China and Japan.—Stress is laid by a well-informed correspondent on the significance of the announcement that the Chinese Government has notified Japan through her Legation in Peking of its desire for a discussion of the Treaty of 1915, by which, among other onerous concessions, the Liao-Tung Peninsula remains till 1907 under Japanese control. Under the Russo-Chinese Treaty of 1898 this area was leased for 25 years to Russia; Japan acquired the lease from that Power in 1905 after her victory, and ten years later included its extension to 99 years from its original date among the Twenty-one Demands presented to China. The Peking Government was constrained to compliance by the certainty that the Allied Powers would be prevented by the war and Japan's participation in it from supporting China in resistance. At the Washington Conference Japan refused any concession on the matter, but China claims that the Treaty is invalidated by the circumstances of its signature, and the original term of the lease expires on March 26th. Hence the Chinese Government is reopening the question, in the hope of support from the Western Powers, now that the Anglo-Japanese Alliance is terminated and the war is out of the way. China is disorganised and the Western Powers have their hands full, but the question can hardly be dismissed summarily.

Stockbrokers and Banks.—By next Tuesday, writes a Stock Exchange correspondent, the names of new candidates for election to the Stock Exchange Committee in respect of the year which begins on the 25th of this month will have to be in the hand of the secretary of the House, and it is stated that one resignation will be made from the 30 men who now form the Committee of the Stock Exchange. This comes from a broker, and, to fill the vacancy so created, an election will be essential. Had it not been for this, quite possibly the present Stock Exchange Committee would have been re-elected *en bloc*, in spite of the lively discussions which have been taking place during the past few months in regard to the matter of the division of commission between brokers and banks. The real question is whether agents of any kind shall be permitted to receive 50 per cent. of the gross commission, but as the banks are the principal customers of the Stock Exchange, it is they to whom the stockbrokers look when they come to debate the points at issue. These have been thrashed out pretty thoroughly in the columns of the *Economist* during the past six months, and the matter has been presented from both sides as far as possible. It shows that the banks have an unquestioned justification for claiming part of the commission, in that they advertise largely (which stockbrokers are forbidden to do), and that their business is unimpeachably safe. On

the other hand, the stockbroker points out that, having regard to the ratio of expenses at which he runs his office, to return half his gross commission is unbusiness-like and unjust, nor does the fact of established convention and custom absolve him from the duty of trying to amend such an arrangement. That there is a good deal of competition for bank business is due to the fact that the stress of living renders it necessary for Stock Exchange men to take any orders which come along, hoping that in the long run the orders may prove to be profitable. The Stock Exchange Committee, in their absolute power, could revise the present rules which permit sharing half the gross commission between brokers and their agents, but this the Committee are not willing to do. They obviously apprehend such an open break with the banks as might result in the latter organising a stock exchange of their own, this being a fear which, to the minds of many practical Housemen, can be dismissed as fantastic and a practical impossibility to be put into operation for more than a few weeks or a few months. Here, however, the matter rests for the moment, and champions may come forward next week to take the part of the brokers who at present consider that they do not obtain a fair proportion of the commission which they receive from banks on the business of the latter's customers. The matter is largely one for brokers, and not for jobbers, although the jobbers naturally have a good deal to say in the matter, in that whatever affects one class touches also the other in the House. Moreover, the fact of the present Chairman of the Committee being at the same time a jobber and one of the best chairmen who has ever occupied that position in the Stock Exchange, it is inevitable that jobbers should consider that the question concerns themselves almost as much as, although more indirectly than, it does the brokers.

Austria's Foreign Trade in 1922.—The complete statistics of Austria's foreign trade in 1922 are now available, and it is gratifying to note that the returns for the second half of the year are considerably better than those for the first six months. This is all the more noteworthy, in that the period July to December witnessed first a severe crisis in internal affairs, accompanied by a catastrophic fall in the quotation for the Austrian krone, which certainly made trade very difficult, and, secondly, a period of stabilisation, accompanied by falling prices and the many painful consequences of a return to economic sanity. In spite of these considerations, which were duly advertised by delighted pessimists, the following figures show that while there was a slight increase in imports during the second half of the year, exports increased over 14 per cent. as compared with the first six months:—

(In Millions of Gold Kronen.)

	Imports.	Exports.	Excess of Imports.
1922.			
January-June	792	489	303
July-December	799	558	241
Total, 1922	1,591	1,047	544
Total, 1921	1,699	904	795

The improvement over 1921 is most noticeable. The fall in imports is accounted for to a great extent by the reduced importation of grain, wine, and eatables, and it seems probable that the reunion of the Burgenland has considerably improved the food position of the new Austria. The importation of other foodstuffs and tobacco shows an increase in quantity, but, thanks to the fall in prices, the value figures remain practically unchanged, as compared with the previous year. The least satisfactory figure on the import side is that for coal, where a rise in prices had led to an increased money value for a diminished quantity of the commodity. In textiles, imports fell from 489 million kronen in 1921 to 423 million kronen in 1922, while exports rose from 221 million to 295 million respectively. The resultant fall in net imports is the more satisfactory, in that the prices of some lines showed a substantial rise over those ruling in the previous year. On the export side, wood, paper, iron, and leather goods showed considerable gains on the year. There is still room for further improvement, as Austrian industries are not working at anything

approaching their full capacity, but it is none the less gratifying to chronicle the fact that the import excess has been reduced by nearly one-third, as compared with 1921. The relative stability of the krone exchange, coupled with the successful flotation of Austrian Treasury Bills in London and other centres, and the new rapprochement between the Succession States, which is exemplified by Dr Scipel's recent visit to Belgrade, should lead to a further improvement in 1923.

London Merchant Bank.—The delay in the publication of the accounts for 1922 of the London Merchant Bank is apparently due to the preparation of the scheme of capital reorganisation which the report discloses. The bank, which until 1916 was known as the London and Hanseatic Bank, had commitments before the war in Germany and Eastern Europe, and after the outbreak of war its profits were substantially reduced. There was some recovery in 1919, when net profits rose to £61,800, and the dividend was raised from 5 to 6 per cent.; but since then profits have steadily declined, those for last year amounting to £36,900. An interim dividend of 2½ per cent. was paid in July, but no distribution is to be made in respect of the second half-year, the balance of profit being transferred to contingency and pre-war adjustment account. The directors intimate that the balance of the advances under the Treasury scheme of 1914, which stands in the balance-sheet at £242,200, has since been liquidated, and state that further progress has been made in the collection of German pre-war outstandings through the clearing-office; considerable relief, however, still has to be granted in many instances to pre-war debtors in Eastern and South-Eastern Europe, such as Poland, Latvia, Austria, Trieste, the Balkans, &c., whilst it is impossible to assess the value of outstandings in Russia.

After careful consideration the directors have, therefore, decided that adjustments of a comprehensive nature should be made by utilising the reserve fund and re-arranging the capital account. They have, therefore, transferred the reserve fund of £350,000 to contingency and pre-war adjustment account, and they propose that an amount of £225,000—viz., £3 per share—should be written off the paid-up capital, and also that the uncalled capital should be reduced by £225,000—viz., £3 per share. If these proposals for reducing the company's capital are sanctioned by the shareholders and confirmed by the court, the result will be that each of the existing £20 shares will become a £14 share with £7 paid up. These shares will then be sub-divided into shares of £7 each, with £3 10s paid up, and be known as "B" shares. The directors also propose that on the reduction of capital taking effect, the authorised capital be restored to its present amount of £1,500,000 by the creation of—(1) 60,000 7 per cent. cumulative preference shares of £5 each, to be known as "A" shares, and (2) 30,000 "B" shares of £5 each. 41,000 "A" shares have been already placed at par, provided that they are issued by August 31, 1923, and the directors propose to offer the remaining 19,000 "A" shares at par to the shareholders in due course. The 30,000 new "B" shares will be held in reserve for issue at some future time. The directors consider the proposals to be in the best interests of the bank, and if carried through the capital account will stand as follows:—Authorised, £1,500,000, divided into £300,000 "A" shares and £1,200,000 "B" shares; subscribed, £1,350,000; paid-up, £825,000.

The balance-sheet shows that, as compared with the end of 1921, acceptances have increased from £1,562,300 to £1,608,700, while deposits have declined from £1,089,700 to £818,300. Cash and money at call and bills receivable are substantially higher, but there is a heavy decline in current credit accounts. The directors are undoubtedly adopting a wise course in squarely facing the losses brought about by the war. The capital reorganisation will improve the bank's credit, and should therefore commend itself to shareholders.

Austin Motors.—Many motor companies appear to be able to turn out excellent products, although, at the same time, working in a financial quagmire. We are reminded of this by the belated appearance of the accounts of the Austin Motor Company, Limited, for the two years ended December 31, 1921. It must be admitted that this was a difficult period in the history of engineering undertakings. It witnessed the changeover of such concerns from war time to peace time conditions, when hopes ran high, labour was looking for a new world, and materials were scarce and not always up to sample. For these two years the Austin Motor Company show a loss of

* "Brussels Financial Conference, 1920." Their Recommendations and Their Appreciation. A Review after two years.

£1,883,601. If this sum be written off, assets will then appear as £3,605,484, against liabilities of £5,489,085, after writing off reserves and the balance brought forward. Thus the general reserve of £475,000 disappears. But this is not the whole of the story. The directors in their report dated March 6th point out that "it will be necessary to depreciate the items under the headings of Investments, Longbridge Estate and Flying Ground to the extent of about £300,000, and when more normal conditions prevail to review the value of all the assets." And then they add: "But as no proposals are being brought forward at present to deal with capital losses, the depreciation, together with the item of expenses of issue, &c., will be adjusted at a later date, when a scheme for revision of capital will be submitted to the shareholders for their approval." A somewhat petulant note is struck in the statement in the report that "the declaration of the Chancellor of the Exchequer in 1920 that it was the policy of the Government to deflate the currency, and with the assistance of the financial institutions to restrict credit, caused a slump in commodities and purchasing power as a natural and inevitable sequence." Surely most industrial companies in 1920, if not in 1921, showed profitable progress.

Merchant's Marine Insurance Company.—This company, in common with other marine offices which so far have issued their reports for last year, shows an improvement in the underwriting account of 1921 as compared with the results of 1920. After transferring £100,000 to suspense to close the account of 1921, there was a surplus of £21,850, which was increased by interest to £50,393. In the account of 1920 there was no surplus. A sum of £127,117 has been transferred to profit and loss from the investments depreciation reserve, £100,000 carried from profit and loss to reserve for insolvent reinsurers, and £25,000 to underwriting suspense account, in addition to the transfer of £100,000 on account of 1921. In the underwriting account of 1922 the premiums were £464,476, against £423,373, and the first year's claims £101,000 (21.75 per cent.), against £92,715 (21.9 per cent.). Expenses were £46,193, against £47,800, and the balance carried forward £317,284, against £282,858. The effect of the war, as measured by the reserve fund, underwriting balance, and profit and loss balance, shows itself in the increase of these funds from £358,319 on December 31, 1914, to £625,589 on December 31st last. The dividend for 1922 (12½ per cent., tax free) cost £15,625, against net interest receipts of £25,029.

American Telephone (Bell System).—Of all American corporations, the American Telephone and Telegraph Company, perhaps more popularly known as the Bell System, has the largest number of stockholders and the widest distribution of ownership. On December 31st the number of stockholders was 248,925, an increase during the year of 62,583, the largest increase in a year in the history of the company. The report of the American Telephone and Telegraph Company for the year ended December 31, 1922, shows that, after meeting all operating charges and making provisions for depreciation and for Federal and all other taxes chargeable against 1922 earnings, it had available for interest and dividends \$81,668,440. Interest charges were \$15,498,011.88, a reduction of \$4,023,097.17 from 1921, thus reflecting the reduction of \$74,095,100 in the company's debt during the year. Dividends paid to stockholders at the rate of \$9 per share per year amounted to \$52,971,251.93, an increase of \$10,296,848.93 over 1921, this increase being principally on account of an addition in outstanding capital stock of \$151,162,100. Of the resulting balance, there was appropriated for contingencies \$5,000,000, and the remainder, \$8,199,176.19, was carried to surplus. The progress made by this undertaking may perhaps be better appreciated if net earnings and expenses are compared with the figures of the previous year, as set out in the following table:—

	1921.	1922.
Earnings—	\$	\$
Dividends.....	38,580,672.59 ..	44,972,928.91
Interest	13,803,052.70 ..	12,281,954.46
Telephone operating revenues..	58,268,539.17 ..	65,324,889.89
Miscellaneous revenues.....	90,507.92 ..	227,946.41
Total	110,742,772.38 ..	122,807,719.67
Expenses (including provision for depreciation and all taxes) ..	37,218,859.61 ..	41,139,279.67
Net earnings	73,523,812.77 ..	81,668,440.00
Deduct interest	19,521,109.05 ..	15,498,011.88
Balance.....	54,002,703.72 ..	66,170,428.12
Deduct dividends	42,674,403.00 ..	52,971,251.93
Balance.....	11,328,300.72 ..	13,199,176.19
Appropriated for contingencies ..	3,000,000.00 ..	5,000,000.00
Balance for surplus	8,328,300.72 ..	8,199,176.19

The present authorised share capital of the company is \$750,000,000, of which amount \$699,347,400 was outstanding at the end of the year. The directors now recommend that the authorised share capital shall be increased to \$1,000,000,000, although they mention that it is not contemplated to issue any new stock in 1923. The report states that "The 25 associated companies (excluding your company) earned 5.6 per cent. on the book cost of their plant during 1922, but based on the true value of the property, a lower return was realised. This earning, while still below what is considered by regulatory bodies and the public to be a fair return, represents a slight improvement over 1921." But it proceeds to add, "Not including its equity in the undivided profits of the associated companies, your company in 1922 earned 11.14 per cent. on its average outstanding capital stock, compared with 11.10 per cent. for 1921. About 20 per cent. of the net income of the associated companies was retained by them as undivided profits, and has been invested in their respective plants—i.e., in telephone property required to meet the increased service demands."

Copeng Consolidated.—This Malayan tin-dredging enterprise, writes our mining correspondent, has now reached the stage of securing the full benefit from its programme of consolidation and concentration. The process started with the fusion of two undertakings in 1912. From the Government of Perak the right was obtained to take a largely increased quantity of water from the Kampar river, and a new hydraulic plant commenced work in March, 1915. In 1920-21 the decision was arrived at by the management to concentrate the mine workings into two sections. The outcome of these measures, in conjunction with some reduction in wages and charges for materials, is the setting up of a new low record for a company of the kind in regard to the expense ratio. The report just issued indicates that during the past financial period costs were practically cut in half; the figure of 3.77d per cubic yard works out at the equivalent of about £36 per ton of metallic tin—now quoted £212. In 1910 the expense ratio was £50 per ton—also a record at the time. Appended is a contrast of the results for the past three years:—

	Year ended September 30.		
	1920.	1921.	1922.
Cubic yards treated	1,115,200	1,429,000	1,355,700
Black tin recovered	7334	9324	8374
Recovery per cubic yard	1.48	1.47	1.39
Cost.....	9.41	7.22	3.77
Average price per ton.....	1871	110	864
Net profit	97,400	54,484	56,460
Dividends	59,365	59,365	59,365
Brought forward	15,139	33,465	18,785
Written-off pipe line, &c.	7,500	7,500	7,500
Carried forward	45,673	21,083	8,380

* After deduction of taxes.

The effect of a moderate decrease in both the quantity of ground worked and the average yield, together with the sharp drop in the price of tin, was practically counterbalanced by the drastic economy already referred to; and as sundries brought in rather more than before, the net profit scored a small expansion. It may be noted that the dividends for the past three years have been maintained

at 15 per cent., albeit this has entailed drawing upon the carry forward for amortisation purposes. Excess profits duty, of course, swallowed up a considerable proportion of the 1919-20 earnings. An interesting item in the balance-sheet is "property redemption account, £28,430." The "life" is estimated at a minimum of 50 years. Prospects for the coming year are described by the general managers as "good." With tin much above last year's average, there would appear to be ground for the expectation of increased dividends.

THE Corporation of Insurance Brokers announces a lecture by Mr Walter Banks on "Legal Aspects of the Insurance Business: VI.—Insurable Interest and Illegality," which will be given on March 12th, at 5.45 p.m., at 59A London Wall, London, E.C. 2.

THE Viscount Chelmsford will preside at the meeting of the Royal Colonial Institute, on Tuesday, March 13th, at 8.30 p.m., at the Edward VII. Rooms, Hotel Victoria, when the Earl of Ronaldshay will give an illustrated lecture on "The Lands of the Thunderbolt; an account of the Scenery and People of Sikhim, Chumbi, and Bhutan."

WE have received from the Russian Trade Delegation ("Soviet House," 49 Moorgate, E.C. 2) a pamphlet setting forth the conditions under which foreign exhibitors may participate in the All-Russian Agricultural and Handicraft Exhibition which it is proposed to hold in Moscow in August-September next. British manufacturers who might wish to sell agricultural machinery and similar articles in Soviet Russia can obtain further particulars from "Soviet House."

Oversea Correspondence.

UNITED STATES. — FEDERAL RESERVE RATE RAISED AT NEW YORK AND BOSTON—SHARP RISE IN COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 23.

THIS week's action by the New York Federal Reserve Bank in raising its rediscount rate from 4 to 4½ per cent. came as a complete surprise to most people in the financial district, notwithstanding more or less comment lately about the marked increase during the past month or two in the volume of rediscounted bills held by the New York institution, and the fact that open market rates of 4½ per cent. and 5 per cent. for rediscountable loans were well above the former bank rate. The same advance was also made by the Federal Reserve Bank at Boston, with the result that the rate in all of the twelve Reserve districts throughout the country is now 4½ per cent., except in the San Francisco district, where 4 per cent. is still maintained. This is the first advance in the New York rate in nearly three years, and the first change since June 22nd of last year, when the rate was lowered from 4½ per cent. to 4 per cent. after a series of reductions from the maximum rate of 7 per cent. established in June, 1920. For the increase in the rate, which applies to all rediscounts and advances, various reasons are given, including the desire of Federal Reserve Bank authorities to equalise rates throughout the country. For some time past it has been apparent that interior centres, where the rate was 4½ per cent., were doing a large amount of financing in New York, where the bank rate was only 4 per cent. This week's advance was evidently designed to check borrowing on such a heavy scale in the local market. Since the first of the year the New York institution's holdings of rediscounted bills have shown an enormous

expansion. At about this time in February of 1922 such holdings were approximately \$58,000,000 less than at the close of the preceding year. A week or so ago the total was more than \$100,000,000 greater than at the end of 1922, amounting to upwards of \$294,000,000, or more than double the aggregate at the corresponding date of last year. This heavy increase has been largely responsible for the steady decline lately in the New York banks' ratio of reserves to deposit and note liabilities combined from a point above 80 per cent. to 74.9 per cent. on February 14th. A year ago at that time the reserve ratio stood at 81.9 per cent. There has also been a considerable increase recently in the amount of Federal Reserve notes in actual circulation, after the usual decrease following the heavy buying during the Christmas holiday period. On February 7th the total for the entire system was \$2,217,817,000; on February 14th it had increased to \$2,243,603,000, and there has been a further increase since then, it is understood. On February 15, 1922, the Federal Reserve notes in circulation aggregated \$2,169,953,000. The gain in rediscounts and circulation reflects, to a large extent, the expansion in trade and industry. The Federal Reserve officials evidently took this fact into consideration, and it may be said that the rate was advanced for the purpose, among other things, of conserving resources in order to be even better prepared to meet growing business demands for money and credit. Another reason, probably, was the desire to discourage the use of credit for speculative undertakings, and to curb or prevent any tendency toward inflation. It is an open secret that brokers' loans have been heavily increased in recent months. The higher rediscount rate became effective to-day, and it is therefore too early to judge whether or not it will cause any material tightening of the money market. It had no appreciable effect upon the stock market, which, though irregular and reactionary at times, has been generally active and buoyant, with new high levels for the year recorded in prices of many shares, both industrials and rails, as well as what are known as specialties. The upward revision in the rate is generally approved in banking circles, where it is pointed out that conditions are now far different from those which, in the autumn of 1919, made it necessary to raise the bank rate, and to continue the process until 7 per cent. was reached in June of 1920. During the fall of 1919 gold reserves of the New York Bank were actually below legal requirements, whereas at present they are about three times above the latter. Call money on the Stock Exchange was then loaning around 20 per cent., as against 5 to 6 per cent. at present, and the reserve ratio of the entire Federal Reserve system was well under 50 per cent., instead of 75.8 per cent. this week. Furthermore, a widespread business revival is under way in this country, with steadily increasing activity noted in practically all lines of trade and industry, in sharp contrast to the depression which began some three years ago.

One of the most notable features of the past week is the pronounced strength that has been shown by many important commodities—cotton, copper, sugar, oil, iron and steel, and many building materials. Copper has reached 16 cents a pound, with some sales reported slightly above that figure. Cotton has soared to a point close to 30 cents for New York spot; sugar, both raw and refined, has advanced more than 1 cent a pound, crude petroleum 10 cents a barrel, following previous increases, and there have been stiff advances in other prices, including those of dairy products and livestock. The last-mentioned are probably due to the recent severe weather and traffic blockades. The rise in sugar, and to some extent in cotton, is attributed to speculative operations, based on expectations of scarcity in the near future. In copper, oil, iron and steel, and building materials, however, the advance is apparently due to buying for actual consumption, with available supplies inadequate to meet all demands. The copper market, especially, is decidedly strong, under heavy purchasing for both domestic and foreign account. Germany, it is understood, has recently re-entered the American market, and contracted for substantial quantities of the red metal.

FRANCE.—IMPROVING TRADE CONDITIONS—LORRAINE OUTPUT IN 1922—PRODUCTION STATISTICS—BUDGET PROBLEMS—NEW TREASURY BONDS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, March 7.

IN spite of what is universally regarded as the unsatisfactory situation of the national finances, and notwithstanding the conflict in the Ruhr, it is curious to note that a general feeling of optimism prevails to-day throughout the whole French business world (with the exception, of course, of those who have been directly hit by the operations in the Rhineland). The slight feeling of hesitancy that was observable a fortnight ago appears to have entirely disappeared, and industries that produce commodities of general consumption are filled with orders, despite the high quotations that rule at present. The unsettled feeling that prevailed almost everywhere immediately after the French and Belgian troops went into the Ruhr has been replaced by firm belief that the worst is over, and that trade may now be expected to touch much better levels. The comparative stabilisation of the exchange, after the renewed sharp fall that occurred in January, the inflow of orders with the spring and the slight improvement in the national financial outlook owing to the unexpectedly satisfactory manner in which the revenue continues to come in, are all factors that have tended to contribute to the present improved feeling.

Whether this better state of things will continue remains to be seen. In any case, conditions are now such that, whether the franc improves or drops still further in the near future, the effect of such a movement will be much less felt than was the case a year ago. Since their disastrous experiences in 1920 traders have ceased to carry large stocks, and are, therefore, much better prepared to meet sudden changes in quotations. This absence of stocks, it is claimed by French business men, has largely reduced trading risks, and is responsible for only one inconvenient factor—namely, that it tends to bring about a revision of prices upwards in the event of any marked increase in demand. In this connection it is argued that it is now to the prime interest of the trading community to stop the sharp rise in prices that has characterised the past few weeks, under penalty of having, in spite of high customs duties, to suffer serious competition from abroad.

The black spot in the French industrial situation is, of course, the metallurgical section, which is undoubtedly suffering seriously from the operations in the Ruhr. Stocks have now been almost entirely absorbed, while output, so far as the Lorraine steel and iron area is concerned, has been reduced to a vanishing point. I understand that it is now impossible to keep more than from one to three blast furnaces hot at any of the mines, quite apart from the fact that imported British coke is quoted at 60s a ton, North Sea port. Hopes are now based on the belief that the Franco-Belgian authorities in the Ruhr will in the near future, now that the coal awaiting transport in the railway station yards has been exhausted, commence requisitioning the enormous accumulations of combustible that have been piling up at all the pitheads in the Ruhr coalfield for many weeks past. The present crisis is all the more keenly felt in view of the fact that the output of the Lorraine metallurgical area during 1922, for which complete figures are now available, showed a striking all-round advance on the previous year. The principal detailed figures are as follows:—

	1921. Tons.	1922. Tons.
Pig iron	1,233,589	2,048,499
Steel	468,916	1,308,367
Finished products	378,373	607,032

The comparative output of iron ore extracted from the various Lorraine iron areas was as follows:—

	1921. Tons.	1922. Tons.
Nancy	552,425	607,676
Briey	4,072,081	7,111,128
Longwy	667,676	1,409,529

The coal industry is in a good state, in spite of the recent rise in miners' wages, but the available output is

distressingly small, quite apart from the stoppage of reparation deliveries from Germany. The miners in the Saar basin are prosecuting an economic strike, and there are partial strikes in the Loire and Moselle coalfields, while some of the Belgian miners are also standing idle for the same reason. The demand for British coal is, therefore, exceptionally large.

The following returns of production in the principal fields of French economic activity during December, as compared with the average monthly figures for the last quarters of the two previous years, afford an excellent picture of the industrial situation here immediately before the occupation of the Ruhr:—

	Monthly Average Last Quarter of—		December, 1922.
	1920.	1921.	
Mining—			
Output of coal (1,000's of tons) ..	2,379	2,249	2,820
Output of iron ore	1,418	1,173	2,181
Output of aluminium ore	126	44	211
Consumption of coal	4,553	4,304	4,697
Consumption of coke	322	271	622
Metallurgy—			
Output of pig-iron (1,000's of tons) ..	359	284	513
Output of steel	317	279	415
Blast furnaces active (end of month)	91	73	116
Shipping construction (1,000's of tons)	399	351	189
Imports of copper (1,000's of quintals)	69	53	77
Textiles—			
Cotton (spindles in operation)....	5,330	4,899	5,562
Do (looms in operation)	48,500	45,832	47,922
Wool (Roubaix-Tourcoing) (1,000's of quintals)	48	49	73
Imports of cotton (1,000's of quintals)	219	286	285
Do wool (1,000's of quintals) ..	87	226	213
Chemicals—			
Imports of sulphur (1,000's of quintals)	439	384	461
Do phosphate (1,000's of quintals)	1,101	611	922
Do nitrate (1,000's of quintals) ..	130	80	107
Production of salt (1,000's of quintals)	742	764	1,008
Do potash (1,000's of quintals) ..	203	83	197
Transport Situation—			
Loaded waggons (daily average) ..	36,520	40,756	48,308
Gross receipts (millions of francs) ..	509	507	526
Shipping arrivals (1,000's tons) ..	2,707	2,679	3,162
Do departures (1,000's tons) ..	1,733	1,974	2,366
River & canal traffic (1,000's tons) ..	1,831	1,912	..
Labour—			
Unemployed relieved (end of month)	39,520	10,032	2,644
Do placed in work	87,083	113,101	99,177
Offers of employment unsatisfied ..	42,121	27,146	25,929
Demands for employment unsatisfied ..	49,473	80,778	42,649
Immigration of foreign workers ..	10,000	2,330	10,106

The Chamber on Tuesday devoted its seventh sitting to the Budget problem since the Estimates for 1923 were sent to the Upper House some weeks ago, and further efforts have been made to meet the deficit of some 3,800 million francs which those Estimates left unprovided for. The sitting, like the previous one before the week-end, was marked by a rather confused discussion on a great number of points, and it is not yet clear what the outcome will be. What is clear is that the conflict of opinion that has prevailed for some time past between the Finance Minister and the Finance Commission of the Chamber still continues, and that M. de Lasteyrie is beginning to resent the opposition the latter has repeatedly raised to his proposals. As matters stand, however, Minister and Commission appear to be in agreement as to the method by which 2,200 millions of the estimated deficit are to be found, but differ as to the remaining 1,500 or 1,600 millions.

So far M. de Lasteyrie has scored one distinct victory in that it appears to have been decided that the proposal to create the famous *carnet de coupons* must be dropped. The Minister has strenuously opposed this project from the first on the double ground that the *carnet* would not only be impracticable of application if not entirely unworkable, but also unproductive of any appreciable addition to revenue.

Notwithstanding the Finance Minister's defence of the

French taxpayer, however, many of the Deputies appear to be still under the impression that a good many of their fellow-countrymen escape the payment of income-tax. The discussion revealed that during 1921, out of a total of 781,000 persons in France who were assessed for income-tax under what is known as the "general tax on income" (as distinct from scheduled assessments), 732,000 made returns showing less than 50,000f of income each, and paid a total of 130,000,000f in tax, 838 declared incomes of between 500,000 and 1,000,000f and paid a total of 426 millions, and 197 declared incomes of over 1,000,000f, paying between them a total of 278 millions. This means, according to the Finance Minister, that 197 people paid no less than one-quarter of the total yield from the tax (including scheduled assessments), 838 paid one-third of the total, and the remaining 732,000 figured for merely one-tenth of it. Small wonder that M. de Lasteyrie described the French general income-tax as an inverted pyramid, a very small number of persons paying by far the greater part of the tax.

The subscription lists for the new issue of two-, five- and nine-year 6 per cent. Treasury bonds were opened on Monday, and will close on April 7th, unless otherwise notified. The bonds are in denominations of 500 and 5,000f, and are issued respectively at 495 and 4,950f, the interest being payable on June 8th and December 8th each year. They are redeemable, at the choice of the holder, on December 8, 1925, at par; on December 8, 1928 at 515f per 500-f bond, and at 5,150f per 5,000-f bond; or on December 8, 1932, at 540f or 5,400f, according to denomination. No limit has been placed on the amount to be issued.

The recent increase in the rate of interest payable on National Defence bonds has given rise to much speculation here as to whether a period of dear money is not now at hand. Much obviously depends upon what may happen in the Ruhr. The opinion appears to be gradually forming, not only in France, but also in England and America, that German resistance to Franco-Belgian pressure cannot be eternal, and there can be no doubt that the first signs of any real clearing of the horizon in regard to the Ruhr will see a substantial number of new industrial issues here, which will absorb an appreciable part of the money now seeking investment. In such circumstances a considerable modification may be expected in market conditions here, as the transfer to less easily mobilisable descriptions of a substantial portion of the money now invested in short-term Treasury loans must necessarily largely reduce available funds for Stock Exchange purposes. Meanwhile, in view of what may happen shortly in the Ruhr, the Bourse is inclined, for the moment, to adopt a waiting attitude.

GERMANY.—RUHR—FINANCES—BOURSE—PRICES—INDUSTRY AND EMPLOYMENT—SHIPBUILDING.

(FROM OUR CORRESPONDENT.)

BERLIN, March 5.

THE Ruhr situation has undergone no substantial change; the disorganisation slowly proceeds, but neither in occupied or unoccupied territory has the pressure been sufficient to break German resistance. The Chancellor, who will speak to-morrow, is expected to divulge the last German plan for Reparations deliveries, which was not laid before the Paris Conference, but the combative attitude so far pursued is likely to be continued. The Ministry of Industry has again declared that a breakdown is not threatened through the loss of Ruhr coal and raw materials. There are increasing protests from the former neutral countries, which are suffering a blockade limited in extent, but otherwise resembling that of 1914-18; in particular the shortage of shipbuilding material, formerly drawn from West Germany, is complained of.

The gold loan is looked upon optimistically. The underwriting of half the small total by banks, and the Reichsbank's guarantee of the whole, which means that the gold reserve would if necessary be broken into, seems to ensure success; and the mark exchange, which has of late been more stable than at any time since the Armistice, reflects this optimism. The exchange market is extraordinarily still, owing to fear both of buying and selling.

**National Bank of Commerce
in New York**

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

Anything like real stabilisation is of course impossible, because when prices, as is inevitable if the present relative stability is maintained, reach world-market level, inflation will become a dominant factor and raise prices further, so that the depreciation of the mark exchange, owing to its over-valuation abroad—a thing which has not yet occurred—must begin. An analysis of revenue published by the Finance Ministry shows receipts from all taxes and from the two chief State undertakings in the past three years as follows (in millions of marks):—

	Monthly Average Receipts from—			
	Taxes.	Posts.	Railways.	All.
1920	2,383.2	333.5	1,177.7	3,894.4
1921	6,197.8	582.8	2,345.6	9,126.3
1922	37,682.2	4,940.1	40,557.0	83,182.3

Railway receipts have risen most, and Posts least; and, taking the terminal months of the triennium, the disparity is more marked. Taxes in January, 1920, yielded 921 millions; in December, 1922, 132,614.7 millions, Posts 265.6 and 20,730.1 millions, and railways 608.8 and 227,851.1 millions. The system, so far very successful, of raising railway freight rates (but not passenger rates) in proportion as the currency depreciated ought to have been applied to Posts, which show an enormous current deficit. The monthly revenue, including railways and posts, in gold marks, calculated on the wholesale index, averaged in 1920 264.9 millions, in 1921 520.3 millions, and in 1922 334.8 millions, the drop last year reflecting the abnormal level of gold prices. The whole Federal Debt, reckoned in the same way, declined from 15,966.4 million gold marks to 1,459.8 million gold marks, or 73 millions sterling, from which it appears that the real debt burden, counted in commodities wholesale, in December was at the rate of about 4 millions sterling a year, nearly the whole burden of the debt being borne, not in taxes, but loss of real income from capital as a result of the currency depreciation. If the mark exchange and prices remain relatively stable for a time, the real burden of debt will again increase owing to the Budget deficits. The

Customs gold surcharge has been reduced to 593,900 per cent., the maximum having been 709,900 on February 14th.

The February settlements were got over with less difficulty than was anticipated, but money remains tight. Capital raised in February was 65,562.4 millions, against 33,548.6 millions in January, 4,252.1 millions being for new foundations, 45,979 millions for loans and bonds, and the remainder for capital increases. The large growth of bond issues is due to the issue of the rye, wheat, coal, brown-coal, and coke loans. Citizens have now got used to the buying and selling marks with commodities. The Prussian "wertbestaendig" loan, which has been postponed, is to be in potash, which has a very unstable gold value. In reality, the "wertbestaendig" bonds are speculations in the gold prices of goods; but the public has been so frightened by its losses on the buying-power of paper-mark investments that the guarantee that it will get back something concrete attracts. The Reichsbank statement for the 23rd shows, except in Treasury bills, no relief. Commercial discounts rose by 306,529 millions, Treasury bills by only 142,254 millions, Darlehnskasse advances by 419,745 millions, crossing the three billion limit to 3,123,540 millions. On December 31, 1921, circulation was 113,639 millions, on June 30, 1922, 169,212 millions, and on December 31st, 1,280,095 millions. The circulation of Darlehnskasse notes remains practically unchanged at 12,800 millions, the notes representing new advances remaining in the hands of the Reichsbank.

Stocks last week had a small rise, but are to-day strongly reactionary. The *Frankfurter Zeitung's* index figure for dividend-payers on March 2nd was 1,001,715, against 860,415 a week before, and a top point of 1,567,265 on February 9th. To-day there was a general sharp drop, owing to a sudden stiffening in money, to stories of difficulty in selling goods, to heavy price falls reported from the Leipzig Fair, and to rumours of new sharp methods against the French. Some of the variable and cash industrial stocks had heavy falls, Anglo-Guano from 200,000 to 153,000, Electric Light and Power from 21,500 to 15,000, Linde Hoffman from 23,000 to 16,100, and nearly all the better-known heavy industry stocks by 30 per cent. or more. This is the biggest change in quotations that has ever taken place without a corresponding change in the mark exchange. Most loans, including municipal, also declined.

Wholesale prices in February fell, for the first time since June, 1921, but the fall was very small, and the partial indexes for the last week of the month indicate a new rise. The *Frankfurter Zeitung's* index for 98 commodities, now based on 1 for July, 1914 is:—

	Food.	Textiles and Leather.	Minerals.	Miscellaneous.	Manufactured Goods.	All 98 Commodities.
March 1	5361	9450	8298	6949	5514	6770
February 1	5550	14137	9312	5347	4766	7159
January 1	1758	3206	2622	1778	1518	2054
" 1922	38	58	52	31	33	42
" 1921	20	23	28	18	17	21
" 1920	20	26	27	11	15	20

As the gold (dollar) index on March 1st was 5381, gold prices were above those of 1914, after being much below them (gold index 9524, price index 7159) on February 1st. This condition was last reached after the great mark recovery of mid-1920. At the end of May, 1920, when the dollar stood at 38, being about 63-fold appreciated, the index (then on the basis of 9.23 for 1914) stood at 134, being nearly 14-fold up. Gold prices, however, remain below present world-market prices—the last American index is 150. The heavy drop in textiles, taken with the small drop in minerals, is characteristic; although minerals, like textiles, are largely imported, their mark price has been kept up by the fact that coal prices, which were doubled just before the mark recovery, have not been reduced. Manufactured goods, being made from raw materials bought at a worse exchange, with no drop in wages, continue to go up. The index for home wares (1 in 1914) is 6084, and for foreign wares 6707, the discrepancy between the two being much reduced since last month, when the figures were 4666 and 9863.

The condition of industry is fairly good. The Prussian

monthly trade report shows that no very serious damage to the unoccupied provinces has yet been done by the Ruhr occupation. No statistics of Ruhr coal production have been published for January or February. The report speaks optimistically of the replacing of the loss of Ruhr pig-iron by increased production in Upper Silesia, and of Ruhr coal by imports from England, and no difficulty seems to be experienced in paying for English coal. The exchange improvement has, of course, helped by abolishing the former great difference between German and English coal prices. Bankruptcies in January were 24, the lowest figure touched, as against 140 in January, 1922. For several months past no single limited liability company has gone into liquidation. Unemployment is increasing. After dropping to under 12,000 on September 1, 1922, the number of unemployed out of 5,800,000 organised workers on February 1st was 252,873, against 182,955 a month earlier. The percentage, 4.4, is about the normal of the winter months of pre-war years. The number of persons working shortened hours rose from 8.7 to 13 per cent. The statistics of publicly supported unemployed are this month defective, but they show a large increase. Only in agriculture is there an increased demand for labour. The wages index in January (1 in 1914) was: in the metal trade, for married skilled workers 652, for married unskilled 980, the absolute weekly wage for the unskilled being 23,108 marks against 25,212 marks for the skilled; the general factory wages index is for the married skilled worker 838, and the married unskilled worker 1047. Wages in February were much higher. The Leipzig Fair, though well attended, has so far been rather dull, and exhibitors of some kinds of goods have had to cut their prices by as much as 40 per cent. The metal industries are still complaining of shortage of capital. The foundries have not enough pig-iron; the Solingen steel and small iron branches report satisfactory present conditions, but a decline in orders; in the Schmalkalden small iron branches business has declined badly; the locomotive works are getting orders only from the State; the electrical branch reports reserve on the part of buyers; the clothing and textiles branches, with the exception of flax spinning, are dull, and work in many mills has been shortened; the table glass industry reports that Czech competition is felt in the Russian frontier States; the rubber and tobacco branches report a decline in buying, and the oil products branch is short of coal. A big foundation with the aim of producing light oils from native fuels is being founded. Krupps, with their associated concerns, have founded an Eastern Trading Company, which will operate in Russia and the former Russian provinces. The shipyards are reported to have a great deal of repair work, and a great deal of ship-breaking, largely for foreigners, is being done, but building prospects, owing to shortage of capital and of materials, are not bright. In 1922 685 vessels of 742,100 gross tons were completed against 397 vessels of 450,900 tons in 1921 and 330 vessels of 327,700 tons in 1920. For home firms 648 vessels of 710,100 tons were built.

ITALY.—SHIPPING SUBSIDIES—FINANCIAL ASSISTANCE TO SHIPYARDS—PUBLIC REVENUE.

(FROM OUR CORRESPONDENT.)

TURIN, February 27.

Two Royal Decrees have been issued this month regulating shipping services and shipbuilding, two main causes of huge after-war expenses to the Treasury. Before the war shipping services cost the Italian Exchequer in subsidies 25,980,400 lire for annual voyages of 3,920,460 miles; to which were to be added an annual subsidy to the "Neerland" Company for a bi-monthly call at Genoa of one of its regular lines. The Austro-Hungarian Monarchy paid a subsidy of 13,803,630 kronen to companies now Italianised for a total yearly mileage of 3,760,232. The rise of costs during the war threatened to bankrupt all the companies; so that, after various experiments, the State requisitioned subsidised ships, paid all expenses, and received all freights. Companies became mere agents for Exchequer account, and received, in addition to the reimbursement of the current actual

expenses, a percentage from 10 to 17 per cent. of freights and other revenue. Although the companies were thus interested in increasing revenues, expenses soon greatly exceeded receipts. The last two financial years closed thus:—

	1920-21.		1921-22.	
	Mileage.	Loss, Miln. Lire.	Mileage.	Loss, Miln. Lire.
Italian services	1,486,905	148.1	1,984,161	177.5
Ex Austro-Hungarian services	1,387,066	125.0	1,813,919	121.3
Total	2,873,971	273.1	3,798,080	298.8

For the current financial year 1922-23 the loss was estimated at 160 million lire for Italian services, and 140 for ex-Austro-Hungarian services, making a total loss of 300 million lire. The late Cabinet had made plans for returning to the old system of definite subsidies; the present Cabinet has carried this out. In virtue of agreements with the several companies (18 in all), the State will pay, as from January 1, 1923, an annual total subsidy of 147,290,000 lire for a total mileage of 3,522,820 miles. Of these 2,029,802 miles are said to relate to lines between the Continent and Italian Isles and colonies and other similar postal lines, while 1,493,018 miles relate to commerce. It is very difficult to say whether the cost to the Exchequer, especially of the commercial lines (postal lines are naturally to be run at loss), will be compensated by indirect advantages to the public. Where figures bearing on the question are available they make us doubtful. On the Genoa-Bombay line passengers were 3,478 in 1910-11, and after going to a maximum of 5,484 in 1912-13 relapsed to 3,014 in 1920-21. Goods carried at the same dates were 53,214, 63,290, and 41,355 tons. Not very good figures for justifying the huge subsidy paid by the State for the apparent purpose of promoting trade between Italy and India.

Another Decree regulates the difficult matter of encouragement to shipbuilding. Before the war there existed in Italy 10 shipyards, with a maximum building productivity of 80,000 tons yearly. The union of new provinces (Trieste and Istria and Litoral) added to this number six ex-Austro-Hungarian shipyards, some of them very good. Unfortunately, the after-war fever and some injudicious encouragement given by the Government added to the said number 11 other new shipyards. The productivity of all these old and new shipyards together can be now estimated at 250,000 tons yearly. The offer of new ships is thus much in excess of the maximum demand on the part of Italian shipowners, which, including demand from abroad, is well below 200,000 tons.

The new Decree has the great merit of not having accepted the request made by some shipyards, that the Government should order directly new ships for its own account, and should order them proportionately to the productivity of the shipyards, so that all could remain in existence. This would have been the best way of continuing the present unsafe state of things, as all 27 shipyards would have survived. As 27 are too many, some of them are bound to be dismantled. The sooner this happens the better. But the Decree has not accepted the conclusions of a Naval Engineering Congress held at Genoa in the last days of December, which were in favour of the unlimited freedom of import of all material for shipbuilding. The Genoa meeting held that Italian shipyards would be capable in the main of meeting the competition of British or other foreign shipyards, if only they were enabled to buy materials in the best market. The Government apparently was not persuaded that this was the case as yet. After July, 1926, freedom will be granted to all imports needed for building ships, and at the same date premiums and other encouragements will cease. But for the intermediate period an intermediate system is to be maintained. Freedom of imports is only granted to metallic materials needed for the hulls of the ships, up to a maximum of 480 kilograms for every gross ton of ships. If, however, shipbuilders buy the same materials on the internal market, they will receive a premium of 120 gold lire per ton of material. As com-

pensation for the higher cost of building in Italy, as compared with foreign countries, a premium of 55 gold lire is granted for every gross ton and for metallic hulls. If hulls are to be made in cement the premium is of 20 gold lire; if in wood of 15 gold lire. Exemption from the income-tax is granted for five years to all ships coming into effective navigation not later than December 31, 1923. The period of exemption is reduced to three years if ships enter into effective navigation as from January 1, 1924, to December 30, 1926. Special regulations are enacted for minor points. These grants will cost to the Exchequer 34,700,000 lire in the financial year 1922-23, 42,700,000 lire in 1923-24, and in 1924-25, and 29,900,000 in 1925-26.

That public revenue is stationary is the first impression made by figures of the first seven months of the financial year 1922-23, from July, 1922, to January, 1923:—

	(In Millions of Lire.)		Inc. or Dec.
	1921-22.	1922-23.	
Income and capital direct taxes ..	2,398.6	2,216.4	— 182.2
Stamp and registration taxes ..	1,497.4	1,422.1	— 75.3
Excises	1,330.0	1,537.5	+ 207.5
Monopolies	1,768.5	1,812.4	+ 43.9
Lottery	105.7	138.7	+ 33.0
Total	7,100.2	7,127.1	+ 26.9

But the figures, if justly interpreted, tell a more encouraging tale. Decreases in the yield of the income and stamp and registration taxes are due to transient reasons. In the income-tax category the decrease of 182.4 millions lire is the net result of a decrease of 435.6 millions lire in the war-profit tax yield, and of an increase of 253.4 millions lire in the various permanent taxes on incomes. That the war profit tax yield is gradually disappearing is natural, but that other income-taxes give so much more is an encouraging fact in view of the difficult economic period through which Italy, as other countries, is passing. The decrease of 75.3 millions lire in the yield of stamp and registration taxes is also the net result of a huge decrease of 151.5 millions lire in the stamp tax on bank of issue circulation, and a rise of 76.2 millions lire in all other stamp and registration duties. As a rise in the stamp tax on currency can only be the result of inflation, so the decrease is the result of deflation. So far the deflation is limited to one or two billions of lire, but none the less it is a gratifying fact, and therefore the corresponding decrease in the revenue is to be regarded also without regret.

HOLLAND.—THE VALUE OF THE GUILDER—LIFE INSURANCE—JAVASCHE BANK.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, February 22.

The question of the possibility of a devaluation of the guilder has aroused much interest. It is curious that this fear began to manifest itself at the time that the guilder exhibited a remarkable stability, especially *vis-à-vis* the dollar. When it became evident that the mark went with increased rapidity in a downward direction, many people here began to lose their faith in our own currency, and active buying of dollar securities and dollars commenced. When, contrary to expectations, the dollar reached more and more closely to gold parity, the fear subsided, and a spell of quiet set in. Banking authorities declared as their opinion that if the Government could succeed in heavily curtailing expenses there need be no reason for apprehension. Yet there are other factors which deserve being taken notice of. Dr. Bruins, one of our leading financial authorities, in a recent address, drew attention to the dangerous possibilities caused by the huge German balances held in our currency. Before the war the aggregate of the funds available in the money market was estimated at some 400,000,000fl. At present it is estimated that German holdings alone amount to about 600,000,000fl. It is, of course, very difficult to make an estimate of such an amount, and probably bank managers would think it exaggerated. Since the establishment of so many German banks in this city, the control of these amounts has been gradually withdrawn from our bankers, and now probably by far the greater part is confided to German institutions. The amount of Dutch bank notes held abroad is estimated at from 200 to 300 million guilders; these bank notes may at any time return and be

another cause for inflation. Finally, there is the Dutch credit of 140 million florins. All these elements are a danger to the stability of our guilder. It is true that the Netherlands Bank still has balances abroad amounting to 100,000,000fl, while the stock of bullion is 200,000,000fl, over 40 per cent. of the circulation, the legal percentage being at present only 20 per cent. But were once the faith in the guilder to be shaken, these reserves should be quickly exhausted. The dangerous side of the monetary situation is that before the war foreign investments here were scattered, while now they are under the control of their own national institutions.

The faith in life insurance companies has sustained a shock by the failure of the largest company, the Algemeene. Although for many years the financial position of this company was looked upon with a suspicious eye by life insurance people, nobody thought that the management would have been so completely unsuccessful as the report now proves. The ultimate cause of the collapse of the company was the investment in Russian and Hungarian securities, and the general fall of the foreign exchanges.

The report of the Javasche Bank states that the profits available for distribution amount to 7,400,000fl, which were mostly made by the sale of foreign holdings, chiefly dollars. These balances in foreign currencies were valued in the accounts at the nominal gold value, and they were transferred at much higher prices to the Netherlands Bank in order to maintain the rate of the colonial currency and satisfy the demand for remittances to Holland. The Javasche Bank herein followed the gold exchange system as it has been practised since 1907. The profits were a result of the strong position of the Bank. About half of the circulation is still covered by gold. The board of directors fixed the dividend at 166 per cent., after increasing the reserves to the statutory maximum of six million florins. A revaluation of the buildings gave a further profit of 1½ million guilders. Thus far the dividend has not been paid—only 35 per cent. interim dividend has been paid—as the Government does not approve of the proposal to pay out to shareholders profits achieved by the foreign exchange transactions. Nor does the Government agree to increasing the book value of the property. These points are to be settled by arbitration.

ROUMANIA.—NATIONAL BANK REPORT—INTERNAL FLOATING DEBT—EXCHANGE RESTRICTIONS.

(FROM OUR CORRESPONDENT.)

BUCHAREST, February 23. THE directors' report read at the annual meeting held yesterday, of the Banca Nationala (the bank of issue), contained, as usual, a general review of the economic and financial condition of the country, and it is noteworthy that this report, for the first time in three years, sounded a rather optimistic note. Among other passages, it states that "even the most pessimistic must admit that an improvement, small but real, is discernible in the financial condition of the country," that "the budget for the 'ordinary' expenditure of the Government is being balanced," and that "for the first time in any year since the war the Treasury has not found it necessary to appeal to the Banca Nationala for credits to meet the 'ordinary' budget requirements of the country." (The general practice in Roumania since the war has been to have, in addition to the "ordinary" budget, "reconstruction" and "extraordinary" budgets. The "ordinary" budget for the present fiscal year apparently makes no provision for the services of the foreign debt.)

The report further adds that "the country's external debt has been consolidated for more than 75 per cent. of its total by a very happy financial combination, and that, for the first time in the financial history of Roumania, British banking institutions have assisted the Roumanian Treasury in such an operation."

The debt of the Ministry of Finance to the Banca Nationala (the internal floating debt which the Government hopes to be able to fund during the present session of Parliament) amounted on December 31, 1922, to Lei 12,317,571,350, and the bank suggests in its report that this debt could be liquidated in the following manner:—

(1) By collecting the proceeds due to Roumania from the liquidation of the Austro-Hungarian Bank. (Some 30,000,000 gold crowns were received on this account during 1922.)

(2) By collecting the amount due from the German Government for the so-called "Banca Generala" notes issued by the Germans during their occupation of Roumania and since redeemed into lei. (These amount to some two billion lei.)

(3) By collecting payments due from the peasants in respect of lands granted to them under the Agrarian Reform Law of 1918. (Collections up to date are said to amount to only about Lei 100,000,000—an insignificant amount when one considers the vast areas that have been expropriated.)

(4) By making an annual budget appropriation for the reduction of the Treasury debt; and

(5) By annual issues of "rentes" to cover any balance not otherwise provided for.

By the adoption of the foregoing methods, it is the belief of the Banca Nationala that the entire internal floating debt can be liquidated in 20 years.

The report further shows that currency circulation during 1922 rose from Lei 14,600,000,000 to Lei 15,162,000,000, and that the total of bills discounted by the bank increased from Lei 4,065,000,000 in 1921 to Lei 10,831,000,000 in 1922 (all in round figures).

The "metallic reserve" is shown in the annual statement to be approximately Lei 500,000,000, but very little of this, it should be pointed out, is in actual metal; in fact, probably not much more than 10 per cent. of it. The balance is "gold" paper (deposit receipts), some for gold—or gold bonds—deposited with the Bank of England, some for gold sent to Moscow during the war, and other similar items.

The bank showed a gross profit for the year of Lei 167,243,294, on a capitalisation of Lei 12,000,000, and a reserve of Lei 72,000,000.

The year-end statements of several of the leading banks have now been made public, and they all give the impression that the underlying banking situation in Roumania is quite sound.

On February 19th the Chamber of Deputies passed a new law, introduced by the Minister of Finance, for the control of foreign exchange transactions originating in Roumania. This is a direct outcome of the violent decline in lei which occurred during the month of January, and which the Finance Minister attributes entirely to speculative influences. The new measure, he states, is designed "to stop gambling in the country's currency," by making illegal (with certain small reservations) all foreign exchange transactions except those for purely commercial purposes. Exchange must now be purchased through a group of selected "authorised" banks, which are responsible to a "central control office" operating at the National Bank. The export of lei currency is prohibited.

The new measure has had a bad Press, and apparently has the almost unanimous disapproval of commercial interests, who point out that previous attempts by legislative action to prevent depreciation in lei have not met with any noteworthy success.

As a result of the visit to Bucharest last December of the German Commission for investigating Roumania's claims arising out of the war, Roumania has just received 68 million gold marks of the 80 million which it was claimed Roumanian merchants had on deposit with German banks, for account of commercial transactions, at the outbreak of the war.

ARGENTINA.—BUDGET—CATTLE AND FROZEN MEAT—BRITISH BANK ACTIVITIES—MARKET CONDITIONS.

(FROM OUR CORRESPONDENT.)

BUENOS AYRES, January 25.

A MONTH ago there was reason to expect that by the end of January the Parliamentary discussion of Argentina's Budget for 1923 would be well advanced, and some clear indication available regarding the lines on which consolidation of the floating debt would be attempted. As yet Congress has tackled neither matter. Meanwhile the

general plan as regards both Budget and consolidation remains, in so far as the Government is concerned, much as it was outlined in last month's correspondence, with one notable change. The banks, according to latest official reports, while they will be invited to take the new 3 per cent. Treasury bonds to the extent of 10 per cent. of their total deposits, are to have the satisfaction of knowing that a heavy amortisation fund—2 per cent. is spoken of—will be devoted to the early redemption of this novel form of Government obligation. Until Congress has discussed and decided on the matter, even this must not be looked at as anything more than a possibility. It is nevertheless a variant in the original plan which will certainly make the bankers look with more favour on the idea than they did when it was first mooted to them by the Minister of Finance. Mention of this Ministry recalls the almost openly admitted collaboration of several well-known and highly respected Argentine politicians in the arduous tasks confronting the present holder of the portfolio. Without in any way reflecting on President Alvear's Cabinet, admittedly a *cabinet d'élite*, it is of good omen for the future that so many men of undoubted position should be willing to come forward unofficially and, regardless of party, be ready to give such special aid to the actual régime as their particular talents may warrant them in offering.

As regards the freezers, most business circles regret that the red herring of a supposed trust to bring down the prices of cattle, bought for export as chilled or frozen beef, should have been so clumsily dragged across the trail of urgent Parliamentary affairs. Horned stock in Argentina have dropped in value from \$200 Argentine paper to \$80-\$100 between 1918 and 1923. These figures apply to crossbred three-year-old steers of prime condition, suitable for chilled beef, but the ratio of diminution is general to all classes of cattle. World revision of prices was late in reacting on Argentine cattle-breeders, owing to the law sanctioning cattle pledges, under which measure speculators had been enabled to buy young stock on credit, carry it on pasturage rented with borrowed money, and generally operate as if they were sound and wealthy *estancieros*, owners of the soil. It is this undesirable element, supported by a few *estancieros* who do not yet see that the sharp slump in cattle is largely due to the need of the speculator for liquidation at any price, which presses for Government support against the so-called "extortions" of the freezers. Most impossible charges are made; the salient fact that thrice as many cattle are offered in the Buenos Ayres market daily as are sent forward in normal times being utterly disregarded. To go into the position fully is not possible here. Suffice it to say that proposals range from expropriating existing freezing works to building new ones for Government operation. Fortunately there is small likelihood of any concrete action being taken, inasmuch as the position is one which will right itself with time. Meanwhile, the best answer to the charge of trustification and enormous profits is given by pointing out that the shares of the largest freezing company which is most closely connected with both export and local meat trade interests can be bought to-day at a bare 5 per cent. over their par value. Pressure to liquidate outstanding indebtedness is not severe, thanks to the abnormally low price for money ruling in this market. The latest Government Treasury bills were renewed at 4 per cent. per annum, free of all charges, and bank deposits still increase. Hence, whenever the fundamental position of a borrower is sound, there is no incentive on anyone's part to recall advances which it is a difficult matter to place elsewhere at profitable rates. For, granted that the nominal rate still lies between 5 and 8 per cent. per annum, first-class loans are a matter of arrangement, and have been done at 4 and 4½ per cent. per annum with relative frequency.

Exchange during the month has been notable for the continued appreciation of the pound sterling, estimated in Argentine currency. Bank's sight drawing rate is 43½d, or a 2 per cent. appreciation in the month. The U.S. dollar has also risen to 118.80 Argentine gold per \$100 U.S., which is \$2.80 above last month's quotation. Export bills have been scarce, and business in general inclined to suspend operations until the European situation is more clearly defined. This also explains the rise in

HARRISONS & CROSFIELD, LTD.

EASTERN MERCHANTS. Shipping and Insurance Agents.

1-4, GREAT TOWER STREET, LONDON, E.C.3.

French francs to 13 per \$ Argentine gold, Belgians being 14.25, and the mark roughly 17,000. Rates on Switzerland and Spain have moved slightly in favour of those countries, quotation for the former being 4.50 per Argentine dollar gold, while the pesetas are 5.34. Export movement during January has been on a much smaller scale than was expected. Wheat is being held back for higher prices, the spot quotation for export quality shipped in Buenos Ayres being \$11.45 Argentine paper per 100 kilos. Maize is firmer on reports of great damage to the new crop through drought, \$8.50 being quoted for March loading, while linseed has fallen \$2, being listed at \$18.20 for February delivery (Rosario loading), with \$17.80 for May. Crop surpluses for wheat have been but little reduced by reports of light grain, patches of damage, &c., and may still be taken as 3,500,000 tons, while for linseed the 1,300,000 tons mentioned last month stands good. Freight rates have fallen away sharply, especially for prompt or near-to fixtures, which have been made on the basis of 21s San Lorenzo/U.K. or Continent, with 16s 6d wheat from Rosario to Rotterdam as a fair average parcel quotation. If the world's unoccupied shipping is ordered to the Plate, unfixed, in anything like the amount that has characterised the last five weeks, even these unsatisfactory figures are likely to be far from a record, and this when shipment should be brisk.

Wool has been in active demand, and all the fine grade may be considered as sold. It is estimated that Argentina will be bare of wool by the end of March. Stocks at present in the Central Produce Warehouses are about five and a-half million kilos; a third of the amount in hand this time last year. Hides, after being unusually quiet, were in firm demand at the month-end, and local prices are rising.

NEW ZEALAND.—IMPROVED OUTLOOK—PUBLIC REVENUE AND EXPENDITURE—EXCHANGE.

(FROM OUR CORRESPONDENT.)

AUCKLAND, January 15.

The year just ended has been a chequered one for primary producers, but the markets have improved greatly of late. The work of Government retrenchment has been steady continued, with satisfactory results, while the revenue no shows a very satisfactory increase. The improved financial position of the Government has enabled it to reduce taxation, and charges in many directions, such as the company income-tax, postal and telegraph charge &c., and further reductions are promised at an early date.

On the whole, the new year opens with excellent prospects. The speculative element, which has acted so detrimentally to business, has almost disappeared. The position in respect of money for mortgage loans should show a great improvement in the near future, including a possible reduction by the banks of one-half per cent. on mortgage advances. It is quite certain, though more money may soon be available at 6½ per cent. on first mortgage, there will be no relaxation of limit as to margins security.

The heavy taxation and exorbitant demands of labour have prevented the starting of new industries; British investors who intended to start such industries, and to av themselves of the abundant local water power, have been compelled on this account to abandon the idea. During the past year the beef market was long depressed, in many cases giving very little or no return to graziers, but future prospects are favourable. As regards wool, mutton, lamb, and dairy produce, the season has been exceptionally good. The estimated increase in butter production this season will be about 10,000 tons more than last year's output. Not only have prices increased to an acceptable standard, but there is every indication that an even better standard will be maintained for a long time. Consider

as a whole, experts calculate that the increase in production of primary products will exceed 30 per cent. this season, while advances in prices will be approximately 15 to 20 per cent. In some cases record prices have been obtained for wool.

The Premier recently made a brief statement about the 4½ per cent., free of income-tax, debentures issued by the Government before and after the war. A few months ago they amounted to £51,733,405; they have now been reduced to £45,659,400. A total of £1,372,507 has been converted into 5½ per cent. inscribed stock, in accordance with a scheme recently announced, and purchase and cancellation accounted for a reduction of £4,701,435; it is estimated that the Government will be able to pay off the new stock in five years.

At the beginning of this month the Premier stated that the Government had made a notable saving in expenditure during the last seven months; for the first time for a long while an increase of revenue had been shown, customs and railways showing notable increases. At the same time expenditure has been decreased. Departmental expenditure for the seven months totalled £7,213,701, as compared with £9,103,918 for the corresponding period of last year. The principal reductions in appropriations were:—Railways, £923,431; post and telegraph, £280,627; industries and commerce, £237,012; internal affairs, £81,837; defence, £142,830; lands and survey, £56,773; agriculture, £43,887; education, £72,789.

The Auckland City Council recently issued in Australia debentures aggregating £150,000; these were issued at par, with 5½ per cent. interest, the commission in connection with issue being one-half per cent. Other New Zealand corporations have also issued loans in Australia, where, it is claimed, the terms are better than could be obtained on the London market.

The exchange position between New Zealand and London, recently so troublesome to bankers, is apparently being adjusted by natural processes. Last producing season, ended June 30th, showed an excess of exports over imports of over £13,500,000. The actual balances were swollen by public borrowing in London, the net result being a plethora of funds in that market. The course of trade since the half-year has much relieved the position. The shipment of the new season's produce now affects the situation, though the accumulation of funds in London will probably be greater than in the case of Australia, where similar conditions prevail. While embarrassing to the bankers, such a situation can only be regarded as a healthy sign. The bank rate of exchange is still adverse to England, the latest quotations for bankers' sight drafts on London being 5s per cent. discount, instead of the premium which was charged a few months ago.

There have been no serious labour troubles. The steady fall in wages has been bitterly opposed by the workers, but not to any extent by strikes or similar methods. The recovery in stock exchange quotations during the past year has been most marked, especially in industrial shares, and the present tendency is towards a further rise. On the whole, the year opens with the most favourable prospects from the financial and commercial standpoint.

Letters to the Editor.

BANKS AND THE STOCK EXCHANGE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Discussion of the vexed question of the half-commission paid to the banks for the Stock Exchange business they initiate, is becoming exceedingly keen as the Stock Exchange Committee elections approach. While the discussion takes in many points of view, the "House" may be said to be roughly divided into two camps:—

(1) One section, small but select, declares that the banks bring a great amount of business to the Stock Exchange which otherwise would never get there, and are therefore fully justified in demanding the full half-commission.

(2) The other section, by far the larger, says that while the banks may bring business, it is at an infinitesimal

cost to themselves, that the stockbrokers who do the actual work are underpaid in receiving only half the commission, and that, in distributing the work, the banks show unfair discrimination.

It is evident that, however long the discussion continues, the question of whether the remuneration is adequate or otherwise will never be settled. Even were it left to the decision of an independent arbitrator, the appraisal of the value of the banks' work in bringing the business would be almost impossible. In hosts of towns and villages throughout the country the banks are the only representatives of respectable finance, and what more natural than that intending investors should consult the bank manager on the matter?

The fact is that the real question at issue is not the amount of commission paid to the banks, but rather the limitation placed on the distribution of the business. Few of the brokers who get any considerable amount of bank business desire to interfere with the present system. The agitation for reduced commission to the banks comes chiefly from those who, being excluded altogether from the business now available, believe that were a definite split engineered between the banks and their favoured brokers, some at least of the business might come their way.

There is, indeed, little of principle and much of material interest involved in the present discussion. Would it not, therefore, be possible to approach the question in a more practical spirit than has hitherto been shown? It has been suggested that it is the custom of the banks to employ for their Stock Exchange business firms who have substantial accounts with them. This may be the case, but in the view of many people the idea might be considerably extended.

"There are very few stockbrokers, if any, who have not an account with one of the 'Big Five,'" said a prominent stockbroker in discussing the problem. "If, therefore, it is a question of accounts we should all get some of the business. Let me suggest an easy method by which the banks could fairly distribute the business which the Stock Exchange obtains through them. Say, one of the 'Big Five' has 1,000 branches. Those branches are graded. The bank knows to a certain extent exactly what business is to be expected from each branch. Why not, then, distribute the business on a geographical basis? This bank with 1,000 branches has probably 400 stockbrokers' accounts. Let it then allocate to each of its customers a town or towns with a business-producing capacity commensurate to the size of the broker's account. "Were something done on these lines and a system initiated under which we should all feel that the Stock Exchange as a whole is really co-operating with the banks instead of competing with them, the agitation would soon cease."

The idea is one which might well be worth consideration at a friendly conference between the Stock Exchange and the banks, such as has been suggested by Mr H. Warwick Smith, the leader of the agitation against the present conditions.—Yours, &c.,

HERBERT S. OAKLEY.

London, February 27th, 1923.

THE TRUSTEE'S CHOICE OF INVESTMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I notice in your issue of 3rd inst. an article on the trustee's choice of investments, and several securities are given on which the yields are worked out, and different rates are given "with redemption."

As an instance, L.C.C. 5 per cent. at 105½ yields £4 16s 3d, but with redemption £4 13s 6d which apparently means that 2s 9d is put aside out of the income until 1940 would at compound interest amount to 5½; but this 2s 9d is subject to income-tax at 5s in the £, so that it is really only about 2s 1d, and this would not provide for the loss of corpus in 1940.

Besides this, a trustee has no power to deduct such a sum from the income if the tenant for life objects, and the Trustee Act, 1893, limits the loss that may be made on a redeemable investment to 15 per cent. every 15 years, unless it is a loss made in British or Indian Government securities. This provision in the Act would be

unnecessary if a trustee could provide year by year for a capital loss on redemption.

But the tables are more misleading still in the case of Cape 4 per cent., apparently repayable in 1936; the yield at 92½ is given as £4 7s, and with redemption £4 17s, and, apparently, this latter is arrived at by putting the ultimate capital gain at 10s per cent. per annum; but the £4 7s is subject to income-tax at 5s in the £, while the 10s is net, or 13s 4d gross, or subject to tax.

But no addition to the corpus can be distributed to a tenant for life either when it falls in, or year by year, so that there can be no addition to the yield in such a case, even if repayment happens in the life-time of a tenant for life. The yield should only be the amount that a person can spend year by year, it being impracticable to anticipate a future capital profit in this way, although in non-trustee securities it is sometimes useful as showing the comparative value of stocks.—Yours faithfully,

F. F. MATHIESON.

March 5th, 1923.

INTERNATIONALISATION OF THE RUHR COALFIELD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have only one comment to make regarding your correction, namely, that the production of iron ore in German Lorraine in 1913 amounted to 21 million metric tons, and in French Lorraine to 19.6 million metric tons. This compares with your statement that "much the largest output was still being produced on the German side in 1913."—I am, yours faithfully, HUGH QUIGLEY.

The Manor House, Didsbury, Manchester,
March 6th, 1923.

[Mr. Quigley is correct. We spoke loosely of German Lorraine. The figures before us included the output of Luxemburg, whose boundary includes a corner of the Lorraine ore field. Before the war Luxemburg was in the German Customs Union, and its steel works in the German Steel Cartel. Including Luxemburg, the Lorraine ore output on the German side was 28 million tons, and on the French side 19.6 million tons. In the quinquennium before the war Germany extracted 120 million tons; France 75 million tons.—Ed. *Economist*.]

Books and Publications.

THE THIRD WINTER.*

If there is one thing that the student of economics, or of politics, desires more than another, it is to have the relevant facts about a great issue collected for him in a compact and intelligible form. It is only very rarely that this desire of his is satisfied. Argument, theory, suggested remedies, he can get in plenty, but seldom the data on which all this super-structure depends. If, by a happy chance, he does get it, it is, more often than not, thrown at him in a form which only the most hardened resolution can bring him to read. We therefore welcome the investigation of the group who have compiled this Report, which, together with nine special investigations into big industrial centres, they have called "The Third Winter of Unemployment." Here, assembled together in one modest volume, is a clear statement of the character of the unemployment problem, with data as to who and where the unemployed are; a lucid summary of the extraordinarily tangled and complicated net-work of legislative and administrative enactments in existence for dealing with it; and a wholly impartial survey of its main effects. If every M.P. who takes part in the House of Commons debates would master the material contained in this book, he would be in a position to criticise intelligently and constructively. The reports of the special investigators, in particular, are absorbingly interesting, and should give actuality to the problem to anyone who will let his

* "The Third Winter of Unemployment." The Report of an Inquiry undertaken in the Autumn of 1922. P. S. King. 6s.

imagination work upon the facts presented. They make vivid much, not only in the condition of the unemployed, but in the normal wage-earning life of this country. They do full justice to the tragic fact that differentiates the unemployment of to-day from that within previous record; that it is only to a very small extent a problem of the unemployable; that the vast majority of the million and a-quarter who can find no work want it desperately. If, thanks to the "dole," they are not suffering physically, as men have done in previous "bad" winters, their mental and moral suffering is greater, inasmuch as there hangs over them the dread probability of degradation, not only in the form of recourse to the once dreaded poor law, but in the loss of skill, and, still worse, of self-respect. If there is demoralisation, it is not, the Report states, to be attributed to the dole. There would have been worse demoralisation without it. It is a function of the long continuance of the present direful stress, which is wearing men down. In particular, it is wearing down the ex-soldiers—weaker vessels, partly because unemployment came upon them without much previous industrial experience.

That war conditions, in the widest sense, are the main cause of the whole trouble is made very clear from the remarkably interesting analysis of unemployment figures according to localities, and according to industries, which the report contains. It is precisely those industries into which there was a great war-time influx of population that have suffered and are suffering the most. The same is true of places. Policy has aggravated these sufferings—notably, in a case like that of Woolwich, or in every shipbuilding centre.

Of a survey packed with facts no adequate survey can be given in a short review. Enough has, perhaps, been said to suggest that this is a book not merely to read, but to keep.

THE CITY'S CASH ACCOUNT.*

This is an interesting volume of accounts for the year ending March 31, 1922—the two hundred and eighty-ninth of the series extant. It deals with the City's cash only, and so does not include the values of freehold, leasehold, and other properties. The amount of loans raised by the Corporation outstanding at March 31, 1922, was £10,792,729, against which there are sinking fund investments (book value) £1,913,254. The loans consist of about 4½ millions debenture stock, bearing interest between 2½ per cent. and 3½ per cent.; about 3 millions of short-term Corporation bonds, at higher rates of interest, mostly at 5½ per cent. and 6 per cent.; and 3½ millions Corporation of London 5 per cent. stock, redeemable in 1945-65. The rates of interest paid on Corporation bonds renewed during the year tended downwards from 6 per cent. to about 5½ per cent. In the previous year the rates had risen from about 4½ per cent. to 6 per cent.

The provision of housing accommodation under the Housing and Town Planning Act (1919) is responsible for 2½ millions of the 5 per cent. stock recently issued. The balance-sheet (page 199B) relating to the Housing and Town Planning Act shows among the assets an amount of no less than half a million pounds for increased liability on conversion of bonds into stock, and cost of raising loan. The Corporation of London 5 per cent. stock ranks equally with Corporation of London stock and bonds already created and issued as a charge upon the rates, and with the 5½ per cent. bonds, 1928. It is redeemable at par on August 1, 1965, or on or after August 1, 1945, on three months' notice by the Corporation. It might have been better to take power to redeem this 5 per cent. stock at a date earlier than 1945, as it is reasonable to hope that long before that time the City will be able to borrow at much cheaper rates. Investors, however, have no cause to complain.

The accounts do not show very clearly the nature of the employment of the large sum of £1,882,827, capital cash in the hands of the Treasurer at March 31, 1922, on the

* The Accounts of the Corporation of London for the year ending March 31, 1922, as rendered by the Chamberlain of London (Treasurer).

Housing and Town Planning Act account. Presumably a large part of this was advanced for the benefit of other departments, which would be duly charged with interest. The Abstract of Cash Balances in the hands of the Chamberlain on March 31, 1922, reports an overdrawn balance of £2,538,670 on "Interest and Deposit Account." This large amount seems to need a somewhat fuller explanation than can be gathered from the published accounts.

MAKING GERMANY PAY.*

Mr ANGUS anticipated and approved of the occupation of the Ruhr, for, rejecting Mr Keynes's elaborate arguments, he is convinced that Germany can pay. If she has no export surplus, it is because she will not tax herself to pay ex-enemies, and because her export figures are artificially kept down by the Control Boards, of which he gives an interesting account. But rapid payment would aggravate inflation, trade uncertainty, and dumping. Still, Germany can pay eventually, and must, to save France from inflation and collapse. Mr Angus's solution is commended to France by a proposed Allied guarantee of her military security, and to Germany, *inter alia*, by a cessation of the Allied occupation and a remission of its cost. First, there is to be a 5 per cent. loan of £100 millions subscribed and guaranteed by the Allied and some associated Powers (including the United States); Germany is to pay the interest and 1 per cent. sinking fund. Second, annual Reparation payments for forty years, beginning with £10 millions, rising in 1945 and 1946 to £200 millions, then declining to a final £10 millions in 1963. Spreading the payments will mitigate the danger of dumping. All this is to be secured by Allied control of German finance and armaments, and, possibly, by occupation of the chief cities. Under pressure, Mr Angus thinks, the German industrialists and banks will even subscribe to the loan. He has specially studied exchange and currency, and has the gift of clear exposition; but, like most specialists, he over-estimates the influence of his special subjects, notably when he describes the possible manipulation of exchange to produce an export surplus (p. 15). And, on the possibilities of a German export surplus, Mr Keynes is on surer ground than his critic.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
March 21. March 22.

The Stock Exchange finds that its tone is better than its trade. There is a firm atmosphere in most of the markets, a willingness on the part of prices to go better, a cheerful air about the lists of quotations. Business there ought to be, in order to justify this quiet buoyancy of sentiment and quotations, and business there is in a few of the markets, though it is not widely distributed, nor does it make itself unduly prominent. Hundreds of men stand in the Stock Exchange, all day long, doing little or nothing, though a few are busy, taking it in turns, as it were, to have a good day, and then one on which business seems to fall off.

The War Loan will go ex dividend in about six weeks' time, and this consideration is having its effect in keeping the price hard, while Consols have been a feature of strength at 58½ bid. Other gilt-edged stocks remain at about their previous levels, the disposition, however, being to advance. Amongst foreign bonds, the French and German issues are keeping to the hard side, but show no dramatic changes on the week. German Threes again recovered to 20s. French Railway bonds are better; Brazilians hardened here and there; faint recovery occurred in certain of the Chinese bonds, while speculation in Peruvians has dwindled to a narrow thing, and only Rio Tintos keep the foreign market really alive, with their violent gyrations, according as Paris buys or sells.

London Midland and Scottish and Great Westerns have been the leading features in the Home Railway market, showing robust strength on the anticipation that, before long, splitting schemes will be proposed in respect of both stocks. The newly-created preferred and deferred stocks of the Northern and Southern groups are steady. Undergrounds have gone ahead. The few remaining Scottish stocks are better, and Home Railway prior-charge issues are a little higher. American Rails are being quietly picked up, some say for the United States, others think for investors on this side who look ahead to the day when the Yankee market shall return to Shorter's court. The Argentine railway market keeps good, and foreigners, as a whole, are better.

No change has occurred in the sleepy condition of the rubber share market. But oils are decidedly harder, speculation having reawakened, and a greater air of confidence being discernible on the part of people, who, having bought oil shares higher up, are now willing to average at to-day's more modest prices. The Courtauld meeting failed to produce the anticipated announcement of any bonus, and the price of the shares fell back, though other textiles are better, with Bradford Dyes up to 3 before the price went ex dividend on Thursday. A little stirring of the dry bones in the shipping market caused prices to harden. Electric lighting shares again improved; gas stocks are quiet; cable issues depressed, on account of the wireless competition, though Marconis themselves have moved narrowly and irregularly. The catering group has strengthened, Liptons being a prominent feature, and hotel shares are better, with brewery stocks marking time.

A few speculative counters, such, for instance, as Low Temperatures, came into prominence. People are once more buying shares in commercial companies which are thought to have turned the corner of the post-war depression, and there is plenty of support available for borrowers who have sound stock to offer at reasonable prices.

March 10, 1923.]

The Kaffir market hastens very slowly. The Cape lends a little support. Paris continues to sell on balance. West Springs and Gedulds and Unions have spurred sharply. Diamond shares are good, and the demand from America is said to be increasing week by week. Tin shares have been something of a rage; Malayan, Cornish, and West African descriptions all joining in the mild flutter of excitement which barely kept pace with the rise in the metal. There is not much public at present, however, in these markets for base metal shares. Russians hardened a trifle. Mining markets continue fairly active, though dealers frankly confess that a good part of the animation must be deemed semi-professional.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded ..	£ 53,675,018	..	..	..

ISSUES OF THE WEEK—
4½ % Treasury Bonds (by Tender Mar. 2, 1923), £2,500,000, at £99 9s 9d 2,487,250

1916 £136,108,130	

Wandsworth, Wimbledon, and Epsom and District Gas Company.—Incorporated by special Act of Parliament 1912. The authorised stock capital is £1,812,472, of which, £1,072,993 has been issued. The authorised loan capital is £906,236, of which £229,302 has been issued. This is an offer of sale by tender of £250,000 new capital, comprising £50,000 4 per cent. debenture stock (irredeemable), £100,000 4 per cent. preference stock (irredeemable), and £100,000 new ordinary stock. The debenture stock is offered at a minimum price of £78 per £100, this showing a yield of £5 2s 7d per cent., the preference stock, at £93 per £100, yielding £5 7s 6d per cent., and the ordinary stock at £95 per £100, at which figure based on current dividend, yields £6 9s per cent. For the year ended December 31, 1922, the net revenue was £105,517, while the interest on the total loan capital, including the debenture stock now offered, will absorb £12,278. The dividend on the preference stock will take £5,000, thus leaving £88,238 available for dividend on £1,172,993 ordinary capital. At the minimum price of issue, these look like excellent investments.

The Railway Share Trust and Agency Company, Limited.—Authorised share capital £800,000, of which £777,040 has been issued and is fully paid. The following information is taken from a statement in the Press made to comply with Stock Exchange regulations. It concerns issue of £145,574 4½ per cent. first debenture stock, being the balance of £400,000 4½ per cent. authorised first debenture stock, and ranking *pari passu* with the £254,426 4½ per cent. first debenture stock already issued as a first floating charge on the undertaking and assets of the company. The principal moneys are repayable at par on December 1, 1965, but the

company reserves the right to redeem the whole at any time at 105 per cent., plus accrued interest, on six months' notice. The only difference between the 4½ per cent. first debenture stock previously issued and the present issue is that the interest on the former is payable on April 1 and October 1, and the stock is repayable on October 1, 1940. The stock previously issued is in future to be designated 4½ per cent. first debenture stock, 1940, to distinguish the same from the present issue, which is to be designated 4½ per cent. first debenture stock, 1965. The whole of the present issue of 4½ per cent. first debenture stock, 1965, has been sold by the company at the price of 87½ per cent. A well-managed undertaking.

Spencer (Melksham), Limited.—Authorised share capital £200,000, divided into 150,000 10 per cent. cumulative preferred ordinary shares of £1 each, and 500,000 deferred ordinary shares of 2s each. This is an issue of the whole of the preferred ordinary shares at par, together with £150,000 7 per cent. first mortgage debentures at 98½ per cent. Applicants for preferred shares will be entitled to apply for one deferred ordinary share at par for every preferred share applied for. The remaining deferred shares, the prospectus states, have been applied for at par, and will be allotted to shareholders of Spencer and Co. Spencer and Co., Limited, was formed in 1894, to take over a business of engineers specialising in elevating, conveying, and storage plant. Assets are valued at £275,000, of which fixed assets represent just over £169,000. Profits are given from 1918, and certainly, judged by 1922 results, the company should be able to make headway. It should be noticed, however, that these profits are stated before charging depreciation (which may be very heavy), managing directors' remuneration, income-tax, excess profits duty, and corporation profits tax. The debentures, of which it is stated £57,280 has been applied for firm at the issue price, will constitute a first and specific mortgage on the company's freehold lands, buildings, and fixed plant, and a floating charge on all other assets. Redemption is to be made on or before April, 1953, by annual drawings at £102½, or purchase in the market, power being reserved to redeem the whole amount at £102½ after April 1, 1933. The purchase consideration is £300,000, payable in cash, of which £50,000 represents goodwill. A fair industrial proposition.

American-Foreign Oil Corporation.—Incorporated in April, 1920, under the laws of the State of Virginia, U.S.A. Authorised capital, \$12,500,000, divided into 2,500,000 shares of \$5 each, of which 1,300,000 shares are fully paid, 1,200,000 being reserved for future issue. A statement in the Press issued to comply with Stock Exchange regulations mentions that 1,000,000 shares have been issued to the vendors, and 300,000 have been issued for cash. We should advise outside investors to await further information.

The Bagracote Tea Company, Limited.—Authorised capital, £100,000, divided into 70,000 ordinary and 30,000 8 per cent. cumulative preference shares, all of £1 each. Of these, 53,644 ordinary shares and 22,990 preference shares are now to be allotted in payment for properties, and the balance of 11,356 ordinary shares and 2,010 preference shares are now offered for subscription. The price of the ordinary shares is £1 7s 6d per share, and that of the preference shares is par. The estates to be acquired are in the Jalpaiguri district of Bengal, and extend to about 6,123 acres. Profits are given from 1911. The consideration for the sale is to be satisfied by 31,500 ordinary and 13,500 preference shares to the shareholders of the Bagracote Tea Company, Limited (the Indian company), and 22,144 fully-paid ordinary shares and 9,490 fully-paid preference shares to the shareholders of the Baint-goorie Tea Company (Dooars), Limited. At a valuation of little under £30 per planted acre, after allowing for reserves contributed by the vendor companies. Thus, as no cash payment is required, there is evidence that the promoters have faith in the venture.

Sablas (North Borneo) Rubber, Limited.—Authorised capital, £300,000 in £1 shares, of which 220,279 have been issued and are fully paid up. This is a further issue to the shareholders of 20,000 shares of £1 each at par, the terms of the issue giving the shareholder the option—in respect of each the issue giving the shareholder the option—in respect of each two shares applied for and allotted—of calling at par one further share at any time up to April 30, 1927. The issue is being made to provide capital for the following purposes:— (1) To pay off existing loans. (2) To extend present planted area during 1923 by 96 acres, thereby raising total planted area to 3,200 acres, and planting small additional areas, to raise total planted area to 3,500 acres. (3) To furnish working capital. To facilitate the issue, the directors have obtained the consent of the British North Borneo Company to cancel the option on 20,000 shares of the 35,000 which that company holds until August 31, 1923. The new shares will be offered for subscription by shareholders in the proportion as nearly as possible of one new share for every 11 now held. The shares now offered will rank in all respects *pari passu* with the previously issued shares of the company.

The Bell System took on 18,765 new employees during the year, having, at the close of December, 243,053 men and women on the payroll. As a consequence of the greatly extended service, there is to-day one Bell telephone station to each eight of the population, as compared with one to each thirteen 10 years ago, and one to each 90 in 1900. The United States is served by 10,200 separate telephone companies, including the 26 associated in the Bell System and 9,261 companies whose stations are connected with the Bell service. There are, in addition, a great number of rural lines not rated as companies, of which some 27,000 are connected with the Bell System. More than 64 per cent. of Bell-owned wire mileage is now in underground cables.

The following statistics show the development of the Bell System on December 31, 1922, and its growth during that year :—

COMPANY MEETINGS, &c.

NORTH BRITISH RAILWAY.
QUESTION OF RAILWAY CHARGES.

The final annual general meeting of the North British Railway proprietors was held at Edinburgh, on the 2nd instant, Mr. William Whitelaw, chairman of directors, presiding.

In moving the adoption of the report and account, the Chairman said: The receipts from all sources during the year amounted in round figures to £10,452,000, and the expenditure to £8,011,000, showing a gross profit, including the amount brought forward from the previous year, of £2,497,086. The traffic expenditure has been 78.65 of the traffic receipts.

In account No. 8 there are increases of £22,314 and £5,342 in the items "rents for houses and lands" and "other rents, including lump sum tolls." This is not due to any increase in the rent roll, but to a change in the method of dealing with the property and income-tax with a view to bringing the North British practice into line with that of the other constituent companies. After deducting interest, rentals and other fixed charges, and dividends on the consolidated lien preference and preferred ordinary stocks, and setting aside to reserve sums similar to those set aside in the year 1913, there remains a balance of £167,808 14s 6d, out of which the directors recommend the payment of a dividend of 1 per cent. for the year on the deferred ordinary stock, carrying forward a balance of £47,799 17s 6d. This is at the same rate as last year, and the carry forward is about £9,000 less.

We have received the final instalment of the compensation money payable under the Railways Act. In this way we have taken into the amalgamated company proportionally less money than other companies, but, on the other hand, we have taken with us our rolling stock restored to the standard of 1913.

The salaries and wages bill of the company for the year 1922 was £4,944,540, compared with £1,660,154 in 1913, an increase of £3,284,386, equal to 198 per cent. Probably the most important problem before the railway companies to-day is the question of railway charges, and it is one of no little difficulty. In consequence of our success in amending the grouping proposals of the late Government the coal, iron and steel traders of Scotland to-day find themselves competing with similar traders in England upon the same relative conditions so far as railway rates are concerned as in 1913. The assurances we gave them in the spring of 1921

have been justified and fulfilled to the letter. We made large reductions in rates during the last year.

The estimated loss of revenue per annum involved in the modifications already made on rates for traffic by merchandise train amounts to fully £1,250,000 per annum on the traffic of twelve months. The reductions made in passenger fares and rates for perishable traffic by passenger train as from January 1st are estimated at £330,000 per annum, and the modifications in dock dues and charges which also took effect as from that date, are estimated at £50,000 per annum, or a total of £1,638,000. Against this we have been to some extent compensated by increased traffic carried, as well as by a substantial decrease in expenditure since this time last year.

INCREASES IN TRAFFIC.

We have secured the following increases in traffic:—Iron and steel scrap, 60,000 tons; pig-iron, 62,000 tons; ironstone and iron ore, 172,000 tons; stone for roads, 105,000 tons; pit timber, 141,000 tons; coal and coke, 6,000,000 tons. With such an improvement in our leading industries we can, without undue risk, enter upon an investigation of how much further we can assist the trade of the country by a reduction of the rates at present in force. There is, of course, another side to the picture. Agricultural traffic has not responded in anything like the same degree, probably owing in some measure to the competition of motor traction. Building materials such as bricks, sand and timber show a decrease of over 100,000 tons, and so long as the building trade continues to be the plaything of politicians we cannot confidently look for improvement.

Generally speaking, I take it there is reason to anticipate that some reduction of rates may be possible in the near future, provided that there is no serious rise in the price of coal, but I hope that what I am saying to-day and what has been said by chairmen of other railway companies recently will not lead to exaggerated hopes of wholesale reductions.

Unfortunately I cannot speak of the passenger as hopefully as I have spoken of the merchandise traffic. Substantial reductions of fares were made as from January 1st, and so far there has not been the response for which we hoped. For the first eight weeks of the current year the decrease of passenger train receipts on the London and North-Eastern Railway has exceeded a quarter of a million. We shall have to do better than that before the question of fares can be again considered.

The Duke of Buccleuch, K.T., seconded the motion, which was unanimously carried.

BRITANNIC ASSURANCE COMPANY, LIMITED.

A REVIEW OF THE YEAR—SATISFACTORY FIGURES.

The fifty-seventh ordinary general meeting of the shareholders of the Britannic Assurance Company, Limited, was held, on the 2nd instant, at the chief offices, Broad street corner, Birmingham, Mr. J. A. Patrick, J.P., chairman, presiding. There were also present Messrs J. A. Jefferson, F.I.A., vice-chairman and general manager; S. J. Port, J. Murray Laing, F.I.A., secretary and actuary; A. M. Patrick and W. Roseco, directors.

The Chairman, in moving the adoption of the report, said: Ladies and gentlemen,—The year 1922 has established the unenviable reputation of having been the worst within living memory so far as the industrial and commercial prosperity of this country is concerned—unemployment was rampant, distress was acute, markets at home and abroad were nervous and unstable with Continental exchanges fluctuating—in many cases actually crumbling—at a pace never known before.

Under such unprecedented conditions, it was inevitable that in a business such as ours we could not escape the consequences of the prevailing depression, and, indeed, so great were the difficulties to be faced throughout the year that even the most sanguine members of the board would not have been surprised if, as a company, we had merely managed to hold our own, and, as it were, marked time so far as progress was concerned. The directors were determined at all costs to stand by distressed policy-holders to the uttermost limit, so that no policy should be allowed to lapse which could possibly be saved, and when I tell you that even to-day we have on our books thousands of policies under which the arrears of premiums are far in excess of our most generous pre-war standards of concession, you will realise that the assistance we are rendering to those concerned is a very practical one, and one which, in the aggregate, is costing the company large sums of money in meeting claims which were we to rely on the very fair and reasonable conditions of the policies would be avoided.

I now formally move:—"That the report of the directors produced, together with the annexed statement of the company's accounts for the twelve months ended December 31, 1922, duly audited, be received, approved, and adopted."

MR J. A. JEFFERSON REVIEWS A DIFFICULT YEAR.

Mr J. A. Jefferson, vice-chairman and general manager, in seconding the motion, said:—Ladies and gentlemen, I rise with great pleasure to respond to our chairman's request to give you an account of our stewardship during the past year. I desire to place before you an outline, as brief as possible, of what has transpired during the period under review, and its effect on this, our great company.

On both occasions upon which I have previously had the honour to address you in my capacity as vice-chairman and general manager I have reported that the year immediately under review has been the most trying and anxious one for your board, and I honestly can say that last year was the worst in our experience; but I really do believe that we have turned the corner and now have actually passed the lowest point of the wave and are now on our way travelling upwards towards the crest.

During the whole of the year we have done everything we possibly could, as the chairman has stated, by way of helping our policy-holders who had fallen on bad times, and even to-day we are doing all we can to help those persons who are really trying to maintain their policies in force. Please do not for one moment think that any one of us connected with the "Britannic" is in any way down-hearted. I believe we feel we have all come through a most depressing and strenuous time, but the experiences we have gained have had this effect only—of making us, one and all, more eager and prepared for the better times we see ahead of us.

INDUSTRIAL ASSURANCE LEGISLATION.

One of the most pressing problems we have had to consider during the past year has been the suggested legislation to give effect to the recommendations made in the report of Lord Parmoor's Committee. The Bill introduced in the House of Lords a few days ago, whilst meeting with the approval of Lord Parmoor himself, is a measure which seriously affects the interests of all of us, and you may rely on our closest attention being paid to this matter. I notice the Lord Chancellor, in moving the second reading of the Bill, stated, when referring to abuses in the business, that he wished it to be understood that in what he said he was not referring to the well-known and reputable societies, but to smaller and newer societies, and I state most emphatically that the "Britannic" can claim to be included in the former category.

The increase in the premium income is as stated in the directors' report, £51,926 over the previous year, and this, although some £25,000 less than the increase shown last year, is, I think, still satisfactory in view of the depression through which we have passed, and I may say that, as far as my judgment serves, from the returns up to date there is, unless something abnormal occurs, every prospect of our showing a much better increase for 1923.

Our claims by death, which amount to over £560,000, show a substantial increase as compared with last year, and this is accounted for entirely by the very heavy death claims which arose in the early part of 1922, and in this connection I may say that 1923 shows a substantial reduction to date as compared with the corresponding period last year.

Our claims paid under maturing endowments remain practically constant at the figure of over £126,000.

Our payments under the heading of surrenders have increased by practically 60 per cent., and this is undoubtedly accounted for by the depression to which we have already referred. Coming to the question of expenses in this branch—before dealing with the figures, in view of the fact that there is probably no feature of industrial assurance more seriously misunderstood or more unfairly attacked than that of the expense ratio—may I be permitted to point out that an insurance company is, as far as I know, the only business in the country which discloses for all to see the total costs of production right from the raw material to the finished article. That is to say, from the collection of the 1d or 2d per week year after year until the payment of the claim, and I would ask you to bear this in mind when you are comparing our costs with the costs of other commodities.

REDUCED EXPENSES.

Returning to the figures, I am glad to be able to report that we have reduced our expenses from 45.59 per cent. in 1921 to 42.94 per cent. in 1922—our main saving, of course, coming under the heading of new business and extension expenses, but the item of commission has also been slightly reduced, and our expenses of management have increased by the small amount of .09 per cent., which, I may say, is more than accounted for by the increased rates of contributions under the Government unemployment insurance scheme.

As a company, we are fully alive to the importance of effecting every economy possible in the management of our business so long as efficiency is not thereby impaired, and the subject is one which is receiving our constant consideration, and every opportunity is taken so to perfect our organisation as to achieve this result.

During the past year a considerable amount of reorganisation has taken place—the full benefit of which has not as yet shown itself in our accounts; but I certainly believe that we can look to a reasonable reduction in expenses during the coming year.

Turning to the receipts side of the accounts, I have already made reference to the increase in the premium income of £51,926, and the only other item calling for comment is the receipt from interest, rents, &c., which you will notice has increased by the very satisfactory figure of practically £30,000—the gross yield being no less than £5 15s 7½d per cent., and the net yield £5 1s 5½d per cent. I think you will agree that the "Britannic" stands extremely well in this important matter of interest yield on invested funds, and it is a fact that there are extremely few British life offices which can show such a satisfactory record in this connection. It will, of course, be increasingly difficult, if not impossible, to maintain this high rate in the future, as naturally the opportunities of investing our funds in first-class securities at the high rates of interest which appertained through the early part of last year are becoming more and more rare—in fact, one might say, as compared with this time last year, that the yield on gilt-edged securities has fallen by practically 1 per cent.

BUSINESS UNDER THE MONTHLY TABLES.

The only other item of general interest which I should like to mention in connection with the industrial branch is that we are doing an increasing volume of business under our monthly tables, and I should like to pay my tribute to our indefatigable secretary (Mr Laing), who last year drew up some most attractive tables in connection with our monthly branch, and as the result we are already doing over four times the amount of business in this department as compared with our previous results. The directors are most anxious that this branch shall be energetically worked, as we believe that there are plenty of people amongst the working classes who can well afford to pay monthly instead of weekly, and thus obtain more advantageous terms for themselves—in other words, it is undoubtedly a higher form of thrift than the weekly

branch, and we are anxious to instil this into the mind of the public.

If you will now be good enough to refer to the revenue account of the ordinary branch, I should like to congratulate everybody concerned, both inside and outside, on the splendid figure of new sums assured—viz., £1,874,317. Assurance men, of course, are never satisfied, which is as it should be if progress is to be made, and we were most anxious to beat our record year of 1920, but we have fallen short by some £70,000. Nevertheless, we succeeded in passing the 1921 figures by no less than £425,000, and I think, taking everything into consideration, that it is a really excellent result, and you may rely on your board using every effort to make sound progress in this important branch of our business.

Our premium income in this department, you will notice, has increased by some £47,000, and our net interest shows the satisfactory increase of over £21,000—the net yield being the same as in the industrial branch, viz., 5½d, and, of course, in this department the high rate of interest is all important, as it is one of the chief sources of profit from which we are able to declare our bonuses to the with-profit policy-holders. Largely as a result of this high yield, we have been able to declare an increased reversionary bonus to participating policy-holders of £1 10s per £100 assured.

I see that in 1912 our gross interest income was £131,757, whereas to-day you will see, according to the general revenue account, the item has increased to £379,865—practically a quarter of a million pounds per annum increase in 10 years.

On the other side of the account, the amount paid by way of death claims has increased by practically £5,000, but the ratio to our premium income has decreased from 16.39 per cent. to 15.79 per cent. Our claims paid under maturing endowment assurances have increased by some £8,000, but again the percentage to premium income has decreased from 28.7 per cent. to 27.72 per cent.

AN OUTSTANDING FEATURE.

It has been an outstanding feature for years that the "Britannic" in ratio to its size has paid by way of claims under maturing endowment assurances a very much larger proportion of its premium income than practically any other company.

We are, of course, delighted that our policy holders should live to receive the result of their thrift, but there is the other side to be remembered, and that is that these heavy maturing claims mean a big drain on our premium income, and mean also that we have to place on our books a large amount of new business to make good this wastage before we can show progress.

You will notice that in this branch the same feature occurs as in the industrial branch under the heading of surrenders, which have increased by over £7,000—attributable, no doubt, to the same cause—trade depression. As regards the expenses of conducting this branch, I am in the happy position to be able to report a reduction under the two headings of commission and expenses of management. The reductions are not large, but they are in the right direction.

Under the heading of new business expenses, there is an increase of nearly 1½ per cent. of our premium income, but that is an increase that we are pleased to see, as it shows, of course, that we are rapidly expanding our business in this branch.

A NEW RECORD.

With your permission, I will now proceed to deal with the balance-sheet. If I may be allowed to use an expression often used by my late father, I think we may look upon last year as a year of milestones, for you will notice that the ordinary branch fund has passed the £3,000,000 mark, the industrial branch has passed the fourth milestone, and our total funds have passed the seventh milestone. In fact, our total increase in funds, amounting to over £850,000, has created a new record for this office, but naturally we who have to guide the destinies of this company hope and trust that in this regard we shall create a new record every year. This year, as last, we have not considered it at all necessary to increase the investment reserve fund, and I may say that the annual valuation of our securities has revealed a position which is even more satisfactory than I was able to report last year.

At our previous meeting I referred to certain disastrous failures in the insurance world, and the subsequent disclosures caused a Bill to be put forward in the House of Commons to compel companies, amongst other things, to give a complete list of securities as set forth in the balance-sheet. May I point out that there is no law that will prevent fraud. In this company no investment is made without the full knowledge and concurrence of the whole board, and, in addition, we have in progress throughout the year a continuous audit by the auditors appointed by the shareholders. These gentlemen know they are entitled at any time to ask—and, in fact, do ask—for any security they may desire to inspect. This, I submit, is the proper and businesslike way to ensure against fraud, and not by publishing a list of securities which is useless before

it is printed, for between the date of the balance-sheet and the time of issuing the list considerable changes will have taken place.

Taking the item of mortgages, you will notice that there is an increase of practically £120,000, and this is accounted for entirely by our house purchase scheme, to which I have already referred on several occasions. I have had some figures taken out, and find that since the scheme started well over 4,000 advances have been made. Of these, no less than 1,200 have been repaid, either in one sum or by instalments. In 104 cases death caused the policy to become a claim—so repaying the mortgage—leaving the widow and children in possession of a home free from all encumbrance. Of these 104 death claims, 13 were in respect of men killed during the Great War, and, as you know, we were not legally liable to pay under the terms of the policy. To-day we have practically 3,000 mortgages existing, and of this number, in spite of the extraordinary depression to which I have so often referred, only in 17 cases have we had to enter into possession, and this, I think, proves the care that has been taken in making the advances and in the selection of our clients. Personally, I believe that the character of the mortgagor is just as important from our point of view as the character of the property upon which we are asked to make the advance.

LOANS ON POLICIES.

You will notice that there is a fairly large increase in the amount appearing under the heading of loans on the company's policies, which, as I stated when dealing with the increase in our surrender claims, shows that many of our policy-holders have found their policies of timely assistance to them in tidying them over these hard times.

Our British Government securities, you will notice, have decreased by over £130,000, and this is accounted for by the maturity of short-dated securities, such as Treasury Bonds and National War Bonds. The decrease of £68,000 in our British municipal securities is accounted for by the fact that we sold some of our holdings in order to reinvest in the new Indian and Colonial Government issues, where you will see there is an increase of over £380,000. Our holding of Indian and Colonial municipal securities has decreased by over £100,000, and we have realised a number of our dollar securities, as money on the other side of the water has been very much cheaper than on this side, and this has meant a big improvement in values. Our holdings of railway securities have increased very considerably indeed—in fact, the larger portion of our new investments have been in this class of security. I am sure you will agree with me that one cannot have a finer security than the well-known British railways, or, indeed, any first-class railway, as they are essential to the very existence of any commercial country.

There is a small increase under the heading of house property, and this is accounted for by the fact that we have deemed it wise, owing to the Rent Restrictions Act and other circumstances, to purchase outright our branch offices in some of the larger towns, so that we may be undisturbed for all time.

Last year you will remember that we transferred £25,000 to our pension fund, bringing that fund up to £90,000. This year we are asking you to agree to the transfer of a further £30,000, and I may say that we have just launched a definite pension scheme, so that those worthy servants of ours, both inside and outside, may know what they have to look forward to in their old age as a reward for long and faithful service. The directors feel, from the numerous expressions of thanks and appreciation we have received, that the scheme will, by its moral and uplifting effect, repay the company for the heavy cost and cement still further the good feeling existing between the management and the staff.

As is our invariable custom, we end our report by thanking the inside and outside staffs for their loyal and efficient services, and in the pension scheme which I have just mentioned I think we have given tangible proof of our thanks. We realise and fully sympathise with all the difficulties, and we can only thank them sincerely for having so splendidly surmounted those difficulties.

In concluding my account of our stewardship, I think I may just sum up the position thus:—A satisfactory increase in premium income, a record addition to our funds, a record interest yield, and a reduction in our expenses ratio.

Finally, I beg personally to thank all my co-directors and fellow-workers for the magnificent assistance they have rendered me during a most trying year, and it is only because of such united efforts that we have been able to place such a report before you and which we are now asking you to adopt.

I have much pleasure in seconding the resolution proposed by our chairman.

The report and accounts were unanimously adopted, and Mr S. J. Port and Mr A. M. Patrick were re-elected directors. The auditors, Messrs Flint and Thompson, C.A., were re-elected.

The meeting concluded with votes of thanks to the chairman for presiding, the directors, general manager, secretary, and the inside and outside staffs for their efficient services during the year.

REFUGE ASSURANCE COMPANY, LIMITED.

SATISFACTORY PROGRESS.

INCOME FROM INVESTMENTS EXCEEDS £1,000,000.

The annual ordinary general meeting of the Refuge Assurance Company, Limited, was held, on the 5th instant, at the chief office of the company, Oxford street, Manchester.

The Chairman (Mr James S. Proctor), in proposing the adoption of the report and accounts, said: Gentlemen,—Before moving the adoption of the report and accounts I desire to refer, on behalf of the board of directors, to an event the sadness of which is brought most vividly to the minds of all those present at this meeting to-day. I refer, of course, to the grievous loss sustained by the company in consequence of the death of the late chairman, Mr R. W. Green, in July last. Mr Green was associated with the company for a period extending over 40 years, and after occupying various positions was, on the death of the late Mr William Proctor in 1898, appointed joint general manager, vacating this position in 1912 on his election to the chairmanship of the company in succession to the late Mr James Wilcock. Wise in counsel, sound in judgment, broad-minded, and sympathetic in the consideration of all matters which came before him, his services were at all times highly valued and appreciated by his colleagues, and, I am happy to add, there was during his lifetime—and has been since—abundant evidence that his disposition and method of dealing with men were such that he was not only most highly respected, but possessed the sincere affection of all those with whom he came in contact. We all, I know, feel his absence most deeply. At this point I would like to take the opportunity of thanking the shareholders for their confidence in electing me as his successor. I need hardly assure you that, in succeeding to this position, I am fully conscious of the responsibilities thereby involved, and will at all times, to the best of my ability, exercise my powers and judgment not only in your interests, but in the interests of the vast number to whom, either as policy-holders or as members of the staff, the welfare and stability of the company mean so much.

Turning now, gentlemen, to the report and accounts for the past year, I feel that I am—on this the first occasion on which I preside at this meeting—extremely fortunate in that I find myself, on behalf of the directors, in a position to put before you such an eminently and obviously satisfactory record of the company's operations for the year under review, particularly so having due regard to the fact that those operations were so greatly influenced by a continuance of the adverse conditions which have, unfortunately, prevailed for so long. Very many industries were most seriously affected, resulting in a diminution in production and generating acute unemployment. In spite, however, of these conditions, you will have observed from the report that the aggregate income of the company was £7,130,667 9s 9d, showing an increase during the year of £510,306 16s 2d. The total assets of the company have increased during the year by £2,335,969 13s, and now amount to £23,948,396 18s 6d, and, what is also worthy of mention, the net income from investments amounts for the first time to over £1,000,000.

INDUSTRIAL BRANCH.

Referring in the first place to the industrial branch, during the past year the number of policies issued in this branch totalled 995,462, assuring the sum of £10,658,101 15s, constituting the greatest production—viewed in relation to the new premiums incident to the business—during the past nine years, excluding the exceptionally prosperous year of 1920. As regards the premium income, after drastically writing down the value of the abnormally high arrears due largely to the generous attitude adopted by the company towards policy-holders who found themselves in difficulty owing to depression in trade, this amounted to £3,493,577 14s 8d, showing an increase of £201,746 6s 7d when compared with the previous year. The net interest revenue—i.e., after deduction of income-tax—amounted to £269,510 11s, which is equivalent to an effective rate of interest of 4 9s 8d per cent. based on the whole of the assets of this branch, whether invested or otherwise, and compares with 4 1s 5d per cent. experienced in the previous year. The death claims amounted to £1,416,376 0s 5d and the survival claims to £116,002 1s 5d, and, after providing for these and all other disbursements, including £25,000 to the staff pension fund and writing off the balance of the furniture account, the life assurance fund was augmented by the sum of £741,247 9s 3d as a result of the year's operations, and after such addition amounted to £5,917,129 4s 3d.

The outstanding feature, however, and I think the most satisfactory one, is that the directors are able to report that the measures taken some considerable time ago to materially reduce the expense ratio have—after being delayed by the economic con-

ditions which have in the interval prevailed—borne fruit, and we have consequently experienced a very gratifying and material reduction of 5.3 per cent. in this item, the ratio of expenses to premium income being 40.8 per cent., against 46.1 per cent. in 1921, a ratio which there is reason to anticipate will be further reduced in the present and succeeding years.

ACTUARIAL INVESTIGATION.

After providing for the elimination of the furniture account, transferring £25,000 to the staff pension fund, and allocating £150,000 to a special actuarial reserve—which reserve now amounts to £350,000—the actuary reports a surplus of £168,240 4s 3d, out of which it is proposed to allocate to the shareholders the sum of £14,953, and to declare a dividend of 7½ per cent., absorbing the sum of £22,500.

ORDINARY BRANCH.

In the ordinary branch the number of policies issued was 37,304, assuring the sum of £4,259,337 10s, creating a new premium income of £309,446 2s 7d. Large as this amount of new business is, it is not of so great a volume as we might have reasonably expected, having regard to previous achievements, but we must not lose sight of the fact that the "Refuge" first saw the light of day in the industrial North, and as a consequence, though it is represented in practically every town and village in the country, has its strongest organisation in that area in which the recent commercial depression has been most acutely felt. The aggregate premium income of this branch amounted to £2,628,412 6s, exhibiting an increase of £109,822 4s 6d as compared with the previous year. The net interest income—after deduction of income-tax—amounted to £732,104 13s 8d, reflecting an effective rate of interest of 4 10s per cent., compared with 4 0s 2d per cent. for the previous year. The importance of this increased yield needs no emphasising, and will be noted with gratification by the vast number of our with-profit policy-holders, as it is, of course, the difference between the assumed effective rate on the assurance fund and the actual rate earned which constitutes one of the main sources to which the policy-holders must look for guidance as to the prospects with respect to future bonus additions. The death claims amounted to £539,880 9s 3d, and the amount paid in respect of survivals was £559,950. After providing for all the disbursements and the allocation of £25,000 to the staff pension fund, the life assurance fund of this branch amounted to £16,631,455 18s, being an increase of £1,595,392 0s 3d in respect of the year.

One item, perhaps, calls for comment from me, and that is the small increase in the expense ratio in this branch at 14.9 per cent., as against 13.6 per cent. last year. This increase is due to the fact that, owing to the rapid growth of the ordinary branch, a slightly higher proportion of certain standing charges has been debited to this branch than hitherto.

ACTUARIAL INVESTIGATION.

In pursuance of the company's recognised practice of instituting annual investigations, an actuarial valuation was made of the liabilities incident to the contracts as at December 31st last, which, after transferring £25,000 to the staff pension fund, revealed a surplus of £991,518 18s, out of which the company's actuary advises the allocation of £525,469 to the policyholders and shareholders, and which sum admits the declaration of a reversionary bonus of £1 12s per cent. based on the sum assured. All will concur with me in affirming that this is a very great achievement, and should constitute a most stimulating factor in the further development of the company's ordinary branch business; and especially having regard to the fact that no less a sum than £466,049 18s has been carried forward as an undivided reserve or contingency fund.

INVESTMENTS.

You will doubtless expect me to refer to the investments. It will have been noticed with satisfaction, though not with surprise, that it has not been necessary on this occasion to make any provision for depreciation in the value of the company's invested funds. The fact is that the past year may—together with its immediate predecessor—be appropriately described as the period of recuperation as regards the depreciation which occurred consequent upon the war. I might, perhaps, go further, and say that the period has been more than merely one of recuperation, as we find, taking market values at the end of last year as our basis, that a very substantially larger appreciation in the value of our securities has taken place than the amount of depreciation which occurred during

and since the war. In fact, leaving out of consideration the investments reserve funds of £800,000, the aggregate market value of the investments at the end of the year exceeded by a very substantial sum the amount at which they appear in our balance-sheets, liberal provision having been made for any impairment in other than Stock Exchange securities. It will interest you to notice that, of the invested funds of the company, amounting to £23,006,325 3s 1d, we hold £8,897,505 14s 6d, or 38.67 per cent., in British Government securities.

Prior to the war—viz., on December 31, 1913—54.40 per cent. of our invested funds was invested in Great Britain, and on December 31st last 76.71 per cent. was so invested.

I have already referred to the very satisfactory increases in the net yields on the total assets of the respective branches, and may here, perhaps, appropriately add that the corresponding net yield on the aggregate assets of the combined branches is £4 9s 10d per cent., compared with £4 6s 5d per cent. for the preceding year, thus showing an increase of 9s 5d per cent. earned from this important source of income.

LEGISLATION.

At the time of our last annual general meeting you will remember reference was made to the Draft Industrial Assurance Bill which had in the previous autumn been introduced by Lord Onslow into the House of Lords. In the interval the late Government announced in August last, through the then Home Secretary, its intention to introduce an amended Bill. Legislation was, however, delayed by the dissolution of Parliament, but you will no doubt be aware that a Bill introduced by the Lord Chancellor is now before the House of Lords. All I desire to say on this matter at the moment is that there is much to commend in the provisions of the present Bill, and I believe the measure will receive a welcome from all who have the best interests of industrial assurance at heart, and if it becomes law in its present form it cannot fail to be beneficial both to the companies and societies transacting industrial assurance and to the insuring public.

TRIBUTE TO STAFF.

Before I resume my seat I desire, on behalf of the directors, to express a note of appreciation relative to the satisfactory manner in which the staff have executed their various duties during a year which—particularly to the outside staff—has been one presenting many difficulties consequent on the general depression in trade. I am glad to observe there is, in addition to that contained in our own returns, abundant evidence that trade generally is improving.

Bank clearings are greater, railway traffic exhibits improvement, and exports reveal a welcome increase, and I trust that the political outlook in Europe may at an early date materially improve, so that what would appear at the present time to furnish the main reason for doubt as to the probability of a sustained trade revival may be removed, and we may look with confidence to a period of active trading conditions and to the many advantages which would accrue therefrom to our own business.

Now, gentlemen, it affords me much pleasure in moving the adoption of the annual report and accounts.
The report and accounts were adopted.

UNDERGROUND ELECTRIC RAILWAYS COMPANY OF
LONDON, LIMITED.

RESULTS OF THE YEAR " MOST SATISFACTORY."

The yearly meeting of the Underground Electric Railways Company of London, Limited, was held, on the 8th instant, at the Caxton Hall, Caxton street, Westminster, London, the Right Hon. Lord Ashfield (chairman of the company) presiding.

The Chairman, in the course of his speech, said: You are, through your investments in various companies, connected with all phases of London transport. You are in this indirect way interested in 66 miles of railway, carrying, in 1922, 325 millions of passengers; in 1,778 miles of omnibus routes, covering 722 miles of roadway, carrying 924 millions of passengers; and in 117 miles of tramways, carrying 186 millions of passengers. Altogether you are in one way or another responsible for carrying 1,504 millions of passengers, or much more than half of the local passenger traffic of the Metropolis, for which purpose you are concerned with the running of 191 millions of car miles. These are huge figures, hard to grasp, yet they mean much to London. Each of your several interests is substantial, and one of the hardest problems which has to be tackled is that of the mutual adjustment of the varied traffic facilities available, so as, on the one hand, to afford the public the best service possible, and, on the other hand, to secure that reasonable return on the total capital invested to which those who have freely ventured their money are fairly entitled. We, as a company, are fortunate in having at our disposal records and experience of London transport from more than one point of view, and we are enabled, therefore, to take decisions with a greater surty that they will prove right. Only a very intimate working arrangement between all the various companies concerned makes this possible.

and this valuable measure of co-operation your company helps to secure.

PRESSING NEED FOR EXPANSION.

Just at the moment the pressing need is for the expansion of facilities of all kinds, but especially on the railways. After the war there was a boom period that tried our resources very severely. It has been followed by a slump, from which we are slowly recovering. In this interval we have the opportunity of making provision for that growth of traffic and advancement of London which will surely come. The transport undertakings are progressing once more after the check imposed upon development by the war, and are reinstating themselves in a condition of improved efficiency. The City and South London Railway is being enlarged and re-equipped. Connecting railways at Camden Town and an extension from Golders Green to Edgware are under construction. New rolling-stock is on order for railways. New omnibuses are building. With the close of this year the pre-war type of omnibus will have wholly disappeared from the main streets of London. The larger Underground stations are being redesigned and equipped with escalators. New plant is being installed in the power-house. New works for the repair and renewal of railway cars are being completed at Acton. Everywhere there is commendable activity.

LARGE EXPENDITURE INVOLVED.

This means, of course, an expenditure of large sums of money. The capital of the five common fund companies has increased during the year by £7,082,000, and now totals £51,423,000. This increase has been obtained by the issue of debentures, mostly upon favourable terms by reason of the guarantee of the Government under the Trade Facilities Act, 1921. It is hoped, in the course of the present year, to raise another £8,000,000 in this way to complete the programme of works, which will knit together the City and South London Railway and the Hampstead and Highgate Section of the London Electric Railway into one system stretching from Edgware on the north to Sutton on the south, a distance of 22 miles, with through routes both *via* the City and the West End. All these works will be mutually helpful one to another and to the Underground system of railways as a whole. It is confidently expected that the extension railways will be self-supporting within a few years, with the housing development that may be looked for in the new districts which will be opened up. Certain it is that your company, and the group of companies associated with it, can only maintain their position and ensure their prosperity by being willing to fulfil their part in meeting the requirements of London's growing population and traffic.

I cannot speak in favourable terms of the Associated Equipment Company's present financial position. The stagnation in the motor trade, as in many other trades, continues, and it is not made better by the considerable number of surplus war vehicles which still seek a market. It has not been able to contribute anything to your income in this year under review, but it has somewhat bettered its general financial position by writing down its stocks and plant.

THE ACCOUNTS.

With regard to the accounts, the income from investments amounted to £882,000, or £118,000 more than in the previous year, an expansion of 15½ per cent. Miscellaneous receipts were slightly better at £6,000, so that the total income amounted to £888,000. If I omit the Associated Equipment Company, every company in which you had a substantial holding has paid a higher rate of dividend. Fortunately this general advance is due to some general cause, and not to some accidental or temporary cause. It holds, therefore, the promise of being sustained. This general cause is the substantial fall in the working costs of each of the operating companies and is attributable not to one but to many factors, the greater economy in management, lower rates of pay, cheaper prices of stores. And while the financial position of all the companies has improved on this account, I should not fail to point out that the public have also shared in the result and enjoy the benefits of both reduced fares and augmented services.

On the expenditure side of the account, the movements which call for notice are: First, the considerable reduction in the loss on exchange by £59,000, from £83,000 to £24,000, consequent upon the recovery of the American and Dutch exchanges during the last year; second, the discount of £1,600 on the redemption of £103,000 of the 6 per cent. three-year secured notes, which mature in this present year. Against this sum, however, must be set a saving in interest on these notes. The third item which deserves comment is the setting aside of £60,000 to special reserve for the equalisation of interest on the 6 per cent. first cumulative income debenture stock and 6 per cent. income bonds. This, added to the £26,242 set aside in the previous year, makes altogether £86,242 available for this purpose. After paying altogether 5 per cent. upon the 6 per cent. income bonds for the year, and setting aside this sum of £60,000 to special reserve, there remains a sum of, approximately, £40,000, which is carried forward.

The last year has been the most satisfactory which your company has experienced since its inception, and I am hopeful that a better fortune than that which has marked your record in past years is in store for you, and that without great and disturbing changes we may make slow and steady progress towards a sound and assured financial position.

When last I spoke to you I suggested that the time had come when it was necessary, if your company were to play an effective part in London transport, that there should be a reorganisation and reconstruction of your finances. Until some scheme of reconstruction is worked out and adopted, your company cannot take its proper place in the expansion and development of the transport systems in which it is already heavily interested.

The report and accounts were unanimously adopted.

HARRODS, LIMITED.

CHAIRMAN'S IMPROVED TRADE PREDICTION JUSTIFIED

The thirty-third annual general meeting of shareholders was held, on the 7th instant, at the company's premises, Brompton road, London, Sir Woodman Burbidge, Bart, C.B.E. (the chairman of the company), presiding.

The Chairman said: The directors are very pleased to be able to present what they venture to think will be regarded by the shareholders as a satisfactory result of the trading for the past year. In the concluding paragraph of my speech to the shareholders at last year's meeting, I emphasised the opinion that the setback which the company had suffered for the financial year ended January 31, 1922, was but temporary. Ladies and gentlemen, the report and accounts now before you, showing as the result of the trading a net profit of £484,000, being an increase over the previous year of £284,000, fully justifies the confidence in the future I then expressed.

A pleasing feature in connection with this increase is to be found in the fact that it is not confined to any one particular branch of the company's operations; Brompton road, our house in Manchester, and Swan and Edgar, Limited, have all contributed to the increase.

STABILISATION OF PRICES.

Prices of all classes of goods and merchandise have, during the year, reached a firmer level of stabilisation. This is all to the good, both for the manufacturer and the retailer, also the general public. Until there can be a further decrease in the cost of production (and, frankly, I cannot see much prospect of this in the near future), prices are likely to remain round about their present level. There may be some people holding back their purchases in the expectation of further reduction in prices. I cannot see any foundation upon which such an opinion can be reasonably based, I think we have reached the time when the public may purchase with confidence both for personal and household requirements. This is one of the best ways to help to decrease unemployment and get the wheels of industry moving freely once again.

As is stated in the directors' report to the shareholders, the business this year at Brompton road shows an increased turnover compared with last year. This is the more satisfactory when we take into account the drop in prices which has taken place since last year, which will average not less than 12½ per cent. to 15 per cent. We are pleased to record that the number of customers served at Brompton road during the past year shows the largest increase in the history of the company from whatever standpoint the comparison is made. This is a splendid achievement, and goes to show that we are well maintaining the popularity we have enjoyed for a great number of years as the leading retail store in the kingdom for quality and value.

One reason why Harrods are able to report such a phenomenal increase in the number of customers served is because the quality and value of our merchandise successfully stands the comparison of the most discriminating public. Although our cash customers show a large increase year by year, the main strength of our business is in the account customers, and you will be pleased to hear that the number of account customers is increasing very substantially every year. This is no doubt due not only to the quality and value of all our goods and merchandise, but to the excellent service we give and the prompt and frequent deliveries we make. We have 160 motors daily delivering in town and suburbs, covering a wide area, and this, we are sure, is very much appreciated by our customers. No effort is spared on our part to make this service satisfactory to all our clients, both in town and suburbs, and wherever possible we endeavour to improve our facilities and extend our service. An important portion of our trade is done with country customers in every part of Great Britain and Ireland.

PROFIT AND DIVIDENDS.

After reviewing the accounts, the Chairman said:—The profit and loss account balance, being net profit for the year, is £484,120. After deducting from this amount the company's usual contri-

[illegible]

butions to the buyers' pension fund for the year, and the payment of interim dividend on preference and ordinary shares, and adding balance of last year's undivided profit, there remains a balance for disposal of £292,860.

Investments, standing at £1,831,028, show an increase of £165,064, due to our having invested £255,000 in 5½ per cent. Government Exchequer bonds, and having reduced the investment account by £75,000 capital in Walter Carter, Limited, now merged in the assets and liabilities in the balance-sheet.

If you will now turn to the proposed appropriation of profit account No. 2, you will observe that: Dividend paid on the preference shares on September 16th last was £150,000; interim dividend of 2½ per cent. on ordinary shares also paid September 16th last, £47,875; dividend on preference shares for second half of the year, payable on March 16th, £150,000; proposed final dividend of 5½ per cent. on the ordinary shares (making 8 per cent. for the year), £105,325; balance to be carried forward to next year (subject to Corporation Profits tax), £37,535. It should not be overlooked that this year's dividend to the ordinary shareholders includes £38,000, being 8 per cent. on the £475,000 £1 fully-paid ordinary shares distributed as free bonus shares in 1920. Had there been no bonus shares distributed, and we had paid this £38,000 as dividend on the ordinary shares issued, it would have increased this year's dividend to a little more than 10½ per cent.

The report and accounts were adopted.

DICKINS AND JONES, LIMITED. LARGE INCREASE IN TRADE.

The twenty-third annual general meeting of Dickins and Jones, Limited, was held, on the 5th instant, at 29 Argyll street, London.

Sir Woodman Burbidge, Bart., who presided, said that, in the opinion of the directors, the past year's business disclosed very satisfactory results. A year ago reference was made to the disturbance to trade which had resulted from the rebuilding operations, but it had been the confident belief of the board that as the floors of the second section were completed and taken over substantial advantage would accrue from the improved premises, and this anticipation had certainly materialised. The trading policy of the company had always been to offer merchandise at the lowest prices consistent with quality. This policy remained unchanged, and the reputation gained during over a century was being firmly upheld. That settled policy had without doubt contributed materially towards the large increase of trade shown during the past year, and a very considerably larger number of transactions had been recorded. The advantage of the magnificent new buildings providing the additional floor space required for storage and display of their goods had been proved, and with the more settled conditions which obtained in the commercial world there should be still further progress in the business which would correspondingly reflect itself in the company's profits. The trading profit for the year amounted to £103,386, as against £50,582 in the previous year, and the directors proposed to pay a final dividend on the ordinary shares at the rate of 10 per cent. per annum, making 7 per cent. for the year. They had been able to arrange with the company's bankers to finance the erection of the new building, and it had thus been possible to postpone until its completion the issue of the new capital. This had proved very satisfactory, as they were able now to raise the money at a much lower rate of interest than would have been possible two years ago. The directors were satisfied that the best way of raising the capital required was by an issue of debenture stock, and in consideration of the preference shareholders giving their consent thereto, it was proposed to increase their cumulative dividend from 5 per cent. to 5½ per cent.

The report and accounts were unanimously adopted.

Resolutions were afterwards passed authorising the issue of £1,000,000 6 per cent. debenture stock, and approving the proposed increase in the preference dividend. At the separate meeting of preference shareholders the resolution submitted was defeated on a show of hands. It was, however, carried on a poll being taken.

UNITED STATES DEBENTURE CORPORATION, LIMITED. "POSITION OF IMPREGNABLE STRENGTH."

The ordinary general meeting of the United States Debenture Corporation, Limited, was held, on the 6th instant, at Winchester House, Old Broad street, London, Mr Nathaniel Spens (the chairman) presiding.

The secretary (Mr William George Lock, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Our revenue has increased from £118,730 to £121,313. Taking from the revenue account the expenses—which have gone up a very slight amount—the net result is that the

1923 revenue is £111,843, against £109,878. Our income-tax and corporation profits tax have increased from £3,326 to £4,678—quite ½ per cent. upon your ordinary stock. The divisible revenue is £107,165, against £106,552. We have paid the debenture interest, which takes only £47,250 of that very large net revenue, so that the annuity which these gentlemen possess is a security, in my judgment, of the very highest description and class, rendered all the more high, of course, by the fact that they say, "So long as we are here you must conserve and preserve your £900,000 of uncalled capital." It is perfectly true that we cannot expect that they, or any other creditors, should give up something for nothing. I may say that we, in conference, have thought about this subject, and have never lost sight of it; but on the whole, up to this moment, we have never seen any scheme which, in our opinion, held the scales sufficiently equally between the rights of the debenture-holders and the rights of the shareholders to make us feel that we should disturb the present exceedingly satisfactory position of the company. If the ordinary shareholders do as I do they will think of their £1 which is paid up, and will probably say, "We ought to get at least 10 per cent. upon that"—and they get it—and they will say for the remaining £3, which is a very nominal liability, "We ought to get a guarantee commission," and they get it, because we pay them 12½ per cent., and I look upon the 2½ per cent. as a guarantee commission.

We are left with a balance for division among our ordinary shareholders which enables us to declare a 12½ per cent. dividend on our ordinary shares, and to add to the amount carried forward a balance of £2,790 in place of £1,177 last year. I think I can truly say that that is a capital result. I am glad to say that on the one side of our investments there has been a rise of something like 12½ per cent., and the result of that has been that we have seen all monetary depreciation wiped out and have a very substantial balance at the credit of our reserves represented by the current and, as I still continue to believe, the low quotations of the fixed-dividend securities which constitute the greater part of our investments. And for our debenture-holders and for our preference shareholders, particularly, this has been a capital year, because we have seen a very material advance in the value of the debenture capital. We have seen a very material advance in the value of our preference stocks, too. I feel that you are placed in a position of impregnable strength, and that for many years to come the United States Debenture Corporation should take its place amongst the first rank of the trust companies in the City of London.

The report was unanimously adopted.

RIVER PLATE TRUST LOAN AND AGENCY COMPANY, LIMITED. SATISFACTORY RESULTS—INCREASED PROFIT.

The forty-second ordinary general meeting of the River Plate Trust Loan and Agency Company, Limited, was held, on the 8th instant, at 52 Moorgate street, London.

Mr James Anderson, who presided, said that at the close of 1921 the company's assets in Argentina represented roughly 53 per cent. of the whole, the remaining 47 per cent. being on this side, whereas at the close of 1922 the position was just reversed. This movement of assets had been occasioned by considerable repayments of mortgage loans having been made at a time when there was little new business of an attractive kind offering. At the close of 1921 the mortgage loans outstanding amounted to £2,820,000, as compared with £2,463,000 a year ago. This unusual activity in the demand might be attributed partly to the unprofitable nature of the estancia business during the last year or two, and partly to the competition of the National Mortgage Bank, the incidence of which in recent years had been felt more and more. The money transferred from the River Plate during the past year they had been able to invest on this side in sound securities which gave a fair return on their cost. The investments on this side now reached the large total of £2,733,000, of which rather over one-third consisted of British Government securities. The remainder was represented by investments in Indian and Colonial stocks, British and foreign railways, public utility companies, and other investments of a general character. Of the general investments, amounting to £1,807,000, 62 per cent. was in bonds and debentures, 23 per cent. in guaranteed and preference shares, and 15 per cent. in ordinary stocks and shares. At the present time the market value of the company's investments was substantially in excess of the book cost, and the capital and reserves were intact. The gross profits for the past year amounted to £394,228, a decrease of £9,061, but there was a saving in expenses of £12,333, so that the net profits, £266,750, showed an increase of £3,272. It was proposed to pay a final dividend of 11 per cent. on the "A" shares, making 20 per cent. for the year, and 4 per cent. on the "B" shares, making 7 per cent. for the year, placing £20,000 to the reserve fund, and

adding £15,750 to the carry forward. So far as could be foreseen, their profits in the present year might be somewhat less than those of last year, in view of the large amount of capital withdrawn from the mortgage business and invested on this side at a lower rate of interest; but the difference was not likely to affect their profits materially. As regarded new business, they were at present having very few applications for loans, while repayments continued on a fairly large scale.

The report was unanimously adopted.

GENERAL INVESTORS AND TRUSTEES, LIMITED. COMPANY'S SOUND POSITION—AMERICAN DEBT.

The annual meeting of the General Investors and Trustees, Limited, was held, on the 8th instant, at Winchester House, London, Sir J. Harwood-Banner, M.P., presiding.

In moving the adoption of the report and accounts, he said their revenue showed an increase of, approximately, £3,000. They recommended the payment of a final dividend of 4 per cent. on their ordinary stock, making once more 7 per cent. for the year, and carried to reserve account £10,000, bringing it up to £125,000, to staff provident fund £4,000, and £11,110 was carried forward. The period since last they met had been an interesting one in many respects. It had seen the negotiation of the agreement with the United States for the funding of our indebtedness to them. The debt was due by us, and we had got to pay it. He hoped our good friends would not complain if we were not too profuse in our acknowledgment of their generosity. He could not resist pointing out to their friends and Allies, the Americans, that in the report of the Council of Foreign Bondholders there was, under the heading Defaulted Debts of the Southern States of the Union, the following:—

"The loans referred to are understood to have been contracted for public improvements, and do not include 'Confederate bonds' or war debts. Interest, which in most cases was at the rate of 6 per cent., is not included. The debts have been in default from about 50 to 80 years."

He did not know what these defaulted debts, with compound interest, amounted to to-day, but he did suggest that this might very well be taken into account by a nation so great and so wealthy as the United States of America. Referring to the position of the rubber-producing industry, he pointed out that already the rise from the lowest of, say, 7d per lb for rubber to 1s 6d meant practically £25,000,000. That, at all events, was something towards the interest we had to pay on the American debt. But this was quite inadequate. He hoped it was not going to stop at that, and surely an average price of 2s per lb must be regarded as fair and reasonable. If we could get to that, then it would mean, approximately, a further £13,500,000 a year. He could only express the hope that the rubber producers, through their representatives on the council of the Rubber Growers' Association, would work steadily with this object in view, and that the Governments concerned would give them their sympathy and support in this worthy object. The one thing now necessary to give to the rubber producer the full and proper return for his risk was the formation of a central selling organisation. As to the position of their company, this, in his view, was never better, and he thought they were justified in looking forward hopefully to the future.

The report was adopted.

B. MORRIS AND SONS. YEAR'S RESULTS "EMINENTLY SATISFACTORY."

The annual general meeting of B. Morris and Sons, Limited, was held, on the 8th instant, at Winchester House, London, Mr W. S. L. Schuster (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—There is no change in the capital account. Creditors (including provision for income-tax and corporation profits tax) stands at £46,798, and shows a decrease of £14,345; the reserve account is up £5,000, and contingency for development reserve account £4,000 as compared with last year, and this, with the addition of £1,000 which we propose to allocate to-day, will bring the reserve up to £50,000. Superannuation account again shows a decrease at £540. The item profit and loss account, £25,230, shows a decrease of £6,500, while balance from last year is larger by £2,300. On the other side of the balance-sheet stock at home and in bond—a very well bought stock—stands at £207,171, an increase of £1,756. Debtors at £80,743 are lower by £12,351—this shows that our collectors are making the best efforts in order to secure cash for the company. In the profit and loss account income and corporation profits taxes are down £1,899, and interest paid is less by £2,098. Plant and machinery depreciation is less by £600, and last of all the net profit for the year is £25,230, a loss compared with last year of £6,500. The profit on trading shows a decrease of £11,000.

Considering the amount of unemployment and the lessened spending power of the nation, together with the high duty and high prices of the best grades of tobacco, I consider the results we have produced are eminently satisfactory, and show that with any slight revival in trade we shall be among the first to benefit. I think it is a balance-sheet that any chairman of a company in the City of London would be very willing to submit to shareholders, as most of you know what balance-sheets have been during the past year.

I need hardly say that I am greatly indebted to my friend the managing director (Mr May), to the secretary (Mr Jones), whom you have known for many years, to my co-directors and the heads of the departments and staff for all the energy and talent they have brought to bear for the benefit of your business during the past year. In regard to the present year, the only thing I might draw attention to is that when we meet you next year we shall find a decrease in the stock. We are introducing several new lines to the public, and I hope they will be as favourably received as those we have introduced in the past.

Mr A. J. May (managing director) seconded the motion, and it was carried unanimously.

ISAAC WALTON AND COMPANY, LIMITED. YEAR'S RESULTS "EXTREMELY GOOD."

The nineteenth annual general meeting of Isaac Walton and Co., Limited, was held, on the 9th instant, at the registered office, 169 Newington causeway, London, Mr Chas. Stuttaford (chairman of the company) presiding.

The secretary (Mr J. Gunn, F.C.I.S.) read the notice convening the meeting and the auditors' certificate and report.

The Chairman, in moving the adoption of the report and balance-sheet, said: The year under review has been a strenuous one, and in view of the general depression in trade and the decline in the price of merchandise, the results shown are extremely good.

The trading profit for the year amounted to £37,206, which compares very favourably with last year when we consider the amount of excess profits duty then recovered, and in only two previous years (I refer to 1920 and 1921) has this figure been exceeded.

The stock at £66,476 is £11,943 lower than last year, which emphasises the fact that it is being turned over at a faster rate, and is a sure sign of a healthy business; our policy of always supplying a good and reliable article at a moderate price, rather than adopting sensational methods which cannot last, has proved to be the correct one.

There is an addition to the properties account, as we had the opportunity of opening an extra section at Newcastle and considerably improving our men's and boys' hat department. We have also during the year put in entirely new fronts and enclosures on the old section of the premises, and have now at Newcastle a thoroughly up-to-date establishment replete in every way as a man's stores.

Our leasehold properties have been entirely written off, but we prefer to keep the figures in the balance-sheet, as they are a valuable asset, and are fully worth the £22,887 at which they are shown. The goodwill now is written down to £25,000, and represents less than one year's trading profit.

If you will refer to the appropriation account on the first page, you will see that shows the profits at £37,206, to which has been added £12,202, the balance brought forward from last year, making a total of £49,408. After paying interest on mortgages,

&c., cost of repairs and renewals, income-tax and directors' remuneration, there is a sum of £30,593 to be dealt with. The preference dividend amounts to £8,400, and to pay a final dividend of 1s per share on the ordinary shares, making 2s per share, tax free, for the year the further sum of £5,000 is required, leaving a balance to be carried forward of £12,193.

The report and accounts were unanimously adopted.

(a) Including Treasury Bonds.

Tenders will be received on Friday, March 16, 1923, for Treasury Bonds and Treasury Bills to be issued to the maximum amount of £30,000,000. The amount of Treasury Bonds issued will not exceed £2,500,000, but subject to that limit, the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

ESTHONIAN EXCHANGE RATES.

The Bank of Esthonia quote Reval exchange rates as below:—

NOTICES.

It is announced that, in accordance with the arrangements made between the British Overseas Bank, Limited, and the London and Liverpool Bank of Commerce, Limited, the following gentlemen were elected directors of the London and Liverpool Bank of Commerce, Limited:—Mr A. C. D. Gardner, Mr N. L. Campbell, Mr A. G. Gumpert, Brig.-Gen. A. Maxwell, C.M.G., D.S.O., Sir G. E. May, K.B.E., the Hon. B. F. Rollo. Also that the following gentlemen have resigned from the board:—The Rt. Hon. Lord Ritchie of Dundee, Major Walter Bonn, D.S.O., M.C., Mr John Dennistoun, Mr Alexander Lang, C.M.G., Sir Felix Schuster, Bart., Mr F. V. Schuster.

Lloyds Bank Limited announce that, in connection with the recent incorporation of the business of Messrs Cox and Co., official agents to the Army and Royal Air Force, a local committee has been appointed, consisting of Sir H. Seymour King, K.C.I.E. (a director of Lloyds Bank), Mr H. A. Cox, Mr A. C. Cox, Mr O. V. G. Hoare, Sir Reginald Brade, G.C.B. (formerly Secretary of the War Office), and Mr R. M. Rowley-Morris (hitherto manager of Lloyds Bank, Law Courts), under whom the Army and Royal Air Force agencies will be continued in full activity as heretofore, and the old personal connection will be maintained and strengthened. They also announce that a sub-branch of the bank is now open at Medomsley, under the management of Mr W. Russell, of the Consett branch.

The London Joint City and Midland Bank announce that the business hitherto conducted at 61 Lombard street, Norwich, has been transferred to the branch at 18 London street, Norwich, and that the office in High street, Fordingbridge, Hants, has been converted into a full branch. It is also announced that new offices have been opened at 66 Magdalen street, Norwich; Melrose House, Pontrhydyfen, Port Talbot; and in Station road, Stainforth, Doncaster.

The National Provincial and Union Bank of England, Limited, announce that a branch of the bank is now open at Hawkers Hill street, Chepstow, the resident officer being Mr C. H. Hearn.

Reports and Notices.

We are informed that since 1890 the businesses of Henry Bannerman and Sons, Limited, and the Bannerman Mills Company, Limited, although under the same management, have been carried on as separate concerns. Now, for family reasons, and with a view to concentration of control, these private companies are being amalgamated under the style of Henry Bannerman and Sons, Limited, who will also take over the Bradford Road Manufacturing Company, Limited.

BANKS.

EASTERN BANK, LIMITED.—The net profit for 1922 amounted to £120,321, to which is added £31,180 brought forward from preceding year, making £151,501 available. The dividend of 9 per cent. for the year absorbed £90,000. The directors have added £20,000 to reserve fund, making it £320,000, and propose to write £10,000 off premises account, leaving £31,501 to carry forward.

INSURANCE.

BRITANNIC ASSURANCE COMPANY, LIMITED.—The report for the year ending December 31, 1922, states that, despite the unfavourable trade conditions throughout the year, the accounts show progress of a satisfactory character. It is with regret the directors announce the retirement, owing to failing health, of their esteemed colleague, Mr R. S. Close, who throughout the lengthy period of upwards of 50 years (during 16 of which he was a director), rendered most valuable services to the company. The premium income in respect of life assurance for the year ended December 31, 1922, amounted to £2,403,048, showing an increase of £99,183 over the previous year. The total premium income amounted to £2,405,893. The sum paid in claims during the year amounted to £968,294, including £279,625 paid under maturing policies. The total amount paid in claims by the company up to December 31, 1922, was £16,855,371. The premium income of the ordinary branch for the year amounted to £552,481, showing an increase of £47,257 over the previous year. The claims paid in this branch during the year amounted to £260,268 inclusive of surrenders. The number of policies issued in this branch, including policies under the special tables, was 13,786, assuring (after deduction of re-assurances) the sum of £1,874,317 at annual premiums of £95,630, and single premiums of £2,776. The premium income for the year in the industrial branch amounted to £1,850,567, showing an increase of £51,926 over the previous year. The claims paid during the year in this branch amounted to £705,844 inclusive of surrenders. The gross income from all sources amounted to £2,786,943, showing an increase of £146,618 over the gross income of the previous year. The total outgo, inclusive of amounts written off furniture, &c., amounted to £1,949,205, leaving a balance of income over expenditure on the year's accounts of £837,738. The total funds, inclusive of capital paid up, now amount to £7,579,899.

REFUGEE ASSURANCE COMPANY, LIMITED.—The report and accounts for the year 1922 show that in the ordinary branch the number of policies issued was 37,304, assuring £4,259,337 10s at a yearly renewal premium income of £309,446 2s 7d, the single premiums amounting to £18,398 6s 5d. The premium income was £2,628,412 6s, being an increase of £109,822 4s 6d over the previous year. The claims paid amounted to £1,099,830 9s 3d, including £559,950 paid to living policyholders under matured endowment assurances. In the industrial branch the premium income amounted to £3,493,577 14s 8d, being an increase of £201,746 6s 7d over the previous year. The claims paid amounted to £1,532,437 8s 2d. These figures include the corresponding items in the sickness assurance account. The total premium income for the year amounted to £6,121,990 8d, being an increase of £311,568 11s 1d over the previous year. The claims paid in the year amounted to £2,632,267 17s 5d, and the total paid in claims since the establishment of the company is now £37,558,773 3s 7d. The total assets of the company now amount to £23,948,396 18s 6d, being an increase during the year of £2,335,969 13s.

MISCELLANEOUS.

BEYER, PEACOCK, AND CO., LIMITED.—The accounts show a profit on the trading for the year 1922 amounting to £35,676. The net profits for the period, after providing for interest on the debenture stock and reserve for depreciation, &c., amount to £16,403, to which must be added the amount brought forward last year, namely, £7,712, making a total of £24,114. Deducting from this sum the dividend on the 5½ per cent. cumulative preference shares paid on July 21, 1922, viz., £8,250, there remains a balance of £15,864. The final dividend on the preference shares, amounting to £8,250, was paid on January 22, 1923, thus leaving a balance of £7,614, which, added to the sum of £10,000 transferred from general reserve, makes a total of £17,614 available for distribution. The directors recommend applying this balance as follows:—To pay a dividend at the rate of 5 per cent. for the year ending December 31, 1922, on the ordinary shares, £15,000; leaving to be carried forward, £2,614. The engineering dispute, which lasted three months, coupled with the general dearth of orders in the locomotive trade, wholly accounts for the diminution in profits. The board consider it advisable to reduce the amount shown in the balance-sheet under the heading of "goodwill," and they have accordingly utilised the profit made by the debenture scheme for that purpose, reducing the figure from £144,500 18s 3d to £100,594 18s 8d.

GOODSON'S MANTLE AND COSTUME COMPANY.—The report and accounts for the year to January 19, 1923, which incorporate the balance-sheet of the operating company, Goodson's, Limited, show the latter to have earned a net profit of £56,013, after making substantial reserves for all likely contingencies, including a further £7,360 to meet renewal reserve, bringing that item in the balance-sheet to

£33,360, and the company's investments in British Government and Government of India stocks to be, at cost, £40,411, with a market value at the date of the balance-sheet of £41,276. Cash at bankers is given at £64,074, stock stands at £28,773, and the freehold and long leasehold property, less depreciation, has been increased by some £12,000 since the balance-sheet of last year.

LINOLEUM MANUFACTURING.—The directors recommend a dividend of 15 per cent. for the year 1922, together with a bonus of 10s per share, both free of income-tax. The net profits for the year after making ample allowance for depreciation of land, buildings, and plant, and also after making provision for doubtful debts and income-tax, amount to £166,668, to which must be added amount received in respect of shares in Deutsche Linoleum Werke Hansa (previously written off), £22,420; appreciation of investments, £3,938; balance brought forward from 1921, £33,968, making £226,994. This sum it is proposed to appropriate as follows:—To payment of 20s per share, being, with the amount paid in September last, a dividend of 15 per cent. for the year and a bonus of 10s per share, both free of income-tax, £125,000; to reserve account, £50,000; to benevolent fund, £12,500; to carry forward to next account, £39,494.

NORTH BRITISH LOCOMOTIVE.—The report for 1922 shows the profit, after providing for depreciation, is £35,751, to which has to be added balance brought forward £204,742, making £240,493. Preference dividend absorbs £37,500. The ordinary dividend of 7½ per cent., free of income-tax, absorbs £93,750, leaving balance of £109,243 to carry forward. The report points out that it has been a year of extreme trade depression, during which time it has not been possible to keep the works of the company adequately engaged. The directors report, with profound regret, the death, in April last, of Sir William Lorimer, LL.D., who had been chairman of the company since its inception. Sir Hugh Reid, Bart., C.B.E., LL.D., was elected to fill the vacancy.

SWAN, HUNTER, AND WIGHAM RICHARDSON, LIMITED.—The directors herewith submit the balance-sheet of the company as on December 31, 1922, duly certified by the company's auditors. The report for 1922 shows that, after providing for depreciation on buildings, plant, and machinery, and for all Government taxation, &c., there remains a net profit on the year's trading of £411,277; to which has to be added the balance brought forward from the previous year, £53,203; making a total of £464,540. Out of this sum it is necessary to provide interest on 4½ per cent. first mortgage debenture stock for the year ending December 31, 1922, £13,742; instalment for sinking fund account, £1,000; leaving a balance to be dealt with of £449,798. Preference dividend absorbed £45,890. Ordinary dividend of 8 per cent., free of income-tax, absorbed £136,885; reserve account, £150,000; reserve for equalisation of dividends, £50,000; for benefit of employees, £10,000; leaving a balance to be carried forward of £57,023. The report says that it should be stated that, although the profit for the year as shown above approximates to that of previous years, it mainly accrues from old contracts completed during the period and not from new work. The company has acquired the North British Diesel Engine Works, Whiteinch, Glasgow, with a view to extending the output of Diesel engines for marine and land service. These works are specially designed for constructing internal combustion oil engines. An arrangement has been made with the old-established engineering company of John G. Kincaid and Co., Limited, Greenock, whereby an exchange of shares has been effected. The company has also acquired an interest in the New York Harbour Dry Dock Company Inc., whose works and floating docks of 12,000 and 8,000 tons lifting capacity are situated at Clifton, Staten Island, in New York Harbour. To alleviate unemployment and encouraged by the reduction in wages which have been accepted, the company has, at its own risk, laid down a number of ships. Though the cost of building continues relatively high, the burden and handicap of excessive costs have been lessened appreciably during the year in shipyards and engine works. It is satisfactory that in shipbuilding the pre-war standard of work per hour is being more nearly approached.

WALFORD LINES, LIMITED (AND REDUCED).—The scheme of capital rearrangement which was recently approved by the shareholders has now received the sanction of the Court, and an issue will be made of £150,000 further share capital in 600,000 shares of 5s each. The present shareholders are entitled to subscribe for five new shares for every two 5s shares now held. The list opened on the 8th inst.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have remained unsettled, with further heavy rains over wide areas in the United Kingdom, and many fields are under water in low-lying parts. On higher land, occasional sowings of spring barley and oats have been made, but generally field operations were held in check by excessive moisture. General course of trade during the week was again on a moderate scale, and while prices displayed slight weakness with regard to breadstuffs, feeders, on the other hand, maintained a firm tone. The demand for native wheat showed a tendency to improve, both here and at provincial markets, and, with supplies in manageable compass, values, if anything, were a shade firmer. Best milling grades moved off at 9s 3d to 9s 6d, and inferior 8s 3d to 8s 6d per 112 lbs, free on rail. Imported descriptions still lack support, and values, for the most part, continue in buyers' favour. No. 1 Northern Manitoba quoted 48s 3d, No. 2 mixed Durum 46s 6d, Rosafe, 63 lbs, 47s 6d, all ex ship to arrive, and Australian 53s, landed, all per 496 lbs. In the floating and forward cargo section rather more inquiry was noticeable, and several steamers changed hands, chiefly on Continental account, at fairly steady prices.

* Half-year.

† Free of tax.

Cargoes of Rosafe, 62½ lbs, on passage sold at 44s 9d and 45s, and Australian 47s 9d per 480 lbs, c.i.f. terms. Prospects in the United States winter wheat belt have improved on further rains, while crop news from other principal exporting countries remains satisfactory. Floating supplies show a marked increase, while port stocks in the United Kingdom are also larger. Flour continues in quiet request, and prices for town milled were reduced by 1s per sack. London standard straight run now quoted at 40s, patents 42s to 43s, town households 38s per sack, delivered in Metropolitan area. All English country straights 31s 6d to 33s 6d per sack, delivered to London stations. Imported makes neglected. Manitoba patents range from 37s 6d to 41s as to sample, Minneapolis good patents 40s 6d, Pacific 37s 6d, and Australian 37s 6d to 39s, all per 280 lbs, ex store. Maize firmly held, though spot trade remains without improvement. La Plata, ex ship, quoted 36s 3d, ditto landed, 37s 6d, No. 2 American mixed ex ship 35s 3d, and ditto landed 36s 6d. On c.i.f. terms cargoes were difficult to move, but in absence of selling pressure values were kept at a fairly steady level. A steamer of La Plata, May-June, changed hands at 35s per 480 lbs. Barley inactive and values weak. English ranges from 6s 9d to 13s per 112 lbs, free on rail, as to quality. Of imported, Californian quoted at 42s 6d to 45s 6d ex ship, and Australian Chevalier 47s to 53s landed, both per 448 lbs. Persian ex ship 24s 3d, ditto landed 25s 3d, Danubian 30s to 31s, and Plate 29s, both landed, all per 400 lbs. The only interesting item in the forward market was a sale of new crop American malting (48 lbs), June shipment, at 26s. Oats ruled firm but quiet for native varieties at 8s to 10s per 112 lbs, free on rail, as to quality. Imported the turn harder to buy. Plate f.a.q. new crop quoted at 25s, No. 2 white clipped American 25s 3d, No. 2 Canadian 26s, Western 29s 6d, No. 3 ditto 27s 6d, and No. 2 Canadian feed 26s, New Zealand A grade 38s 6d, and B 37s, all per 320 lbs. Oatmeal, London made, all cuts, quoted 17s 6d, flaked oats 20s 6d, steady. Scottish oatmeal 18s 6d to 19s, and American, all cuts, 17s 3d per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20:—

	1922-1923.	1921-1922.	1920-1921.	1919-1920.
Estimated sales of home-grown wheat—				
1 week to March 3	Cwts. 314,323	Cwts. 279,886	Cwts. 177,804	Cwts. 351,499
25 weeks to March 3	11,614,082	11,520,686	4,381,099	8,425,689

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated March 8th, is as follows:—Pig-iron.—The demand for prompt pig-iron cannot be met, and prices have therefore advanced further. No. 3 Cleveland G.M.B. has been sold at 125s. East Coast mixed numbers hematite is quoted 120s for delivery into the second quarter. Although two or three more furnaces are expected to be blown in shortly on Cleveland and hematite, there is no doubt that their output will find a ready market. Manufactured iron and steel.—There is plenty of inquiry for steel at recently advanced prices. Steel ship plates, £10; steel ship angles, £9 10s; iron bars, £12; steel rails, £9 10s. Iron ore.—The demand is rather quiet, but prices are firm. 25s to 26s is about the price for best Bilbao Rubio ore.

Our Sheffield correspondent writes:—The demand for steel material from home and overseas sources continues to increase, and makers report congested order books, while further advances in prices have taken place. Inadequate supplies of coke, pig-iron, and scrap are the dominant features of the situation, and these hamper efforts to increase production. Many overseas orders which cannot be executed in Germany are being placed in this country. The prevailing high prices, however, are checking business considerably. As regards raw and semi materials, transactions are by no means considerable. Producers for the most part have contracted for their output for the present month, and are holding their hands as regards the future. Nor are consumers prepared to buy beyond April or May at the current prices. As no one seems able to forecast the trend of business conditions a month or two hence, buyers and sellers alike have adopted an attitude of extreme caution. The extremely high figures mentioned in reports are consequently largely nominal. Usually they are quoted by makers who have nothing to sell. Derbyshire foundry iron now stands at £5 2s 6d, f.o.t., while basic pig is unobtainable. As much as £6 has been asked for it. The scarcity also affects hematite iron. Acid Siemens billets have this week been advanced £1 to £12. Soft billets are now £9 10s. Crown bar iron is advanced 10s to £12 10s. Most of the rolling mills in the country are fully booked up. Quietude still obtains in shipbuilding, engineering, iron foundry, tool, steel and various small tools. Some amount of recovery is in operation in these branches, but progress is slow. The season trade for farm and garden tools is described as moderate. Cutlery and plate makers are experiencing very quiet conditions, and a poor year seems in prospect. Reductions in the number of unemployed are reported week by week, and the total has now been reduced to 30,000. The Ruhr trouble has had the effect of sending up the prices of copper, tin, brass, and aluminium. Germany is a keen buyer of aluminium scrap. Coal trade conditions are the same as last week. More steam coal is going into consumption, and the demand expands for gas and railway fuel. The famine in coke continues.

Our Glasgow correspondent writes:—Steel and iron trade prospects are much more satisfactory than they were, or looked like, only a week ago. Concern was then keenly felt lest the high cost ruling for fuel—coal and coke—would have such a detrimental effect on the position of manufactured materials, steel especially, that the improvement in shipbuilding and engineering (which has set in and was appreciably recognised) would be nipped in its progress if it were not altogether suspended. There were authorities on the situation who went the length of concluding that steelworks would be obliged to shut down, and that employment would be as bad as it had been at any time for months past. Happily these dismal anticipations have not been realised, and conditions have moved in quite a different way. Steel and iron producers, instead of sitting down and moping, faced the situation boldly—passed their enhanced costs on to consumers, and for the first time in their experience probably, have had their measures crowned with success—that is to say, the higher rates named for coal have been met by higher rates for steel and its manufactures, and trade, instead of lagging, is steadily standing up. It is reported that while none of the steel and iron works are going full blast, they are turning out a good tonnage—in plates and sections—and that for home and foreign houses. Extensive inquiries are coming to hand from most foreign markets (including French and German), but particularly from Indian, Australian, and South American, all of which, fortunately, appear in need of tubes, pipes, locomotive engines, and railway plant of varied construction. Orders in these relations are fairly numerous, so that the position of manufacturers in these branches is better than was of late anticipated. Prices have undergone substantial change and adjustments since last week. Crown bars have been advanced by 10s a ton at £11 10s., delivered Glasgow, which is both the home and the export rate. For mild steel bars, re-rollers are asking now £11 5s per ton, delivered Glasgow, and f.o.b. Glasgow. A week ago the quotation was £10 10s a ton. The f.o.b. terms have been fixed definitely for steel for the home market:—Boiler plates, £13 per ton; ship plates, ½ in. and up, £9 15s.; angles, 17 in. and up, £9 5s.; forging blooms, £10 10s.; stray bars, £12. Prices of all materials are free in the export branch, excepting boiler plates, which are £12 10s. Further advances have also been intimated in black steel sheets, which are quoted:—Under ½ in. to ¾, £11 10s.; under ¾ in. to 1 in., £12; under 1 in. to 16 gauge, £13; under 16 to 20, £13 15s.; under 20 to 24, £14 10s.; under 24 to 27, £15 10s.; all per ton, net delivered Glasgow. The new prices reflect advances of 10s and 15s a ton, and are in keeping with the general trend of all iron and steel materials, owing to the increased costs of production. It may be noted that advances ranging from 5s to 20s a ton were intimated at the end of January, these marking the turning point after a long series of "cuts" announced from time to time since 1920. Generally the new lists of steel prices show an advance of approximately 30s per ton from the opening of the present year. Demand for coal, on French, Belgian and German orders continues very heavy, notably from the East Coast, where on the average from 60 to 100 steamers are daily waiting on cargoes. Industrial coal for export runs from 29s to 31s. Pig-iron, scrap, and other metals are scarce for prompt delivery.

Our Cardiff correspondent writes:—Conditions on the Cardiff coal market this week have been reminiscent of the boom days of 1919-20. Once the equilibrium between the supply of and demand for coal is disturbed, variations in prices become extremely irregular and altogether disproportionate to the altered relationship of supply and demand. The statistics of production and export in

South Wales during February show very little difference when compared with those in January. The output has been practically stationary, and the foreign cargo exports, although in February half-a-million tons more than in the corresponding month last year, were 200,000 tons less than in January. For March shipment, however, the collieries are oversold, and, with shipping abundant, the supply of free coals has been extremely limited. The reason for the sharp rise in prices which has taken place this week has been the concurrence of very active inquiries for prompt supplies with this extreme shortage in free coal. The market has been inundated with orders from all parts of the world. Scandinavian as well as other North Sea buyers have diverted to South Wales business which they usually place for North country coals, owing, apparently, to the failure of the Tyne and the Scottish ports to meet their demands, while Italy is also increasing her requirements as the result of the failure of Reparation deliveries. In these circumstances quotations for spot or prompt positions have been advancing by the hour. The top price for best Admiralty large a week ago was 32s 6d; some of these coals to-day are quoted at 37s 6d; second Admiralties have advanced from 32s to 35s, Monmouthshire coals from 30s to 35s, and small steams from 26s to 27s 6d. The volume of business arranged at these inflated figures, however, is very small; probably it does not represent 5 per cent. of the coal that is being shipped; but the prices for contracts up to the end of June, and even up to the end of the year, have been favourably affected. Many contracts have been arranged up to the end of June up to 32s and 33s for best Admiralty large, and up to 23s for best steam smalls, while some collieries have been able to arrange business up to the end of the year on the basis of about 30s for large and 20s for best smalls. It was hoped that this pressure of trade would facilitate a settlement of the third shift question, but negotiations have again broken down on the terms under which such a shift shall be worked, and the dispute has now been referred to the Ministry of Labour for a declaration by a Court of Inquiry under the Industrial Courts Act that the trade conditions either warrant or do not warrant the working of an extra shift. The current approximate quotations are as follows:—Best Admiralties, 35s to 37s 6d; second Admiralties, 33s to 35s; best drys, 30s to 31s; black veins, 33s to 35s; Eastern Valleys, 32s 6d to 33s 6d; Western Valleys, 33s to 35s; best bunker smalls, 25s to 27s 6d; ordinary cargo smalls, 21s to 23s 6d; anthracite big veins, 35s to 40s; anthracite machine-made cobbles, 40s to 45s; French nuts, 40s to 45s; stove nuts, 40s to 45s; rubbly culm, 14s to 14s 6d; coke for export, 80s; inland blast furnace coke at ovens, 32s 6d to 35s; patent fuel, 37s 6d to 40s; pitwood ex ship, 30s 9d to 31s. Prices are also advancing in the iron and steel trades. A week ago the minimum prices of tinplate bars were increased from £8 6s to £8 16s per ton, and in consequence of this increase and of the rise in tin the prices of tinplates have been raised to 22s 6d-43s per basis box. At these appreciated values there has been active buying both for inland and foreign consumption, and further advances are considered probable in the immediate future. The rise in the price of coal, although it has not yet appreciably affected inland prices, is having a disquieting influence on the metallurgical position.

THE COTTON TRADE.

MANCHESTER March 8.

Throughout the market this week there has been no lack of inquiry, but considering the amount of business offering, the turnover has been disappointing. The fact of the matter is numerous customers are not in a position to pay to-day's prices for lots of quantity. Purchasing, therefore, has been of a hand-to-mouth character. Sentiment in the United States with regard to prices is very bullish, but numerous Lancashire traders do not hold such views. A scattered business has been done in piece goods for India, chiefly in light cloths and fancies. Inquiry for China has been fairly persistent, and moderate lines have been booked for Shanghai, Hong Kong, and the Straits Settlements. Trade advices from the Near East remain discouraging. A fair amount of buying has taken place for South America. An improvement has shown itself in the turnover in home trade fabrics, certain buyers being more prepared to place orders with makers. American yarns for home use continue stiffer in quotation, and there has been a slightly larger turnover. An increased demand has been met with in Egyptian spinnings.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The course of trade at the Colonial wool sales in London has been very much on the lines generally expected, and so far it has had little effect on this centre. It is significant that Continental buyers are operating with comparative freedom in Coleman street, and this, combined with the general competition in the colonies, is taken to mean that users have confidence in the future of merinos. The slight ease in values recorded in the raw material market has not brought wool on to a basis at which tops can be sold at a profit. Generally speaking, it is costing about 5s to make a good 64's top without allowing any profit for the topmaker, and only in isolated cases can that price be realised to-day. Most buyers, if they have serious intentions at all, are wanting to get in at about 4s 10d; but it is doubtful if anything could be done at that price with the big firms; at least, not if a really good top was wanted. However, spinners appear to be fairly well bought ahead, and as they are not booking much new business in yarns, they are not at all anxious to press matters. The market is mainly marking time and waiting for a clearer outlook on the Continent. It is well known that in other countries wool consumption is being well maintained, with perhaps the exception of Germany, and the position in the West Riding would undoubtedly improve immediately there was any real sign of a settlement of the difficulties arising from the French occupation of the Ruhr. In the meantime, however, export trade with the Continent is being held up, and, on the other hand, the exchange is enabling French manufacturers to sell cloth in the English market at prices much below those needed by home producers.

COLONIAL WOOL. (FROM A CORRESPONDENT.)

The second series of London sales have commenced, the actual standing of the raw material being thereby revealed. Good combing merinos do not show much, if any, change compared with the close of last series, but average and shabby classes are fully 5 per cent. cheaper. This is no cause for alarm, for the position is infinitely better than it might have been. It is surprising in view of the unsatisfactory manufacturing conditions in Yorkshire to find that prices for the raw material are so well maintained.

It has been remarkable, however, during the past six months, that as one section of the trade has dropped out of the running another has stepped in, with the result that the general decline is far less serious than it might have been. This persistence of competition has been found in Australia as well as elsewhere, and it is now quite evident that the home trade is by no means the only pebble on the beach. At the recent meeting of the British Wool Federation in Bradford, the president, Mr. Walter Andrews, emphasised this aspect of the wool situation, pointing out that America and Japan are bigger wool consumers than ever, and that this year America will work up a record quantity. Japan will do the same, and if conditions had been normal on the Continent, France and Germany would have absorbed a greater quantity of wool per annum than before the war. We are convinced that the wool position is sound and healthy, notwithstanding that the home trade is in the doldrums. It has been remarked that Bradford is always either in the attic or in the cellar, and the figure of speech applies to-day with unusual force. During the past month the price of tops in Bradford has been 3d per lb cheaper than the cost of the said tops on the basis of their cost in the raw material. It is known that 4s 8d has been accepted for a by no means bad 64's, and that a fortnight ago one of the largest importing topmakers was willing to sell their average tops at 4s 9d, and warp tops at 4s 11d. This can be taken as an indication of the general tendency of the market, but it has not been possible to buy wool in any centre to bring in tops at such prices. Of course, topmakers who have their own combing plant can save at least 1 1/2d per lb in the cost of combing compared with topmakers who have to put their wool out to comb on commission, and this has enabled them to meet the market. We think that the much-talked-of serious fall is as far off as ever; in fact, it cannot be realised so long as consumption is maintained in America and on the Continent. In the one case a high tariff and in the other the low value of the currencies gives manufacturers an opportunity to secure whatever trade is offering. Cable information has been received of the withdrawal of 10 per cent. of the offerings at the last Adelaide sale, but this alone is no indication of a slump in wool market. To begin with, the total quantity was not large, and in any case could not be much better than the sweepings up of the season. Other cables report firm prices for merinos in the Colonies, and the statistical position of this class of raw material is too strong to admit of any serious decline.

There is a large quantity of crossbreds to be offered during the current series, and so far 56-58's have only declined 5 per cent., having often sold at par. Medium and coarse crossbreds have declined 5 to 7 1/2 per cent., the latter fall being seen in wools essentially suited for topmaking purposes. No one need be surprised at crossbreds declining, and we think that before the auctions terminate B.A.W.R.A. will find it in their interests to cancel the last three days of the auctions. We see no necessity for the auctions to last more than three weeks, for the trade is well supplied with heavy direct imports. The most satisfactory feature is that the aggregate consumption of crossbreds is increasing, and neither B.A.W.R.A. nor importers need rush their holdings on to the market. There is no need for crossbred values to fall any lower, for in the event of such a thing no more trade would be done in fully manufactured goods. On the other hand, steady and firm prices will be helpful to the entire textile industry.

VEGETABLE OILS AND OILSEEDS.

The feature has again been extensive buying of linseed oil on American account for March-April shipment from Hull to New York in bulk for tank steamer. Four very considerable lots, each of several hundred tons, have thus far been booked for early delivery, apart from a large business done earlier for May-August loading, and this despite a seemingly prohibitive tariff equal to £16 sterling against imported linseed oil. Reports from America would appear to indicate that there is a probability of this business continuing throughout the year, American mills, notwithstanding heavy purchases of Plate linseed, not being able to meet domestic demand for oil. A well-known linseed firm in America, in a recent advice states that the Western mills are actually short of seed, and that the Lake Erie mills were unable to secure a sufficient supply before the close of navigation to last them until spring, and can scarcely afford to receive Argentine linseed all rail from the seaboard. The unexpectedly early and heavy demand for linseed oil has, they add, therefore fallen on the Atlantic Coast plants, and they have had to contend with difficulty in securing labour, poor movement of tank cars, and severe weather.

Linseed oil in English markets, under the influence of the American situation and the fact that the consuming industries are fixing up their usual spring requirements, has been very firm, current value of spot oil, ex Hull mill, having appreciated again to over £39 per ton, and in London to £42. It is also attracting a good deal of speculative interest. The firmness of the oil product has also had the effect of maintaining prices for linseed, a fact business in Plate being reported round £18 7s 6d for seed, Red Sea and February-March shipment to Hull and London. Cakutia on passage to London has been done at £20 7s 6d.

A good demand for crude Egyptian cotton oil from the Continent has had a steady influence on the market, and prices have rapidly recovered, both of the oil and the seed, which had recently had a sharp setback. Crude soya bean oil is in good request, and rape oil is scarce and dearer on spot. Castor oil has been advanced 20s per ton for first pressure.

The new Plate crop appears to be moving off well, the shipments from January 1st to March 3rd totalling 334,400 tons, of which 94,000 tons were for the United Kingdom, 124,000 tons for the Continent, and 116,000 tons for North America. In the same period last year the shipments were 145,500 tons, of which 27,000 tons were for North America. The shipments of linseed from India in January and February were 19,750 tons to the United Kingdom and 7,800 tons to the Continent—together 27,550 tons, against 53,750 tons a year ago. Shipments of linseed (Plate and Indian) to the United Kingdom are thus 114,150 tons and to the Continent 131,800 tons, and the quantity at present afloat for the United Kingdom is 69,600 tons and for the Continent 35,800 tons. Cottonseed shipped since January 1st for the United Kingdom amounts to 67,950 tons Egyptian and 64,000 tons Indian—together 131,950 tons, against 80,320 a year ago.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market remained steady at Thursday's Bermondsey auctions, best ox hides selling from 7½d to 8½d per lb, with two classes showing a slight advance of ¼d. Seconds were as last, with the exception that heavies at 7½d advanced ¼d. Best cows sold again at 6d to 6½d. Calf were erratic, best grades making from 7d to 13½d, a few classes showing fractional reductions, and lights an advance of ½d. Wools again sold from 5s 6d to 12s 6d, and hogs from 6s to 15s each. Trade in imported hides is still depressed, and prices lean toward consumers. In frigorifics a sale of 52,000 and cow is reported to the States at slight advances. The Continent is buying saladero hides, and a sale is reported of 20,000 Liebig hides, part being consigned to Liverpool. Fray Bentos have realised 11d, c.i.f., and Colons the same figure. African hides continue very firm, and the States have bought 24,000 joburgs at 8d, c.i.f. New York. The American market is cabled this week as steady, with best heavy packers now at 20 cents.

Trade in sole leather is still slow in Bermondsey, although the Northern tanners are moving off a fair amount of bonds. Common classes are still the rule, but there are signs that manufacturers are tired of rubbish, and are gradually getting back to a better sole for their boots and shoes. There is a little export business doing with America and the Continent, and rumours of a further Russian order hanging fire, which cannot be financed. Continental sole is also making its appearance here, as the rate of exchange makes it possible to put the leather cheaper on the market than home productions. A huge quantity of sole leather was destroyed this week by a fire which broke out at the Penketh Tannery, Warrington, the damage being estimated at about £170,000.

Upper leathers are still slow of sale, and complaints are heard of the low price of German chrome calf coming here. Glacé is selling fairly well in colours, and suede is again being sampled freely for women's summer shoes.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, March 9.

SUGAR.—With a steady inquiry for spot parcels of refined, a fair trade was effected at prices showing no material alteration. Of British, Messrs Tate and Lyle's cubes, sold, 65s to 66s; granulated fine and coarse grain, 60s 10½d; No. 1, 60s 7½d; No. 2, also London, 60s 4½d; caster, 61s 6d to 62s 4½d; finest, 64s 1½d; yellow crystals, 54s 4½d. Granulated, April, 60s 6d; May, 60s 9d; June, 61s; July-August, 61s 3d. West India crystallised in small supply, and quoted 54s 6d to 55s 6d, as to sample. Imported descriptions of refined remain in small supply. American granulated, spot, quoted 59s; ditto, March, steamer, sold, 31s 6d, c.f. and i. London. Dutch granulated, spot, 59s to 59s 6d; white Java, spot, sold, 56s to 57s; May-June shipment, 27s 3d to 28s 3d; June-July, 26s 9d, and July-August, 25s to 25s 6d, c.f. and i. London. Continental parcels for shipment more or less nominal. Cuban basis 96 per cent., March, quoted 27s 3d; West India ditto, March-April, 29s; Brazilian, basis 80 per cent., March-April, 19s, all c.f. and i. terms U.K. Terminal market showed fair activity and market ruled rather irregular, but firm on balance. May delivery, sold, 29s 1½d to 30s 9d; August, 28s 7½d to 30s 3d. Cuban stock stands at 460,000 tons, against 492,000 same time last year.

COFFEE.—Spot market firm with sustained inquiries on the part of the home trade, while some of the finer descriptions are again dearer on the week. Of East India, bold sizes of Mysore, sold, 11s to 12s; peas, 12s 6d to 12s 10d; Nairobi, bold, 10s 6d to 11s 5d; peas up to 12s 10d; Costa Rica, bold, 11s to 12s; peas up to 14s 5d. Future delivery market remains steady, but slow. March, sold, 60s.

COCOA.—Actual dealings this week were confined to a small limit, but prices show no essential alteration. Accra, F/F quality, March-May, quoted 35s 9d, f.o.b. terms.

TEA.—Indian auctions produced some 34,600 packages, which elicited brisk competition at full to dearer prices. Low medium and common tended against buyers. Ceylon auctions of 19,650 packages also experienced a strong market, really fine teas being ¼d to 1d per lb dearer, and commoner kinds ¼d to ½d higher. Java and Sumatra sold well at full to dearer prices.

RICE.—Market very quiet, and general position rather nominal. Two stars Rangoon, spot, quoted 14s 6d; February-March, Continent, 13s 3d, c.f. and i. terms. Broken kinds very slow, as sellers require prices above buyers' views. More remunerative rates are obtainable in local Eastern markets. Rangoon beans, spot, quiet of sale at 8s. Beans, spot, 3s; February-March, 31s 6d, c.f. and i.

PEPPER.—Pepper was dealt in quietly, but prices remained generally

BY ORDER OF THE DIRECTORS.

NEW ISSUE OF DEBENTURE, PREFERENCE AND ORDINARY CAPITAL.

WANDSWORTH, WIMBLEDON AND EPSOM DISTRICT GAS CO.

(Incorporated by Special Act of Parliament.)

Messrs. A. & W. RICHARDS

are instructed to offer for sale by Tender

£250,000 NEW CAPITAL

COMPRISING:

£50,000 FOUR PER CENT. DEBENTURE STOCK (IRREDEEMABLE),

At the Minimum Price of £78 per £100, yielding £5 2s. 7d. per cent.,

£100,000 FIVE PER CENT. PREFERENCE STOCK (IRREDEEMABLE),

At the Minimum Price of £93 per £100, yielding £5 7s. 6d. per cent.,

£100,000 NEW ORDINARY STOCK,

Ranking equally with the existing similar Stock, now receiving

£6 2s. 6d. per cent. Dividend, and

At the Minimum Price of £95 per £100, yielding £6 9s. 0d. per cent.

The Net Revenue of the Company for the year ended on the 31st December, 1922, was

The Interest on the Loan Capital, including the

Debenture Stock now being issued, will amount to

12,278 4 0

The Dividend on the Preference Stock now offered will require

5,900 0 0

Leaving available for Dividend on the Ordinary

Stocks of the Company

£88,238 17 0

The Dividends in respect of the half year ended on the 31st

December last were paid at the following rates per cent. per annum: On the "A" Stock 8½; "B" 7½; "C" and New

Ordinary Stocks 6½; Wimbledon Stock 6½; Epsom Stock 7½.

After payment of these Dividends, and adding £4,549 9s. 5d.

to the Reserve Fund, a balance of Undivided Profit amounting

to £20,536 1s. 1d. remained to be carried forward.

The New Ordinary Stock ranks for a Standard Dividend of

3½ per cent., subject to the sliding scale, the standard price of

gas being 16½d. per therm, and the slide operating by 1s. 9d.

per cent. per annum for each variation of ¼d. per therm above

or below the standard price. The present selling price of gas is

9d. per therm.

The Company was incorporated by Special Act of Parliament

in 1912, being an amalgamation of the Wandsworth & Putney

Gas Light & Coke Company (established in 1834), the Mitcham

& Wimbledon District Gas Light Company (established in 1849),

and the Epsom & Ewell Gas Company (established in 1839).

The Statutory area of the combined undertaking now extends

to over 40 square miles, and includes Wandsworth, Putney, part

of Battersea and Streatham, the Borough of Wimbledon, Raynes

Park, Mitcham, Merton, Tooting, Morden, part of Carshalton,

part of Beddington, Epsom, Horton, Ewell, Ashted, Banstead

and other places.

The Company's mains extend to 357 miles, and the number

of consumers is 77,697.

The sales of gas for the year ended 31st December last were

13,375,519 therms, equivalent to 2,845,855,000 cubic feet.

The new Capital now being raised will be utilised in repaying

part of a loan from the Company's bankers obtained for extensions

of the works, plant, mains, etc., necessary to enable the

constantly increasing demands for gas to be met. As the loan

is already bearing interest, the new Capital will add but slightly

to the amount required for payment of interest and dividends.

The Authorised Stock Capital is £1,812,471, of which there

has been paid up (including Premiums) £1,072,993. The

Authorised Loan Capital is £906,235, of which there has been

borrowed £229,301.

Application will be made in due course to the Committee of

the Stock Exchange to allow dealings in the Stock now being

issued.

A brokerage of 5s. per cent. will be allowed on allotments

made in respect of tenders bearing the stamp of a broker.

PROSPECTUS and FORMS OF TENDER, which latter must

be sent in by 11 o'clock on THURSDAY, 22nd MARCH, may

be obtained at the COMPANY'S OFFICES and of Messrs.

A. & W. RICHARDS, 37, Walbrook, London, E.C.4.

steady. Fair black Singapore, spot, quoted 4½d; March-May, 4½d; Aleppo, spot, 4½d; Tellicherry, 4½d; Ceylon, black, 4½d; white Singapore, spot, 6½d; Muntok, ditto, 6½d; ditto March-May, 6½d. Zanzibar cloves, spot, sold, 1s 1½d; January-March, 1s 1d to 1s 0½d; March-May, 1s 0½d to 1s 0½d; flake tapioca, firm and fair, Singapore spot, sold, 3½d; fine Java, 4½d per lb; fair Singapore, March-April, Havre, sold, 34s to 34s 9d, c.f. and i. terms. Fair Penang seed tapioca, spot, sold, 27s 6d; March-April, London, 26s 9d, c.f. and i. Sago flour dull. February-April, sellers, 14s; March-May, 13s 10½d; desiccated coconut, firmer, and fine cut, spot, sold, 40s 9d; medium, 41s 3d; halves, March-April, 41s. Ginger firm, but trade rather quiet.

FRUIT.—The market for currants, though quiet, proved steady. Pyrgos, quoted 51s in bags, and quarter-cases 52s 6d; Vostizza, good to fine, 68s to 70s. Half-boxes of Valencia raisins, 30s to 34s; quarter-cases, 38s to 48s. Sultanias, also dates, sold very quietly.

JUTE. Market discloses firmer features, sellers adopting more reserve, and a steady demand was experienced from continental spinners, closing easier. First grade, February-March, Continent, sold, £32 10s to £33 and £32 10s; March-April, £33 5s to £33 10s and £32 15s; April-May, £33 10s to £34 and £33; with lightning-grade, April-May, £32 10s. Hessians and twills were quiet, but without particular change in prices.

H&M.—Manila fairly steady with moderate dealings. G grade, February-April, quoted at £38; J, ditto, sold, £36 5s; K and L quoted £35 5s; M, £34 5s. New Zealand quiet. High point, fair, spot, £34; February-April, £33. African sisal, No. 1 G.E.A., March-May, £36 15s; No. 1 Kenya, £35 15s per ton.

SHELLAC.—Spot quiet, futures firm. T.N., spot, quoted, 355s to 360s; March, 350s; and May, sold, at 330s.

COPRA.—Active and firmer on balance, but very irregular. F.M.S. Straits, February-April, to Rotterdam, sold at £29 12s 6d to £28 15s; March-May, £29 10s to £28 10s, £29, and £28 10s; April-June, £29 5s to £28 7s 6d; Ceylon, February-April, Rotterdam, quoted at £30 10s; Dutch East Indies, February-April, £28 15s; March-May, £28 12s 6d; Java, February-April, £29; Cebu, F.M.S., February-April, sold, at £28 17s 6d to £28 5s; to Marseilles, F.M. Straits, February-April, £28 12s 6d; mixed, £28 10s. Palm kernels, April-June, to Liverpool, sold at £20 15s to £20 7s 6d.

RUBBER.—Some irregularity prevailed during the week, attended by weakness, but a fair amount of business was effected. Standard crepe and sheet, spot, also March delivery, sold, 1s 5½d to 1s 4½d; April-June, 1s 5½d to 1s 4½d; July-September, 1s 6½d to 1s 5½d; October-December, 1s 6½d to 1s 6½d and 1s 5½d. To New York, standard sheet, April-May, sold, 1s 5½d; and first crepe, ditto, 1s 5½d, c.f. and i. terms. Fine hard Para, spot, 1s 4½d; soft fine, 1s 3½d; and Caucho ball, 1s 2½d per lb.

EGG PRODUCTS.—Market generally unaltered, with business more

active. Prime hen, liquid, spot, sold, 105s; April-June, 83s cwt, c.f. and i. Dried yolk, spot, 8½d; paid; hen albumen, spot, 2s 10½d per lb. OILS.—Linseed market irregular, with a generally good demand. Spot, net, naked, 41s; April, 38s 6d; May-August, 37s 1½d; September-December, 36s 3d. Rape firm. Crude, spot, 44s; refined, 47s. Cotton steady. Crude Egyptian, spot, 39s; common edible, 44s; deodorised (in barrels), 46s. China-wood steeper. Hankow, spot (barrels), 110s; March-April, 80s. Coconut firmer. Ceylon, spot, 40s; March-April, 45s; Cochin, ditto, quoted 46s 6d. Soybean firm, Oriental, barrels, March-April, 39s 6d. Japan fish steady. March-April, cases, 27s. Cod steady. English, spot, 31s. Groundnuts quiet. English crushed, naked, spot, 46s; deodorised, barrels, 53s. Turpentine irregular. American, spot, 109s 3d; March-April, 109s 6d. Rosin quiet. American, grade B, 13s 6d; F, 13s 9d; G, 13s 9d; H to I, 13s 9d; W.G., 17s 6d; W.W., 18s 9d. French, F/G, 13s 6d; W.W., 15s 6d per cwt. Petroleum steady. American standard, white, spot, 1s 1d; and water white, 1s 2d per gallon. Castor oil firmer. First pressure, spot, to June, quoted 50s; second pressure, 46s, and pharmaceutical, 55s per cwt.

OILSEEDS.—Linseed in good demand at irregular rates. Bold Bombay, afloat, quoted £21 5s; small Bombay, ditto, £20 5s; Calcutta, afloat, £20 10s; February-March, £19 15s; and April-June, sold, £19 10s to £19; Plate, afloat, £18 7s 6d to £18 12s 6d and £18 10s paid; February-March, £18 7s 6d to £18 8s 9d and £18 paid; April-May, £18 7s 6d to £17 17s 6d; Rapeseed dearer, and sparingly offered. Toria, February-March, £19; Jamba, February-March, £14 15s. Cottonseed quiet. Egyptian black, March, £11 15s; and white, sold, £10 6s to £11 2s 6d. Bombay, March-April, £9 7s 6d, sellers. Gingly-seed firm. Large, Bombay, March-April, Continent, sellers, £24 5s. Chinese, March-April, sold, £24 12s 6d to Continent. Groundnuts dearer. Coromandel, machine dried, March-April, quoted £23 10s. Chinese decorticated, f.a.q., March-April, £23 5s. Nigerian, ditto, £23 15s. Soya beans firm. Manchurian, March-April, £12 5s. Castorseed quiet, firmer. Bombay, March-April, £20 10s.

METALS.—Tin: At the opening session ruled easier in sympathy with lower advices from the East, but subsequently prices improved on a good demand for distant positions and reserved sellers. Standard, cash, sold at £208; April, £209 5s to £209; and three months, £210 10s, £209, £209 10s. Eastern cables report business on the basis of £219, c.i.f. Values further improved, though attended by slight irregularity, with dealings on a fairly liberal scale. By the middle of the week cash was dealt in at £211 15s; April, £212 5s; and three months at £213 5s. The tendency was again dearer at Thursday's market, Standard cash being sold at £212 17s 6d to £214 5s; and three months at £213 to £212 to £215 to £214 15s. The tendency was active and dearer at the final meeting, standard, cash, being dealt in at £215 10s to £218 to £217 5s, and three months at £215 to £218. English ingots, £216 10s to £217 10s,

Copper: Commenced with a quiet tone, and prices declined on selling pressure, though part of the loss was recovered on better buying orders. Standard cash sold at £73 5s; April, £74 2s 6d to £72 1s; and three months, £74 7s 6d to £73 17s 6d. Further transactions were on a lower basis, the market being depressed due to lower American cables and free selling offers, although a large turnover resulted at the lower range established. At Wednesday's meeting standard cash sold at £71 7s 6d; April, £72; and three months, £72 5s. At Thursday's session rates were firmer, and a large business occurred. Standard cash quoted at £72 7s 6d to £72 10s; three months sold at £71 17s 6d to £71 15s to £73 2s 6d. On Friday standard cash sold at £215 10s to £218 to £217 5s, and three months at £215 to £218. Electros, £80 10s to £81; best selected, £75 10s to £77 10s. Strong sheets, £104. Wire bars, £81. Lead steadier at £29 7s 6d to £29, as to position. Spelter easier at £36 15s to £36 7s 6d, as to position. Antimony steady. Ordinary brands, £27 to £29 10s. Aluminium quiet. Home trade, £100; export, £105.

TALLOW.—Messrs Colchesters and Woolner write on March 7th as follows:—The tallow market was firm during the week, and prices are 1s dearer to-day. There is still more demand for inferior than for good coloured sorts. The stock in London on February 28th, as returned by the wharves, amounted to 14,955 packages, showing a decrease during the month of 2,558 packages. At auction to-day 708 casks tallow were offered, and all were sold. Quotations are:—Australian mutton: Fine, 44s 6d; good to fair, 44s 6d to 42s 9d;

dull to dark, 39s 6d to 38s; hard, none. Australian beef: Fine, 43s; good to fair, 42s to 40s 6d; dull to dark, 38s 9d to 37s 6d; sweet, 43s 3d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 42s 6d; and mixed, 43½, c.i.f. London, 39s 9d. The market letter is dearer; tallow 1s, still, 2s. Town tallow, 37s 6d per cwt. Rough fat, per 8 lbs, 2½d; melted stuff, 28s 6d per cwt. Quotations are:—Town: 37s 3d net cash, naked, ex works. Country: Frail casks, 36s 9d; home melted, shipping casks, net, f.o.b., good coloured, 41s; fair to dull, 38s to 37s. Bone fat: White, none; pale, none; benzine, 34s 6d; melted stuff, 34s, f.o.b.

THE MONEY MARKET.

THERE was no change in the monetary position, the market's supply being just sufficient, except when any extra dislocation occurred, or when any attempt was made to reduce indebtedness to the Bank of England. Discount rates, which had been hoisted up at the end of last week by the high price paid by the Treasury, eased off slightly, owing to freer purchases of bills by banks and anticipations of more plentiful money after the turn of the quarter. These expectations, however, seem only likely to be

realised if revenue comes in so slowly that the Government has to borrow largely from the Bank of England. Yesterday, after the announcement of the Treasury bill allotment, the rate for three months' bank bills was quoted very nominally at $2\frac{1}{4}$ per cent.

	Mar. 16, 1923.	Mar. 9, 1923.	Mar. 2, 1923.	Feb. 23, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1% (Jly. 13, '22)
Discount (Call)	1	1	1	1	1% (Jly. 13, '22)
Houses (Notice)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 13, '22)
Market rate (3 months' bills) ..	$2\frac{1}{4}$	$2\frac{1}{4}$	$2\frac{1}{4}$	$2\frac{1}{4}$	..

The Bank return showed a decrease of £472,000 in the note circulation, and a trifling increase in the stock of gold, leaving the Reserve £473,000 higher. Government and Other securities rose by a million and a quarter of a million respectively, and there was a decline of a quarter of a million in Public deposits, with the result that Other deposits were two millions higher. Currency notes outstanding were reduced by £116,400 to £281,039,700, which includes £1,497,500 for notes called in but not yet cancelled. The fiduciary issue is £230,092,200, or £40,091,600 below the maximum.

THE STOCK MARKETS.

The volume of stock market business this week was not very large, but continued to be well distributed over many sections, the general characteristic being steady confidence. In the gilt-edged section firmness was maintained. War Loan holds its ground, and Funding Loan made a temporary rise, the market being short of stock. In the foreign market, Honduras bonds advanced on an announcement regarding debt settlement, and Greek issues rose on the increase in interest payments. The home railway market has been dull, with business slack. Cable stocks were adversely affected by wireless developments, tobacco shares were good, the iron and steel group moved rapidly and irregularly, and the rubber share market was practically dormant. Kaffirs are again depressed by Paris selling, while base metal shares gave way after early strength. There is still a good deal of speculative interest in selected favourites.

The Stock Exchange Committee elections take place next Tuesday.

THE COMMODITY MARKETS.

There has been no abatement this week in the strength of the position of the Cardiff coal market. To quote the words of our Cardiff correspondent, "the Continent is sweeping up every ounce of coal it can find in the United Kingdom." Makers having no pig-iron for sale for early delivery, business is naturally restricted. The price of Cleveland No. 3 G.M.B. has risen to 127s 6d per ton for prompt delivery, and there is a good demand for East Coast hematite, the quotation being 122s 6d per ton. A distinctly better trade in steel is reported, and steel rails have advanced 20s per ton. Our Sheffield correspondent reports that an increasing amount of overseas orders are being booked, although the fact of prices being raised in the heavy steel trade has checked its volume. Conditions are inclined to be quiet in the Manchester cotton trade, most of the transactions being of a hand-to-mouth character. Our Bradford correspondent points out that wool continues to sell well in all the chief centres, although values have eased in the past few weeks. It is possible that Russia may export to us appreciable quantities of timber this coming season, and it is mentioned that Poland may increase its shipments, yet the prospects of cheaper timber for housing are not favourable. Other details of markets and prices from our special correspondents will be found on later pages.

FOREIGN EXCHANGES.

In the foreign exchange market, although business has again been restricted, rates have shown more decisive movements than for some little time past. New York, which on Saturday last had risen to \$4.71 $\frac{1}{2}$, had fallen quietly and steadily to \$4.68 $\frac{1}{2}$ yesterday morning. In part,

this has been due to some buying for special needs at the moment, but the main influence has been a steady pressure through the purchase of dollar securities. For the time being, at least, it would seem that sterling has reached its limit of improvement, and it is difficult to see how the rate can go higher so long as the present discrepancy continues between money rates in London and New York. At the same time, the transfer of funds which results in forming a reserve on the other side which may perhaps be relied upon to prevent any decided weakening in the rate. Forward rates at 1 to 1 $\frac{1}{2}$ cents per month over spot show no change on the week. The Paris rate moved up sharply at the end of last week on the news that the Chamber had rejected the Government's proposal for meeting the Budget deficit, and had substituted the plan of a new lottery loan. During the last few days, however, political influences have been again dominant, and the rumours of approaching negotiations with Germany have brought down the rate from 78.07 $\frac{1}{2}$ on Monday to 73.80 yesterday morning—a quotation lower than at any time since the first week of February. Movements in the immediate future will, we must assume, be regulated entirely by the political situation. Brussels has, as usual, been affected by the same influences, the rate having dropped from 90.70 on the 10th to 85.95 yesterday morning. At 8 to 9 centimes per month above spot in Paris forward rates are unchanged; in Brussels they have narrowed slightly to 2 to 3 centimes below. Berlin throughout the week has remained comparatively steady, about 97,500, and little business has been done. The market would appear to be well in official control, and, apart from unexpected political developments, another jump downwards like that which took place last week may perhaps be expected at any time. There is, however, to be taken into account the violent feeling which is being roused in Germany over cost of living, and the fear of causing unemployment may prevent the Government from continuing its policy of exchange improvement. Forward rates at 4,000 to 5,000 marks per month above spot show little change. Italy at 97, as compared with 98.68 a week ago, shows some improvement corresponding to the general slight movement against sterling. Amsterdam from 11.89 $\frac{1}{2}$ is down to 11.80 $\frac{1}{2}$. Switzerland, after being higher, is back again at 25.20, the payment two days ago of 420,000,000 gold marks by Germany on Belgian bills discounted in Switzerland having had no direct influence on the rate. Madrid shows a further slight depreciation, the rate having risen on the week from 30.31 to 30.42. All three Scandinavian countries have moved slightly against London, but Helsingfors has remained steady at about 168 $\frac{1}{2}$. In Central Europe Vienna is, as usual in these days, unchanged; Warsaw, where vigorous attempts are now being made to cope with the financial situation, is a little higher at 215,000. Prague is steady at about 158, Belgrade shows little change, Bucharest again slightly higher at 1,015. In the East the rupee, after a drop early in the week, is again rather higher, but at 1s 4 3-32d is below last week's level of 1s 4 $\frac{1}{2}$ d. The yen at 2s 0 25-32d is about 3-32d dearer than a week ago. Silver, after some quiet Chinese demand, was brought up sharply by inquiry from India in the early part of the week, but there would seem to be sufficient supplies to prevent any decided upward movement. After being considerably higher, Hong Kong and Shanghai have reacted to 2s 3 $\frac{1}{2}$ d and 3s 1 $\frac{1}{2}$ d respectively, not much above last week's levels. In South America Rio at 5 23-32d is 1-32d cheaper, while Buenos Ayres has dropped $\frac{1}{2}$ d to 43d. Montevideo at 43 $\frac{1}{2}$ d shows little change, but Valparaiso has improved 1 peseta to 35.90 pesetas.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ending March 10th:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	26,783	Interest on Debt	1,347
		Supply Services	9,547
		Reduction of Debt	15,541
		Added to Exchequer Balances ..	156
		Sundries	158
	26,783		26,783

The remarkable feature about the week's accounts is the continued reduction under expenditure. Revenue at £26 $\frac{1}{2}$ millions compares poorly with the figures of £34 millions

for the corresponding week last year, but Expenditure at £11 millions is over two millions less, mainly on account of Supply Services falling from £11,932,000 to £9,546,900. Revenue continues to come in well. During the week £18 $\frac{1}{2}$ millions has been added to Income-tax, bringing this item up to a total of £336 $\frac{1}{2}$ millions, as against the estimates for the year of £329 millions. Under Special Receipts £1,200,000 came into the accounts, bringing the total up to £44 millions, which is still far short of the estimated figure of £90 millions.

The week's operations reduced the National Debt by £15,540,800, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 450	Treasury Bills	- 17,653
4 $\frac{1}{2}$ % Treasury Bonds	+ 2,487	Funding Loan, &c.	- 284
Public Department Advances ..	+ 600	Bank of England Advances ..	- 1,500
Unemployment Insurance ..	+ 430	Sundries	- 971
	+ 3,967		- 19,508

The floating debt was reduced by £18,535,000 to £831,371,500.

FINANCIAL YEAR, 1922-23 (April 1, 1922, to March 10, 1923).

	£		£

EUROPE STILL AT SEA.

"They are ill discoverers that think there is no land when they can see nothing but sea."

The occasions in history are fortunately rare when the world's affairs drift into so hopeless a deadlock as that which we have witnessed in the last few weeks. Indeed, we cannot recall a case where our statesmen have been so much at their wits' end either to foresee what is going to happen or to think of any way out. The fall of the Government's majority to 48 on Tuesday after the Ruhr debate is undoubtedly to be accounted for by dissatisfaction at the position of impotence in which this country is now placed. The outlook is, however, not quite so black as the pessimists would have us believe, and it is in conditions such as the present that it is more than ever necessary to keep our sense of direction clear, and to hold on

to the assurance that we must eventually reach port. The exact scope and extent of the decisions reached in the conference between M. Poincaré and M. Theunis at Brussels remain obscure, but the communiqués indicate that the tendency has been towards moderation. On paper, at any rate, as we have often urged, there has never been insuperable difficulty in reconciling British and French views on Reparation, provided we are ready to take a sufficiently liberal view of the distribution of the spoils, and the news from Brussels gives no indication that this possibility has become more remote. The issue as between France and Great Britain on the question of sanctions, however, remains, and we have seen the French view put into practice, and almost immediately merged into the entirely different question of France's desire for security. It is, however, significant that at Brussels the French and Belgian Governments have returned to the more limited conception of the purposes of the Ruhr occupation, and now propose to evacuate the Ruhr progressively as German payments come in. This is certainly a statement of principle which it would be wrong to minimise. After the recent ventilation in the French Press of schemes for the open or veiled partition of Germany, it is a relief to see definite proposals for evacuation (however remote or contingent) put forward by the French Government.

The progressive evacuation would presumably be spread over a long period; but the dangerous possibilities of the occupation are becoming accentuated day by day, and incidents are already occurring any one of which might make "progressive evacuation" an anachronism. Once more, as in 1914, there is a current of violence setting in, which may at any moment become a torrent and sweep aside the current of reason and conciliation. Can the former be retarded or the latter accelerated before Europe is rushed into a new catastrophe?

Again, what is the relation between the official decisions taken at Brussels, in which the occupation of the Ruhr is presented as a sanction for the exaction of Reparations, and those unofficial discussions, referred to above, in which the quest for Reparations is made an opportunity for the pursuit of other aims of a much more serious kind? The French Government, whether influenced by Belgium or not, may be maintaining a "correct attitude." It may have decided, or always intended, not to go beyond the bounds of the Treaty of Versailles in its French interpretation. But what does it mean when so moderate and so Anglophil a writer as M. Philippe Millet plays with the idea of putting all Germany west of the Rhine, including the Sarre basin, under permanent international control? M. Millet is at present content that this new and permanent Rhineland Commission should have a Franco-Belgian majority, and should be given authority over the police and the railways. If he is thinking of this, many more Frenchmen must be looking forward to a Rhineland and a Ruhr completely detached from Germany, and under exclusive Franco-Belgian control. Unhappily there is little doubt that such a prospect appeals to the French nation. It is a salve (though a strange one) to their fear of what Germany may do in the future; it satisfies the instinct to repay in kind the injuries which she has inflicted on France in the immediate past; and it responds

to more ancient territorial aspirations. During the past weeks the French Government has tolerated, if not encouraged, the instilling of these ideas into the French mind. Possibly the Government may merely have intended to arouse sufficient public enthusiasm to stand the strain of the Ruhr operations, but is the public any longer under the Government's control? And, if the Ruhr policy succeeds, will the public now allow the Government to extract nothing from it beyond legitimate Reparations? It is of the utmost importance that this should be cleared up. Lord Robert Cecil on Thursday, in addressing the Council of the League of Nations Union, welcomed the idea of a demilitarised area between France and Germany, with authority entrusted to the League of Nations to see that the terms were carried out. But this leaves German sovereignty untouched, and this point, in conjunction with an acceptable constitution for the supervising authority, makes the whole difference as to whether a special régime for these areas would be a perpetual irritant or would create a centre from which might emanate a sense of tranquillity. Is there any prospect of harmonising this idea with that which is abroad in France?

These governmental and national issues will have, of course, the closest bearing upon the future relations between the French and German "heavy industries," though this is strictly a private economic problem which would have been created anyway by the retrocession of Alsace-Lorraine to France, even if no Reparations crisis had arisen. It may be said at once that the economic cancellation of political frontiers is as desirable here as it is in the case of Upper Silesia, and that anyone who cares sincerely for the material reconstruction of Europe is bound to advocate it, so long as it is brought about on sound economic and fair political terms. Before the war, Alsace-Lorraine was more truly an integral part of economic than political Germany, and even the 1871 frontier was ceasing to be a dividing line. Briey ore was going to the Ruhr; Ruhr coke was coming to Briey; and private companies were threading their mineral lines in and out of the political boundaries. With the restoration of the lost Departments, the economic obliteration of the 1871 frontier has, of course, been completed, and the heavy industry of Alsace-Lorraine has been federated with that of France herself, though not without some long-drawn-out negotiations over the quotas to be allotted in the various selling organisations. The gain, however, has been small compared to the economic dislocation produced by the severance of Alsace-Lorraine from Germany; and Western Europe, as a whole (including the British Isles), will hardly recover her prosperity until Germany and Alsace-Lorraine have been "reintegrated" economically without destroying the new economic associations between Alsace-Lorraine and France. A business partnership between the French Comité des Forges and the German industrial magnates would not necessarily, or indeed naturally, be a menace to other countries, though any great economic force can be perverted to aggressive political ends by misguided statemanship. In itself, however, such a partnership, while certainly constituting a solid (and, in so far, economically advantageous) bloc, would not inevitably be a merely continental one. There is no reason to believe that, if such a bloc were formed on the Continent, its promoters would desire to exclude British, or indeed American, industry from participation. Indeed, the contrary is the case. Already before the war, the metal industries—particularly in the steel-rail business—were feeling their way towards world-wide co-operation, and if present political impediments could be removed, that tendency would certainly revive. The suggestion, therefore, that a settlement between Governments of the Reparations question (and the sanctions attaching to it) should be accompanied by a working agreement between the industries of the respective countries should be welcomed, provided the general character of the arrangements made are above board, and that there are sufficient safeguards that they are not allowed to degenerate into an international combine for fleecing consumers. It has, however, unfortunately to be said that all the recent political and military steps taken by France and Belgium militate against the success of such schemes. The atmosphere of violence and domina-

tion is the worst possible for initiating a vast and delicate business transaction. The more, therefore, we desire industrial co-operation between the leading Continental peoples, the more actively we must work for a political and military *détente* as the necessary preliminary to it.

Such are some of the currents that can be identified amid very great confusion, and, as we think, some of them are not without hope. Meanwhile, the Government finds its position on the fence increasingly uncomfortable. They are perhaps even more aware than the general public of the very serious danger of an unimaginable catastrophe in Europe if the situation deteriorates. Yet they hesitate to take the one step which in our opinion is incumbent upon them, and in any case must precede any intervention—namely, to state the most liberal offer we are prepared to make to France, not only as regards Reparations, but as regards security also. As public feeling here rises, such a statement will be increasingly difficult to make; but at present France only has before her a very inadequate offer—and one only put forward as the basis of a haggling bargain. We cannot expect her to welcome British help so long as she has an unsatisfactory idea of the sort of peace agreement to which Great Britain could be a party. But, at the same time, without Great Britain there can be no lasting peace. Perhaps, after all, Mr Bonar Law is the man who could show Europe in which direction the land lies.

WHEN THE DOLLAR GOES TO PAR.

A CORRESPONDENT raises in a later column some interesting speculations as to what effect will be produced upon our economic and monetary system when the dollar sterling exchange returns to par, and a free gold market is restored in this country. The questions raised may at any moment become matters of practical importance, and it is very desirable that some thought should be given to the problem. But it is in the hatching season that the prudent poultry-keeper needs most to remember the warning against counting his chickens too soon. The dollar has been standing obstinately at about 4.70 in recent weeks, and though it is in the spring that a continued appreciation of sterling is most likely to occur, the factors influencing the exchange are so complicated that it would be rash to forecast with assurance the further course of the exchange.

Mr Hoover has recently called attention to the fact that when account is taken of the invisible items in the trade account America has an adverse balance. The Harvard Economic Service estimate that in 1921 the foreign account of the United States was as follows:

	U.S. Creditor.	U.S. Debtor.
1. Exports of merchandise	4,485	
2. Exports of silver	52	
3. Exports of gold	34	
4. U.S. Government international receipts	90	
5. Foreign loans matured and paid off	255	
6. Interest on American private capital abroad	180	
7. Freight payments receivable on exports carried in American vessels	90	
1. Imports of merchandise		2,509
2. Imports of silver		63
3. Imports of gold		691
4. Imports on U.S. paper currency		100
5. U.S. Government international expenditure		140
6. New foreign bond issues in this country		665
7. Foreign currency bonds issued abroad and sold in U.S.		100
8. Net purchases here of foreign-held American securities		32
9. Other foreign investments of American capital		200
10. Interest payable on foreign capital in U.S.		100
11. Freight payable on imports carried in foreign vessels		57
12. Immigrants' remittances and European relief ..		500
13. Tourists' expenditures		200
Totals	5,176	5,357
Net debit balance		181

For 1922 the adverse balance is very much larger. We have seen no figures for the calendar year 1922, but Mr Hoover recently gave the debit balance as 750 million dollars for the fiscal year to June, 1922. This net export

The New York Trust Company

Capital, Surplus & Profits - \$27,500,000

COMPLETE INTERNATIONAL BANKING FACILITIES

100 Broadway

New York City

of capital, if it were being maintained, would undoubtedly tend to cheapen the dollar and to push the pound further towards parity.

There are, however, very important influences which have recently been operating in the opposite direction. In the first place, the issues of foreign securities in New York have dwindled very much since the beginning of 1922, while, on the other hand, these and other existing American securities have to some extent been taken over in London. There is no precise statistical method of tracing the movement of securities from one country to another, but there is a general impression here that a considerable part of the large issues made in New York in 1922 have been taken over by this country, and, on the other hand, there is in London the beginning of a tendency among British investors to get back into American securities disposed of during the war; and with every point nearer par this movement becomes stronger in the expectation that at par there may be a substantial movement of British capital and a rise of American stocks. These tendencies, which are offset against the figures quoted, are checking the recovery and making the last stages of the process more difficult. The payment of the American debt, though not of immediate overwhelming importance, also has a tendency to prevent a return to par. It is for these reasons that we hesitate to prophesy the future course of the exchange.

There is little doubt, however, that parity will eventually be reached, and that the questions which our correspondent raises will have to be faced. But it does not by any means follow that when parity is reached a free gold market will be re-established. Three possibilities present themselves: (a) we may leave things as they are—i.e., continue to restrict the export, but allow the free import of gold; (b) we may regulate the import as well as the export; (c) we may restore a free gold market by removing restrictions on the export of gold. The first of these is perhaps the most probable event. If we leave things as they are, as soon as the exchange reaches the upper gold point (parity plus the cost, including insurance, of transporting gold) exports from America would begin, and unless artificially checked would continue either until they balanced America's real trade account, or until the movement brought into operation other influences which would tend to balance the account. Would gold shipments have this effect under present circumstances? The answer depends upon the effect of these shipments upon discount policy, the effect of movements of Bank rate upon the movement of floating balances and upon prices, and the effect of these price movements upon the physical trade balance. So far as America is concerned, gold export would probably stiffen up the policy of the Federal Reserve Board and make them more anxious to check the present upward movement of prices. This might prove successful but is by no means certain. A more certain result would be that, owing to the higher rate of interest in America, floating balances would be attracted to New York, and thus tend to correct the balance of the account and prevent a wide movement of the exchange. The higher rate of interest in America would

also tend to check foreign borrowing there and transfer it back to London. The uncertainty of the situation arises from the want of experience as to how rapidly these influences would operate under the novel circumstances of the present day. This want of experience causes even greater uncertainty as to what would happen on this side than in America, largely owing to the fact that the delicate connection between the bullion reserve and Bank rate policy has been broken for so long. The importation of gold would tend to make money cheaper, but not in the same cumulative degree as before the war. In particular, the much more important part played by the Government in the money market and the disturbing influences of Treasury policy, particularly when large interest payments are being disbursed, make the ordinary normal reactions less automatic than they used to be. Trade conditions also are to-day such that a slight cheapening of money is a less important influence in encouraging trade expansion than the overriding effect of political chaos on the Continent and elsewhere. So far, therefore, as the effect in Great Britain is concerned, it looks as though a gold movement might continue for a considerable time before correcting the exchanges, except to the extent that the shipment itself restored the adverse balance.

As to the second possibility, if gold imports were restricted the £ sterling might go to a considerable premium, particularly if American prices continued to rise while British prices moved more slowly. This would not be welcomed by traders, and would undoubtedly be checked by psychological considerations, though the £ sterling would be by no means the first currency to be dearer than the dollar. It would, however, have the incidental advantage of cheapening the Treasury's task in repaying the American debt. Indeed, in such circumstances it would be well worth while to borrow money on this side and buy dollars, and thus convert part of the American debt into a British internal debt. As to the effect of such a premium upon trade, the effect would depend, as at present, on the relation between relative price levels and the exchange; if the rise in the dollar quotation went *pari passu* with the relative price levels in the two countries there would be no effect. If the rise in the quotation outran the upward movement of American prices it would stimulate our purchases in America, and make it more difficult for us to export either to the United States or in competition elsewhere. In other words, it would bring into operation the ordinary corrective of the exchanges when they move away from the level justified by relative price levels in two countries. It is, however, doubtful whether the cheapening of the dollar would go on at an excessive rate.

There remains the possibility of restoring a completely free market, but all the considerations that have been mentioned suggest the need for caution. International trade conditions are still very unstable, and might take such a turn that we might be faced with a substantial adverse account if the conditions produced a sudden big export of goods from Europe. It would, perhaps, therefore, be wise that freedom should not be restored until the exchange has been at or near par for some considerable

time, covering at least one period of the usual autumn drain when the trade account normally turns against us.

One important consideration is that the Bank of England has not at the moment complete control over the whole paper currency; but this could be attained by placing the currency note issue in the hands of the Bank of England. If this were done, the Bank would regain a further measure of control over the total circulation in the country, and the reserve is now so large as compared with pre-war conditions that the Bank is in a much stronger position to deal with any drain of gold which might be caused by international trading conditions. The restoration of a free market would link our prices definitely with those of America, and it might well be that it would end in some closer co-operation between the central banking systems of the two countries for endeavouring to limit the fluctuation of prices.

AN ANALYSIS OF RAILWAY RECEIPTS.

LAST week we published a brief analysis of the working expenditure of the railways of Great Britain, comparing the figures shown in the 1922 accounts with those for the year 1913, any comparison with more recent years being impossible owing to suspension of publication of the essential figures during the intervening period. It was there shown that working expenditure rose from £79½ millions to £184 millions, an increase of nearly £104½ millions, or 131 per cent. As compared with 1921, there was a decline in expenditure of £52 millions, or 28½ per cent. We now propose to examine the figures of gross receipts in comparison with 1913. Gross receipts in 1922 amounted to £228½ millions, a decline of £46½ millions, or 17 per cent., as compared with 1921, and an increase of £104 millions, or 83 per cent., as compared with 1913. The table below shows the various classes of receipts in 1913 and 1922 for the companies constituting the four groups:—

(000's omitted.)

	Passenger Trains.		Goods Trains (excluding Livestock).		Total Railway Receipts (including Livestock, &c.)		Total Gross Receipts (including other Businesses).	
	1913.	1922.	1913.	1922.	1913.	1922.	1913.	1922.
Lon., Mid., and Scottish	18,547	34,762	26,034	46,851	44,581	81,613	49,837	81,613
London and N.-Eastern	13,114	23,921	20,901	36,493	34,015	60,414	39,191	71,024
Southern	9,870	18,283	3,650	6,442	13,520	24,725	15,344	27,572
Great Western	7,901	14,741	9,290	18,403	17,191	32,144	19,675	38,523
	49,532	91,707	59,778	108,189	114,782	210,142	124,275	228,397
	..	+85%	..	+81%	..	+83%	..	+83%

Passenger train receipts, in addition to amounts received from passengers, include payments for the carriage of mails, parcels, and other merchandise by passenger trains and for excess luggage. These items constitute a considerable proportion of passenger train receipts. The North-Western, for example, had passenger train receipts in 1922 of just over £19 millions, of which £544,100 was from mails and £3,385,700 from parcels, merchandise, &c. Similarly the Great Western earned £380,000 from mails and £3,100,000 from parcels, &c., out of a total of £14½ millions. Goods train receipts as shown above include revenue from merchandise, less expenses of collection and delivery, coal, coke, and patent fuel, and other minerals; while total railway receipts include revenue from livestock (a relatively small amount in proportion to total goods receipts) and from jointly owned and jointly leased lines and miscellaneous receipts. The final column includes receipts from omnibuses, steamboats, canals, docks, harbours and wharves, hotels, refreshment rooms, &c. These items, it will be seen, brought in over £18 millions in 1922 as compared with £9½ millions in 1913. As we mentioned in last week's article, the comparison of the Great Western figures is not an absolutely true one, since the latest accounts include

figures from many of the subsidiary concerns, whereas in the 1913 total we have included only those of the constituents of the new group and none of the subsidiaries. This should be borne in mind in reading all these tables. We next compare the number of passengers carried, the receipts from passengers (season ticket holders being excluded in order to show the average fare per passenger), and the mileage run by loaded passenger trains:—

PASSENGER TRAFFIC.
(000's omitted.)

	Total Number Carried.		Receipts from Ordinary Passengers.		Average Fare per Passenger.		Coaching Train Miles (Miles Run in Relation to Receipts.)	
	1913.	1922.	1913.	1922.	1913.	1922.	1913.	1922.
London, Midland, and Scottish	341,366	329,682	13,564	23,659	0 9 50	1 5 20	82,840	76,995
London & North-Eastern	280,971	235,811	9,403	15,859	0 8 03	1 4 12	60,632	53,399
Southern	172,327	184,409	7,432	12,987	0 10 35	1 4 90	38,954	37,582
Great Western	131,849	128,639	5,952	10,266	0 10 83	1 7 15	34,364	33,554
	926,513	878,541	36,351	62,771	0 9 41	1 5 15	216,790	201,530
	..	-52%	..	+73%	..	+82%	..	-71%

The coaching train mileage shows a decline of 7 per cent., while the number of passengers has dropped by 5 per cent. The deduction to be drawn from this is either that there has been a slight increase in the ratio of short to long distance traffic, or else that there have been fewer empty spaces on the trains. The latter is the probable explanation. Passenger fares throughout 1922 were 75 per cent. higher than in 1913, whereas the average fare received per passenger shows an increase of 82 per cent. This must presumably be attributed to the curtailment of cheap facilities, such as excursions, or else to an increase in the average length of journey. The former is the more probable explanation. Excursions, cheap week-end tickets, and so on were restored to some extent last year, but were not on the same scale as in 1913. There can, however, be no certainty as to the interpretation of these figures until we are allowed to have ton mileage and passenger mileage statistics. Receipts from ordinary passenger fares show an increase of 73 per cent., while passenger train receipts went up by 85 per cent., so that there was a very much larger increase in other passenger train traffic.

The next table shows goods traffic tonnage and receipts:—

GOODS TRAFFIC.
(000's omitted.)

	Tonnage.		Receipts.		Average Receipt per Ton.		Goods Train Miles (Miles Run in Relation to Receipts.)	
	1913.	1922.	1913.	1922.	1913.	1922.	1913.	1922.
London, Midland, and Scottish	185,436	156,211	26,037	46,852	2 9 7	5 11 9	55,098	48,501
London & North-Eastern	177,487	156,670	20,804	36,500	2 3 3	4 7 9	40,865	35,325
Southern	19,184	19,612	3,649	6,443	3 9 6	6 6 7	8,161	6,377
Great Western	108,507	73,643	9,287	18,402	1 8 5	4 11 9	22,127	20,507
	490,614	406,166	59,777	108,197	2 4 94	5 3 94	126,251	110,710
	..	-172%	..	+81%	..	+121%	..	-123%

The loaded goods train mileage has decreased by 12.3 per cent., while the tonnage carried is down by 17.2 per cent.; this would be accounted for by a loss to the roads of short-distance traffic, which counts heavily in the tonnage total, but lightly in train mileage. Freight rates were reduced during the year, and it is not possible to name a general average increase over 1913. The rates have been changed at various dates and for various classes of traffic. But the lowest rates for minerals were something over 50 per cent. over the pre-war level, while the figure for general goods was about 115 per cent. up until the reduction in the summer, when the figure fell to something over 80 per cent. up. The actual increase in the average receipts per ton is considerably higher than the increase in the average rate charged to traders, owing to the loss of short-distance traffic, to which we have referred. The increase in receipts per ton, it will be observed, is considerably below the average in the case of the Southern Group. This is due to the high average in 1913, when the London and South-Western showed an average receipt of nearly 4s 1d per ton of goods carried.

In the next table we give the tonnage and receipts for the three principal classes of goods traffic:—

GOODS TRAFFIC.
(000's omitted.)

	Merchandise.		Coal, Coke, and Patent Fuel.		Other Minerals.	
	1913.	1922.	1913.	1922.	1913.	1922.
Lon., Mid., & Scottish	25,727	19,267	78,541	70,710	27,909	18,883
Tons*	13,947	25,631	8,439	15,633	3,648	5,587
London & N.-Eastern	23,602	18,503	83,669	74,088	26,670	16,392
Tons*	9,301	17,770	8,484	14,393	3,019	4,330
Southern	4,800	3,736	1,428	901	2,669	2,059
Tons*	2,346	4,021	881	1,650	423	771
Great Western	10,765	8,950	48,623	42,794	9,457	7,835
Tons*	4,176	8,572	3,795	7,194	1,319	2,637
Total	64,894	50,456	212,261	188,493	66,705	45,169
Tons*	29,770	55,994	21,599	38,870	8,409	13,325

* Originating on company's system.

The tonnage figures are those of goods originating on the company's own system, while the receipts are those from total goods carried, and it is not possible to calculate from this set of figures the average receipt per ton for the three classes of freight for the separate railway systems. For example, the coal figures for the Southern Group in 1922 indicate that the bulk of the coal carried originated on other lines. The South-Western carried 3,880,800 tons of coal, coke, &c., in 1922, for which it received £600,000, or about 3s 2d per ton. But only 118,000 tons originated on the company's own system. The figure, however, can properly be worked out for the railways as a whole, the tonnage total being free of duplication. The results are as follows:—

	1913.		1922.	
	s	d	s	d
Merchandise	9	2	22	2
Coal, coke, &c.	2	0	4	1
Other minerals	2	6	5	11

In order to illustrate the changes in the average rates on the different classes of goods traffic in different railway systems, we give in the final table the average rates received for the total tonnage carried by four of the principal companies in 1913 and 1922:—

AVERAGE RECEIPT per TON.

	Merchandise.		Coal, Coke, and Patent Fuel.		Other Minerals.	
	1913.	1922.	1913.	1922.	1913.	1922.
London and North-Western	7 7	16 5 75	5 25	2 11 00	2 15	4 8 5
Midland	7 22	16 5 52	2 3 70	4 4 09	2 1 30	3 9 77
North-Eastern	5 24	11 5 15	1 4 05	2 4 98	1 11 03	4 3 32
Great Western	6 9 9	14 5 96	1 4 82	2 9 36	2 3 63	5 2 86

The increase in coal freights is considerably less than in freights on merchandise and other minerals. The Midland rates for coal are much above the average, but this company's mileage figures suggest that there is a much longer haul in comparison, for example, with the North-Eastern. The merchandise rates show an average increase of nearly 120 per cent., other mineral rates about 112 per cent., and coal rates not much more than 90 per cent.

As we have shown at the beginning of this article, there was an increase in both gross receipts and expenditure as compared with 1913 of £104 millions, leaving net operating income of a little over £44 millions for each of the two years. But there was also an increase of over 90 per cent. in miscellaneous net income—principally rents and interest—so that there was an increase of over 6 per cent. in net income. With the distribution of the latter we hope to deal in a further article.

IS CAPITAL APPRECIATION PROFIT?

FROM 1900 to 1920 the right way of dealing with gilt-edged securities in a balance-sheet was straightforward, simple, and unpleasant. They had to be written down. Until two years ago that was the consistent annual practice of the present generation of business men, and now that we are confronted with the opposite phenomenon of rising instead of falling prices, the habits of a lifetime are deranged, and we are apt to feel that we are moving

about in a world of confusion, in which all the old standards and landmarks have disappeared. How ought an appreciation of security values to be treated in a trading or financial balance-sheet?

In the very able and interesting speech that he delivered to the policyholders of the United Kingdom Provident Institution on Tuesday, Mr Runciman dealt with the problem from the point of view of the life insurance company, balanced between the imperative requirements of sound finance and the natural desire to show profits large enough to pay good bonuses. It is a difficult subject for actuaries and life managers, who have to decide when and to what extent profits have been made through a general rise in the level of security prices, and a corresponding fall in the rate of interest. The question is akin to, but not identical with, the other question of an active investment policy—whether the managers of a life company should take a view of the market and attempt to change and select their securities in accordance with what they expect the money and stock markets to do in the future. That question was touched on by Mr Runciman, but he laid his chief emphasis on the danger of thinking a profit had been made simply because securities had risen in value.

On this point Mr Runciman, speaking as the chairman of a life office, was definite and insistent, appearing to go so far as to argue that no fixed-interest investment can ever be said to have produced a profit until it has risen in value and been sold, and re-invested to produce a larger income than it originally produced. Speaking of the position of his own company, which has naturally a very large capital appreciation in its balance-sheet, he said:—

To write up fixed-interest-bearing securities and to divide the money so obtained as bonus would mean that we were dividing capital and so reducing our income and weakening our bonus prospects for the future.

The logical conclusion to be drawn from this maxim appears to be that a fall in values must be written off because it is a real loss, but a rise in values must be neglected because it is a fictitious gain—a doctrine that will come to most business men, who regard the appreciation of their securities as the one bright spot in their firmament, as a douche of ice cold water. But how far is Mr Runciman's maxim sound?

If we consider the position of the private capitalist, the rentier who has an income derived from Government securities, lives on a part of it and re-invests the balance, there can be little question that Mr Runciman's attitude is sound. If Mr Smith, of Hampstead, is lucky enough to have a net income of £2,000 a year from War Loan and moderate enough in his tastes to live on £1,500 a year, he will be a regular investor of £500 per annum, and his chief concern will be to make the investment in such a way as to produce the largest income consistent with the best security. Is it better for Mr Smith that securities should rise or fall? Obviously, that they should fall. What he wants is not an appreciation of capital (which is, for him, a paper affair), but a big return; and a bigger return can only be got when the tendency of stock markets is downwards. When War Loan was below 90, he could get 5½ to 6 per cent. on his new investments. Now he gets less than 5 per cent., and, moreover, runs the risk of having the whole of his income reduced after 1929 if a further appreciation of values enables the Government to convert from 5 per cent. to some lower rate of interest. We have no doubt that Mr Smith, of Hampstead, has less to gain than to lose by the capital appreciation which he probably finds so delightful to contemplate.

But a trading or insurance concern is not in the same position as the private Mr Smith. Its securities are not held like his simply as a source of income. They are assets against certain liabilities which the company has undertaken, which the company, in fact, was founded and designed to undertake. Those liabilities are expressed in terms of money, and whatever happens to the rate of interest—whether 3 per cent. or 6 per cent. is the ruling fashion—the amount that the company will ultimately have to pay to be quit of its liabilities remains the same. To the final recipient of the money it will make a world

of difference whether securities are cheap or dear at the time the liability is liquidated, but to the company itself the debt is a money debt, and a constant amount. This being so, how can it be argued that a rise in the money value of securities held against an unvarying money liability does not constitute a profit to the security holder? If we isolate a single liability and a single security—say, an endowment policy for £5,000 maturing in 1924 and War Loan large enough to meet the policy on maturity—we see at once that a profit does accrue. At one time in 1920 it required over £6,000 (nominal) of 5 per cent. War Loan to produce £5,000, and the life company quite rightly wrote down the value of its War Loan to meet the depreciation, or, in other words, increased the amount of its holding to produce £5,000 in money in 1924. To-day the War Loan set aside against this policy is worth over £6,000, and unless there is a fall in values it will still be worth over £6,000 when the policy matures next year. The liability will have been discharged, and the company will have over £1,000 of cash in hand as the result of capital appreciation. This surely looks as definite and tangible a profit as could be imagined.

It is true that profit arising from appreciation may run off as easily as it accrued, and for that reason should be treated with a caution that other forms of profit do not demand. It may be advisable to treat part, or even all, of the appreciation as a reserve against falling markets; and in determining their policy the directors will be forced to take a view of the future course of money; but it seems an excess of prudence to declare that a general rise in capital values is in itself not a profit, and that in no circumstances must it be regarded as divisible. And it must always be remembered that in a mutual life office an ultra-conservative treatment of profits is equivalent to penalising this generation of policy-holders at the expense of the next or the next but one.

THE STATISTICAL POSITION OF TIN.

THE further rise in the price of tin early this week, making the net gain in the standard market well over £50 per ton since the opening of the year, and the big reduction in the United Kingdom stocks to 5,650 tons, have again drawn attention to the statistical position of this interesting metal. Tin has shown a persistent upward movement ever since the American demand began to approach pre-war dimensions, and seeing that the United States is now the largest individual consumer of the metal, it is not surprising at all to find that the heavy takings for Transatlantic consumptive needs should have led to a big wave of speculative interest on this side during the past month or two, resulting, with other causes, in excited markets and the substantial enhancement in values mentioned above. During the year 1922 the price of cash tin on the London market fluctuated between £139 and £189 per ton, and finally registered on balance a net appreciation of £12 per ton at £182 5s. The range was thus rather narrow, and seeing that the total imports of tin into the United States last year amounted to 59,468 tons, against 24,758 tons in 1921, an increase of 34,710 tons, or roughly 140 per cent., it can only be concluded that the further rapid rise seen during the last few weeks had been to some extent deferred owing to certain misapprehensions which seem to have arisen in connection with the tin held in the East under Government control.

The Eastern pooled surplus which was acquired over two years ago under an agreement made between the Federated Malay State Government and the Dutch authorities in Java in order to protect the tin-mining industry at a very critical period, originally amounted to about 16,000 tons, but roughly about one-fourth of the tin thus taken off the market consisted of Billiton and Singkep metal. This was disposed of last year, and in addition to this important clearance, certain quantities of tin smelted in the Straits from ores imported from Java were undoubtedly exported under the generic heading of "Straits" tin. This on close examination partly accounts for the abnormally heavy Straits shipments of tin during the past year, amounting to well over 64,000 tons to the European and American ports, these figures being substantially in excess of the returns issued since the year 1915, when the total came to about 1,000 tons more. In-

cluding the quantities absorbed by Far Eastern consumers, the total exports of tin from British Malaya during 1922, according to the official returns just issued, amounted to 66,257 tons, valued at about £46½ millions sterling, while the importations of ores last year aggregated 30,537 tons, valued at well over £3 millions. The equivalent in fine tin of these imported tin ores treated by the Straits smelters and exported by them as Straits metal would represent roughly 20,000 tons, apart from the tin secured from the purely native ores. The smelted output of the latter, as indicated by the usual official F.M.S. returns, have varied only a little within more recent years, and the returns for 1922 were 35,288 tons, compared with 34,400 tons in the previous year. But when the figures are compared with those issued several years back, a serious deficit is disclosed. The total for 1914 was as high as 49,000 tons, while the output for 1916 fell to below 44,000 tons. Taking the returns for 1922 as given above, and making allowance for the tin smelted from the imported ores, it is apparent that the total shipments of tin made from Malaya during 1922 to all countries represented over 66,000 tons, and this would only have been possible by taking considerable quantities out of old surplus stocks held either under control or in the smelters' hands.

This fact is absolutely incontrovertible, and is well known to the leaders of the recent bull movement. Thus it is perfectly obvious that the smelting industry is now in a much stronger position than it was a year or two ago. Evidence of this can be seen in the independent attitude adopted by the Eastern smelters early this week, when only a little tin came on offer at the high price of £226 and £231 was paid for Straits tin, March-April shipment, c.i.f. New York, and therefore the strength of tin may be said to rest now on the material reduction which has taken place in the invisible or unshipped surplus. Probably the latter is at present well over 10,000 tons less than it was a year ago, as far as the Eastern sources of the world's tin supply, including Java and China, are concerned; and this is a side of the question which mere theorists have lost sight of. There is no doubt that the surplus lying in Java was reduced to relatively small dimensions by the beginning of the present year, although the months of increased production have now been entered upon, and as far as can be gathered there is not much tin held in China either. Thus shippers are holding for higher prices; in many cases exorbitant figures are being mentioned. The Eastern surplus held by the pool may be placed at 12,000 tons, and it is obvious that the F.M.S. Government will continue to pursue a firm policy and hold the metal for equitable rates, seeing that trade conditions are particularly favourable to the satisfactory completion of the operation, both from the point of view of revenue and also the industry chiefly concerned. During the past year or so many rumours have been circulated in London and New York suggesting that the pooled holdings were going to be dispersed, even at a loss on the figure at which the tin was acquired—viz., about £220 per ton; but official denials were forthcoming on every occasion. But the aspect of the tin market is now altogether changed. The world's consumption of tin is well ahead of current production. Prices have risen considerably, and the most has presumably been made of the policy of retaining the surplus as a bull point. Some of this tin will be wanted shortly; in fact, the market must have it; thus it is now only a matter of finding the price level that will cover all costs and possibly leave a small margin to the credit of revenue account instead of a heavy loss, as had been generally apprehended when the tin market was very depressed in common with other commodities.

At first glance it seems rather curious that notwithstanding the rise of over £40 per ton since the close of 1922 there has been no material change in the visible supply of tin. At the end of February the figures were issued as 22,242 tons, which compares with 22,281 tons at the close of 1922, and 24,680 tons in 1921. Careful scrutiny of the movement of supplies from the producing sources and the deliveries into consumption during the past year and since, however, reveals certain features which fully account for the more recent market movements, although speculation has naturally played its part. There has been a very striking recovery in the consumption.

The total deliveries of statistical tin for 1922 amounted to about 92,000 tons, which compares with barely 60,000 tons in the year 1921. The total for last year was likewise substantially in excess of the returns for several years past. The increase in the home deliveries was nearly 5,000 tons, at 23,513 tons, while those to the United States totalled as much as 57,360 tons, or 31,700 tons more than in 1921. The Continental deliveries at 12,683 tons were 4,000 tons better on the year. As an indication that the improvement has been on the whole well maintained since the beginning of the present year, it may be stated that the average of the monthly deliveries all over the world so far this year at about 9,100 tons is some 1,600 tons in excess of the average for all last year. Thus given a continuance of the deliveries on the same scale as they were during the past three months, covering 27,693 tons, of which 17,580 tons were credited to the United States, the quantities to come into sight from the current production would, in order to keep pace with requirements, have to be supplemented by a considerable contribution from the controlled surplus of tin. And, of course, in the event of this happening, the market must be prepared to reckon with the price views held by the pool. This is a very important thing to bear in mind.

Even on the basis of about 8,000 tons for the average to be delivered into consumption per month for some time to come, such as has been recorded for the twelve months ended February 28th last, it is probable that competitive buying between this side and the United States would call for full requisitions being made from the surplus tin financed by the F.M.S. Government. The latter should be fully alive to the price possibilities of the metal with a full world's consumptive outlet, and there is every indication of the demand from trade users continuing at least for some time to come. There has been a very marked recovery in the tinplate industry during the last three months or so. The mills in South Wales are working close up to full capacity, and the American tinplate output promises to reach a new high record for the year. The consumption of tin in the United States, as well as other metals, is proceeding at a phenomenal rate, and it may be stated that well over 11,000 tons, or one-half of the present visible supply of tin on February 28th last, were afloat to America, the figures including 2,000 tons of spot tin and metal landing. Some years before the war the London stock was kept round about 7,000 tons, against less than 2,500 tons at present, and the market was kept under close speculative control for a considerable period round about £230 per ton. Early in 1920 there was a jump to over £400 under clever bull manipulation, but the recent rise owes less to that than it does to the continuous heavy consumption and the fact that the statistical position is thoroughly sound, thanks, of course, in some measure to the controlled surplus having been so tightly held. Proof of the underlying firmness of the market was seen on Thursday, when the greater part of the previous day's decline was recovered, and as much as £240 c.i.f. was paid for Straits tin, May-June shipment, to New York.

INDUSTRY AND PUBLIC EXPENDITURE.

SPECIAL interest attaches to the review of British industry which Sir Eric Geddes delivered in Birmingham last Tuesday to the West Midland Branch of the Federation of British Industries, for he spoke from the unique source of information which the Federation of British Industries is able to collect from its widespread ramifications. Like the President of the Board of Trade in his recent speech to the Chamber of Shipping, Sir Eric Geddes was struck by the fact that the analysis of our foreign trade, with which our readers are familiar, shows that the effect of trade depression on various groups of world markets has been similar. "As I see it, the import and export trade of this country, although below the 1913 standard, is divided among the various parts of the world in much the same proportions as it was in 1913." From this he draws the inevitable conclusion that when one part of the world suffers the rest suffers with it. Speaking in particular of

the effect of the French occupation of the Ruhr and of the question whether trade improvement can go on elsewhere while this paralysis is killing one of the most vital industrial areas of the world, he says: "This dislocation affects us far more than the direct trade between our country and the occupied section of Germany. It means that Germany, injured industrially and economically, will be unable to buy from other parts of the world, and therefore those other parts of the world will be unable to buy from us."

As regards the home trade situation, concerning which we have argued a steady and very substantial improvement throughout 1922 in Great Britain, Sir Eric Geddes confirms this diagnosis: "No organisation is better able than the Federation of British Industries—with its large and varied membership—to obtain general impressions and reports as to the progress of home trade, and, as far as we can judge, home trade has improved in roughly the same proportion as there has been improvement in our export trade. To sum up, therefore, 1922 has been a year of fairly substantial recovery, with the rate of recovery accelerating towards the end of the year." This improvement, however, is very far from bringing us back to the 1913 level of production, and, moreover, Sir Eric Geddes preceeds to point out that the problem facing this country will not be solved merely by restoring 1913 conditions. We have to support an adult male population of 1,300,000 more than in 1911, and to provide for an annual increment of 250,000 lads who reach adult age. Sir Eric then enumerates as a further difficulty facing Great Britain the problem of the American Debt, and argues that we have to see our way to producing an increased exportable surplus of 30 millions, which he describes as a formidable task. This difficulty, however, is, in our opinion, a greatly exaggerated one, for we have never seen that there need be any great difficulty in paying 30 millions a year to America on the score of our foreign trade balance. Before the war our visible and invisible exports exceeded our total imports by nearly 200 millions a year, and in a recent article in the *Economist* we showed that in 1922 this surplus had already recovered to something like 112 millions. It is true that it would be much more to the advantage of Great Britain to invest the whole of this in profitable enterprise instead of paying off debt, and it is obvious that if we use 30 millions of it every year to pay America, we shall be holders of so much the less international capital at the end of sixty years. Moreover, the raising of 30 millions is not a burden to be lightly explained away, but of all countries in the world Great Britain is best placed for converting 30 millions at home into 30 millions of foreign currency without disturbing or necessarily modifying existing trade conditions. The facts of the case as revealed in 1922, moreover, lead us to question whether Sir Eric Geddes is on quite firm ground when he argues that the burden of the Budget is so large that it is eating up the whole of the nation's savings, and leaving no margin of capital for additional employment. It is certainly possible that if we set all our workpeople to work tomorrow there might be a shortage of capital and the means for providing them with material and tools. This is a matter which it would be very difficult to prove one way or another, but it is quite clear at the present moment that with reduced production industry has not been held up during the last few months through want of capital, in spite of the fact that the Chancellor will have drawn into the Exchequer during the current year at least £900 millions.

We are, however, entirely at one with Sir Eric in emphasising the need of reducing, as far as possible, the burden of government expenditure, and leaving as large a share as possible of the margin between the national production and its consumption to be saved and made available for industry. In this connection he has sharply criticised the apparent economy of over 100 millions in the estimates for the coming year. We pointed out last week that much the greater part of this saving is really due to the completion of war payments, and not to economies in administration. In the estimates for defence, on which we comment elsewhere, large reductions are being made, and we hope still larger ones are to follow, but the expenditure on

civil administration still seems to us much larger than the country can afford, and we hope Sir Eric will get every possible support in pressing on with his demand for further economy. This seems to us a much sounder demand than the cry for reduction of taxation at any price. Lower taxes at the expense of a sound policy on the question of our huge national debt would in the long run do more harm than good.

UNEMPLOYMENT INSURANCE.

(BY OUR LABOUR CORRESPONDENT.)

As a result of the dissatisfaction prevailing in the trade union world with regard to the administration of unemployment insurance, the Joint Research Department of the Trades Union Congress General Council, and the Labour Party, was instructed to make an enquiry into the question. Its report has just been published ("The Administration of the Unemployment Insurance Acts, 33 Eccleston square, S.W. 1, 6d), and deals both with administrative defects and criticisms of legislative provisions. Its appearance synchronised with the publication of the Government's Unemployment Insurance Bill, which does little to remedy the grievances of the organised workers.

The Bill came before the House of Commons last Monday, and though the Labour Party did not press a division, the whole tenor of the speeches made from the Labour benches was severely critical. The present Government's Bill is but one of a series of Unemployment Insurance Bills, which have been brought before Parliament during the past three years. The subject has since the war been dealt with by emergency legislation, and the Bill now before Parliament is primarily designed to make provision for a further grant of "uncovenanted benefit" as from April 19th next, though it contains clauses of a more permanent character.

In view of the large volume of long-continued unemployment, it was found necessary to provide additional benefits to carry unemployed workers over a part of the period when they would otherwise have been receiving no benefit. The first object of the Bill is to prolong the fourth special period of benefit from November 2, 1922, to October 17th next. During this period of 50 weeks, according to the memorandum which prefaces the Bill, "a total of 44 weeks of benefit may be drawn, subject to the condition that when a person has received 22 weeks of benefit in the fourth special period, i.e., since the beginning of November, 1922, a gap of two weeks will occur before he becomes entitled to further benefit." What the Memorandum does not state explicitly is that, at the best, there will within the 50 weeks ending October 17th be a "gap" of a fortnight, and at the end of the period a gap of four weeks. No unemployed worker can do better than that under the Bill, and large numbers will, as a matter of fact, do worse, whilst scores of thousands of workers will probably be refused this "uncovenanted benefit" altogether.

One of the great grievances of the trade unions is the "gap." The Unemployment Insurance Act, 1922, provided that "when and so often as a person has received benefit under this section (i.e., uncovenanted benefit) in the third special period for periods amounting in the aggregate to five weeks he shall cease to be qualified for the receipt of benefit in the third special period until the expiration of five weeks from the end of the last period in respect of which benefit was payable." Once the State accepted the principle of "uncovenanted benefit" and the circumstances which rendered it necessary, there was no logical case for a five weeks' "gap." As might have been expected, grave hardship resulted, and as the Report referred to above points out, the unemployed were thrown upon the rates during the five weeks' gap. "The five weeks' gap," we are told, "sent Birmingham Guardians' expenditure up from £15,000 per week to £25,000 per week." Local authorities and trade unions vigorously protested against the "gap," and in consequence the "gap" was by the Unemployment

Insurance (No. 2) Act, 1922, reduced to one week. During the past few weeks workers in increasing numbers have been falling into "gaps," and Dr Macnamara, the ex-Minister of Labour, pleaded in the House of Commons last Monday that the fourth special period should be brought forward earlier than April 19th—a date laid down in the Bill. The Labour party pressed for closing up the "gaps" altogether.

But the "gap" system is not the only defect of the uncovenanted benefit, as the recent Labour Report shows. As the law stands at present a person may receive uncovenanted benefit if the Minister of Labour considers it expedient in the public interest that he should do so. The Minister of Labour has used this power to exclude single persons maintained wholly or chiefly by relatives, aliens (other than ex-service men and British-born wives or widows of aliens), and in certain cases short time workers. The Minister's regulations have created widespread dissatisfaction and a sense of injustice. As regards single persons in certain industries—e.g., iron and steel and cotton—it is common for fathers and sons to follow the same trade. To refuse a son benefit when his father, with whom he lives, may be out of work is clearly a hardship. One or two cases out of many may be quoted. An iron and steel worker was refused uncovenanted benefit, although his father, who was also unemployed, was only in receipt of 22s per week, out of which he had to maintain five children. The National Society of Pottery Workers supplies a case—referred to in the Labour Report—of a girl of 20 years of age who was refused benefit on the ground that her father was working. "He had been unemployed for 12 months, and had only resumed work five weeks before the claim was made. The mother was an invalid. So far from being partially dependent on her parents, the girl had been paying 15s per week towards the home expenses." In the case of aliens—many of whom have been employed a lifetime in British industries, and form the backbone of certain trades—their exclusion from uncovenanted benefit is an injustice. The Minister of Labour has issued instructions that short time workers are not to receive uncovenanted benefit unless their weekly earnings are less than 50 per cent. of their normal weekly earnings, except in the case of very low paid workers. This rule works out very unfairly. A case under this head comes from Warrington, where an iron worker was employed eight days in four weeks. He was considered to be a half-time worker, and was therefore refused benefit. In the four weeks this man received £6, or an average of 30s per week—a good deal less than half his normal earnings. If he had been totally unemployed he would have received 23s a week, as he has a wife and three children. By working two shifts a week, therefore, he receives only 7s more than if he did no work at all.

The present Bill does not propose to alter the Minister's powers in regard to uncovenanted benefit, and is being opposed by Labour on this ground. It is difficult to see how the Government can, with justice, refuse to allow uncovenanted benefit to single workers, aliens, &c., when they are compelled to pay at the present higher rate of contribution to pay off the loan to the Unemployment Fund, out of which uncovenanted benefit is being paid. These workers must in future pay contributions to make up the amount required during the slump period to pay uncovenanted benefit which they are refused, without Parliamentary sanction on the fiat of the Minister of Labour.

Another feature of the Government's Bill which has met with criticism from the Opposition benches is the proposal to alter the State's contribution to the unemployment insurance scheme. The State contribution after the end of the "deficiency period" is to be the same as in the Unemployment Insurance Act, 1920, viz., one-fourth of the joint contributions of employers and employed, instead of the present proportion of approximately one-third. Last year the Government was empowered to borrow up to a maximum of £30,000,000 in order to continue the payment of benefit. By April 19th the deficiency on the unemployment fund will be approximately £18,500,000, a sum which by April, 1924, will be increased to about £22,500,000. Workers, employers, and the State will continue to pay increased contributions (and the State its increased proportion of one-third) until the end of the

"deficiency period"—i.e., the date when the Treasury certifies that the unemployment fund is again solvent. The longer the depression continues and the heavier the loan to the fund, the longer will be the period before the fund becomes solvent. But once the deficit is wiped out the State will revert to a contribution equivalent to one-fourth of the joint contribution of employers and insured workers. It is clearly impossible to measure arithmetically the respective responsibilities of the three parties as regards unemployment; but there is no justification for the State decreasing its proportion. This proposal is intended to be permanent, and it is worth while to consider what is likely to happen if schemes of insurance by industry are extended in the future. One thing is certain: on the whole, the industries which will promote schemes of their own will be those where unemployment is, on the average, below the normal; whilst industries which remain within the State scheme will include those whose rate of unemployment would make it a serious proposition for them to run their own schemes. If that be so, then either the contributions of employers and workers will need to be raised or the proportion payable by the State increased. In other words, the arrangement proposed in the Bill is hardly likely to be permanent. One way of preparing for the day of schemes of insurance by industry would be for the State to continue to pay its present proportion, so as to assist in building up a substantial fund which will enable the State scheme to continue without an alteration of contributions pending the adoption of a more or less final national scheme.

These observations by no means cover the whole ground of the Bill. Attention may, perhaps, be drawn to one further point—a point which marks a considerable advance. The Bill amends the existing provisions relating to continuity of unemployment. The new rule proposed is that benefit shall be payable for any three days or more of unemployment occurring during any six consecutive days, not necessarily within one calendar week, as at present. This proposal will render eligible for benefit many workers, and particularly casual workers, who are at present excluded from benefit under the existing continuity of unemployment rule.

The Government's Bill is not a heroic measure. It is a piece of pedestrian legislation, useful enough in its way. A strong fight will be made to improve the Bill in Committee, but as a financial resolution has already been adopted, there can be no alteration in the proposal to modify the State contribution.

Notes of the Week.

Liberal Reunion.—The reunion of the two wings of the Liberal party is a consummation devoutly to be wished. If it does not take place, we must resign ourselves to the probability of a Parliamentary system based upon an increasing number of small groups, and this in its turn would lead to modifications of our traditional system of Cabinet responsibility. Continental countries have developed various forms of Cabinet government, some of which produce Governments including very varied elements; others evolve considerable independence of Parliament; while our own recent history has produced an abortive effort at something very like a personal dictatorship exercised through the Cabinet. But none of the departures from British tradition of which we have yet heard seem to us at all attractive, and it is because we desire to see a return to the system of government by a Cabinet united by the doctrine and practice of joint responsibility, answerable to Parliament, and kept in check by an efficient Opposition which is capable of forming an alternative Government, that we are anxious to see the revival of a strong and united Liberal party. So long as the Labour party is Socialist in theory and tied to the class interests of the trade unions in practice, it does not fill the bill; and though a three-party system has obvious disadvantages, we cannot expect to get back to two so long as the mass of the nation, which cannot find its political resting place within the narrow limitations of the Labour party, remains divided temperamentally into those

whose outlook is predominantly progressive and those whose outlook is conservative. But division in the Liberal ranks, which is clearly a great source of weakness to the party, does not appear to correspond, so far as the main body of both sections is concerned, to any real difference in present outlook; and this being so, we may rely on political pressure to bring the wings together as the memory of the last few years fades into history. In the meantime, Parliamentary manoeuvres on this question form an entertaining diversion from the more pressing and sombre political issues of the day; for they introduce certain personal considerations which are always piquant. This week Mr Lloyd George, having endeavoured to explain away his reference to combining against Labour—a cry on which it would obviously be futile to attempt to rally the more radical elements of the party—announces that conditions for reunion are (1) unity and (2) an attractive political programme. It is perhaps a consequence of Mr Lloyd George's rather distant acquaintance with abstract ideas that he still seems to imagine that "unity" is in itself a political idea which can serve to inspire and create a party. But "unity," whether it be of the brand advertised by the ex-Premier in his November speeches or that put forward this week, is not created by simple declarations that men are united. It exists or does not exist according to whether there is, in fact, unity in aim and action. A programme is a real essential which will serve to show whether there is unity of aim, and the records of debate and of the division lobby during the session will show whether there is unity of action.

Legal Aspect of the Ruhr Occupation.—In answer to the question whether the Law Officers of the Crown had given an opinion on the legality of France's action in the Ruhr, the Under-Secretary for Foreign Affairs gave so evasive an answer that many of his hearers assumed that the opinion had been taken but that it would be embarrassing to the Government to disclose what it was. But there agreement ended. Some thought that to announce that France's action was considered illegal might compel the Government unwillingly to put itself definitely in opposition to France. Others concluded that an opinion in favour of France would be embarrassing to our diplomats who have constantly claimed that the rule of unanimity and joint action is imposed by the disputed clauses, and to Sir John Bradbury, who has acted on and put this view before the Reparation Commission. Indeed, either decision would be embarrassing to the Government in its present uneasy attitude of sceptical neutrality. Such are the penalties of a policy of indecision.

Irish Deportations.—The chief Parliamentary excitement of the week has been provided by the arrest and deportation to Dublin of about 100 men and women in England and Scotland. Each day at question time the Home Secretary has been assailed with a running fire of query and criticism, mainly from the Labour benches, and on Monday Mr Jack Jones obtained leave to move the adjournment of the House. The consequent debate, in which the Government secured a majority of 108, was by no means a waste of time, for these deportations involve legal and constitutional questions of first-rate importance. They were carried out by the British authorities at the request of the Free State Government, the persons affected being under suspicion of planning outrages against law and order in the Free State. No Home Secretary could properly have refused the Free State Government's demand for their arrest. It is around the question of deportation for internment in Ireland that controversy rages. The legality of the Home Secretary's action in this respect has been called in question, but the opinions expressed in the House of Commons by Sir John Simon and the Attorney-General apparently dispose of doubts on that score, although legality rests on so slender a basis as a majority decision in the Court of Appeal in 1921, from which one judge strongly dissented. But the importance of the issues involved goes far beyond the question of mere technical legality. When the legal regulation under which the Home Secretary acted was last used the men deported to Ireland did not leave the area of control of the central Government. To-day the position is different. Ireland is

a separate Dominion, and the position, as Sir John Simon pointed out, "is exactly the same as if we were to arrest a man over in London on suspicion and, without trial, hand him over to the Dominion of Australia or to the Dominion of Canada. Nobody doubts the good faith of any of these Dominion Governments, but, none the less, to do anything of that kind would be, I think we will all agree, a gross betrayal of the liberties of ordinary people living in this country." The Irish Government apparently intends to keep the arrested people indefinitely in internment camps without trial. Meanwhile, an Advisory Committee is to be set up over here by the Home Secretary to investigate the cases of the deportees. The powers of that committee and its procedure are to be the subject of questions in the House on Monday, and possibly of another adjournment debate. In so far as the Home Secretary's action has crushed a dangerous plot against law and order in Ireland, it receives universal approval. But the liberty of the subject is so vital a question that all the circumstances of the case deserve the fullest discussion and investigation; and it is properly considered to be an essential point in English liberty that, however grave and well-founded the suspicion on which a man or woman is arrested, he or she can claim the right of a speedy trial, in which the accused can appear face to face with the accuser. This aspect of the affair is all the more important because, in so large a round up as that of last week-end, the chance of mistakes is very considerable. If any case of unjustifiable arrest can be proved, we presume that a claim for compensation would lie against the British Government. The affair may, perhaps, be summed up in this way: The arrests were proper and necessary. Deportation for indefinite internment without trial may be legal, but was indiscreet and possibly dangerous. For both the London and the Dublin Governments have put an ugly weapon into the hands of their opponents. Our Dublin correspondent, on a later page, expresses the fear that, while for the moment a serious blow has been dealt at De Valera's organisation, the affair will cause a reaction of feeling against the Free State Cabinet.

The Cost of National Defence.—The publication of the Army estimates this week completes the bill which the nation will have to meet next year for its defence services. The total net estimate for the year 1923-24 is for a sum of £52 millions, which compares with £62.3 millions last year. This reduction of £10.3 millions is not quite as satisfactory as would at first sight appear, as nearly one-third is accounted for by a fall in the terminal charges of the war from £7 millions to £3½ millions. There is, moreover, a further saving of over one million in the non-effective charges, which were abnormally high last year as a result of the special gratuities provided for the officers and men who left the Army on reduction of its establishment during the current year. The vote provides for a total strength (excluding those serving in India) of 170,800 men, or a reduction of 44,200 as compared with the year 1922-23. These figures, together with those for the Navy and Air Force, enable us to compare the present cost of defence with that of pre-war days:—

ESTIMATES OF DEFENCE SERVICES.				
(In Thousands of £'s.)				
	1913-14.	1914-15.	1922-23.	1923-24.
Army: Total vote.....	27,719	27,845	62,300	52,000
Less terminal charges of the war	..	..	7,000	3,588
Total	27,719	27,845	55,300	48,412
Navy	46,284	51,225	64,883	58,000
Air Service.....	526	1,325	10,895	12,011
Total	74,529	80,395	130,978	118,423

The figures for the Army and Navy in the years 1913-14 and 1914-15 are total estimates after the deduction of the cost of the Air Service, which was met chiefly out of the Army estimates (£501,000 in 1913-14 and £1 million in 1914-15). It should be remembered that the Navy estimates for the latter year were relatively very high on account of the large competitive building programme which was then in full swing. The most interesting conclusion to be drawn from these figures is the change in the relative cost of the different services. While the total cost of defence is 55 per cent. more than before the war,

the Army estimates this year show an increase of 87 per cent. and the Navy estimates an increase of only 19 per cent. over the average of the last two pre-war years. But the comparison is quite different when carried back to the years before the Dreadnought programme was in full swing.

	Army. £	Navy. £
1897-8	19,330,000	20,850,000
1907-8	27,115,000	31,141,000
1908-9	26,840,000	32,188,000
1909-10	27,236,000	35,807,000
1923-24	48,412,000	58,000,000

The rise in prices, wages, &c., has, of course, to be set against these increases; but the war will have been a heavy burden indeed if, in addition to pensions and debt, we are unable to get some relief from the heavy annual charge which the European competition in armaments was imposing on us before it occurred. Moreover, the situation is complicated by the rise during the war of a third service—that of the Air, which is now costing half as much as the whole British Army cost 15 years ago. And yet the figures given by the Secretary of State for Air in the House of Commons on Wednesday last show that this country is very far behind France in this respect. If any further expenditure should prove necessary for air defence, we hope that it will be provided for by the economies which would result from the establishment of a Ministry of Defence. The co-ordination of the different services which would thus be achieved would also lead to the establishment of a much more efficient defence organisation than is possible under present conditions.

Overseas Trade in February.—The Board of Trade returns for February show a drop in exports of over £9 millions from the January figure, and are £825,000 less in value than in February of last year, while imports are £16 millions less than in January and £14½ millions more than in February, 1922. As regards the comparison with January, the discrepancy in the number of the working days in the two months accounts for most of the decline. A summary of the value figures for February and the first two months of 1922 and 1923 reads as follows:—

MONTH OF FEBRUARY.				
	1922.	1923.	Increase or Decrease in February, 1923.	
	£	£	£	%
Imports	69,384,967	83,855,165	+14,470,198	+20.8
British exports	58,335,110	57,509,904	-825,206	-1.4
Re-exports	10,174,160	9,823,323	-350,837	-3.4
Total exports	68,509,270	67,333,227	-1,176,043	-1.7
Excess of imports over total exports	875,697	16,521,938	+15,646,241	..

TWO MONTHS ENDED FEBRUARY 28.				
	1922.	1923.	Increase or Decrease in 1923.	
	£	£	£	%
Imports	145,884,914	183,555,020	+36,670,106	+25.2
British exports	121,482,059	124,448,812	+2,966,753	+2.4
Re-exports	18,633,026	19,621,284	+988,258	+5.3
Total exports	140,115,085	144,070,096	+3,955,011	+2.8
Excess of imports over total exports	5,769,829	39,484,924	+33,715,095	..

In January and February of last year imports were at a low ebb, and the excess of imports over exports declined to an abnormally small figure. The balance for the past two months is only slightly in excess of last year's monthly average. In the first two months of this year imports of raw materials were £12 millions larger than in the first two months of 1922, and food imports £18½ millions higher. The increase in these two classes alone accounts for more than the whole of the rise in the two months' import excess. Coal exports in February were again very good, being 5,002,630 tons, as compared with 5,611,670 tons in January and 4,014,334 tons a year ago. Satisfactory, also, is the story of iron and steel exports, the total February export being 317,568 tons, as against 353,389 tons in the previous month and 223,616 tons a year ago. The monthly average of iron and steel exports in 1913 was 414,102 tons. A less favourable story is told by the figure for cotton manufactures. Cotton yarn exports last month at

10,881,600 lbs compare with 14,913,200 lbs a year ago and 11,367,600 lbs in January. Cotton piece goods exported last month were 342.5 million square yards, as against not quite 252 million square yards in February, 1922, and nearly 400 million square yards in January. Although it is notoriously dangerous to base deductions on the figures of a single month, especially of the short February, it would, on the whole, appear that, while a strong bracing effect has been produced on the coal and iron and steel industries, the returns suggest that the Ruhr affair may have begun in some measure to apply the brake to the wheels of general trade improvement. Bullion and specie imports and exports for February nearly balance, the former being £4,044,101, and the latter £4,196,802. Tables classifying import and export value figures under a number of heads will be found in our trade section at the end of this issue.

Coal and Iron and Steel Output.—Since the beginning of the year the average weekly output of coal from the mines of Great Britain has been well over 5½ million tons, and the latest figures show that this average is being well maintained. The total for the week ended March 3rd was 5,565,600 tons, which compares with 5,519,100 tons in the previous week and 5,038,900 tons in the corresponding week of last year. The statistics issued by the National Federation of Iron and Steel Manufacturers show that pig-iron output in February was 543,400 tons, which compares with a monthly average of 408,300 tons in 1922, of 218,000 tons in 1921, and of 855,000 tons in 1913. The output in January last was 24,500 tons greater than in February, but in the latter month average daily rate of production was about 6 per cent. higher. Furnaces in blast at the end of the month numbered 189, an increase of six during the month. Steel production in February exceeded the 1913 monthly average, amounting to 707,100 tons, the highest figure recorded since December, 1920. The January total was 634,100 tons, and the monthly average in 1922 486,000 tons, in 1921 308,600 tons, in 1920 755,600 tons, and in 1913 638,600 tons.

Great Britain and Mexico.—On Wednesday the Mexican Consul-General in London was able to tell the London Chamber of Commerce that President Obregon had established internal peace in Mexico, reduced the army from 300,000 to less than 55,000, and effected retrenchment in all departments of the administration; and that the service of the foreign debt would be resumed next month and the railroads returned shortly to the companies. He laid stress on the fact that the foreign trade of the country in 1921 was greater than in 1910—the year before the fall of President Diaz—on the enormous output of metals and petroleum, which yet is only a minute fraction of what it might be, of the great possibilities in agriculture, and of the opportunities for British trade. He estimated the total of British investments in Mexico at \$1,560 millions—much the highest figure, we believe, yet given; and he insisted on the opportunities open to British exporters to recover their former share of the trade, which has passed of late years to the United States. Better personal knowledge of the country and people is needed, and British goods, the high quality of which is fully recognised, should be advertised and pushed in Mexico. Evidently much may be done even without recognition of President Obregon's Government. Recognition (of Carranza's Government) was asked for by influential British bankers and merchants in 1918, but, though Obregon is far more firmly established, recognition now apparently awaits not only the action of the United States, but the adjustment of the claims of a British land company for expropriation (to create small holdings) and of British holders of the De Kay and National Packing Company bonds, which were issued under President Huerta, a usurper under legal forms. Mr McNeill, as Under-Secretary for Foreign Affairs, told the House on Wednesday that Great Britain desires the question of the liability of the Mexican Government for these issues to be submitted to the existing Claims Commission, and at present is not prepared to recognise President Obregon's Government by appointing a British Minister to Mexico. The British demand is entirely reasonable; unfortunately, the existing

Carranzist constitution and the policy of President Obregon's Government specially favour small holdings as against large landowners and foreign companies; it is not yet clear how far the clause prohibiting retrospective legislation is operative against foreigners who have acquired land previously common; and Huerta bonds are regarded in Mexico much as Confederate bonds are, or were, in the United States. And American investors are apparently apprehensive of what is known as "Radical legislation"—even of the type which, since the Irish Land Acts and the advent of labour insurance, has been familiar in Europe. Some of the early State constitutions, founded on the Social Contract theories of society, declare that the rights of property are antecedent to all positive law; and the belief seems deeply rooted in the American mind. The Obregon Government, however, is "Radical," and General Calles, Minister of the Interior, and named by the *Times* correspondent as the next President, is even more so than his chief.

Central American Trade and Finance.—Four Consular Reports, recently issued in one cover by the Overseas Trade Department, deal respectively with Honduras, Nicaragua, Salvador, and Guatemala. In all, development is more or less arrested by trade depression, inadequate internal communications, financial stringency, and political unrest. Honduras, indeed, has a flourishing banana traffic from its northern zone, which has been developed by American enterprise, and caused the addition last year of 132 kilometres of railroad, constructed by the plantation companies, to the 763 kilometres previously opened. Sugar is also promising; there are two large factories, one of them likely to become the largest in Central America. But there (as in the other three States) mining and the timber trade suffer from the lack of communications, and the immigration of efficient West Indian labour is officially discouraged in the interest of the natives, of whom, except in the central districts, some 90 per cent. suffer from hookworm, a scourge which the Rockefeller Foundation is combating. The southern zone has been disturbed by revolutionist raids, which the neighbouring States have undertaken to check. The interoceanic motor highway through Tegucigalpa is still unfinished, but the country is prosperous enough to contemplate a settlement with its external bondholders. In Nicaragua, coffee, the staple export, has been plentiful when prices were low, and scarce when they were high; sugar is promising, gold mining has great but unexploited prospects, and the banana trade has not yet attracted foreign capital. A railroad is surveyed, connecting Lake Nicaragua with the Atlantic. The Report suggests the improvement of the San Juan River, which was an important waterway 60 years ago. Salvador coffee is recovering its European markets in Scandinavia, Germany, and Italy; sugar and tobacco are promising, balsam superseded by other drugs. The best harbour, La Union, has been linked by rail with the capital, which has also a motor road to the port of La Libertad, and the railroad system is being connected through Santa Ana with the Guatemalan system—a very roundabout route to the Atlantic. But the condition of the public finances is serious. The Guatemalan Report is chiefly concerned with finance. The surpluses accumulated during the war in Europe have been dissipated, chiefly by President Herrera's Government, whose overthrow, apparently, has not mended matters. Foreign trade has been hampered by exchange difficulties, set up largely by a depreciating currency, and the consequent diminution of purchasing power has been intensified by drought and political disturbance. Coffee finds its chief markets in Europe, the highest qualities in Great Britain; bananas, and hereafter cattle, may come to be important exports, but only one-fourth of the cultivable land is tilled. All the Republics hope for loans from American financiers, but the terms are onerous. The Guatemalan scheme for its application was unsound, and, in Salvador and Honduras, the negotiations are hindered by the fear of American control of the revenue. Great Britain's share of the trade is passing to the United States, but the Report suggests various means by which it can be partly recovered.

Russian Production.—The March number of *Russian Information and Review* contains figures of Russia's output of various kinds in the years 1920-22, expressed as a percentage of pre-war productions:—

	1920.	1921.	1922.
Coal	26.8	30.8	36.8
Oil	41.1	42.7	51.0
Ores	1.0	1.6	2.4
Metallurgical	8.7	9.3	14.8
Electrical	11.9	20.5	37.6
Cotton	5.2	7.5	23.2
Wool	23.3	17.2	30.6
Flax	38.2	25.4	56.0
Sugar	5.9	6.7	7.4
Alcohol	2.5	4.2	3.4
Matches	16.7	20.9	17.6
Rubber	5.1	10.7	24.8

The figures show that the special efforts which have been devoted to improving coal production have had considerable effect in the last three years, but have only raised the product to 37 per cent. of normal. Production of oil and flax is the most advanced, but the metallurgical industries and sugar production are lamentably behindhand. In the former case the collapse of transport is a very grave hindrance, while sugar production has been vitally hit by the agricultural revolution, since before the war the output of sugar beet came almost entirely from the large estates, which are now broken up.

Stock Exchange Committee Election.—A Stock Exchange correspondent writes:—That a good deal of importance is attached to the Stock Exchange Committee election which will be held on Tuesday next is shown by the fact that 23 members of the present committee have circularised their fellow-members of the Stock Exchange by a manifesto marked "Private and Confidential," in which they dwell more particularly upon the question of sharing commission between brokers and bankers. This question it is which comes, of course, particularly before the House at next week's election. The letter, circulated yesterday amongst members of the House, includes the signature of the chairman, Sir Wilfrid Atlay, whose views are always regarded as sound and sane, carrying weight amongst the great majority of Stock Exchange men who regard any particular question in dispute dispassionately and impartially. Sir Wilfrid is a jobber, but he has earned the respect of the whole body of the Stock Exchange by the manner in which he has filled the office of chairman through an exceedingly difficult time, while his devotion to the work is such that it renders it exceedingly difficult for him to take any active part in his ordinary business. The letter points out that the practice of sharing commission between members of the House and the banks has existed for almost a century. The signatories declare they have satisfied themselves that all the big banks would be unanimous in resisting to the utmost of their power any interference with the custom. Reference is made to the fact that the Stock Exchange Committee approached the Bankers' Committee seven years ago, and suggested that some modification of the present division of commission might be acceptable, but this was met by a firm refusal on the part of the banks to entertain the idea. Again last year the Stock Exchange Committee were informed by the Clearing Banks that there was no change in the attitude they had taken up in 1916. Consequently these 23 signatories announce themselves as being strongly opposed to any interference with the established custom of dividing commission with banks. Such a division of commission, they declare, has brought an incalculable amount of business to the House which could not by any other means have been diverted to securities in the present Stock Exchange. It will be noticed that seven members of the present committee do not sign this manifesto, and next Tuesday's election will show in what direction the sympathies of the Stock Exchange members are pointing at a time when it is obviously a matter of weighty moment to the public, as well as to the House, that the matter of commission division should be settled amicably and permanently. There are 33 candidates for the 30 seats, two new brokers and two new jobbers having put up for election, and one

broker having retired. According to the Stock Exchange rule, every member must vote for 30 committee candidates, giving only one vote to each.

The Greek External Debt.—The Council of Foreign Bondholders is able to announce that the minimum rates of interest on the old gold loans under the Settlement of 1898 will be increased in 1923 in respect of 1922 by 42 per cent. of the original interest on the loans of Group I. and III., and 44 per cent. on those of Group II. These increases will be paid in full on the next coupon of each loan. The total interest payable on the six loans compares with that paid for the three previous years as follows (the rates in 1920 and 1921 having been identical):—

	Total 1921.	Total 1922.	Total 1923.
I. 4 per cent. 1887 Monopoly Loan	4.00	3.40	3.40
5 per cent. 1893 Funding Loan	5.00	3.70	3.70
II. 5 per cent. 1881 Loan	5.00	3.60	3.80
5 per cent. 1884 Loan	5.00	3.60	3.80
5 per cent. 1890 Piræus-Larissa Loan	5.00	3.60	3.80
III. 4 per cent. 1889 Rentes	4.00	2.88	2.96

The sinking fund is increased by 18 per cent. of the original amount in respect of each loan, as against 24 per cent. last year on the first two groups, and 26 per cent. on the 4 per cent. loan of 1889. The gross receipts from the assigned revenues which provide the "plus-values" that make these additional payments possible—viz., the monopolies and stamp and tobacco duties—amounted last year to 74,089,418 drs, against 73,493,141 drs in 1921; but the increase of 1,196,277 drs is more than counterbalanced by the fall in exchange. However, the receipts for 1922, after the deduction under the Law of Control of 18 per cent. of the "plus-values" for expenses, amounted to 66,447,322 drs, giving a "plus-value" in excess of the minimum fixed by that law of 37,547,322 drs, of which 60 per cent., or 22,528,393 drs, goes to the service of the Debt—half to the interest and half to the sinking fund. The Piræus Customs receipts also showed an increase over 1921 of 71,796,592 drs. Naturally there was no addition (as there was in 1920 and 1921) due to benefit from exchange; but the Greek Government, in spite of its financial straits, and in view of repeated protests of the bondholders' representatives against the prejudicial effect on their clients' interests of recent unauthorised issues of paper currency, has added 4,000,000 drs, which is available for increase of interest. This brings up the total to 15,264,197 drs, which produced 6,042,558f; the other half of the 60 per cent. of "plus-values," viz., 11,264,196 drs, produced 4,459,009f, which goes to the sinking fund. With the balances brought forward from 1921 and the interest saved on bonds redeemed in previous years (which goes to increase the interest of the current year), the total amount available for increase of interest is 8,141,823f, and for additional sinking fund 4,445,459f, carrying forward balances of 13,713f and 98,592f respectively. It is noteworthy that the rates of interest actually paid are higher than in any year of the world-war.

The Honduras Debt.—The negotiations for a settlement have been advanced a stage through the acceptance by the Honduras Government of part of the counter-proposal of the Council of Foreign Bondholders, viz., to pay £1,200,000 (instead of £1,000,000) in 30 annual payments of £40,000 each, to be applied to the purchase and cancellation of the bonds of all four issues alike. The question of security for these payments is still under discussion. The Council desires that they should be secured on the Customs revenue, the soundest and most usual guarantee, but the Spanish-American jealousy of possible foreign control over the native financial administration seems to be more acute than ever. Special provision was made against such control in the abortive Central American Constitution of 1921, and the fear of it has held up the settlement of the Salvador External Debt. Honduras, however, is as yet hardly strong enough to borrow without assigning special security, and must borrow soon from financiers in the United States.

Tin Prices and the Producers.—Our mining correspondent writes:—In our issue of October 21, 1922, attention was directed to the significance for tin-producing companies of the recovery in the price of the metal, and tables were given showing the monthly earnings or outputs of all the principal concerns. In the meantime, a further substantial appreciation has occurred both in tin and in the share market. At one time this week the cash quotation for the white metal touched £235, a figure which compares with an average of slightly under £160 for last year. Whether the £250 talked of in some quarters will be reached remains to be seen—such an event appears by no means unlikely. Anyhow, maintenance of the price at something above £200 per ton will enable the dredging companies operating in Malaya and Siam to make large profits. In last week's "Note" on the Gopeng Consolidated, special reference was made to the low working cost ratio—equivalent to about £36 per ton of metallic tin. This, as intimated, is exceptional; but it is obvious that even in the case of a company whose expenses are double that figure, the current price of the metal leaves a handsome margin of profit. Appended is a complete list of the companies in question which have appeared in the dividend list during the past seven years, with the rates for each year:—

	Dividends.

* Return of capital.

The following dividends have since been declared:—Gopeng, 9d in January; Renong, 1s 6d on preference in January; Siamese, 2s in February; Tekka-Taiping, 3d in March; Sungei Besi and Tronoh, 1s each this week; Tongkah, 2s in January; Dee-book, further refund of 6d in March. Ipoh is due to start up another dredge shortly; the Malayan is now operating with five dredges, and is arranging for the installation of a sixth more powerful than any of the others. Kamunting is now running two dredges; a third is expected to be completed in June and a fourth in September. The Pahang—alone—secures the bulk of its yield from lode mining. The Siamese Tin Syndicate is a finance as well as a mining enterprise; the flotation of further subsidiaries is looked for if conditions continue favourable. The Tronoh holds a controlling interest in the Sungei Besi. As regards undertakings not included in the tabulation, the Southern Perak, which started dredging in September last, should make a maiden distribution before long; the Bangrin is expected to start its dredge next month.

Standardised Rubber Company Accounts.—We have received from the committee of the Rubber Shareholders' Association some interesting particulars relating to proposals of standardised accounts for rubber planting companies. It is quite correctly pointed out that most people will agree that comparison of the results achieved by various companies are often vitiated by the great divergence in the forms of balance-sheets, profit and loss accounts, &c., while more especially to be deprecated is the practice adopted by some companies of presenting accounts in such a bald and meagre shape that very little meaning attaches to them. In this connection the committee lays down the following fundamental postulates:—(1) The object of all bookkeeping should be the providing

of a true and complete statement of affairs as at any given date; (2) the owners of a business are entitled to the information provided by correct bookkeeping; and (3) in the case of a joint-stock company the owners of the business are the shareholders. After pointing out certain objections which might be reasonably raised against giving certain information calculated to damage a company in the competitive struggle, it is stated that in regard to rubber-planting companies such cases are extremely rare. The committee provides a form of balance-sheet and profit and loss account which is approved by a very eminent firm of accountants, and they conclude by mentioning that the proposed form of accounts is not necessarily perfect, but they contend that this is eminently one of the questions where open discussion may result in throwing new and valuable light upon the whole subject. The really important points to consider, they state, are:—(1) Is a standardised form of accounts desirable? (2) Is it practicable? (3) If there are any objections to the proposal, are those objections based upon the interests of the shareholders, or upon the convenience of other persons? The committee will welcome a free expression of opinion from everybody interested in this subject, and especially invite constructive criticism. We certainly consider this a step in the right direction, and look forward to the time when most of our important industries will possess standardised forms of accounts.

Canadian Pacific Results.—The London office of the Canadian Pacific Railway Company has received a cable from Montreal giving the preliminary results of the line for 1922. These compare with those of the three previous years as follows:—

	1919.	1920.	1921.	1922.
Gross earnings—railways	\$ 176,929,060	\$ 216,641,349	\$ 193,021,854	\$ 186,675,036
and lake steamers	143,996,024	183,488,305	158,820,114	150,373,345
Working expenses	32,933,036	33,153,044	34,201,740	36,301,691
Net earnings	10,161,510	10,775,409	11,519,072	13,348,906
Fixed charges	22,771,526	22,377,635	22,682,668	22,952,785
Surplus	500,000	500,000	500,000	500,000
To pension fund	22,271,526	21,877,635	22,182,668	24,452,785
Net revenue				

The decline in gross earnings was more than balanced by the reduction in working expenditure, net earnings being more than two million dollars higher than in 1921. Fixed charges show a further increase, but the balance available for dividends is still nearly \$300,000 higher than a year ago. After payment of all dividends for the year, the surplus from earnings of the railway and lake steamers is \$1,025,509, as compared with \$755,400 for 1921, \$450,359 for 1920, and \$844,250 for 1919. The special income for the year, after making allowances for contingent reserves, is \$11,092,355, as compared with \$10,987,199, \$10,966,448 and \$9,049,42 for 1921, 1920 and 1919 respectively.

Swiss Bank Corporation.—The report of the Swiss Bank Corporation for the year 1922 shows net profits, converting the franc at 25 to the £, of £421,100, which compares with £462,000 for 1921 and £469,700 for 1920. The dividend is at the rate of 8 per cent., as against 9 per cent. in the three previous years. Deposit and current accounts stand at £32,280,100, as compared with £34,802,500 a year ago. The directors remark that as a result of the greatly diminished demand for money for trade and industrial purposes the bank had unusually large cash balances during the year, and the impossibility of finding employment for the large liquid resources necessitated recourse to short-term Government securities. Investments stand at £3,703,000, of which about £500,000 are Swiss and £2,160,000 British Government bonds. The report adds that in Switzerland the depression in trade and industry continued in 1922. Exporting industries, in particular, suffered from the high costs of production, import restrictions, and high tariffs abroad. Unemployment has been met to a certain extent by subsidies, which tell, and will tell for a long time to come, on the resources of the State, the Cantons, and the Municipalities. There was little demand for capital for commercial purposes, and the

private rate of discount has ruled at 1 per cent., and even lower, with the result that there has been an appreciable rise in State and other public securities.

Employers' Liability Assurance Corporation.—An alteration in the form of the annual accounts, itself an improvement in detail, makes exact comparison with previous years rather difficult. In 1922 the total premiums were £4,838,605, as compared with £5,568,328 in 1921, a decrease of £729,723. So large a part of the company's business consists of workmen's compensation business, in this country and America, at premiums based on wages bills, that depression in trade, reduced wages, and unemployment directly affect the premium income. The premiums in the general account (which includes employers' liability business out of the United Kingdom) were £4,143,439, the claims £2,661,650 (64.2 per cent.), and the expenses £1,350,550 (32.6 per cent.). After allowing for the decrease in the necessary reserve for unexpired risks, the surplus carried to profit and loss was £363,763. From the fire account £49,073 was transferred to profit and loss, and from the accident account (including employers' liability business within the United Kingdom) was £33,714. The total surpluses were thus £446,550, against £718,446 in 1921. Interest receipts were £303,772, against £291,897, and dividends paid or provided £287,818, as for 1921. Taxes cost £354,552 last year, as compared with £521,694. The investments, after writing down, stand in the books at £7,385,175, and are stated to have appreciated by £255,023 since December 31, 1921. The total depreciation in December last was £16,344. The investment reserve stood a year ago at £271,367; in view of the appreciation that has since occurred, the directors have applied £200,000 from this reserve to writing down the shares of the associated companies. After providing for the dividend as above, the general reserve was increased by £75,321 to £2,820,111. The accounts of the Employers' Liability do not include those of the Merchants' Marine and the Clerical, Medical, and General Life Office, which have been issued separately, and dealt with in these columns.

Wall Paper Manufacturers.—Outstanding taxation matters having been settled, the directors of the Wall Paper Manufacturers, Limited, are now able to present accounts for the year ended August 31, 1922. It may be recalled that for the previous year a deficit, after making provision for depreciation, was revealed amounting to £878,610. For after crediting the balance of £181,054 brought forward from 1920, making transfers from reserves, but deducting interest on debenture stock and interim dividend on preference shares, a debit balance of £557,203 resulted. This debit balance has since been reduced by "bringing back reserves for taxation which are no longer required" to £107,302. During the past year the fortunes of the company have changed. A profit is now shown of £701,958, and after deducting the debit balance of £107,302, a balance is shown of £594,656. Ordinary shareholders now obtain 10 per cent., while deferred shareholders take 5 per cent. The reserve fund gets £100,000, leaving £114,697 to be carried forward. Since this is partly a holding company, it is somewhat difficult to deduce from the balance-sheet an exact idea of the position of affairs. The main item is capital expenditure on land, building and plant, and goodwill. This amounts to £3,428,464. Investments include shares in subsidiary companies. These have increased during the year from £700,609 to £1,192,781. Stock-in-trade, which fell so heavily a year ago, is again down—this time by £211,579—at £956,236. The company's claim in respect of the German business is, it is stated, still in the hands of the Mixed Arbitral Tribunal, and a date for the hearing has not yet been fixed.

San Francisco Mines.—At Thursday's annual meeting more than one speaker quoted the description "romance" applied to the history of this undertaking in our recent "Note." Sir Henry Strakosch, who has long been identified with the enterprise, remarked that the romance was one in which hard, patient, and persistent work was

at length enjoying its reward. From the chairman's statement of the financial position, it appears that the whole of the loan and all but £50,000 of the debenture indebtedness have now been cleared off, and after the end of March the profits will be available for dividends. No definite intimation was given as to when these would be commenced, or what the rate was likely to be, but it was made clear that in the profits so far declared very little credit has been taken for the proceeds of the zinc concentrates, the shipment of which was commenced in November. Inquiring shareholders were recommended to figure out the dividend prospects for themselves. It would look as though 50 per cent. is by no means an ultra-optimistic computation.

Hollinger.—The performances of this Canadian gold-mining enterprise are at the moment of more general than particular interest to British investors, although transactions in the shares occasionally take place on the London Stock Exchange. Formed only some seven years ago, the concern has attained the position of one of the "great gold mines of the world." The value of the bullion produced last year amounted to 12½ million dollars, whereof over \$5,000,000 was net profit. Dividends totalled \$3,198,000 upon an issued capital of \$24,600,000; the balance increased the net surplus to nearly \$6,000,000. This is fully represented by cash and investments. Funds have been accumulated with a view to increasing the supply of hydro-electric power. There are indications that the directors may be able to devote much of this money to the extension of the treatment plant. Despite the milling last year of about 50 per cent. more ore than in 1921, the ore reserves are now estimated at the increased total of 4,608,200 tons, whereof approximately one quarter is "probable." The total represents some three years' supply.

Transvaal Gold Output.—The output of gold of the mines of the Transvaal during the month of February amounted to 704,970 ounces of fine gold, as compared with 764,469 ounces during January. There was no declaration of output in February, 1922, in consequence of the strike. The following table shows the production for a number of years:

	1917.	1918.	1919.	1920.	1921.	1922.	1923.
	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.

The figures show a very great improvement over the figures for many years past. Indeed, they are the best since 1917, and are appreciably better than before the war. The drop in February is, of course, due to the shorter month, the daily output being 25,176, against 24,660 in January. This high output is satisfactory, not merely for South Africa, but for the world. The nations will find their return to a gold standard eased if gold becomes abundant. The following are the number of natives employed at the end of the last eight months by members of the Witwatersrand Native Labour Association and contractors:—

	July, 1922.	Aug., 1922.	Sept., 1922.	Oct., 1922.	Nov., 1922.	Dec., 1922.	Jan., 1923.	Feb., 1923.
Gold mines...	172,896	175,054	174,565	175,129	173,173	176,834	181,985	182,983
Coal mines...	12,371	12,270	12,090	11,495	11,789	11,001	14,664	14,717
Diamond...	1,211	1,219	1,234	1,218	1,237	1,253	1,222	1,227
Total...	186,468	188,543	187,799	187,842	185,499	189,078	197,871	198,927

It will be noted that there is an improvement in the number of natives employed at the gold mines during the month, which is a good augury for future production.

THE annual and public meeting of the National Institute of Industrial Psychology will be held, by kind permission, at Burlington House, Piccadilly, W., in the rooms of the Royal Society, on Tuesday, March 20th, at 5 p.m. In the chair, Mr H. J. Welch. Speakers, the Right Hon. the Earl of Balfour, K.G., O.M., F.R.S., Sir Lynden Macassey, K.B.E., K.C., Dr C. S. Myers, C.B.E., F.R.S., Mr Arthur Pugh, secretary of the Iron and Steel Trades' Confederation; Sir Charles Sherrington, G.B.E., president of the Royal Society; Sir Robert Hadfield, Bart., F.R.S.

A PUBLIC lecture on "Shipping" will be given by Sir Ernest Glover, Bart., president of the London Chamber of Shipping, at the London School of Economics (Houghton street, Aldwych, W.C. 2), on Tuesday, March 20, 1923, at 5 p.m. The lecture is the last of a series on "Statistics Before, During, and After the War." Admission free, without ticket.

Oversea Correspondence.

IRISH FREE STATE.—THE DEPORTATIONS.—THE CUSTOMS BARRIER QUESTION.—GOVERNMENT BORROWING PLANS.

(FROM OUR CORRESPONDENT.)

DUBLIN, March 15.

THE arrest and deportation to Ireland by the British authorities of Irish, Anglo-Irish, and other sympathisers with the "Republican" Irregulars has certainly raised formidable constitutional issues, and may possibly be turned to account against both the Irish and the British Governments. Unquestionably, however, it is a serious blow to the De Valera faction, which is already known to be embarrassed by splits in its organisation both in Ireland and in the United States and by growing impecuniousness. The British Government account, when discount for official reticence has been deducted, practically proves—what has long since been obvious to skilled observers—that the "activist" Communists of Great Britain have been working in support of the Irish Irregulars. It is to their promptings, quite clearly, that a good deal of the burnings of the "big houses" is directly traceable. And it is a realisation of this fact that has caused discouragement amongst the saner elements of the "Republican" fighters. It is the same realisation, too, which has rendered peace-mongering less popular. The general public understands that Ireland's liberty in regard to its external relationships has been effectively secured, but that her existence and functioning as a nation in being are as yet in suspense. The issue is not resistance to foreign oppression, but the defence of the very life of the community, which is being garroted by a section of its citizens.

Ireland is now face to face with a new Customs barrier surrounding North-East Ulster, which is to come into operation on April 1st. Nothing could better illustrate the lethargy and nervelessness of the responsible leadership of the business community than the manner in which this question has been dealt with. Fearing politics, and with an ignorance of them, partly inborn and partly cultivated, it fails to take action at the appropriate moment for the protection of its own interests and for the furtherance of its own views. It has delayed action too long. The matter being imminent, and probably now inevitable, there is quite a little hubbub: suggestions for postponement, hints at the desirability of unification or working agreements, and so on. The business community itself, in spite of its leaders, is waking up. The ferment is also working in North-East Ulster. Slowly but surely the inconvenience and expense of the Customs barrier is coming to be realised, and sooner or later the community as a whole will make up its mind that it ought to be relieved of it. There are projects mooted for unified administration of railways for all Ireland—not in connection with the Council of Ireland arrangements and the Government of Ireland Act, 1920, but as a mere business proposition. There is also talk of a central organisation

for the Chambers of Commerce of all Ireland. Supporters of the Free State allege that the position of North-East Ulster in regard to its contribution to Imperial resources is very much less favourable than that of the Free State, and it is expected, as matters settle down and these factors come to be realised in daily experience, that education by hard facts will lead to a maturing of political judgment. But things would have been better for all interests if obvious truths were only realised and acted upon at the appropriate moment.

There are continual rumours as to projected Government borrowings, but nothing final has been decided so far. It is known that confidential conversations have taken place between the Government and some of the Irish banks; and with public spirit, prudence, and goodwill on both sides there should be no difficulty in handling the situation. For a moderate Government loan the Irish banks could provide all the money necessary, and in their own interests should strain every effort to support the national credit. Their interests and the interests of the community are identical, and both would be equally served by good public credit and low rates of interest. A minor sensation was caused a few days back by the publication of an interview with President Cosgrave, who is also Minister of Finance, in which he was made to speak of Government borrowings as being possible at 10 per cent. Fortunately, the public was reassured by an official statement that this astounding figure was due to a misprint in transmission of a cablegram, and that he had mentioned 5 per cent. as the extreme figure.

A minor controversy as to the legalisation of sweepstakes impinges upon this discussion of alternative methods of Government borrowing. It has served to emphasise the evils of unrestricted gambling and to mobilise anti-gambling sentiment. The controversy is an untimely one for those who are anxious to see an issue of premium bonds as one of the financial expedients of the Government. There is a large section of the population of sporting, not to say gambling, proclivities, to whom such premium bonds would make an appeal. It is surely a merit of this method of public borrowing that it inculcates—nay, compels—thrift amongst this class. Because the more they desire to participate in Fortune's rewards, the more bonds they will need to acquire by saving and investing their money. And they will need to retain their bonds so long as there are any further premiums to be awarded.

UNITED STATES.—SHIP SUBSIDY BILL KILLED.—RURAL CREDITS LEGISLATION.—FURTHER RISE IN COMMODITY PRICES.†

(FROM OUR CORRESPONDENT.)

NEW YORK, March 2.

FOR some time past Washington advices quite clearly indicated the unlikelihood of ship subsidy legislation by Congress during the session which is now practically ended, owing to the continued filibuster against the Bill, and to pressure for the passage of other measures whose chances of enactment might be diminished by keeping the Subsidy Bill before the Senate. Advocates of the Bill fought hard to bring it to a vote, but succeeded only in prolonging its life. President Harding finally announced this week that he had abandoned all hope of securing the passage of the measure which he had persistently advocated. The end came on Wednesday last, when a motion to recommit the Bill to the Senate Committee on Commerce was defeated, and the Senate, by a vote of 63 to 7, took a decision which had the effect of disposing of the subsidy proposition. It was made known at the White House that President Harding will himself endeavour to solve the difficult problem which has been pushed back upon him, owing to the failure of Congress to pass the proposed legislation—a result which he, evidently, very keenly regrets. He does not intend, it is understood, to seek the aid of Congress in this matter at the next session; a plan now under consideration by the Shipping Board is expected to be well advanced before that session meets. Details of that plan are not yet available; but the general impression is that it will involve liquidating the affairs of the Shipping Board and disposing of the vessels now

held, with the view of committing the upbuilding of the merchant marine to private interests.

What is known as the Rural Credits or Farm Credits Bill was passed by the House of Representatives this week by an overwhelming majority. The main features of the measure, as accepted by the House, are as follows: Creation of 12 institutions to be known as intermediate credit banks, and to be officered and directed by the Federal land banks. These intermediate banks are to be capitalised at \$5,000,000 each, the capital to be subscribed for by the Secretary of the Treasury, and owned by the Federal Government. They will be authorised to make loans running from nine months to three years on live stock and warehouse receipts up to 75 per cent. of their value. The Government is to be reimbursed by the application of one-half of the net earnings, so that it is expected to have the capital it furnishes returned eventually, while still owning the banks. Another important feature is the provision creating private corporations, with a capital of \$250,000 each, to deal in agricultural paper having a maturity of six months or more, and authorising the formation of rediscount corporations with a capital of \$1,000,000 or more. As explained by the chairman of the House Banking and Currency Committee, the Bill is designed to provide intermediary credits for the agricultural interests of the United States, including all people who are engaged in the production, warehousing and marketing of agricultural or farm products. Those interests contend that the present commercial banking facilities are not adequate to permit, without impediment, the planting, production, harvesting, and marketing of farm products. The statement issued by the House Committee in charge of the Rural Credits Bill points out that during the war, when the commercial banking system of the country was being utilised almost to the breaking point, not only by the commercial, industrial and agricultural interests, but by the Government itself, Congress created the War Finance Corporation to help out in the emergency financing. That institution is still operating, its sphere of influence having been broadened by Congress to permit aid to the agricultural interests of the country by financing, under rules and regulations prescribed by it, loans on live stock and commodities, and also loans to co-operative marketing organisations. At the peak of that corporation's activities loans aggregating almost \$400,000,000 were made to those classes of people. In addition, favourable rulings in regard to the rediscounting of paper based primarily on agricultural products as security have been made to enable the Federal Reserve system to aid in meeting the farmers' needs. Other legislation has been passed by Congress providing for aid to many sections of the country in purchasing seed for planting. Many people thought, the statement adds, that so soon as the war readjustment had been completed, and conditions had returned to a normal basis, the present banking facilities throughout the country would be ample to care for the needs not only of industry and commerce, but also of the agricultural communities. The latter, however, have felt that there is a gap, and the Bill just passed by the House seeks to provide intermediary credit facilities for agricultural interests. The measure, which has been strongly supported by the Administration, has been referred to a conference committee representing the House and Senate, and since the latter has already passed Bills embodying the salient features of the House Bill, it is generally expected that the new law will be passed at this session. One of the provisions in the House Bill extends the life of the War Finance Corporation until January 31, 1924. The pending legislation, which has been strongly advocated by the farm bloc in Congress, has met with a great deal of opposition from various interests in Congress and elsewhere. In some quarters it is characterised as the worst legislation that has passed the House in a generation. Opponents of the measure express fear that it will adversely affect the present well-established banking system, and ultimately do the farmer more harm than good; it is claimed he will get too much credit, which will prove to be his undoing.

The further rise in commodity prices is attracting widespread attention and causing no little concern in many quarters, especially among manufacturers who use raw

materials. Cotton has soared well above 30 cents a pound for spot in the New York market, with no indication that the "top" has been reached. Sales of copper are reported at 17 cents a pound. Raw sugar is selling at a level close to 7½ cents, raw silk (Japan) has advanced more than 30 cents a pound here during the past week to \$9.35 for the best grade, but even that abnormally high level does not fully reflect the recent spectacular rise in Yokohama. Wool continues decidedly strong, with, if anything, an advancing tendency, while a general accretion is noted in prices of pig-iron, crude and finished steel, especially bars, plates and sheets, and in tinplate. In many industries, particularly textile, manufacturers are much disturbed over the continued upward trend of raw materials, and in some markets the rise of prices has checked buying. A great deal of uncertainty is felt on all sides as to what effect these advances will have upon future consumption. Trade generally will not be retarded, it is thought, in the next few months; but no one is willing to make definite predictions as to what may happen in the second half of the year when the high costs now prevailing in primary markets will be passed on to the public. It is too early for such increases to be reflected in retail distributive channels.

FRANCE.—BUDGET DEFICIT TO BE MET BY BORROWING—REVENUE—WHEAT SUPPLY—PRICES—SUGAR.

(FROM OUR CORRESPONDENT.)

PARIS, March 15.

THE long debate which has been in progress in the Chamber in connection with what may be described as the second edition of the Budget Bill for 1923, came to an end with surprising suddenness on Friday afternoon, when it was decided that, instead of imposing any further taxation worthy of the name, the expected deficit in the national finances shall be met by borrowing. To be quite fair, this decision is more serious in appearance than in fact, as the circumstances will show. As I have previously stated, the Estimates for the year were sent up to the Senate some weeks ago, the question of how an expected deficit of some 3,800 million francs between estimated revenue and expenditure could be met being reserved by the Chamber for subsequent settlement. The Finance Minister, in his first proposals a year ago, suggested that this deficit should be met by borrowing. The Finance Commission of the Chamber, however, flatly declined to endorse this view, and for some months schemes to get over the difficulty were shuttle-cocked backward and forward between M. de Lasteyrie and the Commission.

The position last week was that Minister and Chamber were for all practical purposes in agreement as to how 2,200 million francs of the lacking 3,800 millions should be found by increased yield from taxation, by payment by the railway companies for material received by them from the Government, &c. There remained the problem of finding sources from which the balance of 1,600 millions was to be obtained. M. de Lasteyrie strongly advocated an increase in some of the existing taxes, in some cases by as much as 20 per cent., and also asked for authority to permit the revenue officials, in cases in which they had reason to believe under-declaration had been made, to assess income-tax by "external signs" of wealth. M. Bokanowski, the *rapporteur* of the Finance Commission, again brought up his proposal, although in a modified form, for the institution of the famous *carnet de coupons*. Two distinct motions for the deficit to be met by a huge lottery loan were also discussed, and each met with a large amount of support.

At the bottom of the whole debate, however, it was evident that members were as much concerned with the fact that General Elections are due next year, as they were with the necessity for balancing the present year's Budget. The Left made a great show of virtue in urging that the only dignified manner in which the Government could escape from the dilemma would be by imposing additional taxation, and by tightening the fiscal screw for the purpose of preventing frauds. The supporters of the Government, however, were by no means anxious to give their opponents the opportunity of going to the country next

year with the cry that the Poincaré Government had been responsible for these two very unpopular steps; nor were even the Socialists and Radicals very anxious to have to give their votes, in the event of the Government succumbing to their arguments, in favour of two such electorally dangerous devices. At one time it looked as if the debate must continue indefinitely.

The Gordian knot was suddenly cut, however, by M. Emmanuel Brousse, one of the recognised financial experts in the Chamber, who moved that the "real deficit," which he placed at 1,430 millions only, should be met by borrowing, in the form of a special issue of Treasury bonds. After a somewhat feeble protest by M. de Lasteyrie, who urged that his proposals for additional *décimes* might at least be discussed further, the Chamber, delighted with having at last found a way out, adopted M. Brousse's motion by 315 votes to 243, and the debate, for all practical purposes, came to an end. The "Bill for Balancing the Budget for 1923," as the second edition of the Finance Bill is termed, was subsequently adopted as a whole by 342 votes against 154, the Government having made it a question of confidence, after a speech by the Finance Minister, in which he pointed out the damage which he believed would be done to French national finance if inquisitorial methods, such as the *carnet de coupons*, were introduced, or if there was any interference with the anonymity involved in the form of security most preferred in France, the bearer bond. The Bill has now gone to the Senate, where the discussion of the Budget as a whole will begin immediately after Easter.

French Budgets, as is known, have often been balanced in the past by a resort to borrowing. There are, I believe, some 25 instances of this on record. To mention only those of recent date, the Budget of 1905 was balanced by the issue of a loan of 57 million francs; in 1907, 84 millions; in 1908, 56 millions; in 1909, 55 millions; in 1910, 159 millions; in 1913, 106 millions. This is the first time, nevertheless, that borrowing has been resorted to on such a large scale. It is argued by many people, however, as suggested above, that the seriousness of the present situation may easily be over-rated, as it is expected that there will be no need to issue anything like as large an amount of additional bonds as 1,430 million francs. The Finance Minister himself has stated, indeed, that he expects to receive as much as between 3,000 and 4,000 millions in excess of the Budget estimates for the present year alone. That this optimism is to some extent justified is evident from the fact that the yield from taxation during January was over 243 millions in excess of Budget estimates. The returns for February, which have just been issued, show that, in spite of a falling off of nearly 70½ million francs in the receipts from Customs duties, the total yield for the month (exclusive of any revenue from income-tax or the tax on war profits) was 105,849,000f above the Budget estimates.

According to an article published by the *Bulletin des Halles*, the deficit in the French wheat supply between now and the next harvest will be much less than has generally been estimated. Hitherto it has been held that this country during the 1922-3 wheat year would be obliged to purchase 24,000,000 quintals of foreign wheat, and this figure has undoubtedly had a great deal of influence on both the recent steady rise in the price of flour and on the position of the franc. The estimate in question was based on the provisional forecast issued by the Ministry of Agriculture in October last. Independent figures that have since been collected by organisations connected with the milling and cereal industry place the deficit at a much lower figure. The actual situation is set forth as follows (the figures representing millions of quintals):—

Total requirements of the country.....	92
Harvest for 1922-23.....	73
Imports from August to February	7
Rye incorporated with wheat flour	2½
Rice	2½
Saving effected by modification in percentage of flour extracted in milling.....	2½
	87½

Actual deficit to be imported

It is further asserted that even this figure may prove to be exaggerated, as there is a probability that, owing to

INTERNATIONAL BANKING
IN ALL ITS BRANCHES
**BANKERS TRUST
COMPANY**
16, WALL STREET, NEW YORK

3 & 5, PLACE VENDOME
CABLE ADDRESS: BANKTRUST, PARIS

supplies of wheat still on hand, it may not be found necessary to purchase from abroad more than about 1½ million quintals during the five months that must elapse before the new harvest is due.

The index figures for February, which have just been issued by the Statistique Générale de France, show a further striking increase in both wholesale and retail prices as compared with the previous month. The index numbers for wholesale prices are returned as follows (base, 100 during the period 1901-10):—

	January (Corrected).	February (Provisional).
General index figure for 45 categories ..	447.3	487.6
Foodstuffs:		
Ensemble of 20 categories	424.8	465.1
Vegetable foods (8 categories).....	386.1	398.2
Animal foods (8 categories).....	457.6	495.1
Sugar, coffee, cocoa (4 categories)	436.3	538.9
Raw materials:		
Ensemble of 25 categories	465.4	505.9
Minerals and metals (7 categories) ..	415.6	478.2
Textiles (6 categories)	624.0	646.5
Various (12 categories).....	415.1	451.3

The index figure for the retail prices in Paris of 13 categories of foodstuffs during February is returned as 3,394 (or 216 per cent. increase on the prices prevailing in 1913), as compared with 3,318 (representing an increase of 209 per cent.) for January. The figure for retail prices corresponds almost exactly with that recorded in May last year (which showed an increase of 217 per cent. on the prices for 1913), after which it dropped to 189 per cent. in August, since when it has again steadily risen. The figure for wholesale prices, however, has consistently risen since March, 1922, when it stood at 355.4 (except in August, when a fractional and momentary drop was recorded).

The outstanding feature in the above return is the enormous rise in the figure for sugar, &c., which shot up from 436.3 in January to 538.9 last month. This was, of course, due to the frenzied speculation in sugar on the French market. Prices for French white beet sugar, which stood at 137f per 100 kilogrammes in the middle of October last, had risen by the end of January to 292f 50c. On February 15th the same sugar was quoted at 292.50, and on February 24th at 308. The whole question of whether this astonishing rise in the cost of an article of prime necessity is due to unjustifiable market manoeuvres is the subject of an exciting debate, which has already occupied two long sittings of the French Chamber, with others in view. It is urged that, in view of the fact that France is obliged to buy 25 per cent. of her sugar from abroad, owing to the destruction of a large proportion of her refineries during the war, this in no way explains (even taking the exchange factor into consideration) why prices should have risen 35 per cent. in France (or 1,000f a ton) recently, when New York quotations have risen only 17 per cent. Allegations have been made that the rise is largely due to the operations of the leading French refiners, who are alleged to have made profits of 554 million francs during the past three years, while the beet-growers have had to be content with two millions during the same period. The Minister of Agriculture has been sharply criticised for not prohibiting the export of French sugar in view of the present shortage, and it is alleged

that dealers have been able to reap enormous profits by ingeniously manipulating certificates relating to the payment of duties on consumption, in connection with the re-import of native-grown sugar that has been exported for the purpose of being brought back into this country again. The present abnormal prices of flour (which has resulted in a fresh demand by bakers for an increase in the selling price of bread) and of butter (which has risen, for no apparent reason, from 14f 80c the kilo on November 1st to 19f, or practically the highest figure known during the worst days of the war) have resulted in the opening of official inquiries.

GERMANY.—RUHR—FINANCES—DANUBE CANAL—EXCHANGE AND BOURSE—INDUSTRY—PRICES—SHIPPING.

(FROM OUR CORRESPONDENT.)

BERLIN, March 13.

CONDITIONS on the Ruhr threaten to develop into guerilla warfare or into terrorism from the German side as a reaction to French terrorist methods. As a result of the murder of two French officers, a number of Germans have been murdered by the French, hostages have been taken, and a military proclamation threatens them with execution. It is not yet known who murdered the officers. The discipline in the French Army is bad, as it has been undermined by the licence of the last two months, and the soldiers have learned to use their cartridges and bayonets without provocation, and sometimes apparently merely in order to amuse themselves. The German Press maintains that the officers were murdered by French soldiers. A counter-terror by Germans, who have no old traditions of that kind, has been considered impossible, but as Germans in the last few years have committed terrorist acts against Germans, organised terrorism against the French can hardly be considered impossible, and the French are doing their best to bring it about. The industrial disorganisation proceeds very slowly, and the French have no prospect of enforcing a settlement by that means in the near future.

The Gold Treasury Bills law has passed the Reichstag and Reichsrat. The bills will not be officially offered in foreign markets. Subscription is open between the 12th and 24th inst., 40 per cent. to be paid at once, and the remainder by April 14th; redemption on April 15, 1926, at 120 per cent. in cheques on New York or in gold at 1.5046 gr per dollar. Payment is taken in sterling, any neutral European currency, Argentine pesos, or Japanese yens. A law has been passed allowing companies which invest money from their reserves in the bills to write off any mark losses that may be suffered from a possible dollar exchange fall, though this was not allowed under previous legislation.

The Rhine-Main-Danube Canal Construction Company announces the issue of dollar bonds of the value of six million gold marks. This is the first dollar loan of any magnitude that has followed the Republic's attempt. The first work of this company—the construction of a power works at Kachlet, near Passau—will be finished in four years. The canal, which will carry vessels of 1,500 tons, between North and South-East Europe will take 20 years to construct, the route being from the Main at Aschaffenburg *via* Bamberg and Nürnberg to the Danube, and further *via* Regensburg to the frontier at Passau, the Danube between Kelheim and Ulm being canalised, and connection being made with Augsburg and Munich. The plan includes power works with an annual capacity of 360,000,000 kilowatts. The public holds 360 millions and Bavaria 208 millions of marks shares, and a Bill authorising Prussia to buy 50 million marks shares has been submitted to the Landtag. Several more "Wertbeständig" rye and coal loans have been issued; but the mark exchange improvement has resulted so far in loss to the bondholders, because whereas the price of the two commodities has fallen heavily, the general cost of living has not fallen correspondingly. Coblenz, the only large city that has of late issued a paper mark loan, is offering 10 per cent. interest.

The floating debt on February 28th was 4,628,248 million marks, of which 3,588,246 millions were dis-

counted Treasury bills. The whole debt is put at 4,692,671 millions. Receipts from taxes in the present financial year (April 1, 1922, to February 28, 1923) were 995,375,267,000 marks, while the forced loan yielded 9,270,034,000 marks and floating debt borrowings 3,316,310,590,000, making a total of 4,320,956,260,000 marks. Expenditure was as follows:—General administration and Peace Treaty costs in mark currency, 2,646,177,666,000 marks; Peace Treaty outlay in foreign currencies, 589,475,521,000 marks; service of the funded debt, 2,473,707,000 marks; of the floating debt, 125,568,588,000 marks; and subsidies to railways and posts, 952,989,739,000 marks. Posts are at present responsible for a deficit of 1,204.6 milliards a year, as the despatch of letters has declined by about half and that of parcels by 43 per cent. The Customs gold surcharge has been reduced to 525,900 per cent. A motion demanding protection for mortgagees by making repayment in the next four years dependent upon the mortgagee's consent is before the Reichstag. The Cabinet some time back declared against this measure. The three State-managed industrial companies, Deutsche Werke, Reichs-Elektro, and the Deutsche Aluminium, together with the Reichskreditgesellschaft, which finances them, are being removed from the management of the Ministry of the Treasury and fused in a single privately conducted corporation, in which the Republic will hold all the shares, under the title "Vereinigte Industrie-Unternehmungen A.G.," with a capital of 600,000,000 marks. The Ministry of the Treasury itself will be wound up.

Stocks last week were again reactionary, and fell to below half the average of early February. The *Frankfurter Zeitung's* index for March 9th shows 725.415 for home dividend-payers against 1,567,265 on February 9th, the change naturally causing very heavy losses to some holders. Yesterday the Bourse was firm, but not active. Speculators have begun to buy back, but the general public holds aloof, and the new Ruhr troubles frightened buyers off.

Business is very dull, the main influence still being the recent exchange improvement. Unemployment is increasing, though the last available statistics are for February 1st. The textiles industry is threatened with a crisis, owing to a general cessation of orders caused by the public expectation of a heavy price fall, and retail traders have already begun to cut prices. The textile mills are now dependent largely upon foreign orders, but it is doubtful whether they can compete at the present level of exchange, and any material reduction of working costs is impossible. The Leipzig Fair, despite the large number of foreign visitors, did very moderate business. East Europe, and particularly Finland and the Russian frontier States, were strongly represented. The partial adjustment of German prices to the world-market level which has been caused by the recovery in the mark has not been accompanied by an adjustment of native buying power to prices. The Railways Department has refused to cut freight rates, on the ground that the average rate, which is 3,200 times that of 1914, is lower than the general price level. An agitation is proceeding for a reduction of the 40 per cent. coal tax, which, with the present high level of gold prices, is severely felt in those industries which have also to import dear foreign materials. The tax was doubled from 20 per cent. on account of the much lower price of German than of foreign coal; but this price difference has largely disappeared, and the present gold price of coal is about five times as high as it was in January. The domestic consumer is very badly hit; the cost of heating, cooking, and lighting for a workman with a two-roomed flat is now nearly 1,000,000 marks a month. The Cabinet has issued a statement declaring that it will do everything possible to prevent a further price rise, adding that an increase of wages is desirable only where wages are below the general level; but an all-round increase would only prevent a price fall, and would benefit no one. This declaration may be taken to mean that the Cabinet will do everything possible to maintain the present mark exchange by intervention wherever necessary, because a new price rise cannot be prevented if the mark again falls. The further improvement witnessed last week took place without any intervention on the part of the Government.

Under the title "Deutsche Auslandsbank in Berlin," an international bank has been founded with the aim of financing industry and trade in and with Austria, Hungary, Czecho-Slovakia, Poland, Russia, and the smaller East European countries. Herr Mannesmann and Herr Ernst Roehling, and a number of Austrian bankers, are interested in this new venture.

The Reichsbank statement for February 28th is, considering that it is a month-end statement, moderate. Commercial bill discounts increased by only 177,457 millions, Treasury bill discounts by 503,061 millions (after a small increase in the preceding week), outstanding Darlehns advances by 39.4 milliards, and note circulation by 389,247 millions. The circulation is now 3,512,787 millions, and at the present rate will reach about 10 billions by the end of the half-year. New metal token money is being coined. The last aluminium and even iron coins long ago passed their nominal value and went out of circulation. Ten-mark paper notes, which have no buying power alone, are the smallest currency now circulating. The new coins are to be 200 marks each. Aluminium, copper, nickel, and iron coins of nominal value 921 million marks and weighing nearly 20 million kilograms have passed out of circulation, and are either hoarded or melted down.

Hamburg shipping in the first two months of this year in both directions exceeded that of the same months of 1913. Arrivals in January-February were 1,893 vessels of 2,189,680 tons, against 1,188 vessels of 1,566,450 tons in 1922 and 2,007 vessels of 2,075,311 tons in 1913; departures, 2,086 vessels of 2,194,823 tons, against 1,191 vessels of 1,559,686 tons and 2,270 vessels of 2,181,044 tons. Shipping was more than four times that of 1920. The Hamburg South-America Company, the first large company to issue its annual report, shows for 1922 operating profits of 474,150,000 marks, against 20,241,000 marks in 1921, and net profits of 183,430,000 marks, against 7,670,000 marks. The dividend is 330 per cent., against 28 per cent. After completion of two vessels now building, the company's tonnage will be restored to 150,000 tons.

AUSTRIA.—POLITICAL SITUATION—ECONOMIC CONDITIONS—BUDGET—CREDIT POLICY—FOREIGN EXCHANGE—MARK SPECULATION.

(FROM OUR CORRESPONDENT.)

VIENNA, March 1.

THE result of the negotiations in London, Paris, Holland, and Switzerland, by which credits to the amount of about £3,500,000 were obtained, has strongly consolidated the position of the Cabinet of Dr Seipel. Even the Social Democrat party realises that the present Government cannot be overthrown by street demonstrations and small conflicts in the Parliament, and this has led to a certain state of political calm. The majority of the population wish above all to have peace in the country, especially as they see that the foreign creditors and the financial measures adopted by the Government have removed the danger of a breakdown for some considerable time. The Chancellor's endeavours to conclude commercial treaties with the neighbouring States by means of direct personal negotiations and to come to cordial economic relations with them have equally contributed towards reducing the pessimism which prevailed a short time ago. The population is gradually beginning to believe in the duration of the State.

From the economic point of view, the events in the Ruhr district are exerting a strong influence on Austrian industry. The elimination of German competition and the increased demands resulting from this in some of the Succession States have caused a considerable improvement in the coal, iron, metal, and engineering industry. On the other hand, the textile industry has had a great setback owing to Hungary's action in closing her frontier to the import of textiles from Austria in order to reduce the export of Hungarian kronen. The export of timber has been seriously affected by the disorganisation of the railway system in Germany on account of events in the Ruhr district, and the leather industry is suffering from overproduction. In general, however, one could say that Austrian industry seems to have reached the turning-

point. A decrease in the number of the unemployed is expected in the near future, inasmuch as the municipality of Vienna and the Austrian Government intend carrying through a number of public enterprises. On the other hand, there have been many difficulties in continuing the erection of water-power plants in the Alpine provinces, because sufficient Austrian capital is not available and foreign capital does not seem to be forthcoming.

The Budget for the year 1923, which was recently submitted to Parliament, allows for a deficit of 2,350 milliard kronen. This enormous figure, however, when compared with the draft drawn up at the beginning of November at the request of the League of Nations, shows a great improvement. The deficit was at that time estimated at 5,293 milliard kronen for the year 1923. The difference of 2,943 milliard kronen between the final Budget and the first draft is due to the fact that foreign currencies have since become cheaper, the index figure has been lowered and the new reconstruction programme affords the possibility of increasing savings and revenues. It remains to be seen, however, whether results will justify this first Reconstruction Budget. The most difficult question will be the dismissal of the superfluous State officials and employees within the time allowed. Up till January 1st 25,000 officials had been dismissed, and another 25,000 should be discharged by July 1st of this year.

There are many complaints in financial circles, as well as in those of commerce and industry, about the tight credit policy of the new National Bank, which is getting numerous concerns into trouble. Rates of interest in the open market are extraordinarily high, and the rapid passage from the time of inflation to one of stability entails the danger of many insolvencies. The standpoint of the National Bank with regard to these complaints is that legitimate demands will be provided for, but that no means will be allowed for speculative purposes. It is remarkable that for the period January 15th to February 15th the bank-note circulation remained nearly unchanged at the figure of 4.07 milliard kronen. During the same period the gold reserve increased by 32 milliard kronen, but holdings in foreign bills decreased 177 milliard kronen, as the demand for foreign currencies is still very great. When the foreign credits are paid in the National Bank's stock of foreign bills will be considerably increased, because the Exchequer will sell these credits in part to the National Bank, and will receive kronen banknotes in return. Since the National Bank must buy its foreign currencies at the present high rates of exchange, it is naturally in its interest that the rates do not drop too fast, because this would entail a heavy loss for the Bank. This is one of the reasons why a rapid drop in the price of foreign currencies is not desirable here.

During the last few years numerous new banks were founded in Vienna owing to the boom in various branches of finance, commerce, and industry which followed the inflation of the currency. These banks were able to carry on satisfactorily so long as business could be picked up in the street and the note-printing press was working at full speed. As these conditions have changed altogether

during the last few months, some of the smaller banks are confronted with great difficulty in conducting their business. Their working expenses are very high, they have large outstanding claims among industries, and they are continually in need of money. The Government, as well as the State Bank Commission, have examined the status of several of these institutions, and there is no doubt that necessity will arise for either merging or liquidating some of them.

Rates for foreign exchange have not shown any considerable changes in Vienna for some time, as the Government and the National Bank have endeavoured by all possible means to stabilise the rates of exchange for the krone. February rates are set out below:—

	Kr. to the £.
February 1	332,350
" 10	332,950
" 20	332,700
" 26	334,500

Many Austrian financiers and private persons have sustained heavy losses in Berlin during the last few weeks. They bought at the highest prices German securities and foreign currencies with borrowed marks at the Berlin Stock Exchange, because they believed the mark would continue falling, and that all foreign currencies would, therefore, be more valuable. As the rates for these fell 50 per cent. during the last fortnight, however, many Austrian speculators lost money.

POLAND.—THE NEW CABINET — MR GRABSKI'S FINANCIAL REFORM PROGRAMME — A NEW MEASURE OF VALUE—INFLATION—EXCHANGES.

(FROM OUR CORRESPONDENT.)

WARSAW, February 27.

THOUGH the present economic position of Poland is far from being satisfactory, the financial outlook is becoming brighter. After seven months of political chaos General Sikorski has succeeded in forming a Cabinet, which has the support of the majority of the Diet. General Sikorski is backed by the parties of the Left, of the Centre, and by the Ukrainian and White Russian members. The National Christian Union has tried to overthrow the Cabinet, but its opposition has now become less violent. One wing of this political coalition, the Christian Democracy headed by Korfanty, has even taken up an attitude which can be described as one of friendly neutrality. After the *exposé* of the new Premier, Korfanty declared that many of the measures proposed by the Government were excellent, and that his party is ready to give, in respect of them, its support to General Sikorski's Cabinet. Under such conditions the new Government has some chances of a stability which will enable the Cabinet to realise its most important task—the reorganisation of the whole financial system. Mr Grabski, who is now at the head of the Ministry of Finance, has already elaborated his programme.

Mr Grabski's reform programme covers three years. During this period the Budget is to be brought gradually and systematically into equilibrium. The Budget is to be divided in two separate sections, an administrative section and another one which will deal with public undertakings. In 1924 and in 1925 the expenditure is not to exceed 90 per cent. of the total estimates for 1923, with the exception of expenditure on education, which may be increased by 10 per cent. every year. The administration of public undertakings is to be put on an absolutely new basis. Every one of these undertakings will have its own budget. Loans for the extension of the existing works and for new investments must be obtained by these undertakings, and secured upon their property and revenues. In the first instance the State railways are to be administered as independent commercial undertakings. The light railways belonging to the State are to be leased and eventually sold to private undertakings. The tariffs on the other lines are to be increased in such a manner as to cover the cost of transport. The building of new lines is made dependent on special loans being obtained for this purpose. If the attempts of the railway admini-

stration in this direction are not successful, concessions for the construction of these lines are to be granted to private concerns.

As I have previously pointed out, the budgetary deficits are to a great extent due to the fact that the Government gathers the taxes in a depreciated currency. When the Polish mark loses its value all salaries have to be increased, while the revenues remain unaltered. In 1922, for instance, the salaries of the officials amounted in January to 15 milliards, in July to 31.5, and in December to 120.9 milliards. The increase in tax receipts did not keep pace with this rise in expenditure. The amounts collected did not exceed the estimates made at the beginning of the year, and in some cases were even smaller. Under such conditions the real burden of taxation is very small, as shown by the following figures:—

TAXES PER HEAD OF POPULATION EXPRESSED IN GOLD FRANCES.

	1912.	1922.
Income-tax	0.34	0.13
Ground tax	1.17	0.12
Building tax	1.72	0.03
Industrial tax	1.89	0.46

The taxes expressed in gold amounted in 1922 only to a tenth and even less in comparison with the sums collected in 1912. In order to prevent in future such losses to the Treasury through depreciation of the currency, it has been decided to introduce into the Budget a measure based on the index number of wholesale prices. The taxes will be assessed on this basis, and paid in Polish marks according to a rate fixed by the Ministry of Finance. The new tax payment unit will be called zloty (gold unit, zlot means in Polish gold). The expenditure of the Government will be equally expressed in zlotys. Efforts are also made to introduce this theoretical currency also as a basis of credit, in the hope that such a measure will contribute to revive again the spirit of saving. Under present conditions no man in his senses saves marks or invests in securities expressed in mark currency. Two private banks have already opened accounts in zlotys. Probably the Postal Savings Bank and the Polish National Bank will introduce a similar system. A person, for instance, paying 50,000 marks will be credited with 10 zlotys. If after three months the rate of the zloty will reach 10,000, the bank will be obliged to put at the disposal of the depositor 100,000 marks.

Mr Grabski's programme aims at enabling the country to balance its accounts after three years. For covering the deficit during this period without resorting to the printing press a capital levy of 10 per cent. will be imposed. The first instalment of this levy is payable in the autumn, the rest half-yearly during the next three years. The Ministry of Finance is preparing the issue of 6 per cent. Treasury bonds, which are expressed not in marks, but in zlotys. These bonds are redeemable in September of this year. The Ministry hopes by this issue to put the brake on the policy of paper inflation during the period which must elapse before the programme of financial reform can be put into execution.

At present the inflation which is completely disorganising the economic and financial system is becoming every month more acute. While the circulation increased in June by 24.1 milliards, the quantity of new paper marks poured into the market amounted in December to 132.4, and in January of this year to 115.8 milliards. The total circulation has already passed the first trillion mark, and Mr Grabski is asking the Diet to increase the limit of the advances which the Polish National Bank can make to the Government by 600 milliards, so that the total will reach 1,475 milliards.

This steady increase of the paper circulation has a very depressing influence on the value of the Polish mark, which since the beginning of this year has lost more than 60 per cent. of its value, as may be seen from the figures below:—

	End of Dec. 1922.	Feb. 27, 1923.
Paris	1,335	2,915
Zurich	3,400	8,900
London	82,600	225,000
New York	17,800	47,000
Berlin	2.55	2.08

Prices of all necessities have risen in much the same proportion.

INDIA.—THE CAMPAIGN FOR PROTECTION—A DEBATE IN THE LEGISLATIVE ASSEMBLY.

(FROM OUR CORRESPONDENT.)

DELHI, February 20.

THE claim that India is unanimous in demanding Protection has repeatedly been advanced by the political classes. There is a widespread belief in this country that all that is needed in order to build up extensive industries is the erection of a tariff wall, and that idea has received no small encouragement from the representatives of the "infant industry" of Bombay. But, after the debate on the Fiscal Commission's report which has just taken place in the Legislative Assembly, a less confident sentiment is likely to prevail; indeed, the speech delivered by Mr C. A. Innes, the Commerce Member, on behalf of the Government of India, made a profound impression on many members of that body who hitherto apparently had studied only one side of the question. The situation is a peculiar one. The debate in the Assembly was opened by a Bombay merchant, Mr Jamnadas Dwarkadas, who moved: "That this Assembly recommends to the Governor-General in Council that a policy of Protection be adopted as the one best suited to the interests of India, its application being regulated from time to time by such discrimination as may be considered necessary by the Government of India with the consent and approval of the Indian Legislature." The speech of the mover was unimpressive. He enunciated the exploded theory that India was once a rich country, but had been reduced to poverty by the fiscal policy forced upon her by England; and he gave expression to other doctrines equally negligible. The surprise of the debate was an eloquent and forcible speech by Mr Innes, who, while accepting Protection in the abstract, exposed its dangers and incidentally disposed of the contention that "India" demands a protective tariff.

Mr Innes moved an amendment to Mr Jamnadas Dwarkadas's resolution to the effect that the Assembly recommended to the Governor-General in Council that he should "accept in principle the proposition that the fiscal policy of the Government of India may legitimately be directed towards fostering the development of industries in India." But in the application of the principle, according to the amendment, regard must be had to the financial needs of the country, and the present dependence of the Government on import, export, and excise duties. Further, the principle should be applied with discrimination, with due regard to the well-being of the community, and to the safeguards suggested by the Fiscal Commission; and, finally, that a Tariff Board should be constituted for a period not exceeding one year, in the first instance, and that it should be purely an investigating body.

The criticism has since been advanced that after Mr Innes's speech the Government should have declared against Protection. But, putting that aside, there can be no question that the Commerce Member has provided many Indian politicians with food for thought. The theory that "India" is clamouring for Protection he disposed of in these words: "In India we have a population of some 300 millions. Two-thirds of that population are agriculturists; most of them are poor, and the general standard of comfort is low. One thing, I think, is certain. If the agricultural classes, which form the bulk of the population, were fully to understand the implications of a policy of Protection, and if they were able to bring their influence on this Assembly, I doubt whether the Assembly would accept my amendment to-day. I doubt, indeed, whether I would be putting it forward." The truth of this declaration is undeniable. The votes cast at the elections for the Assembly numbered substantially less than 200,000, and over 300 millions will be affected by Protection. Whatever the merits or demerits of a high tariff may be, there is no ground whatever for the assertion that "India" is demanding a radical change of fiscal policy.

Mr Innes, moreover, cogently pointed out that the time was not favourable for the inauguration of a policy of Protection in India. The manufacturing interests of other countries were strenuously engaged in reducing the costs of production, and vast reserves of inherited skill, aptitude and efficiency were being mobilised to this end. "On the other side," said the Commerce Member, "India has still

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

before her in most industries that most difficult and protracted of all tasks—namely, the training up of a force of skilled and efficient operatives. While the task is in progress the measure of Protection necessary to secure the end in view will not be small, and that means again that, *pro tanto*, our policy of Protection must increase the level of prices in India for the consumer generally, and for the agricultural and middle classes in particular. There is no getting away from this fact."

It is notorious that much of the unrest in India in recent years has been due to the increase in the cost of living, and Mr Innes mentioned that high prices had meant an increase of nine crores of rupees, or six millions sterling, in the remuneration of Government services.

The speech certainly appeared to have a sobering effect on the Assembly, and after the Commerce Member had concluded, Mr Joshi delivered a protest on behalf of Labour, while Mr Townshend, an official member from the Punjab, made some pertinent remarks on the rise in the price of cloth which the agriculturists of that province had to face when Indian mills enjoyed temporary protection during the war. The outlook for Protection in India is not so bright as it appeared before the debate, but there are influential interests which will not allow the matter to drop.

SOUTH AFRICA.—UNION'S BUDGET OF EXPENDITURE: A SMALL DECREASE.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, February 14.

THE estimates of expenditure for the Union, excluding the Railways and Harbours Administration and also the four Provincial Administrations, that of the Transvaal being distinctly heavy, have been issued. The total estimate of £28½ millions reflects a decrease of nearly half a million, compared with the original estimate, but an increase of £46,769 compared with the revised estimate. Salaries and wages account for £8,861,000, and general services for £19,700,000, decreases of £104,000 and £378,850 respectively. New services, chiefly hospital treatment of ex-soldiers, a grant of £50,000 to the British Empire Exhibition, increased Mint annuity, staff and equipment for Weights and Measures Act total £195,000. The largest increases in normal expenditure are £105,000 subsidies to Provincial Administrations, £54,800 in Public Debt charges, and £25,600 in the Mines Department vote, but of the grant if £50,000 be deducted, the actual reduction is £24,000 due to reorganisation. On the other hand, unemployment expenditure is reduced by £200,000, and the vote "industrial disturbances consequent upon the Rand strike," of £225,000, disappears. In police, prisons, and reformatories there is a decrease of £120,000, while Native Administration is to cost £58,000 less, mainly owing to reduction in establishment.

The largest item in the Union's expenditure Budget is Public Debt £8,627,000, of which only £400,000 is for redemption—exclusively in respect of the £35 million development loan of the Transvaal and Orange Free State and the £5,000,000 loan of the Transvaal. There is no provision for the redemption of certain Cape loans stipulated for under Acts of 1878 and 1881, and for which £87,796 was provided in earlier Budgets. The funded debt is £175,387,686, and the temporary debt £19,690,000. Further borrowings of about £6 millions

are contemplated as £320,000 is included for interest. But, as the late Auditor-General, Sir Walter Gurney, has pointed out, the Budget is swollen by the inclusion of the gross amounts. In this connection, the Treasury is to receive £5,637,000 interest, all but a million of it from the Railways and Harbours Administration, while the Provincial Administrations are to pay £340,000 and the Land Bank £265,000. Grants to Provincial Administrations account for £4,321,500. In a sparsely populated and extensive country like the Union the cost of policing is bound to be heavy, namely, £2,574,200, while prisons account for another £785,700. We have heard a good deal of retrenchment in the Defence Force, nevertheless it is to cost £19,400 more, and the total is getting unpleasantly near a million a year. Post and Telegraphs budget for an expenditure of £2,828,000, another example of swelling the Budget, inasmuch as this would be offset by the revenue of this trading department. With a fixed establishment of 26,000, Civil Service pensions are bound to be heavy. But more than half the £1,805,000 provided for is for war allowances, albeit the £960,000 marks a decrease of £204,000. Some £98,000 of post-war expenditure has been transferred from loan account. Compensation for loss of office on reorganisation of the Civil Service has increased by £98,000 to £230,000.

Letters to the Editor.

THE APPROACH OF A FREE GOLD MARKET.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The remarkably steady rise in the value of the £ in New York, which has been one of the few cheering features of the trade depression, is leading us by slow but sure steps towards the close of an epoch in English financial development. When the £ finally reaches gold parity, and the flow of gold between London and New York is restored, we shall be within measurable distance of the re-establishment of world prices, which played no small part in the growth of international commerce before the war, and which are equally indispensable to the resumption of the trading relationships on which the prosperity of Great Britain to a large extent depends.

In one respect at least we shall have advanced a step beyond the position of 1914, for we shall for the first time be directly linked up, by means of the transport of gold, with the Federal Reserve system. Before the war, when the financial mechanism of the United States was far from perfect, our close relationship with New York was not unattended by anxiety, on account of the severity of the crises which still disturbed the American market. It is probable that even in the summer of 1914 New York had reached the eve of a crisis which was overshadowed by the greater crisis of the war. These periodical disturbances, of course, had serious reactions on the monetary centres of Europe, and in view of the resumption of full financial intercourse with New York, there is cause for great satisfaction at the undoubted success of the Federal Reserve system. The old defects of American financial organisation seem to have been thoroughly overcome, and it is likely that the reunion of New York with London will represent a distinct advance in the direction of stability of prices. It should also provide a firm basis for any of the European countries which may think it advisable to establish a gold exchange standard.

But this will only be one of the lesser indications of a new era in British finance. The rise of the £ is bringing us to the close of the epoch which opened with the Bank Act of 1844, and when gold parity is reached we shall be forced to take steps which will fundamentally change our monetary system. Whether or not the system established in 1844 was the most suitable that could be devised for England's peculiar position in world commerce is a matter on which much might be said; judged by the

growth of British trade, and the remarkable position which London achieved as the world's financial centre, the system has been by no means unsatisfactory. The point, however, is that the Bank Act virtually ceased to be effective in 1914, and while analysis of its merits and defects will teach us valuable lessons, its full restoration is out of the question. That is why the return of the £ to gold parity will mark a new era, and that time seems sufficiently near to warrant a brief reference to the problems which British finance will have to face.

Before the war rates of exchange between gold standard countries were maintained at or near gold parity by means of small shipments of gold. The effect of these was to adjust discrepancies between the trade balances of the respective countries, but this effect was not accomplished by the gold merely in its capacity of an import or export, but by means of its effect on prices. In other words, the primary function of gold shipments was to adjust price levels between the countries. This was done through the medium of the discount rates. When the exchanges were against us, and gold was flowing out, bank rate was raised, and the resultant contraction of credit would steady any tendency to a rise of prices, and encourage exports of goods. When rates were in favour bank rate would be lowered, and the expansion of credit would stimulate prices and encourage imports. The essential of the system was that the discount policy of the central banking institution should be effective throughout the market concerned.

How does this principle fit in with the post-war London money market? During the war bank rate became subservient to the needs of the Government in the market, and by the end of the war such a mass of floating debt had arisen that bank rate became a relatively unimportant factor in the market to such an extent that, since the Armistice, movements in bank rate have been a reflection of economic conditions rather than the determining influence. To make matters worse, there has been introduced an enormous mass of virtually inconvertible paper currency, which is subject to no adequate limitations of issue, and which bears no definite relation to the needs of trade; consequently, if a free gold market were re-established under present conditions, there would be no medium through which imports and exports of gold could perform their function of steadying price levels. If, for instance, the heavy burden of paying the interest on our debt to the United States were to commence a drain of gold, there would be no check to the outflow, unless the amount of currency notes in circulation were reduced sufficiently to bring about a contraction of credit and a fall of prices, which would stimulate exports of goods; and, in any case, such a rough-and-ready means of operating London's delicate financial mechanism would be most unsatisfactory.

The problem, then, will be to re-establish the connection between movements of gold and prices. How far the bank rate can be restored to its former effectiveness depends on the policy of the Treasury with regard to the floating debt; but the more pressing question will be the disposal of the currency notes. To abolish them is impossible, since sufficient gold to replace them could be obtained only by accumulation over a long period of years. The most obvious solution would be to make the notes convertible, and to use our present reserve of gold as a partial backing, supplemented by commercial paper, following the old German plan. In this way a connection could be established between gold movements and the amount of currency in circulation, and prices would be influenced by changes in the amount of the gold reserve. But such a vast and intricate problem cannot be dealt with in a short space. It is rather the subject for the deliberations of a committee which would rival in historical importance the Bullion Committee, which discussed similar problems a century ago.—Yours, &c.,

London, March 3rd.

H. E. BUTSON.

AMERICA'S BALANCE OF PAYMENTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Secretary of Commerce Herbert C. Hoover's speech of October 16, 1922, states the financial position of U.S.A. towards other nations during the last fiscal year as follows:—

Other nations exported goods to United States.....	\$ 2,600,000,000	\$
United States exported goods to other nations	.. 3,800,000,000	
Other nations exported gold and silver to United States.....	450,000,000	
Balance of exchange against United States (secret exports), and in favour of other nations ..	1,500,000,000	

4,550,000,000 .. 3,800,000,000
750,000,000
Balance against United States

So United States of America is running in debt to other nations at the rate per year of \$750,000,000.

And yet most Europeans assert that U.S.A. is a creditor nation, and as such should not only forgive the inter-governmental debts, but should pay or underwrite at least the major part of Europe's war bill.—Yours, &c.,

HENRY A. FORSTER.

New York, February 14th, 1923.

[These figures are referred to in another column. We cannot, however, follow our correspondent in thinking that they show America is "running into debt." A balance-sheet of this kind is only a means of showing that for the moment America is making more payments abroad than she is receiving, and is therefore tending to put the exchanges against herself. But she is making these excess payments as permanent or temporary loans to other countries, and thus making them more deeply her debtors than ever. Mr Forster also loses a sense of proportion in his last sentence. According to the Bankers' Trust Company, the cost of the war to the United States was 3½ billion dollars, while the cost to the other Allies was 130 billion dollars. The total inter-Allied debts to America, which is the only burden that anyone has ever suggested America should shoulder for Europe, amount to 10 billion dollars.—Ed. Economist.]

Books and Publications.

TWO YEARS OF SEA WAR.*

If this book is dull the author must not be blamed. One must attribute the quality of the compilation to the limitations inherent in the subject matter. The volume is a record of happenings in connection with seaborne trade during two years of war—from the beginning of 1915 to the end of 1916—but does not include any account of the defensive measures employed to meet the submarine attack, nor of the exploits of British seamen. Those aspects are dealt with in other volumes of the official history of the war. So here we breathe only the artificial atmosphere of departments, ministries, conferences, committees, sub-committees, and official machinery in general. With painstaking care, masses of official reports and records have been gone through and digested into a continuous statement. The result is a volume of materials, not a history. This is the work of the annalist rather than of the historian. Despite the severely proper official manner which is maintained—or perhaps because of it—the war mind seems to dominate the composition. Anything which tells against the late enemy is apt to be expanded and dwelt upon in a way not approached in discussing the other side of the question. There is no impartiality; nor is there any touch of humanity. The narrative is hard and cold. The sufferings inflicted on women and children in Germany by our offensive operations are referred to as a vivisection might describe his experiments on a helpless animal. Their immediate strategic consequences alone are considered. Broad issues are not referred to, much less discussed. The appointment of the Shipping Controller, with which the period covered ends, is duly chronicled. He was to have ministerial rank, but was anxious to be free from attendance in Parliament. That is all the reference made to the plunge from the constitutional usage of long years into a system tending towards ministerial irresponsibility and dictatorship. No doubt this is a most valuable collection of material for the future historian; but the historian will have to regard it as a heavily biased *ex parte* record, uninspired by any breadth of outlook.

UNEMPLOYMENT AND ITS REMEDIES.*

Mr KIRKCONNELL is a Canadian economist who has travelled recently, and extensively, in Continental Europe; and his book is an admirable compendium of information on the causes—normal and exceptional—of unemployment, of the overlapping theories put forward in explanation of its persistence, and of the remedies suggested by other writers as well as by himself. Normally, the evil arises from maladjustments in modern "mechanistic" civilisation, and may be met by readjustments of labour supply, carried out through labour exchanges, by "decasualisation," improved training, and Whitley councils to avert trade disputes; and it may be mitigated, e.g., by unemployment insurance—which is reviewed very fully—and by relief works. And our "mechanistic civilisation" implies international interdependence, and therefore international organisation, the progress of which he sketches from its initiation in 1881 by Switzerland to the Geneva Labour Conference of 1921. But the evil has been immensely intensified by the effects of the war—economic, social, and monetary—by "mad nationalism," by the disorder in exchanges due to inflation, and by the hampering influences of Reparations and inter-Allied debts. His remedies may be inferred from this diagnosis; and he looks to the League of Nations as the only hope of mankind. Yet, after all, he thinks that civilisation may be decaying through the excessive multiplication of the unemployables, and so he tends to pessimism. Here he perhaps exaggerates the influence of heredity, and underrates the more hopeful conditions in the American continent; earlier he overrates the evil effect of the agrarian revolution in Russia, and neglects its more encouraging possibilities in the Russian border States. But his book is admirably informative, and valuable for its clear apprehension and sane treatment of the subject generally, and of the special problems left by the war.

COMPANY MEETINGS, &c.

LONDON MERCHANT BANK, LIMITED.

CAPITAL RE-ARRANGEMENT APPROVED.

PROBLEM OF PRE-WAR OUTSTANDINGS.

The fifty-first ordinary general meeting of the London Merchant Bank, Limited, was held, on the 14th instant, at the offices, 38 Lombard street, London, Mr Frederic Lubbock (the chairman) presiding.

The secretary (Mr Frederick Poole) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: I would commence what I have to say by expressing our deep regret at the loss of our dear old friend and colleague, Mr Benecke, who had been a director of the bank for 28 years. There were few men in the City better known, or better liked by those who knew him, and we all miss his kindly and cheery presence at our board meetings.

We have to apologise for the issue of our report being somewhat later than usual. Our excuse must be that we have devoted much time and thought to the arrangements we have decided to propose to you in regard to the capital, and it has taken time to get the necessary resolutions and other formalities put into shape.

When we met last, I had naturally to refer to the financial and commercial conditions that were the consequence not only of the economic disturbances caused by the war, but of the political unsettlement from which Europe has suffered more or less ever since the cessation of hostilities. A year has gone by since then, and if trade and industry have improved in some directions, political unsettlement is to-day even more in evidence than when I last addressed you. In a business such as ours, in which contact is maintained with practically every part of the world, such a state of affairs introduces a very disturbing element. It is hardly necessary for me to state that, under these conditions, the conduct of our business has required constant circumspection and vigilance. This has induced us, on the one hand, to adopt an attitude of great reserve in the granting of credits, and, on the other hand, to keep in an immediately realisable form the bulk of the balances standing to the credit of our correspondents and customers.

BALANCE-SHEET ITEMS.

This policy is reflected in the items of the balance-sheet, which I now propose to review briefly with you. Cash and loans at call, together with bills receivable, come to £762,033, as against the amount of £818,282 figuring on the liabilities side under the heading of current and other accounts. This method of employing balances is evidently not the most profitable one, but while things are in such an unsettled state abroad, we prefer to adopt the safer, if less remunerative, course in this respect. This year's figure of current and other accounts represents a substantial increase of over £300,000 in comparison with the corresponding net figure of last year, owing to the number of banks and merchant houses overseas for whom we act as correspondents having again increased. This is a branch of activity to which we give special attention, and to which our working methods lend themselves well.

The item current and other accounts on the assets side, standing at £991,123, shows, in comparison with £1,734,842 for the preceding year, a reduction of nearly £750,000. This is due to repayments effected by pre-war debtors and to the adjustments to which I shall refer later on. The last item on the assets side, liability of customers for acceptances, which finds its counterpart in acceptances on account of customers on the liabilities side, is about the same as last year. Although trade has by no means been active during the year under review, we have been able to maintain this important branch of our activity at the same level.

The advances owing under the Government scheme of 1914, which this year are set out separately, amounted to £242,227 on December 31st last. I am pleased to say that these advances have been liquidated since that date.

PROFIT AND LOSS.

Coming now to the profit and loss account, I need not again draw your attention to the state of affairs which existed during 1922, and which could not fail to react on banking profits. Our profit for the year amounts to £36,876, as compared with £46,194 for 1921, and, having regard to the special conditions which obtained during the past year, I trust that you will consider the figure as not unsatisfactory. As you will have seen from the report, we have deemed it advisable to transfer the balance of profit and loss account, amounting to £36,909, to contingency and pre-war adjustment account. This sum, in fact, would have been

sufficient to permit of the payment of the usual dividend, and we therefore all the more regret that, owing to the exceptional circumstances set out in the report, the dividend for 1922 should not exceed 2½ per cent., which was paid in July last.

As, however, our earning power is unimpaired, future profits will, once the special adjustments have been made, again be available for the payment of dividends.

PRE-WAR OUTSTANDINGS.

I shall now proceed to deal with the matter of our pre-war outstandings, and I think it will be convenient if I take at the same time in detail several points which, strictly speaking, relate to the resolutions to be submitted to you at the extraordinary general meeting.

In our annual reports for 1920 and 1921, and at the last two meetings, special reference was made to our pre-war outstandings. We always felt that the liquidation of these outstandings would necessitate important adjustments, but although we were not by any means optimistic, the developments which have taken place in this respect since we last met have been the cause of great disappointment to us.

With regard to our outstandings in Germany, the major portion thereof has been settled, but there remain a number of claims which are subject to the arbitration proceedings provided for in the Peace Treaty.

Concerning claims against Austrian debtors, the liquidation is only made possible by granting to the debtors more or less considerable relief.

The chief source of disappointment lies in the outstandings in Poland, Latvia, Trieste, the Balkans, and Russia.

In referring to the outstandings in Poland, I am sorry to say that the adjustment of the accounts of banks and financial houses, with a number of whom we entertained pleasant relations for many years, presents unusual features, which necessitate making substantial provision. Another group of Polish outstandings consists of the accounts of textile manufacturers whose imports of cotton and wool were for many years financed in London. The arrangement now made with them, whilst providing for the liquidation of the principal in full, results in the loss of a considerable portion of the accrued interest.

As to Latvia, we always had a fair share of the lively commercial intercourse between Riga and the United Kingdom. While some of the debtors have had opportunities of retrieving their fortunes, the position of others is such that adjustments are necessary.

A sad tale has to be told of Trieste. For many years we took a large share in the financing of shipments of coffee to that port. As you know, the status of Trieste has entirely altered as the outcome of the territorial re-arrangements consequent upon the war, which have profoundly affected the position of the parties concerned. There are also other factors of a juridical nature which have so far—in most cases—militated against a settlement of those accounts, and it is likely that even with greater efforts on the part of the debtors than have hitherto been made by most of them there will be a correspondingly important deficiency.

As to the Balkans, the number of pre-war accounts is small, so that I need not go into details.

RUSSIAN CLAIMS.

With regard to our Russian outstandings, it is impossible to foresee the ultimate outcome, and therefore the only course to be followed at this juncture is to provide for these accounts in full pending the arrangements which may at some future date be made either by treaty or otherwise in regard to British claims against Russia.

To sum up this part of my remarks, I think it would not be unfair to say that the deficiency arising out of the pre-war accounts is due not only to the four years of war, but in no small degree to the four subsequent years of peace. Whatever may have been done or left undone during the war in a number of countries in the realm of finance, particularly in the matter of the inflation of currencies, the financial methods then employed appear to-day as matters of minor consequence when contrasted with those adopted since, as is illustrated by the heavy depreciation of their exchanges.

POSITION IN 1914.

At this point, so that you may be better able to understand the difficulties which we have had to surmount, I would ask you to come back with me for a few moments to the eventful days of August, 1914. London banks and merchant bankers had granted considerable acceptance credits to their foreign customers, for which the latter could not provide cover owing to the outbreak of the war. With great promptitude and foresight, the Treasury and the Bank of England stepped in, and arranged for these acceptances to be taken care of.

Now that the advances taken by us have been liquidated, I can speak of this matter with greater freedom. At the end of

1913 our balance-sheet showed acceptances amounting to over £5,000,000. When the moratorium declared at the outbreak of the war came to an end, we had to avail ourselves of advances under the Treasury scheme of September, 1914, to the extent of about £3,250,000. This figure was, as you will see from the balance-sheet, on December 31st last, reduced to about £250,000—since liquidated—and the fact that, notwithstanding the intervening difficult years, we have been able to deal, as we did, with a sum of this magnitude cannot fail to be a source of satisfaction to shareholders and directors alike.

Nor does the amount of £3,250,000 just referred to indicate the whole of the burden involved, as that sum represented capital only. In respect of interest on the advances, we have paid in cash a sum of over £1,000,000 during the last eight years. If I mention that on account of interest alone the figure of the loss to be dealt with is in the neighbourhood of £330,000, and if you consider that there is a substantial deficiency on these accounts in regard to the principal owing to us, you will be able to appreciate the intricacy of the problem with which your board have had to deal.

When it is realised that customers' accounts, aggregating from three to four millions, had to be liquidated in entirely abnormal conditions, it could not, of course, be expected that we would come out unscathed; but we had always hoped that the reserves in hand, together with the earnings of current business, over and above the amounts distributed by way of dividends, would be sufficient to meet the eventual deficiency.

PROPOSED REDUCTION OF CAPITAL.

This problem of the pre-war accounts has been with us for a long time, and we are strongly of opinion that the time has now arrived when adjustments of a comprehensive nature should be made.

After mature consideration we have, therefore, decided to utilise the reserve fund, and to propose to you a rearrangement of the capital account, details of which are in your possession. The proposed writing off of £3 per share inspires us with a feeling of very great regret, but I have little doubt that you will agree with us that it is better by far to value our assets on clear-cut lines by making ample provision, which the adoption of the proposed scheme will enable us to do. You may be sure that before making this proposal a number of alternatives have been most carefully considered; we are of opinion, however, that this course is in the best interests of the shareholders.

Furthermore, we think that this is an appropriate opportunity to revise also the amount of the liability on the shares, and we therefore propose a reduction of £225,000 in the uncalled capital, so that the liability will be reduced from £10 to £7 per share. The £20 shares will thus become £14 shares with £7 paid up, and these shares will then be sub-divided into shares of £7 each with £3 10s paid up, and be known as "B" shares.

RESULT OF PROPOSED REDUCTION.

The result of the proposed reduction would be that our paid-up capital would stand at £525,000, but, as you will readily understand, it is of great importance that this should at the earliest possible moment be restored to at least the previous figure of £750,000. We have made arrangements with that object in view, and at the extraordinary general meeting you will be asked to sanction the creation of 60,000 7 per cent. cumulative "A" (preference) shares of £5 each. Of these shares 41,000 have been taken firm at par without any underwriting or other commission—provided that they are issued by August 31st next—whilst 19,000 will be offered to the shareholders at par in due course. Our reason for not proposing the immediate issue of the "A" shares is to keep the expenses of the operation as low as possible. You will observe that the resolutions to be submitted to you at the extraordinary general meeting are so framed that the increase of the capital becomes operative upon, and only upon, the proposed reduction of the capital taking effect. Thus, if the proposed reduction is confirmed by the Court, the authorised capital will at the same moment be restored to its present figure. If the arrangements are carried through in this manner, we are advised that duty on the new capital will not be payable.

You will further be asked to sanction the creation of 30,000 "B" shares of £5 each to be held in reserve for issue at some future time.

If these rearrangements become operative, the capital account will stand as follows:—authorised, £1,500,000; issued, £1,350,000; paid-up, £825,000.

Once more it gives me much pleasure to express our high appreciation of the services of our manager, Mr Harter, our sub-managers, Mr Haswell and Mr Springer, and the staff generally, all of whom discharge their duties ably and efficiently, and with full loyalty to the interests of the bank. They have still had to work during the past year under the discomfort caused by inadequate accommodation, especially in the last few months while the alterations were being carried out, but I hope you will agree with

me that the addition to our premises, which I mentioned last year, has now given us much more presentable and convenient quarters, both for the staff and for the customers of the bank.

THE FUTURE.

In conclusion, I will say a few words as to the future. We have a business with wide ramifications in the banking as well as in the commercial field, a large connection spread over many countries, and, moreover, a valuable asset in the goodwill resulting from our 50 years' business activity. All this—given peaceful and stable conditions—offers reasonable ground for confidence, and now that we are making the above comprehensive adjustments, we shall be in a better position to take advantage of the opportunities which the much-hoped-for improvement in trade may offer.

The resolution was adopted, and at an extraordinary general meeting which followed the proposals for the rearrangement of the capital account and the creation of the cumulative preference shares and the "B" shares, as detailed by the chairman, were also agreed to.

UNITED KINGDOM PROVIDENT INSTITUTION.

82ND ANNUAL MEETING.

SPEECH BY THE RIGHT HON. WALTER RUNCIMAN.

PREMIUMS OVER £1,000,000.

The annual meeting of the members of the United Kingdom Temperance and General Provident Institution was held on Tuesday, March 13th, at the Cannon street Hotel, London, E.C.

In presenting the report and moving the adoption of the balance-sheet, the Chairman (the Right Hon. Walter Runciman), in the course of his remarks, said: Our profits are mainly from three sources—low mortality, economical administration, and allowing in our valuation interest at a low rate.

LOW EXPENSES.

Our expenses are only 13.7 per cent. of our premium income, whereas we reserve for working expenses 23 per cent.

HIGH INTEREST YIELD.

We value on a 3 per cent. basis, and we actually earned last year an average net rate of interest of £4 10s 6d per cent., the highest rate ever reached by this office.

INCOME THE TRUE MEASURE OF WEALTH.

There appears in some quarters to be an impression, a belief amounting almost to an axiom, that the sale of securities on a rising market at prices in excess of their book value adds to the profits of life assurance institutions and augments their strength and wealth. This assumption is far too sweeping, and involves a fallacy which I would like to take this opportunity of dissolving. The fallacy appears to be based on a view which is far too prevalent among business men and politicians, namely, that the price of capital is the natural way of measuring wealth.

The mistakes which are made by the advocates of a capital levy, for instance, are due, in the main, to the attempt to measure wealth in terms of capital prices. The real value is what an investment will produce year by year; whether over a longer or shorter period. The annual or the triennial or the quinquennial income drawn from the investment is its real value. That is one reason why an annual income-tax is a more perfect taxing instrument than a capital levy—better for the revenue and more just as between taxpayer and taxpayer. To measure the profits of an insurance institution by recording the fact that during the year so much of the institution's investments have been sold above the book value and a profit has been realised thereon is fundamentally an unsound or inadequate financial statement.

As far as a life office is concerned, appreciation realised is only divisible profit in so far as it increases either immediately or ultimately a life office's income. Unless there is an increase in immediate or ultimate income, the so-called realised profit on investments is a delusion and may become a snare. Safety lies in abiding by sound doctrine.

TRIENNIAL BONUS.

After weighing the considerations affecting a short and long bonus period, the directors have decided that in future bonuses shall be declared triennially instead of quinquennially. Our first triennial valuation and distribution of profits will take place at the end of this year.

BONUS PROSPECTS.

Although only periodic valuations, i.e., when a bonus is declared, are published, for office purposes an estimate is made each year, and the two estimates made for the years 1921 and 1922 show that our working profits have been at least equal to our pre-war experience. If, therefore, the experience in 1923 is not less favourable, and I see no reason why it should be, there is every indication that the bonus to be declared for the three years 1921 to 1923 will be substantial.

COMPOUND BONUSES REQUIRE STRONG RESERVES.

The maintenance of a rate of compound bonus necessitates higher reserves than the maintenance of the same rate of simple bonus, and the higher the rate the greater the difference in the necessary reserves. The rate of compound bonus maintained by this institution in the years preceding the war was as high as any declared by any other office, and it was due to the strength of the reserves that this high rate of bonus could be maintained. Your directors' aim will, therefore, be not only to declare a substantial bonus at the end of this year, but also to lay before you a report showing such financial strength on both sides of the balance-sheet as will compare with the reserves of pre-war days, and so fortify our ability to maintain in future trienniums the rate of bonus declared at our first triennial investigation.

INVESTMENTS.

The funds of the institution are all invested in stocks of the very highest class. Of our investments, 87 per cent. are invested in England; 4 per cent. in India; 6½ per cent. in other colonial securities, leaving only a balance of 2½ per cent. invested outside of the British Empire. Again, of our Stock Exchange securities 92 per cent. are definitely trustee securities.

NEW BUSINESS.

The new business effected last year was nearly as large as that of the previous year, being £1,826,306. Considering the conditions ruling throughout last year, and the fact that much of October and November was interrupted by the General Election, the results are satisfactory.

PREMIUM INCOME.

Our premium income now exceeds £1,000,000. In 1902 our premium income just exceeded £500,000, so that it has doubled itself in 20 years.

INCREASE IN FUNDS.

The increase in our accumulated funds in the past twelve months is over £600,000, the largest increase the institution has ever shown.

OUR STRENGTH.

After the exhausting wastage of the war and the heavy depreciation brought to us in the disappointing years of peace, we are now able to record our strength regained. We dealt fully and frankly with depreciation during that trying period, and we have been rewarded in the proof given in this report and balance-sheet that our foundations are solid.

The resolution was seconded by the Hon. Cecil Baring, and carried unanimously.

RADIATION, LIMITED.

A SUCCESSFUL YEAR'S TRADING.

REMARKABLE ECONOMY OF "NEW WORLD" GAS COOKER

At the annual meeting of the company, held at the Queen's Hotel, Birmingham, on March 14, 1923, the Chairman, Mr H. James Yates, in moving the adoption of the report and accounts, said: Considering the difficulties which trading concerns continue to experience, I think it will be agreed that we have reason to congratulate ourselves on last year's results. We have had a good share of such revival of trade as has been experienced throughout the country.

We are steadily continuing to develop our system of standardisation, and the new methods which we have thus put into operation

upon so large a scale are reducing our costs of manufacture, so that we have been able during the past year to make very substantial reductions in the selling prices of our goods. This, it will be recognised, altogether discounts the impression which existed in some minds that the purpose and effect of a big combine like ours was to create a monopoly and raise prices. That it has had the opposite effect on prices is further evidenced by the fact that some months ago the chairman of a competing firm, in his annual address to their shareholders, stated that they had "had to compete with a large combination, and there had been keen cutting of prices."

NEW TYPE OF GAS COOKER.

I referred last year to an entirely new type of gas cooker on which we have been working for a long time, and I am glad to say that the new gas cooker, which we have named the "New World," is now about to be launched.

With this new cooker you are able to cook food at as low a cost for gas as you could do before the war. The burner in the hot-plate is the development of a burner that we have been using for a number of years past. There is no burner made with a higher efficiency, and further, there is no burner made which allows the flame to be so efficiently and economically utilised. A great feature is the fact that the burner can never become clogged up in use. With all burners that have drilled holes a prominent disadvantage is that, whatever may be the efficiency of such a burner, considered merely as a burner—and when it is new—the holes, being necessarily of small diameter, clog-up or rust-up, so that they become reduced in area. As a consequence, combustion becomes incomplete, waste ensues, and with it those unpleasant odours which are often experienced in connection with some gas cookers having this type of burner. Apart from this, the ring type of burner is of such a large area and consumption—considerably larger than the Radiation type—that a utensil placed upon it is not capable of utilising the full amount of the heat given off by the flame—particularly when the utensil used is a small one—and this is a cause of great waste.

REDUCES THE TIME OF COOKING.

In our new Radiation type of burner the maximum rate of gas consumption is considerably less than that of ring burners, and the actual consumption of gas on the hotplate for the duty performed is, therefore, much less. The high efficiency of our burner also reduces the time of cooking or boiling operations substantially as compared with that required with the drilled ring burners.

We are satisfied that if the use of our type of burner were to become universal, there would be few complaints by consumers regarding the amount of their gas bills. In addition, the decrease in the amount of the products of combustion entering the room is a very important factor that cannot be ignored.

The oven of the "New World" cooker is constructed on a new and original principle. The entire space within the oven is available for all cooking operations, and pastry or bread can be cooked quite as well at the bottom of the oven as at the top.

Attached to the oven may be had an automatic regulating device, which enables anyone to set the gas to ensure the temperature best suited to the purpose for which the oven is going to be used, and once cooking operations have started, the cooker can be left to itself until the fixed time set out in the instructions, when the food can be removed, and it will be found, as proved by extended practical use, that it is cooked perfectly—and far better than if there had been left to the fallible human element the duty of opening the oven door from time to time, and deciding when the cooking appeared to be finished.

Capital and Reserves

THE THERM.

In accordance with facilities afforded by the Gas Regulation Act, many of the gas undertakings throughout the country, instead of continuing to charge for their gas upon the thousand-cubic-foot basis, are now doing so on the basis of the therm, which is equivalent to 100,000 B.Th.U., equal to 200 cubic feet of gas of a calorific value of 500 B.Th.U. per cubic foot. It should be emphasised that this modification was not introduced at the request of the gas undertakings, but as the result of the recommendations of the Fuel Research Board, for the protection of the interests of the consumer.

To charge by the therm enables a direct comparison to be made between the charges for various makes of gas, such as the cubic-foot system of charging did not allow. It also permits of a comparison of the cost of heating by gas and by electricity, on the basis that the heating power of one therm is approximately equal to the heating power of 30 Board of Trade electrical units. Under the new therm system of charging, you pay for what you get instead of what you are supposed to get.

Following upon the outcry against gas measurement by the therm, there has lately been some agitation against gas itself, and the surest way to meet this successfully is simply to make known the actual facts, because the last thing gas has to fear is the truth.

There is a comparatively small proportion of the houses in this country not supplied with gas, and it is remarkable that there are so extremely few accidents traceable to this source. Statistics show that the aggregate number of accidents to-day from oil and gas put together is much less than those caused by oil alone in the days when oil was in general use.

That constituent of coal gas which is probably primarily responsible for any accidents is carbon monoxide. When gas is burned this constituent is converted into carbon dioxide, a substance which is the result of combustion of any kind—whether it be combustion of coal, of petrol, of oil, of gas, or whether it be given off by the human breath as the result of combustion in the body.

During the recent inquiry into the results of gas measurement by the therm, statements have been made that much of the existing gas apparatus and fittings already in use—and even those supplied to-day—are defective. So far as this company is concerned, I am happy to be able to give you the comforting assurance that any charge made against gas apparatus does not apply to the apparatus designed and standardised by Radiation. I have not the least hesitation in saying that the fact that faulty apparatus is being made and bought to-day is due to buyers thinking more of price than of the efficiency of the apparatus, as if the lowest price made the cheapest purchase.

You may take it from me that in the new goods which we are gradually bringing out and standardising, Radiation is creating a standard of quality which has no equal in our industry.

A PATENT INJECTOR-VENTILATOR.

By means of a patent injector-ventilator, the "Thermo-Radiant" gas grates of the Radiation firms effect ventilation equal to that of the coal fire, and free from all the disadvantages of the latter. By the same means these gas grates have the further advantage that when the fire is not alight the room is still as well ventilated as though no gas fire had been placed in front of the coal grate—a feature not attainable with any other gas fire.

No fuel-consuming apparatus should allow its combustion products to escape into the apartment. With a coal fire you can tell if there is an escape of combustion products, because you see the smoke, whereas with a gas fire any escape is not visible. When you see a gas grate or gas fire made by the Radiation firms, you have the perfect assurance that no combustion products escape into the room, as they do not require the aid of a chimney—"pull" to take them away. We originated this standard of a perfect gas grate, and devised a test capable of detecting any escape of products which would cause an increase of one part in 10,000 in the carbon dioxide content of the atmosphere of the room. At a later date the *Lancet* instituted a test of their own, which confirmed the standard we had laid down.

Summing up these points—when you use a Radiation Standard Gas Grate made by one of the Radiation firms, you have all the advantages of the coal fire, none of its disadvantages, and none of the disadvantages of the earlier types of gas fire—70 per cent. of the heat passing into the room is radiant heat; you have perfect ventilation and a silent-burning fire.

With regard to the balance-sheet, you will no doubt be pleased to know that the year 1922 was, so far as your company is concerned, a great improvement on the previous year. Our combined turnover has greatly increased, and our net profits show a satisfactory improvement.

It gives the directors much pleasure to recommend that the same final dividends as in previous years be declared, making, with the interim dividend already paid, 6 per cent. less tax on the preference shares, and 6 per cent. free of tax, on the ordinary shares.

THOMAS TILLING, LIMITED.

"VERY STRONG POSITION ATTAINED."

The 26th annual general meeting of Thomas Tilling, Limited, was held, on the 15th instant, at the company's offices, 20 Victoria street, Westminster, London, Mr R. S. Tilling, J.P. (the chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said: Your directors hope that you are satisfied with the result of the year's working, especially considering the general state of trade. You will observe that the net profit for the year was £154,016, as compared with £150,503 for the year previous, after providing for the interest on the first mortgage debentures, the directors' and trustees' fees, and corporation profits tax.

During the past year we have removed the remainder of our old fleet of London omnibuses, and have replaced them with those of the latest type. I think it perhaps wise to remind my hearers that this business is now 77 years old, that it has been built up little by little, line upon line, that we have still a large horse business (their numbers run into four figures), we have private motors, industrial motors, coachbuilding, &c., and that our activities are no longer confined to the metropolis. Not more than 25 per cent. of the company's assets are represented by their London omnibuses.

A good deal has lately been said about the irregular (or what we used to describe as the pirate) omnibus. Well, we have large interests outside London, and in establishing services to cater for public requirements certain portions of them are not in themselves profitable, but are helped by the portions that are. These irregular owners are people who only run their vehicles on the profitable portions of a route and at the profitable times, without any idea of serving a public need, and if they are to take the cream and leave the regular owner only the skimmed milk the public must suffer in the end. Of course, these irregular owners get a lot of sympathy from the uninformed, because they are what are called "little men."

In every place in which we are operating we are doing so in conjunction with, and not in opposition to, such people as are capable of and who are giving the public a regular service such as I have indicated.

Hitherto we have only paid dividends on our ordinary shares yearly, as most of our subsidiary companies only declare their dividends once a year, but the very strong position now attained by the company seems to warrant our departure from that practice, and your directors will pay interim dividends in the future providing the position justifies their doing so.

Mr C. J. Dignasse seconded the motion, which was carried unanimously.

Messrs Samuel Montagu and Co. write on March 14th as follows:—

GOLD.

A fair amount came into the market, and was acquired for India, with the exception of a trifle taken for the Continent. Large amounts are also being withdrawn from the United States of America for India. The following were the United Kingdom imports and exports of gold during the month of February, 1923:—Imports, £3,370,585; exports, £3,318,958.

March 17, 1923.]

SILVER.

During the earlier part of the period under review the market was quiet. China speculation was responsible for most of the buying, which, coming upon an ill-supplied market, kept prices fairly steady. India remained inactive until Monday, when considerable buying orders competed with some China demand, and drove prices to 32 1/4 d for cash and 32 1/8 d for two months' delivery, the highest quotations since January 24, 1923, and November 15, 1922, respectively. At these rates the Continent supplied the bulk of what was required. Yesterday a reaction ensued—32 1/4 d and 32 1/8 d being quoted for the two respective deliveries. A recovery took place to-day as a consequence of some Indian bazaar inquiry, but at any much further advance silver, speculative and otherwise, is freely offered. The total amount purchased under the Pittman Act was reported from Washington on the 27th ult. as 162,165,601 ounces. This amount included a purchase of 1,540,000 ounces on that day.

NOTICES.

Barclays Bank, Limited, announce that they have opened new branches at Cynfal, Cerrig-y-Druidion, North Wales, under the management of Mr D. W. Llewellyn (also manager of Corwen branch), and at Abergelle road, Old Colwyn, under the management of Colwyn Bay branch.

Mr Wynn Harold Tregoning, C.B.E., a director of Alfred Booth and Co., Limited, has been elected a director of the London and Brazilian Bank, Limited.

Sir Walter Jeans vacated the office of general manager of the Bank of Australasia on 10th instant, after a period of service covering 59 years. He retains his seat on the board for several years, and has recently returned from a lengthy visit to Australia and New Zealand, has been appointed London manager.

The London Joint City and Midland Bank, Limited, announce the opening of a new branch at 2, High street, Sutton, Surrey, under the management of Mr W. C. M. Higgs. An office has also been opened at North Kelsey, near Lincoln.

In addition to the branch which will shortly commence business in London, the Union Bank of Warsaw, which was established in Poland in 1921, will open branches in Paris and other Continental cities in about six weeks' time.

The Commercial Banking Company of Sydney, Limited, notify that branches have been opened at Hamilton, New South Wales, and at Wowan, Queensland.

1st inst. of their valued colleague, Sir Harold A. Stuart, G.C.M.G., K.C.S.I., K.C.V.O. Since the date of the last report, new branches have been opened at Hastings (New Zealand), and Elsternwick (Melbourne), and the branch at Menzies (Western Australia), has been closed. The meeting will be held on March 22nd, at Winchester House, Old Broad street, E.C.

MERCANTILE BANK OF INDIA, LIMITED.—The net profits for the year 1922, after providing for bad and doubtful debts, and including £137,671 brought forward from last account, amount to £405,105. From this sum has to be deducted £84,000, being the interim dividend of 8 per cent., less income-tax, on the "A," "B," and "C" shares paid in September last. The directors have added £50,000 to the reserve fund (raising it to £1,200,000); £15,000 to the officers' pension fund, and written £20,000 off freehold banking premises. They now recommend a final dividend on the "A," "B," and "C" shares of 8 per cent., less income-tax (making 16 per cent. for the year), leaving a balance of £152,105 to be carried forward. A branch of the bank has been opened at Bangkok.

INSURANCE.

BRITANNIC.—In the ordinary life department 13,786 new policies were issued, assuring £1,874,317. This was more than in 1921, though less than the new business of £1,943,222 in 1920. The ordinary life premium income increased by £47,257, to £552,481. The annual valuation permitted ordinary branch participating policies to receive a reversionary bonus at the increased rate of 30s per cent. for the year. In the industrial life branch the premium income was £1,850,567, an increase of £51,926. The expenses in this branch were 42.9 per cent. of the premiums, as compared with 45.8 per cent. in 1921, and 47.5 per cent. in 1920. The total funds at the end of last year amounted to £7,579,899.

EQUITY AND LAW LIFE ASSURANCE SOCIETY.—The new assurances amounted to £893,209 under 466 policies, of which £844,877 had been retained by the society. The gross new premiums amounted to £37,205. The amount of the total assurances in force at the end of the year was £12,936,249. The profit on reversions fallen in during the year amounted to £34,709. Excluding reversions, capital stock of the Law Reversionary Interest Society, Limited, outstanding premiums, and interest and cash at bank, the funds were invested at the end of the year to produce £5 4s 11d per cent. The claims by death under 164 policies assuring 119 lives amounted to £336,780, and 182 endowment assurances amounting to £162,449 matured. The mortality has been favourable. The total funds amounted at the end of the year to £3,409,262. The expenses of management and commission amounted to £14 14s per cent. of the premium income.

MARITIME.—The premiums taken last year were £300,484, against £307,492; the claims £301,519, against £345,793, and the expenses £60,230, against £56,129. A sum of £30,000 was transferred to profit and loss. The underwriting fund was reduced by £91,265 to £549,449, as compared with a reduction in 1921 of £124,430. Interest receipts amounted to £45,918, against £47,750. The dividends cost £21,359.

PROVIDENT ASSOCIATION OF LONDON, LIMITED.—The 45th year's report has just been issued, and shows that during the year 1922 the total funds of the association have increased by £350,624, and at December 31, 1922, stood at £7,816,229. The payments to policyholders and certificate-holders during the year amounted to £361,136, as compared with £328,165 in 1921, and £175,373 in 1913. Advances to policyholders and certificate-holders upon house property to the amount of £376,566 were completed during the year. The total of advances made by the company upon mortgages on house property is £11,721,611. The premiums for the year amounted to £551,014, and the interest for the year to £374,192 gross, and, after deduction of income-tax, to £309,879 net. The premiums collected by way of monthly payments, representing about 70 per cent. of the total premium receipts, are received in sums averaging about 10s; and of the interest receipts more than one-half is received from the borrowing policyholders and certificate-holders in small quarterly sums averaging under 4s. The total of the funds at the close of each quinquennial period within the last 20 years is shown by the following table:—

December 31.	Total Funds.	Amount Outstanding in respect of Advances to Policyholders and Certificate-holders.
1907	3,005,657	2,437,767
1912	5,533,199	4,442,625
1917	6,822,535	4,539,580
1922	7,816,229	4,755,925

SCOTTISH WIDOWS' FUND.—The report for 1922 states that the new business completed consisted of 3,341 policies assuring £2,110,253 net. The relative new annual premium income was £88,914, and £60,503 was received for the purchase of annuities. The claims by death amounted to £1,095,095 (including bonus additions); the actual claims being about 68 per cent. of the amount allowed for. The average gross rate of interest realised during the year on the funds was 5.78 4d per cent. (subject to income-tax), showing a decrease of 1s 4d per cent. on the gross rate earned in the previous year. The expenses of management and commission together amounted to £190,353, representing 11.9 per cent. of the premium revenue or only 7.14 per cent. of the total revenue. The total income amounted to £2,664,264, and the total outgoings to £2,059,362, showing a surplus of £604,902. This sum has been added to the assurance and annuity funds, which at the end of the year amounted to £23,425,122.

RAILWAYS.

PARAGUAY CENTRAL.—The gross earnings of the railway for the year ended June 30, 1922, in sterling were £168,106, as against £232,874, a decrease of £64,768. The working expenses show a decrease of £27,576, viz., from £133,766 to £106,190. These expenses include the usual provision for renewals of 6 per cent. of the gross receipts, the amount so provided being £10,086. The net earnings of the railway were £61,916, as compared with £99,108 for the previous year, the decrease in net earnings being £37,192, or 37.5 per cent. The net revenue for the year amounted to £74,538, as compared with £123,522 last year, a decrease of £48,984. Last year's revenue account, however, was credited with £2,935 in respect of exchange profit, whereas there was a loss for the year under review of £3,769. Interest and sundry receipts amounted to £20,318, against £23,364 in the previous year. The average gold rate of exchange during the year was 3.908 per cent., as compared with 3.919 per cent. for the preceding year. On June 30, 1922, the rate was 4.292 per cent., and at present stands at 4.261 per cent. As the payment of the interest on the "B" income debenture stock for the year under review will make the third successive year for which the full interest at the rate of 7 per cent. per annum will have been paid, the interest upon this stock by the terms of the trust deed will be reduced in future to 6½ per cent. per annum.

MISCELLANEOUS.

RADIATION, LIMITED.—The balance-sheet as at December 31, 1922. After bringing in £30,668 brought forward from 1921, the balance of the revenue account is £190,977. After deducting the interim dividends (£62,292) paid in August last, there remains at disposal the sum of £128,685, which the directors recommend be appropriated as follows:—A final dividend of 3 per cent. to December 31, 1922, on the preference shares, less income-tax, £24,469; a final dividend of 3½ per cent. on the fully paid ordinary shares, to December 31, 1922, free of income-tax, £18,798; a final dividend of 3½ per cent. on the partly paid ordinary shares, to December 31, 1922, free of income-tax, £5,297; to carry forward to next year £50,120.

POWELL-DUFFRYN STEAM COAL.—The report for the year 1922 shows that, after charging debenture interest, making provision for Corporation profits tax and income-tax, writing off depreciation, and making such other provisions as the directors think necessary, there remains a balance of profit for the year of £235,803. Out of this amount interim dividends have already been paid at the rate of 6 per cent. per annum (less income-tax) to June 30, 1922, upon both classes of preference shares amounting to £7,828, leaving the sum of £227,975. To this must be added £125,756 brought forward from 1921, making a total of £353,731. The directors recommend that this sum should be dealt with as follows:—That a final dividend of 3 per cent., less income-tax, be declared on the preference shares for the year ended December 31, 1922, £4,673; that a final dividend of 3 per cent., less income-tax, be declared on the second preference shares for the year ended December 31, 1922, £3,154; that a dividend of 7½ per cent., free of income-tax, be declared on the 2,905,176 fully-paid ordinary shares, and in respect of the amount of capital paid on the 446,876 partly-paid ordinary shares for the year ended December 31, 1922, £237,997; and that there be carried forward the balance of £107,905. The report goes on to say that the output of coal from the various collieries for 1922, exclusive of those of the Rhymney Iron Company, Limited, was 4,544,988 tons, which is the largest output yet obtained in any year. The whole of the company's collieries, buildings, and plant have been maintained, as far as possible, in a state of efficiency.

WILLIAM HOLLINS AND CO., LIMITED.—The report and audited statement of accounts for the period ended December 31, 1922, shows the net profit, after providing for depreciation and proportion due to the managers, is £125,092, which, with the amount brought forward from last year, viz., £22,924, makes a total available balance of £148,016, and deducting dividends paid before the date of the balance-sheet, viz., Preference shares: Quarterly dividends at the rate of 5 per cent. per annum to March 31st, June 30th, and September 30th, as per profit and loss account, £13,500, there remains a balance of £134,516. Of this the dividend on the preference shares for the quarter to December 31, 1922, paid February 20, 1923, absorbed £4,500; leaving £130,016; and the directors now recommend the following appropriations:—To payment of a dividend of 7½ per cent. on the ordinary shares, £86,673; to income-tax reserve, £20,000, leaving a balance to be carried forward of £23,342.

steady level. Suitable milling grades quoted at 9s 6d to 9s 10d, with inferior at 8s 3d to 8s 9d per 112 lbs, free on rail. Imported descriptions move off slowly, and prices ruled firmer. No. 1 Northern Manitoba quoted 48s 6d, No. 2 mixed Durum 46s 6d, Rosafé, 63 lbs., 47s, all ex ship to arrive, and Australian 52s 9d, landed, all per 496 lbs. A better tone prevailed in the floating and forward cargo section, there being more inquiry from Continental and Mediterranean countries. Prices exhibited a firmer tendency, with Australian descriptions held for 1s per qr advance on reduced offerings. Sales included steamers of Australian, on passage, at 47s 9d to 49s 9d, Rosafé, 64 lbs, afloat, 45s 7½d, ditto, 63 lbs, 45s 6d to 45s 9d, 62½ lbs, afloat, 45s 3d, ditto, shipping or shipped, 45s 6d, and part cargo choice white Karachi. March, 47s 6d, per 480 lbs, c.i.f. Crop prospects in the United States winter belt have improved, while reports from other principal exporting countries are generally satisfactory. Supplies on passage were rather lighter to this country, but Continental consignments show an increase. United Kingdom port stocks are lighter owing to small arrivals. Flour in moderate request at recent rates. London standard straight run quoted 40s, patents 42s to 43s, town households 38s per sack, delivered in Metropolitan area. All English country straights 31s 6d to 33s 6d, delivered London stations. Of imported, Manitoba patents range 37s to 41s, Minneapolis good patents 40s to 40s 6d, and Australian 36s 6d to 38s 6d, all per 280 lbs, ex store. Maize ruled firmer in sympathy with higher forward offers, but trade generally quiet. La Plata 39s, landed, American mixed 35s 3d, ex ship, 36s 9d, landed, and East African 34s 9d, ex ship, to arrive. The cargo market showed more activity and prices ruled firmer for old crop, sellers being more reserved. Steamers of yellow La Plata, on passage, sold at 36s 3d to 36s 6d, and May-June at 35s 3d per 480 lbs. English barley ruled steady for best malting descriptions, but other classes fail to attract much attention. Prices range from 6s 9d to 12s 6d per 112 lbs, according to quality, free on rail. Imported quite neglected, and trend of values easier. Californian quoted 42s 6d to 45s, ex ship, Australian Chevalier 46s to 51s, landed, per 448 lbs. Plate 29s, Danubian 49s 6d to 30s 6d, and Persian 25s 3d, all per 400 lbs, landed terms. Oats steady for

native varieties, while ranging from 8s to 10s 6d per 112 lbs, free on rail, as to sample. Imported firmer. Plate, new, f.a.q., 25s 6d, No. 2 white clipped American 25s 6d, No. 2 Canadian Western 20s 6d, No. 3, ditto, 27s 6d, New Zealand grade A 38s 6d, grade B 37s per 320 lbs, all landed. Oatmeal steady with moderate inquiries. London made, all cuts, quoted 17s 6d, flaked oats 20s 6d, ex mill. Ordinary Scottish oatmeal 18s 6d to 19s, and American, all cuts, 17s 3d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20:—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated March 15th, is as follows:—Pig-iron: Business in pig-iron is very restricted, for the simple reason that none of the makers have any iron for sale for early delivery, and there is very little in second hands. The price of Cleveland No. 3 G.M.B. has risen to 127s 6d per ton for prompt. There is a good demand for East Coast hematite, and mixed numbers are now quoted 122s 6d per ton. Manufactured iron and steel: A distinctly better trade in steel is reported, and steel rails have been advanced 20s per ton this week. Steel ship plates, £10; steel ship angles, £9 10s; iron bars, £12; steel rails, £10 10s net. Iron ore: Business in imported ore is very quiet, and as there does not seem to be any scarcity in the supplies of ore at the moment, it is rather difficult to maintain prices. It must not be forgotten, however, that a large number of furnaces are still inoperative, and coke supplies are scarce. Best Bilbao Rubio is about 25s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—The heavy steel trade continues busy, and deliveries of raw and rolled material are getting considerably in arrears, but the raising of prices has checked the placing of new business, both at home and abroad. All the same, an increasing amount of overseas orders are being booked. British consumers are acting with caution, lest there should be an early settlement of the Ruhr troubles, followed by a drop in prices. Prices of pig-iron and billets show a continuous hardening tendency. Rolling mills are full of work, and forges are improving as regards activity. The export returns for February as regards iron and steel materials were favourable on the whole, although they recorded a decline in railway material. They also indicated quietude in the automobile and engineering and ship-building sections. The returns notified the importation of 20,000 tons of Belgian billets during February, and there were also large purchases of Belgian rolled steel and wire rods. Shipments of steel to France, Italy, and Belgium were light, owing to the state of exchanges. Colonial trade is better than it has been for some time past. Makers of engineers' small tools continue to suffer from the competition of surplus war stocks, of which large quantities have come on the market since the Disposal Board ceased its function. The consumption of tools has increased lately, but the improvement has not yet benefited the makers. File makers are also exceedingly quiet. A moderate amount of business is passing in table cutlery, spoons, and forks and certain kinds of electro-plate, but practically nothing is doing in pen and pocket knives and razors. The demand is strong and progressive for steam coal, nuts, and coke. Best South Yorkshire hards are quoted at 21s at pits, and best Tyne steams at 33s.

Our Glasgow correspondent writes:—Conditions in the Scotch steel and iron trades (raw and finished), while leaving room for improvement, continue to develop more or less satisfactory progress, and that despite the advances in prices noted during the last few weeks. It is reliably reported that two prominent Clyde marine engineering shops are experimenting on a couple of engines of the Diesel type, intended for the Canadian trade, and from which big economic results are looked for. Steelmakers are well employed on the rolling of plates and angles, particularly at Mossend and Motherwell, but it is felt that more would have been doing had coal remained where it stood a month ago. Boiler plates are firm at £13, ship plates £9 15s, and sections £9 5s, delivered Glasgow. These are home quotations, export figures being some

10s a ton lower. Channels are fetching £10 10s for home and £9 5s for export, light sections £10 and £9 5s respectively, and joists £10 5s and £9 2s 6d respectively. There is more passing in black sheets, chiefly for India, for which £12 is now specified for 7½ in., and £19 10s for 24 broad gauge. In the last few days No. 1 toundry has been advanced 3s 6d a ton at £6 3s 6d, and No. 3 3s 6d a ton at £5 18s 6d—both delivered makers' works. Scotch hematite unchanged at £6. The shipments last week were close on 4,200 tons, part being destined for the Pacific Coast. There has been an expansion in operations in steel bars and in re-rolled bars since last week, and values have hardened up to £12 per ton for crown quality. It is said that £600,000 is to be expended immediately on the re-equipment of the Larne and Stranraer line to Glasgow and the West of Scotland. The Glasgow Chamber of Commerce are drawing the attention of the Government to the difficulty which Scotch firms are experiencing in securing delivery of German steel material on order from the Ruhr. Tube makers keep very busy on export business. Bolt and nut makers are doing well, and rivet makers have found that the inquiry for rivets justifies a rise of 20s a ton, at £14 a ton. The coal market is busy and strong on exceptional demand from France and Belgium, and prices are very stiff, domestic sorts being fully 45s a ton.

Our Cardiff correspondent writes:—There has been no abatement this week in the strength of the position of the Cardiff coal market. The occupation of the Ruhr by France has involved the loss of between 1,500,000 and 2,000,000 tons in the normal supply of coal to France, Belgium, and Italy, and the embargo on the transport of Ruhr coal to unoccupied Germany has not only diminished the supply available for inland consumption in Germany, but also deprived Germany of its chief source of supply for export. Reparation obligations did not prevent Germany maintaining some of her coal export business; on the contrary, German exports to some markets were being steadily increased. The result, therefore, of the occupation of the Ruhr has been not only to drive the Allied countries to Britain and the United States for supplies to make good their internal deficiencies, but also to compel Germany to use English coals for export purposes. This demand is more than the United Kingdom can meet. There is no reliable means of ascertaining the exact quantity of coal purchased in the United States, but the tonnage already taken up for the transport of that coal, excluding vessels on time charter, represents over 320,000 tons. Of this a small proportion represents coke. The Continent is sweeping up every ounce of coal it can find in the United Kingdom, and paying increasing prices for it. The best Admiralty large coals have been done for April delivery at 35s, and 37s 6d per ton is now quoted, while small steam coals are changing hands at 27s 6d for the best bunker descriptions, and even at 25s up to the end of June. The South Wales collieries were never more efficiently equipped than they are to-day. Conveyors are becoming more

extensively used, and the quantities insured for the current year establish a record for the coalfield; but outputs remain practically stationary, partly as the result of the shorter working day, and partly in consequence of the inadequacy of the facilities for the shipment of coal. This week several local stoppages have accentuated the scarcity of coals for prompt shipment. The current approximate quotations are as follows:—Best Admiralties, 35s to 37s 6d; second Admiralties, 33s to 35s; best drys, 32s 6d to 35s; black veins, 34s to 35s; Western Valleys, 33s 6d to 35s; Eastern Valleys, 32s 6d to 35s; best bunker smalls, 27s to 28s 6d; ordinary cargo smalls, 24s to 26s 6d; anthracite big vein large, 40s to 45s; anthracite machine-made cobbles, 45s to 47s 6d; French nuts, 45s to 50s; stove nuts, 45s to 50s; rubbly culm, 14s 3d to 14s 9d; coke for export, 80s; inland blast furnace coke at ovens, 32s 6d to 35s; patent fuel, 30s to 40s; pitwood, ex ship, 27s to 28s.

There has been a further advance this week in iron and steel prices. Last week we reported the raising of the minimum prices of tinplate bars from £8 6s to £8 10s; this week they have been quoted up to £9 10s, delivered, and accordingly a further advance in the minimum is anticipated. Tinplates have also further advanced to 24s, which compares with 19s 3d last October and 20s last December.

MANCHESTER, March 15.

The tone of the market during the past week has been comparatively quiet. Buyers cannot be stimulated to place orders on a freer scale, and most of the trading has been of a hand to mouth character. In the cloth section fancies and specialties have been in steady request, but business remains very slow in "bread and butter" styles. Restricted operations have occurred for India, chiefly in bleaching descriptions. Only isolated transactions have been put through for China. Printed and dyed goods have been sold in moderate quantities for South America and the United States. There has not been much activity in home trade circles. Spinners of American yarns have made more determined efforts to secure profitable prices, and quotations have been stiffer. Here and there rather more business has been done, but not at full rates. A steady trade has been reported in Egyptian spinnings. Operations in shipping yarns have been irregular.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Judging from the recent trend of trade, the raw material market still dominates the position, and the demand for wool is the determining factor. There has been a distinct lull in business so far as tops and yarns are concerned, and the manufacturing section, of course, is in anything but a comfortable position, yet wool continues to sell well in all the chief centres. It is true that during the last few weeks raw material values have eased all round, but it is still impossible to buy wool in any part of the world to bring in tops at the prices now being made in Bradford. It is manifest that in this and in other countries users have great faith in the future of wool, especially merinos, for at the moment there is not sufficient doing in tops, yarns, and pieces to justify the heavy buying of raw material, at least so far as the West Riding is concerned. French manufacturers, apparently, have underestimated their requirements in wool, or, perhaps, have waited for a fall in values, but they are now being forced to buy heavily in order to keep their machinery employed. America is still consuming big weights, and the general feeling here is that an upward movement in prices would immediately result from any satisfactory settlement of the Ruhr problem. Meanwhile, quotations remain fairly steady, very little change being noticeable on the week. Generally speaking, however, sellers are less inclined to make concessions, and this is especially noticeable in merinos. Crossbreds are steady, with a lot here and there offered at attractive prices. There is not much new business in yarns, but the tone of the market is somewhat better and quotations are not quite so irregular. The piece goods trade remains quiet, the Far Eastern markets offering the most scope at present.

London County Westminster & Parr's Bank, Limited; London Joint
City & Midland Bank, Limited; Cox & Co.

Although there is no actual advance in values to be recorded, there is no weakening, and every day's catalogues are being absorbed with real spirit. The home and Continental trades are still dividing the bulk of the offerings, while American buyers are taking some very good merinos, and also medium and fine crossbreds. The last-named, however, are nothing near so active as in January, the result being that the opening decline is still in evidence, and the offerings of speculators' parcels in good to super merinos are just short of real active American competition. It has been decided to abandon the last three days of the series, and the auctions will finish at the end of next week. This is largely the result of the determination of owners not to offer these good merinos until there is an improvement in prices. The demand is there right enough, but the standard of values is not the same as in January, and until the market is better, it is hardly likely that importers will get out on the right side with their Australian purchases. All the same, some very good prices have been paid for really choice spinners' wools of warp 70's quality, and excellent character. For instance, Hyde Park was superior in every sense, length, quality, and condition being all that one could desire. It is significant that this mark was taken by the home trade, the best lot making 37d, second coming 34d, and the comeback, which was really of merino quality, touched 30d, while super lambs made 28 1/2d. Quite a number of other first-class clips have touched over 30d, prices which are equal to the best ruling this series, but which are certainly slightly under the best rates paid in January. Then, too, some very good figures have been made for super Queensland scoureds, the top side of 50d being realised several times. These prices clearly indicate that the market is sound. The spirit of the sale-room remains good, and competition is fully equal to anything previously seen this series. France continues to be a big buyer; in fact, it is amazing the amount of wool which the Continental section of the trade is absorbing, a proof that France and Belgium in particular have faith in the future.

Every day has seen catalogued a big quantity of crossbreds, and everything from 36's to 58's is meeting with a ready sale. The home trade is having more of its own way this series than last, and, on the whole, is acquiring some very good wools. It is a long time since we saw such an excellent lot of New Zealand crossbreds, the Marshlands clip touching 25 1/2d for grease fine comeback, and 23 1/2d for second comeback. Wools of this character (56-58's) are costing 37d; 56's, 33d-34d; and super 50's, 24d to 25d. Other cheap clips have been catalogued from Hawkes Bay, as well as Canterbury and Otago, and good 50's are costing about 21d clean, and 48's 18d. It is rather noteworthy that in these superior wools America is by no means a big buyer, the home trade taking by far the bulk of the offerings. No doubt Bradford topmakers have an eye upon casing all these good fleeces, and selling them as straight lots, for there is certain to be a steady demand for good matchings during the coming months.

A two days' sale should have taken place in Liverpool on April 19. This has now been abandoned, and the next Liverpool sale will be on June 14 and 15.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

Although many contradictions have appeared to the contrary, there still appears to be a section of the community who are under the impression that there is a ring or combine of timber merchants in this country to keep up prices of building and other woods to consumers. That such is not the case is confirmed by the fact that merchants are continually selling their timber at a pound or two per standard under replacement values, and that competition is very keen.

The imports of all descriptions of building and furniture woods so far this year are much larger than during the corresponding weeks of 1922, and have assisted in swelling a fairly large stock in the country for March—a time when holdings should be wearing down in anticipation of the arrivals of the f.o.w. cargoes a few weeks hence. The stock in London is heavy for the time of year, particularly of deal sizes and prepared boards.

Although the demand is more active than a year ago, timber traders are still awaiting a great impetus in house building, and an improvement in railway, shipbuilding, wood paving, and other work that would make healthy calls for their material, and as showing their confidence in the early future, importers have purchased some of next season's available shipments at values that they could not get promptly on the spot, although they have, very wisely, not committed themselves largely in forward buying. Their policy is one of caution.

The prospects of cheaper timber for house and other building purposes, therefore, are none too bright, but other factors than those given above have to be taken into consideration. It is now well known that strenuous efforts are to be made in Russia this coming season to export large quantities of timber (estimated at from 300,000 to 400,000 standards), and various companies have been formed for the purpose of resuscitating the timber industry in that country. Other European timber-producing States, particularly Poland, it is hoped, will augment their shipments to this country this year, which would have the effect of keeping spot values at a fair level for building work.

Stocks on the spot consist principally of the lower grades of wood, good joinery material being none too plentiful. Deal sizes are comparatively cheap, but buyers are few at the tempting offers. There is plenty of material for boxes and cases, but the demand is small. Both Canadian spruce and American pitchpine are improving in demand—and price.

In the furniture wood market, mahogany is keeping up well, both for logs and converted woods. Large imports of American woods have been a feature of the market for months past; stocks are large, and the demand moderate. For these, spot prices cannot keep up to shippers' rising ideas.

VEGETABLE OILS AND OILSEEDS.

Market conditions are somewhat quieter. Linseed has fluctuated and is slightly lower, but, on the whole, steady, recent business done in Plate on crushers' account being round £18 to £17 15s for shipment to Hull, and Calcutta £19 10s to £19 to London, sellers now asking rather more. Shipments from the Plate continue good, and the quantity on passage (including Indian) is returned at 76,300 tons for the United Kingdom and 95,700 tons for the Continent—together 171,500 tons, against 155,400 tons a week ago. Supplies of seed on hand and in sight appear to be ample to meet current needs, "spot" and "afloat" commanding only a very small premium over "shipment." The steadiness in the seed market has been contributed by a good demand for the oil product both for export and by the consuming trades in this country. America has continued a buyer to some extent up to May shipment. Values have thus been fairly well sustained, the forward position especially being firm, and higher figures quoted.

Egyptian cotton-seed has been in only moderate demand, and values are about unchanged. Soap-makers' grade of refined cotton oil and crude Bombay have been in brisk demand, and are very scarce, values moving up in consequence. Crude Egyptian and edible refined have been only a quiet trade, and values barely steady. Crude soya bean oil is in fair request, and supplies low. Palm kernel oil has been in good demand for export.

The mills at the crushing centres are now pretty active, and the production of oil expanding. The cake residue, however, is not in big demand, and prices of both linseed and cotton cakes have been reduced in order to encourage business.

The imports of oilseeds, nuts, and kernels into the United Kingdom in February reached the high figure of 105,850 tons, the principal items being cotton-seed, 54,284 tons; linseed, 28,037 tons; soya beans, 23,080 tons; and nuts and kernels, 51,805 tons. The January-February imports total 300,805 tons, against only 202,928 tons same period last year. The exports of unrefined vegetable oils in February were 5,728 tons, and refined 1,567 tons, against 9,447 tons and 1,278 tons respectively a year ago. The falling off in the former is due to smaller exports of linseed oil, of which America took large quantities in February last year. There were, however, much increased shipments of palm kernel cotton and rape oils. Imports of oils from abroad, principally palm and coconut oils, during the month were less, but of crude soya bean oil more.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The Bermondsey hide market this week was barely steady with a firm tendency, as slight advances were again noted. Best ox made from 7 1/4d to 8 1/4d, three classes showing advances of 1/4d to 1/2d on last prices. Seconds sold again from 7 1/4d to 7 3/4d, one class only advancing 1/4d. Calf were slightly weaker, best making from 6 1/4d to 13 3/4d, two classes dropping 1/2d to 3/4d. Wools were steady at 5s 6d to 12s 6d, and hogs from 6s to 14s 6d each, the latter dropping 3d per skin. The export of British hides for January-February amounted to 26,289 cwt, of which Germany took 4,592 cwt, and the United States 11,123 cwt. There is a better enquiry for imported hides, but tanners are still timid buyers of River Plates. Liebig saladeros have been sold on a basis of 11d per lb s.w. and l.w. respectively. Dry River Plates are very firm, with Germany the chief buyer on the Continent. The American market is cabled as quiet, with best heavy packers now selling at 19 cents.

Trade is not good in sole leather, and speculation is still absent. Prices are fairly firm, although I hear of concessions being made by tanners to clear certain lines of bends. Cheap dry hide bends are still the most popular sale, although there is a steady, if small, call for the better-class tannages. Dressing leather is quiet, in view of the disturbed state on the Continent. Upper stock is going off in small parcels at very unremunerative prices. German box calf still seems to be the *bête noir* here, but there are signs that it is coming to an end. American chrome calf is also badly hit by the German stuff, and importers are hanging on to stocks hoping for a change for the better. Glacé kid sells only in the low grades, many tanners being sold ahead for this class.

The boot trade is still improving, although slowly. Makers of ladies' goods are the best employed, and have large orders in hand. Exports of footwear were valued at £519,105 during the past two months, as against £347,457 for January and February of last year.

Application will be made to the Committee of the London Stock Exchange for permission to deal in the Shares of the Company after allotment. The Subscription List will open on Monday, the 19th day of March, 1923, and will close on or before Thursday, the 22nd day of March, 1923.

SEPANG SELANGOR RUBBER ESTATES LIMITED.

(Incorporated under the Companies Acts, 1908 to 1917.)

CAPITAL - - - £350,000

Divided into 350,000 Shares of £1 each,
OF WHICH

280,000 Shares are now offered for Subscription at par,

PAYABLE:—

2s. 6d. per Share on Application, 7s. 6d. per Share on Allotment, 10s. per Share on 19th April, 1923.

DIRECTORS:—

ERIC MACFADYEN (Chairman), of 1 to 4 Great Tower street, London, E.C.3. (Director of Harrisons and Crosfield, Ltd., and formerly Chairman of Planters' Association of Malaya).
JAMES DAVENPORT, of 16 Gracechurch street, London, E.C.3. (Manager and Secretary of General Investors and Trustees, Limited, and Director of Lubok Rubber Estate, Limited).
SIR ERNEST HENRY LAMB, C.M.G., J.P., of 74 and 75 Finsbury street, London, E.C.2. (Chairman of Foster's Parcels and Goods Express, Limited).
HENRY JOHN WELCH, of 1 to 4 Great Tower street, London, E.C.3. (Director of Harrisons & Crosfield, Limited, and Chairman of Rubber Plantations' Investment Trust, Ltd.).

AGENTS, SECRETARIES AND REGISTERED OFFICE:—

HARRISONS and CROSFIELD, LIMITED, 1 to 4 Great Tower street, London, E.C.3.

The Prospectus states that:—

The Company has been formed for the purposes set out in the Memorandum of Association and primarily for acquiring, as from the 31st May, 1923, the Sepang Estates, situated in the State of Selangor, Federated Malay States, and containing an area of about 10,000 acres.

The Estates are held under grant from the Government of the Federated Malay States at an annual quit rent of 10 cents per acre per annum, and free from all the usual cultivation clauses.

Mr. Toungh, the well-known visiting agent, in summarising his report on the whole Sepang-Tanah Merah Concession, wrote as follows:—

"This property, in my opinion, is the best and most important that has ever come into the market in the Malay States. It is almost unique in respect to the terms under which it is held, its size and uniformity of soil. The Rubber is well grown and what is of more importance it is well preserved, and everything which really matters in connection with a well-conducted estate has received assiduous attention."

The following particulars have been taken from a summary of Mr. Souter's Report on the Estates, as received by cable, and from the Report itself dated 10th February, 1923.

He estimates the planted acreage as follows:—

Rubber in bearing, 1917 plantings and earlier	2,727 acres.
" " 1919 plantings and replantings	302 "
" " 1920 " "	405 "
Reserve suitable for Rubber	3,494 "
Sites, roads and land requiring drainage, swampy and waste	3,702 "
	10,633 acres.

Cost of Production.—Mr. Souter estimates the cost of production f.o.b. at 26 cents per lb. in 1922, 28 cents in 1924 and 1925, 24 cents in 1926, and 22 cents in subsequent years. 33 cents equals about 6½d.

Weeding.—Weeding has been neglected to a certain extent, and the mature areas all have dirty patches to clean up, but nothing that has done any harm or that will be heavy work.

Tapping.—Mr. Souter states the tapping has been uniformly good, and the bark reserve adequate, and that the appearance of the rubber is generally good and well up to the average growth.

Labour.—The labour is Chinese, and health good.

Capital Expenditure.—Mr. Souter estimates that an expenditure of approximately £28,000 will be called for to bring the present immature areas into bearing, and provide the Estates with full usual establishment inclusive of necessary factory extensions.

Standard Production.—The approved standard production under the Restriction Enactment is 1,135,782 lb.

Pests.—Mr. Souter reports that timber was nearly all got rid of in 1918, 1919, and there is a comparative absence of disease in the Mature Rubber. The only thing of note was a recent outbreak of Mouldy Rot in a field of 130 acres adjoining some small holdings where the disease had gone untreated. Treatment was promptly given in the 120 acres, and, at the time of his visit, the Mouldy Rot had gone.

Mr. Souter refers to the damage done to the Rubber by animals, and in his opinion it is absolutely essential that all intervening blocks of jungle should be felled and planted as soon as possible. It is his view that the Company should immediately embark upon a programme of 2,000 acres of extensions.

The policy of the Company, however, will be to limit extension to the minimum adequate, together with other measures of protection against deer, to ensure the existing plantings against damage.

Valuation.—Mr. Souter values the Estates (including £262,500 in respect of reserve land) at £2,530,000, which is equivalent to £202,165.

Purchase Price.—The price payable by the Company is £1,700,000 (approximately £138,354).

Deducting from the purchase price Mr. Souter's conservative valuation of the unplanted area, the price which is being paid for the Estates is equivalent to £248 per planted acre. The Directors consider the capitalisation a moderate one for a Selangor property already producing on a large scale.

Prospectus.—Against Mr. Souter's estimate of 1,300,000 lbs. for the whole of 1923, the output, under restriction, from May 31st (the date of purchase) to the end of 1923, is estimated at 463,000 lbs. Against Mr. Souter's estimate of 1,000,000 lbs. for 1924, the restricted output for that year is estimated at 1,023,000 lbs. For the following years the normal outputs as estimated by Mr. Souter are taken. Adopting his estimate of f.o.b. costs throughout, adding a

reasonable provision for London administration and expenses, and assuming an average sale price of 1s. 1½d. per lb. net the resulting profits work out at:—

Year	Estimated Outputs	Profit	% per an. of Issued Cap.
1923 (7 mths.)	463,000 lbs.	£ 5,857	at the rate of 9.7
1924	1,022,000 "	38,500 "	15.8
1925	1,180,000 "	44,545 "	15.9
1926	1,315,000 "	53,510 "	19.1
1927	1,375,000 "	54,405 "	19.4
1928	1,398,000 "	54,405 "	19.4
1929	1,398,000 "	54,405 "	19.4

One penny per lb. difference in the sale price of 1,398,000 lbs. would equal 2 per cent. on the issued capital.

Working Capital.—After providing for the purchase of the Estates, and the estimated Underwriting and Preliminary Expenses, the present issue will leave over £54,000 for the general purposes of the Company.

No part of the purchase consideration is payable in respect of goodwill.

Throughout the Prospectus the Straits Dollar has been converted into sterling at the normal exchange of 2s. 4d.

Copies of the Reports, Contracts, and of the Memorandum and Articles of Association of the Company may be seen at the offices of the Solicitors to the Company at any time during business hours while the Subscription List remains open.

Applications for shares on the terms of the Prospectus dated 16th March, 1923, should be made upon the form below or that accompanying the Prospectus and sent to Barclays Bank Limited, 54 Lombard street, London, E.C.3, together with a remittance for the amount of the deposit.

Copies of the Prospectus on the terms of which applications will alone be accepted and Forms of Application may be obtained at the Offices of the Company and from the Bankers, Barclays Bank Limited, 54 Lombard street, London, E.C.3; Chartered Bank of India, Australia and China, 38 Bishopsgate, London, E.C.2; or the Brokers, Foster and Braithwaite, 27 Austin Friars, London, E.C.2; and Macgregor, Walker and Company, 26 St. Andrew square, Edinburgh.

THIS FORM OF APPLICATION MAY BE USED.

TERMS OF SUBSCRIPTION.

Quarterly, 14s 6d; Half-yearly, £1 9s 6d; Yearly, £3 18s. 6d. Colonies and Abroad, £3 15s 6d per Annum.

Single copies, post free, 1s 1d.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."

Office: Granville House, Arundel street, Strand, London, W.C. 2.

Copies of the Economist may always be obtained in the City at Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmons, 5 Birch Lane; Barker and Howard, 6 Fenchurch buildings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15 Cullum street; Willing and Co., Limited, 50 Copthall avenue, and 53 Finsbury pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de L'Opera.

THE MONEY MARKET.

WITHDRAWALS of credit by three of the big banks on Wednesday told on the already impoverished market, and fresh borrowing from the Bank of England was necessitated. Discount rates were steady at the lower level established at the end of last week by the rush to

secure end-June Treasury bills. The popularity of the current date, however, was offset by the scarcity of money, and though forward business in June bills to be delivered next month was reported at $1\frac{1}{2}$ per cent., buyers were not very eager on the basis of $2\frac{1}{2}$ per cent. for three months' bank bills for immediate delivery. The discontinuance of the sale of $4\frac{1}{2}$ per cent. Treasury Bonds has been quickly followed by the prospectus, which appeared last night, of an issue of £15,000,000 4 per cent. Treasury Bonds at $94\frac{1}{2}$, repayable in 1931-33 at par.

	Mar. 23, 1923.	Mar. 16, 1923.	Mar. 9, 1923.	Mar. 2, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	$3\frac{1}{2}$ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	$1\frac{1}{2}$ (Jly. 13, '22)
Discount (Call)	1	1	1	1	$1\frac{1}{2}$ (Jly. 13, '22)
Houses (Notice)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 13, '22)
Market rate (3 months' bills) ..	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	..

The Bank return showed increases of £202,000 in the note circulation and £2,000 in the stock of gold, the Reserve thus being £200,000 lower. Other securities rose by a million and three-quarters, but the Public deposits had risen by no less than $8\frac{1}{2}$ millions, so that Other deposits were nearly seven millions lower. There was a reduction of £84,800 to £280,955,000 in currency notes outstanding this week, which includes £1,494,900 for notes called in but not yet cancelled. The fiduciary issue is £230,010,000, or £40,173,800 below the maximum.

THE STOCK MARKETS.

The volume of business in the stock markets has been considerable for the last full business week before Easter, and a strong tone in the markets, especially the gilt-edged market, has taken place, in spite of quite a rush of new capital issues, which, as a rule, have achieved a rapid success. Consols and War Loan have been prominent among British Government securities, whose strength is mainly due to the belief that money will be cheaper immediately after Easter. In the foreign market a lively recovery of French issues has been the feature, while Mexican and Greek securities have also advanced. In the Home Railway market the heavy lines have been held in check by fears of possible labour troubles, but Metropolitan and Districts have recorded spurts. Rubber shares are dull, but there has been a little liveliness in low-priced oil shares. In the industrial sections movements have been irregular, tobaccos being a strong feature, and iron and steel shares weakening on labour fears. In the South African mining markets interest has been confined mainly to the Rhodesian group.

THE COMMODITY MARKETS.

Owing to labour conditions in South Wales, details of which are given under "Notes of the Week," coal prices have further advanced, best Admiralty touching 40s per ton. Our Middlesbro' correspondent reports that the pig-iron market is decidedly quiet. Consumers have apparently covered their immediate requirements, and hesitate to buy for forward delivery. This hesitancy is stated to be possibly due to the uncertainty prevailing over the position in the Ruhr. Recent advances in prices of manufactured iron and steel have been well maintained, according to our Middlesbro' correspondent, but our Cardiff correspondent mentions that the local iron and steel market has been to some extent unsettled by the increase in the price of coal, while from Sheffield it is reported that the sharp rise in prices is inducing a spirit of caution on the part of buyers. In the Manchester cotton trade the easier tendency in raw cotton rates has accentuated the attitude of buyers in operating from hand to mouth, and it is stated that, whatever may be the feeling elsewhere, it is believed in Manchester that prices in the near future will be on a lower level. The wool market has improved during the week, owing to stronger markets for the raw material. Fuller details of these and other markets will be found on later pages.

FOREIGN EXCHANGES.

In the foreign exchange market, which has been considerably more active than for some time past, the chief feature of the week has been the dramatic if somewhat unsteady recovery in the Paris rate. On the last two days

of the previous week, after considerable fluctuations, it closed each time at about 74.95, but on Monday there was a sharp drop to 72.60, on Tuesday to 71.95, on Wednesday to 69. On Thursday it was at one time as low as 67.50, but after that a reaction set in, the rate closing at 70.20, and rising yesterday morning to 71.65. How far official support has been responsible for this improvement is not known, but there is no doubt that a large part of the buying has been due to a growing belief that a settlement of the Ruhr problem was not far distant. This belief, for which there is still no definite basis, has been especially strong in America, which has made a large contribution to this recovery. The agreement between the Bank of England and the Bank of France has been taken as a favourable factor, but its influence has been swamped by a somewhat unreasoning political optimism. How far this will be justified time only can tell, but there is already a feeling borne out by the movements of yesterday and this morning that the rise in value of the franc has been pushed too far. The recovery in the Brussels rate, which on the 21st dropped to 77.60, has been even more rapid, but so, too, has been the reaction, the quotation yesterday morning standing at 82.50. Forward rates at 7 to 9 centimes per month above spot in Paris and 1 to 3 centimes below in Brussels show little change. The lira has also shared, although to a smaller degree, in this improvement, being yesterday quoted at $95\frac{3}{4}$ as compared with $97\frac{1}{4}$ a week ago. Berlin has moved relatively little, but at 98,000 yesterday was rather worse than the previous closing. There has again been an enormous issue of notes, but Government intervention and political feeling remain the controlling factors. Forward rates remain more or less nominal at about 4,000 marks per month above spot. Throughout the week, with the exception of Monday, when the rate closed at \$4.70 $\frac{1}{2}$, the dollar has remained slightly under \$4.70, yesterday morning's quotation being \$4.69 $\frac{1}{2}$, as compared with 4.68 $\frac{1}{2}$ on the 16th, the same influences being at work as were referred to a week ago. Forward rates were much the same as before at $\frac{3}{4}$ to $1\frac{1}{2}$ cents per month above spot. Among neutral exchanges, Switzerland at 25.35 is now well above parity, over which it rose on Monday. Amsterdam at 11.89 shows little change. Madrid at 30.47 has again moved in our favour. In Scandinavia, Copenhagen shows little change, but Christiania and Stockholm have moved slightly in our favour. For the first time for some weeks Helsingfors has moved up, being now 174, as compared with 168 $\frac{1}{2}$ on the 16th. In Central Europe, Vienna remains unchanged, but Warsaw shows a sharp recovery from 235,000 to 185,000. Prague at 158 is unchanged, Belgrade and Bucharest remain more or less nominal, and Budapest continues to depreciate rapidly. In the East, the rupee remained at about 1s 4 $\frac{1}{2}$ d, and the yen is much the same at 2s 0 $\frac{1}{2}$ d. Indian selling at first brought down the price of silver, but China and India also then came in as buyers. By the end of the week, however, the market was again dull. Hong Kong has fallen from 2s 4 $\frac{1}{2}$ d to 2s 3 $\frac{1}{2}$ d, and Shanghai from 3s 2 $\frac{1}{2}$ d to 3s 1 $\frac{1}{2}$ d. Of the South American rates, Rio at 5 $\frac{1}{2}$ d is about the same as last week, Buenos Ayres is about $\frac{1}{2}$ d dearer at 43 $\frac{1}{2}$ d, and Montevideo $\frac{1}{2}$ d dearer at 43 $\frac{1}{2}$ d. Valparaiso at 35.90 is unchanged.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ending March 17th:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	31,016	Interest on Debt	844
		Supply Services	10,700
		Reduction of Debt	16,802
		Added to Exchequer Balances ..	207
		Sundries	2,463
	31,016		31,016

Revenue produced just over £31 millions, as against nearly £43 millions for the corresponding period last year. Property and Income-tax brought in the satisfactory sum of £16 $\frac{1}{2}$ millions, and Customs and Excise £7 millions. This makes the total revenue, up to date, with two more weeks to go, £86 $\frac{1}{2}$ millions, against the estimate of £91 $\frac{3}{4}$ millions. Expenditure now totals £745 millions, as against the Budget estimate of £904 millions. It is possible, however, that some heavy outgoings may take place in the next fortnight.

The week's operations reduced the National Debt by £16,802,000, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 400	Public Department Advances ..	- 3,200
4 $\frac{1}{2}$ % Treasury Bonds ..	+ 706	Treasury Bills ..	- 14,258
Unemployment Insurance ..	+ 080	Funding Loan, &c.	- 170
		Telegraph money	- 650
	+ 1,276		- 18,078

The floating debt was reduced by £17,270,000 to £814,101,500.

FINANCIAL YEAR, 1922-23 (April 1, 1922, to March 17, 1923).

THE LABOUR PARTY AND SOCIALISM.

FROM the Parliamentary point of view, Tuesday's debate on Socialism was the outstanding feature of the session. The standard of debate was high, and the leading protagonists greatly impressed the House with their handling of a vast subject. But beneath the surface the reason for the great interest aroused, as contrasted with the desultory debates of former years, was not so much the subject matter itself as the fact that the doctrines under discussion are the nominal creed of a great and growing party, which is certain to have a profound influence on the future of British politics, but whose future evolution it is at present very difficult to foresee. The occasion has given an opportunity for Parliamentary manoeuvre, and all parties are hot on the trail to secure tactical advantages with a view to future elections.

But when the dust of the arena has subsided the battle turns out to have been nothing but a sham fight, after all; and anyone who takes the trouble to read the speeches in cold blood will be conscious of an air of unreality and a sense that the rival armies have been firing off volleys of pre-war platitudes without much regard to the world of to-day. In particular, Mr Snowden's speech was singularly reminiscent of those which he was accustomed to deliver up and down the country before the war. We

have no quarrel with him on this score, for clearly an indictment of capitalism based only upon the facts of to-day would have invited the obvious retort that the situation is quite abnormal, and that England is to-day at the mercy of world forces which she cannot control by internal reforms. But we confess to some surprise at finding Mr Snowden's speech full not merely of his old platform illustrations, but of the old fallacies as well. For example, he would have us believe that distribution during many decades of the nineteenth century left a rapidly diminishing proportion of the country's annual wealth to the worker.

Thus he declares that "between 1874 and 1908 the mean increase of wages—that is, taking all the industries—had been under 10 per cent. Between the dates that I have mentioned (1854 and 1918!) the amount (assessed to income-tax under Schedule D) taken very largely by incomes received by those who made no contribution to labour for those incomes had increased by 12 times."

Such a presentation is as full of fallacies as an egg is of meat. To mention only a few, it compares the increase of wages *per head* with the increase in the total income of all taxpayers; with a fixed income-tax limit and an increasing national income, due to rising wages, salaries, and profits, the percentage of the national income above a fixed line will increase without any change in the division between wages, salaries, and profits; the selection of dates is grossly misleading, and the statement about wages is incorrect. Some years ago Dr Bowley made estimates of (a) the nation's wages bill and (b) the income assessable to income-tax above a sliding exemption limit over a long series of years. Seeing that the numbers paying income-tax have increased at least as fast as the number of wage-earners, the figures (to which we have added a figure for 1911, approximately but not strictly comparable) give the fairest picture available of the distribution between wage-earners and others respectively:—

	(Million £.)	National Wages Bill.	Income Subject to Tax.
1871		390	490
1874		470	555
1881		455	575
1891		555	635
1901		705	800
1911		782	900

The figures contain a considerable element of estimation, and we should not care to base upon them too categorical a statement. But so far as they go they show that during the latter part of the nineteenth century the national wages bill has remained a fairly constant proportion of the national income, and closer examination shows that, over the period of which Mr Snowden was speaking, the worker secured a substantial share of the nation's increasing material prosperity.

Again Mr Snowden, after observing that for most of his history man had lived together in tribes, proceeds to the very curious remark that "most of the great inventions that have been the basis of our machinery and our modern discoveries were invented by men who lived together in tribes." But these primitive savants unaccountably omitted to put their great thoughts into practical application, or, at all events, took a very long time over it; whereas under private enterprise has occurred the evolution of the stage coach to the locomotive running at 60 miles an hour, which so struck the imagination of Mr Henry George. The author of "Progress and Poverty" would have had still further matter for musing had he lived to see the conquest of the air and the building of ocean liners, from the cabins of which passengers can telephone by wireless to their friends in London and New York. Sir Alfred Mond, in a reply which will much enhance his prestige with the present Parliament, dealt very effectively with these and other points in the opening speeches.

But these, though very relevant, are really academic debating points. In saying that the whole discussion has an air of unreality, we have in mind the obvious fact that whatever may have been the trend of events before the war, anything like a wholesale application of Socialism is remote from the real expectation of the majority of the Labour party, and is certainly not con-

templated by the country or even by the voters who voted "Labour" last November.

Mr Snowden himself has mellowed with the passing years. He is no longer revolutionary, he "will resent any proposal of confiscation," and is very careful to explain that "we want no further step forward until the previous step which we took has been justified by success."

As for the general public, the Russian experiment has convinced them that the nationalisation of everything affords no short cut to Utopia; the experiences of war control of industry have given us all an object-lesson more telling than any argument as to the real weaknesses and difficulties that have to be weighed against the advantages of national control, while the far-reaching educational effect of our recent economic history on the mass of the people has brought home to them that Great Britain is economically fighting for her life, and that to undermine the only certain and reliable motive of economic endeavour at such a moment would be fatal folly. The weak point in the position of Mr Snowden and his friends is that while they will get up and explain in the adjourned debate quite sincerely that they intend to make hardly any change at all in practice, they will preach to the country that by "superseding private enterprise" they will do away with present evils. We are convinced that very few really think it possible to supersede private enterprise, or that the motives either of public service or of compulsion exerted through a bureaucracy, however efficient, can replace the motive of private gain. The moment the extreme doctrinaire position is abandoned we get back to practical politics, and to the question of how much and what kind of restrictions are to be placed on private enterprise. Scarcely any of those who oppose Mr Snowden will attempt to deny the cogency and importance of many of the criticisms that are made of our existing system. These criticisms have already been put with great force and eloquence in the debate, as indeed they should be, for it is as a protest against hard times much more than on any economic theory that most of the Labour men were sent to the House. The real answer to the Socialist motion is to show not merely that the present system is better than any alternative, but on the one hand that its worst defects are remediable without trying to find an entirely new motive for economic action, and on the other that there is a determination to carry into effect whatever changes are practicable—in other words, to produce a practical alternative economic policy. It is no condemnation that Parliament spends its time in limiting and regulating private enterprise. If Socialism came in to-morrow we should have to set to work the next day to put right its weak points. Private enterprise is a great motive force, the most effective which we know, and one which we need for its own intrinsic merits as well as for practical reasons. Man has to learn how to harness this great force for the promotion of the common good. The debate will serve a valuable purpose in so far as it evokes alternative constructive proposals of social and economic reform.

CURRENCY DEPRECIATION, WAGES, AND PRICES.

THE general effect of a rapid currency depreciation, of which recent history has furnished such startling examples, is now beginning to be better understood. At the same time, it is not very easy to obtain really accurate statistics, partly because of the wildness of the changes themselves, and partly on account of the inherent difficulty of getting reliable quotations of wages and retail prices.

One of the most interesting phenomena in this connection is the fact that, in countries whose currencies are very much depreciated, there is often a constant shortage of currency, despite the tremendous outpourings from the printing press. In a recent number of the bulletin of the *Skandinaviska Kreditaktiebolaget*, Professor Cassel points out that when a currency is actually in process of deterioration, foreign opinion constantly tends to discount a further fall, and undervalue the money in question—which is only another way of saying that its external

purchasing power depreciates more than its appropriate internal value at the moment. Whether there is a sufficiency of currency or not depends upon two factors, viz., the rise in average prices within the country, and the increase or decrease in the actual volume of business.

Professor Cassel proceeds to deal with the figures for Germany on these lines:—"The total circulation (Reichsbank notes and Darlehenskassenscheine) amounted at the end of June, 1922, to 179.6 milliard marks, at the end of May to 161.4 milliard marks. Calculating on the basis of these figures with an average circulation for June of 170 milliard marks, and dividing this circulation by the wholesale price index, which in June averaged 70.3 (in relation to 1 for 1913), we obtain a reduced circulation of 2.42 milliard marks. Dividing instead by the price index for food-stuffs, 51.2, we get a circulation reduced to 3.32 milliard marks. The average of these figures is 2.87 milliard marks. The total circulation on February 28, 1914, is estimated at 5,270 million marks. In relation to the latter figure, the circulation for June, 1922, according to the average last mentioned, is 54.5 per cent. The supply of money in Germany may thus be considered to have dwindled to that level. The shrinkage is obviously due in some measure to the contraction of the country's area, but principally no doubt to the impoverishment of Germany." Some 10 per cent. of this is due to reduction of territory, but after making this allowance, and taking into account the change of prices, the amount of circulation was only about 60 per cent. of the pre-war circulation.

Comparing this with production, Professor Cassel goes on to observe that "a study of German statistics of production, transport, and commerce shows that the situation of the country is far more serious than people in general have been inclined to believe. According to the available data, the supply of goods in the country must, in fact, have dwindled to something like two-thirds of the normal. In that case a correspondingly reduced circulation of money must now be considered to be normal."

In order to get to grips with this problem, and, incidentally, to obtain some idea of the social consequences of depreciation, a consideration of wages in Berlin both in relation to cost of living, and to pre-war standards, should prove useful.

According to the figures compiled by Dr Kuczynski, of Berlin, the cost of living figure for that city—which purports to include the food minimum necessary for ordinary needs, together with rent, heating and lighting, clothing, and certain miscellaneous items (such as fares and taxes), rose between forty-five and forty-six times during the year, 1922. The figures published for Berlin by the official statistical journal, *Wirtschaft und Statistik*, which include food, heating, lighting, and dwelling if modified to include clothing (calculated on the basis of the official figure for this item for the whole of Germany in which case the percentage error is not likely to be large), show a rise of thirty-seven times for the year, as compared with thirty-nine times for the whole of Germany. The two series of figures, together with figures showing the weekly rates of wages of bricklayers and compositors in Berlin, are as follows:—

WEEKLY COST OF LIVING AND WAGES IN BERLIN
(In German Marks.)

1922.	Cost of Living for a Family of Four Persons.		Wages.	
	Kuczynski.	Wirtschaft und Statistik.	Brick-layer.	Compositor.
January	548	441	586	553
February	627	543	621	613
March	789	643	716	643
April	915	791	966	773
May	995	852	1,196	933
June	1,195	901	1,472	1,093
July	1,763	1,219	1,692	1,393
August	2,968	1,808	2,009	1,638
September	4,714	3,041	3,553	2,622
October	7,508	5,257	5,053	4,345
November	16,271	10,316	8,023	6,577
December	24,994	15,636	15,109	10,859

The most significant fact which appears from these statistics is the great reduction in the real remuneration of labour. Whereas the official cost of living figure (*Wirtschaft und Statistik*) shows a rise of 37 times during the year—and this is certainly an under-statement of the real position—the wages of bricklayers show a rise of under 26 times, while the wages of compositors have not even risen quite 20 times. In other words, bricklayers' wages purchased in December, 1922, only some 70 per cent. of what they purchased in January, while the purchasing power of compositors' wages fell over 46 per cent. during the year. This tremendous fall in the standard of living—which would appear to be much greater if due allowance were made for goods of foreign origin, such as colonial goods, which are now beyond the reach of the German workman—must in the long run lead to a serious diminution in the efficiency of labour. Up to the present, however, reports on this head have been somewhat conflicting. On the one hand the efficiency of the iron and steel workers in the Ruhr basin was estimated before the recent disturbance at only about 60 per cent. of the pre-war standard, though it is impossible to obtain confirmation of this figure. On the other hand, inquiries carried out by the *Frankfurter Zeitung* seem to show that, in some factories at any rate, where piece rates have been substituted for time rates, efficiency is actually higher than in 1914. One of the first effects of a fall in the real earnings of labour when wages are paid on a piece-rate basis, is often an increased output on the part of the worker—a tendency which has been illustrated recently in the case of the British coal mining industry. When, however, the reduction in purchasing power in the hands of the workers is as large as that which appears to have taken place in Germany in 1922, one may well doubt whether it would be physically possible to maintain for long an increased output of this kind.

In the following table we give the statistics of cost of living and wages reduced to an index number basis, taking 1914 as 1:—

(On an Index Number Basis, 1914 = 1.)

1922.	Cost of Living.		Wages.	
	Kuczynski.	Wirtschaft und Statistik.	Brick-layer.	Compositor.
January	19.0	17.0	14.0	16.1
February	21.8	21.0	14.8	17.8
March	27.4	25.6	17.1	18.7
April	31.8	31.5	23.1	22.5
May	34.5	33.9	28.6	27.1
June	41.5	35.9	35.2	31.8
July	61.2	48.5	40.5	40.5
August	102.7	72.0	48.0	47.6
September	163.7	121.1	85.0	76.3
October	260.7	209.3	120.8	126.4
November	565.0	410.7	191.9	191.3
December	867.9	622.5	361.3	315.9

If we compare the increase in the cost of living, again taking the "Wirtschaft und Statistik" figures, with the increase in the money wages of bricklayers and compositors in Berlin, we see that these wages in December represented in purchasing power some 58 per cent. and 50 per cent. respectively of the 1914 rates. These figures, if correct, imply a very substantially reduced consumption by wage-earners, and illustrate Professor Cassel's thesis as to the amount of money needed in Germany in 1922 as compared with pre-war conditions. The standard of living has fallen even more amongst the middle-class and especially amongst Government officials—and the comparisons we have given, based as they are on the most conservative estimates available, are a clear indication of the impoverishment of the country.

The dollar exchange rose some 38½ times during 1922, while the *Frankfurter Zeitung* index number of wholesale prices rose 49 times, and the official figure of wholesale prices 43 times in the twelve months. If we allow for the fact that world gold prices rose some 20 per cent. during the year (as shown by the American Index Number), paper prices in Germany should have risen 46 times in order to keep the same relation to external gold prices.

The foregoing statement shows that, according to one index, German prices have risen a little less, and according to the other a little more than this gold equivalent.

THE NET RECEIPTS OF BRITISH RAILWAYS.

THE analysis which we have made in the last two weeks of the receipts and expenditure of leading British railways enables us to present a bird's-eye view of their financial situation—an essential preliminary before discussing their relations to the public. Comparison with the pre-war position shows that so far as the results of railway operation are concerned, gross receipts and expenditure have grown by almost the same amount, and leave net revenue practically unchanged:—

	(Million £.)		Percentage	
	1913.	1922.		Change.
Gross receipts	124.3	228.4	..	+ 83.6
Expenditure	80.4	183.9	..	+ 128.5
Net operating revenue ..	43.9	44.5	..	+ 1.4

While the increase in both expenses and receipts is the same in amount, this means that the percentage increase of expenditure has been much greater than on the receipts side, and a glance at a set of figures such as these naturally raises the question whether in times of changing prices all the items should rise and fall together, or whether it is appropriate that one figure should remain fixed while the others vary. We may have again to return to this question later, but for the moment we may content ourselves with observing that the doctrine that railway shareholders should receive what they received in 1913 was accepted both by the railway directors and by the House of Commons as equitable in 1921. The figures for 1922 compared with 1913, however, are likely to give a false impression of continuity, and it is worth while recalling the figures for 1921, which also permitted a distribution to railway shareholders of very much the same amount as in 1913. Those dividends, however, were paid by money received from the Government. The accounts for 1921 were considerably less explicit than those for 1922, but the estimate which we made when they appeared showed that gross receipts amounted to 230 millions and expenditure to 236 millions, the expenditure being thus nearly 200 per cent. above the pre-war level and much higher than in 1922, while the receipts were practically the same as in 1922, at about 85 per cent. over 1913. But the Government added 45 millions of subsidy payable in respect of the period of control (January to August 15th), and the railway companies took, to pay dividends, a further £5 millions out of the money paid as compensation. The figure of £230 millions for gross receipts from railway operation makes an interesting comparison with 1922, for it shows that the loss of revenue in 1922 through the reduction of freight rates and the offer of certain cheap facilities for travellers about balanced the very substantial increase in the volume of goods carried. Having maintained their receipts, the railway companies have regained the pre-war margin between income and expenditure through the fall in the latter.

But in actual fact the railway companies have done better than the operating statistics show, for they have considerably increased their miscellaneous net revenue, the chief element in which is interest on investments. Miscellaneous net revenue rose from £3 millions in 1913 to nearly £6 millions in 1922, the actual increase being £2,825,000, or over 93 per cent. Total net income was thus £3,422,000, or 7.3 per cent. higher in 1922 than in 1913, and as the amount brought forward at the end of 1921 was £732,000 greater than the amount brought forward at the end of 1912, the balance available for pay-

ment of fixed charges, for allocation to reserve and for payment of dividends was £4,154,000, or 8.7 per cent. higher than it was nine years ago. The table below sets out these figures, and shows how the amounts were distributed:—

	1913.	1922.	Increase or Decrease.
	£	£	%
Gross receipts.....	124,275,000	228,397,000	+ 104,122,000 + 83.6
Expenditure	80,428,000	183,953,000	+ 103,525,000 + 128.5
Net operating income ..	43,847,000	44,444,000	+ 597,000 + 1.4
Misc. net income	3,050,000	5,875,000	+ 2,825,000 + 93.1
Total net income	46,897,000	50,319,000	+ 3,422,000 + 7.3
Brought forward	984,000	1,716,000	+ 732,000 + 74.1
	47,881,000	52,035,000	+ 4,154,000 + 8.7
Fixed charges.....	13,883,000	14,924,000	+ 1,041,000 + 7.5
Guaranteed & pref. divs.	15,537,000	16,041,000	+ 504,000 + 3.2
Ordinary dividends	16,342,000	20,214,000	+ 3,872,000 + 23.6
To reserve, &c.	984,000	Dr 645,000	- 1,629,000
Carried forward	1,135,000	1,501,000	+ 366,000 + 32.3

Thus, the total distributed on railway capital in 1922 amounted to £51,179,000, against £45,809,000 in 1913. The bulk of the increase in the amount available for distribution went to ordinary shareholders, the increase in fixed charges and in guaranteed and preference dividends being balanced by a net withdrawal from reserves. Last year, it will be seen, balances brought forward were drawn upon to the extent of £215,000, though the amount in hand is still £366,000 higher than at the end of 1913. The companies in the London, Midland and Scottish and London and North-Eastern groups were responsible for the reduced amount carried forward at the end of last year, and also, as may be seen from the next table, for the withdrawals from reserve:—

	1913.	1922.
	Net Income.	Net Income.
London, Midland, & Scottish	19,162	21,066
London and North-Eastern ..	14,339	14,155
Southern	5,992	6,842
Great Western	7,414	8,276
	To Reserve, &c.	To Reserve, &c.
London, Midland, & Scottish	327	Dr 224
London and North-Eastern ..	415	Dr 474
Southern	2,208	53
Great Western	2,142	2,451
	Guaranteed & Pref. Dividends.	Guaranteed & Pref. Dividends.
London, Midland, & Scottish	6,327	6,334
London and North-Eastern ..	4,880	4,943
Southern	1,801	2,313
Great Western	2,833	3,377
	Ordinary Dividends.	Ordinary Dividends.
London, Midland, & Scottish	11,155	11,155
London and North-Eastern ..	11,155	11,155
Southern	11,155	11,155
Great Western	11,155	11,155

The net income of the London and North-Eastern group shows a decline of 1.4 per cent., but that of each of the others has increased substantially, the increases being London, Midland and Scottish 9.9 per cent., Southern 14.4 per cent., and Great Western 11.5 per cent. In the London, Midland and Scottish group, the Glasgow and South-Western, the Highland, and the North Staffordshire Companies are responsible for the withdrawals from reserves in 1922. In the London and North-Eastern group the Great Eastern withdrew £256,000, the North-Eastern £300,000, and the Great North of Scotland £40,000. The Great Northern added £60,000 to reserve and the North British £40,000. The South-Western also transferred £40,000 to reserve and the London, Brighton and South Coast £13,000. The Southern group, moreover, shows the largest increase in ordinary dividends, and also increases the total balances carried forward.

But it is not only in net income that the railway companies have improved their position. The agreement with the Government under which they were controlled up to August, 1921, and still more the settlement which Sir Eric Geddes made with them in respect of their outstanding claims for compensation, has enabled them to improve their balance-sheets enormously, and to make large investments from which they get a handsome revenue. The following table shows some of the principal items of the balance-sheets summarised for 1913 and 1922:—

(000's omitted.)

	Reserve and Other Funds.							
	Capital Expenditure.	General Re- serve.	Depre- ciation Ac- counts.	Govern- ment Com- pen- sation.	Total (includ- ing Super- annua- tion, &c., Funds).	Cash.	Govern- ment Securi- ties.	Stocks of Stores and Mater- ials.

* Includes subscriptions to other companies and therefore involves duplication to the extent of a few millions.

The feature of the table is the enormous increase in total reserves, with which we have included superannuation funds, which account for some £24 millions in 1922, as against about £10 millions in 1913. The depreciation funds have risen by a larger amount than the amounts due from the Government under the Railways Act.

The increase in cash is relatively small, but the second instalment of compensation money, amounting to some £23 millions, had not been paid by the Government at the date of the balance-sheets. In most cases Government securities are shown at cost, and a large proportion were probably purchased a year or more ago before the prices of gilt-edged stocks had reached their present levels; this should constitute a considerable hidden reserve. No information is given as to how stocks of stores and materials are valued, but they show in all cases a considerable reduction as compared with the end of 1921. We have now summarised, as far as the accounts permit, the gross receipts, expenditure, net receipts, and the reserve accounts of the companies. It remains to consider the conclusions to be drawn from this survey on the question of the prospects of shareholders and the public respectively.

AGRICULTURAL CREDIT.

THE reasons why an increasing amount of public attention is being given to agricultural problems are not far to seek. The boom times of the war and the years immediately following have given place to acute depression, and there are many strugglers on the land to-day who have taken to agriculture recently, and have not, therefore, derived from the high profits of war-time a financial staying power to tide them over the present slump. Also, with industrial unemployment on a huge scale, and with doubts being entertained as to whether British industry can, except in boom times, absorb the increased population of adult industrial workers, the desire to foster agricultural production by all legitimate means takes on a fresh importance. The latter aspect of the case was forcibly presented to the House of Commons by Mr Lloyd George last session. In the debate that followed his speech, Mr Bonar Law definitely ruled out the two nostrums of Protection and subsidies, but promised comprehensive inquiries into many aspects of the agricultural problem. The result of one of these inquiries was recently published in the Report of the Committee on Agricultural Credit.*

It may, perhaps, help to clear away some of the misconceptions through which this problem of agricultural credit is too often approached, if we begin by considering the question why agriculture should be regarded in the matter of credit on a different basis to other industries. If agriculture is profitable, it may be argued, it will attract

all the credit it needs. If it is unprofitable, the mere supply of credit will not make it profitable, and it is better that it should not be encouraged by artificial arrangements to prolong an uneconomic existence. On purely economic grounds, the case for subsidising an agricultural system which cannot support itself has no standing, and it must look for its basis to the war argument of the difficulty of transporting over submarine-infested seas adequate food for the population. But in regard to the special machinery of credit facilities that it needs, agriculture stands in a position different to that of any other industry. That fact has been recognised by legislation in most countries. As the Committee's report points out, the agriculturist "is often isolated and remote from the normal opportunities of obtaining credit. Compared with the manufacturer and the trader, his operations are complex, long in their cycle, and subject to exceptional risks from weather and disease beyond the ordinary ups and downs of prices and wages. For the greater part of the year, and especially when he is most in need of credit, his capital is sunk in forms of wealth difficult for anyone but an expert to value, and not readily chargeable as security for an advance." These and other considerations compel a sympathetic approach to the questions, first whether the existing credit facilities for agriculture are deficient, and if so whether the State can by encouragement, legislation, or even by material assistance, properly or usefully mend the gap in the present system.

The insufficiency of existing credit facilities for agriculture is often greatly exaggerated. One sees painted sometimes a picture of the poor agriculturist, cold-shouldered or ignored by the banks, and without any other avenues for obtaining credit. That, of course, is a gross travesty of the facts. The report under discussion brings out the fact that the five leading banks alone have £46½ millions of loans outstanding to farmers, of which £26 millions represent loans for the purchase of land and £20 millions normal loans for current trading. The Committee also describe the activities of the other undertakings providing credit for the farmer. With these we are not impressed. During a term of 70 years one undertaking has advanced only £13 millions, in spite of the fact that its resources are described as "practically unlimited." On the other hand, a small company has advanced, we learn, half a million, and it is pointed out, it has had to refuse applications amounting to between £5 millions and £6 millions. Evidently these two undertakings require to be placed in touch with each other. The Committee, while confessing to surprise at the magnitude of the bank loan figures, which, in their judgment, furnish the most convincing evidence against the general criticisms levelled against the banks, believe that there are still gaps to be filled in the provision of credit. Briefly their recommendations are:—

(a) That farmers who purchased holdings between the date of passing of the Corn Production Act, 1917, and the Corn Production Acts (Repeal) Act, 1921, should be enabled to obtain loans from "an approved society operating under the aegis of the State, such loans not to exceed 75 per cent. of the present value of the holding concerned, and to be repayable within 40 years," and (b) that short-term credit might be provided by the "immediate formation of agricultural co-operative credit societies." The Committee proposes that the State should place money at the disposal of these credit societies "on the basis of £1 for every £1 of share capital raised by the society," and it is further proposed that the funds employed for this purpose "should be derived by the application of a portion of the money derived from the sale of Savings Certificates in rural areas." This latter suggestion is distinctly interesting, although it opens up a vista of ear-marking receipts from Savings Certificates which may take curious directions if extended further. If State aid is to be granted anywhere, those who took up land under the belief that the Corn Production Act would last longer, have a special claim. But we are not impressed with the Committee's proposals. They certainly possess no novelty. For many years enthusiasts have pressed forward in this country the merits of agricultural co-operative credit societies, but it has been in vain, and British farmers are apparently not to be attracted by the successful development of these very useful undertakings in most other lands. The two most pertinent objections to these

societies usually advanced by farmers are:—(a) a general dislike to joint liability for borrowings, and (b) aversion to allow local people to know that one has funds to place on deposit, or alternatively that one is in need of funds.

The proposed long-dated credit facilities will not strike very deep at existing agricultural troubles. To offer to advance farmers 75 per cent. of the "present value" of their land, while perhaps sound finance, is scarcely a panacea for agricultural depression. These loans are to be granted, it is suggested, by approved societies which will be under Treasury rule. The State will then guarantee interest and capital of special debenture issues made by such societies, the proceeds of which will be used to provide long-term loans to farmers. These approved societies are outlined at some length in the report, but the Committee cannot recommend the establishment of a land bank, State-aided or otherwise. The reasons stated for this decision, however, are not altogether convincing, especially the contention that "the effect of lending money on easy terms may lead to the tenant paying a higher price than he would otherwise do." The absence of a land bank has certainly not prevented existing landholders, now in such a parlous plight, from obtaining possession of land at high values.

The unwillingness of British farmers to co-operate with one another probably rules out the main recommendation of the Committee as impracticable. It is also one of the root causes of the unprofitable conditions which so many farmers so often have to face. Farmers, like other producers, have to get their goods to market before they are any use. Potatoes and beans left on the fields are of no more use than coal left in dumps at the pit-head. Both have to be marketed, and marketing costs in the case of the small agricultural producer are ruinously heavy. Co-operation and combination for marketing purposes would greatly reduce these costs; but in most parts of the country all efforts to that end have failed. In the absence of combined marketing arrangements the outlook for the small farmer of arable land is poor indeed. The stern individualism of the small farmer may be natural and traditional, but it is none the less a self-imposed obstacle to progress, the existence of which is not a sound ground for the demand for State aid. That demand, if it can be sustained at all, must be sustained, not because of, but in spite of this self-imposed obstacle. We are driven, therefore, to the conclusion that the Report of the Committee on Agricultural Credit makes no practical contribution to the discussion of current agricultural problems. In one respect, however, the Committee have usefully cleared the air. They have discovered the fact that the agricultural loans of the big banks are on a far larger scale than was generally supposed, and that the field of agricultural credit which their operations do not succeed in covering, though it may be considerable, is less extensive than it is usually made out to be.

HOTEL AND RESTAURANT COMPANIES.

ON the whole, the hotel industry, judged by the figures given below, is able to present a slightly better picture than a year ago, when we examined a number of the accounts of companies engaged in attending to our rest and sustenance. We have before pointed out that the highly speculative business of hotel and restaurant management is one which lends itself more readily to private control than to the operations of a joint-stock company, and the return on capital, even in the most prosperous concerns, as shown by published accounts, is not so high as to tempt the speculator to embark on fresh ventures in this direction.

Thus even the Strand Hotel, an admittedly successful undertaking, can only show a profit of £94,939 on a share capital of £735,000. Holborn and Frascati is an excellent restaurant, we believe, and certainly very prosperous, as our table of dividends shows; but its return of £35,534 on a share capital of £382,000 is not remarkable. The Carlton reveals earnings of £40,291, but its capital is £400,000. The Gordons, with a share capital of £1,931,000, has to be content with £5,451, while the Frederick Hotels show a profit of £54,850 on a capital

of £706,250. The high dividend rate, given below, for the Piccadilly Hotel is explained by the method of capital finance adopted. The debenture capital amounts to £421,105, while the share capital is but £15,000. Thus a comparatively small surplus profit after paying debenture services was sufficient to pay a substantial rate of dividend. On the other hand, a slight fall in profits leaves little for shareholders. These ratios of profit to capital in many branches of trade would seem ample; but the cases quoted are the successful concerns, and in even their past history show how very unstable their profits are.

The following table shows the dividends declared over a period of years upon the shares of a number of companies representative of the hotel and restaurant industry:—

	1913-4	1914-5	1915-6	1916-7	1917-8	1918-9	1919-20	1920-1	1921-2

Smedley's Hydro	124	174	124	124	174	124	124	124	124
Strand Hotel, pref. ord.	9	9	9	9	9	9	9	9	9
Waldorf Hotel, 6% pref.	6	3	3	3	3	3	3	3	3

* Free of tax. † Ordinary.

Unlike many other industries, the war did not bring much prosperity to hotels, and the position in that period is reflected by the almost tedious repetition of "nil" in the above table. However, after the war the position gradually improved, although in the past year but little progress has been made. The Waldorf alone shows a noticeable improvement this year.

In the next table we set out the gross profit and net profit of these companies for the past two years, adding comparative figures for 1913-14:—

Company.	1913-14.		1920-21.		1921-22.	
	Gross Income.	Net Profit.	Gross Income.	Net Profit.	Gross Income.	Net Profit.
Burlington Hotels	£ 44,285	£ 1,750	£ 67,410	£ 3,350	£ 71,273	£ 9,753
Carlton	75,797	35,441	80,601	46,964	78,557	40,391
Frederick Hotels	339,549	31,906	162,883	46,172	141,165	54,850
Gordon Hotels	161,665	81,690	138,682	48,018	146,457	5,451
Holborn and Frascati	171,068	39,348	322,062	66,411	289,150	35,534
Piccadilly Hotel	246,492	22,228	43,238	51,972	11,802	11,802
Romano's	23,450	5,065	24,055	7,219	21,453	2,472
Savoy Hotel	182,891	42,239	220,067	126,398	230,445	142,328
Short's	23,265	21,704	43,811	42,311	38,619	37,119
Smedley's Hydro	50,938	10,072	91,919	6,554	92,886	14,335
Strand Hotel	69,507	28,376	104,314	92,954	106,229	106,229
Waldorf Hotel	36,512	17,165	44,235	34,194	46,725	36,672

* Trading profit.

The Fredericks, the Piccadilly, the Strand and the Waldorf all have a better net profit, but Romano's again shows a loss. This latter company appears to be spending upon improvements sums which are taken out of profits. For the year 1920-21 £3,796 went in this direction, while in 1921-22 £4,987 was again spent on this account. It is certainly good for shareholders to learn that "during the year a considerable sum has been expended upon repairs of a non-recurring annual character," and further that these have all been written off. The Burlington is making good headway. In the report issued in February of this year the directors recommended the payment of the current preference dividend and arrears, making two years in all, thus discharging entirely the company's liability on this account. The Savoy Hotel has experienced a very satisfactory year, and its directors point out that this success has been due in a considerable measure to visitors from the United States. Profits have advanced from £126,398 to £142,328, and £50,000 is allocated to reserve, as against £30,000 a year ago.

Gradually the hotels are concluding settlements with the Government arising out of war claims. The Gordon

Hotels' claims for compensation, other than for goodwill, in respect of the Northumberland Avenue Hotels, have been settled, while their claims against the Government in respect of the Hotel Metropole, Folkestone, the Lord Warden Hotel, Dover, and the Grand Hotel, Broadstairs, are not yet completely agreed, although a payment has been made on account. Thus we find in the revenue for the year of this company £9,528 rents received from Government, as against trade earnings of £146,457. The previous year's comparative figures are £54,354 from the Government and £97,800 on account of trade earnings. The Frederick Hotels show a trade profit of £121,891, as against £160,479 a year ago, but in this year's accounts there is also an item of £10,335, being compensation paid by the Government for the military occupation of the Hotel Great Central.

Wines, spirits, and provisions, after properties, are the most important trading assets of these undertakings, and it is always a matter of interest to examine changes in these items by comparing the figures in the last two balance-sheets. The Carlton shows stocks of wines, spirits, and provisions down from £140,584 to £109,521; the Gordon Hotels record a similar item as down from £175,928 to £148,558. Holborn and Frascati now value wines, &c., at £276,553, as against £310,877 a year ago. It is perhaps remarkable to find that the Piccadilly can work with stocks and stores amounting to £30,513, these having been reduced from £37,544. Shorts, mainly known as retailers of wines, reveal this item as falling from £116,202 to £68,362. The Frederick Hotels follow their usual practice of showing stocks and debtor balances as one item; for the year ended June 30, 1921, this amounted to £112,260, while for the year ended June 30th last it was £74,877. The Strand Hotel is always a striking example of balance-sheet clarity, and the directors have been able to reduce stock-in-trade from £22,151 to £14,351. Waldorf stocks are down from £14,595 to £13,393, and Romano's £29,963 to £21,719. Total assets of the Savoy are £272,805, as against £276,691 a year ago, stocks, &c., falling from £375,494 to £315,616; investments are also down at £106,322, showing a decline of £26,176 on the year, but cash at £139,625 is £50,498 higher.

Amongst provincial hotels, Smedley's continues its prosperous course. The capital of the company has been increased from £75,000 to £100,000 by the distribution of additional shares to existing shareholders. The reserve fund, amounting to £10,000, has been divided up, and 8s per share on each new £1 share is credited as paid, leaving 12s per share to be called up as and when required. General receipts for 1922 were slightly higher at £92,499, as against £91,142 for the previous year, while net profits improved from £6,554 to £10,145.

Our final table shows the movements of representative hotel shares during 1922, and compares the current prices with those prevailing a year ago. Yields based on recent dividends are appended:—

Company.	Amount of Share.	Prices of 1922.		Price End of Feb., 1922.	Price Mar. 22, 1923.	Present Yield.
		Highest.	Lowest.			
Burlington Hotels, Ord.	1	5	4	2	8	8 0 0
Carlton Hotel, Ord.	1	1	1	1	1	8 17 0
Do 5% Cum. Pref.	10	7 1/2	5 1/2	5 1/2	7 1/2	7 6 9
Frederick Hotels, 5% Cum. Pf.	10	6 1/2	5 1/2	5 1/2	6 1/2	8 16 0

Strand Hotel, Pref. Ord.	1	1 1/2	1 1/2	1 1/2	1 1/2	6 11 0

* Dividend in arrears. Yield calculated on a 5% basis.

As will be noticed hotel share prices have made substantial improvements on the year. Gordon Hotels £10 preference shares have moved up from £5 2s 6d to £7 5s, while Carlton £10 preference have been marked up from £5 5s to £7 10s. Ordinary shares have also been in favour. Gordons, Carlton, Shorts, and Strand Hotel all show better prices, while of late a speculative inquiry has been noticeable for Burlington Hotel shares, caused, no doubt, by the excellent year's results.

THE SOVIET STATE BANK.

The Soviet State Bank was founded towards the end of 1921, its creation being closely connected with the inauguration of the so-called "new economic policy." While its chief object was to grant credits to nationalised industries, it was also designed to provide banking facilities for private trade and enterprise, which were now authorised by the Soviet Government. At first it did not strive at improving the currency, and it was not until October 11th last that a decree was issued granting it the right to issue notes. The official data published on the occasion of the tenth Congress of the Soviets (at the end of December, 1922) show, however, that the part played by the State bank as a credit institution was, and still is, very insignificant. The official reports ascribe this to the position created by the uninterrupted and speedy depreciation of the Soviet paper currency, which makes credit a risky operation. In such conditions only short time credits at a very high rate of interest and discount are possible. During the past year the discount rate of the State Bank was measured by scores per cent. monthly, though in the summer during the short period of stabilisation of prices it fell to 2 per cent. The market rate is considerably higher; even in the summer it did not go below 4-1 per cent. daily.

In such conditions, to which must be added the absence of indispensable legal guarantees, which lie at the basis of all credit, the general scope of credit operations in the country must needs be quite insignificant. Whereas in 1913 the total balance of all the credit institutions in Russia amounted to 9,300 million roubles, in December, 1922 it was about 95 million gold roubles, or nearly 100 times less. According to official calculations, only one-thirtieth to one-fourteenth part of the total credit requirements of the country is satisfied at present (see *Ekonomicheskaja Jisn*, No. 293, 1922). In spite of the fact that several private credit establishments were opened lately, the work done by them is still on a very small scale. The State bank continues to play the dominant role, and towards the end of 1922 its balance constituted 98 per cent. of the total balance of all the credit institutions.

We give below the chief items in the balance-sheet of the board and Moscow branch of the State bank*, on January 1, 1923 (converted into gold roubles at the official rate of exchange):—

(In Thousands of Gold Roubles.)

ASSETS.	
Cash	4,562.1
Special loans to industry	24,424.9
Loans to agriculture	1,671.0
Discounts	198.9
Advances on bills	2,118.7
Credits on merchandise	2,688.1
Debtors	3,267.5
Merchandise	859.4
Foreign coin and notes	11,490.6
Foreign bills	3,502.3
Precious metals	7,834.7
LIABILITIES.	
Subscribed capital	7,471.4
Notes in circulation	11,180.0
Deposits of the Commissariat of Finance	24,306.5
Deposits of other public institutions	2,500.0
Current accounts bearing interest	6,568.0
Current accounts in gold and foreign currency	5,033.4

The total balance amounts to 95.5 million gold roubles, but this figure is fictitious to a considerable extent, since among the assets items are found unused credits, against which there are contra items in the liabilities (*Ekonomicheskaja Jisn*, No. 9, 1923). On analysing the liabilities, we see that, although one of the principal aims of the bank was to attract private capital in order to provide credit for industry, both nationalised and private, and for agriculture, up to the present it has been engaged almost entirely in distributing public grants among public enterprises. It may be seen from the balance-sheet that the largest capital

* The balance-sheets of other branches for January 1, 1923, have not yet been published, but, judging by the former ones, they are comparatively insignificant.

so far attracted—24.3 million roubles—came from the Commissariat of Finance, and is either intended for distribution through the bank, or temporarily deposited in it; of similar origin also are the 2½ million roubles—deposits of other public institutions. It is quite probable that the other items of liabilities—current accounts bearing interest and current accounts in gold and foreign currency—are only to a small extent of private origin; at least, on October 1, 1922, only one-fourteenth of these items was shown as belonging to private persons and firms, one-twentieth to co-operative organisations, and the remainder (about 88 per cent.) to public institutions (*Ekonomicheskaja Jisn*, No. 293). Thus the bank hardly attracted any private capital at that date.

As to the assets, out of the rather insignificant total of credits granted by the Bank (altogether about 31 million roubles, out of which only 1.7 million to agriculture, which is so greatly in need of credit) the major portion falls also to public institutions. There are no figures for January, 1923, but on October 1, 1922, the credits of the State Bank were distributed in the following way:—State enterprises, 64.2 per cent.*; co-operative organisations, 25.6 per cent.; private persons and institutions, 10.2 per cent. Thus the figures entirely confirm our statement that the State Bank is chiefly a distributor of State capital between State institutions.

Although the Bank has not as yet succeeded in attracting private deposits on a considerable scale, its inauguration, nevertheless, marks an important step forward towards the establishment of more normal economic conditions. In a country where all confidence in credit institutions had been lost, in part at least, as a result of a constantly depreciating currency, the problem of attracting any deposits at all seemed hopeless. Last autumn, however, the Bank announced its willingness to accept paper rouble deposits for one, two, and three months, crediting the depositor with the equivalent in gold roubles at the official rate of the day. When the deposits are withdrawn they are reconverted into paper currency at the rate ruling at the date of repayment. As a result, all depreciation risks are borne by the Bank, and an additional inducement is thus provided for the depositor. In this manner it is hoped eventually to restore confidence; while the establishment of an issue department, of which we shall speak more fully in a later article, is a first step towards the introduction of a sound currency in Russia.

The Soviet State Bank, through its foreign department, also endeavours to finance foreign trade, and has recently established a branch in London. By granting loans to Russian exporters, supplying importers with foreign exchange, and guaranteeing the payment of importers' bills, a beginning has already been made towards bringing Russia once more within the range of world trade. The real significance of the total turnover, which is very small when measured in terms of that of the large foreign banks of Western Europe and America, can only be properly appreciated if we remember that it represents, in effect, the first glimmerings of a return to settled conditions. Money remittances can now be made to almost any part of Russia through the Bank, which has already opened over 140 branches, and has correspondents in almost every European country.

More interesting still is the fact that five private banks have commenced operations in Russia; and though much remains to be done, it is gratifying to note that the first steps have already been taken in the return to a régime of free enterprise.

THE LENGTH OF THE WORKING DAY.

BEHIND many of the current controversies as to wage rates, which are once more coming to the fore, lies the equally important question of the length of the working day. In the majority of cases, it is true, the hours of labour do not form the main point at issue at the present time. In the dispute between farmers and agricultural workers in East Anglia, however, the labourers are being called upon to

* Including credits for purchases of corn, executed chiefly by the State organisations.

choose between longer hours and lesser rates, while in the building trades the employers are advocating a lengthening of the working week from 44 to 47 hours. Moreover, there seem to be indications that employers in many other industries are coming to the conclusion that the reduction in hours brought about in this country immediately after the war has not led to any noticeable increase in the efficiency of labour, and are pressing for a revision of the whole question. It is therefore not without interest at the present juncture briefly to review some of the attempts that have been made to regulate hours of labour, and to give a short outline of the system now ruling in this country.

Thanks to the great increase in productive efficiency, the last hundred years has witnessed a very considerable improvement in the general standard of living, of which not the least interesting feature has been the progressive reduction in the length of the working day. Beginning with the statutory regulation of the hours of work in the case of women and children, this principle has gradually been extended, either by legislation or mutual agreement, to almost all categories of labour. War-time experience and post-war aspirations gave a new stimulus to the movement in favour of the statutory regulation of hours on the basis of the eight-hour day. For a time this question was in the forefront of industrial problems awaiting solution, and attempts were made to secure uniform legislation on an international basis. The Washington Draft Convention of 1919 limited the hours of work in industrial undertakings to eight in the day and forty-eight in the week, but this has so far been ratified only by five States—Bulgaria, Czecho-Slovakia, Greece, India, and Roumania—and there seems to be no immediate prospect of ratification by the more important Powers.

In Great Britain the Draft Bill embodying the general principle never went beyond a first reading in the House of Commons, and, in a letter of July, 1921, the British Government pointed out to the International Labour Office that it had examined the possibility of ratifying the Draft Convention, but had found itself faced with two main difficulties. On the one hand, the various collective agreements between employers and employed which regulate the hours of labour in this country on a national basis in the different industries leave considerable liberty as a general rule for authorising overtime in excess of 48 hours in the week, according to the particular needs of particular undertakings. The rigid nature of the text of the International Convention, however, does not appear to allow of such flexibility. On the other hand, the agreements concluded between the railway companies and the unions of railway workers authorised daily extensions of work and Sunday work in excess of the eight-hour day and the 48-hour week which are not compatible with the terms of the Draft Convention. We may add that the controversies which have taken place over the application of the general principle to the special cases of agriculture and merchant shipping show clearly the dangers which must arise by attempting to standardise legislation for all countries and for all categories of labour.

It is not easy to give a short general account of the way in which hours of labour have been regulated by the series of national agreements which at present rule in this country. On the whole, however, they correspond rather to the principle of a 48-hour week than to that of an eight-hour day. This norm has been adopted by the textile industries; in the leather, hosiery, and boot trades, and in paper-making, printing, cement, and breweries, together with most of the transport industries—though under rather special conditions in the case of railways. The 47-hour week is the basis in some types of mining and quarrying, and in the various engineering and electrical trades. Certain of these, however, such as tin-plate and coal mining, are on the day shift principle; the nominal working week in the latter case being 46½ hours. Finally, there are a few special cases like building (44 hours in summer, 41½ hours in winter), and roadmaking (49½ and 44½ hours respectively), where allowance is made for seasonal conditions, while dockers work a 44-hour week.

This summary will make it clear that most British industries have accepted the principle either of the 48 or

else of the 47-hour week. In many cases, if more than eight or nine hours are worked in any one day, overtime is to count daily. The system in force is clearly more elastic, and thus, *prima facie*, more satisfactory, from the economic point of view, than that proposed by the Washington Convention.

The effect of this reduction in hours on industrial output is not easy to estimate, and obviously must vary considerably in different industries. It depends very largely on the ease with which any adjustments may be made which local conditions render necessary, for to apply a cast-iron system indiscriminately is clearly unsound. Further, in some industries its effects on output costs might well be different according as one, two or three shifts are worked daily. In general, however, it is well to remember that a reduction in the hours of labour does not necessarily lead to a reduction in output in any given case. The recent welcome increase in output in the coal industry, for example, where the weekly figures of production now surpass the average figure for 1912, and are not far short of those for 1913, shows that production has been practically maintained in spite of the introduction of a seven-hour shift in place of the eight-hour shift of pre-war days. At the same time there appear to be grounds for believing that a less rigid application of this principle than is possible under the present statute would lead to still further improvements in output.

In the building trades, however, the national agreement only provides for a normal 44-hour week, and recent experience does not lead one to suppose that this reduction has led to any increase in the efficiency of labour. Any attempt to standardise working hours at a level considerably below the 48-hour basis seems to us to be premature and unjustifiable, particularly in the building trade, in view of the great need for cheap houses; and in the docks, where all possible efforts should be made to diminish the cost of handling goods by speeding up the process. Moreover, while a reduction of hours from 60 to 48 may well add to the efficiency of labour, or, at least, leave it unimpaired, there seem to be limits set by common sense to an indefinite extension of this argument.

Notes of the Week.

Air Policy and the Future of Europe.—The Air Estimates for 1923-24, the figures of which we gave last week in a Note on the cost of national defence, have been the subject of two very important debates this week, one in the House of Commons and the other in the House of Lords. Debates in both Houses, and indeed all private and public discussions about the Air, turn definitely on a comparison of French Air strength with British Air strength. The statistical comparison is set out below:

SERVICE AEROPLANES.		Probable Position	
	Nov., 1918.	March, 1923.	in 1925.
France.....	3,600	1,260	2,180
Great Britain.....	3,300	371	575
(Excluding reserve and training machines.)			

While this country has reduced its effectives to about one-tenth of its war establishments, the French reduction is only to about one-third. Moreover, whereas about two-thirds of the British aeroplanes are overseas, three-quarters of the French establishment is in France. The true significance of this inferiority in the air becomes even more apparent when we turn to civil aviation, for national defence in the air, as Captain W. Benn pointed out in the same debate, depends in the long run more on the provision of an adequate number of competent airmen, or, in other words, upon the prevalence of the flying habit, than on anything else. In this connection he added that, whereas British civilian aircraft had only flown some two million miles between May, 1919, and March, 1922, French civilian aircraft had 1,400,000 miles to their credit in 1921, and actually flew nine million miles in 1922. The uneasiness about this comparison which the Earl of Birkenhead expressed in the House of Lords on Wednesday is, it must be confessed, widely shared; and the question of

Air policy is by no means the least difficult of the grave problems by which the Government is confronted. When the Geddes Committee was appointed in 1921, it was authorised to assume that no major war in Europe was possible for at least 10 years. Whether such an assumption remains justifiable to-day is unfortunately a question that now claims the earnest consideration not merely of fire-eaters and panic-mongers, but of all sober-minded people. There is indeed some justification for Lord Birkenhead when he declares that "we have not gained one yard in the direction of that European settlement and the re-attainment of tranquillity on the Continent of Europe which was the dearest hope of everyone four years ago." But there is a graver aspect of the matter than simple disappointment. The British nation, having watched with anxiety the steady drifting apart of France and England in their aims in Europe and in their conceptions of international relations, are now face to face with the question whether we can any longer assume that the possibility of hostilities with France may be left out of our reckoning. Lord Birkenhead somewhat euphemistically described the tone of the French Press to-day as "less warm" towards Great Britain than at any time since 1913. If that tone persists for one or two years more, it may become impossible for the Government of the day to answer with an honest affirmative the question that we have deliberately phrased above; and a Government which cannot so answer it will not be able to resist the "safety-first" demand for at least an equality with France in the Air. The definite demand for a one-Power Air standard is publicly voiced to-day; in the absence of a change for the better in Europe it might, one or two years hence, become overwhelming. The Under-Secretary for the Air told the House of Lords that equality with France in the Air would mean Air Estimates of £23,000,000 next year, and, in addition, perhaps £15,000,000 of capital expenditure. But it is not merely on the ground of economy, and all that economy means in terms of national well-being, that we should regard with horror the renewal of armament competition; such a race could, in our opinion, have only one end—another war, and one infinitely more terrible than the last. The gravity of the problem of Air policy, and of the contrast between British and French Air strength lies largely in the fact that its consideration cannot be dissociated from the whole great question of the future peace of Europe. It silhouettes sharply the urgent need for the restoration of a state of confidence that would make an international disarmament agreement possible; it emphasises powerfully the responsibility for the future of the world that rests upon the French Government and people to-day. It depends to an incalculable extent upon the policy and actions of France whether the future of Europe is to be peace and a resumption of prosperity, or war and ruin. We have so frequently expressed our sincere sympathy with France's war sufferings and present difficulties, and our fundamental conviction of the need that France and England have for each other's friendship, that we hope to escape misunderstanding when we say frankly that the only avenue to peace lies in French acceptance of the substitution in Europe of the system of international co-operation for the present reign of jealous nationalism and arbitrary dictation. All other avenues lead, sooner or later, to another war.

Lausanne and After.—The Inter-Allied Commission now sitting in London, has accepted the Turkish counter-proposals to the draft Treaty of Lausanne as a basis for further negotiations. This reduces the likelihood of a rupture almost to a vanishing point, though it does not necessarily follow that the attainment of complete agreement will be either quick or easy. It does follow, however, that the labours of Lausanne will not be lost, and this adds interest to the "Records of Proceedings and Draft Terms of Peace," which the Government published a few days ago as a Blue-book (Turkey No. 1, 1923, 30s net). Even if the work therein recorded had proved abortive, this admirable publication would have had a permanent value as a very definite step towards "Open Diplomacy" (it is noteworthy that a similar book in two volumes has been published by the French Government

simultaneously). If only the antecedents of the Treaty of Sévres had been made equally public before the signature of that instrument! Or if the same publicity had accompanied the making of the Treaty of Versailles! The cynic may, of course, object that however fully the proceedings of any international conference are published, the important things will be done in secret still, and that if you insist on illuminating the conference chamber too brightly, you will only drive its denizens into the corridors and backstairs. Such a view is not supported, however, by the experience of the League of Nations Assembly, where the proceedings are open to the public, and are not merely published after the event. In this case attitudes obstinately maintained in private discussion or in committee are very frequently and very considerably modified when the discussion is carried into the open, and there is no reason to suppose that the psychology of diplomatists should be different when they happen to be sitting in a conference of the old-fashioned kind. The Lausanne Blue-book does not, of course, give the proceedings of the sub-commissions, but only those of the formal public and plenary sessions at the beginning, and of the three main commissions in which the work of the sub-commissions was digested or rejected. But the reader is not left with the impression that anything of substantial importance has been withheld from him. The correspondence between Lord Curzon and Ismet Pasha regarding Mosul, which was probably the most important negotiation conducted, apart from the official machinery of the Conference, is duly printed as an appendix to the report of the First Commission's 21st meeting on January 23rd. The debates on the Minorities question make the most interesting reading. Ismet Pasha's rather erudite historical statement, and Lord Curzon's somewhat impatient rejoinder to it, explain, in epitome, how it is that the horrors which have reached their culmination in the last few years have come to pass. Both Lord Curzon and Ismet were sincere; each was strongly convinced of the justice of his case; and each failed to see the elements of reasonableness in the other's. So it has been for a century. The statesmen cannot understand one another, and the minorities go to the wall.

Indian Budget Crisis.—The first cables relating to the reception of the Budget statement of the new Finance Member, Sir Basil Blackett, encouraged the hope that a repetition of last year's Budget controversy in the Legislative Assembly would be avoided. Subsequent events have rudely shattered this hope. After defeating the Government on several minor, though not unimportant, matters, the Assembly has now taken the serious step of rejecting the increase in the salt duty, by which Sir Basil sought to balance the Indian Budget for the ensuing year. A year ago the Assembly also rejected tax proposals, and left the Government with a prospective deficit of £6,000,000, which subsequent events turned into an actual deficit of £12,000,000. On that occasion the Government accepted the position, and appointed the Inchcape Committee to explore the possibilities of retrenchment. This year the Government, faced by a similar position, have taken the grave decision to override the wishes of the Assembly, and, according to Delhi cables in the *Times*, the Viceroy will, if necessary, exercise his power of certifying the Finance Bill in its original form. The procedure to be adopted appears to be as follows: The Bill as originally introduced in the Assembly was to be presented yesterday to the Council of State, with a recommendation from the Viceroy that the proposal to double the salt tax (which the Assembly rejected) should be adopted. Assuming a Government victory in the Council of State, the Bill will again be presented to the next Monday Assembly, which will thus be given a formal opportunity to reverse this week's decision. But the course of action chosen shows that the Viceroy intends, if necessary, to "certify" the Bill. This, we believe, is the first case in which the Viceroy has decided to resort to the special powers conferred on him by the Government of India Act in connection with a Finance Bill; and the political importance of his decision is obviously very great. The danger of resorting to it at the present stage of slow and troubled approach towards

self-government hardly needs to be pointed out; and we can well believe the accounts of the sensation which the Viceroy's action has aroused in India. It is fervently to be hoped that the tension of a disquieting position may be relieved by a reversal by the Assembly of its previous decision. This would only require a very small turnover of votes, but can hardly be counted upon as likely. Elections to the Assembly are approaching, and in voting upon so unpopular a measure as the doubling of the salt tax, elected members no doubt had their eyes upon their constituents. In support of the Viceroy's policy, it may be urged that the importance of balancing the Budget is universally admitted, and that the Finance Bill in its original form commanded a considerable measure of non-official support in the Assembly. But these arguments do not do much to relieve our profound uneasiness at the course that affairs are taking. The special powers conferred on the Viceroy by the Government of India Act, which he is apparently prepared to use, were obviously inserted as a safeguard to be employed as a last resort in an emergency; and it is surely straining the term "emergency" far beyond its accepted meaning to make it apply to additional taxation which is estimated to bring in Rs. 4½ crores, or less than £3 millions sterling, in a Budget total of Rs. 204 crores, or over £130 millions. We sympathise to the full with Sir Basil Blackett's exposé on the need for a balanced Budget; but to risk a serious Indian crisis over a matter of these dimensions seems to us as reckless as the action of the skipper of an Atlantic liner who risks shipwreck amid ice and fog in the hope of reaching port a few hours under record. It is hardly conceivable that the Viceroy is playing a game of bluff, hoping by the adoption of an intransigent attitude to frighten the Assembly into reversing its vote. That would indeed be playing with fire. We cannot congratulate the Government of India on its handling of this unfortunate affair, and we await the dénouement with some anxiety.

Labour Conditions in South Wales.—In the South Wales coalfield this week, writes our Cardiff correspondent, the outstanding feature has been the recurrence of stoppages on the question of non-unionism. The two districts chiefly affected were those of the Maesteg and Garw Valleys. The collieries of about 11 companies were involved. They have a daily output of approximately between 7,000 and 8,000 tons, and employ between 11,000 and 12,000 miners. Since the national coal strike of 1921 there has been a revival of separate organisations of surface workers and underground craftsmen. The South Wales Miners' Federation has expressed its determination to break up these sectional unions, and in the Maesteg and Garw Valleys the federation claims to have achieved this purpose. There was a resumption of work on Thursday morning at the majority of the pits, and it is expected that the others will be at work on Friday. There was also a stoppage without notice on Wednesday at the Markham Colliery of the Tredegar Coal Company, and on Monday, March 19th, a fortnight's notice to terminate contracts on the non-unionist question was served in the Rhondda districts, where approximately over 50,000 men are employed, but of whom less than 40 per cent. actually handed in their notices. The effect of the week's stoppages has been to reduce the output of the coalfield by between 25,000 and 30,000 tons, and to entail the workmen in the sacrifice of between £20,000 and £22,500 in wages.

Employment in February.—Figures given in the *Ministry of Labour Gazette* show that a further definite improvement occurred during February in the demand for labour. The trade union percentage of unemployment was reduced to 13.1 at the end of last month, as compared with 13.7 at the end of January and 16.3 a year ago. The percentage unemployed among workers insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland was 11.8 at February 26th, as compared with 12.7 at January 22nd and 15.5 at the end of February, 1922. The course of the trade union percentage over recent years may be traced in the following table:—

TRADE UNION UNEMPLOYMENT PERCENTAGES								
	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
End of—								
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8	13.7
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3	13.1
March	1.9	0.3	1.2	2.9	1.1	10.0	16.3	..
April	1.7	0.3	0.9	2.8	0.9	17.6*	17.0	..

December ..								

* Excluding coal miners.

The total number of registered unemployed at February 26th in Great Britain and Northern Ireland was 1,376,000, of whom 1,073,000 were men. These figures represent a considerable decline during February, for on January 29th the corresponding total was 1,460,000, of whom 1,138,000 were men. In the coal mines and in steel sheet manufacture employment was good, owing to the increase in demand since the Ruhr affair developed, and also in the worsted trade, while the iron and steel and tinplate industries showed improvement in this respect.

The Cost of Living.—According to the calculation of the Ministry of Labour, the cost of living for an average working-class family fell by one point during February, and on March 1st stood at a level 76 per cent. above that of July, 1914. A year ago the figure was 86 per cent. above the pre-war level. The highest increase—namely, 176 per cent.—was reached in November, 1920, and the new figure for March 1st is the lowest recorded since May, 1917. Monthly movements of this index number are traced below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.	1923.
January 1st..	85.90	120	125	165	92	78
February ..	90	120	130	151	88	77

August	110	115	155	122	81	..
September ..	110	115	161	120	79	..
October	115.120	120	164	110	78	..
November ..	120.125	125	176	103	80	..
December ..	120	125	169	99	80	..

For retail food prices alone the index figure on March 1st was 71 per cent. above the pre-war level, having been 73 per cent. above that level a month earlier. The February decline was due to a drop in the prices of eggs, bacon, fish, potatoes, and to a lesser degree of flour, bread, milk, and imported meat. The current issue of the *Ministry of Labour Gazette* also gives a calculation referring to the cost of living in the Irish Free State. Taking mid-July, 1914, as 100, the following figures for recent dates are given as follows:—Mid-March, 1922, 191; mid-June, 1922, 185; mid-October, 1922, 189; mid-January, 1923, 190.

Stock Exchange Committee Election.—A Stock Exchange correspondent writes:—Sixty-five per cent. of members of the Stock Exchange voted in the committee election, which took place on Tuesday, 2,567 voters sending in their lists, of whom 21 spoilt their papers, thereby rendering the latter ineffective. The surprise of the election is that the chairman, Sir Wilfrid Atlay, was not returned, he securing 1,397 votes, as against the lowest successful total of 1,689 polled by the Hon. Gilbert Johnstone. One of the new candidates was also defeated, together with another member who was returned for the first time a year ago, but who has now lost his seat. The largest number of votes, 2,548, went to Mr D. M. Scott, next to whom came Mr F. H. A. Booth, "father" of the Stock Exchange Committee, with 2,525 votes. The result

of the election, so far as the public are concerned, will be to leave matters as they were before in regard to the division of commission between stockbrokers and their agents, the question upon which the election was fought this time. The majority of the new committee are in favour of agents receiving 50 per cent. of the gross commission, and the brokers getting the rest, out of which latter the brokers have to pay their expenses. A good deal of talk has been let loose over the election, but possibly the supporters of the scheme for dividing commission into two-thirds for the broker, and one-third for the agent, can claim that they have impressed upon the Stock Exchange mind the desirability of making some change from the existing arrangements. To clients it is something of a convenience to be able to deal through their bank when they want to buy or to sell stock, more particularly to buy it. This involves no drawing of a cheque; the purchase money is simply debited in their passbooks, and, slight as this attraction may appear, it weighs a good deal with some people who do not always recognise that, in sending their Stock Exchange orders through a banker, the transactions become part and parcel of a collection of others in which a broker, while executing, feels no such interest as he would do if the client was known to him, and on whose behalf he is ready to do his utmost in order to deal at the closest of prices obtainable. The Stock Exchange new financial year starts on Monday, and according to the rules the committee's first duties are to elect amongst themselves a chairman and deputy-chairman, who shall hold office until March 25th next ensuing. In the defeat of Sir Wilfrid Atlay the Stock Exchange sustains a more serious loss from the committee than its many members may at present realise, for, under his chairmanship, the Stock Exchange has attained a position of power and dignity amongst City institutions such as it never before enjoyed, or even claimed.

Governments, Solvent and Insolvent.—Like its predecessors, the forty-ninth report of the Council of Foreign Bondholders deals mainly with the minor States of Spanish America, all more or less embarrassed by exchange difficulties and the recent decline in their foreign trade, and some, in addition, by political unrest, administrative mismanagement, and their own jealousy of American financial control. Special mention, supplemented by the full text of the agreement, is made of the impending settlement of the Mexican External Debt; but the Council is pressing, through the Foreign Office, for the inclusion of the bonds of the Mexican Packing Company and the "C class" of the 6 per cent. bonds of 1913, for which the Federal Government is legally liable, although they were issued to maintain the rule of President Huerta. In Colombia, the financial situation has been transformed by the American indemnity for the severance of Panama. The coupons in arrear have been paid, the Consolidated External Debt, now reduced by drawings to £1,279,500, should be extinguished before many years have passed; large loans for public works are secured, or likely to be obtained, from American financiers, both by the Central Government and the Department of Antioquia, and \$5,000,000 of the indemnity is to be devoted to establishing a State bank. Venezuela is also comparatively prosperous; the unanimous re-election of President Gomez probably assures six years more of domestic peace; the Budget deficit has been met from Treasury reserves; the currency is at a premium over sterling; the Diplomatic Debt has been reduced to £2,435,320, and, as in Colombia, its extinction is in sight. In Santo Domingo a native Provisional Government was set up last October, but the finances are still under American control, and the debt will soon be extinguished. Ten years of similar control in Nicaragua have justified its institution, and reduced the foreign debt to £908,600. Much of the information relating to Central America and to Ecuador has been already given in the Consular Reports recently summarised in our columns, and it need only be said that Salvador is awaiting fresh proposals from American financiers, and that Guatemala continues her remittances for the debt service, but persistently ignores the arrears. Uruguay's losses on exchange should be set off against her past

profits; and her foreign bondholders should be encouraged by the circumstance that 35 per cent. of her external debt is held at home. Paraguay is in default—through her civil war; so, with less excuse, are several States and cities in Brazil and Argentina, and the Mexican State of San Luis Potosi. The State Government of Corrientes does not even acknowledge the Council's letters, and the City of Rosario gives bills instead of cash. But Lima, since the Report was printed, has paid the coupon due on January 1st. Outside America, Liberia still awaits the American loan offered during the war, but not sanctioned by the United States Congress, and the American Receiver-General of Customs, though directed by his Government to resume the monthly remittances for the debt service, has apparently not as yet begun to do so. As to the four other States dealt with outside America, the Chinese Treasury Bills and Notes are still in arrears; Turkish and Bulgarian finances remain in the melting-pot; Soviet Russia continues to repudiate liability even for the loans spent on public works; and Greece was dealt with in these columns last week. We may note, however, that the Turkish bondholders' claim to the payment in gold of the sums deposited on their account during the war in German banks still awaits adjudication, and that the Greek Debt Commission has revived the idea of a monopoly of Naxos emery put forward in its Report of 1902.

The Salt Union.—The gross profits of the Salt Union, Limited, for the year 1922 show a further decline, but thanks to a reduction in rates and taxes from £121,200 to £49,300, the net profit has increased from £162,300 to £207,900. The report states that the quantity of salt delivered during the past year showed a satisfactory increase as compared with the previous year, "the lower cost of production enabling the company to recover some portion of the trade in Fishery salt; and also to secure a larger share of the shipments to those overseas markets which are subject to most competition. To the East, in particular, a larger tonnage was sent, but less profit was realised." The following table traces the company's financial history since 1910:—

	Gross Profits, Rents, and Dividends.	Reserve and Depre- ciation.	Dividends.	Balance Forward.
	£	£	£	£
1910....	242,937	30,000	25,000*	4,561
1911....	262,006	35,000	37,500*	3,957
1912....	226,333	25,000	nil	5,104
1913....	227,261	25,000	nil	8,896
1914....	232,710	20,000	15,000*	9,338
1915....	275,314	25,000	62,000	8,862
1916....	426,066	127,000	190,000	14,317
1917....	354,817	50,000	190,000	3,597
1918....	440,074	60,000	190,000	29,326
1919....	455,148	60,000	190,000	24,007
1920....	482,844	70,000	190,000	23,274
1921....	354,990	..	110,000	21,561
1922....	336,513	..	150,000	20,228

* Preference distribution only.

Debt interest for the year absorbed £49,200, or £4,800 less. The distribution of 2s 4d per share on the preference capital represents the maximum dividend of 7 per cent. for the year, together with £28,000, the share of surplus under the capital reduction scheme. The ordinary dividend is raised from 5 to 10 per cent., but this is still 5 per cent. below the rate paid from 1916 to 1920, inclusive. After transferring £10,000 to staff superannuation fund, the balance forward is slightly reduced. The balance-sheet, an analysis of which is printed elsewhere, shows a reduction of £12,800 in the first mortgage debenture stock, although the holders of the "B" debenture stock, amounting to £200,000, have exchanged their holdings for first debenture stock. The property item shows a reduction of £141,300 at £2,030,400, and investments stand £206,700 lower, owing to the disappearance of the company's own debenture stock for this amount in the item, but cash has risen by £107,500 to £656,300.

British Italian Corporation.—The report for the year 1922 of the British Italian Corporation shows net profits of £41,000, which compare with £44,300 for 1921 and £62,900 for 1920. Provision for income-tax and corporation profits tax required £38,300, as against £33,100 in the previous year. The dividend is maintained at 4 per

cent., free of tax, and the carry forward is £1,000 lower at £26,700. The directors report that "general conditions have not been favourable to business during the past year, and the low money rates ruling have adversely affected banking profits." They also announce that the Banca Italo-Britannica has sold its holding of shares in the corporation. Changes in the balance-sheet are set out below:—

LIABILITIES.		ASSETS.	
Amount, £	Compared with Dec. 31, 1921.	Amount, £	Compared with Dec. 31, 1921.
Share capital	1,000,000 ..	Cash in hand and at banks	745,913 ..
Reserve	233,418 ..	Bills receivable ..	416,171 ..
sundry creditors ..	+ 367,932	Investments	174,111 ..
Acceptances, &c. ..	3,608,744 ..	Advances	1,261,856 ..
Profit and loss ..	68,740 ..	Cover for acceptances, &c.	3,608,744 ..
		Premises	40,742 ..
		Furniture	1 ..
Total	6,247,538 ..	Total	6,247,538 ..

The reserve of £233,418 is the amount received from the British Government in previous years, which has now become the absolute property of the company, the contingent liability to the Government having now been cancelled. Advances to the Banca Italo-Britannica still figure at £803,300, and there are cash balances with the same institution of £194,300. In order to dispel "a misapprehension which has frequently occurred" concerning the object of and the business carried on by the company, the directors propose to change the title to the British Italian Banking Corporation. This will require the approval of the Board of Trade and sanction by shareholders.

British Portland Cement.—A decline of £28,500 in trading profit is recorded in the report for 1922 of the British Portland Cement Manufacturers, Limited, but £25,000 less, namely, £125,000, is put to general depreciation reserve, and the amount available for distribution is less than £4,000 lower at £210,600, as may be seen from the table below:—

	1913-14.	1916-17.	1917-18.	1918-19.	1919.*	1920.	1921.	1922.
Trading profit ..	330,428	254,162	328,889	345,374	379,446	558,840	479,762	451,222
Interest, &c. ..	79,928	85,822	97,353	82,178	53,343	62,146	85,800	84,479

Ord. dividend ..	96,665	55,305	82,957	110,610	110,610	207,393	138,262	138,262
	(7 %)	(4 %)	(6 %)	(8 %)	(8 %)	(15 %)	(10 %)	(10 %)
Carried forward ..	64,322	72,994	87,722	91,509	136,264	181,478	186,628	188,144

* Eight months.

No change is made in the dividend, and the balance forward is slightly increased. The directors state that the demand for Portland cement in the home markets further declined during the year, despite a substantial lowering of selling prices, while the export trade continued to be adversely affected by the depreciation of the exchanges and by lower freights from the Continent than those obtainable from this country. The principal change to be noted in the balance-sheet is the transfer of the depreciation reserve funds to the property item, which reduces the latter by £875,300 to £2,534,600. Stock-in-trade stands £121,200 lower at £404,200, but investments have been increased by £96,600.

Union Corporation.—Our mining correspondent writes: The declaration in November last by this Kaffir finance house of an interim dividend of 8 per cent. was an indication of improved fortunes, there having been no similar payment on account of either of the two preceding years. Of late rumours have been current on the Stock Exchange that the final dividend for 1922 would be 2s per share, or 16 per cent. In the event this proves correct. An official communiqué intimates that the profits for the year amount to £242,100. As before, the sum of £30,000 is transferred to reserve, and a final dividend of 2s is declared, leaving the slightly increased balance of £80,000 to be carried forward. There can be no doubt that the corporation's enhanced prosperity is largely due to its association with the San Francisco Mines, whose

position has recently been referred to in our columns. On the basis of the current market price, the yield on the shares at the 1922 rate of dividend is about 10 per cent.

William Whiteley.—A substantial increase in trading profits is shown in the accounts of Wm. Whiteley, Limited, for the year ended February 14th last, in explanation of which the report states that the number of customers has again been larger than last year, and that the expenses have shown a substantial decrease. Net profit, however, while showing an increase of £52,000 is still more than £60,000 below the figure of two years ago. The table below shows results for a number of years:—

Year end Feb.	1914.	1916.	1918.	1919.	1920.	1921.	1922.	1923.
Trading profit ..	£129,478	£113,479	£136,325	£219,239	£331,874	£329,339	£219,820	£268,961
Net profit	70,632	55,481	77,745	151,562	258,567	264,989	152,251	204,295
Brought forward ..	13,917	14,215	12,345	19,651	54,808	210,016	171,961	203,834

Reserves, &c. ..	31,500	22,500	27,000	36,000	63,000	63,000	63,000	90,000
To man't shrs ..	16,000	13,000	21,000	19,236	15,008	214,687	32,000	30,000
Carried forward ..	2,554	1,824	2,189	2,919	5,100	5,108	5,108	7,299
	14,245	12,122	19,651	92,808	210,017	171,961	203,834	260,581

Reserve, contingency and staff funds are credited with £24,000, as against £32,000 a year ago, and £6,000 is paid to directors, free of tax, by way of additional remuneration. The ordinary dividend is raised from 14 to 20 per cent., the highest yet paid, and £7,208 is distributed to the holders of the £100 of management shares. The balance-sheet shows that a loan on mortgage for £111,200 has been paid off, and that the reserve for corporation profits tax and contingencies has been reduced by £118,400 to £27,400. Investments have been reduced by £103,300 to £204,100, of which the market value is stated to be £285,200. The investments include £234,000 of British Government stocks. Cash is £43,900 higher at £104,100, while deposit and current accounts in the banking department have risen by £37,700 to £533,000.

London and Lancashire and British Fire Insurance.—A circular is being issued to the shareholders of the British Fire Insurance Company, Limited, advising them of an agreement under which the London and Lancashire Insurance Company, Limited, offer to purchase the shares of the "British Fire" at a price of 11s each for the partly-paid shares and £2 15s for the fully-paid shares. The payment is to be made as follows:—1. As regards the partly-paid shares. (a) As to 6s per share by the allotment and issue of one "London and Lancashire" share for every 50 shares in the "British Fire." (b) As to 5s per share in cash. 2. As regards the fully-paid shares. (a) As to £1 10s per share by the allotment and issue of one "London and Lancashire" share for every 10 shares in the "British Fire." (b) As to 25s per share in cash. The last published balance-sheet (1921) shows a total premium income of £140,473, reserves and capital amounting to £226,662. The directors of the "British Fire" add that "the shareholders of the 'British Fire' will appreciate that some time must elapse before the directors could feel justified in recommending the payment of dividends, whereas by accepting the offer of the 'London and Lancashire' they will receive nearly three times the amount paid up on their shares, with the definite prospect of earning interest. The offer is conditional upon the holders of at least 85 per cent. of the issued share capital of the 'British Fire' (or such less proportion as the 'London and Lancashire' may, with the approval of the board of the 'British Fire' deem sufficient) accepting it on or before April 16, 1923."

Canada Life Assurance Company.—It makes one feel that Canada can no longer be regarded as a new country when one notes that the Canada Life Assurance Company, founded in 1847, has completed 75 years of business. The directors claim, with justice, that the latest year of the company has been the best year; the figures justify some self-congratulation. The new assurances issued amounted to £15,905,592, or £1,322,967 more

than in 1921. In 1914 the new business was no more than £2,798,112, which at the time was considered to be quite good. The premium income was £2,558,168 as compared with £2,212,024 in the previous year, and the assets increased by £1,347,177 to £17,805,719. The surplus of assets over liabilities is declared to be £1,655,789, of which £502,808 becomes payable to policyholders as bonuses—"dividends" in the language of Canada—during the present year. Much of the success of the office is due to the low mortality experienced; last year the claims were only half those expected under the tables. The rate of interest earned is highly enviable even in these days, when British offices have got back to their pre-war rate of net interest earnings. It was in 1922 £6 5s per cent., against a valuation rate of 3 per cent., so that there is a margin of 3½ per cent. for producing profits. The actual surplus earned during the year is put at £553,608. With the accounts as issued in this country is a list of all the bonds owned by the company. In his speech at the annual meeting the president stated that, though the assets are written down to market values when necessary, they are never written up again upon a subsequent improvement in value. This prudent course tends to provide a hidden investment reserve in addition to the special contingent fund which appears in the accounts. This strong Dominion company claims that its experience last year in Great Britain was the best that it has enjoyed during the 20 years of business in the old home country.

American Cotton Crop.—Our Manchester correspondent writes:—The Census Bureau of the United States Government has this week published its preliminary final report on the cotton crop for 1922-23. The amount of cotton ginned up to the end of February is given as 9,729,000 bales, as compared with 7,978,000 bales at the same time last year, and 13,271,000 bales two years ago. The figures have not resulted in any change in prices, and the commercial crop for this season will be, in round figures, 10,250,000 bales, against about 8,400,000 bales last year. Increased interest is being taken in the prospects for 1923-24, and the outlook at the present time is encouraging. According to private advices there is a probability of an increase in the acreage of 10 to 15 per cent. Owing to cold weather during the last few weeks it is anticipated that there will be less damage to the plants from the boll weevil. Farmers are said to be buying fertilisers on a large scale. Many things may happen during the next few months, but in Lancashire trade circles there is a disposition to expect towards the end of this summer lower prices than those ruling to-day for American cotton.

Japanese Trade and Finance.—Cabled advices from Tokyo summarising financial and trade conditions in Japan during the first half of March record that early in the month the rate of day-to-day money fell to 4½ per cent., the supply of floating credit being increased by the return of money from the provinces. But large revenue collections and heavy calls on Government bonds and other debentures combined to make this easy condition short-lived, while large imports of cotton caused a good deal of credit to be paid into the exchange banks. By the middle of the month the tone of the money market was steady, with day-to-day loans ruling at about 5½ per cent. There has been since the beginning of the month a lull in the new issue campaign. Leading commodities have, generally speaking, maintained their quotations, although the recent rise has been checked by the sluggishness both of internal and export trade. Stock market business is quiet, and security prices have been moving within narrow limits. The cotton yarn and rice markets are inactive, and so also at the moment is the market for raw silk, although in the case of the latter there is anticipation of a further rise in price. At March 15th the note issue of the Bank of Japan was 1,077 million yen, as compared with 1,118 million yen a year ago, while discounts and advances at 172 million yen compare with 83 millions in mid-March, 1922. Import values in February, 1923, were 154 million yen, and exports 122 million yen, the comparable figures for February, 1922, being imports

178 million yen, and exports 87 millions. The index number of wholesale commodity prices in Tokyo for February was 253, against 272 a year ago.

THE Board of Trade announce the receipt of a telegram from the British High Commissioner at Coblenz reporting that the Inter-Allied Rhineland High Commission has decided to adopt, as from March 25th, the German Import Tariff in the form in which it stood in April, 1922. For imports into the occupied territories of Germany, the duties of the German Import Tariff as it existed in April, 1922, will therefore supersede the present uniform import duty of 10 per cent. *ad valorem* on and after March 25th.

THE next examinations of candidates for admission into the Society of Incorporated Accountants and Auditors will be held on May 14th, 15th, 16th, and 17th. Women are eligible under the Society's regulations to qualify as incorporated accountants upon the same terms and conditions as are applicable to men.

SIR ALEXANDER HARRIS, K.C.M.G., late Governor of Newfoundland, will preside at a meeting of the Royal Colonial Institute at the Edward VII. Rooms, Hotel Victoria, on Tuesday, March 27th, at 4 p.m., when the Rev Henry Gordon, of Cartwright, Labrador, will give an illustrated lecture on "Life in Labrador."

Oversea Correspondence.

UNITED STATES.—NEW GOVERNMENT FINANCING—FURTHER BUSINESS EXPANSION—RISE IN PRICES—JANUARY RAILROAD EARNINGS.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 9.

NEW Government financing was announced this week in the form of an offering of Treasury certificates of indebtedness in two series, each dated March 15th; one is for six months, and bears 4½ per cent. interest, the other for one year at 4½ per cent. The interest rate on the one-year certificates is ½ per cent. higher than that on the last similar issue, and reflects the firmer money market now prevailing in this country. The combined offering is for \$400,000,000, approximately. In exchange for the new certificates, the Treasury offered to accept at par and accrued interest as from March 15th any Treasury certificates maturing on that date, or any uncalled Victory notes maturing May 20th next, as well as called Victory notes at par. This financing was necessary because about \$366,000,000 of Treasury certificates become payable on March 15th, together with interest on the public debt in the amount of some \$135,000,000. Called Victory notes amounting to nearly \$90,000,000, and matured war savings certificates aggregating about \$75,000,000, are also outstanding, and both are being presented steadily for redemption. On the other hand, the Treasury expects to receive this month in the neighbourhood of \$400,000,000 in income and profits taxes, although it is rather uncertain just what sum will be realised from such taxes, since this month's payments are the first to be made on the basis of the new Revenue Act and the business of the calendar year 1922. The present offering of certificates, it is explained, is intended to provide, with the balances already on hand, for the payments falling due this month over and above tax receipts; also to meet the Treasury's further cash requirements between now and May 20th, when the uncalled Victory notes will mature. Further financing will be necessary before that date to refund maturing notes, but the amount involved has already been reduced to "manageable proportions," and is expected to be still further reduced between now and then by exchanges and advance redemptions out of the proceeds of the current offering. When the present month's operations are completed, there will remain outstanding only a little more than \$1,000,000,000 of Treasury certificates, which Secretary of the Treasury

Mellon considers "a remarkably low total for this stage of the Government's post-war financing." It is evident that the Treasury Department is continuing its efforts to handle necessary financial operations in a way that will not seriously disturb the money market. As indicated, the interest rates on the new certificates are in line with the existing money market, and all signs now point to a heavy over-subscription to the offering. As a matter of fact, the interest rates are somewhat better than the present market price of outstanding issues. For instance, the one-year 4 per cent. certificates maturing December 15th of this year have been selling lately on a 4.07 per cent. basis, approximately.

The San Francisco Federal Reserve Bank raised its rediscount rate this week from 4 to 4½ per cent. In all of the twelve Federal reserve districts throughout the country, therefore, the rediscount rate is now the same, namely 4½ per cent. There has been considerable talk this week about a possible further increase in the rate, especially by the New York Federal Reserve Bank, but there is nothing in the latest weekly Federal Reserve Bank statements that indicates the likelihood of such action for the present at least. The total of rediscounted bills for the entire system showed a further heavy decrease this week, while the New York Federal Reserve Bank's rediscounts fell to the lowest amount reported since the middle of January, and its reserve ratio rose to 83½ per cent., the highest recorded since last November. What might happen should there be a big increase in the use of credit for speculative purposes is another matter; but as one competent authority correctly points out, "such speculative expansion would itself have direct and powerful effect on the New York Federal Reserve Bank's loan account and reserve ratio."

Trade and industry generally have shown increased activity this week, and the price situation has become decidedly stronger. Numerous advances have occurred in many markets. Reflecting the further rise in raw cotton above 31 cents, all cotton goods, both finished and unfinished, have ruled much firmer; and, as a result of the recent heavy buying for spring and fall requirements, additional lines of cottons have been withdrawn by manufacturers owing to sold-up conditions, and to a desire on the part of mills and selling agents to prevent, if possible, over-purchasing by their customers at the present abnormally high prices. Manufacturers do not wish merchants to load up with high-priced goods which might become burdensome in the event of a sharp decline in prices later on, as happened a year or so ago. The further rise in Japanese raw silk prices to the highest level since May, 1920, has quickened buying of silk piece goods, which were already moving in exceptionally large volume to retail distributors; but the advance has caused increased concern to manufacturers, who fear that the higher prices which must be asked, if raw silk holds around present levels, will seriously curtail consumption of silk goods and divert a great deal of business to artificial silk merchandise. Practically all iron and steel products have been advanced, with buying more active and production at the maximum permitted by present fuel and car supply conditions. Further heavy railway purchasing of locomotives and cars is reported, together with an extensive demand for material from automobile and implement manufacturers, as well as makers of structural steel. Virtually all building materials have reached higher levels, and it is noteworthy that reports are being received from several parts of the country that high prices are actually holding back some building operations, and that the future of building generally is threatened by possible further advances. Advances which have just come to hand show that in many lines of industry activity during February was equal to or exceeded that witnessed in January. Pig-iron production showed a daily average last month of 106,935 tons—a total not reached since March of 1920. Car loadings for the week of February 24th exceeded those in the corresponding week for three years past. The February output of automobiles—270,995 cars and trucks—has been surpassed only twice in the history of the industry, namely, in June and August of last year, when 289,011 and 272,538 cars and trucks respectively were produced; the February automobile output was 125 per cent. greater

than in the same month a year ago. The record of building permits granted last month, based on returns from 149 cities, shows an aggregate value of \$216,748,197, as against \$190,551,939 at the same cities for January, and of \$133,011,394 for February of last year. The February total, which is the largest ever recorded in the second month of the year, shows a gain of nearly 14 per cent. over January, and about 6½ per cent. over February of 1922. Obviously the figures, to a large degree, confirm and explain the reports of exceptionally brisk demand for all building materials, and of increased production of the latter where weather conditions have permitted. It is interesting to note that the February building expenditure was larger than the monthly average for 1922, which was the biggest year in the country's history.

The marked strength of prices in February is reflected in Bradstreet's index number as of March 1st, which was \$13.9332. That figure represents a gain of 1.5 per cent. over February 1st, 20 per cent. over March 1st a year ago, 17 per cent. over March 1, 1921, and of 31 per cent. over the low point of June 1, 1921. It shows a reduction, however, of 33.2 per cent. from February 1, 1920, which was the high point of all time. As compared with August 1, 1914, the advance amounts to 60 per cent. Sharp advances last month in textiles and metals, and smaller increases in breadstuffs, provisions, oils, naval stores, building materials, chemicals and drugs, and miscellaneous commodities, combined to offset slight declines in live stock, coal and coke, and hides and leather.

Earnings reported by the Class 1 railroads for January made a better showing than those of any month since the carriers were returned to private ownership and control. Their net operating income, according to reports filed with the Interstate Commerce Commission, amounted to \$60,654,700, representing a return at the annual rate of 5.54 per cent. on their tentative property valuation. That figure is only \$5,000,000, approximately, below the amount designated by the Commerce Commission as a fair and reasonable return. It compares with \$29,486,000 for the corresponding month of last year.

GERMANY.—RUHR—FINANCES—EXCHANGE AND INFLATION—BOURSE—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, March 19.

THE Ruhr situation has undergone no change; industry in the occupied district is working tolerably well, though in general it is selling only locally; and in the unoccupied provinces the present high gold prices are having more effect than the cessation of Ruhr fuel and metal deliveries. Nothing either on the French or the German side indicates an approach to a solution. The only important question now pending is whether Germany will make a new formal offer. The Cabinet has not made any request for English or American intervention, but merely made reports to London and Washington. There seems this week to be more prospect that Dr Cuno will make a new offer; if so, it will be more in response to English and American criticism than in belief of success; the failure of the British plan and the ignoring of Herr Bergmann's plan has made Germans believe that no practicable offer will be considered, and an offer based on a mere gradual withdrawal of French and Belgian troops would not be well taken by public opinion. The public is told that the issue is whether the Ruhr measures injure Germany or France most, and that so far Germany has suffered less. This may be undue optimism, because a harder strain will come as soon as the exhaustion of the large coal and iron supplies in unoccupied Germany makes necessary a further increase in the value of imports. With native coal and iron prices at near foreign prices, the individual consumer has no reason to fear importing; but this depends on the ability of the Reichsbank to keep the mark where it is.

After a struggle with the combined "bourgeois" parties, the Bill adapting tax rates to the currency depreciation has been passed in a form resented by the Socialists. All direct taxes are amended. The new income-tax is 10 per cent. for the first 400,000 marks, 15 per cent. on the next 200,000 marks, 20 per cent. on the next 200,000 marks, and so on progressively, being

40 per cent. on the third million, and 60 per cent. on taxable income exceeding 7,750,000 marks. As the last sum has probably at present a buying power of not more than £120, the rates seem excessive. The rates of the triennially assessed property tax, after a free limit of 400,000 marks rise from 1 per mille per annum on the first 1½ millions of taxable capital wealth to a maximum of 19 per mille. In the first years these rates are, according to the amount of taxable wealth, doubled or trebled. The rate for public companies is 1½ per mille, with a supplement of 150 per cent. The succession tax rises from 10 per cent. on over 400,000 marks to 100 per cent. The forced loan, assessed at the same time and under the same conditions as the property tax, is 1 per cent. from the first 600,000 marks, rising to 10 per cent. on property exceeding 6,000,000 marks. The corporation tax (company income-tax) is 15 per cent. on the profits paid to stockholders in dividends or in any other form, the rate being increased by 25 per cent. in the next few years as compensation for the suspension of the 10 per cent. tax on interest and dividends (*kapitalertragsteuer*). Experience has shown that this tax is not worth collecting from the ever-dwindling real yield of fixed-interest securities; and the tax is abandoned until stabler currency is established. Hitherto the real burden of the nominally very heavy direct taxes has been largely escaped by means of late payment. This is to be prevented by the new provision of 15 per cent. penal supplements to taxes paid late, 20 per cent. where the unpaid sum exceeds 10,000 marks. This will be effective only if the currency is fairly stable; with the conditions of 1921 and 1922, a taxpayer would still profit by delaying payment and bearing the fine.

The beer tax is to be increased. Gratis shares or shares offered to old shareholders at lower than Bourse prices are now subjected to a special tax (*bezugsrechtsteuer*), based on the Bourse quotations. The tax is payable by the companies, and even when old shareholders do not exercise their options. The Customs gold surcharge has been reduced to 524,400 per cent. (5.245-fold the nominal). The Industry and Trade Congress has recommended keeping accounts in "firm" (not necessarily gold) marks, and the introduction of gold deposit accounts. The Bankers' Central Association has proclaimed against gold accounts. Some provincial savings banks are taking deposits on the "wertbeständig" principle, which obliges them to repay an increased sum in paper marks if prices rise. A Brandenburg communal concern has raised a loan in coal, interest to be paid, if desired, in electric light or power. The floating debt of discounted Treasury bills on March 10th was 4,345,265,907,000 marks, having increased in ten days by 757,019,873,000 marks. Since the beginning of the financial year 1922-23 617,366,161,000 marks were paid for foreign currencies needed for fulfilment of the Peace Treaty.

The foreign exchanges remain practically unchanged, and official utterances imply that this abnormal condition can continue for an indefinite time. The effect of the inflation is left out of account in these calculations. Inflation proceeds headlong, and though the absolute new inflation will probably not further increase if the mark holds, the effect of the enormous issues on prices, and therefore ultimately on the exchanges, must be taken into account. Unofficial indexes show in the last days a further small price-fall, which is probably due in part to forced realisations, caused by money shortage, of goods bought at higher prices. The index figure of imports naturally remains unchanged, and were it not for the inflation relative price-stability would seem ensured until some outside factor sends the mark up or down. But with home prices no longer being driven violently down or up by exchange fluctuations, and with them fairly near the international gold level, the inflation must soon have effect. In so far as the quantity theory applies, the average monthly increase (January and February) of 1,100 milliards upon a circulation which totalled only 1,280 milliards at the beginning of the year must have effect. Circulation on March 7th was 3,781 milliards, or nearly threefold that of January 1st. If the absolute weekly additions to circulation remain more or less unchanged, as will probably be the case if the mark holds, the rate of multiplication of the total circulation will naturally slacken; but even then the increase must be rapid enough

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

to produce a home price-rise. The case of Russia, where for a long time the foreign exchanges played no rôle, illustrates this; there was an almost calculable relation between output of money and rise in prices. The present stability of the mark must therefore, it seems, be ultimately shaken, because a new price-rise, coming after prices have risen nearly to world-market level, would check export. Already calculations are published to show that Germany could not deliver certain kinds of machines to America at a lower dollar exchange than 18,900, to England 19,600, which figures are very near the present 21,000.

Stocks last week rose slightly. The *Frankfurter Zeitung's* index for home dividend-payers shows on March 16th 808,565 against 725,415 a week before. Berlin stockbrokers have doubled their commissions. The Bourse proposes to demand security in dollars from its members. To-day the market opened weak and dull, later becoming more active, but only certain special stocks were in demand. Home loans were bought, mainly 5 per cent. War Loan, apparently in connection with American interest in the Gold Loan. Colonial securities were active. War Loan was quoted at 90, Fours 1,150, 3½ per cents. 660, Threes 4,450, Forced Loan 50, Colonial Fours 11,250, Savings and Premium 260, Prussian Threes 200, Hamburg Staats-Rente 3½ per Cent. 350, and Berlin Fours, 1904, Ser. 2, 200.

January foreign trade values (weight figures already reported) were:—Imports, 563,800,000 gold marks, against 589,800,000 gold marks in December, and a monthly average of 516,700,000 gold marks in 1922; exports, 311,400,000 gold marks, against 423,000,000 gold marks in December, and an average of 330,800,000 gold marks. These gold mark values are for 92 per cent. of the total value estimated with the help of private experts, the remaining 8 per cent. being summarily reckoned on the basis of the 92 per cent. The gold mark values are at best approximate. The West German textiles industry is in a bad way, being affected by inability to deliver to

the unoccupied provinces and by a general slackness of buyers. Working hours are being reduced. The potash export branch is reported to be on the eve of a new boom, owing to American measures for increasing the percentage of potash salts in fertilisers. The artificial silk industry reports a large increase of production in 1922. Owing to the rise in gold prices the Merchants' Association has demanded the abolition of the Foreign Trade Control. Apart from the minimum export price system, which is considered to be no longer necessary, the official procedure, the delays, and the fees imposed are complained of. Bankruptcies in February were only 17, a new low record, against 24 in January and 123 in February, 1922. Shipping in Bremen and Bremerhafen in February was:—Arrivals, 308 vessels of 339,453 net tons, against 176 of 221,878 tons in February, 1922; departures, 295 vessels of 337,393 tons, against 182 vessels of 248,315 tons.

(FROM OUR CORRESPONDENT.)

OTTAWA, February 26.

FROM coast to coast Canada has experienced a month of unprecedentedly cold weather; at least Eastern Canada has not often enjoyed such a continuous spell of low temperature. The snowfall has been heavy, and costly for the railways; and in the West there have been severe blizzards, which have tied up traffic on many branch lines. These conditions have seriously militated against active business, and both wholesalers and retailers have felt their effects. In addition, Central Canada has been suffering severely from fuel scarcity. Canada owes it to President Harding and Mr Hoover that an embargo on American exports of coal to Canada, which many members of Congress demanded, and which would have caused real hardship in Ontario, has not been imposed; but, even as it is, in Ottawa, Toronto, and other cities coal is being doled out to householders in ton and half-ton lots; the quality is not good and the prices are high, \$20.50 per ton being charged in Ottawa for anthracite. The public have become exasperated at the apathy of the Government to this vital problem, and there is a growing demand that they should not be left at the mercy of American charity, or, rather, the American coal trust. If the mineowners of South Wales, some of whom have ventured into the Canadian market this year, cared to develop it, they would probably find it profitable. With spring gradually moving northward, the fuel crisis is now over for this year, but its repetition winter after winter is getting upon the nerves of the public.

The Franco-Canadian commercial treaty has come up for ratification in the House, and has not been spared criticism. Mr Fielding intimated that the loss of revenue from the concessions granted to France would be about \$850,000, but the opposition contended that the estimate was too low, as other nations would have to benefit by the favoured-nation clause. But the main indictment against the pact was that it has lowered the duties on a long list of luxuries which were stipulated by the Liberal platform to be the special object of taxation. The Conservatives contended that the changes would put out of joint the whole protectionist system; the treaty, for instance, left the duty on woollens at 28½ per cent., but lowered the rate on laces 15 per cent., and the Conservative view is that the workers and farmers will not tolerate such a discrepancy in favour of the rich. Mr Fielding also had to confess that the French duties on wheat and oats would not be any lower, and only the lumber trade in Canada will materially benefit. France also maintains in full force her preferential system for her colonies, and, according to the critics of the treaty, makes other reservations which impair its value. Mr Fielding was careful to enter a caveat against too high hopes being based on the treaty, but denied that one of its effects would be to lessen the

value of the British preference. He has also promised to make adjustments of the domestic Excise duties for the benefit of the Ontario wine-growers, who have, strange to say, been thriving under prohibition, and see dangerous competition in lowered duties on French wines.

The estimates for the fiscal year 1923-24 have now been tabled, and total \$427,511,236, as compared with total estimates for 1922-23 of \$479,171,392. The decrease of \$52 millions is very welcome to the country, but the supplementary estimates which are forced upon every Canadian Finance Minister will probably reduce it. The most important decline is in the railway estimates, whose demands upon the public treasury have been curtailed by \$24,750,000; last year they absorbed \$97,750,000. Provision was made last year for \$9,550,000 for housing loans, and there is no parallel item this year. Under consolidated revenue services the main decreases are:—Interest on public debt, \$2,379,709; pensions, \$612,529; public works, \$955,813; labour, \$1,304,000; Canadian Mounted Police, \$313,825; soldiers' land settlement, \$3,600,000; soldiers' civil re-establishment, \$2,711,500. The chief items of increase are:—Immigration and colonisation, \$1,316,490; subsidies to provinces, \$718,758; Indians' education, \$500,000; and post office charges, \$778,641. The capital charges show a total decrease of \$1,253,490, and Mr Fielding has evidently been fairly successful in checking the rapacity of members for public works in their constituencies. The total revenues available for the current fiscal year will be somewhere in the neighbourhood of \$400 millions, but several items like the arrears of the business profits tax will be smaller next year, and unless new taxation is imposed the Budget will once more have to forecast a deficit.

The trade returns for the twelve months ending January 31st are regarded as reasonably satisfactory. The domestic exports, at a value of \$902,823,445, show an increase of roughly \$135 millions over the figures for the previous period. Imports at \$778,948,901 are almost identical with last year's, and the total trade increase, taking into account exports of foreign origin, is approximately \$135 millions. It is an astonishing commentary upon the tariff changes made by Mr Fielding in his first Budget, which were claimed to be downward, that under the Liberal régime \$11 millions' worth more of Customs duties have been collected on the same volume of imports.

There is little hope of any substantial tariff reductions in the forthcoming Budget, for during the debate on the French Treaty, Mr Fielding, to the amazement of the House, repudiated any responsibility for the plank in the Liberal platform which pledges the party to an increase of the British preference to 50 per cent. of the general tariff. As after this platform had been ratified by the Liberal convention Mr Fielding stood as a candidate for the leadership the incident has left a very unpleasant impression.

It is expected now that the Government will propose some amendments to the Bank Act; their tenour is not known, but they will not be drastic. The friends of co-operative rural credits have received a severe shock from the report of a special commission, consisting of a sound economist and a veteran farmer, who were instructed to examine the operations of the rural credit societies of Manitoba. They were run on a local adaptation of the Raiffeisen plan, but apparently political influences were allowed to bedevil the whole system from the start. There was no proper supervision or audit, records were badly kept, and ordinary business principles were not observed. The local directors were allowed to lend freely to themselves and their friends; 259 local directors of societies secured loans for themselves, and the amount which they allotted themselves was, on the average, double that lent to the ordinary borrower. The shareholders in the societies only contributed as paid-up capital \$47,850; the municipalities and provincial government doubled this sum, and on this a superstructure of credit through which three million dollars have been advanced on loans has been built. The report makes certain practical recommendations for the salvaging of the system, but it states that the capital fund of many of the societies will be seriously impaired, and the provincial treasury may have to become responsible for a heavy loss.

The grain markets are still bearish, but farmers are

deriving great encouragement from the prices now available for good fat stock, and also for high-grade cattle for breeding purposes. The Minister of Agriculture has announced that the arrangements for the removal of the British cattle embargo will probably be complete about April 1st, and there has come further welcome news of a large reduction in ocean freight rates for cattle. It will now be possible to resume on an extensive scale a trade which has been very spasmodic for some years, and cattle prices in most of the markets have already risen. Many breeders are evidently looking forward to steadier and more profitable conditions in the cattle trade; hence the demand for high-class stock. Fat hogs of good quality are also scarce, and are bringing good prices.

The Bank of Commerce's index number for February shows a decided rise in wholesale prices, both for imports and exports. The import number now stands at 165.29, and the export number at 151.97, as compared with 161.65 and 146.26 a month ago. The combined number is now 158.63, as against 153.95 last month. The rise in the import number is due chiefly to increased prices for cotton, metals, and coke; in the export number to wood pulp, silver, and cattle. Sterling has been rising steadily in value, and one day was within six points of par. The stock markets have been lively, and there has been a steady demand for high-class bonds.

In January there was a considerable contraction of employment, but a recovery is now recorded, and the employment index number now stands at 89.5, as compared with 86.3 on January 1st and 78.9 on February 1, 1922. In mining circles there is great interest over new discoveries in North-Western Quebec, in the district adjacent to the well-known Porcupine and Larder Lake fields. A typical rush is now in progress to this new field, which is known as the Rouyn, but it is too early to form any real estimate of its possibilities. Both silver and gold are claimed to exist in paying quantities. Meanwhile, however, there is a serious shortage of power in Northern Ontario, and prosperous mines like the Hollinger are faced with the prospect of curtailing production.

**AUSTRALIA.—RAILWAY RESULTS—EXPORTS AND
THE EXCHANGE OUTLOOK.**

(FROM OUR CORRESPONDENT.)

MELBOURNE, January 23.

THE reports of the railway departments of the six Australian States and the Commonwealth Government for the financial year ended June 30, 1922, show an improvement in the final result as compared with the preceding year, the aggregate deficit after providing for interest being reduced from £4,569,843 for 1920-21 to £3,120,524 for 1921-22. This improvement is due to the increase of £2,264,811 in gross earnings, owing to the more prosperous state of the country districts as the result of two good wheat harvests and the recovery in the wool market. On the other hand, there has been no further increase in working expenses to follow the increase of nearly 5½ millions in the previous year, but interest has further increased by nearly a million. The New Zealand figures (to March 31st last) are in contrast with the Australian figures, as there has been a falling off in gross revenue, with increases both in working expenses and interest. During the war New Zealand compared favourably with Australian railways, but since 1918 expenses have gone up largely in New Zealand, while during the last year or two that country has not participated in Australian rural prosperity. The following is a summary of the results for the last two financial years in Australia (six States and Commonwealth) and in New Zealand:—

	Australia.		New Zealand.	
	1920-21.	1921-22.	1920-21.	1921-22.
Gross earnings	£ 35,835,401	£ 38,100,212	£ 6,908,531	£ 6,643,591
Working expenses	30,154,943	30,017,105	5,636,601	6,237,727
Net earnings	5,680,458	8,083,107	1,271,930	405,864
Interest	10,250,301	11,203,631	1,628,456	1,722,305
Deficit	4,569,843	3,120,524	356,526	1,316,441

* New Zealand interest assessed at 4 per cent. on average capital.

The Australian interest is taken at the actual amounts shown in the various reports except in the case of the Trans-Australian line to Western Australia, in which case interest is allowed at 4 per cent. instead of the nominal amount officially debited, which is only equivalent to 1.21 per cent. The Australian net earnings, £8,083,107, are equivalent to about 3¼ per cent. on capital, and as interest is equivalent to 4½ per cent., the loss of £3,120,524 is equivalent to about 1¼ per cent., against about 1½ per cent. for 1920-21. The New Zealand report does not show interest, and a higher rate than the 4 per cent. assumed above would make the deficit so much worse.

Some of the Australian railway reports during the last two years have been dwelling upon the need for greater progress in country development in order to increase the volume of railway traffic upon a sound basis. Various statistics indicate that the volume of production, as distinguished from gross values at the high prices of the last few years, has made little progress since 1914, while the larger part of the increase in population has been in the metropolitan cities, thus helping suburban passenger traffic, but contributing little directly to the earnings of the country lines.

The outlook for Australian exchange on London is affected by the fact that the unsold balance of the wool clip is smaller than twelve months ago, owing to the greater progress made in selling the current season's clip, and also by the much smaller quantity of wheat that will be available for shipment during 1923. Wool sales in Australia on account of the current season's clip up to Christmas were 836,740 bales, or an increase of 440,872 bales as compared with the corresponding period a year ago, when the actual sales included a much larger proportion of wool carried forward from the preceding season. The sales of current season's wool this season give a higher value, owing to the advance in merino wools during the last few months. As regards the wheat harvest, business calculations are now for a yield of only about 92 million bushels, against about 129 million bushels last year, and nearly 146 million bushels two years ago. After allowing for local consumption for food and seed, and for a stock to carry forward at the end of 1923, the quantity available for export may be reckoned at about 40 million bushels, shipments being likely to be prolonged owing to the disposition of farmers to hold. The total value of exports of wheat and flour from Australia during 1923 will probably be £10,000,000, or a little over, against over 22 millions sterling for 1922 and 46 millions sterling for 1921. Thus with less wool remaining to be dealt with than a year ago, and with a smaller wheat harvest, the aggregate value of Australian exports will shrink after March or April. Against this imports are larger, the value for the five months ended November 30th being about 19½ millions sterling in excess of that for the corresponding period of the previous financial year, while fresh Government borrowing in London is on a reduced scale. By the middle of 1923, therefore, Australian balances in London are expected to be in a considerably different position from that at the middle of 1922.

**CZECHOSLOVAKIA.—CURRENCY POLICY—BUSINESS
CONDITIONS.**

(FROM OUR CORRESPONDENT.)

PRAGUE, March 9.

THE question which still excites most interest here is the value of the crown. Even the most influential political party is divided on this issue, as some people still hope for a further rise with a view probably to the payment of interest on foreign loans falling due, and the necessity of finding more money for public works. It has become known that £4,000,000 of last year's loan has still to be paid to the Government. This amounts to something like one-fifth of the amount of the Investments Budgets. On the other hand there is the new liability for the Austro-Hungarian State Railways, of which by far the greater portion—very nearly 75 per cent. of the total—falls to be paid by this country. It is hoped that the amount of the American debt, which is in the neighbourhood of 25 million sterling, will first be ascertained, and then consolidated and settled

on equitable terms as regards repayment and interest.

Others contend that the stabilisation of the crown at its present level is the best thing for the country, while a third contention is that it should be stabilised at a lower figure. The adoption of this last proposal would, of course, tend to a great revival in trade generally, and do much to increase employment, but the difficulties that would arise in the matter of wages would be great. On the whole, the middle course of stabilising at about the present price would seem to be most desirable.

Dr Englis, the able and conscientious ex-Finance Minister, who refused on principle to accept the position vacated by the death of Dr Rasin, has written an article in a daily paper defending his views as regards stabilisation, which were stated, as many thought, unanswerably last summer. He then predicted the commercial crisis which is still upon us, while he now sees nothing in the future but a financial crisis if deflation is proceeded with still further. That this is the policy of the Government is confirmed by the most recent declaration of the new Finance Minister, M. Becka. The deflationists are in power, so we may expect a further rise of the crown, accompanied by more unemployment, more purchasing power, and an increasing currency reserve. The prospect is certainly not encouraging. Possibly a further loan can be obtained. But it seems to be forgotten that loans involve the payment of interest and eventually of principal. Meanwhile, the national indebtedness is rising with no corresponding increase in revenue, or any prospect of such increase in the immediate present.

The demand for cheaper transport is becoming more insistent, and indeed something will have to be done before long. Wood is said to be rotting in Slovakia on account of the expense of transport. It can compete neither with Roumanian wood in the south, nor with Bohemian wood in the north, so Slovakian paper factories are being transferred into Hungary. Some of the larger factories in Bohemia, with up-to-date machinery, are doing well and exporting, though restoration of the prosperity of the glass or steel trades does not seem possible at present while the crown remains so high and while transport charges are so heavy as is now the case. The improvement in business generally is still apparent, but it has no permanent element about it. Orders are limited, and many of them of old standing in the iron trade, while the Ruhr operations, which are favourably affecting coal, coke, chemicals, &c., cannot continue for ever.

The latest return as to financial liability shows it to have increased by nearly 400 millions, while the increase of currency and metal balances together amounts to 6 millions only.

GREECE.—A LEVY ON CAPITAL—NATIONAL BANK LOAN TO THE STATE—INCREASE OF CIRCULATION—COST OF LIVING.

(FROM OUR CORRESPONDENT.)

ATHENS, March 7.

THE latest financial measure of the Government, taken despite strong opposition by the Chambers of Commerce and other responsible persons who criticised it as untimely, is a law imposing a levy on capital. This tax is levied for once, at a progressive rate, on all personal property and real estate possessed in Greece on December 31, 1922, old style. Foreigners are subject to the tax as regards their property in Greece if they had been living in Greece for more than one year before January 1/14, 1923. Moreover, Greek property abroad, personal and real, is liable to this tax if acquired after August 1, 1914. Foreign corporations established in Greece are subject to the tax in respect of their capital employed in Greece. The property of the King, of the State, of foreign States, of Municipalities, of legal persons of a public character, of benevolent, provident and mutual help societies, of religious establishments, of agricultural and other co-operatives, of scientific societies, and of diplomatic representatives of foreign States is exempted from the tax. Foreign capital and Greek capital imported from abroad and deposited with banks or other credit institutions in Greece on December 31, 1922, savings bank deposits and bank deposits under 20,000 drachmæ are not considered as tax-

able property. Foreign securities owned by foreigners residing in Greece and Greek State bonds are also exempted from the tax. Mortgage debts and other personal debts, duly proved, as well as certain taxes paid during the financial year 1922-1923, are deducted from the taxable property. The law provides a thorough and complicated system for assessing the property and levying and collecting the tax, which, however, it will be very difficult to apply. Though the Minister of Finance expects a revenue from this tax of about 2,000 million drachmæ, in view of the extremely complex nature of the tax, of the psychology of the taxpayer, and the unpreparedness of the Revenue departments for the application of such imposts, evasion on a large scale will probably take place, despite the penalties provided for in the law. Therefore, the actual revenue from the tax may fall considerably short of the Minister's estimates. The tax is levied at a progressive rate ranging from 2 to 20 per cent., with a non-taxable minimum of 50,000 drachmæ. The capital of limited liability companies is taxed at a flat rate of 6 per cent., the shareholders deducting from their property the value of the shares held by them. The tax is payable in ten half-yearly instalments. Interest at 4 per cent. per annum is charged for the second and the remaining instalments from the expiration of the period at which declaration of the taxable property must be made up to the end of the month at which each instalment falls due. A discount of 20 per cent. is allowed for the immediate payment of the whole tax.

Simultaneously with the publication of the law imposing the above tax, a convention has been signed between the Government and the National Bank, by which the latter, in exchange for an increase of its right of issue of banknotes for 750 million drachmæ, undertakes to grant forthwith to the State a loan of an equal amount, secured by the yield of the above tax and by that (so far as it is realised in paper drachmæ) of the law imposing an obligatory cession of gold to the State. The Government is thus discounting for 750 million drachmæ the proceeds of the tax on property. The revenue from the above sources will be deposited by the Tax Commissioners with the National Bank of Greece, and will be utilised by the latter for redemption of the new loan, the surplus, if any, to be used for redeeming previous State loans from the bank against forced currency. For every part of debt thus extinguished an equal amount of banknotes will be withdrawn from circulation. Moreover, the gold to be ceded obligatorily to the State by virtue of the recent law will be collected by the National Bank on behalf of the State, and utilised as cover for the new issue.

The recent heavy taxation and the continued depreciation of the drachma are reflected in a rapid increase of the cost of living, as the following index numbers of retail prices show:

1914	100
1922 October-November	1010.4
" November-December	1056.4
1923 December, 1922-January, 1923	1107.5
" January-February	1252.5

From March 1st the Gregorian calendar has been adopted in Greece for all civil transactions, the Julian calendar still remaining in force only as regards religious matters. The Governor of the National Bank of Greece, Mr D. Maximos, having resigned, Mr A. Dionède, an ex-Minister and former Vice-Governor of the Bank, has been elected Governor at an extraordinary meeting of the shareholders of the bank.

Letters to the Editor.

BRITISH RAILWAY ACCOUNTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The interesting articles which you are publishing of the railway accounts for 1922 induce me to ask for space to call attention to the anomalous position of this matter at the present time.

The annual accounts of the separate companies are compiled in a form prescribed by the Railway Companies (Accounts and Statistics) Act, 1911. They are fairly com-

plete so far as statements of capital and revenue receipts and expenditure are concerned. They also give a good deal of what I may call "static" information as to the property (miles of line, number of vehicles, &c.) represented by the capital. But on the "dynamic" statistics, those of operation, that is, the use of the property and its annual output, they are almost wholly silent.

Sir Eric Geddes, soon after he became Minister of Transport, under the authority of the Ministry of Transport Act, 1919, called upon the companies to furnish to him adequate monthly statistics of operation. The obligation to furnish them has been made permanent by the Railways Act, 1921, and they are now published every month, both for the separate companies, and for the railways as a whole, by the Ministry of Transport. But each issue costs 2s 6d, and the bulk of the information is too technical to be of use to non-railway readers. On the other hand, the summary in each issue, giving the volume and the variations of the traffic, is of real interest both to investors and to traders, while the separate returns for each company concern very materially those who are more particularly interested in its fortunes.

The annual reports of the companies, which receive considerable attention as they appear, ignore these operating returns altogether. The only place in which the two sets of figures—those required by the Act of 1911 and those required by the Act of 1921—are brought together is in the Annual Railway Returns. But this publication cannot, in the nature of things, appear till well on in the year following that to which its information relates; it costs 21s, and for 1921 contained 280 closely printed pages. What I would urge is that each of the new group companies should in future annual reports give the more important and less technical of the operating figures which, though they were not available when the form of accounts was prescribed, now exist ready to their hand.

May I indicate from your own careful article of March 17th the effect of this lack of juxtaposition. You say that "there can be no certainty as to the interpretation of [certain] figures until we are allowed to have ton-mileage and passenger mileage statistics." But the fact is that we do get ton-mile statistics month by month, and that the Returns for 1921 give and compare the passenger mile statistics for the two months of July in 1920 and 1921 respectively. You desiderate information as to the proportion of passengers carried on cheap tickets. The latest monthly tables show that, whereas in November, 1921, out of 63 million passengers (excluding season and workmen's tickets), only one million travelled at reduced fares; in November, 1922, the proportion had risen to 4 millions out of 55 millions. Though no figures are available for 1913, it is evident that we are still a long way from getting back to pre-war proportions. Again, you say that the financial figures suggest that the Midland Railway must have a much longer average haul of coal than the North-Eastern. The operating figures, which hardly vary month by month, show the average hauls of the two companies to be respectively 55 and 22 miles. If the *Economist* fails to use the operating returns as an aid in interpreting the financial accounts, what can we expect of the ordinary stockbroker or investor?

As I am writing, let me say one thing more. Surely the time has come when the new group companies should publish, not weekly gross receipts, but monthly figures of gross and net. Last year the reduction on expenditure as compared with 1921 amounted to £52 million. The shareholders knew nothing of this for 13 months. One quarter of 1923 is now past. Is the position now stationary, or is expenditure increasing again, or diminishing further? There might be something to be said for railway companies, like ordinary trading concerns, publishing nothing. But I submit that the gross figures without the net are not only useless, but must, when (as at the present time) everything is in a state of flux, be absolutely misleading.

Further, the companies are now bound, as a condition of being allowed to charge rates which will earn their pre-war dividends, to show that they are conducting their business with efficiency and economy. Is it not much in their interest to put their cards on the table, and give to the public month by month tangible evidence that this

CURRENCY AND DEBTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Runciman's speech to the policy-holders of the United Kingdom Provident Institution, and your article in the issue dated 17th instant, in which you handle the matter in rather a novel way, by regarding a private individual as being in a different position from a company, are only evidences of the variation of contracts due to the fluctuations of the currency in which they are expressed. Those variations will not be eradicated, or even approximately so, until the financial tangle has been unravelled.

Mr Butson, in his letter published in the same issue, arguing on lines of cold logic, arrives at the conclusion that the huge post-war debts and our inconvertible notes are a great obstacle to the unravelling of the tangle, and suggests a conference akin to the Bullion Committee of long ago.

Is it not a fact that last century's problem solved itself through the tremendous advances made in industrial development? Had it not been for the application of machinery to industry that problem would have been with us yet. But machinery provided the people with the means of producing the wherewithal to pay the debts. In the long run debts must always be liquidated in goods or services, money being merely the means of effecting the exchange of the goods for the obligation.

Would it not, therefore, be more profitable to apply our thoughts not so much to Bullion Conferences as to ways and means of enabling people to work and to produce real wealth? It can be done, and it ought to be done, for herein lies the solution of the problem. Whilst we have a million and a-half of unemployed we cannot flatter ourselves that we are doing our best to redeem our debts.

As for the inconvertible currency notes, why not pay them into the Bank, and use cheques instead? Does anyone seriously suggest that we did not use an inconvertible currency before the war? I wonder what would have happened if all the cheque-holders had simultaneously demanded payment in gold, not to speak of those who had the power to draw more cheques than were already in circulation.—Yours faithfully,

W. J. COOK.

Barnes, S.W. 13, March 17th, 1923.

Books and Publications.

FOOD PRODUCTION IN WAR.*

THE price of this handsome volume is not indicated, but it belongs to a series of monographs published on behalf of the Carnegie Endowment, of which the general editor is Dr James T. Shotwell. The editorial preface is well worth reading. "The responsibility of the Endowment is to history itself, an obligation not to avoid but to secure and preserve variant narratives and points of view in so far as they are essential for the understanding of the war as a whole." This surely is well said, and it is to the praise of Sir Thomas Middleton that he has evidently aimed at presenting us with a gem of many facets in his particular contribution to the series. Synthesis is the thing lacking, but in truth we still all stand too near as yet to the trees, and cannot hope for some while to

* "Food Production in War." By Sir Thomas Middleton. (Oxford) The Clarendon Press, 1923.

come clearly to see the wood. Sir Thomas Middleton had particular claims to write this volume. For years before the war he had studied the agricultural resources of Germany, and during the war he was Deputy Director-General of the Food Production Department. It may be added that he possesses a clear elucidatory style, and that he keeps his own conclusions well in hand. They will be found in the brief chapter "On Food Production back to Farming."

The evidence that is accumulated in the present survey of the war years would be of greater value if we were told what the actual pressure of the enemy's attack on our food supply was. Without this key not much can be unlocked. Lord Selborne, in his Report to Parliament early in the war, and Lord Ernle in his negotiations with Canada at a later period, appear to have been the prey to panic. Neither "shipping" nor "tonnage" are given in the index, and it is hard to trace the references to what, with Britain importing 75 per cent. of its wheat, must have been a vital issue. It is, we believe, the fact that less than 2 per cent. of our food supply was lost through enemy action; if so, Sir Thomas is rather going beyond his warrant when he asserts that "the greatest danger was the risk of the war weariness which would have immediately followed on any serious food shortage." Apart from dry food, we never had to draw upon our live stock, and came out of the war with as many cattle as we had when we entered it. The Continent has a very different tale to tell.

Our author does not leave us with any augmented idea of the capacity of our rulers during the war period, but he is able to show us certain elements of reassurance. The yield of crops per acre did not decline during the war, the yield of milk from kine did not diminish. The amateur cultivators who came to the rescue when even "pivotal" men were withdrawn from the fields must have been "splendid," or production must have gone down, and the maintenance of the milk yield augurs that expert advisers over food returns such as Professor Wood, of Caius, and Sir John Russell, of Rothamsted, did the nation good service.

A matter which Sir Thomas Middleton perhaps is inclined to minimise somewhat is that of the prodigious bread subsidy, £162,000,000, which augurs a very serious break down in economics and amounts to an extra tax on the capital of the country. Mark Lane at the time was astonished at the recklessness of Government expenditure, a hundred shillings per quarter and over being spent on overseas wheat while the British farmer was not allowed more than seventy-five shillings. Economists of note then asserted that if the Government only allowed home cultivators the market price such as overseas wheat commanded, ploughing-up orders and extensive coercion would be wholly unnecessary. A species of inverted protection, of restricting the price of the home product and of favouring imports, may be said to need an apologist. Sir Thomas Middleton, one may fancy, has been too wary to assume the rôle.

The statistics presented throughout this volume are exceedingly valuable, and are admirably marshalled. Only two points, and these minor ones, occur to us. The Weights Act of 1921, which became compulsory on January 1st last, insists on the *cwt* of 112 lbs as dry food standard. It would be of use if in this important series the metric ton of 2,204 lbs could be discarded for the now sole legal British weight. Multiplying by 19.7 to get metric tons into *cwts* is easy in the counting-house, but the ordinary reader will multiply mentally by 20, and when crops of many millions are concerned, the resulting error is appreciable. One other point relates to returns of yields in bushels. Here the margin of error is much more serious. Scotch oats are often 42 pounds to the bushel, American are only 36 lbs, Argentina returns her maize by a 60 lbs bushel, the U.S. standard is 56. A reference to the Corn Production Act of 1917 being "discussed in the Lords as if it were a post-war measure," rather curiously illustrates a certain tendency in our public life, for although the Act provided for its own cessation with August, 1922, the Farmers' Union has denounced its "abandonment" as "treacherous," and the Agricultural Labourers' Union has called the close of the Wages Board a "betrayal." The Lords are sometimes the very shrewd-

est of men, and in this case foresaw the troubles of discontinuance. How many labourers ever grasped the fact that the very essence of the Wages Board was that control was only to last five years?

HUMAN NATURE IN ECONOMICS.*

ECONOMICS as a deductive science has always met with criticism on the ground that its conclusions, while doubtless applicable to an imaginary society of "economic men," have at best a remote bearing upon existing society. While critics have not been disposed to deny the validity of the basic assumption that, other things being equal, people prefer a larger amount of wealth to a smaller amount, they have contended that such a postulate obscures by its apparent simplicity the essential complexity of human motives, and affords no sure foundation upon which to build a science. The volume before us is of special interest in connection with this kind of objection, because it is the work of a writer who is at once an economist and a psychologist. His view is that "economic man," though an abstraction from reality in so far as he is supposed to know more than people in general, is no more discreditable to the economist than the spherical earth is to the geographer. The author believes that there is a large field in economics in which attacks based on the allegation of "exploded" psychology are quite properly met by the reply that economics takes as premises only what men are seen to do, and consequently is not involved in psychological disputes as to why they act. In this field the economist need no more worry about the ultimate facts of the spiritual nature of man than the carpenter concerns himself about the higher chemistry of wood. At the same time, economic explanation does bristle with premises that are really psychological, and, in fact, the two sciences are closely related in that the central unit of each is human *want*. "The economist is a psychologist in spite of himself, engaged in explaining a special type of behaviour, with his eye on the stimuli (wealth and the various other features of the environment) and on the behaviour they elicit from his subjects." Some knowledge of psychology is therefore desirable, and it is with the main purpose of gathering up whatever material is to be found in psychological science that offers help in dealing with economic problems, and to present this material briefly in a manner intelligible to the economist or other social scientist that Professor Dickinson has written this book. The main part of the book is entirely remote from economics, being devoted first to an historical account of the evolution of thought about human motives from the time of Aristotle, and second, to an exposition of the basic ideas of modern psychological doctrine. The application of psychology to economic problems fills only the last 100 (out of some 300) pages. The subjects dealt with include psychology in relation to wants, the psychology of the valuation process and the psychological motives of saving and of work.

Professor Dickinson's book should be suggestive both to economic students and to those who are engaged in one way or another in the practical application of economic reasoning.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. | ACCOUNT.
 April 4. | April 5.

For the week before Good Friday the amount of business passing through the Stock Exchange markets has been by no means inconsiderable. More of a feature than the actual volume of business, however, is the way in which subscription lists to new issues have closed with a promptitude that testifies not so much to the avidity of stags to snatch short profits, but to the real desire on the part of investors to obtain sound stock at reasonable figures. It may well be understood from the new issue success how keen is the demand for underwriting which is spread, naturally, around a much narrower circle than that to which new stocks and shares are offered amongst the public. The plaint of the underwriter mingles with the indignation of the provincial applicant at being shut out altogether, or else very scantily treated, in the matter of allotment of stock. All kinds of new issues, from Jamaica to rubber shares, are being eagerly taken.

The strength of British Government stocks is due in the main to the hope that money is going to be cheaper directly after Easter. Some big loan had been looked for before Easter, India being mentioned as the most likely borrower, but this factor is no longer regarded with apprehension, and prices have improved all round, with the War Loan and Consols particularly in the ascendant.

Amongst foreign loans, a lively recovery in French issues is the principal item of interest, due, of course, to the idea that some kind of settlement will emerge in the near future from the Ruhr chaos, a settlement which would have a strengthening effect upon the franc. Germans are practically unchanged; movements in Brazilian, Chinese, Chilean, and other speculative investments have been small and irregular. Mexican and Greek Government issues have gained materially.

Amongst Home Railways, the fear of labour trouble, owing to strikes in various parts of the country, has had a little influence in the prices of the Heavy stocks, North-Westerns and Great Westerns being down a trifle. But Districts, Metropolitan, and Southern Railway junior stocks have spurted sharply, there being a fair amount of buying plus a little option-dealing in stocks. Canadian Rails are quiet; Mexican Railways showed a timid disposition to improve; Argentine Rails are not much affected one way or the other by the dividend declarations this week, which come up to market expectation, but Brazilian Railways are harder in consequence of the San Paulo's increased dividend.

The House of Lords has decided against the appeal of the Merlimau Rubber Company, and this served rather to ruffle the stagnation in the rubber share market, where prices are dull. The oil division managed to maintain a certain liveliness in a few of the lower-priced shares. Amongst the others, Burmahs eased off on reports of a strike on one of the company's fields. Venezuelan Concessions jumped ahead, on the discovery of a record well in the country, imagination promptly crediting this to the V.O.C. Company. Chemical shares have strengthened by reason of an excellent dividend from the United Alkali Company, the first since 1920, accompanied by a bonus distribution of shares. Electric lighting shares further advanced, on the meetings held this week and the extension of the principle of splitting shares into the denomination of £1 each. Gas stocks are steady, and the shipping market is almost unchanged. Commercial Unions advanced, this being the main feature in the insurance group. The banking market remains quiet, with a hard tone.

Tobacco shares have again gone ahead, rumour being insistent as to a probable bonus in the shape of new shares to be issued shortly to the proprietors of Imperial Tobacco. Cements and some of the recently popular speculative shares have declined, though Eastwoods, on the Government's road-making programme, have advanced, and with them Millar's Timber shares went ahead. The cable group has thrown off most of the weakness which occurred through the latest wireless tremor. Wireless shares are dullish, no interest being taken in them. The Canadian Marconi report is expected to be issued at once. The stores and catering shares all keep good, and there has been a slight demand for some of the lower-priced motor descriptions. Iron and steel shares drooped, by reason of the labour disputes.

Interest amongst South Africans has been principally confined to the Rhodesian group, where Selukwes, Cam and Motors, and two or three others attracted a good deal of professional and a little public attention. Some of the deep-level shares in the Kaffir market are firmer, but the public are taking no interest. Tominils came down from 15s 9d to 10s 6d within a couple of hours, on consideration of the report but quickly, though partially, recovered. Mexican mining shares have been erratic, but better on the whole, and the shares, West African, Cornish, Malayan, after a show of strength in the early part of the week, tended to droop as the price of the metal gave way, and the approach of the holiday season not only circumscribed fresh business, but led to market profit-taking.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded	£ 58,956,203	..	..	..
ISSUES OF THE WEEK—				
4½% Treasury Bonds (by Tender Mar. 16, 1923), £500,000, at £99 9½ 4-8d	..	497,350	..	..
NATIONAL SAVINGS CERTIFICATES.				
NET RECEIPTS INTO THE EXCHEQUER WEEK ENDED MARCH 17, 1923.

4 per Cent. Treasury Bonds, 1931-1933.—Issue of £15,000,000 at £94 10s per cent. The Bank of England is authorised by His Majesty's Treasury to receive applications for these bonds. The principal and interest of the bonds are chargeable on the Consolidated Fund of the United Kingdom. If not previously redeemed they will be repaid at par on April 15, 1933, but His Majesty's Government reserve to themselves the right to redeem the bonds at par at any time on and after April 15, 1931, on giving three months' notice. The interest on the bonds will be exempt from corporation profits tax. The bonds may be registered, free of cost, in the books of the Bank of England as (1) Transferable in the bank transfer books, or (2) transferable by deed.

Jamaican Government 4½ per Cent. Inscribed Stock, 1941-1971.—This is an issue of £670,000 at 94 per cent. The loan is raised to meet the cost of completing works in connection with the Jamaica Government Railway and its extension, the sisal plantation at Litity, and the stud farm at Grove Place, as well as the cost of erecting new post-offices. The outstanding amount—£54,505—of certain loans advanced by his Majesty's Treasury for public works in the past, which would otherwise form a prior charge on the Colonial revenues, will also be repaid out of the proceeds of the loan. Principal and interest are payable at the Crown Agent's office in London. The loan is secured upon the general revenues and assets of the Government of Jamaica, and the principal will be repayable at par on April 15, 1971, by a sinking fund of not less than 18s per cent. per annum, commencing October, 1924, but the Government of Jamaica will have the option of redemption at par on or after April 15, 1941, subject to six months' notice. The revenues of the Colony of Jamaica alone are liable in respect of this stock, and the Consolidated Fund of the United Kingdom and the Commissioners of his Majesty's Treasury are not directly or indirectly liable or responsible for the repayment.

Calcutta Improvement Trust.—Issue of £700,000 5½ per cent. debentures at £93½ per cent, repayable at par on May 1, 1953. The loan is offered with the sanction of the Indian Government, and is secured by charges authorised to be levied by the trustees within the Municipality of Calcutta, and ranks *pari passu* with other loans of the trustees as a first charge upon the properties vested in the trust. The whole of the proceeds of the loan will be utilised in the acquisition of land. Payments will be made to a sinking fund for the redemption of the present issue in thirty years, and will commence on November 1, 1923. It is pointed out that £3,537,733, calculated at an exchange of 1s 4d per rupee, has been expended upon the property, and against this only £333,333 has been borrowed, the excess of expenditure over income being made up from the accumulated surplus under the revenue account. A fairly good investment in its class.

John Walker and Sons, Limited.—Authorised share capital, £2,760,000, divided into 1,500,000 7 per cent. cumulative preference and 1,260,000 ordinary shares, all of £1 each. The authorised loan capital is £2,000,000, consisting of 6 per cent. first mortgage debenture stock. This is an issue of the whole of the debenture stock at £99 per cent. and 1,499,993 preference shares at par. The debenture stock will be secured by a trust deed constituting a first specific charge on properties and on certain investments of the company, a charge upon 6 million proof gallons of whisky. It will be definitely repaid by June 1, 1951, but is redeemable at the option of the company after June 1, 1928, at 103. In the statement of assets and liabilities properties are valued at £302,080, and investments at £211,355. Stocks are, however, valued at £3,832,484. Average annual profits for the past eight years are given as £688,271. It is a pity, perhaps, that these could not be shown in detail. The debenture stock will absorb £160,000 per annum for services, while dividends on the preference shares will take £105,000 per annum. Surplus assets are valued at £2,793,074, which, together with the value placed upon goodwill, namely, £1,401,323, makes a total of £4,195,207. This has been fixed as the purchase price, of which £2,835,000 is payable in cash, and the remainder of £1,360,000 is taken in ordinary shares.

Although a 6 per cent. debenture at 99 in a good industrial concern is attractive in these days, the security offered must be carefully considered, while an investment in the preference shares must also be regarded from all aspects, especially according to one's view of the future of this particular industry.

The Second Mercantile Trust, Limited.—Authorised share capital, £1,000,000, in shares of £1 each. This is an issue of all the shares at 21s each. The shares will be converted, when fully paid, into equal amounts of preference and ordinary stocks, and the preference stock will be entitled to a 5 per cent. cumulative dividend. The prospectus states that it has been thought desirable, instead of issuing fresh capital of the Mercantile Investment and General Trust Company, Limited, to form a new company associated with the parent company. The full benefit of the experience and connection of the present management would be brought into the organisation of the new enterprise. During the last six years the annual dividend paid on the ordinary stock of the Mercantile Investment and General Trust Company has steadily increased from 6 per cent. to 9½ per cent. An interesting venture, launched under very favourable conditions.

Illingworth, Morris, and Company, Limited.—Authorised share capital £1,500,000, of which £1,253,633 has been issued and is paid up. The company has outstanding £600,000 8 per cent. seven-year notes, but there is now offered £1,000,000 6 per cent. first mortgage debenture stock at 98½, and the company proposes to redeem the 8 per cent. notes out of a part of the proceeds. The stock cannot be repaid earlier than 1928, but can be paid off after June, 1928, and before June, 1933, at 103 per cent.; after that date, but before June, 1938, at 102 per cent.; and any time thereafter at 100 per cent. The issue is secured by a specific first charge on mills and land, by the guarantee of subsidiary companies, and by a floating charge on the undertaking and all other assets of Illingworth, Morris, and subsidiary companies. Surplus assets are valued at £2,148,091, while profits of the combined concerns shown from 1915-16 have been as high as £674,991 and not lower than £180,363. The prospectus states that the mills produce high-grade worsted yarn, for which there is a steady demand, and except for a short period at the height of the post-war slump in commodity values they have been fully employed for many years. The price paid by the present vendor for this stock is 94½ per cent., the vendor paying an underwriting commission of 1½ per cent., with an overriding commission of ½ per cent., and all expenses in connection with the offer. A good industrial risk.

Dickins and Jones.—Authorised capital £600,000, divided into 50,000 5½ per cent. cumulative preference shares of £5 each and 350,000 ordinary shares of £1 each, all of which have been issued. Of the ordinary shares it is stated that 334,525 are held by Harrods. This is an issue of £1,000,000 6 per cent. first mortgage debenture stock at 99 per cent. This stock will be secured by a trust deed, and will constitute a first mortgage upon property held by the company, and a floating charge upon other assets. It will be repayable on or before March 31, 1973, by the operation of a cumulative sinking fund of ½ per cent., the first payment to which will be made on February 1, 1928, which will be applied in the redemption of stock by drawings at 102 per cent., or in the purchase of stock in the market at or under 102 per cent., plus accrued interest. The company reserves the right to redeem the outstanding stock or any part of it by drawings at 102 per cent. at any time after February 1, 1933, upon six months' notice. Property, plant, and fittings are valued at £1,470,401, while total assets are given as £1,789,273. This is an old-established business, but profits are shown for six years only. These show, however, that the interest on the debentures is fairly well covered, while there is a reasonable margin of security for the principal.

Kelly's Directories.—Authorised share capital £1,100,000, divided into shares of £1 each, comprising 200,000 5 per cent. first cumulative preference shares, all of which have been issued, 500,000 7½ per cent. cumulative preference shares, all of which are now offered for sale at par, and 400,000 ordinary shares, of which 391,069 have been issued. There is debenture stock of £40,100 outstanding. Kelly's Directories is acquiring 500,000 preference and 75,000 out of 100,000 ordinary shares of £1 each in Iliffe and Sons, Limited, a well-known publishing firm, and the present issue is being made in connection with this operation. Iliffe and Sons, Limited, capital when rearranged will consist of 500,000 7½ per cent. cumulative preference shares of £1 each and 100,000 ordinary shares of £1 each, and there will be debentures for £500,000 on the property and assets of Iliffe and Sons, and of the Cornwall Press, Limited. The offer for sale shows that the average annual profit of Kelly's Directories and associated companies for three years ended March 31, 1922, and those of Iliffe and Sons and the Cornwall Press for the three years ended December 31, 1922, subject to corporation profits tax, was £161,226. The dividend on the present issue calls for an annual payment of £37,500. The margin is therefore wide, and considering that this is an offer for sale, the details given are informative. The offer is promising in its class, but the speculative element in the publishing business is one which cannot be altogether overlooked.

Midland Counties Electric Supply Company, Limited.—Authorised capital £2,000,000, divided into 1,000,000 6 per cent. cumulative preference and 1,000,000 ordinary shares, all of £1 each. Of these 750,000 ordinary shares have been already issued, and 750,000 preference shares are now offered for subscription at par. There are also outstanding £344,680 5 per cent. redeemable debenture stock and £393,980 7½ per cent. redeemable mortgage debenture stock. It is proposed to redeem the 7½ per cent. mortgage debenture stock out of the proceeds of the present issue of preference shares. The company was incorporated in 1912, and owns the capital of six companies interested in electricity supply in the Midland counties. Profits are shown for the past five years. The prospectus would have been more complete had it included a balance-sheet of this undertaking, showing the precise assets and liabilities of its controlled concerns.

The Lancashire and General Assurance Company, Limited.—Authorised capital £100,000 in 2,000,000 shares of 1s each, of which 908,000 shares have been issued, the paid-up capital being £33,469. This is an issue of 1,000,000 shares at par. The company transacts all classes of insurance business, except life and marine. The prospectus states that the business of the company from 1907 to 1914 was mainly on the Continent. At the outbreak of war it was decided to cease temporarily active operations. Business was not recommenced until the latter half of 1921. A statement is given in the advertised prospectus showing an excess of premiums of £7,189 for "the first period of activity." Competition is so keen when one is brought up against the big established insurance institutions that a certain amount of hesitancy must take place when considering an issue of this kind.

Gordon (Malaya) Rubber Estates, Limited.—Authorised capital, £70,000, divided into 700,000 shares of 2s each, of which 650,000 are offered for subscription at par. The company has been formed to acquire a rubber estate in Kedah, 37 miles from Penang. The area of the estate is stated to be about 1,070 acres, of which 570 acres are in bearing, 70 acres in partial bearing, and 359 acres planted, but not yet in bearing. It is also mentioned that 570 acres contain trees of six and a-half years. The property is being purchased in cash and shares for the sum of £54,500 (about £54 10s per planted acre), against a valuation on the basis of seven years' purchase with good possibilities of £53,634 (approximately £62,500). A speculative proposition, but the prospectus is somewhat reticent over past crops.

The Standard Screw Company, Limited.—Authorised capital, £75,000, divided into shares of 10s each. This company was formed in October, 1922, as a public company, to extend the business carried on at Halifax, Yorkshire, by the Automatic Standard Screw Company. Assets are valued at £51,345. The purchase price has been fixed at £66,545, and is payable in cash. These and other details are given in an advertisement inserted in the Press to comply with Stock Exchange regulations.

Wandsworth, Wimbledon, and Epsom District Gas Company.—The tenders for the £250,000 capital which were offered for this company were opened on March 22nd, the issue being largely over-subscribed. The details of the tenders are as follows:—For the 4 per cent. perpetual debenture stock, from £81 down to the minimum of £78, the lowest price to secure an allotment being £79 15s. For the 5 per cent. preference stock, from par down to the minimum of £93, the lowest price to secure an allotment being £94 5s 6d. For the ordinary stock, from £102 down to the minimum of £95, the lowest price to secure an allotment being £96 10s 6d.

Malacca Rubber Plantations, Limited.—Recent issue Allotment letters and letters of regret were posted March 22nd.

Selangor Rubber Estates.—Allotment letters were posted Wednesday, March 21st.

COMPANY MEETINGS, &c.

THE EASTERN BANK, LIMITED.

DIVIDEND MAINTAINED—BETTER TRADE PROSPECTS.

The thirteenth annual general meeting of the Eastern Bank, Limited, was held, on the 21st instant, at the Cannon street Hotel, London, Mr J. S. Haskell (the chairman) presiding.

The secretary (Mr R. Carter) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the period under review had been hardly less free from the complexities which had beset the bank in the previous year. In India for the greater part of the year money could not be profitably employed, and the rupee, after dropping heavily, had remained practically without movement for several consecutive months. Though that might be regarded as a good feature from the traders' point of view, it had hardly given opportunity for profitable exchange operations; consequently, with a smaller turnover and strong competition, the profits from that source had been much reduced. In the circumstances he hoped the shareholders would agree that the results for 1922 were not unsatisfactory. After making ample provision for bad and doubtful debts, the directors were enabled to recommend the same dividend as last year, namely, 5s for the six months, making 9 per cent. for the year.

CONDITIONS IN INDIA.

Though, broadly speaking, conditions had not been favourable, there had been one or two good features which should sooner or later conduce to greater trade activity. The monsoon in India had again proved favourable, the last harvest had been abundant, and there were good crops in sight, making available for export a large surplus of foodstuffs and raw materials. The Government of India had been enabled in the autumn of last year to remove the embargo on the shipment of wheat and cereals—a welcome measure. A rise in the value of the rupee, which would normally have resulted from the above-mentioned causes, had not eventuated to the extent which might have been expected; that tendency had been largely neutralised by the heavy imports into India of gold and silver bullion amounting to £20,000,000 and £10,000,000 respectively. It was noteworthy that in spite of those extensive imports of treasure the balance of trade had moved largely in favour of India. For the nine months from April 1 to December 31, 1922, taking into account the bullion imports, there was a balance in favour of India of £13,600,000, against an adverse balance of £16,650,000 for the corresponding period in the previous year, which was a good indication of the country's prosperity. Another notable factor which had had an adverse effect on the exchange rate was the resumption by the India Council of the sale of Council drafts. That practice had been continued for six weeks only, and had since been withdrawn. In the closing months of 1922 business had begun to revive, and there had been more encouraging signs. Germany had entered the field as a buyer, but the French occupation of the Ruhr had caused a set-back. The prospects for the current year were not easy to forecast; the position was more hopeful, but they could not look for any settled recovery so long as the troubled economic conditions in Europe continued, particularly in regard to Germany, which was one of India's principal customers. However, he was glad to say that the bank was in a very strong position to participate to the fullest extent in the revival of business, which was bound to come when the Continental situation became more stabilised.

POSITION IN MESOPOTAMIA.

The position in Mesopotamia had not undergone any sensible change, and the trade of the country continued in a more or less depressed state. Whatever might be the outcome of the deliberations of his Majesty's Government in regard to future policy, he would like to emphasise that, to his mind, a policy of complete evacuation was greatly to be deprecated. At the present time, when foreign markets were being closed by high tariff walls, the development of the Mesopotamian markets would afford a valuable outlet for British manufactures. There was an idea in some quarters that if the British left Mesopotamia it would not make any marked difference to their external trade, but he was not so sanguine. In the event of the retirement of Great Britain chaotic conditions would prevail for many years to come, and traffic with the North of Persia would be seriously jeopardised. Lancashire interests were largely concerned in that trade, which consisted to a great extent of cotton piece goods. Then there were exports from Mesopotamia which should not be ignored. Already a fair quantity of grain was being shipped, and by the development of

irrigation a substantial increase would result. There was also a good outlook for cotton cultivation on a large scale. Lancashire was looking round for fresh fields for cotton supplies, and he ventured to say that there were great possibilities in that direction. All enterprise, however, had been checked by the continued political uncertainty.

The report and accounts were unanimously adopted.

SCOTTISH WIDOWS' FUND LIFE ASSURANCE SOCIETY.

"A COMFORTABLY SOLID POSITION."

The one hundred and ninth annual general court of the Scottish Widows' Fund Life Assurance Society was held in the society's head office, Edinburgh, on the 20th instant, Mr A. W. Robertson Durham, C.A., F.F.A. (chairman of the ordinary court of directors), presiding.

In moving the adoption of the report and accounts, the Chairman said:

The year 1922 was a very difficult one for new business—in some respects, indeed, more difficult than 1921, for, while in that year we suffered in common with all the financial and commercial interests of the country from the effects of the prolonged coal strike, yet in the early part of 1921 we had the benefit of the concluding period of what amounted to a post-war boom in life assurance. The year 1922 was one of almost unrelieved commercial depression and of financial stringency from the personal point of view, and in such conditions were bound to react on our new business. In such circumstances it will, I think, be regarded as satisfactory that, while our new business last year did not reach the figure of 1921, yet we issued new policies for the gross amount of £2,185,253. Of this amount, the sum of £775,000 was reassured with other offices, leaving a net new business of £2,110,253, producing single premiums of £15,000 and new annual premiums of £88,914. In addition, we granted policies securing deferred annuities for £12,780 per annum, producing single premiums of about £12,800 and new annual premiums of about £4,300. The new policies placed on the books in the year, therefore, produced in all single premiums amounting to £27,589 and new annual premiums of £93,261.

FAVOURABLE MORTALITY EXPERIENCE.

The death claims constitute one of the most important items in the working of our business, and I am glad to say that last year our experience proved very favourable, the claims being more than £200,000 less than in 1921, considerably below the average of the previous quinquennium, and, indeed, little more than the average for the quinquennium 1909-1913, when, of course, our premium income did not reach its present proportions. Claims by maturity showed a slight reduction as compared with the previous year. Surrenders showed an increase, which, though regrettable, is perhaps not unnatural in view of the times of difficulty our members are passing through. There is a reduction in our commission and expenses of management, which last year worked out at about 11.9 per cent. of the premium income, a very moderate rate, comparing very favourably with the average rate of other first-class offices.

PREMIUM INCOME WELL MAINTAINED.

Our premium income is well maintained, and, indeed, shows a slight increase, being now practically £1,600,000, showing an increase of £172,000, or over 10 per cent. above the pre-war figure. Annuity considerations, which showed a falling off in 1921, made a substantial recovery last year, and amounted to £72,000. Interest, both gross and net, was also well ahead of the previous year. To summarise the revenue account, the total outgo showed a considerable reduction, while the income showed a considerable advance, a state of things which you will no doubt regard as gratifying.

The gross rate of interest earned on our funds was £5 7s 4d per cent., compared with £5 8s 8d per cent. for 1921, showing a reduction of 1s 4d per cent., which you will not regard as surprising.

THE SCOTTISH WIDOWS' FUND LIFE ASSURANCE SOCIETY.

Founded 1815.

The Largest British Mutual Life Office.

Addition to Funds in 1922, over £600,000
Accumulated Funds - nearly 23½ Millions
Annual Revenue - - - over 2½ Millions
Claims Paid - - - over 56 Millions

Head Office: 9, ST. ANDREW SQUARE, EDINBURGH.
London Offices: 28, CORNHILL, E.C.3, and 17, WATERLOO PLACE, S.W.1

in view of the change in the investment position. We have, however, derived substantial advantage from the reduction in the rate of the income tax, and as the result our net rate of interest, which is the important factor, has increased by about 2s per cent. to £4 7s 7d per cent.

LARGE ADDITION TO FUNDS.

The working of the year has resulted in the increase of our funds by over £600,000—one of the largest additions ever secured in a single year. Our balance-sheet shows what I think you will consider a comfortably solid position—namely, that our total funds amount to just under £23,500,000. Over £13,000,000 is represented by British Government securities, of which a large proportion is in terminable investments, relatively free from fluctuation in value. The remainder of the items in the balance-sheet are, as you will see, well distributed, and the investments as a whole stand in our books at considerably less than their market value. The recent general recovery in values, while it affords a substantial barrier against the possibility of future depreciation in values below our balance-sheet figures, brings with it, of course, a corresponding reduction in the rate of interest obtainable on new investments, and in this way presents new problems of its own.

We are now in the last year of our quinquennial, and next year we shall present to the members the results of the quinquennial investigation as at December 31st next. The working of the business for the first four years of the quinquennium has been favourable, and unless there should be some markedly unfavourable financial developments which cannot be foreseen, leading to a serious fall in the value of securities, I confidently anticipate that at next year's meeting we shall come before the members with a satisfactory report in respect of the full quinquennial period which will then have been completed.

The report and accounts were unanimously adopted, and after the re-election of directors had been carried, and a vote of thanks accorded to the directors and office-bearers, the proceedings terminated with a vote of thanks to the chairman.

METROPOLITAN LIFE ASSURANCE SOCIETY.

PROSPEROUS YEAR—GOOD PROSPECTS.

The ordinary general meeting of the Metropolitan Life Assurance Society was held, on the 22nd instant, at Winchester House, Old Broad street, London, Sir John B. Wimple, K.B.E., presiding.

The Chairman said that during the past year policies had been issued for 295,429, producing new annual premiums of £12,343. Reassurances to the extent of £38,250 had been effected at annual premiums of £2,367, and the net new business, therefore, amounted to £257,179, with annual premiums of £9,976. The number of new policies issued in 1922 was greater than in the previous year, but the sum assured was less by £5,832. Their experience during the year as regarded claims by death had been very satisfactory. No less than 86 per cent. of the claims were in respect of lives aged 60 and upwards at death, 63 per cent. were aged 70 and upwards, and 28 per cent. were aged 80 and upwards. The society, in consequence, had realised a handsome surplus from that source. The rate of interest earned during the year under review on the total funds of the society, including the investments reserve fund, was £5 5s 8d per cent. before deduction of income tax—a fall of 5d per cent. as compared with 1921. Owing, however, to the reduction in the rate of income tax, the net rate of interest showed an increase of 3s 5d per cent. to £4 2s 2d per cent. With regard to the investments, the improvement in value referred to at the last meeting continued during the year, with the result that on December 31st last the aggregate value of the society's marketable securities was greater than the figure at which they stood in the balance-sheet, and the whole of the investments reserve fund of £170,000 remained intact as a provision for possible future adverse fluctuations. At the general meeting in 1921 he stated that £68,535 had been transferred from the valuation reserves to the investments reserve fund. The board now felt that that sum could be put back into the valuation reserves, and £70,000 had accordingly been transferred from the investments reserve fund. They had thus reverted to the strong position of pre-war days, and held a sum in the valuation reserves fully sufficient to provide for the future maintenance of the current rates of abatement of premium.

RATES OF ABATEMENT INCREASED.

As the result of the year's working the board were able to declare for the year ending April 4, 1923, an increase of 2 per cent. in the rates of abatement, which would therefore range from 82 per cent. in the case of the first series to 37 per cent. for the current fifth series. He might add that the last occasion when the rates of abatement were increased by 2 per cent. was in 1869. After making full provision in the valuation reserves for the maintenance of the rates of abatement, they carried forward an unappropriated balance of £30,139, as compared with last year's

corresponding figure of £12,901. Taking every fact into account, he felt justified in saying that the past year had been one of the most prosperous in the society's history, and he could confidently say that the prospects of its members for future profits were never better. The same remark applied to those whom they hoped would shortly join the society by taking out new policies. He felt that the great handicap they had suffered since the commencement of this century—namely, the depreciation of their securities—had been arrested. Already they found themselves in a very satisfactory position, so far as their investments were concerned, and he was inclined to think there was a steady appreciation ahead. It was true that the trade revival we all hoped for might cause a large demand for money, and possibly rather dearer money; but it looked, and he hoped it would prove so, that the revival would come gradually and steadily, and, if it did, the natural absorption of good securities should prove sufficient to maintain their price in spite of the possible necessity of their being put on the market for the purposes of trade requirements. He wished to thank the large number of members who took such an active and personal interest in increasing the business of the society by introducing their friends, and he would urge those who had not up to the present seriously considered the difference that their active support would make to the office to endeavour this year to assist the society in that way.

The report and accounts were unanimously adopted.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION, LIMITED.

The ordinary general meeting of this corporation was held, on the 21st instant, at the head offices, Hamilton House, Victoria Embankment, London, the Right Hon. Lord Claud Hamilton presiding.

The Chairman said that fire account, apart from the fall in premium income, showed excellent results. The reduction of premium income was due to a general fall in rates, the cancellation of a treaty involving £12,205, and the great depression in trade, through which so much less merchandise became available for insurance. In the other accounts the fall in premium was confined entirely to policies based on wages to workmen, comprising the larger part of the total income of the corporation. Without any serious loss of clients, they stood to-day with a decrease of £1,536,153 as compared with 1920. In all other branches there was no falling off to report.

It was a matter of congratulation that they were able to pay the same dividend as last year, and to carry something to general reserve. Management expenses were £599,357, or 12.4 per cent. in 1922, compared with £574,008, or 10.3 per cent., in 1921. Reduction could not be made without impairing the efficiency of the organisation. Commission, however, seemed unduly high, and was £1,080,043, or 22.3 per cent., compared with £1,284,470, or 23.1 per cent., in 1921. In the United States the Insurance Commissioners of the different States had fixed maximum commissions for various classes of insurance. In this country Government interference was not wanted, and insurance companies, brokers, and agents should therefore come to some arrangement whereby the cost of introducing business should not in any case exceed the cost of managing it.

The interest on investments, £303,772 (subject to tax) sufficed to pay the whole dividend. The £369,712 used to establish the Employers' Fire Insurance Company in the United States had not contributed anything to interest account this year, and they did not anticipate any such contribution for some years. Nevertheless, the gross income had increased from £291,897 to the above figure. Since the beginning of 1923 they had launched the American Employers' Insurance Company, registered under American law, and as such capable of doing certain classes of business which the corporation as a foreign company was not permitted to do. To this end they had utilised about £400,000, which they believed would contribute handsomely to the interest fund when the new company was firmly established.

The report and accounts were unanimously adopted.

COUNTY OF LONDON ELECTRIC SUPPLY COMPANY, LIMITED. BUSINESS EXPANSION. GREAT FUTURE.

The twenty-ninth ordinary general meeting of the County of London Electric Supply Company, Limited, was held, on the 20th instant, at the Institute of Chartered Accountants, Moorgate place, London, Sir Harry Renwick, K.B.E. (chairman), presiding.

The manager and secretary (Mr F. C. McQuown) having read the notice convening the meeting,

The Chairman, in the course of moving the adoption of the report and accounts, said:—

The gross receipts from all sources amount to £895,783, being an

increase of no less than £126,150, or over 16 per cent., for the year. The gross profit on the year's working is £521,769, being an increase of £179,568, or over 52 per cent., on the year. The net profit for the year, after providing for all interest, is £457,684, being an increase of £179,869 net profit for the year.

We are placing to our several reserve accounts a total sum of £312,500, which is £132,500 more than for the previous year. In addition to this, we are providing £5,000 as a sinking fund for the recently issued 7 per cent. debenture stock, and we are writing off nearly £30,000, being the balance of expenses on the debenture stock issued in 1921. We are recommending a final dividend on the ordinary share capital of the company at 7 per cent., making 10 per cent. for the year, and we are carrying forward £48,218 to the current year's account, as against £21,787 brought into the account.

We have reached the substantial figure of £858,317 from sale of current and meter rentals, an increase of £115,430, or over 15 per cent. on the previous year's figure.

EXPENDITURE, INVESTMENTS, AND RESERVES.

The total working expenses amount to £374,013, against £427,432 last year, thus showing the substantial reduction of £53,419, or over 12 per cent., notwithstanding the fact that we have sold during the year 7,000,000 additional units.

The total sum provided out of revenue for the year for reserves of one sort and another, together with nearly £30,000 written off for issue expenses, amount altogether to £347,000; we are recommending a final dividend on the ordinary shares of the company of 7 per cent., making 10 per cent. for the year, and we are carrying forward to next year the sum of £48,218.

The item of investments and advances shows a considerable increase during the year, and it will be seen that an amount of £163,565 has been invested in British Government and trustee securities. I particularly desire to direct your attention to this item and to emphasise the fact that we are now building up a reserve in securities of this character outside the company's business.

The general reserve fund now stands at the good round sum of £450,000, after adding £242,500 placed to that account out of revenue for the past year, and it will be seen that the total reserves

shown on the face of the balance-sheet, together with the carry-forward, amount to the substantial figure of £813,352.

The total units sold during the past year amounted to 58,241,758, showing the substantial increase for the year of no less than 7,021,679 units, while the applications received during the year in respect of new business amounted to the equivalent of an additional 6,292 kilowatts, while the total number of consumers supplied for all purposes now amounts to over 48,500.

As to our associated companies, I need only say that they continue to flourish, as is evidenced by the fact that they are paying largely increased dividends for the past year, and our revenue account is correspondingly benefited from that source, as compared with the previous year.

"GOLDEN AGE OF ELECTRICITY."

As to the future prospects of the electricity supply industry, generally, I am much tempted to speak in eloquent terms, and, indeed, I feel that I cannot speak too optimistically of the great future in store for our industry, in which I have the profoundest belief born of the sternest conviction. When addressing a meeting in the autumn of last year, I said that the "golden age of electricity was not far distant." It was perhaps a bold phrase for me to use, but I am to-day more convinced than ever that it is true and that everything points to it. In the first place there is the concrete evidence of the great increase that has taken place in the consumption of electric energy during the last year or so, which is enormously in excess of the rate of progress in former years. Then the ever-increasing use of electricity for power purposes and for chemical purposes is creating of itself a gigantic demand. Following this there is heating and cooking and other domestic uses which have made great strides, and the future in that direction is practically unlimited.

Lastly we come to electricity supply for traction purposes. In that direction the demand in the future is likely to be on a colossal scale. Many schemes of railway electrification are in different stages of fruition, and it is only a matter of time when at least all suburban traffic will be run electrically, and the power stations up and down country will be called upon to meet the enormous demands that must arise for that purpose.

I think you may look forward to a continuance of our successful and, indeed, remarkable progress.

The report was unanimously adopted.

THE WALL PAPER MANUFACTURERS, LIMITED. EXCELLENT RESULTS OF THE YEAR.

The adjourned annual general meeting of the Wall Paper Manufacturers, Limited, was held, on the 22nd instant, at the Connaught Rooms, Great Queen Street, London, Mr Edgar Smith (the chairman) presiding.

The secretary (Mr John T. Chasney) having read the notice convening the meeting and the auditors' report.

The Chairman said: Ladies and Gentlemen,—We now resume the meeting of December 21st last, which was adjourned until such time as the balance-sheet for the year ending August 31, 1922, could be completed.

At our annual meeting, on December 20, 1921, when the balance-sheet as at August 31, 1921, was presented, we had passed through a period of great trade depression and a phenomenal slump in the values of stocks of raw and finished materials, and, although your directors told you that the company would have a substantial claim for adjustment of taxation under the provisions of the Finance Act, 1921, they had not then been able to formulate the claim. The Act was only a new one, and its provisions were very complicated.

SOUND FINANCIAL POSITION.

I explained the position fully to you at the time, and told you that we had faced our losses and written down our stocks and investments to the values at that date. I also said that our company was in a sound financial position, and that there was no need for depression with regard to our prospects.

In that balance-sheet we had made reserves for taxation, but as the accounts had only been settled with the authorities up to August 31, 1921, and as the relief we could obtain under the Finance Act, 1921, was not known, it was impossible to do other than reserve for all the taxation which we estimated the company would be liable for under previous legislation, and to leave any portion of these reserves which ultimately might be found not to be required to be brought back into the accounts when our taxation figures were gone into and our claim settled.

BALANCE-SHEET FIGURES.

The relief we have obtained, together with an excellent year's trade, enables us to present the balance-sheet as at August 31, 1922, which is before you to-day.

As you have all received copies of it and directors' report, may I assume you will take them as read?

In the balance-sheet you will notice that the issued capital is the same as before, and our creditors now stand at £527,000 or £843,000 less than in the previous balance-sheet. On the assets side the capital expenditure on land, buildings, plant, machinery and goodwill stands at £3,428,000, and I would point out to you that this is less by £200,000 than the figure at which it stood 10 years ago, since which date we have acquired several very large businesses and mills, but have disposed of the Greenhithe Paper Mills. We have maintained all our factories in an up-to-date condition.

INVESTMENTS—A PROMISING FUTURE.

The investments stand at £1,192,780, an increase of nearly £500,000 over that of the previous balance-sheet. The investments are mostly in gilt-edged securities; some of these are of a temporary character, and have been, or will be, realised to meet taxation payments and dividends to shareholders. The stock-in-trade, debtors, bills and cash total £1,774,000 against £2,112,000—a reduction of £338,000.

I think you will agree with me that our future looks promising, and I may say that the new season, of which six months have already gone, is satisfactory.

SUCCESS OF THE WALPAMUR COMPANY.

Amongst the businesses which we carry on outside the manufacture of wallpaper I would name the Walpamur Company, which is growing into a very big concern.

This company has its own separate organisation and entity, but it has the Wall Paper Manufacturers behind it, and with this support they are always able to ensure the highest quality and service to their customers.

Walpamur, as you all know, is the very best water paint on the market, and the Walpamur Company is also famous for its paints, varnishes, enamels, and other products. This company has depots in most of the large towns, and is splendidly organised. The works are situated at Darwen. Walpamur is more widely used than any other water paint for decorating schools and public buildings, and if any of our shareholders are associated with any institutions where this class of decoration is required, and where Walpamur is not used, I hope they will recommend its use, and they will realise what a valuable asset we have in this subsidiary company.

INJUSTICE OF THE CORPORATION PROFITS TAX.

As I am speaking to ordinary and deferred shareholders, I might ask you to use any influence you possess to get the Corporation Profits Tax abolished.

The Corporation Profits Tax is collected solely from the profits of industry and commerce, and is borne in our company by the ordinary or deferred shareholder. Why the ordinary and deferred shareholder, who is also taxed like any other individual in the general taxation of the State, should be thus marked out for special penalty I do not know.

At the time this tax was introduced the Government were very badly in need of money, but it is generally hoped by business men that the injustice of it will now be apparent to the Government, and that we shall shortly see it abolished.

I will now formally move the adoption of the report and the accounts for the year, and will ask Mr Sugden to second this resolution.

Mr A. V. Sugden seconded the resolution, which was carried unanimously.

Mr A. B. Sanderson proposed a hearty vote of thanks to the chairman, directors, and officers of the company for the efficient services they had rendered during the past year.

Mr C. Halliwell seconded the vote, which was unanimously accorded.

The Chairman announced that the ordinary share dividend warrants would be posted on 25th inst., and the deferred share dividend warrants on April 12th next.

BAH LIAS TOBACCO AND RUBBER ESTATES, LIMITED.

PROSPECTS "BRIGHT AND HOPEFUL."

The twelfth ordinary general meeting of the Bah Lias Tobacco and Rubber Estates, Limited, was held in the Council Room of the Rubber Growers' Association, 2, 3 and 4 Idol Lane, London, on the 21st instant, Mr C. Heath Clark (the chairman of the company) presiding.

Mr James M. Kemp, representing the agents and secretaries (Messrs Harrisons and Crosfield, Limited), read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said:

The issued and paid-up capital of the company remains the same as at the end of the previous year at £351,213. The reserve account has been increased during the year from £111,585 to £124,047, the difference being made up by the amount of profit made on the sale of the Perlanaan concession, to which I referred at last year's meeting, and which amounted to £8,068, and by the sum of £4,393 representing the balance recoverable or received in respect of the sale of the tobacco section of our business. I should like to point out that, although the crop harvested is 316,137 lbs less than that harvested in the financial year 1919-20, which was the last year when no restriction took place, our f.o.b. cost has been reduced by no less than 5½d per pound as compared with 1920-21. This satisfactory reduction has been mainly effected by economies in working which we have been able, with the loyal co-operation of our reduced staff in the East, to make, and when we consider that this has been accomplished without allowing our estates to deteriorate in any way, I think you will agree that it represents a very satisfactory position.

YEAR'S PROFIT.

The year's working resulted in a profit of £15,951, as compared with a loss for the previous year of £13,264. If we add to the year's profit our carry forward from last year of £41,140 and take credit the sum of £9,520 refunded us on account of Netherlands East Indies war profits tax, we are left with a total of £66,611, with which we have to deal to-day. The directors recommend that a dividend at the rate of 7½ per cent. be paid in respect of the year under review and to carry forward to the current year a credit balance of £40,270, which is about equal to the amount we brought in. The areas of rubber in bearing on each of our three estates have been maintained in a clean weeded condition throughout the year, and this work has been carried out at a very moderate cost.

Despite the reduction in the European staff and the labour forces, it is gratifying that the visiting agent in his most recent report is able to state that the general condition of the company's rubber divisions remains first-class, and that in fields and factories everything continued to be kept well up to date.

As regards coconuts, we manufactured 5,877 piculs of copra, which is a somewhat smaller crop than we estimated for at the commencement of the financial year, and this shortage is for the most part due to the very wet weather which was experienced, coupled with the smallness of the nuts harvested. The crop realised a net average of 21s 7d per picul, which was 1s per picul less than the previous year's average, but the f.o.b. cost of production, although still too high to show a profit, was over 4s per picul less than the previous year.

RESTRICTION OF RUBBER OUTPUT.

Turning to the current year, the board have decided, in conjunction with the majority of British-owned estates in the Dutch East Indies, voluntarily to restrict the export of this company's rubber, harvested after the end of October last year, to the same limit as that allowed by the legislation in force in British Malaya and Ceylon to be exported at the minimum rate of duty. This voluntary restriction ought not to any material extent affect our working or costs, as we have consistently restricted our rubber output since November, 1920, the crop for the last financial year being, in fact, only 70 per cent. of what we could normally have produced under full tapping. By tapping only our highest-yielding areas in order to obtain our restricted crop we have not only been able to make a substantial reduction in our cost of production, to which I have already referred, but, by resting the lower-yielding areas, we shall undoubtedly improve the productive capacity of these in future years.

We are estimating for an output of 7,250 piculs of copra, and given normal conditions and a reasonable price for this commodity a quite satisfactory showing ought to be made.

The company possesses a very fine property, especially as regards the Bah Lias and Bah Enda divisions, and will be in a position, with heavy yielding capacity and low costs of production, to reap the fullest benefit from the improved condition in the market which rules to-day, and which appears likely, with the increased demand and the safeguards afforded by the Stevenson scheme of Government restriction, to continue in the future. The prospects of the Bah Lias Company to-day, I think, are of very bright and hopeful character.

Mr J. R. Gray seconded the motion, which was carried unanimously.

GOVERNMENT RETURNS.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, March 14, 1923, amounted to 797 tons.

Reports and Notices.

Mr Henry Montgomery Crozier has been elected chairman of Browne and Eagle, Limited, in place of Mr Joseph Francis Lescher, deceased.

BANKS.

BANCA ITALO BRITANNICA.—The net profit for the year 1922, as shown by the balance-sheet, amounts to Lit808,144. Deducting therefrom Lit30,944, to be carried to the ordinary reserve fund, which will then amount to Lit130,000, Lit577,198, and adding the balance carried forward from 1921, Lit127,972, the total profits available for allocation are Lit705,170. The directors propose:—(1) To distribute a dividend at the rate of 4 per cent. per annum on the paid-up capital, absorbing Lit460,000, viz., Lit400,000 in respect of 2,000 shares of Lit5,000 each, fully paid, for 12 months, and Lit60,000 in respect of 2,000 shares of Lit5,000 each, paid up Lit1,000, for nine months; (2) to place to special reserve fund Lit120,000, thus increasing it to Lit470,000; (3) to carry forward to new account the balance of Lit125,170. If these proposals meet with approval, the dividend will be payable as from April 16th, under deduction of 15 per cent. in the case of bearer shares, and with the addition of negotiation-tax allowance in the case of registered shares. The increase of the capital of the bank to 20 million lire, which was resolved on March 8, 1922, was effected by the issue of 2,000 shares of Lit5,000 each, on which Lit1,000 per share was paid up on subscription, and the balance of Lit4,000 per share called and paid up on March 15, 1923.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.—The accounts for 1922 show a net profit, after providing for all bad and doubtful debts, of £1,004,701, inclusive of £215,170 brought forward from the previous year. The interim dividend, at the rate of 14 per cent. per annum, paid in September last, absorbed £210,000. The amount now available is therefore £794,701, and the directors propose to pay a final dividend at the rate of 14 per cent. per annum, together with a bonus of 6s 3d per share, making 20½ per cent. per annum for the whole year, free of income-tax; to add £100,000 to the reserve fund, which will then stand at £3,800,000; to add £25,000 to the officers' superannuation fund; to write off premises account £50,000, and to carry forward the balance of £222,201.

NATIONAL BANK OF EGYPT.—The gross profit for the year 1922, after providing for depreciation on the bank's buildings and furniture, for rebate of discount, and for bad and doubtful debts, amounts to £906,870. Directors' fees absorb £11,937. Current expenses amounted to £392,839, leaving a net profit of £502,094, to which is added £180,920, making £683,014 available. The sum of £50,000 is allocated to special reserve for contingencies. The ordinary dividend of 15 per cent. for the year absorbed £450,000, and the balance of £183,014 is carried forward.

NATIONAL BANK OF INDIA, LIMITED.—The net profits for the year 1922, after providing for all bad and doubtful debts, amount to £535,160 5s 5d, and adding £164,095 12s 8d brought forward, the available total is £699,255 18s 1d. An *ad interim* dividend at the rate of 20 per cent. per annum, free of income-tax, was paid on September 19th last, amounting to £200,000. The directors now recommend a further dividend at the same rate, and an addition of £100,000 to the reserve fund, raising it to £2,700,000. They proposed to write £20,000 off house property account, and to add £20,000 to the officers' pension fund, leaving a balance of £159,255 18s 1d to be carried forward.

RUBBER.

GULA-KALUMPONG ESTATES.—The output of rubber for the year amounted to 1,183,280 lbs, representing 70 per cent. of the estates' assessed "standard production" of 1,689,612 lbs. The net profit per acre of mature rubber amounted to £12 1s 2d. The Kalumpung Estate smokehouse was destroyed by fire on September 3rd; the loss was covered by insurance. 7,500,000 coconuts were gathered during the year, yielding 1,608 tons of copra. The net profit per acre of mature coconuts amounted to £5 13s 3d. No estimate of the output of rubber can be given, this depending upon the percentage of "standard production" allowed to be exported under the Export of Rubber (Restriction) Enactment, 1922. The exportable percentage to April 30, 1923, is fixed at 60 per cent. The manager estimates that 8,000,000 coconuts will be gathered during the year, to yield 1,785 tons of copra. The net profits for the year amount to £74,821, to which must be added the balance from 1921, £40,406, less corporation profits tax £2,615—£119,612. Out of this total the directors recommend the following appropriations:—To reserve fund, £10,000; to income-tax account, £10,000; to dividend, 10 per cent. (income-tax will be deducted at the rate of 5s in the £), £50,000; leaving to be carried forward (subject to corporation profits tax), £49,612.

ASSURANCE COMPANIES.

NATIONAL MUTUAL LIFE ASSOCIATION OF AUSTRALASIA, LIMITED.—A cable has been received by the London office that the meeting in respect of the seventeenth triennial investigation for the three years ended September 30, 1922, has just been held in Melbourne. The report of the actuary on the valuation showed that there was a surplus over liabilities of about £1,700,000. This surplus is considerably more than double that of the previous valuation as at September 30, 1919. In consequence of the good results disclosed by the valuation the association has been able to declare reversionary bonuses as at September 30, 1922, on a very high scale. Under whole life policies (Table I.) the lowest bonus declared is £1 16s per cent., and under other assurance tables the lowest bonus is £1 14s per cent. (except under two unimportant tables with policies maturing at the early ages of 35 and 40, where the lowest bonus is £1 12s per cent.). The bonuses increase with the duration of policies until under certain policies of long duration the bonus amounts to £3 per cent. per annum. Assuming future distributions to be at the same rate as at September 30, 1922, the bonuses on assurance policies in force for 20 years would average from £1 19s per cent. to £2 8s per cent. per annum. It has been decided that bonuses shall be declared annually in future instead of triennially as heretofore.

MISCELLANEOUS.

LAMPOR AND HOLT, LIMITED.—The profit for the year 1922, after providing for depreciation, amounts to £134,472, to which must be added £137,162 brought forward from 1921, making a total of £271,634. The board has placed £8,000 to the staff superannuation funds, and after payment of the dividends on the preference shares, it recommends the payment of a dividend on the ordinary shares at the rate of 6 per cent. per annum, and that the balance of £66,824 17s 6d be carried forward. The passenger steamer "Vandyck," 13,233 tons, and the motor vessels "Linnell," 4,424 tons, and "Lassell," 7,419 tons gross register, were delivered by the builders during the year. The steamers "Rembrandt," "Tennison," "Byron," and "Siddons" have been sold. The company's fleet consists of 49 vessels, besides sundry small craft, the total tonnage being 320,039 gross.

PINCHIN, JOHNSON, AND CO., LIMITED.—The directors state that the results of the year 1922 are extremely satisfactory, the profits showing a substantial expansion over the figures for previous years. Despite the continuance of difficult trading conditions all over the world during the past year, the company's business shows a gratifying increase in every section, and there has been a satisfactory development of the company's business both at home and abroad. The improvement reflected in the trading results for 1922 shows a continuance in the present year, with satisfactory indications for the future. The year's trading, after providing for all expenses, shows a net profit of £70,549. There was a balance brought forward from last year of £16,512, making a total sum to the credit of profit and loss account of £87,061. Deducting: Interim dividend on preference share capital for half-year to June 30, 1922 (less tax), £11,781; interim dividend of 5 per cent. on ordinary share capital (less tax), £11,062, there remains a balance of £64,218. The directors recommend that the following appropriations be made:—Half-yearly dividend on preference shares, less income-tax (paid January 1, 1923), which will absorb the sum of £12,187; a dividend of 10 per cent. on the ordinary shares (making 15 per cent. for the year), less income tax, which will absorb the sum of £22,125. Writing the sum of £6,000 off preliminary expenses of new capital issue, £6,000; carrying to general reserve the sum of £7,000; carrying forward to 1923, £16,905.

ROLLS-ROYCE, LIMITED.—The report for the year ended October 31, 1922, shows that after (a) paying or providing for all trading expenses and suitable depreciation of buildings, machinery and plant, and charging repairs and replacements to revenue, and (b) making provision for corporation profits tax, there is available for distribution the sum of £149,208 12s 4d, together with a amount of £8,133 14s 4d carried forward from the previous year. The three months' engineers' lock-out at the works seriously disorganised the output, and, as will have been anticipated, affected the trading for the year. Certain moneys for excess profits duties and for other claims, which were included in the liabilities at October, 1921, have now been released and placed to the credit of the accounts for the year under review. The directors recommend that 8 per cent. be paid on ordinary shares, absorbing £64,932. That £60,000 be transferred to reserve and £24,000 to income-tax account. The sum of £8,410 is carried forward.

STEWARTS AND LLOYDS, LIMITED.—The report for 1922 shows that the net profit, after setting aside £70,000 for depreciation and after making provision for estimated liability for income-tax and corporation profits tax, amounts to £522,077, to which falls to be added the balance brought forward from previous year, £185,817, together £707,894, and after deducting the interim dividends for the half-year to June 30, 1922, at the rate of 6 per cent. per annum on the preference and 10 per cent. per annum on the preferred ordinary shares (paid on September 30, 1922), amounting to £59,000, there remains a balance of £648,894, which the directors recommend should be appropriated as follows:—To reserve fund, £100,000; to employees' benefit reserve, £10,000; to payment of dividend for half-year ended December 31, 1922, at the rate of 6 per cent. per annum on the preference shares (from which income-tax will be deducted), £16,500; to payment of dividend for half-year ended December 31, 1922, at the rate of 10 per cent. per annum on the preferred ordinary shares (from which income-tax will be deducted), £42,500; to payment of dividend for year ended December 31, 1922, of 2s per share on the deferred shares (free of income-tax), £263,810; to payment of bonus for year ended December 31, 1922, of 6d per share on the deferred shares (free of income-tax), £65,952; to be carried forward, £150,132.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions marked a slight improvement during the past week, there being less rain and more sunshine, especially in southern parts of the country. A spell of fine dry weather is much to be desired, in order that farmers may push ahead with spring sowings. A firm tone was in evidence at market, and prices moved in sellers' favour, both for bread and feeding stuffs, in sympathy with higher forward offers. English wheat displayed a very steady tone, but trade was by no means fast. Best milling samples ruled at 9s 4d to 9s 9d, with inferior sorts at 8s 3d to 8s 9d per 112 lbs, free on rail. Imported descriptions were more 8s 9d per 112 lbs, free on rail. Generally higher rates. No. 1. reservedly offered, while held for generally higher rates. No. 2. Northern Manitoba quoted 49s 9d, No. 2 mixed Durum 47s 3d, Rosafé 63 lbs 48s 6d, all ex-ship, to arrive, and Australian landed 53s 6d per 406 lbs. The cargo sections displayed more activity, and a considerable business transpired to the Continent. Some 50,000 tons Barusso 62½ lbs loading and prompt shipment sold

to Germany at 49s 4½d, Rosafé 62½ lbs expected ready to load at 49s 6d. Choice white Karachi April shipment 48s 3d to 48s 9d, and part cargo of Australian to Ireland at 50s 3d per 480 lbs. Visible supplies in the United States are about unaltered, but a fair increase is observed in Canada. Floating supplies are on a limited scale, while United Kingdom stocks continue to decline. Crop prospects in the chief importing countries remain favourable, with an improvement noted in North America. Flour moves off quietly, but rates are maintained owing to the wheat position. London standard straight run quoted 40s, patents 42s to 43s, town households 38s per sack delivered in Metropolitan area. Imported dull of sale. Manitoba patents range from 37s to 41s as to quality, Minneapolis good patents 40s to 40s 6d, and Australian 36s 6d to 38s 6d, all per 280 lbs ex store. Barley moves off slowly, and tendency of values weak. English ranges from 6s 9d to 12s 6d per 112 lbs free on rail as to quality. Of imported, Californian quoted 42s 6d to 45s ex ship, Australian Chevalier 46s to 51s ex store per 448 lbs. Plate 28s 6d, Persian 25s 3d, and Danubian 28s 6d to 29s 6d, all per 400 lbs landed terms. Maize firmer and sellers more reserved, owing to higher c.i.f. values. Plate ex ship quoted 28s, landed 29s, American mixed 36s, ditto landed 37s 6d, East African 35s ex ship per 480 lbs. Cargo market ruled firmer for old crop positions, which attracted more attention, and steamers of La Plata on passage changed hands at 37s 6d. A good trade was conducted in parcels at full to dearer rates. Oats steady for native varieties at 8s to 10s 3d per 112 lbs free on rail as to sample. Imported opened firmer, but the improvement was not maintained. Plate f.a.q. 25s 3d, No. 2 white clipped American 25s 3d, No. 2 Canadian Western 20s 6d, No. 2 Canadian feed 20s 6d, New Zealand A grade 38s, B grade 37s, all per 320 lbs landed terms. Oatmeal steady, with a moderate trade in force. London made, all cuts 17s 6d, flaked oats 20s 6d ex mill. Ordinary Scottish oatmeal 18s 6d to 19s, and American all cuts 17s per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20:—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated March 22nd, is as follows: Pig iron: This week the market is decidedly quiet. Consumers have covered their immediate requirements, and are hesitating to buy for forward delivery at present prices. The hesitancy is no doubt largely due to what may develop with regard to the Ruhr position. Meantime prices are fully maintained, with No. 3 Cleveland G.M.B. at 127s 6d per ton, and mixed numbers East Coast hematite now up to 127s 6d. Manufactured iron and steel: Local works are now fairly well supplied with orders, and it is generally anticipated that further steel furnaces will be operating within the next few weeks. The recent advances in prices have

been well maintained, to-day's quotations being as follows:—Steel ship plates, £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £10 10s. Iron Ore: The market is slow, as the ironmasters have sufficient ore in stock and coming forward that will supply all their needs up to probably the end of June, and in the absence of forward business in pig-iron, they are holding off the market for their ore supplies. The sellers' nominal quotation for best rubio is 25s per ton, c.i.f. Tees, but so far this price has not been realised.

Our Sheffield correspondent writes:—Activity in the iron and steel markets has lessened considerably during the last week or two, as the sharp rise in prices is inducing a spirit of caution on the part of buyers. There is a growing feeling that a settlement of Germany's troubles might occur at any moment and cause a drop in prices, and for this reason consumers do not care to take the risk of being saddled with stocks of dear material. There is consequently little forward buying. All the same, the production of steel is insufficient for the demand, and the restricted supplies of pig-iron prevent it being increased. Many orders from overseas, including the Continent, are coming in, most of them for smallish quantities. A proportion of the recent inquiries have had to be turned down for lack of means to supply, as the mills cannot get billets in sufficient quantity to keep their works running at full capacity. Ordinary steel scrap has gone up to £5 per ton or more, and there was a rise last week-end in most classes of iron and steel. Soft billets are now being quoted at £10, hard billets at £10 10s, acid billets at £13, soft wire rods at £13. Derbyshire foundry pig at £5 10s. Scarcely any class of pig-iron is now procurable in the open market. The local unemployment roll is being reduced by about 300 per week. Vickers, Limited, have booked a Government order for 20 tanks of a new type, which will cost £6,000 each. Business continues quiet in fine steels and tools of various kinds, and there has been no progress in these branches since the start in January. Wire makers are busy. The competition of German goods and surplus stores of tools is still being severely felt. The market conditions for coal and coke continue to strengthen, and the trend of prices is still upward. Current quotations at pits are:—Best hand-picked branch, 33s; silkstones, 28s; best South Yorkshire steams, 22s; best slacks, 11s. Best Tyne steams are advanced to 34s, f.o.b.

Our Glasgow correspondent writes:—Although one comes face to face daily with evidences that the ranks of the unemployed are still of uncomfortable proportion in this district, it remains that in nearly all the heavy and leading branches of the iron and steel trades prospects are steadily on the mend. India, South America, Western Africa, Canada and Australia are all given as eager buyers of manufactured materials. Shipbuilding continues to develop. During the week orders have been placed with builders for a large cargo boat and for three moderate sized vessels, while negotiations are in progress, it is stated, for two big motor steamers, a branch of marine engineering on which local firms are concentrating their attention and energies. Steelmakers are naturally benefiting from the greater outlet now being experienced for plates, sheets and sections, and their outlook is said to be encouraging. Black sheet establishments are being pressed for deliveries, notably for overseas markets. For 3-in. delivered Glasgow £12 is being named per ton, and for 24 h.g., f.o.b. Glasgow, £10 5s (5s down on the week) is quoted. Bar iron makers are at £12 for crown sorts. Hematite producers are turning over a large tonnage, and have raised prices by 7s 6d a ton at £6 7s 6d delivered at the steel works. Supplies of Scotch pig-iron and of scrap iron are scarce, and in response to the fact values are hardening. No. 1 foundry iron has been put up 1s 3d at £6 5s, and No. 3 is 3d also at £6. Boiler plates continue at £13, ship plates £9 15s, sections £9 5s. In the past few days ferro-manganese has gone up 20s a ton at £17 per ton, and manufactured copper by £2 a ton to £106, basis strong. An active trade is proceeding in coals, but prices on export account are just the least bit easier. No fewer than 120 vessels are waiting their turn to load at Lanarkshire. Five and Lothian ports for foreign buyers. French, German and Belgian. Splints are commanding 35s a ton, and steams 29s 6d to 32s.

Our Cardiff correspondent writes:—Owing to the labour conditions (details of which will be found under Notes of the Week), the market has been very strong, and prices have further advanced. For spot positions best Admiralty large has touched 40s, and best small steams 30s, but the bulk of the business arranged has been for forward supplies, and contracts have been entered into at f.o.b. prices ranging up to 32s 6d, and even to 35s over the year, for best large steam qualities. Over the next three months the collieries are unusually well sold, and there are prospects of a substantial increase in wages in July, when the first audit embracing current prices will take effect. It is strange, however, that notwithstanding this improved wage outlook, a Conference of the South Wales Miners' Federation this week has decided to instruct its delegates at the forthcoming conference of the Miners' Federation of Great Britain to recommend the service of a three months' notice to terminate the present national wage agreement. The following are the approximate market prices:—Best Admiralty, large, 37s 6d to 40s; second Admiralty, 35s 6d to 37s 6d; best dries, 32s 6d to 35s; black veins, 35s to 37s 6d; Western Valleys, 34s to 36s; Eastern Valleys, 32s 6d to 35s; best bunker smalls, 27s 6d to 30s; ordinary cargo smalls, 24s to 26s 6d; anthracite big veins, 40s to 45s; anthracite machine made cobbles, 45s to 47s 6d; French nuts, 45s to 50s; stove nuts, 45s to 50s; rully culm, 14s 9d to 15s; coke for export, 75s to 80s; inland blast furnace coke at ovens, 32s 6d to 35s; patent fuel, 34s to 40s; pitwood, ex ship, 25s to 26s.

The iron and steel market has been to some extent unsettled by the increase in the prices of coal, scrap, and pig iron, but busi-

ness is fairly active, and current quotations for tinplates are ruling up to 24s 6d per basis box, f.o.t. at works, or 2s above the minimum price. Tinplate bars are also quoted at several shillings per ton above the minimum of £8 16s. The exports of iron and steel from the South Wales ports in the week ending March 16th were the greatest in any single week in the current year. They totalled 19,000 tons, of which 9,600 tons were tin, terre, and black plates, 4,800 tons galvanised sheets, and 4,500 tons of bars, wire rods, hoops, rails, and steel tubes.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market has improved wonderfully during the last week, and although business is by no means active in tops and yarns, there is a better tone generally, and all sections appear to have more confidence in values. This change must be attributed to the strong raw material markets. In London and in the Colonies wool has been selling exceedingly well, and the recent downward tendency seems to have been definitely checked; indeed, the present tendency is in the direction of higher values, sales during the last few days having revealed a marked hardening. It is evident that wool still dominates the position, and apparently users in this country will again begin operating as soon as they are satisfied that stability has been established in the wool market. The outlook on the Continent is still depressing, and the upheaval in Germany continues to retard trade development, but in other directions trade is more promising, and this is especially noticeable in regard to the demand for piece goods for the Far Eastern markets. Some very useful orders have recently been placed with manufacturers, and this probably accounts for the improvement in the spinning section, as spinners report that particulars coming to hand enable them to face the immediate future with a good deal more confidence than was possible a fortnight or so ago. In the yarn trade, however, quotations vary considerably, due to the difference in the position of different firms, and a number of weak sellers give the market an irregular appearance. The loss of the Continental trade is being felt, and, to make matters worse, home spinners are being undersold in most markets by Continental competitors.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales finished yesterday with a distinctly better tone than was shown at the beginning, and although merino values have not been all that could be desired from an importer's standpoint, it is impossible to find any really weak spot. Everything indicates that the past six weeks will prove to have been a worse period than will be experienced for some time to come, and for

conditions in America and Japan. The present demand for raw material is largely due to the activity in centres other than the West Riding, and it is somewhat humiliating to manufacturers in this district to find that when they offer good cloths to London merchants, they are told that similar goods can be bought from French manufacturers at considerably less cost per yard than the home manufacturers are wanting. There is nothing at all superior about the French fabrics, but London merchants are compelled to buy them in order to keep their own connections. A very strong feeling of dissatisfaction has developed among manufacturers respecting the handicap which is being placed upon the industry of this country. Last Monday a private meeting was held in Bradford, when the whole question was thoroughly discussed, and it is understood that representations are being made to the Board of Trade with a view to some of the anomalies being removed. In the meantime, the raw material continues to sell very readily everywhere, and generally speaking there is great confidence in the future of values, this being due to the knowledge that, given an opportunity for the free flow of business through its normal channels, a considerable expansion would take place.

THE COTTON TRADE.

MANCHESTER, March 22.

The market throughout the week has continued quiet. If anything, the easier tendency in raw cotton rates has accentuated the attitude of buyers in operating from hand to mouth. Whatever may be the feeling elsewhere, it is believed in Manchester that prices in the near future will be on a lower level. Only a miscellaneous business has been done in light fabrics for India, offers in grey staples being decidedly scarce. Not more than a retail turnover has occurred for China, and advices from the other side are no better. For the minor outlets, East and West odd lots have been sold to make up assortments. Certain reports from the home trade are more encouraging, and goods seem to be moving rather better in the country. American yarn quotations remain firmer, but business has been of limited dimensions. Egyptian counts have been rather quieter. Very little has been done in export yarns.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market remained very steady at Thursday's Bermondsey auctions, best ox selling from 8d to 8 1/2d, and seconds from 6 1/2d to 6 3/4d. The opinion is general that hides have reached their maximum; in fact, some tanners are again reducing their input in view of the difficulty in obtaining an adequate return on their money. Calfskins were decidedly weaker, possibly owing to the absence of foreign orders, and best sold from 6 1/2d to 13 1/2d, decreases of 1/2d to 1d being noted. Wools sold from 5s 6d to 12s 6d each, the hogg class making from 6s to 14s 6d each. Pelts are much higher than at this time last year, and as first-class pelts are scarce, prices are not likely to be much easier. Business in imported hides remains dull, and little support has been forthcoming from British tanners. American tanners are to some extent refraining from buying saladeros in the River Plate, but, so far, this has had little effect on prices. Prices of dry River Plates are a shade firmer, and Capes have sold freely to the Continent, and the U.S.A. cables from New York report the Chicago market as steady, with best packers now selling at 18 1/2 cents.

Business in sole leather has not come up to expectations in Bermondsey this week; tanners, however, in the Northern districts have moved off fair-sized quantities of both heavy and light bends, and light weights of English are well sold forward. Tanners state that dry hides have advanced so much in price that they do not pay for tanning, in view of the low prices obtainable for cheap bends. Dressing leather is a bad seller, owing to lack of export business. Shoulders and bellies are selling fairly well, and prices of rough splits are very firm. Upper leathers and fancy leathers move off slowly, but so great has been the demand for low grades, that tanners have now little to offer, and are pushing their best selections.

There is a decided improvement in the shoe section, especially in districts devoted to ladies' work. Factors and retailers have been pressing for holiday deliveries, and the insistence for cheap lines is still very marked, in view of the high prices retailers are still obtaining from the public.

VEGETABLE OILS AND OILSEEDS.

There has been some buying of Plate linseed round £18 to £18 2s 6d, shipping, or already on passage to Hull, since when the market has had a firmer tone, and values have advanced 7s 6d to 10s per ton. Consumers, however, are proceeding very cautiously as the position of the near future is uncertain, and is complicated by the American demand. Up to the middle of the month the shipments of Plate linseed to North America this year had reached the high total of 174,000 tons, against only 32,000 tons in the same period of last year, when the domestic crop was only two-thirds of the present. The question arises whether, with large imports of seed, America will continue to be so extensive a buyer of oil on this side, though it seems pretty certain that English oil will find a steady market on the eastern seaboard, given reasonable and competitive prices. In view of the trade boom in America, and the increased spending capacity of the people, America should be able to absorb even more linseed oil than it did last year, when English mills contributed a large proportion. Importers appear to be pretty confident, and inquiries here for oil still persist, and combined with a good home demand have assisted to continued firmness. Values after a relapse are again recovered, and with spot oil quoted £40 ex Hull mill are advanced on the week. The forward positions, while steady, are perhaps not quite so firm.

The mills are busy, and have plenty of raw material to be going on with, and have substantial supplies in prospect, the quantity

A full report will be sent on application to:—

48 Gracechurch Street, London, E.C.3.

of linseed (Plate and Indian) on passage to the U.K. being 76,500 tons. That to the Continent is returned at 100,200 tons, or together 176,700 tons, against 171,500 tons a week ago, and 104,300 tons same date last year.

Egyptian cottonseed had a sharp relapse at the close of last week, and business was done in Sakellaridis at £10 15s. The market has since improved to the extent of 5s per ton. Slightly more enquiry is reported for Egyptian crude, and refined oils and prices are steady, and about unchanged. Bombay crude is very scarce, and commands fully the figure quoted for Egyptian. Other seed oils are in moderate demand, and maintain late values.

The demand for oilcakes continues very disappointing, and both linseeds and cottons are offering at reduced prices. Meals also are slightly easier. The fine open weather, and the depressed state of the agricultural industry militate against a substantial demand.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, March 23.

SUGAR.—With demand from consumers again largely restricted to wants of immediate necessity, actual transactions during the week were only moderate in extent, but prices remained very steady. All white sugars on the spot are now in very limited supply. Of British descriptions, Messrs Tate and Lyle's cubes quoted 65s 6d to 66s 6d; granulated, 60s 10 1/2d to 61s 4 1/2d; yellow crystals, 54s 10 1/2d; caster, 62s to 62s 10 1/2d; finest, 64s 7 1/2d; granulated, April, 61s; June, 61s 9d; July-August, 62s. Crystallised West India in small supply, and quoted 54s 6d to 55s 6d; white Mauritius, spot, 56s 6d. Czechoslovakian granulated, spot, 59s 6d to 60s. American granulated, spot, 60s; March-April, steamer, sold, 32s 6d, c.f. and i., London. Belgian crystals, new crop, October-December, quoted 24s 6d. f.o.b. Antwerp. Cuban basis 96 per cent., March-April, quoted 27s 6d; Brazilian ditto, 27s 6d, and ditto basis 80 per cent., 19s, c.f. and i., U.K. Cuban stocks stand at 667,000 tons, against 678,500 same time last year. Terminal market rather quieter and somewhat unsettled. White May, delivery, sold, 32s 6d to 31s 3d and 32s 3d; August, 31s 10 1/2d to 30s 9d and 31s 10 1/2d; December, 25s 4 1/2d.

COFFEE.—Apart from fair support accorded the more attractive home trade qualities and which cleared at steady prices, a quiet and weaker tone pervaded this market. Of East India, bold Mysore, sold, 16s; bold Nairobi, 10s 4d to 10s 5d for good. Costa Rica, bold sizes, 12s 7s 6d to 14s. Fancy peas reached 17s. Futures delivery market dull.

COCOA.—Market very quiet, but spot parcels were held for previous rates. Accra F/F quality, March-May, sold, 35s 9d, f.o.b. terms.

TEA.—Public sales of Indian embraced some 39,800 packages, and with active and well-distributed competition general firmness ensued. Most descriptions under 1s 7d per lb ruled fully 1/2d dearer as against the previous week. Ceylon sales of 22,830 packages, and while all the finer liquoring parcels received active support at full recent prices, common proved rather quieter and rates the turn weaker. Java and Sumatra teas sold at about steady rates.

RICE.—Quite steady on reserved offers from producing countries, but buyers on this side respond slowly. Two stars, spot, 14s 6d; March-April, 13s 6d, c.f. and i. terms. Rangoon beans, spot, 8s. Japanese peas, spot, sold, 29s 3d. Madagascar butter beans, afloat, done, 14s 9d.

SPICE.—Pepper continued quiet, but with no pressure to sell quotations maintained a steady level. Fair black Singapore, spot, quoted 44d; Aleppo, 44d; Tellicherry, 44d; white Singapore, 64d; Muntok, 64d; Singapore, black, March-May, sold, 44d; Muntok, April-June, 64d. Zanzibar cloves, spot, sold, 1s 1d; January-March and March-May, 10 1/2d to 1s, c.f. and i. Tapioca steady, but general trade quiet. Fair flake Singapore, spot, 34d; fine Java, 44d per lb. Penang, fair seed, spot, sold, 30s; March-April, 28s 6d, c.f. and i. Sago flour, February-April, sold, 13s 4 1/2d; March-May, 13s 1 1/2d to 13s 4 1/2d. Desiccated coconut, spot, halves, sold, 44s; March-April, 41s 9d to 42s 3d; April-May, 41s 3d. Ginger steadily held, but demand is quiet.

FRUIT.—There has been a steady business doing in currants at firm rates. Pyrgos, quarter cases, sold, 53s; bags, 52s; Vostizza quoted 63s to 70s. Valencia raisins quiet, and half-boxes quoted 32s to 34s. Smyrna sultanias steady, quiet, and medium to good quoted 80s to 90s; fine, 105s to 110s. Dates slow, unaltered.

JUTE.—With only quiet inquiries forthcoming from spinners, a dull and weaker condition of affairs pervaded this market. First grade, March-April, usual Continental ports, sold, £32 10s to £31; April-May, £33 to £31. Lightning grade, April-May, quoted £30 per ton. Hessians and also twills steadily held, but actual business very limited.

HEMP.—A quiet and easier tone predominated for Manila parcels, as receipts were on a liberal scale. J grade, March-May, quoted £34 10s; K and L, £33 10s; M, £33; H, on the spot, sold, £37; G, February-April, quoted £37 10s. New Zealand idle, and general situation purely nominal. African Sisal dull. No. 1 Tanganyika, March-May, quoted £37, and No. 1 Kenya, £36.

SHELLAC.—Spot market quiet, futures the turn dearer. T.N., spot, 35s 5d; May, sold, 330s; August, 312s 6d per cwt. **COFFEE.**—Market ruled quiet, and tendency easy, with moderate sales. F.M.S. Straits, February-March, to Rotterdam, quoted at £29 17s 6d; February-April, £29 12s 6d; March-May, £29 8s 9d; April-June, £29 5s; Ceylon, February-April, £31; Java, March-May, £29 15s; Cebu, February-April, £29; Dutch East Indies, £29 10s; South Sea Islands, March-May, quoted, £28 12s 6d; F.M. Straits, March-May, to Marseilles, £28 17s 6d. Mixed, excluding Padang, £28 13s 9d. Palm kernels quiet and barely steady. To Liverpool, April-June, sold at £21 per ton.

RUBBER. dull, and rates tend in buyers' favour. Plantation standard crepe and sheet, spot, sold at 1s 4 1/2d to 1s 4 3/4d; April, 1s 4 1/2d to 1s 4 3/4d; April-June, 1s 4 1/2d to 1s 4 3/4d; July-September, 1s 5 1/2d to 1s 5 3/4d, and 1s 5 1/2d; October-December, 1s 5 1/2d to 1s 5 3/4d. Wild sorta

the circumstances, the market was not able to meet in full the amounts that fell due at the Bank of England. These inconveniences, however, were generally regarded as temporary, though it is hard to see whence fresh supplies of money are to come, unless and until official expenditure outruns revenue and obliges the Treasury to borrow from the Bank of England. Three months' bills, now a July maturity, were weak in the neighbourhood of $2\frac{1}{2}$ per cent. Yesterday the stringency was continued, and rates varying up to 3 per cent. were paid for loans until Monday. In the discount market the tone was firmer, but there was no appreciable change in quotations.

	Apr. 6, 1923.	Mar. 28, 1923.	Mar. 23, 1923.	Mar. 16, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	$3\frac{1}{2}$ (Jly. 13, '22)
Bank Deposit Rate	1	1	1	1	$1\frac{1}{2}$ (Jly. 13, '22)
Discount (Call)	1	1	1	1	$1\frac{1}{2}$ (Jly. 13, '22)
Houses (Notice)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 13, '22)
Market rate (3 months' bills)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	..

The Bank return showed decreases of £341,000 in the note circulation and £3,000 in the stock of gold, the Reserve thus being £338,000 higher. Other securities were $6\frac{1}{2}$ millions lower, and Public deposits declined by 13 millions, Other deposits rising by $7\frac{1}{2}$ millions. Currency notes outstanding were increased by £2,459,200 to £288,074,900 this week, which includes £1,492,000 for notes called in but not yet cancelled. The fiduciary issue is £237,132,800, or £33,051,000 below the maximum.

THE STOCK MARKETS.

This week has belied the reputation of the short Easter week for dullness in the stock markets. The early strength which appeared when the House reassembled on Tuesday became more pronounced as the week advanced. British Government securities have made notable improvement, encouragement being provided by the size of the 1922-23 revenue surplus and revived hopes of some reduction in the income-tax in the coming Budget. There have also been sharp rises in home railway stocks; textiles and nitrate shares have benefited from provincial buying, while tobacco shares and a number of industrials shared in the liveliness. In the Kafir market, too, there has been a little animation. Altogether the short week has been a good one for shareholders and brokers, and for the moment the malign influence of the Ruhr has ceased to operate as a depressing factor.

THE COMMODITY MARKETS.

Business on the Cardiff coal market has been affected by holidays and by the labour dispute in the Rhondda district, and in consequence prices are very firm. Our Middlesbro' correspondent reports that there is a good inquiry for steel and that the outlook for the near future is good. Our Sheffield correspondent, however, mentions that conditions generally in the iron and steel markets are much quieter than a month ago, although works are well employed on contracts. Our Glasgow correspondent, in referring to a quietness in shipbuilding, puts it down to the all-round advance in costs of late. In the Manchester cotton trade, quotations for cotton and for yarn have been firm, but buyers have not been prepared to buy anything more than small lots. In the wool trade, inquiry is again very general and the tone of the market good. Linseed oil has moved upward in value. At the Bermondsey hide auction on Thursday prices slightly advanced. Other details of markets and prices will be found on later pages from our special correspondents.

FOREIGN EXCHANGES.

Holidays and general quietness of business have robbed the foreign exchange market of much interest during the past week. The main feature has been a further sagging of the American rate, which fell away steadily from \$4.68 $\frac{1}{2}$ on the 29th to just over \$4.66 $\frac{1}{2}$ on the 5th. Yesterday morning it was very slightly firmer at \$4.66 $\frac{1}{2}$.

No new factors have intervened beyond high money rates in the States, and the consequent tendency of Americans to get rid of British securities and of this side to move funds to America. On the whole this movement would seem to be slackening off somewhat, but, on the other hand, there is a tendency for an increased British demand for raw materials, and there are also indications of the anticipation which has been marked in recent years of the usual autumnal swing. The rate for forward dollars has narrowed some $\frac{1}{2}$ cent to $\frac{3}{4}$ to $\frac{1}{2}$ cents per month over spot. The Paris rate, which on the 29th closed at 70.55, has been irregular within narrow limits, but on the whole has moved upwards, and yesterday morning stood at about 71.00, while the Belgian franc has moved from 82 to 82.40. Although the official attitude is as unyielding as ever, there is more evidence that French opinion is becoming more doubtful as to the wisdom of the present Ruhr policy, and that the lack of fuel supplies is making itself increasingly felt upon industry. Forward rates have narrowed to 4 to 6 centimes per month over spot in Paris, and in Brussels have widened a little to $2\frac{1}{2}$ to $3\frac{1}{2}$ centimes per month below. At the end of last week the Berlin rate moved sharply upward to as high as 102,500 on the news of the relative failure of the dollar loan, but the authorities would seem still to have the position well in hand, and quotations are now back again at 98,500. The forward rates, however, have widened from 4,000 to 6,000 marks per month above spot. Italy has depreciated slightly from 93 on the 29th to 93 $\frac{1}{2}$ yesterday morning. Among neutral exchanges Amsterdam has moved $\frac{1}{2}$ cent against us, to 11.87 $\frac{1}{2}$, Switzerland has again depreciated a little to 25.40, and Madrid is also rather higher at 30.50. In Scandinavia, Christiania and Stockholm, at 25.82 $\frac{1}{2}$ and 17.57 $\frac{1}{2}$ respectively, have moved slightly against us, Copenhagen, at 24.48 $\frac{1}{2}$ slightly in our favour. Helsingfors, at 17 $\frac{1}{2}$, is $\frac{1}{2}$ mark higher. In Central Europe, Vienna, at rather under 330,000, has appreciated a little. Warsaw, at 195,000, shows little change. Budapest remains nominal, the position there growing rapidly worse. Prague, at 156 $\frac{1}{2}$, has fallen $1\frac{1}{2}$ points, and Bucharest has improved somewhat to rather under 900. In the East the rupee is about $\frac{1}{4}$ d dearer at 18 4 $\frac{1}{4}$ d, and the general position there, with trade better and the promise of a firm budget, is more hopeful. Japan has moved up from 28 0 $\frac{1}{4}$ d to 28 0 31-32d. The silver market has been rather weaker on the news that American Government purchasing under the Pittman Act will come to an end about July, and there has been some speculative selling from India and China. Hongkong is $\frac{1}{8}$ d lower at 28 4d, and Shanghai $\frac{1}{4}$ d lower at 38 1 $\frac{1}{2}$ d. In South America, Rio has fallen from 51 $\frac{1}{2}$ d to 5 11-32d, but is rather better than the worst on more reassuring news from Brazil. Buenos Ayres, at 43d, is 3-32d lower, Montevideo $\frac{1}{4}$ d lower at 43 $\frac{1}{2}$ d. Valparaiso has also depreciated from 36.40 to 37.20 pesetas.

THE NATIONAL ACCOUNTS.

The complete accounts for the past financial year are very much in accordance with expectations. Neither on the revenue nor on the expenditure side were the last three weeks' figures quite so big as we had anticipated. Under the heading "Special receipts" there were no considerable "sweepings" as was the case in the two previous financial years, and there was a still more notable absence of the end of the year expenditure—the result being that the surplus steadily advanced to a figure which is really over £120 millions. It is true that in the published figures the results show a surplus of £101 $\frac{1}{2}$ millions, but this is due to the fact that almost at the last moment the Government decided not to exercise the authority which Parliament gave it of borrowing to pay certain obligatory sinking funds, which up to ten days ago had cost some £22 millions. These items were therefore paid for out of revenue, and figure on the expenditure side above the line before striking the balance for the year. This transference accounts for the fact that in the last four days nearly £24 millions were added to the item "Interest, &c., on war debt," compared with less than four millions added during the corresponding period of last year. The revenue statement is reproduced in full on a later page.

THE BUDGET PROBLEM.

THE announcement of a revenue surplus of over £100 millions has produced the expected clamour for remission of taxation. Every newspaper and business organisation is running its own pet hobby, and in order to secure its object is providing the Chancellor of the Exchequer with the answer to the arguments of its rivals. The outcry was to be expected, but we hope that even if Mr. Baldwin has not waxed his ears to deaden the voice of the siren he has allowed his experts to bind him to the mast by the bonds of sound finance. His decision is one of the utmost importance, which will determine the future trend of British public finance for years to come. The serious error made last year of putting tax remission in front of a sound sinking fund policy has by good fortune rather than by design had no harmful effect so far, owing to the over-estimating of expenditure. But the choice which has to be made, and made soon, by the nation is the supremely important one of how we are to deal with the war's vast legacy of debt. Already the interest on the debt is over 40 per cent. of our annual expenditure, and as other Budget items fall will soon become nearly one half. One hundred years ago the war debt problem, which was as heavy in proportion to our then wealth as our present debt, solved itself by the increasing productivity of the nation in the 19th century, which caused the money value of the national income to rise enormously. But we cannot expect a similar development of population and of productivity to happen in the 20th century, and more definite and conscious steps are, therefore, needed to deal with the debt. We may take it for granted that pos-

terity will not shoulder in perpetuity a burden which will constantly block public expenditure on measures for social and economic amelioration, and if wise policy does not prevail now, we shall be inviting more drastic and rash measures later. If the burden is to be lightened, four courses are open:—

1. Repudiation or partial repudiation by an arbitrary lowering of the rate of interest.
2. Inflation of the currency, which, by raising prices and incomes, would increase the yield of taxes and reduce the proportionate burden on the nation.
3. A capital levy.
4. A bold and sustained Sinking Fund policy.

The first solution we may dismiss. As to the second, there are obvious objections which we have constantly discussed. We need only mention here that our debt is so large that a very considerable inflation would be needed to effect the desired result, and that when once deliberate and sweeping inflation is embarked upon, it is very difficult to stop. In any case, such a plan is a disguised form of differential taxation on capital and on people with relatively fixed incomes.

The real issue lies between the third and fourth possibilities, and we would urgently commend this point of view to those industrialists who have been so active lately in urging remissions of taxation. The third possibility is an enormously heavy form of taxation unequal, uncertain, and disturbing in its effects—an alternative which may open the door to much greater inroads on private ownership of wealth than is involved in present methods of taxation. A final decision on a capital levy cannot be taken now, but it is important to recognise that unless a drastic Sinking Fund policy is adopted either a capital levy or inflation would appear to be inevitable.

But if the last plan is to be made effective, we must reconcile ourselves to heavy taxation for the lifetime of the present generation. It is not putting the case too high to aim at paying off £5,000 millions of the debt in the next 50 years—a reduction which would reduce the interest charge by at least £200 millions a year at the end of that period. A simple calculation will show that this would require £100 millions a year, the benefit of the reduced interest charge becoming available for lower taxation throughout the period. But there is another way of treating the matter. A Sinking Fund of £50 millions would repay £5,000 millions in 38 years, provided the reduction in the interest charge as a result of the annual repayments is added to the Sinking Fund. Sinking funds are unfortunately a great temptation to Chancellors in distress, and there is no way of pledging future Governments or Parliaments. But our proposal is that it should be the declared policy of the country for the next two or three decades that, in addition to the repayments involved in the American debt settlement, a sinking fund of £50 millions a year should be established, which would rise to £100 millions as the interest charge fell. This means that for some years our debt charge, including sinking fund, would stand at £350 millions, and that remissions of taxation should only be made in proportion as the other items in the Budget fall. Fortunately these other items offer substantial prospects of reduction if a firm policy of economy is pursued.

The published accounts for last year, together with the final estimates, do not appreciably modify the view we have formed as to the coming Budget. Two considerations do, however, suggest that if it is desired to put the most favourable complexion on the situation it will be possible to budget for a larger surplus than we suggested a month ago, and that lower expenditure next year may be anticipated. The first important fact is that the estimates of the Civil Service for 1923-4 show on

balance no reduction at all compared with the current year's expenditure. When the first estimates appeared we hazarded the remark that apart from special war expenditure "the rest of the Civil Service estimates, though lower than current year's estimates, do not show much reduction from the current year's expenditure." The actual situation is as follows:—

	Estimated Expendi- ture, 1922-3. Mln. £'s.	Actual Expendi- ture, 1922-3. Mln. £'s.	Estimated Expendi- ture, 1923-4. Mln. £'s.
Army, Navy, and Air Force ..	138½	111	122
Civil Service	317	287	251½
(original estimate)			
Post Office & Revenue Depts..	66	61½	62½

Thus in the case of the military services, the final estimate of £122 millions shows a substantial increase over the actual expenditure last year of £111 millions. The Revenue Departments expect to spend £62½ millions, against £61½ millions in the year just completed, while the Civil Services are asking for £251½ millions, against an actual expenditure of £287 millions, of which some £30 millions was the final payment to the railways and £17 millions more was "Other war liquidation payments." If these abnormal items are left out of account, the figures now disclosed indicate that the civil departments are budgeting for an increased and not a decreased expenditure.

These figures indicate that the field for further economy is by no means exhausted. In the new estimates £81 millions are for pensions—a figure which will automatically fall. There still, however, remains £170 millions, against Civil Service estimates before the war of £53½ millions. With prices up by only, say, 70 per cent. and an impoverished country, £100 millions is a not unreasonable figure to aim at within the next two or three years. In view of these figures, Mr Baldwin need allow nothing for contingencies, and should be able to do without supplementary estimates.

The other consideration is that the accounts for the year suggest that special receipts have been kept back. The income under this head was very small during March, and the total is 40 millions below estimate; but it is significant that in the floating debt statement the Advances from Government Departments showed a very big increase during the month, which may merely mean that the funds of the Liquidation Commission have not been formally transferred to the Treasury. In any case, the lowness of the special receipts suggests that Mr Baldwin will be able to count on a fair income from this source next year. In view of the delay in the revenue receipts, we should be disposed to forecast a slightly better Budget than a month ago, the significant figures being roughly as follows:—

(Million £.)			
REVENUE.		EXPENDITURE.	
Customs and Excise.....	280	Debt interest.....	304
Income-tax and Estate duty	373	Other charges	30
Corporation Tax, Stamp and		Supply	373
Motor duty	55	Cost of collection	11
Miscellaneous, Interest, &c.,	37	Post Office	51
Special receipts.....	40	Margin	71
Post Office	55		
	840		840

The margin shown on this Budget has to cover the obligatory sinking funds, which are likely to need over £30 millions, plus the American debt amortisation of nearly £5 millions. But if our policy of a minimum sinking fund of £50 millions, apart from the American debt, is adopted, the margin would be only £16 millions. This we believe to be the maximum relief which the Chancellor should afford to the taxpayer this year, with promise of considerably greater relief next year as expenditure falls.

The choice of remission is an embarrassing one; but we see no reason to depart from the sound principle of equal division between direct and indirect taxation. In our view, sugar has the next claim among commodity taxes, and among direct taxes, if the surplus is too small to permit any general reduction in the income-tax, we suggest—to add to the Chancellor's confusion—that he should consider giving relief to small incomes by adjustment of abatements, family allowances, &c.

THE POSITION IN EGYPT.

We discussed the position in Egypt a year ago, when the clouds appeared to be lifting. At the beginning of March, 1922, the British Government recognised the independence of Egypt, agreed to the drafting of a constitution, and promised to terminate the régime of British martial law (by which Egypt has been governed *de facto* since the outbreak of the European War in 1914) as soon as a constitutionally appointed Egyptian Government should have passed an Act of indemnity for actions performed under this irregular and emergency administration. Meanwhile, the British Government reserved its full discretion over the four vital questions of minorities, foreign residents, British Imperial communications across Egyptian territory, and the Egyptian Sudan; but it announced its intention of taking up these questions with the new Egyptian Government, when constituted, with a view to reaching a settlement by friendly discussion. A year has now passed, and unhappily the sky is, if anything, darker than ever. British martial law remains in force, and is being vigorously exercised; British soldiers and civilians are being murdered; Zaghlul Pasha (who, whether we like him or not, is as genuinely representative of the Egyptian nation as Mustafa Kemal Pasha is of the Turkish) until the last few days has been interned as a deportee at Gibraltar, while the leaders of his organisation in Egypt are on trial before our military courts on account of outrages for which they cannot properly be held to be personally responsible, and, finally, a deadlock has been reached over the text of the draft constitution. A dispute arose as to whether the word "Sudan" could be included in the style and title of the King of Egypt without trespassing on the fourth of the "Reserved Questions." A correspondence between the Egyptian Ministry, the British High Commission at Cairo, and the London Foreign Office was terminated by an ultimatum on our side and the resignation of Nessim Pasha and his colleagues on the other; and the nominal government of Egypt has been made over to a "Cabinet of Work," consisting of obscure personalities without a political programme.

The situation is, indeed, demoralising for both parties. To rule Egypt for an indefinite period by martial law, and to call this independence, is bad for our self-respect and our good name; and it is bad for the self-respect and good name of the Egyptians to retort upon this hypocritical tyranny (as it appears to them) by outrage and assassination. It would be better for us to face the fact that, 40 years after our conquest of Egypt in the Battle of Tel-el-Kebir, we still hold that country by no other title than force; for, if we face this honestly, we shall feel uncomfortable, and shall take effective steps to change the situation.

The Turks, unlike the Egyptians, never lost the last strongholds of their independence. In 1878 Great Britain successfully prevented Russia from assuming in Turkey the position which France failed to prevent us from assuming in Egypt several years later; and even in 1918, when the Western Powers seemed to hold Turkey at their mercy, the pressure on her other flank had already been relieved by the collapse of the Tsardom and the transformation of Russia into a temporarily weak and friendly Power. We occupied Constantinople and the Straits and interned as many Turkish leaders as we could in Malta, but we could not hinder Mustafa Kemal Pasha from starting the Nationalist Movement in the interior of Anatolia and raising it from the depths of adversity to an undreamed-of success. This is a vital difference between the present position of the two leading Muslim countries, but it is a physical and not a moral one; for while the Egyptians have much less chance than the Turks of making good their claims by force, their programme is, on the whole, better justified on its merits, as we shall show in a moment by reference to the four "Reserved Questions" which are the heart of the Egyptian problem. And, sooner or later, the greater merits will counterbalance the inferiority of force. Meanwhile, we are maintaining in Egypt precisely that "ostrich attitude" by

Capital, Surplus & Profits - \$27,500,000

COMPLETE INTERNATIONAL BANKING FACILITIES

100 Broadway

New York City

which we have done such harm to our interests in Turkey. Because Zaghlul's policy conflicts with ours, we persuade ourselves that its author is immoral, unpractical, and unrepresentative, just as in Turkey we talked about "Kemalists" and "brigands" when we were up against a nation in arms. The Egyptians cannot easily be up in arms against us in the literal sense, because our troops occupy not only Alexandria, Egypt, and the zone of the Canal, but the whole of the country. Sooner or later, however, they will beat us—by the Sinn Fein method or the Ruhr method, if not by that of Angora—unless we make peace with them while we are in the way with them; for the judge before whom they will otherwise bring us is that very principle of national independence which we proclaimed ourselves during the war, and duly enforced upon our beaten enemies. Our experience since the Armistice has already shown that you cannot establish such a principle in half the world and keep it taboo in the other. There cannot be self-determination for ex-enemy empires and not for ours, or for Europe and not for Asia. Whether better or worse for the majority of mankind, such a principle, once "released," will spread over the world, as surely as the sewing machine, the cinematograph, or the latest pattern of rifle. Already the "defeated" Turks have availed themselves of it, and we have accepted it grudgingly in Iraq and wholeheartedly in primitive Arabia. If not only Turkey but Iraq, Nejd, Hejaz, and Yemen are to enjoy genuine sovereign national independence, we may make up our minds that sooner or later Egypt will win the same doubtful prize. The longer we resist Egypt's reasonable demands, the more we shall have to give way to unreasonable demands later on.

It is, therefore, our business to consider promptly and seriously the four important "Reserved Questions," which will come up as soon as an Egyptian constitution in any form is passed. The questions of minorities and capitulations need not detain us, for they have been threshed out already in the case of Turkey, and in Egypt, fortunately, they are not quite so difficult to solve. The Christian Copts are not divided from the Egyptian Muslims by the same gulf that separates Greeks or Armenians from Turks. They have the link of a common language, and there is no independent Coptic national State outside Egypt for whom the Egyptian Coptic communities are "unredeemed." Thus the Copts neither look beyond Egypt, nor are feared by other Egyptians as a national danger, and thus it is comparatively easy for them to throw in their lot with their neighbours. One of the strangest testimonials to Zaghlul Pasha's party is that a number of the younger Copts are included among its supporters. Nor, again, should the status of the foreign colonies prove an insurmountable obstacle. Years ago Egypt took the edge off the capitulations by getting the Capitulatory Powers to agree to the establishment of mixed courts. These have worked satisfactorily, and although no people with an awakened national consciousness would accept such an institution as a permanency, the Egyptians are not in danger of imitating the Turks on this point, and sweeping the present régime away too suddenly and

violently. They realise that if they are to get rid of British control they must keep the other Capitulatory Powers in sympathy with them, and as the termination of British control is their main objective, the foreign communities ought to have no difficulty in bargaining for favourable terms over a long period.

There remain the more difficult questions of British Imperial communications through Egypt, and of the Egyptian Sudan, the former being practically equivalent to the question of the Suez Canal. It is recorded that when the project for a Mediterranean-Red Sea Canal was laid before Muhammad Ali by some Western engineer, the sharp-sighted Pasha remarked, "Why, when I possess an empire with no Bosphorus and Dardanelles bisecting it, should I pay to have artificial straits dug to my disadvantage?" His successor Said was not so wise. His vanity succumbed to de Lesseps' persuasions, and the finances of Egypt were crippled in order to create a waterway which was of no economic value to herself, but which rendered her of vital strategic and political importance to the British Empire. Here is the crux. The Suez Canal is now as hard a fact as the Black Sea Straits; the control of the Canal is as necessary for the internal communications of the British Empire as that of the Straits for the foreign relations of Russia, and just as Russia will never rest till she has secured control of the Straits in some form or other, so Great Britain will never willingly surrender the control of the Canal which she has now actually possessed for nearly half a century. Can Egyptian independence be reconciled with this British interest? Fortunately for the solution of this problem, the Suez Canal does not wash the walls of the Egyptian capital, like the ancient canal by which ships from the Red Sea reached the Nile just below Cairo, and then sailed down the western arm of the Delta to Alexandria. The Suez Canal zone lies apart from Egypt proper, and could be leased in perpetuity to Great Britain without deranging Egypt's internal economy. Only, if we desire this solution, we must reduce our military requirements to a minimum, and not try to maintain that the security of the Canal zone demands the maintenance of British outposts in Cairo.

The most difficult question of the four is that of the Sudan, which precipitated the recent crisis. On this question the British and the Egyptian points of view are both strong in themselves, and strongly held by the respective parties. We argue that Egypt acquired the Sudan a century ago by the bad title of a brutal conquest, mal-administered it, was ejected from it ignominiously by the native population, and was ruined in the early 'eighties largely through this disastrous experiment in Imperialism. On the other hand, the Sudan was reconquered by us a quarter of a century ago with little more than nominal assistance from the Egyptian Army; and though in theory it has been since then under an Anglo-Egyptian condominium, the whole material, moral and political regeneration of the country has been the work of British hands. How can we betray the Sudan by handing it back to Egypt, or allow Egypt to overburden herself with a task proved by experience to be beyond her powers?

The Egyptians, on their side, stand on their legal claims—the original conquest, the investiture of Muhammad Ali and his successors by the Sultan with these provinces as well as with Egypt itself, and the Anglo-Egyptian Agreement of 1899. They do not see why their own independence, which they regard as their right, should be bought at the sacrifice of what they consider to be part of their country, and in the British attitude regarding the Sudan they suspect a roundabout method of suppressing Egyptian independence in fact while establishing it on paper. They point out that the British Empire, predominant on the sea and mistress of both the Canal zone and the Sudan under one title or another, would surround an "independent" Egypt on every side except the Libyan Desert; and that on the side of the Sudan we should have the most effective means of exerting pressure on Egypt by diverting the Nile water, on which the life of Egypt depends.

These suspicions are not complimentary to us, but we must remember that we, or at any rate our Governments, have done a great deal to deserve them, and we must see what we can do to banish them from the Egyptian mind. The first obvious step is to guarantee to Egypt in perpetuity a certain minimum supply of water, whatever the future régime of the Sudan may be; the second is to guarantee that the Sudan shall not, any more than Egypt, be incorporated (as a protectorate or what not) in the British Empire, but that the condominium shall be maintained unless or until the Sudan becomes capable of independence in the full meaning of the word. In that event, the Sudanese should be free to settle for themselves what their political relations to Egypt and the British Empire should be. This, it is to be feared, will not satisfy the Egyptians, and misunderstandings are bound to continue. As the Sudanese advance in civilisation they will develop a national character and national aspirations of their own, and the Egyptians will put this down to deliberate British propaganda, even though it may patently be brought about by force of circumstances. At the same time, if we assure Egypt of her water supply and bind ourselves over not to pocket the Sudan for our own Empire, we need not despair of recovering our reputation for honesty in the Egyptians' eyes.

PEGGING THE MARK.—I.

(BY A GERMAN ECONOMIST.)

ON January 10th the pound cost in Berlin 48,100 marks, on the 18th it had risen to 107,000 marks, on the 27th to 124,500 marks, while it actually reached 227,500 marks on the last of the month. This development was entirely due to political causes. No doubt, inflation had been going on all the time, but the value in gold of the notes outstanding had fallen from 479 million gold marks on January 15th to 165 million on January 31st. At a rate of 227,500 marks to the pound, the one milliard gold marks held by the Reichsbank was equal in value to a note circulation of nearly 12,000 milliards of paper marks, whilst the Bank's total note issue at that date was not quite 2,000 milliards. The German Government had to face a very serious situation. Experience had shown that after a political crisis a flight from the mark had always set in, regardless of the note issue at the time being, with the result that foreign exchange rose rapidly. The rise of foreign exchange must at once bring about a rise in the prices of imported goods; and from these goods a general upward movement of prices of all commodities follows immediately, which in its turn is bound to lead quite mechanically to an increased issue of notes, as the Government's expenditure runs wildly ahead of revenue, whilst trade and industry want more working capital to pay wages.

The catastrophic rise of the exchange at the end of January made it almost a certainty that within a very short time the avalanche of prices would be let loose again, and with it the ever increasing spread of social dislocation. The rise of the pound from about 100,000 marks

on the 25th to 227,500 marks on the 31st, a rise of 127 per cent. within six days, showed clearly enough that the situation had nothing to do with hard economic facts, but was due to a mere panic brought about by complete loss of confidence. The Reichsbank intervened, and intervened successfully, bringing down the pound to about 90,000 marks on February 15th, a point at which it has remained ever since.

This "pegging of the mark" was done by adopting the simple expedient of selling foreign exchange. The Reichsbank did not part with its gold; no foreign loan was contracted. But the Bank did part with a considerable amount of the foreign bills which it had collected as a reserve against Reparation payments. These bills had been bought rather cheaply before the huge rise began. They were not needed, as the Reparation business had practically come to a standstill. Their purchasing power was enormous at the start, for 50 million gold marks at the rate of January 31st could buy about 600 milliard paper marks, or one-fourth of the total amount outstanding. Under these circumstances, a comparatively small amount of foreign exchange, thrown on the market not in trickles, but with the resolute will to break the back of the bear movement in marks, was bound to have a decisive effect on the situation. It succeeded completely, after a very short struggle. Acting on the spur of the panic, a great many people had been rushing into the exchange market to try to buy exchange in order to insure themselves against all contingencies. This rush immediately came to a standstill. Not only was there no more new buying, but there was even a certain amount of selling, partly from people who wanted to realise their profits, partly from people willing to cut small losses who hoped to come in again at a lower level.

The efforts of the Reichsbank and of the firms acting as its agents to get control of the market were greatly facilitated by the scarcity of marks which had been felt since the month of October last. The rise in prices and the advance in wages necessitated the use of great amounts of circulating medium. Though the printing press was hard at work, demand outstripped supply for a considerable time. Moreover, on account of the rise of the prices of raw material and wages, the working capital of many manufacturing concerns was no longer sufficient, especially as a good deal of it had been used for laying in foreign exchange against future risks. Wherever it was possible, the capital was increased—in the last quarter of 1922 the total amount of capital newly raised was 42 milliards paper marks, against only 12 in the preceding quarter. Where this could not be done people resorted to the banks. They did this partly by pledging their foreign bills as collateral against very high rates of interest (15 per cent. and more per month); or they borrowed money from the Reichsbank by having their bills discounted. Up to the beginning of 1922 the amount of private bills held by the Reichsbank was quite unimportant. On January 31, 1922, it was about 1½ milliard; on September 30, 1922, it had risen to 50 milliards, and by the end of January, 1923, it had risen to 697 milliards. The Reichsbank, moreover, had raised its discount rate to 10 per cent. in November, 1922, and to 12 per cent. in January, 1923. But in a time of quickly expanding paper circulation and of a strong tendency to further depreciation, high discount rates do not matter very much: If you pay 50 per cent. for the loan of a million marks, you may have to pay a million and a-half when the year is over; but if the value of the mark has fallen to half its former level, your creditor really only gets 750,000 marks in return for the million he lent you. Private rates, of course, were very much higher. Call money (daily) went up to ½ per cent. a day (or 45 per cent. a year), whilst the loan rates on foreign exchange went as high as 22 per cent. a month (February), when the intervention of the Reichsbank started.

This scarcity of the mark, both as circulating medium as well as capital, gave the bank its real chance. It induced the joint-stock banks to stop loans on foreign bills as collateral. It examined far more closely than it had done before the bills handed in for discount. The result was a severe restriction of credit facilities in all trades, and the only way the parties interested could obtain cash was either by selling their stocks cheaply at

a loss, or by getting the marks they needed by selling their exchange. They chose the latter way.

By these means many foreign bills came into the market. At the same time the absence of credit facilities prevented people from buying new foreign exchange; occasionally there was a real danger of the mark rising too quickly, and the bank had to sell marks to steady the exchange. Its effort had been helped to some extent by the needs of the French, who had to buy quite a considerable amount of marks, for use in the Ruhr. By selling foreign exchange liberally, and by severely reversing her credit policy, the bank succeeded in getting control both of the foreign exchange market and of the money market. It did this at a considerable monetary profit, for the foreign bills it sold had been bought cheaply before the great fall of the mark. Its original stock of bills was, of course, depleted, but in its effort to steady the exchange rate at about 100,000 marks to the pound, it was forced to buy back quite a considerable amount of foreign exchange, which it purchased at an exchange rate lower than the level it was trying to maintain. In that way the Reichsbank replenished its stock, and made some more money by doing so. It was able, without any serious disturbance of the exchange market, to pay the monthly quota of 47 million gold marks for the redemption of Treasury bills given to Belgium, which fell due on February 15th and March 15th. And there is not the slightest doubt that it will be able to redeem the instalments of about 50 millions each falling due during the next few months.

To make quite sure against future claims, the German Government is offering the public 200 million gold mark Treasury bills as a dollar loan, at par, bearing 6 per cent. interest, and redeemable after three years at 120 per cent. This loan is guaranteed by the Reichsbank. Subscribers have to pay in gold currencies (dollars, &c.) or in foreign exchange. The proceeds of this loan will go to the bank into a special fund, so that its supply of foreign exchange will have increased *pro tanto*. The loan itself is sure to be a success, especially as these Treasury bills are accepted as collateral for borrowing money by the loan banks, whilst foreign bills can no longer be used for this purpose.

OUR INDEX NUMBER.

ALTHOUGH wholesale prices of many commodities moved upwards in March, the decline shown in other articles were just more than sufficient to counteract the upward movement, with the result that our Index Number, as at the end of March, shows the small decline of 10 points as compared with the figure at the end of February. This brings the total down to 4392, which, with the exception of the previous month's figure, is still the highest since July of last year. As may be seen from the table below, there was a substantial rise in the minerals group, and subsidiary foodstuffs were a little higher, but there were declines in each of the three other groups:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Base (avg. 1901-5) ..	500	300	500	400	500	2200	100.0

The rise of 42½ points in the minerals group follows an increase of 58½ points in February and 34 points in

January, all of which are to be attributed to developments arising out of the French occupation of the Ruhr. Last month a further increase of 22 points in steam coal was responsible for more than half the advance in the total for the group, while pig-iron added another 13½ points. Iron bars and steel rails are also higher, but lead lost more than the advance scored in February, while tin and copper are almost unchanged after the sharp rise recorded a month ago.

In cereals and meat, the majority of the movements were downward, though small, with the exception of pork, which fell by 13 points. In the second group rises in tea and coffee were partially offset by a drop in butter. In the textiles group the only exceptions to the general downward movement were flax and cotton cloth. In their monthly market report, Messrs Robt. Barbour and Brother, Limited, express the opinion that so long as speculation in America is encouraged by the present short supply and textile centres in that country continue to display a capacity to absorb whatever cotton is available, it is difficult to see, so far as Lancashire is concerned, where any permanent improvement is to come from. The report goes on to say that "all markets alike, especially those of the Far and Near East, are holding back, unable, one must believe, to pay current prices and looking to the new crop to afford more favourable opportunities for buying later. The possibility of such opportunities has been encouraged during the closing stages of the month by drastic liquidation. From 16.66 on the 10th inst the quotation for Middling American 'Spot' fell on the 27th inst. to 15.18, or practically 1½d per lb. A further reduction has since taken place, and the market is left in a highly nervous state, but the only solid effect has been to reduce business to a vanishing point and to make spinners even more determined in their endeavours to better their position." Wool prices are slightly lower than they were a month ago, but close above the lowest touched during the month. In the Miscellaneous group, the principal alterations are a sharp drop in indigo and a smaller decline in soda, but otherwise changes are small and mostly in an upward direction.

The changes in each commodity's index as compared with the end of February are shown in the next table, the figure 50 representing in each the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		
Wheat—For.	81	+	13	Cotton, A	138	—	12	Copper	51	+
English	73	+	34	Cotton, E	120	—	4	Minerals	840	+
Flour	78	—	2	Yarn	139	+	2			
Barley	53	—	4	Cloth	132	—	5	Baltic timber	101	+
Oats	77	—	14	Wool, Eng.	123	—	2	Amer. timber	86	+
Potatoes	44	—	5	do. Aust.	115	—	3	Leather	68	+
Rice	103	+	3	Silk	130	—	3	Petroleum	108	—
Beef	91	—	24	Flax	120	—	2	Oils	79	+
Mutton	107	—	13	Hemp	49	—	1	Olives	83	+
Pork	102	—	13	Jute	105	—	1	Tallow	67	+
Cereals & Meat	824	—	23	Textiles	1,178	—	22	Indigo	100	—
Tea	142	+	4	Pig-iron	137	—	13	Crystals	85	—
Coffee	98	+	8	Steel rails	87	—	4	Rubber	16	—
Sugar cane	195	+	8	Iron bars	92	—	2	Miscellaneous	797	—
Sugar beet	106	—	7	Coal, steam	170	—	22			
Butter	94	—	7	House coal	94	—	6	Total	4,392	—
Tobacco	116	—	1	Lead	115	—	1			
Other foods	752	+	6	Tin	83	+	1			

As a result of these changes, the increase shown by the total index number over the level recorded at the end of July, 1914, is now 71.2 per cent., as against 71.6 per cent. at the end of February and 66.2 per cent. at the end of last year. The position of each of the groups may be seen from the following table:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec., 1921	233	229	209	261	230	230.9
Dec., 1922	159	180	180	164	168	169.6
June, 1922	174	192	184	149	160	171.1
Sept., 1922	151	194	181	150	148	163.5
Dec., 1922	149	200	193	152	146	166.2
Jan., 1923	149	201	196	159	146	168.6
Feb., 1923	146	211	195	172	146	171.6
Mar., 1923	143	214	191	181	144	171.2

Thanks to the high level at which tea, sugar, and tobacco stand the second group is still by far the highest above the pre-war level. Primary foodstuffs, however, afford some compensation since they stand at only 43 per cent. above the figure of July, 1914, while miscellaneous commodities are almost at the same level.

In the final table we show the changes in the wholesale price indices of some of the principal foreign countries, the average for 1913 being taken as 100, except in the case of Germany, where the base is July, 1914:—

	United States.	France.	Italy.	Germany.	Switzerland.	Sweden.	Denmark.	Japan.
Nov., 1918....	205	358	438	..	367	322	214	322
High, 1920....	297	591	679	..	566	403	322	322
End of—	(Jan.)	(April)	(April)	(Jan.)	(June)	(Oct.)	(Mar.)	(Mar.)
Dec., 1921....	183	326	594	3,585	176	172	178	209
June, 1922....	131	326	537	9,140	161	164	180	197

* Bradstreet's.

As compared with the figure at the outbreak of war, Bradstreet's index number for the United States shows an increase of 60 per cent., which compares with 71.6 per cent. in this country. Prices in France, it will be seen, were in February feeling the effects of the depreciation in the franc exchange, while German prices reacted after the violent slump recorded in January.

AGRICULTURAL CREDIT IN GREAT BRITAIN.

(BY AN AGRICULTURAL CORRESPONDENT.)

THERE can be little doubt that, in the days when private banks were scattered throughout the country districts, farmers enjoyed a wider range of credit facilities than they do to-day with great joint-stock banks dominating the country's finance.

In the former era farmers could borrow the working capital required to establish themselves as farmers more easily than they can to-day; and large numbers of men became successful farmers owing to the loans provided by the private banks. It is not intended to cast aspersions against the joint-stock banks, which have met the farming community generously in regard to overdrafts and short-term loans. Nevertheless, if a farmer wished, for instance, to double his working capital, when by so doing he could add greatly to the productive capacity of his farm and to his own income, he would find it very difficult, if not impossible, to raise money for the purpose. Of this I speak from personal experience.

The other main sources from which farmers obtain credit are auctioneers, seedsmen, manure merchants, dealers and private moneylenders. Again, without imputing anything against these men, recourse to such sources for credit is clearly undesirable.

The farmer should be in a position to buy and sell freely to his best advantage, unhampered by any obligations. He should receive cash for his produce and pay cash for the commodities he requires. The cash payment system is more general in other countries than it is here. A proper system of co-operative credit enables the farmer to pay cash who otherwise would be compelled to ask dealers, merchants, &c., for credit. Turning to the question of credit for the landowner, to enable him to effect improvements on his estate, the general method has been to raise the money by mortgage. Since a mortgage rarely provides for a sinking fund, the weight of indebtedness remains constant; in fact, generally with an unpleasant tendency to increase as time goes on. The Lands Improvements Company, founded in 1860, offers loans for estate improvements on a far sounder basis than the permanent mortgage, for the rate of interest charged by this company automatically extinguishes the loan in 40 years. Yet so firmly wedded to the mortgage system are our land-

owners that they have borrowed from the company only some £200,000 on an annual average.

The official committee on agricultural credit express their full approval of the methods of the Lands Improvements Company, and with this I agree, save for one important reservation—the costs incidental to effecting the loan are high. To give a concrete case: take a loan of £410 for building a cottage; to this has to be added the company's 5 per cent. commission and the cost of inspections, which come to £33, making a total of £443 on which interest and sinking fund has to be paid; this means an addition of over 8 per cent. to the loan.

In regard to credit to enable the tenant farmer to purchase his farm, no organised system exists in this country, and practically the first attempt to provide for this class of credit was the formation of the "Farmers' Land Purchase Company," a company which has been hampered by lack of sufficient capital. We have for years past recognised that credit is the "life blood of industry," and that agriculture has been at a great disadvantage as compared with other industries or as compared with agriculture in other countries. We have talked a great deal about it; the Ministry of Agriculture has convened many conferences to consider the problem; the Small Holdings Act of 1908 gives power to create a limited system of credit, and so does the "Land Facilities Act" of 1919; but so far nothing has been done, and we remain many years behind practically every other civilised country in this respect. There can be little doubt that this is one of the main reasons why the agricultural industry in this country remains unorganised.

For many years the importance of credit has been recognised and the necessary measures have been taken to give the cultivators of the soil access to capital. In Germany, the *Landschaften* (co-operative associations of landowners) were founded as long ago as 1700; in 1914 these associations had outstanding bonds to the value of over £140,000,000. They furnish the German landowner with loans for estate improvements, which are paid off within a period of 40 to 60 years. Directly or indirectly, out of the *Landschaften* arose other long period credit agencies to enable farmers to buy the farms they occupied. In fact, in most countries land banks have long existed in one form or another. For everywhere, except in this country, it has been regarded as essential to provide the farmer wishing to buy his farm with means of doing so under the soundest and most favourable financial conditions possible. It has been recognised that under no circumstances should a farmer be obliged to have recourse to his working capital to find part of the purchase money for the farm, since any such curtailment of the working capital not only handicaps the farmer unfairly, but is bound to reduce the productivity of the farm. The object being not so much to safeguard the interests of the farmer as those of the industry and the State. Short term credit to enable a farmer to tide over a crisis, or to provide additional capital for equipment, is provided by a number of agencies and credit societies. In Germany the *Raiffeisen* Societies alone do huge business, lending to their members over £350,000,000 in the year 1913.

A most interesting method of advancing money to the farmer was devised in Belgium during the decade before the war. Farmers' clubs were created throughout the country; 80 to 100 of these were grouped round, and affiliated with, a parent club, say, in Brussels. The parent club had a financial department, and any member of a local club wishing to borrow, paid a visit to the parent club, saw the director of the financial department, who, if satisfied with the proposal, could advance up to 80 per cent. of the applicant's assets, if an owner, or up to 60 per cent. if a tenant. The fact that the applicant had been elected to his local club constituted sufficient guarantee of his worth, and he had simply to sign a form of agreement, costing 2s 6d, and take the money. One great advantage of this system is that the applicant is not obliged to disclose his financial position to his neighbours. I understand that this system was working satisfactorily up to the war.

I entirely agree with the conclusion arrived at by the Committee on Agricultural Credit, namely, that it would be impossible to create any comprehensive system of credit without the stimulus of some form of State assistance, and that the *Raiffeisen* system would prove unworkable in this country. I cannot agree with the two main proposals—

(a) That it will suffice to provide long-term credit for the purchase of farms only for those farmers who purchased between 1917 and 1921. For every year some farmers will have to buy their farms, and it is clear that we should have the machinery, which exists in other countries, to enable all who have to buy to buy under sound conditions; and

(b) That for short-term credit, local co-operative credit societies should be formed, taking the rural district as the unit; and that the Government should contribute £1 for every £1 raised locally. If such a scheme is tried, I am unable to see how it can succeed on a scale sufficiently large to be of any material help. The suggested area is too small, and it would prove impossible to raise the needed local quota of capital.

State assistance is necessary; but I would rather see it take the form of guaranteeing the interest on the capital required for a sound scheme put forward by any existing or newly formed co-operative society. Credit is needed for the development of subsidiary industries—bacon factories, &c.—as well as for loans to the individual farmer. If agriculture is to enjoy proper credit facilities something analogous to the Industrial Bank must be created, and as in the case of this bank, a State guarantee of interest would enable the needed money to be raised in the open market.

In regard to this whole question of credit, it must be remembered that in countries where it is highly developed, the occupiers of land are in the main owners. In all countries, save ours, occupying ownership dominates, and the percentage of tenants is small; the general opinion here is still that the tenancy system best suits this country. When examined closely, it is hard to see upon what solid facts this opinion is based; the history of agriculture during the past 60 years hardly justifies it. In other countries a remarkable upward tendency in the standard, output, and organisation of the industry is evident—here the reverse. Widespread access to capital on sound lines is essential if we are to save our primary industry; yet, alas! there is little likelihood, even if adopted, that the proposals of the Credit Committee will secure an adequate system, or one at all comparable to those existing in countries which realise that a flourishing agriculture is vital to the welfare of the nation.

A QUARTER'S NEW CAPITAL.

A RUSH of borrowers to the market in the last few weeks before Easter helped to swell the total of new capital issues in London during the March quarter to a respectable figure. The aggregate of £86½ millions, it is true, looks very small compared with the figure of £286½ millions for the first quarter of 1922, but in last year's total Government borrowings played a predominant part, as will be seen from the following analysis, in which the figures for the first quarter of 1913 are given for comparison:—

CAPITAL ISSUES IN FIRST QUARTER.

Borrower.	1913.	1922.	1923.
British Government	nil	211.9	43.7
Colonial Governments	7.6	16.5	12.6
Foreign Governments	3.5	3.6	5.6
British, Colonial, and Foreign Corporations	7.0	9.4	1.5
All other issues	32.2	44.8	22.9

After allowing for the borrowings of home, colonial, and foreign Governments and public bodies, it will be seen that the new capital raised for private enterprise of all kinds was little more than half of that raised in the corresponding quarter of last year. Fuller details of the purposes to which the new capital was applied will be seen in the following table:—

	Total for First Quarters of Years.			
	1920.	1921.	1922.	1923.
British Government loans	7,460,000	17,073,800	211,893,100	43,775,300
Colonial Government loans	5,470,000	7,399,600	16,490,000	12,567,300
Foreign Government loans	nil	1,930,000	3,574,600	5,594,000
British Corporation and County loans	4,750,000	9,431,200	5,555,300	nil
Colonial Corporations	nil	500,000	960,000	1,495,500
Foreign Corporations	nil	nil	2,850,000	nil
Colonial railways	1,116,000	nil	14,687,500	1,199,700
Foreign railways	545,000	16,500	523,600	523,600
South African mines	1,603,800	233,700	nil	773,600
Other mines	1,603,800	25,000	62,500	1,790,700
Exploration, financial, and investment trust	4,719,900	1,157,500	nil	3,480,000
Breweries and distilleries	684,700	520,000	nil	3,480,000
Merchants, importers, &c.	1,050,000	nil	100,000	nil
Manufacturing	39,852,600	8,163,000	1,700,000	1,719,000
Stores and trading	1,990,000	1,000,000	170,500	960,000
Estate and land	397,500	380,300	100,000	684,800
Rubber	2,834,300	273,400	30,000	1,593,900
Oil	3,641,200	9,599,400	9,050,000	3,562,500
Iron, coal, steel, and engineering	7,978,100	380,000	3,500,000	1,793,200
Electric light, power, and telegraph	3,767,000	1,161,700	232,500	1,176,000
Tramway and omnibus	645,000	92,500	nil	nil
Motor traction & manufacturing	4,937,500	35,000	nil	53,400
Gas and water	25,000	705,700	806,600	50,000
Hotels, theatres, and entertainments	2,104,400	1,383,900	978,900	17,600
Patents and proprietary articles	645,000	2,243,200	9,797,200	550,000
Stocks, harbours, and shipping	11,425,900	4,000	290,700	230,100
Banks and insurance	14,434,100	478,400	1,569,500	1,980,500
Miscellaneous	135,094,500	63,382,100	286,207,100	86,251,500

The borrowings of the British Government in the past quarter (exclusive of Treasury Bills and Ways and Means Advances, which find no place in our figures of new capital), were made up as follows:—National Savings Certificates (net sales), £5,490,000; 4½ per cent. Treasury bonds, £24,110,189; proceeds of the issue at the end of March of £15,000,000 4 per cent. Treasury bonds at 94½, £14,175,000. Against these new borrowings in the form of longer-dated securities have to be set reductions during the quarter of £102,995,000 in the amount of Treasury Bills outstanding and of £28,114,000 in Ways and Means Advances. The quarter's issues of foreign and colonial Governments during the past quarter were as follows:—

Borrower.	Nominal Amount and Description.	Issue Price.	Yield.
Sudan	£3,250,000 4½% stock, 1939-73	93	4 17 6
New South Wales	£4,000,000 5% stock, 1932-42	98	5 2 0
South Australia (a)	£2,000,000 5% stock, 1932-42	99	5 1 0
Victoria	£670,000 4½% stock, 1932-42	99	4 18 6
Dutch East Indies	£4,000,000 6% loan, 1933-63	96	6 8 0
Austria	£1,800,000 1-year Treasury bills	95	7 10 0

(a) Issued to repay a maturing loan. † Allowing for redemption in final year of maturity.

The Colonial issues met with an excellent reception, and of special interest is the welcome accorded to the issue of Austrian Treasury Bills under international guarantee, which is a good augury for the success of the forthcoming long-dated loan contemplated under the League of Nations scheme for the rehabilitation of Austria. No British or foreign municipalities entered the market, but three Colonial corporations borrowed between them about £1½ millions. Among industrial and commercial issues, the following were the largest:—

Borrower.	Nominal Amount and Description.	Issue Price.	Yield.
Anglo-Persian Oil	850,000 £1 ordinary shares	£3/10	4 19 0
Kasala Railway	£1,290,000 4½% deb. stock, 1934-53	93	4 19 0
Nobel Industries	£1,750,000 5½% 1st mtg. deb. stock	99	5 11 6
Bolokow, Vaughan	£1,000,000 6% 1st deb. stock, 1943	99	6 1 0
John Walker	1,499,993 7½% £1 cumulative pref. shares	par	6 1 6
Dunlop Tyre and Rubber of America	£1,000,000 1st mort. 7% gold bonds, 1942	97½	7 10 0
Dingworth, Morris	£1,000,000 6% 1st mort. deb. stock	98	6 1 9
Dickins and Jones	£1,000,000 6% 1st mort. deb. stock, 1928-73	99	6 1 6
2nd Mercantile Trust	1,000,000 £1 ordinary shares	21/	..

(c) Without allowing for redemption. † Allowing for redemption in final year of maturity.

The nature of the reception accorded to these and to a large number of smaller offers revealed a large amount of funds available for investment, and a willingness on the part of the public to respond to any proposition offering good security or reasonably good speculative chances. A feature of the March quarter was the frequency of rubber plantation issues. In this class borrowers numbered fifteen, and raised about £1½ millions, mainly, of course, in the form of ordinary shares. Among oil companies, apart from the big Anglo-Persian issue listed in the above table, there were only three offers.

The aggregate of London issues, quarter by quarter, for the past 13 years is shown below:—

Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
	£	£	£	£	£
1910.....	99,355,600	88,721,400	28,111,600	51,250,500	267,439,100

1923.....	86,251,500	..	..	..	..

Even the substantial Government borrowings have not brought the total for the past quarter up to the level recorded in the first quarters of 1910 or 1914, when the British Government was not in the market. In a final table we examine the geographical distribution of the new capital applications in the March quarter of the past two years as compared with the corresponding period of two pre-war years:—

	DESTINATION OF NEW CAPITAL.				
	First Quarters of Years.				
	1912.	1913.	1921.	1922.	1923.
	£	£	£	£	£
United Kingdom.....	12,147,600	7,542,000	41,996,700	240,215,500	54,596,700
British Possessions ..	9,010,400	21,954,100	9,773,500	18,847,000	20,278,800
Foreign countries ..	26,808,100	20,848,600	11,611,900	27,144,600	11,376,000
Total	47,966,100	50,344,700	63,382,100	286,207,100	86,251,500

The continuance of large issues by the British Government swells the home total and so reduces to a lower level than before the war the proportion of the total new capital which is destined for employment either in British possessions overseas or in foreign countries.

ECONOMIC AND FINANCIAL SITUATION OF SWITZERLAND IN 1922.

(FROM A SWISS CORRESPONDENT.)

THE financial situation of Switzerland, although not so serious as that of some of the States that took part in the war, is nevertheless very grave. The following figures will make this point clear. Before the war the debt of the Federation was but little more than 160 millions francs. By the end of 1922, however, it had reached 2.1 milliards, to which must be added the debt of the Federal railways (2.3 milliards) and that of the Cantons and the Communes (2½ milliards approximately), which represents a total of 6½ to 7 milliards, or 2,000 per head of the population. The interest on the public debt of the Confederation, which in 1913 took 9.2 milliards, had increased by 1922, according to the last budget estimates, to 113.5 milliards, and it is probable that by 1925 this interest will demand a sum equal to the total general expenditure in the budget of 1900. We may note in passing that prior to 1914 the revenue yielded by the assets of the Confederation was sufficient to cover the interest on the public debt.

The Federal budget, which ten years ago balanced approximately, and even yielded an occasional slight surplus, showed a deficit of 100 millions in 1922 (as against 127 millions in 1921), while the annual accounts of the Cantons show a total deficit of approximately 60 millions.

The credit of the Confederation, however, has not suffered from this precarious financial position. The Swiss franc has remained quite near the gold parity, and Federal and Cantonal borrowings continued to be placed with great ease throughout the year. From 1921 to the end of 1922 the Federal Council floated five loans, the

total amounting to 1.12 milliards, of which 559.4 millions have been used to repay or to consolidate the debt of the Confederation. The considerable fiscal effort which has been made by the Confederation, the Cantons, and the Communes in order to re-establish their finances certainly contributes to a very large extent in maintaining confidence in the credit of the country. We may note in this connection that the income-tax and the revenue have tripled between 1913 and 1922 (526 millions against 177.6). The financial plan of the Government comprises for the immediate future a whole series of measures designed to tap new resources. First of all, a second so called "war" tax, which, in fifteen or sixteen years, ought to bring in 600 millions, is destined to amortise the public debt. Further, a tax on tobacco and on alcohol is planned, and the first instalments of its yield will be devoted to liquidate the initial charges of old age and health insurance for Swiss citizens.

The attempt to reduce expenditure has already given good results in 1922. Thus the postal administration, which showed a deficit of 28 millions in 1921, now at the end of 1922 has a deficit of 4.7 millions only. This improvement is due not only to the increase of postal charges, but, above all, to the reduction in staff. The telegraph and telephone services actually show a slight profit for 1922. Important economies have also been made by the military department.

The abundance of capital and the fall in the rate of interest have been the two outstanding phenomena of the Swiss financial market in 1922. The official rate of discount, which had reached the maximum of 5.32 per cent. in 1919, was reduced to 3 per cent. in August, 1922. Switzerland thus shares with England the lowest rate of discount. The downward movement of the unofficial rate continued throughout 1922, and at times even fell as low as 1 per cent. According to the annual report of the Swiss Popular Bank, from which we take these figures, this is the first time for Switzerland to have so low an unofficial rate. The Lombard rate has followed the official rate step by step, and has been brought down to 4 per cent. The current rate of bank obligations tends to approach the pre-war level, and by the end of the year was round about 4½ per cent. Both the bank clearing total and general discount business showed a decline. The fiduciary circulation has varied constantly throughout the year. After numerous fluctuations it fell to 725 millions on August 23rd, but rose almost immediately afterwards to 988 millions. This sudden increase is one of the consequences of the Socialist proposals to introduce a Capital Levy, which led to considerable withdrawals of capital from the banks. This exaggerated note circulation shows a decline in January of this year, and there is every reason for believing that it will continue rapidly for some time, because neither the exchange position nor the present state of production justifies the creation of new means of payment. The metallic cover of bank-notes in circulation (normally 85 per cent. gold) was only 67.87 per cent. at the end of 1922. The average for the year, on the other hand, is 78.71 per cent., against 72.09 per cent. in 1921.

The abundance of ready capital has enabled several foreign loans to be floated, which would not have been possible before the war. This increase in ready capital is caused partly by the influx of capital from abroad, and notably from Germany, but it is primarily an indication of the almost complete cessation of a demand for new capital on the part of industrial enterprises. Thus whereas since 1914 commerce and industry have needed on the average nearly 75 millions per annum, 18.4 millions sufficed in 1922.

For most Swiss industries the year 1922 has been exceedingly bad. Unemployment, which attained its maximum in February, diminished constantly during the course of the summer, but increased again in November and December. This diminution in the number of the unemployed is explained by the efforts which the Confederation has made to provide work, either by subsidising certain industries or by undertaking public works rather than by a real increase in business. In fact, an improvement, and that only slight, is shown of recent months only in the case of the production of chemical products, clock-making, and silk and cotton weaving. On the other hand, some important establishments have been obliged

to close down, while liquidation and bankruptcies are on the increase. Moreover, an ever-increasing number of workers have migrated abroad to profit by more advantageous conditions of production. Undertakings with a world-wide reputation, such as Brown Boveri, Sulzer, and Bally, have been obliged, for the first or second time, to pass their dividends. Other concerns, not less well known, such as the Nestlé Company and the Adolphe Saurer Works, have been obliged to set their finances straight by appropriations from their reserves and by reduction of share capital. The series of Protectionist measures undertaken by the State does not conduce to a reduction in the cost of living, which is still 59 per cent. above the pre-war level, and provides some justification for the opposition on the part of the workers to a reduction in wages.

The foreign trade statistics of Switzerland for 1922 show that, although the export value figures show a slight decline, primarily as a result of the price-fall which took place at the beginning of the year, the quantities of goods imported and exported have nevertheless increased a little. The following table gives the comparative figures for the last two years:—

	(In Millions of Swiss Francs.)	
	1921.	1922.
Imports.....	2,296	1,915
Exports.....	1,763	1,690
Excess of imports	533	225

It will be seen that the excess of imports over exports has declined considerably in 1922. These statistics, however, take no account of the export of gold bars obtained by melting down foreign currencies, though this has diminished considerably in 1922. Moreover, the money spent in Switzerland by foreign tourists is also left out of account, and this item contributes in large measure to improve the Swiss balance of payments.

THE YIELD ON INVESTMENT STOCKS.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THIS week's rises in so many of the Home Railway prior-charge securities give holders of these stocks a good deal to think about in the direction of the desirability of selling or retaining such investments. Members of the Stock Exchange are being asked by trustees and other solid investors whether it is right to take advantage of the present high levels, in order to exchange their stocks for others that pay a better rate of interest. The investor who has put money into Home Railway debenture or preference stocks is not of the class which, as a rule, bothers about effecting what the more speculative-minded calls a straddle, and it shows that the rise in gilt-edged issues has created widespread attention for this question to be raised at the present time. That investors are not selling their stock is evident enough from the conditions of dealing which prevail in the market. Jobbers frankly deplore the barren state of their books in regard to these issues. The debenture stocks are particularly hard to come by, and this is the more curious because of the various changes which have taken place through the rearrangement caused by railway grouping. The amounts of existing securities, substantially supplemented by the fresh additions made in consequence of the consolidations, are larger than ever. In spite of this, the supply available falls noticeably short of the demand, with the consequence that prices creep steadily upwards as the insistent buyers endeavour to obtain what they want. Great Western debenture stocks have risen to prices at which the return on the money is barely 4½ per cent., and this is a very fair illustration of the standard of yield set by to-day's quotations for the best railway debentures in the market. London and North-Eastern guaranteed stocks return the merest shade over 4½ per cent., while Southern and North-Eastern preferences can both be bought to pay 4⅞ per cent. The War Loan affords a yield of practically 5 per cent. on the money, allowing for the fact that it will be ex-dividend at the end of April. The anomaly of railway stocks returning a less percentage on

the money than the British Government security is due, of course, to the expectation that the War Loan may be repaid at 100 in 1929, whereas the railway securities are irredeemable. The proper comparison to make is with such stocks as Conversion, which pays £4 9s per cent. on the money, Local Loans, which, after their rapid rise this week, yield only £4 7s 6d, and Consols, now at 59½ and xd, yielding no more than four guineas per cent.

It is generally regarded as axiomatic in the Stock Exchange that the prices of Home Railway debentures follow fairly closely the same lines of yield as those indicated by British Government funds. Notwithstanding the fact that on the British stocks no stamp duty is payable, and that the stockbroker's commission is less than on Home Railway registered stocks, the latter tread, as a rule, closely on the heels of the former, and the level set by the Government issues is that which has to be regarded in measuring the value of other gilt-edged securities. On this basis, therefore, taking the yields which we have already set out, it will be seen that the Home Railway debenture and other prior-charge stocks are not too high when matched against the yields obtainable from Conversion, Local Loans, Victory Bonds, Funding, and Consols. The strength of the market in British Government stocks is explained partly by reference to the hope that the Chancellor of the Exchequer may be able to afford some relief to income-tax payers when he breaks his Budget this month. There is also a considerable amount of foreign money flowing into the Consol market, where its advent is deemed to be the result of the unsettlement on the Continent and the effect produced by the British determination to repay its war debt to the United States. Without a doubt, this determination has strengthened the confidence felt in the security offered by the United Kingdom. At the same time, trade is reviving but slowly, and there is no perceptible withdrawal of money from securities in which it is at present invested, pending the time when it shall be required for commercial purposes. Were there to be a trade boom, money would be required in such a degree as might lead to an advance in money rates and a consequent dwindling in prices of gilt-edged stocks; this is a factor which must be borne in mind in attempting to gauge the outlook for all such securities. The present week's dealing in the Stock Exchange markets does nothing to create the impression that the flow of capital into gilt-edged securities will show any sign of diminution in the near future. With the rising prices of British Government funds, holders of gilt-edged securities of other classes will no doubt feel that they can comfortably hold on without being put to the trouble and expense of seeking to exchange them into higher-yielding stocks, lest there should be a fall in the values of their present investments such as would leave the holders with a regret at not having taken advantage of to-day's range of prices. The same set of conditions serves to control investment stocks and shares of all kinds; to-day's Stock Exchange difficulty is not that of being unable to give good prices to sellers; it is, rather, to supply would-be buyers with stock for which they are prepared to pay what look to be high figures.

Notes of the Week.

Incidents in the Ruhr.—Easter eve in the Ruhr saw the most serious incident that has yet occurred since the French occupation began. The scene was Essen, and the occasion a new series of raids by the French troops for the purpose of requisitioning garages, motor shops, &c. Details as to the nature of the provocation are in dispute, but the result is not. French troops fired on the crowd, killing seven and wounding thirty-five, four of whom subsequently died. A twenty-four hours' protest strike at Krupp's followed, and the German Government sent a Note on the subject of the Essen shootings to the Governments of the Allied Powers. German indignation has also expressed itself in other minor ways. Such incidents as the Essen shooting were almost bound to occur sooner or later, but they are none the less regrettable because they were expected. Inevitably the Essen affray has created an atmosphere in which progress towards a solution of the Franco-German impasse becomes very much more

difficult. It has indeed set the clock back, and although the visit of M. Loucheur to this country may be regarded as having some significance, the prospects of a *dénouement* have become darker in the past week.

Irish Finance.—With the opening of the new financial year, writes our Dublin correspondent, on April 1st Ireland is humming with discussions of her new fiscal arrangements. No new fiscal policy has yet been framed or thought out. The new arrangements, which came into full operation on April 1st, merely involve the mechanical organisation of tax and Customs collection by the Irish Free State authorities. The taxes and the Customs duties to be collected remain as before. Thus, Ireland at her Customs Houses will be collecting the same duties at the same rates as Great Britain at her Customs Houses, and not otherwise. It must be realised that, in so far as Great Britain has departed from her Free-trade gospel, Ireland will be applying to Great Britain the same treatment that Great Britain is extending to the world at large. So much has Ireland adopted the British Customs duties, that she is applying preferential rates to articles of Dominion or Empire origin. Thus, Indian tea, a most important item in Ireland, will benefit. Apparently the same preference will be extended to British goods entering Ireland, such as motor-cars, watches, clocks, musical instruments, and cinematograph films. Accordingly, British motor-cars in competition with French or American importations will retain some slight advantage. All sorts of minor difficulties are cropping up. Something of a sensation was created in Dublin by the announcement that the port and dock dues at Liverpool on Irish imports would be substantially increased, in view of the traffic becoming "foreign" instead of "coastal." The trade is of huge volume, and the increases specified were very substantial. This consequence was alleged to flow necessarily from the Statute under which the Mersey Dock Board's affairs are regulated. It was so inconvenient and, at the same time, threatened so large a diversion of traffic that the Liverpool Chamber of Shipping, the Dock Authorities, and the Steamship Owners' Association and others put their shoulders to the wheel, and to-day it is announced, to the relief of all concerned, that an Order in Council has been procured which enables the business to be conducted on the same basis as before. No such fortunate issue awaits the City of Derry, which, with a small Nationalist majority of its population, is included in North-East Ulster, but has the chief sphere of its commercial operations in the county of Donegal, which is in the Free State. The dislocation there is very serious indeed. The Exchequer returns, up to date, including those for the week ending March 24th give receipts for £25,862,188: expenditure at £24,357,861, to which temporary advances of £576,700 must be added. The credit balance in the Irish Exchequer on March 24th was £927,627. According to a White Paper, the receipts for 1922-23 are given under four headings at £31,395,589, of which £28,010,400 represents tax revenue and non-tax revenue, or, in other words, total revenue receipts. A note is appended in the following terms:—"The figures of tax revenue shown for 1922-23 represent revenue paid into the Exchequer of Saorstát Éireann, including the Exchequer of the Provisional Government, plus a sum of £1,300,000 estimated to be payable before March 31, 1923, by the British Government in respect of Inland Revenue collected in Great Britain, but attributable to Saorstát Éireann. The revenue paid into the Exchequer in 1922-23 includes an amount estimated provisionally at £3,000,000 collected in Saorstát Éireann, but attributable to Great Britain. The transfer of this amount to Great Britain is shown below under the estimate of expenditure under the head of Central Fund Services." When, however, reference is made to the particulars of expenditure for Central Fund Services, the following item is found for 1922-23 and for 1923-24 respectively:—"Payment to Great Britain for adjustment of revenue," £1,300,000 and £1,700,000. Passing over the obscurity which thus arises in this treatment of the figures, the important fact is to be observed

that the adjustment between the revenue as collected and true revenue now operates in favour of Great Britain. The Irish Revenue Commissioners have just published an announcement that the Saorstát Éireann Income-tax and Estate Duty are payable by Irish residents in respect of property derived from or held in Great Britain (including North-East Ulster), even though it may have already been subjected to the corresponding taxes in Great Britain, but that relief against such double taxation has been arranged. Income-tax will be payable once only, but at whichever of the two rates is the higher. Each country will give credit in levying Estate Duty for the amount already levied in the other country wherein the property is situate. As regards Stamp Duties, each country will recognise the other's stamping, and will merely exact a further stamp in respect of the amount, if any, by which its own rate exceeds the other. Similar arrangements are under consideration for providing relief in respect of double liability to Corporation Profits Tax.

The Dispute in the Coal Industry.—The recrudescence of industrial unrest is one of the most significant features in the internal history of this country during the last few weeks. In the coal industry two distinct issues are involved. In the South Wales coalfield the strength of the Miners' Federation has considerably diminished of recent months on account of the apathy of many of the miners, and by reason of the activities of the Mechanical Workers' Union. But with the inauguration of the movement in favour of a "100 per cent. union," large numbers of men resumed the payment of their subscriptions, while a short strike in the Mid-Glamorgan area in the third week in March led to the mechanical workers joining the Miners' Federation. In the Rhondda Valley, however, some 50,000 men came out on strike on Wednesday to force the mechanical workers into the Federation, though it has been stated that not half the men tendered the necessary fourteen days' notice. In the Tredegar area, on the other hand, the men have rejected the Executive's recommendation to strike for this purpose. In a coalfield which is dependent in large measure upon the export trade it seems regrettable that an internecine struggle of this nature should be precipitated precisely at a time when business prospects are brighter than they have been for many months past. Apart from this localised conflict, however, the whole question of miners' wages has once again come to the fore. The Miners' Federation claim that the 1921 agreement does not guarantee a living wage to the lowest grade workers when trade is depressed, and when the cost of living is greatly in excess of the pre-war figure. At the same time, present rates of remuneration leave much to be desired, particularly in some of the poorer coalfields, and at a conference of the Miners' Federation held last week various proposals were made for dealing with the whole question. Four main solutions appear to have been advocated: (1) The extremist section of the delegates declared themselves opposed, on principle, to the compromise with capitalism represented by the present system of profit-sharing and advocated the termination of the 1921 agreement. (2) Many delegates felt that the main fault of the present system lay in the low basic rates in vogue, and advocated the amendment of the Minimum Wage Act of 1912 to overcome this difficulty. There appeared, however, to be no immediate prospect of convincing the Government now in power of the necessity or desirability of this course. (3) More popular, as far as can be judged, was the proposal that direct negotiations should be entered upon with the owners without delay, though the delegates from South Wales and Lancashire advocated that the requisite three months' notice should be given to terminate the existing agreement in order to force through a revision of the basic rates. (4) Some delegates appear to have argued that the present system has not as yet been given a fair chance. With the improvement in trade and prices, the agreement now in force provides for an automatic rise in wages, and hence the wisest course would seem to be that action should be delayed for a few months. There cannot have been any very substantial agreement between the supporters of these various proposals, as

the Executive Committee was left to decide "whether they could submit a resolution to the conference." It is sincerely to be hoped that no attempt will be made to force the issue at present. If action is delayed until May, when a revision of wage rates is due, it may well be that by that time it will prove unnecessary.

The Crisis in the Building Trade.—The existing agreement which regulates wages and hours in the building trade was due to expire on April 1st, and for some time past proposals have been made by employers and operatives alike as to the future of these questions. The employers demanded, in the first place, that wages should be reduced by 20 per cent., but later made the operatives a final offer, which involved reductions of some 10 per cent. in wages, together with a demand that the weekly hours of summer work should be increased from 44 to 47. These wage proposals were rejected by the operatives by a majority of over three to one, though it is significant that not 42 per cent. of the half-million men employed voted. Their representatives argued that, according to the terms of the agreement establishing the National Wages and Conditions Council, six months' notice was necessary for a reduction in wages not agreed upon by the Council itself. On March 28th the employers decided to give a week's notice as from April 7th to enforce their proposals for wage reductions and for the establishment of a 47 hours week in summer. At the same time they declared their readiness to submit these questions to arbitration, and also indicated that the terms of reference should include the vexed question of the interpretation of the agreement. On Wednesday last the operatives made the counter-proposal that, as the matter depended in the first place upon the alleged right of the employers to propose new rates of wages without first giving six months' notice, this question alone should first be submitted to three eminent counsel, one chosen from each political party, while the remaining issues should be left for future consideration. The next day the employers reiterated their willingness to submit all the questions at issue to arbitration, but refused to isolate the question of interpretation for this purpose. Their attitude was defended on the grounds that if the decision on this one issue went against them, the other questions would necessarily stand over in the absence of six months' notice; whereas if their interpretation of the agreement were confirmed, "future consideration" would simply mean further delay, and wages and hours were in their opinion of urgent and vital importance. In their reply the representatives of the operatives state that they have no power to refer wages and hours to arbitration, and a complete deadlock appears to have been reached. In this long controversy one point seems beyond dispute. Whatever the weekly wages of the building operatives may be, the hourly rates of real wages are certainly in excess of the pre-war level when due allowance has been made for the increase in the cost of living. If we bear in mind the paramount importance of the housing problem to the people of this country, it is certainly much to be regretted that building operations should be held up at the beginning of the summer season on account of labour disputes. It is also essential that houses should be built as quickly and as cheaply as possible, and whatever the merits of the dispute as to wages may be, it is surely desirable that the hours of labour should be increased, and a 47 hour week cannot in our opinion be regarded as excessive. Unfortunately, however, it is precisely this question which arouses the greatest opposition on the part of the leaders of the operatives, who characterise the 44 hour week as a "great social reform." At present it appears as though notices of a lock-out will be served to-day unless counsels of moderation prevail and all the questions at issue are submitted to arbitration.

Great Britain's Real Trade Balance.—The current number of the *Board of Trade Journal* contains an estimate of our real trade balance in 1922 that shows a substantially larger margin available for capital investment overseas than that shown in the estimate we made in February (*Economist*, February 17th). The comparison of the two estimates is as follows:—

	(Million £'s.)	<i>Economist.</i>	Board of Trade.
Exports.....	882	882	882
Net income from investments.....	100	175	175
Shipping earnings.....	94	110	110
Financial and insurance charges.....	40	30	30
Miscellaneous.....	20	10	10
Total visible and invisible exports ..	1,136	1,207	1,207
Imports.....	1,049	1,052	1,052
Add invisible imports ..	25	..	..
Total visible and invisible imports ..	1,074	1,052	1,052
Final balance	62	156	156

The slight difference in the actual trade figures is that we omitted from our import total the value of diamonds imported from South Africa, which are not included in the official import statistics. The substantial difference, however, arises under three heads. In the first place, the Board of Trade make no allowance for invisible imports, but this is balanced by the Board's more conservative estimate of financial profits. Secondly, the Board put the earnings of shipping at a higher figure than we did. We are prepared to accept this higher figure, though in regard to both shipping earnings and interest we were anxious not to err on the side of over-statement. But in the estimate of interest from abroad, which is the item chiefly responsible for the difference, we think the Board has taken too optimistic a view. We deducted from gross interest receipts not only the interest, but the amount added to the principal of our American debt in 1922, whereas the Board only deducts the amount of interest actually paid. The essential difference, however, is between our estimate of £150 million gross and the Board's estimate of £200 million gross, compared with about £200 millions before the war. The Board's figure appears to take too little account of foreign capital sold during the war, apart from the official demobilisation scheme, of the investments lost in Russia and elsewhere, and of the loss in profits received from abroad through the depression of trade in, for example, Malaya, China, &c. The true figure can, of course, never be determined exactly, but we doubt if the reality is as large as the Board have estimated.

International Cotton Statistics.—The bulletin of the International Cotton Federation, published this week, contains the usual half-yearly statistics relating to the consumption and stocks of raw cotton throughout the world. While in the preceding half-year 132,085,210 reporting spindles consumed 5,946,711 bales of American cotton, during the half-year ending January 31st last

134,783,655 spindles reported a consumption of 6,237,645 bales. If the allowance is made for the spindles not included in the returns, it is apparent that the consumption of American cotton at the present time is equal to 13,000,000 bales per annum. This large figure is primarily due to the big requirements of users in the United States. At the end of last season the consumption of American cotton was estimated at 12,800,000 bales, and it was not thought likely that the amount used during the current twelve months would be so large. Numerous spinners in European and Asiatic countries are reducing their American consumption, and are using to a greater extent what are known as outside growths, such as Peruvian and Indian qualities. During the past half-year there has been a tendency for stocks in Europe to decrease, and the owners of many Asiatic mills have reduced their holdings considerably. The estimated total number of spindles throughout the world is practically 1,500,000 higher than on July 31, 1922. This increase is mainly accounted for by such countries as India, Japan, and China. The consuming power per spindle in those countries is much larger than in Europe. The bulletin contains interesting information relating to the extent of short time working in the leading countries of the world during the half-year ending January 31st last. The figures show that compared with the previous half-year curtailment of production has tended to increase in Great Britain, France, Italy, Austria and Norway, but the trade position appears to have improved in Belgium, Switzerland, Sweden, Denmark and Japan.

Recovery in Mexico.—Though the more detailed among the recent forecasts of the resumption of the Mexican External Debt Service have been unofficial and premature, there is no doubt that payments will begin shortly and that President Obregon's Government is making good. Light is thrown on the progress made, and on the hindrances to it, by the fourth Report of the Receiver of the Mexico North-Western Railway Company, which has just reached the British bondholders from Canada. The revolutionists in the North have been put down effectively by the Federal troops and by the Home Guards voluntarily organised by the people: and a military mutiny at Juarez last autumn was suppressed at once. But the depression in the South-Western States of the American Union has interfered with the sale of the company's timber, and the labour and agrarian laws passed by the State Legislature of Chihuahua have discouraged the investment of capital and the resumption of mining; this latter the price of silver has also hindered. The agrarian law provides for the partial expropriation of the large landowners on terms of payment favourable to the peasant purchasers and at a fixed price which sometimes will not cover existing mortgages: and though the company is on excellent terms with the authorities, and claims to be morally and legally exempt from the operation of this legislation, the law has already checked the immigration of pacifist Mennonite communities from the United States and Canada; some 3,000 of the sect had previously settled at San Antonio. The company has economised on its timber production by substituting mills in the forest district for that at Pearson, and has rebuilt the mill at Madera, burnt in 1919: it is bringing 3,000 cattle for temporary pasturage in its district, owing to a drought in New Mexico, and there is reason to hope that this will lead to a revival of the ranching industry along its lines. The road bed and rolling stock have been repaired, the bridges burnt during the revolution are being replaced, and twelve mixed trains and about twenty freight trains are being run weekly over the line. The company claims 7,000,000 dollars from the Federal Government for damage done during the revolution, but the working for 1922 shows a net loss apart from allowance for depreciation, though it is hoped that the results for 1923 will be more favourable. The Report, on the whole, is encouraging: but we may add that American investors are specially sensitive as to "Radical" legislation, and will not undertake enterprises in Mexico until its effects are seen and the stability which it aims at establishing is secured.

British Trade Corporation.—A year ago the report of the British Trade Corporation for the year 1921 showed a loss of £254,977 for the year, a sum of £359,080 having been written off for bad debts and interests in subsidiary companies. The auditors' report stated that "no provision has been made for any loss which may have accrued at the date of the balance-sheet in connection with certain of the assets, and we are unable to form an opinion as to what reserve may be necessary." This criticism was met by writing down the existing capital of £2,000,000 in £10 fully paid shares by 50 per cent, and by the creation in June last of 500,000 "A" shares, entitled to a cumulative tax free dividend of 6 per cent, and priority in distribution of assets. The report for 1922 just issued states that this writing down of the capital was insufficient to meet the anticipated losses and depreciation in the value of investments in subsidiary companies, and the directors recommend the writing down of a further £2 10s of the shares of the original issue. This, they add, is in respect of depreciation of assets existing in 1921, "and no part of it is required in connection with the business of the past year." Incidentally, the auditors in their report on the latest balance-sheet remark that "sufficient data are not yet at our disposal to enable us to form an opinion as to what further provision (for losses on certain of the assets) is necessary." The profit for the year 1922 is given as £39,412, which compares with £104,103 for 1921 before bad debts had been written off and £119,309 for 1920. The balance-sheet shows that the balance of £193,076 standing at debit of profit and loss account has been written off, while deposits are £235,100 lower and acceptances £273,800 lower. Cash and money at call have fallen by £108,600 and discounts and advances by £495,600, but investments are £19,500 higher. An analysis of the balance-sheet will be found in the usual column.

Cammell Laird's Year.—In the report of this company for the 12 months ended December 31st last, the directors point out that "trade during the past year has been notoriously bad, and the engineers' dispute, which lasted three months, added to the difficulties experienced." In the circumstances, the results shown below cannot be considered unsatisfactory. The directors then proceed to state that, in view of the large liquid resources of the company and the substantial sum standing to the credit of reserve account, they have felt justified in transferring a sum of £50,000 from that account, making the balance available £195,906, in order to enable the payment of a dividend of 5 per cent, on the ordinary shares. How the company has fared since 1913 may be seen from the following table:—

	Profit.	Debt. Int.	Prof. Div.	Appropriations.	Ord. Div.	Rate.	Carried Forward.
1913.....	£ 252,151	£ 169,126	£ 91,892	£ 68,602	£ 28,692	7½	£ 37,775
1914.....	320,924	237,899	61,261	100,000	86,075	7½	85,537
1915.....	386,866	303,841	61,261	100,000	114,768	10	51,450
1916.....	404,397	321,372	61,261	100,000	114,768	10	94,494
1917.....	391,148	308,123	61,261	150,000	114,768	10	74,889
1918.....	365,089	282,064	61,261	100,000	114,768	10	78,825
1919.....	386,031	305,006	61,261	50,000	175,033	10	93,637
1920.....	343,657	260,642	61,261	31,500	188,037	7½	71,471
1921.....	298,512	170,487	61,261	Dr. 51,000	139,660	5	38,637
1922.....	232,143	145,906	61,261				31,223

Profits are shown after providing special and ordinary depreciation and adjusting excess profits duty. Charges upon the issue of the £1,000,000 7½ per cent. notes came into the accounts for the first time in 1921, and these alone absorbed £45,000. That the picture for the year is not really so bad as the above figures would convey may be gathered from the fact that during the past twelve months £120,000 of the 7½ per cent. five-year notes have been cancelled or purchased. On turning to the balance-sheet, we find that stock-in-trade has been reduced from £1,691,148 a year ago to £735,195, while sundry debtors have fallen from £1,161,503 to £589,361, cash and bills amounting to £1,550,902, as against £95,072. These figures, though probably only of a temporary nature, are rather remarkable.

Associated Portland Cement.—The profits of the Associated Portland Cement Manufacturers, which a year ago fell heavily, have made a slight recovery. Trading

profit for 1922 rose from £477,400 to £510,700, but the income from investments was over £20,000 less, and the profit works out at £670,100, as against £658,900 for the previous year and £947,300 for 1920. The directors state that owing to the depression in the building and construction trades the home demand for portland cement was disappointing, but an increased tonnage was exported, notwithstanding difficulties experienced in various overseas markets. A summary of the company's financial history since 1901 is set out below:—

Year Ending June 30.	Profit.	Debt. & Mortgage Interest.	Preference Div.	Sinking Fund, Reserves, &c.	Balance.
1901.....	£ 226,707	£ 84,694	£ 91,213	£ 20,096	£ 30,704
1905.....	310,662	135,063	118,885	61,185	Dr. 4,471
1910.....	316,407	140,938	118,885	60,848	Dr. 4,264
1911.....	369,861	139,237	118,855	109,707	2,032
1912.....	355,507	186,974	122,324	51,751	Dr. 5,542
1913.....	585,645	235,114	124,220	116,292	109,817

1922*	670,116	221,516	125,660	208,881	114,059

* Year ended December 31st.

Debt interest payments require over £25,000 more owing to the creation of £600,000 Kent 6½ per cent. first mortgage debenture stock in connection with the purchase of the works and other assets of the Kent Portland Cement Co., which was completed in May. In this connection, the ordinary share capital has also been increased by £119,900 and the 5 per cent. second debenture stock by £150,000. The ordinary dividend payment of 5 per cent., which is at the same rate as for the previous year, thus requires £3,800 more, namely £110,700, leaving £227,400, or £3,400 more to be carried forward. The general depreciation allowance is reduced from £150,000 to £125,000. The balance-sheet shows an addition of £989,400 to the property item during the year, but depreciation reserves have been transferred from the other side of the balance-sheet, and the item is £474,100 lower on balance. Stock-in-trade is £88,600 lower, debtors have fallen by £104,300 and investments by £176,100, but cash and bills have risen by £170,800. First and second debenture stock to an amount of £69,600 was redeemed and cancelled during the year. The directors mention that a considerable reduction was effected in the cost of manufacture during the year, "the benefit of which was passed on to the consumer."

U.S. Steel Corporation's Year.—Our New York correspondent writes:—According to its annual report, published this week, gross business transacted by the United States Steel Corporation in 1922 amounted to \$1,092,697,722, or nearly \$106,000,000 more than in 1921. The net income totalled \$58,840,801, as compared with \$55,957,832 in 1921. The balance available for the capital stock, after paying interest on the Steel Corporation's bonds and other items, was \$39,653,455, as against \$36,617,017 the year before. After preferred dividends, the balance left for the \$508,302,500 common stock was \$14,433,778, equivalent to \$2.84 a share, against \$2.24 per share in 1921 and \$16.62 a share in 1920. Regular quarterly dividends were paid on both the preferred and common stocks last year, as in 1921, but in order to meet such payments in 1922 the corporation was obliged to draw on its profit and loss account to the extent of \$10,081,346, as compared with \$14,017,784 withdrawn for that purpose in the preceding year, those two amounts representing the deficits reported for 1922 and 1921 respectively. The general balance-sheet, as at December 31, 1922, showed total assets of \$2,340,653,216, of which \$1,631,579,206 represented plant and equipment, less depletion and depreciation. Net current assets aggregated \$512,202,554, while net current

liabilities amounted to \$98,753,583. Regarding the inventory account, the report says that there was written off for shrinkage in inventory values the sum of \$11,250,173. Total cash and security holdings of the corporation at the close of last year were \$324,535,809, or equivalent to nearly \$64 a share on the 5,083,025 shares of common stock outstanding. Of that total, \$185,400,000, approximately, consisted of securities, chiefly of the United States Government, and about \$139,000,000 cash. The \$324,535,809 in cash and security holdings does not include the \$1,233,298 cash held by trustees, or the \$13,245,518 contingent fund and miscellaneous assets, which are believed to be in the form of cash or marketable securities. The annual report shows that \$29,500,000, in round numbers, was spent last year for new construction, bringing the total expended for that purpose since the corporation was organised up to \$1,084,901,345. The increase of nearly \$400,000,000 in working capital during that period, plus the outlay for new construction, makes a total of \$1,484,000,000, which is equivalent to more than \$290 a share on the common stock. The corporation's bonded debt was reduced by \$1,124,500 last year. In his remarks to stockholders, Judge Gary, chairman of the corporation, says that the steel industry in 1922 showed a substantial recovery from the unusually low volume of 1921, both in respect of new business offered and output. The aggregate tonnage of orders booked by the subsidiary companies during the year was slightly more than 90 per cent. of their estimated maximum capacity. The greater part of that tonnage was entered during the second half of the year, when, owing to the extended strike of coal miners and railroad shopmen, operations were conducted under difficulties. As a result, the output of the steel-making subsidiary companies for the entire year averaged only 71.3 per cent. of capacity, exceeding materially, however, the 1921 output, which averaged 47.5 per cent. Interruptions in operations caused by the strikes, as well as the increased cost of coal, together with an increase of about 20 per cent. in wages effective on September 1st, resulted in increasing costs of operation to an extent which, Judge Gary says, was not balanced by the slight advances in selling prices during the year. The earnings, therefore, were not commensurate with the investment employed. New business booked in 1923, he points out, has exceeded the rated maximum capacity of the subsidiary companies, and some improvement in selling prices has taken place. Prices received in 1922 for domestic shipments of rolled and other finished steel products were \$13.52 per ton less than the average price received per ton for an equivalent tonnage of similar products respectively shipped in 1921; on export shipments, the report states, prices received were \$19.70 per ton less than the average price obtained in the preceding year. The average daily earnings per employee in December, 1922, amounted to \$5.59, as against \$4.60 in that month of 1921.

Rio Tinto.—Our Mining correspondent writes:—In view of the declaration of an interim dividend of 10s per (£5) share in November, and of the improvement in the price of the copper, the expectation generally entertained in market circles was that the final distribution would prove to be 30s per share. Consequently the announcement of the rate at 20s occasioned a mild degree of disappointment. The directors make it clear in their report, now issued, that the rally in copper was to some extent offset by the unduly low quotation for pyrites resultant upon severe competition. No production statistics have been published by the company since those relative to 1913, but in pre-war days the pyrites sold averaged around 600,000 tons annually, and the output of copper about 22,000 tons. The revenue account for 1922 shows a balance of £670,500, as compared with only £126,900 in 1921; payment of 30s per share will leave the moderately increased balance of £448,000 to be carried forward. For each of the two preceding years the ordinary shareholders received nothing; in respect of 1919 they had £2 per share. With the price of copper considerably above the best point touched in 1922, there are grounds for the hope that the results for the current year will score a still further recovery. Such contingency is to some extent allowed for in the

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned periods of the Year ending March 31, 1923, as compared with the corresponding periods of the preceding Year.

	Quarter from January 1 to March 31, 1923, compared with the corresponding Quarter of the preceding Year.		Year ending March 31, 1923, compared with the preceding Year.	
	Quarter ending Mar. 31, 1923.	Quarter ending Mar. 31, 1922.	Increase.	Decrease.

Treasury, March 31, 1923.

current market quotation of the shares—about 38, upon which the yield at last year's rate of dividend does not appreciably exceed 4 per cent. The report mentions that one-half the 50 million pesetas loan has recently been paid off. In this war-time transaction it must be remembered the company merely acted as the agent of the British Government.

Nestlé Results.—One satisfactory aspect about the accounts of the Nestlé and Anglo-Swiss Condensed Milk Company is that they are full and informative. In the figures just issued for the year ended December 31, 1922, receipts are shown as just over 65 million francs, and after deducting various items, of which the most important are selling expenses and advertising, 21½ millions, freights, 18½ millions, and interest, 15½ millions, a net profit of 3,100,900 francs for 1922 is revealed. It is now proposed to extinguish the debit balance brought forward from 1921 of 1,792,221 francs, and to carry forward 1,308,718. It may be recalled that in the recent financial reorganisation of this company the ordinary capital of the company was reduced from 160 million to 80 million francs, and the directors now state that, while the "modest profit" now shown "is far from satisfying" expectation, "it seems, at least, to indicate that the company has entered upon a more normal period of trading." The fifty-sixth annual meeting of shareholders will be held at Cham, Switzerland, on Saturday, April 21st, and we await with interest a report of its proceedings.

Cornish Mining Finance.—A considerable amount of heartburning has been occasioned by the proposal of the directors of the East Pool and Agar to issue an additional 100,000 preference shares. At the moment there are outstanding 300,000 ordinary and 235,800 preference shares of 5s each, the latter being entitled to 10 per cent. non-cumulative, plus one-half the surplus profits. It is obvious that the issue of a further 100,000 participating preference shares will diminish in an appreciable degree the rights of the existing holders of this class of capital. Those who subscribed under the impression that the shares offered in April, 1922, comprised the total, naturally feel aggrieved. The main point, however, is that the company requires more money to assist it in resuming production at an earlier stage than formerly anticipated, and it will be able to secure the additional funds more easily now than it could have done 12 months ago. Receiving an inadequate response from the members to their appeal of October last to subscribe £70,000 against a Government guarantee of £50,000, the directors of the Dolcoath Mine have arranged with the Advisory Committee to increase their guarantee to £65,000 as against £55,000 new capital raised by the company, provided the 40,000 shares held by the company in the Tehidy Minerals be deposited as additional security. This, of course, entails an amendment of the former offer to the debenture holders. Some of the latter do not care for the change, but unless the new scheme receives adequate support, the re-financing of the concern will almost inevitably fall through.

Japanese Trade and Finance.—Cabled advices from Tokyo concerning financial and commercial conditions in Japan during the second half of March record a firmer tendency in the money market owing to the absorption of floating credit by new issues, and to a big settlement of cotton import bills. Demands for accommodation for tax payments and for meeting calls on Government and municipal bonds were also heavy, and the effect on the short loan market was so pronounced that at the close of the month the rate for day-to-day money reached 11 per cent. However, borrowings from the Bank of Japan were not on a large scale. The stock markets have been practically lifeless. The market for cotton yarn has been inactively under the influence of a decline in American raw cotton, and of anxieties regarding the further development of the boycott in China against Japanese goods. Slight improvement took place in the rice market, while in the market for raw silk there were signs of a revival of demand. At March 31 the note issue of the Bank of

Japan was 1,238 million yen as compared with 1,289 million yen a year ago, and discounts and advances 350 million yen as compared with 248 million yen.

A COURSE of 18 lectures on "Industrial Psychology" will be given at the London School of Economics, by arrangement with the National Institute of Industrial Psychology, on Mondays and Wednesdays, at 5 p.m. (beginning Monday, April 23, 1923), by Cyril Burt, M.A., Eric Farmer, M.A., G. H. Miles, D.Sc., C. S. Myers, ScD., F.R.S. Fee for the course, £1 1s.

The seventh Swiss Samples Fair will be held in Basle from April 14 to 24, 1923. Information regarding travelling facilities to and from the fair may be obtained from the Swiss Federal Railways, Carlton House, 11B, Regent street, London, SW. 1.

THE Right Hon. Sir Gilbert Parker, Bart., will preside at the meeting of the Royal Colonial Institute on Tuesday, April 10th, at 8.30 p.m., at the Edward VII. Rooms, Hotel Victoria, when the Hon. Sir John Cockburn, K.C.M.G., will read a paper on "Francis Bacon as an Empire Builder."

Oversea Correspondence.

UNITED STATES.—GOVERNMENT FINANCING—STOCKS AND BONDS—TEXTILE WAGE INCREASES—FINAL RETURNS OF 1922 COTTON CROP.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 24.

THE Treasury Department announced this week that subscriptions received for the new certificates of indebtedness, offered recently in connection with the Government's March financing, totalled \$538,859,000, representing an over-subscription of \$138,859,000. The Victory notes, Treasury certificates which matured March 15th, and War Savings certificates offered in payment for the new certificates, aggregated \$36,235,650, an amount smaller than had been expected. The total amount of subscriptions allotted was \$475,414,000.

The stock market has continued very active and buoyant under heavy speculative buying, based on the present and prospective expansion of business in trade and industry generally. Many industrial and railroad shares, as well as numerous "specialties," repeatedly established new high records for the year this week, and in some instances went above the highest prices recorded in 1922. The bullish demonstrations, however, have not yet attracted much buying on the part of the general public. Money rates have shown a firmer tendency, reflecting the growing demands for agricultural, trade, and industrial purposes. The bond market has been comparatively quiet and heavy. Because of the greater need of working capital in many directions, investment demand for bonds has fallen off considerably; for the same reason there has also been a certain amount of liquidation.

Perhaps the most important development in the textile industry this week was the announcement by the American Woollen Company of a wage increase of 12½ per cent. in all of its mills, to take effect on April 30th. About 45,000 operatives will receive the advance, which is the first wage change made by the company since December, 1920, when the general 22½ per cent. reduction from the war-time scale was put into effect throughout the textile industry in New England. Apparently the present increase, therefore, will bring the wages paid by the largest producer of woollen goods up to within 10 per cent., approximately, of the war levels. It is generally believed in cotton goods circles that the independent action of the leading woollen interest, which was something of a surprise, will eventually force New England cotton mills to grant an increase in wages, if a strike of operatives in such mills is to be avoided. Furthermore, it is thought that the woollen company has set a precedent which may encourage textile employees in other sections and

branches of the industry, including silk mills, knit goods mills, and southern cotton mills, to seek higher pay. In short, the step taken by the American Woollen Company seems to mark the beginning of what may prove to be a more or less general increase of textile wages in this country. Whatever other reasons may have prompted that company to raise wages at this time, it evidently deemed such action advisable in order to forestall any possible dissatisfaction or labour trouble on that score in its own organisation, especially in view of the fact that its entire available production of spring and fall goods for this year is sold up. Cotton goods manufacturers in New England, however, are not in such a comfortable position. In some lines of finished cottons they are well sold ahead for a few months, but that is not true of printcloth and grey goods mills. Several woollen and worsted goods mills have already followed the lead of the American company, and granted a like increase in wages. Eastern cotton goods manufacturers are still resisting the unions' demands for more pay; they insist that, in view of the abnormally high cost of cotton and yarns any rise in wages will necessitate further advances in cottons to levels which, they fear, will seriously retard distribution and consumption, and in that event ultimately result in curtailed production.

The 1922 cotton crop in this country amounted to 9,729,048 running bales, according to the final census report this week. That total compares with 9,964,000 bales estimated by the Department of Agriculture last December, and with the 1921 crop of 7,977,778 bales. The census figures for last year's production include 172,182 round counted as half bales, 32,786 bales of American-Egyptian, 5,125 bales of Sea Island, and 8,864 bales which ginners estimated would be turned out after the March canvass. Reduced to 500 lb bales, last year's cotton crop was 9,761,817 bales. With the exception of the 1921 crop, which it exceeded by about 22 per cent., the 1922 crop was the smallest since 1903, when 9,851,129 bales were gathered. The average gross weight of the bales last year was 501.7 pounds, as against 498.5 pounds for 1921, and 506.4 for 1920. While it is too early to make any predictions regarding this year's cotton crop—which has not even been planted yet, although preparations are under way in the extreme south—much importance is attached to the fact that the exceptionally cold weather which has prevailed throughout cotton-growing States is likely to check weevil activities, and some authorities claim that the outlook is for a much smaller infestation of this year's cotton crop than in any spring since 1920. That prospect, no doubt, has been responsible in some measure for the recent sharp declines in speculative cotton markets here.

FRANCE.—BUDGET DEBATE—WAR COMPENSATION—COAL OUTPUT.

(FROM OUR CORRESPONDENT.)

PARIS, April 5.

THE Chambers, after voting two new *douzièmes provisoires*, or Votes on Account, for April and May, adjourned at the end of the month (after a sitting that lasted until 2 a.m. on Good Friday) for the Easter recess, and will not meet again until the beginning of May. The two new *douzièmes* asked for amounted to a total of 4,579,772,915f in respect of the General Budget, and to 483,226,565f for the "Annexed" Budgets. One of the outstanding features of the long discussion that took place in both Houses was the fact that Supplementary Credits were again asked for, on this occasion amounting to 61,390,544f in respect of the Budget for 1922. In the Chamber, amid the many other subjects of interest that came up, this question of Supplementary Credits was passed over, as the *Temps* puts it, with "almost disdainful indifference." The matter was taken, as a matter of course, at the same time as the *douzièmes provisoires*, and the credits were sanctioned without a word of comment. The Senate, however, took the question much more seriously. A special report laid before the Lower

House by M. Bokanowski disclosed the fact that during the year Supplementary Credits had already been sanctioned for a total of 2,107,704,562f. As a protest, the Senate declined to discuss the new demand at the same time as it considered the request for further *douzièmes provisoires*, and adjourned its decision on the question until after the recess.

The Bill for the new *douzièmes provisoires*, too, contained many entirely new proposals, which it is held by many financial critics ought not to come up in this form, but should be embodied in the Budget Bill proper. One of these, for instance, concerned the raising of the abatement rate for income-tax payers. It was agreed, in principle, some time ago that, in view of the distaste of the French working man for any kind of direct taxation, especially when it is based on his wages, the rate of abatement should be raised by 1,000f a year for each category of persons assessable under this tax; that is to say, that the limit of abatement should be raised in the Paris area from 6,000f to 7,000f, and in communes of over 50,000 inhabitants from 5,000f to 6,000f, and to 6,500f in those of over 500,000. These and other modifications are embodied in the Budget Bill for 1923 which is now awaiting discussion by the Senate. In view of the necessity for issuing the assessment papers for 1923 without further delay, however, the Government took the unusual step of asking Parliament to enable these new modifications to come into operation immediately by including them in the Bill authorising the Votes on Account for April and May. In the circumstances the Senate adopted this proposal, although with a rather bad grace. The sequel to the raising of the limit of abatement has quickly followed in the announcement that the sale price of tobacco is to be raised forthwith by 10c the packet, in order to compensate for the loss of revenue due to the raising of the abatement rate in income-tax assessments. Another slight relief afforded to income-tax payers for the current year is that assessed persons are now permitted, in making their declarations, to deduct from the amount of their income the amount paid in income-tax during the previous year. The rate of payment for income-tax on salaries, wages, &c., is fixed at 6 per cent. on the net revenue.

In this connection it may be noted that, according to figures just published by the Ministry of Finance, the yield from the tobacco monopoly during the past three years has been as follows:—1920, 1,448,073,000f; 1921, 1,596,843,000f; 1922 (provisional figures only), 1,611,192,000f.

In reply to a written question, published a day or two before the Chamber rose for the holidays, the Minister for the Liberated Regions states that the total amount of compensation for war losses due to interested persons in the ten Departments comprised in the devastated area of France amounts approximately to a total of 85,789,631,000f. Of this amount, 41,265,276,000f had been actually paid down to December 31st last, leaving 44,524,355,000f still to be paid. These figures, of course, relate only to damage done to civilian property, and leaves out of account damage done to State property, and military and civilian pensions.

Fuller figures are given in a detailed study that has been laid before the Paris Statistical Society by M. Edmond Michel, who states that the total sum really due by Germany to France for losses incurred by her is 180,000,000,000f in respect of war losses under the various categories agreed on before the peace treaty was signed. Of this total of 180 milliards, M. Michel states that France has already raised and expended 98 milliards (or 54.4 per cent.) from her own resources, while Germany has paid only about 4 milliards (or 2.2 per cent.). The expenditure already made by France in this respect is set forth by M. Edmond Michel as follows:—

	Francs.
Damages paid to persons (pensions, &c.)	32,000,000,000
Do to property	41,354,000,000
Various interests	1,200,000,000
On account of State works	7,195,000,000
Reorganisation of public services	2,150,000,000
Aid on various accounts	1,300,000,000
Cost of administration	800,000,000
Interest on advances made by France on behalf of Germany	12,000,000,000
Total expended	98,000,000,000

The balance of 84 milliards that still remains to be expended is composed, according to M. Michel's calculations, as follows:—

	Francs.
Capital value of pensions still to be paid	35,000,000,000
Damages to property	43,645,000,000
State works	2,905,000,000
Sundries	2,450,000,000
Total outstanding	84,000,000,000

The total number of dwelling-houses destroyed or damaged was 794,040, of which 408,474 had been repaired (which was the case with the vast majority of them) or rebuilt. Factories destroyed or damaged numbered 22,900. Steam-driven appliances used in industry in 1913 in the ten departments represented a total of 1,070,700 kilowatts. In 1920 these had resumed operation to the extent of 777,069 kilowatts. Out of 85 blast furnaces damaged or destroyed a little more than half are now again in activity. M. Edmond Michel estimates that out of the total able-bodied male population of France (which numbered 12,000,000 at the Census of April 5, 1911), 8,410,000, including 475,000 "native" or coloured troops, were mobilised; in other words, two-thirds of the adult male population of France proper. Of these, 1,128,300 were killed, 265,088 "disappeared" (missing), about 690,000 were mutilated, and over 800,000 were wounded. The proportions of losses (killed and missing) in the respective belligerent armies he returns as follows:—France, one in every 30 mobilised; Germany, one in 35; Austria, one in 50; Great Britain, one in 66; Italy, one in 70; Russia, one in 107; United States, one in 2,000.

Figures are now available showing the output of the French collieries (both coal and lignite) for 1922, from which it is seen that the total amount of combustibles produced amounted to 31,940,845 tons, as compared with 28,960,000 tons in 1921, or an increase of 2,980,372 tons. These figures do not include the output from the Saar basin, where considerable improvement was also recorded, the total extracted during 1922 being 11,240,000 tons, as compared with 9,574,000 tons in 1921, or an increase of 1,666,000 tons. Including the Saar area, the total output of French coal during 1922 showed an increase of 4,646,372 tons on the year. Including the newly acquired Moselle and Saar coalfields, the 1922 output was 42,403,000 tons, or an increase of 3½ million tons, as compared with the total French output of 39 million tons in 1911 (20 millions in 1920 and 25 millions, exclusive of the Moselle and Saar pits, in 1921). This increased tonnage is due entirely to the fact that France is now able to draw on the Moselle and Saar coalfields, without which she would be still more seriously below her pre-war output. The collieries from which France drew a total of 39 million tons before the war last year produced only 26,821,032 tons, owing to damage done during the conflict. The fact that this total was about 1,800,000 tons greater than during 1921 indicates the extent to which the wrecked pits have been brought back to a working state during the year. The damage wrought by the enemy included the destruction of 212 pits of from 230 to 704 metres in depth (140 of which were wilfully dynamited), of machinery representing 380,000 horse-power, of 500 miles of railways, of 1,975 miles of galleries, 1,366 miles of which were so seriously flooded that they must be reconstituted, and 30,000 miners' cottages. The reparations, it is estimated, will not be completed for another four years.

GERMANY.—RUHR—GOLD LOAN—FINANCES—TRADE CONDITIONS.

(FROM OUR CORRESPONDENT.)

BERLIN, April 3.

THE Ruhr situation gets ever more hopeless. The massacre of workmen at Essen was only a logical development of French policy, and there is small prospect of the repetition of such events being avoided as long as the occupation lasts. During the first weeks of occupation, the French, who either honestly believed or wanted others to believe that they were attacking the German Government and the Capitalistic leaders of industry, tried with success to avoid mass collisions with the workmen; the mere threat of a strike was often sufficient to make military

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

parties evacuate workshops and mines. Of late this policy has changed. The French have been increasingly raiding, removing goods from, and seizing employees of, private undertakings. The system is to march against a mine or workshop with unnecessary armaments, rifles, bayonets, machine-guns and tanks. The workmen usually stream in masses into the streets or yards, and since, although they are unarmed and perfectly peaceful, they usually outnumber largely the French attackers, the risk of a collision is great.

The Gold Treasury Bill experiment has not been a success. No returns have yet been published; but the semi-official statements imply that only about a quarter of the 200,000,000 gold marks bills have been taken up by the public. As, however, a banking syndicate guaranteed half the issue, 100,000,000 gold marks are ensured. The semi-official statements are optimistic about this result, implying that better was not expected; if so, the larger sum ought not to have been asked for. The causes of the failure are not clear. The loan, being regarded as a weapon against France, was popular. Probably the amount of foreign currencies in the public's hands was over-estimated; perhaps the industrialists, in whose hands the largest sums must be, preferred to keep their money for paying for the largely increased coal and iron imports which are now necessary. The Government declares that it will and can maintain the policy of supporting the mark. Against this must be pointed out that with the mark exchange stable and the paper circulation growing, the yield of the loan becomes every week less effective; the exchange intervention of February with small means was successful only because the circulation was low when measured by the gold depreciation of the mark. The Prussian Government announces a paper-mark loan with variable interest, to be 2 per cent. under the Reichsbank rate, but not under 7 or over 15 per cent. No limit is put on the issue. A paper-mark loan even on such favourable interest conditions would have had no chance of success two months ago, but public sentiment has been

reversed by the last weeks' mark stability; the "wertbeständig" loans in gold marks, rye, coal, &c., have suddenly lost their popularity; and the paper mark has regained a certain prestige. For the same reason, invoicing in foreign currencies in home business has almost ceased. Heavy losses have been suffered by persons who exacted dollars at around the end of January. Gold-mark dividends are still being declared by industrial companies, but the decision to do this was come to some time ago.

The increase in nominal debt and the inflation are proceeding headlong. In the month preceding the last report of the Finance Ministry (for March 20th) the total debt nearly doubled. The movement of debt, all of which except 64,423 millions is floating, has been as follows:—

	Millions of Marks.
March 31, 1914	4,918
June 30, 1921	292,659
June 30, 1922	375,993
September 30, 1922	592,793
December 31, 1922	1,886,471
January 31, 1923	2,743,936
February 28, 1923	4,692,671
March 20, 1923	6,905,266

This is not a State debt in any real sense of the word. It is merely a record of revenue extracted by currency depreciation instead of by taxation; and even for that purpose it is useless, owing to the enormous difference in value between the marks booked at different dates. The system is demoralising, but works extraordinarily easily; it is easier for Herr Cuno to balance his Budget than for Mr Bonar Law, and that is one reason why reform delays. Whether the "real" Budget, that is the relation of revenue to expenditure both expressed in buying-power, has got worse or better is hard to say; since last summer it seems to have got worse owing to the relief which the ever more rapid mark depreciation gave to large classes of taxpayers. In April-August, 1922, the first five months of the current financial year, the General Administration Budget showed monthly surpluses varying between 7½ and 10½ milliards; in the first four of these months, there were surpluses even after paying subsidies to balance the Railways and Posts Budgets; and the only deficits were on Fulfilment of the Peace Treaty. On all the three Budgets, the month's deficit in April, 1922, was 9 milliards, in August 23½ milliards, October 152.7 milliards, December 656 milliards, February, 1923 (approximate), 1,507 milliards, and March (1st-20th only) 2,325 milliards. In 1921-22 the whole expenditure on General Administration, Railways and Posts, and Peace Treaty was only 263.3 milliards. In the last reported period (March 1st-20th), expenditure at 1,559,939 millions was about six times as much as in the whole financial year 1921-22. With the Budget the same stage was long ago reached as with Foreign Trade; paper-mark statistics have ceased to have any value for comparison, and it is time to follow the Foreign Trade precedent and, even though the paper-mark has to be maintained in practice, to issue gold-mark or "buying-power" estimates of revenue and expenditure.

The Customs gold surcharge has been reduced to 509,400 per cent. Difficulties are being met with in assessing the triennial Property Tax and the Forced Loan associated therewith. The first self-assessment, which ought to have been carried through before the end of January, has been postponed until the end of April; with the result that the Government does not get its money. Income-tax for 1923 is still being paid on the assessments for 1921, although incomes have meantime risen anything from 80 to 200-fold. In a concrete case: a merchant whose income this year is 43,000,000 marks, and is, therefore, mostly subject to the maximum 60 per cent. rate, is asked in advance to pay a mere 4,500 marks for one quarter's provisional income-tax for 1923. The Finance Ministry sends round a bailiff to distrain furniture for the 4,500 marks, worth about 1s; but it will not send out the assessment forms for the Income and Property Taxes and for the Forced Loan. In part, the failure to collect "real" taxes is due to the quickness of the last currency collapse; in part it is due to the collapse of the bureaucracy.

The last Reichsbank return reflects this state of affairs. There is a record increase of 683,123 millions in circulation, and a record increase of 528,720 millions in Treasury Bill discounts. Commercial discounts increased by 181,370 millions. Outstanding Darlehns advances have passed one billion marks—to 1,001,200 millions; the limit of these

advances has now been raised to 2 billions. The bank has booked in its "Metal Reserve" the whole of its holding of new token money in base metals, so that the reserve is now 4,195 millions, after being for years somewhat over one milliard, or only a little more than the gold reserve, which it includes. The question whether this act is technically correct need not be discussed; but it is certainly misleading to the public, which has been used for years to accept the "Metal Reserve" as almost entirely gold, and now finds the total quadrupled, without anything to show that only one quarter is gold, and that together with this gold is booked aluminium, nickel, and iron, of practically no value. In the third week of March 100 million gold-marks were sent to the Swiss National Bank to be held as potential security on the same conditions as with the gold in the Bank of England. The gold held by the Reichsbank abroad is now 164,952,000 gold-marks. The bank expresses confidence in its ability to maintain the mark exchange; but its statements, unlike those of some central banks, do not show what sum in foreign bills is held. The foreign bills are booked at their paper-mark cost, together with native bills and cheques, while balances in foreign banks are booked as "Other Assets."

Building has revived, and the heavy iron and steel branches are active; but most finishing manufacturers complain of lack of orders, and conditions in the leather and textiles branches are almost critical. The cause is the public's unwillingness to buy, in expectation of a further price fall. Wholesale prices are declining almost imperceptibly. The Coal Tax has been reduced from 40 to 30 per cent., and the net price of coal has also been cut down slightly; the gross price, including tax, is thereby reduced by about 15½ per cent. Iron and steel prices have not been altered since the last week of February. The foreign trade statistics published for February are imperfect, as a result of failing returns from occupied territory. The imperfect report shows imports of 3,166,100 metric tons and exports of 1,096,100 tons; these figures are so much below normal that they give no means of estimating even roughly the true totals.

BELGIUM.—EXCHANGE FLUCTUATIONS—ATTACKS ON THE FRANC?—GERMAN PAYMENTS—THE LLOYD ROYAL BELGE AND THE MERCANTILE MARINE.

(FROM OUR CORRESPONDENT.)

BRUSSELS, March 28.

Up to 89 and down to 75, then up to 80 down to 80, up to 83 down to 80 once more, and finally back again to 84—these are the fluctuations for the £ sterling which we have experienced in Brussels during the last ten days, and between these rises and falls there have also been many smaller movements. This instability in the foreign exchanges completely paralyses international trade and causes stagnation in business at home. As the barometer rises and falls according to the state of the weather, so we see the exchanges weakening or hardening with the possibilities or impossibilities of a solution to the thorny question of the Ruhr, and as the barometer is sometimes at fault, so do we see that the probable improvements in the international situation do not always materialise, and it is this that causes a succession of violent reactions in the exchanges. Speculation further aggravates the oscillations when we are not experiencing what we call "an offensive" against the franc. These "offensives" seem to me to be indisputable, otherwise how can one explain the following:—

The closing rate for Brussels in New York gives a parity for the £ against Belgium of (say) 80.00 without any definite tendency. We are thus at 9 o'clock in the morning with only this indication from New York, and as the exchange markets in Paris and London do not open before 9.30 or 9.45, the market in Brussels should also be without any tendency. Nevertheless, we find London strongly wanted here at 80.50, 81, 81.50, 82, 82.50, without anyone knowing exactly the reason, and generally we discover that it is Holland who is selling francs at any price. Why these actions from Holland if they are not based on definite instructions from her Eastern neighbour? Sometimes the movement increases in importance, at other times it is only a flash in the pan, and more often it is

a struggle between Paris and Amsterdam, the former buying and the latter selling francs.

It is generally predicted that an appreciable improvement in the Belgian franc might be realised if the economic convention between Belgium and France, which has been under discussion for a considerable time, is concluded on a sufficiently large basis. Unfortunately, it appears that there are numerous obstacles on both sides; especially on the French side, where certain industrial groups fear the competition of this country and endeavour to maintain the Customs' tariffs affording them protection. It now appears very probable that the new economic treaty between the two countries will be very limited, and this is not very astonishing when we remember that the Customs' policies of the two countries are entirely opposed; on the one side Protection, and on the other Free-trade as far as possible.

Meanwhile, we learn with satisfaction that Germany has paid the second instalment of 50 million gold marks due in March under the Belgian priority claim. There remain a further three instalments payable monthly, which, if paid (and there is every reason to believe that they will be paid), will mean a total receipt by Belgium during the last five months, in foreign currencies, of roughly 1¼ billion francs at the present rate of exchange.

Taxation returns for February are favourable. Direct taxation received amounted to 100 millions—roughly 25 per cent. more than for the corresponding month last year, and seven times as much as the average monthly receipts before the war.

A Cabinet meeting has just been held to deal with the difficult question of the Lloyd Royal Belge. The affairs of this company, which was created by the Government, are not at all satisfactory, and the American Government has recently intervened in favour of certain American creditors by retaining all ships belonging to the company which are in American ports. This action on the part of the American Government has been much discussed here, and is considered as very unfriendly towards Belgium, especially as the Belgian Government is heavily involved in the affairs of the company, having guaranteed bonds to the extent of 100 million francs. A liquidation of the company would be a serious disaster to this experiment in maritime expansion, and would discourage all further initiative, and a complete reorganisation has consequently been proposed. The actual position is as follows:—The principal creditors are the Belgian Government and a group of banks. The claim of the former amounts to 98,000,000f (amount of bonds guaranteed), the latter 80,000,000f. It is proposed to convert the claim of the State into 40,000,000f of preference shares and 58,000,000f capital shares. The banks to receive in respect of their claim 25,000,000f preference and 20,000,000f capital. The directors of the company to subscribe 10,000,000f fresh capital as preference shares, and the actual share capital of 50,000,000f to be converted into ordinary shares with no nominal value. After applying 5 per cent. to reserve, 6 per cent. to preference shares and 5 per cent. to capital shares, the remaining profits to be divided as follows:—25 per cent. to redeem preference shares, 25 per cent. as dividend on the ordinary shares and the remaining 50 per cent. to be distributed among all the shares. It is also stated that Mr Francqui, recently elected vice-governor of the Société Générale de Belgique in succession to Baron Janssen, will be chairman of the board.

As the Lloyd Royal Belge comprises 330,000 tons of shipping navigation under the Belgian flag it would be a great disaster to allow it to fall. Although the new proposition has been discussed on Bourse, it has not been criticised too much.

An important meeting was held on Tuesday last to advocate the development and expansion of the Belgian mercantile marine. The Minister of Marine presided, and all the principal commercial and financial notabilities of the country were present. The King, in a letter addressed to the meeting, expressed his wholehearted support and desire to see the country fully equipped with a marine necessary for the maintenance of its colony and worthy of the position it now occupies in the world. Mr Fortomme, the president of the Comité Permanent de l'Exportation, in the course of his speech, impressed on the meeting the importance and benefits of the acquisition of a strong mer-

Industrial Financing

cantile marine, and added that according to the English principle, "trade follows the flag." He reminded his audience that the war had made Belgium known to the four corners of the earth, whereas prior to 1914 the country was not considered of any importance, and he insisted on the necessity of all sacrifices being made, not only to keep its present position, but to improve it, so that in later years Belgium could claim to be independent of all other Powers. This is typical of many incidents which frequently occur to show that the country is fully alive to its present position in the world, and is ready to maintain it by sacrifices and hard work.

The Bourse has been violently agitated recently. The new French loan weighing heavily on the Paris market immediately affected the forward market in Brussels, and as the open positions during the rise were very considerable, it resulted in a severe fall in prices, which was immediately felt on the "spot" market, which consequently fell heavily, and the slump was further accentuated by the fall of foreign exchanges. Since then, however, a slightly better tone has prevailed among the first-class securities, where there is really very little paper, the rates having fallen rather from lack of buyers than from the number of sellers. The news of the forthcoming issue of a new Belgian loan has not had a favourable influence on the Bourse. It is proposed to issue in May next one billion francs "Dommages de Guerre" in shares of 500f, at 5 per cent., repayable at 550f, by monthly drawings, and with numerous lottery prizes of a maximum of 1,000,000f each.

AUSTRIA.—POLITICAL SITUATION—EXPENDITURE PROBLEMS—PRICES RISING—UNEMPLOYMENT DECLINES—NATIONAL BANK—NEW CAPITAL—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

VIENNA, April 1.

UNTIL recently the influence of the Social Democrat Party was decisive in matters relating to both public and private enterprises. The mere threat of strikes or public demonstrations was sufficient to remove all opposition. At present, however, since the Geneva reconstruction programme has come into force, and Dr Seipel's Cabinet has successfully obtained foreign credits, the threats of this party are no longer feared. The population wants peace, and the Social Democrats have been driven into a position of defence. This does not alter the fact, however, that they are now directing a fierce attack against Dr Zimmermann, the Commissary General of the League of Nations in Vienna, by reproaching him for his alleged interference in matters which are solely reserved to the decision of Parliament. As a reaction against the Social Democratic policy, a strong anti-Semitic movement, mainly directed against the Socialistic leaders, has been gaining ground here during the last month.

The second report made by the Commissary General of the League of Nations emphasises the fact that, although

an improvement in financial conditions can be noticed, much is still to be done. The approach to reconstruction entails reduction in the number of State officials and a decrease in the deficit of the railways and of other public enterprises. How difficult the accomplishment of these things will be is shown by the Government's decision to cut down the number of free passes on the State railways granted to post and telegraph officials, which has produced so-called "passive resistance" amongst these officials. This has been overcome only after a week's negotiations between the Government and the officials' trade unions, and has led to considerable congestion in the post-offices and to serious delays in these services. The necessity of reducing the number of free passes on the railways can be proved by the fact that in the last half of 1922 only 50 per cent. of the travellers on these railways paid the full fare, whilst the other 50 per cent. either used free passes or tickets greatly reduced in price. Under these conditions it is easily understood that the earnings of the State railways for January, 1923, were 108,000 million kronen short of the Budget's estimate. Another difficulty in reducing public expenditure is created by the increase in the cost of living which has lately set in, and which has raised the index figure by 6 per cent. This means an automatic increase of 6 per cent. in all the salaries paid by the State.

For the first time for many months signs of a decrease in unemployment are to be seen. The number of unemployed at the end of February was still very high, as 169,255 persons were receiving the unemployed dole at that date. Since then a decrease, due mainly to the improvement in industrial conditions and to the gradual renewal of building activities, is to be noticed. The Vienna Industrial Fair, held from March 18th to March 24th, was more successful than the previous two. More foreigners came to Vienna, and since both industrialists and traders endeavoured to create lasting business connections with them, they were inclined to be as obliging as possible. It is worth noticing that the Viennese merchants who asked payment in foreign currencies at the two previous fairs willingly accepted Austrian kronen at this one, since they no longer feared the krone would lose its value from day to day.

During the last three months the cost of living index number has followed an upward course, and the next figure will probably show another increase, especially since sugar, meat, fat, coal, and rents have risen. Besides this a new tax of every business transaction comes into force on April 1st, and it is expected that this will increase all prices by 3 to 4 per cent., those of luxury articles being 12 per cent. The Treasury estimates the revenue for this year to be 450,000 million kronen. This, of course, means a heavy burden for the population.

A Bill has been drafted providing for the appointment of a foreign adviser for the National Bank. Mr. Snyders, the Swiss bank director, is being considered for this position. The Government and the bank hope to increase their standing in foreign countries by the appointment of an adviser from a neutral country. At present the business of the new bank is being conducted in a very careful manner, and the former note inflation has been checked in a very decided way. On March 13th the note circulation of the bank amounted to 4,258 milliard kronen, 31 per cent. of which was covered by the gold reserve and the stock of foreign bills. Since January 7th the gold reserve has increased from 49.6 milliard kronen to 85.14 milliard kronen, and the stock of foreign bills from 1,145.5 milliard kronen to 1,266 milliard kronen. As the internal loan, which must be repaid in gold, will be due in June, negotiations have already been started in the leading foreign cities with a view to transforming these gold treasury bonds into a new international loan.

The past year, which was entirely under the influence of the note inflation, saw the foundation of a great number of industrial and financial organisations. For example, 316 Austrian joint-stock companies were founded, as against 152 in the year 1921, and 316 foreign companies, as against 12 in the year 1921, were registered in Austria. A large number of these organisations will hardly be able to carry on through the next few years. The fear of social revolutions in Austria and the further depreciation of the krone formerly caused Austrian capital to be interested exclusively in the Succession States, especially Czechoslovakia,

since shares in that country yielded a much higher profit. For the last few weeks, however, there has been a great demand for good Austrian shares on the Stock Exchange. This is due to the stabilisation of the krone, to the companies' endeavours to increase their dividends as much as possible, and the efforts of some companies to get the majority of their shares into other hands.

The latest intensification of the Hungarian emergency exchange regulations has made Austrian merchants unable to collect their outstanding debts in Hungary in recent months. They have, therefore, sustained heavy losses, because the Hungarian krone has fallen considerably in value of late. Nevertheless, Austrian merchants are endeavouring to keep up trade with Hungary, since it is an old market, and exchanged much-needed agricultural products with Austria.

The once flourishing business on the money market, caused by the fluctuations of foreign exchange, has experienced great changes. Prices for foreign money have remained unchanged since the stabilisation of the krone, and the National Bank has a firm hold on the market in consequence of the large amounts in foreign bills obtained from the credits.

SWEDEN.—NEW ISSUES—COMMODITY PRICES—TRADE BALANCE—LABOUR CONDITIONS—EFFECT OF RUHR OCCUPATION—TOBACCO TAX.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, March 15.

THE money market has been loaded with several big loans lately, and their absorption has not been very difficult. The Government has made a big bond issue of 50 million crowns, with a dividend of 4½ per cent., but as the bonds will be sold at a rate of 97 per cent., the yield will be 4.63 per cent. This is the fifth Government loan issued within the country since 1914, when the foreign market was practically closed for any loans, and the total sum thus borrowed amounts to 493 million crowns. Besides this, two premium bond loans of a total of 200 million crowns have been issued and absorbed during the same period, which shows that the monetary resources within the country are considerable. Another big bond issue of 17 million crowns has been made by the shipping concern, Transatlantic of Gothenburg, carrying interest of 6½ per cent. on 14 million crowns and 7 per cent. on 3 million crowns. This loan is issued in order to consolidate the concern, and cut down the book value of the company's tonnage. The tonnage is placed as security. At the same time, the share capital will be cut down by 50 per cent. to 9.15 million crowns. This concern, which is the biggest owner of tonnage in this country, has seven motor vessels of 53,700 tons d.w. and 27 steamships of 180,000 tons d.w., most of which are very modern and up to date, several of them having been built during these last years at high prices. The board has decided to make such a drastic writing down now, because they wish to avoid passing dividends.

The fall in prices has almost ceased now. The monthly index for foodstuffs, including light and food, issued by the Board of Social Welfare shows the very slight fall of one point during February, from 166 to 165 (the prices for July 1914 being counted as 100). On the other hand, there has been a rise in the wholesale price index issued by the Svensk Finanstidning of two points since January, this figure for February being 158, against 156 the month before. The strongest rise in prices is noted in the cases of coal and coke, but for pig-iron, copper, lead and tin higher prices have also been quoted. February showed larger imports and a greater import surplus than January, but this is largely seasonal. The export of iron ore is very much bigger for January-February this year than for same period last. The pig-iron export has been fairly good, and is for February this year about the double quantity recorded same period last year. Our trade balance for 1922 showed quite favourable figures, the total import surplus not being more than 11.98 million crowns for the whole year, compared with 161.43 million crowns for 1921; the total import value for 1922 being 1,164 million crowns and the export value for same period 1,152 million crowns, while the same figures for 1921 were

1,258 million crowns and 1,097 million crowns respectively. The improvement in the trade balance for 1922 is due to the great increase of timber, paper, pulp, and iron ore exports. The total quantity of timber exports last year was 1,031,924 standards, compared with only 544,073 standards the year before. As far as the export quantity for 1922 is concerned there is nothing to complain of, but the prices were not much to boast of, and have given the exporters but a poor revenue, as a big percentage of the output was cut and sawn at top prices. The outlook for the timber trade this year is rather favourable, the total quantity sold up till the middle of March being about 300,000 standards.

The conflict which has been going on with the timber-cutters, and which has lately been settled, has very likely not done much harm to the result of the timber-cutting, as the weather is very favourable for lumbering now. The lock-out at the saw-mills, which began on February 1st, is still going on. As to the rest of the labour market, there has been uneasiness in several quarters, but some agreements have been arrived at, as for instance, in the workshop industry, which for a very long time has been working without a collective agreement. This new agreement will be in force until January 1, 1924, and the wages agreed upon are those prevailing at January 1st this year. At the paper-mills there has also been a settlement, the wages thus agreed upon being those prevailing during December last year, but at the pulp factories the lock-out continues. Unemployment figures are much better than at this period of last year, the number of unemployed then being about the double of the present number, which on February 1st this year amounted to about 55,500. February saw further improvement, but no official figures are available. There is no doubt that the Ruhr occupation is having a very bad influence on trade. Several important industries, such as shipping and mining, are suffering considerably. On the other hand, the iron and manufacturing industries, owing to labour troubles, are not in a position to take advantage of the falling off of German competition. Many traders have applied to the Foreign Office for intervention, with the view to getting their difficulties solved by diplomacy.

A Bill has been placed before Parliament embodying the proposal to prolong the temporary tax on tobacco for the next budget year, with the difference that cigars and cigarettes manufactured within the country, which at present are free from taxes, should now be charged with a small duty, while for imported cigars and cigarettes the taxes would be lowered. The tax is expected to yield the same revenue as before, or 12 million crowns.

SOUTH AFRICA.—RAND VALUATIONS—VIEWS ON "ECONOMIST" ARTICLES—AREA UNDER CULTIVATION—RAILWAY EARNINGS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, March 6.

THE special articles published at the end of January and early in February in *The Economist* on the Rand gold mining position have attracted a good deal of attention in financial and stock exchange circles. As I was in no way responsible for them, I may, perhaps, be permitted to pass on a remark of a prominent broker that they were "very sound," though some people thought the valuation for Government Areas, namely 86s, somewhat conservative. Of course, the allowance for British income-tax, as adopted by the writer of the articles, in connection with the amortisation fund tends to reduce the valuation considerably. This bears out the view expressed that Rand shares are really worth more to the holder domiciled in South Africa. The accumulative rate of 4 per cent. was thought a little low, inasmuch as Union Sixes yield £5.7 per cent., free of Union income-tax at 1s 3d in the £.

While it is perfectly sound and conservative finance to start the amortisation fund for the redemption of capital immediately, it is shown by experience that quotations for better class Rand shares hold their prices pretty well until a few years before the end of their lives. People are inclined to ignore the incidence of sinking funds on the price of the shares until there is a sudden awakening, by a drop

in dividend sounding a warning. Thus, I notice in a circular recently issued by a well-known firm of brokers the following remark as to Government Areas:—"In view of the long life, probably 25 to 35 years, the question of redemption need hardly be taken into consideration at the moment." As to Crown Mines, "the life is doubtless of some great length, and, therefore, the question of redemption may be left out of one's calculations for some years." Again, with New Modder, "it is hardly necessary to take into consideration the question of redemption, but should redemption be commenced now, on an assumed life of twenty years, it would be necessary to put away 2s 4d per share per annum at five per cent." Johannesburg holders rather go on the principle of buying attractive shares when the market is dull, taking dividends for a few years, and selling the scrip when the market is active, and thus incurring little, if any, capital depreciation. But, naturally, the element of "luck" enters largely into putting this policy into operation.

Local estimates agree pretty closely with those given in your series of articles. Government Areas is, according to the same circular, expected to pay 12s per annum, or £11.6 per cent. gross on the outlay; New Modder 10s, representing 13 per cent. gross and 10 per cent. net on the current price of 77s 6d. Van Ryn Deep is assumed to pay 12s a year, representing £17.6 per cent., or £13 per cent. net, with amortisation over fifteen years. It is remarked that the life may be considerably lengthened if development of the western section continues to open up payable ore, but it is of very much lower grade than the eastern and southern portion of the mine, so it cannot be expected that the same high rate of dividend can be paid when those sections have been exhausted. Modder Deep is expected to pay 7s per share annually, a gross return of £16.3 per cent., but only nine per cent. with amortisation over a life of fourteen years. The same rate of dividend is looked for at Crown Mines (which is rather more than is indicated in your series of articles), or nearly £13 per cent. gross on the present price of 55s.

New State Areas have been dealt in at a quotation verging on 40s, which appears to be a pretty long price to pay in view of the very heavy royalty payable to the Union Treasury. At a ratio of 40 per cent. profit to recovery, as, for example, on a recovery of 35s, working costs at 21s and a profit of 14s per ton, the Government would receive 61.25 per cent. of the profit after allowing for amortisation of capital. At a ratio of 50 per cent., say, 17s 6d per ton of capital. At a ratio of 50 per cent. profit, the "tribute" is 65 per cent. cost and 17s 6d per ton profit, the "tribute" is 65 per cent.; while on a ratio of 55 per cent. the Crown takes two-thirds of the net produce. This latter ratio would be shown with a grade of 40s and costs at 18s per ton. In the actual calculation the allowance for amortisation of capital, say £80,000 in equal instalments over twenty years, is deducted from the gold revenue to arrive at the ratio. This is added to the working profit, and is available for distribution. Unlike Government Areas, New States have to pay ordinary taxation in addition, which may be considered as absorbing two months' profits. Johannesburg investigators incline to the view that the shares are unattractive on a crushing basis of 50,000 tons a month, but that the position would be improved materially were this eventually increased to 100,000 tons.

Figures just issued by the Union Department of Census and Statistics show that the cultivated area of the Union has increased by ten per cent. in the past year. In April last the total area under cultivation was rather over five

million morgen, or, approximately, ten million acres. The areas in the three major provinces, the Cape, Transvaal and Orange Free State, are much the same at a million and a half morgen each, while in the much smaller province of Natal the total is about half a million. While it is gratifying to notice this improvement, it should be made clear that the proportion of the area of the provinces which is cultivated is lamentably small, although it is being dinned constantly into our ears that agriculture is the principal industry of the Union. Comparison with the total areas indicates that less than two per cent. of the Cape Colony is cultivated, about $4\frac{3}{4}$ per cent. of the Transvaal and Natal (including Zululand), while the highest proportion is 10 per cent. in the more favoured Orange River Colony, with its much superior riparian river supply. An enormous area of the Cape North-West has to be written off. Large areas in various parts of the Union consist of rocks, and unfortunately what soil there is elsewhere is being rapidly eroded by periodical torrential rains. Taking it all in all, it is most disappointing to record that only $3\frac{1}{2}$ per cent. of the entire area of the Union is under cultivation. No figures are available as to areas occupied by ranching and cattle raising. It would be instructive to know what area of the Union is regarded as cultivable, so that a comparison might be instituted with other colonies.

According to an official return by the General Manager of Railways, 39 branch lines totalling 3,208 miles showed in November a loss of £42,000, or equal to half a million a year on a capital cost of 16½ millions. Commenting on these results, *The Star* says, "The Union railway system is carried by the interior almost entirely, and if the mining zone were by any misfortune to fall to the non-paying position occupied by more than half the mileage, the whole system would crumple up."

Letters to the Editor.

MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The imminence of the return to par of the dollar sterling exchange has evoked some thoughtful contributions to your pages on certain aspects of domestic and international monetary policy.

A perfectly free gold market would not be re-established immediately parity is attained. A measure of official control would be imperative if, as is possible, the political and economic condition of the Continent is abnormal, and pending a revision of our currency system, complete convertibility would be impossible. During the period intervening between the attainment of parity and the re-establishment of a free gold market, the problem of maintaining our prices at the level of world (gold) prices will be one of importance and complexity.

The pre-war simplicity of our currency system, destroyed by the exigencies of Government war finance, enabled the Bank of England's minimum rate of discount to be effective. Events of tremendous importance have greatly impaired its power to reduce the level of prices. The clearing banks now control gigantic resources, with great power to affect prices. Their investments in Treasury bills, while convertible into currency notes, are potential sources of inflation. Often the Government can only pay the huge amounts in interest on war loans, &c., by borrowing, to some extent, from the Bank.

Thus in a period of active trade there is danger of inflation, despite a high Bank rate. But this danger could be largely avoided by the pursuit of a common policy in regard to the control of the level of prices. The Treasury, the Bank of England, and the clearing banks should closely co-operate, discouraging unhealthy speculation, and allowing only such a degree of inflation as is inevitable in periods of industrial activity. Their policy would be determined by the course of American prices, and to a lesser extent by Continental conditions. The problem of making our emergency currency amenable to central control might well form the subject of an expert inquiry, as Mr Butson suggests.

Mr Cook disdains the suggestion, because it would do little to provide work for the unemployed. Hitherto our

large urban population has been sustained because our exports (using the word in an extended sense) create credits in our favour in food-producing countries. Until, therefore, purchasing power is restored to those parts of the world in which it has perished, the whole of our population cannot be fully employed. The task of statesmanship is to give stability to the monetary systems of the world, by which sanctity of contract would be recreated. When trade had ceased to be a gamble, then the problem of unemployment would be reduced to manageable dimensions.—Yours, &c., LEONARD F. GREGORY.

Wolverhampton, March 27th, 1923.

THE APPROACH OF A FREE GOLD POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr H. E. Butson's letter on the above matter is written from the bankers' point of view only, and the arguments he puts forward are either totally misleading or else positively incorrect. Let us examine the first dogmatic statement as to the benefits this country will receive when the £1 reaches pre-war parity of exchange with the dollar. In 1920, when the rate of exchange of the £1 was as low as \$3.20, we had then no unemployment, and practically everyone was doing well. Now the exchange has improved to \$4.65 we have nearly 2,000,000 unemployed, and a record of bankruptcies and suicides that increases each month—a state of affairs brought about solely by the deflation forced on the country by the bankers.

Again, his statement that "there has been introduced an enormous mass of virtually inconvertible paper currency" is absolutely incorrect, as the following figures show:—1914, gold in circulation, approximately £220,000,000; 1923, Treasury notes in circulation, £270,000,000. If Mr Butson would explain how the bankers manage to lend £800,000,000 when there is only the above amount of Treasury notes (or real money) in being, he might have been able to furnish us with information more correct, and certainly more interesting than is furnished by the series of dogmatic misstatements his letter contains. A hint as to how the issue of this "enormous mass" of book entry or fiction money is regulated would be worth knowing. The suggestion as to how to deal with the existing currency note circulation is obviously a part of the policy of the bankers, as expressed at the Sound Currency Association meeting about a month ago, when the chairman stated that the Government should never have been allowed to issue the Treasury notes and intimated that powers would be sought to place this function in the hands of the Bank of England.

One would have thought that the bankers might have rested content with the enormous profits they make by lending £800,000,000 of book entry money at 5 per cent., and would at least be patriotic enough to let the country benefit by the large profits which are made by issuing the Treasury notes to the public.—Yours truly,

LOUIS H. CROSS.

May's Farm, Sharnal street, near Rochester, Kent,
April 3rd, 1923.

[Gold in circulation in 1914 was nearer £120 millions than £220 millions.—Ed., *Economist*.]

Books and Publications.

A SHORT HISTORY OF THE BRITISH COMMONWEALTH. VOL. II.*

Those who derived keen pleasure from Professor Muir's first volume have waited with eagerness, and perhaps a little anxiety, for the completion of the whole work. Even those of us with a well-developed historic sense have a livelier feeling of reality in the events that are nearer to us, the immediate progenitors of our own problems, and there is some natural impatience to see them portrayed with those graphic and masterly touches which so distinguished Professor Muir's treatment of the earlier age.

But there was some concern lest the method of treatment which was adequate to co-ordinate the simultaneous action of earlier history should fail in marshalling and controlling the complex and diverse movements of the nineteenth century. In respect to the first anticipation, Professor Muir does not disappoint us, for it is his gift to touch sharply any well-worn theme, and to give it a new setting or suggestion of import. In this work his history tells itself, and the historian intrudes not overmuch. We can appreciate, even if we regret, his restraint when we remember his powers of generalisation and philosophical comment. As he nears the polemical of our own day he is guarded and calm without being featureless and cowardly. The skill of compression and selection is quite wonderful, and a reader who knows the full story can see a whole episode summarised in a sentence—even an adjective, magnified, is adequate to show that the author had in mind a whole series of suppressed facts and views which are there to be found in the only representation which space would allow.

Professor Muir sometimes had less in mind the powers and grasp of his reader than his own desire not to be thought to have overlooked any aspect of his subject merely because compression compelled its omission. Compression into limited space is here not achieved so much by the selection of broad and salient lines, as by the use of a kind of literary diminishing lens. It is instructive to compare the treatment of the break away by the American colonies, or of Warren Hastings' work in India in the author's "Expansion of Europe," with the corresponding chapters of this book, if one would see how much extra matter has been packed into this volume. How far it is possible to be more successful than Professor Muir in making all the world action of one time a composite whole we should not like to say, but probably it is not in any case an altogether compassable task. There is something here of the same feeling that accompanied the reading of the Victorian novel when we broke away from the heroine struggling in mid-ocean, to review the positions of the hero in a solicitor's office in Lincoln's Inn, or of the villain in a Paris intrigue. Not a few readers may prefer to read the chapters in the order that appeals to them, and to take the whole story of Ireland consecutively without distraction. For the task he has set himself, that is the presentation of the whole story of the British Empire in two volumes, Professor Muir has succeeded beyond the powers of most writers for "structure proportion and arrangement" are admirable, but we feel that he has shown us the real or absolute limitations of this type of history. A skilled synopsis is a secondary and not a primary accomplishment, and fills a minor and not a major need. He himself can show his own powers, and grip his readers to greater advantage, either in a broader and less detailed sweep, or in the fuller narrative less cramped by considerations of proportion and "giving all the players a turn." The chapters on literary and economic aspects are full of freshness and value. No lover of history or student of modern political science should fail to possess for leisureed and frequent reference, rather than for the outright reading, these two volumes of Professor Muir's matured thought.

THE MALAY PENINSULA.*

This valuable work is the joint production of a number of British officials in the Malayan Civil Services. It is admirably illustrated, and contains in a small compass an immense amount of information concerning the physical and geographical features of Malaya, its fauna and flora, its archaeology and history, its extremely complicated ethnology, its resources, industries, communications and commerce. There, as in other Eastern countries, the growing of rubber has overshadowed all other cultivation and provided "one of the greatest romances of tropical agriculture." Coconuts and rice are the other staple products, but the crops neglected for rubber since 1906 are again coming into notice, and others also, notably fibre plants, gutta percha—only recently cultivated at all, but the wild trees have become scarce—and possibly tea.

* "Malaya." The Straits Settlements and the Federated and Unfederated Malay States. Edited by R. O. Winstedt, M.A., D.Litt. Oxon. (London) Constable and Co., Limited. 1923. 12s net.

Tin mining has far outstripped that of gold, and 64 per cent. of the output is still produced from small workings by the Chinese; tungsten ores are of potential importance, monazite is widespread, and there is one coal mine and much kaolin. Historically, Malaya presents a typical and very successful example of British Empire-building with native consent; socially, it is of interest as a country with a highly composite population, rendered even more composite by the fact that nearly all the work of development is done by immigrants from China and Southern India. But, though the births in recent years have fallen below the deaths, there appears no reason to suppose that the Malay race—a very attractive one—is being crowded out.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
April 18.	April 19.

INSTEAD of business falling off after the first few hours of dealing when the Stock Exchange reassembled on Tuesday, activity in the markets became pronounced as the week advanced. The House is genuinely busy in some of its more popular departments. The strength of the Consol group (due to expectation of a reduction in the income-tax), the sharp rises in Home Railway stocks on account of the glorious Easter weather, the provincial buying of textiles from Manchester, of nitrates from Liverpool, the liveliness in tobacco shares and a number of other industrials, and a minor degree of animation in Kaffirs, have contributed to make the short week a pleasant one for shareholders, a profitable one for their brokers. The Ruhr as a factor of importance has lost its bad influence, and, for once in a way, the forthcoming Budget is anticipated with feelings of pleasurable hopefulness.

Consols, Conversion, the Funding Loan, Victory Bonds, Local Loans, and others of this class have been prominent in the improvements round the markets, and their robust example has certainly helped to fortify the increasing strength shown by other departments. The War Loan goes ex dividend in about three weeks' time, and this consideration has helped to give the price a moderate lift, although the possibly short-dated character of the security militates against its enjoying any pronounced advance. Conversion and Victory have spurred strongly. Amongst foreign Government bonds, the French strongly. Germans have scarcely changed; issues are moving erratically. Brazilians reflected with a general decline the low-water mark, touched by the milreis this week, while inter-Bourse stocks, such as Peruvians and Rio Tintos, have been swayed by Paris advices.

Buoyancy characterises the Home Railway group, where practically everything moved up. People are buying the stocks as much for investment as for speculation. Substantial sums have been paid this week for options to run two or three months. The Undergrounds continue their advance, and something of a feature is the way in which North-Westerns and Great Westerns have gone ahead. Grand Trunk stocks are dull, Mexican Rails wait upon fresh developments from the country, Argentines are generally better after having given way a little, and Brazilian Railway stocks have been hardly affected by the dulness of Brazilian Government bonds.

Rubber shares hardened in consequence of a steady diminution in the visible supply of stocks of raw rubber. The oil market has swung into the limelight upon purchases, largely professional, of various shares in the leading companies. Nitrates advance almost daily upon support from their constant

Mr H. L. Usher, C.A., and Mr C. E. W. Macpherson, C.A., were re-appointed to conduct the audit of the books for the current year, and a vote of thanks to the chairman terminated the meeting.

THE NATIONAL BANK OF EGYPT.

GOOD RESULTS DESPITE DIFFICULTIES. REVIEW OF CONDITIONS IN EGYPT AND SOUDAN. ADVERSE BALANCE OF TRADE CORRECTED.

The twenty-third annual general meeting of the shareholders in the National Bank of Egypt was held on March 19th at the head office of the bank in Cairo.

Mr B. Hornsby, C.B.E. (the Governor), presided.

The directors' report was as follows:—

The directors present to the shareholders the balance-sheet and profit and loss account for the year ending December 31, 1922.

The gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount and for bad and doubtful debts, amounts to:

	£906,869 15 7
After deducting from this sum:	
For directors' fees	£11,936 14 4
For current expenses	392,839 5 1
there remains	502,093 16 2
In conformity with Article 49 of the Bank's Statutes a dividend of 4 per cent. is payable on the share capital	120,000 0 0
After this statutory distribution there remains	382,093 16 2
Adding to this the balance brought forward from last year	180,920 2 5
the amount available is	563,013 18 7
The directors consider it prudent to allocate to special reserve for contingencies a sum of	50,000 0 0
which leaves	513,013 18 7
From this amount the directors recommend the payment of an additional dividend of 11 per cent. on the share capital, which will absorb	330,000 0 0
And leave a balance to be carried forward of	£183,013 18 7

The total dividend for the year will thus be at the rate of 15 per cent., equivalent to £1 10s per share. An interim dividend of 8s having been paid on September 4, 1922, the balance remaining to be distributed will be £1 2s per share.

REPORT OF THE AUDITORS.

We have examined the books of the National Bank of Egypt, and in our opinion the above balance sheet is properly drawn up so as to exhibit a true and correct view of the state of the bank's affairs as shown by the books. We have also verified the cash, notes, and securities at the head office and the Cairo and Alexandria branches, and have found the same correct. The London returns have been audited and certified by Messrs Deloitte, Plender, Griffiths, and Co., Chartered Accountants.

F. H. RUSSELL.
W. G. CARMICHAEL.

Cairo, February 19, 1923.

GOVERNOR'S SPEECH.

CONDITIONS IN EGYPT AND THE SOUDAN.

The Governor said: Gentlemen,—We have the honour to submit to you the balance-sheet and profit and loss account for the year 1922.

You will notice that the gross profits amount to £906,869. After deducting £404,775 for expenses, there remains an available balance of £502,094, which enables us to propose to you the allocation of £50,000 to the special reserve and the payment of a dividend of 15 per cent. requiring £450,000.

The gross profits are £85,000 below those of 1921. We are pleased, however, to report a decrease of £28,000 in expenses, so that the net profit is only about £50,000 less than last year. Having regard to the shrinkage in the margin of interest which took place during the year, I think we may congratulate ourselves on this result.

The total of our balance-sheet shows an increase over last year of about seven millions, due almost entirely to the larger balance which we hold for the Egyptian Government.

It is satisfactory to note that there has been no decrease in our deposits from the general public, which remains at about the same figure as they were at the end of 1921.

Our holding of Government securities shows a large increase over last year. These securities, of which a large part falls due in the near future, appear in our books at a considerably less sum than they would realise at present-day prices.

Our advances are slightly lower, but the item of bills of exchange is much higher on account of the rapidity with which the cotton crop has been exported. These bills are of the highest class, and constitute an extremely liquid asset.

We regret to have to inform you that we have not been able to make much progress in respect of the claims against our German and Austrian debtors, and we have been obliged to institute proceedings before the Mixed Arbitral Tribunals constituted by the Peace Treaties. Our principal debtor appears to be striving to delay matters, and there is as yet no sign of this particular case being heard in the near future; we continue to do our utmost to bring matters to a successful conclusion.

NOTE ISSUE.

Our note issue, which was £37,000,000 on January 1, 1922, fell gradually till the end of August, when it touched its lowest point during the year, £26,300,000. On December 31st it was back to £33,200,000, showing a decrease for 1922 of nearly four millions.

The following figures give the highest and lowest point reached by the issue during each of the past five years. It must be remembered, however, that this was an abnormal period, and it would be incorrect to draw any pessimistic conclusions from the difference between the highest and lowest figures attained.

	£E	£E
	Highest.	Lowest.
1918	46,100,000	29,200,000
1919	68,200,000	39,900,000
1920	66,000,000	39,400,000
1921	39,900,000	30,400,000
1922	37,300,000	26,300,000

EGYPT'S FOREIGN TRADE.

The following statistics of the foreign trade of Egypt from 1917 to 1922 show that the adverse balance of the year 1920-21 has been corrected and that exports have once again exceeded imports. These figures refer, of course, only to merchandise; to obtain a true estimate of the economic state of the country account must be taken of invisible factors on both sides, such as debt charges, &c.

1st September to 31st August.	Imports.	Exports (inc. Re-exports).
	£E	£E
1917-1918	47,285,226	48,019,952
1918-1919	44,334,720	48,829,951
1919-1920	87,577,985	113,461,806
1920-1921	71,725,677	37,690,260
1921-1922	46,006,529	50,185,140

COTTON CROP.

The cotton crop of this past winter has been marketed with more than usual rapidity. Prices have again been disappointing for growers, and it is certain that the finer qualities of Sakellaridis have not obtained the same premium over American cotton as in the past. On the other hand, the lower qualities and Upper Egypt cotton have maintained their position, and during this season it has been possible to dispose of a large accumulation of low cotton which had been unsaleable for the last two or three years.

PURCHASE OF EGYPTIAN SECURITIES.

It is interesting to note that since the war this country has acquired from foreign holders a great number of Egyptian securities. England, France, and Germany, for reasons connected with their own situation, have been constant sellers, and thanks to the prosperity of previous years the Egyptian market has been able to absorb easily all that was offered.

According to the statistics published by the Caisse de la Dette, the proportion of coupons of Egyptian Unified Debt paid in Egypt, which was only 5½ per cent. in May, 1916, had risen to 37 per cent. in November, 1920. At those same dates the proportion of coupons paid in London free of income-tax rose from 18½ per cent. to 35½ per cent. Details of the payment of coupons of the Privileged Debt show a similar increase.

Account must be taken, it is true, of the shrinkage of the public fortune which has taken place owing to the depreciation of European currencies. During the war there were numerous investments of Egyptian money in War Loans of the Allies, and since the Armistice Russian roubles, Austrian crowns, and German marks have been very largely bought. It is almost impossible to estimate what the amount involved may be, but it is certainly considerable.

THE SOUDAN.

DEVELOPMENT WORK PROCEEDING.

Notwithstanding the universal trade depression, economic and financial conditions in the Sudan have been fairly satisfactory, as may be seen from the following figures of exports and imports for the last five years:—

	Imports.	Exports.	Total.
	£E	£E	£E
1918	4,024,582	4,210,384	8,234,966
1919	4,805,745	3,029,569	7,835,314
1920	7,006,865	5,075,971	12,082,836
1921	5,806,070	2,318,533	8,124,603
1922	4,252,890	2,298,770	6,551,660

The value of exports is roughly the same as in 1921. Imports show a marked decrease, owing to the suspension of work on the White Nile dam and on the Gezira Irrigation Scheme.

I alluded last year to the negotiations then in progress relative to the issue of a further loan by the Sudan Government. These negotiations have been so far successful that a 4½ per cent. loan for £3,250,000, the principal and interest of which are guaranteed by the British Government, has recently been issued, and work on the Gezira Scheme is again in full swing.

In addition to these works, the building of a new line linking up Kassala to the Khartoum-Port Sudan Railway has been started, the completion of which will greatly facilitate the transport to Port Sudan of the products of Kassala Province and further develop the country's trade.

During the past year we have had to deplore the death of two of our colleagues on the London committee, the Hon. Algernon Mills and Sir Carl Meyer, Bart. Both these gentlemen had been members of our board since the foundation of the bank, and we shall greatly miss their wide business experience and their sound judgment. We desire to express to their families our heartfelt sympathy.

NEW DIRECTORS.

Since our last general meeting we have elected H.E. Adly Pacha Yeghen to our board. The name and reputation of Adly Pacha are well known to you, and we are sure you will share the satisfaction we feel in having obtained his collaboration.

In the place of the Hon. Algernon Mills we have elected Lord Cullen of Ashbourne, whose long experience in the City will be of great value to our London committee.

In accordance with the statutes, these two nominations require your confirmation.

The directors who retire by rotation this year are Mr H. E. Barker and Mr Robert Rolo, who offer themselves for re-election.

Finally, the board desire to thank the sub-governors, the managers, and the staff for the services they have rendered during the year.

BRITISH GENERAL INSURANCE COMPANY, LIMITED.

"A WONDERFUL RECORD OF SUCCESS."

The annual general meeting of the British General Insurance Company, Limited, was held, on the 5th inst., at the Cannon street Hotel, London, Mr Henry C. Walker, M.I.M.E. (the chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said that 1922 had been one of the most difficult years which insurance companies had ever experienced by reason of the unrest and disturbance created by the failure of a number of reinsurance offices formed or reconstituted during the war period. The crisis in the reinsurance market a year ago, whilst a very disagreeable incident, had, however, only served to show the inherent strength of their company. They had been able to face exceptional losses and meet them in one year, without touching their reserves; indeed, they had been able during that period to add to the reserves a substantial sum, and he could not imagine any greater test than that.

The underwriting profit in the fire and accident departments had been £83,681 and the income from investments had been £58,921 before deduction of income-tax, making a total gross profit for the year of £142,602. Appreciation of the company's investments between January 1 and December 31, 1922, had amounted to approximately £100,000, and, adding that figure, the total gross profit for the year from all sources was not far short of £250,000. That was not the usual form of presenting figures, but it would help shareholders to realise the earning power and possibilities of their company, and to show in its proper proportion the effect of the loss due to the failure of certain reinsurance companies. They could even look back on that unhappy event as a blessing in disguise, for it had once more demonstrated the soundness of the basis on which the "British General" had been built. The board had also had abundant evidence during the year of increased confidence in the company on the part of companies and brokers who had placed business with them in

HEAD OFFICES: LIVERPOOL AND LONDON

ROYAL

INSURANCE COMPANY, LIMITED

ALL CLASSES OF INSURANCE EFFECTED

greater volume than in any previous year. As to the life assurance branch, 722 new policies had been issued assuring £218,177. Those contracts were almost entirely connected with the transfer of the business of the National Benefit Assurance Company, Limited, all ordinary new life proposals being handled by the allied office, the Scottish Temperance and British General Assurance Company, Limited. The "Scottish Temperance" had had a most successful year to close their quinquennium. The profit on the fire branch had amounted to £26,624, compared with £21,762, and on the accident branch the total profit amounted to £74,045, or a reduction of nearly £12,000 as compared with 1921. The profit for the preceding year was, however, in a sense abnormal. As to the marine department, premiums had amounted to £294,143, an increase on the 1921 figure, but it was the intention of the directors to limit business in that department until conditions were more promising. Generally speaking, he could say that the company had had a wonderful record of success during its career of 19 years. Their business was growing every day, and the loss ratio over a long period proved beyond question that the business which they wrote was good, while the dividend of 20 per cent. recommended absorbed not very much more than one-half of the interest earnings. With their financial position they could safely face the future, which, although they might have ups and downs, could for the "British General" only be a very bright one. Results for the first three months of the current year had been eminently satisfactory, and he felt that the optimism he had expressed had a solid basis.

The report and accounts were unanimously adopted.

BRITISH AUTOMOBILE TRACTION COMPANY, LIMITED. ISSUE OF PREFERENCE SHARES FORESHADOWED.

The nineteenth ordinary general meeting of the British Automobile Traction Company, Limited, was held, on the 6th instant, at 88 Kingsway, London.

Mr C. Shirreff Hilton, who presided, said it was particularly gratifying to come before the shareholders with satisfactory accounts for 1922, in spite of the bad weather experienced and the continued trade depression.

In the balance-sheet loans and deposits showed a reduction of approximately £30,000, and were now within easy compass. It was the intention of the board to issue, at a convenient time, the remaining 96,239 participating preference shares *pro rata* to the shareholders to provide for these loans and further developments. The reserve had been increased by £10,000, but the directors had thought it wise to take advantage of the exceedingly strong position of the company and to write off out of reserve the balance of the costs of the issue of the participating preference shares. The fund still stood at £41,000, a little over 10 per cent. of the capital expenditure.

The revenue account, including the amount brought forward, showed a surplus of £61,171, out of which it was proposed to allocate £10,000 to reserve, and to pay dividends at the rate of 10 per cent. per annum on both the participating preference and the ordinary shares, leaving £20,824 to be carried forward, subject to corporation profits tax.

In spite of the first-class manner in which the company's London omnibuses were being maintained and run, the directors believed it would be desirable in the near future to replace the present fleet by omnibuses of a more up-to-date type. The directors had made arrangements to meet the expenditure this would involve when the time came. The Macclesfield, Buxton, and Stockport undertaking provided omnibus services in the four counties of Cheshire, Derbyshire, Lancashire, and Staffordshire. The directors felt that there was room for further development in this area. In pursuance of the general policy of the company, it had now been decided, in conjunction with Thomas Tilling, Limited, to form a separate company for this district.

With regard to the question of the taxation, there was much to be said in favour of the equity of a petrol tax, but the scheme at present put forward was an effort to transfer a considerable part of the burden from the shoulders of the pleasure car owner to those of the commercial vehicle.

The report and accounts were unanimously adopted.

ROLLS-ROYCE, LIMITED. IMPROVED FINANCIAL POSITION.

The annual meeting of Rolls-Royce, Limited, was held, on the 29th ultimo, at Derby, Lord Wargrave (the chairman) presiding.

The Chairman, in moving the adoption of the report, said that, as compared with last year, amounts owing by the company showed a decrease of £313,973, the consolidated reserve fund an increase of £28,250, and the profit an increase of £41,882. The higher profit was not alone due to the result of trading. The company had been fortunate in that, through relief in respect of excess profits, a considerable portion of the reserves was now available for dividends. Other claims had not materialised, and consequently further reserves were also available. The directors recommended that the dividend should be as last year, namely, 8 per cent., subject to deduction of tax. Sixty thousand pounds was being added to the reserve fund.

THE NEW 20-H.P. CAR.

In spite of the management's foreknowledge as to the quality of the new 20-horse-power car as the best of its kind, they had been surprised at the enthusiasm with which it had been received. All the most responsible technical experts gave the unanimous verdict that in various ways and from every conceivable point it was unapproachable among cars of moderate horse-power. It was also gratifying that the car-buying public were equally generous in their appreciation of its fine qualities. All would agree in acknowledging the genius of Mr F. H. Royce and the skill of his assistants. It was a remarkable tribute to the stability of the famous forty-fifty Rolls-Royce that the demand had in no way been curtailed by the appearance of the smaller car; on the contrary, orders had actually increased. The standard forty-fifty horse-power model, upon which the reputation of the company had been built up, remained their principal product, and retained its pride of place as the most prominent of the world's super cars.

FUTURE OF THE AERO DEPARTMENT.

During the past year the Rolls-Royce aero engines had added a remarkable feat to their already long list of achievements, having won in the reliability race round Britain for the King's Cup. The company's aero department was exceptionally equipped from the designing and the manufacturing point of view. They had the ability of Mr Royce and his designing staff, which produced the aero engines so highly thought of by the authorities that during the war a greater horse-power of Rolls-Royce engines was put into the air than that of any other make. Since then the company had secured the services of Mr A. J. Rowledge, whose name was so intimately associated with the design of aero engines. From a manufacturing point of view, the company had fine buildings, specially equipped for the making of aero engines, and having attached to them their own independent stores and testing plant run by highly-trained supervisors and men, as would be expected in any Rolls-Royce undertaking. Whether the whole of this organisation was to continue or be closed down depended on the Government's future policy as to the size and efficiency of the air fleet deemed necessary for the protection of this country. The administration of the company, in common with others, were anxious and troubled, because of the proposal which was being considered by the Government that there should in future be only one aerial transport company, and a monopoly subsidised by Government.

A DISASTROUS MONOPOLY.

Responsible officials stated that if this subsidised combination were brought into existence, it would, as a matter of economy, order engines from only one maker and 'planes from only one maker. This monopoly would practically put out of business all the other engine and 'plane makers, and it was difficult to believe that it would be otherwise than disastrous in the event of war, or rumours of war, seeing that these various organisations would not be at the Government's disposal for immediate manufacture, while the designing staffs would have been dispersed. So long as there were sufficient orders to keep these concerns going, even to a limited extent, staffs would be maintained, and interest in effecting improvements would be sustained, and the Empire would be kept at least abreast of other countries.

He was glad to note that the Air Minister was alive to the danger. The Chairman added that reports from the American Rolls-Royce Company showed a marked improvement in sales, and the American members of the board spoke with great confidence of the future of the trade.

The report was adopted after being seconded by Lord Herbert Scott.

Before the meeting concluded, Lord Herbert Scott, on behalf of the board, presented to the secretary, Mr John de Looze, a piece of silver plate in recognition of his faithful service for 30 years with the company and its predecessor.

NATIONAL BANK OF INDIA, LIMITED.

SATISFACTORY RESULTS OF YEAR'S BUSINESS.

"A VERY STRONG POSITION."

FINANCIAL AND TRADE CONDITION.

The ordinary general meeting of the National Bank of India, Limited, was held, on the 4th instant, at the Wesleyan Hall, Bishopsgate, London.

Mr Robert Williamson (deputy-chairman) presided.

Mr C. Nicoll (general manager) having read the notice convening the meeting and the auditors' report,

The Chairman said: Ladies and Gentlemen,—The report of the directors and the accounts for the year ending December 31, 1922, have been before you for some days, and I presume we may, as usual, take them as read.

We are pleased to be able to put before you such satisfactory results from our operations, for trade conditions throughout the year have not been favourable. In addition, we have had to contend with very keen competition in our business, and margins in exchange have thereby been very bare.

PROFIT AND ALLOCATIONS.

Still, our resources one way and another have been well employed, and we are able to show a net profit of £535,160 5s 5d, to which there falls to be added £104,095 12s 8d brought forward from the previous year, the total at our disposal being thus £699,255 18s 1d, which compares with the slightly larger sum of £704,095 12s 8d for the year 1921. A diminution in profits has been experienced by most banking concerns. We have provided for all bad and doubtful debts.

Our proposals to you to-day are to place £100,000 to the credit of our reserve account, raising the total to £2,700,000, or £700,000 in excess of our paid-up capital, £20,000 to the pension fund for the bank's officers, and to write down our house property account by £20,000. The remaining balance permits of our paying quite easily to the shareholders our usual dividend at the rate of 20 per cent. per annum, free of income-tax, which, with the interim dividend, will cost £400,000, and carrying forward £159,255 18s 1d undivided profits.

We have already expended some money in building new office premises at Cochin and Newera Eliya; we are now engaged in an important addition to the Bombay office, and in the future—not immediate—we shall have a considerable sum to find in connection with an entirely new office at Colombo, the cost of the site for which we have already paid. These outlays, therefore, make it essential for us to write down our property account.

I trust you will be as well pleased with these figures as we are, and be in agreement with us in the matter of disposal of profits.

BALANCE-SHEET ITEMS.

Inasmuch as there are some changes in the balance-sheet figures in comparison with those of the previous year, I may as well glance at them now.

If you will look at the liability side you will observe that current, fixed deposit, and other accounts total £32,267,601. There is some little falling off here compared with the previous year, but this is not to be wondered at considering the competition of Indian Government 6 per cent. tax-free bonds, and other issues. Bills payable show an increase, but acceptances for customers are down. This, of course, is a reflex of the smaller volume of business passing.

Turning to the assets side, I would point out that there is an increase in our holdings of both rupee and sterling securities—in the latter case the sum of £5,581,175 represents an increase of in the latter case the sum of £3,308,944 over a year ago. These are all gilt-edged, and about 90 per cent. of them are short-dated bonds. Our investments total £8,639,271, and stood in our books at December 31st well under market value. In cash and securities we held nearly £14,000,000—a very strong position—to which, moreover, there falls to be added a considerable amount representing our holding in Treasury bills included in bills of exchange, so that our cash balance could be readily augmented at any moment.

As in the case of acceptances, bills of exchange show a falling off, and this again is an indication of the smaller business passing both in imports and exports.

Discounts, loans, &c., stand at £14,247,130, and I think that on the whole our figures make a very satisfactory showing.

GOLD AND SILVER IMPORTS AND EXPORTS.

A very notable point in connection with Indian business is the persistent demand experienced for gold in the past year, which still continues, and more keenly perhaps than ever before. At times in recent weeks there were orders in the London market for two or three times more than the quantity available for sale. When I was addressing you at this time last year I gave you some

details of imports and exports and those applicable to silver as well, but they were somewhat fragmentary as regards the year 1921. I have had them looked into again for that year and also 1922, with the following result:—

GOLD—		£
Imported 1921	7,205,000	
Exported 1921	20,300,000	
Surplus of exports	13,095,000	
Imported 1922	19,700,000	
Exported 1922	50,000	
Surplus of imports	19,650,000	
SILVER—		
Imported 1921	11,300,000	
Exported 1921	2,000,000	
Surplus of imports	9,300,000	
Imported 1922	12,500,000	
Exported 1922	1,760,000	
Surplus of imports	10,740,000	

Therefore, in 1922 the surplus of imports of gold and silver combined reached the large sum of £30,000,000.

In 1921, it is believed, a considerable amount of gold was sent from Bombay to Japan, probably connected with repayment of money borrowed by our Government from that country, while there were also fairly large supplies sold to America, an unusual operation, a tempting price being offered for the metal.

In addition to these imports and exports India for the last few years has retained all the gold the produce of the Southern Indian mines, which for the years 1920, 1921, 1922 totalled 1,189,623 ounces, and also the whole of the silver from the Burmah Corporation Company's important undertaking in the Shan States.

In 1922 India must have received probably something like a quarter of the world's production of gold, and, although the mints are still closed to the coinage of silver to the public, about one-half of the output of that metal.

Since the beginning of this year the demand for gold has been stronger than ever, and for the three months up to date the value of the shipments is estimated at £10,000,000, which includes shipments from America, and of silver £3,500,000. The former figures are very big, and I would myself expect some slackening off in the demand, but at this moment there is no evidence of that.

BALANCE OF TRADE.

In the balance of trade figures for the past year—largely adverse to India for each of the two previous years, as I pointed out to you—a very gratifying change has taken place, and we find some little justification for the purchases of the previous metals in such volume, which I have been bringing to your notice. Since March of last year the balance has been in favour of India, and for the whole year the total is Rs. 11,35,00,000, or £7,600,000, but we need to see a much greater improvement, and we must all hope for an early return to pre-war conditions to bring this about. At the moment the outlook in Europe is dismal enough, and the problems to be settled are most difficult and complex.

Notwithstanding some differences among the politicians at Delhi, the country as a whole strikes me, from what I read, as more settled, and the great mass of the people more contented than two to three years ago. I assume that the large crops reaped from the sowings in the autumn and cold weather of 1921 have contributed to this improvement. In a note issued by the Viceroy a few days ago in connection with the proposed addition to the tax on salt, I was glad to read that the cost of living had fallen and that he anticipated a further decline.

FAVOURABLE CROP PROSPECTS.

A year ago I told you of the favourable monsoon of 1921, and of the abundant crops, particularly of wheat in the Punjab and in the United Provinces, which would be harvested. The ban upon exports was removed at the end of September last, and since then probably not more than 200,000 tons have been exported. There must still be a great quantity available from that harvest, but the matter of prices there and here seems to prevent business being carried through.

I believe the monsoon last year has been even more favourable than in 1921, and still larger crops are again almost a certainty. There are not lacking indications of improvement, quite definite in

this country in the case of coal, iron, and steel, probably due to the intrusion in the Ruhr, but not visible in Lancashire piece-goods, &c. The supply in India of these latter cannot be abundant, due perhaps to middling American cotton costing fully 15d per lb. Some months ago the price was between 9d and 10d per lb, on which basis the outlook for business was then really promising. Now, with the higher price of cotton, trade conditions from an Indian outlook with the outer world are decidedly "patchy." European affairs still remain very much "out of joint," and we seem yet to be some distance away from making a real all-round start on pre-war lines. We badly need large buyers for India's food supplies and raw materials, and when they are forthcoming Indians will respond by purchases from Lancashire and elsewhere. We all hope that complete success will attend the efforts of the present Government to smooth out the obstacles which block the way.

RATE OF EXCHANGE.

Throughout the greater part of last year rates of exchange ruled fairly steady in the neighbourhood of 1s 4d per rupee, but in January of this year there was something of a surprise when the rate made a rapid upward movement until it reached 1s 5½d for T.T.

The average rate for money of the Imperial Bank of India has been about 4½ per cent., but on December 14th it had risen to 6 per cent., on December 28th to 7 per cent., and on January 11th last to 8 per cent., which is still the current rate, but with some indications of ease. There was great tightness in the money market, the real foundation for which may have been due to too rapid deflation in the currency by Government. But at the time a considerable amount of financing had to be done in connection with shipments of cotton to China and Japan, and speculation, especially on the part of bullion dealers, became very active, and these factors had an influence in bringing about this sudden change. The jump has not been of very long duration, and the rate of exchange is now back to about 1s 4½d.

The matter of a return to what is called the old fixed rate of 1s 4d is still very much in the air. Apparently difficulties in Europe and with Turkey must first be disposed of, says the Finance Minister, before that matter can be tackled.

EAST AFRICA.

As regards East Africa, there is, I think, some improvement in the prospects of both trade and agriculture.

The export trade of the country is more active, and its products, such as sisal, maize, coffee, hides, &c., find a ready market. The Uganda cotton crop, although it will not realise the original estimate of about 100,000 bales, will be fairly large, and should assist in the offtake of imported goods through the buying power produced from its sale. The repeal of the Kenya income-tax and revision of Customs duties should also improve matters.

There are certain political disturbances locally almost inseparable from the growth of a young country with a mixed population such as Kenya has, which we all trust are capable of adjustment. The outlook in this direction is promising, as deputations from the disputants are coming here to interview the Secretary of State for the Colonies.

It is only fitting that, before I close my remarks, I should, on behalf of my colleagues and myself, express our hearty appreciation of the efforts of our managers and staff at home and abroad during the past year, which have enabled us to lay before you so satisfactory a result of a strenuous period.

I beg to propose:—"That the report of the directors and statement of accounts for the year ended December 31, 1922, be received and adopted, and that a dividend for the six months to December 31, 1922, at the rate of 20 per cent. per annum, be paid on the shares of the company registered at this date, the same to be payable, free of income-tax, on and after April 5, 1923."

After this resolution has been seconded by Mr Miller, if anyone wishes to ask any questions before I put it to the meeting I shall be pleased to answer them.

Mr Robert Miller: I have much pleasure in seconding the resolution which has just been proposed.

The resolution was carried unanimously, without discussion.

RE-ELECTION OF DIRECTORS.

The Chairman: Ladies and gentlemen,—I have much pleasure in proposing: "That Mr Robert Campbell be re-elected a director of the bank." I avail myself of this opportunity to say a few words about our chairman, whose absence to-day every one of you, I am sure, as deeply regrets as we his colleagues do. A year ago I thought it possible that he might again be able to preside at some of our board meetings in the past year and at to-day's meeting, but unfortunately the state of his health has made that impossible. He is still much of an invalid, but fairly well. He continues to take a keen interest in the business of the bank, and is furnished every day with copies of our telegrams. Although not

present, he is always at our disposal if and when we want to consult him, and with that we must rest satisfied.

Mr J. N. Stuart: I have great pleasure in seconding the resolution.

The motion was unanimously adopted.

The Chairman: I have now to propose: "That Mr J. D. Nimmo be re-elected a director of the bank."

Sir Charles C. McLeod: I have pleasure in seconding that.

The motion was unanimously approved.

The Chairman: I have to propose: "That Mr J. N. Stuart be re-elected a director of the bank."

Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E., M.P.: I have pleasure in seconding that.

The motion was carried unanimously.

Mr J. Irwin Davis: Mr Chairman, ladies, and gentlemen,—I beg to propose: "That Messrs Cooper Brothers and Co. be re-elected auditors of the bank for the ensuing year at the remuneration of 400 guineas per annum, free of income-tax."

Mr J. D. Longmire: I have pleasure in seconding that.

The resolution was passed unanimously.

Mr W. A. Sadgrove: I beg to propose: "That Messrs W. A. Browne and Co. be re-elected auditors of the bank for the ensuing year at the remuneration of 400 guineas per annum, free of income-tax."

Mr J. M. G. Proffit: I beg to second that.

The motion was unanimously agreed to.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS, AND STAFF.

Mr H. H. Nelson: I beg to propose "That a very hearty vote of thanks be given to the chairman and directors for the care and prudence exercised in conducting the affairs of the bank during the past year, and to the general manager and staff for their valuable services." I should like to say, to begin with, that I personally am delighted—as I am sure all those who know him are—that we still have the advantage of the clear intellect, the wonderful knowledge, and the splendid character as a man of business and as a gentleman of Mr Robert Campbell to assist our deputy-chairman (Mr Williamson) and the able body of directors that we have to conduct our affairs. Mr Campbell is an old colleague of mine in the days of long ago, when I was engaged in the same kind of business, and I think that the prosperity of this bank is due largely to his wisdom and knowledge in the selection of his colleagues and in the selection of his staff. There is no Eastern bank which has a better and more trustworthy directorate and staff than has the National Bank of India, and the report which we have before us to-day is one of the most satisfactory that has been issued for many years. The bank has had to overcome difficulties which have been entirely exceptional, and yet we have come out with an excellent report. I feel quite sure that all the shareholders will appreciate that fact. It is a great pleasure to me, therefore, to propose the resolution which I have already read, and after it has been seconded it will be my privilege to put it to the meeting.

Mr Frederick Tomkinson: Gentlemen, the pleasing duty devolves upon me of seconding the resolution which has been proposed by Mr Nelson. This year the resolution is a somewhat composite one; in fact, we might almost call it a tabloid resolution. Hitherto I think it has been our custom to pass one resolution with regard to the directors, and there has been a separate one with regard to the executive and the managers, both here and in India. This year, as you have heard from the resolution which has been read, we are proposing to accord our hearty thanks to the chairman, the directors, and the staff generally in one vote. I think you will all recognise that the past year has been one of exceptional difficulty, and it is owing to the exceptional merit which has been shown by our directors and the management that we have such an excellent result presented to us on this occasion. In looking at the figures I was somewhat surprised, if I may say so, at the large amount of liquid assets, to which the chairman has referred. The position seems to me to be extremely strong. The chairman remarked that he hoped the shareholders would be as pleased as the members of the board themselves were, and I should like to say, on behalf of you gentlemen, that we are distinctly pleased, and we beg to offer the directors our sincere thanks. I hope that our thanks will go forth especially to those who are working for us abroad, because they are working under difficulties which we do not feel here.

The vote was unanimously accorded.

The Chairman: On behalf of my colleagues and myself, I desire to return our thanks for the kind resolution which you have just passed, and the general manager asks me on his behalf to say the same. We will take care that the staff abroad are informed of the resolution which you have passed to-day. I should like to add how much I appreciate the kind remarks which Mr Nelson has made about our absent chairman, to whom I will take care to convey them when I see him.

The proceedings then terminated.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

SUCCESSFUL RESULTS OF THE YEAR.

CHAIRMAN ON ECONOMIC AND TRADE CONDITIONS IN THE EAST.

SIGNS OF TRADE IMPROVEMENT.

The sixty-ninth ordinary general meeting of the shareholders of the Chartered Bank of India, Australia, and China was held, on the 4th instant, on the bank's premises, 38 Bishopsgate, London, E.C., Sir Montagu Cornish Turner (the chairman) presiding.

The chief manager (Mr W. E. Preston) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—The figures in our statement of accounts reflect fairly accurately the trend of business during the past year at the various points in the East and Far East covered by the operations of this institution. At no single point have we witnessed a great spurt in business, no indication of that real revival in trade which we are hoping for so keenly as the solution of many of our difficulties—social, commercial and political. On the other hand, international trade has not been entirely dead, and we might reasonably say has shown an improvement on the position of 1921. We can say, for instance, that the effect of the terrific slump in prices of commodities is gradually working itself out; that the top-heavy load of unsold or rejected goods in India, China, and the East generally has been very appreciably lightened, though at heavy cost, and that we see rays of encouraging sunshine in place of the depressing dark clouds which encircled our horizon and obscured our vision some twelve months ago. All that is to the good. A spirit, a rightful spirit, of caution prevails at the present time, and should be encouraged. Operators must work cautiously, and absolutely refrain from overloading Eastern markets with unrequired goods. We have no fear for the future. Once peace is assured—we cannot believe that the present chaos will be allowed to continue indefinitely—and the purchasing power of the consumer has been restored, we can reasonably expect an active trade between East and West.

EXPORTS.

India, for instance, with the advantage of a low exchange and the bountiful crops after two favourable S.W. monsoons, has surplus stocks of wheat, seeds, barley, rice, cotton, and other commodities, available for export as soon as the Western markets can take the goods. In regard to exports from India, it is worth noting that in the year 1922 shipments of raw cotton to Japan totalled about 263,000 tons, valued at Rs. 30,26,33,914. During the same period Shanghai took about 60,000 bales of yarn, compared with 500,000 to 600,000 bales some ten years ago, illustrating the unpleasant fact for Indian mills that the cotton mills in North China have increased with marked rapidity, and that there are to-day about 2,000,000 active spindles now at work.

Further, in connection with the trade of India, it is interesting to note that the imports of gold into India were: In 1920, £12,054,086; in 1921, £7,204,864; and in 1922, £19,678,961. Gold exports were: In 1920, £5,083,956; in 1921, £20,242,221; and in 1922, £49,365. Silver imports were: In 1920, £3,461,808; in 1921, £11,229,315; and in 1922, £12,108,845. Silver exports were: In 1920, £2,417,937; in 1921, £1,989,238; and in 1922, £1,723,905. The imports of gold for the first quarter of this year have also been unusually heavy, to meet the requirements of marriage ceremonies and perhaps for hoarding purposes. Imports of gold and silver in January, 1923, were Rs. 6,16,53,552, or £4,110,236, and in February, 1923, Rs. 10,85,00,000, or £7,233,333. Mr Findlay Shirras, in his book "Indian Finance and Banking," estimates that India in 46 years—1874 to 1919—absorbed gold coin and bullion to the amount of £250,000,000, or five times the world's average annual production in the same period.

INDIA'S FINANCIAL POSITION.

As regards India's financial position, we have heard a great deal lately about her Budget deficits. Well, it is true they do exist, or have existed, but they are due mainly to abnormal demands and abnormal conditions. India is a country of immense resources and wonderful recuperative powers, and, provided that retrenchments as suggested by the Incheape Committee are effected, the political agitator is reasonably restrained, and normal conditions prevail in Europe and America, I can see no reason why India should not be ere long in a very satisfactory financial position.

China has also products available for export to Western markets, but, unhappily, she is still greatly handicapped by internal unrest, and one almost despairs of seeing a really firm civil Government which could control the various elements of misrule and disturbance, a constant source of danger to the masses of humble traders who yearn to be let alone and given a chance of peaceful life.

As regards the position of special Eastern commodities, we must congratulate our friends engaged in the tea industry on the most satisfactory position in which they find themselves. The demand for tea of high grades and consumption of tea has increased more than we could have expected, and has, I imagine, exceeded the most sanguine expectations. The Straits and Federated Malay States have also benefited by a marked improvement in rubber and tin, though it must be remembered that in the case of rubber the improvement is in a measure due to restricted output, and before a real substantial and steady rise in the price of rubber can be looked for there must be an increased legitimate demand for that article.

Looking all round, we ought to be satisfied with the position generally, in view of the prevailing world-wide state of political unsettlement and unrest. It is earnestly to be hoped that the present position of affairs in Central Europe may not be allowed to continue, to the great detriment of civilisation, and that in England all classes will recognise that strikes must be averted, that hearty co-operation must exist between employer and employed, and that increased output and increased exports are essential if we wish to maintain the credit of this country in the world of finance.

BALANCE-SHEET ITEMS.

Turning to the figures of our balance-sheet, although our total figures for 1922, £60,153,372 15s 10d, show a reduction as against the £61,767,780 18s 8d for the same period in 1921, the decrease is more apparent than real, as our Indian figures this year have been brought into our accounts at a 1s 4d rupee instead of 1s 8d as in 1921. This more particularly applies to the items in our balance-sheet under the heading of current and other accounts, at £25,765,183 2s 4d, and bills discounted and loans at £17,456,245 17s 7d, while the latter, in addition, reflects the pleasing liquidation which has taken place in the derelict Eastern advances. Our cash in hand and at bankers, at £4,515,804 10s 9d, is down £2,135,962 1s 5d on last year's total, but our holdings of bills of exchange, including Treasury bills, have correspondingly been increased from £16,422,953 10s 10d to £17,932,445, while our holdings of Government and other securities now stand at £12,159,013 18s, against £9,432,796 8s 8d on December 31, 1921. Our fixed deposits, at £16,643,106 8s 7d, are within £5,048 15s 2d of our 1921 figures. With the exception of our bank premises account, which shows an increase of £189,888 14s 1d, due mainly to cost of our new Shanghai and Java premises, the other items in our balance-sheet do not call for comment.

TRUSTEE DEPARTMENT.

I have to remind you that at the close of this meeting an extraordinary general meeting will be held to pass certain resolutions, copies of which have already been circulated. The effect is to create a trustee department in this bank. For some time past, to meet the convenience of our constituents, we have had a special department to deal with the payment of income-tax and the recoveries of income-tax. Many of our friends who have been our constituents in the East have suggested that we should also have a trustee department, and, after consideration, the board decided to meet this reasonable request. We have every hope that it will be successful.

In conclusion, I desire, on behalf of the board, to congratulate Mr Preston, as chief manager of this bank, on the very satisfactory position disclosed in our report. We tender our thanks to him, to Mr Bruce, to Mr Miller, to the managers abroad, and to the entire staff for the excellent work they have put in and for the manner in which they have conducted our business, both at home and abroad, in these most difficult times.

I beg to move: "That the report now presented, together with the balance-sheet and profit and loss account, be approved and adopted."

Sir Alfred Dent, K.C.M.G., seconded the resolution, which was carried unanimously.

DIVIDEND AND BONUS.

The Chairman then moved: "That a dividend at the rate of 14 per cent. per annum for the half-year ended December 31st last, together with a bonus of 6s 3d per share, free of income-tax, be now declared, payable on and after the 11th inst."

The Right Hon. Lord George Hamilton, G.C.S.I., seconded the motion, and it was unanimously approved.

The Chairman next proposed the re-election of the retiring

directors, Sir Alfred Dent, K.C.M.G., Mr Thomas Cuthbertson, and Mr J. M. G. Prophit.

This was seconded by the Right Hon. Sir John N. Jordan, G.C.M.G., G.C.I.E., K.C.B., and unanimously adopted.

On the proposition of Mr Robert F. Banks, seconded by Mr Henry B. Henley, the auditors, Mr D. C. Wilson, F.C.A., and Mr H. C. K. Stileman, F.C.A., were reappointed.

VOTE OF THANKS TO DIRECTORS AND STAFF.

Mr Frederick Tomkinson proposed a cordial vote of thanks to the directors and the staff for their successful management of the bank. In doing so, he said that the shareholders were greatly indebted to all concerned in the working of the bank, from the chairman downwards, for the able way in which its affairs had been conducted during a most strenuous year. He particularly wished to mention the staff abroad, who worked often in climatic conditions which were not as favourable as those at home, and the shareholders in London owed a debt of gratitude to them for the able assistance they had given to the board. With regard to the chief manager at home, he was well known in banking circles and needed no further praise.

Mr Bernard R. Glover seconded the vote, which was unanimously accorded.

The Chairman briefly acknowledged the compliment on behalf of the board, and Mr W. E. Preston (chief manager), who responded on behalf of the staff, said that it had been their endeavour, through somewhat trying times, to be the means of presenting to the shareholders what the latter had stated to be satisfactory figures. Provided trade conditions during the next year were no worse, they could only endeavour to repeat them.

An extraordinary general meeting was then held, at which resolutions were passed approving a supplemental Royal Charter and altering the company's deed of settlement.

VOTE OF THANKS TO THE CHAIRMAN.

Mr Tomkinson said he did not think the shareholders would wish to separate without passing a very cordial vote of thanks to Sir Montagu Turner for the able way in which he had presided on the present occasion, and also for the speech he had delivered, which had been particularly interesting from various points of view. He (the speaker) would not touch upon those points, but he did wish to say how much he, and doubtless other shareholders present, appreciated what Sir Montagu had said about trade and

his statement that if the Government showed a strong hand business people would feel secure—as, indeed, had been shown since Gandhi's seclusion.

The vote was cordially approved.

The Chairman briefly acknowledged the compliment, and added that a meeting would be held about three weeks hence for the purpose of submitting for confirmation the resolutions which had just been passed at the extraordinary general meeting.

The proceedings then terminated.

SCHILL BROTHERS, LIMITED.

A GRADUAL AND STEADY IMPROVEMENT.

FREEDOM FROM POLITICAL INTERFERENCE NECESSARY.

The annual general meeting of the shareholders of Schill Brothers, Limited, was held at the Chartered Accountants' Hall, 60, Spring gardens, Manchester, on Wednesday, March 28, 1923, at 11 a.m.

Mr Charles Henry Schill (the chairman) presided.

The Chairman said: You have the figures before you, and you will be as pleased to note the improvement in the state of our affairs as your directors are to be able to record it. It is true that the result is not yet as large as we could wish, but you all know that 1922 was anything but a good year for trade in general and the export trade in particular. Nor can any real improvement set in until there is real peace in Europe and the nations settle down to some definite scheme of steady work in harmony with one another.

THE NEED FOR FREEDOM OF TRADE.

The commercial sections of all countries alone can gradually repair the past losses, but they must be free of political interference before they can do so successfully. We can only hope that this may come about before long, and we must also hope that in this, our own country, all legislation interfering with the freedom of trade will be avoided and such dangerous Bills as the Safeguarding of Industries Act and the British Dyestuffs Bill be repealed forthwith. This is nothing less than pure protection, which this country cannot do with. One instance of it, amongst many, was brought before us not long ago, when one of our branches informed us that a customer of ours had established a firm reputation for the excellence of his dyed yarns. These used to be imported in a dyed state from here, but this man found it to his advantage to set up his own dye works, to import the grey yarn, and to buy his dyes

in the best market and dye it himself. It would never have suited him to do this had he been able to procure the high-class article which he requires at competitive prices in this country, and we have, therefore, lost quite a good little trade, and with it, of course, the employment which it would have brought.

SATISFACTORY RESULTS OF THE YEAR.

But to revert to our own affairs and last year's figures. The improvement is really a more satisfactory one than the figures show, because it has been gradual and steady. We still had to make certain sacrifices during the year to help some of our customers to rehabilitate themselves, and put them in a position to do the little new business that began to show itself, and to settle their accounts with us. This was, of course, a matter of policy only, and not in any way of obligation. Most of it took place during the early part of the year, and bore fruit later on. At first our turnover was very low, and the rebates allowed must have absorbed most of the profit made in the first half. They practically ceased then, and the new business which the customers were then able to get came on to us as expected, and caused our turnover during the second half to improve considerably. Orders came in quite nicely, and are still continuing to do so, and we are, therefore, able to show the result before you. The actual bad debts during the whole year have not been at all extraordinary.

THE CAPITAL POSITION.

But the increase in good business which is now offering has made us feel the loss of our reserve capital in 1921 very keenly. We require all our available resources now to take advantage of the situation and to commence to strengthen our position again. Moreover, we still have a certain amount of capital abroad which should have returned, but has not yet done so, because customers are only paying off their old indebtedness gradually. The consequence is that, though we have made enough to begin to pay off the arrears of preference dividends, and intend to start doing so, we can only do it gradually in instalments as and when more money returns to us. We hope to be able to pay a first instalment at an early date from now, but cannot to-day either fix the date nor the actual amount.

IMPROVED PROSPECTS.

In conclusion, I am glad, at last, to be able to present a more cheery report to you, and one which seems to be the forerunner of better times again, though I confess I almost hesitate to say this in view of the unsettled state of the world and the possibility of chaos again arising as a consequence of some error of judgment in handling the European situation, and the possible consequence of a still further depreciation of the exchanges.

The report of the directors produced, together with the annexed statement of the company's accounts to December 31, 1922, were received, approved, and adopted.

Mr F. A. Morello, the retiring director, was re-elected a director of the company.

The action of the directors in co-opting Mr Walter Fielding as a director of the company was confirmed.

Messrs David Smith, Garnett and Co., chartered accountants, were re-elected auditors of the company for the ensuing year.

MONTE VIDEO WATERWORKS COMPANY, LIMITED. CANAL CONCESSION AND GOVERNMENT PURCHASE.

The forty-fourth ordinary general meeting of the Monte Video Waterworks Company, Limited, was held, on the 5th instant, at the company's offices, 52 Moorgate, London.

Mr James Anderson (chairman of the company), who presided, said that the accounts showed an improvement over those of last year in almost every respect. There was a marked growth in the number of services having risen from 40,991 to 43,035. The gross revenue was larger by £20,214. In working expenses there was an actual reduction of £2,774, notwithstanding the larger business done. The net profits for the year were £123,139, which enabled the board, after providing for the usual dividend of 8 per cent. for the year, to add £20,530 to the reserve and £2,314 to the carry forward.

The board's anxiety about the future had not decreased. Three years ago the Government granted a concession for the construction of a canal to bring water to the neighbourhood of Monte Video from the stream from which the company drew their supply. The board felt that with this threat held over them they could not advise the shareholders to raise the large amount of capital required for extensions which the action of the Government might render of little or no value. The Government appointed engineers to go into the whole question, and the report of the Government inspectors was in the nature of a recommendation that the Government should purchase the company's undertaking and do the extensions themselves. At the request of the Government, the directors named a very reasonable figure at which they would be

prepared to sell, and one which, in the opinion of the Government inspectors, was not in excess of the value of the property. The terms were practically arranged, but a new Minister came into office, decided against Government purchase, and intimated that, in his opinion, the company should proceed with the extensions, giving the Government the option of acquiring the property at a more convenient season, and at the same time suggesting that the price previously provisionally agreed upon was excessive, and that for the future the Government should have a participation in the profits. The directors refused these conditions. Meantime, the period given to the Canal Concessionaire to satisfy the Government that he had secured the capital necessary for construction had lapsed.

The report and accounts were unanimously adopted.

APOLLINARIS AND JOHANNIS, LIMITED. RECONSTRUCTION APPROVED.

A series of meetings of the debenture stockholders, the deferred interest certificate holders, and the preference and ordinary shareholders, of Apollinaris and Johannis, Limited, was held, on the 26th ultimo, at the Holborn Restaurant, London, to consider a scheme of arrangement and reduction of capital, in which it was proposed that the debenture holders should write down their stock by 20 per cent., the rate of interest being raised from 4 per cent. to 5 per cent., and the rate of redemption from £100 to £120; that the interest on the certificates should be reduced from 6 per cent. to 5 per cent.; that sinking funds for both debenture stock and deferred interest certificates should be constituted; that the preference shareholders should be called upon to forgo arrears of cumulative dividend, and that the preference shares should be written down from £10 to six £1 ordinary shares and the ordinary shares should be written down from £10 to two £1 ordinary shares.

Sir Bernard E. Greenwell, Bart., one of the trustees for the debenture holders, presided at the meeting of the debenture holders, at which the scheme was agreed to.

MR HOLLAND'S STATEMENT.

Mr Alfred R. Holland, who subsequently presided at the various shareholders' meetings, as well as at the meeting of the deferred interest certificate holders, said that for some considerable time past it must have been evident that some drastic form of reconstruction of the capital of the company could not be avoided. For the years prior to the war this company enjoyed good and continued prosperity. Its sales showed regular and important increases. The war, and the war alone, had changed all this. He had no hesitation in stating that the war was entirely responsible for the present unfortunate position of the company. When the war broke out in 1914 they were cut off from their source of supply, and this state of things continued until the end of July, 1919, and this state of things continued until the end of July, 1919, and this state of things continued until the end of July, 1919. When they started again untold difficulties had to be overcome; not only had their world-wide organisation suffered shattering blows, but their goodwill, the greatest asset they possessed, had suffered irreparable damage. People were no longer in the habit of drinking Apollinaris. Other waters had taken its place, and the company had to make a fresh start under the most adverse conditions. Raw material for producing bottles, timber for cases, &c., were almost unobtainable. Every country seemed to have adopted a system of export and import licences for every article imaginable, rendering business almost impossible. The wonder was not how much business was done, but rather that they did any business at all. In spite of all these difficulties, they were able to build up again a demand for Apollinaris, to put their

finances into reasonable order, and the directors were to-day not asking for any further capital, but only urging that the company should be put upon a reasonable financial basis in proportion to its probable money-earning capacity in the future. During all those years interest on the debentures had accumulated, and the dividend on the preference shares had piled up, so that they had now to deal with figures so formidable that they could only be described as impossible. In existing circumstances, the present capital was out of all proportion to the money-earning capacity of the business. This must be remedied if the company was to be put on a sound financial and commercial basis. To achieve this, all interested must make a considerable sacrifice.

CURRENT YEAR'S TRADING.

If the scheme were adopted, the directors had every reason to believe that the company would gradually regain its prosperity, but this would take time and great efforts. It must be dependent upon no great political disturbances happening and again cutting them off from the source of supply. He would not like to attempt to forecast the result of the year's trading, which expired at the end of the present month, but, as far as could be foreseen, it should be much better than that of the previous year. Indeed, the board would be much disappointed if the profits shown were not equal to the amount required for the debenture interest, certificate interest, and the two sinking funds.

At each of the meetings there was a somewhat lengthy discussion.

Mr Rowe, speaking at the meeting of the deferred interest certificate holders, said that as the certificate holders had conceded two points, he thought they should have a concession made to them on a third. Under the scheme the directors were proposing that the interest on the certificates should be payable out of the annual profits of the company. The conditions of the existing certificates stated that the interest was a charge on the general assets of the undertaking. His point was that if they consented to allow their interest to be reduced by 1 per cent. per annum, and also to postpone the payment of the capital amount of the certificates—£238,000—which, according to present arrangements had to be discharged before the preference or the ordinary shareholders received any dividend, their interest, at any rate, should continue to rank as a charge on the assets.

After some discussion the necessary series of resolutions were adopted, with the modification agreed to at the deferred certificate holders' meeting, to the effect that the interest on the certificates should be a charge on the assets annually instead of being payable out of the profits only.

A confirmatory meeting is to be held in due course according to statutory requirements, after which application will be made to the court for confirmation of the scheme.

D. H. EVANS AND COMPANY, LIMITED.

SUCCESSFUL RESULTS—SATISFACTORY PROFITS.

The twenty-ninth annual general meeting of the shareholders of D. H. Evans and Co., Limited, was held, on the 6th instant, on the company's premises, Oxford street, London, Mr Ernest Webb (chairman and managing director) presiding.

The secretary (Mr R. Stannard) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, when I had the pleasure of addressing you last year I felt it was necessary to utter a warning note as to the conditions then existing, and the possible effect such conditions might have on our trading in the then coming year. It is with all the greater pleasure, therefore, that I am able to present to you to-day the accounts to February 19th last, showing, I think you will agree, a record of satisfactory trading and satisfactory profits.

The past year has not been without its difficulties, but by careful purchasing we have been able to give our customers good value and good service, and by watching every item of expenditure we have arrived at the result to which I will now refer.

PROFIT AND LOSS ACCOUNT.

Dealing first with the profit and loss account, the total expenses for the year under the heading of salaries, rents, rates, taxes, insurance, &c., amounted to £232,554, showing a reduction compared with the previous year of £8,085. This reduction is partly the result of various economies which have been effected during the year, and is partly due to a welcome reduction in rates and taxes, which, however, still remain at a very high mark. Repairs show a saving of £1,191. The remaining expenses are constant items in which there has been no alteration. On the credit side of the account the gross profit on trading, transfer fees and interest received amount to £385,604, an increase of £3,188 over last year. During the year under review in many instances there has been a further fall in prices. The increase in the gross profits will satisfy you that, notwithstanding such reductions in value, the business

has been well maintained and is attracting its share of trade. The final result is a profit for the year of £129,973, being an increase over last year of £11,791.

The balance of profit is carried to the appropriation account, which shows the interim dividends paid, the reserves for taxation, the transfer to reserve fund of £11,497, and the final dividends which the directors now recommend. On the credit side of the appropriation account it will be seen that the directors have decided to transfer from the profits of the year the sum of £4,000 for the purposes of the staff pension fund, raising that fund to £25,000, as shown in the balance-sheet. Our staff have rendered the company loyal service for this and for many years, and I am sure the shareholders will approve of and share the wish of the directors to increase the amount available for provision to assist such members of the staff when they may be unable to carry on their work.

The balance of profits brought forward from last year was £15,681, and we are now carrying forward a balance of £39,623, after making provision for all taxation on the profits of the year.

BALANCE-SHEET ITEMS.

Turning now to the balance-sheet, on the debit side the issued capital and debentures remain unaltered. The reserve fund amounts to the substantial figure of £173,520, which will be increased to £185,017 by this year's contribution. The sundry creditors show a small increase of £3,531. The staff pension fund, to which I have already referred, now amounts to £25,000, and the profit and loss account I have also dealt with. On the assets side the property and fixtures accounts show reductions representing writings off in excess of additional expenditure. The stocks on hand show a decrease of £5,272, and the sundry debtors a decrease of £4,260. The investment in Victory Bonds remains the same as in the last year's balance-sheet, except that it has considerably increased in value, and the balance of cash, amounting to £143,963, represents an increase of £51,547 over the corresponding item last year.

I think I have now dealt with the details of the present account. There is, however, another matter which the directors have had under consideration, and which I wish to bring to your notice: that is, the necessity for the rebuilding of the old part of our premises, which, for convenience, we call "the Eastern block" (nearest Oxford circus), on the whole of which we hold 999 years' leases. These old buildings are the result of the conversion of a series of single shops into connecting showrooms, workrooms, and offices, and the time has now come when our present showrooms do not give us the space we require for the proper display of the goods we sell, or provide for our customers that standard of comfort when shopping which in these days is expected from a business establishment such as ours.

I now beg to move the resolution that the report and accounts be adopted.

Sir James Boyton seconded the resolution, and it was carried unanimously.

GOVERNMENT RETURNS.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £40,000,000 in three months' Treasury Bills dated from Monday to Saturday, April 9-April 14, were opened on April 6, 1923, and the total amount applied for was £78,915,000. Tenders for Monday to Saturday bills at 99 8s 10d, about 36 per cent., and above in full. For Treasury Bonds at 95 0s 0d, about 55 per cent. above in full. The average rate of discount was £2 4s 3 1/2d. The amounts allotted were as follows:—In bills at 3 months, £35,000,000; in bonds, £1,000,000.

(a) Including Treasury Bonds.

4% Treasury Bonds, 1931-33.

Tenders will be received on Friday, April 13, 1923, for Treasury Bonds and Bills to be issued to the maximum amount of £35,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000, but subject to that limit, the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

Reports and Notices.

The directors of the British General Insurance Company, Limited, have appointed as sub-manager Mr Joseph G. W. Rollason. Mr Rollason commenced his insurance career with the "Union" at Birmingham in 1893. In 1896 he entered the service of the "Caledonian," where he acted in various capacities. In 1907 he was appointed local manager at Bristol for the "Century," being promoted later to the management of the Birmingham branch, and in 1914 to the London secretaryship. In 1918 he became first managing director of the "Atlantic," which position he recently vacated, and has now taken up his duties with the "British General."

Messrs Walter Sanderson and Co., of 10 Angel court, E.C. 2, and the Stock Exchange, announce that they have admitted as a partner, Mr Herbert Victor Rubens, son of the late Mr Victor Rubens, who was admitted a member of the Stock Exchange in 1867.

We understand that Mr T. Ivor Jones, late of the firm of T. Ivor Jones and Co., chartered accountants, Swansea and London, has been elected a member of the board of Richard Thomas and Co., Limited, Swansea, with the appointment of managing director.

GOVERNMENT STOCKS, &c.

BULGARIAN 5 PER CENT. GOLD LOAN OF 1902—NOTICE TO BRITISH BONDHOLDERS.—The Bulgarian Government announces that it is prepared to pay to British bondholders the Coupon No. 41 of the above loan, maturing on March 14, 1923, at francs (French) 12.50 each, and the bonds drawn for redemption on that date at francs (French) 500 each. Holders of bonds which have been in British ownership since August 1, 1914, who are desirous of availing themselves of the offer thus made by the Bulgarian Government should present the above-mentioned coupons and drawn bonds (to which all coupons due after the date of redemption must remain attached) for payment at the counting-house of Messrs Stern Brothers, 6 Angel court, E.C. 2, between the hours of 11 a.m. and 2 p.m. (Saturdays excepted). The amount due in French francs will be paid in sterling at the sight rate of exchange in Paris on the day of presentation, less income-tax. All bonds and coupons, together with such verification of ownership as may be required, must be left seven clear days for examination.

ROUMANIAN GOVERNMENT.—Messrs J. Henry Schröder and Co. are instructed by the Roumanian Legation in London to publish the following statement:—A commission has recently arrived in London for the purpose of marking for identification the bonds of Roumanian loans held by British subjects, of which the coupon service has not yet been fully resumed. This work commenced on Thursday, April 5, 1923, and will finish on April 20, 1923. No extension will be allowed. Holders of British nationality should deposit their applications, together with the bonds and documents with Messrs J. Henry Schröder and Co., 145 Leadenhall street, E.C., before April 20, 1923.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4d, being the moiety of the fourth fortnightly instalment of the debt service payable to the council in respect of the half-year ending June 30, 1923.

BANKS.

BANK OF SCOTLAND.—The report and accounts for the year ended February 28, 1923, show a net profit of £345,178, to which is added £72,978 balance from last year, making £418,156 available. The dividend of 16 per cent. for the year absorbed £157,955. The sum of £125,000 is placed to reserve, £25,000 in reduction of bank premises account, £25,000 in reduction of heritable properties account. The sum of £85,201 is carried forward. All the investments of the bank are valued in the balance-sheet at or under the prices ruling at February 28th last.

CREDITO ITALIANO.—The following is the balance-sheet as at December 31, 1922:—

December 31, 1922.			
LIABILITIES.	Amount.	ASSETS.	Amount.
Capital	300,000,000	Cash and balances at call with banks	132,602,313
Reserve fund	300,000,000	Bills receivable on Italy, England, and other countries	2,579,085,034
Deposits & saving accounts	836,574,928	Loans against collateral securities	341,870,238
Current accounts	3,086,524,282	Current accounts	1,136,522,700
Acceptances on account of customers	77,959,403	Investments	104,353,283
Cheques outstanding	194,704,183	Participations	16,426,157
Sundry creditors	40,892,088	Freehold bank premises	12,500,000
Guarantees on account of customers	57,416,715	Sundry debtors	59,033,086
Rebate on bills receivable maturing next year	13,522,099	Customers' liabilities against guarantees	57,416,716
Net profit	42,215,829		
	4,739,809,527		4,739,809,526
	16,707,606		16,707,606
	4,766,517,133		4,756,517,133

At the annual general meeting held on March 27, 1923, it was decided to allocate the net profit as follows:—To reserve fund, 10,000,000 lire; to directors, 1,551,724.15 lire; to shareholders as dividend, 0 per cent., 27,000,000 lire; to balance carried forward, 3,664,104.45 lire—42,215,828.60 lire.

INSURANCE.

BRITISH OAK.—The accounts for last year show that in the fire department the premiums were £53,236, the net claims 60.74 of the premiums, and the expenses and commissions 42.14 per cent. The reserve for unexpired risks was made up to 40 per cent. of the premiums by transferring £2,565 from profit and loss; an additional fire reserve of £15,000 was provided by a transfer from the special reserve fund. In the accident and general department the premiums were £157,271, the net claims 53.91 per cent., and the expenses and commissions 41.09 per cent. After providing for unexpired risks a sum of £2,647 was carried to profit and loss. An additional reserve of £11,550 was taken from the special reserve fund. In the marine department the premiums were £89,018, and the claims and returns £59,182. The expenses were £14,012, and the funds £84,947, including £10,000 transferred from the special reserve fund. In the profit and loss account the principal item is a profit on sale of investments of £12,812. Development and sundry expenses cost £18,352, and the balance on December 31st was £9,456, against £9,357 brought forward.

UNIVERSAL AUTOMOBILE.—The report for last year shows that the net premiums were £40,811, the claims were £22,105, and the expenses £12,877. After providing for the increase in the reserve for unexpired risks, there was a profit of £3,153, against £2,551 for 1921. Interest on investments produced £1,967, against £1,614. The directors have declared a dividend of 10 per cent. and bonus of 10 per cent., both tax free. The balance at profit and loss on December 31st was £17,609, against £14,744 brought forward.

WESLEYAN AND GENERAL ASSURANCE SOCIETY.—The eighty-second annual report for the year ended December 31, 1922, shows that as regards new business the total number of policies issued in the ordinary and industrial departments was 194,514, assuring £3,452,683. The claims and surrender values paid in all departments amounted to £650,763, making a total of nearly twelve million pounds paid since the establishment of the society. The premium income amounted to £1,462,257, and the gross interest revenue was £226,136, making a total income from these two sources of £1,688,393, an increase for the year of £39,743. The assurance funds amount to £4,915,786, showing an increase on the year of £544,924. The general and investments reserves together amount to £65,000. The valuation disclosed a surplus in each department, the total surplus amounting to £97,573, including £20,792 brought forward from 1921. Of this sum, £48,687 is divided among the holders of with-profit policies in the ordinary department in the form of a reversionary bonus at the rate of £1 10s for each £100 assured, upon condition that such bonus will become an effective addition to the sum assured as soon as the policy has been two years in force, and the sum of £15,000 has been added to the general reserve. The balance of the surplus, amounting to £33,886, is carried forward undivided.

WORLD AUXILIARY.—In the fire and general account for last year the net premiums were £143,660, the claims £88,541, and the expenses £57,776. The fire and general funds on December 31st

were £67,803, against £70,459 brought forward. In the marine account the premiums were £149,758, the claims on account of 1920 and 1921 were £83,937, and of 1922 were £37,775. Expenses amounted to £6,488, and after transferring £20,000 to profit and loss the marine fund was £191,392, against £189,835 brought forward. The profit and loss account shows a transfer to reserve fund of £20,000, interest and commission earned of £24,169, profit on investments realised, &c., £33,511, and a balance on December 31st of £22,465, against £7,371 brought forward.

RUBBER, &c.

DIMBULA VALLEY (CEYLON) TEA COMPANY, LIMITED.—The report for the year 1922 shows a net profit of £43,290, as compared with £33,810 last year. The balance brought forward from 1921 amounted to £4,772, making £48,062 available. Preference dividend for the year absorbed £3,784. A dividend of 20 per cent. for 1922 has been paid on the ordinary shares, absorbing £36,035. The sum of £5,000 has been put to estates purchase reserve account, and £3,243 has been carried forward. The report states that careful plucking was continued throughout the year, and the crop amounted to 1,565,215 lbs, against, for the previous 12 months, 1,354,813 lbs, which included three months' crop only from Blairlmond Estate. The total crop (including the portion valued) realised £96,924 3s 8d net, or an average of 1s 2.86d per lb, against 1s 2.64d last year, and 10.90d for the previous season. The cost of cultivation and placing the crop on board ship was 51.70 cents, or 8.16d per lb, against 49.53 cents, or 8.11d per lb the previous 12 months. The estimate for 1923 is 1,725,800 lbs, allowing for careful plucking. The rubber crop, which was restricted for the last two months of the year in accordance with the legislation restricting exports, was 427,570 lbs, against 333,725 lbs for the previous 12 months. The total crop (including the portion valued) realised £17,797 6s 2d net, or an average of 9.99d, against 8.38d last year. The cost of cultivation and placing the crop on board ship was 27.12 cents, or 4.28d per lb, against 28.70 cents, or 4.70d per lb for the previous 12 months.

GENERAL CEYLON RUBBER AND TEA ESTATES, LIMITED.—The report for the year ended December 31, 1922, shows a trading profit of £51,355. After providing for London charges, including administration and general office expenses, taxation, and debenture interest, there remains a sum of £38,924 8s 6d at the credit of profit and loss to be carried to appropriation account. The appropriation account shows that after bringing forward a debit balance of £9,325 from the previous season there remains a credit balance of £29,599. From this £10,000 has been placed to reserve account, leaving a balance of £19,599 to be dealt with, and the directors now recommend the payment of a dividend of 5 per cent., less tax, for the year, and to carry forward the balance of £4,349 to next year.

MISCELLANEOUS.

BRITISH EMPIRE STEEL.—The report for 1922 states that the profits for the year were \$2,917,275, to which is added \$4,000,000, the balance of amounts received in settlement of claims against the Government, and \$755,926 brought forward. Sinking funds, depreciation, &c., absorbed \$3,627,799, interest on bonds and debentures \$1,676,906, and dividends on first preference shares of the corporation and preferred stocks of constituent and subsidiary companies \$1,344,299, leaving \$1,024,198 to be added to the existing surplus of \$21,784,870. The balance-sheet shows total assets of \$158,123,111.

DEBENHAMS, LIMITED.—The report and balance-sheet for the year ended January 31, 1923, shows that the net profit for the year, as shown by the balance-sheet, amounts to £618,244 12s 4d, which is divisible in the manner prescribed in clause III. of the articles of association as follows:—Dividend on cumulative first preference shares, £110,500; dividend on cumulative second preference shares, £66,600; reserve fund, 20 per cent. of balance and further allocation (subject to income-tax), £88,801; dividend on cumulative preferred ordinary shares, £100,000; participation fund 30 per cent., after deduction of preference and preferred ordinary dividends, £102,343; dividend on "A" 10 per cent. ordinary shares, £50,000; dividend on "B" ordinary shares, £100,000. When the sum of £88,801 4s 8d (less income-tax) is transferred to reserve fund the company's reserve funds (including debenture sinking fund) will stand at £526,161 19s. The report adds that "in accordance with previous practice, the whole of the company's stocks have been taken at cost or market value, whichever is the lower. The home trade during the past year has been more satisfactory, but the export trade, although showing slight signs of improvement, has, in common with the general export trade of the country, been disappointing."

FAIRBAIRN LAWSON COMBE BARBOUR, LIMITED.—The profits of the company for the year 1922 remaining after payment of interest on the debenture stock and notes, reserving £11,000 for corporation tax, and meeting all revenue charges, amounted to £179,881, to which must be added the amount brought forward from the previous year, viz., £226,469. Interim dividends of 2½ per cent. on the preference shares and 4 per cent. on the ordinary shares have already been paid, and the directors now recommend the payment of a further dividend of 2½ per cent. on the preference shares, making 5 per cent. for the year; the payment of a further dividend of 10 per cent. on the ordinary shares, making 14 per cent. for the year; the transfer of £18,000 to note redemption fund in accordance with the provisions of the note issue; the writing-off of the balance (£14,033 9s 8d) of the expenses of the new capital issue; the transfer of £20,000 to reserve fund, leaving a balance of £234,317 3s 8d to be carried forward. The report goes on to say that during the year 1922 business was at an almost complete standstill for over 13 weeks owing to the engineering lock-out. The prevailing slackness in the engineering industry also affected the company and its associates. The directors are, however, glad to be able to report signs of distinct improvement in the prospects of trade. The Indian establishment has been practically completed and production has commenced.

GORDON HOTELS, LIMITED.—The directors, in presenting to the shareholders the report on the company's affairs, with the accounts

for the seven months ended December 31, 1922, and balance-sheet at that date, state that they have pleasure in reporting that, notwithstanding the continued depression in trade, the volume of business transacted in the company's hotels shows a large and gratifying increase, and that, in spite of the very substantial reductions in tariff, the receipts in the hotels during the period under review amount to £854,349, against £822,508 for the corresponding period of 1921. The profit earned in the hotels, after deducting all central administration expenses, amounts to £116,939; the comparable figure for the corresponding period last year was £93,676, but though every care has been taken in arriving at this latter figure, it can only be considered as being approximate, as no complete annual stocktaking took place at December 31, 1921. The net profit, after provision for debenture interest, interest on notes, income-tax, &c., amounts to £30,524. After the deduction of £11,666, being the proportion for the period to be transferred to the sinking fund, in accordance with the terms of the trust deed relating to the issue of the 8 per cent. notes, there remains the sum of £18,858, which, when added to the £11,232 carried forward at May 31, 1922, leaves a balance of £30,090 10s, which it is proposed to carry forward.

J. MANDLERBERG AND CO., LIMITED.—The net profits for the year ended December 19, 1922, amounted to £67,683, to which must be added £65,936 brought forward from last year, making a total available balance of £133,619. The dividend of 7 per cent. on the cumulative preference shares for the year amounts to £4,900. There has been transferred to the depreciation fund the sum of £3,500. The directors recommend the payment of the dividend on the preferred ordinary shares of 8 per cent. for the year, less income-tax (including the interim dividend for the half-year to June 19, 1922, at the rate of 8 per cent. per annum already paid), £12,000; the payment of a dividend of 10 per cent., less income-tax, for the year on the ordinary shares (including the interim dividend for the half-year to June 19, 1922, at the rate of 10 per cent. per annum already paid), such dividend being calculated in respect of partly-paid shares on the amount for the time being paid up thereon, £46,280; and to carry forward £66,939. The whole of the company's works and machinery have been maintained in complete efficiency, the cost having been charged, as heretofore, against the revenue of the current year.

THE ROCK PERMANENT BENEFIT BUILDING SOCIETY.—The directors state that during the year £375,400 has been advanced on mortgage, against selected securities. The amount due on the mortgages held by the society at the end of the year was £983,740. Investments in preference shares amounted to £284,107, this sum exceeding by £209,554 the repayments, making the total amount under this heading £886,282. The reserve now stands at £34,150. The growth of the society during the past decade is as follows:—

	Preference Shares.	Amount Advanced.	Due on Mortgage.	Surplus
1912	358,155	35,982	404,825	17,201
1922	886,282	375,400	983,740	34,150

SCHILL BROTHERS, LIMITED.—The directors are pleased to be able to report a distinct improvement in the affairs of the company. During the first part of the year a certain amount of assistance had still to be given to help their clients to overcome their difficulties, to begin to liquidate their indebtedness to us, and to start trading again on a sound basis; but as the year went on, the fruit of this developed. Both money and orders began to come in somewhat more freely, and are still continuing to do so. In view of the difficulty of attaining a reasonable turnover during the first part of the year, it is gratifying to be able to state that there is a profit in respect of 1922 of £16,227 which, added to the balance brought forward from last year of £3,831 makes a total of £20,058, which is carried forward. As soon as liquid funds become available, the directors intend to pay some of the arrears of preference dividend.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Drier weather conditions have prevailed during the week, which has enabled farmers to push ahead with spring sowings. In some districts field work is retarded by the agricultural labourers' dispute, but in parts of the country not affected fair progress has been made. Growing crops continue to receive favourable comment, but a spell of warmth and sunshine is much to be desired in order to hasten maturity. Business at market proved on a limited scale, while largely under holiday influences, but price ruled steady to firm for most cereals. English wheat is in lighter supply and commands steady rates. Suitable milling grade quoted at 9s 3d to 9s 6d, and inferiors 8s 3d to 8s 9d per 112 lbs free on rail. Imported descriptions again the turn dealer, in sympathy with forward firmness, but general course of trade shows no appreciable expansion. No. 1 Northern Manitoba quoted 49s 9d April-May, sold at 49s 6d to Italy, Rosafé 62½ lbs loading, 47s 4d. No. 2 mixed Durum 47s 6d, Rosafé 63 lbs 49s, all ex ship; and Australian 54s landed terms all per 49s lbs. The cargo section showed more activity, and prices on a higher level in view of improved American advices. Steamers of No. 1 Northern Manitoba April-May, sold at 49s 6d to Italy, Rosafé 62½ lbs loading, 47s 4d. Barusso, 62 lbs afloat, 46s 3d net, choice white Karachi earl April 48s 9d, ditto April-May 48s 3d, Australian on passage 51s 3d to 51s 6d all per 480 lbs c.i.f. terms. Crop reports from the principal exporting countries continue favourable, while shipments of

IRON, STEEL, AND COAL.

but it is hoped that it will not extend over the present week, and that work will be resumed at most if not at all the collieries next week. With so considerable a reduction in the supply of coal, prices are firmer than ever, and for the better quality coal 40s has been quoted for large and 30s and more for best small steams. The most active section of the market is that of Monmouthshire coals. An effort to extend the non-unionist stoppages to that district has been unsuccessful, except at one or two pits, and for the little free coal that is available top prices have been realised. Pitwood prices are easier as the result of the suspension of the demand from the Rhondda district, but otherwise the market has been featureless. Current market quotations are approximately as follows:—Best Admiralties, 37s 6d to 40s; second Admiralties, 35s 6d to 37s 6d; best drys, 35s to 37s 6d; black veins, 37s 6d to 40s; Western Valleys, 36s to 37s 6d; Eastern Valleys, 32s 6d to 35s; best bunker smalls, 30s to 31s; ordinary cargo smalls, 26s to 29s; anthracite big vein large, 45s to 47s 6d; machine made cobbles, 45s to 46s; French nuts, 40s to 47s 6d; stove nuts, 45s to 47s 6d; rubbly culm, 15s 6d to 16s; coke for export, 75s to 80s; inland blast furnace coke at ovens, 32s 6d to 35s; patent fuel, 40s to 45s; pitwood, ex ship, 27s 6d to 28s.

In consequence of the holidays, there has been no iron and steel market this week, but conditions in the tinplate and steel bar trades were as strong as they were before the holidays.

THE WOOL TRADE

Our Bradford correspondent, writing on Thursday, says :— The check to new business caused by the closing of so many business establishments for the Easter holidays has had no appreciable effect on this market. Inquiry is again very general, and the tone of the market is exceptionally good. It is manifest that a very large number of traders have full confidence in the future of merinos, and the present revival is apparently due to the strength of the raw material position rather than to a pronounced expansion in actual consumption. The fact remains, however, that in other countries, and particularly in the United States, consumption is being maintained on a big scale, and activity in consuming centres abroad, combined with the strong statistical position of merinos, is undoubtedly helping this centre to recover the ground lost in recent weeks. America is still in the market for matchings, and if she continues to buy crossbreds, it should not be difficult to maintain the improvement in these wools recorded at the last London auctions. Bradford topmakers are well sold ahead, and to-day it is more difficult to obtain any concession on quoted prices, especially in merinos and low crossbreds. Although not quotably higher on the week, all prices are very firm, and show, if anything, a hardening tendency. Spinners are in a more comfortable position, on account of the improvement in the way in which particulars are coming to hand, and most firms have enough orders on their books to keep machinery occupied for two or three months. Quotations for yarns are not quite so irregular, many of the weak sellers having dropped out since the close of the London auctions and the improvement in general conditions. Trade with the Continent, however, is still restricted, on account of the uncertainty resulting from the French occupation of the Ruhr. There is some improvement in the tone of the piece goods trade, and inquiries, both on home and export account, are rather more numerous.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Twice in about a week Australian cables have intimated growing concern owing to the continued absence of rain over large areas of the Commonwealth, and apparently there are signs of drought. The past summer has been particularly hot, with a marked absence of rain-fall, and while there have been some fairly heavy rains re-

Le Touquet-Paris-Plage (open during the season ending 30th Sept.).

EVERY DESCRIPTION OF BRITISH AND FOREIGN BANKING
BUSINESS TRANSACTED.

Our Cardiff correspondent writes:—Business on the Cardiff coal market has been held up this week, partly by the two days' official holidays, and partly by the non-union strike in the Rhondda district. All the more important steam coal colliery companies are affected by this particular stoppage. The number of persons affected is between 30,000 and 35,000, and the output over 30,000 tons per day. The duration of the stoppage is uncertain,

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20:—

	1922-1923.	1921-1922.	1920-1921.	1919-1920
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to March 31	473,498	320,118	153,785	247,588
29 weeks to March 31	13,297,564	18,359,313	9,415,093	9,572,952
Average price of English wheat per	s d	s d	s d	s d
quarter	41 1	51 6	89 1	72 7
= per cwt	9 7	12 0	20 9	16 11

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1919 to 1922:—

		QUANTITIES SOLD.			AVERAGE PRICE PER CWT.					
		Wheat.	Barley.	Oats.	Wheat.		Barley.		Oats.	
1923.		Cwts.								
Mar. 29	412,801	133,667		51,834	s	d	s	d	s	d
31	473,484	114,337		44,580	9	5	8	6	9	8
					9	7	8	5	9	8
1919	274,993	115,557		41,605	16	11	17	6	16	11
1920	247,590	48,167		17,809	16	11	25	3	19	11
1921	355,746	57,826		24,032	20	9	13	8	12	8
1922	350,481	93,986		51,795	12	0	11	9	10	8

Europe are on a moderate scale. Flour generally quiet, but prices fully steady in sympathy with the wheat position. London standard straight run stands at 40s, patents 42s to 43s, and town householders 38s per sack delivered in the Metropolitan area. All English country straights 31s 6d-33s 6d, delivered to London stations. Imported, steady but quiet. Manitoba patents 37s 6d-41s. Minneapolis good patents 40s 6d, Australian 36s 6d-38s 6d, all per 280 lbs, ex store. Millers' offals steady. Broad bran quoted 7s 6d, ordinary 6s 9d, middlings 7s 3d, bags included ex mill. Barley quiet, English ranges from 6s 9d-12s 6d per 112 lbs, free on rail, as to quality. Imported lower. Californian 42s 6d-45s, ex-ship, Australian chevalier 46s-51s, landed both per 448 lbs. Persian 25s 3d, Danubian 29s 6d-30s 6d, Plate 28s 6d, all landed per 400 lbs. Maize firm to dearer. Plate landed 39s. American mixed ex-ship 36s 3d, ditto landed 37s 6d. East African ex ship 35s 3d, ditto landed 36s 9d, all per 480 lbs. Oats, English, steady at 8s 4d-10s 6d per 112 lbs free on rail as to sample. Imported firm. Plate f.a.q. 25s 9d, No. 2 white clipped American 36 lbs, 25s 3d; No. 2 Canadian western 29s 6d, No. 3 ditto 27s 9d, No. 2 Canadian feed 26s, New Zealand A grade 38s, B 37s per 320 lbs, all landed. Oatmeal steady. London made all cuts 17s 6d. Flaked oats 20s 6d, ex-mill, ordinary Scottish oatmeal 18s 6d-19s, and American all cuts 17s per cwt.

Holidays this week have interfered with the daily round and common task, but apparently there is a well sustained interest in the course of wool values. Nobody expects to see any important move during the next few weeks, but consumption is well maintained, and Bradford still shows an improvement on recent weeks. Home markets cannot be called at all active, but they are sound and healthy, and that is something. We understand that there is a little more interest being shown by Japanese buyers of textiles, and some decent orders have recently been placed in light-weight solid worsteds for next Spring. This certainly is a move in the right direction, and, with an improved exchange, it is also expected that Bradford manufacturers will still retain their hold of the home market in dress goods.

ALEXANDERS DISCOUNT Co., LTD.,
24, LOMBARD STREET, E.C.3.

Telephones: 1882 & 225 Avenue. Telegrams: "Alexanders, Thread-London."

CAPITAL AUTHORISED	£1,250,000	CAPITAL PAID UP	£600,000
CAPITAL SUBSCRIBED	£1,100,000	RESERVE FUND	£400,000

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

Reports so far to hand are to the effect that quite a good business has been done in boots and shoes for the holiday. Leicester makers were, in fact, unable to deliver some of their orders in time, and have resumed work to cope with the demand. If a clearance has been made, it will give the allied trades a very welcome fillip.

February-March, steamer, 28s cwt.
SPICE.—Pepper market generally slow, but sellers required steady prices. Fair black Singapore, spot, quoted, 44d; April-June, 43d; Aleppy, spot, 43d; Tellicherry, 44d; white Singapore, 63d; Muntok, 64d; ditto, April-June, 64d. DIRECTORS' REPORT.

Presented at the Sixty-ninth Ordinary General Meeting, 4th April, 1923.

The Directors have now to submit to the Shareholders the Balance-Sheet and Profit and Loss Account of the Bank for the year ended 31st December last. These show a net profit, after providing for all bad and doubtful debts, of £1,004,701 4s 5d, inclusive of £215,169 15s 5d brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £794,701 4s 5d, and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum, together with a Bonus of Six shillings and three pence per share, making Twenty and a quarter per cent. per annum for the whole year, free of Income-Tax; to add £100,000 to the Reserve Fund, which will then stand at £3,800,000; to add £35,000 to the Officers' Superannuation Fund; to write off Premises Account £50,000, and to carry forward the balance of £222,201 4s 5d.

Sir ALFRED DENT, K.C.M.G., Mr. THOMAS CUTHBERTSON and Mr. JAMES MAXWELL GRANT PROPHIT, the Directors who now retire by rotation, present themselves for re-election. The Auditors, Mr. DAVID CHARLES WILSON, F.C.A., and Mr. HENRY CROUGHTON KNIGHT STILEMAN, F.C.A., again tender their services. The Dividend and Bonus will be payable on and after Wednesday, the 11th April.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de L'Opera.

THE MONEY MARKET.

As was expected, the market had a difficult task in repaying the Bank of England the sums borrowed and renewed last week, and only succeeded in doing so because "special buying" of Treasury bills provided the necessary funds. In other words, the Treasury or Bank lent the market the money to pay its debts, less a week's batch of Treasury bills should cost too high a rate of discount. This performance being satisfactorily concluded,

there was rather more demand for bills, though the market was nominal and stagnant. Fine three months' bank paper was placed at $2\frac{1}{8}$ per cent. The low rate at which the Treasury bills were allotted weakened the market still further, and three months' bank bills were quoted nominally at $2\frac{1}{8}$ per cent.

	Apr. 13, 1923.	Apr. 6, 1923.	Mar. 28, 1923.	Mar. 23, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1% (Jly. 13, '22)
Discounts (Call)	1	1	1	1	1% (Jly. 13, '22)
Houses (Notice)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 13, '22)
Market rate (3 months' bills) ..	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	...

The Bank return was strong, showing a substantial increase in the Reserve and a considerable decline in liabilities. Notes came back from circulation to the extent of £1,185,000, and the stock of gold rose by £15,000, so that the Reserve was £1,200,000 higher. Government disbursements had also reduced the Public deposits by 6½ millions, and so the market was able to make repayments, which reduced the Other securities by four millions, and still leave the Other deposits nearly 3½ millions higher. Currency notes outstanding were reduced this week by £467,400 to £287,607,500, which includes £1,489,950 for notes called in but not yet cancelled. The fiduciary issue is £236,667,600, or £33,516,200 below the maximum.

The monthly statement of the average weekly balances of the London clearing banks for March shows signs of further substantial contraction. The detailed figures are printed on a later page; in the table below we summarise the figures for the nine English banks:—

	Dec. 1921.	June 1922.	Dec. 1922.	Jan. 1923.	Feb. 1923.	March 1923.
Capital and reserves	115.9	115.9	116.0	116.2	116.2	116.2
Acceptances	65.3	55.2	72.8	76.3	76.8	79.9
Deposits (incl. undiv. profits, &c.) ..	1,818.6	1,755.2	1,684.7	1,692.2	1,643.9	1,596.4
Total Liabilities	1,999.8	1,926.3	1,873.5	1,885.3	1,836.9	1,792.5
Coin, notes, balance at bank, and cheques in course of collection ..	273.5	251.3	253.0	246.5	234.5	232.3
Money at call	105.7	113.0	106.0	108.0	103.0	104.4
Investments	343.3	412.0	384.5	382.0	373.4	357.4
Discounts	421.3	346.2	298.3	320.0	286.4	250.4
Loans and advances	762.3	723.3	732.7	728.5	736.5	741.6
Cover for accept., premises, &c.	90.7	80.5	99.0	102.3	103.1	106.4
Total assets	1,999.8	1,926.3	1,873.5	1,885.3	1,836.9	1,792.5

The total of deposits is now £150 millions lower than it was in March of last year, this reduction being balanced by a fall of £100 millions in bills discounted, of £35 millions in investments, and of £13 millions in cash, there being a slight increase in advances as compared with a year ago. As compared with February of this year, deposits show a drop of over £47 millions, but acceptances are £3 millions higher. Bills discounted have dropped by £36 millions, and investments by £16 millions, while loans and advances are £5 millions higher.

THE STOCK MARKETS.

The outstanding feature of the Stock Exchange week has been the strength of gilt-edged stocks. Five per cent. War Loan has touched the highest price since it was issued, Indian Government stocks have risen with remarkable rapidity, while advances are the order of the day among Corporation stocks, Home Railway prior-charge stocks, Colonial Government securities, and Indian rails. In the gilt-edged sections demand has become so insistent that a shortage of supply has developed in a large number of prominent stocks. Brokers look for a continuance of this activity; and it will be noticed that the approach of the Budget has not in any way acted in the direction of restricting business. In other markets Home Rail ordinary stocks gave way on strike fears; rubber shares showed a little better tendency; there has been more activity in oil shares, while conspicuous strength has been shown by tobacco shares. The mining markets business is on a modest scale. Rubber heavy, though a few Rhodesians improved, and tin have become dull, while coppers were better towards the close of the week, and diamond issues remain firm.

THE COMMODITY MARKETS.

Most markets that are influenced by American conditions show a hardening tendency. Cotton is slightly up and wool has risen as a result of American buying in England. The American wheat market is also very bullish, but English quotations have only partially responded. In the copper market the turnover is lower, owing to a pause in American speculation, and prices are slightly weaker. Lead is also down; but tin has risen, though the rise was checked by the news that the Eastern pool is to sell 880 tons a month. Our Cardiff correspondent states that the collieries in South Wales hold so many orders for coal that there is hardly any free coal for disposal; the prices of even inferior steam coals have been increased to 40s per ton. From Sheffield it is reported that, although manufacturing fuels are in request, the demand for house coal is comparatively quiet. The output of pig-iron cannot be increased fast enough to meet requirements owing to coke shortage, and practically the only pig-iron left for sale is for the second half of the year. Our Middlesbrough correspondent reports that the demand for steel is good, although prices are unchanged. Conditions in the hide and leather trade are steady, and linseed oil is firm.

FOREIGN EXCHANGES.

On the foreign exchange market business has been restricted, but considerable interest has been provided by movements in the Paris and New York rates. From a closing rate of 70.55 on the 6th, the franc dropped to 69.30 on the 9th. On the 10th it was as low as 69, but closed at 70.25. On the following day it was down to 68, but reacted to 69.80, and on the following day, after further fluctuations, to 70.65. Yesterday morning the rate was again irregular, and at 69.45 seemed moving downwards. The Belgian rate has followed roughly the same fluctuations, being 80.50 yesterday morning, as compared with 82 a week ago. Forward rates in Paris have narrowed some two centimes to 2 to 4 centimes per month over spot; in Brussels at 2 to 3 centimes per month below spot the forward rate is also slightly narrower. The main influence this week has been rumour and expectation as to the results of M. Loucheur's visit, coupled with a certain increase in confidence in the French position which America, for no very obvious reason, is now showing. It should also be remembered that the spring season is normally favourable to the franc. Purchase of securities in New York and sale by Americans of British securities is still the main influence on the dollar quotation, which, with some fluctuations, has moved down from \$4.60½ on the 6th to \$4.65½ yesterday morning. On the whole, although no very rapid improvement can be expected, it is hardly likely that the reaction will be carried much further at present. At ½ to 1 cent per month over spot has widened a little from last week's figure of ¾ cents. After rising on Saturday to 94.10 the lira has improved quietly through the week to 93.50 as compared with 93.75 on the 6th. Apart from a slight rise on Tuesday to 98.250, the Berlin rate has remained steady at 98,000 in spite of the enormous issues of notes. At 3,000 to 5,000 per month over spot the forward rates are 1,000 narrower than in the preceding week. Among neutral exchanges the chief feature has been the further depreciation of the Swiss franc, which now stands at 25.56½, as compared with 25.41½ a week ago. Amsterdam also has moved in our favour from 11.88 to 11.89½. Madrid, on the other hand, is back at 30.40 as compared with last week's 30.49. Of the Scandinavian currencies, Copenhagen at 24.67½ and Christiania at 25.92½ have both depreciated, but at 17.50 Stockholm has moved somewhat against us. Helsingfors at 169½ is 3 points lower. In Central Europe, Vienna remains unmoved at 330,000, and rumours that the Government intend to raise the value of the krone have been categorically denied. Certainly an attempt at appreciation, when the present stability is based for the time entirely on foreign credits, would be unfortunate. Warsaw at 195,000 is a little higher than last week's 190,000, but a period of relative stability seems now to have been attained. Prague, at 156½, is ½ up on the week, Bucharest remains nominal at 995, the alarmist and incorrect reports of revolutionary troubles having had no effect. In the East, the rupee, at 1s 3-32d, has hardly moved from

last week, while Yokohama, after being rather higher, is back again at 2s 0½d. In the silver market there has been some further selling on the news that the Pittman Act selling is likely to be completed sooner than was expected, and prices have moved downwards. Hong Kong, at 2s 3½d, is nearly 1d cheaper, and Shanghai ½d cheaper at 3s 1½d. In South America, Rio has moved up a little from 5 13-32d to 5 17-32d, Buenos Ayres is unchanged at 43d, after being rather lower, and Montevideo has moved up from 43d to 43½d. Valparaiso, after moving higher, is back at 37.20 pesos, the same as the preceding week.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 7th:—

EXPENDITURE.	Min. £	Receipts.	Min. £
Perm. charge on Debt	3332	From Revenue	26182
Interest on War Debt, &c.	23701	Amount borrowed	2900
Supply Services	6000	Decrease in Balances	3951
	35033		33033

Revenue for the week ended April 7th at £26 millions compares with £31½ millions during the first eight days of the financial year 1922-23. Expenditure at £33 millions compares with £39 millions. The reduction in Expenditure is mainly on account of Interest on Debt being reduced from £28½ millions to £23½ millions. Receipts from Property and Income-tax amounted to £16½ millions, as against £18½ millions a year ago, while Customs produced £1½ millions, as against £1¼ millions. Excise yielded nearly £2 millions. The week's operations increased the National Debt by £2,900,467, and caused the following changes:—

	Min. £		Min. £
4% Treasury Bonds	+ 12050	National War Bonds repaid..	- 13250
Treasury Bills	+ 4334	Public Department Advances ..	- 418
Unemployment Insurance ..	+ 160		
Land Settlement	+ 004		
	+ 16548		- 13648

The floating debt was increased by £3,963,000 to £813,905,500.

FINANCIAL YEAR, 1923-24 (April 1 to April 7, 1923).

	£		£

THE EVE OF THE BUDGET.

THE defeat of the Government in Parliament on Tuesday and the interruption of business by the Opposition on Wednesday will not have encouraged the Government in courses which may seem to them to savour of unpopularity. There is no one on the Government side who is so expert at listening with his ear to the ground as the late Prime Minister; but the decline of the Government's prestige since the election, culminating in this week's fiasco, will undoubtedly strengthen their desire to regain, even if only temporarily, some of their lost credit. We are not, therefore, surprised at the persistent rumours that the Government has decided to take 6d off the income-tax and to reduce the beer duty. Mr Baldwin will no doubt strain every nerve to accomplish this without sacrificing altogether his Sinking Funds, and the margin between cautious and speculative estimating is in these days so wide that he will probably be able to do this without straining the conscience and technical pride of the Treasury too severely. This week's revenue return is very good, and confirms the opinion that no indecent haste was shown prior to April 1st to squeeze last-minute receipts due in respect of 1922-3 into the closed accounts. The carry over of both general and special receipts into the current year will help matters, but if the surplus is widened in this way it makes it the more necessary to be certain that if taxes are reduced the loss of adventitious revenue will not leave the accounts with a deficit. There could be no more regrettable step than to reduce taxation and find it necessary to reimpose it again later.

For the moment, however, we may take it for granted that Mr Baldwin will not retract his words, and copy Sir Robert Horne in providing nothing for Sinking Fund. The question is whether the amount allowed will be adequate, and whether the Budget will be so drawn as to ensure adequate debt repayments during succeeding years. In this connection our suggestion last week that a fund of at least £50 millions a year, rising to £100 millions, is necessary if a really acceptable alternative to a capital levy is to be provided, has been criticised as being too drastic to be practical politics in the present state of public opinion. Our answer is that it can only be considered as extreme in so far as public opinion has not yet realised the magnitude and significance of the debt problem. Two of our contemporaries think that a non-cumulative Fund of ½ per cent. (i.e., £37½ millions) would be adequate. But it is not a pleasant prospect to base our policy on paying off the debt in two hundred years.

It is sometimes suggested that the use of floating and short-term debt in the money market, and of long-dated Government securities as the universal medium for

"safe" investment makes the National Debt so integral a part of our financial system that it is not desirable to diminish it unduly. But this is not a serious consideration over a long period. London is looking forward to the day when the commercial bill once again comes into its own, and as to the supply of gilt-edged securities, that will take care of itself. The Railways Act has done something to make all but a small proportion of railway stocks into "safe" investments, municipal borrowings are increasing, the differentiation of industrial obligations is creating an increasing supply of debentures, and last, but not least, there will be future Government borrowings. We may hope that future generations will not have to provide for another war; but there are certain to be borrowings for new and productive purposes. The loans under the Trade Facilities Act and the suggestion of a Government guarantee in the Agricultural Credit Committee's report are a cloud like a man's hand, which may one day cover a large part of the financial firmament. The question what form of indebtedness should be reduced first is a problem to which these considerations are germane. They have no relation to our proposition that we cannot in any circumstances expect that interest on the cost of the great war, amounting to 10 per cent. of our cumulative income, will willingly be paid by the nation for what is in effect an indefinite period.

The possibility of paying off debt has also been questioned in the last few days on the ground that if this policy is adopted all hope of concessions to the taxpayer must be abandoned for years to come, since the possibility of economies is now exhausted. But this is far from the case, as the following table shows, in which the estimates are set out in detail in comparison with recent expenditure and with expenditure before the war. We have also added for comparison the final estimates for 1922-23. The figures in the top half of the table for 1923-24 are our assumptions based upon last year's expenditure, and make no allowance for sinking funds of any kind:—

	1913-14.	1920-21.	1921-22.	1922-23.	1923-24.
National Debt Services—					
Inside the fixed charge	24½	24½	24½	14	14
Outside " "	—	325	308	310	290

II. Salaries and Expenses of	4½	19½	17	14	10½
III. Law and Justice	4½	20	22½	12½	12
IV. Education, Science, & Art	19½	59½	65½	54	49½
V. Foreign and Col. Services	1½	4½	32½	16	12½
(Inc. Middle East)	(nil)	(29)	(11)	(11)	(18½)
VI. Pensions and Miscel.	14	37	131½	119	124
(Min. of Pensions)	6	106	(93½)	(90)	(73½)
VII. Health, Labour, & Incoe.	—	49	46½	43	38½
Unclassified Services	—	147	123	66½	16
Customs and Excise and Inland Revenue	4½	12½	14	12	11½
Post Office Services	24½	62	66	54	51
Total Supply Services	160	815½	719	538	436
	197	1,193½	1,079	812½	770

Thus compared with 1913 defence expenditure has risen from £77½ millions to £122 millions, and the Post Office and Customs and Revenue departments from £29 millions to £62½ millions. The remaining Supply Services take £251½ millions, against £53½ millions in 1913. Three important items, amounting to £98 millions, are new, viz., pensions, the Middle East, and unclassified services, all of which should fall very substantially, partly through change of policy, but to some extent automatically. The remaining items show an increase from £53½ millions to £153½ millions, and even if we deduct education, which, though not outside the pale of economy, cannot be reduced as much as other items, there is still an increase from £34 millions to £103½ millions. This three-fold increase is far too large. It is probable that this level of expenditure will, in any case, not be attained, but the figures

show that there is still much room for reduction without impairing the efficiency of government. We see no reason why £100 millions should not be taken off the gross Supply Service estimates in the next two or three years, and if this is done, and trade is reasonably prosperous, there should be substantial remissions of taxation, as well as an adequate Sinking Fund, established on the scale we have suggested. Mr Baldwin would do very much to put this whole problem in its true perspective if he would give us in his Budget speech a provisional idea of the balance-sheets of the next three fiscal years.

SUPERFICIAL ECONOMICS.

BRITISH agriculture has been, since the war, the sport of hasty legislation, heedless administration, and reckless exaggeration. But, behind all this, there lies the serious question of the relation of the State to an industry which is of vital significance in the social and economic life of the nation. The land system, which, in its essential principles, has survived by reason of its adaptation from time to time to changed conditions, is challenged at the present time as unsuited to the needs of the twentieth century. Issues of grave importance and extreme complexity are raised, and any serious attempt to initiate a new national policy determining the relations of the State to the land should be made with anxious care and supported by well-considered facts and arguments. The reference of the question to reputable economists was a step hastily taken, and the instructions given to them were open to criticism. But, at least, it might have been expected that with this great responsibility placed upon them they would have risen to the opportunity of placing before the country a calm and detached analysis of the economic position of agriculture and of the fundamental factors which must determine its future as an integral part of the national organisation. Some consciousness of this fact is apparent in the Report of the Tribunal. They say at the outset that "it is impossible to survey the field and form a fully considered judgment on many of its aspects without more extensive inquiry," but "in view of the very serious crisis with which the agricultural industry in this country is faced," they have presented an interim report. They make no attempt to measure the seriousness of the "crisis," nor do they even mention the dominant fact that, in the main, the causes of it are common to all industries. They rush to the conclusion that because farmers have had serious losses during the past two years, the compulsory increase of arable land during the war has been lost, unemployment is serious (they say "growing"), and wages have fallen—therefore, on the basis of these temporary conditions, the policy adopted by the nation for the past eighty years should be abandoned. And to convince the public that this is necessary they deem it sufficient to present a series of *obiter dicta* in a document as sketchy and perfunctory as a magazine article.

There have been in living memory two "crises" in agriculture, both of which, judged by any tests that can be applied, were more serious and prolonged than that through which we are now passing. Both in the "eighties" and the "nineties" the agricultural situation was the subject of examination by Royal Commissions, and anyone who takes the trouble to refer to their Reports will find a marked contrast with the Report of the Tribunal. Those Commissions at least fortified their recommendations with ascertained facts, and presented them with detailed argument. They might be open to the charge of prolixity, but, at any rate, they could not be accused of levity or lack of thoroughness.

The recommendations of the Tribunal deal specifically with 13 subjects, and in addition they urge generally the importance of research, education and organisation. On the latter point there is common agreement, and on such questions as credit facilities, railway rates, local rates, relief of rural unemployment, and administrative machinery any controversy which may arise is concerned rather with details than principles. The challenge which the Tribunal offers to the existing policy of the country in relation to agriculture lies in their proposals for dealing

with imported products. They lay stress on the importance of maintaining the arable area, but they reject an import duty on wheat because it is a charge on the consumer, and a subsidy on wheat-growing because it is a charge on the Exchequer. They add that "it is more important to maintain the arable area generally than to maintain the area of any particular crop, even one so important as wheat." They then at once proceed to recommend special measures for maintaining the area of four "particular" crops, viz., malting barley, hops, potatoes, and sugar beet.

On the face of it this is a rather curious selection. The arable area in Great Britain in 1922 was 14½ million acres. Hops occupied 26,452 acres, potatoes 718,581 acres, and sugar beet 8,409 acres. There is, strictly speaking, no such crop grown as "malting barley." All barley, and indeed practically any cereal, may be malted. Barley best suited for malting is grown in a few counties where conditions of soil and climate are most favourable to the growth of the particular kind of grain which is preferred by maltsters and brewers. The standard of suitability varies from season to season, and a grower may find his barley saleable for malting in one year and not in another. Taking an average of years, it may be roughly estimated that not more than 50 to 60 per cent. of the barley crop is sold for malting, and on that assumption the area affected would be, say, 800,000 acres. It will be seen, therefore, that the measures proposed for maintaining the arable area would affect about one-tenth of the whole area. Under the ill-fated Agricultural Act the growers of wheat and oats were selected for favour, but the Tribunal prefer to help the growers of potatoes and a chosen few of the growers of barley. The irony of the suggestion is that malting barley makes a much higher price than feeding barley—often 50 per cent. higher—and costs practically the same to grow.

There is some indication of a method in selecting malting barley, hops and potatoes. The growers of all three crops are, in this particular year, the victims of abnormal conditions. Under normal conditions the growers of these crops—a very limited number all told—probably make larger profits than the growers of any other crops that could be mentioned. These are strange grounds on which to base a new fiscal policy. A duty of 20s per cwt on hops imported from foreign countries and of 13s 4d per cwt on hops imported from the Dominions is light-heartedly suggested, because "the serious condition of the hop-growing industry" was "put very strongly" before the Tribunal. How far this condition is due to the Hop Control foolishly established during the war, and to what extent it would be altered by the abolition of the control—which they suggest—they do not appear to have considered. They might have obtained some information as to the normal conditions of the hop industry in this country by reference to the very thorough investigation of the subject made by a Select Committee in 1908. As to potatoes, the Tribunal recognise that there was this year a home crop much in excess of the demand. This would appear to be an adequate reason for the low prices which have prevailed, which in their turn will probably lead to a reduction of acreage and high prices for the next crop. But the Tribunal cannot trust the experience of the past, which proves that on an average of seasons potatoes are profitably grown in this country.

Shrinking, with apparent regret, from recommending a duty on wheat or flour, the Tribunal have devised a scheme for penalising the import of flour and encouraging the import of offals, which displays some ingenuity. They propose that "every importer of wheat-flour should be required to send" (they presumably mean "buy," as flour importers are obviously firms in this country) "a corresponding proportion of wheat offals, e.g., 25 per cent. of offals to 75 per cent. of flour." Such a scheme is the reverse of business-like. The imports of flour last year was 674,000 tons, of which one-half came from Canada. Wheat offals are not separately distinguished, but the item which includes them, and of which they form the main bulk, was a total of 17,000 tons. It is hardly necessary to observe that flour and offals are handled by entirely different people, and that the import trade in one is quite independent of that in the other. The dislocation of commercial machinery and the administrative difficulties will be obvious enough in London and Liverpool,

though they may not be apparent in Birmingham or Oxford. It is not explained whether the flour and corresponding offals must be landed simultaneously, or whether a flour importer will be allowed a reasonable time to make up his quota. In the latter case, the Customs and Excise will have to keep surveillance over flour importers as they do over brewers. And, in the result, offals may perhaps be cheaper, but, if so, flour will certainly be dearer. The supply of offals from home mills is not, and cannot be, regulated by demand. It is determined by the demand for flour, offals being a by-product. The object being to ensure a permanent glut of offals, regardless of demand, the Tribunal, to make assurance doubly sure, propose a 10 per cent. *ad valorem* duty on all offals exported. Incidentally it may be observed that, as feeding barley is the nearest competitor with wheat offals, the unfortunate grower of non-malting barley is not only left unprotected, but may have the value of his crop still further reduced.

Space fails to deal adequately even with the most prominent features of this remarkable Report. The Tribunal state that they aim at assisting "the farmer and the labourer," but the advantage which the latter will gain from these proposals is not apparent. The difficult question of wages is not overlooked; indeed, the paragraphs in which it is briefly discussed are distinguished by an attempt at serious argument, which is not conspicuous elsewhere. The suggestion for the establishment of six District Boards, and the outline of their functions and powers, must be reserved for closer examination than can now be given to it. One observation touches the root of the matter. It is truly said that Wages Boards exist "to ensure that the standard of payment is not fixed by the inefficient farmer." In making their proposals for artificially encouraging the production of certain crops, have the Tribunal also thought of the inefficient farmer?

We are not surprised that Prof. Macgregor in a reservation expresses his doubts as to the effectiveness of these protectionist measures, and that the Ministry of Agriculture has hastened to disclaim any intention of adopting the Commission's suggestions with reference to the hop industry.

RAILWAY RATES.

THE recent but apparently inconclusive meetings of the railway managers to discuss the lowering of freights, together with the recommendation of the Agricultural Committee that railway rates on farm produce should be lowered if necessary at Government expense, raise the question of the possibility of cheaper rail transport. The demand for early and substantial reductions received a very important reinforcement in the speech which Sir Eric Geddes recently delivered at Manchester, for while perhaps the situation hardly justifies dragging in the old tag about the poacher turned game-keeper, nevertheless Sir Eric Geddes is the man mainly responsible for the agreement of 1921 under which the Government undertook to settle the railway companies' outstanding claims for £60 millions, the sum which is largely responsible for putting their balance-sheets into the strong position they show at present. When, therefore, Sir Eric, as head of the Federation of British Industries, now tells us that the time has come when the railway companies should endeavour to gain the confidence and goodwill of the public by sharing with them the burden of the restoration of industry, his opinion is one which must obviously carry great weight. Passenger fares now stand at 50 per cent. above pre-war level, having been reduced from 75 per cent. at the beginning of this year. Goods rates are put at an average of 75 per cent. above the pre-war level by Sir Eric Geddes (some are a little over 50 per cent. up and others over 80 per cent. up, Sir Eric's figures being presumably an estimated average) against an all-round advance of 116 per cent. eighteen months ago. It is clearly the turn of goods traffic once again, and though the Federation of British Industries at the time of the last negotiations promised the railway companies that they would not carry any dispute as to the level of goods rates to the Rates Tribunal until July of this year, Sir Eric Geddes proposes that the railway companies should voluntarily reduce rates to 33½ per cent. above pre-war level. If there is no change in the volume of traffic it may be estimated

at a rough guess that the reduction of passenger fares which was made in January will reduce the railway receipts by about £10 millions, while the reduction in goods rates now suggested might cost the railway companies some £25 millions. We may consider briefly in what position the companies are placed for meeting these losses. According to the preliminary statement of accounts for all the railways of Great Britain, just issued by the Ministry of Transport, the transportation account for last year was as follows:—

	Mln. £
Gross receipts	238
Working expenses	191
Net receipts	47

Of the gross receipts, £102 millions were from passenger trains, of which about one-fifth was received from carriage of mails, parcels, &c.; goods receipts (excluding live stock) produced £113 millions, the balance of income being from transport of other classes of traffic and from subsidiary undertakings. If £35 millions are lost through reduction in charges for passengers and goods, it must be made up in one of five ways: An increased volume of traffic, economies in working as a result of amalgamation or of improved efficiency, lower wages and prices of material and fuel, a reduction of reserves, or a reduction of dividend.

As regards the first of these, an increased volume of traffic does not involve a proportionate increase in working expenses. Even if it did so, there would be considerable gain, for the object of the companies is to maintain a fixed net revenue and as working expenses are less than gross receipts a 10 per cent. increase on both sides would in present circumstances give a margin of £4½ millions towards rate reduction. But in practice it is, of course, evident not only that there is a possibility of carrying more traffic without increasing the number of trains or the staff, but also that the large elements of railway cost which cannot be allocated to particular traffic would certainly not show a very considerable increase. It would not be a rash guess to suppose that an increase of 10 per cent. in traffic on the basis of 1922 rates (yielding £20 millions of gross revenue) would raise working costs by less than half this amount. Unfortunately, we have no up-to-date monthly returns showing the volume of railway traffic, but such figures as have been published so far show that the volume of traffic at the end of 1922 was considerably greater than earlier in that year, and it would not be unduly optimistic to assume that it is already nearly 10 per cent. higher than the average volume of traffic in 1922.

As regards the economies of amalgamation, Sir Eric reminds us of his estimate that these will ultimately amount to £25 millions, and he sees no reason to alter his opinion. It is true that these economies will only be realised over a number of years, but it may be assumed that an appreciable contribution towards the railway budget of 1923 will be obtained from this course.

A more certain reduction is obtainable from lower wages and prices. During 1922 two wage reductions occurred in accordance with the sliding scale arrangement, 2s per week being taken off on April 1st and a further 2s on July 1st. According to an answer given in March to a question in the House of Commons the wages bill of the companies in 1923, at the March, 1923, rates, will be £111 millions, which compares with £117 millions in 1922. This means a reduction of £6 millions, without taking into account any saving through redundant personnel or saving of overtime, &c., through the more satisfactory adjustment of the eight-hours day system. The course of prices is not very accurately calculable, particularly in view of the tendency of prices, and particularly of coal prices to rise as a result of the European situation. But even if this movement persists, it will not necessarily prevent any saving, for the bulk of railway buying for 1923 has already been done. There should be substantial automatic saving under the heads of material and fuel which together account for £33 millions of the companies' costs. In the answer in Parliament above referred to it was stated that at the February level of prices the cost of fuel this year will be roughly £14 millions, a saving of a million as compared with 1922 and

of £11 millions as compared with 1920. No accurate estimate can be made of the margin which will be produced by these three influences, viz., increased volume of traffic, whether already realised or to be stimulated by lower rates, economies of amalgamation, and lower wages and prices, but there can be no doubt that it will be a very substantial one.

The claim for lower rates, however, is strengthened by considering the balance-sheets of the companies whose reserves have increased from £30 millions to £145 millions. In view of the part which Sir Eric Geddes played in securing these reserves, his comment upon them needs no elaboration:—"It could be argued with justice that a part, at any rate, of these reserves are proper, as against arrears, renewal, and maintenance during the war years, and there are other weighty arguments upon both sides which might be advanced, but with which I have not time to deal to-day. But, on the whole, with the situation so much clearer than it was when the Act was passed, with prices below the level at which they stood, but still above the pre-war level, I think we might not unreasonably ask the railway companies to use this reserve for part, at any rate, of their high cost of maintenance to-day, and to ease their apprehension as to a reduction of rates."

There remains the question of the amount distributed to shareholders, and the possibility of a saving in this direction. From the statistics which we have compiled, and from the figures of capital conversion which have been published, we have made a rough estimate of the amount which will be available for ordinary and deferred ordinary shareholders if the companies receive their "standard" revenue and nothing more. Under the terms of the Railways Act, 1921, it may be recalled, the rates to be charged by the amalgamated companies should be such as will, with miscellaneous revenue, yield an annual net revenue equivalent to the 1913 net revenues of all the companies forming the group, and in addition, each company is allowed to earn (a) a sum equal to 5 per cent. on approved capital expenditure during the period of control, (b) such allowance as may be necessary for adequate remuneration on any additional capital expenditure since January, 1913, which, in the opinion of the tribunal, really adds to the value of the undertaking and is not included in (a), and (c) an allowance in respect of capital expenditure on works which had not become "fully remunerative" at the beginning of 1913. In the table below, the figures in which should be regarded merely as tentative estimates, we have assumed that the allowance under (c) will be the same as is allowed under (a) and (b). The standard revenue of the Midland and N.E. groups, whose net revenue in 1913 was £19,100,000 and £14,340,000 respectively, would now be about £20,160,000 and £15,340,000. Similarly the Southern and Great Western groups' standard revenue, based on £5,980,000 and £7,410,000 respectively in 1913, would be £6,310,000 and £8,800,000, making the total standard revenue £50,610,000, which compares with £50,319,000 actually earned by the four groups in 1922 and £46,897,000 in 1913. The companies have thus already earned practically their full standard, and at present wages and prices will exceed it considerably in 1923. After payment of prior charges, preference and preferred ordinary dividends, the amounts available for ordinary and deferred ordinary dividends show a considerable variation, as may be seen from the table:—

	(1) Standard Revenue.	(2) Rents, &c.	(3) Debt Interest.	(4) Guar. and Int. Interest.	(5) Pref. Ord. Dividend.	(6) Total of (2), (3), (4), and (5).	(7) Balance Available for Ordinary and Defd. Ordinary Stock.	(8) %
London, Mid. & Scott.	20-16	1-48	4-10	6-61	..	12-19	7-97	8-0
London & N. Eastern	15-34	1-52	3-33	6-84	2-09	13-78	1-56	4-4
Southern	6-31	0-42	1-42	2-29	1-37	5-50	0-81	2-3
Great Western	8-80	0-99	1-83	2-39	..	5-21	3-59	8-5

Our figures for the Southern group show a sum available for Southern deferred stock which gives less than 2½ per cent. on the capital, and compares with 8½ per cent. for the Great Western. We can only emphasise the fact that the figures are partly based on estimates, and may mention in passing that the directors of the South Western Railway, in their circular announcing the terms of the

Southern grouping scheme last October, stated that the balance of standard revenue was estimated to produce a dividend of £2 18s. per cent. on the new company's deferred stock. However that may be, it is obvious that if the companies receive only the standard revenue in 1923, they will be in a position to pay dividends at the substantial rates of 1922, which were a good deal higher than the level of recent years. Some reduction in the rates of dividend on the junior stocks could be borne without affecting the security of the prior-charge stocks. We know of no argument on which such a reduction in times of depression could be regarded as unfair, as they will doubtless be exceeded when trade is good.

When all these considerations are taken into account and the important part which railway rates play in influencing trade is borne in mind, there is clearly a very strong case for the claim put up by Sir Eric Geddes and his friends.

PEGGING THE MARK.—II.

(BY A GERMAN ECONOMIST.)

So far the policy of pegging the mark has been very successful. The bank has succeeded in reducing the price of the pound from 227,500 to 100,000 marks, and in keeping it steady for more than a month. There is not the slightest doubt that it can go on doing so for quite a long time to come. This operation has been very profitable, and has greatly strengthened the position of the bank. It has done so without losing money; on the contrary, it can be assumed that the profit it made is very considerable. It lost, it is true, part of its stock of foreign exchange, but it has been able to replenish it. It has kept its gold, it has not been forced to contract a big international loan, it has succeeded in paying back the Belgian Treasury bills. So far, the predictions of the international financial experts who met in Berlin in November last, and those few German experts who concurred with them, have been verified completely.

There has been so far no serious reduction in prices. The index of wholesale prices has fallen from 5967 on February 5th to 4750 on March 15th. This is but a small reduction, but the intervention of the bank occurred before prices had risen to the exchange level of January 31st. If no action had been taken, the mark would not have stopped at 227,500, and prices would have run up madly after it. The smallness of the price reduction achieved is mainly due to two causes. Producers are not convinced that the mark can be kept at its present level; from their egotistical point of view they go on hoping for a new rise of the exchange, and with it of prices. The manufacturers of finished goods and the retail shops are compelled, in many cases, to offer their goods at reduced prices, as this is the only way for them to get ready cash; as the public are not yet keen on buying, their situation is rather desperate. The producers of raw material and half-finished goods are in a different position. They are strong enough to hold on, in fact, in some cases, they have raised prices. But anyhow they are waiting. And as long as there is no serious reduction in basic produce, coal, &c., a strong general fall in prices is impossible. Moreover, and this is very important, the price of many commodities had not gone up to the standard of 100,000 marks a pound when the pound stood for a few days above 200,000. They are reaching the present level of prices by slow stages; this holds good especially of wages, which go on increasing slowly, as they had not yet reached the level of the index of the cost of living. The only branch of economic life where the fall of prices has been immediate—apart from imported goods, which follow automatically the movement of exchange—has been the Stock Exchange. The index of prices for the leading shares since February 7th has gone down from 545.6 to 270 on March 7th. This is partly due to the stringency of money, brought about by loan restrictions, and partly by the general gloomy economic outlook.

The occupation of the Ruhr is, of course, unsettling German economic life. Imports into Germany of English coal, for example, are increasing; but the general import trade is slack. Exports are decreasing. The rapid fall of foreign bills has wiped out the premium on exports, which existed, in many cases, through the divergency of

the level of prices in Germany and abroad; in many industries prices at home are higher now than prices abroad. The chances of cheap exports are greatly reduced. Industrial concerns are not likely to lower their costs of production by thoroughly overhauling their organisation as long as they are not sure whether the present conditions are not purely temporary.

Worst of all, all hope of balancing the Budget has gone for the time being. The total deficit of the Reich, which was estimated at 843 milliards in the autumn, has risen to over 7,000 milliards for the current year, partly on account of the consequences of a rise of the pound from 30,000 to over 100,000, partly on account of the direct and indirect expenditure due to the occupation of the Ruhr. The amount of Treasury bills outstanding on December 31st was nearly 1,500 milliards, on March 10th it had risen to 4,350 milliards. The weekly excess of expenditure over revenue is about 400 milliards. Notwithstanding all credit restrictions, the demands of private industry, especially in the Ruhr district, are enormous. As the French are practically stopping sales, produce is accumulating, but wages have to be paid. The result is an increase of commercial bills discounted by the bank from 697 milliards on January 1st to 2,100 milliards on March 15th. The floods of paper money are rising as they have never risen before. The note issue of the Reichsbank has increased from 1,280 milliards at the end of January to 4,272 milliards on March 7th. The weekly issue is about 400 milliards.

As long as this flood is not stopped, there is no hope that the pegging of the mark can lead to permanent stabilisation. On the contrary, there is grave risk that after some time the amount of marks issued will be so great as to make impossible any control by the bank. But this evil moment is farther away than people are inclined to think. The amount of gold in the hands of the bank, to which must be added the proceeds of the gold loan—leaving out of account the bank's ordinary stock of foreign bills—represents at present a value of at least six billion paper marks. As circulation is greatly hampered owing to the dislocation of transport and the necessities of the Ruhr the same quantity of money cannot serve the same needs it did formerly. Before the war the money in circulation in Germany can be estimated at about 4½ milliard gold marks. At the rate of 100,000 marks to the pound, this would amount to about 22½ billion paper marks. Assuming for the moment that there has been no essential change in credit facilities, and assuming, moreover, that on account of loss of territory, reduced transactions, &c., the monetary needs of the country are but half what they were before the war, they might be estimated at about 12 billion paper marks, or very nearly three times the amount outstanding at present. The gap between these two figures is filling rapidly. It would be widened automatically by any new fall of the mark, which would do a great deal of damage to Germany's economic life, but not half as much as must follow a complete defeat in the struggle for the economic foundations on which her life and the life of Central Europe is resting.

THE COPPER OUTLOOK.

IN an article on copper printed in these columns on December 16th last, it was stated that the outlook for the metal was decidedly better, and that copper was bound to receive its full share of attention. No spectacular lift in rates was anticipated, but it was suggested that higher prices would be seen early in 1923. Standard copper at the close of last year stood at £64 11s 3d cash and £65 11s 3d three months, while electrolytic was officially quoted at £72 per ton. Values at the end of March were £74 18s 9d for standard cash, £75 16s 3d for three months, and £82 15s for electrolytic. Thus, on the first quarter of 1923 standard rose £10 5s to £10 7s 6d, and electrolytic advanced £10 15s. Since then there has been a further improvement on these rates, but this was followed by a certain amount of fluctuation on profit-taking and larger forward offers. From the results of the first three months of the current year it is obvious that the merits of the copper position have claimed considerable attention, and the very large turnover recorded on the London Metal Exchange in standard metal may be taken as the forerunner of a big increase

in the world demand for the metal. The phenomenal increase in the American consumption as compared with the tonnage absorbed by actual users in the United States at the opening of 1922 is a clear sign of a general American industrial revival, and this is now spreading to other parts of the world. During the past year the trade potentialities in the United States were underrated on this side, presumably under the prejudicial influences which were engendered by the adverse European economic and political conditions, but during the first quarter of 1923 sentiment underwent a startling change. Copper had few friends in this country during 1922, and the price of the standard metal dropped at one time to £57 per ton, this being the lowest touched since 1914, when £49 was recorded. This figure, and £159 reached towards the end of 1916, constitute the two extremes reached for a number of years, and the table appended gives a good idea of the movements witnessed in the market compared with the pre-war year 1913:—

STANDARD COPPER—CASH DELIVERY.

	Highest.			Lowest.			Closing Value.		
	£	s	d	£	s	d	£	s	d
1913.....	77	2	6	61	15	0	65	2	6
1920.....	122	5	0	70	0	0	71	5	0
1921.....	75	12	6	65	5	0	66	2	6
1922.....	66	2	6	57	0	0	64	11	3
1923 (1st quarter)	76	17	6	63	7	6	74	18	9

Thus, within the first quarter of the present year the price of paper copper has fluctuated well into the range of values seen ten years ago, that is to say, the year 1913, when the market generally was on the down grade following on the comparatively high level of values attained during 1912, when the price crossed the £80 mark. The most potent factor responsible for bringing about the rapid strengthening of the American statistical position during 1922 was undoubtedly the satisfactory developments in the American consumptive demand, which has assumed dimensions never previously seen, chiefly in connection with the great activity experienced in all industrial branches in the United States. The deliveries of refined copper into American consumption for last year were fully 40,000 tons per month, as compared with 25,000 tons per month for 1921, and the export takings divulged an increase of close on 80,000 tons for the year. Seeing that many of the mines were idle during the former period of depression, and only resumed operations last year, it is obvious that there has been a very steady recovery from the era of uncertainty and depression which existed when the copper-producing industry had to face a big unsold surplus, and found itself badly crippled by the absence of anything like a satisfactory outlet for supplies. During that critical period very few companies connected with copper were able to pay dividends, and many were compelled to close down altogether, or curtail their operations very drastically, in order to minimise working losses. But for the fact that vast quantities of cheap scrap metal left over from the war years were absorbed by consumers in Europe and the United States during the last year or two, the demand for new copper would have been on a much larger scale. The scrap surplus was wiped out some time back, although the French Government still retains certain quantities, and this must prove, as time goes on, an additional strengthening factor. Indeed, it has already made itself felt, as can be seen from the increase in the American exports of refined copper, which, amounting to nearly 330,000 tons in 1922, are now beginning to expand again.

The key to the world's copper position is in the United States, and a close examination of the position from that point of view reveals much that is encouraging to the trade generally. The total production of American refined copper during 1922, including the quantities secured from foreign sources in the form of raw copper, amounted to 625,000 tons, in addition to which about 50,000 tons of secondary copper were turned out. Thus the total production showed close on 170,000 tons increase on the previous year. The stocks of refined copper lying at the American refineries at the close of 1922 amounted to 125,000 tons, against 205,000 tons at the end of 1921. Based on the total thus given, and making due allowance for the increased refinery production against domestic deliveries, together

with the considerably larger exports for the first two months of 1923, the surplus of refined copper in the United States on March 1st last was reduced to 115,000 tons, which total included 25,000 tons held by the American Copper Export Association. This copper has been ear-marked for export purposes, and this is not available for American home use, so that the balance ready to meet domestic needs on the date mentioned was about 90,000 tons. Considering that the total outgoings for the month of February were over 80,000 tons, against an estimated refinery output of 71,500 tons, the present statistical position of copper is remarkably sound and healthy. In the absence of official figures such as used to be published, but which were discontinued some years ago by the American Copper Producers' Association, giving the exact refinery production together with domestic deliveries and exports as well as the stocks at the refineries month by month, the exact statistical position is rather difficult to gauge, but the figures given above are based on very sound information, and may be taken as approximately correct. Private estimates of the stocks usually vary when compared with the returns issued by the United States Geological Survey, but making all allowance for such differences, it is generally recognised throughout the trade that the actual marketable surplus has been worn down to quite normal dimensions, and that the current refinery production of copper is not equal to the heavy current requirements. An indication of this became apparent to certain large consumers in the United States when the last big buying movement set in. It became difficult to place orders for early delivery, and to this fact must be attributed the rapid extension in forward buying which gave the market the appearance of being out of hand when the price was rushed up to 17½ cents per lb for electrolytic in New York. The American producers are now undoubtedly in a much stronger financial position than they have been for several years past. In any case, they are no longer burdened with the weight of the excessive stocks, and the industry as a whole is well assured of a re-establishment of prosperous conditions for a lengthy period. Developments made during the last six months or so have enabled several of the better known large world's copper producers to resume the distribution of dividends to their shareholders. The Anaconda Copper Mining Company quite recently declared the first dividend paid since November, 1920, and all copper securities have appreciated in value owing to the rise in the metal during the last few months, and the better outlook for the trade. As the world's output of copper becomes gradually restored to something like pre-war dimensions, some saving in working costs should be possible. The arrangement made by the Anaconda Company and the American Brass Company, whereby the greater part of the former's output is absorbed by the latter, and the centralisation of control in other respects as witnessed by the Anaconda Company's acquisition of the Chile Copper Company, which has an output of low-cost copper running into something like 100,000 tons per annum, are cases in point; thus even if the world's production over the next year or two shows a good expansion, there should be no sacrifice of profits. The following table shows the approximate figures relating to the American refinery production, including metal accrued from imported raw copper, &c., together with the domestic deliveries and exports and the world's copper production:—

	Total	American Production.	Domestic Deliveries.	U.S. Exports.	World's Copper Production.
1913 .. (tons)	736,000	350,000	389,000	970,000	970,000
1920 .. "	732,000	470,000	278,000	965,000	965,000
1921 .. "	507,000	304,000	265,000	539,000	539,000
1922 .. "	675,000	490,000	330,000	849,000	849,000

From this it will be seen that the American production in 1922 amounted to 168,000 tons more than the figures for the previous year, but the total domestic deliveries and exports rose by 255,000 tons, or 87,000 tons more. The increase in the world's production was 310,000 tons, and the total at 849,000 tons is still 121,000 tons under the total output of 970,000 tons for 1913. The American domestic deliveries for all last year, compared with 1913, showed an expansion of no fewer than 140,000 tons, and it is perfectly obvious that the market generally stands to benefit from the improvement that must come shortly in

European industrial conditions. England, France, and Germany will be large buyers of copper during the remainder of the present year. Stocks in all three countries are small, and it is significant that while the imports into the United Kingdom are becoming more normal, stocks at the beginning of the present month showed a decrease of 1,239 tons at 26,393 tons. This is the first reduction in stocks here since last June, and in view of trade requirements the total is a very modest one. Most of the works in this country are operating on a very slender margin, and with very heavy American deliveries for last month the outlook may be regarded as very encouraging. Buying for consumptive purposes since the Easter holidays has been rather quiet here and also on the Continent, but an improvement is looked for shortly, and this will be more than sufficient to offset the increase in the American production and the freer movement of the metal in other directions. The fluctuation witnessed this week has been largely the outcome of speculative operations due to the general lull in the demand, but the undertone both here and in the United States remains hard.

REVISION OF THE CANADIAN BANK ACT.

(BY OUR OTTAWA CORRESPONDENT.)

ON March 20th, Mr. Fielding, the Minister of Finance, introduced in draft form the new Bank Act under which the Government proposes that the chartered banks of Canada will operate for the next ten years. In a brief speech, he pronounced against any drastic changes, declared that the basic provisions of the old Act had stood the test of experience, and outlined some of the improvements which the Government proposed to incorporate in the new measure. No serious comments were offered from the opposition benches, and when the Bill had been given a first and second reading it was referred to the Banking and Commerce Committee, at whose sessions the real dissection and shaping of the Act will take place. Several of the proposed changes reflect the lessons of the Merchants' Bank debacle. A record shall be kept of the attendance at each directors' meeting, and a summary of the year's records will be sent to each shareholder with the notice of the annual meeting. No bank will be allowed to lend to any of its officials more than \$10,000, and for loans between \$1,000 and \$10,000 made to officials the consent of the directorate will be necessary. No part of any guarantee or pension fund, whether contributed out of the funds of the bank or not, shall be invested in the shares of any bank.

In the annual and special statements under "Liabilities" must be shown, in addition—

(a) Advances under the Finance Act. (b) Letters of credit outstanding. (c) Appropriation accounts. (d) Contingent reserves, including undistributed profits. Under assets must be shown, in addition, "United States and other currencies." Mr. Fielding declared that he had rejected the idea of a Government audit, which had been demanded in many quarters, on the ground that it would involve the Government in responsibility for the banks, but he proposes to strengthen the existing audit system. The Bankers' Association will, as before, prepare a panel of auditors, not less than 25 and not more than 40 in number, who must have the qualification of six years' practice as public accountants in any city in Canada in which there is the head office of a bank. After the Finance Minister has approved the panel, or exercised his right of deleting names, the shareholders shall select two auditors from the panel to audit the business of each bank, but the two auditors of a bank must not be members of the same firm. No person shall be appointed for more than three years in succession to audit the affairs of any one bank, nor shall a member of any firm be appointed if any member or members of the firm have either alone or in the aggregate acted for three years in succession as an auditor or auditors of the bank's affairs. The Finance Minister may require the auditors to report from time to time upon the adequacy of the procedure

adopted by the bank for the protection of its creditors and shareholders, and may, in his discretion, enlarge or extend the scope of the audit.

Directors who knowingly or wilfully concur in any division of profits exceeding 8 per cent. per annum, unless the bank is left with a reserve of at least 30 per cent. of its paid-up capital after making the appropriations necessary to provide for losses, shall be jointly and severally liable for the amount divided as a debt due by them to the bank. The annual return must show the fair market value of each bank's real and immovable property, whether held in its own name or in the name of a trustee, or of a corporation controlled by the bank. This change is intended to check the practice of banks forming separate companies to handle their realty holdings. The clauses in regard to responsibility for the various statements and returns about the position of the bank are sternly tightened up, and the lines of defence which secured the acquittal of the President and General Manager of the Merchants' Bank will be no longer available. All returns and statements shall be regarded as approved of and concurred in by the persons who have signed them. The president, the vice-president, or director acting as president, and the general manager or principal officer of the bank who have severally signed any such return shall be deemed to have ascertained the true position of the bank on the last day of the month last preceding the day of the declaration of any dividends.

Changes in Clause 88 will be interesting to Bradford and other merchants who have complained that their position as creditors of Canadian firms has been impaired in the past by the actions of Canadian banks. Any wholesale purchaser, shipper, or dealer who intends to give a bank security in the shape of goods under the authority of Section 88 must give notice of such intention before any loan is made or the securities taken by signing a document which may be in the form set out in Schedule K or to like effect. This document shall be registered in the office of the Assistant Receiver-General, in which the place of business, or, failing that, the place of residence, of the borrower is situated. In the case of a Canadian company "place of business" shall be construed as the place where the head office of the company is situated; in the case of a foreign corporation or firm, as the place where it receives service of civil process in the province wherein the loan is made. The Assistant Receiver-General shall number consecutively every notice received by him, and shall endorse thereon the number and the date and hour of receiving it, and shall file the notice and enter in alphabetical order in a record the name of every person who has given notice of such intention, with the number endorsed thereon opposite each name. The Assistant Receiver shall also endorse on the bank's copy of the document the date of registration and number, and the production of the copy thus endorsed shall be conclusive evidence of the registration and its date. After this provision comes into force any security subsequently taken under the authority of Section 88 of the bank will be null and void as against creditors, subsequent purchasers, or mortgagees in good faith. A notice of intention when registered shall be reckoned notice in respect of all securities taken by the bank from a borrower under the said authority during a period of three years after the date of registration. Rules are also laid down for the cancellation of such notices of intention. Every person upon payment of a fee shall have access to and be entitled to inspect the registration book and any document registered or filed pursuant to these provisions.

Much more stringent rules are laid down about the particulars which the banks must furnish in their returns. The recent failure of two small financial institutions in Winnipeg, which catered to the non-British immigrant class and did a considerable business in remitting money to Poland and the Ukraine, has called for drastic regulations about this class of establishment. They can only be licensed for a year, and that by special resolution of the local municipal body, and must deposit securities to the value of 25 per cent. of their deposits before they can do business. There are other minor changes, but they are not likely to provoke controversy. There is just a possibility that, despite its introduction, the actual

revision may be held over till next session. If the Imperial Conferences are summoned for an early date in the summer, the Prime Minister will want an early prorogation, and the Progressives will not be disposed to let the Bank Act slip through without a keen struggle for more drastic changes than Mr Fielding now proposes.

LATIN AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

PAN-AMERICANISM.—While there is reason to anticipate certain advantages from holding, last month, at Santiago-de-Chile, yet another—the fifth—International Conference of American States, the object aimed at—to earn recognition of the United States as virtual autocrat of the smaller nations of Latin America—seems as far off realisation as ever. Discussions and debates upon trademarks; attempted codification of international law; propagation of sanitary conferences; policy, laws and regulations relating to inter-continental railroad, motor and aircraft, all form useful and timely subjects to scrutinise and consider. Were it, indeed, possible from the summoning of such conferences to hope for anything more practical than the passing of mere academic resolutions and solemn acceptances of conventions that are seldom observed in practice or intended ever to be carried into execution, countries other than those of the Americas—European and Far Eastern, for example—might likewise benefit directly or indirectly, and something approaching an economic Arcadia attained. Unfortunately, similar conferences organised under the same hopeful auspices—such, for example, as that held at Buenos Aires in 1910—have brought few particular advantages in their train to any one of the participating States (many of them sending representatives at an expense difficult to meet from their impoverished treasuries), while relations with the Latin-American countries, as a whole, have become little improved. Witness the present attitude of Mexico, whose Government flatly refused to participate in the Santiago assembly because “it would submit to no dictation from the United States.” Few of the ennobling objects with which the Pan-American Union has been credited since 1889, after establishment by the late American statesman, James G. Blaine, have been consummated. Each succeeding summons issued from Washington is eyed with suspicion, not wholly unaccompanied by a lurking fear regarding some new “onward march” of the Northern Colossus—resembling the forcible separation of Panama from Colombia or the compulsory privilege of constructing Nicaraguan territory a second Isthmian Waterway—which shall leave the weaker Latin-American nations straggling far behind.

Some of these smaller republics are frankly sceptical of United States benevolence—and they say so. *Timeo Danaos et dona ferentes.* El Salvador wants to know the exact definition of the Monroe Doctrine as applied to Central America; Honduras desires to learn what will happen to her, among the other small nations whose ports border on Fonseca Bay, when the United States naval station about to be built there makes of these now-free waters a *mare clausum*; Costa Rica, Guatemala, and Nicaragua express doubts regarding the establishment of this wholly unnecessary and menacing naval base, in the construction of which they can see nothing whatever suggestive of that exalted spirit claimed by Mr. John Barrett and others for the Pan-American Union.

MEXICO.—It is not difficult to understand the apprehension existing among many of the large companies and employers of Mexican labour regarding the threatened new legislation relating to compulsory insurance. A new Bill, to be presented to Congress within a few days, is in the hands of an influential labour leader, Señor Louis Morón, whose advocacy for greater control of foreign enterprises has often caused misgivings among all but the most partisan and prejudiced of critics. If the Bill bears out all—or, indeed, any—of the damaging clauses that is suspected to disclose, both employers and employees

would be bound to protest. The new ordinance would render almost impossible the conduct of any large business where considerable labour is employed. As Mexican industrial insurance is conducted to-day there is little to complain of. Indeed, rapid strides have been made along the road of modern progress without resort either to sensationalism or violence of method. Any new decree defining more clearly employers' liability and apportioning the risks justly, so far from being resented, would be generally welcomed. According to reports, however, Señor Morón's Bill is far from assuring this. It is believed to contain, *inter alia*, a clause providing that the employer shall pay compensation to all sick and injured workmen, and a lump sum to the next-of-kin in case of death or injury, as well as medicines and medical attention. The Bill will, it is believed, aim at amending the already sufficiently protective law by substituting obligations in the form of a tax on employers of 10 per cent. on the amount of their payments to employees of all kinds—even domestic servants. The large funds thus created would be held and controlled by the Ministry of Labour (at present there is no such Department of Government, but it is proposed to create one), and contributions might—the Bill does not say “will”—be supplemented by State and municipal contributions. Apparently the employees themselves are to contribute little or nothing, and the Bill will thus discourage thrift and open the door to possible fraud and malingering.

PERU.—The new Tariff Bill which the Peruvian Legislative Chambers have been discussing, and which is expected to become law and put into force at once, is likely to provoke some expressions of protest, since the high schedule adopted upon certain articles will probably adversely affect British trade. In an ordinary year before the war the value of British imports was far in advance of those from other nations, goods entering the port of Callao, which deals with between 60 and 65 per cent. of all such entries, showing a proportion of 36 per cent. British goods against 19 per cent. by the United States and 15 per cent. by Germany. Premier place was, however, forfeited even before—and more since—the war; any pronounced hope of its being resumed seems likely to be doomed to disappointment if the tariff schedule now being framed should prove as drastic as anticipated. Business circles are already dull, and a prevalent lack of confidence hampers enterprise. An unfavourable impression has likewise been created by the modification of the Dunsmuir concession, the grant of which was promised practically in its entirety. Had it been confirmed by Congress there would have been afforded a considerable and much-needed impetus to Peruvian trade, especially engineering, while at the same time many thousands of unemployed would have been absorbed into industry. In its abbreviated form the concession has lost much of its value; there is even some doubt whether Mr Robert Dunsmuir will care to proceed with its fulfilment. Anticipating such a decision upon his part, Congress, in approving the concession in its altered and attenuated shape, has authorised the Executive to offer the same terms to other interests in the event of Mr Dunsmuir withdrawing.

SOME RAND RESULTS.

(BY A MINING CORRESPONDENT.)

THE properties operated by the subsidiary companies of the Johannesburg Consolidated Investment Company are fairly well scattered along the Rand from east to west; consequently the results secured constitute a tolerably faithful reflex of the gold industry as a whole. The earnings of 1921, it may be recalled, generally fell somewhat short of those for the preceding year, owing to the decline of about 5s 6d in the gold premium, and sporadic outbreaks of labour trouble. Last year these conditions became accentuated. The currency price of gold averaged about 10s less than in 1921, while the tragic developments in connection with the white miners entailed the suspension of operations for the greater part of the first quarter. A considerable measure of compensation for these adverse factors was subsequently

found in the reduction of wages and in the charges for stores, accompanied by a marked improvement in the efficiency of labour. In these circumstances the quantity of ore milled and the revenue obtained per ton naturally declined; it is satisfactory to find that of the six more important producers of the group, three are able to register some expansion in profits last year as compared with 1921, while in four cases an expansion in the ore reserve tonnage is registered. Interest will attach to a comparison of the salient figures for the past three years:—

	Ore Crushed Tons.	Results per Ton.			Working Profit.	Divs.	Ore Reserves.	
		Yield.	Costs.	Profit.			Tonnage	Value.
Cons. Langlaagte	Tons.				£	%		Dwt.
1920	503,900	32/	24/8	7/4	185,110	12½	1,339,000	6·2

1922	422,400	23/9	19/5	4/4	92,440	20	457,400	5·5

A proposal for amalgamation of the two Langlaagte undertakings is now before the shareholders. It is strongly recommended by the consulting engineer, and certainly appears likely to result to the advantage of all concerned, especially if—as probable—some additional ground can be secured. Although the Government Areas Company last year performed about 5,000 feet of development less than in 1921, the ore reserves were fully maintained in quantity and scored an advance in value. All allowances made, the existing tonnage represents about five years' supply for the mill—a very strong position. The results of the Randfontein Central reflect the completion of the very comprehensive programme of reorganisation initiated by the present control; further improvements are foreshadowed. The capacity of the mill, which was not long ago increased to 170,000 tons per month, is to be still further expanded to 200,000 tons. During the year the company secured fresh advances from the Estate company, bringing the total up to £1,399,000. It is obvious that unless a funding scheme can be arranged, dividends are still a long way off. The Randfontein Estate Company, in turn, increased its loan from the Johnnies company by about £100,000 to £135,000. The company's holdings in the Langlaagte and Randfontein Central undertakings again figure at £1,545,000, “which is below the market value.” This is irrespective of £1,925,200 debentures in the Central Company.

At the Van Ryn Deep developments have not been quite what appears on the surface, the increase in tonnage and decline in value of the ore reserves being principally due to an expansion in the stoping width. In reference to the Witwatersrand Gold, the consulting engineer makes the significant intimation that “the mine has reached a stage when it is not possible to develop as much ore as crushed.” The two other producing companies—the Primrose and the Unified—are, of course, nearly at the end of their tether. On the other hand, the New State Areas, whose property lies in the Far-Eastern Rand, is expected to commence crushing next month on a 50,000-ton basis. At the end of 1922 the ore reserves were computed as 1,100,000 tons of an average value of 8½ dwts. This company, it may be recalled, lately made an issue of £500,000 convertible debentures. In view of the somewhat onerous nature of the terms upon which the profits are to be divided with the Union Government, there would appear ground for doubt as to whether the current quotation of the shares is likely to prove warranted.

Notes of the Week.

The Significance of the Government Defeat.—A defeat of a Government in the House of Commons may be important or unimportant. The defeat which Mr Bonar Law's Government suffered on Monday evening may be regarded as either, according to the aspect from which it is viewed. It is unimportant, in so much that it has not seriously shaken the Government's position, which, after all, is the chief point. It has merely caused the loss of two days of Parliamentary time, although it might have created far greater embarrassment to Mr Bonar Law had not the ruling of Mr Speaker on an intricate point of procedure paved the way to the practical re-introduction of the motion on which the defeat was so unexpectedly sustained. Thanks to this loophole of escape, calm has quickly succeeded the storm. But from another point of view its importance is far from being negligible. The incident shows that in the present Parliament, in contrast with the last, there is a large, organised, critical and active Opposition. Some sections of that Opposition unfortunately gave an exhibition of rowdiness in the House on Wednesday which, though not without respectable precedent, will not enhance the public appreciation of their usefulness or merit. Nevertheless, the somewhat striking reminder given this week to the Government that they are faced by formidable opponents should prove a useful stimulus to efficiency in the Government ranks, while it certainly stamps the debates in the present House of Commons with a reality which the debates could not pretend to possess in Coalition days. If the defeat has put the Government on its mettle, it has aroused a certain jealous rivalry between the Independent Liberal party and the Labour party which will spur both of them on to further efforts. Altogether, the Parliamentary proceedings of the coming months bid fair to be marked, not only by a certain liveliness, but also by a stern struggle and attention to business which, if the recurrence of rowdy scenes is avoided, should do much to restore public interest in Westminster and public faith in the reality of representative government. That it will directly and indirectly help in this direction is the chief significance of Monday's sensational division.

The Improvement in British Industry.—Decisions will shortly be taken on the question of reducing taxation and of lowering railway rates, and on both these subjects stress will quite properly be laid on the serious condition of British industry. The urgency of the need requires no continued emphasis so long as we still have more than one million of our industrial population unemployed. Such a figure is still much larger than anything in our pre-war experience. It is, however, important to keep a sense of perspective in this matter. It is difficult to give precise information as to the increasing volume of British trade, but a significant indication is the fact that not far short of a million workpeople have been reabsorbed into industry during the last 15 months. Out of the 11 to 12 million people in insured industries, who constitute the bulk of our industrial population, the number unemployed has fallen quarter by quarter as follows:—

NUMBER OF UNEMPLOYED REGISTER.	
December 30, 1921	1,934,000
March 30, 1922	1,740,000
June 30, 1922	1,503,000
September 30, 1922	1,414,000
December, 1922	1,431,000
March, 1923	1,284,000

Thus there are 650,000 fewer people registered as unemployed than 15 months ago. But in the same period there has also been an increase in the adult population of working age, which is growing at a rate between 200,000 and 250,000 a year. In 15 months the figure would certainly be 300,000. A small proportion of these will not be included in what may be called the industrial population, while some deduction, though not a large one, must also be made for net emigration. But when these qualifications have been made it is evident that between 850,000 and 900,000 more wage-earners are finding employment to-day than was the case at the end of 1921. Moreover, with certain exceptions, notably the cotton industry, which still remains one of the least satisfactory

sections of the industrial field, short time has diminished and output per head substantially increased. In the absence of more exact data these figures certainly justify the conclusion that there has been a very substantial recovery of production in this country in the last 15 months. It is, on the whole, satisfactory that this recovery has occurred without one of those excessive movements of prices which, though stimulating at the time, inevitably bring in their train a most serious reaction. It is significant also that this improvement has occurred at a time when almost all the political influences have been unfavourable, which shows how strong are the underlying economic influences making for improvement in the world generally. If the political horizon clears, such figures would justify a very optimistic outlook.

Peace Hopes and Finance in Ireland.—Our Dublin correspondent, telegraphing yesterday, says:—Recent events have shown marked progress in the restoration of peace and order in the Irish Free State. The arrest and deportation of Republican sympathisers in Great Britain proved to be a formidable blow to the organisations which furnish money and munitions to the Irregulars in Ireland, a blow reinforced by the markedly increased efficiency of the Government forces in grappling with the forces of disorder. Captured documents have spoken with eloquence and detail of the discouragement and disintegration which are manifesting themselves at the headquarters and in the ranks of the fighting Republicans. The latest blow has been the wounding, capture and subsequent death of Liam Lynch, their irreconcilable fighting chief. It is admitted that if the fight, such as it is, cannot be carried on during the summer, the end is definitely in sight. The ensuing week will probably see the initial stages of the formulation of the financial and fiscal policy of Ireland. Hitherto Ministers have been content to carry on the previously existing system with such adaptations of principles and their application as the new conditions rendered indispensable. A genuine Budget discussion is now imminent, in which revenue and capital requirements must be clearly considered, and the provisions designed for their satisfaction discussed in their bearing upon taxation and fiscal policy. It is not doubted in Dublin that actual Irish revenue as collected by Irish taxgatherers will exceed the "true," or adjusted, Irish revenue as apportioned on the basis of estimates and averages out of the joint revenue of the United Kingdom. The revenue so far collected is about twice as much as that of N.-E. Ulster, and has been by no means unsatisfactory, but the position will not be without difficulty. Extraordinary expenditure upon the Army and other forces for the maintenance of order and upon compensation for injury and damage must be met by borrowing, and the capital sum needed will have to be increased by the sums needed for the completion of land purchase. Land settlement must prove difficult. Financial conditions have altered profoundly since the cheap money of 1903 enabled Mr George Wyndham to break the back of the difficulty. The expectations which his terms of settlement aroused on the one side, and the appetites which the political revolution has evoked on the other, produce divergent views, and the difficulties are proved by the dissolution after two days of the Land Conference convened by the Cabinet to discuss terms of settlement. Doubtless, however, the discussion will be renewed in some form, and ultimately a settlement will be hammered out. The comparative equanimity with which the general public has taken the modified protective duties which have resulted in the Free State imposing the British import duties at its own Customs houses has encouraged the manufacturers to ask for more. The Federation of Irish Industries publishes a memorandum of the most orthodox Protectionist type, which presents one side and wholly ignores the other side of the picture. It is, however, but the preliminary trumpet blast which precludes the fray. The farming community, predominantly strong in Ireland, feeds itself, and its surplus produce finds a free market in Great Britain more valuable to it than its sales to urban Ireland. It may not relish increased prices for its necessary purchases of non-agricultural produce, together with the risk of less favourable

treatment for its own output of foodstuffs by Great Britain, but the consideration of the whole subject is still extremely immature. The enhancement of Ireland's national status has been brought home to the public by the request for Irish representation at the forthcoming Customs Conference organised by the Economic Commission of the League of Nations. Regard for American opinion, however, renders Ireland somewhat cautious about claiming her right to her place as a national unit in the League of Nations. Not improbably the minor step of seeking representation at the Customs Conference may be taken, as fiscal and commercial questions are beginning to arouse interest. Evidence of this can be seen in the formation of a central association of the Free State Chamber of Commerce, on the initiative of the Dublin Chamber, led by a progressive president.

Overseas Trade in March.—The official Board of Trade returns of overseas trade in March have not yet been issued, but the *Board of Trade Journal* publishes the following preliminary figures of total imports, exports, and re-exports:—

	March, 1922.	Feb., 1923.	March, 1923.
Imports	£ 87,879,424	£ 83,855,165	£ 90,022,226
Exports (British)	64,580,793	57,509,904	60,920,690
Exports (foreign and colonial) ..	10,153,612	9,823,323	9,085,642

The excess of imports over total exports is thus £20 millions, as compared with £17 millions for February, and £13 millions for March, 1922. Aggregate figures for the first quarter of the present year compare as follows with those for the corresponding periods of the previous three years:—

First quarter—	Imports.			Exports.		
	£	British.	Foreign and Colonial.	£	British.	Foreign and Colonial.
1913	196,278,738	127,310,184	31,083,630	127,310,184	31,083,630	31,083,630
1921	307,835,238	227,786,786	26,847,427	227,786,786	26,847,427	26,847,427
1922	233,742,537	186,062,852	28,786,632	186,062,852	28,786,632	28,786,632
1923	273,577,246	185,369,502	28,706,926	185,369,502	28,706,926	28,706,926

For the March quarter the import excess is nearly £59½ millions, as compared with a little under £10 millions for the first quarter of 1922, the increase being almost wholly due to larger imports. The full returns should be available for discussion in our next issue.

The Quarter's Shipbuilding.—Lloyd's Register Shipbuilding returns, for the first time since March, 1921, show an increase, as compared with the previous quarter, in the tonnage under construction in Great Britain and Ireland. The tonnage building at the end of March, viz., 1,492,138 tons, exceeds by about 23,500 tons the figures given for December 31, 1922. The total still includes a considerable amount of tonnage (181,000 tons) on which work has been suspended for some time. Deducting this amount in order to enable a comparison to be made with figures for normal times, the tonnage actually under construction in Great Britain and Ireland now amounts to 1,311,000 tons. The average tonnage under construction during the twelve months immediately preceding the war was 1,890,000 tons, i.e., 579,000 tons more than the present figures. As compared with the figures for the quarter ended December 31, 1922, there has been a decrease in the tonnage launched, but a considerable increase in the tonnage commenced in Great Britain and Ireland during the past quarter, the tonnage of vessels launched being 32,217 tons less and of those commenced 124,016 tons more. The tonnage commenced during the quarter ended December 31, 1921, amounted to 55,290 tons; a slight further reduction took place during the following quarter, and in the course of the second quarter of 1922 the figures reached the lowest level, viz., 38,877 tons. During the third quarter there was an increase of about 44,000 tons. During the last three months of 1922 the figures reached within 30,000 tons of the total launched during the same period, and for the first quarter of 1923 the tonnage commenced (355,203 tons) actually exceeds by 126,832 tons the tonnage launched. The total merchant tonnage building in other countries is 1,367,934 tons, but this includes about 148,000 tons upon which work has been suspended, leaving about 1,220,000 tons actually under

construction; the latter figure is 50,000 tons less than at the end of December, 1922. The figures for the leading countries abroad are:—Germany and Danzig, 343,027 tons; France, 209,581 tons; Italy, 185,001 tons; United States, 173,762 tons; Holland, 121,321 tons; and Japan, 83,357 tons. The tonnage of vessels launched in the world during the quarter under review amounts to 442,522 tons, of which 228,371 tons were launched in Great Britain and Ireland, 70,462 tons in Germany and Danzig, 53,212 tons in the United States, and 90,477 tons in other countries. The tonnage commenced in the world during the same period amounted to 530,621 tons, of which 355,203 tons were commenced in Great Britain and Ireland; these totals, however, do not include vessels commenced in Germany during the quarter, such information not being yet available.

A League of American Nations.—It is stated that the Pan-American Congress now in session at the Chilean capital has unanimously adopted a resolution proposed by two Chilean members, Don Alejandro Alvarez and Don Aldunate Solar, which provides for the formation of a code of international law for the nations of the American Continent, incorporating the Monroe doctrine, and contemplates the acceptance of the whole by the Governments of Europe. Now that Germany is powerless to effect the expansion under her own flag which her colonial enthusiasts formerly hoped to bring about as the result of peaceful penetration—in Ecuador and Southern Brazil in particular—and which the Kaiser probably aimed at hastening in 1902, when he induced Great Britain to join in the German blockade of Venezuela, no European Power is likely to cherish territorial ambitions in regard to the American Continent; and the Spanish-American jurists may be trusted to clear the doctrine of the implications read into it by North American imperialists, and to get rid of the fear that political subjection may arise out of the financial aid furnished from the United States. The proposed code, interpreted by a Court of Arbitration, the establishment of which is proposed by a Costa Rican member of the Conference, is regarded in Chile as a first step towards a league of American nations; and such a league would obviously prepare the way for that approach of the United States to the existing League of Nations, to which American opinion seems gradually to be coming round.

The Problem of Double Taxation.—The great rise in taxation resulting from the war has made the problem of double taxation far more urgent and more serious than in pre-war days. The problem was discussed at the Brussels Financial Conference and at Genoa, and was the subject of a number of resolutions at the recent Rome Congress of the International Chamber of Commerce. Investigation of the problem has been undertaken by the Financial Committee of the League of Nations, whose first step was to appoint a committee of experts, consisting of Professor Seligman (United States), Sir Josiah Stamp (Great Britain), Professor Bruins (Holland), and Professor Einaudi (Italy). Their report, of which a summary has been issued, begins with a full analysis of the economic consequences of international double taxation, followed by a detailed discussion of the general principles that govern international competence in taxation, in which it notes the evolution away from the principle of an individual's political allegiance to that of his economic allegiance; in other words, the consideration is not so much to what nation an individual belongs as to what State his economic interests belong. The report examines the constituent elements of economic allegiance, and comes down to the two fundamental factors of (1) the location of property (or the origin of income) and (2) residence of the individual. It makes a classification of all the important categories of wealth, and discusses in each case as to which of these two elements—origin of income and residence—seems to predominate. The report discusses four different methods of solving the problem:—(1) That an income should be taxed in the country of origin, irrespective of the residence of the taxpayer, and that the country of residence should remit the amount of such tax. The difficulty here is that

under modern economic conditions the great creditor countries might not be willing to accept such a plan. (2) That residence of the taxpayer and not the origin of his income should be the controlling consideration, and that, therefore, all countries should refrain from taxing non-residents. The difficulty here is that the debtor countries might not be willing to accept. (3) That the tax should be divided according to a fixed proportion between the country of origin and the country of residence. (4) That, instead of dividing the tax between the country of origin and the country of residence, there should be a classification of the different categories of wealth, some to be taxed according to origin and some according to domicile. The committee reach the conclusion that different considerations must apply to taxes on wealth as measured by property, and to taxes as measured by income. Regarding taxation of wealth as measured by property, the committee believe that the fourth method (classification and assignment of sources), possibly modified by the third method (division of the tax), offers a suitable basis for mutual agreement, and that its adoption would lead to immense improvement all over the world. In order to facilitate this division of the tax, and, at the same time, to diminish tax evasion, it would be desirable to enter into agreements for the mutual interchange of all relevant information, for which purpose the creation of a central clearing house might be found practicable. It is not considered possible to have a general convention to which every country could agree, but a series of agreements on the general principles outlined. With regard to modern income taxation, however, the committee explain the difficulty caused by the fact that during the past quarter of a century countries have been passing from taxation of land and capital to a system of taxation purely on the individual's whole income. This evolution is in various stages. The committee believe that ultimately, and especially as countries approach nearer to the pure income-tax and become more highly industrialised, adoption of the principle of residence will eventually become the only logical one. Their final conclusion is that for the present countries on a comparative plane of economic equality could very well afford to adopt the second principle of residence as against origin, and that where there are great difficulties in its adoption, the best plan would be to act, in a very rough way, on the principle of classification and assignment of sources, modified by the division of the tax. The committee make clear the urgency of overcoming the great and growing embarrassments in international intercourse occasioned by existing conditions.

The Electricity Commissioners' Report.—The Electricity Commissioners have now issued their annual report on the generation of electricity in Great Britain for year ending March 31, 1922. The Report gives an analysis of the fuel consumption and units generated by electricity supply undertakings, railways, and tramway authorities. The Report is primarily useful to those in the industry as giving comparative efficiencies, in regard to fuel consumption, of different sizes of generating stations, but as the figures are also grouped territorially under the different districts defined by the Electricity Commissioners, the Report shows the relative importance of each district from a coal consumption point of view, and consequently indicates where the most important coal saving can be effected through reorganisation of supply. The coal used throughout the country for steam generating plant is given as 6,577,587 tons. By far the biggest consumption occurs in the London and Home Counties district, where 1,839,720 tons is registered. The only other two districts where the consumption amounts to at all a comparative figure are in the North-East Coast district, with 659,373 tons, and the South-East Lancashire district, with 653,131 tons. It will be remembered the Coal Conservation Committee, reporting on the possible economies that might be effected nationally in coal consumption instanced the big saving which would come about through centralisation of generation of electricity, a matter which was subsequently dealt with by the Electricity Supply Acts, 1919 and 1922. Under these Acts the Electricity Commissioners have already delimited

15 electricity districts, and the schemes of reorganisation are in various stages of fruition. It was originally contemplated that a joint electricity authority would be set up for each of these districts, but the various local inquiries have shown that the creation of semi-public bodies is not viewed with much favour. The recent scheme published for the London and Home Counties District included the formation of a joint electricity authority, but vital points have been raised in connection with the constitution, and these have been referred to the courts for decision, so that the whole scheme is at present in abeyance. In the North-East Coast area no scheme has been proposed, as the Newcastle-on-Tyne Electric Supply Company and their subsidiary companies already cover the whole ground with a more or less unified system. But although no reorganisation scheme for any district has yet received legislative sanction, even in a modified form, the recent Electricity Supply Acts have by no means been a dead letter, since they have given a considerable impetus to voluntary co-operation between various undertakings, and have firmly established the ideal of centralisation of generation, an ideal which is moulding, and will mould in the future even more emphatically, the policy of undertakings throughout the country.

Swedish Banking Developments.—Our Stockholm correspondent writes:—Business as well as political circles in Sweden have lately been agitated by an event which may prove to be of the very greatest importance for the future development of Swedish banking. During the war, in 1916, a new bank, the Aktiebolaget Svenska Lantmännens Bank, was started in connection with co-operative work in the agricultural sphere. Subsequently the bank got a fully paid-up capital of 20 million Swedish crowns, and its reserves had, chiefly by means of premiums on the subscription of new shares, risen in 1921 to an amount of 3,400,000 Swedish crowns. It is evident that such an institution, created only to cater for the interests of a certain group of citizens, must suffer under the depression of agriculture. The clients of the bank consisted mainly of farmers, but the bank had also engaged in the financing of industrial concerns. During the last two years it has been a public secret that the bank had had severe losses, partly due to the devastating deflation, but also to lack of success in the management. At the beginning of this year it was evident that the position was no longer tenable; the quotation of the shares sank to about 30 per cent. of their nominal and paid-up value, and depositors began to withdraw their money. The Bank of Sweden granted the bank the help it needed by means of loans and rediscounting of bills, but eventually the bank found difficulty in raising money enough to meet their engagements. In this emergency the bank appealed to the Government, and the Government directed them, for the sake of a possible reconstruction, to approach the Aktiebolaget Kreditkassan of 1922, an institute founded through the co-operation of the State and some of the private banks in this country, in order to support and reconstruct banks which had got their credits frozen. At the examination made by the Kreditkassan it was, however, considered that the funds of the bank were gone, and that the Kreditkassan, according to its by-laws was unable to give the necessary support, which would have meant a clean loss for the Kreditkassan from the very beginning. The Government now decided to intervene, mainly for political reasons. For they regarded it as a political mistake to refuse assistance where the pecuniary interests of about 80,000 farmers and tenants were concerned. All parties thus agreed that the bank was to be helped, but as to the way in which this should be done there was a sharp struggle, from which the sitting Socialistic Government has come off victorious. Through a resolution taken by Parliament on March 22, 1923, it has been decided that a new bank is to be founded with a fully paid-up capital of 20 million Swedish crowns, of which 15 millions are to be subscribed by the State and 5 millions, under the guarantee of the Kreditkassan, by private people. This will in reality mean that the Kreditkassan will have to subscribe the whole of the last-mentioned sum. The new

bank will take over and continue the business, as it is said, in order to further a slow and consequently favourable liquidation. This is, at least, the intention of those provincial members of the Conservative party who have given their votes for the creation of the new institution. What, on the other hand, has made the Socialists go through fire and water for the new bank is their desire to get a business bank in the possession of the State. By giving help to the agriculturalists they expect to gain the help of this party in the solution of another burning question of the day in regard to the granting of unemployment doles. A less explicable fact is that the President of the Bank of Sweden has warmly supported the plan for the creation of a new bank along the above-mentioned lines. The constitution of the Bank of Sweden is dangerous in that the bank is owned and administered by Parliament, and thus is exposed to the danger of being used as an instrument in party politics. All competent people in this country agree that the new experiment is extremely dangerous, and that, at all events, it will mean heavy losses to the taxpayers.

The New Roumanian Budget.—Owing to the decision to change the old financial year of April 1st to April 1st in Roumania to the year commencing January 1st, the Budget just introduced by M. Vintila Bratianu, Minister of Finance, is for nine months—April 1, 1923, to January 1, 1924. Provision is made for an expenditure of Lei 15,406,457,918, or more than double that allowed for a similar period in the previous year. The expenditure for the past nine months and the next is compared below:—

	EXPENDITURE (in Millions of Lei).	
	Nine Months, 1922-23.	Nine Months, 1923-4.
Ministry of War	1,281	2,338
Finance	1,563	4,750.3
Education	716	1,124
Cults and Arts	167	259
Interior	342	669
Public Works	148	179
Justice	165	243
Agriculture and Domains	221	392
Industry and Commerce	164	234
Foreign Affairs	20	29
Public Health	250	450
Communications	2,391	3,932
Council of Ministers	14	1.7
Special Fund for increasing Salaries of Officials and Pensions	..	500
Supplementary and Extraordinary Credits ..	..	305
	7,429.4	15,406

The greatest increase in expenditure comes under the head of the Finance Ministry, and although no explanation has yet been given, it is presumably caused by the augmented definite commitments for interest on foreign floating liabilities, which have recently been consolidated, and arrears of interest on foreign loans. The expenditure by the War Office is practically doubled—a regrettable feature, explained by the recent news from Roumania. The only other substantial increase is in connection with roads and communications, and having regard to the inadequate and dilapidated condition of the State railways, this appears to be a wise outlay of money. To meet these heavy outgoings M. Vintila Bratianu is apparently relying on (1) a better working of the new taxes, and (2) the application of these taxes to all the new territories in place of the fiscal laws existing in Transylvania, Bucovina, and Bessarabia. Revenue estimates for the two periods compare as follows:—

	(In Millions of Lei.)	
	Nine Months, 1922-23.	Nine Months, 1923-24.
Direct taxes	555	1,557
Indirect taxes	4,143	5,885
Stamp duties and registration fees ..	772	903
State monopolies	1,445	1,770
Ministry of Communications	1,269	3,543
Various	800	1,748
	8,984	15,406

All the new taxes introduced in the previous Budget for 1922-3, such as income-tax, tax on profits, export duties, import duties, &c., yielded greater receipts than the

estimates, so that the Minister of Finance has reason for being optimistic. It was a difficult proposition last year accurately to calculate the revenue from taxes, which had never been imposed before in the history of the country. The estimates for the year 1922-3 were apparently unduly low, as the following figures suggest:—

	(In Millions of Lei.)	
	Estimated.	Yielded.
Direct taxes	489	555
Indirect taxes	2,482.5	4,142.5
Stamps and registration	428	772
Monopolies	1,220	1,446

The great surplus of 1,660 millions of actual receipts from indirect taxes over the estimates was undoubtedly due to the fact that the export taxes were payable in foreign currencies, and the value of the lei fell from 600 per £ sterling in April, 1922, to 800 on January 1, 1923. As in the case of other countries, the pre-war Budgets were insignificant in comparison to the present one. The revenue in 1907-8 amounted to 307 millions of lei, leaving a surplus of 62 millions, and in 1913-4 was 608 millions, giving a surplus of 96 millions.

Rural Credit in U.S.A.—Our New York correspondent writes:—Regulations governing the operation of the newly created intermediate credit banks, or rural credit banks as they are commonly called, have been prepared by the Federal Farm Loan Board, which is charged with the administration of those institutions, and which will exercise much the same supervision in that capacity as the Federal Reserve Board in Washington does over the Federal Reserve banking system. The Treasury Department, it is understood, has credited to the Farm Loan Board the \$60,000,000 capital authorised by the recently enacted law establishing the credit banks, and \$1,000,000 will be turned over to each of those 12 banks as soon as their charters are issued, additional funds to be supplied as needed. Temporarily, at least, the Board intends to limit loans negotiated under the new law to a maximum maturity of nine months. According to Washington advices, the more important provisions of the new Statute have been construed to mean that "direct loans cannot be made to individuals. Direct advances may be made to co-operative marketing associations, or livestock associations, secured by warehouse receipts for staple agricultural products, or by chattel mortgage on livestock. No such loan may exceed 75 per cent. of the market value of the agricultural product or livestock. Loans may be re-discounted for national and State banks, savings banks, trust companies, agricultural credit corporations, and incorporated livestock loan companies. No paper can be re-discounted upon which the borrower has been charged a rate more than 1½ per cent. in excess of the discount rate of the intermediate credit bank of the district. Ample funds will be available for loans to facilitate ordinary marketing, but none to support speculative holding of farm products." As a result of a recent conference in Washington between the War Finance Corporation and members of the farm bloc in Congress, it seems likely that further steps will be taken to extend export markets for American agricultural products. Present plans are said to contemplate a renewal of efforts, unsuccessfully made in the last session of Congress, to amend the War Finance Corporation Act so as to make it easier for foreign corporations, which purchase such products, to obtain credits; at present it is not possible to make such loans unless they are based on American security. Although the War Finance Corporation has stood ready to consider applications from foreign buyers for long-time credits, few, if any, such requests from foreign sources have been received during the past two years, owing largely, it is explained, to the fluctuations of currencies abroad. In a statement issued a few days ago the War Finance Board says that it is proceeding with its operations under the law, and will continue to do so as new applications are made, and in the matter of handling advances heretofore made. As the new banks, authorised by the Agricultural Credits Act, are organised and get under way, however, it is expected that they will gradually take the place of the War Finance Corporation, and extend and carry the loans heretofore and hereafter made. Notwithstanding the assistance that

has been given to agricultural interests, conditions confronting farmers in some sections of the country are described as very unsatisfactory. One United States senator is quoted as declaring that in the North-West 70,000,000 bushels of grain, mostly wheat, lie on the farms owing to lack of credit facilities required by farmers to move their grain to market.

Business Conditions in Esthonia.—A Reval correspondent writes:—The transit business in Reval has fallen off considerably, while the Riga transit business has increased of late, and it is feared that this is due to the heavy rates charged by the Esthonian railways from Reval to the Russian frontier. Besides, the Russians are making desperate efforts to keep the port of Petrograd open through the use of heavy icebreakers, and have partially succeeded owing to the mild weather, but the expense must be very great. Reval and Esthonia have derived very large profits from the transit trade with Russia, and the loss of this trade may affect their budget considerably. Owing to the slackness of this transit trade, the Russian Government is reported to have leased many of their Reval warehouses to Jews resident in Reval, and to have gained a substantial profit in this way, as the rents are considerably higher to-day than those arranged for at the time of construction and leasing of the property. Last year the transit business looked very promising. The commercial fleet of Esthonia consists to-day of 58 steamers with 24,420 tons, 154 motor-boats with 3,880 tons, 450 sailing vessels with 23,306 tons, and 30 ferry boats with 5,231 tons. In the course of last year the Esthonians increased their commercial fleet by one steamer, ten motors, 37 sailers, and two ferries. A great deal has been written about oil-shale in the Reval Press, but it appears that the concessions hitherto granted have yielded poor results, as the concessionaires are rather trying to pass their rights on to other parties than to exploit the concessions themselves. The lands marked out in concessions extend from Reddon to Narva, and the Estrinche Schieferöl A.g seems to be the only concern to have established distilling works for obtaining oil. Besides this, the only producing mines are the Government mines near Kochtel and the mine in Kuckers. Direct trains between Esthonia, Lettland, Lithuania, and Berlin are to commence running on April 1st, or, if not practicable, on May 1st. Already through carriages Riga to Berlin are put on to the train from Riga, but a delay of two hours occurs on the frontier, and the direct communication is thereby delayed.

The Stock Exchange Report.—Next Tuesday's meeting of the proprietors of the Stock Exchange is likely to prove a harmonious affair, writes a Stock Exchange correspondent, as the report and accounts then to be presented show a pleasant state of affairs. Upon the subscribed capital of half a million pounds sterling, in 20,000 shares, £25 paid, the Stock Exchange earned a profit of £143,742, an increase of £9,295 over the profit for the preceding twelvemonth. A dividend of £8 per share gross is to be distributed for the full year, £3 of which the shareholders received last November. This is equal to 32 per cent. upon the paid-up value of the shares, and its distribution calls for £16,200 more than was actually earned. The managers transfer, however, £15,000 from the income-tax reserve account; they take a little from the previous carry forward, which still allows of £144,700 going to the new year, or the equivalent of £7.55 per share. By degrees the mischievous system of dual control is dying a mechanical death, for out of the 3,896 members 2,273 are now shareholders as well, and in less than a couple of decades every member of the Stock Exchange should be also a proprietor, under the rule which obliges the candidate for membership to acquire one share or more. Of an original amount of £450,000 in 3 per cent. debentures £319,000 now remains, so that the capital and debenture debt of the Stock Exchange total together £819,000. Against this the freehold property of the House is valued at £503,324 and the leasehold property at £432,244—not very extravagant figures considering the situation of the building.

The largest item of the Stock Exchange expenditure is, as usual, that for salaries and wages, which takes £41,432, a reduction of £3,000 as compared with the previous year. The next two heaviest items are £22,932 for rates and taxes; £18,900 for rent paid. Both of these are also less than was paid for the same purposes in 1921-2. Maintenance and improvement of buildings called, however, for £8,971, or more than twice as much as the total in the previous year. The main source of revenue is, naturally, that derived from members' subscriptions, which brought in £156,405, while the clerks' subscription payments came to £44,945, giving a total of £201,350. Entrance fees for members yielded £35,910; for clerks, £9,705. There are 212 old members paying annual subscriptions of twenty guineas each, 1,422 men pay thirty guineas, and 1,829 pay forty guineas apiece. Only 76 pay the maximum subscription of a hundred guineas for membership. Owing to the high and increasing cost of the water rate an artesian well is to be sunk, the boring of which has already been started, and it is of interest to observe that the Stock Exchange has abandoned its own electric lighting plant, taking its current now from the City of London and the Charing Cross and City Electricity Supply Companies. At the present price of 108 cum dividend, Stock Exchange shares pay a trifle under 6 per cent. net on the money, which appears to be a very satisfactory yield in view of the excellence of the investment. The shares can be held only by members, or, for a certain time, by their executors.

Cotton Yarn Prices.—Our Manchester correspondent writes:—Since the beginning of this year more determined efforts have been made by the employers in the Lancashire cotton spinning trade to lift yarn prices on to a more profitable level. Production of American qualities is being reduced by 50 per cent., and it is likely that this short-time policy will continue for another month to the end of May. The Provisional Emergency Committee has now issued a statement giving prices which should be obtained for standard counts of yarn. The figures published have caused considerable interest, as they are 7d to 8d a lb higher than market rates. As a step towards the stabilisation of prices in the spinning section of the cotton industry, the Federation of Master Cotton Spinners' Associations has urged all members not to sell yarns below the cost of production. A sub-committee of the federation was appointed a few weeks ago to consider what action should be taken to secure a discontinuance of the practice of selling yarn at less than the cost price. The sub-committee has been instructed to collect all necessary data and consider every aspect of the matter, with a view to firms being supplied with reliable information relating to cost prices for standard American yarns. Until further inquiries have been made, spinners are being urged to carry out the following resolution adopted by the general committee of the federation:—“That the selling price of American yarn be not less than the cost of production, including all charges calculated on the basis of full-time working.” It may be mentioned that, according to the Provisional Emergency Committee, the stoppage of production to the extent of 50 per cent. means that for the yarn made 4d a lb more will have to be obtained to cover the higher standing charges in relation to the limited output of the mills. Although for over two years the depression in the weaving branch of the industry has been very acute, no attempt has yet been made to organise short time amongst cloth manufacturers. The Cotton Spinners' and Manufacturers' Association, however, has decided to ask the district associations for their views as to some system of organised short time. It is believed that much difficulty will be met with in arranging a definite scheme, as those firms who have contracts on hand cannot afford to stop looms, as in such cases there would be a danger of orders being cancelled because of late delivery.

Two Scottish Life Offices.—The Scottish Provident Institution, one of the best of the mutual life assurance societies, shows no sign of decline. The net new business for last year, though not up to the high record of

1920, exceeded that of 1921. The amount was 3,495 policies, assuring £2,299,065, against 3,389 for £2,270,235. In addition, eight capital redemption policies were issued for £233,350. The life premium income amounted to £988,008, as compared with £954,590, and the cost of expenses and commissions was 15.66 per cent. of the premiums, as compared with 15.92. The mortality experienced was, as is usual with high-class offices, considerably below that shown by the tables employed. The ratio of the actual to the “expected” claims was 72 per cent. The total funds of the Scottish Provident increased by £452,937 to £17,553,857, and yielded a net rate of interest of £4 5s per cent., after allowing for income-tax. This rate compares with £3 17s 3d per cent. before the war. At the end of the current year a valuation falls to be made; the results should be very much more favourable than at the end of 1918, when large sums had to be provided for depreciation on investments. The Scottish Widows' Fund, operated by a system different from that of the Scottish Provident, has done as well as its neighbour. The new policies issued last year numbered 3,341, assuring £2,110,253 net, as compared with 3,636 policies for £2,365,299 in 1921. The life premium income was £1,598,339, against £1,593,214, and the expenses and commissions amounted to 11.9 per cent. of the premiums, as compared with 12.48 per cent. in the previous year. The net rate of interest earned by the funds was £4 5s 8d, as compared with £4 5s 1d in 1921 and £4 0s 4d in 1921. The mortality experience was similar to that of the Scottish Provident, the actual claims being 68 per cent. of the amount allowed for. The Scottish Widows' Fund Society will also hold a valuation at the end of this year, of which the results may be expected to be a great improvement upon those of 1918.

Phoenix Assurance Company.—The accounts of this large office are complicated by the adjustments which followed the purchase of the business of the London Guarantee and Accident Company, which, though mainly concerned with accident and miscellaneous insurance in this country and America, had fire, marine, and other departments. The report of the Phoenix for last year includes the figures of the London Guarantee and Accident, as well as those of its other allied companies, the Norwich Union and the Union Marine. In the fire department the premiums showed little change; they were £4,747,557, against £4,745,020 in 1921. The fire claims were £2,722,005, or 57.3 per cent. of the premiums, against £2,627,216, or 55.4 per cent. Expenses amounted to 42.2 per cent., against 42.4 per cent. After allowing for the reserve against unexpired risks on the basis of 40 per cent. of the premiums, the fire surplus for last year was £18,337, against £27,448 in 1921. The large surplus in 1921 was due to the reduction in the premium income, and the consequent release of reserves provided for unexpired risks. A sum of £255,711 was brought into the fire account from the adjustment account of the London Guarantee and Accident, and a transfer of £274,049 made to profit and loss. In the marine department the premiums were £1,438,839, and the net claims in respect of 1922 and previous years were £1,828,007; the claims for these previous years had already been provided for by reserves brought forward. Expenses were £104,810. A transfer to the marine account of £1,279,696 was made from the adjustment account of the London Guarantee and Accident, and the funds increased from £1,163,000 to £1,908,000; £40,627 was carried to profit and loss. The accident, employers' liability, and miscellaneous department—which is now the largest of the company's accounts—showed premiums of £5,374,328, claims of £2,991,471, and expenses of £2,159,340. By a transfer of £2,970,988 from the London Guarantee and Accident adjustment account the funds were increased from £1,229,000 to £4,267,000; £156,507 was carried to profit and loss. The total transfers to profit and loss were £486,182, and the interest receipts £522,744; a refund of British taxes yielded £35,616. The directors recommend a dividend of 12s a share, less tax. A sum of £250,887 was written off the cost of business acquired, leaving

£472,000, and the credit balance at profit and loss was then £603,629. The total reserve funds, exclusive of capital, amounted on December 31st last to £23,894,640.

Birmingham Small Arms.—Again a loss is revealed in the accounts of the Birmingham Small Arms Company for the year ended January 31st last. The report of the directors states that as against a deficit of £356,000 for 1921-2, a loss of only £46,204 is now recorded. But these figures are arrived at without including any allowance for interest on the 12-year notes, which amounts to £120,466. This figure has been added to the deficits mentioned by the directors for the years 1921-2 and 1922-3 in the table which follows:—

	1914.	1917.	1918.	1919.	1920-21*	1921-22.*	1922-23.*
Net profit	190,429	427,976	435,207	373,091	566,881	Dr 469,168	Dr 206,671
Preference dividend ..	19,684	21,118	20,649	19,710	113,471	21,834	23,134
Ordinary dividend ..	115,047	230,094	230,094	234,511	140,759	Nil	Nil
15 %	20 %	20 %	20 %	10 %	5 %	Nil	..
To reserve	50,000	150,000	155,473	100,000	..	..	..
Carried forward	+ 5,698	+ 26,764	+ 28,931	+ 18,876	+ 29,265	- 291,002	- 30,010

* 18 months ending January 31, 1921. † Including £100,729 interest on short-term notes. ‡ Year ended January 31st.

On turning to the balance-sheet it is satisfactory to find that the contingent liability under guarantees to the bank in respect of overdrafts of the Aircraft Manufacturing Co., Limited (in liquidation), and Peter Hocker, Limited (also in liquidation), has been reduced during the year from £596,063 to £269,931, but “Investments” is an item concerning which we should be glad to hear more about at the annual meeting on April 20th. The words “Shares in and loans to subsidiary companies” (valued at £4,121,848) are followed by the statement that “These investments are brought forward on the same basis as in previous years, and no adjustment, in view of existing trade conditions, has been made.” We would suggest that the balance-sheet would be clearer to shareholders if the actual assets and liabilities of the subsidiary companies were shown separately, and some information offered as to whether these investments represented fairly the value of the surplus assets of subsidiary companies.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that the rains of the early part of March hindered work on the land considerably, but with the finer weather that prevailed later fairly good progress was made. The lighter soils dried rapidly, and a satisfactory tilth is being obtained on this type of land, but heavy soils, as a result of the absence of frosts during the winter and the rapid drying of the surface, are working badly. In the east and south-east some of the stiffest soils had not become dry enough to cultivate by the end of March. Sowing of spring corn was proceeding in all parts of the country at the date of the reports, but this work is generally more backward than usual, especially in the districts where sowing is usually done early. None of the spring sowings are yet showing above ground, except for the comparatively small areas drilled about the beginning of February, which have come up well as a rule. The preparation of the land for potatoes is backward, and very little planting has yet been done, though a start has been made on Fen lands. In Cornwall the early potatoes are well forward, and many crops are above ground, but in other districts where early crops are grown planting is backward. It is reported that potato growers have purchased less seed than usual from other districts, as, owing to the large surplus and the shortage of money due to the low prices obtained for last year's crops, many growers propose to plant their own seed. The winter corn has improved during the recent fine weather, but such wheat and oats as lost colour during the rains still have rather a yellow appearance. On the whole, wheat and oats are strong, healthy plants, and promise well, only a comparatively small proportion on the wettest soils having an unhealthy appearance. The small areas of winter barley look well. In the east beans are making slow growth, and are still backward in most parts of the country, whilst there are some thin crops. Pastures are now fresh and green, and in many districts grass made good growth during the

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000
Paid Up Capital ... 1,080,000
Reserve Fund and Undivided Profits ... 1,352,105

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

latter half of March. Cattle and sheep are healthy and are in satisfactory condition as a rule, though, owing to the poor quality of the hay, cattle have in some cases finished the winter rather lean. The supply of labour is usually more than sufficient for requirements, but with the better weather there are rather less casual workers unemployed than a month ago. At the yearly hirings in Northumberland boys and women were scarce, but men had some difficulty in finding employment. The strike among farm workers in Norfolk is still proceeding.

Transvaal Gold Output.—The output of gold of the mines of the Transvaal during the month of March amounted to 761,586 ounces of fine gold, as compared with 704,970 ounces during February. The output in the first three months of 1922 amounted to 639,728 ounces. The following table shows the production for a number of years:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January ..	782,634	714,182	676,059	670,503	651,593	639,728	704,469
February ..	781,321	659,759	636,728	625,330	658,137	..	704,970
March ..	787,094	696,281	712,379	707,036	671,133	..	761,586
April ..	749,778	717,000	694,944	686,979	681,383	511,336	..
May ..	779,385	741,317	724,995	699,041	687,776	629,786	..
June ..	759,724	727,696	702,379	715,957	678,490	675,697	..
July ..	757,839	736,199	725,497	736,039	689,556	730,435	..
August ..	756,658	740,210	706,669	702,083	711,546	753,490	..
September ..	736,231	708,406	696,558	682,173	691,026	747,089	..
October ..	751,290	679,764	723,722	662,472	707,535	776,156	..
November ..	722,839	658,701	677,970	633,737	704,236	764,476	..
December ..	722,419	641,245	650,191	632,215	681,847	790,713	..
Totals ..	9,018,084	8,418,292	8,330,091	8,153,685	8,114,516	7,020,111	8,231,025

The output figures continue to show satisfactory progress. The following are the number of natives employed at the end of the last eight months by members of the Witwatersrand Native Labour Association and contractors:—

	Aug., 1922.	Sept., 1922.	Oct., 1922.	Nov., 1922.	Dec., 1922.	Jan., 1923.	Feb., 1923.	Mar., 1923.
Gold mines ..	175,054	174,565	175,129	173,173	176,834	181,985	182,983	181,473
Coal mines ..	12,270	12,000	11,495	11,089	11,001	14,664	14,717	14,710
Diamond	1,219	1,234	1,218	1,237	1,253	1,222	1,227	1,273
Total	188,543	187,799	187,842	185,499	189,088	197,871	198,927	197,456

The number of natives employed at the gold mines was slightly lower on the past month.

COLONEL THE VISCOUNT BURNHAM, president of the News-vendors' Institution, will preside at the society's 84th annual general meeting, to be held at Stationers' Hall, Ludgate hill, on Tuesday evening, April 17th, at half-past six o'clock.

A COURSE of five lectures on Electoral Methods will be given by John H. Humphreys (secretary of the Proportional Representation Society) at the London School of Economics and Political Science on Wednesdays at 5 p.m. (beginning May 9th). Each lecture will be followed by a discussion class at 6 o'clock. Fee for the course, 10s.

THE Administrator of Hungarian Property (Cornwall House, Stamford street, S.E. 1) gives notice that he intends to declare a first dividend of 1s 6d in the £. All creditors who lodged their proofs of claim with the Administrator not later than March 31, 1923, and who by the Treaty of Peace (Hungary) Order, 1921, or any amending Order are entitled to benefit, may participate in the said dividend under the conditions contained in the above-mentioned rules. The first distribution of the said dividend will be made on June 30, 1923.

UNITED STATES.—FINANCIAL AND ECONOMIC OUTLOOK—JAPANESE AND CHINESE BONDS OFFERED—A SILK FIRM IN RECEIVERSHIP.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 30.

New financing undertaken here this week included an offering by the National City Company of \$19,900,000 external loan 30-year non-callable 6 per cent. gold debenture bonds of the Oriental Development Company, Limited, guaranteed by the Imperial Japanese Government. This is the first Japanese financing in the American market since the Russo-Japanese war. The bonds were priced to investors at 92 and interest, to yield approximately 6.62 per cent. The proceeds, it is announced, will be used to redeem 15,000,000 yen of the company's outstanding debentures, and to retire 10,000,000 yen of bank loans; the balance is to be used in developing the company's business in Japan and in the latter's colonies, principally Korea, for "economically productive purposes." Application will be made, it is stated, to quote these bonds on the New York Stock Exchange. Another foreign offering consisted of 1,500,000 of the Chinese Government 4 per cent. external gold loan of 1895, due July 1, 1931, which is well known to European institutions and investors. The bonds are secured by a first charge on the entire revenues of the Imperial Maritime Customs, and also by deposit of Custom bonds. The price to investors here was \$84 flat per 500-franc bond, including the right to participate in the 1923 drawings; at that figure the yield to average maturity is 7.20 per cent.

The award this week of \$5,000,000 5 per cent. Province of Quebec bonds to Canadian banks in competition with New York institutions seems to indicate that Canada is now in a position to finance some of her own loans on better terms than could be obtained here. The Canadian banks, which were the successful bidders, offered 98.935; at that figure it is doubtful if they can afford to sell them at a price to yield more than 5 per cent. New York bankers say that, under present conditions here, they could not possibly pay such a high price. Canadian bonds floated lately in this market have been offered to investors at a price to yield about 5.20 per cent.

In most cases offerings of new securities are meeting with a good response from investors, although the issues are not being absorbed as rapidly as was the case before the general trade and industrial expansion began a few months ago. Some offerings have moved rather slowly, including the \$50,000,000 external loan of the Republic of Cuba, which was recently put on the market here by a banking syndicate headed by J. P. Morgan and Co. It is understood that about 20 per cent. of that loan remains to be disposed of.

In a review of business conditions *Bradstreet's* will say in its issue of to-morrow: "Trade observers, merchants, and bankers will, we believe, agree that the past week or ten days have seen a slight sobering of the exuberant feeling resulting from public realisation of the great surge forward in industry, in wholesale trade and in speculation that was witnessed in the first and second months of this year. Certainly, there have been a number of cautionary signals displayed, and a number of rough and ready—especially ready—predictions have appeared in various lines setting forth in almost comically precise terms just when the present concededly active industrial situation was to wither and decay. It might be said that speculative markets showed the chief reflection of these reports, while the stock, bond, cotton, and wheat divisions all weakened sympathetically. Explanations of the reasons for the setting afloat of these hit or miss reports may be found variously in the seasonal quieting shown in many lines of wholesale trade as the peak of spring buying passed; in the quiet tone of retail trade due to exceptionally bad weather for three weeks past and the early date of Easter; in the public knowledge that prices of many commodities have been advanced greatly, which has led to misgivings as to the effect of these on final consump-

tive buying, and the reports that the national Government was working through the Department of Commerce to devise means for what might be called the regulation of the admittedly superabundant activity in, for instance, building lines so far as Federal construction was concerned. Of special interest, too, was the feeling that the present activity was bound to be reflected in higher money rates, and that the usual meeting of the heads of the Federal Reserve Banks," with the members of the Federal Reserve Board in Washington, "might result in a further stiffening of rediscount rates, with the speculative community especially interested in the liquidation of some possibly extended lines. Whatever the moving or contributing causes, there have been several outgivings, which by their very number and character have given evidence that many minds were thinking along similar lines, these having largely to deal with advice as to the handling or prevention of possible evils yet to come." The authority quoted then gives liberal extracts from expressions which have appeared recently in reviews or bulletins published by such well-known institutions as the Irving Bank-Columbia Trust Company, the Chase National Bank, the Guaranty Trust Company of New York, the Harvard Economic Service, and the Federal Reserve Board. Commenting on the views set forth by those authorities, *Bradstreet's* will say:—"It will be seen that cautionary signals have been numerous, but nothing beyond caution has been indicated; and it is submitted that this caution is not only desirable but proper, under any and all circumstances, if the present, on the whole very satisfactory, conditions are to be maintained. If, as appears to have been the case in some lines, the number of cautionary signals has led some people to an attack of 'nerves,' the results, on the whole, may be beneficial. A safe and sane weighing up of the above reports and arguments (referring to the extracts given) should be salutary, and tend to make for future safety."

A great deal of apprehension was felt by the stock market community this week over a possible increase in Federal Reserve Bank rediscount rates. While the Federal Reserve officials, at their Washington conferences, no doubt carefully considered financial and economic conditions and the outlook for the future, there have been no developments thus far that would seem to foreshadow an increase in rediscount rates in the immediate future. It can hardly be expected, however, that such rates, which are the same in all of the twelve Federal Reserve districts throughout the country, will continue indefinitely at the present level of 4½ per cent. But whatever changes may be made—and they are more likely to be in an upward direction than downward—will be governed entirely by conditions that develop in the respective districts. The money market here continues decidedly firm, although there is no sign of any stringency. Time funds command 5½ per cent. for all maturities, the bulk of commercial paper is being discounted at 5½ per cent., and call money on the Stock Exchange rules around 5½ per cent., frequently rising to 6 per cent.

Announcement of a receivership for the D. G. Dery Corporation, one of the largest broad silk manufacturers in this country, has attracted a good deal of attention in silk and allied trades, but is not regarded as a reflection of unfavourable conditions in the silk industry generally. Most silk goods mills have a large percentage of their capacity active, and are well sold ahead.

FRANCE.—M. LOUCHEUR'S VISIT TO LONDON—A BUFFER STATE—REVENUE—PRICES—TREASURY BONDS.

(FROM OUR CORRESPONDENT.)

PARIS, April 12.

The Easter holidays have brought about an almost complete cessation of activity in many directions, but the political situation in the Ruhr still dominates all other questions. Superficially, there has been little change in the outlook during the past two or three weeks, but, as a matter of fact, there has been an enormous amount of activity below the surface, and it may be predicted with a good deal of confidence that important developments will take place in the very near future. M. Loucheur's much-discussed visit to London at Easter has proved very

puzzling to a large section of French opinion, and has been commented on with about equal proportions of approval and disapproval. The real explanation appears, after careful inquiry in reliable quarters, to be quite simple.

The Poincaré Government is anxious to bring the present deadlock in regard to the Ruhr to an end before the Chamber reassembles on May 8th after the Easter recess. The German Government, it is universally believed here, is extremely desirous to open negotiations for a settlement, but finds it impossible to decide on what means to adopt to bring this about. Meanwhile, there are signs that opinion is beginning to become restless here, although less so than on the other side of the Rhine, and business interests in both countries are suffering enormously. In the circumstances M. Loucheur, who is both a great French industrial and a politician who believes he is justified in thinking that he may one day find himself at the head of the Government here, took the bold step of paying an independent visit to London, for the purpose of ascertaining exactly what British views on the present situation are. That M. Loucheur went to London with the full knowledge of M. Poincaré is undoubted; that he went as a direct emissary from the French Government is almost certainly untrue.

One important feature of the present situation is the proposal for the creation of an autonomous Rhineland Republic, in the form of a demilitarised buffer State, which shall be retained within the *cadre* of the German Empire, but which shall be for all practical purposes independent of the Berlin Government. This buffer State, it is suggested, shall include the whole of the occupied area on the left bank of the Rhine and also a substantial portion of that on the German side of the river, including a large part of the Ruhr area and particularly Essen itself. There is a growing feeling here, in non-official quarters, that in the adoption of this proposal may be found the solution of the greater part of the reparation problem, and the satisfaction of the French demand for some tangible means of ensuring the security of this country, now that the Triple Pact has been repudiated by Great Britain and the United States. The weak point in the scheme appears to be the difficulty that might arise in enforcing the suggested new régime for the Rhineland, in the event of serious differences, in regard to their respective interests in the area in question, arising between France and Germany in the future. It is recognised that to instal the League of Nations as the supreme court of appeal over the Rhineland might have the effect of transforming the autonomous area, in the German mind, into another Alsace-Lorraine, which is the one thing all parties, and especially the French, are anxious to avoid.

Rightly or wrongly, the advocates of the proposal insist that the population of the territory concerned is fully prepared to accept the suggested new régime, and I have been told on good authority that there is documentary proof in existence in Paris showing that native-born German mayors and other responsible authorities, representing 70 per cent. of the inhabitants of the Rhineland, have pledged themselves to proclaim an autonomous Rhineland Republic, within the limits of the German Empire, from the moment they are assured that they will have the moral support of the Allied Powers. They have also pledged themselves, it is asserted, to accept the burden of one-fifth, or possibly one-third, of such Reparation debt as may eventually be imposed on Germany as a whole. The widespread belief that this proposal for an autonomous Rhineland now constitutes the crux of the whole Franco-German problem has been strengthened by the fact that M. Loucheur, immediately after his return from London, saw both M. Poincaré and the President of the Republic, and that, almost simultaneously (at M. Loucheur's direct request, it is stated) Dr. Dorten, the leader of the Rhineland "separatist" movement, arrived in Paris, where he now is.

The French revenue returns for March, which have been issued to-day, show a total yield for the month of 1,674,358,200f from all sources, including income-tax, tax on war profits, and the sale of war stocks. Of this total 501,975,600f was derived from direct taxation of all kinds collected on behalf of the State (as distinct from local taxation), and included 311,918,300f from income-tax and

162,104,100f from the special tax on war profits. The revenue from indirect taxation and State monopolies yielded a total of 1,288,701,000f, or 123,735,500f (over 10½ per cent.) in excess of Budget estimates for the month, in spite of the fact that the revenue from Customs duties was well over 66 millions (or 17 per cent.) short of expectation, owing to the high rate of exchange against this country. With the exception of the returns from these duties, from those on benzol, and from the exploitation of the telephone system (which latter showed a falling off of 120,000f as compared with the Finance Minister's estimates), indirect taxation showed an increase under every heading, that from registrations being over 43½ millions in excess of the estimate. The revenue for the first three months of the year from indirect taxation and monopolies alone (exclusive of income-tax) is returned as having been 249,145,000f in excess of Budget expectations. The most notable feature of the return, perhaps, is the improvement in the yield from the much-discussed tax on turnover, which is now becoming systematised, and steadily trending towards the figures which its inventor, M. Klotz, predicted it would reach when he first brought it into operation. The yield for March was 217,678,000f, or over 10 per cent. more than M. de Lasteyrie estimated to secure from it in his Budget forecast for 1923.

The general index figures for wholesale prices in France for March have been issued to-day, and reveal some interesting variations. The comparative detailed figures, which are based on 100 as representing the mean index figure for the period 1901-1910, are as follows:—

	February, 1923	March, 1923
	(Corrected).	(Provisional).
General index figure (45 categories)	487.6	490.2
Foodstuffs (20 categories)	465.1	459.2
Vegetable foods (8 categories)	398.2	400.1
Animal foods (8 categories)	495.1	487.6
Sugar, coffee, cocoa (4 categories)	538.9	520.7
Raw materials (25 categories)	505.7	515.0
Minerals and metals (7 categories)	478.2	510.9
Textiles (6 categories)	646.5	632.7
Sundries (12 categories)	451.3	458.6

The index figure for retail prices of thirteen categories of foodstuffs in Paris, which was returned as 3394 for the end of February (equivalent to an increase of 216 per cent. on the prices of corresponding articles in 1914) is given as 3454 for the end of March (or 221 per cent. higher than in 1914), a rise of 5 per cent. on the month. The variations in retail prices of the same 13 categories of foodstuffs for the whole of France are represented by 3320 at the end of February, 1923, as compared with 3312 at the end of November, 1922. The "Commission Régionale d'Etudes relatives au cout de la Vie à Paris" on Saturday issued a statement showing that the cost of living has risen considerably during the past three months in respect of all kinds of expenditure. The index figure representing the expenditure for food, housing, clothing, heating and lighting, for a family of four persons living in the Paris area, based on 100 for 1914, has risen from 28c at the end of September, 1922, and 300 at the end of December, 1922, to 324 at the end of March, 1923. It is still, however, considerably below the figure for the

end of December, 1920, when the cost of living reached the record figure of 370, thereby bringing about a general and substantial rise in wages and salaries of all kinds. In November, 1920, according to the index figure of the Statistique Générale, the retail prices in Paris of 13 categories of foodstuffs were represented by an index figure of 4577 (or an increase of 326 per cent. on those of 1914), as compared with 221 per cent. at the end of March, 1923.

The subscription lists for the new issue of three-, six-, and ten-year 6 per cent. Treasury bonds closed on Saturday, when it was officially announced that the reports so far received by the Ministry of Finance showed that at least 6,500,000,000 of the new issue had been subscribed. As the returns were at that time incomplete, the Treasury authorities announced that there is good reason to believe the gross subscriptions will amount to over 7,000,000,000. No information is yet available as to what proportion of this amount consists of fresh money. As one of the real objects of the new issue is to provide money to reimburse the issue of two-year Bonds which come to maturity in the immediate future, it is impossible at present to say to what extent the operation has been successful, but it is officially regarded as completely satisfactory.

GERMANY.—RUHR—FINANCES—INFLATION—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, April 10.

M. LOUCHEUR's mission to England has provoked a great deal of comment and speculation, but it is not believed that it could have brought a Reparations settlement any nearer. The Ruhr question now dominates everything; and the public attitude here is combative, the belief being rightly or wrongly held that France will be obliged by monetary losses and damage to her prestige to retreat. It is not, however, made clear how Germany can indefinitely stand the present position, in which the most important part of her industries, whose output is needed for payment of food and of fuel and raw materials for the unoccupied provinces, are producing almost exclusively for stock. The solution so far tried is the old ere of credit and inflation. In principle the Ruhr industry is now in much the same position as the Republic's Finance Ministry; not having any longer current receipts sufficient to pay its way, it is pulling along with fictitious receipts which, in the end, are mainly supplied by the Reichsbank. Stories of impending German crashes have been so often falsified that it would be precipitate to predict a crash from the new trouble; but the effect must be increasing impoverishment and a new strain upon the classes that suffer from currency depreciation. If this is so far not visible, it is because the home currency depreciation has been so far determined exclusively by the mark exchange, and the mark still holds; but from the last Reichsbank reports it must be concluded that the relative price-stability will at a not distant date be upset by the flood of paper money. If so, the temporary stabilisation of the mark exchange by means of intervention will not have brought any benefit.

Returns of the result of the Gold Treasury Bill operation are still lacking. According to the "Deutsche Handelsdienst," only \$12,600,000 has been subscribed: this is almost exactly the quarter of the amount asked for which was reported last week. On the basis of the bankers' guarantee the Government will receive \$25,000,000, equal to about half a milliard paper marks, or one-tenth of the present circulation. The ratio of this sum and of the Reichsbank's ordinary holding of foreign bills to the circulation rapidly decreases owing to the continuance of inflation side by side with exchange stability; and the process witnessed for years, under which the exchange value of the circulating currency, despite a rapid nominal growth of circulation has declined, is being reversed. Probably one cause of the under-subscription to the Loan is the imminence of payments for Property and Income-tax and for the paper-mark Forced Loan, all of which are due by the end of this month; there was a strong motive for not bringing out secretly hoarded stocks of foreign currencies, which would be liable both for the Property tax and the Forced Loan. The Customs gold surcharge

has been raised from 494,900 to 497,900 per cent. The gold surcharge law has been altered by making the duty payable at the surcharge rate of the day of import of goods, instead of, as until now, the day of payment of the duty. Patent fees have been increased fourteen fold from the 1st April. Paper-mark loans are still being issued by municipal and other local bodies, at rates of up to 11 per cent.; and owing to the mark stability they have a prospect of success. Large new private emissions are stated to be impending. In March, increases of capital totalled 13,815 millions against 15,331 millions in February; capital raised by newly-founded concerns 6,656 millions against 4,252 millions, and bonds, in addition to the 500 milliards of the Gold Loan, 7.7 milliards against 33 milliards.

The Reichsbank report for March 31 shows circulation exceeding 5½ billions, or more than fourfold that of the end of 1922, and nearly fifty times that of the end of 1921. In spite of the stoppage in the price rise, the buying power of the currency in circulation is much less than at the end of 1921, the commodities index-figure having risen about three times as much as the nominal circulation. The statement for the 31st shows an increase of 90,110 millions in private Bills, 207,554 millions in Treasury Bills, and 562,284 millions, to a total of 5,517,919 millions, in circulation. Darlehns advances increased by 158 milliards to 1,159 milliards. The legal limit for these advances has been raised to 2 billions. The Bank continues to book new issues of token money in base metals with its "metal reserve"; the last week saw an addition of 2,859 millions of such money, so that the metal reserve is now 7,055 millions, of which 1,004,830,000 is gold. It is an anomaly that the gold should be booked at its goldmark value, and added together with a supposedly sixfold greater value of token-money, which has practically no metal value at all. The new Austrian National Bank books its gold currencies and coins at their current exchange value. The movement of circulation during the past 1½ years has been:—

	Million Marks.
December 31, 1921.....	113,639
March 31, 1922.....	130,671
June 30, 1922.....	169,211
September 30, 1922.....	316,869
December 31, 1922.....	1,280,094
January 31, 1923.....	1,984,496
February 28, 1923.....	3,512,787
March 31, 1923.....	5,517,919

The Bank has suffered considerable losses through French seizures of its money. Altogether about 30 milliards have been seized, and there is no recognised cover for the loss. The Bank maintains 5 or 6 note-printing establishments in occupied territory, the plates of some of which are in French hands. According to the "Frankfurter Zeitung," the Bank has now the help of 40 auxiliary printing firms and 20 bank-note paper firms. It is considered necessary to print notes in occupied territory, because the risk of seizure of notes in transit over the new customs frontier would be even greater. The need for money on the Ruhr is enormous; at least 1,300 milliards of 3,800 milliards issued since January 11 have gone, estimates the journal mentioned, to occupied territory.

Prices (*Frankfurter Zeitung's* wholesale index) fell in March by 5.6 per cent. against 5.4 per cent. in February, every group, except food, showing a material drop. Figures (on the basis of 1 in July, 1914) are:—

	Gold (Doll'r).	Food.	Textile and Leather.	Minerals.	Miscellaneous.	Manufactured Goods.	All 98 Wares.
January, 1920.....	19	20	26	27	11	15	20
" 1922.....	45	38	58	52	31	33	42
" 1923.....	2045	1758	3206	2622	1778	1518	2054
February, 1923.....	9524	5550	14137	9312	5347	4766	7159
March, 1923.....	5381	5361	9450	8298	6949	5614	6770
April, 1923.....	5024	5350	8349	7822	6434	5315	6393

All groups are materially above pre-war gold prices, manufactured goods being cheapest. The index figure for ten home products is 5064, against 6084 at beginning of March, and for ten imported products 6068, against 6767. At the beginning of February home goods were only 3838, against 9863 for foreign, so that, as always in times of mark stability, the disparity between prices of home and imported goods has tended to disappear. Judging by the American and English

indices, German gold prices are still well behind those of leading high-exchange countries. The official wholesale index for March is 4888, against 5585 in February, but these are average prices for the whole month. Iron prices, after remaining unchanged since late in February, have been cut to: Hematite 646,300m per metric ton, Siegerland steel-iron 843,700m, Spiegeleisen (6 to 8 per cent. mang.) 934,600m. Supplements are charged for iron smelted with foreign coal; and English hematite and foundry iron are being delivered a little cheaper than this dearer kind of native iron. The first deliveries of iron from Hungary have been made, and steel rails have been ordered from Austria. In spite of the Ruhr embargo no shortage of heavy iron is felt in the unoccupied provinces; owing to the large reserves and to considerable imports, the supply is sufficient, and the market, after being for a short time very active, is now dull. The iron and steel using finishing industries everywhere complain of bad business, in particular the small iron goods and cutlery concerns of Hagen, Remscheid and Selingen.

The unemployment reports show further increases, and as the reports are always belated, present conditions are probably worse than is shown. The number of publicly-supported unemployed on March 1st was 194,591, against 149,181 on February 1st, 85,419 on January 1st, and only 16,678 on October 1, 1922. The highest number in the last two years was 413,321 on April 1, 1921. The rate of unemployed among Trades Union members on February 24 was 5.7 per cent., against 4.4 per cent. a month earlier, the rate of men working on short time 16.5 per cent., against 13 per cent.

ITALY.—WHOLESALE PRICES—COST OF LIVING—STABILISATION OF THE LIRA—ABOLITION OF OBSTRUCTIVE TAXES AND A NEW TAX ON TURNOVER—HOTEL AND RESTAURANT TAXES.

(FROM OUR CORRESPONDENT.)

TURIN, March 27.

PROFESSOR BACHI's index number of wholesale prices, calculated on the basis of 1920's prices (100), has settled down in recent months:—

	Nov. 1920.	June 1921.	Oct. 1921.	May 1922.	Oct. 1922.	Jan. 1923.	Feb. 1923.
Vegetable foods.....	107.7	97.0	115.8	106.3	112.9	109.4	109.1
Animals.....	124.1	100.5	128.5	93.9	113.5	108.4	107.8
Chemicals.....	107.7	63.4	74.6	67.3	72.1	69.3	69.8
Textiles.....	94.0	45.8	75.6	65.7	84.6	80.8	83.0
Minerals and metals.....	101.4	60.4	64.1	57.5	69.1	62.5	64.3
Building materials.....	112.6	101.6	90.9	78.5	82.3	87.5	86.1
Miscellaneous.....	108.7	95.0	114.4	96.4	123.6	124.7	129.9
Miscellaneous.....	105.2	90.4	94.2	87.9	96.0	98.8	92.3
General index.....	107.3	81.5	95.9	83.3	96.2	96.2	93.2

In this series a seasonal movement of prices is evident, which corresponds closely to the usual strengthening of foreign exchanges in the autumn and decreases in the paper cost of purchasing foreign goods in the spring months. It seems, however, that the worst point was in the autumn of 1920, when Italy was on the brink of a Bolshevik experiment. In recent months the general index would have been better if the Ruhr affairs had not exercised an evil influence on the exchanges, and textiles had not gone up, according to a general world tendency. If the lira has not followed more strictly the vagaries of the French franc, the cause may lie in the increased hope that the public budget will balance, and that sales will be made of balances held by Italian business men in foreign centres. Not a few heads of trading firms used to hold balances in sterling or dollars as insurance against the risk of great and sudden increases in foreign exchanges. To-day they may hope that the lira will go on improving, and, by their realisations of balances, co-operate to keep down exchanges in face of the threatening international situation.

Retail prices and the cost of living are somewhat slow in following wholesale price variations. The cost of living of a working family of two parents and three sons (on the basis of the first half of 1914 = 100) is calculated as follows in Turin:—

	Food.	Clothing.	House Rent.	Heat & Light.	Miscellaneous.	General Index.
January, 1920.....	351	327	100	406	344	318
April, 1921.....	534	497	110	417	544	470
July, 1921.....	446	411	110	354	537	405
January, 1922.....	524	454	120	435	591	466
April, 1922.....	470	433	120	378	587	424
November, 1922.....	531	437	120	411	578	465
December, 1922.....	517	437	120	416	578	457
January, 1923.....	499	433	120	423	574	446
February, 1923.....	484	435	120	428	574	438

We may observe here the same tendency towards maximum in the winter and minimum in summer and spring months. The average increase in the cost of living corresponds closely with the depreciation of the lira in gold and as the gold has been depreciated itself, it seems that the purchasing power of the lira is better in Italy than in foreign countries. When the July figures are forthcoming the house rent item will rise abruptly to about 200, as the new system of rent regulation by arbitration will then begin to be applied.

At the recent meeting of the International Chamber of Commerce held at Rome, a renewed proposal by Professor Cassel for the stabilisation of exchanges met with a very cool reception by the average public opinion in Italy. The motion was shelved under the guise of a vague acceptance of the principle. Public opinion in Italy still clings firmly to the hope that in some future day the lira will be restored to the old gold parity. No proposal for fixing the lira at, say, 25 cents gold has the slightest chance of being entertained by responsible statesmen or parties, notwithstanding that no one is capable of predicting when and how the full restoration to parity will be effected, and how it will be possible to overcome the great difficulties which would arise in the balancing of the public Budget and in the dislocation of industries. Perhaps time will work its own salvation, so that when stabilisation has been reached in fact, no one will cavil at a law to sanction it.

Signor De Stefani, Minister of Finance, has taken another step in the truly gigantic task of simplifying our complicated tax system. A decree of March 18, 1923 abolishes certain taxes:—(1) On production of silk textiles, which was imposed at the rate of 10 per cent. on all natural and artificial silk goods, and greatly hampered the trade and export of this our greatest national industry; (2) on sales of gems and gold and silver goods, a progressive rate of 5 to 20 per cent. As gems and gold objects are easily smuggled, the tax was scarcely productive and encouraged the substitution of secret deals for honest and open commerce; (3) on sales of so-called luxury goods at the rate of 12 per cent. of the price. The high rate of the tax favoured collusion between dealer and clients. In its stead, Signor De Stefani has enlarged an existing tax of 0.36 per cent. on all sales of goods between producers and dealers, and dealers and dealers. Excepting foods, all goods sold will be subject to a tax every time they change hands. The tax is somewhat on the pattern of the French turnover tax, with this difference, that it will not hit sales direct to final consumers, but only sale between the original importer or producer and the last dealer. The tax will be at the rate of 0.50 per cent. on the price of raw materials and agricultural produce, and of 1 per cent. on all other products. A select list of a few luxury goods (gems, ivory, motor cars, Oriental carpets, choice furniture, &c.) will be taxed at 2 per cent. and in these cases alone the tax will also affect the sale direct to final consumers.

Foreign travellers in Italy will be interested in another decree published on March 18, 1923, concerning taxes on expenditure in hotels and restaurants. All over Europe travellers are often bewildered at the variety of taxes and stamps laid on their hotel expenses and bills. From July 1, 1923, taxes will be laid as follow, without additions:—Tax on hotels or pensions, 8 per cent. for luxury or extra category, 4 per cent. for first and second category, 0.50 per cent. every other category. Tax on restaurants (single meals):—Luxury or extra category 1 lira for every person, irrespective of amount paid every other category, inclusive of meals at clubs, &c. 20 cents, whatever the number of persons, if the amount paid is not higher than 20 lire per person; if the sum paid exceed 20 lire, a fixed tax of 20 cents and, in addition, 30 cents for every person.

SPAIN.—PUBLIC EXPENDITURE—A NEW LOAN EXPECTED—CHEAPER MONEY—LABOUR TROUBLES—QUIET STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

MADRID, March 25.

For the first time since he became Minister of Finance, Señor Pedregal has made a declaration to the Press of his intentions, but in such vague terms that no one is any the wiser. The economies which were promised by the Government have not materialised, and the deficit has increased rather than diminished. The papers frequently quote the example of England and suggest that it should be followed by Spain, but the man has still to be found who could take the matter in hand with sufficient energy and tenacity to ensure success. Besides, there is a big difference between both the politicians and taxpayers in the two countries, and the same methods could not be applied. The principal difficulty lies in the violent opposition which is put up immediately any "vested interests" are touched, and this opposition is supported by many of those who are not directly interested, in the fear that their turn might come afterwards. This system of "live and let live" effectively prevents any of the promised Government economies, and the general public, which, in common with most Latin countries, takes little direct interest in the management of its affairs, only wakes up a little when extra taxation touches them; the Government then comes in for its share of abuse, which soon subsides, leaving things as they were—except the cost of living.

Of the last issue of Treasury Bonds there only remains some 25 million pesetas, and a further issue is expected shortly either of more Treasury Bonds or of a Consolidated Loan. Although it has not yet been officially announced, the discount rate of the Bank of Spain is to be reduced from 5 per cent. to $4\frac{1}{2}$ per cent. This will probably be followed by an all-round reduction of the interest allowed by local banks on current account, especially in view of the large balances held by nearly all the banks and the lack of temporary investment for them. Spanish industries have not got over the crisis, and are not asking for capital for the purpose of development. On the other hand, the workmen's syndicates have not yet fully grasped the fact that the time has come for them to give way on the question of wages, and their stubbornness has caused lock-outs to be declared in the different industries. In Barcelona there has been a revival of terrorism, and quite a number of persons have been shot in the streets, some belonging to the extremists' camp and others with moderate tendencies. Whilst this state of affairs exists, it is extremely difficult for Barcelona to produce economically or compete with other countries, even for internal trade, and this in spite of the formidable Customs tariff. Once capital and labour are able to come to terms, it is probable that the country will see a decided improvement, as Spanish finances are really on a sound basis compared with those of other European countries at the present time.

The Madrid Stock Exchange is being modernised by the installation of private telephone booths for the use of the principal banks, but the effect of this improvement is somewhat marred by the announcement that 2.50 pesetas entrance fee will be charged in future instead of 0.50 peseta, as up till now. The "Bolsa," which had already lost a great part of its animation, will now be quieter than ever, and there is a decided tendency on the part of the banks to transact the greater part of their exchange business directly over the telephone, during the mornings especially, in view of the practice of falsifying the official closing rates.

The volume of business transacted during March was smaller than usual, and no important events have occurred to break the monotony of the sessions. Should the Government decide to issue a loan, as anticipated, the resources of the market will be found more than sufficient to meet any demands that the Treasury may make upon it.

ROUMANIA.—FUNDING OF COMMERCIAL DEBTS—IMPORTS FROM GREAT BRITAIN—GRAIN EXPORTS—EXCHANGE RESTRICTIONS—FRENCH LOAN.

(FROM OUR CORRESPONDENT.)

BUCHAREST, March 23.

THE successful outcome of the visit of the Commission to Great Britain to negotiate the funding of Roumanian commercial indebtedness to British merchants contracted before January 1, 1922, has caused considerable satisfaction here, not because either side is completely satisfied with the terms obtained, but because the way has now been cleared for a restoration of mutual confidence and understanding in the commercial relations between the two countries. As the conditions of the agreement are to be carried out under the guarantee of the Banca Nationala, Parliamentary approval must be obtained before the agreement becomes effective, and the necessary "project of law" has already been drawn up and published. Mr Vintila Bratianu, the Minister of Finance, however, has let it be understood that Parliamentary sanction should not be sought until the Debt Commission has completed its negotiations with the creditors of several other European countries, including, it is understood, France, Belgium, Italy, Switzerland, and Holland. A French journal, published under semi-official auspices, has stated within the last few days that French creditors ought not to be asked to accept the terms just negotiated with British creditors, the extension of payments over a period of 20 years, apparently, not being at all to French liking.

A consideration of British trade figures with Roumania during recent years would seem to indicate that a restoration of mutual confidence cannot but have a beneficial effect. During the year 1920 British merchants shipped to Roumania goods to the value of approximately £7,500,000, and over £6,000,000 worth were shipped during 1921. But last year the total fell to only £2,600,000, and while this represents an increase of some £600,000 over a good pre-war year like 1913, the price level in 1922 was probably at least 25 per cent. higher than in 1913, so that the volume of goods shipped during 1922 was presumably less than in 1913, and Roumania, meantime, has doubled her area and population.

While some portion of the decreased value of British exports as between the years 1921 and 1922 can be accounted for by the increased purchases of Roumanian merchants in Germany, most of it is probably due to the decreased buying power of Roumania. The French occupation of the Ruhr has no doubt led to increased purchases—particularly of iron and steel products—from British sources during recent weeks; but the latter factor (decreasing buying power) is still strongly in evidence, and is directly traceable to the succession of poor grain harvests (from the point of view of the surplus available for export) in recent years. Even with the acquisition of the new provinces, the foreign commerce of Roumania is still overwhelmingly dependent on the volume of grain available annually for export. In 1913 grain exports totalled 2,939,253 metric tons from the Old Kingdom, whereas the exports of grain from Greater Roumania during the years 1920, 1921 and 1922 were only 973,094, 1,510,283 and 1,190,299 tons respectively. Lumber, petroleum and cattle exports during 1922 show substantial increases over the preceding years, but they are not sufficient to compensate for the decrease in cereals.

A further restrictive influence on the country's buying power, as well as on the general agricultural situation, is the maximum price regulation for the principal bread grains, and until the price of bread is decontrolled (which is a measure the Government could hardly attempt under present conditions), and until export taxes are considerably reduced, it is hardly to be expected that any very considerable volume of grain will be available for sale abroad. Stocks of manufactured articles (particularly textiles) throughout the country are reported to be very low, and even a slight improvement in the general situation would almost certainly lead to substantially increased purchases abroad.

The law for the control of foreign exchange transactions, which came into effect on March 1st, seems to have

kept lei fairly well stabilised for a few weeks at around 1,000 to the pound, but only at the expense of much inconvenience to persons having to buy or sell foreign exchange. If the law is to be rigidly enforced, it must be expected still further to restrict the economic life of the country.

A measure providing for a credit to Roumania of 100,000,000 (to which reference was made in the *Economist* of January 13th) was recently submitted to the French Chamber for approval. It is confirmed that all of this amount will be turned over in goods.

Letters to the Editor.

THE APPROACH OF A FREE GOLD MARKET.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent Mr Louis H. Cross, in a letter in your issue of the 7th inst., quotes me as having stated at the recent annual meeting of the Sound Currency Association that "the Government should never have been allowed to issue the Treasury notes, and intimated that powers would be sought to place this function in the hands of the Bank of England." The latter part of this statement is correct, but your correspondent is in error with regard to the first. I recognised, as most people did during the panic of August, 1914, that some credit instrument was necessary to allay it, but was dubious as to the use which would be made of such powers of issuing paper money by the Treasury. When Mr Lloyd George, the then Chancellor of the Exchequer, introduced the Bill granting these powers to Parliament, I asked him what steps would be taken to redeem the notes. His reply was that he had no doubt when the occasion (i.e., the panic) had passed it would be to the interest of the banks to retire the notes. A little later I again repeated my question, and his answer was that it was against public policy to retire the notes, and after a third attempt to elicit an answer, he stated that he hoped they would become popular and form a part of our circulation. So easy is it for a Government, any Government, having once discovered this method of raising the wind, to desire to retain it. I pointed out at the time the evils of inflation which would follow from this action, the rise in prices, the export of gold, and derangement of the exchanges; but all in vain. My voice fell upon deaf ears, or those who did not wish to listen. We paid the penalty, and are continuing to do so. In large measure the costly strikes and industrial disputes are directly traceable to this cause. Values have been altered, and the economic foundations of the country have been disturbed. These are now gradually being restored, and it is because I do not wish to see a repetition of these misfortunes that I advocate that the control of the power of issuing paper money should be handed over to the Bank of England.—I am, Sir, your obedient servant,

D. M. MASON,
Chairman Executive Committee Sound Currency Association.
115 Cannon street, E.C. 4, April 7th, 1923.

SINKING FUNDS v. TAXATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your leader in the last issue of the *Economist* is the clearest exposition I have seen published during the last two years of the serious financial and economic problems facing this country. But I cannot understand how "a sinking fund of £50 millions would repay £5,000 millions in 38 years, provided the reduction in the interest charge as a result of the annual repayment is added to the sinking fund."

A sinking fund of £50 millions per annum would repay in 38 years £1,900 millions. The reduction of the interest charge would be only £2 millions per annum, on the basis of the present average percentage of interest paid. This would mean a further repayment of £76 millions, or, say, £80 millions—total, £1,980 millions only.

On the other hand, it should be borne in mind that a considerable percentage of the debt charge is paid back to the Government as income-tax. That item of revenue

would diminish *pro rata* to the repayment of the debt, and the reduction of the charge thereof.

You say the real issue lies between the possibilities of "a capital levy" and a "bold and sustained sinking fund." As the former is impracticable for the just reasons advanced by you, the problem is to create a sufficient revenue for the latter.

Your solution seems to be that further economies should be effected by the Government, but this can only be limited. Besides, a further decrease of revenue due to further trade depression could easily counterbalance any such economies.

You admit that we cannot expect a similar development of population and of productivity to happen in the twentieth century as was the case in the nineteenth century; in other words, we cannot expect to repay the war debt by producing sufficient goods at pre-war level of prices. If this cannot be done, then the only logical and practical conclusion, to my mind, is that the values of commodities should be brought back to the average level at which the war debt was contracted. It is within the power of the banks to accomplish this, and to control the stability of prices through the medium of credit facilities, as it has been done frequently in the past.

It is above the comprehension of any reasonably minded man that the nation should be expected to suffer a low standard of life for several decades, because the money value of the debt is practically trebled through deliberate, premature, and artificial deflation of prices of commodities.

The war debt is a fictitious credit in the sense that the goods produced thereby are wasted. So long as we have the colossal inflation of £8,000 millions war debt credit, it is idle to talk about the dangers of currency inflation; particularly when it is remembered that even in the days of the so-called "gold standard," 95 per cent. of the trade was conducted by bank credit, cheques, and other negotiable documents.

The policy of deflation through contraction of credits was a blunder of the first magnitude. It has crippled the sources and the mediums of the production and the distribution of wealth, and thereby retarded considerably the prosperity of this country.

According to your correspondents, the revival of trade has set in months ago in the United States of America, and the overseas trade of France and Germany has exceeded both in value and tonnage the 1913 figures.

This means that our competitors are increasing the production of wealth, whereas we have still nearly two millions unemployed on doles. Surely this is not sound finance?—Yours truly,

OBSERVER.

74 Princess street, Manchester, April 9th, 1923.

["Observer" has forgotten the effect of compound interest, and has only added one year's saving of interest to the debt repayment. If the saving of interest is added every year, the size of the sinking fund increases every year and the saving of interest increases with it. £50 millions a year accumulating at compound interest of $4\frac{1}{2}$ per cent., or, in effect, a cumulative Sinking Fund of £50 millions a year will amount to £5,000

millions in approximately 38 years. In the second year the sinking fund would be £52½ millions, in the tenth £74½ millions, in the twentieth £115½ millions, and in the thirtieth £180 millions. On the second point "Observer" has overlooked the fact that money taken from the taxpayer and repaid to holders of war debt is almost entirely reinvested, such taxation being, in fact, a means of ensuring that this amount of the nation's income is saved and not spent on immediate consumption. Presumably, it will be invested at a profit on which income-tax will be payable. As to the third point, apart from the saving of interest which a sinking fund policy makes possible, the Budget should further be reduced by the automatic fall of the pensions charge and by economies in Government services. In this latter connection we point out elsewhere that the Civil Services are to-day costing nearer three times than twice our war expenditure on these same services. We agree with "Observer" that in equity it would be fairest for the war debt to be repaid at the price level at which it was incurred, but if the average price level prevailing at the various dates when our war debt was raised is calculated it works out at about 80 per cent. above the pre-war level, which is not very far from our present situation. We cannot discuss the subject of deflation in a note to a letter, but would only observe that during the past twelve months, when £125 millions has been taken from the taxpayer and returned to the capital market in the form of debt repayment, there has been a steady absorption into work of about 500,000 unemployed, and that although we have not yet absorbed the increase in population which has occurred since 1914, our national production to-day is not far short of the pre-war level in most of our industries.—*Ed. Economist.*

PUBLIC AND PRIVATE INSURANCE ENTERPRISE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Surely the writer of the note on above in your issue of March 31st is under a misapprehension regarding the salient facts of the industrial insurance industry.

The Post Office insurance department is a failure because it is prohibited by the Treasury to canvass even in the P.O. department, and because of the ignorance and apathy of the masses, who are unaware that it offers them terms 40 to 60 per cent. better than those of the private enterprise companies. Its expense ratio is only 5 per cent. on premiums, as against 44 per cent. average of the companies. It has no lapses, and it gives surrender values after two years' premiums have been paid.

The lapses in the companies cannot be placed at less than 6,000,000 policies yearly, and assessing each policy at an average of 20s, that shows six million pounds to be added to the 44 per cent. required for expenses. Thus we find that over 60 per cent. of the premiums paid are lost to the assured. Surely the economist cannot regard this waste of small savers' money as proof of the superiority of private over Government enterprise?

The industrial insurance of the private companies is a success only in so far as its shareholders, directors, and chief officials have some of them made colossal fortunes out of it.

The Onslow Bill should, in the interests of the poor and ignorant, and to redeem the character of private enterprise, be passed in its entirety.—Yours, &c.,

J. M. MACDIARMID.

10 Gillespie-crescent, Edinburgh.

Books and Publications.

"EFFECTS OF THE WAR UPON FRENCH ECONOMIC LIFE."

WE can understand Professor Gide's difficulty in finding a fitting title to this volume (which consists of five monographs by well-known authorities on the effects of the war on the French mercantile marine, textile industry, finance, commercial policy, and labour), but we think he is claiming too much when he calls it the "Effects of the War on

French Economic Life." Obviously it deals with a few aspects only, and, although the volume under review contains no announcement on the subject, we learn from another source that other important aspects—such as the effects on prices, wages, population, agriculture, metallurgical industries, &c., will be dealt with in subsequent volumes. Within their limits, however, the essays are well done. The first—that on the effect of the war on French shipping—perhaps contains for a brief essay too much statistical and too little descriptive matter. Out of 25 pages, 11 are in tabular form, of which four are devoted to the freight rates prevailing in the French merchant marine from December, 1913, to December, 1917, and the statistics are a little confusing until it is realised (which is not until page 30 is reached) that "the present" or "now" refers to November, 1919. This article also requires occasional elucidation by an editorial note, and it is unfortunate that errors occur in two of these—viz., on page 16, where the editor refers the reader for an explanation to page 32 instead of to page 34, and on page 30, where he describes c.i.f. as a "technical abbreviation for *carriage*, insurance, and freight." The essay contains no mention of the rationing of tonnage which was as necessary in the French as the British mercantile marine, nor is any account given of the work of the Inter-Allied Maritime Council. Sir John Salter's excellent book on British shipping during the war may have made us somewhat critical of other essays on the same subject.

In the introduction to the essay on French finance, Professor Nogaro reminds us that "even before the period of hostilities the status of French finance was rather abnormal; the Budget did not balance; the fiscal system was archaic; and the general income-tax, just voted, had not yet been put into effect when the war began"—but in those days "the monetary situation was excellent and the exchange favourable."

Probably the essay of most general interest is that of Professor Oualid on Labour. When the mobilisation decree was issued 3½ million reservists flocked to the military depots, rendering it necessary for factories to close down and the harvest to be gathered by old men, women, and children. Those establishments which remained open retained only one-third of their personnel. As in this country, the first problem was that of unemployment, but partly because of the predominance of agriculture and partly because the country's decreasing population "constituted an effective guarantee against chronic unemployment," the machinery for dealing with it had not been developed in France. Soon, however, the struggle for materials began, and revealed a scarcity of labour. The true nature of the struggle was apparently no better realised in France than in England, for it was thought "that the war could be conducted with the materials and supplies already on hand together with the maintenance of the necessary repairs." When it was clear that this was not the case, vigorous steps were taken to secure the necessary labour, and the number of workpeople employed in the munition factories rose from 45,000 at the beginning of the war to two million at its end. Professor Oualid describes the steps that were taken to bring this about; not only were men withdrawn from active service and women recruited to take the place of men, but over 140,000 coloured labourers were recruited from North Africa, Annam, Madagascar, and China, all of whom were employed on different kinds of agriculture and industrial work for the support of the Army. At the same time, the Minister of Munitions organised the recruiting of foreign labourers of the white race, and by the end of the war more than 100,000 foreign labourers had been brought into France through the direct efforts of the Government, in addition to those brought in by private manufacturers. Professor Oualid also describes the position with regard to wages, strikes, working conditions, &c., and has some

interesting remarks on the relative efficiency of male and female labourers.

A word of commendation must be given to the anonymous translator, whose work has, on the whole, been very well done.

THE STORY OF A GREAT INDUSTRY.*

Just a century ago, James Muspratt of Liverpool crowned a series of thrilling adventures in the Napoleonic Wars by the more fruitful adventure of manufacturing alkali from salt by the Leblanc process, whose inventor had died in poverty in France. This interesting pamphlet describes the gradual perfecting of the process and of its mechanism, the recovery of its waste products, their utilisation for the production of other chemicals indispensable to the textile, paper, aluminium, and various other industries, and the concentration of the manufacture in districts where all or most of its raw materials were at hand, chiefly on the Mersey and Tyne, and, after the discovery of salt-beds at the mouth of the Tees, at Middlesbrough. But it was gradually affected adversely, first, by the development of rival works behind tariff walls in the United States and Germany, then by the cheaper production effected by the ammonia soda process introduced by Brunner, Mond and Co., in 1881. Still, the Leblanc process had an advantage in the variety of its bye-products, and its users met the competition, first by a trade agreement, and eventually by the formation of the United Alkali Company in 1890. The great services of the company to British industries during peace, and to the nation during the war in facilitating the production of explosives, and meeting the chemical warfare introduced by Germany, are fully set forth; but the Leblanc process was finally abandoned in 1920, partly through difficulties resulting from the war, and partly through its supersession by the electrolytic process developed by the company on the Tyne. The human element in the history is supplied by interesting accounts of the Muspratt and Tennant families, whose members led the development of the industry and still take part in its direction; and the record is closed by an account of the influence of its agents in spreading chemical knowledge in such countries as Mexico and Japan. The whole pamphlet is a valuable contribution to the history of the British chemical industry, and a vindication of it against the exaggerated claims of its German rival.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
April 18.	April 19.

It is not difficult to single out the main feature of the Stock Exchange markets this week. The strength of all gilt-edged securities figures so prominently as to make it the outstanding object of interest, and of satisfaction, to the solid investor, who, while he has no desire to change his holdings, nevertheless is pleased to see his stock increasing in value. The War Loan attained the highest price touched since it came out 6½ years ago. India Government stocks have spurred in a manner rare in such staid issues. Dozens of rises are marked in Corporation stocks, Home Railway pre-ordinary, and Indian rails, while the supply of colonials—like that, indeed, of everything else in the gilt-edged sections—has diminished to a point at which jobbers themselves are fain to confess that their lists of stocks on offer have become almost farcical, so wide are the gaps between the names of the few stocks obtainable.

The careful investor who has been watching the trend of events, and observing the tendencies of the markets as reflected in serious financial papers, will feel no surprise at this development of a movement that has been gathering force for some time past. Not until trade revives in earnest, and money is required for commercial purposes is it likely that there will be any weakening in the robust appearance presented by all investment securities.

Rises in French railway bonds outstrip improvements in the French Government issues, but there is not much trade doing in either. Greeks have been going down, Chilians are better, the foreign market, on the whole, somewhat placid.

Home Railway ordinary stocks gave way abruptly, on the fear of a strike, which caused a good many holders to sell at prices that showed them excellent profits, but which would have been more substantial still had the stockholders not waited for the time when the market should turn downwards before they got out. A fair amount of support was forthcoming at the lower levels. Grand Trunk Pacific debentures have gone back a little; Mexican Rails are dullish. In Argentines, the feature is the strength of all pre-ordinary issues, this following upon the same lines as that indicated above in regard to British gilt-edged stocks.

The rubber market is inclined to go better, but the stickiness of the raw material offers no encouragement to prospective buyers. There is more doing in the oil market, where speculation in British Controlled shares, and in various others in companies expected to benefit by the Venezuelan oil discoveries, have fanned a little flame of optimism. Reports of revolutionary trouble in Roumania had no effect upon prices of oil shares. The main excitement this week in the industrial market centred upon Imperial Tobacco shares, the price going up with a rush, on rumours of an imminent bonus distribution of shares. The other members of the tobacco group, after being good, reacted a trifle, but have been overshadowed by the animation in Imperials. Substantial rises have taken place in the insurance market, the shares of the leading companies going up by leaps and bounds on a few increased dividends, coupled with the expectation that the future holds bright promises of dividend advances all round.

The banking market follows in the same direction, though much more quietly. Shipping shares are steady, the Cunard's 7½ per cent. dividend, the same as that of a year ago, meeting expectation. Brewery stocks have been marking time on the eve of the Budget announcement, and amongst textiles, speculation has ebbed to some extent, though prices maintained most of their recent rises. The iron and steel market is firm. Gas stocks have been better and electric lighting shares difficult to buy. Most of the newly issued stocks stand at a premium, though with some of the latest rubber companies underwriters got left with shares, and the prices drooped to a small discount.

at Canton can, in the long run, be detrimental to this colony, and our Chinese friends may be assured that British policy in this matter is bounded by no such narrow outlook as that attributed to it.

MARITIME CUSTOMS AND SALT REVENUE.

The report of the Maritime Customs revenue collection for the year 1922 has already appeared in the newspapers, and I will not take up your time by repeating the figures here. The total net collection was Hk Tls 58,600,000; this, as already stated, beats all previous records, being Tls 4,100,000 in excess of the collection of 1921, itself a record year.

The total salt revenue paid into the group banks, after deducting administrative expenses, was \$85,633,000, which is an increase of \$5,000,000 as compared with the previous best record of 1919, and an increase of \$7,600,000 on the revenue realised in 1921. Retentions by various local authorities amounted to \$31,668,000—an increase of \$13,000,000 as compared with the amount retained in 1921. In addition to the retentions made in former years in the provinces of Kwangtung, Szechuan, Yunnan, and Hunan, revenue was retained during 1922 in the provinces of Shansi, Hupeh, Kiangsi, and Manchuria, while in the case of Fukien no revenue has been paid into the group banks during the last months of the year owing to local military action. On the other hand, a gratifying increase of revenue was obtained during the year 1922 in the majority of the districts in which the control of the chief inspectors has not been interfered with.

The actual total released for the general purposes of the Chinese Government during the year amounted to \$47,237,000, as compared with \$52,060,000 in 1921.

The reserve in the group banks, to provide for the service of the Reorganisation Loan, was maintained during the year at \$7,000,000.

ECONOMIC CONDITIONS OF EUROPE.

The economic conditions of Europe continue to give rise to grave misgivings. Very little progress is being made towards a settlement of the multitude of complicated international questions. It is very gratifying, however, that arrangements have been concluded for funding the British debt to America on mutually satisfactory terms, thus removing a fruitful source of friction between the two countries and setting an example for the rest of our Allies to follow. But it has not yet been found possible to determine the amount of German reparations, which is an indispensable preliminary to the flotation of the International Guaranteed Loan required to enable not only Germany, but France also, to arrest the depreciation of her currency and to balance her Budget. It is a matter that cannot be postponed indefinitely, and the longer a settlement is delayed the more difficult it will be to avoid a great disaster to Central Europe, the effects of which would be very far-reaching.

In England the situation has improved considerably. We are meeting our expenditure by taxation, and not by borrowing.

The premium on gold has been reduced from 25 to 8 per cent., and the New York exchange to within less than 20 cents of pre-war parity. In this matter it is the last step which counts, and it is well not to be too sanguine of an early return to the old gold standard upon which British predominance in international trade was built, but we are entitled to contemplate with satisfaction the advance already made towards its ultimate realisation.

International trade is based upon comparative cost. Prices are now relatively lower in Great Britain than in America. This is, no doubt, the fundamental cause of the improvement in the sterling exchange. It has also the effect, by stimulating our exports and discouraging our imports, of making England a better country to buy in than to sell in.

TRADE RETURNS.

The last available trade returns show that for the eleven months ended November, 1922, the unfavourable trade balance, that is the excess of imports, has been reduced by over £100,000,000. Allowing for difference in prices, it is now within measurable distance of the visible excess of imports before the war. It may fairly be said that trade appears to have turned the corner, and, assisted by returns from the £130,000,000 of savings invested during the year in foreign and colonial loans, is likely to improve if the springs of commerce are not choked at their source. The capacity and resource of the British merchant, left to himself, may safely be trusted to discover new channels of business and to launch again on the tide of commerce the freight of credit and confidence on which our international trade depends.

Early last year we issued a loan for £2,000,000 on behalf of the Royal Siamese Government. This loan was well received, being applied for many times over, and at present stands at about 8 per cent. premium, which is an indication of the high credit of the Royal Siamese Government in the London market.

MILITARY LANDS.

There is an important local matter which I feel you will expect me to refer to, and that is the question of the military lands.

Early in my speech I mentioned that land values had risen to undreamt-of heights, owing to the steady influx of Chinese from the neighbouring provinces, and to one other reason, which I will now proceed to explain.

The area in this island available for commercial purposes is, as you well know, strictly limited—it has been added to from time to time by laborious and expensive reclamations from the harbour, and a new and extensive reclamation is now in progress.

As this is the case, it must be self-evident that the best use should be made of the space available for business purposes. And yet the military establishments continue to occupy a large tract of the best commercial land in the colony, dividing the western from the eastern districts, hampering free communications and the natural development of the business area. It is well known that our Government has been for years past making efforts to remove this anomaly. There are plenty of better sites, belonging to the Colonial Government, available where the troops could enjoy more healthy and spacious surroundings, but no settlement has yet been arrived at. I believe this is not due to lack of effort on the part of the Hong-Kong Government or to obstruction by the local military authorities, who must be well aware that the present cramped situation of the garrison is detrimental to the health and efficiency of the troops. There is no question of military strategy involved, yet the obstruction to the change comes from the War Office alone.

I think it is time that the War Office realised that Hong-Kong does not exist solely in order to pay a military contribution of 20 per cent. of its revenue, and that if this senseless policy of obstruction and hampering of British trade and the natural development of the colony is persisted in, it will become a question of whether the contribution can be justified any longer.

TRIBUTE TO STAFF.

I cannot conclude without a word of commendation to the staff. In the Hon. Mr. A. G. Stephen, our chief manager, we have a man whose knowledge of business and finance is unparalleled, and whose services to the Empire and its Eastern connections are well known to all of you. During the past two years, in a period of world depression, the bank has progressed under his able direction, and its position to-day is stronger than ever. Amid the troubles and disasters throughout the world, the disorganisation and uncertainties of exchanges, our men everywhere have risen to the occasion, and have created a faith in the bank of the utmost value to trade and British prestige in the East. We are indeed fortunate in possessing a staff second to none in loyalty and devotion to the interests of their employers, and I am confident that as senior men retire their places will be taken by men of equal calibre, and the bank will continue to be a tower of strength to Eastern trade and enterprise in the future as it has been in the past. I am sure you will agree heartily with the decision of your directors to award the staff a bonus of 10 per cent. on their salaries.

I beg to propose the adoption of the report and statement of accounts. After the proposal has been seconded, and before placing the motion before the meeting, I shall be pleased to answer to the best of my ability any questions which shareholders may have to ask.

Mr. L. Dunbar said: Mr. Chairman and Gentlemen,—It is a great pleasure to me to second the adoption of the report and accounts. I think it is very gratifying in these troublous and uncertain times that the bank is able to present such a favourable report, the profits for the year exceeding all previous records. Of recent years many new competitors have appeared in the Eastern banking field, but the Hong-Kong Bank appears to thrive on competition, its reports for many years past showing a steadily increasing expansion of figures in every direction. I agree with the chairman in describing it as a tower of strength to trade and enterprise and to British prestige in the East.

I am glad the chairman touched on the question of military lands. We see the colony expanding in every direction, building going on everywhere, and the rents in the central district rising to a height that is a serious handicap to merchants. And yet the military continue to occupy the location they have held for the last 80 years, a location which, although eminently unsuitable for the troops, would be of the utmost value to the business community. Let us hope the War Office will wake up one day and discover that Hong-Kong has changed somewhat since the military took up their present quarters, when the island was first occupied.

I am sure we all join the chairman in his tribute to the staff. The bank is indeed fortunate in possessing a staff of men who began their business careers in the bank and mean to end them in the same service. The number of them who have served for over 20 years in the East is a source of strength and stability. I think you will all heartily support the directors in voting the staff a bonus of 10 per cent. on their salaries.

The motion was carried unanimously, and the meeting terminated with a vote of thanks to the directors, management, and staff.

LEVER BROTHERS, LIMITED.

"SATISFACTORY RESULT OF YEAR'S TRADING."

GOVERNMENT EXTRAVAGANCE IN WEST AFRICA.

CO-PARTNERSHIP AND TRADES UNIONS.

The twenty-ninth annual general meeting of the shareholders of Lever Brothers, Limited, was held at the Lyceum, Port Sunlight, Cheshire, on Thursday, April 12, 1923. The Right Hon. the Viscount Leverhulme (chairman of the directors) presided.

Viscount Leverhulme, in the course of moving the adoption of the report and accounts, said: My lord, ladies and gentlemen,—I rise to move that the directors' report and statement of accounts for the year to December 31, 1922, now submitted, be received and adopted, and in doing so it is again my great pleasure to be able to congratulate the shareholders upon what, I hope, they have found a satisfactory result of the year's trading, following on the most difficult period that trade and commerce of the United Kingdom have ever had to face—namely, the three years following the boom time which immediately succeeded the end of the war. You will have received with the statement of accounts the book of views of works of Lever Brothers, Limited, and associated companies, and I hope you feel, as myself and colleagues do, proud of the most valuable properties you possess in so many countries of the world. Believe me, it has always been our object to, what one may call, spread our risks. Carnegie's advice was to put your eggs in one basket and then to sit on the lid, but I like there to be a great many baskets in a great many countries.

You will be asked later to elect to the board Mr. D'Arcy Cooper, who has been intimately connected through his firm, Messrs Cooper Brothers and Co., with the business of Lever Brothers, Limited, for a great number of years. He has now completely severed his connection with his old firm of Messrs Cooper Brothers and Co., and will in future devote himself entirely to the business of Lever Brothers, Limited, and become, with Mr. Greenhalgh, a vice-chairman of the company. Myself and colleagues welcome more profoundly than words can express the addition of Mr. Cooper to the board as one that will add enormously to the strength of the company, but he is rather a bashful and retiring man, so that I must spare his blushes and refrain from saying all I would like to say about him.

THE ACCOUNTS.

Now I come to deal with the various items in the accounts.

I may say that in the preparation of the accounts, with the full concurrence of our auditors, we have for this past year adopted the principle of treating, with regard to profit and loss account, all our associated companies as if they were branches of the parent business and not separate limited liability companies. We have had, therefore, in the accounts now presented to deal with the losses that were made by certain of our companies, the most serious losses being those of our companies in West Africa and of our Margarine Company. These losses had for the two previous years been dealt with by your directors, in their valuation, placing no value on the shares of these companies. How these have been dealt with this year you will have seen from the directors' report. I think the report is quite clear, but if any shareholder wishes to address a question to me later upon the subject I will endeavour to answer it.

PREMIUMS ON SHARES.

With regard to the premiums on the shares issued during the past year to associated companies which the ordinary shareholders have returned to this company, no thanks are due to the ordinary shareholders for this surrender of premiums, because obviously the ordinary shareholders are equally benefited with the preference shareholders by the losses made in the slump years being dealt with in the manner they have been; but their rights to these premiums were agreed to by all shareholders at the time the capital of the company was increased, and a considerable number of 20 per cent. cumulative preferred ordinary shares were created in priority to the ordinary shares. The ordinary shareholders made it an absolute condition of their assent to such increase of capital that such 20 per cent. cumulative preferred ordinary shares were to be first offered to them at par before they could be dealt with by the company. It is quite obvious that the position of the ordinary shareholders in the value of the ordinary shares, in consequence of the creation of these 20 per cent. preferred ordinary shares in priority, was depreciated to the extent that these 20 per cent. shares might be issued in priority to the ordinary shares, and it was only by linking the two together in this way that the matter could be handled with advantage to the preference shareholders, and justice and equity to the ordinary shareholders.

DIVISION OF RESERVES.

Our preference shareholders will remember that only three years ago certain reserves in the business to the large amount of £3,944,412

were distributed amongst the preference shareholders, and that, in addition, the rate per cent. payable on the preference shares was increased, and that in consequence thereof the amount required to pay the dividends on the preference shares was increased by over £500,000 per annum. It was intended at that time to divide the balance of reserves amongst the ordinary shareholders, but this latter intention was never put into effect, and those reserves have been available for meeting the slump year losses of certain of our associated companies.

As far as my knowledge goes, the whole of the losses of our associated companies during the slump years have now been dealt with in the way described in the report. I want to make it quite clear that this does not affect the balance-sheets of the associated companies as such. It is merely that the parent company and certain of its associated companies have reserved out of profits, and out of these premiums and other income, for the losses made by certain associated companies.

CRITICISM ANSWERED.

To any critic taking exception to this transfer of £3,000,000 shares and premium thereon as above, I would venture to express the view that had your directors decided to ask the preference shareholders to agree to the cancellation of the bonus of £3,944,412 they received three years ago such method, if agreed to by preference shareholders, of cancellation of bonus shares issued would have achieved the same object and also have left us with £1,000,000 surplus to be added to reserves, and would have also increased by over £300,000 sterling per annum the balance of profits remaining after payment of all dividends to preference shareholders, and available for division amongst the ordinary shareholders.

Your directors believe they have dealt with slump losses of associated companies in the manner that was in the best interests of the preference shareholders and of the business as a whole, without regard to any narrow selfish view of the immediate interest of the ordinary shareholders.

There were no losses at any time incurred by the parent company, and your directors believe that those associated companies in West Africa and our Margarine Company merely reflect the universal condition of other companies in similar businesses.

NIGER COMPANY'S LOSSES.

I note in certain financial articles referring to the balance-sheet there has been some misunderstanding with reference to the Niger Company, and it has been inferred from the fact of the transfer of the 3,000,000 20 per cent. "A" preferred ordinary shares to an associated company in West Africa, that the losses shown in the Niger Company's accounts would disappear when the next balance-sheet was issued. This is entirely erroneous; the 3,000,000 shares were not transferred to the Niger Company, but to one of our West African associated companies, now an associated company of the Niger Company, but in which Lever Brothers, Limited, held the shares long before we acquired the shares we hold in the Niger Company. The Niger Company will require to make profits of itself and its associated companies to liquidate its losses, but under the new method of preparation of accounts, the losses are dealt with on the principle named of treating all associated companies as if they were branches of the business, and dealing only with the remaining profits after providing out of the profits and reserves of some companies for the losses of others.

However, as the result of the last three years' steady plodding and persistent effort, I believe that we have dealt with the situation and resulting losses successfully.

It will be of interest to you to know that the number of shareholders of the company now amounts to 141,216, and of debenture-holders to 20,020—a total of shareholders and debenture-holders of 161,236—so that the average holding per shareholder is about £300, omitting shares held by associated companies, co-partners, and the ordinary shareholders, and the average holding of the debenture-holders is about £400 each, which shows the widespread interest taken in the shares and debentures of the company.

VALUE OF HOLDINGS IN ASSOCIATED COMPANIES.

With reference to our holding of shares in West African companies and our shares in Margarine, my colleagues and myself have made a most careful valuation of the holdings of Lever Brothers, Limited, in all our 200 associated companies, and in making this valuation, but placing no value at all on our shares in our West African associated companies and no value on our shares in our Margarine Company (although we do not for a moment suggest that they possess no value, still for the purpose of valuation we put

no value thereon, in view of the fact that they have both been losing money), there is still a substantial surplus over the amount at which the shares and debentures in and loans to associated companies appear in the balance-sheet. The total number of our associated companies exceeds, as I have already mentioned, 200, scattered all over the world, so that the distribution of our capital is, we believe, very well and wisely divided.

WEST AFRICA—HIGH EXPORT DUTIES.

I would like, with your permission, to make further reference to the position in West Africa. The trade of West Africa is staggering under absolutely prohibitive high duties on exports of produce. Some of the Governors state that these duties are not having a prejudicial effect, others the contrary. I find whenever the statement is made of their non-injury to trade, it is to support the position the Governor finds himself in of requiring the duties to be maintained to support extravagantly high expenditure. I find equally that where the duties have been reduced, as on the Gold Coast on cocoa, the Governor, His Excellency General Sir Frederick Guggisberg, is able to report, and has reported, a response at once in improved trade conditions. Sir Frederick Guggisberg states that when the reduction of duty on cocoa from a half-penny a pound to a farthing was under consideration, it appeared as if the loss—if there was no response in increased volume of business—would amount to £326,000 in the year, but his trade advisers were of opinion that the reduction in duty would result in such increased business that the final loss would come down to about £23,000 in net income, and on this the export duty on cocoa was reduced from ½d to ¼d per pound. The report goes on to state that the results have fully justified the reduction in the duty; that the net income for the year was not £23,000 less than the preceding year, but £190,000 more, and he was convinced that this reduction of duty was responsible, with other factors, for the recovery of trade.

EXTRAVAGANT EXPENDITURE.

I would call attention to the fact that the produce from West Africa is in competition with produce from all over the world, practically none of which is called upon to pay any export duties, but the expenditure in Nigeria is so heavy, the Government states, that no reduction in these duties can be made. Now, with regard to this expenditure, I would like to point out that in 1913 the Government expenditure in Nigeria amounted to £2,916,801 for that year (1913), but in 1921-2 the Government expenditure in Nigeria had been inflated to the extravagantly high figure of £7,171,997, which was an increase out of all proportion to the increase of revenue, notwithstanding the duties laid on produce, for whilst in 1913 the revenue was £3,462,507, and showed a surplus of over half-a-million over expenditure, the revenue in 1921-2 amounted to only £4,876,246, and showed a deficit of over 2½ millions for the same year. The taxation and expenditure are out of all proportion to the trade of Nigeria. The cost of bringing to market the palm oil from West Africa in duty, railway freights (which themselves are out of all reason in amount), ocean freights (which latter, however, have just been greatly reduced), and the cost of casks and other expenses amounted in total to £9 1s 4d per ton in 1913 as against £15 1s 3d per ton in 1922, an increase of about £6 per ton. Of this increase the Government is responsible for £3 11s 8d—83 per cent. of which is duty. To put this matter in a form in which perhaps we can realise its effect upon the native more clearly, I may say that whilst in 1913 the exports amounted to 95 per head of the native population, of which the native received 6s, and the Government took 3s in taxes, in 1921 the value of the exports amounted to 10s 9d per head of the native population, of which the native only received 3s 3d and the Government took 7s 6d. In explanation of the high increase of expenditure it has been stated by the Under Secretary for the Colonies in Parliament that salaries of Government officials were increased in 1920 in view of the increased cost of living; that these increases, now that living is falling, cannot be reduced as salaries are permanent, but lower scales may be applied when new appointments are made. I would like to ask the Under Secretary (Mr Ormsby-Gore) whether the care and solicitude he has shown for the Government employees, being white men, should not be shared in by the native population. The cost of calico and other goods required by the natives, which make their cost of living, has advanced since the war, but so far from there being any increase of income to the native, the Government have reduced, by their taxation, the net amount received by the native to practically one-half.

This wonderful indifference to and detached view as to the welfare of the native is contrary to the best interest, the progress of our Crown Colonies.

POTENTIAL VALUE OF WEST AFRICAN INTERESTS.

Your directors have given, and are giving, the closest possible attention to our West African interests, which are of enormous potential value as the cheapest source of supply of oils and fats, for both soap and margarine manufacture, as a reference to the chart of costs entering into soap production which I shall explain

later, and which was similarly given last year, will show. The company's West African interests extend over a coast line of over 3,000 miles from Dakar to the Congo. Your directors have paid three visits to these West African properties. Myself in 1912, my son and Mr Moseley in 1921, and Mr Greenhalgh and Mr Simpson last year.

In fulfilment of the promise I gave to the shareholders at the time the debentures were created, a further £250,000 out of the profits of 1922 is added to the reserve fund, which now exceeds a million. You will also notice from the balance-sheet that we have written off out of this year's profits a further sum of £120,000 from the discount on debenture stock and expenses of issue.

I will now make a passing reference to what I called last year our "cellar" reserves, which do not appear in the balance-sheet.

ADVERTISING, DEPRECIATION, REPAIRS AND RENEWALS.

The amount we have expended in advertising (which is really maintenance and renewal of goodwill), depreciation, repairs and renewals for 1922, is the largest of any year in our history, and the total amount spent under these heads during the last 20 years now exceeds 27 millions sterling, or more than 50 per cent. of the capital of the company. It has never been the policy of your directors to carry large sums to open reserves, but we have maintained what I call the "cellar" reserves fully, amply and generously, if not extravagantly; but I do consider that the best reserve of all in the business is our co-partnership system. Our co-partners now number 15,671, and the total paid in dividends from the commencement of co-partnership to the end of 1922 exceeds 14 millions sterling. The co-partnership certificates issued to co-partners exceed two millions sterling nominal value. Believe me, myself and colleagues attach much greater importance to reserves created in the hearts and will of our co-partners than to other reserves in the business, and co-partnership forms the strongest and wisest investment of a proportion of the profit of the company that, in our opinion, we could possibly make. After all, co-partnership is merely a desire on both sides for a "square deal." It is not wise or equitable that the whole of the profits of the business should go in one golden stream to the shareholders. The stream ought to be divided fairly and equitably between the shareholders and those engaged in the business. At the same time, I want to make it quite clear that, in the opinion of myself and colleagues, the organisation of industry must follow the lines of the organisation in our mercantile marine or fishing fleets. There must be the captain; there must be the officers; and there must be the crew, each with their respective and proper places; and whilst, as in the fishing boats, the proceeds of the catch may be wisely shared, and should be shared, amongst captain, officers and crew, in just proportion to responsibility, there must be no interference by the crew in the control of the navigation of the ship by the captain and officers.

WHITLEY REPORTS.

In my opinion, founded upon my experience of 56 years in business, the so-called Whitley Report, in its recommendation of workmen's committees to take part in the control of industry, has been the most harmful suggestion ever made, and one that has created very largely the spirit of unrest now prevailing. There is something very attractive in the suggestion of the Whitley Report, but it is no more practicable in a manufacturing business than it would be on a ship navigating the ocean, and I venture to say that the authors of the Whitley Report would hesitate to trust their own lives and the lives of their wives and families to a ship on which the crew sat alongside the captain and officers as a committee to control the navigation, and I would strongly advise the members of the Whitley Committee not to invest the savings of themselves or wives or families in any industry in which the workers have any effective voice in the control and management of the industry. Bolshevik Russia tried workmen's committees to control industry. We all know the result. In these remarks I do not want you to think I am unsympathetic with advancement and progress for labour. We have always had the policy, and successfully practised it, of advancement for the members of the staff to a seat on the board of directors, but this has been a process of selection, just in the same way that a cabin boy of to-day may be the captain to-morrow, provided he has shown the requisite application and ability, and has proved his tested knowledge of navigation.

DOCKS ON BROMBOROUGH ESTATE.

We are again promoting this year a Bill in Parliament for the making of docks on our Bromborough Estate. You will remember that a few years ago we were granted powers to build wharves on the River Mersey alongside our Bromborough land. At the time that Bill was lodged in Parliament we had not acquired Messrs Prices' business. Many years ago we endeavoured to arrange with Messrs Prices to promote a joint Bill in Parliament for docks at the mouth of Bromborough Pool, but negotiations fell through. There is no doubt that both in the interests of the navigation of the River

Mersey and facilities to Lever Brothers for handling cargo the Bill we are promoting this year is a wise replacement, if approved by Parliament, of the powers granted to us for wharves alongside our land at Bromborough.

CO-PARTNERS AND TRADES UNIONS.

It will be within your recollection that the Carpenters' and Joiners' Trades Union wished to expel certain of their members employed at Port Sunlight in the event of their continuing to be co-partners in Lever Brothers. Carpenters and joiners employed by the firm who were affected by this proposed action by their union contested their right in the courts, and their case was finally decided in the House of Lords. Many of you may have read the report at the time, and know that the House of Lords decided in favour of the co-partners, and granted injunctions against the trades unions restraining the threatened expulsion.

The immediate point decided in that case was that there was nothing in the rules of either union to prohibit their members taking the benefit of our co-partnership scheme, but that was not all the case decided. There was a further point of much wider general interest to the public, which makes this case one of the most important which has ever been decided in the history of trades unionism. The trades unions argued most strenuously that a member of a trade union who has been expelled—no matter for what reason, whether the grounds of expulsion were justified under the rules of the union or not—must submit to this expulsion, and has no right of redress in the courts of law. The House of Lords rejected that contention, and decided that where a member of a union has been expelled for reasons which the rules do not justify, he can go to the courts and obtain reinstatement, and this is the law as now finally decided by the cases I am referring to.

At the Easter Conference of the National Union of Distributive and Allied Workers, held at Southport, a resolution was passed, on the motion of the Cheshire and North Wales Divisional Council, which includes Port Sunlight, expressing the opinion that the time had arrived when the general trade union movement, through its annual Congress, should declare itself against any form of capitalist co-partnership, believing that the capitalist attempts to introduce certain forms of co-partnership were designed to mislead the workers and prevent trade union solidarity.

Apparently, he is a good citizen who does not find remunerative employment for his fellow-man, and he is a bad citizen who does provide remunerative work for his fellow-man, but he is the worst type of citizen who wishes to do so on a basis of co-partnership. I believe the word used to describe this evil action of finding remunerative employment is to "exploit" the worker, whether you deal with him solely as a weekly wage-drawer or as a co-partner, and desire to raise him to the status of a capitalist holding co-partnership certificates—in the case of co-partners in this company already amounting to a nominal value of over £2,000,000 sterling, and, we hope, of increasing value each year.

Each succeeding year your chairman has been instrumental in employing a greater number of his fellow-men, until to-day the number exceeds 40,000, and each succeeding year he has found that it has entailed extra work upon himself, so that instead of getting relief from the so-called "exploitation" of his fellow-men, your chairman's opinion in his seventy-second year is that his fellow-man is exploiting your chairman, and really taking more out of him than the strength with which he was endowed by Nature has placed at his disposal. For some years now your chairman has had to get up at 4.30 in the morning, and your chairman's opinion is very strongly that, so far from your chairman exploiting his fellow-man, it is his fellow-man who is exploiting him. I would like to refer our shareholders to an anti-socialistic and very clear and able article by Mr Robert Blatchford in the *Sunday Chronicle* of April 8th, which is well worth close reading by all interested in this subject.

GROUP UNEMPLOYMENT AND LIFE INSURANCE SCHEME.

During the past year we have made a further departure with regard to the betterment of the position of our staff, by the adoption of what we call the group unemployment and life insurance scheme. Under this scheme we have arranged with the Atlas Assurance Company, Limited (which arrangement came into operation on October 1st last), for the insurance in groups of members of our staff who are co-partners. We have three groups, from the youngest co-partner of the staff up to and including the directors. Under Group 1 the insurance in case of death or disablement ranges from a minimum of £100 to a maximum of £1,000. Group 2 " " " £200 " " " £2,000. Group 3 " " " £400 " " " £4,000.

The total value of policies issued to 7,155 members of our staff who are qualified under the scheme amounts to £985,600. Unfortunately, seven deaths have resulted since the inauguration of the scheme on October 1st last, and £1,100 has been paid out thereunder, whilst £100 is outstanding yet to be paid as soon as the claim has been passed by the insurance company.

In addition to life insurance, we have unemployment and sickness relief benefits applied to co-partners—men and women—in the employment of Lever Brothers, Limited, or associated companies working within a radius of two miles from the centre of Port Sunlight. The latter scheme also came into operation on October 1st. It is our intention to extend its operations beyond the area in which we have commenced, should we be justified in doing so. The basis of both the insurance and of the unemployment and sickness relief is the grading into groups. This is according to efficiency in the particular group in which the member of the staff is employed.

UNEMPLOYMENT.

With reference to unemployment, the scheme provides that during any period of suspension from employment arising from any cause, such as slackness of trade, to which, in the opinion of the company, a co-partner has not either directly or indirectly contributed, the company will pay to such co-partner, *ex gratia*, such a sum by way of supplement to the State allowance as, together with that allowance, will yield an amount equal to half the standard weekly wages. In the case of the sickness relief scheme, provided that in the event of a co-partner being ill and thereby being prevented from working for at least seven consecutive days, and satisfying the company as to the fact, such co-partner will receive, *ex gratia*, from the company, the same weekly payment for four weeks as he or she would have received for suspension from the causes above mentioned. After the expiration of four weeks, the company will consider whether or not such benefit should be continued for any further period. We have also inaugurated a short-time relief scheme to provide against hardship caused by our working short time, by the payment of half-rates for all short time so worked, to which short time the co-partner has not either directly or indirectly contributed. I would point out that in these schemes no medical examination is necessary, that if there is any co-partner who retires on superannuation or pension after October 2, 1922, he will remain insured for a period, and that if the assured leaves the employ of the firm, he or she can continue the insurance without medical examination for a similar amount at the insurance company's ordinary table rates for the class of insurance selected. We trust that our shareholders will approve of these additional advantages being accorded to our co-partners.

PROSPECTS FOR 1923.

With reference to the prospects for 1923, it is very difficult indeed for me to express at the present moment any very pronounced opinion. On the one hand, we have advancing prices for raw materials. On the other hand, the advancing prices of raw materials will greatly help our interests in West Africa, the Solomon Islands, and elsewhere producing oil and fats. The volume and tonnage of our business for 1922 was a record in the whole of the history of the company—in fact, our increases have rather astonished even ourselves, accustomed as we are to increases in volume of business.

Our export trade is gradually recovering, although not so quickly as we would desire, owing to certain markets, due to the rate of exchange; being still closed against imports of most kinds.

TAXATION.

With reference to taxation, I would like to say this: that any relief that can be given to the heavy burden of taxation borne by the citizens of the United Kingdom would have an immediate direct effect in improving business, increasing demand, and reducing unemployment. We have already since the close of the Great War reduced our war indebtedness by a larger amount than we reduced the war indebtedness of the Napoleonic Wars during the succeeding 60 years. And it is the fact that after the Civil War in America the United States first concentrated their attention on improving the trade and commerce of their country, and actually increased their war indebtedness during the 10 years following the end of the Civil War; then, having restored trade and commerce, they set resolutely to work and speedily paid off their war indebtedness. I am certain we are wise to make every effort to pay off our war indebtedness, and, in any case, not to entertain for one moment any policy that would add to it; but equally time has always proved that the words of William Ewart Gladstone—possibly the greatest Chancellor of the Exchequer we ever had—were invariably justified when he said, in adopting a policy of reduction of taxation and slowly paying off the National Debt rather than maintaining taxation unreduced and paying off the National Debt at a speedier rate, that money fructified better in the pockets of the people than in the coffers of the State, and undoubtedly the wisdom of this policy was proved by the response by increases of trade and commerce manifested on each succeeding occasion when reduction of taxation was put into effect.

Mr H. R. Greenhalgh: My lords, ladies, and gentlemen,—After the very full statement which our chairman has given you, it only

remains for me to second the resolution, which I do with very great pleasure.

The resolution for the adoption of the report and accounts was then put to the meeting and carried unanimously.

Votes of thanks were moved by the Hon. Hulme Lever, and seconded by the Marquess of Carisbrooke, to the chairman and directors of the respective associated companies, and the staffs and agencies abroad; and by Mr J. L. Ferguson, seconded by Mr C. W. Barnish, to the management, office staff, and employees of Lever Brothers, Limited, for their zealous and efficient services during the year.

These votes were carried unanimously. This concluded the business of the meeting.

GODFREY PHILLIPS, LIMITED.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The fourteenth ordinary annual general meeting of Godfrey Phillips, Limited, was held, on the 12th inst., at Winchester House, Old Broad street, London, Mr M. David Phillips presiding.

The Chairman, in moving the adoption of the report and accounts, said that he regretted that their chairman was unable to be with them owing to his having fallen a victim to influenza. The chairman had asked him to read his speech, in the course of which he said:—

There are one or two items in the balance-sheet upon which I should like to comment. On the liability side there has been a reduction in the items "Loans—including loans from bankers" and "Sundry creditors and credit balances." These amounts vary, of course, from time to time, especially when the tobacco crop is moving, but comparing the figures in respect of these two items with the figures in the previous year's balance-sheet there is a reduction of nearly £114,000, which, I am sure, you will agree is most satisfactory. On the same side of the balance-sheet last year we had under the heading of "Special reserve fund" an amount of £51,083. This year we have transferred from this amount to profit and loss account a sum of £15,583. I want to tell you why that has been done.

Of this "Special reserve fund," £1,083 represented the amount of the first year's payment in respect of the sinking fund for the redemption of the mortgage. This sum of £1,083 was set aside out of profits, and it is confusing to set aside sums out of profits while there is a debit balance on the profit and loss account on the other side of the balance-sheet, and that amount has accordingly been transferred to the credit of the profit and loss account. The remainder of the "Special reserve fund" was created in the following way:—

PURCHASE OF "ARMY CLUB" CIGARETTES.

Some time after this company purchased the business of Messrs. S. Cavander and Co., proprietors of the well-known "Army Club" cigarettes, a business which has been in existence for three centuries, a new company was formed with a capital of £50,000, and your company have acquired the whole of the ordinary shares. On the formation of that company the nominal value of the shares was taken in our balance-sheet as an asset, and at the same time a like amount was shown as reserve in respect of that asset, so that in effect the value of the shares was treated as nil.

Cavanders, Limited, has now been in existence for five or six years; a substantial business is being done in their brands, especially abroad, and your directors are of opinion that there is an undoubted value attaching to these shares; they have assessed it at £14,500, and have transferred that amount from the "Special reserve fund" to the credit of the profit and loss account.

On the asset side of the balance-sheet, "stock" has been reduced by £70,700.

After dealing with the new extension to the Commercial street factory, the Chairman continued:

We now come to "Profit and loss account." The directors, to meet the wishes of the shareholders, decided to waive their rights and to pay income-tax in respect of their salaries from January 1, 1922, themselves.

The profit for the year 1922 is £54,058, subject, of course, to corporation profits tax, and shows an increase of nearly £40,000 on the previous year's profits. This profit of £54,058, with the appreciation of land and buildings and the transfer from special reserve, to which I have already referred, reduces the amount to the debit of profit and loss account to £4,237, and that debit, I am happy to be able to tell you, has been more than wiped out by the profits earned this year. We are very satisfied with the result of the past year's trading, the present prospects and the improved financial position of the company, and we confidently look forward to increased prosperity in the future. We hope before long to be in a position to begin payments on account of arrears of dividend—when exactly that will be must, of course, depend upon circumstances.

Mr J. Van den Bergh seconded the resolution, which was carried.

LEGAL AND GENERAL ASSURANCE SOCIETY, LIMITED.

SATISFACTORY FIGURES—INCREASE IN SOCIETY'S FUNDS.

The annual general meeting of the Legal and General Assurance Society, Limited, was held, on the 10th instant, at the head office, 15 Fleet street, London, Mr Charles P. Johnson, J.P. (deputy-chairman), presiding.

The general manager (Mr W. A. Workman, F.I.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: The number of policies issued in the past year in the life and general funds was 4,645, against 4,655 in 1921—a reduction of 10 only. The gross sums assured were £2,943,337, as against £3,674,680, and the new premiums £181,269, as against £192,249. Deferred annuities were granted for £50,545 per annum, as against £98,123 in the previous year. These are gross figures—that is, before deducting re-assurances—and the figures of the life and general funds have been combined for the sake of brevity. Taking the net figures—that is, after deducting re-assurances—we have for last year total sums assured £2,862,287, compared with £3,073,576 for 1921, and new premiums £179,152, compared with £159,632. It will be seen, therefore, that although the reduction in the gross sums assured is £731,343, the reduction in the net amount retained by the society is only £211,289, or about 7 per cent. of the figure for 1921, and, in view of the difficult conditions ruling throughout the year 1922, I trust, gentlemen, you will not consider these figures unsatisfactory, particularly as practically the whole represents non-profit assurance, a great deal of which is secured under severe competitive conditions.

PREMIUM INCOME AND ANNUAL REVENUE.

The total net premium income in the life and general funds increased by £66,576 to £1,376,856. That in the fire and accident funds amounted to £172,243, being an increase over the previous year of £7,375. So that the total net premium income of the society for 1922 was £1,549,099.

The total net annual revenue for 1922 amounted to £2,027,416. The consideration received for immediate annuities was £72,185. The total expenses and commission in the life and general funds amounted to 14.99 per cent. of the net premium income, as against 15.13 per cent. in 1921. This is a movement in the right direction, and, having regard to existing conditions, to the fact that the sum includes expenses in connection with the society's quinquennial valuation as at December 31, 1921, and the expenses of the extensive annuity business, I do not think it is unduly high or compares unfavourably with the average of offices generally.

The total net claims in the life assurance fund during the year, amounting to £983,203, show a considerable increase on the corresponding figure for 1921, but of this amount the sum of £532,814 is due to endowment assurances matured. This figure is much larger than usual, owing to the practice of persons effecting policies to mature in the year following a declaration of bonus, so as to secure the full benefit of the society's compounding system. The total net claims caused by the death of 286 lives assured in the year amounted to £450,389, as compared with £452,228 due to 261 deaths in 1921. The society's mortality experience during the past year was again very favourable, the claims being only 64.6 per cent., and the deaths only 61 per cent. of the expectation.

TOTAL FUNDS.

The total funds of the society have increased during the year by the sum of £471,845, and the total assets on December 31st last amounted to £14,842,300. The directors have, as usual, examined the various securities comprised in the assets, and they are pleased to be able to state that the result is satisfactory. The Stock Exchange securities have been valued by the society's brokers as at December 31st last, and the market value then exceeded the value in the books by the sum of £349,962. On March 19th last this had been increased to £439,974. A considerable profit accrued in the year from the sale of securities, and the directors have thought it desirable to apply a small portion of this to make the investment reserve fund up to a round sum of £150,000.

The average rate of interest has increased from 5 7s 6d per cent. to 5 9s 8d per cent., which is satisfactory. This is before deduction of income-tax, and the net rate of interest earned (making allowance for the special rebate made to life assurance companies on account of annuities and expenses) is 4 9s 6d per cent.

The net premium income from the fire and accident business shows an increase of £7,375, which is satisfactory in view of the difficulties of the year, and the substantial reductions effected in insurances in all directions for reasons well known to all of you. I do not think we have any special reason to complain of our results for the year in these departments. Progress in these departments must necessarily be slow, but we can look forward to the time when these departments will provide their quota of profit to the shareholders.

The report and accounts were unanimously adopted, and a dividend of 3s per share was declared.

MALAYALAM PLANTATIONS, LIMITED.

AMALGAMATION SCHEME APPROVED.

"A SATISFACTORY AND REMUNERATIVE PURCHASE."

An extraordinary general meeting of the Malayalam Plantations, Limited, was held, on the 11th instant, in the Council Room of the Rubber Growers' Association (Incorporated), 3 Idol lane, London, to consider the following resolutions:—

(1) That each of the three conditional agreements dated March 23, 1923, and respectively made between the East Indian Tea and Produce Company, Limited, the Meppadi Wynaad Tea Company, Limited, and the Wallardie Tea Estates, Limited (hereinafter called "the vendor companies"), of the one part and this company of the other part, which have been laid before this meeting and which provide for the acquisition by this company of the tea and rubber estates and certain cash and liquid assets of the vendor companies for fully-paid shares in this company, be and the same are hereby approved and sanctioned, and that the directors be and they are hereby authorised and directed to take all necessary steps and proceedings for carrying the said agreements or any of them into effect.

(2) That the articles of association be altered in manner following—namely: "That the following words be added at the end of article No. 94—namely: In addition to the remuneration hereinbefore provided for, the directors be paid as from April 1, 1923, additional remuneration at the rate of £1,000 per annum, to be divided between them as they may by a majority agree or in default of agreement equally."

Mr H. J. Welch, chairman of the company, presided.

Mr John Calderwood, representing the secretaries (Messrs Harrison and Crosfield, Limited), having read the notice convening the meeting,

The Chairman said: Gentlemen,—You have had in your hands for some days the notice of the meeting, the resolutions to be submitted for approval, and particulars of the proposed acquisitions by this company. I do not propose to weary you by repeating the information contained in the circular.

The Board is gratified by the approval of the amalgamation proposals which has been given generally by the shareholders of this and the other companies concerned and by the Press. There have only been a very small number of criticisms or questions raised, and these principally arose from the difficulty some felt in grasping all the details of the scheme.

MAIN POINTS OF THE SCHEME.

Among the main points, which you will all have appreciated, are that this company is acquiring for shares a large area of tea and a small one of rubber (all mature or nearing maturity) at a price which is lower than this company's cost per acre, and much below replacement cost, and the directors are convinced they will prove a good purchase for the company; further, that our financial position will not be weakened, as the vendors are each providing the company with cash sufficient to cover the cost of bringing their estates to maturity and a further sum per acre sold, equal to the value of the existing surplus assets per acre of our own properties.

Particulars are given in the circular of the outputs, f.o.b. cost, sale price and profits for 1922 and 1923, of the estates to be acquired, which demonstrate their value.

The Koney estate is thought to be one of the best planted estates in South India. Its output per acre of rubber is above our average output, and it produces good low country tea. It is near our Kumbazha estate, and rises from 90 to 700 feet above sea level.

The properties of the East Indian and Meppadi Companies are in the Wynaad district, Madras Presidency. They are about 3,000 feet above sea level, and form together an excellent group for combined control.

The Wallardie estates are situated in the Peermade district, Travancore, at an altitude of about 3,000 feet, and are near our Mundakayam properties.

In November and December, 1919, I personally visited all the vendors' properties, as well as most of young properties. On my return to this country I was appointed chairman of all the vendor companies and of your company.

POLICY OF FULL CULTIVATION.

Since that date a policy of full cultivation and manuring has been adopted, and is being carried out on all the properties to be acquired. This has been done under the advice of Mr Kelsey Hamber, of the Ceylon Government Department of Agriculture, who visited South India on behalf of the vendors in 1921. While the estates have already benefited, the full benefit of this cultivation in improvement of output and in other ways has not yet had time to show itself. I may mention that for the three months ended March 31st the tea crop from the vendors' estates shows an in-

crease of more than a quarter of a million pounds of tea over the corresponding period of last year.

Further, the estate managers generally have much improved the quality and market value of the tea manufactured, and in this way they have not only had valuable assistance from the agents and visiting agents, but also from a Ceylon expert in tea manufacture, who visited most of the estates late in 1921 at the request of the boards of the vendor companies. We are advised by our selling agents that the improvement in the comparative market value arising from this better manufacture is substantial.

In the Wynaad also the two vendor companies in 1921 combined in the appointment of one of their oldest and most experienced estate managers as a resident agent or adviser for all their properties. This is considered to be an improvement in their organisation, from which we shall continue to obtain better results.

In addition to the special visits of experts I have mentioned, one of your directors, Mr G. Nicol Thomson, who is an experienced planter, visited all the vendors' estates in the autumn of 1920 and the spring of 1921, and gave valuable advice as to their management and improvement.

REMUNERATIVE PURCHASE.

I mention these matters because, owing to the war and other reasons, the success of the vendors' estates has been delayed. Similarly to ourselves, they found that European management and supervision were seriously interfered with, heavy exchange losses were incurred, and Government control of the tea market adversely affected the economic administration and development of the properties. Consequently, as stated in the circular, the Board believes the past results of working the estates to be acquired are no accurate guide for their future. The improvement during the last two years illustrates this, and, as stated, the board is confident the estates will prove a satisfactory and remunerative purchase for this company.

The company is acquiring the estates at a much lower cost than it would cost it to plant and equip new areas on its own account. By the purchase we shall be about equally dependent upon the tea and rubber markets for our profits instead of being so largely dependent upon rubber alone. It is unlikely that we shall again have a simultaneous slump in both tea and rubber prices as we had recently. We may reasonably hope that when one is down in value the other will be up, and thus by depending upon two commodities instead of upon one we believe we shall secure greater steadiness of profits and dividends.

BENEFITS FOR STAFF.

We hope by reason of the increased size and importance of our company to be able to secure economies in working and improvements in our local organisation. The service of our company will be more attractive to Europeans, and not least because, in addition to security of employment for good workers, it will also give a greater scope for promotion and for utilisation in the company's service of men of various grades of managing ability. In this connection I may say that since my return from the East we have established a profit-sharing scheme for all our estate managers, which gives them a direct interest in the profits of the particular estates they are managing, and also in the profits of the company as a whole. In addition, also, we have established a scheme whereby the managers and assistants can, up to a limited percentage of their salaries each year, become shareholders of the company upon very favourable terms. These benefits will be extended to the managers of the estates to be purchased.

DIRECTORS' REMUNERATION.

Perhaps I had better say a word or two about the second resolution to be submitted to you, as one or two shareholders do not see why because planted areas of 10,000 acres (or 15 square miles) divided into 13 estates are added to the care of the directors their remuneration should be increased, although I am sure this is not the case with the great majority of you.

It is obvious that the work of the board controlling 29 estates, producing three different commodities and comprising over 26,000 acres of planted land (that is, over 40 square miles), cannot be compared with that of an ordinary plantation company of a thousand acres or so, and perhaps holding one estate. The details relating to the agricultural part of the work, the engagement, promotion, remuneration, and dismissal of staffs, the estimates of expenditure, keeping track of costs of production and prices, arrangements as to finance, exchange, &c., sales of produce, forward or otherwise, &c., all are multiplied many times for a company of this size.

Also it is important that a company of this kind should get and keep upon the board men of the necessary experience and capable of directing so large a concern, and for this adequate remuneration must be provided. Further, some directors may be called to do more work than the others in relation to the detailed administration of the company's affairs, and in such case they will require to have a larger share of the remuneration than the others.

It is, however, proposed to raise the fixed fees by £1,000 per annum. If this is done the total fixed fees will only amount to about 2s per planted acre over the combined acreage, which I think will be found very much below the average cost per acre of directors' fees paid by rubber and tea plantation companies generally. The average paid is probably nearer 5s per planted acre, and in many cases it is as much as 15s to 20s per planted acre.

I venture to suggest that amalgamations such as this should be encouraged, and that they effect a real saving in the remuneration of directors, whether calculated in relation to the acreage controlled or the capital employed, and also what, perhaps, is of more importance, help to attract and retain in the plantation industries the better and more valuable type of directors.

If there are any questions upon the scheme I shall be pleased to do my best to answer them, and I will now move the first resolution, which has been read to you, and ask my colleague, Mr C. Heath Clark, to second it.

Mr C. Heath Clark seconded the resolution.

In the course of the discussion which ensued an amendment to defer the proposed purchase was defeated, and, the Chairman having replied to questions, the resolution was carried, on a show of hands, by the requisite majority.

On the motion of the Chairman, seconded by Mr E. L. Hamilton, the second resolution was also adopted by the requisite majority, and the proceedings terminated with a vote of thanks to the chairman.

BOOTH'S DISTILLERY, LIMITED.

CONTINUED EXPANSION—ISSUE OF CAPITAL.

The 26th ordinary general meeting of Booth's Distillery, Limited, was held on the 12th instant, at the registered office of the company, 55 Cowcross street, London, Mr Charles E. Cottier presiding.

The chairman said that the gross trading profit for the past year, amounting to £133,696, indicated an eminently satisfactory increase in the company's trading, being over three times as much as the corresponding figure for the previous year. The net profit amounted to £56,840. The directors recommend a dividend of 10 per cent., less tax, on the ordinary shares, carrying forward £11,800, subject to corporation profits tax.

Referring to the fire which broke out at the Millburn Distillery in April last, he said that the opportunity had been taken of enlarging the premises and equipping them with up-to-date plant and machinery, the annual producing capacity having been increased by at least 30,000 gallons, thus bringing the possible output up to 180,000 gallons.

During the past 12 months the company had systematically and attractively advertised its products, and there was no doubt that the wisdom of this policy was fully reflected in the trading. The products of Booth's Distillery had for the better part of 200 years maintained a first-class reputation for quality, and the directors were confident that the continuation of this advertising policy was the correct course.

NEW BUSINESSES ACQUIRED.

In November last the company acquired the wholesale wine and spirit business of Messrs Style and Winch, Limited, including all

the shares in a small company which held the goodwill in the trade-mark of the well-known "Old Style" whisky. This business, which embraced a large number of customers in the United Kingdom, and export trade to foreign countries, was an important accession to Booth's Distillery, and the directors were confident that it would add materially to the future profits.

They had also entered into an agreement to acquire the whole of the share capital of Samuel Mart and Co., Limited, wholesale wine and spirit merchants, of Castle street and Paul street, Finsbury square, E.C. This was a concern of excellent repute in the trade, and was established in the year 1850. It had an extensive connection, largely among the licence holders in London and the Home Counties. This acquisition, apart from continuing the normal business of that company, would give Booth's Distillery important openings for the development of its trade, and should materially increase the company's earnings.

During the 12 months under review the outstanding debentures of the company had been reduced by £48,200, and now stood at £135,000.

The improvement shown in the accounts now presented had continued to be consistently progressive for the three months of the current year which had already elapsed, and the directors anticipated that the net earning capacity for 1923 of the various undertakings now owned and to be taken over and operated by Booth's Distillery, Limited, based upon the annual turnover of the respective concerns, would not be less than £100,000, and there was no reason why this figure should not annually increase.

ISSUE OF £500,000 DEBENTURES.

The considerable purchases and extensions, and the progressive policy embarked upon, had necessitated the expenditure of a considerable sum of money, a portion of which had been provided by a loan from the company's bankers, which at December 31st last stood at £289,892. The directors had decided that the discharge of this loan should be immediately dealt with, and the finance of the company placed on a sound and permanent footing. It had therefore been decided to issue £500,000 debentures, out of the proceeds of which the existing debentures, amounting to £135,000, would be discharged and the bank repaid. The terms of the proposed issue were that the debentures should carry 6 per cent. interest and be issued at 99. The debentures and the interest thereon would be secured by a trust deed constituting a specific first mortgage upon the freehold distilleries and other properties of the company, and, in addition, by a floating charge upon the whole of the other assets. They would be redeemable by drawings at 102 per cent. on or before April 1, 1948. In each year, commencing with the year ending December 31, 1924, £15,000 and such further sums as, together with this amount, would be equal to one-quarter of the net profits of the company after payment of the preference dividend would be set apart as a fund for the redemption of outstanding debentures. In addition the company would reserve the right to pay off all or any of the said debentures at 105 per cent. at any time after October 1, 1928, by giving six months' notice, and any debentures not redeemed would be repaid on April 1, 1948, at 102 per cent. The directors were arranging that applications from shareholders, debenture-holders, and customers would receive special consideration. Anticipating that existing debenture-holders would be desirous of retaining a debenture interest in the company to replace the 4 per cent. debentures which would be paid off, the directors had made arrangements whereby they would be prepared to receive from the holders thereof applications for a like face value of the new issue.

The report and accounts were unanimously adopted.

CORDOBA COPPER COMPANY, LIMITED.

INCREASE OF CAPITAL APPROVED.

The fifteenth ordinary general meeting of the Cordoba Copper Company, Limited (and Reduced), was held, on the 10th instant, at the Cannon street Hotel, London, Mr Edgar Taylor (chairman of the company) presiding.

The secretary (Mr G. H. Wells, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that during the 12 months under review a substantial and successful amount of development work had been carried out at the Mosaboni Mine in India, no less than 3,241 feet of sinking and driving, besides 14,717 cubic feet of excavation work, having been accomplished. Considerable lengths of ore of good width and value had been disclosed; the widths and assay values of the lodes in the various levels were clearly set out in the report, and the figures might be described as eminently satisfactory. The financial position of the company at the date of the balance-sheet was satisfactory, inasmuch as they had cash, Government securities, &c., amounting to £29,062. The liabilities amounted to £2,563, leaving a balance of resources of £26,499, besides stores to the value of £3,762. An engineer (Mr E. R. Woakes) had been dispatched by the managers, Messrs John Taylor and Sons, to the properties to report upon them, and information had been received from him to the effect that after a thorough examination he was most favourably impressed with the present appearance of the property and its future prospects. Mr Woakes estimated that up to the end of January last 65,000 tons of ore, assaying slightly over 3 per cent. over a stoping width of 47 inches, had been opened up, and the prospects of developing large tonnages of ore of higher grade in depth were most encouraging. He strongly recommended a programme of vigorous development, which would increase the reserves at Mosaboni to at least 300,000 tons within the next two years, the assay value of which should not be under 3½ per cent. The Indian sale price of copper was never less than 16 per cent. higher than the London price, and at times it was 24 per cent. higher. It was proposed to increase the capital to £300,000 in 3,000,000 shares of 2s each, and to issue at once 800,000 shares at par to the shareholders in the proportion of one new for each old share held. The issue had been underwritten.

The motion was carried unanimously, and the retiring directors, Mr R. E. Carr and Mr Hugh F. Marriott, and the auditors, Messrs Turquand, Youngs, and Co., were re-elected.

It was also unanimously resolved: "That the capital of the company be increased to £300,000 by the creation of 2,200,000 new shares of 2s each, ranking *pari passu* in all respects with the existing shares in the company's capital."

A vote of thanks to the chairman and directors terminated the proceedings.

WORLD AUXILIARY INSURANCE CORPORATION, LIMITED.

SUCCESSFUL INVESTMENT POLICY.

The fourth ordinary general meeting of the World Auxiliary Insurance Corporation, Limited, was held, on the 10th instant, at Winchester House, London, Sir John B. Wimble, K.B.E. (chairman of the company), presiding.

In moving the adoption of the report and accounts, the Chairman said: The premiums received in 1922 on account of fire and accident business amount to £143,660, showing a fall in income of £28,800 compared with 1921. The claims paid and outstanding amount to £8,540, to which must be added commissions and expenses of £57,775, showing that our reserve for unexpired risks is 47.19 per cent., against 40.8 per cent. for the corresponding period of 1921—a fact which, I think you will agree, is very satisfactory.

The marine account shows the net premiums for 1922 to be £149,758, or £15,210 less than 1921, and the claims for 1922 £37,775, being 25.2 per cent. With the amount brought forward at December 31, 1921, and after paying all claims on 1920 and 1921 end expenses, there remains a balance of £211,392, out of which the sum of £20,000 is transferred to profit and loss account, leaving the marine fund to be carried forward £191,392, or 127.8 per cent. of the year's premium income.

Dealing with the profit and loss account, interested amounted to £21,366, which, with commission earned of £2,803, gives £24,169. Profit on investments realised £32,945, transfer fees £114, miscellaneous receipts £453, and transfer of £20,000 from marine account, as previously stated, shows, with the amount brought forward of £7,371, a total of £85,052. From this amount is deducted sundry items as detailed in this account, amounting to £42,587, including a reserve for Government taxation of £26,000, leaving a balance of £42,465, from which is deducted £20,000, transferred to the reserve fund, leaving a balance of £22,465 to be carried forward.

As I have already stated, our profit and loss account is credited with a profit on investments realised of £32,945. This is brought about by the sale of most of our short-dated securities. At the start of the company's career your board deemed it advisable to have

considerable investments in short-dated securities to avoid possible depreciation; this policy has proved successful, for not only has there been no depreciation, but we have realised a handsome profit in their appreciation. The money so realised has been invested in securities with a longer-dated maturity.

Sir Arthur Lawley seconded the resolution, which was carried unanimously.

BRITISH TRADE CORPORATION.

REDUCTION OF CAPITAL APPROVED.

The sixth ordinary general meeting of the British Trade Corporation was held, on the 9th instant, at the Institute of Chartered Accountants, Moorgate place, London.

Lord Faringdon (the governor) said that the profit and loss account showed a credit balance of £69,434, but after making provision in respect of interest charged to debtors but unpaid, the balance was only £39,411. Profits had been particularly hard to make, and the result had fallen short of the board's expectations. It should, however, be mentioned that the corporation had obtained only small benefit during the past year from the new capital issued, the calls having been spread over periods from July to December last.

At the last meeting the policy and the necessity for the provision of new capital had been fully explained and fully endorsed by the proprietors, and in the circumstances his colleagues and himself were of opinion that it was clearly their duty to carry on, the alternative being liquidation or the contraction of operations. In June last, therefore, they had issued £500,000 of the £1,000,000 "A" shares authorised, and these had been fully subscribed. The provision of that £500,000 had put the corporation in the strong financial position he had already indicated.

Four and a-half years had passed since the Armistice, and Europe was still in an unsettled condition, and little disposed to settle down to peaceful occupations. Credit had not been re-established, and the only European country which had made any serious attempt fully to meet its annual obligations was their own, and they were suffering from heavy taxation, which made expansion of enterprise difficult. Relief from some of the burdens would stimulate trade, which was certainly showing signs of recovery from the extreme depression of last year. However desirable it might be to reduce the nation's indebtedness, it was at the present moment more important to increase the volume of our business and broaden the basis upon which future taxation could be levied.

The real trouble this corporation had had to face was the result of the political and economic conditions in the Near East and elsewhere, and the stagnation of trade and depreciation in foreign currencies which they had produced.

The report and accounts were adopted, and at a subsequent extraordinary general meeting resolutions approving the proposed reduction of capital were agreed to.

RIO TINTO COMPANY, LIMITED.

PROFITS DOUBLED—FAVOURABLE OUTLOOK.

The fiftieth ordinary general meeting of the Rio Tinto Company, Limited, was held, on the 12th instant, at 3 Lombard street, London, the Right Hon. Viscount Milner, K.C. (the chairman), presiding.

The Chairman, in the course of moving the adoption of the report and accounts, said: In regard to the revenue account, the outstanding and most satisfactory feature is that the main item of it—profit on sale of produce—amounts to £996,000, as compared with only £403,000 in the previous year. This result is all the more encouraging because it is not due to any specially favourable market conditions, but to a general recovery in our business, which has enabled us to make headway against market conditions that were in some respects very unfavourable. For though the price of copper in the later part of the year showed a steadily rising tendency, the average price which we were able to obtain throughout the twelvemonth was only £63 8s 4d a ton, and, on the other hand, severe competition kept the price of pyrites inordinately low. That, despite adverse circumstances, we have been able to come out on the whole so well is, I think, of good augury for the future.

Our operations in Spain have been carried on smoothly, without interruption or disturbance of any kind. The efficiency of labour is well maintained. We have not sought to save money by reducing wages, but in other respects costs are greatly diminished. This is due mainly to the all-round fall in the price of materials, especially pig-iron, but to some extent also to an even more gratifying cause—the economies which we have been able to effect in some branches of our business. Concurrently with this reduction of costs there has been a considerable increase in the demand for pyrites. And though competition has kept prices in this commodity very low, we have found some measure of compensation in the increased amount of our sales.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

Turning to the future, it is, of course, in the present state of the world more dangerous than ever to venture upon prophecy. But apart from adverse political influences, the outlook is favourable. The price of copper, always a factor of the greatest importance, is much higher than last year, about £75 a ton at the present time, as compared with an average of between £62 and £63 a ton in 1922, and it is not likely that, for some time to come at least, it will fall much below this figure. The situation, as a whole, therefore, seems to me, on this occasion also, to justify an attitude of "moderate optimism."

The report and accounts were unanimously adopted.

FAIRBAIRN, LAWSON, COMBE, BARBOUR, LIMITED.

PRICES REDUCED—IMPROVED PROSPECTS.

The twenty-fourth ordinary general meeting of Fairbairn, Lawson, Combe, Barbour, Limited, was held, on the 12th inst., at the Liverpool Street Hotel, London, Mr J. Campbell Inglis (the chairman) presiding.

The Chairman, in proposing the adoption of the report and accounts, said that after meeting debenture and note interest, providing for corporation profits tax, and paying or providing for all expenses, they had an available balance for the year of over £179,000. The directors were thus not only able to recommend a final dividend of 10 per cent., making 14 per cent. for the year, but also to set aside £18,000 for note redemption; to write off £14,000, the net expenses of the capital issue; put £20,000 to reserve, and carry forward a slightly increased balance. It was true that the profits showed a marked decline from those of 1921, but 1921 was an *annus mirabilis*, such as they had never enjoyed before, and such as they could only hope to enjoy again at infrequent intervals. But beyond that there was the fact that in 1922 they had to contend with factors which were non-existent in 1921, and the directors felt that they had done well to come out with so substantial a result. For over 13 weeks there was an almost complete cessation of work in the company's establishments owing to the great lock-out, and the consequent dislocation could not be repaired till a considerable time after the resumption of work. In addition to this they began to feel the effects of that great depression in the engineering industry which succeeded the post-war boom.

To meet this hesitation on the part of their customers they had reduced their prices to the lowest figures compatible with a reasonable profit, and he was glad to say that there were distinct signs of improvement in trade. Some of their friends, however, were still holding back, and seemed to expect still further reductions; in fact, it had been suggested that they ought to go back to their 1912 prices. Even if conditions were the same, those prices did not include a satisfactory margin of profit, but the conditions were not the same.

The Chairman then dealt with some of the figures in the balance-sheet, and in particular called attention to the liquid financial strength of the company. In conclusion, he remarked that the directors had had a strenuous year, but they were always encouraged by the solidity of the company's business and its amazing powers of resilience.

Mr H. L. Whalley seconded the motion, which was carried unanimously.

JAMES W. COOK AND CO., LIMITED.

GERMAN COMPETITION.

The twenty-sixth annual general meeting of James W. Cook and Co., Limited, was held, on the 11th instant, at 130-135 Minories, London, Mr W. J. Clarke presiding.

The Chairman expressed regret at the loss which the company had sustained by the death of Mr William Clarke, the late chairman and managing director of the company, and also of Mr Joseph F. Lescher, a director of the company. Proceeding, he said that the trading in 1922 had been difficult in the extreme. During the war period increases in warehouse and transport charges took place, following the increases in wages, culminating in a surcharge at one time of 150 per cent. over base rates. This percentage now stood at 62½ per cent. on labour charges in the tariff of the Port of London Authority, whose lead they followed, and these reductions had been made much in advance of the fall in labour costs secured in the Port. They had particularly suffered by the transference of the storage of one of their articles entirely to Hamburg, solely by reason of the fall in the mark.

In addition to absurdly low warehousing charges, it could be reshipped from Hamburg in steamers run on marks, so that they had there a double difficulty to contend with. We could not compete with such inflation as had occurred in Germany, but there was one thing we could do in this country immediately, and that was to recognise that it was impossible to maintain the present shortened hours of labour of 44 hours per week, and that the Port output

must be increased by lengthening the working day by an hour at least, which, without affecting the labourers' pay, would automatically help them to meet the present conditions. Other articles were affected in the same way, although, happily, not to the same extent, so that their problem had been and was to secure trades that were not subject to the same conditions. This could not be done at once, but he was very hopeful that, as the result of their present success in their fresh endeavours, they would be fully rewarded ere long. The company's investments at the moment showed a comfortable margin of profit, and they had steadily added to the value of their property during the year. The Chairman concluded by moving the adoption of the report and accounts, and the payment of a dividend at the rate of 12 per cent. per annum for the half-year on the ordinary shares, making 10 per cent. for the year, less income-tax, and a bonus of 5 per cent. on the ordinary shares, free of income-tax.

The resolution was carried unanimously, and Mr Ernest G. Devitt and Mr Robert Massey were appointed directors of the company.

TRANSVAAL AND RHODESIAN ESTATES, LIMITED.

IMPROVED PROSPECTS OF THE FRED MINE.

The adjourned ordinary general meeting and the ordinary general meeting for 1923 of Transvaal and Rhodesian Estates, Limited, were held at River Plate House, Finsbury Circus, London, on the 6th instant, Mr H. G. Latilla (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the Fred Mine continued to be the principal revenue-producer. They were long faced with a shortage of hammer boys, which, with the narrow reef width, caused the tonnage to be less than was anticipated. Costs per ton showed an increase, partly because the exploratory work on the adjoining Fernando Mine was charged to current costs. The ore reserves situation at September 30th last was higher in tonnage, but lower in value than at the end of 1920. The total number of ounces contained in the reserves was practically the same. The new development programme had been pushed ahead. It included the sinking of the 5A shaft to the eleventh level. The change of programme had fully justified the expense incurred, as results both on the tenth and eleventh levels were decidedly better, and it looked as though the mine had pulled round again.

The Turkois Mine was owned by the Gem (Rhodesia) Gold Fields, Limited, in which the company had acquired 98 per cent. of the shares. The Turkois Mine of 65 claims was in the same district as the Cam and Motor, and was spoken of as likely to become one of the biggest in Rhodesia. They were concentrating on developing at depth. The Turkois line of reef ran for over seven miles.

The company's Nigerian interests had been acquired by the Nigerian Base Metals Corporation, which owned 1,806 acres of mining leases, mining rights over about 46,000 yards, and silver lead prospecting licences over 1,533 square miles. Substantial improvement in the position of the corporation could be looked for now that tin stood at £213, provided the market remained steady. They had taken an interest in an alluvial gold prospect in Nigeria, and within the next few months they might be able to give definite information as to values and prospects. The company now had a 30 per cent. interest in the Farm Maraisdrift, in the Heidelberg district of the Far East Rand. Much had been said as to the probability of this property becoming one of the largest and most profitable gold producers in the world. The demand for land in South Africa had been very slow, and sales had consequently suffered. Satisfactory progress had been made on the ranches. Regarding the English estates, the Tube Railway to Edgware was increasing the demand for land and houses on the Canons Park Estate; and on the Walmer Estate, on the coast of Kent, a few sales of plots had been effected, and the purchasers had commenced to erect houses, which, it was hoped, might bring further inquiries for plots.

The report and accounts were adopted.

MYSORE GOLD MINING COMPANY, LIMITED.

POLICY OF DEEPENING THE MINE.

The forty-third ordinary general meeting of the Mysore Gold Mining Company, Limited, was held, on the 13th instant, at Cannon Street Hotel, London.

The Hon. Lionel Holland, the chairman, in moving the adoption of the report and accounts, said that the results shown conformed generally to anticipations. At the last meeting he had pointed out that they had to be prepared to face for a time a period of lessened profits, for the fall in the price of gold must prejudice their sales revenue, while no increase was contemplated during the 12 months in the tonnage of ore to be stoped and milled. Until their extensive programme of development work in the deeper levels was continued, or until it disclosed further reserves of payable ore sufficient to replace what they took out from the reserves, the wisdom of sub-

mitting to some curtailment of output was almost beyond argument. It rendered practicable a considerable saving in underground expenditure, and ensured that the payment of dividends to shareholders during the period of development should not be interrupted.

Sales of gold had produced during the year £565,927, and the balance of profit was £186,723, against £207,799 for 1921. The disposable balance of profit, after satisfying various allocations, was £93,282 as compared with £108,838. The final dividend of 1s. 3d. per share would complete a dividend payment for the year of 2s. per share, or at the rate of 20 per cent., and would make up a sum exceeding 9½ millions sterling paid out by way of dividend by the company since its first dividend payment 38 years ago. Generally, their financial position continued strong, having scarcely altered since last year. Their showing on the present occasion would have been less satisfactory had not a saving in mining costs been realised during the year approximating to a sum of at least £30,000. There was a vast undertaking, but because of its very vastness every economy told the more. As to future prospects, he could only repeat what he had expressed last year, that the new development work was still in too early a stage to justify any attempt at a forecast, except that the recuperative power of those Indian mines at depth had again and again confounded the sceptic and the pessimist, and that their near neighbour, the Ooregum Mine, was proving bodies of ore of high value at a greater depth than any to which the Mysore Company had attained. It was disappointing that they had failed during the year to replenish their reserves by any substantial discovery of milling ore. Rather they had during those months trencched upon them by over 100,000 tons; but their reserves were estimated upon a conservative basis, and could be relied upon to support their requirements well through the period of development.

Mr Edgar Taylor, in seconding the motion, said that the policy of deepening the mine with all possible speed had been followed. The report and accounts were unanimously adopted.

		Other countries	624
Total declared value of imports	896,537	Total declared value of exports	553,843

Messrs Samuel Montagu and Co. write on April 11th as follows:—

GOLD.

A fair amount of gold came on offer this week, and a moderate amount was taken for India. Gold valued at \$2,250,000 has arrived in New York from London. It is stated in the Press that plans to recover the bullion from the ss. "Egypt," sunk in 65 fathoms off Ushant, are nearing completion, and that the salvage premium works out at 55 per cent.

SILVER.

There has been a considerable amount of selling during the week from India, the Continent, and America, arising, no doubt, from the news as to the Pittman Act purchases being likely to be completed earlier than was generally anticipated. The Indian bazaars have been fairly good buyers for this week's—the settlement—steamer, but there has been a tendency to sell an equivalent quantity for forward delivery. There has been an outbreak of plague in the Bombay Presidency, but not yet serious enough to be a factor of real importance in the silver market. The bazaars, however, are always ready to seize anything, however slight, that confirms a view already taken, and, therefore, they would naturally consider it a bear point. China, on the whole, has been inactive, but has prolonged such bull commitments as fell due.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Mar. 15, 1923.	Mar. 22, 1923.	Mar. 31, 1923.
Silver coin and bullion in India	17,433	17,438	17,470
Silver coin and bullion out of India	8,673	8,678	8,706
Gold coin and bullion in India	2,432	2,432	2,432
Gold coin and bullion out of India	5,743	5,744	5,748
Securities (Indian Government)	585	584	584
Securities (British Government)			

The coinage during the week ending 31st ult. amounted to 8 lacs of rupees. The stock in Shanghai on the 7th inst. consisted of about 28,600,000 ounces in sycee, 36,000,000 dollars, and 1,020 silver bars, as compared with about 28,300,000 ounces in sycee, 34,000,000 dollars, and 120 silver bars on the 3rd inst.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as follows:—

1923.	Gold.		Silver.		Date.	Silver.
	Per Ounce.	Cash, Per Ounce.	Forward, Per Ounce.			
April 7..	88 3	32 1/2	32		April 13, 1917	36 1/2
9..	88 3	32 1/2	31 1/2		17, 1918	46 1/2
10..	88 10	31 1/2	31 1/2		11, 1919	48 1/2
11..	88 6	31 1/2	31 1/2		9, 1920	60 1/2
12..	88 5	31 1/2	31 1/2		8, 1921	33 1/2
13..	88 6	32	31 1/2		7, 1922	33 1/2

NOTICES.

We understand that arrangements have been made for Sir William Carruthers to retire from the general management of Barclays Bank on September 30th next. Sir William will continue to be a member of the board, and otherwise remain closely connected with the bank.

Mr F. C. Goodenough, the chairman of Barclay's Bank and the president for this year of the British Bankers' Association, has accepted an invitation to address the executive council of the American Bankers' Association at their spring meeting. Mr Goodenough is sailing for New York by the "Berengaria" on April 14th.

Mr F. E. Steele, an assistant general manager of the Westminster Bank, Limited, is retiring on pension at the end of this month, after over 42 years' service with that bank and its constituent banks. Mr Steele is a member of the Council of the Institute of Bankers and of the London Chamber of Commerce, is the author of various financial treatises, including "Present Day Banking" and "How Our Overseas Trade is Financed," and was Gilbert Lecturer on Banking in 1921.

Barclays Bank, Limited, announce that they have opened a new sub-branch at 65 Beckenham lane, Shortlands, S.E., under the management of Mr P. J. Luck (also manager of Bromley branch). The business hitherto carried on at 42 Kirkdale, Sydenham, has been transferred to and amalgamated with their office at 13 Kirkdale, Sydenham, which is under the management of Mr E. M. Horlock. A new branch has been opened at 172 King street, Hammersmith, W.6, under the management of Mr E. W. Nix.

W. J. Fitzherbert-Brockholes, Esq., C.B.E., J.P., D.L., of Cloughton Hall, Garstang, near Preston, has joined the board of the Union Bank of Manchester, Limited.

The National Provincial and Union Bank of England, Limited, announce that a branch of the bank is now open at 53 Old Kent road, S.E. 1.

The Hongkong and Shanghai Banking Corporation announce that Sir George MacDonogh, K.C.B., K.C.M.G., has joined the London committee.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Wool sales have been resumed in Australia, and cables to hand from Melbourne and Sydney indicate an active and rising market. A month ago brokers in Sydney were seeking buying limits in Bradford, stating that they could pick up on a clean basis of 50d for good topmaking wools. Cables received this week are at 53d, and we are satisfied that merino values are going to be no cheaper this season. It has been announced that Victorian offerings from Easter to the end of the season are only going to be about 27,000 bales. This is a very small quantity indeed, and we expect that after this month Sydney offerings will be both small and poor. During the current month all the New England clips will be disposed of, and the season is practically over in South Africa. Cables from Port Elizabeth mention 52d to 53d as the buying basis for 10-12 months' wools, and 55d for full 12 months' combing. All this clearly indicates a strong, rising market, with merino values healthy and sound. In consuming districts there is already talk of a sensible advance in Coleman Street when the next series opens on the 24th instant, and whilst we think it unwise to adopt anything in the nature of forcing tactics, resulting in values eventually being put on to an unworkable level, supply and demand may be expected to dictate market values. The present buying movement is being brought about by competition from various important sources, Japan and America, as well as the Continent, all operating freely. Business in the West Riding is none too good to warrant higher merino values. Manufacturers are still meeting with tremendous opposition, but America is reported to be keenly inquiring for good combing merino fleeces, as well as fine crossbred matchings. The latest reports from across the Atlantic indicate renewed attention to merino fabrics, which is taken as being indicative of very healthy manufacturing conditions, as well as a good sustained demand for clothing. There is always a certain percentage of the consuming public to whom it is no financial hardship to pay an extra guinea or two for a suit of clothes, but the purchasing power of the great majority is still very limited, and it is the desire of wholesale and retail clothiers to offer goods at an attractive price, which is the real explanation for the present opposition against the excessive cost of merino fabrics. We are convinced that the rank and file of the world's consumers of clothing cannot afford any higher prices than those current to-day for all classes of fabrics, and it will do the wool textile industry the most good for present values to be consolidated. In that way a steady and progressive business will be ensured. It is remarkable that all the driving force continues to come from the raw material end of the trade. Messrs Dalgety and Co. have received a cable from their Melbourne branch stating that the exports of wool from Australia during the nine months ended March 31st amounted to 1,703,000 bales, an increase of 80,000 bales compared with the corresponding period ended March 31, 1922. The exports from New Zealand amounted to 373,000 bales, a decrease of 91,000 bales. The total exports from Australasia thus amounted to 2,076,000 bales, a decrease of 11,000 bales compared with the shipments for the corresponding period of 1921-22. It is clear from the above data that there will not be a large supply of fine wool offered in London during the remainder of the current year. It is quite true that competition will decide the actual level of values, but when all is said and done supplies will not be so reduced as to justify anything in the nature of a wild scramble.

THE COTTON TRADE.

MANCHESTER, April 12.

Since a week ago there has not been any distinct change in the conditions prevailing in the market. On the whole, however, more inquiry has come through, and in certain quarters a few more contracts have been arranged. Buyers, however, are cautious, and there is not sufficient confidence in current rates for active operations to take place. Scattered transactions have occurred in shirtings, bleaching cloths, and fancies for the several outlets of India, but dealers on the other side are slow in raising limits. Standard makes for China remain slow, but some advices from Shanghai are slightly better, and some very fair orders have been booked in special makes. A little more activity continues to show itself for Constantinople and Egypt. Buying for South America has been very irregular. Home trade buyers are purchasing from hand to mouth. American yarn quotations have been generally firm, and the turnover shows some improvement. A steady demand continues to be met with in Egyptian spinnings, and better reports are being published by Bolton mills.

Some interesting statistics relating to the amount of cotton machinery in Lancashire are given in the new edition published this week of Messrs Worrall's "Trade Directory." The spindles are

The First National Bank of Boston

The leading financial institution of New England

Foreign and domestic commercial banking of every nature

Correspondence solicited.

now given as 59,818,670, and looms 795,244. During the last few years there has been a tendency for machinery to run out of use without being replaced; in 1917 the spindles were 60,973,381, and in 1916 the looms totalled to 808,796.

VEGETABLE OILS AND OILSEEDS.

The outstanding feature of the market has again been the firmness of linseed oil, and a further rapid advance in values at both Hull and London to over 50 for spot and month oil, an advance of at least £10 inside a month. Near positions have also hardened correspondingly, while the position still further forward is firm. The strength has been derived from the position of seed and the further heavy buying of oil for shipment to America. In addition, a good demand has been met with from the home trade for future delivery. Latest reports from America are to the effect that although substantial purchases of Plate linseed have already been made on American account, they are little more than one-third of the States' requirements from this quarter over the full year. From Minneapolis it is reported that 25 million bushels (625,000 tons), or 18 million bushels more than last year, will be the year's requirements to be supplied from Argentina, which, of course, will leave a correspondingly smaller surplus to supply needs on this side of the Atlantic. In view of this, Plate prices continue very firm, but only a small trade appears to be doing on European account, English crushers having turned their attention to the Indian crop of which they have bought freely, paying up to £21 5s for Calcutta and £21 15s bold Bombay for April and April-May shipment. For Plate seed, Hull has paid up to £19 17s 6d for April-May and Rotterdam up to £20 10s for "adfloat." Egyptian cottonseed has rallied, and is 10s dearer on the week, while cotton oils are also in better demand, and are 30s to 40s dearer and firmer.

The shipments of linseed from January 1st to April 6th to the United Kingdom are: Plate 140,900 tons and Indian 27,550 tons, together 168,450 tons, against 116,500 tons a year ago; and to the Continent: Plate 187,000 tons, Indian 15,000 tons, together 202,000 tons, against 146,000 tons. The shipments to the U.K. and Europe thus total 370,450 tons, against 262,500 tons for same period of 1922. The shipments of Argentine linseed to North America are returned at 215,000 tons, against 45,000 tons a year ago, and the total including Europe and 4,000 tons to Australia at 546,900 tons, against 226,100 tons a year ago. The balance of the Argentine crop available for export is, on the basis of recently revised estimates (which are considered too conservative), 503,000 tons, while that from India is put at 354,000 tons, giving 857,000 tons yet to be shipped, against 927,000 tons at the same date last year. The possibility of shipments from Russia is not taken into account.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Market hides remained very steady at Bermondsey auctions on Thursday, and best ox hides at 8½d to 8¾d showed no alteration. Seconds also sold at last prices. Best cows were steady at 6½d to 6¾d, but seconds dropped an eighth. Calf were unaltered, with the exception of the seconds light class, which advanced an eighth. Wools sold from 5s 6d to 12s 6d, hogs 6s to 14s 6d, and lambs from 2s 9d to 6s each. The demand for imported hides has shown an improvement of late, and the turnover has been much better than was the case a few weeks ago. Frigorifics are slightly lower in the River Plate, although this is discounted by long hair. Prices quoted are 85¢ for Argentines and 84¢ for cows. Saladeros have sold this week to the home trade, Tabarez cows selling at 8½d on spot. Dry hides are very firm, and sales are reported of Australian, West Coasts, and Cape stock. The American market is cabled as steady, with heavy native steers offered at 19 cents and packer sheepskins from 35¢ to 36¢ each. The tone of the sole leather market has much improved in Bermondsey this week, and some merchants appeared really busy. Light bends from 8 to 10 lbs are being taken by manufacturers, whilst repairers have ordered bends up to 12 lbs. Prices are fairly firm, but there are persistent rumours that tanners are shading prices to effect clearances, especially in the heavy selections. Pinned offal is in short supply, and shoulders which will cut a cheap sole are sold forward. Little American sole leather is arriving, as prices in the U.S.A. are too high, but more has been doing in the Norwich district in Australian sole, which suits the turn shoe trade.

Upper leathers are selling slightly better, and prices are very firm. Box and willow calf are wanted in the cheaper grades, but tanners say it is hopeless to attempt to compete with German prices at present. Glacé and suède are selling mainly in their cheaper grades.

The shoe section is finding the benefit of the Easter trade, and orders are coming along to replace stocks. Cheapness is still the bête-noir of the manufacturer, and it seems, no matter what profit the retailer is able to make, he wants something which will "come out cheaper" than the stock he is offering.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, April 13.

Business in most directions pursued a quiet course, and amongst fibres jute took a further downward turn owing to lack of interest shown on the part of spinners. Sugar, however, further moved upward on scarcity of offers from producing countries, and a fair business was done both on grocery and manufacturing account in spot parcels of refined at a general advance of 1s 6d per cwt.

SUGAR.—Market very firm undertone, with refined and also raws very sparingly offered. Cuban stock stands at 676,800 tons against 851,300 same time last year. Crystallised West India remains in small supply. A fair business resulted in refined on spot at full prices. Messrs Tate and Lyle's cubes, 68s to 69s; granulated, fine and coarse, 63s 10½d; No. 1, 63s 7½d; No. 2, also London, 63s 4½d; yellow crystals, 57s 4½d. Granulated, May, 62s 9d; June, 63s; July, 63s 3d; August, 62s 9d. West India crystallised ranges from 55s 9d to 58s, as to quality. American granulated, spot, 62s 6d; April, steamer, 35s 6d, c.f. and i., London. White Java, spot, 61s to 61s 6d; May-June, steamer, 32s 6d, 37s 6d paid; June-July, 30s 3d to 29s 4½d; July-August, 29s to 28s 3d, c.f. and i., London. Czecho granulated, spot, 62s; November-December, 26s, f.o.b., Hamburg. Of Dutch, W.S.R. granulated, prompt, quoted, 36s; J. 35s 6d, f.o.b., Amsterdam or Rotterdam. Belgian granulated, October-December, sold, 25s, f.o.b., Antwerp. Cuban, basis 96 per cent., April-May, 29s 6d; Brazilian, ditto, 29s 6d; ditto, 80 per cent., 19s 3d; Madras, cane, jaggery, April-May, 19s, all c.f. and i. terms, U.K. Terminal market irregular. May, quoted, 34s 3d; August, sold, 35s 3d to 34s; December, 25s 9d to 26s 4½d and 26s.

COFFEE.—Market quiet, but firm for fine Costa Rica descriptions, though otherwise rates favour the buyer. East India, middling, sold, 92s; bold, 101s to 112s; Costa Rica, mid, 104s to 105s; bold greyish, 112s 6d; fine, 142s. Future delivery market idle, and quotations quite nominal.

TEA.—During the week nearly 41,000 packages Indian were brought to auction, and generally speaking a quieter demand was experienced. This resulted in some slight irregularity, medium to fine being quite firm, while occasionally dearer for autumnal character, but common and thin liquoring descriptions proved only saleable at easier prices. 24,360 packages Ceylon were only moderately competed for, and apart from leaf sorts selling firmly on export account, a quiet and easier tone predominated. Java and Sumatra kinds experienced a quieter market, and rates favoured the buyer.

RICE.—General trade is quiet, but, with sellers equally reserved, recent rates are fully maintained. Two stars, spot, 14s 3d; adfloat, 13s 7½d; April, 13s 9d; No. 3 cleaned Rangoon, April-May, Levant, 14s 3d. Broken kinds quiet, but steady. 1 A Burma, April-May, 12s 6d; Siam C 1, 11s 6d. Rangoon beans dull, and hand-picked, spot, quoted 8s. Japanese peas quiet, and spot quoted 28s 3d; April-May, 26s. 2,500 tons bran, Rangoon, April-August, sold, £5 10s, ex ship, London-Liverpool.

SOUTH-NORWAY.

Business
of every description.

London Bankers:—Hambros Bank of Northern Commerce, Limited;
London County Westminster & Parr's Bank, Limited; London Joint
City & Midland Bank, Limited; Cox & Co.

SEEDS.—Linseed opened firmer, but quieter since. Bold Bombay, afloat, £22 10s; small Bombay, ditto, £22; Calcutta, afloat.

TALLOW.—Messrs Colchesters and Woolner write on April 11th as follows:—The tallow market was firm during the week, and prices are 6d to 1s dearer to-day. Inferior sorts continued to meet with a lively demand, while good kinds also showed considerable activity. The stock in London on March 31st, as returned by the wharves, amounted to 14,858 packages, showing a decrease during the month of 97 packages. At auction to-day 1,018 casks tallow were offered and 721 were sold. Quotations are:—Australian mutton: Fine, 45s 6d; good to fair, 44s 6d to 43s; dull to dark, 40s 9d to 39s 9d; hard, 45s. Australian beef: Fine, 45s 6d; good to fair, 43s to 42s; dull to dark, 40s 6d to 39s 3d; sweet, 45s 6d. Present shipment from Australasia:—Mutton, fair coloured, 48 degs., 44s; and mixed, 43s, c.i.f., London, 44s. The market letter is unchanged for tallow, stuff is dearer. Town tallow, 37s 6d per cwt. Rough fat, per 8 lbs, 24d; melted stuff, 29s 6d per cwt. Quotations are:—Town: 38s 3d net cash, naked, ex works. Country: Frail casks, 38s; home melted, shipping casks, net, f.o.b., good coloured, 42s; fair to dull, 39s to 38s. Bone fat: White, none; pale, none; benzine, 36s; melted stuff, 36s 6d, f.o.b.

Office: Granville House, Arundel street, Strand, London, W.C. 2.

Copies of the Economist may always be obtained in the City at Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmons, 5 Birch Lane; Barker and Howard, 6 Fenchurch buildings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15 Cullum street; Willing and Co., Limited, 50 Copthall avenue, and 53 Finsbury pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de L'Opera.

THE MONEY MARKET.

AFTER being in fair demand in the early days of the week—so much so that brokers complained that while discount was two to under, money was two to over—the supply became more abundant later, this relaxation being explained by the figures of the Bank return showing large increases in the Government securities and Other de-

posits. Discount rates have been weak, the pronounced scarcity of bills making it impossible to keep them from slipping, even though those who fear dearer money later on were able to cite Mr Baldwin on their side, by reason of his observations in winding-up the Budget debate. Friday's Treasury Bill allotment weakened the market further, and the three months' rate was nominal at or under 2 per cent.

	Apr. 20, 1923.	Apr. 13, 1923.	Apr. 6, 1923.	Mar. 28, 1923.	Previous Rate and Date Changed.
Bank Rate	5%	3%	3%	3%	3½ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount (Call)	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	2	2½	2½	2½	..

The Bank return showed a decrease of £530,000 in the note circulation, and increases of £4,000 in the stock of gold, and £534,000 in the Reserve. Government securities had risen by 2½ millions, while Public deposits had declined by 2 millions, and so the Other deposits were four millions higher, in spite of repayments which had reduced Other securities by 1½ millions. Currency notes outstanding were reduced by £2,042,600 to £285,564,900, which includes £1,487,900 for notes called in but not yet cancelled. The fiduciary issue is £234,627,000, or £35,556,800 below the maximum.

THE STOCK MARKETS.

The effect of the Budget upon the Stock Exchange markets as a whole has been decidedly favourable. Among most sections of high-class investment securities the activity of recent weeks received a fresh filip. In addition the interest in industrial shares has become broader and more vigorous under the dual influence of the halving of the Corporation Profits Tax and accumulating signs of improvement in industry. Many British Government stocks, Home Railway prior-charge stocks, Indian railway stocks, Colonial issues, and Corporation bonds show rises on the week, and in many cases the supply of stock on offer is insufficient to meet buyers' demand. The foreign market has, except for a sharp rise in Rio Tintos, been dull, the weakness of the franc and the new break of the mark being an unfavourable influence. Rubber shares are idle in consequence of a relapse in the price of the raw material. Favourites in the oil market have again been active. Shipping shares are heavy, but bank and insurance shares moved upwards, iron and steel shares are firmer, while tobacco shares and textiles have strong features. The brewery section was not affected by the Budget, and, apart from a rise in diamond and copper shares, the mining markets as a whole are uninteresting.

THE COMMODITY MARKETS.

Though markets do not complain of weakness, prices generally show no marked sign as yet of following the upward movement which is in progress in America. Sugar is an exception. Both spot and forward quotations have advanced in harmony with the American movement, which has been described as an "orgy" in speculation. Quotations for wheat are slightly higher, No. 1 Northern Manitoba moving from 51s 3d to 52s 6d. Copper remains quiet but steady at £74 per ton. In rubber, plantation varieties were weak, first crepe and smoked sheet selling at 1s 4d, as against 1s 4½d a week ago. Moderate inquiries but few useful contracts have been received for cotton goods, and our Manchester correspondent states that business has been impracticable in grey staples. Some fresh orders from India and more activity in fancies for China and other markets have been the noticeable movements of the week. Though wool spinning machinery is fully employed on old orders, few new orders are coming in. Our Bradford correspondent says the strength of the raw material market is making spinners cautious as to commitments.

There is a slight lull in dealings on the Cardiff coal market on account of the collieries being full of orders. Prices are 10s a ton higher than three months ago. In Scotch colliery districts orders continue to arrive from France, Germany, Belgium and Italy. Prices for pig-iron and for manufactured iron and steel remain unaltered, and demand is good; but our Sheffield correspondent states that consumers have no confidence in the current high prices being maintained. Linseed oil, after reaching the highest price since November, 1920, has weakened slightly on better crop reports. In the hide and leather trade values remain firm, tanners having to pay advanced prices at recent auctions.

FOREIGN EXCHANGES.

During the past week business on the foreign exchange market has again remained comparatively restricted, but excitement has been provided by violent fluctuations in the German mark. For about six weeks past the intervention of the Reichsbank has kept the mark very steady between about 97,000 and 99,000, after the action in the middle of February which had maintained it at a level of about 100,000 to 108,000. On Tuesday, however, there were signs of a break, and on Wednesday the rate rose at one time to 150,000, and on Thursday to 155,000. On both days there was some recovery towards the close, the final rate on the latter day being 133,500, and yesterday morning there was a further fall to 118,000. It is clear that for the time the Reichsbank intervention was allowed to lapse, and that the market in Berlin lost its head. Why this break in control, however, was permitted has not as yet been satisfactorily explained. It is said that the rise was accentuated by particularly heavy demands for sterling in payment of coal, &c., and it is also suggested that the Reichsbank permitted the movement in preparation for further stabilisation at a new and somewhat higher level. After being very much higher, forward rates are now quoted nominally at about 9,000 to 12,000 marks per month above spot. Paris, after being up to 71 on Tuesday, and above 70 on both the following days, was down yesterday morning to 69.80, as compared with 69.50 a week ago, the Brussels rate, as usual, moving in much the same way, being 80.90 yesterday morning, as compared with 80.45 a week ago. Forward rates in Paris have widened somewhat to 4 to 5 centimes per month above spot; in Brussels they are ½ centime wider at 2½ to 3½ centimes below. No new factors have intervened, and there remains the same feeling of hesitancy pending further political developments. On Monday the dollar reacted again to \$4.65½, but since then has improved slightly to \$4.66 yesterday morning. Forward rates are about the same at ¼ to ½ cents per month above spot. In view of the fact that the discrepancy between wholesale prices in the two countries is now disappearing, and the demand for American raw materials would seem to be increasing, there is not much likelihood of any decided rise in quotation. The lira has moved up again a little, from 93.30 on the 13th to 94½ yesterday, after having been rather higher in the earlier part of the week. Among neutral exchanges the chief feature has been the further depreciation of the Swiss franc, which, under the influence of withdrawals on German account, rose on Tuesday to 25.77, and at 25.62½ yesterday morning was still some 3 centimes above the quotation of the 13th. In the early part of the week Madrid showed some recovery, but yesterday was back at 30.35, about the same as last week. All three Scandinavian countries have moved somewhat against us, and Helsingfors also at 168½ is 1 mark lower. In Central Europe Vienna, Prague and Warsaw are unchanged at 330,000, 156½, and 200,000 respectively, and Budapest remains nominal. In the East the rupee is slightly dearer at 1s 4½d, while the yen has moved down from 2s 1 3/32d to 2s 1 1/8d. For the greater part of the week demand from China kept silver prices somewhat unexpectedly moving upwards, but a slight relapse has followed. Hong Kong

is 2s 3½d as compared with 2s 4d, Shanghai 3s 1½d as compared with 3s 2½d. In South America, Brazil, after some improvement, has relapsed again a little to 5½d, but is still rather dearer than 5½d a week ago. Buenos Ayres, on the other hand, is rather cheaper at 42½d, as compared with 42 31/32d. Monte Video is unchanged at 43½d, Valparaiso 20 points cheaper at 37.40 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 14th:—

EXPENDITURE.	Min. £	Receipts.	Min. £
Land Settlement	303	From Revenue	15,851
Interest on War Debt, &c.	2,004		
Supply Services	6,100		
Increase in Balances	994		
Repayment of Debt	7,650		
	15,851		15,851

Revenue for the week ended April 14th at £15,851,500 compares with £15,068,900 in the same period of last year. Expenditure at £8,107,700 compares with £6,777,000. The increase is due to the fact that Supply Services demanded 2 millions more this year. Interest on debt was £480,000 lower. Receipts from Property and Income-tax amounted to £6,306,000, and from Super-tax to £1,690,000, against £8,167,700 from these taxes in the same period of last year. It is worthy of note that in the accounts for the new financial year the yield from Super-tax is given under a separate head instead of being included with the Property and Income-tax as last year. Customs produced £1,830,000, as against £1,427,000, and Excise £688,000, compared with £1,372,000. The week's operations reduced the National Debt by £7,649,369, and caused the following changes:—

	Min. £		Min. £
National War Bonds repaid ..	1,500	Public Department Advances ..	5,000
Treasury Bills	12,434	4% Treasury Bonds ..	281
Interest on Exchequer Bonds ..	937	National Savings Certificates ..	250
	13,971	Unemployment Insurance ..	120
			+ 6,321

The floating debt was reduced by £7,425,000 to £806,480,500.

FINANCIAL YEAR, 1923-24 (April 1 to April 14, 1923).

	£		£
Total Expenditure ..	41,140,724	Raised by Revenue ..	42,033,494

A COMPROMISE BUDGET.

Of all the Government's actions to date, Mr Baldwin's Budget most truly carries out the ideal which Mr Bonar Law put before the electors last November. While carefully eschewing risks or fancy remedies, and paying homage in act as well as in deed to sound financial principles, the Chancellor has contrived to conciliate popular demands sufficiently to avoid any general hostility. Very few are entirely pleased, but it is a considerable achievement that in a year when there has been more than usual interest in the details of our finance, most people will find several features to approve. Our expectation that the Budget surplus would be £71 millions proved very near the mark, the Chancellor's actual figure being £76 millions. In the disposal of this surplus the Chancellor did not go as far as we should have wished in providing for debt redemption; but in setting aside £40 millions this year he declared his intention of asking for a bill which would increase the figure to £50 millions in two years. This is an important step in the right direction, and its warm welcome by public opinion may perhaps have surprised those who did not realise how quickly the nation has come to see the serious hindrance to social progress which our war debt constitutes. We have already given our reasons for thinking this allowance is not a very adequate provision, and this view is confirmed by the Chancellor's enumeration of his statutory obligations, which shows that there is a margin of only £3 millions for all other forms of debt reduction:—

	£
Sinking Fund on Victory and Funding Loan	4,428,000
Sinking Fund on Conversion Loan	13,500,000
Death Duty	7,500,000
American Debt Sinking Fund (say)	5,000,000
Silver repayments to U.S.A.	6,500,000
	37,000,000

When asked by Sir Robert Horne what he proposed to do in respect of Sir Stafford Northcote's Sinking Fund of 1874 (the "New Sinking Fund" of pre-war days), the Chancellor returned an evasive reply; but we gather that his proposed clause in the Finance Act will supersede this fund which provided for some £10 millions of debt redemption in 1921-2. The Leader of the Opposition recalled to his notice the Treasury circular of two years ago, in which the need of a sinking fund of £100 millions was indicated. Mr. Baldwin's reply is that such figures are only called for by the War Loan, &c., depreciation funds, which come into operation when these particular loans fall below specified figures; he pointed out that this year we should have to spend some £98 millions if these stocks fell heavily, but this contingency, though possible, is not likely to arise. These considerations, however, all help to show that the present provision can by no stretch of imagination be called excessive.

Apart, however, from the arguments for and against a sinking fund, the Chancellor himself suggested a doubt as to whether remission of taxation was justified in view of the temporary character of some of the items on the receipt side of the account. Thus there is £40 millions for special receipts, which will soon disappear altogether. The tax remissions made this year will cost £23 millions more in a full year than they do this year, viz., £57 millions against £34 millions. The £12 millions from E.P.D. is only a matter of arrears, and the present year's income-tax estimate appears to include the payment of some £30 millions of arrears. If there were no compensation, this would mean that the Budget of two years hence would show a revenue, not of £818½ millions, but of £713 millions. On the other hand, the only item that will drop out of the expenditure total of £816½ millions is £15½ millions of special receipts, against which the Sinking Fund will rise by £10 millions. Thus two years hence the Chancellor

might have a deficit of nearly £100 millions. It is in this respect that Mr. Baldwin has taken risks, and has gambled on either the natural expansion of existing sources, or the development of new sources of revenue on the one hand and the reduction of expenditure on the other. The gap to be filled is a very wide one, even in these days of big figures, and the final judgment on this year's Budget will not be passed until these expectations have been put to the test of experience.

Before, however, calling attention to some of the considerations affecting the prospect of ultimately restoring equilibrium between these figures, a word must be said on the suggestion that the present surplus has been underestimated, and the deficit in future years exaggerated by underestimating the yield from existing taxation and by overestimating expenditure as was done last year.

As regards the revenue side, Mr. Baldwin has taken a conservative view of Customs and Excise receipts and of death duties, but in spite of disappointments, still hopes for something from E.P.D. On the important question of income-tax receipts, the yield is largely a matter of guesswork, since arrears amounted, even at the end of March, to no less than £94 millions. The Chancellor's estimate on the 5s basis is that £338 millions would be produced. Judging from previous experience, it would seem that this figure assumes the paying up of some £30 millions of arrears. This would appear to be a reasonable allowance. As regards expenditure, it will be remembered that the estimates for last year were £885 millions, with £25 millions added for contingencies. The whole of this margin was not needed, but supplementary estimates for nearly £19 millions were approved, making a total authorised expenditure of £904 millions. The actual expenditure, exclusive of Sinking Fund payments, which were not provided for in last year's Budget, was £791 millions. There was thus a saving of £113 millions, made up as follows:—

Lower rates of interest and reduced amount of debt	33 million
Fighting services	27 "
Post Office	4 "
Civil services	49 "

Before we draw conclusions from these figures, there is a point which needs explanation. In commenting on the reduction of expenditure, Mr. Baldwin observed that it was "partly due to over-issues in the previous year, which operated to reduce the issues in 1922-23." This remark emphasises the fact that the figures now being discussed in Parliament are not the true expenditure at all, but the issues from the Treasury. Thus in 1921-2 the Treasury issued for the Civil Services £450 millions. The actual expenditure was £438 millions. Last year the Treasury issued £286 millions on these services; but the closed accounts may show an actual expenditure of more than this. If the Chancellor's hint means that these over-issues were considerable, the actual expenditure of the past year will show a smaller saving than is indicated above. It is important that we should know how much this carry-over amounted to. This factor does not explain the error in estimating last year's expenditure, for both the Treasury and the departments were presumably aware of these balances when the estimates were framed. But it is very relevant when discussing the trustworthiness of the estimates of the current year; for it may account for the otherwise inexplicable fact that the estimates for the current year for the Civil Services are more than the apparent expenditure (issues by the Treasury) in the year just completed. We are inclined to think that the present estimates involve a definite but very small reduction on the amounts actually spent last year. While, therefore, expenditure may, and probably will, be below the estimates, it is not so certain as appears on the surface.

This, however, does not affect the consideration that in the next two years there is ample margin for further economy. The present estimates, excluding

special expenditure, compare with the pre-war situation as follows:—

	1913. (Actual).	1923. (Estimate).
Defence	77½	117
Civil Service (excluding pensions, &c., Post Office, and collecting depts.)	53½	160

Both these items should be reduced to 100 millions, and with the automatic fall in pensions this would nearly bridge the gap that we have indicated.

For the rest, the future depends on revenue prospects—not windfalls of arrears, but the regular, normal assessments of the country. In this matter the prospects are by no means discouraging. Mr. Baldwin has repeatedly suggested that, in fact, the revenue assessments are showing satisfactory results. This is confirmed by our analysis of company reports, which show that even in accounts which mainly cover the year 1922, profits have substantially recovered from the worst level of depression, and are definitely on the up grade. If this improvement is maintained, we may hope not merely that our accounts may show a balance on the right side next March, but also that Mr. Baldwin's gamble on the ultimate balancing of permanent revenue and expenditure will be as successful as Sir R. Horne's gamble last year.

THE YEAR'S ACCOUNTS.

THE financial statement circulated with the Budget has little new to tell us with regard to the past year, except with regard to the extent and nature of debt repayments, and a slightly fuller analysis of the year's expenditure. Thus the account confirms our surmise that the amount of debt repaid as an item of ordinary expenditure was £21½ millions, which, with the excess of revenue over expenditure of £101½ millions, makes the surplus for the year £123½ millions. Comparison of the actual and anticipated expenditure of last year in comparison with the current year's estimates is given in the following table:—

(000's omitted.)				
Service.	Estimate, 1922-23.	Actual Expenditure, 1922-23.	Estimate, 1923-24.	Estimate, 1923-24 or less (+) than 1922-23 Estimate.
CONSOLIDATED FUND SERVICES.				
National Debt Services, Interest, &c.	335,000	302,237	310,000	+ 25,000
Sinking Fund		21,753	40,000	+ 40,000
Total National Debt Services	335,000	323,990	350,000	+ 15,000
Payments for Northern Ireland	2,500	3,323	3,000	+ 500
Road Fund	10,000	11,772	12,500	+ 2,500
Payments to Local Taxation Accounts, &c.	9,788	10,471	10,448	+ 560
Land Settlement	5,500	1,236	1,500	+ 2,000
Other Consolidated Fund Services	2,650	2,704	2,972	+ 322
Total Consolidated Fund Services	363,438	353,496	380,470	+ 17,032
SUPPLY SERVICES.				
Army (including Ordnance Factories)	62,300	45,400	52,000	+ 10,300
Navy	64,884	56,200	58,000	+ 6,884
Air Force	10,895	9,400	12,011	+ 1,116
Civil Services	317,455	286,826	251,670	+ 65,785
Customs and Excise, and Inland Revenue				
Departments	12,275	11,317	11,591	+ 684
Post Office Services	53,822	49,857	50,874	+ 2,948
Provision for Supplementary Estimates	25,000			+ 25,000
Total Supply Services	546,631	459,000	436,146	+ 110,485
Total	910,069	812,496	816,616	+ 93,453
Estimated expenditure chargeable against capital	10,050		8,630	+ 1,420

The current estimates include the sum of £40 millions, which the Chancellor proposes to allot as Sinking Fund. The figure for interest is £8 millions more than last year's actual expenditure, the difference being approximately equal to the increase in the interest to be paid on the American debt. Thus, no credit has been taken for the interest saved by the redemption of debt, or by conversions which may be effected or further interest saved during the current year; but, as Mr. Baldwin admitted in reply, he has taken account of the probability that rising market rates for money may increase the amount he will have to pay for the floating debt.

Revenue, on the existing basis of taxation is estimated at £852½ millions, a decline of over £61 millions on last year's receipts, more than two-thirds of which is shown under the heading of tax revenue:—

(000's omitted.)			
	Receipts in 1922-23.	Estimate for 1923-24 on Basis of Existing Taxation.	Estimate for 1923-24 more (+) or less (-) than Receipts in 1922-23.
Customs	123,043	118,300	- 4,743
Excise	157,275	155,700	- 1,575
	280,318	274,000	- 6,318
Motor Vehicle Duties	12,321	13,250	+ 929
Estate, &c., Duties	56,871	52,000	- 4,871
Stamps	22,222	20,000	- 2,222
Land Tax, House Duty, and Mineral Rights Duty	2,980	3,000	+ 20
Income Tax	314,836	280,000	- 34,836
Super Tax	64,209	58,000	- 6,209
Excess Profits Duty, &c.	2,004	12,000	+ 9,996
Corporation Profits Tax	18,977	20,000	+ 1,023
	482,099	445,000	- 37,099
Total receipts from taxes	774,738	732,250	- 42,488
Postal Service	34,150	34,500	+ 350
Telegraph Service	5,500	5,250	- 250
Telephone Service	13,550	14,750	+ 1,200
	53,200	54,500	+ 1,300
Crown Lands	900	900	
Interest on Sundry Loans	10,016	12,500	+ 2,484
Miscellaneous			
Ordinary receipts	24,140	12,500	- 11,640
Special receipts	51,018	40,000	- 11,018
Total receipts from non-tax revenue	139,274	120,400	- 18,874
Total revenue	914,012	852,650	- 61,362

Out of the anticipated surplus of £36 millions, Mr. Baldwin proposes remissions of taxation of about £34 millions, leaving him with a surplus of less than £2 millions for contingencies. The proposed reductions in Customs and Excise duties are estimated to cost £13,250,000 in the current year, and £16,875,000 in a full year. They comprise a rebate in the beer duty of £1 per bulk barrel, independent of the gravity, but this is not to operate to reduce the existing duty on any beer below 24s 3d per barrel for customs and 24s for excise duties, any tendency to add water to the beverage, which might be encouraged, being thus checked. The Chancellor stated that all beers down to about 1024 degrees of gravity will receive the full 20s, but below that point the rebate will gradually diminish. The duty of 4d per gallon on cider and perry is repealed, and that on table waters, sweetened or fermented, is reduced from 4d to 2d per gallon. The reduction in the standard rate of income-tax from 5s to 4s 6d in the £ is expected to cost £19 millions this year, and £26 millions in a full year, while the halving of the Corporation profits tax, from 1s to 6d in the £, in respect of profits arising after June 30, 1923, will not affect this year's receipts, but will cost £12½ millions in a full year. Decreases in postal and telephone rates, it is anticipated, will reduce receipts by £1,900,000 this year, and £2,400,000 in a full year. The total loss to the Exchequer from tax relief is thus expected to be £34,150,000 in 1923-24, and £57,775,000 in a full year.

The final balance-sheet (in millions £) may be summarised in the following form:—

Customs and Excise	260.7	Debt (including U.S.A.)	350.0
Motor Vehicle Duty	13.3	Other Consolidated Fund	
Inland Revenue	426.0	Charges	30.5
Post Office	52.6	Defence	116.9
Other ordinary non-tax		Civil Services	241.2
revenue	25.9	Revenue Departments	11.6
Special receipts	40.0	Post Office	50.8
		Special expenditure	15.6
		Surplus	1.9
	818.5		818.5

In a further table we compare the amounts received from taxation and spent on interest, and on the supply services in each of the past three years, and in 1913-14, together with the estimates for these items for the current year:—

		(Million £'s.)		Supply Services (less Post Office and Special Payments).	
		Tax Revenue.	Interest.		
1913-14		162.3	19.1	135.6	
1920-21		1,031.7	341.7	682.6	
1921-22		856.7	322.4	557.6	
1922-23		774.8	302.0*	406.6	
1923-24 (est.)		700.0	310.0†	369.7	

* Of which U.S. debt about £22 millions.

† Of which U.S. debt about £30 millions.

Interest requirements for this year after deduction of the amount required for the American debt are thus unchanged at £280 millions, a figure which shows a substantial reduction from the £342 millions of 1920-21. It is, however, a much smaller reduction than the decline in supply services, which have fallen by over 45 per cent., while tax revenue has fallen by less than 33 per cent.

MR CHURCHILL AT THE ADMIRALTY.

THE naval historian of the future may perhaps divide the story of the British navy administration from 1909-1918 into three periods of war. The first broke out in 1909, reached a crisis in 1911, and ended on that quiet summer night in 1914, when the First Fleet, released from Portland, passed through the Narrow Seas and took up its war station at Scapa Flow. All danger of surprise which had oppressed the Admiralty for three years was then over. The second naval war, of surface action, ended with the Battle of Jutland, on May 31, 1916; success in that war arose directly out of the victory achieved in the bloodless war of 1909-14. The third and final war, waged against submarines which threatened our maritime communications, reached its crisis in April, 1917, and was not definitely won until the Armistice of November 11, 1918.

The bloodless war—the description was Mr Churchill's own—was in many respects more difficult and more critical than the other two. In actual war politics give place to action, but this struggle consisted of maintaining naval supremacy against strong and sincere political opposition at home. A Liberal Government, supported by a Liberal Party, does not willingly make preparations for a war in which it is reluctant to believe. The naval controversy begun by Mr McKenna with his eight battleships in the programme of 1909, became the most urgent of national problems after the Agadir Crisis of 1911. Then, for a while, even Mr Lloyd George began to believe in a potentially hostile Germany, and Mr Churchill was sent by Mr Asquith to the Admiralty to prepare the Navy for the war which seemed about to break upon us. The story of how Mr Churchill fulfilled his task is in the main the story told in his new book, "The World Crisis, 1911-1914." No one could have told it with an authority equal to his, and with a pen as adroit and convincing as his. Whatever we may think of Mr Churchill's exploits in the second part of the war, of his strategical essays at Antwerp and in the Dardanelles, even his bitterest opponents of those days cannot withhold from him the chief credit for the victory in his task upon which victory in the actual war largely depended. Had a man of less insight and vigour gone to the Admiralty as First Lord in October, 1911, and stayed there until August, 1914, the course of recent world history might have been different.

It was due to Mr Churchill, more than to any other man—except, possibly, Mr. Asquith, who put him in his place and supported him loyally throughout—that the Navy was ready for war in August, 1914, and was strong enough to do its job. It was a Navy which in its major elements, and in many also of its minor elements, was astonishingly new. The Fleet which gave us our superiority over Germany depended for its battle strength on ships launched in 1912 and later years. But for the McKenna programme of 1909 its margin of superiority would have worn away and disappeared in the first few months of war. Until 1916, until the later Churchill ships, and especially the Fast Division, reached Admiral Jellicoe at Scapa, there was always a possibility that the German High Seas Fleet might have caught the Grand Fleet at a temporary disadvantage. A Fleet which is constantly at sea sheds its units in a fashion most alarming. One battleship, the *Audacious*, was sunk by a mine,

* Thornton Butterworth. 30s net.

two battle cruisers had to go off to the Falklands, another battle cruiser, the *Princess Royal*, was twice sent across the Atlantic; ships ran into one another in the darkness of winter cruises, ships cried out for periodical refits, now and then engines broke down. Sometimes Sir John Jellicoe was not within half a dozen capital ships of his proper strength. Fortunately the Germans did not know how weak he sometimes was. That he had a margin sufficient at the beginning was Mr Churchill's principal achievement in his pre-war years at the Admiralty; that he had a margin sufficient when the clash of Jutland came was the result of his work in those years and in the first eight months of the actual war.

Let us take just a few of those outstanding deeds for which the British Empire owes Mr. Churchill a debt of gratitude. He formed a Naval Staff whose one job it was to study every aspect of the coming war, and to prepare in advance for it. He took Admiral Beatty, whom the Admiralty had rejected, and made him head of the Battle Cruiser Squadron. He put Sir John Jellicoe in command of the Grand Fleet. He laid down the Fast Division of battleships with 15-inch guns at a time when no guns of so large a calibre had ever been constructed. He turned these five ships over from coal to oil because their high speed could not be got out of coal, and he provided through the Anglo-Persian Oil Agreement for the essential supplies of oil. He so wrought upon and spurred up the Admiralty that all the lamentable personal quarrels of the Fisher-Beresford era dissolved, and enthusiastic harmony reigned throughout the Service. A crisis with his Liberal colleagues came at the end of 1913 over the naval estimates, which would have caused Mr Churchill and the whole Board of Admiralty to resign had not Mr Asquith, by suave diplomacy, saved the First Lord's position. Then at the crisis of our fate, when a sudden blow from Germany might have fallen upon us, Prince Louis—with his Chief's full concurrence—held the Fleet together at Portland; it was this Fleet which a few days later Mr Churchill despatched to Scapa, whence it dominated the seas of the world. That was the end of the bloodless war which Mr Churchill had fought and won.

It is easier to blame than to praise; especially is it easier to blame than to praise an ardent, combative, virile personality like that of Mr Churchill. It seems to us in reading this book, and in adding to it what we know from other sources of the story of 1909-1914, that the departmental work of the First Lord who held office from 1911 to 1914 was beyond praise; for although this book is necessarily in the nature of an apology, its pages make it quite clear that internal difficulties were abundantly superimposed upon the great difficulties which he encountered in the political arena. He was First Lord in a Government which hated naval estimates. He had to fight for every ship and gun. We regard Mr. Churchill's "The World Crisis" as ranking in historical value with Lord Jellicoe's "Grand Fleet," the late Sir Julian Corbett's "Naval Operations," and with Admiral Sims's "The Victory at Sea." This is high praise, yet no higher than the book deserves.

INDUSTRIAL PROFITS.

WHEN writing upon the subject of the profits of industry, three months ago, we suggested that the statistics available indicated that the worst of the depression had been left behind, and the corner turned. Figures for the first quarter of the current year not only confirm this, but show a very substantial recovery in profits. The figures to which we refer are compiled from the weekly analysis of company profit and loss accounts, published on a later page. During the past quarter the reports of 405 companies have been analysed, and these show aggregate net profits, after payment of debenture interest, &c., of £40,276,870, which compares with £28,489,993 earned by the same companies in their preceding financial year, an increase of £11,786,877, or 41.4 per cent. It is impossible to say that these profits refer to any definite

period, since the time which is allowed to elapse after the close of a financial year varies a great deal. The bulk of the accounts of these 405 companies, however, relate to the financial year ended December 31, 1922, or September 30, 1922. It will be seen from the following table that a large decline in profits was recorded at this time last year, and that in the two succeeding quarters the fall lessened, while in the last quarter of last year a small increase was shown:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports published in		Increase.		Decrease.	
		1921.	1922.				
First quarter	442	£ 47,368,926	£ 26,785,952	..	..	£ 20,582,974	43.4
Second quarter	401	38,044,790	25,195,690	..	..	12,849,100	33.7
Third quarter	209	15,853,920	12,120,153	..	..	3,733,767	23.5
Fourth quarter	319	23,310,452	24,228,719	918,267	3.9	..	..
1921.	1,371	124,578,088	88,310,514	..	..	36,247,574	29.0
1922.	405	28,489,993	40,276,870	11,786,877	41.4	..	..

In examining these figures it should be remembered that a great deal of the decline in profits which was recorded a year or more ago was a result of the heavy fall in prices which involved the writing down of stock-in-trade to such an extent as largely to neutralise any margin of profit there may have been on trading operations. To this extent, therefore, the substantial increase in net profits now shown is due to the absence of the necessity for further writing down of stocks owing to the greater stability of commodity prices. The average profit per company in the past quarter works out at £99,450, as compared with £70,350 in the first quarter of 1922, and less than £60,000 in the third quarter of last year. From the next table, which gives a bird's-eye view of the quarterly statistics since the beginning of 1918, it will be seen that the profits disclosed in the first quarter of this year are better than those shown in the first three months of any of the preceding five years:—

	1918.	1919.	1920.	1921.	1922.	1923.
First quarter	10	10.4	12.9	3.5	4.4	41.4
Second quarter	5.8	5.1	3.7	8.4	3.7	..
Third quarter	12.3	3.4	4.9	4.2	2.5	..
Fourth quarter	4.7	19.5	2.7	5.9	3.9	..

From an examination of this and the first table it would appear that the lowest point reached in net profits was in the third quarter of 1922, when a decrease of 23½ per cent. was shown on the profits disclosed in the third quarter of 1921, which in turn had fallen by 42½ per cent. This indicates that the lowest point of the trade depression from the profit-earning point of view was in the 12 months ended March 31, 1922, for the reports published in the third quarter of the year refer in the main to that period.

In the next table we show how the profits of the various groups of companies disclosed in the past quarter compare with those of the previous year:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Quarter Ended March 31.		Increase.		Decrease.	
		1922.	1923.				
Breweries	14	£ 711,030	£ 731,977	20,947	2.9	..	..
Electric light & power	27	1,906,685	2,775,014	868,329	45.5	..	..
Gas	31	1,942,427	3,250,585	1,308,158	67.3	..	..
Hotels, restaurants, &c.	9	115,913	270,281	154,368	134.5	..	..
Iron, coal, and steel	29	2,565,662	1,878,854	..	..	686,808	26.6
Land, mortgage, &c.	20	870,091	1,066,835	196,744	22.5	..	..
Motor and cycle	8	985,642	1,163,810	178,168	18.1	..	..
Rubber, &c.	32	15,566	292,229	276,663	..	..	..
Shipping	5	52,642	342,883	..	..	290,241	37.8
Shops and stores	29	1,830,106	2,891,875	1,061,769	58.0	..	..
Tea	6	70,138	65,678	..	..	4,460	6.3
Textiles	20	2,556,952	4,469,619	1,912,667	74.7	..	..
Tramways	10	734,526	757,932	23,406	2.6	..	..
Trust companies	31	4,470,039	1,553,492	83,453	5.6	..	..
Waterworks	15	346,576	524,653	178,077	51.2	..	..
Miscellaneous	119	13,783,201	19,570,773	5,787,489	41.8	..	..
405	28,489,993	40,276,870	11,786,877	41.4	..	..	..

The iron, coal, and steel and shipping groups alone show a substantial decline in profits, and apart from these and a small decrease in the tea group, the increase is general, varying from less than 3 per cent. in the case of brewery and tramway companies to 134½ per cent. for hotel and restaurant companies. The motor and cycle group still shows a net loss in the aggregate, but a very great im-

provement is shown, while the net profits of the rubber group have multiplied nearly twentyfold.

In the next table we show the method of distribution of profits in each of the past five quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1922.	£	£	£	£
First quarter	26,785,952	22,171,510	9,689,030	Dr 5,074,588
Second quarter	25,195,690	20,066,774	6,156,048	Dr 1,027,132
Third quarter	12,120,153	10,010,136	3,528,074	Dr 1,218,057
Fourth quarter	24,228,719	15,698,160	4,720,052	3,810,507
1923.	40,276,870	21,934,234	9,501,074	8,841,562

In each of the first three quarters of last year the amount distributed to shareholders exceeded the net profit earned, with the result that reserve funds or balances brought forward were reduced. In the fourth quarter the position improved, and reserves were replenished to the extent of over 15½ per cent. of profits, and in the past quarter a still larger percentage has been set aside, the proportion going to ordinary shareholders having been reduced to less than 55 per cent. The 22 per cent. of profits which is reserved, though very much better than in recent years, is not yet up to the pre-war average, which was in the neighbourhood of 30 per cent. Moreover, our figures have shown that reserves have been very much depleted in the past two years, and the loss has not yet been made good. The appropriation of net profits in each of the groups in the past quarter is shown below:—

	Net Profits.	Ordinary Dividend.	% of Profits.	Pref. Dividend.	% of Profits.	Carried to Reserve, &c.	% of Profits.
Breweries	£ 731,977	£ 364,926	49.7	£ 217,876	29.7	£ 149,195	20.6
Electric light, &c.	2,775,014	792,708	28.5	437,650	15.7	1,485,246	53.6
Gas	3,250,585	2,167,311	66.6	340,076	10.5	743,198	22.9
Hotels, restaurants, &c.	270,281	138,313	51.5	31,283	11.5	106,685	37.0
Iron, coal, and steel	1,878,854	1,582,650	84.2	344,749	18.3	*48,555	2.5
Land, mortgage, &c.	1,066,835	662,368	62.1	204,014	19.1	200,453	18.8
Motor and cycle	Dr 163,810	73,932	..	13,950	..	*253,699	..
Rubber, &c.	292,229	221,939	76.0	3,463	1.2	66,827	22.8
Shipping	342,883	327,435	95.5	145,625	42.3	*60,177	17.5
Shops and stores	2,891,875	1,844,591	63.8	885,524	30.6	721,760	25.0
Tea	65,678	54,786	83.4	4,782	7.3	6,110	9.3
Textiles	4,469,619	2,518,794	56.2	522,964	11.7	1,427,861	32.1
Tramways	757,932	416,606	55.0	158,092	20.9	183,234	24.1
Trust companies	1,553,492	850,133	54.9	526,101	33.8	177,258	11.3
Waterworks	524,653	347,385	66.2	75,943	14.5	101,325	19.3
Miscellaneous	19,570,773	10,200,567	52.0	5,589,572	28.3	3,840,634	19.7
40,276,870	21,934,234	54.4	9,501,074	23.6	8,841,562	22.0	..

* Decrease.

In the matter of reserve allocations the best showing is made by the electric light and power group, which sets aside nearly 54 per cent. of net profits. The hotel and textile groups also reserve over 30 per cent. of net profits. At the other end of the scale the motor and cycle group has had to withdraw from funds in hand a sum of over a quarter of a million. This is accounted for by three concerns, each of which carried forward a considerably larger debit balance than was brought in. In the shipping group the debit under reserve, &c., is due to a reduction of £70,000 in one company's balance forward. The small percentage of profits going to preference shareholders in the rubber and tea groups is due to the small amount of preference capital existing in these groups, as will be seen in a later table.

We next show the ratio to total ordinary and preference capital of net profits, and of amounts carried to reserve in each of the past five quarters:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1922.	£	£	£
First quarter	442,936,400	26,785,952	Dr 5,074,588
Second quarter	350,840,200	25,195,690	Dr 1,027,132
Third quarter	205,481,600	12,120,153	Dr 1,218,057
Fourth quarter	268,105,000	24,228,719	3,810,507
1923.	1,267,363,200	40,276,870	8,841,562
First quarter	406,793,000	40,276,870	8,841,562

The last quarter makes an exceedingly favourable comparison with the corresponding period of last year, and shows a substantial improvement on the last quarter of 1922. It may be mentioned that in the full year 1921 the

ratio of profits to total capital was 10.3 per cent., and in 1920 15.2 per cent.

The average rates paid on the three classes of capital quarter by quarter since the beginning of 1920 are set out in the next table:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1920.	1921.	1922.	1923.	1920.	1921.	1922.	1923.	1920.	1921.	1922.	1923.
1st quarter	4.25	4.43	4.70	4.61	5.1	5.0	5.3	5.7	11.2	10.3	8.5	9.2
2nd quarter	4.40	4.61	5.00	..	5.0	5.0	5.0	..	13.7	12.6	8.8	..
3rd quarter	4.12	4.45	5.21	..	5.0	5.0	5.0	..	14.2	9.7	7.6	..
4th quarter	4.43	4.52	4.83	..	5.3	5.1	4.6	..	11.6	7.6	8.8	..

The average rate of debenture interest has fallen in the last two quarters, but there is a further increase in the average rate of preference dividend, while the average rate of ordinary dividend at 9.2 per cent. is the highest recorded for 18 months. The increase compared with the corresponding quarter of last year, however, is by no means proportionate to the rise in profits. Last year's rate, however, as we have shown, was only made possible by a depletion of reserves.

The final table shows the average rates of interest and dividend paid in each of the groups during the past quarter, the average rate on ordinary capital shown in our article a year ago being given for comparison:—

	Debenture Capital.	Average Rate of Interest.	Preference Capital.	Average Rate of Dividend.	Ordinary Capital.	Average Rate of Dividend.	Average Rate of Dividend, a Year Ago.
Breweries	£ 3,664,571	4.6	£ 4,099,320	5.3	£ 11,453,329	10.3	10.3
Electric light, &c.	12,857,494	5.1	9,889,703	5.3	10,441,136	10.4	10.4
Gas	12,137,820	3.9	8,649,262	3.9	40,288,588	8.8	8.8
Hotels, restaurants, &c.	1,389,330	4.9	2,084,554	1.5	1,588,086	8.7	9.0
Iron, coal, and steel	3,912,962	6.0	7,243,532	4.7	21,498,993	9.2	9.2
Land, mortgage, &c.	4,859,073	4.1	5,548,736	3.7	7,113,630	9.3	9.1
Motor and cycle	225,000	4.7	4,039,800	0.3	5,093,705	8.8	8.8
Rubber, &c.	30,000	7.0	124,712	8.6	5,222,083	4.8	4.4
Shipping	2,950,000	6.0	2,375,000	6.1	5,065,000	6.1	5.4
Shops and stores	3,091,430	4.2	11,833,278	7.5	12,899,397	9.7	10.1
Tea	5,200	5.0	79,280	6.0	374,276	20.0	10.3
Textiles	1,847,475	4.1	9,189,410	5.7	22,597,230	11.2	8.6
Tramways	6,080,900	4.4	3,443,325	4.6	7,012,181	8.8	8.8
Trust companies	18,816,550	4.3	12,215,732	4.0	13,431,733	8.8	8.8
Waterworks	3,383,994	3.0	2,108,677	3.6	6,000,000	1.8	1.8
Miscellaneous	23,575,987	5.1	84,060,326	6.4	77,387,468	13.0	10.0
	98,028,056	4.6	167,723,328	5.7	130,000,138	9.2	9.2

The only exceptions to the increase in ordinary dividends are shown by the hotel, shipping, shops and stores, and brewery groups, the last-named showing no change. With the exception of the 20 per cent. shown in the tea group, there are no outstandingly high rates of ordinary dividend, the miscellaneous section being the highest with an average of over 13 per cent.

THE CENSUS HOUSING STATISTICS FOR LONDON.

IN discussing one of the Government Blue-Books a few weeks ago we remarked that there was a greater chance of intelligent publicity being given to figures collected and tabulated at great labour and cost if the tabulated matter were prefaced by letterpress indicating the significance of the results obtained. This point is well illustrated by the case of Part I. of the Census Volume for the County of London, which contains elaborate statistics with regard to the housing conditions in the County and in each of the Metropolitan Boroughs. Though published in October last, this volume received no attention from the Press, nor, if our memory is correct, was it referred to in any of the speeches made at the recent by-elections at which the housing question was predominant. It seems doubtful if even the late Minister of Health, whose department is responsible for the census, had heard of the volume, for some of the figures to be found there could have been used to prove that housing conditions were not quite so bad as they had been represented, but we do not recollect that he did so. Yet, "in view of the exceptional interest and importance attaching to the subject at the present time, this side of the Census inquiry was very carefully organised in advance, with a view to securing that the records should be as complete and consistent as possible, having

regard to the variety of buildings met with in practice and the conditions affecting their occupation." This quotation is taken from a volume of comment on the Census of London, just published, which, though it has received some attention, has not had the notice to which the importance of the subject entitles it.

At the Census of 1921 the authorities abandoned the use of terms such as "house," "tenement," &c., on the ground of ambiguity, in favour of the phrase "structurally separate dwelling," which is defined "as any room, or set of rooms, having separate access either to a street or to a common landing or staircase accessible to visitors." Each flat in a block of flats is, therefore, a separate unit, as is also a private house, whether occupied by one family or more, which has not been structurally divided; if a private house has been structurally divided into separate portions, each portion is regarded as a separate unit. The number of structurally separate dwellings so defined was found to be 725,419 in 1921, as compared with 725,972 in 1911, but whereas in 1911, 47,260 were vacant, in 1921 only 18,969 were vacant. The number of occupied dwellings thus increased by 4.1 per cent. in the intercensal period, but since the number of private families increased by 9.5 per cent. the average number of families per occupied dwelling increased from 1.51 in 1911 to 1.59 in 1921. On the other hand, on account of the declining birth-rate and the consequent smaller family, the number of persons per occupied dwelling declined from 6.66 to 6.35. It is unfortunate that the report does not state how many of the so-called vacant dwellings merely happened to be untenanted on the Census night, for the Census authorities have abandoned the distinction between vacant dwellings "in occupation" and "not in occupation"; the text is also silent as to the number of buildings in course of erection, but if we turn to the volume of statistics, we find that these amounted to only 3,669, of which 3,093 were undivided private houses and 233 blocks of flats.

At the date of the Census the population of the County of London numbered 4,484,523 persons, of whom 4,243,838 were grouped in 1,120,897 private families; this gives 3.79 persons per family, compared with 4.15 in 1911. Of these families 424,696, or 38 per cent., had separate dwellings to themselves, 360,758, or 32 per cent., were living two to a dwelling, and 335,443, or 30 per cent., were housed in dwellings containing three or more families each. Nearly two-thirds of the families in the county, therefore, have to share a dwelling with others; the proportion would not be quite so high but for the fact that the Census regards a single lodger boarding separately from the occupier as a separate "family," but even if allowance is made for these the proportion is still over a half.

The dwellings have also been analysed according to the number of rooms they contain, and it is found that 18.1 per cent. contained three rooms or less, 27.2 per cent. contained four or five rooms, 42.3 per cent. six to eight rooms, and 12.4 per cent. nine rooms or more.

An analysis of the private families according to the number of rooms occupied gives the following results:—

No. of Rooms.	No. of Private Families.	%	Population in Private Families.	%
3 rooms or less	647,438	57.8	2,014,556	47.5
4 or 5	303,171	27.0	1,386,353	32.7
6 or 7	104,923	9.4	502,362	11.8
8 or over	65,365	5.8	340,567	8.0
Total	1,120,897	100.0	4,243,838	100.0

Nearly half the population of London, therefore, lives in dwellings of three rooms or less, and approximately 80 per cent. in dwellings of five rooms or less.

The private families have also been analysed according to the number of persons in the family and the number of rooms occupied, and it is found that the number of rooms per person has actually improved between 1911 and 1921 from .88 rooms per person to .91, so that, on a general average of rooms per person, the London population is slightly less densely housed than in 1911. Further evidence of this is afforded by the figures for families and persons living under "over-crowded" conditions—that is,

having two or more persons per room, which are as follows (it will be noted that the average size of families living under over-crowded conditions is 6.19 compared with 3.79 in the total population):—

	1911.	1921.
Private families each living more than two persons to a room	121,591	110,495
Population in such families	758,438	683,498
Per cent. of population to total population	17.8	16.1

Sir Arthur Griffith-Boscawen might, therefore, have argued, with some measure of justification, that housing conditions had actually improved in London during the intercensal period, to which his opponents would have replied, if they also had studied the Census results, that housing conditions in London are notoriously worse than in the rest of the country, and if any improvement had occurred it would still leave London behind other large towns, and secondly that the units to be considered are not the individual on the one hand nor the room on the other, but the "family" and the "dwelling." The increase in the number of families by 9.5 per cent. and of dwellings by only 4.1 per cent. has reduced the average number of rooms per average family from 3.56 in 1911 to 3.38 in 1921, although, since the average family was smaller at the later date, the density per person has, as previously indicated, slightly improved.

A very instructive table has been compiled (Table VI.) giving the average number of rooms per person for each size of family, in which it is shown that the only families with more rooms per person in 1921 than 1911 are those consisting of only one or two persons, and that it would require 58,400 more rooms to house the families of 1921 as well as those of 1911 were housed; to house them as well as the families in the other large towns were housed in 1911 would require 901,000 more rooms, and to give them the same average number of rooms as prevailed through the whole of the country in 1911 would require 1,045,000 more rooms, equivalent to 209,000 five-roomed houses.

In the words of the Census Report:—"The regrouping of the population into smaller family units has been accompanied by a re-allocation of the available rooms. As families are now smaller, the weight of their distribution has, in consequence, moved on the density curve in the direction of the more favourable housing standards. In other words, a larger proportion of the population have become qualified for the housing advantages enjoyed by small families, and have thus absorbed out of the available pool of rooms a larger share than previously fell to the lot of families of the same size, the share remaining to the larger families being correspondingly diminished."

A very comprehensive table (Table VIII.) enables the housing conditions in the various Metropolitan Boroughs to be seen at a glance. From it can be seen, for instance, that 68 per cent. of the structurally separate dwellings in the county are undivided private houses, 21 per cent. "maisonettes, flats, tenements, &c.," and 11 per cent. "attached to shops, offices, warehouses, &c.," that the proportion of flats, &c., is over 60 per cent. in Holborn and over 40 per cent. in Westminster, Marylebone, Finsbury and Southwark; that Hampstead has an average of 7.96 rooms per dwelling, Paddington 7.53, Kensington 7.09, Stoke Newington 6.73, St Pancras 6.57, Islington 6.54, while Bethnal Green has only 4.28, Holborn 4.35, Stepney 4.40 and Southwark 4.52; that the smallest families are to be found in Holborn (3.12 persons), Westminster (3.31), Great Marylebone (3.33), Paddington (3.43), and St Pancras (3.45), and the biggest in Stepney (4.26 persons), Poplar (4.19), and Bethnal Green (4.14); that the number of rooms per person is highest in Hampstead (1.41), Lewisham (1.24), Kensington (1.23), and Westminster (1.23), and lowest in Shoreditch (0.65), Finsbury (0.67), Bethnal Green (0.68), Stepney (0.69); that the proportion of the population living more than two in a room is highest in Finsbury (34.0 per cent.), Shoreditch (32.0 per cent.), Stepney (29.0 per cent.), and Bethnal Green (27.8 per cent.), and lowest in Lewisham (4.7 per cent.), Hampstead (6.5 per cent.), and Wandsworth (6.8 per cent.), &c.

The section of the Census Report devoted to housing contains many more figures which could usefully be referred to if space permitted; enough has, however, been

said to show that in the Census records the Government possesses more complete information on the housing conditions of the people than ever before, and this information should be made available to members of Parliament, local authorities, and the public generally at the earliest possible date. It is to be regretted that information for the whole country is not available for use in the debates that will shortly take place on Mr Chamberlain's housing proposals.

COAL PRODUCTION AND COSTS IN 1922.

The years 1921 and 1922 together form one of the darkest chapters in the whole history of the coal mining industry. Soon after the termination of hostilities wages and prices alike soared to absurd levels, which could only be maintained at the height of the boom period, and the inevitable reaction, when it came towards the end of 1920, necessitated a complete shaking-down to a more normal economic level. This process involved much hardship to masters and men alike in the poorer coalfields, and the purchasing power of the average wages paid throughout the country fell considerably below the pre-war level. By the beginning of this year, however, the lowest point had already been passed, and there were welcome signs of revival in this basic industry.

Fortunately very full statistics of production and costs* are available in the case of undertakings representing some 94 to 95 per cent. of the total output of the country, and we are thus able to study the progress of events with a greater degree of accuracy than is possible in the case of any other important industry. The returns of total output and costs for 1922 in these undertakings are summarised in the following table:—

The COAL INDUSTRY in 1922.

Totals.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.
Tonnage raised tons	57,633,631	53,261,024	58,717,767	64,550,171
Tonnage disposable tons	52,213,331	48,416,513	53,694,293	58,977,291
Wages	34,827,133	30,540,289	30,533,993	33,658,099
Net costs*	51,404,023	45,910,483	46,106,227	50,108,391
Proceeds	54,367,927	45,875,798	49,013,908	54,603,996
Net profit (+) or loss (—)	+2,963,904	— 34,685	+2,907,681	+4,495,605

* Total costs, less proceeds of miners' coal sold at special prices.

The outstanding feature of the year is certainly the great increase in production, except in the second quarter, when the lock-out in the engineering trade prevented fresh contracts being made. Comparisons with the previous year, however, are somewhat complicated by the fact that in the second quarter of 1921 there was a complete stoppage in all the mines on account of the strike. But even if we make allowances for this there remains a very considerable improvement to record during the period when work was actually proceeding. Thus, whereas the total output disposable commercially of the mines for which these detailed statistics are available was under 141 million tons in 1921 (this being the total for the first quarter and the second half of the year), the total for 1922 was 213,301,428 tons, and, for the corresponding nine monthly period, amounted to nearly 165 million tons. Even more gratifying than these totals is the fact that during the last quarter of the year the weekly coal output was greater than at any time since 1913.

The position of the industry and the progress made last year are more easily seen from the figures of proceeds, wages, net cost, and net profit, calculated on a tonnage basis, which we reproduce below:—

1922.	Proceeds per Ton.	Wages per Ton.	Net Cost per Ton.	Net Profit (+) or Loss (—) per Ton.
First quarter	s 20 9 90	s 13 4 08	s 19 8 28	+ 1 1 62
Second quarter	18 11 41	12 7 39	18 11 58	— 0 0 17
Third quarter	18 3 08	11 4 48	17 2 08	+ 1 1 00
Fourth quarter	18 6 18	11 4 09	16 11 50	+ 1 6 28

* For 1922 see Cmd. 1726, 1759, and 1797. The returns for the quarter ended December 31st have not yet been published.

The decline in the average selling price of coal, which was the most outstanding feature in 1921 (when proceeds per ton fell from 33s 3.25d in the first to 29s 0.76d in the third and to 23s 0.02d in the last quarter), continued, during the first eight months of last year. The figures of the last quarter, however, show that the long downward movement had at last been checked, and that a considerable increase in production coincided with a slight rise in prices before the French occupation of the Ruhr in January started a fresh—and, it is to be feared, a very unhealthy—boom in the industry.

The net cost per ton, which was over £2 in the first quarter of 1921, has continued to fall throughout the year. Comparing the figures for the first and last quarters of 1922 respectively, the net costs were 2s 8.38d per ton lower in the latter period than in the former, while it is 11.99d (or approximately 75 per cent.) of this reduction was accounted for by lower wages costs. The percentage fall in this latter item is thus slightly greater than that represented by the reduction in total costs. To appreciate justly the position of the workers in the industry, however, it is necessary to consider output and earnings in relation to the number of manshifts worked. In the following table particulars are given of the number of men employed, the total of manshifts worked, and, for purposes of comparison, the total of manshifts lost that might have been worked, together with the output of saleable coal, and the average earnings per manshift worked:—

1922.	Number Employed.	Total of Manshifts Worked.	Total of Manshifts Lost.	Output per Man-shift Worked.	Earnings per Man-shift Worked.
First quarter ..	1,020,207	63,236,314	6,171,819	Cwts. 18.23	11/0-18
Second quarter ..	1,025,592	59,831,062	4,677,252	17.80	10/2-51
Third quarter ..	1,027,853	65,446,658	5,476,180	17.94	9/3-97
Fourth quarter ..	1,068,623	71,323,137	5,696,488	18.10	9/5-25

The increase in the number of men employed during the year, gradual at first, became much more marked during the last quarter, and had risen by December to 1,073,487, so that well over 50,000 extra men were absorbed into the industry during the year. The second and third columns in our table enable us to make a rough estimate of the importance, during the twelve months, of absenteeism, which, though affected by illness, &c., is in the main voluntary, since the days when the collieries were not working are left out of the account. The proportion of manshifts lost to manshifts worked was over 10 per cent. in the first quarter; it fell off to 7.8 in the second quarter, and, after rising again to 8.4 in the summer months, fell to under 8 per cent. in the last quarter. The output per manshift was high in the first quarter (18.23 cwts., as against 17.73 cwts in the last quarter of 1921), and, though it decreased during the second quarter, there was a considerable improvement in this respect towards the end of the year, the November figure being exactly the same as the average of the first quarter.

The approximate average weekly wage in the industry declined from 58s 10d in the last quarter of 1921 to 52s 6d in the first quarter, 45s 9d in the second, and 45s 8d in the third quarter of last year. The improvement in the coal market, together with a steady increase in output and, to some extent, a falling off in absenteeism, combined to check this downward movement, and the average weekly wage during the last quarter of the year rose to about 48s 5d. The effects of the general improvement in the state of the industry will only be fully felt in the statistics for the first few months of this year, as wage rates are fixed on a two-monthly average, in accordance with the 1921 agreement. As a result of this the trade position in November and December does not influence wages until the March-April period.

It is impossible within the limits of this article to do much more than give an outline of the general average position for the whole country. There are, however, very considerable divergencies in the individual coalfields. Thus, the mining industry in Cumberland, South Staffordshire, and Kent remains in a very precarious condition. Heavy losses are still being sustained, and the future is far from bright. High costs are at present inevitable in the first

and last-named areas on account of the technical difficulties encountered, and basic wage rates seem to be very high in both cases. South Staffordshire, again, is an old field, where the mines appear to be working on diminishing returns and wages remain very low. The solution of present difficulties in these areas is by no means clear, and one may even doubt whether they can hope to pay their way at all save in times of boom activity. Some trouble seems to have been experienced in the Lancashire coalfield, which has a slight loss to register; while the position of colliery owners in North Wales, Bristol, and the Forest of Dean is by no means satisfactory. The Somerset mines are made to pay their way, though this field enjoys the unenviable distinction of recording the lowest manshift earnings figure in the kingdom.

Apart from the problem of the poorer fields, the industry seems to have passed through a period of great difficulty with a remarkable degree of success. Production, however, remains less than it was in 1913, and the output per head is below the pre-war level. Despite the marked improvement of the last quarter, the coal industry still has a certain amount of leeway to make up, though it may be doubted whether this all-important problem is capable of solution until the principle of the seven-hour day is applied with more elasticity than appears to be the case at present.

The balance-sheet of those undertakings in the coal mining industry for which returns are available (i.e., about 94 to 95 per cent. of the total) may be summarised as follows:—

COALMINING INDUSTRY in 1922.

	£	As Percentage of Total Costs (Approximately).
COSTS OF PRODUCTION.		
Wages	129,559,514	66.6
Stores and timber	24,731,945	12.6
Other costs (management, salaries, insurances, repairs, office and general expenses, depreciation, &c.)	33,226,921	17.1
Miners' welfare fund contributions	974,593	.5
Royalties (including the rental value of freehold minerals where worked by the proprietor)	6,128,550	3.2
Total costs	194,621,523	100.0
Deduct proceeds of miners' coal	1,092,399	..
Net costs	193,529,124	..
PROCEEDS.		
Commercial disposals	203,861,629	..
Credit balance	10,332,505	..

While it is to be regretted that a more detailed statement of the various items included in "Other Costs" is not given in these returns, the table does nevertheless provide a good general indication of the relative cost of the different agents of production. Public attention is most frequently called to the wages bill as compared with the remuneration on capital, and the table shows that, in 1922, whereas the average net cost of coal disposable commercially was approximately 18s 1.75d per ton, wages accounted for 12s 1.25d per ton, while the balance available as profits was 11.62d per ton.

MORE RAND GOLD MINING RESULTS.

(BY OUR MINING CORRESPONDENT.)

THE general conditions affecting the Witwatersrand gold industry in 1922 were briefly referred to in last week's article on the reports of the "Johnnies" group; one may therefore proceed direct to a discussion of the more important of the other annual statements now in the hands of the shareholders. These include the reports of two large consolidations of the Rand Mines group—the City Deep and the Crown Mines. The former in especial gives a striking impression of the improvement which has taken place in the intrinsic position. During the second half of the year, when conditions were normal and reorganisation had taken place, costs averaged 23s 10d, or 6s 10d less than in respect of 1921; and thus, despite the fall in the price of gold, the profit per ton was more than main-

tained. Indeed, for the last quarter it represented 14s 10d per ton milled, as against 14s 3d for the whole of the previous year. Similar features, although not quite so marked in extent, are shown by the Crown Mines. The appended table contrasts the results of the two undertakings for each of the past three financial periods:—

	1923.	1921.	1922.
CITY DEEP.			
Tonnage milled	862,500	995,100	840,300
Working costs per ton	30/2	29/11	27/3
Total working profit	£ 649,350	£ 711,520	£ 504,040
Dividends	£ 415,250	£ 485,630	£ 337,230
Do per cent.	32½	37½	27½
Ore reserves	3,099,200 tons	2,428,300	2,815,000
Average value	9.9 dwts	8.8	8.4
CROWN MINES.			
Tonnage milled	2,201,000	2,177,000	1,924,600
Working costs per ton	23/9	25/-	22/5
Total working profit	£ 1,093,340	£ 672,030	£ 561,320
Dividends	£ 728,580	£ 305,530	£ 369,280
Do per cent.	77½	32½	40
Ore reserves	8,131,700 tons	8,511,200	8,882,100
Average value	6.4 dwts	6.1	6.1

In the case of the City Deep the expansion, or perhaps one should rather say recovery, shown by the latest ore reserve estimate arises partly from the performance of a vigorous development programme, and partly from the re-inclusion of ore which previously had to be ruled out on account of the high level of costs. The material opened up during the year was, however, of rather lower grade than before. The tonnage represents somewhat over two years' supply at the normal rate of operations. At the Crown Mines, also, the value of the ore developed showed some decline, although not sufficient to affect the value of the reserves as a whole; on the other hand, the percentage of payability scored improvement. The "available" ore stands at 7,382,600 tons. On the general position the consulting engineer remarks that the mine has arrived at the stage where it is "no longer dependent for its profits on the so-called gold premium." An event of some importance is the acquisition of nearly 550 additional claims, which, besides increasing the "life," will facilitate the operation of the property.

As regards the other companies of the Rand Mines—Central Mining group, last year's earnings on the part of the Durban Roodepoort Deep proved insignificant, but the report makes it clear that during the latter part of 1922 the company benefited from the expenditure upon new equipment, as well as from the improved conditions. At the standard price of gold, the operations of the last half of the year showed a profit of 2s 9d per ton milled, whereas on the same basis a loss of 4s 7d would have resulted in respect of the concluding six months of 1921. The ore reserves have increased in both quantity and value, and the capacity of the reduction plant is to be expanded slightly. Just recently the shares were the subject of some speculative excitement on amalgamation rumours. Finance is the one weak point in the position. The Robinson, of course, will shortly suspend operations, and interest centres chiefly around the sum likely to be yielded by the impending liquidation. The balance-sheet shows surplus cash assets to the tune of nearly a quarter of a million, and it is conservatively calculated that the total winding-up distributions should exceed the current market price of the shares. The accounts of the Rose Deep indicate that the 1922 dividends of 11½ per cent. substantially exceeded the profit earned; and as a number of ex-enemy shares were purchased, the balance forward becomes reduced by £53,700 to £85,800. The ore reserves continue to shrink, and altogether it is apparent that the company has reached the stage where the question of "life" becomes an important factor. At the Village Deep, costs during the second half of the year averaged 22s 5d—a reduction of 7s per ton compared with the 1921 figure. Thus profits can be earned with gold at normal price. At 2,115,400 tons, value 6.1 dwts, the ore reserves show a small increase in quantity and decrease in value; they represent about three years' supply for the mill.

For practical purposes the East Rand Proprietary Mines may now be regarded as belonging to the group under discussion. From the monthly returns it must have been apparent that the company was faring badly, but the actual terms of the annual report evidently came as a shock to the general body of shareholders. Development last year, it is intimated, was again confined

to the more promising sections of the property. In the Driefontein and Comet Deep sections stretches of high-grade ore were exposed; "these, however, do not persist over any extended distance, and alternate with similar stretches of unpayable ore, which will have an adverse effect on the grade obtainable when mining commences in these areas." At 1,724,350 tons the ore reserves show a decrease of nearly a quarter of a million tons, the value being maintained at 6.7 dwts. Some proprietors are not a little puzzled at the circumstance that with the ore in reserve averaging practically 6½ dwts, the yield actually secured should barely reach 5 dwts. The explanation is that as the tonnage available is totally inadequate to the scale of operations—not greatly exceeding a year's supply—it becomes necessary to fall back upon reclamation ore for the purpose of keeping the mill going. On the financial side, despite a substantial reduction in working costs, last year's operations resulted in a mining loss of £92,600, which was expanded to £220,000 by debenture interest and redemption, taxes, &c. The question of liquidation has been unofficially mooted. Such a course would be to the advantage of the debenture-holders; the shareholders appear to stand little chance of getting anything appreciable in either case. The position is that there are now outstanding £536,860, balance of an issue of £1,500,000 debentures, redeemable by annual drawing of £90,000 at 103, or by purchase in the market at or under that figure. The bonds standing at a discount, the bulk if not the whole of the number required annually has in recent years been obtained by purchase. The balance-sheet shows cash and cash assets to the amount of £839,200, or just about sufficient to meet the liabilities, taking the debentures for convenience at the round figure of par. Consequently any liquidation dividends would represent the proceeds of the sale of the property and plant, with the yield from the final clean-up—both very uncertain quantities. The issued capital is close upon 2½ millions.

Notes of the Week.

France, Germany, and the Ruhr.—The present week appears to be closing with the Ruhr deadlock more menacing than ever. Only a few days ago there appeared to be some grounds for hoping that the atmosphere was gradually becoming more suited to the possibility of negotiation. The first indication in this direction was the visit, apparently with the unofficial approval of M. Poincaré, of M. Loucheur to this country, and his interviews with British politicians. The second was the stressed reference in M. Poincaré's speech last Sunday at Dunkirk to M. Loucheur's account of his visit, and his expression of willingness to examine German offers in conjunction with Great Britain and other signatories of the Versailles Treaty. For the rest, however, his speech was an unbending defence of the Ruhr adventure, and a renewal of the pledge not to retire therefrom except in return for actual payments of acceptable dimensions—not promises—by Germany. Unless M. Poincaré's view of what would constitute acceptable payments has changed, and of that there is no direct evidence, this declaration does not seem to carry us any farther. But some allowance should be made for the fact that the occasion—the dedication of a memorial to fallen soldiers—was more suited to patriotic rhetoric than to conciliatory words, and it is at least something to the good that he took pains to disparage the French annexationists. Moreover, M. Poincaré's consultations this week with French representatives on the Reparations Commission suggest that the possibility of a re-opening of negotiations is not entirely out of his mind. It appeared that the same interpretation could also be placed upon the speech which Dr Rosenberg, the German Foreign Minister, delivered in the Reichstag on the following day. He, like the French Prime Minister, made uncompromising defence of his Government's position and policy. He disclosed that the offer which Dr Bergmann took to Paris in January was in the neighbourhood of £1,500 millions, but stated that the Ruhr affair had so far changed the face of German economic life that the German Government could no longer pledge itself to carry out

that proposal. So far there is little sign of unbending. But Dr Rosenberg reiterated with emphasis the willingness of the German Government that Germany's capacity to pay should be assessed by an international body of financial experts. The mere fact that within the space of two days the French Prime Minister and the German Foreign Minister should think it worth while to make statements possesses some significance. But, unfortunately, M. Poincaré's speech has now to be re-read in the light of subsequent happenings, of which the most disconcerting is the arbitrary removal by the French and Belgian Governments, without British consent, of the German Rhineland Commissioner, Prince Hatzfeldt. This is an action which tends to put the clock back. The last few days have also seen a fresh break in the mark exchange, with a simultaneous weakening in the franc. Whatever may be the actual causes of this break, and the explanation of the Reichsbank's slowness in intervening, the exchange movement does not in any case indicate any belief in an improvement in the Ruhr outlook. Time drags on, and it becomes increasingly difficult to see how the British Government can afford to delay much longer a considered pronouncement of its policy.

Economics in the Budget Debate.—The Budget Debate has been noteworthy for the large number of theoretical economic questions which have been raised during its course. The tone of some of the discussions suggests that quicker progress would have been made if the House had been provided with diagrams or blackboard and chalk. A particularly interesting example to economic students is the discussion on the effect of taking off the sugar duty. Mr Baldwin argued that the conditions of supply are so restricted at the moment that if the tax were removed and consumption stimulated by the resulting fall in price, the increased demand would promptly drive up prices almost as high as they were before, including the tax. There is a familiar economic theory that when demand is elastic and supply inelastic a tax will, in the main, fall on the producer. Mr Baldwin's argument was an example of the opposite theory that, in such circumstances, if a tax is remitted the producer gets most of the benefit. Mr Ramsay Macdonald rather missed the point of the Chancellor's argument and harped upon the effect of the tax in keeping down consumption, and therefore affecting the standard of living of the working classes. Mr Baldwin recognised, and had stated, that removing the tax would increase consumption, but in the prevailing conditions of supply, the increase would be very small indeed, and the rise in prices from the old net level without the tax would be very considerable. If Mr Baldwin's assumption is true that supply is so restricted that an increase in the demand of Great Britain, though only a portion of the world's demand, could not be met without upsetting the market, his economic argument is sound in theory. We are not sure, however, that it is sound in political practice. Mr Baldwin has to consider taxation from now until next spring. His argument only applies to the conditions of the sugar market between the present time and the coming of the new crop in the summer, and it is by no means certain that the supply conditions he depicts will necessarily continue into the new sugar year. As a matter of fact, a state which economists would describe as one of inelastic supply is, on the whole, normal at a time of year which is four months before the end of the commodity season, as every manipulator knows who dreams of organising a corner in any market. But as the Budget comes in April, we should be in danger of never getting rid of our taxes on sugar and tea at all if Chancellors of the Exchequer allowed themselves to be too much influenced by this theoretical argument.

Reduction in Railway Rates.—The expected announcement by the railway companies of certain reductions in freight rates was made yesterday. Agriculture receives the largest amount of benefit. For agricultural produce the general rule (with some exceptions) is a reduction from 75 per cent. to 50 per cent. above pre-war rates; while on certain classes of livestock, such as horses, mules, calves, rams, sheep, pigs, &c., the reduction is more substantial, and is from 118 per cent. to 50 per cent. above the pre-

war charges. Rates on parcels by passenger train are reduced from 100 per cent. to 70 per cent., and on parcels by goods train from 100 per cent. to 75 per cent. above the pre-war level. As regards general traffic the reductions are less extensive than was expected. For coal and coke and iron and steel, for instance, there is no reduction. For non-agricultural traffic that has hitherto been paying 75 per cent. above pre-war rates there is a general reduction to 60 per cent. On the whole, the cuts now announced will not satisfy the demands for relief that have been so strongly voiced by industrial interests, whose hopes of further concessions will, however, be kept alive by the following paragraph in the railway companies' statement:—

The companies have endeavoured to secure the co-operation of railway labour in order to make a larger reduction, but so far without success. Negotiations are proceeding, it being apparent that, failing some substantial reduction of expenditure due to high rates of wages and costly conditions of service, there is little prospect of further considerable changes in rates and charges. In the event of the negotiations with the railway trade unions being successful, the companies will be prepared to make further reductions.

The railways estimate that the concessions now announced will cost £9 millions per annum. The calculations which we have made in recent articles upon the railway position show that in making them the companies are not taking any risk, and lead us to hope that before long the companies will see their way to making further reductions. Still, the present reduction, if disappointing, will give some slight assistance to the branches of industry to which they apply.

A Tax on Betting.—The expectation of automatic declines in revenue in the next two years is a sufficient reason why the Chancellor of the Exchequer is anxious to discover new sources of revenue which will not add to the burden on trade and industry. Under the stress of war and post-war circumstances the field of possible taxation has been so widely explored that the task of discovery is difficult. The Chancellor can only suggest one new source, and that is a tax on betting. By this idea he is "greatly attracted," and the project is to be examined at once by a Select Committee. The work of the Committee will be watched with great interest, for they are sailing uncharted seas. No one really knows to-day whether such a tax would lend itself to easy administration, while estimates of the amount of money that might be tapped by such a source vary enormously. It is already obvious that a tax on bets will meet with some political opposition, based on moral objections to any step that would involve State recognition of gambling. But an unbiased study of the present attitude of the State towards betting goes a long way towards knocking the bottom out of this moral objection. At present betting on the racecourse is legal, and although betting business elsewhere is illegal, the State does not allow bookmakers to escape payment of income-tax on profits, the larger portion of which must be derived from betting by people who never go near a racecourse. To tax the turnover of a business whose profits are already subjected to tax hardly involves any greater degree of recognition. On the other hand, the imposition of a tax on bets might possibly lead to some beneficial results in the direction of State regulation and State attempts to eliminate the worst abuses of present betting practice. We fail to see how a tax would encourage betting; on the other hand, we do not believe that a tax on anything else would ever stamp it out, and as regards the moral aspect, the open recognition involved by a betting tax would be no more objectionable than the humbug that marks the present anomalous position. For ourselves we are willing to judge a betting tax in accordance with the opinion of experts on the two simple questions, whether it would yield a large revenue, and whether it would be easy to administer.

Agreement in the Building Trades.—On April 7th last notices were served in the building trades. In our issue of that date we outlined the progress of events which had led up to what seemed like a complete deadlock, and expressed the hope that this important industry would not

be paralysed precisely at the moment when building should be in full swing. Fortunately both parties to the dispute seemed unwilling to allow matters to drift, and on April 10th negotiations were resumed, only to be broken off on the following day. At this juncture the Ministry of Labour intervened to the extent of consulting both parties, and the operatives declared their willingness to submit to arbitration both the interpretation of the agreement establishing the National Wages and Conditions Council and the question of wages. The length of the working week alone remained as the stumbling-block between the parties, but the leaders of the operatives, while still resisting the employers' demands for a 47-hour week, declared their willingness to consult their members on the principle of a "spread-over" week of 44 hours. This scheme would involve a working week of 46½ hours in summer, while for two of the four winter months weekly hours should be 44, and in the remainder 41½. This would provide increased elasticity in the regulation of the hours of labour, and represented a considerable advance on earlier demands. Towards the end of last week, therefore, Mr Ramsay MacDonald invited representatives of the employers and the operatives to meet him in the House of Commons, with the result that an ingenious formula was invented which proved acceptable to both parties. The interpretation of the agreement, or, in other words, the question as to whether the employers are entitled to demand wage reductions without first of all giving six months' notice of their intention so to do, together with the dispute as to wages are to be referred to the immediate arbitration of an arbitrator appointed by the Lord Chief Justice, assisted by two assessors, one selected by the employers, the other by the operatives. His decision must be given within seven days. The question of hours, on the other hand, is referred in the first instance to the districts for settlement. Failing agreement in this manner, regional ballots are to be taken within a month to decide whether the question should be referred to the National Wages and Conditions Council. If this in turn should prove impossible, the question of hours also will be referred to the special arbitrator appointed by the Lord Chief Justice. In the application of the "spread-over" 44-hour week, however, it is provided that there shall be no extension of hours in districts where unemployment is excessive. It will be seen that this compromise contains several important concessions on both sides, for, while the owners do not insist on their earlier demand that all the three points in dispute shall be referred to immediate arbitration, the operatives nevertheless agree that there shall be arbitration on all the points, including hours, failing previous understandings on a regional basis. Moreover, the imposition of time limits overcomes the employers' objection to further negotiations, which was based on their fear of procrastination on the part of the operatives, while these latter have succeeded in maintaining the principle of a fresh ballot on the question of hours. This week Sir Hugh Fraser was appointed arbitrator, and he and the two assessors will begin their activities at the Law Courts to-day. The final solution of the questions at issue, therefore, should not now be long delayed. This happy conclusion to what threatened to prove a disastrous dispute has also led to a settlement in East Anglia, where a long struggle has been in progress in the building trade. In this district the employers had broken away from the National Federation in order to enforce a reduction of painters' wages. It is perhaps significant, however, that on April 7th last the federation notices were posted in this, as in other parts of the country, and it appears now that the local employers will return to the National Federation. Work in this area was resumed on Thursday, and the issues involved in the recent stoppage will apparently be settled in accordance with the decisions of the special arbitrator.

Improvement in the Labour Outlook.—A fortnight ago the outlook in the labour world seemed far from bright, and strikes and rumours of strikes were the order of the day. The acceptance of arbitration in the building trades, to which we refer above, marked a turning point, and to-day the outlook is decidedly brighter. Not only have certain local disputes been terminated, but in several dis-

tricts there appear signs of a new spirit in the labour world. Thus the ironstone miners of Cleveland have reverted to the eight-hour day, and the coal miners at Ebbw Vale (Mon.) have decided to work double-shift. In these ways it is hoped to stimulate and cheapen production, while work is expected to be found for some of the unemployed in these localities. In the Potteries, where lock-out notices were due to expire to-day, a settlement was fortunately arrived at on Thursday, when the employers' modified terms were agreed to by the workers' representatives, having previously been accepted by large majorities in a ballot vote of the workers themselves. The chief outcome of this agreement, which affects nearly sixty thousand operatives, is a 10 per cent. reduction in gross wages throughout the industry. More spectacular, perhaps, is the settlement of the Norfolk farm strike, the terms of which it is expected will be ratified at Norwich to-day. This struggle had become very bitter, as the lot of an agricultural labourer can hardly be described as a happy one at the best of times, while the present slump in this oldest of industries bore very heavily on workers whose wages were already very low. A complete deadlock had been reached on Wednesday, when Mr Ramsay MacDonald decided to invite representatives of the Farmers' Union to discuss the position with him at the House of Commons. As a result of his mediation, there seems to be every indication that the new terms submitted will prove acceptable to both parties. These provide, according to the *Times* of yesterday, for a wage of twenty-five shillings for a guaranteed week of fifty hours. Overtime is to be at the rate of sixpence an hour for the first four hours in excess of the weekly minimum, and at ordinary rates thereafter. A weekly half-holiday is to be secured, and there is to be no victimization. It has been realised that an early settlement is imperative if great damage to the year's production is to be avoided, and we may hope that this distressing dispute will soon be forgotten by both parties. The dispute as to a proposed cut in the wages of railway shopmen, in which the companies propose a reduction in the war bonus which would bring the railway shops more nearly into line with the rest of the engineering shops, has not yet been settled, and is much complicated by the multiplicity of trade unions involved. In the shipyards, again, a first-class crisis seems imminent owing to the repudiation by the Boilermakers' Society and others of an agreement concluded recently by the Federation of Engineering and Shipbuilding Trades (of which these unions are members) on their behalf. The regulation of overtime provides the bone of contention, but from the larger point of view the whole question of trade union discipline is involved. The employers first tried negotiations with representatives of the dissentient unions, but as these proved abortive, on Wednesday they gave notice of a lock-out of the members of the unions in question, to take effect at the end of the month. In North Shields some men are already on strike, and have declined to accept the employers' proposal that they should return to work under protest. The attitude of the Boilermakers' Society and its allies is much to be deprecated, as it strikes at the very root of the principle of collective bargaining. We sincerely hope that trade union discipline will be enforced, for under present conditions the position of the employers is an intolerable one. Despite this threat of trouble to come, the general position in the labour world has nevertheless improved considerably during the last week, and it is hard to believe that internal troubles amongst the trade unions themselves will be allowed to prevent the return of this country to more normal industrial activity.

Coal, Iron, and Steel Production.—Coal production continued at a high level during March, and, except for the holiday weeks, consistently exceeded 5.7 million tons per week. In the week ended March 17th an output of 5,721,000 tons was recorded, a figure only once exceeded since weekly figures have been published. It will be seen from the table below that production in the first quarter of this year has been at practically the 1913 level. Exports of coal also continued high, mainly on account of the demand from Germany and the countries deprived of reparations coal. The following table compares production and exports in the first quarter of 1923 with the

first quarter of 1922, and with the quarter before the coal stoppage of 1921:—

First Quarter—	Production. Tons.	Exports.	
		Foreign. Tons.	Bunker. Tons.
1921	53,783,000	5,397,332	3,136,345
1922	62,202,000	13,236,504	4,403,262
1923	71,042,000	18,694,000	4,568,000

The exports in the first quarter of 1923 include 11,389,000 tons to Germany, France, Belgium, and Italy, an increase of 2,125,000 tons over the previous quarter, and of 4,413,000 tons compared with the first quarter of 1922. The statistics issued by the National Federation of Iron and Steel Manufacturers show that pig-iron production in March (633,600 tons) was the highest since January, 1921, and since there was a net gain of 13 in the number of furnaces in blast during the month, the April output may be expected to be higher. The production of steel ingots and castings amounted to 802,500 tons, and was the highest since September, 1920, when it was 884,700 tons. Much of this expansion is undoubtedly due to the Ruhr situation, although some improvement was confidently anticipated prior to the occupation. The following table compares production and exports of iron and steel in the same way as for coal above:—

First quarter—	Production.		Exports.	
	Pig-iron. Tons.	Steel. Tons.	Pig-iron. Tons.	All Other Iron & Steel. Tons.
1921	1,491,700	1,336,000	43,112	505,000
1922	977,900	1,295,700	118,189	654,600
1923	1,744,900	2,143,700	272,000	767,000

The exports of iron and steel in March amounted to 368,072 tons, a figure only twice exceeded since the war, but, pending the issue of the Trade Returns (delayed by a printers' strike) it is impossible to analyse the direction of the foreign trade in iron and steel.

The Coal Industry in South Wales.—The collieries are so fully sold, writes our Cardiff correspondent, that they are independent of current inquiries, and many of the salesmen are abstaining from giving forward quotations. The boom has reached the collieries producing the inferior classes of large and other steam coals, but the output of these collieries is comparatively small, and its suitability for marine consumption is very limited. Still, the collieries producing these coals have benefited from the failure of the better class steam coal collieries to supply the market, and for the first time since the collieries were decontrolled these particular mines are being worked at a profit. The docks continue in a state of congestion. At every one of them there are vessels waiting for berths not only in the docks themselves, but also in the roadsteads, and detentions are heavy. An important point has been raised under the terms of the Chamber of Shipping Welsh Coal Charter in respect of these detentions, that is, as to whether time should count from the arrival of the vessel in the roads ready to load, or from the time of her actual arrival in dock. The text of the Charter relates exclusively to the readiness of the ship "in dock," and on this ground the charterers are resisting claims of owners for demurrage. The congestion has affected the chartering of tonnage, and brokers and merchants are now giving preference to those docks where the congestion is least. The prospects of the settlement of the third shift question are not at the moment as bright as they were a week ago. The workmen's leaders agreed upon terms with the employers for the working of this shift, and undertook to recommend those terms to the acceptance of the trimmers and tippers. At Cardiff, however, the workmen have repudiated the action of the leaders and declined to work an extra shift. At the other ports, however, the trimmers and tippers are more conciliatory, and the proceedings of the Court of Inquiry have been suspended to provide further time for negotiations between the parties, with a view to a settlement that will be more favourable in the matter of wages than that provisionally agreed upon by the Negotiating Committee last week.

The Stock Exchange and the Budget.—A Stock Exchange correspondent writes:—Previously to the introduction of the Budget, the Stock Exchange had been

going for, as the House phrases it, a reduction of tax on some modest scale, the general impression being that there would be 6d in the £ removed from the income-tax. Some had expected a lowering of the duty on tobacco; others had hoped for complete remission of the Corporation tax. Mr Stanley Baldwin is respected in the Stock Exchange as a business man, and one whose legislation might conceivably be cast upon lines larger than those laid down by his predecessors during the last few years. In the expectation that taxation would be cut down, there had been substantial purchases of gilt-edged stocks, with the natural result that prices, as we have shown in our Stock Exchange news, moved steadily upwards. Some hesitation was felt in regard to the manner in which a possible lowering of the income-tax might affect the prices of stocks and shares in those companies which pay their dividends free of income-tax, it being thought that proprietors of such investments might take the view that the stocks and shares, under a lighter income-tax, would present less attraction to prospective buyers. In the event, the Budget has proved itself an unusually popular measure in the Stock Exchange markets. It aroused little criticism. To have taken a shilling in the £ off the income-tax might have been going too far, according to the theory of many of the older members. The Sinking Fund conditions are much as the Stock Exchange had expected, while the minor remissions of duties on beer and the cheapening of postal rates aroused no particular interest from the purely market point of view. There is mild regret that the Chancellor did not embrace the opportunity of taking a bolder course, and, as he professes to look forward to increasing trade in the country, trade on this in such a manner as would have enabled him to abandon the Corporation tax altogether, or to have made a deeper cut in the income-tax. This, however, did not prevent a general strengthening of securities in practically everything outside the mining markets. The prices of tax-free stocks and shares, which, it had been feared, might give way on a reduction in the income-tax, remained as firm as they were before, and on the day that the Budget appeared there were nominal rises in some 40 different gilt-edged securities, including colonial stocks, Indian railways, home and foreign corporations, and similar issues. The lifting of the income-tax incubus by 6d in the £ undoubtedly brought relief. Money is available in considerable amounts for investment, and the slight hesitation noticeable on the eve of the Budget's introduction gave way to confident purchases as soon as the terms were known. Money is pouring into the Stock Exchange. Where it comes from, brokers and jobbers alike profess their inability to discover. They are astonished at seeing the capital coming from all over the country, and so insistent is the demand that in a number of stocks which would sound exaggerated if it were to be set down in print, there is literally none on offer. Industrial shares benefited by the halving of the Corporation tax, nor did the Chancellor's helpfulness in regard to increased activity of trade prevent money from flowing into the shares of companies which might, conceivably, require to withdraw substantial sums from gilt-edged securities for the expansion of their business. In some quarters it is held that the trade revival, of which so much is heard nowadays, is taking place at a rate lower than might have been assumed from the cheerful way in which it is proclaimed. The buying of industrials, for instance, is on a sufficiently large scale to bring about strings of rises every day in the popular departments. So far as mining shares are concerned, the provisions of the Budget affect these so slightly, and so indirectly, as to lead to little additional interest being aroused in their markets, but elsewhere throughout the Stock Exchange the effect of the Budget has been to infuse a greater cheerfulness into the outlook, a greater amount of strength into investment securities, and a general loosening of purse-strings for the purchase of industrial stocks and shares, preference and ordinary alike.

British and American Shipping.—A correspondent writes:—The Ship Subsidy Bill having failed, further efforts are to be made to deal with the vexed problem of the U.S. mercantile marine. President Harding has held a conference with all the members

of the U.S. Shipping Board, and the decision has been come to that unless the 388 steamers are sold within 90 days the Government will take them over, go into the shipping business with a fund of £10,000,000, and pursue an aggressive policy in competition with the private shipping companies. Of course, it will be impossible to sell these ships in the time mentioned; thus it looks as though the American State-owned fleet will continue to be operated by the Government officials. The suggestion that "aggressive competition" may be expected has aroused some interest in shipping circles on this side, but there is at the moment no apprehension of what is usually termed a "rate war." Private capital is hardly likely to be attracted to the steamers under the American flag, as there is so little scope for employment for tonnage of this class working from the United States ports. Thus even if the U.S. Government decided to run the ships through the medium of the U.S. Shipping Board or any other Government department, the effect on British shipping would not be much, although the talk of rate cutting is rather disturbing. British shipping just now is doing much better business than it was, both in the passenger trade and the cargo markets. Most of the leading passenger steamers on the eastward route are booked up well ahead, and changes in the American immigration laws now under consideration may help the third-class traffic from this side. In the freight markets the tone has become much firmer, with a general rise in home-ward freights. The Canadian season is rather late this year, owing to the thick ice in the St. Lawrence, but a fair amount of chartering has been done. Steamers to load coal and coke from the United States ports have been in demand, and up to \$5.35 per ton has been paid this week for the latter from Philadelphia to the Antwerp-Dunkirk range. The River Plate market shows a much-improved tone, with more business doing and better rates paid. The reports about the new maize crop indicate that there will be full supplies forthcoming during the next few weeks. Numerous steamers have been fixed for May, June, and July loading, and the freight money paid from not above San Lorenzo to the U.K.-Continent has ranged from 26s up to 28s 9d, which is fully 5s per ton higher on the month and nearly 10s over the lowest recorded this year. Nitrates report more inquiry for July shipment. In the East Bombay and Karachi have been very active, with a large number of steamers fixed up for June and July loading at higher rates. Minerals from the Mediterranean and Bay are fairly active. Outward coal moves briskly.

The Silver Outlook.—Our New York correspondent writes:—Recent declines in the price of silver in New York and in foreign markets are attributed largely to the announcement by the Director of the Mint that the United States Government will discontinue its purchases of silver bullion under the Pittman Act about July 1st. That announcement came as something of a surprise, because it had been estimated that the Government's purchases, at the rate they have been made, would be continued until September or October. Thus far approximately 180,000,000 ounces have been acquired by the Mint, besides 8,000,000 ounces previously allocated for subsidiary silver coinage and turned back into the fund; therefore, about 20,000,000 ounces remain to be purchased to complete the 208,000,000 ounces, the total amount authorised by the Pittman statute. In some quarters it is suggested that the Government's decision to stop purchasing at the end of this fiscal year, or thereabouts, may have been due to the discovery that producers' stocks of silver were larger than had generally been supposed. However that may be, the belief is expressed by authorities here that the discontinuance of Government purchases at \$1 an ounce (the price which the Pittman Act stipulates must be paid for silver of American origin) will serve to depress the price of domestic silver and bring the latter down to the level of the market for foreign silver, which dropped below 67 cents an ounce last week. On the other hand, "there are certain factors in the situation," the *Wall Street Journal* remarks, "which lead bullion dealers to feel rather encouraged over the silver outlook. A prime consideration

has been the debasing of silver coinage since the war by England and certain continental countries. This threw a lot of silver on to this market, and was largely responsible for the big disparity prevailing between the two prices here. But this selling," it is added, "is pretty well over now, and the only influence that is looked for from Europe in the future is from purchases rather than sales. India, too, is expected to be in the market for the white metal, as her trade position has been growing favourable."

Indian Trade Tendencies.—The Senior British Trade Commissioner in India has forwarded to the Department of Overseas Trade some facts and figures relating to India's foreign trade in February, and in the eleven months ending with February. Statistics of imports, exports, and re-exports of merchandise for these periods compare with preceding periods as follows:—

	Feb., 1922. Rs. Lakhs.	Feb., 1923. Rs. Lakhs.	Eleven Months Ending	
			Feb., 1922. Rs. Lakhs.	Feb., 1923. Rs. Lakhs.
Imports	20.00	19.37	244.86	214.05
Exports	21.33	30.60	205.20	267.63
Re-exports	1.08	1.00	12.47	13.73
Export excess on merchandise figures.....	2.41	12.23	*27.19	67.31

* Excess of imports.

During the eleven months ended February, 1923, as compared with the corresponding period of 1921-22, the value of the imports decreased by nearly 13 per cent., while total exports rose by about 29 per cent. The following comparative figures for gold and silver are also given:—

	Eleven Months Ended Feb.	
	1922. Rs. Lakhs.	1923. Rs. Lakhs.
Gold imported	10.39	35.23
Gold exported	16.61	12
Silver imported	14.97	19.33
Silver exported	2.37	2.41

"Measured by the statistics of merchandise, treasure, Council bills, enfaced rupee paper, &c.," reports the Trade Commissioner, "the balance of trade was against India to the extent of Rs. 32 lakhs in February, 1923, as compared with a credit balance of Rs. 94 lakhs in January, 1923, and a debit balance of Rs. 45 lakhs a year ago. In the eleven months ended February, 1923, there was a favourable balance amounting to Rs. 21.11 lakhs, as against an adverse balance of Rs. 32.28 lakhs in the corresponding months of the preceding year." The most noteworthy feature of the Indian import trade in February was the large increase in the imports of cotton piece goods, which amounted to 147 million square yards, as compared with 78 million square yards in February, 1922.

The Swiss Customs Tariff.—The "Initiative" put forward by the Swiss Socialists demanding reversion to the pre-war Customs tariff was rejected last Sunday by a popular vote of 452,340 to 170,239, and by every canton except the urban half of Bâle. It was motivated by the high cost of living, and had been supported by some independent Radical leaders; and the adverse majorities, though large even in Geneva and Zurich, were enormous in the agricultural cantons—more than four to one in Vaud, six to one in the Grisons, nine to one in Freiburg, and nearly twelve to one in the Valais; so that the result was primarily a victory for agricultural Protectionism. That, however, is not its sole significance. Following on the decisive defeat of the Capital Levy and of a number of other Socialist initiatives of a political character, it indicates that Swiss Socialism is declining, and the small poll (about 65 per cent.) is put down to lassitude—an explanation which brings out one drawback to the institution of "polls of the people." One reason for the rejection was the fear that the Federation would make up the loss of revenue by new imposts encroaching on the taxable resources of the cantonal Governments. But a more serious objection was constitutional. The opponents among the Opposition parties took

pains to point out that, while not endorsing the financial policy of the Federal Executive, they would regard the success of the proposal as setting a dangerous precedent for the submission of all commercial treaties to a popular vote. The general tariff may properly undergo this ordeal, but Switzerland is surrounded by Protectionist countries, and the character of her exports necessitates that foreign markets should be kept open for them by treaties negotiated by experts; and the knowledge that these treaties might, after all, be rejected by the people would paralyse the negotiators. Finally, with a series of Budget deficits, Switzerland has no revenue to throw away.

Cunard Results.—The accounts of the Cunard Steamship Company, Limited, for the year ended December 31, 1922, show a further decline in profits. Receipts from freights, passage moneys, &c., which amounted to £9,286,027 in the previous year, declined to £8,313,316 for 1922. Working expenses fell from £8,336,256 to £7,557,714, but the real reduction in this item is greater than the figures show since in the present accounts income tax and corporation profits tax, shown as a separate item of £172,249 last year, are now included under the head of working expenses, &c. The following comparative table shows the results for the past five years. Figures for 1913 are also given:—

	1913.	1918.	1919.	1920.	1921.	1922.
Freight and passages ..	£ 3,659,774	£ 3,801,655	£ 9,201,728	£ 12,260,662	£ 9,286,027	£ 8,313,316
Working expenses	2,468,457	*2,594,530	*7,476,808	*11,079,042	8,336,256	7,557,714
Repairs and renewals ..	271,207	..	..	..	..	..
Insurance premiums....	66,736	..	..	..	..	..
Balance	853,374	1,207,125	1,724,920	1,181,620	949,771	755,600
Brought forward.....	88,964	157,552	173,237	144,187	169,075	199,800

* Including repairs and renewals and insurance premiums.

The ordinary dividend is maintained at 7½ per cent., but the carry forward is considerably less at £125,261. Depreciation is again included in the general total for expenses of the year, no figures being shown, while the reserve fund stands at the same figure as in the last balance-sheet. Steamers and shipping investments are nearly £3 millions higher at £19,287,682, and general investments slightly higher at £2,663,488. During the year the company has been able to collect a considerable part of debts owing to it, the amount under this head having been reduced from £3,555,227 to £1,492,282. Cash in hand and at bankers totals £1,593,433. An analysis of the balance-sheet will be found in our usual column. The report of the directors states that "the position of general manager has been discontinued, as the rapid growth of the company's business has rendered it desirable to decentralise the various departments of the company, which are now placed under the control of managers with personal supervision by individual directors." As to the conditions of trading during the past year, the directors state: "A fair share of the Atlantic passenger traffic was obtained, but the third-class movement continued to be limited owing to the operation of the United States law restricting immigration. The volume of freight carried shows a considerable increase over 1921 but the carrying rates, especially homeward from America have fallen to a low level owing to increased competition."

English Electric.—A considerable decline in both gross and net profits is shown in the accounts of the English Electric Company for the year ended December 31, 1922. Gross trading profit, including £55,594 brought forward amounted to £318,265, compared with £363,659 in the previous year, when £46,236 was brought forward. Net profit was down to £111,403, as against £164,530 in the previous year. An analysis of the balance-sheet will be found in our usual column. The following table com-

pares the results of the four years since the company was formed :—

	YEAR ENDED DECEMBER 31,			
	1919.	1920.	1921.	1922.
	£	£	£	£
Gross profit	410,835	312,237	363,659	318,265

Carried forward ..	45,302	46,236	55,599	68,983

It will be seen that 1922 was the worst year the company has had. The dividend on the ordinary shares is maintained at last year's figure of 5 per cent. (which compares with 8 per cent. in 1919 and 1920), but there is nothing for reserve for the past year, compared with £60,000 in 1921. No figures are given to show the movement of expenditure, so that one cannot judge what economies have been effected during the recent depression. In their report the directors state that depression of trade during the greater part of last year, aggravated by the engineers' strike, gravely hampered all engineering concerns. An active policy abroad and the closest economy at headquarters and in the works have been necessary to show the return they present for 1922. Owing to extension of the business geographically and technical development of the company's products, several important contracts have been secured, particularly in railway electrification and water-power development schemes. "Your directors have persevered in their policy of reducing the stocks of material on hand to the lowest workable margin. This accounts to a considerable extent for the figure in the balance-sheet which gives the value of the stocks and works in progress, and which is less by approximately £366,000 than the corresponding figure for the previous year."

London Life Association.—The accounts of this mutual life office are always of much interest; the business is conducted at the smallest cost (no commission is paid), and all through the war the bonuses to policyholders were maintained. Last year the net new assurances numbered 1,470 for £1,570,123, of which £381,311 was reassured with the allied office, The Clergy Mutual. The premium income increased by £44,074 to £760,631, and the ratio of expenses to premiums fell from £6 5s 11d per cent. in 1921 to £5 16s 5d per cent. in 1922. The funds increased by £583,335; the net rate of interest yielded by them was £4 8s 2d per cent., after deducting income-tax, and the actual death claims were no more than 60.1 per cent. of the amount expected by the mortality tables used in the valuation. The directors have increased by one the rates of reduction of premium, so that they will range, as from July 1 next, from 51 per cent. up to the equivalent of 129 per cent. Upon policies entitled to reversionary bonuses a compound bonus of 35s per cent. has been declared. According to the system adopted by this office, special reserves are always set aside which provide for the continuance of reductions of premium or of reversionary bonuses. A revaluation of Stock Exchange securities as at December 31st last showed that in the London Life funds there was a margin over book values of £252,140, and in the Clergy Mutual Fund of £160,705. A scheme is appended to the report under which the union between the London Life and the Clergy Mutual (which has existed for four years) will be made more close. Briefly, the arrangement provides that all policies of both companies shall be secured on the joint assets, and that the net rate of interest and the rate of expenses to premiums shall be the same for both. The London Life is to guarantee to participating policyholders in the Clergy Mutual a minimum bonus of 30s per cent. per annum on whole life assurances and 35s per cent. per annum on endowment assurances. This guarantee will not prevent the declaration of a higher rate of bonus in any year.

London and Lancashire Insurance Company.—Though this company has not been able to show profits up to the high level of recent years, it has, under difficult insurance conditions, again done very well indeed. The fire premium income last year was £2,904,408, as compared with £3,007,501 in 1921. The claims were 51.1 per cent. of the premiums, against 49.9 per cent. in 1921 and 40.9 per cent. in 1920. Expenses were lower at 39.3 per cent., against 41 per cent. The surplus, after allowing for unexpired risks, was £320,574, or 11 per cent. of the premiums, as compared with £538,034, or 17.9 per cent. in the preceding year. In the marine department the premiums were £1,144,399, against £1,383,306, and the claims £1,041,736, against £1,914,004. The accident insurance premiums were £1,447,519, as compared with £1,630,724. The total underwriting surplus of all departments is put at £651,149, from which falls to be deducted income-tax on profits and provision for corporation tax amounting together to £240,815. Interest on investments, less debenture interest, amounted to £338,195. After increasing the additional reserves in the fire, marine, and accident accounts by £300,000, providing £24,041 for cost of business acquired, and transferring £20,000 to the staff pension fund, the directors propose to pay a final dividend of 7s per share, less tax, making, with the interim dividend already paid, a total distribution for the year of 13s per share, less tax, and to carry forward £1,075,343, as compared with £1,026,431 brought forward. The reserve funds, excluding capital paid-up, amounted on December 31st last to £6,240,801, being 113.7 per cent. of the premium income for the year. The cost of the dividend for the year will be £355,576, of which £338,195 is provided out of interest earnings.

Atlas Assurance Company.—A good profit on the fire account, and the resumption of bonuses to life policyholders are the features of the Atlas's report for last year. In the fire account the premiums were £2,136,188, against £2,123,300. Claims amounted to £1,075,994, or 50.4 per cent. of the premiums, as compared with £1,150,312, or 54.2 per cent.; expenses were 43.4 per cent., against 45.3 per cent. The underwriting surplus, after providing for the reserve for unexpired risks, amounted to £128,158, or 6 per cent., against £97,525, or 4.6 per cent., for 1921. In the employers' liability, &c., account a premium income of £257,558, yielded a surplus of £35,829. A valuation on the life department showed a surplus of £265,841, of which £109,270 was set aside to write down securities and meet loss on investments, and £101,455 was distributed to policyholders as a reversionary bonus at the rate of 30s per cent. per annum on sums assured and existing bonuses in respect of the years 1920, 1921, and 1922. In the profit and loss account, interest on funds (other than life and capital redemption) yielded £119,105, and profits from departments £177,586. Income-tax, excess profits duty, and corporation tax absorbed £72,120. The dividend for the year of 13s a share, tax free, will absorb £143,000, leaving £145,262 to be carried forward against £124,376 brought down.

Financial Conditions in Japan.—According to cables from Tokyo, Japanese exports in March were 121,000,000 yen, and imports 197,000,000 yen, the comparable figures for March, 1922, being exports 113,000,000 yen, and imports 205,000,000 yen. At April 15th the note issue of the Bank of Japan was 1,094,000,000 yen, as compared with 1,114,000,000 yen a year ago, discounts and advances being 266,000,000 yen, against 202,000,000 yen. In the first half of the present month stringency was felt in the Tokyo money market, the rate for short loans ranging around 9 per cent. The stock markets are reported as presenting no feature. In the rice market the tone has been firm, and higher prices are anticipated in the near future. In the first ten days of April heavy business was transacted in raw silk, but the market then became quiet. No improvement has taken place in the cotton yarn position, and rumours are current that agreements to curtail working hours are under the consideration of leading spinning companies.

A MEETING of the Institute of Chartered Accountants will be held at the Hall of the Institute on April 24, at 5.30 p.m., when Mr P. D. Leake, F.C.A., will read a paper, entitled, "The Foundation of Taxable Capacity: a New Tax System."

THE Right Hon. Viscount Novar, G.C.M.G., late Governor-General of Australia, will preside at the meeting of the Royal Colonial Institute, on Tuesday, April 24th, at 4 p.m., at the Edward VII. Rooms, Hotel Victoria, when the Hon. John H. P. Murray, C.M.G., Lieut.-Governor of Papua, will read a paper on "Papua To-day."

THE Trade Facilities Act Advisory Committee, whose present address is 17 Throgmorton avenue, London, E.C. 2, will remove to 16 Finsbury circus, London, E.C. 2, on Monday, April 23, 1923. On and from that date all communications intended for the Committee should be forwarded to the latter address. The new telephone number will be London Wall 1200.

Oversea Correspondence.

UNITED STATES.—FEBRUARY RAILROAD EARNINGS—RAILWAY EQUIPMENT EXPENDITURE—FARM LOAN BOND REDEMPTION—COMMODITY PRICES—JANUARY FOREIGN TRADE—STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 9.

As foreshadowed by recent reports, the combined net operating income of all first-class railroads in the United States for February show a marked decrease as compared with January of this year and with February of 1922. Operating revenue totalled \$446,538,000, representing an increase of about 11 per cent. over the previous February, but operating expenses of \$375,707,600 were nearly 16 per cent. larger. Expenditure for maintenance of equipment alone amounted to \$112,143,600, as against \$91,901,300 in February of last year, or an increase of 22 per cent. The heavier operating expenses were due partly to severe weather conditions that prevailed in various sections of the country. During February the railroads repaired and turned out of their shops 34,692 locomotives—a new high record for any one month. Net operating income, which aggregated \$38,903,000, as against \$60,654,700 in January last and \$47,727,000 in February of 1922, was equivalent to an annual return at the rate of 3.73 per cent. on the tentative valuation of the carriers' property investment. The latter figure compares with 5.54 per cent. for January, and 4.67 per cent. for the previous February. In making the comparison it should be noted that freight rates were lower in February than they were a year ago, a 10 per cent. reduction on various commodities having become effective last July. For the first two months of this year the net operating income aggregated \$99,619,900, or an annual return of 4.66 per cent. on tentative valuation, as compared with \$77,346,500, equivalent to a return of 3.69 per cent. for the first two months of 1922. Operating deficits for February were reported by 59 railroads, of which 26 were in eastern, 1 in southern and 32 in western territory. The combined statement of all railroads for March is expected to show a return to more normal conditions. Such expectation is based largely on the fact that car loadings for last month exceeded the previous records established in March, 1920. Official statistics show that between July 1, 1922, and March 17, 1923, more traffic was moved than in any like period in the history of this country.

At its meeting here last week, the American Railway Association decided upon a comprehensive programme to facilitate the traffic movement during the remainder of this year, which is confidently expected to reach the largest volume in the annals of American railroads. In a formal statement the railroad executives said, among other things:—"The railroads have authorised since

January 1, 1922, for cars, locomotives, trackage and other facilities, the expenditure of \$1,540,000,000." Of that vast sum, they actually expended in 1922 for cars \$200,000,000, for locomotives \$45,000,000 and for trackage and other facilities \$195,000,000, a total of \$440,000,000. The carriers have authorised outlays for equipment and other facilities of approximately \$1,100,000,000 for the year 1923, divided as follows: \$515,000,000 for cars, \$160,000,000 for locomotives and \$425,000,000 for trackage and other facilities. The railway executives state that they "are raising this enormous amount of additional capital largely through borrowed money, on the abiding faith in the fairness of the American people and reliance on the continuance of the policy announced in the Transportation Act of 1920 as a measure of reasonable protection to investment in railroad property." From January 1, 1922, to March 15, 1923, the carriers purchased 223,616 new freight cars, of which 117,280 have been delivered and put into service, and 4,219 new locomotives, of which 2,106 have already been placed in service. Practically all of the new equipment still on order is to be delivered by next autumn—a period when freight traffic is always heaviest. The significance of the foregoing figures will be better appreciated when it is recalled that the average number of new cars and locomotives purchased over a period of 10 years, 1913 to 1922 inclusive, has been 101,009 new cars per year and 1,960 new locomotives.

In line with other refunding operations undertaken recently by the Government, the Federal Farm Loan Board has called for redemption on May 1st all outstanding bonds, dated May 1, 1918, which were issued by the twelve Farm Loan banks. The total amount to be redeemed is \$55,032,000. The bonds do not mature until 1938, but the Board decided to exercise its option of calling them five years after their issue, and it is not unlikely that other issues may be retired as they become subject to call under the 5-year option. This action is taken to foreshadow an early issue of new bonds, bearing an interest rate lower than the 5 per cent. rate which is carried by the bonds now called. In this connection, it is interesting to note that the twelve intermediate, or rural, credit banks recently created by an Act of Congress will rediscount agricultural and livestock paper after April 20th at the rate of 5½ per cent. The adoption of the latter rediscount rate for the intermediate credit banks, it is pointed out, means that not more than 7 per cent. will be paid by the borrower, since the law provides that where the rediscount privileges of the intermediate institutions are used the rate paid by the original borrower to any individual or organisation must not exceed 1½ per cent. above the rediscount rate of the intermediate credit bank. It is expected that this will result in a lowering of the commercial rate which farmers now have to pay, and which are said to vary from 6 to 24 per cent., with an average charge of from 8 to 12 per cent.

Prices of commodities showed irregular trends during March; some, owing to increased demand, advanced, while others, reflecting a seasonal quieting down in primary lines, declined. The net result on the level of all commodities, however, was an almost imperceptible decrease for the month according to *Bradstreet's*, whose index number as at April 1st, namely \$13.9304, compares with \$13.9332 on March 1st, representing a decline of only two hundredths of 1 per cent. The number shows a gain of 20.8 per cent. from April 1st of last year, and of 31 per cent. from the low point of June 1, 1921, but a decrease of 33.2 per cent. from the peak point of February, 1920. As compared with August 1, 1914, the increase is 59.9 per cent.

Preliminary estimates by the Department of Commerce of our import trade during January make a remarkable showing. The total value of imports for that month is placed at \$319,000,000, or some \$25,000,000 more than in December, and \$102,000,000 greater than the imports in January of 1923. Not since November of 1920 had the value of monthly imports reached \$300,000,000, and only in two months before 1919 was that figure ever recorded. The reason for the big increase in the inward movement of merchandise and commodities is found in the great expansion of trade and industry which occurred

in this country in January, and which served to stimulate importation of foreign goods and materials, despite the higher duties imposed under the Fordney Tariff. Although January's exports were unusually large, the excess of exports over imports was only \$16,893,000, or approximately \$44,700,000 less than in January, 1922.

While prices of many stocks have suffered further declines during the past week, bonds generally have displayed a firmer tone. The average price of representative domestic bonds has now rallied nearly a point from the low level of the year reached a week or so ago, while foreign bonds have recovered more than 3 points from the season's lowest. An outstanding feature recently has been the marked improvement in Liberty bonds, and some shrewd observers look for further advances during the next month or two. Their expectations are apparently based on possible purchases by the British Government. About \$80,000,000 interest on the British War Debt to the United States is to be paid on or before June 15th, and under the terms agreed upon, payment may be made in Liberty bonds at par. So long as those bonds are available at a material discount, it is thought not unlikely that the British Government may purchase them on a substantial scale, if it has not already done so.

FRANCE.—RUHR OUTPUT AND CONDITIONS—CREDIT NATIONAL—REVENUE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, April 19.

THE Franco-German struggle in the Ruhr shows no sign of termination, nor is there at present the slightest indication, as seen from Paris, that either side has any intention of giving way in the near future. The German demonstration during the past few days is interpreted here as indicating that nothing can be hoped for at present in the way of any further attempt to open negotiations for a settlement, and there is certainly no evidence on the French side of any tendency to weaken.

The Ministers of Finance, Public Works, and War have all paid extended visits to the Ruhr during the week, and have returned apparently in a distinctly optimistic mood. M. Le Trocquer, who is not only Minister of Public Works but a practical engineering expert, in a declaration made to-day, proclaims himself thoroughly optimistic as to the outcome, and insists that he bases his satisfaction on results that have actually been accomplished. He asserts that not only have the consignments of metallurgical coke into France and Belgium risen from 500 tons, the output from a single depot, to 8,550 tons, which were sent out yesterday, but that in another week the daily train loads sent into this country will amount to 10,000 tons. He is confident that very shortly the output will exceed the 12,000 tons a day which were delivered by the Germans in 1922. Already the shut-down blast furnaces in Lorraine have resumed work, and there is said to be enough coke in sight to relieve the metallurgists in Lorraine from anxiety for the immediate future. The removal of the huge stocks of coal that have been accumulated at the pit heads has also been resumed, and this combustible is being sent out by both barges and railway trucks. M. Le Trocquer also expresses himself satisfied with the steady improvement of railway exploitation in the Ruhr, now that matters are settling down in French hands. He cites the fact that, although the Berlin Government has threatened sentences of three months' imprisonment to all Germans who use the railway, the number of railway tickets sold at Essen station, which last week was only 60 per day on an average, numbered 232 on Tuesday, while at Treves 1,500 were sold yesterday, as compared with a daily average of 150 a fortnight ago.

M. de Lasteyrie, the Finance Minister, was equally positive. The amount paid in export taxes, which are levied in foreign currencies, has progressed, he stated, as follows:—February 7th to 20th, 2,640f (at the then current rate of exchange); February 20th to 28th, 94,016f; March, 1st to 10th, 213,638f; March 10th to 20th, 204,385f; March 20th to 31st, 432,338f. From this the Minister deduces that the boycotting of the French financial administration by the Ger-

mans is coming to an end. M. de Lasteyrie is convinced that no State can long continue the policy which Germany has adopted in the Ruhr, and that she is inevitably running to a catastrophe. When that catastrophe will come he does not venture to predict. He points out, however, that by increasing her issue of paper money from 3,558,245 marks on March 1st to 6,601,142 marks, according to German official figures on March 31st, "the Germans have beaten the Russian records," and that as a consequence the mark may so collapse within a few days that Germany will have to confess herself beaten.

The important rôle that is being played by the Crédit National, the channel through which the money that has been raised by this country to make reparation for war losses is being distributed to those entitled to compensation, renders a few details as to the present situation of the institution interesting. The Crédit National was created under the law of October, 1919, for the double purpose of assisting the *sinistrés* in the devastated regions and at the same time facilitating the resumption and development of trade and industry in that area. It is a limited company, managed by directors who are either nominated by the Government or elected by the heads of the great banks of the country, and its dividends are strictly limited in amount. Behind all its operations is the guarantee of the State. Its principal function is to pay to sufferers, on behalf of the State, the compensation due to them, and to make reimbursable advances in certain circumstances. It is also empowered to make advances to manufacturers and others, for periods ranging from three to ten years, under stringent guarantees. The extent of its field of operations in regard to reparations alone may be gauged from the official statement issued a few weeks ago, from which it appeared that "since the end of the war France has expended 54 milliards on the devastated regions, plus 41 milliards for other reparations, during which time Germany has paid less than six milliards of gold marks, of which less than two milliards have been received by France, or insufficient to pay the cost of her army of occupation."

The Crédit National has so far issued six loans respectively in December, 1919, May, 1920, October, 1921, January, 1922, June, 1922, and January, 1923, the total amount of nominal capital issued being 22,000,000,000f. Four of these issues have been in the popular form of premium or lottery bonds. For the two 1922 issues the Government adopted the form of short term bonds without lots, but returned to the long term premium bond principle in 1923. All the issues are in bonds of 500f each, and have been offered, as usual in this country, at a small discount. The rates of interest and present quotations (April 12th) of the various issues are as follows:—5 per cent., 1919, 469.25; 5 per cent., 1920, 473; 6 per cent., 1921, 507.50; 6 per cent., January, 1922, 486.75; 6 per cent., June, 1922, 486.75; 6 per cent., 1923, 495.75. The market in these bonds is large, and a substantial proportion of them is held abroad. As all are of the bearer description, they are easily negotiable. The large number of prizes offered (the first prize at each monthly drawing is 1,000,000f) and the fact that they are guaranteed by the State to a great extent explains the steadiness of the prices at which they are quoted. Since its constitution 3½ years ago, the Crédit National had effected, down to February 28th last, 5,806,918 individual payments to *sinistrés*, totalling 18,790,320,803f. Over 10,000 payments are now being made daily. Long term loans made to manufacturers and others, which amounted to 31 millions in 1920, rose to 225 millions in 1921, the total advances down to March 6th last being 364 millions.

Analysis of the revenue returns for the first three months of 1923 indicates that the Finance Minister's statement during the Budget discussion, to the effect that he hoped it might be found possible to cancel at least a large part, if not the whole, of the estimated deficit owing to the surprisingly satisfactory manner in which the revenue is exceeding his estimates, is likely to be largely justified. There was a drop of 184 millions in Customs receipts during the three months owing to the rate of exchange, but each of the other great categories of indirect taxation showed unexpected yields ranging (with few exceptions) from 10 per cent. to over 50 per cent. above the estimates. The mixed Commission, in which are included M. André

Citroen and other leading business men, which has been appointed to investigate the French tobacco and match monopolies and to draw up plans for their reorganisation and development, has definitely decided against the denationalisation of these two industries, which has been the object of attempts to open negotiations on the part of various American and other financial groups during the past three or four years. Recommendations are being drawn up for the complete overhauling of both monopolies and for their development in the immediate future on modern industrial lines.

The Bourse during the week has continued to display all the undecided tendencies that might be expected, in consequence of the present unsettled situation in the Ruhr, and has largely contented itself with marking time. One outstanding feature since the beginning of March has been the consistent fall in practically all descriptions, such as Suez Canals, Tintos, South Africans, and Oils, which are directly affected by the variations in the exchange. Price changes, on balance, were in all departments downwards.

GERMANY.—RUHR—FINANCES—REICHSBANK—EXCHANGE AND BOURSE—TRADE AND SHIPPING.

(FROM OUR CORRESPONDENT.)

BERLIN, April 17.

THE speeches of M. Poincaré at Dunkirk, and of Dr. Rosenberg to the Reichstag, have left the Ruhr position unchanged. The substance of both is resolution to fight the matter out. Dr. Rosenberg gave details of past German offers without indicating that a new offer would be made, the only difference from past declarations being that instead of making evacuation a condition of offering-making he declared that no offer could be made while the occupation made doubtful what Germany's paying ability is. This implies that the possibility of fulfilling the 30 milliard gold mark offer sent to Paris, but not discussed there, is now in doubt; but the argument that a new economic feature was introduced by the occupation is hardly correct; the occupation, it is true, does much damage, but it was not at any time plain that the 30-milliard offer could be carried out. Dr. Rosenberg's statements regarding politics, though not new, sharpen the opposition; it is repeated that no French plans designed to weaken Germany's sovereignty in the West will be considered, and that gradual evacuation would not be accepted, and the description of M. Poincaré as "obstinate and unpeaceful in his errors" indicates that the combative spirit here has not weakened. The Socialist speaker asked whether a more active foreign policy might not be pursued, and suggested that a new offer should be made, but agreed that resistance must be continued, and that no policy of securing France that took the shape of veiled annexation could be tolerated. In the past week the Ruhr has been somewhat quieter, but the imprisonments and expulsions continue. The Reichsbank has repudiated notes seized by the French at the printers, and put by them into circulation.

The financial year 1922-23, which closed on March 31st, shows the following result:—

REVENUE. (000's Omitted.)	
From Taxation	1,288,251,031
Forced Loan	12,750,347
Floating Debt	6,329,206,992
	7,630,208,370
EXPENDITURE. Marks.	
Peace Treaty fulfilment in foreign currencies	951,696,187
Administration and Peace Treaty fulfilment in marks ..	4,471,571,883
Funded Debt	4,271,020
Interest on Floating Debt	220,968,208
Interest on Funded Debt	2,718,739
	5,651,226,037
Deficits on Posts and Railways	1,978,982,171
	7,630,208,208

These figures give no idea of current revenue, expenditure, and debt. Thus in the last ten days of March receipts from taxes were 80,813 millions, from floating debt 800,210 millions, expenditure on administration and the Peace Treaty 583,314 millions, and subsidies to posts and

railways 298,708 millions, the expenditure in the ten days being about one-eighth of the expenditure of the whole financial year. The floating debt on March 31st was 8,273,708 millions, having increased 3,645,400 millions in one month. At the close of the preceding financial year the floating debt was 281 milliards. The Customs gold surcharge has been raised to 499,900 per cent., and now equals the currency depreciation. The Railway Council has rejected demands to reduce freight rates. The Prussian Cabinet has approved of the opening of gold mark savings bank accounts, deposits and withdrawals to be in paper marks, which will be booked in fictional "savings gold marks" of ten American cents at an exchange to be determined by the official quotation of the new 6 per cent. dollar Treasury bills (the precise yield of this loan is still unreported, and subscription is proceeding). Gold savings accounts will be permitted only to persons with paper-mark savings accounts, and old paper-mark accounts will not be convertible into "savings gold-mark" accounts.

Taxation conditions, which ought to have been simplified by the new mark stability, are hopelessly confused. Before the end of this month self-assessments and in part payments for income-tax, property tax, forced loan, sales tax, and several minor taxes are due; and though, owing to the currency stability, it is now less necessary, taxpayers are threatened with enormous penalties if they are late. The property tax forms, which govern also the forced loan, have not yet been sent out, and the ten closely printed folio pages of instructions and threats which they contain will have to be mastered in about a week. The income-tax has become so hopeless that, unable to assess, the Finance Ministry requires citizens not only to make the usual declarations, but also to calculate their taxes, and to pay provisionally what they calculate to be due, this in a confusion of rules and prohibitions which no normal citizen can master; yet if the citizen under-pays he is subjected to the penalties. For a long time the Government had the good excuse that, with

currency rapidly changing value, it was impossible to get in direct taxes efficiently, but it is strange that after years of experience things are worse than ever. Normally, and apart from the effect of the Ruhr trouble, State finances ought now to improve owing to the present fixed buying power of the mark. These improvements have always taken place in times of relative stability.

The Republic of Thuringia has opened a State bank. The Reichsbank is stated to have made a new considerable despatch of gold to foreign countries. The last weekly statement, for April 7th, shows 164,952,000 gold marks held abroad, and not pledged. The statement reports considerable relief, both in regard to credit pressure and inflation. The smallness of the circulation increase of only 106,193 millions is probably a reaction after the heavy inflation of the two preceding weeks; commercial discounts increased by only 51,080 millions, and Treasury bills by only 246,228 millions, but the Darlehns advances rose by 153 milliards to 1,313 milliards. The bank's ability and willingness to maintain the present exchange of around 21,000 marks to the dollar is being discussed. The *Berliner Tageblatt* says that industrial circles are trying to have the dollar raised to 25,000 or 30,000 marks. A certain increase in the demand for foreign bills has created doubt about the future, but the bank is believed to stand for continued stabilisation, and the newspaper quoted states that this, if necessary, may even be done by sacrificing part of the gold reserve.

Stocks last week rose moderately. The *Frankfurter Zeitung's* index for dividend-payers for the 13th shows 1,175,665, against 1,049,015 a week earlier and 1,567,265 on February 9th. The Home Loans index shows a reaction. There was considerable foreign buying of bank shares, stated to be English or American, and to be aimed at gaining influence in Berlin banking on the lines already achieved in Vienna. Upper Silesian and some other metal stocks rose sharply on negotiations for a new trust, which, with its secondary ramifications, would be much the biggest in Germany. Primarily concerned are the Linke-Hofmann engineering concern, which recently, by gaining control of the Lauchhammer Company, obtained a new steel and brown-coal supply, and the Caro-Hegenscheidt concern, or Upper-Silesian Iron Industry Company, which has smelting furnaces, rolling mills, ore mines, coal, and finishing shops. The Kattowitz, Laurahuetten, Harpener, General Electricity Company, and, through their affiliations, the two chief shipping companies of Hamburg and Dresden, the Deutsche Werft of Hamburg, which is Germany's newest and biggest shipyard, the Otto Wolff Trust, the Augsburg-Nuernberg Machinery Company, and several other first-class companies are concerned in the deal, and Stinnes' name is mentioned as a secondary interest. The Vienna banking house Bosel, and the Weinmann interest of Aussig, are interested as leading holders of Kattowitz and Laurahuetten, also Herr Friedrich Flick of the Charlottenhuetten, and Dr Karl Skoda, formerly chief of the Austrian, now Czech, Skoda Works. The result aimed at seems to be a loose trust, similar to those of Stinnes and Wolff, but even greater in dimensions. Herr Stinnes has been conceded two seats in the Control Board of the Berlin Handelsgesellschaft Bank, in which he acquired shares last October, and this fact also is brought into connection with the trust plan. Bond prices yesterday were: War Loan 89.50, Fours 1.150, 3½ per Cents, 600, Threes 4.350, Colonial Fours 11,000, Savings and Premium 300, Prussian Threes 250, Hamburg Staats-Rente 3½ per Cents, 360, Berlin Fours 130.

Trade values in February (imperfect, owing to lack of reports from occupied territory) are: Imports 446,200,000 gold marks, exports 360,600,000 gold marks. Coal imports were 1,421,800 metric tons, pig and scrap iron 34,477 tons, both of which are less than in January. In unoccupied territory there is at present no scarcity of either, and the iron market is even dull. The Reichswirtschaftsrat has refused to recommend complete abolition of the Foreign Trade Control system, which is demanded by some interests on the ground that home prices are near foreign, but it is considering measures for increase of exports. The Hamburg-American Line's report for 1922 shows gross profits of 761,387,646 marks, net

95,125,400 marks, dividend 30 per cent., whereof 20 per cent. in shape of a bonus, against 10 per cent. without a bonus last year. The company has under construction 14 sea-going vessels, of 108,000 gross tons. Last year it bought five vessels, of six to eight thousand tons, and built 26 ships, of 98,368 tons. The company is putting Diesel motors in some of its new ships, and reports favourably. The North German Lloyd reports gross profits 733,500,000 marks, net 514,500,000 marks, dividend and bonus the same as with the Hamburg-America. The company has 30 sea-going ships, against 25 in 1921 and 116 in 1913. The Hansa Company of Bremen reports gross profits of 158,721,000 marks, net 80,548,000 marks, dividend 50 per cent., against 10 per cent. Bankruptcies increased in March, being 30, against 17 in February and 151 in March, 1922. Coming after an exchange improvement, the increase is normal. In 1922 3,033 share companies (Aktiengesellschaften) were founded, with nominal capital of 14,767 millions, against 1,132, capital 4,230 millions, in 1921, and 175, capital (gold marks) 216 millions, in 1913. The great increase in foundations is due only in part to trade activity, and mainly to the insufficiency of capital in individual hands. The number of share companies existing at the close of 1922 was 9,669, capital 104,077 millions, against 5,486, capital (gold marks) 17,356 millions, at the close of 1913. With a currency depreciation of about 1:1800th, nominal capital increased only about six-fold. Steel Syndicate prices, after being unchanged since the end of February, have been reduced to (in marks, per metr. tons): Ingots 728,000, blooms 813,000, bars 1,012,000, thin sheets (under 1 mm.) 1,596,000. Business is still dull, but the opening of the Frankfurter Fair showed a tendency towards reviving activity in textiles and leather, and prices were slightly upward.

CANADA.—BUSINESS CONDITIONS—IMMIGRATION—MINING BOOM—AGRICULTURAL ENQUIRY—SHIPPING COMBINE.

(FROM OUR CORRESPONDENT.)

OTTAWA, March 26.

THE continuance of severe wintry weather right up to the end of March has served to nullify in some degree the stimulus to trade which the annual approach of Easter and revival of outdoor work invariably brings. Wholesale trade in the larger cities is fairly satisfactory, considering general conditions, but a thaw would give an immediate fillip to buying. For the moment the turnover is moderate in volume, and retailers are purchasing in small lots only. But in the cities many of them are clearing off their stocks by sales, and trying to release funds for spring and summer operations. Prices of many commodities, especially steel, copper, and cotton, have shown a tendency to rise, but the cost of living remains practically stationary. The woollen and cotton mills declare that there can be no reduction of prices till the autumn. General conditions in the industrial world promise well; most factories are not anxious to take orders long ahead, but the majority are well booked up, and, as a result of the exodus to the United States which still continues, and is causing grave alarm, a shortage of expert mechanics is expected by midsummer. Makers of railway equipment are all well employed, and Canada's export trade in motors, which has reached considerable dimensions, bids fair to be sustained. The flour trade, both domestic and export, has been dull, but the lumber industry continues brisk, and there is no indication of any cessation of the steady demand from the United States, the Orient, and Australasia. Farmers, especially in the west, are still uncertain about the future. A late seed-time is now inevitable, and though the heavy snowfall ought to guarantee a good store of moisture, the later a crop is sown the greater are the risks which it has to face on the prairies. The grain markets continue to be dull, and considerable quantities of wheat are still in the farmers' hands. Prices for good, fat cattle and hogs remain firm, and even have risen, and the first shipment of store cattle under the new regulations has sailed for Britain. The immigration estimates produced in the House of Commons a five days' debate, and diversified

opinions were expressed about the Government's very cautious policy. Some members took the view that it was hopelessly inadequate, and that unless a stream of immigrants on the pre-war scale could be brought in, the country, with its pyramiding debt and heavy southward emigration, was on the road to ruin. Others, chiefly agrarian members from the West, took the line that until economic conditions were remedied it was wasteful folly to spend money in alluring more people to share the hardships and difficulties which the farming community at least is facing. A middle view was that no flood of immigrants should be encouraged under present conditions, but a steady increase of population was needed to make use of the superfluous railways and institutions with which the western provinces had equipped themselves. There was general condemnation of the Government's alliance with the Canada Colonisation Association, and some criticism of the plans of the Overseas Settlement Board.

There is tremendous activity in the mining areas, and rich new discoveries are announced every other day. Prospectors are flocking to new Rouyn goldfields, and the Standard Mining Exchange of Toronto now claims to be the largest of its kind in the world. On March 23rd the record number of 1,298,868 shares changed hands. In 1922 Canada's gold production totalled about 22 million dollars, and the expectation is that the end of 1923 will see the 30-million dollar mark passed. Apart from the mining boom, and possibly as a result of it, the general stock and bond markets have been dull, and many issues have lost a few points in the last week. There has been a recession in the Canadian exchanges in New York, but it is regarded merely as the swinging back of a pendulum which had swept too far in one direction. The discount, which is now about 2½ per cent., is not due to currency inflation, for the position of Canada's currency situation is steadily improving. On December 31st the ratio of gold held against paper money stood at 61.4 per cent., which compares favourably with the 66.1 per cent. of June, 1914. The trade returns for the 11 months of the fiscal year which have elapsed are also good; exports have increased over \$175,000,000, thanks largely to the abnormal grain crop, and imports have jumped \$42,000,000.

A special committee of Parliament which has been examining into agricultural conditions and grievances has unearthed some disturbing facts. It has proved by the confessions of various steamship managers the existence of a close combine to fix rates in the North Atlantic shipping trade, and the Canadian National Marine is an active participant in the combine. The further disclosure has also been made that invariably from American, and sometimes from Canadian ports, flour milled in the United States is carried to British ports at a lower rate, varying from 2 to 5 cents per 100 lbs, than flour milled in Canada. The reason assigned is that the United States Shipping Board have given a special rate to the American Millers' Association, and the other lines have to meet it. But public opinion is disturbed to find the State-owned line abetting a combine instead of trying to break it.

AUSTRALIA.—BANKING FIGURES—TRADE BALANCE.

(FROM OUR CORRESPONDENT.)

MELBOURNE, February 26.

THE quarterly average returns to December 31st of banking liabilities and assets within Australia and New Zealand (exclusive of the Commonwealth Bank of Australia) shows that deposits have increased by £1,020,144 and advances (which include Government securities) by £7,599,451 since the previous quarter, the latter movement being partly due to the increase in imports, especially in Australia. The movements as compared with twelve months previously are an increase of £13,056,754 in deposits and an increase of £5,880,379 in advances. Separating Australia from New Zealand there is a marked divergence, as in Australia deposits are larger by £11,960,569 and advances are larger by £10,121,638

BANKING AND INSURANCE.

than at a year ago, but in New Zealand an increase of £1,096,185 in deposits is accompanied by a decrease of £4,241,259 in advances. Business activity in Australia has been stimulated by the advance in merino wool and by the good wheat harvest of 1921-22 following that of 1920-21, while New Zealand has simply had the benefit of a slight recovery in crossbred wool and a better demand for frozen meat and butter, without participation in the Australian advantages derived from wheat and merino wool. The large public borrowings in London, which took place late in 1921 and early in 1922, have also given a considerable stimulus to certain forms of trade and employment in Australia. The following is a comparison of the principal totals with those for the previous quarter and the December quarter, 1921:—

	December Quarter, 1921.	September Quarter, 1922.	December Quarter, 1922.
Deposits—	£	£	£
Australia	209,753,941	218,166,098	221,714,510
New Zealand	43,333,249	46,957,703	44,429,434
Total deposits	253,087,190	265,123,801	266,143,944
Advances—			
Australia	182,932,700	185,941,838	193,054,338
New Zealand	53,507,275	48,779,065	49,266,016
Total advances	236,439,975	234,720,903	242,320,354
Cash items—			
Coin and bullion (Australia and New Zealand)	27,521,008	27,565,466	27,686,456
Australian notes	25,978,540	22,856,735	23,565,130
Legal tender notes of other banks (New Zealand only)	912,619	541,806	539,592
Total cash	54,412,167	50,964,007	51,791,178

The principal figures (within Australia) of the Commonwealth Bank of Australia, not included above, compare as follows:—

	December Quarter, 1921.	September Quarter, 1922.	December Quarter, 1922.
Deposits	£	£	£
Savings Bank deposits	25,251,886	28,854,556	27,617,966
Discounts, loans, &c.	35,983,860	37,523,001	38,250,893
Government and municipal securities	14,652,186	13,043,510	13,367,064
Coin and bullion	34,537,456	35,233,595	35,684,936
Australian notes	1,955,451	2,330,619	2,543,798
	5,836,209	7,344,568	4,314,544

Both the ordinary banks and the Commonwealth Bank show a reduction in the total cash held, and consequently in the ratios of cash to liabilities, as compared with a year ago. This is the effect of the contraction of the Australian note issue, which has been carried out by the board of the Commonwealth Bank issue department without any addition being made to the amount of gold available for banking purposes. Lately the Commonwealth Bank has been purchasing new gold at a small premium from the Gold Producers' Association, but while this enlarges the gold backing of the note issue and helps to prepare for the time when it will be on a parity with gold, it has in itself no immediate effect in increasing the total supply of currency in existence for the use of the banks and for active circulation amongst the public. The latest returns of the Australian note issue, however, show a slight expansion in the total issue, which amounted to £52,449,622 on January 29th, against £51,771,431½ at a month previously and £55,337,548 on January 30, 1922.

An unofficial compilation from the Australian monthly trade returns shows total imports for 1922 amounting to £122,299,134, against £119,912,317 for 1921, or an increase of £2,386,817, and total exports £128,013,145, against £127,679,743, or an increase of £333,402. The excess of exports for 1922 was £5,714,011, an amount

much smaller than the annual interest on British capital, say, about 24 millions per annum as an approximate estimate, the balance being settled out of the proceeds of fresh borrowing. At the moment the prospect appears to be that further borrowing in London will be on a much smaller scale than during 1921-22, and that with large imports and only a moderate quantity of wheat to be exported during 1923 Australian balances in London will be drawn upon considerably this year.

ARGENTINA.—NATIONAL FINANCE—INTERNAL AND EXTERNAL LOANS DISCUSSED—TRADE CONDITIONS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, March 16.

My last letter dealt at some length with the proposals of the Argentine Government concerning consolidation of the Republic's floating debt. Unfortunately, the prediction that nothing would be discussed until Congress meets for its ordinary sessions in May appears to have been well-founded; and in the meantime it looks very much as if a golden opportunity for internal issue of national Treasury bonds at a favourable rate of interest had been lost. For at the time of writing there is a distinctly firmer tendency in the money market, making it improbable that further renewals of short-date Treasury bills will be obtainable at the rate governing the last transaction of this sort, namely, 4 per cent. per annum. On March 19, there are \$75,000,000 Argentine paper due, and of this sum, \$5,000,000 will be cancelled owing to the holders asking for a higher rate than the Government deems it expedient to pay. It is said, with some apparent authority for the rumour, that 4½ per cent. is the lowest rate that will be accepted, especially seeing that the sum total is far too large to permit of the Treasury adopting cancellation tactics, save for a very small proportion of the bonds falling due. That this state of affairs is reflected in those circles abroad which follow Argentine finance with particular interest is perhaps but natural. Hence the frequent reference in the commercial Press cables to the likelihood that nothing can be obtained in New York under 6½ per cent. at 95, and the recent statement that a British financial group, said to be willing to find ten millions sterling—a third of the total of the proposed external loan—has suggested postponement for at least a couple of months. The most important item in connection with the whole financial position of Argentina is, however, embodied in the conclusions arrived at in a leading article of *La Nación*, the acknowledged Government organ. Under the heading of "The Future Internal Loan," referring to the suggested issue of 3 per cent. bonds to be taken by banks and held by them as part of their cash reserves—thanks to the bonds being encashable at par on presentation to the Banco de la Nación—it is pointed out that it will be to the advantage of commerce in general to accept these obligations. The proposal, as originally drafted, established that only banks and firms accepting deposits could take up the new bonds. In the article to which reference is made this limitation is stigmatised as inadvisable, since everyone with means ought to be allowed to take up the issue, seeing (so says the writer) that without risk of capital loss the holders can at any moment reimburse themselves, receiving in addition the proportion of interest due to them. A further decree subordinate to the main proposal will establish the just proportion of interest corresponding to each holder. The article concludes by saying that, if this were done, "we should very soon see how these transactions would be a daily event, and that on a scale of considerable importance, within and without the banks, the Bourse, and the various corporations and private concerns authorised to take deposits." If this modification of the original idea is accepted, it throws the door open to much that is questionable and even dangerous in currency practice; particularly when it is borne in mind that, little by little, the whole weight of the Argentine national financial system is being transferred to the shoulders of the Banco de la Nación, now working with a cash percentage of 21.5 (figures of

February 28th). Under the emergency legislation of 1914 the institution can go to the Conversion Office for funds, discounting its portfolio and receiving paper currency, a recourse which is, however, not commendable, opening up, as it does, sombre vistas, and awakening memories of past financial difficulty, whose repetition the best Argentine public opinion would sacrifice much to avoid.

With such matters pending, and no anxiety on the part of the Legislature to press forward practical administrative measures, such as the Budget estimates for 1923 and the authorisation for consolidating the short-dated loans above mentioned, the position of Dr Alvear's Government is far from comfortable. What truth there may be in the rumour that occult influence within the fold of the Radical party itself is responsible for the dilatory tactics so obviously employed, it is impossible to say. All that the business man can see is that such delay is most certainly present, and that it is prejudicial to affairs as a whole. The delicate matter of cash in hand is, however, being helped most unexpectedly by the substantial increase in Customs receipts for the first 2½ months of the year. Daily collections are close on a million dollars paper, which is some 25 per cent. over last year's average daily takings for January-February-March. To date, March 15th, \$54,787,000 Argentine paper has come in, as against \$39,323,000 Argentine paper this time last year. Being almost exclusively derived from import dues, this presupposes a large increase in the arrival of manufactured goods, of high quality, judged by a tariff standard. How far this is attributable to an effort on the part of importers to stock as heavily as possible, before the threatened increase in the percentage payable can be enforced, one cannot say, any more than one can set it down to improving trade. Probably both factors are jointly responsible, since the additional movement in business generally is far from what was expected would be witnessed at this height of the year. February failures were high, being \$12,336,000 Argentine paper in liabilities, or double January figures, and this without the total being swollen by the heavy sums which it was prophesied would be contributed by ruined cattle breeders. Indeed, there is every reason to believe that the cattle prospects have improved during the last month. Prices for fine stock, fit to prepare as "chilled" beef, are steadily rising; there is better demand for coarser steers suitable for extract, two things which, taken conjointly with the notorious liquidation of cows that has gone on for close on twelve months, may well bring about a really sharp appreciation for all types of horned stock handled by packers and freezing works. Be that as it may, the position is rapidly assuming such a shape that pleas for Government aid for ranchers look foolish, while the charges against the freezers, namely, that they had joined forces secretly for the purpose of depressing prices on this side, have fallen of their own weight.

Local rates for loans have hardened appreciably, 7 to 8 per cent. per annum being now general for most single name advances, though trade lists of commercial paper range from 5 to 6½ per cent., and against first-class collateral 4 to 4½ per cent. is about the figure. Both sterling and the United States dollar are firmer at 42½ and 119 respectively, while the franc has recovered to 13.50 Paris and 15.65 Belgium, with the Italian lira at 17.42, all the foregoing rates being telegraphic. Cereal markets are distinctly weaker, export wheat being quoted at \$11.40 Argentine paper per 100 kilos. spot, and maize at \$8.50, while linseed is \$19.55 in Rosario, with an uncertain tendency. That there is at least a million tons exportable surplus of this seed may now be considered certain, 450,000 tons having been shipped since the first of the current year. Freights show a drop of 2s when compared with last month's quotations, being 19s March loading, San Lorenzo/U.K.-Continent, and the same quotation Bahia Blanca/U.K., though 23s was obtained for a 3,000-ton steamer, San Lorenzo/Rotterdam, March loading with linseed. Parcel business is reported fairly plentiful, but rates are sluggish alike for shipments to Europe and the United States, for which latter market the chartering rate is now scarcely better than \$4.75 gold, Rosario-New York, with every probability of lower quotations ere very long.

Letters to the Editor.

CURRENCY AND DEBTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Cook has missed the connection between his statement in the early part of his letter that the remarks he refers to "are only evidences of the variation of contracts due to the fluctuations of the currency in which they are expressed," and his question later on, "Would it not, therefore, be more profitable to apply our thoughts not so much to Bullion Conferences as to ways and means of enabling people to work and to produce real wealth?" He refers to Mr Butson's letter in your issue of the 17th ult., but although the latter gentleman was evidently not aware of the full import of one sentence which it contained, it illustrated the need, not it is true, for a bullion, but for a currency conference. Mr Butson, writing of the working of the discount rates pre-war, said: "When the exchanges were against us and gold was flowing out Bank rate was raised, and the resultant contraction of credit would steady any tendency to a rise of prices." He added, "and encourage exports of goods," but in the Cunliffe Report on the Currency question the Committee explained, in effect, that to bring about this export the rise of discount rates had first to result in all new ventures being postponed, all stocks carried on borrowed money having to be realised on a weak market, the demand for constructional materials, such as bricks, cement, steel, and iron was lessened, and in consequence of the number of people thrown out of work less food was consumed.

Mr Butson went on to point out that an enormous mass of virtually inconvertible paper currency has been introduced, "which is subject to no adequate limitations of issue, and which bears no definite relation to the needs of trade."

When cheques are included, as they must be, this is perfectly true, and the history of our gold currency system since 1873 discloses a variation in the purchasing power of the sovereign over different series of years, which has resulted in the falsification of debts alternating in favour of the creditor or the debtor.

It is difficult to suppose that a system which produces such results at home can be successfully defended, and when the facts resulting from its operation put on record by the Cunliffe Commission are remembered, I hope Mr Cook will agree that further inquiry into the currency question is imperative.

Mr Butson says that the problem will be to re-establish the connection between movements of gold and prices, but reflection should convince him that it is unsound to allow prices to be regulated by alterations in the volume of currency, the laws of supply and demand being the only factors which should operate.

The operation of the discount rates pre-war stopped the outflow of the nation's money, i.e., gold, by restricting the bankers' issues of credit money at home, so that it did in effect violate the true principle which should underlie our currency system, because it reduced prices by creating an artificial scarcity of money. Added to this, with gold as virtually international currency, a gold point was established at which our money could be taken for export instead of goods, and this placed a definite limit on the price our exporters could obtain for their drafts when selling them to would-be importers.

The free working of the laws of foreign money exchanges was therefore abrogated, and this is a factor of vital importance which alone would warrant the establishment of another Currency Commission, for it constitutes an attempt to regulate the flow of international trade by unsound artificial methods, in violation of the sound economic ones which would operate perfectly and justly under a right currency system.—I am, Sir, yours faithfully,

MARK B. F. MAJOR.

Red Lion and Three Cranes Wharf, Upper Thames street, London, E.C. 4, April 3rd, 1923.

INSURANCE COMPANIES' PROFITS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I notice in the reports of insurance companies a great divergence in practice in the allotment of profit to shareholders.

Some companies confine their distribution to the interest earnings of their various funds, placing year by year the whole of the profits to reserve; other companies distribute, in addition to the interest, a substantial proportion of the profits earned by the business.

The companies in the first category appear to me to err on the side of caution, and to treat too cavalierly the rights of shareholders to participate in profits.

A huge expenditure is incurred in the conduct of the business (including large salaries to skilled managers for the production of profit), and the shareholders are tacitly told, year by year, that the whole of the profits are required to strengthen reserves, and that they must be content with the interest earnings of the funds.

I have before me the accounts of the London Assurance Corporation for the past year.

An analysis of these accounts shows:—

Interest (less tax) available for shareholders dividends.....	204,855
Profit from the various departments (after the usual provision of 40 per cent. of the premiums for unexpired risk and an increase of £50,000 in the marine fund)	211,175
Together	416,030
The apportionment of this amount is as follows:—	
Dividend to ordinary shareholders.....	174,517
Dividend to preference shareholders	15,000
Reserves	189,517
Additions to the reserves of the various departments	88,804
Addition to contingencies account.....	40,000
Written off premises account	50,000
Premium on preference shares redemption policy	6,208
Increase in balance of profit and loss account	41,501
Together	416,030

The dividend to ordinary shareholders paid during 1922, shown above, is at the rate of 7s a share (free of tax). The dividend to be paid during 1923 is at the rate of 7s 6d a share (free of tax), an increase of £12,465.

It is to be noted that, as compared with a company which declares dividends subject to tax, the shareholders derive no benefit from the increase, 7s a share being equivalent to 10s subject to tax at 6s in the £ and 7s 6d being equivalent to 10s subject to tax at 5s in the £.—Your obedient servant,

Books and Publications.

MONETARY RECONSTRUCTION.*

MR R. G. HAWTREY'S new volume contains four essays written (and already published) since the war, and two others which date from 1915 and 1916. An introductory chapter is intended to "give unity to the collection," but Mr Hawtrey's personality and opinions are so consistent that the real unity was there already. The whole book is, in fact, an exposition of a monetary theory which is perhaps not new, but which certainly has become more and more widely accepted in recent years. Mr Hawtrey has made himself the chief exponent of its doctrine in this country; and it is commonly believed that the Treasury and the Bank of England would like to translate it into practice. "Monetary Reconstruction" is therefore a book of much more than ordinary interest and importance.

The theory which Mr Hawtrey propounds, in what must surely be its most extreme form, is in outline this, that all major economic movements can be interpreted, and are best interpreted, in terms of currency and credit; and that since currency and credit can be controlled, it would and should be possible to gain almost complete mastery over economic movements, and to eliminate those which are undesirable. The trade cycle, Mr Hawtrey believes, is a purely monetary phenomenon (p. 141); unemployment is due to a maladjustment of the monetary

* By R. G. Hawtrey. Longmans, Green, and Co. 1923. Pp. 147.

machinery (p. 145); the explanation of adverse exchange movements by reference to an unfavourable balance of trade is, except in a very limited sense, a fallacy (p. 75); and the forces which tend to raise or lower prices in general "proceed" (without qualification) "from the state of the currency" (p. 137). If seasonal movements in the exchanges are to be recognised at all, or if price movements are to be correlated with declining or accumulating stocks (p. 143), the facts have to be translated into monetary terms before Mr Hawtrey will admit that they are satisfactorily explained. In essence, the theory here put forward is an elaboration and an immense extension of the quantity theory of money.

This simple diagnosis of all economic ills is defended with all that attractive subtlety in argument of which Mr Hawtrey is an acknowledged master; but it may be that these premises will find fewer adherents than the practical conclusions which are drawn from them. Even if it is not possible to do quite everything by means of credit control that Mr Hawtrey would like to see done, it is certainly possible to do a good deal more than has been done in the past, and the chapter (v.) on the Federal Reserve System, besides being a very lucid explanation of a difficult subject, is a devastating piece of criticism. "We want to stabilise prices," says Mr Hawtrey (p. 137); there are, perhaps, two sides even to that question; but "the whole world has been plunged into the most appalling distress for nearly two years by the strain of raising the commodity value of the dollar 80 per cent." (p. 123), and that is a degree of instability which is intolerable, and which could have been avoided by a better control of credit.

But "in the control of credit what is needed, above all, is prompt action" (p. 118). It is necessary, in fact, to intervene before the event, if action is to be effective. The authorities must "anticipate, and as far as possible prevent, any movement from the normal," for "every disturbance from the normal, whether towards expansion or towards contraction, tends to magnify itself unless quickly checked by the appropriate rise or fall in the discount rate" (p. 123). Similarly, "once a high discount rate has become deterrent at all, it tends to grow more and more deterrent" (p. 111). What is required, therefore, in Mr Hawtrey's view is a discount policy which will strike once, at the psychological moment, and then desist. His criticism of past action is that the right thing was done at the wrong moment, and then done too persistently.

Having proceeded thus far by way of diagnosis and destructive criticism, Mr Hawtrey has the courage to conclude with positive and practical proposals for the future. His soaring ambitions inspired the Genoa Resolutions on Currency, which, having been unanimously adopted, "may therefore be regarded as the united voice of the Governments of Europe"! Within a week or two it will be 12 months since the Conference assembled; but the Conference of Central Banks has not yet taken place, and the American exchange is still some way from parity, and the gold exchange standard for Europe is a dream. One need not be discouraged; for, in the meantime, the credit cycle has moved on and carried us through the first stage of a new upward swing. The psychological moment is perhaps at hand, when either the efficacy of credit control will be put to the test, or the impossibility of imposing it on the trading community will be demonstrated.

One detailed criticism, in a question of fact and not of opinion, may perhaps be permitted. A trader covers himself against exchange risks in the forward exchange markets; does he thereby "merely pass on the risk to the dealers in this market?" (p. 8).

ITALY EMERGENT.*

This pamphlet of 71 pages, issued for the recent meeting in Rome of the International Chamber of Commerce, opens with a glowing description of the effects of the policy of the Mussolini Government and closes with an interesting sketch of its aims. They consist in encouraging private enterprise, by grants in aid of reconstruction in the war

* "A Brief Survey of Italy's Economic Condition." (Rome) International Chamber of Commerce, Italian Section, 1923.

zone, and of reclamation works elsewhere. (It even purports to abolish the State monopoly of life insurance, enacted in 1913.) It is striving to promote emigration—the decline of which confronts it with grave economic difficulties—to simplify taxation, to open up foreign markets by commercial treaties, to reorganise railway traffic, to electrify the lines, and to lighten the duties on food. The economic outlook is, on the whole, encouraging. Agriculture is nearly normal again, even as regards livestock in the devastated regions, and the replacement of maize and rice by wheat in the dietary of the peasants indicates a rise in the standard of life. In the textile industry cotton and jute have almost recovered, and nearly all the wool used is prepared at home. The most hopeful feature is the great development of hydro-electric power, which will soon exceed all that derived from the pre-war import of coal, while the reservoirs provided will also extend irrigation in the midlands and the backward south. The authors lay stress on the great resources of Italy and on the frugality and thrift of her people. It is in the development of these, and not of those manufactures which suffer from "insufficient Customs-protection," that her way to prosperity will be found.

The Colliery Year-Book and Coal Trades' Directory, 1923. (London) The Louis Cassier Company, Limited. 21s.

The appearance of the first issue of the *Colliery Year-Book and Coal Trades' Directory, 1923*, is welcome. Here we have in a concise form not only data and statistics, which alone will be found of considerable value, but a useful survey of the industry as it is to-day.

The main feature of the book is a complete list of all the colliery owners of the kingdom arranged alphabetically, giving detailed information regarding each proprietor, such as names of mine owners, directors, managers, number of men employed, &c.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
May 2.

ACCOUNT.
May 3.

THE effect of the Budget has been to make Stock Exchange markets better as a whole, and to give a fresh fillip to the investment departments. In addition, industrial shares have sprung into further favour, on the idea that the halving of the corporation tax and the reduction of the income-tax will make a useful contribution to their profits. At the same time, trade and industry are not recovering at a sufficiently rapid rate to cause any noticeable withdrawal of capital into commercial channels. The net result of the week is a long list of rises, many of them substantial, in most of the markets round

the Stock Exchange, the foreign bond market and that for mining shares being amongst the few which have not benefited from Mr Stanley Baldwin's proposals.

New South Wales is issuing a new loan for £6,000,000 in 4½ per cents. at 94. The underwriting was rapidly subscribed.

The War Loan will be quoted ex dividend next Wednesday night, when £2 10s clear is deducted from the price. This has served, in conjunction with the Budget, to bring about a further improvement in the price. Victory bonds have spurred sharply. Numbers of British Government stocks, Home Railway pre-ordinary, and Indian railway stocks, Colonial issues, and Corporation bonds show rises on the week. Nor do these advances reflect in every case the real strength of the market, which rests in the fact that buyers are only too anxious to get the offer of stock, but find that there is little to be obtained.

The foreign market is slightly overcast by the fall in the French exchange, and French issues, after being fairly firm at the beginning of the week, went back a little within the last day or two. In Germany there is nothing doing. Brazilians are mostly higher. Chileans and Argentines remain steady, some of the loans being better. The principal feature in this market has been a violent rise in Rio Tinto, though the best price was not maintained. Paris bought largely, and other copper shares improved in sympathy.

Home Railway stocks presented a very firm front until the carry-over showed that there is something of a bull account in the popular descriptions. This disclosure had a moderate effect upon the prices. Optimism still talks of good dividends being declared on the deferred stocks of the North-Eastern and Southern groups, early days though these may appear for making such estimates. Canadian Pacifics have gained several dollars. Argentine Railway stocks show robust strength on dividend anticipations. Brazilian Railways have moved but little. Nitrate railways and nitrate-producing shares display an improving tendency.

The price of raw rubber has fallen back again, and the market in rubber shares is consequently stagnant. Activity continues in the oil market amongst such shares as those which have recently become popular as speculative counters. Of the others, Burmahs are decidedly higher, on the impression that the strike on the company's properties is on the point of settlement. The shipping market is inclined to be heavy, the Cunard report being regarded as disappointing. Banking shares, home, colonial, and foreign, have moved up steadily day by day, and the rises in insurance shares have been continued. The iron and steel market, with armament shares, leans to the firmer side, and Babcock and Wilcox enjoyed a sharp rise on the dividend and bonus declaration. The feature of the week amongst industrials has been the activity in tobacco shares, the prices of which spurred strongly, Imperials going ahead on renewed bonus talk, and British Americans being taken for New York. Courtaulds enjoyed a good deal being taken for New York. Courtaulds enjoyed a good deal being taken for New York. Courtaulds enjoyed a good deal being taken for New York.

Quiet conditions prevail in the Kaffir circus. The Cape has been doing very little, and London, if anything, rather less, the only interest in Kaffirs emanating from the provinces, whose business is, after all, comparatively slender at the present time. Nor is there any marked activity in Rhodesians, though Chartered developed strength. Diamonds have been good, De Beers more particularly, thanks to dividend hopes. To the rise in copper shares reference has been made already. Other mining markets are uninteresting, that for tin shares, for instance, being dull by reason of the lack of elasticity in the price of the metal. The introduction of a new silver share, the Keeley, was effected last Monday, and the price, after opening about 9s 9d, went back to 8s 6d towards the latter part of the week.

The Stock Exchange annual meeting of proprietors was held early this week. The satisfaction of the shareholders is best expressed by reference to the fact that the proceedings lasted just eight minutes.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

Dorman, Long, and Co., Limited.—Authorised capital £7,500,000, divided into £1,500,000 8 per cent. non-cumulative preference shares and £6,000,000 ordinary shares, all of £1 each, and all issued and fully paid. Outstanding loan capital consists of £400,000 4 per cent. first mortgage perpetual debenture stock and £387,500 5 per cent. sinking fund mortgage debentures. The latter are to be repaid out of the proceeds of the present "offer for sale" of £3,500,000 5½ per cent. first mortgage debenture stock at 95, to be redeemed at par on May 1, 1923, or at 102 per cent. on or after May 1, 1943. These debentures will be secured as a first specific mortgage or charge on substantially the whole of the fixed assets of Dorman, Long, and Co., Limited (including those of its subsidiary companies which are to be liquidated and their assets transferred), except certain property of a book value of approximately £1,100,000, which is specifically mortgaged under the perpetual debentures. The trust deed will provide that further issues of debenture stock ranking *pari passu* with the new debentures may be made, but that the total, including the £3,500,000 now offered, shall at no time exceed 50 per cent. of the issued and paid-up capital. Freehold and leasehold land, buildings, minerals, fixed plant and machinery, less depreciation, are valued at £7,986,379, so that, allowing for the existing charge, the first mortgage security seems attractive. Net assets, including £3,125,000 proceeds of the present offer, are valued at £11,443,736. Profits are given for the past 10 years. Besides the redemption of the 5 per cent. debentures, the proceeds of the present offer will be applied to paying off outstanding funded debt of subsidiaries, and repayment of a loan of £918,475 by the Treasury incurred for extension of the company's works. The vendors are paying 9½ per cent. for this stock, and in turn are paying 1½ per cent. on derelicting commission and ½ per cent. overriding commission. This is a good industrial debenture, and was quickly oversubscribed.

Horne Bros., Limited.—Authorised capital £1,000,000, divided into 550,000 7 per cent. cumulative preference and 450,000 ordinary shares, all of £1 each. This is an issue of 550,000 7 per cent. preference shares at par. The business of

Horne Bros., retail hosiers, &c., was founded in 1885, and it has been developed in a progressive spirit. Profits are only given for 1920, 1922 and 1923, however. For 1921 a loss of £133,924 was made. Assets are valued at £986,336, but this sum includes £170,792 for goodwill, &c. Liabilities amount to £36,336, leaving net assets valued at £950,000. The purchase price has been fixed at this amount, and is payable as to £450,000 by the allotment of all the ordinary shares and as to £500,000 in cash. This is a clear and informative prospectus, and if the efficient administration of the business is maintained, there is no reason why the company should not continue its prosperous career.

Booth's Distillery, Limited.—Authorised share capital £520,532, divided into 19,525 5 per cent. cumulative preference shares of £10 each and 500,434 ordinary shares of 13s each, of which 377,400 are issued and fully paid, the total issued share capital being, therefore, £440,560. The authorised loan capital is £500,000, consisting of 6 per cent. debentures, the whole of which is now issued at £99 per cent. These debentures are to be redeemed by drawings at £102 per cent. on or before April 1, 1928, the company reserving the right to pay off at £105 per cent. at any time after October 1, 1928. The debenture stock will be secured by a trust deed constituting a first mortgage upon the freehold distilleries and other properties of the company, and by a floating charge upon other assets. Surplus assets are valued at £976,580, after adding the proceeds of the present issue and after paying off a bank loan of £289,892, and providing £135,000 for redemption of existing debentures. The value of properties as shown by a statement of assets and liabilities at December 31, 1922, is given as £201,641. Thus the first mortgage security is not very attractive. Amongst other assets, we notice goodwill, trade-marks, and licences, valued at £150,000. Profits are given for five years before deducting certain charges, which include interest paid to debenture-holders, bankers, and depositors. We recognise that a sound 6 per cent. debenture in a prosperous industrial undertaking in these days is difficult to obtain, but this investment does not appeal to us.

The Porcupine Goldfields Development and Finance Company, Limited.—Authorised share capital £1,000,000, divided into £1 shares, of which 475,000 are being issued and 525,000 may be issued later. This is an issue of 250,000 shares at par. This company has been formed by the National Mining Corporation and New Consolidated Gold Fields, mainly to secure the right to acquire and develop mines in the Porcupine Goldfield of Ontario and in other mining districts of Canada. The prospectus states that "the consideration payable for the transfer of 90 per cent. of the share capital of the British Porcupine Development Company, Limited, which capital consists of 50,000 ordinary and 100,000 deferred shares, is as follows:—With regard to two-ninths of such shares, £50,000 in cash, being at the rate of £5 for each two ordinary and £5 for each four deferred shares. With regard to the remaining seven-ninths of such shares, the allotment of five fully-paid shares of this company for each two ordinary or four deferred shares. Prudential Trust Company, Limited, will subscribe and pay, or find subscribers who will pay in full at par for 50,000 shares in this company (The Porcupine Goldfields Development and Finance Company, Limited), being the equivalent of the cash proportion of the price payable as above." Gold-mining is a useful industry, but as investment propositions the pitfalls are proverbial.

Cardiff Gas Light and Coke Company.—Authorised capital is £957,000, of which £629,723 has been issued and paid up as follows:—4½ per cent. preference stock, £96,410; consolidated ordinary stock, £501,860; premiums obtained on issues, £31,453. Loan capital issued amounts to £308,860, divided into £51,000 5 per cent. and £20,000 4 per cent. perpetual debenture stocks, and £237,860 7½ per cent. debentures, which are to be redeemed in 1931. Present issue is £125,000 consolidated ordinary stock at par. The company owns 256 miles of main and supplies, 46,089 consumers, and figures are given showing that demand for its gas has increased by 420,000,000 cubic feet in the past 10 years. Its total reserves—reserve fund, special purposes fund, and depreciation fund—amount to £75,694. Profits are given for 1922, when the amount available for dividends and co-partnership bonus was £42,533. Six per cent. was paid on the consolidated stock for that year. The company, it is stated, has expended considerable sums on extending its mains and plant, these works being financed by its bankers, who are to be repaid out of the present issue. The ordinary stock will have a fairly reasonable margin of profits available for distribution, and the investment is worthy of consideration, although we notice that the stock is quoted only on local Stock Exchanges.

Fred. W. Millington (1920), Limited.—Authorised capital is 250,000 6½ per cent. (tax free) cumulative preference shares and 500,000 ordinary, all of £1 each. All the preference shares have been issued, and £269,455 of the ordinary. The company, incorporated in 1920, paid in cash £225,051 for the business of F. W. Millington, Limited, which in turn was incorporated in 1903, as importers and exporters of cotton, woollen, and silk goods. There was paid £134,400 for a con-

trolling interest in James and Thomas Alexander, and £125,000, both in cash, for the whole interest in Henry Reid and Son, Limited, both at Dunfermline. Directors are authorised to borrow up to nominal amount of capital, and £60,000 has been borrowed, £20,000 secured by a first mortgage at 5½ per cent., and £40,000 by a second mortgage at 6 per cent. From 1914 to 1919 the old company paid dividends of from 10 to 20 per cent., but in 1920 nothing was paid, in 1921 there was a loss of £48,000, stated to be due to depreciation of stocks, and last year the accounts showed a profit of £33,885. These particulars are taken from an announcement made to comply with Stock Exchange regulations, but investors will require more detailed information before interesting themselves in the firm.

Lambak Rubber, Limited.—Authorised capital £200,000, divided into shares of £1 each, of which 145,000 are now issued at par. Of this issue 41,250 have already been applied for. The company has been formed to acquire a rubber estate known as Jee Hong Seng Estate, in Central Johore. The planted acreage comprises 2,460 acres, of which 1,134 acres are over six years of age. The purchase price is payable in cash, and is fixed at £88,280, plus £2,040 "paid by the vendors in respect of commission." This works out at £37 per planted acre. The estate is valued at £130,254, and the net value, "after deducting £40,132 in respect of estimated capital outlay to bring the existing planted area to maturity," at £90,122. A fairly promising speculative proposition.

Southend Gas Company.—Authorised capital £555,623, of which £381,048 has been issued and paid up as follows:—Ordinary shares, 5 per cent. standard dividend, £149,602, "B" ordinary stock £166,000, redeemable 7 per cent. preference stock £45,000, premiums (not entitled to dividend) £20,446. The company has redeemed £3,609 of this issued capital. Loan capital issued consists of £90,530 4 per cent. perpetual debenture stock. There is now offered for sale by tender £40,000 5 per cent. perpetual debenture stock, at a minimum price of £97 10s per cent. An agreement has been entered into by the company to acquire the gas undertaking supplying Leigh-on-Sea from the Corporation of Southend-on-Sea. The new capital is being raised for extensions of works, mains, &c. Net revenue last year was £50,863, and as the interest on loan capital, including that being offered, will only require £5,621, there is ample margin in this direction. Accumulated funds, including £8,139 of undivided profit after payment of December dividends, amount to £20,829. The area supplied by the company has increased in population considerably of recent years, and consumers have increased from 13,718 in 1910 to 22,211 in 1922. At the minimum price this is a good investment in its class, but regard should be paid to the narrow market for so small an issue.

Tolgus Mines, Limited.—Authorised capital £200,000, divided into 800,000 shares of 5s each. Of this number, 220,000 shares have been already issued, and 480,000 shares are now offered to the public at par. The company was formed in 1919 to work tin mines at Redruth, Cornwall. It is now proposed to sink a new shaft, the cost of which is estimated at £80,000. The property is held under grant for 21 years at a royalty of 2½ per cent. on gross ore values realised. The price paid to East Pool and Agar for the licence to work the Tolgus Mines was £1,000 in cash and £30,000 in fully-paid shares. The East Pool Company also agreed to subscribe for 24,993 shares at par, which have been allotted. An agreement has been entered into between the company and East Pool and Agar, Limited, the latter company agreeing to underwrite 360,000 of the shares now offered for a commission of 7½ per cent., and an overriding commission of 2½ per cent. Evidently the directors take an optimistic view of the future of the Cornish tin industry. Only those who share this view will, we presume, participate in this speculative enterprise.

Patani Para Plantations, Limited.—This new company has an authorised share capital of £100,000, divided into 1,000,000 shares of 2s each, of which 801,500 are now offered at par. The directors are sub-underwriting 210,000 shares, and four of the five are directors of other rubber companies. The company has been formed to acquire the Thyie Aik rubber estate in the State of Kedah, 11 miles from Sungai Patani, a town which is 24 miles from the port of Penang. The area of the estate is about 2,146 acres. At present the title to the greater portion of the land consists of provisional grants, but it is stated new grants in perpetuity are about to be issued. The annual rent is \$3,027 45c, subject to increase not exceeding 50 per cent. every 15 years. The total planted acreage is 2,020, of which 1,350 were planted during 1915, and the rest between the end of 1918 and beginning of 1921. The purchase price is £65,500, of which £5,850 is payable in fully-paid shares of the company, the remaining amount we presume being payable in cash. It is estimated that the yield in 1923-4 will be 300,000 lbs, rising to 383,640 lbs in 1927-8, and that costs will decrease from 29 cts to 20 cts in the same period. As far as one can judge, the report on the estate has been carefully prepared, and the issue seems to be as promising as the majority of its class.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

UNITED ALKALI COMPANY, LIMITED.

PROSPECTS OF THE INDUSTRY—ENCOURAGING FEATURES.

INCREASE OF CAPITAL APPROVED.

The adjourned annual meeting of shareholders for 1921 and the annual meeting for 1922 were held, on Wednesday, the 18th instant, at Liverpool, Sir Max Muspratt, Bart., chairman of the company, presiding over a numerous attendance.

The Chairman said the directors were now able for the first time in several years to present accounts up to date. The disturbing element of uncertain incidence of taxation had been brought to a focus, and an estimate could be formed with considerable accuracy of the company's accumulated indebtedness. He was pleased to report that the final figure was well within the provisions made from time to time on taxation account, and on the cash side had been fully liquidated. The accumulation of the over-provisions under this head amounted to something over £100,000.

ACCOUNTS COMBINED.

The year 1920, which was the last for which accounts had been issued, was good, but that year marked the height of the trade boom, and had many elements of uncertainty—labour and the effect of the final settlement of excess profits duty, in particular—and then came the great slump in trade in 1921, followed by the coal stoppage and the adjustment of excess profits duty for seven years. 1921 was a truly disastrous year, and then came the slow, steady recovery in 1922. The directors believed that the average of these two years approximated to a reasonable survey of the position of the company, and hence the accounts were presented in a combined form.

PROFIT AND LOSS ACCOUNT.

In the profit and loss account it would be noted that taxation for two years was some £25,000 less than for the single year 1920, while head office expenses averaged £26,000 per annum less than in 1920. The gross profit was at the rate of £60,000 per annum less than 1920.

BALANCE-SHEET ITEMS.

In the balance sheet there were some large changes due to the adjustment of accounts over a period of years. The debts owing by the company were reduced by no less than £1,200,000. Of this the payment of accumulations of taxation accounted for a very large sum, but £273,000 was a book settlement of current accounts with the North American Chemical Company, in which the United Alkali Company holds a controlling interest.

The great reduction in debts owing had not been effected without a considerable increase in the company's bank overdraft, namely, of £164,000, to cover which, and an appreciably higher amount if necessary, debenture stock had been issued to the bank to the extent of £300,000 as collateral security.

RESERVE FUND.

The Chairman referred to the increase of the reserve fund by £350,000. Two special reserves, totalling £88,000, being war-time provisions not now required, had been absorbed into the general profits. On the property and assets side, after additions and sales had been taken into account, there was a reduction of £113,000 in book values, and the overburden account at the mines had been reduced by £17,000. Debts owing to the company were lower by £136,000, due to the lower rate of values, but consignments were increased by £33,000, as the company was doing a much increased business on these lines in several important overseas markets.

General investments were down by £262,000, representing War Loan and similar securities purchased to meet subsequent taxation, and realised when such taxation had to be met.

GENERAL POSITION.

Surveying the general position, an encouraging feature was the steady demand for the company's alkali in almost every market of the world, and this in spite of much strenuous competition from America and other countries, even those blessed with natural deposits. The home market had not been as expansive as could be desired, although signs of improvement were not wanting.

Referring to sulphuric acid, the Chairman said the position in all parts of the world was not satisfactory, and Great Britain was no exception. This adversely affected the company's mines and copper works, and was partly due to the grave depression in the iron and steel trade. An appreciable improvement might be expected as a result of the better conditions in those industries. The company

was fully equipped with every type of plant for every form of sulphur raw material to deal with the situation as it developed.

ORGANIC PRODUCTS.

In organic products last year was very disappointing. Accumulation of stocks through over-production at home and excessive imports from abroad, coupled with the grave slump in the textile industry caused almost the entire stoppage of dye production, but instead of disbanding their large staff of chemists in this department the directors had concentrated them upon research work, and as a result had several new developments which attracted great interest at the British Industries Fair. The demand in this branch was steadily improving, and was approaching a scale where reasonably profitable business could be looked for. It was of interest to note that whereas over 80 per cent. of the dyes used in this country were imported before the war, over 80 per cent. was now manufactured in this country, and the quality and range were constantly improving.

RELATIONS WITH LABOUR.

The relations with labour remained very cordial, and, by way of celebration of the centenary of the foundation in this country of the alkali industry, the directors proposed to supplement the existing pension scheme with a scheme of composite life insurance for manual workers and the lower-paid staff. They hoped this would further cement the good relations with their employees.

The Chairman, in conclusion, referred to the election of Dr Clayton, one of the directors, as representative of the Widnes Division in Parliament. For many years Dr Clayton had given wholehearted attention to the technical side of the business, and the improved position now recorded was in no small degree due to his services. The directors would miss greatly his daily regular attention. At the same time, modern conditions required at Westminster spokesmen of the great industries, and there could be no better informed representative of the chemical industry than Dr Clayton.

ALLOCATIONS AND DIVIDENDS.

The Chairman then moved that the report and statement of accounts to December 31, 1922, be received and adopted, and that, after transferring to debenture redemption account £15,000 in 1921 and £15,000 in 1922 and to reserve £76,000 10s 1d, the following dividends be and are hereby declared out of the profits which have accrued during the two years ended December 31, 1922, such dividends to be payable on May 1st.

On the £10 preference shares a dividend of 7s per share, less income-tax, making, with the interim dividends already paid, dividends at the rate of 7 per cent. per annum for the years 1921 and 1922.

On the ordinary shares a dividend of 2s per share, less income-tax, carrying forward £386,734 15s 9d.

Dr Clayton, M.P., in seconding, said the results of the reorganisation of the company's manufacturing processes had more than justified the venture, and the shareholders were to be congratulated on the improved value of their property.

Mr J. W. Harvie, a shareholder, expressed the view that a conservative valuation of the company's assets would reveal a recovery of a great deal, if not all, of the ordinary capital written off in 1913. They were grateful for the skilful way the chairman and directors had brought the company not only through the war, but through the subsequent and more difficult years.

The motion was carried unanimously.

Dr G. C. Clayton, M.P., Mr R. M. Bewick, and Mr. Holbrook Gaskell were re-elected directors.

INCREASE OF CAPITAL.

A subsequent extraordinary general meeting approved of the capital of the company being increased to £4,500,000 by the creation of 900,000 new ordinary shares of £1 each, the splitting up of the preference shares, and certain alterations in the articles of association.

On the motion of Mr C. F. Ratcliffe, seconded by Mr L. F. Pratt, a cordial vote of thanks was tendered to the chairman and directors. Sir Max Muspratt, in reply, said the directors had worked hard, and were delighted to be able to give such a good account of themselves.

NORWICH UNION LIFE INSURANCE SOCIETY.

GRATIFYING RESULTS OF YEAR'S BUSINESS.

HIGH INTEREST YIELD—LOW EXPENSE RATIO.

The one hundred and fifteenth annual general meeting was held at Norwich on Tuesday, 17th inst., when the president (Mr Haynes S. Robinson) submitted the report and accounts for 1922.

TRIBUTE TO MR DAVIDSON WALKER.

In the course of his remarks the President said: I have again the privilege to submit to you the results of a highly successful year, but before referring to the accounts will you allow me specially to notice the last paragraph of the report, referring to the approaching retirement of our esteemed general manager? Mr Davidson Walker came to us at the close of 1891 as second officer under the late Mr Deuchar, on whose retirement in 1910 he was appointed general manager and actuary. The following figures which have been got out for me show the progress, roughly, of the office during his official life with us.

PROGRESS OF THE OFFICE.

In 1891 the new business was just short of 1 million, funds were about 2 millions, and premium income under £200,000. In 1910, when Mr. Walker was appointed general manager and actuary, the new business volume had reached fully 4½ millions, funds were about 9 millions, and premium income £1,200,000. To-day the record for 1922 stands: New business, 7½ millions; funds, 20 millions; premium income, more than 2½ millions.

Such figures, indeed, show a record of hard work and excellent management. They speak for themselves, and need no comment from me. Last year Mr Walker, feeling the strain of business was telling on his health to some extent, and having also passed the age after which, by the rules of the office, he was entitled to retire, gave notice to the board of his intention to do so at the end of next month. He has given the office more than 30 years' continuous and devoted service, and I am sure we all trust he will have good health and happiness to enable him to enjoy his well-earned rest.

Though not really a matter for the report of 1922, I think I may announce now that the directors have decided to appoint Mr Lees, our secretary, to the vacancy caused by Mr Walker's retirement. He has been with us for nearly 18 years, and the board have every confidence in thus promoting him.

THE ACCOUNTS.

Coming now to the consideration of our accounts for 1922, I see from our records of a year ago that, after analysing the notable figures of our accounts for 1921, I for once committed myself to a rather bold statement. My exact words were: "If you add to these figures the consideration that the value of our investments—permanent and redeemable alike—stands on the basis of the market prices of December, 1920, which compare so unfavourably with those now ruling, I think you will agree that I am fully justified in describing the year 1921, viewed on its own merits alone, and without reference to the years immediately preceding it, or to those which may follow, as the most prosperous year the society has ever experienced during the 114 years of its existence."

RESULTS OF THE VALUATION.

When putting forward that claim, I had not yet in my knowledge the actual results of the private valuation which we are in the habit of making every year. These figures were available a few weeks later; they excelled even our most sanguine of estimates, and would have justified me in speaking unreservedly of the prosperity of the year as a record in the society's existence, even without taking into account the important item of improved market value of invested funds since December, 1920—an asset item to which the old adage, "Light come, light go!" might, perhaps, conservatively be held to apply!

SPLENDID RESULTS FOR 1922.

A chairman who refers to some specific year as being a record in the direction of prosperity always runs the risk of handicapping himself as against the day when he has to put forward the figures of the next 12 months—figures which, according to all the laws of average, are probably destined not to stand the test of comparison with such a high standard as that set up. Well, gentlemen, I am glad to be able to tell you at once, and quite emphatically, that I labour to-day under no such handicap. I have to acknowledge a slight doubt as to the strict truth to-day of the statement that 1921 is a record year, for the simple and most pleasing reason that the accounts we have now the satisfaction of placing before you point to a prosperity for 1922 at least up to the record standard of 1921. We have not yet quite concluded our private valuation for 1922, but even without that it is an easy matter on the figures now before you to arrive at the conclusion that in the matter of profit-earning the year 1922 has held its own even with its remarkable predecessor.

In the business of life insurance, as I have so often reminded you, profits accrue in normal conditions under three headings: (1) The earning of a rate of interest in excess of the scale on which the calculation of reserves as against liabilities is made; (2) a mortality experience more favourable than that of the valuation standard table of mortality; and (3) miscellaneous sources, such, for instance, as strict economy of management.

An analysis on these lines gives one a true view of the normal prosperity of the year. One other factor—an abnormal one—was, I am glad to say, much in evidence during both 1921 and 1922. I refer to the increase of the market value of invested capital, but for the reason I have already indicated this is not an item on which we are inclined to place too much reliance in connection with an analysis such as I am now bringing under your notice.

1921 FIGURES.

Of the three sources to which I have referred, the first is by far the most important, specially where an office such as ours is concerned, whose life and endowment insurance liabilities are reserved for on the assumption of a net interest-earning rate of only 2½ per cent. The difference between the latter rate and our actual earned rate for 1921 of £4 15s 8d per cent., after deduction of tax, was the key to our notable prosperity during that year. In addition, we had a specially favourable mortality experience—only 64 per cent. of expectation—and a reduction of almost 1 per cent. in the already moderate ratio subsisting between our expenses of management and our premium income.

CORRESPONDING FIGURES FOR 1922.

Now, coming to the corresponding figures for 1922, what are the facts? An interest yield of no less than £5 1s 3d per cent. after deduction of tax (5s 7d per cent. beyond the record of 1921), a mortality experience 69 per cent. of expectation (only 5 per cent. less favourable than the striking rate of 1921), and a still further reduction of nearly 1 per cent. in our expense ratio.

An elementary calculation will show you that on a fund of nearly £20,000,000 an interest-earning excess of 5s 7d per cent. represents fully £50,000 extra profit for the year, and on a premium income of fully £2,500,000 the further reduction of expense ratio involves a sum of about £20,000, which has to be reckoned with in any comparison between 1922 and 1921. On the other hand, there is only the one slightly less favourable factor—that of a mortality experience of 69 per cent., as against 64 per cent. Therefore, although one cannot speak with any degree of confidence until the figures of our private valuation are available, it certainly looks as if the prosperity record for 1922 would replace that already set up in the immediately preceding year. Anyhow, we can safely say that the two years taken together—the first two years of our current valuation period—constitute a record of prosperity previously unequalled in the 115 years' history of the society.

PRE-WAR COMPARISON.

By way of illustration of this gratifying state of matters it occurred to me to ask our general manager to let me have a similar profit-earning analysis for the corresponding two years of our latest pre-war valuation period. He reminded me that that was not, strictly speaking, possible, as we formerly made our valuations in the middle and not at the close of the year, as is now our custom. For practical purposes, however, the accounts of the years 1907 and 1908 may be taken as supplying the answer to my question, as these were the first two complete calendar years of our valuation period ending June 30, 1911.

The interest rate (less tax) for 1907-1908 worked out, the general manager tells me, at £4 3s 11d per cent., as against £4 18s 5d per cent. for 1921-1922, the mortality record was 76 per cent. of expectation, as against 66½ per cent., and the expense ratio of 1907-1908 was slightly higher than that of 1921-1922, notwithstanding that costs all round in pre-war days were on a very different footing from what they are to-day.

The significance of this comparative analysis would be incomplete if I failed to remind you that the profit distribution of June, 1911, was on an extremely satisfactory scale, taking rank among the best of the bonus declarations made round about that pre-war period even by the other mutual life offices of this country. The president, in concluding his remarks, referred fully to the excellent figures of the year's working—a new business of 7½ millions, after deduction of re-assurances, a fund increase of over £1,400,000, and a premium income now substantially in excess of 2½ millions.

VIEWS OF THE GENERAL MANAGER.

The general manager and actuary, in acknowledging a vote of thanks to the staff, proposed by the Lord Mayor of Norwich, said, with reference to his approaching retirement, that he felt satisfied no chief officer in the field of life insurance could ever have passed on the torch of general management with an easier conscience than himself. He based that statement on the certainty that no one in his position had ever previously had the right to say that the life and endowment insurance reserves of the office he served had

been set aside on the basis of a rate of interest less than half the net rate actually earned, that the mortality experienced was well established on a footing of two-thirds of expectation, and that asset values stood on a basis of strength corresponding to all that to-day is implied in the phrase, "market values of December, 1920." Incidentally, it was a further satisfaction to realise that, in the matter of magnitude of annual new business, fund expansion, premium income, and so forth, the society had for a good many years now stood head and shoulders above all the other offices in the country which did not engage in industrial insurance business.

LAW UNION AND ROCK INSURANCE COMPANY, LIMITED.

GOOD RESULTS—SATISFACTORY PROSPECTS.

The annual general meeting of the Law Union and Rock Insurance Company, Limited, was held, on the 10th instant, at the head office, 7 Chancery Lane, London, W.C.

Mr Charles G. Hamilton, chairman of the company, presided.

The secretary and actuary (Mr James Stirling) having read the notice convening the meeting and the report of the auditors, the Chairman said: Gentlemen, I presume you will take the report as read. (Agreed.)

In the life department the net new business amounted to £1,280,227. This is not quite equal to the new business transacted last year, but as has been pointed out by the chairman at several of the recent Life Insurance Company meetings, 1922 was a difficult year for life business, owing to commercial depression. Incomes fell, and with taxation remaining very heavy, it was not unnatural that people who in happier times would have insured their lives hesitated to increase their immediate outgoings by paying premiums for new life insurance policies. Taking these facts into account, I consider the results of last year as eminently satisfactory.

The net new premiums amounted to £45,425. The total life premium income was £630,066, and the total life funds, £9,005,577, an increase during the year of £156,468.

The expense ratio of the life department was 17.17, a decrease on the figure of 1921.

The claims by death were £510,797, an amount well within the mortality expectation.

The net rate of interest earned was £4 11s 9d per cent. This is a very satisfactory rate, bearing in mind that we base our calculations on an assumed net interest of only 3 per cent.

INVESTMENT OF FUNDS.

Owing to the recent appreciation in first-class Stock Exchange securities, it is getting difficult to invest our funds at so good a rate of interest as during the last few years, but if, as I hope, there should be a real revival in trade, money will be in demand. That means higher rates of interest will have to be paid, and investments may then have to be sold by those wishing to invest their moneys in commercial enterprises, so that opportunities may arise for insurance companies to invest their surplus funds at a satisfactory rate.

I should like to emphasise the fact that the net rate of £4 11s 9d per cent. has not been earned by speculative investments.

FAVOURABLE QUINQUENNIAL PROSPECTS.

As I told you at our last meeting, the prospects of a large surplus at our next quinquennial valuation at the end of 1924 are distinctly favourable. If during this year and 1924 we can escape serious depreciation in our investments, there must be a large surplus, and a with-profit policy in the Law Union and Rock is a policy that can confidently be recommended to every would-be insurer.

FIRE DEPARTMENT.

The figures in the fire department were most satisfactory. Our loss ratio was 43.13 per cent., and the expenses of every description 38.07 per cent. of the premium income. The profit, after putting aside 40 per cent. of the premium income for unexpired risks, was £86,305.

The premium income shows a small decrease of £14,336 on the figures of the previous year. This decrease is not surprising. The year 1922 was one of commercial depression, which caused a heavy fall in values, resulting in less fire insurance being required, and consequently a lower volume of premiums. The directors have added £50,000 to the fire reserve, bringing it up to £471,490, which is considerably in excess of the premium income. That constitutes a very strong position.

ACCIDENT AND GENERAL DEPARTMENTS.

The accident and general account results were also quite satisfactory. After adding £30,000 to the reserve fund, bringing it up to £107,721, £15,061 was carried to the profit and loss account.

PROFIT AND LOSS ACCOUNT.

That account, after payment of interest on debentures and dividends amounting to £74,628, closed with a balance of undivided profit of £333,244, some £8,000 less than the balance at the end of 1921, but, as already mentioned, the reserves in the fire and

accident and general accounts have been increased by £80,000 from profits.

In considering the profit and loss account, it must be remembered that nothing has been added to that account since the end of 1914 in respect of profit made in the life department.

CURRENT YEAR'S PROSPECTS.

The prospects of the current year are fair, and the decrease in the income tax will benefit the company materially.

Our association with the London and Lancashire has proved greatly to the advantage of the business of the Law Union and Rock, and also to the old shareholders, whose investment in the London and Lancashire shows a very substantial improvement.

I have now to move "That the report be received and adopted." Mr F. W. Pascoe Rutter seconded the motion, and it was carried unanimously.

The Chairman next moved "That, in accordance with the recommendation of the directors in their report now adopted, a dividend of 8s per share, less income-tax, be paid to the shareholders for the financial year ended December 31, 1923, the dividend to be payable as usual by half-yearly instalments on the 31st day of May and on the 30th day of November next."

The Rt. Hon. the Earl of Middleton, K.P., seconded the resolution, and it was adopted unanimously.

On the motion of the Rt. Hon. the Earl of Strafford, seconded by Mr Francis Scott, the retiring directors, Mr Busick E. Pemberton and Mr Frederic Wadsworth, were unanimously re-elected.

On the proposition of Mr Hendry, seconded by the Hon. E. C. G. Cadogan, M.P., Messrs W. B. Peat and Co. were reappointed auditors.

The Chairman proposed a cordial vote of thanks to the officers and staff, and also to the agents, for their work on behalf of the company during the past year.

This was seconded by Mr F. W. P. Rutter, and unanimously accorded.

On the motion of Mr B. E. Pemberton, seconded by the Hon. Charles H. Strutt, a vote of thanks was accorded to the chairman, and a brief acknowledgment by him closed the proceedings.

APOLLINARIS AND JOHANNIS, LIMITED.

SCHEME CONFIRMED—MORE HOPEFUL FUTURE.

An extraordinary general meeting of Apollinaris and Johannis, Limited, was held, on the 20th instant, at the Holborn Restaurant, London, Mr Alfred R. Holland in the chair, for the purpose of confirming as special resolutions the resolutions passed on March 26th last in connection with the reconstruction of the company.

The Chairman expressed his gratification at the results of the poll taken at those meetings, which showed 1,827,606 in favour of the scheme and 7,320 against it. In other words, over 99 per cent. of the voting had been in favour of the scheme, and less than 1 per cent. against it.

The scheme was unanimously agreed to and confirmed at this meeting.

The Chairman mentioned that with a capital now standing at a more reasonable figure in proportion to the anticipated earning capacity of the company, a more hopeful future might be looked for generally in regard to the company's affairs.

The Chairman also stated that the accounts for the past financial year would be submitted to the shareholders at their next general meeting towards the middle of July this year.

The meeting concluded with a vote of thanks to the chairman.

JOHN BARKER AND CO., LIMITED.

SPLENDID RESULTS—RECORD PROFITS.

The 30th ordinary general meeting of the shareholders of John Barker and Co., Limited, was held, on the 17th instant, at the Town Hall, Kensington High street, London, Sir Sydney Martyn Skinner, J.P., chairman of the company, presiding.

The secretary, Mr G. Wright Bellamy, having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that they had had another record year of business—a further expansion of their three houses, which were now being familiarly referred to as the "Barker Group." The report and accounts were interesting more from the possibilities for the future which they disclosed than for any records of achievement in the past, important as that development had been. This group of stores had reached a prominence in the national life which in the immediate years to come they hoped would be still further emphasised. Their gross profit was about £22,000 more than last year—not a very extra-

ordinary increase, perhaps, but an increase that the directors, taking all the difficulties of the year's trading into consideration, regarded as very satisfactory. Rents, rates, taxes, and insurance were £20,000 up. Repairs and renewals represented a very costly item, but were slightly less than last year. The most impressive item in the balance-sheet was the net profit, which this year stood at the substantial amount of £362,384. Not only did the gross trading profit of nearly a million and a-half establish a record, but the net profit was a record also. This result, important as it was, would have been better still but for the writing down of the fixtures. The dividend for the year was 20 per cent., and they were carrying forward the substantial surplus of £148,000. From these facts it would be seen that Barker's was fulfilling the expectations which in recent years it had been his privilege to express. The financial position of the company was one of great solidity.

SCHEMES FOR DEVELOPMENT.

A great deal had been done in the past year to make their three great shops a pleasant rendezvous for the crowds which daily came to Kensington. Their daily transactions were on a gigantic scale, and increased month by month. The extensive alterations at Pontings were now complete, and Pontings was now the expression of the most modern note in shopbuilding. They had now a store splendidly equipped for the rapid development of the class of trade for which Pontings specially catered. It was absolutely unique of its kind. Also at Derry and Toms considerable progress had been made in adapting the premises to modern shopping needs. Both Pontings and Derry and Toms were in an ideal position, having a railway station inside their very doors. Customers arriving from the provinces or from any point in the metropolis could make the journey under cover all the way, right into the department they wished to visit, and very soon they hoped to give something of the same advantage to Barker's, it being in contemplation to carry a huge covered thoroughfare along the entire length to the rear of the present line of buildings. It would be the most ambitiously devised arcade in the world. They also intended to develop the freehold property on the south side of Ball street, and the marked increase in the trade of the furnishing section also demanded considerable extension. There was also the question of the erection of a new store on the vacant land recently acquired from the Crown. They had opportunities for expansion that were unique in London. These various schemes for development had become urgent because of the increasing number of shoppers at Kensington. In the three businesses they had served several more million customers than in the previous year. Their customers reached to from 15 to 20 millions per annum.

THE BUDGET.

Turning to the Budget, he remarked that the incidence of taxation played a very important part in retail trade. They regretted that the corporation tax was not entirely removed, as they regarded it as an unnecessary piece of legislation; but they were pleased to see that some relief was given in the matter of income-tax, as the less a man paid in income-tax the more he could spend. It was to be hoped a return would be quickly made to the penny post. The parcels post concession would be of great advantage to the mail order side of the business, which was a very large one. They would have liked to have seen a restoration of the sample rate, which was discontinued in 1919, and which was of great importance to traders. He would also like to see the hours of posting at the half-penny rate extended from 4.30 p.m. to 7 p.m., but they would prefer to see the whole thing abolished as regarded the posting of printed papers before 4.30 p.m. The reduction in telephone calls was a step in the right direction.

Mr Millbourn, in seconding the resolution, said he thought he was warranted in saying they had every hope of a further successful financial year in the current year.

The report and accounts were unanimously adopted.

BIRMINGHAM SMALL ARMS COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The annual meeting of the Birmingham Small Arms Company, Limited, was held, on the 20th instant, at the Daimler Works, Coventry.

Sir Hallowell Rogers (the Chairman), in moving the adoption of the report and balance-sheet, said that their guarantee in respect of the debentures of the Aircraft Manufacturing Company and Peter Hooker, Limited, had, when the balance-sheet was signed, been reduced to £270,000. Since that date a further sum of £78,000 had been paid off, and as the main properties of both concerns were still unsold there was no risk of the B.S.A. being put to any expense. The whole of these repayments, amounting to £758,000 since January 31, 1921, had resulted from the realisation of assets belonging to the two companies in liquidation, and had not involved any charge, either for capital or interest, on the Birmingham Small Arms Company.

Discussing the trading results, he said that in 1919 they prepared for a world trade by making themselves ready for the mass production of a relatively small number of individual products, a policy fully justified so long as the conditions continued which had created it; but there followed two years in which markets, both on the Continent and further overseas, were virtually closed to them. Amongst their undertakings, the Daimler Company and Daimler Hire Company had in this dark period achieved satisfactory results. Thus in the 15 months that ended in October, 1920, all their constituent companies made profits. In the 12 months 1920-1921 almost all made losses.

PERIOD UNDER REVIEW.

Their present report showed in the period under review, 1921-1922, losses made by some concerns and the profits made by others had almost balanced. This result had been achieved in spite of many unfavourable conditions. B.S.A. Guns, Limited, did as well as the general financial conditions of the country permitted with their shot-guns, match, cadet, and air rifles. The shot-gun in its various models remained without a rival, but, until purchasing power abroad improved and there was a revival of prosperity in country interests at home, it was unreasonable to expect this weapon to find the sale proportioned to its merits.

Passing to the cycles business, the Chairman said their various models fully maintained their high reputation. The period under review was, from the point of view of profits, disappointing, largely because the lock-out, by limiting output, added to the cost of production. The best results that they obtained were with the Daimler Company and the Daimler Hire Company. Last year that company put on a new model with the 20-h.p. four-cylinder car, and it was the success of that model, the whole output of which was readily taken by their customers, that afforded them a guide to the wider policy which he put before them a year ago.

The old models, the 30-h.p. and the 45-h.p. landaulets, fully maintained their position.

BETTER PROSPECTS.

The trading year 1921-1922 should be looked at less from its positive than from its negative results. The world slump thwarted all their plans, and they had to change front and avoid disaster while they did so. Of their success, in this stage, he need only remind them that they got through an exceedingly anxious period with much smaller deficit, with their trade reputation and goodwill as high, if not higher, than it had ever stood before, with their credit and resources unimpaired. The engineering group of their undertakings were necessarily dependent on exterior forces for renewed prosperity. It was gratifying that their reorganisation of these concerns had fulfilled its purpose, and, as there were, indeed, many indications that a real revival was in prospect, they had taken full advantage of them. If, therefore, they were looking forward to better times, it was because they had planned for an active business in motor cycles and motor-cars in the hope that this would successfully see them through a period during which their other investments could earn little. Pursuant to the policy he outlined last year, to extend the range of their car and motor-cycle manufacture to all the sizes which public tastes showed to be in demand, they substituted a 21 h.p. six-cylinder Daimler for the 20 h.p. four-cylinder of 1921-1922, and they supplemented the Daimler six-cylinder range by 16 and 12-h.p. cars. These three models had been so well received that they had now decided to increase the range still further to bring in two new six-cylinder Daimler coupe models, a 21 h.p. and a 16 h.p., to meet the requirements of the owner-driver.

Deposits and Cheque Accounts (31/12/22) - Fmk. 1,420,000,000

124 BRANCHES AT ALL IMPORTANT BUSINESS CENTRES IN FINLAND.

Telegraphic Address Kansallispankki.

It was a distinct advantage that, just as the selling season was coming into full activity, they were able to begin deliveries of the new models at prices markedly below those which prospective users thought sufficiently attractive at last year's motor show. Meantime, larger models of Daimler forty-fives, thirties, and twenty-ones had an excellent market. In motor cycles, too, they had enlarged their range, and confidently expecting a greatly increased sale, they prepared for an output equal to their total capacity, and gave their customers the benefit of the resulting saving. The outcome had fully justified their enterprise.

Sir Edward Manville, M.P., deputy chairman, seconded, and after several questions had been answered the report was adopted.

§ Approximate receipts.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the March outputs, and dividends for four complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

and corporation tax, and have placed £100,000 to reserve. They will propose at the general meeting the payment of a final dividend of 2½ per cent. on the preference stock, making, with the interim dividend, 5 per cent. for the year (less income-tax), and on the ordinary stock a dividend of 5 per cent., making, with the interim dividend, 7½ per cent. for the year (free of income-tax), and to carry forward £42,254 to the next year.

BANKS.

COLONIAL BANK.—The report for the half-year ended December 31, 1922, shows a net profit for the half-year of £53,130, to which is added £28,667 brought in, making £81,797 available. Out of this sum £20,000 is set aside for provision for bad and doubtful debts. Dividend at the rate of 8 per cent. per annum absorbs £33,057, leaving £48,740 to go forward. With regard to the West Indies, the report states that the improved price of sugar is everywhere giving planters much needed encouragement. In Jamaica and Demerara the crop will be short, owing to unfavourable conditions. Banana prospects are good, but cocoa is still very depressed. The diamond industry in Demerara has had a record year, stones to the value of £800,000 having been exported. In the Gold Coast the cocoa crop proved to be a good one. There is a better demand for Nigerian palm oil, and the appreciation in the price of tin should benefit the mining districts. Improvement in West African trade generally is, however, very slow.

DAI-ICHI GINKO, LIMITED.—The gross profit for the half-year ended December 31, 1922, amounted to 16,660,736 yen, from which has to be deducted the general expenditure of the bank, 11,389,714 yen, showing net profit of 5,271,022 yen. The available balance, including the amount brought forward from last account, 2,631,267 yen, is 7,902,289 yen. To bonus for directors, 200,000 yen; to chief officers, 263,550 yen; to pension fund for officers and staffs, 105,420 yen; to be added to reserve fund, thus raising that account to 35,500,000 yen, 2,000,000 yen; to dividends at the rate of 13 per cent. per annum on 454,000 old shares at 3.25 yen per share, and 546,000 new shares at 2.03125 yen per share, 2,584,562 yen; leaving a balance to be carried forward to next account, 2,948,756 yen—7,902,289 yen.

LONDON AND BRAZILIAN BANK, LIMITED.—The accounts for the year ended January 31, 1923, show a available balance of £539,976, which includes £498,622 brought in from the preceding year. A dividend of 10 per cent. for the year absorbed £150,000. A sum of £200,000 is allocated to a special contingency account, and of £189,976 is carried forward. The total assets amount to £34,055,093, of which the following are the leading items:—Bills discounted, loans, &c., £15,454,120; bills for collection, £6,613,347; specie and cash, £8,482,141; cash in transit, £1,245,800. With regard to liabilities, deposits stand at £19,684,399 and bills for collection at £6,613,347. The meeting will be held on May 1st at 7 Tokenhouse yard, at 12.30 p.m.

ASSURANCE COMPANIES.

GENERAL ACCIDENT, FIRE, AND LIFE.—The report for last year shows that in the accident and general account the premiums were £3,517,416, the claims £1,783,671, and the expenses and commission £1,273,207. After providing for unexpired risks on the basis of one-third of the annual premiums, a sum of £141,513 was transferred to profit and loss. The total income was £4,169,436, and the net outgoings £3,869,776. After adding £175,881 to the various reserves, there remained at credit of profit and loss £296,450, including £172,672 brought forward. After paying a dividend of 5 per cent. on the preference and 25 per cent. on the ordinary shares, transferring £70,000 to the fire additional reserve fund, making this fund £100,000; £28,080 to the general reserve fund, making this fund £200,000; £30,000 to the staff pension fund, a balance of £109,660 was carried forward.

LONDON ASSURANCE.—The report for 1922 shows that in the life department new assurances were granted for £1,382,128. The net premium income amounted to £349,709, an increase of £17,330, and the total income from all sources was £529,115. The life funds on December 31st amounted to £3,380,986, an increase of £23,648. In the fire department the net premium income was £1,480,153. Claims were 51.5 per cent., and expenses 45.2 per cent. After transferring £51,552 to profit and loss, the fire fund amounted to £1,300,000, an increase of £50,000. Marine premiums were £869,278, and the fund was increased by £50,000 to £850,000, after transferring £163,235 to profit and loss. In the accident department the net sum received in premiums was £207,400, and the fund was increased from £138,389 to £155,779. The balance at the credit of profit and loss was increased by £41,501 to £249,745, after transferring £40,000 to contingencies account and writing £50,000 off premises. The directors recommend a dividend of 30 per cent., free of income-tax, representing an increase of 2 per cent., as compared with the dividend paid in respect of the preceding year.

NORWICH UNION LIFE.—During last year 9,820 new life policies were issued assuring £7,255,538 net, as compared with 10,841 policies assuring £7,512,733 net in 1921. The net premium income was £2,400,513, against £2,446,512, and the expenses were at the rate of 16.8 per cent. of the premiums, as against 17.15 per cent. in 1921. The total funds increased by £1,432,591 to £10,089,922. The yield from interest was 5.15 3d per cent., after deducting income-tax, as compared with 4.4 15s 8d. Death claims of £58,414 were £262,157 less than the amount expected by the company. It is announced that Mr Davidson Walker, the general manager, is about to retire.

OSMAN ACCIDENT AND GUARANTEE.—This company, whose accounts will be incorporated with those of the Commercial Union Assurance Company, has issued a separate statement. The total income last year was £5,415,442 and the claims £3,076,974.

After taking £210,000 from the accident department and £40,000 from the fire department, the credit balance at profit and loss was £522,508, including £213,442 brought forward. Income-tax and corporation profits tax cost £184,097. The assets amounted on December 31st last to £7,663,254.

MISCELLANEOUS.

BENGAL IRON COMPANY.—The directors, in a circular dated April 16, 1923, state that, so far as they can see, in spite of reduced prices obtainable, the final result for the year ended March 31, 1923, will show an improvement on the figures for the previous year. During the year the works have been fairly well supplied with orders, and at its close the stocks of pig-iron and iron castings carried were moderately light. Substantial progress has been made with the development and equipment of the company's Jitpur colliery, which it is hoped will be brought into full operation within the next eight months. A fourth battery of coke ovens is nearing completion. Prospects for the current year are hopeful. The greater portion of the estimated production of pig-iron up to December next has already been sold.

CANADIAN GENERAL ELECTRIC COMPANY.—The profit and loss statement for the year ended December 30, 1922, shows a profit of \$532,791. Interest charges amount to \$428,227, leaving a net profit of \$104,564. With \$557,726 brought in from the previous year, the available balance was \$662,290. Dividends at the rate of 7 per cent. per annum on the preference stock and 8 per cent. per annum on the common stock for the first quarter, and 6 per cent. per annum for the remainder of the year, were paid, absorbing \$841,879. It was, therefore, necessary to draw upon the accumulated earnings of the company to the amount of \$737,314 to provide for dividends. The report of the directors states that the trade depression which began in 1921 continued during most of 1922. In the first nine months of that year there were insufficient manufacturing orders to keep the company's works operating on an economical basis. Since the close of the year there has been a marked increase in the volume of orders. As the reserve for depreciation stands at \$5,164,923, the directors did not consider it necessary to augment it last year, but all repairs and replacements have been charged direct to expenses account.

CITY OF SANTOS IMPROVEMENTS COMPANY.—The report for the year 1922 shows that the revenue in Santos has been converted into sterling at 7.187d, the average remittance rate of exchange for the year, as against 8.281d in 1921, and the floating assets and liabilities in Brazil have been valued at 6.062d per milreis, the rate ruling at the end of the year 1922. The net revenue for the year was £87,404, which, added to £11,519 brought forward from 1921, makes a total of £98,923, as compared with £100,388 in 1921. Out of the total of £98,923 provision has been made for debenture interest £11,112, sinking funds £14,757—£25,870; dividend on 6 per cent. preference shares for the year 1922 £12,000, interim dividend of 2 per cent. on ordinary shares (paid, less tax, November 1, 1922) £16,000; and there remains a balance of £45,053. Out of this sum the directors have transferred £5,000 to reserve account, and having set aside £6,000 to tramways renewal account, they recommend the payment of a final dividend of 3 per cent. on the ordinary share capital, making 5 per cent. (less tax) for the year, leaving £10,053 to be carried forward to the next account.

HADFIELD'S LIMITED.—The report for 1922 states that adjustments may still be necessary to meet the provisions of the Munitions and Finance Acts. The directors have taken advantage of the favourable position of the money market, and, acting under the terms of the trust deed, gave notice to redeem the £1,000,000 7½ per cent. mortgage debenture stock issued in December, 1920. An issue of £1,040,000 5½ per cent. mortgage debenture stock has been arranged to take the place of the stock so paid off. By this re-issue the finances of the company have been stabilised, and a saving has been effected of £17,800 per annum. The investments of the company have been written down to their present-day values, so far as can be ascertained. A sum of £137,000 has been taken from the special reserve account for this purpose. The engineering dispute, which lasted 13 weeks (March 11 to June 13, 1922) had a very serious effect on the company's operations. The great and protracted shortage in the demand for steel and engineering products generally has also caused your directors much anxiety. There are now, however, marked signs of improvement in this direction. The directors recommend that, in addition to the interim dividend of sixpence per share paid on August 21st last on the ordinary shares, a further dividend be paid on the ordinary shares of sixpence per share, making a total dividend of 5 per cent., free of income-tax, for the year, and that the balance of £128,418 7s 7d be carried forward.

MERCANTILE MARINE FINANCE CORPORATION.—The account for the year ended February 28th last show net profits amounting to £43,570. This, with the amount brought forward, £6,043, makes a total available for distribution, after providing for taxation, of £41,734. The directors recommend the payment of a dividend of 6 per cent. per annum, less income-tax, the payment of which absorbs £30,000, and that the balance, £11,734, be carried forward. The balance-sheet shows that investments stand at £618,303, and include British Government, British Corporation, and Colonial Government securities to the amount of £517,388, the market value of these investments at the date of the closing of the books being £645,206. Bills receivable against security amount to £425,641. Sundry debtors and accrued interest, £12,445; and cash at bank, £34,105. The liabilities at the close of the year comprise loans, £419,000; sundry creditors, outstanding, and income received in advance, £20,851; bills receivable discounted £100,000, all preliminary expenses having been written off.

WHITEHALL ELECTRIC INVESTMENTS, LIMITED.—For the month of February, 1923, the approximate net operating returns of the companies in which Whitehall Electric Investments, Limited, is interested are: Operating in Chili: Cia. Chilena de Electricidad Limitada, £16,300. Operating in Mexico: Cia. Electrica de Tampico, S.A., £15,000; Puebla Tramway Light and Power Company, £9,600; Veracruz Electric Light Power and Traction, Limited, £3,600; Cia. de Luz Electrica y Fuerza Motriz de Orizaba, S.A., £1,650; Cia. Electrica de Cordoba, S.A., £550. Chilean exchange calculated at \$38.75 equals £1. Mexican exchange calculated at \$1 equals 24.5d.

Commercial Reports.

THE CORN TRADE.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20:—

Mark Lane, Friday Evening.

Climate conditions have remained dull, with further showers of rain in some districts, and which continue to hamper field work. Farmers, however, have been able to drill a fair quantity of oats, while early sowings are now showing above ground. Winter wheat and oats are generally satisfactory, but a spell of fine warm weather would greatly improve agricultural prospects. English wheat is less freely offered both here and at provincial centres, and prices continue to harden in sympathy with the general position. Suitable milling grades range from 9s 9d to 10s 6d, and inferior 8s 9d to 9s 3d per 112 lbs, free on rail. Imported descriptions also very firmly held at a further advance, owing to higher forward offers. No. 1 Northern Manitoba quoted at 52s, Barusso 62½ lbs 51s, both ex-ship to arrive, and Australian landed nominally 55s 6d, all per 496 lbs. Crop news from the chief exporting countries vary, and while India confirms a good harvest, preparations for the new crops in Canada and Australia are somewhat backward. Reports from the United States indicate a slight improvement, while weather conditions are favourable for ploughing in Argentina. Arrivals at United Kingdom ports continue on a light scale, and stocks continue to decrease. In the floating and forward cargo section prices were again rather firmer in sympathy with higher foreign cables, which, however, tended to check demand. Steamers of choice white Karachi April-May changed hands at 50s, White Western and No. 2 soft Pacific July-August 49s 7½d, and Barusso 62½ lbs afloat 48s 1½d per 480 lbs. There is a fair demand for home-milled flour, and values are steadily hardening, owing to the advance in wheat, with millers showing more reserve. London standard straight run now quoted at 42s, patents 43s to 44s, and town households 40s per sack, delivered in the Metropolitan area. All English country straights 32s to 35s, delivered London stations. Imported steader. Manitoba patents range from 37s 6d to 41s 6d, Minneapolis good patents 41s, and Australian 37s to 38s per 280 lbs, ex-store. Millers' offals, firm. Broad bran quoted 7s 3d-7s 6d, ordinary 6s 6d, middlings, 7s 3d-7s 9d, bags including ex mill, light oats 6s 3d, powdered oat husks 6s 3d, feed oatmeal 8s 9d, ground oats 13s 9d per cwt, free on rail. Barley, English steady at 7s-13s per 112 lbs, free on rail, as to quality; imported, firm. Californian quoted 42s-44s, ex-ship, Australian chevalier 46s-51s, New Zealand 40s, both landed, all per 448 lbs, Plate 29s 6d, Persian 27s, Danubian 29s 6d-30s 6d, all landed 400 lbs. Maize, quiet, but firm. Plate, ex-ship, 39s 3d, landed 40s 6d, No. 2 yellow American, ex-ship, 38s 3d, landed 39s 6d, No. 2 mixed ditto, ex-ship, 38s 3d, East African landed 38s 3d, red Karachi ditto 42s 6d, all per 480 lbs. Oats, English steady at 8s 4d-10s 6d per 112 lbs, free on rail, as to sample; imported, firm. Plate f.a.q., ex-ship, 25s, ditto landed 26s 6d, No. 2

Canadian Western 30s, No. 3 ditto 28s, No. 2 Canadian feed 26s 9d, New Zealand A grade 38s 6d, B 37s 6d per 320 lbs, all landed terms. Oatmeal, firm, and in fair demand. London-made all cuts 18s, rolled oats, also whole groats, 18s, flaked oats 20s 6d, ex-mill, ordinary Scottish oatmeal, 18s 6d-19s 6d, and American all cuts 17s 6d per cwt.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated April 19th, is as follows:—Pig-iron: Makers have no trouble in disposing of what little unsold pig-iron they have for the next couple of months, and prices are firm and unchanged. The position over the second half of the year is naturally uncertain. Manufactured iron and steel: There is a good demand for steel, with more orders. Prices remain unaltered. Steel ship plates, £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £10 10s. Iron ore: Good iron ore is relatively cheap at 24s 6d for best Bilbao Rubio. Owing to the coke shortage, it is difficult to see how more hematite furnaces can be started at present.

Our Sheffield correspondent writes:—Conditions in the iron and steel trades are again quieter this week, and the tonnage of new business placed is negligible. Furnaces are still busy on old contracts, but little or nothing is coming forward to replace these when completed. Consumers have no confidence in the current high prices being maintained. Owing to reduced buying from the Continent, the position of coke is much easier, and there should be no difficulty about supplies in the future at reasonable prices. A settlement of the trouble in the Ruhr and the resumption of German competition in the steel market is generally regarded as imminent, and induces an attitude of extreme caution on the part of buyers. Apart from open hearth steel, the tendency in the heavy trades is to contract, with the single exception of the railway department. Orders continue to be booked for wagons which involve the consumption of large quantities of steel and wrought. The volume of work does not, however, suffice to find full employment for the spring and tyre plants. Prices are a shade easier, and the billets can be bought at £9 10s, or 10s less than previously. The stagnation in cutting steels and tools required in engineering and shipbuilding work is as pronounced as ever. Judging from reports from all sides, the trading of the present quarter is likely to fall considerably below the first quarter of the year. The present month is proving very unsatisfactory to makers of plate and cutlery, as

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

(with which is incorporated the AFRICAN BANKING CORPORATION, LTD.)

Bankers to the Government of the Union of South Africa in Cape Province; to the Imperial Government in South Africa; and to the Administrations of Rhodesia.

Bank of British West Africa, Ltd., 49-53 SCHAUBENBURGER-STRASSE.

Over 360 Branches. Sub-Branches and Agencies in CAPE PROVINCE, NATAL, ORANGE FREE STATE, TRANSVAAL, RHODESIA, NYASALAND, BASUTOLAND, KENYA COLONY, KENYA PROTECTORATE, UGANDA, ZANZIBAR, PORTUGUESE EAST AFRICA, SOUTH WEST AFRICA, TANGANYIKA TERRITORY, BELGIAN CONGO.

BANKING BUSINESS OF EVERY DESCRIPTION transacted at all Branches and Agencies.
CURRENT ACCOUNTS opened on the usual terms, and **DEPOSITS RECEIVED** for fixed periods at rates which may be ascertained on application.
SAVINGS BANK ACCOUNTS opened on terms, particulars of which may be obtained at Branches.
BILLS NEGOTIATED AND COLLECTED.
DRAFTS issued, **MAIL AND TELEGRAPHIC REMITTANCES** made, **LETTERS OF CREDIT** and **COMMERCIAL CREDITS** established.
TRAVELLER'S LETTERS OF CREDIT issued available in all parts of the world.
PURCHASE AND SALE of Stocks and Shares effected. (The world.)
DIVIDENDS, ANNUITIES, ETC., received and **COUPONS COLLECTED.**
STRONGROOMS provided for the safe custody of Securities and Valuables of Customers.
ASSAY DEPARTMENT—Gold, etc., and all Mineral Ores assayed and **EXECUTED** and **TRUSTEE** business undertaken. (Inland.)
The Officers of the Bank are bound not to disclose the transactions of its customers.

the demand is almost confined to the cheapest classes of goods, and buying was never so keen. A lot of business is being refused because the prices offered are unremunerative. Colonial orders are rather better than of late. Arrivals of German cutlery and tools have shrunk considerably as the result of the Ruhr occupation. Nevertheless, the competition of such goods is still to be reckoned with, as the country contains large stocks of them. While there continues a brisk demand for all kinds of manufacturing fuel, and prices are firm, it is considered in some quarters that the crest of the boom in the coal trade has been passed. Steam coal sells freely, both to manufacturers and railway companies, and slacks occupy a strong position. Coke for export is reduced to 45s per ton, f.o.b.

Our Glasgow correspondent writes:—The expressed tone in iron and steel trade connections is said this week to have been a shade quieter than that which obtained a fortnight ago, and this is attributed to the feeling growing amongst merchants that the Ruhr situation is giving signs of amendment, with the consequent anticipation, should events move that way, that prices for raw materials will be modified. Indeed, here and there they have changed already. Scotch No. 1 foundry pig having yielded 2s 6d a ton at £6 2s 6d, and No. 3 also 2s 6d at £5 17s 6d a ton. Both export and home inquiry for these qualities is off a bit; at the moment American needs are about nil, with few orders standing in makers' books for execution. Last week's shipments to U.S. ports dropped to 2,696 tons. In manufactured steel connections an active trade is passing in all sections for plates, joists, girders, &c., and the promise, it is stated, is hopeful for the general outlook, on to the middle of the year at least. At the same time, no expansion falls to be noted in shipbuilding, though there are a number of steamers lying in the yards, hung up for constructional orders; and these, again, depend on the course of expenses. A moderate decline in costs would liberate a lot of tied-up tonnage. Boiler plates remain hard at £13; ship plates at £10 5s; ship sections at £10; and crown bars at £12 10s. Black sheets continue in strong request for Australia, South America, and South Africa, with ½ inch to 1 inch at £12 10s f.o.b. Glasgow. Heavy steel rails, hoops, channels, angles, &c., are in request on general export account, and are commanding fair terms, say, £10 10s for rails, £10 10s for angles, steel bars (small), £11 7s 6d; and steel channels, £10 10s. A very healthy trade is going through in steel tubes for export; and engineering shops, except probably those engaged on locomotive building (in which there is a positive lull), are well employed on specialties, such as Diesel and other engines. As the week closes rumours are current as to shipment orders having been secured for some large bridges for South Africa; and also to contracts having been secured for heavy railway waggons, trucks, &c. The trading in motors (pleasure and trade) is on the increase. A big spurt is looked for in girders and joists, which should be in considerable need for constructional purposes under the new house-building scheme. In all the colliery districts in Scotland production is on a heavy scale, and yet it is unequal to wants, which are literally flowing in from the Continent—France, Germany, Belgium, and Italy.
