rather optimistic view. A far more incalculable item is that of "special receipts." The sale of war stores is practically completed, but they have not all been paid for, many contracts being arranged for a period of years. Further, the item of "special receipts" contains payments for various other costs arising out of the war, such as interest and amortisation on loans to contractors. Without special knowledge it is almost impossible to forecast this item, and one can only say that it will be smaller than this year.

On the expenditure side, the estimates issued this week for the Civil Services are not as good as was hoped. They show a reduction of £88 millions. Hardly any of this saving, however, is due to economy in administration, but is due to the automatic termination of war charges. Thus 47½ millions comes under the heading of "special" expenditure (the largest item being the final payment to the railways), 3½ millions under ordinary unclassified services—road grants, unemployment, &c., 16 millions in respect of pensions, and two millions the promised saving in Mesopotamia. Of the remainder 3 millions is due to falling costs in the Post Office, leaving 16 millions as the saving in all other directions. But, as we have seen, there has probably been a saving of 39 millions in supply services this year, much of which must have come from the Civil Services. When it is also remembered that a considerable sum will be saved on unemployment insurance, it is evident that the rest of the Civil Services, though below the current year's estimates, do not show much reduction from the current year's expenditure. The fighting services may provisionally be included at £125 millions. The Air and Navy estimates amount to £70 millions, to which are provisionally added £55 millions for the Army, against £62½ millions a year ago. As regards the other chief item on the expenditure side, the interest on the unfunded debt, a certain amount of 5 per cent. Government debt in the form mainly of 1923 War Bonds will be replaced presumably at a lower rate of interest; but against that has to be set the possibility that there may be a hardening of money rates in the coming year, which will increase the total interest payments on the floating debt. Moreover, interest on the Treasury Bonds is higher than that on the Treasury bills they have replaced, and this higher rate will be paid for a full year, as against a part only of the current year. On the whole, therefore, we cannot count on a further saving of interest, and this item will, moreover, be increased by the fact that we shall have to pay 10 millions more to the United States than we paid in the current year. We, therefore, have put in this item at £300 millions. On these bases the accounts will show a margin of 25 millions, without allowing anything for contingencies. But out of this has to be paid the obligatory Sinking Funds, and unless these are to be once more abandoned, the surplus is turned into a deficit of 10 millions.

The hope of a substantially better result than we have suggested rests mainly upon our having greatly under-

estimated "special receipts." It is also possible for the Chancellor to save £14 millions by paying only half the interest on the American debt this year. Whether it is wise to take advantage of this option or not depends upon the prospect of future possible reductions in the cost of Government. In this connection it is to be noted that the present figures for supply services include 73 millions for pensions and 8½ millions for the Middle East; the balance of 353 millions compares with 160 millions spent upon comparable services in 1913. Military expenditure accounts for £125 millions in the coming year, and £80 millions before the war. Thus the Civil Service vote has increased from £80 millions to £228 millions. It certainly ought to be possible to reduce the cost of these services to nearer 100 per cent. above pre-war level. In view of the general financial situation which we have endeavoured to outline above, we welcome the speeches delivered by the Chancellor of the Exchequer this week at Liverpool on Monday, and at the Caxton Hall on Tuesday, in which he lays stress on the primary importance of progressive debt reduction.

THE BALFOUR NOTE ONCE MORE.

In view of the settlement of the American Debt, the discussions now going on between Lord Balfour and the American Ambassador on the terms of the Balfour Note of August last may perhaps be thought to be of merely academic interest. But as the payment is one which will go on for a very long time, and the settlement may affect public opinion towards other problems of international indebtedness, it is of the utmost importance that there should be a clear understanding of the nature of our obligations. Lord Balfour's statement in the House of Lords on Thursday was one which, if it had been embodied in the August Note, would, perhaps, have avoided some of the difficulties which that document created. But the speech was not quite so clear as it might have been, and, at the risk of wearying our readers, we venture to set out what we believe to be a fair statement of the case.

In the main, the debts under consideration arose in respect of three classes of purchases:—

(a) Purchases by Great Britain in the United States, leading items being wheat, articles of food euphoniously known as hog products, cotton, copper and steel.

(b) Articles purchased in the United States by France and other Allies, leading items again being wheat, copper, cotton, shell steel, &c.

(c) Articles purchased by France in Great Britain, leading items being coal (which could hardly have been carried across the Atlantic for lack of shipping), woollen goods, special steels, benzol, and other explosives and finished munitions, the output of which was in a highly organised position in Great Britain in 1917.

It was for the purchase of (a) that we incurred far the largest portion of our American debt, which has recently been funded. The purchase of (b) created the direct debt between France, Italy, &c., and the United States, with which Great Britain has nothing whatever to do. The totals amount to the following:—

DEBTS OF EUROPEAN BELLIGERENTS TO AMERICA.

	In Million \$ Converted at Parity.
France.....	2,966
Italy.....	1,631
Belgium.....	349
Russia.....	188
Serbia.....	27
Other Allies.....	108

The purchases of items in (c) were added to the debts which our European Allies had already incurred towards us by April, 1917.

Lord Balfour quite rightly pointed out that in 1917 the British Government approached the American Government, and suggested that as we had already incurred very heavy financial as well as other burdens in the early years of the war, the United States should undertake the responsibility of financing the whole of the external purchases of France, Italy, &c. If the American Government had been willing to do this, France and Italy could have paid for the items under (c) in dollars, and we could have financed our own purchases (a) with the proceeds. We may add, parenthetically, that it is arguable that if our

own financial position had been relieved by not having to give any further financial assistance to our Allies, we could have found the money for meeting our own purchases (a) in other ways than by borrowing from the American Government. Under conditions in which general export business had been almost entirely suppressed, this could only have been done by the same means that had been previously adopted—namely, selling more of our foreign capital. But in practice any advantages there might have been in reducing our foreign commercial capital, instead of incurring a Government debt, were far outweighed by the practical conveniences of borrowing from the American Government.

In certain cases our purchases from America under (a) were very intimately connected with our sales to our Allies under (c); and after considerable negotiations the American Government did admit that in cases where it could be demonstrated that we were buying material from America as a direct result of our supplying goods to our Allies (as, for example, where we sold hematite pig-iron to France and Italy and replaced it by basic pig-iron purchases in the United States), our purchases in America might be made at the expense of France and Italy. In accordance with this arrangement, we imported into this country considerable quantities of American material in 1918, which we paid for out of the French and Italian credits in New York, and these sums are included in the figures quoted above as French and Italian debt. On this principle some of the material purchased by us in 1917, before this agreement came into effect, might properly have been debited to France and Italy. Moreover, two other items—viz., (a) certain Russian rifles, &c., of which we took delivery and which we subsequently sent to Admiral Koltchak, and (b) certain of the dollars which were used for pegging the sterling exchange in New York, and the results of which accrued to the benefit of France and Italy—ought strictly to have formed part of the debts of our Allies rather than of that of Great Britain. But with these exceptions our purchases from America were for our own use.

The issue put to the United States Government in 1917, therefore, was not whether America was willing or unwilling to lend to the Allies, but whether she was willing to finance them over and above their purchases in America, and to give them credits with which to buy goods in other countries. The Washington Government refused to do this, largely on the ground that if they did so they would have no control over the expenditure of the money, and at that time the American Departments were undoubtedly somewhat sceptical as to whether all their loans would, in fact, be used for war purposes.

In the circumstances described we sympathise with the complaint of the American Ambassador against the sentence in the Balfour Note in which it says, "Under the arrangement then arrived at the United States then insisted, in substance, if not in form, that, though our Allies were to spend the money, it was only on our security that they were prepared to lend it." This sentence certainly suggests that the American Government refused to accept the credit of our European Allies, and that in some way we were made to underwrite the loans they made from America for all purposes—an implication which is entirely incorrect. We regret, therefore, that Lord Balfour should have said on Thursday that "I am unable myself to find in those words anything which is either misleading or obscure."

It is so important in the interests of Anglo-American friendship that there should be a right understanding on this matter, that we would urge the Government to issue a very full account of the whole of these war transactions and the negotiations accompanying them. Some months ago the late Government refused to give any detailed information about these transactions, but we are convinced that this question will continue to be a source of misunderstanding until a full analysis of our American debt is produced.

We would add, however, that while we think this clause in the Balfour Note was undoubtedly obscure and misleading, Lord Balfour was perfectly justified in reiterating the reasons for which Great Britain invited the United States to bear a large share of the financial burden of the war. While we would not question the right of the

United States to decide for themselves what their contribution should be, or criticise their decision in any way, the suggestion was a perfectly reasonable one for our Government to put forward in the circumstances of the time. Its inspiration cannot be better explained than by the following figures, recently quoted by the Swiss Bank Corporation, on the authority of the Bankers' Trust Company of New York, which show the relation between the cost of the war (adjusted to the price-level of 1913) and the pre-war wealth of the various belligerents:—

	Wealth of the Nations. Million \$.	Cost of the War (adjusted to 1913 Prices). Million \$.	Ratio of Cost to Wealth.
France	57,900	12,430	21.5
Italy	21,600	3,391	15.7
Russia	60,000	7,913	13.2
United Kingdom	70,500	20,030	28.4
U.S.A.	200,000	14,969	7.5
Germany	80,500	19,316	23.9

These figures make no allowance for the repayment to the United States of any of the Allied debts, though the loans are included in the costs attributed to the various countries.

AN ANALYSIS OF RAILWAY WORKING COSTS.

THE resumption of the publication of full accounts by the British railway companies enables us once again to undertake an analysis of the various items of working expenditure as was our practice before the war. The accounts essential to this analysis were suppressed during the war and until the end of 1921, under the authority of the Government department concerned, and it is, therefore, impossible to make a comparison between the figures for 1922 and those for 1921. Consequently, in analysing the details of expenditure we have made a comparison with the similar figures for 1913, the last year for which they are available. As we showed in an article on Home Railway results in our issue of February 24th (p. 424), the working expenses of the principal English and Scottish companies for 1922 amounted to £184 millions, which represented a reduction of £52 millions, or 28½ per cent. on the total for 1921. The total expenditure of the same companies for 1913 was £79½ millions, so that in 1922 expenses were £104½ millions, or 131 per cent. higher than before the war. The table below shows the expenditure for the two years 1913 and 1922 for the companies constituting the new groups:—

	1913.	1922.	Increase.
London, Midland, and Scottish	£ 32,082,000	£ 72,983,000	£ 40,901,000 127.5
London & North-Eastern	25,348,000	58,106,000	32,758,000 129.2
Southern	9,913,000	21,761,000	11,848,000 119.5
Great Western	(12,228,000)	31,103,000	(18,875,000) (154.3)
Total	79,571,000	183,953,000	104,382,000 131.2

The 1922 accounts of the Great Western include, besides those of the constituent companies which we have added for 1913, those of some of the subsidiaries, and this accounts for a small amount of the larger increase shown. In other cases, such as that of the Lancashire and Yorkshire, which was absorbed by the London and North-Western in 1921, we have included the former's figures in 1913. Total expenditure in 1921 was nearly three times the pre-war figure, but as detailed accounts were not published in 1921 it is impossible to ascertain in which directions economies in 1922 made possible the reduction of 28½ per cent.; but it may be safely assumed that wages and fuel played a very substantial part. It is possible, however, to see how these and other items have contributed to the increase of over 130 per cent. shown in the 1922 expenditure over that of 1913. In the table below we show the amounts spent on items covering about two-thirds of the total expenditure:—

(000's Omitted.)

	Wages.		Materials.		Coal, Coke, &c.		Rates & Taxes	
	1913.	1922.	1913.	1922.	1913.	1922.	1913.	1922.
London, Mid. & Scottish	£ 13,265	£ 34,092	£ 3,215	£ 7,485	£ 3,324	£ 6,305	£ 1,626	£ 2,823

Great Western	4,904	13,693	1,210	2,956	1,171	2,229	798	1,536
Increase over 1913	179%	179%	141%	141%	90%	90%	92%	92%
Percentage of expenses	40.1%	43.9%	9.9%	9.3%	9.5%	7.2%	6.3%	4.9%
Total	31,680	83,819	8,334	18,142	8,342	14,975	4,386	7,736
Increase over 1913	165%	165%	118%	118%	79%	79%	76%	76%
Percentage of expenses	40.0%	45.4%	10.5%	9.8%	10.5%	8.1%	5.4%	4.2%

The largest increase, namely, 165 per cent., is shown by wages, which in 1922 accounted for 5½ per cent. more of total expenses than in 1913. In this item we have included salaries paid for superintendence, but not those paid for administration, &c. The average increase over 1914 of the Ministry of Labour's cost of living figure was 82½ per cent. in 1922, or exactly half the increase over 1913 in the total wages bill. There have been various reductions in wages since the settlement which followed the 1919 strike. Briefly, the negotiations of 1919 and 1920 provided for national standardisation of pay in rural and industrial areas respectively; simplified classification and the elimination of certain grades, the fixing of basis or "B" rates, which represented advances of various amounts over pre-war wages; the calculation of current or "A" rates, which varied from 122 per cent. to 197 per cent. above the "B" rates when the cost of living was 130 per cent. above the pre-war standard, and a provision that the "A" rates should move up and down in accordance with changes in the cost of living index. The men thus secured an increase in real wages and a sliding scale which ensured that there should be no return to the pre-war level of wages. Moreover, the introduction of the eight-hour day and the consequent employment of larger numbers is also responsible for further additions to the total wages bill. No data yet exist, however, for showing separately how much of the increase in the wages bill is due to higher rates of pay, and how much to the reduction in the standard hours of work. Some figures published two years ago in the *Railway Gazette*, compiled from information supplied by the Ministry of Transport, showed that the increase in the wages bill over 1913 in a normal year under the conditions then ruling was 250 per cent. The largest increases in total wages paid, it may be mentioned, are recorded by the Scottish companies, whose scale before the war was below that in force on the English lines. The wages paid by the Scottish companies increased as follows:—

	WAGES.		Increase.	
	1913.	1922.	£	%
North British	1,408,000	4,284,000	2,876,000	+ 204
Caledonian	1,280,000	3,622,000	2,342,000	+ 183
Glasgow and South-Western	539,000	1,524,000	985,000	+ 183
Great North of Scotland	131,000	398,000	267,000	+ 204
Highland	140,000	451,000	311,000	+ 222

Each of the other three items absorbed a smaller proportion of expenses in 1922 than in 1913. The increase in the amounts spent on materials for maintenance and renewal purposes shows great variations between the different groups, and still greater variation between the individual companies. For instance, the Great Eastern's materials cost less than 50 per cent. more than in 1913, while those of some of the Scottish railways show an increase of more than 200 per cent. These variations may be explained by the rapidity or otherwise with which arrears of maintenance had been overtaken in previous years by the different companies. The ratio of the fuel bill to total expenses also shows some interesting variations. In this item we have included cost of electric current and petrol for locomotive purposes. The ratio is lowest in the cases of the Great Western and London and North-Eastern, and highest, as might be expected, for the Southern. The old North-Eastern Company is partly responsible for the low figure of the group for 1922, its

expenditure on fuel being less than 6 per cent. of total expenses. The London, Brighton, and South Coast, on the other hand, spent 10.2 per cent. on fuel. The increase in the total amount spent on coal coincides approximately with the increase in the average price of coal in 1922 over 1913, which suggests that fuel consumption remained unchanged. Rates and taxes absorb a higher proportion of expenses in the cases of the Great Western and the Southern than in the two northern lines. To some extent the Scottish railways are responsible for this discrepancy, their ratios being much lower than those of the English lines.

The conclusion to be drawn from this brief analysis is that so long as the present scale of wages remains in operation a further substantial reduction in working expenditure is not probable. Materials should not cost so much from the current year onwards, since the bulk of the deferred maintenance and repairs are understood to have been now overtaken. Coal prices cannot be expected to come down much for the present. If the objects of the Railways Act are achieved, however, the amalgamations should produce some economies in so far as duplicated and overlapping services are concerned. We hope to deal in subsequent articles with the volume of work done and revenue earned in comparison with these outgoings, and proceed to discuss the problem of the level of rates and fares, on the one hand, and the prospects of shareholders on the other.

INDUSTRIAL LIFE ASSURANCE.

INDUSTRIAL life assurance—the assurance of small amounts on the lives of men, women, and children at weekly or monthly premiums—is entering upon a new, and it would appear, an improved phase in its history. The war hit the companies engaged in this business very severely. Though they were not liable for war casualties, yet in very many instances these casualties were paid for, their investments suffered grievous depreciation, and they were compelled by emergency legislation to keep policies in force though premiums remained unpaid. The cost of conducting the business increased. All these adverse influences operating together compelled the adoption of administrative reforms as soon as the war pressure was lifted, and we see in reports which have recently been issued how materially the leading companies have been able to cut down the cost, always heavy, of operating a business in which house to house collections always form a severe tax on the receipts from premiums. Above all those engaged in industrial life assurance—companies, collecting societies, and agents—has hung the shadow of impending legislation. Although most of the 18 companies are financially sound, one or two are not, and although some of the 50 collecting societies are beyond reproach, several of them were better out of the business altogether. The modern principle of "Safety First" demanded—and is about to receive—a sufficient measure of legislative control to assure, at least, substantial safety for the premiums of the working classes.

Before we turn our attention to the chief features of the Industrial Assurance Bill, which has been introduced by the Government into the House of Lords—and in the principles of which the leading companies have concurred after long negotiations—let us consider the question of expenses of administration, the outstanding problem of industrial life business. House to house canvassing and house to house collections of weekly pence are inevitably expensive. It has been a standing reproach that the cost of conducting working-class life assurance has been about three times as great as that of conducting "ordinary" life assurance. The Parmoor Committee, which two or three years ago investigated the whole subject, was so much impressed by the large proportion of industrial premiums which went in agency commissions and office expenses, that they recommended direct legislative limitation of them. One objection to that drastic course was the difficulty of giving practical effect to it. How can

a Government department limit expenses in practice unless it also exercises administrative control? Hence the Government's new Bill omits altogether any attempt to control expenses. But what legislation would probably fail to do the leading companies are themselves doing. That is the chief point of interest in the report of the Prudential Assurance Company, and of two others, the Pearl and the Refuge.

The Prudential, an insurance company which has 2½ millions of industrial life policies in force in the British Isles, has been the pioneer in the good cause of reducing costs of administration and collection. Ten years ago the management started a "block system," under which agents were allotted regular areas of canvassing and collection, so that the waste involved in tumbling over on another on the same doorsteps was done away with. The war came as a set-back, but during the past three years we see how admirably the system has been operating. In 1920 the ratio of expenses to industrial life premiums in the case of the Prudential was 40.5 per cent. In 1921 it was 36.9 per cent. For last year it has fallen to 32.1 per cent., a lower rate of expense than a few years ago would have been considered possible. Seeing that the industrial premiums of the Prudential now amount to over 14 millions, a saving of every one per cent. in expense to premiums means £140,000 annually. The other two leading companies, the Pearl and the Refuge, though they lag behind the Prudential in the magnitude of their savings have followed hard upon the same good road. During the last three years the expense ratios of the Pearl have been

—1920, 45.5 per cent.; 1921, 40.6 per cent.; 1922, 37.1 per cent. Those of the Refuge have been:—1920, 50 per cent.; 1921, 46.1 per cent.; 1922, 40.8 per cent. We understand that both the Pearl and the Refuge have adopted the "block system," and one may reasonably expect that their reductions in expenses will continue to be progressive. As a further means of reducing expenses, policy-holders are being induced to pay premiums monthly instead of weekly. As much as 43 per cent. of the Prudential's industrial business is now collected monthly. The example of these three companies—which transact between them from three to four-fifths of all the industrial life business in Great Britain—must dominate the market.

The corollary to saving expenses in the industrial business is a system of allotting a fair share in those savings to policyholders. For if existing policyholders gained nothing from them, and all savings went to shareholders of companies in dividends, or to future policyholders in lowered premiums, then injustice would result from the exercise of the virtue. We, therefore, welcome the extension of its industrial profit-sharing system, which the directors of the Prudential have announced. For many years past some allotments of profits have been made by the Prudential to industrial policyholders of long standing. Between March, 1908, and March, 1921, £2,260,000 was so allotted; in March, 1922, the amount was £200,000, and this month it was £500,000. As from January 1st last a new system is to come into force founded upon a regular basis. The surplus profits of the industrial branch, after providing a fixed dividend to the holders of fully-paid shares, are to be divided into six parts, of which one-sixth will go to these shareholders, one-sixth to the outdoor staff, and four-sixths to the industrial policyholders by way of bonuses. These bonuses will take two forms:—A simple reversionary addition to the sum assured to vest after a policy has been 15 years in force, and an interim bonus on policies which become claims and upon which premiums have been paid for not less than five years and less than 15 years. This new system of bonuses to industrial policyholders will not only give those who pay premiums a direct benefit from the savings effected in expenses, but also will tend to keep policies in force and to reduce the rate of lapse, which is an unfavourable feature in industrial life business generally.

And now we come to the Industrial Assurance Bill. The idea of limiting expenses by legislation has been abandoned, and is of diminished urgency now that the leading companies are themselves intent upon economy. Security is the main purpose of the Bill. Industrial life insurance is separated from "ordinary" life assurance and placed under the supervision of the Chief Registrar of Friendly Societies (to be named for this purpose

Industrial Assurance Commissioner). Collecting societies and industrial branches of companies will be required to make a permanent deposit of £20,000. A certain standard of valuation is set up, which will apply as from December 31st of next year. A "proper value" must be placed on the liabilities, and no policy must be so valued as to be treated as an asset. Fictitious assets, such as "expenses of organisation and extension," are to be penalised. A period of five years is allowed to shaky companies and collecting societies to pull themselves together, provided they give evidence of genuine efforts, but after five years from the passing of the Bill the Commissioner may dissolve an actuarially insolvent collecting society, or apply to the Court for the winding-up of a company in similar condition. This is a most valuable provision. As the law exists at present, the Board of Trade is compelled to stand impotent while valuation reports revealing actuarial deficiencies are deposited in its archives. It can warn a company unofficially that it is insolvent, but it can take no legal steps towards having it wound up. A useful clause in the Bill, and one which will help in keeping down expenses is one which provides that canvassers for new business must be in the regular employment of companies or societies. This hits at the "special agent," a sort of privateer who in the past has vigorously canvassed within the area of regular agents, and has handed over his human prey to the company or society who would pay him the highest rate of commission for it. In many other ways the Bill is good and sound; it is not exciting but administered faithfully it should very materially raise the standard of security and management upon the ragged fringes of what has been hitherto an almost wholly unregulated market.

THE RETURN ON RAND CAPITAL.

(BY OUR JOHANNESBURG CORRESPONDENT.)

Dr R. A. LEHFELDT, Professor of Economics at the University of the Witwatersrand, has contributed to the Chemical, Metallurgical, and Mining Society of South Africa a paper on the "Return to Capital Invested in the Witwatersrand." He points out that the question is of considerable economic interest to the world, but is one on which there is very little information to be had, and very contradictory opinions have been held. The author finds it impossible to carry his investigations back to the beginning of the exploitation of the minefield (about 1887) and, therefore, restricts them within a period after the field had become well established. He chooses June, 1907, as the initial date as being the time when Stock Exchange quotations seemed to be fairly steady, and neither unduly depressed nor inflated. The closing date was December 31, 1921; it was desired to find what return on capital was made during this period of 14½ years.

The method adopted was to suppose an investor, who, on the earlier date bought all the shares in the Witwatersrand mines at the market price, who subsequently supplied all the new capital that was supplied, received all the dividends and repayments, and disposed of his interest at the market price on December 31, 1921. What return would the imaginary investor have received on his money? Professor Lehfeldt was able to secure the active support of Sir Robert Kotzé, Government mining engineer, who placed the resources of his department at the service of the investigation, in which several officials of the Mines Department assisted.

Altogether the records of 176 companies existing in 1907 were examined; of these 90 have been amalgamated into larger organisations, 35 have been liquidated, owing to failure, or because of exhaustion of ground, leaving only 51 at the end of 1921. Small minor ventures, outlying properties, had been ignored.

Financing by debentures is quite a subsidiary matter with the Witwatersrand Mines, less than one-tenth of the capital being supplied in this form. If debentures are repaid on maturity they may be disregarded in this investigation as merely part of the working expenditure.

But defaults may be set against profits made in other parts of the industry. Loans are made, mostly by finance companies which are interested in particular mines, and thus able to protect themselves, so that the whole amount lost is the comparatively trifling sum of £247,561; the loss in respect of debentures (three cases) amounts to £600,000. Reconstructions involving exchange of old shares for new do not affect the result—only cash transactions involved in reconstruction need be entered in the account.

The average yield is, then, such a rate of interest that all the outgoings, accumulated at that rate, to a given date, will balance the income, similarly accumulated. Arbitrarily, a rate of 6 per cent. was tried, and it was found that the income appeared to exceed the outgoings. On recalculating with 7 per cent. interest, the position was reversed, and the true rate was eventually found by proportion to be 6.2 per cent. The actual calculation was as follows:—

	(£1,000.)
At 6% loss on loans and debentures.....	1,294
Other outgoings.....	226,194
Income	227,488
Excess	230,791
At 7% loss on loans and debentures.....	1,375
Other outgoings.....	257,221
Income.....	258,596
Deficiency	245,298
Income.....	13,298

The yield of the mines is certainly not a high one, considering the erratic nature of the investment, some being very rich and others failures; it is necessary to distribute investment over a considerable number of mines to feel any confidence in the average return. Mining shares are usually dealt with on the Stock Exchange on a basis of something like 10 per cent. yield, and investments in real estate and industrial companies probably bring in nearly as much. The Government mining engineer in his memorandum on the Far East Rand expressed certain conclusions as to what was a "workable mining proposition"; it is "a dividend of at least 15 per cent. on the capital sunk returned over a period of twenty years, after paying its share of profits to the Government." Dr Lehfeldt recalls the fact that the Mining Industry Commission of 1908 made a serious attempt to estimate the profits that had been made by the Witwatersrand. The amortisation of each subscription of capital was based on an accumulative rate of 3 per cent., and the net rate of interest which would be considered satisfactory to the investor was taken to be 7 per cent. (the Chamber of Mines quoted 6 per cent.; Mr Reyersbach 8 per cent. or 9 per cent.). The accumulative rate of 7 per cent. was applied both to the current year and to such arrears of accumulated interest as might be due. The result of this method was to show a surplus of £7,116,000 over what was needed for amortisation and the stipulated interest. The total cash working capital from time to time subscribed for the establishment of the 64 producing mines in 1906 was £29,235,000. This, apparently, does not include capital subscribed to work ground that did not prove successful, and was not absorbed into one of these 64 mines. It is not easy to compare their result with that worked out in the present paper, but it is highly probable that the return obtained from the early working of the mines was greater than during recent years.

It will be noticed that the Commission of 1907-8 suggested 7 per cent. as a reasonable return to the investor. There is considerable divergence of opinion on this point. The material prepared by the Commission seems not to have been preserved, and it is doubtful whether an investigator now would have access to the same sources.

The author concludes his paper with the following remarks:—"That the profits were larger in the early days of the Rand than now is rendered likely, not only because the early exploiters of the field had at their disposition large masses of rich ore near the surface, but because they were producing a more valuable article. 1887-1907 was a time of very low prices, i.e., of a high value of gold; in the years 1907-14 gold was worth, on

the average, quite ten per cent. less in purchasing power, and since the outbreak of war it has, of course, fallen much more. Mining has become more economical, both on account of extension of scale and of technical improvement, but this has not sufficed to compensate the unfavourable situation. The technical advances have enabled the industry to survive; if primitive methods were still in use very few patches of the Rand would be rich enough to pay their way, but despite the improvement in technique the average interest now yielded by investment in the mines is not very much higher than that paid by Governments and other first-class borrowers."

FOOD SUPPLIES AND PRICES.

To more than four-fifths of the population of Great Britain the price of food is of the first importance, and the most necessary of all food is bread. In the latest edition of Porter's "Progress of the Nation," which Mr. Hirst revised and brought up to date some ten years ago, he stated (page 435): "For incomes below 30s a week two-thirds of the total, it is found, goes on food; of incomes below 25s a week, 21 per cent. goes on bread and flour.....bread still remains the great staple food of all sections of our people." We may fairly assume that the wage of 30s a week in 1912 would be about the equivalent of a wage from 50s to £3 a week at the present time, and the allocation of that wage probably remains as it was stated to be by Mr. Hirst. Everyone hopes for a cheapening of the cost of food, for, with the reduction in the weekly wages of so many millions of our working population, it has become imperative that the price of bread, milk, sugar—among the principal items of their weekly expenditure—should be reduced to the consumer. A consideration of the trend of the quantities imported during the last four years, and of the immense reduction in wholesale values, as well as the reduction in freights and the promised reduction in railway and transport rates generally, imposes upon political economists the urgent duty of emphasising the need of this direct step towards ameliorating "the condition of the people." In the early Victorian days there was no subject more frequently discussed in Parliament, and, judging by the temperament of the present House of Commons, no subject will be more eagerly attended to and be more attentively watched by the constituencies in the approaching session.

Late in the autumn there was published a manifesto on "The Need for Good Will," prepared by the Industrial League and Council, and signed by a large number of persons who endorse its work for the improvement of relations between employers and employed. It deserves to be kept in constant remembrance until its precepts have been put into practice. The manifesto declares that "the real ruler of the world to-day is Commerce!.....It is only the worker who can build up what the soldier has destroyed.....The whole Continent is full of suspicion and mistrust.....Men lack necessities and opportunities, while there is a vast demand for everything that Europe produces. Given good will, that demand can be met, distress can be relieved, employment can be widened. We in Great Britain have the factories, the works, the skilled men, the able direction. One of the most vital things wanting is that good will which is the motive power. If we are to obtain it, every class, employer and employed alike, must admit the theory of personal responsibility, and must endeavour to fulfil its obligations."

One of the chief proofs of reviving trade is found in the increasing quantities of our imports and exports. A larger amount of tonnage must be employed for the carriage overseas of merchandise, and there must be a corresponding increase in internal traffic. As accumulated stores become exhausted, increased production and manufacture become necessary to provide the increased quantities of our exports. These results can only be brought about by the employment of a larger number of people, or by increased hours of labour. As the wages of many millions of workpeople have been and are still being

reduced, and as wholesale prices have been very generally lowered, it is evident that it rests upon the middlemen and the retail shopkeepers to submit to lessened profits in order to meet the lowered wage-earning capacity of the workpeople.

The following tables (which are based upon the Trade and Navigation Returns) show how some of our imports of food are regaining their pre-war weights:—

TABLE I.	Weight of Imports in Million Cwts.					Inc. or Dec. per Cent. Compared with 1913.			
	1913.	1919.	1920.	1921.	1922.	1919.	1920.	1921.	1922.
Wheat, grain	105.9	71.4	109.3	80.5	96.4	-32.6	+3.2	-24.3	-9.0
Maize	49.2	16.9	33.8	36.8	37.2	-65.7	-51.3	-25.2	-24.4
Barley	22.4	16.6	12.7	15.8	12.7	-25.8	-43.5	-29.6	-43.3
Oats & oat products	19.0	8.1	6.9	9.2	10.2	-57.4	-64.2	-51.6	-46.3
Wheatmeal & flour	12.0	17.7	12.0	15.8	13.5	+47.5	+31.7	+15.2	-12.5
Rice	4.3	2.0	2.9	6.9	2.7	-53.3	-51.4	+88.6	-37.2

Our imports of wheat (grain) were nearly one-third less in weight in 1919 than in 1913, but were very heavy in 1920, and rose above the weight imported in the standard year. They were nearly one-fourth less in weight in 1921, but last year exceeded nine-tenths of the imports of 1913. Wheatmeal and flour imports gained greatly in favour during the war, owing to the great deterioration in the quality of flour milled in the United Kingdom, and in 1919 were nearly half as heavy again as in 1913; were of equal weight in 1920, nearly one-third heavier in 1921, and last year 12.5 per cent. heavier than in 1913. Maize fell off by nearly two-thirds in 1919; by nearly one-third in 1920, by one-fourth in 1921, and by rather less last year. Barley was less by one-fourth in 1919, by more than two-fifths in 1920, by nearly 30 per cent. in 1921, and by more than two-fifths again in 1922. Oats and oat products show the heaviest falls of all the cereals, being between 50 and 60 per cent. less in 1919 and 1921, and nearly two-thirds below 1913 in 1920, but gained somewhat last year, although they were not much more than half as heavy as in 1913. Rice was less than half the weight in 1919, by nearly one-third in 1920, but gained immensely in 1921, only to fall off considerably last year. It is seen that our imports of grain and cereals last year showed a much nearer approximation to the weights imported in 1913 than in 1919, 1920, or 1921.

The next table shows that the values of our imports of these cereals is now approaching the pre-war values of 1913:—

TABLE II.	Values of Imports in Million £.					Increase or Decrease per Cent. compared with 1913.			
	1913.	1919.	1920.	1921.	1922.	1919.	1920.	1921.	1922.
Wheat, grain	43.8	68.4	146.8	70.6	58.8	+56.2	+235.2	+61.2	+24.8
Maize	13.8	13.7	27.4	18.5	15.0	-0.7	+98.5	+34.1	-8.7
Barley	8.1	17.8	14.5	10.5	6.1	+120.0	+79.0	+30.0	-24.7
Oats and oat products	6.3	9.0	6.9	5.6	5.3	+42.9	+10.3	+10.9	-15.9
Wheatmeal and flour	6.3	25.7	21.2	19.1	10.7	+308.0	+238.5	+203.2	+68.4
Rice	2.3	3.0	6.2	6.4	2.3	+31.3	+172.2	+182.4	-

Barley and wheatmeal and flour show continuous declines in the percentage increases in value over 1913 from 1919, the value of the barley imported last year being one-fourth less than the value in 1913. Wheat (grain) and maize show rapid declines since 1920. The values of our imports of oats and oat products in 1920 and in 1921 were only about 10 per cent. higher than in 1913, and the value of last year's import was 15.9 less than in 1913. The values of our imports of rice were higher in 1919, and greatly higher in 1920 and 1921, but last year's value was the same as in 1913. Comparing the quantities imported in each year, and their values we find that the prices per unit during the last two years have been rapidly approaching those that prevailed in 1913:—

TABLE III.	1913.			1921.			1922.		
	Mill. Cwts.	Mill. £.	Price per Cwt.	Mill. Cwts.	Mill. £.	Price per Cwt.	Mill. Cwts.	Mill. £.	Price per Cwt.
Wheat, grain	105.9	43.8	8.3	80.2	70.6	8.8	96.4	58.8	6.1
Maize	49.2	13.8	5.7	36.8	18.5	5.0	37.2	15.0	4.0
Barley	22.4	8.1	7.3	15.8	10.5	6.6	12.7	6.1	4.8
Oats and oat products	19.0	6.3	6.7	9.2	5.6	6.1	10.2	5.3	5.2
Wheatmeal and flour	12.0	6.3	10.6	15.8	19.1	12.1	13.5	10.7	7.9
Rice	4.3	2.3	10.8	6.9	6.4	9.3	2.7	2.3	8.5

How the millers and bakers have contrived to keep up the price of the quartern loaf since it was last reduced some year and a-quarter ago is one of those puzzles that appear to be insoluble! The table shows that the

average price of imported wheat and of flour was about 50 per cent. higher last year than in 1913, but the price of the loaf remains at nearly double the pre-war price.

We proceed to deal with the quantities and values of our imports of meat, and of the price per unit compared with 1913:—

TABLE IV.	Weight of Imports in Million Cwts.					Inc. or Dec. per Cent., Compared with 1913.			
	1913.	1919.	1920.	1921.	1922.	1919.	1920.	1921.	1922.
Beef	9.9	6.6	10.7	12.2	11.8	-33.3	+8.1	+23.2	+19.2
Mutton & lamb	5.3	4.1	6.4	6.8	6.0	-22.6	+20.8	+28.3	+13.2
Bacon	4.9	8.3	5.6	5.7	5.9	+69.4	+14.3	+16.3	+20.4
Hams	8	1.8	3	1.1	1.4	+111.8	-64.7	+29.4	+64.1

In 1919 our imports of beef were less by one-third than in 1913, but each later year has shown heavier imports. Our imports of mutton and lamb were more than one-fifth less in 1919 than in 1913, but show larger increases in later years than beef. In each case 1921 shows the heaviest weights imported. Our imports of bacon in 1919 were nearly 70 per cent. higher than in 1913, but fell to 14 per cent. in 1920, and have risen slightly each year since. Our imports of hams in 1920 fell off very heavily after being more than twice as heavy in 1919 as in 1913. They still show very great increases. The huge sums that we have been paying for imported supplies of meat are shown in the next table:—

TABLE V.	Values of Imports in Million £.					Increase or Decrease per Cent., Compared with 1913.			
	1913.	1919.	1920.	1921.	1922.	1919.	1920.	1921.	1922.
Beef	18.9	52.1	51.9	44.9	29.3	+175.7	+174.1	+138.6	+55.0
Mutton & lamb	11.1	19.5	28.0	29.7	22.9	+75.7	+154.1	+166.6	+106.3
Bacon	17.4	73.6	50.4	43.5	35.5	+323.0	+190.0	+150.0	+154.7
Hams	3.1	16.1	3.0	8.2	8.6	+419.0	-3.2	+164.5	+177.4

The total value of our imports shown in the table rose from £50,500,000 in 1913 to £161,300,000 in 1919, but fell to £133,300,000 in 1920, to £126,300,000 in 1921, and to £96,300,000 last year. The great sums paid for imported bacon and hams should encourage our pig-breeders to try to recover the valuable trade they lost when they destroyed their swine during the war.

The fall in prices of our imports of meat is shown in Table VI.:

TABLE VI. Meat Imports.	1913.			1921.			1922.		
	Mill. Cwts.	Mill. £.	Price per Cwt.	Mill. Cwts.	Mill. £.	Price per Cwt.	Mill. Cwts.	Mill. £.	Price per Cwt.
Beef	9.9	18.9	s. d. 2 11	12.2	45.1	73 11	11.8	29.3	48 5
Mutton and lamb	5.3	11.1	41 10	6.8	29.6	87 1	6.0	22.9	76 0
Bacon	4.9	17.4	71 0	5.7	43.5	152 7	5.9	35.5	120 3
Hams	8	3.1	72 11	1.1	8.2	149 1	1.4	8.6	122 10

Although our imports of mutton and lamb during the last three years have shown increases of 154 per cent. in 1920, of 166.6 in 1921, and of 106.3 per cent. last year, the price per cwt (£3 16s) shows a percentage increase of 81.7 over the price (£2 1s 10d) in 1913. The increase in the price of bacon last year showed 69.3 per cent. over the price in 1913, whilst that of hams was 68.8 per cent. higher, and that of imported beef only 27 per cent. higher.

LATIN-AMERICAN NOTES.

(BY OUR OWN CORRESPONDENT.)

BOLIVIA.—A belated but welcome economic revival appears to have set in in Bolivia, owing mainly to the improved exports of tin concentrates, such having exceeded those of the previous year by as much as 60 per cent. The demand has come principally from Great Britain, but that from the United States has likewise proved an important factor in the situation. So satisfactory, indeed, are said to be the prospects of the mining industry (the backbone of the country's business) that several additional Chilean companies have been formed for the purpose of mining both tin and gold in Bolivia, while the copper industry has also received the attention of local capitalists. The foreign trade of the Republic has improved generally, while the recent substantial rise in the rate of Bolivian exchange has been offset by the rise in the price of tin. In view of these more favourable conditions, a fresh Government loan

of \$7,000,000 (£1,400,000) is contemplated in connection with the furtherance of railroad construction. It is reported that New York bankers have determined to exercise an option to issue such a loan, which would form the part remaining unsubscribed of a previous \$33,000,000 loan, already referred to in these columns. The money would be raised through the sale of Bolivian Government bonds, which would be accepted by the railway contractors or syndicate underwriting the loan at about 93 per cent. For the current year an additional national deficit of 8,000,000 bolivianos will probably be incurred over and above the 12,000,000 bolivianos deficit, covered by the last loan obtained in the United States.

MEXICO.—The financial year in Mexico finished unsatisfactorily, with the forced liquidation of seven banking houses, a circumstance which resulted in further contraction of credits, and mercantile operations. The principal commercial houses, however, succeeded in passing through the crisis without incurring any serious consequences. Other adverse factors in the economic situation were increasing discounts against silver currency, a definite suspension of silver coinage having been in force since the end of October, gold and fractional coins alone being minted. In the opinion of many experienced economists, the business situation of the Republic to-day is rather worse than at any time since 1910. General trade is dull, and holiday purchases are less than those of last season. Neither has the position been assisted by the new governmental decree requiring the banks to maintain a cash reserve of 50 per cent. against deposits. The imposition of this new and unexpected enactment caused deposits to at once decrease, until they have now reached an almost unprecedentedly low figure, with no loans in sight. This last is due also to the absence of funds available for that purpose, and to the prohibitively higher interest rates in interior points. Meanwhile, according to the published statements of the Controller-General, national revenues have fallen off steadily month by month. So far, no new laws having any beneficial effect upon the general situation have been enacted, nor are any projected. Importations, exports, and sales in local markets have all declined, while in regard to the Republic's chief industrial production, petroleum, the temporary increase in exports is not thought likely to continue. It is feared, moreover, that the raising of national revenues for 1923 will prove more difficult because of the poor crops this season. While it is known that the Government has in mind the payment of the 30,000,000 pesos due on the National Debt Agreement in April next, and intended, during this year, to pay 11,000,000 pesos on the Carranza and other Government bonds held by local banks and on the agrarian bonds, it is thought that some modification of these plans—even if they are not altogether abandoned—will become necessary. While it is reported that the Government has upon deposit in New York and Mexico the sum of 10,000,000 pesos (£1,900,000), considerably more than sufficient to pay the overdue interest instalment upon the foreign debt, part of this sum must be devoted to the relief of trade and industry as well as to that of unemployment, both of which problems are creating widespread unrest.

COSTA RICA.—Designed to promote foreign commerce by fixing a definite rate of exchange, a new monetary law has come into force in this Central American Republic, establishing a Caja de Conversion, or exchange office, to maintain the rate of exchange at 4 colones for one gold dollar. All import duties assessed, up to the present in gold, hereafter will be calculated in paper currency at double the rate shown in the tariff schedule; that is to say, while the import duties remain unaffected by the new law (since they are to be calculated in paper at the new rate of conversion), the amount paid in paper will be practically doubled. So long as the law remains in force, coined gold may be exported without restriction.

NICARAGUA.—Trade conditions in Nicaragua have improved materially of late; a feeling of optimism has been created by the prospects of an exceptionally good coffee crop. Although local produce sales fell off towards the close of the year, as is not unusual prior to the harvest season, there have been fewer important commercial failures, while the financial condition of the Republic, as

a whole, has sensibly bettered. Collections promise to become easier, and business placed on a firmer footing. While local interest rates remain at from 18 to 36 per cent. annually, the National Bank has again commenced to make a few small loans at 12 per cent., on the strength of the coming crops. According to non-official estimates, the current year's production of coffee should amount to between 300,000 and 350,000 quintals*, a normal crop being estimated at between 200,000 and 250,000 quintals. Sugar, also, promises well. Should present quotations hold, planters would secure a substantial profit upon the expected yield of from 250,000 to 350,000 quintals. On the other hand, mining operations have not proved very profitable, and unless arrangements can be made for a further foreign loan there is a possibility of existing work coming to a temporary end.

Notes of the Week.

By-Elections and the Parties.—At the General Election in November four Ministers were defeated in their constituencies. One, the Lord Advocate, is still in search of a new constituency; the other three, Colonel Stanley, Sir A. Griffith Boscawen, and Mr J. W. Hills, have been roundly defeated during the past week in the carefully selected constituencies of East Wiltshire, Mitcham, and Edge Hill. A concentrated electoral blow of this magnitude, within four months of accession to power, is, we believe, without precedent in the history of British Governments. Neither the Liberal nor the Labour leaders would claim that the huge turnover of votes in these three elections represents a lightning conversion of the electorate from Tory to Liberal or Labour principles. In each case the defeats were clearly due to the alarm aroused by the Government's policy, or lack of policy, on the Housing question. It is a profound pity that the Government have been compelled to frame a policy on this vital question in an atmosphere of popular fever, and although Mr Bonar Law and his new Health Minister, Mr Neville Chamberlain, must be afraid that any new line that they may take will arouse a fresh storm, it is equally obvious that they cannot afford to let the matter drift. A way out of the present muddle must be found, and the introduction of a Housing Bill cannot be delayed more than a few weeks. Sooner or later, as we have pointed out before, a real attempt must be made to adjust rents to price levels, and to escape from the vicious circle in which a sufficiency of houses is made the condition of decontrol, while certainty about decontrol policy is the condition on which depends the provision of houses. The way out lies in our opinion in a gradual lifting of the 40 per cent. margin, leading up to decontrol class by class at definite dates. Those are the broad lines on which can be reached a solution which will show tenants and landlords clearly where they stand, and will at the same time provide the element of certainty necessary to attract private enterprise and capital to the building industry. But the Government's housing task is so thorny that it might bring Mr Bonar Law perilously near to a defeat for which the country and the parties are by no means ready. Thus with the difficulties of the Conservative Government growing more acute at home, as well as abroad, the position of the other parties in the State becomes a matter of practical interest. At the present moment, if the Conservative Government fell, the only party that could possibly hope to command a majority and take its place is the Labour party. So long as the old Liberal party remains rent in twain, a Liberal Government is not a possible alternative. National importance, therefore, attaches, in the present state of affairs, to the efforts that are being made to restore Liberal unity. For such unity Mr Lloyd George made a dramatic appeal at Edinburgh last week-end. He was answered at Cleeheaton by Sir John Simon with frank coolness, while Mr Asquith at Cambridge studiously, but politely, sat on the fence. Both these speakers interpreted two feelings uppermost in the minds of their followers, namely, that the Independent Liberals cannot possibly take upon their

* 1 quintal = 101.43 lbs.

shoulders any share of the responsibility for the sins of the Coalition, and that, after the profound differences of the past four years, real unity cannot be restored by a gesture or a formula, but must grow out of a demonstrated harmony of political action and political creed. Mr Lloyd George, on his part, obviously cannot promise to repudiate the work of his own premiership. In these considerations lies what might appear to be an insurmountable barrier to reunion. But in a letter to Mr Entwistle, published in the *Times* yesterday, Mr Lloyd George makes so substantial an advance on any previous definition of his attitude, that the ground on which the Independent Liberal leaders might have continued to refuse to meet Mr Lloyd George in conference has been largely removed. A Conference between the leaders of the two wings will not, in all probability, restore, as if by magic, Liberal unity in Parliament and the country. But the effect of Mr Lloyd George's latest advance is to throw the responsibility for the acceleration or obstruction of the unity movement upon Mr Asquith and his colleagues.

The French Advance.—Memories of the war were revived this week by the sight of newspaper placards bearing the words "big French advance." The words summarise the development of events in the Ruhr. French troops have advanced and extended with the result that not only the Ruhr, but also the British area of occupation, is surrounded by a French cordon, which blocks communications with the rest of Germany. The British Cologne garrison, therefore, finds itself isolated and surrounded by zones in which "war" is being carried on by her Allies, without British sanction or approval, and not regulated by the inter-Allied Commission. This course of events must, we think, drive the British Government reluctantly to abandon their policy of passivity as regards the British garrison in Cologne. Its maintenance there has long been exceedingly difficult, and has now, in our opinion, become impossible. We cannot agree that withdrawal would be regarded as a definitely hostile act by France, but we can conceive lively danger of its maintenance there leading to very serious disputes with our Allies over matters which are, after all, of secondary importance to the great question of the future peace of Europe. Withdrawal, moreover, would proclaim to the world our official disapproval of and dissociation from the Ruhr adventure, and such proclamation in one form or another cannot surely be long delayed. All the developments in connection with the Ruhr affair this week point to the situation becoming more and more tense. The severity of French military control has been increased, and day by day greater departures are made from the provisions of the Treaty of Versailles, as they are interpreted in this country. On the other side the temper of German passive resistance is heightened. In the climax to which events are slowly but inexorably working up, Great Britain will be in the stronger position through an act of disavowal such as the withdrawal of the Cologne garrison would constitute. The increasing tension in the Ruhr coincides with renewed discussions in Paris of the outlines of a new settlement and the part which Great Britain will play in it. From the French standpoint it is not unnatural that there should be a disposition to feel that those who are paying the piper should call the tune. But the matter cannot be isolated in this way. The attitude which such suggestions reveal is a most dangerous one, which we view with the gravest concern, for it reveals a state of mind which is prepared to substitute a piecemeal settlement in accordance with the strength of the various sectional conflicting interests for the general settlement which some of the statesmen of the Paris Conference endeavoured—with not much success—to attain. A new and lasting settlement of Europe without the concurrence of Great Britain is unthinkable. Financial stability certainly cannot be attained without her co-operation, and this country could not, however much we might be tempted to do so, ignore the responsibilities which we incurred towards Europe in joining in and helping to win the war, in becoming a party of the League of Nations Covenant, and in taking part in the territorial adjustments made, and in setting up the new nations created in 1919.

Better News from Turkey.—The Angora Assembly has accepted the closure of the debate on the draft Treaty, passed a vote of confidence in the present Government, and sanctioned the resumption of negotiations. This is good news, for it means that the party in favour of an understanding with the West has turned what was the most dangerous corner in their course of policy, and that the Assembly has not given a mandate to the party which stands for an anti-Western orientation in concert with other Muslim nations and with Russia. That eventuality, which would be so fatal to all parties concerned if one of the parties were to force it upon the remainder, has at any rate been averted for the time being. At the same time, we are not yet out of the wood, for if the Assembly has agreed to limit the issue to Turkey's own national claims, it has, on the other hand, insisted upon the full measure of them. This was, of course, to be expected, and when the lines laid down for the new negotiations are examined, they will not be found to preclude a settlement *à priori*. In regard to frontiers, for example, the Assembly has definitely accepted the Thracian frontier proposed at Lausanne—that is, the Maritsa line with a tiny bridge-head opposite Adrianople, but without Kavagach or any section of the railway between Dedeagach and Bulgaria. This is a wise renunciation from the Turkish point of view, for it means that Turkey, even though she has returned to Europe, will be able to keep clear of South-East European controversies. The question of Dedeagach and its railway has not, unhappily, been settled at Lausanne, and until it is settled there will continue to be trouble between Greece and Bulgaria; but, as things are, Turkey will not be involved, having contented herself once more with the frontier which she voluntarily accepted in 1918. The insistence on the complete abolition of the financial and judicial capitulations was only to be expected, and from our point of view it seems doubtful wisdom to stand out for ineffective compromises. The moment that the foreign Powers ceased to be able to enforce the capitulations by diplomatic or naval pressure there really ceased to be any alternative method of obtaining tolerable conditions for their nationals in Turkey, except the method of securing Turkish goodwill. Minimum judicial safeguards forced upon the Turks against their will would exasperate them without effectively helping the foreign residents, and might actually make the position of the latter more unfavourable than if their privileges were abolished *in toto*. That being so, the new negotiations will hardly break down on this ground. The Assembly further proposes to postpone the economic questions, in which France and Italy are primarily interested, on the terms on which the Mosul question had already been postponed at Lausanne by agreement between the Turkish and the British representatives. This suggestion ought not to prove unacceptable to our Allies. The remainder of the draft Treaty is accepted by the Assembly, with the perfectly reasonable proviso that all occupied Turkish territories shall be evacuated by the Allies as soon as peace is signed.

The Indian Budget.—When Sir Basil Blackett left the Treasury to go to India a few months ago to take up the post of Finance Member of the Viceroy's Council, he must have realised that he had no easy task before him. A year ago, it will be remembered, the Legislative Assembly, as a protest against the level of military expenditure, refused to sanction some of the new taxation proposed by Sir Malcolm Hailey, and left a prospective budget deficit of £6,000,000. In opening his budget statement for 1923-24, on March 1st, in the Legislative Assembly, at Delhi, Sir Basil Blackett announced that disappointments in some sources of revenue had caused this prospective deficit to be nearly doubled. He laid great stress on the danger to India's credit of the constantly recurring deficits, and outlined proposals for creating a balance for 1923-24. In framing his plans, he was assisted by the work of the Retrenchment Committee, over which Lord Inchcape presided. This Committee, whose work was analogous to that performed by the Geddes Committee in Great Britain, indicated economies to the extent of £12,000,000, but the new Finance Member explained that except in the military, and to a certain

extent in the Posts and Telegraphs budget, the Committee's suggestions could not, for want of time, be incorporated in detailed estimates. But lump sum reductions were allowed for. In the non-military budget (excluding interest charges), the amount of expenditure reduction is Rs. 6½ crores, as compared with the Committee's suggested reduction of 8½ crores. Military expenditure at Rs. 62 crores shows a reduction of Rs. 5¼ crores, whereas it would have fallen to Rs. 57¼ crores had full financial effect been given in this budget to the Inchcape proposals. The difference of Rs. 4½ crores, Sir Basil explained, was due in part to special expenditure in Waziristan, and partly to inevitable delay in giving effect to the proposals. For 1923-24 total expenditure is estimated at Rs. 204½ crores, or Rs. 11 crores less than in the previous budget, and revenue on the existing basis of taxation at Rs. 198½ crores, leaving a deficit of Rs. 5.85 crores to be met. This deficit is to be reduced to Rs. 4½ crores "by crediting to revenue the interest on securities in the Paper Currency Reserve, which latter was approved by the House last year." The balance of Rs. 4½ crores is to be covered by new taxation, which consists of one item only, namely, the doubling of the salt tax from Rs. 1½ to Rs. 2½ per maund. This measure, Sir Basil anticipates, will bring in an additional yield of Rs. 4½ crores, and leave him with a trifling surplus. The Finance Member concluded his statement with a strong appeal to the Assembly for their support in the effort "to get out of the vicious current which was threatening to drag India down to insolvency." This appeal, coupled with the good impression caused by the work of the Retrenchment Committee, and Lord Rawlinson's acquiescence in the Committee's suggestions of military economies, appears to have had its effect, for from the sparse details at present cabled as to the progress of the subsequent debates, it appears that the Assembly acknowledges the necessity of balancing the budget, and has not been able to suggest any practical alternative to the obviously unpopular measure of doubling the salt tax. A cable in Thursday's *Times* from its Delhi correspondent says:—"The Assembly is unanimously of the opinion that the deficit must be covered, though it has strenuously endeavoured to find other expedients than a doubling of the salt tax. After two days' discussion, however, as Sir Basil Blackett remarked, the salt tax holds the field. A notable feature of the debate has been the reasonable atmosphere prevailing. No speaker attempted to justify his opposition to the salt tax on any but political grounds." The prospect is, therefore, that the 1923-24 budget will pass without the obstruction and truncation which its predecessor suffered.

The Civil Service Estimates.—The estimates for the financial year 1923-4 for the Civil Services and Revenue Departments, issued this week, show a reduction of £88 millions to £314 millions in comparison with the estimates for the year 1922-3. An examination of the details, however, tempers the optimism raised by this substantial drop, for they show that at least 80 per cent. of the decline was due not to an outburst of zeal for economy on the part of the Departments, but to the automatic cessation or reduction of special payments arising from the war. The decline, moreover, is in comparison with the 1922-3 estimates, and to judge by the weekly accounts the reduction in comparison with the actual expenditure in 1922-3 will be very much smaller than the figure mentioned. Unclassified Services require £17½ millions as against this year's estimate of £69 millions. Thus £51½ millions of the total reduction are accounted for, of which £47½ millions relates to "services arising out of the war." The liquidation of railway and canal agreements is to take less than £2 millions as against £33½ millions this year, coal mines deficiency £1½ millions against £5 millions, and shipping liquidation £2 millions against £8½ millions. Further reductions are shown by the Disposal and Liquidation Commission, £3 millions, and grants for compensation for damage by enemy action £2½ millions. Ordinary unclassified services show a reduction of £3½ millions, of which grants-in-aid for Northern Ireland account for £2 millions, relief of unemployment £820,000, and export credits

£250,000. In other services the principal reduction is shown by the Ministry of Pensions, which calls for £73½ millions as against £90 millions this year. Other reductions include £2 millions for the Ministry of Labour, £3 millions for the Ministry of Health, £4 millions for education, £2½ millions by Middle Eastern services, £1½ millions for the Irish Department, one million for stationery and printing (a praiseworthy effort), and three-quarters of a million for the Board of Trade. The Mint asks for £950,000 as against £750,000 this year, though the necessity for an increase is not obvious when a substantial profit is being made on the silver coinage. The estimates for the Revenue Departments show a reduction of £3½ millions, of which the Post Office accounts for £3 millions.

The Navy and Air Estimates.—The Navy Estimates for the year 1923-24 issued on Thursday show a reduction, in comparison with this year's estimates, of £8 millions in gross expenditure and of £6½ millions in net. The gross estimate is for £61½ millions, and appropriations in aid account for £3½ millions, leaving a net estimate of £58 millions, which compares with £64½ millions twelve months ago. The principal reductions are £1,800,300 in pay of officers, seamen, &c., £957,500 in victualling and clothing, £986,100 in dockyard personnel, £930,500 in stores and material, £345,000 in fleet fuelling, £852,300 in travelling and miscellaneous expenses, and £2,266,400 in non-effective services. Contract shipbuilding, at £5,031,450, shows an increase of £1,696,950, owing to the larger provision necessary for the two new battle-ships, while naval armaments show an increase of £280,400 for the same reason. The reduction of the personnel of the fleet by 20,000 officers and men to 100,000 is expected to be complete by April 1st. In his memorandum on the estimates the First Lord of the Admiralty states that "in their main outlines the Navy estimates for 1923-24 bring out the full effect of the programme of reductions initiated immediately upon the acceptance by His Majesty's Government of the Washington Agreement. The ratification of the Agreement has not yet been completed by all the great Powers concerned, and none of them have so far followed the example of this country, which, in anticipation of the general ratification and implementing of the Treaty, has already sold or broken up practically all the Capital Ships to be scrapped under the Treaty. This act of faith, though involving risks to which the Board of Admiralty have been fully alive, has secured for the taxpayer the immediate fruition of large economies which would otherwise have been deferred. The full extent of these economies is made clear by a comparison between the new estimates and those for 1921-22. Part of this great difference, it is true, is accounted for by the fall in wages and prices, by the progressive elimination of a variety of charges incidental to the winding up of war accounts and to the general aftermath of the war, and by an increasingly rigid scrutiny of expenditure in every department. But it is necessary to remember that, to a very great extent, these detailed administrative economies, effected by the reduction of reserves and the postponement of all but the most indispensable new requirements, are themselves only made possible, even in the present financial stringency, by the general easing off of naval competition which, it is hoped, will result from the Washington Agreement." The Air Estimates show an increase in the gross estimate of £3 millions and a net increase of £1,116,000, the total net estimate being £12,011,000 as compared with £10,895,000 a year ago. The increase in the total is almost wholly accounted for by the increase in the vote for technical equipment, which has risen from £1½ to £3½ millions. The Secretary of State for Air remarks that "the war stocks upon which the Air Force has been living to a large extent since the Armistice are now becoming exhausted, and an increase in the cost of maintaining existing squadrons is, therefore, inevitable." This vote, however, now includes experimental and research services, which last year were down for £1,177,000. The pay vote is down by £273,000 to £3,508,000. An analysis of the net total of the Air Estimates shows that it includes £11,486,000 for normal services and £525,000 for war

liabilities. The comparable figures in 1922-23 were £9,935,600 for normal services and £959,500 for war liabilities. The true increase in services other than in the Middle East is, therefore, £1,550,500. The gross total includes a figure of £5,957,000 for expenditure in respect of Middle East services. This does not affect the net total, since under existing arrangements the total cost of Middle East services is voted in the Civil Service Estimates, and the debits against Air votes are balanced by equivalent Appropriations-in-Aid.

Funding the International Debt.—The memorandum issued by the industrial group of the House of Commons suggesting plans for funding the international debts of the various Allies to one another, and the cancellation of many of them, embodies many ideas and principles which have become almost common form in discussions in this country. Unfortunately, the suggestions carry us very little farther, since the Reparation figure on which the whole scheme is based is a quite impractical one. The memorandum proposes that in addition to paying for the restoration of the devastated areas in France, Belgium, and Italy, Germany should pay 2,663 millions sterling, to be divided among the Allies on a principle which would give to Great Britain 922 millions—i.e., the amount of our debt to the United States. But the figure proposed by the group means that Germany's total debt would be something over 4,000 millions, a figure which there is not the least likelihood of obtaining. The group must fundamentally modify these figures if it really hopes to put forward a practical plan.

The Unemployment Insurance Bill.—The fifth Unemployment Insurance Bill within two and a-half years was read a second time this week without a division. Like its three immediate predecessors, it is an emergency measure designed to supplement the main Act of 1920. It is designed to prolong the period of "uncovenanted benefit," or, in other words, to give benefits in anticipation of contributions by the insured. A fourth special period of benefit is to be prolonged from November 2nd last to October 17th next, during which time 44 weeks of benefit may be drawn, provided that a gap of two weeks intervenes between the first 22 weeks and the second. It is also provided that from mid-October next until mid-October, 1924, 26 weeks of benefit may be paid, if necessary, irrespective of contributions. For subsequent benefit years the period of benefit is limited to 26 weeks, payable only in respect of contributions. Of course, the "uncovenanted" benefits do not pretend to be based upon any insurance principle; they are simply rendered necessary by the volume of unemployment. Last year the House of Commons authorised 30 millions to be borrowed by the Unemployment Insurance Fund to meet these uncovenanted benefits, and loans for about 17 millions have been incurred. It is reckoned by the Ministry of Labour that with an average unemployment of 1,250,000 for the next 18 months the burden on the Fund will reach 22½ millions by April, 1924, but should fall again to £20,700,000 by October, 1924. The finance of the Fund was very clearly explained by Sir Montague Barlow. During the last two and a-half years the amount expended under the Unemployment Insurance Acts has reached £125 millions, made up of £33 millions from the State, £48 millions from employers, and £44 millions from the workmen and women. This expenditure has been made possible by the credit balance of £22 millions in the old Fund—piled up during the war boom—and £17 millions borrowed. The idea is that when trade substantially revives the loans incurred to pay uncovenanted benefits may be repaid out of the normal contributions of employers, workpeople, and the State.

Cotton Trade Short Time.—A further development has occurred this week in the organised short-time movement in the cotton mills of Lancashire producing American yarns. The depressed state of trade has been considered by the Cotton Spinners' and Manufacturers' Association.

This organisation concerns itself chiefly with the weaving branch of the industry, but some of the members have spindles, and sell yarn. It has been decided that employers who spin yarn for sale should be strongly recommended to adopt the proposal of the Master Spinners' Federation, that production should be curtailed during the month of March to the extent of 50 per cent. It is understood that this organised restriction of yarn output is being loyally carried out by spinners. Stocks of yarn tend to be reduced, and there are already signs of some improvement in the market, owing to there being less twist and weft on offer.

Commercial Policy Since the Brussels Conference.—The second Assembly of the League of Nations in September, 1921, requested the publication of information showing how far the States which took part in the Brussels Conference of September, 1920, had succeeded in putting its recommendations into practice. In order to comply with this request the Economic and Finance Section of the League issued to the various nations a questionnaire, the replies to which have now been issued in two volumes*, one of which is entirely devoted to a report on Italy written by Professor Bachi. For the purpose of these volumes the Brussels recommendations were divided into three heads:—(1) Budgetary Measures, (2) Monetary Measures, (3) Commercial Measures. Under the first two heads a mass of important information has been received, collected, summarised, and presented in handy form by the League authorities, and the information provided we hope to discuss in a forthcoming issue. Under the third head, Commercial Measures, the replies by way of the countries were brief and inadequate, and no attempt is made to summarise or review them. For their inadequacy, it must be confessed, the officials responsible for sending out the questionnaire must be held partially responsible. In the commercial section the main point on which information was asked was "the abolition of the establishment of prohibitions on imports or exports, or of special permits; the abolition or lowering of import or export duties, &c." The italics are ours, and we emphasise the words in question to call attention to the fact that no specific question is asked about erecting or raising tariffs. The omission to extend the inquiry to that fruitful field was unfortunately taken advantage of by nations whose record in such matters is not beyond reproach, among them, we regret to say, the United Kingdom. The British reply to the inquiry about commercial measures gives an imposing list of prohibitions and controls removed, but fails to mention a trifle like the Safeguarding of Industries Act and the orders made under it. The United States reply does, it is true, give details of anti-dumping legislation in 1921, but since it contains no reference at all to the Fordney Tariff, it is, like the British, chiefly notable for its incompleteness. The reply from British India duly records prohibitions imposed on imports of shaving brushes and tooth brushes from Japan, but passes over the increase in the duty on cotton goods in discreet silence. No compilation that fails to record such outstanding features as these can claim to be more than a misleading and inadequate history of the commercial policies of leading nations during the past few years. France sends no reply, but fortunately some Governments have disclaimed the loophole of escape provided by the wording of the questionnaire. For instance, Japan and Finland set an example of honesty by describing increases that have taken place in their tariffs. Australia goes one better, and covers six pages with the text and schedules of its Customs Tariff (Industries Preservation) Act of 1921. We discussed this complicated measure at the time of its enactment, and recommend a study of its clauses (pages 12-18 of volume I.) to all critics of our own Safeguarding of Industries Act. It may be noticed in passing that the schedules which prescribe the scale of *ad valorem* duties to be imposed on goods coming from certain countries with depreciated exchanges provide for a fall in the French franc to 300 to the £ sterling, but of the mark to

only 240 to the £ sterling. How rapidly economic events upset the calculations of tariff architects! Not the least merit of the League volume is that its 300 pages of close print and statistics are issued at the low price of 5s. If this volume is a commercial proposition at 5s, it is time that the Government reconsidered the prices charged for some of its larger Blue-books.

Argentina and the League of Nations.—Cable advices from Buenos Aires state that the Chancellor has informed the Chamber of Deputies Budget Commission that the League of Nations is claiming from Argentina payment of quotas in arrears amounting to 2,334,372 gold francs. The Finance Committee of the Chamber of Deputies proposes to include an appropriation of 900,000 (gold) in the 1923 Budget towards this payment. It is announced that Chancellor Gallardo supports the re-entry of Argentina to the League, and anticipates that the Cabinet will give a favourable opinion. It is understood that the Argentine Government intends to recognise the claim of the British Treasury to the differences of exchange, stipulated in the British loan to the Argentine, arranged during a former administration, for the purpose of paying New York bankers. The Cabinet will accept the clause in the agreement, and will arrange for the cancellation of the account through the projected loan for the consolidation of the floating debt.
