Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's,
37 Avenue de l'Opera.

THE MONEY MARKET. FOUR PER CENT.

On Thursday the directors of the Bank of England
raised the official *minimum* rate of discount from 3 to 4
per cent. The movement had not generally been ex-
pected to happen so soon, though the continued decline
in the New York exchange had given plenty of warning,
since it was known that the Bank was anxious to dis-
courage those who were helping this decline by lending

Telephone: 7802-7803 City.

freely to American borrowers. Since there is a good deal of divergence of opinion concerning the extent of the connection, in these days, between rates of interest and rates of exchange, much uncertainty prevailed as to whether the rise of 1 per cent. in the Bank rate would suffice to steady the price of sterling, without being reinforced by a further advance later. Lombard Street was rather puzzled and anxious, and inclined to look forward to uncomfortable times, but in view of the very large amount that had to be borrowed from the Bank over the turn of the half-year, partly owing to the fact that funds normally available for borrowers here had been lent to New York, the Bank seems to be able to justify its action on the ordinary business principle of putting up the price of a commodity that is scarce, quite apart from considerations of exchange. After some discussion the clearing banks raised their deposit rates by 1 per cent., and the discount houses followed *pari passu*. Money had been extremely abundant owing to the big borrowings last week, which had still, after large repayments on Monday, Tuesday, and Wednesday, left the Other securities nearly 16 millions higher; but discount rates had remained firm with October bank bills quoted at 2½ per cent. before the rise in Bank rate, and fully 1 per cent. higher thereafter. Yesterday, when the result of the Treasury bill allotment was known, rates for Bank bills were quoted at 3½ per cent. for three and four months, and 4 per cent. for six months.

	July 6, 1923.	June 29, 1923.	June 22, 1923.	June 15, 1923.	Previous Rate and Date Changed.
Bank Rate	4	3	3	3	3 (Jly. 5, '23)
Banks' Deposit Rate	2	1	1	1	1 (Jly. 5, '23)

Houses' Notice	2½	1½	1½	1½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3½	2½	2½	2½	..

The Bank return showed large movements in connection with the turn of the half-year. The note circulation expanded by £1,873,000, leaving the Reserve £1,869,000 lower, in spite of a small increase in the stock of gold. Government and Other securities expanded by £1,360,000 and £15,743,000, and Public and Other deposits by £5,489,000 and £9,712,000. Currency notes outstanding were advanced this week by £2,733,500 to £289,236,400, which includes £1,467,400 for notes called in but not yet cancelled. The fiduciary issue is £238,319,000, or £31,864,800 below the maximum.

THE STOCK MARKETS.

The Stock Exchange entered upon the second half of the year in a chastened mood. The rise in Bank rate was not unexpected, and its immediate effect not unfavourable, but with the early advent of selling orders a mild slump occurred, affecting most gilt-edged stocks. Several recent Colonial and Foreign issues have tended to relapse to a discount, or very small premium. Home Rails have been under the influence of the dockers' strike. Rubber shares have lacked public support, while fairly heavy liquidation has taken place in certain Oil shares. In the Miscellaneous markets textile and tobacco shares have generally resisted the prevailing downward trend. The banking and insurance markets remain heavy. South African mines have been affected by Paris selling, and business generally is dull.

THE COMMODITY MARKETS.

General quietness was again apparent in most directions, demand for both manufactured and raw materials being confined to wants of immediate necessity. Conditions in the South Wales coal market are slowly improving, the volume of business at the lower prevailing prices being slightly better. The immediate outlook for pig-iron is discouraging, and our Sheffield correspondent reports

that a serious position is developing in that district. Business in steel remains very quiet, and lower prices fail to bring in orders of any importance. Weakness developed in tin, but copper prices were steady. Uncertainty continues to be the keynote of the Manchester cotton trade, and business is restricted to immediate needs. Wool values remain high, mainly as a result of Continental support. Price changes were unimportant at the Bermondsey hide and skin auctions, but the undertone was weak. Rubber was rather steadier. Wheat was in demand, but sugar prices were marked down, and the market for tea was inclined to be dull. Trade both in vegetable oils and oil-seeds has continued on quiet lines.

FOREIGN EXCHANGES.

In the foreign exchange market the week has been one of feverish movements in rates, but of little real business. The outstanding feature, apart from the further depreciation of the "reparation currencies," has been the rapid decline of the £ sterling in New York. From \$4.57½ on the 29th the quotation sagged quietly away to as low as \$4.54½ on Thursday. The announcement of the change in Bank rate brought a recovery up to \$4.56, but this was not maintained, and yesterday morning the quotation was \$4.55½. Whether the higher Bank rate will be sufficient to stop the steady drain of sterling to New York is, in view of the discrepancy which still exists between the value of money in the two centres, very doubtful. Forward rates have narrowed slightly from ½ to ¼ cent per month over spot. The German mark, in spite of new restrictions and of a policy which seems to consist for the greater part of ignoring quotations in other centres and fixing an arbitrary rate in Berlin, has again shown many fluctuations, and at one time the quotation reached about 1,000,000 marks. The quotation yesterday morning of 890,000, although higher than at some times during the period, was about the same as the preceding week. Forward marks were quoted nominally at 280,000 marks per month over spot. It is now, however, announced that dealings in futures are forbidden. From 75.20 on the 29th the French franc rose sharply at the beginning of the week to about 78, after which there was a recovery to 76.65 on Wednesday, only to be followed by a further upward movement to 77.70 yesterday morning. The Brussels rate, although, as usual, moving roughly with Paris, shows a tendency to draw away still further, and yesterday stood at 93.60, as compared with 88.25 on the 29th. The lira also has moved upwards rapidly from 103½ to 105½. Among neutral currencies Amsterdam, following the dollar, has gone against us from 11.70½ to 11.60, while Stockholm has also moved from 17.30 to 17.23½. Switzerland, however, has depreciated from 25.28 to 26.35½, and Madrid has moved up sharply from 31.45 to 32.07½, after being on Wednesday as high as 32.17½. Christiania has depreciated further from 27.92½ to 28.47½. Copenhagen on the 4th reached 26.68½, but the announcement that the National Bank had sent a considerable amount of gold to America has caused a recovery to 26.35½. In Central Europe, Vienna remains stabilised at 325,000. Warsaw, although the recent panic regulations have not yet been modified, shows a slight recovery. Prague has moved down from 153½ to 151. Belgrade remains about the same at 420, but Bucharest at 910 shows a new tendency to depreciate, while Budapest continues to move steadily upwards. In the East the rupee, at 1s 4 3/32d, is the same as last week, but the yen, in sympathy with the dollar, has moved against us from 2s 1½d to 2s 1¼d. Dullness in China, and a hold up in the Bombay monsoon, have depressed the silver market, and prices are considerably lower. Hong Kong is ½d cheaper at 2s 2¾d, and Shanghai 1d cheaper at 3s 0¼d. In South America, Buenos Ayres has fallen from 41½d to 41¼d, and Rio from 5¾d to 5½d, while Montevideo is also ½d cheaper at 42¾d, and Valparaiso has depreciated from 34.60 pesos to 34.80 pesos.

NATIONAL ACCOUNTS.

The Revenue statement for the first quarter of the current financial year, printed in full on a later page, shows an excess of expenditure over revenue of approximately £27½ millions, revenue amounting to £187 millions, or £8 millions less than in the same period of last year, and expenditure to £214½ millions, or nearly £9 millions more. This latter increase is due to the inclusion in the figures of the first half-yearly payment under the American debt settlement, the item "interest, &c., on war debt" being £21½ millions higher than it was last year, at £124½ millions. There has been a saving of £12½ millions in the Supply Services, of which £3½ millions is under the fighting services. The decline in revenue is more than accounted for by ordinary miscellaneous receipts, which have dropped from £13½ to £4½ millions. Estate duties fell by £2,801,000, and receipts from the postal services by £1,050,000, while nothing was received from E.P.D., as against £954,000 a year ago. Customs receipts were £980,000 higher, and there were increases of £1,398,000 in stamps, of £1,553,000 in corporation profits tax, and of £2,492,000 in interest on sundry loans. It is too early yet to draw any conclusions from a comparison of the figures with the estimates for the year, but it may be mentioned that expenditure is £10 millions over its quota (owing, of course, to a half-year's American payment), while revenue is £17 millions below it, the first quarter being, as a rule, the lightest in receipts. The following table shows the national income and expenditure during the last week of the quarter:—

EXPENDITURE.	Min. £	REVENUE.	Min. £
Supply Services	11,515	From Revenue	12,050
Interest, &c., on War Debt	4,408	Amount borrowed	4,603
Sundries	636		
Increase in Balances	694		
	16,653		16,653

The week's operations increased the National Debt by £4,603,000, and caused the following changes:—

	Min. £		Min. £
Treasury Bills	5,193	Bank of England Advances ..	4,250
Other Debt	269	Public Department Advances ..	4,960
National War Bonds Repaid ..	925	National Savings Certificates ..	100
	5,487	Sundries	780
			10,093

The floating debt was increased by £4,030,000 to £819,330,500.

FINANCIAL YEAR, 1923-24 (April 1 to June 30, 1923).

The Week in Parliament.—The Report stage of the Finance Bill occupied the greater part of the week in the House of Commons. A feature of the debates was an unavailing attempt by Mr Lloyd George, Mr Austen Chamberlain, and others to delete the clause doing away with the Land Valuation Department. On Wednesday the Prime Minister contributed to the Finance Bill debates an important speech on the debt settlement with the United States. The discussion on the Viceroy's action with regard to the Indian Budget was continued on Thursday. The House of Lords has passed the second readings of the Housing Bill, the Bastardy Bill, the Legitimacy Bill, and the Cotton Industry Bill, and passed the third reading of the Matrimonial Cause Bill and some minor measures, and has debated the project of a Shakespeare National Theatre and a railway in Kenya.

Company Meetings of the Week.—On later pages of this issue will be found reports of the meetings of the following companies:—British Empire Trust Company, Otham's Press, Lipton, Estates Control, and Ohlssons Cape Breweries. The chairman of the last-named called attention to the speech made at the meeting of the National Bank of South Africa, reported in full in the *Economist* of June 30th.

THE SITUATION IN GERMANY.

ANOTHER week has passed without bringing any signs of an approach to the Ruhr armistice, which must be the preliminary of a reparations discussion, and although the best part of a month has passed since the British Government addressed a plain, straightforward questionnaire to the French Government, M. Poincaré has not yet brought himself to make a plain, straightforward reply. His failure to do so has undoubtedly accelerated the pace at which the once immense store of British sympathy for and patience with France is becoming exhausted. If we read the situation aright, impatience and daily deepening anxiety over the situation, both in the Ruhr and in unoccupied Germany—an anxiety only too clearly reflected in many phases of the economic life of this country—is manifesting itself in a quiet and unobtrusive concentration of most of the leading schools of political thought behind Mr Baldwin in the attitude that he is believed to be adopting in the present diplomatic discussions.

While what has been described as a "silent contest" is going on between London and Paris, the situation in Berlin is rapidly approaching a crisis. The symbol and instrument of the disturbance is the new fall of the mark, which has once again thrown economic values into hopeless confusion. Some comparatively few days ago a traveller changing money in London found on reaching Berlin that the marks received in London had lost half their value on the journey. An English journal costing 2,000 marks on a Monday was priced at 3,000 marks and 4,000 marks respectively on the two following days. Another journal issued for the guidance of American travellers explained in a recent issue that the fare on the taximan's clock must be multiplied 7,000 times, but between printing and publication the information had become out of date, and the paragraph was stamped over by hand that the multiplier had risen to 10,000. A Berlin banker tells that his cook, who complained that she could not possibly live on her wages, refused the offer of double wages, but demanded—a Stock Exchange tip! And that the first thing the countrywoman does when bringing her goods to market is to inquire the price of the dollar. Then there is the case of the man who refused to buy a shirt in a department store on the ground that it was too dear, but did his calculation over again and changed his mind before he reached the door; before he could get back to the counter the telephoned rates for the day had come through and his shirt was up 25 per cent. At the moment the salary paid to Cabinet Ministers of the Reich is equivalent to the lordly sum of £6 a month! Some of the countries of Europe have become almost accustomed to these madhouse economics; to the foreign observer whose pocket-book contains a few pieces of paper that really have some stable value there is indeed much amusement to be got out of it. But beneath the surface the situation is tragic, for with the currency depreciation there has come some physical and much moral depreciation. Corruption is widespread among the formerly almost incorruptible German bureaucracy; stealing—in the train, the factory, and the working-man's home—is rife, begging is prevalent in the streets in marked contrast to pre-war Germany, while the undernourishment and poverty of the middle classes have reached dimensions which must excite pity. Indeed, the annuitant classes only live by speculation, by taking in lodgers, or by selling their possessions, while officers of the highest rank in the old army are to be found doing the humblest clerical labour.

How is it that Germany manages to carry on? It is true that unemployment is much greater than six months ago, and there is much short time. But her economic life continues; her fuel supply is sufficient, and up to now she has been able to buy all the coal she needed in England and pay for it in sterling. Indeed, with the recent slump in the mark the orders to her factories have actually increased, and employment has slightly improved in consequence. We cannot attempt to give a complete answer to this question here, but will merely call attention to some of the features of the situa-

tion. So far as the fuel situation and the means of paying for imported coal are concerned, it must not be forgotten that exports lag behind both orders and production; exports from unoccupied Germany did not at once feel the effect of the Ruhr occupation, and even now have only slightly fallen. The use of the bills resulting from these exports is to some extent regulated by the exchange control system, which, though very incomplete, checks the import of unnecessary goods by private persons. For the moment, indeed, Germany has overbought her coal, and has even tried to slow down deliveries from Great Britain. The miscalculation for which the railways are apparently to blame has carried a heavy penalty, for the coal payments have been the chief factor in hammering the exchange. But credits due to the results of previous trading and the foreign balances of big industrial concerns cannot hold out indefinitely. Already the Government have been selling marks for buying coal, and this will increase and make the situation worse than ever. If the Government intends to carry the conflict into the winter, it is high time to think of rationing industry and the public with food and fuel.

But frankly, Germany does not contemplate continuing the struggle. For, however possible it might be to do so on the basis of Germany's economic position, the Government is too weak and the morale of the people too seriously undermined. The labour situation, in particular, is bad. The sharp rise in prices without corresponding wage increases, short time, and despair of the political situation have combined to produce a dangerous temper—at all events in Berlin, where the fear of disturbances is very freely expressed. In a small way food riots have begun, and strikes are threatened in connection with the demand for wages to be based on an index number. Unless the present slump can be checked, this demand will have to be granted, and this will, of course, increase the speed of deterioration. It will also have another significant effect. Germany's industry has for some time been in a bad way; output per head has been low, and with political and monetary worries to think about, the workman's heart has not been in his work. But industry has been able to sell cheaply on foreign markets for two reasons. The depreciation of the mark means that fixed interest charges have been practically wiped out—this has occurred so completely that continued depreciation will not bring any further appreciable reduction in cost to German factories on this account; the time lag between the rise of mark wages and mark prices means that labour is losing real wages. If this time lag is abolished by making wages rise more automatically the advantage the manufacturer at present gets in a low wages bill will disappear. Indeed, if labour is paid in gold marks the worker is very likely to make a fight for his pre-war gold wages, and this would mean that wages must rise considerably, for at present wages are far less than their pre-war gold equivalent. Hence there is not much prospect of any exceptional increase of exports as a result of the present or any future depreciation of the mark. The situation may be made a little more tolerable for the wage earner, whose complaint is not so much that he cannot buy food as that he cannot afford to pay for other things; but even an index system of wages will not end the demoralisation spread by the suspicion that someone is making undue profits at labour's expense, or the unrest that comes from the disturbance of men's sense of values.

Morale has, in fact, depreciated with the mark. There is a general feeling that Germany is on the verge of political disturbance. So far as one can see there is no real monarchist feeling outside Bavaria; the Communists command no substantial following, and there is no Napoleon on the horizon. The word on people's lips in Berlin is anarchy. There are enough firearms about to make street disturbances, but not enough to threaten any armed enemy or even to resist the existing German army, whose discipline is much better than a year or so ago. The best selling articles of the day are miniature pistols and sporting rifles, with which men can learn the use of firearms, and perhaps martial exercises. But they will not kill, and the plant for making serious weapons has been so thoroughly destroyed that no considerable armament could be produced in Germany within a year even if left free to devote her energies to that end. But any disturbances

that may occur do not seem to public opinion to have any *raison d'être*. There seems to be no alternative Government that could improve the mark except by way of an agreement with France. A large part of Germany is indeed in a mood to follow the present Government in almost any sacrifice that it would be willing to make to France provided it held out some hope of Germany being able to work for her future recovery. What Germany needs is a ray of hope; and it is for this reason that German opinion is undoubtedly prepared to an increasing extent to contemplate a measure of international control similar to that now being exercised in Vienna. It is, for example, not beyond possibility that the power of fixing rates, &c., on German railways on which their value as a guarantee of payment entirely depends might be surrendered. Indeed, it seems clear that no German Government could, in fact, put through the reforms which are clearly necessary for Germany's recovery without foreign pressure. The question of the form of international control in Germany will be a critical question of the near future. But in this connection it is necessary to repeat and underline what we said last week, namely, that all discussion of international control must be abortive unless in some way or another it can be definitely assured that the control would be really international, and would not in effect degenerate into the predominance of one nation in the control exercised over the financial and economic affairs of another.

OUR INDEX NUMBER.—PRICES FALLING.

THE trend of commodity prices confirms the abundant evidence from other sources of the reaction that has overtaken trade and industry. A substantial decline in our Index Number in June brings the total down to within 40 points of the level at which the year opened. The fall in June amounts to 111 points, and makes the total 4301, which is the lowest recorded since the end of December. The highest point of the half-year was reached at the end of April, with a total of 4440, and the widest fluctuation is 176 points. The average for the half-year works out at 4378½, as compared with an average of 4294½ for the whole of 1922, when the widest fluctuation was 207 points, the higher average for the past half-year being attributable to a large extent to events in the Ruhr, which in the early months produced a sudden demand for coal, iron, and steel at a time when supplies were not sufficient to meet it. This may be seen from the figures for the minerals group in the following table, which rose rapidly until the end of March, and are still substantially higher than at the beginning of the year:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	579	352	618½	464½	553	2568	116.6
" Dec., 1915	897	446	731	711½	848½	3634	165.1
" Dec., 1917	1286½	686	1684½	839½	1348½	5845	265.2
" Nov., 1918	1289	782½	1848½	803	1389½	6212	282.6
" Dec.	1303	782½	1805½	866	1337	6094	277.0
" Dec., 1919	1441½	881½	2442½	1145	1453½	7364	334.7
" Mar., 1920	1508	914	2974½	1246	1709½	8352	379.6
" Dec.	1344	805	1284	1216	1275	5924	269.8
" Dec., 1921	921½	636	1106	762	931½	4357	198.0
" June, 1922	1000½	676½	1135	690	887	4389	199.5
" Sept.	873½	682½	1116	699	818	4189	190.4
" Dec.	861	706	1184½	705	807½	4264	193.8

" June	815½	773½	1177½	773½	761	4301	195.5

Only two groups are now higher than they were at the beginning of the year, namely, minerals and other food. In the case of the latter the rise has been steady throughout the period, and for this the sharp advance in sugar quotations is very largely responsible. The first and last

groups show about the same proportionate decline on balance, but textiles show only a very slight change.

Changes in June were mostly in a downward direction, and, in most instances, of small dimensions, the extent of the decline in the total being in some measure due to one or two sharp falls, notably in silk, pork, and steam coal. In primary foodstuffs the only exception to a general fall was a slight advance in oats, but there has since been some reaction. The improvement in the weather and generally favourable crop reports are responsible for the lowering of quotations for cereals, and meat prices are also easier, there having been a particularly sharp fall, as already mentioned, in pork. In subsidiary foodstuffs declines in coffee, sugar, and butter were offset by an advance in tea. Textiles, where any changes occurred, were higher, with the exception of silk, which has fallen to the lowest point recorded this year. On the position of raw cotton prices, Messrs Robt. Barbour and Brother, Limited, write as follows in their monthly circular:—

The cost of the raw material acts as a block at every turn, and until this has been materially reduced offers and counter offers are for the most part just time and money wasted. The discount on "futures" reveals the weakness of the cotton position and justifies the lack of confidence in current rates, but if relief is to come speedily it will need all the help it can get from a continuation of the more favourable weather advices which have recently come to hand. The first bureau report published at the beginning of the month gave the condition figure as 71.0, which is slightly worse than the average of 10 years, but better than that of the last three. Its immediate effect was bearish, but a reaction followed which hoisted fully middling to 17.28, actually nearly 1d per lb more than Egyptian, and the highest recorded since November, 1920. At this time of the year the market is particularly sensitive to conditions affecting the growth of the new crop, and fluctuations occur, as a rule, almost from day to day. Such is the case at present, from 17.28 on the 12th inst. 16.18 was quoted a week later, 16.80 on the 25th inst., and 16.67 on the last day of the month. Interest is now largely centred on the second bureau report due early in July, and its publication may give a clearer index in regard to the probable course of events in the near future.

Wool prices remain steady, thanks mainly to Continental support at the auctions. On the manufacturing side, however, business is dull. In the minerals section there has been a further cut in Cleveland pig-iron, owing to a revival of foreign competition, but steel rails and iron bars remain unchanged. Steam coal has again dropped substantially, and the minor metals are all weaker, owing chiefly to the withdrawal of American support. A reference to the tin position will be found in a Note in a later column. In the miscellaneous section changes were downward, with the exception of a slight advance in foreign timber. The month's changes in each commodity's index are shown in the following table, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	82	— 4½	Cotton, A	160	+ 10½	Copper	54	— 1

Tobacco	116½	..	Lead	103	— 6			
			Tin	71½	— 6			
Other foods ..	773½	+ 1						

The changes in June have reduced prices to a level which is 67.7 per cent. above the figure prevailing at the outbreak of war in 1914, as compared with 72 per cent. a month ago, 73.1 per cent. at the end of April, and 66.2 per cent. at the end of last year. The relation of the present level of each of the groups to that recorded at

the end of July, 1914, may be seen from the table below:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec.	233	229	209	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6
June, 1922	174	192	184	149	160	171.1
Sept.	151	194	181	150	148	163.5
Dec.	149	200	193	152	146	166.2
Jan., 1923	149	201	196	159	146	168.6
Feb.	146	211	195	172	146	171.6
Mar.	143	214	191	181	144	171.2
Apl.	148	214	195	180	144	173.1
May	150	220	189	176	142	172.0
June	141	223	191	167	137	167.7

Primary food and miscellaneous commodities are still very substantially lower than the average, which is only as high as it is on account of the high level at which textiles and other food stand. With last month's fall, minerals are now just at the average figure.

STANDARDISATION OF ACCOUNTS AND SECRET RESERVES.

An interesting departure from precedent occurred recently in the speech of the chairman of one of our large industrial concerns. It consisted of a direct reference to secret reserves in the accounts under consideration, and was noteworthy in that it was uttered simultaneously with the publication of the recommendations of the Rubber Shareholders' Association on standardised accounts. The reference was brief, and therefore of less consequence than the departure from the custom of keeping secret reserves hidden from shareholders might lead one to expect. It was interesting, however, in that it introduces us to the term "cellar" reserve. Whether this unique and picturesque term will serve to allay the suspicions which trail its synonyms is a matter of doubt; it is certain, however, that its introduction will not lessen the difficulties which hidden reserves place in the way of progress in the matter of standardisation. It is true that the Rubber Shareholders' memorandum made no reference to secret reserves, but it must be remembered that any such efforts towards standardisation can only be gradual, dealing with special aspects after the acceptance of the principles involved. As a matter of fact, it is unlikely that those particular recommendations will be accepted *ex toto* by rubber companies for some time to come, and it is probable that many companies will never endorse them. Under the circumstances, therefore, it is not surprising that such an obstacle as secret reserves should be avoided in the initial efforts of the idealists. Efforts towards uniformity will undoubtedly be made in other industries, and it is likely that similar disappointment and apathy will be experienced; such temporary set-backs, however, should not deter those to whom the appeals of Sir Josiah Stamp for standardisation have been a real incentive to, and promise of, progressive stewardship.

Statisticians and accountants of note who have led the way in the standardisation movement have not placed on record their proposals with regard to secret reserves. Doubtless they have considered it sufficient to urge uniformity in the grouping or dissection of the aggregate information at present disclosed in balance-sheets. It is obvious, however, that as soon as any recommendations are accepted, even by one trade alone, then the question of the hitherto undisclosed information must be dealt with immediately. If it is ignored, then the results of a preliminary reform will be largely nugatory. From a commercial point of view, there is undoubtedly a lot to be said for secret reserves. They have been the means of

warding off much unnecessary anxiety; they have assisted in the equalisation of dividends and in the support of the stability of those undertakings in which public confidence forms no inconsiderable portion of goodwill. On the other hand, they have many obvious disadvantages. The most serious disadvantage is that they tend to destroy confidence in certified trading results as soon as the shareholders learn by implication or by direct information that they exist. Suspicion is aroused that the steady increase in net profits is not necessarily the actual variation from year to year, but the effect of secret provision for reserves in good years and equally concealed writing back in lean years.

In principle there should be no such item as a secret or cellar reserve. The owners of a business should be entitled to full information regarding the affairs of their own concern. The fact that the proprietors of a limited liability company have sunk their individuality in a corporation capable of suing or being sued as a separate legal *persona* should not affect their rights as a body of shareholders to full knowledge of the conduct of their affairs. The word "should" is used advisedly in view of the decision in *Newton v. B.S.A., Limited*, in which it appeared from the judgment that it was not illegal to withhold certain information as to "internal reserves" from the shareholders, although it was *ultra vires* to attempt to forbid auditors to report on all matters connected with the accounts. The judgment of Buckley J. lays down, in effect, that the shareholders are not entitled to full information if the articles authorise the non-disclosure of certain matters, and that the auditors are not bound to disclose that the position of the company is, in fact, healthier than would appear from the published accounts. It is obvious, then, that the matter of secret reserves is likely to prove one of the most formidable obstacles to the attainment of standardisation. Not only may a shareholder be kept in ignorance of the existence of reserves created by excessive writing off, but he may also be kept unaware of the existence of reserves in the form of assets purchased and charged to profit and loss.

At one time it was a practice to set out a statement on the balance-sheet enumerating assets which were held but excluded from the accounts. This disclosure was a compromise between the orthodox full statement, with its attendant risk of loss of goodwill in lean years, and the other extreme of holding up specific assets from the accounts with the rather more dangerous risk of misapplication or *ultra vires* expenditure. Unfortunately, the compromise fell into disfavour, probably on account of the public discussion which ensued on the raising of a *Times* account in the balance-sheet of the London General Omnibus Co., Limited, and at present it is safe to say that in the majority of cases in which secret reserves do exist they are, in fact, secret.

That a solution of the difficulty is a pre-requisite of standardisation cannot be denied, and it is advanced that a return to the "footnote" disclosure method will at least constitute a step in the right direction. Such a movement is likely to meet with strenuous resistance, but the counter arguments necessary will be more readily accepted than those necessary to induce the inclusion of all assets in the balance-sheet itself. To proceed step by step in the reform is the only method whereby the ideal will be realised.

The effect of the creation of secret reserves on the profit and loss account is, of course, a far more difficult obstacle to overcome than the effect on the balance-sheet. Even though the existence of all the assets be disclosed, the use of trading figures by statisticians will be of no avail unless it is known how and when the secret reserve was provided out of revenue. In the case of excessive writing off, it will be necessary to know the proportions of profit set aside each year. It is too much to hope that the initial reforms, when conceded, will extend beyond the balance-sheet, and apart from the necessity of bearing the matter in mind, it seems useless to speculate on the manner in which this more serious difficulty may eventually be overcome. Until both problems are solved, however, economists cannot hope to proceed in their work on the theories, inductive and deductive, which will emerge from standardised accounting procedure and presentation.

INDUSTRIAL ENGINEERING.

MR HOOVER is reported to have said that "half our trouble in industrial crises runs back to the necessity of squeezing the waste out of industry." The idea is old and familiar: but in America it is being applied in new ways and with a new intensity which perhaps deserve attention. A profession of so-called "industrial engineers" has arisen, whose function it is to translate Mr Hoover's maxim into terms of practice. If an ailing business is suspected of organic, and not merely of functional, defects, these consultants are called in to prescribe a remedy. They squeeze the waste out of industry (if one may be pardoned for remembering the phrase) until the pips squeak; and there is a growing suspicion that their methods can be made to result in a prodigious increase of productivity and in a vast improvement in the general standard of life and efficiency.

In this country we are inclined to be sceptical about anything quite so systematic, especially if we are offered only general principles, like Mr Hoover's, without practical illustrations. But if any sceptic will take the trouble to read the autobiography of Mr Henry Ford*, his lethargy is likely to be rudely disturbed. For many years the world has wondered, with a mixture of perplexity and amusement, to what happy combination of luck and judgment the continued expansion of the Ford motor company could be due. The world is now let into the secret; Mr Ford's astonishing exploit turns out to have been nothing more nor less than an immense feat of industrial engineering.

The book has one central idea—to combat in theory, as Mr Ford has combated in practice, the doctrine which another American writer recently expressed in its crudest form, that "the making of goods is conducted for the making of money.....The motive behind production is the ulterior motive of profit." That, says Mr Ford, is precisely the reason why so much business at present is bad business. "It has been thought that business existed for profit. That is wrong. Business exists for service (p. 270).....The essence of my idea is that waste and greed block the delivery of true service. Both waste and greed are unnecessary (p. 19)."

If Mr Ford were content merely to propound such worthy sentiments in general terms, he might be nothing more than a good moralist, or (as others might prefer to put it) "the world's most notorious crank." But what he actually has done, in his factories and in his book, is first to work out in the minutest detail exactly how his central principle can be applied under modern conditions, and, secondly, to prove that the result may be a triumphant success, whether it is judged by his own standards of service and efficiency or by the accepted arithmetic standard of profits. The methods he uses for transmuting good morals into good business are the methods of industrial engineering, and his case against the existing system is not only that the motive is wrong, but that the means are inefficient even for the attainment of the end in view.

Such, in outline, is the tactical plan of Mr Ford's general assault on things as they are. But tactical plans convey nothing of the excitements of battle, and no summary can do justice to the headlong impetuosity of this brilliant work. The book is not by any means a good book. The style is telegraphic or colloquial, the construction slipshod and haphazard; every page is packed with aphorisms and epigrams which often turn out, on closer examination, to be half truths or irrelevances. But the fact remains that Mr Ford has written—or it may be more correct to say that Mr Ford has made and Mr Crowther has written—a great book. The very faults and absurdities, the dogmatism, the exaggeration, the sunny insolence of outlook, have the subtle attractiveness which belongs to the obvious failings of a masterpiece.

The book is full of economic theory, express or implied, which—like the rest of Mr Ford's doctrine—is

* "My Life and Work." By Henry Ford, in collaboration with Samuel Crowther. Heinemann, 1922. Pp. 289.

always original, usually heretical, and sometimes clearly fallacious. Mr Ford's foibles on the subject of finance and financiers are well known. "I have never been able to understand on what theory the original investment of money can be charged against a business (p. 39)..... I have always insisted on the payment of small dividends.I regard business profits above a small percentage as belonging more to the business than to the stockholders (p. 161)..... Bankers play far too great a part in the conduct of industry. The danger of having bankers in business is that they think solely in terms of money. They think of a factory as making money, not goods (p. 176)..... Lawyers, like bankers, know absolutely nothing about business (p. 224)." All these are foibles, if you will. But there is no denying that the total amount of capital subscribed in cash to the Ford Motor Company was about twenty-eight thousand dollars—"which is the only money that the company has ever received for the capital fund from other than operations (p. 51)." And so with the rest of Mr Ford's paradoxical notions; somehow they very often seem to work. If any of his readers are as modest as himself they may be inclined to agree with another of his conclusions: "I am not prepared to dogmatise on the subject of money and credit. As far as money and credit are concerned, no one as yet knows enough about them to dogmatise (p. 178)."

But Mr Ford's most characteristic achievements have to do not with finance, but with management and factory control. On these subjects he gives facts and figures in great detail, and again manages to make the whole romantic story seem to be the inevitable outcome of a few simple ideas consistently applied. Here, too, conviction and experience have led him to original conclusions. "We do not have piecework (p. 126)..... We do not bother about costs (p. 146)..... The six-dollar day wage is cheaper than the five (p. 147)..... We have found that buying ahead does not pay. It is not worth while to buy for other than immediate needs (p. 143)."

To many readers the most surprising and delightful chapters of this book will be those which have to do with birds and farming, hospitals and prisons and charity, and a host of other subjects treated by the way. They reveal a personality which is almost laughably charming and simple. And what is one to say when one finds a motor millionaire and "industrial engineer" exclaiming that "economy is the rule of half-alive minds. There can be no doubt that it is better than waste; neither can there be any doubt that it is not as good as use. People who pride themselves on their economy take it as a virtue. But what is more pitiable than a poor, pinched mind, spending the rich days and years clutching a few bits of metal? What can be fine about paring the necessities of life to the very quick? Economy is waste. It is waste of the juices of life, the sap of living."

CANADIAN EXPORTS AND SHIPPING RATES

(FROM A CANADIAN CORRESPONDENT.)

IF the Canadian delegates to the forthcoming Imperial Conference do not raise in acute form the question of shipping rates and their effect upon inter-Imperial trade, they will be held to be neglecting their duty by a large body of Canadian public opinion, which is deeply exercised on the subject. The researches of a special committee appointed this session by the Federal House of Commons to investigate agricultural conditions and grievances disclosed convincing proof of the existence of an omnipotent shipping combine which controls the North Atlantic traffic and fixes rates according to its will. The representatives of the companies involved meet every week in New York, and there is a subsidiary meeting each week in Montreal, which has power to make minor adjustments in connection with the St Lawrence route. The shipping companies did not attempt to deny the existence of a rate-fixing combination among them, but vigorously defended the right of the owners of vessels to sell their space for the highest price which can be exacted. "Space

is a commodity; the laws of supply and demand must govern the price," was the view most strenuously expounded.

But the law of supply does not always operate very effectively when the shipping managers get together once a week and fix rates for the next week on the principle of "all that the traffic will bear." The Parliamentary Committee, in its report, drew special attention to two cases. By the orders of the North Atlantic Conference, which claims that it has to meet special rates established by the U.S. Shipping Board, Canadian flour has for some months been penalised, even when shipped from Canadian ports, by a differential of 4 cents per 100 pounds, as against the rate charged American flour, and the most amazing circumstance of all is that the officials of the Canadian Government Mercantile Marine cheerfully obeyed this ukase.

The report of the Committee also showed that when cattle shipments began in the spring the main object of the shipping companies seemed to be to put up the freight rates to a level which would enable them to reap the last cent of advantage from the withdrawal of the British embargo against Canadian cattle. Last winter cattle were shipped from Portland, Maine, to British ports at \$15 per head, and it was proclaimed all over Western Canada that this rate would not be exceeded, and might even be substantially reduced. But soon after the British embargo was removed, and shippers began to inquire for cattle space, the rate jumped to \$20 per head, then to \$22.50, to \$25, and an attempt was made to bring it up to \$27.50. The shipments of cattle are now made from Montreal, which is practically the same distance from Liverpool as Portland, and the rate has now fallen to \$20, which is just twice the highest rate charged in the pre-war years.

In face of these high rates, the cattle shipments from the St Lawrence ports have not to date exceeded 8,000 head, a sad downfall from the enthusiastic predictions of the Minister of Agriculture and his officials, who prophesied that forty or fifty thousand cattle would be shipped from Canada to Britain before midsummer. Authoritative agriculturists declare that many more cattle are available for shipment, and there seems little doubt of the existence of a correlation between the meagreness of the shipments and the manifestation of an intention on the part of the shipowners to demand excessive rates. Now the majority of the lines involved are ultimately controlled in Britain. Here is a trade with great possibilities, in which the farmers of Canada are deeply interested. Its development would strengthen the commercial ties between Canada and Britain, and would give a much needed fillip to Canadian agriculture. The natural assumption would be that every interest involved—transport as well as financial and political—would be eager to help the trade over its early difficulties of revival, and render it every assistance to get on its feet. No attention seems to have been given by the shipping lines to the possibility that high rates might kill the trade in its infancy; all that could be seen was the prospect of picking up a few dollars and swelling dividends. The shipping companies are not alone in this short-sighted view; the space brokerage and insurance agencies have been playing exactly the same game.

Now, if the Canadian cattle trade is left to the mercies of this modern version of the operation of the law of supply and demand, it will struggle along against the perpetual uncertainty of rates, and the perpetual certainty that they will be adjusted from time to time to deflect the legitimate profits of the cattle raisers to the treasuries of the shipping companies. The farmers will gradually cease to cater for it, and turn their eyes once again to the American market, which they know, if it can be reached, will be much more valuable to them. Speaking in the Canadian House of Commons on June 14th, Mr W. C. Good, a leading member of the Progressive party, in discussing the Budget resolution offering a measure of reciprocity to the United States, said:—"If we do not have commercial union with the United States in a reasonable time, I do not think we are likely to be able to maintain the Canadian Confederation. In my judgment, we may have political union instead with the United States. I do not want to see that. I would like to see the experiment of confederation work out, but

I do think that a very large measure of commercial union with the United States, with all that it involves, is an absolute necessity if we are to preserve our political integrity."

If shipping interests are allowed to make the British market valueless to the Canadian farmer, he will soon become desperate to secure access to others, and might reach a frame of mind wherein he would pay any price demanded. Under the conditions which now exist it will be perfectly futile for the forthcoming Imperial Economic Conference to discuss the possibilities of further extension of the preference system; any sacrifices which the British public might be asked to make would enure not to the benefit of the Canadian farmer, but to British shipping companies.

Among the recommendations in the final report of the Special Committee on agricultural conditions are the following:—

(1) That action is desirable to control shipping rings or conferences.

(2) The Canadian representatives who attend the next meeting of the International Institute of Agriculture should be authorised to initiate a thorough discussion of the problem and explore the possibilities of an international system of control.

(3) The problem should be taken up at the forthcoming Imperial Conference, and an effort made to secure concurrent action by the British Government.

(4) The Federal Department of Trade and Commerce at Ottawa should entertain complaints from shippers of unfair or oppressive treatment by ocean carriers, and should hold investigations, either privately or publicly, into such complaints.

(5) A certain number of the ships of the Canadian Government Merchant Marine should be operated in connection with the Canadian National Railway system, and the freight rates on such ships be fixed at a level which will include the operating cost plus a reasonable profit based upon the present value of each ship. It is argued that the ocean service thus given by the State ships would tend to keep rates down to a reasonable basis and serve as a deterrent to the levying of unreasonable rates by other lines, and that the knowledge thus secured by the Government about the actual cost of ocean transportation would help it to determine whether the rates charged by other lines were extortionate.

There is real anger in agrarian circles at the discovery that the Government has permitted the national marine to become a participant in the combine. The said marine, however, is the prize lame duck of the shipping world. In the calendar year 1922 it showed an operating deficit of \$2,384,189, and when interest on capital, depreciation, and other charges were allowed for the total gross loss for the year was \$9,649,478. In 1921 the loss was only a little less, and there is apparently no immediate prospect of any serious improvement in the position. Mr Duff, a Liberal shipowner who claimed that the adventure had cost the country 69 million dollars to date, argued that the Government should at once lay up all the ships and sell them at what they would fetch, but his advice was suspect as not disinterested. The State fleet is now under the management of the directorate of the Canadian National Railways, and they have decided upon a compromise policy. They are offering for immediate sale 27 of the smaller ships, and are keeping the remaining 38, of which eight will be fitted up at once to provide a cattle service between Montreal and Cardiff. The Manitoba *Free Press* and other Western papers are strongly opposing the abandonment of the enterprise. They take the view that the Canadian National Railways need a complementary fleet if they are to have a chance in competition with the C.P.R., which has 440,000 tons of shipping at its disposal. They demand that such vessels as are efficient and can be operated at a profit on a reasonable capitalisation should be retained as a weapon against the North Atlantic shipping combine, and as a safeguard against extortion. But they unite in demanding that the Imperial Economic Conference should make the examination of the shipping situation one of its first tasks.

RUBBER PRODUCING COMPANIES IN 1922.

EVENTS have moved so rapidly in the rubber-growing industry that what happened in 1922 is practically ancient history. An examination of the reports and accounts of a number of companies, however, does make us realise the extent to which the "black year" in the plantation industry affected the finances of these undertakings.

The year 1922 opened for the rubber industry with large

stocks on hand and prices low. Mainly, it is claimed, as a result of legislative control in Ceylon and Malay, supplies have been restricted to such a level as has compelled consumers to pay about double for the material. Briefly put, the statistical story of 1922 is that the production of plantation rubber amounted to about 345,000 tons, with an additional supply of 25,000 tons of wild rubber. The world's consumption was estimated at 375,000 tons, of which America took 75 per cent. This was a total increased consumption of 115,000 tons, of which America was responsible for 100,000 tons.

A more detailed story of the year may be gathered from the accounts of a few representative rubber-growing undertakings, and for this purpose we have selected eleven companies, which include some of the most important concerns in the industry. In our first table we set out the production of rubber during the past three years, together with the price per lb at which crops were sold. Figures for 1914 are also appended:—

Company.	Production.				Price per lb.		
	1914.	1920.	1921.	1922.	1914.	1921.	1922.
Anglo-Malay.....	1,394,382	1,430,807	814,209	1,199,767	2 1/2	0 8/8	0 10/8
Chersonese.....	537,646	553,267	504,891	502,133	2 1/2	1 5	0 9/8
Cons. Malay.....	584,050	1,070,989	842,805	905,362	2 1/2	0 8/8	0 9/8
Golden Hope.....	174,133	461,824	233,446	343,759	2 0/8	0 8/8	0 9/8
Highlands & Lowlands.....	1,137,858	1,533,919	1,215,779	1,171,977	2 2/8	0 11/8	0 11/8
Linggi.....	1,389,290	2,804,217	2,175,728	2,256,547	2 1/2	1 0/8	0 11/8
London Asiatic.....	1,131,430	1,605,830	1,426,257	1,335,145	2 1/8	0 9	0 11/8
Selangor.....	614,199	868,833	656,554	642,000	2 2/8	1 9	1 6
Shellford.....	157,130	360,915	325,525	380,263	2 1/8	0 8/8	1 1/8
Sungei Kapar.....	658,616	905,883	722,467	664,503	2 2/8	0 9	0 10/8
United Serdang.....	1,827,943	3,789,951	2,876,188	2,562,227	2 3/8	0 9/8	0 9/8

It is instructive to make a comparison between the prices obtained for rubber and production costs. For this purpose we set out below the cost of production per lb. over a period of years of a few companies:—

COST OF PRODUCTION per Lb.														
	1913.		1914.		1918.		1919.		1920.		1921.		1922.	
	s	d	s	d	s	d	s	d	s	d	s	d	s	d
Anglo Malay	1	0/38	0	10/45	0	10/25	0	9/21	0	11/07	0	10/78	0	6/27
Consolidated Malay	1	0/61	0	11/93	1	1/17	1	0/70	1	2/69	0	9/24	0	6/72
Golden Hope	1	2/18	0	11/23	1	2/87	0	8/81	1	2/11	0	7/71	0	8/25
Highlands & Lowlands	0	11/53	0	9/29	0	10/83	0	7/52	0	10/95	0	7/20	0	7/38
Linggi	0	7/3	0	9/54	1	2/20	0	11/21	1	0/43	0	9/41	0	7/25
London Asiatic	1	4/76	1	0/83	1	1/64	0	10/12	1	0/14	0	9/33	0	8/47
United Serdang	1	4/56	0	11/84	1	1/88	1	0/86	1	2/22	1	1/97	0	7/45

It may be noticed that, with the help of the companies concerned, we are able to supply in the two above tables statistics which cannot be found in reports. We would again suggest that next year this information might be made available to shareholders in the annual accounts. It is now generally recognised that frank publicity is the best way to keep the confidence of the investor.

The next table shows net trading results over a number of years:—

NET PROFITS after PROVIDING for all EXPENSES.							
	1912.	1913.	1919.	1920.	1921.	1922.	
	£	£	£	£	£	£	£

United Serdang	72,596	112,813	107,726	98,225	Dr 66,607		18,775

After the adverse year experienced in 1921 many companies have taken advantage of better results to add to various reserves. The Anglo-Malay transferred £10,000 to income-tax reserve; Chersonese allocated £3,000 to "Reserve for Development"; Linggi places £20,000 to general reserve and £2,500 to income-tax reserve, while London Asiatic provides £15,972 for reserve purposes. The Selangor Company places £6,000 to taxation reserve and £1,000 to depreciation, out of profits, but other companies apparently allow for depreciation before striking profits. Reserves of the United Serdang benefit by £22,665, £20,000 going to taxation reserve, and the balance to writing off capital increase expenses. Our table somewhat obscures the position of this last com-

pany. In addition to the trading profit of £18,754 recorded above, £24,022 was brought into the accounts, being refund of excess profits duty. Thus including £17,072 brought forward, a total of £59,848 was available for distribution.

Our final table shows the trend of rubber share prices during the past few years. Quotations in July, 1914, are added for comparison:—

Name.	Prices of 1921.		Prices of 1922.		Price July 27, 1914.	Price July 27, 1922.	Price Aug. 16, 1922.	Price June 29, 1923.

With reference to the future, in a recent speech Mr H. J. Welch, the chairman of the Rubber Plantations Investment Trust and an authority on the industry, estimated that the demand for rubber in the current year would be not less than "400,000 tons, and will be the highest ever reached. It may considerably exceed even that figure. In this connection I may remind you motor-car registration in America increased in 1922 to the colossal figure of 12 1/2 million, and it is estimated that not less than 3,000,000 new cars will be built this year—an estimate supported by the actual production up to the end of April. The total number of automobiles in use in the rest of the world is probably not far short of 3,000,000, and is steadily increasing. This increase is likely to be accelerated during the next few years, because motor transport is everywhere competing most successfully with horse transport, on the one hand, and railway transport, especially for short hauls, on the other." But he warned his hearers that the rubber industry "is only convalescent, not cured. Whilst the industry depends on Government restriction of part only of the sources of supply, it rests upon an artificial basis, and not upon the more healthy foundation of supply and demand. Our real hope lies in increase of demand, brought about by extension of the present uses and the discovery and development of new uses of our product. Not until, as a result of these, the demand equals the unrestricted supply at a profitable price will the industry rest upon a satisfactory commercial basis, nor will its position be considered sound by those who take the long and broad view of the matter."

AGRICULTURAL PRODUCTION IN ROUMANIA AND HUNGARY.

THE problem of agricultural production in Eastern Europe is one of very considerable interest alike in its bearing on the world's food supply and on the general economic rehabilitation of the Old World. In the quinquennial period 1909 to 1913, Russia alone contributed no less than 22 per cent. of all the wheat and wheat flour which entered into international trade, this being not so very inferior to the exports from Canada and the United States combined (over 4 1/2 million metric tons annually, as against some 4 1/2 million tons); Roumania occupied the fifth place with over 1.4 million tons, a total slightly greater than that of India or Australia. Roumania also came third as a maize-exporting country, with an average of nearly a million tons, the Argentine coming first with nearly 3 million tons, and the United States second with just over one million.

At present Russian exports are negligible in comparison with the pre-war figure, while the new Roumania, which has acquired the rich corn province of Bessarabia from Russia, and a by no means inconsiderable portion of the Banat from Hungary, contributes far less to international trade than did the Old Kingdom. The future of agricultural production in these countries gains still further in importance when it is remembered that the export of grain provides the main source of purchasing power with which the import of manufactured goods from the West is

financed. Reliable statistics as to Russian conditions are not yet available. This makes a detailed consideration of Roumanian production all the more interesting, particularly as the country has undergone an agrarian revolution of very considerable magnitude, involving up to the present the expropriation of over 12 million acres of land, and the creation of small peasant holdings in place of the large estates which formerly played a predominant part in the National economy. Much has been written upon the "Green Revolution," which has swept across Eastern Europe as a consequence of the war, and which is usually regarded as likely to prove fatal to agricultural production. Roumania is probably second only to Russia in the thoroughness with which the peasant has "come to his own," while Hungary remains as an island of vast estates in a green sea of "agrarian reform." Particular interest thus attaches to a comparison of agricultural production in these two countries, especially as Roumania has certainly suffered at least as much as Hungary from the economic dislocation caused by the war. Shortage of seed and of agricultural implements is common to both countries, while the Roumanian contingent of domestic animals was more reduced by the enemy occupation than was the case in Hungary, as the following statistics show:—

	DOMESTIC ANIMALS (000's omitted).					
	Greater Roumania.			Hungary.		
	Last Pre-War Census.	1919.	1920.	1921.	1911.	1920.
Cattle.....	5,647	4,634	4,876	5,721	2,148	2,222
Horses.....	2,254	1,380	1,485	1,687	895	746
Pigs.....	3,406	2,289	2,514	3,132	3,320	3,729
Sheep.....	12,896	7,791	8,690	11,194	2,406	1,817

The figures refer throughout to the areas at present included in Hungary and Roumania respectively. While the Hungarian returns for 1920 compare in the main quite favourably with the last pre-war census, the Roumanian totals give some slight indication of the extent of the loss inflicted by the war on that country. They also show the remarkable recovery which has taken place since 1919.

With a contingent of cattle and horses so much nearer the pre-war level, we might have expected a considerable superiority in the area under cultivation in Hungary, as compared with Roumania. The actual statistics, however, do not substantiate this, as the following table shows:—

	SOWINGS of CEREALS (in Thousands of Acres).				Hungary.			
	Average 1909-13.	1920.	1921.	1922.	Average 1911-15.	1920.	1921.	1922.
Wheat.....	8,739	4,998	6,149	6,547	3,732	2,662	2,695	2,854
Rye.....	1,198	780	807	659	1,679	1,476	1,370	1,340
Barley.....	3,364	3,450	3,878	4,269	1,297	1,266	1,187	1,129
Oats.....	2,129	2,388	3,062	3,295	850	802	806	818
Maize.....	9,551	8,143	8,510	8,411	2,122	2,017	1,975	1,716
Total principal cereals.....	24,981	19,769	22,406	23,181	9,682	8,222	8,033	7,857

By taking the average of the quinquennial period 1911-15 as the basis of comparison for Hungary†, the falling-off in production is slightly less marked than it would have appeared had the same base been taken as in the case of Roumania. This fact, however, only makes the general result the more surprising. After making due allowance for the changes effected in the area of the Old Kingdom of Roumania by the Treaty of Bucharest in 1913, the post-war sowings of the two countries represent the following percentages of the respective pre-war averages:—

	Greater Roumania.			Hungary.		
	1920.	1921.	1922.	1920.	1921.	1922.
Wheat.....	% 54	% 67	% 72	% 71	% 72	% 76
Rye.....	64	66	54	88	82	80
Barley.....	100	110	120	98	91	87
Oats.....	110	141	151	94	94	96
Maize.....	85	88	87	95	95	81
Total principal cereals.....	77	87	90	85	83	81

* The Hungarian law of "Agrarian Reform," so-called, had led to the distribution of less than 200,000 acres by the end of 1922.

† This is the figure given in the "Annuaire Est-Européen" (Budapest), 1922, p. 64.

Over a short period, the area under cultivation provides a safer guide than the crop returns, though the latter also bear out the general conclusions which may be drawn from the above table. The remarkable fact is that if we take the total of the principal cereals—and these represent almost nine-tenths of the cultivated area in both countries—the Roumanian figure has approached more nearly to the pre-war level than has that of Hungary, and this despite the fact that agrarian reform is popularly supposed to have paralysed agriculture in the country. Of course, it would be dangerous to draw any very definite conclusions from the statistics of three abnormal years, and, whatever the ultimate consequences of the reform, there can be little doubt that the change from one régime to another must operate as a disturbing factor. At the same time, it is surprising that the disturbance has not been greater. While Hungary may suffer more from a shortage of fertilisers than Roumania, we have already seen that her contingent of live stock was considerably superior, and a shortage of proper seed and of agricultural implements was certainly no less acute in Roumania after the war than in Hungary. Moreover, the transport system of the former country was much more seriously disturbed as a result of the war than was the case in the latter. In a word, it seems quite possible that the lack of a proper solution of the agrarian question, which is very acute in Hungary, has proved at least as disturbing a factor in the psychology of the rural population as has the actual operation of the reform in Roumania.

The decline in the area down to wheat is more noticeable in Roumania. On the one hand, wheat is not a favourite crop of the peasantry, and on the other the existence of a high export tax on this cereal has greatly favoured the expansion of oats and barley. The falling-off in the area down to rye is noticeable in both countries, but more particularly in Roumania; while the poor acreage of maize in 1922 reflects the failure of that crop in the previous year. On the whole, however, maize, which is the principal food of the Roumanian peasant, has been remarkably constant in that country.

While the changes in land tenure appear to have had much less effect on the acreage under cultivation than has generally been supposed, there will in all probability be much less corn available for export for some years to come. Before the reform, the standard of living of the peasantry had been very low, and a change may well be expected in this respect which will tend to restrict the surplus available for export. On the other hand, there are signs that the number of domestic animals is likely to increase under peasant proprietorship. Thus, while the total production is not likely in the long run to be adversely affected, it appears as though the direction of production will change considerably as a result of the new agrarian legislation.

Notes of the Week.

Labour Unrest.—The principle of collective bargaining on which the smooth working of British industry so largely depends, has once again been called in question. On Monday last an unauthorised strike of dockers began in four ports, and had spread by Tuesday to London. It was declared that this action had been undertaken as a protest against a wage reduction which became operative this month. The wage agreement which holds at present was negotiated 12 months ago, and was subsequently ratified by a delegate meeting. This instrument authorised a reduction of 2s a day in dockers' wages, the first shilling to become effective in October, 1922, and the remainder in June, 1923, if the cost of living had then fallen to 69 points above the pre-war level. The first cut became operative nine months ago, in accordance with the agreement, but as the cost of living last month stood at 70 points above pre-war, the second cut did not then come into effect. This month, however, the cost of living figure had come down to 69 points, and accordingly the employers reduced dockers' wages by 1s a day (that is to say, from 11s to 10s a day). This was expressly warranted by the terms of the agreement; and the action of certain of

the dockers is a direct challenge to the authority of their accredited leaders. Complaints are being made that the official cost of living figure does not correspond to the realities of the case, while in some ports full employment seems to be the exception rather than the rule. At the same time, a strike which, it should in justice be remembered, is only partial even though it involves some 40,000 men, does not appear to be the proper manner to ventilate grievances whether real or supposed. Irresponsible agitators are finding a powerful auxiliary in the heat wave which the country is now enjoying, but it is much to be hoped that common sense will prove stronger than climatic change, and that the men will obey the instruction issued by the National Committee of the Dockers' section of the Transport and General Workers' Union by resuming work on Monday next. In contrast with this deplorable lack of discipline and reason in the dockers' dispute, it seems at present to be probable that the various points at issue in the railway world will be solved by the existing machinery of conciliation. The question of the railway shopmen, who were not included in the national agreement, seems to have advanced a step further towards a reasonable solution by the attitude adopted by the National Union of Railwaymen. On Wednesday last this body carried a proposal that the further reduction of the shopmen's bonus of 6s 6d a week should be referred to the same machinery as exists for the traffic grades. This attitude of "sweet reasonableness" is in marked contrast to the intransigent position recently adopted in certain quarters, and an appeal to a system of conciliation which has fully justified itself in other directions is one not lightly to be set aside. In addition to this rather special question of shopmen's wages, a new issue has arisen as a result of the new proposals made by the railway companies for a reduction in the wages of the conciliation grades. It should be noted that the basic wage rates are not affected by these proposals, which are concerned primarily with such questions as the daily mileage of locomotive men, which allow of extra earnings which the companies consider to be excessive under existing conditions. In accordance with the terms of the Railway Act of 1921, these questions are first being referred to a joint meeting of the companies and the men. As the Act also provides further machinery in the event of this preliminary step failing to achieve the desired end, and as there appears to be a determination on both sides to utilise this constitutional machinery to the utmost, it is not too much to hope that the questions at issue will be settled without strife. The policy adopted by the railwaymen during the last two years saves the country endless expense, and is of great benefit to the railwaymen themselves no less than to the community at large. It is an example of the efficacy of collective bargaining when combined with the discipline necessary to guarantee its enforcement—an example which may be recommended to the attention of the dockers at this present juncture.

Irish Free State Finance.—Our Dublin correspondent writes:—The Irish revenue returns for the first quarter of the financial year, now available, are being scrutinised closely for evidence of the general consequences of the new fiscal and financial system. The obvious basis of comparison is the first quarter of the last financial year, when Ireland was still enjoying the peace which followed from the Truce and the Treaty, and had not yet been made the victim of the irregular campaign against order and property, trade, commerce, and railways. The comparison is unquestionably satisfactory, so far as it goes, both in its bearing upon the recuperative power of Ireland's economic life and in regard to the merits of the new system. Its value is unmistakable at the present moment, when the extent and solidity of Ireland's resources are being widely canvassed in regard to projected national borrowings. Receipts for the first quarter of the current year, omitting balances in the Exchequer on April 1st and certain minor borrowing operations, amount to £7,516,019, against £5,125,918 for last year. Customs receipts have increased from £539,000 to £1,775,000, and Excise receipts have fallen by £425,000. Property income-tax is up from £740,000 to £885,000. Stamps have increased from £82,000 to £124,000, a valuable

indication of improving business. The increase in receipts in respect of land purchase annuities and sundry loans from £140,900 to £947,505 testifies to the admirable firmness of the administration in enforcing contracts with the State. All other items show increases. It must be remembered that Customs, Excise, and income-tax previously were all subject to adjustment to convert revenue as collected into true revenue—there will be no such adjustment in future. At one time these adjustments operated to swell the collected Irish totals; recently they are alleged—the figures were not all made quite clear—to have operated to diminish them. The increase in income-tax receipts is interesting, having regard to the numerous complexities and obscurities of the law and regulations dealing with the subject and with the avoidance of double taxation. Probably, however, the new system has not made itself fully felt in this regard at present, and the increased receipts are not unlikely to be due to collection of arrears. For if the new system is to hit Ireland anywhere, it will be in regard to income-tax and estate, &c., duties. But, making every allowance for unascertained factors, a 50 per cent. increase in the first quarter's revenue is a noteworthy phenomenon upon which the Irish Free State is to be congratulated. On the other side of the account expenditure has increased from £3,531,153 to £8,688,700, an increase due entirely, or almost entirely, to outlay of an emergency or non-recurrent character on army and police work for the prevention of disorder and in payment of compensation awards. The balance in the Exchequer on June 30, 1923, was £228,431. It is believed that the Government has arranged with the banks for financial accommodation, so far as may be required, pending the General Election and a subsequent national loan. The Government has taken the first step towards the formulation of a new fiscal policy for Ireland. It has set up a Fiscal Inquiry Committee, consisting of Professor Smiddy, of Cork, Professor Bastable, of Trinity College, Dublin, and Professor Henry, of Belfast, with two junior academic economist representatives of Trinity College and the National University. The Committee, which has already held some preliminary sittings, is at pains to inform the public that its functions are not the formulation of a national fiscal policy, but rather to ascertain facts and to report on proposals submitted to it. The chairman states that they are engaged in considering the Safeguarding of Industries Act, 1921—borrowed bodily from Great Britain—and are awaiting evidence from individuals in the country who might desire its repeal in part or altogether, and that as soon as they get that evidence they will proceed forthwith to investigate it and report on it.

Russia and the Oil Trade Disagreement.—Whenever the oil trade is concerned in a dispute passions run high, particularly when the dispute concerns Russia. Now that the Soviet Trade Agreement has received another lease of life and the contending oil parties another lease of disagreement, it seems opportune to review the rival positions. The present phase of the dispute is concerned with oil products, not with the oil properties. The flutter at the Genoa Conference, it will be remembered, arose from the former, and a Franco-Belgian syndicate was formed to protect mutual oil interests in Russia. At the time of the Hague Conference, which succeeded Genoa, this syndicate secured the adherence of the Royal Dutch-Shell group to the idea of an International Defence Committee, in which big trusts and little firms alike joined up in one united family of "former oil proprietors in Russia." Members of this committee pledged themselves to do all things in common in negotiation with the Soviet Government, each swearing to do nothing to enrich himself at the expense of the other. But since that date exports of refined oil from the Baku fields have been made in considerable quantities. A firm of "independent" oil merchants in London began to trade, and finally made a contract, in April of this year, for 30,000 tons of kerosene. As dictators of the British oil markets, the Shell group were roused to Napoleonic action, and one of their subsidiaries closed with the Soviet Government for the balance of their exports of this product. Moreover, it demanded the cancellation of the contract with the "independent." The members of the International Defence Committee

accused the Royal Dutch-Shell of bad faith. While this acrimonious dispute was raging the "independent" firm entered into an agreement with the (official) Russian Oil Syndicate for the formation of a mixed company to handle in future years a certain quantity of Russian exports on a commission basis—100,000 tons in the first year, 150,000 tons in the second, and so on. One fancies that this arrangement is more after the Soviet heart, for it gives the official syndicate control of the exports and does not bind it to any firm quantity. There matters stood when Lord Curzon sent the British ultimatum to Moscow. While Lord Curzon and M. Krassin were composing the political differences, the Shell group deemed it wise to compose their own differences with the "independent" firm. An arrangement is said to have been made between the two, which saves the market—for the Shell. The Shell objections to the "independent" contracts with the Soviet were withdrawn. The last act in this complicated drama is said to have been an offer by the Shell for the pipeline between Baku and Batum. The pipeline needs much repair, but even so the Soviet would hardly give virtual control of their exports to a foreign capitalist concern. The Shell Transport and Trading Company and the Royal Dutch in their annual reports deal frankly with the criticisms that have been passed on their Russian behaviour. Literally they are, it appears, correct in saying that the resolutions of the International Defence Committee referred to oil properties, not to oil products. "From the very earliest discussions in regard to co-operation," write the directors of the Royal Dutch, "we have emphatically stated that we reserved to ourselves complete liberty in regard to the purchase of products." But the members of the committee have urged that the Royal Dutch-Shell action has prejudiced the interests of the dispossessed owners, which it had sworn not to do, that if the combine had joined in a general boycott of the Soviet oil exports the Soviet Government would have been compelled "by economic pressure" to restore the oil properties. But is that likely? There could have been no general boycott of Russia without a thorough-going war and blockade. Independent oil merchants, who were not members of the Defence Committee, had long been trading with the Soviet, and could not reasonably be prevented. It is quite possible for Russian oil to find markets in Central Europe, while the restrictions on Roumanian exports continue and the high cost of freight rules out American products. There may conceivably arise economic pressure of a different and better kind. Out of an annual output from the Russian oilfields before the war of about 7-8,000,000 tons, less than 10 per cent. was available for export. The production was approximately 3,853,000 tons in 1920, 4,416,000 tons in 1921, and 5,316,000 tons in 1922, and exports have not reached

5 per cent. of these figures. Stocks of oil have fallen from 400 million poods, with which the Soviet started their operations, to 20-30 million poods (322,000 to 483,000 tons) at the end of 1922, and unless production is speeded up the export of such quantities as 200,000 tons of kerosene would lead quickly to the exhaustion of the refined oil stocks and a serious shortage of exportable oil next year. But without outside help production cannot be quickly speeded up. The drilling operations at Baku of the American Barnsdall Corporation are for the time being suspended, because the corporation failed to obtain the quantity of oil that the Soviet stipulated for in their contract. No quick improvement in production can, therefore, be expected. If the Soviet Government finds itself confronted with a domestic famine of heavy oil and a shortage of refined oil for export—that is the sort of economic pressure that is more likely to bring about the return of oil properties to their former owners.

The Turkish Elections.—As the results of the Turkish elections are progressively published, it becomes clear that the expected overwhelming victory of Mustafa Kemal Pasha's party ("The Defence of Rights") is going to be realised. Anti-Kemalist disturbances are reported from Adana, in Cilicia, in connection with the voting, and these may be due to economic hardship produced by the rigid closing of the new Turco-Syrian frontier, which is known to have been injuring trade on both sides of the line. The distress here, however, can hardly be so great as at Smyrna and Constantinople, in both of which cities the Government candidates appear to be having things their own way, and this must mean that the opposition are carrying out their policy of "wait and see." Possibly there may be deputies elected on Kemal Pasha's coupon who will not prove so complacent towards him when they take their seats, but his most formidable opponents, the surviving leaders of the old Union and Progress party, are likely to remain in retirement until the hero of the Greek War has had time to make the probable mistakes, and incur the inevitable unpopularity of the reconstruction period. The previous Union and Progress Government attracted to itself all the odium of Turkey's disastrous participation in the European War, and thereby provided an admirable foil to Mustafa Kemal when he stepped forward as the saviour of the nation from the crimes and blunders of his predecessors. Until his *beau rôle* has begun to tarnish in turn, they would only be incurring risks without the chance of profit if they openly challenged his position. Hence Kemal Pasha and his friends may be expected not only to return to power, but to stay there for a year or two; and the elections have no direct bearing on the Conference at Lausanne; while, on the contrary, the outcome of Lausanne is bound to have an important effect upon the internal politics of Turkey after the elections. Turkey is desperately in need of constructive economic activities, but it is practically impossible for her to embark upon them without the assistance of foreign capital and technique. If these are not forthcoming (as they will not be, if the signature of peace leaves the foreign investor and *entrepreneur* distrustful and unfriendly), and if the "boom," to which all classes of the Turkish population are looking forward, consequently fails to appear, there will be a wave of disappointment and resentment by which the Government of the day will be shaken, if not overthrown. At present the Turkish nation is demanding both the assertion of national sovereignty over foreign interests in Turkey, and also the intensive economic development of the country to degrees which are hardly compatible when carried to such extremes; and the Turkish Delegation at Lausanne have been faithfully executing the policy of their constituents. But public opinion is inconstant and ungrateful, and Governments have often been punished for translating mistaken national aspirations too successfully into fact. If this fate eventually overtook the Government of Mustafa Kemal, the Unionists might find a new chance, or else Turkey might enter on a period of political and economic revolution, like that through which the Balkan States and the South American Republics have all had to pass after their liberation, and through which China is passing to-day.

Reporting of Transfers of Land.—A correspondent writes:—The discussion in the Commons on Tuesday on Sir Wm. Bull's amendment to the Finance Bill resulted in a confirmation of that amendment. Few, reading Section 27 of the Finance Bill, would realise how much is affected by it, for it reads only as follows:—"As from the commencement of this Act, such parts of section four of the Finance Act, 1910, as are not repealed by Section 57 of the Finance Act, 1920, shall be repealed." The reference to the Finance Act, 1910, C.4, has to do with the "collection and recovery of duty in cases of transfers and leases," in connection with the payment of Increment Duty. That duty was withdrawn, with the other land values duties, but the valuation department was still empowered to get copies of the terms of transfer of any land. The object of Sir Wm. Bull's amendment is to do away with this last obligation, which, of course, involves a slight expense in each transfer for a copy of the terms. Hence the proposal to wipe out what remained of C. 4 of 1910, after Mr Chamberlain's Finance Act of 1920. The amendment would do much more than it seems to do. Apparently Sir Wm. Bull would save £500,000, which reporting transfers imposes annually on landowners in preparing terms of transfer; but he knows as a practitioner that not only the Government departments, but all our public authorities, would thereby lack the guidance now at hand on the price paid and value of land. The Probate Office uses the returns to assess estate duty on land values, and the local and other authorities have a guide to the values of property required for public purposes. This knowledge of values, from actual transactions, as Mr Chamberlain said, the landowning fraternity, through Sir Wm. Bull, would keep from the public, and the motive is patent. The whole matter of valuation periodically, and of registering sales and transfers of land, will surely not be left as this Finance Bill leaves it. It appears that though a periodical valuation cannot be made now, nor in future a record of sales demanded in connection with land, the department, in the decimated state, is to be maintained still.

The China Consortium.—A meeting of the Council of the China Consortium was held in Paris recently, at which Sir Charles Addis, Mr René Thion de la Chaume, Mr Thomas W. Lamont, and Mr Kanji Yano were present, representing the British, French, American, and Japanese groups respectively. A discussion ensued on the proposed consolidation of China's unsecured obligations, and instructions were issued to the Group Representatives at Peking to examine, in consultation with the four Ministers of their respective Governments, the existing floating debt of China, including all loans which are unsecured, or of which the security seems likely to prove inadequate in the near future, with a view to formulating in due course a comprehensive scheme of debt consolidation. The Council had next under consideration the general policy of the Consortium in China. This is now published as a lengthy separate report, and lays down the fundamental principles inspiring the members of the Consortium. It points out that with reference to industrial loans, in which railway loans are included, provided adequate security can be obtained, there seems to be no reason why the further development of railway communication in China, in itself a potent means of political unification, should wait upon the solution of her administrative problem. It is recognised that the consolidation of the floating debt is an essential part of any financial reorganising scheme, and considers that it would be futile to ask the foreign investor, to whom the Consortium stands in the relation of quasi-trustee, to subscribe to a Chinese loan until he is satisfied that its proceeds will be properly expended, and his capital duly returned to him at maturity. It is indisputable that this necessitates some measure of supervision, but "no more control than the minimum actually required to provide the adequate degree of security without which it would be impossible to issue a foreign loan." It is the policy of the Consortium to assist China, so that eventually "the entire control of loan service and expenditure may finally pass into the hands of China herself." The report concludes with an intimation

that the project of a loan secured on the Land Tax has not been and is not now under consideration by the Consortium.

The Bank Dividends.—The half-yearly dividend announcements of the principal banks so far made are with one exception at the same rates as at this time last year, as may be seen from the table below, in which the midsummer dividends for a number of years are shown:—

	Per Cent. per Annum.							
	1916	1917	1918	1919	1920	1921	1922	1923
Bank of Liverpool and Martin's	*16	*16	*16	16	16	16	16	..
Barclays Bank "B" shares....	+17½	+17½	+20	+20	14	14	14	14
Lancashire and Yorkshire	16	16	16	16	16	19	19½	20
Lloyds	18½	18½	18½	18½	16½	16½	16½	16½
London Joint City and Midland	18	18	18	18	18	18	18	18
Lon. Cnty. Westminster & Parr's	18	18	20	20	20	20	20	..
Manchester and County	13½	13½	15	15	15	15	15	..
Manchester & Liverpool District	*17½	*17½	*17½	*17½	18½	18½	18½	..

Do "B"	..	..	..	..	..	..	..	18
Union Discount.....	13	13	13	14	14	14	15	15

* Final dividend. + On old capital.

(t) Also a special cash bonus of 10s per share, free of tax.

The exception referred to is the Lancashire and Yorkshire Bank, but this is merely a matter of adjustment, it being stated that it is intended this year to pay the dividend in two equal half-yearly amounts, which will make the total distribution for this year at the same rate as for 1922. The National Discount Company has reorganised its capital. There are now "A" shares of £2 10s each, fully paid, and "B" shares of £7 10s each, on which £2 10s has been paid up. The dividends now declared are at 2s 6d on the "A" shares, and 4s 6d on the "B" shares. Last year the interim dividend on the old shares was 6s, the apparent increase in the dividend over that of the corresponding period of 1922 being due to equalisation consequent on the rearrangement of capital.

Co-operative Problems.—The Co-operative movement, which increased its membership by a million people during the war, writes a correspondent, has encountered serious problems since the Armistice. Many new works were started, and fresh farms acquired which, as soon as the slump in trade occurred, proved expensive assets. The co-operative methods of debiting depreciation and interest on capital before totalling departmental gains or losses have affected present profits, although they may ultimately benefit the new generation. The impression is gaining ground in many societies that too heavy a tax is taken from the results of the present in the interests of the future. At the same time, it should not be overlooked that, had this policy not been adopted in the past, the troubles of the present would have been much more intense. The interim accounts of the Co-operative Wholesale Society, now being considered by the movement, show that in the first three months of the present year the sales totalled £15,200,556 (a decrease of £251,726, or 1½ per cent.). The supplies from the society's own productive works were £5,085,818, or practically what they were in the same period a year ago. The slight decline in the sales, however, must be regarded in the light of the fall in the cost of living and of prices. The bulk of the C.W.S. trade is in groceries and provisions, and the volume of goods sold does not reveal a diminished trade. The bulk, which was of foodstuffs, has been much larger than in 1922. There has been an improvement in the textile section, and a great recovery in the boot and shoe trade, the productions of the C.W.S. from January to the end of March including 665,000 pairs. The slump recorded for a couple of years has been slowed down to the point of disappearance—unless the dislocation caused by the strike, which has only just terminated, has given the retail societies an opportunity of filling their stores from the private firms from whom they had ceased to buy. Had the threatened boycott of C.W.S. goods by the members of the National Union of Distributive and

Allied Workers become general in the movement, the results might easily have been fatal to any progress this year. The intervention of the Joint Committee of Trade Unionists and Co-operators came at the right moment to avert such a state of things. The strike, upon the merits of which arbitration is now taking place, has opened up new problems as to the control of industry, which will occasion some thought from the business section of the co-operative world, as well as some restraint on the part of the political section, and those who readily responded to the appeal of the employees on strike for a boycott that was as unconstitutional as it was unco-operative.

American Cotton Crop.—At the beginning of this week the Department of Agriculture of the United States Government published important statistics relating to the cotton crop for 1923-24. The feature of the figures is the large increase in the acreage, the area under cultivation being given as 38,287,000 acres, which is a record, against 34,016,000 acres a year ago. The increase of over 12½ per cent. has exceeded all expectations. With regard to the condition of the crop, the figure is 69.9 per cent. against 71 per cent. a month earlier, and 71.2 per cent. at the same time last year. This statement was about equal to anticipations. On the basis of the above statistics the yield is expected to be about 11,400,000 bales, against 10,200,000 bales for the current season. The reports have resulted in a rather easier tendency in prices, and in trade circles as a whole bearish sentiment prevails, writes our Manchester correspondent. The extent of the crop is now almost entirely dependent upon the weather in the belt during the next couple of months. If the conditions are favourable, especially in view of the big acreage, there is a possibility of the output being much more substantial than indicated a week or two ago. Consumption of American cotton in Lancashire continues very small, and there is no probability of the requirements of users on the Continent increasing until there is a definite settlement of the reparations question. In the United States the mills are not so busy as a month ago. Dealers in manufactured cotton goods in this country and in Eastern markets are not prepared to buy freely at the moment, but there is ground for believing that if a decline of 2d a lb in the price of American cotton could be brought about demand for cloth would revive.

The Position of Tin.—Standard tin closed the half-year at £182 15s, or 10s better than the final value for 1922. This figure, however, was more than £50 per ton below the best of the year, which was reached last March when for a brief period the market was very strong at £234 5s per ton. This week values have fallen to a new low record for 1923, and there is now a considerable bear following in the metal. Considerable interest was displayed in the monthly visible showing. The London Metal Exchange places this at 21,297 tons for the whole world, against 22,187 tons in the previous month, but the leading trade authority gives the world's visible supply of tin as 17,762 tons, as compared with 18,338 tons a month ago and 22,485 tons at this time last year. The Straits shipments for June amounted to 5,280 tons against 5,335 tons in May, total supplies being 8,139 tons against 7,780 tons in the previous month. The monthly deliveries aggregated 8,715 tons, of which 5,410 tons were credited to the United States, against 6,035 tons in May. The decrease of 576 tons in the visible supply is largely due to the fact that some metal was shut out at the close of the month, but on the whole the return is not so bad. The political and industrial situation lends itself to bear manipulation, and during the last few days it has been stated quite freely on the market that standard tin was going to be put down to about £150 per ton. At this time last year the price of standard tin was a little over this figure, and during 1922 the low level of £140 was reached. The falling away in the American deliveries is a very unpleasant factor, and it is obvious that the high average of recent months is not going to be maintained over the rest of the year. During the twelve months ended June 30th last 97,372 tons of tin came into sight for ordinary consumption purposes, and of this quantity America took 46,485 tons direct from the Straits. Of

total deliveries during the same period amounting to 102,095 tons America took no fewer than 66,639 tons, compared with 20,308 tons in the United Kingdom. Seeing that while the United Kingdom deliveries were 3,351 tons less the American taking rose by 21,634 tons, the importance of the United States as a consumer of tin is obvious. The tinplate industry in the United States has quietened down considerably of late, and the same remark may be applied to the Welsh industry, where makers find it difficult to maintain the minimum rate of 23s 1½d per box. Tinplate makers are now working with high-cost tin, and naturally they are watching the position very closely. The market for tin having fallen close on £60 from the highest should react, as statistically and technically the position is sound enough despite the unsold surplus in the East. There are other factors, however, to be considered, and they do much to make the future course of the market unpredictable. Prices would prove attractive to buyers were industrial conditions better, but the bear interests may find their operations aided by extraneous influences. The tin market ought to begin to recover very shortly, but whether there will be another substantial break before the rally starts remains to be seen. The undertone this week has been very sensitive, but on Thursday the feeling was much firmer and the market had a sold-out appearance. The rise in Bank rate, some inquiry for American account, and demand from bears to cover brought about an improvement from the lowest, and sentiment seemed inclined to improve.

Union Bank of Canada.—Our Ottawa correspondent writes:—Rumour has been busy with the condition of the Union Bank of Canada ever since the resignation of the general manager was announced at the beginning of the year. It has now come to a head through an official statement to the shareholders, which announces that \$4,250,000 has been appropriated from reserve to meet losses already incurred or contingent risks. The president in his letter confesses to heavy losses from "certain unauthorised transactions in foreign exchange," which, it is reported, emanated from the London office, but the origin of some other losses and difficulties is known. An alliance formed with the Park-Union Bank of New York to develop foreign business, especially in the Orient, proved disastrous, and has now been abandoned, and there is a very heavy frozen credit of dubious value in connection with a railway enterprise in the Peace River Country. In many quarters there is distinct relief that the situation is not worse, and the Montreal financial world was quite prepared to learn of the Union's impending absorption by another bank. The Progressive members of the House of Commons, however, are very suspicious that the statement is merely a prelude to such a move, and regard it as a strange coincidence that it should have been withheld till the day after the Bank Act got its third reading; they feel that their complaints against the banking system are justified, and have demanded a special adjournment of the House to discuss the situation. This request has been conceded, and the debate will take place shortly. The Press is, on the whole, disposed to hold that the bank's directors have met the issue squarely and courageously and told the worst; the return of a former vice-president, Mr R. T. Riley, one of the ablest and most conservative of the financiers of the West, to the board has strengthened public confidence. The capital of the bank stands at \$8,000,000, and the reserve is left at \$1,250,000. The dividend has been reduced from 10 to 8 per cent. The news had been partially discounted beforehand in the stock markets, the stock having fallen 20 points from its high figure of 140 in the opening week of the year. On the day after the announcement it fell 6½ points more, and closed on the 22nd at 113½, but there was no emphatic pressure to sell, nor has there been any sign of a run on deposits. The Union Bank, which has half a century of prosperous history behind it, was originally an institution centring in the city of Quebec, but it made a strong and successful bid for Western business, and some years ago its headquarters were transferred to Winnipeg. To-day it is stated that only two other banks do a larger business in the Western provinces, and in these regions its absorption would be greatly regretted.

not merely because its management has always been sympathetic to rural needs, but because it would mean the disappearance of the last bank with a Western head office.

National Bank of South Africa.—At the annual meeting of shareholders, at Pretoria, on June 29th, the chairman dealt at considerable length with the difficulties which have recently beset this institution. As a result of further heavy losses the National Bank decided to submit its accounts to the governor of the South African Reserve Bank for his expert official scrutiny. A subsequent letter from Mr Clegg, the governor, approved the steps taken by the directors, and went on to state:—"In these circumstances, I have to say that the Reserve Bank, being satisfied that the business of the National Bank is now being conducted on sound and prudent lines, are prepared to extend to the National Bank all facilities which it may require for meeting its engagements and carrying on its business. I have further to inform you that the Government, who have been made acquainted with the facts of the situation, fully approve this decision of the Reserve Bank, and will be prepared to give them any support which may be required to make it effective." After appropriating the bank's reserve of £1,000,000 and writing £3 off each £10 share, fully-paid, the capital of £2,075,500 will represent a clear surplus of assets over liabilities, and it is not expected that any recurrence of the bank's troubles will be experienced. The chairman's speech, which was printed in full on page 1463 of last week's *Economist*, deals with many South African banking questions in informative fashion, and will repay a careful perusal.

The Distillers' Company.—This company has been able to turn the prevailing conditions of the past year to such good account as to produce a gross profit of £815,100, which exceeds that of 1921-22 by £172,763, and the previous high record of 1919-20 by £145,636. This figure is more than two and a-half times that of 1913-14, as will be seen from the table which follows:—

YEAR ENDED MAY 15th.

	1914.	1919.	1920.	1921.	1922.	1923.
Gross profits ..	£ 310,993	£ 502,379	£ 669,464	£ 597,582	£ 642,337	£ 815,100
Brought forward ..	19,223	65,358	70,435	100,526	108,994	98,770
Income-tax, &c.	330,216	567,737	739,899	698,108	751,331	913,870
Debt interest ..	28,733	140,167	140,862	155,099	157,071	165,331
Reserve & dep.	36,409	27,090	27,090	27,090	27,302	28,132
	100,550	125,000	255,000	105,000	165,000	235,000
Balance	164,524	275,480	316,947	410,919	401,958	484,407
Preference div.	13,499	10,045	11,432	11,521	12,293	12,293
Ordinary div.	130,000	195,000	204,989	290,493	291,667	364,568
	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)
Carried forward ..	21,025	70,435	100,526	108,994	98,770	107,546

The directors are in a position to be generous with the reserve fund, which accordingly receives £200,000 as compared with £150,000 a year ago, while superannuation and provident fund receives £30,000. Ordinary dividend is maintained at 10 per cent. (free of tax), but its payment requires £72,901 more than last year's, the issued ordinary capital having increased by £529,010 to £3,645,680. This adjustment is chiefly due to the acquisition of the Distillers' Finance Corporation, Limited, Belfast, the purchase price being paid partly in ordinary shares to the corporation shareholders, and partly in cash. Another result of the transaction appears in the shape of a bank overdraft for £518,022, which it is now proposed to liquidate. The directors propose to capitalise the reserve fund (amounting to £950,000, all invested in the business) by issuing 1,822,840 6 per cent. preference shares of £1, in the proportion of five to one, to each holder of the company's £10 ordinary shares, 10s per share being paid up from the reserve fund, leaving 10s to be paid by the allottee or his nominees. The existing £10 preference will be placed on a 6 per cent. basis, and both preference and ordinary will be split to a £1 denomination. The most noteworthy change in the balance-sheet occurs in the item of investments, which has increased from £1,096,900 to

£3,227,900, and some information regarding the composition of this large item would be welcome. Stocks of spirits, &c., at £2,046,800, and property and plant together at £1,682,000, show little change, but loans to subsidiary companies, at £948,221, are £263,200 higher. The balance-sheet is summarised elsewhere.

British Dyestuffs.—The accounts of the British Dyestuffs Corporation, Limited, for the year to October 31, 1922, show a net profit of £102,657, after providing £411,382 for depreciation, and taking credit for an undisclosed amount of excess profits duty estimated to be recoverable. In spite of depression among the dye-using industries, this result is a great improvement on that of the previous year, when the necessity of providing £1,444,344 for depreciation of stock values left the company with a net debit on profit and loss account of £803,355. This debit is now reduced to £700,699, which is carried forward. The directors point out that at the date of the report over £2,000,000 was held in cash or easily realisable securities, while the surplus stocks, which were so heavy a millstone round the Corporation's neck in past years, have been liquidated, and stocks on hand written down to current values. Those held by associated concerns are given as £1,870,372 on October 31, 1922, as compared with £2,507,136 a year before. The Corporation's undertakings, it is stated, are now capable of meeting to a very large extent the requirements of colour users in this country. The balance-sheet shows few changes, beyond an increase of £173,456, to £644,496 in sundry debtors. Shares in, and advances to, associated companies figure at £7,829,132, and preliminary expenses remain, as before, £251,552. The associated companies are to be liquidated, and their undertakings transferred to the parent concern.

General Electric Company.—In spite of the three months' lock-out in the engineering industry, and the paralysis of general business during the summer, this company recovered, during the year ended March 31, 1923, most of the ground lost during the previous year, and its net profits rose to £751,486. The improvement is due in the main to a general increase of activity in all departments of the home trade, though it is noteworthy that the overseas branches made no contribution. They were the last to feel the depression, and are showing a similar tendency to lag in the matter of recovery. The results for the past three years are set out in the following table:—

	1920-21.	1921-22.	1922-3.
Net profit	£ 796,149	£ 566,582	£ 751,486
Brought forward	175,668	348,034	217,024
	971,817	914,676	968,510
Debt interest	8,000	182,431	243,775
Depreciation	157,915	161,745	182,031
Pension fund	17,266	15,283	14,219
Preference dividend	229,344	232,594	248,765
Ordinary dividend	211,198	105,599	105,599
	(10 %)	(5 %)	(5 %)
Carried forward	348,034	217,024	174,121

Debt interest and depreciation both take a heavier toll this year than last, and the ordinary dividend is maintained at 5 per cent., to which it was reduced a year ago. Creditors have increased by £113,265, and stand at £1,448,622, while debtors, at £2,853,567, are £202,972 lower. The whole position has become much more liquid, Government securities and cash together totalling £839,595, against £128,165 a year ago. Reserve account stands as before at £707,017. Loose tools, fixtures, and goodwill are valued at nominal amounts, but no reduction has yet been made in the item of £409,403, representing expenses in connection with an issue of mortgage debenture stock in 1921. The balance-sheet is summarised in another column.

Spicers and Pond.—This company of refreshment caterers and hotel proprietors has had another very satisfactory year. Profits for the 12 months ended March 31, 1923, before deduction of debenture interest, directors' fees, &c., were £155,901, an amount exceeding that of the previous year by £10,153, and being, in fact, the highest since

the company was reorganised five years ago. A dividend of 12½ per cent. is to be paid on the ordinary shares, as was the case on the three previous occasions. Profits and their appropriation, since 1918, are given below:—

	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
Profit	£ 128,520	£ 151,365	£ 136,072	£ 145,748	£ 155,901
Deb. interest, &c.	26,714	26,419	31,209	41,590	36,126
Net profit	101,806	124,946	104,863	104,158	119,774
Brought forward	..	15,355	15,652	22,531	13,114
	101,806	40,301	120,515	126,689	132,888
Reserve, &c.	35,000	43,000	22,000	22,000	22,000
Directors	2,000	5,000	5,000	5,000	5,000
Dividend	49,451	76,649	70,984	85,575	86,540
	(10 %)	(12½ %)	(12½ %)	(12½ %)	(12½ %)
Carried forward	15,355	15,652	22,531	13,114	19,348

A mortgage of more than £40,000 on the Blackpool Hotel Metropole has been entirely repaid during the year, partly, it would seem, by a sale of investments, which have decreased over the year by £22,000. No further issues of debentures were made during this period, while a further £7,916 were paid off. The directors are following up their policy of building a strong reserve position, this year's appropriation of £20,000 bringing general reserve to £120,000. Amounts representing stocks of wines, spirits, &c., continue to decline, and at £63,175 cannot be said to be unreasonably high. Real property remains by far the most important item among the assets, being valued at over £1,000,000 in a balance-sheet total of £1,600,000.

Union Cold Storage Developments.—The Union Cold Storage Company propose to increase the capital of the company to £8,780,000 by the issue of 3,300,000 further 6 per cent. cumulative preference shares and 700,000 ordinary shares. It is considered that the company should be in a position to ensure on a very large scale the wholesale and retail distribution of meat produced by the company, carried by and stored in the company's refrigerated stores. With this object in view the company has entered into a contract to acquire from the Western United Investment Company, Limited, at the price of £4,000,000 the whole of the ordinary shares in a number of companies controlling more than 2,400 retail shops, depots, and market stalls in this country, amongst which are the British and Argentine Meat Company, Eastmans, Fletchers, Argenta Meat, British Beef, and North Australian Meat Company. Profits of the companies to be acquired, taken as a whole for 1922, were £693,517, while the amount required to pay the dividend on the 6 per cent. preference shares proposed to be issued is "only £198,000, thereby improving the position of the holders of the present 6 per cent. preference shares, the 7 per cent. preference shares, and the 10 per cent. preference shares to the extent of £495,517 per annum."

Denmark in 1922.—In Denmark, according to the report of the Commercial Secretary to the British Legation, just issued by the Overseas Trade Department, 1922 was a year of reconstruction, especially in the banking world; there was another Budget deficit; exports—especially agricultural produce and fish—suffered from the decreased purchasing power of Central Europe, and industry at first from labour troubles, and throughout from the competition of countries with a depreciated exchange. The Landsmandsbank, which did one-third of the whole commercial banking, had to write off capital and accept State aid, and a State guarantee lasting till 1928; its affairs are still under investigation; smaller banks had graver troubles, and several insurance companies—mostly, however, recently established—were wound up. The interest on the National Debt now exceeds the whole of the national expenditure of 20 years ago. But the reconstruction, even of the Landsmandsbank, proved successful and restored confidence, and improvement has begun. The grain harvest was good, though in quantity rather than quality, and the root crops also. Horse breeding declined, owing to a lessened German demand (mainly for reparations); the export of butter, cheese, and eggs increased, still more that of bacon, of which 99½ per cent. went to

Great Britain, as well as much condensed milk and cheese. The Tariff Bill imposing *ad valorem* duties has been dropped, owing to opposition. Labour troubles were checked by the agreement of April, which in most trades has been extended till next spring. Including invisible exports, the trade balance was favourable, and the debt to foreign countries was reduced. But the return of prosperity must depend mainly on conditions in Germany and Russia. The eight hours day is very generally observed in industry, though not enforced by law. Copenhagen is beginning to lose its surplus population, and entailed estates are being cut up into small holdings; but emigration is urgently needed, and fantastic schemes have been mooted of colonies in Madagascar, Central America,

and Northern China. Russia, when reopened, may prove a better field. Five or six Danes have taken over estates in Lithuania at the invitation of its Government. The volume both of imports and exports was higher than in 1921, and the shipping was practically all employed at the end of the year.

Santo Domingo and Her Creditors.—A correspondent writes:—Although the original purpose for which the United States Government installed, in 1905, its temporary administration in Santo Domingo—namely, reconstruction of the finances of that island—has been accomplished, it has been resolved to postpone the evacuation which, according to agreement, would have been brought about

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,352,105

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned period of the Year ending March 31, 1924, as compared with the corresponding period of the preceding Year.

	Quarter from April 1 to June 30, 1923, compared with the corresponding Quarter of the preceding Year.			
	Quarter ending June 30, 1923.	Quarter ending June 30, 1922.	Increase.	Decrease.
	£	£	£	£
Customs	32,289,000	31,309,000	980,000	
Excise	36,478,000	36,738,000		260,000
Motor Vehicle Duties	2,141,000	1,703,000	438,000	
Estate, &c., Duties	13,790,000	16,591,000		2,801,000
Stamps	4,840,000	3,442,000	1,398,000

Treasury, June 30, 1923.

this year. The military Government was replaced last October by a Provisional Dominican Constitutional Government, but this has been found unsatisfactory. Internal dissensions, centreing around the electoral law, are responsible; while growing opposition between the National and the Provincial Governments render the situation extremely disappointing. The position of President Juan Baptista Vicini Borgas has become unsafe, and the Americans hesitate to withdraw from him the support of their troops, who thus remain in actual, and not merely nominal, control. It is not probable that election for the new Congress can be carried on before August next. Then the legislators will sit for 60 days only—the customary period—before resolving themselves into a constitutional assembly for revision of the constitution. From this body later on the permanent Government will be elected, which at the earliest could not be before the summer of next year, and the evacuation of the United States troops has now been scheduled to follow this latter event. British holders of Santo Domingo securities have little for which to thank the American administration of the island, since their vested interests have been consistently and persistently opposed, as, for example, when in 1905 (in fact, concurrently with North American intervention) a *modus vivendi* was arrived at between the United States and Dominican Governments, by which the whole of the 55 per cent. of revenues, which were to have been allotted to the payment of the foreign debt of the Republic, were “pending ratification of the Protocol by the United States Senate,” placed on deposit in an American bank. This procedure naturally prejudiced British bondholders, and they strongly protested against such action. Such was also the case when later, and according to further arrangements (in connection with which British bondholders were again not even consulted), the principal sum fixed as payable by the Republic Government under the International Arbitration Award of 1904, in respect of their claims, was cut down by 10 per cent., and interest thereon only recognised as from 1905. There has been no attempt at any time to extend equitable treatment to this class of Santo Domingo’s creditors, while, on the other hand, the demands of the island’s North American lenders have been satisfied in full. In other respects British interests have suffered, for whereas the trade of the island has developed enormously during recent years, reaching, it is believed, about £16,000,000 for last year, the share of the United Kingdom has amounted to little more than £150,000, in spite of the enterprise of the B.S.P. Company in running a monthly freight service to Samana Bay. Over 84 per cent. of the commerce carried on is claimed by the United States.

Oversea Correspondence.

UNITED STATES.—REORGANISATION OF DENVER AND RIO GRANDE WESTERN RAILROAD—SEIZURE OF FOREIGN SHIPS’ LIQUOR.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 25.

UNDER the plan finally decided upon for reorganising the Denver and Rio Grande Western Railroad, provision is made for terminating the receivership, for the raising of \$10,000,000 cash, the conversion of \$31,114,000 refunding bonds, and \$10,000,000 adjustment bonds, and the creation of equal beneficial interests in the company for the Missouri Pacific and the Western Pacific. The plan, upon which the reorganising managers, Kuhn, Loeb and Co. and the Equitable Trust Company, have been working for more than a year, has been approved by the bondholders’ committee, and also by the directors of the Missouri Pacific and the Western Pacific Railroads. Holders of refunding or adjustment bonds not heretofore deposited under any agreement may participate in the plan, it is announced, by depositing their bonds with the reorganisation managers, or their representatives, on or before August 1, 1923. The more important features of the reorganisation may be summarised as follows:—The \$31,114,000 refunding bonds and \$10,000,000 adjustment

bonds of the Denver and Rio Grande Railroad Company now outstanding are to be exchanged for new general mortgage 5 per cent. bonds, maturing in 1955, and new 6 per cent. cumulative preferred stock at the rate of \$725 of general mortgage bonds and \$400 of preferred stock for each \$1,000 principal amount of refunding bonds with the coupon maturing February 1, 1922, and subsequent coupons, or for each \$1,000 adjustment bond with the coupon of October 1, 1921, and subsequent coupons. The total issue of general mortgage sinking fund bonds will be \$29,807,650, and of preferred stock \$16,445,600. A preferred stockholders’ committee is to be created, whose three members for the first five years are to be designated by the bondholders’ committees; thereafter they will be elected by preferred stockholders. Members of that committee will be entitled to attend meetings of the directors of the railroad and of the Utah Fuel Company.

The financial structure of the Denver and Rio Grande Western, under the proposed reorganisation, will be as follows:—

Out- standing:		Fixed Charges:
\$		\$
81,112,000	Underlying bonds	3,379,740
29,807,650	General mortgage sinking fund bonds	1,490,383
4,500,000	Equipment trust certificates.....	247,500
115,419,650	Total fixed charges	5,117,623
	Annual sinking fund instalment upon general mortgage bonds (payable from earnings; cumulative)	298,076
16,445,600	Preferred stock, dividends 6 % cumulative ..	986,736

Charges contingent upon earnings

300,000 Shares, common stock

The announcement of the foregoing plan, together with an authoritative statement that reorganisation of the Texas and Pacific is likely to be accomplished shortly, encourages the belief that other railroad receiverships will be terminated in the not distant future, especially since railroads generally in this country have, in recent months, enjoyed greater prosperity than for some time past, and the outlook for earnings continues bright.

Instructions recently issued by Secretary of the Treasury Mellon to the Public Health Service regarding medicinal supplies of liquor for foreign vessels serve to clear up some misconceptions and relieve, though only slightly, the situation created by the Prohibition Enforcement Act, or rather by the most unfortunate interpretation that has been placed upon it, with respect to vessels within American territorial waters. Last week the Acting Surgeon-General ruled that dietary (liquor) rations should not be construed as medicinal. Secretary Mellon promptly instructed him, in substance, to advise Public Health Service officers at the various ports that when officers or the proper authorities of any foreign merchant vessels within the territorial waters of the United States apply for the privilege of using liquors for medicinal purposes, and the laws of the country of such vessels prescribe a certain quantity of liquor for such purposes, the said quantity must be allowed by the Public Health officer in charge. Medical officers were directed by Secretary Mellon to familiarise themselves with the laws of the different countries bearing on this subject, especially those relating to medicinal supplies, and to give full consideration to the professional opinions of the ships’ doctors, so as to enable the latter to carry out measures necessary to preserve the health of persons under their care. In determining the

amount of liquor to be permitted on such vessels, American medical officers were instructed to be guided by the sworn statement of the ship's doctor as to the quantity needed for medicinal purposes.

FRANCE.—BUDGET PASSED—IRON AND STEEL PRODUCTION—MEXICAN EAGLE.

(FROM OUR CORRESPONDENT.)

PARIS, July 4.

As the outcome of a series of all-night sittings the Chamber and the Senate succeeded, at 6.30 on Sunday morning, in passing into law the Budget Bill for 1923, and with it, for all practical purposes, that for 1924 also. The net result of the long controversy between the two Houses is that what the Chamber, when it sent the Finance Bill up to the Senate some six months ago, estimated at a deficit of over 3,689 millions, has been transformed, by agreement between the two Houses, into an estimated surplus of 35,467,277f. The exact figures, showing the modifications the Bill has undergone, first by the Senate (as compared with the original estimates of the Finance Commission of that House, as given in this column last week), and subsequently by agreement between the two bodies, are as follows (in francs):—

Estimated	Chamber.	Senate.	Finally.
expenditure ..	23,971,099,877 ..	22,271,271,771 ..	23,402,487,556
Revenue	20,281,832,261 ..	23,037,966,832 ..	23,437,954,833
	3,689,267,616 ..	766,685,061 ..	35,467,207
	Estimated deficit.	Estimated surplus.	

It will be remembered that the two principles on which the Senate based its consideration of the Budget, as received from the Chamber, were a drastic reduction of projected expenditure and an equally large increase in revenue. In its first enthusiasm the Upper House, after carefully going into the credits asked for by each of the Government departments, made total cuts to the amount of 1,700 million francs. As was generally anticipated, several of the departments concerned put up a strong fight against these proposed reductions when the Bill got back to the Chamber, and particularly those interested in military and political measures, such as those connected with the French operations in Syria, for instance. In most of these cases the Chamber, as a body, supported the objections raised by the interested Ministries. In the final analysis the Bill, as now approved, shows that, although the total authorised expenditure is really over 222 millions higher than was projected in M. de Lasteyrie's original estimates early in 1922, it is nevertheless fixed at over 568½ millions lower than the amount approved by the Chamber six months ago. The warning has been given several times during the discussions that two much faith must not be placed on the practical value of these reductions, in view of the probability of Supplementary Credits being asked for during the next few months, and all who know anything of French methods will agree that these warnings will only too probably be justified.

Analysis of the revenue side of this distinctly complicated Budget (as compared with the normal British Finance Bill) discloses the fact that in this direction also there is good ground for scepticism. The theoretical deficit of about 3,000 millions that had still to be met, after allowing for the 568½ millions of reduced expenditure, has been covered as follows:—

Estimated yield from liquidation of war stocks	125,000,000
Repayment by the railway companies of cost of material ceded to them after armistice.....	500,000,000
Appropriation from yield from special tax on war profits	2,000,000,000
To be raised by loan	400,000,000
	Frs. 3,025,000,000

The final balance of the Budget foreshadows a surplus of some 35 millions, but it is evident, from the fact that this surplus is only arrived at after providing for 400 millions to be raised by loan, the absence of a deficit is much more apparent than real. At the same time, the fact remains that, whereas the Chamber proposed to resort to borrowing to the extent of practically 3,700 millions, to make both ends meet, the result of the praiseworthy

efforts of the Upper House has been to reduce this amount to the purely negligible one of only 400 million francs.

The most satisfactory feature of the whole Budget, as most people will admit, is the courageous manner in which the Chamber has refused to render an artificial situation still more artificial by eliminating from current liabilities the interest charges this country has to face in respect of the enormous sums that have had to be borrowed, through Germany's default, for the restoration of the devastated area. The Senate, as is known, dallied for some time with the suggestion that it is unfair to the French taxpayer that he should be called on to pay out of revenue, year by year, the interest charges on the money borrowed on German account, which amounts for the current year to 3,500 million francs, and will progressively amount to a still heavier annual charge in the future, seeing that it is estimated that over 40 milliards will still have to be raised before the restoration work is completed. The crux of the whole French financial situation, as it is regarded here, is that but for this burden which has to be borne through Germany's default, the Budget would be easy to balance, and would even show a handsome surplus on the present basis of taxation.

The statistics that have just been issued by the Comité des Forges, in regard to the French output of iron and steel, come down only to June 1st, and for this reason have to some extent lost their practical value. The figures show that on June 1st there were 99 blast furnaces in operation, as compared with 88 on May 1st, 77 on April 1st, 90 on February 1st, and 116 on January 1st, a fortnight before the Franco-Belgian troops entered the Ruhr. These figures are, of course, for the whole of France. At the same date there were 74 other furnaces available for activity, and 46 undergoing construction or repairs. Of the 66 furnaces working in the East of France, and in Alsace and Lorraine on June 1st (as against 58 on May 1st), "some" were not working full time. Of the 11 furnaces that were restarted during May, 2 were in the East of France, 6 in Alsace and Lorraine, 2 in the North, and 1 in the Midlands. From these details it is to be concluded that out of the total of 116 furnaces that were working on January 1st, before the shortage of coke set in as the result of the occupation of the Ruhr, only 17 are still lying idle. The total production of iron in May was 42,943 tons in advance of the figures for the previous month, but still 119,860 tons behind the output for December, which was the last normal month of production. The output of steel in May, which totalled 388,249 tons, showed an improvement of 33,458 tons, as compared with April, but was still 119,860 tons behind the December figures.

Independent reports concerning the metallurgical industry show that both home and foreign orders are now coming in steadily, although in no great volume. This improvement, however, is regarded as due more to the fact that buyers, who have been holding off for so long owing to the uncertainty of delivery, &c., have now been compelled to come into the market, than to any lasting improvement in conditions. As a matter of fact, quotations have dropped to such an extent that a certain number of firms have preferred to slow down rather than have to quote the present low prices. So far as foreign orders are concerned, there is less to complain of. Foreign buyers, including even Germany, and particularly Great Britain, have latterly been placing substantial numbers of orders in this country, the number of orders from England, especially for partially manufactured products, having latterly shown a satisfactory increase. The large increase in German orders is explained by the belief that buyers on the other side of the Rhine, in view of what is regarded here as the inevitable final collapse of the mark in the near future, are systematically replacing their depreciated paper with products that have an undoubted intrinsic value.

The drop of 50 per cent. in the dividend on Mexican Eagle shares, which have been one of the favourite gambling counters here since the "boom" of 1918-19, has hit the French investing public very hard. Before the war the shares in this company were quoted here at prices ranging from 35 to 50f without finding any very large market. Some four years ago, however, they suddenly soared into the neighbourhood of something like

750f, and it is estimated that over two-thirds of the shares that have been issued by the company since the boom year have been absorbed by French investors. Today these shares are quoted at around 82, having steadily dropped from 148 since the beginning of April only. The loss incurred by French investors is estimated at several milliards of francs, and there are loud outcries in certain quarters against those who are alleged to have been responsible for rendering it possible for such a substantial portion of the national savings to be exported to foreign countries.

GERMANY.—RUHR—FINANCES—INFLATION—BOURSE—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, June 30.

CONDITIONS on the Ruhr are worse, and even threaten to develop into guerilla warfare. In two new speeches the Chancellor has proclaimed that passive resistance will not be abandoned, and the local attitude, both of employers and employed, is the same. The proceedings of the French authorities and courts martial, in cases of alleged retaliation by Germans, are of such a character that it is impossible to judge how far local Germans have really embarked on a campaign of counter terrorism. The soldiery shoot, and are encouraged to shoot, without provocation, and as the courts martial condemn to heavy punishment for mere passivity, for acts which are no offence under any law, and usually without proof that the accused have committed the acts, the increasing number of convictions is no index. It seems, however, that there are regular sabotage organisations, the members being Nationalists of extreme colour, who reason that they will be shot or sent to gaol whether they offend or not. Such a movement cannot be suppressed as long as the military terrorism is directed against victims chosen by the soldiery at random. The expulsions and plundering of private property continue. The Cabinet and most newspapers continue to proclaim that the resistance ought to be kept severely passive, but an increasing part of the public, at any rate outside the occupied areas, sees in active resistance the beginning of a war of liberation.

The financial situation is going rapidly worse—in the sense that an ever smaller proportion of expenditure is covered by revenue. The last report of the Finance Ministry, for June 20th, shows a floating debt of nearly 17 billions, of which more than 2½ billions were accumulated in the last ten days. The movement of the floating debt up to date is:—

	Million Marks.
June 30, 1921	214,200
June 30, 1922	311,570
September 30, 1922	528,370
December 31, 1922	1,822,046
March 31, 1923	8,273,708
April 30, 1923	10,114,668
May 31, 1923	12,901,089
June 20, 1923	16,984,202

The whole debt is 17,048,625 million marks. This liability is, of course, not real debt in the sense of an obligation to repay at any fixed gold value. The whole liability at present gold exchange is about 450,000,000 gold marks. The progressive increase in the total is merely an instructive register of the success with which revenue can be collected without taxation, by way of currency depreciation. The real deficit in the State finances is, of course, expressed in ever bigger paper mark figures even when this real deficit does not increase; but in fact, in times like the present, of rapid currency depreciation, the real deficit does increase, owing to the failure of the nominal revenue to keep pace with the decline in the mark's value for purposes of administrative outlay.

The cause, it must be repeated, is the failure of the Government to take energetic steps for the automatic adjustment of tax yields to currency values. Three years' observation shows it to be beyond doubt that the Budget (at any rate, if cash Reparations were omitted) could easily be balanced if the last-mentioned trouble were overcome. The matter continues to attract public attention. The Finance Minister, Dr Hermes, this week announced that it is impossible to find a factor by means of which nominal

taxes will be made automatically to increase as the mark's value declines. It is very hard to accept this opinion, in view of the fact that the solvency of private industry and agriculture has been maintained in face of precisely the same obstacle. The automatic increase of direct taxation would undoubtedly inflict injustice on individuals, because property values and income do not everywhere increase in proportion to currency depreciation; but the injustice would be less than under the present system, by which the whole deficit is taken at random out of the pockets of those unskilful individuals who do not understand what is going on, while the best-situated classes almost entirely escape direct taxation. In adapting indirect taxes (other than Customs) the Government is also remiss. The Reichswirtschaftsrat has passed one more resolution calling for reform in this matter.

The decision of the Berlin Municipality in favour of an automatic increase of its direct taxes on a price-index basis has been nullified by the rejection of the whole Municipal Budget. The reformed State and Municipal Taxation Law (*Landessteuergesetz*) has passed through the Reichstag. One of the proposed measures—the increase of the Sales Tax from 2 to 2½ per cent., to help the finances of the local governments—was rejected. The Law increases the share of the municipalities in the income-tax yield from two-thirds to three-quarters, and their share of the Sales Tax yield from 5 to 15 per cent.

The weekly increase in Reichsbank circulation exceeded 2 billion marks for the first time in the statement of June 23rd. The increase in Treasury Bill discounts touched nearly 2½ billions. A summary of the inflation movement up to date (Darlehns Notes, which are practically stable at 12,300 millions being omitted) is given:—

	Million Marks.
December 31, 1913	2,593
" " 1914	5,046
" " 1915	6,918
" " 1916	8,055
" " 1917	11,468
" " 1918	22,188
" " 1919	35,698
" " 1920	68,805
" " 1921	113,639
" " 1922	1,280,094
March 31, 1923	5,517,920
April 30 "	6,545,984
May 31 "	8,563,749
June 23 "	13,091,739

Money is plentiful, and the official restrictions on buying exchange continue to lead to high quotations for dollar Treasury bills, which sell considerably above the dollar. Loans issued on a commodity basis are also still being fully subscribed. In view of the fact that the mark circulation has increased since before the war only about 2,000-fold (including coined gold, the pre-war circulation was 6 milliards), while the price level has risen 24,618-fold (official index, June 25th), the plentifulness of money seems to need explanation. A banking authority puts it down to the great increase in speed of circulation. This increase in speed is an outcome of the rapid depreciation, which causes salaries and wages, where possible, to be drawn at short intervals and immediately converted into goods. The now instinctive rush to maintain the real value of one's mark capital and mark earnings leads to strange phenomena; the official whose salary is paid quarterly in advance puts it immediately into stocks, to be held perhaps for only a few days or weeks, in the knowledge that if the mark exchange falls stocks will rise; while business men sell goods for marks only after they have provided for the immediate investment of these marks in other goods. This form of flight from the mark has spread all the more rapidly since the adoption of the exchange restriction policy. It is also the main influence on the Bourse, and has caused some stocks to rise more than would have been the case on a mere mark depreciation basis. The Bourse now has an almost continuous boom, rises of several hundred thousand on one day being common. Federal and State, and in less measure, Municipal loans, have ceased, in the imagination of foreigners and some natives, to be mere paper-mark securities, and there has been frantic buying. As these loans have no value except the number of paper marks they represent, and even then have only the value of the day, the move-

ment is highly erratic. Some loans double their quotations on a day on which other loans, for no known reason, have big declines. State loans, which until lately were neglected, have gone ahead more rapidly than Federal, but the highest quoted municipal loan (Berlin Fours) has reached only 400. The Reichsanleihe A.G. (intervention company), which long had difficulty in maintaining War Loan at 80.75, lately got rid of a great part of its holdings at a higher rate. The chief buyers, it is stated, were Americans. Loan quotations of the 29th were:—

War Loan 5 per cents	325
Fours	8,500
3½ per cents	5,500
Threes	34,000
Colonial Fours	31,000
Forced Loan	90
Prussian 4½ per cents	800
Prussian Fours, Consols	2,000
" Threes	5,300
Baravian Fours	8,000
Hamburg Staats-Rente 3½ per cents	4,100

Banking shares have been active in connection with fusion rumours. The Barmen Bank Verein, which has connections with important banks in Leipzig and Munich, and relations with the Disconto Gesellschaft, has decided to increase its capital from 1 to 1½ milliard marks. Four-fifths of the new shares are taken up by Herr Stinnes, who gets two seats on the Control Board.

Prices are moving rapidly upward. Railway freight rates, as increased 250 per cent. on July 1st, average 21,420-fold those of 1914, against 2,856-fold on January 1st. Postal rates are trebled as from July 1st, but remain extremely low, the home letter rate being only about 1-10th of an English penny, and the foreign rate under ½d. Steel and iron prices are being raised at short intervals. The latest are (in marks per metric ton):—

Hematite pig	3,228,000
Foundry iron, I	3,198,000
" " III	3,195,000
Ingots	3,382,000
Blooms	3,820,000
Billets	4,041,000
Construction forms	4,773,000
Bars	4,800,000
Thick sheets (5 mm. and over)	5,710,000

Employment reports for the beginning of June show, in most industries, slight improvement; in many works employees who had been on short time returned to full work. There is, however, no sign of an industrial boom such as followed earlier mark-exchange declines.

ITALY.—WHOLESALE AND RETAIL INDEX-NUMBERS—DEBATE ON TARIFFS—EXPORTS AND IMPORTS IN 1922 AND FIRST QUARTER OF 1923.

(FROM OUR CORRESPONDENT.)

TURIN, June 24.

THERE is talk at present of a new increase in prices. The widespread impression that there has been an increase is not borne out by the Bachi's index number in the wholesale market, on the usual basis of 1920's prices 100:—

	Nov., 1920.	June, 1921.	Oct., 1921.	May, 1922.	Jan., 1923.	April, 1923.	May, 1923.
Vegetable foods	107.7	97.0	115.8	106.3	109.4	110.6	109.9
Animals	124.1	100.5	128.5	93.9	104.4	113.6	109.7
Chemicals	107.7	63.4	74.6	67.3	69.3	69.6	69.7
Textiles	94.0	45.8	75.6	65.7	80.8	83.0	81.6
Minerals and metals ..	101.4	60.4	64.1	57.5	62.5	65.5	65.0
Building materials ..	112.6	101.6	90.9	78.5	87.5	83.4	83.3
Miscel. vegetables ..	108.7	95.0	114.4	96.4	124.7	128.1	122.4
Miscellaneous	105.2	90.4	94.2	87.9	98.8	93.2	92.0
General index	107.3	81.5	95.9	83.3	92.1	94.2	92.9

The only difference in the figures for this spring is the maintenance of prices at the high level reached in the autumn and winter months; while in past years the months from March to June usually saw lower levels.

Retail prices, which are always slower to move, are as follows (the figures relate to the cost of living in

Turin of a working family of two parents and three sons, on the basis of the first half of 1914 = 100):—

	Food.	Cloth-ing.	House Rent.	Heat & Light.	Miscel-laneous.	General Index.
January, 1920	351	327	100	406	344	318
April, 1921	534	497	110	417	544	470
July, " "	446	411	110	354	537	405
January, 1922	524	454	120	435	591	466
April, " "	470	433	120	378	587	424
January, 1923	499	433	120	423	574	446
February, " "	484	435	120	428	574	438
March, " "	481	437	120	423	574	436
April, " "	488	437	120	394	574	438
May, " "	493	437	120	370	570	440

The characteristic of this year is the same as in the wholesale market: retail prices are not decreasing this spring as they did in past years. Food is dear, a strange thing in the face of a good season, with plenty of vegetables and very good prospects for fruits. The Government has taken various measures to prevent the rise of the cost of living, the most important being the abolition or lowering of various duties on animals, sugar, meats, oils, cheese. Yesterday there was held at Rome a great meeting convened by Signor Rossi, Minister of Trade and Industry, for the purpose of devising remedies against the high cost of living. Chambers of Commerce, municipal councils, and co-operatives gave various opinions on the causes of the rise in retail prices; increases of taxes on consumption (turnover tax), increases of rents of shops after the abolition of the rent restriction act and fixation of rents by arbitration tribunals; increased export of cheese, vegetables and meat; imperfect organisation of transport, and so on. Fortunately, notwithstanding some high words and threats of penalties against speculators and middlemen, no direct action by the Government was advocated. The Fascist Government gives no support to policies of maximum prices, restrictions of exports, or regulation of consumption.

The debate in the House of Deputies about the general customs tariff, although not formally closed with a vote, may be said to have come substantially to end. The protectionists mustered all their forces, and won a great deal of success. But the Government promised that the general tariff, although wanted for purpose of negotiation of the treaties of commerce with foreign countries, ought to be lowered in virtue of the lower treaty duties and the extension of the most favoured nation clause. Perhaps the most important outcome of the debate was a vote taken inviting the Government to abolish all duties on pig-iron and broken iron, and to substitute in their stead a system of premiums on pig-iron production which might be deemed necessary for the defence and independence of the nation. If we consider that the iron industry is at present the chief barrier against the adoption of a more liberal fiscal policy, that the premium system is more apt for measuring the exact sacrifice which the State is making for the support of so costly an industry, we may say that this House vote, if acted upon, is perhaps the most important step taken by the present protectionist majority of the Parliament.

The latest statistics of foreign trade relate to the first quarter of the year (in millions of lire):—

	January.	February.	March.	Whole Quarter
Imports—				
1922	1,315.5	1,056.2	1,310.8	3,682.6
1923	1,059.7	1,571.8	1,495.7	4,127.3
Difference	-255.8	+515.6	+184.9	+444.7
Exports—				
1922	619.9	720.1	716.1	2,056.0
1923	788.8	750.4	886.7	2,425.9
Difference	+168.9	+30.3	+170.6	+369.9
Excess of Imports—				
1922	695.6	336.2	594.7	1,626.6
1923	270.9	821.9	609.0	1,701.4

The interesting fact is that figures are rising in both ways, indicating that trade is increasing. Wholesale prices, not being much different in the two periods, do not exercise a notable influence.

The distribution in 1922 of imports and exports among various classes was as follows (in millions of lire):—

	Imports.	%	Exports.	%	Difference.
Raw materials of in-					
dustry	5,504.8	35.0	1,165.2	12.5	+ 4,339.6
Half-worked materials ..	2,825.7	18.0	2,816.0	30.3	+ 9.7
Finished products	2,394.3	15.2	3,126.7	33.7	- 732.4
Foods	5,003.5	31.8	2,184.9	23.6	+ 2,818.5
	15,728.3	100.0	9,292.8	100.0	+ 6,435.5

We see that what is called the adverse balance of Italian trade is due wholly to the necessity of importing vast quantities of food and of raw materials for the national industry. Raw material imports are likely to increase in the future; and the increase will be a good omen as a proof of better working capacity of our industry. The figures of food imports are not so encouraging. The most important items in food imports were:—Wheat, 3,057; other cereals, 500.5; fish, 422.7; coffee, 305.8; meat, poultry, game, 191.2; cattle, 154.3, million lire. It should be possible to buy more manures and to improve agricultural methods, and, without increasing and even diminishing the planted area, to increase the cereal production. To many people it seems a pity that Italy, with so long a sea coast, should be obliged to buy abroad such a vast quantity of fish (85,477 tons, of a value of 422.7 million lire). It seems that such a lamentable result is due to out-of-date methods of fishing. Public opinion was therefore delighted when it was announced that, following in the steps of the Duke of Abruzzi, who is conducting a great cotton enterprise in Italian Somaliland, the Duke of Udine, of the Blood Royal, intended to start a new experiment on a vast scale in fishing with modern apparatus and fleet. The fleet will fish not only in Italian waters, but also in distant seas.

AUSTRALIA.—PUBLIC FINANCES—COMMONWEALTH AND THE STATES—BANKING RETURNS—CROP PROSPECTS.

(FROM OUR CORRESPONDENT.)

MELBOURNE, May 28.

At the conference of Commonwealth and State Ministers, now sitting in Melbourne, a series of proposals dealing with the financial relations between the Commonwealth and the six State Governments has been brought forward by the former. At present, the Commonwealth pays part of the taxation raised by it to the States on a per capita basis under an arrangement originally made when the only form of Commonwealth taxation was that from Customs and Excise, only a portion of the yield from which was required for Commonwealth purposes. Before the war a graduated land tax was imposed as a party measure by a Commonwealth Labour Government, and during the war the Commonwealth imposed its own income-tax, death duties, and one or two other forms of taxation, so that with the exception of stamps most of the principal forms of taxation are duplicated by the Commonwealth and States. The Commonwealth proposal now is that it should discontinue the per capita payments to the States, leaving each of them to replace the amount by increasing State taxation, and that the Commonwealth in turn should draw the line for its own income-tax at £2,000 per annum, taxing incomes only on the excess over that amount. The number of Commonwealth income-tax payers with incomes over £2,000 is only 1 per cent. of the total number of taxpayers, and while the proposal would relieve the remaining 99 per cent. from the necessity of furnishing income-tax returns to the Commonwealth, it would mean placing 1 per cent. of the taxpayers in an isolated position, convenient for taxation of a penalising character, whenever a Labour Government with a policy of heavy expenditure again acquires power. At the conference the State Premiers were unfavourable to the proposal, partly on the ground that Commonwealth income-tax is not to be completely abolished, and they submitted a counter proposal including the retirement of the Commonwealth from the field of income taxation, the abolition of the present per capita payment by the Com-

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1716.

Every Description of Home and Foreign Banking Business transacted.

monwealth to the States, and the payment by the States to the Commonwealth of the loss of revenue sustained by the latter, this arrangement to be embodied in a ten years' agreement. To this the Commonwealth Premier, Mr Bruce, replied that the counter proposal had been carefully considered by the Commonwealth, and could not possibly be accepted. The subject, however (notwithstanding Mr Bruce's reply), has continued under discussion.

The States have decided to accept the proposal to apply income-tax to loans issued in future. This, of course, will apply only to loans issued in Australia. Another proposal by the Commonwealth which the States have accepted is that a loan council consisting of the Commonwealth and State Treasurers should be established to determine the order in which the Governments and other public bodies should borrow upon the market within Australia. An estimate prepared by the Commonwealth Treasury of new loans required in 1923-24 by the Commonwealth and States shows a total of £45,000,000. This is all for railways and other works, and does not include the redemption loans that will be necessary to provide for old loans maturing. Detailed estimates for subsequent years are not given, but it is announced that "from the information available it appears the total requirements for the next three years will be approximately the same as for the year 1923-24."

This means that in the next four financial years about £180,000,000 will be required in fresh loan money by the Commonwealth and States, to be raised partly in Australia and partly outside, in addition to the large amount of redemption in prospect. The public debts will consequently increase much more rapidly than the population, and allowance requires to be made for the fact that fresh railways do little beyond earning working expenses in the first few years after construction, the interest becoming a charge on taxation. These questions, however, were outside the scope of discussion at the conference, which dealt simply with the methods to be followed in borrowing.

The quarterly average returns to March 31st of bank liabilities and assets within Australia and New Zealand show that deposits, inclusive of the Commonwealth Bank of Australia (but not excluding the Savings Bank department of that institution), are now at the highest point on record, the grand total being £309,046,557, against the previous record of £308,827,517 in June, 1920, which was followed by a decline to £278,339,076 in December, 1921. The latest increase is mainly the outcome of a good season in Australia, with high prices for merino wool, accompanied by an active demand for accommodation for various purposes, including assistance to production in the country, house-building to meet the requirements of the large town populations, factory extensions, and trading demands following the fresh increase in imports since the middle of 1922. In New Zealand, on the other hand, the decrease in advances which began nearly two years ago has continued. The various Governments have absorbed a considerable amount of fresh money, borrowing in the local money market directly and indirectly at rates varying from 5 to 5½ per cent., free of both State and Commonwealth income tax. Such rates as these largely govern the rates offered by banks for money, the rate for a considerable time past being 5 per cent. for two-year fixed deposits.

Setting aside the Commonwealth Bank of Australia, the following is a comparison of the principal totals of the

ordinary banks with those for the previous quarter and the corresponding period last year:—

	March Quarter, 1922.	December Quarter, 1922.	March Quarter, 1923.
Deposits—	£	£	£
Australia	217,672,828	221,714,510	232,000,840
New Zealand	44,866,839	44,429,434	48,659,637
Total deposits	262,539,667	266,143,944	280,660,477
Advances (inc. Govt. securities)—			
Australia	183,675,755	193,054,338	197,994,984
New Zealand	52,415,359	49,266,016	48,347,815
Total advances	236,091,114	242,320,354	246,342,799
Cash items—			
Coin and bullion (Aust. and N.Z.)	27,557,996	27,686,456	27,287,078
Australian notes	29,604,826	23,565,130	26,353,024
Legal tender notes of other banks (N.Z. only)	1,312,967	539,592	501,218
Total cash	58,475,789	51,791,178	54,141,320

In Australia there has been an increase of £14,328,012 in deposits during the past year, with a practically equivalent increase of £14,319,229 in advances. In New Zealand, however, where deposits have increased by £3,792,798, there has been a reduction of £4,067,544 in advances, making a total reduction of £11,673,593 in two years. Nearly the whole of the increase in deposits in Australia during the past year, as well as a good proportion of that in New Zealand, has been in fixed deposits, the money thus being rendered more available for employment in advances. The total cash held by the banks is smaller than a year ago, owing principally to the contraction of the Australian note issue, and the ratio of cash to liabilities has declined slightly.

The principal figures (within Australia) of the Commonwealth Bank of Australia, not included in the table above, compare as follows:—

	March Quarter, 1922.	December Quarter, 1922.	March Quarter, 1923.
Deposits	£ 22,628,567	£ 27,617,966	£ 28,386,084
Savings bank deposits	36,144,999	38,250,893	38,148,906
Discounts, loans, &c.	15,141,497	13,367,064	13,863,996

Coin and bullion	2,207,552	2,543,798	2,637,705
Australian notes	2,299,336	4,314,547	2,774,221

Stocks of coin and bullion in Australia and New Zealand, including the ordinary banks, £27,287,078, Commonwealth Bank £2,637,705, and reserve against Australian note issue £24,500,000 (approximate average) amount to £54,424,783, against £53,165,548 for the March quarter 1922.

The outlook for the 1923-24 producing season in Australia has been improved by the rainfall lately, which gave a fair start to the wheat crops, though the previous dry weather has definitely lowered prospects for the new wool clip. It is now hoped that June will prove sufficiently wet to carry on the crops for the greater part of the winter months, in which case the outturn would depend on the spring rains. Although the outlook as a whole is still uncertain, the feeling is much more hopeful than at the beginning of May, and since the rainfall started the country demand for goods has improved.

Letters to the Editor.

CREDIT CONTROL AND UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I was amazed to read a letter on the above subject from Mr Charles Edward Pell, which appeared in your issue of the 30th ult. He appears to contemplate with equanimity a perpetual state of inconvertible paper currency which must be depreciated in terms of gold, deranged exchanges, and, in fact, repudiation of our just debts. Mr Pell goes further. He states "what is wanted is stabilisation, not falling prices," and he thinks this and the question of unemployment can easily be

settled by "pursuing a policy of inflation until such time as the million and a-quarter at present unemployed are absorbed, and then stabilising prices at the higher level." One rubs one's eyes to see such statements in cold print. Does Mr Pell think that Germany has settled her unemployment problem, or Russia, or did Austria by means of the printing press? What does he think is the secret, or was the secret, of the success of our foreign trade? Was it not our ability to manufacture and export goods cheaper and better than most of our competitors, and if we stabilise prices at a higher level (assuming that it is possible to do so), how will that help our foreign trade on which in the end the employment of our people mainly depends?

There is no short cut to the full employment of our people, but I venture to state that a sound financial system at home, peace abroad, and sound financial methods there also, will go a long way to bring nearer that most desirable state of affairs. Instead of more inflation of the currency, we desire a gradual contraction until parity of exchange has been re-established with America and other gold standard countries. In your Money Market Review you speculate as to the cause of the renewed fall in the New York exchange on London. Surely it is because of the depreciated state of our currency. We have nearly twice as much currency in circulation to-day compared with pre-war days, and the premium on gold indicates that depreciation exists. Why, then, wonder at the adverse exchange? This surely is the main cause, and until it is removed by contraction of the currency the exchange will remain adverse.—I am, Sir, your obedient servant,

D. M. MASON
(Chairman, Executive Committee, Sound
Currency Association).

July 2nd, 1923.

THE SAAR QUESTION.*

THERE is some justification for the view that the treatment of the Saar Valley was the worst blot upon the Treaty of Versailles: if it had been a large instead of a small area, the cynical disregard of all the sentiments of the inhabitants which marked the settlement would have been recognised as being in flagrant conflict with the promises of the Armistice. There is still more justification for the view that the administration of the Saar Valley since 1919 has gravely discredited both the Allies and the League of Nations. The Saar trouble is, indeed, symptomatic of the evils from which Europe is suffering; and a measured, impartial, well-documented study of the question would be a real contribution to the study of contemporary problems.

Mr Osborne has put together in this book a useful collection of documents, including all the reports of the Saar Commission to the League of Nations. But his own narrative (which forms less than half of the book) is so virulently anti-French, that even those readers who are strongly opposed to French policy will be alienated and driven to ask what is to be said on the other side. It is noteworthy that he seems to accept all German statements in the controversy as well-founded, and even incorporates passages from the German Note in his own narrative, without acknowledgment; while he regards all French statements as suspect, and pays no attention to the balancing judgments of Mr Wellington Koo's reports to the League. He interprets the whole policy of France in the light of a supposed fixed determination to dominate Europe by means of a metallurgical supremacy. This may be, and no doubt is, a motive present in the minds of some powerful sections of French opinion. But Mr Osborne uniformly falls into the temptation to which all political writers are prone, of speaking of countries as if they were individuals with fixed and undeviating purposes: he speaks of the designs or the actions of "France" without reminding his readers that there are in France, as in all countries, many different strains of opinion, and that, even when they agree in pursuing the same policy, they often pursue it from quite different motives and for quite different ends. Nor does

* "The Saar Question: A Disease Spot in Europe." By Sidney Osborne. Allen and Unwin. 12s 6d.

he ever give due weight to the dominating fact of the situation in France—the nervousness as to the future, the yearning desire for some guarantee of security, which—since the peacemakers have failed to find any adequate means of satisfying it—has driven the nation back upon the old, futile, self-defeating means of military domination, and enabled the militarist element (which is present in all countries) to get into the saddle.

It is regrettable that a useful piece of work should have been disfigured by virulent partisanship.

THE STABILISATION OF BUSINESS.*

NINE essays on the problems of stabilisation are collected in this volume, to which Mr Herbert Hoover has written an introduction. The contributors are all eminent men, but most of them are professors. They write, however, not for the theorist, but for the man of business, believing that they may help to bring "the science of economics and the practice of business into a closer understanding."

Professor Irving Fisher summarises again his proposals for stabilising the dollar; Professor Seligman writes on the international aspects of stabilisation; and separate chapters deal with the question in its relation to unemployment, transportation, and the distribution of public works.

The book is a very authoritative summary of advanced thinking on the subject, and it has both the merits and defects of advanced thinking. "Thought on business cycles," we are told in the preface, "is advancing from the stage of analysis of the causes and characteristics of cycles to the stage of planning the policies of the control of cycles," and certainly the contributors to this volume have succeeded in giving to their thought a practical turn. But they are pioneers, and most of them are theorists; which means that they have perhaps more than their share of confidence and imagination. Some of their readers may think that the course of business cycles will have to be further analysed and more thoroughly understood before stabilisation can become a practical proposition.

The editing of the book has been uncommonly well done. There is little overlapping of subject matter between the different contributions, and the conclusions arrived at from various points of view are effectively combined so as to confirm one another. The intention to avoid tedious and technical detail may have led, perhaps, to a somewhat summary and dogmatic treatment of the subject; but the book gives as good a conspectus as could now be given of all the problems connected with stabilisation, and gives it in a very readable and intelligible form.

REAL PROPERTY LAW.*

THE Law of Property Act, 1922, is lengthy, difficult to understand, and does not take effect till 1925. It is, in the words of Sir Arthur Underhill, Senior Conveyancing Counsel of the Court, "a lawyers' Act, laboriously built up by skilled conveyancers." Little wonder that it reached the Statute book without attracting much notice, even in Parliament. Yet the new law (unless repealed, as Mr Harvey, in the book under notice suggests part of it at least ought to be, will affect middle-class as well as more wealthy folk in their everyday affairs. If Mr Harvey's criticisms are just, the Act will make dealings with property more difficult and expensive, but possibly the new scheme as a whole may work better than Mr Harvey fears.

The declared object of the Act is to simplify land law, and simplify and cheapen sales, mortgages, and other transactions. As is well known, the skilled investigation of the historical chain of title to property each time it changes hands is a cause of expense. The new Act endeavours to remedy matters "by keeping equities, with some few exceptions, off the title, thus making the history of each title a very simple and straightforward account of sales, mortgages, and leases, and putting all settlements and trusts behind a curtain." These are the words of

CABLE ADDRESS: BANKTRUST, PARIS

Sir Arthur Underhill, who has explained further in a book on the Act that the curtain provisions "place naked equitable interests decently behind a legal curtain." Why equitable interests, that is settlements, trusts, and so on, should be regarded as indecent has not been explained. Nor does it appear why law and equity are emphatically contrasted. The distinction between them is one of form and history rather than of substance and principle, and it is surprising to find a measure, which purports to do away with useless and tedious technicalities, insisting on this distinction. Only absolute fee simples and leaseholds would continue as modes of legal ownership of land, other interests being provided for under trusts.

The Act further proposes to assimilate to some extent the rules of law applying to real property to those governing personal property. It would abolish copyhold tenure of land, and the rules as to descent to the eldest male on an intestacy. Instead of the existing rules for descent of personal property on intestacy it would substitute a new (and rather complicated) code. The changes to be introduced into the law of intestacy were discussed in an article in the *Economist* of April 1, 1922, and objections to them pointed out. These matters, and very many technical points, are closely examined by Mr Harvey in his book, which should certainly receive attention. His treatment of the subject is, however, scarcely suited to the requirements of the non-professional reader, though the subject itself should not be left to lawyers alone. Mr Harvey makes a good point when he refers to the desirability of the economic and social aspects of the matter being adequately investigated.

RAILWAY PROBLEMS IN SPAIN.*

THE Spanish railways are not favourably regarded by visitors from abroad. A few through expresses are very comfortable, but the gradients from the coast to the central plateau are steep, the speeds slow, the routes usually roundabout, and the branches comically primitive in equipment and working. State aid in construction has hampered development; unprofitable lines have been built; kilometeric guarantees have increased distances and working costs; subventions have set up the belief that the capital accounts can be closed and the rates fixed once for all; the leasehold tenure of the lines discourages fresh expenditure; and the combination of many small lines into the three leading systems has caused debenture issues constituting two-thirds of the total capital. Thus the companies cannot raise money for extensions, or to cope with the vastly increased traffic. Recently, indeed, the State has sanctioned increased rates, and advanced money to the companies; it constantly interferes with the management, and tends towards nationalisation, complete or partial—a very doubtful benefit; but the problem is extremely complicated, and the future obscure. Mr Boag, who has himself managed a Spanish railway, discusses the situation at length; he also deals with the history, mentioning the abortive negotiations with George Stevenson, the famous official report of 1844—very sound, though its framers had never seen a railway—the

* "The Railways of Spain." By George L. Boag. (London) The Railway Gazette. 1923. 12s net.

opening in 1848 of the first and very successful line from Barcelona to Mataró, and the progress to the present day. He gives full technical particulars of equipment, working, rates, and welfare work—excellent, but not a bar to strikes; he makes light of the break of gauge at the frontier, which he declares was not motivated by strategic reasons—but they would hardly have been mentioned officially—and of the grandiose project for a through line of standard gauge from the French frontier to Algiers, to provide a fast route for international traffic to Morocco, Dakar, and South America. He concludes that improvement is unlikely, unless increased receipts enable the companies to effect it themselves; and that, as the bulk of through travel is by night, more direct communications between Madrid and the provinces would really be of slight advantage. An interesting chapter deals with the railways of Portugal, where conditions are more satisfactory. The book should interest the railway expert, the student of economics, and the foreign visitor to Spain.

STOCK EXCHANGE NEWS. SETTLING DAYS.

TICKET. ACCOUNT.
July 11. July 12.

THE Stock Exchange cannot boast that the second half of the year has entered its markets with any degree of cheerfulness or of business. Throughout the week, the possibilities of a rise in the Bank rate pressed hardly upon gilt-edged stocks, and continuance of the complications abroad checked enterprise on the part of the speculative division. Evidence remains that there is still plenty of money available for investment. At the same time, the presence of the stag element is obvious from the manner in which the prices of stocks and shares which were rapidly subscribed upon the issue of their prospectuses, tend to break away when the market in them starts. The recently issued New Zealand scrip has dropped to 3 discount, and the India scrip, up to 3 premium a fortnight ago, gave way to 1 discount, while the Austrian sixes, which looked so buoyant at 7 premium, have relapsed to 2½ premium. Various of the commercial companies' shares lately floated are also at a discount. The fact of over-subscription on a prospectus does not by any means guarantee that there will be no discount when a market starts.

Although the immediate effect of the Bank rate rise to 4 per cent. was not unfavourable, sellers soon came into the investment markets. A mild slump occurred, to the accompaniment of fears that the rate may rise to 5 per cent. next Thursday.

The War Loan has been dropping steadily, but the main flatness occurred in Conversion Loan, Funding, Victory, Consols, and the India scrip mentioned above. Several of these have attracted a certain amount of speculation, and quiet pressure on behalf of moneylenders, bankers, and others has been exercised to curtail the accounts open on the bull tack. Colonial Government stocks have weakened sympathetically, and heaviness spread also to Home Railway prior-charge issues.

French bonds suffered acutely from the fresh demoralisation in the franc, and although there was a faint recovery from the lowest, most of the French prices are heavy—Government, municipal, and railway. Depression extended to Brazilian bonds, Chinese, certain of the Scandinavian, and, as already observed, to the Austrian scrip. The Dutch East Indies new loan receded to 1½ discount, and other foreigners are weak.

London Midland and Scottish stock had to be quoted ex dividend in order to admit of dealings in the new stock which came into being through the inclusion of Caledonian stock in the group. The dividend was reckoned at £2 5s 9d net. Home Railway stocks suffered by reason of the unauthorised dockers' strike, which came on top of a threatened stoppage of work by

some of the railway unions. North-Westerns fell back on account of Thursday's train disaster. Grand Trunk Pacific 4 per cent. debenture was one of the mercurial stocks of the week, the price jumping 7-8 points to 50, on rumours that the negotiations with the Dominion Government are proceeding satisfactorily, but going back to 45 as sellers rushed in; Argentine railways, although easier in places, managed to maintain their firmness tolerably well, the falls being modest in extent; in Brazilians, there is little doing.

Rubber shares again sagged for want of public support, and on account of the stagnation in the market for the raw produce. Oil shares have been decidedly flat, owing to a fresh break in the price of Mexican Eagles and fairly heavy liquidation in some of the other previously popular shares. The textile list and tobacco shares, both of which are closely followed by speculative investment interests, resisted the general trend, though a good many of the usually active industrialists have come under the ban of the depression throughout the Stock Exchange, and are lower on balance. Cable stocks and shares gave way sharply, on renewed fears of wireless competition, and Marconis advanced, though the movement was held in check by a certain amount of selling. Newspaper shares are lower; Trust companies' stocks have halted in their long upward stride, the reduction in the dividend on British Steamship deferred causing a little surprise. Shipping issues are no better, and in the insurance market the movements follow the general disposition, without, however, the fall being particularly noticeable. London banking shares are heavier, because of sales that have had to be made in order to provide money required for other purposes—payment of calls on new issues, of the July income-tax instalment, and losses incurred in speculation. The Iron and Steel market is quiet. Nitrates are a little irregular. Electric Light shares hold their substantial gains of the past six months.

The Kaffir market has felt the force of the weakness that developed in Paris, and it is said that operators from that Bourse have been selling bears of South African shares in the London market. The copper favourites fell with the rest. Amongst Rhodesians, Chartered spurred sharply to 14s, on a rumour that the Government is about to come to an immediate settlement with the company. But the rise was soon spent. Tin continues to descend, with the result that tin-mining shares are in the doldrums; and there is so little doing in other mining sections that what changes have occurred are mostly small declines, caused by precautionary action on the part of jobbers not anxious to take more stock at the present time upon their backs.

NEW ISSUES.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Government of India Rupee Loan, 1923.—The India Office notify that the total subscriptions to the loan received in India on the opening day (July 4th) exceeded Rs. 16 crores. It has already been announced that the loan, which takes the form of 10-year 5 per cent. bonds (free of Indian income-tax), issued at Rs. 97 per cent. and 5 per cent. (Indian income-tax free) loan 1945-55, issued at Rs. 96 per cent., will be closed not later than July 23rd or earlier without notice when the total subscriptions to the two issues amount to approximately 24 crores.

The Lima Light, Power, and Tramways Company.—Incorporated under the laws of Peru. This is an offer of £1,500,000 6 per cent. first mortgage debentures at £90 per cent. The undertaking was formed in 1910 to take over and work various electric railway, tramway, power, and lighting undertakings. The company has recently obtained from the Government of Peru and the municipality of Lima improvements and extensions of the concessions for the undertakings, and part of the proceeds of the present issue will be applied in repaying £744,360 outstanding 5½ per cent. debentures. The fresh issue will be secured by a trust deed, creating a first charge upon the property and plant. Attractive conversion terms are offered to existing debenture holders, and the investment ranks as a fairly good one amongst Peruvian securities.

Industrial and General Trust, Limited.—Subscribed capital £2,500,000, divided into £1,100,000 4½ per cent. preference stock, £1,100,000 ordinary stock, and 300,000 £1 shares recently issued at 24s per share. This is an issue of £813,765 4 per cent. debenture stock at 84½ per cent. The stock, of which £200,000 has been already applied for and will be allotted in full, ranks *pari passu* with £933,160 of 3½ per cent. debenture stock and £753,075 of 4 per cent. debenture stock at present existing. It is redeemable at the option of the trust at any time at £102. Profits of the trust, after paying debenture interest, for the past three years have been well over £150,000 in each year, while the dividend on the ordinary stock for the same period has been 12 per cent. per annum. The amount required for interest on £2,500,000 debenture stock (less tax at 4s 6d in the £) is £73,884. The prospectus shows that there are total funds of £5,620,574 available as security for debentures. The issue deserved the cordial reception extended to it.

The East Surrey Water Company.—Authorized share or stock capital, £655,000, of which £475,000, including premiums, has been issued. The loan capital issued amounts to £202,768. It is now proposed to raise, by the issue of 10,000 ordinary shares, £120,000, these being offered for sale by tender at the minimum price of £11 10s per £10 share. The shares will be entitled to a dividend not exceeding 7 per cent., and will rank *pari passu* with an existing issue of 22,215 ordinary (B) shares. Maximum dividends have been paid on the ordinary shares for the past 23 years, excepting for the year 1920-21. The amount required to pay full dividends on the existing ordinary capital is £20,851, while the net amount available for dividends on the ordinary shares for the year ended March 25 last was £33,544. Thus a comfortable margin is revealed, and the yield at the minimum price of issue, namely, £6 1s 9d per cent., is certainly reasonable.

Albert E. Beed and Co., Limited (Paper Manufacturers).—The capital consists of 300,000 6½ per cent. cumulative preference shares of £1 each, of which 240,000 have been issued, and 225,000 £1 ordinary shares, all of which have been issued. There is a 6 per cent. first mortgage debenture stock "secured by a trust deed in favour of the Bank of Liverpool and Martins, Liverpool." It is redeemable by a cumulative sinking fund of 1 per cent., beginning on July 1, 1927, and operating in purchases below par, or drawings at par, exclusive of accrued interest. Any stock not previously redeemed will be paid off at par on July 1, 1966. The company reserves the right to pay off the whole or any part of the stock at six months' notice as follows:—At any time between July 1, 1923, and June 30, 1928, at 105 per cent.; at any time between July 1, 1928, and June 30, 1933, at 102½; on or after July 1, 1933, at par. The interest is payable half-yearly on January 1 and July 1. The company has sold this stock at the price of 95½ per cent., less a brokerage of ½ per cent. These details are taken from a Press announcement made to comply with Stock Exchange regulations.

C. and F. Sudbury (1922), Limited.—Authorized capital £240,000, divided into 140,000 7½ per cent. cumulative preference and 100,000 ordinary shares of £1 each. Of these,

110,000 preference and the whole of the ordinary shares are issued and fully paid. The company has also issued £160,000 of 7 per cent. first mortgage debentures. This is a Nottingham undertaking, and these and other details are given in the Press to comply with Stock Exchange regulations.

The Bainham Waterworks Company, Limited.—Authorized capital £48,000, of which £24,000 has been issued. Loan capital for £6,275 has been issued. This is an offer for sale by tender of £12,000 £1 per cent. preference shares at the minimum price of par. The net revenue will be, "in the opinion of the directors," £2,250 for the current year. The interest on existing debenture stock amounts to £251 and on preference shares to £960, leaving a margin of £1,039 for ordinary shareholders if the estimate of revenue proves correct.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

COMPANY MEETINGS, &c.

THE BRITISH EMPIRE TRUST COMPANY, LIMITED.

COMPANY'S POSITION "STRONG AND SATISFACTORY."

The twenty-second annual meeting of the British Empire Trust Company, Limited, was held, on the 2nd instant, at the Liverpool street Hotel, London, Mr J. Davidson (deputy-chairman and managing director) presiding.

The secretary (Mr H. M. Cox) having read the notice convening the meeting and the report of the auditors,

Mr Davidson apologised for the absence of the chairman, Mr R. M. Horne-Payne. In the course of Mr Horne-Payne's address, which was read to the meeting, he said that the statement of affairs showed the company to be in a very strong and satisfactory position. The revenue was substantially higher at £113,821, and after providing for all expenses and outgoings, including income-tax and corporation profits tax, the net income was £84,062, which, with the amount brought forward from last year, left a total of £134,515 available for distribution. After providing for dividends of 8 per cent. on the employees' profit participating shares, 5 per cent. on the preferred ordinary shares and 7 per cent. on the deferred ordinary shares there remained a balance of £94,849, or a sum equal to 12½ per cent. of the entire capital of the company, or, put in another way, a sum sufficient to pay for three and a-half years the present rates of dividends on the preferred and deferred ordinary shares. The directors might have recommended increased dividends on the preferred and deferred ordinary shares, but they came to the conclusion that their first duty to the shareholders was to keep the company in an absolutely unassailable position. A considerable amount of the profits of the past two years had been derived from appreciation of investments, which might not, and almost certainly would not, in future years be repeated on so large a scale. The company was now acting as trustees for £67,000,000, and if the revenue from this source was to be maintained and increased the company must be maintained in such a strong position that it would continue to be accepted without question as trustee, and have its undertaking regarded as unquestionable, as was the case at the present time. He was not able to make any promises as to increased dividends, but his own personal feeling was that, if the surplus reached £100,000, and there were reasonable prospects of this figure being maintained and increased year by year, the directors would be justified in recommending an increased distribution.

WEST GLOUCESTERSHIRE GENERATING STATION.

The most important financial business undertaken during the year was the finance of the establishment of an electrical power generating station and distribution system in West Gloucestershire. The area to be supplied with light and power was one mapped out by the Electricity Commissioners as suitable for the operation of a central power station, and covered some 300 square miles, and included the Forest of Dean coalfield. It also covered the Stroud Valley industrial district. The construction of this power station was commenced only in January last. The construction of the station itself is now practically complete, and the main distribution system is expected to be completed before the end of the present year. The enterprise would meet the growing requirements for light and power of a large industrial and residential area, and he was confident would prove a financial success.

BRITISH COLUMBIA ELECTRIC RAILWAY.

The protracted negotiations which the British Columbia Electric Railway had had with the city of Vancouver regarding the right to charge a 6 cent fare had been satisfactorily concluded, an agreement having been entered into fixing the fare in the city of Vancouver at 6 cents for a period of three years from November 8, 1922. The relations between the company and the authorities in Victoria and Vancouver had never been more cordial, and the company looked forward with confidence to a prolonged period of peace and prosperity. As the result of the above settlement the company was able, on January 1 last, to reduce its charges for domestic lighting from 6 cents to 5 cents per unit. Since the beginning of January to the end of May the company's revenue showed increases of \$126,973.

MONTEREY RAILWAY, LIGHT AND POWER COMPANY.

Since its reorganisation the Monterey Railway, Light and Power Company had been able to pay regularly the interest on its 5 per cent. "A" first mortgage debenture stock. It had not yet been found possible for the company to arrive at a settlement with the

Government of the State of Nuevo Leon in respect of the moneys due to the company under the State guarantee in connection with the water and sewage concessions. When a settlement of this matter was effected and political conditions throughout Mexico improved, the company should again make satisfactory progress.

CANADIAN WESTERN LUMBER COMPANY.

Under the able management of Mr McCormack the position of the Canadian Western Lumber Company was now stronger than at any previous time in its history. The arrears of interest on the 5 per cent. first mortgage debenture stock had been reduced to 9 per cent., and it would not be a surprise if this year's operations resulted in the complete repayment of the arrears of the interest on the first mortgage debenture stock. The sales of lumber from the beginning of January to the end of May showed an increase of 6,344,722 feet.

The continuation of the general industrial depression during 1922, together with a small reduction in fares, affected to some extent the gross earnings of the Winnipeg Electric Railway, but economies had been made in working expenses, with the result that the net earnings of the company for the year were well maintained.

CALGARY GAS COMPANY.

Regarding the position of the Canadian Western Natural Gas, Light, Heat and Power Company, Limited, the Public Utilities Commission ordered a rehearing of the case regarding the rates to be charged by the company, and requiring the Calgary Gas Company to show cause why the order of the Commission of November 30, 1921, should not be revoked. During the rehearing of the case a voluntary agreement was entered into between the City of Calgary and the company, and was executed on November 30, 1922. This agreement recognised the right of the gas company to charge 48 cents per 1,000 feet until November 1, 1923, after which date it provided for a periodical revision of the price to be charged on a basis mutually agreeable to the city and the company.

Our latest advices are that the city of Calgary have stated that they will do nothing to hinder the gas company in its efforts to obtain an adequate supply of gas, and the company is at the present time engaged on the drilling of two new wells. It is hoped that from these two wells and the drilling of a third well, which is in contemplation, the company will secure a satisfactory additional supply of gas. In this connection the Public Utilities Commission have fixed October 1st next as the date on which supplies must be augmented, and have intimated that if the supplies are not augmented by that date the question of supply and price of gas to the city of Calgary will be reviewed by the board.

We can only hope that the company will be successful in its efforts to increase its gas supplies, and that it will be left in peace to continue to sell gas at the very reasonable price now being charged.

He then moved the adoption of the report and accounts.

Brigadier-General E. F. O. Gascoigne, C.M.G., D.S.O., seconded the resolution, and, after the chairman had replied to some questions put by Mr C. H. Wilkinson, it was carried unanimously.

The retiring directors, Mr R. M. Horne-Payne and Sir William Mackenzie, were re-elected. Viscount Stopford was elected to fill the vacancy caused by the resignation of Mr Norman Scott-Russell.

The auditors were re-appointed, and a vote of thanks to the chairman and directors concluded the proceedings.

ODHAMS PRESS, LIMITED.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The third annual general meeting of Odhams Press, Limited, was held, on the 3rd inst., at the Hotel Cecil, Strand, London. Lt.-Col. W. Grant Morden, J.P., M.P. (chairman of the company), presided.

The secretary (Mr A. C. Duncan, A.C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report, said that one of the main problems of increasing importance throughout the Great War was that of propaganda—namely, the publishing of news calculated to inspire our own people and to depress the enemy. Foremost amongst those in the public eye in that respect were the late Lord Northcliffe and Mr Bottomley, the founder of *John Bull*, and its editor until the end of 1921. The company was formed in 1920 to amalgamate the old-established printing business of Odhams, Limited, with *John Bull*, and it was deemed essential to the welfare of that paper that its editor and founder, Mr Bottomley, should be retained. When, subsequently, Mr Bottomley was held responsible for the losses of thousands of people through his bond clubs, which caused many of his warmest supporters to become the bitterest opponents of everything connected with his name, that naturally had a serious effect upon *John Bull*, and the problem

before the directors had been to save and rehabilitate the journal, which was one of the most important profit-earning assets of the company. Steps had been taken to convert the paper from a personal one to an impersonal one, while continuing its policy of outspoken and independent criticism, and the paper had numbered during the past year amongst its contributors some of the greatest men in the country, including the Right Hon. H. H. Asquith, M.P., Field-Marshal Earl Haig, Right Hon. Earl Birkenhead, Right Hon. Sir W. Joynson-Hicks, Bart., M.P., the Right Hon. J. R. Clynes, M.P., the Lord Bishop of Birmingham, Right Hon. Sir Frederick Milner, Bart., Right Hon. Sir L. Worthington Evans, Bart., M.P., Right Hon. Lord Lambourne, Admiral Sir Percy Scott, Bart., and the Rev. R. J. Campbell.

"JOHN BULL" INCREASED SALES.

It had also been necessary to devise a far-reaching scheme whereby the new attractive features of *John Bull* had been made known throughout the country and its sales pressed home. That had been a very costly matter. But the success hoped for had been attained, and to-day the net sales were well over 800,000 copies per week, and the paper occupied the gratifying position of having the largest circulation of any twopenny weekly periodical in the world. The board had thus restored to the company a most valuable asset, and they had every reason to believe that the future would justify the expenditure. Of other sections of the business an encouraging story could be told and at least as good prospects foreshadowed.

The machines in the printing department were busier than they had been for some years past; a ten-years' contract had been secured for printing the *People*, and contracts for ten other publications had been secured. During the year additional depots had been opened in Manchester, Leeds, Bristol, Birmingham, Cardiff, Liverpool, and Newcastle for the better distribution of the journals published by the company. The Borough Bill Posting section of the business had been considerably developed. Special attention had been paid to illuminated signs, and the company held the key positions suitable for electric advertising. The purchase of the share capital of Messrs Dean and Son, owners of "Debrett's Peerage" and of the well-famed toy books, was made at the end of 1921, and he could report that all indications pointed to a satisfactory year for that branch. The earnings of the *Sporting Life* continued to be satisfactory.

ISSUE OF DEBENTURES.

Owing to the exceptional expenditure to which he had referred, it had been found essential to obtain more working capital, and the directors had arranged with the Investment Registry to take up an issue of £250,000 of debentures. A valuation of the company's leasehold premises, plant, machinery, &c., obtained in connection with that issue resulted in the sum of £456,316, which was especially satisfactory as showing that the company had always made ample reservation against depreciation. As to the adequacy of the capital provided, Messrs Dickson, Wilson, Tubbs and Co. reported that they considered the company to be a well-organised and live concern, and that it should now be sufficiently provided with working capital.

Further, after an inspection of the works by representatives of the Investment Registry, their managing director had written that the representatives had all been very favourably impressed with what they had seen. In fact, one, who happened to be an expert organiser, had said that he had never seen a better organised business either in this country or in America. With a view to further economy, the board had decided to reduce the number of directors to nine, two of whom would be nominated by the Investment Registry, the fees to the remaining directors being considerably reduced. For that purpose it would be necessary to make certain alterations in the articles of association, and they would be

submitted to the shareholders at the termination of the other business of the meeting. The year had been one of exceptional difficulty to everyone actively interested in the business of the company, but the directors felt that they had now overcome the difficulties through which the company had passed, and that there was every indication of the business reaching the profit-earning position which it had formerly enjoyed, when they could look forward to the resumption of the payment of dividends.

The deputy-chairman seconded the resolution, and, after some discussion, it was carried.

LIPTON, LIMITED.

RECORD TRADING—IMPROVED EXPORT BUSINESS.

The annual general meeting of the above company was held, on the 2nd instant, at Winchester House, Old Broad street, London, Sir Thomas J. Lipton, Bart., K.C.V.O. (chairman), presiding.

The secretary (Mr S. B. Sledmere) having read the notice convening the meeting and the auditors' report,

Mr H. L. Peters (deputy chairman) explained the variations in the accounts, after which the Chairman said: You have had the figures in the accounts explained to you, and I feel sure that the results, showing an increased volume of trade and a satisfactory increase in net profits, will commend themselves to your satisfaction. Last year our trade in the United Kingdom was larger than in any previous year, and again we record an increased tonnage in our turnover.

There have been further falls in values during the year, as was also the case during that preceding. These had their effect upon the large stocks it is necessary for us to carry in our stores and branches, and our profits have been reduced accordingly. The consequent benefits of the reductions in the selling price have been given to our customers, and we have thereby contributed to lower costs of living, so helpful in these days of enforced economy, restricted earnings, and heavy taxation.

CHRISTMAS GIFTS TO UNEMPLOYED.

Although it may be said that there has more recently been some improvement in general trade, the past year has witnessed a very large amount of unemployment, and in view of the fact that a considerable proportion of our trade is done with the working classes, we decided to make a gift at Christmas to some of the unemployed, particularly those whose cases were most necessitous. We sent out over 125,000 parcels containing various kinds of nourishing foods, and these were distributed throughout Great Britain and Ireland. Having the necessary authority under the constitution of the company to do this, we felt sure we were acting in accordance with the wishes and with the approval of the shareholders. From the very large number of expressions of appreciation and thanks that were received, we are certain that the distribution of these gifts added very considerably to the popularity of the company. Judging by results, and quite apart from the fact that the scheme won such widespread approval from the general public and helped to increase our goodwill, I feel in my heart that we did right in making this distribution at the time we did to the unemployed.

Working expenses have been lighter, particularly railway freights. It is true that some further reductions in rates are shortly to come into operation, but further reductions in this direction are highly necessary to enable the prices of food to be brought down to a still lower level. Following our usual policy of selling at the lowest possible prices, our rate of profit has been very small, and had we not been able to reduce our expenses of distribution we could not have placed such satisfactory results before you. We

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

have opened a further number of branches, and propose to continue that policy of development, but building costs still call for cautious proceeding in this direction. Our various factories have again demonstrated their extreme utility in supplying goods of our own manufacture, which command an increasing and gratifying popularity from their excellent quality and reasonable prices, showing considerable savings to the purchaser.

EXPORT TRADE IMPROVED.

Our export trade has shown a decided improvement in both turnover and profit. The steady decline in the rates of Continental exchanges has adversely affected our business in France and Belgium, but better results have been shown in our Indian business. The tea and rubber estates in Ceylon have shown very satisfactory results. In times like these, when economy is imperative and money must be made to go further, we have every reason to congratulate ourselves on the ever-increasing number of our customers. This public support is in itself a good sign that as we get nearer to a more settled state of trade our prospects will be better still. Once again it gives me much happiness to speak of the splendid support we have received from our staff at home and abroad. We recommend the payment of a dividend of 12½ per cent. for the year, leaving a balance of £38,639 to be carried forward, subject to corporation profits tax. The reduction in the corporation profits tax announced in the last Budget is a step in the right direction, and it is to be hoped that next year will see the total abolition of what has always been an unfair burden on limited liability trading companies.

Mr H. L. Peters seconded the motions for the adoption of the report and accounts and as to allocation of profits, which were carried unanimously.

Mr H. L. Peters was re-elected a director, and Messrs Turquand, Youngs and Co., auditors, were reappointed.

The proceedings terminated with a hearty vote of thanks to the chairman, directors, and staff both at home and abroad.

OHLSSON'S CAPE BREWERIES, LIMITED.

IMPROVED RESULTS—DIVIDENDS RESUMED.

The ordinary general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 5th instant, at the Great Eastern Hotel, London, Mr Gerald Buxton (the chairman) presiding.

The secretary (Miss M. Pulleyn) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts to March 31 last, said that at the meeting a year ago the directors stated that they hoped the accounts for the year now under review would benefit in various ways, especially by economies which had been effected as a result of the change of management in South Africa, and by the lower cost of materials. He thought shareholders would agree that the past year's results had proved the correctness of this forecast. It gave the directors great satisfaction to find that this was so, and that they were able to resume the payment of dividends. The recovery in general business in South Africa, as elsewhere, had been much slower than had been hoped for. The chairman of the National Bank of South Africa, in his speech last week, gave a very full account of the difficulties with which the whole Dominion had been struggling, and shareholders would understand that the brewing business naturally suffered from any general depression involving unemployment and lack of wages. It was, therefore, very satisfactory to report that, although the company's trade had not increased—in fact, it had declined—the result was very much better. According to the latest Government returns in South Africa, covering the whole of the beer trade, there was a reduction in the Excise collected of over 20 per cent. during the nine months ended December 3 last—three-quarters of the year covered by the accounts now submitted. In these circumstances it was particularly satisfactory that the profit had amounted to £92,000, as against £42,000 for the previous year.

With regard to the beer duty at the Cape, which had been increased by 150 per cent. on that prevailing before the war, there had been no reduction, and he did not know that they could look for any. They were in the unfortunate position, as beer producers, of competing with local wine, the producers of which had considerable influence in the matter of excise taxes. They, as a matter of fact, paid no excise at all, whereas the brewers had to pay an excise of 30s per barrel, which was a great handicap as between their product and the local wine. There seemed to be indications of an improvement in trade in South Africa, and, as the beers produced by this company were of excellent quality, Ohlsson's Cape Breweries were well situated to take full advantage of an improved demand when it arose.

Sir Charles R. Hunter, Bart., seconded the motion, which was carried unanimously, and a dividend of 5 per cent., less tax, on the ordinary shares was declared.

ESTATES CONTROL, LIMITED.

A NEW SCHEME FOR HOSPITALS.

The nineteenth annual meeting of Estates Control, Limited, was held on the 5th instant, the chairman, Sir George Lawson Johnston, presiding.

The Chairman, in moving the adoption of the report and accounts, said: In glancing through the balance-sheet the only considerable alteration that you will notice is that on the closing date the cash at bank and on short loan was £83,980, as against £43,841 on the previous November 30th. The shareholders have every reason to be satisfied with the accounts on the whole, though some portion of our investments is unremunerative at present.

It is a rare thing to-day to find a land and cattle company that is showing a satisfactory profit. In the case of the Argentine Estates of Bovril, Limited, though its land is worth much more than the amount of its debentures, it did not earn a profit last year, and I should be surprised if it earns enough to pay its debenture interest this year. That will have to be met out of other resources of the company.

Sir George also referred to the remarks which he had made at the previous year's meeting on the question of the combined appeal for the voluntary hospitals of London. To-day he wished to mention a matter which he felt sure would be of interest to many voluntary hospitals throughout the country. An association had been formed under the name of the British Charities Association, with a view to running competitions and securing any profits therefrom for the benefit of hospitals and other charities. The first of these would be a prize scheme in which there would be a first prize of £12,000, and in all £30,000 worth of prizes. The prizes were to be guaranteed by Bovril, Limited, who would also pay the cost of an extensive publicity campaign to put forward the scheme in the Press and on the hoardings.

Tickets would be supplied absolutely free to recognised voluntary hospitals on condition that they were issued only to those who gave not less than 5s to the hospital.

"Which are the Best Bovril Posters?" would be the subject of the competition, and as these Bovril posters had attracted public attention for over a quarter of a century, there would be considerable interest evoked in deciding the order of their popularity.

The report and accounts were adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £30,000,000 in Treasury Bonds and Treasury Bills dated from July 9-July 14 were opened on July 6, 1923, and the total amount applied for was £39,185,000. Tenders for Monday to Friday bills at £99 is rod, about 50 per cent., and above in full, and for Saturday bills at £99 2s 1d, and above in full. The amounts allotted were as follows:—In bills at 3 months, £27,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.

Messrs. Samuel Montagu and Co. write as follows on July 4th:—

GOLD.

Supplies of gold this week are plentiful, but as the demand from India is very small, the bulk is likely to go to the United States.

SILVER.

Continental sales upon a singularly inactive market carried prices on the 2nd inst. to the comparatively low figures of 30½d and 30½d for cash and two months' delivery respectively. China had been doing very little in this market, and the check in the Bombay monsoon has held up Indian orders. The better news, however, that refreshing rains had fallen in Bombay led to some bear covering from that quarter yesterday, and a recovery of ½d in the quotations ensued. To-day, however, owing to pressure of sales on China account, this advance was lost. The offtake from Bombay is reported as 100 bars a day, and the stock as considerably under a thousand bars. In these circumstances some demand for shipment before long would not be an unnatural outcome. No fresh Indian currency returns have come to hand. The stock in Shanghai on the 30th ultimo consisted of about 25,300,000 ounces in sycee and 33,000,000 dollars, as compared with about 24,800,000 ounces in sycee, 32,000,000 dollars, and 290 silver bars on the 23rd ultimo. The Shanghai exchange is quoted at 3s 0½d the tael. Statistics for the month of June are appended:—

	BAR SILVER—Per Ounce Standard.		BAR GOLD.	
	Cash.	2 Months' Delivery.	Per Ounce.	Per Ounce.
Highest price.....	32½	31½	89 11	89 11
Lowest ".....	31½	30½	89 0	89 0
Average ".....	31½	31½	89 3 4	89 3 4

The silver quotations to-day for cash and forward delivery are each ½d below those fixed a week ago.

NOTICES.

Arising out of the retirement of Sir John Purcell, K.C.B., chairman, owing to advancing years, the following changes in the directorate of the National Bank, Limited, will take effect from July 1, 1923:—Mr J. B. Meers, C.B., deputy-chairman, has been elected chairman of the bank. Sir Thomas H. Grattan Esmonde, Bart., has been elected deputy-chairman of the bank, in addition to retaining his chairmanship of the Irish board. The Right Hon. Lord MacDonnell of Swinford, G.C.S.I., K.C.V.O., has been elected deputy-chairman of the London board. To fill the vacancy created by the retirement of Sir John Purcell, Mr M. J. Cooke, secretary, has been elected to a seat on the board, and has been appointed a general manager of the bank.

Mr Norman L. C. Mather has been appointed managing director of the National City Company, Limited, of Canada.

Mr John Constant Gibson, C.B.E., formerly of Buenos Aires, has been elected to a seat on the board of the London and Brazilian Bank, Limited.

The Commercial Banking Company of Sydney, Limited, announce that a branch has been opened at Mount Lacombe, in Queensland.

Lloyds Bank, Limited, announce that branches of the bank are now open at 2 Shield street, Shieldfield, Newcastle-upon-Tyne, under the management of Mr. J. A. Houston, of the Grey street branch; at 82 Cricklewood Broadway, N.W. 2, under the management of Mr W. H. Nichols; and sub-branches at Front street, Embleton, under the management of Mr R. Wilkie, of the Alnwick branch, and 53 High street, Harrow-on-the-hill, under the management of Mr H. S. Gill, of the Harrow branch.

The National Provincial and Union Bank of England, Limited, announce that a daily agency to the Barry Docks branch is now open at 13 Vere street, Cadoxton.

The London Joint City and Midland Bank announces the opening of new offices at 59 Vere street, Cadoxton, near Barry, and Le Long Frie, St Peter-in-the-Wood, Guernsey. The sub-branches at Hallgate and King street, Cottingham, East Yorks, have been amalgamated, and the combined businesses will be carried on at 112 King street. The office at 1 Bronwmn street, Trawsfynydd, Merioneth, has been converted into a full branch.

The Chartered Bank of India, Australia, and China announce that an agency of the bank was opened at Samarang (Java) on 2nd instant.

We are informed that Mr F. Ashford Eve, the district manager of the Liverpool and Manchester area of Barclays Bank, Limited, has been appointed joint manager of branches for the Union Bank of Manchester, Limited, with Mr William Roston, with whom he has collaborated for some time past. Mr Eve will continue to act as district manager for Barclays Bank, Limited.

Barclays Bank, Limited announce that their office at 530 High road, Ilford (known as Goodmayes branch), has been converted into a full branch; manager, Mr A. W. Hare. They have opened new sub-branches at Victoria road, St Aubin's, Jersey, under the management of Mr W. M. Cooke; at 24 Otley road, Headingley, Leeds, under the control of Mr H. B. Frank (who is also manager of Leeds branch); and at Chapel House, Croesgoch, Pembro, under the management of Fishguard branch. The office at Llanybyther, Carmarthenshire, has been converted into a full branch; manager, Mr E. Lloyd Jones.

The Chartered Bank of India, Australia, and China announce that Mr Colin Frederick Campbell, chairman of Messrs Forbes, Forbes, Campbell, and Co., Limited, has been elected a director of the bank, to fill the vacancy caused by the death of Sir Duncan Carmichael.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS.—Estimated gross production of crude oil for the month of June was 63,478 barrels, equal to approximately 9,000 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 10,000 tons.

LOBITOS OILFIELDS, LIMITED.—The production for June is cabled as 10,060 tons.

STEAUA ROMANA (BRITISH), LIMITED, are advised that the approximate fields' gross production of the Steaua Romana Company (Bucharest) for the month of June was 18,010 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, June 27, 1923, amounted to 1,490 tons. Cable received July 2nd regarding new well: "Stopped June 28th due to choking by sand; produced average 80 tons daily, June 25th-June 28th."

BRITISH AUSTRALIAN BROKEN HILL.—For the fortnight ending June 30, 1923:—7,139 tons crude ore produced 1,180 tons lead concentrates, containing 743 tons lead and 31,860 ozs silver; also 1,025 tons zinc concentrates, assaying 7.0 per cent. lead, 8.5 ozs silver per ton, and 46 per cent. zinc; 190 tons carbonates raised.

BROKEN HILL SOUTH.—For the four weeks ended June 30th:—15,960 tons of crude ore and 9,590 tons of dump slime were treated, and produced 4,811 tons of lead concentrates, assaying 5.5 per cent. lead and 24 ozs silver per ton; also 2,540 tons of zinc concentrates, assaying 44 per cent. zinc.

MOUNT LYELL.—During the four-weekly period ended June 27th there were smelted Mount Lyell ore 980 tons, North Lyell ore (direct to smelters) 733 tons, concentrates 2,521 tons. The converters produced 416 tons blister copper, containing 412 tons copper, 9,056 ozs silver and 160 ozs gold. The mill treated 8,814 tons of ore and produced 2,918 tons of concentrates.

administration charges, \$185,840; interest and charges on secured gold notes and other loans, \$535,152; provision for general amortisation, \$300,000—\$1,020,992, making net revenue \$6,851,968, against \$3,237,681; dividends on preference shares at 6 per cent. per annum, \$600,000; two quarterly dividends on ordinary shares of 1 per cent. each, \$2,131,511; making surplus for the year, \$4,120,457, against \$2,637,681 in preceding year. The following comparative statement shows the total gross and net earnings of the subsidiary companies in Brazil, the fixed charges and expenses of the subsidiary companies and of this company, and the resulting net revenue of this company for the past four years:—

	Year ended December 31.			
	1919.	1920.	1921.	1922.
Gross earnings from operation in Brazil	Milreis. 13,073,982	Milreis. 13,905,832	Milreis. 170,867,353	Milreis. 197,749,105
Net earnings from operation in Brazil	58,423,485	69,990,657	95,105,553	124,505,563
Average value of milreis for exchange on New York based on remittances	26.80	20.41	12.51	13.09
Above net earnings in dollars	15,655,477	14,286,039	11,898,523	16,299,229
Miscellaneous revenue	86,160	458,576	270,150	118,022
Total revenue of subsidiaries	15,741,637	14,744,615	12,168,673	16,417,251

As will be seen from the above statement, the total gross earnings of the subsidiary companies in Brazil were 197,749,105 milreis, being an increase as compared with the corresponding earnings of the previous year of 26,881,752 milreis, or 15.73 per cent. The net earnings from operation were 124,505,563 milreis, being an increase of 29,400,010 milreis, or 30.91 per cent.

BRITISH OXYGEN CO.—The report just issued shows an improvement on the preceding year, the net profit having advanced from £76,849 to £131,801, while the ordinary dividend has been raised from 10 per cent., free of income-tax, to 12½ per cent., free of income-tax. The reserve fund is fortified by the placing of £25,378 to its credit, bringing it up to £150,000. The directors attribute the better results partly to the new and improved large plants which are now installed in most of the company's factories, and to a continued increase in the demand for oxygen. The directors point out that the year's profits have been earned on a considerably reduced selling price for oxygen. They attribute the increase in demand mainly to the extensive use of the gas for ship-breaking and the development of other metal-cutting applications. The meeting will be held at Great Eastern Hotel, Liverpool street, on Thursday, July 12th, at noon.

HOARE AND CO., LIMITED.—The report for the year ending April 18, 1923, states that certain contingencies provided for in past years not having arisen, the sum of £30,146 became available from the contingencies reserve, and has been dealt with as follows:—£10,000 put to the credit of the superannuation fund, which has been placed on a definite basis by a trust deed, in conformity with Section 32 of the Finance Act, 1921, and the balance of £20,146 transferred to the credit of profit and loss account. After making provision for depreciation of properties, plant and machinery, bad and doubtful debts, and all outgoings, including Corporation Profits Tax, the profit for the year amounts to £219,438. Interest on debenture stocks, mortgages, and deposits amounts to £33,107, leaving a net profit of £186,331. The amount brought forward from last year's account is £4,987, and, after providing for the interim dividend paid on January 26, 1923, there remains a balance in the appropriation account of £172,554, which the directors recommend shall be dealt with as follows:—Final dividend, 2½ per cent. (making 5 per cent. for the year), £18,813; to reserve fund, £20,000; balance, £133,741—£172,554. The directors have resolved that the surplus available profits for the participation certificate holders are £128,595, which will redeem at par the whole of the participation certificates other than those held by the company, leaving to be carried forward to next account £5,146. The meeting will be held at Red Lion Brewery, St Katherine's Way, E. 1, on July 12th, at 12.30 p.m.

INTERNATIONAL TEA CO.'S STORES.—This company has just issued its report to April 21, 1923, and is able to show a satisfactory year's working. The trading profit has increased from £329,613 to £396,983. The ordinary dividend has been raised from 16 per cent. to 18 per cent., and the net profit at £336,718 compares with £280,020. Last year £40,000 was put to reserve, but in the latest report £100,000 is set aside, which brings the reserve account up to £284,906. The sum of £118,218, subject to corporation profits tax, is carried forward. The meeting will be held at Winchester House, Old Broad street, on July 12th, at noon.

LOVELL AND CHRISTMAS.—The report for the year ended June 16, 1923, shows a net profit of £102,919 as compared with £121,190 in preceding year. The ordinary dividend and bonus is unchanged at 14 per cent. for the year. The sum of £103,125 is carried forward, as against £95,643 brought into the accounts. A sum of £53,000, being capital profit realised by the sale of investments, has been added to reserves, thus increasing total reserves to £330,365. The meeting will be held at Manchester Hotel, Aldersgate street, on July 12th, at half-past three.

MARCONI INTERNATIONAL MARINE COMMUNICATION.—The accounts for the year ended December 31, 1922, show a net profit of £171,848, arrived at after writing off approximately £8,000 in respect of bad and doubtful debts. After bringing in £18,822 from the accounts of the previous year, a sum of £190,670 is dealt with as follows:—Interim dividend of 5 per cent. for the year ending December 31, 1922, £59,636; proposed final dividend of 7½ per cent. for the same period, £89,454; balance to be carried forward, subject to excess profits duty for the years 1916 to 1920, inclusive, less amounts paid on account, £41,580. The report states that the increase in the year's profits is due in part to

additional business consequent upon the return of ships to commission after the period of great depression in the shipping trade, which necessitated the laying up of a large number of ships in 1921, and also to economies which have been effected throughout the organisation in the methods of working and control. During the year debentures of a par value of £1,260 were redeemed.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have been more favourable to growing crops though more rain would be welcome. The condition of winter wheat is satisfactory, the plant now being in full ear, and with a spell of sunshine harvesting may not be so late as at one time anticipated. Hay making has made good progress, but the yields vary considerably. While hay is expected to be a rather light crop, clovers and sanfoin appear abundant. A rather quiet and featureless condition of affairs prevailed at market, and following an easy period, prices recovered slightly on firmer forward offerings. Sellers are by no means pressing, in view of labour difficulties at the docks. No. 1 Northern Manitoba quoted 49s 6d, No. 2 mixed Durum 46s, Rosafe 62½ lbs 47s 6d, choice white Karachi 47s 6d, and red ditto 46s 9d, all per 496 lbs ex ship terms. The cargo section remained quiet, but prices are a shade better with rather more inquiry for La Plata descriptions. Rosafe 62½ lbs July sold at 43s 4½d to 43s 9d, ditto afloat 43s 7½d per 480 lbs. Maize cargoes firmly held. Plate steamers afloat sold 34s 6d, and July shipment 34s 6d, while No. 6 Yellow South African October-November sold at 33s 3d per 480 lbs. Barley dull, and a cargo of Dan-Bess-Kustendji afloat sold at about 25s per 400 lbs, c.f. and i. terms. Crop reports from the chief exporting countries remain for the most part favourable, while floating supplies to Europe are on a reduced scale, though arrivals in this country have been fairly liberal of late. Flour in moderate request and prices steady. London standard straight run quoted at 40s, patents 42s to 43s, town households 38s per sack, delivered in metropolitan area. All English straights sparingly offered at 35s to 36s per sack delivered at London stations. Imported quiet. Manitoba export patents range from 35s to 38s 6d, Minneapolis good patents 38s, and Australian 36s to 37s, all per 280 lbs, ex store terms. Millers' offals firm. Broad bran quoted 6s 6d-6s 9d, ordinary ditto 5s 6d, middlings 8s, bags included ex mill, light oats 5s 3d, powdered oat husks 5s 3d, feed oatmeal 7s 9d, ground oats 13s 3d, all per cwt, free on rail. Barley, English, quiet at 7s 6d-ros 6d as to sample, with good malting grades quoted 8s 6d-11s per 112 lbs, free on rail. Imported weak. Californian quoted 42s-44s, Australian chevalier 38s-46s, New Zealand 33s-45s, as to sample, all landed, per 48 lbs. Persian ex ship 24s 9d, Danubian landed 29s, Plate ditto 27s, No. 4 Canadian Western ex ship 25s 6d, American malting, 48 lbs, ditto 25s 3d, all per 400 lbs. Maize

IRON, STEEL, AND COAL.

Our Glasgow correspondent writes:—Hope for the future is brightened in the announcement by Sir Glynn West that Glasgow will participate in big Newfoundland orders (involving an expenditure of four millions) just concluded, and in the extensive undertakings in steel and iron to be proceeded with immediately at Singapore. In raw iron and hematite purchases in the last

EVERY DESCRIPTION OF BRITISH AND FOREIGN BANKING BUSINESS TRANSACTED.

few days have been promised, conditional on prices being reduced; and as Midland quotations have been lowered by 2s 6d a ton, a corresponding cut may be made here. Meantime boiler plates stand at £13 a ton, ship plates at £10 5s, and sections at £10. Black sheets continue to meet with a fair inquiry at a ton. Steel tubes are being run off in fair quantity, and there is promise of an increased outlet for rivets, wire ropes (indeed, all wire productions), and bars. As has been indicated, no change for the better is to be discerned in Clyde shipbuilding, and the official figures of June's output read very poorly. Only two steamers of 5,000 tons were booked in the course of last month, while the launches combined totalled 13 boats of 8,512 tons, comparing with 16 vessels of 34,906 tons in June of 1922. For the half-year (January to June, both inclusive) the launching record of the Clyde consisted of 58 vessels of 145,657 tons; six months, 1922, of 62 vessels of 167,493 tons; and corresponding period 1921, of 118 vessels of 235,800 tons. In 1913, the record year, the figures were 127 vessels of 348,476 tons respectively, representing a falling off now of 69 vessels and of 202,819 tons. The coal market is still slow of movement, and prices are maintained with difficulty, at round about last week's level. Industrial consumption poor, reflective of the general trade conditions.

Our Middlesbrough correspondent's report, dated July 5th, is as follows:—Pig-iron: Although the immediate outlook for pig-iron is discouraging, there are still a fair number of inquiries coming forward, but actual business is slow. There is no doubt that orders are being held up in the hope of further reductions in price. Cleveland No. 3 G.M.B. is 110s, and East Coast hematite mixed numbers are about the same figure. Manufactured Iron and Steel: Business in steel remains very quiet, and even lower prices fail to bring out orders of any importance. Steel ship plates, £10; steel ship angles, £9 10s; iron bars, £12; steel rails, £10. Iron ore: No change. Buyers seem quite indifferent, and will not look beyond immediate requirements, which appear to be satisfied. Best Rubio is nominally 24s per ton.

Our Sheffield correspondent writes:—A serious position is developing in the pig-iron trade. For a long period sales have not equalled production, and the result is accumulations of stock at most of the furnaces. As demand is still dwindling, the stoppage of a number of blast furnaces shortly is extremely probable. The experiences of makers of crude open-hearth steel are similar, and already production is being curtailed. Sales of billets have been negligible for two months. As French production of steel is being curtailed for want of fuel and other difficulties, a lessening of foreign competition in billets in this country is hoped for, otherwise numerous steel furnaces in this and other districts will have to be put out of commission. The coal market continues to lose strength, and owing to the falling demand some pits have gone on short time. Shipments are considerably below a month ago, and specifications from the iron and steel trades have decreased. House coal is particularly quiet. Coke is a firm market. Best South Yorkshire hards are still quoted at 22s, and best Blyths at 26s and 27s.

Our Cardiff correspondent writes:—The conditions on the South Wales coal market this week have undergone very little change. Prices have been more or less maintained at the reduced levels to which they fell last week, but the volume of business at these prices has been greater, and the undertone is distinctly firm. The situation in the coalfield has been improved by the advance in wages. Current approximate quotations are as follows:—Best Admiralties, 31s to 32s 6d; second Admiralties, 29s to 31s; best dries, 30s to 31s; black veins, 29s 6d to 30s 6d; Western Valleys, 28s 6d to 29s 6d; Eastern Valleys, 27s to 28s; best bunker smalls, 22s 6d to 25s; ordinary cargo smalls, 19s to 21s; anthracite big vein, large, 50s to 55s; machine made cobbles, 62s 6d to 65s; French nut, 60s to 62s 6d; stove nuts, 55s to 56s; rubbly culm, 18s to 18s 6d; coke for export, 50s to 60s; inland blast furnace coke at ovens, 40s to 45s; patent fuel, 35s to 37s; pitwood, ex ship, 30s to 32s 6d. In the iron and steel trade production is well maintained, but there has been a slight abatement in the demand and prices are consequently a shade easier.

THE COTTON TRADE.

MANCHESTER, July 5.

An uncertain feeling continues to prevail throughout the market, and there are no indications of any real increase in the turnover. Bearish sentiment prevails with regard to prices, and in the circumstances, buyers are disposed to purchase sparingly. There has been an improvement in the amount of cloth inquiry for India, but only scattered sales have taken place, most of the bids being unworkable. Restricted operations have occurred for China, there being more activity in fancies than staple makes. Trade for the Near East remains slow, but a little more demand has been mentioned for some of the South American outlets. The conditions in the home trade remain unsatisfactory. The annual

holidays which are now taking place in weaving districts are being extended. Prices in American yarns have favoured buyers, and demand can only be described as sluggish. A quieter tone continues to show itself in Egyptian spinnings. Only odd lots have been sold in export yarns.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—It is evident from the way in which colonial wool is selling in London and from the good demand for home-grown wool at the country fairs, that the majority of people have confidence in the future of wool values. Of course, the main support in London is coming from the Continent, but the fact remains that prices are being kept on a level that is quite out of reach in consuming centres here. There is no doubt that the entire textile industry of this country is suffering severely from the trouble on the Continent, and it does not seem possible that there can be much improvement until conditions become more settled in Germany. Meanwhile, British producers are experiencing difficulty in keeping machinery running, and they are having to face the keenest competition from goods made on the Continent. Yarn prices are nominally unchanged, but spinners are in need of orders, and new business is unremunerative as a rule.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Real concern is felt among Continental wool buyers respecting the movement of the exchanges, and the increasing gravity of the political situation is not without its effect upon all sections of buyers. In view of the value of the mark and franc being so low, it would not have been surprising if there had been a distinct decline in wool values, and if prices held up to the finish on the present level it will be one of the greatest accomplishments of recent times in the wool market. Continental buyers undoubtedly continue to be the keenest and largest operators in merinos, while the activity of Yorkshire in cross-breeds is significant of much. On several occasions this week good scoured merino Queensland wools have sold up to 56d, one or two special lots fetching 1d more. The bulk of the Queensland scoureds are realising well over 50d for the top lines of combing, and good grease combing is selling on a clean basis of around 53d. This price is above what home trade topmakers can afford to pay, for 11d per lb must be added to the clean cost to cover conversion charges. It is impossible to make 5s 4d for warp 64's in Bradford. Any weight of average 64's can be bought at 4s 11d, but the cost is around 5s 2d. Nevertheless, wool sells freely, and the sales are making excellent progress. The way in which the big daily offerings of cross-breeds are absorbed, purchases being about evenly distributed between the home and Continental trades, is indicative of no little confidence in this class of raw material. Some very good little lots of good to super grease merinos are being catalogued, chiefly on importers' account, but the frequent withdrawals indicate that the original cost was fully equal to the present London level. Many of these speculators' lots were excessively limited, and this is an aspect of the sales which buyers do not appreciate.

VEGETABLE OILS AND OILSEEDS.

Trade both in vegetable oils and oilseeds has continued on quiet lines, and the volume of business in either department is small. Some attention is being paid to Indian linseed, but Argentine seed is lifeless. Meanwhile, prices are quite steady, and about at the level of a few days ago. Up to the end of June the shipments of linseed this year had been from Argentina 868,600 tons and from India 197,400 tons—together, 1,066,000 tons, leaving an estimated balance of 402,000 tons to be exported over the second half of the year; and in present circumstances it looks as if this would be sufficient to meet all likely requirements. Of the total shipped in the past half-year, America took 445,000 tons, against only 206,000 tons a year ago; the United Kingdom 284,450 tons, and the Continent 322,525 tons.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Changes were unimportant at the Bermondsey hide and skin auctions on Thursday, the tone, however, being weak. Best ox sold from 6½d to 8½d, two classes dropping ½d as against last week's prices. Seconds made from 5½d to 7d, one class showing a slight advance of ½d. Cows, best, sold from 6½d to 6¾d, and best calf from 4½d to 11½d. The 17 to 24 lbs class did not sell, and the 8 lbs selection at 11½d showed a slight advance on last figures. Lambs sold from 2s 1d to 6s 6d each, pelts making from 3s to 5s 6d each.

The shoe trade is quieter, as the dull summer has badly

affected the retailers' business. A spell of fine weather would, however, effect a good deal in the way of clearing out summer shoes, even now.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 6.

General quietness was again apparent in most directions, demand for both manufactured and raw materials being confined to wants of immediate necessity. With regard to refined sugar, prices on spot were marked down 1s 6d for all British whites, with yellow crystals 1s. Imported descriptions also declined in sympathy. Business was on a moderate scale.

SUGAR.—Of British refined, Tate and Lyle's cubes quoted 62s 6d to 63s 6d; crushed, 60s 6d; granulated, fine and coarse grain, 59s 7½d; No. 1, 59s 4½d; No. 2, also London, 59s 1½d; ditto, second half, August, 59s; September, 57s 9d; October, 56s 3d; and November-December, 53s 6d. Yellow crystals, spot, 54s 7½d. American granulated, spot, 58s; white Java, spot, sold, 56s; May-June, 25s 3d; June-July, 24s to 24s 6d; July-August, 23s 9d to 24s, c.f. and i., London. Continental parcels for shipment mostly nominal, as very few definite offers are received. Terminal market unsettled. August sold, 27s to 26s 3d and 27s 9d; December, 23s 6d to 22s 9d and 23s. Cuban stocks stand at 590,200 tons, against 844,000 same time last year. Liquid glucose, spot, 30s 6d.

COFFEE.—Spot market shows no material alteration, but trade is of a quiet character. Only a moderate assortment was brought forward in public sale this week. Future delivery market idle.

COCOA.—With no revival in demand, the market during the week proved idle, and quotations in most cases nominal. Accra F/F quality, July-August, 31s f.o.b. terms; October-December, 32s 5d f.o.b.

TEA.—About 20,800 packages Indian were brought to auction this week, and while good to fine qualities were readily competed for at full recent rates, medium and common met a quieter market, and rates tended against sellers. Ceylon auctions totalled 20,700 packages. Medium and common teas sold quietly at ½d to ¾d per lb decline, but all the finer invoices realised steady figures. Samples of new season's China are fairly satisfactory, and Keemun were sought after at 1s 5d to 1s 8d per lb. Java and Sumatra quiet, and prices against sellers for medium and lower kinds. Really fine parcels steady.

RICE.—Quiet and featureless. Two Stars, spot, 13s 6d to 13s 9d for new crop. Spanish, spot, 21s 6d to 21s 9d; forward, 21s. Japanese peas, spot, 25s 6d.

SPICE.—Pepper continues very quiet, and values barely maintained. Fair black Singapore quoted 4½d; June-August, 4d. White Singapore, spot, 5½d. Muntok, spot, 6½d; ditto, May-July, 6d; August-October, 6½d. Zanzibar cloves steady. Fair spot, 1s 1½d; May-July, buyers, 1s 1½d; August-October sold, 1s 2½d. Tapioca dull, unaltered on spot. Flake, July-September, Havre, sellers, 25s 6d. Sago flour, afloat, sellers, 12s 3d; August-October quoted 12s 4½d. Desiccated coconut quiet. Spot, fine cut, 41s; medium, 41s; halves, in the river, landed terms, 40s; do, June-July, 38s (d; July-August sold, 38s; August-September, sellers, 38s; buyers, 37s 9d cwt. Ginger dull unaltered.

JUTE.—Market presented quiet features, but sellers required steady prices. First grade, June-July, Continent, quoted £26; August-September at £26 10s; September-October, £26 s. Hessians slow, unaltered.

HEMP.—Manila quiet, and values barely supported. J grade, June-August and July-September quoted £31; K and L, £28 5s; M, £27 5s ton.

SHELLAC.—Quiet. T.N., spot, 270s; August, 227s 6d; October, 220s cwt. Total shipments from Calcutta for last month 45,545 cwts of which 13,743 were to the U.K. and 26,770 to U.S.A.

COPRA.—About steady, but trade proceeded quietly. F.M.S. Straits, April-June, Rotterdam, quoted, £27 10s; May-July, sold, £26 15s to £26 16s 3d; June-August, £26 11s 3d. Ceylon, June-July, value, £29; Java, ditto, £27; Dutch E.I., ditto, £26 16s 3d; Cebu, £26 7s 6d; South Sea, £25 17s 6d. Palm kernels, June-August, Liverpool, sold, £18 10s ton.

RUBBER.—Steadier, on renewed covering orders, but easier since, and standard plantation, spot, also July delivery, sold, 14d to 13½d;

GIRARD TRUST COMPANY

PHILADELPHIA, PENNSYLVANIA.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

August, 14½d to 14½d and 14d; September, 14½d to 14½d, 14½d and 14½d; October-December, 14½d to 14½d, 14½d and 14½d; January-March, 15½d to 15½d, 15s and 15½d. To New York, standard sheet, August-September, buyers, 14d; September-October, sold, 14½d to 14½d lb, c.f. and i. terms. Wild sorts steady, quiet.

OILS.—Lined irregular with a fair business in force. Spot, net, naked, quoted 43s 6d; July, 41s 6d; July-August, 41s; September-December, 38s 9d. Rape quiet. Crude, spot, 40s; refined, 43s. Cotton firm. Crude Egyptian, spot, 39s; common edible, 44s 6d; deodorised (in barrels), 43s. China-wood quiet. Hankow, spot (barrels), 108s; July-August, 93s. Coconut easier. Ceylon, spot, 45s 6d; July-August, 43s; Cochin, ditto, quoted 47s. Soya quiet. Oriental, barrels, July-August, 37s 9d. Japan fish nominal. July-August, cases, 29s. Cod firm. English, spot, 36s 3d. Groundnuts quiet. English, crushed, naked, spot, 47s; deodorised, barrels, 54s. Turpentine easier. American, spot, 80s; July-December, 71s 3d. Rosin quiet. American, grade B, 13s; F, 13s 6d; G, 13s 6d; H to I, 13s 6d; WG, 17s 6d; WW, 18s 9d. per cwt. French nominal. Petroleum steady. American standard, white, spot, 1s; and water white, 1s 1d per gallon. Castor-oil steady. First pressure, spot, to August, quoted 56s; second pressure, 55s, and pharmaceutical 61s per cwt.

OILSEEDS.—Linseed firm, with a good demand for Indian description. Bold Bombay, afloat, £21 5s; small Bombay, ditto, £20 7s 6d; Calcutta, afloat, sold, £20 17s 6d to £21; June-July, £20 12s 6d to £20 15s; August-September, £20 10s. Plate, July-August, £19 7s 6d. Rapeseed easier. Toria, July-August, £16 10s; real bold Ferozepore, ditto, £15 10s; Jamba, £12 5s. Cottonseed dull. Egyptian black, July, £12; and white, £11 5s, to Hull. Bombay, July, £9 12s 6d. Gingly seed quiet. Large Bombay, May-June, Continent, sellers, £23 5s. Chinese, ditto, £23 15s, Continent. Ground-nuts dull. Coromandel, machine-dried, June-July, quoted £22. Chinese decorated, f.a.q., July-August, £22 10s. Nigerian, ditto, £22 10s. Soya beans steady. Manchurian, June-July, £12 2s 6d. Castorseed firmer. Bombay, June-July, £20 15s paid per ton.

METALS.—Tin: On pressing offers from the East at lower rates the London market developed marked weakness, and sellers were well in evidence, though offers were fairly well absorbed. Standard cash sold at £176 15s to £177, and three months £180 to £180 10s to £178. Sales in the East were reported on the basis of £184, c.i.f. Prices subsequently displayed slight irregularity, while again easier on balance. By the middle of the week standard, cash, sold at £176 2s 6d, and three months £177 10s to £176 15s to £177 7s 6d. Further sales occurred in the East at £181, c.i.f. At Thursday's meeting rates moved in an upward direction. Standard, cash, sold at £176 to £177 10s, and three months £177 to £178 15s. On the following day values were firmer though irregular, closing, however, below the best points. Standard, c.i.f., sold at £178 to

£178 12s 6d to £177 15s, and three months £179 to £179 10s to £178 15s to £179. English ingots, £178 15s to £179. Copper was actively dealt in during the week and prices steady, while subject to slight fluctuations. Cash opening at £64 16s 3d; and three months £64, while subsequently done at £64 15s and £65 7s 6d respectively. A rather firmer tone governed the market on Thursday, though business proved of smaller extent. Standard, cash, sold at £65 2s 6d to £65; and three months £65 10s to £65 12s 6d. At the final session the tendency was barely steady. Standard, cash, sold at £64 12s 6d to £64 15s, and three months £65 7s 6d to £65 5s to £65 10s. Electrodes, £72 to £72 10s; best selected, £68 to £69 10s; strong sheets, £98; wire bars, £72 10s per ton. Lead easier at £23 15s to £23 5s, as to position. Spelter lower at £28 to £28 12s 6d, according to position. Aluminium, home, £115; export, £120. Antimony, ordinary brands, £30 to £32.

TALLOW.—Messrs Colchesters and Woolner write on July 4, 1923, as follows:—The tallow market was steady during the week, and prices are fully maintained to-day. About 6,000 packages recently arrived from New Zealand are delayed in the steamers. The stock in London on June 30th, as returned by the wharves, amounted to 20,016 packages, showing an increase during the month of 3,483 packages. At auction to-day 834 casks tallow were offered and 302 were sold. Quotations are:—Australian mutton: Fine, 42s 6d; good to fair, 41s 6d to 41s; dull to dark, 38s to 36s 3d; hard, 42s. Australian beef: Fine, 42s; good to fair, 41s to 38s 6d; dull to dark, 37s to 35s 9d; sweet, 42s. Present shipment from Australasia nominal. Present shipment from South America, 39s to 39s 6d. The market letter is unchanged. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 1½d; melted stuff, 28s 6d per cwt. Quotations are:—Town, 35s, net cash, naked, ex works. Country: Frail casks, 35s; home melted, shipping casks, net, f.o.b., good coloured, 38s 6d; fair to dull, 36s to 35s. Bone fat: White, none; pale, none; benzine, 34s; melted stuff, 34s, f.o.b.

return looks as if the market's freedom may have been secured by a little official borrowing. Fine three-months' Bank bills were taken yesterday at $3\frac{1}{2}$ per cent.

	July 13, 1923.	July 6, 1923.	June 29, 1923.	June 22, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	3%	3%	3 (Jly. 5, '23)
Banks Deposit Rate	2	2	1	1	1 (Jly. 5, '23)
Discount (Call)	2	2	1	1	1 (Jly. 5, '23)
Houses (Notice)	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills)	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	..

The Bank return showed a decrease of £567,000 in the note circulation, and a roughly corresponding increase in the Reserve. Other securities had declined, through repayments by the market, by no less than £26½ millions, while Government securities showed an increase of £2½ millions. Owing, however, to a decrease of £7½ millions in the Public deposits, the net decline in the Private deposits only amounted to £15½ millions, leaving them at the fairly comfortable total of £108 millions. Currency notes outstanding were increased this week by £918,400 to £290,154,800, which includes £1,465,400 for notes called in but not yet cancelled. The fiduciary issue is £239,239,400, or £30,944,400 below the maximum.

THE STOCK MARKETS.

Stock Exchange markets have been somewhat brighter, a further dip in prices having been followed by a sharp rally extending over most sections. British Government stocks, after unusually wide fluctuations, have recovered much lost ground, but Colonials and some Home Railway prior-charge stocks have remained heavy. The Home Railway market generally, however, benefited from the existence of a fair-sized bear account at the carry-over, and from the improvement in the labour situation. In the Foreign section, Brazilian rails shared in the advance common to Brazilian issues. Rubbers were quiet, but oil shares advanced after the settlement. Textile markets were favourably influenced by the good report of the English Sewing Cotton Company. Little change has occurred in the Kaffir market, but copper and diamond shares have shown signs of improvement.

THE COMMODITY MARKETS.

The political situation is having a bad effect on commodity markets, although possibly some languidness in dealings is on account of the weather. A general quietness is noticeable on the Cardiff coal market, and prices remain at low levels with an absence of demand. In the Sheffield district a heavy drop is reported in demands for industrial fuel, but our Glasgow correspondent mentions that purchases of coal for "France, Belgium, Italy, and Germany are on a large scale." The demand for pig-iron continues quiet, and business for export is poor; it is stated that French pig-iron, owing to the exchange position, can be sold abroad at prices with which our makers cannot compete. Inquiries in most sections of the Manchester cotton trade are fairly extensive, but business is still slow in developing, on account of hesitation to pay current values. Jute prices in London displayed increased weakness. Conditions on the Continent continue to dominate the wool trade, and general stagnation is reported in Bradford. Further weakness developed in wheat. Sugar remained steady, however; there was little demand for raw refining descriptions. The tea sales aroused competition, but the rice market was devoid of feature. Dealings in rubber proceeded quietly. Tin and copper both improved. The tone of the Bermondsey hide market has been firmer, though price changes are not important.

FOREIGN EXCHANGES.

In the foreign exchange market dealings have again been restricted, with erratic movements in rates. Towards the middle of the week business became even quieter, as there was a general tendency to hold off until Mr Baldwin's statement of policy on Thursday evening. Up to now the various exchange centres would not seem to have had sufficient time fully to digest the meaning of his pronouncement, and the reaction on the market has been small. During the week the Paris rate has been particularly uncertain in its movement. From a closing rate of 78.30 on the 6th, it moved up to just below 79. After a slight recovery on Monday, it moved sharply down to just below 77 on Tuesday. On Thursday it was up again to about 77.60, but yesterday morning, after Mr Baldwin's speech, moved up again to 78.40. Brussels, which at one time was actually above 97, was 94.45, as compared with 95.80 a week ago, a slight improvement as compared with the Paris rate. In Paris the forward quotation is 3 centimes per month above spot; in Brussels it is 3 centimes per month below. As compared with 905,000 on the 6th, the Berlin rate went up to 1,300,000 on Monday. After that there was a slight recovery, with a marked fall to about 800,000 on Thursday in anticipation of the Baldwin speech, but yesterday morning there was another reaction to 1,000,000, when it was clear that the British policy offered no immediate relief to Germany. Forward marks are quoted nominally at 250,000 marks per month above spot. It goes without saying that at the present fantastic rates no business of importance is being done in German currency. The satisfactory feature of the week has been a decided recovery in sterling, the natural reaction against the recent sharp fall having led gradually to a rate of not far short of \$4.60 in the middle of the week. After this there was a slight reaction, but yesterday morning the pound was again quoted at \$4.59, and seemed inclined to be firm. At the same time it would be rash to expect any decided further improvement at present. Forward rates are about the same at $\frac{1}{16}$ cents per month above spot. The lira, which moved up in sympathy with the franc to as high as 108½ on Saturday last, has since recovered, with some fluctuations, to 106½ yesterday morning, a slightly better rate than seven days ago. Following and even exceeding the movement of the dollar, the Dutch rate moved up very sharply on Tuesday, and although it has reacted slightly since then and at 11.72½ yesterday morning was about 9 cents above last week's rate. Switzerland has moved from 26.55½ to 26.33½, and Madrid, after being lower, is 31.88½ as compared with 32.02½ a week ago. In Scandinavia, Christiania, at 28.12½, shows a slight recovery, but Stockholm has moved in our favour from 17.25½ to 17.32½, and Copenhagen from 26.20 to 26.22½, while Helsingfors is up from 165½ to 167. In Central Europe, Vienna at 320,000 has been moved slightly against us, and it will be interesting to see whether this is an accidental fluctuation or is part of a policy of gradual increase in the value of the krone. Warsaw is quoted at 570,000; business still is badly restricted by the present exchange regulations, but it would now appear that they are speedily to be modified. Prague has reacted again from 150 to 153. Bucharest at 880 shows a decided recovery from the 910 quoted last week. Constantinople, after being brought down a little on the news of agreement at Lausanne, has reacted again to about its old level. In the East, the rupee at 1s 4½d is slightly cheaper than last week, and the yen also has reacted slightly from 2s 1 21-32d to 2s 1 1-8d. In the silver market Chinese buying brought up prices at first, but at higher levels there was considerable selling from the same quarter and little support from India, in spite of satisfactory monsoon reports, so that prices reacted to last week's levels. Hong Kong has moved from 2s 3d to 2s 2½d, and Shanghai from 3s 0½d to 3s 0½d. In South America, Rio has remained very steady, falling only from 5½d to 5½d. Buenos Ayres, however, has moved down from 4½d to 40½d, while Monte Video has declined still more sharply from 42½d to 41½d, and Valparaiso has also depreciated from 34.80 to 35.40 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 7th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	7000	From Revenue	11,768
Interest, &c., on War Debt	4,395		
Sundries	4875		
Increase in Balances	1087		
Reduction of debt	211		
	11,768		11,768

Revenue for the week amounted to £11,767,705, as compared with £18,892,614 during the eight days ended July 8, 1922. The yield from Property and Income-tax was £4,143,000 and Super-tax £800,000, against a combined revenue of £8,388,000 last year. Revenue from Interest on Sundry Loans was reduced from £1,400,260 to £578,684. Customs yielded £2,203,000 against £2,920,000, and Excise £1,217,000 against £1,539,000. The week's operations reduced the National Debt by £211,088, and caused the following changes:—

	Min. £		Min. £
Treasury Bills	254	Public Department Advances	2,780
Bank of England Advances	3,250	National Savings Certificates	200
		Sundries	313
	3,504		3,293

The floating debt was reduced by £705,000 to £818,625,500.

FINANCIAL YEAR, 1923-24 (April 1 to July 7, 1923).

	£		£
Total Expenditure ..	225,883,726	Raised by Revenue ..	198,769,450

Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

The Week in Parliament.—Thursday's statements on Reparations policy in the Lords by Lord Curzon and in the Commons by Mr Baldwin, were the most important episodes in the Parliamentary week. The Commons have debated the Rent Restriction Bill, passed the report stage of the Housing Bill and the third reading of the Agricultural Rates Bill, and devoted Thursday to the Home Office Vote. Apart from Lord Curzon's Reparations statement and Lord Grey's comments thereon, the features of the week in the Lords have been a statement by the Duke of Devonshire on a Rhodesian settlement and a debate on naval and air defence and expenditure.

Company Meetings of the Week.—On later pages of this issue will be found reports of the meetings of the following companies:—Bank of British West Africa, National Bank of New Zealand, P. and O. Banking Corporation, Australian Estates and Mortgage, General Electric, Howard and Bullough, Union Cold Storage, International Tea Stores, Spiers and Pond, W. J. Bush and Co., Brakpan Mines, Springs Mines, and Maleber Tea.

Among the features of the speeches were the references by the chairman of the National Bank of New Zealand to the growing importance of the dairying industry in the Dominion and by the chairman of the Bank of British West Africa to trade improvement in that country. The chairman of the Australian Estate and Mortgage Company dealt with the effects of the Queensland Land Act Amendment Act (1920).

INSURANCE SUPPLEMENT.

With this number our readers will find a supplement reviewing the progress and prospects of insurance. The topics dealt with include the recent experience of life offices, the increase of business, mortality, the condition of funds, valuation results and bonuses; the results of fire insurance in the past year; the situation created by the Government Bill dealing with Accident Insurance; and the sombre results recorded in the latest reports from the marine insurance world. The Supplement is not a record of company results, but a general survey of the insurance problems of the day.

REPARATIONS AND BRITISH POLICY.

THE official statement made on Thursday by Lord Curzon in the House of Lords and by the Prime Minister in the House of Commons shows that whatever criticisms may be made on their attitude towards the present crisis they cannot be convicted of undue precipitancy. The statement does, indeed, carry the problem a little step further forward. We have ourselves urged that the Government should not take hasty decisions, but that time should be allowed for events to drive their lesson home, particularly in France. We cannot, however, find anything in the present statement which could not have been said a fortnight ago. The message is couched in friendly terms to France. It recalls our common interest with the Allies, reiterates our determination that Germany should pay to the extent of her capacity, but emphasises the reservation that to ignore the limits of Germany's capacity will produce failure. We are told that the French and Belgian Governments have assured Great Britain "that our sole object in occupying the Ruhr is to secure reparations." But the Government evidently have their doubts of this assurance, for the next sentence reads, "If this be so the difference between us is one of method rather than aim." This doubt is clearly entertained elsewhere, for the Paris correspondent of the *Times*, who has shown himself to be in close touch with the fluctuations of French opinion, stated yesterday that "by reason of repeated declarations, and the strong push of events, the French have made up their minds that they are installed in the Ruhr for a long time to come." The Government declaration goes on to say that Germany is fast approaching economic chaos, which may be succeeded by social and industrial ruin, and this is reacting on all the countries of Europe, including Great Britain. Mr Baldwin might have added that the reaction affects not Europe only, but every continent of the world. The statement emphasises the need for a settlement which may bring to an end the unstable conditions of occupation by one country of the territory of another in time of peace. It recognises that the three questions of payment of reparations, the settlement of inter-allied debts, and the security of a pacified Europe, are linked together. It indicates that Germany cannot be expected to send offer after offer without any reply, and that the proposals in the last note contain the germs of a possible settlement and should not be treated with indifference. Since France and Belgium are unable to take any fresh initiative in the matter, Great Britain, therefore, proposes to draft a reply herself and to submit it to her Allies, and presumably also to the United States, before it is despatched. On the whole this statement is to be commended, in that it restores the diplomatic initiative to Great Britain, who before long should be able to place before the world a reasonable solution of this baffling problem.

Whether the effort will be crowned with success depends on the terms of the Note now being drafted. We would, however, emphasise the fact, admitted in the Government declaration itself, that time is short, the sands are running out, and Germany may at any moment lapse into a condition which would render any satisfactory settlement impossible. We stated last week that the slump in the mark is both the symbol and the instrument of economic deterioration. The fall goes merrily forward, but for some time past its downward rush has been checked by the action of the Reichsbank. There has been no pretence in Berlin that this action could in any sense stabilise the mark; its only object was to break the fall and thus prevent economic conditions from becoming quite intolerable. With this object in view, the Reichsbank has not only rationed all applications for foreign exchange on a very strict scale, but at the end of last week was spending its gold at the rate of 10 million gold marks a day. This would use up the whole of the remaining gold reserve in about 60 days. The bank would certainly not pursue this policy to the last gold piece, and it was expected that it would abandon

its efforts soon after the middle of the present month. When this happens, there is nothing to prevent the mark slumping with redoubled speed unless the Government can by direct action check imports—action which the Treaty of Versailles makes practically impossible. It is felt that if these gloomy expectations are fulfilled, the impossibility of adjusting wages and prices, together with actual insufficiency of currency, will combine with general hopelessness and demoralisation, to cause food riots, cessation of production, and social disturbances dictated not by any belief in communism or other theories, but by revolt against intolerable conditions of life. Even if the principle of an index wage were introduced to-morrow into the organised trades, it would not cure the unrest which permeates the great mass of the population. There is no real political opposition to the Government, for no one in any party envies Dr Cuno his impossible task, for, as we have previously said, the spectre which is haunting Germany is not revolution, but anarchy and chaos; and if this comes it means famine. For these reasons Great Britain must act at once, and with vigour, if the reply which it is drafting is to produce an understanding in time.

What the note will contain we cannot pretend to forecast. It will be all to the good, though it will not solve the problem, if a Commission should lay down some figure of Germany's capacity to pay. We do not pretend that this estimating task is a simple one. The very fact that the value of gold, on which alone it is practicable to make the estimation, may change in value very much during the next two decades, makes the estimate a matter of guesswork. But at all events such an estimate would, to use a Stock Exchange phrase, squeeze out the water from the nominal capital debt which Germany owes to the Allies. We are, however, of opinion that the success of the note will depend not so much on what it says about the total reparations to be paid as on the question of control. We have already expressed our opinion that Germany to-day is in such a serious economic plight that international control is imperative if she is to be restored to a condition in which she can resume her normal economic activities and pay any reparations at all. The organisation of this control is going to be a task of very great difficulty, but Germany is undoubtedly prepared to accept the inevitable in her own interests. In this connection our only object lesson is the course of events in Austria, which at this moment is worthy of the closest study. We deal with some of the lessons of this experiment below (p. 48). The main and primary point is that if control is to be acceptable to Germany it must be neither French nor Allied, but international, and it is in order to afford the justification for international control that so much stress is laid in Germany to-day upon an international loan—even though it be a small one—as part of a settlement of the reparations question. It is hardly necessary to add that no note that we might draft would be acceptable to France unless at the same time we made it clear to her whether or not, and if so to what extent, we are prepared to make concessions in the division of reparations among the Allies, and the extent to which we would recognise the principle of priority for repairing the devastated areas.

We have said that the tone of the British statement is friendly to France. It is important that our late Allies should not mistake this tone. Great Britain has too strong a memory of the war and of the objects for which it was fought to do less than justice to France. At the same time it would be idle to close one's eyes to the fact that the sympathy and affection which were so apparent in the relations of the two countries a few years ago have been silently but certainly disappearing. This change in opinion is most marked in certain northern districts, whose markets have been ruined by the direct or indirect effects of French policy, but the change is not by any means simply the result of a narrow self-interest. It is well-nigh universal. Even those who, like Lord Grey, have the strongest sympathy with France, feel, as he has felt, that "the drift of affairs in the last few months has been acutely and peculiarly distressing." This general change of sentiment is nourished on the conviction that the breakdown of economic and social life which now appears so imminent in Germany is, after all, the real goal at which France has been aiming. In the opinion

of Great Britain, such a breakdown, involving, as it would, an incalculable set-back to economic recovery in other parts of Europe, would be a world disaster. To look at the prospect from another point of view, the phase of Germany in ruins would not be permanent. From the ruins would undoubtedly grow a more powerful Germany, free from obligations to the Allies of the late war, with a growing population hardened by the struggle against adversity. Such a Germany would present an infinitely greater menace to France than that which she recently escaped. There is yet time for France to show to the world an example of high-mindedness, forethought, and generosity, the only qualities by the display of which Europe can be brought back to harmony and peace. But if, on the other hand, she attempts to obtain security by the weakening of social order in Europe and the political break-up of Germany, her victory will rapidly turn to dust and ashes.

BANK RATE POLICY AND PRICES.

THE action of the Bank in raising the Bank rate last week has given rise to considerable criticism and controversy, the case of the critics being that in order to secure the advantage of maintaining the dollar exchange—a benefit in appearance rather than reality—the Bank has embarked upon a policy which will prejudice employment and hinder trade at a critical moment. Before, however, we can decide whether this line of criticism has substance or not, we must first decide whether the action of the Bank is to be regarded as a part of a deliberate policy aimed at securing, at all costs, a return of the dollar exchange to par, a policy to be pursued whatever other disadvantages may accrue, or, alternatively, whether we regard last week's action as a relatively minor event in which the Bank took advantage of current conditions to give this assistance to the dollar exchange in circumstances which enabled action to be taken without serious effects. In the light of all the circumstances, we incline to the second belief. Up to the early spring of this year it will be remembered that the dollar exchange showed signs of steadily approaching par, but from about March onwards opposing influences began to make themselves increasingly felt. With the boom in trade, money rates in America began to rise and investments yielded a better return than in Europe. As, therefore, the pound approached par, capital both for permanent and for temporary investment moved rapidly across the Atlantic, and so tended to raise the value of the dollar. As the year has gone on, other influences tending to depress the pound have come into operation, of which the most important are the political situation in Europe, the anticipation of the normal seasonal fall in connection with the financing of American crops, and the payment of interest on Britain's debt to America. The effect of these influences has been seen in the steady set-back in the sterling dollar exchange. Now, whatever may be urged against the forcing back of sterling to pre-war parity with the dollar, it cannot be denied that there are serious disadvantages in a fall in the exchange. There is no doubt that the high level of the British pound and the comparative stability it has enjoyed for months past has been a factor in bringing business to London; it has given confidence to values quoted in sterling, and has brought orders to Great Britain because of that indefinable influence which can only be described as international prestige, and has lowered prices of raw materials and of food imports. A fall in the exchange would, on the other hand, raise very much the cost of our autumn purchases of corn and cotton. These are important and substantial considerations, and may quite properly govern bank policy as long as they do not involve a more serious set-back to employment and the means of livelihood in the country.

It may, indeed, be doubted whether the action of the Bank will, in fact, have much effect upon the exchange. It is true that a slight improvement has already set in, but this would be fully accounted for by the renewed upward movement of prices in the United States. If the

sterling exchange is going to vary between 4.70 and 4.50, in a comparatively short time a difference of 1 per cent. in the rate of interest will weigh very little against the much larger amount of exchange profit or loss which would follow a transfer of funds from one country to the other. Nevertheless, so far as it goes, the action of the Bank will tend to maintain the exchange.

The Bank action has, however, had an immediate effect in liquidating what now appears to have been an unduly inflated amount of speculation on the Stock Exchange, and the effect was immediate. Though prices have since recovered a little, the episode shows that very large sums of money have been used for speculative buying of stocks and shares of all kinds. Again, those responsible for our financial policy have felt considerable anxiety in regard to the floating of new issues and the unhealthy extent to which staggering operations have been going on in the case of second-class issues. The raising of the Bank rate will check the attractiveness of London for these forms of speculation, and will at the same time limit the possibility of persons creating a market in them. Thus a small effect on the dollar exchange and a definite check to speculation are the positive results of the Bank action.

It may be asserted with almost equal assurance that it will not seriously prejudice the trade situation. It is sometimes assumed by those who argue to the contrary that the raising of the rate will raise loans to commercial firms. Substantially this will not be the case. Advances to industry are usually made at $\frac{1}{2}$ per cent. above Bank rate, but with a fixed minimum, and we doubt whether this minimum is as low as 4 per cent. in more than, say, 10 per cent. of advances. For a very large number the minimum is $4\frac{1}{2}$ per cent., so that the rate payable will not affect the charge for advances. It is suggested that in some indefinable way the raising of the rate will restrict the ability of the banks to make such advances, and it has been suggested, in fact, that in recent months our monetary policy has involved a shortage of floating money for industry; but this, again, is not the case. The advances of the joint-stock banks have been increasing latterly, but they are still a smaller proportion of their assets than before the war. We are satisfied that if the banks could see suitable openings for the use of money they would gladly advance these sums to industry rather than invest them at low rates of interest in Treasury bills. The limit of the employment of capital in business has been, and remains, a lack of suitable and profitable opening, and not a lack of funds.

But while we think that the action of the Bank will have satisfactory results and will not interfere with trade, nevertheless it is important that we should not lightly dismiss the issues that will be raised if the present action is regarded as the first step in a monetary policy aimed at restoring at all costs the pre-war parity of the exchange. The day before Bank rate was raised the question of price policy was discussed in the House of Commons, and the Prime Minister gave expression to what we believe to be the sound view—namely, that we should aim at stability of prices rather than at deflation or inflation, and that this policy should take precedence over other considerations. If this view is accepted it means that if America goes in for a policy of checking her present high level of prices and deflating them, the pound for some time to come cannot get back to par; for at present levels American prices are not relatively as high above pre-war prices as British prices are, and in the long run this difference in price level governs the exchange. We do not doubt that, if not this year, at all events in the long run, America's hoard of gold will get into use, and raise her level of prices to a figure at which our exchange will be back at par. But in the meantime she may for her own purposes check or even lower her own price movements. If she does this she will in fact be causing arbitrary changes in the value of gold, and she can do so by virtue of her position as the only country with a true gold standard. For us to follow such changes in the effort to keep a steady exchange, even though it involves a handicap to business and a lowering of prices here, is very much open to criticism.

The objections to a falling level of prices are so obvious that we need not dwell upon them. We hold no brief for inflation; but the stimulating effect on business of an upward movement has been constantly illustrated in Europe;

and even in the abnormal and disjointed conditions which obtain in Germany to-day each big upward movement of prices acts as a momentary tonic to the diseased body of German economic life. Examples of the difficulties created by the opposite phenomenon are equally definite in their lesson. But fortunately we may also note that under conditions of stability real economic recovery can be accomplished, as witness the experience of this country during the last twelve months and of Austria during the last six. In both cases, with a steady price level, there has been an absorption into employment, improvement in public finance, growth of public confidence, and better health in the body politic.

This conclusion is, however, not universally recognised. This week at the miners' conference at Folkestone the president, Mr Herbert Smith, spoke almost with longing of the conditions which obtained before the war, and might obtain again if prices were reduced to a pre-war basis; wages in many areas have fallen to a mere 20 per cent. above pre-war standard; if prices would follow suit all would be well in the mining industry. But such a view overlooks all the difficulties. A fall from the present level to pre-war prices would be much more difficult even than the great drop which occurred in 1921—since wages and incomes generally in 1920 had by no means risen to the peak of prices, whereas to-day the bulk of payments are on the present basis of prices. To lower prices to a pre-war level would make our Budget position impossible. By lowering the yield of taxation without reducing debt and other fixed charges would cause a prolonged setback to an already difficult trade situation by eliminating all hope of profit for some time to come and checking incentive to fresh enterprise, and would enormously increase the burden of all fixed charges upon property and business. The maintenance and improvement of employment in Great Britain is of paramount importance. Industry could not possibly face another fall of prices on the scale of two years ago.

But while the force of these arguments is generally admitted, it is not always realised that a policy of stability may require some modification of accepted currency policy. A greatly increased volume of trade will require a greater turnover of money. We do not doubt the ability of the banks to supply this; but it may be doubted whether the actual circulation of notes which has fallen automatically with dwindling trade is adequate for the purpose. We doubt if this question has been fully considered. The present discussion will have done good if it shows the need of reconsidering once more the principles to be pursued in the next few years.

INDUSTRIAL PROFITS.

Our quarterly statistics of the profits of industrial companies show that 425 concerns, whose reports were published in the three months ended June 30th last, earned net profits of just under £39 millions, as compared with less than £32 millions earned by the same undertakings in their previous financial year, an increase of £7 millions, or 22.1 per cent. These reports refer very largely to the financial years ended December 31st last or March 31st, although in some cases the periods covered are earlier or later. The figures, therefore, cannot be taken as an index to the earnings of industry up to June 30th, but rather in the year ended December 31st. The table below, which gives the results of our four last quarterly analyses, shows that during the past twelve months 1,358 companies have disclosed net profits of £115½ millions, representing an increase of over 16 per cent. on the profits of the previous financial year of each company:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.)

	Number of Companies.	Reports published in		Increase.		Decrease.	
		1921-22.	1922-23.				
1922.		£	£	£	%	£	%
Third quarter	209	15,853,920	12,120,153	3,733,767	23.5	..	..
Fourth quarter	319	23,310,452	24,228,719	918,267	3.9	..	..
1923.							
First quarter	405	28,489,993	40,276,870	11,786,877	41.4	..	..
Second quarter	425	31,874,787	38,945,778	7,070,991	22.1	..	..
	1,358	99,529,152	115,571,520	16,042,368	16.1	..	..

Too much weight should not be attached to the changes here shown without reference to the history of preceding quarters with which they are compared. Further, the big fall in commodity prices, which occurred in the second half of the year 1920, involved a heavy writing down of stock-in-trade, which seriously affected profits. Consequently, although the profits disclosed in the latter half of 1921 and the first part of 1922 showed substantial declines, much of this was due to stock depreciation, and it may be assumed that much of the increase shown in the reports of the past two quarters is due to the absence of any such necessity, although it does not follow that there has not been a considerable improvement in the profits on trading operations. In the table below we show the quarterly increases and decreases in net profits since the beginning of 1918:—

	1918.	1919.	1920.	1921.	1922.	1923.
First quarter	-10	+104	+269	+35	-434	+414
Second quarter	-58	-51	+378	-84	-337	+221
Third quarter	+123	-34	+419	-424	-235	..
Fourth quarter	+47	+105	+271	-529	+39	..

From these figures it would appear that the worst period of the trade depression, from the profit-earning point of view, was the twelve months April, 1921, to March, 1922.

In the next table we classify the profits disclosed during the past twelve months into 20 groups of companies, showing how they compare with those earned in the preceding financial year:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Year Ended June 30.		Increase.	Decrease.
		1922.	1923.		
Breweries	89	7,498,045	8,381,068	11.8	..
Canals, docks, &c.	5	276,143	466,024	68.6	..
Electric lighting, &c.	35	2,051,908	2,990,487	45.5	..
Gas	48	2,174,800	3,600,885	65.7	..
Hotels, restaurants, &c.	29	1,207,220	1,520,406	25.9	..
Iron, coal, and steel	101	13,303,149	10,040,476	..	24.5
Land, mortgage, &c.	72	2,735,841	3,855,862	40.9	..
Motor and cycle	27	Dr 18,111,294	Dr 308,508	..	..
Nitrate	20	604,421	271,504	..	332,917
Oil	12	15,493,373	12,877,151	..	2,616,222
Rubber, &c.	259	473,379	1,652,401	249.1	..
Shipping	25	5,593,446	5,308,210	..	285,236
Shops and stores	53	5,174,434	5,831,496	12.7	..
Tea	69	1,506,760	3,072,610	103.9	..
Telegraph, &c.	20	3,614,515	4,346,447	20.2	..
Textiles	42	4,812,000	12,164,107	152.7	..
Tramways	27	1,456,106	1,723,403	18.4	..
Trust companies	74	3,651,744	4,050,973	10.9	..
Waterworks	24	444,276	648,357	44.6	..
Miscellaneous	327	29,268,886	33,278,361	13.7	..
	1,358	99,529,152	115,571,520	16.1	..

An outstanding feature of the table is the recovery shown by rubber companies. In our article a year ago, however, the profits of 260 rubber companies were shown to have dropped from £4,221,200 to £437,250, and the recovery to £1,652,400 in the profits of 259 companies shown above, although very welcome, by no means makes good the decline of the previous year. The recovery in the textile group practically restores the profit figure to that of two years ago. The increase in the tea group follows one of over 250 per cent. twelve months ago. The state of the motor and cycle group shows some improvement, but two years ago 27 companies showed net profits of £2,172,400. The electric lighting and power companies show a very substantial increase in profits, which follows an advance of 2½ per cent. twelve months ago. The iron, coal, and steel group again shows a substantial decline; the profits of 98 companies twelve months ago showed a drop from £18,426,600 to £11,933,500. The decreases shown twelve months ago in the nitrate, oil, and shipping groups were respectively 63.8, 9.5, and 23.4 per cent.

In the next table we show the method of distribution of profits in each of the past four quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1922.	£	£	£	£
Third quarter	12,120,153	10,010,136	827	Dr 1,218,057
Fourth quarter	24,228,719	15,698,160	64.9	3,810,507
1923.	£	£	£	£
First quarter	40,276,870	21,934,234	54.4	8,841,562
Second quarter	39,945,778	25,038,627	64.3	6,162,466
	115,571,520	72,681,157	63.0	25,283,885

This table makes a satisfactory showing when compared with that published 12 months ago, when 80.3 per cent. of profits went to ordinary shareholders and 27.5 per cent. to preference shareholders, the balance being made good by withdrawing £6½ millions, equal to 7.8 per cent. of profits, from reserves, &c. For the past year the method of distribution has been more normal, though the proportion of profits reserved or added to the balances carried forward is still much below the pre-war average. In the 12 months ended June 30, 1914, ordinary shareholders had 56 per cent. of net profits, preference shareholders 16.9 per cent., and 27.1 per cent. went to reserves, &c.

We next show the method of distribution adopted by each of the groups:—

	Net Profits.	Ordinary Dividend.	Pref. Dividend.	To Reserve, &c.
Breweries	8,381,068	4,946,643	58.9	1,343,234
Canals, docks, &c.	466,024	212,216	45.6	242,759
Electric lighting, &c.	2,990,487	830,725	27.8	585,579
Gas	3,600,885	2,413,853	66.9	360,054
Hotels, restaurants, &c.	1,520,406	639,537	42.0	391,564
Iron, coal, and steel	10,040,476	6,834,776	68.0	3,260,217
Land, mortgage, &c.	3,855,862	2,250,266	58.0	890,733
Motor and cycle	Dr 308,508	391,232	..	Dr 1,004,601
Nitrate	271,504	615,021	226.5	3,000
Oil	12,877,151	9,189,226	71.4	1,619,677
Rubber, &c.	1,652,401	1,542,725	93.4	22,178
Shipping	5,308,210	3,167,771	59.8	1,244,303
Shops and stores	5,831,496	3,671,937	63.0	1,258,087
Tea	3,072,610	1,725,738	56.2	289,387
Telegraph, &c.	4,346,447	2,420,642	55.9	262,865
Textiles	12,164,107	7,273,686	59.8	1,624,792
Tramways	1,723,403	639,113	37.0	579,708
Trust companies	4,050,973	2,380,712	58.8	1,141,258
Waterworks	648,357	419,162	64.7	86,953
Miscellaneous	33,278,361	21,075,804	63.3	9,403,716
	115,571,520	72,681,157	63.0	25,283,885

From the point of view of conservative distribution the electric lighting group makes by far the best showing, having placed more than half of the net profits to reserve. Only two other groups reserve more than 30 per cent., while the iron, coal, and steel group makes a slight net reduction in reserves and balances carried forward. The rubber group has treated ordinary shareholders very generously, and left the balance-sheets to take care of themselves.

Turning to the question of earnings on capital, we show in the following table the ratio to total ordinary and preference capital of net profits and of amounts reserved in each of the past four quarters:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1922.	£	£	£
Third quarter	205,481,600	12,120,153	5.9
Fourth quarter	268,105,000	24,228,719	9.1
1923.	£	£	£
First quarter	406,793,000	40,276,870	9.9
Second quarter	396,675,400	38,945,778	9.8
	1,277,055,000	115,571,520	9.1

The ratio of net profits to capital at 9.1 per cent. compares with 6.8 per cent. 12 months ago, 13.2 per cent. in July, 1921, and 14.6 per cent. in July, 1920. The average rates paid on the three classes of capital quarter by quarter since the beginning of 1920 are set out in the next table:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1920.	1921.	1922.	1923.	1920.	1921.	1922.	1923.	1920.	1921.	1922.	1923.
1st quarter	4.25	4.43	4.70	4.61	5.1	5.0	5.3	5.7	11.2	10.3	8.5	9.2
2nd quarter	4.40	4.61	5.00	5.08	5.0	5.0	5.0	5.4	13.7	12.6	8.8	9.9
3rd quarter	4.12	4.45	5.21	..	4.9	5.0	4.5	..	14.2	9.7	7.6	..
4th quarter	4.43	4.83	..	..	5.3	5.1	5.6	..	11.6	7.6	8.6	..

The average rate of debenture interest in the past five quarters has been appreciably higher than it was two years ago, but this is largely accounted for by the fact that short-term notes, of which large quantities have been issued since the war, are included under this heading. The average rate of ordinary dividend for the last quarter is the highest paid since the corresponding quarter of 1921.

In the final table we show the average rates paid by each of the groups during the past 12 months:—

	Debt Capital.	Average Rate of Interest.	Preference Capital.	Average Rate of Dividend.	Ordinary Capital.	Average Rate of Dividend.	Year Ago.
Breweries	33,601,983	4.1	23,899,463	5.6	36,451,890	13.6	12.8
Canals, docks, &c.	1,486,459	3.5	5,154,810	4.7	6,328,520	3.4	1.9
Electric lighting, &c.	14,467,432	5.1	10,807,522	5.4	11,486,139	7.2	5.7
Gas	13,380,919	4.1	9,072,884	4.0	45,021,239	5.4	4.7
Hotels, restaurants, &c.	6,880,488	4.8	8,551,794	4.6	10,402,230	6.7	8.8
Iron, coal, and steel	45,833,257	5.8	63,367,637	5.1	140,033,666	4.9	7.1
Land, mortgage, &c.	21,314,149	4.2	19,977,158	4.5	32,586,649	6.9	8.2
Motor and cycle	4,547,446	6.4	10,998,648	1.0	18,045,880	2.2	2.8
Nitrate	220,980	5.2	65,000	4.6	6,004,163	10.2	12.5
Oil	6,248,449	5.1	28,684,187	5.7	41,205,838	22.2	24.0
Rubber, &c.	1,853,806	7.3	1,322,068	1.7	43,167,888	3.6	2.1
Shipping	25,393,260	5.4	21,010,150	5.9	38,022,667	8.3	9.1

The canal and water companies still pay the lowest rates on debenture capital, while the rubber companies pay the highest, with the motor companies not far behind. Seven groups show declines in the average rate of ordinary dividend, the most conspicuous being the drop 7.1 to 4.9 per cent. in the iron, coal, and steel group. The tea group is prominent with an increase in the average rate of ordinary dividend from 9.3 to 19.2 per cent.

BRAZIL AND BRAZILIAN INVESTMENTS.

THIS week, for the first time within a couple of decades, Brazil has been able to publish a three-monthly balance-sheet—January to March—which shows Federal revenue meeting expenditure. This led to a slight rally in the value of the milreis. The Stock Exchange cautiously advanced a few Brazilian quotations, but the faint doubt felt in regard to Brazil's ability to continue cash payments of her interest finds reflection in the fact that Brazilian Government bonds stand upon a level of prices at which the yield on the money comes to about 8 per cent. The "old" 5 per cent. Funding Loan is quoted at 82½ ex coupon, giving a return of 6 per cent. on the money, but the 1914 Funding Bonds, which also are 5 per cents., can be bought at about 70½, and pay fully 7 per cent., while the various 4 per cent. loans stand at prices that range from 41 to 49, giving 10 per cent. to 8 per cent. on the capital invested at to-day's prices. The specially-secured 7½ per cent. Brazilian coffee bonds command 110. Coupon payments on all the loans are regularly met at the due dates. In the case of ten Brazilian Government issues, resumption of the sinking fund has been definitely suspended until 1927. The prices at which all these bonds stand are evidence of the further doubt regarding the ability of Brazil to recommence the sinking fund arrangements which should come into force in four years' time.

Brazilian bonds are widely spread over many circles of British investors, but the loans are also popular in France, and some of the issues claim occasional attention from the United States. Hence they possess that international character which operates to the advantage, or the disadvantage, of market prices, according to fluctuating sets of conditions in several different countries. The older-fashioned British investor, and probably the Frenchman, too, set much store by the general identification of the Rothschilds with the finances of Brazil. The American financier and merchant buy or sell Brazilian bonds as these transactions suit trade requirements in the United States. And Brazil, to a far greater degree than the neighbouring Argentine Republic, is dependent, for the condition of her credit, upon a rate of exchange that, for weeks past, had been moving steadily against her, to the detriment of her external trade and the ever-increasing perplexity of the Brazilian bondholders.

The milreis at the present time has fallen to a record low level, a fact which is due, of course, to a variety of causes, traceable in many cases to the aftermath of war. Brazil depends largely upon coffee and rubber for the maintenance of her prosperity. Germany used to be one of Brazil's most profitable customers for coffee, but Germany has no cash with which to pay for more than a minimum amount of coffee nowadays. Para rubber has been ousted from its pride of place by the plantation produce of the Middle East, which can be grown and handled more cheaply, and which, for most practical purposes, is as good as the Brazilian rubber. Handicapped by the restrictions that now confine her two main props of revenue, Brazil has turned a wise attention to other means for balancing her Budgets, and, so far, these have proved successful in enabling the country to meet her obligations with regularity and punctuality.

Those who follow with any close attention the trend of affairs in Brazil are aware of a gradual change which seems to be taking place in the internal economy of the country, and which may, in course of time, go far to rehabilitate its credit. It is a change which infers that Brazil is becoming more and more a self-supporting country. Brazil appears to be growing less dependent upon the outside world, and to be following the United States' example of a self-contained land. With her vast area and enormous natural resources Brazil must always be on the look-out for opportunities to develop her overseas, as well as overland, trades. Steady progress towards a policy of self-support—and the present disposition of Brazilian affairs suggests, moreover, that this is the Government's aim—can hardly fail to be an important factor in the outlook. It must weigh in the minds of Brazilian bondholders who maintain their faith in Brazil's ultimate capacity for regaining that position in the confidence of the investor which was shaken by the war, and by what has since occurred to the rate of exchange by reason of post-war problems.

Brazilian railway stocks fall mostly into the category of speculative investments. The companies are doing well in the matter of traffics, but the exchange question tells heavily against them. To take earnings in currency, and to pay dividends in British money, is an expensive business in these days for any Brazilian undertaking. Leopoldina paid 2½ per cent. for 1919 on its ordinary stock, and nothing since. The present price of 27 is within a slender fraction of the lowest touched this year. The stock rose to 36½ a few weeks back, and to 41½ last year, on hopes that were raised of a possible dividend on the ordinary. The 5½ per cent. preference, which received their full dividend last month, stand at 6½ and pay 8½ per cent. on the money. The rise to 7½ earlier this year was encouraged by the establishment of the long doubtful point as to whether these shares were cumulative or not, the matter having been decided in favour of the former. The San Paulo (Brazilian) Railway paid 7½ per cent. for last year, so that at the present price of 138 the yield is nearly 5½ per cent. on the money, while the company's 5 per cent. non-cumulative preference at 87½ returns 5½ per cent., and is regarded as a sound stock. Within the last ten days, the Sorocabana Railway has published a lengthy scheme under which the company's 4½ per cent. first debenture-holders are asked to change the status of these bonds into an income security. The Brazil Railway Company presses for the adoption of this scheme, the real reason for which lies in the depreciation of the milreis. Sorocabana bondholders are not likely to look very kindly upon the proposal, but the outlook may lead them to consider that acquiescence is another word for making the best of a bad job. The Brazil Railway's own shares stand at a nominal price of 155 for the 100 dollar shares, and the company's first mortgage 60-year Gold Bonds are quoted about 20.

Of the Brazilian municipal bonds, Rio de Janeiro Fives at 66, and the 5 per cent. Gold bonds, guaranteed by the Brazilian Government at 82, each have their own particular following of supporters, the latter bonds being considered a good corporation stock of their class. The Municipality of Para 5 per cent. Gold bonds receive no interest, and these, together with the 6 per cent. Treasury bills of 1919, are all quoted in the neighbourhood of 40 to 70 shillings for the £100 bonds. A very different type of security, Rio de Janeiro Tramway Light and Power 5

per cent. first mortgage gold bonds command 92½xd., and San Paulo Tramway 5 per cent. first mortgage debentures stand at 96, both being well covered, and enjoying the favour of those to whom payment of coupons in American or Canadian currency is an advantage. The Brazilian industrial issues appeal more particularly to those investors who make a study of the local conditions surrounding each undertaking, while in its mines, Brazil possesses too limited a number of paying concerns to render the country an encouraging field for the speculative interest. The student of financial economics will find an alluring field of theory presented by Brazil's predilection for valorisation schemes. To the more practical mind of the investor, it may be that these excursions do not always commend themselves as inevitably beneficial to the country which adopts them.

THE SWISS FRANC.

(BY A CORRESPONDENT.)

At the beginning of 1922 the Swiss franc was the most expensive of all units of money in the world market. In May, 1922, however, the dollar took its place; in October of the same year it was overtaken by the florin, and in March, 1923, the pound left it behind. The latter event drew the attention of a larger public to this downward movement of the Swiss exchange, and since then people have begun to look at it somewhat distrustfully. They do not know whether they should see in its depreciation merely one of those temporary fluctuations to which all currencies are liable, and which simply reflect the ever-changing tide of the economic life of a country, or whether they should not take the weakening of the Swiss exchange as indicative of more serious and more lasting evils.

In the first place it must be stated that, if the Swiss franc has given way, as compared with the pound and the florin, it is not only because its own position has weakened, but also because theirs has improved. While the British and Dutch exchanges advanced, as compared with the Swiss exchange, they also steadily improved their relation to the dollar. It must be admitted, however, that other factors are also responsible for the fall of Swiss currency below the gold parity.

Most Swiss experts agree that the chief cause of this decline is to be sought in the emigration of Swiss capital, which is taking place in a hitherto quite unwonted degree. The exodus of money set in last autumn as a consequence of the capital levy which then threatened the Swiss investor. It still continues, though the Capital Levy Bill has long been rejected, and thus constitutes for the time being the most important source of the present eager demand for foreign bills in Switzerland.

What are the reasons for the present emigration of Swiss capital on such a large scale? It is not symptomatic of anything wrong in Switzerland's balance of payment, for while the present period of change has perhaps not been without lasting effect on this balance, it has rather diminished its volume than displaced its equilibrium in a sense unfavourable to Switzerland. The trade balance, in fact, has for the last year been passive, though the average excess of imports was only about 358 million francs for the period from 1914 to 1922, as compared with the much higher average of 588 million francs for the previous period from 1909-1913. There is sufficient evidence that Switzerland is able, and will continue to be able, to meet the usual excess of her imports over her exports without any great difficulty. Thus the present outflow of capital must be regarded as something apart from the factors which habitually go to the making of the Swiss balance of payment. Its causes are indeed more direct. Swiss capital finds at home a rate of interest which compares very unfavourably with that to be had elsewhere. It moves, therefore, to those countries where the rate is more remunerative, and where the exchange seems to be on the safe side. Even were the holders willing to leave their capital in Switzerland, the opportunities for new investment there are rare, and thus an exodus of capital is practically inevitable. Besides, taxation in Switzerland is so very high that it is only

equalled in severity by that in Great Britain, and this, too, is no small stimulus for the sending of money out of the country.

Not all the money that comes from Switzerland, however, is really Swiss money, for in the hands of Swiss banks there were substantial deposits owned by Germans. In order to effect payment of 47.6 million gold marks in April of this year and another 58 million gold marks in May, Germany liquidated some of her deposits abroad. The liquidation of such deposits as had been placed by her in Switzerland was not without a weakening effect upon the Swiss exchange, especially in relation to Great Britain and America.

The trade returns of the Swiss Customs Department show, for the first three months of the present year, a marked increase in the imports of raw materials of every description. This is indicative of the slight improvement in industry and trade which set in at the turn of the year. As the Swiss manufacturers have not yet abandoned the good pre-war habit of paying cash, their increased demand for raw materials reacts immediately on the market for foreign bills in the country.

There is very little controversy in Switzerland as far as these explanations are concerned. A difference of opinion, however, is to be found as to the effect of the present amount of currency in circulation in its relation to the exchange value of the Swiss franc. Those who do not approve of the present level of notes in circulation, however, overlook one essential fact; that is, that not all the notes which are reported by the Swiss National Bank as being in circulation are really in circulation. A very considerable proportion is hoarded, and thus do not at present exercise any influence on the internal purchasing power of the franc at all. There are supposed to be as many as 300-350 million francs of the note currency of the Swiss National Bank, which stands at 854 million francs, out of active circulation. Of this total of 300-350 million francs, 130-150 million francs represent the amount of Swiss bank notes estimated to be held abroad. Until recently, the Swiss franc has been and is still being used for the settlement of business transactions in Southern Germany and Austria. It will continue to fulfil this function; but the dollar on the one side, and the stabilised kronen on the other, will gradually make its use superfluous. It is probable that the reflux of such Swiss notes as are held abroad will then tend to diminish the purchasing power of the franc in Switzerland, unless appropriate steps to prevent this are taken in time. For the present situation, however, the nominal extent of the note issue cannot be considered as a contributory factor in the present fall of the Swiss franc, and in support of this opinion it may be pointed out that the gold in the possession of the Swiss National Bank covers alone more than 60 per cent. of its present note issue.

The fall of the Swiss currency is, as we have seen, chiefly due to the marked export of Swiss capital. This movement, which has its source in the low rate of interest in Switzerland, and in the lack of opportunities for new investments, will automatically come to an end as soon as its present surplus has disappeared—and this may be soon. The fact that the Swiss franc is below parity in its relation to the United States, Great Britain, and Holland is having a marked effect on Swiss industry. In 1920 more than 33 per cent., in 1921 27 per cent., in 1922 over 21 per cent. of Swiss imports, especially food-stuffs and raw materials, came from these countries. Owing to the long and severe crisis and to heavy taxation Swiss industry and trade have already been sorely tried, and the fall of the Swiss franc may retard their recovery from these years of stress.

SOME LESSONS OF THE AUSTRIAN EXPERIMENT IN RECONSTRUCTION.—I.

BERLIN is a city of despair, Vienna is a city on which hope has dawned. Even the least observant traveller going from one to the other could not fail to be struck by the contrast between them. It is true that in Berlin one will see crowds of pleasure-seekers, and the restaurants and amusement resorts full of well-dressed folk with money to

spend, the shops well stocked and the transport and movement of a great capital unabated. But beneath the surface there is anxiety and depression. One cannot converse for two minutes without raising the one absorbing problem of the imminent breakdown of economic and social order, and faces at once become serious with the haunting fear of what an unknown future may have in store. In Vienna, on the other hand, the Austrians have before them the prospect of a settled existence, and though their path may yet be difficult, there is confidence that they are now well on the road to conditions of life at once tolerable and stable. The problem of Austria is, of course, a small one compared with that of Germany; but it presents so many of the same features in miniature that the experience may have valuable lessons to teach which should help in solving the larger and more complex question.

We will start with the financial situation, not because it is the most important—for it is, after all, only a means to an end—but because it is the side from which the problem has, in fact, been approached, while the technical issues involved are of the utmost practical importance. Austria to-day presents the paradox of a country which in the grip of a stringent financial control is yet printing notes and putting them into circulation at a very rapid rate. The explanation is simple. The currency is inadequate at present price levels, while forces are operating to make the crown appreciate, and these can only be met by the issue of money. But while the facts are readily explained, the decision as to what policy should be adopted is far from self-evident.

For the first four months of this year the payments due by Austria to foreign countries greatly exceeded those due to her; but as confidence in the Austrian situation was gradually restored, the circulating capital of the country, which had been exported to the extent, according to one estimate, of about two-thirds of the total, began to return. Surrounding nations came to look upon Austria as a place where values were stable, and foreign capital began to flow into the country. Hence, in May, and to a greater extent in June, the foreign payments being made to Austria have begun to exceed the payments which Austria is making abroad. In ordinary circumstances this would involve a rise in the exchange value of the Austrian crown. But to allow this to happen would be to abandon the idea of stabilisation. Up to the present, therefore, the difficulty has been met by the printing press, which has been turning out at a very rapid pace not inconvertible crown notes, but crown notes issued against gold or foreign currency. Hence the total circulation of notes rose in April and May from 347 million gold crowns to 376 million gold crowns. This increased internal circulation of money has been a necessary condition of the returning prosperity of the country. The volume of trade has been increasing, stocks and shares rising, at first slowly and then with the dimensions of an enormous boom, and finally commodity prices have begun to move upward.

The problem of how much circulation to allow in Austria—an island of sound finance in a sea of fluctuating currencies—is a very difficult matter. Before the war the currency in circulation in what is now the present Austria is estimated to have amounted to one thousand million gold crowns. Twelve months ago the value of the paper circulation had depreciated to such an extent that it only amounted to sixty million gold crowns. With the steady improvement which has taken place since last September the internal circulation has increased in value to nearly 380 million gold crowns. How much more currency can Austria absorb without producing once again the evils of inflation? The pre-war basis is not a safe guide, for crowns were used as savings and were hoarded, the rapidity of circulation was slow, and the turnover of trade per head was greater than it is to-day. These differences are so difficult to measure that one cannot say that there is any figure that represents a safe internal circulation for Austria under present conditions. Undoubtedly, as confidence revives the amount of circulation can increase, for people will accumulate gold as in olden days. But the question is whether the rise of prices which has already begun is a sign that the saturation point is being reached. If this were so, a steady increase in prices might prejudice

Austria's industrial recovery, making her costs of production high, and turning the physical balance of trade against her. Her foreign payments account would balance, but she would be paying for her imports by the influx of capital and not by exports. Her financial position would be strong, but her industrial position would be seriously undermined. In such circumstances there are those who urge that the object of the financial control should be not to maintain the foreign exchange at a fixed ratio, but to maintain internal prices at a steady level, and to allow the crown to rise in value so long as internal prices do not show any sign of falling. Thus the two alternative policies of stabilising the exchange and stabilising prices are for the moment at issue. Our view, however, is quite clear that in present circumstances the stabilisation of the exchange is the imperative necessity. If the exchange were allowed to rise there is no doubt that the present influx of capital into Austria would be enormously increased, for every speculator on the Continent would think that the Austrian crown was the one currency in Europe that was certain to improve, and this opinion itself would make the crown appreciate at a rate that would at once get completely out of control. It is only by giving the impression that the crown will and can be firmly held that the forces of speculation can be enlisted to help maintain this stability.

This policy may lead to a period of rising prices in Austria. Cost of living will reach a high level, and this, in turn, will make exports more difficult. It is quite clear that if the flood of capital exceeded all bounds the policy would, in the end, break down through the blow to Austrian production and the rise in unemployment. But at present there are no signs of this, and as long as it is in any way possible to do so, it is important to prevent the crown becoming an object of speculation again.

It may be added parenthetically that in present circumstances it is quite impossible for the Government to bring home to Austria the money that has recently been subscribed for her, and it must therefore be placed on deposit at low rates of interest in London and in New York. The sums involved are considerable, as the following table shows:—

AUSTRIAN LOAN.

Market.	Nominal Total (Millions)	Rate of Interest.	Issue Price.	Effective Total (Millions).	Effective Total* in \$ (Millions).
London	£14.0	6	80	£11.2	51.66
New York	\$25.0	7	90	\$22.5	22.50
Stockholm	Kr.13.1	6	80	Kr.10.5	2.78
Amsterdam	Fl.3.0	6	80	Fl.2.4	0.94
Brussels	B.F.25.0	6	80	B.F.20.0	1.08
Zurich	S.F.25.0	6	80	S.F.20.0	3.59
Vienna	\$13.0	7	93	\$12.1	12.09
Paris	F.F.150.0	6½	93	F.F.139.5	8.83
Rome	L.200.0	6½	93	L.186.0	8.62
Prague†	Kr.60.0 (gold)	?	?	Kr.60 (gold)	12.16
Total	..	..	..	..	124.25

* Calculated on basis of rates ruling at New York on June 15, 1923.
† This is a funding operation and not a public issue.

The control of Dr Zimmerman nominally comes to an end at the end of 1924, but the Austrians themselves do not pretend they will be in a position to take over the responsibility for running their own affairs so soon as this. Moreover, the creditors of Austria would not look with complacency on a return to the old state of things, and would certainly feel that if the League of Nations washed its hands of Austria the moment the Budget was balanced, it would have raised money in the markets of London and New York on false pretences. As a matter of fact, this limit of the period of control, though not discussed at the time the loans were floated, is quite clearly laid down in the protocols. Under the scheme, Dr Zimmerman holds at his own account, not merely the money lent in London, New York, and elsewhere, but also the money from Customs duties and the tobacco monopoly. From the two latter items he deducts, or will deduct, whatever may be necessary to pay interest on the loan, and returns the rest to the Austrian Exchequer. The expenditure of the Austrian Government requires, of course, during the next eighteen months not merely the

whole of this balance, but the proceeds of the loans which Dr Zimmerman holds at his disposal, and he therefore has the effective power of the purse. Since the Government has surrendered the right to issue notes it cannot meet its weekly bill for State services, railway expenses, &c., if Dr Zimmerman withholds supplies. This will be entirely altered when the budget balances, and there is no reason to doubt that this will happen before 1925. Dr Zimmerman or his representative will still receive the proceeds of the Customs duty and the proceeds of the tobacco monopoly, and the greater part of this will be used for the service of the loan. There will remain a balance which will represent quite a small proportion of the Austrian Budget, and any determined Government could easily make itself independent of the receipts from these particular sources. In other words, the League would retain a small but very slight financial hold over the Government. There is a feeling in Vienna that to abandon control so soon would be a mistake in the interests both of the country and of the creditors of Austria, who will continue to have a very real interest in the continuation of sound finance. It is one thing, however, to insist upon particular forms of taxation and economy as a condition of financial assistance; it is quite another matter to claim a similar authority over a national parliament in the interests of creditors whose money has already been spent. In any case the League of Nations will have to reconsider the whole position very carefully not later than the spring of next year.

Notes of the Week.

Approaching Peace with Turkey.—During the small hours of the morning of July 12th, the diplomatists at Lausanne (putting as much pressure into their last spurt as if it had been their seventh instead of their 157th day on the track of peace) were reported to have reached agreement on the three points still at issue, namely, the Ottoman Public Debt, the Foreign Concessions, and the date of the evacuation of Constantinople and the Straits by the Allied naval and military forces. In regard to the debt, which was the most difficult question of the three, the Allies have finally contented themselves, as was expected, with saving their faces. All reference to the debt, as being a private business transaction, is to be omitted from the treaty, in respect not only of arrangements for the future, but of the confirmation of the past. The bondholders were anxious that the treaty should incorporate the Decree of Mouharrem, the unilateral act by which the Ottoman Government regulated its relations with its creditors more than 40 years ago. This claim was naturally resisted by the Turks, on the ground that there was no reason why the interests of private individuals should be gratuitously increased in value in a treaty between Governments. Having gained their point, the Turkish Government will start separate negotiations with the bondholders as soon as the political treaty is signed; but if they wish to reap advantage from their diplomatic triumph, they will not press the bondholders so hard as to discourage other foreign interests from investing in Turkey in the future; for if they overstep the mark now, the need for foreign capital will force them to draw back sooner or later with a loss of countenance which can be avoided by present moderation. The Allied Governments, on their side, have reserved their right to make a formal declaration of their views on the debt (on the understanding that Turkey is not bound to accept them); and they have intimated that they may reopen the whole financial question if in their opinion the bondholders are too badly treated. No doubt this course is open to them, but it would hardly please or benefit the majority of their constituents. Indeed, Turkey and the Allies have a common interest in finding a reasonable compromise over the debt, and in not pushing the issue to extremes. As regards concessions, it is satisfactory to note that an agreement has been reached between the authorities at Angora and the Aidin Railway Company, one of the most considerable British concerns in Turkey. Light is thrown on this by a letter from Mr Parker, the company's representative, written at Angora and published

in the *Times* last Thursday. In this important instance, at least, the Turks have evidently shown themselves neither unpractical nor unaccommodating, and apparently they also welcome the establishment of British control over the ex-German Anatolian Railway, which was recently effected by a British purchase of shares held in Switzerland. The rehabilitation of her existing railway system will benefit Turkey more than the projects for new constructions, at present in dispute between French and American concessionaires; and if it is carried out by British enterprise, it will be a practical means of improving Anglo-Turkish relations. Incidentally it will help the British community at Smyrna, who have been so hard hit by the fire, and by the subsequent evacuation of British subjects from the city, for they had placed a large part of their savings in the Aidin Railway, which, before the Armistice, was one of the safest investments in the world. Thus, at last, a genuine settlement of the issues between Turkey and the Allies seems a real likelihood, although a new hitch over the concessions question, reported in yesterday's newspapers, warns us that it is not yet an accomplished fact, and that there will be no certainty until the treaty has actually been signed. Angora is reported to be less optimistic than the Turkish delegation at Lausanne, and on the points provisionally agreed to by the delegation, Angora has the last word. The omens, however, are favourable, and even if the negotiations between Turkey and the Allies should miscarry once more, it is satisfactory to remember that peace has at any rate been established between Turkey and Greece; for, if fighting has to go on, it is better that it should be conducted with francs and sterling between gentlemen in black coats than with blood and iron between Greek and Turkish conscripts.

The Half-Year's Overseas Trade.—We do not propose to examine in any detail the overseas trade returns for the half-year, which have been issued this week, because for comparative purposes they are at present useless. For the past three months the figures have included the import and export trade of Great Britain and Northern Ireland with the Irish Free State, while the trade of the Irish Free State with the rest of the world has been excluded. So far we are without any exact guide as to the effect of these changes upon the figures—a defect which, we trust, the Board of Trade will endeavour to remedy as quickly as possible, for it is a serious matter that no reliable data should be available as to what is the real trend of our overseas trade. On the face of it the month of June looks very disappointing, for, while imports were similar in value to those of May, exports fell by over £9 millions. We append for what they are worth (which, for the reasons given above, is very little) a summary of the June and six months' value figures:—

MONTH OF JUNE.				
	1922.	1923.	Increase or Decrease in June, 1923.	
	£	£	£	%
Imports	84,276,901	89,307,683	+ 5,030,782	+ 6.0
British exports	52,145,951	62,883,559	+ 10,737,608	+ 20.5
Re-exports	8,720,209	10,954,932	+ 2,234,723	+ 25.5
Total exports	60,866,160	73,838,491	+ 12,972,333	+ 21.4
Excess of imports over total exports	23,410,741	15,469,192	- 7,941,549	- 34.0
SIX MONTHS ENDED JUNE 30.				
	1922.	1923.	Increase or Decrease in 1923.	
	£	£	£	%
Imports	487,183,421	538,777,822	+ 51,594,401	+ 10.6
British exports	351,761,805	382,679,027	+ 30,917,222	+ 8.8
Re-exports	55,671,520	63,863,784	+ 8,192,264	+ 14.7
Total exports	407,433,325	446,542,811	+ 39,109,486	+ 9.6
Excess of imports over total exports	79,750,096	92,235,011	+ 12,484,915	+ 15.7

In the past six months coal exports were 39.8 million tons, against 27.2 million tons in the corresponding period of 1922; iron and steel exports 2,215,642 tons, against 1,539,938—both important advances, even in face of any effect which the Irish complication may have had on the figures. Cotton piece-goods exports were 2,106 million

square yards, against 1,850 million square yards; but, on the other hand, cotton yarn exports fell from 96 million to 61 million lbs. Imports of bullion and specie in the six months were £29.4 millions, and exports £33.7 millions. The six months' figure for tonnage of vessels clearing with cargoes was 34.9 million tons, compared with 26.9 millions in the first six months of 1922. Here the increase is a true one, because Irish Free State clearings are included. Separate shipping statistics for the Irish Free State are also included, and we hope that the Board of Trade will in future issues find some means of providing data to show the effect of the separation of the Free State not only upon shipping figures, but also upon imports and exports.

The League and the Greek Refugees.—More than a million refugees have moved into Greece since the débâcle of September last, and of these more than 80 per cent. are destitute. The problem of their maintenance engaged the attention of the Council of the League of Nations last April, and Colonel Procter, the Deputy High Commissioner for Refugees, was asked to make a report on the subject. This has now appeared, and has at once led to a marked improvement in Greek exchange. In this document a loan of £10 million sterling is regarded as an absolute minimum, in view of the fact that the initial expenditure must necessarily be considerable. Of the 860,000 destitute refugees, nearly half a million are agriculturalists, while the preliminary distribution of such large numbers of people has, perhaps naturally, not always been accomplished in a manner calculated to facilitate their permanent absorption in the economic life of the country. The report envisages the creation of a special commission, three of whose members, including the president, would be appointed by the League of Nations and two by the Greek Government. This commission would have entire control over the expenditure of all funds obtained from the process of the loan, and would be able to veto all nominations to positions in the administration of these undertakings. The settlement of the agriculturalists alone is expected to necessitate the expenditure of nearly £6 million sterling, while reimbursements made by the newly settled peasantry are to have priority over all State taxation. In this way it is claimed that the reimbursement would be effected at a minimum rate of 10 per cent. per annum of the advance. It is stated further that there is no shortage of land for the production of cereals, and that a considerable improvement in the trade position of the country would be brought about by reducing the amount of corn which has at present to be imported. The settlement of urban workers would apparently be less expensive, while considerable sums would be necessary in the form of grants in aid to the aged, to children, and to invalids. Greece is described as an agricultural country with a very low proportion of land cultivated per head of the population. The burden of her million refugees comes at a time when the large Public Debt of the country and a depreciated currency bear heavily on the national economy. On the other hand, the foreign trade position is not as bad as might be expected, while industrial development is proceeding favourably. The restoration of peace should lead to considerable progress in agricultural production, which has suffered enormously from ten years of almost continuous warfare. It must be pointed out, however, that a £10 million loan is not a philanthropic undertaking, and it seems wildly improbable that anything approaching this sum would be forthcoming without some very definite and specific guarantees on the part of the chief Governments. It is not enough that the League should bless a new issue, and unless something more tangible than a benediction is in sight, the advisability of publishing this report seems to us to be open to question. The need is pressing, but nothing can be gained by raising false hopes.

The Quarter's Shipbuilding.—Lloyd's Register Shipbuilding Returns for the quarter ended June 30 show a decrease of about 154,000 tons, as compared with the previous quarter, in the tonnage under construction in Great Britain and Ireland, viz.:—1,337,759 tons; and the de-

crease as compared with 12 months ago reaches about 582,000 tons. The total includes 130,000 tons on which work has been suspended for some time. Deducting this amount in order to enable a comparison to be made with figures for normal times, the tonnage actually under construction in Great Britain and Ireland now amounts to 1,208,000 tons. The average tonnage under construction during the 12 months immediately preceding the war was 1,890,000 tons, i.e., 682,000 tons more than the present figures. As compared with the figures for the quarter ended March 31, 1923, there has been a slight increase in the tonnage launched, but a considerable decrease in the tonnage commenced in Great Britain and Ireland during the past quarter; the latter tonnage amounting only to 16 per cent. of the work in hand at the beginning of the quarter. The total merchant tonnage building in other countries is 1,206,097 tons, but this includes about 132,000 tons upon which work has been suspended, leaving about 1,074,000 tons actually under construction; the latter figure is 146,000 tons less than at the end of March, 1923. The figures for the leading countries abroad are:—Germany and Danzig, 352,405 tons; France, 170,866 tons; Italy, 141,543 tons; United States, 133,660 tons; and Holland, 99,821 tons. The tonnage of vessels launched in the world during the quarter under review amounted to 570,412 tons, of which 239,373 tons was launched in Great Britain and Ireland, 160,065 tons in Germany and Danzig, 53,333 tons in the United States, and 117,641 tons in other countries. The tonnage commenced in the world during the same period amounted to 314,375 tons, of which 241,283 tons was commenced in Great Britain and Ireland; these totals, however, do not include vessels commenced in Germany during the quarter, such information being not yet available. The total world tonnage actually under construction is 2,282,000 tons, which is 1,164,000 tons below the highest pre-war record reached on June 30, 1913, viz.:—3,446,558 tons.

The Half-Year's Coal Output.—The production of coal from the mines of Great Britain for the week ended June 30th last was 5,400,700 tons, and this brings the total for the half-year up to 140,791,000 tons, which compares as follows with the three preceding half-years:—

	Tons.		Tons.
July-Dec., 1921	109,879,000	July-Dec., 1922	132,096,000
Jan.-June, 1922	119,754,000	Jan.-June, 1913	140,791,000

In only four of the 26 weeks has the output been below five million tons, and each of these was affected by holidays. The weekly average for the half-year is 5,415,000 tons, which compares with a weekly average of 5,530,000 tons in 1913, and just over five million tons in 1912.

Crop Prospects.—According to the monthly report of the Ministry of Agriculture and Fisheries, there was much less sunshine than usual during June, and in most districts very little rain. For the greater part of the month the weather was cold, but in the last week or ten days summer-like conditions prevailed. Crops look healthier than a month ago, and are generally improving, though backward and needing rain. Hay-making was proceeding at the end of June. Though short in the straw, wheat generally looks well, and is a satisfactory plant. The crop has been late in coming into ear. Barley varies considerably. Winter barley is strong and promising, but spring crops, except where sown early, are frequently thin and weak. Winter oats have also done well, and have come into ear nicely, whilst spring oats are in much the same condition as barley. In some districts, especially in the North, many fields of oats are very thin owing to damage by grub and wireworm. It is anticipated that the yield of wheat will be nearly up to average, but oats and barley are expected to give under average crops, barley, which is the least promising, being estimated at from 5 to 8 per cent. under average. Prospects for the cereal crops generally are poorest in the West Midland and Eastern Counties. Main crop potatoes have come up regularly as a rule, and have a healthy appearance. The crop is very backward, however, and in many cases was only just through the ground at the end of June. On heavy land in the Holland part of Lincolnshire the main crop is doing badly. Throughout the country under average yields are

expected, and present indications are for a yield per acre about 5 per cent. less than the average of the last ten years. Hay-making was in progress in most parts of the country at the end of June. In the North and in the later districts generally a start had only just been made, but in the South a good proportion of the seeds hay had been saved in good condition. Very little meadow hay had been cut, and the crops were improving with the warmer weather. It is estimated that over the country as a whole seeds hay will yield about 29½ cwts per acre and meadow hay 20 cwts per acre, or about 1½ cwts above average in the case of seeds, and nearly 1 cwt below average in the case of meadows, but these yields may be appreciably increased if good second cuts are obtained. In the best cultivated gardens hops are fairly strong, but in others they are weak. The crop is backward generally, but has grown better during the last ten days of June. In all districts only very light yields seem possible. The frosts and cold winds have caused a very heavy fall of apples, and only half an average crop is anticipated. Pears are practically a failure everywhere, and plums will give very poor yields, barely a quarter of an average crop being expected. In the principal districts the cherry crop will be about 25 per cent. under average. Strawberries are rather under average, and in the late districts the crop is backward. Gooseberries are about average, and the crop has been cleared in early districts. Raspberries and currants are suffering from want of rain, and black currants will probably be only half an average crop, red currants being more promising. With hay-making and turnip-hoeing in progress, more temporary workers are now being employed, but the supply is adequate in practically all districts, and there is some unemployment, especially in a few parts of the Eastern Counties.

Basic Prices for Cotton Yarns.—Our Manchester correspondent writes:—Two or three months ago the Federation of Master Cotton Spinners' Associations held an inquiry as to the desirability of publishing for the guidance of spinners basic prices for yarns made from American cotton. Eventually a scheme was arranged, and the members were recommended from the beginning of June not to sell below the figures published. It may be said that these official quotations have been from 1½d to 2d a lb above market prices. During the last week or two the question of maintaining the scheme has been discussed, and the committee, therefore, decided to take a ballot of the members on the question. The result was announced on Tuesday last, and showed that over 83 per cent. of the members were in favour, and nearly 9 per cent. against, whilst from over 8 per cent. no reply had been received. The committee discussed these figures very thoroughly, and then adopted a resolution by 22 votes against 18 that the members of the Federation producing American yarns be advised to adhere to the prices posted from time to time. In trade circles there has been much comment upon the voting of the members of the committee. It is no use disguising the fact that the basic prices are not being obtained by spinners, and in many quarters the opinion has been expressed that it would have been far better if the Masters' Federation had realised the failure of the scheme and abandoned it.

German Coal-Oil Amalgamations.—German oil concerns having lost their pre-war holdings in the Russian, Galician and Roumanian oilfields, have naturally been forced to turn more to the development of their domestic oil resources. With the surrender of Alsace-Lorraine, the only "free" oil production left to Germany is the insignificant output of the wells in Hanover. The distillation of oil from coal and lignite (brown coal) has therefore assumed even greater importance than before the war, particularly for the chief German oil companies—the Deutsche Erdöl A.G. (D.E.A.) and the A.G. fuer Petroleum Industrie (A.P.I.), which have suffered most. The D.E.A. led the way by acquiring lignite mines in Saxony, and has lately obtained control, by an exchange of shares, of the Graf Bismarck Coal Mining Company, which in normal "unoccupied" times produces 2½ million tons of coal per annum. This latter company possesses coal very suitable for the

extraction of oil, and has already been successfully working a process of distillation. The D.E.A. will now control 2 per cent. of the German pit coal production, and 5 per cent. of the lignite. Such command of both technical skill and raw material may lead to striking developments in the field of German coal-oil production. This is by no means all. There is good ground for believing that an amalgamation of the D.E.A. and A.P.I. is being promoted by Hugo Stinnes. Some years ago a fusion of these two concerns was attempted, but broke down on the basic question of the price of shares to be exchanged. Stinnes may be more successful. His oil interests are already considerable, and embrace the Olea Mineraloelwerke, which has a refinery at Frankfurt, and the Riebeckische Montanwerke, which has a share interest in the Rütger chemical works controlled by the A.P.I. The immediate move of Stinnes is said to have been the acquisition of a block of shares in the A.P.I. (which, by the way, has been paying its directors' fees in petrol). An important feature of the Stinnes' oil group is its control of a process for the hydrogenation of brown coal, which, if brought to commercial results, would revolutionise the coal-oil industry. The importance of this hydrogenation question can hardly be exaggerated, and it may well be that the D.E.A. may be anxious to participate in the experiments. If the D.E.A. and the A.P.I. and the Stinnes companies are brought together, a very formidable domestic oil trust will have been created. But Stinnes has greater plans than domestic, for he is actively extending his participation in foreign oil resources. Already he is heavily interested in the Argentine fields (as is the D.E.A.), and is seeking to secure the oil monopoly in Czecho-Slovakia which the Standard Oil lately held, and perhaps unwisely dropped. What is more important, Stinnes has entered into negotiation for the purchase of an estate in central north Texas, the largest single undeveloped oil-bearing property that is being offered in America. With foreign reserves of this extensive kind, not to mention command of tank steamships, the Stinnes "General German Petroleum Trust" (if he pulls it through) may become an international force in the oil industry.

More Bank Dividends.—A further batch of interim dividend announcements has been issued by the banks, which we have added to those given in our last issue:—

	Per Cent. per Annum.									
	1916	1917	1918	1919	1920	1921	1922	1923		
Bank of Liverpool and Martin's	*16	*16	*16	16	16	16	16	16		
Barclays Bank "B" shares...	†17½	†17½	†20	†20	14	14	14	14

National Discount "A".....	10½	10½	11½	12½	12½	12½	12½	10		
Do "B"	..	..	..	..	..	..	..	..		
Union Discount.....	13	13	13	14	14	14	15	15		

* Final dividend. † On old capital.
(t) Also a special cash bonus of 10s per share, free of tax.

We regret that in last week's table we gave the dividend of Williams Deacon's Bank as unchanged at 12½ per cent. per annum, whereas it should have been 13½ per cent. per annum, as against 12½ per cent. per annum on the "A" shares, with the dividend on the "B" shares unchanged at 12½ per cent. per annum. Apart from this increase, and alterations by two of the northern banks, the previous rates have been repeated. The Lancashire and Yorkshire and the Manchester and County make slight additions to the rate, but these are made with a view to equalising the two half-yearly distributions. The past half-year, to judge from the course of money rates, has not been a particularly profitable one from a banking point of view, but the further appreciation in the market value of securities has, no doubt, helped considerably.

The Rally in Copper.—Copper this week has led a good recovery in the non-ferrous group of metals, writes a market correspondent, and both standard and electrolytic have advanced rather sharply. The news from America has been more cheerful, with reports of a broadening demand for export and also on United States domestic account, and this has resulted in an upward adjustment in values. Preliminary figures indicate that the exports for June will approximate 28,000 to 30,000 tons, and the news is confirmed that the Copper Export Association has now cleared out all its surplus holdings. Second-hand copper, which had such a depressing influence upon the American market during the recent decline, is now very hard to find, and shipment terms to European ports are much stiffer than they were, indicating that the position of the metal is much healthier than it was last month. The talk of cutting down production is premature, and whilst there is nothing in the position that is likely to encourage developments in mining and smelting operations beyond present limits, the fact that the surplus stocks and the big supply of scrap metal have been worked down to practically nothing will count in the near future. Certain mergers are under discussion in the States, and this may have an effect on sentiment later on in the year. On this side the market is in firm hands. Warrants are not over plentiful, and some of the copper acquired recently on cheap terms may be shipped to the United States. The U.K. stocks at 27,776 tons include 23,000 tons of rough copper, and statistically the position must be regarded as very healthy. Cable makers have been buying this week, fair lines of wire-bars having been done at £72 5s, c.i.f., Liverpool, for arrival next month, and there has since been a further rise in both bars and electrolytic. A lot depends on the developments in the European political position, but market opinion is strongly in favour of better prices for copper, and certainly any movement in favour of a settlement of the Ruhr question would bring along more business from users both here and on the Continent where stocks are very small.

Government Agreement with the Chartered Company.—

Subject to the sanction of Parliament on the one hand and the shareholders of the Chartered Company on the other, an agreement between the company and the British Government has at last been reached. The terms of this provisional agreement are set out in a White Paper (Cmd. 1914), issued yesterday. The most important points may be summarised as follows:—On October 1, 1923, the date on which Responsible Government is to be established in South Rhodesia, the British Government will pay to the company £3,750,000. Further, the Government will waive their claim against the company for reimbursement of advances made in connection with the war. The company will accept the payment "as including a full discharge of its claims, under the terms of the judgment of the Judicial Committee of the Privy Council, in respect of the administrative deficits incurred by the company in Southern Rhodesia up to the termination of its administration." The company hands over to the Crown public works, buildings, and administrative assets in Southern Rhodesia, and withdraws its Petition of Right, now pending, while—an important point—the Crown "recognises the company as the owner of the mineral rights throughout Southern Rhodesia, subject to the provisions of the law in force in the territory." But the new Southern Rhodesian Government will have possession of all the unalienated lands in their territory. Chartered shares strengthened when the correspondence, setting out this agreement, was published, and we imagine that the shareholders will, at the meeting called for July 24th, accept their directors' advice and endorse the settlement. The last letter in the White Paper contains an offer by the elected members of the Legislative Council of Southern Rhodesia to pay over considerable sums (well over £2,000,000) to the British Government in return for benefits which the country will receive under the new régime. Generally speaking, the agreement looks like one of those rare things—a satisfactory compromise.

Holland in 1922.—The Report of the Commercial Secretary to the British Legation at the Hague, just issued by the Overseas Trade Department, shows the depth of the depression last year in Dutch finance and trade. Bankruptcies numbered 3,403, against 2,264 in 1921; banking troubles were very grave; margarine and chemical companies reduced their dividends, the Royal Dutch Lloyd its fleet. The State Railways showed a deficit of 33 million guilders. Agriculture suffered from high wages and the continuance of high rents, averaging 100 florins per hectare, or about 64s per acre, above the pre-war level; from the decreased demand for garden produce in Central Europe, the partial closure of the American bulb market, adverse weather conditions, and a poor flax crop. Trade, industry, and fishing were hampered by the decreased purchasing power and the fluctuations in the currency of "the hinterland," but Government attempts to check the competition of countries with a depreciated currency were frustrated by business opposition, and the volume of transit trade through the ports was less. Industry was also hampered by high wages, labour troubles, and short hours, and the extension of the working week from 45 hours to 48 proved inadequate. Unemployment in the skilled trades increased latterly, but no figures for casual labour were available. The Budget deficit for 1922 showed a deficit on ordinary expenditure of 52 million guilders; for 1923 this deficit would reach 52.7 millions, of which 10 millions would be made up from the sinking fund; extraordinary and "crisis" expenditure were likely to decrease, but borrowing for ordinary expenditure would be necessitated by "social" legislation, and, as tax revenue is determined largely by the profits of past years, the full effect of the depression has still to be felt. House property was depressed by the lessened demand for large houses, owing to the high cost of living and to taxation; the unsubsidised construction of small houses was facilitated by the lower cost of material and changes in the building regulations. The purchase of supplies in Great Britain tended to increase, owing to the fall in prices and the greater certainty of delivery and of stability in price.

Bolivian Finance.—The political troubles of this Republic in the earlier part of the year, writes a correspondent, when the action of the Opposition in calling on the President, Dr Saavedra, to resign caused serious rioting in La Paz, have apparently had little adverse effect upon the actual economic progress of the country. How far this condition will become affected by the general elections remains to be seen; but financial circles seem to entertain little fear of any violent change in the present much-improved trading position. Larger tin exports and renewed interest in rubber cultivation, taken together with a slowly but surely opening-up of the interior by new railway construction, might help the country to take its place eventually among the more prosperous nations of South America. But this cannot be expected until the financial situation, which still shows signs of great instability, can be adjusted. The actual income and expenditures for the current financial year are unknown. The estimates submitted by the Finance Ministry are admittedly unreliable, and, indeed, form but the merest guesswork. The 1923-24 budget displays a calculated revenue of 23,854,705 bolivianos and expenditures of 40,015,022 bolivianos, or a deficit of 16,160,317 bolivianos. Towards the reduction of this adverse balance will be applied the sum of 12,000,000 bolivianos received from the latest loan issued in the United States. No less than 13,000,000 bolivianos out of the total national revenues of 24,000,000 bolivianos are now required for the service of the foreign debt, another 3,000,000 for the internal debt, and 5,000,000 for the service of Customs house warrants—thus leaving the Treasury with barely 3,000,000 bolivianos to meet ordinary expenditure. The general trend of Bolivian finances may be gleaned from the fact that there have been substantial budgetary deficits since 1917—and even earlier—the heaviest, however, having been that for 1920, exceeding 21,000,000 bolivianos. In that year national expenditures reached the unparalleled figure of 49,470,475

bolivianos, while revenues were but 27,786,770. The highest revenues recorded were those for 1918, when close upon 30,000,000 bolivianos were enjoyed.

The Salvador Debt Settlement.—After protracted negotiations frequently interrupted, a settlement has been effected between the Salvador Government and the American financial syndicate which has come to its aid, and a meeting of the holders of the two Sterling Loans is called for Thursday next, July 19th, to consider the terms offered them. In 1921, both these loans having gone into default, the American syndicate offered a new loan of \$6,000,000 in "A" bonds, secured as a first charge on the Customs revenue, while the Sterling Loans were to be converted into "B" bonds, forming a second charge, and "C" bonds were to be issued to the Salvador Railway for arrears of subsidy, and to certain other creditors, and were to rank as a third charge on the Customs revenue. The stringent control of the Customs originally demanded by the American syndicate was resented in Salvador, but has been somewhat mitigated in the terms now offered. These differ from those of December, 1921, as follows:— (1) The "A" bonds are to be for \$6,000,000, instead of \$5,000,000, the interest (8 per cent.) and sinking fund (about 4 per cent.) being as before. (2) The total issue of "B" bonds is to be £1,050,000 instead of £1,010,000. (3) Arrears of interest are to be paid in "A" bonds instead of in cash; details will be given at the meeting. (4) The loan is secured on 70 per cent. of the gross Customs revenue instead of on the whole. (5) The remittances for its service are to be made to a fiscal agent of the Salvador Government in New York, and the American Collector of Customs appointed by the syndicate can only intervene after 30 days' default. Nothing is now needed to complete the settlement, except the assent of the holders of the Sterling Loans.

Ebbw Vale.—The accounts of this company for the twelve months ended March 31, 1923, reveal a certain amount of recovery from the acute depression of the previous year. This improvement would probably have been more conspicuous but for labour troubles. The Prince of Wales Colliery was idle for ten months during wage agreement discussions, whilst the remaining collieries in the group were at a standstill for seven weeks following the issue of the "Galloway" award. A net profit of £52,673 was earned, as compared with a loss of £327,560 in 1921-22, but no dividend is being paid on any class of the company's shares. Profits and their allocation in recent times, and in the pre-war year, have been as follow:—

YEAR ENDED MARCH 31.

	1914.	1921.	1922.	1923.
Gross profits	£ 166,873	£ 633,248	£ 49,501	£ 426,117

Carried forward	11,999	6,690	16,458	69,131

* Withdrawn from reserves.

The company has grown considerably since 1914, and loan and debenture interest charges have lately become rather a heavy burden, averaging nearly £365,000 during the last two years. The coal side of the business benefited by the American demand of last autumn, but the iron and steel departments, after six months of intermittent activity, came to a standstill in September in consequence of a strike of coke oven workers. The wages bill at £1,310,083 was much the same as for 1921-22, but less than one-third of its amount in 1920-21. The balance-sheet shows mortgage debentures and 8 per cent. seven-year notes to a total of £3,928,300, against an issued capital of £3,700,000, while £1,583,179 is owing to

sundry creditors. This last amount, however, includes £202,364 "reserves for special purposes, including provision for taxation." On the other hand, the company's various reserves total £1,650,348, and £594,432 is due from sundry debtors. Shares and debentures, at cost, in associated concerns are valued at £2,803,491. With the advent of prosperous times the directors will probably aim at producing a more liquid financial position.

Kaffir Yields and Lives.—Our mining correspondent writes:—Some months ago reference was made in these columns to the fanciful nature of certain calculations put forward in a circular with reference to Witwatersrand gold mining companies. The same criticism cannot be levelled at a sheet headed "Mining Investments," just issued by an important Stock Exchange firm. It shows, in respect of ten of the more solid undertakings, their issued capital and claim area, the quantity and value of the ore reserves and their net value, the latter being calculated on the basis of gold at 85s per oz, and working costs at the average of the first quarter of the year, with allowance for taxation and sundry expenses, also for the redemption of outstanding debentures where there are such. Then follow the dividends for the past 2½ years, and the yield on the price of the shares at the end of June on the basis of last two half-yearly dividends, after allowing 5 per cent. for redemption of capital. Finally, there is the approximate life of the mine, and the amount required annually for redemption of the capital. Appended is a condensation of the tabulation, one company, the Robinson Deep, whose position was dealt with in a recent issue, being omitted:—

Company.	Ore Reserves.		Approximate Life.	Price of Share, End June.	Gross Yield.	For Redemption per Annum.
	Net Value.	Percentage of Market Value.				
Brakpan	£ 1,255,300	41	Years. 20	3	104	s d 1 10
City Deep	1,509,800	37	25	23	124	1 1
Crown Mines (10s)	1,813,200	37	25	23	98	1 1
Geduld Proprietary	2,215,700	63	35	34	53	0 8
Government Areas	8,244,900	51	25	53	82	2 4
Modder Deep (5s)	4,336,700	97	15	22	93	2 1
New Modder (10s)	7,148,100	64	17	4	82	3 1
Springs Mines	1,807,100	56	35	28	104	0 6
Van Ryn Deep	2,058,800	51	17	38	124	2 7

The foregoing figures present some interesting contrasts which must, in the main, be left to speak for themselves. It may, however, be pointed out that the exceptionally low yield afforded by the Geduld arises from the circumstance that the reduction plant has so far been altogether incommensurate with the size of the property. The capacity of the mill has lately been increased from about 45,000 to 65,000 tons per month, and a further expansion would seem probable sooner or later. At the annual meetings of the Brakpan and Springs companies the chairman, to correct erroneous reports in circulation, announced that on the basis of existing conditions the proportion of the profits payable to the South African Government, under the leasing schemes, would work out at 15 per cent. and 20 per cent. respectively. In the light of this information the dividends may be calculated as 35 per cent. in the case of the Brakpan, and 27½ per cent. for the Springs. The output of the Brakpan will probably be increased if developments continue good, while later in the year the Springs will be putting through 60,000 tons per month, in place of the present tonnage of about 50,000. Of the earnings of the Government Areas, slightly more than one-half is taken by the Union Government under the profit-sharing scale, the terms being such as to make for steadiness. It may be useful to point out that the dividends of all these Kaffir companies are paid free of Dominion tax, while, thanks to the relief allowed, United Kingdom income-tax is only deducted at one-half of the standard rate. A note of warning is perhaps called for in regard to the "life" estimates. These assume the continuation of certain factors, and in especial the quantity of payable ore obtainable per claim. If—as in the recent striking example of the Modder "B"—a serious falling off should occur in the quantity of payable ore opened up, the "life" calculation becomes more or less invalidated.

Transvaal Gold Output.—The output of fine gold from the Transvaal mines for the month of June last amounted to 755,309 ounces, a decrease of 31,255 ounces on the figure for the preceding month, but an improvement of 79,612 ounces as compared with June, 1922. During the first six months of 1923, 4,516,549 fine ounces have been obtained. The following table shows the monthly production over a number of years:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.
January ..	Fine Ozs. 782,634	714,182	676,059	670,503	651,593	639,728	764,469
February ..	781,321	659,759	636,728	625,330	558,137	..	704,970
March ..	781,094	696,281	712,379	707,036	671,123	..	761,586
April ..	742,778	717,000	694,944	686,979	681,382	511,338	743,651
May ..	779,385	741,317	724,995	699,041	687,776	629,786	786,564
June ..	759,724	727,696	702,379	715,957	678,490	675,697	755,309
Total (6 months) ..	4,632,936	4,256,235	4,147,484	4,104,846	3,928,501	2,456,549	4,516,549
July	757,839	736,199	725,497	736,099	689,565	730,635	..
August ..	756,658	740,210	706,669	702,083	711,526	752,490	..
September ..	738,431	708,206	698,558	682,175	691,026	747,089	..
October ..	751,290	679,764	723,722	662,472	707,825	778,159	..
November ..	722,839	658,701	677,970	633,757	704,236	764,476	..
December ..	722,419	641,245	650,191	632,215	681,847	790,712	..
Total (12 months) ..	9,018,084	8,418,292	8,330,091	8,153,625	8,114,516	7,020,111	..

It will be observed that one must go back as far as 1917 to find an instance of greater output in the first six months of any year. Production in 1923 has been nearly twice as large as that of the corresponding period in 1922, but the latter was much below normal owing to the incidence of industrial and political disturbances on the Rand during the early part of the year. The output for May, 1923, was the largest during any individual month since March, 1917. The number of natives employed at the end of each month since November last by members of the Witwatersrand Native Labour Association and contractors is given below:—

	Nov., 1922.	Dec., 1922.	Jan., 1923.	Feb., 1923.	Mar., 1923.	April, 1923.	May, 1923.	June, 1923.
Gold mines	173,173	176,834	181,985	182,983	181,473	178,337	175,591	170,865
Coal mines	11,089	11,001	14,664	14,717	14,710	15,040	15,176	15,598
Diamond	1,237	1,253	1,222	1,227	1,273	1,860	2,668	3,063
	185,499	189,088	197,871	198,927	197,456	195,237	193,435	189,526

The figures reached their maximum at the end of February, and have since declined steadily, month by month, the total at the end of June being 9,401, or nearly 5 per cent. less than that of four months ago.

UNITED STATES.—COMMERCE COMMISSION AND COAL DISTRIBUTION—GOVERNMENT'S FISCAL YEAR—FEDERAL RESERVE BRANCHES FOR CUBA.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 2.

Two extraordinary orders, just issued by the Inter-State Commerce Commission, are the subject of widespread comment and criticism. One relates to the allocation of coal cars; the other is a denial of the application made by the Virginian Railway to build a short stretch of track to some coal mines in process of development, the Commission's reason for such refusal being that there are already too many coal mines in this country. The ruling concerning distribution of coal cars abolishes the practice of assigning cars for railway fuel. In other words, it forbids railroads, after September 1st, to allot any extra cars to soft coal mines which produce railroad fuel, or to show any preference in the matter of car supply to mines which possess their own cars. The new order, resulting from an investigation which the Commission had been conducting since the early part of 1921, upholds contentions made at various hearings by representatives of commercial mine operators, soft coal producers' associations, and the United Mine Workers of America; it abrogates rules and regulations prescribed by the Commission itself several years ago, and directs the discontinuance of a long-established practice despite vigorous protests from the carriers. The ruling applies to all railroads throughout the country, but its effect will be felt most by the big systems, such as the New York Central, Pennsylvania,

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

Baltimore, and Ohio, the Chicago Great Western, the Southern Railway, and numerous others which use assigned cars for railway fuel at mines reached by their own or other lines. The Commerce Commission claims, in support of its action, that the practice of assigning cars for railway fuel serves to diminish the supply of cars placed at commercial mines during periods of shortage. Although the extent of such diminution is in dispute, mine operators, according to the Commission's findings, consider the practice a serious matter, owing to its direct effect in limiting production, and to the indirect effects upon their costs and labour supply. Railroad managements, on the other hand, minimise the result, and even claim compensating advantages to commercial mines because of the practice. Four members filed separate opinions strongly dissenting from the decision concurred in by the other seven Commissioners. They declare that "a railroad must have an adequate supply of fuel in order to supply the people with adequate transportation," adding that in effect, though not in intent, the findings of the majority "subordinate the needs and interests of all others to those of the coal industry."

The Virginian Railway Company's application for permission to construct an extension—only about a mile long—of its lines in West Virginia to serve new coal mines which the Pocahontas Coal Company proposed to open, was denied by the Inter-State Commerce Commission on the ground that future public convenience and necessity did not require such a development. Other reasons given were that, at various times after July, 1922, the railway company had been unable to provide all the cars needed by mines in operation and dependent upon it. Therefore, the Commission contended, the building of the branch and the opening of additional mines would not result in better service to the public; on the contrary, it was claimed, the development would tend to reduce production and transportation of coal, since the car supply would be made "more inadequate because of the necessity of placing cars at the new mines." The Commission fails to state that the car shortage on the Virginian Railway last year

occurred during the coal strike, when its traffic was greatly increased because the coal mines which it serves were kept in operation. Furthermore, the assumption that the company would not be able to furnish sufficient cars for the new mines does not appear to be well founded, because for a number of years the Virginian Railway expenditures for equipment have averaged about \$2,500,000 annually. The real reason for the Commission's action in this case is found in its statement that "there are at present more (coal) mines in the country than are consistent with the most efficient use of carriers' equipment, and their aggregate capacity exceeds greatly the country's demands." That opinion coincides with views held by administration authorities, who are endeavouring to stabilise the soft coal industry. Although the Commerce Commission contends that the law authorises it to take such action, the ruling in the Virginian Railway case is regarded as a radical departure in railway regulation and an unusual exercise of power. In many quarters it is felt that the Commission, in what appears to be an effort to regulate the coal industry, has gone far beyond its statutory function of regulating inter-State transportation.

In a statement covering the Government's operations for the fiscal year ended June 30, 1923, the Treasury Department shows that total ordinary receipts for the year amounted to \$4,007,135,480, while expenditures chargeable against such receipts aggregated \$3,697,478,020, leaving a surplus of receipts amounting to \$309,657,460. Sinking fund and other debt retirements accounted for \$402,850,491 of the total expenditures, which means that the public debt was reduced by that amount during the year out of the ordinary Budget; a further reduction of \$210,823,851 was accomplished out of the surplus, so that there was a total decrease of \$613,674,342 in the public debt, which now stands at \$22,349,707,365. The balance in the general fund of the United States Treasury at the end of the fiscal year is given as \$370,939,121, as against \$272,105,512 on June 30, 1922, representing an increase of \$98,833,608. Customs receipts were much larger than in any previous fiscal year in the history of the Government, totalling \$561,928,866; the previous high record was \$356,443,387 for the year ending June 30, 1922. Income and profits tax receipts were unexpectedly large, totalling \$1,678,607,428, as against the estimate of \$1,500,000,000 submitted in the Budget last December. Miscellaneous internal revenue receipts produced \$945,865,332. During the year approximately \$4,500,000,000 of debt matured and was either retired or refunded, thus completing the Treasury programme for refunding the \$7,500,000,000 of short-dated debt maturing within about two years, which was outstanding when the present Administration took office. Since the refunding programme was announced on April 30, 1921, the Treasury Department says that about \$4,070,000,000 of Victory notes have been retired, Treasury certificates of indebtedness have been reduced from \$2,820,000,000 to approximately \$1,030,000,000, and war savings securities have been reduced from \$713,000,000 to some \$90,000,000; new Treasury savings certificates to the extent of about \$245,000,000 and, roughly, \$4,100,000,000 of Treasury notes maturing on various quarterly tax payment dates during the years 1924 to 1927 have been issued and are now outstanding. During the present fiscal year public debt maturities will approximate \$1,390,000,000, including about \$1,030,000,000 of Treasury certificates of indebtedness falling due June 15, 1924, and some \$50,000,000 of War Savings Certificates of the 1919 series which mature January 1, 1924. There are also outstanding about \$95,000,000 of 4½ per cent. Victory notes, which matured or were called for redemption during the past fiscal year, and in the neighbourhood of \$30,000,000 War Savings Certificates of the 1918 series, which became due January 1, 1923; those obligations are being presented for redemption daily, and the amounts outstanding are steadily being reduced.

The controversy that has been in progress for many months over the question of establishing branches of the Federal Reserve system in Cuba has finally been settled by the Federal Reserve Board in Washington, which has granted permission to the Boston and Atlanta Federal

Reserve Banks to open agencies on the island. There was very keen competition between those institutions, each desiring to secure the Cuban field. This development is meeting with considerable criticism in banking circles here, because it is taken as further evidence of the competitive policy pursued by certain Federal Reserve banks, which, it is claimed, were created to function solely as reserve institutions. By far the greater portion of Cuba's export trade to this country is handled at New York, according to local bankers; they fail to understand, therefore, why either the Boston or Atlanta Federal Reserve Banks should encroach on the Cuban field by seeking to open agencies there. Much of the criticism is apparently due to apprehension that the new branches may engage in transactions in competition with individual banks now operating on the island. The establishment of these agencies in Cuba is an entirely new venture. That it is regarded more or less as an experiment is evident from the fact that the Federal Reserve Board has "reserved the right to terminate the agencies at any time if it deems such action advisable."

FRANCE.—BUDGET IN SENATE—PRICE MOVEMENTS —IRON AND STEEL—INCREASED COAL PRODUCTION.

(FROM OUR CORRESPONDENT.)

PARIS, July 11.

THE Senate on Tuesday disposed in a single sitting of the Budget of Recoverable Expenditure for 1923, which provides for a total expenditure of 14,000,000,000. Of this sum, 13,000,000,000 represents the amount to be expended during the current year on reconstitution of the devastated area and on pensions arising out of the war, and 1,000,000,000 the cost of the army of occupation in German territory. The speech of M. Henry Bérenger, the *rapporteur* of the Budget, showed that up to that time the French investor had lent to the State 110 milliards, which had been expended on pensions and on the restoration of the devastated area, and that another 80 milliards would have to be found to meet requirements still unsatisfied under these two heads. So far Germany had paid to France a total of only 1,800 million gold marks, partly in cash and partly in kind, which had been more than absorbed in meeting the cost of the army of occupation, on which Germany still owed a further sum of 61 millions. While Germany had not paid a farthing of the amount due in respect of French claims for pensions and Reparations, she had reconstituted, at a cost of milliards of gold marks, a large part of the mercantile fleet taken from her by Great Britain, and to replace her lost colonies she had carried out a kind of colonisation of the whole world. M. Bérenger warned the Senate that the most critical moment of the Reparations controversy had arrived. France had occupied the Ruhr, he said, in order to assure the payment of the 26 milliards of "A" and "B" bonds created under the agreement of May 5, 1921. The 82 milliards of "C" bonds should be utilised for a compensatory settlement of the inter-Allied debts.

The well-known economist, M. Raphael Georges Lévy, the special reporter for the Budget for the Liberated Regions, informed the Senate that so far 40 per cent. of the value of the buildings in the devastated regions had been restored, but this, unfortunately, was not the same thing as 40 per cent. of the buildings that had been destroyed. In spite of the difficulties of making economies in this direction the Finance Commission of the Senate had recommended reductions of expenditure amounting to 58,000,000, in addition to the reductions that had been effected by the Minister himself, who had suppressed 10,000 officials last year and arranged to suppress another 4,000 during the present year. Eventually the Budget was approved by 274 votes to six.

The French Government index figures for wholesale

prices at the end of June, as compared with those of the previous month (base, 100 for the period 1901-1910), are as follows:—

	End May (corrected).	End June (provisional).
General index figure (45 categories)	469.9	471.1
Foodstuffs (ensemble of 20 categories)	444.8	450.2
Vegetable foods (8 categories)	372.9	414.8
Animal foods (8 categories)	482.3	472.5
Sugar, coffee, cocoa (4 categories)	513.8	476.4
Raw materials (ensemble of 25 categories) ..	489.9	489.7
Minerals and metals (7 categories)	452.3	440.1
Textiles (6 categories)	628.0	637.0
Various (12 categories)	442.8	445.0

The increased figures for foodstuffs, it should be pointed out, are largely due to the replacement of old potatoes by those from the 1923 crop. Had the price of potatoes remained the same during June as in May the index figure for foodstuffs in June would have been only 390.7 (instead of 450.2), the figure for foodstuffs in general only 440.6 (instead of 450.2), and the general index figure 467.8 (instead of 471.1). The continued rise of textile prices is to be explained by the steady drop in the value of the franc. Retail prices of foodstuffs in Paris continue on the upward grade. The index figure for 13 categories of foodstuffs at the end of June is returned as 3562 (or 231 per cent. above that of 1914), as compared with 3496 (or 225 per cent. above that of 1914) at the end of May. The figure for the whole of France shows a rise in retail prices at the end of May to 3387, as compared with 3320 at the end of February, the trend towards a higher cost of foodstuffs being common to the east, south-east, midland and western regions of France, as well as Alsace-Lorraine. In the north of France, however, the figure for the end of May is returned as 3491, as compared with 3506 at the end of February.

The returns published by the French Customs Department for the first five months of the year show that French imports of pig iron substantially increased during May, and that the imports of both iron and steel were continuously in advance of those of the corresponding period of last year. Exports of iron during the first five months of 1923 were 236,000 tons (as compared with 178,000 tons during the corresponding period of 1922), and of steel 608,000 tons (against 807,000 tons in 1922). These figures show a net falling off in the combined exports of iron and steel during the five months of, in round figures, 50,000 tons. The effect of the occupation of the Ruhr is perhaps most strikingly shown (for the moment, at any rate) by the fact that the exports of iron during May amounted only to 21,000 tons, as compared with 35,000 tons in May, 1922, while those of steel were 141,000 tons, as against 167,000 in the corresponding month of last year. At the same time, it must not be overlooked that the French iron and steel industry was occupied down to the end of April in carrying out orders placed prior to January last, before the rise in prices. Since then, partly owing to the disturbance and uncertainty set up by the occupation of the Ruhr, orders have fallen off enormously, and there is every reason to believe that the figures for June and July will disclose a still further drop in production. The opinion prevails generally, however, that the worst is now over, and that, in view of the large number of foreign orders that have been placed here during the past two or three weeks, for delivery in August, September, October, and November, according to specification, the future may be looked forward to with confidence. The renewed fall in the franc has largely stimulated foreign purchases in this market, particularly by Great Britain, while it is reported that a number of interesting orders have been placed by both North and South American buyers. A good deal of nervousness is shown over the rumour that the new Italian tariff, which is now under discussion, may include articles imposing on French metallurgical products duties almost if not quite as heavy as those placed on similar products of German origin. The French Minister of Commerce is being urgently requested to take action on this point while there is yet time.

The output of the French collieries during May amounted to 3,129,000 tons, a figure only once exceeded since the war began (in January last, and then only slightly). For the first time the amount of combustible available (including both imported supplies and those pro-

duced in France) exceeded 5,000,000 tons. There is therefore obviously no ground for the fears that have been entertained as to a possible shortage in the near future. The deficit in available supplies that occurred as the outcome of the occupation of the Ruhr has now been met, to a large extent, by the increased output of the French collieries. Imports of British coal, which dropped to 1,500,000 tons in April, rose again to 1,700,000 tons in May, or to approximately the same figure as in March. Last year, a monthly average of 1,200,000 tons of imported coal was regarded as exceptionally serious. The effect of this increase in imports of foreign coal has obviously had a direct bearing on the recent further fall of the franc. At the same time, although quotations for French coal have on the whole remained steady, in spite of the general trend towards higher prices in other countries, the price of Belgian coal, which forms an important proportion of the quantity needed to meet French requirements, has risen substantially. This explains why, in spite of the large supplies now available, comparatively speaking, and of the fact that we are now in the height of summer, combustible prices have risen considerably. The prospects now are that there will be no shortage of coal in the near future, but that prices will rule high. Heavy contracts have recently been concluded with British firms for deliveries in July and August, at prices ranging from 5s to 10s a ton below those current in May, but still appreciably higher when calculated on the present basis of the franc.

GERMANY.—FINANCES—CURRENCY—BOURSE— PRICES—TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, July 10.

THE finances and currency of the Republic are rapidly reaching a condition which until lately was considered peculiar to Soviet-Russia. The difference between German and Russian conditions is mainly one of time, not of kind or degree, because phenomena which a year, or at most two years, ago were regarded as specifically Bolshevik are already repeated here. Even the particular measures of renovation which were tried in Russia side by side with a general aggravation are tried in Germany, also a year or two later in date, and they have the same slight effect. Against the "Tchervontsi" are the dollar Treasury bills; against wages in kind, an attempt to establish index wages, in principle the same. The Russian anti-speculation measures which really had the demagogic aim of diverting public attention from the real evils are also being tried here; but, being late in everything, Germany is still intent on them at a time when Russia has largely abandoned them. The main difference between Russian and German State finance is superficial. Germany professes to adhere to "bourgeois" methods. She avoids the scandal of formal debt repudiation by recognising an ever-smaller proportion of her debt—the present proportion being about 1-50,000th of her pre-war debt, and an incalculable but also ever-smaller proportion of the paper mark debts contracted since 1914. Also while Russia brazenly balanced her budgets by issuing State notes, Germany retains outwardly the correct method of notes issued against Government debt.

The last German Ministry of Finance reports suggest that Germany might advantageously perfect the likeness to Russia by abolishing the mechanism of incurring debt, and by resorting to issue of State notes instead. By doing this she would probably not increase, but rather materially diminish, the burden imposed by the currency depreciation on the mark-interest classes. This conclusion is inevitable from an examination of the last reports. As was stated last week, the floating debt (nearly all consisting of discounted Treasury bills) increased by over four billion marks in the first 20 days of June. In the next ten days this debt increased by nine billions. This particular decade report may be considered abnormal, because the increase was only partly due to the price-rise, and was partly due to the quarterly advance salary payments, a system by means of which the officials, who are at best insufficiently paid, are enabled to survive at the cost of those persons into whose hands the mark salaries go and remain during the next three months. The reports

of the preceding decades must be considered normal, because they contain no such exceptional expenditure. In the third decade of May, receipts were 283,558 millions and expenditure 1,646,077 millions; first decade of June, receipts 226,578 millions, expenditure 1,795,432 millions; second decade, receipts 280,653 millions, expenditure 2,794,112 millions. From covering nearly a fifth of expenditure receipts came to cover about a tenth. These reports are called "normal," because with the present exchange and price movements, which show no sign of ceasing, and with the present taxation system, a continuation of the decline of the ratio of receipts to expenditure is inevitable.

Hope that the mark exchange depreciation will cease while the above conditions prevail is not felt in any quarter. The Government since May 8th issued no less than nine separate prohibitions or regulations; but the net result of the Reichstag inquiry was to show that the Government nullified its mark support plans by providing large classes with money to invest in exchange. Although international bearing of the mark has not of late occurred on the great scale of 1921 and 1922, it is plain that the weekly reports of inflation have their effect abroad. Immediately after the two last Reichsbank reports the mark in New York was quoted far below Berlin; yesterday, in fact, it was quoted at around 280,000 to the dollar, although the Berlin rate was 180,000. This was apparently on the basis of the Reichsbank report for June 30th showing 4,199,322 millions addition to circulation, 5,440,028 millions to Treasury bill discounts, and 1,000,415 millions to private bills. The supply of exchange is insufficient, and it was yesterday severely rationed, although the Reichsbank raised 40 million gold marks-worth of foreign high-exchange currencies on the security of its deposits abroad. The free gold reserve, as a result, has now fallen to 716,912,000 gold marks.

The note-issue limits of the Bavarian Bank and Saxon banks have been raised to 150 milliard marks each, and for the Württemberg and Baden banks to 52 milliard each. The Reichsbank is now printing 1,000,000 mark notes. Money is tighter, apparently for technical reasons connected with the limitation of exchange dealings to the Berlin official quotation, which has had the effect of concentrating such dealings in Berlin. The annual reports of the big banks for 1922 are now appearing. The Disconto Bank reports gross profits of 12,123,042,337 marks, net 4,789,363,982 marks, dividend 250 per cent., against 20 per cent. in 1921, requiring 1,525 millions, while 2 milliards have been placed to the special reserve. The bank's clearings totalled 14 billions. The Darmstadt and National Bank reports net profits of 2,954,342,318 marks, of which 1,546,774,420 marks are placed to reserve and 1,200 millions paid in dividends at rate of 200 per cent. The General Electricity Company has decided to increase its capital from 1,400 to 1,700 million marks, the new shares to be held by a banking syndicate. This company is the highest capitalised in Germany. The Rhenish Steel Company has decided to raise its capital from 200 to 360 million marks, and the Deutsche Erdoel Company from 260 to 450 million marks. The stock boom last week continued. Yesterday began with reactions, but closed firm. The *Frankfurter Zeitung's* Bourse index shows for dividend payers on June 6th 23,200,950 against 17,801,700 a week earlier, and 376,685 on January 5, 1923. Since January, 1922, the home stocks on this index have risen 848-fold, home loans 53-fold, and foreign loans 1,529-fold. The dollar exchange has risen 912-fold, so that stocks have nearly caught up—in fact, if allowance is made for capital increases, have probably more than caught up. Last year stock prices kept far behind the currency depreciation, but in the first half of this year they rose 2.7-fold more than the dollar exchange. The *Frankfurter Zeitung* points out rightly that it is no longer true that paper-mark gains from bull speculations in the chronic boom are unreal. That was so as long as stocks moved more slowly than the gold or price index; but of late very large real gains have been made, the loser being, as usual, the outside mark interests. Quotations of bonds yesterday were:—War Loan, 270; Fours, 7,500; 3½ per cents., 5,000; Threes, 37,000; Colonial Fours, 87,900; Savings and Premium, 1,700; Prussian Threes, 4,350; Berlin Fours (1919), 400.

No agreement has been come to on the subject of a fixed real or index wage. The Government has taken to issuing a weekly cost-of-living index. For July 4th it shows (basis 1 in 1914) 16,180 against 11,785 a week earlier, and 9,272 on June 20th, so that the cost of living nearly doubled in a fortnight. For commodity prices June showed, with exception of January, the biggest rise on record. The *Frankfurter Zeitung's* index (basis 1 in 1914) for July 1st shows 39,898 against 14,980 on June 1st and 2,054 on January 1st. The gold index, reckoned by the dollar exchange, was 39,924 on July 1st, against 18,155 on June 1st, so that gold prices have nearly caught up, and are practically the same as in 1914, but are still well below world-market level. The index for textiles is 61,841, or roughly 50 per cent. over the gold price of 1914. The prices of all commodities still move rapidly upward. Ruhr standard coal (Fettfoerderkohle) has been increased from 528,000 marks to 835,000 marks per metric ton, which is 69,000-fold the 1914 price, pig-iron (hematite) to 3,499,000 marks, ingots 4,437,000 marks, bars 6,300,000 marks, sheets (5 mm. and over) 7,098,000 marks.

The Prussian Trade Ministry's monthly report shows an increase in activity in most industries. Bankruptcies in the first half of 1923 numbered 180, against 676 in the first half of 1922. Most Prussian crops, with the exception, chiefly, of potatoes and sugar-beet, are reported to have improved their conditions in June, and are, on the whole, better than in July, 1921, and much better than in July, 1922. The May trade report (defective owing to absence of reports from occupied territory) shows the following returns (metric tons):—

	Imports		Exports	
	May.	April.	May.	April.
Total	4,013,100 ..	6,396,100 ..	929,900 ..	1,028,800
Thereof—				
Food	266,900 ..	330,900 ..	96,100 ..	100,100
Raw & half-finished materials	3,630,300 ..	5,950,800 ..	525,400 ..	600,000
Manufactured goods	112,200 ..	108,500 ..	308,300 ..	328,700

Coal imports were only 2,500,000 tons, against 4,500,000 tons in April; ore imports also dropped. Exports of iron products fell heavily, export of scrap iron doubled. The exports of yarn and cloth increased.

AUSTRIA.—POLITICAL POSITION—STATE FINANCES—FOREIGN CAPITAL—INDUSTRIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

VIENNA, July 1.

ALTHOUGH the Parliamentary elections will take place only in the autumn, the preparations for the electoral campaign are in full swing by all parties. The contest between the Christian Socialists and the Social Democrats will probably be very fierce, and heated agitation has already set in on both sides. The Social Democrats reproach the Government for not having obtained better terms of the floating of the League of Nations' loan, and accuse it of encouraging a reactionist movement; to their sorrow they realise that the new army, which until recently was completely under the influence of the Socialists, is gradually beginning to sever itself from them. In general, however, the Social pacification in this country has made great progress; the majority of the population is tired of politics, and willing to work. At the beginning of this year great masses of the people thought the financial and political breakdown of the country was only a

Correspondence Invited. Telegraphic Address: Kingwart, Vienna.

question of time, but confidence in the future of the country has now become an established conviction. The Commercial Treaty with France has just been signed, and is judged much more favourably than the Treaty with Italy. Many people here are of the opinion that the bad result of the recent negotiations for commercial treaties was caused by the insufficiency of the present Austrian tariff system, and propose creating a new system with high protective duties, both on industrial and agricultural products. Since the Government, however, is afraid that the question of these high duties could unfavourably influence the approaching elections, it is probable that the revision of the tariff system will be postponed until the winter.

The success of the League of Nations' loan abroad, and the result of the subscriptions expected in Austria, will enable the Treasury to carry on for at least two years. Although the main difficulty in rearranging the Budget—the deficit on the State railways—has not yet been removed, the report made by the English expert, Sir William Acworth, raises the hope that a businesslike management of the railways under a general manager endowed with full power to act, will realise important economies. The reduction of the number of State employees is making but slow progress, because it is very difficult to find new positions for the dismissed officials in private enterprises. Up to the end of May, 36,255 had been dismissed, a total which Commissioner General Dr Zimmerman stated to be insufficient. It is also of great importance to the State finances that a way be found of eliminating the "Index Law." The officials, supported by the Social Democrat Party, are in favour of maintaining it in order to accommodate automatically the salaries and wages to the increase in the cost of living.

When the Austrian National Bank was founded last year, the subscribers of shares were allowed to pay part of their subscription in Austrian Treasury Bonds instead of foreign money. The gold reserve of the National Bank had, therefore, an outstanding balance of 86.7 milliard kronen. These Treasury Bonds have now been exchanged by the Treasury against foreign bills and foreign money; the gold reserve now covers nearly 36 per cent. of the whole banknote circulation, while the Bank Law requires a proportion of only 20 per cent.

The stabilisation of the krone and the improvement in social conditions have, to a great extent, attracted foreign capital to Austria during the last two months, the leading banks especially succeeded in getting the foreign capitalists of Western Europe interested in their concerns. In this respect the most important item is the agreement concluded by the "Union Européenne Industrielle et Financière" of Paris (which is intimately connected with Schneider-Creuzot) with the Niederösterreichische Eskompte-Gesellschaft, one of the leading banks of Vienna, for the promotion and financing of industrial enterprises in Austria and the Balkans. The programme of the newly allied companies is an ambitious one. They intend to finance the construction of new water-power plants for the municipality of Vienna and the electrification of the Vienna City Railway, while they also contemplate the construction of new docks and harbours on the Danube near Vienna. The interest taken by foreign capitalists in Austrian enterprises has caused a boom in various securities on the Stock Exchange. In spite of numerous new issues, a number of bank and industrial shares show an increase of over 100 per cent. during recent months. Money has become much cheaper during the last two weeks; whilst it was scarce at 2 per cent. per week last month, it is offered at ¾ or 1 per cent. at present.

Industrial production has shown no improvement during the last month. Owing to German and Czechoslovakian competition, sales are going very slowly, and the large accumulated stocks forced the producers and dealers to lower their prices. In consequence of these conditions and of the stabilisation of the currency, the post-war custom of selling only against cash is gradually being replaced by the previous method of granting credits. The cost of living index figure for the month of June rose by only 1 per cent., so that the gradual increase in the cost of living has almost come to a standstill. Still, the prices which for nearly all commodities have reached, and even exceeded, the world market price, are high. As a result of this, the

number of foreigners visiting Austria this summer are few in comparison with last year, and also Austrians prefer going abroad, as living in Italy and Switzerland is not more expensive than in this country. The sharp distinction between the people who profited by post-war conditions and the depreciation of the currency, and those who have been impoverished by this development, is more accentuated than ever.

The foreign exchanges have shown only very little fluctuation during the past month. The Austrian banks are dealing at present mainly in exchange transactions at the Berlin market. On June 1st the rate of exchange was 327,700 kronen to the £; on June 30th it was 323,500 kronen to the £.

ROUMANIA.—COMMERCIAL DEBTS—SALE OF ENEMY PROPERTY—REPARATIONS—PETROLEUM PRICES—TAX RECEIPTS.

BUCHAREST, June 19.

BASED substantially along the lines of the agreement for the deferred settlement of Roumanian commercial debts arranged with British creditors several weeks ago, a Bill was approved by the Senate on May 29th, providing that the liquidation of debts contracted in "strong" currencies prior to January 1, 1922, can be effected by annual payments extending over a minimum period of 12 years, and a maximum of 20 years; the debtors desiring to secure the benefits accorded by this law being obliged to deposit a guarantee of 30 per cent. of the total debt—such guarantee to be in lei, or lei securities, and to be calculated at the average rate of exchange for the year 1922. A previous Bill, passed on May 14th, had provided for a "term of grace" of three months, during which time action could not be taken in the courts for the collection of commercial debts.

The Bill of May 29th states that it is immediately operative only as to English creditors, and that it does not become operative as to other creditors until the expiration of the three months' "term of grace" provided for by the Bill of May 14th, the hope being expressed that during this time arrangements along the lines of the British agreement will be concluded with other creditors.

Representatives of Czech, French, Italian, and Swiss, among other European, creditors, have recently expressed themselves as being strongly opposed to the new law, i.e., the application of the terms of the British agreement to their creditors, and several of them have intimated that they would much prefer an immediate cash settlement, even if it were necessary to write off as a loss a portion of the indebtedness.

Another important Bill passed the Senate on June 7th, providing for the liquidation of all former enemy properties seized by Roumania during the war, the proceeds to be applied on account of Roumania's claims for war reparations and damages, and to be reported in full to the Reparations Commission. These claims are considerable, and include an item of more than two billion lei for currency issued by the Germans during their occupation and since redeemed by Roumania.

The Director-General of Railroads recently announced that Roumania had received from Germany, on account of Reparations, a credit of 32,900,000 gold marks, which credit is being used for the purchase of 110 passenger cars, 20 locomotives, and other railway equipment. He also announced that Roumania expects to receive from Germany 260 passenger cars in exchange for 1,250 flat cars which Germany owes.

A new petroleum régime came into effect on June 12th, providing for a substantial increase (of almost 100 per cent.), in the maximum price schedule for finished products sold internally. One of the great handicaps under which Roumanian petroleum companies have been compelled to operate during recent years has been the necessity of furnishing an increasing percentage (it is now over 60 per cent.) of their refinery output to the domestic market at maximum prices fixed by the Government, that were absurdly low compared with world-market prices. The new prices (with motor spirit at Lei 6.00 and kerosene at Lei 3.00 per kilogram), while still much below world-market prices, have nevertheless afforded considerable

satisfaction to the oil companies, which are now reasonably sure of a sufficient margin of profit, so that they can with safety extend their operations to as yet unproven fields. Although the production of crude has been increasing fairly steadily during the last two years—it is now up to 135,000 tons per month, against a monthly average before the war of about 150,000 tons—more than 50 per cent. of it is obtained from the Moreni field, and the impression among prominent oil people here is that the oil sands in this field are steadily thinning out, and that a declining production must be expected.

The following table shows the custom house receipts for the fiscal year, which closed on March 31, 1923, in comparison with the previous year:—

	Import Taxes.	Export Taxes.	Miscellaneous.	Total.
	Lei.	Lei.	Lei.	Lei.
1921-22.....	1,009,971,527	461,623,337	29,136,285	1,500,731,149
1922-23.....	1,251,996,190	2,251,587,167	312,585,955	3,816,169,312
Increase	242,024,663	1,789,963,830	283,449,670	2,315,438,163

The large increase in export taxes, which are now mostly payable in foreign currencies, is due not only to exchange depreciation, but also to the greatly increased rates in force during 1922-23, as compared with the previous year.

Letters to the Editor.

CREDIT CONTROL AND UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr D. M. Mason would have been far less surprised at the contents of my last letter had he paid some attention to the connection between unemployment and prices. Both economists and business men are now gradually perceiving that the cause of recurrent trade slumps is the periodical collapse of prices caused by a contraction of credit which compels buyers to cease from buying, and which, in the past, has generally been due to our unscientific currency system based on gold. To cure unemployment it is necessary to remove the cause, and the only way to avoid periodical contractions of credit is to stabilise prices. So long as we fail to do this we are bound to get periodical slumps. It is true that the causes of unemployment are many, but that part of the unemployment problem which is due to periodical slumps is so overwhelmingly predominant that if it were successfully dealt with the small portion remaining would present no difficulty. Neither Germany nor Russia can permanently deal with unemployment until they stabilise prices; but Germany had practically no unemployment until the occupation of the Ruhr, and her various trades were booming; while Russia's industrial disorganisation is due to political follies for which stabilisation is no remedy. I entirely agree with Mr Mason as to the desirability of a "sound financial system at home," but my conception of a sound system is one which will stabilise both prices and industry, whereas what Mr Mason calls, with unconscious humour, a "sound" system is one which guarantees us vast irregularities in prices and a disastrous trade slump about once in every ten years.

The raising of the Bank rate to 4 per cent., in order to steady the American exchange, at a time when index numbers are falling, also raises the question as to whether our trade is to be sacrificed to the exchanges or whether the exchanges exist for the sake of our trade. The most obvious explanation of the continued fall in the exchange with America is to be found in our heavy payments on account of the debt to that country. We must obviously pay the debt in goods, and in order to do that we must produce and export the largest possible quantity of goods. An adverse exchange puts a premium upon exports and so stimulates production. If we are to pay our debts we are bound to have an adverse exchange. But the policy of raising the Bank rate seems designed to remove the stimulus to export, and will certainly discourage production. For the only way in which it can affect the American exchange is by causing a fall of

prices in this country, and that will have a disastrous effect upon trade and production here.

The justification put forward for this policy would probably be that the adverse exchange will necessitate heavier payments by the British Government on account of the debt, and that this will lead to increased taxation. Yet the gold values to be paid to America will not be altered to the least degree. The increase will be purely nominal, and will merely mean a change in the number of pieces of paper by which the debt is represented. But the depression of trade here resulting from the increased Bank rate will mean a loss of hundreds of millions of pounds through lessened production and a proportionate loss of revenue, which will mean increased taxation. It will also bring disaster to the fortunes of some hundreds of thousands of workers. A more egregious example of sacrificing the substance to the shadow could hardly be imagined. And, curiously enough, when the disastrous results of this policy begin to make themselves apparent, we shall probably be told that it all follows from the collapse of the German mark or the exhaustion of Central Europe, or some other of those Mad Hatter explanations always so plentiful when folly brings its inevitable consequences.—Faithfully yours,

CHARLES EDWARD PELL.

21 Westbourne avenue, Acton, W. 3, July 8th, 1923.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr D. M. Mason asks if it was not our ability to manufacture and export goods "cheaper" than most of our competitors that was our strong position in the past, and he further asks if we stabilise prices at a higher level how will that help our foreign trade on which in the end the employment of our people mainly depends. His statements raise some very serious problems, and it might be very helpful in solving them if Mr Mason, from his point of view, would explain the following questions to which his letter gives rise:—

(1) When the word "cheap" is used, does that mean an abundance of goods in general, as against scarcity of goods in general? Or does it mean that there may even be a great scarcity of goods, but if the Government curtails the currency, thereby causing fewer notes to go round, each note will command a greater number of goods in general?

(2) If this process goes on, i.e., contracting the currency, irrespective of an increased or decreased volume of goods, when at the same time our competitors and our customers are expanding their currency, what will the effect be on employment in this country?

(3) When we speak of helping our foreign trade, what do we really mean? Are we better off by having comparatively large exports in relation to small imports, or in having comparatively large imports in relation to small exports? Are we better off by having increased unemployment and a large volume of exchangeable goods, or are we better off by having a small volume of imports and our men fully employed manufacturing and exporting a large volume of goods in return for that small volume of imports? What do we really want? Do we want full employment for our workmen, irrespective of whether they get a large or small quantity of goods in return for their labour? Will not the tendency be that our workmen will get a smaller return (in goods) for their labour under the process of a contracting currency, and a larger return under an expanding currency? Will not true capital get a smaller return under a contracting currency, and a larger return under an expanding currency? What in Mr Mason's policy is to be the determining reason for contracting the currency artificially?

(4) If we have twice as much currency in circulation to-day compared with pre-war days, is not that too little when we remember the amazingly large debt we contracted at mid-war prices?

(5) Is not an adverse exchange with America a corollary of what actually happened? Our debts with that country were contracted when prices were nearly at, and at, their apex. This being so, are we better off with an adverse exchange, or with an exchange at par, brought about by deliberately contracting the currency? Are we better off by having an exchange at par with America, or an exchange even at its lowest point, with 1919 prices?

ruling? If we can only get a par exchange with America by contracting our currency, does that not mean that our workers (mental and manual) will have to work, at least, nearly twice as many hours per day than they need, and in addition, will it not cause a strain on our machinery in producing nearly twice as many articles of commerce than we need if we let the economic factor run its normal course and we do not interfere with it by artificially forcing a return to pre-war prices? Inflation is bad, but is not deflation worse?

These, and many others, are the questions raised in Mr Mason's letter, and if he can show how his theory will overcome them it will help to remove many of the miseries from which humanity is suffering at present.—Yours faithfully,

JAS. S. MCCONECHY.

44 Spring gardens, Manchester, July 9th, 1923.

Books and Publications.

MODERN CAPITALISM AND ITS ALTERNATIVES.*

THIS is the latest volume of that admirable little series of economic handbooks written under the general editorship of Mr J. M. Keynes by writers of the Cambridge School. The title rather leads us to expect that we are concerned with the question of Government control of industry; in point of fact, however, the book deals with the organisation of the industrial system. What is the structure of the economic organisation by which the forces of nature are exploited, and our wants in some measure supplied, and in what directions is this organisation being modified at the present time or capable of modification in the reasonably near future? These are the two main questions which the author discusses, his chief object being to throw light on the more comprehensive question, "How, if at all, can we ensure that the men and women engaged in industry shall not become mere instruments of production or mere passive receptacles of its fruits, but shall retain, in their relation to the economic circumstances of their life, the character of self-directing human beings?" He has at the back of his mind "a picture of Man, eager to enjoy and to beget, lodged precariously on the surface of a finite planet, and arguing distractedly with blind forces the eternal question of his daily bread."

The most indignant critic of the existing order need not fear to find Mr Robertson unsympathetic or unaware of the grave deficiencies of our present economic system. At the same time he warns the reformer "to beware lest," in endeavouring to change the existing organisation, "he overlook the achievements and impair prematurely the operation of that delicate mechanism of price and profit, faith and expectation, which is at present our only substitute—imperfect makeshift though it be—for the routine orders and operation orders of a single all-directing intelligence."

Perhaps the most interesting chapters are those in which the author discusses the advantages and limitations of the various directions in which it has been proposed or attempted to modify the existing capitalist system. He deals in turn with consumers' co-operation; collectivism and quasi-collectivist arrangements; communism; various kinds of workers' control over industry, including productive co-operation, syndicalism and Sovietism and guild socialism; and lastly, various kinds of joint control over industry. It is in this last direction, and particularly in the development of Whitleyism and the evolution of a parliament of industry that he seems especially to look for advance.

Mr Robertson has produced a masterly little work enabling the reader to obtain something of a bird's eye view of the whole subject, and the book cannot be too strongly recommended to all who wish to realise both the strength and weakness of the present economic system. The author has a luminous style, which (aided by chapter headings from "Alice in Wonderland" and "Through the Looking Glass") makes the book eminently alive and readable.

SOCIAL PHILOSOPHY.*

THIS is a fourth and revised edition of a work on sociology and its history, which first appeared many years ago, and attracted a good deal of attention. It is a mine of learning and research on many aspects of the subject. The central feature of the author's sociological teaching lies in the problem of Authority, to which he gives special attention. He has apparently veered in the direction of regarding authority as having in some degree a biological significance, and has been particularly impressed by the fact that Bolshevism, which set out to destroy authority, has required the authority of a Lenin to establish its system of State capitalism. In general, Dr Stein remains an optimist, despite the war and all the hardships which have arisen from it. He is convinced that Western civilisation will recover and rise to higher levels. It is of interest to note that this edition is dedicated to Lord d'Abernon, while an earlier edition was dedicated to Herbert Spencer. The book is in the form of lectures, having been based originally on lectures delivered by the author at Zürich and Berne, in which latter university he was professor of philosophy.

LABOUR CONDITIONS IN BOMBAY.*

THE Government of Bombay Labour Office is responsible for two reports, which make an exceedingly valuable contribution to our knowledge of industrial conditions in Bombay city. The two should be read together, as they are largely complementary. The "Working Class Budgets" contains a mass of interesting data, which helps us to form a very accurate impression of social conditions in a modern Indian town. The outstanding fact, of course, is the poverty of the mass of the people, and from this follow the many evils mentioned in the report. Thus we find that 97 per cent. of the working-class families live in single rooms, with the inevitable result—a high infant mortality and a general debility of the people. We find in 1921 that the infant mortality for families occupying one room was 828.5 per thousand, while for those occupying four rooms it fell to 133.3. It is safer to be born by the roadside—evidently a common event in Bombay—for the mortality is only 484.8! This, of course, largely accounts for the excessive death rate in Bombay.

As one would expect, considerably more than half the income of the people is spent on food, but this diminishes as the income rises. Some very interesting comparisons are made with other countries. The workers are mostly vegetarian, and among the lower-paid groups expenditure on milk and ghi (clarified butter) is negligible. Barely 6 per cent. of the total monthly income is spent on meat. Further, it is pointed out that the consumption of cereals is just equal to the maximum allowed by the Famine Code, but less than that prescribed in the Bombay Jail Manual. Perhaps that accounts for the fact that Indian prisoners often look much fatter than their free brethren. But a careful study of these figures will explain why the general physique in Bombay is so bad.

One could go on citing examples, but the above will suffice for the present purpose. The report reveals a state of affairs which it is difficult to imagine had one not seen Bombay and its "chawls." The moral is obvious, though the problems involved in creating a better state of affairs are almost insoluble. But the Government and employers will need to take a much greater interest in the welfare of the worker if the introduction of Western methods is to be a blessing and not a curse to India.

Orders for the publication in these columns of the reports at
Company Meetings should be addressed to the Reporting Manager
of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

COMPANY MEETINGS, &c.

NATIONAL BANK OF NEW ZEALAND, LIMITED.
INCREASED RESOURCES PROFITABLY EMPLOYED.

The fifty-first ordinary general meeting of the National Bank of New Zealand, Limited, was held, on the 9th instant, at 17 Moorgate, London, the Hon. William Pember Reeves (chairman of the bank) presiding.

The secretary and London manager (Mr Arthur Willis) having read the notice convening the meeting and the report of the auditors,

The Chairman said that the paid-up capital was £1,250,000, and the reserve fund, by the addition of £10,000 now recommended, would be increased to £1,260,000. The profit for the year, after paying the bonus to the staff of £13,600, was £229,000, an increase of £16,000. Including the carry forward, it amounted to £371,000, an increase of £41,000 over last year's figures. They proposed to pay the same rate of dividend and bonus as in the previous year, 14 per cent., free of tax, and that on an increased paid-up capital of £1,250,000. He was pleased to say that they had been able to employ their larger resources profitably. They had again placed a substantial sum to premises account, and had allotted £22,600 to the pension and gratuity funds. They were carrying forward £145,567.

IMPROVED CONDITIONS IN NEW ZEALAND.

The general manager, writing a year ago, had spoken of 1921 as a year of extreme difficulty for New Zealand. The Dominion had been faced with financial stringency, depressed values for products, unemployment, and heavy trading losses, but he had added that 1922 had opened with a better feeling. All reasonable hopes for 1922 had been fulfilled, so that the year could be reviewed with a sense of real satisfaction. In the United Kingdom the year had been described as one in which the economic life of the nation had been at a very low ebb—a year of trade stagnation and much unemployment. In Australia the position had been different, and in New Zealand the improvement could be spoken of almost without qualification. There had been a favourable season; the overseas trade left a substantial balance in favour of the Dominion, and increased revenue and decreased expenditure had enabled the Prime Minister not only to balance his Budget, but to show a surplus. The growth of the dairying business had been remarkable. It was now the principal source of income for farmers, and New Zealand aimed at becoming the largest supplier of dairy produce to the United Kingdom. There was a good outlook for wool, all the indications being in favour of good prices for some time to come. Dairy produce, wool, and frozen meat made up 90 per cent. of the exports, and, with all three at remunerative prices, it could readily be understood that farmers as a whole had had a favourable year.

ASSISTANCE FOR FARMERS.

The complaint that bankers were not giving adequate financial assistance to farmers had been heard frequently. The land credit banks, or agricultural banks, had been persistently advocated as the remedy, but it was impossible to find in New Zealand the class of rent-racked, usury-ridden peasantry for whose especial benefit the Raiffeisen and Schultze banks had been formed in Europe. Since complaints on behalf of farmers were made against the trading banks in New Zealand, he would state the position. Their advances to farmers represented 31 per cent. of the total number to their clients, whilst in amount they came to 37 per cent. Even those figures did not include advances to farmers' co-operative companies, stock and station firms, &c., advances which were used by them to finance farmers and pastoralists. Dairy companies banking with this bank received their supplies from 18,620 shareholders, of whom only a percentage were the bank's own customers. He ventured to think that the fact that 37 per cent. of their advances were to men on the land would convince the unbiassed that the bank was not neglecting them. Most of what agricultural bank advocates contended for was already available to them through the State Advances to Settlers Department, the invested capital of which was now £21,000,000, a sum which the Prime Minister had just stated would be increased by some £2,000,000. The latest statistics showed that the advances by the State Department averaged £413. It was true that there was not enough capital available for mortgages on farm lands, but the bank had nothing to do with that. Long-term mortgages were not, and never had been, banking business.

Comparing the position of New Zealand with that of other

countries, he said, in conclusion, that New Zealand had her troubles, but she had an honest Treasury, trading classes who were trustworthy, farmers who increased production, and workmen who were at work. Her people could point to industrial peace, improving trade and prices, and a general measure of well-being in which all classes shared with, at any rate, an approach to equity.

Mr Henry F. Freshwater seconded the resolution, which was carried unanimously.

The formal business having been transacted, a cordial vote of thanks to the directors, general manager, and officers of the bank in London and New Zealand terminated the proceedings.

BANK OF BRITISH WEST AFRICA, LIMITED.

SIGNS OF IMPROVED TRADE.

The twenty-ninth annual general meeting of the shareholders of the Bank of British West Africa, Limited, was held, on the 12th instant, at the offices, 37, Gracechurch street, London, the Right Hon. the Earl of Selborne, K.G., G.C.M.G. (chairman of the company), presiding.

The secretary (Mr G. B. Bennett) having read the notice convening the meeting and the report of the auditors,

The Chairman said that last year he dwelt on the effects of the great commercial and industrial crisis through which the world had been passing, and he asked shareholders to agree to a reduced dividend of 6 per cent. He asked them now to agree to a still further reduction to 5 per cent., which was all that the directors felt they could prudently recommend in view of the continued stagnation of business last year, and the slowness of recovery of the world's trade.

The grievous depression of trade, of which he spoke last year, had prevailed through the period covered by the report and accounts now presented in all the countries in which their bank operated, though less so in West Africa than elsewhere. That was the reason why they had not been able to present more favourable results or to recommend a higher dividend. But in that period values had at last found their proper level, and there were signs, though not great signs, of an improvement of trade in West Africa. Last year he said that the recovery of trade de-

pended on a great variety of considerations, among others on the exercise of rigid economy by His Majesty's Government in Great Britain and in the colonies, and on the reasonableness of employer and employee. He was glad to be able to say that those conditions had been largely fulfilled, and, in addition, he would mention the settlement of accounts between Great Britain and the United States of America.

THE ACCOUNTS.

Turning to the accounts, on the liabilities side of the balance-sheet, the capital and reserve remained the same as a year ago, but the current and deposit accounts again showed an increase. Another item indicative of the prevailing conditions was that of bills for collection, which stood at £876,000, or almost £1,000,000 less than in the previous year. That clearly indicated the falling off in their customers' trade.

On the assets side their cash holding of £1,488,000 represented 25.54 per cent. of their current and deposit accounts, as compared with an average of 31 per cent. over the previous ten years. But if their holdings in Treasury bills were regarded as cash their percentage this year was raised to over 30 per cent. As 90 per cent. of their investments were in British Government securities, and those represented a further 18 per cent. of the bank's liabilities to the public, shareholders would agree that a very liquid position was disclosed.

Their loans, advances, and other accounts, at £2,028,000, showed a decrease of £373,000, as compared with the 1922 accounts. Their net profit for the year was £100,574, as against £105,935 in 1922. All those features shareholders would have seen reproduced in the balance-sheets of other banks, and were sure signs of bad trade.

He could not doubt that there was much trade in store for British West Africa when the older civilisations in Europe had composed their differences and begun again to consume the products of the tropics on their former scale. There was nothing amiss with Africa; the fault to-day lay in Europe. He moved the adoption of the report and accounts.

The deputy-chairman (Mr R. Hugh Tennant) seconded the motion, and it was unanimously agreed to.

A final dividend of 3 per cent. for the year ended March 31st last, making, with the interim dividend paid in December, 1922, 5 per cent. for the year, less income-tax, was then declared, and the retiring directors and auditors were re-elected.

P. AND O. BANKING CORPORATION, LIMITED.
BANK'S STRONG FINANCIAL POSITION.
CHAIRMAN'S CONFIDENCE IN INDIA'S FUTURE.

The third ordinary meeting of the shareholders of the P. and O. Banking Corporation, Limited, was held, on the 13th instant, at 122 Leadenhall street, London, the Right Hon. Lord Inchcape, G.C.M.G., K.C.S.I., K.C.I.E., chairman of the company, presiding.

The secretary (Mr. H. J. Rolt) having read the notice convening the meeting and the report of the auditors,

The Chairman said he would like, in the first place, to refer to the loss the bank had sustained in the death of two of its directors, Sir Richard Vassar Smith and Sir Duncan Carmichael, both valued colleagues, who had taken a deep interest in the bank's concerns. The former had been succeeded by Lord Selborne, a director of Lloyds Bank, of which Sir Richard was chairman.

EXPANSION OF THE BANK'S BUSINESS.

The total figures of the balance-sheet, all items of which showed expansion, had risen from £13,000,000 to £22,500,000, a gratifying feature being the rise in current deposit and other accounts to £10,000,000 from £6,316,000 a year ago. Their cash position was very strong indeed, and nobody would cavil at the large liquid balances of nearly £5,000,000, representing about 50 per cent. of their demand liabilities, which they had thought it necessary, even at the expense of profits, to retain in these uncertain days. The meeting would be glad to note that the item "Bills discounted" had increased to over £4,500,000, and included such liquid assets as £2,630,000 in British and Indian Government Treasury Bills.

EFFECTS OF TRADE DEPRESSION.

The bank's securities, save for the permanent investment in the Allahabad Bank, were all British or Indian Government securities. The decrease in advances to customers to £2,850,000 from £3,490,758 a year ago, reflected the depression in trade. Money rates had been low, and, having opened, in the first three years of the bank's existence, eight branches in the East, they had had to carry a load of new development which, apart from the heavy initial outlay involved, could not at once yield its quota of profit.

VALUATION OF RUPEE ASSETS AND LIABILITIES.

He had, he said, been asked by one or two of the shareholders to make some reference to the rate of 2s which they had adopted for the valuation of their current rupee assets and liabilities. Some conventional valuation had to be adopted for the purpose of bringing to account their assets and liabilities in Eastern currencies, and it was immaterial what this conventional rate was so long as it was not applied to any assets and liabilities which were affected by exchange.

So far as rupees were concerned, they adopted the 2s rate because at the time the bank came into existence that was the official rate, and they had maintained it because it was still the official rate. But this rate was not the rate at which they had converted their profit and loss items which had been brought to account at the rate ruling at the close of their financial year. So also had the rupee securities been valued at the rate prevailing on March 31st, as the auditors' report made clear. In fact, all items in the balance-sheet affected by exchange had been valued at the rate current on March 31st, and the funds remitted towards the purchase of their premises in Bombay had been valued at the rate at which they were remitted, which was below 1s 4d.

Their permanent investment in the Allahabad Bank stood at the purchase price, and this had been remitted to India at about 1s 5d per rupee. Despite financial trouble in India, the Allahabad Bank had held its own, and both as to staff and the advantages of having an affiliated bank with branches all over India, the P. and O. Bank had proved it a valuable connection, the value of which was likely to increase.

DIVIDEND MAINTAINED.

The profit on the year's working, £139,388, added to £14,042 brought forward, gave £153,430, from which they proposed to pay the same dividend as last year, 5½ per cent., less tax, but as by reason of Colonial relief the effective rate for tax deduction was reduced to 4s 1½d, this would cost £14,000 more than last year, leaving them in a position to place £25,000 to reserve (bringing that fund up to £115,000) and to carry forward £15,179.

NEW PREMISES AND THE STAFF.

The near completion of their new premises in London, already partly occupied, would provide comfortable housing for their managers and staff, and ample accommodation for the public. At their various branches abroad they had secured efficient managers and a good staff. They would, he was sure, join him in acknowledging that the results now reported reflected credit on the managers and staff at home and abroad.

The board's policy was one of prudence. They intended to go cautiously, avoiding risks as far as possible, gradually working up what they hoped would be a sound and lucrative business and building up reserves, a course which he felt would have the support of their shareholders.

INDIA AND EUROPE.

The Continent of Europe, his lordship continued, was, before the war, India's best customer, and until things were settled there—as they hoped, by the influence of the Prime Minister and His Majesty's Government, they might soon be—the trade of India, of this country, and of the world generally, would not revive.

In his humble judgment this country would gain far more by a settled Europe than by anything in the way of reparations she was likely to get from Germany.

THE GOVERNMENT OF INDIA.

He had spent some months in India recently, and came away with no misgivings as to that country's position. Very considerable economies had been or were in course of being effected in the expenditure, and the budget for the current year would balance, which had not been the case for the previous five years. The credit of India had been restored, and he was not without hope that, barring some failure of the monsoon, the days of deficits were past. Lord Reading, the Viceroy, with the aid of Lord Rawlinson, the Commander-in-Chief, was ruling India with a firm hand; steps had been taken which, so far as one could see, would secure the country from any serious attack by frontier tribes, and at the same time would admit of material reduction in military expenditure.

There were laudable aspirations on the part of the educated classes in India for a greater share in the Government of the country, and though these might be met in the course of time, he felt perfectly certain that nothing would ever be allowed to interfere with the supremacy of the British Raj in India. He had, he concluded, no fear as to the future of Britain's great Dependency.

The chairman concluded by moving that the directors' report and statement of accounts should be received and adopted.

Mr A. K. Wright, K.C.B., D.L., seconded the resolution, and it was carried unanimously.

The dividend of 5½ per cent., less tax, was formally declared, the retiring directors were re-elected, and the retiring auditors re-appointed.

The proceedings terminated with a hearty vote of thanks to the chairman.

AUSTRALIAN ESTATES AND MORTGAGE COMPANY, LIMITED.

QUEENSLAND LAND ACT—CHAIRMAN'S CRITICISMS.

The annual ordinary general meeting of the Australian Estates and Mortgage Company, Limited, was held, on the 10th instant, at the Cannon street Hotel, London, Mr Andrew Williamson, chairman of the company, presiding.

The secretary (Mr L. E. Pickin) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: The gross profit for the year amounts to £352,615, an increase of £98,474. Current expenses came to £172,510, an increase of £77,969, leaving a net profit, before charging debenture interest, of £180,105, or an increase of £20,505. The heavy increase in expenses is almost entirely due to Colonial and English income-tax. After charging debenture interest and carrying £35,000 to reserve account (against £20,000 last year), the directors recommend a dividend of 6 per cent. for the year, which will leave £8,553 to be carried forward. Under all the circumstances, we have reason to consider the results as very satisfactory.

WEATHER CONDITIONS.

Weather conditions were very different from those of the previous year. In 1921 the rains were abundant and well distributed, whereas in 1922 the season over practically the whole of our properties was very unfavourable, the total rainfall having been quite insufficient, and badly distributed over the year.

The season during 1922, so far as the Western half of Queensland is concerned, was drought-stricken to a marked degree. Shortage of rain was also the outstanding feature of the year in the Southern, Eastern, and Northern parts of the State, excepting over small areas and the coastal regions in the extreme North. In fact, generally, drought conditions may be said to have prevailed, but, unlike the more Western areas, in these parts partial relief was experienced at intervals.

In New South Wales the rainfall registered during the year was extremely deficient in many parts, whilst in others it was the lowest on record.

These drought conditions resulted in a lighter wool clip, amounting to 13,875 bales, against 15,304 bales in 1921. Livestock was

slow of sale, and prices were poor, especially for cattle, which were throughout the year at an unprofitable level. During the greater part of the year the market for sheep was inactive. It was more advantageous to withhold sheep from sale other than those of advanced age and inferior quality. The low levels ruling in London for frozen beef adversely affected our revenue from stock sales, the comparatively few cattle sold realising very low prices.

Following on the temporary and healthy reaction in December, 1921, the market for wool was very firm throughout the year. With the exception of the months of March and June and November-December, each series of the London auctions showed a rise in values amounting, in the course of the year, in the case of merinos to from 25 per cent. up to 50 per cent., and in the case of crossbreds from 35 per cent. up to 60 per cent. The gratifying outcome of the working for the year is the more satisfactory because our accounts in 1922 did not benefit from any receipts from the British-Australasian Wool Realisation Association.

PROSPECTS.

The amount of wool that is estimated to have been consumed last year is very striking. The astonishing ease with which the large surplus stocks which then weighed on the market have been absorbed has exceeded all expectation.

We had much cause for anxiety during the early months of the present year. This anxiety has been, to a great extent, relieved by welcome rains during the last six weeks, from which all our properties have benefited. This year's lambing, however, must be disappointing. More rain is still wanted even now on several of our properties, and later on during the Australian spring (September-November) we hope for seasonable falls. All immediate anxiety has been removed, so far as our pastoral interests are concerned. We hope to have a fair clip, though it will be less in quantity than last year, and the extraordinarily strong statistical position of wool justifies the expectation of excellent prices, which should be reflected in good prices for sheep. The outlook for the cattle industry is still gloomy in the extreme.

QUEENSLAND.

I referred last year in detail to the damage which we and other holders of pastoral leases from the Crown in Queensland have sustained through the action of the Government of that State in passing the Land Act Amendment Act (1920). A contract with the pastoralists, entered into by the State of Queensland with the definite object of securing to the pastoralists a reasonable protection for the expenditure of large sums of money in stocking up and improving very large areas of country, which was then desired in the general interests of the community, has been set aside by the Government of that State without the other party to the contract being consulted, or any compensation of any kind being provided for the money expended in reliance upon it. If it had been put to the pastoralists that the exigencies of the Government, or the permanent well-being of the State, necessitated a modification of the contract, the lease-holders would have been perfectly willing to enter into negotiations with the Government, and to meet the requirements of the case in a fair and reasonable spirit. A modification of the contract in exchange for equitable compensation could thus doubtless have been arranged, without the good name or credit of the State being adversely affected. Unfortunately, what might have been done equitably by negotiation was carried through by an Act of Parliament, which, without any compensation, ignored the contract made by the State with its pastoral lessees. Our company has already sustained loss to the extent of nearly £30,000 through this.

I still hope that a wise statesmanship will yet find a way by which, without its sovereign rights being in any way affected, Queensland may remove all legitimate grounds of protest from the pastoral lessees.

We all want to see Queensland prosperous and trusted, with money flowing freely in for the steady and effectual development of its vast natural resources. The Queensland Government must have the same wish, and it is in their power, as it is to their interest, by an attitude of conciliation, and by a fair and equitable measure of adjustment, to dispel the cloud at present resting on the State, and to gain back for it the high credit it formerly enjoyed.

The wool industry is so all-important an interest not only to Queensland, but to the whole of Australia, that the aim of her statesmen should be to do everything in their power to encourage and foster an industry which can only be worked to the best advantage, both as to quantity and quality of production, when carried on upon a large scale, and with ample capital. With all the encouragement that Government could give in the way of security of tenure and confidence in obtaining absolutely fair treatment, there still must ever remain for this industry many serious risks inseparable from the climate and conditions of Australia. Having regard to the vast extent of land suitable for pastoral occupation and the very limited population, so far, of

Australia, this industry can well be carried on upon a large scale for many years to come, without prejudice to the closer settlement of the country, the immense importance of which is fully recognised; indeed, it fits in perfectly with the present stage of development of that great country, and every wise Government would seek to safeguard, and not to undermine, so great an Australian asset.

The reports and accounts were adopted unanimously.

GENERAL ELECTRIC COMPANY, LIMITED.
CONTINUED PROSPERITY—RESEARCH ACTIVITIES.

The annual general meeting of the General Electric Company, Limited, was held, on the 12th instant, at Magnet House, Kingsway, London, Mr Hugo Hirst, chairman and managing director, presiding.

The secretary (Mr Leslie C. Gamage) having read the notice convening the meeting and the report of the auditors,

The Chairman said that if the opinion of the Press with regard to the report was indicative of the feelings of the shareholders, the management of the company had every reason to be pleased with the past year's results. They were more than pleased bearing in mind the unsatisfactory conditions prevailing during the first four or five months of the year. But considering their determined efforts, they were entitled to hope for more, and the present balance-sheet threw out great hopes in this direction. The profit from the trading account, at £637,224, exceeded that of the previous year by £167,670. Remembering the absolute paralysis of trade during the first quarter of the year, and seeing that the company had already done so much better this year during the same period, it was reasonable to hope that a further advance might be made in this figure. The income from investments was £113,273, and the available balance amounted to about £968,000, as compared with £914,000. These better results, however, were not yet sufficient, as there were increased charges to be met. An additional £61,744 was required to meet a full year's debenture stock interest, as against only eight months' interest a year ago, and depreciation absorbed £20,000 more. There was also a slightly higher charge of about £15,000 for preference share dividend. During the year the small unissued balance of both "A" and "B" preference shares, being too small for a public issue, had been disposed of *en bloc* to a financial house, the price paid being par plus dividend accrued to date.

ORDINARY DIVIDEND.

By the declaration of a 5 per cent. dividend on the ordinary shares, the carry forward was reduced by £40,000, and he hoped and believed they might be able to add to this next year. In making this statement, he hoped he would not be accused of too much optimism; he did not anticipate a boom nor immediate bursting prosperity. He believed the company was sailing into calmer waters, though there might be some nasty squalls before they got there. Sundry debtors were less by £200,000. This did not indicate smaller business, but smaller values. He estimated an all-round drop in prices of at least 20 per cent., and in order to do the same amount of business, a greater volume of work had passed through their factories and selling organisations. The same picture was reflected in the country and overseas branches. This factor also affected stock-in-trade and work in progress, and to some extent accounted for the increase in liquid cash resources, which, apart from the proceeds of the preference issue, had risen by some £500,000. The reserve fund amounted to £707,000, and there were also other reserves—he referred particularly to loose plants, tools, &c., fixtures and installations, and goodwill and patents, which items figured at £1 each. The very considerable amount spent on the two former items could be judged by a study of the depreciation accounts and generous allocation from revenue, but the goodwill of the General Electric Company could not be calculated in figures. If the company desired to be independent and hold its own against its great competitors in other parts of the world, it had to develop assets other than those which could now be expressed in £ s. d. He referred to the intensive culture and improvement of the human element in their organisation.

RESEARCH LABORATORY OPENED.

They had to get hold of the knowledge of the principles underlying their specific processes and the precise way in which they must be applied in manufacturing. These required continuous study and discovery, and for that reason the directors had committed themselves to the establishment of an important research laboratory, which was opened in the early spring. It was started mainly for the purpose of the better understanding and production of the company's own materials, for the improvement in the manufacture of their goods, and for the education of the staff. For the purpose of testing the numerous applications of electricity for different industries, the company had, apart from research, put development departments by the side of their factories. It was

due to these institutions and the strenuous efforts and skill of their designers and engineers that, in spite of the short time since they entered the field of heavy engineering, they could now claim that they occupied a premier position, not only in the manufacture of lamps and other supply articles, but also of the largest plant, be it turbo generators, compressors, turbo blowers, gas-cleaning, conveying, or mining plant. It would not be difficult to mention some instances of work which was the biggest of its kind ever undertaken in this country. With such preparations for the future, great success and prosperity should be assured. He would have no hesitation in prophesying this as a certainty were there not a heavy cloud hanging over them at the present moment, which might thwart their best and most earnest endeavours. But for that dark cloud, his optimism as regarded the future of the General Electric Company and of the country would have been as of old—bright, definite, and undiluted.

The report and accounts were unanimously adopted.

HOWARD AND BULLOUGH, LIMITED.

"LARGEST RESULTS OF ANY YEAR'S WORKING."

The twenty-ninth annual ordinary general meeting of the shareholders of Howard and Bullough, Limited, was held at Globe Works, Accrington, on Tuesday, July 10, 1923, at 12 o'clock noon. The chairman of the company, Sir George Bullough, Bart., presided.

The reports of the directors and auditors, and balance-sheet were taken as read.

In moving the adoption of the reports and accounts, the Chairman said: The balance-sheet before us reveals the largest results of any year's working we have yet experienced. It is in a great measure accounted for by our having been engaged during an uninterrupted year upon many orders secured at a period when price levels were higher than now. For some time past the disturbed state of the world's affairs and the depression in the cotton trade have curtailed the markets for new business. Keen competition for the restricted business offering has inevitably led to a general lowering of price levels.

ALLOCATIONS.

The recommendations of your directors regarding the appropriations to reserves and the sum proposed to be carried forward to next account will therefore, if adopted, place us in a strong position to meet eventualities.

An addition of £200,000 to the reserve fund will raise that fund to £500,000; of this sum your directors propose to capitalise one-half by the creation and the distribution of 250,000 new £1 ordinary shares to the registered holders of ordinary shares in the proportion of one new share for every four now held.

To the dividend reserve an addition of £100,000 is recommended, and in carrying forward the balance of £166,261 to the next account due consideration has been given to the increased requirements for taxation.

I now move that the reports of the directors and auditors as presented in the balance-sheet be allowed and passed.

Mr W. Livesey, of Southport, seconded, and the resolution was carried.

Mr R. W. Bugler, of Haslingden, moved that a dividend be paid for the half-year ending May 31, 1923, at the rate of 6 per cent. per annum, less income-tax, on the preference shares, and a fourth quarterly dividend of 2½ per cent., less income-tax, on the ordinary shares, making, with the interim dividends already paid, 10 per cent. for the year on the ordinary shares.

Mr J. T. Hoyle, of Bacup, seconded, and the resolution was agreed to.

BONUS.

Mr H. Ross, of Accrington, in moving that a bonus for the year ending May 31, 1923, at the rate of 2s per share, free of income-tax, be paid on the ordinary shares, complimented the directors and staff on the successful year's work.

Mr M. Livesey, of Accrington, seconded, and the resolution was unanimously carried.

Mr R. Mellor, of Stockport, said he had very great pleasure in moving the re-election of Mr James Bancroft, M.B.E., and Mr George Boothway, as directors of the company.

Mr F. J. Fletcher, of Oswaldtwistle, seconded, and the resolution was agreed to.

Mr Boothway expressed thanks on behalf of Mr Bancroft (who was absent on business) and himself for their re-election.

Mr J. Drake, of Altham, proposed the re-election of Messrs John Adamson, Son and Co., of Manchester, as auditors of the company, on the same terms as before.

Mr A. Hindle, of Accrington, seconded, and it was approved.

Mr J. T. Hoyle, of Bacup, proposed a vote of thanks to the chairman and co-directors, and to the staff and workers for their services.

Mr T. Howard, of Accrington, seconded.
Sir George Bullough, Bart., suitably responded, and the meeting then terminated.

BRACKPAN MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

SATISFACTORY RESULTS—BRIGHT PROSPECTS.

The twentieth ordinary general meeting of shareholders was held in Johannesburg on Friday, June 8, 1923.

The Chairman, Mr F. R. Lynch, in moving the adoption of the report and accounts, said:—

A few days ago an extraordinary general meeting of shareholders was held for the purpose of considering a proposal to increase the capital of the company from £850,000 to £1,020,000 by the creation of 170,000 new shares, which will rank for the dividend to be declared as at June 30th. The proposal was unanimously approved.

No change took place in your company's property holdings during 1922, but since the close of the year the Schapenrust Claims royalty has been commuted, and part of the proceeds of the new shares will be used for that purpose.

The main features of the work for the second half of 1922 were the increased tonnage crushed, the improvement in the revenue per ton milled, and the working profit on the basis of the standard value of gold, whilst there was a very considerable reduction in working costs and a heavy fall in the amount of revenue received from premium on gold.

Owing principally to the higher percentage of payable footage developed, the result of the recalculation of the reserve at the end of the year showed a small increase of 26,050 tons, while the stope width was increased by 1.87 inches and the value was decreased by .38 of a dwt.

The development figures for the first quarter of this year, which were given in the report issued to shareholders in April last, are even better than those for last year. The tonnage milled for the quarter was slightly below the average of the second half of last year, but this was due to a loss of approximately 10,000 tons through a breakdown of the winding engine at the No. 2 Shaft, and to the small number of working days in the month of February.

The working profit for the year was £370,240, plus £69,596 premium on gold and £3,610 sundry revenue, making a total of £443,446. After deducting from this amount £68,964 for strike expenses, £8,497 for expenses in connection with the purchase of ex-enemy shares, and £2,549 for donations, there remains an amount of £363,436 to be added to the balance of £44,467 standing to the credit of the appropriation account, making an available total of £407,903. This sum has been dealt with as follows:—

Appropriated for Union Government and Provincial taxation	37,148
Government participation in profits under mineral lease	45,329
Depreciation of stores and materials	14,000
Funds appropriated for capital expenditure	100,000
Dividend No. 21 of 20 per cent.	170,000
leaving a balance of £41,426 to be carried forward to the 1923 accounts.	

Turning now to the balance-sheet, the only item which calls for explanation on the liability side is £10,654 standing to the credit of "development suspense account." The fixed charge to working costs of 5s per ton milled was not fully expended during the year, and the unused balance was, therefore, carried forward to 1923, and will be applied as a set-off against the current year's expenditure on development. On the assets side, it will be noticed that the item "stores and materials in excess of standard stock" shows a considerable reduction. At the end of 1921 the account stood at £56,183, of which £44,024 was for general stores and £12,159 for construction stock. At the end of 1922 the amount invested in general stores (apart from the standard stock of £27,000) had been reduced to £3,989, and the construction stock figure stood at £6,461.

The results of this year's operations at Brakpan Mines have been more than satisfactory. Shareholders may, therefore, look forward with confidence to the distribution of good dividends.

The report and accounts were unanimously adopted.

SPRINGS MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

INCREASED EFFICIENCY—GOOD PROSPECTS FOR CURRENT YEAR

The fourteenth ordinary general meeting of shareholders was held in Johannesburg on Friday, June 8, 1923.

The Chairman (Mr F. R. Lynch), in moving the adoption of the report and accounts, said:—

During the period under review 424,090 tons were milled, of which 279,000 tons were dealt with during the second half of the year. The working profit was £347,117, which, together with 59,541 derived from the clean up of the obsolete precipitation plant, made a total of £406,658. The amount received by way of premium on gold was £54,127, a reduction of £161,000 compared with the corresponding figure for 1921. The average grade milled was better by about 9d per ton at 38s 0.17d, and cost

were reduced from 29s 8.36d to 24s 2.36d, the resultant working profit being 13s 9.81d per ton milled as compared with 7s 6.14d for 1921. For the second half of the year, when operations were practically normal, the value of the ore crushed improved to 39s 4.12d, working costs were reduced to 22s 11.26d, and the working profit rose to 16s 4.86d per ton milled.

Your general manager, in commenting on the reduction of costs, states that since the resumption of operations there has been a considerable increase in efficiency, which he attributes to the restoration of managerial authority and the reorganisation of work, which resulted in the elimination of a number of redundant men.

The working expenditure and revenue account shows that the working profit for the year amounted to £406,658, which includes £54,126 premium on gold, and £59,541 from the clean up of the obsolete plant. After providing for the strike expenses, £73,823, expenditure in connection with the purchase of ex-enemy shares £9,319, and sundry items amounting to £8,015, a balance of £315,777 was carried to the appropriation account, and, together with the balance of £73,430 brought forward from 1921, made a total sum of £389,207 available. This was dealt with as follows:—Appropriated for Union Government and provincial taxation, £39,031; Government participation in profits under the mineral lease, £14,448; appropriation for reorganisation of plant and equipment, £76,714; dividend No. 7 of 15 per cent., £213,110; leaving an unappropriated balance of £45,904 to be carried forward.

The report for the quarter ended March 31st was issued towards the end of April, and those of you who have read it will have noticed that the tonnage milled during the three months was 151,200 tons, or an average of over 50,000 tons a month, notwithstanding that in the short month of February only 47,000 tons were treated. The yield was 39s 7.1d and working costs 22s 6.9d per ton milled, the resultant working profit being £131,203.

Generally speaking, I may say that the results of operations during the past five months have been very satisfactory, and give promise of a successful year. The increase in the capacity of the plant to 60,000 tons per month, which will be completed by the end of October, will mark the practical termination of our present programme of capital expenditure. From that date onwards we may look forward to steady and regular returns from a plant more commensurate with the size of our mining area. It is only then that the true value of our property will be apparent, and shareholders will be rewarded in increased dividends for their enterprise and patience.

During the past few weeks several shareholders have asked me if there is any truth in a statement sent to them, purporting to show, *inter alia*, that the amount payable by us to the Government under the mineral lease agreement for the year 1923 would be equivalent to 30 per cent. of our profits, in addition to the ordinary taxation common to all gold mining companies. I have told those gentlemen who approached me that the figure of 30 per cent. is quite inaccurate.

The report and accounts were unanimously adopted.

W. J. BUSH AND COMPANY, LIMITED.

GREAT IMPROVEMENT DESPITE ADVERSE FACTORS.

The 26th annual general meeting of W. J. Bush and Co., Limited, was held, on the 9th instant, at the Institute of Chartered Accountants, Moorgate-place, London, Mr James Mortimer Bush (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The past year has shown no great revival in trade activity, and several of the Continental markets have remained practically closed to us on account of depreciated currencies. The cold and wet summer also lessened the demand for many of our products. In spite of these adverse factors, the figures present an agreeable comparison with those of the previous year. The improvement is due mainly to the fact that the depreciation in the value of our stocks which took place in 1921 was not continued into the period under review. Reductions in expenses also contributed to the result shown. We have not attempted to economise by reductions in wages. The standard wage of a workman in a fine chemical factory in Germany is about 2½d per hour, and that of a qualified works chemist £4 per month. We pay about six or seven times these rates. We cannot claim any superiority over the Germans as regards efficiency. We have, however, increased the efficiency of several of our processes of manufacture, and it is in this direction that we must look for the maintenance of our future prosperity.

After prolonged and tedious negotiations it was with a sense of relief that we came to a settlement with the authorities in respect to our claim for a refund of excess profits duty and the adjustment of income and corporation profits taxes. During the year we reduced our bank loan £36,000. Our subsidiary company in the

United States became on a profit-earning basis again during the past year. Our Canadian company also made a moderate profit.

After the adjustment of excess profits duty, corporation profits tax, and income-tax, we have an amount brought forward of £2,658, to which is to be added a net profit for the year of £41,788. After making provision for dividends on the preference shares and an interim dividend of 3 per cent. paid on the ordinary shares, there remains a balance of £30,696, subject to corporation profits tax for 1922. We recommend the payment of a final dividend of 5 per cent. on the ordinary shares, which, with the interim dividend already paid, will make 8 per cent. for the year. This will absorb £12,500, leaving a balance to carry forward of £18,196. The report and accounts were adopted.

MALEBER TEA ESTATES, LIMITED.

CONDITION OF ESTATES "ENTIRELY SATISFACTORY."

The annual ordinary general meeting of the Maleber Tea Estates, Limited, was held, on the 10th instant, at the offices, 5, Fenchurch street, London.

Mr W. Hilliers, chairman of the company, presided, and, in moving the adoption of the report, said:—Gentlemen,—So far as the conditions obtaining on the estate—by which I mean upkeep, state of gardens, crop, &c.—are concerned, they can be described as entirely satisfactory. As you know, in the preceding years the general cultivation had to be curtailed to the strictly necessary work, but now that the market conditions and prospects are brighter, more liberal upkeep was allowed, and it is satisfactory to note that the bushes have responded well to the more generous treatment. I think it is only fair to mention that credit is due to the manager and visiting agent for their part in the work. As you also know, in some of the preceding years the estates have suffered from attacks of blight, but fortunately, anyhow at present, there is little, if any, trouble in that direction to report.

Had prices throughout the year been good, and had the Java teas profited by such favourable conditions as was the case with Indians and Ceylons, the result for the year would have been satisfactory, but, unfortunately, Java-grown teas have to labour under the great disadvantage of a preferential tariff in this country and in some of the Colonies, and cannot realise any such high prices as Indian and Ceylon teas, which benefit by the preferential tariff. However, the rates at which a substantial portion of the current crop has already been sold, and the favourable prospects, indicate a much better result for the current year. This has induced the directors to distribute an interim dividend on account of 1923 of 5 per cent., and the dividend warrants will be posted to-morrow. It is hoped that when the accounts for the current year are closed a further satisfactory distribution will be possible. These are all the remarks that I have to make. Before I put the resolution I shall be glad to answer any questions.

Sir Edward Rosling seconded the resolution.

The Chairman, in reply to questions, said that no tea had been sold forward beyond the current year. The matter of recoverable taxation was still unsettled.

The resolution was carried unanimously, and the retiring directors and auditors having been re-elected, the proceedings terminated with a vote of thanks to the manager and staff in Java.

INTERNATIONAL TEA COMPANY'S STORES, LIMITED.

RESULTS OF A PROSPEROUS YEAR.

The twenty-eighth annual meeting of the International Tea Company's Stores, Limited, was held, on the 12th instant, at Winchester House, London, Mr G. A. Tonge (governing director and chairman) presiding.

The secretary (Mr E. Davies) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I think we may be all well satisfied with the result of our past year's trading. The profit, as you will have seen, is £396,983 1s 6d, and this, with the amount of £88,000 brought forward from the last account, leaves us with nearly half a million sterling to deal with. We are depreciating our fixtures and fittings by £30,000 and placing £100,000 to reserve account. After providing for the preference and interim dividends, the final one I am asking you to declare will absorb £34,000, which will bring our ordinary dividend up to 18 per cent. for the year, and leave £118,217 to carry forward to the next account. I do not think there is much in the balance-sheet I need comment on. Our freeholds have increased owing to the natural expansion of our business—an expansion which I hope and believe will continue—and I would tell you, as I have told you before, that the bulk of these freeholds are worth a great deal more than they stand at in the balance-sheet—I daresay double, some of them. The fittings, fixtures, plant, machinery, &c., also are slightly higher, and, of course, this is for the same reason. Debtors, £270,180, is an ordinary trade asset, and no doubt has been all

discharged before now, and, of course, the same applies to the creditors on the other side of the sheet. As to the future, I can only tell you, as I have often told you before, that, with proper management, our progress must trend upwards. It is a great business, and, if looked after, will become greater. Before moving the adoption of the report I wish to tender to the entire staff our united thanks for their loyalty and energy in discharging their various duties. I now beg to move the adoption of the report and balance-sheet.

Mr G. Collier (vice-chairman) seconded the resolution.

Mr J. Galloway said that he would like to congratulate the directors on the satisfactory result of the past year's trading, all the more so when they considered what anxious times the company had been going through. The splendid result was a grand testimony to the ability of the management.

The resolution was carried unanimously. The formal business having been transacted, a cordial vote of thanks to the chairman terminated the proceedings.

UNION COLD STORAGE COMPANY, LIMITED. ISSUE OF NEW CAPITAL SANCTIONED.

Separate class meetings of the holders of the 10 per cent. cumulative "A" preference shares, the 7 per cent. cumulative preference shares, the 6 per cent. cumulative preference shares, and an extraordinary general meeting of the Union Cold Storage Company, Limited, were held, on the 12th instant, at Winchester House, London, to consider proposals to increase the capital of the company.

Mr Roger P. Sing, who presided, said that, in addition to increasing the ordinary share capital of the company to £1,000,000, they were asking the shareholders to authorise the issue of a further 3,300,000 of the company's £1 6 per cent. cumulative preference shares, which the directors considered to be in the best interests of all classes of shareholders. The money was required to carry out the natural development of their great industry, which at the present juncture took the form of acquiring the whole of the ordinary share capital of well-established companies concerned with the distribution of food products. The purchase was made at a figure which he firmly believed to be distinctly below the intrinsic value of the assets acquired, and their balance-sheet would thus be strengthened. The income-earning capacity of the new assets, as proved by experience, was much greater than the additional amount which would in future be required to meet the preference share dividends. The relative position of each class of shareholder was thus improved. The accounts for the year ended December 31, 1922, were not yet ready, but he was able to state that when they were issued it would seem that the company had accumulated a depreciation reserve of over £1,827,000, and other reserves amounting to £200,000, the total reserves amounting to over £2,027,000.

The resolutions submitted were carried unanimously at the different meetings, and the Chairman announced that he had pleasure in informing them that arrangements had been made to issue the new capital next week. The prospectus would be in the hands of all shareholders by the morning of Tuesday, July 17th, and the lists would open for subscription at the company's various banks on that date. Applications from share and debenture holders of the company and from the company's customers would receive preferential consideration. He added that the issue price of the 6 per cent. cumulative preference shares would be 20s 6d.

SPIERS AND POND, LIMITED. RECORD OF STEADY PROGRESS.

The thirty-ninth ordinary general meeting of Spiers and Pond, Limited, was held, on the 11th instant, at the Hotel Cecil, Strand, London, Sir J. S. Harwood Banner, M.P. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: I think the board are justified in saying that in the five years since we carried through the reorganisation in 1918 the record has been one of steady progress. Profit on trading for the past year is £136,700, as compared with £119,700 a year ago. We propose to pay a final dividend of 7½ per cent., making 12½ per cent. for the year.

Our hotels, almost without exception, have done excellently well, and, as we are taking pains to see that they are in every way efficiently maintained and kept in every respect in the front rank, we see no reason why they should not continue to prosper. It is almost invidious to mention any particular property, but I cannot refrain from saying how pleased the directors have been at the uniformly satisfactory results which we have had from the Hotel Metropole at Blackpool, from Bailey's Hotel, London, and from the Empire Hotel, Bath.

The Bushey Hall Hotel has well maintained its position, and particularly for the golfer and his wife, or for the tennis enthu-

siast, it would be most difficult to find a more delightful spot anywhere in the neighbourhood of the Metropolis. Apart from the magnificent golf course which adjoins the hotel, we have six first-class grass tennis courts, and two hard courts, which are kept in perfect condition. Those of our shareholders who have not yet visited this hotel ought to make an effort to do so.

Then there is the Valley of Rocks Hotel at Lynton, situated in one of the most delightful positions the mind of man can conceive, and well worth the few hours' journey from London, which, incidentally, we will make as comfortable as possible if you will travel in the admirably equipped dining cars which we run on the South-Western Railway. Lynton is a particularly delightful spot in the spring or early autumn, and one which we should like to see our shareholders and the general public patronising more and more. The Victoria Hotel at Manchester, while a different type, perhaps, to our other properties, has once more done a really fine and profitable business.

Mr James Davenport seconded the motion, which, after some congratulatory remarks from shareholders, was carried unanimously.

British Government securities since purchased (cost price)	31,734,599
	40,205,981

SIDNEY TURNER, Accountant-General.

India Office, July 11, 1923.

Messrs Samuel Montagu and Co. write, on July 11th, as follows:—

GOLD.

The demand from the Indian bazaars continues to be moderate, and the bulk of the available supplies will be set to America.

SILVER.

The latest news as to the monsoon seems good. Rainfall was nearly general in lower Burma and Koukan. In the United Provinces and Punjab crops were good, and normal results were to be expected. The reappearance of the Bombay monsoon has fixed values firmly of textiles, &c. Notwithstanding this good news as to the Indian monsoon, the market has not been robust, and purchases from that quarter have been on a small scale. The tendency has been to prolong Indian bear sales as they fall due. China has figured as both a buyer and a seller on several days. The Continent has sold moderately, and America has kept more in touch with the market here as a seller. On the whole the prospects do not command much confidence, though the bear account open here may cause unexpected stringency in the event of sudden attempts to cover short positions. Owing to pressure of sales to-day on an unwilling market a sharp drop took place at 1s 4d, but at the fall buyers pondered.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	June 15, 1923.	June 22, 1923.	June 30, 1923.
Notes in circulation	17,152	17,238	17,361

12.	89 10	30½	15, 1921	37½
13.	89 9	30½	14, 1922	35½

NOTICES.

The directors of Lloyds Bank, Limited, announce that the Right Hon. Sir Robert Horne, G.B.E., M.P., has been elected to a seat on the board. They also announce that a sub-branch of the bank is now open at The Square, Westbourne, Sussex, under the management of Mr E. P. Hallett, of the Emsworth branch.

We understand that Mr J. Arthur Kenrick, of Berrow Court, Edgbaston, has, owing to increasing years, resigned the seat on the board of Lloyds Bank, Limited, which he has occupied for more than 46 years. The directors have passed a resolution expressing their great appreciation of the most valuable services which he has rendered to the bank during the whole of that time.

The London Joint City and Midland Bank announces the opening of new offices at 128 Uxbridge road, West Ealing, W. 13; in Main street, Roos, near Hull; and in Wakefield road, Fitzwilliam, Yorkshire.

Barclays Bank, Limited, announce that they have opened a new branch at 28 New Oxford street, W.C. 1 (to be known as British Museum branch), under the management of Mr A. Cullingworth, and a new sub-branch at Hollywood, St Albans road, Garston, near Watford, under the management of Mr W. Massey, also manager of 1, The Parade, Watford, branch.

Reports and Notices.

The offices of the Agent-General for Nova Scotia have been moved to the corner of Charles street and St James' square, known as 33 St James' square, London, S.W. 1.

Messrs. C. D. Hoblyn and King desire that the name of their firm should not be confused with the firm of Hodding and King, whose failure is announced.

Messrs. Price, Waterhouse, and Co. announce that Sir Arthur Lowes Dickinson, who for many years was the senior partner of their firm in America, and has for the last 10 years been a partner in London, has retired from practice and from membership of their firm.

The appointment of Mr H. S. Gayford as general manager of the Northern Assurance Company (following the death of Mr John Robertson, joint general manager, on May 22nd) was only announced a month ago, and it is with very deep regret the directors now communicate the news of the death of Mr Gayford, on the night of the 11th instant, from an attack of pneumonia, after an illness of only a few days. Mr Gayford was only 54 years of age.

GOVERNMENT STOCKS, &c.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Finance Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 14 to May 31, 1923, compared with those from January 14 to June 13, 1922:—

	Monopolies, Tobacco, Stamps, Stamp Paper, Naxos Emery.	Piræus Customs.
Gross receipts, May, 1923	Drachmæ. 9,017,064.90	Drachmæ. 11,804,425.10
Do do 1922	5,590,569.35	15,229,561.65
Estimated receipts for five months (Law of Control)	1923-11,012,351.67	1923-4,078,223.77
	1922-12,041,666.67	1922-4,458,333.33
Actual receipts for 1923, five months	35,890,345.50	105,733,845.70
Actual receipts for 1922, five months	32,516,229.25	51,179,776.15

NOTE.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos Emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893. Owing to the change in the Greek calendar from old to new style, both the estimated and actual receipts in the above statement are for 13 days less in 1923 than in 1922. As regards receipts subject to the system of plus-values, all increases in duties and prices are excluded therefrom in the above table. Minimum receipts have, however, been fixed in order to guarantee the plus-values against eventual diminution in the consumption.

CITY OF RIGA 4½ PER CENT. LOAN.—Messrs Lazard B others and Co., Limited, announce, with reference to their recent circular, that no meeting of the bondholders will be held for the present. This decision has been arrived at in view of the fact that the replies received from the bondholders express approval of the steps taken on their behalf, and that only a very small proportion indicated a desire for a meeting.

RAILWAYS.

COSTA RICA RAILWAY.—The 38th report and accounts to June 30, 1923, shows that after payment of fixed charges, &c., there is an available balance of £50,996, as against £39,804 in the previous report and accounts. The ordinary dividend is again 1½ per cent., less income-tax. After payment of dividend, £19,496 goes forward, subject to corporation profits tax, if any, for two years. The report

states that the appeal which the company lodged in October, 1921, against any assessment for corporation profits tax being made upon the company still remains in abeyance, but the Commissioners have intimated that it will probably be heard during the present month. The board is to be commended upon furnishing a list of the railway's investments, which amount to £160,701, as shown in the report. On June 30, 1921, all investments were written down to market values, and those which remain still bear those values in the company's books. Purchases since made are at cost price. The general agent reports that the Northern Railway Company has maintained this company's property in good order. The meeting will be held on July 18th at Winchester House, London, at noon.

DELHI, UMBALLA, KALKA RAILWAY.—The following interesting statement given in the report shows the results of working for the past five periods:—

	Year, September, 1919.	Year, September, 1920.	Half-Year, March, 1921.	Year, March, 1922.	Year, March, 1923.
Gross earnings (including the Jind-Panipat Railway) ..	Rs. 47,78,665	Rs. 53,70,806	Rs. 25,98,597	Rs. 48,59,647	Rs. 56,16,157
Company's share of net earnings, converted at 1s 4d exchange	£157,679	£177,222	£85,909	£160,493	£185,140
Gain by exchange ..	£14	£14	£7	£14	£15
Dividends & bonus ..	£14	£14	£7	£14	£15

The net earnings are, under the company's contract, 52 per cent. of the gross earnings. The ordinary dividend with bonus is 15 per cent. for the year, against 14 per cent. for the preceding year. The sum of £20,286 is carried forward. The meeting will be held at 237 Gresham House, Old Broad street, on July 17th, at noon.

BANKS.

IMPERIAL BANK OF INDIA.—The net profit for half-year, June 30 1923, amounts to Rs. 76,01,100; brought forward from December 31, 1922, Rs. 10,56,600; making total, Rs. 86,57,700. The governors have declared dividend of 16 per cent. per annum, free of income-tax, absorbing Rs. 45,00,000; transferred to reserve fund, Rs. 12,50,000; transferred to pension fund, Rs. 5,00,000; transferred to premises account, Rs. 5,00,000; carried forward, Rs. 19,07,700.

NATIONAL BANK OF AUSTRALASIA, LIMITED.—The reports and accounts for year ended March 31, 1923, shows an improvement on the preceding report as a net profit of £442,178 is revealed as compared with £350,168. Adding £68,743 brought in, there is an available balance of £510,920. The ordinary dividend remains unchanged at 10 per cent., but it should be explained that it absorbed £272,500 against £203,050 in preceding year. The sum of £117,097 goes to reserve fund, while £40,000 goes to reduction of bank premises, and £81,324 is carried forward. The report adds that owing to the expansion of the bank's business the directors consider it advisable to increase the paid-up capital by £500,000. The remaining 16,500 £8 paid-up to £5 and also 41,750 £10 shares fully paid are to be issued.

UNION BANK OF AUSTRALASIA.—The report and accounts for the year ended February 28, 1923, exhibits a net profit of £639,712, as compared with £536,261 in the preceding year. The dividend is unchanged at 15 per cent., free of income-tax, for the year. The dividend will absorb £450,000. The sum of £89,720 is carried forward, against £86,818 brought into the accounts. The reserve is strengthened by £100,000, which makes it now stand at £3,350,000. Since the last meeting a branch of the bank has been opened at Bruthen in Gippsland, Victoria. Circulation stands in the balance-sheet at £562,081. Deposits are at £31,390,819, while the balance-sheet amount to £3,707,570. Investments amount to £2,200,000, all in British Government securities. Specie on hand and cash balances amount to £64,987,141. Money at call stands at £1,060,000. Balance of remittances, &c., amount to £5,759,791. Bills discounted, &c., stand at £26,350,356. The meeting will be held at 70 Cornhill on July 23rd, at 1 o'clock.

MISCELLANEOUS.

APOLIINARIS AND JOHANNIS. The accounts to March 31, 1923, show a profit (after providing £12,750 for interest on deferred debenture interest certificates) of £39,727, as compared with £15,158 in the previous twelve months. After deducting this from the debit balance of £233,185 brought forward, inclusive of the year's liability for debenture interest, £34,000, a reduced debit balance of £193,458 remains. Since the closing of the accounts a reconstruction scheme has been approved, under which there will remain 5 per cent. debenture stock, £680,000; liability on 5 per cent. deferred debenture interest certificates, £238,000; and £1 ordinary shares, £952,000. The total annual charge will amount to £51,680.

ARGENTINE NAVIGATION COMPANY.—The loss for the year ended December 31, 1922, was £16,303. This, added to the debit of £648,948 brought forward from the previous year, gives a total debit balance of £665,252, which the board recommend be carried forward. The depressed state of trade in South America, and the high scale of working expenses, are responsible for the loss sustained. The last dividend on the cumulative preference shares was paid in June, 1920.

BRITISH CYANIDES.—The directors' report for the year ended April 30th last shows a profit of £17,204, which, with the amount brought forward, makes a total of £17,607. This compares with a total profit last year, including the amount brought in, of £3,342. After the payment of the dividends on the preference shares for the year there remains a sum of £14,847, as compared with £492 for the year 1922, which the directors recommend should be carried forward. The report states that the profits realised were almost entirely earned during the last few months of the period under review. The Tat Bank Works, which, owing to the sudden slump in trade during the previous year had been closed down, were

reopened in February last, and the operations at this factory will be further extended during the coming year with, the directors believe, very satisfactory results. The balance-sheet shows, apart from loans to subsidiary companies, that stocks of materials, boats, tank-wagons, &c., amount to £52,267; sundry debtors, £30,421, as against creditors £27,379; cash in hand and at bankers, £9,850, as against £4,880 last year; whilst the bankers' overdraft has been reduced from £47,402 to £30,001.

ENGLISH SEWING COTTON COMPANY, LIMITED.—The directors report that the accounts for the year ended March 31, 1923, result as follows:—After providing for depreciation, debenture interest, income and corporation profits taxes, directors' fees, law charges, and auditors' fees the net profit for the year is the sum of £652,798, against £348,161 for 1921-22, to which has to be added the balance from last year, £196,514, against £198,353, making £849,312. This amount the directors propose should be dealt with as follows:—

—Payment of preference dividend 5 per cent. for the year ended March 31, 1923 (of which 2½ per cent. was paid on September 30, 1922, and 2½ per cent. on March 31, 1923), £50,000; payment of a final dividend of 12½ per cent. on the issued ordinary shares (making with the interim dividend of 2½ per cent. already paid) 15 per cent. for the year, £300,000; bonus on issued ordinary shares of 5 per cent., or 1s per share, £100,000 (this makes 20 per cent. for the year against 15 per cent. for preceding year); reserve account, £100,000; reserve for equalisation of dividends, £100,000; pension fund for employees, £11,997; balance carried forward, £187,405.

HOVIS, LIMITED.—The company, in commemoration of its twenty-fifth anniversary, has included with its report a very attractive illustrated booklet, descriptive of some thirteen of its mills and other establishments. The report covers the last three financial years, in which profits (before striking debenture interest, £2,400) amounting to £42,385, £49,092, and £54,106 were earned. The preference shares received dividends of £9,000 each year, while distributions on the ordinary were £15,391, £22,371, and £23,520, being at the rate of 7 per cent. for the year ended March 31, 1921, and 8 per cent. for the two succeeding years. Reserves received £10,000 in 1921, £26,944 in 1922, and £14,698 in 1923, and £14,877 was carried forward as at March 31, 1923. A distribution of £28,000 from the company's reserves was made during the past year. The directors do not recommend a further distribution at the moment, owing to the serious condition in the white flour trade. The year, however, has been a good one, results of other branches are good, and the sales of Hovis flour during the past year have exceeded all previous records.

ILLINGWORTH, MORRIS, AND CO., LIMITED.—The balance-sheet and report for the year ended May 31, 1923, shows gross revenue of £159,171, as against £87,975 for the year ending May 31, 1922. Interest on the 8 per cent. seven-year notes (since redeemed) and on the debentures and management expenses absorb £59,655, leaving £99,515 to be carried to the balance-sheet, as against £42,296 for the year ending May 31, 1922. This, with the balance brought in at May 31, 1922, gives a total available of £152,644. An interim dividend of 3½ per cent. was paid last November, and a final dividend at the rate of 6½ per cent., making 10 per cent. for the year, is now recommended. At May 31st the final instalments were not yet payable on the recently issued first mortgage debenture stock, and £453,160 was still owing. The £600,000 seven-year notes, the balance unredeemed and discount thereon stands at £333,244. Cash at bankers and in hand is £22,726, as against £8,820 at May 31, 1922. Investments at cost stand at £2,388,142. In the course of the year the company acquired the whole of the share capital of G. H. Leather, Limited, the business of John Robertshaw and Co., and the whole of the share capital of the Globe Worst Company. No profits from John Robertshaw and Co. or dividends from the Globe Worst Company are brought into this account. The purchase of G. H. Leather, Limited, included the profits amounting to £25,000 for the year ending March 17, 1923, the whole of which has been placed to the capital reserve. During the greater part of the financial year the woollen trade is stated to have been in a satisfactory position, but to have been adversely affected latterly by the Continental situation. During the year £1,000,000 of 6 per cent. debenture stock was issued, primarily to redeem the notes and to provide part of the purchase money of G. H. Leather, Limited, and J. Robertshaw and Co., and to furnish further working capital. 200,000 further preference shares have also been issued at par to provide for the purchase money of the new investments. Meeting at the Cannon street Hotel on Tuesday, July 17, 1923, at 3 o'clock.

INVESTMENT CORPORATION OF CANADA, LIMITED.—Revenue for year to April 30, 1923, after paying management expenses and debenture interest, £29,273 (against £44,145). The directors have increased the reserve fund by £10,000 against £5,000, of which £7,640 is discount on redemption of debenture stock, and placed £5,000 to contingency fund, against depreciation of real estate (the same). They recommend dividend on the ordinary stock of 6 per cent. for the year (the same), leaving £6,166 to be carried forward, against £12,489 brought in, both subject to corporation profits tax. Meeting, Winchester House, July 27th, at 2.30 p.m.

MOND NICKEL COMPANY.—The report for the year to April 30th last shows a profit of £292,385, after payment of directors' fees, as compared with £225,414 in the preceding twelve months. After bringing in £37,883 from the last account, £330,268 is available, out of which interim dividends amounting to £110,000 were paid in March, 1923. The directors propose to pay a final dividend on the preference capital at 7 per cent. per annum, absorbing £87,500, and a final dividend of £67,500 on the ordinary capital, making 10 per cent. for the year, free of tax. A balance of £65,268 will be carried forward. Last year the ordinary shares obtained a dividend of 7½ per cent., free of tax. The report states: "The demand for nickel improved during the year, and sales have been satisfactory. As a result, production has been increased. The market prices for nickel and

IRON, STEEL, AND COAL.

Our Glasgow correspondent writes:—In the last day or two a leading maker has sold a respectable lot of a Scotch special brand at 112s a ton for No. 1, while the common rate for No. 1 foundry is 111s 6d f.o.b. Glasgow, and 110s f.o.b. for No. 3; and East Coast hematite is called 111s 6d f.o.b. Middlesbrough. There were several sellers at these figures on Wednesday, yet no buyers were in evidence. No new shipbuilding orders have been reported, and the sales of steel proceeding are about the lightest on record. Of course, consumers at the moment are working up yard stocks, carrying over as small supplies as possible. For such work as is passing—mainly still in machinery—some expensive plant is being constructed, and fair quantities of material are being absorbed. All over quotations reflect little alteration on the week. Crown bars continue to command £12 a ton; ship plates, £10 5s; sections, £10; hoops, £12 10s; ditto channels, £10; joists, £10 5s; black sheets, £12 10s; and galvanised sheets, £18 12s—all delivered f.o.b. Glasgow. Wire rope makers exceptionally advise the booking of several good export lines, and so do tube-makers (for foreign markets), bolt, nut, rivet, and nail makers. There is also a decent trade being transacted in light steel sections for house building, and there is large room for expansion in this branch in Scotland. Demand for coal is easier generally; but purchases for France, Belgium, Italy, and Germany are on a large scale, negotiations for supplies extending on to the end of the year.

Our Middlesbrough correspondent's report, dated July 12th, is as follows:—Pig-iron: The demand for pig-iron continues to be very quiet, and business, more particularly for export, is very poor. French pig-iron, owing to the exchange position, can be sold abroad at prices which our makers cannot compete with. The hematite market is flat. Some furnaces on the Tyne and on the West Coast are closing down, as they cannot avoid working at a loss. No. 3 Cleveland G.M.B. is quoted 109s, and East Coast mixed numbers hematite can be bought at 10s 6d per ton. Manufactured iron and steel: Business in steel is still quiet, and is likely to remain so until the boilermakers' strike is settled. Steel ship plates, £10; steel ship angles, £9 10s; iron bars, £12; steel rails, £10. Iron ore: The iron ore trade is without life. No forward demand and very little inquiry for prompt. The sellers' nominal price of best rubio is 24s per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—There has been a further sharp decline of business in open-hearth steel this week, and there is practically no sale for billets. The position is much the same in the pig-iron and scrap markets. As most of the contracts are completed, makers have had no alternative to reducing their output, and furnaces are going out of commission in a way that causes serious concern. The situation would have been much worse but for the policy of one or two large firms who are making for stock in anticipation of the collapse of competition from the Continent. An increase this week of 400 in the number of locally unemployed men reflects the downward movement of trade. Work in the railway steel departments is being maintained at a fairly high level, notwithstanding the absence of contracts for the building of

privately-owned wagons. Most of the engineering branches are extremely quiet. Agricultural engineers have no export business on hand worth speaking about. Shipbuilding is furnishing only meagre business to Sheffield in tool steel, files, and small tools. Colonial and South American trade is picking up as regards saws, and certain descriptions of hand tools. The cutlery trade is very bad, and the demand for electro-plated goods moderate. Limited sales and severe competition have brought about an easing of prices of most of Sheffield's finished products, with the result that it is difficult to operate at a profit. A heavy drop is reported in the demand for industrial fuels following a falling off in exports, and pits are going on short time. Prices, while not quotably lower, show a sagging tendency, and may be reduced to some extent shortly. Local quotations at pits are:—Best South Yorkshire hard, 21s; Derbyshire ditto, 20s; small nuts, 18s; rough slacks, 12s; best Blyth steam, 26s to 27s 6d (f.o.b.); Tyne steams, 25s (f.o.b.); blast furnace coke, 30s at ovens.

Our Cardiff correspondent writes:—There has been very little change this week in the position on the Cardiff coal market. Prices have remained practically stationary at the recently reduced levels, but there is no great activity in the demand, although as the result of business placed during the week the stems of the majority of the collieries are much fuller than they have been for the past two or three weeks. The increase in the miners' wages as from July 1st has added at least 1s per ton to the labour cost of production, but it is feared that the actual increase will be greater in consequence of lower outputs, and this higher cost of production is one of the strongest factors which has contributed to the firmness of quotations this week.

The approximate current quotations are as follows:—Best Admiralties, 30s to 32s 6d; second Admiralties, 29s to 30s; best drys, 30s to 31s; black veins, 29s to 30s; Western Valleys, 28s to 29s; Eastern Valleys, 27s to 28s; best small steams, 22s to 25s; ordinary cargo smalls, 19s to 21s 6d; anthracite big vein, large, 50s to 57s 6d; machine-made dibbles, 62s 6d to 65s; French nuts and stove nuts, 62s 6d to 65s; rubbly culm, 15s 9d to 16s; coke for export, 45s to 55s; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 34s to 36s; pitwood, ex ship, 30s to 32s 6d. In the tinplate trade the position is unchanged.

THE COTTON TRADE.

AUCTION OF B.A.W.R.A. WOOL AT HULL.

Owing to labour troubles at the ports, the Committee of London Wool Brokers announce that by instructions of the British Australian Wool Realisation Association, Limited, the public sale advertised to take place at Hull on the 27th instant has been postponed. The trade will be duly advised of the date on which this auction will ultimately be held.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

The London sales were abruptly suspended last Monday, owing to the dockers' strike. The casual workers in the up-town warehouses decided to throw in their lot with the dock labourers. It has been decided that the auctions shall be resumed next Tuesday if the men are back at work, which at the time of writing looks likely.

The attitude of the home trade has been very contradictory. Importers whose wools have been reoffered freely have been wanting to sell on a clean basis of something like 4d more than the prices at which they were wanting to buy.

Scoured merinos have continued to sell remarkably well, and importers, as well as those selling on growers' account, cannot complain. Some magnificent prices have also been paid for crossbreds, particularly those from New Zealand. Up to 26½d has been paid in the grease, the prices working out at about 4½d for 58's, 36d for good 56's, and 3½d for ordinary wools. Most of the fine half-breds have gone to the Continent. Slip crossbreds have sold almost on a level with last series, good half-bred lambs still making excellent figures. Considering the quantity of this class of staple catalogued, good half-bred lambs at 25d to 26d cannot be despised. Good 56's slipped lambs are selling around 24d, superior 50's 20d to 21d, 48's-50's 18d, 48's 16½d to 17½d, and good 46's 14d to 14½d, while short clothing slipes, suitable for blanket purposes, have made around 12d.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Although alterations were not important at Bermondsey hide market on Thursday, the tone of the market was firmer, and bears out the hint given in this report recently that bottom price of hides has been reached for the time being. Best ox sold from 7d to 8½d, three classes advancing an ½d above last prices. Seconds sold from 5d to 7d, one selection only advancing ½d. Cows, best, were firm from 6½d to 6½d, whilst best calf made from 5½ to 11d. Supplies of hides are small in the provincial markets, and tanners fairly eager to obtain supplies. The demand for imported S.A. hides has fallen away of late, and values are in course of readjustment. Argentines have been sold at round about 7½d c.i.f., the Continent and United States being buyers. Sales of Leibig hides include Fray Bentos at 8½d, and Colon cows at 6½d. Saladeros are quiet, Livramentos being sold on a basis of 7½d. The demand for dry hides is quiet, with prices here and there a shade easier. The Chicago position is called as steady, with best packers still offering at 14 cents.

VEGETABLE OILS AND OILSEEDS.

Only a small business has been done in linseed oil, mainly on account of the home trade, and values are, on balance, about unchanged. The export demand shows no sign of improvement. Cotton oils have been more or less neglected, and crude Egyptian, on some pressure to sell, has further declined, edible descriptions also being slightly easier. Crude soy oil continues to meet with competition from Oriental, which has been selling at 60s per ton below English. Palm kernel oil is in firm demand and somewhat lower. In the oilseed section crushers have bought to a fair extent Calcutta linseed, both to London and Hull, in near positions, but little has been done in Plate linseed, which is inclined lower. Egyptian cottonseed, in the absence of demand, has further declined, Sakellarisidis offering around £11 2s 6d for July shipments.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 13.

The quiet tone prevailing in the various markets, both with regard to raw and manufactured goods, became more accentuated during the week, resulting in trade in most directions partaking of retail proportions. Of sugar, refined goods were taken to a fair extent on the spot at steady prices, while with regard to raw refining descriptions, recent y three steamer cargoes of Cuban, basis 96 per cent., reached the U.K., but were redirected to America, which would point to British refiners being in possession of ample supplies. Rice market fails to show any improvement, Burma grain remaining a negligible quantity, as near continental inquiries count for little, while home demand runs upon the finer descriptions of Spanish, Italian, and Carolina. All kinds of fibres witnessed but limited trading. Regarding jute, the India Government's first forecast, and which does not include Nepal and Cooch-Behar, amounted to 2,297,520 acres, against a revised estimate last year of 1,800,000. Shells, M.-o'-P.—A moderate quantity auctioned met with but slow support, but prices for the part disposed of marked no essential alteration.

SUGAR.—Refined goods sold steadily on spot, and British makes were again largely favoured. Messrs Tate and Lyle's cubes, 6½s 6d to 6½s 6d; granulated, fine and coarse grain, 8s 7½d; No. 1, 5s 8½d; No. 2, also London, 5s 8½d; second half August, 5s 8½d; September, 5s 8½d; October, 5s 8½d; November-December, 5s. Yellow crystals, spot, 5s 7½d. American granulated, spot, 5s; white Java, spot,

5s 9d to 5s; May-June, steamer, 2s 6d; June-July, 2s; July-August, 2s 6d, c.f. and i., London. Continental parcels for shipment more or less nominal, with an absence of definite offers. Raw refining kinds dull. Cuban, basis 96 per cent., July, quoted 2s 4s, c.f. and i., U.K. Terminal market, after being firmer, became unsettled and weaker. August, sold, 2s 8d to 2s 9d, 2s 7d, and 2s 6d; December, 2s 9d to 2s 10d, 2s 9d, and 2s 8d; March, 2s 6d to 2s 7d and 2s 5d. Cuban stocks total 582,300 tons, against 778,800 last year.

COFFEE.—Spot market generally quiet, chief demand being for the better qualities of East India, and these realised full rates. Other kinds without material change. Futures remain quite nominal.

TEA.—Only 11,500 packages Indian were offered, and while all the finer sorts aroused good competition at recent rates, inferior sold quietly at barely steady values. 24,270 packages Ceylon offered experienced a firm market for all qualities, and some of the finer realised slightly more money than obtained last week. Java and Sumatra met with steady support.

RICE.—Market quiet and featureless. Two stars, new crop, spot, 1s 6d to 1s 9d. No. 1 garden Siam, double bags, July-August, 1s 9d. Broken kinds dull of sale. Rangoon beans, spot, 1s 6d. Japanese peas, spot, 2s 6d; September-October, sold, 2s 6d.

COCOA remains very dull. Accra, July-August, sold, 30s, 29s 9d, and new crop, October-December, 31s 6d, f.o.b. terms.

SPICE.—There was no new feature to note with regard to pepper, business being reduced to a minimum at prices showing no alteration. Zanzibar cloves steady. Fair, on spot, 1s 1½d; May-July, 1s 1½d, and August-October, 1s 1½d per lb. Tapioca slow of sale, at previous level of prices. Sago flour, June-August, 12s 6d. Desiccated coconut quiet. Fine cut, spot, 39s 9d; medium, 40s 3d; halves, 40s; ditto, June-July, 37s 6d; July-August value, 37s per cwt.

JUTE.—A quiet tone again governed this market, very few orders being received from spinners, and, with Calcutta acceptance of cable bids, prices in the London centre displayed increased weakness. First grade, June-July, Continent, quoted £26; August-September, sold, £26; September-October, £26 per ton. Hessians and twills dull of sale, with prices tending downward.

HEMP.—Manila quietly dealt in, and prices barely steady. J grade, August-October, sold, £31 15s to £31 5s; K and L, sellers, £28; M, £27 ton.

SHELLAC quiet. T.N., spot, 260s; August, 232s 6d; October, 232s 6d cwt.

COPRA.—A moderate demand prevailed, but the market is still unsettled and weak, as abstention on the part of American interests in the matter of purchasing F.M.S., Cebu, and F.M. manila results in large quantities of such copra being offered in the London market. F.M.S. Straits, May-July, Rotterdam, quoted, £26 15s; June-August, sold, £26 2s 6d to £26 6s 3d; August-October, £26 2s 6d to £26 5s; October-December, £26 5s. Ceylon, June-July, quoted £28 2s 6d; Java, ditto, £26 17s 6d; Dutch East Indies ditto, £26 15s; Cebu, June-July, £26; South Sea, £25 10s; F.M. manila, £25; mixed, excluding Padang, £25 10s. Palm kernels, July-September, Liverpool, £18 7s 6d ton.

RUBBER.—Only quiet trading again ensued, and no new feature crept into the general situation. Standard plantation crepe and sheet, spot, also July delivery, sold, 13½d; August, 14d; September, 14½d; October-December, 14½d; and January-March, 15d to 14½d and 15d. To New York, standard sheet, August-September, sold, 13½d; September-October, buyers, 14d per lb. c.f. and i. terms. Fine hard Para, spot, 14½d; soft fine, 14d; and Caucho ball, 13½d per lb.

EGG PRODUCTS.—Business is quite retail, and quotations nominally the same as hitherto.

FRUIT.—Dried: The market for currants remained in a quiet state, and in some cases prices were barely maintained. Pyrgos quarter-cases sold, 55s 6d; half-bags, 54s 6d; Gulph, 58s to 60s; Vostizza, 65s to 70s; Australian, 69s to 71s. Sultanias were again dealt in quietly. Smyrna, good, 80s to 82s; fine, 88s to 90s; choice, 95s to 100s; Californian, 65s to 64s for new. Valencia raisins quietly steady. Half-boxes quoted 33s to 34s; quarters, 40s to 45s; Cape, good, 45s; fair, 38s. Dates steady. Hallowee, 18s to 20s; Siar, 18s. Evaporated fruits commanded fair attention, and a firm tone governed proceedings. Cape apricots quoted 85s to 90s; undergrades, 70s to 75s; Australian ditto, 85s to 105s. Californian pears, choice, 60s to 65s; extras, 70s to 75s; ditto apple-rings, 50s to 52s; Canadian, 46s; Australian peaches, 55s to 75s; Californian plums, 40-50, quoted 75s to 76s; 70-80, 58s; 80-90, 55s per cwt.

CANNED GOODS.—General trade in sardines moved quietly, but prices remained without appreciable alteration with main attention directed towards best packs. Lobster in steady request, and halves, sold, 165s, with sustained inquiries chiefly for Pinks, there was quite a good volume of business and firmness characterised the market. 1 lb flat reds, labelled, 55s to 58s; ditto tall, 40s 6d to 41s; 1 lb flat

ALEXANDERS DISCOUNT Co., Ltd.,
24, LOMBARD STREET, E.C.3.

Telephones: 1382 & 225 Avenue. Telegrams: "Alexanders, Thread-London."

CAPITAL AUTHORISED £1,250,000 CAPITAL PAID UP £800,000
CAPITAL SUBSCRIBED £1,100,000 RESERVE FUND £400,000

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

Pink, 25s to 26s; ditto tall, 25s per case. Canned fruits were held for fully steady rates. Singapore pines 1½ lbs, on spot, quoted 5s 10½d; Californian apricots, 8s to 11s; peaches, 8s to 12s; pears, 12s to 14s 6d per dozen tins. Tomatoes dull of sale, and easier prices had to be accepted in order to facilitate business. Meats steady, with a moderate demand.

OILS.—Linseed irregular with a moderate business in force. Spot, net, naked, quoted 43s 6d; July, 41s 6d; August, 41s; September-December, 38s 9d. Rape quiet. Crude, spot, 39s 6d; refined, 42s 6d. Cotton quiet. Crude Egyptian, spot, 38s 6d; common edible, 44s; deodorised (in barrels), 48s. China-wood quiet. Hankow, spot (barrels), 106s; July-August, 93s. Coconut quiet. Ceylon, spot, 45s; July-August, 42s; Cochin, ditto, quoted 47s. Soya quiet. Oriental, barrels, July-August, 37s 6d. Japan fish nominal. Cod quiet. English, spot, 35s. Groundnuts quiet. English, crushed, naked, spot, 42s; deodorised, barrels, 52s. Turpentine easier. American, spot, 78s; July-December, 71s 6d. Rosin quiet. American, grade B, 13s; F, 13s 6d; G, 13s 6d; H to I, 13s 6d; WG, 17s 6d; WW, 18s 9d, per cwt. French nominal. Petroleum steady. American standard, white, spot, 1s; and water white, 1s 1d per gallon. Castor-oil firmly held. First pressure, spot, to August, quoted 56s; second pressure, 55s, and pharmaceutical 61s per cwt.

OILSEEDS.—Linseed quiet to London, but a fair business done with outports. Bold Bombay, afloat, £21 10s; small Bombay, ditto, £20 17s 6d; Calcutta, afloat, £20 15s; June-July, sold, £20 10s to £20 12s 6d; August-September, £20 10s. Plate, June-July, sold, £19 5s; and July-August, £19. Rapeseed easier. Toria, July-August, £16 7s 6d; real bold Ferozepore, ditto, £15 10s; Jamba, £12 5s. Cottonseed dull. Egyptian black, July, £11 17s 6d; and white, £11 2s 6d, to Hull. Bombay, July, £9 12s 6d. Gingly seed quiet. Large Bombay, May-June, Continent, sellers, £23 5s. Chinese, ditto, £23 15s, Continent. Ground-nuts dull. Coromandel, machine-dried, June-July, quoted £22. Chinese deodorated, f.a.q., July-August, £22 10s. Nigerian, ditto, £22 10s. Soya beans steady. Manchurian, June-July, £12 2s 6d. Castorseed quiet. Bombay, July-August, £20 12s 6d per ton.

METALS.—Tin: Market opened with a firmer tone in sympathy with higher Eastern cables, although top points were not maintained. Business was on a fair scale, including standard cash at £181 5s, and three months £180 10s to £182 15s and £182 12s 6d. In the East business was reported on the basis of £183, c.i.f. Slight irregularity since prevailed, with a weaker tone in evidence. Standard cash sold at £180 10s, and three months £182 2s 6d. Eastern cables reported further business at £186 15s to £184 10s, c.i.f. At Thursday's session a firmer tone prevailed, standard cash sold at £181 10s to £183 5s, and three months £182 10s to £184 5s to £184. Values were easier on the following day, with sales of fair extent. Standard cash sold at £182 5s down to £180 17s 6d, and three months,

£184 to £181 17s 6d to £182. English ingots, £181 5s to £181 10s. Copper steadier, owing to higher American advices and a good demand for near dates. Standard cash quoted at £65 2s 6d, with business, July, at £65, and three months, £65 11s 3d to £65 15s. The firm tone continued, with a fair business at slightly higher rates. On Wednesday, standard cash sold at £65 10s, and three months, £66 7s 6d. Prices were fully steady on the following day with sales of fair extent. Standard cash sold at £66 to £66 2s 6d, and three months, £66 15s to £66 17s 6d. At the final market the tone proved easier. Standard cash sold at £65 12s 6d, and three months, £66 15s to £66 5s. Electrodes, £73 to £73 10s; best selected, £68 10s to £70; strong sheets, £100, and wire bars, £73 10s per ton. Lead steady at £24 5s to £23 15s, as to position. Spelter dealer at £28 15s to £29, according to position. Aluminium: Home, £115; export, £120. Antimony: Ordinary brands, £30 to £32. Quicksilver, spot, £10 5s to £10 10s per bottle.

TALLOW.—Messrs Colchesters and Woolner write on July 11th, as follows:—The tallow market was quiet during the week, and prices are barely maintained to-day. Business is restricted through supplies not becoming available, and difficulties in shipping curtailing the demand. At auction to-day 885 casks tallow were offered and 316 were sold. Quotations are:—Australian mutton: Fine, 42s 6d; good to fair, 41s 6d to 41s; dull to dark, 38s to 36s 3d; hard, 42s. Australian beef: Fine, 42s; good to fair, 41s to 38s 6d; dull to dark, 37s to 35s 9d; sweet, 42s. Present shipment from Australasia nominal. Present shipment from South America, 39s to 38s 6d. The market letter is unchanged. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 14d; melted stuff, 28s 6d per cwt. Quotations are:—Town, 35s, net cash, naked, ex works. Country: Frail casks, 35s; home melted, shipping casks, net, f.o.b., good coloured, 38s 6d; fair to dull, 36s to 35s. Bone fat: White, none; pale, none; benzine, 34s; melted stuff, 34s, f.o.b.

Houses (Notice	2½	2½	2½	1½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3½	3½	3½	2½	2½

The Bank return showed an increase of £14,000 in the stock of gold, a decrease of £623,000 in the note circulation, and a consequent increase of £637,000 in the Reserve. Government and Other securities rose by £690,000 and £1,880,000, while Public deposits declined by half-a-million; and so the Private deposits were more than 3½ millions higher. Currency notes outstanding were reduced this week by £844,300 to £289,310,500, which includes £1,463,200 for notes called in but not yet cancelled. The fiduciary issue is £238,397,300, or £31,786,500 below the maximum.

The monthly statement of average weekly balances for June of the London clearing banks, set out in detail on a later page, shows a considerable expansion in deposits, and the total for the nine English banks is almost up to the February figure, as may be seen from the following table:—

	Dec., 1922.	Feb., 1923.	March, 1923.	April, 1923.	May, 1923.	June, 1923.
Capital and reserves	116.0	116.2	116.2	116.2	116.2	116.3
Acceptances	72.8	76.8	79.9	78.0	77.5	73.8
Deposits (incl. undivided profits, &c.)	1,684.7	1,643.9	1,596.4	1,606.0	1,608.5	1,637.7
Total Liabilities	1,873.5	1,836.9	1,792.5	1,800.2	1,802.2	1,827.8
Coin, notes, balance at bank, and cheques in course of collection	253.0	234.5	232.3	240.0	234.6	240.7
Money at call	106.0	103.0	104.4	110.5	108.8	115.3
Investments	384.5	373.4	357.4	351.3	349.4	355.5
Discounts	298.3	286.4	250.4	249.5	262.3	270.8
Loans and advances	732.7	736.5	741.6	744.4	743.0	746.9
Cover for accept., premises, &c.	99.0	103.1	106.4	104.5	101.1	100.6
Total assets	1,873.5	1,836.9	1,792.5	1,800.2	1,802.2	1,827.8

There are increases in each item on the assets side, the most pronounced being in discounts, cash and money at call. Acceptances, with a drop of nearly £4 millions, are at the lowest point since December. We refer to the half-yearly statements in a leading article.

THE STOCK MARKETS.

The principal feature of the stock markets this week has been the recovery in gilt-edged stocks, and in other directions the recent "shake-out" has imparted a healthier tone. Home Railway prior charge securities have strengthened in price, but the ordinary stocks are still languid owing to lack of interest on the part of the public. French bonds have recovered from the lowest level, and Brazilians continue to harden. Grand Trunk Pacific debentures fell heavily on the statement by the Canadian Government denying any legal liability towards the holders, and Argentine Rails have declined with the drop in the exchange. Industrials have been irregular, with one or two good features; the dockers' strike has had singularly little effect. Interest in the mining markets has centred upon Chartered, Kaffirs being quite idle.

THE COMMODITY MARKETS.

The commodity markets have been unusually quiet, and dealings have been restricted to those of immediate necessity. The volume of coal exports has increased and is again normal, but there is a scarcity of new orders, and present prices are difficult to maintain. With the holidays in Glasgow and slow general demand for pig-iron, prices continue to droop. Nominally the price of Cleveland G.M.B. No. 3 is 105s per ton, but less would be accepted. The steel works are growing short of orders, but no definite improvement can be expected until the boiler-makers' dispute is settled. Tin and copper are dull. The Manchester cotton trade shows no tendency to expand;

a fair amount of business has been done in small lots, but buyers apparently are only satisfying immediate needs. The jute market is dull. It is stated that owing to labour difficulties the remainder of the July London wool sales have been abandoned; it is thought that wool values will be higher in September, when sales will be resumed. Rubber has been in moderate request, but some uneasiness has been noticeable. The hide market position is fairly good, and there is an improvement in the demand for sole leather; upper leathers are selling better, and the export section of the shoe trade is doing well. Linseed oil is steady, with a tendency to improve in value.

FOREIGN EXCHANGES.

The oppression and uncertainty of the reparations problem still weighs down the foreign exchange market, and business, as before, has been restricted and irregular. The demoralisation of the mark continues. After a slight recovery on Saturday last, the rate has moved up again, steadily at first, but with a rush on Thursday, when the closing rate was 1,455,000 marks, and yesterday morning, when 1,850,000 was quoted. The policy of the Reichsbank of concentrating in itself the supply of foreign currency and selling limited amounts at rates arbitrarily fixed below those ruling in other centres has, of course, failed. The climax of this folly was reached on Thursday, when, after a holiday on the previous day, applications were received for 20,000,000,000 marks worth of foreign currency, and the Reichsbank was only able to offer fulfilment of ¼ per cent. of the orders. The further rapid depreciation is due in part to this exposure of financial chaos, in part to the renewed belief in the possibility of co-operation between the British and French Governments. This latter influence has produced a marked recovery in the Paris rate, which, after reaching over 79 early in the week, closed on Thursday at 77.50, although yesterday morning it had reacted again to 78. A satisfactory return of the Bank of France showed that the Government had repaid a considerable part of the advance made over the turn of the half-year, and the note circulation was also sharply reduced. The Belgian rate, which closed on Tuesday at 95.65, stood yesterday morning at 94.85, as compared with 94.20 a week ago. In Paris the forward quotation remains the same at 3c per month above spot; in Brussels it has widened from 3c to 6.9c per month below. The lira, from 107.45 a week ago, has shown a better tendency, although at 106.50 yesterday morning there was some reaction from the figure of 106.06 the day before. The dollar, which recovered on Saturday last to \$4.60¾, fell back again, and has not been able to get above yesterday morning's figure of \$4.59¾, as compared with \$4.59½ on the 13th. With the difference in money rates which still exists, and with the autumn pressure still unsatisfied, it is wise not to expect an improvement. On the other hand, apart from unforeseen political events, any further important fall is improbable. At about ½ per cent. per month above spot forward rates are slightly narrower than for the preceding week. Amsterdam, moving from 11.71½ to 11.70½, has gone against us more rapidly than the dollar. Switzerland has also moved sharply, from 26.55 to 25.90, while Spain has also recovered, from 32.12 to 32.05. In Central Europe, Vienna is steady once more at 325,000, after being slightly lower. Warsaw, where the recently introduced impossible exchange restrictions are still in force, is up to 650,000. It is reported, however, that free dealings are again soon to be permitted. Budapest has moved up sharply, Prague remains steady, as also does Bucharest, on a new level of about 880. In Northern Europe, Stockholm has moved against us, from 17.33 to 17.29, but Christiania has depreciated from 28.22 to 28.31, and Copenhagen from 26.27 to 26.30. Helsingfors remains steady at 166½. In the East the rupee is unchanged at 1s 4½d, while Yokohama is ½d cheaper at 2s 1½d. The silver market has been particularly dull, with prices hardly changed, and India, in spite of favourable monsoon

reports, still shows reluctance to buy. Hong Kong is unchanged at 2s 2½d, Shanghai 1d cheaper at 3s. In South America, Buenos Ayres has dropped from 40½d to 40d, Rio is unchanged at 51½d, and Monte Video ½d cheaper at 41½d. Valparaiso has also depreciated from 35.40 to 36.40 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 14th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	9,711	From Revenue	16,874
Interest, &c., on War Debt	515	Taken from Exchequer Balances	317
Sundries	950		
Reduction of debt	6,915		
	17,191		17,191

The total revenue at over £16½ millions compares with £18½ in corresponding period a year ago. This comparatively slight decline is entirely accounted for by the drop of £2½ millions from Special Receipts. Property and Income-tax yielded £7½ millions, and Super-tax £650,000. This shows little variation on the combined total a year ago. Customs yielded £2,455,000, and Excise £1,409,000, both items showing little change as compared with the corresponding period. The week's operations reduced the National Debt by £6,915,000, and caused the following changes:—

	Min. £		Min. £
Treasury Bills	— 6,675	Bank of England Advances ..	+ 1,000
Public Department Advances ..	— 1,450	National Savings Certificates ..	+ 300
Sundries	— 990		
	— 8,215		+ 1,300

The floating debt was reduced by £7,080,000 to £811,545,500.

FINANCIAL YEAR, 1923-24 (April 1 to July 14, 1923).

	£		£
Total Expenditure ..	236,159,765	Raised by Revenue ..	215,643,450
		Net Borrowings.....	17,261,626
		Decrease in Balances	3,254,689
Total	236,159,765	Total	236,159,765
ESTIMATES for		YEAR 1923-24.	
	£		£
Ordinary Expenditure	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure..	15,603,000	Special Receipts....	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

The Week in Parliament.—The resumed debate on the capitalist system occupied the House of Commons on Monday. For the rest of the week the features were debates on the East India Loans Bill; on the trade position, which was discussed on the Board of Trade vote; and on naval policy and expenditure in connection with the Singapore dock, the latter question being raised on the Admiralty vote. The House of Lords read a second time the Agricultural Rates Bill, the Intoxicating Liquors Bill, and discussed, among other topics, food production, and the Royal Assent was given to a large number of minor measures.

Company Meetings of the Week.—On later pages of this issue will be found reports of the meetings of the following companies:—Bank of New South Wales, Bank of Roumania, Distillers Company, Ebbw Vale Steel Iron and Coal Company, Apollinaris and Johannis, Anglo-Ceylon and General Estates, Sialang Rubber Company, Mond Nickel Company, Hovis, and Illingworth, Morris, and Co. Among the features of the speeches were the remarks of the chairman of the Bank of New South Wales on the prospects of Australian trade, and of the chairman of the Bank of Roumania on the financial position of that country. The chairman of the Distillers' Company spoke strongly on the spirit duty. The speech to the Ebbw Vale Company was largely concerned with the labour position, and the chairman of the Mond Nickel Company reported an increase in the use of nickel for coinage.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world.

REPARATIONS AND BRITISH POLICY.

A WEEK ago we urged the need of haste in dealing with the reparation crisis, and suggested that the slump in the mark which was being mitigated but not controlled by the action of the Reichsbank would probably enter upon a new and more critical phase before the end of this month, and that this movement would involve still more acute social and economic difficulties. The proceedings upon the Berlin Bourse on Thursday confirm these fears. The Reichsbank has now been made the sole official source through which foreign currency can be obtained, and demands all over Germany must be made through the Reichsbank. In the scramble to escape from the mark these demands amounted in a single day to 20 billion marks, or say 20 million pounds at a million marks to the £. The representative of the Reichsbank pointed out the folly of these demands, which amounted to more than the whole swollen circulation of Germany, and as the rule is that applications for foreign drafts must be covered by German marks, the applications were obviously more than the whole of the Berlin banks together could have covered. An appeal from the Reichsbank to moderate the demands only resulted in a small fraction being deducted, and in the end the Reichsbank only satisfied the demands to the extent of ¼ of 1 per cent., a very small consolation to those who are trying to convert everything they possess into foreign currency. The Reichsbank has apparently shot its bolt, and it is difficult to see what can now retard the downward plunge of the mark sufficiently to enable wages and salaries to make at all events some show of keeping pace with it.

An attempt has been made in some quarters to minimise or even to deny altogether the harmful effect which the present situation is producing upon the world's trade. An analysis, however, of the situation in various British centres, as well as of the reports from various countries which we summarise this week in our monthly supplement, admits of only one conclusion. It is true that the volume of production here is much larger than a year ago, and the figures of trade in June—swollen, it should be observed, by the statistics of our trade with the Irish Free State—compare quite favourably with last year, and indeed with the figures for the beginning of 1923. But British exports reflect not the conditions of the moment, but those of some weeks or months ago, and the true test of the situation is the rate at which orders are being booked, and it is in this respect that the present trade position is so unsatisfactory. The Ruhr occupation gave to certain industries here an undoubted fillip, but since the end of April the trend, except in one or two cases, has been downward. Our index number of wholesale commodity prices turned two months ago. The West Riding of Yorkshire, which had previously been doing very well, reports slackening trade, and above all Lancashire, which for two years has been living in hopes of a revival of its Far Eastern markets, sees its hopes being indefinitely postponed. Two regions which might both contribute to a restoration of a normal trade in Great Britain are India and South America, but in both cases stagnation continues for want of a European market.

While we have little to add to the comments we have already made in connection with the tactics to be adopted in the forthcoming British Note, we observe with gratification that there is a slightly more hopeful tone on the diplomatic issue. Our observations in Germany lead us to believe that the German Government would accept almost any arrangement which would open the road to negotiation; but it is not the task of Great Britain to call upon Germany to make unconditional surrender in respect of a policy from which our Government has deliberately dissented. On the other hand, if, as seems to be the case, France intends to modify her occupation if passive resistance is no longer countenanced from Berlin, there are surely many diplomatic devices by which this result could be achieved without a third party's interference. The Note itself may, indeed, do something to make this result easier by recognising the need of foreign control in Germany, and sug-

gesting the transformation of the Ruhr occupation by two interested Powers into a control not merely of the Ruhr, but of the whole assets of Germany, by a really representative international body. This would produce much more tangible and practical pledges for the payment of Reparations, and would lift from the shoulders of France and Belgium the task of fulfilment. We do not believe that the question of a long moratorium or the assessment of the total amount that Germany can pay will prove definite stumbling blocks in the way of a settlement.

On the last point, however, we venture to repeat once more that in the end the acceptability or otherwise (from the French point of view) of any scheme which our Government may propose will depend on how we arrange the sharing of Reparations between ourselves and France, and on the policy adopted in regard to inter-Allied debts. The latter question will presumably not figure at all in the Note to Germany, but, as every Conference has shown since the Armistice, it is a matter which must be settled before progress can be made. There is a current of opinion which holds that our differences with France have reached such a point that we should demand payment of our debts and, by threatening to embarrass France's financial position, drive her into agreement with us. We believe such tactics would be entirely futile, and that the only proper line on this question is to make it easier for France to write down her Reparation claim by taking a liberal attitude on the debt question. It is sometimes suggested that if the present effort fails, and all prospect of France obtaining Reparations fades into mist, the franc will collapse under the weight of France's budgetary burden, and that only when this has happened will the French Government be willing to negotiate on the basis of reality. It is possible that this will be the final outcome. But it would be the height of folly to take for granted that any such slump will, in fact, occur. Least of all can the Government afford to base its policy on this assumption. The economic situation of France is radically different from that of Germany. For example, latest forecasts indicate that the French harvest together with supplies from Algeria will be sufficient to cover France's wheat requirements without any importation this year. France is not consuming as much as she is producing, and is putting her surplus into increased capital and into loans with which the Government is repairing the devastated areas. It is quite conceivable that the French franc may continue merely with its sagging tendency for months or even years to come, so long as the French peasant does not lose confidence. It is only a catastrophic fall in the franc which would produce serious political reactions. But, on the other hand, it is impossible that France should regard with any degree of complacency the future of her finances should the present eleventh-hour chance of a sane Reparations agreement be allowed to pass.

CAPITALISM AND PUBLICITY.

In the palmy days of German Imperialism it was claimed as a triumph for the Teutonic mind that in the Reichstag alone among the Parliaments of the world members spoke and thought in terms of that elusively universal concept, a Weltanschauung. With the advent of the Labour-Socialists, however, the British House of Commons seems to be following suit, and on Monday last many hours of valuable Parliamentary time were wasted in discussing the alleged break-down of capitalism and the alleged "inevitableness" of Socialistic "gradualness." To indulge in generalities of this kind seems to us to be the prerogative of the debating society rather than of the Mother of Parliaments, and in pre-war Germany the tendency to vagueness and universality was to be explained and excused solely by reason of the impotence of the Reichstag itself.

Even the desire to obtain a division on the question of Socialism, which was the chief reason for giving up another day to the subject, was not a sufficient reason for the waste of Parliamentary time; for the division was on strict party lines, and if the critics of Socialism expected to drive a wedge into

the Labour ranks and bring those Labour members who are not really Socialists out into the open, they signally failed. We will not weary our readers with an account of the argument and counter-argument called forth by the motion of Mr Snowden, which declared, amongst other things, "that legislative efforts should be directed to the gradual suppression of the capitalist system by an industrial and social order based on the public ownership and democratic control of the instruments of production and distribution." For our part, however, we cannot accept the theory that capitalism is doomed because the present system has certain very serious defects; for it would be hard indeed to imagine any system which would be utterly perfect. Nor are we in the least unaware of the immense progress that has still to be made before the existing instruments of production can be said to be used to their full advantage, or the system of distribution can be certified as satisfying the instincts of equity or good sense. Sir John Simon did well to make it clear that the least important part of his case was his trenchant and destructive analysis of the phantasy of a Socialist Utopia, and that the really important task of the immediate future is to work out a practical and satisfying policy of industrial evolution. A complete Socialist policy is peculiarly unsuited to a country like Great Britain, whose existence rests upon foreign trade, initiative, and the ability to meet and by adaptation to overcome competition from whatever quarter it may appear. At the same time, great changes will have to be initiated in the next decade if private enterprise is to be accepted wholeheartedly as the basis of our national life by the mass of the working population of the country. No reform is more urgent, and no reform could have a more beneficent effect, than the expansion of economic knowledge and the tearing down of the veil of secrecy which to-day hampers the free and proper working of the supreme safeguard of the public under private enterprise, namely, competition. Inadequate publicity, and the public ignorance resulting from it, are the chief causes of that suspicion which poisons the relations between capital and labour, and which makes very difficult any intelligent handling of monetary policy in the interests of stability, and the avoidance of ignorant speculation.

Of all the economic evils to which we are subject, the insecurity of the worker is perhaps the worst. But it is hopeless to diagnose and prescribe remedies for trade fluctuations without knowledge. In this connection some remarks made recently by Sir Eric Geddes, the President of the Federation of British Industries, at Bradford, merit careful attention. In his opinion, the principal cause of these movements is to be sought in the "lack of accurate knowledge as to what the world can consume." The solution of one of the most fundamental questions which have to be dealt with in order that the machinery of production and distribution may run smoothly appears, according to this view, to depend very largely upon "the collation and collection of information by the great trade and industrial organisations, to enable their members to forecast more accurately what the demand will be and what production will be."

As Sir Eric pointed out, American knowledge of consumption and production is far ahead of ours. In addition to information which is collected privately for the principal banks and business houses by special business experts, whose opinion is constantly sought and acted upon, the Department of Commerce at Washington publishes a monthly "Survey of Current Business," which to the British business man would be a veritable revelation. This publication contains, amongst other things, remarkably full statistics of the production of practically all the important commodities of the country, whereas Great Britain has no production statistics except for coal, iron, and ships. The American statistics, which may be described as a monthly census of production, show for the woollen, cotton, and silk trades, production, proportion of idle plant, consumption of material, prices and stocks. Similar information is given for the iron and steel, copper, coal, petroleum, paper, rubber, automobile, glass, lumber, building material, hides and leather, chemical, and other industries. The state of the food trades is shown by the movement and stocks of grain,

THE BANKING HALF-YEAR.

THE English joint-stock banks do not issue profit statements at this period of the year, and the only guide as to the results of their operations during the past half-year is afforded by the interim dividend announcements which have been tabulated in previous issues. These show practically no changes, and in no case has any reduction been made, a fact which leads to the assumption that net profits have not fallen to any appreciable extent, and that any decline which may have occurred in profits on ordinary banking business, including provision for bad debts, presumably still a large item, has been made good by profits realised from the rise in the market value of securities, which, as will be seen from figures below, have been sold in considerable volume. The average level of money rates has been well below that prevailing in the first half of last year, but the bulk of a bank's revenue is derived from interest on loans, and as the rates of interest on the latter, although fluctuating with Bank rate, are not allowed to go below a certain minimum—generally $4\frac{1}{2}$ per cent. or more—the 3 per cent. Bank rate of the past half-year, which compares with an average of $\pounds 4$ 7s for the first half of 1922, has not entailed much loss; for while the average rate of loan interest cannot have fallen by more than a few shillings, the fall in the average rate paid on deposits must have been much larger. For although a certain volume of deposits, especially in the provinces, is at a fixed rate, the bulk earn interest at a rate which fluctuates with Bank rate. The volume of advances, as will be seen below, was considerably higher at the end of last month than at the same date of 1922, but the monthly figures of average weekly balances were higher in the first six months of 1922 than they have been during the past half-year.

Turning to the actual figures of the half-yearly balance-sheets, we append a comparison of the aggregate figures of the "big five" banks, with those of December 31 and June 30, 1922 :—

(Million £'s.)

	June 30, 1923.	Compared with Dec. 31, 1922.	Compared with June 30, 1922.
	£	£	£
Paid-up capital	59.2	—	—
Reserves	47.0	— 0.1	— 0.1
Acceptances and endorsements	64.5	— 0.2	+ 19.0
Deposits (including undivided profits)	1,504.2	— 33.1	— 96.0
Total	1,674.9	— 33.4	— 77.1
Cash, notes, balances at bank, and cheques in course of collection	230.0	— 22.7	— 12.5
Ratio to deposits	15.2 %	+ 1.2 %	+ 0.2 %
Money at call and at short notice	101.7	+ 13.5	+ 1.4
Investments	324.8	— 25.6	— 52.2
Discounts	245.5	— 23.5	— 62.6
Loans and advances	684.2	+ 24.0	+ 28.3
Premises and sundries (including cover for acceptances)	88.7	+ 0.9	+ 20.5

production of flour, cattle movements, and production of animal products, while sugar is traced through production, stocks, transport, refinery, and wholesale and retail prices. But what is still more significant is the series of statistics relating to wholesale and retail trade. Large stores forward to the Department monthly statements of their turnover for purposes of publication, and in this manner a useful barometer is afforded for the measurement of the purchasing power in the hands of the actual consumer. The figures of sales by two large mail order houses—Sears, Roebuck, and Montgomery Ward, as well as those for a dozen chain stores, are given individually. It would add a zest to competition in this country if the *Board of Trade Journal* published every month the turnover of, say, Harrod's, Selfridge's, and Debenhams'. Other tables relate to the most important towns and regions of the country, and are not merely summaries for the whole Republic. In addition, moreover, particulars are given wherever possible of commodity stocks at the end of each month, which throw some light on an important aspect of the trade cycle that has not as yet received the attention it deserves.

It must, of course, be admitted that the careful compilation of statistics of this type is of quite recent origin, and that some years must necessarily pass before their influence will make itself felt to the full. At the same time, every increase in our knowledge of business fluctuations—and it is really surprising how little is as yet known of this most fundamental question—should help towards the regularisation of production. Publicity is not, of course, a universal panacea for all the ills to which the flesh is heir, nor would it provide a popular election cry. But it is clear that investigations of the type we have described should prove of much greater value than abstract discussions of general principles. As we have already suggested, however, it is not enough that these statistics of production and consumption should be collected and interpreted. In the world of to-day the community as a whole, no less than the various sections of labour more directly interested, takes a lively interest in the remuneration of the different agents of production and the relationship between the selling price of commodities and their cost of production. In this direction, too, therefore, there is need for more light; and the example of the coal industry, which now draws up statements of production and costs agreed by the masters and the representatives of the men, is a precedent which might well be followed in the other industries. Nothing is gained by secretiveness in this respect. In fact, it is widely felt that when particulars are refused there must be something to conceal. This in turn results in an atmosphere which cannot but be profoundly disturbing to industrial peace, and which is often fatal to the economic efficiency of the country in consequence. When the need for greater publicity in these respects is widely realised, we think it will be found that many of the defects of the present system are not really inherent in the system itself, but rather capable of definite adjustment in the light of a fuller knowledge.

The decline in deposits this year has been much less pronounced than in the second half of last year. The monthly figures of all the clearing banks showed a substantial fall in July, August, and September of last year, but this was followed by an upward movement until January. In February and March there were two further substantial declines, but there has since been some recovery in the total, which for June amounts to £1,638 millions, as against £1,685 millions for December. Acceptances show a substantial increase as compared with this time last year, but there is practically no change on the six months. Changes on the credit side of the balance-sheet are of more interest; of the increase in loans and advances in the twelve months, the bulk has occurred since the beginning of this year, while money at call, which dropped by £12 millions in the second half of last year, has increased by a slightly larger amount since the turn of the year. These changes in the past half-year have been effected by a continuance of the reduction both in investments and in bills discounted (including Treasury Bills), which was a feature of the latter half of 1922, and by a substantial reduction in the cash item. The ratio of the latter to deposit liabilities, it will be observed, has thereby been reduced by over one per cent., though it is slightly better than it was at this time last year.

While these figures are useful as showing general tendencies, a comparison of the individual balance-sheets shows a remarkable divergence in the changes in the different items. We have therefore tabulated the increases or decreases shown in the main items of the latest balance-sheets of the five banks, in comparison with the figures for December 31st last:—

COMPARISON with DECEMBER 31, 1922.
Million £'s.

June 30, 1913.	Barclays.	Lloyds.	London Joint City and Mid.	National Prov. and Union.	Westminster.
Deposits	— 7.3	+ 3.7	— 8.0	— 5.4	— 16.1
Acceptances..	+ 1.9	— 3.4	+ 0.6	— 0.6	+ 1.3
Cash, &c....	— 7.1	— 0.5	— 1.3	— 6.2	— 7.6
Money at call	+ 2.1	+ 1.8	+ 3.5	+ 2.1	+ 4.0
Investments..	— 1.1	— 6.2	— 17.5	— 1.6	+ 0.8
Discounts ..	— 9.2	— 6.5	— 0.8	— 2.8	— 4.2
Advances	+ 7.7	+ 14.6	+ 7.8	+ 3.0	— 9.1

The only changes which are common to each balance-sheet are the reductions in cash and in discounts. The figures of Lloyds, however, are affected by the amalgamation with Cox and Co., which took effect in February. From the last published balance-sheet of the latter it might be assumed that the amalgamation was responsible for an increase of approximately £12 millions in deposits, and of £5 millions in loans and advances, and of something over £3 millions in cash and money at call; and if these reductions are made, Lloyds' figures come more into line with those of the other banks. The Westminster records not only a decline in deposits, which is much larger than the average, but is also the only bank whose advances have fallen, and that, moreover, by a substantial amount. This may be partly a result of the bank's extensive foreign connections. The drop shown in the aggregate for acceptances is entirely due to the figures of Lloyds, but this bank showed an exceptional increase of £8 millions in this item in the second half of 1922, and the present amount of £12 millions is some £5 millions higher than at this time last year. Another feature of the figures is the very large reduction in the investments of the London Joint City and Midland, accompanied by a relatively trifling decline in bills discounted. The fact that this bank's total investments are the smallest of the five banks, while its total assets are the largest, is significant, and seems to indicate some doubt in the minds of the directors as to the future level of gilt-edged security prices. We welcome the innovation made by Lloyds Bank in separating short-term British Government securities from other British Government securities, and trust that this good example will soon be followed by the other banks.

Considerably more uniformity is displayed in the balance-

sheets of the five principal provincial banks, for which we have compiled a similar table:—

COMPARISON with DECEMBER 31, 1922.
Million £'s.

June 30, 1923.	Bank of Liverpool and Martins.	Lancashire and Yorkshire.	Manchester and County.	Manchester and Liverpool.	Williams Deacon's.
Deposits ..	— 4.7	— 2.0	— 1.5	— 3.1	— 3.1
Acceptances..	— 3.4	— 0.3	— 0.2	— 1.3	— 0.1
Cash, &c. ..	— 2.2	— 0.2	— 1.3	— 0.7	— 1.0
Money at call	— 1.1	— 0.8	— 0.3	— 1.6	— 0.5
Investments..	— 2.6	— 0.8	+ 0.5	— 0.9	— 1.1
Discounts ..	— 1.0	— 1.2	— 0.5	— 0.9	— 1.1
Advances ..	+ 2.2	+ 0.3	+ 0.1	+ 0.1	+ 0.7

There is here a very definite decline in acceptances, while the increase in advances is relatively small. Taking the figures as a whole, the half-year's changes do not afford very much ground for optimism in regard to an expansion in trade. In the second half of last year the volume of acceptances increased heavily, but since the end of the year, in spite of the fillip given to some branches of overseas trade by the Ruhr occupation, there has been a decline in this item in the aggregate, while the expansion in advances, though large in the case of three of the banks, has not yet assumed the proportions which one would associate with real trade activity. Moreover, in the case of the provincial banks, the increase is very small, and it would be interesting to know how much of the increase shown by the London banks is a result of genuine trade accommodation. In the final table we compare the ratios of the advances of the big five banks to their deposit liabilities at the end of each of the past three half-years, and at the middle of 1914:—

RATIO of ADVANCES to DEPOSIT LIABILITIES.

	June 30, 1914.	June 30, 1922.	Dec. 31, 1922.	June 30, 1923.
Barclays	45.0	40.1	41.7	45.4
Lloyds	52.7	36.1	37.1	41.1
L. Joint City & Midland	56.9	48.0	51.2	54.6
National Provincial...	45.0*	45.1	46.1	48.4
Westminster	48.1	35.0	38.0	36.5
Total	50.7	41.0	43.0	45.4

* Union of London and Smiths.

For the sake of comparison we have given the figures of the Union of London and Smiths Bank in the first column, because the discounts and advances of the National Provincial were not separated. As compared with this time last year there is an increase in each case, but for the Westminster the ratio has declined since December. From these figures it would appear that there is room for expansion in loans and advances in the case of at least two of the banks, when the need arises.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

DURING the past quarter spinners and manufacturers in Lancashire have continued to experience an unsatisfactory state of affairs. Now and again rather more business has been done, but no buying movement has been of long duration, and it has not been possible for producers to secure sufficient orders to enable them to present a stiffer front to customers and demand remunerative prices. It may be said that in the finer end of the industry, that is to say, Egyptian yarns, and cloths produced from Egyptian yarns, conditions are healthier than at the beginning of the year. The depression is most acute amongst makers of plain cloths and common qualities of yarn. Cases of financial difficulties continue to be reported, and it is feared that failures have not come to an end, but in certain quarters the financial stringency is not so severe as a little time ago, and numerous firms have fewer accounts outstanding.

During the past three months important developments have occurred relating to raw cotton supplies. More is

now known as to the prospects for the American crop for 1923-24. During the early part of June the climatic conditions in the growing area were unfavourable, the plants being adversely affected by heavy rains and low temperatures. During the past month, however, there has been a welcome improvement, and the growth is now making good progress. At the beginning of July the Government published a condition report, which was about equal to expectations. The forecast of the acreage, however, was a surprise, being over 38,000,000 acres, which is a record, against 34,000,000 acres a year ago. On the basis of the statistics published, the Agricultural Bureau estimate the probable yield at 11,400,000 bales, against about 10,200,000 bales for 1922-23. The outlook continues healthy, and there is a tendency to increase estimates of the output. With regard to prices, the quotation for Fully Middling, on the spot in Liverpool on March 29th, was 14.90d. By April 10th the price had risen to 16.34d, but on the 16th the quotation was 15.46d. Wide fluctuations continued to take place, and after 15.36d being posted on May 1st, the price on May 8th was 14.19d. By the 31st there had been an advance to 16.02d, and the figure on June 12th was 17.28d. There was a drop to 16.18d on June 19th, and 16.67d was registered on June 29th. On Wednesday last the quotation was 15.71d. The statistical position of American cotton is rather serious. The world's visible supply is less than 1,000,000 bales, against 2,284,000 bales a year ago, and 4,240,000 bales two years ago. With regard to the crop in Egypt, an increase in the acreage of about 10 per cent. is likely. During the last few weeks the news relating to the growth has been very encouraging, and there is every probability of a large output. The quotation for Fully Good Fair Sakellaridis Egyptian cotton on the spot in Liverpool on March 29th was 17.40d. Not much change occurred during April, but on May 8th the figure was 15.40d. There was an upward movement in June to 16.50d on the 11th, but 16.20d was registered on June 29th and 15.65d on Wednesday last.

Manufacturers of piece goods continue to struggle against adverse conditions. Some producers of fine fancy styles have rather more work to go on with than three months ago, but in ordinary qualities of cloth makers cannot obtain any relief. It is estimated that over 40 per cent. of the looms in Lancashire are stopped owing to the absence of orders. Up to quite recently the home trade demand was checked by the unsatisfactory weather, but during the past fortnight there has been a distinct improvement in the turnover in light summer materials. With regard to export demand, the general inquiry has been fairly extensive, but in most instances the prices offering have had to be refused. It has been almost impossible for leading customers to pay current rates for lots of quantity. The monsoon season in India began rather badly, but a recovery has now been experienced. There has been increased activity in light fabrics such as dhooties, and some substantial contracts have been arranged for Calcutta and Bombay. In grey shirtings there has not been any flow of orders, and producers are doing very badly. Recently a better turnover has been reported in printed and dyed sorts. A welcome improvement has shown itself in the demand for China. This has been partly due to the boycott of Japanese goods, and there has been a rush in Shanghai and Hong Kong for European styles. Buying of an encouraging character has taken place in grey and white shirtings and sheetings, and considerable activity has also prevailed in fancies of various kinds. Operations during the quarter for the Near Eastern outlets have been unimportant, but owing to the better political news from Turkey there are hopes of a trade revival before very long. Shippers to South America have not given much support. Fine goods have attracted a fair amount of attention for the United States, but now and again instances have been mentioned of contracts being cancelled as a result of buyers being overbought.

The following is a comparative table of shipments of

cotton cloth from the United Kingdom, the figures being for the six months ended June in each year:—

	Yards.	£
1913	3,582,788,800	48,756,738
1920	2,396,798,000	153,347,097
1921	1,211,021,700	75,104,452
1922	1,850,860,000	67,391,014
1923	2,106,868,600	70,098,846

Compared with last year we are exporting on a larger scale to Bengal, Bombay, the United States, the Argentine Republic, and Chile, but the takings are smaller for China, Germany, Switzerland, Australia and Belgium.

Spinners of American yarns continue in a wretched position. For three months no relief whatever has been obtained. Curtailment of production on an organised scale continues, and the committee of the Masters' Federation has recommended the members to restrict output by 50 per cent. up to the end of August. Owing to the holidays, which are now taking place, the output of the factories is very limited. The demand from users continues poor. Now and again a few more orders have been placed in medium counts, but the requirements of customers are easily satisfied. In order to assist spinners, the Masters' Federation has put into operation a basic prices scheme. The official quotations, however, are above market rates, and it has been quite impossible to establish the minimum prices. The scheme is being continued, but the movement can only be described as a failure. In yarns made from Egyptian cotton, the undercurrent of demand has kept up fairly well, and most of the mills in Bolton and district remain busy. Fine combed numbers, however, are more favourably situated than coarse carded counts. Operations in yarns suitable for shipment abroad have been irregular. The bulk of the buying has been for India, chiefly in the higher counts. Trade with European countries has not developed, and no improvement is anticipated until the political situation is more promising.

An analysis of the June stocktaking announcements of 95 Lancashire spinning concerns shows that 66 companies have not been able to make any dividend distribution to shareholders. These 95 companies have a total paid-up ordinary share capital of £11,053,607.

The following is a comparative table of yarn shipments from the United Kingdom, the figures being given for the six months in each year:—

	Lbs.	£
1913	106,409,000	7,512,062
1920	78,614,700	23,912,824
1921	50,638,100	10,301,588
1922	106,309,100	14,242,341
1923	70,225,700	10,170,024

During the quarter a satisfactory arrangement has been come to between the employers and the operatives on the wages question. The fresh agreement which was reached at the end of May provides for no change in list rates before January 25, 1924. After that date the employers will be at liberty to take whatever action they think fit on giving one month's notice, but the trade unions cannot make any application for a general advance in wages before September 25, 1924.

Much uncertainty exists at the moment in the Man-

chester market as to the probable course of prices during the next few months. A great deal depends upon the weather experienced in the American cotton belt. On the whole, there are indications of the yarn and cloth requirements of buyers becoming more urgent, and the undercurrent of inquiry is healthier than a little time ago. The chief obstacle to a revival of trade is relatively high prices, and it must not be forgotten that cloth is two and a-half to three times dearer than in pre-war days. The unsettled political situation throughout Europe is also a very unfavourable factor, and many people believe that no real improvement in export trade will take place until more peaceful conditions exist on the Continent. In some quarters there are indications of buyers having adopted a short policy, and should there be a turn in prices some people may be caught. It is reasonable to anticipate some improvement in industrial conditions this autumn.

THE PROFITS OF LONDON STORES.

It is often thought that the large shopping emporiums of our West End depend for their existence on luxury buying. This is really not so, and it is another significant feature of the complexities of our modern life to find that although trade depressions naturally leave their mark on these shopping centres, in the main, support is derived from people in all walks of life without particular regard to any distinct class.

In the tables below we set out the figures for 15 companies with large shops or stores in London, showing how they fared during 1922. These undertakings may be considered to be fairly representative of the industry. In our first table we show the net profits of these companies over a period of years:—

NET PROFITS.

Company.	1913.	1917.	1918.	1919.	1920.	1921.	1922.
Army and Navy.....	£192,739	£241,366	£251,009	£335,521	£246,047	£14,348	£133,582
Civil Service Supply...	44,911	55,722	54,434	70,807	57,707	48,320	51,761
D. H. Evans.....	69,923	69,318	94,465	169,281	134,729	115,183	126,974
Dickins and Jones.....	60,406	66,105	100,198	126,252	105,779	69,574	86,163
Frederick Gorrings.....	33,222	49,992	43,144	61,947	49,331	48,359	57,464
Harrod's.....	295,181	282,293	352,042	583,635	536,042	200,268	484,120
Jay's.....	40,857	15,917	33,870	94,229	21,659	Dr20856	10,940
John Barker.....	63,907	85,284	103,772	263,867	291,509	306,103	331,885
Liberty and Co.....	61,534	61,619	99,047	129,154	118,515	30,105	41,482
Maple and Co.....	206,930	285,401	463,159	473,038	447,195	95,834	175,415
Mappin and Webb.....	54,250	46,780	66,975	86,982	105,689	79,427	17,340
Selfridge and Co.....	112,396	240,832	305,695	355,735	358,821	326,722	304,655
Spencer, Turner.....	37,194	55,675	74,578	107,396	60,856	7,289	67,831
Thomas Wallis.....	23,118	33,241	58,762	77,769	47,931	22,374	30,578
William Whiteley.....	70,633	77,745	155,562	263,566	269,989	152,431	204,295
	£1,368,102	£1,667,290	£2,257,511	£3,199,249	£2,851,929	£1,495,281	£2,104,485

From the comparatively poor results of last year a substantial progress is recorded, aggregate profits rising from £1,495,281 to £2,134,485. But although many of these undertakings are able to show better results, complaint is made in many quarters not only of the fall in prices, but of losses sustained through adverse foreign exchanges. Two companies in particular, namely, Maple and Co. and Mappin and Webb, the latter company, having extensive interests in France, Italy, Brazil, and Argentina, have been affected by adverse exchange movements.

The next table shows the appropriation of profits for 1922:—

	Net Profit.	Reserve, Depreciation, &c.	Prof. Div.	Ordinary Dividend.	Carried Forward.
Army and Navy.....	£133,582	£8,500	..	£123,000	15 + 2,083
Civil Service Supply.....	51,761	14,500	..	49,540	14 + 2,280
D. H. Evans.....	126,974	18,997	12,000	54,035	18 + 23,942
Dickins and Jones.....	86,163	..	12,500	24,500	7 + 2,482
Frederick Gorrings.....	57,464	11,479	14,000	30,000	15 + 1,994
Harrod's.....	484,120	..	300,000	153,200	8 + 26,550
Jay's.....	10,940	..	10,312	..	.. + 741
John Barker.....	331,885	60,000	10,175	209,000	20 + 52,710
Liberty and Co.....	41,482	20,000	6,000	20,000	20 + 483
Maple and Co.....	275,415	..	60,000	180,000	10 + 35,415
Mappin and Webb.....	17,340	..	122,125	7,375	24 + 12,160
Selfridge and Co.....	304,655	71,000	184,615	50,000	10 + 960
Spencer, Turner, & Boldero	67,831	4,550	10,800	36,521	8 + 15,962
Thos. Wallis.....	30,578	1,000	9,000	20,000	10 + 578
Wm. Whiteley.....	204,295	24,000	20,250	90,000	20 + 56,748

+ 6 months dividend.

Unfortunately, there is a tendency in some cases to maintain rates of distribution at the expense of any substantial strengthening of reserves. The appropriation account of Dickins and Jones provides us with an interesting field for speculation. In the above table we have shown no figures under allocation to reserves. According to the appropriation account, £20,000 was carried to the general reserve, but a debit item appears of "Interest on bankers' loan, £51,047." This is reduced by a transfer "from reserve for future development" of £24,365, so that on balance reserves are worse off. Jay's no longer show a deficit. Last year a gross profit of £23,466 was secured, but income-tax, corporation profits tax, and directors' fees reduced these promising figures to £10,940. Mappin and Webb's distribution has been curtailed this year, only an interim dividend of 2½ per cent. having been paid on the ordinary shares, which is in striking contrast to the 10 per cent. of a year ago. Selfridge's dividends are free of tax. Whiteleys, in particular, show remarkable progress, the dividend of 14 per cent. on its ordinary capital increasing to 20, and absorbing £90,000, as against £68,108 a year ago; moreover, the amount carried forward at £260,582 is £56,748 higher.

Amongst trading companies, our London store undertakings offer more information in their balance-sheets than is vouchsafed by companies in many other industries. Assets are well set out, while liabilities are given in considerable detail. The Army and Navy Co-operative and Civil Service Supply stands out prominently in this connection. In America the big stores give a very valuable index to the trend of trade by publishing figures of monthly gross sales. We would suggest to directors that this is a practice which might be followed in this country. In these days, when everyone is seeking for straws to show the course of the trade wind, such figures should prove invaluable.

Probably the most interesting item in the balance-sheets of these stores is "stocks," the figures of which we have extracted from accounts for the last two years, and now show them, with total assets for comparison:—

Company.	1921.		1922.	
	Total Assets.	Stocks.	Total Assets.	Stocks.
Army and Navy.....	£759,715	£421,216	£782,176	£363,345
Civil Service Supply.....	2,586,600	933,733	2,623,167	740,063
D. H. Evans.....	1,078,331	187,910	1,117,425	182,639
Dickins and Jones.....	1,793,423	137,640	1,974,581	145,352
Frederick Gorrings.....	612,106	121,237	628,043	122,852
Harrod's.....	8,925,992	1,229,983	8,777,514	1,091,252
Jay's.....	619,786	602,153	602,153	87,827
John Barker.....	3,715,407	669,891	3,608,898	698,793
Liberty and Co.....	971,160	357,233	935,859	286,383
Maple and Co.....	5,158,988	1,764,648	5,061,477	1,628,974
Mappin and Webb.....	2,078,970	588,259	1,929,888	501,729
Selfridge and Co.....	4,483,723	593,617	4,519,625	521,982
Spencer, Turner.....	894,666	207,335	910,420	213,355
Thomas Wallis.....	736,955	176,065	706,979	162,136
William Whiteley.....	3,294,998	394,104	3,200,498	365,845

It will be observed that the general fall in values during the year under review, which has given so much concern to directors, is fully reflected in these figures, and only in two instances are stocks actually higher. It is a significant feature of the drapery trade to find that stocks occupy such a small ratio to total assets. Thus D. H. Evans show stocks of £182,639, against total assets of £1,117,425; while Dickins and Jones' figures are more remarkable—stocks amounting to £145,352 out of assets of £1,974,581. Furniture and other stores invariably appear to be compelled to sink more money in stocks. The banking departments are still retained by some stores. Harrod's show deposits of £921,763, as against £1,078,357 a year ago, but Whiteley's banking department shows a growth of deposits from £495,239 to £532,966.

Our final table shows dividends together with share quotations and yields obtainable from representative shares in this group:—

Company.	Amount of Share.	Dividends for Past Six Years.						Price End June, 1922.	Price July 16, 1923.	Present Yield.
		1917.	1918.	1919.	1920.	1921.	1922.			
Army and Navy.....	10/6	333/8	350/8	350/8	35	10	15	(b) 1 1/2	1 1/2	6 13 3
D. H. Evans.....	1	12 1/2	15	20	20	17 1/2	18	2 1/2	2 1/2	8 9 6
Dickins & Jones.....	5	5	6	7	7	7	7	3 1/2	4 1/2	6 13 3
Frederick Gorrings.....	1	9	9	15	15	15	15	1 1/2	1 1/2	9 4 6
Harrod's.....	1	15	17 1/2	20	17 1/2	5	8	1 1/2	1 1/2	4 9 6
Jay's.....	1	2 1/2	6	17 1/2	10	Nil	Nil	2 1/2	2 1/2	Nil
John Barker.....	1	10	11	20	20	20	20	2 1/2	2 1/2	8 4 0
Liberty and Co.....	10	20	20	20	20	20	20	4 1/2	4 1/2	16 0 0
Maple and Co.....	1	13 1/2	15	20	17 1/2	7 1/2	10	1 1/2	1 1/2	6 13 3

Thomas Wallis.....	1	10	13	16 1/2	14	10	10	1 1/2	1 1/2	7 5 6
Wm. Whiteley.....	1	6	8	14	14	14	20	1 1/2	2 1/2	7 8 9

* Yield on 5% cum. pref. + 6% cum. pref. † Paid on 1s shares.
(a) Free of tax. (b) End of April, 1922.

It is evident that the accounts of these undertakings have been considered by the investing public to be of a fairly satisfactory nature, prices showing substantial improvements in most cases. At the same time, the rather wide variations in the yields obtainable perhaps indicate that some of the companies at least may have difficulty in maintaining the higher dividends.

SOME LESSONS OF THE AUSTRIAN EXPERIMENT IN RECONSTRUCTION.—II.

THE most notable activity in Austria at the moment is the Stock Exchange boom, to which we referred last week. The basis of the movement is simple. Shares in Austria have, as elsewhere in inflationist countries, risen very much indeed, but they have not risen to the same extent that the exchange depreciates. The plant and labour is there, so that the physical means of production are intact. People therefore argue that since the crown is now stabilised, all values, including not merely wages and prices, but property also, will gradually revert to a world basis. In other words, they will rise to the extent of the depreciation of the crown, plus the depreciation in the world value of gold. Thus if gold prices are taken as 50 per cent. above those of 1913, bricks and mortar in Austria should be worth in the long run 50 per cent. more gold crowns than in 1913. On such a basis the stocks and shares quoted in Austria at the beginning of this year were only a fraction of their "normal" value. The recognition of this fact has led to the boom now in progress. The means by which the boom has been carried out is the Austrian and foreign capital which has been returning to the country, and has been taken to the bank of issue in the form of foreign currency credits and exchanged for Austrian crown notes. All such arguments as to the value of securities may, however, easily be pressed too far. The value of plant is not a physical fact, but a result of economic conjuncture. Actually, Austria's industrial plant is in a backward and depreciated condition as a result of the war and the economic débâcle since the Armistice. Economically, the earning capacity of this plant is very uncertain, because of the break-up of the Austro-Hungarian Empire, the high tariffs of Austria's neighbours, and the uncertainty as to whether she can find markets farther afield in Asia Minor, the Balkans, &c. The commercial future of Vienna can be regarded with confidence. The industrial future of the country is less certain. The prudent investor would not, therefore, regard the present value of Austria's stocks and shares as being equivalent to pre-war value, but would allow a substantial discount. At the moment, however, values are being fixed on a much more short-sighted view. If money continues to pour into Austria, it will come in the hope of finding profitable employment, and the Stock Exchange is the only outlet for it.

Before passing from the financial side of the Austrian experiment, a word may be said on the issue price of the loans, the details of which we gave last week. Criticism has been made in Great Britain that the terms were too favourable to the lenders, and that the backing of the chief Governments of Europe should have made it possible to issue a loan on something much more like gilt-edged

terms. This criticism, however, quite misjudges the position. In the first place, it was never expected that Great Britain would be called upon to furnish so much as £14 millions. Just before the loan came out India had applied to the London market for £20 millions and had received ten from the public. Earlier in the year Roumania, offering the proceeds of an export tax as security, and relying on the fact that she has vast natural resources, asked for £1½ millions and received £600,000. When the Austrian loan was first discussed it was hoped that America might put up as much as Great Britain, and that Holland, Spain, and Switzerland would help substantially. The figures that we gave last week show that one after another of these expectations failed. If the loan had not succeeded in Great Britain, it would have failed altogether, and if the Austrian experiment had not succeeded under conditions in which there are fewer political difficulties than in any other possible case that might arise in Central Europe, it was certain that there could be no hope of international co-operation for the financial reconstruction in Europe that would have any hope of success. For the last two years the financial community of Great Britain had been strongly impressed with the imperative necessity of making a success of reconstruction efforts in Europe. It was in this atmosphere that it was agreed to make up in the London market the deficits in the share of other countries. But it was by no means certain what view the money market would take of a composite guarantee. The investor knew that the fraction of his interest, guaranteed by Great Britain, was safe; but what would his reaction be to a guarantee of part of his interest by Czecho-Slovakia, part by Italy, and part by France? In the event it has been shown that the loan could be floated on much better terms than Czecho-Slovakia, a State with a much more assured economic future, was able to secure. But this may perhaps be accounted for by the knowledge that Austria is for a time, at all events, to be under the control of a supervisor, to be appointed by the Council of the League of Nations. It is difficult to say to what extent the assurance of good financial behaviour, as compared with the joint guarantee, is responsible for the price of Austrian credit, and on the whole we must suspend judgment as to whether this particular device is or is not satisfactory in such schemes. With these doubts in mind, it was imperative that the terms must be such as to make the loan succeed. The Governor of the Bank had in his favour the instinct of the whole financial community, as well as the enthusiasm of a very large body of political opinion in Great Britain which was anxious that the League of Nations should make a success of this great constructive effort. The very large number of applications for a minimum of £100 is proof of this wide-spread interest. The loan was attractive, and the investor also knew that he was supporting British public policy.

When we turn to the internal condition of Austria, the first thing that strikes us is the enormous social importance of a stabilised currency. Up to the middle of last year Austria was suffering from the demoralisation which a depreciating currency brings with it. Among the working people there was a general feeling that they were being exploited, that the wealthy were evading taxation, that their own wages became worthless almost as soon as they were received, that saving was useless, and that money must be immediately turned into goods. People of frugal habits endeavoured to purchase durable goods, while others spent all they had on food and drink.

It is difficult to say how much of this demoralisation was due to the after effects of the war and how much to the actual depreciation of the currency. The combined result, however, was that in the industrial districts work fell off and discipline completely disappeared. In one centre in Austria, where iron ore is produced and converted into steel, we are informed not only that drunkenness was rife, and that even the school children got completely out of hand, but that the workpeople openly flouted the authority of the management, while thieving from the works was of almost daily occurrence. Thus when a motor from an overhead crane in the works was stolen—a feat obviously requiring a considerable amount of team work on the part of expert mechanics—the police of the district, who shared their headquarters with the local trade union,

and were largely recruited from the ranks of the socialists, took no steps to trace the culprits, and the workers' organisation entirely refused to allow any investigation to be made in the works. Moreover, in the last two years the workers' organisation kept certain of the supervising engineers out of the works for months at a time, and it was not unknown for recourse to be had to physical violence in the offices of the company during wage negotiations. With the stabilisation of the crown, and the advent of unemployment, however, all this changed. The Utopian hopes held out by Socialist governments had been falsified in actual practice, and the fear of unemployment began to operate to produce an increased output among those left at work. The sense of discipline returned, and with renewed faith in the value of money the natural instinct to save and to obtain security against economic variations reasserted itself. In January of this year unemployment reached its maximum, but with the invasion of the Ruhr and the transfer of many orders to Austria, the position improved to such an extent that these particular works are now fully employed. But work is being carried on under something like pre-war conditions of output, discipline, and morale.

In Vienna itself public hygiene, which began to improve through the efforts of the American Relief Administration, has gone steadily ahead under the new reform scheme. The diseases consequent on underfeeding have disappeared, tuberculosis is no longer the menace it was only a short time ago, while infant mortality is falling steadily. All these symptoms are having their effect upon the personal efforts of the population. The Catholic organisations are very strong in Vienna; boy and girl scout movements and gymnastic clubs are flourishing, and social life generally is proceeding on more healthy lines.

The housing question, on the other hand, seems to be as far off a solution as ever. The refusal to allow an increase in rents in Vienna, as in Berlin, means that masses of people are living rent free, while the owners have in reality had their property confiscated. Apart altogether from the effect on the former house-owning classes, who, of course, are quite unable to do any repairs, the wages level has become adjusted on a basis which allows nothing whatever for rent, and in such circumstances the building of new houses is quite impossible. It is very difficult to see what the solution of this particular question will be.

The position of the middle classes still remains very difficult. The incomes even of professional people are quite inadequate to maintain their pre-war standard of living, while pensioners and those dependent on interest-bearing securities are extremely badly off. Such questions will take years to correct themselves, but they do not substantially alter the fact that for every class of the community there is to be found a new spirit of hope.

Notes of the Week.

Turkish Peace at Last.—In the small hours of Tuesday morning the parties at Lausanne again arrived at an agreement, as they had done (and subsequently undone) a few days before. This might seem to augur that the Conference would resolve itself into one of those division sums which, after throwing up a long and varied array of figures, end at last upon a recurring decimal. To agree at 1.30 a.m. every third day, with time to recuperate and disagree in the interval, is a process which might very well go on for ever; but happily we are assured that there was a profound difference between the two nocturnal achievements. The first agreement was in principle, the second in detail, or, in other words, the Allies have given way, as they were expected to do, on the private economic issues which had been the remaining obstacle to a settlement. Things usually return to their origins in the end, and so the Lausanne Conference—after the Armenians had long been abandoned and forgotten, and the Greeks and Turks of Western Anatolia ruined and evicted—came back to those economic relationships with which the contact between the Western Powers and Turkey originally began. The really important event of the last days seems to have been a victory of the American over the British point of view regarding the British-owned "Turkish

Petroleum Company's" concession. Sir Horace Rumbolt followed General Pellé's precedent in the case of the bondholders of the Ottoman Debt, and contented himself with a declaration that the British Government would hold the Turkish Government responsible for what were the Turkish Government's obligations in the British Government's opinion. But he said nothing about sanctions, and prudently declined Ismet Pasha's proposals to submit the validity of this concession to arbitration—a step which might "open a door" through which many imposing foreign interests in Turkey would vanish away. The British delegate and the American observer then politely reminded each other of their respective Governments' disagreement regarding oil, and soon afterwards the handshakings and congratulations began. Thus the Turks have won the economic as well as the military and political battle, but it is too early yet to see what the effects of their victory will be. Foreign enterprises in Turkey have differed greatly in character, and the credit of the Turkish Government will turn on its treatment of those whose titles are beyond dispute, and which have put solid work into the development of the country. In this connection, the agreement concluded at Angora with the representative of the Aidin Railway is a good stroke of business from the Turkish point of view. Meanwhile, the better understanding between Turkey and Greece, or at any rate between Ismet Pasha and M. Venizelos, which began to manifest itself as soon as the Allies' economic interests came into the foreground, is making satisfactory progress. M. Venizelos has taken effective steps to remove possible causes of future friction over the status of the Ecumenical Patriarchate, while Ismet Pasha, on his side, has secured amnesties for Turkish subjects of Greek nationality recently convicted in Turkish courts of crimes committed during the Greek military occupation. All who desire peace in the Near East will applaud any break in the chain of reprisals which stretches back beyond the memory of man. It needs force of character to break with such a deeply-rooted Near Eastern tradition, but if the bitter memories are given a chance to fade, the relations between the peoples may be transformed, and the West may be shocked to find "Oriental Diplomacy" most incorrectly presenting a united front. Now that the contest of wills is over, both parties must look at the facts as they are. The West must admit that it has lost its old omnipotence in Turkey, and the Turks that they have not gained complete independence of the West.

Irish Affairs.—Our Dublin correspondent writes:—Some secrets are well kept in Dublin. Not a ripple in the public Press has marked the entente between the Government and the Irish banks and the arrangements made to enable the former comfortably and honourably to pay its way until the pending election and the subsequent national loan take place. The fact of the arrangement and certain of the attendant circumstances upon which it would be indiscreet to enlarge are a convincing answer to the somewhat malicious innuendoes at the expense of the Free State credit by which partisan rancour, not from one quarter alone, seeks to vent its spleen upon the new political system it hates. Meantime, business is looking up in spite of labour troubles. These are, as is their way everywhere, sufficiently embarrassing, but are scarcely likely to endure in an acute form. They are in part due to post-war unsettlement, warring factions amongst labour leaders, bad housing, and high cost of living. The Government is pushing through its full programme of legislation, including the very comprehensive scheme of Land Purchase and its Emergency Powers Bill. Its firmness of purpose is making many friends for it in unexpected quarters. If it has made mistakes, it is realised that they are relatively small and unimportant when viewed in relation to its crowded record of achievement in matters legislative, executive, and administrative under circumstances of most extreme difficulty. A sign of the times, and a direct result of Ireland's fiscal independence, is the migration to Ireland of certain businesses previously trading with her from a distance. Thus Messrs Player and Messrs Wills are both starting, or about to start, factories for the manufacture locally of their characteristic products as consumed by the Irish public. The Irish business of the Anglo-American

Oil Company is to be managed by a subsidiary company registered in Dublin. Recently, also, Vickers, Ireland, was registered—another member of the subsidiary group through which the multifarious activities of the parent Vickers' enterprise are carried on. The two latter cases are, of course, little, if anything, more than agencies, though in the latter instance, at least, it might easily ripen into a great deal more. All of them, however, tend to increase the fund of profits assessable to income-tax in Ireland. Reports from the country state that the people are thronging to the local courts, and that there is in many districts what might almost be described as a rush to pay debts. The Fiscal Committee's labours will be the occasion of the opening stage of the battle which will rage over the Free-trade versus Protection controversy as it will appear in Ireland. The public has not thought about it much in the past, but believes generally that British Free-trade, viz., the repeal of the Corn Laws, hit Ireland very hard. It knows that most countries are more or less Protectionist—and had heard something of alleged scientific tariffs in the United States and in Germany as directly tending to national development. There have been many more or less vague hankerings after a full-blooded scheme of Protection as a royal road to Irish prosperity, and the various interests have not been slow to seek to exploit them for their own benefit. The Fiscal Committee's labours will serve to promote reflection, and to ripen thought. Its pronouncements, when they come, will help to clear the air. Ireland's case is not the case either of the United States or of Germany. The predominating industry of Ireland is agriculture, and the great bulk of her exports consist of agricultural produce (inclusive of live stock). The farmers may not prove anxious to be taxed upon all their non-agricultural articles of consumption. Again, it has yet to be realised that under ordinary conditions the bulk, if not all, of an import duty is paid by the importing country. The effect, too, of import duties on the cost of living—the indirect effect as well as the direct—has yet to be studied. It is not unlikely that the Committee, when reporting, will make such matters clear, and will indicate that the promotion and development of Irish industries on self-supporting lines had best be sought by providing facilities as to education, technical training, information, credit and transit, and such like matters rather than by either bounties or import duties.

Indian Borrowings and Spending.—When the committee stage of the East India Loans Bill came before the House of Commons on Tuesday, Sir R. Hutchinson moved an amendment to the effect that at least 75 per cent. of the proceeds of Indian loans raised in London should be expended in Great Britain. This amendment was negatived without a division, but the discussion was remarkable for the support accorded to the amendment by Mr Austen Chamberlain and Mr Lloyd George. In spite of this distinguished support, Earl Winterton, on behalf of the Government, easily killed the proposal, his two decisive points being, first, that India was at present spending no less than 95 per cent. of her London loans in direct purchases in this country, and, secondly, that the principle had been accepted that India should be left free to purchase in the best market. The Chairman ruled out of order a general discussion on the wider question of imposing restrictions of this sort upon overseas borrowings in London. This, perhaps, was a pity, because such a discussion would have shown up in clearer light the folly of Sir R. Hutchinson's proposal, which, if carried, would, as Mr Lloyd George admitted, have had to be applied impartially not only to India, but to all overseas borrowers. But in spite of Mr Hope's ruling, the discussion did succeed in making a few excursions into the general field. Mr Wise pointed out that, whether the proceeds of a foreign loan were spent directly here or abroad, the benefit to British trade accrued just the same in the long run. The following was his principal example:—"Supposing Norway gets a loan here for £3,000,000 to buy coffee in Brazil. Norway floats the loan here..... Norway buys the coffee from Brazil, but the money does not leave this country. The actual position is that Norway gets the coffee from Brazil to her country. The £3,000,000 is transferred from the credit of Norway to

the credit of Brazil. Brazil orders machinery in this country, and the £3,000,000 leaves this country not as cash, but as goods." That is a rather crude and compressed statement of the "triangular trade" argument; but it suffices as a reminder that, in the long run, loans overseas floated in London must be used to stimulate British trade. But if Mr Lloyd George distrusts the triangular trade argument, it is surprising to find that he scents no danger in imposing what would be in essence a protectionist restriction upon the free activities of the greatest international money market in the world. It would be protectionist in effect, because, as Sir Frederick Banbury stated, it would remove the element of competition. Sir R. Hutchinson's policy might imperil London's premier position as international lender, and in so far as it did so, would damage instead of assisting British trade. It would not have appeared necessary that such simple home-truths should be stated, either in the House of Commons or in the *Economist*, if it had not been shown to the amazement of the City that two ex-Chancellors of the Exchequer have as yet failed to comprehend them.

Employment in June.—The official statistics of unemployment for June show a slight improvement, the percentage unemployed among members of trade unions from which returns are received by the Ministry of Labour being 11.1 per cent., as against 11.3 at the end of May and 15.7 per cent. at the end of June of last year. In the majority of industries employment was still slack, but it was good in coal mining, tinplate and steel sheet and carpet industries, and fairly good in tailoring, paper, coach-building, and certain sections of the metal trades. The table below shows the trade union percentage of unemployed for a number of years:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8	13.7
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3	13.1
March	1.9	0.3	1.2	2.9	1.1	10.0	16.3	12.3
April	1.7	0.3	0.9	2.8	0.9	17.6*	17.0	11.3
May	1.9	0.4	0.9	2.1	1.1	22.2*	16.4	11.3
June	1.9	0.4	0.7	1.7	1.2	23.1*	15.7	11.1
July	1.9	0.4	0.6	2.0	1.4	16.7	14.6	..
August	2.0	0.5	0.5	2.2	1.6	16.3	14.4	..

October	2.2	1.1	0.4	2.6	5.3*	15.6	14.0	..
November ..	2.0	1.1	0.5	2.9	3.7	15.9	14.2	..
December ..	2.6	1.4	1.2	3.2	6.0	16.5	14.0	..

* Excluding coal miners.

The percentage unemployed among workpeople insured under the Insurance Acts in Great Britain and Northern Ireland was 11.0 per cent. at June 25th, the same percentage as at May 21st, which compared with 13.1 per cent. at the end of June, 1922. These figures include a due proportion of claimants to benefit in respect of systematic short time, previously not included. The total number of workpeople registered at the unemployment exchanges as unemployed at June 25th in Great Britain and Northern Ireland was approximately 1,226,000, as against 1,261,000 at May 28th.

Cost of Living.—The Ministry of Labour's calculations of the cost of living of a working-class family show that in June there was no change in comparison with May, the average percentage increase as compared with July, 1914, for all items included in the statistics remaining at 69 per cent. :—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.	1923.
	%	%	%	%	%	%
January 1st..	85.90	120	125	165	92	78
February ..	90	120	130	151	88	77
March ..	90	115	130	141	86	76
April ..	90.95	110	132	133	82	74
May ..	95.100	105	141	128	81	70
June ..	100	105	150	119	80	69
July ..	100.105	105.110	152	119	84	69
August ..	110	115	155	122	81	..
September ..	110	115	161	120	79	..
October ..	115.120	120	164	110	78	..
November ..	120.125	125	176	103	80	..
December ..	120	125	169	99	80	..

For food alone the average increase was 62 per cent., as against 60 per cent. at the end of May. Potatoes and eggs were dearer at the end of June, but there were slight falls in sugar, cheese, butter, and some descriptions of meat.

The Sea Carriage Bill.—The Select Committee to which, as mentioned in the *Economist* of June 2nd, the Sea Carriage Bill was referred, has now reported in favour of the measure. Assuming that the Bill completes its remaining stages in the Lords before the adjournment, the probability is that it will be dealt with in the Commons during the autumn. The great majority of commercial men are, as the Committee found after hearing a number of representative witnesses, strongly in favour of the proposals. There will be a few amendments on points of detail in the clauses of the Bill itself, but the Rules for international application, which are in the Schedule, will stand substantially unaltered. The passage of the measure into law will, it is suggested, "put an end to a controversy which has existed between shippers and shipowners for many years," and may also lead to the adoption by the legislatures of other countries of the agreement embodied in the Rules. The legal objections of Lord Justice Scrutton and Mr Mackinnon, K.C. (both of whom gave evidence before the Committee), were considered not to outweigh the advantages to be gained by giving statutory force to the Rules. The legal criticism, Sir Norman Hill pointed out in his evidence before the Committee, ignored the broad policy upon which the Rules are based. That policy, as he explained, "is founded on the assumption that overseas commerce as a whole will be promoted and facilitated by making all bills of lading a better security to their holders. And it is to be made effective by attaching to all bills of lading, in all trades, certain uniform, minimum, inalienable rights as against all classes of shipowners." This policy, as Sir Norman went on to remark, will place the bill of lading on a footing somewhat similar to that occupied by the bill of exchange. This, Lord Sterndale's Select Committee is satisfied, is what is desired by shippers, shipowners, bankers, and underwriters, and the Bill may be regarded as having now passed the crucial point in its progress through Parliament.

Treaty with Czecho-slovakia.—On July 14th Lord Curzon and Dr Benes (Foreign Minister of Czecho-slovakia) signed a Treaty of Commerce which will come provisionally into force on September 1st next, pending the exchange of formal ratifications. The full text of the treaty is published in this week's *Board of Trade Journal*. The main purpose of the treaty is to establish most-favoured-nation treatment as between Great Britain and the Czecho-slovak Republic, and to place British traders and companies in Czecho-slovakia in a position at least as favourable as may be enjoyed by those of any other foreign country. The gist of the treaty is contained in Article I., which runs as follows:—"The subjects or citizens of each of the contracting parties and goods the growth, produce, or manufacture of the territories of the two contracting parties, and the vessels of each of the two contracting parties, shall enjoy unconditionally in the territories of the other treatment at least as favourable in all respects as that accorded to the subjects or citizens and the produce of the soil and industry and the vessels of the most-favoured foreign country. This treatment shall be accorded in all matters of commerce and navigation, both as regards importation, exportation, and transit, and in general in all that concerns Customs duties and formalities and commercial operations; the establishment of the subjects or citizens of each of the contracting parties in the territories of the other; the exercise of commerce, industries and professions, the payment of taxes, and the treatment of commercial travellers and their samples." Though the terms of the treaty are not immediately applicable to India, the self-governing Dominions, or British colonies and mandated territories, nevertheless most-favoured-nation treatment is assured to them provided that they accord similar treatment to Czecho-slovakia. An important provision in Article II. of the treaty lays down that so long as the present import

licensing system continues in Czecho-slovakia, British goods will be admitted to an annual amount to be agreed upon. In pursuance of this article, a list of goods and quantities is appended to the treaty, setting forth the quota admissible annually as soon as the treaty comes into force. In connection with this treaty, attention may be drawn to a Report on the trade of Czecho-slovakia, by H.M. Acting Commercial Secretary, which has just been issued by the Stationery Office. Mr Elliott, in that Report, referred to the negotiations for a treaty, and pointed out that a good many of the present difficulties in the way of British trade with the republic would be removed by it.

The Mark as a Standard of Value.—The recent collapse of the mark exchange has made German currency practically worthless as a standard of value. Hitherto, of course, depreciation enabled debtors and mortgagees to repay their obligations at trivial expense; but it has become apparent recently that whatever the position as to past indebtedness may be, there is no prospect of raising fresh capital on the basis of depreciating paper. Accordingly, as far back as the end of December last an issue of "rye bonds" was made, and the precedent thus set has spread to other commodities. A schedule recently prepared for the *Frankfurter Zeitung* gives particulars of thirteen loans issued since that time in denominations other than the official German currency. Two of these were based on gold marks, and one on the dollar, while the rest are in terms of commodities as various as rye, coal, lignite, and potash manure salt. The bonds are in respect of metric tons or centals of the commodity in question, and subscriptions to these issues is made at the current price of the commodity. The interest is payable in units of the same commodity, or rather in money according to the prices then ruling for the commodity. Thus towards the middle of May of this year, subscribers to the *Erste Preussische Kaliwert Anleihe* bought bonds for 100 kg. of potash manure salt at the price then ruling of 22,900 marks. The annual interest is 5 kg. on each bond, which may well amount to a paper mark value greater than the cash subscription. This principle has recently been extended to mortgage loans in East Prussia, where farmers are in great need of capital, but quite unable to obtain mortgages in marks. Accordingly, rye has been adopted as the standard, on the grounds that it forms the basis of the people's food, that it must be acquired at a reasonable price, whatever that may mean, and that it is grown all over the Empire. These new loans may indeed "go like hot cakes," for it seems impossible in present-day Germany to raise capital on any other basis. While readers of the "Wealth of Nations" will be amused at the resurrection of a theory that a few years ago seemed definitely relegated to a dim and distant past, this new development is a most disquieting symptom of the economic collapse of Germany. The mark as a standard of value has already been displaced by "sound" foreign currencies or by commodities. This latter expedient seems to be about as unsatisfactory a system as could well have been devised, and may indeed lead to a new form of gambling in commodity values. Possibly, however, this innovation should be regarded as the first step towards capital issues in terms of the general index number of commodity prices, which would certainly prove a better basis than the price of a commodity such as rye, which is much influenced by the world production of cereals. Meanwhile, however, the position of the mark as legal tender is seriously threatened by a decision of the Darmstadt Court in April last that the repayment of a mortgage in paper marks might be refused on grounds of equity. By further development of these tendencies, the "flight from the mark" will acquire a new meaning, disastrous to the world, but fascinating, no doubt, to the pessimistic student of pathological economics.

Bank Notes and the Price Index in Soviet Russia.—A correspondent writes:—Since the introduction of the new bank notes, based on gold, six months ago, the Russian State Bank's loans to industry have been made exclusively in the new currency, and a comparison of the exchange rate for bank notes during this period with the price in-

dices of the main groups of commodities, gives some idea of the relative ease or stringency of credit conditions. The figures in the following table represent millions, except where otherwise stated:—

	1922. Dec. 1.	Feb. 1.	April 1.	June 1	June 1 in % of Dec. 1.
Bank notes rate in Soviet					
Rbls. per Chervonetz	117	212	302	580	495.7
General goods index (wholes'le)	12.3	20.4	31.8	62.9	512.6
Industrial goods	14.3	26.8	45.4	96.2	672.8
Food commodities (prepared) ..	19.8	33.9	58.9	125.1	632.0
Metals	9.5	16.1	32.8	86.1	905.0
Manufactured textiles	20.9	39.8	66.2	156.2	748.0
Leather goods	12.8	20.1	35.7	68.7	535.0
Chemical goods	9.2	15.6	22.2	47.3	512.3
Agricultural produce	10.7	15.9	22.8	41.8	391.1

It will be seen from the above table that, taking the whole period under review, the bank note rate and the general goods index of the State Planning Commission increased in an almost identical degree, although more or less considerable divergences between them appear if individual months are taken. In December, for example, the bank note rate rose faster than the index; in February the index caught up and passed the rate, which again took place in June, following a sharp rise in the bank note rate in April, far outstripping the rise in prices. It will be seen that the index of prices for agricultural commodities lags far behind the rate for bank notes, the latter being equivalent to 139 per cent. of the agricultural products index in June, as against 105 per cent. in December last. In the case of industrial commodities, however, the opposite tendency is observable, the rate for bank notes in June being 60.3 per cent. of the index for industrial commodities, as against 81.8 per cent. in December. In the case, therefore, of loans advanced by the State Bank, the relative movement of prices favoured the products of industry. It must, however, be noted that the crisis which occurred in April, as a result of which the bank note rate rose almost 30 per cent. in the first fortnight of the month—from 300 to 390 million to the chervonetz—whereas the State Planning Commission's general commodity index rose only 6.9 per cent. in the same period, threatened with ruin those clients of the State Bank whose loans fell due for repayment at the time. This crisis has given rise to the widely held opinion that no industrial concern can afford to borrow from the State Bank in present conditions. It is, however, maintained by the Bank officials that such crises are exceptional, that the Bank showed great forbearance to its clients during this time of stress, which soon passed away when, during May and June, the price indices for manufactured goods overtook the bank note rate and went ahead of it. Apart from the effects of the April crisis, the exceptionally favourable credit conditions granted by the Bank to its clients before the introduction of the new currency—conditions which involved the Bank in considerable loss in respect of loans paid back in Soviet roubles which had greatly depreciated during the period of the loan—may be regarded as one of the causes of discontent with the Bank's present policy of issuing loans in chervonetz repayable in Soviet roubles at the rate of exchange for chervonetz on the day of repayment.

Sweden in 1922.—In Sweden, according to the Report of the Commercial Secretary of the British Legation at Stockholm, just issued by the Overseas Trade Department, 1922 was a year of deflation, retrenchment, and a readjustment to altered economic conditions which was both courageous and successful. The stocks of imported goods purchased at high prices during the boom of 1920 were finally cleared off, though at heavy sacrifices; the retail price index fell during the year 45 per cent., as against 35 per cent. in the United States and 20 per cent. in Great Britain; the Budget balanced at a little less than £41 millions, or £11 millions less than in 1921; and the actual deficit for the year was reduced to 35 million kronor, or less than £2 millions. Swedish banks are involved with industry in a greater degree than in most countries, and to an extent detrimental to industrial self-reliance; but the 18 largest banks wrote off depreciations amounting to 530 million kronor, or about £29,444,000.

The value of exports for the year was 1,152,400,000 kronor, of imports 1,164,400,000 kronor, an import surplus of only 12 million kronor, against 1,161,400 kronor in 1921; and the staple industrial exports—timber, pulp, and paper—were valued at 612 million kronor, or 53 per cent. of the total. Many industrial and business undertakings were reconstructed; the deposits in the Post Office savings banks increased by more than 18 per cent. to 118,579,199 kronor. Issues of securities since 1914 have mostly found purchasers at home, and large amounts of State, municipal, and industrial bonds have been repurchased from abroad. The export of iron ore has suffered, chiefly from the lessened German demand; but in 1922 it exceeded 88 per cent. of the pre-war average, and the vast deposits in Lapland will be made more accessible by the completion of the railway to Lake Venern, which will be rendered accessible to large seagoing vessels by the new Trollhättan canal. Large deposits of copper and pyrites recently discovered will be important in the future. The Spitsbergen colliery, in which the State is a partner, is being worked at a loss. The development of hydro-electric power and of railway electrification are making progress, and efforts are being made to standardise the products of industry. Shipping recovered rapidly during the year. Agriculture and labour problems give cause for anxiety, but the country is clearly emerging rapidly from the post-war depression. On a very small scale, commercial and financial relations and seaborne traffic are being resumed with Russia. The decline of German competition gives great opportunities for British trade—notably in motor-cars and motor-cycles, sports requisites, cinema films, and gramophones—but great stress is laid on the absolute necessity for personal knowledge on the part of exporters of the country and of popular tastes. And German traders are actively preparing for the time when the stabilisation of German currency conditions will help them to recover their former predominance.

New Issue Effects.—A Stock Exchange correspondent writes:—Every stag, like every dog, has his day, and in his applications for shares he must take the tide at the flood or he will lose his money. The highest tide in the stags' fortunes of late was the issue of the Austrian loan, in which applicants for modest amounts received considerate treatment, and were able to secure a premium of five points or more within a couple of days of receiving their allotment letters. This was reminiscent of the striking success which followed the issue of the P.L.M. Railway scrip, upon which a premium of five points was promptly established as soon as the market opened. Such incidents offer an irresistible temptation to the man of small means, who thinks that by putting up five or ten pounds per cent. application money he will be able to secure a bank note or two without being asked to provide more cash, and for no other pains than that involved in the filling-up of an application form. The Austrian Sixes came in the middle of a flood of new issues, of which the earlier stocks were, as a rule, advanced to a premium within a very short time of the allotments being circulated. The successors to the Austrian scrip, however, were not so fortunate. Though issues were over-subscribed and subscription lists closed in advance of the advertised dates for so doing, the result from the point of view of the stags proved disappointing in a number of cases, of which the Tokyo Electric 6 per cent. debenture, offered at 94, is a fair example. The price opened at 15s premium; within an hour was down to practically its issue price, fell further to 2 discount, and then, the stags being apparently shaken out, recovered to its present level of 7s 6d premium. Judged by the prospectus, the stock looked a good investment, and likely to advance upon any investment demand. But it has come to be recognised that the more attractive-looking an issue may be, so much the greater are the chances of the price falling to a discount as soon as the market opens. The anomaly is superficial only, because, as things are to-day, a very wide circle of small speculators is on the insistent look-out for opportunities to snatch a few pounds profit through applying for new issues. The more temptingly the latter are offered, the more likelihood is there of the stock being heavily over-subscribed by people who have neither the money for, nor the intention of keeping it, and who clamour to get out

immediately a market is made. They cannot afford, in many instances, to put up the money due even upon allotment. The consequence is that for a few days the market is swamped with small selling orders, which are not offset by such buying as is pretty certain to be attracted as soon as the stock becomes better known. This present-day tendency with new issues is becoming so generally recognised that the genuine investor is disposed to refrain from sending in his own application, preferring to await a probable rush of stag-selling after the allotment, and to take his chance of picking up the stock at a lower price than that at which the company offered it. The same principle applies, of course, in days when the demand for new issues is sluggish, and when underwriters are being left with their obligations on account of the public's refusal to take up new stock. It was not so very long ago that gilt-edged issues, though offered never so cheaply, failed to be wholly taken by the public, which observed that chances favoured the obtaining of the same stock at a discount from underwriters who had been left with it, and who were able to sell below the issue price by reason of the commission which they were paid for their underwriting contracts. The investor who is attracted by a new prospectus, and who thinks that the stock or shares which it offers can be regarded as cheap, will probably disregard the possibility of market fluctuations at the commencement of dealings. He will apply for the stock direct, although frequent experience in having his cheque returned, or receiving some trifling allotment that is of little use for his purpose, tends to make him exasperated, and to declare he will waste no more time in applying for issues to which the stag is so irresistibly drawn. But, if he elects to wait until the allotments are made, with a view to buying the new scrip at a discount, it might be usefully suggested that he should leave an order with his broker to buy at whatever discount he thinks is reasonable, for it still happens in cases of good stock, moderately priced, that the security will remain below the issue price only for such time as may be required to clear out the stags by the process of rapid exhaustion.

The Chartered Agreement.—The publication last week in the form of a White Paper (Cmd. 1914), of the agreement reached between the British Government and the British South Africa Company, to which reference was made in our last issue, has been followed by the issue to shareholders of an "interim report of the directors," to be presented to an extraordinary general meeting to be held at the Cannon street Hotel on July 24th. The directors say in this report, which consists mostly of the correspondence between the Colonial Office and the company, the effect of the settlement, briefly, is that the company will surrender its rights under the Privy Council judgment relating to Southern Rhodesia and under the Cave award, and will surrender its buildings and assets used for administrative purposes, and its land and monopoly rights other than mineral rights under its concessions in Northern Rhodesia; but that, in addition to the receipt of a payment of £3½ millions from the British Government, the company will retain a half interest for forty years in the net proceeds of the disposal of land in North-Western Rhodesia; that it will receive the Crown's recognition of its mineral rights throughout Rhodesia, and a considerable measure of protection for its railway interests; and that the Crown will waive its whole claim against the company in respect of extraordinary military expenditure incurred during the war. Subject to the foregoing, the company will retain the whole of its commercial rights and assets, no further question will be raised as to any liability of the company in respect of land appropriated for the purpose of its own commercial undertakings or granted to other parties, and the company will be relieved of the duty of carrying on the administration of Northern as well as of Southern Rhodesia. Consequently, no further liquidation or proceedings before the Judicial Committee of the Privy Council will be required. The directors recommend shareholders to accept the terms of settlement.

English Sewing Cotton.—The profits earned by this combine in the year ended March 31, 1923, were surprisingly large, net earnings rising from £348,161

to £652,798, and being now within £80,000 of those of 1919-20, the "record" year. Unfortunately, such an experience is not typical of the cotton trade as a whole. The ordinary shareholders receive an extra 5 per cent. in dividends, and £200,000 is placed to reserves, this being the first time reserves have received any contribution since 1920. Two years ago £200,000 was withdrawn from stock contingencies reserve:—

	1913-14.	1917-18	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.

* Includes £200,000 transferred from stock contingencies reserve.

The improved position seems to be the result not of any marked amelioration of the trade position, but of the absence of a further fall in stock values. The balance-sheet item of stock-in-trade, at cost or market value, at £822,846 shows only a slight decline from last year's figure of £879,850, whilst two years ago it stood at £1,324,696. Reserves, with this year's allocation, will stand at £850,000. Sundry creditors at £393,291 show little change, but the American Thread Company and other subsidiaries, which a year ago were owed £27,173 by the parent company, are this year debtors for £79,362. Property, plant, and investments in subsidiaries are put together in one item of £3,266,906, but the presence of investments in British Government securities to the tune of £1,038,911 makes the position a fairly liquid one. The balance-sheet is analysed on the usual page.

Furness, Withy, and Co.—The accounts of Furness, Withy, and Co., Limited, for the year ended April 30, 1923, show a further substantial decline, thus reflecting the serious depression in the shipping industry, and the directors state that they "have had to rely mainly for our profits upon other branches of the company's business and dividends on investments." As will be seen from the summary table below, profits have now fallen below the figures for the three years preceding the war:—

	Total Profit.	Depreciation.	Reserve, &c.	Dividends.	Ord. Rate.
	£	£	£	£	%
1908-9	267,075	114,897	..	166,361	5
1909-10	332,992	145,417	..	183,302	5
1910-11	440,732	179,603	50,000	220,620	7½
1911-12	653,207	240,000	125,000	270,620	10
1912-13	756,141	350,000	125,000	270,620	10
1913-14	620,928	350,000	..	270,620	10
1914-15	653,548	350,000	15,000	268,431	10
1915-16	1,386,960	350,000	300,000	463,125	20
1916-17	*787,564	350,000	200,000	456,250	20
1917-18	645,077	200,000	..	456,250	20
1918-19	747,661	..	300,000	452,500	20
1919-20	1,004,821	500,000	..	452,500	10
1920-21	782,944	300,000	..	452,500	10
1921-22	655,207	..	200,000	452,500	10
1922-23	552,511	200,000	..	356,250	7½

* After payment of two years' Excess Profits Duty.

After transferring £200,000 to depreciation, instead of to reserve as was done a year ago, the ordinary dividend is reduced from 10 to 7½ per cent., free of income-tax, and £202,300, or nearly £4,000 less, is carried forward. A year ago the balance-sheet showed signs of compression, an item of £500,000 in National War Bonds being thrown into one of the three items on the assets side. This retrograde step, we are glad to see, has been followed by a very substantial advance in the right direction, and one which is doubly welcome in the report of a shipping company. For shipping companies have of late years been by far the worst offenders in the matter of their accounts, and have developed a tendency to publish balance-sheets which for any practical purpose, so far as we are aware, are worthless. Furness, Withy, and Co. have now subdivided one item which appeared in the 1921-22 accounts as £8,647,405 out of total assets of just over £12 millions,

and included the fleet, all kinds of investments, and premises into three separate items. The fleet and investments in associated companies are given together at £4,399,200, other investments at £3,596,500, and premises and property at £228,400. As compared with last year, debtors have increased by £873,200, but cash and bills are down by £702,600.

Tanganyika Concessions.—Our Mining correspondent writes:—The accounts now issued cover the eighteen months to December 31st last, and as during that period the revenue has been negligible, there is a deficit of nearly £60,000. The holdings are higher by £342,000 at close upon £4,000,000, due to the subscription for further shares in the Union Minière du Haut Katanga, the company's largest individual interest. It was in this connection that the Tanganyika some twelve months ago made an emission of £750,000 ten per cent. preference shares, for five years convertible into ordinary at 22s. apiece. The first interest payment is due this month, and will be provided with the assistance of the dividend of 35¢ per share declared by the Union Minière Company in respect of 1922. The amount receivable may be calculated as equivalent roughly to £65,000 at current rate of exchange. As already indicated in our columns, the Katanga undertaking is expanding its operations, and, incidentally, its capitalisation. The balance-sheet indicates that there are now outstanding 60,000,000 of debentures, 50,000,000 of preference shares, and 26,000,000 of ordinary shares, besides 260,000 "dividend shares without designation of value," but ranking equally with the ordinary. Further capital is to be subscribed by Belgian interests as required; the balance-sheet shows that the need is now, seeing that apart from a large amount locked up in stocks and securities, the company at date had only 153,900 cash in hand, against liabilities to the tune of 123,045,900. With regard to the physical operations of the Union Minière, the information supplied indicates that the output of copper continues steadily to expand; for the first half of the current year it totals 24,500 tons, in contrast with 43,360 tons for the whole of 1922, and 30,460 tons in respect of the preceding year. No information is given as to the working costs, but a little investigation suggests that they may be placed at about £50 per ton. The ore reserves are now set out on a different basis from that formerly employed; they figure at over 68,000,000 tons, estimated to contain 4,500,000 tons copper. Of this quantity, some 700,000 tons are contained in 3,900,000 tons of ore. It would seem that attention has lately been directed chiefly to the more promising areas; indeed, it is announced that a large deposit of high-grade ore suitable for direct smelting has been located by drilling at Rushai. Leaching tests having given satisfactory results, a large plant is to be installed. An eventual output of 100,000 tons of copper annually is aimed at. The recovery of tin proceeds on a moderate scale. Cobalt and radium are being produced, the former locally, the latter at Oolen (Province of Antwerp). The Benguela Railway, in which the Tanganyika Company holds some 2,700,000 shares, is in course of extension, and when the line reaches the Congo border the transport facilities of the mineral area will be greatly improved; meantime, commerce and industry will benefit in the districts passed through. Last year's earnings scored a marked expansion. Copper and gold areas have been located by the Congo Divide Syndicate, and more prospectors have been sent out. Altogether, the enterprise would appear to have a big future; but when the holders of the ordinary shares in the Tanganyika Concessions will receive a dividend is another story. The Zambesia Exploring Company, which is interested in some of the same undertakings as the Tanganyika, and has for a number of years past confined itself to co-operating with that company, during the past 18 months increased its credit balance by £17,600 to £50,300.

Compagnie Aramayo.—The accounts for 1922 of this Bolivian mining enterprise show a marked improvement in the profits, the total of 4,537,500 comparing with 1,847,850 in the preceding year. The directors intimate

that this result has been attained "notwithstanding the very unsatisfactory condition of trade generally and the small improvement in the price of the company's products." It has consequently to be inferred that there must have been a large expansion in the output, or a marked reduction in costs, or both. Doubtless further particulars will be given at the annual meeting; but some of them, at any rate, might with advantage be embodied in the report. With the assistance of a draft upon the carry forward a bonus of 10 per cent. is to be paid, making 35 per cent. in all for 1922; at the same time a third interim dividend of 5 per cent. on account of the current year will be disbursed. On the basis of last year's returns the shares (at 3½) give the by no means excessive yield of 10 per cent. The recovery in the Bolivian dollar has permitted the withdrawal of part of the provision made under the heading of exchange account.

Canadian National Railways.—The Board of the Canadian National Railways are to be congratulated upon publishing for the first time particulars, in their latest monthly statement for May, 1923, of gross and net receipts. The gross earnings amounted to \$21,830,532, an increase of \$2,723,862 as compared with May, 1922. Operating expenses were \$19,746,308, an increase of \$1,718,135. The net earnings at \$2,084,223 show an increase of \$1,005,727. The net earnings for the first five months of 1923 are \$696,386, against a deficit of \$2,551,295 in the first five months of 1922. There is, thus, an increase in net earnings of \$3,247,681 in the first five months of the present year. The present mileage of the Canadian National Railways is 22,680.

Oversea Correspondence.

UNITED STATES.—COMMODITY PRICES—ANTHRACITE MINERS' DEMANDS—COAL COMMISSION'S REPORT—SILVER EXPORT ASSOCIATION SUGGESTED.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 9.

WHILE commodity prices continued to decline in June as in the three preceding months, the downward trend was more pronounced and general than in any month since the great deflation of 1920 and 1921. The percentage of decrease in June was the heaviest reported since May, 1921, and all but one of the groups of commodities used for statistical purposes declined last month. Bradstreet's commodity price index number as of July 1st was \$13.0895, representing a decrease of 2.2 per cent. from June 1st, and of 6 per cent. from March 1st of this year, but it was 8.1 per cent. above July 1st of last year, and 23.2 per cent. higher than that of June 1, 1921, when commodity prices were close to their lowest levels. As compared with February 1, 1920, the July 1st number was 37.2 per cent. lower, but it was 50.2 per cent. above that of August 1, 1914. Of the thirteen groups of commodities figuring in the compilation, twelve declined, the most conspicuous reaction being in provisions, especially meats and hog products, pig-iron and non-ferrous metals like copper, lead and tin, textiles, hides and leather, live stock, oils, and miscellaneous products. On July 1st only eight products were higher than at the beginning of June, while 47 were lower, and 51 remained unchanged. As compared with a year ago, 64 commodities showed advances, 34 declines, and eight were unchanged.

Representatives of anthracite coal miners have submitted to the operators several amendments to the present agreement, which expires August 31st, as a condition to its renewal. The more important demands of the miners include a 20 per cent. increase in wages, abolition of the 12-hour day, recognition of the "closed shop" throughout union fields, and the introduction of the "check off" system. Officials of the miners' union have stated that, while their proposals have not been presented as an ultimatum, strong efforts will be made to induce the operators to grant the principal

demands as outlined above. Present wages in the hard coal industry range from \$4.20 to a maximum of about \$5.60 a day; the miners contend that their wages are much below those paid for similar work in other industries, and that they are therefore entitled to an increase, especially in view of the fact that there is a greater hazard in mining than in most other occupations. In support of their demand for full recognition of their union by anthracite operators, the hard coal miners point out that such recognition has already been given throughout the bituminous industry.

While anthracite miners and operators are holding joint conferences for the purpose of drafting a new agreement covering wages and other matters to replace the present contract, the United States Coal Commission has announced its conclusions after an eight months' investigation of conditions in the anthracite coal industry of this country. Although the report of its findings, just published, is described as only preliminary, the document contains more than 30,000 words. It deals entirely with the anthracite situation. The final report, to be made later, will cover both branches of the industry. Among the more important recommendations made by the Commission are those providing for Government regulation of the anthracite coal industry, and authorising the President to take over the mines, transportation, distribution, and marketing of hard coal in any national emergency that might be caused by strikes or the suspension of mining operations. The Commission expresses the opinion that anthracite coal is a limited natural monopoly, one-third of the deposits of which have already been exhausted, but the segregation of coal mines from railroads is so recent that the Commission is unable to say whether or not the natural monopoly of anthracite will be in restraint of trade. It takes the view, however, that such a monopoly, held by a relatively small number of individuals, estates, and companies, and supplying a necessity for millions of people, "cannot continue to be treated as if it were not affected by a public interest." The fundamental fact in the anthracite coal problem is that, heretofore, these limited and exhaustible natural deposits have been in absolute private possession of their legal owners to be developed or withheld at will, to be leased for such royalties as could be expected, to be transported and distributed at such rates and in such manner as a double-headed railroad and coal combination might find advantageous from the point of view of private profits. The Commission does not advocate abolition of existing property rights. It is opposed to Government ownership and operation of the mines. On the other hand, it insists that the secrets of the anthracite industry, its affairs and management should no longer be withheld from the public. In order to determine the effects of this natural monopoly upon consumers, the Commission recommends full publicity through annual reports submitted to some Government agency on forms prescribed by the latter. The Commission declares that the coal industry can be regulated federally, as are national banks and interstate railroads, without abandoning the efficient and economic principle of individual responsibility which goes with private ownership and management. In recommending that the President be empowered to deal with situations like that created by last year's coal strikes, the Commission says: "The President of the United States should be authorised by act of Congress to declare that a national emergency exists, whenever, through failure of operators and miners in the anthracite industry to agree upon the terms of employment, or for any other reason there is a suspension of mining operations, seriously interrupting the normal supply of anthracite fuel in inter-state commerce, to take over the operation of the mines," as well as the transportation, distribution, and marketing of the product, "with full power to determine the wages to be paid to mine workers, the prices at which the coal shall be sold, and, subject to court review, the compensation to be paid to land and mine owners." The report deals extensively with the rise in prices of anthracite to consumers, the increased cost of mining and distribution, living conditions among miners' families, wages and labour conditions in the hard coal industry.

Plans to form a silver export association, similar to the Copper Export Association, have been suggested by

Francis H. Brownell, vice-president of the American Smelting and Refining Company, to relieve the depression in the silver market caused by the discontinuance of silver purchases by the United States Mint under the Pittman Act at the fixed price of \$1 per ounce. Briefly outlined, the plan as proposed in a tentative way contemplates the bringing together of some of the largest silver producers, whose mines furnish about 70 per cent. of the world's output, and eventually other American producers would enter the association until approximately 90 per cent. of the world's silver production facilities would be controlled by the organisation. At the outset, the association would be capitalised at \$5,000,000 or \$10,000,000, with authority to increase the amount from time to time for exploitation purposes. The association, under the plan suggested, would not only interest itself in the sale of silver for coinage purposes, but would also seek to bring about a larger use of silver commercially. The organisation's income would be derived from a charge of 1 or 2 cents an ounce on silver mined, which would amount to \$1,750,000 or \$350,000,000 a year on the basis of current production. "One of the most important purposes" of such an association, Mr Brownell says in a statement recently issued, "should be to help restore the former use of silver as money, and to encourage its continuance by those still using it. The friendly co-operation of the chief financial interests of England and of the United States," he adds, "and the friendly attitude of each of those Governments must be obtained. The whole plan and purpose of the association should be to work along lines of co-operation, and without arousing antagonism, trade rivalries and political animosity."

FRANCE.—TREASURY DIFFICULTIES—PUBLIC DEBT—EXTERNAL OBLIGATIONS.

(FROM OUR CORRESPONDENT.)

PARIS, July 18.

CRITICS of the French Government have often complained of the difficulty that is experienced in ascertaining definite and detailed information as to the exact position of the national finances, and regret is from time to time expressed that no effort is made in this country to make public from week to week—or even from month to month—any statement corresponding to the clear statement published weekly by the British Government and every month by the Government of the United States. As matters stand at present, all who are interested in matters of this kind are compelled to rely upon the occasional statements made by the Treasury, or, which is more often the case, on the annual Budget statement, or else upon purely fortuitous and quite special declarations that are from time to time to be come across in Parliamentary papers or in official statements that seldom deal with more than one limited aspect of the national finances.

One reason for this, of course, is that in France there is no national system of bookkeeping, so far as the public accounts are concerned, as we understand the term in England. The French Treasury to-day, as complaints have often confirmed, is still suffering, like other departments of the French Government, from the fact that Napoleon, when he swept away, in reorganising the nation, a vast amount of the machinery that had done duty for centuries under the *ancien régime*, carefully—or perhaps unintentionally, and for lack of time to attend to the matter—conserved a great amount of old, *démodé* and entirely worn-out governmental mechanism that to-day is found to be absolutely a handicap in carrying on the work of the nation. This was admitted, indirectly, by the present Finance Minister, M. de Lasteyrie, some months ago, when he pointed out, in emphasising the necessity for an entire reorganisation of the Ministry of Finance, that it is to-day labouring under the difficulty of having to carry on the work of meeting the necessities of a Budget of well over 20 milliards with an organisation that was created to deal with an expenditure of a mere fraction of that sum. The drastic and complete reform and reorganisation of the French Ministry of Finance has long

been one of the most crying needs of the country, which all parties in this country admit to be necessary, but which—for reasons that are fairly obvious—it has so far been found impossible to take in hand.

In the absence of any other data, it is satisfactory to note that one of the most complete statements of the French public debt that has hitherto been available is to be found in a very interesting report that was recently drawn up by M. Louis Dausset on behalf of the Senate Finance Commission, in regard to the Finance Minister's Budget proposals for 1923, supplemented by the general report drawn up for the same Commission by M. Henry Bérenger. The figures set forth in these two documents may be summarised as follows:—

CAPITAL ACCOUNT OF THE FRENCH PUBLIC DEBT ON APRIL 30, 1923.

I.—FLOATING DEBT.	
	Francs.
Ordinary Treasury Bonds	2,364,732,000
National Defence Bonds	53,229,285,000
Bonds issued in Japan	51,600,000
Bonds handed over to British Treasury	14,993,930,000
Bonds handed over to Bank of England	1,387,100,000
Special funds belonging to general treasuries ..	365,625,000
Private current accounts at French Treasury ..	491,971,000
Other deposit accounts at Treasury	3,869,376,000
Short term credits in Spain	119,109,000
Do do Argentina	92,353,000
Do do Holland	114,565,000
Do do Uruguay	80,400,000
	77,159,746,000

II.—SHORT TERM DEBT.	
	Francs.
Ten-year National Defence Obligations	290,024,000
Five-year do	15,800,000
Six-year do	410,053,000
Obligations handed to Sinistrés (sexennial) ..	925,000,000
Ten-year Obligations handed over in payment of War Losses (Law of February 28, 1923)	10,024,000
Ten-year Obligations handed over to Banques d'Alsace-Lorraine	270,000,000
Two-year Treasury Bonds	3,054,700,000
Three to Five-year Treasury Bonds	8,232,124,000
Three, Six, and Ten-year Treasury Bonds	10,082,582,000
Loan of \$100,000,000 in United States, 1920 ..	466,376,000
Do \$100,000,000 do 1921	449,652,000
Loans to Lyons, Bordeaux, and Marseilles by United States	210,235,000
Advances by the United States Treasury	15,195,038,000
Obligations handed over to United States Treasury against war stocks sold to France	2,110,026,000
Loan issued in Japan	258,000,000
	41,979,634,000

* Provisional figures, which will be corrected later, when the final results of the issue of three, six, and ten-year bonds are known.

III.—PERPETUAL AND LONG TERM DEBT.	
	Francs.
5% Rentes, 1915 and 1916	19,452,682,000
4% do, 1917	9,070,989,000
4% do, 1918	21,064,960,000
6% do, 1920 (redeemable)	11,554,359,000
6% do, 1920	26,873,040,000
Commission on Obligations of State Railways ..	1,289,350,000
Credit National Bonds and Obligations	21,977,950,000
3% Rentes	19,740,455,000
Do (redeemable)	2,890,055,000
3½% Rentes (redeemable)	14,301,000
Capital of Annuities paid by State	7,707,990,000
Capital corresponding to Annuities Scrip handed to Sinistrés (Law of July 21, 1920)	6,754,955,000
	148,391,076,000

* The total amount of 5 per cent. Redeemable, 1920, Rentes borne on the records of the Treasury on April 30, 1923, amounted to 15,894,280,000 francs. Of this total, however, 4,339,921,000 francs was the property of the Treasury itself, which had either bought them in, for sinking fund purposes, on the Bourse, or had accepted them in payment of the special tax on war profits, or in exchange for new 6 per cent. 1920 Rentes. These four milliards odd will be extinguished only at the same time as the series to which they belong, but they are deducted from the total set forth in the table in order to show the real total of the public debt.

IV.—ADVANCES FROM BANKS.	
	Francs.
Bank of France	22,500,000,000

It should be pointed out that the amounts due to foreign nations are set forth on the basis of the franc at par. The figures set forth above, therefore (subject to the very material increase which would be necessitated if the franc were taken at the present exchange rates) represent the capital value of the French public debt on April 30, 1923, as 290,030,456,000, of which total 254,502,072,000 represents internal debt, and 35,528,384,000 represents the amount due to foreign nations.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised 43,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits ... 1,332,105

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

The proportions of the various categories of public debt represented by that owing to foreign countries are shown as follows:—

	Internal Debt.	Foreign Debt.	% of Foreign Debt.
	Francs.	Francs.	
Floating debt	60,320,689,000	16,839,057,000	21.8
Short term debt	23,290,307,000	18,689,327,000	44.5
Perpetual or long term debt ..	148,391,076,000	nil	..
Advances from banks	22,500,000,000	nil	..
Total	254,502,072,000	35,528,384,000	12.3

The total foreign debt owing by France is shown as follows (the amounts in this case also being set forth on the basis of the franc at par):—

	Floating Debt.	Short Term Debt.	Total.
	Francs.	Francs.	Francs.
United States	18,431,327,000	18,431,327,000	
Great Britain	16,381,030,000	16,381,030,000	
Japan	51,600,000	258,000,000	305,600,000
Spain	119,109,000	nil	119,109,000
Holland	114,565,000	nil	114,565,000
Argentina	92,353,000	nil	92,353,000
Uruguay	80,400,000	nil	80,400,000
	16,839,057,000	18,689,327,000	35,528,384,000

The fallacy of the above figures, of course, as M. René Thérý points out in *L'Economiste Européen*, is that, whereas the money in question was borrowed when the franc was not more than between 20 per cent. to 30 per cent. below par, the sum of something in the neighbourhood of 105,000,000,000 would now be required, at the present rates of exchange, to pay off the debt France owes to her foreign creditors.

GERMANY.—FINANCES—"VALORISATION"—EXCHANGE AND BOURSE—SHIPPING.

(FROM OUR CORRESPONDENT.)

BERLIN, July 14.

MR BALDWIN's statement of British policy in the Reparations and Ruhr questions was well taken here, but not much hope is felt as to a speedy settlement. It is assumed that the last German offer of guarantees will form a part of the British proposals which are to be submitted to the other Reparations Powers, but it is naturally expected that the proposals will go considerably farther than Germany's, and that, in particular, some kind of more advanced financial control than was accepted by Germany last year will be insisted on. In view, however, of the German belief that France and Belgium will accept no plan which involves immediate or speedy Ruhr evacuation, the real question of interest here is what will be British policy in the event of an agreement with France not being attained. As long as the Cuno Cabinet's declared intention of making a Reparations settlement dependent upon a Ruhr settlement is adhered to, German policy necessarily remains passive, for it is certain that German measures so far have had the effect of only stiffening French determination, and that throws the whole question of a settlement into English hands. The effect of this attitude upon German financial policy is not good. The Government, though it does not formally declare so, acts, or rather delays action in this vital matter as if nothing whatever

counted as long as the great international question is not settled. The policy is very like that pursued by belligerents during the War—win the war at all costs, meantime ignore everything else, which policy, as Germany later discovered in the matter of war finance, is reasonable only if one really wins.

No attempt will be made to grapple with the State-financial question until the Reichstag reassembles. The attitude of expert Germans to this unnecessary delay is very curious, if in a way reasonable. The next few months, it is admitted, will see a further collapse of taxation, enormous deficits, an enormous accumulation of debt, and enormous further inflation. It is estimated that at a minimum the note circulation must increase by 10 billion marks per month, probably much more. The inexperienced German who does not understand the nature of these transactions is healthily frightened, newspapers, for instance, printing each new record of debt accumulation or circulation increase with notes of exclamation. The expert German, however, often declares that it matters nothing; the debt is not real, or if it is real it is decreasing, not increasing; the inflation is not real, because it implies no liability by anyone; and if three months hence the debt has increased fifty-fold and the inflation forty-fold, nothing will have happened that represents real deterioration; it will be just as easy to scale down, denominate, and, in fact repudiate with figures running into hundreds of billions as into tens of billions; the Budget will have been quite as effectively balanced with notes as with taxes; and as for the social process at cost of which this is done, that process has been going on for years, the nation has adapted itself, and so on. Probably were there a prospect of full financial reform and currency stabilisation, experts would not talk in this way, but there is no such prospect, therefore a little more or less—and every additional billion really means less, not more—matters little. The Government long ago ceased talking of the possibility of a sudden crash as the outcome of State-financial or currency conditions, and as there is to be no crash, and as the present system, if not satisfactory, is extremely easy to work, reform can remain over for a few months, or better, until the Reparations question is settled.

This is the way in which expert Germans talk in private. In public there is still praiseworthy zeal for sound finance and stable currency, and projects come from every official quarter. The Reichswirtschaftsrat, which consists entirely of experts, this week passed unanimously a resolution containing a whole programme of reform, mainly by means of the now favourite "valorisation," or automatic adaptation of all paper mark claims to the currency on a gold or some other index basis. The Reichswirtschaftsrat's programme practically proclaims for universal gold calculation, though it sometimes speaks of internal "currency depreciation," meaning the rise in paper mark prices. The resolution declares that income-tax advance payments should be fully adapted to the depreciation; that tax assessments should be "valorised" (expressed in gold, or on a price basis) on the assessment date, and increased according to the currency fall between assessment and payment dates; that taxes on consumption should be assessed as percentages of sale prices; that credits by the State should be calculated in gold and bear gold interest; and that railway, post, stamp duty, and other charges should be "valorised." The Ruhr struggle should be financed by supplements to existing taxes, and by raising a "valorised" loan, i.e., subscribable in paper marks, to be credited and repaid on a gold-calculation basis. The Reichsbank should cease giving pure paper credits, and should "valorise" them in gold, should discount bills on this basis, accept paper mark deposits on a gold basis, and give its guarantee for a funded "wertbeständig" loan (presumably also on a gold basis). Finally, universal gold calculation in trade and in money is recommended, and is declared to be necessary before wages on a gold basis can be paid. "Universal and avowed" introduction of gold calculation is, in fact, recommended.

This plan, of course, is only an extension of what is taking place already, officially and privately, and sometimes in violation of the law. The Prussian Diet last week considered a Bill providing for adaptation of taxes to the currency depreciation by Ministerial order. Export duties will henceforth be assessed in gold, and paid in paper

marks equal in value to the gold assessment. It is not likely that the Reichswirtschaftsrat's comprehensive programme will be put through by one legislative act. Apart from technical difficulties, the objection of principle is still raised that such a measure would accept indefinite currency depreciation as inevitable, but this objection is not quite reasonable, because it is certain that the Budget (Reparations apart) could be very easily balanced were the State as permanent creditor saved from the chronic loss of taxes, and stoppage of inflation together with the international effect of restored finances ought to prevent any further mark exchange drop. At present one may almost say that no taxes at all are coming in; despite the rapid fall in the mark's value, and despite the fact that the nominal yield of some taxes (e.g., Customs) does rise in accord with the mark's fall, the whole nominal revenue has of late actually fallen off, and its gold value has fallen off to a fraction.

The reports for 1922 of the Deutsche and Dresdner Banks show the same inflation of all figures as the reports summarised last week of the Disconto and Darmstadter. The Deutsche Bank reports gross profits of 23,679 million marks, against 1,159 millions in 1921, net 5,949 millions, against 278 millions, dividend 300 per cent., against 24 per cent. The bank adds 3,000 millions to reserve. Present capital and reserve total 6,050 millions, of which 800 millions are capital. The Dresdner Bank's gross profits were 12,223 millions, against 831 millions, net 2,621 millions, against 207 millions, dividend 200 per cent., against 16 per cent. Capital and reserve total 970.5 millions, of which 550 millions are capital. Capital of all seven chief banks (four "D" banks, Commerz und Private, Berliner Handelsges., and Mitteldeutsche, the National Bank being now amalgamated with the Darmstadter) was increased in 1922 by 1.4 per cent., reserves by 3.6 per cent. The clearings of some of the banks are not reported; where reported they vary between 7.4 and 9.5 fold those of 1921, the Deutsche Bank's, the largest, being 19,383 milliards.

Money is getting tighter. The banks refuse to advance money for purchase of securities, and only unwillingly grant commercial credits; but the disproportionate rise in stock quotations, taken with the great Bourse activity, has put a strain on the market. The Bourse is, on the whole, very firm, though it opened dull on the last day of the week.

Shipping in Hamburg now seems to be permanently above pre-war records. Arrivals in June totalled 1,313,270 net tons, departures 1,403,817 tons; first six months of 1923 arrivals 7,517,312 tons, against 6,927,560 tons in the same half of 1913, departures 7,662,650 tons, against 7,063,147 tons. The Prussian law of this year restricting (in practice forbidding) purchase of real property by foreigners has been declared by the Berlin Landgericht II. to be invalid, in so far as it applies to citizens of countries signatory to the Peace Treaty, and in some points invalid when applied to other nationals. The whole law, as German jurists long ago pointed out, is forbidden by the Federal Constitution.

NORWAY.—STATE FINANCE—GREENLAND—BANKING—BUDGET.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, July 10.

THE Storting has sanctioned the raising of a loan of 250 million kroner, and left the details of the transaction in the hands of the Government. The sum borrowed will chiefly be used for repayment of floating debt. A project has been put forward to make the loan to some extent a lottery loan, but as there is in the country a rather strong feeling against lotteries, that project seems to have small chances. About 18 years ago a fund of 40 million kroner was established which was to remain untouched, and only held for very great emergencies of the State. The sum was placed in some of the then very safest public bonds. In process of time the value of these bonds has greatly deteriorated, the consequence of which is that the 40 millions has now dwindled down to rather less than 24 million kroner. Under these circumstances, the Government propose, and the Financial Committee recommend to the Storting,

ing, to realise the fund and revoke the Act establishing it as a special fund. No doubt the Storting will resolve accordingly.

Some difference of opinion has lately taken place between Denmark and Norway as to certain relations of Greenland to these two countries. Greenland, as may be remembered, for hundreds of years was considered as belonging to Norway, but in 1814 came to Denmark, when the union between that country and Norway was dissolved. The proprietorship of Greenland is of importance in regard to the fisheries, and it is on that score that the differences have arisen. A Select Committee of the Storting has reported, very lucidly, on the question, on the basis of which the Government, with the sanction of the Storting, have invited Denmark to a conference on the question. No doubt the invitation, made in the most friendly manner, will be accepted in a similar spirit, and as the two peoples are, and certainly reciprocally wish to remain, on friendly terms, nothing but good could result from such a conference.

At the turn of the half-year the position of the Bank of Norway was rather strained. But already the position is easier, the circulation having during the first week of the second half-year been reduced by more than three millions, and the account for loans and discounts during the same period has been reduced by five millions. The business world is looking forward to a lowering of the discount rate (now 6 per cent. since May 2nd), though, especially in view of the recent raising of the English rate, any such hope may for the present be falsified.

The unrest that has taken place among the public with regard to the safety of the banks since the difficulties experienced in the early spring by some minor banks, and two of the large ones, has gradually subsided. Rumours and talks which have left the other big banks alone have, however, been busy with one of the very biggest—Den Norske Handelsbank. The face value of its shares, Kr.200, at one time rose to much over Kr.400, but were recently sold at Kr.112.50. The board have now issued a circular to the shareholders setting forth the position of the bank, which, according to this statement, is very healthy. There can hardly be any doubt that the position of the bank will be much strengthened by this straightforward statement, signed by a number of highly-respected and well-known men.

The State Budget—that is to say, the ordinary Budget—has now been fixed by the Budget Committee at a gross total of 499 million kroner. The extraordinary Budget, to be covered by the above-mentioned loan, is well above 50 millions. These figures represent very large reductions as compared with preceding years.

CANADA.—PROROGATION OF PARLIAMENT—C.N.R. CONSTRUCTION PROGRAMME—THE RAILWAY SITUATION.—FINANCE—UNION BANK—CROP REPORTS.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 2.

PARLIAMENT was prorogued on June 30th, to the general relief of the country, as its performances had been singularly uninspiring and unprofitable. The supineness of the Ministry in face of pressure of members for railways and public works in their constituencies and the incapacity or unwillingness of Parliament to check dangerous extravagance were abundantly demonstrated in the closing fortnight of the session, when there were tabled supplementary estimates totalling nearly 15 million dollars and a programme of new construction for the Canadian National Railways which called for an expenditure of almost 28 millions, spread over three years. Many of the supplementary estimates appeared to be planned to further political ends, like the winning of impending by-elections. The general impression is that Mr Fielding, knowing his official life is nearing an end, has simply thrown up his hands and allowed Liberal members to raid the Treasury at their sweet will. The Progressives, who were pledged to drastic economies, had been placated by liberal promises of branch railways in the West, and offered no adequate resistance to this plundering. Luckily the Conservative majority in

the Senate, emboldened by the victory of their party in Ontario, came to the rescue of the country and killed the Bill sanctioning the new C.N.R. programme. At a time when the country is overwhelmed with its railway burden, and the C.P.R. is spending practically nothing on new construction, it was difficult even for the Government to defend.

Sir Henry Thornton, the president of the C.N.R., has since his arrival rather captivated the imagination of the Canadian people by his energetic industry and by the boldness of some of his moves, and his political gifts win admiration in a country where these are highly appraised. His consolidation of the Grand Trunk with the rest of the C.N.R. system was promptly accomplished, and in the last six months he has undoubtedly managed to infuse a new spirit into the management of the State railways. Shippers report that on many routes where the two lines compete the C.N.R. is actually giving a quicker and more efficient service than the C.P.R.; the traffic returns since January 1st seem to bear out this contention, for while the C.P.R. gross traffic returns show a very meagre gain the C.N.R. increase has been averaging 14 or 15 per cent. per month. But the extra operating expenses of the C.N.R. seem to have eaten up most of the increase, and it is doubtful if the end of the current year will see any diminution of the appalling deficit. There is, moreover, a fear that Sir H. Thornton's bold imagination is inimical to any idea of economical management; it is stated in Montreal that the overhead expenses of the headquarters of the consolidated system will easily exceed the joint parallel charges of the old system. Mr Fielding admitted on June 28th, before the Senate killed the C.N.R. programme, that the demands of the railways on the Treasury for the current year were about 116 million dollars. On this basis Sir Henry Drayton, the ex-Finance Minister, calculated without contradiction that the total expenditure of the Federal Government for the current year would reach 548 million dollars, which is at least 150 million dollars beyond the most optimistic estimates of the revenue. The Senate in its final debate took a very serious view of the situation. Sir Edward Kemp declared that taxation had paralysed industry, and that the Government did not understand the meaning of the word economy; Senator Turritt, a Progressive, said that in his long political career the estimates had never been so glaringly political in character, and that unless a halt was called bankruptcy was inevitable. There is a growing consensus of opinion among intelligent people that Canada has known no more feeble and incompetent Government than the King Ministry, and its position is bound to grow steadily more humiliating. Lacking a clear majority in the Commons, and outvoted in the Senate, it has only been able this session to pass one major measure, the revised Bank Act, and while the Redistribution Bill has been jettisoned, a number of other measures have been slaughtered by the Senate amid general approbation. Perhaps its best Bill has been the measure placing the control of freight rates on the inland waterways under the control of the Board of Grain Commissioners, which is reinforced by another Bill giving the Cabinet power to suspend the Canadian coastal laws.

The Government secured power in the closing days of the session to establish by Order-in-Council an embargo upon the export of all pulpwood, whether cut upon crown or private lands. The measure, while supported by the Conservatives, was strongly opposed by a number of Liberal members from Quebec, who argued that settlers in the new regions often maintained themselves during their pioneer struggles by cutting and selling pulpwood, and that if they were left to the mercy of a ring of local mills they would soon find prices lowered. Against this it was contended that the increasing number of Canadian mills provides a constantly expanding market for pulpwood at home. But the most powerful argument was that of conservation, for the rate of the depletion of Canadian forests is gradually creating a situation where reforestation on a vast scale by the State will be necessary if the supply of raw material for the lumber and pulp and paper mills is to be maintained. However, it seems probable that the Government will exercise great caution before they put the embargo in force, and they

intend to appoint a Royal Commission to examine the forestry situation. What is feared in many quarters is that if this embargo, which is bound to hurt American paper mills and incidentally American newspapers, is put on, there will immediately commence in the United States a vigorous campaign for an embargo on anthracite coal. It was threatened last winter with considerable excuse, but was averted by the efforts of Mr Hoover. It would suit certain coal-mining interests in Canada, but would cause enormous inconvenience and possibly hardship in Ontario and Quebec.

A gleam of comfort, however, comes from a gratifying increase in the customs and excise revenues, which for June are \$10,701,205, as compared with \$7,009,929 for June, 1922. For the first quarter of the current year the parallel figures are \$73,273,080 and \$58,953,971. The main source of increase is in the excise taxes, which are up 11½ millions in the quarter, and the chief factor in it is the change in the method of levying the sales tax, which, however, while it may add to the revenues, cannot fail to increase the cost of living once its full effects are felt.

On June 24th Mr Forke, the Progressive Leader, raised the question of the position of the Union Bank, but the only result was to give Mr Fielding an opportunity of giving a certificate of character to the bank, and commending the courageous action of his directorate. He also admitted that the difficulties of the bank had been made known to him some time previously. The bank's stock, which steadily weakened after the disclosures, has been moving upward lately, and is now at 113.

The *Manitoba Free Press* has now published its third crop report, and its general tone is as optimistic as that of its predecessors. Replies received from 285 points in the prairie provinces indicate that in the past fortnight the grain crop has made rapid progress, and that abundant rains have fallen in practically every district of the prairies to guarantee sufficient moisture. Severe hailstorms have occurred in some places, but the accruing damage has been local and on a small scale. The rains have also served to check plagues of grasshoppers and cutworms, which threatened to afflict certain localities, and they are now unlikely to do much harm.

The stock markets have been reflecting the continued weakness of the New York market, and many issues have touched their lowest levels for the year. Both wholesale and retail trade is moderately good, and the sale of seasonable summer goods, which was held back by the continued wet weather, is now making up for arrears. But many businesses report that although their turnovers are satisfactory, the results are disappointing. The good crop reports have produced a decline in grain prices in Winnipeg, which alarms the farmers.

ARGENTINA.—PUBLIC FINANCE—THE B.A. LOAN—FRESH BORROWING—MONEY RATES—PRICES.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, June 21.

ARGENTINA'S astonishing natural vitality and productivity are responsible for the generally accepted belief in local commercial circles that the apparatus of Government is more or less a luxury, which the nation can well afford but need not take seriously. Hence the wide gap between the business world and the politicians, not only in national but also in provincial and municipal matters. The course of events is, nevertheless, forcing public opinion to realise that with the finances of the nation, the province of Buenos Aires, and the Federal capital, all more or less dependent upon large loans in the present and increased revenues in the future for their post-war adjustment, a better understanding and a bridging of the gap must be found without delay. In the Chamber of Deputies the expenditure authorised by the Budget and Finance Committee has received sanction. Discussion of the additional duties and taxes which are to balance the extra two hundred million dollars paper to be spent in 1923 is only beginning, which means that unless extraordinary measures are taken the sanction of external borrowing and internal consolidation of the floating debt must be postponed *sine die*. How far the trifling filip to exchange given by the recent £2,500,000 London loan has helped to clear the air may

best be gathered from the statement that when the present month-end liabilities of the Government for debt service are met, and past advances repaid—allusion is made to the £500,000 lent by the bankers to meet April coupons—there is scarce £200,000 in hand. Half the year has gone by, affairs are no whit further advanced in the matter of consolidation of the floating debt than they were in January, and, nevertheless, new Government projects include an outlay of some thirty million dollars on modernising the fleet and renewing army equipment, more particularly the artillery, more railway extensions, which will call for three hundred millions, and a small trifle of twenty millions wherewith to install distilling plant for the treatment of Argentine oil. None of these things has yet been treated in Congress, and they are here mentioned rather as evidence of the trend of official thought than as likely to be put into active execution in the near future.

Meanwhile, the uncertainty prevailing with respect to the customs charges, combined with the growing doubt as to whether the Government will be able to put its plans for debt consolidation into such shape as may meet with Congressional approval, is handicapping all import business. Indeed, it is not too much to affirm that though exporters are apparently profiting by the depreciation in Argentine exchange, a profit which they share to some extent with the producer, they also are affected in a general sense by the present position. As *La Prensa* recently showed in a leading article entitled "The State of the Nation's Credit," it is incorrect to consider that the actual issue of the £2,500,000 Port Works Bonds so speedily taken up in London at the beginning of June was made at 86½, the net yield from an Argentine standpoint being but 78½. Indeed, this journal, which is locally known for its sound financial views, goes further, saying that if one includes in the calculation the fact of gold being at a premium, and that Argentina, though receiving notes, binds herself to repay in gold thirty years hence, the rate of issue is but 72½ by the time one has taken into account the 5½ months of the first coupon, the 2 per cent. tax collected by the British Government, the 4 per cent. commission and charges, and a 7 per cent. difference between paper and gold. Fanciful though the last item may be, it nevertheless may affect the final settlement, and the rather ingenuous outburst of the heckled Minister of Finance who, when tackled on this point, said: "God alone knows how our dollar will stand in relation to the pound sterling thirty years from now," did not cause a favourable impression either within the Chamber or in private financial circles. *La Prensa* affirms that the Minister seems to think that his sole presence suffices to restore the public credit. He has not taken into serious consideration the need for reducing expenditure, suspending public works, and refraining from new enterprises until such time as the consolidation of the floating debt is fully assured.

Creation of further debt wherewith to redeem earlier commitments, plus something for immediate needs, is the outstanding feature of the recently sanctioned Municipal Public Works loan. \$167,000,000 Argentine paper, or its equivalent in sterling, gold dollars, or U.S. dollars, will be sought on an issue, by series, of bonds of the Municipal Debt at a rate not below 94 per cent. issue price, with 6½ per cent. maximum interest and 1 per cent. cumulative amortisation. Municipal Works classed as of primary importance, and payable out of the first series, which is to be for \$100,000,000 Argentine paper, or its equivalents aforementioned, would take forty million dollars, and the balance goes to redemptions; as for the subsequent series—and the works remaining to be completed—they would be issued when the Municipal Council saw fit to do so. The yield promises to be attractive to investors, and if it be true that the United States bankers are already interested there is nothing more to say. Municipal works in Buenos Aires have not been conspicuously cheap in the past, but the total municipal debt of the city is to-day under \$150,000,000 Argentine paper, and the revenues of the city are steadily increasing, so from a financial standpoint no great objection can be raised. It will be ratepayers' business to see that the money is profitably spent, once it has been obtained.

Borrowing is indeed the theme of the moment, and the

position of the National Mortgage Bank, now lent up to the hilt and applying for leave to issue a further five hundred million dollars paper in Cédulas, has during the past month engaged considerable attention. Constituted as these popular bonds are by first mortgage on producing properties, with their interest and amortisation also carrying the guarantee of the National Government, their sale on behalf of would-be borrowers who, on favourable despatch of their application, are handed Cédulas to the nominal value of the advance authorised, has been an easy matter for several years past, and is now effected at or near par, the interest being 6 per cent. and the amortisation 1 per cent. per annum, cumulative. If, however, authority is given to the bank to extend operations until half as much again has been added to the Cédulas on the market—for the present limit is a thousand million—how will this affect the plans for debt consolidation? Nobody can give more than a speculative answer to this question, and meanwhile two views are to the fore, one of which holds that it is the duty of the Government, i.e., Congress, to sanction the extension in order that the influx of foreign mortgage concerns may be discouraged, and the interest payable on such forms of accommodation remain in the country.

Meanwhile, the local money market shows little alteration as regards rates for loanable capital. Short-date obligations of the Government are renewed at 4 per cent., but 6 to 7 per cent. is obtainable by banks for first-class single name advances, though as low as 4½ for commercial paper with unquestionable endorsements is recorded. Exchange has been variable throughout the month. Sterling rose to 42½ at the mid-month, while the U.S. rate fell to 122. The loan negotiated in London having taken the Government off the market for end-June remittances explains the slight recovery of the Argentine dollar, but already this flash in the pan has expired, and sterling closes (June 21st) at 42d cable remittances and 123.90 U.S. Continental currencies have, however, declined a trifle, French francs being 12.97, Belgians 15, and lire 17.75. Unless news of an important foreign loan definitely closed in London and/or New York is near, further depreciation of the Argentine dollar expressed in sterling and U.S. may be looked for. There is much money still to be remitted, and but little export paper likely to come on offer until September-October brings the first wool bills into the market. Cereal quotations show falling prices for wheat, spot quotations for 80 kilo export grain in Buenos Aires being \$11.40 Argentine paper with \$11.55 for July-October deliveries quoted in the Futures market. Maize is unchanged from last month at \$11.45 spot, and linseed, after considerable speculation, closes a shade higher on the month at \$21.65. The improvement in freights has not been maintained, the market lacking animation, and latest fixtures being in the neighbourhood of 21s from Bahia Blanca to U.K./Cont., and perhaps 22s 6d from San Lorenzo (up river). Little general cargo is offering, and berth rates have fallen all round, a partial cargo of 5,000 tons, Rosario to Dunkirk, having been taken at 19s.

JAPAN.—RUSSIAN TRADE—SAGHALIEN—RELATIONS WITH THE SOVIET.

(FROM OUR CORRESPONDENT.)

TOKYO, June 10.

JAPAN'S failure so far to reach an understanding with the Soviet Government at Moscow is regarded in commercial circles as a great blow to trade between the two countries. As the principal industries of Siberia are agricultural, they have not been permanently injured by the Bolshevik revolution, and consequently Siberia can supply Japan with these products, while Japan can export much-needed manufactures to Russia. Japan's pre-war trade with Russia did not amount to more than 6,000,000 yen in annual value, Germany then taking the greater part in Russia's trade; but in the first year of the war Japan's trade with Russia jumped to 10,000,000 yen in annual value, and the following year to no less than 78,000,000 yen, and in 1916 to as much as 117,000,000 yen; while American trade with Russia for the same

ESTABLISHED 1836 General Manager W. A. WORKMAN, F.I.A.

period rose from \$40,000,000 to \$300,000,000, as a result of the war demand and the cessation of German trade. Now that America has practically withdrawn from trade with Russia, the field is open to Japan, if only satisfactory relations can be established between the two Governments. At present Japan's trade with Russia does not total more than 14,000,000 yen, the figure for 1921.

In the old days Japan's chief exports to Russia included copper, bronze, zinc, leather goods, medicine, woollen and cotton textiles. Since the revolution the main items of export from Japan to Russia have been cotton textiles, woollen cloth, medicine, shoes, knit goods, liquors, and paper. Japan can also send rice, sugar, tobacco, and porcelain. From Russia, Japan wants timber, fish, ores, hides, and agricultural produce. There are, however, various other items of great economic interest. Between Harbin and Vladivostok, along the line of the Chinese Eastern Railway, Japan has opened up flour mills, saw mills, bean oil presses, brick kilns, electrical and engineering enterprises, involving in all not less than 25,000,000 yen in capital; while the output annually from paddy-fields exploited is equal to about 15,000,000 yen. All these interests will decline if the present relations between Japan and Russia prevail. From the Japanese concessions in Siberia, timber to the annual value of 6,000,000 yen is imported; and Japan's fishing concessions in Russian waters have to be protected, these having an annual value of about 50,000,000 yen.

The question of Saghalien, also, is one of immense importance to the Japanese. From the beginning of Japanese history this valuable island was regarded as part of the Japanese archipelago, but through Russian threats and trickery Japan was finally deprived of it. Half of it was regained at the Portsmouth Conference at the close of the Russo-Japanese War, but Japan will never be content until she has the whole. After the massacre of 700 Japanese at Nikolaievsk in 1918, Japan occupied the northern half of the island, still holds it, and will continue to do so until the Soviet agrees to provide redress for the massacre. Japan would like to buy the northern half of the island, but the Soviet is obstinate not only in refusing this, but in declining to accept responsibility for the debt of 300,000,000 yen contracted in Japan by the former Imperial régime of Russia. Saghalien has valuable deposits of coal and petroleum, as well as extensive timber limits and furs. Japanese mining companies have already spent over 3,000,000 yen in prospecting there, while the Imperial Government has spent no less in subsidies for developing the resources of the island.

Such are some of the considerations that render Japan's relations with Russia of paramount importance to her at the present time. It is probable that Japan will insist on protecting her interests in Russia, no matter what attitude the Soviet authorities may assume. The demands of Japan to which the Soviet has not yet agreed are as follows:—(1) That northern Saghalien shall be sold to Japan, or concessions in that territory be given to a Russo-Japanese syndicate; (2) that the question of Russia's foreign debt shall be divorced from the question of recognition of the Soviet, and left to international agreement; (3) that Russia shall indemnify Japan for the Nikolaievsk massacre; (4) that Japan shall be left to name the date for evacuation of Saghalien; (5) that ratification of the Russo-Japanese treaty shall be a sufficient recognition of the Soviet, without any formal declaration.

Letters to the Editor.

CREDIT CONTROL AND UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I agree with Mr Mason that "a sound financial system at home" is required, also that when this has been secured it will not only find full employment for our home population, but will gradually lead to peace abroad. The sound financial system advocated by Mr Mason is, however, one of further currency contraction "until parity of exchange has been re-established with America and other gold standard countries." If the full employment of our people is to be postponed until this result is achieved, the position is indeed deplorable.

It is now over two and a-half years ago—shortly after the recommendations of the Cunliffe Commission, which Mr Mason so heartily supports, came into operation—that the Chancellor of the Exchequer elect, addressing the shareholders of the London Joint City and Midland Bank, stated:—

"The declared policy of monetary deflation is a public warning to the trader that he must be prepared to lose on every contract for the future delivery of goods. Owing to the general fall in prices, the market price of the goods when he gets them will be lower than at the time when his contract was made. A policy of gradual monetary deflation, but deflation so guarded as not to interfere with production, is a policy impossible of execution."

This policy has been in force for nearly three years, and has been pursued, not only by reducing the volume of currency notes in circulation, but also by the paying off of Treasury bills held by the banks, and so reducing their deposits. The result of such policy may raise the exchange value of the British pound in relation to the United States dollar, but this result is only brought about by increasing the value of the pound in terms of goods, in other words, by "forcing traders to lose on every contract for future delivery." A policy of deflation not only restricts production, but also brings about a decreased demand for the product.

No one desires, or even suggests, that a policy similar to that adopted by Germany, or Russia, or Austria should be pursued in Britain, nor can I see any reason for the suggestion that this was put forward by Mr Pell. It must be conceded, however, that the policy of deflation has gone at least far enough, that it has ushered in a period of trade stagnation, an unemployed problem which threatens to be permanent, and an agricultural depression of severe magnitude. The continuance of such policy must make matters worse, its abandonment can only be serious to one section of the community—the banking and financial interests so ably championed by Mr Mason—and even these will not suffer unduly.

No credit control can possibly be effective under an unstable currency system, liable to fluctuations in value from discretionary action at home or irresponsible interference abroad. What is wanted is an independent inquiry into the whole question with a view to the selection and establishment of a standard by which currency issues should be regulated so as to avoid inflation on the one hand or deflation on the other. Stability of internal prices would thus be assured, and an impetus given to production which would go far in reviving industrial and commercial prosperity.—Yours faithfully,

WM. G. RENWICK,

General Secretary, National Currency League.
7 Queen street place, London, E.C. 4,
July 18th, 1923.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In a letter printed in your number of June 30th, Mr C. E. Pell expresses the idea that the unemployment problem can be permanently abolished by pursuing the policy of inflation until such time as all the unemployed are absorbed and then stabilising prices at the higher level.

This idea seems a very simple solution of the unemployment problem, which is the most serious one in all coun-

tries which are trying to get back from post-war money troubles to pre-war stabilised conditions.

But I should like to point out that the question of unemployment seems to be substantially connected with the state of consumption. By the war, and especially by the policy of inflation pursued by so many Governments, whole classes of people have been completely ruined and so forced to restrict their consumption to the utmost possible degree, and limit it to the things most necessary for life. The few who became very rich by the shifting of material property representing the real wealth of nations which was caused by inflation cannot consume so much as is necessary to maintain the industry of the whole world.

Were the consumption of the world not diminished, but progressing in quantity and quality, as it was before the war, the demand would bring prices up to such a level that it would be necessary to increase correspondingly the supply.

As long as the consumptive power of the whole world is restricted, only such part of the world's industry is working which is sufficient to meet this restricted demand, and it is natural that in the first place that industry is working which can sell at the lowest prices.

This cheapness of products is very often attained not, as in normal conditions was the case, by lowering the cost of production, but by the fact that the currency, which is artificially being inflated, loses gradually its value in relation to material wealth and to the currencies of the States where inflation is taking place not at all or more slowly.

As it is proved by the development of things in the countries where inflation was used, inflation is restricting the buying power of whole classes and thus limiting the demand of the country itself. On the other hand, inflation acts as an export premium for every exported commodity paid to the producers at the cost of those who possess no material things, but only obligations expressed in the inflated currency, and at the same time as an import duty which becomes higher as inflation progresses.

The country which would try to procure business to its factories by inflating currency could do so only at the cost of other countries with uninflated currencies, and if all countries begin to solve the unemployment problem by this artificial means, a world-wide competition in inflation would necessarily arise. And the result would be the ruin of the consumptive power of mankind and unemployment all over the world.

It is not by artificial means of currency inflation or deflation that economic problems can be solved; that can be done only by helping the natural economic forces which try to bring back the equilibrium to the disturbed conditions; in our case it means that the unemployment can be dealt with only by raising the demand for manufactured goods, which again can be attained only by increasing the consumptive power of the largest classes of mankind.

DR J. HRASE,
Prague-Zemská Banka.

Prague, July 9th, 1923.

BONDHOLDERS AND THE TURKISH DEBT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your notes of the week of July 12th you state that "the bondholders were anxious that the Treaty should incorporate the decree of Mouharrem, by which the Ottoman Government regulated its relations with its creditors more than forty years ago."

As a member of the Turkish Bondholders' Committee in 1903, when the Turkish 4 per cent. Unified Debt was finally settled, may I be permitted to say that the bondholders, so far, have not moved in the matter.

Since the war we have received in 1921 and 1922 over four and a-quarter millions in sterling in part payment of coupons from 1914 to the end of 1922, together with scrip certificates for balance of unpaid coupons. The only coupon in arrear is that for March, 1923. So far, it does not seem reasonable to assume that the Angora Government intends to abrogate a decree and interfere with the Council of Administration of the Ottoman Public Debt, which has for so many years rendered invaluable services to the Imperial Ottoman Government as well as to the bondholders.—Your obedient servant,

London, July 19th, 1923.

G. S. PAWLE.

MEXICAN OBLIGATIONS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—From the letters which are being received from debenture, preference, and ordinary stockholders, it is obvious that considerable misapprehension exists as to the scope of the agreement made by the International Bankers' Committee with regard to the debts of Mexico.

These stockholders generally assume that this agreement includes provisions for dealing with the claims of the Interoceanic Railway of Mexico (Acapulco to Vera Cruz), Limited, the Mexican Eastern Railway Company, Limited, and the Mexican Southern Railway, Limited, upon the Mexican Government, but as this is not so, we are instructed to state that, although every effort was made to get the companies' claims included when the negotiations with the Mexican Minister of Finance were taking place in New York in May of last year, these claims were not provided for.

For nearly five years the directors have been continuously pressing the Government of Mexico to deal with its indebtedness to the companies, but without avail. In January last, at the invitation of the Mexican Government, a special commission representing these three companies visited Mexico City to negotiate a settlement, but no reasonable or definite offer was obtained, and the commission returned to England.

It will be remembered that in August, 1914, the Mexican Government took possession of these railways, which represent a total capital of more than £9,000,000. The Mexican Government is still retaining these British properties. For nearly nine years the companies have been deprived of the whole of their earnings, and have received no compensation from the Government in respect of its occupation. The laws of Mexico, under which the railways were seized, prescribe the basis upon which compensation is to be calculated, and the companies' claims for loss of earnings alone amount to upwards of £3,500,000. The Mexican Government, however, appears to be unable or unwilling to honour the obligations by which it is bound by its own statutes, nor does it even offer any reasonable basis of compromise.

Meanwhile, it has not been possible since 1914 to pay any interest to the debenture stockholders, while the capital value of all classes of stock has in consequence become greatly depreciated.—Yours faithfully,

N. STUART (Secretary, the Interoceanic Railway and the Mexican Eastern Railway).

THOS. LINTON (Secretary, the Mexican Southern Railway).

London, July 19th, 1923.

Books and Publications.

CURRENCY AND THE TIME FACTOR.

THE Pollak Foundation for Economic Research, which has already published Professor Irving Fisher's *The Making of Index Numbers*, has now issued as a second volume *Money*, by William T. Foster and Waddill Catchings, in which the authors essay a preliminary discussion of "the core of economic theory."* The work professes to be only introductory, and to deal with some of the larger aspects of monetary phenomena, the significance of which appears to be overlooked at times in discussions of business problems and reform programmes. No panacea for social ills is offered, but a promise is held out that in subsequent studies, based in part on this volume, the Pollak Foundation will have something to put forward in the way of concrete proposals. Nevertheless, this preliminary discussion is in no way elementary; in their 368 pages the authors have produced a study as careful, painstaking, and up-to-date as any prolegomena to economics ought to be. The touch of inspiration is perhaps lacking, but

* "Money." By William Trufant Foster and Waddill Catchings. Houghton Mifflin Company, Boston and New York. \$3.50.

the views presented are sound and the expression is lucid.

The importance of stability is recognised to the full. "Inflation and deflation; neither of these monetary diseases is a cure for the other. Both are disastrous—morally, socially, economically. The dominant economic need of the world is not 'abundant money,' not 'easy money,' not 'a more elastic supply of money,' but a money that is a true standard of value. In an industrial order founded on private property, division of labour, and competition, with its interest focused on the monetary aspects of nearly all its activities, there is no economic phenomenon so far-reaching in its consequences as unstable money. A shifting price-level is sure to be accompanied by alternate periods of business elation and gloom, with the familiar trend of extravagance, injustice, excessive speculation, 'profiteering,' over-production, tight money, business failures, unemployment, and 'hard times.'..... How to prevent these extreme shifts of the price-level and extreme swings of the business cycle—the heights of prosperity and the depths of depression—is the economic problem."

On the necessity that the general price-level should be stable the authors are thus in line with the modern view; but they regard variations in individual prices as having but slight interest for the inquirer into variations in the general price-level. They recognise that "the rightness of individual prices consists in their capacity to move goods," but, apparently deterred by the volume of data required, they do not pursue the topic very far. Some inquiry would, however, have been welcome as to whether the maladjustment of individual prices tends to become cumulative, so as to impede the circuit flow of purchasing power, and to develop those tensions in the general price system which lead to instability. In other words, if prices are economically wrong, should action be taken to hasten the adjustment which economic forces will eventually bring about, and if so, along what lines is action possible?

The most interesting feature of the book is the analysis of the time factor in producing that lack of balance between purchasing power and commodities which upsets the stability of prices. But it is surely misleading to state that money *always* ceases the exchange of goods, which under a system of barter would be instantaneous. The essential point of a money economy is that it removes the "here and now" element of barter, by introducing a time factor. But the result is as much to accelerate as to defer, and hence to produce those high tides and low tides of purchasing power, the regulation of which by the cancellation or creation of credit is the central problem of banking. The general argument is, however, not affected by this slip in its attempt to show that deviations from the normal pace of circulation of purchasing power, which is a purely monetary phenomenon, is a root cause of cyclical changes in the general price-level. The diagnosis is well worked out, but it is a little disappointing, in spite of the warnings of the introduction, to find only a few pages devoted to the suggested remedy, which is that Governments should increase or decrease the supply of legal tender currency, redeemable in gold, by buying or selling securities as prices fall or rise. The remedy is admitted to be applicable only to the United States, whose vast gold reserves offer a unique opportunity for the process suggested. The concluding chapter is indeed of so sketchy a nature that one may disregard it, and look upon the carefully reasoned theory which precedes it as a statement of the problem, of which the solution is yet to be attempted.

This postponement of practical suggestions may be due in part to the desire of the American authors to obtain further experience of the Federal Reserve System before attempting a theoretical examination of its possibilities as a means of producing stability. But until we have seen the effects of a sufficiently prompt application of a change in money rates, it is premature to pronounce that means of controlling the price-level insufficient.

All the "little dogs of footnotes have been corralled in an Appendix"—a sensible practice when the footnote serves only to give the reference for a quotation; but the few which are of major importance, in this case some 30 out of 220, might be permitted access to their usual haunts.

TARIFF REFORM IN ITALY.*

THE new Italian tariff, superseding that of 1887, was made operative by Royal decree in July, 1921, to compensate capital for the seizure by the operatives of a number of factories, and for the acquiescence in that outrage by Signor Giolitti's Government. The Fascists have since forcibly recovered the factories for the employers, but the tariff remains in force, though as yet without Parliamentary sanction or even debate. The first of these pamphlets begins with a comparison of the two tariffs; the other two deal with the subject in a more popular form. The 1887 tariff contained 19 "categories" and 472 "titles" (voci); in that of 1921 the numbers have swelled respectively to 52 and 953. The titles and sub-titles in the new tariff number at least 29,555, of which 24,000 are under "Minerals and Metals," and Dr Rëpaci has elaborately calculated that the average increased burden on the consumer, estimated in gold, is 84 per cent., and that in currency, taking the mean of the exchange from July, 1921, to last October, it is 424.09 per cent. But he thinks it is really heavier, for various reasons, notably the intricacy of the classifications, the consequent delays and uncertainties, the frequent treatment of the packing material as dutiable, and the additions of "coefficients" to duties on goods from countries with a depreciated currency, which additions the Government may vary at its will. Outside the "metals and minerals" section, as these pamphlets show, many of the duties are sheer "window-dressing," put in to make the producers believe that the tariff protects them; notably that on wheat, which is suspended, and likely to remain so, and those on many textiles and nearly all agricultural products, which more than suffice for the home demand. Other duties protect goods for which Italy cannot meet that demand, and never will; and those on iron and steel (notably on castings) hamper many Italian industries for the benefit of one politically influential hothouse industry, from which, however, they have not averted disaster. If Italy must have these "key industries," it is suggested that they might be supported by subsidies on a modest scale. The Italian Free-trade group, consisting of eminent economists, now joined by prominent manufacturers and merchants, is enlarging its membership, and doing good work in exposing the absurdities and corrupt practices generated by this extravagant Protectionism, and the Fascist programme suggests that its efforts may attain some practical result.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
July 25. July 26.

No fears were entertained in the Stock Exchange of a rise in the Bank rate on Thursday, and with the monetary position tolerably easy, the gilt-edged issues round most of the markets have shown a robust tendency. There is, for instance, a contraction of the supply of Home Railway pre-ordinary stocks such as came on offer a fortnight ago. Prices are stiffening again, and, outside the trustee lists, good debentures and preference shares have once more become difficult to buy. In the cases of new issues, where sound stocks were heavily staggered, the initial discounts caused by the rush of weak holders to dispose of their scrip, have now been replaced by higher values, though amongst Colonials, the more recently-offered loans show little disposition to rally. The New Zealand 4 per cent. scrip is, for instance, still 4 discount, and discount prices are quoted for the new India, West Australia and New South Wales scrip stocks.

The War Loan rose steadily on Thursday, and Conversions have spurred to the neighbourhood of 79. Victory Bonds recovered from 89½ to 91½. Other British Government issues are strong. Home Railway Prior Charge securities, as already noted, are strengthening in price. Colonials remain practically the same as they were a week ago. Good class corporation stocks, home, colonial and foreign, have been the subject of inquiry, but are none too easy to obtain.

French bonds recovered substantially from their lowest prices, when it became apparent that the Ruhr obscurity is being pierced by a gleam of light through the efforts of the British Government, which appear to be making their effect felt upon the previous implacability of the French Government. The railway bonds have risen with the Government stocks. Brazilians continue to harden in company with the milreis. The new Austrian scrip, after its violent fluctuations between 7 premium and 1 premium, settled down into a quieter stride on the basis of 2½ premium, but the new Dutch East Indies bonds continue heavy. In the Far Eastern group Chinese Eights are flat. A general rise in Russians which occurred at the beginning of the week aroused mild interest, and was attributed to the hope that Russian politics are becoming more stable. Nobody outside the House appeared to take much notice of the rise. Turkish bonds reacted a little, and other foreigners remain very quiet. The newly-issued Manchurian bonds were quickly subscribed.

Home Railway stocks exhibited a sagging tendency, for which the continued want of interest on the part of the public and a lurking fear of labour troubles are deemed responsible. Undergrounds, after a sharp decline, recovered to some extent, and the Underground Income bonds stand out as one of the firm spots of the market. Grand Trunk Pacific 4 per cent. debenture fell heavily upon the apparent decision of the Canadian Government to do nothing in the way of shouldering responsibility for this railway's security. Argentine Rails have moved downwards in consequence of a drop in the Argentine rate of exchange.

Although rubber is quoted a shade better, no particular increase of activity can be reported in rubber shares, where the market has drifted into a backwater. Oil shares swung backwards and forwards within narrow limits; the latest cut in the price of petrol proved a depressing factor. A drop of nine points in Workman Clark debenture reflected the fear lest the

half-yearly interest payment may not be forthcoming. Indo-China deferred are weaker. P. and O. deferred gained a few points. Insurance shares are mostly disposed to droop, and the list of London Banking shares displays a string of small declines. The Courtauld interim dividend had no effect upon the price of the shares, and these, together with other textiles, continue quiescent.

The Imperial Tobacco Company has declared an interim dividend at the rate of 7 per cent., an excellent result, which had the effect of causing a temporary rise in the price, although this served to bring in profit-takers. Cable stocks have recovered appreciably on the publication of satisfactory reports from the Eastern Telegraph and the Eastern Extension Companies, while the wireless group is out of fashion. Radios came into demand from America. Brewery stocks and shares showed a tendency to recover, while the markets for hotels, stores, catering and similar shares have been so quiet that the prices maintain a very placid appearance. The dockers' strike had singularly little influence upon any of the industrial issues, but its breakdown led to a trifling recovery in some of the iron and steel shares which previously had been weak. Gloucester Wagon shares broke sharply on the declaration of 5 per cent. dividend for the year, against 10 per cent. for the previous twelve months. The Land group is neglected. Nitrates are a little easier, and the inclination amongst tea shares has been for small declines to occur in the higher-priced descriptions. A few electric lighting shares are better upon increased interim dividend announcements by the County of London and some of the other companies.

Interest in the Mining markets has been centred almost exclusively upon Chartered. The price gave way to 12s 6d sellers upon news of the opposition that is to be offered to the acceptance of the Government's offer of £3¼ millions, which is to be discussed at next Tuesday's meeting. Buyers came in at this level, and the price promptly recovered. Kaffirs are somnolent, and there is next to nothing doing in diamond shares. Amongst Australians, Sulphides gave way upon news of a fire on the property, though other Barrier shares did not suffer. A few West Africans displayed trifling animation, but Mexicans are in the doldrums, and other mining sections must be described as lifeless.

Mr A. W. Mellon, secretary to the U.S. Treasury, and two other American guests were entertained at luncheon by the Stock Exchange managers and committee on Wednesday. They made a subsequent tour of the markets, and were accorded a polite reception by the members in the House at the time.

We are officially informed that Mr Charles Barton Budd and Mr Walter Frederick Budd, trading as Hodding, King and Co., have been declared defaulters upon the Stock Exchange.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Newfoundland Power and Paper Company, Limited.

—Incorporated under the laws of Newfoundland. Share capital \$21,000,000, all of which has been issued. The loan capital consists of £2,000,000 4½ per cent. "A" mortgage debenture stock, guaranteed by the British Government, under the provisions of the Trade Facilities Act, and £2,000,000 5½ per cent. "B" mortgage debenture stock, guaranteed by the Government of Newfoundland. The former is now offered for subscription at the price of 95 per cent., and the latter will be "issued forthwith." The stock is secured by a trust deed as a first charge on the property and plant of the company, and will be repayable by means of a sinking fund commencing in 1933, and calculated to redeem the whole of the stock on or before July 15, 1948. The Newfoundland Power and Paper Company, Limited, originally known as the Newfoundland Products Corporation, Limited, was incorporated in 1915, and owns valuable water rights and land and extensive timber limits in the colony. The Government's guarantee naturally places this issue in the list of gilt-edged securities.

The Union Cold Storage Company, Limited.—

Authorised share capital £8,780,000, all of which has now been issued. This is an issue of 3,300,000 6 per cent. cumulative preference shares of £1 each at 20s 6d per share, and forms part of a total preference issue of £4,780,000, which ranks immediately after £946,656 debenture stock outstanding. The company has entered into a contract to acquire from the Western United Investment Company the whole of the ordinary shares in the British and Argentine Meat Company, Eastmans (except eighty-one shares out of a total of 626,320), Fletchers (Meat Importers), Argenta Meat Company, British Beef Company, North Australian Meat Company, Lonsdale and Thompson, John Layton and Company, Donald Cook and Son (Cook's Farm Eggs). This purchase will, it is stated, give control of about 2,400 retail shops, depots, and market stalls in this country, together with factories and wholesale selling establishments. Services for this preference issue need £286,800 per annum, and the directors are able to show an annual surplus of £1,062,790 as available after meeting debenture charges. The capital security for the issue of £4,780,000 preference shares is placed at £10,355,029. A good industrial preference share.

The Trans-Zambesia Railway Company, Limited.—

—Details are published in the Press, presumably to comply with Stock Exchange regulations, of an issue of £200,000 5½ per cent. 10-year guaranteed notes in this undertaking. It is stated that the principal and interest are guaranteed unconditionally by the Government of the Nyasaland Protectorate. The notes are repayable at par on August 1, 1933, and are redeemable at any time before that date at 105. These notes have been purchased at 95 per cent. by Messrs. Erlangers, who have placed them at 97 per cent. In addition to the issued share capital of £600,000, the company has outstanding 6 per cent. guaranteed first mortgage debentures amounting to £1,200,000. The line is 156 miles in length, and connects the railway system of South Africa with the Central Africa and Shiré Highlands Railways running to Blantyre, British Nyasaland. The main question investors will have to consider is what exactly the guarantee of this small Protectorate is worth.

South Manchurian Railway Company, Limited.—

Issue of £4,000,000 5 per cent. sterling bonds at 88, on which principal and interest are unconditionally guaranteed by the Japanese Government. These bonds are repayable on July 15, 1948, but the company has the right, after 1933, to redeem at par. Much detail is given in the prospectus, but, of course, the investor will rely upon the guarantee of the Japanese Government as his security. The existing 5 per cent. South Manchurian Railway Bonds are quoted at 95, but they are "redeemable" in 1932. Guarantees are delicate instruments, but we see no reason why the bonds should not prove as good an investment as existing Southern Manchurian issues.

The Queensland National Bank, Limited.—

The directors of the bank are about to make an issue of a further 80,000 shares of £5 each. The present authorised capital is £2,000,000 in 400,000 shares of £5 each, of which 160,000 have been subscribed and fully paid. The new issue will bring the subscribed and paid-up capital to £1,200,000. The new shares will be offered at a premium of £2 per share to shareholders on the registers of members on July 14, 1923, in the proportion of one new share for every two shares held.

The East Surrey Water Company.—

Tenders for the issue of ordinary (B) shares of £10 each were opened at the company's offices, the total number of shares tendered for being 22,315, ranging from £13 to £11 10s per share. Tenders at and above £11 13s were accepted, the tenders at the lowest price, viz., £11 13s being allotted *pro rata*. The average price obtained for the issue was £11 17s 1d per share.

OIL OUTPUTS.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during June amounted to 115,056 barrels, or approximately 16,437 tons, including St Helens Petroleum Company, Limited, 57,097 barrels, approximately 8,156 tons; Kern Trinidad Oilfields, Limited, 9,068 barrels, approximately 1,295 tons; Kern Romana, Limited, 1,540 barrels, approximately 220 tons.

MEXICAN EAGLE OIL COMPANY.—Production for the week ended July 7, 1923, was 148,000 barrels.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel Street, Strand, London, W.C. 2.

COMPANY MEETINGS, &c.

BANK OF NEW SOUTH WALES.

SATISFACTORY RESULTS—INCREASED PROFITS.

LAVISH PUBLIC EXPENDITURE CRITICISED.

The half-yearly general meeting of the Bank of New South Wales was held at the chief banking house, Sydney, on Tuesday, May 29, 1923.

The Chairman, Mr Thomas Buckland, president of the bank, in moving the adoption of the report, said: Gentlemen,—It is now my duty to move the adoption of the report and balance-sheet, but before doing so I will, as usual, briefly review the figures and compare them with those of March, 1922.

BALANCE-SHEET FIGURES.

The note circulation in New Zealand shows a decrease of £26,000. According to the trend and requirements of trade the circulation varies.

Deposits are £5,200,000 higher on the year. A large part of this increase is temporary, awaiting distribution (it has since been distributed by the companies concerned), and a proportion will in the ordinary course come back to us; the balance of the increase is well spread over our business in the various States and New Zealand, and is largely attributed to the realisation of wool, wheat, &c., at enhanced prices.

Bills payable show an increase of £733,000. This item comprises several large items of an active nature, and the increase has no special significance, being usual fluctuations.

Capital and reserve fund are £1,152,000 more, and since March 31st last the payments for the April shares of the last issue and sales of unapplied-for shares have brought the amount paid up to £6,000,000, which represents the capital to-day. Proceeds of the sale of all unapplied-for shares and shares derived from fractional parts have been accounted for to the various shareholders concerned.

The profit for the half-year is £73,000 more than 12 months ago, after making full provision for contingencies. The extra capital employed assisted in financing the abnormally heavy wool bills already referred to, and contributed to this increase.

ASSETS.

On the assets side, the first line, comprising the cash and other readily convertible reserves for liabilities, is £5,485,000 more than this time last year. At our last meeting we intimated that, notwithstanding the adverse exchange position in London, we had decided to finance our customers' wool bills as usual, and our funds in London have in consequence been temporarily augmented by some £4,700,000, and in addition we have replaced £1,000,000 of British securities which were disposed of in 1921 to provide for our customers' requirements when funds were unobtainable there. In view of the probable effect of the present very general dry conditions on next season's exportable produce, it may be desirable to retain a larger amount than usual in London for future transactions.

Advances, as a whole, show an increase of £1,631,000. The ordinary advances to customers have increased £2,670,000, and this amount is well spread over the various States. Bills receivable from London, representing imports, have increased £400,000. On the other hand, our advances against wheat and War Loans have decreased £1,438,000, leaving a net increase as before mentioned. The droughty conditions in the country if continued will increase the demand by our country clients for assistance, as is usual when similar conditions have prevailed.

OPTIMISM AND A WARNING.

The good seasons, and the very satisfactory prices which have been ruling for some time, and which still continue for our premier product, wool, together with the distribution recently of over £6,000,000 on account of B.A.W.R.A., have been the chief causes of a most buoyant state of affairs in our midst. As one travels about the great cities of Sydney and Melbourne they cannot fail to be impressed by the evidence of prosperity in the form of new buildings which appear in all directions, and the signs of affluence are perhaps still more emphasised in the activity of the stock and share market—Government and industrial stocks have increased so very largely in market values during the last month or so that one might almost feel justified in the optimistic feeling that the prosperity of the moment would go on for all time, but, gentlemen, there are three factors we cannot overlook.

FACTORS TO BE CONSIDERED.

First, there is the uncertainty of our seasons (this very moment

we are threatened by a severe drought). Secondly, there is the question of a market for our goods. The wool market, as previously mentioned, has certainly been excellent for some time past and seems likely to continue in that direction, and the demand for wheat has also been well maintained, but beef for an extended period has been a glut in the London market, nor can I gather evidence to justify me in forecasting any early improvement, and we learn from the papers that a quantity of our butter shipped to Europe for higher prices is being brought back for consumption at home. The third factor to be considered, and considered seriously by thinking men of affairs, is our public expenditure, which in the present affluent circumstances is so lavish. It is easy (for the present) to pass this unpleasant subject over, so much more pleasant to ignore it, so infinitely comfortable to be a public man of the bold, courageous, optimistic order, and squander money for the approval of those people who live for the day only. But, gentlemen, there is a very much more serious view of the question. The system of money, say finance, is the basis upon which the civilisation of the world is formed, and any country, municipal body, or other institution which ignores this fact and wastes money on unproductive, fanciful undertakings or careless expenditure, must inevitably sooner or later fail, and ruin themselves and all concerned.

DEATH OF THE HONOURABLE JAMES THOMAS WALKER.

I regret very much to have to refer to the death of our late colleague, the Honourable James Thomas Walker, who for so many years was connected with the bank, first as an officer, and then as a director. He occupied the chair as president from August, 1898, to June, 1901. This position he relinquished upon his election to the Senate, but he retained his seat as a director up to the time of his death.

The vacancy has been temporarily filled by Mr R. W. Gillespie on the invitation of the board, and a little later on to-day you will be asked to confirm their action by duly electing Mr Gillespie, who for years past has been a friend and supporter of this institution.

BANK OF ROUMANIA, LIMITED.

GOVERNMENT'S EFFORTS TO BALANCE BUDGET.

The ordinary annual general meeting of the Bank of Roumania, Limited, was held, on the 18th instant, at Winchester House, Old Broad Street, London, the Viscount Goschen, C.B.E., presiding.

The secretary (Mr H. Locke) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of moving the adoption of the report and accounts, said:—The shareholders will, I have no doubt, be satisfied with the figures presented in the balance-sheet. The balance available, after making provision for bad and doubtful debts, income-tax, corporation tax, and exchange depreciation in the bank's funds employed in Roumania, amounts to £16,437. The board recommends the payment of a dividend of 6s per share, less income-tax, which will absorb £11,062, and that the balance of £5,375 be transferred to the contingency account.

In comparison with the total figures for the year 1921, there is a reduction of a little over £250,000, which is accounted for by the fact that the conversion into sterling of the Bucharest accounts has been made at 800 lei to the £ sterling, as against 550 for the previous year, although the currency figures in themselves show a slight increase.

The business of the bank continues to be satisfactory. The working expenses, however, are heavy, occasioned by the high cost of living, &c., in Roumania, and the high rate of exchange at which we have to convert our profits on the other side reflects unfavourably on our profits in sterling. There was, during the year 1922, a depreciation in the lei from 550 to the £, and the Government took steps to regulate dealings in exchange, and the National Bank of Roumania has also lent support recently to improve the exchange position. The exchange rate has of late been much steadier. Your board has again to report that the conservative policy, to which I made reference last year, has been continued.

EXPORTS AND IMPORTS.

According to British Customs returns, the exports from Great Britain to Roumania during the year 1922 were £2,633,000 (60,000 tons), the largest item being, as usual, cotton goods to the value of £1,500,000. This total shows a reduction on those for the previous two years, which were respectively £5,800,000 for 1921 and £7,100,000 for 1920. Imports into Great Britain from Roumania for 1922 were valued at £1,700,000 (205,500 tons), the largest items being cereals, £957,000, and oil £550,000. This total of £1,700,000 compares with £3,400,000 in 1921 and £3,200,000 in 1920.

During the year the Government made great efforts to consolidate its debt, internal and external, and has, by way of exchange into a long-term 4 per cent. loan, removed from the market most of its Treasury bills in foreign currencies, which were in circulation in different countries, and has also given its approval to a scheme for gradual payment, over a number of years, of debts due by firms and others in Roumania to nationals of other countries. By increased and extended taxation, Roumania is making a very serious effort to reach equilibrium in its Budget. Not unnaturally, many of these taxes, in the state of development in which Roumania finds itself, are in the nature of experiments, and do not all fully achieve their object.

It is worthy of note that the Government has ceased to have recourse to the National Bank for borrowing for its own purposes, although the needs of the commerce of the country resulted in an increase in the note circulation of the National Bank from 13,722 millions of lei on January 1st to 15,997 millions lei on December 31st.

GOOD CROP PROSPECTS.

The Roumanian Government, after a careful review of the position of the oil industry, have recently modified the conditions of export and also internal distribution, and this step will assist those engaged in that important industry. With regard to the harvest, on which so much of Roumania's prosperity depends, while there is little increase in the area under cultivation, the condition of the crops at present warrant expectations that the production will exceed that for last year. Our Bucharest manager, in a telegram just received, informs me that the prospects at the moment are for a good and abundant crop, provided there is a little more rain within the next three or four weeks.

With regard to the export trade from Roumania, very much depends on the railway services for transport, and, although progress has been made within the year under review, railway facilities are still far behind requirements. This matter, the importance of which is fully recognised by the authorities, is now, I understand, occupying very serious attention on the part of the Roumanian Government.

General the Hon. Sir H. A. Lawrence, K.C.B., seconded the motion, and it was carried unanimously.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

THE DISTILLERS' COMPANY, LIMITED.**STRONG FINANCIAL POSITION.****NEW CAPITAL PROPOSALS.**

The forty-seventh annual general meeting of the Distillers' Company, Limited, was held at Edinburgh, on the 19th inst., when Mr W. D. Graham Menzies, chairman of the company, presided.

Before moving the adoption of the report, the Chairman said: Ladies and gentlemen,—I think I ought to congratulate you on the excellent record we are able to put before you at this time, although there is one matter which has caused us great disappointment. Three months ago we considered it our duty, in conjunction with other members of the trade, to lay our views before the Chancellor of the Exchequer to the effect that it was imperative that a substantial reduction in the spirit duty should be provided for in the Budget which he was then about to produce. We were careful to point out that this was required not so much in the interests of the large firms in the trade who were fortunate in possessing stocks of whisky bought and paid for before the war, but in the interests of the smaller, although still important, firms who in many cases were obliged to buy their supplies of old whisky on the market at high prices with which to carry on their businesses, or do, as many have been forced to do, liquidate their wholly inadequate stocks and go out of business altogether. The number of firms who have been so forced out of business during these past few years must be very great, and as distillers we deplore the loss of so many good friends. The fact is that, with a duty of 72s 6d per gallon, the capital required to finance a good going business tends to drive the trade more and more into the hands of the few who can command the extra capital. Meantime, I am glad to think that the strong position of this company has enabled it not only to stand the strain, but even to increase its profits, out of proportion to the largely increased capital, a fact which reflects the greatest credit on the management and the whole staff, whose zeal and enthusiasm I wish to take this opportunity of acknowledging.

NEW MOTOR FUEL, "DISCOL."

The only other subject which I wish to touch upon is concerning the new motor fuel, "Discol," which we recently put upon the market. When we last met together we had just launched this new product at our Hammersmith distillery. Since then we have established a mixing depot at Bankhall Distillery in Liverpool, and within the past ten days we have completed and opened up at Pinkston Station, Glasgow, a depot from which the Scotch orders will meantime be supplied. We have never made any secret that our ability to compete with the great oil companies was questionable, and that our real object was to run alongside them, so that if a shortage of petrol ever should take place the country would have, at least to a limited extent, an alternative fuel to fall back upon. We believe the oil companies recognise the advantages of having such an alternative fuel ready in case of emergency, and are therefore less disposed to regard us as competitors than as coadjutors having a common object. I may explain that we have no intention at present of putting up "Discol" in the usual two-gallon cans, but will confine our trade principally to commercial users or to those private users who can take a 50-gallon drum at a time. The success of alcohol mixtures as fuel for racing cars and cycles has been very marked, and we have an increasing demand for this purpose, not only within the U.K., but also from the Continent.

MANAGING DIRECTOR'S SPEECH.

In seconding the adoption of the report, Mr W. H. Ross, the managing director, said: The price actually paid for the shares in question amounted to £2,996,623, which was partly met by an issue of 52,901 D.C.L. £10 ordinary shares at a premium of £10 each, this premium being deducted from the price, thus reducing the figure to £2,467,613. Shortly after the settlement of the purchase price a final dividend was paid by the Finance Corporation amounting to £157,186, which having been largely earned prior to the purchase was not regarded as a revenue item, but was treated as capital, and therefore deducted from the purchase price, bringing the figure previously mentioned down to £2,310,426. Although your directors have no reason to be dissatisfied with the bargain they made they decided to make the investment thoroughly safe, as they endeavour to do in every instance, and have written off a further sum of £110,426, which leaves the value of the investment standing in our books at the net figure of £2,200,000. This explanation will help to make more clear the items appearing in the printed balance-sheet to which I would ask your attention

for a moment. Comparing first the assets side of the balance-sheet, it will be seen that land and buildings have been depreciated from the previous year by £30,000, while plant and utensils have been written down by £22,000. These sums are in addition to all new buildings and plant erected during the year, the cost of which also has been provided out of revenue. If you ask why it is necessary to write off such large sums, I would answer that the great drop in the consumption of our national beverage, due to the present monstrous duty and other causes, forces upon us a curtailment of production. A reduction of production means the closing down of certain of our works, and the consequent necessity for keeping these properties well written down in our books. I have not the least hesitation in stating that if our properties and plant were valued to-day they would be valued at sums greatly beyond those appearing in the balance-sheet, but none the less I am sure you will agree with the directors' policy to deal with all the assets in a most conservative manner. Even as a measure of protection against threatened competition we think it is a prudent policy.

Sundry debtors show a reduction of £122,000 from last year, which is purely incidental to the business. Stocks are £139,000 down—not that the stocks are less, but that the values are lower. It is satisfactory to note that the company's sales of spirits during the past year were within 2½ per cent. of the actual production, showing that the production is being kept well in hand. Your directors are determined to continue this policy, and so prevent as far as possible the possibility of over-production and its inevitable evils.

"Loans from subsidiary companies" show an increase of over £769,000, which represents practically the sum borrowed from the Irish Company. The only other item in the balance-sheet which need be referred to is the bank overdraft of £518,000, which is the balance still remaining of the original loan of £1,938,000, and against which the Finance Corporation shares were pledged in security. When this overdraft is wiped out by the issue of fresh shares now proposed this security will, of course, be returned to the company.

The profit and loss account calls for no comment further than that the year's profits show an increase of £162,000, while the additional amount required to pay the dividends on the increased capital already issued is £73,673. The difference between these two sums has been utilised in increasing the reserves and the amount carried forward.

NEW HOLDING COMPANY.

I would like to explain that the company is not yet at the end of the arrangements for organising its business. You would doubtless be surprised to see from the brochure recently issued to each shareholder the number of interests combined under the wing of the D.C.L. In large measure these various sub-companies are engaged in the blending and distributing of potable whisky, which is a branch of the business which previous to the war we did not touch unless for the export markets. This branch of our business, however, has now grown so important that your directors consider it could be better organised under a separate company. It is therefore proposed, while retaining the individuality of the various brands of whisky, to transfer the shares of the sub-companies to one holding company, whose shares, on the other hand, would be held by the D.C.L., instead of the present arrangement, whereby the shares of the individual sub-companies are held by the parent company. In this way it is hoped to co-ordinate the policy of the various companies in a manner hardly possible under existing conditions. This will involve little or no change in the value of the company's investments, but they will then appear in more consolidated form. I thought it was due to you to mention this coming change in case that exaggerated reports might appear in the Press and give a wrong impression.

The Chairman, having invited questions and none being forthcoming, declared the motion for the adoption of the report to be carried unanimously.

ADDITIONAL PREFERENCE CAPITAL.

An extraordinary general meeting of the preference shareholders was held immediately afterwards, when Mr W. D. Graham Menzies again presided.

In proposing the resolution, the managing director, Mr W. H. Ross, said: It is somewhat unfortunate that the proposals which we have to put before this meeting of preference shareholders to-day cannot be done in a simpler form than by means of the complex resolutions now in your hands, but if I may be permitted to paraphrase these resolutions and strip them of their legal verbiage, I would say that, so far as they are of interest to the preference shareholders, they may be classed under three main heads:—

1. A proposal to increase the nominal share capital of the company from £4,000,000 to £6,000,000.

ANGLO-CYLON AND GENERAL ESTATES COMPANY, LIMITED.**INCREASED PROFITS—BETTER PROSPECTS.**

The thirty-seventh annual general meeting of the Anglo-Ceylon and General Estates Company, Limited, was held, on the 19th instant, in the Council Room of the Ceylon Association, 6 Laurence Pountney hill, London, Sir Edward Rosling (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: In Ceylon we again experienced unusually dry weather in the early part of the season, with the result that the tea crop, although 111,421 lbs more than in the previous year, was still much below what we would reasonably expect in a normal season. The crop, amounting to 2,826,189 lbs, is now all sold, and has realised the very satisfactory net average of over 1s 3½d per pound, as compared with 1s 1½d in the previous season. Costs, unfortunately, continue to rise, largely due to the increase in wages throughout Ceylon, and partly also to the fact that we have had to undertake a larger expenditure than usual on replacements and repairs. When we purchased the Gonavy estate, some 15 years ago, it was always understood that the time would come when the factory would either have to be rebuilt or the Loolecondra factory enlarged sufficiently to deal with the Gonavy leaf. The Loolecondra site was not one that lent itself to a satisfactory extension, and, in view of a threatened settlement of the side of the hill on which the factory was built, it was decided to replace both factories by a new one on Gonavy, utilising the old material and machinery as far as possible. This work is now completed, and the group, consisting of 1,700 acres of tea, with a further 1,000 acres available for extension, possesses a modern factory capable of dealing with its present and prospective crops, instead of two factories with the cost of dual staffs and extra supervision.

CACAO AND RUBBER CROPS.

The cacao crop, amounting to 5,369 cwts, shows a small increase on the previous year. Prices throughout the year have been disappointing, and although Ceylon cacao continues to sell at favourable rates compared with cacao from other countries, the margin of profit has been considerably reduced. The rubber harvested, amounting to 223,583 lbs, realised a net price of 1s 0½d, as compared with 7.04d in the previous year. You will see from the schedule of estates that our tea properties in Ceylon have been increased by 320 acres. In July last we purchased Coombewood for £27,000; this estate is situated in the Dimbula district and produces tea of good quality, and the directors have every reason to believe that it will prove to be a valuable addition to our Ceylon estates. We have also purchased some 170 acres of land suitable for growing cacao. Our general manager's reports indicate that the estates are well cultivated, and that the labour position is somewhat improved. For many years we have suffered from an increasing shortage of labour in Mauritius, necessitating the letting out of cultivation of some of the poorer yielding lands. Recently the Indian Government have allowed the resumption of immigration of a certain number of labourers, and, although this has been allowed for one year only, we are hopeful that it may be continued in succeeding years, and so assist in an increased production of Empire-grown sugar.

THE YEAR'S RESULTS.

The results for the year are a profit from Ceylon of £68,917, which is about £5,000 more than in the previous year; a profit from Mauritius of £19,089, which is also an increase of about £5,000; and a falling off in interest and commission earned of nearly £6,000, which is chiefly accounted for by the low rate of interest ruling and a reduction in the amounts advanced to sundry estates. We are still without dividends from our rubber interests, but since the closing of the financial year dividends are being declared both by the Bukit Rajah and North Hummock Companies. The net profit for the year is £86,716, or £5,726 more than in the previous year. With £33,935 brought forward from the previous season, there is a sum of £120,651 to be dealt with. Out of this a 5 per cent. dividend, amounting to £25,000, has been paid. It is now proposed to pay a final dividend of 10 per cent., which will absorb £50,000, to place £5,000 to the general reserve, and to carry forward a balance of £40,651.

In regard to the prospects for the current season, tea prices are on a higher level than they were this time last year, and the indications point to a rather larger crop. In regard to rubber, I believe we have passed the worst and are now round the corner. In regard to sugar, the prospects for the current season are rather more favourable than they were a year ago. Early in the growing season we suffered from an exceptionally severe drought, which at one time threatened disaster, but climatic conditions proved favourable from February onwards, and the indications point to a slightly larger crop than in the previous year.

Mr Henry K. Rutherford seconded the motion, which was carried unanimously.

2. A proposal to create and issue 1,822,840 new preference shares of £1 each, to bear interest at 6 per cent. per annum.

3. A proposal to subdivide the existing preference shares into shares of £1 each, and to increase the rate of dividend thereon from 5 per cent. to 6 per cent.

Now I suppose there will be no adverse criticism on the part of the preference shareholders against proposals 1 and 3, nor should there be any such criticism against the second of these proposals when the following facts are borne in mind:—

(1) That when these changes are carried out the total issued capital will be £2,149,460 in preference shares and £3,645,680 in ordinary shares;

(2) That these ordinary shares are represented entirely by solid assets, and not, as in the case of many companies, largely by goodwill;

(3) That to the extent of one-half of the present issue the cash will be applied partly in discharging the bank overdraft (which now forms a prior charge to the preference capital) and partly in adding to the liquid assets;

(4) That the larger issue of preference shares, coupled with the higher rate of dividend, will make these a much more attractive investment.

More than this I need not say, but as an original preference shareholder, who paid par value for all the shares held, I can confidently recommend the acceptance of the proposals.

The motion having been duly seconded was carried unanimously.

EXTRAORDINARY GENERAL MEETING.

An extraordinary general meeting was held after the extraordinary general meeting of the preference shareholders, when Mr W. D. Graham Menzies presided.

In proposing the resolutions, the managing director, Mr W. H. Ross, said: Ladies and gentlemen,—Throughout the whole history of this company the directors have made it their guiding principle to pay cash for all obligations undertaken on behalf of the company. All grain and other raw materials bought are paid for in cash. It is a definite instruction that no bills be accepted for goods purchased. Occasionally for temporary periods our bankers have been requisitioned to get us over a difficult stile, and I must give them credit for at all times meeting us in the most generous manner. It may be that we are a bit old-fashioned and prefer to have our hands free as well as our securities in our own possession, but, in any case, your directors have come to the conclusion that the raising of additional capital would strengthen the company's position by getting rid of this liability, and at same time furnish us with the necessary liquid cash required for our extending business.

The question then came to be, in what form should this additional capital be raised? We had first of all to consider that we were already making full use of our reserve funds, which were entirely invested in the business. To go on adding to our reserves without increasing the dividend distribution did not seem to us quite fair to the shareholders, and to add to the dividend without recognising that the profits were to a considerable extent being made out of money not classed as capital was apt to create a false impression in the minds of the public. Moreover, we saw no prospect of this reserve fund being in the near future either required to prop up the various assets of the company or, on the other hand, being set free in the form of a cash bonus. That being so, your directors concluded that the most conservative policy to adopt was to convert this reserve fund to a large extent into fixed capital, and utilise it further in obtaining from the shareholders, in return for favours rendered, the amount of cash required to place the finances in a sound position. So far as I have been able to judge the proposals have generally been favourably received. They have been criticised both by preference and ordinary shareholders, both of whom claim greater benefits for their own particular class, which is perhaps the best evidence of the fairness of the proposals.

I would just like to add that if the resolutions are duly carried and confirmed it is proposed in view of the holiday season to hold over the allotment of the new shares till about the middle of October, and to issue these to the ordinary shareholders registered on the books at October 1, 1923; also that a month will be allowed for payment of the call of 10s per share. Renunciation forms will be provided, so that any shareholder unable or unwilling to take up his proportion of the new preference shares will be able to sell his rights.

Further, in view of the large amount of work entailed on our share department, it is not intended to proceed with the proposal to subdivide the ordinary shares until the new preference shares have been allotted and paid for. It may possibly be found more convenient, therefore, to hold over this operation until after the payment of the February dividend.

The motion, having been duly seconded, was carried unanimously.

SIALANG RUBBER ESTATES, LIMITED. REDUCED COST—IMPROVED PROSPECTS.

The fourteenth annual general meeting of the Sialang Rubber Estates, Limited, was held, on the 18th instant, at 2, 3, and 4 Idol Lane, London, Mr C. Heath Clark, J.P. (the chairman), presiding.

The Chairman, in the course of his speech, said: The only unusual item in the accounts this year is the £3,000 written off as depreciation of our mature rubber areas. New regulations have recently been adopted by the Netherlands Indies Government, whereby the taxpayer is allowed to deduct for income-tax purposes from each year's profits a percentage of the value of the rubber trees which are mature, based on their estimated productive life, which, though likely to extend over a long period, cannot be without limit. Such writing down is very sound accounting, and we have therefore adopted for the purposes of our books the basis which we understand is likely to be accepted by the N.E.I. authorities.

The f.o.b. cost in the year to January 31, 1922, inclusive of London administration expenses, was 9.18d per pound. This year the figure is 7.44d, but as neither depreciation nor bonus to the Eastern staff was provided for in 1921-22 the actual reduction amounts to 3.17d per pound.

The year's working resulted in a net profit of £36,424, and after the carry-forward and a refund of excess profits duty have been added and Ned. Indies profits tax deducted, there remains £73,070, which the directors recommend should be dealt with by payment of a dividend of 12½ per cent., absorbing £37,500, and by the payment to the directors in terms of the articles of association of £375 additional remuneration, which sum represents 5 per cent. on the amount by which the declared dividend exceeds 10 per cent. After deducting these amounts there remains to be carried forward £35,195.

The outlook for rubber producers has been much improved as a result of the regulation of exports introduced by the Governments of Malaya and Ceylon and the improved consumption, and while the market at the present time is on the quiet side, there is nothing unusual in that at this season of the year. The imports into the United States during the first six months of 1923 amounted to 190,000 tons, and during that period the stocks in London and Liverpool have been reduced from 81,000 to 57,000 tons, while stocks in Singapore and Penang have fallen from about 35,000 to 20,000 tons. Having regard to the present magnitude of the industry, the position would appear to warrant the expectation of a higher market in the autumn.

The report and accounts were unanimously adopted.

APOLLINARIS AND JOHANNIS, LIMITED. INCREASED DEMAND—PROFITS DOUBLED.

The twenty-sixth ordinary general meeting of Apollinaris and Johannis, Limited, was held on the 17th instant, at Holborn Restaurant, London.

Mr Alfred R. Holland, the chairman, stated that the accounts showed a net trading profit of £52,476 14s 7d, against £25,868 7s 11d for 1922. Actually the earnings during the last year had increased by £26,608 6s 8d—in other words, doubled!

The next annual accounts would show the reduced capital and liabilities. In the current year, to meet interest on debentures and debenture certificates as well as sinking funds, a total amount of £51,680 per annum would be required. Shareholders would observe that the past year's earnings had been £52,476 14s 7d, consequently during the year under review sufficient had been earned to meet the interest on the debentures and on the debenture certificates as well as the sinking funds. As in the year under review only the interest on the debenture certificates had had to be paid in cash, the company were able to carry forward a sum of just on £40,000. Such would materially strengthen the company's finances.

The home trade last year had shown very satisfactory development, and this in spite of the generally unfavourable summer season. In other departments, however, difficulties had been continuous. On the Continent the trade had been stagnant consequent on adverse exchanges and general political unsettlement. Export, though, had shown some little expansion, notwithstanding that one had continually to contend with increased duties and fluctuating exchanges.

In July, 1922, he had referred at some length to the claims of the company against the German Government. Under the compromise as then advised, the company were to receive just on £50,000 for liquidation, and some £37,000 for compensation. The money for the liquidation settlement had then just been received. The sums due in settlement for compensation were, however, coming in but slowly. So far only one dividend of 2s 6d in the £, or £4,600, had actually been paid by the English Clearing Office. It

was understood that another dividend of 2s 6d in the £, or £4,600, was to be paid by the English Clearing Office on the 31st of this present month, and no portion of these had been included in the profits.

In respect to the future, the Chairman remarked that as the company had made £25,000 more profit this year than last, shareholders might conclude that during the current year a corresponding increase would possibly result. The debenture interest would be resumed in cash on October 1 next. But with a business such as theirs it could only prosper if trade were flourishing and international commerce unhampered. He feared, therefore, it would be too much to hope that trade affairs would improve soon enough to render a dividend possible as early as next year.

The report was unanimously adopted.

EBBW VALE STEEL, IRON, AND COAL COMPANY, LIMITED. EFFECTS OF LABOUR TROUBLES AT EBBW VALE.

The fifty-sixth ordinary general meeting of the shareholders of the Ebbw Vale Steel, Iron, and Coal Company, Limited, was held, on the 17th instant, at the Cannon Street Hotel, London, Sir Frederick Mills, Bart. (chairman and managing director), presiding.

The Chairman first dealt with the accounts, and, proceeding, said: It is disappointing to the board that, while they present a balance-sheet which shows we are able to avoid again entrenching on the published reserves, it also shows there can be nothing for the shareholders. I desire to express the regret of my colleagues that they are unable, for the second time in succession, to recommend the payment of a dividend on the ordinary shares, and for the first time deem it wiser to defer the consideration of the payment of a dividend on the preference shares. The dividend on the preference shares is cumulative, and the holders may rest assured it will be paid the moment the directors consider it prudent to do so.

EFFECTS OF THE STRIKE.

This unfortunate position has mainly arisen as the result of the somewhat notorious labour troubles at Ebbw Vale last year. Profit was a possibility, as is proved by the accounts of each of our four subsidiary colliery companies, where such troubles as existed were of the ordinary nature and were dealt with by the ordinary means. It will be remembered that, following the general stoppage of the coal mines in the spring of 1921, work at Ebbw Vale was resumed on the footing that all matters of local difference—and they were many and important, the outcome of the extraordinary attitude assumed by that group of colliers during the war—were referred to the arbitration of Dr Galloway. I pause here to say that the wiser course, in view of the notice given to the men four months before, would have been to press for a settlement before the resumption of work, already delayed for a month. The policy adopted was dictated by feelings of sympathy with our workpeople, who had been many months out of employment; but I regret to say our attitude was regarded, yet once again, as a sign of weakness by them, for the arbitration proceedings not only dragged out their weary length with one abortive meeting after another, but after more than twelve months, by which time Dr Galloway had obtained sufficient evidence to enable him to give his award, it was promptly rejected by the men. The strike lasted some seven weeks, and in the outcome an agreement—at the instance of the chairman of the Conciliation Board—was come to which to all intents and purposes gave the men what we had offered some fifteen months before.

It is not surprising that with the backbone of Ebbw Vale's industries in such a turmoil there could be no profit in the first nine months of the financial year, but with the improvement which set in at the beginning of 1923, and with the men settling down to work in real earnest, the collieries have made a profit; in point of fact, the last three months of the year show a small working profit on all accounts instead of a heavy deficiency, which at one time we feared would have been the case.

IRON AND STEEL.

In common with other firms in the heavy steel trade, there was a loss in that side of our operations in the earlier months of the financial year owing to low prices and intermittent working. It was thought desirable to try out the steel process suitable for our Northamptonshire ores, and in April a start was made, and we were just overcoming the initial difficulties inherent in starting a new process and reaching the quality desired when the whole business was suddenly and effectively closed down by the stoppage of the coke ovens in September, 1922. Before I proceed further let me say that since we restarted the ironworks in April this year our expectations have been realised, and we are now making from our Northamptonshire ore pig-iron entirely suitable for our purposes. It is our intention gradually to expand the manufacture,

because, notwithstanding our difficulties of last year, the resulting steel met with instant approval by our customers.

The cost of relining the furnaces, together with that of overhauling the rest of the plant and machinery, has amounted to about £75,000, and has been charged against the revenue account for the year. I am glad to report that we are now in full work in all departments; our collieries are making adequate profits, as also are our steel works.

It is perhaps desirable to say that your share and other capital issues are more than fully covered by the assets, that the earning capacity of the collieries and works, by reason of the immense sum spent upon them during recent years, is infinitely greater than ever before, but the last two and a-half years of labour troubles and of bad trade have rendered it necessary for your board to conserve, by all means in their power, the cash resources of the company. A brighter day has apparently dawned for us, and I hope, and indeed expect, that next year I may have as satisfactory an account to give you as, I fear, this has been unsatisfactory, and, to those who do not know the facts, disappointing.

The report and accounts were adopted.

ILLINGWORTH, MORRIS, AND CO., LIMITED. CONTINUED DEVELOPMENT.

10 PER CENT. DIVIDEND FOR THE YEAR.

The third ordinary general meeting of Illingworth, Morris, and Co., Limited, was held, on the 17th instant, at Cannon Street Hotel, London, Mr T. H. Morris, D.L., J.P. (chairman of the company), presiding.

Mr Ian P. Little (director and secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman, moving the adoption of the report and balance-sheet, said: Mr Turner has been appointed a joint managing director with Mr Ostrer, who will look after the financial side of this large company, now the largest coloured spinners as well as the largest white botany spinners in the trade, and with a reputation second to none in either branch.

You will be glad to hear of the disappearance of the 8 per cent. notes, and to know of the success of the debenture issue, which was over-applied for, and now stands at a premium. Further preference shares up to the total authorised of £500,000 have been issued to provide part of the purchase money of the new businesses, but I anticipate in the early future more capital will be required to give the company ample means to carry out their financial arrangements without outside assistance.

Generally, prospects seem to depend very largely on the settlement so long delayed in mid-Europe. All our branches have good contracts on their books, but the lack of confidence engendered by the generally unsettled conditions prevents their being taken up with the speed that they ought to be. The fine trade has also been very much hampered by financial difficulties the merchants have had to face, particularly London merchants, who do the fine fancy worsted trade.

There is no doubt the company is beginning to realise the advantages of co-operation, and I think the year's results, under somewhat difficult conditions, reflect credit upon the management of the various mills, and are such that the directors feel able to recommend a dividend that will, with the interim paid last half-year, bring up the total to 10 per cent., less tax.

All eyes are now turned to the negotiations between the Allies and Germany for the settlement of outstanding disputes, and should these, in the near future, be satisfactorily settled, the prospects for the company are good.

Mr F. W. Turner (managing director) said that the key to the improvement of the whole trade lay in the solution of the Ruhr difficulty. He also foreshadowed great and cumulative advantages from the amalgamation of the company's mills to the shareholders, the public, and the operatives.

Sir W. B. Gentle seconded the motion, which was carried unanimously.

MOND NICKEL COMPANY, LIMITED. FOREIGN GOVERNMENT CONTRACTS SECURED.

The ninth annual general meeting of the Mond Nickel Company, Limited, was held, on the 19th instant, at 39 Victoria Street, London.

The Right Hon. Sir Alfred Mond, Bart., M.P., presided, and, after expressing his satisfaction at resuming the chairmanship of the company, said that the credit balance to profit and loss account for the past three years was: in 1921 £222,000, in 1922 £299,000, and in 1923 £307,000, which showed a recovery in the affairs of the company which everyone must think very satisfactory in the present disturbed state of trade.

The demand for nickel, which had been at a very low ebb, had sustained a very considerable improvement during the past year

—an improvement which at present was maintained—and their turnover and deliveries had been satisfactory. Their production had been increased and their works were well employed, but the prices which had been ruling, owing to a somewhat unrestrained competition from a good many sources, had been lower than at almost any other period of the industry, and had counteracted to some extent the benefits derived from the larger sale and the larger production. Copper sulphate, of which they were the largest manufacturers in the United Kingdom, and which was a product chiefly exported to the Continent, had suffered not merely from competition, but also from severe fluctuations in the exchanges in most of the bigger export markets, such as France and Italy.

The Chairman proceeded to draw attention to the changes which had taken place in the uses of nickel since the war. Previous to the war, he said, probably 50 per cent. of their nickel had gone to steelmakers for armaments and 50 per cent. for the production of non-ferrous alloys and pure nickel products, whereas last year only 12½ per cent. had gone to the former and 87½ per cent. to the latter. The use of nickel for coinage was increasing, many countries now replacing their paper currency with nickel. The Italian Government, for instance, had recently placed large orders for the supply of pure nickel coinage, this company obtaining the contract for the supply of the raw material. A similar contract had been obtained for one of the Baltic States. They had also supplied considerable quantities of nickel for other pure nickel and nickel-bronze currencies in various parts of the world.

The use of nickel for cooking utensils was also on the increase, and when it was more appreciated by the public he thought that its use in that connection would be greatly increased.

The report and accounts were unanimously adopted.

HOVIS, LIMITED. SOUND POSITION—BRIGHTER PROSPECTS.

The ordinary general meeting of Hovis, Limited, was held, on the 19th instant, at Caxton Hall, Westminster, London.

Mr J. F. Morton (assistant managing director), who presided and submitted accounts for the three years ended March 31st last, remarked that the occasion was unique in the annals of the company, this being its twenty-fifth anniversary. The balance-sheet for the past year showed an increase of £28,000 in the capital, this having been distributed to the shareholders as a bonus in December last, and after deducting this amount the reserve stood at £145,302. It was now proposed to increase the reserve account to £160,000, as the directors felt it incumbent that, with the increasing business of the company, and, it might be added, its success, they should not neglect the conservative policy at which they had always aimed. During the past three years the capital assets of the company had increased by approximately £100,000, and the depreciation written off amounted to £50,000. A further investment had been made, cash in hand having been employed by taking up short-dated bonds to the extent of £100,000. The net profit for the past year amounted to £78,000 odd, and the directors recommended a final dividend for the half-year to March 31st last at the rate of 8 per cent. per annum.

Notwithstanding the sound position disclosed by the accounts the directors felt that they ought to exercise the same care that had led the company to where it was at present. That was why, in view of the cut which was taking place in respect to white flour, they did not think it expedient to recommend any further distribution at the present time than that mentioned. Since de-control the company had done well, and, doubtless, reason would prevail, and, notwithstanding over-production, white flour would fetch a modicum of profit instead of a loss, at which it had been sold practically all over the country within the last few months. On the other hand, it was gratifying to be able to record that the sales of Hovis were continuing to show an increase, and all their side lines—their van and barrow building departments, printing

BULLION.

IMPORTS AND EXPORTS OF GOLD.

Week ended July 18, 1923.

Imported into the United Kingdom.	Exported from the United Kingdom.
From—	To—
British South Africa.....	France.....
Sweden.....	Poland.....
Other countries.....	United States.....
	Egypt.....
	British India.....
	Netherlands.....
	Other countries.....
Total declared value of imports.....	Total declared value of exports.....

Messrs Samuel Montagu and Co. write, on July 18th, as follows:—

GOLD.

The gold available this week was rather larger than usual. As Indian inquiry is small, the greater portion will be despatched to New York. The following were the United Kingdom imports and exports of gold during the month of June, 1923:—Imports, £3,130,140; exports, £2,129,057. It is reported that several German banks are attracting large paper mark deposits on the new "gold mark basis." This system, as regulated by the Prussian and Bavarian laws, is as follows:—The "savings gold mark," whose value is not that of the old gold mark, but ten American cents, is selected as the unit. Paper-mark deposits are valued in the "savings gold mark" according to the day's Bourse quotations of new dollar Treasury bills, and they are so booked. The savings bank undertakes to repay to depositor, when he withdraws his deposit, in paper marks of the same gold value. The bank presumably covers its own risk by investing the paper-mark deposits in dollar Treasury bills, or in some other stable security.

SILVER.

The market during the last seven days has been singularly inactive. Although favourable news continues to be cabled regarding the monsoon, the Indian bazaars are reluctant to purchase silver outright, preferring to ship and sell a similar amount for delivery in two months. China has sent orders to buy, but at a considerable fraction under quotations. The Continent and America have not figured as sellers of any importance. On the whole, the market has a languid appearance.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	June 22, 1923.	June 30, 1923.	July 7, 1923.

BRITISH AUSTRALIAN BROKEN HILL.—Returns fortnight ending July 14, 1923, are: 7,078 tons crude ore produced 1,220 tons lead concentrates, containing 763 tons lead and 33,184 ozs silver; also 1,050 tons zinc concentrates, assaying 8 per cent. lead, 95 ozs silver per ton, and 45 per cent. zinc. 190 tons carbonates raised. One day's stoppage.

BURMAH CORPORATION.—June:—Mined 17,531 tons of ore. 19,000 tons of ore were milled in the treatment plant, producing 10,418 tons of lead concentrates. 10,869 tons of lead-bearing material were smelted in the blast furnaces, producing 4,046 tons hard lead for treatment in the refinery. Refinery products were 3,512 tons lead and 330,623 ozs silver. Tonnage milled includes retreatment 1,607 tons tailings. Experimental zinc plant produced 591 tons zinc concentrates, assaying 9.5 ozs silver, 6 per cent. lead, 47.5 per cent. zinc.

SULPHIDE CORPORATION.—During the six weeks ended June 30, 1923, 14,594 tons of ore and 2,874 tons of slimes were milled at the Central Mine, producing 3,343 tons of lead concentrates (including 389 tons from the de-leading plant), which assayed 45 ozs silver, 67 per cent. lead, together with 5,212 tons zinc concentrates, assaying 12 ozs silver, 6 per cent. lead, and 49 per cent. zinc per ton.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the June outputs, and dividends for four complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

"The company, although not directly concerned with the matter in dispute, was involved as a member of the Engineering and National Employers' Federation in the engineering lock-out, which lasted from March 3rd to June 6, 1922, covering the period of the year in which normally the output of the factory is at its maximum. It is estimated that the loss of turnover incurred by the company on this account amounted to not less than £300,000. A further substantial fall in the value of stocks took place during the year under review, and the directors have felt it wise to write down the stock on hand at September 30, 1922, to the market value ruling at that date."

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Recent warm rains have had a beneficial effect upon spring cereals, pastures, and roots, which were badly in need of moisture. Winter wheat and oats are ripening quickly under a spell of brilliant sunshine, and a full average outturn is anticipated.

General course of trade was on a limited scale, while restricted by labour troubles at the docks. The trend of prices was in buyers' favour owing to lower forward offers, except for parcels actually available, these being held for a substantial premium owing to the difficulty in obtaining delivery. Supplies of native wheat continue in small compass, and prices largely nominal, while ranging from 10s 6d to 11s 9d per 112 lbs, free on rail, as to quality. Imported dull and easier for arrival. No. 1 Northern Manitoba quoted 47s to 47s 6d, No. 2 mixed Durum 45s, choice white Karachi 46s 9d, red ditto 45s 6d, Rosafe, 62½ lbs, 46s 6d, all ex ship, to arrive, per 496 lbs. The cargo section was dull and depressed on freer offers of Plate descriptions, and pressure to sell new crop Manitobas, also in view of favourable crop prospects in the chief exporting countries, and liberal supplies available for shipment to Europe. Cargoes of No. 1 Northern Manitoba, July shipment, sold at 45s 3d, and early August at 44s 1½d net. Feeding stuffs lacked interest, and prices declined for most descriptions. Flour firm owing to scarcity of grist, and a steady demand prevailed. London standard straight run quoted at 40s, patents 43s, town households 38s per sack, delivered in the metropolitan area. Country straights nominal owing to scarcity of native wheat. Imported descriptions firm for stop parcels. Manitoba patents range from 35s 6d to 39s, Minneapolis good patents 38s 6d, soft winters 36s 6d to 39s, and Australian 35s 6d to 37s 6d, all per 280 lbs, ex store. Stocks continue small and arrivals light. Millers' offals steady. Broad bran quoted 6s to 6s 3d, ordinary ditto 5s 6d, middlings 8s 3d to 8s 6d, bags included, ex mill. Light oats 5s 3d, powdered oat husks 5s 3d, feed oatmeal 7s 9d, ground oats 7s 3d, all per cwt, free on rail. Barley: English quiet at 7s 6d to 10s 9d per 112 lbs, free on rail, as to sample. Imported steady. Californian 42s to 44s 6d, Australian chevalier 40s to 46s, New Zealand 33s to 45s, as to sample, all landed, per 448 lbs. Persian, ex ship, 25s, No. 4 Canadian western ditto 25s 9d, American malting, 48 lbs, 25s 3d, Plate, landed, 27s 3d, all per 400 lbs. Maize quiet, but landed parcels held for extreme rates. Plate, ex ship, 36s 6d, ditto, landed, 42s per 480 lbs. Oats: English nominal at 8s to 10s 8d per 112 lbs, as to sample, free on rail. Imported easier for arrival, but parcels actually available realise firm prices. Plate f.a.q., ex ship, 22s, ditto, landed, 26s, No. 2 Canadian western, ex ship, 26s 6d, No. 3 ditto, ex ship, 26s landed 28s, No. 1 Canadian feed, ex ship, 25s 3d, No. 2 ditto 24s 9d, New Zealand A grade, landed, 38s 6d, B ditto 37s 6d, all per 320 lbs. Oatmeal quiet. London made, all cuts, 17s 6d, rolled oats, also whole groats, 17s 6d, flaked oats 18s, ex mill, ordinary Scottish oatmeal 19s 6d to 20s, and American, all cuts, 17s 6d per cwt.

tute a critical period, as, unless a radical change takes place in the situation, the closing down of plant will be inevitable. Prices of pig continue to ease off, and makers of hard basic billets have reduced 10s per ton. Continental competition in steel billets shows signs of breaking down. Output is dropping and prices rising, and a diversion of business from the Continent to this country is believed to be imminent. The outlook for investors in industrial concerns is bad, so far as the next nine or twelve months are concerned. The railway steel branches are working with regularity, but not to the full extent of their capacity. French competition in small tools is assuming serious proportions. The reaction in iron and steel is reflected in a reduced call for manufacturing fuels of all descriptions, and a slight drop in prices. Current quotations per ton at pits are:—Best South Yorkshire hards, 21s; rough slacks, 11s 6d to 13s; nutty slacks, 10s to 12s; smalls, 7s to 9s; best washed branch, 32s 6d; silkstones, 26s 6d; best Blyth steams (f.o.b.), 26s to 27s.

Our Glasgow correspondent writes:—As was mentioned last week, industrial business was suspended (in all leading productive and constructive departments) in Glasgow and the West of Scotland as from Friday, and remains so at present, and for all practical purposes will be at a stand on to the end of the month. This excludes, of course, repairing in the various steel and iron finishing shops, in the shipyards, and in the engineering establishments throughout the Clyde valley. Though no actual business engagements of consequence have been entered into over the eight days, it is understood that certain tentative engagements have been broached, the buying emanating mostly from the Midlands and other English manufacturing localities. Some concern has been generated in the last day or two by the announcement in markets in the South of reductions of from 5s to 10s a ton in the prices of iron and steel plates, sections, &c., and producers here are wondering if they will have to face similar changes when the rolling mills are again set going. Fortunately the dockers' dispute has not extended North, and that fact has permitted of some delayed landings of French and German material being dealt with here. The quantities are not large, but the deliveries are welcomed by consumers of semi-finished products. Trade advices from Canada, with which this district has most intimate associations in iron and steel, are regarded as highly encouraging—the National Railway Board having resolved on an expenditure of 30,000,000 dollars on railway developments over the Dominion. Glasgow producers are hopeful as to their share of the prospective work. During the past week about 300 tons of Scotch pig-iron were shipped from the Clyde to the Pacific side of the United States.

Our Cardiff correspondent writes:—There has been no material change this week in the state of the Cardiff coal market. The volume of the coal exports has increased, and is again normal, but there is a scarcity of new orders, and colliery salesmen have had a hard task to maintain prices. Outputs, however, are diminishing slightly, and are likely to still further decline as the result of the increase in wages and the absence of miners on holiday. There is a probability of a further advance in wages in September. The official audit will not be announced for some weeks yet, but the export values for the months of May and June, the two months which will regulate the general wage rate in September and October, show an increase over those of March and April of no less than £872,000, and it is estimated that the increased proceeds

of the industry in those two months will justify a further increase in the general wage rate of at least 7½ per cent., and possibly nearly 10 per cent. The knowledge of this fact, which means a further increase in the cost of production, is strengthening the determination of the collieries to uphold current prices, and in that determination they have so far succeeded. Although current inquiries have been comparatively few, there has been no break in the prices of any of the leading grades of coal, and the current quotations remain approximately as follows:—Best Admiralties, 30s to 32s 6d; second Admiralties, 29s to 30s; best drys, 29s to 30s; black veins, 28s 6d to 29s 6d; Eastern Valleys, 27s 6d to 28s 6d; best bunker smalls, 21s to 23s; ordinary cargo smalls, 18s to 19s; anthracite big vein large, 50s to 55s; machine-made cobbles, 60s to 62s 6d; French nuts, 60s to 62s 6d; stove nuts, 60s to 65s; rubbly culm, 15s to 15s 6d; inland blast furnace coke at ovens, 30s to 35s; coke for export, 50s to 60s; patent fuel, 33s to 35s; pitwood, ex ship, 31s to 32s. Business in the tinplate trade is also easier, and rejection by the manufacturers of demands for better wage and other working conditions has created a somewhat disquieting labour outlook.

MANCHESTER, July 19.

Trading in the market during the past week has not shown any particular expansion. A fair amount of business has been done in small lots, but buyers have not been prepared to commit themselves to contracts of weight. Quite apart from any changes in raw cotton values there has been a tendency for prices in yarn and cloth to weaken. A moderate turnover has taken place in bleaching, printing, and finishing cloths for India, but very little has been done in standard grey makes. Bids have been about in shirtings and sheetings for China, but only occasional orders have been booked, the bulk of the demand for that quarter having run on fancies and specialties. Heavy goods have attracted a little more attention for Egypt and Turkey. Sheetings have been in request for South America. Isolated sales have occurred in fine goods for the United States. Spinners of American yarns continue to do very badly. Further weakness in prices has shown itself. An irregular trade has been done in Egyptian spinnings.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The decision to abandon the current series of wool auctions in London has occasioned no surprise. The auctions have been twice postponed on account of labour trouble at the docks, and it is obvious that the selling programme cannot be carried out under existing conditions. The sale which was to have been held at Hull this month and the one arranged for Liverpool in September have also been cancelled. The next series will, therefore, open in London on September 4, when for 19 selling days there will be available about 226,000 bales of Australasian and 10,000 bales of Punta Arenas wool. The general impression is that this rearrangement will make for greater strength in the wool market. The opinion is freely expressed that values will be on a higher scale in September, especially in view of the large consumption on the Continent. Meanwhile trade in this centre shows, if anything, just the slightest indication of some recovery. It is difficult to trace any material increase in demand, but the tone of the market is somewhat better, and traders are inclined to take a more optimistic view of the future. Quotations show very little change from those ruling a week ago, and weak sellers are to be found both in tops and yarns. Any improvement in demand, however, will be immediately reflected in a firmer attitude on the part of sellers, and it will take very little movement to check the recent downward tendency and put tops and yarns on a basis more in keeping with the cost of wool.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

There is disappointment in many quarters at the postponement of the wool sales, and although there may be a recommencement next Tuesday, at the moment of writing it is doubtful even if then there will be any resumption. No regrets have been expressed except by importers who are anxious to turn their raw material into cash, but there is nothing to indicate that actual needs are of any material size, and as importers and merchants have fairly heavy stocks, nobody anticipates a lack of wool in any direction. At the same time importers and selling brokers would have preferred to have continued the auctions for another fortnight. The general opinion is that wool values will take no harm between now and September. The home trade should then be better able to estimate prospective needs, for by that time there should be in operation some decent sized piece business for next spring. In the meantime, manufacturers in the West Riding are getting ready to make deliveries to the Far East, for the goods should be away by the end of October and November for the next light weight season.

VEGETABLE OILS AND OILSEEDS.

The most notable feature about the markets is the continued steadiness of linseed oil and some improvement in value. Though trade in this commodity, home and export, is still distinctly quiet, there is a good undertone, the main support being the comparatively small supplies of seed to meet requirements from now till the new crops are ready, and the hope that sooner or later there will be a settlement of the European trouble and the beginning of a revival of industry. Linseed, the raw material, is inclined to sag in view of the very small demand from crushers, and is slightly lower on the week. Cotton oils have been to a great extent neglected, and crude Egyptian has further declined, and is offering ex Hull mill at £35 10s for prompt delivery. Other vegetable oils are in quiet demand at about unchanged values.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The market hide position is steady, and alterations at Thursday's Bermondsey auctions were trifling. Best ox sold from 7d to 8½d again, two classes advancing ½d. Two classes of seconds sold at 7d., but three classes were withdrawn. There is a decided improvement in the demand for sole leather. Leicester shoe manufacturers have been anxious to obtain supplies, as the fine weather has brought in more orders for ladies' shoes than were expected. Exports of British leather increased from

£1,800,532 to £2,090,531 for the January-June periods of 1922-23 respectively.

Upper leathers are selling better; patent, in the medium grades, takes first place, followed by glacé kid in black and colours. Box and willow calf are selling in small lots, but prices are cut very fine owing to foreign competition. Imports of dressed leather to the end of June this year were valued at £3,374,753, as against £3,226,154 for corresponding period of 1922.

The shoe trade shows a slight improvement, the export section being fairly busy. Exports for the first six months of this year were valued at £1,653,258, as against £1,207,322 for January-June, 1922, a very satisfactory indication that trade is on the mend.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 20.

There was really no new feature to note in most directions, business being carried on quietly in both raw and manufactured goods as buyers continue to restrict operations to wants of immediate necessity.

SUGAR.—There was a fair demand for refined goods, chiefly British, and prices disclosed steadiness. Messrs Tate and Lyle's cubes, 6rs 6d to 62s 6d; granulated, fine and coarse grain, 58s 7½d; No. 1, 58s 4½d; No. 2, also London, 58s 1½d; ditto, second half August, 58s 6d; September, 57s 3d; October, 55s 9d; November-December, 53s. Yellow crystals, spot, 53s 7½d. American granulated, spot, sold, 56s 9d; white Java, spot, 54s 9d for medium; ditto, May-June, steamer, 23s 9d; June-July, 23s 6d; July-August, 23s 4½d, c.f. and i., London. Continental parcels for shipment more or less nominal, with a paucity of first hand offers. Raw refining kinds meet a slow sale. Cuban, basis 96 per cent., July-August shipment, quoted 24s, c.f. and i., U.K. Terminal market unsettled, particularly for the August position with dealings on a fair scale. August, sold, 26s 7½d to 28s 3d and 26s 6d; December, 22s, 22s 6d, and 21s 9d; March, 22s, 22s 3d and 21s 1½d. Cuban stocks stand at 564,380 tons, against 716,250 same time last year.

COFFEE.—Only limited trading was in force, but with regard to all the finer qualities, holders required steady prices. Good bold Costa Rica, sold, 103s. Future delivery inactive and nominal.

COCOA.—Only retail transactions occurred in spot parcels on about former terms. Former positions dull. Accra, F/F quality, July-August, quoted 30s, and October-December, 32s 6d, f.o.b. terms.

TEA.—Only 6,960 packages Indian were offered this week and soon disposed of to a generally good demand at full recent rates. 11,100 packages Ceylon attracted active support, and general firmness characterised the market, buyers paying particular attention to all leaf teas. Java and Sumatra in fair request and firmer.

RICE.—There is nothing fresh to note in this market, business being quite retail with but little alteration in prices. Two Stars, new crop, spot, 13s 9d; August quoted 12s 6d, c.f. and i. terms. Broken dull, unaltered. Japanese peas, spot, 24s 9d; September-October, 23s 6d to 23s 9d; and December-January, sold, 23s 6d to 23s.

SPICE.—Pepper generally steady, but trade continues extremely quiet. Fair black Singapore, spot, 4½d; August-October, 4d; Aleppo, spot, 4½d; Tellicherry, 4½d; white Singapore, spot, 5½d; Muntok, 6½d; ditto August-October, 6½d. Zanzibar cloves, spot, 1s 1½d; August-October, 1s 2½d. Tapioca meets a slow sale. Fair Singapore flake, spot, quoted 3½d; fine Java, 4½d lb.; Singapore, June-August, 4½d; fair Penang seed, spot, 29s; sago flour, June-August, 12s 4½d. Desiccated coconut steady. Fine cut, spot, 38s; medium, 36s 6d; halves, June-July, 36s; July-August, 36s 6d; August-September, 36s 6d cwt. Ginger dull.

RUBBER.—A generally quiet tone predominated, and prices were barely steady. First grade, June-July, Continent, quoted £24 5s; new crop, August-September, £24 5s; September-October, £24 5s ton. Hessians and twills dull, and rates weak.

HEMP.—Manila dull and featureless. J grade, August-October, quoted £30 10s; K and L, £27 10s; M, £26 10s ton. African sisal dull, unaltered.

SHELLAC. quiet. T.N., spot, 26s; August, 24s; October, sold, 24s 8 to 240s.

COPRA.—Market quiet and easier. F.M.S. Straits, May-July, London, sold, £26 15s to £26 10s; ditto, April-June, Rotterdam, £26 16s 3d to £26 10s; May-July, £26 2s 6d to £25 15s; June-August, £25 15s to £25 5s. Ceylon, June-July, quoted £27 5s; Java ditto, £26; Dutch East Indies, June-August, £25 2s 6d; South Sea, £24 10s; Cebu, June-August, Hamburg, sold, £25 2s 6d to £24 10s. Palm kernels, July-September, Liverpool, sold, £17 15s ton.

Vol. XCVII.

SATURDAY, JULY 28, 1923.

No. 4,170

RUBBER in moderate request, but market rather unsettled at times. Standard plantation, crepe and sheet, spot and July, sold, 14½d to 14¾d; August, 14½d to 14¾d; September, 14½d to 14¾d; October-December, 14½d to 15½d; January-March, 15½d to 15¾d and 15¾d. To New York, standard sheet, September-October, sold, 14½d per lb, c.i. and f.

OILS.—Linseed irregular, but prices firm on balance. Spot, net, naked, quoted 43s 9d; July, 42s 6d; July-August, 41s 9d; September-December, 38s 9d. Rape quiet. Crude, spot, 39s 6d; refined, 42s 6d. Cotton quiet. Crude Egyptian, spot, 38s 6d; common edible, 44s; deodorised (in barrels), 48s 6d. China-wood quiet. Hankow, spot (barrels), 105s; July-August, 93s. Coconut quiet. Ceylon, spot, 45s; July-August, 41s 9d; Cochin, ditto, quoted 47s. Soya quiet. Oriental, barrels, July-August, 37s. Japan fish nominal. Cod quiet. English, spot, 35s. Groundnuts quiet. English, crushed, naked, spot, 43s; deodorised, barrels, 52s. Turpentine steadier forward. American, spot, 78s 9d; July-December, 72s. Rosin quiet. American, grade B, 13s; F, 13s 6d; G, 13s 6d; H to I, 13s 6d; W.G., 17s 6d; W.W., 18s 9d, per cwt. French nominal. Petroleum easier. American standard, white, spot, 11d; and water white, 1s per gallon. Castor-oil firmly held. First pressure, spot, to August, quoted 56s; second pressure, 55s, and pharmaceutical 61s per cwt.

OILSEEDS.—Linseed quiet and easier, especially distant positions. Bold Bombay, afloat, £21 2s 6d paid; small Bombay, ditto, £20 15s; Calcutta, afloat, £20 12s 6d; June-July, sold, £20 10s; August-September, £20. Plate, June-July, sold, £19 2s 6d to £18 17s 6d; and July-August, £18 17s 6d; January-February, £17 5s. Rapeseed quiet. Toria, July-August, £16 5s; real bold Ferozepore, ditto, £15 12s 6d; Jamba, £12 5s. Cottonseed inactive. Egyptian black, July, £11 15s; and white, £10 17s 6d, to Hull. Bombay, July, £9 7s 6d. Gingly seed quiet. Large Bombay, July-August, Continent, sellers, £23 12s 6d. Chinese, ditto, £23 15s, Continent. Ground-nuts dull. Coromandel, machine-dried, July-August, £22 5s. Chinese decorticated, f.a.q., July-August, £22; East African, ditto, £20 15s. Soya beans quiet. Manchurian, August-September, £11 15s. Castorseed quiet. Bombay, July-August, £20 10s per ton.

METALS.—Tin opened easier due to liberal offerings and lower American advices, while a fair business transpired. Standard cash, sold at £179 15s, and three months £180 5s. In the East business was reported at £185, c.i.f. Market subsequently displayed slight irregularity, though prices further gave way. By the middle of the week Standard cash sold at £178 7s 6d, and three months £179 15s. Further business was reported in the East on the basis of £182, c.i.f. A firmer tone was apparent on Thursday. Standard cash sold at £179 5s to £180 5s, and three months £180 10s to £181 10s to £181. Tin was fairly well supported at the final session, and values ruled firmer. Standard, cash, sold at £183, and three months at £183 to £182 10s.

to £184 5s to £184 2s 6d. English ingots quoted at £183 15s to £184 5s. Copper also declined on lower American cables, but the market ruled fairly active at the lower level. Standard, July, was dealt in at £64 17s 6d, and three months £65 12s 6d. With buyers showing more disposition to operate, particularly with regard to forward positions, the market became steadier, and on Wednesday standard, August, sold at £65 7s 6d, and three months up to £65 17s 6d. Prices were fully steady on the following day. Standard, cash, sold at £65 7s 6d, and three months £66 to £66 12s 6d to £66 10s. Prices on Friday were fully maintained, though three months closed below the best. Standard, cash, quoted at £65 17s 6d to £66, and three months sold at £66 15s to £66 17s 6d to £66 12s 6d. Electrodes, £72 15s to £73; best selected, £69 to £70 10s; strong sheets, £100; wire bars, £73 per ton. Antimony quiet. Ordinary brands, £30 to £32. Aluminium: Home, £115; export, £120. Lead firm at £24 10s to £24, as to position. Spelter firmer at £29 15s to £29 12s 6d, according to position.

TALLOW.—Messrs Colchesters and Woolner write as follows on July 18th:—The tallow market was quiet during the week, and prices are unchanged to-day. There is no change in the position. Business is almost at a standstill. At auction to-day 48t casks tallow were offered and 179 were sold. Quotations are:—Australian mutton: Fine, 42s 6d; good to fair, 41s 6d to 41s; dull to dark, 38s to 36s 3d; hard, 42s. Australian beef: Fine, 42s; good to fair, 41s to 38s 6d; dull to dark, 37s to 35s 9d; sweet, 42s. Present shipment from Australasia nominal. Present shipment from South America, 38s 6d to 37s 6d. The market letter is unchanged for tallow, stuffs lower. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 1½d; melted stuff, 27s 6d per cwt. Quotations are:—Town, 35s, net cash, naked, ex works. Country: Frail casks, 35s; home melted, shipping casks, net, f.o.b., good coloured, 38s 6d; fair to dull, 36s to 35s. Bone fat: White, none; pale, none; benzine, 34s; melted stuff, 34s, f.o.b.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."

Office: Granville House, Arundel street, Strand, London, W.C. 2.

Copies of the Economist may always be obtained in the City at Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmons,

34 Throgmorton street; Barker and Howard, 6 Fenchurch buildings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15,

Cullum street; Willing and Co., Limited, 50 Copthall avenue, and 53 Finsbury pavement.

Paris: Galinani Library, 224 Rue de Rivoli; Messrs Brentano's,

37 Avenue de l'Opera.

THE MONEY MARKET.

MONEY was still quite plentiful enough to suffice for the attenuated trickle of business to which Lombard street has been reduced by the smaller volume of Treasury bills and the continued scarcity of bank paper. Some people said that the tendency of the discount market was a shade firmer on Thursday, owing to big revenue payments and the figures of the Bank return, but the three months' rate was no better than 3½ per cent.

	July 27, 1923.	July 20, 1923.	July 13, 1923.	July 6, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount Call	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3½	3½	3½	3½	..

The Bank return showed a decrease of £69,000 in the note circulation, and increases of £3,000 in the stock of gold and £72,000 in the Reserve. Government and Other securities declined by £1,895,000 and £1,026,000, and Public and Other deposits by £632,000 and £2,256,000. Currency notes outstanding were reduced by £261,400 to £289,049,100, which includes £1,461,900 for notes called in but not yet cancelled. The fiduciary issue is £238,137,300, or £32,046,500 below the maximum.

THE STOCK MARKETS.

After the "shake-out" of the previous week it was hoped that the week just closed might be one of steady recovery in prices. This hope has not been realised. The factor of political uncertainty and anxiety is restraining prospective buyers, while a certain amount of forced selling still continues. But in the gilt-edged market the week's net changes in leading quotations are not wide. Among foreign securities French bonds spurted and reacted, and nervousness about conditions in China led to a series of declines in Chinese bonds. The beginning of the dividend season attracted more notice to the Home Railway market, but Argentine railways are weaker. Rubber shares made a decided improvement in the latter half of the week on the rise in the price of the commodity, but oils are flat. In the general sections tobacco shares were again conspicuous for strength, other good features being few. Except in a few special instances mining markets are dormant.

THE COMMODITY MARKETS.

The approach of the holiday season, combined with the effects of the dock strike, are apparently lulling the commodity markets into a state of dullness and apathy. Coal values remain at about the same level, although at Cardiff prices are inclined to be slightly firmer. In pig-iron there is no sign of any change; but the recent reduction in prices has brought no orders. The steel trade is rather better. Tin and copper are weaker. Dealings in sugar have been mainly confined to British makes, foreign descriptions being handicapped in the matter of delivery. Wheat is lower, and supplies overseas are stated to be plentiful. In the Manchester cotton trade prices continue to favour buyers, the latter anticipating cheaper rates. Jute prices are lower. In wool, the market for the raw material is comparatively strong, but the industry in Bradford is dull. Business continues slow in timber for furniture making; consumers of American woods, it is said, are awaiting a further drop in prices. The hide market presents a steady appearance; sole leather is in better demand and the price is firmer. Prices now being quoted for the new linseed crops have produced a drop in prices of the oil.

FOREIGN EXCHANGES.

The main feature of the foreign exchange market during the week has been, of course, the total collapse of the mark. After a slight steadying of the rate on Saturday, the rush began on Monday, on which day the closing rate was 1,735,000 marks, and continued rising by about 500,000 marks each day till the quotation on Friday morning was 3,800,000 marks, as against 1,555,000 a week ago. The reception accorded to the British note in France and Belgium was partly the cause of this movement, but it is evident that the situation has escaped from the control of the Government and the Reichsbank, and that, as was inevitable, the attempt of the latter to im-

pose restrictions on the market has failed. Apparently, this policy has now been abandoned, and the freeing of the forward market practically nullifies the regulation by which the Reichsbank was arbitrarily fixing the rate for ordinary dealings. The rate of 1,500,000-2,000,000 for one month above spot is merely nominal. The Paris rate has fluctuated from day to day, varying between 77.80 last Saturday and 76.70 on Wednesday, and stands on Friday at 77.20. Meanwhile, satisfaction may be expressed at the improved return of the Bank of France for the second week in succession, both the Advances to the State and the note circulation showing a reduction. The Belgian rate showed some improvement over the week-end, closing at 92.55 on Monday, as against 94.85 on the previous Friday. In the middle of the week, however, it depreciated to 94.55, but recovered to 93.95 yesterday morning. In Paris the forward quotation is slightly wider at 3-4c per month above spot, while in Brussels it is 5-7c per month below. The lira has shown a steadily improving tendency, and stood yesterday morning at 104½, as against 106.06 a week ago. The dollar rate improved slightly over the week-end from 4.59½ to 4.59½ on Tuesday, at which figure it has remained steady. No great change is expected immediately, but in some quarters a slight easing of the rate is thought possible. Forward rates remain the same at ½ per cent. per month above spot. The Amsterdam rate continued its former movement, and fell during the week from 11.70½ to 11.68½ yesterday morning. Switzerland has also gone against us slightly, moving to 25.70, as against 25.90 a week ago, while Madrid, after rising from 32.05 to 32.22 on Wednesday, recovered again slightly on Friday to 32.10. In Central Europe, Vienna is slightly weaker at 330,000, but Warsaw, where, in spite of repeated promises by the Government, the exchange regulations still remain in force, rose at the end of this week from 700,000 to 850,000. The Budapest rate, on the steady deterioration of internal conditions, has risen to 800,000 from 600,000 a week ago. Prague is a little weaker at 154½, and Bucharest at 905, as against 153½ and 880 respectively a week ago. In Northern Europe, Stockholm is a little better at 17.23, while Christiania remains fairly steady about 28.32. Copenhagen, however, has improved from 26.30 to 25.75, Helsingfors has moved from 166½ to 166, after touching 165½ on Monday. In the East the rupee is unchanged at 1s 4½d, and Yokohama at 2s 1½d. The silver market has been steady, with slight fluctuations to meet supply or demand. India is still holding off, but China, after doing little in the early part of the week, was slightly more in evidence later. Hong Kong, after touching 2s 3½d, is ½d cheaper on the week at 2s 2½d, while Shanghai, after rising from 3s to 3s 1d, now stands at 3s 0½d. Singapore is unchanged at 2s 3½d. In South America, Buenos Aires has risen ½d to 40½d, Rio is fairly steady at 5½d, but Monte Video is 2d cheaper at 39½d. Valparaiso has also depreciated from 36.40 to 37.20 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 21st:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	8,724	From Revenue	17,569
Interest, &c., on Debt	1,027	Taken from Exchequer Balances	365
Sundries	1,042		
Reduction of debt	7,141		
	17,934		17,934

Revenue was about £2 millions lower at £17½ millions during the week ended July 21st, as compared with the corresponding period of last year. Property and Income-tax and Super-tax accounted for a good deal of the fall in revenue, amounting to £4,841,000 and £520,000 respectively, against a combined total of £6,673,000 last year. Excise at £5,923,000 compares with £7,511,000. Customs brought in £2,317,000, an increase of £200,000, and Estate, &c., duties at £960,000 compare with £1,600,000. Special Receipts yielded £1,514,200, against £143,800. On the expenditure side, National Debt Services are now split up into two items, i.e., Interest, &c., which during the financial year to date has amounted to £119,955,250, and Sinking Fund, which amounts to date to £14,493,497. This is a step in the right direction, and will help to make the national balance-sheet more clearly understood by the taxpayer.

The week's operations reduced the National Debt by £7,141,000, and caused the following changes:—

	Min. £		Min. £
Treasury Bills	881	Unemployed Insurance	720
Public Department Advances	5,200	National Savings Certificates	150
Bank of England Advances	2,000		
	8,081		940

The floating debt was reduced by £8,175,000 to £803,370,500.

The Week in Parliament.—After devoting a day to debating and rejecting a Labour motion on disarmament, the House of Commons this week worked through a heavy programme of financial business. The Post Office, Mines Department, and Colonial Office votes produced discussions of broad and varied interest; while on Thursday evening a large number of outstanding estimates were cleared off. On the Board of Trade vote the chief subject of discussion was the effect of European unsettlement on British trade. Meanwhile, the House of Lords have discussed financial aspects of the Irish settlement, Kenya problems, and Hungarian reparations, and have also advanced a number of Bills, including the Agricultural Rates Bill.

Company Meetings of the Week.—On later pages of this issue will be found reports of the meetings of the following companies:—Imperial Ottoman Bank, Standard Bank of South Africa, Union Bank of Australia, Tariff Reinsurances, Eastern Telegraph Company, Eastern Extension, Australasia, and China Telegraph Company, Bisichi Tin Company (Nigeria), Furness, Withy, and Co., Tanganyika Concessions, Zambesia Exploring Company, Compagnie Aramayo de Mines en Bolivie, and Transvaal Mining Company. At the meeting of the Standard Bank of South Africa, Lord Selborne was not optimistic as to the trade situation in the Union. He mentioned that South African exchange rates have been higher during the year than they liked to see them, and expressed anxiety to see them reduced to the normal level. Lord Goschen, at the meeting of the Imperial Ottoman Bank, briefly reviewed financial and trade conditions in Turkey, and was more optimistic as to the future. At the meeting of Furness, Withy, and Co., Sir Frederick Lewis explained the improvements made in the balance-sheet, to which we referred in our note last week.

REPARATION RUMOURS.

Two or three points of interest have emerged this week which may serve to keep the speculatively minded busy in this interval of waiting for the reply to the British Note. In the first place, the Belgian and the French Governments are now, it appears, to make separate replies to our Government. It would be a mistake to attach too much importance to this fact, for we are assured that it indicates only that France and Belgium do not see eye to eye on the one question of an expert assessment of Germany's capacity. But whether France and Belgium are really fully in accord on the question of passive resistance the event alone will show. Belgium is undoubtedly far more anxious about the situation than France, and the impression has been very persistent for some time past in Brussels that a solution would be reached by about the end of July. It may yet happen that Belgium may take some decisive initiative to bring to an end the present deadlock.

In the meantime, although the official French attitude seems as far removed as ever from offering any sort of approach to the British point of view, there are signs even in Paris of a desire to find a bridge. Thus, the Press has been actively discussing the suggestion that a temporary settlement of the amount to be paid by Germany might solve the situation. To the French, of course, a temporary settlement means that Germany should forthwith undertake to pay the amount required for the restoration of the devastated areas. Any further payment should be postponed for 10 or 15 years, and at that date the ability of Germany to pay anything more should be reconsidered. Anything that might then be forthcoming should be passed on to Great Britain and America in respect of the Allied debts, which would be suspended in the meantime. We believe this proposal is substantially the one practicable way of dealing with reparations, but it has to be recognised that it once more brings to the fore the question whether Great Britain is prepared to go on paying interest to America without receiving anything from either France or Germany, and the still more troublesome question as to whether America is willing to forgo all payment of interest from her European debtors for 10 or 15 years. The plan is interesting as raising in a specific form this question of principle, which must shortly be faced by the British Government. In detail the proposal is probably not a suitable one, for we can see no advantage, having regard to Germany's financial status, in her repaying so large a principal in a comparatively short period of years. We have no doubt that the reparation debt will one day be made into a simple external public national debt, and there is nothing to be gained by making it a comparatively short-term obligation. If, however, Germany only pays interest on the cost of reconstruction, it obviously makes her payments a manageable proposition.

More significant still is the suggestion in the *Temps* that, while France adheres rigidly to her view that she cannot enter into a discussion with Germany unless passive resistance ceases, there is no reason why the Reparations Commission should not at Germany's request immediately resume the discussion of Germany's capacity. This proposal may, indeed, show us the way round the difficulty, as it has done at all the previous acute crises in the reparations problem. In May, 1921, it was the Reparations Commission's assessment of Germany's capacity which opened the door to the London schedule of payments, and prevented the occupation of the Ruhr at that date. Again, when the London Conference of August last broke up without a solution, it was the Reparations Commission which discovered the temporary expedient of direct negotiations between Belgium and Germany.

But if the discussion is to be resumed in this way, we would suggest that it should be associated with a reference to the League of Nations. It is now clear that there must be some external control of Germany's finances. But this control would be strongly resisted in Germany if it were mainly French. On the other hand, its purpose must not be simply the collection of reparations, but it must also be designed to prevent what is now manifestly a danger to the whole commercial world, namely, the break up of Germany's economic life. For this purpose a League of Nations' control is the appropriate machine. The League is also the most suitable trustee for creditors if, as is probable, a general settlement included the raising by Germany of a comparatively small loan to assist in the payment of her early reparations annuities. The procedure we suggest should, therefore, now be as follows: First, the Allies should invite the Council of the League to consider immediately, as a matter of urgency, and with Germany concurring, whether they could produce a plan for the regulation of Germany's financial affairs. The Council would, of course, at once reply that it could only do so if it knew what charges were to be included in Germany's budget for reparation. To this the Allies would reply that the Reparations Commission was being asked to decide what sum could be properly included in the German budget over a series of years, and the League Finance Committee would be invited to satisfy itself that the figures proposed were practical. In other words, the Allies would invite the League to examine Germany's capacity jointly with the Reparations Commission. If the

two bodies disagreed, the Allies would retain the right to reject too heavy a writing down of the payments in the next few years. But if, on the other hand, the figure of the Reparations Commission seemed to the League too high, it would naturally refuse to undertake the task of supervision proposed to it. There is a growing feeling in France in favour of using the machinery of the League, and this suggestion would enable it to be done without the Allies at this stage surrendering their right to say what reparation payment they will stand for in the next decade or so.

Among those in Germany who have considered the question of control, it is generally felt that the chairman of any control board must be an American, and it may be suggested that this rules out the League as a controlling authority. But this is by no means necessarily the case. American financiers have shared in the loan to Austria under the security of a controller responsible to the League, while in other activities of the League individual Americans have served in positions of great responsibility. We see no reason to suppose that the United States Government would put any difficulties in the way of an American accepting the invitation of the League to act as a controller of finance in Germany. Indeed, we think such a plan would probably be welcome, for it would enable Europe to avail itself of the impartial standpoint from which Americans approach European affairs without in any way committing the American Government officially to support or to take any responsibility for the specific actions that might be taken by the controller.

CURRENCY PROBLEMS AT HOME AND ABROAD.

"If we seek for a single word which may describe the past year, we may perhaps say that 1922 has been for this country a year of stabilisation. Fiscally, we have been engaged in stabilising the £. This has been effected by just balancing the Budget and leaving nothing over for the payment of debt. We have thus avoided adding to the suffering involved in deflation, and, on the other hand, we have escaped the far greater evils which accompany inflation." So said Dr Walter Leaf in his speech to Westminster Bank shareholders on February 1st. Our readers may remember that these observations were in sharp contrast with those made by Mr McKenna to the City and Midland meeting, when he, in effect, charged the Government with responsibility, through its policy of deflation, for "diminished trade and increased unemployment." The apparent difference between these two distinguished authorities was really, as so often happens, merely a question of definition. By deflation Dr Leaf seems to mean a fall in prices, and Mr McKenna means a reduction in purchasing power through a contraction of bank deposits. The awkward thing is that, according to monetary theory, on which some people are now relying to cure many economic evils, deflation in the sense of contracted purchasing power ought to produce it in the sense of a fall in prices. Whereas, in fact, we had as the chief features of the year's financial history the stabilisation which seemed so satisfactory to Dr Leaf and the decreased purchasing power which was so keenly criticised by Mr McKenna.

The discrepancies, which are inevitable and reasonable except in the eyes of those who expect prices and purchasing power to move together with mathematical precision, are also apparent in the experiences of foreign countries. The League of Nations has just issued from Geneva, at the price of 10s, a Memorandum on Currency, 1913-22, containing results of the continued study of currency conditions begun in preparation for the Brussels Conference of 1920. It agrees with Dr Leaf, and says that the year 1922 has, in fact, been a period of price stabilisation in the great majority of countries. It is unfortunate, though probably it could not be helped, that the memorandum, though only just issued, could not include in its tables of deposits those of 1922, and so for the past year was only able to compare price movements with changes in note issues. This comparison, however, was extremely interesting, though it showed that the connection between prices and notes is by no means uniformly close. In the

case of Norway the percentage of the note issue to the end of 1919 level fell from 92.3 at the end of 1921 to 87 at the end of 1922, but prices fell from 83.5 to 68.3. In Denmark notes came down from 96.3 to 93.9, but prices were inconsiderate enough to rise from 52.4 to 53.2; while in France the discrepancy was still greater, notes having declined from 97.9 to 97.5 between December 31, 1921, and 1922, while prices made a considerable advance from 77.1 to 85.6. Obviously there must be a lag between the currency change and its effect on prices, and we have always to remember how imperfect our methods still are for measuring price movements. Summing the history of the year 1922 from its special point of view, the Memorandum states that "the facts of outstanding importance in the history of prices have been: the general stabilisation in those countries with relatively sound currency conditions; the rise in prices in the U.S.A., and, for different reasons, in France and Belgium, and the indications of coming rises elsewhere; the closing up of the gap between the purchasing power of gold and the purchasing power of those relatively sound currencies referred to above; the apparent success with which certain countries have met in checking the upward rush of prices by vigorous action, not only involving financial reform, but demanding at an earlier or later date a deliberate policy of devaluation; and finally, the violently accentuated movement in Germany, Poland and Russia."

Apart from this violently accentuated movement, which, as everyone knows, has in the case of Germany been very much more violently accentuated during the present year, a good deal of evidence can be gathered from the League of Nations Memorandum of a tendency towards a return to normality as the world sees before it the appalling consequences of inflation in countries where it runs its course unchecked. Reference is made to the measures taken in Austria, Latvia, and Lithuania to reform their respective currencies. In Latvia stability had been to a great extent secured by the end of 1921, the note circulation was less in November than in January, and the cost of living index number had fallen during the last eleven months of 1921 by over 15 per cent. Latvia, in fact, gave a lead to countries with depreciated currencies by being the first since the war, "with the possible theoretical exception of Paraguay," to take the devaluation plunge. A new currency, the lat, equal to a gold franc, was introduced, and lat notes were put into circulation last November and declared convertible into gold; the Latvian rouble notes were not withdrawn, but are accepted by the Government, and apparently by all other creditors, at the rate of 50 to the lat. In Lithuania currency reform was complicated, and at the same time simplified by the absence of any independent domestic currency, and the use of marks, ostmarks, and to a growing extent dollars. A new unit of currency, the litas, was introduced last October, against which the other notes in circulation were to be exchanged.

An interesting section is devoted in the Memorandum to the question of deposits and clearings. In London, as in New York, the clearings reflect Stock Exchange and financial transactions, loan flotations, and financial operations generally rather than industrial. On this point the Memorandum makes the curious observation that "as a currency problem it is immaterial what type of debts are being met by the cheques cleared. An increase in Stock Exchange transactions or the flotation of a loan has, as constituting obligations and involving payments, exactly the same influence upon the demand for money as the manufacture and sale of goods." This is certainly very true, but surely the question has a good deal of relevance when we are considering the relation between the volume and velocity of purchasing power and the prices of goods. The Memorandum proceeds to admit, not only that index numbers do not take into consideration money transactions other than those for the sale of goods, but that this deficiency in index numbers is much more important now than it was before the war, because with bigger debts and higher taxes the demand for money for merchandise turnover is a smaller proportion than it was of the total demand, and this proportion tends to become smaller still as prices fall faster than debt is cancelled. In connection with the question of clearings an

ingenious theory is worked out, by which the curve of the ratios of sight to time deposits is established as constituting a rough index of the changes in the velocity of circulation.

IRON AND STEEL IN THE FIRST HALF OF 1923.

(FROM A CORRESPONDENT.)

AFTER nearly two years of unparalleled depression the year 1923 opened for the iron and steel industry with considerable promise of better things. The shipping, and, therefore, the shipbuilding position, was improving, the railway companies had promised the Prime Minister to place orders for renewals and maintenance to assist in the problem of unemployment, and trade generally was beginning to revive. More furnaces were in blast at the beginning of the year than had been the case since September, 1920, and iron and steel masters were beginning to feel that they might at last expect to reap the reward of their long and sustained efforts to stimulate trade. What was most desired was a steadily expanding output with prices gradually recovering from the uneconomic level to which they had fallen. What was most emphatically not desired was a repetition of the boom conditions of 1920.

Before the year was many days old, however, the French decided to occupy the Ruhr. This quickly dislocated the production of coal, coke, iron, and steel in that area, and (by curtailing the supplies of coal and coke) of iron and steel in France and Luxembourg. Production in Belgium, which is not so dependent for fuel upon the Ruhr as are France and Luxemburg, has been fairly well maintained, but the production of pig-iron, both in France, where it had been steadily increasing in the second half of 1922, and in Luxemburg, fell between December and February by about 40 per cent. In these circumstances many orders placed with works in Occupied Germany, Luxemburg, and Eastern France were transferred to this country, and by the end of February order books were fuller than they had been since 1920. Though handicapped by a shortage of coke, the number of furnaces blowing and the production of pig-iron and steel steadily increased, as will be seen from the following figures:—

	Furnaces in Blast at End of Month.	Production.	
		Pig Iron (Tons).	Steel (Tons).
January	183	567,900	634,100
February	189	543,400	707,100
March	202	633,600	802,500
April	216	652,200	749,400
May	223	714,200	821,000
June	222	692,900	767,700
Total first six months, 1923..		3,804,200	4,481,800
" " " 1922..		2,149,300	2,562,400
" " " 1920..		4,145,000	4,877,000

Production was thus 75 per cent. higher than in the corresponding period last year, and within 10 per cent. of the production in the first half of 1920. Deprived of Ruhr coke, however, unoccupied Germany, France, and Luxemburg turned to other sources of supply, the chief of which was Great Britain. This not only caused a shortage of coke here, but naturally sent up the price. Exports of metallurgical coke, which in the first six months of 1922 amounted to 596,400 tons, amounted in the first half of 1923 to 987,200 tons, of which 309,200 tons went to Germany, 235,000 tons to France, and 92,800 tons to Belgium; and the price of Durham blast furnace coke, which was quoted at 26s per ton at the beginning of the year, reached 41s 6d per ton at the end of May. This naturally resulted in increasing prices for iron and steel products, and Cleveland Foundry No. 3, for example, which was quoted at 92s at the beginning of the year, rose to 127s 6d by April. The fact that iron and steel prices at the end of 1922 had fallen to uneconomic levels, accentuated the steepness of the rise, but, as a matter of fact, iron and steel prices never rose above those for commodity prices generally. This is clear from the Board of Trade's wholesale index number, which in December was 155.8 for "all commodities," and 131.8 for iron and

steel products; in April, when iron and steel prices were at their highest, the index numbers were 161.4 and 160.4 respectively, and in June the iron and steel index had fallen to 152.6, while commodity prices generally stood at 159.4.

With production dislocated on the Continent, and America fully occupied with a big home demand, exports of iron and steel from Great Britain in the first six months of 1923 have easily surpassed those of any other country; they amounted to 2,215,600 tons, as against 1,539,900 tons in the first half of 1922 and 1,652,700 tons in the first half of 1920, and were nearly 90 per cent. of the exports in the first six months of 1913. The chief items of export were pig-iron and ferro alloys, 533,100 tons; galvanised sheets, 305,800 tons; and tinplates and sheets, 281,900 tons; the exports of pig-iron and galvanised sheets approaching, and those of tinplates exceeding, the pre-war figures. The following table shows the principal destinations of the exports of iron and steel in the first half of 1923, compared with 1922 and 1913:—

	Monthly Average.		
	1913.	1922.	First Six Months, 1923.
	Tons.	Tons.	Tons.
Germany	16,606	6,895	20,949
Netherlands	12,192	4,413	6,625
Belgium	10,486	9,260	13,364
France	16,934	10,927	12,330
Italy	11,984	7,334	8,490
Japan	19,840	10,141	21,366
Brazil	9,809	1,547	2,503
Argentina	29,875	10,020	13,852
United States	14,912	23,624	38,660
Total foreign countries	221,672	116,024	179,066
India and Ceylon	74,680	55,439	55,230
Straits Settlements	6,982	2,572	3,409
South Africa	21,726	8,968	12,752
Canada	15,605	8,588	8,154
Australia	47,257	30,127	42,011
New Zealand	12,839	6,707	9,203
Total British Possessions	192,430	123,327	145,125
Unallocated	..	44,000	45,082
Total exports	414,102	283,385	369,274

It will be seen that exports to Europe account for a considerable part of the increase, and that increases are also considerable in the case of Japan, the Argentine, the United States of America, South Africa, Australia, and New Zealand. Apart from the European countries, Japan and the United States of America actually took more iron and steel in the last six months than before the war, while the Argentine and Brazil took only 40 per cent. and Canada little more than 50 per cent. of the amount they took pre-war.

Since, as we have seen, production was less than in 1920, and exports were considerably greater, it is clear that the home demand did not develop as was anticipated; partly owing to the unfavourable trade situation, and partly owing to the unfortunate dispute with the boiler-makers, the hoped-for improvement in shipbuilding did not materialise, and the tonnage of ships commenced, after rising to 355,000 tons in the first quarter of the year, fell back to 241,000 tons in the second quarter—the tonnage commenced in the first half of 1920 amounted to 1,297,000 tons. The railway companies did not place orders in sufficient volume to affect the situation, and the rapid rise in price, though inevitable, caused the postponement of much work that might otherwise have been undertaken but was not absolutely necessary. There was also a great deal of speculation as to the extent of the stocks which were accumulating in the Ruhr, and the policy which would be followed in their liquidation, and this caused hesitation on the part of buyers both here and overseas. The artificial stimulus supplied by the Ruhr occupation had therefore spent itself by May, and as orders were fulfilled manufacturers found it exceedingly difficult to replace.

The price of Cleveland No. 3 has fallen from 127s 6d in March and April to 104s per ton; soft billets from £10 to £7 10s; tinplate bars from £10 to £9 2s 6d, and

so on. By June the state of manufacturers' order books began to be reflected in the production figures, which showed a decline both for pig-iron and steel, and for the first time for many months there was no increase in the number of furnaces blowing during the month, but in fact a decline, though only of one.

The greater activity of the past few months has considerably improved the position from the labour point of view, both with regard to numbers employed and wages. The percentage unemployed among insured workers, which was still as high as 22.1 at the end of December, has steadily fallen until at the end of May it was 14.9, while under the system of sliding scales wages have risen with increasing prices.

The outlook for the future is still very obscure, and hardly such as to warrant optimism. Ironmasters are now talking of "stagnation," and the probability of having to damp down several furnaces in the near future unless more orders are soon forthcoming, and though the trade is normally rather dull at this time of the year, there is no doubt that this year the slackness has been accentuated by the reaction of the Continental situation. Most iron and steel masters would have preferred to do without the stimulus of the Ruhr occupation if they could have had the steady expansion of output at stable prices, to which they looked forward at the beginning of the year.

THE OUTLOOK FOR COPPER.

AFTER a long period of dulness and irregularity copper is beginning to attract attention again, and the outlook generally may be regarded as much better than it was a few weeks back. Mining shares in the copper group have displayed a welcome hardening tendency, both here and in New York, Rio Tintos having also been favourably influenced by the settlement of the war claim against the British Government, and the very important agreement come to among the leading producers of pyrites. Sentiment in Wall Street is somewhat bullish on copper, and there are indications that higher prices will be seen in the world's metal markets for this favourite commodity during the closing months of the year, providing, of course, no unforeseen circumstance arises and upsets calculations.

There is apparently considerable difference of opinion between London and New York in regard to copper, and there is no disguising the fact that the bear party on the former market is still inclined to operate on the short side. Thus, while London was lower early this week, New York was higher, but the struggle looks like ending in favour of the bulls. The bear following has been helped by the decline in the consumptive demand which set in at the end of the first quarter of the year. For the time being the marketable supplies of copper exceeded the demand, and bears were not slow in taking advantage of the situation. The chief adverse factor has been the unsettled European political situation, and the disturbed state of Continental trade, due in part to the French occupation of the Ruhr. Earlier in the year the outlook was very favourable to a heavy consumptive demand for the metal, but during the second quarter the European users of copper kept out of the market, and, as this happened to coincide with a slowing down of the United States domestic enquiry, due to the cancellation of large contracts, chiefly on financial grounds, there was a very serious decline in values. This is confirmed by the course of prices. Opening this year at £64 12s 6d per ton for standard copper, the quotation dipped early in January to £63 10s. Then the demand came on, and during February there was a steady upward movement. This was continued into March, and on the 19th day of that month the very satisfactory figure of £76 5s per ton was officially recorded on the London Metal Exchange for standard cash copper. The metal early in April held its ground, but during May and June the bear element became more daring, and their tactics finally broke the market down to a very low level, the closing value for the half-year being £65, or a drop of no less than £11 5s from the highest. Early in July prices went even lower

than this, but the market has since been over £66 for the cash position with three months' copper able to command a fairly large premium on this figure.

The bear faction has made much of the support that has been given to the market during recent months by certain American interests, and they claim that the position even now rests upon an unsound foundation. Standard warrants have been lent and passed from hand to hand on quite nominal terms, and even the actual shipment of Bessemer copper to the United States and Germany has not brought about the anticipated demand to cover. It may seem surprising that a country like Germany should be able to take copper from this side, but it is a fact nevertheless. German trade is undoubtedly in a critical state. The fuel crisis is now very acute, and not only the iron and steel trades, but the important industries using the non-ferrous metals, such as copper, are sadly crippled, with little or no prospect of recovering for a long time to come. Thus it is obvious that a lot of the copper bought by German interests is not intended for consumptive purposes at all, but is merely being held as something more substantial than paper marks which, worth some 3,000,000 to the £ sterling one day, may be absolutely worthless in six or twelve months' time. But, of course, it must not be overlooked that Germany is normally the largest individual consumer of most metals, including copper, in Europe, and if it is possible to settle the Ruhr problem, and bring about industrial peace on the Continent within a reasonable space of time, all this copper now held in place of paper marks would easily be absorbed by the manufacturing interests, and such a movement would quickly influence sentiment. The U.S. exports of copper for the first five months of the present year amounted to 137,500 tons, and of this quantity Germany took over 31,000 tons, against 29,500 tons taken by France, and 28,250 tons by Great Britain. There is also reason for believing that a good deal of the copper shipped to Holland is for German account. In any case, if five to seven thousand tons of copper is shipped from this country to the United States and Germany, and this is followed by further exportations of rough copper, it must have a considerable effect upon the statistical position of the metal, and in the end help to support the upward tendency of values. The U.K. copper imports for June were only 7,064 tons, and the stocks in the Metal Exchange warehouses on June 30th amounted to 27,776 tons, of which 23,074 tons were rough copper. If the reserves of rough copper are lowered to about 15,000 to 20,000 tons, and total supplies of refined metal in the country, apart from users' stocks, are no more than 4,500 to 5,000 tons, any satisfactory development in trade necessitating fresh buying of copper later on in the year, when the political and industrial atmosphere becomes a little clearer, would most decidedly find prices very sensitive to the change in conditions.

In the United States the statistical position of copper is healthy. The final report of the Geological Survey Department for 1922, which has come to hand this week, gives the smelter output for all 1922 as 950,285,947 lbs, against 505,586,098 lbs in 1921. The refinery production of new copper is placed at 904,670,685 lbs, against 609,414,256 lbs in the previous year, while the total production of new refined copper for 1922 aggregated 1,359,000,000 lbs, or 339,000,000 lbs more than the figures for 1921. Adding secondary copper, the total U.S. copper output amounted to 1,504,669,643 lbs, against 1,126,512,429 lbs for 1921, and this gives some idea of the spurt that took place in the demand for the metal last year. The stocks of refined copper at the beginning of 1921 amounted to 659,000,000 lbs. By January 1, 1922, they had fallen to 459,000,000 lbs, and at the beginning of the present year they were down to 216,000,000 lbs, although there was an increase in the holdings of blister and rough copper. The stocks of 100,000 short tons of refined copper brought into 1923 have since been substantially reduced, and labour shortages are still impeding refining operations. It is claimed by the American producers that statistically copper is better now than it has been at any time since the war ended, and there is something in this contention. The refinery unsold stocks are reckoned to be down to about 80,000 to 90,000 tons, yet the price for electrolytic early this week was no better than 14½ cents per lb for

August shipment, this being close on three cents per lb below the selling price at the end of March. In this connection it should be remembered that the cost of production is still very heavy, with wages, stores, and coal still well above pre-war level, and the dearth of labour is all against increased production yet awhile, many men preferring to go to the harvesting fields rather than to the smelters at this time of the year. Here is a table showing the stocks of copper in the United States and the United Kingdom over a period of years:—

	U.S.A. Refined Copper (Lbs.)	U.K. Refined and Rough (Tons)
January 1, 1913	105,497,683	27,000
" 1914	90,385,402	11,000
" 1915	173,640,501	18,000
" 1916	82,429,666	..
" 1917	128,000,000	..
" 1918	114,000,000	..
" 1919	180,000,000	36,000
" 1920	631,000,000	10,000
" 1921	659,000,000	12,000
" 1922	459,000,000	16,655
" 1923	216,000,000	26,780
June 30, 1923	200,000,000	27,776

* Official figures. † Estimated. ‡ Only Government stocks in country.

The Copper Export Association has now cleared out all its holdings of old copper, and all sales made now will call for new metal. War copper and the huge stocks of brass scrap have been dispersed. Thus all supplies, both for American domestic use and for export, must come out of the current production, and this undoubtedly reveals a healthy condition. With Havre copper stocks round about 2,500 tons, British supplies down to 20,000 tons or so, and the American refinery surplus down to about 85,000 by the close of the month, the tone of the copper market should certainly improve once the holidays are over; thus the outlook for the copper mining companies and the metal itself contains decided elements of hope. There has been on the London market a fall of over £10 per ton, mostly based on sentimental considerations, and the present price is cheap. While the tension on the Continent lasts, the market must remain somewhat artificial, and the possibility of Germany's collapsing altogether and bringing about a general European industrial calamity, must not be lost sight of. If that were unfortunately to happen, not even American support could hold copper values where they are to-day. But, on the other hand, if things take a favourable turn, the oversold state of the market will at once be revealed, and a complete change will be probable. Consumers everywhere are working with very small stocks, and already there is a tendency to cover future requirements. Based on the statistical showing, copper is decidedly underpriced, and it would be very surprising if a better level of values were not established during the closing quarter of the year, if not sooner—that is, one must repeat, unless an aggravation of European conditions takes place.

CHINESE AND JAPANESE BONDS.

THAT Chinese Government bondholders are perturbed by the state of chaos reported from Peking this week is amply demonstrated by the heavy falls that have just occurred in the prices of their securities. The slump has affected all the bonds. Those which are secured upon the Customs, and regarded, of course, as the best of the series, have gone down with the others. Chinese Five per Cents. of 1896 and the Four and a-Half per Cents. of 1898 show falls of about 8 points apiece, as compared with the middle of June prices. The familiar 1912 Fives are 5 points down, and the various railway loans, guaranteed by the Chinese Government, are mostly 4 to 5 lower than they were six weeks ago. The Eight per Cent. Treasury Bills and the Eight per Cent. Treasury Notes stand at the more or less nominal price of 50, as against 55, although these do not rank with the Government bonds whose coupons have been met regularly and punctually. The next payment of interest due upon any of the loans—apart from both the Eight per Cents.—is that attached to the Chinese Imperial

Railway Five per Cent. Gold Loan, which should, and doubtless will, be met on Wednesday next, August 1st. The present price of the bonds, 70 cum coupon, is an indication of the mistrust that exists; for a Chinese bond to occupy the level of a 7½ per cent. yield is provocative of thought. Chinese credit has hitherto stood high. The reported honeycombing of the country with Bolshevism during the last two or three years has aroused a little uneasiness, but prior to this Chinese bonds commanded investment respect. Non-payment of coupons upon the Eight per Cent. issues, mentioned above, led to a shadow of uneasiness, though both the bonds, "Vickers" and "Marconi" alike, were recognised as falling outside the pale of the Government loans. Sir Francis Aglen, Inspector-General of Customs, was reported some time back as speaking seriously of the outlook. There seemed to be some doubt as to the words he actually used, and the cabled condensation was held responsible for what was thought to be an innocent perversion of his actual meaning. The Maritime Customs, upon which the best of the Chinese loans are secured, fall under European control and administration. The department is largely British. Chinese Customs continue to show good increases; the surplus is very considerable.

In most of the Chinese issues, bonds are drawn once a year, and these drawings take place with regularity at the due dates. The Four per Cents. of 1895, with January and July coupons, are the first charge of the Chinese Government, and are repayable in 1931. The yield at 87½ is a trifle over 4½ per cent. flat, but 7 per cent. when redemption is taken into account. The Five per Cents. of 1896, at 87½, and the Four and a-Half per Cents. of 1898, at 77—all these three being secured on the Maritime Customs—return 5½ per cent. outright, and over 7½ per cent. allowing for repayment at 100 in 1932 and 1943 respectively. Men in the Stock Exchange market base what faith they have in Chinese Government bonds upon the fact that, however disturbed may be the Government of the country, however anarchic the conditions in the big cities, the average Chinaman outside the areas of trouble goes on with the ordinary avocations, relaxes none of the industry ingrained by centuries-old convention, and can be trusted to meet the interest upon his debts. Therefore the Maritime Customs bonds, their service administered mainly by British hands, are considered with a good deal of favour in spite of the speculative tinge with which internal politics have coloured the loans secured upon the Chinese railways, and those of the Chinese Government that have no special hypothecation to gild them. The Chinese habit of mind is so different from that, say, of Mexico, or of the defaulting States in South America, that the British investor can hardly conceive China following the path of error and bad business which begins with non-payment of coupons. But the market, while hoping for the best, is awake to the wisdom of preparing for the worst; many of the falls that have taken place this week in Chinese bonds were due more to precautionary marking-down than to any pressure to sell stock.

With Japanese loans, the case is, of course, very different. A useful standard of Japan's present credit can be measured by last week's offer of four million pounds Five per Cent. Sterling Bonds of the South Manchurian Railway Company. These came out at 88, principal and interest being unconditionally guaranteed by the Japanese Government. Stag-selling has put down the price to ¼ discount. The bonds are repayable, at latest, by July, 1948, but can be redeemed, or drawn, in July, 1933, and thereafter, at the Government's option. Various other Japanese loans are subject to redemption from time to time as determined and notified in advance by the Minister of Finance. The popular Four per Cent. Loan of 1899 stands about 70, and yields 5½ per cent., flat, on the money. The Fives of 1907, now about 89, another popular investment, return 5½ per cent. on the money, without allowing for payment of the next coupon on September 12th. Principal and interest are payable in London in sterling; in Paris at exchange of 25.25, and in New York at the exchange of the day. Besides the Japanese Government bonds, there are a fair number of municipal issues available to the investor, whose confidence is shown by the fact that City of Nagoya, City of Osaka, and City of Tokyo

Five per Cent. Sterling Bonds stand about 90. The City of Yokohama Five per Cent. 1917-37 Loan is quoted at 93, and the Five per Cent. Bonds of the 1924-54 issue at a couple of points lower. Of the Japanese railway bonds, one of the best known is the Four and a-Half per Cent. First Mortgage Debenture of the Kansai Railway, commanding the high price of 95. The recently issued Six per Cent. Debenture of Tokyo Electric Company, which came out at 94, is quoted at a few shillings premium.

LATIN-AMERICAN TRADE.

(BY A CORRESPONDENT.)

THE position occupied by British trade with Latin-America is frequently referred to by economists, but few students appear to realise the great change that has come about during late years in our commercial relations with the countries of the New World. Even before the war, attended by violent interruption to our overseas communications, our trading position in the New World had been boldly challenged by the United States. But since 1914 the position has become much more serious, as the following figures, showing the actual percentages of Latin-American trade distribution, conclusively prove.

Year.	United States.		United Kingdom		Germany.		France.	
	Imp'ts.	Exp'ts.	Imp'ts.	Exp'ts.	Imp'ts.	Exp'ts.	Imp'ts.	Exp'ts.
1910.....	23.50	34.46	26.02	20.87	15.55	11.13	8.35	8.63
1911.....	23.79	34.29	25.73	20.92	16.72	12.85	8.25	9.15
1912.....	24.50	34.43	24.84	19.79	16.67	11.88	8.32	7.89
1913.....	25.03	30.78	24.42	21.42	16.55	12.38	8.32	7.99
1914.....	27.94	38.20	23.92	22.32	14.62	8.75	6.64	6.41
1915.....	42.15	40.71	20.51	22.20	1.84	.02	4.65	6.55
1916.....	51.77	46.41	17.88	20.57	..	..	3.70	8.04
1917.....	54.71	51.72	14.82	21.00	..	..	3.71	7.12
1918.....	49.48	46.83	16.86	24.43	..	..	3.28	11.24
1919.....	48.79	44.49	15.30	18.11	.19	.45	4.80	5.33
1920.....	50.15	47.68	16.70	17.94	3.39	1.80	4.80	5.33
1921.....	45.43	36.50	17.62	24.47	7.11	6.17	4.79	4.59

From these statistics, prepared by the United States Bureau of Foreign and Domestic Commerce, and the accuracy of which will hardly be in dispute, it is seen that since 1917 the percentages of United Kingdom trade with the Latin-American States compare very unfavourably with those of the United States. Although an appreciable increase in our imports from the Latin-American countries took place in 1921, while similar United States commerce showed a shrinkage, the total claimed by the latter was still far above that of the United Kingdom. It is true that the total trade carried on between the United States and Latin-America for 1922 has also shown further reduction; but the aggregate still reaches, for imports and exports combined, the considerable figure of \$1,315,248,943 (roughly £263,049,788)*.

If we take trade carried on with South American markets alone, omitting from consideration that of North America, Mexico, Central America, and the West Indies, we find that in 1921 the 10 S.A. Republics received from the United Kingdom 23.42 per cent. of their imports against 29.38 per cent. from the United States. But with regard to the whole of the Latin-American exports to leading commercial countries, we find that the United Kingdom received as its share in 1921, 30.24 per cent., against 22.48 per cent. taken by the United States. It is, therefore, clear that we are now buying more from these Latin States than we are selling to them. Undoubtedly the war and the trading difficulties brought in its train account, in a large measure, for the falling-off in our trade with the Latin-American countries, but the lack of suitable organisation has likewise played its part in the unfavourable situation.

In the case of the United States, the substantial reduction in the excess of exports to the Latin-Americas does not indicate an excess of imports as a probable development of the future, although it is clear that eventually the obligations of the smaller States, like those of other countries, must be liquidated largely by payments in goods. Of late years the export of American capital in the form of loans—Governmental, State, and Muni-

pal—has largely offset the net balance of exports to the smaller countries of the New World.

In view of the important, in fact, paramount, part played by British capital in the early economic development of the Latin-American countries, it is a matter for surprise, and no little regret, that orders for railway supplies, port and harbour constructional materials, and other industrial equipment, should be placed so often outside British manufacturing circles. Whereas the construction of railways in Argentina and Brazil, among other Latin-American States, has been pre-eminently the outcome of financial enterprise and industry upon the part of British *entrepreneurs*, contracts for locomotives, rolling-stock, rails, electrical, industrial, and other machinery have been freely given to entirely outside bidders. Without having constructed or financed a single railway system in either Argentina or Brazil, United States contractors have succeeded in securing an unduly large proportion of orders for rolling stock. Similar opportunities are being offered every day, and naturally are made the most of. The Latin-American Governments usually purchase their railway equipment by competition open to all responsible concerns, both foreign and local, calls for tenders being published more or less fully in the official gazettes. This method, however, is not strictly adhered to, many valuable orders being obtained by favour after systematic solicitation, and no doubt shrewd watching of coming opportunities.

SOME LESSONS OF THE AUSTRIAN EXPERIMENT IN RECONSTRUCTION.—III.

THE political position in Austria, though by no means serious, is not as good as the financial situation. There are three parties in Parliament of which the largest, that of the Christian-Socialists led by the Prime Minister, Dr Seipel, forms the Government, with the support of the German Nationalist Party, which although small in numbers, nevertheless holds the balance of power. The Social Democrats, who form the opposition, adopt a critical attitude towards the League of Nations' plan of reform. The weak feature of the situation is that there is no patriotic feeling anywhere for the present Austrian State. The pre-war patriotism of Austrians centred in the ancient though somewhat faded Hapsburg monarchy, with its heritage of the glory that was once the Holy Roman Empire. What is left of this patriotism is now to be found in the German Nationalist Party, which hopes some day, though not now, for union with Germany. As to the Socialists, in Austria, as elsewhere, there are many in the party who have an international rather than a national outlook, while it must not be forgotten that a very substantial proportion of the finance and commerce of Vienna is in the hands of Jews, whose national attachments are notoriously weak. Among the agriculturalists in the provinces the provincial patriotism of the peasant in Tyrol, Styria, or Carinthia is almost as marked, and at times has been more exclusive than his feelings for the new Austrian State. This lack of national spirit has various important consequences. On the one hand, it made it easy for Austria to surrender her autonomy to the League of Nations. In this respect the situation is in marked contrast with that in Germany, where the problem of international control now is a matter of immediate political importance, and in Hungary, which has already applied for a scheme on similar lines. The task of a controller in Hungary, a country surrounded by jealous enemies and inhabited by a strongly nationalistic and revengeful people, would be an entirely different problem from that with which Dr Zimmerman has been faced in Austria. Unlike Budapest, Vienna has never been a centre of irredentist aspirations.

On the other hand, this lack of national spirit creates difficulties of its own. In the first place, the financial community of Vienna provides no group of public-

Notes of the Week.

spirited financial magnates competent to take the lead in economic affairs, or to form a body of opinion which would modify speculation and the prevailing instinct to make an immediate profit out of a difficult situation. Secondly, political life has less stability, and there is little common ground between the parties. When a League of Nations Commission first went to Vienna in 1921 they obtained the undertaking of all the parties, the Communists only excepted, to accept a mortgage on all Austrian State property. But when the second and later scheme was developed the final arrangement was only made with the party in power. At Geneva last September it was thought and hoped that when Dr Seipel returned to Vienna he might form a Coalition, and give effect to what was a national trust with the League of Nations. When, however, he arrived home the temptation to make party capital out of a successful negotiation proved too strong, and the party government was maintained. The Socialists, being driven into opposition, have developed a strong campaign against the new system, their line of argument being that the controller, Dr Zimmerman, is using his power to suppress social improvement, to rescind recent socialistic legislation, to relieve direct taxation, and to impose indirect taxation on the masses, and generally to enthrone the capitalist system. At the present moment these criticisms do not make much headway. Austria is rejoicing in her new-found hope, and remembers only too well the chaos of the last few years to lend a ready ear to the criticisms of theorists. The elections which are to be held in the early autumn are not expected to bring any increase of strength to the Socialist Party. But even if by some chance they came into power, the League's scheme would not be endangered, for the Socialist leaders have definitely declared that they would honour it as a national undertaking, though endeavouring to modify its administration.

At the same time, these criticisms are important, and should be carefully considered by those who think that the Austrian plan may have to be applied elsewhere. Dr Zimmerman, in fact, has not got on paper any direct control over the Austrian Budget, but in practice he has almost autocratic control, since he will only release the funds which come into his hands from the Customs and the tobacco monopoly, as well as the proceeds from foreign loans, if he is satisfied with the arrangements which are being made to reduce the Budget deficit according to the schedule agreed upon in Geneva. It is not true that indirect taxation is being exploited as against direct taxation. The nominal figures of direct taxation for the last two years have been extremely high, and on Budget day the Socialists might flatter themselves that Austria has raised nearly all its revenue by direct taxation. But it was only in appearance, for when the exchange is depreciating rapidly, an income-tax of even 10s in the pound, assessed to-day but paid six months hence, becomes a trivial affair. In these last two years, when nominal rates for direct taxes have been so high, the *actual yield* of the direct taxes has been very small. Now that the crown is stabilised, the yield of direct taxes is rising in proportion, though the nominal rates are falling. On the other hand, steps are being taken to modify some of the taxes, such as those on all financial transactions which were imposed under the previous *régime*. Some concessions also in the Eight Hour Law are being negotiated even on the railways. It is, of course, notorious that from London to Moscow every Parliament in Europe has been constrained in the last year or so to modify various utopian schemes which found their way on to the statute book during the years of illusion which followed the Great War, and Austria is no exception. Certain impracticable laws are being repealed and others will undoubtedly follow; but this necessity is not dictated by the League of Nations, and will not be remembered to the discredit of the League by practical people. But it is open to the Socialists to attribute these changes in Austria to the League of Nations, which is represented as a capitalist organisation interested in restoring capitalism in Europe. It is clear, therefore, that if the League is to perform its proper function the greatest care must be exercised as to how far it interferes in any individual state in the detail of that country's administration.

Monetary Policy.—Our recent suggestion that the time has come for a considered restatement of the monetary policy to be pursued during the next few years is repeated in a more definite form in a memorandum issued this week by the Federation of British Industries. In this document the federation "urge most strongly" upon the Government that a Commission should be immediately appointed to review the position and make recommendations as to future monetary policy. "It is in their opinion essential that this Commission should contain not only financial experts, but also representatives of industry, commerce, and labour, so that the effect of any policy on trade and employment may be fully considered before a decision is reached." The memorandum quotes the Premier's remarks on price stability in the House of Commons on the third reading of the Finance Bill, but complains that the declared monetary policy of the country is still that recommended by the Cunliffe Committee, namely, to bring back the exchange value of the pound sterling to parity with the gold dollar "by a process of deflation." The Cunliffe Report was written in 1918, and present conditions, as the federation remark, differ very materially from any which existed or could have been foreseen in 1918. Indeed, we venture to assert that those members of the Cunliffe Committee who survive would draft their report somewhat differently in the light of present-day conditions, for the relative importance of various issues has undoubtedly changed. Their first report showed that they anticipated an approximation between prices in this country and gold prices, "if credit expansion elsewhere continues to be rapid." While this has not happened, prices here have for some time now been relatively stable. In his speech, which the federation quote, Mr Baldwin said, "One of the things that has contributed most to the steadier feeling which is more prevalent now than it has been in this country, is that people feel that they are getting down more or less to a stabilised basis of prices." The memorandum expresses doubts as to whether the Prime Minister's views are shared by those "more directly responsible for controlling our monetary policy," and further argues that "the policy of deflation advocated by the Cunliffe Committee, and apparently still being followed by the banks and the Treasury, has surrounded the monetary policy of the country with an atmosphere of obscurity which is extremely undesirable in the present circumstances." While we do not agree that any definite policy of deflation is at the present time being pursued either by the banks or by the Treasury (such deflation as has taken place being the normal result, and not the cause, of the present condition of trade), there can be no doubt that at the present juncture a redefinition of our monetary policy would be beneficial in removing uncertainty and enable the public to understand better the actions not only of the Treasury, but of the banking world.

The Problem of Disarmament.—The academic portion of the disarmament resolution which Mr Ramsay MacDonald introduced in the House of Commons on Monday commands universal agreement. The practical portion, namely, the demand that the British Government should immediately summon an international conference, found the Government armed with an array of sound objections. Alarm at the height of armament expenditure since the war; fears of a renewed armament competition; anxiety born of sad experience, lest this reviving competition is not already leading us along the broad road that leads to war—all these feelings were instinct in the speeches, not only of Labour members but of all sections and parties. Likewise all schools of political thought are, like Mr MacDonald, anxious to find a way of checking this pernicious growth before it is too late. The fact that Mr MacDonald's motion was rejected must not be taken to mean that the Parliamentary majority is unfavourable to an international attempt to secure reduction of armaments. On the contrary, we believe that both Parliament and the country are solidly in favour of such efforts being made. For our part we have urged constantly that an interna-

* Official figures of the Pan-American Union.

tional agreement for the reduction of land and air forces is an essential condition of future world, especially European, peace. Nevertheless, we agree with Mr Baldwin in his resistance to the demand that he should summon an international conference forthwith. In the first place, recent history has taught us the futility of convening international assemblies without carefully and industriously preparing the ground beforehand. Secondly, the League of Nations, which has been giving unremitting attention to this subject, is about to produce certain concrete suggestions which may form a basis for fruitful discussion. It would not be an act of wisdom for the British Government at this moment to ignore the League, and on its own initiative summon an international conference. Thirdly, the British Government is at the present moment preoccupied with the attempt to approach the problem of European peace and security through the medium of a reparations settlement. A reparations settlement brooks of no delay; and the chances of such a settlement might well be delayed or jeopardised if just at this psychological moment the red herring of disarmament were to be drawn across the path. Thus, while we agree with most things that Mr Macdonald said on the general subject of armament competition and war dangers, we find Mr Baldwin's attitude perfectly correct. The Prime Minister spoke of "dreams" of world peace and disarmament, but he described the Washington Conference as leading to "a limitation of naval armaments, which, I am convinced, the statesmen of all countries would have considered to have been impossible, impossible even to have been debated, and impossible in its fulfilment." His reference to the work of the League of Nations on disarmament shows that he is not hopeless of the possibility of a repetition of the Washington triumph. He promised that the work of the League would be examined "not only with the sympathy and interest which such work deserves, but with an earnest desire, at the first moment when it appears to be practicable, that the aims of the League, if not in the exact form in which they have suggested they should be brought about, shall be brought into effect in Europe." With the spirit of that profession we must remain content for the moment, and hope that we may rest assured that, after the urgent question of reparations, the problem of international disarmament ranks foremost among the vital questions engaging the active attention of the Government.

The Kenya Settlement.—The lengthy controversy between the Indians in Kenya Colony, backed by the Government of India, and the British settlers, supported in the main by the missionaries in the interest of the native population, has been settled by the Colonial Office on terms published in a White Paper (Cmd. 1922) on Tuesday. This aims at placating Indian sentiment by making it clear that any discrimination against Indians in the colony is not based on ground of race or colour, but on the economic interest of the native population and of the colony in general, and on the pledge to reserve the highlands for white settlement, given to British settlers by the Colonial Office in 1918. The colony contained in 1921 over 2,500,000 natives, 9,651 British, 10,102 Arabs, and 22,822 Indians; the last named were there long before the country was British. The Indians demand full political equality, and claim that it is threatened by proposals for their segregation, by the reservation of the highlands, and by restrictions, actual or contemplated, on Indian immigration, and that they are better friends to the natives than are some of the British. The British settlers reply that the mass of the Indians are unfit for political equality, that unrestricted immigration would aggravate this unfitness, lower the standard of life for Europeans, and keep the natives permanently down, and that the highlands reserved for white settlement are the only district fit for it in tropical Africa. The controversy, which may arise in different forms in other tropical colonies, has lasted nearly two years, threatening the peace of Kenya and straining Indian loyalty; the settlement proposed last year by the Wood-Winterton Committee was rejected by the British population, and rival delegations interviewed the Colonial Office last May. The settlement now achieved is briefly this: As to the franchise, there are two alternatives (a) separate or "communal" representation of the races, possibly

with overlapping constituencies, and (b) a common electoral roll, Europeans and Indians voting together in the constituencies into which the country would be cut up. This latter plan, favoured by the Wood-Winterton Committee, would in practice involve some gerrymandering and differentiating in qualifications in order to keep the mass of low-class Indians from swamping the European electors, and to ensure fair representation for both races alike. The communal system allows a much wider Indian franchise, and affords a framework into which Arab and, hereafter, native representation may be fitted, and at present any candidate of one race favouring the other would forfeit the support of his own. So the communal plan is adopted. Candidates must know enough English to take part in the proceedings of the Legislative Council. Its elective element will consist of 11 British, one Arab, and five Indian members (there is one nominated Arab already), and a missionary may be nominated to advise on native questions. The Executive Council already contains one Indian member; it will also contain an adviser on native affairs, probably a missionary, and no distinction will be made in appointment on racial grounds alone. Communal representation on municipal bodies will be given to Indians, details being settled hereafter; segregation will not be insisted on, but "the rigid enforcement of sanitary, police, and building regulations without racial discrimination" will suffice. The reservation of the highlands will continue, inasmuch as the Governor will retain the power of veto on transfers of land between members of different races, but areas in the tropical lowlands will be assigned for bona-fide Indian settlers. At present there are no agriculturist immigrants from India; the Indians are traders, clerks, railway servants, and artisans. Finally, restrictions on immigration can never be racial; they must be purely economic and devised in the interest of the natives, who must be protected from any influx which will interfere with their economic welfare. Further consideration of the control of immigration is foreshadowed with this exclusive purpose. The Report caused an outburst of angry comment in India. This, we trust, may simmer down when the full meaning of the new proposals is thoroughly grasped. For they are, at any rate, decidedly more liberal to the Indians than any previous proposal, and the retention of the official majority in the Council affords security against encroachment on the rights of the natives, whose welfare both British and Indians assert to be paramount, and the Imperial Government formally declares to be its primary aim.

Trade Union Discipline.—For nearly four weeks thousands of dockers have been on strike against the advice and instructions of their responsible leaders. Our readers will remember that this movement is directed against an agreement which had been duly accepted by the union representatives and by the men themselves. If it succeeds, therefore, the whole principle of collective bargaining is in danger. Fortunately, however, there are signs that many of the strikers are seriously disappointed, as the strike weapon is proving less successful than they had been given to suppose. Work has, indeed, been resumed at Manchester and Salford, though the conflict still drags out its weary course in the Port of London and at Hull. This past week has not brought any startling developments in the situation, but mass picketing, which seemed on Monday almost likely to bring the Tilbury men, who had hitherto stood loyally by their union, into line with the rest of the London dockers, has apparently proved a complete failure, and at the time of writing conditions are almost normal in that area. If any illusions were cherished by the strikers as to the possibility of joint action on their behalf by other sections of labour, they cannot have survived the resolution congratulating the loyal dockers which was passed by the General Council of the Trades Union Congress on Wednesday last. The announcement of Mr C. T. Cramp, the industrial general secretary of the National Union of Railwaymen, that grants from branch management funds must not be made on behalf of the strikers must also have proved disappointing, though by no means unexpected. As the end of the fourth week of idleness approaches we hope that some at least of the strikers will count the cost and measure the benefits gained. On the one hand, a month's wages have

been lost, and it would take many months to make this good even were the extra shilling a day, which is the present bone of contention, to be granted by the employers. It must, however, be apparent that the chances of an unconditional surrender by the masters is more remote than ever, and no amount of bravado on the part of those irresponsible elements which are now masquerading as strike leaders can conceal the fact that public sympathy is dead against the whole movement. The employers have asserted that the new day-wage of 10s is only a minimum, which would in a very large number of cases be exceeded. In addition they have promised a full statement of wages paid to dockers in the past, which should do much to enlighten public opinion as to the position of an employment which is undertaken by a regrettably large number of casual labourers. But it cannot be too often repeated that the wage question is not the real issue in the present conflict, and this fact is fortunately perfectly clear to the overwhelming body of organised labour, which realises to the full the advantages to be derived from collective bargaining.

Irish Free State Affairs.—Our Dublin correspondent writes:—The public has been taken somewhat by surprise at what is seemingly a sudden advance of the date of the pending General Election. A recent estimate in these columns placed it in the early part of September, and, while it is not yet actually fixed, that is when it is still likely to be. But during the last ten days—and following upon a visit of President Cosgrave to London—there has been a general "hurry up," an urgency to complete or abandon pending legislation, an acceleration of candidatures and programmes. The election itself will be big with fate for Ireland. It will afford a test of the constructive capacity of the present generation of the Irish people, and it is to provide a more numerous membership for re-adjusted constituencies upon adult suffrage. The best opinion is that the present Government will obtain a general endorsement and a renewed lease of power, and this, subject to minor changes and rearrangements, is what the wiser heads on almost every side desire. Mr Cosgrave, Mr O'Higgins, and their colleagues have done extraordinarily well in circumstances of immense difficulties. They have displayed a devotion to principle and a disregard of popularity, points which, if they have drawn upon them some enmities, have earned them the esteem of large sections in no wise predisposed in their favour. The big strike of farm labourers in Co. Waterford continues, and this is now supplemented by what may develop into a great labour struggle in Dublin. The Labour organisations of Dublin, and in particular the powerful Irish Transport and General Workers' Union, are split from top to bottom by the rivalries and feuds resulting from the return of Mr Jim Larkin. The employers have taken the occasion to press for reductions of wages to what they allege to be an approximation to an economic level. In a reasoned statement the shipowners point out that the changes of wages and conditions since 1914 make an increase of 422 per cent. for a given quantum of work, and that business cannot be continued on these lines in competition with all the other ports where, without exception, the work is done cheaper. So far, the strike or lock-out is more or less restricted to the docks. Other classes of employees are still deliberating; their ultimate solidarity is still in doubt. It is not unlikely that these developments will tend at the General Election to strengthen the Government, and win support for its policy of national concentration and reconstruction. An issue of the most grave importance is now being brought upon the stage of Imperial politics. The Irish Free State has informed the British Government of its desire to proceed with the Boundary Commission pursuant to the terms of the Treaty, and has appointed Professor John M'Neill to act as its representative. It would be unthinkable that the British Government could fail to make good its solemnly pledged word, but that is what some of the hot-headed partisans of N.E. Ulster demand that it should do. No Government in Ireland could expect to live for a month which submitted to being put off with less than the Treaty gave, and the majority of the Free State populace have fought or suffered

or both for the Treaty and for what it promised. The deep gravity of the issue now raised is fully realised in official circles in Dublin.

The Problem of Hungary.—The Hungarian problem has come once again to the fore as a result of a question asked by Lord Newton in the House of Lords on Wednesday last. The position of the noble lord, whose sympathies for the Magyar nation are well known, may be summed up by saying that Hungary should not be called upon to pay any reparations at all because she, of all countries, had suffered most by the peace settlement of Paris. Indeed, her finances are alleged to be in such a parlous state that not only would it be impossible for her to make any substantial payments, but, unless a loan is forthcoming under the aegis of the League of Nations, the country is inevitably condemned to complete financial ruin. Under these circumstances, Lord Newton urged that the States of the Little Entente should not be allowed to borrow a single penny on the London market until they had agreed to a "satisfactory and just settlement of Hungarian reparations." It is, of course, admitted that an international loan under the auspices of the League implies control by a representative of the League on the Austrian model. We refer elsewhere in this issue to one fundamental difference between Austria and Hungary, and that, perhaps, the most important, that whereas irredentism is admitted on all hands to be prevalent if not predominant in political circles at Budapest, the modern Austrians can hardly be said to have any nationalist aspirations whatsoever. It is obvious that this fact would complicate enormously the task of the League Commissioner for Hungary, were one to be appointed; and it must be equally clear that it must also give rise to some misgivings on the part of the States of the Little Entente. In fact, the demand put forward recently by Dr Benes and M. Bratianu that guarantees must be forthcoming that international assistance shall not be used by Hungary as a means to further her Imperialist ambitions, seems perfectly reasonable as a preliminary condition to co-operation in the proposed scheme by Czecho-Slovakia and Roumania respectively. We are not concerned with the rights or wrongs of the Treaty settlement. This, indeed, is best left to the student of Magyar rule in non-Magyar lands in the palmy days of Hungarian Imperialism. What is clear, however, is that the League of Nations can only concern itself with the frontiers as they at present exist, and a settlement under its auspices must necessarily be on this basis. Whether any government could co-operate on these terms and maintain itself in office at Budapest at the same time is, of course, another question. But this is not all. Modern Hungary is predominantly an agricultural country, and rural property is still in the hands of the large territorial magnates. Despite the fact that peasant proprietorship has been established, mainly as a result of post-war legislation, in all the surrounding countries, the Magyar landlords have so far shirked the question of agrarian reform. At first sight this might appear satisfactory from the economic point of view, but a closer analysis of the statistics of agricultural production, such as that published in the *Economist* of July 7th last, reveals the somewhat surprising fact that the rural economy of Roumania, for example, where expropriations have been carried out on a vast scale, is much nearer the pre-war standard than is that of Hungary. This fact alone is significant, especially when it is remembered that Roumania formed part of the theatre of war, and was afterwards thoroughly exploited by the German armies of occupation for close on two years. The explanation is almost certainly to be found in the prevalence of social unrest and general dissatisfaction with the Horthy régime among the mass of the Hungarian people. Indeed, the Hungarian problem is very largely a social question, and as such beyond the sphere of activities of a League of Nations Commissioner. Moreover, the political supremacy of the landed aristocracy makes the problem of taxation an exceptionally difficult one, and one of the main causes for the financial collapse of the country is to be sought in the fact that the wealthy classes do not pay anything like their due proportion of taxation. But there remains yet

another difficulty. The floating of a loan on behalf of Hungary would necessitate the raising of Reparations liens on the part of the smaller Allied Powers of the Little Entente. This they are not prepared to do unless the transaction forms part of a general cancellation of indebtedness. Roumania, for example, is not prepared to surrender her claims on Hungary for a given period of, say, 15 years, unless the claims against Roumania herself which arise out of the Treaty settlement are also waived for a like period. These latter claims consist for the most part of obligations undertaken by Roumania in connection with the former Austro-Hungarian debt, which result from her succeeding the Hapsburgs as sovereign over part of the former Austro-Hungarian Empire, or else in the so-called "Liberation Debt" owed to the Allied Governments. The position, in fact, can be briefly summarised by saying that Roumania, together with the other States of the Little Entente, is not prepared to waive her credits under the Treaty settlement unless her own creditors are prepared to waive their claims for an equivalent period. For our part, we feel that a solution of the Hungarian problem is only possible as part of a larger scheme of general settlement, and that the intervention of the League of Nations on lines similar to those which have been so successful in the case of Austria is only possible if adequate political guarantees are forthcoming on the part of the dominant Magyar aristocracy. Indeed, a certain degree of chastened resignation is indispensable for the success of such a scheme of international control, and news from Hungary leaves us unconvinced that this necessary preliminary has as yet been complied with, despite Lord Newton's able presentation of the Magyar case on Wednesday last.

The Railway Half-year.—Until the railway companies see fit to publish traffic returns which are of any real value, that is to say, which show net as well as gross receipts, it is impossible to form a clear idea either as to the equity of their scale of charges or as to the position and prospects of shareholders. The grouping of the companies has, of course, complicated the compilation of statistics relating to previous years, and has so taxed the statistical machinery of the Ministry of Transport as to delay publication of their monthly return for January last until this week. But the comparative figures do exist, and as one of the new companies, namely, the London and North-Eastern, publishes last year's comparative figure with each weekly return, there seems to be very little excuse for withholding them on the part of the other three companies. But the production of the net figures is of equal urgency, and without them the gross figures are comparatively meaningless. We reproduce them, however, for what they are worth:—

	JANUARY TO JUNE, 1923.		
	Passengers, &c.	Goods, &c.	Total.
	£	£	£
Great Western	6,146,000	9,388,000	15,534,000
London and North-Eastern	10,485,000	19,595,000	30,080,000
London, Midland and Scottish	15,120,000	24,330,000	39,450,000
Southern	7,729,400	3,049,500	10,778,900

The London and North-Eastern gross receipts for the first half of 1922 are given as £31,258,000, making a decline this year of £1,178,000, of which passengers accounted for £1,140,000 and goods for £38,000. The relatively very small decline in the latter item is no doubt due to the boom in the coal and iron and steel trades in the early part of the year, which resulted from the Ruhr occupation. It would not be unreasonable to assume that the decline in gross revenue has been covered by a corresponding reduction in expenditure, and that net revenue has been at about the same level as in the first half of 1922. The London, Midland, and Scottish dividend, announced yesterday, is at the rate of 6 per cent. per annum, which is much in accordance with market anticipations, while the Southern Railway interim distribution is to be at the rate of 5 per cent. per annum on the preferred, but no interim distribution, as in the pre-grouping days, is made on the deferred stock. There is, of course, no direct comparison available, nor must these rates be contrasted with the final distributions for the year 1922, which were at exceptionally favourable rates, and the last to be distributed by the old companies. The accounts for

1922 showed that the companies have enormous reserve funds, which will be available for equalising dividends should the directors think fit to use them for this purpose. It is probable, however, that the present interim distributions are being made on a conservative basis, leaving the final distributions to correspond more closely with the full year's results. The railway reserve funds are still a matter of controversy, and the traders argue that they should be utilised to lower railway rates in order to help in the restoration of industry. In a recent article the *Railway Gazette* challenges these arguments, and claims that the present railway reserve fund is equivalent to approximately 11 per cent. of the capital expenditure, or 20 per cent. of the total ordinary and preference capital. This, of course, refers only to visible reserves. At the same time, our contemporary makes a comparison of our quarterly analyses of industrial profits with the dividends paid on railway stocks in recent years, in order to show that the return on railway capital is low. But only our average figures, covering all classes of industries, are produced, and a comparison of these averages with the rates in one particular industry is entirely misleading, especially when that industry is one in which one looks for a certain degree of security, and is very different to, let us say, oil or rubber undertakings, in which the risk is known to be heavy, and in which capital naturally expects a commensurate return.

The Oil Trade Position.—The recent reductions of 3½d per gallon in the retail price of No. 1 petrol (3d per gallon in the wholesale) and 1d per gallon in the price of kerosene are an overdue acknowledgment of the prevailing economic position of the oil industry. It would seem that British prices reflect the world situation only indirectly, that is to say, that they are reduced only when the combines consider that the small companies are making too much profit. Petrol, for example, can now be purchased in the United States and delivered in this country for about 10d a gallon—ex ocean installation. Oil prices, both crude and refined, have been falling in America since last April. Pennsylvania crude oil, which may be taken as an index of the crude oil situation, is now standing at three dollars per barrel, having fallen by \$1.35 per barrel since April. Stocks of crude oil (pipe-line, tank farm, refinery, and imported crude) had risen from the January level of 279,707,916 barrels to 289,871,477 barrels in March, and to about 300,000,000 barrels in June—or about 211 days' supply at the current rate of consumption, which is about 50 per cent. above the pre-war maintenance. Indeed, stocks have been steadily rising since 1920, and the slump never checked production adequately. Since the discovery of the prolific deep sands in the Southern Californian fields, production has been completely out of balance with consumption. The daily average crude oil output had risen from 1,752,000 barrels in the first week of January to 2,076,250 barrels in the first week of June, and for the week ending July 7 is reported as 2,199,150 barrels, of which California accounted for 835,000 barrels, or about 38 per cent. Of that Californian daily total the three southern fields—Santa Fe Springs, Long Beach and Huntington Beach—were responsible for 626,000 barrels. To check drilling in these flush-producing fields, crude oil prices must be cut still further—in other words, until drilling is made hopelessly unprofitable. The steps taken to curtail production by a voluntary restriction of output in California and elsewhere by a pro-rating of pipe-line runs have been more than offset by the new wells brought in. If production has been unexpectedly small in one district, as in the Teapot dome area of Wyoming, it has been unexpectedly big in another, as in the Powell field of Texas. If the gas pressure in the Long Beach Californian field is showing signs of giving out, the estimate of the Californian Oil Producers' Association shows that 260 wells are due to be completed between July and November 30, with a potential new production of 746,000 barrels a day. It will be appreciated that the decline in Mexico has not greatly affected the general position, seeing that California is now producing twice as much as the whole of Mexico, and that this over-production is of the lighter grade of crude oil which results in over-produc-

tion of gasoline and kerosene, whereas the failure of Mexican fields affects only the fuel oil supply. The oil trade generally is impatient, because price reductions do not come more quickly and buying is slow. In this situation the companies most adversely affected are, of course, the single producers. The big refining and marketing companies are profiting by the cheapness of the raw material and the fact that this margin of profit is just as satisfactory with lower prices, which, indeed, tend to expand business. It goes without saying that the few big combines which can take advantage of the market, buy supplies cheaply, and store them for higher prices will be able to reap a harvest later on.

Six Months Oil Imports and Exports.—The following are the figures of oil imports, exports and re-exports for the first six months of 1923, as compared with those of the corresponding period of 1922:—

	Imports.		Re-Exports.	
	1922.	1923.	1922.	1923.
	Gallons.	Gallons.	Gallons.	Gallons.
Crude	94,407,119	146,495,842	24,567	1,701,548
Lamp oil	80,503,140	70,390,202	1,579,953	1,272,440
Motor spirit	172,966,645	157,832,579	13,387,023	19,514,334
Spirit other than motor spirit	2,200	1,001,410	49,252	13,755
Lubricating oil	34,155,420	51,764,900	1,470,505	1,136,881
Gas oil	41,982,352	35,599,234	204,595	1,370,590
Fuel oil	203,286,042	165,675,377	3,511,665	369,128
Other sorts	22,714	28,306	4,699	40
Total	627,325,632	628,787,850	20,232,259	25,378,716
Total value	£ 21,367,727	17,797,246	1,200,697	1,378,344

	Exports.	
	1922.	1923.
	Gallons.	Gallons.
Lubricating mixed	221,718	389,696
Petroleum lubricating	2,763,173	3,105,132
Other sorts	6,276,289	33,941,003
Total	9,261,180	37,435,831
Total value	£605,707	£1,192,064

Fuel oil shipped for the use of steamers engaged in the foreign trade for the six months of 1923 totalled 104,904,991 gallons, as against 50,102,414 gallons for the corresponding six months of 1922. It is unsafe to draw many conclusions from these half-yearly figures. While the total volume is practically the same in each period, it is noticeable that imports of fuel oil have declined in the 1923 period by nearly 19 per cent., and of motor spirit by 9 per cent., while crude oil imports have increased by 55 per cent. and lubricating oils by 51 per cent. The increasing volume of crude oil imports does not support the story that the Llandarcy refinery of the Anglo-Persian Oil Company has been a failure. As regards the re-exports, it is remarkable that the amount of fuel oil shipped as bunkers for steamers engaged in foreign trade has increased by 108 per cent. in the last six months, as compared with the first six months of 1922. Higher prices for bunker coal have made it more favourable for shipowners to convert their vessels to fuel oil burning. Thirty-one per cent. of the world's tonnage is now consuming oil, as against 11 per cent. in 1914. The increase in marine fuel oil consumption concurrent with the decrease in fuel oil imports no doubt accounted for the rise in the British price of bunker fuel oil this year from 60s a ton to 70s a ton, ex tank.

Trade Volume and the Irish Factor.—Last week's *Board of Trade Journal* includes the official calculation of the volume of trade in the June quarter, as compared with the corresponding quarters of 1922 and 1913. Our official contemporary gives the following statement showing the value, as declared, of the imports and exports, their aggregate value at the average values, commodity by commodity, at which similar goods were declared a year ago, with the corresponding figures of the trade of the second quarter of 1922, and the calculated equivalents, on the

basis of 1913 prices, of the trade of the second quarters of the current year and last year:—

COMPARISON OF TRADE in the SECOND QUARTERS of the YEARS 1923, 1922, and 1913.

April-June.	Total Imports.	Exports of United Kingdom Goods.	Re-exports of Foreign and Colonial Merchandise.
	£'000.	£'000.	£'000.
1923, as declared	265,201	197,309	35,157
" At 1922 prices	271,559	205,746	31,739
1922, as declared	253,459	165,699	26,885
At 1913 prices—			
1923	177,174	104,411	26,412
1922	166,905	84,348	21,828
1913	182,467	129,751	27,967

From these general comparisons it appears that the imports of April to June this year were in excess of those of the corresponding period of 1922 by about 7 per cent., exports of British produce showed an expansion of 24 per cent., and re-exports an expansion of 18 per cent., when all are calculated on the same price-basis, namely, that of April-June, 1922. Compared with the second quarter of 1913, the imports of the second quarter of 1923 show a reduction of about 3 per cent. in volume, the exports of British produce a reduction of 19.5 per cent., and re-exports a reduction of about 5.6 per cent. In reading these figures it has to be remembered that comparisons between the past quarter and the second quarters of previous years is vitiated by the fact that since April 1st the British returns have included exports to and imports from the Irish Free State, while the direct trade of the Irish Free State with other countries has been excluded. What exact bearing on the figures this change has had, there is not as yet sufficient data for judging. But it would appear that the exports to Southern Ireland would not be sufficient to account for more than a part of the increase in British exports last quarter over those of the June quarter of 1922. While adequate Irish trade statistics are not yet available, the *Board of Trade Journal* produces some figures which afford some slight indication of the position. A list of "principal" exports of British produce to the Irish Free State in the past quarter are shown to have reached a total of just under £3 millions, and seven leading re-exports to the same quarter a value of £1¼ millions. On the other hand, a list of "principal" imports into Great Britain and Northern Ireland from the Free State represented a value of nearly £7 millions. A further item of information is that in 1921 the value of imports from abroad into Southern Irish ports amounted to £15 millions, and the exports from those ports to overseas countries about £400,000, with re-exports a mere trifle. However, these crumbs of information are only of slight value, and it is to be hoped that complete Free State figures for the past quarter will be produced as quickly as possible, and that thereafter their compilation will be kept up to date. For unless and until this is done we are without a true basis for comparing current British overseas trade with that of previous periods.

German Imports.—The Trade returns for Germany are of course, to some extent defective, owing to the absence of figures for the Occupied Territory, but with the rigid French régime these can hardly amount to very much. The German returns express the totals in weight as well as in value, which is a great advantage when the exchange is fluctuating so rapidly. The following figures compare the imports since the Occupation with those in December last:—

IMPORTS into GERMANY (Metric Tons).

	Total.	Coal.	Iron and Steel.	Total Excluding Coal, Iron, and Steel.
December, 1922	4,326,300	1,471,600	236,000	2,618,700
January, 1923	4,728,900	1,870,100	287,600	2,571,200
February	3,166,100	1,421,800	101,500	1,642,800
March	5,220,100	3,397,700	107,200	1,715,200
April	6,396,100	4,526,100	154,300	1,715,700
May	4,013,100	2,500,000	?	

It will be seen that while the total imports into Germany have increased rather than diminished since the Occupation, the increase is wholly due to increases in the imports of coal, imports of commodities other than coal, iron and steel having fallen in April to about 65 per cent. of the December totals.

Marine Insurance Results.—In our "Review of the Progress and Prospects of Insurance," which was published on July 14th, we gave the aggregate figures of premiums, claims, and expenses of some six marine insurance departments for the years 1919-1922 inclusive. This was done in order to give a broad general idea of marine insurance business since the war boom. It has, however, been pointed out to us with some justice that the selection of the figures for these four years—as given in the companies' accounts—exaggerated the weight of the claims, since many of the claims falling within those years related to 1917 and 1918, during which premium incomes were very large indeed. When premium incomes are rapidly contracting, as they did after the war, one needs to extend a survey over a longer period of years to get results which are a trustworthy indication of the course of marine underwriting. It may be that ten years would not be too long, but perhaps it will be useful just now to take, say, six years from 1917 to 1922 inclusive, and to show what the aggregate results have been for the six companies previously selected. When we took four years, 1919-1922, and added up the premiums, claims, and expenses for those years, the final results were:—Alliance, deficiency, £243,005; Commercial Union, surplus, £569,929; Liverpool and London and Globe, surplus, £17,140; London Assurance, deficiency, £7,077; London and Lancashire, surplus, £238,109; and Royal Exchange, deficiency, £76,324. If, however, we bring in the two previous years, 1917 and 1918, and give the aggregate premiums, claims, and expenses for the six years 1917-1922, the results are widely different, as will be seen from the following figures:—

AGGREGATES for SIX YEARS, 1917-1922, inclusive.

	Premiums.	Claims.	Expenses.	Surplus.
	£	£	£	£
Alliance	7,308,833	5,402,690	758,352	1,147,791
Commercial Union	4,216,858	2,317,190	752,002	1,147,666
L. and Lond. and Globe ..	3,811,996	3,136,120	276,570	399,306
London Assurance	6,585,404	4,770,782	986,828	827,794
London and Lancs.	10,860,834	8,069,732	1,057,966	1,733,136
Royal Exchange	5,693,501	4,498,176	554,927	640,398

Here we see that deficiencies disappear, and all the companies show substantial surpluses. This is, of course, because the richness of the war years, 1917 and 1918, has much more than made up for the comparative poverty of 1919 to 1922. One cannot tell how individual underwriting years have worked out until at least three years after an account has been opened. Several marine companies give information concerning the working out of their accounts after two years, but one only—the Alliance, in its directors' report— informs the public and the shareholders how an underwriting account has panned out after three years of operation. If this were generally done by the companies, then one could arrive at really trustworthy results in regard to marine insurance years.

Legal and General Assurance Company.—This office, which recently gave up the further issue of "with-profit" policies, has put forth revised tables of premium rates for fixed amounts of life assurance. A comparison with the tables previously in force shows reductions of approximately one shilling in the pound in the whole life and endowment assurance rates. Together with its revised tables the company issues particulars of a scheme by which life policyholders—by means of extra premiums—may provide for:—(1) remission of premiums during temporary total disablement by sickness or accident; (2) payment of the sum assured in the event of permanent total disablement; and (3) payment of double the sum assured in the event of death by accident. There are limits to the ages at entry, and to the ages at which incapacity benefits become payable. The extra premiums are 5 per cent. on the

ordinary annual premiums for benefit (1), 10 shillings per cent. on the sum assured for benefit (2), and 2 shillings per cent. on the sum assured for benefit (3). The scheme is really life assurance, with accident and sickness benefits imposed upon it, and if a policy-holder paid for all three benefits he would get something very like a combined life assurance and accident and sickness policy. If we take, say, a policy-holder aged 30 effecting a whole life assurance for £1,000, and subscribing for the three benefits, he would pay an annual premium of £18 3s 4d for his life assurance and £6 18s 2d for his accident and incapacity benefits. The company reserves to itself the right to decline any proposal where the disability risks would be more than usually hazardous. The Legal and General Company also offers to give its new life policy-holders, without charge, a medical overhaul every year. The results would not, of course, affect the terms of any existing life policy, and no treatment would be given, but there would be issued a certificate "showing the exact physical condition of the policy-holder, together with any observations that may be necessary." It is a curious offer, and we doubt whether many policy-holders will avail themselves of it. Most people dislike medical examinations too much to multiply the occasions for them. Still, it is probably true that if we all submitted to a medical overhaul every year we should anticipate the approach of disease and live a good deal longer than if we waited to be examined until illness overtook us. It will be interesting to learn the effect of this annual overhaul scheme on the mortality rates of the policy-holders who submit themselves to it.

Anchor Line Results.—A further contraction in profits is shown in the report of Anchor Line (Henderson Brothers), Limited, for the year ended April 30th last, a period of severe depression in the shipping trade. The report states that the freight carryings both in the Indian and Atlantic trades show a satisfactory improvement over last year, but rates of freight have ruled on a considerably lower level, especially in the homeward Indian trade. The drop of £128,500 in profits follows a decline of over £53,000 in the previous year, but as profits are declared after providing for depreciation, the comparisons are of little value. The profits shown for the past year are, however, very much below the level of recent years, as may be seen from the table below:—

Year Ended April 30.	1914.	1918.	1919.	1920.	1921.	1922.	1923.
Working profit...	£311,573	£309,399	£89,193	£258,937	£205,245	£151,738	£23,238

* Deducted before arriving at profits.

The dividend of 5 per cent., free of tax, is maintained, but nothing is credited to reserve. The latter, however, stands at £1,500,000, against a paid-up capital of £575,000. The balance-sheet, which is analysed in another column, shows a contraction in total assets of £1,119,800, the property item, including investments in associated companies, having been reduced by £1,450,600 to £4,555,500, while debtors have increased by £355,800. These changes have been balanced by a reduction of £1,149,900 in credit balances. No information is vouchsafed in the report as to the reason for these large reductions.

The City Life Assurance Company.—We have dealt so fully in the past with the position of this company that its passage into liquidation, under strong pressure from the Board of Trade, will have been expected by our readers. The winding-up order was dated July 2nd last, and as from that date the policy-holders became uninsured, and were put into the position of creditors in the liquidation for the winding-up values of their policies. Under these circumstances the life policy-holders in the ordinary branch will probably welcome an offer from the

British General Insurance Company, Limited, to grant them new policies, without medical examination, as from July 2nd at the same premiums and subject to the same conditions as their City Life policies, but scaled down in amount to certain guaranteed minima. The sums assured allowed by the British General will be increased when the life fund of the City Life has been realised and received from the liquidator. The recent valuations of the City Life Assurance Company showed heavy deficiencies, though in the ordinary department (to which the British General's offer alone relates) they were not so bad as in the industrial department. The offer will appeal especially to the older policy-holders—the newer ones who are prepared to face medical examination can look after themselves—and so far as we can judge at present, is as liberal as could be expected under the lamentable circumstances. The British General has hitherto been chiefly concerned with fire, marine, and accident business, and has established itself in a reputable position. The total funds exceeded five millions, and the shares of £1 (5s paid) are quoted at 33s.

Van den Berghs.—This company made a good recovery during 1922 after its adverse experience in the previous year, a profit of £346,842 being earned, in comparison with a loss (including depreciation and directors' fees), of £256,885, in 1921. The report lays stress on the "great difficulties which have throughout the year attended the trade" both at home and abroad, but it would seem that the main trouble of 1921—a disastrous fall in value of stock-in-trade—was much less formidable in 1922. Whereas the balance-sheet item declined over 1921 by £2,266,828, the reduction last year amounted to no more than £301,261. This in itself would go far to explain the difference in the two years' results. With £106,964 brought forward from last year, a total of £453,806 is available, from which dividends are paid on the preference and preferred ordinary shares, amounting to £272,081, the ordinary shares receive £73,398—a 50 per cent. dividend—and £108,327 is carried forward. Profits, it should be noted, are subject to provision for a possible liability under a trade agreement which cannot at present be ascertained, and for any depreciation in value there may be of the interests in associated and subsidiary companies. These last are valued (including goodwill), at £1,476,342 in the current balance-sheet. Claims in respect of ex-enemy pre-war debts still figure among the assets to the extent of £407,233.

General Mining.—The profit of £78,900 earned by this Kaffir finance undertaking last year scores a marked advance upon the 1921 result. The most important point, however, consists in the position *qua* ex-enemy shares. At the nominal price of 2s, the Corporation has purchased nearly 850,000 of its own shares, and in due course the capital will be reduced to a corresponding extent. The difference between the purchase price and the par value of the shares, plus the year's profit and the balance brought forward, is more than sufficient to wipe out the accumulated balance-sheet deficit. It is calculated that the surplus assets represent fully 20s. per share, now quoted about 12s. 6d. Shareholders who expected a distribution in respect of 1922 are disappointed, but there appears to be every prospect of a dividend of 7½ or 10 per cent. for the current year. The most recently floated subsidiary of the corporation, the Transvaal Silver and Base Metals Company, is making satisfactory progress.

Base Metal Companies' Results.—Our mining correspondent writes:—Of the various annual statements lately issued of companies producing lead, tin, or copper, the most satisfactory is that of the Rhodesia Broken Hill Development. This company, which owns an extensive concession, last year turned out 20,500 tons of lead, as against 18,100 tons in 1921. It is an interesting point that the whole of the ore was obtained by quarrying. The profit of £77,000 shows an increase of as much as £44,000, and after payment of 10 per cent.—the same rate as for the three preceding years, but upon a substantially in-

creased capital—a balance of £104,700 goes forward, as against £62,700 brought in. As regards the two Nigerian tin concerns, the best that can be said is that the results score some improvement upon those of 1921. In this connection it is, of course, necessary to remember that the advance in the price of the metal did not occur until the autumn. The Bisichi made a net loss of under £1,000, as against £3,600, but after allowing for income-tax the deficit stands at £6,200. The proved reserves at the end of the year were estimated to represent 10,100 tons of 70 per cent. concentrates—a fairly substantial figure. The output for the current year to date shows expansion. Last year the Rayfield (Nigeria) recovered rather more tin than in 1921, and sold it at a slightly higher price. With the small profit thus earned, supplemented by what has been made since, the directors have been able to reduce the company's liabilities and provide for certain prior charges; nevertheless, some uphill work still remains. Losses to the amount of nearly £90,000 were wiped out last December by a reduction of capital. The company holds various properties of promise, but suffers in an especial degree from the prevalent labour shortage. It may here be noted that a further reduction in smelters' returning charges to £6 per ton has lately been negotiated by the Nigerian Chamber of Mines, while there are hopes that the onerous railway rates may at length be reduced. At first sight the report of the Briseis Company—which operates in Tasmania—appears to be very disappointing, but the whole of the year's expenditure has been charged up, whereas tin-winning was not resumed until August. The debit balance now stands at £33,500. The directors intimate that the successful diversion of the river has rendered available a large block of "drift," the value of which has been increased by recent developments. Last month's output of 35 tons of tin concentrates showed an increase of 10 tons upon the May result. The cabled summary of the annual report of the Mount Morgan Company, of Queensland, displays the disappointing feature of an expansion in the deficit concurrently with the expansion in the scale of work. Owing to the high production costs, aggravated by a shortage of skilled labour, last year's income of £675,700 fell £70,000 short of the sum required to cover the outgoings. Nevertheless, operations are to be continued, "in the hope that an improvement will be manifested during the current period." It is mildly encouraging to observe that some of the associated industrial undertakings are doing fairly well.

Obersea Correspondence.

UNITED STATES.—CROP CONDITIONS; DECLINE IN WHEAT—MAY RAILROAD EARNINGS—TRADE AND INDUSTRY SLOWING DOWN—STOCK MARKET.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 16.

The general crop outlook in this country is described as fair, although the Department of Agriculture's latest report puts the composite condition of all crops on July 1st as approximately 3.6 per cent. below their ten-year average on that date. As compared with a year ago the condition on July 1st was better in oats, barley, and apples, but poorer in rye, potatoes, flaxseed, rice, hay, cotton, and peaches. Wheat and corn showed little difference. The total wheat crop, according to present prospects, will amount to 821,000,000 bushels, approximately, as against an actual harvest of 862,000,000 bushels in 1922. The loss is due entirely to spring wheat. Although a slightly larger area was planted to corn this year, the estimated yield, 2,877,000,000 bushels, would be about 14,000,000 bushels below last year's harvest. According to the Government report, the level of prices paid to producers for the principal crops declined about 1.8 per cent. during June, or nearly twice the average decrease in that month. The average index of prices on July 1st was almost 17 per cent. higher than a year ago, and 30.6 per cent. higher than two years ago, but 17.6 per cent. below

the average of the past ten years on that date. Based upon the Department of Agriculture's July 1st estimates, and prices prevailing on that date, the value of 12 of the principal crops this year is placed at \$7,027,500,000, approximately. It is rather early, of course, to make such an estimate.

Seldom in recent years has wheat dropped below the dollar mark; the fact that September options have done so this week is causing much concern to producers. Incidentally, flour, largely in sympathy with wheat, has declined to the lowest price recorded in about eight years. The acute depression in wheat is attributed, to a considerable extent, to the enforcement of the Grain Futures Act which was passed by Congress, and which agricultural interests, especially the farm bloc in the national Legislature, hailed at the time as a great victory. Heretofore, speculative buying has absorbed practically all the offerings of future wheat. Now, however, the markets are being deprived of that speculative support, new wheat is being offered in excess of immediate demands, and prices naturally are crumbling. At elevators in Kansas wheat is said to be bringing only 70 or 75 cents a bushel, and less in Oklahoma and other States. In many sections farmers may feed hogs on wheat, which at current prices is much cheaper than corn. The outlook for a substantial export movement, however, is not encouraging at present.

Returns from practically all of the principal railroads in this country show that the carriers had a net operating income during May of \$89,999,600, which is equivalent to an annual return at the rate of 6.33 per cent. on their tentative property valuation. For the second consecutive month this year, therefore, the first-class lines have reported an annual rate of return on their investment exceeding 6 per cent. The May exhibit compares with net operating income in May a year ago of only \$62,069,000, representing an annual return rate of 4.46 per cent. on valuation. Gross earnings in May of this year, totalling \$547,282,500 for 193 roads, were nearly 22 per cent. greater than in the corresponding month of 1922. The increase was due largely to the heaviest volume of traffic reported for the month of May in the history of American railroads. During the first five months of this year railroads had a net operating income of \$356,966,900, or at the annual rate of return of 5.69 per cent., as against \$273,215,000, or 4.45 per cent. in the same period of 1922.

The United States Steel Corporation had on its books at the end of June 6,386,261 tons of unfilled orders, according to its latest report, indicating a decrease during that month of 595,000 tons, or much larger than had generally been expected. The heavy falling off in unfinished business shows that buyers have been very cautious in making new commitments. Since the corporation's shipments last month are said to have approached 1,250,000 tons, it is evident that new orders received amounted to about 655,000; May shipments were estimated at approximately 1,300,000 tons, and new business at 1,000,000 tons. The decrease in June bookings is attributed partly to a slackening of export trade on account of low European prices. Steel ingot production by companies, which last year turned out about 95 per cent. of the total, amounted to 3,574,567 tons, as against 4,000,695 tons in May, according to figures compiled by the American Iron and Steel Institute. On that basis, the country's total production in June was 3,748,890 tons, representing a decrease of nearly 11 per cent. from the previous month's total of 4,195,800 tons. The June, 1922, output was 3,127,755 tons. The United States Steel Corporation is taking steps to eliminate the 12-hour day in its plants where men, largely from choice apparently, are working that length of time. The Corporation, however, is finding it difficult to reduce the number of hours, owing to the scarcity of labour; chairman Gary estimates that there is a shortage of about 60,000 labourers in the steel industry at present.

Foreign trade statistics issued by the Department of Commerce show that exports in June increased, while imports decreased. The total value of June exports is placed at \$329,000,000 and of imports \$328,000,000, leaving an excess of \$1,000,000 in exports. For the three preceding months, imports exceeded exports by

\$151,500,000 approximately. For the fiscal year ended June 30th the aggregate value of exports was \$3,965,967,460, and of imports \$3,789,002,114, showing an excess in exports of \$176,965,346, as compared with \$1,163,077,481 for the 1921-22 fiscal year. Those figures clearly indicate the remarkable change that has taken place in the foreign commerce of the United States during the past twelve months. In other words, the balance of trade in favour of this country, based on import and export trade, decreased nearly one billion dollars in the past fiscal year. Imports of gold aggregated \$284,089,550, and exports only \$49,021,975, showing an excess of \$235,067,575 in gold imports; the latter, however, were \$184,228,723 less than in the preceding year, while gold exports increased \$21,676,693.

There was a slowing down in new building operations throughout the country in June. The total expenditure for which permits were issued last month at 153 cities amounted to \$225,090,818, as against the May total in the same cities of \$245,714,752, and an aggregate of \$234,296,872 in June of last year. Last month's total was the smallest reported since January. The record for the first half of this year, however, makes a very impressive exhibit. With only a few cities yet to be heard from for June, total permitted building expenditures for the past six months reached \$1,610,181,124, or nearly 32 per cent. above the aggregate for the first half of last year, which in turn showed a gain of 73.5 per cent. over the first six months of 1921.

The June decrease in building operations is only one instance of lessened activity in trade and industry generally. Demand for non-ferrous metals has slackened considerably, and prices have fallen sharply. Similar conditions prevail in cotton goods and many other textiles, forward buying of which has shrunk to such an extent that production is being severely curtailed; in many New England districts the output has been cut about 30 or 40 per cent. from the March peak, while broad silk mills and cotton yarn spinners generally are not now running much above 50 per cent. of capacity. Both the oil and soft coal industries are depressed, owing to the fact that production has caught up with, and probably exceeds, consumption. Retail trade in most lines is being well maintained, but that is because retail prices, as a rule, have not yet reflected the sharp advances made in wholesale and primary markets a few months ago.

The stock market has become extremely dull, but is much steadier following the severe declines of recent weeks. In commenting on the situation and outlook, one of the most conservative Stock Exchange houses says: "The stock market began to decline when business was at record activity. It should begin to advance again while business is still depressed, but when the outlook far ahead is favourable." That, it is remarked, "cannot occur until the labour situation has been taken in hand and a satisfactory readjustment effected."

FRANCE.—BUDGET—FOREIGN TRADE—COAL IMPORTS.

(FROM OUR CORRESPONDENT.)

PARIS, July 25.

THE French "Budget of Recoverable Expenditure," which is quite independent of and supplementary to the Ordinary Budget, is, perhaps, to the foreign student, rather a mysterious affair, and therefore I may be forgiven for devoting a certain amount of space to explaining what it really comprises. Let me point out at the outset that the Ordinary Budget includes provision for the raising of a sum, which this year amounts to 3,638,000,000, "to meet the interest on capital advanced by the French State, prior to January 1, 1922, for the purpose of ensuring the payment of expenditure which, under the Treaty of Versailles, should have been met by Germany" (to quote the phrase used in the Budget of Recoverable Expenditure itself). The latter Budget—which has just been passed by the Senate (as stated recently)—provides for an expendi-

ture during 1923 of 13,582,000,000. This is designed to meet the following requirements:—

	Francs.
Interest on loans (prior to January 1, 1922)	3,266,000,000
War pensions during 1923	3,198,000,000
Reconstitution of liberated regions	5,977,000,000
Various Departmental Budgets (Education, War, Hygiene, Agriculture, Justice, Colonies, Marine, &c.)..	1,141,000,000
	13,582,000,000

It is proposed to raise the money to meet this estimated expenditure chiefly, as may be expected, by loan. Theoretically, the Treasury counts on three sources of revenue to meet the requirements of the "Recoverable Budget": (1) From the payments made by Germany, in cash and in kind, under the stipulations of the Peace Treaty; (2) from the sale of National Defence Obligations, which will be handed to sinistrés, in payment of their claims against the State (and, of course, resold or pledged by them) to the amount of 3,250,000,000; by repayments received from the Office de Reconstitution Agricole, to the amount of 150,000,000; and by receipts from sundry sources amounting to 109,000,000, these making a total of 3,509,000,000; and (3) in case of an insufficient yield from these sources, from loans. The proportion of the total of 13,582,000,000 to be expended during 1923 which it is proposed to raise by further borrowing is fixed at 10,100,000,000.

Article 2 of the law of February 20 last authorised the Minister of Finance to borrow during the present year by the issue of Treasury Bonds and other short term loans, the sum of 13,000,000,000, of which 5,000 millions was allocated to the Ordinary Budget (or *Budget Général*) and 8,000 millions to the Budget of Recoverable Expenditure. This was subsequently modified to the extent that the proportion of the total is to be devoted to the purposes of the "Recoverable Budget" during 1923 was raised from 8,000 to 10,000 millions, while that to be used for the Ordinary Budget was reduced from five to three milliards. Thanks to the praiseworthy efforts made by the Senate, which were afterwards accepted by the Chamber, there will now be no need for three milliards to be raised by borrowing for the purpose of balancing the Ordinary Budget, unless something very unforeseen occurs. The 10,100 millions required to balance the "Recoverable Budget" will be raised by the sale of Treasury Bonds and other similar devices.

The "Recoverable Budget" is somewhat puzzling to the lay mind, which finds it difficult to comprehend, for instance, why it includes provision for the payment of the interest on the Rentes handed to sinistrés in payment of their war losses, and yet includes the *capital* sum represented by National Defence Obligations that are utilised for the same purpose. In the same way, only the sum required for *interest payments* on the Crédit National issues is provided for in this Budget. The Budget figures, therefore, really give no complete statement of the financial effort the French taxpayer will be called on to make in 1923, as they leave out of account many of the sums that will be expended. The real amount which France will expend on reparations account during the current year will undoubtedly be much nearer 26,000 millions than the 13,582 millions provided for in the "Recoverable Budget." The total expenditure on this account may be set forth as follows (in millions of francs):—

	Francs.
Credits included in the "Recoverable Budget"	13,582
Capital of 6 % Rentes given to sinistrés in payment of their claims	1,000
Loans through the Crédit National	6,000
Direct loans by sinistrés, guaranteed by State	1,750
Interest charges included in Ordinary Budget	3,638
Millions of francs	25,970

The nett result of this year's expenditure on reparations account will be that (as 3,638 millions of this amount is included in the Ordinary Budget and will be met from taxation) the French Public Debt will be increased this year by rather over 22,000 million francs from the fact that this country has so far been unable to recover any of the money owing to her by Germany. The French Treasury, down to June 30, 1923, had already expended 110,000 million francs on accounts comprised in the

"Recoverable Budget," and it will have to provide money to meet a further 70,000 millions of expenditure (most of which will be required during the next four or five years) before the claims upon it in respect to reparations can be satisfied. A great deal of criticism is offered from time to time in regard to the huge amount of Treasury, National Defence and other instruments in existence in France. Possibly these figures will throw a certain amount of light on the matter.

The French foreign trade returns for the first six months of 1923, which were issued last Thursday, disclose that during the half-year the value of the total imports and exports was respectively as follows, as compared with the corresponding period of 1922:—

	First Six Months of		Inc. or Dec.
	1922.	1923.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	2,598,561,000	3,374,289,000	+ 775,728,000
Raw materials	6,087,689,000	9,222,015,000	+ 3,134,326,000
Manufactured goods	1,949,271,000	2,093,155,000	+ 143,884,000
Total	10,635,521,000	14,689,459,000	+ 4,053,938,000
Exports—			
Foodstuffs	830,241,000	1,487,513,000	+ 657,272,000
Raw materials	2,533,675,000	4,407,595,000	+ 1,873,920,000
Manufactured goods	6,108,689,000	7,470,164,000	+ 1,361,475,000
Postal parcels	634,507,000	796,193,000	+ 161,686,000
Total	10,107,112,000	14,161,465,000	+ 4,054,353,000

The total weights of both imports and exports, on the same comparative basis, are shown from the following figures (in tons):—

	First Six Months of		Inc. or Dec.
	1922.	1923.	
Imports—			
Foodstuffs	2,251,373	2,264,859	+ 432,486
Raw materials	21,358,418	22,244,347	+ 885,929
Manufactured goods	826,980	772,119	— 54,861
Total	24,436,771	25,691,325	+ 1,254,554
Exports—			
Foodstuffs	414,952	616,488	+ 201,536
Raw materials	8,307,070	9,418,697	+ 1,111,537
Manufactured goods	1,054,555	1,348,967	+ 294,412
Postal parcels	12,789	15,505	+ 2,716
Total	9,789,366	11,399,367	+ 1,610,210

From the fact, as I have already pointed out, that the French trade returns are now issued month by month in the form of the bulk figures since the beginning of the year (and not in comparative monthly figures) it is difficult to gauge the exact fluctuations of the country's trade. The *communiqué* accompanying the above returns, however, states that the progressive increase in imports which occurred during the previous two months came to a pause in June, the total imports for that month having been to the value of 2,558,336,000, as compared with 2,596,881,000 in May, and 2,560,189,000 in April. The figures for March were 2,486,736,000. Exports, however, fell off during June to a much greater extent, being returned as 2,479,391,000, as against 2,675,045,000 in May.

M. André Tardieu, who seldom loses an opportunity of criticising M. Poincaré's Ruhr policy, published some striking official figures in his "Echo National," which I reproduce for what they may be worth:—

First Five Months of	Deliveries of	Purchases of
	German Coal and Coke.	English Coal and Coke.
	Tons.	Tons.
1921.....	4,260,000	1,985,000
1922.....	3,597,000	5,183,000
1923.....	1,141,000	7,700,000

"In other words," says M. Tardieu, "the deliveries of German coal and coke in France during the first five months of 1923 were 74 per cent. less than those during the corresponding period of 1921, and 69 per cent. less than those of 1922, while French purchases of English coal and coke during the first five months of 1923 were 75 per cent. greater than in the corresponding period of 1921, and 33 per cent. more than during the same period in 1922."

GERMANY. — EXCHANGE CRISIS — FINANCES — STOCKS — PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, July 24.

SOCIAL conditions here are rapidly getting worse and public sentiment becoming gloomier. The riots of last week and this in Breslau and Frankfurt-on-Main are no accident, and further local disorders are likely enough. Luckily the only class which could make effective disorder, that is, the urban working men, is well kept in hand by its Socialist leaders, and there is no prospect that it will think of attempting to improve things by mass outbreaks. The present black mood of the public cannot be associated exclusively with the currency deterioration and the resulting upward price movement. In earlier post-war years similar pressure was felt, but with production increasing and with receipts from exports sufficient to pay for food and other necessities the general feeling was improving. The present discontent is ultimately due to the increased pressure brought on the population all over the country by the unsolved Ruhr problem. As long as the industries in occupied Germany are producing, as they are now, at a very low level, and are unable to sell what they produce, the main burden of support of the occupied district's industrial population falls upon the population elsewhere. The money despatched to the Ruhr to enable those employers who cannot export to pay wages is got by precisely the same means as the money needed for meeting the State deficits, and therewith a second inflation tax has been added to the first. This problem appears in another form in the present exchange crisis. The first cause of the crisis is the failure of receipts of foreign bills by Ruhr exporters. The foreign currency supply has fallen off; the need of exchange for import, though reduced somewhat by inability to import foreign ores and other raw materials into the Ruhr, is still very large, and the effect is to make import into any part of the country more difficult. Ultimately the supply of necessities everywhere must tend to fall below the demand, and if the Ruhr industrial population does not resume paying its way the population in the unoccupied districts will have to go short. So far, the Reichsbank in allotting exchange has given preference to food importers; but this only postpones the problem, because industry in the unoccupied territory is beginning to complain of shortage of necessary foreign raw materials, and if this is not remedied a fall in production in this territory will also result. There seems to be no remedy for this except restoration of the Ruhr to normal conditions, thus enabling it to revive its exports.

The exchange crisis caused on the 19th by the demand for 400 million gold marks, or 20 milliard paper marks' worth of foreign bills, is not yet over. The Reichsbank abandoned its threat to cease discounting commercial bills, and it has come to an agreement with the private banks. The agreement upholds the former condition, that the banks before executing orders to buy exchange must first have the full paper mark cost in cash, and that the buyer must report to the Reichsbank in that sense and give the aim of the exchange purchase. The Reichsbank will make tests to see if the cash payment condition has been fulfilled. The Ministry of Industry has further restored the right to deal in exchange and in dollar Treasury bills for future delivery. This restores a certain freedom to the exchange market. Further, yesterday, for the first time, the official Berlin quotation, at which according to regulation all deals must be made, was set on parity with the international mark quotations. By this it is hoped to extract exchange from hoarders. The general shortage of exchange, however, continues, and the Reichsbank is being obliged to sacrifice more and more of its already reduced reserve, so that little more than three-fifths of that of the beginning of the year remains. The Bank's last statement of July 15th shows that 30 million gold marks are being shipped to New York from the holding in Berlin, and that 20,000,000 gold marks more were sold in London. The free gold reserve is now 656,879,000 gold marks, of which 110,032,000 gold marks is deposited in foreign central banks. In the matters of credit strain and inflation the statement again makes new

records. Commercial discounts increased by 2,460,260 millions to 11,061,137 millions, Treasury bills by 8,063,943 millions to 29,910,149 millions, and circulation by 5,249,955 millions to 25,491,738 millions. Since June 15th circulation has increased by nearly 15 milliards. Outstanding Darlehns advances are now 3,173,000 millions. There has been a great shortage of large notes in the last few days. The 100,000 mark notes, worth less than 2s, are still the largest in circulation; but, as a rule, only 20,000 mark notes can be had. The Reichsbank, like the Finance Ministry in taxation matters, adapts itself to value changes too late; it is still issuing 200-mark aluminium coins, of which 10 go to pay for a newspaper, and it is about to mint 240 milliard marks in 1,000-mark coins.

The Government has at last begun an inquiry as to the possibility of issuing a Federal "wertbeständig" loan on a gold basis. Nearly every private expert months ago proclaimed for this. The plan being discussed lies between the rye, coal and gold loans issued by local bodies and the dollar treasury bills. The former are both subscribable and redeemable in paper, the commodity or gold being only used as indexes for valuing the paper, while the gold dollar bills were purchasable only and redeemable in gold (in practice, high currencies). The Federal plan under discussion is reported to be for a loan subscribable in paper, but repayable in gold. This would require a reserve of gold or of high exchange. It is reported that the Reichsbank is unwilling to guarantee such a loan. The Forced Loan is to be collected again, with a supplement of 900 per cent. (tenfold in all) on August 1st. The yield will be considerably less than tenfold that of the original loan, because the Government has been obliged to exempt the paper mark fixed-interest securities and city real estate, the latter being kept on a paper mark basis. The yield will be devoted to cheapening bread. This is really a non-repayable tax, the Forced Loan assessments being merely used for convenience. It will, however, hardly be more of a tax than the original Forced Loan, which was theoretically repayable, but which in a few months almost entirely vanished in the currency depreciation. The Reichsrat has sanctioned the five-folding of the beer tax. This, as usual, is too little or too late; the real yield of the five-folded tax will be only a fraction of the yield of the simple tax a year ago. One must repeat what has been often said here: it remains a mystery why the Finance Ministry goes on assessing taxes on consumption by weight or volume months after every authority, including itself, declared that such taxes will not pay for their collection; and after the Federal Economic Council formally declared that all these taxes should be assessed as an *al valorem* percentage. The financial editor of the *Berliner Tageblatt*, Dr Heichen, this week points out what I believe I stated some time ago, that if the above system is not reformed it will be just as well to abandon the tax pretence altogether, and to cover the whole expenditure by note printing. The latest ten-day report, for July 10th, shows that about 4 per cent. of expenditure was covered by receipts. Expenditure was 6,375 milliards, receipts 259 milliards. This report is really worse than that of June 30th, when the figures were respectively 7,817 and 155 milliards, because the earlier report contained three months' official salaries. The Customs gold surcharge has been raised to 4,139,900 per cent., the paper mark payment being 41,400-fold the nominal.

Stocks last week had another big rise, also home loans, which on an average appreciated some 50 per cent. The *Frankfurter Zeitung's* dividend payers' index shows for the 20th 29,723,700, against 24,712,700 a week before, and 376,685 at beginning of the year. Last week there was considerable stock buying by foreigners, and a sudden demand for War Loan. Yesterday there was heavy buying of metal, chemicals, machine and electrical stocks, and also of brown coal stocks, which had very big rises, while War Loan reacted.

The Allgemeine Deutsche Credit Anstalt Bank of Leipzig reports for 1922 net profits of 1,449 millions, against 57 millions in 1921; dividend, 200, against 15 per cent. To reserve are added 680 millions. The price rise in the last week was particularly rapid, and personal observation shows that an ever-increasing number of people are unable to make ends meet, and are pinching themselves in

regard to necessities. Retail markets are crowded early in the morning in order to buy before the next price rise, which sometimes comes in a couple of hours. The new prices of iron and steel are (in marks per metric ton): Hematite, 6,950,000; foundry iron No. 1, 6,920,000; ditto No. III., 6,917,000; Siegerland steel iron, 8,814,000; Spiegeleisen, 9,722,000; ingots, 7,630,000; blooms, 8,688,000; billets, 9,258,000; construction forms, 10,927,000; bars, 10,995,000; wire rods, 11,641,000; thick sheets (5mm. and over), 12,367,000.

INDIA. — TARIFF BOARD — THE QUESTION OF PROTECTION FOR STEEL.

(FROM OUR CORRESPONDENT.)

SIMLA, June 28.

Two of the three members of the Tariff Board have now been appointed. It may be recalled that the Indian Fiscal Commission recommended the creation of this Board, and that the amendment proposed and carried by the Government of India in the debate on the Commission's report in the Legislative Assembly laid down that the Board should be constituted, in the first instance, for a period not exceeding one year, and should be purely an investigating and advisory body. The chairman, Mr G. S. Rainey, is a Civil Servant of proved capacity, who has had experience in the Finance and Commerce Departments of the Government of India, and the Indian member, Mr P. Ginwala, a lawyer and a member of the Legislative Assembly, who, in the fiscal debate, declared that he was "a Protectionist to the core."

It is generally assumed that one of the first questions that will be considered by the Board, when it is fully constituted, will be that of placing a protective duty on steel. As bearing on this question, the pronouncements of the Railway Industries Committee, which reported about three months ago, are especially pertinent. That committee was appointed, at the instance of the Legislative Committee, "to consider what steps should be taken by the Government of India to encourage the establishment of the necessary industries, so that as large an amount as possible of the Rs. 150 crores (£100 millions) proposed to be set aside for the rehabilitation of the railways during the next five years be spent in India, and, further, to advise the Government of India in regard to the revision of the Indian Stores Rules."

The Committee pointed out that there were serious difficulties in the way of securing in India supplies of railway rolling stock and materials. Dealing with locomotives and wagons, it emphasised that industries to supply these requirements demanded large capital expenditure, and that a considerable time must elapse between the inception of the undertaking and the beginning of actual manufacture. In India, moreover, the supply of skilled labour for work of this class was limited. It was extremely expensive to import all the skilled labour required, and much time and money must be spent in collecting and training the necessary skilled operatives. In fact, the Committee added, industries newly started in India for the manufacture of railway material of a fabricated nature could not in the initial stage compete without assistance against established industries abroad. Further, it was well known that, owing to the general trade depression, manufacturers abroad, especially in the United Kingdom, "are fighting with their backs to the wall in order to keep their works open and their men employed, and they are quoting prices which in some cases, at any rate, we believe to be below the commercial cost of production." In any case, the Committee proceeded, these manufacturers were quoting prices with which firms in India could not possibly compete, and the report cited a striking instance of this difficulty. A tender for 3,132 railway wagons of various types had recently been called for by the Railway Board. In all, 44 tenders were received from wagon manufacturers in India, England, Belgium, Germany, Canada, France, America, and Holland. The tenders from British manufacturers were by far the lowest, and in the case of the most important type of wagon the lowest satisfactory Indian tender was 50 per cent. higher than the lowest British tender, even with the addition to that tender of

c.i.f. charges and Customs duty. In short, it would have cost the Indian taxpayer approximately half-a-crore of rupees if the lowest satisfactory Indian tenders for the 3,132 wagons had been accepted instead of the lowest tenders from abroad.

The report went on to state that it was impossible to take the case of the industries named apart from the steel industry as a whole. At present the firms building wagons in India were dependent on imported steel for 80 per cent. of their requirements, and the members of the Committee "could not disguise from themselves the fact that, at first, at any rate, there might be between the steel industry and the wagon industry that conflict of interests which had been referred to in the Fiscal Commission's report." The Commission, it may be stated here, intimated that it had received evidence in Calcutta which seemed to place three interdependent industries in a relation "of some antagonism." The manufacturers of wood pulp from bamboo asked for a protective duty on imported wood pulp. The Indian manufacturers of paper from wood pulp naturally objected to this demand, since the imposition of the duty would raise the cost of their raw material. Again, the Indian printers and publishers complained that if the cost of paper were increased they would be placed at a disadvantage in competition with imported books, which were admitted free. After considering these problems the Fiscal Commission cut the Gordian knot by remarking: "When the Tariff Board is in possession of all the facts, we can only suggest as a principle for its guidance that an industry should receive protection, even if it adversely affects the development of other industries, provided it results in a net economic advantage to the country."

The Fiscal Commission suggested that one of the first subjects to be submitted to the Tariff Board should be whether the protection of the tariff should be given to Indian steel, and the Railway Industries Committee, in its turn, recommended that, in this event, the Board "should be instructed also to investigate the wagon, locomotive, and similar industries, to consider the bearing

on such industries of any proposals it may make in respect of steel, and to make such recommendations as it thinks fit in regard to these industries."

The Board will, therefore, have a thorny problem to deal with at the very outset, and one which may give rise to lively controversy.

SWITZERLAND.—THE LEAGUE COUNCIL.

(FROM A SPECIAL CORRESPONDENT.)

GENEVA, July 16.

THE recent meeting of the Council of the League of Nations cleared the air on the Saar Administration without a thunderstorm. In my last letter I was a little sceptical about the prospects of the British Government's initiative in demanding an inquiry into the whole character of the government of the Saar, but Lord Robert Cecil most tactfully secured a Council decision to summon all the members of the Governing Commission to Geneva, where they were subjected to a courteous but searching examination, the result of which should prove a source of satisfaction to the British Government and to those who are jealous for the reputation of the League.

The resolution which was eventually passed by the Council, though it may appear a little platitudinous, is nevertheless a sharp reminder of the facts, taken in conjunction with the inquiry and all the circumstances involved. It should be effectual in preventing a recurrence, at any rate, of the more glaring defects which prompted the inquiry. The resolution notes with satisfaction the withdrawal of the much-criticised decree of March 7th and the amnesty granted under the picketing decree; it records the Council's desire to see a return to a normal régime as soon as possible, and emphasises the necessity for recruiting local gendarmerie gradually to take the place of the foreign troops now responsible for order; it underlines the collective responsibility of the Commission to the Council, and to the Council alone—that is to say, the French President is not entitled to act as sole executive, and he shares with the rest of the Commission responsibility to the whole Council, and not to any one member of it. The resolution concluded with what seems to be a vote of confidence in the good intentions of the Commission, and may be described without malice as a verdict of "Not Guilty, but don't do it again." It was altogether a good, tactful piece of business, and seems to have given reasonable satisfaction to all people directly concerned. There certainly will not be another decree like that of March 7th, and there may be changes later on in the personnel of the Commission.

Another rather ticklish administrative task under the League also presented difficulties, though not of such a complicated character as the Saar. Since the accession to power of the Polish Coalition Government there has been a good deal of ardent discussion of Poland's rights in the Free City of Danzig, where the League is represented by its High Commissioner. There has been suspicion on both sides; the Poles have been inclined to regard the English High Commissioner as leaning too much towards the German point of view in denying them what they conceive to be some of their rights, but that is symptomatic of a certain frame of mind which regards any effort to be fair to Germany as wickedly pro-German and anti-something else. The people of Danzig, on the other hand, have been suspicious of Polish designs. However, the Council heard the High Commissioner and the representatives of Poland and Danzig, and found no reason for any fundamental change of procedure. The discussion which took place had its value, and agreement was reached to settle outstanding disputes by informal negotiations with the help of the High Commissioner and members of the secretariat. There is, of course, always a final appeal to the Council.

Poland made serious efforts to prevent submission to the Permanent Court of International Justice of a request for an advisory opinion on two points connected with the interpretation of Article IV. of the Minorities Treaties between Poland and the principal Allied Powers, but the Council remained determined to ask the Court whether it was competent to consider the question, and whether by this article of the Treaties Poland was justified in expatriating many thousands of Germans claiming Polish nationality.

On another political issue the Council resisted Hungary's

pressure to bring before the Court her difference with Roumania on the expropriation in Transylvania of Hungarian landowners by the Roumanian Government. This question certainly concerned an interpretation of the Treaty of Trianon, and the Roumanian claim that the Treaty could not be held to give privileges to Hungarians which were denied Roumanians in their agrarian laws seemed one that might be tested by the Court. Roumania resisted because of the vital political and social considerations involved, though at the last meeting the Council were rather disposed to go to the Court. Since then, however, an agreement was reached by the Roumanians and Hungarians in negotiations conducted under the mediation of one of the members of the Council. The Hungarian representative accepted some general arrangement whereby the Roumanians promised to do their best for particular cases of hardship brought to their notice, but the Hungarian Government did not uphold their delegate's action. The Council was unable to secure agreement on what is undoubtedly a dispute of many complications, and contented itself with a request to both sides to endeavour to arrive at a settlement in a conciliatory spirit. If agreement is not secured the League will not have finished with the matter, for Hungary has intimated her intention of referring the question to the Assembly.

There is the possibility of some valuable reconstruction work by settling refugees in Greece. The Greek Government applied to the Council for help in raising a loan for this purpose, and the Council asked the advice of Dr Nansen's Relief Agency as to the possibilities of the settlement of the refugees, and the Financial Committee, on which the United States was represented, as to the possibility of a loan. The replies of both were such as to enable the Council to present a general scheme for the consideration of the Greek Government, and if the Greek Government sees its way to accept, the work of settling the refugees can be undertaken by an international commission composed of representatives of the Greek Government, American Relief Agencies, and the League of Nations. The matter had been brought to a head by a Note from the American Secretary of State announcing that the American Relief Agencies would have to cease work, but would be willing to co-operate in any general reconstruction plan which should be adopted.

The Council adopted the recommendations of the Opium and Health Committees, both of which involved matters of considerable importance, including a scheme now made possible by the consent of the United States for the amalgamation of the League of Nations Health Organisation and the Office International d'Hygiène Publique. The final decision on this point is to be left to the Assembly. The Council appointed a committee of five experts, including an American who has since accepted, to undertake an international investigation into the extent and scope of the traffic in women and children as recommended by the Advisory Committee, an American social organisation having agreed to provide the exceptional funds necessary. Consideration was also given to the progress of Austrian reconstruction and various other matters.

The text of a Convention on arbitration clauses in commercial treaties and a series of recommendations concerning the treatment of foreign nationals and enterprises (drafted by the Economic Committee) are to be sent to all States, in the hope and expectation that they will give their assent to them when they come before the next Assembly.

There was a short but interesting discussion on the League Budget, initiated by the French representative, who, without any material criticism, wanted still further savings than the considerable economies already effected. Lord Robert Cecil asserted that no other Budget in the world was subjected to such close scrutiny, and emphasised the Supervisory Committee's deliberate assertion that any further economies would seriously hamper the essential work of the League. This view was taken by other members of the Council, and the French representative withdrew his suggestion that the Budget should be referred back for consideration. It now remains to be considered in detail by the Assembly in the ordinary way of procedure. The French share of the League Budget is about one-four-hundred-thousandth part of the National Budget, and the British share has been estimated at a trifle over one-tenth of a farthing in the pound.

DENMARK.—THE EXCHANGE QUESTION—PRICES AND TRADE—HARVEST PROSPECTS.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, July 17.

DURING the past month discussion has centred on the Exchange question, and from various quarters movements have been set on foot aiming at exercising a regulating influence on the Krone rate. In this connection it should be mentioned that on the initiative of Nationalbanken a great Exchange conference will be held early in August. The bank has invited interested parties from all quarters—practical business men, representatives of the organisations, and special experts—and it is expected that on this occasion a general discussion will take place of all the factors affecting the exchange situation. At the same time, the Nationalbanken is preparing to meet sudden rises in the exchange. The bank during June increased its credit balances with foreign correspondents, and is thereby enabled to help the market to an increased extent. Further, the bank has during last week dispatched an amount of just over Kr. 13,000,000 in gold to America, the first gold shipment for a long time, as the gold reserve of the bank has remained constant at about Kr. 228,000,000. After the above shipment the total bullion reserve amounted to 47.9 per cent. of the note circulation, which shows that owing to a reduction of the note circulation there is practically no change in the percentage of cover, the percentage for the previous week being 48 per cent.

It is a matter of course that in the long run detrimental effects to our economic conditions cannot be avoided if the sterling rate should remain as high as 26. Early in June the Danish Krone had lost about 35 per cent. of its gold value, and it is not considered impossible that prices, which have to some extent already shown a rising tendency, will in the rather near future advance still further owing to the rise in foreign exchange. In connection with the latest rises, the *Finanstidende* points out that the Krone is valued proportionally far below the dollar, as the difference in the level of prices of the two countries would only correspond to a dollar rate of 520, while on July 2nd the rate was 571.50. This journal says: "But as soon as the present high rate has become steady, it will quickly entail a further rise in prices of all goods. In the first instance imported goods will rise, but from this the rise will, in the course of a short time, spread to home produce and through the retail price level to the wages of labour. And once the rise in prices has reached down to the wages of workmen and officials it will be very difficult to get away from again. In August the existing agreements may be expected to entail some rise in the wages of labour, as the retail price level has been rising since the beginning of the year."

The efforts of Nationalbanken have therefore given satisfaction. As the charter only stipulates that one-third of the note circulation should be covered by bullion, the Nationalbanken will still be able to dispose of not inconsiderable amounts in gold, and it is possible that it will do so in case the measures previously adopted should not prove sufficient. The possibility of a foreign exchange loan has also been mentioned.

During June there was a further fall in the gold value of the Danish Krone, and as a consequence a further rise in prices, which caused the price index of the *Finanstidende* to rise by 5 points, i.e., from 202 to 207. As far as foodstuffs are concerned, the rise has been most pronounced for potatoes, pork, and meat, while the price of sugar has dropped a trifle. In the group "other goods," coal, iron and various other metals show some decline, but apart from this, the general tendency is decidedly an upward one, which must entirely be ascribed to the exchange conditions, as the prices on the world market on the average have been slightly weaker during the month.

Recent foreign trade statistics show several encouraging facts. In comparison with April, imports were reduced in May by Kr. 13,400,000 to Kr. 155,000,000, while the value of exports increased by Kr. 18,000,000 to about Kr. 134,000,000. For the first five months of the year the surplus of imports has been calculated to be

STATE EXPRESS

555

VIRGINIA CIGARETTES

MADE BY HAND, ONE AT A TIME.

Kr. 177,000,000, or Kr. 35,000,000 per month, while in May the deficit was only about Kr. 20,000,000. Agriculture, our principal industry, has reached a period of rather lively production. The export bacon factories during the first four months of the year have taken 1,013,000 pigs, while in the corresponding period last year the killings were only 645,000, the average for the years 1911-1914 being about 813,000. Even if it is taken into consideration that Slesvig is now included, the killings are considerably above the pre-war average. Harvest prospects are favourable. The latest report of the Statistical Department, dated July 1st, differs only slightly from the previous one of June 15th, but shows that for several crops the prospects are an average harvest or more. The heat wave, which reached this country about a fortnight ago, is certain to have a favourable influence.

From the banking world there is little news of importance. The Landmandsbank itself is now working once more under quite steady conditions, sheltered by the confidence created by the unrestricted State Guarantee. The balance-sheet at June 30th showed a total of Kr. 1,075,000,000, of which Kr. 821,000,000, were deposits of various descriptions.

RUSSIA.—FINANCE—FUEL AND MINERAL PRODUCTION—HARVEST AND GRAIN EXPORT—TRADE.

(FROM OUR CORRESPONDENT.)

Moscow, July 13.

SOKOLNIKOF has published the following monthly figures regarding the issue of new style paper roubles since October, 1922:—

1922.	Millions.	1923.	Millions.
October	244	February	607.4
November	383.7	March	1,246.2
December	515.2	April	1,594.1
1923.		May	973
January	634.7	June	1,000

Commissar Sokolnikof at the session of the Vzik (Council of the R.S.F.S.R.), just closed, estimated the 1922-23 State expenses at 1,400 million gold roubles, of which 350 millions would be covered by emission, and represented deficits on working the railways (estimated deficit 140 million gold roubles), and on industries and the expenses of agricultural reconstruction. The Finance Commissar urged unsuccessfully the postponement of the allocation of 10 million gold roubles for the hydraulic station at Volkhovstroy, which is to furnish electric power to Petrograd industries. The Finance Commissariat is counting on an immediate increase in the sale of State Grain Loan bonds (see *Economist* of June 9th) from 30 to 60 million poods, with a subsequent increase to 90 millions.

The assets of the 34 credit institutions in Russia (excluding the State Bank), on March 1st, were estimated at 4,013.6 thousand tchervonetz; April 1st, 6,391.4; May 1st, 8,249.6; of this amount 88, 89.6 and 90.2 per cent. respectively are represented by the Industrial, Russian Commercial, Moscow Municipal, and Pan-Russian Co-operative Banks. Operations in connection with the financing of the industries in Russia have been transferred largely to the Industrial Bank, and it is proposed to create a special bank for financing agricultural and raw material production and export; to this end an agreement has been entered into between the Commissariats of Food, Foreign Trade, and the Grain Produce Trust (Khleb

product) to constitute a capital of 10 million gold roubles for this bank, and to invite the participation of foreign groups. On July 10th the exchange in Moscow for the tchervonetz was 832 roubles (1923), and for the pound sterling 810 roubles.

The net production of coal in the Union (excluding local consumption, about 30 per cent. of total) for April and May was 32,824,000 poods and 43,847,000 poods respectively, of which the Don basin produced 18,400,000 and 28,462,000 poods. In March 3,663,000 poods of coal were imported, chiefly through Petrograd. The naphtha production in poods in April and May was as follows:—

	April. Poods.	May. Poods.
Baku	18,142,800	19,710,000
Grozny	6,719,900	7,204,000
Emba	724,100	712,000
Kouban and Black Sea	170,000	Statistics not yet available.
	25,762,800	27,626,000

The Naphtha Syndicate state that from October 1st to April 1, 1923, naphtha products to the value of 6,994,000 gold roubles were exported. Of the estimated production for 1922-23 of 176 million poods, the State took delivery of 126.5 million poods at a price of 24.8 goods kopecks a pood for Bakou naphtha, and 21.5 for Grozny, which might have realised on the foreign market 50-55 kopecks a pood. Production is greatly hampered by lack of capital, machinery, and materials. At the June Conference of metallurgists it was stated that the output of the industry was 12.8 per cent. of the pre-war production. In April and May the total production was 50,000 tons of pig-iron, 107,000 tons of steel billets, and 81,000 tons of rolled steel.

The following statistics of the grain sowing area have recently been published:—

	Autumn, 1922, Sowing Area.	Percentage of 1916 Area.	Spring, 1923, Sowing Area.	Percentage of 1916 Area.
Russia (including Siberia & Crimea)	16,655,300	84	26,514,700	64
Ukraine	5,496,000	83	10,699,800	83

The authorities count on a cereal export during the next harvest year of 3,000,000 tons. Allowing for undue optimism in regard to the yield, it may be assumed on present crop prospects, and the small purchasing power of the non-producing population, that at least 50 per cent. of this quantity will be exported by the official grain export trust from the present date to the end of July, 1924, chiefly through the ports of Nikolaiew, Odessa, Kherson, Novorossisk, Sebastopol, Theodosia, and Petrograd. To cover the expenses of putting into working order the railway lines and elevators for the grain export, the Council of Labour and Defence decided, as from July 1, 1923, to put a tax on exported grain of 1 gold kopeck a pood for maize, barley, and bran, and 3 gold kopecks for other cereals.

The Department for Foreign Trade has recently published the following import and export statistics for the three months January to March, 1923:—

Imports (excluding the Imports of Relief Organisations).		EXPORTS.	
	Fooda.		Poods.
Foodstuffs	445,000	Foodstuffs	6,758,000
Animal products	128,000	Raw and semi-manu-	
Timber	1,705,000	factured goods.....	8,748,000
Pottery and porcelain ..	15,000	Manufactured goods ..	55,000
Chemical products	542,000		
Asphalt, pitch, &c.	3,731,000		
Minerals and metals ..	529,000		
Paper	214,000		
Textiles	312,000		
Clothing, &c.	10,000		
	7,631,000		15,561,000

An indication of the partial revival of Petrograd is furnished by the recent increase in population, which, having fallen from 2,415,700 inhabitants in 1916 to 722,229 in 1920, is now estimated at 1,100,000. In June 85,000 tons of merchandise were imported and 80,000 tons exported through the port, which received in that month ships of the following nationalities: 24 German, 11 Swedish, 10 Danish, 6 Norwegian, 7 British, 5 Finnish, 9 Russian,

and 1 Lettish. The foundation of two mixed Russo-Austrian companies, "Russavtorg" and "Ratao," for the importation of manufactured articles, chiefly Austrian, and the export of Russian goods, has recently been approved by the Council of the People's Commissars. The capital of the Russavtorg is \$100,000, and the company is engaged to grant a credit in goods of \$1,600,000; the R.S.F.S.R. receive 10 per cent. of the profits, and the balance up to the equivalent of 40 per cent. of the capital of the company is divided between the R.S.F.S.R. and the company; if above 40 per cent. the R.S.F.S.R. receive 60 per cent. and the company 40 per cent. The Ratao Company has a capital of 300,000 gold roubles, three-quarters of which are provided by the company, which undertakes to grant credits in goods for one million gold roubles a year. The profits up to 50 per cent. of the capital are to be divided equally between the company and the R.S.F.S.R. On July 3rd, a Norwegian group formed a mixed company with the R.S.F.S.R. for the exploitation of 1,973,000 dessiatines of forest land along the Onega.

Letters to the Editor.

CREDIT CONTROL AND UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with interest the letters of Mr Charles Edward Pell and Mr Jas. S. McConechy in your issue of the 14th inst., and shall endeavour to answer the questions they have put to me. Mr. Pell is not alone in hankering after some new financial system which will eliminate these periodical contractions of credit and fluctuations in prices. I frankly believe this to be impossible to achieve, and were it possible I believe it would be undesirable. Trade is a system of barter, and when the exchange of commodities and services between countries becomes ill-balanced, a contraction of credit is necessary to bring about an adjustment. Of course, some people suffer in the process, but the general health is improved by the operation.

In reply to Mr McConechy's questions, I would state (1) I mean by "cheap" what I stated, i.e., cheaper and better goods than our competitors in the common markets of the world.

(2) If we gradually contract our currency until parity of exchange with gold standard countries has been re-established and our competitors expand their currency (I assume pursue a policy of inflation) this policy will eventually lead to an increase of employment in this country, although, of course, the pursuit of inflation by any country adversely affects the whole world in the end.

(3) I do not suggest doing anything artificial. At present we are suffering from an inconvertible paper currency due to an over issue of paper money, and I suggest reverting to a sound system which I believe to be making the paper convertible into gold on demand. To do this we must contract the paper. I believe in a profitable trade, and believe this can best be achieved through a sound system such as I have briefly described.

(4) The size of our debt has little or nothing to do with the amount of our currency. That is governed in the main by our trade needs, internal and external. If there is a redundancy it is indicated by the premium on gold.

(5) I believe our workers in the long run would be better off if we reverted to a sound system. It is not a question of inflation or deflation, as if we had a choice. It is whether we should endeavour to restore the old free market in gold or not. I believe it would be of great advantage to us in every way to do so, and also an honourable course to pursue.—I am, Sir, your obedient servant,

D. M. MASON.

Sound Currency Association, 115 Cannon street, E.C. 4.
July 14th, 1923.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I notice the Sound Currency Association is still suffering from the delusion that a nation's currency is sound when all notes issued are covered completely by

gold. Perhaps a short explanation of the fundamental facts of banking may throw a little light on the matter.

Before the Bank Act of 1844 the banks issued to depositors titles to gold in the form of notes. These titles were sound only so far as they were covered by gold, the remainder being unsound or fictitious titles to gold. The Bank Act limited the issue of these fictitious notes or bearer titles. The banks were thus forced to issue titles to gold as registered titles, registration being effected by making an entry to the credit of the depositor or so-called borrower in the bank's account books. At the same time they were forced to develop a system of transfer of these fictitious titles. So the banks did not really change their system, but simply the form in which they issued fictitious titles to gold, the difference between a bank-note and a bank credit being only that which exists between a bearer and a registered security. This means that, according to the ideas propagated by the Sound Currency Association, the great mass of credit money issued by banks being uncovered by gold represents unsound currency.

If the Association is wise, it will not dispute the facts, but concentrate upon finding what sound principles do govern the issue of these non-interest-bearing securities, bank-notes and credits, and Treasury notes, constituting paper-money. Until they do so they are merely fooling the world and prolonging its agony.—I am, sir, your obedient servant,

W. H. NORTON.

4 Rugby mansions, London, W. 14, July 11th, 1923.

LAUSANNE AND THE OTTOMAN DEBT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As an original subscriber to the Ottoman Four per Cent. Loan, 1909, I have been trying to find out why the French representatives at Lausanne refused Ismet Pasha's offer of payment in francs. Of course, the terms of the bond promised me £40 a year in gold on my holding of £1,000, but I am not getting it, and the Stock Exchange quotation indicates that no one expects me to get it. Why should I not be allowed to receive 1,000 francs a year, if the Turkish Government is willing to pay it?

The French Government pays holders of pre-war Rentes in paper francs, and does not pay interest on its debt to the British Government in any currency at all. Why should it insist on the poor Turk paying in gold? M. Poincaré should remember the parable of the ungrateful servant.—Yours, &c.,

J. E. ALLEN.

RESTORATION OF THE WORLD'S CURRENCIES.*

THIS book is a welcome addition to the voluminous literature of this unending subject; for it is that rare bird, a reasonable and intellectual defence of the gold standard. One expects from Professor Zehfeldt first-hand information, rigid argument, and lucid exposition, and one is not disappointed. He urges that a speedy restoration of a gold standard, frequently at the old parity, is practicable and desirable over a large part of the commercial world. The alternative of "moneyed paper," he thinks, would be no more effective than gold in avoiding the minor fluctuations of the trade cycle, would be inferior to gold as a regulator of the exchanges, and would certainly be abused and break down. There is a natural stability about the value of gold to which we should do well to cling. Further, Professor Zehfeldt has the courage of his convictions, and advocates the actual use of gold as currency, partly because it would render the secret abandonment of the standard more difficult, and partly because it would help to bring about that further rise in the value of gold which he thinks desirable.

We do not find his arguments convincing. He appears to us to overrate the importance of complete stability of foreign exchange, and to underrate the disastrous effects of the recent appreciation of gold on production and economic well-being. It seems to us that the present concentration in America of the world's gold supplies robs the conception of a "natural level of gold prices" of all meaning for some time to come, and that the violence of

AGENTS AND SECRETARIES OF RUBBER,
TEA AND PRODUCE COMPANIES.

1-4, GREAT TOWER STREET, LONDON, E.C.3.

the trade cycle is being unnecessarily aggravated by the prolonged uncertainty about what the normal level of prices is to be. For these reasons the Cassel-Hawtrey school of credit-regulators is surely on a firmer path than Professor Zehfeldt, though it may prove a more difficult one than it is now fashionable in enlightened economic circles to assume. For it seems possible that their subtleties and refinements, if fully translated into practice, might so far reduce the need for gold as to torpedo the gold standard at the very moment of its nominal restoration. It may be that we shall yet be forced to face a clear-cut issue between gold and paper. If so it is all the more important, in order that we may judge wisely, that the case for gold should be presented by such able and weighty writers as Professor Zehfeldt.

TOWARDS INTERNATIONAL JUSTICE.*

To interpret in a living way a mechanism as complicated as that of the League of Nations and the Permanent Court of International Justice is an exceedingly difficult task, but one which Mr Keen appears to have achieved. If there can be such a thing as a keynote to a work of this nature, we find it in the author's contention that the remedy for the world's chaos does not lie in regulation but in examination of evils. He explains that the Hague Conference, which before the War represented the greatest heights achieved by the promoters of peace, had devoted its labours to regulating the codes of war on a chivalrous basis rather than destroying the incentive to war. The Permanent Court of International Justice lately set up by the League of Nations fulfilled a wholly different function. Not assuming that warfare is a human necessity, but condemning that assumption, it pursues a positive programme with the aim of setting up an international legal code at once practically acceptable to the nations of the world.

There is much of the vision of the prophet in Mr Keen's book, and we find it inscribing thoughts and hopes collected during the progress of the war, descriptions of international machinery which only took concrete shape several years after he had foretold their creation. For an author to be able at the end of his book to describe in detail a machinery of which he had but a faint impression in the earlier chapters is a sensation which we may justly envy. Most men in the face of such a thing would feel that their message had been fulfilled, but Mr Keen is not one of those men who are easily satisfied. He sees dangers ahead, and concentrates on the best means by which the ship is to be steered clear of the rocks.

Being a jurist and not a mere visionary, he would have the new international code created by the League of Nations so far improved as to set up a new social order, which would make the incentive in men to battle almost negligible. He anxiously awaits the growth of a world public opinion, and believes that the time will come when an international legal code will be as punctiliously respected by international public opinion as national laws have come to be respected in the states of the world.

Mr Keen's book is not one from which one would glean any fierce enjoyment, but it is packed with knowledge, and set out in a clear and simple way, and will well repay reading.

* By F. N. Keen. (London) Geo. Allen and Unwin, Limited.

THROUGH DESPOTISM TO LIBERALISM.*

FAVoured alike by political conditions and by the teaching of theologians, Protestant as well as Catholic, the theory and practice of absolute monarchy reached their climax in the first half of the reign of Louis XIV., whose conceptions of his position are fully expressed in his journal and memoirs. Then both were undermined, partly

* "Les Idées Politiques en France au XVIIe. Siècle." Par Henri Sée. Paris: Marcel Giard. 1923.

by the visible results of religious persecution and economic mismanagement, partly by the example of the English Revolution and the theory put forward by Locke to justify it, and partly by the nascent critical spirit of which Pierre Bayle is the chief exponent. M. Sée describes the whole process clearly and thoroughly, and brings out its characteristic features and some incidental curiosities of doctrine. Early in the century the power of the monarch was held to be limited only by the fundamental laws of the kingdom and the dictates of his conscience; but Richelieu, with his centralising policy and his insistence on the dominance of "reasons of State" over all other considerations, prepared the way for the weakening of these limitations, and Bossuet found Scriptural warrant for ignoring them. Such critics of extreme absolutism as Fénelon and St Simon looked only for a reversion to the good old times of the mediæval monarchy, always idealised and sometimes supplemented by new constructions, and it is only towards the end of the century that the idea of progress dimly appears. The assailants of Louis XIV.'s economic maladministration are mainly practical reformers and accurate observers, with a noteworthy appetite for statistics not yet available, and a growing insight into economic science. Vauban, the famous engineer, is prominent among them, and modern social ideas begin to emerge, notably that of "the people" and its rights. One writer—Boulainvilliers—even suggests the institution of a fund for labour insurance, controlled by local chambers of commerce, provided by compulsory levies on wages, and furnishing also the means for popular elementary education; and the Abbé de St Pierre, a man fertile in ideas, devises a Project of Perpetual Peace. And so we reach the beginning of the economic and political theorising which provided the doctrinal basis of the Revolution.

STOCK EXCHANGE NEWS.
SETTLING DAYS.

TICKET.	ACCOUNT.
August 8.	August 9.

It cannot be said that the past week has proved altogether satisfactory from the point of view of holders of Stock Exchange securities so far as the movements in prices are concerned. Once more it is politics that are causing uneasiness in markets. Prospective buyers are restrained from making purchases while the outlook is so unsettled. A certain amount of forced selling still goes on. There is again vague talk of a possible rise in the Bank rate. There has been gossip about financial trouble in London and the provinces. New issues absorb substantial amounts of the floating supply of capital. At the same time, big business takes place every day in various descriptions, both of gilt-edged stocks and shares and those of the industrial type, the orders being negotiated quietly and without causing any perceptible movements in quotations.

BARCLAYS BANK
LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

Erratic movements in Conversion stock, now the leader of the Consol market, demonstrate the unwillingness of the market either to sell or to take large blocks in the ordinary way. Some of the brokers dealing for big clients go so far as to declare that the Consol market is, in House parlance, drying up, though this, of course, is a picturesque exaggeration of the true state of affairs. Nevertheless, there is not the same willingness as was displayed a year or two ago to deal in lines of stock. Consequently, prices move more sharply in either direction when heavy orders come in. The War Loan has dwindled a shade in price, taking with it the other British Government securities that revolve around it. Newfoundland 5½ per Cent. are the best market in this section of the week, the price rising rapidly to 3½ premium, though the Colony's 4½ per cent. stock stands at a small discount.

French Government bonds enjoyed a brisk spurt early in the week, the rise, however, being mostly lost in the subsequent depression that developed on fears of the attitude the French Government may adopt in relation to the forthcoming British Note. German bonds are unchanged. A long string of falls in Chinese bonds bears witness to the nervousness felt by proprietors rendered anxious by the condition of internal affairs in the country. Brazilians moved downwards. The Austrian scrip has ranged between 2 and 2½ premium.

Declaration of the Metropolitan and the Southern Railway dividends on Thursday infused rather more interest than usual into the home railway market. Metropolitans have been good, with a rise to about 70, but the Southern stocks came under the influence of the heaviness which overhung the markets, and after being firm on the carry-over showing a shortage of stock, they eased off later in sympathy with movements in the Consol market. Argentine Railways gave way on fears as to the probable course of the rate of exchange. Grand Trunk Pacific 4 per cent. debenture stock slumped to 22 before it recovered a few points. Cuban Ports have fallen 7 on the week. Montenegro Fives went up 5.

The rubber market is better, in consequence of demand for the raw produce said to come from United States users. Nevertheless, business has been quiet, and the market found it difficult to make a great deal of headway against the general conditions round the House. Oil shares are weak, upon constant pressure to sell by people who are becoming genuinely anxious about the course of prices. Gas stocks improved, upon an investment inquiry, though a few of the electricity supply shares eased off after their recent long rise. Marconis advanced by reason of the statement made this week in the House of Commons in reference to the Imperial Wireless Chain. Cable stocks held most of their recovery. Tobacco shares showed pronounced strength, partly because of the fact that the contangoes on Tuesday disclosed a very obvious shortage of stock. Prices did not, however, retain their full advances. Textiles remain neglected and tending to dwindle in price. Workman Clark debentures, after a slump to 55, rallied on 65.

Of the various new preference shares, John Barker's Sixes at 21s 6d have come into the list of dealings on the basis of 3d premium. Lyons 7 per cent. preference, issued at 23s, are 24s 9d; Union Cold Storage 6 per Cent., which came out at 20s 6d, are a shilling discount. Shipping shares are still inclined to droop. There is not much doing in banking or insurance issues; prices are mostly lower when any changes appear. Amongst the miscellaneous shares, the tendency is for prices to sag owing to the want of public interest seasonal at this holiday time of year. In the iron and steel list, Platt Brothers have fallen noticeably, and others in the group are languishing in consequence of the failure of the country's trade to make a more marked recovery.

The Cape sent buying orders for Robinson Deep "B" shares, apart from which there has been no particular feature in the Kafir Circus. The Chartered meeting on Tuesday had a slightly depressing effect upon the shares, some holders evidently being disappointed with the likelihood of a cash payment being postponed for some time. Wednesday's Tanganyika meeting elicited the statement that the year's dividend on the 10 per cent. preference shares will be paid, but this failed to move the prices of either class of the company's issues. Tin,

the metal, fell back after its little spurt of last week, the consequence being that various tin shares in the Cornish, Malayan and West African markets have given way a trifle. A few of the copper shares are better. Rio Tintos, leading the market, continue to be swayed by the tone current in Paris. Other mining markets are dormant, and a disgusted humorist in one of them hung up a sign inscribed "Sleeping berths over-subscribed. Lists full."

NEW ISSUES.

Government of Newfoundland.—This is an offer for sale at 96½ of £423,500 5 per cent. inscribed stock, principal being repayable at par on July 1, 1943. The stock represents the consideration payable to Reid Newfoundland Land Company, Limited, by the Newfoundland Government in respect of the settlement of matters outstanding between the Government and the company, and of the surrender by the company to the Government of its railway, express, and dock- ing interests in Newfoundland. The issuing house has contracted to purchase the stock from the Reid Newfoundland Company, Limited. This issue is exempt from taxes imposed by Newfoundland. It is created under the provisions of the Railway Settlement Act, 1923, of the Newfoundland Legislature, and is a trustee investment.

Newfoundland Power and Paper Company, Limited.—Incorporated under the laws of Newfoundland. Share capital £21,000,000, all of which has been issued. The loan capital consists of £2,000,000 4½ per cent. "A" mortgage debenture stock, guaranteed by the British Government, all of which has been issued, and £2,000,000 5½ per cent. "B" mortgage debenture stock, guaranteed by the Government of Newfoundland, now offered at 98½ per cent. The stock will be repayable by means of a sinking fund beginning in 1928, and "calculated to redeem the whole of the stock on or before July 15, 1943." The company reserves the right, however, to redeem at par after January, 1928. The Newfoundland Power and Paper Company, originally known as the Newfoundland Products Corporation, was incorporated in 1915, and owns valuable water rights and land and extensive timber limits in the colony. These debentures are a good investment in their class.

Bengal Presidency.—Kasimbazar Raj Sterling Loan—Issue at par of £675,000 6½ per cent. first mortgage debentures. The issue is secured by a first mortgage on the hereditary domains, collieries, royalties, and other property of the Maharajah of Kasimbazar, and is redeemable at par in London in 31 years from 1925, by a cumulative sinking fund, with annual drawings to begin on January 1, 1925, or by purchase. The Maharajah reserves the option of repaying debentures outstanding on or after January 1, 1939, at £102 10s per cent. Interest is payable in London. An eminent firm of accountants has "investigated the revenue accounts and the general financial position," and it is found

that the estates produce a net revenue of £139,172, taking the rupee at 1s 4d. The amount required annually for service of the present issue is £51,325. Thus a comfortable margin is shown as far as security in this direction is concerned. It is, however, an investment proposition which requires consideration from several other angles.

United Engineering and Manufacturing Company, Limited.—Authorised capital £50,000, of which £10,000 is in 10 per cent. cumulative preference and £35,000 in ordinary £1 shares and £5,000 in deferred 1s shares. The deferred shares are not being offered to the public, but 45,000 of them are to be allotted for cash to Mr George Hills, jun., one of the directors and promoters, and the vendor of the lifting-jack patent, and 4,500 are to be allotted as part payment of underwriting commission. Preliminary expenses are estimated at £4,000. The company has been formed to acquire an engineering business at Louth, valued at £19,547, and we are informed that "the assets acquired will include" a patent right. We can find an annual estimated profit given, but the past financial history of the business to be acquired for £19,547 in cash is passed over in silence, except a chance remark to the effect that the company "ceased operation in December, 1922." Another patent is also to be acquired, and again estimates of profits appear. Our experience of estimated profits from patents makes us inclined to be pessimistic.

GLYNN'S LYDENSBERG, LIMITED.—Directors have decided to pass dividend per July 31, 1923. For the preceding three half years no dividend was paid.

PERRY AND CO., LIMITED.—The directors regret that they do not see their way to pay an interim dividend on either the preference or ordinary shares.

THE BURMAH ELECTRIC TRAMWAYS AND LIGHTING COMPANY recommend a dividend of 11 per cent., less tax, on the preference shares on account of arrears for 22 months to May 31, 1919, payable August 1st. The arrears to July 31st, 1923, remaining after payment of this dividend will be satisfied by the allotment after July 31st to preference shareholders on the register on that date of one new preference share of £1, credited as fully-paid, for each original £5 preference share held.

COMPANY MEETINGS, &c.

IMPERIAL OTTOMAN BANK.

SATISFACTORY RESULTS DESPITE UNFAVOURABLE CIRCUMSTANCES.

FINANCIAL AND TRADE CONDITIONS IN TURKEY.

The annual general meeting of the shareholders of the Imperial Ottoman Bank was held, on the 25th instant, at Winchester House, Old Broad street, London.

The Viscount Goschen, C.B.E., presided.

The secretary (Mr Charles E. L. Corthorn) having read the notice convening the meeting,

The Chairman said:—Ladies and Gentlemen,—I have been informed that this meeting is properly constituted. I presume that it will be your pleasure that the report and accounts, as printed and circulated among you, shall be taken as read.

In moving the adoption of the report and accounts, I would like to say a few words. The period for 1922 has again been beset with difficulties of every kind. The general depression in trade did not abate, and the momentous events which occurred in the Near East also had their effect on our affairs.

WAR BETWEEN TURKEY AND GREECE.

During the first months of the year the Allied Governments made a sincere effort to put an end to the war between Turkey and Greece. For a time hope revived, and the hope sufficed to restore initiative; but the negotiations had no result. Military operations, which had been virtually suspended were resumed with increased activity in August. On September 9th Smyrna was entered by the Turks. On October 11th an armistice was signed at Mudania, and on November 20th the Peace Conference opened at Lausanne.

The military operations, the devastations in the war zone, the burning of Smyrna, and the fear of political complications, all had the most unfortunate economic results, and during the second half of the year business languished more and more.

In Constantinople the monetary tightness, the new Customs regulations, and the difficulty of communicating with Anatolia, contributed further to discourage trade. Meanwhile Southern Russia reduced its purchases on the market of Constantinople, and importers limited their transactions to foodstuffs and articles of prime necessity.

EXPORTS AND IMPORTS.

General the Hon. Sir H. A. Lawrence, K.C.B.: I beg to second it.

No questions being asked or comments made, the resolution was at once put to the meeting and carried unanimously.

The Chairman: I now beg to move:—"That M. Georges Heine, M. Raoul Mallet, Sir J. P. Hewett, and Lord Oranmore and Browne be and they are hereby re-elected members of the general committee."

The Earl of Bessborough, C.M.G.: I beg to second that. The resolution was carried unanimously.

The Chairman: That concludes the business.

Mr J. Rosselli: Before leaving here I think we ought to accord to the chairman, directors, and staff, both at home and abroad, a very hearty vote of thanks for their able supervision of our affairs in the East.

Mr. A. Bradbery: I have much pleasure in seconding that.

The vote was unanimously accorded.

The Chairman: On behalf of my colleagues and myself, I desire to express our sincere and grateful thanks to you for this kind vote of thanks.

The proceedings then terminated.

UNION BANK OF AUSTRALIA, LIMITED. GOOD RESULTS OF YEAR'S BUSINESS.

The annual general meeting of the Union Bank of Australia, Limited, was held, on the 23rd instant, at 71 Cornhill, London, Mr Henry P. Sturgis presiding.

The Chairman, in moving the adoption of the directors' report and accounts, said that the year under review had presented no abnormal features calling for special comment; it had been a satisfactory year for the bank. The net profit was £639,711, inclusive of £86,817 brought forward. They were placing £100,000 to reserve, which now stood at £3,350,000, and declaring a dividend at the rate of 15 per cent. per annum, free of tax, leaving £89,711 to be carried forward. The balance-sheet figures compared with those of a year ago showed an increase of £1,979,000, the principal increases on the liability side being reserve funds and balance of profits £103,000, and deposits £2,203,000, while bills payable showed a decrease of £330,000. The increase in deposits was of a general character, and was a matter of congratu-

lation in face of the numerous short-dated Government issues, free of taxation and bearing high rates of interest; and also of the fact that the various savings banks were increasing the interest rates allowed. On the assets side there were increases in investments of £26,000, bills receivable, &c., of £1,441,000, and advances of £1,379,000, while specie and cash balances were lower by £809,000, and money at call in London by £65,000. The increase in advances was due, for the most part, to the natural extension of business, but also in part to advances for financing primary products. The liquid assets amounted to 8s 9d in the £ of the bank's total liability to the public. The gross profits were £11,000 less, but expenses were less by £27,000. Remuneration to the Colonial staff was about £19,000 higher, due chiefly to awards under the Arbitration Courts in Australia. General Colonial expenses were £18,000 lower, about £10,000 being due to less taxation, while in London income-tax and corporation profits tax showed a decrease of about £26,000.

The exports from Australia for the year ended December last were maintained at the level of the preceding year, amounting to £128,000,000, while imports at £122,000,000 showed an increase of some £2,000,000. In New Zealand the value of imports was £35,000,000, against £43,000,000 in 1921, while exports amounted to £41,000,000, against £43,000,000. The experience of farmers and graziers in Australia had been, on the whole, favourable, the wheat harvest having been a fair one. The wool clip, on the whole, was in good condition, but the quantity was somewhat smaller than in the previous season. The demand for wool had been very satisfactory, and unexpectedly rapid progress had been made in the liquidation of the stocks held by the British Australasian Wool Realisation Association. Prices for all classes of wool had substantially appreciated. Trade in Australia had been less active. The general position should, however, be sound owing to the previous writing down and liquidation of stocks. Recently there seem to have been a tendency towards somewhat excessive importations. New Zealand had benefited to a marked extent during the year from the improvement in the prices of her principal products. This had helped to overcome the effects of the previous fall in values and of speculation in land. A cable from the general manager reported the season to be generally favourable and prospects encouraging.

Sir Westby B. Perceval, K.C.M.G., seconded the resolution, which was carried unanimously.

COMPAGNIE ARAMAYO DE MINES EN BOLIVIE.

INCREASED PROFITS.

PROSPECTS FOR THE CURRENT YEAR.

The third ordinary general meeting of this company was held on Tuesday, July 24th, at the company's offices, 16 Quai de la Poste, Geneva, the chairman of the company (Mr F. A. Aramayo) presiding.

The Chairman said: Gentlemen,—I beg to present to you the results of the working of our company during the year 1922, the accounts of which have already been sent you, together with the directors' and accountants' reports.

As you will have seen by these reports, the balance-sheet to December 31, 1922, which has been sent us by the local administration in Bolivia, shows as a result of the year a profit of 4,772,655.03f after deduction of the differences in exchange, which this year have been moderate, owing to the improvement in value of the Bolivian peso, as compared with that of the Swiss franc.

This result is modified, as shown in the profit and loss account on the credit side, by interest on deposits and investments, and on the debit by the directors' fees, law and other expenses in Europe, leaving the sum of 4,537,499.74f as net profit for the year. This profit, which is well above that of the preceding year, is satisfactory if we consider that there has been no improvement in the selling prices of our products. It is due first to the reduction of almost two millions in the stocks of minerals realised at prices above those at which they had been valued in the last balance-sheet, and to the great economies introduced during the difficult period mentioned in our previous report.

SALES OF DIFFERENT PRODUCTS.

The sale of tin ore during the period under review has been 3,208 tons at an average price of Lg. 68.16.7, against 3,097 tons at Lg. 71.1.10 the year before.

The sale of silver sulphides has been 762,405.72 ounces troy at an average price of 37.20d per ounce, against 679,233.85 ounces at 40.65d the year before. The sale of rich argentiferous mineral has been 476,403.86 ounces troy at 34.56d, against 475,021.78 at 40.42d the year before.

The sale of copper precipitate has been 123.20 tons at Lg. 33.6.11 (average), against 272.44 the year before.

The sales of bismuth have reduced by half our last year's stock, and we are restarting the mining and smelting of this metal.

The total production of tin barrilla (concentrates of 60 per cent.) in the various mines has been raised to 2,756.4 tons, against 2,361 tons the previous year. The production of bismuth in bars, moco (fine dust), and export ore only amounts to 10,208 kilos., against 20,328 the year before. The total production of silver in sulphides, export ore, and contained in cement copper reached 1,330,984 ounces troy, against 1,178,215 ounces during 1921. The production of copper was 70.3 tons, against 93.7 tons the previous year.

It is pleasing to state that the cost price of tin concentrates has been reduced this year to Bs. 851.76 per ton, against Bs. 940.10 in 1921 and Bs. 1,082.50 in 1920. That of the silver has also been reduced a little. On the other hand, the cost price of bismuth is exorbitant, owing to the small production, which had to carry the cost of the development work executed. In fact, the year's work on this product would show a heavy loss if the realisation of part of the stocks had not modified that result.

EXPLORATION AND DEVELOPMENT WORK.

Exploration and development work were continued with all possible activity in the various sections, and the total number of metres run during the year is 3,205, against 3,206 the year before.

In Chorolque it has been considered prudent to suspend working in the Yana Salli and Acero Cruz regions, which were so poor that they were already showing losses.

In the Socavon San Bartolomé, which is the great work of the future, at 400 metres lower than our old workings in the Quellu Coya and La Tajo, we have done considerable exploration work on the veins, which we believe to correspond in depth to the above-named veins, but up to the present the results have not been so satisfactory as was expected, although this work continues to produce a little tin.

We propose to continue our investigations in depth, but we have been stopped by water in quantities far above the capacity of the pump at our disposal, and have decided to send a larger pump in order to realise our aims.

In Tasna the bismuth works continued practically at a standstill during the year under review, but the extraction of tin was relatively more active. The smelting and production of bismuth at Quechisla only restarted in the month of December, 1922.

Development of Chocaya in silver and tin continued satisfactory down to gallery 200, and the total estimation of reserves of minerals of silver and tin in sight contained in the veins "Colorado" and "Santa Rosa" are now 166,265 tons, assaying 22.883 D.M. silver (0.2283 per cent.) and 7.044 per cent. tin, against 130,672 tons estimated in 1921. This is without taking into account the silver ore contained in the veins "Llampera," "Judios," and "Animas." The central shaft is down to the 200-metre level, and will greatly contribute to the economical working of the various galleries.

The metallurgical establishment of Telamayú is already working on the concentration of tin, and it is anticipated that the aerial ropeway will come into use at the end of this year, when the installation for the lixiviation of silver will also be completed.

CURRENT YEAR'S PRODUCTION.

Referring now to the first four months of the current year—i.e., January 1st to April 30th last, I have much pleasure in noting that the production of silver has increased by 45,563 ounces, as compared with that of the same period of the previous year. The production of tin has only decreased by 78.4 tons.

I much regret not being able to dispose of the necessary space to give you *in extenso* the report of the general manager, Mr Carlos Victor Aramayo, a document of the greatest precision and containing all desirable details on the complicated operations of this vast enterprise. Mr Aramayo is very ably supported by Mr Reece, under-manager, and by Mr Navarro, manager of Quechisla and chief accountant. In the mining sections of Chocaya, Tasna, and Chorolque he has the help of the mining engineers, Messrs Smith, Davis and Bergman, with the collaboration of the auxiliary engineers, Messrs Jeffery, Maddock, Fernau, and Osorio.

Mr Malcolm Roberts, our late general manager, is still lending us the help of his great experience as consulting engineer.

DIVIDEND AND BONUS.

Reverting to the final results of the year's operations, as shown by the balance-sheet presented, your board proposes that you should confirm the interim dividends paid during the year, amounting to 25 per cent., and vote a bonus of 10 per cent. applicable to the year 1922, and to carry forward the balance of 12,414,369.50f. This balance is less by 712,500.26f than that of the previous year, and it has to be taken into account that the profit obtained is not entirely accounted for by the operations of the year under review, and that it is also desirable to keep sufficient reserve, in view of the assets non-realizable at the moment, as well as the greater expenses which will have to be incurred to restart the works stopped during the crisis.

If any shareholder desires further particulars I shall be glad to answer questions.

No questions being asked, and after the reading of the auditors' report, the statement of accounts was approved, and the following resolutions proposed by the board were carried unanimously:—

1. The meeting approves the statement of accounts presented by the board for the year 1922, and gives entire discharge to the directors.

2. The four interim dividends, totalling 25 per cent., paid during 1922 are confirmed.

3. The declaration of a bonus of 10 per cent., making a total of 35 per cent. for the year 1922, is approved.

A THIRD INTERIM DIVIDEND.

The Chairman informed the shareholders that the board had decided to pay a third interim dividend of 5 per cent. on account of the current year, payable on August 1st next, together with the above-mentioned bonus of 10 per cent., to holders of share warrants to bearer presenting coupon No. 9 at the Société de Banque Suisse, Geneva, and to all shareholders on the register of the company on the 24th inst.

A shareholder proposed a vote of thanks to Mr F. A. Aramayo, the managing director, the general manager in Bolivia and his staff, and Mr Malcolm Roberts, the consulting engineer, which was carried unanimously.

The proceedings then terminated.

policy of building up the reserve funds, thus enabling us to lay additional cables as and when considered expedient. Since the armistice, this company has, in conjunction with the Eastern Extension Company, laid an entirely new cable of large capacity to the Far East, in addition to which we have carried out extensive renewals to many of the main-line sections. The cost to this company of these operations has been £5,293,745, of which £2,678,086 has been charged to the general reserve fund, and there is roughly one million, six hundred thousand pounds still held in suspense. This fund is to-day £25,000 less than it was at the end of the year 1914, notwithstanding the substantial additions which have been made to it since then. You will, therefore, realise how vital it is that the fund should be again built up as rapidly as possible.

Our expenses this year have exceeded the normal annual ratio of increase over pre-war days by no less a sum than one million pounds, apart altogether from taxation. It is on these grounds that the necessity for economy becomes imperative. Out of every £100 received to-day our expenses are approaching £17 more than they were in 1913. In the current year there has been no improvement in trade. It is, however, to be hoped that the economies which are being effected will in a measure meet the considerable decrease in income we must anticipate this year.

SYSTEM STRENGTHENED.

As a public utility company, the interests of the general public, consistent with sound finance, are our first concern, and with this end in view, we have strengthened our system during the past year, at a cost of over one million pounds, by completing the laying of a new line between Malta and Colombo, connecting us with the extensions made by other associated companies. It may not be out of place to remind you and the public generally that all this expenditure has been made without any increase in rates; indeed, I suppose there is no other commercial interest which can claim, as can the cable companies, that the public have been able throughout to use our service at the same rates as existed before the war; in fact, in some cases, rates have been materially reduced.

In July last the company celebrated its jubilee, a fact to which I referred at our last meeting, and your directors, to mark the occasion, granted the staff a bonus of two months' salary.

You will expect me, doubtless, to say something regarding wireless. I think you may rest assured that the sagacity of America, the commercial instincts of Germany, the national aspirations of Italy, and the prudence of British and Colonial Governments, would not allow them to risk respectively the expenditure of vast sums of capital in cable enterprise unless they were confident that cable systems of communication all over the civilised world must continue.

At the same time, your board hold the opinion that they should be associated with all classes of telegraphic communication, and with this object they are associated with applications for wireless licenses for full powered stations in Great Britain, India and China.

Sir Albert J. Leppoc Cappel, K.C.I.E., seconded the motion, which was carried unanimously.

THE EASTERN EXTENSION, AUSTRALASIA AND CHINA TELEGRAPH COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The annual meeting of the Eastern Extension, Australasia, and China Telegraph Company, Limited, was held, on the 25th instant, at Electra House, Moorgate, London, Sir John Denison-Pender, G.B.E., K.C.M.G., chairman of the company, presiding.

The Chairman, in moving the adoption of the report, said that the accounts presented would, he thought, be considered quite satisfactory, although on the result of the year's working, as compared with 1921, there was a net decrease of £402,297. Message and other receipts had again fallen, working expenses were much in excess of the year 1913, about 203 per cent., but having now been relieved of many items of expenditure rendered necessary during the past few years, they should, before long, assume a proportionate standard to receipts. They would observe from Abstract B a net increase in general expenses at stations, amounting to £47,498, which was mainly accounted for by the very considerable increase in income-tax, due to the introduction in the Netherlands Indies of a revised system of taxation, against which, he might say, strong objection had been raised by all mercantile firms trading in that country. Also noticeable was the increase in home taxation of £46,413, which shareholders might perhaps consider required some explanation in view of the welcome reduction in the rates of income-tax and corporation profits taxes. It was due, he said, to the fact that under the three years' average system in the computation of the income-tax for 1922, one lean year was dropped, and one fat year had to be submitted, thus increasing the taxable amount by about £204,000. The 1921 accounts also were credited with £56,993 on account of the old

excess profits duty adjustments, which augmented the 1921 figures, and, of course, told against a favourable comparison with those of 1922, now submitted.

The balance they had to deal with was £724,803, plus the carry forward from 1921, making a total of £1,032,683. From this sum £250,000 had been placed to the general reserve fund, £400,000 paid in dividends, and the balance, £382,683, had been carried forward. The directors considered it advisable to carry forward this substantial amount in view of the fact that returns for the early months of the current year showed a further considerable fall in traffic receipts, which, considering the state of trade all over the world, was not surprising. They were no doubt aware of the condition of affairs at present ruling in China, where, owing to the existence of several militarist parties, who were all striving to force their domination on the country, chaos reigned, and it would, he feared, be some years before any improvement in the situation would take place. Needless to say, trade suffered. His Majesty's Minister at Peking, under the direction of the Foreign Office, was supporting the company's cause in that country. On the last occasion on which he had the pleasure of addressing the shareholders, it would be remembered that he mentioned the proposed laying of a cable between Colombo and Penang. This, he was pleased to say, was successfully accomplished in March last, and the cable had been working well since that date. In order to improve their communication between Singapore and Java the directors decided to duplicate the Singapore-Batavia cable. That work would be completed when the company obtained the necessary permission from the Netherlands Indian Government to land the second cable. At the last meeting he had spoken strongly on the subject of the postal department's advertisement of their "Pacific" route on public correspondence passing through their hands, and he was now pleased to inform the shareholders that their representations in the matter had had the desired effect, and that form of advertisement had now ceased. With regard to his promise to look into the question of the rearrangement of the shares of the company, he desired to inform them that the directors and auditors had carefully considered the matter, and had come to the decision that any alteration at the present moment would, in the best interests of the company, be inadvisable.

The report was unanimously adopted.

TANGANYIKA CONCESSIONS, LIMITED.

SATISFACTORY PROGRESS—ENORMOUS COPPER DEPOSITS.

The adjourned ordinary general meeting of the Tanganyika Concessions, Limited, was held, on the 25th inst., at River Plate House, London, General Sir Francis Reginald Wingate, Bart., G.C.B., G.C.V.O., G.B.E., K.C.M.G., D.S.O. (chairman of the company), presiding.

The manager and secretary (Mr L. Scotland) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: You will shortly be addressed by our managing director, Mr Robert Williams, who has just returned from a visit to the Sudan, Katanga, Lobito Bay, and the Benguela Railway, when he fully investigated all the interests of the Tanganyika Concessions, Limited, and its associated companies, and discussed with the various local authorities, by whom he was given a most cordial reception, various details of our business. This group of companies is to be congratulated on having its affairs in the hands of your present managing director—perhaps the greatest living pioneer of African civilisation—whose vision, coupled with his profound knowledge of mining and metallurgy and long practical experience of local conditions in South and Central Africa, has built up an organisation for the development and transportation to the markets of the world of the rich treasures of those mineralised "milestones" which mark the various stages in the progress of African railways, and the commercial and economic development they bring in their train.

Sir Cecil L. Budd, K.B.E., seconded the resolution. Mr Robert Williams (managing director), in the course of a lengthy address, said: Your holding in the Union Minière du Haut Katanga is shown as increased to 103,048 capital shares and 78,000 dividend shares, which at the market value and with the exchange ruling on December 31, 1922, represented £4,420,564, showing a surplus of £3,578,091 over the amount at which they are entered in the accounts. You will therefore see that all your shares and debentures in other companies are covered by the value of the shares in the Union Minière. The total gross working results of the Union Minière for 1922 amounted to about 48,000,000. After charging interest on debentures, &c., and providing for substantial amortisations, that company was able to declare a dividend of 35f, less deduction of 2.80f per share for Belgian taxation. The proceeds of this dividend will appear in the next accounts. You are asked to sanction the payment of a dividend on the preference shares, the credit balance on profit and loss account brought forward enabling us to do this. I may say that if exchange had

been normal there would have been a dividend on the ordinary shares too.

PROGRESS OF UNION MINIERE DU HAUT KATANGA.

The operations of the Union Minière for the year 1922 were very satisfactory, the total production being 43,362 tons of copper. Unfortunately the price of copper touched the lowest figure recorded since 1914—namely, 57—and the highest price during 1922 was £66. During the first half of this year the production has been 24,528 tons. The output for June of 4,810 tons is the highest monthly output yet obtained.

I have recently visited the various places of Africa where your company has interests, and I should like to tell you briefly of the great developments that have taken place since my last visit to Katanga in 1911. In 1902 I said I believed the Katanga copper belt would ultimately produce 1,000 tons of copper per day, if everything that makes for economical working were brought to bear, particularly cheap transport to the coast and Europe. Since I have visited the copper belt this time I am more than ever confirmed in this opinion.

ENORMOUS COPPER DEPOSITS.

I went over most of the hills of copper. In one mile of the 20 miles at Fungurume 9,000,000 tons of ore had been proved. At Musonoi there is a group of mines within 1,100 miles by rail of Lobito Bay in which millions of tons of ore have already been proved to exist. At Ruwe Mine, in this group, £100,000 in gold has already been extracted. Gold, platinum, palladium, vanadium and copper exist there. The existence of large supplies of cobalt and uranium ores has also been proved in the eastern section. About ten miles out of the 250 miles of this copper belt has given a development of 68,000,000 tons of ore, containing about 4,500,000 tons of metallic copper. These ten miles represent operating mines and proved bodies of ore over the whole 250 miles. If ten miles has given 4,500,000 tons of metal, 40,000,000 tons of copper is a very conservative estimate for the whole 250 miles.

The Benguela Railway continues to bear out all that has been previously said and written in regard to its potential earning powers. The traffic on the present open section of the line from Lobito to Chinguar—a distance of 519 kilometres—continues to show the marked and substantial increases which have been taking place year by year. I have no hesitation in saying that the increases in traffic carried will not only continue, but will show still further improvement. Our big future will only be realised when the Benguela Railway is connected with the Katanga copper mines, and when the output of copper reaches anything between 100,000 and 360,000 tons per annum, and when that copper is produced largely by leaching and is transported economically to the coast and Europe.

The report and accounts were unanimously adopted.

ZAMBESIA EXPLORING COMPANY, LIMITED.

IMPORTANCE OF THE BENGUELLA RAILWAY.

The adjourned ordinary general meeting of the Zambesia Exploring Company, Limited, was held, on the 25th inst., at River Plate House, London.

General Sir F. Reginald Wingate, Bart. (the chairman), presided, and, in moving the adoption of the report and accounts, said that he was convinced that they had in their managing director, Mr Robert Williams, a man of remarkable character and exceptional capacity, endowed with a directness of mental attitude which had gained for him the respect and confidence of his colleagues, the shareholders, and the British public, all of whom realised that his great work, initiated in answer to the personal request of Cecil Rhodes, to assist that great African Empire builder's dream of communication from the south to the north of Africa, was resulting in immense developments.

Mr Robert Williams, in the course of a lengthy address, said that the operations of the Union Minière du Haut Katanga for the year 1922 were very satisfactory. He believed that the real policy for the Union Minière to pursue was to go ahead with all processes and try to perfect them as they proceeded. There was an endless quantity of ore in that great copper belt suitable for all purposes.

After referring to the position regarding radium, tin, cobalt, and coal, he went on to deal with the Benguela Railway. When the line was completed and connected through to the Belgian Congo, that country would have a large and prosperous agricultural and cattle-breeding country at its doors, from which it could draw its food supplies without having to wait through a period of development for years, which might seriously handicap the rapid development of its large copper industry. Angola had a great future. It was a white man's country. During his visit he had been struck with the great developments that had taken place at Lobito Bay since his last visit in 1911. It had been transformed from a bare sandspit into a pleasant township, and he was struck with the

great development of roads, wireless, and aviation throughout the whole of his travels in Angola. While in Khartoum he had discussed the affairs of the syndicate with the authorities, and had been able to settle with the Sudan Government a satisfactory basis for a further development of their interests.

At the last meeting he had told the shareholders that they had turned the corner. They had had a big struggle since then, their greatest difficulty being the fluctuations in exchange and in the price of copper. Nevertheless, they had turned the corner, and the Union Minière had restarted paying dividends, which, he believed, would go on increasing.

The report and accounts were adopted.

TRANSVAAL GOLD MINING ESTATES, LIMITED.

ADVERSE FACTORS IN PAST YEAR.

A special general meeting of members of the Transvaal Gold Mining Estates, Limited, whose registered address is elsewhere than in South Africa, was held, on the 27th instant, at Winchester House, London.

Mr M. T. Brown, who presided, said that the profit for the past year amounted to only £1,597, the worst result since work was resumed after the end of the Boer War. This figure was arrived at after bringing into account £10,000 derived from general revenue, which converted a working loss of 11d per ton into a bare profit. This compared with a profit earned in 1921-22 of £28,416. In other words, there was a decrease of £26,819, in spite of the following facts:—(1) The tonnage milled was increased by 600 tons; (2) the gold recovered was increased by 2,814 fine ounces; (3) the yield per ton was better by a little over ¼ dwt; (4) the working expenses were almost 1d per ton less. All these favourable features were, however, more than neutralised by the drop in the price of gold, which in 1921-22 sold for an average of £5 0s 8d; but last year for only £4 8s 4d. The mine profit for the first eight months had amounted to £11,000, but this was nearly all wiped away by losses in the last four months of the year.

Another fact that must not be overlooked was that working expenses included no less than £30,000 for prospecting, equal to 3s 3d per ton, or about £14,000 more than in the previous year. The balance of appropriation account showed a net decrease of just over £17,000. This was mainly due to the fact that the accumulated profits had been drawn upon for the employers' tax amounting to £4,620, a new poll tax lately imposed by the Transvaal Provincial Government, and for the purchase of the 32,248 enemy shares acquired at a cost of £12,721. The ore reserves position might be considered satisfactory, as, although there had been a slight decrease of 48,000 tons, or about 7 per cent., there had, on the other hand, been an improvement of 0.3 dwts in the value, or an increase of about 3¼ per cent. As to prospecting, with such a large area to work on as 300 square miles, much of which was of a similar geological formation to that where the existing mines were, the expenditure of £30,000 was justified, especially as the future of the company depended so largely on the discovery and exploitation of fresh bodies of high-grade ore. Referring to general conditions, it must be said that the Government was not too helpful to the mining industry.

In regard to the current year, the results of three months' working showed a profit of just over £6,000. The month of June had accounted for more than half that profit, and was the best for over 15 months, showing both a better yield and a lower working cost than the average of last year.

The report and accounts were adopted.

BISICHI TIN COMPANY (NIGERIA), LIMITED. **GOOD PROSPECTS FOR CURRENT YEAR.**

The twelfth annual general meeting of the Bisichi Tin Company (Nigeria), Limited, was held, on the 24th instant, at the Cannon street Hotel, London. Mr James Gardiner presided.

The Chairman said that those engaged in the Nigerian tin-mining industry were grateful to the Government for the concessions made during a critical time, but it was still penalised by excessive railway rates. At an interview recently granted to a deputation from the Nigerian Chamber of Mines, the Governor-General stated that the whole question of railway rates was being investigated. During the past year everything possible was done to effect economies. Costs were reduced by £6 per ton, and a working profit of just over £10,000 was made, as compared with £3,000 in the previous year. After providing for administration expenses, writing off depreciation, and allowing for income-tax and corporation profits tax, there was a net loss of £864.

There was no foundation for the suggestion that the Nigerian Chamber of Mines had shown a lack of interest in the labour question, and had ignored a scheme brought forward by two or three of the local managers for the solution of the difficulty. On the contrary, the matter had received their most serious consideration. The shortage must eventually be overcome by labour-saving plant and appliances, and this was the line on which the Bisichi Company was working. The council of the Nigerian Chamber of Mines had negotiated a further reduction in smelters' returning charges to £6 per ton, which was lower than the pre-war figure. The new arrangement represented a saving of £2 10s per ton as from January 1, 1924. Statistically the position of the metal was sound, and with a brightening of the general outlook he felt sure that the industry would come into its own once more. At the present time the company was working at a substantial profit; the new plant had been paid for, and the balance was greater than at the end of the financial year. This had been done on a dry season output, and during the wet season, now at its height, largely increased returns could be looked for, particularly as all the plant was now working at full pressure. The price of the metal was now £17 higher than the average on which the past year's production was realised. Unless, therefore, a further serious depreciation took place, it might be safely stated that the results attending the current year's operations would be perfectly satisfactory.

The report and accounts were unanimously adopted, the formal business was transacted, and a vote of thanks to the Chairman terminated the proceedings.

GOVERNMENT RETURNS, &c.

features, and with shippers inclined to press, prices were on a lower level for all descriptions. Several cargoes of No. 2 Northern Manitoba, November and December shipment, sold to Mediterranean at 42s 3d, and a steamer of choice white Karachi, on passage to United Kingdom, at 41s 9d per 480 lbs. Flour remains firm, owing to scanty wheat supplies, and stocks at the mills are very slow. It is reported that millers are obtaining small quantities from the near Continent. Nominal quotations are:—London standard straight run 40s, patents 42s to 43s, town households 38s per sack, delivered in Metropolitan area. Of imported, Manitoba patents 35s 6d to 39s, Minneapolis good patents 38s 6d to 39s, and Australian 35s 6d to 37s, all per 280 lbs. ex store. Maize cargoes easier, and a steamer of La Plata, shortly due, changed hands at 33s 3d, September-October 34s. Of barley several cargoes of Persian, November, December, and January shipments, sold to the Bristol Channel at 23s per 400 lbs. c.i.f. terms. Millers' offals firmer. Broad bran quoted at 6s 6d, ordinary ditto 5s 6d-5s 9d, middlings 9s, bags included, ex mill. Light oats

MANCHESTER, July 26.

The market continues unsettled. Prices have continued to favour buyers. Much uncertainty exists as to the future level of values, and most buyers are anticipating cheaper rates. Cloth inquiry for India has been fairly extensive, but shippers have restricted their purchases to small lots, chiefly in light bleaching, finishing and dyeing fabrics, and grey staples have attracted very little attention. Standard makes for China have been comparatively quiet, but a moderate turnover has taken place in fancies and specialties. Business for the Near East has not been much in evidence, and only occasional contracts have been arranged for South America. Limited buying has occurred in home trade goods. Some very fair contracts have been arranged in cambrics for Germany. American yarn quotations have been weak when tested, and requirements of users have been of retail dimensions. Very little has been done in export yarns. Egyptian spinnings continue slower.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market generally presents a quiet appearance, and there is nothing in the present situation to suggest any immediate improvement. The one thing that prevents an utter feeling of despondency is the comparative strength of the raw material market. Since the cancellation of the auctions, there has been a fair inquiry for wool in the bale and for matchings, and it seems probable that a considerable turnover will take place before the resumption of the auctions in London in September. American and Continental firms are interested, and this movement of wool, while helping holders in this country to get rid of some of their stocks, is also valuable in that it reveals a firm tendency in values. When we turn to semi and fully-manufactured goods, however, the outlook is not very encouraging. Trade is being confined to a miscellaneous picking up of cheap lots, and as some firms are obliged to realise, bargain-hunters are busily combing the market for the weak sellers. If the statistical position of wool is anything to go by, some of the purchases now being made should prove to be very sound investments in a few months' time, but the trouble is that few users have the courage to go in and buy forward while they are confronted with so much idle machinery. Continental competition in yarns and piece goods tends to become more acute, and producers here complain that they are quite unable to contend with the depreciated exchanges. This matter is rapidly becoming serious, for although it is regarded as being of a more or less temporary nature, it is obvious that British firms cannot go on indefinitely selling their products at prices considerably below replacement values. British wools are firm, but there is not much business passing, as prices in the country are well above the ideas of users.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The plain coating trade is very depressed, and both German, Belgian, and French mule spun yarns are being offered in increasing quantities to every hosiery manufacturer throughout Great Britain. This competition is serious, simply because on account of the low exchanges Bradford spinners are completely out of the running. One of them remarked this week that one of his best customers in Leicester had shown him some French spun yarns which staggered him, single 24's being offered as low as 5s 2d, a price that is little more than the cost of the top. Continental exchanges are certainly handicapping the home trade in a manner that is most annoying.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

In the imports of wood into this country for the past six months it is gratifying to notice the increasing shipments of building timbers and hard woods from Canada, especially hard woods, while for building and packing-case work the growing shipments from Latvia and Poland are welcome—when they are ready for delivery to consumers.

Business is still slow in the furniture woods market. Of mahogany logs, stocks in first hands are moderate, with prices very firm; but mahogany boards are plentiful, with values fairly steady. American woods are slow in demand, and some consumers are awaiting a further drop in values, but from advices to hand from the United States it would appear that exporters there are thinking upwards rather than down. Pitch pine, teak, Oregon pine, and other shipbuilding timbers are awaiting better times in the industry in the North; but the boilermakers' strike still exists, though this might not be the only reason for the bad state of shipbuilding.

VEGETABLE OILS AND OILSEEDS.

Quotations for the new crop are already being made, and values are almost identically at the level they were a year ago when the present crop was first offered. In sympathy with seed, and reflecting the small demand, the oil product has eased off, and is about 40s per ton below the highest last week in the new positions. The export demand for linseed oil is very small, and America continues out of the market.

Cottonseed has been easier in Alexandria, and sellers here have been discounting the market, quite low figures having been accepted for Sakellariadis afloat. The new crop, shipment of which is expected to commence in October, is offering at £10 2s 6d to Hull. Cotton oils show no sign of an improved demand, crude Egyptian offering freely at £34 10s, ex Hull mill, without response.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Market hides remain steady, both in London and the provinces. At the Bermondsey auctions on Thursday best ox again sold from 6½d to 8½d, the two light classes showing a decline of ½d. Best cows from 5½d to 5½d showed an advance also of ½d per lb. Calf were steady, best making from 5½d to 10½d per lb, alterations being unimportant. The 8 lb and under class were withdrawn in view of attitude of bidders. Lambs sold from 2s 1d to 6s 6d each, and pelts from 3s 4d to 5s 6d each, prices being firm and the demand good. The demand for foreign hides is better, and, as supplies are fairly heavy, tanners are pressing for lower rates. The surprise of the week, however, has been the news that Germany has bought no less than 20,000 fregorifics and 20,000 Liebig hides, besides other hides in various markets. Argentine ox are quoted at \$37 and Liebig's round about 7½d and 8½d. Dry hides are selling better, and tanners seem to be regaining confidence.

Sole leather has been in better demand this week, and fair parcels of medium and light bends have gone to the various centres. Prices are firm, but the big tanners do not seem able to resist a bid for a large block of stock at a shade less money, and merchants have in some cases taken advantage of this. Manufacturers are pressing for concessions, and many have managed to get deliveries spread over the next three or four months.

Upper leathers are still quiet, although this week there has been a moderate run on cheap patent. Box calf and willow calf are still selling slowly, and home-dressed leather is still under a cloud owing to cheap German leather. Glacé kid is selling in black and colours, but saddles are almost a dead letter. Curriers are slack in kip butts and semi-chrome.

Boot manufacturers are rushing out holiday wear, but the fine weather has come too late to be of much service to them.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 27.

The quiet tone prevailing for most commodities became more pronounced during the week, business being hampered by the dock strike, with consequent difficulty of securing supplies.

SUGAR.—Business in refined descriptions was on a moderate scale, chiefly confined to British makes, as foreign are handicapped in the matter of delivery. Prices maintained a steady level. Messrs Tate and Lyle's cubes sold 6½s 6d to 6½s 6d, as to quality; granulated, 58s 1½d to 58s 7½d; September, No. 2, and/or London, quoted, 57s 3d; October, 55s 9d; November-December, 53s. American granulated, spot, quoted 56s 6d; white Java, spot, 54s 6d to 55s, as to sample; ditto, May-June, 23s 6d; June-July, 23s 4½d; July-August, 23s 3d, c.f. and i. terms, London. Continental parcels for shipment quite nominal, with an absence of definite offers. Raw refining kinds inactive and nominal. Terminal market generally quiet and somewhat unsettled. August delivery, sold, 26s 6d to 27s 6d; December, 21s 9d to 21s 3d and 21s 9d. Cuban stocks stand at 540,400 tons, against 658,000 tons at same time last year.

COFFEE.—The market presented a steady, quiet tone. In auction Nairobi, middling to good, ditto, sold, 78s to 85s; fancy bold Costa Rica, 120s.

COCOA.—Market remains very dull, and prices at public sales ruled mostly easier where business transpired. Trinidad, sold, 47s (d to 48s; Grenada, 44s to 46s; Jamaica, 44s 6d; good bold red Ceylon, 83s 6d; Accra, October-December and December-February, quoted 31s, f.o.b. terms.

TEA.—Only 2,350 packages Indian were brought to auction owing to the dock strike, and soon sold at full to rather dearer prices. 10,800 packages Ceylon were eagerly competed for, and prices ruled firm to ½d, and in some cases, 1d per lb advance for really fine qualities. Java and Sumatra sold well at full prices for all medium to fine, but some commonest kinds ruled weaker.

RICE. remains very quiet and featureless as far as the European situation is concerned, but no pressure arises from shippers, and previous quotations were adhered to. Local Burma markets cabled very steady, and inquiries on Japanese account for Straits quality led to some 50,000 tons being disposed of during the past two or three weeks. Spanish steady, but there is not much demand just now. Carolina sorts sparingly offered. Broken kinds call for no comment. Japanese peas, on spot, quoted 24s 3d cwt.

SPICE.—There is no revival in demand for pepper, but sellers refrain from pressing, and quotations meantime show no alteration. Cloves steady, quiet. Fair quality Zanzibar, spot, is 1½d; May-July, is 1½d; August-October, is 2d lb. Tapioca steady, but only retail inquiries are circulating at the moment. Sago flour, June-August, sellers, 12s 4½d. Desiccated coconut quiet. Fine cut, spot, 37s 6d; medium, 38s; halves, June-July, value 35s; July-August,

35s 9d; August-September, 36s; and September-October, sold, 36s cwt and buyers.

JUTE.—A calm state of affairs predominated, and prices are lower on the week. First grade new crop, August-September, also September-October, Continent, sold, £22 10s; lightning ditto, value, £21 10s ton. Hessians flat.

HEMP.—Manila dull of sale, and general position rather nominal at the moment. J grade, afloat, sold, £30 5s; ditto August-October, sellers, £30 10s; K and L, £27 10s; and M., £26 10s ton. African Sisal unaltered.

SHELLAC quiet. T.N., spot, 260s; August, 242s 6d; October, 237s 6d cwt.

COPRA.—Prices were forced down on selling desire, and considerable quantities of Manila, Cebu, also South Sea continue to offer to European destination, which is the outcome of lack of American support for same. F.M.S. Straits, August-September, London, sold, £24 12s 6d to £23 16s 3d; ditto, May-July, Rotterdam, done £25 to £24 10s; June-August, £24 12s 6d to £23 15s; August-October at £24 5s to £23 12s 6d; October-December, £24 5s to £23 10s. Ceylon, July-August, Continent, quoted £26 5s; Java ditto, £24 17s 6d; Dutch East Indies, June-July, sold at £24 12s 6d to £24 7s 6d; ditto, June-August, £24 to £23 15s; Cebu, July-August, sellers, £24; South Sea Islands, £23; F.M., Manila, August-September to Marseilles, sold, £23 5s to £23. Palm kernels weaker, with business in the July-September position to Liverpool at £16 18s 9d to £16 8s 9d ton.

RUBBER.—Prices fluctuated a little at times, but a fair amount of trade was carried through. Standard plantation, crepe and sheet, 5½d, also August, sold, 15d to 15½d, and 14½d; September, 15½d; October, 15½d to 15½d; October-December, 15½d to 15½d and 15½d; January-March, 16d to 16½d and 16d. To New York, standard sheet, European estate, August-September, sold, 14½d; and September-October, 15d per lb, c.f. and i. Wild descriptions quiet, unaltered.

OILS.—Linseed quiet and easier. Spot, net, naked, quoted 42s; July, 39s 9d; August, 39s; September-December, 36s 6d. Rape quiet. Crude, spot, 39s; refined, 42s. Cotton quiet. Crude Egyptian, spot, 38s; common edible, 43s 6d; deodorised (in barrels), 47s 6d. China-wood nominal. Hankow, spot (barrels), 104s; July-August, 93s. Coconut lower. Ceylon, spot, 43s; July-August, 41s; Cochin, ditto, quoted 47s. Soya quiet. Oriental, barrels, July-August, 36s 9d. Japan fish nominal. Cod quiet. English, spot, 34s. Groundnuts quiet. English, crushed, naked, spot, 43s; deodorised, barrels, 52s. Turpentine easier for spot, but steadier forward. American, spot, 74s 6d; Sept.-December, 73s; January-April sold, 73s 6d. Rosin quiet. American, grade B, 13s; F, 13s 6d; G, 13s 6d; H to I, 13s 6d; WG, 17s 6d; WW, 18s 9d, per cwt. French nominal. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon. Castor-oil firmly held. First pressure, spot, to August, quoted 56s; second pressure, 55s, and pharmaceutical 61s per cwt.

Inland Tel-grams :

OILSEEDS.—Linseed quiet and easier, especially new crop La Plata. Bold Bombay, afloat, £20 7s 6d; small Bombay, ditto, £19 15s; Calcutta, afloat, £19 15s; June-July, £19 15s; August-September, sold, £19 12s 6d to £19 7s 6d; Plate, afloat, £18 10s; July-August, £18 7s 6d; January-February, sold, £17 5s to £16 5s. Rapeseed easier. Toria, July-August, £16 2s 6d; real bold Ferrozepore, ditto, £15 10s; Jamba, £12. Cottonseed weak. Egyptian black, August, £11; and white, £10 10s, to Hull. Bombay, August-September, £9 7s 6d. Gingly seed quiet. Large Bombay, July-August, Continent, sellers, £23. Chinese, ditto, £23 10s, Continent. Ground-nuts dull. Coromandel, machine-dried, July-August, £21 10s to £21 15s. Chinese decorticated, f.a.q., July-August, £22; East African, ditto, £21. Soya beans quiet. Manchurian, August-September, £11 12s 6d. Castorseed quiet. Bombay, July-August, £20 5s per ton.

METALS.—Tin opened firmer in sympathy with higher prices in the East, though a good deal of irregularity was noticeable. A fair business transpired, including standard, cash, at £186 5s to £186 15s, and three months at £188 to £187 and £187 15s. Sales in the East were reported on the basis of £190 10s, c.i.f. The market subsequently ruled easier owing to heavy realisations, particularly with regard to distant positions, and by the middle of the week standard, cash, changed hands at £185 2s 6d to £184 10s, and three months fluctuating between £186 10s to £185 10s and £186. Further sales occurred in the East at £192, c.i.f. On Thursday the tendency ruled easier, with moderate sales. Standard, cash, sold at £184 to £184 5s to £183 15s, and three months £185 to £185 5s to £184 15s. Prices, after opening below the previous day's close, displayed firmer features on Friday, though only small sales took place. Standard cash sold at £182 10s to £184, and three months £184 10s to £185 5s. English ingots £185 to £185 10s. Copper was a weaker market due to liberal offerings, but at the lower prices a good business was effected. Standard, cash, sold at £65 15s, and three months at £66 15s to £66 10s. Subsequent movements were attended, but slight irregularity with business on a smaller scale. On Wednesday standard, cash, quoted at £66 15s, and three months sold £66 10s to £66 5s to £66 10s. Only quiet trading ensued on the following day, and trend of values proved in buyers' favour. Standard, cash, quoted at £66 7s 6d and three months sold at £66 5s. On Friday the tone proved fully steady with small sales. Standard cash sold at £65 7s 6d, and three months at £66 5s. Electro, £72 10s to £73. Strong sheets, £100; best selected, £63 10s to £70. Wire bars, £73 per ton. Lead quiet at £24 2s 6d. Spelter dealer at £31 2s 6d to £31, according to position. Aluminium: Home, £115; export, £120. Antimony quiet; ordinary, £30 to £32.

TALLOW.—Messrs Colchesters and Woolner write as follows on July 25th:—The tallow market was quiet during the week, and prices are unchanged to-day. A little business has been

done for export as soon as possible. Shipments of tallow from Australasia during June amounted to 2,700 tons. At auction to-day — casks tallow were offered and — were sold. Quotations are:—Australian mutton: Fine, 42s 6d; good to fair, 41s 6d to 41s; dull to dark, 38s to 36s 3d; hard, 42s. Australian beef: Fine, 42s; good to fair, 41s to 38s 6d; dull to dark, 37s to 35s 9d; sweet, 42s. Present shipment from Australasia nominal. Present shipment from South America, 38s 6d to 37s 6d. The market letter is unchanged. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 14d; melted stuff, 27s 6d per cwt. Quotations are:—Town, 35s, net cash, naked, ex works. Country: Frail casks, 35s; home melted, shipping casks, net, f.o.b. good coloured, 38s 6d; fair to dull, 36s to 35s. Bone fat: White, none; pale, none; benzine, 34s; melted stuff, 34s, f.o.b.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's,
37 Avenue de l'Opera.

THE MONEY MARKET.

MONEY was said to be very plentiful over the turn of July,
but on Thursday, when the Bank return and the cur-
rency note statement showed the extent to which holiday
demands for circulation had already taken cash into the
country, there began to be doubt as to whether there was
any substantial margin between the market and poverty,
and discount rates, which had been weak and very
nominal, hardened appreciably. Yesterday this harden-

ing was carried further by the Treasury Bill result, and bank bills were quoted nominally at $3\frac{1}{4}$ per cent.

	Aug. 3, 1923.	July 27, 1923.	July 20, 1923.	July 13, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	$2\frac{1}{4}$	$2\frac{1}{4}$	$2\frac{1}{4}$	$2\frac{1}{4}$	$1\frac{1}{4}$ (Jly. 5, '23)
Market rate (3 months' bills) ..	$3\frac{1}{4}$	$3\frac{1}{4}$	$3\frac{1}{4}$	$3\frac{1}{4}$	..

The Bank return showed an increase in the circulation and a decrease in the Reserve of £904,000. A small decline in the securities, and an addition of $2\frac{1}{4}$ millions to the public deposits, left the private deposits $3\frac{1}{2}$ millions lower. Currency notes outstanding were increased this week by £2,696,100 to £291,745,300, which includes £1,460,100 for notes called in but not yet cancelled. The fiduciary issue is £240,835,200, or £29,348,600 below the maximum.

THE STOCK MARKETS.

The Stock Exchange has passed a depressing week, and the bears have been taking advantage of the general nervousness arising from the political deadlock. The gilt-edged market has been dull, though prices have not drooped very much, and were indeed inclined to recover a little after the Premier's statement on Reparations on Thursday. In other markets there is a monotonous list of declines to be recorded, though in many cases there was a recovery from the lowest. In the foreign market French bonds have given way sharply, and the new Austrian Sixes have changed hands at a slight discount. Home Rails have been unaffected by the interim dividend announcements, while Argentine Rails, after a temporary rally, have become depressed. Rubber shares were slightly better at first, but oils have been very flat, owing largely to foreign selling. Lack of public interest has been conspicuous in the miscellaneous section, and the mining markets have done little business.

THE COMMODITY MARKETS.

The advent of the holidays and the Ruhr crisis have in many instances had adverse effects upon the commodity markets in various directions during the week. Prices on the Cardiff coal market have been steady for all grades of coal, but our Sheffield correspondent mentions that the fuel position is weaker, there being an absence of demand for both steam and house coal. Notwithstanding the easier prices of pig-iron, makers cannot induce buyers to make purchases. The steel works are complaining about the scarcity of orders, and in several instances the number of furnaces has been reduced. Both tin and copper have been weak. After a marked fall, there has been a quick upward movement in raw cotton prices, mainly as a result of the crop report published by the American Government. Overseas demands for wool tend to keep the raw material firm in value, but in other sections of the industry a state of stagnation exists. Higher prices are reported in hide markets. Sugar was lower, but coffee and tea values were steady. The rubber market was generally steady, but quiet. Linseed oil has further declined.

FOREIGN EXCHANGES.

The foreign exchange market has been very depressed again this week, owing to the European crisis. Business has been dull, and there was a general air of waiting for the pronouncement of the British Government on Thursday, as a result of which a slightly steadier tone was apparent. The violence of the rise of the Berlin rate has been checked, and there was even a slight recovery on Saturday. The rate fluctuated between 4,000,000 on that day and 5,300,000 on Thursday, standing finally on Friday morning at 5,000,000. It would seem that the German Government has decided to make one more attempt to regain control of the situation by the issue of a gold loan and the introduction next week of fresh financial reforms, while the Reichsbank has raised its discount rate from 18 per cent. to 30 per cent. Whether the Government will be strong enough to carry through

any effective reform remains to be seen, but, in any case, it is not thought that the raising of the Bank rate will be sufficient by itself to check the demand for credit. The forward rate of 1,500,000 to 2,000,000 for one month above spot remains nominal, there being no buyers in the market. The Paris rate has shown a steady depreciation, moving from 77.65 on Saturday to 80.15 at one time on Thursday. The latter rate, which constitutes a record for the franc, was due to apprehension concerning the nature of the British Government's statement. After its publication, however, the rate steadied to 79.40, and stood yesterday morning at 79.15, thus expressing the general feeling that the door has not been definitely closed on the prospect of a settlement of the Ruhr question. But, at the same time, there is no great faith in the future of the franc should the present opportunity be allowed to pass. As usual, the Belgian rate moved in sympathy with the French, but to a greater extent. The rise was slow over the week-end, from 94.55 on Saturday to 95.80 on Tuesday, but continued more rapidly during the following days, and stood at 99.60 on Friday, after touching 101.10 on the previous day. In Paris the forward quotation is slightly wider at $4\frac{1}{2}$ 5c per month above spot, while Brussels is 3-5c per month below. The lira has also depreciated in value, but to a much less extent, as might be expected. The rate stood yesterday morning at 105 $\frac{1}{2}$, as against 104 $\frac{3}{4}$ a week ago. It is impossible yet to tell the effect on the New York Exchange of the death of President Harding. It seems possible, however, that the uncertainty which must exist in the political situation there during the next few days may be reflected in the rate, which during the past week has fallen from 4.59 $\frac{1}{2}$ to 4.56 $\frac{3}{4}$ on Thursday. Yesterday morning there was a slight reaction to 4.57. Special purchases of dollars in New York were reported during the week, but it is not expected that this will continue for long. It should, however, be borne in mind that the harvest season in America usually results in large demands for credit from the banks, and that consequently action by the Federal Reserve Board in restriction of credit may have to be considered. Forward rates are narrower at $\frac{1}{8}$ - $\frac{1}{4}$ c per month above spot. The Amsterdam rate fell from 11.64 to 11.61 $\frac{1}{2}$ on Tuesday, but has since risen to 11.62 $\frac{1}{4}$. The fall would seem to be due in part to the large demand for guilders from Germany and in part to a sympathetic movement with the dollar exchange. Switzerland has continued to move against us, and is now at 25.58, as against 25.70 a week ago, while Madrid has risen from 32.12 to 32.45. In Central Europe, Vienna has remained steady between 325,000 and 330,000, but Warsaw, with the removal of the exchange restrictions and restoration of the free market, depreciated from 850,000 to 1,000,000, at which rate there is no demand, and business is only done by negotiation. The Budapest rate continued to rise, and from 800,000 last week has reached 1,050,000, at which rate buyers have once more appeared. Prague, after rising to 156 on Thursday, was offered at 155 on Friday morning, while Bucharest is weaker at 920. In Northern Europe, Stockholm has appreciated from 17.23 to 17.16, but Christiania has weakened to 28.60, as against 28.32 last week. Financial operations by the State Bank in connection with the shipping of gold to America have resulted in a continued improvement in the Copenhagen rate, which has moved from 25.75 to 25.10, and Helsingfors is stronger at 164 $\frac{1}{2}$. In the East the rupee is $\frac{1}{16}$ d cheaper at 1s 4 $\frac{1}{16}$ d, while Yokohama is steady at about 2s 1 $\frac{1}{2}$ d. The silver market is extremely dull. Some buying from both India and China was counterbalanced by later sellings in both these markets. Hong Kong, after touching 2s 3d in the middle of the week, is now the same as last week at 2s 2 $\frac{3}{4}$ d, while Shanghai in the same way has returned to 3s 0 $\frac{1}{4}$ d, after reaching 3s 0 $\frac{3}{4}$ d on Wednesday, and Singapore is unchanged at 2s 3 $\frac{3}{4}$ d. In South America, Buenos Aires has not varied appreciably from 40 $\frac{1}{2}$ d, Rio is steady at 5 $\frac{1}{2}$ d, but Monte Video is slightly dearer at 40 $\frac{1}{2}$ d. Valparaiso recovered early in the week to 36.40, but sagged away again to 37.00. As regards Australia, the Associated Australasian Banks in London announce that on and after August 10th the rate for purchasing documentary bills on Australia and New Zealand will be reduced from 2 per cent. to 1 $\frac{1}{2}$ per cent. discount for sight bills, with an increase of $\frac{1}{2}$ per cent. discount for every additional 30 days of currency.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 28th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	8,285	From Revenue	12,469
Interest, &c., on Debt	1,280		
Sinking fund	820		
Sundries	324		
Reduction of debt	1,708		
Added to Exchequer Balances ..	501		
	12,469		12,469

Revenue at £12,469,100 compares with £13,618,700 in the corresponding period. Customs receipts amounted to £2,339,000, against £3,356,000. Property and Income-tax yielded £4,474,000, and Super-tax £540,000, against a combined total of £5,915,000. Special Receipts were reduced from £1,106,200 to £400,000. The week's operations reduced the National Debt by £1,708,100, and caused the following changes:—

	Min. £		Min. £
Public Department Advances ..	7,549	Treasury Bills	5,777
National War Bonds repaid ..	150	4% Treasury Bonds	943
	7,699	Sundries	171
			5,991

The floating debt was reduced by £1,774,000 to £801,596,500.

FINANCIAL YEAR, 1923-24 (April 1 to July 28, 1923).

£	£
Total Expenditure .. 257,662,561	Raised by Revenue .. 245,682,077
	Net Borrowings..... 8,412,526
	Decrease in Balances 3,567,958

Total 257,662,561 Total 257,662,561

ESTIMATES FOR YEAR 1923-24.

EXPENDITURE FOR YEAR 1928-29.		£	
Ordinary Expenditure	801,013,600	Ordinary Receipts ..	778,500,000
Special Expenditure..	15,603,000	Special Receipts....	40,000,000
Total	816,616,600	Total	818,500,000
		Surplus	1,884,000

The Week in Parliament.—Parliament adjourned on Thursday till November 13th. The debates on the Consolidated Fund Bill, which occupied most of the week in the House of Commons, ranged over a wide variety of subjects, including the Post Office, the Disposals Board, and unemployment plans for the winter. On the closing day both Lords and Commons debated the Government statement on Reparations and the Ruhr, while in both Houses statements were made on the Navy and the Air Force. A large number of minor Bills were passed through their concluding stages. The Lords also discussed Abyssinian slavery.

Company Meetings of the Week.—On later pages of this issue will be found reports of the meetings of the following companies:—Malayalam Plantations, Van den Berghs, De Trey and Co., and Threlfall's Brewery. Mr Henry Van den Bergh, the chairman of Van den Berghs, in announcing a successful year, took occasion to observe that "We are on excellent terms with our people..... This happy co-operation has in no small measure contributed to the results." Mr Henry J. Welch, at the Malayalam meeting, makes mention of a blight which attacked the cardamoms, thereby considerably reducing this crop. The chairman of De Trey and Co., Mr X. Castelli, has some interesting remarks to make about price-cutting in dental manufactures. Major Threlfall was no exception amongst chairmen of brewery companies in complaining about beer duties.

THE DEADLOCK AND THE NEXT STEP.

SELDOM, if ever, on the closing day of a session can Parliament have heard graver statements than those delivered on Thursday by Lord Curzon and Mr Baldwin. To appreciate their gravity in its true proportions we must cast our minds back. Early in January, after four years of unsuccessful discussion, during which the surface appearance of agreement was insincerely maintained, France and Great Britain openly agreed to differ on the Reparations problem. France took her own line and occupied the Ruhr—Great Britain expressed disapproval,

but adopted a policy of neutral passivity. Such a policy, whether right or wrong, could not persevere very long; and when Mr Baldwin succeeded Mr Bonar Law, he held that the time had come for an initiative by Great Britain to solve the Ruhr deadlock (whose menace was steadily growing) and bring the practical questions of Reparations and inter-Allied debts back into the realm of international discussion. The British Government, therefore, set in motion a train of events, beginning with a speech by Lord Curzon, which induced Germany to make a new offer, continuing with the British *questionnaire* to our Allies, and finally the circulation of the British draft reply to the German Note. The burthen of the Government statements made on Thursday was that these efforts have failed to produce anything approaching an agreement between our country and France. The disclosure of this apparently insoluble deadlock at a moment when Germany appears to be steering fast for chaos—a chaos that would involve incalculable consequences for France, Great Britain, and the whole world—produces the most critical situation which this country has had to face since 1914.

There are two important features in the statement on the Ruhr made by Mr Baldwin on Thursday afternoon: the first is that the British Government went a long way towards meeting the French point of view by advising the German Government, if it desired a resumption of negotiations, to withdraw its ordinances and decrees on passive resistance, and to disavow acts of violence and sabotage. The Note expressed the belief that such action on the part of Germany would involve a reconsideration by the occupying Power of the conditions of their occupation and a substantial return to the normal features of industrial life in the Ruhr. This is clearly as far as Great Britain could possibly have gone in the direction of meeting the French position. It is conceivable that the phraseology might have been differently expressed; but clearly France could have got from this Note the solution she required—namely, that passive resistance should cease before the negotiations were revived. But Mr Baldwin also made the amazing statement that "the draft reply submitted by his Majesty's Government is not mentioned in the French and Belgian reply." If this were taken literally, it would mean that France made no attempt to meet Great Britain's advances on the question of passive resistance, and that only one interpretation was possible—namely, that the present French Government has no wish to end the present situation in the Ruhr. This conclusion appeared to be that of the British Cabinet, judging from the tone of Mr Baldwin's statement. It is a conclusion which we should have accepted with very great reluctance, for it would mean, on the one hand, that France had elected to ignore the risks to herself of a break-up in Germany and Central Europe, and, on the other hand, that she was not prepared to attach any importance to the interests of that great assembly of European, American, and Asiatic nations which rallied to her support and eventually saved her from the menace that threatened to crush her in 1914. Fortunately, however—and here there appears to be a ray of hope in the surrounding gloom—the summary of the French reply to Great Britain, as given by the Paris correspondent of the *Times*, conveys a very different impression. This summary answers the chief points made in the British draft reply, and particularly deals with passive resistance and the British proposals in regard to it, and expresses a willingness to modify the character of the Ruhr occupation. If the full documents bear out this impression, then the phraseology adopted by Mr Baldwin was unfortunate and misleading. This divergence emphasises the immense importance of a speedy publication of the full documents, and suggests the hope that they will disclose a more tangible approach to agreement than could possibly have been deduced from Mr Baldwin's statement.

The other feature of the statement is that, though Mr Baldwin announced his intention of publishing the British section of the correspondence, he did not say that Great Britain would send a reply to Germany. If the summary

of the French reply, to which we have just referred, is accurate, further negotiations with the Quai D'Orsy should obviously precede such a step. Further, it is evident that the French reply raises the inevitable question of the inter-Allied debts. Even if the prospect of any agreement between France and Great Britain is visibly fading, we still think that Great Britain should give a straightforward and categorical answer on this question. If France's idea of mutual understanding is that we should place our diplomacy in the hands of M. Poincaré, there is no one in this country who would think this a suitable time to make any concession whatever on the French debt to Great Britain. At the same time, we should not like to see Great Britain launch out on independent negotiations with Germany without having first put on record what are the utmost limits to which we are prepared to go in agreeing to a cancellation or postponement of debt, or without having made it clear that we are prepared to accept the principle of priority for the devastated regions before any inter-Allied debt is claimed by us. So long as there remains any chance whatever of a settlement, statements such as those of Sir Robert Horne and Mr Lloyd George that, having agreed to pay America, we should insist on payment from France are the reverse of helpful. If the reparations plan breaks down it is evident that France will not be able to pay her war debts, unless she were to repudiate loans with which she has, in fact, repaired Northern France, by inflation or by a direct cancellation. We repeat that both on the merits of the case and as a business proposition for this country, it is well worth our while to give up any prospect of the repayment of these debts, if by doing so we can get a European settlement. We may add that the idea that France can well afford to repay is being supported on a somewhat fallacious argument. France, like Germany, America, and Great Britain increased her productive plant during, and since the war, and she is represented as being now in a state of great prosperity. It is true that the volume of French trade is as much as before the war, but that is because Alsace Lorraine is now included as French, and the figures contain the very substantial trade between the metallurgical and textile industries between those provinces and Germany, which were formerly classed as part of the internal trade of Germany. The trade of post-war France is almost certainly less than before the war, since her employable population has been substantially reduced since 1913. Great Britain's production, on the other hand, is approximately what it was before the war, but we have a large unemployment problem because our trade has not increased sufficiently to absorb our increased population.

A true recognition of these facts is important. But for the moment they are subsidiary. The great question of the moment is whether there is still any way out of the deepening gloom, and whether there is any step open to the British Government that will help us to find that way. Neither Mr Baldwin nor Lord Curzon could foreshadow what the next step of the British Government would be. We have indicated above one or two points which should be made clear to France, before Great Britain decides, as France decided in January, to take her own line. Moreover, the summary of the French reply makes the chance of ultimate Anglo-French agreement look some degrees less hopeless than Mr Baldwin's speech suggested. Until the full documents of recent negotiations are published further comment, as Lord Grey and Mr Asquith pointed out, is difficult. We must hope that their publication will clear the air, and by showing up the position in clearer light, indicate some possible *dénouement*. Meanwhile, we must derive what confidence we may from certain features of Mr Baldwin's reply to the House of Commons debate. This reply showed recognition of the imperative urgency of the German situation, a clear grip of British interests in a solution, and a determination to work for agreement so long as any door of approach is open. We venture to hope that the door is still rather more open than Mr Baldwin's speech led the House of Commons to believe, and the rush of the fresh air of publicity that will come from the full publication of all the documents may blow it open a little wider still. Thus, while the position is gravely critical, we refuse as yet to regard it with despair.

THE FUTURE OF THE BRITISH COMMONWEALTH.

THE *Round Table* for June, 1923, opens with an editorial article setting forth what is evidently a carefully weighed and considered view regarding the future development of the British Commonwealth. After the profound changes produced by the European War, great interest would in any case attach to a pronouncement of this kind from a group of publicists who have long specialised in the affairs of the Commonwealth, and are closely in touch with its several leading component peoples; and certainly this article (which is admirably written) will not disappoint the reader's expectations.

The main conclusions presented are that no organic reconstruction of formal relationships is at present possible; that the system of Imperial Conferences, developed during the war, should be continued; but that these are not enough to prevent dangerous divergencies and tensions. In the intervals between Imperial Conferences, as is justly pointed out, the Dominions cannot be committed by the action of the British Government, and while these conferences must necessarily be rare, in proportion to the eminence of the Dominion representatives who attend them, the movement of international affairs, with the consequent adjustments of policy in Whitehall, cannot stand still. The Chanak crisis of last autumn, of which the ulterior effects in the Dominions have evidently been serious, is held up by the writer of the article as a warning. Here was a case in which a long train of policy pursued at Whitehall without the participation of the Dominions had led suddenly to a threat of war which took the Dominions by surprise. The Dominion Governments were asked by the Home Government over the cable whether they would be prepared to go to war on an issue upon which they had no first-hand or detailed information, and the notice was so short that, had war broken out, several Dominion Governments might have been forced to take their decision without consulting their Parliaments. The maintenance of peace by a narrow margin prevented the constitutional problem involved from assuming its most acute form, but undoubtedly the Commonwealth could not stand many shocks of this kind without dislocation, and it is a common interest of all its members to prevent their recurrence. The means suggested in this article is that there should be something like diplomatic representation of the Dominions in London, and of the Home Government in the Dominion capitals. The writer argues convincingly that the need for such a liaison exists; that the present Dominion High Commissioners and Imperial Governors-General do not, and are not likely to, supply it, since they are appointed for somewhat different purposes; and that in consequence Great Britain and the Dominions are in some ways less in touch than most independent countries which are consciously foreign to one another, and which therefore make special arrangement for mutual contact.

This is a notable development of view in a journal which originally stood, or was thought to stand, for Imperial Federation. A refusal to be bound by old dogmas is one of the most valuable qualities in political thought; nor, at bottom, does this proposal come paradoxically from the *Round Table*, for political unity, after all, does not mean unity of mechanism, but unity of interest and aim, and it may reasonably be argued that this real subjective unity would be strengthened by a step which would undoubtedly carry the Dominions one degree nearer to the outward forms of sovereign independence.

There remains, however, the question how far the unity of the British Commonwealth, by whatever means attained, either can be or should be carried; and here the writer combats what he considers to be two possible disruptive tendencies—that towards atomic Nationalism on the one side and that towards a single-group system (the League of Nations) on the other. He has little difficulty in pointing out the disadvantages of "Balkanisation" as illustrated by post-war Europe, and in showing that, were the Dominions to retire from partnership with Great Britain, they would escape no burdens but would be a good deal less secure than at present and very much less influential

in international affairs. The benefits of co-operative insurance, especially on the naval side, are sufficiently evident; and it is probable that the Dominions, as independent Powers, possessed of smaller populations and resources and less central positions than, say, Roumania, would play an insignificant part in the world. On the other side, he presents an incontrovertible case, on practical grounds, for the existence of smaller groupings within the League. Indeed, not only is the British Commonwealth (which is the most prominent example of such groupings) much older and more securely established than the League itself, but there has been a distinct tendency, since the close of the war, for new groups to arise. In Central and South-Eastern Europe, for instance, there is now the Little Entente, which is less likely to dissolve again than to become an inclusive association of all the States in this region. A similar process is at work among the "Balkanised" countries round the Baltic, and it may be expected to show itself in Hispanic America and in the Muslim Middle East. There seems no reason why such groupings should not co-exist with the League and with one another, and one can conceive of countries which might be members, not only of the League, but of more than one lesser association (for instance, Egypt, which might enter a Middle Eastern Entente for some purposes without parting company for others with the British Commonwealth). So far we are in agreement with the *Round Table*, but we cannot follow the writer in his contention (which does not seem essential to his main argument) that the League and the British Commonwealth differ in their nature. He criticises the League (though with great restraint and moderation) as an association without coercive force, which depends on the services of its more powerful members for the execution of its common decisions. But does not this account of the League apply absolutely to his own description of the British Commonwealth? The system of Imperial Conferences, the mutual absence of liability in the case of any individual member for action taken by another, and the plea for diplomatic relations between them, all imply that there is no coercive bond; while the advantages accruing to the Dominions from partnership in the Commonwealth arise from the fact that Great Britain puts her own superior strength at the Commonwealth's disposal very much as the Principal Allied Powers are supposed to put their power at the disposal of the League of Nations. The difference in solidity between the two associations is surely not one of coercive power or any other attribute of political or military machinery, but of sentiment, or, in other words, of tradition and time, and this is only a difference of degree. It might be suggested that there is a vital difference in the respective degree of common interests, but the *Round Table* writer virtually disposes of that contention himself by his demonstration that the lack of common interests, rather than the lack of effective machinery, is the real reason why there has not been a united Commonwealth foreign policy since the conclusion of the war. Once the urgent common interest of resisting Germany's bid for "world dominion" had been secured by victory, the members of the Commonwealth reverted to their regional preoccupations. This analysis strikes us as true; but if it is so, has not the writer himself shown that the problem of unity within the British Commonwealth is precisely that which, over a wider field, confronts the League of Nations?

In the case of the Commonwealth, is it probable that, whether by diplomatic or other machinery, or by sentiment and interest, or by all these forces in combination, the problem of unity will be solved? And if unity of policy is attained, will it necessarily be in the interests of all members of the Commonwealth or of the rest of the world? "If," the *Round Table* submits, "we are to make any progress towards an ordered world, it will be because the progressive peoples can exercise real influence and real power within it." Few will disagree with this dictum, and yet its generality rather obscures the crucial concrete issues with which the writer, no doubt deliberately, refrains from dealing. It is difficult, however, to look into the future of the Commonwealth in abstraction from the two still unsettled controversies of "Empire Development" versus the "Open Door," and of racial equality versus the reservation of territories suitable for European colonisation to people of European origin and civilisation.

The latter of these controversies has presented itself in an acute form in Kenya—a problem dealt with by the *Round Table* in another article in the same issue. The British Commonwealth—including, as it does, some of the most populous non-Western civilised countries as well as some of the most thinly populated areas of Western colonisation—is the field in which this controversy is likely to be decided, with vital consequences, one way or the other, not only to the Commonwealth itself, but to the whole world; and, again, the economic policy of the Commonwealth or of its several members in regard to its vast combined resources cannot be a matter of indifference to other nations, and will largely determine their opinion as to whether the Commonwealth is a progressive and beneficent institution from a world point of view. The writer would perform a considerable service to serious students of the Commonwealth problem if, at some later date, he would carry the arguments of his present article into the field of the concrete issues suggested above.

SHIPPING IN THE FIRST HALF OF 1923.

LIKE all forms of transport, shipping is servant rather than master of the event, and has necessarily for watchword: "Prendre le bien où on le trouve." Thus it is not the fault of shipowners (whatever the general verdict on *homo sapiens*) that a world which cannot afford sufficient food or clothing should lately have paid considerable sums to secure the spectacle of coal-laden freighters solemnly passing each other in the North Atlantic—eastward and westward bound. This example of economic unreason and waste is mentioned as being the type and reflex of world conditions to which shipping has recently been forced to accommodate itself, and which have been seen to grow increasingly unfavourable. It is not that the record of the past six months has been wholly unsatisfactory, so much as that the position at the end of the half-year has visibly worsened in comparison with the outlook at the beginning.

The later months of 1922 had witnessed an unmistakable improvement in conditions. Demand for tonnage was expanding and better distributed; freights had risen from the low level of August-September by some 8 per cent.; and the market value of new ready cargo-carrying tonnage (based largely on freight prospects) had significantly recovered from £8 5s to £8 15s per ton for a single-deck 7,500-ton steamer. That confidence as to the future was growing within the industry itself is shown by the following figures of shipbuilding commenced in the United Kingdom:—

TONNAGE COMMENCED.	Tons.
Quarterly average, 1913.....	467,000
Second quarter, 1922.....	39,000
Third quarter, ".....	82,000
Fourth quarter, ".....	231,000
First quarter, 1923.....	355,000
Second quarter, ".....	241,000

The reaction in the second quarter of this year indicated that the optimism of shipowners was short-lived (a conclusion which will almost certainly be strengthened by a further shrinkage in the current quarter); that it was misplaced is easy to argue in view of the extreme depression which has developed in the last two months, but it should be remembered that the conflicting tendencies set in motion by the Ruhr occupation in January took some time to develop their ultimate effect, and the course of shipping business up to May at least was sufficiently puzzling and contradictory to account for owners still having courage to place orders for a little tonnage here and there.

In the following table the activity of shipping is presented in comparative form:—

SHIPS ENTERED and CLEARED with CARGOES, U.K. PORTS.
In Million Net Tons.

Year.	Entrances.		Clearances.		Total British Entrances and Clearances as Percentage of 1913.
	British.	Foreign.	British.	Foreign.	
1913.....	32.3	16.8	40.1	27.7	100
1921.....	25.1	12.0	24.3	12.1	68
1922.....	28.4	14.9	36.8	22.9	90
1923*.....	29.5	16.5	39.2	28.7	95

* At rate of first six months.

The greater activity denoted by the above figures produced a corresponding improvement in the employment of seamen, the numbers of engagements registered at United Kingdom ports (excluding the Irish Free State) being, in thousands:—

Year.	Engagements.	Per Cent. of 1913.
1913.....	572	100
1921.....	404	71
1922.....	481	84
1923†.....	548	95

† At rate of first six months.

In contrasting this evidence of fuller employment of ships and crews with the erratic and finally downward course of freights, it is necessary to consider developments in more detail.

The occupation of the Ruhr had two immediate results. It paralysed the movement of bulk cargoes to Europe, and evoked first from the United Kingdom, subsequently also from U.S.A., a pressing demand for coal. Exports of British coal per working day rose from 231,000 tons in January to 287,000 tons in March and 308,000 tons in May, a volume 23 per cent. above the average level of 1913. Freights for outward coal cargoes rose sharply, especially in European waters—the rate from the Tyne to Hamburg being on the average 4s 10½d in January and 7s 3d in March. The wider effects were confusing. On the one hand, the volume of cargo homewards steadily dwindled; on the other, ships were diverted from grain routes (cutting losses homeward in many cases), to be absorbed by the comparatively profitable business of coal-carrying. This produced during April-May an artificial shortage of tonnage in Eastern and South American ports, and rates temporarily rose for homeward voyages. Meanwhile, in spite of a 10 per cent. reduction in wages in April, shipowners were finding that congestion and delay at the coal ports, coupled with a 10s per ton rise in bunkers, trenched heavily on apparently attractive coal freights. Laid-up tonnage was also being re-commissioned at an increasing rate. Of the vessels covered by the Chamber of Shipping returns, some 200,000 tons were put to sea in the first quarter of this year, while 300,000 additional tons of American shipping seem to have been re-commissioned during that period. By June the entire market for whole-cargo freights was crumbling again. Exports of coal ebbed in that month to 260,000 tons per working day, and freights from the Tyne to Hamburg fell to 5s 3d; the loss of ore cargoes to Germany could no longer be off-set by the temporary stimulus afforded in the spring to British ore imports; above all, the market in whole cargoes of grain was coming to a standstill. Ships began hurriedly to lay up, and the tonnage idle in United Kingdom ports had risen on July 1st by 30 per cent. over the April figure.

The movement in rates can be traced in detail through the *Economist* Index of Shipping Freights (published in

the July Monthly Supplement), which seems to reflect accurately the known facts; the general tendency can be more simply illustrated by the course of average rates per month on the South American route:—

	Outward South Wales —Plate.		Homeward San Lorenzo —U.K.		Round Voyage.	
	s	d	s	d	s	d
January	13	6	24	3	37	9
March	16	9	21	8	38	5
May	14	1	29	9	43	10
June.....	14	1	23	4	37	5

Put shortly, the moral of 1923 for "tramp" tonnage is that shipping cannot live by coal alone, a moral reflected in the renewed fall in tonnage values during the second quarter. As regards shipping of the liner class, it is particularly unfortunate that the altered status of the Irish Free State in the last quarter's Board of Trade returns renders it impossible accurately to compare the statistics of entrances and clearances (table 2 above) in the light of estimated physical volume of trade. On the basis of such evidence as is vouchsafed by returns for the period January-March, it seems clear that cargo liners are still running less than economically filled, a conclusion which is corroborated by reliable reports that in most Conference routes such moderate improvement in volume of cargoes as has occurred is confined to "rough" goods normally shipped as bulk cargoes in "tramp" vessels. The North Atlantic passenger season has proved disappointing. Outward traffic has been well maintained in all classes, but there has been a serious decrease in the numbers of eastbound first-class passengers, whose relative importance, having regard to diminished revenues from the emigrant business, is much greater now than before the war.

The immediate outlook for all types of shipping is obscure. Favourable factors are the prospect of a bumper harvest, and the likelihood of a continued demand (if at a lower level of prices and quantities) for British coal for export. On the debit side must be set the progressive deterioration of Central Europe, the growing chaos in China, and the absence of any signs of recovery of effective demand for goods on anything like the pre-war scale. Moreover, shipping is now feeling the cumulative effects of the post-armistice riot of shipbuilding, as may be seen from the following figures of expansion in the world's fleet:—

Year Ended.	Increase (Millions of Tons).
June, 1912.....	1.4
" 1913.....	2.4
" 1920.....	6.4
" 1921.....	4.7
" 1922.....	2.4
" 1923.....	8

Thus, while the shipping slump dates back to 1920, the expansion of tonnage, even in the last 24 months, is comparable with that occasioned by the great boom of 1912. The figure for 1923 indicates that the painful process of readjustment is well in hand, and comparison of the total tonnage launched in the last 12 months (2.1 million tons) with the net expansion recorded suggests that, after allowing, say, 400,000 tons for loss through casualties, over three-quarter million tons have passed through the hands of shipbreakers, whose activities in the next year are likely to be accelerated.

Meanwhile, the physical volume of the world's trade being perhaps 75 per cent. of pre-war level, there remain 16 million more tons of shipping—steam, sail, and motor—in existence now than in 1914. After making all reasonably safe deductions from this total increase, viz.:—

	Million Tons.
Increase in tanker tonnage.....	4
Estimated increase in tonnage over 25 years old.....	2.5
Increase in wood and composite steamers, and in unusable U.S.A. Fleet.....	6
Total.....	12.5

there is left a net increase in efficient tonnage of at least 3½ million tons to compete for the carriage of passengers and cargo other than oil, a figure more than adequate to account for liners running part-empty and "tramp" freights being depressed to a level far below that of general prices.

Fortunately, the financial position of the majority of important British lines is, so far as ascertainable, satisfactory, and much stronger than that of most Continental competitors. The fact has, however, to be faced that acquisition of tonnage at boom prices, expensive absorptions, costly purchases of "control," and plentiful issues of bonus shares have resulted in heavy capitalisation of the industry. An analysis of some five million tons of liner tonnage indicates that, excluding debentures, the capitalisation per gross ton has risen from £6 in 1914 to nearly £11 in 1923, while the corresponding rise in the case of two million tons of tramp tonnage examined is nearly 400 per cent. The attempt to carry too much capital defeats its own ends, and it may be well for investors in shipping to contemplate the necessity of considerable writing down before the present depression is over.

OUR INDEX NUMBER.—A FURTHER FALL.

A DECLINE in commodity prices in July similar to that recorded in June has reduced our Index Number to the lowest point touched since the Armistice. The total is now 4182, which is 7 points below the figure for the end of September, 1922, hitherto the lowest touched since the early part of 1916. The fall in July amounted to 119 points, and followed a decline of 111 points in June. The general stagnation of trade is reflected in an almost unbroken list of declines in all commodities, practically the only exceptions being those affected by the strike of dock labourers. Our table below shows that, of the five groups, only cereals and meat are higher, while the largest decline is shown in textiles:—

Date.	Cereals and Meat.	Other Food Pro- ducts (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin- ber, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5) ..	500	300	500	400	500	2200	100.0

" July "	819½	756	1115½	744½	746½	4182	190.1

The increase in primary foodstuffs is due to a seasonal increase in the price of potatoes and to an advance in pork, following a sharp decline a month ago. An increase in the price of home-grown wheat is neutralised by an exactly similar decline in foreign wheat, while other cereals and meat are slightly lower. In the second group of foodstuffs both tea and sugar are materially lower; but butter, owing to the holding up of imported supplies at the docks, is substantially higher.

In the textile group, wool is an exception, with an increase, but other quotations all show a fairly substantial downward movement. The decline in cotton prices resulted largely from the more favourable prospects for the American cotton crop. In their monthly report Messrs Robert Barbour and Brother, Limited, write:—

As regards business generally, it cannot be said there has been any lack of inquiry, as offers have been numerous, but at very low prices. The orders booked have generally been small, and at rates which are little or no better than allowing machinery to stand idle. A great many of the offers received seem to have been sent to test the weakness of the market, and not with the object of reaching the order book. Goods are wanted in most of the markets, but it would seem that not until costs of production are considerably reduced can any weight of business be practicable. There is no getting away from the growing feeling that prices may be

distinctly cheaper in the near future should the cotton crop in the United States continue to make good progress, and, generally speaking, the weather conditions are very favourable. American yarns have been distinctly easier, and little success seems to have attended the trial of a minimum price at which these may be sold.

In the minerals group, pig-iron and steel rails have both been lowered in the hope of stimulating business, but iron bars are unchanged. A further slight fall is shown by coal, while among the minor metals lead is again slightly lower; but tin and copper have reacted slightly in an upward direction. In the miscellaneous section there are only a few changes, the principal of which is a reduction in the price of petroleum.

The month's changes in each commodity's index are shown in the following table, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	76½	— 5½	Cotton, A	136½	— 13½	Copper	54½	+ ½
English	89½	+ 5½	Cotton, E	130	— 18	Minerals	744½	— 29
Flour	78	— 2	Yarn	127	— 7½			
Barley	86	— 2	Cloth	133	+ 10	Baltic timber	103½	..

Tea	215½	— 7½	Pig-iron	92	— 9½	Crystals	15	..
Coffee	119	— 13½	Steel rails	140½	— 6	Rubber	746½	— 14½
Sugar, cane	81	+ 13	Iron bars	100	— 2½	Miscellaneous	4,182	— 119
Sugar, beet	116½	— 17½	Coal, steam	72½	+ 1	Total		
Butter	756	— 17½	House coal	72½	+ 1			
Tobacco	756	— 17½	Lead	72½	+ 1			
Other foods	756	— 17½	Tin	72½	+ 1			

The changes during July have reduced the level of prices to 63.1 per cent. above the figure prevailing at the outbreak of war, as compared with 67.7 per cent. a month ago, 73.1 per cent. at the end April, and 66.2 per cent. at the end of last year. The position of each of the groups in relation to that recorded at the end of July, 1914, may be seen from the following table:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscel- laneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec. "	233	229	209	261	230	230.9

Apl. "	148	214	195	180	144	173.1
May "	150	220	189	176	142	172.0
June "	141	220	191	167	137	167.7
July "	141	215	181	160	135	163.1

While British prices were a month ago 67.7 per cent. above the pre-war level, American prices, according to *Bradstreet's* Index Number, were 50.2 per cent. higher having dropped from 60 per cent. at the end of February last. The highest point this year in this country, it will be observed from the table, was at the end of April, but while American prices at the beginning of July were down to the level of October-November, 1922, British prices had also reached that level a month ago, and are now below the level of September last.

THE BRITISH ROPE AND TWINE TRADE.

AMONG Britain's minor trades which have become, in the aggregate, so important during the past half-century, there are few more interesting than that engaged in producing rope and twine. The industry is, of course, very ancient, though Beckmann gives us no particulars of its origin. But it is easily conceivable that the use of single vegetable fibres for binding fagots of wood together probably occurred extremely early in the development of the human race. From this it would be a comparatively small step to the twisting of two or more strands to make a stronger bind-

ing material, and there you have a rope. Thence a perfectly natural evolution in the choice of methods and materials would lead gradually to the production of the vastly varied ropes and twines of the present day.

Unfortunately, we have little reliable evidence of the industry's development in Britain, save that afforded by our foreign trade statistics. These extend back into the 'fifties of last century, so far as exports are concerned. As to imports, they used to be recorded along with great quantities of coir yarn, and it was not till 1907 (the year in which the Census of Production was taken) that the import figures were severely limited to rope and twine. Only since that year, then, are the import figures strictly comparable.

A complete review of the foreign trade during the last 65 years is interesting:—

BRITAIN'S FOREIGN TRADE IN ROPE AND TWINE.
(Annual Averages.)
(000's omitted.)

1918-22.....	319 .. 2,198	122 ..	570

It will be seen that shipments of British rope and twine have not always been progressive. In the late 'seventies they only averaged 113,000 cwts a year, falling in 1875 to less than 100,000 cwts—the lowest quantity ever shipped in all the 65 years. But a steady upward movement then began, and every succeeding lustrum showed an improvement on its predecessor until just before the war, when the quantity sold abroad had risen to an average of no less than 420,000 cwts. Indeed, in the single year 1912 the quantity reached the "record" at 482,000 cwts, and in 1913 it was only second best at nearly 476,000 cwts.

The great jump taken at the beginning of the present century is very striking. In the closing years of the nineteenth century the trade's methods had become somewhat antiquated, and an overwhelming flood of imports was the result. This soon braced up the British manufacturers, and in the ten years between 1902 and 1912 the quantity shipped by us was more than doubled.

Of course, the war has severely restricted overseas trade in these goods. In 1919 and 1920, it is true, our exports very nearly regained the pre-war level, only to fall again heavily, however, in the two succeeding years. Imports, on the contrary, have shown no such tendency to increase.

A notable difference between imports and exports is found in their relative values. In the last 15 years, according to the above table, total imports have risen in value from £1 17s to £2 9s and £4 13s per cwt. During the same period our exports have gone up from £2 6s to £3 6s and £6 17s per cwt.

The explanation is that the bulk of the foreign stuff landed here is American reaper and binder twine of comparatively low value. On the other hand, the major portion of British shipments is of cordage exceeding a quarter of an inch in diameter, and worth a pound per cwt more, while another large section is of goods of less than $\frac{1}{4}$ inch diameter, but worth more than double as much as binder twine.

It may be said, shortly, that in this trade, as in many others, our manufacturers have devoted themselves to the production of high-class goods. They cannot be said to have neglected the lower class entirely, for in some years since the war we have sent overseas larger quantities of binder twine than we have received from abroad. But they have apparently paid greater attention to the articles of higher quality, which presumably pay better.

Now let us inquire where these enormously increased exports of recent years have gone to. Here is a statement of the average exports for the 30 years to 1920, showing the quantities and values of those sent to foreign countries and the British Possessions:—

DISTRIBUTION OF EXPORTS OF ROPE AND TWINE.

		(000's omitted.)			
		To Foreign Countries.	£	To British Possessions.	£
	Cwts.			Cwts.	
1891-5	135 ..	251 ..	73 ..	177 ..	
1896-0	129 ..	242 ..	85 ..	204 ..	
1901-5	144 ..	326 ..	110 ..	287 ..	
1906-10	235 ..	519 ..	130 ..	357 ..	
1911-15	276 ..	637 ..	164 ..	477 ..	
1916-20	218 ..	1,319 ..	106 ..	799 ..	

Roughly, the table conforms to the proportionate distribution of our export trade in general. About two-thirds of the goods go to foreigners, and one-third to imperial markets overseas. The British Possessions, however, appear to take goods of higher quality than foreign purchasers do. In the five years to 1920 Colonial purchases averaged £7 10s per cwt, against £6 1s for the goods taken by foreign customers. In the five years to 1915, when prices were not so inflated, the relative values were £2 18s for imperial sales and £2 7s for those to foreign customers.

It is significant, however, that in the 30 years sales to foreign nations have grown by over £1,000,000 a year, while those to British Possessions have grown by only a little over £600,000 a year.

THE PHILOSOPHY OF STOCK EXCHANGE MARKETS.

(BY A STOCK EXCHANGE CORRESPONDENT.)

FORTUNATELY for the Stock Exchange, and for the community at large, the speculative account now open is of comparatively small dimensions. The war, however, with its incessant appeals for fresh capital—appeals that reached many classes which previously had never dealt in stocks and shares before—proved the direct means of inducing speculation, in that both men and women argued, plausibly enough, they could not afford to be content with the 5 per cent. offered by the Government, but must buy other things which paid more on the money, in order to raise the average yield on their investments, having regard to the high cost of living. To-day there must be many thousands of people up and down the country who hold more or less speculative industrial shares that they would never have dreamt of buying, that they might have even considered it unmoral to touch, before the war gave them an insight into Stock Exchange transactions. To the experienced mind there is nothing very surprising, however exasperating it may be, in the fall which has overtaken all Stock Exchange securities, from those of the best class down to the most speculative. Century-old experience has taught the certainty of reaction succeeding rise, and though the Stock Exchange man will candidly confess that he very seldom learns wisdom from the frequent lessons which experience should have taught, he regards the decline in the value of his investments with a philosophy, and a shrug of the shoulders, inculcated by what has happened so often on previous occasions. The less-informed holder of stocks and shares will find this philosophy worth the following. Provided the investor, be he large or small capitalist, is content with the character of his security, he need be at no loss of self-respect, or of good temper, at the fact of prices going against him. Nor need he take too much blame upon himself for having missed the opportunity for getting out at the top prices touched, because 90 or more per cent. of people do exactly the same, however long they may have been connected with City affairs. Even the banks and the trust companies do not invariably sell at the psychological moment.

The falls which have taken place during the past month are, after all, not very severe. Compared with the previous advance which most of the markets had enjoyed, the decline has been modest in extent, and to-day it is probable that most people who bought speculative industrials, except in a few markets such as that for shipping shares, for instance, can, at any rate, see their money back if they wish to sell. The cycle of Stock Exchange fluctuations moves erratically, and very often without apparent rhyme or reason, but it is easy enough to see the driving-power which is operating at the present time to depress values all round. With the Ruhr problem and Reparations difficulties so ever-present to the general mind, it is impossible to expect that energy or enterprise

is likely to be set into operation in such manner as will regalanise Stock Exchange markets into any activity during the holiday month of August. As men say to one another in the markets, Why should things go better? and to that there is no answer. The eyes of the Stock Exchange and its clients wait upon France, Germany, and our own Government. Unless there is to be a general cataclysm throughout Europe, some *via media* will be eventually found to lead the Continent out of its present *impasse*. The proprietor of Stock Exchange securities, investment or speculative, can close his book with a sigh, if not of content, then of resignation, at the prospect of improvement in the future. The policy of waiting is never popular, but it almost invariably pays to refrain from selling on markets which are admittedly flat, provided the holder can rest assured that his investments are in sound stocks. These are liable to fluctuations, of course, in accordance with the general trade and financial conditions of the world, but they are reasonably certain to show him a fair return upon his money during the period over which he may be called upon to wait before he can realise what he regards as a decent profit.

Notes of the Week.

Death of President Harding.—Shortly before going to press we have received with deep regret the news of the death of Mr Harding, President of the United States. The sympathy which this country will extend to our friends across the Atlantic in their great loss will bear the stamp of deep sincerity. British regret at President Harding's passing is something much more than the formal expression of condolence for a loss sustained by a great and friendly nation; it arises also from a very widespread feeling that the loss is not America's alone, but the world's. Mr. Harding, in his short tenure of office, has stamped his name on the world's history in a striking manner. At a time when one European conference after another was failing to achieve harmony or sow the seeds of peace, he summoned the Washington Disarmament Conference, and by a bold stroke achieved a remarkable triumph, represented by an agreement for the limitation of naval armaments by the leading maritime Powers. His name is thus coupled with the greatest practical step towards international peace which has been achieved since the Paris Conference. That outstanding success emphasises the untimeliness of his death, for Europe looked upon it as the precursor of further achievement, and in recent months has been watching with lively interest and hope his attempts to obtain America's adhesion to the International Court of Justice. With the European gloom deepening, the eyes of thinking people in this country turn inevitably to watch the more closely the policy of the United States; and they have been turning thither the more hopefully because they saw at the American helm a man who had proved himself capable of bold and practical contributions towards the settlement of world difficulties. Again, the confidence that Mr Harding had thus won served as a useful antidote to the irritation caused to public opinion in this country by the drastic application of the "dry law" to British ships, and other minor irritations that have arisen from time to time between the two nations. Nor will the historian forget that during his time was achieved the funding of the great British war debt to the United States. Some evil fate seems to pursue the occupants of the White House. President Wilson raised the hopes of Europe to their zenith, and then fell a tragic victim to ill-health and unpopularity. President Harding has been cut off in the early stages of a career from which the world hoped much. Of his successor, Mr Coolidge, who, as Vice-President, automatically takes the helm, Europe knows little. As Governor of Massachusetts his name became momentarily familiar by his firm action in connection with a police strike. His published speeches reveal him as an orator and a man who combines high ideals with a knowledge of practical limitations. During the remainder of

the Presidential term he will presumably, as indeed his initial statement shows, endeavour to carry on the policies of his predecessor.

Unemployment Plans.—When Parliament next meets, the country will be well into a winter in which, unfortunately, unemployment promises once more to be a severe and urgent problem. It was fitting, therefore, that occasion was taken of the debate on the Consolidated Fund Bill to discuss this problem and the steps which the Government propose to take with regard to it. In the main, the Government plans, as explained to the House of Commons on Thursday by Sir Montague Barlow, are on the same lines as those applied last winter. A new benefit year under the Unemployment Insurance Act will begin on October 17th. The Trade Facilities Act and the Export Credits Scheme will continue to operate. The Ministry of Transport will spend this year on various programmes £7½ millions, thereby giving winter work to some 30,000 men. Financial provision will be made for land drainage and improvement and water supply work, while the Forestry Commissioners will increase their normal programme. Various Government departments, noticeably the Post Office, will accelerate their programmes of new works; the scope of the Unemployment Grants Committee is to be extended, and so on. All these plans constitute a palliative, and not a cure. No radical reduction of unemployment can be hoped for until peace, security, and financial sanity are restored to Europe; and the outlook for such restoration is not becoming brighter. But it is desirable that such palliatives as can be devised should be made as effective as may be; and to that end we believe a great deal remains to be done in the shape of co-ordination of Government effort. At present the Ministry of Labour supervises unemployment benefit; the Board of Trade administers the Export Credits Scheme; the Treasury administers the Trade Facilities Act; and there are other instances of divided control. We regret that Sir Montague Barlow's statement did not foreshadow any attempt to establish unity of control over all the unemployment measures which the Government has in hand. It is to be hoped that before the winter is upon us the Government will devise a measure of effective co-ordination. Another point about Sir Montague Barlow's statement which claims special attention is his suggestion that the railway companies should "utilise their very large reserves for reconditioning and also for electrical development." This suggestion will doubtless achieve a degree of popularity corresponding with the prevalence of the belief that the railways have been treated over-generously by the Government, and that their present huge reserves have been built up unjustifiably at the expense of the taxpayer. But, on the other hand, the railway manager's

point of view must not be overlooked. The latter can argue that, having got his large reserves for the first time in history, he would be lacking in duty if he set out hastily to spend them upon "reconditioning" and new works while the outlook is obscured, and while it remains to be seen whether such works as might now be contemplated would not eventually represent expenditure in the wrong direction. Take a single illustration. A railway manager is pressed to carry out immediately plans for rebuilding stations and overhauling rolling stock. He may reasonably argue thus: "Would it not be wiser to wait and see if I can presently obtain road transport powers? If I can, reserves might be more wisely spent in acquiring an unrivalled fleet of road cars. If I cannot, I could then still rebuild inefficient termini, or even go out to meet road competition by a great development of frequent motor-train services between local stations." This approach to the question is sufficient to remind us that, although the use of railway reserves for helping unemployment is a popular cry, it is one that must raise serious questionings in the minds of railway managements.

Air Defence.—A very important statement was made on Thursday by the Prime Minister laying down the lines of a Cabinet decision on the controversy between the Air Force and the Admiralty. The Government has adopted the report of the Imperial Defence Committee on the relations of the Navy and the Air Force and on the co-ordination of the Defence Forces. This upholds the principle of a single Air Service. Briefly, the Government's decisions are that there shall be no Ministry of Defence, that the Navy, Army, and Air Force shall remain under separate Departments, and that a new Committee of Imperial Defence shall be appointed to secure co-ordination. This committee is to consist of certain Ministers, chiefs of the Staff of the three Services, the Permanent Secretary to the Treasury, and representatives of the Overseas Dominions, according to the nature of the business. Finally, the present standing Defence Sub-Committee is suppressed, and its past proceedings will be merged into those of the Committee of Imperial Defence. The decision seems to us a sound and practical one. It is fairly clear that the air may become the decisive arena of conflict in the future, and it would be folly to dissipate our strength by having two rival departments for material, two rival departments for training, and two sets of personnel. To our mind, however, the statement is most important for the recognition it contains of the fact that defence is one problem, not three problems. We believe that the solution is a Minister of Defence, and when we are informed that such a solution is undesirable and impractical, we are left wondering whether this means that it is impracticable to reduce the numbers by permission of ambitious Cabinet Ministers, or whether it is impracticable to make the necessary restrictions upon the present responsibility enjoyed by permanent heads of the fighting services. We are, however, content to leave this problem to the future, for it is clear that the strengthening of the Committee of Imperial Defence, the appointment of a presumably whole-time chairman, "with power to interpret the decision of the Prime Minister and the Cabinet to the Department concerned," and the appointment of a super staff in which three distinct Chiefs of Staff will have a sort of Cabinet responsibility for advising on defence policy as a whole, are steps which go a long way towards securing unity of command, and it would only be a small step further to make the Chairman of the Committee a Minister of Defence.

Railway Rates.—It was announced on Tuesday by the London and North-Eastern, the Great Western, and the Southern Railway companies, that they intend to reduce their rates for the carriage of merchandise traffic (including coal, coke, and patent fuel), on and from August 7, 1923, from 60 per cent. above the rates in force on January 14, 1920, to 50 per cent. above those rates. No alteration will be made in the flat rate additions. The London, Midland, and Scottish Company has independently made the same reductions to date from August 1st. The new reductions, which do not affect the larger industries to a great extent, mean a general levelling down of all

rates except in the case of certain commodities, such as iron ore, which we believe is already below the 50 per cent. mark. The four companies have now submitted to the Railway Rates Tribunal their schedules of standard charges showing the passenger fares and goods rates they intend to charge in the future. The schedules may be obtained from the offices of the companies (price 7s 6d each), or inspected at the offices of the Tribunal, 2 Clement's inn, W.C.2. It seems probable that the proposed changes will provoke considerable controversy among traders, and some time may be expected to elapse before they come into force with the sanction of the Tribunal. The Great Western dividend declared yesterday is at the rate of 3 per cent., which compares with 2½ per cent. a year ago, the addition being made "to reduce the disparity between the interim distribution and final dividend." The London and North-Eastern announces an interim dividend of 2½ per cent. on the 5 per cent. preferred ordinary stock.

Statistical Confusion.—Following upon the changes introduced into the Board of Trade returns consequent upon the altered status of Southern Ireland, whereby the foreign trade statistics are rendered unreliable for comparative purposes, we now have the Ministry of Labour choosing the middle of a long period of unemployment to change its classification of insured workpeople. In the current number of the *Labour Gazette* it is stated that with the present exchange of insurance books "opportunity has been taken to revise the classification of insured workpeople, so as to bring it as far as practicable into conformity with the 1921 Census of Population." This process is to occupy three months, during which "it will not be possible to give the total numbers of insured persons in each industry"—and consequently the percentages based on them. The Ministry admits that though the change will have great permanent advantages, it "has the disadvantage of making the returns in this and subsequent issues of the *Ministry of Labour Gazette* not strictly comparable with those in earlier issues." For three months, therefore, we are to be without data as to the relative importance of unemployment in various industries, and if percentages are restored at the end of that time, we shall not know for certain whether unemployment in shipbuilding or cotton, say, has improved or not during the interval. We agree that it is desirable that the Ministry of Labour statistics with regard to industries should conform to the classification adopted by the census authorities, but the C classification must have been decided upon in 1920, and it is difficult to believe the statisticians at the Ministry of Labour were not consulted at that time. Why, then, have they allowed two and a-half years to elapse before adopting the revised classification, and have chosen a time when the employment figures were more important than ever before to vitiate their value for comparative purposes? The recent alterations in the Board of Trade and Ministry of Labour statistics seems to us to emphasise the need for some central co-ordinating authority for Government statistics which will supervise the collection and presentation of statistics by the Government Departments. As a first step, a small advisory committee might be set up, on which business and non-official statisticians should be in the majority, and to which any contemplated changes of the kind to which we have taken exception should be referred before effect was given to them.

Petroleum Legislation in Britain and France.—The Petroleum Bills which have been introduced respectively in the House of Lords and the French Chamber of Deputies afford an interesting, if not odious, comparison. In the first place, they indicate that the military mind is suffering on both sides of the Channel from some lack of proportion. On our side it is unfortunately worse in this particular case. In the British Bill "to amend the Petroleum Acts of 1871 and 1879," it was proposed to give the Home Office power, acting on the advice of the military, naval and air authorities, to attach to the grant of annual licences for the storage of all grades of petroleum such conditions as to the mode, nature, and situation of the storage as may seem desirable in the interests of national defence. In other words, the defence authorities wanted

to obtain power to move an oil installation (tanks, pipelines, power and pump house) further inland, if they thought it was exposed to "attack." Happily, commercial common-sense was permitted to restrain official folly. The Bill was referred to a Select Committee, presided over by Lord Younger, which has now issued a report flatly recommending that the Bill be not proceeded with further. The Committee recognised that the principle that "a trade may be regulated during peace in order that a commodity may be protected more easily in time of war" was foreign to this country, and, once established, might be applicable to many other industries, and become "a serious hindrance to the development of trade." It recommended that a new, and innocuous, Bill be introduced, merely bringing up to date the old Petroleum Acts where necessary (legalising, for example, the roadside petrol pump), without admitting any official interference in trade. In the French Bill "sur le régime intérieur du pétrole," the treatment of the oil industry was not so silly as unfair to certain interests. For the purpose of the national defence, the oil companies are required to hold stocks amounting to three months' requirements, and to pay a tax of ten francs per ton on their imports, of which half the proceeds are to be assigned to the creation of a national fleet of oil tankers. The Minister of Commerce is further empowered to establish an oil bureau to stimulate the prospecting for oil in French territory, and to direct technical oil instruction. All this is harmless, if unnecessary. But a clause has been inserted which would require foreign importers of motor spirit to mix with their petrol before clearance from bond a proportion of alcohol, purchased from Government stocks, not less than 10 per cent. of the volume of the import, while it would allow the French refiner, who imports crude oil or crude petrol, to escape altogether from this objectionable requirement. It suggests that the foreign oil interests, whose refineries are outside French territory, are being purposely penalised. The Bill has been postponed until the next session, and it is to be hoped that the French Government will recognise in the meantime the unwisdom of attacking foreign interests if it seriously desires to see large stocks of petrol maintained in the country.

An Insurance Fusion.—The arrangement under which the Northern Assurance Company proposes to purchase the shares of the London and Scottish Assurance Corporation is in accordance with modern practice. The London and Scottish was formerly a life office (under the name of the London and Lancashire Life Assurance Company), but it gradually expanded its operations in other insurance directions, and in 1919 became the London and Scottish, probably to avoid confusion of identity with the London and Lancashire Assurance Company, which had also expanded its operations and dropped from its title the distinctive description "Fire." The provisional purchase price of the London and Scottish Corporation's shares is the equivalent of £7 a share, against a market quotation of 4½. The purchase is to be satisfied by the issue by the Northern Company of 50,000 ordinary shares (£1 paid), valued at 16, and the payment of about £40,000 in cash. The provisional agreement will take effect if 75 per cent. of the London and Scottish shares are offered to the purchasing company in terms of the scheme. The Northern Assurance Company has been a notable absorber of other assurance companies of late years. It has purchased, among others, the Indemnity Mutual Marine and the World Marine, the Royal Scottish Insurance Company, the Provident Accident and Guarantee Company, and the National Guarantee and Suretyship Association. Its assets on December 31st last amounted to 14½ millions. The London and Scottish at the same date possessed assets of 6.8 millions. It is intended that the two companies shall continue their business connections and personnel as heretofore, and that Mr W. Alneas Mackay shall become general manager of the Northern, while retaining his management of the London and Scottish.

An Irish Banking Development.—We are officially informed that, with the view of consolidating and extending its banking business in the Irish Free State, to which area its operations have always been entirely confined, the

Royal Bank of Ireland, established in 1836, has purchased from the Belfast Banking Company the 20 branches hitherto carried on by that bank in the Free State area. In making this arrangement the Belfast Bank is pursuing the same policy as the London Joint City and Midland Bank, with which it is associated, and whose settled policy is not to open or retain branches in any dominion, colony, or foreign country. The Belfast Bank is confining its business to Northern Ireland. The Royal Bank, in taking over the 20 branches which are situated in the City of Dublin and in the most prosperous areas of the counties of Dublin, Donegal, Louth, Meath, Monaghan, and Sligo, will add very considerably to its business and its resources, and give it the desired opportunities as a purely Free State Bank of encouraging the development of the manufacturing, commercial, and agricultural interests of the country. We understand that the Belfast Bank, in order to carry out its full desire for reciprocity, is appointing the Royal Bank its chief agent in the Free State area, and the London Joint City and Midland Bank has likewise intimated its intention of using the services of the Royal Bank to the fullest extent.

The Chinese Chaos.—To Western observers the Chinese Republic seems to be lapsing into anarchy and on the verge of dissolution. The Peking Government has long been without funds for its daily needs, and has all but ceased to exist. The people is being drained of its resources by the armies of the rival Tuchuns and plundered by brigands, who differ little from the soldiery, and who are absorbed into or separated from the various armies according as funds to pay them are available or lacking. Civil war is going on at Amoy between the Northern forces and the Cantonese, and a new conflict appears to be impending in the Lower Yangtse region in order to set up a new Government in Peking, but the chances of its success appear to be slender, and it threatens the trade of Shanghai. The traditional hatred of foreigners is being fostered artificially by leaders who profit by the existing disorders, and the only protection in sight against the repetition on a larger scale of the recent railway outrages consists in the projected organisation under foreign officers of a special railway police. It is not surprising that the European and American residents are demanding the strengthening of the foreign garrisons in order to protect the Treaty Ports. But the European Powers are occupied with even more urgent problems, the Washington Government seems indisposed to join them in taking action, and the Four-Power Treaty of 1922—fortunately, under existing conditions—precludes its several signatories from acting alone. The China Association, at its meeting on Friday of last week, passed a resolution calling for a conference of the signatories to the treaty to consider measures to assist China in achieving national union, settled conditions, and financial equilibrium, and suggesting either the extension of the powers of the conference on the abolition of li-kin and the establishment of the Customs surtax, which is to assemble after the ratification of the Washington Treaty; or, if this conference cannot meet this autumn, by another, specially convened. Both these plans, however, as Mr McNeill stated on Wednesday in the House of Commons, have been "rejected after full and careful consideration." Hopeful features in the situation are, first, that the Chinese, though affording excellent military material, are essentially non-militarist in disposition; next, that the rival leaders had much rather negotiate than fight; thirdly, that China has amazing vitality, which has brought her through worse trials; and, finally, that the people have money, and would lend it freely to any established and authoritative Government. Chiefly through the order and economic activity in the Treaty Ports, the Customs revenue, though it has now begun to decline, has in the last half-year beaten all previous records; and the development of events is not sufficiently rapid to demand instant action on the part of the Powers chiefly concerned. If the conflicting elements could be induced to accept a large extension of the foreign financial control which now keeps China from total insolvency, the rival armies might be disbanded and a stable Government set up with restored credit and authority. Otherwise it is

at present impossible to say what solution can be found. Meantime, the assurance need hardly be repeated that the secured foreign loans are perfectly safe.

American Cotton Crop.—Last Wednesday the Agricultural Bureau of the United States Government published its third report on the cotton crop for 1923-24. The condition of 67.2 per cent. was much below expectations, as numerous private firms anticipated a figure of over 70 per cent. The report compares with 69.9 per cent. a month earlier and 70.8 per cent. same time last year. According to private advices, the conditions have improved during the past month, and there has been a tendency to increase estimates of the crop to over 12,000,000 bales. The Bureau report, however, only indicates a growth of about 11,500,000 bales. There is a little confusion as to what the official announcement means, writes our Manchester correspondent, as it is understood that any abandonment of acreage has been allowed for in the condition statement. Owing to the statistics being much worse than expected, heavy buying of futures has taken place and prices have advanced about 2d a lb. In Lancashire trade circles there is an inclination to discredit the Bureau report, but it must be said that recently the plants in Texas have been adversely affected by excessive heat and the absence of substantial rains. If the American crop for this season only turns out to be 11,500,000 bales, it is not reasonable to expect lower values than at the moment. Some particulars have been published by Mr Hester, of the New Orleans Cotton Exchange, with regard to the cotton season which ended on July 31st. The commercial crop has been given as 11,283,000 bales, against 11,653,000 bales in the previous year and 11,377,000 bales in 1920-21. The consumption during the twelve months is estimated at 12,600,000 bales. The carry-over, about which much interest has been shown, is given as 2,578,000 bales, against 4,920,000 bales a year earlier and 9,194,000 bales in 1921. These figures are striking, and indicate very clearly the way in which stocks have been reduced during the last couple of years.

Cotton Control Board Scheme.—Our Manchester correspondent writes:—The members of the Master Cotton Spinners' Federation in Lancashire have rejected by a large majority the proposal to set up an advisory council for the industry. The members were asked to vote "Yes" or "No" on the following question:—"Are you in favour of the principle of establishing an advisory council for the cotton industry (consisting of representatives of the existing master cotton spinners', cotton manufacturers', and operatives' organisations), with full power to control production and to impose penalties upon firms who do not carry out its instructions?" The result of the ballot was announced on Tuesday last, when the following figures were given out:—For the proposal, 25.38 per cent.; against, 56.66 per cent.; no reply from 17.96 per cent. In view of these figures, the general committee of the Federation passed a resolution, with only one dissident, that no further action be taken in the matter. Originally the Control Board scheme was urged by the Provisional Emergency Committee, and one of the leading supporters of the idea has stated that the advisory council, when formed, would review the state of trade from time to time, and decide what proportion of the normal output of the spinning and manufacturing sections should be produced from month to month. It would also be necessary to fix prices calculated on the cost of production. The operatives compelled to work fewer hours would be compensated out of the levies made upon mills running more than the allowed proportion of machinery. In trade circles the scheme is considered impracticable, and according to many people, the regulations could not be enforced without Government support.

Conditions in the Ukraine and the Crimea.—A correspondent recently in these territories writes:—One can, by travelling through the Ukraine, get a surface picture of the economic conditions prevailing there. In going through some of the territory of this Republic recently I

found wheat fields spreading in all directions, as well as many stretches of other small grains, and there were other conditions looking towards what was described as a "bumper" crop. In addition to my own observations the Economic Council of the Government of Odessa has supplied me with figures on all phases of the economic life of Ukraine and its principal port, Odessa. For the year 1922-23 the area planted in different grains—maize, wheat, and the like covers 6,375,000 desyutines, the area in wheat fields alone covering 1,385,000 desyutines; the spring planting of the Odessa province being 1,600,000 desyutines. Foreigners who are well acquainted with the agricultural conditions of the Ukraine corroborate the official predictions that the yield will amount to nearly 100 poods per desyutina this year as against 35 poods last year. The prospects for grain in the Ukraine for 1923-24 reach the colossal figure of 1,100 million poods, from which the Government expects to take a general tax of 180 million poods. These last figures are, of course, pure speculation. The Ukrainian Government collected a tax in kind (amounting to about 16 per cent. of the peasants' produce) last year of 103 million poods of grain, but as they are making every effort to have the tax paid in money this year, the question of export of grain from Odessa will become an important one. Along with this the question of a "free port" is being discussed, the State industries being in favour of a free port because the development of factories and other industrial enterprises requires it; while the Foreign Trade Office of Odessa objects on the ground that the *porto franco* is contrary to the principle of State monopoly of trade. Odessa being greatly in need of reconstruction, the Government has given about 400,000 gold roubles and 30 million poods of grain for this purpose. Factories are operating at 25 per cent. of their pre-war capacity, some sinking to 5 per cent., while a few, such as a tanning factory, which I visited, are in excellent condition, as are also the tobacco factories, and one of the metal factories. In Odessa there are factories for making sacks of jute, linoleum, chemicals, soap, a shipbuilding factory, a naval factory in Nikolief, and an electrical establishment. There were said to be about 5,000 flour mills in the villages and towns of the Ukraine in pre-war times, 70 of the largest of these being operated by State trusts, with a project for 400 more of them to be so managed, the tax coming from these mills to be used to support industry and transport. Many of the small mills have been revived by small private concerns. There are about 150,000 people out of employment in the Ukrainian Republic, 35,000 of these being in the Odessa Government. These people receive some aid from the Board of Labour, and, the Government having given one million poods of grain and 3 billion Soviet roubles for public works, some employment has been afforded in the reconstruction of houses, &c. The average wage in the principal industries is 10.7 trade roubles per month, this being 48 per cent. of the pre-war wage. Compared with last year, there is an increase of 80 per cent. in the wages, while the increase in production of work is 60 per cent. The trade unions of the Ukraine comprise 840,000 members. During the past year there have been 5,180 disputes, 60 per cent. of them being in private factories, and 80 per cent. of the whole were decided in favour of the workers. During the journey by motor through the Crimea from Yalta to the capital, Simferopol, one passes many hills along the sea, the sides of which are covered with vineyards, with here and there a wine cellar. Though appearances are excellent, the authorities state that only a medium supply is expected. Considerable revenue accrues to the Government from the wine industry, as a tax of 25 per cent. is levied. The total seeded area of Crimea for the last fall and spring planting (mostly wheat and rye) is 300,000 desyutines which is expected to yield 16,500,000 poods, giving a surplus equal to the total crop of last year. The area in tobacco is 400 per cent. more than last year, being 1,600 desyutines. Of the several tobacco factories in Crimea, 5 are owned by the Government. A fair number of cattle and sheep are seen in the hills, and are said to be rapidly increasing, while the peasants are using horses, oxen, and water buffaloes for ploughing. Salt is produced in large quantities, and fishing, though there are great possibilities, is nevertheless handicapped by lack of nets.

William Beardmore and Co.—The report of William Beardmore and Co. for the year 1922 states that the negotiations with the Inland Revenue Authorities as to the company's liability for Imperial taxation are still proceeding, but the directors are convinced that the provision made in the accounts before arriving at profits is sufficient to satisfy the amount for which the company may ultimately be found liable. Profits for the year 1922 at £96,167 show a decline of over £31,000. Separate accounts for the five years ended December 31, 1920, were not issued, but a report submitted in December, 1921, showed aggregate net profits for the period of £2,411,000, or an annual average of nearly half a million. The profits of the past two years have been much below this level:—

	1921.	1922.
Brought forward.....	£ 711,909	£ 752,797
Net profit.....	127,288	96,167
	839,197	848,964
Prof. dividend.....	86,400	86,400
Ord. dividend.....	nil	nil
Carried forward.....	752,797	762,564

Last year's profits, in fact, were little more than sufficient to meet the dividend on the preference capital, but the directors have wisely not entrenched on the substantial balance in hand. No depreciation has been written off the value of the buildings, plant, and machinery for the year, the directors considering that "the depreciation written off in previous years has reduced these assets to a figure which is substantially less than their value, and the appreciation in the value of certain of these assets more than covers any depreciation there may have been in the year under review." There is a general reserve fund of £1,000,000, and a special preference dividend reserve of £250,000. Four and a-half per cent. debentures outstanding amount to £437,500, and there are also 8 per cent. seven-year notes to the amount of £1,000,000 maturing on January 1, 1928. Property, including goodwill and patent rights, stands at £5,479,200, having increased by £28,800 during the year, but stock-in-trade has dropped by £259,700 to £1,140,600. An analysis of the balance-sheet will be found in another column.

Watney, Combe, Reid, and Co.—This important brewery undertaking has maintained its prosperous position in 1922-23, as the following table proves:—

	YEAR ENDED JUNE 30.		
	1921.	1922.	1923.
	£	£	£
Trading profit.....	1,057,001	1,412,961	1,415,115
Net profit.....	281,524	614,614	690,718
Brought forward.....	277,265	150,962	194,494
Total available.....	558,789	765,576	885,212
Prof. and pref. ord. dividend	216,683	216,249	215,007
Deferred ordinary dividend....	191,145	254,833	254,833
	(24%)	(32%)	*(16%)
General reserve.....	150,961	100,000	*200,000
Carried forward.....	150,961	194,494	215,372
* Deferred ordinary capital doubled by capitalisation of	from reserves. £796,353		

Gross profit on trading was much the same as last year, but a saving of £131,898 on rates, insurance, and taxation more than counterbalanced increased expenditure of £40,034 on advertising and general expenses, and of £37,805 on freehold and leasehold maintenance, and consequently net profit works out £76,104 higher. The deferred ordinary stock receives the same dividend as last year, namely, 8 per cent. on its original amount, though the capitalisation of reserves which has been carried through reduces its nominal level from 32 per cent. to 16 per cent. Our criticism of this operation is strengthened by the directors' remark that "the burden placed on the trade by the recent Budget has only affected the profits for less than three months of the past year, but this experience has been sufficient to show its serious nature, which will have full effect in the current year." Trade investments are £126,608 higher, reflecting the purchase during the year of the Cobham United Breweries, and a rise of £190,877 in gilt-edged investments is another favourable feature. Sundry creditors have increased by

Railroad, Public Utility and
Industrial Financing

£211,683, and fixed assets are £248,207 higher. The directors apparently expect the present year to show less favourable financial results.

The Rally in Spelter.—The good recovery in the price of zinc, or commercial spelter, has been the leading feature in the non-ferrous metal markets this week. A few weeks ago, writes a market correspondent, the London price of G.O.B.s was down to under £28 per ton, which, of course, was well under cost, but early this week August fetched up to £32, representing an improvement of fully £4 per ton from the lowest. This is a very satisfactory development, as obviously if the price of zinc had fallen much lower it would have simply ruined the British spelter industry and jeopardised the Australian concentrate contract now in the hands of the British Board of Trade. The upward movement started under the impetus of a brisk demand from the galvanised sheet and wire makers for actual metal; thus there is no suspicion of speculation or manipulation about the rise. Zinc users were caught short this time, and, with large bookings of galvanised sheets made during the last fortnight in July, the necessary zinc requirements had to be covered. Several prominent sheet firms have placed contracts for thousands of tons of spelter, and in view of the small stocks in the country an interesting position is developing. The zinc imports for June amounted to 7,412 tons, this being a decline on the two previous months; but the total for the half-year at 70,996 tons compares very favourably with the returns for the corresponding six months of 1922, when only 34,740 tons came into the country. Searching for the outlet for all this zinc, it is pleasing to come across an industry that is doing well. The exports of galvanised sheets for the first half of the current year reached the handsome total of 305,769 tons, compared with 265,444 tons in the same six months of 1922, and 59,097 tons in the first half-year of 1921. The trade on the export side is, indeed, practically up to pre-war level again, and there is also a fairly good demand for home use. The stocks of zinc everywhere are on the small side, and production has been cut down in the United States and probably in Belgium also. At the beginning of July the total stocks in the United Kingdom were down to 1,700 tons, or so, against 4,650 tons a year ago, and in the States the unsold surplus amounted to about 17,000 tons, or practically a fortnight's supply. The U.S. production for June disclosed a cut of 4,500 tons, and although American prices have come up nearer to British parity, there has been no marked desire to sell American zinc forward. The Belgian output for June aggregated 12,000 tons, but there was probably a reduction last month, which will be disclosed when the returns are available. The Joplin mines have cut down the output of ore, and the Belgian zinc smelters took certain action when the price fell. Thus there may be a shortage during the next month or two, and when the consumers who have bought for forward delivery call for their metal the

nearby positions may become very tight. Belgium is reported sold out for two to three months, and statistically, and in every way, zinc looks very sound. The reaction from the highest was due to profit-taking over the holiday period.

West African Mining.—The two Gold Coast companies whose reports for 1922 are now in the hands of the shareholders are able to record a small improvement, writes our mining correspondent. But it is only to the extent that the losses are not quite so heavy as they were in 1921. The Abbontiakoon crushed over 90,000 tons of ore, and recovered gold representing nearly 38s per ton; the latter was insufficient to cover expenses. The loss of £13,000 compares with £22,800 previously. At 476,100 tons value 9.95 dwts the ore reserves score a moderate increase both in quantity and value. The second company—the Prestea Block A—last year underwent a financial reorganisation, the heavy capital being reduced by about four-fifths, and additional resources provided by an issue of debentures carrying onerous rights. The loss of £61,400—making a total of £376,400—was extinguished by the writing-down just mentioned. Hopes of better results are based upon the erection of a Minerals Separation plant, which should now be in operation. “Developments in the lower levels,” it is stated, “continue to show satisfactory results,” but at 104,850 tons, value 39.2s per ton, the ore reserves indicate a slight falling-off. The quantity represents only about a year and a-half’s supply. In each case labour is a crucial factor. The supply is inadequate, and often inefficient. Efforts have for some time past been made to secure larger numbers of natives. Up to the present little success can be recorded.

Jagersfontein.—A noteworthy change has taken place during the past 12 months in the position of this important Transvaal diamond mining enterprise. An interim dividend of 25 per cent. was paid in respect of the first half of 1920-21, but no final distribution could be made; nor did the shareholders receive anything for 1921-22, work having been suspended. It is now intimated that the actual sales during that period only amounted to £18,500. Last year they recovered to £455,800. The bulk of this represented stones on hand at the date of the 1921 balance-sheet, as operations were not resumed until November; the value of the diamonds recovered amounted to £183,900, an increase upon the result for the short period worked in 1921-22, but comparing with £1,005,600 for 1920-21. The final dividend of 17½ per cent. made a total of 30 per cent. for last year. After providing for taxation the substantially increased balance of £104,100 was carried forward. At the annual meeting it was intimated that the shareholders might with confidence look forward to another dividend in September. It would seem that development has been allowed to get a little behind-hand, but this is not really a serious matter. With new plant installed, and old equipment overhauled, the company is in a position to expand its output should conditions warrant such a course. On the basis of last year’s dividends the yield on the shares at 63s is about 9½ per cent.

LONDON STORES.—In our article on “The Profits of London Stores” in the *Economist* for July 21st, we regret that the figures of total assets and stocks for the Army and Navy and Civil Supply Stores became transposed. The correct figures for the Army and Navy Stores are for 1921, total assets £2,586,600 and stocks £933,733, and for 1922, total assets £2,623,167, with stocks of £740,063.

THE fortieth annual report of the Bank Clerks’ Orphanage shows a total income of £15,829 and an expenditure of £15,843, there being thus a small deficit for the first time since 1917. This excellent institution is still in need of financial support, which will be welcomed by the Secretary, 34 Clements lane, E.C.

Oversea Correspondence.

UNITED STATES. — COTTON CONSUMPTION — GOVERNMENT SUIT AGAINST INTERNATIONAL HARVESTER CO.—BANK MERGERS.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 23.

CONSUMPTION of cotton by American mills last month amounted to 542,166 bales, representing a decrease of 12½ per cent. from May, and of 13 per cent. from the high monthly record of 623,105 bales in March, but an increase of 6.4 per cent. as compared with June a year ago. That consumption would be lighter than in the earlier months of this year was fully expected in view of the falling off in cotton goods manufacturing and distribution, and a further decrease is likely to be shown for the current month, since curtailment of production has reached extensive proportions in New England and in other mill centres. The number of active spindles last month fell to 34,843,421, the smallest total reported for any month since November of last year, although 8.5 per cent. greater than in June, 1922. The latest figures available indicate that consumption, plus exports, for the eleven months ending with June amounted to 10,738,094 bales, or about 1,000,000 bales in excess of last year’s actual crop; the surplus carried over from the old crop has therefore been drawn on to that extent. Stocks of cotton, exclusive of linters, in manufacturing establishments and in warehouses at the end of June aggregated 2,577,954 bales, as against 3,200,896 at the close of May, and 3,284,381 bales at the end of June, 1922. Predictions made earlier in the year that there would be a marked shortage of cotton toward the end of the season, and that prices would soar to prohibitive levels, have not been realised, and are not likely to be. Forecasts that mills would be forced to curtail output have come true, not because of a shortage of raw material, but because new business has not developed in sufficient volume to keep them running at the previous rate of capacity. Curtailment of production, together with smaller exports, has therefore prevented a serious shortage in supply and a consequent rise in prices of spot cotton, which seemed imminent a short time ago. The cotton year, accordingly, is ending much better, in that respect, than was expected earlier in the season. The outlook for the new crop, however, is not as good as could be desired. Conditions vary in different States. About the best reports come from Texas, Arkansas, and the Carolinas. Hot, dry weather is checking boll weevil ravages in Texas, but rains in the lower Mississippi and Alabama regions are causing fears of weevil damage. Cotton is being picked in the Rio Grande Valley, between 2,000 and 3,000 bales having been ginned.

The dissolution suit which the Government filed against the International Harvester Company a few days ago is virtually a continuation of the litigation instituted several years ago. In a petition just filed in the Federal District Court at St Paul, the Department of Justice, through Attorney-General Daugherty, demands that the company be separated into three independent corporations, with different stockholders and officers, as recommended in the Federal Trade Commissioner’s report to the United States Senate in May, 1920. The Attorney-General explains that this action is taken because the original decree of November 2, 1918, dissolving the company has not accomplished its purpose, namely, “to restore competitive conditions in the United States in the interstate business in harvesting machines and other agricultural implements.” The Government now asks the Court to decree that the company is still a monopoly operating in restraint of interstate trade in violation of the Sherman Anti-Trust Law. The original decree provided, among other things, that at the end of a test period, which has now expired, the Government might ask the Court to determine whether or not free competition, contemplated by the Sherman Law, exists in the farm implement industry. The Government evidently has now taken that step. The sole issue raised by the present Government petition, according to Alexander Legge, president of the International Harvester

Company, relates to competitive conditions with respect to harvester machines. The petition does not charge the company with unduly raising prices to the injury of the American farmer, as was asserted in 1912, but it does charge that the company has been unduly depressing the price of harvesting machinery, particularly since 1920, to the injury of its competitors. The unfortunate condition in which manufacturers of harvesting machines and of all other farm implements find themselves, he says, is due to the serious business depression that affected the entire country, beginning in the fall of 1920. During the last few years the farm implement industry has been in an abnormal and distressing situation, President Legge points out, which directly reflects the situation of the farmer. High costs of labour, materials, and transportation have burdened the industry with high manufacturing costs, while, on the other hand, low prices for agricultural products have prevented the farmer from buying his normal and needed requirements of farming machinery. For such conditions the company claims it is in no way responsible.

The number of bank and trust company consolidations, which have been quite numerous this year, will probably be increased shortly by the merger of two large institutions whose combined assets exceed \$100,000,000. They are the Manufacturers’ Trust Company, whose capital is \$3,000,000, with deposits upwards of \$66,000,000, and the Columbia Bank, which has a capital of \$2,000,000 and deposits of about \$31,000,000. While no formal announcement has been made, it is understood that the deal whereby the Manufacturers’ Trust Company will absorb the Columbia Bank has virtually been completed. The Bank of America, which, according to its last annual report, had capital and surplus of \$11,000,000, deposits exceeding \$130,000,000 and total resources above \$150,000,000, has lately acquired the Battery Park National Bank. The latter had capital and surplus of \$2,700,000 and deposits of \$11,000,000. This is the second merger accomplished by the Bank of America in the past year, and the third since 1920. In all cases, the institutions thus taken over are continued as branches of the banks or trust companies that acquire them, and usually with the same officers and employees as before the consolidations. While the merger movement, therefore, neither increases nor decreases total banking facilities, it is, obviously, a centralisation of banking power, and tends to reduce the number of individual banks and trust companies operating separately.

From time to time during the past year reports have been current that a large tobacco merger was under way. Such a combination is now said to be nearing completion, and, if consummated, will be the largest single company of its kind in the world. It is assumed that the British-American Tobacco Company and the Tobacco Products Corporation are involved in the negotiations, and will form the nucleus of a combine which will include other tobacco manufacturing and distributing companies, and which will operate not only in the United States, but in Europe and other foreign countries. The Tobacco Products Corporation already controls many tobacco concerns, including the chain of United Cigar Stores, as well as the Foreign Trade Corporation, which manages companies that operate in the Near East.

FRANCE.—PUBLIC REVENUE—PAYMENTS FOR RESTORATION.

(FROM OUR CORRESPONDENT.)

PARIS, August 1.

THE French taxation returns for the month of June (exclusive of the yield from income-tax and the tax on war profits) show a total revenue from indirect taxation and State monopolies of 1,399,290,000f, or 174,718,000f more than during June, 1922, and 35,541,500f more than was expected when the Budget estimates were drawn up. The total revenue for the first six months of 1923 (income-tax included) amounted to 9,843,477,100f, in which the yield from income-tax amounted to 1,473,683,000f, or 283½ millions more than during the corresponding period

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

of last year. The much-discussed tax on turnover produced, during the first six months of 1923, a total yield of 1,379,252,000f, or an increase of over 21½ million as compared with the first half of 1922. It is evident, therefore, that this form of impost is now becoming stabilised, and that it is at last well on the road to proving the exceptionally valuable source of revenue that its inventor, M Klotz, M Clemenceau’s Minister of Finance, predicted it would be.

Wines and spirits and beers all fell below Budget expectations during the half-year, and the same may be said of the yield from motor-cars and bicycles, but these were more than handsomely compensated for by the remarkable increase in the yield from the duties on railway transport, which exceeded expectations by no less than 55½ million f. The big surprise in the yield from the State monopolies was the amount received from the post office, which (exclusive of telegraphs and telephones, which were both most satisfactory, the latter being over 7 millions over the estimated yield) produced over 15 millions in excess of Budget estimates. “Exceptional resources” produced 1,160,833,200f during the six months, including 752,318,000f from the special tax on war profits and 176,882,700f from the sale of war stocks, so that the total revenue, including the 9,843,477,100f mentioned above as derived from the ordinary normal and permanent resources of the Treasury, really amounted during the half-year to 11,204,310,300f.

It should be pointed out that, although the return for the month of June shows an excess of revenue over Budget estimates to the amount of over 35½ million f, the excess for the entire period of six months is returned as only 1,427,500f. This is due to the fact that the latter figure is based on the finally revised revenue estimates that were drawn up during the progress of the Budget Bill through the Senate. M de Lasteyrie, it will be remembered, estimated that a substantial proportion of his original estimated deficit of 3,800 millions would be met by the increased amount that was being received from taxation, over and above his original estimates of revenue. The fact that the revenue from indirect taxation and monopolies for the six months has actually shown an increase of nearly 1½ million francs over even the Minister’s latest revised estimates, as incorporated in the Budget Bill, indicates that so far his figures have been more than justified.

In view of the recent controversy as to the manner in which the French Government is alleged to be disposing of its resources, to the alleged detriment of British and American creditors, it may be useful to set forth how the enormous amount of money that has been raised for the restoration of the devastated regions and for the payment of pensions and other charges arising out of the war has been expended. M de Lasteyrie, in an official statement, asserts that down to December 31, 1922, the French Government had expended “on German account” a total of 97,740,000,000f. Of this amount 85,333,000,000f has actually been paid away in settlement of various claims for war losses (including pensions), while the surplus of 12,410,000,000f represents interest paid on the money raised to render it possible to meet the claims in question. Of the 85,330 millions applied directly to the work of reparation, 31,679,000,000f have been expended in meeting claims for losses suffered to the person, while the balance of 53,651,000,000f has been used to make reparation for

loss of property. The details of both accounts are as follows:—

FOR LOSSES SUFFERED TO THE PERSON.		Francs.
Military allowances, urgent assistance, gratuities paid in respect of the dead, &c.	14,299,000,000	
Prisoners of war and civilian victims	1,039,000,000	
Pensions and various payments to mutilated men	15,910,000,000	
Orphans, &c.	431,000,000	
	31,679,000,000	
REPARATIONS FOR LOSS OF PROPERTY.		Francs.
Payments by Treasury on account of the capital sum of indemnity claims	17,964,000,000	
Payments by the Crédit National on account of the capital sum of indemnity claims	16,466,000,000	
Payments by annuities on the capital of indemnity payments	6,406,000,000	
Payments in Renten in respect of the capital of indemnities	465,000,000	
Interest payments on indemnities made by Crédit National	1,148,000,000	
Other expenditure (works, purchases, &c.)	7,134,000,000	
Railways	2,182,000,000	
Public services	1,186,000,000	
	53,651,000,000	

These amounts have been expended since the beginning of the war as follows (the figures being in millions of francs):—

Year.	Reparations in Respect of		Total.
	Persons.	Property.	
1914	701	..	701
1915	2,291	.. 5	2,296
1916	2,897	.. 42	2,939
1917	3,705	.. 114	3,819
1918	4,731	.. 284	5,015
1919	4,787	.. 8,410	13,197
1920	4,672	.. 13,084	17,756
1921	4,503	.. 17,769	22,272
1922 (provisional)	3,392	.. 13,943	17,335
Totals	31,679	.. 53,651	85,330

The cost of the maintenance of the Army of Occupation is not, of course, included in these totals, neither are the sums that were advanced to Germany under the Spa Agreement, to enable her to purchase coal. These together amounted, down to the end of 1922, to a total of 1,841,000,000 gold marks, or approximately 7,000,000,000 of paper francs, the amount advanced to Germany by this country for coal being 239,000,000 gold marks. The greater part of these, however, have already been repaid by Germany, the exact amount of these repayments being 1,780,000,000 gold marks, composed of 144,000,000 gold marks in cash, 1,293,000,000 gold marks in various categories of payments in kind, and 343,000,000 gold marks in corresponding amounts of paper marks. (The payments made by Germany in kind are valued by the French Government at the above-mentioned figure, but are estimated by the Reparations Commission at 52,000,000 gold marks in excess of that sum. Neither is the capital value of the Saar collieries, estimated as being worth 300,000,000 gold marks, included in the total which Germany is credited in the above figures with having paid.)

It is impossible at present to ascertain exactly from what sources the French Government has obtained the sum of nearly 98,000 million francs which it has expended in the manner set forth above. The well-known economist M René Théry, however, in an article just published in his journal "L'Economiste Européen," sets forth the sources from which the money has been obtained as follows:—

	Francs.
Six-year obligations	930,000,000
Loans issued by Crédit National	17,614,000,000
Loans on annuities	6,406,000,000
Rentes handed over in payment of claims for indemnity	456,000,000
Foreign loans (purchases abroad)	1,100,000,000
Short-term bonds	71,500,000,000
Total	98,006,000,000

The last two sums M Théry qualifies as "approximate." In view of the fact that it has hitherto been impossible to elicit anything like exact information as to the amount of short-term bonds in existence, and of the statements that have repeatedly been made to the effect that the real total is much larger than is generally supposed, the qualification is probably justified.

GERMANY.—INTERNAL CRISIS—EXCHANGE AND CURRENCY—TAXATION REFORM—CURRENT FINANCES—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, July 31.

CONDITIONS in the past week have looked worse than at any time since 1919. There is a currency crisis, a political crisis, and a food crisis. The latter is much the most threatening of the three, because it has induced a state of public nervousness and irritation of the kind which in other countries has usually preceded serious outbreaks or revolutions. Ultimately all three crises must be linked with the mark exchange. The earlier mark collapses, though usually proclaimed to signalise disaster, were overcome fairly easily; against the privation caused to certain classes could always be set off an industrial boom, with better employment; and no mark collapse before 1922 caused any serious shortage of working capital. In general the process of adaptation to each new standard of values was rapid. But the more rapid the exchange depreciation, the harder it was to adapt. This time the speed of exchange depreciation has beaten all records. In one week, between the 23rd and the 30th, the dollar exchange rose about 200 per cent.—from 350,875 marks to 1,102,750 marks, and this happened after three months of depreciation. In the second six months of 1922 the dollar rose about twenty-fold; in the first seven months of this year about 150-fold. This has been accompanied by no all-round improvement of business, because against the slightly increased industrial activity of the past weeks in unoccupied territory is the fact of stagnation on the Ruhr. The shortage of food, which has led to some slight disorders, and to the besieging of markets and shops by crowds of hungry citizens, is a threatening novelty. It is due in some part to a real shortage, in greater part to the holding back of supplies. Farmers, as in Soviet-Russia, are unwilling to sell. Against normally rapid currency depreciation they can protect themselves by immediately putting their marks into goods, but they cannot protect themselves to-day when the prices of certain kinds of goods treble in a few days. To complete the parallel with Russia, many shops have been closed for lack of goods. For this there was no parallel even in the difficult months after the Armistice, although the real reserves of necessities were then smaller than now. It is not safe to say that these bad conditions can be indefinitely aggravated without a convulsion, but bad as they are, they would only be made worse by a Government collapse or by widespread disorder, and the vast majority of urban workmen, who alone count, are aware of this, and are kept well in hand by their leaders. The Communists, who think otherwise, are still a small minority. If general starvation comes, naturally these considerations would not apply. But for the moment the statements in the French Press that Germany is "on the eve of anarchy and dissolution" seem to be overdone, and the French reasoning that a German surrender will be enforced is probably wrong. The majority of Germans do not see a remedy for present conditions in the abandonment of resistance on the Ruhr any more than they see a remedy in revolution or disorder.

The cash question is still acute. The appearance of five-million mark notes has not much improved things; since these were decided on the demands of business have enormously increased. The Reichsbank, as usual, was caught napping; its vaults are full of 200-mark aluminium coins, each worth the hundredth part of a penny, which nobody will accept, but no provision was made for the demand for big notes. The private banks offer their clients drafts on the Reichsbank, against which the Reichsbank cannot pay out notes. Many persons get from their banks sheaves of drafts on the Reichsbank for different sums, and try and make their purchases fit their drafts. The waste of time and the irritation caused can

hardly be described. These troubles will be got over only if the mark exchange fall ceases for a time. There is so far no sign of a lack of credit or of industrial working capital. The Reichsbank continues to discount commercial bills, and conditions for big concerns are alleviated by the widespread affiliations existing between companies engaged in different stages of production of the same or similar goods.

The assaults upon the Cabinet and the Reichsbank are daily more bitter. The Centre Party, which is represented in the Cabinet, has attacked Dr Cuno through its organ, *Germania*, and almost the whole of the Berlin Press agrees with it. The questions asked are, why the Cabinet did not six months ago present a special taxation programme adapted to the special conditions caused by the Ruhr "war"; why the urgent and obvious demand that the existing taxes should be put on a basis guaranteeing a stable real revenue even when the currency is depreciating; and why the Reichstag was allowed to disperse at the peak of the crisis without doing anything? The Socialist party has presented its own programme, which is popularly called an "Ultimatum," but which could have that character only if the party was ready to attempt extra-parliamentary pressure. The programme demands the trebling of a number of taxes, including the already tenfolded Forced Loan (for bread-cheapening purposes), of the advance income-tax payments, and of the Sales Tax; further, a special Ruhr tax on business, a natural tax on rye, the acceleration of payment over to the Government of the coal, export, and other taxes, State gold mortgages on business undertakings, or direct State participation in them.

These measures do not seem to be necessary if only the "valorisation" of taxes is carried thoroughly through, but the Cabinet even now seems only partially converted to the latter solution. On the 30th it issued an announcement of its intentions. First is a "Rhine-Ruhr Levy," in two parts. The first part is based on the advance income-tax payments in the last two quarters of this year and first quarter of next. These payments have already been provisionally multiplied 25-fold, which was quite inadequate, as they are assessed on incomes of 1922, which averaged perhaps the 1-500th of incomes to-day. The levy will be twice the present provisional advance payments or 50-fold the income-tax of 1922. This multiplier is quite inadequate, because those classes (free professions) whose incomes are assumed not to have risen in measure with the currency depreciation are exempted, having been already exempted from the 25-fold rate. The Cabinet is here plainly repeating the blunders which it and former Cabinets have made for five years; it contents itself with adapting taxes (somewhat imperfectly) to the rise which has already occurred, but it is just as likely as not to find the new 50-fold payments depreciated to nothing by further currency depreciation—that is already the fate of the 25-fold payments. The second part of the Rhine-Ruhr levy is to be 50 times the motor-car tax. Here again there is no guarantee that the real yield will be increased. The population of the occupied districts is to be exempted from the levy. The beer tax is at last to be assessed on selling price—20 per cent. of the brewer's price. The mineral water tax is to be abolished, on the ground that the Reichstag lately refused to increase it. At present it yields practically nothing. Certain beverages which formerly came under this tax will be classed with the beer tax. Provision will be made for enforcing rapid payment of other taxes on consumption, and there will be a "taxation interest law" increasing the rates of interest on delayed tax payments.

This programme is not satisfactory. It is a repetition of the old policy of increasing the number of taxes, impressing the citizen with "levies," and so on, instead of getting in the old taxes efficiently. The 60 per cent. income-tax and the 100 per cent. (after a small exemption) expropriation of war profits are cases in point; nobody paid them, but they temporarily impressed citizens with the Government's thoroughness. The editor of the *Vossische Zeitung*, Herr George Bernhard, calls this "taxation-demagoguery," and he puts the Rhine-Ruhr Levy in the class. In fact, there is not the least prospect that any tax assessed on the multiplier system will yield real revenue. The increase in the punitive interest rates

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1746.

Capital (Paid Up) - £1,250,000

Every Description of Home and Foreign Banking Business transacted.

on delayed tax payments will probably prove useless for the same reason. The present rate is 15 per cent. per month for the first month's delay, 30 per cent. afterwards; but this month money fell in value to one-sixth, and a 15 or 30 per cent. penalty was not felt. The Government seems to have learnt nothing by its repeated experiments in this direction. E.g., the Department of Posts is obliged to announce that the annual deficit estimated a month ago at under six billions must now be estimated at 30 billions. In order not to be caught, for once, the Department announced six weeks ago not only a heavy increase of postal rates for July 1st, but also, well in advance, another increase for August 1st, trying, that is, to get ahead of currency depreciation which was not certain to take place. This ruthlessness impressed everyone, but the only result is that in August letters will be delivered to any part of the Republic for 1-20th of an English penny. The railways' condition is the same. Fares, well in advance, were declared quadrupled; but second-class travel for 200 kilometres will, nevertheless, in August be supplied for 1s 9d. The lack of a homogeneous policy towards the taxation and currency depreciation question is just as marked after the dangerous crisis of last week as it was four years ago, when no ordinary politician had any experience or theoretical knowledge of the matter.

Current finances go on in the old way. Between June 20th and 30th the floating debt increased from 31,041,975 millions to 42,936,163 millions, revenue received being only 512,373 millions against expenditure of 14,406,560 millions. The subsidy to railways in these ten days was over 3½ billions. The Finance Ministry's accounts for the first quarter (ending June 30th) of the present financial year show a complete collapse in real revenue. How hopelessly the real yield has fallen behind is shown by the fact that receipts in June, 1,262,524 millions, were only a little more than a third of the 3,539,388 millions received in the whole quarter, this though April began with a dollar exchange of about 21,000, while June ended with 155,000. For some taxes even the nominal receipts fell off, and the buying power of certain tax yields, reckoned on the commodities price index, fell in the three months to one-fifth or one-sixth. The July accounts will show an almost complete disappearance of real revenue, and probably those of the later months will be worse, because most of the measures now proposed were long ago proved worthless, and because the useful measures will not come at once into force. The total revenue as above given was composed of:—

	Million Marks.
Taxes on property, income, and business	2,343,094
Customs and taxes on consumption	1,035,875
Export duties	160,224

The Government is considering abolition of some of the numerous exchange regulations, including the compulsion to deal at the official rate. The Bourse boom continues, and yesterday reached a new height, with some stocks rising over 5,000,000 per cent. Leading stocks now quote between 10,000,000 and 18,000,000. The price of hematite pig-iron has been raised to 14,213,000 marks per metric ton, with supplements for iron smelted with English coal, ingots to 12,960,000 marks, bars to 18,750,000 marks, and thick sheets (five millimetres and over) to 21,131,000 marks. The official commodities index for the 24th shows 79,462 (one in 1914).

UNION OF SOUTH AFRICA.—NEW INSURANCE LEGISLATION — RAILWAY DEPRECIATION, BASED ON CAPITAL VALUE OF ASSETS OR REVENUE?—GOVERNMENT EXPENDITURE AND COUNTRY'S RESOURCES.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, July 4.

THE Parliamentary session has just closed after an almost record duration of 103 days. It will be more remarkable for the things left undone than for useful measures placed on the Statute book. Some 35 Bills were passed, but ten of these were merely formal financial measures. About ten Acts were administrative, dealing with such diverse subjects as radio stations, pensions, magistrates' courts, aviation, and Customs. Three important measures, among them the Conciliation (Labour Disputes) and Miners' Phthisis Bills, were postponed as, consequent upon their highly controversial character, they could not be dealt with in the time available. The Acts passed of public importance were the Insurance Act, the Beef Export Bounties, and the Currency and Banking Act Amendment. The last-named permits British and Union Treasury bills to be taken as security for reserve bank notes.

The Insurance Act consolidates laws in force in several provinces of the Union. Companies have to be registered and make deposits on a stipulated scale. Life assurance, bond investment, and industrial companies are obliged to furnish to the Treasury a certificate by an actuary that the conditions on which business is proposed are actuarially sound (though I am afraid this could not be done in respect to certain State pension funds!). The moneys and securities deposited are to be available to satisfy any judgment obtained in the Union by any policyholder against the company. Policyholders are entitled to sue the insurance company in any court of competent jurisdiction in the Union, and any question of law arising shall be decided according to the law of the Union. No stipulation purporting to deprive the policyholder of the benefit of such provision shall be valid. Minors over 18 may insure their own life, with all rights except of pledge and cession. Policyholders may engage in military or naval service in defence of the Union without the consent of the company. A policy which has been three years in force is during lifetime protected against creditors to the extent of £2,000 (plus bonuses), subject to the rights of the person to whom it is pledged. After death the policy is similarly protected, but in the case of a surviving spouse only to one-half. A policy ceded to a wife is to be her property free from the husband's control, and shall not be void as a gift between spouses. Important provisions are made with respect to amalgamations of companies, which have to be sanctioned by the Court.

Agents for Lloyds or similar associations have to be registered, pay a licence fee of £50, and deposit £2,000. Insurance companies are debarred from making any discrimination in favour of individuals by way of special inducement, rebate of premium, &c., and from accepting a promissory note for the first year's premium, or portion thereof. After three years the onus shall be on the company to prove that any statement of age is incorrect. Ten schedules are appended to the Act dealing mainly with returns which have to be filed with the Treasury.

An interesting question has recently arisen in connection with the assessment of depreciation on the South African railways. It is the practice to make allocations to the renewals fund, besides ordinary maintenance. In ten years the Government railways have spent £14½ millions on permanent way upkeep, and £21½ millions on rolling stock maintenance. The Auditor-General, giving evidence before the Railways and Harbours Select Committee, said: "We have actually spent from the renewals fund in rolling stock in ten years £11,933,900 from revenue, against £16,779,740 from capital, or 71 per cent. of the total capital expenditure on rolling stock. I am not aware of any railway in the world which has spent such a large sum in such a short time on renewals of rolling stock from revenue." Five years ago the Public Accounts Committee reported that "for the present" a contribution of not less than £1,400,000 a year to the general renewals fund was sufficient. The contribution is a very

elastic item; for instance, it had grown to £1,957,500 for 1921-22, in the critical times of 1922-23 it was reduced to as little as £842,400, while in the current estimates (1923-24) a sort of middle course has been taken at £1,162,600. With such a fluctuating factor, it is obvious that the net result of working may be made pretty well what is desired. For example, the railway profit this year (1923-24) is estimated at £43,000, but had the depreciation been as meagre as in the previous year, the profit would have been close upon £400,000. Conversely, had it been as lavish as in 1921-22, the small profit would have been converted into the substantial loss of three-quarters of a million. The two million a year allocation was based on a 25 years' life for rolling stock and 30 years' permanent way, but last year the Railway and Harbours Committee voiced a doubt that 25 years was too short a life to assign to rolling stock.

The Provincial Finances Commission was unable to give a definite answer to the question whether the expenditure of the four provinces was proportionate or otherwise to the resources of the country, but endeavoured to ascertain what relation the total expenditure of the Union and Provincial Administrations should bear to the income of the people. It first points out that the former (combined) had increased from £13,350,000 in 1913-14 to £27,000,000 in 1921-22, expenditure on post office and interest on railway and provincial debt being excluded. The value of mineral production declined from nearly £53 millions to £36 millions (owing to the strike and the lesser production of diamonds). Wealth "derived from minerals is likely to continue to decrease unless there are new discoveries of gold, or a very large expansion of mineral production other than gold. . . . Expansion in the production of the farming industry since 1911 is far from being commensurate with the growth in public expenditure." Manufactures have increased from £18,120,000 in 1915-16 to £40,343,000 in 1920-21. "The conclusion seems inevitable that the country's expenditure has grown at a rate quite out of proportion to the increase in resources. The Union is not a rich country, and would be a comparatively poor one but for its mineral assets, some of which are being rapidly exhausted."

POLAND.—EXCHANGES—POLISH BANKING—UPPER SILESIAN COAL—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

WARSAW, July 20.

THE second half of June was marked by spasmodic fluctuations of the exchanges. The American dollar, which at the end of May was quoted 53,000, reached three weeks later the record level of 180,000, and after a few days fell to about 100,000. In July the movements of the mark were less violent, and since the beginning of the month a comparatively slow upward tendency on the exchange market may be observed, as shown by the figures below:—

	End of June.	July 6.	July 18.
London.....	458,900	496,000	564,000
New York	99,500	108,000	121,000
Zurich	17,810	18,000	21,500
Paris.....	6,155	6,390	7,150
Berlin	0.81	0.57	0.50

It would be wrong to draw from these figures the conclusion that the climax of the present crisis has been reached. The exchanges have been maintained since the end of June on a relatively stable level, by drastic exchange regulations, which have completely crippled the trade and industry of the country. The Central Board of Exchange has been functioning; the banks are not authorised to sell foreign currencies. The rates are fixed by this Board, and they are 20 to 30 per cent. below those quoted by the illicit "black exchange." In consequence, the influx of foreign bills to the banks, which are obliged to apply in their transactions the official quotations, has ceased nearly completely, and it is impossible to obtain from them, even with a licence, foreign remittances. The import of raw materials is much hampered by this deadlock, and it is reported that various textile factories are obliged to cancel orders for American cotton because of the disorganisation of the exchange market.

The whole situation is accentuated by political instability at home. At a moment when the maintenance of a firm and decided fiscal policy was of the greatest importance, Mr Grabski has tendered his resignation, because it was impossible for him to co-operate with the new Cabinet. The portfolio of the Ministry of Finance has been taken over by Mr Linde, who was formerly at the head of the Postal Savings Bank, whose foundation and development is his personal achievement. It seems that the new Minister has not a new financial programme, and that he will simply continue the policy inaugurated by his predecessor.

The capital of the Polish banks amounted on January 1st of this year to 26.4 milliard marks, as compared with 9.2 milliards at the beginning of 1922. The increase of the capital did not keep pace with the depreciation of the mark. While the exchange of the dollar rose from 3,000 in January, 1922, to 18,000 in December, or by 600 per cent., the increase of capital did not even reach 300 per cent. The banks had the task of financing with a much smaller capital a larger volume of trade and industry. A similar dwindling away of the deposits of the Polish banks may be observed, as shown by the figures below:—

	Deposits. Million Polish Marks.	Value Expressed in American Dollars.
December 31, 1921.....	33,880	11,784,600
" 31, 1922.....	125,049	7,045,000

Though the deposits increased from 33 to 125 milliard marks, their real value was at the end of 1922 nearly 4 million dollars smaller than in 1921. The difficult problem of financing the trade and industry of the country could only be solved by a growing support of the credit system by the Polish National Bank, which could place a practically unlimited amount of paper marks at the disposal of the private banks. While in January of last year these institutions had rediscounted only 15.7 per cent. of their bills, and in February 19 per cent., the percentages rose in October to 38.5 per cent., in November to 43.5 per cent., and in December to 46 per cent. Though the rate of interest charged by the banks has reached the abnormal height of 50 per cent. and even more, the profits obtained from loans did not keep pace with the steadily increasing costs, which from December, 1921, to December, 1922, rose from 2.4 to 17.6 milliard marks. At the end of 1921 these costs absorbed 78.6 per cent. of profits obtained from loans; at the end of 1922, 92.6 per cent.

The coal production of the Polish part of Upper Silesia is slowly approaching the pre-war level. Though the partition of the complicated economic organism made a very deep cut in the production of this province, the mining industry has overcome to a great extent the difficulties resulting from political reorganisation. Out of 68 Upper Silesian mines, Poland obtained 54, with an output of 33.8 million tons in 1913. In 1920 the production amounted to 24.6 millions, in 1922 it reached 25.6 millions. During the present year there has been a further increase. In January 2,330,000, in February 2,102,000, in March 2,413,000 tons were produced, as compared with an average monthly output of 2,130,000 in 1922. The progress would have been more rapid if Upper Silesia had possessed the necessary railway connections with the rest of Poland. The railway system of this province was constructed with the view of facilitating the traffic with Germany, while the lines connecting Upper Silesia with Poland were neglected. In consequence, greater quantities of coal are sent to Germany than to the Polish provinces situated outside Upper Silesia. I reproduce below the most important items relating to the production and export of Upper Silesian coal during the first four months of this year (metric tons):—

	January.	Febru'y.	March.	April.
Production	2,329,775	2,101,707	2,413,235	2,131,530
Taken by Polish Upper Silesia ..	839,482	750,057	817,373	724,018
the rest of Poland	478,042	340,547	377,340	449,314
Exported to Germany	775,865	797,848	1,039,529	579,311
Exported to other countries	366,925	345,967	225,031	248,089

The principal foreign market for Upper Silesian coal is Germany; Austria ranks second. The export to Czechoslovakia has decreased considerably in comparison with the pre-war figures. The export of coal to Italy has

ceased completely. The competition of Upper Silesian coal in foreign countries has been rendered very difficult by the disappearance of the premium which resulted from the depreciation of the mark. While in 1922 the price of Upper Silesian coal, expressed in gold, was much lower than the price quoted in England, to-day it has reached nearly the world level.

The trade returns for the first quarter of this year show for the first time an excess of exports over imports, as may be seen from the figures below:—

	(In Millions of Swiss Francs.)	Imports (—)	Exports (+)	Excess of Imports (—)
January.....	99.8	71.8	28.0	— 28.0
February	81.8	115.4	33.6	+ 33.6
March	100.6	146.7	46.1	+ 46.1

The principal articles exported were coal (3,706,000 tons), timber, raw and manufactured (766,000 tons), oil products (74,600 tons), sugar (54,800 tons), metal products (62,500 tons), zinc (17,000 tons), cotton goods (2,200,000 tons).

BULGARIA.—EXCHANGE MOVEMENTS—MONETARY SHORTAGE—BUSINESS POSITION.

(FROM OUR CORRESPONDENT.)

SOFIA, July 15.

THE predominating influence in the economic life of Bulgaria since the solution of the Reparations question has been and still is the movement of the lev. Down to the end of May the rates moved very sharply in favour of the country, as the following quotations for sterling in Sofia show:—

	Leva.
March 1	820
April 2	630
May 1	609
May 26.....	440
June 1.....	500
July 13.....	505

Importers who paid for their stock at the higher rates—ruling a few months ago have been badly hit, as also have those who invested dearly-borrowed money in building-undertakings and similar ventures. Many exporters of corn, tobacco and other raw materials bought relatively large stocks at the higher level, and are now in an awkward position.

The general trade position has also been aggravated by the prevailing scarcity of money. Since November last, bank credits have practically ceased, and almost all the banking houses have called in their loans. Moreover, the organisation of the National Bank is such that it has signally failed as a regulating institution. Indeed, what with heavy advances to the Treasury and large investments made under considerable pressure from the late Government, the efficiency of that institution has been sadly impaired. The position is still further complicated by the lack of a really competent trained staff.

Export trade has practically ceased for the moment as a result of the appreciation in exchange. But this is, of course, practically the sole source of foreign currency; and liabilities incurred abroad in respect of previous imports, the settlement of which has hitherto been postponed in anticipation of a further rise of the lev, are now beginning to fall due. The demand for foreign currencies thus remains active: while the new Government has made it a point of honour that the prestige of the national currency shall be maintained. The regulations which were created recently with this end in view have not, however, had the desired effect, for the general uneasiness which followed their publication led to considerable apprehension in business circles and a nervous rush to buy foreign exchange. It seems probable, therefore, that the lev will fall still further, though this gives no reason for anxiety, for until the pound sterling stands at somewhere about 620 leva there is little hope for active exports. The prosperity of the last three years has rather spoiled producers of corn and tobacco, and they are not now willing to sell unless they are really in need of money. As a matter of fact, however, money is plentiful amongst the peasantry, and the shortage which we have described really only affects the urban population. In addition, those exporters who have been caught out at the higher level will certainly

make desperate efforts to keep up prices, and the resultant lack of export will, of course, at once react on the exchange position.

The present situation is unpleasant, but it has at least the advantage of being quite clear. The vicious circle must be broken by importers and exporters alike liquidating their speculative position and cutting their losses. This is the only really effective way in which prices can be adapted to the new economic position of the country. Fortunately, moreover, Bulgarian industrial undertakings are not involved in the present crisis to any considerable extent, and their stocks could be liquidated without any serious loss.

From the point of view of the peasant proprietor, who represents the overwhelming majority of the nation, the fall in the price of the few articles of consumption he needs to buy, such as cotton yarn, salt and petrol, is the only thing that counts at the present time. Indeed, as soon as the internal prices of these commodities have come down to their external equivalent, the process of reshuffling may be regarded as practically complete, as far as the majority of consumers are concerned.

The new Government has appointed an expert committee to investigate the economic and financial position of the country. Its good intentions in this respect are beyond all doubt, but the actual results will depend very largely upon whether a policy can be evolved which will save the country from rigid State control, and from the clumsy bureaucratic regulation of delicate questions of trade and finance.

Letters to the Editor.

CREDIT CONTROL AND UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I don't know where your correspondent Mr W. H. Norton gets the idea as set forth in his letter to you in your issue of the 28th ult., that "the Sound Currency Association is still suffering from the delusion that a nation's currency is sound when all notes issued are covered completely by gold." If I have any authority to speak for the association, I would beg to state that this delusion exists only in the imagination of Mr Norton. We believe that a sound currency implies a free market in gold, and that notes issued should be made payable in gold on demand. This is an entirely different thing, and allows for such things as credit, the science of banking, and the necessary gold reserve to be maintained which only skill and a knowledge of such things can determine. The Federal Reserve Bank notes of the United States of America and the Bank of England notes do not require to be covered completely by gold, but, given a free market in gold and convertibility, are regarded as quite sound by the association. The unsound feature in our system at present is the lack of an absolutely free market in gold, which cannot yet be permitted because of the depreciation in the currency which still exists. This can be proved by the fact that the price for gold bullion in our currency exceeds the mint price. If the prohibition to export was entirely taken off, at the present rate of exchange it would pay bullion dealers to present Bank of England and Treasury notes for payment in gold and ship the metal to America. To restore the exchange to parity and prepare the way for a free market in gold, there is only one remedy that I know of, and that is to gradually contract the issue of paper money until parity of exchange has been re-established. When that has been achieved, then the prohibition can be removed, and the amount of the issue of currency notes be left to the automatic regulation supplied by their convertibility.—I am, Sir, your obedient servant,

D. M. MASON,

Chairman, Executive Committee,
Sound Currency Association.

August 1st, 1923.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of July 28th, Mr D. M. Mason states that he frankly believes that a financial system which would eliminate periodical contractions of credit and fluctuations of prices is impossible of achievement;

further, that were such system possible, he believes that its adoption would be inadvisable.

We, on the other hand, believe such achievement to be possible; further that, in order to secure the satisfactory development of the nation, it is essential that the natural protection of a national currency system be afforded, so that our overseas trade shall consist of the exchange of goods for goods.

How a currency system of this nature would operate was outlined in my letter in your issue of April 28th last, in which I quoted the views held by the late Dr Ellis Powell, and to which Mr Mason did not reply.

Unless Mr Mason and his association are prepared to consider and adopt the advice given by Mr C. B. Norton, they will certainly give ground for thinking that his suggestions are well founded, and that the banking and financial interests represented by the Sound Currency Association "are merely fooling the world and prolonging its agony."

We maintain that the return to a system which would render national paper convertible into international gold on demand would be disastrous to Britain. It is open to Mr Mason and his associates to challenge our position.

The exigencies of space do not allow of a fuller exposition of our views, but I shall have pleasure in forwarding further particulars to any of your readers interested in the subject.—Yours faithfully,

W. G. RENWICK,

General Secretary,

The National Currency League.

7 Queen street place, London, E.C. 4,

August 1st, 1923.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As a constant reader of your valuable paper, I have followed with interest the controversy which is appearing in your columns regarding "Credit Control and Unemployment," and I should esteem it a favour if you would grant me space to say a few words on the subject.

I do not wish to contradict your esteemed correspondents, but judging from a lifelong experience in the export trade, I should say that their diagnosis is incomplete. It is an axiom that our home trade is not sufficiently considerable to occupy all our workers in all our industries; we are therefore compelled to find outlets for our manufactures in all markets of the world, and before the war the fairly steady business which we secured in those markets kept the number of unemployed workers at a reasonably low percentage.

Now, all markets, and even those which were outside of the war zone, have suffered to an enormous extent in consequence of the catastrophic slump of 1920-1921, and confidence has been slow in reviving, so that only urgent requirements are covered, the result of which is a hand-to-mouth business throughout the world.

It is not a lower Bank rate, nor greater credit facilities that are necessary to bring about an improvement in the situation. What is wanted are buyers from all parts of the world, buyers who can buy and who can pay for the goods.

A study of export statistics shows that for years past scarcely any market has received as large an annual quota of cotton piece goods and yarns (yardage and weight) as it did before the war. It is thus evident that there is no glut, but, on the contrary, a shortage of goods nearly everywhere, especially taking into account the normal growth of population. And this applies to all other classes of manufactures as well.

But to be able to buy the overseas merchant must have confidence that the produce of his own market will find a ready sale abroad, and it is just this which is lacking. This, to my mind, is the cause of all the trouble, and this will only be remedied when the great Central European and Near Eastern markets shall be enabled to resume their normal trading operations, and, by taking from the overseas countries the raw material and produce of which Central and Eastern Europe is in need, place our overseas customers again in a position to buy freely from us.—Yours faithfully,

A. DE MIERRE.

Books and Publications.

THE LIBERAL STATE.

STARTING from the belief that Liberalism is not an anæmic compromise between two full-blooded extremes, but an active, energising, vital political principle, Professor Ramsay Muir sets out in this book* to sketch the Liberal State for which he and his associates are working. To translate a guiding principle into a concrete system is not an easy task. The idealist, whether in religion or in politics, who paints from afar the city of his dreams is tempted to add glory to glory until he has achieved the new Jerusalem rather than a mundane cis-Jordan community. This temptation Professor Muir successfully resists, and if he seems at times a little inclined to predicate a wholesale spiritual conversion, it is far better for the political thinker to credit humanity with too much than with too little of the capacity to reform itself.

By way of distinguishing between the more or less distant ideal and the very urgent needs of the near future, he divides his picture into parts, dealing separately with what he calls "the practicable ideal" and "the immediate tasks of reform." In his chapter on the practicable ideal he is necessarily somewhat sketchy, touching in less than 25 pages on the place of nationalism in politics, international security and the League of Nations, tariffs and Free-trade, the duties of Empire, devolution or proportional representation, the rights of inheritance, the place of hospitals, the problem of slums and town planning, building guilds, education and the size of classes, foreign trade, and the agricultural revival. But the keystone of the ideal State is a reformed industrial system in which the conflicting elements of to-day are co-ordinated, and real co-operation is established between employers, employed, and the Government. The Industrial Council, to which much of the work now ill-done by Parliament and the Bureaucracy would be relegated, is the author's enthusiasm and his great hope. Less of secrecy in the matter of accounts and costing is, he believes, an essential reform, and there are probably few economists whom he will here fail to carry with him. The organisation must doubtless be built up by degrees, and the limits of Government encouragement are not yet clear; but on such lines as these the future of industry, if there is to be a great future, must lie.

Among the immediate tasks of reform, foreign politics and finance naturally take a leading place. In foreign affairs Professor Muir argues from the Liberal point of view, which is rapidly becoming the British point of view, for the much-divided Liberal policy of 1920 has now practically converted the nation. Until this policy triumphs there is little chance of a trade revival, and that revival is the condition of all reform—social, industrial, and financial. A capital levy is discarded on the somewhat peculiar ground that, though practicable in the boom, it is impracticable in the slump. We should have thought that if ever there was an impossible moment for assessing a capital levy, it was when values were grossly inflated and on the point of falling 50 or 75 per cent. If a levy had been passed at the end of 1920, how many of us would be solvent to-day?

Taking this little book as a whole, it is fair to say that, of all the statements of political belief and reform that have been given us in the past ten years, it presents the sanest views and the most constructive methods. There is little or nothing in it that is impracticable; much that is stimulating and hopeful. It does not belittle our difficulties, and it has the supreme merit of avoiding short cuts.

* "Politics and Progress." By Ramsay Muir. (London) Methuen and Co., Limited.

BUSINESS CYCLES AND UNEMPLOYMENT.*

This important book comprises the report of a Committee of the Conference called by President Harding in 1921 to consider the problem of unemployment, together

* McCraw Hill Publishing Company. 1923.

with the results of a long and detailed investigation into the trade cycle undertaken at the request of the Committee by the National Bureau of Economic Research, under the editorship of Professor Wesley Mitchell. The report itself is a wise and stimulating document, and the National Bureau's investigation comprises a vast mass of information and suggestion concerning the American boom and slump of 1920-1, and the possibilities of control of the trade cycle. It would be impossible in a brief review to discuss and analyse the whole of this most interesting material, but it may be useful to indicate the main lines along which the minds of the Bureau and the Committee appear, as it seems to us rightly and fruitfully, to be working.

In the first place, they lay emphasis on the need for more and better information, and more and more intelligent use of such as is available. Except as regards employment, America is incomparably better equipped with statistical reports and services than England; but it is evident that there, too, the addiction of the business world to secrecy and rule-of-thumb is a bar to progress.

Secondly, these investigators grasp that under present conditions a mechanical connection between bank deposits and gold reserves is not a sufficient guarantee against over-extension of credit, and advocate deliberate control of credit conditions with a view to preserving business stability. In particular they criticise the rule-of-thumb by which American bankers demand from borrowers a two-to-one ratio of quick assets to liabilities, since this leads to an expansion of credit when stocks of goods stand at inflated prices. But they do not seem to have moved quite as far as enlightened opinion in Europe in the direction of advocating attempts to stabilise the price-level by means of the discount policy of the central banks.

Thirdly, stress is laid on the responsibility which rests on individual firms for helping to counteract and "flatten out" the trade cycle—an important matter which is apt to be overlooked by those who are pre-occupied with the general monetary and credit aspects of the problem. It is urged that plant extensions and advertising campaigns should be taken in hand in the depression rather than in the boom, and a number of other devices for stabilising employment are discussed. The interesting experiences and methods of the Dennison Manufacturing Company and other pioneer firms are recorded, and the special difficulties of the railways, due to the unstorability of their product and the statutory limitation of their receipts, are fully treated.

Fourthly, the duty of public authorities to plan their constructional enterprises far ahead, and to put them into operation in slack times, instead of competing with private undertakings for labour and materials in time of boom, is strongly urged.

Fifthly, evidence is given of a serious and open-minded desire to tackle the problem of unemployment insurance, in which America has allowed herself to fall gravely behind the practice of European countries. What is of most interest here is that American thought seems moving in the direction of using insurance as a method of prevention, and not merely of treatment. The scheme in operation among the garment-working firms in Cleveland—the abortive Bills brought forward in Wisconsin and Massachusetts, the voluntary schemes introduced by private firms, all agree in placing the incidence of the burden on the employer, and in such a way as to give him a direct incentive to reduce the instability of employment. The whole matter is still in a very embryonic stage; but it is possible that if thought and experiment continue to develop in this direction, America, for all her late start, will ultimately tackle the unemployment problem on sounder and more constructive lines than Europe has done.

In any case, the gratitude of business leaders, economic students, and social reformers in all lands is due to the organisers and executors of this solid and valuable investigation.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. August 8. ACCOUNT. August 9.

Stock Exchange markets have spent an unsatisfactory week. There has been a good deal of quiet liquidation, some of it traceable to Paris, while New York has also contributed an uncomfortable amount of selling in certain descriptions. The bears have been actively engaged in taking advantage of the nervousness engendered by the political outlook. The debate in the House of Commons on Thursday and the previous hints of what was contained in the various International Notes on the subject of reparations caused buying orders to be cancelled, and a general desire on the part of investors to wait and see what is likely to happen after the holidays. Mr. Baldwin's statement on Thursday was deemed discreet, non-committal, and a trifle disappointing to those who hoped for something more definite.

Few markets have escaped from the effect of the political tension, and this week's record in the majority of stocks and shares is one of monotonous declines in prices, though, as a rule, there were recoveries from the lowest touched. Gilt-edged stocks have been a little more than dull, no special weakness occurring in the Consol market. Owing to peace having been signed with Turkey, the Stock Exchange Committee are about to rescind the last of the temporary regulations which still demand physical possession of certificates from sellers of bearer securities. Underwriters of the new Kasimbazar 6½ per cents. issued at 100 were left with 86 per cent. of their obligation, and dealings have started on the basis of 3½ discount. A few of the Home Railway prior-charge stocks shed a point or so. A score of Colonial Government issues were similarly lowered.

Turkish Unified, in spite of the peace signature, has been acutely flat on sales by speculators disappointed at the way in which the market for the stock failed to respond to the news from Lausanne. French bonds gave way sharply, because of the attitude adopted by France in her latest Note. Chinese 8 per cents. were marked down by points as a precautionary measure against probable sales. South American bonds are mostly a trifle lower, and the new Austrian Sixes, which came out at 80, and touched 7 premium a couple of days after the allotment letters were posted, have changed hands at a small discount. The price hardened again to "par" in sympathy with a rally in other foreign bonds.

Home Railway stocks are not altered by the declaration of the various half-yearly dividends. The stocks of the passenger and freight lines moved in consonance with the sentiment in other parts of the House. The deferred issues remain fairly firm. Undergrounds have lost some of their recent strength, with the exception of the Underground income bonds, where the reaction is trifling. Grand Trunk Pacific debenture fell to

22, recovered to 26, and then went back a little. Mexican Rails are dull. Argentine railway stocks, after a temporary rally, succumbed to depression. A rise in Antofagasta stands out as a bright spot in an otherwise dull market.

Rubber shares gave a mild exhibition of strength before they, too, eased off under the influence of a little selling. The autumn outlook for the rubber industry appears to be improving; real holders are not disposed to part with their shares. The oil market is decidedly flat. American selling, combined with realisations from the Continent, bear "banging," and a desire to get out on the part of nervous British holders, have played their part in bringing about acute weakness. But here, again, an upward reaction came at the end of the week. Amongst other speculative shares, Courtaulds relapsed sharply, and the tobacco group has also given way. Banking shares are mostly lower, upon consideration that even the present prices are fairly high having regard to the 4 per cent. Bank rate and the yields now offered by other stocks. A few falls occurred in the insurance group. The shipping list has maintained its prices with firmness, except in the case of Indo China Deferred and one or two others.

The iron and steel market has been clouded by selling orders from the North and West of England, evidently based upon impatience at the sluggishness of trade. Marconis gave a good account of themselves on the Postmaster-General's recent statement in connection with the wireless chain; though profit-taking reduced prices from the best; while the cable stocks are heavy again, upon another outbreak of apprehension lest wireless should damage the submarine business. The various issues of the stores and catering companies are inclined to be dull. Chinese engineering and mining shares rose abruptly, on Brussels buying. British Oil Cake and Mills strengthened by reason of rumours of possible amalgamations. The brewery market is easier, Guinness and Watney stocks being more particularly dull, and Workman, Clark debentures, after a rise to 65 on the news of the payment of the half-yearly interest due on Wednesday last, went back again as sellers tried to take advantage of the improvement. New issue prices mostly suffered from the generally heavy disposition of markets, and newspaper shares have come down with the rest.

The Kaffir market, left to its own devices without a lead either from the Cape or from Paris, has found its prices gently sagging for want of public interest. Chartered moved backwards as tired holders realised their shares, not caring to wait for the time when there may be a return of capital. A little gambling in Cam and Motor shares and in Selukwes rescued the Rhodesian market from complete stagnation. De Beers and other diamonds are heavy. Improvement in the price of tin, the metal, failed to save tin shares from giving way here and there. Sulphides fell away upon the fire on the property. The Mexican, Australian, and Indian mining groups show small losses where movements have occurred at all, and Russo-Asiatics are flat. The mining markets might almost as well have been closed in advance of the August Bank Holiday, for all the business which they did during the past few days.

NEW ISSUES.

Huronian Belt Company, Limited.—Authorised capital £200,000, divided into shares of £1 each, of which 100,000 shares are issued fully paid. The company was formed in March, 1914, to take interests in many enterprises. Details of share issue and other information are given in connection with an application to the London Stock Exchange for share quotation purposes.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Messrs. Lord and Hall, under whose guidance the recent improvements in the position of the company have been effected. We have also recently appointed one of our experienced managers, Mr L. G. Knight, as the resident visiting adviser for our estates in the Venture Valley. This is an adoption of the system successfully inaugurated two years ago for the Wynaad Estates we recently purchased, when Mr J. E. Bisset was appointed their local visiting adviser. The outlook for the industries in which we are engaged is, as far as we can see, quite favourable.

Mr. E. L. Hamilton seconded the resolution, and, after some questions had been answered, it was carried unanimously.

YAN DEN BERGHS, LIMITED.

IMPROVED RESULTS—SOUND FINANCIAL POSITION.

The twenty-third ordinary general meeting of Van den Berghs, Limited, was held, on the 31st ultimo, at Winchester House, Old Broad street, London, Mr. Henry Van den Bergh (chairman and one of the managing directors) presiding.

The secretary (Mr A. G. Hales) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: When I had the honour of presiding over you in October of last year my task was less pleasant than it is now. Then we had just passed through the most adverse period in the history of the company, and for the first time in 27 years our accounts showed a loss. The slump in prices of raw materials, which was our difficulty at that time, is a thing of the past. To-day I am pleased to be able to point to the fulfilment of my last year's expectations, the proof of which is before you in the satisfactory result of last year's trading. When the year under review began the slump had not yet neared its end; prices were still sagging and the stocks we held were depreciating, but by the time these stocks had been turned into margarine the position had improved and, prices having returned to a more normal level, business in this country reverted to its usual course.

The same, however, cannot be said as yet of the businesses conducted by our associated companies on the Continent. There new difficulties had to be faced, originating almost entirely in the enormous fluctuations in the rates of exchange, but I am pleased to say that these difficulties were coped with in a most satisfactory manner, although even now, in dealing with those countries where such fluctuations occur, our associated companies cannot avoid running certain risks, which are being restricted but cannot be entirely eliminated.

THE ACCOUNTS.

Turning to the accounts, I should like to go over a few of the figures of the balance-sheet which is before you. On the left-hand side you find bills payable shown at £346,797, which is about £250,000 less than last year, and sundry creditors with an aggregate of £1,078,970, which is about £100,000 more than last year. In total, therefore, our floating liabilities have been reduced by about £150,000. On the assets side we find capital expenditure with a figure of £619,878, which is £26,000 below last year's figures. This shows to what extent the depreciations have exceeded the additions.

Associated and subsidiary companies and their current account balances are shown at £2,332,652, or £267,000 over last year. This difference is but an incident in the ordinary course of trading when large fluctuations in the balances of these companies take place daily. The stocks have gone down over £300,000 to £454,526; against this decrease there is an increase in the contingent liability

on forward contracts shown on the other side. Trade and sundry investments are shown at £73,718, or £76,000 less than last year, mainly in consequence of the sale at a profit of war stocks, &c., held last year. Cash at bankers shows an increase of over £19,000.

"HEALTHY FINANCIAL POSITION."

These figures, I think you will agree, reflect a healthy financial position. The proviso in the balance-sheet as to a possible liability under a trade agreement refers to an agreement which has been in existence for the last 15 years, and has shown satisfactory results to the company; on account of post-war complications we are not yet in a position to ascertain definitely whether a liability exists, but it is anticipated that no provision will be required. The enemy debts appear amongst the debtors at the same figure as last year, and the directors are confident that the amount shown will be fully recovered. The balance of profit and loss account, after providing for accrued dividends on preference and preferred ordinary shares to December 31st last, and after allowing for the distribution of the proposed ordinary dividend, amounts to £108,327 4s, which the directors suggest should be carried forward to the next account.

We are on excellent terms with our workpeople. Our staff has also loyally supported us in our arduous task. This happy co-operation has in no small measure contributed to the results upon which I am able to congratulate you. These results allow us, after providing for all fixed charges, to propose the distribution of an ordinary dividend of 2s 6d per share, of which 1s was paid by way of interim dividend on January 15 last. This dividend, in proportion to our large turnover, represents only an infinitesimal profit per lb of margarine sold.

We provided a popular article of food, an article of diet which constituted a prime necessity to millions of people and ranked second only to breadstuffs. We were proud to be enabled to serve the interests both of the community and of the shareholders.

Sir Walter Townley, K.C.M.G., seconded the motion, which was carried unanimously, and a vote of thanks to the chairman, directors and staff terminated the proceedings.

DE TREY AND CO., LIMITED.

COMPANY'S STRONG FINANCIAL POSITION.

The eleventh annual general meeting of the shareholders of De Trey and Co., Limited, was held, on the 31st ultimo, at 6 Swallow street, London, Mr X. Castelli (the chairman) presiding.

The secretary (Mr F. J. Sheen) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen,—You will have seen that the position of our company is a strong one. We do not owe a penny to our bankers, and in this respect have an advantage over very many trading companies at the present moment. No debentures or mortgages hamper our property, and on December 31st last we had liquid assets in the shape of British Government securities and cash to the extent of £250,000. Our reserves amount to £119,000, or about 10 per cent. of our capital; we owe but a small sum—under £40,000—to creditors of the company, while we have still to pay some £80,000 in respect of income-tax and corporation profits tax. How heavy a burden taxation is at present will be seen from the fact that your company has to pay away nearly 40 per cent. of its profit for taxes.

We are at all times obliged to hold considerable supplies of artificial teeth, dental equipment, chairs, instruments, and other necessary dental materials, and the year 1921 found us with a stock which, owing to the world-wide depression which ensued,

had to be very considerably written down. This necessitated an encroachment on our reserves to the extent of £46,000, leaving us, after paying the dividend on our preference capital, with a loss for the year 1921 of £16,500. Furthermore, the great decrease in purchasing power all the world over—more especially in those countries with depreciated exchanges, where formerly we had a large and lucrative turnover—and the large number of unemployed in this country have not helped to improve the situation. Conditions in Germany, both as regards obtaining licences and the depreciation of the exchange, have rendered it practically impossible to market our goods in that country, while inferior goods manufactured in Germany and elsewhere came upon this and other markets, and their very cheapness was taken advantage of by certain dentists who did not, and do not, consider it their bounden duty to work with the very best materials in such an all-important and vital cause to human beings as the care of the teeth.

QUESTION OF PRICE-CUTTING.

We have always endeavoured to keep prices at such a level as would allow both ourselves and our friends, the retail dealers, to make a fair and honest profit, but the ruthless lowering of prices for the sake of inordinate competition could be of no advantage, and has only had the result of reducing profits all round. This state of things could not continue. The retail dental houses realised it, and have formed an association called the British Dental Trade Association, the purpose of which is self-protection against the ruinous evil of price-cutting, and it is hoped that through the maintenance of fair prices, as fixed by the manufacturers, the retail dental trade in the country—upon which, obviously, the welfare of the manufacturers indirectly depends—will again enjoy reasonable prosperity.

Before closing I feel that I must refer to the rumours which have been current as to an amalgamation between your company and another well-known dental company. Your board were of opinion that, on the basis of a fair agreement, such an amalgamation would have been to our mutual advantage. For over five months tedious and indefinite pourparlers took place, which ended abruptly when your directors, in regard to a subsidiary of the company in question, took a very firm attitude in respect to a trade-mark of ours. The company in question objected to our action, and, as we declined to depart from our standpoint in this matter, they made it a reason for breaking off the negotiations for amalgamation. In view of all that has happened, your directors feel that, after all, we are better off as a free and independent company. We have made certain arrangements which will, we trust, be of material advantage to our company and to the trade, and we look forward to the future with confidence.

The results of the first six months' trading have justified your directors in declaring an interim dividend for the current year at the rate of 6 per cent. per annum on the ordinary shares. They hope that the next six months' trading will be equally satisfactory. As you will have seen, the net profit for 1922 was carried forward, being too small to allow of any dividend being paid for that year on the ordinary share capital.

A business like yours, with its extensive ramifications here, on the continent of Europe and elsewhere, can only develop and prosper as it should if conditions are more or less normal. At present the credit and purchasing power of the world are more or less at a standstill, and until the Ruhr question is settled the uncertainty of the situation seriously hampers trade of every description. Let us hope that, for the benefit of the world at large, the ability of the statesmen of our country and of our Allies will soon put an end to the present state of unrest.

Mr C. de Trey (managing director) seconded the resolution, which was carried unanimously.

THRELFALL'S BREWERY, LIMITED.

SATISFACTORY RESULTS OF THE YEAR.

The thirty-sixth annual general meeting of this company was held, on the 1st instant, at Cannon street Hotel, London, Major C. M. Threlfall presiding.

The Chairman, in moving the adoption of the report, said: The results of the trading for the year ended June 30, 1923, are highly satisfactory.

I feel that the price of beer is still too high for the majority of working men to purchase, when we take into consideration the very substantial reductions in wages to which the workers in various trades and industries have been subjected. However, we earnestly hope that a further reduction in duty will take place in the near future, and thus enable us to place our national beverage within the reach of all grades and classes of the community.

During the year further valuable business premises have been purchased, and new properties have been erected, and as our endeavour is to keep pace with the times, a number of the company's properties have been extended and altered, the desire of the board being to make our licensed premises as congenial and comfortable

as possible. You will observe from the balance-sheet that our investment in War Loan has been increased to £200,000. This sum represents our unexpended capital, which has been so invested as to be readily realisable should any advantageous offer be made to us; but as we refuse all that do not offer a good possibility of development on the purchase-price our extension in this direction is naturally slow.

Another little point that may interest you is that on completion of fifty years' service with the company we make a presentation to our employees, apart from any retiring gratuity. Well, it might seem that the occasion would rarely arise, and yet during the past few years it has been our pleasurable duty to make such a presentation on no fewer than six different occasions, and I think so many instances of men who have been content to give their whole lives to the service of the company prove our occupation to be both a healthy and a happy one.

I have to inform you that our Mr Binns, who has served you faithfully and well for more than fifty-six years, has expressed a wish to be relieved of his position as assistant managing director. After such a lengthy service it would not be considerate were we to press him to retain that position any longer, but I am pleased to tell you that he has consented to remain with us as an ordinary director, so that we shall still continue to have the benefit of his ability and long experience in matters connected with our business. It will interest you to know that it is our intention to appoint, as from September 1st next, Mr G. M. Galloway as an assistant managing director of this company. Mr Galloway has been for over thirty years with Messrs Bass and Co., and his knowledge of the trade will be of undoubted value to us. His varied experience will help us considerably, more especially in our Manchester business, which is growing more important each month, and requires continuous supervision and attention to secure the best results.

Now to turn to the balance-sheet, which, I am glad to say, shows you once again how well our good position is being maintained. The gross profit for the year is £389,607 18s, and, after writing off for depreciation in the value of leasehold properties and plant, and making reserves for corporation profits tax and bonus to employees of £42,656 14s 2d, there remains a net trading profit of £346,951 3s 10d. After deducting interest on debenture stock, interest on deposits, directors' fees, and compensation levy, and adding transfer fees, bank interest, and interest on War Loan, there is a net profit of £288,527 3s 9d for the year, which, together with the carry forward, £232,553 10s 7d, from last year, makes a total of £521,080 14s 4d to be dealt with.

Mr W. G. West (managing director) seconded the motion, which was carried unanimously.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in Treasury Bonds and Treasury Bills dated from Aug. 6-Aug. 11 were opened on Aug. 3, 1923, and the total amount applied for was £55,375,000. Tenders for Monday to Friday bills at £99 3s 3d, and above in full, and for Saturday bills at £99 3s 5d, about 91 per cent., and above in full. The amounts allotted were as follows:—In bills at 3 months, £32,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
June 22..... 1923.	£	£	£ s d	£ s d
June 22.....	45,000,000	51,855,000	2 2 1-13	nil
June 23.....	40,000,000	49,445,000	2 5 4-82	nil
July 6.....	30,000,000	39,185,000	3 10 2-02	nil
July 13.....	30,000,000	42,315,000	3 1 0-93	nil
July 20.....	30,000,000	42,925,000	3 1 10-93	nil
July 27.....	30,000,000	50,940,000	3 0 2-99	nil
Aug. 3.....	35,000,000	55,375,000	3 4 4-95	nil

Tenders will be received on Aug. 10, 1923, for Treasury Bonds and Bills to be issued to the maximum amount of £30,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000.

on the previous Wednesday. The Indian bazaar inquiry has again been small, and the bulk of the supplies of gold coming on the market this week will be sent to the United States of America. Gold valued at \$1,715,000 has arrived in New York from London. The Southern Rhodesian gold output for June, 1923, amounted to 58,323 fine ounces, as compared with 54,737 fine ounces for May, 1923, and 55,614 fine ounces for June, 1922. The Soviet Minister of Finance has stated that the new gold coin now being minted would be withheld from circulation for a few years in order to prevent it from finding its way into the stockings of the peasants, who already hold in this way something between 200,000,000 and 300,000,000 old gold roubles.

The Bank of England gold reserve against its note issue on the 25th ult. was £125,808,795, as compared with £125,808,440

The market has been exceptionally inert during the week. There was some buying from China, but yesterday China both bought and sold. The improvement was assisted by some Indian bear covering, of which quite a large position still remains open. To-day both India and the Continent sold; the offerings were absorbed by China. The General Bulletin of the American Mining Congress, dated 21st ult., states that Under-Secretary of the Treasury Gilbert, in a letter to the American Mining Congress, declared that the resolution adopted by its Western Division at San Francisco in June "is quite obviously part of the campaign of misrepresentation that various interested parties have been carrying on in an effort to make silver producers believe that they have been unfairly treated." The resolution advocated court action concerning the legality and propriety of the cancellation by the Treasury of allocations of silver for subsidiary coinage under the Pittman Act, so that the question may be settled "regardless of the action of a department that is wrongfully endeavouring through widespread propaganda to deceive the people into believing that producers seek an unfair interpretation of the Act." Mr Gilbert said he is surprised that the resolution was adopted by the Mining Congress, "without the slightest effort to ascertain the facts." He said the Treasury's action respecting allocations for subsidiary coinage "is clear and beyond dispute. It rests upon the decision of the Comptroller-General, which is conclusive and binding upon the department, and is not engaging in any propaganda in this matter, and has no occasion to do so. It has taken action under the law upon the advice of the highest constituted authority, and has stated its position in the clearest possible terms. Its action fully satisfies the purchase provisions of the Pittman Act, and saves the people at least five million dollars. It would be more becom-

Reports and Notices.

The directors of the United Kingdom Temperance and General Provident Institution have appointed Mr C. C. Nicholls, O.B.E., B.A., F.I.A., F.F.A., actuary of the Great Eastern Life Office, Singapore, to be actuary of the institution to fill the vacancy caused by the appointment of Mr C. C. Monkhouse, M.C., B.A., F.I.A., as general manager of the South African Life Assurance Society, Cape Town.

Messrs Turquand, Youngs, and Co. and Messrs Kemp, Chatteris, Nichols, Sendell and Co. notify that they have amalgamated their businesses in Paris, where in future they will practise under the name of Turquand, Youngs, Kemp and Co., at 2 Rue Edouard Sept.

Mr Alfred Shepherd has been appointed chairman of the New Zealand Loan and Mercantile Agency Company, Limited, in succession to the late Mr Warrington Laing.

GOVERNMENT STOCKS, &c.

BULGARIAN 4 1/2 PER CENT. LOAN OF 1907.—The Bulgarian Government announces that it is prepared to pay to British bondholders the Coupon No. 33 of the above loan, maturing on August 1, 1923, at 11.25 francs (French) each, and the bonds drawn for redemption on that date at 500 francs (French) each. Holders of bonds which have been in British ownership since August 1, 1914, who are desirous of availing themselves of the offer thus made by the Bulgarian Government should present the above-mentioned coupons and drawn bonds (to which all coupons due after the date of redemption must remain attached) for payment at the counting-house of Messrs Stern Brothers, 6 Angel court, E.C.2, between the hours of 11 a.m. and 2 p.m. (Saturdays excepted). The amount due in French francs will be paid in sterling at the sight rate of exchange on Paris on the day of presentation, less income-tax. All bonds and coupons, together with such verifications of ownership as may be required, must be left seven clear days for examination.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds, the Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the July instalment of the debt service in accordance with the arrangement of May 25, 1912.

URUGUAY CONSOLIDATED 3 1/2 PER CENT. DEBT.—Messrs Glyn, Mills, Currie, Holt and Co. are instructed by the Government of Uruguay to announce that the thirty-fourth amortisation of the Consolidated Debt of the Republic will take place on Thursday, the 9th inst., the amount applicable being £41,495 9s 3d. They are prepared to receive tenders of bonds for redemption on forms which may be obtained at 67 Lombard street, London, where the tenders will be opened on Thursday, 9th inst. Messrs. Glyn, Mills, Currie, Holt and Co. reserve the right of accepting or rejecting the whole or part of any tender, and, in accordance with instructions received from the Government of Uruguay, they may require the deposit of the bonds offered for sale under this tender. All bonds must have attached the coupons due November 1, 1923, and subsequently. Tenders must not be made at any fraction of a shilling other than threepence or multiples of threepence.

MISCELLANEOUS.

ELECTRICAL DISTRIBUTION OF YORKSHIRE, LIMITED.—A statement just issued says that during the half-year ended June 30th there has been a satisfactory increase in the demand for electricity and a substantial addition to the number of consumers. An interim dividend at the rate of 7 per cent. per annum (free of tax) will be paid for the six months ended June 30, 1923. The development of the company's business and decreased costs have enabled the directors to reduce the price of supply to consumers in all those districts where the tenure is long enough to justify the anticipation of a reasonable return on additional capital expenditure on extensions contemplated in those districts. At meetings of shareholders held on March 6 and 27, 1923, the nominal capital of the company was increased from £150,000 to £250,000. Inquiries as to when further capital will be required have been received. The time for this has not yet arrived, but it is expected that an issue will be made to the shareholders early next year.

GRAVESEND STEEL AND TINPLATE.—The report and accounts for the year ended March 31, 1923, shows a credit to profit and loss account of £316,049, which includes £113,328 brought in from preceding year. Debenture and other interest absorbed £20,203. Reserve for depreciation and renewals absorbed £26,184, and reserve for taxation £35,000. This leaves £234,662. The year's preference dividend amounted to £9,758, leaving a credit balance of £244,904. The company have allocated £48,439 to reserve fund. The sum of £13,979 is utilised to write off debenture issue expenses. The ordinary shareholders receive 12 1/2 per cent. dividend, which amounts to £53,000, and £109,485 is carried forward. The reserve fund, with the addition referred to, will amount to £126,000, and it is proposed that £76,000 should be capitalised and distributed among the ordinary shareholders in fully-paid ordinary shares. Since the date of the balance-sheet the directors have sold at par 95,004 6 1/2 per cent. preference shares which were unissued at March 31, 1923.

IMPERIAL CONTINENTAL GAS ASSOCIATION.—It is announced that the Imperial Continental Gas Association has received from the Clearing Office (Enemy Debts) a sum of £188,900 3s 1d, being a second payment (less commission) on account, in respect of the compromise award of £1,550,000 in settlement of the outstanding balance of the association's German claims under the Peace Treaty.

MANCHESTER SHIP CANAL.—The traffic receipts for the half-year ended June 30, 1923, show an increase of £46,235 over the corresponding period of last year. The net revenue for the half-year shows an increase of approximately £62,000 over the corresponding

* Half-year.

† Free of tax.

‡ Capital doubled in 1922-23 by bonus issue.

period of 1922, after making provision for increased interest and other fixed charges. The above result is exclusive of arrears of tolls and dues payable by the Weaver Traders arising out of the recent actions in the Courts and the House of Lords, where judgments were obtained in the Canal Company's favour. These sums, as ascertained, will be brought to credit in the company's accounts when they are made up at the end of the current year.

OLD SILKESTONE COLLIERIES.—The report for the year ended March 31, 1923, shows a net profit of £56,744, to which is added £39,787 brought in from preceding year, making £96,531 available. The ordinary dividend is 15 per cent. for the year, which absorbs £36,085. The preference dividend absorbed £11,667, and a balance of £48,779 is carried forward. The whole of the expenses in relation to increase of the company's capital and the issue of 350,000 £1 8 per cent. preference shares have been written off. An amount of £14,903 has been written out of the company's profits for the year for depreciation.

SMITHFIELD AND ARGENTINE MEAT.—The report for the year 1922 shows a welcome improvement on the previous year's working, as there was a net profit of £118,037, against a net loss of £297,619 in the preceding year. The better year has resulted in the debit balance being reduced from £356,626 to £238,589. Favourable weather has been experienced in the Argentine during the past year, adequate supplies of fat cattle and sheep being available, but competition made the wholesale overseas trade difficult, with small margin of profit.

THE YORKSHIRE ELECTRIC POWER.—During the half-year ended June 30, 1923, according to a statement just issued, the sale of electricity has again largely increased, this being mainly due to the demands from new consumers. The profits also show a satisfactory increase. Interim dividends at the rate of 6 per cent. per annum for the six months ended June 30, 1923, will be paid on the shares issued prior to 1923. The issue in April last of £250,000 of ordinary shares of £1 each at 23s per share was applied for more than three times over by the shareholders of the company. The interim dividend on these shares will be calculated to June 30, 1923, from the date of allotment and first due date of instalment on the amounts due and paid (excluding premium) on those dates.

W. AND H. M. GOULDING, LIMITED.—The fifty-first annual report shows that the net profits for the year ended June 30, 1923, including dividends from subsidiary companies, and a refund of excess profits duty, amount to £35,138 16s 11d, out of which it is proposed, as usual, to set aside a sum of £7,000 to cover estimated discounts on realisation of outstanding debts. This, with £7,939 17s 11d from last account, leaves a sum of £36,078 14s 10d available for distribution. After providing for the usual debenture interest and the fixed dividend at the rate of 5 1/2 per cent. on the preference shares, they recommend a dividend of 5 per cent. on the ordinary shares of the company for the year ending June 30, 1923,

of which 2s 6d per share is payable on July 31st, and the second 2s 6d per share is payable at December 31st next, less income-tax. They further recommend that £5,000 be carried to depreciation account. The sum available for distribution would thus be allocated as follows:—To debenture interest, dividend, and income-tax, £27,175; to depreciation account, £5,000; carry to next account, £3,903.

WHITBREAD AND CO.—The accounts to June 30, 1923 show a net profit of £175,085, which compares with £178,789 last year. Dividends on the preference, preferred ordinary, and "Crawshaw" shares absorb £48,393, and the same dividend as last year—namely, 10 per cent.—is paid on the ordinary, and requires £96,741. A balance of £319,531 is carried forward.

YORK STREET FLAX SPINNING.—The report for year to June 30, 1923, shows a net profit of £88,554, against £87,624 for the previous year. The sum of £15,292 is brought in from preceding year, against £11,668, which makes £103,846 available. Preference dividends absorbed £36,000. Ordinary dividend is unchanged at 8 per cent. free of income-tax, which absorbs £48,000, leaving £19,846 to be carried forward. The directors report that the company's property is in perfectly efficient condition.

and Co., Glasgow and London), in addition to six motor ships; Messrs John Brown and Co., Clydebank, have booked a 750-ton yacht; Messrs Alley and MacLellan, Polmadie, four 170-ton barges; the same firm a single-screw tug (all for South Africa); and Messrs Hall, Russell and Co., Aberdeen, a passenger-cargo boat, for North of Scotland Railway Company. For the seven months the Clyde has turned out 63 vessels of 140,411 tons, which compares with 73 vessels of 200,454 tons in the corresponding months of 1922. In the period for 1913 the launches were 146 of 377,270 tons. These figures are significant of the collapse in Clyde shipbuilding in recent years. Coals quiet in tone as respects deliveries, but values continue steady. Continental inquiries—German, French, and Scandinavian—are comparatively poor for the season.

Our Cardiff correspondent writes:—The position on the Cardiff coal market has not undergone any material change this week. The outputs have been very satisfactory; indeed, they have been slightly in excess of the average, but they have been absorbed, and there is no abnormal accumulation of stocks on the sidings. Prices accordingly have been steady for all grades of coal. They have not been characterised by that exceptional firmness which, as a rule, prevails on the approach of holidays, but this is probably due to the fact that the shipment facilities are greater and more elastic as the result of the working of the third shift, which has secured despatch and prevented delays to shipping at most of the ports. The tippers are still threatening trouble over the working of this extra shift, but the employers have recognised the reasonableness of the claim of the trimmers for a modification of the night-shift arrangements, and after the holidays they have agreed to a reduction by one-third of the number of tips in that shift. Next week the collieries will be idle until Thursday morning, and it is expected that the loss of at least half-a-million tons of coal and the probable absence on holiday in the following weeks of a large number of the miners will produce a hardening effect on prices generally. The approximate current market quotations are as follows:—Best Admiralties, 30s to 31s; second Admiralties, 28s to 30s; best drys, 28s 6d to 29s 6d; Black Veins, 28s 6d to 29s 6d; Western Valleys, 27s 6d to 28s 6d; Eastern Valleys, 25s to 27s 6d; best bunker smalls, 20s to 22s; ordinary cargo smalls, 16s to 18s; anthracite big vein, large, 50s to 55s; machine-made cobbles, 60s to 62s 6d; French nuts, 60s to 62s 6d; stove nuts, 60s to 65s; rubbly culm, 15s to 17s 6d; coke for export, 55s to 60s; inland blast-furnace coke at ovens, 30s to 35s; patent fuel, 32s to 34s; pitwood, ex ship, 32s to 33s.

Stagnant conditions have prevailed in the iron and steel trades this week, and both the imports of raw materials and the export of tinplates, galvanised sheets, rails, &c., have been phenomenally low. The employers, however, have adjusted their differences with the workmen, and a new agreement has been entered into for the next twelve months. This achievement has had a good effect on the market. Prices are unchanged at the minimum figures. Next week the tinplate works will be idle for the usual annual holidays.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—A fairly general demand for wool and matchings, while tending to keep raw material values very firm, emphasises in a striking manner the stagnation in other sections of the industry. America and Germany are still taking fine wool, and it is significant that private transactions have been carried through in London during the past week. Of course, it is the foreign consumption of raw material that is keeping values steady, and although it would be better for everyone concerned if the wool could be used in this country, the special demand is at least causing money to be turned over and helping holders to reduce their stocks. Whether they will be able to replace them at a suitable figure when the demand for tops revives is another matter. There has been rather more business in tops during the last week, but prices are very low, and bear no relationship to the cost of production. Weak sellers are to be found here and there, and this gives an appearance of great irregularity to the whole market. There are indications that cross-breeds are coming more into favour, and certain it is that wholesale fabric buyers are more interested in cloths made from medium and fine cross-breeds than in the soft-handling botanies which have held undisputed sway for the last three years or so. It is really a question of price, and when once the public realise that they can get good value in these cloths, there should be quite a good demand for them. Meanwhile, spinners seem to be "holding the dog," for although prices of tops are quite attractive if account be taken of the cost of wool, it is impossible to make satisfactory prices for yarns. Continental competition, of course, is very keen, and Yorkshire firms are frequently so far out in the matter of price that their yarns do not get a chance. Botany spinners are especially quiet, while demand for cross-breeds is irregular, and prices are disappointing.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

It is understood that some quiet buying of wool is being done in Coleman street by the trade, several selling brokers having had visits during the past ten days from both home and Continental buyers, their object being to secure stock to run machinery during the long vacation. This is a good sign, and shows clearly that stocks in consumers' hands are not large; indeed, it is understood

that in the case of the Continent they are exceedingly light. It is also seen that the bulk of the purchases, particularly on home trade account, consist of cross-breeds, and this is taken to indicate that Bradford is finding a decent trade. The merino departments of some of the wool-combing establishments are to be closed ten days or a fortnight during August, whereas crossbred departments will only stand one week for Bowling Tide. This is clearly indicative of the general tendency of the trade, and we do not think that things are so bad in Bradford as has been painted. We are convinced that there is a bigger consumption and a larger business passing than is indicated on the surface. We think that after August there will be a revived interest in the course of wool values, and are satisfied that a reasonable settlement of the Ruhr problem would be followed by a greatly increased volume of business. There are indications of more being done with the United States, and the reasonable response of wholesale buyers of piece goods for next spring and summer clearly shows that good times are still being experienced across the Atlantic.

THE COTTON TRADE.

The First National Bank of Boston

The leading financial institution of New England

Foreign and domestic commercial banking of every nature

Correspondence solicited.

MANCHESTER, August 2.

The raw cotton situation has dominated all other matters in the market this week. After a decided fall in values there has been a smart reaction as a result of the bullish crop report published by the American Government. Trading in piece goods has been thoroughly disorganised by the uncertain feeling with regard to values. An increased inquiry has been met with for India, but terms of fresh contracts have been very difficult to arrange. Low offers have been about for China in staple makes, and fair lots have been sold in fancies. Irregular buying has been reported for the several minor outlets. Exporters are not yet ready to commit themselves to contracts of weight. American yarn quotations have been very irregular when tested, and business has been restricted. Not much has been done in Egyptian spinnings. Occasional lines have been put through in bundle yarns for India.

VEGETABLE OILS AND OILSEEDS.

The easier tendency in prices for both seeds and oils has become more marked, the seasonal slackness being accentuated by the smallness of the demand and the favourable outlook for supplies when the new crops are marketed. The general opinion seems to incline to the belief that we shall see a lower range of values than have ruled in the past season. Linseed oil has further sagged, and at £38 per ton naked ex Hull mill is at the lowest level recorded this year, and compares with £52 registered in mid-April, the highest, when the American demand was strong and the seed market "bullish." Cotton oils, too, have continued neglected, and, in sympathy with cheaper seed, crude Egyptian has declined sharply to £32 10s, a drop of over £5 per ton in four weeks. Refined is lower following, as are also other vegetable oils that compete. In view of the poor trade in oil and falling markets, crushers are not yet entering into commitments for the new linseed and cotton crops, shipment of which will begin later in the year. Late quotations are not sustained. All round there is a pessimistic feeling that will not be relieved until a settlement of affairs in Europe is arrived at.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market is again firming up, and advances are reported both in the Bermondsey and provincial markets. Best ox sold from 7d to 8d in Bermondsey on Thursday, seconds making from 5 1/2d to 7 1/2d, and showing an advance of 1d in three classes. Best cows were steady at 6 1/2d to 6 3/4d, and kips from 2 1/2d to 3d, or 1d more, however, being made on two selections of the latter. Best calf sold from 5 1/2d to 11 1/2d, advances of 1d to 1 1/2d being noted in two classes. Lambs sold from 2s 1d to 6s 6d, and pelts from 3s 4d to 5s 6d each. Business in foreign hides shows an improvement, but as stocks of hides are plentiful at origin, tanners, in view of the depressed state of the leather trade, are at a loss to account for the prevailing high prices. Latest reports from the River Plate are to the effect that 7 1/2d had been made for ox, Liebig hides selling from 7 1/2d to 8 1/2d. Dry hides are quiet, tanners having filled their wants for the time being. Cables from New York report the Chicago position as steady, with best heavy packers now selling at 15 cents.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 3.

SUGAR.—British refined goods mark a reduction in price all round, and a fair amount of business was carried through. Messrs Tate and Lyle's spot sugars declined 1s per cwt, with forward granulated 1s 3d, easier for September delivery, 2s 3d, October, and 3s regarding November-December. Cubes, on spot, quoted 60s 6d to 61s 6d; nibs, 61s; granulated, stove, 58s 1 1/2d; fine, also coarse grain, 57s 7 1/2d; No. 1, 57s 4 1/2d; No. 2, also London, 57s 1 1/2d; ditto, September delivery (2 cwt bags), 56s; October, 53s 6d; and November-December, 50s. Yellow crystals, on spot, 52s 7 1/2d; caster, finest, 60s 10 1/2d; A, 59s 1 1/2d; B, 58s 3d. Glebe K granulated, prompt, London, 57s; second half August, 57s (d); Orchard, fine, prompt, 56s 9 1/2d; K granulated, prompt, Greenock, 57s. Imported descriptions meet a quiet trade, and prices ruled lower all round. American granulated, spot, sold, 55s; fine Dutch ditto, sellers, 55s; Czechoslovakian, 55s. White Java, spot, changed hands at 53s; ditto, due in about three weeks, sold, 20s 6d; June-July, quoted 20s 6d; July-August, 20s 6d, c.f. and i. terms, London. W.S.R. cubes, July-August, quoted 31s; ditto, granulated, 28s, f.o.b. Amsterdam. Czech granulated for shipment quite nominal. Raw refining kinds scarcely mentioned and nominal. West Indian basis 96 per cent. preferential, prompt, 24s. Brazilian basis 96 per cent. ditto, 20s 6d; ditto, basis 80 per cent., 15s 6d, c.f. and i., U.K. Terminal market steady, and moderate transactions include August at 23s to 24s 3d; December, 20s 3d to 20s 7 1/2d; March, 20s 1 1/2d to 20s 7 1/2d cwt.

COFFEE.—There is a moderate demand for spot parcels by private treaty, both on home and export account, at steady prices. Costa Rica, Uganda, and Kilimanjaro are chiefly favoured. Future delivery idle. September and December, quoted, 49s 6d cwt.

COCOA.—Demand for spot parcels shows no improvement, and only retail sales are in force. Forward market quiet, but steady. Accra, F/F grade, November-January shipment, sold, 31s, f.o.b. terms. Lagos, intermediate, sold, 30s, c.f. and i., New York. Bahia, for shipment, quoted, 35s cwt, c.f. terms, London.

TEA.—Private contract market maintains a firm but quiet tone, being virtually closed for the holidays.

RICE.—No pressure of supplies is felt, which helps to counteract slackness of demand, and quotations remain steady. Two stars Rangoon, spot, 13s 9d. Broken kinds meet a slow market. Japanese peas, spot, 23s 9d cwt.

SPICE.—Pepper very quiet, but prices manifest no essential alteration. Fair black Singapore, spot, 4d; ditto, August-October, 3 1/2d, sellers; Aleppy, spot, 4 1/2d; white Singapore, 5 1/2d; Muntok, 6 1/2d; ditto, August-October value, 6d. Zanzibar cloves quietly steady. Spot, 1s 1 1/2d; August-October, 1s 1 1/2d per lb. Tapioca remained a slow market on about former terms. Sago flour nominally unaltered. Desiccated coconut quiet. Fine cut, spot, 37s 6d; medium, 38s, delivery guaranteed; halves, June-July, sold, 34s; July-August, 35s; August-September, quoted 35s 6d cwt. Ginger dull, unaltered.

JUTE.—There was a moderate business doing, and prices on balance are weaker. First grade, August-September, Continent, sold, £22 10s to £22 15s and £22 5s; ditto, September-October, £22 5s; and October-November, £22 5s to £22 10s. Hessians and twills slow at previous level of prices.

HEMP.—Manila steadily held but quiet. J grade, August-October, sellers, £31; K and L, £27 10s; M, £26 10s ton. Italian without new feature. African sisal quiet, unchanged.

SHELLAC. quiet. T.N., spot, 250s; August, 245s; October, 240s cwt. COPRA dearer, with sellers more reserved on increased buying, after being lower. F.M.S. Straits, June-August to October-December, sold, £23 15s to £24 5s, and £23 18s 9d; Ceylon, August-September, quoted £26 5s; Java nominal. Cebu, August-September, £23 7s 6d; Dutch E.I. ditto, £23 17s 6d; South Sea, £23 2s 6d, Manila to Marseilles, August-September, £23. Palm kernels, July-September, Liverpool, sold, £16 16s 3d to £16 11s 3d ton.

RUBBER.—Market generally steady, but quiet. Standard plantation crepe and sheet, spot, also August, sold, 14 1/2d to 15 1/2d; September, 15 1/2d to 15 3/4d; October, 15 1/2d; October-December, 15 1/2d to 15 3/4d; January-March, 16 1/2d. To New York, standard sheet, estate, August-September, sold, 14 1/2d; September-October, 14 1/2d; and ordinary sheet, September-October, at 14 1/2d per lb, c.f. and i. Wild steady, unaltered.

KAPOK.—New crop Java, November-December and January-March, No. 1 Japara, sellers, 1s 1 1/2d; and No. 1 Samarang ditto,

THE BANK OF TAIWAN, LIMITED.

(Registered in Japan, 1899.)

Capital Subscribed - - - - - Y60,000,000
Capital Paid Up - - - - - Y52,500,000
Reserve - - - - - Y12,500,000

Head Office - - - - - TAIPEH, FORMOSA.
London Office 25 OLD BROAD STREET, E.C.2

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kienyang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

	Aug. 10, 1923.	Aug. 3, 1923.	July 27, 1923.	July 20, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	5 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills) ..	3½	3½	3½	3½	..

The Bank return showed a decrease of £531,000 in the note circulation, and a small increase in the gold stock, the Reserve being £535,000 higher. A small increase in Government securities was balanced by a rather larger decline in Other, and about 2½ millions were transferred from Public to Other deposits.

The statement of the London Clearing Banks of average weekly balances for July is printed in full on another page; below we show the aggregate figures for the nine English banks:—

	Dec. 1922.	March, 1923.	April, 1923.	May, 1923.	June, 1923.	July, 1923.
Capital and reserves	116.0	116.2	116.2	116.2	116.3	116.3
Acceptances	72.8	79.2	78.0	77.5	73.8	73.8
Deposits (incl. undivided profits, &c.) ..	1,684.7	1,596.4	1,606.0	1,608.5	1,637.7	1,638.0
Total liabilities	1,873.5	1,792.5	1,800.2	1,802.2	1,827.8	1,828.1
Coin, notes, balance at bank, and cheques in course of collection	253.0	232.3	240.0	234.6	240.7	236.6
Money at call	106.0	104.4	110.5	108.8	113.3	109.4
Investments	384.5	357.4	351.3	349.4	355.5	362.5
Discounts	298.3	250.4	249.5	262.3	270.8	276.4
Loans and advances	732.7	741.6	744.4	743.0	746.9	747.3
Cover for accept., premises, &c.	99.0	106.4	104.5	104.1	100.6	100.9
Total assets	1,873.5	1,792.5	1,800.2	1,802.2	1,827.8	1,828.1

The only changes of note are increases of £7 and £6 millions in investments and discounts respectively, which have been balanced by reductions of £4 millions in the cash item and of £9 millions in money at call.

THE STOCK MARKETS.

The Stock Exchange has quite unseasonably presented a very much firmer appearance this week, which may be attributed partly to a more optimistic view as to the international political outlook, partly to the existence of an extensive bear position, and partly to the seasonal cessation of new issues. Prices in the gilt-edged market have moved steadily upwards, but this strength has not yet spread to the market for colonial stocks and Home Railway prior charges. The foreign market has been unaffected by the demoralisation of the mark, but German stocks are, of course, a nominal market. Home Rails have moved up a little, and American railroad stocks are a trifle better. Rubber shares have been firm, and oils, thanks to bear-covering, have advanced. Brewery stocks were better, and in the mining markets there was some professional support.

THE COMMODITY MARKETS.

The holiday season, as usual, renders the commodity markets dull and listless. Coal prices are stationary, and there is practically no business doing in pig-iron. Makers are complaining about the scarcity of orders for manufactured iron and steel, and production is being drastically reduced. Business in the Manchester cotton trade continues to be adversely affected by the violent fluctuations in raw cotton rates. Jute came into some request at one time, but prices subsequently weakened. Conditions in the wool industry are dull, and the outlook is described as depressing. The vegetable oil and oilseed markets are quiet, with prices inclined to be easier. Transactions in sugar have been more numerous, and buyers are taking more interest in the market. Rubber took an upward turn on account of speculative operations, but as little response was forthcoming from America, the demand fell away. Although no hide auction was held this week in Bermondsey, there is a decidedly firm tendency in home markets, the decline having been apparently arrested.

FOREIGN EXCHANGES.

The foreign exchange market has been in a nervous and depressed condition during the past week, the reparation exchanges suffering particularly badly. For all practical purposes the mark has now no longer any value in exchange transactions. The rate at the end of last week was fairly steady round 5,000,000, but with the removal of the restrictions on free dealings in Berlin on Monday it collapsed completely, and when the London market reopened on Tuesday was quoted here at 15,000,000 to 18,000,000. On Wednesday the rate at one time touched 28,000,000, but has since improved somewhat, and opened yesterday morning at about 15,000,000. According to the current Reichsbank return the note circulation increased during the week by 12 billions of marks, and now stands at 43½ billions, without any appreciable effect on the shortage of currency. Moreover, the gold reserve has fallen by 20 million marks. In spite of official denials, rumours are once more being revived of the repudiation of the mark and the substitution of a gold currency, in which connection it is interesting to note that the Russian rouble was abandoned when a quotation of 18,000,000 was reached. Forward dealings are entirely a matter of negotiation, the rates quoted varying as widely as 3,000,000-8,000,000 for one month above spot. More attention, however, has been paid in the market to the depreciation of the French and Belgian francs. The Paris rate rose steadily from 79.05 on Saturday to 80.65 on Thursday night, which is the lowest point touched since the war. On Friday morning, however, a slight improvement to 80.25 was reported. This movement was followed, though much more violently, by the Brussels rate, a high record of 107.30 being reached on Thursday. There was some recovery the following morning to 104.95, as against 99.00 a week ago. The Belgian market, being smaller, is usually more affected than the French by any movement, and it is believed that less support is given to the exchange by the Bank of Belgium than by the Bank of France. The return published by the former this week shows a rather heavy expansion in the note issue, and the Prime Minister's announcement in the Senate that the exchange was suffering from German sales of francs in Holland and a lack of confidence among certain sections of the Belgian people is not reassuring; but his decision not to impose exchange restrictions will be welcomed. In Paris the forward quotation is slightly wider at 5.5½c per month above spot, while Brussels is 2-4c below. The lira stands at 107½, as against 105½ a week ago. In New York the market has been dull, with little business, owing to the suspension of political affairs, and the dollar rate yesterday morning, at 4.57, was the same as a week ago, though it had touched 4.56½ in the meantime. Forward rates are steady at ½-1c per month above spot. The Amsterdam rate continued to move against us from 11.62 on Saturday to 11.58 on Thursday. Yesterday morning, however, it opened at 11.58½. The Swiss rate appreciated considerably during the week to 25.05, as against 25.50 a week ago. It would seem that the rise in the Bank rate in that country has had the desired effect. The Madrid rate has shown a steady rise from 32.45 to 33.10 yesterday, a partial explanation of which may be found in the figures of the latest Bank of Spain return, which show an increase in the note issue of some 57 million pesetas during the week. In Central Europe, Vienna remains steady at 325,000, but Warsaw is slightly weaker at 1,190,000 offered. The Budapest rate improved to 85,000 on the conference of the Little Entente, and Prague is steady at 155½, but Bucharest is slightly higher at 940. Athens improved from 300 to 250 on the news of the advance by the Bank of England. In Northern Europe, Stockholm is steady at about 17.18, but Christiania has improved from 28.60 to 28.10 on the rumour, as yet unconfirmed, of the placing of a loan in London. The Danish quotation has again fallen from 25.10 to 24.90, while Helsingfors is ½ mark weaker at 165. In the East the rupee is steady at 1s 4½d, while Yokohama is slightly dearer at 2s 1½d. The silver market has been quiet, with little movement in prices. The Indian bazaars have been sellers for forward delivery, but business, both there and in China, has not been great. Hong Kong, after touching 2s 3d, is now quoted again at 2s 2½d, while Shanghai is steady at 3s. 0¼d., but Singa-

pore is ½d dearer at 2s 4½d. In South America, Buenos Aires has cheapened to 38½d as against 40½d last week, probably owing to the lack of any definite news as to the loan, and Monte Video is cheaper at 37½d, but Rio, at 5 19-64d, has not greatly altered. Valparaiso is slightly dearer at 36.70.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 28th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	8,600	From Revenue	14,551
Interest, &c., on Debt	8,834	Borrowings	3,638
Sinking fund	500		
Sundries	103		
Added to Exchequer Balances ..	146		
	18,189		18,189

Revenue at £14,551,000 compares with £15,243,000 in the corresponding period a year ago. Customs brought in £2,052,000, while Excise yielded £1,063,000. Property and Income-tax together with Super-tax produced £6,971,000, and the Post Office contributed £1,250,000. The week's operations increased the National Debt by £3,637,900, and caused the following changes:—

Treasury Bills	Min. £	Bank of England Advances ..	Min. £
	5,651	Public Department Advances ..	4,050
		National Savings Certificates ..	200
		Sundries	39
	5,651		9,289

The floating debt was increased by £3,480,000 to £805,076,500.

FINANCIAL YEAR, 1923-24 (April 1 to August 4, 1923).

Total Expenditure ..	£	Raised by Revenue ..	£
275,705,475		260,233,369	
		Net Borrowings	12,050,418
		Decrease in Balances ..	3,421,688
Total	275,705,475	Total	275,705,475

ESTIMATES FOR YEAR 1923-24.

Ordinary Expenditure ..	£	Ordinary Receipts ..	£

Special Expenditure ..	£	Special Receipts	£
15,603,000		40,000,000	
Total	816,616,600	Total	818,500,000
		Surplus	1,884,000

THE ANGLO-FRENCH NEGOTIATIONS.

THE events of the last few weeks have illustrated very clearly the disadvantages of secrecy in the negotiations now taking place between England and France. Since writing a week ago the French Government have issued the text of the instructions, dated June 14th, sent to their Ambassador in London, in reply to the British questionnaire of June 13th, but suspended during the political crisis in Belgium. That document might have assisted to form public opinion if its contents had been disclosed at the time. To-day it is out of date, and nothing but the complete correspondence which has since taken place would be of much help in guiding the public of this country in one of the most critical phases of recent history. The document reiterates France's intention not to negotiate with Germany on the subject of passive resistance. At the same time it does indicate France's intention, under certain circumstances, to modify the form of her occupation. It reiterates the belief frequently indicated from Paris that if Great Britain would advise Germany to cease passive resistance the German Government would—with a bad grace, no doubt—accept this advice, and hasten to take a step which France asserts it will sooner or later be compelled to take. At the moment Dr Cuno, watching with despair the lack of progress in Anglo-French negotiations, naturally gives no sign that he would do this. But his view might be different if he knew that a settlement acceptable to Great Britain had been reached in principle. In spite, therefore, of his recent speech, we think that there is just a possibility that in certain circumstances Germany might be induced officially to call off further passive resistance. What are these circumstances? They are, as we have indicated, that there would be some certainty of restoring a tolerable régime not merely in the Ruhr, but throughout Germany. Now, France is not prepared as yet to discuss with Germany the future régime in the Ruhr, but she must discuss it with Great Britain if we are to be in any

sense a party to a settlement. Great Britain does not believe that under the existing régime in the Ruhr reparations could be paid by Germany. She does not believe that under existing conditions the financial chaos in the Reich can be remedied; but she is convinced that the present policy leads inexorably to the break-up of Germany into units which would have no responsibility whatever for carrying out any of the provisions of the Treaty of Versailles, and would certainly repudiate all financial obligations. To meet the views of Great Britain, the seizure of specific pledges in the Ruhr must be replaced by a definite but general control over the revenues of the Reich throughout Germany. Any settlement, therefore, which aims at securing the payment of reparations postulates an important change in the present Ruhr situation. Great Britain is bound to negotiate with France on these points, and satisfy herself before she can make any request to Germany. France, on the other hand, provided she has any inclination left for a settlement which will produce cash rather than the break-up of Germany, must also recognise that she must agree with Great Britain on the character and objective of the action of the creditors of Germany both in the Ruhr and in unoccupied Germany. Have we any reason to think that France will negotiate with us on this matter, or that we can offer her any inducement to do so?

On this point Mr Keynes has summarised in a recent letter to the *Times* the financial conditions which must form the basis of any settlement between France and England. He proposes that reparations should be fixed at 50 milliard gold marks, but that the rate of payment should be fixed by the Reparations Commission, which means in effect that the real value of this nominal sum should be now assessed by an *ad hoc* inquiry by the Commission into Germany's capacity. Great Britain would forgo any claim out of this sum until the shares of her Allies had been paid; and finally would cancel the Allied debts. The latter clauses, which form the basis of a unanimous resolution passed at Vienna recently by various European League of Nations Societies, are, moreover, those which form the financial basis of M. Poincaré's policy. Mr Keynes, however, associates with these clauses the suggestion that France should at once leave the Ruhr. On the monetary side Mr Asquith gave on the whole a general approval to these suggestions in a speech on Thursday at Cambridge. But he evidently recognised that to get the French to leave the Ruhr forthwith without conditions or provisions which would assure the payment of the sums that Germany is expected to pay is not a practical policy, for it would arouse all the doubts as to Germany's intention to fulfil her obligations which have been the underlying influence which has moved French and Belgian opinion in favour of the Ruhr policy. Mr Asquith, therefore, without being very precise, hinted that in addition to this offer we must agree with France on certain steps for ensuring payment. The Government also clearly realise that financial control in Germany must form part of a settlement—a conclusion based not merely on regard for French prejudices, but on a feeling widespread in this country that a reparation settlement would, in fact, not be carried out without strong supervision in Germany.

Up to the present the Government have given no sign as to what they will say on the subject of the war debts, a question on which the French naturally have asked for information. We are afraid that at the critical moment they may lack courage, as Mr Lloyd George lacked courage last August to take the only practical line on this question. We have so often repeated the arguments for cancellation in these columns that we will not weary our readers by repeating them. For the first two years of the war our financial aid assisted France to maintain her resistance in our common struggle while we were able to complete preparations for taking our own part. The only equitable basis of dividing the cost of the war among the European Allies is in proportion to their national wealth, and on this point France already bears her full share without adding to it an indemnity of £600 millions to Great Britain. If we fall out with our former Ally there will be an irresistible temptation to use our financial position to bring pressure to bear upon France for this, that, or the other

object; but the fact that we are in a position to use the debts in such ways does not mean that they are in themselves equitable. The fact that the United States is not, and never has been, ready to pay for the war on the same scale as the countries of Europe, and therefore asks for her loans to be repaid, is irrelevant to the question of our inter-Allied financial arrangements in Europe. It is rumoured that the British Cabinet is drifting back to the attitude taken in the Bonar Law scheme of January on this question. It will be remembered that this scheme practically cancelled the inter-Allied debts, but that it neutralised the effect of this generosity by maintaining our claim for a large share of a comparatively small total of reparations, thus making it impossible for France to secure the full cost of restoring the devastated areas. The offer of full priority for the restoration of Northern France, plus abandonment of our claim for the repayment of our debts, plus an agreement on machinery that would make Germany's guarantees of payment effective—which, of course, involves a substantial modification of the occupation in the Ruhr—is the only basis, in our opinion, for an agreement with France. With these principles agreed, Great Britain can whole-heartedly urge Germany to cease her passive assistance.

Unfortunately the factors making for delay seem to be winning the day. The French nation does not yet seem to know whether it most desires reparations or the break up of Germany; and the British Government is still a little afraid to face what it—in our opinion erroneously—thinks would be popular disapproval of surrendering so much of our claims upon Europe. Once again the evil genius which has dogged all attempts to re-establish the economic condition of Europe seems to be at work, and will delay a recognition of the true factors until too late. In the meantime, economic conditions in Germany go from bad to worse, and, as our correspondent shows in another column, the Government is hurriedly bringing in plans for improving taxation, &c., which are obviously bound to fail. Great efforts are to be made to float a loan upon a gold basis in September. But the conditions of September 15th do not seem to be of very much importance, for the situation grows worse and will grow worse daily so long as the Government is afraid to take the last desperate step which might to some extent check the chaos—namely, to put taxation, as well as wages, on to a gold value basis.

THE INFLUENCE OF OIL ON POLITICS.

(BY A CORRESPONDENT.)

THE intervention of the American observer during the last stages of the Lausanne Conference in the matter of the Turkish Petroleum Company raises again the interesting question of the influence of oil on politics. The incident in itself is obscure. It would seem that the Treaty was drafted to contain a recognition of the validity of the Turkish Petroleum Company's concession, but that when the State Department at Washington became aware of that excellent intention, the American observer was instructed to oppose it. Seeing that Standard Oil had already been admitted, in principle, as a participant in the Turkish Petroleum Company, what motive prompted the State Department to take this course of action so flattering to the Turk? Was it in support of the claims of the Chester concession which cuts into the Mosul oilfields? That is hardly probable. The State Department has specifically denied supporting the Chester concessionaires. Was it a subtle device of Standard Oil to secure a larger share of Mesopotamian oil? Or was it merely an act of formalism on the part of Mr. Secretary Hughes, who had started the first Lausanne Conference by declaring for "the open door" and felt constrained to end the second by doing the same? There may be something in the latter idea. The concession of the Turkish Petroleum Company, in any case, does not run into Turkish territory as the frontiers stand at present, and is not really affected by the Turkish Treaty one way or the other. That being so, and the Standard Oil having been already admitted into the Turkish Petroleum Company, it may well be that Mr. Hughes was advised, in view of the coming elections, to do some harmless window-dressing to please his own

people, who are never tired of hearing of the "open door" for Americans.

This incident is typical of the mystery which envelops the influence of the oil interests. It is the same now as it was in the Mexican affair of 1913, when American and British oil companies were objects of general suspicion in both continents, when Standard Oil was accused of instigating the Madero revolution and Lord Cowdray of supporting Huerta against Madero. Is the climate of the Mesopotamian oilfields to be as relaxing as the Mexican for the political morality of the Powers? One is forced to return to a few fundamental facts, political and economic, in order to state without exaggeration the part which oil necessarily plays in foreign politics.

Politically one begins with the British Government and the Anglo-Persian Oil Company. Great Britain was unique in that it had been committed to an oil policy before the war. In the early summer of 1914, Mr. Churchill carried through the House of Commons the Act enabling the Government to take a controlling interest in the Anglo-Persian Oil Company for the purpose of safeguarding, in part, the fuel oil supplies of the Navy. Previous to that Sir Ernest Cassel had been persuading British interests to join hands with German in the exploitation of the oilfields in Mesopotamia. It speaks much for the influence of Sir Ernest Cassel that early in 1914 the Turkish Petroleum Company was reconstituted at the instance of the British Government, the Anglo-Persian Oil Company taking over from Sir Ernest Cassel the 50 per cent. share of the National Bank of Turkey and the Royal Dutch and the German interests taking the remaining quarters. The pressure which the British and German Governments brought to bear jointly on the Turkish led to the latter assigning—by a mere letter, it is said—the whole of the Mesopotamian oil rights to the Turkish Petroleum Company. This was just before the outbreak of the war.

How far the lessons of the war caused the British Government to develop or modify its pre-war policy in oil, which was one of indirect participation in oil production in the Middle East, is a field of inquiry which has not yet been fully explored. But there is no doubt that France took a serious view of the national importance of oil supplies and was fully alive to the forward oil position of Great Britain. That is why she broached the question of an oil entente. She had already secured virtual control, commercially, of the oilfields of Poland; she was steadily increasing her investment in those of Roumania and stimulating the production of oil in her own country and in her colonies. Finally, in 1920, she was able to bring Great Britain to an oil pact at San Remo. The important part of the San Remo Agreement was not the reciprocity clauses, pledging support of each other's oil interests, but the assignment to France of the 25 per cent. German interest in the Turkish Petroleum Company. That was the cause of all the trouble with America, or Standard Oil.

To go back to fundamental economic principles, it should be appreciated that an oil combine, embracing like Standard Oil the four functions of production, refining, shipping and distribution, is bound to become international in its interests and operations. The economic pressure is twofold. In the first place, the demand for oil products is world-wide, and oil production and marketing facilities must be widely distributed in order to meet demand economically. Considerations of this kind—economic, not political—led the Anglo-Persian Oil Company to take an interest in a company producing in Roumania, to drill for oil in Hungary and Jugo-Slavia, and enter into a prospecting agreement with the Greek Government in Macedonia—merely to find a more economic source of supply for the European markets. In the second place, an oilfield is a rapidly wasting asset. It is axiomatic that the producer of oil must continually seek fresh fields in order to meet the depletion of his source of supply. The Chairman of the Royal Dutch Company once stated at a shareholders' meeting: "The importance of our oil grounds in the Dutch East Indies is continually decreasing. We have no reserve grounds. Therefore, we had to employ our capital, organisation and energy elsewhere. Everywhere in the world our geologists are at work for the extension of our oil grounds." The same economic pressure is being exerted on Standard Oil. Originally pushed abroad to find markets for the ever-increasing

American production, Standard Oil was eventually forced to acquire reserves in foreign fields in order to protect its heavy capital investment in the refining and marketing business in the United States. Some day, however remote, American oilfields will decline, like all others. Now whenever Standard Oil, hunting for reserve sources of production, finds itself too late upon the foreign field, there is generally some political trouble. Is not this, coupled with the British Government's indirect participation in the oil business, a possible explanation of the influence of oil on foreign politics?

Let us note two occasions when Standard Oil was too late upon the field and mark the political events which followed. The first is Russia. Before the war Royal Dutch-Shell was predominant in the Russian fields. It was not till 1920 that Standard Oil acquired an interest in Russia by the purchase of control of the important Nobel undertakings in Baku. Yet this minor interest of the great oil trust was apparently sufficient to lead up to the rupture of the Genoa Conference. It will be recalled that the mere rumour of a deal between Royal Dutch-Shell and the Soviet Government set Standard Oil to work in Washington, in Paris and Brussels—in Washington to urge the State Department to reiterate its economic policy of "the open door," in Paris and Brussels to support French and Belgian interests in warning their respective Governments against "British greed." Is it not to be assumed that the insistence of the Belgians on the return of properties without the option of compensation, the amendments of the French to the Russian Memorandum, the final break up of the Conference under the deadly cloud of having a further meeting of experts at the Hague, are so many indications of the influence of oil—and Standard Oil?

The other occasion was, and is, Mesopotamia. Standard Oil had arrived too late upon the oilfields of the Middle East. It had a prospecting claim in Palestine, but not a single concession or claim in Mesopotamia. Indeed, American interests in that country were confined to the shadowy claims of Admiral Chester. Naturally, the policy which Standard Oil urged upon the American Government in this sphere was the policy of "the open door." How else could it get inside? One remembers the heated Notes that passed between the American Secretary of State and Lord Curzon ostensibly on the subject of "the economic rights in Mandated territories," but really on the oil rights of Mesopotamia. The British Government was roundly accused of partiality to British interests, of seeking to establish an oil monopoly in mandated territory. The San Remo Agreement intensified American feeling and suspicion. So violent was the last diplomatic Note from Washington on this subject that it was considered unfit for publication. The British Government were constrained to give way and pacify American oil interests: it agreed that Standard Oil should be admitted into the Turkish Petroleum Company. Here was outstanding evidence of the political influence of the American oil colossus. The first proposal was to give Standard Oil a 20 per cent. interest by taking away from the Anglo-Persian 10 per cent. and from Royal Dutch-Shell and the French

5 per cent. respectively. The Royal Dutch-Shell somewhat naturally objected to these political manoeuvres at the commercial expense. The second proposal was that Standard Oil should have a 25 per cent. interest and that the Anglo-Persian Oil Company should give up half its 50 per cent. holding for that purpose. Presumably the Anglo-Persian was to be compensated in some other way, possibly by receiving a royalty. With this agreement in principle, the Powers entered into conference with the Turk at Lausanne. France, Britain and America were all interested now in the Mosul oilfields, a fact that no doubt explained the solid and united front which they presented to the Turk on the question of the Mesopotamian frontiers at the first conference. At the second we have noted the apparent lapse from unity, which we may suspect is more apparent than real.

Much still remains obscure in the post-war history of oil. One does not yet know the full commitment of the British Government to an oil policy, or the complete machinations of the Standard Oil Company of New Jersey, or the full extent to which Mr. Secretary Hughes has earned his popular title of "the Secretary for Oil." The international influence of the big oil combines must inevitably be considerable in the nature of things economic and political, particularly that of Standard Oil on the occasions when it arrives too late upon any foreign field. One fact emerges clearly—namely, that the British Government appears subservient to the American whenever the pressure of Standard Oil is strong. Was it not the same in 1913? At a time when American and British feelings were strained over the question of the recognition of Huerta, Lord Cowdray was actually prevailed upon to withdraw his requests for extensive concessions in Colombia in subservience to American clamour, and the invocation of the Monroe doctrine. Of that occasion the late Walter H. Page, American Ambassador in London, wrote to Colonel House: "I congratulated him. 'That, Lord Cowdray, will save you, as well as some other people I know, a good deal of possible trouble.'" But the trouble has only been shifted from Mexico to Europe and the Middle East. In the latter case, it is the Anglo-Persian Oil Company that is forced to make the sacrifice, but subservience to Washington is still the rule.

GERMANY'S NEW FINANCIAL POLICY.

(BY OUR BERLIN CORRESPONDENT.)

As I foreshadowed last week, the Government's new financial policy is wholly inadequate. It contains some good minor features; but its main feature repeats the old error, many times exposed, that any real yield worth having can be counted upon from taxes assessed in a fixed number of paper marks without regard to the mark's value. That is the feature of the proposed "Rhine-Ruhr Levy." While the Government imposes this levy, based upon a mere multiplication of former income-tax, it denounces its own expedient by issuing a "fixed-value" paper mark loan on a gold-index subscription and repay-

ment basis. If the currency is not further to depreciate it would be unnecessary to put this loan on a fixed-value basis; if the currency is to depreciate, the pure paper-mark Rhine-Ruhr Levy cannot yield any calculable sum. The loan is for an unlimited amount, to bear 6 per cent. interest, to be redeemable in 1935, to be valued in dollars in that the subscribers will pay in sufficient paper marks to buy at the day's exchange the wished-for value in dollar bonds, and will be repaid sufficient paper marks to buy at the exchange of the redemption date the same value in dollars. In the meantime the paper mark amount of the 6 per cent. interest will fluctuate according to the dollar exchange. This is identical with the local coal, rye, and other commodity bonds, with the difference that the commodity is gold. It will be allowed to buy the new dollar bonds with dollars or other high-exchange currencies, and in this case the issue price, which for paper-mark subscriptions is 100, will be 95. The difference in issue price is, strictly speaking, a violation of the "fixed-value" principle. The loan, judged by the success of similar local loans, ought to yield a very large sum in paper marks; but, in view of the fact that the deficit in ten days is nearly 18 billion marks, and that the whole note circulation is under 32 billions, the biggest possible loan yield will hardly help the finances; in other words, the amount of cash in public hands through earlier inflation is insignificant in comparison with the current inflation need. Before deficits can be covered by loan they must be reduced into some proportion with the amount of money available.

The "Rhine-Ruhr" Levy, the chief feature of the taxation reform, is, it is to be feared, another instance of what Herr Bernhard calls "demagogic" taxation. It is to be imposed on the public companies as an imposing-looking multiple of their income-tax (so-called *Koerperschaftssteuer*); but once the multiple is fixed, the real yield will vanish, unless, as cannot be expected, the currency depreciation ceases. Companies which closed their books between October 1st and December 31, 1922, are to pay, on August 31st, in addition to their ordinary company income-tax, one quarter's tax multiplied by 35, and on October 5th and January 5th each one-half of the tax multiplied by a "currency depreciation" figure, which is to be fixed under the law of July 9th. Companies which closed their books before October, 1922, will pay twice as much, their original income-tax having been assessed on profits made at an earlier, lower standard of values. In addition will be added to the levy the 50-fold motor-car tax. The nominal yield of the income-tax part of the levy cannot be estimated. The real yield cannot be even guessed at, because it depends upon the currency value between now and next January. If the mark continues to decline rapidly in value, the real yield may be very small.

Only five days have passed since this project was published, and it is highly likely that the multiplying factor will have to be raised before one day more has passed. How unsatisfactory the multiplication of taxes proves is shown by the fact that the Reichsrat was yesterday (Monday) considering again the raising of the ordinary income-tax. Only a few weeks ago income-tax advance quarterly payments were to be multiplied 25-fold. The multiplication fixed on Monday was 100-fold. But that was on a basis of 1,000,000 marks to the dollar. To-day (Tuesday) the dollar is quoted over 3,000,000 marks, so that within 24 hours the multiple must be trebled. As long as the tax Bill is not passed the multiple can be increased again and again, but once it is passed nothing can be done without a new law, and, if history repeats itself, even a 300-fold rate will yield much less in real tax than the unit rate of a year ago. Under discussion are a number of reforms of the taxes on consumption, which will be described when they take shape. At present the rates and conditions are changed nearly every day, and every day the currency movement makes yesterday's rates and conditions useless. The demand that the Government assess all indirect taxes on a percentage of selling values, and all direct taxes in gold or in "price-index marks" continues to be made from expert unofficial quarters, but the Finance Ministry pays no heed. As a *reductio ad absurdum* of its present system I give the yields of certain taxes in June, at June average of exchange, and the per capita per annum tax: Beer £166,

sugar £165; each per capita per annum 1-120th of an English penny; salt and lighting materials £16 and £17 respectively, each per capita per annum 1-1200th penny; matches £33, per capita per annum 1-600th penny. Were it not for the tobacco and wine taxes, which are assessed on selling prices, and yielded in June respectively £200,000 and £26,000, the whole of the indirect taxes put together would yield only about a good middle-class income for one family. The result continues to be shown in the Finance Ministry's ten-day reports. In the term July 20th-30th Revenue totalled only 460,150 millions, or about 1-40th of expenditure, which was 18,279,053 millions. Although no statistical proof can be given, it is certain that this Revenue did not cover more than a fraction of the assessment and collection cost. In other words, part of the 17,800,000 millions added in the ten days to the Floating Debt (which now totals 60,755,064 millions) was an unnecessary inflation burden which the population would not have had to bear if taxation had been altogether abolished.

THE TIN POSITION AND OUTLOOK.

THE price of standard cash tin at the close of July stood at £185 per ton on the London market, and the forward position commanded a premium of 15s at £185 15s. Thus compared with the high level reached last March, there has been a decline of nearly £50 per ton, although the final values for last month were roughly about £10 per ton above the lowest level touched in that month. A year ago the cash price was down to £162 10s, and, to go back two years, the still lower level of £160 has to be noted, although this was not the worst seen in 1921, when for a brief period the market was allowed to fall to £148. The standard price thus finished last month about £2 10s under the highest and £45 above the lowest registered for all 1922, and taking it altogether the metal may be said to have held its own very well considering the trying times through which the non-ferrous group has been passing.

The selling price of tin is of vital importance to numerous mining companies in this country, and the fact that the United States is the largest consumer and the smallest producer makes the metal one of more than usual interest, as speculation undoubtedly has a lot to do with the price changes that are started here and in the East, and subsequently reflected in the New York quotations. In the year 1921 the United States imported only 24,758 tons of tin, but last year the figures jumped to 59,468 tons, an increase of 34,710 tons, or approximately 140 per cent. The American demand was well sustained in the early part of the current year, but there has since been a falling off, and as the United States draws the bulk of its tin supplies from the Straits Settlements, this factor must necessarily influence the position generally. At one time this year the United States' deliveries were at the rate of 75,000 tons per annum, and had this satisfactory level been maintained the effect on the market would have been highly encouraging to tin producers in the East, and also in Nigeria.

The visible supply statement issued early this month shows that on July 31st last the total stocks in London and the outports amounted to 3,776 tons, against 4,566 tons in the previous month. At the close of last week this total had been further reduced to 3,538 tons, of which 1,668 tons were in London and 1,860 tons in Liverpool, there being ten tons also credited to Swansea. The tin landing, in transit and afloat, to the United Kingdom at the end of last month aggregated 1,335 tons, against 380 tons at the close of June; thus the total supplies for this country stood at 5,111 tons, against 4,946 tons at the end of the half-year. To this must be added the supplies of Banca and (or) Billiton, on the spot or afloat, to Europe and the United States amounting to 3,703 tons, and also the Straits tin afloat to the Continent totalling 1,240 tons. Thus, with the 8,122 tons of tin on the spot, landing or afloat, to the American ports, a visible supply of 18,176 tons is arrived at, which compares with 17,762 tons at the close of June, 20,229 tons on July 31, 1922.

and 19,438 tons two years ago. There has thus been an increase of 414 tons on the month, but compared with the aggregate of 22,281 tons recorded for December 31, 1922, there has been a reduction in tin supplies of 4,105 tons in the last seven months. In addition to this, it is only reasonable to suppose that the F.M.S. Government and the other signatories to the Eastern pooling agreement have liquidated some part of their holdings, and thus the invisible surplus has in all probability also been moderately reduced since the opening of the year.

The total monthly supplies for July amounted to 8,623 tons, which brings the total for the twelve months ended on that date to 100,480 tons as compared with 84,730 tons in the year ended July 31, 1922, and 55,380 tons for the period from August 1, 1920, to July 31, 1921. The total supplies as a matter of fact are the largest recorded for several years and the metal is now coming into sight at a rate which is approaching the pre-war level. Analysing the supplies, it is found that the total from the Straits amounted to 62,850 tons, out of which no fewer than 46,720 tons went direct to the United States, against 37,180 tons in the same period of 1922, and 15,995 tons in the twelve months ended July 31, 1921. The Bank and Billiton supplies amounted to 17,552 tons, against 15,746 tons for 1922, and 9,796 tons for the twelve months ended July 31, 1921, while it is pleasing to note that Australia sent 1,576 tons of tin to the United States and Europe, compared with 1,357 tons in the previous twelve months. Turning to the matter of deliveries, it is found that in the twelve months ended July 31st last these came to the very satisfactory total of 102,533 tons, against 83,939 tons in the previous year, and 53,887 tons for the year ended July 31, 1921. The American deliveries accounted for 67,354 tons, against 48,070 tons for 1922, and 29,726 tons for the same period of 1921, while the United Kingdom took only 18,658 tons, against 24,820 tons during the twelve months ended July 31, 1922, and 17,754 tons in the corresponding twelve months ended July 31, 1921. The Continental deliveries in the same period amounted to 11,453 tons, compared with 7,626 tons for the twelve months ended July 31, 1922.

The monthly deliveries for July were very disappointing at 8,209 tons, but probably the dock strike had much to do with this. The returns for the United Kingdom, for instance, amounted only to 764 tons, against 1,791 tons for June, while the Continental deliveries rose from 912 tons in June to 1,580 tons in July, and made quite a good showing. The British tin-plate trade is fairly well engaged at the present time, and it is quite possible that there will be more life about the market later on when the price stabilisation agreement comes to an end, as it will do at the end of next month. Offers of plates below the minimum have been already made for October-December shipment, and the appearance of makers' order-books has undergone a change for the better during the last few weeks, notwithstanding the holidays and the political tension. The tinplate shipments from Swansea for the week ended August 4th were larger than the receipts, and the total stocks are not heavy at 243,707 boxes. Thus, any improvement in the demand for plates in the autumn would find makers rather lightly covered in the way of tin. Reports from the United States indicate that the tinplate mills are leaving behind the ill effects of the hot weather stoppages, and that the outlook for the autumn canning season is distinctly good. At the same time, there is no denying the fact that American tin users are proceeding very cautiously, and this seems to suggest that the needs for the next few months are well covered. While the Ruhr question remains unsettled and the political outlook on the Continent shows no change for the better, it would be folly to look for any expansion in speculative interest in metallic tin. There was a slight hardening in values early this week on the resumption of business, but the drop in the mark, coupled with talk of a strike in the German metal trade and hints of a coming general collapse, kept business within very narrow compass. Tin on its merits, however, is reasonably cheap, and the statistical position generally may be regarded as very healthy. If world trade conditions were more satisfactory and there were any reasonable prospect of the reparations question being settled before the beginning of 1924, values would un-

General Manager W. J. WOREMAN, F.I.A.

doubtedly lift to a better level later on in the last quarter of the year, but no important movement is anticipated yet awhile. Tinplate users everywhere are working with slender stocks, and this is a good point for the metal. America may re-enter the market when the full effects of President Harding's lamentable death have been accurately gauged, but for the time being if the metal can hold its own round about current level it will be doing well, as the leading operators on this side are not inclined to lend much support. The bearish forecasts for tin that have been circulated lately have no justification, and they are based merely on sentiment. The East has not been a free seller at recent levels, and this suggests that offers from that quarter, as well as elsewhere, are being deliberately held back until it is seen how the European crisis is going to turn. The monthly showing for July must be regarded as favourable when all the circumstances are taken into account, and while there may not be any material improvement in the price of tin over the next few weeks, the undertone of the market should continue hard, and that is all that can be expected.

THE RUSSIAN HARVEST.

ONE of the unknown factors in the economic situation of the next few years is the date at which Russia will re-enter the world market as a considerable exporter of grain, and more particularly of wheat. There has been much talk of the renewal of wheat exports in the coming autumn, and there are those who confidently anticipate that there will be business to be done in this direction. But the truth about the economic condition of Russia will remain very largely wrapt in mystery, and in no direction is the uncertainty greater than in this matter of agricultural production over an area which constitutes more than half of the continent of Europe. The report made last autumn by the League of Nations Secretariat on the agricultural situation of Russia illustrated very clearly the confusion of prophets in Russia itself, the unreliability of Russian statistics when a case had to be made, and the necessity of interpreting such statistics as come from Russia with conservatism and in the light of probability. In the view of the over-estimate of crops last year our readers will appreciate the warning of a correspondent, who sends us the following comments upon the two estimates which have been made on the current year's harvest:—

"Two estimates of the yield anticipated from this year's Russian harvest have appeared recently in the Moscow Press. M. Teitel, an expert of the Commissariat for Agriculture, and M. Popov, formerly head of the Central Statistical Bureau of the Soviet Government, agree in calculating that the sown area for 1923 is about 20 per cent. greater than that of last year. M. Teitel bases his estimate on the final figures for the yield of the 1922 harvest, published in Bulletin No. 72 of the Central Statistical Bureau. This is given as 1,889,909,000 poods.* He believes that a 20 per cent. increase on it will give an approximately accurate idea of the dimensions of this year's harvest—that is to say, it would work out at about 2,267 million poods. He quotes the Central Statistical Bureau as giving last year's sown area as 49,474,000 desyatins,† and this year's area as 59,365,000. This

* 1 pood = 36 lbs.

† 1 desyatina = 2.7 acres.

allows for an almost identical yield per desyatin this year as last, or about 37 poods. It is, however, doubtful whether last year's yield will be attained, and some authorities would be inclined to reduce M. Teitel's estimate by 5 per cent. It is to be noted that M. Popov, as head of the Statistical Bureau last year, anticipated in his final estimate, published in October, that the 1922 harvest would amount to 2,850,000,000 poods, whereas the experts of the Commissariat of Agriculture thought that it would amount to between 1.9 and 2 milliards. M. Popov, who has since relinquished his post in the Central Statistical Bureau, still, however, regards last year's harvest as having amounted to 2,850 million poods, and estimates the present harvest at 3,000 millions. This would give an average yield per desyatin of more than 50 poods, which considerably exceeds the pre-war average yield, although this year's harvest is regarded as being average or below average, and the deterioration in seeding material has occasioned a corresponding fall in productivity. In estimating the surplus or deficit likely to arise out of these two estimates it must be borne in mind that approximately 480 million poods will be needed for seed if the 59 million desyatins said to have been sown this year are to remain in cultivation during 1923-24. It is, however, understood that the Soviet Government hopes to bring the sown area for next year's harvest up to the standard of 1916, which, if it proves to be possible, would involve the expenditure of 160 million more poods on the sowing of 20 million more desyatins. If the figure of 1,828½ million poods, based on allowances made by the Central Statistical Bureau and published by the League of Nations in the report on Economic Conditions in Russia last year, is taken as the amount necessary for consumption by the population, it will be seen that at least 2,308 million poods will be required to meet these demands, allowing in this case only for the maintenance in cultivation of the area said to be sown this year, apart from any effort to increase it, and not making any allowance for increased consumption caused by the natural growth of population during the last 18 months. Thus a deficit arises on M. Teitel's estimate of some 41½ million poods, while M. Popov claims for his estimate a surplus of 500 million poods as being available for export. On the other hand, statements have been made in the Soviet Press from time to time that the Government hope to export this year from Russia anything from 200 to 300 million poods. It is worth remembering, in this connection, that M. Popov's computation last year exceeded by almost one milliard poods that which was subsequently published by the Central Statistical Bureau as constituting the final official figure for the 1922 harvest. On the other hand, the estimates made last year by the Petrovsky Academy attached to the Agricultural Commissariat and by Central and Local officials of the Agricultural Commissariat itself, prove to have exceeded the actual dimensions of the harvest by little more than 100 million poods. M. Teitel's estimate, therefore, seems likely to furnish far the most useful guide as to what the 1923 harvest is likely to be.

"Even if allowance is made for the substantial decrease in the standard of consumption in Russia during recent years and for the fact that transport facilities are so weak that effective distribution of the harvest is impossible, and that therefore surplus grain will be available in some districts which will rot if it cannot be exported, it seems difficult to believe that grain exports from Russia can be anything but insignificant during 1923-1924. The pessimistic view of cereal exports held by Russian economists of repute is illustrated by an address recently made in Moscow by Professor Haensel to the Institute of Economic Research. The enormous expansion of the world's cereal production in recent years, the re-entry into the market of countries like Poland, Roumania, and Hungary, the prospect of good crops in the new world, the substantial drop in shipping freights, whereas freights in Russia remain relatively high, and the impaired quality of Russian grain were factors which inclined Professor Haensel to look with great reserve on the possibilities of re-establishing in the near future Russia's former position as a large cereal exporting country. Such export as might be effected would, he feared, only be possible if the present extremely low agricultural prices in Russia

continued to prevail, which meant a continuance of the conditions tending to disunite the towns from the rural areas, and to leave Russian industry without market for the goods which it produced. It is also feared that it will prove difficult to supply the credit necessary to finance the preparation of any exportable surplus, as shown in an article by M. Ivanov in 'Ekonimicheskaya Zhizn' for July 25th. Meanwhile, however, the Centro-Soyuz is actively developing its export plans, and has already concluded contracts with the Kuban, Don and Stavropol provincial co-operative unions for the supply of 15 million poods, two-thirds of which, it is stipulated, must be wheat, but the Kharkov correspondent of 'Ekonimicheskaya Zhizn,' writing in the issue for July 27th, observes that great difficulties are anticipated in transport, owing to a lack of rolling-stock, and insists that it will be necessary to recondition the ports of Novorossiisk and Eisk, while the shallowness of its harbour and the absence of sea-going or river vessels makes Rostov of doubtful utility."

STOCK EXCHANGE MISUNDERSTANDINGS.

(BY A STOCK EXCHANGE CORRESPONDENT.)

EXPERIENCE shows that it is so often the case that more misunderstandings arise over little things than over the larger affairs of life, that to find the same conditions prevailing in business matters is only what may be expected. And, using the Stock Exchange as an illustration, it is unquestionably the case that minor matters lead to more friction, arising out of misunderstandings between broker and client, than ever occurs in connection with substantial transactions. The man who sells a thousand Lever preference is not at all likely to raise any questions in connection with the settlement of the bargain. In all probability the mere fact of his having such an amount of money in shares of this description argues a certain amount of acquaintance with Stock Exchange affairs. But the seller of 100 Lever preference who is asked to pay half-a-crown or 3s 6d for "splits," because half the shares are in his own name and half in that of his wife, is very inclined to be resentful, and to think that, in some way or other, he is being done out of the extra stamp and fee. If he put himself into the position of the buyer, the misunderstanding would quickly disappear. The purchaser buys his 100 Lever preference and expects to pay stamp and fee on that particular number of shares delivered on one deed. If there are two transfers, of 50 shares each, sent to him, the extra registration fee of half-a-crown, and whatever additional transfer stamp may be involved through splitting the original purchase of 100 shares, certainly ought not to fall upon him, the buyer. If the seller has specified in the first place that the shares were in two distinct names, the broker would have dealt in this manner, but when the order is sent to sell a hundred shares, it is executed in this way, and whatever loss arises thereafter through the fact of the shares being in different names should fairly be debited, as is the case, to the seller who neglected to mention this when sending the instructions.

The seller of 50 Lever preference at, say, 20s 6d pays 3d per share commission, 12s 6d in all. The seller of 20 shares is charged 10s, or 6d per share, and, unless he knows the reason, not unnaturally thinks he is being swindled. But the Stock Exchange rule is that no lower commission than £1 is to be charged, except in the case of transactions amounting to less than £100 in value, when 10s is the minimum; or upon transactions amounting to less than £20 in value, when the lowest commission is 5s. Therefore the lowest charge on 20 shares at 20s 6d is 10s. Similarly, the commission on the War Loan is 5s per £100 stock, according to the official scale. The man who buys £100 of it at 100½ is charged £1, this being the minimum brokerage, though, if the price were 17s 6d lower, he would get off for a minimum 10s.

Notes of the Week.

The Parliamentary Session.—The session of Parliament which was adjourned last week until November 13th—although the recess may be shortened by Continental developments—has been of unusual interest from more than one aspect. Early in the year the new Conservative Government appeared to be losing headway, and almost foundering in a sea of exceptional difficulty. Trouble arose in the first place through a combination of two apparently unconnected factors, namely, the housing question and Mr Bonar Law's loyalty to his colleagues. Four members of his Government were defeated at the general election. Mr Bonar Law wished to secure seats for them in the House. For three of them carefully selected constituencies were found where a safe return was thought to be a foregone conclusion, but fate was so unkind as to bring public dissatisfaction over the housing question to a head just when these three by-elections were due, and one after another the ministers were ignominiously defeated. Three such electoral defeats on ground carefully selected by the Government and so soon after a general election were unprecedented, and dealt a very severe blow at the prestige of the new administration. But worse—as it appeared then—was to follow. The health of the Prime Minister himself gave way under the strain of his office, and after an unavailing rest it became necessary for Mr Bonar Law to resign. To many prophets his generally lamented departure appeared to herald the rapid disintegration of the Government, which had never succeeded in cutting more than a very mediocre figure in the House of Commons. Had the King selected as his successor Lord Curzon, or indeed any other Peer, these prophecies of woe would in all probability have been somewhat rapidly fulfilled. But the selection of Mr Baldwin as Prime Minister, on the sound ground that the Prime Minister must be able to face the concentrated opposition in the House of Commons, proved to be the turning point in the Government's fortunes. Mr Baldwin struck the public imagination as a man of common sense, determined to redeem British foreign policy from impotence; and in Parliament he consolidated the Conservative position by strengthening the debating power of his front bench, and by gaining the adherence of at least one prominent member of the dissentient Conservative element. The result in brief is that the Government reached last week's adjournment more strongly in the saddle than seemed possible a few months ago, when the housing muddle and the controversy over the Irish deportations were to the fore. In one respect Mr Baldwin has been assisted by his principal difficulty. Over the whole session the questions of the Ruhr and Reparations have hung like a cloud. No small amount of his strong position to-day is owed to the willingness of most sections of the House to believe that he was making a bold and common sense effort to secure a sane solution. It is impossible to discuss the past session without mentioning Mr McKenna. By obtaining the conditional promise of Mr McKenna's entry into the Government, Mr Baldwin was held to have played a strong card. The impression thereby created lasted for a time, and served its purpose. But as time passed, and Mr McKenna remained in the City, the public became a little sceptical of the likelihood of his advent at the Treasury; and in the closing week the rumour was revived though not confirmed that for reasons undisclosed—perhaps they were electoral—the Treasury was not to receive him. Thus ended an eventful session, and although Mr Baldwin may be more than gratified at the success of his trial spin, he will face the recess with the realisation that his future depends upon his ability to fulfil the national craving for the return of peace, stability, and good trade.

A Pre-War Anglo-German Agreement.—The full text of the secret Anglo-German Convention of June, 1914, regarding Asiatic Turkey has been published for the first time in the March number of the Columbia University *Political Science Quarterly*. The final text of the document, with its appendices, had been agreed and initialled by Lord Grey and Prince Lichnowsky, but signature was postponed until Germany should have con-

In all scales of this sort, commission or otherwise, inequity and anomaly are sure to be found. The Stock Exchange Committee's regulations are framed with the intention of being as fair as possible to the greatest number. The commission on £400 War Loan is exactly the same (5s per cent.) as it is on £100 stock, seeing that the minimum is £1 in the case of transactions amounting to £100 or more in value. The reason is that the amount of work involved upon the broker is the same in the case of the smaller as it is in that of the larger amount, another little fact which clients perhaps overlook.

In consequence of the splitting-up of railway stocks, which came about as a result of the grouping arrangements entered into last year amongst the Railway companies, all kinds of odd and broken amounts of stock came into existence. Clients, when they come to sell these sums, do not always understand why they are called upon to pay the stamp and fee to the purchaser, seeing that it is the buyer's part to be charged with this expense. The buyers in nine times out of ten are jobbers in the market, who, in such instances as these of broken amounts, have to take the stock into their own name. If they buy £68 London and North-Eastern preferred stock and £54 of the deferred stock, it is extremely improbable that buyers will come along to take these precise amounts, and the consequence is that they, the jobbers who buy the stocks, have to put them into their own names, and, of course, to pay the stamp and fee. The latter charges would more than swallow up whatever profit they were likely to make out of such modest deals, a profit which, in any case, would be small and hardly adequate to the amount of work involved. Therefore, it has been the custom for over a hundred years to stipulate that sellers who wish to dispose of what the House still calls broken amounts should be required to pay the transfer stamp and the company's fee, a practice which is reasonable in itself, and does not rest upon mere tradition for its justification. In these circumstances, the amount of money stated on the transfer-deed is invariably that which the seller actually receives, whereas in other transactions the money set out as the consideration that governs the stamp duty on the transfer deed usually differs from the sum realised by the sale of the shares. It has been stated, times without number, that the consideration money on the transfer deed is that which the buyer pays, and will probably differ from the seller's proceeds of the sale by reason of the fact that the shares may have changed hands many times between the original sale, by the man in whose name the certificate is made out, and the purchase by the ultimate buyer, who gives either a higher or lower price than the first at which the bargain was effected. The question was raised so constantly that it became necessary to put a note on every transfer deed, which reads:—

The consideration money set forth in a transfer may differ from that which the first seller will receive, owing to sub-sales by the original buyer; the Stamp Act requires that in such cases the consideration money paid by the sub-purchaser shall be the one inserted in the deed, as regulating the *ad valorem* duty. The following is the clause in question:

"Where a person, having contracted for the purchase of any property, but not having obtained a conveyance thereof, contracts to sell the same to any other person, and the property is, in consequence, conveyed immediately to the sub-purchaser, the conveyance is to be charged with *ad valorem* duty in respect of the consideration moving from the sub-purchaser." (54 and 55 Vict., cap. 39 (1891), Section 58, Sub-section 4.)

That many thousands of people do not read this paragraph, which is set in sufficiently plain language to convey its meaning to any ordinary mind, is obvious from the fact that stockbrokers get scores of inquiries every year on the point, a fact which leads to the inference that, for every one person who inquires, there are probably at least a dozen more clients who do not understand, but who are averse from asking the questions which this particular paragraph answers. The stockbroker, however, would infinitely prefer to be asked for explanation on any point connected with his business than that his client should nourish some sense of injustice, which could be easily cleared up to the avoidance of misunderstanding and of unspoken grievance on the part of the public.

cluded some preliminary negotiations with Turkey, and the whole scheme was rendered abortive by the outbreak of the War, against which it was intended to be a safeguard. This abortive agreement was a painstaking fair-minded, and, on the face of it, sincere effort on both sides to resolve a number of local conflicts of interest, which were none of them, perhaps, likely causes of war in themselves, but which had long contributed to produce friction in Anglo-German relations. Parallel negotiations are believed to have been conducted in regard to the eventual disposal of certain territories in Tropical Africa; and had time been on the side of peace, it is possible that the year 1914, instead of being memorable for the outbreak of the War, would have been remembered with faint interest and most inadequate gratitude as the date at which England and Germany achieved what England and France had achieved in 1904 and England and Russia in 1907. At any rate, the existence of this almost completed agreement disposes of the view that the agreements on details, which was the prelude to our Entente with both France and Russia, were secondary matters, and that fear of Germany was the all-compelling cause of mutual understanding. Incidents like that of Fashoda, or of the shots fired by the Russian Fleet at British fishing-boats, showed how serious such disagreements in detail might be in their effects upon national temper, and how little that temper was controlled by the consciousness of superior interests making for concord. The removal of minor grievances, like that of tree-stumps, is a negative but far from an easy operation; and the inference is that, if fortune had been more favourable, this Anglo-German Agreement regarding respective interests in Turkey would have been one of the preliminary steps towards an Anglo-German Entente. Nor was the agreement, like the Persia Agreement of 1907 between England and Russia, obviously made at the expense of a third party; for there was no question of partitioning Turkey into British and German zones, nor anything, indeed, that was markedly prejudicial to Turkish sovereignty. In fact, in this agreement Germany would have recognised the terms of a convention of a similar kind, in settlement of outstanding differences, which had been signed by Great Britain and Turkey in the previous year. The basis of the abortive agreement with Germany was that Great Britain should withdraw her opposition to the construction of the Baghdad Railway, while Germany should agree to a minor British participation in the enterprise and to the terminal point of the line being at Basra, up the Shattu'l Arab, and not on the open coast line of the Persian Gulf. Germany also undertook to respect the rights of British navigation enterprises on the Tigris and Euphrates, in which German capital, in turn, was to be accorded a minor share; and arrangements were made to prevent cut-throat competition between the two systems of transport. The opportunity was also taken to demarcate the respective interests of the British and German railways in Anatolia; to provide for eventual junctions between their lines; and to divide the navigation rights on the lakes which lay between them. German irrigation concessions in Cilicia and British in Mesopotamia were to be mutually recognised and respected. The whole document is characterised by a spirit of moderation and common sense with which the grandiose and uncompromising projects engendered on both sides after the outbreak of the War are in lamentable contrast.

Irish Affairs.—Our Dublin correspondent writes:—Yesterday the Oireachtas completed its labours, and will meet no more. The Government finished its legislative programme save a Licensing Bill, which the Seannad declined to consider urgent. A short election campaign of concentrated effort and excitement has begun, and upon Monday, August 27th, the new Dail, or Lower House, will be elected. Proportional representation and adult suffrage, combined with a multiplicity of candidates and a most critical turning-point in Ireland's history, make this General Election extraordinarily interesting. The number and diversity of the candidates is a matter for wonder to those unfamiliar with Ireland—to those particularly who have been accustomed to the flawless discipline and uniformity of the Irish Parliamentary Party at Westminster, which, though tempered occasionally by rather unintelligible "splits," seemed to betoken a corresponding uniformity of view amongst the Irish electorate. If opposition to British rule regimented the people, political liberty has disintegrated that organisation, and amongst the constituent atoms and groups new combinations are being gradually conceived, which shall serve to express with approximate accuracy the new mind, the new purpose, the new ideals of emancipated Ireland. An interim Report from the Fiscal Committee deals with the Safeguarding of Industries Act, 1921, and the Dyestuffs (Import Regulation) Act, 1920. The repeal of Part I. of the former is recommended, and will, no doubt, be effected by the new Oireachtas; and the repeal of the latter has already been effected in anticipation of the formal receipt of the Report. These Acts of the British Legislature remained operative and formed portions of the Irish Fiscal code of laws. The conditions which they were designed to affect were purely British conditions, and when these Acts were applied to Irish affairs they became unmeaning, if not positively mischievous. Thus provisions designed to hinder the importation of impure ether into a country which produced pure ether had the effect, when applied in a country which produced no ether, of imposing well-nigh intolerable burdens upon the hospitals and others who use this most necessary anodyne. The only portion of these Acts which will survive will be that which confers power on the Ministry of Industry and Commerce (the analogue of the British Board of Trade) to make import regulations affecting "dumped" goods. The legislation passed to settle finally the land question followed, with liberality and discrimination, the precedent of the great Wyndham Act of 1903. It was well received in the Seannad, which represents the vested interests, and the Minister of Agriculture, Mr Hogan, received a tribute of applause for his obvious mastery of his subject—the Earl of Mayo expressing the landlords' views in this sense. The farmers of N.E. Ulster will now be expecting a corresponding measure, and the result may be interesting. There is some discontent over the rather clumsy handling of the arrangements as between the Commissioners of Revenue and the Irish banks as to the collection of income-tax and for the avoidance of double income-tax. There has been some public correspondence between the secretary of the Irish Bankers' Standing Committee and the Commissioners, and some inconvenience in the meantime. The annual reports of the Irish Free State banks show uninterrupted progress and prosperity, their only reflection of or upon contemporary conditions being that the deposits in the banks, which had continued to rise for a long time past in spite of everything, reached their top level in last December and have tended since somewhat to recede. Irish Exchequer returns from April 1st to August 4th continue to maintain their level of 50 per cent. over the corresponding figures for last year. This year's receipts are £10,614,461—as against £7,279,647 for last year. It must, of course, be remembered that part of the increase represents arrears of income-tax and of land purchase annuities which have now been collected, but the increase of Customs receipts, from £757,000 last year to £2,560,000 this year, and the increase of stamps from £120,000 to £164,000 are undeniably satisfactory.

Shipping Services to Australia.—The Imperial Shipping Committee has issued a report on the economic size and speed of vessels trading between the United Kingdom and Australia, and on the subsidies necessary to maintain speeds in excess of the economic speed. It appears that 18 months ago Mr Hughes, then Prime Minister of Australia, asked the Committee to inquire into this matter, having in view the Australian policy of promoting immigration and the importance of shortening the time occupied in the conveyance of mails. The Committee, it will be recalled, recently made a report on the deferred rebate system as obtaining in the trade between this country and Australia, which was summarised in the *Economist* of February 17th. It has now investigated the questions of the economic type of ship for the Australian trade, the demand for speed, the question of

routes, and possible means of acceleration, including the question of subsidies. Whether subsidies (beyond mail subsidies already being paid for services rendered) are desirable has not been gone into, nor does the report indicate any source from which money for this purpose might be forthcoming. The whole investigation, therefore, is incomplete in material parts. Indeed, the Committee, recognising the uncertainty of the immediate future, and that a concrete solution might very soon be out of date, has limited its inquiry to generalities, and aimed "at a report which should disentangle the main factors in the problem and exhibit them in their proper relation to one another." High speed, it is pointed out, is not important for the greater part of the cargo carried, nor for emigrants, while business correspondence is to an increasing extent transacted by cable, though it is essential that the mail steamers should deliver documents of title to the consignee before the arrival of the goods to which they relate. On the question of routes, that by the Suez Canal is considered preferable. Possibilities of accelerating the ocean and land portions of this route are examined. In Australia the rail journey from Fremantle to Melbourne is hampered by the lack of a uniform gauge. Possible air services are discussed, and in conclusion the Committee expresses the opinion that "the possibility of saving a week by subsidising an air mail from Great Britain to Egypt and a 16-knot sea service to Fremantle, and by obtaining a faster railway service through Australia, requires careful consideration."

Coal Production, Wages and Profits.—The ascertainment for the first quarter of this year of output costs and profits, which include within their scope about 95 per cent. of the collieries of Great Britain, have been delayed somewhat, though the returns now to hand well illustrate the improvement in the industry which then took place. In the following table we give the totals for the first three months of 1923, together with those for the three previous quarters:—

Totals.	1922.			1923.
	Second Quarter.	Third Quarter.	Fourth Quarter.	First Quarter.
Tonnage raised tons	53,261,024	58,717,767	64,550,171	67,099,121
Tonnage disposable tons	48,416,513	53,694,293	58,977,291	61,357,470
Wages £	30,540,289	30,533,993	33,658,099	35,441,768
Net costs* £	45,910,483	46,106,227	50,108,391	50,663,203
Proceeds £	45,875,798	49,013,908	54,603,996	58,156,716
Net profit (+) or loss (—)	34,685	+2,907,681	+4,495,605	+7,493,513

* Total costs, less proceeds of miners' coal sold at special prices.

It is interesting to notice that the increase in wages has been considerably greater than that in net costs. With a greater output, costs other than wages have been proportionately less, and this change is perhaps in part a sign of increasing managerial efficiency. The general position is made much clearer by considering the costs and the proceeds on the basis of the tonnage disposable commercially:—

	Proceeds per Ton.		Wages per Ton.		Net Cost per Ton.		Net Profit (+) or Loss (—) per Ton.	
	s	d	s	d	s	d	s	d
1922.								
First quarter	20	9 90	13	4 08	19	8 28	+1	1 62
Second quarter	18	11 41	12	7 39	18	11 58	—0	0 17
Third quarter	18	3 08	11	4 48	17	2 08	+1	1 00
Fourth quarter	18	6 18	11	4 09	16	11 90	+1	6 28
1923.								
First quarter	18	11 48	11	6 63	16	6 17	+2	5 31

These figures make it quite clear that by the end of March the industry was showing healthy signs of recovery from the depression of last year. Proceeds per ton continued their upward tendency, while the total net cost per ton fell over 5½d as compared with the previous quarter, despite the fact that wages rose over 2½d per ton. Net profits meanwhile increased by nearly 11d per ton, with the result that, according to the terms of the National Agreement, the wages now ruling are considerably better than they were in the period under review. A gratifying feature is that the improvement was caused not only by the fact that

the selling price of coal moved upwards, but also because the production side was more efficiently handled. The following table gives further particulars of the labour position during the quarter as compared with that last year:—

	Number Employed.	Total Manshifts Worked.	Total Manshifts Lost.	Output per Man-shift Worked.	Earnings per Man-shift Worked.
1922.				Cwts.	11/0-18
First quarter	1,020,207	63,236,314	6,171,819	18-23	11/0-18
Second quarter	1,025,592	59,831,062	4,677,252	17-80	10/2-51
Third quarter	1,027,853	65,446,658	5,476,180	17-94	9/3-97
Fourth quarter	1,068,623	71,323,137	5,696,488	18-10	9/5-25
1923.					
First quarter	1,087,733	73,504,058	6,163,833	18-26	9/7-72

The industry has continued to find employment for more workpeople, though this has been accompanied in the period under review by an increase in the output per man-shift worked. Unfortunately, however, this welcome feature did not continue in the month of April. Absenteeism appears to have increased somewhat as compared with the last quarter of 1922, though it is still well below that prevailing in the corresponding quarter last year. On the whole, these returns are satisfactory, and it will be interesting to see to what extent the general improvement has been maintained in recent months.

Australian Port Charges.—Some striking figures showing comparisons between Australian port charges and those levied at home ports have been worked out by the Chamber of Shipping of the United Kingdom in view of the holding of the forthcoming Imperial Economic Conference. In a series of resolutions, the Council of the Chamber, noting the high terminal costs in Australian ports, points out that such charges constitute a serious obstacle to the free development of Australian trade, and urges reductions. In Australian ports dock dues and charges are, it is stated, still 148 per cent. above pre-war. Eighteen months ago a similar state of things prevailed in this country, but "drastic reductions have been made, so that, speaking generally, charges do not now exceed 40 to 50 per cent. above pre-war." Pilotage charges are still very high, both in Australian and New Zealand. As to light dues, it appears that shipowners are being charged twice over for the same services, once by the Federal and once by the State Governments, owing to the latter continuing to levy dues in respect of services now performed by the Federal Government. In Australia the light dues are 225 per cent. over pre-war, whereas in the United Kingdom they are down almost to the pre-war level. In New Zealand these dues have actually been made the subject recently of a further increase. Other costs are also excessive in the Australian trade. Thus bunker coal in Australia costs 125 per cent. more than in 1913 compared with 83 per cent. more in the United Kingdom. The high terminal charges in the Eastern Dominions are, it is evident, a bar to the cheap marketing of their produce, which, moreover, has to compete with that from Canada and North and South America. The distances from Australia and New Zealand are relatively much greater. Freight rates have been reduced, and at present shipping services to Australia are running at a loss. The Australian Government line itself is stated to have made a loss of £2,700,000 in the last two years. This, of course, has to be met out of the pockets of the Australian taxpayer. Finally there is the question of double income-tax. Australia taxes the ships coming to her ports on an assumed profit based on 10 per cent. of the gross earnings. This is a serious obstacle to private enterprise and initiative, on which cheaper transport must depend, and seems to be a most unjust impost, especially in present conditions. The conference in October may do some good if it helps to emphasise the mistaken character of Australian policy in regard to the shipping trade.

The World's Mercantile Marine.—The latest edition of Lloyd's Register Book contains the usual complete particulars of all the seagoing vessels of the world of 100 tons and upwards, and also of the steel and iron vessels

trading on the Great Lakes of North America. It thus includes a full record of upwards of 33,500 steamers, motor vessels, and sailing vessels, of a tonnage of 65,166,238 tons. The number and tonnage of existing vessels which are now or have been classed by Lloyd's is 15,875, of 38,861,967 tons. During the last twelve months there has been an increase in the steam tonnage owned in the world of 992,421 tons, and a decrease in the sailing tonnage of 196,969 tons, making a net world increase of 795,452 tons. The countries with the largest increases are Germany, with 702,665 tons, and Italy with 167,407 tons. The largest decreases are shown by the United States sea-going tonnage, 141,471 tons, and by France, 108,548 tons. There are still nearly two million tons of wood and composite steamers in existence, but such tonnage is of relatively small importance in international trade. The relative positions of the various merchant marines, taking only steel and iron sea-going vessels are shown in the table below:—

Country.	June, 1914. Tons Gross.	June, 1923. Tons Gross.	Difference Between 1923 and 1914. Tons Gross.
Great Britain and Ireland..	18,877,000	19,077,000	+ 200,000
British Dominions	1,407,000	2,219,000	+ 812,000
America (United States) ..	1,837,000	12,416,000	+10,597,000
Austria-Hungary	1,052,000	Nil	..
Belgium	341,000	600,000	+ 259,000
Denmark	768,000	920,000	+ 152,000
France	1,918,000	3,265,000	+ 1,347,000
Germany	5,098,000	2,496,000	- 2,602,000
Greece	820,000	743,000	- 77,000
Holland	1,471,000	2,606,000	+ 1,135,000
Italy	1,428,000	2,788,000	+ 1,360,000
Japan	1,642,000	3,402,000	+ 1,760,000
Norway.....	1,923,000	2,299,000	+ 376,000
Spain	883,000	1,169,000	+ 286,000
Sweden	992,000	1,092,000	+ 100,000
Other countries	2,057,000	2,847,000	+ 790,000
Total abroad	23,637,000	38,862,000	+15,225,000
World's total	42,514,000	57,939,000	+15,425,000

Amongst the principal countries, apart from Germany, Greece is the only one which still shows a reduction in the tonnage now owned as compared with 1914. In 1914 the United Kingdom owned nearly 44½ per cent. of the world's sea-going steel and iron steam tonnage; the present percentage is just under 33. The United States occupy now second place with 12,416,000 tons—equal to 21.4 per cent. Obviously the above figures do not take into consideration the question of the efficiency of the various merchant navies, as in addition to such factors as size, age, type, and speed of the vessels, other circumstances, which do not lend themselves to a statistical analysis, would have to be taken into account. There are 6,913 vessels less than five years old, and their tonnage represents 35 per cent. of the total tonnage in existence. Vessels of 25 years and over amount to 6,551, but their tonnage is less than 12 per cent. of the total. Of the vessels built before 1899, 64 per cent. are of less than 1,000 tons each, and the average size of the others is 2,543 tons, while of the vessels built during the last five years, only 33 per cent. are of less than 1,000 tons each, and the average of the others reaches 4,557 tons. Of the tonnage owned in Great Britain and Ireland, 29.1 per cent. is less than five years old. The merchant navies which have the largest proportion of new tonnage (less than five years old) are as follows:—United States (sea), 57.3 per cent.; Germany, 52.6 per cent.; Holland, 37.8 per cent.; Canada, 36.8 per cent.; Japan, 35.3 per cent.; and France, 34.7 per cent. A great development has taken place in the use of steam turbine engines and of internal combustion engines. There are now 1,386 steamers, of 8,893,749 tons, fitted with turbine engines, and 1,795 vessels (including auxiliary vessels), of 1,666,385 tons, fitted with internal combustion engines, as compared with 730,000 tons and 220,000 tons respectively in 1914. Of the 917 tankers (of 1,000 tons and upwards), with a total tonnage of 5,160,973 tons, 312, of 1,691,257 tons, are registered in Great Britain and Ireland, and 399, of 2,497,625 tons, are registered in the United States. Of the 3,049 steamers fitted for burning oil fuel, 601, of 3,792,676 tons, are registered in Great Britain and Ireland, and 1,709, of 8,798,776 tons, are registered in the United States of America. Less than 69 per cent. of the tonnage of the merchant marine now depends entirely upon coal, while in 1914 the percentage was nearly 89.

Home Crop Prospects.—The monthly report of the Ministry of Agriculture and Fisheries states that the weather during the first half of July was hot and dry, and was very favourable for haymaking and for the ripening of the corn. The latter part of the month was cooler, with some rains which benefited crops, but the ground is hard and dry everywhere, and more rain is much needed for the roots and pastures. Wheat improved considerably during the month, and is the best of the cereals. The ears have filled well, but ripening is frequently reported to be slow. For the country as a whole a yield of 17.6 cwts per acre (½ cwt above the average) is estimated. A few pieces were cut in early districts by the end of the month. In a number of districts straw is reported to be short. Barley also is more promising than a month ago, but is a variable crop. The yield is forecasted at 14.3 cwts per acre, or nearly ½ cwt below the average. Winter oats are nearly everywhere a good crop. On the whole, a yield of 13.4 cwts per acre, which is about the average, is expected. Cutting had commenced in many districts at the date of the reports. As the figures of the approximate area under each of the cereal crops this year, compiled from the annual agricultural returns collected in June last, are now available, it is possible to estimate, from the basis of the estimated yield given above, the total yield of the crops this year. These estimates are given in the table below, in which the final figures of 1922 are included for purposes of comparison. It is to be borne in mind, however, that the forecasts of this year's production are based on estimates made at the beginning of this month, and are consequently subject to modification.

	1922. Acres.	1923. Acres.	Production, 1922. Cwts.	Forecast, 1923. Cwts.
Wheat....	1,967,000	1,741,000	33,478,000	30,642,000
Barley....	1,364,000	1,329,000	19,123,000	19,005,000
Oats.....	2,164,000	1,974,000	25,033,000	26,452,000

Early varieties of potatoes have not yielded well, the tubers being rather small. The recent rains have benefited the main crops, but these, although healthy, are still rather backward, and on present appearances the yield per acre will be about 7 per cent. below the average of the last ten years. The area of potatoes is 467,000 acres, or over 94,000 acres less than last year. The weather during the first half of July was very favourable for haymaking, but showers hindered operations in the latter part of the month. In most districts the bulk of the crops had been secured in excellent condition by the end of the month, but there are a number of reports of heated stacks. The yield of seeds hay is now estimated at 31½ cwts per acre and of meadow hay 21½ cwts per acre, or 3½ cwts and ½ cwt per acre, respectively, above the average. At present the prospects of good second cuts are not promising.

British Sea Fisheries.—The total value of sea fish of British taking returned as landed in England and Wales during June of the current year was £1,072,134, a figure which shows little variation from the £1,036,244 returned in June, 1922. The value for the first six months of 1923 is returned at £6,861,667, in comparison with £6,922,593 in the first half of the preceding year. Of the current total, "wet fish" account for £6,672,400, representing catches of 4,601,427 cwt. The Ministry of Agriculture's return reveals the fact that haddock and cod are by far the most important products of English fisheries, landings of the former, since the beginning of this year, amounting to 984,022 cwt, valued at £1,439,393, and of the latter to £1,272,740, valued at £1,311,601. These two kinds alone account for 40 per cent. of the total takings. During the same period fish weighing 2,185,421 cwt, with a value of £1,586,782, was landed at Scottish ports, the totals for the whole of Great Britain being:—

Jan.-June.	Quantity. Cwts.	Value. £
1923.....	6,786,848	8,259,182
1922.....	7,354,899	8,588,138

Imports of fresh fish amounted to 1,866,131 cwt, valued at £1,991,748. Grimsby heads the list of individual ports, with landings of 267,569 cwt of "wet fish" in the six months, while Hull and Fleetwood are respectively second and third, with totals of 176,427 cwt and 87,686 cwt.

The Foreign Trade of Czecho-Slovakia.—Czecho-Slovakia is first and foremost a manufacturing and exporting country, and the collapse of some at least of its markets has had a serious effect on its trade position. Moreover, almost alone among Central European countries, it has abstained from a policy of "kite flying," and has even erred, if at all, in the opposite direction. In the first six months of 1922 the average quotation for the pound sterling was 236.5 kr, with a rate that was on the whole remarkably stable during the period. Later in the year, however, a considerable appreciation took place in the exchange value of the national currency, which was partly due to the favourable trade balance and partly the result of a deliberate policy. During the half-year which ended in June last, the average exchange rate on Prague was 157.5 kr to the £, and during this period also fluctuations took place only within relatively narrow limits. Bearing these facts in mind, it is not without interest to compare the trade returns for the first half-year of 1922 with those for the corresponding period this year, which have just been published:—

(In Thousands of Czech Crowns.)

	January to June, 1922.	1923.
Exports	10,513,888	5,612,355
Imports	7,497,010	4,071,931
Balance	+ 3,016,878	+1,540,424

The reduction in the favourable trade balance this year, as compared with the corresponding period of last year, is of course explained chiefly by the improvement in the value of the crown, which has made business very difficult, and has necessitated a readjustment of prices within the country. This, in turn, caused a considerable amount of unemployment and short-time, though it speaks well for the Czecho-Slovak people that the crisis has been successfully overcome without any serious labour troubles. The principal articles imported are raw cotton and wool; while coal and iron loom large in the exports of the Republic. The occupation of the Ruhr has been of great immediate advantage to the heavy industries of Bohemia and Moravia. This fact stands out clearly in the following table of exports of iron and iron goods (in waggons of 10 metric tons):—

Destination.	MONTHLY AVERAGE.		
	1922. Fourth Quarter.	1923. First Second Quarter. Quarter.	
Total	1,780	3,319	5,513
Austrian Succession States	970	1,400	1,370
Germany.....	590	1,490	3,037

While exports to the Austrian Succession States show welcome signs of revival, the phenomenal increase in the total exports of iron and steel is accounted for in overwhelming degree by deliveries to Germany. It is, indeed, an ill wind that blows nobody any good! Serious opinion in Czecho-Slovakia is, however, well aware that this state of affairs cannot possibly last for ever, but for the moment increased demand is helping the industry over a very difficult period. The main fact which results from these recent trade returns is that the balance is still favourable to Czecho-Slovakia, though it has been greatly reduced in size as compared with 1922, in consequence of the general readjustment in the price level. It cannot, however, be denied that the future of the country—which comprises within its frontiers over three-quarters of the industries of the former Austro-Hungarian Empire—depends very largely upon the general restoration of normal economic conditions throughout the whole of Central Europe.

The New President of Portugal.—On Monday the Portuguese Chambers, assembled in joint session, elected Senhor Teixeira Gomes President of the Republic by 121 votes to five. Three ballots were taken, a two-thirds majority being requisite for election, but the only formidable competitor of Senhor Gomes among the various ex-Ministers nominated was Dr Bernardino Machado, Prime Minister at the outbreak of the war, and President from 1915 to October, 1917, when he was overthrown and expelled from the country by the Revolutionary Government, of which Dr Sidonio Paes was the head. Senhor Gomes, however, led from the first, and the adverse

minorities ultimately gave in blank voting papers as a sign that they had abandoned their opposition. He inherits and continues the Republican traditions of his family, but he was less definitely a party candidate than any of his opponents. He enters on his four years' term of office early in October, and stands for financial reform and the abatement of the fierce party strife which has repeatedly all but wrecked the Republic. A large landowner and an eminent author, he has represented his country as Minister in London almost continuously since the overthrow of the monarchy, and also at the League of Nations, the Peace Conference, and the Genoa Conference. The chief problems before his Ministers are the achievement of Budget equilibrium by retrenchment and effective direct taxation, the abatement of the conflict over religious education and of labour unrest, a reduction in the cost of living, the stoppage of inflation, and the devising of satisfactory remedies for the catastrophic fall in exchange since the conclusion of the war. British observers of the vicissitudes of our oldest ally will cordially wish him success.

U.S. Cotton Standards.—Our New York correspondent writes:—The Department of Agriculture issued this week regulations for the administration of the Fulmer cotton standards Act, which, as from August 1st, extends the use of United States cotton standards to spot market and foreign transactions. The regulations are set forth in a voluminous document of about 15,000 words, and contain provisions affecting operations of foreign cotton exchanges. An outstanding feature is the provision which permits the owner or custodian of cotton to submit samples to the Department of Agriculture for classification, and makes the department's final certificates stand as *prima facie* evidence in United States courts. The Secretary of Agriculture is authorised to examine and license cotton classers, although those engaged in commercial classing of cotton are not obliged to secure a license. The regulations contain nothing which prevents the purchasing of cotton in the spot markets or in foreign commerce on types or marks, but the law makes it obligatory to use the universal grades when any standards are employed. The bureau of agricultural economics is empowered to establish boards of cotton classers at New York and New Orleans; the board of review will be located in Washington, and will pass upon appeals from classifications in disputes. The regulations explain in detail how samples must be submitted for classifications, and precautions have been taken to prevent fraud. Three different services are contemplated, namely: Informal classification of samples drawn and submitted by individuals indiscriminately; classification for purposes of arbitration of agreed samples submitted by two parties in a dispute; and the classification of samples, the authenticity of which is established by supervision of the storage and sampling of cotton.

Rylands and Sons.—This large textile concern seems to have risen superior to the depressing influences which some of its colleagues are feeling so acutely, thanks to the energetic measures taken two years ago, at the beginning of the "slump." Profits were earned in the first six months of 1923 amounting to £129,591. Recent results are summarised below:—

	Six Months Ended, June 30, 1922.	Dec. 31, 1922.	June 30, 1923.
Net profit	£ 111,955	£ 127,064	£ 129,591
Brought forward.....	146,161	142,316	149,380
Total available	258,116	269,380	278,971
Prof. div., less tax	42,320	44,000	44,760
Ord. div., "	73,480	76,000	77,140
	(10 %)	(10 %)	(10 %)
Balance forward.....	142,316	149,380	157,071

Compared with December 31, 1922, the balance-sheet shows signs of a slight contraction of business. Stock-in-trade is down by £73,000, debtors by £64,000, cash by £100,000—the greater part of this decline being taken up by investments and loans, which have increased by £247,000. Reserves are unchanged, and total £600,000, while issued capital amounts to £3,500,000. A summary of the balance-sheet will be found on another page.

Guinness's Year.—A decrease of over £800,000 in gross profits, accompanied by a reduction of over £600,000 in expenses, has resulted in a decline of £203,000 in the net profits of Arthur Guinness, Son and Co., Limited, for the year ended June 30th last. The net profit, as may be seen from the following comparative record, is the lowest since 1918-19, though it is still more than double that of the last pre-war year:—

	Gross Profit.	Ex-penses.	Net Profit.	Reserve, Depreciation, &c.	Ordin'ry Dividend.	Rate %
	£	£	£	£	£	
1908-9	2,218,160	1,096,522	1,121,638	280,000	700,000	14
1909-10	2,465,713	1,195,090	1,270,623	325,000	775,000	15½
1910-11	2,629,180	1,301,511	1,327,669	335,000	825,000	16½
1911-12	2,541,030	1,328,241	1,212,789	255,000	825,000	16½
1912-13	2,527,237	1,443,119	1,084,118	185,000	825,000	16½
1913-14	2,752,974	1,514,726	1,238,248	235,000	700,000	14
1914-15	4,181,655	2,721,206	1,460,449	585,000	700,000	14
1915-16	5,472,922	3,962,122	1,510,800	531,000	800,000	16
1916-17	4,920,287	3,014,157	1,906,129	235,000	800,000	16
1917-18	4,105,393	2,083,307	2,022,086	235,000	800,000	16
1918-19	5,858,854	3,808,174	2,050,680	285,000	800,000	16
1919-20	12,941,420	9,677,513	3,263,907	735,000	1,000,000	20
1920-21	18,187,514	14,558,324	3,629,190	519,407	1,250,000	25
1921-22	14,570,320	11,691,967	2,878,353	235,000	1,450,000	29
1922-23	13,759,584	11,084,264	2,675,320	235,000	1,800,000	24

Expenses consist mainly of Excise and licence duties, which, in the latest accounts, took £10,854,700, as against £11,460,300 for 1921-22. The reserve fund is credited with £200,000, and £35,000 goes to depreciation, in addition to £7,700 charged as departmental working expenses. In May last the paid-up ordinary stock was increased from £5,000,000 to £7,500,000 by the capitalisation of reserves. The interim dividend was at the rate of 18 per cent. per annum on the smaller capital, and the final distribution is at the rate of 16 per cent. per annum, together with a bonus of 10 per cent., all being paid free of income-tax. The total distribution is equivalent to 36 per cent. on the old capital and 24 per cent. on the new. Taxation absorbs £683,100, as against £673,300 a year ago, and, after payment of £120,000 for preference dividend and £1,800,000 to the ordinary stockholders, there remains a balance of £594,200 to be carried forward, as against £702,300 brought in. The balance-sheet shows total assets of £17,431,800, as against £17,139,800 a year ago. Debtors have been increased by £1,800,000, but stocks have been reduced by £1,828,000 to £5,296,000, while investments have been increased by £603,000.

Bass, Ratcliff, and Gretton.—The accounts of Bass, Ratcliff, and Gretton, Limited, for the year ended June 30th last show that, although gross trading profit was lower by £38,000 than in the preceding year, there was a saving of £68,000 in expenses, and as sundry revenue brought in £4,000 more, there was an increase of nearly £34,000 in the net profit. The following table gives results for a number of years past:—

Yr. ended Jne. 30	1914.	1919.	1920.	1921.	1922.	1923.
	£	£	£	£	£	£
Gross trading profit	749,607	890,294	1,113,121	1,158,172	1,205,795	1,167,135
Expenses	455,611	568,151	817,546	880,771	925,946	857,617
	293,996	322,143	295,575	277,401	279,849	309,518
Sundry revenue	143,153	232,693	282,965	236,894	200,528	204,394
Balance forward	64,593	61,570	60,080	61,970	73,085	66,748
	501,742	616,406	638,620	576,265	553,462	580,660
Deb. interest ..	80,800	80,800	80,800	80,800	80,800	80,800
Bad debts and invest. deprec.	34,266	24,646	43,450	29,980	13,514	43,889
Prof. dividend ..	68,000	68,000	68,000	68,000	68,000	68,000
Ord. dividend ..	204,000	217,600	224,400	224,400	224,400	224,400
Rate	15 %	16 %	11 %	11 %	11 %	11 %
Reserve, &c.	50,000	165,280	160,000	100,000	100,000	100,000
Carried forward	64,676	60,080	61,970	73,085	66,748	63,571

Rents, rates, taxes, &c., took £67,000 less, and £45,000 less was spent on repairs and renewals, but £13,000 more went in depreciation and salaries, and other expenses rose by £31,000. The allowance for bad and doubtful debts shows a jump of over £30,000, while £50,000 is reserved for contingencies, and £50,000 transferred to general

reserve. The ordinary dividend is maintained at 11 per cent., and is again paid free of income-tax. The principal changes in the balance-sheet, which is analysed in another column, are decreases of £567,500 in stock-in-trade and of £431,400 in debtors, and increases of £718,000 in investments and of £206,500 in cash. Goodwill and trademarks still figure at £800,000, and the reserve fund stands at the same amount, but will be increased to £850,000 by this year's allocation.

Broken Hill Affairs.—Shareholders in various mining and ore treatment companies operating in New South Wales, writes our mining correspondent, are having anything but a happy time just now. A brief cabled summary of the annual report of that prominent undertaking, the Broken Hill Proprietary, states that after providing for depreciation a net loss of £106,100 is shown. It may be recalled that this company has become more of an industrial than a mining enterprise, having invested a large amount of share and debenture capital in the installation of an extensive iron and steel works at Newcastle (N.S.W.). During the first half of the year ended May 31, 1922, a small profit was earned—sufficient to provide a dividend of 9d per share; but subsequently the works were closed down owing to the impossibility of operating at a profit. The restart has been attended with the highly unsatisfactory results above indicated. The latter are, of course, due mainly to the onerous conditions imposed by labour—short hours, high wages, heavy taxation. In these conditions the company—despite a protective tariff—cannot even compete in its home market with foreign manufacturers. Now the directors of the Broken Hill Block 10—once the second largest producer on the field—have intimated their decision to discontinue operations and to realise the assets. As the bulk of the company's free resources have been embarked in an unfortunate gold mining venture, there would appear to be no prospect of any substantial liquidation distribution. The failure of the gold mining enterprise is also largely attributable to high costs. Finally, in regard to the Sulphide Corporation, a mining and treatment concern, there has been the news of a fire at the Central mine. The price of the shares has only recovered to a slight extent from the heavy fall which occurred—for, naturally, although the fire is believed to have been extinguished, much damage has been sustained on the property, and some time must elapse before the extraction of ore can be resumed.

The Necessity for Clearer Balance-Sheets.—The time must surely be approaching when company officials will recognise the necessity for giving in balance-sheets as accurate a picture of affairs as possible, not leaving the more material facts to be gathered from a perusal of the directors' report and auditors' certificate. An instance of this is found in the report and accounts of British and Allied Investments Corporation, Limited, just issued. In the balance-sheet investments are shown "at cost," £1,071,020. The auditors cover themselves by stating that, "subject to the depreciation on the investments, as to the amount of which we are unable to form an opinion.," while the directors in their report naively tell us that "The intrinsic value of the investments (quoted and unquoted) is in the aggregate believed to be no less than the total of the amounts at which they stand in the books of the corporation, but the depreciation at market prices of the securities dealt in upon Stock Exchanges, so far as can be ascertained, has increased since last year, and now amounts to approximately £350,000." The italics are ours. It will be interesting to know to what extent this policy is to be followed. Should the report be detached from the balance-sheet, an absolutely erroneous account is shown. However, the next sentence in the report provides us with some measure of hope, for it states that the directors "consider it is in the interests of the shareholders to place to reserve as large a sum as possible," and overleaf we find that this sum is the modest figure of £12,517, which brings the total capital reserve up to £43,000, against which might be placed investments and advances totalling £1,396,335 "at cost." The most illuminating aspect, however, of the report and balance-

sheet of the British and Allied Investments Corporation is found when the accounts are considered as a whole. Assets total £1,075,756 if we consider the depreciation of £350,000 already referred to. But as creditors amount to £980,050, shareholders for their capital of £400,000 appear to have assets worth £95,736! Nor is this a case in which directors can ease their minds by ignoring the fall in security values, pleading that revenue is unaffected, for it is to be noted that revenue, which amounted to £121,546 for the year ended June 30, 1921, had fallen to £66,426 for the year ended June 30, 1923.

Obersea Correspondence.

UNITED STATES.—UNSETTLEMENT IN OIL INDUSTRY —EXPORTS OF FOODSTUFFS—CENSUS RETURNS OF MANUFACTURE.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 27.

CONDITIONS in the oil industry in this country are rapidly growing worse. There has been a great deal of talk about the urgent necessity of curtailing output in order to stabilise petroleum prices, and some efforts have been made in that direction. Nevertheless, production has steadily increased, and for the second week of July it again broke all previous records. Another new high record was established in the week ending July 21st, when, according to estimates made by the American Petroleum Institute, the daily average gross crude oil production in the United States was 2,255,950 barrels, representing an increase of 17,200 barrels over the preceding week. The same authority places the total June production of crude oil in California at 22,667,106 barrels, or an average of 755,570 barrels per day; that exceeded the May output by 60,881 barrels a day. The situation in California, resulting from the enormous production there, is said to be serious, if not critical. Output from the largest pools has continued to increase, and nearly 600 additional wells are being drilled, with prospects that their output will utterly demoralise the market. That the oil situation here is greatly unsettled is plainly evident from nation-wide reductions in prices of crude and gasoline in a season of the year when consumption is heaviest. The largest companies are now handling all the oil they are physically able to handle, so that new production must of necessity be shut in. Many smaller producers are at present offering crude at prices well below the quoted market price, without finding customers. Large refiners generally made another cut of 1 cent a gallon in gasoline prices, effective throughout all districts. Small refiners have cut retail prices fully 5 or 6 cents under those named by the big companies. At present gasoline can be purchased at 7 cents a gallon wholesale in California, and shipped by tank steamers to the Atlantic seaboard at an additional cost of 3 cents a gallon, making the laid-down cost here 10 cents a gallon. The wholesale price in mid-continent markets is 8 cents per gallon, and the freight rate for tank-car shipments to the eastern seaboard is approximately 5 cents a gallon, or a total cost, landed in eastern markets, of 13 cents, as compared with 10 cents for the California product. Naturally, the latter, under such conditions, is rapidly crowding mid-continent gasoline out of the eastern markets, and promises to bring about further reductions in prices.

Details of export trade in foodstuffs, now available for the fiscal year ended June 30, show that as far back as last autumn the decrease in foreign takings of American wheat and flour was largely responsible for the falling off in the year's export trade. The value of eight classes of foods exported in the fiscal year totalled \$803,765,563, representing a decline of \$118,000,000, or 12.8 per cent., from the preceding year. Breadstuffs exports dropped from \$591,299,059 in 1922 to \$451,341,734 in 1923, a loss of \$140,000,000, or 23.6 per cent. Wheat and flour exports for the year had an aggregate value of \$276,006,330, as against \$377,042,609 the previous year, showing a loss of \$101,000,000, or 26.7 per cent. The following table

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER
President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

gives the values of exports of foods for the past two fiscal years, as reported by the Department of Commerce:—

	Twelve Months Ended June 30th.	
	1922.	1923.
	\$	\$
Meats	131,952,836	143,291,899
Dairy products	36,375,097	23,326,903
Animal oils and fats	124,567,317	144,220,168
Grains and prep.	591,299,059	451,341,734
Canned vegetables	3,720,035	4,736,160
Canned fruits	16,373,219	22,479,307
Canned salmon	9,239,217	7,872,135
Cotton oil	8,400,072	6,497,257
Total	921,926,852	803,765,563

The latest census returns of manufacture, just published by the Department of Commerce, furnish interesting data. The statistics, however, will not be found useful as a normal basis for purposes of comparison, because they cover the year 1921, a period of depression in commodity prices and production following the deflation of 1920. Furthermore, comparisons which are made with the years 1919 and 1914 cannot be said to be any nearer a normal basis than are the returns for 1921. The outstanding feature of the 1921 statistics is that they show a big falling off from 1919, the latter year in turn disclosing an enormous gain over 1914, which, it may be recalled, showed a noticeable decrease in production from the preceding census year of 1910. In fact, the present exhibit may be regarded as an exposition of two depressions in American manufacturing, with a peak-year between. The total value of the manufacturing output of 1921 is placed at \$43,653,283,000, representing a decrease of 29.6 per cent. from the peak output of \$62,041,795,000 in 1919, but an increase of 82.4 per cent. over 1914. The latter increase was, partly at least, a gain in value rather than in volume, since prices in 1921 were 27 per cent. higher than those of 1914. The returns show that the average number of wage-earners in 1921 decreased 22.8 per cent. from 1919, and was less than 1 per cent. greater than in 1914. The total number employed in manufacture, 8,257,376, was 2,431,000, or 22.9 per cent. less than in

1919, but 1.7 per cent. above 1914; the percentages, it will be seen, do not differ much from those of the wage earners' returns alone. The conclusion to be drawn from such returns is that the number engaged in manufacture in 1921 and in 1914 was about the same. A somewhat similar showing has been made by this country's foreign trade; that is to say, changes from 1914 to recent years have been largely in value, and not in volume. A summary of the census returns of manufacture for 1921, 1919, and 1914 is given below:—

UNITED STATES CENSUS RETURNS OF MANUFACTURE.

	1914.	1919.	1921.
Number of establishments	177,109	214,383	196,267
Persons engaged	8,117,895	10,688,849	8,257,376
Proprietors and firm members	259,172	250,571	172,871
Salaried employees	962,533	1,438,219	1,137,941
Wage earners (average number)	6,896,190	9,000,059	6,946,564
Salaries and wages	5,342,157,000	13,342,655,000	10,763,442,000
Salaries	1,274,438,000	2,880,868,000	2,563,118,000
Wages	4,067,719,000	10,461,787,000	8,200,324,000
Paid for contract work	198,720,000	452,994,000	451,580,000
Cost of materials	14,358,935,000	37,288,731,000	25,338,617,000
Value of products	23,987,860,000	62,041,795,000	43,653,283,000
Value added by manufacture*	9,628,925,000	24,753,064,000	18,314,666,000

* Equivalent to value of products, less the cost of materials.

The statistics for 1921 do not include establishments with products under \$5,000 in value, or establishments engaged in automobile repairing. A study of the returns from 14 general groups of industries discloses that textiles, chemicals, paper and printing, tobacco manufacturing, and vehicles for land transportation (largely automobiles, presumably) showed the greatest expansion.

FRANCE.—THE FRANC—WHEAT HARVEST—BANK CAPITAL—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, August 7.

Now that, as the result of Mr Baldwin's statement, there seems to be no good ground for the nervousness that was undoubtedly felt here a week ago that Great Britain might directly intervene between France and Germany, in a way that could not but be inimical to this country, there has been a resurrection of the feeling of optimism that not even the renewed fall of the franc to within a shade of 80 has been able to suppress. Confidence in the approaching collapse of German resistance in the Ruhr is increasing daily, and the belief that this will be accompanied by a substantial improvement in the position of the franc has been distinctly strengthened by the confirmation that has now been received of the reports that the wheat harvest will far exceed all expectations.

Speaking generally, French opinion regards the present situation of the franc largely with indifference. News-paper abuse of England and the United States that was so common a couple of years ago, when there was scarcely a fluctuation of the franc that was not marked by the appearance of violent attacks against both countries as the alleged responsible causes of the rise in exchange rates, is now conspicuous by its absence. It is pointed out that the adverse trade balance against this country is now smaller than it was before the war, while both imports and exports are steadily increasing in value. Exports to Great Britain, for instance, which had a value of 1,941,838,000 for the first half of last year, amounted to 3,015,636,000 during the first six months of 1923, an increase of over 55 per cent., while imports from Great Britain, which amounted to 1,601,038,000 from January-June, 1922, rose this year to 2,634,805,000, or an increase of practically 65 per cent. A large proportion of the increase in the value of the imports from Great Britain was due, of course, to the increased price, owing to the high exchange, of the combustibles which France is always compelled to purchase from Great Britain, owing to her own chronic shortage of this commodity, and quite independent of any supplies she may draw from the Ruhr or elsewhere. According to the *Journal des Débats*, French imports of combustibles during the first half of 1923 were to the value of 1,683,000,000, as against only 1,154

millions for approximately the same tonnage during the corresponding period of 1922. The 529,000,000 which France has been compelled to spend on imported combustibles this year, in excess of last year, represents almost exactly the deficit of 528,000,000 which constitutes the difference between her imports and exports during the same period (imports, 14,689 millions, exports 14,161 millions). In view of the fact that this adverse trade balance of 528 millions has been more than met, as usual, by the sums spent in France by foreign tourists during the past six months, the *Débats* once more advances the argument that technical and economic factors are in no way responsible for the continued low standing of the franc, which it asserts is due to purely artificial reasons.

It is officially announced that the French wheat harvest, which is now in progress throughout the country, is showing a sufficiently satisfactory yield to enable France to meet the whole of her requirements during the coming year without being obliged to purchase corn from abroad. The importance of this fact needs no comment, and its effect on the situation of the franc, should the official estimate prove correct, may be appreciable. To meet the needs of her population France requires a total supply of 94,000,000 quintals of wheat. Last year's harvest was a poor one, the total yield being only 66,000,000 quintals, and after making all possible economies it was found necessary to purchase from 12½ to 13 million quintals abroad (two-thirds of this amount being obtained from the United States) at a cost of between 950 and 1,000 million francs. The shortage in 1921 was about 5,000,000 quintals, which was purchased from other countries at a cost of 470,000,000. The total area under wheat this year is estimated at 5,500,000 hectares, or an increase of about 750,000 acres on last year's sowings. It is estimated that the yield this year, judging by already proved results, will average at least 14 quintals per hectare, from which it is calculated that the total yield will be between 75 and 80 million quintals. The greater part of the deficit between this quantity and the amount of wheat required to meet the needs of the population will be made up by North African wheat, from Algeria, Tunisia, and Morocco, the total yield from which is calculated as amounting this year to 19,406,200 quintals, as against 9,471,300 quintals last year. Nearly 10½ million quintals have been harvested this year in Algeria alone, as compared with less than 5,000,000 last year. In order to prevent unnecessary foreign purchases of wheat this year, the Government of Algeria has taken steps to reserve for consumption in France all Algerian wheat not required for home consumption. If to this be added the saving of 6,000,000 quintals, which has been achieved by the law compelling millers to mix 8 per cent. of flour derived from rye, rice, barley, manioc, and other substitutes with wheaten flour, and the fact that, since the war, simultaneously with an increase in the consumption of meat, the consumption of bread has diminished, it will easily be seen that French purchases of foreign wheat during the coming twelve months will be an entirely negligible quantity.

An interesting example of the evolution in the mind of the public and of the leaders of the French banking world is seen in the decision that the shareholders of the Banque Nationale de Crédit will shortly be called on to vote on a resolution which proposes to transform the capital of the undertaking from 500 millions to 250 million francs, by reducing the nominal value of the shares from 500f to 250f. It is proposed that shareholders who have fully paid up their shares shall receive back 250f in respect of each share, and that those who have paid up only one-quarter shall pay up the other 250f. New shares, of 250f each, at the rate of two for each old share of 500f fully paid up, will then be given in replacement of the old scrip. The principle of the proposal is undoubtedly a sound one, as it will put an end to the questionable practice of regarding unpaid-up capital as a veritable liquid reserve. As far as French banking practice is concerned, recent experiences have proved that this practice is open to many objections. The difficulties recently experienced by the Banque Industrielle de Chine and the Société Centrale des Banques de Province, in obtaining the enforced payment of the 25 per cent. of their unpaid-up capital, is fresh in the minds of all, and it gave rise to a

belief, which was to some extent well founded, that to regard unpaid-up capital as a more or less liquid asset is illusory.

The policy adopted by the Banque Nationale de Crédit is by no means a new idea, although this undertaking is, I believe, the first Paris concern actually to put it into practice. The Société Générale, whose 500f shares are only 50 per cent. paid up, brought forward a similar project as far back as 1920, but has not yet developed it beyond the stage of a proposal. In the French provinces a lead was given in this direction in 1914, when the Société Nancéienne modified its capital in this sense, while in 1921 the Société Lyonnaise de Reports et Dépôts took a similar course, and both, at the same time, increased their capital. One reason that is actuating the Banque Nationale de Crédit in taking a similar course is undoubtedly based on recent fiscal changes. From the shareholders' point of view the new development is a good one, as it would not only free them from a liability, but would leave them free to invest in other directions their semi-immobilised capital, for which they might otherwise be called on at any moment. Further, on distributable profit amounting to 33,945,360f, the holders of fully-paid 500f shares in the Banque Nationale de Crédit recently received 42f 50c per share, while holders of half-paid-up shares received only 20f (owing to the provision that fully-paid shares receive a first dividend of 6 per cent., the balance being divided equally between both classes of shares). The 500f shares now stand in the neighbourhood of 620f.

On the Bourse, the end of the month settlement revealed a large increase in speculative positions, and the rate for carrying over rose from 4½ per cent. to 5 per cent. The large number of demands for money for this purpose was due, to a great extent, to the suspense in which the market stood while awaiting Mr Baldwin's statement. This, owing to the mystery preserved regarding it, was expected in some quarters to be sensational, and wild rumours were current to the effect that the franc might be expected to drop almost immediately to 100. The statement, when it was actually known, however, proved to be surprisingly milder than the professional section had expected, and it was generally received almost with indifference, so far as its practical effect was concerned. The conclusion drawn was that one direct consequence of the hesitations of the British Cabinet will be to bring about the capitulation of Germany at an earlier date than might have been expected had the Premier's announcement been more definitely anti-French. As matters stand, the Bourse regards the outlook as much more favourable than it was a week ago, and practically no nervousness is now felt as to the possibility of surprises being sprung upon this country in regard to its foreign policy. The belief is that we are now on the threshold of a distinct revival of business, both speculative and otherwise, which can only be favoured by the more settled situation and by the large amount of available capital.

GERMANY.—REPARATIONS—REICHSBANK—STOCKS—PRICES—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, August 7.

The Reichstag reassembles to-morrow to carry through a programme of Financial Reform, prepared hurriedly, which ought to have been prepared deliberately and put through six months ago. The Cuno Cabinet is being assailed from all sides for letting the Reichstag disperse, without doing anything, in the middle of the worst currency crisis so far experienced. It must be said that neither the Reichstag itself nor the public showed any consciousness of the gravity of the crisis. A few days before the dispersal they accepted calmly the news that 40-50ths of the Federal expenditure was being covered by inflation, and were satisfied with the Finance Minister's assurance that real taxation reforms would be put through "in the autumn." Even now the food panic, the riots, and the rise of the dollar to over 3,000,000 marks have not been sufficient to induce the Finance Ministry to submit a real programme of reform. Some newspapers are asking, not very hopefully, whether this time the Legislature

will not force energy and commonsense upon the Executive. The position on the Ruhr becomes daily worse. The new French policy of seizing works with the aim of directly exploiting them upon "regie" principles will, while not profiting France, probably lead to further conflicts. The majority of Germans have come to look upon reparations as beyond settlement, at least until some general convulsion settles the question by wiping it out. The failure so far of the British initiative in France and Belgium has confirmed this belief. Those persons who accept the convulsion theory flatter themselves that Anglo-French opposition will ultimately become acute; in other words, that England will at first directly, but inactively, and later actively, support Germany. This belief naturally weakens what little enthusiasm there is to put the national financial house in order without waiting for a reparations settlement; if England's policy is inspired by fear of an European crash, runs the argument, the nearer the crash appears to be the more effective England's policy (by which is understood an anti-French policy) will become. The recommendation to Germany to cease passive resistance has not been well taken. All parties are against cessation except upon a guarantee of immediate or speedy evacuation; and to cease resistance to a garrison which is to be withdrawn has no meaning.

The increase of the Reichsbank's discount rate from 18 to 30 per cent. will not check the inflation. The Reichsbank, however, gives the usual reason for this step. On April 23, when the rate was raised to 18 per cent., the bank held 6.2 billions out of 8 billions of outstanding Treasury Bills, or 77 per cent.; on July 23 it held 39.1 billions out of 43.5 billions, or 90 per cent. The public will not be tempted to purchase Treasury Bills by the 2½ per cent. per month rate at a time when private credit is as high as 1 per cent. a day, and when the currency, as in July, may depreciate to one-sixth in a month. The inflation for State purposes will therefore continue. The inflation for private purposes, through note-printing against Commercial Bills, must also continue unless the bank refuses to discount altogether; at the present rate of currency depreciation a 30 per cent. rate does not prevent a loan being practically a gift to the borrower. Despite this, the representatives of business on the Bank Committee unanimously opposed the rise in the rate. The Reichsbank's statement for July 23 again breaks all previous records, the note circulation rising by 6,333,082 millions to 31,824,820 millions, while discounted Treasury Bills increased by 9,186,613 millions, and Commercial Bills by 2,869,247 millions. The coming report for July 31 will probably show very much higher figures. Only five weeks have passed (up to the 23rd) since the week's addition to circulation first exceeded 1 billion marks.

Stocks rose rapidly last week, and yesterday, after some uncertainty, closed firm. The "Frankfurter Zeitung's" index for dividend payers for the 3rd inst. shows 90,033,700, against 52,248,700 on July 27 and 376,685 on January 5. In seven months stocks rose about 240-fold, while the dollar exchange rose only about 130-fold. Home Loans yesterday had big rises and were quoted: War Loan 1,000, Fours 39,000, 3½ per cents. 29,000, Threes 275,000, Colonial Fours 380,000, Prussian Threes 38,000, Berlin Fours, 1924, 360, Greater Berlin Fours 5,900. The last is the only municipal loan quoting above 1,000.

The price rise in July was by far the most rapid yet recorded. In February, which hitherto held the record, prices rose over three-fold; in July over seven-fold. The "Frankfurter Zeitung's" index for 98 commodities for the first day of each month is as follows:—

	Food.	Textiles and Leather.	Mine- rals.	Miscel- laneous.	Manu- factured Foods.	All 98.
Mid. 1914	1	1	1	1	1	1
Jan. 1920	20	26	27	11	15	20
Jan. 1922	38	58	52	31	33	42
Jan. 1923	1,758	3,206	2,622	1,778	1,518	2,054
April	5,350	8,590	7,822	6,434	5,315	6,425
July	37,683	61,841	45,301	34,736	29,809	39,898
Aug.	234,828	457,915	407,450	212,135	210,521	286,248

As against an index rise of 617 per cent. the dollar exchange rose 563 per cent., with the result that gold prices which on July 1 were almost exactly those of 1914

are now higher, the dollar exchange index on the first being 261.905, as against the above price index of 286.248. Average gold prices, however, remain below present world-market prices; but the prices of textiles and minerals are probably above. The cost of living (Federal weekly index on the basis of 1 in 1914) rose from 16.180 on July 4 to 71.470 on July 30, which is also the most rapid rise recorded. In the last week, July 23-30, the cost of living rose 81.7 per cent. The price of hematite pig-iron from August 1 was fixed at 26,250,000 per metric ton, ingots from August 3, 31,968,000, bars 46,250,000, thick sheets (5mm and over) 52,124,000. Iron and steel prices in future will not be binding until again fixed, but will change automatically with the exchange of sterling. For iron smelted with English coal a supplement is added.

Business in unoccupied territory is improving. The Prussian Trade Ministry's monthly report describes increased activity in many industries, particularly textiles: but complaints are made of a shortage of fuel, and partly also of raw materials as a result of the rationing of exchange. Unemployment in 40 trades unions with 5,800,000 members fell during June from 6.2 to 4.1 per cent. The latter is about the winter pre-war rates, but is high for summer. Exporters to England complain of serious losses caused by the exchange shortage. The Government compensates them in paper marks for the deducted 26 per cent. of the sterling price; but when they try to convert the marks back into sterling the supply of sterling always proves to be inadequate.

SWEDEN.—CROP PROSPECTS—INDUSTRIAL CONDITIONS—STOCKS AND EXCHANGES.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, July 26.

With the recent hot weather the outlook for the crops has improved very much, and from different parts of the country it is reported that, for the moment, the crop is expected to be at least an average one.

The labour market seems to be returning to a normal state, though the pace of return is slow, and the number of unemployed is being steadily reduced. At the moment the number of unemployed for the whole country is estimated at about 20,000, and would probably be much less if the conflict in the ironwork industry could be settled. Fresh negotiations in this dispute are being carried on, but nothing is known as to probable results. This dispute is hampering other industries. For instance, one of the naval shipyards, suffering from lack of material, made application for permission to import material from England should the conflict not be settled in the very near future. Otherwise, it was stated, the workers would have to be dismissed. No doubt the Gothenburg Exhibition has had some share in reducing unemployment. This exhibition, which proved a great success, seems to have attracted a great deal of interest abroad, and the number of foreign visitors from all parts of the world was very large. Various special exhibitions and congresses have been and will be held in Gothenburg in connection with this Jubilee Exhibition. Interest at the present moment is centred on the International Aero Exhibition, which is the biggest of its kind hitherto held. The English section of it has excited much comment, and is by experts considered the best.

The Riksgränsbanan running from Lukå on the Bothnian Gulf to Narvik in Norway is now fully electrified. The harbours of Lukå and Narvik are the outlets of the big quantities of iron ore exported from the great iron mines in Lapland, and this railway had from 1903 to the end of 1922 carried about 75 million tons of ore to the sea. The line is 460 km. in all and the total cost of electrification is estimated at about 48 million crowns. The electrical power comes from the extensive waterfalls at Porjns, not very far from Kiruna, where the biggest mines are situated. It is due to this railway that the Swedish iron mines in Lapland have been exploited to such an extent and Swedish iron ore has become such a prominent product in our export trade. The electrification of the railway line between Stockholm and Gothenburg has been decided upon, and preparatory arrange-

ments are going on now. It is reckoned that the electrification of the whole line will be completed by the beginning of 1926.

In the timber as well as in the pulp market, the outlook seems favourable, the quantity of timber sold up to the middle of this month being estimated at 575,000 standards. During recent weeks there has been an increased demand for pine, although the prices obtained have been extremely low. Timber sales to Spain and Australia are specially notable as showing a considerable increase, while France has to exercise strict economy in her purchases owing to the rate of exchange.

The Stock Exchange is having a very quiet time now, and the same is the case with the bond market. New bonds amounting to a sum of 62.09 million crowns have been made during the second quarter, the corresponding figure for same period last year being 53.74 million crowns. The Swedish part of the International loan to Austria, amounting to 11 million crowns, which was issued here some time ago, was sold out in about an hour. As to Exchange rates, there is a constant fall in the German mark, and yesterday a million marks could be had for six Swedish crowns in the open market. The official quotation, however, was 9 crowns for same number of marks. The day before (the 27th) there was a sudden drop of 9 ore in sterling value, which was quoted at 17.19 crowns per £, but it regained a little yesterday, when the quotation was 17.23. This sudden fall was due to big sales of what is called "timber pounds," i.e., payments for the timber sales, which are now taking place in the market.

The cost of living is steadily falling. The quarterly index issued by the Board of Social Welfare, including all necessities of life, shows a drop from 177 for April 1st to 174 on July 1st. This reduction is chiefly due to the fall in prices of foodstuffs (especially pork, butter, and eggs), light, fuel, and clothing, while the figure for house rent and taxes remains unaltered. The price of eggs and butter is now at pre-war level. The electrical concern, Asea, has received large orders of generators from Canada and from Russia lately. The Russian order consists of four big generators for a water-power station, to supply Petrograd with light and water.

SWITZERLAND.—SWISS FRANC DEPRECIATION—PALLIATIVES—NEW FEDERAL LOAN—AUSTRIAN LOAN—FEDERAL ADMINISTRATIVE ACCOUNTS.

(FROM OUR CORRESPONDENT.)

GENEVA, July 26.

As a correspondent pointed out in the *Economist* of July 14th, the slight depreciation registered by the Swiss franc during the last few months is essentially the outcome of an important exodus of capital which has taken place. This movement, originally due to the menace of a capital levy, was accentuated by the lowering of interest rates—the official discount rate being reduced in August, 1922, to 3 per cent., and the Lombard rate to 4 per cent., the rate for Bank paper standing at the end of 1922 around 4½ per cent. It would appear that Switzerland, which a short time ago possessed free capital in abundance, was too hasty in reducing its rates. Capital being able to find remunerative employment more advantageously in other countries, Switzerland was powerless to carry out an independent financial policy, and could not prevent the export of capital without taking into account the rates in force abroad. On July 14th, therefore, the National Bank raised its official discount rate to 4 per cent. and the Lombard rate to 5 per cent. As will be observed from the annexed table, the mere anticipation of the rise in the discount rate, which had been foreseen several days before the actual decision was taken, had an immediate effect on the exchanges:—

	Mint Par.	July 10.	July 12.	July 25.
London	25.2215	26.45	26.65	25.72
Amsterdam	208.3193	227.25	222.75	219.60
Stockholm	138.89	151.50	151.0	149.50
New York	5.1286	5.80	5.70	5.59

This appreciation of the Swiss franc continued after July 14th, and is apparently becoming slightly more marked.

The Federal Council, faced with the necessity of floating a 200-million franc loan for the conversion of 6 per cent. Treasury bonds issued in 1921, and falling due at the end of next September, has had to bear the following facts in mind. Whilst a loan of 200 millions was placed last year without difficulty at 4 per cent., the 4 per cent. Federal Railway issue of April, 1923, was subscribed only to the extent of 120 millions of the 200 millions offered. As the Federal Railways required this sum for electrification of their lines, they were compelled to resort to borrowing 75 millions from the Compagnie d'Assurances et de Rentes, Zurich, which supplied them at 3½ per cent., issue price 85. In view of this, a short-term loan is to be offered at 98, carrying 4½ per cent. interest.

There is every reason for expecting that this flotation will present little difficulty, even allowing for the subscription of 25 million francs, in June, representing Switzerland's share of the Austrian 6 per cent. loan. The unprecedented success of this emission is easily accounted for if the issue price, 81, is considered. Another important factor was the earlier issue of other parts of the loan in London, New York, and Amsterdam. Swiss subscribers, noting that the bonds went at once to a premium in these foreign markets, were encouraged to expect a similar result in their case. London and New York financial houses were also considerable subscribers through their agents to the Swiss issue, in the hope of obtaining part of the securities they had failed to obtain elsewhere. The issue was heavily "staggered," applicants not being compelled, as in other countries, to deposit a definite percentage with their application forms. This consideration completely falsified the result, and most fantastic figures have been put forward without any authority whatever, the group of banks responsible for the flotation having made no public announcement on the point.

Is the depreciation of the Swiss franc likely to be arrested by the measures taken by the financial authorities? None would care to give a categorical answer. After all, these are but palliatives in the general situation, and a country's exchanges reflect ultimately its economic conditions. The only effectual and lasting remedy lies in a real improvement of these conditions. If, then, one must admit that one of the essential factors, a fall in the cost of living, has been arrested during the last few months, other symptoms of more favourable conditions are certainly present. In the first place, the accounts of the public services administered by the State show noteworthy progress in the first six months of 1923 as compared with the corresponding period in 1922. Customs receipts increased by 15.6 millions, the postal deficit was reduced from seven millions to two millions, while the loss on telegraph and telephone administration was only 176,831f, compared with 503,089f in 1922. The net receipts of the Federal Railways for the six months at 42.7 were 39.3 millions higher than in 1922. The financial state of the main branches of public administration, thanks to a policy of severe economy, registers, therefore, a change for the better, which will certainly be maintained, provided no sudden heavy fall of the Swiss franc takes place and raises the cost of living. The number of unemployed, again, which was 90,085 a month ago, stood actually at 39,168 at the end of July, having declined by 50,917.

HUNGARY.—COLLAPSE OF THE CROWN—THE FINANCIAL OUTLOOK—QUESTION OF A FOREIGN LOAN.

(FROM OUR CORRESPONDENT.)

BUDAPEST, July 28.

NATURALLY, for the last few days, attention in Budapest and all Hungary has been fixed upon the fall of the crown and its causes. People have been pointing to the estimate of the grain harvest, the sugar crop, the output of coal, the progress in the development of the wool, cotton, and silk industries. And then, just as hope was beginning, came the sudden drop in the currency. Nothing certain is known as to the cause, but that "an enemy hath done this" is the obvious conjecture. A political move on the part of Czecho-Slovakia or Roumania, or both, is at once alleged: Austria and the Czechs want to lower the price

HARRISONS & CROSFIELD, LTD. EASTERN & GENERAL MERCHANTS. AGENTS for ENGINEERING and ESTATE SUPPLIES, TEXTILES and HARDWARE GENERALLY. 1.4, GREAT TOWER STREET, LONDON, E.C.3. (Associated with Harrisons Rumsay Proprietary Ltd., established throughout Australasia.)

of wheat in Hungary, Austria for her own sake, the Czechs because the Slovaks have to be fed and there is not enough wheat produced in the country. Meanwhile, all that is actually known is that the selling took place in Vienna. No explanation was attempted either by Count Bethlen or the Finance Minister in the House of Deputies, though both alluded to the unhappy facts. The Finance Minister was more than usually optimistic in his review of recent developments. He deplored the fall of the crown, but hopes that it will improve in the autumn, and could give no convincing reason for the collapse. The Minister stated that he was in favour of free export, but not of free import. He promised new measures regarding the Devisen Centrale and foreign countries, and to give instructions with a view to aiding foreign commerce, but that on no account would he leave free opportunity for speculation in foreign exchanges. Credit should be given to help the development of agriculture, but first of all the crown must be stabilised.

Count Bethlen touched on many matters, and made one very significant statement when speaking of the chances of obtaining a foreign loan. These he believed to be greater than they were a month ago; but if a foreign loan could not be obtained, he said, neither he nor the Foreign Minister would continue to conduct the affairs of the country. Such a statement coming from the Prime Minister of a country speaks for itself, and let us hope it will not be lost sight of by the members of the Reparation Commission, especially the representative of France, whose casting vote it was that caused the rejection of the loan suggested on the last occasion. It may be recalled that in his speech to the Commission, Count Bethlen stated that if the exchange restrictions were removed the crown would undoubtedly collapse, while if they were not removed the economic life of Hungary would be slowly strangled. The only point in which the present position differs is that a partial collapse has come about without the removal of the restrictions on exchange, so that it is actually worse. In the note sent to the Commission asking them to reconsider their verdict, the Hungarian Government declare that they cannot be responsible for preserving order in Hungary unless Hungary is given a chance to live. In this connection it is worth noting that two Communist plots have been discovered quite recently, while, since the fall of the crown, the continued and heavy rise of prices is likely to have the usual effect upon the disorderly elements of the population.

CANADA.—CROP PROSPECTS—GRAIN PRICES—MARKETING SCHEMES—FEDERAL FINANCES—PULPWOOD EMBARGO—PRICES—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 15.

This year, in addition to the Dominion Bureau of Statistics and Provincial Governments, the two railway systems, four banks, the Manitoba Free Press, and the Lake of the Woods Milling Company are all issuing periodical surveys of the Western crop, on whose fate the prosperity of the Dominion seems by general admission to hinge, and their latest bulletins all agree that, generally speaking, the crop is faring amazingly well, and there is reasonable assurance of a very abundant, if not a record, yield. There have been some very severe hailstorms, but the crop acreage which they have destroyed is a small part of the total. Many districts report that, thanks to the abnormal wetness of June, they have enough moisture to carry them to harvest; indeed, some report too much moisture. Growth has been very rapid, and in some areas wheat has more than made up for its late start. It is now heading out, and the growth of straw is particularly heavy. This means that the crop will require a relatively

large amount of extra labour to handle it, and no one seems exactly to know where it is to come from. To-day the Ontario farmers are handicapped in their hay harvest for lack of workers, and cherries and other fruit are rotting on the trees for want of pickers. The difficulty is that harvest work in the West does not last more than 2½ or 3 months, and the majority of grain-growing farmers have no use for the services of labourers in winter. Accordingly when there is such a demand for labour in the industrial centres of the United States, there is little inducement for men to join harvest excursions to Western Canada.

Unfortunately for the farmer, the good crop reports have caused grain prices to tumble, and No. 1 Northern October wheat is now selling at less than a dollar per bushel on the Winnipeg Exchange. There is every expectation that it will go lower, and the farmers of Saskatchewan were recently warned by a reasonably competent authority that they need not expect more than 50 or 60 cents net per bushel for their wheat this autumn. The unanimous cry goes up that at this price wheat-growing is a losing game, and there is a clamant demand for an explanation why the prices of farm produce should be back to their pre-war level, or even below it, and the prices of manufactured should still be anything from 60 per cent. to 100 per cent. above it.

However, despite low prices, if Canada can show the same exportable surplus of wheat as she did from the 1922 crop, economic ruin is not an immediate danger. From September 1, 1922, to May 30, 1923, wheat exports were 57 million bushels greater than in the previous year, and the total amount exported is now in the vicinity of 250 million bushels. In this nine-month period exports of flour to the United Kingdom were 160,000 barrels greater than in the parallel period a year before.

The project of a State-operated Wheat Board has now definitely fallen through, but efforts are still being made in Alberta to organise a voluntary pool scheme. The Royal Commission on the Grain Trade is now holding sessions throughout the West, and evidence tendered at some of them serves to confirm the farmers' suspicions that the elevator companies indulge in some strange practices. Meanwhile, the Dominion Government is trying to increase the machinery for handling the export of grain. It has made very large advances to the Harbour Commissions of Montreal and Vancouver, and is constructing a large terminal elevator at Edmonton. A new Grain Exchange is being organised in Vancouver, and that city is making desperate efforts to capture a large share of the Western grain trade.

Serious industrial troubles have once more broken out in the Cape Breton district, and both the miners and steelworkers are on strike. Substantial contingents of troops are patrolling the Sydney area, despite demands of the Trades and Labour Congress for their withdrawal, and industry and trade are paralysed throughout the whole locality.

The Finance Minister has to provide for the retirement of a loan maturing next November. The amount outstanding is \$172,471,000, and in addition there are \$95,000,000 Treasury bills which were extended last year. During the sessions of the Banking Committee he hinted that he contemplated the flotation of a domestic loan, but it is understood that representatives of the bond and financial firms are opposed to this project. They fear that a Federal loan would absorb most of the domestic funds available for investment and tend to weaken prices generally. The impression now is that the loan will be delayed as long as possible, and floated in New York or London, or possibly in both places.

A strong movement of protest has developed in the United States against the Canadian Government's proposed embargo on the export of pulpwood, and it is backed by many influential newspapers, who are roused by the prediction that it will increase the price of newsprint \$10 per ton. There are hints that the American Government might retaliate by placing an embargo upon anthracite coal, and in view of the Nova Scotia strike such action would cause great inconvenience and possibly hardship in Central Canada. It is therefore safe to prophesy that the King Ministry will not move rashly in using the embargo powers conferred upon it.

The weak point in the Canadian situation is in the state of the Governmental finances. The country is overloaded with superfluous physical equipment, but there are districts which can put a reasonable case for fresh railways and public works, and their representatives are rarely backward in pushing it. One or two of the provincial Cabinets have maintained a firm front to these demands, but the rest have weakly yielded time and again, and the King Ministry at Ottawa has shown a deplorable complacency. At present it is trying to make political capital in Western Canada out of the fact that the Senate rejected the Bill embodying the new construction programme of the Canadian National Railways. Undoubtedly to settlers who have been living 40 miles from a railway for years, and feeding on hopes of branch lines, the news of their postponement comes as a severe blow; but a country which is faced as Canada is this year with a deficit of at least 100 million dollars cannot afford any more railways. The war and its aftermath can be pleaded as a partial excuse for the growth of Federal debt and expenditure, but Mr Yorath, the City Commissioner of Edmonton, recently gave some disturbing figures, which showed that in the four Western provinces the spirit of extravagance had shown no abatement since the outbreak of war. Their joint population had only increased from 1913 to 1922 15.32 per cent., the figure in the latter year being 2,479,451. Yet in the same period the gross debt of the four provinces, only a fraction of which could be charged to the war, had climbed from \$62,499,678 to \$264,728,195, or an increase of 323.57 per cent. Their annual revenues had jumped 79.29 per cent. from \$27,509,027 to \$49,321,782, but even then it had failed to keep pace with the annual expenditure, which mounted from \$33,833,854 to \$51,702,321. The provinces east of the Ottawa have long complained that far too much public money was being spent on the development of the West, and now that their representatives dominate the Government at Ottawa, they are making full use of their opportunities.

There has been a welcome increase in the immigration returns, which in the first five months of the calendar year show a total of 39,907 arrivals, which is 43 per cent. better than last year's figures of 27,973. But they are still very disappointing, and there is plain evidence that the United States has now superior attractions for British immigrants. In the first five months of 1922 21,625 British immigrants entered Canada, but in the first fortnight of July, when the new quota season opened, almost 17,000 entered the United States.

The Bank of Commerce index number of wholesale prices shows a minimum of change from mid-May to mid-June. The number for export stands at 153.78, as compared with 153.83; for imports at 167.53, as against 167.92; and the combined number at 160.65, as against 160.87. There has been a heavy break in hog prices, and lesser declines in flour, hides, copper, and silver; these balanced slight "export" increases in the case of wheat, beef, bacon, butter, cheese, and potatoes. In the imports, decreases in the prices of iron, tin, and coke balanced increases in corn, cotton, and rubber.

The good crop reports have given a fillip to business in many lines, and wholesalers report that the country storekeepers in the West are buying more freely than for many months, but in many quarters definite indications are being awaited as to harvest results in terms of buying power in relation to the actual prices of goods. Labour is still in a position to demand high wages, and prices of manufactured goods are thereby kept high. The stock markets have been very weak in response to the reaction in New York.

Letters to the Editor.

THE PRINCIPLES OF PAPER MONEY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I thought I might be contributing something towards solving the world's financial problems by giving you my own ideas of the principles governing the use of paper money. To explain these principles, I have adopted the method of showing first how they work in a small imaginary group before explaining the system of working in larger groups. It is probably the best way of helping people to an understanding of elementary economic and financial principles.

Let us, therefore, imagine a small self-contained group of producers, one of them a gold producer, exchanging their products between themselves through the medium of a single trader or exchange agent. Assume that they have developed the habit of measuring and relating values through the use of a common monetary unit equal to a certain weight of fine standard gold.

How would such a small system of exchange be worked if only paper and no gold money be used?

It is really quite simple. The trader having settled the value of each producer's products, takes them over and issues to each man notes signed by himself indicating the value of the products received. If the trader is trusted by the producers, the trader can, instead of issuing notes, open an account for each individual producer, and credit him with the value of the products received. It is not, however, a matter of great importance which method is adopted.

These notes and credits that the trader has issued are titles to a value of products that the trader has accepted for exchange, securities that prove the holder to be the owner of a certain value of stock that is held by the trader. The note is a bearer security, and the credit entry is a registration of the holder's title. The producers are therefore joint owners of the trader's stocks, the trader a trustee for the stocks he holds. Each producer therefore holds a paper security that entitles him to receive from the trader on demand a certain value of his stock-in-trade. The trader's aim is only to hold such stocks as will meet the demands of all the producers.

It is, however, a custom that the trader shall retain for himself a reasonable proportion of the products he has accepted for exchange, as he has to live as well as the producers. He therefore deducts for himself a certain proportion of each product, and gives to the remainder the same value that he gave to the whole.

When the producers, who have now changed to consumers, make their demands, the trader hands over to each his requirements, and either takes back the notes or cancels the credit he has given by debiting each man's account.

If the trader has worked his business properly, he should be left without any stock, and no notes or credits should be outstanding. Thus the operation of exchange should be carried through to the complete satisfaction of everyone in the group without the use of any gold money.

With a large number of groups exchanging between themselves, and a corresponding number of traders, the function of issuing notes and credits in an independent system can only be worked effectively by concentrating the function of issuing notes and credits in a mass organisation, for it is obvious that notes issued by a mass of independent traders would not circulate freely, and also that credits could not be transferred without a system of accounting covering all the groups.

This money-issuing institution issues its own notes (also token coins in place of paper if convenient) on behalf of all traders in denominations of the monetary unit to facilitate transfer. It also issues credit money on their behalf, and transfers it on the order of a money holder, transfer being effected by withdrawing money from one individual and issuing an equal amount to another. The whole system, indeed, is very similar to the British banking system, but with some important differences.

With a number of communities using different gold monetary units and different forms of notes, the acceptance of one another's paper money is a matter of arrangement between communities. The money-issuing houses of each community then accept the money of the other communities. Acceptance, in the case of communities, means that a money-issuing house will accept the paper money of another community, and in the course of transfer issue its own money against the receipt of notes and credits from other communities, at a rate of exchange fixed according to the weight of gold in the respective monetary units. This operation increases the money in active circulation in one community, and decreases it by a corresponding amount in the other. The whole system thus works as if all communities were using the same monetary unit and the same form of notes. Such unconditional acceptance implies that there is no abuse of paper in either system, both as regards money and other kinds of securities.

To proceed further I do not think necessary, for with the aid of these simple principles an expert should be able to work out all the details of a complete financial system for any nation that has developed sufficiently to use paper money. Perhaps I ought to add that I am fully aware of the immense difficulties that have to be faced in their practical application arising mainly out of the ignorance and acquisitiveness of human nature. Still, it is only under the guidance of sound principles that one can hope for ultimate success in finance as well as in other forms of human activity.—I am, sir, your obedient servant,

W. H. NORTON.

Books and Publications.

RECENT ECONOMIC LITERATURE—A MONTH'S SURVEY.

JULY, and August even more than July, are the "off" months in the publishing world. They represent the recoil, before the tide of autumn publications sets in. Moreover, since they are months supposed to be dedicated, by the part of the world that goes on holiday, to relaxation, and few persons regard economic reading altogether in that light, they are a close season for works falling under that heading, to a degree which hardly applies to the rest of the publisher's catalogue.

It is therefore natural that the last six weeks are, from the standpoint of the economic student, comparatively thin. Perhaps the most interesting single volume that has appeared during the period, interesting both to the general reader and to the political or economic student, is the small volume, in the admirable series of Cambridge Economic Manuals, on *Population* (Nisbet and Cambridge University Press, 5s). In this Mr Harold Wright surveys the whole question in a singularly lucid and dispassionate manner, rather setting out the considerations that have to be faced than laying down general and binding conclusions. A better introduction to a most difficult question could hardly be imagined. There are things in it that provoke dissent, and also lively discussion, but that is to say that it is a "live" study. If one makes interest one's test, one might put beside this two other recent volumes that, like it, are political primarily, economic only in the second place — Professor Ramsay Muir's *Politics and Progress* (Methuen, 3s 6d) and Mr Michael Farbman's arresting *Bolshevism in Retreat*

(Collins, 15s), a book of special value because of its clear account of the economic position of pre-war Russia.

The new and revised edition of Professor A. W. Flux's *Economic Principles—An Introductory Study* (Methuen, 12s 6d) is very welcome, since, despite the crowd of works professedly setting out the elements of orthodox economics, there are few at once as clear and as well arranged as this. The student would find it an admirable method of exercising his mind on the general rules he has thence derived, to pass to a study of *Questions on the Principles of Economics*, by E. E. Day and J. S. Davies (Macmillan Co., New York, 6s), a revised edition of a very competent American work; or to the brochure, *Some Aspects of Recent British Economics*, published by the University of Chicago Press—a descriptive treatment of two or three problems of the day by economists of standing. In many respects, economic problems present a rather different, and sometimes a simpler, face to the American student, and the opportunity of comparison is illuminating.

A case in point is the whole Trade Union movement. Mr Selig Pearlman's *History of Trade Unionism in the United States* (Macmillan Co., New York, 9s) shows the labour movement in America as, essentially, at the stage in which our movement was before the formation of the Labour Representation Committee, which precluded the constitution of the Labour Party. It is exclusively concerned with questions of hours and wages, and so far has made a principle of the exclusion, not only of the "intellectual" but of the brain worker. It has nothing to do with politics, and therefore, not by accident, but by design, has little or no political significance. It is very instructive to turn from Mr Pearlman's book to a very valuable piece of research and enquiry conducted by Dr Finer, of the London School of Economics, into the whole apparatus of Industrial Government set up in Germany, under the general title of Works Councils. *Representative Government and a Parliament of Industry* (Allen and Unwin, for the Fabian Society, 7s 6d) is prefaced by a general discussion of the alleged failure of repre-

sentative institutions, in their parliamentary form, very much on the lines familiarised by Mr and Mrs Webb in their latest phase. Dr Finer then turns to examine the efforts made in Germany to find a way out by devising something in the nature of a parliament of industry. His discussion is largely theoretical, but it is none the less interesting for that, although, it must be frankly admitted, his style is not calculated to assist the reader.

Data of permanent interest and value are included in Mr Humbert Wolfe's *Labour Supply and Regulation* (Clarendon Press, 10s 6d), the latest volume in the series of monographs on the economic history of the world war issued by the Carnegie Endowment. The book is a more or less official survey of the working of the Munition Acts, and the whole emergency apparatus designed for dealing with what was inelegantly called the man power problem. It is too official to be very easy reading, but as a work of reference it is excellently carried out. Taken in conjunction with Mr Cole's two volumes on *Trade Unionism and Munitions* and *Workshop Organisation*, the Carnegie Endowment have presented to us a fairly complete picture of the labour problem during the years of the war.

The war, of course, continues to account for at least half of the works that come out, whether directly, as in discussions, in all languages, on its economic consequences, or indirectly, as in such a collection of essays on the League of Nations as *Towards International Justice*, by F. N. Keen, with a preface by Professor Gilbert Murray (Allen and Unwin, 8s. 6d.); or, from another aspect, in the exceedingly useful little volume which Mr A. G. Enock has called *The Problem of Armaments* (Macmillan, 6s). Mr Enock is an engineer by profession, and there is a refreshing realism in his treatment of the whole subject—realism which by no means excludes idealism. He is quite aware that the remedy for the evils he sets out is to be found in the human intelligence. His book is a storehouse of invaluable statistical material, well arranged, so that it can be read and understood, and not merely looked

at with a dazed sense that these figures may mean something to somebody else.

Of sternly practical works there are a certain number. Two that deserve some special mention are Mr. Philip Burt's careful analysis of the *Principal Factors in Freight Train Operating* (Allen and Unwin, 10s 6d) and Mr R. Osborne's account of *How to Organise and Conduct an Export and Import Business* (Ellingham Wilson, 4s). Both of these ought to be very useful. Of *Accountancy Simplified*, by Henry G. Purnell (Lee and Co., 6s 3d), and *One Thousand Questions and Answers on Company Law* (by Henry A. Ashton. London Financial Service, 5s), the same can be said.

Professor Parker Willis' study of the *Federal Reserve System* (Ronald Press Company, New York, \$10, with an introduction by the Hon. Carter Glass) is likely to rank as the standard work on a subject of extreme interest and importance, outside the United States as well as inside.

MILK AND WATER ECONOMICS.*

PROFESSOR ACHILLE VIALATE, of Paris, gave in August, 1921, some lectures which have now been published as a volume in the Institute of Politics' publications of Williams College, Williamstown, Mass. A survey of world affairs leading up to the war is presented, and the facts are well marshalled, but when the Professor reaches the heart of his subject his energy seems to be exhausted. The latter part of the book is disappointing. Instead of dealing vigorously with the needs of the present troublous times, the author contents himself with setting down a number of vague platitudes. After having shown, in the historical part of the book, how patriotism, nationalism, imperialism prevented the development of economic internationalism, and created instead an atmosphere in which world war was more than a possibility, the author asks, "Are we to see, now that the war is over, economic imperialism continued, perhaps intensified?" It is, he points out, a dangerous eventuality. "For the present, at least," he remarks, "over-excited national feelings tend clearly in that direction.... In a world where peace offers but an insecure outlook, such feelings are natural; whatever the strength of economic tendencies, they cannot prevail against these feelings." We are to "wish and hope" such feelings will subside, and that people will understand the necessity of "resuming and extending the movement of economic internationalism which was begun during the preceding period, and which imperialism had held in check." Surely something more than wishing and hoping is needed, something other than "the adoption of a general policy of moderate protection" which the author favours. He has nothing to say of rectifying the mistakes of Versailles. He mentions that the League of Nations in 1920 called an international financial conference at Brussels, but does not explain that the common-sense of the economists was ignored. The bibliography at the end of the book has some remarkable omissions, some of the leading authors not being mentioned.

August 23.

MARKETS all round the Stock Exchange present a brighter appearance than they have been doing lately. The reason for the change of front is not easy to locate. At the back of men's minds, however, there is obviously increased anticipation of some kind of settlement being arrived at in connection with the Anglo-French-German relations. The meeting of Monsieur Poincaré with Lord Robert Cecil is regarded of greater importance than the noisy scene in the Reichstag on Wednesday last. This week's Cabinet discussions are expected to be fruitful in the direction of peace. The death of President Harding caused no ripple in any department of the Stock Exchange. Cables of sympathy and of acknowledgment passed between the chairmen of the London and New York Stock Exchanges.

The carry-over of this week showed that the bear position is still extensive in a good many parts of the House. Stagnation in trade continues to force money into the Consol market. Apprehensions of a rise in the Bank rate are not so much as mentioned. There is a seasonal, but none the less welcome, cessation of new issues, and this factor enables existing stocks to become more firmly placed into the hands of permanent holders.

While the War Loan pursues a steady upward course, rises in Conversion Loan, Funding, and Victory Bonds have been substantial. Up to the present the search for absolute security has not yet overflowed into such channels as those for Colonial stocks and Home Railway prior-charge securities, though the market in the latter is certainly better in tendency. India Government stocks are hardening.

Demoralisation of the mark by the million at a time has a far less effect nowadays than used to be the case when the mark fell 20 to 50 points in a day. French bonds are scarcely affected by it; Germans naturally remain a nominal market. The French railway issues rose in the earlier part of the week and maintained most of the improvement, while French Government bonds are moving narrowly. Chinese issues remain weak as a whole; Austrian Sixes, after a dip to a discount, recovered to about 2 premium. South American bonds are quiet, and of the new issues there are still discounts on the scrip of the Dutch East Indies and the Manchurian loans.

Home Railways followed the upward course set by the Consol market. London, Midland and Scottish led the way with sharp recovery. The preferred stocks, now ex-dividend, are better; and of the Undergrounds, Metropolitan stand out as the firmest spot. The junior stocks of the various lines are better, and the market is beginning to attract more public attention. Canadian Pacific put on a dollar or two, other American railroad shares and bonds also advancing. Canadian and Mexican Railway stocks are dormant. Argentine Railways continue to feel the depressing effects of the rate of exchange. San Paulos have fallen, and Leopoldinas went with them.

The rubber market is one of the firmest in the House. A rise in the price of the produce rounded-up the bears, and the handful of shares in which there is still a free market showed good rallies. The oil market has thrown off much of its acute flatness. Prices enjoyed an all-round advance, due principally to bear covering, to which was added a little buying on the part of people who had bought stock much higher up, and who consider the time has arrived when it seems well to average. London and Scottish Assurance Corporations responded to the offer of the Northern Assurance Company to purchase the shares of the former at £7 per share. Other insurance shares are steady, but the banking market is still under something of a cloud, and prices tend to droop. There is nothing doing in the shipping list. Indo-China deferred and Royal Mail are lower.

The new shares of the Imperial Tobacco Company became marketable in the middle of the week, all the certificates having now been despatched to their proprietors. The price is firm, and British-American Tobacco shares have once more crossed £5. Such speculative favourites as Courtalds and Associated Portland Cement are better in consequence of the prevailing brighter tendency. Guinness gained 20 points on the dividend

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves exceed £13,000,000.

THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

announcement, and held most of the rise. This assisted Watney deferred and some of the other brewery stocks. Hudsons Bays and Egyptian Land shares hold their previous levels. The catering and stores group is hard, Harrods being assisted by the improvement to 3 per cent. in the interim dividend. Cable stocks, after being acutely weak, rallied from the worst, and Marconis touched 2½ before they reacted a little. Iron, steel, and armament shares are moving narrowly and somewhat irregularly. Workman Clark debentures stand about 50. Electricity supply shares, in spite of increased interim dividends in several cases, are slightly irregular, the firmest features being the shares in the City and County companies. Interest in gas stocks has ebbed to a minimum.

The Kafir market received a little support from the Cape, while it was reported that Paris had turned a buyer of some of her favourites. This made prices a trifle better. Rhodesians have been enlivened by a sharp rise in Globe and Phoenix, while Cam and Motor, Selukwe, and one or two others of this class went ahead briskly on professional support. Diamond and copper shares have relied upon the orders from Paris for their fluctuations, and Paris has been a buyer on balance. The tin share markets remain in a sleepy condition, and the holiday mood is reflected in most of the sections of the mining markets other than those just mentioned.

Various stocks connected with Ireland have been transferred this week from purely British sections of the Stock Exchange Official List into others which comprise the securities of British Possessions.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liabilities.

1916 ..	363,763,600				

The City of Rangoon.—Issue of £300,000 5½ per cent. debentures at 98½ per cent. This loan has been created with the sanction of the Government of India, and is secured upon the rates, taxes, and dues imposed and levied in the City of Rangoon. Under the City of Rangoon Municipal Act (Burma Act VI. of 1922) provision is made for the attachment of the municipal fund in the event of default in payment of principal or interest of the loan. The unredeemed loans of the corporation and the amount at credit of sinking funds on March 31, 1923, amounted to £802,100 and £261,400 respectively (conversion rate taken at 18 ad per rupee). The issue is repayable at par in 1953, but the yield to the investor cannot be described as over-generous.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

British and Colonial Government Securities.

NOTE.—The value of the gold output fluctuates each month in accordance with the amount of premium which may be declared to the Mines Department of Southern Rhodesia in that month.

The Bank of England gold reserve against its note issue on the 1st instant was £125,811,595, as compared with £125,808,795 on the previous Wednesday. Indian bazaar inquiry being still upon a small scale, most of the moderate amount of gold on offer this week will probably be taken for the United States of America. Gold valued at \$2,624,000 has been received in New York from London, and 20,000,000 gold marks from Germany. Sir William Joynton-Hicks announced last week that gold to the value of £3,817,232 had been saved from the wreck of the "Laurentic," and that operations were being continued.

SILVER.

The market continues to be quiet, and prices to move within narrow limits. China has been working both ways, and though the Indian bazaars have bought small quantities for shipment, they have also been sellers of silver for forward delivery. This is noteworthy, considering that, on the whole, the monsoon has been not unfavourable. Reuter thus summarises the position up to the end of July :—" The monsoon was late everywhere except in Bengal. The rainfall was adequate, except in West Madras, Western Bengal, portions of the United Provinces, Rajputana, Baluchistan, and the dry zone of Upper Burma. In the latter tract the protracted drought caused anxiety regarding cotton and sesamum. There was some damage to crops by heavy rainfall and floods in parts of Madras, Bengal, and Assam. Agricultural operations were retarded in Central India." The news from Bombay is quite good. The returns of the Mexican silver production for the six months ending June last are at the rate of 90,000,000 ounces per annum.

BRITISH AUSTRALIAN BROKEN HILL.—Fortnight ended July 28th.—5,801 tons crude ore produced, 1,180 tons lead concentrates, containing 726 tons lead and 32,338 ozs silver; also 970 tons zinc concentrates, assaying 7 per cent. lead, 85 oz silver per ton and 46 per cent. zinc. Carbonates raised, 195 tons. One day's stoppage.

BROKEN HILL SOUTH.—Four weeks ended June 2nd.—Crude ore treated 15,440 tons, assaying 12.0 per cent. pb., 5.7 ozs ag., 12.3 per cent. zn., producing the following concentrates:—Lead concentrates 1,181 tons, assaying 63.8 per cent. pb., 19.4 ozs ag., 7.0 per cent. zn.; current slime, 579 tons, assaying 56.1 per cent. pb., 35.0 ozs ag., 9.3 per cent. zn.; total, 2,394 tons, assaying 62.0 per cent. pb., 23.2 ozs ag., 7.6 per cent. zn. Slime zinc flotation plant—10,121 tons residues, assaying 4.0 per cent. pb., 1.7 ozs ag., 13.6 per cent. zn., producing the following concentrates:—2,643 tons, assaying 9.8 per cent. pb., 5.0 ozs ag., 43.4 per cent. zn. Dump slime treated 9,729 tons, assaying 13.5 per cent. pb., 7.1 ozs ag., 14.6 per cent. zn., producing the following concentrates:—2,376 tons, assaying 40.1 per cent. pb., 23.6 ozs ag., 18.0 per cent. zn. In addition to the above, 1,421 tons of classified sands from the dump slime, assaying 5.4 per cent. pb., 3.5 ozs ag., 13.2 per cent. zn., were passed to the table concentrator, producing the following concentrates:—56 tons, assaying 61.3 per cent. pb., 19.6 ozs ag., 7.9 per cent. zn. Despatches of zinc tailings:—8,049 tons net to Amalgamated Zinc.

ELBROTHALYTIC ZINC COMPANY OF AUSTRALASIA.—Production during four-weekly period ended July 25th:—3,143 tons zinc silicate, silver lead product for shipment to Port Pirie for realisation, containing 550 tons lead, 80,000 ozs silver.

MESSINA (TRANSVAAL).—July.—Mines, ore hoisted, 12,605 tons; concentrates produced, 1,035 tons, containing 375.8 tons copper. Smelter, 573.4 tons matte, containing 328.3 tons copper; blister, 64.8 tons, containing 64.4 tons copper. Probable shipment during August of blister copper, matte, and concentrates containing 500 tons copper.

MOUNT LYELL.—Cable: "During the four-weekly period ended July 25th there were smelted:—Mount Lyell ore, 312 tons; North Lyell ore (direct to smelters), 264 tons; concentrates, 2,130 tons. The converters produced 404 tons of blister copper, containing:—Copper, 400 tons; silver, 7,748 ozs; gold, 122 ozs. The mill treated 10,344 tons of ore, and produced 3,041 tons of concentrates. Furnace ran 15 days. Furnace blown out July 27th to permit accumulation of sinter. Recent irregular running necessary pending an increase output from sintering plant, full equipment of which is nearly complete. Expect to resume smelting August 6th."

MOUNT MORGAN.—Four weeks ended July 24th.—Treated 4,888 tons Mount Morgan ore, 302 tons Many Peaks ore, 3,888 tons concentrates, and 11 tons of purchased ore and secondary products. Produced 377 tons blister copper, containing 373 tons copper and 4,567 ozs gold. Concentrator treated 16,510 tons ore for a production of 5,769 tons of concentrates, containing 319 tons copper and 3,831 ozs gold. In addition to above production, have matte on hand containing 21 tons copper and 206 ozs gold. Production again affected by shortage of miners and to some extent influenza epidemic.

NORTH BROKEN HILL, LIMITED.—For the month of July, 16,550 tons of crude ore were treated. Produced 3,510 tons lead concentrates, averaging 64 per cent. lead, 29 ozs silver per ton, and 8 per cent. zinc; also 2,980 tons zinc concentrates, averaging 48 per cent. zinc; 6 per cent. lead; and 7 ozs silver per ton.

SAN FRANCISCO MINES OF MEXICO.—July.—Ore treated, 7,500 tons; lead concentrates produced, 1,670 tons; zinc concentrates produced, 1,680 tons. Estimated net smelter return on lead, \$78,395 U.S. currency; on zinc, \$21,790; total net smelter return, \$100,185; operating expenses, \$42,260; estimated operating profit, \$57,925; capital expenditure (including development), \$36,000.

Reports and Notices.

GOVERNMENT STOCKS, &c.

VENEZUELA 3 PER CENT. DIPLOMATIC DEBT, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,300 15s 4½d, being the moiety of the first fortnightly instalment of the debt service payable to the council in respect of the half-year ending December 31st, 1923.

CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—The Council of Foreign Bondholders notify the payment of the August instalment of the debt service in respect of the half-year ending December 31st, 1923.

MISCELLANEOUS.

ISAAC HOLDEN AND SONS.—The directors' twenty-fourth annual report, as at June 30th last, shows a trading profit of £109,843, as compared with £181,126 in the previous period. After various deductions have been made for taxation and debenture interest, £55,000 placed to depreciation and insurance funds, and interim dividends have been allowed for, a balance (including amount brought forward, £24,984) of £105,232 remains (last year, £75,677). Preference shares absorb a further £4,146, and it is proposed to pay a final dividend of 2s per share, free of tax (making 15 per cent. for the year), to transfer £25,000 to that £25,000 first mortgage debenture stock has been purchased during the year, and recommended that £32,762 from the reserve fund be applied in writing off the balance of goodwill.

(a) The directors intimate that there has been recovered from the Inland Revenue certain amount of United Kingdom income-tax in respect of the payment of Dominion income-tax up to February 5th last, which, in terms of the Income-Tax Act, falls to be made over to the stockholders. This payment will be made along with the interim distribution at the rate of 7s 1 1/2 per £100 of preference stock held and 16s 6d per £100 of ordinary stock held.

STOCK CONVERSION AND INVESTMENT TRUST.—The dividends announced for the two half-years ended June 30th by the London and North Eastern Railway Company will, after payment in full of the 3 per cent. first charge (North-Eastern Consols), permit of a dividend of £2 17s 3d per cent. on the deferred charge stock.

UNITED TURKEY REP.—The directors have decided to pay forthwith all arrears of dividend on the preference shares to June last.

OIL OUTPUTS.

THE UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, July 25, 1923, amounted to 710 tons.

BRITISH BURMAH PETROLEUM COMPANY.—Production of crude oil by this company and the Rangoon Oil Company for the month of July amounted to 63,857 barrels.

STEAUA ROMANA COMPANY (BUCHAREST).—Approximate fields' gross production for the month of July was 17,850 tons.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—Total production during July, 105,182 barrels, or approximately 15,026 tons, including St. Helen's Petroleum Co., Limited, 47,201 barrels = 6,756 approximate tons; Kern Trinidad Oilfields, Limited, 7,821 barrels = 1,117 approximate tons; and Kern Romana, Limited, 1,379 barrels = 197 approximate tons.

APEX (TRINIDAD) OILFIELDS.—Estimated gross production of crude oil for the month of July was 59,601 barrels, equal to approximately 8,500 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 9,200 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Harvesting of winter crops in the United Kingdom is now proceeding under ideal weather conditions, and with regard to wheat, returns so far are very satisfactory, being up to average both in quality and weight. On the other hand, barley and oats are less favourably mentioned. Spring crops generally have derived great benefit from recent rains. Trading is still more or less at a standstill on the London market, owing to the difficulty in obtaining deliveries from the docks, and prices meanwhile are quite nominal, while the few lots actually available realise very full rates. Native wheat of the old crop is mostly out of supply, only inferior sorts offering at 11s to 11s 6d, while limited supplies of new rule at 10s to 10s 4d per 112 lbs, free on rail. Imported nominally easier in view of lower c.i.f. quotations, but values are difficult to quote with any degree of accuracy, as there is practically nothing workable. In the cargo section, business was again of a meagre character, the few sales effected being at lower prices. Steamers of No. 2 Northern Manitoba October-November, also January, sold at 42s 6d to Italy, and Rosafé 6 1/2 lbs on passage at 39s 9d per 480 lbs. Crop reports from the principal exporting countries remain favourable, while harvesting and threshing on the Continent, also Roumania, indicates a good out-turn. The export of wheat from South Russian ports has assumed more liberal proportions, and several steamers have been chartered during the week, prompt to November shipments to Continental ports. Flour in good demand at 1s per sack decline for home milled. London standard straight run quoted at 39s, patents 41s to 42s, town households 37s per sack, delivered in Metropolitan area. New country straights 30s to 31s per sack, delivered to London stations. Imported in small supply, and prices firm for available lots. Manitoba patents range from 37s to 40s, Minneapolis good patents 39s 6d, Australian 36s 6d to 37s 6d. Soft winters 36s to 39s per 280 lbs, ex store. Millers' offals firm. Broad bran quoted 6s 6d, ordinary ditto 5s 6d to 5s 9d, middlings 9s, bags included, ex mill, light oats 7s 3d, powdered oat husks 5s 9d, feed oatmeal 8s 9d, ground oats 13s 9d per cwt, free on rail. Barley: English quiet, old crop quoted at 8s to 10s, new ditto 8s 6d to 9s 4d per 112 lbs., free on rail as to sample. Imported steady. Californian quoted 42s to 44s 6d, Australian chevalier 41s to 48s, New Zealand 33s to 45s as to sample, all landed, per 448 lbs. Karachi 28s,

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent writes on August 9th:—Pig-iron: In view of the holiday conditions now prevailing, there is practically no business doing, except for small parcels required by consumers for immediate consumption. Prices are nominally at 102s 6d for No. 3 Cleveland G.M.B., but the price for mixed numbers 6d for No. 3 is down to 98s per ton. There have been three furnaces stopped, which makes five less than at the other three furnaces. There is no alteration in price, but makers end of June, and all these were on hematite pig-iron. Manufactured iron and steel: There is no alteration in price, but makers are complaining of the scarcity of orders, and in many instances production is being drastically reduced. Steel ship plates, £10; production is being drastically reduced. Steel ship plates, £10; steel ship angles, £9 10s; iron bars, £12; steel rails, £10. Iron ore: The strike at Bilbao still continues, but there is no buying, as most works have sufficient in stock or coming forward against contracts to keep them going for some weeks yet. The price of best rubio is nominal at 23s per ton, c.i.f.

Our Sheffield correspondent writes:—The holiday season being in full swing, business transactions are at the minimum, and

there is a sagging tendency in all branches of iron and steel. Makers generally report continued shrinkage of orders, and owing to the keenness of competition, severe work can only be secured by accepting unremunerative prices. The result is that most steel works are being run without profit or at a loss, and consequently the outlook for holders of industrial shares is extremely black. Acid basic billets were last week reduced ten shillings to £12 10s per ton, and this week soft basic billets have been re-

Rt. Hon. the Earl of Selborne, K.G. James S. Shiel.

duced from £8 10s to £8 5s. The crucible steel branches have little to do, the state of exchanges having deprived Sheffield of the former trade done in such material with European countries. Best South Yorkshire hards are quoted at 22s per ton at pits. There is quite a slump in small boiler fuel.

Our Glasgow correspondent writes:—During the past week there has been a rather better business doing in iron and steel (raw and manufactured), but it can hardly be said that the tone ruling is any cheerier than that which obtained for over a month back. The bulk of the rolling mills, which have of late undergone a thorough overhaul, are pretty well engaged on plates and sections, but it is complained that the outputs are not being made good by the deliveries, either on home or export accounts. Ship plates on Monday were cut by 5s a ton to £10, and sections also by 5s a ton to £9 15s; boiler plates remain at £13—all delivered at Glasgow stations. Export inquiries for black sheets and galvanised sheets keep firm at £12 10s and £18 17s 6d respectively. Scotch pig-iron is in request from Pacific ports in the United States—about 2,000 tons were sent hither last week—and the home inquiries for foundry sorts are the turn more active. Scotch hematite has yielded 3s 9d at £5 12s 6d, while No. 1 foundry pig stands at £5 10s, and No. 3 at £5 5s. Electrolytic copper, c.i.f. Glasgow, has dropped 7s 6d at £65 7s 6d, pig-lead 10s at £24 12s 6d, and virgin spelter, c.i.f. Glasgow 15s at £32 12s 6d. Coals flat on collapse of Continental demand. Best qualities back from 2s to 2s 6d a ton on the week.

Our Cardiff correspondent writes:—The South Wales collieries were idle this week until Thursday morning, and consequently there was no market at Cardiff until that day. Business, however, towards the end of the week was comparatively quiet. The stocks have been almost completely depleted during the holidays, and it is doubtful whether the total production for the current week will amount to more than about 450,000 tons, compared with a normal week's output of over 1,100,000 tons. Prices, however, have been stationary for practically all classes of coal. For prompt positions, salesmen are accepting current quotations, but several of them are refusing to enter into further future contracts owing to the unsettled conditions in Europe. France continues the chief buyer of South Wales coals. The returns for July show that the exports to France absorbed 43 per cent. of the total exports of the South Wales ports, and that in only one other month this year have the requirements of France been more than they were in July. The total shipments in that month were 2,561,000 tons, of which France took 1,092,878 tons, Italy 300,698 tons, South America 353,791 tons, and British coaling depots 214,729 tons. The agitation of the tipplers against the working of the third shift is less active, and at the moment there is no immediate danger of any labour trouble.

The approximate current quotations are as follows:—Best Admiralties, 30s to 31s; second Admiralties, 28s to 30s; best drys, 28s 6d to 29s 6d; black veins, 28s 6d to 29s 6d; Western Valleys, 27s 6d to 28s 6d; Eastern Valleys, 25s to 27s 6d; best bunker smalls, 20s to 22s; ordinary cargo smalls, 16s to 18s; anthracite big vein large, 50s to 55s; machine-made cobbles, 60s to 62s 6d; French nuts, 60s to 62s 6d; stove nuts, 60s to 65s; rubbly culm, 15s to 15s 6d; coke for export, 55s to 60s; inland blast-furnace coke at ovens, 30s to 35s; patent fuel, 32s to 34s; pitwood, ex ship, 32s to 32s 6d.

The tinplate industry is this week at a standstill, owing to the annual week's holiday, and there was virtually no market on Tuesday. Prices are nominally unchanged, but the recent fall in the values of the Belgian and French francs has stimulated the importation of French and Belgian blooms, billets, and bars.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The wool textile industry generally presents a very dull appearance at the moment, and in view of the poor state of trade during the last few months, most firms are taking advantage of the local holidays to close their mills for at least a fortnight. In some cases there is very little new business for the operatives to start on after the holidays, and from the standpoint of employment, the outlook is decidedly depressing. It is an undoubted fact that the whole industry is suffering from the strangulation of German trade, and until some settlement is arrived at in connection with Reparations and the Ruhr, it is difficult to see how there can be any real improvement in conditions here. Wool values remain fairly steady, the Continental and American demand for wool in the bale and for matchings being sufficient to keep the raw material market firm. On the other hand, demand for tops and yarns is very restricted, and the bulk of the business transacted is of a picking-up character by users who are prepared to buy when prices look particularly attractive. The gap between selling price and replacement cost, however, is very wide, and this is causing a good deal of concern. Quotations do not show much change on the week, but they can only be regarded as nominal, there not being sufficient business to test the market. Spinners complain about the lack of new orders, and in the Botany section, in particular, things are bad generally. Continental competition is still being felt, both in yarns and piece goods, and while the advantage of lower conversion costs and depreciated exchanges rests with the Continental producers, there cannot be much development in the West Riding industry. The demand for piece goods is spotty, and prices leave much to be desired.

THE COTTON TRADE.

MANCHESTER, August 9

Business throughout the market continues to be disorganised by the violent fluctuations in raw cotton rates, and until prices are steadier there is not much hope of an increased turnover. The feeling is gaining ground that many customers are in more urgent need of fresh supplies of goods, and the demand from day to day is persistent. There is considerable nervousness, however, as to further changes in values. The stiff rise at the beginning of this week has not been maintained, although American crop advices continue unsatisfactory. Inquiry in piece goods for India has been arranged chiefly in light fabrics, but most of the offers have been impracticable. The turnover for China remains unimportant. Rather more business has been offered for some of the Near Eastern outlets. American yarns have been very irregular in quotation when tested, and buying has been restricted. There has not been much activity in Egyptian counts. Bids as a rule in export numbers have been too low.

VEGETABLE OILS AND OILSEEDS.

Markets this week have been to a large extent under the influence of the holiday, and what little business has been done has been to emphasise the easier tendency noted of late. Demand for oils of all descriptions is within narrow compass, home consuming industries and foreign buyers alike apparently being content to mark time. Raw linseed oil, in the absence of effective support, has eased off to £36 per ton naked, ex Hull mill, the lowest figure touched this year. Cotton oils are quiet at the lower level of values, which have stimulated some buying of crude Egyptian, but on the whole demand is only moderate.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

As no hide auction was held this week in Bermondsey, prices remain as last quoted, with a firm tendency in all home markets. The decline seems to have been arrested, and this in itself is a good sign as showing tanners have confidence in the future. Business in imported hides has been checked by the holidays, and Liverpool reports rather a dull market. Cables from the River Plate report a weaker market for regorifics, and sales of Argentine ox are reported to have been made on a basis of 73d, c.i.f. Fray Bentos saladeros are also reported to have sold at 8d, with regorific ox at 8 1/2d. Dry hides have attracted little attention this week, few tanners being in a buying mood. The American position is cabled as steady, with best heavy packer hides selling at 15 cents.

The demand for sole leather has been trivial this week, as most of the Midland shoe factories are closed. A few parcels of dry hide bends have, it is true, gone out, whilst orders have been booked for forward delivery. Prices remain firm, and tanners are not at all disposed to give away the meagre margin of profit they can just obtain by the most rigid economy.

Sampling has been going on in upper leathers, and once the holidays are over there will probably be a demand for cheap glacé kid and patent leathers. Chrome calf of home origin is still badly affected by German imports, whilst carriers of E.I. kips have received very few orders for their specialities of late.

Few shoe factories have opened this week, but from what I hear, the fine weather has induced a good deal of buying, and retailers have in some cases cleared stock which they expected to carry over until next season.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 10.

Business proceeded on quiet lines throughout the great part of the week, holiday influence being asserted, and in several directions no serious attempt to resume operations was made. Amongst fibres there was a good call for jute at the opening, and prices responded where influenced by higher cable advices from Calcutta, but a depressed tone set in later, as spinners were not inclined to follow any appreciation in price, while demand for manufactured goods does not improve. First grade, new crop, sold £23 5s to £22 2s 6d. Manila hemp dull, and was not influenced by the fact of weekly receipts of 19,000 bales being 20,000 less than previously expected. Italian hemp firmly held, and liberal transactions are recorded by wire in local markets. There was some inquiry for No. 3 cleaned Rangoon rice for the Levant, where it appears that a steady drainage has been made upon the local stocks, an average of 400 tons daily being kept up for some little time past, but there is nothing fresh to add with regard to the European position. General tone is steady after the recent clearance of floating parcels to Germany of two stars Rangoon, but buyers are reticent. Rubber took an upward turn on increased speculative operations, but assumed a quieter state of affairs, as little or no response was forthcoming from America. Straits shipments to all parts during July amount to 16,800 tons, Para receipts for the same period being 1,141 tons. Cuban sugar stock totals 4,940 tons, against 590,000 last year.

SUGAR.—There was decidedly more tone about the market towards the close, and with regard to refined descriptions on spot, traders became better interested, and previous quotations were repeated all alone the line. British refiners recorded a fair clearance. Messrs Tate and Lyle's cubes, 60s 6d, 61s 6d; granulated, fine and coarse grain, 57 7 1/2d; No. 1, 57s 4 1/2d; No. 2, also London, 57s 1 1/2d; ditto, September, 56s; October, 53s 6d; November-December, 50s. Yellow crystals, spot, 52s 7 1/2d. Brown to good yellow pieces, sold, 47s, 49s; fine white, 53s. Imported kinds offered in only moderate

quantities, while handicapped upon the question of delivery occasioned by the strike, and though inquiries were more numerous, business was naturally hampered. American granulated, spot, quoted 55s; also fine Dutch and Czechoslovakian, with forward positions for same purely nominal, as definite offers are generally found wanting. White Java, spot, 52s 6d to 53s, as to quality. Regarding ditto for arrival, same may be summed up in afloat parcels, while quoted 21s 6d, c.f. and i., London, irrespective of position of steamer. Hungarian crystals, spot, quoted 52s to 52 1/2d, with delivery uncertain. Raw refining kinds remain a dead-letter. Fair support was forthcoming in the terminal market, and a steadier tone predominated. August, sold, 23s 3d, 23s 10 1/2d; December, 20s 3d, 20s 10 1/2d cwt.

COFFEE.—Spot market generally slow, but sellers adhere to previous asking prices. Future, firmer. September and December quoted 54s per cwt.

COCOA quiet, and Accra weaker forward, with business in F/F grade, October-December and November-January, at 29s 9d to 29s 6d cwt. f.o.b. terms.

TEA.—Market quietly steady pending resumption of auctions next week.

RICE.—There is nothing fresh to add in this market, and the position of Burma grain to Europe shows no change. There is some business stirring in Spanish for shipment at recent level of prices. Two stars, Rangoon, spot, new crop, 13s 6d, and August, 12s 9d, c.f. and i., London. Rangoon beans, H.P., August-September, new crop, quoted 10s 3d, f.a.q. 6s 6d. Madagascar butter beans, new crop, spot, 14s; afloat, 13s. Japanese peas dull. Spot, 23s 3d; September-October, 20s cwt.

PEPPER.—Pepper market remains quiet, but steady. Fair black Singapore, spot, 3 1/2d; August-October, 3 1/2d; Aleppo, spot, 4 1/2d; Tellicherry, 4 1/2d; white Singapore, spot, 5 1/2d; Muntok, 6d; ditto, L.C.H., August-October, 6d; Lampong, black, October-December, 3 1/2d. Zanzibar cloves, spot, 1s 1 1/2d; August-October, 1s 1 1/2d; September-November, 1s 1 1/2d. Fair flake Singapore tapicca, spot, 3 1/2d; fine Java, 4d per lb. Fair Penang seed pearl, spot, 27s; sago flour, August-October and September-November, value 12s. Desiccated coconut steady. Fine cut, spot, 37s; medium, 37s 6d; halves, July-August, sold, 35s 3d; August-September, quoted 36s; September-October, 36s 3d cwt. Ginger dull.

JUTE.—Market generally steady, despite weakness cabled from Calcutta for baled, and a moderate demand prevailed. First grade new crop, August-September to October-November, Continent, sold, £22 2s 6d to £22 7s 6d; lightning grade, ditto, quoted £21 ton. Hessians slow, unaltered. Twills dull. B, August-September, 63s 6d 100 bags.

HEMP.—There is no movement in Manila kinds, and quotations were nominally unaltered. J grade, August-October, £31; K and L, £27 10s; and M, £26 10s ton. African sisal unaltered.

SHELLAC.—Market stronger, with a good demand. T.N., spot, 270s; August, sold, 265s to 272s 6d; October, 260s to 265s; December, 260s cwt.

COPRA.—Firm but quiet, and market somewhat sensitive. F.M.S. Straits, August-October and October-December, Rotterdam, sold, £24 10s to £24 7s 6d; Ceylon, August-September, quoted £26; Dutch E.I. ditto, £24 10s; Cebu, £23 15s; Manila, £23 7s 6d. Palm kernels, August-October, Liverpool, sellers, £16 17s 6d; August-September, Hull, sold, £16 15s ton.

RUBBER.—Slightly unsettled and weaker on cessation of buying. Standard plantation crepe and sheet, spot, and August, sold, 15 1/2d to 15 1/2d, and 15 1/2d; September, 15 1/2d; October, 15 1/2d to 15 1/2d; October-December, 16 1/2d, 15 1/2d, and 16 1/2d; January-March, 16 1/2d, 16 1/2d, and 16 1/2d. To New York, standard estate sheet, August-September, sold, 15 1/2d; September-October, buyers, 15 1/2d per lb, c.f. and i. Wild steady, unaltered.

GAMBER.—Market fully steady forward, and block, August-October, quoted 34s cwt., c.f. and i. terms.

EGG PRODUCTS.—There is a moderate demand for hen liquid yolk and hen albumen, and market is steady. Prime hen liquid, spot, 85s; August-September, 72s 6d cwt. Dried yolk, spot, 10 1/2d; hen albumen, spot and forward, 3s 5 1/2d per lb.

DRIED FRUIT.—With no improvement in demand, business was of a retail character. Of currants, Pyrgos half-bags quoted 53s; Gulph, 58s; good Vostizza, 67s to 71s; Australian, 63s to 66s. Sultanias: good Smyrna, 6

ings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15
Cullum street; Willing and Co., Limited, 50 Copthall avenue, and
53 Finsbury pavement.Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's,
37 Avenue de l'Opera.

THE MONEY MARKET.

MONEY was not over plentiful at the beginning of the week, and Thursday was awaited with some apprehension, owing to the prospect of heavy Excise payments, added to the direct taxes and balance-sheet withdrawals. In fact, the market only avoided the Bank of England with some difficulty, after having bid up to 3½ per cent. for money on that day. It was probably saved by the extreme stagnation of the discount market, where the scarcity of commercial bills was once more a cause of general comment.

apricots, 7s to 11s. Pea-hes, 8s to 12s. Pears, 12s to 14s 6d. Tomatoes remain dull. Spanish threes, 6s 6d; Italian, 7s per dozen. Meats in continued quiet request despite very reasonable rates ruling.

OILS.—Lined quiet and easier. Spot, net, naked, quoted 40s 6d; August, 37s 3d; September-December, 35s 3d; January-April, 33s. Rape dull. Crude, spot, 38s 6d; refined, 41s 6d. Cotton quiet. Crude Egyptian, spot, 36s; common edible, 43s; deodorised (in barrels), 47s 6d. China-wood nominal. Hankow, spot (barrels), 103s; July-August, 92s 6d. Coconut inactive. Ceylon, spot, 47s; August-September, 38s 6d; Cochin, ditto, quoted 46s. Soy quiet. Oriental, barrels, July-August, 34s 9d. Japan fish nominal. Cod quiet. English, spot, 34s. Ground-nuts quiet. English, crushed, naked, spot, 43s; deodorised, barrels, 52s. Turpentine quiet and easier for near, but distant firmer. American, spot, 71s 6d; September-December, 72s 6d; January-April, 73s 6d. Rosin easier. American, grade B, 13s; F, 13s 3d; G, 13s 3d; H to I, 13s 3d; WG, 16s; WW, 17s per cwt. French nominal. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon. Castor-oil firmly held. First pressure, spot, to August, quoted 56s; second pressure, 55s, and pharmaceutical 61s per cwt.

OILSEEDS.—Lined quiet and easier. Bold Bombay, afloat, £19 5s; small Bombay, ditto, £18 12s 6d; Calcutta, afloat, £18 12s 6d; August-September, sold, £18 17s 6d to £18 15s. Plate, afloat, £18, paid; July-August, £17 17s 6d; January-February, £15 15s. Rapeseed lower. Toria, August-September, £15 5s; real bold Ferozepore, ditto, £15; Jamba, £11 10s. Cottonseed steady. Egyptian black, new October, £10 2s 6d; and white, £9 15s, to Hull. Bombay, August-September, £9 5s; December-January, £8 12s 6d. Gingly seed quiet. Large Bombay, afloat, Continent, 30s, £21 15s. Chinese, October-November, £21, Continent. Ground-nuts dull. Coromandel, machine-dried, August-September, £20 7s 6d. Chinese decorticated, f.a.q., October-December, £21; East African, August-September, £19 10s. Soy beans quiet. Manchurian, August-September, £11 2s 6d. Castorseed easier. Bombay, July-August, £19 per ton.

METALS.—Tin: The market ruled steady at the week's opening session at a slight advance on previous close, but only a small turnover resulted. Standard, cash, changed hands at £182 10s, and three months at £183 5s to £183. Business was reported in the East on the basis of £188 15s on c.i.f. terms. Later the market became firmer on higher cable advices from the East, combined with a good demand. Standard, cash, moved up to £184 12s 6d, with three months fluctuating between £183 15s, £185 7s 6d, and £185 10s. Further sales in the East occurred at £189 c.i.f. On Thursday prices, after opening easier, subsequently eased, closing, however, firmer on balance. Fair sales transpired, including cash at £185 5s to £184 12s 6d to £184 15s, and three months, £185 10s to £186 10s to £185 10s to £185 11s 3d. An easier

tone was apparent on the following day, standard cash sold at £184; and three months, £184 15s to £185 5s to £184 15s. English ingots, £184 15s to £185. The market for copper displayed irregularity, but prices were firmer on balance, while a fair business was concluded. Standard cash sold at £64 12s 6d to £65, and three months £65 10s to £65 7s 6d and £65 12s 6d. The advance, however, was not maintained, and subsequently transactions were at £64 15s, and three months £65 12s 6d to £65 7s 6d. Rates opened easier, but improved at Thursday's market, finally settling down with very little change. Standard cash sold at £64 7s 6d to £64 12s 6d, and three months £65 5s to £65 2s 6d and £65 7s 6d to £65 6s 3d. At the final meeting prices ruled in favour of buyers. Standard cash being sold at £64 5s down to £64, and three months, £65 to £65 2s 6d to £65. Electros, £70 to £70 10s; best selected, £67 5s to £68 15s. Strong sheets, £98, and wire bars, £70 10s per ton. Lead steady at £24 to £23 15s, as to position. Spelter dearer at £31 10s to £31, as to position. Antimony quiet. Ordinary brands, £30 to £32. Aluminium quiet, home trade, £115; export, £120.

Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills) ..	3½	3½	3½	3½	..

The Bank return showed decreases of £1,263,000 in the note circulation and £2,000 in the stock of gold, and an increase of £1,261,000 in the Reserve. There were small cross entries in the securities, and the Other deposits were £703,000 higher on balance.

The circulation of currency notes shows a reduction of £3,066,000 to £291,035,000, which includes £1,457,000 for notes called in but not yet cancelled. The fiduciary issue is now £240,128,000, which is £30,055,800 below the maximum.

THE STOCK MARKETS.

While the Stock Exchange thoroughly approved the firm tone of the British Note to France, the latter produced an unsettling effect upon the markets. Business has fallen to a very low ebb, and the reply of the French Government is awaited with intense interest. Gilt-edged stocks, after early firmness which was supported by foreign buying, have fallen away, and the foreign market has been particularly dull. The Home Railway market has been neglected, but Argentine Rails have recovered and American Rails show some slight improvement. Rubbers have been firm, and strong support has been forthcoming for tea shares, but oils have been featureless. In the miscellaneous section quietness has prevailed with few and irregular movements. In the mining department, though business has been at a minimum, there has been a firmer tendency.

THE COMMODITY MARKETS.

August, the first half at least, is usually a slack period for the commodity markets, and if to this is added the uncertainty arising from the political position and, as far as the produce markets are concerned, the congestion at the London docks owing to the strike, some understanding of the state of the commodity markets may be obtained. The flatness of the pig-iron market is intensified by the holidays, while trade in manufactured iron and steel is so quiet that many works are reducing output owing to lack of orders. Our Sheffield correspondent writes in pessimistic vein. Business in Welsh steam coal has not recovered after the holiday interruption. Conditions in the Manchester cotton trade have been very difficult, sellers not being able to accept the idea of values put forward by buyers. The wool textile industry is passing through an exceptionally quiet period, and all business is of a hand-to-mouth character. The hide market is dull, but our correspondent mentions that the export branch of the boot trade is good. British refined sugar is down, but tea has made a fresh upward movement. There is no marked demand for coffee or rice, while rubber displayed some slight weakness. Prices are depressed in vegetable oils and oilseeds.

FOREIGN EXCHANGES.

In the foreign exchange market business is again restricted and depressed by Anglo-French tension and the German situation. The Brussels rate, which, it will be remembered, had reached 105.15 at the close of the 10th, showed a sharp recovery on Saturday down to 101.80 on the announcement of the introduction of severe exchange restrictions and the arrangement of a credit to be given by French banks to the Belgian National Bank. A further slight recovery followed on Monday, but since then the rate has been somewhat uncertain, and yesterday morning the quotation had risen again to 102.50 on the report that the loan negotiations are not proceeding as

smoothly as was expected. In Paris there was a steady upward tendency until the middle of the week, when the rate stood just below 84. Since then there has been a decided recovery, coinciding with the apparent change in attitude towards the British Note, and by yesterday morning the quotation at 82.20 seemed inclined to go lower. There has been much foolish talk in the French Press of attempts abroad, and especially in London, to depreciate the French franc. It is unnecessary to reply to these suggestions, and it is perhaps enough to point out that the political situation, the infectious nature of Belgian uneasiness, and anticipations of the effect at this time on the French rate of a substantial advance to Belgium are quite enough to account for the recent movements. It is unfortunate for France that this relapse should have come at a time when excellent harvests, releasing the country from the necessity of buying corn from abroad, would otherwise have been a very favourable factor. In Paris the forward quotation remains at about 5½ centimes per month above spot. In Brussels it has moved from 3 centimes below to 6 centimes above. The Berlin rate, at which, of course, the business done is very small, moved down sharply on Monday to 13,000,000 marks, and showed further recovery on the following day. After two days' relative stability, it moved up again yesterday morning to 18,000,000 marks, about the same as a week ago. The forward quotation at 4,500,000 per month above spot is merely nominal. The Italian rate has been steady, with a slight downward tendency, and at 106.12½ yesterday morning compares favourably with the quotation of 107.75 a week ago. In dollars business remains restricted, and the market has been rather weak, the rate falling away quietly from \$4.57 on the 10th to \$4.56½ yesterday morning. Forward rates are about the same at 1½ cent. per month above spot. Among neutral currencies, Amsterdam, after being rather higher, ends the week unchanged at 11.60. The Swiss rate at 25.20 has moved in our favour, although there has been a reaction again from the figures of 25.25 quoted earlier in the week. The Madrid rate has further depreciated to 33.70, as compared with 33.50 a week ago, and the last return of the Bank of Spain again shows a heavy increase in the note issue and in discounts. In Northern Europe Christiania, after recovering to 27.50, from 28.11 on the 10th, on the announcement that a \$20,000,000 credit had been arranged in the U.S.A., has reacted again slightly to 27.62, but is still considerably better than last week's quotations. Copenhagen has also moved from 24.94 to 24.55, while Stockholm is about the same at 17.16, and Helsingfors is also unchanged at 165. In Central Europe Vienna remains unchanged at 325,000, and Budapest is also stationary. Warsaw, also, after being higher, shows at 1,200,000, the same quotation as last week. New Polish exchange regulations have gone far to permit free dealings again, but their exact meaning is not as yet understood on this side. Prague, at 156, is unchanged. Bucharest, however, has moved up rather rapidly from 940 to 1,125 on the release of "blocked" balances. In the East the rupee is rather cheaper at 1s 4d, while the yen has moved from 2s 1 31-32d to 2s 1 18d. The silver market has been very quiet, with a slightly higher tendency in prices. Hong Kong and Shanghai are both unchanged at 2s 3d and 3s 0½d respectively. In South America the announcement of new exchange regulations in Brazil has had little effect on the rate, which has fallen from 51½d to 5 5-32d. Buenos Ayres, however, shows a slight recovery from 38½d to 39½d, and Montevideo is also ½d dearer at 38½d, while Valparaiso has appreciated from 36.70 to 36.40 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 11th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	5,490	From Revenue	14,927
Interest, &c., on Debt	2,034		
Sundries	87		
Added to Exchequer Balances ..	691		
Debt Reduction	6,645		
	14,927		14,927

Revenue produced £14,927,260, as against £13,722,000 for the corresponding period a year ago. Customs contributed £2,302,000, Excise £924,000, while £6,319,000 came into the accounts from property, income and super-

tax. The week's operations decreased the National Debt by £6,644,919, and caused the following changes:—

	Min. £		Min. £
Bank of England Advances ..	5,000	Public Department Advances ..	650
Treasury Bills	678	National Savings Certificates ..	100
Sundries	1,717		
	7,395		750

The floating debt was reduced by £5,030,000 to £800,046,500.

FINANCIAL YEAR, 1923-24 (April 1 to August 11, 1923).

	£		£
Total Expenditure ..	283,297,241	Raised by Revenue ..	275,160,629
		Net Borrowings.....	5,405,499
		Decrease in Balances	2,731,113
Total	283,297,241	Total	283,297,241

ESTIMATES FOR YEAR 1923-24.

	£		£
Ordinary Expenditure	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure..	15,603,000	Special Receipts....	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found reports of the meetings of the following companies:—Mitchells and Butlers and Watney, Combe, Reid. The chairman of the latter discussed the effect of the reduction in the price of beer, and stated that in May and June consumption had not been increased thereby. Since then "beer-drinking weather" has produced "satisfactory" results. We would call the attention of those interested in the subject to the remarks of Mr Waters Butler, at the meeting of Mitchells and Butler, on Prohibition, on which he spoke at some length.

A FRANK STATEMENT OF BRITISH POLICY.

WHATEVER may be said of the detail of the British Note to France and Belgium, published on Monday, there can be no manner of doubt that it clears the air, and brings the discussion down to fundamentals. We are of opinion that for reasons to be mentioned later, the British Government have missed a great opportunity by not making a more generous offer in regard to the Allied debts. But the tone of the preceding correspondence, which is published in the same White Paper, and in particular the truculent character of the French reply of July 30th, shows quite definitely that under M. Poincaré's guidance the French Government would not agree to any settlement which could have been accepted by the British Government. Mr Baldwin has, therefore, bluntly stated as forcibly as possible the grounds of British objection to French policy.

The most important sentence in all this important Note, and perhaps also the most unexpected, is that in which the British Government bluntly declares that the occupation of the Ruhr is illegal—i.e., is not justified under the Treaty of Versailles. This view, which we have put before our readers on several occasions, is the safest ground for the British Government to take. It is true that in maintaining it Mr Baldwin has to make some very awkward explanations. For example, in an earlier document M. Poincaré reminds the British Government that the latter had so far raised no objection on the score of illegality either in December or January last. It is but a poor answer to say, as the British memorandum says, that we kept quiet on the subject in order not to embarrass our friends; but it is a curious view of our international responsibilities to appear to differ with our Allies merely on a matter of expediency when really we were of an opinion that they were committing an act of aggression, and a breach of the Treaty of Versailles. An even more awkward corner to turn is the fact that we joined with the French in the spring of 1921 in occupying Dusseldorf, Duisburg, and Ruhrort, before even the first payment had become due under the Treaty of Versailles. We will not attempt to improve upon the official defence of that action, which,

we are told, is not inconsistent with the British view of the present action. "The action then taken or threatened was never claimed to be in pursuance of the Reparation clauses of the Treaty. The Allies jointly decided to threaten Germany with the occupation of further territory just as they might have threatened her with a renewal of war, for her failure to perform her Treaty obligations, some of which had no connection whatever with Reparations." Such an admission as this will lay the Government open to a great deal of cynical criticism both at home and abroad, but we sincerely congratulate the Government on having had the courage to disencumber itself of this particular entanglement left to it by its predecessor. The paragraphs in which the legality issue is now raised are succinct but forcible. It is denied *in toto* that the measures authorised by the Treaty under paragraph 18 of Annex II. of the Reparation Chapter include the military occupation of territory. "Such occupation forms the subject of the special provisions of Part 14 of the Treaty, dealing with Guarantees. It is the right to occupy the left bank of the Rhine and the bridge-heads, which has been given to the Allies 'as a guarantee for the execution of the Treaty.'" Moreover, Article 430 particularly stipulates that if the Reparation Commission finds that Germany refuses to observe the whole or part of her obligations under the Treaty with regard to reparations, the whole or part of the occupied territories, which may already have been evacuated, "will be immediately re-occupied." It would have been idle to stipulate expressly for such re-occupation in case of default on reparations, if the Allies had already an unlimited right to occupy any German territory under another clause of the Treaty.

The issue once being joined on fundamentals, the Government has not hesitated to speak frankly on other aspects of the question. The French and Belgian notes both emphasise the right of the Reparations Commission to deal with the assessment of Germany's capacity. The British Government does not challenge this view, and, indeed, in the hope of getting to a common agreement, they were ready to accept the Reparations Commission as the official arbiter on the question of ability to pay. But in their last Note they point out that in the absence of an American representative, France and Belgium are in a position, with the aid of the casting vote of the French chairman, to override the British and Italian representatives, "and it is notorious that in these circumstances the Commission has become in practice an instrument of Franco-Belgian policy alone."

In its main contentions the Note is very ably drawn, and will command general approval throughout the English-speaking world. M. Poincaré, for example, asks how it would be possible to estimate Germany's capacity to pay better than the Commission that fixed Germany's debt in 1921, and he adds in support the anonymous estimate by an American expert made during the Peace Conference. But the Note bluntly points out the difference between an estimate of the amount due and an estimate of Germany's ability to pay; and after mentioning two or three other fantastic estimates made at the Peace Conference, adds, "The truth, of course, is that at that time there was no experience of attempts to establish and enforce inter-State obligations of such magnitude, to which experts could look for guidance. It is precisely because such experience has become available during the last five years that a fresh enquiry is urgently called for."

But even of more immediate as well as of ultimate importance is the effort made by Great Britain to ascertain what the intentions of France and Belgium were in the Ruhr, and on what terms they would modify their occupation if passive resistance ceased. Both Belgium and France declare in these documents that their object is not to obtain, and that they do not expect to be able actually to collect from the Ruhr any large amount of Reparations, but to create in Germany the "will to pay" by subjecting the economic and political organisation of the Reich to such inconvenience "that it would prefer the execution of the Treaty of Peace to this inconvenience." But M. Poincaré does not limit himself to creating the will to pay, for far from regarding this as a free will, he proposes to stay in the Ruhr until the last mark is paid. The British Government believed that they were in line with the French and Belgian intentions

when they assumed that "the occupation would naturally terminate from the moment that guarantees or pledges, less economically harmful, and more effectively productive, than the occupation of the Ruhr, should have been not merely devised and obtained, but seen to be satisfactorily operating." But this suggestion was met by blank refusal. This fact was not clear from Mr Baldwin's recent and incomplete statement in the House. But it fully justified his pessimism on that occasion, for it finally makes impossible any successful outcome to the present discussions unless and until there is some change of policy in France. The British Note points out that the determination to remain in the Ruhr until payment is complete, when read in conjunction with the intention of France to adhere to the London Schedule of Payments, means that the Ruhr would be occupied for not less than 36 years, and seeing that this schedule is almost impossible of fulfilment, probably for ever. The Note says that "such a situation, of which the political, quite apart from the economic, consequences could only be described as disastrous, cannot but be viewed by his Majesty's Government with the greatest concern. It would vividly conjure up the danger of international relations being affected in a manner threatening—to use the words of the eleventh article of the Covenant of the League of Nations—to disturb international peace, and the good understanding between nations upon which peace depends. His Majesty's Government cannot believe that the French and Belgian Governments will be able to reconcile the opinion of the world to the indefinite maintenance of so perilous a situation."

The wording of this last paragraph foreshadows quite clearly that the British Government recognise their duty to raise the whole question at the forthcoming Assembly of the League of Nations, a duty that will be considerably easier now that there has come into power in Germany a Government, an item of whose policy is to apply for membership of the League. It would therefore seem that in all human probability the next act in the drama will take place at Geneva. The result may be to split the League, but there will be no further misunderstandings over false issues, and it will at all events show how world opinion is divided, and what its efficacy may be.

The publication of these documents is so important, and so much to be welcomed in restoring complete freedom to Great Britain, that we are the more regretful that they should be marred by an inadequate policy in regard to the Inter-Allied debts. On this question a separate memorandum reiterates that Great Britain is prepared to limit its claims against Germany and its former Allies to 14.2 milliards of gold marks, which is the figure at which the Treasury now estimates the present value of our debt to the United States. But to fix a minimum in this way is precisely the fault for which we criticise M. Poincaré. Great Britain declares that we must have 14.2 milliards, France says she must have 26 milliards for her devastated areas over and above what she is to pay to Great Britain, while Belgium, who quite properly recalls the phrases in which the Allies solemnly declared during the war that full reparations should be paid to her, puts her minimum at 5 milliards. Thus quite apart from the claims of Italy and the Balkan Allies, we arrive at 45 milliards as the figure that Germany must pay, regardless of her capacity. If the Reparations total is to be assessed in this way, why waste time talking of how to assess Germany's capacity? The doctrine that we must have from some third party whatever we pay to America—the doctrine of the ill-starred Balfour note—is a futile attempt to pass on to the United States any odium we may incur when putting pressure on France or Germany; it puts us in a false position in Europe by making it appear that we are indifferent whether we get cash from our late enemies or our late allies, and it effectively bars the only line of approach to a settlement. Indeed, it denies to France what we demand for Germany, namely, that her payments should depend on capacity to pay—for if Germany defaults, France, who will be poorer, will have to pay us more. Nor is the argument in respect of material damage done to Great Britain much more convincing. The Government very unwisely attempt to show that war pensions are just as important as material damage, and that damage by land has no prior claim over any other material damage.

"Sunken ships and cargoes rotting at the bottom of the sea may not shock the eye like the ruined villages of France and Belgium. But they are equally material damage caused by German aggression, and represent equally heavy losses of national wealth." Such arguments are thoroughly disingenuous. The British shipping community far more than made up for its losses by the enormous freights charged to the world not merely during, but in the two years after the war. The loss of life involved, of course, stands in a special category, but the actual loss of ships and cargoes cannot be compared with the disturbance lasting over many years endured by a large civil population whose means of livelihood were destroyed not merely in actual battle, but by deliberate and calculated destruction behind the lines. The idea that part of the money needed to restore the devastated areas of France and Belgium should be passed via Great Britain to the Treasury of the United States Government is repugnant to the instincts of all European peoples, and we believe also to the people of this country. If Great Britain is to fight once more for a settlement, and there remains the bare possibility that the mobilisation of opinion at Geneva may afford such an opportunity, Great Britain must be ready to accept the doctrine that any receipts from Europe which may help us to pay the United States must rank after the claims of the devastated areas.

It is impossible to say as yet whether the note of August 11th will or will not bring us nearer to peace in Europe. On the surface, it means the end of the Entente, for the positions taken by the French and British Governments are irreconcilable. But the effect of so fundamental a challenge to the French viewpoint, combined with a reconsideration in France of the financial possibilities which the note will undoubtedly arouse in France, may have unexpected consequences. Meanwhile, we await the next step which, if France offers no open reply, will presumably be made before long in London if Mr Baldwin can keep his Diehards quiet.

BRITAIN'S OVERSEAS TRADE.

THE July trade returns contain, as usual, an analysis of the countries of origin and destination for the first six months of the year. For comparative purposes these figures, too, are rendered less valuable by the exclusion during the second quarter of the year of the direct foreign trade of the Irish Free State. Before examining in detail the half-yearly figures of the direction of our overseas trade for the first half of the year, we may put on record the principal features of the ordinary statistics for the month of July. We have repeatedly stressed the fact that comparison of the monthly figures with those of the corresponding months of last year is now completely vitiated by the changes made in connection with the Irish figures. But for what they are worth we reproduce those for July and the seven months:—

MONTH OF JULY.				
	1922.	1923.	Increase or Decrease in July, 1923.	
Imports	£ 81,736,827	£ 76,818,334	— 4,918,493	% 6.0
British exports	60,418,626	59,503,850	— 914,776	— 1.5
Re-exports	8,316,638	8,799,983	+ 483,345	+ 5.8
Total exports	68,735,264	68,303,833	— 431,431	— 0.6
Excess of imports over total exports	13,001,563	8,514,501	— 4,487,062	— 34.4

SEVEN MONTHS ENDED JULY 31.				
	1922.	1923.	Increase or Decrease in 1923.	
Imports	£ 568,846,950	£ 615,568,899	+ 46,721,949	+ 8.2
British exports	412,180,431	442,182,877	+ 30,002,446	+ 7.3
Re-exports	63,988,158	72,663,767	+ 8,675,609	+ 13.6
Total exports	476,168,589	514,846,644	+ 38,678,055	+ 8.1
Excess of imports over total exports	92,678,361	100,722,255	+ 8,043,894	+ 8.7

As compared with the June figures imports show a decline of £12½ millions, while exports are £3¼ millions lower and re-exports £2 millions lower. Exactly how far the strike of dock labourers is responsible for the disappointing appearance of these figures it is impossible to say, but it has undoubtedly been an adverse influence. The July imports of sugar, for example, amounted to 1,561,075 cwts, as against 3,387,946 cwts in June. Meat imports dropped from 2,765,915 cwts to 2,327,666 cwts, butter imports from 484,990 cwts to 419,133 cwts, and cheese imports from 291,717 to 165,564 cwts. The value of total imports of food, drink, and tobacco shows a decline in value of £9 millions as compared with June, imports of raw materials are £2½ millions lower, while imports of manufactured goods are less than a million lower. On the export side food, drink, and tobacco figure at £3,131,400 as against £3,940,000 a month ago, raw materials at £10,835,400 against £11,539,600, and manufactures at £44,733,700 against £46,533,800. Imports of bullion and specie figured at £4,228,100 as against £3,292,100 in July, 1922, and exports £5,192,900 against £10,400,700.

Turning to the figures of the direction of trade, they are, as we have already stated, upset by the separation of the statistics of the Irish Free State. Our imports for the second quarter of the year from the Irish Free State are shown as £10,141,300, while exports thither were £6,883,200 and re-exports £1,862,630. It has been pointed out in the *Board of Trade Journal* that these totals cannot be taken as fully representative of the normal volume of trade between the two countries, since the effect of such anticipatory imports into the Irish Free State as may have taken place shortly before the establishment of the Customs boundary between Southern Ireland and the rest of the British Isles will gradually manifest itself in increased exports from this country of dutiable goods, the major part of which will be classed with re-exports. Other reasons why it is impossible to treat the figures of the June quarter's trade as a complete guide to the change in our trade returns resulting from the separate administration of Southern Ireland are that important sections of the trade are seasonal in character, and the seasonal variations need to be ascertained, and, as a further point, the very fact of the separate political existence of the Irish Free State may result in enlarged direct trade with other countries taking the place of trade carried on via Great Britain. The values omitted from our accounts through the separate treatment of Southern Ireland have not yet been made public by the authorities of the Irish Free State. It is stated that the omission on the import side is quite important, amounting probably to from 25 to 30 per cent. of the value newly recorded and shown above. For exports, however, the correction is small. Of imports from the Irish Free State during the quarter at least £8 millions, we are told, fall under food, drink, and tobacco. The exports of British goods to the Irish Free State are much more varied in character than the imports and re-exports. Flour and refined sugar, with a variety of other articles of food, represent an important aggregate. Coal also figures largely, although possibly not so much so as might be supposed, the value of the quarter's shipments to Southern Ireland having fallen short of £500,000. Apparel and textile fabrics make up also a total exceeding in value either coal, flour, or sugar. This information, which is given in the *Board of Trade Journal*, cannot be extracted from the monthly returns, for reasons best known to the compilers. But we fail to understand why a line cannot now be added in the case of the principal articles showing our trade with Ireland as is done in the case of other countries.

In making comparisons from the figures shown in the following tables, the omission of the direct foreign trade of the Irish Free State in the second half of the last period must be borne in mind. The amount, however, is probably not very large. The table below shows our imports from and exports to the principal European

countries in the first half of each of the past three years and of 1914:—

JANUARY TO JUNE. (000's omitted.)												
	Imports from				Exports to							
	1914.	1921.	1922.	1923.	1914.	1921.	1922.	1923.		1914.	1921.	1922.
France	23,929	30,831	25,625	30,034	14,364	24,479	28,406	28,975	£	30,975	20,339	20,339
Netherlands	11,493	25,730	19,539	21,378	8,127	21,354	22,512	20,339	£	20,339	20,339	20,339
Denmark	12,054	20,048	18,015	21,675	2,995	4,265	5,560	6,511	£	6,511	6,511	6,511

Perhaps the most interesting figures here are those relating to Germany. The figures for the first quarter showed that our imports were £8,287,000, so that in the second quarter we have taken £8,643,000. Exports to Germany in the first quarter, however, were £12,254,700, so that we have only sent £8,544,000 in the second quarter. Re-exports to Germany show the same trend, the first quarter's total being £6,327,400 and the second £4,061,000. The *Board of Trade Journal* supplements these figures with some statistics for various classes of goods, which compare the half-year's trade with that for the full year 1922. Very few items were imported at a lower rate than the half of the imports of 1922, the only goods which showed such a decline being iron and steel and manufactures thereof, aluminium hollow ware, crude zinc, and fabric gloves. In several branches, imports, during the first half of 1923, approached within 20 per cent. in value the total imports during the whole of 1922, such being electrical goods, cotton manufactures, and paper and cardboard. Imports of woollen and worsted manufactures in the first half of this year were actually greater than in the full year 1922.

The principal features on the exports side were the heavy increase in exports of coal and coke, of pig-iron and iron and steel plates, all of which exceeded in value the corresponding exports for the whole of 1922. On the other hand, there was a considerable falling off in the rate of exportation of tops and yarns, and of other textiles. Both features are closely bound up with the disturbance consequent upon the occupation of the Ruhr. Apart from raw and waste cotton, raw and waste wool, crude rubber, gums and resins, and raw coffee, all other branches of re-exports to Germany showed a marked falling off in comparison with the rate last year.

In trade with other European countries, our imports in the majority of cases show an appreciable increase in comparison with the first half of 1922, but on the export side the upward movement is by no means general.

In the next table we show our trade with other foreign countries:—

JANUARY TO JUNE. (000's omitted.)												
	Imports from				Exports to							
	1914.	1921.	1922.	1923.	1914.	1921.	1922.	1923.		1914.	1921.	1922.

Egypt	11,858	138	149	492	4,936	75	104	496	£	496	496	496

The most satisfactory feature of this table is the decline which it discloses in our adverse trade balance with America. If re-exports are included, the adverse balance for the past three months was £18½ millions, as against £24½ millions in the first quarter. In the first and second

quarters of 1922 the figures were £34 and £42 millions respectively, and in the same quarters of 1921 £68 and £50½ millions respectively. Egypt returns to this table after an absence of a few years. Both imports and exports show an increase in comparison with last year. There is a substantial increase in our imports from China, but our exports thither show a sharp decline.

The next table shows trade with British Possessions:—

JANUARY TO JUNE.
(000's omitted.)

	Imports from				Exports to			
	1914.	1921.	1922.	1923.	1914.	1921.	1922.	1923.
Australia.....	21,431	41,997	36,815	34,234	17,711	24,898	27,569	29,112
New Zealand..	16,068	29,438	27,443	29,172	4,689	8,332	7,148	9,850
India & Ceylon..	22,615	29,270	22,625	36,830	36,676	60,749	46,291	47,131
Canada.....	9,899	23,051	18,972	21,240	9,580	10,465	11,619	13,586
Egypt.....	12,153	15,872	..	..	8,468	7,705	..	..
South Africa..	7,179	9,302	10,068	7,732	10,830	16,306	12,664	13,573
West Africa..	3,394	5,709	5,685	6,494	5,931	5,830	5,799	6,021
Straits Settlements	7,134	3,751	3,637	4,426	2,612	4,924	3,620	3,862
West Indies..	1,373	3,707	3,007	3,341	1,233	2,078	1,539	1,699

On the imports side, Australia and South Africa are the only exceptions to a general increase, which is most pronounced in the case of India. Among exports there is an increase in every instance.

The final table gives re-exports to the principal countries:—

JANUARY TO JUNE.

	1914.	1920.	1921.	1922.	1923.
United States.....	18,210,000	38,449,000	10,813,000	10,376,000	17,576,000

India and Ceylon.....	..	1,456,000	1,456,000	757,000	568,000
South Africa.....	..	1,413,000	602,000	605,000	668,000
Denmark.....	261,000	2,348,000	649,000	556,000	895,000
Norway.....	272,000	970,000	334,000	377,000	432,000
Japan.....	108,000	1,289,000	427,000	189,000	153,000
Russia.....	4,556,000	2,956,000	98,000	186,000	612,000
China.....	..	190,000	103,000	100,000	82,000

The feature here is the substantial increase in re-exports to the United States and the reduction in the case of Belgium and Holland.

THE POSITION IN THE COAL TRADE.

THE position in the coal trade of the United Kingdom at the moment is one of uncertainty. The first half of the year was a period of steady improvement. During 1922 prices had been stabilised approximately on the basis of the cost of production. In those costs that of labour was the chief factor. Of the total costs, wages represented about 67 per cent., and it was practically stationary at that proportion in consequence of the operation of the minimum wage clause, which secured for the miners a minimum of 20 per cent. above their new 1921 standard wages. One of the consequences of restored stability in prices was a steadier and slowly expanding inland and foreign demand for coal. In the earlier months of the present year that normal increase was stimulated by the abnormal demand from Continental Europe which followed the occupation of the Ruhr by France and Belgium. The virtual cessation of production in the occupied districts drove Germany, Holland, Belgium, France, and to a smaller extent Italy, to the United Kingdom for increased supplies, and so great was the pressure of these emergency Continental requirements that Great Britain found it impossible to meet them, and orders, representing in the aggregate some millions of tons, were diverted to the United States and to other sources of supply. Prices had naturally advanced by leaps and bounds. Between the lowest figures ruling before the occupation of the Ruhr and the highest figures reached when the Continental demand was at its height there was in some cases a difference in f.o.b. export quotations of between 12s 6d and 15s per ton. The ex-

pansion in volume of trade was as remarkable as the expansion in the proceeds of the industry. The following table gives the total quantity exported as cargo and bunkers, the average f.o.b. price, and the total f.o.b. proceeds:—

	Foreign Cargo and Bunker Exports. Tons.	Average F.o.b. Price. s d	Total F.o.b. Proceeds. £
January.....	7,331,162	22 5	8,223,083
February.....	7,307,178	23 2	8,474,749
March.....	8,624,382	24 7	10,593,112
April.....	8,269,881	26 1	10,777,695
May.....	9,244,855	27 7	12,740,537
June.....	8,149,656	27 2	11,071,143
Totals.....	48,927,114	25 3	61,880,319

In this improvement all the exporting districts of the country participated; but the share of the North-Eastern and Scottish ports was greater than that of the Bristol Channel ports, and this disproportionate distribution was due to the circumstance that the most active of the foreign markets were those which normally derive their supplies from the Yorkshire, Durham, Northumberland, and Scottish East Coast coalfields. Thus, Germany, in the first half of the current year, took nearly three times the quantity of coal she did in the corresponding period last year, Belgium also nearly three times, and France about half as much again. The extent of the abnormality of this Continental demand will be, perhaps, better illustrated by comparing the cargo exports to these four countries in the first half of the current year with those for the corresponding half of 1913. In the case of Belgium they show an increase of 242 per cent., in that of Holland of 168 per cent., in that of Germany 78 per cent., and in that of France 49 per cent. The total volume of the cargo export trade of the United Kingdom in the first six months of 1923 was 39,800,000 tons, compared with about 37,000,000 tons in the first half of 1913, representing an increase of only about 8 per cent. The great increase, therefore, in the European demand has been nearly balanced by a contraction in the demand from the more distant markets, and if the European requirements this year had been normal, the general situation in the coal export trade would have been hardly more satisfactory than it was in 1922.

The actual course of the market, however, tested to the full the productive capacity of the industry under the Seven Hour Act. In the first three months of the year the production of the United Kingdom was about 71 million tons, and in the second quarter about 70 million tons, giving an annual output at the rate of 282 million tons, compared with the pre-war 1913 record output of 287½ million tons. In full working weeks the production has been astonishingly uniform. The average for the 26 weeks is about 5,400,000 tons; the highest weekly output 5,825,000 tons; and the lowest full week output 5,327,000 tons. The employers have tried to increase production by employing more labour. During the half-year the number of persons employed was increased by about 30,000, and at the end of June the total number engaged in the industry was about 50,000 more than in 1913. Moreover, the low wages earned by the workmen stimulated exertion, and in some of the coalfields the output per shift per hewer equalled that of 1913. It is quite possible that the output would have been greater in the first half of the year if better facilities had been available for the shipment of coal. The supply of tonnage was abundant, but the two-shift system in the tipping and trimming of coal artificially restricted the effective shipment capacity of the docks, and particularly those of South Wales. This system was naturally an impediment to the production of coal. The tippers and trimmers were eventually persuaded in South Wales to work a partial third shift; but that shift was not inaugurated until after the pressure of the Continental demand had been considerably relaxed, and the workmen are now agitating for the restoration of the two-shift system. The general impression left by the experience of the first five months of the year is that the collieries had reached their maximum productive power under the Seven Hour Act and under the existing organisation of the industry. The expansion in the demand from abroad coincided with a steady increase in the requirements of the inland market, and over the whole of the half-year the

proportion of the output retained for home consumption was about 66 per cent. compared with a pre-war proportion of 68 per cent. In both markets, however, the demand is now lagging. There has been a heavy drop in prices, and the disturbing effects of the Ruhr problem are so great that no one cares to express an opinion as to what course the market will take during the next few months. All are waiting on events.

The improved state of trade in the first half of the year yielded the employers substantial increases in profits and the workmen a substantial increase in wages. In the two months of November and December, 1922—probably the best months last year—the net surplus available for distribution as wages in the proportion of 83 per cent. and in profits of 17 per cent. was approximately £4½ millions; the audit for March and April last showed a surplus of £8½ millions. The extent to which wages have benefited from the improvement in trade may be gathered from the following facts:—In the first two months of the year the total wage bill for the country was at the rate of £134½ millions per annum, compared with about £91 millions actually paid out in 1913; during July and August, however, the wages bill, on the strength of the March-April audit, represents an annual sum of £154½ millions. Thus in July and August the total wage bill will be nearly 70 per cent. in excess of that paid in 1913, compared with an excess of only about 48 per cent. at the beginning of the year. The proceeds of the industry during May and June will govern the general wage rate in September and October, and although the audit for that period will not be completed for another two or three weeks, sufficient is already known of costs and prices to anticipate a further net increase in the wages bill during September and October.

The miners do not dispute these facts, but they quarrel with their incidence. They complain that it is only the wealthier coalfields that have profited from the improvement in trade. In Lancashire, Cheshire, and North Staffordshire, North Wales, South Staffordshire, and Salop, Cumberland, Bristol, Forest of Dean, the Newburgh district of Somerset and Kent the general wage rates have remained stationary at the minimum. In Monmouthshire and South Wales the general wage rate has been increased from 28 per cent. to 37.62 per cent. on the 1915 standard; in Scotland from 125.4 per cent. to 178.41 per cent. on the 1888 standard; in Northumberland from 98.72 per cent. to 138.55 per cent. on the 1879 standard; in Durham from 97.02 per cent. to 123.40 per cent. on the 1879 standard; and in the Eastern Federated area from 49.61 per cent. to 58.56 per cent. on the 1911 standard. These five coalfields employ roughly 80 per cent. of the total labour of the industry, and absorb roughly 86 per cent. of the total wage bill of the industry. It is with a view of improving the wages of the 20 per cent. who still remain at the minimum that the Miners' Federation of Great Britain is agitating for a revision of the terms of the national wages agreement. The movement for the service of notices to terminate that agreement has been abandoned for the time being; the vote of the better-paid districts has swamped that of the lower-paid districts; but the national executive was authorised unanimously by the recent annual conference to agitate for a revision of the terms of the national agreement relating to the distribution of the surpluses and to the minimum wage. An application has been made to the coal-owners for a higher minimum and for a larger percentage proportion of the surplus, and it is now receiving the consideration of the constituent districts of the Mining Association of Great Britain. An examination of the latest audit figures shows that the profits earned in the larger coalfields are considerably in excess of those earned under pre-war conditions, and doubtless a strong case can be made out for the institution of a more variable ratio which will give the workmen a larger percentage proportion of the proceeds on a rising market, but a lower proportion on a falling market. The difficulty, however, is to separate this factor of profit distribution from such other factors as outputs, costs, and prices, and that difficulty is aggravated by the determination of the workmen to oppose any increase in working hours. If a compromise could be arranged conceding to districts the right by local agreement to work extra hours, then a settlement of the distri-

bution of proceeds on the basis either of a higher percentage proportion to labour, or on that of a ratio that would vary in accordance with the general condition of the trade, would probably be found easy of achievement; but it is unlikely that the owners will agree to any increase in the minimum wage, apart from such allowances as they may find practicable from time to time under the subsistence wage clause.

THE WHITE CROPS OF THE YEAR.

MIDDLE August sees the white crops of the year in rapid process of harvesting in the British Isles, in Canada and the United States, while in the other seven of the ten principal countries the greater part of the harvest labours are over as we write. The estimates of crop yields are by this time of a reasonable authenticity, though mathematicians with a sense of humour—need one name others than Professor Bowley and Mr. Udney Yule—may yet present the Statistical Society with “verified mendacity curves” for Canada and the United States respectively. It requires, indeed, less keen an observation than theirs to note that as July comes round the real estate agencies and the transport agencies of the Dominion acquire an optimism which they think it worth while to cable. In the United States another curve is necessary. Here pessimism is wont to stalk, though not unchecked. A journal before us remarks how “the crop reporter of our esteemed contemporary has commenced his ravages.”

The International Institute of Agriculture has done much to make Canadian and American reports reliable, while the American official first estimate of July 11th, with reports from some 40,000 correspondents up to July 1, is an extremely valuable document.

The total wheat yields of the ten chief countries for 1923 look like reaching 1,427,000,000 cwt. This is about 43 millions more than last year, but the yearly increase in wheat consumption is about 50 millions, and world production certainly shows no symptoms of getting ahead of wants. If to-day there are stores of unsold old wheat pressed on sale, it is for the depressing reason that immense populations to whom the money exchange is badly adverse have undoubtedly been underfed. Wheat harvest exceeds the average per acre in India, Spain, Italy, and Canada, and equals an average in the United States, Argentine, Australia, and Germany. The British and French estimates are quasi-official, but cannot be regarded as final.

Barley is a crop which is grown for different uses, so that returns are still very far from what the statistician desires. Thus the British 24,000,000 cwt includes possibly as much as 14,000,000 cwt for the brewer and distiller, while India's 64,000,000 cwt are of feeding barley only. In Spain there is a large area of barley grown for horses. The year at first looked to be against barley growers, but there was an improvement in June, and July was ideal for this crop. Report runs that malt-

ing barley will be scarce, so that protective legislation will be a work of supererogation. On the other hand, pigs should have plenty of barley meal.

Oats in Canada have done better, relatively speaking, than in the United States, 120 to 360 rather than 150 to 330 is the usual ratio. British, French, and German fields have benefited from a warm and rainy July. Rye is the smallest of the white crops now that Russia, which used to grow 430,000,000 cwt, is out of the running. But a world production of 197,000,000 cwt is not negligible, and in an immediate, concrete case the 103,000,000 cwt grown this year in Germany will much reduce the call of her 60 million people for wheat bread.

Unit—Millions of Cwt.

Country.	Wheat.	Barley.	Oats.	Rye.
British Isles	31	24	60	1
France	163	20	180	14
Germany	43	32	79	103
Spain	73	40	10	12
Italy	103	4	8	2
Canada	197	36	150	19
U.S.A.	438	96	330	43
Argentina	103	3	15	1
Australia	56	2	3	1
India	220	64	1	1
Total	1,427	321	836	197

If we have ten leading countries able to supply us with a probable and more or less official estimate of the year's four white crops there are ten other countries which are more or less "dark horses." The merchant keen on enterprise has plenty of scope. Five of these countries, Russia, Mexico, Anatolia, China, and Persia, are considerable growers of cereals, though Mexico mainly is felt to fail us when we come to maize, and neither Persia nor Anatolia count for much except with regard to barley. China sometimes ships a little wheat, and sometimes imports a good deal of flour; more trade, it is thought, might be done.

The other five countries, Roumania, Bulgaria, Egypt, Mesopotamia, and the regions once constituting the Austro-Hungarian empire, are only out of the crop tables temporarily and for political reasons. Roumania and Bulgaria, with undoubted wheat surpluses, have to face the prospect of dangerous riots if an effort is made to ship grain thereby in the view of the town populations forcing up the home price. Egypt and Mesopotamia are in a transition state from British statistical to "popular" control, and Austria-Hungary is at present a welter of confused returns from the various independent new countries.

On the whole, the news from this region, recently so distraught, is hopeful. Agriculture looks like proving the mainstay and peaceful refuge not only of the republic of Czecho-Slovakia, but also of the Jugo-Slavian State, while Hungary is favoured with a fine season and is said to have resumed the export of flour from her famous mills. The crops of Poland are said to be a full average of wheat, barley, and rye, but to be deficient of oats and potatoes.

Nature has not been unkindly to the Continent this season, but there is a general failure to employ a sufficiency of fertilisers, and it must not be forgotten that the prairie return of an acre of wheat is only 780 lbs of grain. The happiest of Continental agriculturists in a time of impoverishment and adverse money exchanges are possibly those who grow sugar beet and brewing barley in alternate years. These crops are each other's natural complement in a remarkable manner; the beet yields 14 to 16 per cent. of sugar, and it fertilises the soil for the barley next year. The alternation makes for a clean agriculture, and both the sugar and the brewing barley have an assured sale; are, indeed, for the most part, bespoken before the crops are harvested.

CHINA'S FINANCES.—I.

EARLIER this summer the China Consortium issued a statement of its policy, preceded by a paragraph informing the public that instructions had been issued to the Group Representatives at Peking to examine with the four Ministers of their respective Governments, Great Britain, France, the United States, and Japan, the existing floating debt of China, with a view to formulating in due course a comprehensive scheme of debt consolidation. No announcement has since been made as to the progress of

this enquiry, but on August 1st Mr McNeill stated in the House of Commons that it had been decided neither to enlarge the scope of the Conference on the Customs surtax, so as to consider and frame general measures for the recovery of China, nor to substitute for that Conference another to consider measures for re-establishing political and financial order in China. It is desirable to examine the possible relationship of these two facts.

The Customs Conference referred to by Mr McNeill is the conference which, according to the terms of one of the agreements concluded at the Washington Conference, is to meet within three months of the ratification of the Washington Treaties, "on a day and at a place to be designated by the Chinese Government," to "consider the interim provisions to be applied before the abolition of likin" and "to authorise the levying of a surtax on dutiable imports as from such date, for such purposes, and subject to such conditions as it may determine." Two interpretations have been given to this agreement, the mere statement of which would occupy the space available for this article. It must suffice to say that while one lays most emphasis on the fact that the Conference is to consider the tax known as likin (an inland tax on goods in transit, the annual value of which has been most recently assessed at over \$42,000,000), the other emphasises most the opening words of the annexe to Article 1 of the agreement, which is stated to have been arrived at "with a view to providing additional revenue to meet the needs of the Chinese Government." Considerable practical importance attaches to the question as to which of these interpretations is correct, because the more closely the levying of a surtax is related to the abolition of likin the weaker the argument for imposing it in present circumstances. Conversely, the nearer the surtax is related to China's financial straits the stronger, from the viewpoint of the framers of the Treaty, does the argument become.

Everybody is aware of the fact that China's finances are in a bad way. Unfortunately, pending the completion of the Consortium's examination, no accurate statement of their position can be made. It is possible to estimate the country's revenue at amounts varying from \$472,838,584, the estimate contained in the 1916-17 budget, to \$557,031,236, the estimate of the second year of the Republic, 1913-14. Estimates, naturally, have also been made of its expenditure, the amounts in the two years referred to balancing to a cent. Actually, however, as stated in the 1923 China Year-Book, no budget published since the establishment of the Republic has been other than a pious expression of hope that the revenue and expenditure would correspond with the estimates, and how far this hope has fallen short of realities is shown by recent statements by the Ministry of Finance, which acknowledge that there is a monthly deficit at Peking of over \$8,000,000—a conservative estimate.

Similarly, no reliable statement can be made of China's indebtedness. The debt secured on the Customs and Salt revenues is an ascertainable amount, and according to Chinese official figures totals £120,694,032 and 164,438,290f, or at \$8 to the pound and \$0.165 to the franc (the conversion rates used in the last official Chinese statement) \$992,684,575.42. The unsecured debt, however, is at the present time variously computed. According to one official Chinese reckoning it totals \$489,000,000, of which \$249,000,000 is domestic and \$240,000,000 foreign debt; according to another, that of Mons. G. Padoux, Adviser to the Chinese Government, the total is \$570,000,000. None of these figures include railway loans, which are secured on the railways themselves with additional specific guarantees.

Now, until quite recently, it has been supposed, in China at all events, that the surtax referred to would be used to consolidate this unsecured debt. In the terms of the treaty the surtax is to be levied "at a uniform rate" of 2½ per cent. *ad valorem*, provided that in the case of certain articles of luxury, which in the opinion of the special conference can bear a greater increase without unduly impeding trade, the total surtax may be increased, but may not exceed 5 per centum *ad valorem*, and on the basis of the estimated additional revenue which this will produce, plus the increased revenue consequent on the recent revision of the import tariff to an effective

5 per cent., plus increased collection of duty due to the development of trade, a consolidation scheme has been worked out. It is not necessary at this stage to examine its merits, but merely to state its principal proposals, which are (a) the lumping together of domestic and foreign unsecured indebtedness, (b) the issue of consolidation bonds to a nominal amount not exceeding 625 million dollars, bearing interest at 7 per cent. from October 1st next, (c) amortisation in 12 years, (d) the use as security of the Customs revenue, helped out for the first few years by the salt revenue. These proposals were put forward by M. Padoux on the assumption that the special Conference provided for in the Washington Treaty would meet and reach a decision by the end of this year.

Mr McNeill's statement in the House of Commons at the beginning of the month did not include any indication as to whether this is contemplated or probable, but it raises important questions as to what policy H.M. Government intends to pursue at the Customs Conference. The consolidation of unsecured debts can hardly be regarded as any other than a "general" measure "for the recovery of China." Its two-fold objects, the restoration of Chinese credit and the freeing of revenue at present pledged for administrative purposes, would certainly seem to correspond with the Washington Treaty as described in the Annexe to Article 1, that, namely, of "providing additional revenue to meet the needs of the Chinese Government." Yet Mr McNeill's statement is open to the interpretation that consideration of such general measures is not to be part of the Conference's work. It is possible, of course, that the statement had in view general measures of a different order, some attempt, for example, to settle the prolonged controversies of North and South China or to minimise China's standing army, the estimated strength of which is 1,332,835 men. But if that was not the case we are thrown back upon alternative inferences, of which one is that H.M. Government's intention is to restrict the work of the Conference to an examination of the problem of likin, and either to grant the surtax as an interim provision for such partial abolition as present circumstances may allow, or to decide to withhold it altogether on the ground that, in the present state of China, the likin question is unapproachable. In which case, what becomes of the unsecured debt? The other inference is that the Consortium has entered upon, and is making satisfactory progress in, negotiations for the consolidation of the unsecured debt, and that the Conference will not be concerned with finance, but with the selection and recommendation of other uses for the surtax, a beginning of likin reform in the shape of an abolition of what are known as coast-trade duties and other constructive and administrative reforms. In that case, Mr McNeill's statement may be regarded as preparatory to a statement by the Consortium announcing the results of the instructions issued to its representatives last July. It is desirable that the public should know as soon as possible which of these inferences is correct.

LATIN-AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

COLOMBIA.—But for the unexpected fall in the price of coffee (rendered additionally serious on account of the lateness and smallness of the crop), it would have been possible to chronicle the continued economic progress of Colombia, thus confirming the optimism of 1922. None the less, the sound reputation—re-established within the past few years, and carefully sustained during the first completed year of General Pedro Nel Ospina's office as Chief Executive—for the observance of financial obligations has been justified, if not entirely without the call for some sacrifice upon the part of the Administration, such as the postponement of certain much-needed public undertakings. Financial requirements have tempted the Administration towards the issue of paper currency as a relief of financial difficulties; but these proposals have been put aside as being contrary to national interests. A counter-suggestion to establish a Government bank was adopted, the institution being successfully brought into operation towards the middle of last year. The Government subscribed 50 per

cent. of the shares to the value of \$5,000,000, utilising for the purpose part of the indemnity received from the United States in regard to the 1903 invasion and separation of Panama from the parent (Colombia).

With a population of six millions the national foreign debt of Colombia represents \$3.56, and the foreign \$4.74, *per capita*, the total national debt amounting to \$7.21, and the total *per capita* debt of the country to \$8.39 (the latter representing foreign loans guaranteed by the Governments—national and provincial—and municipalities, and internal loans raised by the Federal Government). Colombian indebtedness compares favourably with that of other Latin-American States, as, for instance, Venezuela, with a total *per capita* debt of \$8.45 (population, 2,850,000), Peru, \$9.38 (population, 4,700,000), and Paraguay, \$9.63 (population, 1,000,000), among the smaller Republics; and with Argentina \$117.94 (population, 9,000,000) and Uruguay \$131.00 (population, 1,564,000) among the larger States. The principal of the Colombian Consolidated External Debt has been reduced by amortisation since 1905, when it stood at £2,687,800 to £1,279,500, while the sinking fund has been brought up to 6½ per cent. of the reduced principal.

It may be remembered that at the beginning of the current year the necessary funds were provided to pay the balance of 30 per cent. of the arrear coupon certificates outstanding of the Consolidated External Debt of 1896, in addition to the December instalment in respect of the last half of 1922. The Government is now in a position to consider the conversion and unification of the Internal Debt, a policy that, for some time past, has been urged by foreign financiers. The Colombian budget for 1923 estimates the national revenues and expenditure at approximately 24,776,605 pesos. It is not improbable that some of the provinces may, in the near future, appear in the market as borrowers to develop local enterprises, among them the Departments of Antioquia and Cauca. The economic future of the country seems exceptionally bright, and the remaining three years of office allotted to General Nel Ospina are looked forward to with a feeling of security and hopefulness that appears to be well founded, both President and Congress devoting themselves to the levelling of expenditure with national revenues.

URUGUAY.—The high *per capita* debt of Uruguay, amounting to \$131.00, is in some degree a reflex of the effects sustained by the Republic from trade depression, particularly in regard to the frozen meat industry. Low exchange of the peso (which, during 1922, fell from a par value of 51d to 43d) and inadequate Government revenue have also played their part. All through the war, and for one year after, Uruguay enjoyed a run of exceptional prosperity, being enabled to extend credits aggregating \$67,250,000 to the Allied nations, and being enabled at the same time to borrow upon terms yielding a little over 5 per cent. The Government has latterly endeavoured to restore its fallen financial fortunes by imposing a system of heavy taxation, but has still been unable to avoid borrowing in order to cover current deficits. At the end of last year (1922) national indebtedness had attained a total of £27,500,000 (sterling). Of the Republic's foreign debt it is estimated that about 35 per cent. is in the hands of native holders. Economic conditions have somewhat improved since last year, when the position was such that the appointment of a Financial Advisor and a complete reform of taxation were suggested. The prospects for the season's wool-clip are bright, and, good rains having fallen, high hopes concerning cattle and agriculture are held. Official estimates of Customs' exports have been several times exceeded lately, and their value is considerably in excess of imports.

BRAZIL.—The sugar industry of Brazil—especially in the main cultivation district of Pernambuco—upon which, with coffee, the economic prosperity of the country largely depends, appears to have enjoyed on the whole a prosperous season. The total Brazilian sugar crop this year has been estimated at 635,000 tons, rather above that of the previous year. Early in October, and partly through November next, deliveries abroad will take place, but little of the produce may find its way to the United Kingdom, although, next to France, we still retain the greater part of the freight trade of the country. The United

States has now become the principal market for Brazilian sugar, and is expected to take all the Demerara quality, say, about 450,000 sacks (of 60 kilos), of 94, 95, and 96 deg. polarisation. This would represent a production of about 27,000 metric tons, at a price of between 10 and 11 milreis per 15 kilos, or, say, about 3.3 cents (gold) per lb, at the rate of exchange of 9 milreis to the dollar. The majority of the Pernambuco factories passed into the hands of an American syndicate in the autumn of 1920, the price paid being close upon £1,000,000.

The State of Sao Paulo is now fast revivalling that of Pernambuco in point of output, having increased its production from 298,590 bags, worth 6,665:940\$000, in 1910-11 to 528,821 bags, worth 33,971:161\$000, in 1919-20. This State now has working, in addition to 16 large central mills, nearly 2,000 small sugar factories situated in various districts. Sao Paulo sugar seldom finds its way abroad, being mostly consumed locally in addition to quantities imported from adjoining States such as Santos, Pernambuco, and Alagoas.

Notes of the Week.

The New German Cabinet.—The collapse of the mark and the wave of popular discontent at the phenomenal increase in prices of recent weeks demanded a victim, and on Sunday last Dr Cuno's Cabinet resigned. The late Chancellor was a business man rather than a politician, and had proved himself unable to win the effective support of the majority of the members of the Reichstag. More important still, however, was the feeling which was prevalent among the mass of the people that the late Government had neither the imagination nor the capacity necessary to tackle the many problems that pressed for solution, and in the wave of discontent and rioting which threatened at one moment last week to overthrow all ordered government in the country, the demand for Dr Cuno's resignation became widespread. His place as chancellor is taken by Herr Stresemann, a Parliamentarian of long experience, who was formerly a very prominent member of the rather chauvinistic National Liberal party, but who has been of recent years one of the leading lights of the People's Party, which, as is well known, represents the industrial interests in the modern Reichstag. Perhaps the most significant feature of the new Cabinet is that it embodies in some measure the idea of the so-called "Great Coalition," containing representatives of all parties except the intransigent German Nationalists and the Communists. The new Chancellor is a man who, without personally resembling the late Herr Erzberger, belongs to his class. He is a vigorous natural politician of a type rare in Germany. The choice of Dr Hilferding as Finance Minister also opens up new possibilities. The former Finance Minister, Herr Hermes, was hopelessly inert. He opposed obstructively all the devices recommended by the "Reichswirtschaftsrat" and by outside authorities for maintaining the real revenue undiminished in times of currency depreciation, but he had no alternative ideas of his own. Herr Hilferding, on the other hand, is a Socialist, and has always stood for an active policy of experiment. He believes in calculations on a gold basis, and in the establishment, as a first measure, of a gold-backed currency of limited amount, which would circulate side by side with the paper mark. This policy, which is based more or less on the model of Soviet Russia, should be followed up, in Dr Hilferding's opinion, by a reorganisation of the Reichsbank, and by the building up of a larger exchange reserve, which could, of course, only be provided by private business. The new Finance Minister appears to be quite convinced of the fundamental need of balancing the budget, and recently stated that without the stabilisation of the paper mark, the adoption of calculations on a gold basis would only accelerate the break-up of German financial organisation. The taxation reforms carried through the Reichstag just over a week ago by Dr Cuno, which are described by our Berlin correspondent elsewhere in this issue, will be put into operation by the new Government, but for our part we are sceptical as to the possi-

bility of genuine financial reconstruction in Germany so long as recourse must be had to the printing press to provide the wherewithal to pay the men in the Ruhr. The recent improvement in the Mark only shows how narrow is the market, and how open it is to psychological influences. At the same time, a Cabinet comprising members of the Industrial group, of the Catholic centre and of the Social Democrats is certainly on a broader basis than was that of Dr Cuno. There have already been signs, however, that the new Coalition may not prove quite so solid as to justify the optimism which now appears to characterise some important sections of German opinion while although Herr Stresemann may be more capable, we doubt whether he is more honest than his predecessor. From certain points of view, however, a change may well prove desirable for its own sake. On the one hand, the wave of despondency which swept across the country recently seems already to have passed, while the new Chancellor may possibly be in a better position to negotiate with the French as he does not share the direct personal discredit of having stood up to Poincaré on the issue of passive resistance in the Ruhr. A coalition of industrialists and Social Democrats may be in a better position to "deliver the goods," while Herr Stresemann's public repudiation of the suggestion that Germany would gain from a rupture of the Entente is perhaps hardly less significant than the announcement that the new Government will endeavour to obtain Germany's admission to the League of Nations.

The Irish Elections.—Our Dublin correspondent writes:—Ireland, and particularly Dublin, is deeply preoccupied with preparations for the General Election on the 27th instant—with its big dock strike, or lock-out, in Dublin, and with its equally important farm labourers' strike in Co. Waterford. The public was shaken out of its preoccupations by the arrest on Wednesday of de Valera at his first attempted public meeting. The secret of his whereabouts had been well kept, but his candidature and his intended speech had been loudly heralded. Scarcely had he stepped on the platform at Ennis before the audience of some thousands was surrounded by troops, supported by an armoured car, and the arrest effected. Someone fired on the troops, who replied with shots in the air, and in the resultant stampede there were a few minor casualties. Seeing the great public desire for peace and the approach of the elections, there was some hesitation of opinion as to the wisdom of the Government's action. But in truth it was inevitable—and yet it was a signal act of high-principled and courageous executive policy. Whether or not it is good electioneering is another matter—a consideration very properly not taken into account. But Irishmen believe in and respect firmness, and, to a greater extent than is sometimes believed, logic also. Outrage, arson, and bloodshed have wracked the country for some 12 months; they were let loose by de Valera's faction, preluded by his announcements, justified by his occasional pronouncements. His lieutenants have been executed, imprisoned, interned. Could he, the prime mover, be allowed to step out of his hiding, and shed his outlawry by participating in an election under a Constitution which he repudiates and under the protection of a Government to which he has made no submission, no surrender of illegally held—and used—arms? If the Government had not acted, its forbearance would have been attributed to fear; and, indeed, forbearance towards an actively contumacious outlaw could not well be distinguished from a nerveless fatuity. But it is not the first time this Government has taken its stand upon principle, regardless of results. Immediately after the election the National Loan and the Ulster Boundary question will be the two big issues, each presenting its own special difficulties. There are widespread apprehensions that the British Government may profess itself unable to carry out its obligations under the Treaty in regard to the Boundary Commission. Grave as the consequences would be for the Irish Free State, a failure to comply with the Treaty would be peculiarly unfortunate for Great Britain in its reactions upon her prestige and moral position, both in European affairs and in the bi-lateral activities of the pending Imperial Conference which is to meet in October. Not much good can be done by discussing it in advance, save so far as

may be necessary to prepare the public mind for the possibility. The better opinion here inclines to the view that the sober non-politician mind of Great Britain would greatly resent being put in the position before the world of failing to make good its formally pledged faith. It does not altogether forget the deplorable results of the unconstitutional holding up of the Home Rule Act of 1914, and it would not relish the recurrence of analogous episodes to-day.

The Mexican Settlement.—The necessary preliminaries to the recognition at Washington of President Obregon's Government were completed on Wednesday by the signature of the records of the Conference between the representatives of the two Powers which has been in session at the Mexican capital. The Agreement is understood to provide (1) that the provisions of the Carranzist Constitution relating to the Federal ownership of land bordering the coast or navigable rivers and of petroleum rights shall not be interpreted to the prejudice of concessions granted before its enactment; (2) that where they have been thus interpreted, compensation shall be given; (3) that a commission shall settle claims for compensation by Americans against Mexico and by Mexicans against the United States. These latter arise from the occupation of Vera Cruz and the Pershing expedition. A satisfactory conclusion of the Conference has been fully expected, but the final result is no less welcome on that account. The United States Government and the oil interests have received the assurances which the repeated decisions of the Mexican Supreme Court had failed to give them, and the impulse given by the recognition of Mexico to foreign trade and investment will no doubt react beneficially on other countries of Spanish America.

Mexican Oil and Recognition.—It is generally known that the resumption of diplomatic relations between the American and Mexican Governments has been dependent upon the improvement of relations between the oil companies and the Mexican Government. At the time of the last Presidential elections there was at least one American oil magnate who was diverted from the Democratic to the Republican banner by the declaration of the late President Harding that he would uphold the rights of Americans in Mexico. The oil interests made it plain that Article 27 of the Carranza Constitution of May, 1917, under which mineral rights were nationalised by what amounted to confiscation, was the bar to recognition of the Obregon Government. There are some who say that the decline in Mexican production and the failure to develop new oil territory are merely part of an attempt by the oil companies to frighten President Obregon out of this pernicious Article 27. There is no doubt that the Mexican President was in a difficult position. The Supreme Court of Justice had advised him that Article 27 was irrevocable. Yet he did his best to compromise by introducing legislation which confirmed titles to oil lands acquired prior to May, 1917. Unfortunately, this Petroleum Bill defined an oil claim as one which did "not exceed 2,000 hectares," and "confirmation" as requiring "a new contract with the Government" on such terms as the Government might impose, and, as a prior condition to "confirmation," the renouncement by foreign owners of their right to protection from their Governments. Clearly, this was vague and objectionable to American oil companies, and three months ago a joint Commission of Mexican and American representatives met to consider a solution of the problem. Despatches from Mexico City indicate that a way round Article 27 has been discovered. Two Presidential decrees have been issued dealing with oil "denouncements." It may be recalled that Carranza had given effect to his confiscatory Article 27 by permitting "denouncements" or "locations," under almost any pretext, on oil lands held by foreigners, and by refusing to issue drilling permits where a "denouncement" had been filed. The two new decrees of President Obregon are reported to authorise, first, the granting of permits for drilling wells outside the proven areas without "denouncement," and secondly, the issue of permits for drilling without "denouncement" on property owned prior to May, 1917. The American Com-

missioners are said to have recommended to Washington the acceptance of this arrangement, and if Mr Doheny, chairman of the Mexican Petroleum Company, which is the largest producer in Mexico, and Mr Walter Teagle, president of Standard Oil, which is the largest buyer of Mexican oil, are satisfied with the decrees, it may be taken that President Coolidge will find no obstacle to recognition. The British Government will no doubt follow suit. The palmy days when Lord Cowdray and the Mexican Eagle Oil Company were a power in Mexican politics have long since passed. The Foreign Office learnt its lesson in 1913, when an untimely British recognition of Huerta led almost to a rupture with President Wilson. Merely from an oil point of view it is doubtless fitting that Great Britain should follow the United States in this matter. The petroleum industry in Mexico is valued, according to official Mexican figures, at one billion dollars, of which 57.7 per cent. is owned by Americans, 33.8 per cent. by British, 6.1 per cent. by Dutch, and 1.1 per cent. by Mexicans. Here is an obvious case where oil decides politics. Nevertheless, it should not be forgotten, when recognition comes, that Mexico under the more stabilised Government of President Obregon is a market for manufactured goods and a source of supply of raw materials which British trade can ill afford to neglect.

China and the Powers.—On Friday of last week a Note was presented to the Peking Government, signed by the representatives of sixteen Powers (including Mexico and Cuba!), demanding compensation for the Shantung railway outrage, guarantees against the recurrence of similar excesses, and the dismissal of the three officials through whose negligence it took place—the Tuchun of Shantung, the military commander of the district, and the commandant of the railway police. The Note is emphatic, but is not backed by the only measure which, in the opinion of the foreign residents, can make it effective—the strengthening of the foreign garrisons in China. Besides, the Peking Government is paralysed and virtually headless, and though it recognises the Tuchuns in theory as its subordinates, it has no power over them. Indeed, its reply states that it "postpones" the dismissals in question. The proposed conference of the Powers on the position generally, to which we refer elsewhere, having apparently fallen through, the only solution before the public at present is that suggested by Brigadier-General Clarence Bruce in Wednesday's *Times*. It derives special weight from his experience in the British forces in China during the Boxer rising and for many years subsequently in the Chinese service. He maintains that the Powers should tell the Peking Government that they intend to protect the Treaty rights of their subjects, and to this end offer to help it to police the railways and waterways, and to get rid of the militarism, falsely so called, of the Tuchuns. Two years would be allowed for the complete submission of these leaders, and thereafter the Powers would give all necessary assistance in suppressing them and in cutting off the supplies of arms for fresh bands of brigands. The Tuchuns' armies are merely coolies or bandits in uniform, and will not fight as fighting is understood nowadays. The Powers should also provide funds to employ the disbanded troops in railway extension and other needed public works; and an international commission, including financial experts, should meet shortly at Peking. He also expresses his conviction that China can only be held together by a restored Monarchy. Any such proposal would certainly be opposed by large sections of the British and American public, as well as by the educated Chinese, whom many Western observers regard as the chief hope of China. Otherwise, General Bruce's suggestions seem excellent on the whole, provided that the Peking Government retains sufficient vitality to respond. Two years, however, is a long time to wait for the submission of the Tuchuns, which will only take place peaceably if their armies are paid off and it is made worth their while. Funds for these purposes can hardly be provided by the Powers without some guarantee of repayment, and this can only be furnished by such an extension of the foreign control of Chinese finance as to secure that the provincial revenues shall reach Peking. How can this control be made effective except by an adequate military force,

stiffened by foreign troops, or, at least, organised by foreign officers and containing foreign elements, though under the flag of the Chinese Republic? A precedent may be found in the suppression of the Taiping rebellion.

The Outlook in Peru.—A correspondent writes:—It is announced that the Peruvian Constitution of 1919 has been amended to permit the re-election of President Augusto Leguia on the approaching expiration of his term of office. He represents one of the great families who have hitherto controlled the Government, and whose rivalries have been the cause of many revolutions; he has himself been actively concerned in two at least, and he anticipated the retirement of his immediate predecessor by exposing him on the ground that he aimed at maintaining his power by force. But he is a reformer with large schemes of popular education and economic development, who has given proof of his political ability by his promotion of the establishment of regional assemblies to modify the excessive centralisation of the machinery of the Government. Peru took a long step towards democracy in 1919 by the extension of the franchise, and the mestizo class, now preponderant both in the population and the electorate, probably requires a strong President until its political education is more advanced. Finance is the great problem of the rulers of Peru, and on this the latest report from H.B.M. Consul at Callao is not encouraging. A large proportion of the population, especially in the capital, depends on the spending capacity of the Government, and the vast resources of the country cannot be developed without foreign capital and enterprise. President Leguia has done his best to attract it; irrigation, under American superintendence, is progressing, great railway developments are contemplated, and, if the reorganisation of the army and navy under French and American officers respectively, has been temporarily suspended, that is all the better for the peace of the Pacific Coast. President Leguia's re-election ensures the stability necessary for development, as that of President Gomez has in Venezuela.

Shipping Freight Index.—The downward course of freights for whole cargoes was continued in July, our index number recording a further fall of 4 points following a decline of 9 points in June. The weakness of rates was widespread, as will be seen from the table below:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (avg. 1898-1913).	100	100	100	100	100	100	100
Average 1913	110.03	113.09	123.37	106.29	117.38	127.89	116.34
Feb., 1920..	814.31	529.89	757.52	744.81	587.02	712.16	690.95
Dec., 1920..	268.90	277.17	244.10	256.79	286.72	347.18	280.14
Dec., 1921..	160.06	164.07	163.72	144.43	141.25	166.47	156.67
Sept., 1922..	143.00	115.60	122.48	129.48	124.52	135.31	128.40
Nov., 1922..	148.89	124.56	134.22	130.86	130.47	138.49	138.95
Jan., 1923..	132.05	126.47	124.85	120.20	142.14	150.44	132.69
Feb., 1923..	149.60	116.85	123.93	117.83	134.49	144.21	131.15
Mar., 1923..	163.55	124.30	130.43	125.40	125.36	135.31	134.06
April, 1923..	142.72	133.38	137.32	133.77	134.06	124.63	134.31
May, 1923..	134.91	140.03	143.05	126.99	134.48	120.18	133.27
June, 1923..	131.77	111.04	124.56	125.50	133.90	118.84	124.27
July, 1923..	132.42	107.20	118.67	122.44	126.10	114.83	120.28

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec.		Index No.	Inc. or Dec.
Home trade.....	135.43	+ 5.53	North America.....	107.20	- 3.84
Bay-outwards.....	139.45	+ 11.01	S. America-outwards.....	112.03	+ 7.16
Bay-homewards.....	140.33	- 9.67	S. America-homewards.....	125.31	- 15.35

It will be observed that rates for homeward cargoes are lower throughout. In certain instances, e.g., grain from U.S.A., and nitrates from Chile, most of the scant volume offering is being carried by liners in "parcels" at rates lower than those possible for shipowners to accept for

whole cargoes. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	1920.	1921.	1922.	1923.
January.....	545.42	194.59	131.60	114.05
February.....	593.90	164.54	135.76	112.73
March.....	588.24	162.17	135.53	115.23
April.....	519.40	147.48	129.46	115.45
May.....	480.60	158.42	125.12	114.55
June.....	463.16	165.73	117.45	106.82
July.....	384.43	169.87	114.52	103.39
August.....	350.96	170.60	113.16	..
September.....	360.27	154.47	110.37	..
October.....	394.80	141.85	114.42	..
November.....	340.33	136.47	119.43	..
December.....	240.79	134.66	117.39	..
Mean for year..	438.52	158.40	122.02	..

The July figure is the lowest recorded, and is little more than 3 per cent. above the 1913 average.

Coal, Iron, and Steel Production.—According to statistics issued by the National Federation of Iron and Steel Manufacturers, the production of pig-iron in July amounted to 655,100 tons, and of steel ingots and castings to 624,300 tons. The steel production is the lowest for any month this year, while the number of furnaces in operation fell from 222 to 206 during the month. Exports of iron and steel which had been 424,500 tons in May, and 365,100 tons in June, fell in July to 307,700 tons, the lowest level reached since September last year. These disappointing results, while to some extent due to holiday influences, are mainly due to the uncertainty of the Ruhr situation. It is rumoured, for instance, that the French, having pursued the policy of requisitioning coke, will proceed to requisition the iron and steel stocks in the Ruhr. The extent of these stocks is the subject of widely varying estimates, but their existence and the possibility of their liquidation in the near future is causing some anxiety. Another interesting subject of speculation is the question as to how long it will be before the Ruhr coke stocks are exhausted. Even the French metallurgists themselves doubt M. le Trocquer's optimistic estimate that they will not be exhausted until January, while neutral observers estimate that the stocks will not last beyond the beginning of October. Whether the French by that time will have managed to work the ovens themselves is quite an open question, but if not, either French production, which is now practically back at pre-occupation level, will have to be curtailed, or greater quantities of coke will have to be imported, with a consequent increase in price. Coal production in the four weeks ended July 28th averaged 5,015,000 tons, a rate considerably less than in the previous period, but for the week ended August 4th, the output was slightly better at 5,253,600 tons. Exports, while not so high as in May, were a little higher than in June, and amounted to 6,767,000 tons (of which 1,295,000 tons went to Germany, 1,699,000 tons to France, and 625,000 tons to Italy). The decline was, therefore, due rather to a reduced home demand, partly on account of lessened demands for industry and for domestic purposes, on account of the hot weather, than to reduced exports. Exports of metallurgical coke in July amounted to 234,600 tons, of which 155,300 tons were sent to Germany.

Japan's Foreign Trade.—Our Tokyo correspondent writes:—At the close of the first half-year Japan's foreign trade shows a larger adverse balance than ever experienced since the beginning of her commercial relations with the outside world. Last year began with a tremendous excess of imports over exports. During the fifth and sixth months there was a recovery of balance, and in the second half-year exports exceeded imports, so that the total balance for the year was not as great as expected. But during the past six months imports have resumed their excess, and have reached a total adverse balance of 394,000,000 yen. Compared with last year's trade for the same period, the totals are as follows:—

	1922.	1923.
Exports.....	735,944,000	713,888,000
Imports.....	1,105,706,000	1,107,978,000
Total.....	1,841,650,000	1,821,866,000
Balance.....	369,762,000	394,090,000
