It is calculated, however, that if the adverse balance for Korea, Formosa, and other dependencies be taken into account, the total for the empire's trade will not be less than 450,000,000 yen. The decline in exports is ascribed to failure of American demand for raw silk, together with persistence of the boycott against Japanese goods in China, to say nothing of futile attempts to take advantage of European conditions created by French occupation of the Ruhr. Some of the decline must also be attributed to artificial expansion of prices and cost of production in Japan, which in some measure accounts for the disappearance of copper and coal from the export lists. Other important items showing a decrease are cement and cotton textiles. On the other hand, there is an increase in raw cotton imports by a value of 92,350,000 yen. Exports usually improve in the second half of the year, but there will have to be an unprecedented demand in America and China, the two chief markets of Japan, if the year is not to end with a balance less favourable than last year. The authorities are endeavouring to decrease prices by improving efficiency and facilities of transport in trade. The embargo on export of gold still obtains, though import bills have to be paid, which makes the embargo not very real. The money eventually comes out of the specie held abroad, however, which is showing a steady decline. At present the total gold holdings of the nation amount to 1,792,000,000 yen, as compared with 2,000,000,000 after the war: 643,000,000 yen belongs to the Government, and 1,149,000,000 yen to the Bank of Japan. Of the total, 1,203,000,000 yen is in Japan, and the balance, amounting to 589,000,000 yen is abroad, mainly in England and America.

Motoring Costs.—A correspondent writes:—Motoring is cheaper to-day than it has ever been. Taking into account the quality of to-day's cars and the number of accessories included in the purchase price, the price of the present-day vehicle is considerably less than it was in 1914. The price of tyres has fallen till they are now actually below the pre-war figure, without having regard to the fact that the present cord tyre is vastly superior and has double the life of the 1914 canvas type. Lubricating oil, the least important item, has also fallen, but not quite to pre-war level. The recent reduction of 3½d. a gallon in the price of petrol brings it practically to where it was on the outbreak of war. The following figures show the fluctuations in the price of petrol since 1914:—

	Per Gal.		Per Gal.
July, 1914.....	1 8	October, 1920.....	4 0
May, 1916.....	2 10	January, 1921.....	3 5
September, 1917.....	4 0	June, 1921.....	2 11
December, 1917.....	3 6	August, 1921.....	2 5
February, 1919.....	2 10	September, 1922.....	2 0
February, 1920.....	3 8	July, 1923.....	1 8
August, 1920.....	4 3		

There are two reasons for the recent drop. One is that the large companies have been piling up huge stocks due to over-production in the United States. The other is that so many small petrol distributing companies outside the combine have started in business during the last few years, and these have been selling at a price considerably below that charged by the big companies. It may be that we are in for a petrol war, and the reduction in price may be an endeavour to squeeze out the smaller firms. If so, the consumer will ultimately have to pay.

Niger Company's Troubles.—A year ago the Niger Company presented accounts for the two years to December 31, 1921, showing a most unfortunate state of affairs. The report for 1922 is little more consoling. Trade conditions in West Africa continued to be unfavourable, and further heavy losses were incurred by the company and its associates. The net result is an increase of £77,560 in the debit to profit and loss, which now stands at £914,261. The accounts are of small value for comparative purposes, Lord Leverhulme having subjected them to much the same treatment as those of Lever Bros., i.e., "the directors have adopted in the profit and loss account the principle of treating the associated companies.....as if they were branches of the business." There has evidently been some shouldering of each other's burdens as between Lever

Bros. and the Niger Company—at least, that is how we interpret the statement: "In addition to making certain allowances to the [Niger] company and to some of the associated companies, Messrs Lever Brothers, Limited (the majority ordinary shareholders), have caused to be passed on to one of the associated companies shares which have been included in the accounts at their estimated value, and the excess over the par value has been applied towards losses of the associated companies." This high finance leaves the shareholder entirely in the dark as to the real results of the year's trading, and though he may be encouraged to hear that "the directors have made a valuation of the assets of the company, and are satisfied that the figures in the balance-sheet represent the true value of the assets," he will note that the auditors are unable to express an opinion as to the value of certain of the most important items. As far as the present balance-sheet is comparable with its predecessor, the most important changes seem to be a welcome fall of £1,059,000 in creditors, which now stand at £2,527,000, and reductions of £389,000 and £647,000 respectively in debtors and stock-in-trade. The most important asset consists of interests in other companies and investments, £3,738,000, about which the auditors are so reticent. A summary of the balance-sheet will be found in another column.

Transvaal Gold Output.—The total gold output of the Transvaal mines in July was 754,306 fine ounces, a slight decrease on the previous month's figures, but an improvement of 23,671 ounces in comparison with July, 1922. The total for the first seven months of this year was 5,270,855 ounces. Monthly figures from 1917 onwards are shown below:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January.....	782,634	714,182	676,059	670,503	651,593	639,728	764,469
February.....	781,321	659,759	636,728	625,330	558,137	539,788	704,970
March.....	787,091	696,281	712,379	707,036	671,123	671,123	761,586
April.....	742,778	717,000	694,944	686,979	681,382	511,338	743,651
May.....	779,385	741,317	724,995	699,041	687,776	629,786	786,564
June.....	753,724	727,696	702,379	715,957	678,490	675,697	755,309
July.....	757,839	736,199	725,497	736,099	689,555	730,635	754,306
Total (7 months)	5,390,775	4,992,434	4,872,981	4,840,945	4,618,056	3,187,184	5,270,855

September.....	738,731	708,206	698,558	682,173	691,026	747,089	..
October.....	751,290	679,764	723,722	662,472	707,825	778,159	..
November.....	722,839	658,701	677,970	633,737	704,256	764,476	..
December.....	722,419	641,245	650,191	632,215	681,847	790,712	..
Total (12 months)	9,018,084	8,418,292	8,336,091	8,153,625	8,114,516	7,020,111	..

Although production has fallen away slightly from the maximum of May last, the year's output is still the highest since 1917. The number of natives employed has lately tended to diminish in the gold and diamond, but to increase in the coal mines, as the following table proves:—

	Dec. 1922.	Jan. 1923.	Feb. 1923.	Mar. 1923.	April 1923.	May 1923.	June 1923.	July 1923.
Gold mines.....	176,834	181,985	182,983	181,473	178,137	175,591	170,865	166,443
Coal mines.....	11,001	14,664	14,717	14,710	15,040	15,176	15,598	16,020
Diamond.....	1,253	1,222	1,227	1,273	1,860	2,668	3,063	2,893
	189,088	197,871	198,927	197,456	195,237	193,955	189,526	185,356

The number of natives employed by members of the Witwatersrand Native Labour Association and contractors continues to fall, the decrease since February last being 13,571, or 7 per cent.

Transvaal Gold Mining Estates.—One redeeming feature of mining shares, writes our correspondent, is that they often provide an exemplification of the adage anent the darkest hour. For each of the past five half-years the directors of this "outside" Rand enterprise have been under the necessity of intimating to the shareholders that no dividend could be paid. During the past week the shares have constituted one of the few active features in the market as the outcome of persistent buying on behalf of Cape operators, which raised the price from 8s 6d to 11s 6d. The reason for this demand has yet to transpire over here. It may be recalled that last year the shares were rushed up to 17s on the news of rich developments—only to fall back sharply when it became ascertained that the high-grade ore was not readily amenable to treatment. Perchance history may repeat itself. The report for the year ended March 31st last made a poor showing, albeit financial results were not really quite what they appeared.

The tonnage crushed was much the same as in the preceding period, but the increase in average yield proved insufficient to counterbalance the decline in the price of gold. Costs were practically maintained at the 30s level, owing to the expenditure of a largely increased amount upon prospecting. Thus the net profit came out at the insignificant figure of £1,600. Unfortunately, the extra exploratory work failed to open up extra ore, the reserves declining by 48,000 tons to 625,800 tons, although the grade recovered slightly to 6.3 dwts. It is evident that the company is being pressed by the Union Government to perform an amount of prospecting really in excess of its financial resources. The manager urges that such work in the district—the Lydenburg, north of the Transvaal—is becoming increasingly the task of a big, powerful organisation. The results so far, however, have not been such as to attract much capital.

UNITED STATES.—DEATH OF PRESIDENT HARDING—CONFIDENCE IN MR COOLIDGE—GOVERNMENT COTTON REPORT—UNITED STATES STEEL EARNINGS.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 6.

THE sudden death of President Harding came as a great shock to the entire country, but has caused no unsettlement in any direction, no pronounced weakness in markets for securities or commodities, and no apprehension—such as may have been felt at other times when a Vice-President became President—regarding the administration of the Government by his successor. Financial, banking, and business interests throughout the United States have expressed their confidence in President Coolidge. They consider him eminently fitted for the Presidency. The late President Harding established a precedent by making the Vice-President a member of his Cabinet. Mr Coolidge regularly attended the Cabinet meetings, and is therefore probably more thoroughly familiar with the duties devolving upon the Chief Executive, and with the many problems confronting the Government, than any Vice-President who, heretofore, has suddenly become President. He has already indicated his desire to retain the present members of the Cabinet, and his intention to carry out the major policies of the Harding administration. A study of his past acts and utterances makes it reasonably certain that he will be strongly opposed to all forms of radicalism, to governmental interference with legitimate business, and to all price-fixing nostrums and other artificial measures, lately suggested by the farm bloc and others, to control the marketing of agricultural products. The new Chief Executive is known to favour a revision of the tax laws, particularly a lowering of surtaxes as advocated by Secretary of the Treasury Mellon, while his views regarding the tariff, the railroads, the maintenance and upbuilding of an American merchant marine, the coal situation, and other domestic problems are in line with those of the Harding administration. As to international matters, President Coolidge, in so far as it is possible to judge from his previous public speeches, is not an isolationist, but believes this country should do its full share in helping to bring about more normal economic conditions in Europe.

All stock, cotton and grain exchanges were closed last Friday as a mark of respect to the deceased President. Since then, markets generally have been characterised by calmness, barring active trading and sensational advances in raw cotton, due to further unfavourable crop advices. On the Stock Exchange dealings have been light in volume, with only slight additional recessions in values. For many weeks the stock market has been declining, the downward movement culminating in another severe break early last week which carried average

prices of both industrial and railroad shares to new low levels for this year.

The Government's cotton report, estimating the condition of the growing crop at 67.2 per cent. of normal, on July 25th, was a great surprise to the trade, which had expected a condition of at least 70 per cent. Private estimates had ranged from 68.6 to 71.7 per cent. The Government's latest estimate shows a loss of 2.7 per cent. since June 25th, and compares with a ten-year average of 72.4 per cent. on July 25th. According to the Department of Agriculture, the condition of 67.2 forecasts a yield of 143.9 pounds per acre, or a total production of 11,516,000,000 bales of 500 pounds gross, representing an increase of 116,000 bales over the production estimated by the department a month ago. The Crop Reporting Board of that department states that the average yield of the last eight years was 6 per cent. below the July 25th forecast of the crops, and that the yield equivalent used this August is 3.7 per cent. below that of August a year ago. Only a few States showed improvement in condition since June 25th.

During July spot cotton continued to decline, and closed at 22.45 cents a pound, or nearly 9 cents below the season's high level reached last March, about half of that drop occurring in the last week of July, the final month of the old crop year. Futures had also weakened, the October option selling, for months past, at a discount of fully 4 cents under July. The immediate effect of the Government's unexpectedly low condition estimate was a wild scramble to buy, which caused an advance of more than \$5 a bale here, and about \$7 a bale in New Orleans. Much of the hasty purchasing represented covering by shorts, who had overstayed their market, notwithstanding the decline of at least 10 cents a pound which had occurred in futures since the end of last winter. After a slight reaction the market resumed its upward trend, and in the past day or two scored a further advance of more than \$6 a bale, making a net rise of over \$14 a bale since publication of the Government report. The latest upturn has been due to complaints of rapid deterioration in the south-west, owing to protracted hot, dry weather, and reports of increased weevil activity in eastern States of the cotton belt. Another bullish influence in the recent trading was the exceptionally light supply of old cotton remaining on August 1st, the world's carry-over of American cotton amounting to only 2,573,000 bales, according to Secretary Hester, of the New Orleans Cotton Exchange; that is one of the smallest totals, if not the smallest, ever carried over into a new crop year. More significance would perhaps be attached to that fact if consumption of cotton were larger, or if indications pointed to increased consumption in the near future. Cotton mill production has been steadily curtailed in the past two or three months, and it is reliably estimated that August consumption in this country will be reduced to the extent of more than 150,000 bales; some 15,000,000 spindles in cloth and yarn mills will be directly affected this month by the short-time movement, which means partial idleness for at least 200,000 operatives.

While it was generally expected that net earnings of the United States Steel Corporation for the quarter ended June 30th would make an exceptionally good showing, the actual results were much better than most trade and financial interests had predicted. The net profits amounted to \$47,858,181, as compared with \$34,780,000 in the first three months of this year, and \$27,286,945 in the June quarter of 1922, and are the most favourable reported since the third quarter of 1920, when net earnings, aggregating \$48,051,540 were the largest for any three months' period since the world war. After deducting taxes and charges, the surplus available for dividends for the June quarter of this year totalled \$29,864,112, which was equivalent, after preferred dividends, to \$4.63 a share earned on the \$508,302,500 common stock. That compares with \$17,518,051 in the quarter ended March 31, equivalent, after preferred dividends, to \$2.20 a common share, and with \$11,196,355, which, after the preferred distribution, left a sum equal to only 96 cents a share on the common stock in the second quarter of 1922. After allowing for the regular dividends, the corporation reported for the past June quarter a balance of \$17,205,412, from which it appropriated \$10,000,000 for plant improvements

and extensions, carrying to profit and loss account a surplus of \$7,205,412. The detailed statement for the second quarter of 1923, compared with the first quarter of this year and the second quarter of 1922, follows:—

	June 30, 1922.	Mar. 31, 1923.	June 30, 1923.
Net earnings*	27,286,945 ..	34,780,069 ..	47,858,181
Dep., sinking fund, &c.....	11,067,432 ..	12,252,744 ..	13,029,797
Net income	16,219,513 ..	22,527,325 ..	34,828,384
Int. U.S.S. bonds	5,023,158 ..	5,009,274 ..	4,964,272

Surplus	*1,462,345 ..	4,859,351 ..	17,205,012
Res. for imp.....			10,000,000
Surplus			7,205,412

* Deficit.

May was the best month of the past quarter, showing net earnings of \$17,698,675, as against \$14,399,988 in April, but profits for June declined to \$15,759,518; the total for June, nevertheless, was the largest reported for any month, with the exception of last May, since October, 1920.

The corporation's net earnings for the first half of the current year totalled \$82,638,250, as compared with \$46,626,930 in the corresponding period of 1922. After taxes and other charges, there remained a balance of \$47,382,163, equivalent, after preferred dividends, to \$6.83 a share on the common stock; in the first six months of last year the amount left out of earnings for the common stockholders was equal to only 88 cents a share.

Judge Elbert H. Gary, chairman of the board of directors, considers the present situation in the steel industry as very satisfactory, from the standpoint of a manufacturer. There has been some diminution in new business during the past 30 or 40 days, but that is regarded as only natural for the summer months. New orders are not quite keeping pace with shipments at present, but if they continue at the current rate, with the large tonnage on the books unfilled and unshipped, there will be enough business, he says, to keep the United States Steel Corporation operating at practically full capacity for a long period.

FRANCE.—THE BRITISH NOTE—IRON AND STEEL OUTPUT—PRICES—GOVERNMENT'S SHIPPING VENTURE.

(FROM OUR CORRESPONDENT.)

PARIS, August 14.

IT may be stated without hesitation that the publication of the text of Lord Curzon's Note, in which the British Government's views on the whole present situation of the reparations and inter-allied debts questions are set forth in detail, has had the effect of a bombshell on French opinion. It was certainly not expected that Great Britain would have expressed her views so "brutally" (to use a word that has frequently appeared here in the comments of the Paris Press on the Note) in regard to the debt owing by this country to her Ally; but the point in the Note that has caused the deepest disappointment is undoubtedly that in which the British Government denounces the French and Belgian advance into the Ruhr as illegal. French and Belgian jurists (including M. Poincaré himself) on this point naturally take a diametrically opposite view to that expressed by the British law officers, and it is generally recognised here that it is round this question that the decisive stages of the controversy will be fought out. So far as the debt owing by France to Great Britain is concerned, the attitude of the French Government is perfectly simple, whether we agree with it or not. France, as M. Poincaré and his principal lieutenants have repeatedly declared, has not, and never has had, any intention of repudiating her liability, but she insists that unless her creditor either assists her to collect what is owing to her by Germany, or allows her to use her own methods to secure satisfaction from that quarter, it is unfair to ask her to pay until her devastated regions are at least put on their feet and again rendered productive.

A point in the whole situation that is frequently overlooked, is that Lord Curzon's latest Note to France, although addressed to the official representatives of the French Government, will have the effect of a direct appeal to the French electorate as a whole. The next French General Elections are fixed for the coming month of May. There is already a widespread belief that the result of those elections will be a marked trend to the Left, which would in all probability mean a resumption of the old Caillaux policy for *rapprochement* between France and Germany, in replacement of the existing Entente Cordiale (if the latter can still be said to exist). The French are undoubtedly deeply dissatisfied with British policy in regard to Tangiers and several other questions, and Lord Curzon's latest Note will prove valuable ammunition, not only to M. Poincaré himself, but to M. Herriot, who may be regarded as the present advocate of the old Caillaux section, the party that is looking to the coming General Election to bring it back to power.

The statistics issued by the Comité des Forges for the period ending July 1st show that on that date there were 106 French blast furnaces in operation, as against 99 on June 1st, 88 on May 1st, 77 on April 1st, 90 on February 1st (a fortnight after the occupation of the Ruhr), and 116 on January 1st. In addition to these, there were on July 1st 64 blast furnaces "ready to operate" and 48 under construction or repair. Of the 71 blast furnaces in activity in the East of France and in Alsace-Lorraine on July 1st (compared with 66 on June 1st), "some," it is stated, were not operating to their full extent. Of the total number of blast furnaces in France, seven were again started up during June (of which three were in the East of France, two in Alsace-Lorraine, one in the South-West, and one in the West), so that the total still shut down through want of coke is ten, in comparison with the total number in activity on January 1st. The output of cast iron in June was 447,013 tons, or an increase of 53,585 tons during May, and a decrease of 66,275 tons as compared with the output in December, the last normal month. The output of steel during June reached 427,400 tons, an increase of 39,151 tons on the figures for May and also of 12,803 tons on the December figures. The June figures, in fact, were higher than any since October last year, so the Comité des Forges states that it is evident that French metallurgists have been able, within a period of six months, more than to make up for the still very large deficit in the output of the Lorraine steel plants. The Lorraine plants (liberated territory only) during June produced 152,088 tons of cast iron (against 133,785 tons in May and 219,137 tons in December), and 139,689 tons of steel (as against 112,125 tons in May and 147,914 tons in December). The total output of cast iron in France during June was 8 per cent. less than in January and 12 per cent. less than in December last, while the total output of steel was 4.8 per cent. more than in January last and 2.4 per cent. more than in December last.

The index figure for wholesale prices at the end of July, which has just been announced by the Statistique Générale de la France, shows a slight reduction, as compared with that for June. The details, based on 100 as the figure for the period 1901-1910, are as follows:—

	1923.	End of June (Corrected).	End of July (Provisional).
General index figure (45 categories).....	472.3	470.1	470.1
Foodstuffs (whole of 20 categories).....	449.8	445.6	445.6
Vegetable foods (8 categories)	414.8	408.4	408.4
Animal foods (8 categories)	472.3	464.3	464.3
Sugar, coffee, cocoa (4 categories)	474.2	482.5	482.5
Raw materials (whole of 25 categories)....	490.4	489.8	489.8
Minerals and metals (7 categories).....	440.1	451.0	451.0
Textiles (6 categories)	637.0	616.6	616.6
Various (12 categories)	446.5	448.9	448.9

The general figure for the end of May was 469.9, for the end of April 479.5, while for the end of 1922 it was 418.4. In other words, the average increase in wholesale prices, as compared with the period 1901-1910, was equal to 370.1 per cent. at the end of July, as against 372.3 per cent. at the end of June and 318.4 per cent. at the end of 1922. Food prices have naturally fallen at this time of the year, with the exception of coffee, &c., the rise of which is obviously due to the exchange factor. The drop

in textile materials was unfortunately largely nullified by a rise of almost equal extent in minerals and metals. The index figure representing the retail prices of 13 categories of foodstuffs in Paris is returned for the end of July as 3,446 (or an increase of 221 per cent. on 1914), as against 3,562 (or an increase of 231 per cent. on 1914) at the end of June.

A report recently presented to the Chamber by M. Charles Leboucq, on behalf of the Finance Commission of the Lower House, sets forth in a striking manner the results of the French Government's experience as an owner of merchant shipping during and after the war. The report shows that the Government shipping department expended a total sum of 1,998 million francs on the purchase, construction, and maintenance of merchant shipping vessels (of which only 476,000,000 francs was in respect of maintenance). The vessels in question, under the liquidation scheme, were sold for a total of 190,000,000 francs, leaving a net loss of 1,808,000,000 francs to be met by the taxpayers. In a word, the fleet of merchant ships "fetched" within a shade of 10 per cent. of their actual cost. Even on this basis, apparently, the loss of any return on the money so invested has not been taken into account, so that it may be stated as a fact that the Government's venture in merchant shipping since the beginning of the war has cost the country an actual loss of 2,648,000,000 francs.

GERMANY.—TAXES AND INFLATION—STOCKS—PRICES—TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, August 14.

THE taxation reform so hurriedly passed last week promises on paper an enormous yield. A newspaper estimate, in which, however, no data are given, states that the new income-tax payments will yield 60 billions, the Ruhr levy 40 billions, the motor-car levy 15 billions, the industrial tax 60 billions, or approximately 120 millions gold, and the agriculture tax 108 billions, or 216 millions gold. Of this sum 150 billions are due to be paid before the end of August. The taxes are:—1. Income-tax. In July the advance quarterly income-tax payments for 1923 were multiplied, beginning with the August quarter, 25 times, and the corporation income-tax 35 times. Both taxes are assessed on the much lower incomes and profits of 1922; and the multiplication aimed at adjusting the yields to the much higher incomes of this year. Ten days ago the Cabinet's plan was to increase the multiples to 100 and 140 fold respectively. Under the influence of the mark crash of last week, however, the multiples have been fixed at 400 and 600 respectively. 2. Ruhr Levy. On August 25th, October 5th, and January 5th each taxpayer, whether individual or corporate, will pay double the above multiplied payments; that is to say, respectively 800 and 1,200 times their original income-tax instalments, as a special levy. 3. The motor-car tax, which we reported last week, has been increased fifty times. For a 25 h.p. car this works out at about 900 million marks. 4. Industrial tax. All industrial concerns for the next six months will pay weekly a sum equal to twice the sum deducted from their workmen's wages for income-tax. 5. Agriculture tax. This is intended as a counterpart to the industrial tax. All agricultural land will pay monthly 1½ gold marks per 2,000 gold marks of valuation. The valuations are on the same basis as those of the Defence Levy (*Wehrbeitrag*) of 1913. In addition there is a Tax Interest Law, which empowers the Finance Minister to impose penalties for any delayed payments sufficient to compensate the State for loss due to future currency depreciation. The different rates of the beer tax have been raised as from August 15th by between eight and nine fold. The sales tax, hitherto payable quarterly, has been made payable monthly, except for persons with turnovers in 1922 of less than 1,500,000 marks. The new "fixed value" paper-mark loan will be opened to subscription to-morrow. It is issued in bonds varying from \$1 (4.20 gm) to \$1,000 (4,200 gm). No limit is put upon the amount; but the law providing for "fixed value" interest payments assumes that the total will not exceed 500,000,000 gm.

It is difficult to criticise the above taxation scheme. The plan to assess in gold-marks or index marks, which

would alone guarantee any fixed real yield, has not been adopted, except in the case of the tax on agriculture, though the Finance Minister is given power to adapt the Ruhr levy rates for October and January to further currency depreciation. The "fixed mark" plan could not be adopted because owing to past neglect there was no time to work out a satisfactory scheme. The enormous estimated paper-mark yields represent very small real values; but it is not certain that even these will be realised. The 150 billions due for payment within little more than a fortnight is worth, at the lowest mark value of last week, only \$30,000,000. The 150 billions is, nevertheless, more than three times the whole note circulation of 43½ billions reported on July 31st; and the 500,000,000 gm "fixed value" loan would have a value of about twelve times the note circulation. The Government, it would seem, is attempting to obtain from taxes and the loan sums which are infinitely greater than its past liabilities; but this only expresses the fact that the currency outstanding against past liabilities has shrunk in value to almost nothing. However, the deficits that have been piling up since the end of July, though particulars are not as yet available, together with the increase in note circulation representing these deficits, will be enormously greater than those of earlier months. Apparently no one expects that the vast tax yields will meet the needs of the case, even if they are fully realised, because the Reichstag had to authorise the Government last week to raise credit by the issue of no less than 800 billion marks Treasury bills. The effect of the sudden enthusiasm for taxation is enormous on the money market and the stock market, no less than on the individual. Millions of income-tax payers who according to law were obliged five days ago to make payments increased 25 to 35 times before August 15th, learned on the 11th of the month that they must make payments increased 400 to 600 times before the same date, and that ten days later they must make additional folded payments increased 800 or 1,200 times. These payments are, of course, not excessive when compared with the currency depreciation which has taken place since the tax assessments were made; but the amount of money in circulation, vast in itself, is so small when measured by the same depreciation that it is a mystery how the payments can be made at all. Apparently the Finance Ministry sees this, because it announces that in view of "technical difficulties" the Finance Offices will be content if they get the Income-tax and Ruhr Levy payments, due on August 15th and August 25th, before August 31st. By this time enormous additional sums will have been turned out from the printing press.

A change in the Reichsbank directorate is expected. The newspapers are clamouring for Herr Havenstein's resignation. The Reichsbank has fixed its gold buying price at \$640 for 1 kilogramme of fine gold, and will pay in paper marks at the Bourse dollar rate. Hitherto the Bank has periodically fixed its paper mark price for gold. The Bank is printing notes at the rate of 8 billion marks a day, but the shortage is none the less acute. The Municipality of Berlin is obliged to reissue low-value notes surcharged, and the private banks are issuing unit checks of one and five millions each. Fifty million marks Reichsbank notes will soon be issued. The Customs gold surcharge is raised from to-morrow to 42,579,900 per cent., which is nearly 300 per cent. above the rate of August 8th. Henceforth the surcharge rate will be fixed each week on the basis of the preceding week's dollar exchange, instead of as heretofore on the average exchange of the preceding three weeks. The pressure on the Reichsbank in the last week of July was hardly as extreme as was expected. Commercial bill discounts increased by 4,383,879 millions, Treasury bills by 14,655,266 millions, and circulation by 11,769,991 millions. The Bank disposed of another 20,000,000 gold marks abroad, thus reducing the gold reserve to 596,351,000 gold marks.

The Bourse yesterday was weak as a result of the drop in the exchange and of realisations by taxpayers. Most stocks lost about 30 per cent. as compared with the highest quotations of last week, while a few lost considerably more. Last week saw an all-round rise, which was the most violent so far experienced. The *Frankfurter Zeitung's* index for home dividend-payers showed 259,823,700 for August 10th, as against 90,033,700 on the

3rd and 376,685 on January 5th. Bank shares and shares of native companies with foreign interests rose rapidly. Home loans, on an average, nearly doubled their quotations, but dropped again yesterday, when the quotations were: War Loan, 2,000; Fours, 60,000; Three and a-Half per Cents., 50,000; Threes, 500,000; Colonial Fours, 450,000; and Prussian Consolidated Threes, 48,000. The decline of home paper mark loans on an improvement in the exchange is a new feature.

Prices went up rapidly last week. Coal (Ruhr Foerkohle) from 5,188,000 marks to 23,267,000 marks a ton, and foundry coke from 7,845,000 marks to 35,385,000 marks. The official cost of living index number for August 6th is 149,531, as against 1 in 1914. This compares with 71,475 on July 30th and 16,180 on July 4th. The increase in the last week was 109.2 per cent., the biggest as yet recorded. The foreign trade report for June, as compared with May, shows:—

(In Metric Tons).

	Imports.		Exports.	
	June.	May.	June.	May.
Total	4,806,600	4,013,100	889,700	929,900
Food, &c.	259,900	266,900	75,800	96,100
Raw and half-finished materials	4,423,900	3,630,300	525,300	525,300
Manufactured wares	121,700	112,200	288,500	308,300

Coal imports in June were 3,000,000 metric tons, against 2,500,000 metric tons in May. The import of iron ore remains very small, being only 180,000 metric tons, or one-fifth of the monthly average for 1922. June exports of rolling mill products and iron wares were 59,171 metric tons, against 81,734 metric tons in May and a monthly average of 193,015 metric tons in 1922; while exports of machinery totalled 18,247 metric tons, against 24,570 metric tons and 39,914 metric tons respectively. The decline in machinery exports is a very serious blow to the foreign balance of payment, and is one cause of the extreme shortage of foreign exchange.

GREECE.—FINANCES—PUBLIC DEBT—THE LOAN FOR THE REFUGEES—EXCHANGES AND BOURSE—CIRCULATION AND BANK DEPOSITS.

(FROM OUR CORRESPONDENT.)

ATHENS, July 28.

IN the absence of the Parliament, the Finance Bills for the financial years 1922-1923 and 1923-1924 have been ratified this year by law decrees. Compared with the Budget statement for the period 1921-1922, which was voted by the National Assembly in April, 1922, these statements show the following increases both as to revenue and expenditure:—

	REVENUE.		
	(In Millions of Drachmæ.)		
	1921-1922.	1922-1923.	1923-1924.
Ordinary	715	1,472	3,031
Extraordinary	1,004	2,827	910
Total revenue....	1,719	4,299	3,941
	EXPENDITURE.		
	1921-1922.	1922-1923.	1923-1924.
Ordinary	1,400	2,033	2,961
Extraordinary	1,997	2,830	3,663
Total expenditure	3,397	4,863	6,624
Deficit	1,678	564	2,683

The extraordinary revenue of the years 1921-1922 and 1922-1923 was derived chiefly from internal loans, the latter year including the forced loan of 1,550 million drachmæ. On the other hand, the extraordinary revenue for 1923-1924 contains a sum of 400 million drachmæ, estimated amount of the first instalment of the levy on capital imposed early this year, 90 millions representing the value of German deliveries in kind, and 250 million drachmæ, proceeds of internal loans. The service of the public debt (interest, ordinary and extraordinary sinking fund, and various charges) for the three periods under review amounts to 415, 1,053, and 1,565 million drachmæ respectively. These items include a provision for difference on exchange for the service of loans in gold of 150, 354, and 759 millions for each of the respective years. On

the expenditure side, extraordinary expenditure in connection with the Ministries of War and Marine, arising out of the state of war, accounts for 1,479 millions in 1921-1922, 1,644 millions in 1922-1923, and 1,738 millions in 1923-1924.

The Greek public debt on April 1, 1923, is analysed as follows:—

	Drachmæ.
Loans in gold (at par of exchange)	1,341,935,378
Foreign advances "	370,192,956
Loans in drachmæ "	5,366,145,768
Floating debt.....	371,076,041
Banknotes issued against Allied credits not realised.....	801,908,135
Total debt	8,251,258,278

The Council of the League of Nations having decided to lend its assistance to the proposal that a loan should be raised in aid of refugee settlement, the Governor of the National Bank has been summoned to Geneva, and, after having visited Paris, is now in London for the purpose of making negotiations for the eventual issue of the loan. Though Colonel Procter, Deputy High Commissioner for Refugees of the League, estimated that an amount of £10,000,000 is the minimum required for the settlement of the refugees, and his report on the economic conditions of Greece, and the guarantees offered for the service and the reimbursement of the proposed loan, are entirely satisfactory, the Council of the League has pronounced for an amount of £6,000,000 only, which is obviously insufficient for the settlement of 860,000 destitute refugees.

With the signing of the peace, foreign exchanges hardened appreciably. This is attributed to speculation. It seems, however, that it is partly due also to a real demand from trade and the general public. Little by little the opinion has been formed that foreign exchanges should rise. The present high levels do not appear, however, to be justified. In spite of a decision of the members of the Stock Exchange, supported by the banks, for an extension of the suspension of business in the Stock Exchange (which was closed on June 13th after the collapse of foreign exchanges), the Government has ordered an immediate opening of the bourse, believing that this action would exercise a lowering influence on exchange rates. This did not happen, however, since it is the movements of exchange rates that regulate the prices of stocks in the bourse. Both exchanges and stocks have risen.

The growth of bank deposits and bank notes circulation in Greece is shown in the following tables:—

	BANK DEPOSITS (in millions of drachmæ.)			
	Dec. 31, 1914.	Dec. 31, 1918.	Dec. 31, 1920.	Dec. 31, 1922.
National Bank of Greece ..	296	603	1,191	2,074
All other Greek banks	180	661	1,076	1,517
In all	476	1,264	2,267	3,591
	CIRCULATION (in millions of drachmæ.)			
	Dec. 31, 1914.	Dec. 31, 1918.	Dec. 31, 1920.	June 15, 1923.
	293	1,375	1,910	3,698
				4,861

The amount of 4,861 drachmæ on June 13th represents the maximum authorised issue of banknotes. Of this amount, 1,400 millions have been issued against foreign exchange and Allied credits, and 113 millions, by virtue of a recent law, covered by foreign exchange. The balance is covered partly by gold and commercial bills and partly by State bonds.

NORWAY.—THE CENTRALBANKEN—NEW LOAN?—PAPER TRADE WAGES—CROP PROSPECTS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, August 7.

A COMMITTEE was appointed to look into the affairs of Centralbanken for Norge, our biggest bank, which, as may be remembered, was in difficulties some time ago. The committee has now published its report. It does not seem to have found anything new with which to reproach the different directors, and it should be particularly emphasized that there is no trace of fraudulent acts on the part of any of them. But it must be owned that the remunerations which have been disclosed as

having accrued to the members of the board in many cases are too big, even extravagant, and could have been justified only if excellent results had been achieved. Still, the remunerations always have been within the limits of the terms agreed to. Otherwise the said bank seems to be plodding on, and will, it is hoped, recover, if only gradually.

The tone of the stock market is firmer, on the whole, though, of course, the season necessarily limits the extent of transactions effected. There has been a good deal of talk lately about the big Government loan to be launched. It is hinted that there is a prospect of obtaining the loan on better terms in London than in New York, but at the same time the idea of borrowing in the home market has not been abandoned; on the whole, the Government seems to be in no hurry in the matter.*

On the 15th inst. the wages tariff of one of our principal industries, the paper industry, expires. For a month negotiations about a new tariff have been going on without any result. A proposal for an agreement made as a preliminary by the conciliator was rejected yesterday by both parties. The next step will be for the conciliator to prohibit stoppage of work until fresh negotiations have been attempted. Though the opinions of the employers and the employed are rather divergent, there is no doubt that earnest endeavours will be made to avoid stoppage of work. The difficulty is, however, that the question is not one so much of wages as of authority. At one of the paper mills two men were dismissed seven months ago, because they were found unsuitable for the work. One of them a year earlier had been the head of the local trades union, and the workers considered his dismissal as an act of revenge on the part of the mill manager, and all the 70 men of the mill struck work and would not resume it until the men had been reinstated. This the manager has refused to do, and so the mill has been standing idle for seven months. This question has been inseparably linked to the question of a fresh tariff. Of course, it is a most important one, as it really involves the question who is to be the leader of a factory—the proprietor or the workers, or even one of the workers. The issue, therefore, is awaited with keen interest. The lack of really statesmanlike labour leaders is felt very much under such circumstances.

Plenty of rain with warm weather has prevailed during the last four to five weeks, causing the vegetation to advance quickly. Haymaking is in full swing, but owing to the dry, cold weather in the early summer the crop of hay will be poor in most districts. If there is warm weather for another month the prospects for a good harvest of cereals and potatoes are good.

ARGENTINA.—BUDGET—FOREIGN TRADE AND EXCHANGE—PUBLIC FINANCE.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, July 25.

SINCE writing a month ago, the Deputies have sanctioned both the debit and the credit side of the 1913 Budget Estimates, which are now before the Senate for approval or revision. Provision for expenditure totalling close on \$635,000,000 Arg. paper would be met by various novel forms of taxation and by additional import dues. Taxation of absentee landlords, a tax on passages, on portable securities, and on banking deposits, were all calculated to stir up bitter and in most cases very warrantable protest. Indeed, in the case of the banks and insurance companies such formal protest has already been made to the Senate. There is, however, good reason to think that of all the measures subsidiary to the general Budget Law of 1923, measures which in their totality compose the imposing part of the Budget, only the addition to the import duties will become law. For there has just been published the new Income Tax proposals, bearing the imprimatur

of the Minister of Finance, and prefaced by the statement that it is intended to bring the same into force as from January 1, 1924. It is therefore logical to presume that this year's administrative finance will again be met by means of the monthly appropriations known as "duodecimos," the Senate turning down the farrago of impositive novelties, which have the added drawback of applying only to the Federal capital and to the national territories; in practice to foreign capital only, and more especially to such as is highly organised and domiciled in Buenos Aires.

For this reason no good purpose is to be served by going into details, while a certain amount of ill-feeling may be saved by explaining that neither the Budget as passed by the Deputies, nor the Income Tax as outlined by the Minister of Finance, can yet be considered as within the region of practical politics. The latter is inevitable, but not necessarily next January, since its imposition on the lines suggested, more or less between night and morning, is impracticable if the tax is to be as generally charged, as the Ministerial proposal published in the Argentine Press states will be the case. There is no machinery ready even for the purpose of drawing up the preliminary estimates of private incomes, and the only concrete figures on which the taxgatherers could to-day operate with any certainty are those of the limited companies—who are down to pay 2 per cent. per annum on their "gains, dividends, or profits" (utilidades, ganancias, ó dividendos). It will be a complicated and an arduous task, in a wide agricultural and pastoral country such as is Argentina, to prepare even the skeleton form on which such an inherently novel tax must be introduced. And one cannot for a moment suppose that the Government would sanction such a law before some means of equitable distribution of the burden had been prepared. Next year, 1924, should see the decennial Census established by the Constitution taken by the Government. Whether this task will or will not be accomplished is hard to foretell, but it is self-evident that with the Income Tax in view the moment is particularly opportune for carrying out, at one and the same time, a census of population and an estimate of individual incomes, based on the inclusion of the necessary questions in the general Census paper.

Pending definite decision regarding these weighty matters, official finance stands just where it did in October, 1922, with such addition as compound interest may have caused to accrue to the debit side of the account. Figures covering the totals of Argentine import and export trade during 1921, 1922, and the first five months of 1923, have at length seen the light. They are not at all encouraging, the total balance against Argentina over the whole period named being no less than \$120,000,000 gold. Goods, import and export, have been valued on their actual not on their tariff figures, and, while admitting that such calculations must be considered rather in the nature of estimates than as concrete ciphers covering current trade, the impression they give is that the actual quotation for the Argentine dollar is by no means fortuitous. Unless there is a sharp reduction of imports during the remainder of the year, and an equally pronounced diminution of official expenditure, there is small hope of the sterling or the U.S. dollar losing their present appreciation in this market. Indeed, if the pronounced decline in wheat, and the probable fall in maize, is not arrested, matters may even be worse. There is the valuable wool clip as an offset, it is true, but this is likely to be small as well as choice, and its assumed value of \$100,000,000 gold will not be a very important factor, compared with wheat at a shade under pre-war prices. Nor is much to be looked for in the direction of foreign loans. The Senate has just authorised Government to borrow \$150,000,000 gold at 6 per cent. interest, and 1

per cent. amortisation, issue price to be not less than 92. The Minister of Finance has, however, declared that the present state of the market—i.e., London and New York—is unfavourable to long-term borrowing, and the operation boils down to the mere granting of authority to renew the loan due in New York at the end of September for \$50,000,000 U.S. In plain language, Argentina has missed her market, hence no amelioration of exchange conditions must be looked for in the direction of large and easy foreign credits. Strict official and private economy can alone react on the international exchanges as they affect finance and trade between Argentina, Great Britain, and the United States, and it would be hazardous to say that there is at the moment any sign of such economy on the horizon.

It is this state of affairs which lends particular weight to Art. 53 of the general Budget law. Therein the Government is authorised to withdraw gold from the Conversion Office against delivery of an equivalent amount in paper at the standard rate of \$227.27 paper per \$100 gold, and to use this gold for the purpose of meeting payments due on the foreign debt services. Passed by the Deputies, this clause has not yet had attention in the Senate. If it is so passed, though but a "facultative clause," it will quote the words of the Minister of Finance, it will materially modify the immediate possibilities of the exchange market. Merely as an instance of what might be possible, one may point out that a Press article openly suggested that it would then be feasible to pay off the U.S. loan above referred to, gaining the exchange difference between par and the current quotation of 130.30. The subject is too delicate to discuss at greater length, and one feels sure that the Government is fully alive to the extreme dangers that even the "facultative" existence of such a clause legally sanctioned might bring in its train. Meanwhile, the matter of consolidation of the internal floating debt remains in abeyance, though this cannot continue indefinitely. The Government finds no difficulty in renewing at 4 per cent., though the market rate for commercial business is from 5 to 7 per cent., but this facility is not a true guide to the Argentine monetary position. As a matter of fact, Government Treasury bills, as well as the bills issued by the State Railways Department, are at the present time circulating from hand to hand in settlement of ordinary commercial obligations. Amounts as low as \$5,000 paper have been mentioned. The State Railway bills—which, though they may be considered as carrying the moral guarantee of the national Government, are not a direct charge on the national treasury—are extended for six months, renewable for five periods, and bear interest at 6 per cent. Discount of these documents becomes more and more confined to the essentially national banks, and to financial institutions willing to run the risk of a long lock-up of funds against a correspondingly high rate for the accommodation they grant. Hence there is a growing feeling that the lesser of two evils would be for the Government to face the situation boldly and carry through its expressed intention of paying off these obligations and replacing them by a bond issue, an operation which will call for \$500,000,000 paper at the very least. There is no doubt regarding the desire of the present Government to stick to sound currency principles, but the present state of affairs is not calculated to help towards that end, and one can already note a tendency to financial anarchy in the provinces, particularly in Mendoza, where the issue of so-called "letras de tesorería" for amounts from \$1 upwards has led to a severe admonition on the part of the Conversion Office, since it is now clear that in the province named two currencies exist, with a 5 per cent. premium on the national as opposed to the provincial dollar. The matter has been thus treated at length, not because the danger is imminent, but solely in order that those having practical experience of Argentine finance, and interests to protect, may realise how essential it is that the National Government should have every support when endeavouring to adhere to a sound currency system. For many theoretical plans which appear attractive on paper take no account of the lessons of the past, or that tendency to undue optimism in matters financial which is characteristic of all new and progressive nations in this part of the world.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,352,105

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.
The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

Letters to the Editor.

THE FINANCES OF NICARAGUA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of May 19th last appears, under the heading of "Latin American Notes, By a Correspondent," a statement about Nicaragua and its finances which has just come to my attention. In the interest of the real situation permit me to state that nearly every one of the dozen details mentioned is a total misrepresentation, or so misleading as to approximate it. As the principal bonded debt of Nicaragua, the sterling loan of 1909, is held in England, for the sake of the bondholders, as well as of the Republic, a correct statement of the facts is due.

The correspondent says "a financial commission appointed by the United States has taken complete charge of the country's finances." This is such an overstatement as to be misleading. There are Americans co-operating with the Government, financial advisers, if one pleases, but they do not have complete charge. The Nicaraguan legislative and executive financial administration is fully functioning.

"Twelve years after the introduction of currency reform Nicaragua now finds itself in rather worse economic condition." This is absolutely not so. Twelve years ago the Republic's finances were in a bankrupt condition. The interest and sinking fund payments on the bonds of 1909, mentioned above, were defaulted. The total of the debts of and claims against the Republic on January 1, 1912, was \$32,236,223.51, an impossible amount for a country of the size and resources of Nicaragua to pay. In the eleven years since the interest and sinking fund on the bonds of 1909 have been paid in full, including arrears, and the floating debts and claims have been settled, readjusted, partly paid in cash, and the balance funded into five per cent. bonds. The total indebtedness of the Republic (on March 31, 1923) is now \$9,294,780.90. The currency reform of 1912-13 replaced an irredeemable paper currency which from 1902 to 1910 had depreciated from a value of 50 cents gold to the peso to eight cents, and in the year 1911 to five cents. It was replaced by a new monetary system in 1912-13, devised by a commission composed of Mr F. C. Harrison, of London, late Treasurer-General of India, and Mr C. A. Conant, of New York, the leading American monetary economist of his day. So if the currency reform produced a worse economic situation, as charged, a well-known English expert was half responsible. But the reverse has happened. The currency of Nicaragua stood the test of 1920-21, the only money in all Latin-America which did not slump to a discount in terms of the dollar, and to-day remains at par with gold. The economic situation is not worse, but far better, your article to the contrary notwithstanding.

"The Government handed over to an American banking firm the whole of the railways," says your correspondent. A half-truth is more of a misrepresentation than a complete misstatement. They were "handed over," it is true, but for a money consideration—a sale for cash. The financial and economic situation of Nicaragua has so much improved that the Government is now buying the railways back, also for cash.

* \$20 millions Kingdom of Norway 6 per cent. External Gold Bonds were offered at 96½ in New York on August 15th, due August, 1923.—Ed. Economist.]

"The control of the national bank and the collecting of internal taxes on liquor and tobacco, together with all other custom house duties" were also "handed over to an American banking house," continues the article. The facts are that at the request of the Republic of Nicaragua an American banking group established the national bank, taking 51 per cent. of the stock and the management, while the Government took 49 per cent. of the stock. The collection of the internal taxes is done by the Government itself. No banking house took over the custom houses. The Government did appoint an American Collector-General of Customs, who has had charge since, whose duty is to pay the interest and sinking fund charges on the British sterling loan of 1909, and on other bonded obligations, and the balance to the Government. By reason of this security the British bondholders gave up all the liens and security for their loan, except that on the customs, and even reduced the rate of interest by 1 per cent., by which the Republic saved enough to pay the whole expense of collecting the customs duties, including the salary of the Collector-General, in respect to which your article makes an odious and incorrect comparison with that of the President.

"The rate of interest charged by the bank (national) is now $1\frac{1}{2}$ and 2 per cent. per month," says your correspondent with comment about "ruinous terms." The minimum rate in Nicaragua charged by any money-lender is 1 per cent. a month, high enough, but common in countries threatened with revolutions and lack of security to both life and property. Your correspondent has the banks mixed. A commercial bank in Nicaragua with British capital did charge $1\frac{1}{2}$ per cent. per month (for which they incidentally had justification under the circumstances), but the national bank has a fixed rate of 1 per cent. Many private banks charge 2 and even 3 per cent. per month. Security in Nicaragua has improved, but it is not the same as in Great Britain.

Your article speaks about a loan, "the only one offered was from the United States" (there was no other offer), whose terms were so onerous, 8 per cent. at 75, that it was rejected. As international loans have gone, an 8 per cent. loan was not so bad, only the other terms were never fixed, something under 90 being talked of but not consummated. That Nicaragua can even enter upon negotiations for a loan bespeaks an improvement.

You can get the facts about Nicaragua, which will refute your correspondent, from the annual report of the Corporation of Foreign Bondholders, whose secretary you can consult about the undersigned. The real situation is so at variance with what you published that it should be stated for the sake of the British investors who subscribed the loan of 1909 to Nicaragua, and who voluntarily reduced the rate of interest by 1 per cent. by reason of the present "control" over the country's finances. His article refutes itself. A country which on January 1, 1912, defaulted the debt charges on its bond, and can now be even seriously considered for an additional loan of any kind, is certainly in better economic condition.

Actually, this year's business is in much better shape. Exports are increasing, the money circulation is having a healthy growth, and the economic situation is much, much better. You must remember that Nicaragua is not an England, for instance. It was only 25 years ago that the H.M.S. "Sheerwater" had to go there to collect a British claim at the cannon's mouth. It is a far cry from that to present conditions about British debts, as stated above.—Respectfully,
CLIFFORD D. HAM,
Collector-General of Customs,
Republic of Nicaragua.

Our correspondent, writing under date July 30th, replies as follows to the comments of Mr Ham:—

Objection is taken to my statement that "A Financial Commission appointed by the United States has taken complete charge of the country's finances."

The National Bank of Nicaragua was established by a New York banking corporation, which took over the railways and steamboats of the country, and, by an agreement between the Governments at Washington and Managua, they assumed control of all revenues, including internal taxes on tobacco and liquor, together with all

Customs House duties. All these financial departments are administered by American collectors..... Could the Americans have assumed a more complete control?

With regard to economic conditions, Customs receipts declined from C\$1,237,593 in 1914 to C\$990,168 in 1921. The product and distribution of the country's revenues fell from C\$4,456,396 in 1920 to C\$2,794,029 in 1921. Imports fell from C\$6,393,068 in 1917 to C\$5,309,903 in 1921. Exports fell from C\$12,409,471 in 1919 to C\$8,070,949 in 1921. (See Corporation of Bondholders' Report for 1922, pages 263, 274, 275, and 276.)

Was I not justified in saying that "Nicaragua now finds itself in rather worse economic condition"? There is nothing in my article in the *Economist* to suggest that the railways were handed over for "love." Any intelligent reader would naturally assume that cash, or some other consideration, accompanied the transaction. The salary of the Nicaraguan President is \$5,000, while that of the American Customs Collector-General (Mr. C. D. Ham) is \$15,000. Is there anything, therefore, incorrect in my statement that one salary is three times as much as the other? The figures given by Mr Ham amply substantiate my statement that the rate of interest charged by the National Bank, is now $1\frac{1}{2}$ and 2 per cent. per month, while the British Consul, Mr T. I. Rees, says: "At present the country is suffering from scarcity of currency in circulation..... The result is that usurious rates of interest are being charged by private money-lenders. The situation seems to call for immediate ameliorative measures on the part of the National Bank of Nicaragua, the only bank of issue in the country." (This is an American institution.)

Here, again, I ask whether there is the slightest exaggeration in my description in the *Economist* of these terms being "ruinous"?

Our correspondent adds that he quotes the report of the Corporation of Foreign Bondholders in support of his statements, and reminds us that practically the whole of the statements upon Nicaragua in the Corporation's Report are derived from Mr Ham's own official report, which is quoted *in extenso*.

Books and Publications.

SILVER DURING THE WAR.*

In the economic organisation of the war silver played in some ways, perhaps, a more vital part than gold. Gold, it is true, was extraordinarily useful in connection with the financing of purchases in the United States before that country entered the war, but dollars were also obtainable by selling securities and by borrowing. The financing of our war effort in the East, on the other hand, was more closely dependent upon the provision of actual rupees in India, which could be obtained in the main only by shipping silver.

In the book before us Dr Pailhas describes how the war reacted upon the demand for silver, and how that demand was met, and he considers also the general position as regards production of silver before and during the war. Many of our readers are familiar with the general history of the silver market during the war. They will recall how the price of silver rose after an initial period of quietness, and how, when the difficulties in the way of providing rupees to finance the Eastern campaigns threatened to become insurmountable, timely help was obtained from the United States Government, which, by virtue of powers granted under the Pittman Act, was able to place at our disposal 200,000,000 ounces of silver out of the Treasury reserves. The continued rise in the price of silver during 1919 and the first quarter of 1920 was mainly caused, as the author shows, by heavy and continued demands from China. At the beginning of the war there were unusually large reserves in the banks at Shanghai and Hong Kong, and this silver formed an important part of the supplies which became available for India. With the revival of Chinese trade, China became thirsty for silver, but her thirst could not be assuaged till after the

* *L'Argent-Métal: La Hausse des Cours de 1914 à 1920.* By André Pailhas. Paris: Librairie générale de Droit et de Jurisprudence, 1922. 15 fcs.

war, because the bulk of the supplies of new silver were controlled by the American and British Governments. It was not till 1919 that China really got a chance to buy. The state of affairs which resulted when the silver contents of the token coins of the principal countries exceeded in value the nominal value of the coins is fresh in the minds of all. Many countries, among them the United Kingdom, reduced the proportion of silver in the coins, and some other countries, notably Germany, decided upon the total withdrawal of silver from circulation. Thus the magnitude of the rise in the price of silver led to an enormous increase of supplies, and a violent slump of prices. Silver has suffered a sharp set-back as a component of the currency of Europe, and has become more than ever the metal of the East.

Dr Pailhas also gives us an interesting survey of the conditions of supply of silver in the principal producing countries before and during the war. He points out that, unlike gold which is mined principally for its own sake, silver is largely a by-product. Few mines are exploited exclusively for the production of silver, which is found chiefly in association with gold, copper, lead, and zinc; and sometimes with tin, nickel and cobalt. Mexico was the largest producer of silver before the war, but output was affected by the revolutionary state of the country, and during the war by scarcity of cyanure of sodium necessary for reducing the silver-bearing ores. Until 1918, therefore, Mexico yielded first place to the United States, whose output remained fairly steady during the war, owing especially to the strong demand for copper and other metals, the ores of which are argentiferous. The Canadian output, which had been falling for some years, owing to the exhaustion of the deposits in the cobalt area, continued to fall during the war, while production in Australia was checked by the cutting off of the market for zinc concentrates and lead. On the whole, the world's production fell substantially from 224.4 million ounces in 1913 to 166.7 million ounces in 1916, after which there was some recovery. The heavy demand for silver during the latter part of the war, and during the period up till March, 1920, coincided, however, with a time of abnormally low output from the mines.

The volume under review is a welcome addition to the library of books which are appearing on various aspects of the economic history of the war.

EVERYBODY'S MONEY.*

THE question of currency reform seems to be coming to the fore once again in the United States as a political issue, and this bright little volume should do much to enlighten the "sovereign people" on the fundamentals of the case. Mr McCullough dedicates his book to the distressed peoples of the world, and exposes the dangers which result from treating a scientific problem in accordance with the dictates of political prejudice and superficial expediency. Historical examples are drawn upon to add point to the argument, while the English reader will be interested in a short non-technical outline of the working of the Federal Reserve system.

The author is no fanatical devotee of the "good old American dollar," and the purpose of this little volume is to popularise Professor Irving Fisher's plan for "stabilising the dollar" in terms of the general price-level. He is not afraid of being an advocate of what has been called the "dancing dollar," and the institution of Professor Fisher's "goods dollar"—a term which smacks somewhat of Soviet Russia—he characterises as "the only scientific and foolproof solution" of the problem of the monetary standard.

This little book is a simple *exposé*, and, especially in its final chapter, which is entitled "The National Standard of Value," perhaps rather too simple. While it is not designed for the serious student of economics, it should be of considerable value to the non-technical reader, though one still fears that the ideal short textbook on monetary science has yet to be written.

* "Everybody's Money: What it is, What it does, What should be done with it." By E. McCullough. Putnam's.

RISK IN BUSINESS.*

"THE connecting thread which runs through all the material is the influence of uncertainty." Thus writes Professor Charles O. Hardy in the preface to his book on "Risk and Risk-Bearing," a new volume in the series entitled "Materials for the Study of Business," which the University of Chicago Press is publishing. The author goes on to describe his book as "a study of the influence of uncertainty on business affairs." Admitting the importance of certainty in business management, Professor Hardy nevertheless agrees that there are definite limits to the application of scientific method in business. Perhaps those limits are not so narrow as they once were. Walter Bagehot's humorous but accurate passage on conditions as he knew them comes to mind: "Most men of business love a sort of twilight. They have lived all their lives in an atmosphere of probabilities and of doubt, where nothing is very clear, where there are some chances for many events, where there is much to be said for several courses, where nevertheless one course must be determinedly chosen and fixedly adhered to. They like to hear arguments suited to this intellectual haze."

Professor Hardy's book is a strictly matter-of-fact manual. There is no humour in it: none of those little whimsical turns which help a student's reading. Its style is massively informative. It is all good, solid, instructive matter. Despite its lack of touches of relief, those who want to understand business should derive much help from these pages. While linked by the thread of a consideration of the influence of uncertainty, the topics undoubtedly cover an extensive and diverse field. They include business forecasting, management of capital, securities, speculation in both stocks and commodities, hedging, and the various kinds of insurance. Life, fire, and miscellaneous property insurances are separately treated, as also are guarantee and suretyship. The two final chapters deal with the risks of labour and social aspects of risk-bearing respectively. Altogether, the work is a comprehensive introduction to a most important aspect of business affairs. It is written, of course, from the American standpoint, and the references are to American practices, but these do not differ fundamentally from the methods followed in this country.

STOCK EXCHANGE NEWS. SETTLING DAYS.

TICKET.	ACCOUNT.
August 22.	August 23.

The firm tone of the British Government's Note to France was thoroughly approved by the Stock Exchange, but its immediate effect upon markets was one of unsettlement, which was not lessened by the fall of the German Cabinet. The gilt-edged market was inclined at first to be quite firm, being supported by foreign buying, but later on prices weakened, and business became very slack. Public interest is now at a low ebb, and although towards the end of the week there was a disposition to take a more hopeful view of the political outlook, most departments have remained completely idle. Prices of

DEPOSITS (30th June, 1923) £295,905,730

FOREIGN EXCHANGE TRANSACTIONS ARRANGED.

CHIEF FOREIGN BRANCH:

168, Fenchurch Street, London, E.C. 3.

Funding and Conversion loans have dropped, the latter on sales for exchange into 5 per cent. War Loan. The foreign market has been very idle; French Government loans and some of the railway sterling bonds have declined; Brazilian bonds, too, were weak, on the President's Budget statement to Congress. Austrian Sixes recovered at one time to 2½ premium, but receded later.

Home Rails have been neglected, and such movements as have taken place have been downward. The foreign railway market has brightened a little, a feature being the recovery in Argentine Rails and a rise of 2½ points in United of Havana. American Rails have been a little better, and Canadian Pacifics are a point higher on balance.

The rubber market has shown a steady tone and firmness in some cases, while tea shares have been well supported, with a resultant upward movement in prices. Oils, on the other hand, have been quiet, with no particular feature. There has been very little business in industrials. Tobacco shares have lost their activity, and elsewhere movements have been small and insignificant. Hotel shares have met with a certain amount of favour, and iron and steel shares have been steady, but textiles have been idle. Bank shares have moved irregularly, and the shipping section has been featureless, but in the telegraph group Marconis have improved slightly. Niger preference fell sharply on the publication of the report, to which reference is made in a Note of the Week.

In the mining markets the tone has been better than in recent weeks, but business remains at a minimum. In the Kaffir section, Government Areas and Rand Mines advanced, but diamond shares were inclined to give way.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

COMPANY MEETINGS, &c.

MITCHELLS AND BUTLERS, LIMITED.

CHEAPER BEER—TRADE'S CONTRIBUTION.

LORD ASTOR AND THE LICENSING TRADE.

PROHIBITION'S UNDERHAND METHOD.

The thirty-sixth annual general meeting of the shareholders of this company was held at the White Horse Hotel, Birmingham, on the 16th instant, under the presidency of Mr W. Waters Butler.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen,—Last year, when moving the adoption of the report, I assured the shareholders that our business was never in a sounder condition, and that its prosperity would be increased with a revival in the general trade of the country. While it is still true that your business could not be on a firmer foundation, and your manufacturing conditions could not be surpassed, and also that your properties were never in a better state of repair and so fully prepared for a trade improvement, I regret the general industrial position has not tended to improve, but rather, we are told by members of the Government, there are indications of it becoming worse during the coming winter. Whether beer is looked upon as part of the daily diet of the majority of the people, or as a semi-luxury, the consumption must ebb and flow with the fluctuations in the industrial position of the country, and, of course, with the price of the commodity itself.

BEER DUTY.

Consumers have been loudly complaining—and rightly so—at the cost of the article, and appeals have been made to the Government of the day to decrease the excessive amount of beer duty, so that its price could be within the depleted purchasing power of the consumer, but it was not until the Budget of this year that any reduction took place. As to the part of the reduction which could be borne by the brewer, many wild and untrue statements were made, mainly due to those uttering them being totally ignorant of the technicalities of the manufacture or the cost of the production of beer. Their arguments were mainly based upon the fact that some breweries which in pre-war days did not enjoy prosperity, had during the war, and since, made their capital profit-earning, a change which I think cannot be said to be exclusive to the brewing industry. I question if, taking industries generally, a lower rate of profit is made on the capital employed in any of them than that of brewing.

BREWING TRADE'S CONTRIBUTION.

No one was more anxious that beer should be made cheaper than the brewing trade, and more willing to make a fair contribution towards that end. Few people realise the conditions which have been imposed upon the brewing trade in connection with the reduction of beer duty, which takes the form of a rebate of £1 per bulk barrel, leaving the duty per barrel of standard gravity to times greater than the pre-war duty. This rebate is on the bulk barrel, and not based on the strength of the beer, as has always been the case, and thus gives a greater preference to those who chiefly produce weak beers, a category in which your company cannot be placed, for it is well known that the ales and stouts we produce are far above the average strength. The aim of the Chancellor was that all qualities of beer should be reduced 1d per pint, which is equal to 24s per bulk barrel, but of the 24s the State should only find 20s, leaving 4s per bulk barrel to be contributed by the trade, and it was to be distinctly understood that no attempt would be made to recover that amount by lowering the strength of the beer. In the case of this company that contribution of 4s per bulk barrel represents an annual charge in excess of £120,000, which will only be recouped by a large increase in our barrelage, as we do not intend to reduce the high quality of our product. The Prime Minister made the statement that brewery profits for the last ascertained year came out at 11s 8d per barrel on the existing output, and expressed the view that a contribution of 4s per barrel was a very fair sum, taking one brewery with another. Notwithstanding that this amount represented fully one-third of the average profit—which is by no means an excessive profit—an amendment was put forward that brewers should be called upon to bear 10s per barrel, or practically equal to the whole of their current profit.

COMPANY'S MODEL HOUSES.

I am glad to say that on several occasions deputations have

been appointed by bodies interested in the question of the improved public-house to visit Birmingham, and it has been a great source of pleasure to me—as I am sure it will be to you—to know that surprise has been expressed at the splendid type of houses owned by this company. It has more than once been said by these visitors that they did not know such model houses existed. I feel confident the shareholders of this company desire that their directors should continue this policy, which on many occasions has had the support of true temperance reformers. I am not, of course, referring to the prohibitionist who covers himself with the veneer of a temperance reformer.

LORD ASTOR'S CRITICISMS.

It is very discouraging to find a man of the standing of Lord Astor taking advantage of a meeting of the Charity Organisation Society—at which one would have thought the speeches would have been concerning the work of the society—to deliver a tirade not only against the licensed trade and the consumption of alcoholic beverages, but particularly against the advocates of the reformed public-house, who, he said, were generally those who got profits by the sale of intoxicants, and that the movement had no influence whatever but for the fact that the trade was spending money on its advocacy. I had the pleasure of working with Lord Astor as a member of the Liquor Control Board, and then felt he was a true temperance reformer, but now he appears to be progressing towards the Prohibition camp, if he has not already arrived in it. It would be interesting to me to know why he, as a member of the Liquor Control Board, was a party to the improvement of public-houses, when many thousand pounds of public money were rightly spent—and are still being spent—in improving the public-houses of Carlisle? So far as I am aware, there has been no protest on the part of Lord Astor. He knows the trade is doing its utmost to support such a movement because they recognise that the demand for the improved public-house is a proper one, and is put forward by prominent men, who, so far as I am aware, have not the slightest pecuniary interest in the trade, but have at heart the interests of the nation quite as much as Lord Astor, but have not the persecuting character which I deeply regret he exhibits.

Surely it is an insult to such men to say their advocacy is due to the spending of money by the trade.

METHODS OF ENEMIES OF THE TRADE.

Lord Astor states that brewers in this country find it more difficult to fight openly under their trade banner, and are organising themselves to catch the unwary. I only wish that the enemies of the trade would come out into the open, and not shelter themselves under such banners as that of "The Temperance Council of the Christian Churches," and the "Strength of Britain Movement," and not make use practically every Sunday of a column in a prominent newspaper, such as the *Observer* is, for furthering teetotal propaganda, the editor of which declines to insert the comments of those who disagree with the views set forth. As Lord Astor says, the people who provide the funds were those who proposed the policy, so I suppose one can assume that his Washington correspondent and his medical correspondent must express views in accord with those of their paymaster.

Let us be thankful that this writing to order is not common to the Press of this country, and that it is an exception to find a prominent newspaper shutting out opinions with which the owner disagrees.

Personally, I am sorry to refer so forcibly to the remarks and actions of Lord Astor, because at one time I formed the opinion that he was as anxious as I am, and the vast majority engaged in the trade are, to support any movement for facilitating the sale of fermented beverages under conditions conducive to sobriety. His latest declarations, however, and his aiding, financially and otherwise, methods such as were used by the Anti-Saloon League in America, give me the impression that he and Lady Astor, while not declaring it openly, have Prohibition as their ultimate goal.

AMERICA AND THE LICENSING TRADE.

Lord Astor has charged the licensed trade with carrying on anti-American propaganda. He may rest assured that America and Americans will not be unfairly criticised by the licensed trade, but when fanatical and well-remunerated Americans come over here and preach fairy tales—a stronger term could be applied—about the success of their great experiment, while disinterested persons state, and produce evidence, that it is otherwise, he must not get peeved when the licensed trade in this country aids in spreading the truth.

Of course, what really annoys Lord Astor is the exposure of the growing failure of Prohibition in the States.

PROHIBITION AND DRUNKENNESS.

I do not want to trouble you again with my views as to Prohibition and what it would mean if imposed upon this country, but in support of the statements I made to you last year of the increasing drunkenness taking place, a remarkable article appeared in the *Westminster Gazette* in March last, written by Mr. Arthur Sherwell, whom I regard as a great and earnest student of the temperance question, but who certainly cannot in any way be looked upon as a writer having a tendency favourable to the licensed trade. In that article he gives the results of his inquiries into the arrests for drunkenness in 26 of the 50 largest cities in America. The figures are official, and were supplied to him by the Chief of Police in each of the cities concerned. He endeavoured to obtain authoritative figures for each of the 50 cities, but the attempt was not fully successful. In some cases no information whatever was forthcoming, and in others the information sent in was too slight and imperfect to be of any use. The police reports of the 26 cities show that in 1922 there were 254,000 arrests for drunkenness, or 1,500 more than in the year 1918, the last complete year of licensed sale in America. He states, the "stream of tendency" indicated is very clearly set in the direction of reaction. In nearly every case the increase was substantial, and in no fewer than one-half of the cities the arrests in 1922 were actually higher than the arrests in 1918. In the majority of these cases they were very substantially higher. He goes on to say that there is much evidence to suggest that "the stream of tendency" towards increase is not confined to the large cities of America; the figures very plainly suggest that alcoholic liquor is still a factor in American social life.

Prohibition in the States was brought about by the methods of the trickster, such as were practised by the Anti-Saloon League of America, which has its counterpart in the United Kingdom Alliance in this country, founded to bring about Prohibition—its telegraphic address is "Prohibition." It is evident the Alliance has now come to the conclusion that honesty of purpose will not advance its object; so much so, that when the only Prohibitionist Member of Parliament who had the sincerity to proclaim to his constituents that he was a Prohibitionist and appealed for their votes as such—I refer to Mr. Scrymgeour, the Member for Dundee—introduced his Prohibition Bill in the House of Commons (it only received 14 votes) the United Kingdom Alliance refused him the support he had the right to expect. One can only assume that the refusal was due to the extreme annoyance they felt that one of their own persuasion should so honestly, but so foolishly, in their eyes, expose their plottings.

Thus it comes about that we find avowed prohibitionists seeking a cover for their movements under such a body as the Temperance Council of the Christian Churches.

There has been lately received from His Majesty's Ambassador at Washington a memorandum on the effects of Prohibition in the United States, which is mainly based on statistics supplied by the opposing factors, as well as by the Federal Prohibition authorities,

but contains little information founded upon any investigation by the British Embassy at Washington.

CRIME AND MORTALITY FIGURES IN U.S.A.

Information by an American Department of State shows that deaths from alcoholism were in 1921 over 72 per cent. of those of 1918 (the last year of licence), and are rapidly increasing at a far greater rate than they were decreasing when so-called "wet" conditions prevailed. The Federal Unit of the United States Treasury agrees that criminal statistics indicate that crime is quite as prevalent as before the adoption of Prohibition, and the Department of Commerce shows that between July, 1917, and July, 1922, the number of persons detained in State prisons increased from 72.4 to 74.5 per 100,000 of the population, while during the same period the ratio of Federal prisoners per 100,000 of the population increased from 3 to 5.1, or 70 per cent. increase, plainly indicating that the form of crime now prevalent is of a much more serious character than formerly.

LABOUR PARTY'S REPORT.

Recently a special committee of the Labour Party presented a report on the liquor trade to the Labour Conference, but so far as I and others have been able to ascertain, the conference neither received, considered, nor adopted the report. It does not make any definite recommendations.

The report gives one the impression that it was drawn up by someone who held decided views against the consumption of alcohol in any form. For instance, when referring to the Drink Bill, a statement is made that: "If the labour and capital and the enterprise and managerial ability now put into the drink traffic could be diverted to the production of something of more durable utility to the community, it cannot be doubted that both the wealth and the well-being of the nation would be greatly increased." Surely an argument like that would apply to the production of bread itself. Like much teetotal propaganda, the report presents an alluring picture of what could be done with the money now spent upon alcoholic refreshments if all became abstainers, and diverted their expenditure in other directions. Nothing is said as to the way in which the millions of taxation, which represent fully one-half of the cost of alcoholic beverages, are to be made good. The expenditure upon alcoholic beverages is dealt with as if it were wasteful and sinful. Seeing it is stated that probably three-quarters of the total quantity of alcoholic beverages are consumed by 9,000,000 British manual wage-earning families, this report appears to hold up to odium the working classes, those representatives were responsible for the inquiry.

The committee state that they "see no sign that the British people are at all likely to be willing to vote, even by a mere majority, for a measure of National Prohibition in any space of time that we can usefully consider. We need only say that, as far as Great Britain is concerned, we deprecate the absorption of the time and energy of reformers in what we regard as, within view, an impracticable measure."

THE TRADE AND LICENSING REFORM.

The statements in the Labour Report concerning the attitude of the Trade, and the opinion of the committee thereon, would appear to give the impression to an ordinary reader that the Trade opposes reasonable reform, and that its financial strength prevents the bringing about of any reform, which view is utterly wrong. The Trade rightly resents the methods of so-called reform which would result in licensees being deprived of their living, and owners having their properties confiscated. As stated earlier in my remarks, I freely acknowledge that the growth of the improved public-house must be slow unless the clearing away of the ill-adapted and redundant licences is accelerated, which can take

place by the State or municipalities acquiring the properties with full consideration for those who suffer by the change of ownership, a policy which, as you are aware, I favour, but which in these days, I am afraid, is unacceptable.

The only course remaining, therefore, is for the licensing authorities to make application to the Secretary of State, for which the Licensing Act expressly provides, for power to borrow the necessary funds on the security of the compensation levy, the whole of which they raise annually from the owners of licensed property. Why this power is not made use of I am at a loss to understand, for the money could be easily raised, and a great and rapid advance in licensing reform would come about by its utilisation?

NECESSITY FOR ATTACK.

Ladies and gentlemen,—Let me again strongly urge upon you and all our shareholders to take your part in the defence of the industry in which you are interested, for never were our enemies more in earnest to bring about your ruin, or more unscrupulous in their attacks. I urge those engaged in our industry to attack and not to simply act on the defensive—a position we have too long occupied. We have, in the past, rather looked upon our enemies as cranks, poor harmless fanatics, with few taking notice of their utterances; and have, as it is said, allowed the lie to have a start, thinking no one would accept it as the truth. But repeat a lie often enough, and give it a wide circulation, then it appears to gain the label of truth. That has gone on long enough. Do not be convicted by default. We are carrying on a legalised trade and doing our best to meet a public need, and will resent in no uncertain manner the slanderous statements and un-English tactics imported into this country by alien parasites who take advantage of that hospitable spirit which is so characteristic of our people. Old England is not yet "down and out," and can still fight its battles, although heavily handicapped at times by those within its gates, whose bitter prejudices, while permitting them to praise, sympathise, and even render aid to the enemies of our country, blind them to the requirements and sufferings of those among whom they live. These cankers on our nation's growth have to be eradicated, and the kill-joy depression which we could not avoid during the war has to make way for the freer, more bracing, and fraternal spirit of our youth. All engaged in the industry with which we are proud to be connected intend to exert to the uttermost all the power they possess to restore a "Merrie England," and in doing so will not stoop to unworthy tactics, but will demand fair play.

With these remarks, ladies and gentlemen, I beg to move the adoption of the report, and will ask Lieut.-Col. H. S. Staveley-Hill to second the resolution.

Lieut.-Col. H. S. Staveley-Hill seconded the resolution, which was carried unanimously.

WATNEY, COMBE, REID, AND COMPANY, LIMITED.
RESULTS OF THE YEAR "HIGHLY SATISFACTORY."

The ordinary general meeting of Watney, Combe, Reid, and Company, Limited, was held, on the 13th inst., at the Charing Cross Hotel, Strand, London, Mr H. Cosmo O. Bonsor (the chairman) presiding.

The Chairman said: Gentlemen,—I think we may all say that our balance-sheet and accounts are highly satisfactory. We have had a prosperous year. On the debtor side of our balance-sheet certain reserves which appeared in the 1922 balance-sheet have disappeared and are replaced by the increase in the deferred stock capital.

I am indebted to Mr Spyer, a shareholder, for writing to me and asking me certain questions. We mention in our report that during the year we have reduced our prior charges by £72,000. Mr Spyer calls our attention to the fact that the £36,000 of debenture stock purchased does not appear in the balance-sheet or in the profit and loss account. He is perfectly right; the £36,000 of debenture stock was purchased out of the ordinary income.

Mr Spyer also asks how our Government securities are valued. They are not valued at all when the amount in our books is less than the market value. As a matter of fact, if we were to realise our Government securities to-day there would be an appreciation of over £30,000. You will observe also that our sundry creditors stand high, the reason being that we owe the Government for both income-tax and corporation profits tax due on January 1st last. Under an arrangement we have not paid them, pending the settlement of our claim for repayment of excess profits duty. The difference between the balance-sheet figure of 1922 and that of 1923 is some £200,000, and if you look at the profit and loss account you will see that the rates and taxes show a reduction of practically that amount on what was in the 1922 account.

Our sundry creditors are also larger in consequence of the fire at Mortlake.

COBHAM UNITED BREWERIES.

On the credit side of our accounts you will see that there is a big increase in freeholds and leaseholds and in trade invest-

ments. The trade investments are up in consequence of our having acquired during the year the whole of the share capital of the Cobham United Breweries, Limited. That company will now go into liquidation, and the figure will be added to our freeholds and leaseholds in the next balance-sheet. During the current year we have purchased several houses on the Duke of Westminster's estate. The leases were getting short, and we have acquired the freeholds. We are absolutely satisfied that this is a most excellent investment, although it took up a considerable amount of cash. On the whole, I think you will consider that our figures are satisfactory.

Turning to our report, you will see that we recommend the same dividends as last year, and we also recommend that out of the year's income £200,000 should be carried to reserve, and that any repayment of excess profits duty should be carried to the same reserve. Those sums will be invested in our business, if they have not already been so invested. That reserve, therefore, will not be a cash reserve. I think you will appreciate that a business like ours cannot possibly stand still—we must either progress or go backwards. We all wish, naturally, to progress, and there are only two ways that I know of of finding the money for progressing. One of those ways is by the provision of fresh capital—a thing which I think the shareholders, and certainly the board, would deplore. The other is to set aside a certain amount of the profits of the year for maintaining the business and for going ahead. Under the 1904 Compensation Act we lost a certain amount of trade each year, and it is our object always, if we can, to replace it. There is another way of spending these undivided profits—namely, in developing our existing channels of business by rebuilding and improving our present public-houses, and increasing their attractions and giving the facilities to which the public are entitled. That is the policy which we are pursuing.

CHEAPER BEER AND ITS EFFECTS.

Among our shareholders it is possible that there are some who never read the papers at all, and it is more than probable that others who do read the papers have short memories, and, looking into the Budget, they probably recollect that 6d was taken off the income-tax and 1d off a pint of beer, but they do not go into the question of how that penny was to be provided for. In case any shareholder does not understand it, I may say that a penny a pint means 24s a barrel, and the arrangement was that the Government would give a rebate of 20s per barrel and the trade were to find the additional 4s. That is, of course, a serious burden, but it was pointed out that an increased consumption would assist the trade to recover that 4s. When we issued our report we had before us the results of May and June, and I am bound to say that they were not at all encouraging. Since then, however, we have had "beer-drinking" weather, and our trade has certainly crept up in a very satisfactory way. It will average itself over the year, and we shall be able to tell you more about it when we meet 12 months hence. I beg to move: "That the report, balance-sheet, and accounts for the year ended June 30, 1923, as submitted, be approved and adopted."

Mr Charles J. Phillips (deputy-chairman) seconded the motion, which was carried unanimously.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £30,000,000 in Treasury Bonds and Treasury Bills dated from Aug. 20-Aug. 25 were opened on Aug. 17, 1923, and the total amount applied for was £46,000,000. Tenders for Monday to Friday bills at £99 4s 4d, and above in full, and for Saturday bills at £99 4s 6d, and above in full. The amounts allotted were as follows:—In bills at 3 months, £30,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.
July 6, 1923.	30,000,000	39,185,000	3 10 2-02	100
July 13, 1923.	30,000,000	42,315,000	3 1 0-95	100
July 20, 1923.	30,000,000	42,925,000	3 1 10-93	100
July 27, 1923.	30,000,000	50,940,000	3 0 2-99	100
Aug. 3, 1923.	35,000,000	55,375,000	3 4 4-95	100
Aug. 10, 1923.	30,000,000	52,405,000	3 2 2-59	100
Aug. 17, 1923.	30,000,000	46,000,000	3 1 8-21	100

Tenders will be received on Aug. 24, 1923, for Treasury Bonds and Bills to be issued to the maximum amount of £40,000,000. The amount of Treasury Bonds issued will not exceed £4,000,000.

Reports and Notices.

GOVERNMENT STOCKS, &c.

EGYPTIAN GUARANTEED 3 PER CENT. LOAN.—The dividend on this loan, due on September 1st next, will be paid by Messrs N. M. Rothschild and Sons on the following Monday and on each succeeding day (Saturdays excepted) between the hours of 11 and 2. Printed forms to be applied for and the coupons left three days for examination.

UNITED STATES OF BRAZIL 4 PER CENT. LOAN OF 1911 FOR \$4,500,000 NOMINAL CAPITAL.—The dividend on this loan, due on September 1st next, will be paid by Messrs N. M. Rothschild and

Sons on the following Monday and on each succeeding day (Saturdays excepted) between the hours of 11 and 2. Printed forms to be applied for and the coupons left three days for examination.

AMALGAMATED PRESS (1922), LIMITED.—The report for the year to June 30th last shows a profit of £531,595. After deducting £10,000, transferred to pensions and allowances fund, and £25,000 to reserve fund, together with interim dividends amounting to £155,276, the directors recommend a final dividend of 25 per share, making 15 per cent. for the year. It is stated that the net sales of the company's periodicals and magazines are satisfactory, and that the revenue from advertisements was the largest in the history of the business. The directors regret to have to record the great personal loss sustained by the death of Lord Northcliffe, the founder of the firm, who, though he retired from active participation in the business in 1915, continued his interest in the company to the last.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent writes on August 16th as follows:—Pig-iron: The flatness of the market is intensified by the holiday period, and there is practically no business doing except for small quantities for immediate requirements. The quotation for No. 3 Cleveland G.M.B. is now 19s 6d, whilst East Coast mixed numbers hematite is firmer at 99s, with No. 1 at 99s 6d. The reduction in the output of hematite has not had any appreciable effect on the market yet. Manufactured Iron and Steel: Trade is very quiet indeed, and a good many works are reducing output owing to lack of orders. Most of the works in this district will be idle next week for the local holidays. There is a reduction of 10s in the price of steel rails, soft billets and fish-plates. The quotations are now as follows:—Steel ship plates, £10; steel ship angles, £9 10s; iron bars, £12; steel rails, £9 10s. Iron ore: There is practically no new business doing, but the continued strike at Bilbao is causing some anxiety to local ironmasters. However, they have sufficient to keep them going for a little while along with other ores from the Mediterranean. Prices are nominal on the basis of Best Rubio at 23s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—The depressed conditions of the steel trade are being accentuated by the effect of the holiday period. About half the existing open-hearth plant is in operation, but makers' order books are fast approaching depletion, and next month will be a critical period, as, should buying fail to revive, a wholesale stoppage of furnaces is inevitable. There are no signs of such a movement, and the refusal of steelmakers to buy scrap

suggests that they are none too confident. Prices are still on the down grade, as makers can only secure business by offering concessions. Local soft wire rods have been reduced 10s to £12 10s. Work in the railway axle, tyre, and spring departments continues to increase, mainly owing to orders from the home railway companies, and the prospects for makers of such material are considered good. Work for overseas railways is limited in quantity. A limited amount of armament work is on hand, and further orders for naval shells have just been received. The market for steam coal is firmer as regards the export trade, and, with forward inquiry brisk, prices are being strongly held. The home trade is quiet in all sections, as manufacturing requirements are decreasing. Current prices per ton at pits are:—Best South Yorkshire steams, 21s; best Blyth steams (f.o.t.), 23s; Durhams (f.o.t.), 25s; rough slacks, 11s 6d; nutty slacks, 10s; smalls, 7s to 8s; best hand-picked branch, 32s 6d; Barnsley best Silkstone, 26s 6d.

Our Glasgow correspondent writes:—Demand for Scotch pig-iron has slackened off a bit this week, and as stocks are steadily on the increase, there has been a revival of the rumour that some furnaces may be closed down. Prices are very unsteady. Scotch hematite is called £5 12s 6d to 15s; No. 1 foundry, £5 10s; and No. 3, £5 5s (each on trucks at makers' yards), and it is stated that producers, for a fair line, would probably yield a little in each connection. An exceptional inquiry, on export account, has sprung up for galvanised material, and sheets have been advanced by fully 5s a ton at £10 a ton. Black sheets are also in improved request (for shipment), and are harder in tendency. Bar iron is more frequently asked for (for shipment), and crown sorts are

The First National Bank of Boston

Correspondence solicited.

readily bringing £13 a ton. Boiler plates remain firm all the same at £13; ship plates, £10; sections (5s down) at £9 15s; and 4-in. plates, £12 10s—all delivered Glasgow. Structural steel is more actively sought after, and makers advise that prospects are expanding. The feature of the week, possibly, is the development of the positions in sugar machinery and in marine engineering generally. Sir William Arrol intimated on Monday the booking of a contract, involving about \$1,000,000, for the construction of a dam and power house for the Hollinger Consolidated Gold Mine. And in general, additional increased bookings are registered by bolt and nut riveters, pipe and tube makers, waggon builders, and locomotive engineers (the last-named arrangements are not up to expectations). The coal market has lost ground this week, because of it transpiring that the German and French consumers were failing to meet their engagements on cargoes forwarded. Quotations have given way by 2s 6d a ton since Monday.

CUMBERLAND IRON.

Bessemer mixed numbers continue to stand at £5 12s 6d per ton, delivered at Glasgow and Sheffield, and £5 15s per ton, delivered at South Wales ports and at Birmingham. Special brands of low phosphorus iron are likewise in small request by high-class steel manufacturers in the Midlands. Makers of manganese alloys holding substantial delivery orders, are in a strong position, though there is not much new business being booked, and ferro commands £18 per ton delivered at home works, and £20 for export, with spiegel steady at £10 at home works, and £9 10s for export. There is only a local absorption of the native hematite iron ore, and with so few furnaces in blast, there has, of course, been a considerable shrinkage in production. Most of the privately-owned mines are closed, and the remainder are not raising average outputs. Prices are a little easier, but sorts of low phosphorus ore being quoted at 24s to 26s per ton, and ordinary kinds 19s 6d to 21s 6d per ton. The steel trade is very dull. No rail orders are being obtained, and the rail mill does not work oftener than once in six weeks. Heavy sections are £9 10s to £10; lighter sections, £10 10s to £11; and billets, £8 per ton. The coal trade has been adversely affected by the labour troubles at the South of Ireland ports, and cross-Channel shipments are rarely above 8,000 tons

per week. Had the Whitehaven collieries been producing, short time would have had to be worked at all the pits. Users are clamouring for concessions, but, so far, prices have been maintained, best round being 27s 6d; house nuts, 26s; and washed nuts, 24s per ton. In the local landsale market, best house is 38s 2d at pit; gas coal, 29s at works; best steam, 30s; and washed steam 29s per ton, delivered. The coke trade alone is flourishing. Part of the make is going to the local furnaces smelting ordinary iron at 29s to 33s, according to carbon content, and between 2,000 tons and 3,000 tons weekly to the Continent at 34s to 40s per ton, f.o.b. East Coast coke supplies average about 8,100 tons per week.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The wool textile industry is passing through an exceptionally quiet period, and this has been emphasised during the past week on account of mills in the Bradford district being closed for the annual holidays. In many cases firms are taking an extended holiday on account of the slackness of trade, and it will be another week before all the mills resume. In the circumstances, business is of a hand-to-mouth character, and there is not enough doing in any section to test prices. The one bright feature is the way in which wool continues to sell. Inquiry on Continental account is still well maintained for merinos, and some Yorkshire firms are still interested in crossbreds. The demand for home-grown wool is also good, and in this department prices are very firm, with holders adopting a more or less independent attitude. Probably little will be done in the way of new business until the position has again been tested in London, where the colonial wool sales re-open on September 4.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Many are discussing the likely course of wool values during the forthcoming colonial season, and already buyers are beginning to leave for Australia in readiness for the opening of the season at the

CANNED GOODS.—The market for sardines is steady, and a moderate demand prevailed, while there is now a better selection of the finer grades available. French 18 oz, quoted 15s 6d; quarter-tins, 7s; Portuguese quarters, 2s 6d to 3s 3d; ditto 12 oz, 5s to 5s 6d; ditto 18 oz, 9s 6d to 11s per dozen tins. Lobster was accorded steady support, with only light supplies on offer. Fancy halves quoted 16s to 16s 5s, with second quality 15s. General steadiness characterised the market for salmon, and with sustained inquiries business during the week proceeded with fair freedom. 1 lb flat reds, labelled, quoted 55s to 58s; ditto, tall, 41s 6d to 42s 6d; 1 lb flat pink, 24s 6d; ditto, tall, 23s 6d; cases of 96 half-pounds, 29s to 31s. There was a decided improvement in demand for most descriptions of canned fruits, which resulted in fair transactions at full prices. Singapore pine of fair quality, on spot, 5s 10d. Californian apricots, 7s to 11s; peaches, 8s to 12s; pears, 12s to 14s 6d. Tomatoes remain dull of sale. Spanish threes quoted 6s 6d; Italian ditto, 7s per dozen tins. Only quiet trading resulted in meats at steady rates.

OILS.—Lined seed firmer. Spot, net, naked, quoted 40s 6d; August, 38s; September-December, 36s 9d; January-April, 34s. Rape dull. Crude, spot, 37s 6d; refined, 40s 6d. Cotton easier. Crude Egyptian, spot, 34s 6d; common edible, 43s; deodorised (in barrels), 45s. China-wood nominal. Hankow, spot (barrels), 99s; August-September, 90s. Coconut steadier. Ceylon, spot, 42s; August-September, 38s 6d; Cochin, ditto, quoted 46s. Soya quiet. Oriental, barrels, July-August, 34s 6d. Japan fish nominal. Cod quiet. English, spot, 34s. Groundnuts quiet. English, crushed, naked, spot, 42s; deodorised, barrels, 51s. Turpentine firm forward. American, spot, 71s 9d; September-December, 72s 9d; January-April, 74s 3d. Rosin quiet. American, grade B, 13s; F, 13s 3d; G, 13s 3d; H to I, 13s 3d; WG, 16s; WW, 17s per cwt. French nominal. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon. Castor-oil lower. First pressure, spot, quoted 51s; second pressure, 50s, and pharmaceutical 56s per cwt.

OILSEEDS.—Lined irregular. Bold Bombay, afloat, £19 10s; small Bombay, ditto, £18 10s; Calcutta, afloat, £18 10s to £18 15s; August-September, sold, £18 8s 9d to £18 15s. Plate, afloat, £17 11s 3d; July-August, £17 7s 6d; January-February, £15 16s 3d. Rapeseed firmer. Toria, August-September, sold, £15 10s; real bold Ferozepore, ditto, £15 10s; Jamba, £11 15s. Cottonseed quiet. Egyptian black, new October, £10 5s; and white, £9 15s, to Hull. Bombay, August-September, £9 5s; December-January, £8 10s. Gingly seed quiet. Large Bombay, afloat, Continent, sellers, £21 10s. Chinese, October-November, £21, Continent. Groundnuts dull. Coromandel, machine-dried, August-September, £20 5s. Chinese decorticated, f.a.q., October-December, £20 17s 6d; East African, August-September, £19 10s. Soya beans quiet. Manchurian, August-September, £11 2s 6d. Castorseed easier. Bombay, July-August, £18 10s per ton.

METALS.—Tin: Opened easier in sympathy with lower Eastern advices, but a fair business was effected at the decline, especially for distant positions. Standard cash sold at £182 10s, and three months, £182 10s to £183 10s. Eastern cables reported sales on the basis of £187 5s, c.i.f. Slight irregularity was subsequently apparent, though prices were firmer on balance with sustained inquiries for forward dates. Standard cash sold up £184 12s 6d; three months fluctuating between £184 10s to £185 10s and £185 5s. Further sales occurred in the East at the advanced rates, £188, c.i.f. At Thursday's market values ruled firmer though closing below the best. Standard cash sold at £185 17s 6d to £184 15s, and three months, £186 10s to £186 17s 6d to £186. On the following day near position were firmer, but three months after improvement marked a setback, while closing with no material change on balance. Cash sold at £185 15s, and three months, £186 10s to £186 5s to £186 15s, down to £186. English ingots quoted at £185 15s to £186 5s. Copper in fair demand, but prices easier in view of lower cables from the United States. Standard cash sold at £64, and three months £64 15s to £64 10s. Quiet conditions continued to prevail, and prices showed slight irregularity, forward positions being most in request. By the middle of the week standard cash was dealt in at £63 15s, and three months £64 10s to £64 11s 3d. On the following day rates proved fully steady, with business on a moderate scale. Standard cash sold at £64 to £63 18s 9d, and three months £64 15s to £65 to £64 15s. A larger business transpired on Friday, and tendency of prices in buyers' favour. Cash sold at £63 12s 6d, and three months, £64 12s 6d to £64 7s 6d. Electro, £69 5s to £69 15s; best selected, £66 15s to £68 5s. Strong sheets, £98. Wire bars, £69 15s per ton. Antimony quiet. Ordinary brands nominally £30 to £32; special, £31 10s to £35. Aluminium: Home trade, £115; export, £120. Lead quiet, steady, at £24. Spelter dearer at £32 15s to £32 5s, according to position.

maturity or interest payment, are nearly always disappointed, but nevertheless spring eternal in the market's breast. Caution was induced, on the other hand, by further weakness in the New York exchange, with its possible reaction on the psychology of the Bank of England.

	Aug. 24, 1923.	Aug. 17, 1923.	Aug. 10, 1923.	Aug. 3, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	5 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3½	3½	3½	3½	..

The Bank return showed a decrease of £551,000 in the note circulation, and a corresponding increase in the reserve. Government and other securities rose by £620,000 and £933,000, and so, in spite of the transfer of nearly five millions to the Public deposits, presumably through tax payments, Other deposits were less than three millions lower. The circulation of currency notes shows a contraction of £4,267,000 to £286,768,000, which includes £1,455,500 for notes called in but not yet cancelled. The fiduciary issue is now £235,862,700, which is £34,321,100 below the maximum.

THE STOCK MARKETS.

Although a fairly cheerful tone has prevailed in the stock markets business this week has remained on a small scale, the only sections where any kind of activity has prevailed being the gilt-edged market and the tea and rubber departments. In the case of the former War Loan and Conversion Loan have been the centre of attraction, but prices of other gilt-edged stocks have been firm. The fluctuations of the franc have disturbed the foreign bond market, but Home Rails, though quiet, have been inclined to improve. In the industrial section textiles have been the best feature; oil shares have been steady, but mines have been quiet.

THE COMMODITY MARKETS.

Markets are still under the depressing influence of the holiday season and the political situation on the Continent. Owing to local holidays, our Middlesbro' correspondent reports, there has been no market this week in pig-iron, and the steel works in the district are closed. Tin moves up and down, but copper is slightly depressed. The fluctuations in raw cotton rates have been disturbing, and at the moment a most uncertain feeling prevails with regard to future developments in the Manchester cotton trade. In spite of the prolonged holidays and apathy of buyers, wool values are fairly firm. Wheat prices were inclined to be easier, while sugar quotations were lower. A good demand for linseed oil, coupled with the buying of seed by crushers, contributed to a marked advance in the oil. At the Bermondsey hide market on Thursday a decided weakness in prices was noticeable.

FOREIGN EXCHANGES.

In the foreign exchange market business has continued restricted, with considerable fluctuations in Continental rates. In the earlier part of the week the dollar showed a decided downward tendency, moving quietly from \$4.56½ on the 17th to \$4.55 on the 21st. Since then it has been somewhat irregular on slightly higher levels, and yesterday morning was again quoted rather higher at \$4.55½. The outlook is uncertain. On the one hand, the recent habit of anticipating the autumn fall and the extreme dullness of trade might suggest that the lowest point for the time being had been reached. On the other, it is possible that a good many food and raw material purchases have still to be made, in spite of bad trade, while serious trouble

in Europe might at any time be reflected in a further fall. Forward rates, at ½ cent per month over spot, show no change on the last two weeks. In sympathy, as usual, with the dollar, the Dutch rate has moved against us, from 11.58½ fl to 11.57½. The mark in the early part of the week, perhaps through fear of the drastic taxation proposals of the new Government, moved up rapidly to a rate at one time on the 21st as high as 45,000,000. From this there was a sharp recovery on the following day to 23,000,000, coinciding with the announcement of the resignation of Herr Havenstein from the Reichsbank; and since then there has been a further quiet recovery to 20,000,000, as compared with 16,500,000 a week ago. Little or no business, however, is done at these rates, and the position in the absence of a Reparation settlement seems almost hopeless, although the new Government, by its taxation proposals and the issue of a new gold loan, is making what would seem a sincere effort to stem the tide. Forward marks are quoted nominally, as last week, at about 4,500,000 marks per month above spot. The Paris rate, on the expectation of a more conciliatory reply from M. Poincaré, moved steadily down from 82.60 on the 17th to just under 80 on the 21st. Since then there has been a very natural reaction, although yesterday morning the rate was a little better at 81.15. At the same time, there is a feeling of uncertainty, since the last French Note, in spite of its apparently friendly tone, would seem to have produced a deadlock, and the weight of Budget difficulties, with the inevitableness sooner or later of heavy taxation or further inflation, appears already to be having its effect in sending French money abroad. The Belgian rate has also shown some recovery from 103.90 to 101.40, although hardly so much as might have been expected in view of the coming Belgian loan in Paris. Forward rates in Paris are slightly narrower at 4½ centimes per month above spot; in Brussels they are unchanged at 6 centimes above. The Italian rate also shows a slight recovery from 106½ to 105½. Spain, after reaching 34.25 on the 21st, has improved to 34.05, as compared with 33.60 a week ago. At the same time, the most recent bank return shows a considerable reduction in note circulation. Switzerland, on the other hand, has reacted again, moving up on the week from 24.95 to 25.20. In Northern Europe Stockholm is practically unchanged. Christiania, after a recovery, is up again to 27.95, slightly above last week's figure. Copenhagen, on the other hand, is rather better at 24.42, and Helsingfors has fallen ½ mark to 164½. In Central Europe, Vienna remains unchanged, and Warsaw at 1,000,000 shows a distinct improvement. Prague has dropped about 1 kr to 155, and Bucharest, after being down to 950, is at 1,025, considerably better than a week ago. In the East, the rupee, as the result partly of conditions normal at this time of the year, partly of bad trade prospects, has fallen from 15 4 1-32d to 15 3 31-32d. The yen, however, is slightly dearer at 25 1-25-32d. The silver market is extremely dull, with a slight downward tendency. Shanghai has fallen from 35 1d to 35 0½d, Hong Kong from 25 3¼d to 25 3d. In South America, Brazil dropped suddenly after the withdrawal of the exchange regulations so recently introduced, but whether as the result of this or of the Government's rumoured coffee plans is not clear. Yesterday the quotation was just under 5d, as compared with 5½d a week ago. Buenos Ayres, after being lower, recovered on news that a further loan had been arranged in the U.S.A. to meet repayments there now falling due, but the rate at 38½d was lower than the 39 1-32d quoted a week ago. Montevideo at 38½ was unchanged. Valparaiso at 37 pesos showed a depreciation of ½ peso.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 11th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	9,450	From Revenue	18,019
Interest, &c., on Debt	409	From Exchequer Balances	508
Sinking Fund	750		
Sundries	785		
Debt Reduction	7,133		
	18,527		18,527

Excise brought in £8,010,000 as against £10,675,000 in the corresponding period a year ago. Customs yielded £1,580,000, while Property, Income, and Super Tax contributed £4,270,000. The week's operations decreased

the National Debt by £7,133,081, and caused the following changes:—

	Min. £		Min. £
Public Departments	9,950	Treasury Bills	2,769
National Savings Certificates	10,000	Sundries	2,867
			2,867

The floating debt was reduced by £7,255,000 to £792,791,500.

FINANCIAL YEAR, 1923-24 (April 1 to August 18, 1923).

	£		£
Total Expenditure ..	294,690,733	Raised by Revenue ..	293,179,331
Net Repayments	1,727,582	Decrease in Balances	3,238,984
Total	296,418,315	Total	296,418,315

ESTIMATES FOR YEAR 1923-24.

	£		£
Ordinary Expenditure ..	801,013,600	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,600	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On a later page of this issue will be found reports of the meetings of the Niger Company, Limited, and of Claudius Ash, Sons, and Co., Limited. At the former, Viscount Leverhulme strongly criticised the Colonial Office policy in West Africa. At the latter, the chairman mentioned the formation of a Dental Trade Association to stop "the suicidal policy of price-cutting."

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world.

A DISAPPOINTING REPLY.

It is difficult to understand the enthusiasm expressed in Paris for the latest of M. Poincaré's Notes, or the assumption that it contributes anything towards maintaining the Entente. It certainly sets out the oft-repeated arguments and assumptions of the French Government forcefully and with considerable repetition; but it contains nothing that could conceivably modify the opinion of anyone who has understood the British case. The best that is claimed for it in responsible quarters here is that it refrains from adopting an injured or discourteous tone—a real cause for satisfaction, seeing that the British Government has taken the responsibility of calling a spade a spade—that it publicly repeats that France has no annexationist aims and will modify the form of her occupation if Germany ceases passive resistance, and that M. Poincaré is ready to go on talking.

But for any substantial contribution towards finding a way of reconciling the viewpoints of France and Great Britain we look in vain, for the Note is considerably less favourable than the forecasts in the Paris Press which preceded it. We had been led to believe that M. Poincaré was going to say that since Great Britain had whittled down what she expected to obtain in respect either of Reparation or of Allied debt, the French Government would make some advance towards a settlement by offering not merely to modify the character of the Ruhr occupation if passive resistance ceased, but also to end the evacuation altogether if France could secure an absolute certainty of payment by some other means. Unfortunately there is no sign of this in the Note, which does little more than reiterate what M. Poincaré said in January last, together with the assertion that the occupation of the Ruhr will only be brought to an end in proportion as Reparation payments are actually made. But Great Britain, having committed herself to the view that the occupation of the Ruhr is illegal, cannot become a party to an arrangement under which the military occupation of the Ruhr continues as a pledge for payment of Reparations. The road, therefore, to an agreement remains completely blocked.

Nor does the scheme of payment from which so much was expected help us at all, for throughout the Note

there runs as a sort of self-hypnotising refrain "our firm resolve, declared a hundred times, not to give up one centime of our Reparation claim, which is sacred (!), and which is comparable with no other claim; there is in addition our resolve not to abandon the pledge which we hold until after the complete payment of Reparations." M. Poincaré's idea of negotiation is simple, and leads direct to the one and only possible end. As a matter of fact, the Note contains no scheme at all, but repeats the plan of January last, with a very slight variation, viz., that France will only claim C bonds so far as she is asked to pay her debts, whereas in January she offered to cancel C bonds so far as she was let off her debts. But in either case this way of putting the case is in effect a way of placing the responsibility for the final total of the demand on Germany fairly and squarely upon the shoulders of the United States. Great Britain has now said that all she requires, either from Germany or from her Allies, is 14.2 milliard gold marks. If the German debt were fixed at 50 milliards, our share would be 11 milliards, or 550 million sterling, leaving a comparatively small balance to be paid as inter-Allied debt. The outstanding obligations of the European Allies towards America, however, amount nominally to nearly 25 milliard gold marks. Great Britain's declaration in her last Note means in effect that we are prepared to use the whole of the amount which we may hope to get from Germany in order to pay America. If the European Allies adopted the same point of view, and were content to use their respective shares of the 50 milliard gold marks in order to repay their respective American debts in full, it would eat up most of Germany's Reparation payments, leaving only a small balance for the restoration of Europe, which would have to be carried out, as it is now being carried out, at the expense of the taxes of France, Belgium, and Italy. France says categorically that she is not prepared to accept this principle, and maintains that however distasteful it may appear she is entitled to add to the bill against Germany the full total of what America and Great Britain ask her to repay.

The dilemma may be best illustrated by a simple table for the purposes of which we will assume that the American Government is willing to grant to European Governments the same funding terms as were granted to Great Britain:—

	(Milliard Gold Marks.)			
	Present Value of Debt to U.S.A. Claimed from Germany.	Amount Claimed from Germany for Reparation.	Share of 50 Milliards on the Spa Per centages.	
Great Britain.....	14.2	nil	11	
France.....	10.0	26	26	
Italy	5.5	?	5	
Belgium	1.2	5	4	
Other (excluding Russia)....	5	?	4	
Total.....	31.5	31	50	

If Great Britain asks the Allies to make up the balance of three milliards which remains over and above her share of Germany's payments, the table means that Great Britain and the United States will ask for 20 milliards from the European Allies out of 39 milliards remaining to them out of Germany's payments—leaving only 19 milliards to cover claims, which are 31 milliards for France and Belgium alone. It is this sum which worries M. Poincaré, and makes him unwilling to surrender his theoretical claims against Germany. M. Poincaré is, however, far from generous in his treatment of the British offer. He concedes grudgingly that we are entitled to ask for repayment of our debts, but claims that even if France gets from Germany the money to pay her debts as well as the cost of restoration, she will have sacrificed more than Great Britain—a curious argument, which forgets that we have theoretical claims for inter-Allied debts amounting to some 25 milliards (excluding Russia), as well as to Reparations for various forms of material damage, for which we shall get no return at all.

But while the main financial argument is directed more against America than against England, the Note also challenges, as we think with great force, the suggestion of Great Britain that we should get 14 milliards either

from Germany or from France, implying that the more Germany fails to fulfil her obligations the more heavily shall we come down on our former Ally. The only argument that we have ever heard in favour of this view is that if Germany fails to pay, we may assume that it is the result of France's action, and she may therefore be reasonably asked to make good Germany's debt in return for the luxury of having destroyed Germany's economic existence. But this, of course, is making a very sweeping assumption, and so long as there is to be any *Entente* at all between the two nations, we cannot possibly base our policy on such a principle. We prefer to think that the British Government's statement is intended to help to make precise the elements of the problem, as, indeed, it has already done, and that it is not Great Britain's last word.

But while the Note does not make a sufficiently substantial advance to enable Great Britain to make any further offer, the significance of the last fortnight has been the evidence of a desire across the Channel to prevent a breach in the *Entente*—evidence that is shown more in the attitude of the Press and in the tone of M. Poincaré's last speech than in the actual suggestion of the present Note. As we have said, we do not see that the Note gives much opening to Great Britain, but it does afford an opportunity for making innumerable debating points in reply to many misleading and unsound arguments. We can, therefore, well believe that it will be followed by a diplomatic wrangle, which, if conducted in a fair spirit, may clear up many confused points at issue. But, in any case, neither the French nor the British Notes have yet approached the practical difficulty of carrying the settlement into effect, even if it could be arrived at between the Allies. It would, however, be a waste of time for the Foreign Offices to indulge in arguing on points of detailed criticism, or to enlarge upon the many subjects which would open up if the settlement were in sight, unless by so doing it may be cleared up whether M. Poincaré literally means what he says when he asserts that the military occupation of the Ruhr will only cease when the last mark has been paid by Germany—a point on which, in spite of the Note, Paris opinion still seems doubtful. If he literally means this, there is nothing to be done but to invite France formally to submit the question of her legal position in the Ruhr and the interpretation of the Treaty of Versailles to the International Court of Arbitration.

AN INQUEST ON THE WAR.

If the object of history were utilitarian, one would be driven already to write off as useless most of the labour and expense that has been devoted since the outbreak of the European war, and particularly since the armistice, to publishing first-hand information upon the causes of the catastrophe. The grand historical "lesson" of the war has been that even the most sensational consequences of political lines of action and points of view do not prevent the particular views from being maintained, or the actions from being repeated, by the closest spectators and even participants in those events which might have been expected to serve as an example. On the contrary, one folly seems to call forth another to cap it, and that within a few months or years of its perpetration. Thus Germany, after having given herself full time to realise the immense evil which she had incurred by provoking the intervention of Great Britain through the invasion of Belgium, deliberately completed her own ruin by provoking the intervention of the United States through the launching of the unrestricted U-boat war. And now France, having seen Germany defeated and herself saved from destruction by the intervention of unexpected Allies, through the imponderable but mighty influence of Germany's moral isolation, is herself braving moral isolation in the world in the belief that she has worked out a plan as incapable of failure as Hindenburg, Ludendorff, and Von Tirpitz's calculations for securing by force certain concrete objectives. Yet if every educated Frenchman were to read,

mark, learn, and digest the contents of the Carnegie Foundation's last two volumes of German documents,* it is most unlikely that that would lead the French nation to reconsider its position, or that it would modify the French Government's policy. Politics are governed by conscience or passion, but hardly by logic, whose thin stream is swamped by the mass of data and the mass of individual minds concerned. The art of history is as powerless to prevent future political disasters as tragedy is to lessen the number of catastrophes in the relations between one human being and another. Yet so long as men write, act, and go to see tragedies, they will write and read history—and for the same reason.

These two massive and at first sight formidable volumes recreate some of the most poignant scenes in the tragedy of the war. They consist of translations into English of the reports of the First and Second Sub-committees of the Committee appointed by the German National Constituent Assembly to inquire into the responsibility for the war, together with the stenographic minutes of the Second Sub-committee and supplements thereto. The reference of the First Sub-committee was to ascertain the responsibility for causing the war, and that of the Second the responsibility for not ending it sooner. The bulk of the volumes is occupied by the oral evidence taken by the Second Sub-committee. Nearly all the chief actors on the German side were heard:—Dr von Bethmann-Hollweg, the Imperial Chancellor; Count von Bernstorff, the Ambassador at Washington; Dr Zimmermann, the Secretary of State for Foreign Affairs; Dr Helfferich, director of the Deutsche Bank and Secretary of State for the Interior; Marshal von Hindenburg; General Ludendorff; and other persons less celebrated but still very near the centre of affairs. The witnesses not only delivered statements, but answered questions put to them by members of the Sub-committee; and since the Sub-committee represented different points of view (as is indicated by the fact that one member sent in a minority report, more favourable to the ex-Imperial Government than that of his colleagues), the great questions under discussion were ventilated with a thoroughness and a frankness which probably have seldom been paralleled. Considering the vast extent of the relevant data, it is possible that all the cards have not even here been put upon the table; but only a very prejudiced reader could persuade himself that there had been any kind of collusion for the suppression of facts or the distortion of conclusions. It may be said, of course, that at the time when this investigation was made Germany had nothing left to lose by drawing a veil over her war record. It might require greater moral courage on the part of the victorious nations if they were to imitate her example. Yet we should collectively be in a stronger moral position than we are to-day if we were to clear up as drastically as the Germans have done the conduct of our Governments during the war years.

Bulky, however, though it is, the material published in these two volumes by no means covers the whole field of the two Sub-committees' references. The proceedings, here recorded, of the First only relate to the attitude of the German Government towards the steps taken by the Hapsburg Monarchy against Serbia; they do not touch the relations of Germany during the days before the war with Russia, France, Belgium, and Great Britain. Similarly, the proceedings of the Second Committee, as given in these columns, are confined to President Wilson's Peace move of 1916-17, and the behaviour of the German Government in regard to it. How many volumes it would require to cover the entire field of both references with the same thoroughness, it would be difficult to conjecture. Meanwhile, we may be well content with what we are here given; for it throws a flood of light upon the views and actions of Germany, or, rather, of particular Germans whose different views and actions came to stand for those of Germany by an often violent resolution of forces, which spreads far beyond the events directly under consideration.

As regards these actual events, the findings of the Sub-committees (in which most readers will agree with them on the basis of the evidence presented) distribute censure

* "Official German Documents Relating to the World War," translated under the supervision of the Carnegie Endowment for International Peace, Division of International Law. (Oxford University Press, New York.) 1923. 2 vols., pp. xvi. + 1,360. 7s. 5d.

with a notably different emphasis from that of the popular verdict of the world. They find the guilt of the German Government in July, 1914, to have been considerably less, and in December, 1916-January, 1917, considerably greater, than it is represented as being in the ordinary legend.

The evidence here presented would appear to exonerate Germany almost conclusively from the charge of having taken the initiative after the Sarajevo murders, and still more from having seized the opportunity to bring on a world-war under cover of Austrian claims for damages against Serbia. The worst that Germany can be accused of at this stage is that she refrained from controlling Austria's proceedings against Serbia—a policy which may have been mistaken, but was deliberately adopted in the belief that control would mean acceptance of responsibility, and that without being effective in the last resort it would destroy Germany's chances of staving off trouble between Austria and Russia. There seems also (oddly enough) to have been incompetence in the official machine; for, in spite of their general policy, the German Government would evidently have liked to obtain some modification in the wording of the Austrian ultimatum to Serbia, if only their representatives at Vienna had managed to communicate the text to them in time. Certainly, from the beginning they appear to have regarded an Austro-Serbian war as inevitable, but genuinely to have believed that the conflict could and would be localised, and to have considered that such a local conflict (in their view, precipitated by the Hapsburg Monarchy in order to preserve its existence) was no affair of theirs. Was this attitude, asks von Bethmann-Hollweg, abnormally criminal, according to the standards of the time? "America conducted the Spanish War, England the Transvaal War, Russia the Japanese War, France countless colonial wars, Italy the war with Tripoli.....In none of these cases was it permitted to bring the dispute before a forum of the Great Powers.Even in 1914 war was not yet condemned as a legitimate means of national self-assertion. That war against Serbia was contemplated for the solution of the Austro-Serbian difficulties may be theoretically condemned by the adherents of pacifism, but except by way of repudiation of their own history, cannot be branded as a crime by those Governments whose statesmen appended their signatures to the Treaty of Versailles." In other words, where would England stand to-day had the Transvaal happened to be in Europe and Serbia in South Africa?

On the other hand, the findings of the Second Sub-committee (endorsed by seven out of the eight members) are unexpectedly severe:—

"1. In the general situation which was brought about by the peace move of Wilson in the winter of 1916-7, certain conditions existed which made it possible to reach the point of peace parleys. The Imperial Government did not avail itself of these possibilities.

"2. The reasons why the above-mentioned opportunities were not taken advantage of are to be found in the resolution regarding the commencement of the unrestricted U-boat warfare of January 9, 1917."

On an earlier page the Sub-committee analyse the errors of judgment on which this resolution was based, and add that "the preparation of the opinion.....was not entered into with the care which was necessarily imposed by the tremendous importance of the question." The experts consulted were "in no event.....leading authorities in the matters of commercial or political relations which were in question. Experts in matters which were of a peculiarly material nature, such, for instance, as the shipping trade, were not called upon to testify at all." On such information, the supposedly scientific chiefs of the German Army and Navy confidently staked their country's fate and their own reputation. And the Chancellor, who let them do it? Of the witnesses examined, he is at once the most interesting, pathetic, and unsatisfactory, yet perhaps he has set his finger on the most important factor: "The machinery of war morale.....restricted the freedom of movement of Governments in our case just as it did in the cases of the other Powers.....If it is your desire, not only on the occasion of this investigation with regard to the American mediation, but in the ordinary course of your investigations concerning the possibilities of peace, to probe not only individual occurrences but the great interconnected whole, I venture to call your

attention once more, and as the result of my own experiences, to the extraordinary fatality which rested like a weight on the external and internal history of every country."

CHINA'S FINANCES.—II.

In a previous article it was regarded as desirable that the public should be given as early information as possible in regard to the position of the Government in relation to China's financial problems. In this one it is proposed to show why. In doing so no attempt will be made to advocate any particular policy. All that will be aimed at will be an accurate statement of the factors affecting the future of Chinese securities.

The first of these factors is the relation of China's indebtedness to its resources. In relation to her population, the debt is a small one. It works out at less than five dollars per head. And China's population is an exceedingly industrious one very lightly taxed. A recent estimate puts the taxation per head as low as \$1.20, which is about one-sixth of the average taxation per head in French Indo-China, little more than an eighth of that paid in Siam, just over one-twelfth of the amount paid in Japan. It is probable that this estimate is far too low, for the average Chinese is subject to a variety of exactions which cannot be classed as taxes, but which have the same effect. Even so, however, China remains a very lightly taxed country. And in natural resources it is the richest in the Far East. Very exaggerated statements have been made in regard to China's wealth, especially her mineral wealth, yet that wealth is unquestionably very great. Many authorities, indeed, would say that it has barely been scratched.

On the other hand, relatively to the financial resources of the Republic, as at present administered, the debt, as has already been shown, is a big one—so big that without foreign assistance it appears to be unmanageable. It does not follow, however, that when the unmanageable—that is to say, the unsecured—part of the debt has been provided for, all will be well, for the causes of the existing discrepancy between resources and liabilities may continue. The possibility of their doing so is the second factor which must be taken into consideration. The inability of the present Chinese Government to meet its obligations is due in part to neglect, in part to misappropriation of resources, but mainly to revenues which ought to flow to Peking being withheld from it. And they are withheld because, ever since the overthrow of the Manchus, the Chinese have been unable to decide where sovereignty in their State lies. Thus at bottom, as M. Padoux's preface to his debt consolidation scheme recognises, the present financial situation in China is a constitutional question.

It follows that money lent to China before the question has been satisfactorily settled, or is in a fair way to being settled, will be associated with certain risks. Of these the first is a continuation of the present factional strife. Reasonably or unreasonably, a large section of Chinese, roughly speaking the South, regard all the financial help that has been given to the North as help given not to China, but to momentarily dominating groups. The reorganisation loan of 1913 was regarded as help given to

Yuan Shih-k'ai and his entourage. The money which was subsequently lent by Japan, and is part of the unsecured debt, was regarded as help given to the Anfu party, and all the strife that has brought China to her present unsatisfactory state is, to a very considerable extent, the consequence of rebellion first against Yuan, and then against the Anfu leaders. Money lent to the party at present uppermost would certainly be regarded by parts of China in the same hostile way, unless it was lent with their full knowledge and approval.

It is necessary to indicate what a continuance of the present factional strife may mean for trade, industry, and the railways, and the best indication of that is what it has meant already. Making all due allowance for the tendency of Europeans resident in China to exaggerate the importance of recent events, there can be no doubt that foreign life and property are not nearly as safe there today as they were even five years ago. There is also no doubt that in certain lines, such as sugar, oil, cigarettes and machinery, all of which necessitate foreigners travelling in the interior, trade has become exceedingly difficult, and that practically all lines of business are suffering from illegal taxation, and the liability of goods in transit to seizure by armed brigands. Nor can it be disputed that even in the Treaty ports the foundation of business, namely, contracts, is becoming weaker. This is partly due to the influx into trade of new types of Chinese differing greatly from the old types, but it is also due to the increasing disrespect for law and the capacity of administrators to apply it. Due in part to the same cause is an increasing unrest in the small but growing industrial population, an unrest which is transmitted with surprising rapidity and sympathy to vagrant sections of the population that have no regular employment, but find a market for their labour first in one area and then in another.

China's railways are suffering from present conditions also. At the end of last year default on three railway loans was averted by the narrowest possible margin. The loans were those of the Canton-Kowloon, the Tientsin-Pukow and the Hukuang railways. The first has never done much more than pay its operating expenses, but the Government had always made up the deficiency. At the end of last year, however, the deficit was not made good until the very last moment, when payment was made possible by the £80,000 received in connection with the renewal of the Skoda loan. The Tientsin-Pukow Railway has hitherto provided a large surplus revenue, and the coupons have been promptly met. But at the end of 1922, though the line earned \$7,000,000, there was not a penny available to pay the interest and amortisation for the half-year. Default would have been unavoidable had not a powerful Chinese coal company come to the rescue. In the case of the Hukuang Railway, it was only at seven in the morning of the day on which the coupon was due in London, i.e., December 14th, that the wherewithal was found to pay it, and that was discovered in a book balance between the Customs and Salt of \$800,000. Of the various securities for this line, only certain salt taxes in the province of Hupeh and Hunan have been available through the Salt Gabelle, a partially foreign-officered administration, and the salt revenue pledged is equal to little more than half the interest requirements. The position of the Peking-Mukden line, which is very much better than any of the above, is none too good, for the reason that Chang Tso-lin, the Tuchun or military governor of Manchuria, one of the principal figures in Chinese factional strife, has taken possession of the northern section of the railway, retains the greater part of the rolling stock, and annexes the whole of the receipts. For similar reasons the Peking-Hankow Railway's position is dubious. There is ample revenue, though for three years past it has decreased, but it is entirely in the hands of the Chinese administration, which is nominated by the dominant military faction.

With these facts before them, readers are in a position to appreciate that a good deal turns upon the next step taken by the Powers in China. Unless the Washington Treaties prove abortive, action has got to be taken, and, as already shown, it may assume different forms. If it takes the form of withholding the 2½ per cent. surtax on the ground that the likin problem is unapproachable, then either China's unsecured debt must remain unsecured or it must be secured by a loan from the Consortium or some

other security. If the Consortium lends, it must lend either with or without the approval of the factions at present opposed to the dominant faction, and if it does so without approval, civil strife is likely to continue with an aggravation of the evils indicated above. On the other hand, the surtax may be granted, in which case it must either be used to consolidate the unsecured debt or for other purposes. If it is used for the former, responsibility for reactions on China's internal affairs will rest directly upon the Powers; if for other purposes, and unaccompanied by a loan from the Consortium on the only other security available, namely, the Salt Gabelle, China's revenue will be increased, but the main problems of the situation will remain untouched. The remaining possibility is a grant of the surtax for specified objects other than consolidation of debt, accompanied by a loan from the Consortium for the latter object. In that case, the arrangements of the Consortium and the Powers would dovetail. Even if the former acted alone, it would do so through the Legations, and to that extent its arrangements would bear an official character, in which connection may be recalled the fact that, in the statement issued in the beginning of July, the Consortium claims to be "an appropriate instrument" for giving effect to the undertaking given by the Powers "to respect the sovereign rights of China.....and maintain for herself an effective and stable Government." As so much depends upon the nature of any arrangements, it is important that H.M. Government's intentions should be clearly defined. For the consequences of the next step taken by the Powers in China are unlikely to be neutral in character. They are much more likely to be very good or very bad.

THE VEGETABLE OIL INDUSTRY.

THE oilseed crushing industry of Great Britain has been well provided with raw material, the imports of oilseeds and nuts and kernels in the first six months of the year being unusually heavy and 33 per cent. higher than a year ago. Gross imports were 949,449 tons and re-exports 24,474 tons, the net being 924,975 tons, or 234,346 tons in excess of the same period of 1922. Taken as a whole, it is, however, problematical whether there has been a corresponding increase in the trade in vegetable oils, or that the bright prospects entertained in the opening months have been fully realised. Nevertheless, despite depression which has been felt in both home and foreign sections of late months, and the inevitable effects of economic chaos in Continental countries, English crushers appear to have held their own. The intrinsic position of the industry is quite sound. The crushing and extracting mills and refineries, which underwent considerable extension during the war years, were never better equipped or adapted to supplying the needs of the consuming trades, and those engaged in their business conduct have no fears as to the future when Europe has finally quitted the wilderness and reached the Promised Land. No one doubts that, under something approaching normal conditions, the great markets now more or less dormant will again respond and absorb the products which the English oilseed crushing industry is able and ready to supply.

Notable features have been the largely-increased imports of cottonseed (313,869 tons), principally from Egypt and India, and of soya beans from Manchuria, the arrivals of the latter exceeding 103,000 tons, the largest figure for many years, and 200 per cent. greater than a year ago. Copra, ground nuts and palm kernels at 236,756 tons, chiefly derived from British possessions overseas, also show a substantial increase. It is satisfactory to note that this branch of the industry, which was wrested from the Germans during the war, has been maintained at so steady a level. The production of edible oils has, in consequence of the foregoing imports, been on an increased scale, and markets have been found for a considerable proportion on the Continent, in Holland and elsewhere, the exports of this class of oil, refined and unrefined, showing an advance of fully 100 per cent. as compared with the first half of last year. Most varieties have been able to compete effectively with American cotton oil.

Soya bean oil made in British mills has, however, had again to face strong competition from that from the East, large quantities of which have been pressed for sale in European markets. Palm kernel oil appears to have been in good demand and a large foreign trade done, America taking some portion.

Linseed and linseed oil are in a category by themselves, and have claimed more than ordinary attention from the fact that the United States have been in the market for very large supplies of seed in competition with Great Britain and the Continent, which also have taken increased quantities, Britain's import in the six months being 231,800 tons, or 39,000 tons more than in the corresponding half of last year. The interesting thing, however, is that at the end of the first six months more than two-thirds of an estimated world supply (Argentine and Indian) had already been shipped, and that by the end of July only 350,000 to 400,000 tons remained for shipment to meet requirements until the arrival of the new crops at the end of the year. America has been estimated to need the oil from a million tons of seed, 600,000 tons of which the Plate would be called upon to supply, and of which 500,000 tons have already been shipped, against only 150,000 tons a year ago. America's domestic yield was around 300,000 tons, or 50 per cent. more than in 1922, when, in addition to seed, considerable quantities of linseed oil were imported from Europe, principally from this country. A probable consumption of 340,000 tons of linseed oil this year, as compared with only 266,400 tons last year and 252,000 tons in 1921, appears to have been called for by the fact that there are extensive arrears of painting to be caught up, and that trade in manufactures in which linseed oil plays a part is good, and reflects the increased purchasing power of the people during a wave of unprecedented prosperity. Not only, therefore, has America had to import larger quantities of seed, but also linseed oil to supply markets bare of that commodity because of Western mills without stocks being unable to get supplies of seed. A good deal of oil was bought on American account in March and April in England for May-August shipment, and, no doubt, has helped to swell the figures of export which, for the six months January-June, stand at 22,433 tons to all destinations, though this is only about 50 per cent. of the U.K. export for the first half of 1922, when 43,788 tons were shipped, about 80 per cent. being destined for America. Latterly, however, America, with her mills again producing, has been out of the market, and with a small demand from home and Continental consumers, markets have been much easier and have witnessed a fall from £52 per ton naked ex Hull mill in mid-April, the highest point this year, to £38 at the end of July, the then lowest. There are suggestions of a revival of the American demand, which last year, and to a smaller extent this year, meant so much to the English industry, but this, of course, depends upon the capacity of America to absorb as much as estimated, and the ability of English oil to jump a tariff barrier of 3.3 cents per pound, or \$78.40 per long ton, equivalent to about £16 per ton, or 40 per cent., plus sea freight on oil at £40 per ton ex mill.

Our exports of vegetable oils of all kinds manufactured or produced in Great Britain in the six months were 54,924 tons of unrefined, against 57,921 tons and 8,414 tons of refined, against 7,046 tons in the corresponding period of last year. Next to linseed oil the largest exports were of cotton and palm-kernel oils. On the other hand, we imported considerable quantities of oil from abroad, viz., unrefined 47,077 tons, against 57,990 tons, and refined 7,216 tons, against 10,039 tons, all net after deducting re-exports. These imports consist very largely of palm, coconut, olive and soya oils, mostly unrefined, and account for 80 per cent. of the gross imports. The oil equivalent (based on the commercial yield) of the oilseeds and nuts and kernels imported and retained in Great Britain in the half-year is estimated at 260,505 tons which, with net imports of oil from abroad of 54,293 tons, gives a total of 314,798 tons. Deducting exports of English oil, 63,338 tons refined and unrefined, we get a net figure of 251,460 tons, which compares with 207,937 tons at the corresponding date last year, which would indicate that this country is supplied with vegetable oils at about the level of normal requirements. Larger imports of butter, margarine and animal fats have also to be taken into consideration, as

they have an important bearing on the edible oil trade. The net imports of these items, including also lard, oleo and stearine, but excluding fish oils, amounted to 251,938 tons in the half-year, against 193,525 tons, an increase of 58,413 tons as compared with a year ago, butter and margarine together accounting for no less than 47,865 tons of the increase. With more seed going into the mills production of oilcakes and meals has been more than ample to satisfy a reduced demand from the agricultural industry. At the same time net imports of foreign-made oil-cake at 159,528 tons were 14,000 tons higher, while our exports at 29,138 tons were 7,314 tons up.

This season's yield having been shipped to within a comparatively small balance, attention is now being directed to the new and growing crops. Argentina has a larger area under linseed, stated to be about 30 per cent. more, while American farmers, encouraged by a tariff of 30 cents per bushel on imported linseed, have about 80 per cent. more, and the prospects for the harvest are reported to be favourable. India is in the midst of reaping her present crop. With regard to cottonseed the bulk of the old crop of Egyptian has been disposed of, and offers are now being made of the new for October loading. The tendency of both linseed and cottonseed and oilseeds generally is to lower values, following wheat, as usual, in view of the prospects of plentiful supplies in the coming year. New Plate linseed is offering for early loading at almost identically the same figures as a year ago, but actual business has not begun, and in no direction does there appear to be any disposition to force matters or anticipate requirements at the present stage, especially in view of the poor trade in oils and the generally unsettled or uncertain outlook in the consuming markets.

TEA PLANTATION COMPANIES IN 1922.

DURING the past year the tea growing industry has enjoyed a marked measure of prosperity, especially if regard is paid to the recent history of the industry. It is only two years ago that tea growing undertakings were facing one of the most disastrous years within memory. Government control had left the industry with what might almost be termed ruin in front of it. Large stocks of low grade teas had been gathered together, which could not be sold owing to the consumers' distaste for the commodity which a paternal Government thought should be taken. All this has now past, however. Companies have been pursuing a policy of finer pluckings, and in consequence providing better teas, the demand for which is increasing both in home and overseas markets.

The general statistical position of the progress made in the industry may perhaps be best gathered from a study of the following table of tea imports and exports:—

IMPORTS and EXPORTS of TEA.

From—	1913.			1921.			1922.		
	Lbs.	Lbs.	Lbs.	£	£	£	£	£	£
India	203,456,657	286,585,218	254,956,972	7,839,223	14,872,077	16,142,209			
Ceylon	110,936,427	118,755,568	111,662,324	4,179,462	6,654,729	7,280,074			
China	16,272,548	4,645,074	11,066,353	613,147	246,570	740,509			
Dutch Indies	32,052,717	37,027,383	38,900,821	1,072,515	1,307,957	1,689,533			
Other countries	2,322,115	568,759	2,233,519	78,558	30,486	123,449			
	365,043,464	447,583,002	418,819,789	13,782,906	23,111,819	25,975,774			
Re-exports	57,555,651	34,734,686	41,971,002	2,808,940	1,964,022	2,755,35			

These figures, however, are interwoven to a considerable extent with the stocks on hand in this country. Last year the crops of India, Ceylon, and the Dutch East Indies fell short by some 60,000,000 lbs of the offtake, and in consequence the stocks of tea in the United Kingdom, which at June 30, 1921, amounted to 218,250,000 lbs, and at June 30, 1922, to 170,500,000 lbs, were reduced at the same date this year to 126,500,000 lbs. But this last figure excludes teas held in the Irish Free State.

As usual with our company group articles, we have selected a few representative undertakings, and from the information revealed in reports and accounts, and also with the aid of that gleaned from other sources, attempted to survey the financial side of the industry for 1922.

The following table shows crops and financial results over a period of three years of 13 selected undertakings:—

	Crop.		Results.		Crop.		Net Profits.		Crop.		Net Profits.	
	1920.	1921.	1920.	1921.	1920.	1921.	1920.	1921.	1920.	1921.	1920.	1921.
	Lbs.	£			Lbs.	£	Lbs.	£	Lbs.	£	Lbs.	£
Amalgamated Estates	5,442,184	89,423	Loss		4,381,050	44,634			4,941,409	158,233		
British Indian	1,650,987	24,178			1,226,499	16,293			1,511,911	43,137		
Ceylon Plantations	4,896,727	65,811	Profit		4,167,041	167,345			4,674,383	128,502		
Chubwa	2,494,521	32,063	Loss		1,813,322	16,943			2,214,328	56,793		
Cons. Tea and Lands	17,689,878	240,598			13,376,272	166,667			14,855,638	425,065		
Dooars	4,978,093	46,347			3,122,721	64,853			3,962,461	128,526		
E. I. Tea and Produce	2,327,970	79,706			2,178,750	650			2,454,590	16,316		
Eastern Produce	5,320,669	34,839			4,594,868	98,215			4,522,084	104,762		
Jhansie	1,314,911	18,949			2,627,337	39,026			2,977,720	84,655		
Jokai	2,661,689	30,502			5,807,528	108,651			7,719,257	222,902		
Lungia	7,603,926	73,112			1,599,972	6,646			2,240,463	59,714		
Nadeem	5,566,834	21,272			3,879,124	27,006			4,223,150	89,767		
Yatiantota	620,161	30,559			460,017	14,956			525,443	8,191		

The increased profits shown above are mainly the results of better prices obtained for the commodity together with lower working costs. This trend is illustrated by excellent statistics given in the reports and accounts of a few of the older companies. Thus we find that for 1917 the Jokai company was able to record production costs at 7.73d per lb, which, however, by 1921 had grown to 12.25d, although for the year under review these were reduced to 10.59d. In 1917 this company sold its tea at 11.31d, showing a profit of 2.18d per lb. The selling price was nearly the same in 1920—11.41d—and the result was a serious deficit, but with the price in 1921 increased to 16.67d per lb, a profit result of 4.42d was obtained. In 1922, with the further reduction in costs and the increased sale price of 17.59d, a result of 6.80d per lb profit is shown. The average price realised by the Jhansie company works out at 16.59d, as compared with last season's average of 14.75d per lb, while the cost of production was 8.68d, as against 10.65d for 1921. Dooars in an interesting table records production cost at 10.33d in 1921, as against 8.55d in 1922. It is a pity, perhaps, that other companies cannot see their way clear to publish statistics of this nature.

In the following table we analyse the balance-sheets of the companies included in our group:—

	Capital, including Debentures	Reserves	Profits and Credits	Estates and Property	Cash and Investments	Total Assets
Amalgamated Estates	£ 898,350	£ 408,606	£ 271,192	£ 772,650	£ 508,688	£ 1,680,316
British Indian	77,325	86,784	12,030	56,562	66,282	176,139
Ceylon Plantations	527,120	182,367	118,937	478,185	193,207	828,436
Chubwa	106,000	94,250	33,222	106,000	47,457	235,473
Consol. Tea and Lands	2,550,000	1,031,529	227,379	2,026,644	802,306	3,808,908
Dooars	348,000	191,034	53,409	286,251	138,496	592,443
East Indian Tea and Produce	249,250	nil	148,740	283,306	3,022	418,663
Eastern Produce	405,000	213,807	85,922	448,636	88,458	704,737
Jhansie	115,000	164,010	17,227	128,333	71,491	296,236
Jokai	396,500	430,872	68,069	412,980	110,372	885,440
Lungia	375,000	17,555	20,206	274,655	15,940	412,761
Nadeem	540,000	97,985	43,137	456,352	108,772	683,457
Yatiantota	221,630	11,000	2,189	201,960	15,687	236,654

It may be complained that this is a very rough-and-ready method of measuring the position of these companies. The most we claim for these figures is that it enables a comprehensive view of the financial trend, position, and methods of finance to be examined, and also places the inquirer on the path to follow up any unusual method of accounting revealed by our figures.

Our final table shows recent dividends and the trend of share prices:—

Company.	Am't of Share	Dividend for Year 1920.	Dividend for Year 1921.	Dividend for Year 1922.	Price End of July, 1914.	Price End of Aug., 1922.	Price Aug. 23, 1923.
Amalgamated Estates	10	% Nil	% 15	% 15	92	88	142
British Indian	5	1	15	30	64	71	142
Ceylon Plantations	1	124	30	30	54	34	23
Chubwa	5	5	15	30	172	154	23
Cons. Tea & Lands	10	Nil	10	25	15	162	283
Dooars	1	Nil	274	324	34	24	34
East Indian	1	Nil	Nil	Nil	34	74	23
Jhansie	5	6	18	40	7	94	234
Jokai	10	6	20	40	16	19	45
Lungia	1	Nil	Nil	Nil	24	44	14
Nadeem	1	Nil	10	224	3	14	24

The figures given in the above table are sufficiently eloquent by themselves to describe what has been happening in the tea share market, and latest reports indicate the possibility of further advances. But at the moment there are two matters which are causing a certain amount of

concern: the shortage of labour, with the difficulty of recruiting it, and the prevalence of mosquito blight amongst the tea bushes, with the failure, so far, to find an effective method of eradicating it.

An interesting sidelight on tea production in the Dutch Indies was shown by the recent remarks of the chairman of a company operating in that quarter, who pointed out that "had prices throughout the year been good, and had the Java teas profited by such favourable conditions as was the case with Indians and Ceylons, the result for the year would have been satisfactory, but, unfortunately, Java-grown teas have to labour under the great disadvantage of a preferential tariff in this country and in some of the Colonies, and cannot realise any such high prices as Indian and Ceylon teas, which benefit by the preferential tariff."

With reference to the future, the chairman of the Indian Tea Association is not very optimistic as to the prospects for the current season at least. "Weather conditions," he says, "have so far been unfavourable, but it would be difficult, and possibly unwise at this stage, to venture a prediction as to how the 1923 crop is likely to pan out." On the other hand, the area of demand is increasing. "Russia," we are told, "is said to have bought 1,000,000 lbs of tea last year, and as her purchases in 1916 of British and Dutch grown tea amounted to 90,000,000 lbs, the gradual resumption of dealings with that country, of which there are some evidences, will afford the means of absorbing any surplus production we may have. Further, it is of interest to find that our work in France, with a view to extending the consumption of tea there, is progressing satisfactorily, and we hope shortly to start an extensive campaign in America."

RUBBER AND RESTRICTION.

(FROM AN AMERICAN CORRESPONDENT.)

THE announcement of the Restriction Enactment caught the dealers in New York heavily short. As usual, they were quick to change their position, and bought steadily without much regard to prices, until they were covered, and had secured substantial stocks both for spot and futures. Speculators for the rise accompanied the upward movement, which was assisted materially by a somewhat belated recognition of the fact that the American consuming demand was at that time considerably larger than anticipated, and by the pronounced change from the pessimistic business sentiment which had existed for so long.

American manufacturers, almost unanimously, adopted a benevolently neutral attitude towards restriction. As consumers they might have been expected to oppose strongly such an arbitrary interference between buyers and sellers, but they took the broad view, as they had done on many previous occasions. They recognised that an indefinite continuance of the 7d to 9d levels must entail disaster to a large proportion of estates, a consequent, though perhaps temporary, reduction in supplies, and an eventual upward swing of the pendulum which would again carry prices to harmful limits. They therefore contented themselves with expressing the view that the increased demand would of itself establish a sufficiently remunerative price for the growers, and that restriction was unnecessary in itself, and, on the other hand, certain to play into the hands of speculators, and thus lead to greater instability in the market than ever.

The Rubber Growers' Association, at an early stage, had given assurances to the American manufacturers that the object of the plan was to promote stability and ensure sufficient supplies for all consumers at around 1s 3d, and that precautions would be taken to prevent prices running away. The association delegates who visited America in the spring appear to have taken a less optimistic view of the probable consumption here this year, and subsequent events amply justify their more cautious views in this respect, as well as in the necessity for maintaining some such control as is afforded by restriction.

The course of market prices has been instructive. The heavy buying and speculative demand carried London to

1s 6d in January, February about the same, March about 1s 5d average, April 1s 4d, early May 1s 3d, when a rather sharp decline to 1s 1d to 1s 2d took place, and, with some moderate fluctuations, the market remained around those levels until recently. In the light of the ascertained facts here, the above tendency is clearly explained.

In the first quarter of the year American consumption was proceeding at record limits, and showed every appearance of continuing almost indefinitely. Arrivals were heavy, but readily absorbed. Manufacturers were buying throughout January, and then, having secured the bulk of their estimated requirements until June, became cautious at the high levels then reached, though the general opinion was that considerably higher prices would rule in the second half of the year. Motor and truck output and sales to the public increased rapidly (in January to March, 1923, the total output was 872,565, as compared with 386,195 in the corresponding period of 1922), there was great industrial activity, something like a boom on the Stock Exchange, and the general business sentiment was distinctly optimistic.

In April warnings and cautious views began to be voiced in influential quarters, and the difficulties of the European political and economic conditions to be realised more clearly. About the same time the heavy arrivals of rubber, and the exceptionally large shipments from the East (far beyond those justified by official Restriction limits) became noticeable. April and May consumption continued in satisfactory volume, but June showed a sharp decrease. Meantime consumers had been asking themselves whether they had not been grossly misled by Restriction, and serious complaints of trickery and sharp practices against the growers and British colonial authorities were heard. The fears of speculative manipulation appeared to have been only too correct, consumers' purchases were found to be on much higher levels than current quotations, and inventory losses had to be faced. It was found that an exceptionally long winter had delayed actual tyre consumption by about two months, and that the public demand was substantially smaller than anticipated.

To add to the difficulties of an already unpleasant situation, manufacturers had to meet a cut in prices which was without warning suddenly forced on them by the one really prominent concern which had aggressively opposed, politically and otherwise, the whole restriction plan. This, and the pronounced change in general business sentiment, as evidenced by the slump in Stock Exchange values, and the normal seasonal slowing down of business, resulted in a sharp reduction in consumption, which now appears likely to continue until well into the winter. Almost all manufacturers find themselves over-bought, many (and amongst them some of the larger consumers) have had to apply to their suppliers to postpone deliveries for which they had contracted, and some have been reselling their purchase contracts. Unless the fundamental conditions change, it seems unlikely that they will be buying again in any sufficient volume to affect prices for several months.

It is somewhat strange that one point of considerable importance has not apparently been realised by tyre manufacturers until recently. It was known that the output and sale of new cars and trucks was greatly increasing. About 2,026,000 were manufactured between January and June as against only 1,151,000 in the same period of 1922, but this large output has thrown a number of the older cars out of use. A new car requires an initial outfit of five tyres, but their mileage life has been increased by improvements in manufacture and by the vastly better roads, on which enormous sums have been spent by the State authorities. The result, while facilitating motor transport, has assisted the average mileage run materially. Until recently it was believed an old car used up three and a-half tyres per annum; experience now shows very little more than two, entailing a big reduction in actual consumption. Manufacturers had calculated that some 55-60,000,000 tyres would be required this year; they made in the first six months about 30,000,000, but find that something like 10,000,000 were unsold to the public at the end of June. The *India Rubber World* now estimates the demand at rather less than 46,000,000 for the year.

Except for a small demand on a hand-to-mouth basis, which occasionally appears and is quickly filled, consumers cannot be induced to show any interest in the market. Rightly or wrongly, many of them consider they were tricked over restriction, and the whole subject is unpopular. They feel their worst anticipations as to the power it placed in the hands of speculators have been filled, and their resulting losses have been a distinctly unpleasant experience. They have been using a far larger proportion of reclaimed to compensate for their higher costs and lower selling prices. They point to the present condition of the London market, in which speculative manipulation appears as the only outstanding element, and express the confident expectation that long before they themselves will be buying again the London market will have been forced to liquidate its bull accounts. Whether this happens or not remains to be seen, but consumers here are certainly sore over the manner in which they consider they have been treated, and the present conditions of their own business are anything but encouraging. Their complaints against the administration of restriction may be more easily understood by considering the January to June arrivals here during the last few years:—

	Plantations.	Other Grades.
	Tons.	Tons.
1919.....	95,844	17,685
1920.....	134,403	17,486
1921.....	71,522	7,390
1922.....	24,001	6,357
1923.....	178,947	11,092

The 178,947 tons of plantations include about 31,000 tons received from Europe, but the direct shipments from the East, which purported, so far as British production was concerned, to have been reduced by 40 per cent., in fact showed a large increase. The absence of any official straightforward expansion of these facts has been commented on adversely, and consumers are unlikely to take restriction seriously until they see that Eastern shipments for a more prolonged period do in fact conform to the limitations called for.

While the present business outlook certainly cannot be considered as optimistic, there seems no reason why growers should be unduly depressed about the future. Doubtless there will be some consuming demand and a more satisfactory business in the autumn or winter, and though the present conditions of all the markets are far too much affected by an altogether premature speculative bull movement, particularly for the October-December position, there is no reason to suppose that the balance of the current year's crop cannot be successfully marketed at an average price of about 1s 1d, which should be sufficient in the present economic conditions to give growers a reasonable return over their cost of production. Next year's conditions cannot be intelligently discussed at present, but it should not be forgotten that 1924 will bring another Presidential election, which usually makes for hesitation and a cautious attitude in all business on this side of the Atlantic.

Notes of the Week.

The Irish Elections.—Our Dublin correspondent writes:—On Monday next, August 27th, the General Election will take place. It is generally anticipated that the result will be a sweeping endorsement of the Government's policy of upholding the Treaty and the Constitution, and of dealing firmly and, if necessary, severely with all, whether Republicans or revolutionaries or anarchists, who do not eschew violence and content themselves with a lawful and orderly advocacy of their respective views. But while its policy is secure of endorsement, the Government itself is not so obviously secure. The election itself is most novel in its conditions. Every man and woman of 21 years and upwards can vote—and the voting is on the system of proportional representation. There are some 29 constituencies to return 158 members out of 372 candidates. The system is designed, and the conditions of the election tend, to provide representation for middle views and minority interests. Its introduction in Great Britain has been hitherto successfully opposed on the ground that under the system of Party Government it is best to have a working majority, and that Party Representation tends too little to regimentation and more to loosely linked groups. Be that as it may, the system is certainly valuable in a country engaged in "finding" itself, in discovering its own political centre of gravity, the nature, value and weight of its several constituent elements, as is the case of Ireland to-day. The Government Party, which is putting up the most candidates, will almost certainly return the largest number of members, but possibly, nay probably, not a clear majority of the new Dail. But from the University members, the Farmers' Union members, the "Business men" candidates, and the better type of Independents the Government is sure to obtain the necessary support. The Republicans, too, may assist by, as usual, declining to take their seats. Labour is not expected to receive any notable accession of strength, in spite of the extended franchise. Its ranks are disordered by the disruptive influence and tactics of Mr Jim Larkin. It suffers, too, in Dublin, at least, from the selfishness of its tactics—it is becoming recognised as one of the "rings" restrictive of the free play of enterprise, and contributing directly and indirectly to the high prices and bad housing which it continues to exploit in seeking the support of the large population of suffering poor. In sum, then, the result of the General Election will be political stability. After that, by degrees the delirium of the de Valeras and the wild women and the red flaggers will subside. The innumerable problems, external and internal, of the newly launched nation will be in strong hands.

Work of the Reparation Commission.—His Majesty's Stationery Office has issued this week, at the price of 5s, a voluminous report on the work of the Reparation Commission for 1920 to 1922. It has been compiled by the Commission's general secretary, in accordance with a decision of the Commission itself, and will be found to be an indispensable book of reference to all who attempt to follow the intricacies of the reparation question. Its eleven chapters deal with the duties and organisation of the Commission, with German payments and deliveries of securities, shipping, coal, dyestuffs, and other deliveries in kind, with the valuation of damage, and the financial clauses of the Treaty of Versailles. There are, in addition, over a hundred pages of appendices, containing a mass of information as regards claims, deliveries, decisions, proceedings of the Commission, &c. It is, in fact, a mine of information, and appears to be adequately indexed. Considerable space is also devoted to dealing with Austria and the work of the Austrian section. It is not possible in a brief space to review even cursorily the contents of so large and important a volume; but we shall no doubt have occasion to make reference to it when discussing the reparation problem.

Building Trade Arbitration.—In April last a deadlock appeared to have been reached in the building trade, but good sense intervened, and the thorny question of working hours, which was the real stumbling-block in the way of an agreement, was referred to arbitration. The employers demanded a 47-hour week, while the operatives stood for the existing 44-hour week, with only 41½ hours weekly in December and January, though they were not necessarily opposed to a "spread-over" throughout the year, provided only that there should be no extension of the hours of work in districts where unemployment was excessive. Sir Hugh Fraser, who was appointed arbitrator, has this week issued his award, which, naturally enough, represents a compromise between the two extreme views. It provides that the present rule whereby 41½ hours are worked weekly in December and January shall be rescinded, and that the 44-hour week shall proceed throughout the year, except during the period of statutory summer time (approximately 21 weeks), when the working time shall be extended to 46½ hours weekly by adding half an hour to each of the first five working days of the week. It is specially provided, however, that nothing in this award shall prevent the retention of the 44-hours' week throughout the year in any area by mutual agreement between the employers and the operatives concerned. The award, which has been warmly welcomed by the assessors of both parties to the dispute, is to come into force on September 17th next, and an appeal for its loyal observance has been endorsed by the principal officials of the National Allied Building Trades Employers and by the National Federation of Building Trades Operatives alike. Sir Hugh Fraser, in announcing his final decisions, commented upon the goodwill which had been present on both sides during the course of the arbitration. It appears that a satisfactory solution to a dispute in which the *amour-propre* of both parties had become deeply involved has at last been found, and a success of this kind is all the more to be welcomed, in that it adds greatly to the prestige of the machinery of arbitration, upon which our hopes of industrial peace so largely centre.

Employment in July.—Employment conditions on the whole changed slightly for the worse during July. According to the *Ministry of Labour Gazette* the percentage of members of trade unions reported as unemployed at the end of July was the same as that reported at the end of June; but the percentage of unemployed among all workers insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland rose from 11 per cent. at the end of June to 11.3 per cent. at the end of July. These latter percentages make allowance for the inclusion of "a due proportion of claimants to benefit in respect of systematic short time." The innovation of including such short-time claimants for benefit (which was introduced in June) vitiates comparison with previous periods. The table appended shows the trade union percentage of unemployed month by month over a number of years:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.								
	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8	13.7
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3	13.1
March	1.9	0.3	1.2	2.9	1.1	10.0	16.3	12.3
April	1.7	0.3	0.9	2.8	0.9	17.6*	17.0	11.3
May	1.9	0.4	0.9	2.1	1.1	22.2*	16.4	11.3
June	1.9	0.4	0.7	1.7	1.2	23.1*	15.7	11.1
July	1.9	0.4	0.6	2.0	1.4	16.7	14.6	11.1
August	2.0	0.5	0.5	2.2	1.6	16.3	14.4	..
September ..	2.3	1.3	0.5	1.6	2.2	14.8	14.6	..
October	2.2	1.1	0.4	2.6	5.3*	15.6	14.0	..
November...	2.0	1.1	0.5	2.9	3.7	15.9	14.2	..
December...	2.6	1.4	1.2	3.2	6.0	16.5	14.0	..

* Excluding coal miners.

On July 30th the total number of workers registered as unemployed was approximately 1,235,000, of whom 930,000 were men. The corresponding figure for the end of June was 1,226,000, of whom men represented 934,000. The principal industries in which a decline in employment is

noted were the wool textile trades, coal and iron mining, and the iron and steel industry. Some improvement was reported in brickmaking and building.

Cost of Living.—The Ministry of Labour's calculations of the cost of living of a working-class family show that in July, for the first time this year, a slight upward movement took place, as will be seen from the following table:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.	1923.
January 1st..	85.90	120	125	165	92	78
February "	90	120	130	151	88	77
March "	90	115	130	141	86	76
April "	90.95	110	132	133	82	74
May "	95-100	105	141	128	81	70
June "	100	105	150	119	80	69
July "	100-105	105-110	152	119	84	69
August "	110	115	155	122	81	71
September "	110	115	161	120	79	..
October "	115-120	120	164	110	78	..
November "	120-125	125	176	103	80	..
December "	120	125	169	99	80	..

It will be seen that a slight upward movement at this period of the year is not unusual. The change in the general index figure is due entirely to food. Retail food prices on July 31st were 65 per cent. above the pre-war level, as compared with 62 per cent. at the end of June. This is reported as having been due to increases in the average prices of potatoes, butter, and eggs. Sugar became a little cheaper during July, while movements in other principal articles of food were unimportant.

Legal Immunity of State-Owned Shipping.—The International Maritime Committee, which has been in session at Gothenburg during this month, has arrived at an agreement upon the important question of the immunity, demanded by international law or comity, and accorded by the private law of all, or nearly all, civilised States, to ships which are owned or chartered by or otherwise navigated under the direction of the Government of another sovereign independent State. Thus in our Admiralty Court such a ship cannot be arrested for damage done by her in collision or to secure an award for salvage services rendered. The owner of the ship injured by collision and the salvor are at the mercy of the foreign Government, except in so far as the Courts of that foreign State may grant relief against its Government. Towards the end of the recent war, when so many States either bought or chartered or "directed" shipping tonnage, this rule of immunity became a source of great inconvenience and occasional injustice. As one of the members of our Court of Appeal remarked in a case where the Portuguese Government successfully pleaded the rule against a claim for salvage services rendered to a Portuguese Government-owned ship, the remedy may be that in future Portuguese Government ships may find themselves left on the mud. The rule agreed upon by the International Maritime Committee, which, though not official, is a very representative and effective body, is that claims against State-owned ships or ships navigated on State account, as well as against their passengers and cargoes, shall avail and be brought in the same manner as against private-owned ships and their passengers and cargoes; with this reservation, that in the case of warships or ships owned by States or navigated on their account for public but non-commercial purposes the claims against such ships or against their cargoes (destined for public but non-commercial purposes) can only be brought in the appropriate Courts of that State. It now remains to be seen whether the International Convention can be concluded, which would be required to give effect to these recommendations. They do not propose the complete abolition of the rule of immunity, but they would have the important result of placing the State as *trader* on the same footing, as regards the legal proceedings incidental to navigation, as the private shipowner. That the rule for immunity may operate as an inconvenient privilege is

perhaps evidenced by Article 281 of the Treaty of Versailles, which provides that: "If the German Government engages in international trade, it shall not in respect thereof have, or be deemed to have, any rights, privileges, or immunities of sovereignty." This is equally sound doctrine for other Governments disposed to indulge in commercial activities.

Taxation of Shipping Profits.—Considerable satisfaction is felt at the action of the Government in introducing a provision into this year's Finance Act to facilitate the carrying into effect of the principle that ships should be subject only to such taxation on profits as is imposed by the country to which they belong. The shipping industry has objected strongly to the practice of levying income-tax at ports in various countries at which a ship may call during a voyage. The British Government levied income-tax on the foreign owners of regular liners. In recent years similar taxation has been imposed in the overseas Dominions, and at foreign ports to an increasing extent, and much inconvenience and expense has resulted. The United States, in its legislation of 1921, took the first step towards adjusting matters by providing for the exemption from taxation of the income of non-resident shipowners where the shipowners' own country granted an equivalent exemption in favour of American owners. Then a few months ago the committee of experts appointed by the League of Nations, which reported on double taxation, favoured this method of reciprocal exemption as the simplest and most effective remedy. The step which has now been taken by the British Government is an acceptance of the American offer of reciprocity, and is regarded as having averted the development of a shipping tax war. It has therefore been welcomed in shipping and commercial circles. The Council of the Chamber of Shipping of the United Kingdom, at a recent meeting, adopted a resolution expressing satisfaction, and the British National Committee of the International Chamber of Commerce has passed a similar resolution. Some time may elapse before the system of reciprocal exemption can be brought fully into operation, but it should result eventually in shipowners' profits being taxed only under their own flag.

American Crop Position.—Our New York correspondent writes:—Some features of the Government's crop report of August 1st were a distinct surprise to the grain trade, but the report as a whole did not make an unfavourable exhibit. Losses sustained during July in estimated yields of certain crops were largely offset by gains in the prospective harvests of others. As compared with the July 1st forecast, the latest estimate indicates increased yields of corn, oats, barley, tobacco, flaxseed and cotton, and smaller harvests of wheat, rye, potatoes, and hay. Similar changes are disclosed by a comparison with last year's actual harvests, corn, oats, barley, flaxseed, and cotton showing increases, while wheat, rye, potatoes, rice, hay, and peaches promise lighter yields. The five cereal crops combined show an increase over the July 1st estimate of 113,000,000 bushels, and a gain of 123,000,000 bushels over last year's harvest. The heaviest falling off last month was in wheat; the Department of Agriculture, on August 1st, estimated the total wheat yield at 793,000,000, or 28,000,000 less than a month ago, and comparing with 862,000,000 harvested last year. An analysis of the report shows that the aggregate prospective yield in Kansas, Oklahoma, Nebraska, the Dakotas, Minnesota, and Montana, which are the principal surplus producing States, is some 42,000,000 less than that indicated a month ago, and 135,000,000 bushels below last year's actual harvest. With the carry over, it is figured that the United States will have this year about 895,000,000 bushels of wheat available for domestic consumption and seed requirements and for export this season, which points to a surplus of some 200,000,000 bushels, after allowing for a normal carry over into the next crop year. The indicated corn crop of 2,982,000,000 bushels is fully 20,000,000 more than the trade had been expecting; that total shows a gain of 105,000,000 over the July 1st estimate, and if realised would be 91,000,000 bushels more than was harvested last year.

Such a large increase in the prospective yield was considered as a bearish factor, but in view of the light carry over from the 1922 crop the larger harvest this year is not likely to prove burdensome. The following table gives the Government estimates of the principal crops in bushels, unless otherwise stated, together with the July 1st estimates, last year's harvests, and record yields:—

	1923.		1922.		1923.		Record Yields.
	Forecast.	Harvest.	Forecast.	Harvest.	Forecast.	Harvest.	
Winter wheat	568	586	586	586	760	760	(1921)

The Department of Agriculture says that the value of this year's crops decreased approximately \$500,000,000 last month. That loss, however, is purely theoretical, as was the July estimate of \$1,200,000,000 increase in their value over that of last year's harvests. Only one of the principal crops, namely, wheat, has been gathered, and not all of that has been marketed. Furthermore, the Department has been basing its valuations on market prices prevailing a month or so ago. Actual prices, which will be realised when the crops are sold, are apt to differ widely from the July quotations. Cotton alone has advanced sharply this month. And it is by no means certain that the present indicated yields of crops still growing will be harvested; they may be larger or smaller. It is apparent, therefore, that any estimates made now of the total value of this year's crops are practically worthless.

A New American Quarterly.—A very important and interesting addition to quarterly literature has recently appeared in New York under the title of "Foreign Affairs." This production contains contributions by some of the best informed of American writers; it also gives evidence of careful research in the references to sources of material at the end of the volume, which relate not merely to books and official documents, but also to public documents which have been unofficially printed or summarised in the Press. It is so important that we in this country should understand America's attitude to foreign affairs, that this review is to be welcomed, and we hope that it will have a considerable circulation in Great Britain. The June number deals with the situation in the Far East, public opinion in Scandinavia, the Polish-Lithuanian dispute, Austria's relations with Germany and Italy, Yugo-Slavia, Italy's Mediterranean policy, the attitude of the American farmer to foreign affairs, a commentary on British war policy in relation to the Western Front by an American staff officer, and a discussion of the world's Iron and Steel Industries in relation to the Ruhr. This last article somewhat exaggerates the part which the iron and steel industry plays in politics, but the article gives a very succinct account of the present balance of international steel power. The writer is much impressed with the probability in the future of keen competition between what he calls the three primary units, viz., the United States, Great Britain, and the Rhineland. In spite of the wide distribution of iron ore in the world, he does not expect to see any other areas supplant these three, but between them he sees the probability of over-production and a fight for markets. "The foreign markets gained by the United States during the war were rapidly recovered to a large extent by the Germans and English—aided by depreciated exchange and by the necessity, in the absence of strong markets at home, of securing foreign markets at any cost. The battle is well under way, and is probably far from its climax. The struggle

is quiet, but in deadly earnest." There is, moreover, at least one assertion of fact that is open to challenge, for in the course of his argument he declares that "Since the war the European Governments, including the English, have retained a large measure of control through embargoes, preferential tariffs, bounties, and in certain cases even direct participation. The United States Government alone since the war has left the business exclusively in private hands." The fact is, of course, that the British Government got out of the iron and steel business within five months of the Armistice, almost as soon as the United States Government, and since that time has interfered less. There was, for example, a considerable period during which prices in America were held by the United States Steel Corporation at a figure agreed between it and the Ministry of Commerce. In Great Britain there had been no understanding, either secret or overt, between the Government and the trade as to prices or production, and there has been nothing in the way of a tariff or bounty. On the contrary, the most striking move of the last year or so has been the deputation from Sheffield, which went to Washington and put the case before Congress for not imposing too high a tariff against the cutlery industry of Great Britain. In these and other ways the articles in "Foreign Affairs" will provoke controversy. But they are not less but more important on that account. They undoubtedly represent some of the best informed of American thought in relation to world affairs.

Gold and Silver Production in U.S.—From the statement issued by the Bureau of the United States Mint, with the co-operation of the Geological Survey, we have compiled the following statement of the final estimate of refinery production of gold and silver in the United States during the calendar year 1922:—

	Gold.		Silver.	
	Ounces.	Value.	Ounces and Value.	
Alaska	345,630	7,144,800	770,232	
Arizona	169,704	3,508,100	4,627,738	
California	712,157	14,721,600	3,095,480	
Colorado	324,456	6,707,100	6,018,781	
Idaho	22,891	473,200	5,791,413	
Michigan	73,443	1,518,200	360,811	
Montana	160,044	3,308,400	9,682,304	
Nevada	19,553	404,200	8,287,704	
New Mexico ..	23,728	490,500	764,031	
Oregon	320,402	6,623,300	150,347	
South Dakota ..	19	400	121,427	
Texas	107,175	2,215,500	653,657	
Utah	9,394	194,200	15,465,202	
Washington	73,840	1,526,400	219,398	
Philippines			27,994	
Total for all States.....	2,363,075	48,849,100	56,240,048	

Silver is valued at \$1.00 per ounce, as provided by the Pittman Act of April 23, 1918, for domestic product. Compared with 1921 these estimates indicate a reduction of \$1,218,200 in value of gold production and an increase of 3,187,607 ounces of silver product. The country's record production occurred in 1915, the figures being \$101,035,700 gold and 74,961,075 ounces silver.

Progress in Finland.—Last year, according to the Report of the British Consul at Helsingfors, just published by the Overseas Trade Department, the exports of Finland largely exceeded her imports, and the mark rose in value, through the influx of foreign currency, and even tended to stabilisation. The staple industries, especially timber and paper pulp, were active, the export of butter and cheese showed a notable increase, labour troubles were slight and unemployment rare. The Budget for 1923 shows a substantial surplus of ordinary revenue over ordinary expenditure, owing partly to increased taxation since the war; the receipts from State forests, sawmills, railways, and the Government production of yeast and alcohol, considerably exceeded the estimates, and made up about one-third of the total. The deficit on extraordinary expenditure was to be met out of the capital reserve. A loan of 200 million Finnish marks (roughly about £1,112,000) was placed at home and in Sweden, and was to be spent chiefly on railway extension. The National Debt was diminished by 55.9 million marks,

or nearly 3 per cent., and the floating debt to the Bank of Finland extinguished. Considerable sums were provided in the Budget for railways, schools, and the extension of peasant proprietorship. Of the exports, over 37 per cent. in value went to Great Britain, and more than 10 per cent. to France. Of the imports, Germany had the largest share, nearly 33 per cent. Great Britain followed with about 21 per cent., but while the imports from both countries increased, the British share increased more than the German. An opportunity for its further increase is given by the relatively lower quality of the German goods and the uncertainty attending their prices and delivery at the due date; but British exporters are warned that, as the Finnish mark becomes more stable, the Finnish buyer will regain confidence in it, and that they must not insist on immediate cash. There is a good opening for certain classes of textiles, especially printed calico and better-class linens, linoleum, oil cloth, and the chemicals used in the paper and pulp industries. Electrification and railway extension are progressing, and the railways are resuming the use of coal. Wages are high, owing to the immense increase in the cost of living, which in Finnish marks is nearly 1,050 per cent. above the pre-war rate. Future labour troubles, therefore, seem not improbable, but, considering the sufferings of the country from the war and internal disorder, the progress made since the achievement of independence is conspicuous and eminently gratifying.

Agricultural Plans in New Zealand.—Our Christchurch correspondent writes:—The winter months in New Zealand are usually made the occasion of numerous conferences and discussions among the farmers. The present winter coming after the fairly favourable season of 1922-23, and looking towards an even better season in 1923-4, has produced discussions of more than ordinary interest. The slump of 1920 was a great shock, especially in districts where farming had been rather speculative. The immediate impulse under such conditions was to withhold produce from the market until more favourable conditions appeared likely. Schemes of collective control of marketing were brought up in most of the main industries, the example of Bawra being always present to the minds of the producers. The first effective scheme was widely advocated under the name of a compulsory Meat Pool, and extravagant expectations were raised among farmers. It was often inferred that the pool would be of sufficient strength to control selling prices on the London market in favour of the local producers. The Meat Export Control Board, which was set up as a statutory body, was given the widest possible powers under a skeleton empowering Act; but as a matter of fact, the board has acted very cautiously, and has not attempted to justify the extravagant claims that were often made for it. The chairman has definitely disavowed any intention of carrying over surplus production from one year to another, or of attempting in any similar way to sidetrack the market. The artificial boom conditions have left the rural industries in a sober mood. Many districts have suffered heavily from unwise speculation, and it is probable that there is still trouble in store for many farmers and farmers' undertakings. But the farming community as a whole is facing the prospect of falling prices by attempting to reorganise and reconstruct both individual practice and collective organisation. The Dominion president of the Farmers' Union is able to report greatly increased membership in every branch of the union. Moreover, increasing interest is shown in the economic aspects of farming. The Meat Export Control Board will apparently be paralleled next season by a Dairy Produce Board working on similar lines. There has been much discussion also of more difficult problems, particularly shipping and banking. In both cases definite schemes have been put forward—for a joint shipping control vested in the State and a co-operative farmers' organisation to own and operate refrigerated transport, and for an agricultural bank backed by the State. The difficulties involved in both proposals are very great, and the opposition to both is solid, but the proposal for agricultural credit associations at least is being pushed very vigorously, and has been

endorsed enthusiastically by every branch of the Farmers' Union. The dangers of a land bank undertaking ordinary deposit and exchange banking business are sufficiently obvious; but a good case can be made out for some better organisation of the present haphazard system of providing the fixed mortgage capital required on farms. At present the market for such dealings is quite unorganised, and the farmer is forced to borrow for relatively short periods on unfavourable terms. Around these schemes there is building up an organised solidarity among the farmers that has never existed before. It is possible that this new spirit may be reflected in the emergence of a new political party, and it is certain that experiments will be tried in co-operative organisation of marketing, and probably of credit.

American Cotton Crop Statistics.—Important statistics relating to the American cotton crop and compiled by Mr. H. G. Hester, the secretary of the New Orleans Cotton Exchange, have just been received from the United States. The report, which is made up to August 1st, places the world's carry-over of American cotton at 2,573,000 bales, which is the smallest carry-over of cotton since the Southern States became an important producer of the staple. The carry-over for the previous year was 4,879,000 bales. Lint cotton included was 2,396,000 bales, as against 4,547,000 last year. The net decrease in carry-over of lint and linters was 2,306,000 bales. The total carry-over in the United States is given as 1,630,000 bales, against 2,955,000 for the previous season. For the season, the consumption of cotton in America Mr. Hester places at 12,613,000 bales, as against 12,829,000 bales for the previous season. The total carry-over in the cotton belt was 947,000 bales, and the total quantity held on plantations and in uncounted towns in the South was put at 184,000 bales, as against 964,000 a year ago. Mr. Hester announces that the commercial crop of the season was 11,283,000 bales, compared with 11,653,000 bales the previous year. Actual growth was 10,424,000 bales, against 8,442,000 bales. He states that during the last five years, which includes the season just closed, the boll weevil has cost the American farmers of the South not less than 1,500,000,000 dollars, which is estimated exclusive of the several hundred millions of dollars spent for seed which went to waste. The average price of cotton last season was placed at 24.06 cents a lb, against 17.78 cents for the previous season, 16.08 cents a year before last, and 38.21 cents in 1919-20. The total value of the crop last year, including the seed, Mr. Hester estimates at 1,571,299,839 dollars, against 1,173,833,582 dollars in 1921-22.

Workman, Clark Debentures.—We understand that debenture holders in Workman, Clark, and Co., Limited, are to hold a meeting at noon on August 28th, at Winchester House, to consider the lamentable position of their security. This is the natural sequence to the letter issued last week by the trustees for the debenture stockholders. When these debentures were originally offered to the public in February, 1920, there were several points about the prospectus which we suggested might be clearer. To some extent the minor defects in the prospectus were offset, as far as the majority of investors were concerned, by the fact that the Northumberland Shipbuilding Company guaranteed the principal and interest of the stock. Like many other boom flotations prospectus anticipation and directors' realisation present striking contrasts. Assets once so substantial have proved to be elusive, while the guarantee which provided a star feature in the prospectus is sadly tarnished. The trustees' report tells us that "the present position has been brought about by the

serious slump in the shipbuilding industry, and by the conversion of assets which were at the date of the debenture issue in readily realisable form, and the reinvestment of the proceeds in 'B' preference shares of the Northumberland Shipbuilding Company and in acquiring the whole of the shares in John Watson, Limited, colliery proprietors, and 99 per cent. of the shares in the Lanarkshire Steel Company, Limited." The italics are ours. It appears to us to be rather a strange procedure to sell "readily realisable" assets and to replace them by a purchase of a block of shares of the Northumberland Shipbuilding Company. As far as the debenture stockholders of Workman, Clark, and Co. are concerned, it certainly has the effect of weakening the position of that company. Why it should have been necessary to purchase shares in the guaranteeing company is a point which directors will probably clear up at the meeting. Further on the report proceeds to state that "as the result of our investigation of the Northumberland Shipbuilding Company, Limited, we are satisfied that nothing can at present be recovered from that company in respect of its guarantee. The only result of any attempt to enforce the guarantee would be the appointment of a receiver on behalf of the debenture holders of the Northumberland Company, for whom you also act as trustees and whose claim would rank in priority to your guarantee." This is clearly a case in which interested parties should have presented to them a complete and detailed statement of the exact position of each company drawn up by independent auditors. These auditors could work under the instructions of a small committee of debenture holders. The trustees, in a further communication dated August 21st, resent certain criticisms which have been levelled at them in connection with their proposed scheme. If certain critics have departed from the correct course, and have made charges against the trustees which cannot be substantiated, it is to be deplored. We would, however, remind the trustees that the last words as to whether their proposals or other proposals are to be accepted rest with the debenture holders.

The Mexico North-Western Railway.—A new chapter in the history of this enterprise is opened by the announcement that, at the request of a considerable number of holders of its three issues of bonds, a committee has been formed to study the position and devise a scheme of reorganisation. To invest this body with adequate authority, bondholders are invited to deposit their bonds immediately, either with the Bank of Scotland or the Canadian Bank of Commerce. The company, one of a well-known group whose headquarters are at Toronto, was formed in 1909 to acquire extensive timber lands in Chihuahua, and three railroads giving access to them, and now owns or controls more than 3,000,000 acres of forest and about 512 miles of railway line. In that year and subsequently it sold £5,600,000 50-year 5 per cent. first mortgage bonds, in 1912 £750,000 10-year 6 per cent. cumulative income bonds, and in 1914 £1,671,000 prior lien 5 per cent. bonds. Owing to the interruption and damage caused by the revolution, no interest has ever been paid on the income bonds, and the other two issues have been in default since 1913 and 1914 respectively. The share capital, nominally \$25,000,000, was issued with the bonds, and not paid for in cash. Since 1914 the line has been under a receiver, and is now fully restored and working, but his last report, summarised in these columns on April 7, while hopeful as to the remoter future, indicated that interest payments could not be resumed for several years, even on the prior lien bonds. The market for the timber has been restricted by depression in the adjacent States of the American Union, the settlers have mostly left, and fresh settlements have been discouraged by the new land laws of the State of Chihuahua. The brighter outlook in Mexico, however, offers opportunities of which the committee, if strongly backed by the bondholders, may take immediate advantage, while the receivership is costly and necessarily slow

in action. The committee includes two directors of the Bank of England, the company's London agent, and several representatives of investment companies, and its chairman, Mr E. R. Peacock, who will shortly visit Mexico on other business, may be able to promote the company's interests if effective backing is given at once. The prior lien bondholders are desirous that any advantage gained shall profit all three classes of bondholders, who, indeed, are probably to a considerable extent identical. The company has a claim against the Mexican Government of \$7,000,000 for damage during the revolution. The bonds and shares have fallen steadily since 1913, except for a brief revival at the close of the world war, and have recently been further depressed by apprehension of an assessment, which seems to be unfounded. Holders will do well to deposit their bonds at once.

African and Eastern Trade Corporation.—The accounts for the year 1922 of the African and Eastern Trade Corporation make a considerably better showing than those of the previous year. A year ago the profit and loss account showed a trading loss, including commitments and depreciation of stocks, of £1,794,800, and £1,750,000 was transferred from general reserve, the balance carried to the balance-sheet being £41,000 after payment of preference dividend. At the same time £1,500,000 from the reserve was also allocated to writing down investments in allied and subsidiary companies. The report now issued states that owing to the complicated nature of the computation in connection with the excess profits duty adjustment a final settlement has not been reached, but taking into account the adjustment so far accomplished, there is a trading profit for the year of £739,800. This permits of a payment of an 8 per cent. dividend on the ordinary shares, after allocating £200,000 for depreciation of stocks and paying the preference dividend for the year, the balance carried forward being £242,400. In view of the uncertainty of the general trade outlook, the directors have transferred £300,000 from the reserve to make "ample provision for future contingencies" and have also transferred £650,000 from reserve to reduce further the book values of investments in subsidiary companies, some of whose trading results have been "affected adversely" by the trade depression. A sum of £250,000 is also set aside to meet claims during the next three years for income-tax on excess profits duty repayments, so far received by the corporation and credited to subsidiary companies. As a result of these transfers, the general reserve fund stands now at £2,000,000, as against £3,220,000 a year ago, and £6,452,200 two years ago. In the balance-sheet investments in allied and subsidiary companies show a reduction of only £240,000 to £6,609,200, while miscellaneous investments are £56,000 higher at £111,200. Advances to allied companies have dropped from £2,638,400 to £1,410,900. An analysis of the balance-sheet will be found in a later column.

Free State Linen.—A Belfast correspondent writes:—Although the manufacture of linen is mainly confined to Northern Ireland, it is evident that the Irish Free State Government intend to do their utmost to give encouragement to the concerns manufacturing this textile in the other counties of Ireland. Hence one of the measures passed by it during the final sittings of the recent session was to repeal the existing duties on German dyes and facilitate their import by the granting of licences to all *bond-fide* users. At present the demand for linen goods is chiefly for costume fabrics in their many shades, and this new measure will enable textile manufacturers in the Free State to extend their range of these cloths. Hitherto this branch of the trade has been almost entirely in the hands of Belfast concerns, but now firms, such as the Greenmount and Boyne Weaving Company, which has works in Dublin and Drogheda, will be able to compete on very advantageous terms for the great world demand for these fabrics.

Oberzee Correspondence.

UNITED STATES.—RESTRICTED GRAIN DEALINGS—
COMMODITY PRICES FALLING—RAILWAY
EARNINGS—STEEL CORPORATION'S FIGURES—
COAL PROBLEMS.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 13.

It is evident from Washington advices that the administration of the new Grain Futures Act will entail a heavy expense to the Federal Government and to grain dealers throughout the country, and will undoubtedly increase the burden of taxpayers, directly and indirectly. Under regulations that have been issued commission houses are required to report all sales of 500,000 bushels or more, which means additional expense to such firms in compiling the reports, and a large increase in the number of Government employees to handle the returns. And ultimately the increased expense will be passed on to producers and consumers, for whose benefit the Grain Futures Act was passed, according to its sponsors. The latter, as well as Department of Agriculture officials, insist that neither the Statute nor the regulations issued to carry out its provisions were designed to eliminate short selling. Whatever was intended, the enforcement of the Act has served to discourage legitimate speculation in grain in all American markets, for both long and short account, and has already worked positive injury to the farming community.

Commodity prices went still lower in July, continuing the recession which has been under way since last February. *Bradstreet's* index number on August 1st was \$12.8201, representing a decline of 2 per cent. from July 1st. A similar decline from the preceding month was recorded on July 1st and on June 1st. As compared with March 1st, the present index figure shows a net decline of 8 per cent., although it is 6.3 per cent. above August 1, 1922, and 20.8 per cent. higher than the low point of June, 1921, but 38.5 per cent. under the peak of February, 1920. As compared with August 1, 1914, this month's index figure is 47.2 per cent. higher. With the exception of advances in provisions and livestock and relatively smaller gains in miscellaneous products the trend of commodity prices generally in July was downward. Nine groups, led by textiles and hides and leather, reacted, others in the list including grains, coffee, sugar, lard, cotton, wool, jute, pig-iron, non-ferrous metals, coke, crude petroleum, vegetable oils, and some grades of lumber. In all 20 articles of common use advanced, 39 declined, and 47 remained unchanged. Compared with August 1st of last year, 61 products are higher, 36 lower, and nine unchanged.

For the month of June net operating income of the 194 Class I. railroads of the United States totalled \$87,742,000, equivalent to an annual rate of return of 5.47 per cent. on their tentative property valuation. In May of this year their earnings were at the annual rate of 6.33 per cent. on their investment. For June, 1922, the same carriers reported net operating income of \$76,271,000, or at the rate of 4.86 per cent. per annum. June operating revenues aggregated \$541,163,000, representing an increase of \$69,129,000, or 14.6 per cent., over that month last year, while operating expenses of \$416,908,000 were \$43,629,267, or 11.7 per cent., larger. The falling off in June as compared with May was caused principally by a decrease in earnings of western railroads. For the first six months of the current year net operating income of all Class I. railroads in this country totalled \$443,912,000, or at an annual rate of return on their tentative property valuation of 5.64 per cent., as compared with \$349,069,000, or 4.53 per cent., for the same period of 1922, showing an increase of \$94,843,000. From September 1, 1920, to July 1, 1923, during which period the railroads have been operating without any Government guarantee, their average annual rate of return on the tentative property valuation has been only 3.94 per cent. The first six months of 1923 were the best half-year experienced by the railroads since before the war, and the outlook for the second half is considered favour-

able, especially since the volume of traffic continues abnormally large. During the week ended July 28th cars loaded with freight on all railroads in the United States numbered 1,041,044, exceeding the loadings of the previous week by 12,117 cars and establishing a new high record.

The United States Steel Corporation's report, showing a decrease of 475,498 tons in the amount of unfilled orders on its books at July 31st, was in line with general expectations. The reduction brings the corporation's unfinished business on that date down to 5,910,763 tons, the smallest total reported at the end of any month since July of 1922. Its plants are now said to be operating at slightly more than 90 per cent. of capacity, and it is calculated that the unfilled orders are sufficient to keep the corporation's mills employed at the present rate for the remainder of this year, without taking into account new business which will develop.

The United States Coal Commission has made a further voluminous report on conditions in the anthracite coal industry of this country. Among the outstanding features of this report is a renewal of the recommendation that the President of the United States be specifically authorised to intervene whenever a stoppage of anthracite production is threatened. The Commission suggests that the renewal date of the anthracite agreement be fixed far enough from that of the bituminous agreement to prevent suspension of mining in both industries at the same time. Another recommendation is that the operators organise in much the same way as the United Mine Workers have done, in order that they may have an organisation functioning throughout the year, instead of merely at the time when a new agreement is being negotiated. Elimination of the long day is urged; no limit is suggested as to the length of the working day, probably because the eight-hour day already prevails quite generally throughout the industry. The Commission expresses its opinion that the right of discharge and discipline should rest with operators, subject to appeal and prompt review by a conciliation board in cases where the discipline is claimed to have been un-

reasonable or unjust. No reference is made in this second report to the "check-off" system, which proved to be the main issue in the recent controversy between anthracite operators and miners, and which caused the breaking off of negotiations between them for a new agreement to replace the contract expiring on August 31st. Under the "check-off" system which is in force in bituminous fields operated by union labour the union assesses 5 cents a ton on all coal mined by union labourers. The mine owners or operators are obliged to deduct that assessment from the workers' pay envelopes and turn it over to the union authorities. In short, the operators are compelled to act as the union's collecting agent for the latter's dues and fines imposed upon its members, amounting to many millions of dollars annually. The United Mine Workers are now insisting upon the adoption of that system in the anthracite industry. So far the operators of anthracite mines have absolutely refused, with the result that a deadlock was reached some time ago in the negotiations. Indications, however, are that efforts to reach an agreement will be renewed shortly. At any rate, Washington advices state that President Coolidge is likely to take a firm stand in the matter, in order to prevent a strike or suspension of mining in the anthracite industry on September 1st.

FRANCE.—THE WEAKNESS OF THE FRANC—FOREIGN TRADE—TAXATION RETURNS.

(FROM OUR CORRESPONDENT.)

PARIS, August 21.

THE situation created by what continues to be regarded here as Lord Curzon's astounding Note to France remains pretty much as it was a week ago, and so far there is little indication of any development in the direction of bringing about any definite agreement between the two Allies. Matters have not been rendered more easy of solution by what is generally looked upon here as the renewed attack on the Belgian and French francs by mysterious financial interests in London, who are openly accused of having adopted this means of bringing pressure to bear on the French Government, for the purpose of persuading it to evacuate the Ruhr. On the one hand it is alleged that the fall of the franc (which dropped to within a shade of 83 to the £ on Saturday) was the result of deliberate action on the part of large holders of German marks in London, who hope to recover at least a part of their heavy losses by forcing the French to let Germany off more easily than M. Poincaré's pronouncements have hitherto given reason to expect. The more sober section of opinion, on the other hand, as represented by the *Temps*, recognises that the recent heavy drop in the franc was due to the existence here of large stocks of francs belonging to foreign holders. These foreign balances in France are estimated in reliable quarters as amounting to something in the neighbourhood of 12,000,000,000f, and it is recognised that they form, in reality, a mass of foreign floating credits, which can be utilised, from one day to the next, for speculative purposes. The theory voiced by the *Temps* is that many of the holders of these balances, "discouraged either by political events or by losses already suffered, and alarmed by the monetary bankruptcy of Germany, have sold out their francs."

In view of the alarm that has undoubtedly been caused by this latest drop in the franc, the Finance Minister, M. de Lasteyrie, has thought fit to issue a statement in which he insists that last week's collapse can in no way be attributed to economic causes. Enumerating the various factors one by one, he points out that taxation is coming in extraordinarily well (as will be seen from the details given below); that railway earnings for the first seven months of the year have been 190,000,000f in excess of the corresponding period of 1922; that savings bank deposits have been, during the same period, 265,000,000f more than for the first seven months of last year; that the adverse balance in French foreign trade amounts still only to 2.90 per cent., or practically the same as in 1922 (as compared with 15 per cent., which was the normal adverse balance on French foreign trade before the war); that even this deficit is more apparent than real, as it will be more than met by the expenditure of foreign

tourists in France; that the advances made by the Bank of France to the State, "which are generally considered abroad as the thermometer of our financial situation," and which stood at 25,900,000,000f in 1920, have successively fallen to 25,200,000,000f in 1921 and to 23,600,000,000f in 1922, and now stand at 23,700,000,000f. The Finance Minister insisted further that the recent further fall in the franc can only be ascribed to speculative influences, "some of which have undoubtedly been inspired by the desire to bring pressure to bear on the general policy of France."

The French foreign trade returns for the first seven months of 1923, which were issued on Monday, indicate that during July the total volume of exports and imports showed a balance against this country of nearly 192,000,000f, as compared with an adverse balance of 79,000,000f in June. In May, it may be recalled, a surplus of exports valued at 78,000,000f was recorded. The figures for the first seven months of the year, taken as a whole, show an excess of imports totalling 719,681,000f, as compared with nearly 1,000 million francs during the corresponding period of 1922. "Visible" exports, according to the official figures, continue to drop, the falling-off of nearly 200,000,000f recorded in June having been increased last month by, in round figures, another 57,000,000f. Imports during July increased by about the same amount. It must not be overlooked, however, that these figures comprise only exports recorded on consular invoices, and do not include the "invisible" exports which take the form of purchases and expenditure on hotels, &c., effected by foreign tourists visiting France, which, at this time of the year especially, amount to a very substantial sum. The detailed figures for the seven months, as compared with the corresponding period of 1922, are as follows:—

	First Seven Months of		Increase in 1923.
	1922.	1923.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	3,087,697,000	3,978,283,000	+ 890,586,000
Raw materials	7,278,289,000	10,879,212,000	+ 3,600,923,000
Manufactured goods ..	2,266,142,000	2,447,612,000	+ 181,470,000
Total	12,632,128,000	17,305,107,000	+ 4,672,979,000
Exports—			
Foodstuffs	944,410,000	1,767,176,000	+ 822,766,000
Raw materials	2,974,840,000	5,168,410,000	+ 2,193,570,000
Manufactured goods ..	7,018,768,000	8,746,415,000	+ 1,727,647,000
Total	11,639,460,000	16,585,246,000	+ 4,945,777,000

The return shows that not only has the value of the raw material imported during the first seven months of the year increased by almost exactly 50 per cent., as compared with the corresponding period of last year, but that the weight increased by over 1½ million tons, while the weight of the same category of exports increased by 1,219,204 tons. The weight of manufactured goods imported during the seven months decreased by 78,281 tons, while that of the same category of imports increased by 294,501 tons. The increase in values has, of course, been much greater than in weight, owing to the rise in prices. While the weight of the total imports has increased by 7 per cent., and that of the exports by 15 per cent., the increase in the value of the imports amounted to 37½ per cent., and of the exports to 42 per cent., as compared with the corresponding period of 1922. The total amount of coal and other combustibles imported during the seven months was 17,287,535 tons, as compared with 16,704,642 tons during the same period in 1922. In spite of her largely increased industrial requirements, and of the cessation of deliveries of German reparation coal, &c., France imported during the first seven months of the year only 600,000 tons of combustibles more than during the corresponding period of 1922, the extra quantity required having been obtained through the largely increased production of the French coalfields. Purchases of coal from Great Britain during the seven months amounted to 2,063,978,000f, as compared with 1,357,545,000f during the first seven months of last year.

The yield from taxation during July amounted to 2,057,021,600f, of which 1,919,070,000f was obtained from normal sources, the balance of 137,951,600f being

the yield from exceptional resources, such as the tax on war profits (87,331,000f), liquidation of war stocks (9,987,000f), &c. The yield from indirect taxation and State monopolies during the month was 39,363,000f in excess of the latest of the revised Budget estimates and over 232½ million francs (or 16 per cent.) in excess of the amount received in July, 1922. The tax on turnover produced over 258½ million francs during the month, the highest figure that has been reached since the creation of this impost, the amount received from it in July having been nearly 13½ millions in excess of Budget estimates and over 48½ millions (or 31 per cent.) more than in July last year. This tax may now be regarded as fairly established, in spite of the ceaseless opposition met with from Chambers of Commerce and other influential bodies. Thanks to a modified system of assessment, under which small traders are now enabled to "compound" by paying a fixed sum every year (and thereby avoid the irritating special bookkeeping which was insisted upon when the tax was first instituted), the tax on turnover is now proving much more palatable to those most interested, and there is little doubt it will henceforward prove, as its inventor, M. Klotz, predicted, one of the main sources of revenue. Registration duties produced nearly 384½ millions during July, or 23,409,500f in excess of Budget estimates. The weak spot, as may be expected, was the yield from Customs, which was under 130 millions, or nearly 13½ millions below Budget estimates (but still 9,880,000f in excess of the yield in July, 1922). The reason for this, of course, is to be found in the high rate of exchange against this country. On balance, the revenue for the first seven months of the current financial year has yielded 40,790,000f more than the revised estimate on which (after allowing for the largely increased revenue from taxation already in sight) the Finance Minister finally balanced his Budget a few weeks ago. The year has also shown an increased revenue of 1,117,208,000f as compared with the first seven months of 1922.

G E R M A N Y.—CABINET—TAXATION—CURRENT FINANCES—EXCHANGE—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, August 22.

CONDITIONS show no sign of real improvement. The Stresemann Cabinet has been, on the whole, well received, and the cash crisis, assuming that the new mark collapse does not go further, has been overcome by the increase of the Reichsbank printers' daily note production to 46 billion marks. This is Herr Havenstein's figure. Newspapers state variously that the bank is helped by 40 or by 80 private printing firms. The supply of food in the cities is also somewhat better, but there are still long queues outside certain kinds of provision shops. That the local food supply is governed by the currency is shown by the fact that the considerable mark improvement of last week brought large deliveries of food to the cities. The Cabinet is considering a programme of new measures, of which one will be the creation of a new exchange fund, stated unofficially at 200 to 500 gold marks, to be supplied by business voluntarily; if not voluntarily, then by confiscation, under obligation to reveal holdings of foreign currencies under oath. This is a makeshift measure, because ultimately the question is whether the permanent intakings of foreign exchange are sufficient to meet needs, and they do not seem to be. Import restrictions, which were announced but not imposed by the former Cabinet, are also being considered.

The taxation programme described last week is in a shaky condition. It is condemned as impracticable by some good authorities like the former Minister, August Muller, who as a Socialist stands in principle for the severe direct taxation at which the programme aims. The view of these authorities is that the taxes can be got in only by means of a large increase in inflation, in addition to the normal increase conditioned by the price-rise. The big concerns, which have real values in abundance, but which owing to the extraordinarily small buying power of the 100 billion marks now believed to be in circulation are always hard up, have begun to (as is popularly put)

"mobilise the mark," to raise credits for payment of their taxes just as they raised credits for payment of their private liabilities. This seems to be inevitable; but as the credits mean more inflation, the ultimate end of the process is that the taxes, like the private liabilities, will be paid by the permanent sufferers, the paper mark interests. The Reichsbank is indeed restricting credits, and is further now discounting some bills—not all—on a sort of qualified "Wertbeständig" principle. It requires its debtors to take 80 per cent. of the loss caused by any future mark depreciation as measured by the dollar exchange. The paper mark repayment of the paper mark debt will increase to the extent of 80 per cent. of the dollar's rise. This system is not satisfactory to business, because the bank does not undertake to reduce its paper mark claims if the dollar falls. Further, as long as all banking business is not "Wertbeständig," the system is paradoxical. The Reichsbank, while making large paper mark profits on the bills, does not increase its paper mark payments to its own creditors, so that the public will continue to lose from the currency depreciation, the only difference being that the profit will go to the Reichsbank instead of to the borrowers. Herr Havenstein rightly pointed out long ago that "Wertbeständigkeit" could not be adopted in only half of a bank's business, but the furious outcry against him compelled him to act against his judgment. The outcry can, indeed, be understood. On December 31st last business owed the Reichsbank on bills and advances 760 milliard marks. On August 7th it owed 36 billion marks. The debt to the bank at the former date was about \$100,000,000. The present debt of nearly 36 billions is about \$6,000,000.

The floating debt in the first ten days of August nearly doubled. It rose from 63,686,604 to 118,681,286 millions. Revenue received was 1,781,202 millions, against expenditure of 67,224,944 millions. The loss on railways alone was 18,378,880 millions. The floating debt is now just 100 times that of December 31st last. The whole debt, having risen from 1,886 milliards to 119,681 milliards, has shrunk in gold value from approximately 158 million to 24 million dollars. The Reichsbank statement for August 7th shows an addition to the circulation of 18,731,954 millions, the total being 62,326,692 millions. This rate of addition has since been far exceeded. Seven billions were added to discounted commercial bills, and nearly 26 billions to Treasury Bills. The Bank's free gold reserve remained unchanged at 596,351,000 gold marks. While very large sums will undoubtedly be received in taxes during the next weeks, the reichsmark's reputation does not seem to have been strengthened. As the inflation rate increases, the vast expected nominal tax yields dwindle in real proportions, and play an ever smaller role. New York on Monday sold the mark at below 7 millions to the dollar, apparently on the basis of the doubling of the floating debt. Exchange is still severely rationed. In free sales the dollar yesterday temporarily fetched about 8 millions, but the official rate was kept down to under 6 millions.

The price rise continues. While prices in general were rapidly catching up on the foreign exchanges, the tax measures, the increased railway and post rates, and sharp increases in coal prices tended to throw the price level farther up, and many commodities are at present far above world market price. The extremely high coal prices—which were this week raised 63 per cent., after being trebled only a week earlier—is the reason given for high gas and tram charges. Business is demanding a further reduction of the coal tax, which early this year was cut from 40 to 30 per cent. of the selling price. The *Frankfurter Zeitung's* provisionally issued half-monthly commodities index shows a rise between the beginning of August and the 16th from 283,599 to 894,637 (basis 1 in 1914), the dollar exchange index on the 16th being 785,714. The textiles index number was 1,250,845, minerals 1,228,881, both not far short of double pre-war gold prices.

Judged by employment reports, the condition of business in unoccupied territory is slowly improving. There are signs of a return of working capital shortage. Practically all calculations by big concerns are now made directly on the basis of the dollar or sterling exchange, and the use of commodities as currency for estimating the value of marks is increasing. A Berlin Court last week

fined a culprit 600 pounds of coal, and a Berlin district municipal council formally leased a swimming bath to a club at the daily rent of "the price of thirty large mugs of light beer as charged at Aschinger's beer-house in the Alexanderplatz." Two more judicial decisions that mortgagees need not accept repayment in paper marks have been given. Newspapers report that a Munich gentleman is testing further application of this principle by suing the Government for gold mark interest on 10,000 marks invested in pre-war loan stock. The *Boersen-Courier* has begun to give stock quotations in dollars and cents.

ITALY.—RESTRICTION ON SALE OF OCCUPIED HOUSES—EXEMPTION FROM TAXES TO FOREIGN LOANS—SUCCESSION DUTY—INCREASE OF FAILURES.

(FROM OUR CORRESPONDENT.)

TURIN, August 4.

AFTER my last letter, a group of interesting Royal decrees has been published in the *Gazzetta Ufficiale*. The War Rents Restriction Acts encouraged the sale of flats, and even of single rooms, to tenants as a means of escaping the ruin with which restrictions threatened the landlords. Proprietors, who received nothing, or almost nothing, as the net rent of their houses, were very glad to sell them piecemeal to their tenants; and tenants rejoiced in the hope of escaping future increase of rent, when freedom would be reintroduced in the rent-market, by the payment of a somewhat liberal capitalisation of present rents.

Rent restrictions were abolished by the Royal Decree of January 7, 1923; but the Arbitration Committees did not allow landlords to increase rents at will, with the result that piecemeal sales were encouraged. When tenants, owing to shortage of money, were unable to purchase flats or rooms occupied by them, a middleman took charge of the affair. He purchased the house as a whole, and, by threats of selling the rooms to other people—who, as landlords, would have the right of evicting the present tenants, compelled tenants, however unwilling, to purchase at a high price. A decree of July 7, 1923, proposes to stop these speculative operations. In the event of sale, the new landlord is bound to respect current leases, and tenants cannot be evicted by new landlords.

The praise justly given to the Royal Decree of December 16, 1922, exempting from Italian income-tax all loans issued in foreign countries for the purpose of importing new capital into Italy, gave place to criticism when the regulations were published recently. These prescribe that borrowers (1) must exhibit a public deed of loan; (2) indicate the use to which the proceeds of the loan will be applied; and (3) within six months of the provisional approval of the Finance Minister, give proof that the loan has been issued in conformity with the regulations. Then only will exemption be accorded; but it is always open to revocation if the proceeds are applied to purposes other than the original ones, or if other regulations are unobserved.

It is feared that those restrictions will somewhat limit the usefulness of the exemption-decree as a means of promoting the introduction of foreign capital in Italy, and it is earnestly hoped that, in his usual experimental way, the Finance Minister will simplify the procedure.

I have repeatedly called attention to the loud complaints aroused by the extraordinary severity of the succession duty, which comprises the taxes known in Great Britain as estate, succession, and legacy duty.

The rates are as follows, and fall on the amount severally received by heirs and legatees:—

Lire.	Father and Son.	Grand-father & Grand-son.	Consorts (Husband and Wife).	Brother & Sister.	Uncle and Nephew.	Grand Uncle and Grand Nephew and Cousins.	Other Relations, & Strangers.
1,000..	Exempt	Exempt	Exempt	8-40	10-80	21-20	21-60
5,000..	1-80	1-80	5-40	9-60	12	14-40	22-80
10,000..	2-40	2-40	6	10-80	13-20	15-60	24
50,000..	3-60	4-80	9-60	14-40	19-20	28-80	42
100,000..	4-80	6	12	16	21-60	32-40	48
500,000..	10-80	12	19-20	25-80	28-80	39-60	62-40
1,000,000..	15-80	18	26-40	32-40	36	48	70-80
5,000,000..	21-60	25-20	34-40	39-60	45-60	57-60	78
10,000,000..	25-20	28-80	36	43-20	50-40	62-40	81-60
50,000,000..	28-80	32-40	39-60	46-80	54	67-20	86-40
Over 50,000,000..	32-40	36	43-20	50-40	57-60	72	90

In certain cases additional taxes are imposed, and when it is remembered that debts are not wholly deducted, that valuations are often very high, and that money, jewels, and furniture are valued at fixed rates, it is not surprising that heirs or legatees frequently prefer to relinquish their rights wholly to the benefit of the exchequer.

When the present Minister took charge of his office hopes were held of a betterment, but, as time went on, it was feared that nothing would come out of these. Suddenly Signor De Stefani proposed in the Cabinet Council that the succession duty should be wholly abolished in the family group, and the proposal was unanimously carried. It appears that this category comprises parents and sons, brothers and sisters, and husband and wife. The succession duty is to be retained only between uncles, nephews, cousins, and strangers, but rates will be reduced in these cases.

The reform is a bold one. Perhaps 85 per cent. of the present yield of the tax is to be given up. As the yield was in the present year about 300 million lire, the sacrifice on the part of the exchequer is considerable. Signor De Stefani briefly sums up the reasons in favour of the abolition of the tax: (1) The reinforcement of the family institution; (2) the injustice of the existing tax, which leaves scot-free almost all movable wealth and bearer securities, and which bears almost exclusively on real property; (3) the injustice of a tax which weighs more on the South than on the North of Italy, as in the South the wealth consists in very large measure of land and houses, which cannot escape taxation; (4) the stimulus which should thereby be given to savings.

As in other countries, the war had a beneficial effect on the number of failures, but this result was really quite abnormal. Profits were high enough to allow even inefficient men and badly managed enterprises to prosper. In 1921 the laws of competition re-asserted themselves, and failures increased. The increase is progressing in 1923:—

	1921.	1922.	1923.
January	82	132	402
February	71	258	367
March	99	332	437
April	114	261	431
May	96	288	473
	462	1,371	2,110

While the average figures of 1912-1915 have not as yet been reached, progress towards a normal elimination of the unfit is noteworthy.

DENMARK.—EXCHANGE—NATIONALBANK—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, August 21.

THERE is no great change in the state of the markets, but generally the tone is better than a month ago owing to the decline in the foreign exchange quotations. It is generally believed that this decline is not a temporary phenomenon. During the last fortnight the krone rate has recovered considerably, and apart from the circumstance that dollars, &c., had been forced too high owing to the nervous apprehension of a further rise usually experienced in a rising market, several positive reasons for the reaction which has now set in may be enumerated.

The prospects of good crops have had some effect. Everything points to at least average yields, and for several crops a yield beyond the normal is anticipated provided nothing unforeseen happens. Further, the balance of trade for the second quarter of the year shows an improvement on the first quarter. A very important point in dealing with the present economic situation is the fact that for June the balance of trade shows a figure of only Kr. 5,000,000, against Denmark, the imports amounting to Kr. 141,000,000, against exports Kr. 136,000,000. For May the corresponding figures were Kr. 154,000,000 and Kr. 134,000,000, and for April Kr. 168,000,000 and Kr. 115,000,000. The deficit on the balance for these two months was accordingly Kr. 20,000,000 and Kr. 53,000,000 respectively, which is considerably more than for June. The figures for one or two months, however, are hardly a sufficient basis to build upon, but the general belief is

that the second half of the year will show a better balance than the first, for which the excess of imports was Kr. 184,000,000.

At the same time, it is noted with regret that prices have shown a tendency to rise still further. This, however, does not apply to wholesale prices, which were unchanged in July, the index of the *Finanstidende* showing the unchanged figure of 207 as for August 1st. But the rise is apparent from the last official figure for the cost of living, which for the beginning of July was 204, as against 198 six months earlier.

From all that can be gathered, it may be said that in Danish trade circles there is a general understanding that unnecessary rises in price should be avoided, and, as regards the krone rate, this fact is not disadvantageous. Quite apart from this, the *Finanstidende* writes that the present outlook for the Danish krone does not appear unfavourable, and the paper is of opinion that it should not be impossible to recover within the near future the decline of the last few months. It has been proposed by an economist to write down the krone to 70 per cent., but as far as can be judged this idea does not appeal to the population, which no doubt still counts upon the regaining of the old parity. But these problems will be treated by the exchange conference convened by the Nationalbank and opened last week. This conference includes 34 representatives of the various trade organisations, &c., as well as a number of the theorists who have taken a special interest in exchange conditions.

The financial year of the Nationalbank closes on July 31st, and early this month the bank reported that the accounts would this time not show a surplus, owing to the earnings as per profit and loss account being absorbed by writing off and placing to reserves in consequence of the sacrifices made by the Nationalbank in support of the Landmandsbank. Various special reserves have also been absorbed, while all losses estimated in the above connection have been covered without touching the reserve fund and the dividend regulation fund. The amounts of these funds are Kr. 11,300,000 and Kr. 30,700,000 respectively, as against a share capital of Kr. 27,000,000.

At the same time the bank reports that in accordance with the provision of the charter an amount will be paid to the shareholders—out of the dividend-regulation fund—and that in view of the satisfactory general position and prospects of the bank, it will be proposed at the meeting of representatives that this payment should be 10 per cent. of the capital, corresponding to last year's dividends.

The amount of Danish trade with England in a number of important lines of business is shown by the statistics for the first half of 1923 now published. The following figures of export to the United Kingdom should be mentioned:—

	January-June.	1922.	1923.
Bacon	1,000 kilos	52,267	79,641
Beef and veal, unsalted ..	1,000 kilos	2,898	2,768
Butter, in casks and boxes ..	1,000 kilos	29,612	44,474
Eggs, fresh	1,000 scores	13,639	16,102

In all these lines, with the exception of unsalted beef and veal, the exports have been more than in the corresponding half of 1922. But also on the import side progress is reported. For instance, the imports of British coal have been somewhat more than last year. The total coal imports have been 1,478,393 tons in January-June, 1923, against 1,155,166 tons during the corresponding period last year, and of this only 11,658 tons emanated from Germany.

JUGOSLAVIA.—TAXATION—NATIONAL DEBT—EXPORTS—COST OF LIVING.

(FROM OUR CORRESPONDENT.)

BELGRADE, August 7.

DURING the last two months the Government has been busy passing a number of long-delayed laws. Two of the most important are the Army Law, which reduces military service from two years to 18 months, and the Civil Service Law, which provides improvement in the status and pay of Government servants. An attempt has been made to improve communications by the introduction of a fortnight's enforced labour *per capita* annually for

the repair of roads, as the previous tax of two dinars per head was quite inadequate. In order to increase revenue a temporary reform of taxation, which is to last 12 months, has been passed. Land taxation has been increased 500 per cent. (from 10 to 60 dinars per hectare), and general taxation 30 per cent., while indirect taxes are also heavier. The increase in direct taxation is expected to yield over 500 million dinars.

Commercial and financial relations with other countries also show signs of improvement. Following the commercial agreement with Austria, a similar pact, on the basis of reciprocal treatment, has been signed with Poland. The question of the repayment of war debt has been discussed, and it has been decided to send a delegation to enter into negotiations with America and England. If, as in the case of England, the interest should be fixed at 4½ per cent., annuities and interest together would amount to about 50 million dollars. This, with the annuities and interests on other loans, would make an annual total of over 90 million dollars. Such a sum, which would equal one-twelfth of the Budget as planned for 1923-4, would be a very heavy burden, but should at the same time do much to increase the financial prestige of the country abroad.

Much of this useful work has been held back by party bickerings, muddled administration, and the political tension in Croatia. The reduction in the number of officials, which was to have effected considerable savings in the Budget, is going on very slowly, and many accusations of partisanship are being brought forward. The Budget is not yet passed, and the State has been living on monthly credits since June.

Commerce is much livelier. Export duties on maize, straw, clover, and wurzels have been rescinded, while duties on wheat, rye, pigs, lard, and flour have been greatly reduced. These reductions, together with the financing of exports by the National Bank, have already led to a considerable improvement in foreign trade. This is particularly the case since March, though, unfortunately, only the statistics for January and February are as yet available. From these it can be seen that the increase is both in value and in tonnage.

	1922.	1923.	1922.	1923.
	Mill. Dinars.	Mill. Dinars.	Tons.	Tons.
January	247	329	134,429	186,924
February	196	384	105,169	166,841

The improvement has been specially noticeable in the exports of maize, flour, prunes, fruit, vegetables, wine, cordage, horses, pigs, cattle, and meat.

These facts and the prospects of an excellent harvest, which promises an increase of 30 per cent. on that of last year, have reacted favourably on the exchange, and the sterling rate for dinars has fallen from 460-470 in April to 420-440 in July. Side by side with this there has been a noticeable fall in the cost of living. The total index number of the principal articles of popular consumption, which is now issued by the *Economic Review*, of Belgrade, stood at 93.6 in the first week of July last, as compared with 100 at the beginning of March. The fall was most noticeable in fruit and vegetables and in meat products.

BULGARIA.—EXCHANGE REGULATIONS—GOVERNMENT POLICY—EXPORTS.

(FROM OUR CORRESPONDENT.)

SOFIA, August 17.

At the beginning of this month the Government issued new regulations restricting dealings in foreign exchange. Purchases can only be made for genuine trade purposes, the authenticity of which must be established by the production of the necessary documents, such as invoices, bills of lading, &c. An exception is made, however, for private buying of foreign currencies, though only on a small scale, for travelling expenses—when the requisite passport must be produced—and for the settlement of private debts abroad. In addition, foreign firms are free to purchase foreign exchange in Bulgaria in so far as their leva balances are sufficient to cover the operation; but advances in leva to firms or to private persons residing abroad are not permitted. Heavy penalties are enacted in the event of these new regulations not being complied with.

As far as the effectiveness of the regulations is concerned, it can only be stated that foreign currencies have been steadily rising since the end of July, although speculation on a large scale has become practically impossible. The only real consequence so far is that the nervousness of the public has been greatly calmed. The Bulgarian exchange market being a very small one, every accidental modification in the supply and demand sharply influences the rates. Moreover, as the lev has no real quotation at any foreign bourse (excepting Constantinople), the restoration of the accidentally disturbed balance takes a relatively long time.

The fusion of the "bourgeois" elements for closer co-operation to oppose a possible combination of agrarians and communists is generally regarded as most significant. The outcome, however, will very largely depend upon the attitude the Government and the new coalition will adopt towards the problems of compulsory land distribution, of compulsory labour services and the various other economic questions left over by the late agrarian Government. Detailed proposals do not as yet appear to have been made, and good intentions alone do not provide a sufficient indication of the probable policy of the new Government. In fiscal matters, however, it seems unlikely that the policy of the agrarians will be much modified.

During the last few weeks the question of reforming, or, rather, of enlarging the National Bank's credit system has been much discussed. Larger credits will be opened to the Bulgarian tobacco and grain exporters on very easy terms. No decision, however, has been taken concerning the extension of industrial and general trade credits. A partial solution of this very important question of credits will most likely prove to be of little use in the consolidation of the general economic situation. The really efficient remedy against the prevailing scarcity of money, the easy mobilisation of trade paper by means of larger discounting on moderate terms, has not yet come up for discussion, and this is a regrettable omission.

The recent fall of the lev has stimulated export transactions in grain, and exported rose-oil has been sold at satisfactory prices. The buying season for tobacco has not yet begun, but active business is very probable in view of the excellent crop, which is somewhere in the neighbourhood of 35,000,000 kgrs.

CANADA.—CROP REPORTS LESS OPTIMISTIC—WHEAT POOL SCHEME—BUSINESS CONDITIONS—PRICES—BANK LOSSES—HIGH TAXATION—BRITISH COMPETITION IN TEXTILES—THE FUEL SITUATION—PROFITS OF TOURIST TRAFFIC—STOCK AND BOND MARKETS.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 13.

THE crop reports from the West have now shed their flavour of exuberant optimism, and abatements of varying degree in the earlier estimates are being made. The *Manitoba Free Press* goes so far as to say that during the past three weeks the very favourable crop prospects have vanished. In Manitoba itself, where very heavy loss is reported from the triple causes of rust, heat and the sawfly, practically every locality has been affected by one or other, and in the central and southern areas the goods yields in sight a month ago have been cut in half already. It is also stated that the wheat heads are not filling to the top. Saskatchewan has not suffered so many calamities, and the crop experts report excellent stands of wheat in many districts, but rust has already done considerable damage, and there have also been premature frosts whose effects cannot be immediately estimated, but are expected to be serious. Cooler weather has mitigated the danger of rust, but apparently Saskatchewan, taken all round, will not have more than an average wheat crop. The bright spot in the picture is Alberta, where a better crop than in 1915 is still claimed. There has been a little damage from grasshoppers and hail, but the province is practically free from rust, and the heads are being well filled. Cutting of wheat has already commenced in the earlier districts, but it will not be general till August 20th. Labour is exceedingly scarce, and workers are demand-

ing from \$4 to \$4.50 per day. The straw is very heavy, and the farming community in the West unites in predicting that with the impaired yield the crop will be a dead loss to them. In the East the grain harvest is well advanced, and the yields are variable.

The western farmers are going ahead with their plans for a voluntary co-operative wheat pool, and have taken out a charter for the marketing corporation. Mr Aaron Shapiro, the well-known California expert on co-operative marketing, has begun to address meetings in Alberta, and the numbers who attend them and promise support indicate that there is a widespread demand for a new system of marketing. Mr T. A. Cramer, the ex-Minister of Agriculture, who is now president of the United Grain Growers, Limited, has issued a statement calculated to throw cold water upon the project, but many farmers have developed a fear that United Grain Growers, Limited, although professedly functioning for their benefit, is a very valuable ally of the Winnipeg Grain Exchange, inasmuch as its officials have condoned many of the abuses charged against that institution. Their suspicion about the existence of serious abuses in the grain trade has been confirmed by the disclosures made to a Royal Commission now perambulating the country, before which disturbing evidence about fraudulent practices in weighing grain and false bottoms in elevators has been tendered. Apart from their distrust of the methods of the elevator companies, the farmers think that if they can control the outflow of wheat in the autumn months they can improve the aggregate price realised for the crop. Their expectations in this connection are probably exaggerated, and although Mr Shapiro has had amazing success as a propagandist of co-operative methods in the United States, it is hard to see how he can bring any scheme to effective fruition this autumn. However, he will probably sow seed which will next year result in a revolution in wheat-marketing.

The setback to the western crop has naturally come as a disappointment to manufacturers and merchants, who were counting on an increased flow of orders from rural storekeepers in the West. Plainly, the volume anticipated will not now materialise, but the forestry and mining industries continue to be very active, and the trend of business is regarded as fairly satisfactory. Many factories are working at full capacity, and the motor manufacturers are still doing a brisk export trade. While the southward exodus still goes on, because workers claim that wages in the States are on a much more favourable basis than in Canada, a certain number of artisans have been coming back to Canada, and in some trades there is an actual scarcity of labour.

The index number of prices compiled by Prof. Mitchell, of Toronto, shows no decided trend in price movements for the time being. At the end of July the index stood at 176.4, a decline of .8 as compared with the end of June. The figure for July, 1922, was 165.3; for July, 1920, 269.4, and for July, 1913, 117.3. The comparison between the fate of foodstuffs and manufactured goods is illuminating. Between July 31, 1920, and July 31, 1923, the index figure for 20 foodstuffs fell from 314.2 to 187; in the same period the figure for 20 manufactured commodities fell from 224.6 to 165.7. The objections of the consumer to the high prices of manufactured articles still continues, and even in prosperous communities there is little freedom in buying. Some authorities discern signs of a very substantial decline in prices of manufactures in the near future, but even this welcome development will not help the farmer much unless there is some healing of the European situation. The primary cause of the economic disabilities of Canada lies in the impairment of the chief market for her exports, and if she had not happened to lie alongside the richest country in the world her condition to-day would have been very unhappy.

Following close upon the action of the directorate of the Union Bank, the Standard Bank, a smaller institution which operates chiefly in Ontario, has made confession of parallel losses and difficulties, and has taken the same course as the Union. A substantial sum has been taken from the reserve to meet losses already incurred and provide for doubtful debts, and a new general manager has been appointed. The end of such episodes

is apparently not yet, for the *Financial Post*, of Toronto, states that there are disturbing rumours abroad about other banks, and demands that they clear the air by frank and immediate readjustments on the same lines as those taken by the Union and Standard Banks.

The business community is complaining bitterly about the heavy incidence of taxation, and while Mr Fielding may derive satisfaction from the fact that during the first quarter of the present fiscal year the collections of Customs and Excise have risen from \$81,741,000 to \$99,367,000, the taxpayer points out that the Federal taxes of Canada approximate \$44 per head, as compared with \$33 per head in the United States, and that the administration at Washington has been able to budget for a reduction of 150 million dollars in taxation this year.

The textile manufacturers are making strong complaint upon the adverse effects of the British competition which has been made possible by the tariff reductions of the last two Budgets. They declare that the local market is being flooded with British goods at prices which they cannot meet, and that as a result many factories are now running on short time. Although the tariff cuts were very slight, and in no case were more than 3 or 4 per cent., their effect has been quite marked, for British shipments to Canada of cotton goods in June totalled 3,501,800 square yards, as compared with 661,600 yards in June, 1920, and 1,985,100 yards in June, 1921. The textile manufacturers have set on foot a vigorous propaganda to ameliorate this situation from their point of view, and next session the Government will be faced with strong pressure for a restoration of the old scale of protection.

The fuel situation is still causing acute concern. In the anthracite field in the United States another strike seems inevitable, and, as the domestic stores of anthracite south of the boundary are very low, an embargo is a very probable contingency. Accordingly, Central Canada is looking for possible supplies elsewhere. The railway companies, as a temporary concession, have made a special freight rate on Alberta coal to Ontario points of \$7 per ton, which is well below the cost of haulage, but, while it ought to enable the Alberta coalowners to sell their coal in Toronto at \$14 per ton, which is well below the current price of American coal, the concession is limited in its application to 4,000 tons. If, however, an American embargo develops, it may have to be made permanent, and there will also be a good market for Welsh coal if it can get up the St Lawrence before the freeze-up.

Quebec and British Columbia, partly through their natural amenities, and partly through their refusal to adopt Prohibition laws, have been deriving very substantial benefits from tourist traffic chiefly coming from the United States, and Canada is more and more becoming a playground for the American people. It is calculated that the tourists will this year bring 30 million dollars into British Columbia, and all the summer resorts on the St Lawrence are crowded.

Paralleling the weakness in New York for which the German troubles and the death of President Harding were responsible, the bond and stock markets in Canada have shown a tendency to lower levels, and the volume of transactions has been slight. The bond dealers, however, anticipate considerable activity in the autumn months.

Recently the Government sold an issue of \$22,500,000 Canadian National Railway Equipment bonds backed by the State guarantee to a strong and representative syndicate of Canadian financial houses. At the accepted price of 97.887 the Government is borrowing at a cost of 5.35 per cent., and the bonds are being offered to the public at prices to yield 5.10 to 5.21 per cent. according to maturity. This represents one of the most important transactions completed in Canada by public tender, and the fact that the issue was oversubscribed a few hours after the books were opened indicates a strength in the domestic bond market which is bound to influence Mr Fielding in his selection of markets for the heavy Government borrowings which are ahead this autumn. It is reported that owing to the outcry in London over the King Ministry's replies to the Grand Trunk shareholders and the Grand Trunk Pacific debenture-holders, and the threat of an organised boycott against Canadian issues Mr Fielding has abandoned the idea of

offering any early Canadian Government loans in the London market. Such threats as have lately been transmitted over the cables simply tend to stiffen Canadian opinion in support of the Government's action, and as it is known that New York will offer a very cordial reception to issues of the Canadian Governments and municipalities, the threat of a boycott in London does not present any real terrors, and simply disturbs good relations between the Dominion and the Mother Country. Naturally, Canadians do not like the accusations of bad faith which are being hurled at their Government, and there is a demand that further efforts be made to convey the true facts of the case of the unfortunate Grand Trunk and Grand Trunk Pacific shareholders.

AUSTRALIA.—COMMONWEALTH FINANCE—TAXATION.

(FROM OUR CORRESPONDENT.)

MELBOURNE, July 9.

AN approximate statement of the Commonwealth revenue and expenditure (gross figures before deducting payments to the States) for the financial year ended June 30, 1923, shows totals comparing with the Budget estimate (after giving effect to reductions in taxation) and with the previous year as follows:

	1921-22.	Estimate. 1922-23.	Approx. Result. 1922-23.
Revenue.....	£ 63,985,796	£ 58,407,000	£ 63,837,093
Expenditure.....	£ 64,195,699	£ 61,112,443	£ 61,707,935

The last year has resulted in a surplus of £2,129,058, instead of the estimated deficit of £2,705,443. This is due to the Customs and Excise revenue, which has realised £32,872,128, or nearly £5½ millions more than the estimate, and about £5½ millions more than in 1921-22, when it was £27,630,359. On the other hand, the Commonwealth income-tax has been inelastic, the receipts being £12,904,517, against the estimate of £13,150,000.

An important feature of the Customs revenue is that it is based upon increased imports, which in turn are partly the after-effect of the heavy borrowing of Australian Governments in London and New York in the 1921-22 financial year. With a high tariff, the indirect result of the flotation of Australian loans in London is virtually to transform about 17 per cent. of the proceeds of loans into Commonwealth Customs revenue, and thus to increase the funds available for ordinary expenditure. During the 11 months ended May 31, 1923, imports into Australia have increased by over £30 millions, as compared with the corresponding period of the previous financial year, and this accounts for the buoyant state of Commonwealth finance.

The total taxation in all forms collected by the Commonwealth Government for 1922-23 is £49,885,018. Adding direct taxation by the six State Governments (exact amounts not being yet available) the total is raised to about £67½ millions, against £67,361,729 for 1921-22, and £70,318,921 for 1920-21.

The attempt to convert the Commonwealth 5 per Cent. War Loan of £38,700,000, maturing on September 15, 1923, into a new 5 per cent. loan with a 25 years' currency at £99 per cent. (yielding £5 15 5d per cent.) did not meet with the success hoped for, only £17,200,000 being converted. The long term was suitable to life assurance offices, and some other classes of investors, but to a great extent Australian investors in Government securities prefer a short term. In addition, the various State Governments have been making fresh issues locally since January to a substantial total at 5 to 5½ per cent., free of both State and Commonwealth income-tax, while the Commonwealth 5 per cent. is subject to Commonwealth income-tax. The Government is now offering a 5 per cent. five-year loan at £98 (yielding £5 9s 3d per cent.), both for cash subscription and for conversion if desired by holders of the maturing 5 per cent. loan, including those who converted a few weeks ago into the 25-year loan. Holders of another War Loan, 4½ per cent., due 1925, are offered conversion at par into the new 5 per cent. five-

year loan. It is hoped that the whole of the loan maturing in September will be provided for locally without recourse to London, especially as the Treasurer announces that "there is in the Treasury a large sum of money available to pay off a portion of the loan."

The results of the Commonwealth shipping speculation, as announced by the Premier, Mr Bruce, in Parliament, are that the whole line, now valued at £12,766,588, is proposed to be written down to £4,718,155, a depreciation of £8,048,438, and that the transactions of the line for the whole period of its existence (seven years) have left a loss of £2,645,761. In arriving at these figures, however, it appears that the profit on the working of enemy vessels under control was £1,837,516, an item really irrelevant to the Commonwealth Government's own operations, while, on the other hand, the line is exempt from taxation. The true loss is consequently materially heavier than is indicated by the figures shown above. The announcement has been received without surprise in business circles. Part of the fleet is now for sale.

The question of a rearrangement of the financial relations between the Commonwealth and the six States has made some progress, but has not yet reached finality. The Commonwealth Government proposal that a discontinuance of its capitation payments (25s per head) to the six States should be accompanied by a restriction of Commonwealth income-tax to incomes over £2,000 per annum was not accepted by the States at the recent Conference, and a fresh scheme was then drawn up, under which the Commonwealth would cease to collect income-tax from individuals, but would tax companies at a flat rate not exceeding 2s 6d in the pound. At present the Commonwealth income-tax on companies is 2s 5d in the pound on that portion of their profits which is not distributed in dividends, the dividends being taxed as part of the shareholders' individual incomes at whatever rate is applicable on the graduated scale. To arrive at an equitable result a readjustment would be required of the State income-taxes, which as regards companies are usually charged on the full amount of their profits, the shareholder not being charged on the dividends. This, however, would not meet the objection that the proposed rate of Commonwealth income-tax on companies, 2s 6d in the pound, is higher than the shareholders in many cases are subject to as individuals (small shareholders with small total incomes being probably exempt), and that they would consequently be contributing indirectly at an excessive rate. The scheme has received a partial assent in principle from most of the States, though New South Wales has not agreed. Since it was drawn up, however, a fresh objection has come to light, as the estimated results upon the finances of the Commonwealth and the States, being based upon one or two financial years only, are not sufficiently representative to form a sound basis for calculation. Further consideration of the whole subject will therefore be required before the scheme can be adopted by the Commonwealth and State Parliaments, and it will probably be adjourned for at least a year. Apart from some saving in Commonwealth administration, which may be counterbalanced by the States after their own finances are rearranged to make good the loss of revenue to them from the discontinuance of the Commonwealth capitation payments, the scheme does not promise any reduction in the total weight of taxation falling upon the Australian public. As, moreover, the Commonwealth Government continues to show a tendency, which dates from pre-war times, to extend the scope of its activities, including schemes to provide the States with money to spend on road-making for the relief of unemployment, and the construction of railways by the Commonwealth Government itself under circumstances that will lead to a substantial annual loss, the tendency in future years may easily be the other way. The whole scheme is simply a working arrangement between the various Governments, but under this Constitution the Commonwealth has complete power to modify or discontinue the capitation payment to the States at its own discretion. The proposed duration of the scheme is five years, but the leader of the Labour Opposition has announced in the Commonwealth Parliament that that party, when it comes into power, will take whatever action it deems necessary.

Letters to the Editor.

RAILWAY ELECTRIFICATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The electrification of some of the main line railways in England has been recently considered in connection with schemes for reducing unemployment, but this association with the unemployment problem, important as it is, should not be allowed to obscure or prejudice the essentially inherent factors of the case for electrification. A strong case can be made out, altogether apart from the employment aspect, based on the substantial grounds of better service to the British public and increased profits to the railway companies. Other countries appear to be going rapidly ahead in this direction, especially the U.S.A. and France. Italy, Holland, and Switzerland have already completed large schemes, and others are in progress. Switzerland, in fact, hopes to have the whole of her railways electrified by 1928. In Germany the schemes completed and in progress total 800 miles, in Austria 500 miles, and in Sweden 280 miles. It cannot, therefore, be objected that electrification is only suited to those countries which are of a mountainous character, or deficient in coal supplies, although, of course, these special conditions may reinforce the arguments in its favour.

The main difficulties in this country are probably a deeply rooted conservatism in favour of the steam locomotive, and some hesitation on the part of the railways in view of the many demands for expenditure in other directions, including station improvements, new docks and harbours, and other extensions. However, even in this country, conservatism, or whatever it is that has hitherto damped enthusiasm, is gradually giving way. Those electrification schemes which have already proved so successful and profitable, mainly in connection with suburban traffic, such as the Liverpool and Southport line, the Tyneside lines, and those of the London suburbs, have encouraged some of our leading railway engineers to contemplate the possibilities of main line conversion. In fact, a scheme for dealing with the main line between London and Brighton and Portsmouth has been under consideration at intervals for many years, but has not yet materialised.

The late chairman of the London, Brighton, and South Coast Railway, in his address to the shareholders in February of last year (*Economist*, 18/2/22, 365), emphasised the importance of proceeding with the work of converting the Brighton main line as soon as possible; but although the company had received very favourable reports as to the financial results to be expected, the time was not then quite opportune for obtaining the necessary capital for the complete scheme, including the line to Portsmouth. However, it was decided to go on with the more urgent suburban part of the programme.

Another eminent railway authority, Sir Vincent Raven, has pointed out, in connection with the proposal to electrify the main line between York and Newcastle, that there would be an annual saving of 500,000 tons of coal, and a further saving due to the fact that a lower-grade fuel could be used in an electric power station. On technical grounds, the electric locomotive has several advantages, resulting in lower maintenance costs and greater efficiency. The maintenance costs, indeed, of the whole system are less, whilst the traffic facilities are increased. In regard to goods traffic, too, there would be several advantages, as Sir John Aspinall and others have fairly conclusively demonstrated.

It has been estimated that there are electrification schemes in this country involving an expenditure of approximately £50,000,000. The early placing of contracts for the whole or greater part of this important work would have very far-reaching effects on British industry, direct and indirect, and these effects would be cumulative and reciprocal. It would put heart into many of our manufacturers and their workers, and contribute much to that restoration of confidence and stability so anxiously looked for on the commercial horizon. It is not too much to say that the results of such increased employment would reverberate throughout the industrial world; and, besides this, our railways, which are so

closely linked up with industrial prosperity, would be more up-to-date and efficient, and possibly be enabled substantially to reduce their charges, considerably increase their traffic, and go ahead with other necessary improvements and extensions, such as harbour and dock construction and other railway work, which have had to be postponed hitherto. No doubt it is a difficult problem for the railway companies to decide which programme of work to proceed with first, but electrification would seem to merit a high place.—Yours, &c.,

Bebington, August 14th.

W. G. CASS.

Books and Publications.

CHINA TO-DAY.*

"EXHAUSTIVE views and extensive information." This is President Li Yuan Hung's comment, given in the original Chinese, and accompanied by his seal, sign-manual and portrait, which serves as the frontispiece of this imposing volume; but, even though backed by Presidential authority, the phrase is far from adequate. The book is at once an encyclopædia, a gazetteer, a "Who's Who" of several hundred Chinese officials, politicians, and generals—all but half-a-dozen mere names otherwise to the Western reader—and a compendium of the history of the Chinese Republic. The amount of information given is marvellous, and has not, as in most year-books, been subjected to stringent condensation. There are admirable descriptions of the geography and geology, of the fauna, vegetation, and forestry, the language, the religions, the progress of education and medicine, the national resources, the railways and waterways, the commerce and industry, the army and navy, the Government, the currency, the opium problem, "Greater China," and the chaos of Chinese finance. The Customs tariff is given in full; there is a list of the foreign officials, and the Chinese Eastern Railway, with its political and financial complications, has a section to itself. Two articles deal respectively with the Shantung negotiations and the work of the Washington Conference. Students of the present situation will probably devote their attention mainly to the articles on the military position and the finance of the Republic. The first governs the second; the army, well organised and centralised by Yuan Shih-Kai, has been broken up by the revolution into conflicting hosts, under independent leaders displacing or dominating the provincial Governors, now sometimes recognised perforce as "Inspectors-General" by the Peking Government. All the leaders agree that disbandment is necessary, but none are ready to begin it. Last year the total monthly expenditure of the Peking Government exceeded \$9,200,000, of which the military portion was over \$5,685,000. The monthly revenue, derived from stamps, the taxes on mining, income, wine, and tobacco, and the Peking octroi was \$231,000. No revenue now comes from the provinces, and the Customs and salt surpluses are always ear-marked for special purposes in advance. The provinces are unlikely either to resume their remittances, or to start disbandment and so permit the Peking Government to do likewise. The total indebtedness (of which elaborate details are given, with lists of all external and internal loans and Treasury bond issues) last September was \$1,906,000,000. But it is less than \$5 per head of population. The people have money, and were the credit of the Central Government restored, they might even provide enough to pay off the whole sum.

WORKSHOP ORGANISATION.*

As most people know, the Trade Union movement of this country is at present in a highly self-conscious and self-analytical frame of mind. The more thoughtful of Trade Union leaders recognise that the real difficulties in the way of the "back to the union" campaign, which is at present being carried on, are not merely or even mainly

* "Workshop Organisation." By G. D. H. Cole. Published for the Carnegie Endowment by the Clarendon Press. 7s 6d.

external. The actual economic situation does present tremendous problems to organised labour. There are an immense number of men who have fallen out of the ranks for the simple reason that they cannot keep up their Union contribution. But behind this economic depression is a deep-seated doubt in the minds of those who use their minds as to the function of Trade Unions. If, as recent experience seems to suggest, they can only serve their members when trade is good, and collapse when it is bad, is there not something altogether wrong with them? It may be in their organisation; it may be in their ideas; it may be in their leadership. The answers differ; the questions are universal.

The question about the basis has been brought up, very sharply, by the dispute about the railway shopmen. Are they to be assimilated with the railway servants, or are they to maintain, section by section, their association with the craft unions to which they severally belong? Should the workers organise themselves in relation to the industry in which they work, or in relation to their own special skill? Or, a further question, is the most feasible unit to be found by taking the local unit, the shop?

From the standpoint of those who set this last question, Mr G. D. H. Cole's monograph in the series published for the Carnegie Endowment is of permanent interest. He is there, of course, describing war-time experiences, but those experiences show, as he says, that "the somewhat rigid official organisation of the Trade Unions presents no obstacle to the rapid growth of fresh forms of organisation under an appropriate stimulus from the economic environment." The actual workshop control movement, as seen during the war, was a rank-and-file movement; a local movement, originating separately in each area, in response to particular local conditions—not quite the same, for instance, in Glasgow as in Sheffield or in Coventry—and a spontaneous movement.

The experiment was carried furthest in the metal trades, which have become "what the textile trades were in the early days of large-scale industrialism, the key group of capitalist industry, and the place of the most important experiments in organisation." Of its working, Mr Cole gives a singularly interesting account. His style is not appetising, but the facts he has to describe, and of which he probably possesses an unique knowledge, are, in themselves, highly important and suggestive. His volume is, in this sense, an admirable corrective, for anyone who wants to get the war-time industrial picture illuminated by a true sense of proportion, to the more definitely official accounts which comprise the other volumes in the series. Here you see how the Munitions Acts, and so forth, looked to the workers. History requires to take in that point of view, and to record the experiments in which it found expression. But those experiments have a more than historic interest.

VOCATIONAL EDUCATION.*

DR LINK writes of the educational work being done and attempted in connection with industry in the United States with the authority of one who has had years of direct experience of it. In this volume he is, however, more concerned to investigate and set out the general principles which should underlie such an effort, and to draw a line between the sort of education that ought to be provided nationally and the sort for which industry, in so far as it profits directly by it, can be legitimately called upon to bear the responsibility. Having done that, he proceeds to discuss the ways in which such industrial education can be carried out. He writes with conspicuous good sense. Even those who disagree fundamentally with his entire conception of education will find much that is worth pondering over in his pages. Very interesting, for instance, is his frank discussion of one great difficulty in industrial training, even in its most limited interpretation; that presented by the fact that there is no clear conception of what is wanted. For instance, he says: "One of the valuable by-products of the vestibule school has been the revelation, time and again, that no standard method for doing certain tasks had been worked out. Each new worker has had to learn his task from the individual next him, with the casual instruction which the

* "Education and Industry." By Henry C. Link, with a Foreword by George E. Roberts. The MacMillan Company. 9s.

foreman was able to give. This has generally been the case, in spite of the fact that piece rates and the time studies on which they are based assume a standard way of doing a job to which all individuals should conform. Another preliminary, which must be carried through if vocational education, whether in the school itself or in relation to the factory or workshop, is to be conducted intelligently is the preparation of vocational surveys, such as have, for instance, been carried through by the education authorities of the State of Indiana. "The efforts made in the field of industrial education will continue to fall wide of their mark unless they are based upon adequate information about the characteristics of industrial life."

BOOKS RECEIVED.

The Anglo-American Year Book, 1923. (London) American Chamber of Commerce in London. 15s net.

This useful volume contains commercial directories of American and British houses engaged in Anglo-American trade, which cannot fail to be of value to the British merchant who wishes to get in touch with American houses doing business over here. An extensive report on Anglo-American trade for 1922 showing the principal items of merchandise which are passing between these two countries, as well as an article on English law for Americans, written by a well-known authority, are important features.

September 5. September 6.

FAIRLY cheerful conditions have prevailed in the stock markets, but apart from gilt-edged stocks and some of the more speculative sections the amount of business has been of small volume. The account was arranged comfortably, and a feeling of quiet optimism appears to prevail as to the outcome of international political developments. There has been a steady demand for British Government stocks under the lead of 5 per cent. War Loan, with Conversion Loan a close second in favour. The fluctuations of the franc have been a disturbing influence in the foreign bond market, and European issues have been irregular, while Brazilian stocks have been depressed by a further break in the value of the milreis. Chinese bonds, on the other hand, have moved upward.

The tone in the Home Railway market has been fairly steady, but price changes on the week are of little consequence. The principal features have been provided by the London Group under the lead of Metropolitan and Districts. Canadian Pacifics have shed a point, but Grand Trunk Pacific 4 per cent. debentures have gained that amount. Among foreign rails, Argentines moved irregularly, but there was an advance in Mexican Railway preferences. In the industrial markets business has still been on a very small scale, but the tone has been quite cheerful. Textiles have been one of the best features, Calico Printers advancing sharply on the announcement of a dividend of 12½ per cent., as against 7½ per cent. a year ago. A number of small improvements were also registered for other textile issues. Tobacco shares, too, have again been in some demand, with a resultant hardening of prices. Shipping issues have been idle, and engineering and iron and steel descriptions very quiet. There was a moderate amount of business in bank shares, but price changes were insignificant.

Oil share prices remain fairly steady, but there is little outside support. Rubbers are still strong, but business is showing signs of dwindling. Tea shares maintain their activity, with an all-round improvement in prices.

In the mining sections prices are inclined to move upward, but here, again, business is on a restricted scale. Tin shares have strengthened in sympathy with a rise in the metal, but other base metal issues were inclined to react.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded	£ 202,020,317	£ ..	£ ..	£ ..

1917	1,090,168,650	1916	585,436,853

The Proprietors of Hay's Wharf, Limited.—Authorised share capital £2,000,000. Six per cent. cumulative preference shares of £1 each to the number of 990,007 and 800,000 £1 ordinary shares have been issued. Included in this undertaking is the old-established transport business of Pickford's, which Hay's Wharf purchased some years back. During the week 500,000 preference shares have been placed at 19s 9d per share, and to comply with Stock Exchange regulations the directors of Hay's Wharf have inserted an interesting and informative statement of the company affairs in the Press. Net profits are given from 1917, while net assets, exclusive of goodwill, are valued at £1,742,382. The preference capital has first claim upon profits, as the company has no debenture debt. Provision is made that without the sanction of an extraordinary meeting, at which shareholders will have the right of voting, the company will not be entitled to borrow any sums exceeding in the aggregate £1,000,000. This is a good industrial preference share, with plenty of information available—a useful supplementation in these days, when companies are prone to drop the veil of dignity over their detailed affairs.

The West African Diamond Syndicate.—Authorised capital £500,000. Capital issued consists of £120,000 in £1 shares. The company was incorporated in August, 1923, primarily to work "diamondiferous" areas in West Africa. No contracts have yet been entered into; certain negotiations are in progress for the acquisition of the whole of the diamond interests of Akim, Limited, for a sum of £250,000, payable in fully-paid shares of the syndicate. The Akim "diamond" properties comprise a 20 square mile diamondiferous area, on which production has commenced on a small scale. These details are taken from an announcement made in the Press to comply with Stock Exchange regulations.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

THE NIGER COMPANY, LIMITED.

CHAIRMAN'S CRITICISMS OF COLONIAL OFFICE.

The forty-third ordinary general meeting of the Niger Company Limited, was held on the 21st instant, at the Cannon Street Hotel, Cannon street, London, E.C., the Right Hon. the Viscount Leverhulme, the governor of the company, presiding.

The secretary (Mr E. A. Enfield) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that he and his colleagues had hoped to have been able to put a better report before the meeting, but conditions in West Africa were such as to have rendered a restoration to pre-war prosperity still a "vision of things hoped for but not yet seen." He was able to report some improvement on the previous statement, but the Niger and associated companies were still in the condition of failing to produce any dividends for the shareholders, or even quite to realise their ordinary working expenses. He was confident that the value of the assets of the Niger and associated companies, as a going concern, was not less than the amount at which they appeared on the books of the company.

The trading losses of the associated companies had been dealt with, and in the opinion of the directors the capital of those companies was intact. Sales of merchandise had been well maintained during 1922, as also had the amount of produce purchased. The withdrawal by the Government on April 1st last of the concessions made to mining companies would tend to increase the revenue the Niger Company received jointly with the Government from rents and royalties. He could well understand shareholders of the Niger Company, and other West African companies, asking themselves the question, "What is wrong with West Africa?" He ventured to suggest that the answer could truly and faithfully be found in the Colonial Office system of government, which had inflicted on that unhappy outlying portion of the British Empire an autocratic, bureaucratic

form of government that was repudiated a century and a-half ago by this country's then North American colonies, and since that date by Canada, Australia, New Zealand, and South Africa in turn. If the trade and commerce of West Africa was to resume its former normal channels, the present export duties should be at once and without hesitation promptly withdrawn, and he claimed that that question, and also the question of the reduction of railway charges, were so urgent that they should be dealt with prior to the proposed visit of Mr Ormsby-Gore, the Under-Secretary of State for the Colonies, to West Africa.

Mr H. R. Greenhalgh (the vice-chairman) seconded the motion, and after a considerable discussion it was carried.

CLAUDIUS ASH, SONS, AND CO., LIMITED.

SATISFACTORY PROSPECTS FOR CURRENT YEAR.

The eighteenth annual general meeting of Claudius Ash, Sons and Co., Limited, was held, on the 21st instant, at 5 to 12 Broad street, Golden square, London.

Mr George Edwards, J.P. (chairman of the company), presided, and, in moving the adoption of the report, said that the result of the last year's trading was a little better than that of the previous twelve months, but the past two years had been very disappointing and, for reasons beyond control, the worst that the company had experienced. They were engaged in a scientific business of international importance, but the past year's trading was carried on under conditions in many respects similar to those which had prevailed during 1921, which are adverse to the advancement of the company's interests, the chief causes being the continued general commercial depression, the further deflation of foreign exchanges and adjustments of stock values so as to be in agreement with current cost prices.

With regard to the home business, the demand for dental treatment had fluctuated with the rise and fall of the country's state of prosperity. As a nation we were not blessed with sound teeth, and at last those in authority were giving close attention to this important branch of hygienics for the public welfare. As from January 1st last they had joined their Canadian business to that of the Temple Pattison Company, Limited—the largest dental retailers in Canada—under the title of Ash-Temple Company, Limited. That company had a chain of branches stretching across Canada to Vancouver, and the important step taken in that British Dominion

would, the board felt, have good results in the further development of their manufactures. Owing to the further depreciation of foreign exchanges, the company's export trade had been retarded, and, in fact, business with some countries had been practically closed to them. With regard to the fall in cost prices, he believed the general opinion of the commercial world was that prices had now about reached rock bottom. The present approximate stabilisation had opened the way for placing retail prices on a fair basis, for which object a Dental Trade Association had been formed, thus stopping the suicidal policy of price-cutting, while providing for the fullest measure of service to the profession.

The current year's prospects showed an improvement over 1922, and, while not indulging in any undue optimistic forecasts, the board felt justified in proposing the payment on the ordinary shares of a half-year's interim dividend in respect of the year 1923 at the rate of 5 per cent. per annum, less income-tax, to be paid on September 25th next.

Mr W. H. Ash, J.P. (deputy-chairman), seconded the motion, which was carried unanimously.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £40,000,000 in Treasury Bonds and Treasury Bills dated from Aug. 27-Sept. 1 were opened on Aug. 24, 1923, and the total amount applied for was £62,360,000. Tenders for Monday to Thursday bills at £99 4s 4d, about 83 per cent., and above in full, and for Friday and Saturday bills at £99 4s 7d, and above in full. The amounts allotted were as follows:—In bills at 3 months, £40,000,000; in bonds nil.

BRITISH BANK FOR FOREIGN TRADE state that because of the Continental situation and the slow recovery of Russia, the board does not recommend a dividend, but proposes applying £23,000 to writing down the value of investments and provision for bad debts, carrying forward £20,243. A dividend of 5 per cent. was paid of the previous year, being the first since 1914.

GLOSSOP GAS.—Directors recommend dividends on original £10 shares at rate of 10 per cent. per annum, on original £5 shares at rate of 10 per cent. per annum, on new £10 shares at rate of 7½ per cent. per annum, on "B" £10 shares at rate of 7½ per cent. per annum, and on "C" £10 shares at rate of 7 per cent. per annum, carrying forward £2,825.

HADFIELD, LIMITED.—It is announced that no interim dividend will be paid on the ordinary shares. For the year 1922 an interim dividend of 2½ per cent., free of tax, was paid.

INTERNATIONAL PAINT AND COMPOSITIONS COMPANY announce an interim dividend of 3 per cent. on the preference shares, but state that no interim dividend will be made on the ordinary shares. No interim dividend was paid on the ordinary shares last year, but at the end of the year a distribution of 3 per cent. was made.

LEEDS FORGE COMPANY announce that no dividend will be paid on the cumulative preference shares for the past half year.

PORTSEA ISLAND GAS LIGHT.—Directors recommend dividend for half-year at following rates per annum:—£15 per cent. on "A" and "B" shares, £12 per cent. on "C" shares, £10 per cent. on "D" and "E" shares, and £5 per cent. on 5 per cent. (maximum) stock, payable, less tax, Sept. 1st.

MOSE EMPIRES, LIMITED. state that the results are not such as to justify the board in paying a dividend on the ordinary shares of the company at this time.

Reports and Notices.

Messrs Read and Brigstock announce the removal of their offices from 5 Lothbury, E.C. 2, to larger premises at English House, 58 Gresham street, E.C. 2.

Mr William Murray and Mr Clive Latham Baillieu have accepted seats on the board of the New Zealand Loan and Mercantile Agency Company.

The Anglo-Scottish Trust, Limited, announces the removal of its offices from 5 Lothbury, E.C. 2, to English House, 58 Gresham street, E.C. 2.

GOVERNMENT STOCKS, &c.

GUATEMALA 4 PER CENT. EXTERNAL DEBT.—The Council of Foreign Bondholders have received the balance required to complete the service of the above debt for the year 1923-24.

VENEZUELA 3 PER CENT. DIPLOMATIC DEBT OF 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the second fortnightly instalment of the debt service payable to the council in respect of the half-year ending December 31, 1923.

MISCELLANEOUS.

MINERALS SEPARATION.—The report for the year ended December 31st last show an excess of expenditure over income of £18,812, due to the fact that large plants for the use of the company's coal cleaning and briquetting processes, and for the new ore reduction process, had not yet been in full operation, and further, to the fact that the general situation as regards the metal industries had shown very little improvement. Considerable progress, however, was made during the year, especially in regard to perfecting of the company's coal processes. The first plant for the new coal briquetting process was erected in France at Nantes by La Compagnie Francaise des Mines Powell Duffryn, and was put into operation last month. The results were excellent, and the advantages claimed for the new system have been completely substantiated. The progress of the business in Spain has continued, and several new installations for the use of the company's coal cleaning methods are being successfully operated. In regard to the South African business, before the end of the current year the results of the working of the process at the Modderfontein Deep Levels, Limited, may be available, and the directors are confident that the results obtained will induce other companies to take advantage of the saving of gold which the adoption of the process affords. In Northern Rhodesia, Copper fields of great value are being opened up under the company's auspices, in the development of which this company has a large interest. In the balance-sheet investments in Conversion Loan (at cost) stand at £301,571; National War bonds (at cost) £69,566; investments, £115,015; cash at bank and in hand, £3,517. The debit to profit and loss account for the year, through the refund of income-tax and appropriation fund adjustments, has been reduced to £5,898.

CALICO PRINTERS' ASSOCIATION, LIMITED.—After providing for corporation profits tax, £597,306 for maintenance, depreciation, repairs, renewals and upkeep, and £128,000 for debenture interest, the accounts for the year ended June 30, 1923, show a net profit of £800,408, which, with £237,371 brought forward from last year, makes the total to the credit of the profit and loss account £1,037,779. Out of this sum an interim dividend for the half-

year ended December 31, 1922, amounting to £75,402, has already been paid on the preference shares, leaving £962,177; the directors have resolved to recommend to the shareholders that £150,000 be placed to the credit of the reserve account, £150,000 to the credit of the reserve for equalisation of dividends, and £100,000 to the credit of the employees' benefit fund, and that a dividend be declared on the preference shares for the half-year ended June 30th last at the rate of 5 per cent. per annum (less income-tax), and on the ordinary shares for the year ended June 30th last a dividend at the rate of 10 per cent. per annum, together with a bonus of 2½ per cent. (both less income-tax), leaving the sum of £235,432 to be carried forward.

BRITISH AUSTRALIAN BROKEN HILL.—For the fortnight ending Aug. 11th:—7,270 tons crude ore produced, 1,280 tons lead concentrates, containing 785 tons lead and 32,896 ozs silver; also 960 tons zinc concentrates, assaying 75 per cent. lead, 85 ozs silver per ton, and 45 per cent. zinc. 195 tons carbonates raised. One day's stoppage.

BROKEN HILL PROPRIETARY.—Report for four weeks ending August 15, 1923:—Iron and steel works.—Coke ovens: Produced 23,876 tons of coke. No. 2 blast furnace: Produced 9,693 tons of pig iron. No. 3 blast furnace: Produced 14,542 tons of pig iron. Open hearth: Produced 23,797 tons. Blooming mill: Produced 21,493 tons. Rail mill: Produced 12,615 tons. 18-inch mill: Produced 7,039 tons. 12-inch mill: Produced 2,573 tons. 8-inch mill: Produced 1,304 tons. Rod mill: Produced 4,999 tons. Steel foundry: Produced 651 tons of castings. Iron Knob: Shipped 33,789 tons. Broken Hill (underground): Position unchanged. Ore-dressing mills: Produced 187 tons of lead concentrates and 5,499 tons of slimes. Zinc separation plant: Produced 1,453 tons of zinc concentrates. Slimes flotation plant: Produced 1,805 tons of lead concentrates and 3,638 tons of zinc concentrates.

BROKEN HILL SOUTH.—For the six weeks ended Aug. 11th:—29,910 tons of crude ore and 11,261 tons of dump slime were treated, and produced 8,221 tons of lead concentrates, assaying 58 per cent. lead and 24 ozs silver per ton, also 4,008 tons of zinc concentrates, assaying 43 per cent.

BURMA CORPORATION.—During July, 19,207 tons of ore were mined. 21,370 tons of ore were milled in the treatment plant, producing 10,449 tons of lead concentrates. 11,615 tons of lead-bearing material were smelted in the blast furnaces, producing 4,339 tons hard lead for treatment in the refinery. Refinery products were 3,654 tons refined lead and 403,481 ozs refined silver. Tonnage milled includes retreatment 2,625 tons tailings. Of silver production 23,000 ozs were recovered from treatment of copper matte. Experimental zinc plant produced 924 tons zinc concentrate, assaying 83 ozs silver, 54 per cent. lead, 47 per cent. zinc. In addition to the above, 200 tons antimonial lead were sold and shipped, and 250 tons copper matte produced ready for shipment from the treatment of accumulated smelter by-products.

SULPHIDE CORPORATION.—During the four weeks ended on July 28, 1923, 3,705 tons of ore and 822 tons of slimes were milled at the Central Mine, producing 841 tons of lead concentrates (including 112 tons from the de-leading plant), which assayed 46 ozs silver, 68 per cent. lead, together with 1,400 tons zinc concentrates, assaying 13 ozs silver, 6 per cent. lead, and 47 per cent. zinc per ton.

ZINC CORPORATION.—July:—Lead concentrator treated 15,257 tons of ore, producing 3,397 tons of lead concentrates, assaying 63.3 per cent. lead and 4,940 tons of zinc middlings.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Although weather conditions have been rather unsettled, harvest- ing operations made fair progress in Southern localities, but in the North and West rains retarded the ripening of cereal crops. So far new crop wheat shows excellent quality, and average yields are anticipated in most districts. Winter oats are also favourably mentioned both as regards quality and weight. General course of trade was again on a limited scale, while hampered by the question of delivery, but with the settlement of the dock strike, conditions should become normal during next week. English wheat of the new crop is somewhat sparingly offered, and rates firm at 40s to 41s 6d per 4½ cwt, free on rail. Imported some- what irregular, but forward quotations ruled firm in sympathy with higher c.i.f. offers. No. 1 Northern Manitoba arrived quoted 47s 9d, Australian 47s, choice white Karachi 43s, Rosafe 62½ lbs 44s 6d, all ex ship, terms per 496 lbs. The cargo section displayed more activity, and the following changed hands:—Wheat: Rosafe, 62½ lbs August shipment 41s to 41s 6d, early September 41s 4½d, and No. 1 Northern Manitoba afloat 46s 3d per 480 lbs. Maize: Steamers of La Plata afloat sold 32s 6d to 32s 9d, early September 32s 1½d, September-October 32s 4½d to 32s 6d. No. 6 yellow African mid-September 31s 10½d, September-October 31s 10½d to 32s 4½d per 480 lbs. Barley: Dan-Bess-Kustendji August-Sep- tember 10th, sold 25s 6d per 400 lbs. Flour in good request, but home milled reduced by 1s per sack. London standard straight run quoted at 38s, patents 40s to 41s, town households 36s per sack delivered. Country straights 31s delivered to London stations. Imported firm and sparingly offered. Manitoba patents range from 37s to 41s 6d, Minneapolis good patents 40s 6d, Australian 36s to 37s, and soft winters 36s to 39s, all per 280 lbs, ex store. Barley: English steady, and malting descriptions range from 40s to 49s, and feeding sorts 28s to 35s per 4 cwt, free on rail. Imported maintained. Californian 40s to 42s, Chilean brewing 39s to 42s as to sample per 448 lbs landed terms. Persian 24s 9d, No. 4 Canadian Western 25s 9d, American malting 48 lbs 25s 9d all ex ship. Danubian 28s, Karachi 26s 6d, both landed per 400 lbs. Maize firm to arrive, but landed parcels easier. Plate ex ship 33s, ditto landed 34s 6d, No. 2 white flat African 34s, No. 6 yellow 33s ex ship, all per 480 lbs. Oats: English firm at 21s 6d to 20s per 3 cwt, free on rail as to sample. Imported firm for arrival, but landed easy. Plate ex ship 21s 6d, ditto landed 22s 9d, No. 2 Canadian Western ex ship 25s 6d, ditto landed 27s, No. 3 ditto ex ship 25s, landed 26s 6d, No. 1 Canadian feed ex ship 24s, No. 2 ditto ex ship 23s 6d, New Zealand A grade 38s, ditto B grade 37s, both landed all per 320 lbs. Oatmeal easier. London made all cwt, quoted 18s, whole groats, also rolled oats 18s, flaked oats 18s 6d ex mill. Ordinary Scottish oatmeal 20s to 21s, and American all cwt 17s to 17s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, 1921-22, 1920-21, and 1919-20:—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent writes, on August 23rd, as follows:—Pig-iron: Owing to the local holidays, there has been no market this week, and very little, if any, new business has been transacted. No. 3 Cleveland G.M.B. is to-day quoted 101s per ton, whilst East Coast hematite mixed numbers are obtainable at 98s 6d per ton, with No. 1 at 99s per ton. Manufactured iron and steel: The steel works in this district have been idle all this week, on account of the holidays, but will restart on Monday next. Prices remain at last week's levels. Steel ship plates, £10; steel ship angles, £9 10s; iron bars, £12; steel rails, £9 10s. Iron ore: There has been no new business in ore, and the nominal price of best rubio is unchanged at 23s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—Steelmakers, who by hold- ing off the market, have forced down the prices of hematite pig, are now somewhat perturbed by the damping down of a number of blast furnaces engaged on that material, as it may involve the raising of quotations. Having little bought, they are now putting out enquiries for considerable parcels. Whether this step will lead to a revival of buying is, however, uncertain, as there is still an absence of substantial business in crude steel. The stocktaking at the end of June yielded unsatisfactory results at most of the steel works, and an unremunerative year appears to be in store for many firms. In the crucible steel trade business continues on a very restricted scale, with practically nothing selling to the Continent. A few of the small firms which are conducted on up-to-date lines, and well managed, are contriving to work at a profit. A feature of the coal trade is the growth of stocks of small fuel, particularly in Lancashire, although this remark does

not apply to coking and slacks, which is still in demand. Cobbles and nuts are also quiet, and the home consumption of steam coal has been declining for some time past. There is, however, a fair demand on export account. Very little house coal is selling. Having regard to the lessened demand, prices may be described as firm. Quotations per ton at pits are:—Best hand picked branch, 30s to 31s; best Barnsley Silkestone, 26s to 27s 6d; South Yorkshire steams, 21s to 22s; best Blythe steam, 22s 6d to 23s; best Tyne steam, 20s to 21s; rough slacks, 11s to 12s 6d; smalls, 7s to 9s.

Our Glasgow correspondent writes:—It is pointed out by experts that, given industrial peace at home and political peace on the Continent, there is considerable opportunity offering for ship-building expansion, chiefly because of the big break that has taken place of late in prices of fuel. A prominent shipbuilder says that two tons of coal are consumed in the making of one ton of steel, and that as coal for manufacturing purposes has declined by from 10s to 15s a ton, the gain to the consumer, on the basis stated, is between 20s and 30s a ton. Engineers and others interested argue that rate concessions should be made in their favour, but producers do not move, owing, it seems, to a want of confidence in the course of events on the Ruhr, their progress being veiled in obscurity. A large trade is passing in sheets (black and corrugated) for export to Australia. There is a moderate turnover in Scotch pig-iron; 1,100 tons were despatched last week to the United States, and negotiations are afoot for the shipment of an additional quantity. Belgium firms are said to be offering plates here at £7 10s, but the sellers do not press the transactions. Home producers are asking £11 for steel bars, £10 for channels, £13 to £14 for boiler plates, £12 to £12 10s for hoops, and £9 5s to £9 10s for heavy rails. Tube makers are busy, and so are bolt, nut, and rivet makers.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says: The market still presents a somewhat slack appearance, due to the break caused by the prolonged holidays and the general apathy of buyers. The demand for wool on export account has been quieter, but values are firm all round; indeed, most holders are now inclined to ask higher prices for the comparatively small stocks unsold. The belief is fairly general that wool values at the September auctions in London will be maintained, or even advanced, compared with the rates ruling at the last series, and there is evidently a desire to wait for a lead before undertaking new commitments. Home-grown wools are also selling remarkably well, and prices being paid at the auctions are well above the ideas of Bradford users. For example, Cheviot hogs were making round 22d at Edinburgh this week, a price of little use in Bradford at the present time. However, there is a strong feeling of confidence in the future of wool values, and no doubt a good deal of speculative buying is being indulged in by those who hope to see a profit later in the season. In the West Riding, however, trade is disappointing, users showing a marked disinclination to do anything further than just carry on with their current requirements. Forward buying is out of favour, though at to-day's prices of tops and yarns one might be tempted to operate on the strength of the wool position. There is so much uncertainty regarding developments on the Continent, however, that most firms prefer to play for safety, and business is accordingly confined within narrow limits. Quotations for tops and yarns do not show much change, but they are more or less nominal, and the actual price depends on the position of the seller. The piece goods trade remains quiet, with demand favouring the cheaper fabrics, especially woollens.

COLONIAL WOOL.

(FROM A SPECIAL CORRESPONDENT.)

According to information received from Australia by the last mail, the rains reported by cable at the end of June and early July were general, greatly relieving the anxiety of pastoralists regarding the future. Since then a fair amount of rain has fallen, and while we expect it will somewhat delay shearing, rain is never objected to, particularly in early spring. It should have a beneficial effect upon lambing, and also help to wash out of the grown fleece a fair amount of dust and earthy matter, which should be to the advantage of buyers when they go on their rounds of inspection and valuation. An adequate amount of rain in spring is beneficial for the sheep themselves, as well as to their fleeces and the pastures. All our information indicates that the clip will be smaller than last year. We see that the latest estimate of the shortage is 400,000 bales. We are not disposed to accept this, although it will no doubt have been made in good faith. We expect the figures will have been based upon the results of the shearing of early sheds, but later shearings will in all probability not show the great shrinkage in weight per head that is seen in the earlier shearings. All the same, we think there will be a decline of around 250,000 bales, possibly more, and pastoralists and Australian selling brokers are naturally optimistic regarding the outlook, feeling satisfied that high prices will continue to be forthcoming. That will depend a good deal upon the European political situation; in fact, developments in that direction will be the most potent influence upon raw material values in the near future. We should certainly have great faith in the future of wool values if there was the slightest improvement in the European situation,

but notes, interviews, and negotiations have not yet done anything to remove trading difficulties. Everyone knows that Germany in particular is in need of raw material, yet the depreciation of the mark makes one wonder how soon German currency will cease to be recognised, and sterling or dollar currency introduced.

MANCHESTER, August 23.

There has been no change in the conditions prevailing in the market during the past week. Numerous complaints have been met with from producers, and there is no doubt that there are great difficulties to be met with in arranging fresh contracts. The fluctuations in raw cotton rates have been very disturbing, and at the moment a most uncertain feeling prevails with regard to future developments. It would be almost impossible for more ups and downs to take place in raw material rates than at the moment. The report of more beneficial rains in Texas has been welcomed. Recent estimates being made indicate that the crop will be short of 11,000,000 bales, which is considered totally inadequate to meet the world's requirements. Lancashire is not at all pleased with the position, for it is realised that the yarn and cloth turnover will continue to be of small extent until it is possible to purchase raw material cheaper. Most producers of piece goods have had another poor week. A large percentage of the offers have had to be turned down. Current prices are distrusted, and a fall in values is expected in the autumn.

VEGETABLE OILS AND OILSEEDS.

Rather steadier conditions have ruled, and all round there is a better tone in the oils section. A good demand for linseed oil from the consuming trades, coupled with the buying of seed by crushers, contributed to a marked advance in value, spot oil advancing to £39 per ton naked, ex Hull mill. This level has been barely maintained, and business is not so active, but the undertone is firm. Linseed has rallied somewhat, and is dearer, but attention is still confined to the Indian crop, which is moving off moderately well. Old crop Plate, of which there is a large balance left for export, in contradiction of official estimates, is neglected so far as crushers in this country are concerned, but some speculative interest has been shown in the new crop, which will begin shipment in December or January.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

There was a decided weakness at the Bermondsey hide market on Thursday, although the best class of ox were steady. These made from 6 1/2d to 8 1/2d per lb, and seconds from 5 1/2d to 7d, slight declines of 1/2d in two classes being noted. Best cows were withdrawn, but seconds sold from 5 1/2d to 5 3/4d per lb. Best calf made from 5 1/4d to 11 1/2d, several declines of 1/2d to 3/4d being noted. Lambs sold from 2s 1d to 6s 6d, and pelts from 3s 7d to 6s each. The imported hide market is quiet, the only item of importance being a sale of a parcel of Argentine ox at \$37 1/2, and a few cows for Liverpool at 5 1/2d s.w. I hear, too, that about 16,000 Liebig hides have been sold at 8 1/2d, and 8d for Fray Bentos ordinaries. Dry River Plate hides are weaker, sales of B.A. Americanos having been made at 9 1/2d. Cables from New York report the Chicago packer hide market as easier, with heavy native steers selling at 14 cents, and light cows at 1 1/2 cents. Prices bid show from one to one and a-half cents below last figures.

The boot trade seems fairly well employed, although much more might be done if trade was really brisk. Makers of ladies' shoes and sports footwear appear to be the best off, as some Leicester makers have large orders on their books for football, golf and tennis shoes. The export trade seems improving, orders having come in even from the United States of late.

OVERSEAS PRODUCE MARKETS.

Mining Lane, Friday, August 24.

SUGAR.—A weaker tone characterised this market, and there was a fair inquiry for refined goods, chiefly British, as, from a grocery point of view, imported descriptions form but a poor selection. Messrs Tate and Lyle's cubes quoted 57s to 58s, as to quality; crushed, 55s; granulated, fine and coarse grain, 55s 1 1/2d; No. 1, 54s 10 1/2d; No. 2, also London, 54s 7 1/2d. Of imported, American, also fine Czecho granulated, spot, sold, 53s 6d. White Java, spot, sold, 49s to 50s, as to sample; ditto, float, 21s; and July-August, 20s 6d, c.f. and i., London. Raw refining kinds inactive, and more or less nominal. 150 tons Madras cane-jaggery, afloat, sold, 14s 3d, c.f. and i., London. Czecho granulated, November-December, quoted 21s 6d, f.o.b., Hamburg. Fine Dutch granulated, November-December, quoted 21s 6d, f.o.b., Amsterdam, and prompt, 27s 6d. Terminal market easier for near, but forward positions firmer. August delivery sold, 23s to 22s; September, 21s 9d to 21s 6d and 21s 9d; December, 20s 9d to 21s 6d and 21s 1 1/2d; March, 21s to 21s 7d to 21s 3d. Cuban stocks stand at 457,700 tons, against 513,200 at same time last year. Liquid glucose, spot, 30s 6d.

COFFEE.—The market continued quiet but generally steady, with main attention still centred upon the finer qualities. Nairobi, bold sizes, sold 78s to 86s; East India, bold Naidoodatum, 99s. Future delivery idle, and general position quiet nominal.

COCOA.—Market still very quiet, with but retail transactions with regard to spot parcels. Accra, F/F quality, November-January, sold, 30s 3d, f.o.b. terms.

TEA.—At resumption of Indian auctions, 24,830 packages were brought forward, and all the better liquoring descriptions experienced a ready sale at firm to occasionally dearer prices, while the commoner kinds sold fairly well at mostly steady values. 15,900 packages Ceylon were also submitted, the chief feature being strength of demand for all the finer grades, and which cleared at mostly 1 1/2d to 1d per lb advance, while common and medium appreciated 1/2d to 1d per lb. Java and Sumatra cleared readily at full to dearer rates. There is a good, steady demand for new season's China and Monings, sold, 10 1/2d to 1s; good Keumuns, 1s 4d to 1s 6d, with finer parcels 1s 8d to 2s per lb in bond.

RICE.—Recent quotations are maintained despite general quietness of demand owing to reserved offers on the part of shippers, and who are assisted by steady inquiries in local Burmese markets. Two stars, Rangoon, spot, quoted 13s 9d to 14s, with business in afloat lots at 12s 9d, c.f. and i. terms, London. Spanish selling moderately for shipment at recent lower rates, and Au. sub-September, steamer, sold, 18s 3d, c.f. and i., U.K. Siam and Saigon unaltered. Broken kinds meet with poor support. Madagascar butter beans nominal on spot, and shipment quoted 13s. Japanese peas quiet. Spot, 23s; September-October, 20s 3d per cwt.

SPICE.—Pepper is a steady but quiet market. Fair black Singapore, spot, quoted, 4d; October-December, London, standard, 3 1/2d; Aleppo, spot, 4 1/2d; Tellicherry, 4 1/2d; white Singapore, 5 1/2d; Muntok, 6d; ditto, October-December, London, standard, 5 1/2d; and f.a.q., to Continent, 5 1/2d. Ceylon, spot, 4 1/2d. Zanzibar cloves, spot, 1s 0 1/2d to 1s 1d; August-October, 1s 0 1/2d; October-December, 1s 0 1/2d. Tapioca market quiet. Fair Singapore flake, spot, 3 1/2d; fine Java, 4 1/2d per lb. Singapore, August-October, Havre, 25s 9d; fair Penang seed, spot, 28s; sago flour, September-November, value, 11s 7 1/2d. Desiccated coconut firm. Spot, halves, quoted, 38s 6d; July-August, sold, 38s; August-September, 38s; September-October, 38s 6d cwt. Ginger dull, at late rates. Nutmegs and mace quiet of sale.

JUTE.—Quiet and easier. First grade, August-September, Continent, sold, £21 10s to £21 2s 6d; September-October, £21 5s to £21 1s; October-November, £21. Lightning grade, August-September, £20; September-October, £19 15s; October-November, £19 15s ton. 10-oz Hessians, August-September, 25s; October-December, 23s 6d; 8-oz, August-September, 19s 3d; October-December, 19s 100 yards. A twills, August-September, 71s 6d; B, ditto, 63s; sugars, 75s; flour, 75s 6d; salts, 52s 6d per 100 bags.

HEMP.—Manila generally steady, but there is ample room for improvement in demand. J grade, August-October, sold, £30; K and L, £25 10s; M, £24 10s. African sisal, No. 1 Tanganyiki, afloat, quoted £36; and shipment, £36 per ton. Italian steady, unaltered, but quiet of sale.

ALEXANDERS DISCOUNT Co., Ltd.,

24, LOMBARD STREET, E.C.3.

Telephones: 1832 & 225 Avenue. Telegrams: "Alexanders, Thread-London."

CAPITAL AUTHORISED £1,250,000 CAPITAL PAID UP £600,000
CAPITAL SUBSCRIBED £1,100,000 RESERVE FUND - £400,000

was still plentiful, and in the morning three months' bank bills were placed below 3 per cent. Later on, however, the tone was made slightly firmer by the Treasury Bill allotment.

	Aug. 31, 1923.	Aug. 24, 1923.	Aug. 17, 1923.	Aug. 10, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3 1/16	3 1/8	3 1/8	3 1/8	..

The Bank return showed an increase in the circulation, and a consequent decrease in the Reserve, of £327,000. Government and Other securities had between them declined by a million, and a million and a quarter had been added to Public deposits. Other deposits were thus 2½ millions lower. Currency notes outstanding were reduced this week by £1,699,000 to £285,069,400, which includes £1,454,000 for notes called in but not yet cancelled. The fiduciary issue is £234,165,400, or £36,018,400 below the maximum.

THE STOCK MARKETS.

The amount of business passing in the Stock markets this week has again been large for the time of year, and although some of it has been of a professional nature, there has been no small amount of genuine investment buying. The Græco-Italian friction has so far had little effect upon the gilt-edged market, but the foreign market has given way a little. War Loan and Conversion Loan have been strong, the latter rapidly recovering the amount of dividend deducted from the price on Tuesday. Home Rails scored a temporary advance in the middle of the week, but Argentine and Brazilian rails have been weak. There was considerable activity in tea and rubber shares, while bear repurchases have strengthened oil share prices. Industrials generally are quiet, and mining markets have been irregular, with occasional small spurts.

THE COMMODITY MARKETS.

A slightly better tone is discernible in the reports from the various commodity markets this week. Cumberland and Middlesbrough pig-iron has come in for more inquiry, and in Middlesbrough steel works have been started after ten days' inactivity. Our Sheffield correspondent, however, describes the situation there as critical, and wholesale stoppages are believed to be imminent. The best feature is railway steel, in which work is fairly steady. The Cardiff coal market is depressed, but tinplate business has appreciably improved. Bradford is awaiting with interest the September wool sales, at which it is expected that values will be maintained. Raw cotton prices have moved irregularly, but in Manchester there has been a more hopeful feeling, though prices are still a stumbling-block in the booking of foreign orders. In vegetable oils and oil-seeds recent price advances have been maintained, but leather prices have been weak and business quiet. Copper prices have been easy, but there has been more activity in lead with steady prices. There has been strong competition at the tea auctions, and prices have been fully maintained, and in the sugar market business has been steady. Wheat quotations have again given way a little.

FOREIGN EXCHANGES.

The foreign exchange market is still completely under the influence of the Reparation controversy, and rates are as uncertain as before. After a slight recovery at the end of last week, as the result of the announcement of Herr Hilferding's vigorous financial policy, the Mark continued to depreciate, and on Thursday slumped suddenly to 55,000,000. Yesterday morning, however, there was a recovery to about 50,000,000. These fantastic figures find their explanation in the last return of the Reichsbank, which shows that within one week's time the note circulation was almost doubled, while the figures for Government expenditure rose to 365 million marks between August 10th and 20th, as compared with 117 million during the preceding ten-day period. In the earlier part

of the week the Paris rate, as the result of slightly more optimistic views of a settlement, fell to 79.15. Since then, however, it has moved up again gradually to 80.70 yesterday morning, as compared with 81 a week ago. For Brussels the quotation has shown a decided recovery from 101 on the 24th to 95.10 on the 28th, partly on the expectation of the Belgian Note, partly on the conclusion of the loan from France, and partly through the operation of a more strict exchange control. Since then there has been a reaction again up to 98.90 yesterday morning. It is interesting to note that neither in Brussels nor in Paris has the loan been welcomed with unmixed satisfaction, Belgian opinion in part at least regretting this further obligation to follow the lead of France, while in Paris there are very reasonable enquiries how the Belgian exchange can be supported without unwelcome pressure on the Paris rate. In Paris forward rates are quoted unchanged at 4½ centimes per month above spot, in Brussels the rate has widened from 6 to 10 centimes per month above. Italy, after some slight improvement, has reacted sharply as the result of the controversy with Greece, and the lira stood yesterday at 106½, as compared with 105½ a week ago. Until Wednesday, when it rose again to \$4.55½, the dollar rate had shown a sagging tendency, and yesterday morning it again fell slightly to \$4.54½. On the whole, apart from unexpected political events, no further fall of any importance need be expected for the time being, although any decided move in favour of sterling is hardly yet due. At 1/16 cent per month over spot forward rates are unchanged. Among neutral rates Amsterdam has moved against us in sympathy with the dollar from 11.58½ to 11.56½. Spain, on a much better bank return, has improved from 33.85 to 33.72½. Switzerland has moved little, but at 25.20 is slightly more adverse than the quotation of 25.21 a week ago. In Northern Europe Stockholm, following the dollar, has moved down from 17.11 to 17.05, Christiania at 27.95 has depreciated slightly, and Copenhagen has moved up from 24.39 to 24.47. Helsingfors at 164½ is practically unchanged. In Central Europe Vienna remains stabilised at 325,000, Prague is unchanged at 154½, and Belgrade at 435, while Warsaw is very slightly better at 1,100,000. As was to be expected, the Athens rate has had a sharp move up to 260. Bucharest at 985 is rather better. In the East the rupee shows an improvement from 1s 3 3/4 to 1s 4 1/8, and Yokohama is also slightly dearer at 2s. 1 3/4. Silver has moved very slightly with some buying from China, and little on offer from the Continent. Hong Kong is 1d cheaper at 2s 3d, and Shanghai also 1d down at 3s 0½d. In South America Rio, after being lower, is now 5d, rather better than last week, Buenos Ayres has dropped away again from 38 25-32d to 38½d, Monte Video at 38d is 1d lower, and Valparaiso has depreciated from 37 to 36.60 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 25th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	5,900	From Revenue	13,011
Interest, &c., on Debt	327		
Sinking Fund	946		
Sundries	1,611		
Debt Reduction	4,080		
Added to Exchequer Balances ..	147		
	13,011		13,011

Revenue was about £1,000,000 below the corresponding period of last year at £13,010,900. The decline was primarily due to nothing coming in from Special Receipts, as against £834,500 in the corresponding period. Property and Income-tax yielded £4,225,000, and Super Tax £490,000, against a combined total of £5,048,000 a year ago. Excise produced £1,532,000, against £1,404,000, and Customs £3,100,000, against £3,114,000. Expenditure at £8,784,000 compares with £7,049,900 in the corresponding period of 1922. The week's operations reduced the National Debt by £4,080,000, and caused the following changes:—

	Min. £		Min. £
Public Departments	8,100	National Savings Certificates ..	950
Sundries	190	Treasury Bills	4,160
	8,290		4,210

The floating debt was reduced by £3,920,000 to £788,871,500.

FINANCIAL YEAR, 1923-24 (April 1 to August 25, 1923).

Total Expenditure ..	£ 303,474,763	Raised by Revenue ..	£ 306,190,264
Net Repayments	5,807,582	Decrease in Balances	3,092,081
Total	309,282,345	Total	309,282,345

ESTIMATES for YEAR 1923-24.

Ordinary Expenditure ..	£ 801,013,000	Ordinary Receipts ..	£ 778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found the reports of the meetings of the following companies:—Bank of New Zealand, Amalgamated Press, Minerals Separation, and Vereeniging Estates. The chairman of the Bank of New Zealand made his customary survey of economic conditions in the Dominion, and at the meeting of the Amalgamated Press, Sir George Sutton gave some interesting advertising statistics. The speech of the chairman of Minerals Separation was devoted mainly to the subject of coal briquetting, which is one of the company's principal operations.

EUROPE'S NEW STORM-CLOUD.

Does the Belgian Note provide any hope of the dispersal of the clouds which hang over Western and Central Europe? Diplomats concentrating on this all-important question have had their attention rudely distracted this week by a sharp and menacing thunderclap from the Near East, that great gathering-ground of storms. This new storm threat is the more startling because, with the Lausanne Treaty at last signed, the world was beginning to weigh up the chances of a durable peace in the Near East resulting from a settlement which, while it satisfied no party entirely, offended no party vitally. Briefly stated, the story of the new European complication is as follows. While the Italian delegates on the International Frontier Commission were proceeding from Janina on Monday last to the section of the Græco-Albanian frontiers which was then in course of delimitation, their car was fired on by an armed band near Delsinaki, a Greek village some twelve miles from the actual frontier, and all its occupants were killed. On Wednesday the Italian Minister at Athens handed in a remarkably strong verbal note to the Greek Government, and demanded an answer within twenty-four hours. Full and official apologies; a solemn funeral ceremony attended by all the members of the Greek Government; a full salute of twenty-one guns to the Italian flag; an exhaustive inquiry to be made on the spot with the assistance of the Italian military attaché; capital punishment for all those found guilty; and an indemnity of 50 million lire—these were the six points which Signor Mussolini thought fit to impose on the Greek Government. On Thursday the Athens Government accepted the first two demands, and even declared their readiness to accord military honours to the Italian flag, but stated that the other demands infringed the sovereignty and the honour of the country.

Inevitably a parallel between the events of this week and the 1914 story of Serajevo, Austria, and Serbia, leaps to the mind. Fortunately, however, the parallel is far from being exact, and it is worth while to consider the chief elements in the present situation which distinguish it from that of July, 1914. First and foremost, the world has had an unprecedentedly bitter lesson of what may be meant by the "incalculable consequences" which arise from an incident of this kind, if it is allowed to develop. We cannot believe that even the dauntless heart of Signor Mussolini is really prepared to allow the world to face once again a menace of unlimited tragedy. Secondly, although we sympathise to the full with Italian horror and anger at the crime from which Italy has suffered, the crime is in essence one aimed at all the

Allied Powers, for it was visited upon one delegation of a mission sent by the Conference of Ambassadors of the Allied Powers. Thus, when the first burst of natural passion is past, we trust that Signor Mussolini will see the wisdom, both from the world point of view and from his own, of acting in consultation with his Allies, who are, technically at any rate, concerned directly with this incident, and who, through the Ambassadors' Conference, have already sent a strong Note to Greece. The principal difference, however, between the pre-war position and the present lies in the existence both of this Ambassadors' Conference and of the League of Nations, with its machinery designed to operate in precisely such a case as has now arisen. It has been frequently said that, had some such opportunity for rapid personal interchange of international views existed in 1914, the conflagration in the Near-East might have been localised, and even stamped out. Whether that was true of 1914 we shall never know. But we can hardly believe that, with all the consequences of the great war before their eyes, and with all the opportunities that exist to-day for international consultations and concerted international action for securing just retribution, the Italian Government will so precipitate matters as to apply a match to the powder-magazine of the Balkans before exhausting all peaceful methods of obtaining legitimate satisfaction. At the moment, it must be remembered, the degree of Greek responsibility, if any, for the crime remains unassessed. Italy's Allies will without question stand solid behind her claim for recompense up to the limits of justice, and have already demanded an inquiry into the affair. On a sympathetic British support of all reasonable demands, Italy should be the more disposed to rely, since in recent months a considerable degree of harmony has developed between the two Governments on the Ruhr and Reparation problems. Moreover, the prompt Greek acceptance of some of Italy's demands indicates a desire to accord such justice. Clearly this is a case for international investigation, and for the use of the new international machinery for securing justice while maintaining peace.

It is believed that Greece is about to appeal to the League. Will Italy agree to submit her case also? No doubt internal factors tempt Signor Mussolini to gain prestige by drastic action in tune with popular passion. In the long run, we believe, he would attain more durable credit both abroad and at home by tempering firmness with restraint, and by evincing a clear appreciation of his responsibility in averting those "incalculable consequences" which develop so rapidly when once the smouldering fires of the Near East are kindled, and which may so speedily pass beyond control. Thus, while the atmosphere is electric, and the situation more than a little critical, we refuse as yet, in spite of the mobilisation of the Italian fleet, to take the tragic view, or to surrender a confident hope that wisdom will overrule national indignation sufficiently to allow international machinery to get to work. In this hope we return, in the next article, to a consideration of the question posed in our opening sentence.

THE BELGIAN NOTE.

It is not easy to assess the value of the new elements which the Belgian Note has introduced into the interminable discussions of the Ruhr and Reparation problems. But this much may at any rate be said, that it is far from being a barren contribution, and that a comparison of the French Note with the Belgian results is an impression decidedly favourable to the latter. It is cleverly written; it is friendly; it contains one or two sound arguments (especially as regards priority), the force of which our Government might concede; it shows some willingness and ability to understand the British position, even where it cannot agree; and on one point, to which we shall return in a minute, opens up important possibilities. The keynote is struck in an early passage in which the revised British gross demand is appreciated as a considerable sacrifice—a conception which contrasts rather strikingly with the view of it expressed or implied by M.

Poincaré, who does not regard it as a concession. Then, again, the Note goes far towards meeting the British position on the question of material damage, and explicitly recognises lost shipping tonnage as legitimately falling within that category.

Before we come to the paragraph in the Note which we regard as the most important, there are one or two points which call for notice. The chief of these is the long reference to the priority question. The reference in the British Note to the question of Belgian priority "has produced," it is stated, "a most painful impression in Belgium." The question is therefore gone into in considerable detail, and the Belgian Government very forcibly shows that, so far from making no concessions at all, Belgium has, in fact, accepted numerous modifications of the Treaty arrangements which have affected in a very important way her priority claims. A section of the British Press has apparently read this passage as constituting an increased priority demand on the part of Belgium. That reading is neither fair nor correct. The Belgian demand of to-day represents a considerably lower figure than her original priority claim. And, it must be remembered, when "priority" was first granted, Brussels quite naturally regarded the word as expressing very much what we mean by the phrase "first mortgage." In private business, so Brussels might argue, the original claim of the holder of the first mortgage is not whittled down if the total value of the property, on which the mortgage is taken, happens to depreciate. So Belgian priority on German reparations, strictly speaking, should not in justice have been whittled down, because extravagant expectations of total German payments had to be modified. But, for reasons of political expediency, Belgium has as a matter of fact agreed to some writing down of her claims. Whether she might wisely have gone further in that direction is one on which the British and Belgian Governments may perhaps disagree. But, in our view, the British Government might achieve an initial step towards agreement by frankly admitting the general force of the argument on this point which the Belgian Note develops with considerable ability. From another point of view it was somewhat unfortunate that the British Government stated its inability to see any reason to modify the Spa percentages. For herein they are open to a charge of inconsistency, for the simple reason that they have themselves, in the case of the British claim, suggested departing from those percentages in certain circumstances.

We come now to the passage dealing with the Ruhr occupation. As was only to be expected, Belgium stands with France in upholding the legality of the occupation and in her determination not to evacuate in return for "mere promises." But this passage deserves very careful study, for it reveals a position essentially more hopeful than that of M. Poincaré. Here it is:—"The Belgian Government, therefore, could not admit that the intention should be imputed to it, even indirectly, of prolonging this occupation indefinitely, if not in perpetuity, or of refusing to examine the suggestion of the British Government relative to the putting into operation in Germany, under an inter-Allied supervision, of certain productive pledges, since the Belgian Government has received no precise information with regard to them, is ignorant of the nature and possible yield of those pledges, and sees itself compelled, in default of agreement between all the Allies on that point, to maintain the sole guarantee which it has taken." If that sentence is taken at face value, it indicates that Belgium is not unprepared to examine the substitution of "productive guarantees"—that is, of proper inter-Allied control with a view to securing Reparation payments, for the present régime in the Ruhr. The importance of this grows when it is taken in conjunction with the speech of the new German Chancellor. Elsewhere there is also a definite statement of willingness to modify the present form of occupation, should passive resistance cease. We do not wish to over-stress the importance of this passage; but it is, in any case, far more promising and helpful than M. Poincaré's blunt statement that the military occupation of the Ruhr will continue until Germany has paid all she owes.

The Belgian Note concludes by suggesting "that the problem has sufficiently advanced for amicable and dis-

creet conversations between the Allies' Ministers to take place, not, of course, in the form of a Conference properly so-called." In the light of the Belgian Note, we agree. The recent interchange of Notes has cleared the air, but its continuance promises little. On the other hand, the ground has obviously not been sufficiently cleared for a formal conference to have any hope of success. But, if our reading of the Belgian Note is correct, "amicable discreet conversations" might reveal more common ground than is supposed to exist between the British and Belgian viewpoints. The French Note suggested hopeless deadlock. The Belgian Note suggests a more favourable atmosphere, and at least some hopeful material to work on. The really important task for our Ministers at the moment is to cultivate this atmosphere, and reconnoitre the ground which appears might become common between London and Brussels. Possibly it is through the latter city that an approach to an agreed solution may at last be found. We trust that the British Government will concentrate on this new and faintly hopeful element in the position.

THE FEDERAL RESERVE SYSTEM.*

THIS is an important book, and perhaps no one in the world was better fitted to write it than Mr Parker Willis. For he saw the conception and the development of the Federal Reserve System from its earliest stages, having been appointed as expert to the House of Representatives Committee on Currency and Banking in 1912, and having served since under the Federal Reserve Board in more than one capacity.

The book covers the whole history of the system up to the present time. Of its vast length (1,528 pages, exclusive of the main appendices and index) more than one-third is devoted to a history of the passage of the Act. All is described in detail, the various alternative schemes that were put forward, the fluctuating fortunes of the measure ultimately selected, the different sources of opposition to it, the contributions made by individuals to its ultimate success. In particular, the importance of the personal initiative of President Wilson in insisting that a banking reform measure should be carried is forcibly brought out.

Many readers will find this part of the book too long. Nevertheless, it is a real advantage that the facts should be on record. Anyone who studies the Federal Reserve Act cannot fail to wonder what was the purpose in the minds of those who framed some of its provisions, and he will often find the solution in Mr Parker Willis's pages. Thereby he will gain a better understanding of the measure than could otherwise be obtained.

The second part of the book, occupying nearly 300 pages, deals with the organising of the system. Much of it is of rather limited interest, though it throws useful light on one or two questions, such as the friction between the governors of the Federal Reserve Banks (meeting in periodical conference) and the Federal Reserve Board. Some of the alternative schemes of 1913 would have included representatives of member banks on the central authority, but the Act left the central authority, the Board, to be composed exclusively of Presidential nominees. Except for the *ex officio* members, the Secretary of the Treasury and the Controller of the Currency, the members have a fixed tenure for a term of years, and have not hitherto had any pronounced political bias. Nevertheless, the views of the Board on the one hand and of the governors, who are practical bankers, on the other, have by no means always coincided, and the tendency has sometimes been for the governors to usurp some of the functions of the Board. Mr Parker Willis looks forward to a future reform of the constitution of the Board, possibly by giving the financial and banking community a share in the duty of making the appointments (p. 1,499).

It has been said at one time of the Papacy, at another of the Austro-Hungarian Empire, that if it did not

COMPLETE INTERNATIONAL BANKING FACILITIES

100 Broadway

New York City

exist it would have been necessary to invent it. The same might have been said of the Bank of England. One of these indispensables seems to have perished beyond all hope of re-invention. The problem of inventing a Papacy has not arisen in modern times. But the problem of creating a counterpart of the Bank of England arises in one country after another. In America, as elsewhere, it has been found extremely difficult to devise a balance of authorities capable of evolving and maintaining as wise a tradition as the chartered oligarchy, autocratic, incredible, but efficacious, by which credit is ultimately controlled in the City of London.

The third and remaining part of Mr Parker Willis's book gives us a history of the Federal Reserve system for the eight years that it has been in operation. The affairs here dealt with are of a wider and more living interest. The Federal Reserve system may be regarded primarily as a rediscounting machine, and that aspect of it is discussed at considerable length. Three chapters, which are devoted to Commercial Paper, Trade Acceptances, and Bank Acceptances, will be of interest to many English readers for the light they throw upon American credit machinery, and incidentally on the failure to establish a satisfactory practice in the use of acceptances.

Light is thrown also on the conception of an elastic currency, which played so considerable a part in the framing of the Federal Reserve Act. Mr Parker Willis regrets the disappearance of the original provision of the Act, which allowed Federal Reserve notes to be issued against nothing but commercial paper, not even against gold itself, though a 40 per cent. gold reserve had to be held, in addition to the 100 per cent. reserve of paper. As he points out, the provision was nullified from the beginning by the power given to any Federal Reserve bank by depositing gold to reduce its liability for outstanding notes and to receive back a corresponding amount of collateral. The amendment which permitted the issue of notes against gold merely put an end to the useless formality of thus buying back collateral.

But it is difficult to see the advantage that Mr Parker Willis anticipated from the provision which was thus evaded. To him, apparently, an elastic currency is one that is covered dollar for dollar by commercial paper. No doubt it is through the backing of commercial paper that the rediscount rate is made effective. But does the ideal of elasticity demand that the rediscounting authority have power to contract the currency down to nil? This cannot be what is in Mr Parker Willis's mind. For he contemplates Federal Reserve notes circulating alongside other forms of currency. When the Bill was being framed in 1913 the Secretary of the Treasury, Mr McAdoo, put forward an alternative scheme for withdrawing all gold certificates, greenbacks, and national bank notes, and substituting for them a uniform issue of "national currency notes" with a 50 per cent. gold backing. This proposal was rejected, apparently on the advice of Mr Parker Willis himself (pp. 203-4). On the other hand, he says (p. 1,523) that some such unification of the currency was hoped for from the Act.

It certainly would be a great reform, though it is difficult to see how it can be achieved without further legislation. The elasticity or inelasticity of the currency apparently depends on the choice of the public between the alternatives of using gold certificates, which require a 100 per cent. gold reserve, and Federal Reserve notes, which require no more than a 40 per cent. reserve. The public have no reason for preferring either medium to the other, and their choice is therefore entirely arbitrary and fortuitous. It might, indeed, be influenced by the banks, but who is to guide the action of 30,000 independent banks? This ridiculous position has not so much practical importance now that the Federal Reserve notes themselves are covered dollar for dollar with gold (with a margin left over against deposits). But it is very remarkable that Mr Parker Willis has not found room in his 1,500 pages to mention it.

Space would not allow us to refer to all the topics arising in Mr Parker Willis's very instructive history. One which has a very special interest at the present time is that of the rediscount rate.

We find that in 1919-20 the disastrous delay in raising the rediscount rate was due to the hesitation of the Federal Reserve Board and the Treasury, the governors of the banks being anxious to take this step. When he comes to the actual raising of the rate to 7 per cent. in June, 1920, and the tremendous reaction that followed, Mr Parker Willis hesitates what conclusion to draw. Some virtue he is willing to attribute to the rise in the rate, but he seems to be puzzled by the fact that the fall of prices preceded the contraction in the actual volume of credit outstanding. Here he seems to have been misled by the quantity theory in its crude form, and to have disregarded the all-important correction which needs to be made at a time of depression for the stagnation of balances or reduced rapidity of circulation. He does not realise that, when the volume of trade borrowing is affected by a change in the discount rate, there is an immediate reaction upon money incomes, which is independent of any change in the outstanding quantity of purchasing power.

It may be added that this book is well turned out, and, being printed on thin paper, is remarkably compact for its length. The index, however, is rather sketchy.

TEXTILE MACHINERY TRADE.

For the two years 1921 and 1922 our foreign trade in textile machinery enjoyed a boom which was remarkable in that it began just when the great slump in the country's general trade set in during the closing months of 1920. Rather more than two years ago the *Economist* called attention to the beginning of the boom, and it will now be interesting to take stock of the position and see how results compare with preceding years. Here is a general view of the foreign trade for the past 28 years:—

BRITISH EXPORTS AND IMPORTS OF TEXTILE MACHINERY.

5-year Averages.	British Exports.		Imports.	
	Tons.	1,000 £.	Tons.	1,000 £.
1895-99	..	6,406 ..	..	..
1900-04	..	5,036 ..	..	165†
1905-09	167,900 ..	7,485 ..	2,500 ..	180
1910-14	150,100 ..	7,097 ..	3,300 ..	250
1915-19	54,100 ..	4,803 ..	1,900 ..	339
Single Years.				
1919	65,920 ..	8,427 ..	3,166 ..	778
1920	63,314 ..	9,159 ..	4,091 ..	1,098
1921	157,044 ..	25,113 ..	2,949 ..	709
1922	155,156 ..	21,573 ..	2,386 ..	584

* Not recorded. † Four years to 1904.

It will be seen how disastrously the great war affected our exports, reducing them to about a third of their former tonnage. Previously, the best year for the trade had been 1908, when 190,560 tons were shipped, worth £8,829,000. The trade's worst recorded year, as far as volume of exports is concerned, was 1918, when the 36,531 tons shipped were worth £3,943,000.

There was some recovery in the two succeeding years, but it was not till the close of 1920 that the great upward bound began. Exports for the last three months of that year were :—

	Oct., 1920.	Nov., 1920.	Dec., 1920.
Tons	3,800 ..	9,900 ..	13,900
Value	£541,000 ..	1,600,000 ..	2,207,000

In two months exports had grown from a rate of 45,600 tons a year to that of 166,800 tons a year. And for two years thereafter the rate of exportation kept up remarkably well, as the above table shows. Whether 1922 must be looked upon as marking the end of the boom we shall see later.

It will, in any case, be interesting to see which countries have contributed most to the absorption of our great shipments of last year, and to note how their purchases compare with those of the pre-war year 1913—remembering that in 1922 prices were roughly three times what they were in 1913 :—

EXPORTS OF TEXTILE MACHINERY.

To—	1913.		1922	
	Tons.	1,000 £.	Tons.	1,000 £.
France	12,630 ..	736 ..	12,127 ..	2,044
Other European countries..	64,091 ..	3,354 ..	18,189 ..	2,919
British East Indies	76,721 ..	4,090 ..	30,316 ..	4,963
China and Hong-Kong	50,437 ..	2,001 ..	62,231 ..	7,980
Japan	3,382 ..	138 ..	19,797 ..	2,529
U.S.A.	19,688 ..	803 ..	22,765 ..	3,089
South America	3,939 ..	251 ..	7,042 ..	1,206
Australia	12,879 ..	531 ..	8,019 ..	929
Other countries	1,417 ..	64 ..	2,849 ..	440
	9,611 ..	404 ..	2,137 ..	437
	178,074 ..	8,282 ..	155,156 ..	21,573

It will be seen that in 1922 France took almost as great a quantity as in the pre-war year, at nearly three times the price. Other European countries, however, absorbed little more than a third of the pre-war quantities, and even the value was lower, despite the enormous rise of prices in the meantime.

Among the remaining countries, China and Hong-Kong stand out prominently with a jump from 3,382 to 19,797 tons—a six-fold increase in quantity, accompanied by an 18-fold increase in value, from £138,000 to £2,529,000. Japan, too, exceeded her pre-war quantities, while it is encouraging to note that even the United States purchased nearly double the 1913 quantity.

The outstanding position of India as a customer in this trade is remarkable. In 1922 she took over a third of the entire shipments, whether measured by volume or value. She has, of course, been a considerable purchaser of textile machinery from us for a generation past. But usually her share has been about a fourth of the exports. Here are the figures for three widely separated pre-war years and two post-war years :—

	India.	Other Countries.	Total.
£	£	£	£
1898	1,293,000 ..	5,335,000 ..	6,628,000
1908	2,025,000 ..	6,804,000 ..	8,829,000
1913	2,001,000 ..	6,281,000 ..	8,282,000
1921	8,867,000 ..	16,246,000 ..	25,113,000
1922	7,980,000 ..	13,593,000 ..	21,573,000

In view of these facts, it is somewhat surprising that the Lancashire cotton trade has not felt the effect more severely than it has yet done.

Even in the present year Indian purchases are keeping up tolerably well, but total shipments to overseas markets show a marked tendency to decline. France is taking less, but other countries in Europe are absorbing considerably more, so that business with Europe on the whole is better this year than last. But shipments to China and Hong-Kong have fallen off heavily—from 10,480 tons for the first seven months of last year to 4,489 for the same period this year. A few other countries show a similar tendency, and the net result this year has been as follows :—

1923.	Tons.	Value.
January	16,425 ..	2,035,313
February	12,450 ..	1,498,591
March	12,829 ..	1,554,504
April	11,915 ..	1,423,016
May	13,376 ..	1,534,668
June	10,012 ..	1,152,702
July	9,357 ..	1,029,415

The fall from 16,425 to 9,357 tons is striking, particularly when it is realised that in March last year exports were as high as 18,323 tons. In the year before the war monthly shipments averaged about 15,000 tons, so that we have witnessed so far this year a descent from slightly above the pre-war figures to a level markedly below them.

At the same time, prices have been shrinking. Exports in January last year averaged £148 per ton. In January this year they were worth £124 per ton, and in July had declined to little over £110 per ton. Nevertheless, even this latter price is seen to be tremendously high when contrasted with the average export value of 1913, which was but £46 per ton.

Taking a broad view of the results achieved to July this year, it looks as though the boom in the industry is decidedly on the wane. Still, there does not seem to be any ground for undue pessimism. Even if our shipments settle down at about 10,000 tons a month, that will be at the rate of 120,000 tons a year. This is nearly double the figures recorded for 1919 and 1920, though considerably below the pre-war years.

BRANCH SHOP COMPANIES.

In our issue of July 21st we reviewed the accounts of a number of companies engaged in retail trade in London, and now propose to supplement this with a brief survey of the reports of several retail companies whose business is run on somewhat different lines, namely, that of a large number of distributing centres with centralised management. Our list comprises eleven branch shop companies, including four grocery concerns, three drapers, and two men's outfitters. In most cases the latest reports refer to the year 1922, but in one or two instances come down to a later date. On the whole the results disclosed by the accounts are better than in the previous year, when the fall in commodity prices necessitated a severe writing down of book values. Only two companies, however, have raised their rate of dividend, while one has reduced it, as may be seen from the record below :—

	1910	1911	1912	1913	1914	1915	1916	1917	1918	1919	1920	1921	1922
Bobby and Co	%	%	%	%	%	%	%	%	%	%	%	%	%
Charles Baker and Co.	nil	5	7 1/2	6 1/2	3	7 1/2	8	8	12 1/2	25	10	5	12 1/2
Home and Colonial (A.)	nil	20	20	20	25	30	30	30	30	30	15	25	22 1/2
Hope Brothers	5 1/2	6	6	6	5	4	6	8	10	15	10	6	10
International Tea Stores	7	6	6	6	5	4	6	8	10	15	10	6	10
Lipton	6	6	6	6	5	4	6	8	10	15	10	6	10
Maynards	10	10	10	10	10	10	10	10	10	10	10	10	10

Parke's Drug Stores	nil	nil	nil	4	6 1/2	4	7	7 1/2	10	10	10	7 1/2	7 1/2
Pim Bros.	7	7	7	7	7	7	7	7	7	7	7	7	7
Plummer, Roddis	5	5	6	8	5	5	7 1/2	8	10	12	10	10	10

* Free of income-tax.

The only company to make a reduction is the Home and Colonial, but it should be mentioned that this concern two years ago raised its capital from £100,000 to £400,000, and the latest rate is considerably higher than that paid two years ago when the capital was first increased. The deferred capital of the Maypole Dairy was

also increased two years ago from £1,233,300 to £2,158,300. On the whole the dividend list is a fairly good one from the shareholders' point of view, considering general conditions during the past few years. Net profits also make quite a favourable showing, as may be seen from the summary below :—

	1913.	1916.	1917.	1918.	1919.	1920.	1921.	1922.
Bobby and Co.	19,456	30,058	23,595	32,249	51,136	44,400	52,900	75,704
Chas. Baker & Co.	17,634	16,967	14,990	21,207	97,314	16,954	3,047	10,651
Home & Colonial	179,486	256,877	226,156	235,650	249,230	267,023	309,875	341,969
Hope Brothers	41,553	51,780	58,171	64,353	116,043	67,552	37,173	76,487
Internat'l. Tea	132,733	140,889	206,741	156,831	240,974	251,581	305,020	366,717
Lipton	140,286	238,530	354,044	380,270	378,229	162,155	205,710	281,057
Maynards	10,716	26,512	43,332	80,468	148,427	86,508	54,250	41,046

Parke's Dg. Sts.	4,326	5,159	6,675	12,234	15,979	7,383	6,613	7,730
Pim Bros.	18,366	27,726	29,472	23,445	34,725	27,449	Dr 6,377	13,330
Plummer, Roddis	20,787	22,635	20,351	22,111	36,887	16,852	21,878	26,674

* Eighteen months.

Only two companies show a decrease, namely, Maynards and Maypole Dairy. Both show a very heavy falling away in recent years. The aggregate profits for all the companies show an increase of £163,000, as compared with the previous year, but a decrease of £206,000 as compared with 1920. If the figures for the Maypole Dairy be excluded, however, a substantial increase over the 1920 figures is shown. The best record since the end of the war is that of the two grocery companies, the Home and Colonial and the International Tea Company's Stores. A substantial increase is also shown by Lipton's. At the annual meeting Sir Thomas Lipton mentioned that "working expenses have been lighter, particularly railway freights.....Following our usual policy of selling at the lowest possible prices, our rate of profit has been very small, and had we not been able to reduce our expenses of distribution, we could not have placed such satisfactory results before you." He also stated that the company's trade in the United Kingdom last year was larger than in any previous year, and there was again an increased tonnage in turnover. On the other hand, the further fall in values affected stocks, and "profits have been reduced accordingly." The Maypole Dairy report speaks of "severe" competition in some of the company's speciality goods. In the report of Bobby and Co. it is pointed out that the company's trading last year covers a much larger area than hitherto, and includes new businesses, with increase of capital, and though the total profit earned is greater in amount, the percentage of net profit is at a lower rate.

In the next table we show the main items of the balance-sheets :—

	Total Liabilities.	Reserves.	Leases, Property, &c.	Stock in Trade.	Goodwill.	Cash & Investments.
Bobby and Co.	£1,270,710	£50,000	£680,249	£282,350	£33,155	£5,001
Chas. Baker and Co.	481,658	25,560	103,819	272,589	40,000	25,447
Home and Colonial	2,976,640	566,885	690,512	902,095	374,240	932,916
Hope Brothers	992,164	100,000	215,546	387,018	250,000	61,718
International Tea	2,708,688	284,906	747,668	677,718	626,675	194,100
Lipton	5,362,188	427,893	2,209,337	1,266,867	?	495,718
Maynards	544,252	102,322	133,426	74,819	nil	245,719
Maypole Dairy	5,033,820	792,453	2,769,075	571,027	422,900	891,507
Parke's Drug Stores	140,795	26,243	12,073	58,049	12,151	16,233
Pim Bros.	463,672	65,000	*150,000	109,760	?	5,611
Plummer, Roddis	534,032	66,000	230,013	118,425	50,000	15,604

* Includes goodwill.

Except in the cases of Lipton's and Pim Brothers, goodwill is distinguished from the property item. Bobby and Co. have added £8,000 to goodwill, and freehold premises have also risen by £100,000, the company having added considerably to its freehold property, and it is stated that extensions are still in progress in several towns. The goodwill of the Home and Colonial Stores has been reduced by £297,000. The report explains that a revaluation of the company's plant, machinery, premises, &c., was made in 1921, and a large excess over book values was shown after adjustment of the depreciation reserves. A portion of this excess was utilised in writing down goodwill. The book value of leasehold properties has been increased from £366,700 to £690,600, while freehold properties and trading investments now stand at £311,900, as against £235,700 a year ago. The International Tea makes no reduction in goodwill, which stands at the rather high figure of £626,700, but freeholds have increased from £587,100 to £678,300. On this matter the chairman said at the meeting that "our freeholds have increased owing to the natural expansion

of our business.....and I would tell you, as I have told you before, that the bulk of these freeholds are worth a great deal more than they stand at in the balance-sheet—I daresay double, some of them." Stock-in-trade has been reduced further in every case except Bobby and Co., where there is an increase of £45,000, owing presumably to developments referred to above. Liptons have also made a revaluation of property, plant, &c., and a portion of the surplus disclosed has been applied in writing off the expenses of an issue of 9 per cent. preference shares, and depreciation of foreign currencies, and in writing down trade investments, a balance of £26,100 remaining being placed to the credit of a special reserve. Total reserves, however, are lower owing to the disappearance of an item of £100,000 for India and Ceylon reserve account, of which no mention is made in the latest report. The reserves of Chas. Baker and Co. show a drop of £50,000, but this is apparently largely a matter of bookkeeping, the leasehold redemption fund having been reduced by over £41,000, while the property item is £40,000 lower. In most other cases reserves have been increased, though the total in more than one instance still looks inadequate.

We conclude with a table of share prices and yields :—

Description.	Share.	Present Amount.	Price July 30, 1914.	Price July 31, 1920.	Price July 31, 1921.	Price July 31, 1922.	Price Aug. 1, 1923.	Present Yield.
Chas. Baker, 8% cum. pref.	£	70,000	5 1/2	5	4 1/2	4 1/2	4 1/2	8 1/2
Home & Col., 6% cum. pref.	£	900,000	5 1/2	5	4 1/2	4 1/2	4 1/2	8 1/2
Do 15% cum. pref.	£	250,000	2 1/2	2 1/2	2 1/2	2 1/2	2 1/2	17 1/2
Do 15% cum. ord.	£	250,000	2 1/2	2 1/2	2 1/2	2 1/2	2 1/2	17 1/2
Hope Bros.	£	300,000	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	12 1/2
Do 5% cum. pref.	£	300,000	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	12 1/2
Internat. Tea, 6% cum. pref.	£	600,000	5 1/2	5 1/2	5 1/2	5 1/2	5 1/2	17 1/2
Do 7% cum. "A" pref.	£	250,000	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	17 1/2
Lipton, Limited, Ord.	£	1,250,000	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	17 1/2
Maypole Dairy, def.	£	2,158,332	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	17 1/2
Pim Brothers	£	150,000	5 1/2	5 1/2	5 1/2	5 1/2	5 1/2	17 1/2
Plummer, Roddis	£	175,000	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	17 1/2

Prices do not show much variation from year to year, and are mostly very slightly higher than they were a year ago. Pim Bros. is an exception with a considerable decline, which seems rather difficult to explain in view of the increase in profits shown above. The yield on these shares, however, is still not unduly high. In fact, in view of the nature of the businesses undertaken by the companies under review, the range of yields is quite moderate. The outlook is obscure, but it can at least be said that it is not so black for retail concerns, trading in necessities, as it is for manufacturers and merchants depending upon foreign markets.

EUROPEAN TRADE POLICIES.

(BY A DUTCH CORRESPONDENT.)

A STUDY of the recent development and present tendencies of the trade and tariff policies of the leading Continental countries must necessarily lead—given the extreme complexity of the subject and the lack of generally adopted scientific systems—to different kinds of observations and conclusions. It might be deduced from a certain group of facts that the tendencies towards Protection, economic nationalism and isolation, which were the main characteristic features of the world trade policy in the post-war period, instead of diminishing are showing signs of growing strength and expansion. In several countries tariff revisions have been prepared, or have already been put into force, and in most cases they mean a higher tariff wall. The adoption of the system of double (maximum and minimum) tariffs, the application of "co-efficients" on import duties, the collection of the Customs duties on a gold basis by a growing number of countries, special measures of restriction taken even by countries which, such as Holland, till now declined to proceed to Protectionist measures, and last, but not least, the policy of narrow and aggressive egoism, with the menace of reprisals, leading to new tariff wars between different countries—these are indeed scarcely encouraging indications for a progress towards a sound international trade policy.

Even the programme and the aims of the International Tariff Conference, convened by the Economic Commission of the League of Nations, to be held in October next at Geneva, shows clearly that the expectations of the advocates of reforms and changes are very limited. The organisers of the said Conference do not intend to deal with the tariff systems, with the questions relative to Free-trade and Protection, and with the general financial and trade policy of the various Governments. The Conference will confine its activities to the formal questions connected with the application of the existing tariff systems, such as the quick publication of all laws, decrees, &c., relating to tariff matters, the procedure with regard to the import licences, and a number of other questions of a technical kind.

However, in recent months two important factors have made themselves felt, which seem to justify a somewhat less pessimistic view as to the outlook for international trade policy. The first of these factors is the very considerable extension which the system of trade agreements and commercial treaties between the different countries has undergone during the last few months, leading to a partial correction of the system of protective tariffs, and resulting in a mitigation of the adverse effects of these tariffs upon the international trade position. The second factor in question is the undoubtedly growing opposition to the exaggerated protective measures even in the leading Protectionist Continental countries, such as France and Italy, in which the Protectionists seemed during the last few years to be all powerful. A short review of the main features of the recent and actual position of the trade policy in the various countries of the European Continent will throw some light upon this double aspect of the present situation.

The French Government has been preparing a revision of the "nomenclature" of the customs tariff in conformity with the changed requirements of trade and industry, as well as some other changes in the tariff system. The Government intends to maintain the specific tariffs and to confine the collection of *ad valorem* duties to a very restricted number of articles, a policy which is supported by interested trade circles. It is, however, believed in French trade quarters that the present moment is still not ripe for a definite settlement of the tariff question, and a provisory solution is suggested, consisting in the application of "co-efficients" on the import duties, varying automatically in accordance with exchange movements. It is further considered advisable to follow the British, Canadian, and American example by granting a certain particular protection to the French key industries. The prospects of a general revision of the French trade policy in a liberal direction are rather poor, but, on the other hand, many commercial treaties and trade agreements have been concluded during the last twelve months, e.g., with Italy, Czechoslovakia, Finland, Canada, and recently with Belgium, in order to support an expansion of French foreign trade. The French Government has, however, recently proceeded to a step which was bound to result in a serious menace for important branches of the French export trade. In a recent speech, delivered at Montpellier, M. Chéron, the French Minister of Agriculture, has announced a forthcoming increase in the import duties on wine, in order to give a more effective protection to the French production, which is experiencing considerable difficulties in home and foreign markets. This statement included the probability of the denunciation of the *modus vivendi* with Portugal, and of the trade agreement with Spain, and consequently of a new tariff war with those countries. The *modus vivendi* with Portugal expired on June 15th last, and so far no agreement has been arrived at as to its prolongation. The provisory agreement with Spain expired in August, but the declarations of M. Chéron, above referred to, are considered by the Spanish Press as an indication of a forthcoming denunciation of the trade agreement between the countries, and stress is laid on the necessity of preparatory measures being taken by Spanish export industries for the eventuality of a new tariff war between Spain and France. Even if it proves possible to prevent the outbreak of such a war, these events show clearly that ultra-Protectionism results in continuous menace to the peaceful economic relations between different countries. The danger has

been realised in French trade quarters, and the projects of M. Chéron have been vigorously attacked at the recent meetings of several Chambers of Commerce, and of other important trade organisations.

Belgium has since the war abandoned her former comparatively liberal trade policy. The revision of the Belgian tariff means a further extension of the protective system, which initially has been mainly confined to an attempt to prevent dumping by depreciated exchange countries. Like France, Belgium faces the danger of a tariff war. The Belgian Government has lately notified the Czechoslovak Government that it intends to levy on nearly 30 commodities imported from Czechoslovakia the same import duties as in the case of the imports of these articles from Germany. This means an increase in the respective import duties on the Czechoslovak commodities in question of 100 per cent. The Belgian Government based this measure on the anti-dumping law of April 8, 1922, by virtue of which the tariff measures applied against Germany may be extended to other countries. From the Belgian side it has been pretended that the said measure of the Belgian Government is but a "représaille" necessitated by the alleged unfair treatment of Belgian industries by the Czechoslovak Government with regard to the import licences for manufactured commodities. The Czechoslovaks, however, deny the validity of this argument, and emphasise that the policy of the Belgian Government would be bound to lead, if maintained, to a serious conflict.

The trade policy of Italy has since the war shown growing Protectionist tendencies, which resulted in the Alessio Tariff of 1921. The opposition to the exaggerated Protectionist measures, which this tariff provoked, was initially very weak, but it has recently become more vigorous, as the adverse effects of Protectionism upon the price situation and upon the position of the Italian export trade became evident. The present Italian Government has already found it necessary to make some concessions to the change of public opinion regarding the tariff question. So far as Italian trade policy is concerned, the most important present issues are the question of the commercial treaties and the revision of the Customs tariff. As to the first point, it may be stated that the Italian Government has made serious attempts to fight the difficulties of the Italian export trade by means of concluding commercial treaties with foreign countries. The first of these treaties was that concluded with France on November 13th last, providing mutual tariff reductions and facilities. In January last a similar commercial treaty was concluded between Italy and Switzerland, containing special provisions regarding the partial abolition of the import restrictions in the trade between the two countries. An important event in the field of international trade policy has been the conclusion of a commercial treaty between Italy and Austria on April 27th last. The former provisional trade agreement between these countries has been replaced by a settlement based on the same principles as the modern commercial treaties concluded before the war. Mutual tariff reductions have been granted on a basis of reciprocity, and, although to a somewhat limited extent, the application of the clause of the most favoured nation has been granted.

Opposition to Protectionist trade policy is making itself felt more strongly in Italy. In the last few months this question has been several times discussed at meetings of both Chambers of the Italian Parliament. The advocates of Free-trade, including such leading economists as Einaudi, Loria, and Fortunato, urged the necessity of a revision of the Customs tariff, and have issued a manifesto against that tariff, which, in their opinion, is being applied in an unlawful manner, having become operative by virtue of a decree, and not having been approved by the Parliament. The opponents of Protectionism desire in the first place the restoration of the import duties on the former basis. So far as "exchange dumping" is concerned, the obligation of the payment of import duties on a gold basis applied against "depreciated exchange" countries would, in their opinion, be sufficient to prevent unfair competition. From a recent statement of the Italian Minister of Commerce, Signore Rossi, it may be deduced that the Italian Government desires to secure a kind of compromise. Generally speaking, it intends to maintain the Protectionist tariff system, but it

seems to be prepared to make some concessions to Free-trade by concluding commercial treaties with foreign countries and reducing the import duties on various commodities.

Austria is now negotiating with France with a view to concluding a commercial treaty, while similar negotiations are projected with Great Britain, Czechoslovakia, and Yugoslavia. On the other hand, even in Austria, growing Protectionist tendencies have been witnessed. It is reported that the Minister of Commerce intends to protect Austrian industries by means of a maximum tariff, while the farmers have declared that in that case they will insist on high import duties on foodstuffs and other farm products. At recent meetings of the big Austrian trade organisations, vigorous protests have been uttered against these plans, which are considered as a serious menace to Austrian trade.

So far as the tariff question in other European countries is concerned, it has lately been decided in Poland to increase considerably the "co-efficients" on the import duties. In Finland the Tariff Commission has recently published its report, which favours a double (maximum and minimum) tariff. It is proposed to increase the import duties for a number of articles, while in the case of other commodities some reductions have been proposed. Generally speaking, in most of the ex-neutral countries Protectionist tendencies are prevalent. In Switzerland the attempts to abolish the exaggerated Protectionist measures have failed; in Holland—the last bastion of Continental free trade—a law concerning the restriction of the imports of footwear has recently become operative; while in Denmark a considerable increase has recently been made in the import duties on footwear. Norway maintains her Protectionist trade policy, and the Storting has lately adopted an increase in the additional import duties on sugar and coffee to 10 per cent., and for other commodities to 20 or 33½ per cent.

Notes of the Week.

The New Chancellor.—The Prime Minister has at last been compelled to relinquish all hope of enjoying the services of Mr McKenna as Chancellor of the Exchequer, and has appointed in his stead Mr Neville Chamberlain. In the letter by which he communicated his decision to Mr Baldwin, Mr McKenna explained that he had not changed in his support of the Prime Minister's policies, but, for reasons of health, was unable to contest an election; and that, since the hope of obtaining an uncontested seat had been disappointed, he had no option but to abandon the idea of taking office. Thus the most striking coup in Mr Baldwin's Cabinet reorganisation has been thwarted by the efforts of the "Die-hards." The success of those efforts means a loss to the Government, and a loss to the nation, which would have liked to see a man of Mr McKenna's great financial experience and ability go to the Treasury at this difficult time. But we venture to think that the course events have taken will be more likely to conduce to Mr McKenna's happiness than the assumption of office. He will continue to play a very important part in the world of finance, and at the same time he will have preserved a line of retreat to his old radical faith (especially in the matter of free trade); whereas, had he taken office under Mr Baldwin, he might have found unpalatable some clauses of the Conservative philosophy to which he would have been expected to subscribe. Thus while the nation is the loser, we feel almost inclined to congratulate Mr McKenna, and we certainly congratulate the bank over which he will now continue to preside. Mr Neville Chamberlain, as Chancellor, is an experiment. Neither the City nor the general public has much knowledge of his views on the most important financial questions of the day. He has been in Parliament for only five years, and has held three offices, each for a comparatively short time. The first time, when at Mr Lloyd George's request he took up the post of Minister of National Service, he made little headway and quickly retired. The second time he became Postmaster-General under Mr Bonar Law, from which office he was moved to replace the luckless Sir Arthur Griffith Boscawen as Minister of

Health. In this latter office, which he now leaves for the Treasury, Mr Chamberlain has achieved rather striking success, for he took the helm at the Ministry of Health at a time when the public uproar over rent and housing policy threatened to submerge the Government, and cleverly steered his ship into calm waters. There are two remarkable points in connection with the appointment. One is that Mr Joseph Chamberlain's two sons have both climbed to the illustrious office which their more famous father never achieved. The other is that the Prime Minister, when disappointed of the services of a pronounced Free Trader as Chancellor, immediately confers the office upon one whose consistent devotion to the Protectionist faith has been beyond doubt. It is impossible to contemplate without some uneasiness the presence of a champion of Tariff Reform at the Exchequer. Nevertheless we hope that his success at the Ministry of Health is a good augury for sound administration at the Treasury. Mr Neville Chamberlain has to win his spurs at a difficult time, and the business community will eagerly watch his performance.

The Irish Elections.—Our Dublin correspondent writing on Thursday, says:—The results of the General Election of members of Dail Eireann are not yet complete. Proportional representation, coupled with adult suffrage and a large candidature, involves an enormous amount of labour in the original counting, and in the very numerous subsidiary counts the methods are new and complex, and possibly the requirements in the size of counting staffs have been somewhat underestimated. On general average about two-thirds of the electorate recorded their votes, which, having regard to the short time available and the virtual absence of canvassing and of arrangements for taking voters to the poll, is a very substantial if not heavy vote. The results so far available show the return of 40 Government candidates, 23 Republicans, 13 Independents, 9 Labour, and 8 Farmers' candidates, which is in substantial accord with the rough indications by way of forecast published in this column last week. The Government is certain of a renewed lease of power, and the cause of the Treaty, the Constitution, and national stability appears to be secure. The Ministers in general headed their respective polls, notably Mr Cosgrave, Mr O'Higgins, and General Mulcahy, who were primarily responsible for the firm handling of revolutionary republicanism. A notable feature is the marked setback suffered by Labour, which is due in part to public resentment at some of its strike activities, but much more to a tolerably obvious deal between revolutionary labour under Mr Jim Larkin and De Valera's faction. Mr Larkin thus was able to strike at Mr Thos. Johnson and the more responsible Labour leaders whom he desires to oust from control of

the movement, and at the same time do his best to assist the Republicans towards creating an amount of internal chaos which would provide a suitable atmosphere for that species of revolution against ordered governments' property generally that he appears to desire. The first counts indicated the likelihoods of a smaller number of Republican candidates being returned than is now probable. The partial recovery of the latter is due to the unfamiliarity of the average voter with the new system. In very numerous cases he failed to see why, if there were eight vacancies he should number his preferences for more than eight or ten candidates, and thereby forfeited a considerable amount of his voting power. On the later counts in this way there have been cases of minority candidates slipping in where the views of large majority of the voters was clearly indicated by the distribution of their first preferences. Mr Cosgrave, President of the Executive Council, who is fully satisfied with the general results as ascertainable up to date, left to-day for the Continent to head the delegation which is to represent Ireland at Geneva at the League of Nations meeting next week, when Ireland will be formally admitted as a member of that body. It is noteworthy that he and his colleagues will travel on passports issued by the Free State Government, and it is believed that they will be accorded an official reception in France on their arrival.

United States Navy Reduction.—Our Washington correspondent writes:—In accordance with the terms of the Five Power Treaty for limitation of armaments, which became effective on August 17th with the exchange of ratifications at the State Department by representatives of the signatory Powers, the Navy Department issued orders whereby 28 American capital ships, having an aggregate tonnage of approximately 750,000, will be dropped from the United States Navy. Ships to be scrapped by this Government comprise three groups. One group consists of battleships and battle-cruisers now under construction at Navy yards; the second group includes capital ships that are being built in private yards, while the third group consists of obsolete vessels already built. The Navy Department, Mr Roosevelt says, in an official statement, will start at once to scrap all ships other than those to be retained under provisions of the Treaty. Of such ships, eleven are now under construction. Seven of the latter are the battleships "Indiana," "South Dakota," "Montana," "North Carolina," "Michigan," "Iowa," and "Washington." The battle cruisers "Lexington" and "Saratoga," under provisions of the Treaty, will be converted into airplane carriers, while the other four battle-cruisers, namely, the "Constitution," the "United States," the "Constellation," and the "Ranger," will be scrapped immediately. The Department is taking no action at present to dispose of the "Delaware" and the "North Dakota," which are being used for midshipmen's practice cruises, since the Treaty does not require that those be disposed of until the "Colorado" and the "West Virginia" are put into commission. According to present plans, the "Delaware" will then be sold for scrapping and the "North Dakota" will be converted into a target ship. Shipbuilders who had new capital ships under construction, but stopped work on them at the time of the Washington Conference, have been asked by the Navy Department to submit estimates for the purchase of the hulks, which are to be reduced to scrap metal, as well as estimates for breaking up the ships in order that the Department may offer the scrap metal to other bidders. Capital ships that were being constructed in Government Navy yards will shortly be advertised for sale to the highest bidders, who in turn will be required to break them up into metal of scrap sizes. The old capital ships, enumerated in the Treaty, and which have been in commission, will be scrapped. The "Maine," "Missouri," "Ohio," and "Kentucky" have already been disposed of to junk dealers. According to Washington advices, the battleships "Virginia" and "New Jersey" will be used in air-bombing experiments by the Army Air Service, and will be sunk by airplane bombs. The "Washington" and "South Carolina" will also be used in submarine and air attacks, and if not sunk in such test will be scrapped.

Stock Exchange Atmosphere.—The man who follows Stock Exchange affairs with any degree of attention, writes a Stock Exchange correspondent, knows that it behoves him to catch, if he can, the "atmosphere" of the markets, because this atmosphere is likely to prove of very practical service in his Stock Exchange dealings. The client living in the country, glad to retain an intelligent interest in financial affairs, is the peculiar victim of the leather-lunged bucket-shop circular which shouts that the time is ripe to buy, let us say, Courtaulds, "for a quick and substantial rise." The prospect of getting a little extra excitement appeals to the prospective client, and he feels tempted to buy the shares simply for the sake of having a mild gamble in an active market, with its hum of lively interest, its spice of making a little money. But the market in Courtaulds may be quiet at the moment, with the prospect of little or no dramatic movement, with the atmosphere dull, uninteresting, useless to the speculator. Better, obviously, to wait for renewal of activity rather than for him to buy Courtaulds now, and carry them over from account to account in that rather hopeless fashion which leads to the creation of a stale bull account. The investor is quite differently situated. He has an advantage over the Stock Exchange man, in that he is not swayed by the look of the market at the moment, and when he considers such-and-such shares cheap, he can buy them without feeling, as the Houseman might do, that, by waiting, the shares might possibly come lower. The Stock Exchange member standing in the market hears men bidding for Rio Tintos as though their very lives depended upon the shares being obtained; others trying to buy Shells, Mexican Eagles, and Royal Dutch, as if to achieve a purchase were the sole aim of their existence. He hears, simultaneously, that the War Loan is better; and that the Cape is buying Modders. All these things work upon the psychology of the Stock Exchange man, and tend to throw his equilibrium out of balance. He is swayed, as he himself always admits, by the look of the market at the moment, than which there are few things more misleading when it comes to active speculation. As a prospective buyer or intending seller, he waits too long in either case. The client, detached from the scene and not expecting to get out either at the extreme top or in at the very lowest, acts upon his own judgment irrespective of what France may be reported as whispering on the Ruhr, or New York flirting-with in connection with the oil industry. The broker curses himself for being misled so often by this look of the market, and is too familiar with the request even to smile when a client asks him to watch the market, because he, the broker, must inevitably know what is going to happen. The Stock Exchange man does better, as a rule, for his clients with their own investments than he does with his own. In the matter of speculation, he probably loses quite as much as they do, if not more. The advantages of being on the spot are so correctly balanced by the handicaps that both may be reflected, to the observant eye, in the remarkably small number of Stock Exchange retirements which occur year by year on the part of men who have made sufficient to live on. This mysterious, misleading and invaluable "atmosphere" which plays so leading a part in the Stock Exchange markets it is always desirable to catch, so far as it can be obtained from a study of conditions as reported in the papers. The speculator, more particularly, will give heed to the description of whether business is good, slack, patchy, or stagnant, while the investor himself is quite likely to pick up a useful hint or two that shall serve as a guide to him in his decision of the time when it is best for him to buy or to sell.

Insurance of Passengers at Sea.—The Comité Maritime International, at its recent conference at Gothenburg, besides discussing a draft International Convention on the legal immunity of State-owned shipping, as mentioned in the *Economist* last week, turned its attention to a problem with which it has not hitherto dealt. This is the question whether it would be desirable to organise, by means of an International Convention, a scheme of compulsory insurance of passengers carried by sea. Insurance systems of this kind have, it appears, already

been established in some countries, and others may take similar steps. In order to prevent each country setting up its own system, differing from others, and involving shipowners in varying responsibilities, the suggestion was made that the matter should be placed upon a uniform international basis. There was, before the recent conference, some difference of opinion as to whether this proposal should be endorsed, but after discussion a resolution was adopted emphasising the desirability of the international adoption of a uniform system for the compulsory insurance of passengers in trans-ocean traffic. The problem is, however, one requiring detailed consideration, and the conference went no further than to agree on the principle, recommending that the matter should be further studied by a special committee which will report to the next conference, to be held, probably, at Genoa. All the English emigrant lines, it was stated, have come to the conclusion, after many years' experience, that the compulsory insurance of passengers is essential. Sir Norman Hill (who recently retired from the secretaryship of the Liverpool Steam Ship Owners' Association, after holding that position for 30 years), in a speech introducing the subject, maintained that a system whereby the insurance premiums would be paid by the passengers, and included in the fares, would be advantageous both from the point of view of shipowners and passengers, whether emigrants or higher-class passengers. The proposal is that the scheme should take the place of the contractual liability of the shipowners towards the passengers travelling on board their vessels, but the insurance would cover all cases, that is, both chance accidents and those caused by negligence, including negligence of a third party. Payments would be made in respect of death and permanent or partial incapacity, but, as already indicated, the scope and details of the scheme are to be further considered. Apparently, as the business, carried on out of passage money, has at present to bear the cost of meeting claims, it may be possible that the adoption instead of an international scheme of insurance would not necessarily involve a material increase in the cost of transport, while placing the matter of claims and their settlement on a more satisfactory footing.

Factory Conditions in 1922.—The annual report of the Chief Inspector of Factories and Workshops for 1922, which has recently been published, reflects the general stagnation of trade last year. New developments have been few, despite the slight improvement which was noticeable in the general outlook in the second half of the year. At the same time the number of registered factories in Great Britain increased from 135,356 to 137,858 during the year, though this was accompanied by an almost equivalent decrease in the number of workshops, and is therefore attributable mainly to the conversion of workshops into factories through the introduction of mechanical power. The number of accidents reported during the year shows a slight increase on the figures for 1921, which were very low on account of the miners' strike and the general falling-off in trade. The fact, however, that 97,986 accidents, of which 843 were fatal, took place last year (as against 92,565 in 1921) shows that there is still much to be done, and it is gratifying to note that the "Safety First" movement initiated by the Department is being taken seriously by masters and men alike. The reports made by the various inspectors show that hours of work, which averaged some 60 hours a week in most industries before the war, have now been reduced in general to between 44 and 48 hours weekly, and this without recourse being had to statutory regulation. Overtime has been rare, and we are told that a five-day week is common. It is stated that this change is by no means wholly due to trade depression. "Few workers would now be willing to work longer hours, and some occupiers say that output in the reduced period is almost, if not quite, up to that of the longer period, while others hold that it would not be worth their while to pay the overtime rates fixed for their industries." It is satisfactory to note that voluntary welfare work is on the increase, despite the trade depression. In one Scottish town it is reported that six

neighbouring factories, of widely different types, have united together to appoint a joint welfare supervisor to work among the boys, while facilities for bathing are on the increase in most districts. Apart from the benefits of work of this kind from the human point of view, it appears to be becoming apparent to an ever-widening circle of employers that expenditure on welfare work is a sound business proposition. As far as statutory welfare work is concerned, however, there seems to be much difference of opinion among employers as to what constitutes compliance with the Welfare Orders issued by the Secretary of State, while in many cases an indifference exists in the attitude of the workers themselves towards welfare work generally. Among questions of health in the different trades, that of the use of white lead and sulphate of lead in painting operations is of considerable interest in view of the adoption of an International Convention at Geneva dealing with the subject. In this country we are told that "highly satisfactory conferences were held with representatives of the Painters' and Decorators' Industrial Joint Council of Great Britain, at which agreement was reached, in anticipation of legislation, as to the form of regulations to be made to govern the use of lead for outside and certain other kinds of painting. This report of the Chief Inspector (Cmd. 1920), as usual, merits careful attention on the part of all who are interested in industrial conditions, and testifies to the great improvements that have been made of recent years in conditions of labour in this country.

The Home Bank of Canada.—Our Ottawa correspondent writes:—The failure of the Home Bank of Canada, following, as it does, closely upon the drastic action of the Union and Standard Banks in writing down their reserves this summer by large amounts, to provide for losses and contingent bad debts, has caused a mild sensation throughout Canada, and has seriously disturbed both the Government and the financial world. Its difficulties had been an open secret among bankers for some time, but the general belief was that they were capable of solution by the policy adopted by the Union and Standard Banks, and no one expected an outright suspension of payment. However, it came when quiet withdrawals by depositors, whose fears had been aroused by the revelations about the other banks, assumed such proportions that the bank was unable to meet its clearing house obligations to other banks. Two weeks ago Mr Cooper Mason, the general manager, died after a long illness, and during his illness the acting-general manager had the unpleasant duty of revealing to the directorate a substantial volume of concealed losses, of which they had no inkling. The Home Bank is one of the smaller chartered banks, its capital being less than \$2,000,000 and its deposits about \$17,000,000. Its June statement showed current loans to be over \$15,000,000. Excessive holdings of property and losses sustained in the readjustment process following the war and the collapse of the boom in the West, where the bank did considerable business, are said to have been the main causes of the débâcle. It is confidently expected that the depositors will be paid in full, but they will have to wait months or even longer

for their money, and may not be fully paid until the shareholders have been called upon for their double liability, as provided by the Canadian Bank Act. Another estimate which places the bank's losses at under 2½ million dollars, presages that the shareholders will not only escape the operation of the double liability clause, but will realise between \$20 and \$30 per share. But at the present stage any estimate of the exact situation is purely speculative. The history of the Home Bank's origin is curious. Seventy-five years ago the Roman Catholic Archbishop of Toronto, a much-beloved and trusted figure, instituted the practice of undertaking care of the savings of the poorer members of his flock, mostly illiterate Irish immigrants. The moneys entrusted to him grew to such a sum that a savings company was organised, and subsequently it developed into a chartered bank. Its associations with the Roman Catholic Church have continued to be close, businesses controlled by Catholics were its most important customers, and the majority of its directors belonged to the same faith.

Egyptian Trade and Finance.—The year 1922 is described in the Report of H.B.M. Commercial Agent at Cairo, issued by the Overseas Trade Department, as "mediocre and unsatisfying." A favourable trade balance of just over £E8,000,000 followed unfavourable balances in each of the two preceding years of about £E13,000,000, but it was due mainly to a decrease in imports—chiefly, however, in American wheat and coal. The cotton exported increased both in quantity and value, but the value was far below the average of the three preceding years. And the Budget surplus, estimated at £E6,125,000, was largely produced by the suspension or delay of public works. The surplus, however, goes to the building up of reserves needed in view of the political changes, and in spite of much unfortunate speculation in depreciated European currencies there is a ready market for all Egyptian securities, especially Government bonds, offered from Europe. The Government aims at assisting trade by removing restrictions, preventing the fraudulent "lapping" of textile imports, providing loans for minor industrialists, and organising advice. In imports the British share and percentage has declined, more especially in manufactures. This the Report ascribes to the apathy of British exporters, who fail to give adequate support to their agents, neglect advertising, and do not study local needs, or ensure prompt delivery of their goods. Of the mineral exports, petroleum fell off last year some 3.5 per cent., phosphates over 50 per cent. Manganese ore from the Sinai peninsula increased 135 per cent.; it went chiefly to Belgium and Holland. Much is said of the development of native industries, whether indigenous or directed by foreign enterprise. Of the latter, textiles, iron and steel goods, and mineral paint are successful or promising. Tourist traffic is recovering, in spite of the lack of visitors from Central and Eastern Europe and the adverse exchange on London and New York. For Europeans the cost of living has not fallen, and hotel prices and rents continue very high. Much detailed information is given regarding the export of cotton, the leading factor in Egyptian foreign trade. The cultivation of the long-stapled Sakel variety introduced in 1911, to which Egypt owes its pre-eminence among cotton-producing countries, seems likely to be discouraged by the recent lessening of its advantage in price, both over the more prolific Ashmouni variety and that produced in the United States. Partly this lessening is due to the use of short-stapled cotton in the manufacture of motor tyres, but it is chiefly caused by the inability of consumers to purchase the more expensive fabrics of which Sakel is the raw material. And, as the popularity of different varieties among the growers is apt to rise and fall swiftly, Sakel may rapidly give place to some more profitable kind. Possibly this view may be too gloomy. Egypt, we believe, possesses a natural advantage over all other countries in the production of long-stapled cotton, and the market for it must revive. The Report, moreover, bases an average price of Egyptian cotton partly on the exceptionally high figure reached in 1919.

Argentine Navigation.—A correspondent writes:—Shareholders in the Argentine Navigation Company (Nicholas Mihanovich), who, for some years past, have been disappointed with the results of the working of their business, will learn with some degree of satisfaction that at least one cause, contributory to their troubles, is likely to be removed. Competition which threatened the company upon the part of German and Chilean interests has been, for the time being, withdrawn, and danger of rate-cutting between the different companies engaged in the river and southern coast trade reduced. Towards the end of last year the Argentine Navigation Company purchased two steamers, the "Byron" and the "Tennyson," from the Lamport and Holt interests, to be used in opening-up a service to the Patagonian coast, in competition with two other companies already engaged in that trade. An agreement has now been made between the three concerns by which the Chilean firm of Braun y Blanchard (affiliated with the S.A. Importadora y Exportadora de la Patagonia) purchases the two steamers referred to for use in Chile, while the Argentina Compañía General de Navegación, the third competitor, sells to the Argentine Navigation Company the two large river steamers "Cabo Corrientes" and "Cabo Santa Maria," which hitherto had been engaged in the run between Buenos Ayres and Montevideo, in competition with the British company. Nor was this the only competition offered, for last year the Montevideo Municipality, supported by guarantee a private individual against whom it was impossible to run profitably, and this necessitated the laying-up of two of the company's finest and most luxurious boats—the "Ciudad de Buenos Aires" and the "Ciudad de Montevideo." At the end of 1917 the interests of the Argentine Navigation Company were acquired by the Royal Mail Steam Packet Company and the Lamport and Holt line; but in 1921, following poor trading in the previous year, a serious set-back to its affairs ensued owing *inter alia* to labour troubles, involving a strike extending over 12 months among the crews, and occasioning a further financial loss of nearly £390,000. The abandonment of profitless rivalry, an improved labour aspect, the removal of troubles in Paraguay (which had also proved a fruitful source of loss to the company), and the operating of the new treaty entered into for reciprocal coast trade between Argentina and Uruguay, should materially assist the company's future prospects. The importance of the transport services rendered can be gauged from the fact that the company has a fleet of over 60 cargo and passenger ships, most of them constructed for river service, and over 60 tugs, as well as a large number of lighters and smaller craft. Besides the cargo trade, regular schedules are maintained on different river runs—a passenger service on the Paraná as far up as Puerto Mendez (a comparatively new route), some 300 miles beyond Posadas, connecting up Alto Paraná with the Falls of Iguazú; on the Uruguay as far as Concordia-Salto; and on the Paraguay as far as Corumba (Brazil). In normal times all this river traffic is very valuable, general merchandise imported from abroad proceeding up-country, while lumber and other exportable products of Northern Argentina, Uruguay, and Paraguay form the down-stream traffic. Although the loss on trading for the last year (1922) is still appreciable, namely, £16,304, it has fallen considerably below the losses for 1921 (£389,830), and 1920 (£411,169) respectively. The adverse balance still stands at £665,252.

Cotton Mill Shares.—Our Manchester correspondent writes:—Owing to the acute depression which has prevailed in the Lancashire cotton industry during the past two years, heavy declines have taken place in cotton mill share values. Many leading men in the industry, however, consider that the fall has been excessive. In many instances the market prices do not represent the value of the shares to which they refer, for the mills and their machinery could not be replaced at anything approaching the value at which they are usually set down. Three years ago many mills were refloated at an enhanced capital basis, and many outside subscribers were attracted. When the slump came these individuals became nervous, and many shares changed hands at absurdly low prices.

Then, again, the cotton mills depend a great deal upon loan money, which in prosperous times enables the directors to pay larger dividends than the average rate of their profit on all the capital employed. That system, however, has its danger when periods of depression come along, and in many instances loan holders have withdrawn their money. There has even been a fall in many shares since the beginning of this year, but many local traders with inside knowledge are of the opinion that prices will not go much lower.

The sixty-eighth annual International Exhibition of the Royal Photographic Society will be formally opened at 35 Russell square, on Saturday, September 15th, at 3 p.m., by the Rt. Hon. Lord Riddell. The exhibition will be open to the public from September 17th to October 27th, admission free, illustrated catalogue 1s.

Oversea Correspondence.

UNITED STATES.—JULY FOREIGN TRADE—SOUTHERN PACIFIC LITIGATION ENDED—THE GASOLINE WAR—FOREIGN LOANS.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 20.

PRELIMINARY returns of foreign trade during July, issued by the Department of Commerce for the first month since last February show a balance of trade in favour of this country. Exports last month totalled in value \$310,000,000, and imports \$284,000,000, making an excess of \$26,000,000 in exports. The figures furnish a striking contrast with those of the last few months. In February of this year exports exceeded imports by \$3,877,000. In March imports were \$56,812,000 greater than exports, while in April the import balance amounted to \$38,780,000, and in May to \$55,895,000. During June imports and exports nearly balanced, revised returns showing an excess of imports over exports of only \$202,783. Both imports and exports last month were lighter in value than in any preceding month of this year, although somewhat larger than in July a year ago. While the returns for last month doubtless reflect larger shipments of commodities, as compared with July of 1922, much of the increase in value is probably due to the fact that prices, as a rule, were higher than those of last year. For the seven months ending with July the total value of exports was \$2,255,929,696, and that of imports \$2,371,920,079, showing a balance of trade against the United States for that period of \$115,990,383; for the corresponding period in 1922 the balance in favour of this country, that is, excess of exports over imports, amounted to \$450,580,969.

After conferring with President Coolidge, Attorney-General Daugherty announced recently that the Government would not appeal from the decision of the federal court at St Paul, which held that the Interstate Commerce Commission had full authority under the Transportation Act to consent to the Southern Pacific Company's control of the Central Pacific Railway Company through lease and stock ownership of the latter. This means there will be no more litigation in that famous case which was begun in February, 1914, when the Government started its dissolution suit under the Sherman Anti-Trust Law, and which has finally resulted in a complete victory for the Southern Pacific. One of the most important practical results of the ending of this litigation is that the Southern Pacific Company will immediately proceed to construct 118 miles of line between Oakville and Kirk, Oregon, which will complete what is known as the Natron route, to connect Weed, California, with Springfield, Oregon. The additional line, which is estimated to cost between \$10,000,000 and \$12,000,000, will not only open to development an extensive area of Oregon farm land in one of the largest districts at present without railroad facilities, but will also give the Southern Pacific a reduced grade, as compared with the present line. On some stretches of the latter five locomotives are now required to haul a single large freight train.

Every Description of Home and Foreign Banking Business transacted.

Reports received by the crop reporting board of the Department of Agriculture from 25,000 farmers indicate that the acreage to be sown to winter wheat this autumn will be 7,177,000 acres less than was planted last fall, representing a reduction of 15.5 per cent. if the farmers carry out their intentions, as expressed under date of August 1st. They also plan to reduce the area sown to rye by 475,000 acres, or 9 per cent. According to the crop board, a reduction of 15.5 per cent. in winter wheat acreage would make a total area sown this year of about 39,200,000 acres, as against 46,379,000 actually planted last year, of which 39,750,000 acres were harvested, since about 14 per cent. was abandoned. The area sown to rye last fall was placed at 5,234,000 acres. This report very plainly shows what the community in such agricultural districts thinks about market prices for wheat and rye. Farmers' intentions, as expressed on August 1st, may, however, undergo considerable change.

The oil industry of this country is in the throes of a gasoline price war, the most drastic price-cutting campaign for years having developed during the past week or two, and involving all producers, large and small, throughout the United States. Following reductions by various interests in different sections, the Standard Oil Company of Indiana last week made an unprecedented blanket cut of 6.6 cents a gallon throughout ten middle-western States. In mid-continent territory, also in California, gasoline is being offered as low as 7 cents a gallon wholesale, while one of the large eastern refiners is offering it in New York at 10 cents a gallon, which compares with a tank wagon price of 19½ cents recently quoted by the Standard Oil Company of New York. Present conditions are said to be the most disastrous experienced since 1914-1915, when the American oil industry was completely demoralised by the outbreak of the war. In one respect the situation is worse than it was in 1915. At that time the average price of crude oil, for the entire country, was about 63 cents a barrel, whereas this season the average has approximated \$1.50, and costs of manufacturing and distribution are greater. The main reasons given for the sensational price-slashing are the excessive production of gasoline, due principally to the large recovery of gasoline from cheap California crude oil (the output of which has shown a tremendous increase this year), and lower tanker rates from California and Mexico to the eastern or Atlantic seaboard. Production of crude oil in California has reached a new high record of 875,000 barrels a day. That oil is so cheap that it is rapidly driving other oils out of various markets throughout the country. It has already forced mid-continent oil out of Atlantic seaboard markets, and has broken the price of Gulf Coast crude oil to the lowest level for years, since it can be transported through gulf ports, refined and marketed at a lower price than can Gulf Coast crude. Although there has been no heavy overproduction of crude oil on the Gulf Coast, the Standard Oil Company has been obliged to reduce, through one of its subsidiaries, grade A Gulf Coast crude 25 cents a barrel, making both A and B grades \$1 a barrel. Heavy Mexican crude oil has lately been cut to 45 cents a barrel from a recent price of 90 cents. There is every reason to believe that the price of mid-continent crude will be sharply reduced in the near future. The gasoline price war has occurred at the worst time of the year for producers, since demand is now at its peak, and will soon begin to show a seasonal decrease. As on June 30th there were 1,263,000,000 gallons of gasoline on

hand. While that quantity has been reduced during the past six or seven weeks, the total is still far above normal, and will undoubtedly begin to increase next month, and present indications are that refiners will be obliged to carry enormous quantities of gasoline in storage throughout the coming winter. The bulk of California crude oil is being produced from some 600 wells in the Los Angeles basin, where 500 additional wells are now being drilled. When the latter are completed there will be a further increase in production, providing the output from existing wells is maintained. In this connection it is noteworthy that the General Petroleum Company, according to advices from Los Angeles, has found rich oil sand below the 5,900-foot depth. This is taken to indicate productivity of the sand to the 6,000-foot level, and a larger oil reserve than had been considered likely.

Naturally, demoralisation in the oil industry has been reflected in severe breaks in prices of shares of refining and producing companies. Stocks of practically all such companies fell to new low levels for this year on the Stock Exchange last week. Declines in that group of securities, however, failed to cause any unsettlement elsewhere in the active list of shares. On the contrary, the market as a whole steadily advanced under a limited volume of buying, in the face of developments in the European situation, and also in domestic affairs, which ordinarily would have depressed prices considerably. It was apparent, however, that owing to the drastic declines of recent months, the market had become well liquidated, if not oversold, and was therefore in a strong position not only to withstand such adverse influences, but to advance in spite of them. The bond market also enjoyed a substantial recovery, sharp gains having been recorded in the past few days, notably in the case of European Government issues.

Another foreign loan has met with a very quick response from investors here. The \$20,000,000 kingdom of Norway 20-year 6 per cent. sinking fund external loan gold bonds, dated August 15, 1923, which were offered in this market last week by a syndicate of New York bankers, headed by the National City Company, and which were priced to investors at 96½, with interest to yield over 6.30 per cent., were quickly oversubscribed. An Argentine Government loan is expected to be offered here in the near future to refund an issue of \$50,000,000 7 per cent. notes maturing on October 1st. Although no official announcement has been made, it is reliably stated that the loan will be priced at about 92 to the bankers who underwrite the issue, and that the interest rate will not exceed 6 per cent.

FRANCE.—THE FRENCH REPLY—IRON ORE—HARVEST PROSPECTS—SAVINGS BANK FIGURES.

(FROM OUR CORRESPONDENT.)

PARIS, August 28.

M. POINCARÉ'S reply to the British Note has been received with unanimous approval by French opinion, and is regarded, rightly or wrongly, as setting forth in irrefutable fashion the French case in regard to both Reparations and the inter-Allied debts. More than ever these two subjects are now regarded as indissolubly bound up together, and approval of what is regarded as the Premier's masterly handling of the complicated double problem is coming in from all sides. The French *conseils généraux* are again in session, and these bodies, which correspond largely to the British county councils, but figure much more prominently as a gauge of national opinion in political matters, are again steadily sending in resolutions expressing their approbation of the line M. Poincaré is taking in regard to the Ruhr and cognate matters.

Much hope is placed on the possibility of a meeting between M. Poincaré and either Mr Baldwin or Lord Curzon (or perhaps both) during the stay of the latter in this country. It is generally recognised here, as apparently it is in England also, that the time for negotiation through the medium of diplomatic Notes, however valuable the latter may be for propaganda purposes, has come to an end, and that commonsense, as between the leaders of two nations of business people, now calls for a frank and business-like round-table conference, which both sides should

enter with a firm determination to settle the Reparations and Allied debt problem once and for all.

Meanwhile, Frenchmen of widely varying parties appear to be agreed that an appreciable modification of the situation has been brought about by the replacement of Dr Cuno by Herr Stresemann, as the head of the Berlin Government. German opinion, it is believed, is now steadily trending towards a recognition of the futility of a continuance of passive resistance in the Ruhr, and little doubt is felt but that, if half a word of friendly encouragement is given to France from Downing Street, the German political leaders will be found to be ready to come to a settlement that would bring the present chaos to an end.

Recent events have focussed attention here on the probable steady growth in the future British demand for French iron ores. It was stated at the Stockholm Geological Congress that the British reserves of iron ore have now been reduced to some 455,000,000 tons, which would mean, on the basis of the consumption of 1913—24,000,000 tons—that our deposits will be exhausted in about twenty years. The situation is rendered still more unfavourable, it is pointed out, from the fact that even the best of the British iron ores yield only 50 per cent. of iron, while many of the deposits do not run higher than from 30 per cent. to 35 per cent. Even in 1913 British ironmasters were compelled to secure 7,600,000 tons of their requirements from abroad. In view of the fact that the Bessemer process requires absolutely pure ore, such as is found in the Moroccan, Algerian and Tunisian deposits, and that since the war several of the British plants have been equipped for the purpose of utilising the Thomas process, which will enable them to draw on the ore yielded by the Brittany, Normandy, and other French iron fields, a large increase in the export of French iron ore to Great Britain is expected in the near future. The first shipment of "minette" from Lorraine arrived in Great Britain last June, but already, before the war, consignments of higher-grade ores from the Briey basin, totalling about 60,000 tons, had been sold in Scotland and South Wales and had given every satisfaction. Large contracts for deliveries of similar ore, as a matter of fact, were about to be signed when the war broke out, and for the time being the matter came to a standstill. So far as British purchases of ore from Lorraine are concerned, the real obstacle is due to the lack of transport. At present there is no direct route for the economic transport of ore from Lorraine to Dunkirk or Antwerp. The North-East Canal, which was projected in 1901, and which is designed for barges of 550 tons capacity, is not yet completed, while transport by the Eastern Canal, the Marne, and the Seine to the Rouen blast furnaces, in 1921, worked out at 17f a ton, which was more than the cost price of the ore. For export to Great Britain there remains only one direct route by rail, that from Briey to Dunkirk, which works out at 14f 50c per ton, plus port charges at Dunkirk, amounting to an additional 4f 25c per ton. By Antwerp the railway rate is some 5f higher than to Dunkirk. The last contract signed with a British blast furnace for ore from this field (35 per cent. iron) was on the basis of 14s 6d per ton c.i.f. British port, which left only 9s for the vendor, after paying transport charges. The solution foreseen here is the proper equipment of the port of Dunkirk, together with a radical modification of labour conditions there, and an appreciable reduction in railway rates, which are at present absolutely prohibitive for traffic in ore for export purposes.

It is now clear that, according to official announcements, the French wheat harvest for 1923 may be estimated at a total of 79,000,000 quintals. In view, therefore, of the surplus yield in the French North African dominions, and of the fact that the measures stipulating for the extraction of the whole of the flour from the grain, and for the use of a percentage of rice, manioc, and other substitutes in all flour intended for bread-making, are to be continued, it may now be regarded as certain that France will be able during the coming twelve months to dispense with all imported wheat and flour. The consequence this fact should have upon the situation of the franc, were the old doctrines of political economy still operative, is too obvious to call for comment. The official communiqués announcing this happy situation point out that, in order that it may actually be translated into fact,

September 1, 1923.]

it is indispensable that the recommendations that have been issued against all waste of bread should continue to be observed. It must be recognised that, quite apart from the fact that French people now eat much less bread than they did before the war, the campaign against waste of bread long ago began to bear fruit, and that there is little doubt the official warning will continue to receive attention.

French savings bank returns yield eloquent proof of the fact that, in spite of the remarkable rise in the standard of comfort that has characterised the people of this as of most other countries since the beginning of the war, the instinct to save has lost none of its virility in this country. The number of savings bank accounts in France did not diminish during the war, as had been feared would be the case, but remained stationary from 1914 to 1918. From 1918 to 1921, however, the number steadily rose from 6,600,000 to over seven millions. The total sum withdrawn in 1915, 1916, and 1917, as may be expected, in view of the strain to which the vast majority of depositors were subjected during those years, was greater than the amount deposited. Towards the end of 1917, however, the rise in the rate of wages began to make itself felt in this direction, and from then onwards deposits once more began to exceed withdrawals, and this tendency has continued ever since. The returns of deposits which are now available for the first five months of 1923 show at a glance the manner in which the French instinct to save is being fostered under present conditions:—

	Francs.
Total deposits during 1913	660,406,013
Total deposits during 1922	1,175,484,915
Total deposits first five months of 1923	527,070,832

The total deposits in 1922 were, according to the figures given, nearly twice as much as in 1913, while those for the first five months of the present year are proportionally still greater. The increase is not, certainly, in proportion to the depreciation of the franc, but approximates very closely to the increase in wages that has occurred. At the same time, it must not be overlooked that these figures do not include a very large sum that has been invested by small people of the savings bank depositor class in National Defence Bonds and other interest-bearing securities, which they naturally find much more convenient and profitable than the more complex medium of the savings bank. The proportion of the total issue of National Defence Bonds that has been taken up by those who would otherwise have entrusted their savings to the Caisse Nationale d'Epargne it is, of course, impossible to ascertain, but it must, in any case, be very large, and is probably at least equal in amount to the total of the savings bank deposits. In view of the unemployment that characterises Great Britain and other countries, these facts furnish a significant indication of the comparatively strong situation of France and of her recuperative power.

GERMANY.—FINANCES—CURRENCY—REICHSBANK POLICY.

(FROM OUR CORRESPONDENT.)

BERLIN, August 28.

THE Stresemann Cabinet continues to have a good public. Dr Stresemann's conciliatory speech on Reparations has been well received, and views on that subject are a little more optimistic. The Cabinet's declared policy is to continue fighting the deficit and inflation system without waiting for a Reparations settlement, and herein it differs from the Cuno-Hermes policy of inaction. It is, however, quite plain that Dr Hilferding does not believe that the drastic taxes rushed through the Reichstag in the last days of the Cuno Cabinet will solve the Budget problem. The latest Finance Ministry and Reichsbank reports show that the expected returns from the emergency taxes, big as they appeared a fortnight ago, will shrink proportionately owing to the vast deficits and vast inflation which were inevitable before the taxes began to come in. The 150 billions expected before the end of August are only about three-fifths of the deficit of the ten days, August 10th-20th. Dr Hilferding speaks of yet more

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

taxes, and of higher rates for other taxes; but such a policy is open to the criticism that many existing taxes which still yield practically nothing first need reform. The Finance Offices, which are the local organs of the Finance Ministry, are so overburdened with work that real control, except possibly at random in individual cases, is impossible. Altogether 147 taxes are levied by the Republic, and between now and the beginning of March, 1924, citizens have to pay 33 different instalments of direct taxes. The official tendency so far has been to meet crises by demonstrative invention of new taxes, some of which mean nothing at all. An instance is the new Ruhr-Rhine Levy, which consists merely of an extra multiplication under another name of the already multiplied income-tax, this merely making for the Finance Offices and for the public extra work, which would have been saved had the tax inventors multiplied income-tax 1,200 fold instead of multiplying it 400 fold and adding a new 800 fold as a separate levy payment. Dr Hilferding laid particular stress on the need for a policy of mark support, declaring that this must be carried out simultaneously with the abolition of the current deficits. The new gold-mark levy, which is to provide means for the mark support, is one gold-mark per each 10,000 paper-marks paid by property taxpayers as a special "bread levy." As the bread levy was ten times the Forced Loan of last winter, citizens will in general pay one gold-mark per 1,000 marks of Forced Loan. The gold-mark levy is really a second Forced Loan. Subscribers are to be credited either with an equal sum in the voluntary gold loan lately issued, with paper-marks at current exchange, or with a "wertbeständig" credit which they can use for payment of later taxes. The gold-mark levy is imposed by emergency decree under Article 48 of the Constitution. This article, in violation of its intent, is being stretched to justify all sorts of administrative measures which ought to have been sanctioned by the Reichstag. The Reichstag refuses to work, on the ground that the private affairs of a few dozen farmer members must be attended to, so that at a time when all Germans proclaim that the Republic is on the verge of ruin, important measures are taken without constitutional right and without being subjected to any criticism. The dispersal of the Reichstag after in a few hours rushing through taxation measures which are admittedly imperfect and in part impracticable is being sharply condemned.

The plan of Dr Hilferding to continue support of the mark exchange is criticised in some quarters on the ground that experience has shown this to be hopeless. In private business the mark is practically dead. Even small retail deals are done in "peace marks." Wages are entirely on that basis, and gold wages have risen extremely high, the skilled wage in Berlin this week being in paper 1,600,000 marks. Some big companies, in so far as they retain the paper-mark for accounts, have summarily denominated it by resorting to the "mill-mark" (1,000 marks) as unit. Other big concerns are conferring with the aim of creating their own "stable-value" currencies, to be secured on their assets. Even small towns have issued emergency currencies, so that the figures published by the Reichsbank give no idea of the total amount of money circulating. The rapid price rise, which is continuing despite the fact that the foreign exchanges have hardly risen since the first week of August, must be ascribed to the pouring out of fresh money from all quarters.

The Reichsbank's statement for August 15th shows an increase in circulation during the preceding week from 62,326 milliards to 116,402 milliards. This is about three times the 18,731 milliards increase of the preceding week. Discounted commercial bills doubled, from 25,340 milliards to 49,531 milliards, and Treasury bills from 79,646 milliards to 177,633 milliards. This is an outcome of the mark exchange collapse of the first week of August. The inflation rate must increase for some time. An estimated sum of 100 billions was paid for official advance salaries on August 23rd, against which very little of the new tax revenue can have come in. A newspaper attack on this score has been opened against the Cabinet, though it was the Cuno Cabinet which started the abuse. The officials not only get a quarter's salary in advance, but during the quarter get repeated supplements to compensate them for the loss in buying power of the quarter's salary, though it is well known that almost all officials suffer no loss, because they immediately invest their money in stocks, exchange, or some other security which rises in proportion as the mark falls. Even when the Reichstag is sitting no real control is exercised over these payments.

The last 10-day report of the Finance Ministry easily beats all records. In a mere 10 days the floating debt trebled, from 117,282 milliards to 363,459 milliards. In the 20 days since July 31st, when the floating debt was 63,686 milliards, the total has increased nearly sixfold. In the 10 days 61 billions were paid in subsidy to the railways, and the whole expenditure was 250 billions. Against this revenue from taxation totalled only 1,766 milliards, or about 0.7 per cent. The new gold ("stable-value") voluntary loan, which was to reduce the inflation, yielded 2,574 milliards, or less than one-twentieth of the addition to circulation in a week. Reports of the Finance Ministry again show the complete collapse of taxation. Whereas in the first four months of the financial year income-tax deducted from wages yielded 2,084 milliards, income-tax paid directly by the better-off classes, which are theoretically taxed up to 60 per cent., yielded only 472 milliards, this though the four months included a whole quarter (for May 15th) of directly-paid income-tax by these better-off classes. In July the beer tax yielded £80, sugar £57, matches £21, salt £5, and playing cards £1.

The conflict between the Reichsbank directorate and the Cabinet continues. The Cabinet is understood to be urging the President's, Herr Havenstein's, resignation. Herr Havenstein has made a long defence of the bank's policy, in which he attributes the inflation mainly to State demands, and only secondarily to the issue of bank-notes against private credits. Herr Havenstein announced the opening of gold deposit accounts, based on payments in of foreign exchange, the depositors being, however, allowed to pay in an amount equal to 25 per cent. of their gold deposits in paper-marks, which will be credited as "wertbestaendig." The object of the latter measure is to encourage gold deposits. Deposits will be booked in "firm" marks or "stable" marks (festmark), of which 100 will equal one pound sterling. The bank will be obliged to cover its liability by holding foreign exchange. This new business will for the present be confined to Berlin, and to big accounts. Herr Havenstein described this as a first experiment with "firm-mark" banking; but he declared himself against a system of general "firm-mark" booking for paper marks which would throw the risk of further mark depreciation wholly on the shoulders of the Reichsbank. Herr Havenstein also defended himself against the bank's failure to provide sufficient cash in the first week of this month. At the end of June, when the circulation was 17,300 milliards, the bank had a note reserve of 11,800 milliards. On August 7th, when the circulation was over 62 billions, the last note of the reserve had been paid out. On that day, with a depreciation of the mark to the 1-975,000th, the per capita gold value of circulation shrank to 1 gold-mark, as against 80 gold-marks in May, 1921, and 100 marks (counting notes and coins) in 1914.

The rise in prices, though probably due first of all to the inflation, is being speeded by measures taken to reduce the inflation. The automatic regulation of railway fares and rates will be fully in force from September 1st.

HUNGARY.—CROP PROSPECTS—FALL IN THE CURRENCY.

(FROM OUR CORRESPONDENT.)

BUDAPEST, August 18.

A CERTAIN Swiss engineer, Mr Bernard Enzler, has been making a study of the economic conditions of Hungary, and describing the results of his studies in a daily newspaper of Budapest. On the whole, his conclusions are most optimistic, and, granted a certain amount of foreign capital, he predicts quite a brilliant future for Hungary, even dismembered as she is to-day. There is one condition attached to this forecast, which is that she must be on good terms with her neighbours. This the writer considers assured by the recent meeting at Sinaia.

In the year 1922 no more than 175 tons of flour were exported from Hungary. Mr Humphreys, the commercial secretary of the British Legation, estimates that, in a good year, she should be able to export 200,000 or 300,000 tons. Mr Enzler is far more sanguine. Steps were taken after 1920 to increase the acreage under cereals, and he considers that in future that the export should reach 700,000 or 800,000 tons, 50 per cent. of the export of 1913. With the exceptionally good harvest of this year, the export should not fall far short of half-million tons, and so far Mr Enzler seems to be justified in his prognostications. The output of sugar seems likely even to exceed the expectations of this sanguine expert. Before the war Hungary possessed 30 sugar refineries, of which she has lost 18. But the 12 factories remaining to her before the war produced as much as the other 18. In the 1912-1913 season the yield of the whole 30 amounted to 590,000 tons of the value of 185,000 gold crowns, or roughly eight million pounds sterling. This year, it is said, the yield is such that some four thousand wagons can be exported. When it is remembered that last year some thirteen thousand tons of sugar had to be imported, the improvement is quite astonishing. Of the four thousand tons for export, one thousand tons has been already disposed of in England, and the bulk of the remainder will probably go to France.

Assuming the correctness of Mr Enzler's figures, eight million pounds' worth were produced in 1913, and three-quarters of this exported, the amount accounted for by new Hungary would be some three millions sterling. Now, in view of the forecast above mentioned, there seems to be no reason why that amount should not be reached this year. The acreage under beet is at present some 70,000 or 80,000 hectares, or 180,000 acres. Seeing that the soil of Hungary is admirably suited to the cultivation of this plant, and produces a species of beet of exceptionally sweetening power, there is every reason for the suggestion that more land should be devoted to its culture. Money is required for the purpose, and foreign capitalists might well turn their attention to the subject.

Unfortunately, there is another side to the picture. The crown is still going down; resort is still being had to the printing press, as is inevitable, and there is still no explanation as to the fall in the currency. One impartial observer, well qualified to judge, attributes it to the Jews as a result of the still rampant anti-semitism in Hungary. If it were to the advantage of the Jew, this might well be, but such could not certainly be the case, so far as the Hungarian Jews are concerned, and the explanation is not convincing. There are gloomy prophets who declare that Hungary is in even worse case than Austria. In Austria, say these, there are economists; here there are none! Others again point to the land system, and the number of large estates, indicating the large land-owner with the usual cry of *voilà ennemi*. With regard to this, it may be said that land reform has been promised by the Government, and that land reform has many opponents is significant. On the other hand, the abolition of large estates, as it is in process of being carried out in a neighbouring country, can hardly be called a success. Rather it is evidence that a too drastic land reform is a danger more than an aid to financial stability. Such a reform needs most careful handling, and the present Government should be not unfitted to take the safe middle course.

POLAND.—NEW EXCHANGE REGULATIONS—CAPITAL LEVY—COMMERCIAL TREATY WITH TURKEY—DANZIG CURRENCY PLANS—NEW CAPITAL.

(FROM OUR CORRESPONDENT.)

WARSAW, August 15.

WHEN, in June, the Polish mark began to decline rapidly, the Ministry of Finance tried to prevent a further fall by creating a Central Board of Exchange, which had the exclusive right of selling foreign bills and currencies. As pointed out in my last letter (*Economist*, August 4th), the effects of this new policy were disastrous. Industry was prevented from obtaining the necessary raw materials from abroad, and was menaced by a crisis. This forced the Government to abandon its new exchange policy, and to return to the system of privileged "exchange banks" (*Banki dewizowe*), which are entitled to sell foreign currencies for all purposes resulting from commercial transactions. The quotations are no longer fixed by the Board of Exchange, but are established by the Stock Exchange. The return to a more liberal exchange policy has hastened the fall of the mark, which, during the last month, has lost more than 50 per cent. of its value. The American dollar is now quoted at 250,000, as compared with 99,500 at the end of June and 121,000 on July 18th. The climax of the depreciation has, however, not yet been reached. In his *exposé* before the Diet, Mr Linde, the new Minister of Finance, declared that the coming quarter will be most difficult for the Treasury.

Mr Linde devoted, in his *exposé*, chief attention to speculation and profiteering, which he intends to cure by the creation of new Government institutions. While Mr Grabski tried to diminish the deficit of the Budget by putting the Government undertakings on a business basis and by leaving them to private companies, Mr Linde did not even mention this subject. It may be said that Mr Linde's *exposé* caused the greatest disappointment to all those who expected that the founder of the Postal Savings Bank would show great initiative in the face of the present financial difficulties. The present Government is making efforts to put the portfolio of the Ministry of Finance into other hands. The candidates, however, are not too numerous, because all those who have a reputation to lose do not consider the political ground sufficiently stable.

Before adjourning, the Diet and the Senate have voted the Capital Levy Bill. The amount of the levy has been fixed at 1 milliard gold francs, of which 500 millions are payable by agriculture, 375 millions by industry and trade, and 125 millions by other taxpayers. The levy will be collected during the next three years in six instalments. The rate of the levy has been fixed at 1 per cent. for small capitals, while properties having a value of 12 to 14 million gold francs will pay 11 per cent. The highest rate has been fixed at 13 per cent. This levy, together with the new turnover and industrial tax, will eventually contribute to diminish the Budget deficit.

At Lausanne a treaty between Poland and Turkey has been signed composed of three parts: a pact of eternal friendship, an agreement establishing the rights of Polish citizens in Turkey and of Turkish citizens in Poland, and, finally, a commercial treaty. This treaty is based on the most-favoured-nation clause. Poland has obtained the right of establishing warehouses in the ports of Constantinople and Smyrna. As soon as the conditions in the Ruhr make it possible, railway communication between London and Bagdad, passing through Amsterdam, Berlin, Poznan (Posen), Cracow, Katowice, Livów (Lemberg), Bukarest, Constanza, Constantinople, is to be opened. This route is shorter by 13 hours than that of the Orient Express. By signing the treaty with Turkey, Poland has returned to an old traditional friendship which has lasted since the end of the seventeenth century.

The total collapse of the German mark has produced grave disorders in Danzig, where hitherto this currency has been the only legal tender. For several months the authorities of the Free City have been making efforts to sever their monetary system from that of Germany. Senator Volkmann has presented to the League of Nations plans for a new currency based on the English

ESTABLISHED 1836

General Manager W. A. WORMAN, F.I.A.

pound. The monetary unit, the gulden, is to be equal to 1/100 of the pound. A bank of issue with a capital of 20 million gulden is proposed. As a temporary measure a clearing-house with a capital of £200,000, having a branch in London, is projected.

The statistics of capital issues in Poland during the first half-year reveal again an important decrease if compared with the same period of 1922. Though the new issues have increased from 9.3 milliard marks in 1922 to 72.3 milliards in 1923, their real value expressed in gold francs has become much smaller, as may be seen from the figures below:—

	First Half-year 1922.		First Half-year 1923.	
	Number of Companies.	New Capital, Swiss Francs.	Number of Companies.	New Capital, Swiss Francs.
Industry and agriculture	135	7,891,101	282	5,713,340
Commerce and transport	40	2,454,155	115	1,606,248
Banking	13	2,163,164	15	607,368
Insurance	3	26,774	5	25,872
	191	12,535,194	417	7,962,828

While in 1922 the new capital created amounted to 12.5 million gold francs, its value in 1923 did not reach 8 millions. This illustrates one of the serious effects of the depreciation of the currency.

ROUMANIA.—EXPORTS — EXCHANGE — CROPS — CIRCULATION—COMMERCIAL DEBTS.

(FROM OUR CORRESPONDENT.)

BUCHAREST, August 13.

THE principal exports from Roumania during the first six months of 1923, in comparison with the same period of 1922, have been officially announced as follows:—

	1922.	1923.	Inc. or Dec.
Grain and foodstuffs... metric tons	454,670	716,770	+ 262,100
Oil products..... "	178,265	177,464	- 801
Lumber..... "	258,427	365,551	+ 107,124
"..... cubic metres	52,227	50,303	- 1,924
Livestock..... head	131,765	54,124	- 77,641
Eggs..... great hundreds	67,684	11	- 67,673
Salt..... metric tons	19,995	27,475	+ 7,480

The increase in grain and foodstuffs is more than accounted for by the increased exports of barley—these totalling 396,771 tons in 1923, against 121,747 tons last year. Wheat shipments are down from 17,630 to 4,345 tons. The decrease of 801 tons in the export of refined oil products is rather striking in view of the fact that crude oil production during the first half of this year was 758,200 tons, against 667,667 tons in the corresponding period of 1922, and serves again to call attention to the increased quantities of refined oil products (particularly fuel oil for industrial purposes) which are being used in the domestic market. The lumber trade is reported to be very active at present, and exports are likely to continue to show a steady increase, the bulk of the shipments (fir and other resinous woods) going to Levant ports. The export of livestock has been restricted during recent months, chiefly in an attempt to keep down the internal cost of living.

After a fair degree of stabilisation for almost six months at around 900 to the pound—during which time internal

COMPANY MEETINGS, &c.

BANK OF NEW ZEALAND.

A DIFFICULT YEAR'S RESULTS.

MARKED IMPROVEMENT IN FINANCIAL CONDITIONS.

THE BANK'S GREAT ASSISTANCE TO AGRICULTURAL AND PASTORAL INDUSTRIES.

The ordinary general meeting of the proprietors of the Bank of New Zealand was held at the head office, on Friday, June 15, 1923. Sir George Elliot, chairman of directors, presided.

With the consent of the meeting, the report of the directors and the balance-sheet were taken as read.

The Chairman, in moving their adoption, said: Gentlemen,—The report of the directors and the balance-sheet for the year ended March 31st last having been circulated some days ago, I presume that, as usual, you will take them as read.

You will have seen from the report that it is proposed to pay for the full year the same rate of dividend as for the preceding year—viz., 10 per cent. per annum on the preference "A" shares, and 2s per share on the preference "B" shares—both of which issues are held by the Government of New Zealand—and 2s 8d per share on the ordinary shares. The whole dividend for the year on the preference "A" shares, an interim dividend of 1s 4d per share on the ordinary shares, and the proportionate dividend upon the preference "B" shares were paid in December last.

Compared with the two previous years, last year shows a considerable falling-off in profit. This is accounted for chiefly by loss of interest consequent on the reduction during the past year of over three millions in our advances within the Dominion; by reduction, too, since the New Year, in the rate of interest charged upon our best accounts, and by the lower rates obtained for a large proportion of our funds in London.

NEW ZEALAND GOVERNMENT LOAN.

Last month the Government issued in London a Four per Cent. loan of four millions at 92, which gives the investor a return of $\frac{1}{2}\%$ is 1d per cent. if the loan is repaid in 1933, or $\frac{1}{4}\frac{1}{2}\frac{1}{2}$ 7d per cent. if not repaid until 1943. The Right Honourable the Minister of Finance, and the High Commissioner also, are to be congratulated on a flotation, the success of which speaks volumes for the high standing of the Dominion on the London money market.

LOCAL BODIES' LOANS.

Local bodies have arranged loans during the year to the extent of several millions, a portion of which was raised in London, but the bulk in Australia or New Zealand, at rates varying from $\frac{1}{2}\frac{1}{2}$ per cent. to 6 per cent.

RATE OF INTEREST.

The minimum rate of interest on bank advances in the Dominion was reduced to $\frac{1}{2}\frac{1}{2}$ per cent. on January 3rd last. The reduction of income-tax last year, and the promise of a further reduction shortly, enabled us to reduce the rate on a great many overdrafts. Although $\frac{1}{2}\frac{1}{2}$ per cent. is the quoted "minimum" rate, we do not average that on the whole of our advances in New Zealand. Hard times disclose unsuspected weaknesses in the financial condition of many customers; so much so that, in some cases, we have found it necessary for the time being to forgo interest, in others to make substantial concessions. The result is that the average rate of interest earned by our advances in New Zealand has been adversely affected.

There is little probability of any further reduction in our advance rates while our overhead expenses remain so abnormally heavy. It is still difficult to borrow on fixed mortgage even on a 50 per cent. margin, at less than $\frac{1}{2}\frac{1}{2}$ per cent., hence it must be recognised that our borrowing customers have little to complain of, since they have the advantage of paying on their daily balances only and not on the sum we engaged to lend them.

Comparison is sometimes made between lending rates here and those ruling in London, but such comparison is absurd, conditions being entirely different. Australian rates certainly bear a close relation to ours, although banks in New Zealand are subject to a much higher income-tax than they are in Australia.

In comparing bank rates with those charged by private lenders and Government lending institutions, the services rendered by the banks in conducting accounts are invariably overlooked; if the public want facilities, they must pay for them.

PASTORAL AND AGRICULTURAL INDUSTRIES.

The extent to which this bank assists the pastoral and agricultural industries will be realised when I tell you that over 10 millions of our advances in the Dominion at March 31st last were to customers engaged in those industries. The small borrower has also been well catered for, since in point of number 56 per cent. of our advances were for amounts of £300 or under; quite a large proportion indeed were under £100 each, and many of these (usually advances of a temporary nature) were made without any security.

The authorities of the bank are quite alive to the importance of supporting the pastoral and agricultural industries. That our support has been more than generous is borne out by the fact that, during the last few years, practically the whole of our bad debts—and they have not been insignificant—have been incurred on such advances.

LAND VALUES.

Land values are, as you know, still a constant source of controversy. It is not for a moment contended that bankers are experts in valuing property; but, if a banker is furnished with the balance-sheet of a farming customer and with profit and loss figures

showing the result of the customer's working during a series of years, he can usually form a pretty shrewd idea of the value of the land.

We cannot hope for a contented rural population until land values are based on a reasonable scale, such as will show a fair return on the capital employed and adequate compensation for the labour of the farmer.

So many instances of the evil effect of the recent boom in farm property come directly and indirectly under the notice of the bank, that we should be callous indeed if we did not feel strongly on the point and do our best to prevent a repetition of the evil.

TAXATION.

At the end of last year, on the invitation of the Government, a committee representing trades, professions and various associations in New Zealand considered the question of taxation generally, and sent in a report on the subject to the Prime Minister.

Without going into the merits of the conclusions arrived at, I desire to bring before you one aspect which was touched upon in this respect. I refer to the non-taxation of municipal and Government trading enterprises.

It is true that during the 1920 session of Parliament the Government intended to bring the municipal trading activities under the provisions of the Income-tax Act; but a deputation representing certain interested local authorities waited on the Prime Minister and protested against this being done unless the Government would at the same time agree to pay local rates on their various city properties.

I think the claim of the local authorities was a perfectly fair one, for until Government, harbour boards and city councils pay rates on all their properties, as well as taxes on their enterprises, the taxation of the country generally cannot be placed on an equitable basis.

If all municipal and Governmental trading concerns paid income-tax, not only would competition be put on a fairer basis, but the burden of the taxation would be placed where it rightly belongs.

THE OUTLOOK.

In these uncertain times, it is difficult to say what the future has in store for our Dominion, since we rely for our prosperity on the prices our primary products realise abroad. We are thus dependent on conditions entirely outside our own control. The purchasing power of our principal customer—Great Britain—means good or bad times for this Dominion, and the purchasing power of Great Britain again depends upon conditions which prevail in other countries.

While I have not hesitated to point out certain defects that exist amongst us, nothing I have said should obscure the satisfactory truth that the great majority of the settlers in the Dominion are in a thoroughly sound financial position.

CAPITAL.

In order to make the capital commensurate with the deposits and general business of the bank, and to provide for rendering the maximum of support to our borrowing customers, the board has resolved to issue at par £1,125,000 of new capital. In accordance with the provisions of the Bank of New Zealand Act, 1920, one-third of the amount (£375,000) will be offered to His Majesty the King in the form of preference "B" shares, and two-thirds (£750,000) to the ordinary shareholders in the proportion of, as near as may be, one new share to every three shares on the register in their name on July 27, 1923.

I now move that the report and balance-sheet as submitted to the meeting be adopted.

The report and balance-sheet having been unanimously adopted, congratulations were expressed to Sir George Elliot and Sir Harold Beauchamp on their knighthood, and a vote of thanks to directors, general manager, and staff terminated the proceedings.

AMALGAMATED PRESS (1922), LIMITED.

SATISFACTORY RESULTS OF YEAR'S BUSINESS.

RECORD ADVERTISING REVENUE.

SUCCESS OF YEAR'S NEW JOURNALS.

The ordinary general meeting of the Amalgamated Press (1922), Limited, was held, on the 27th ultimo, at the Memorial Hall, Farringdon street, London, Sir George A. Sutton, Bart. (the chairman), presiding.

Mr J. R. Sumpter (joint secretary) having read the notice convening the meeting and the report of the auditors, The Chairman said: Ladies and gentlemen, I assume the report and accounts will, as usual, be taken as read.

It is my pleasure to-day to present to you the first balance-sheet of the Amalgamated Press (1922), Limited, and this, I think, you will regard as very satisfactory in all respects.

It is common knowledge that the year through which we have passed has not been an easy one for business enterprises. The state of trade, the uncertainty of politics, the widespread unemployment have all been adverse factors.

LORD NORTHCLIFFE.

With profound regret, too, in the year under review my colleagues on the board have lost a great friend and the country a great patriot by the death of Lord Northcliffe. He was, as you are all aware, the founder of this great business, and though he retired from it many years ago, his invaluable counsel and help were always freely at our service when occasion required. His first journal was *Answers*, which he started 35 years ago, and it is a noteworthy fact that *Answers* to-day stands in the very forefront of national weekly periodicals, and the revenue received from advertisements in the year of Lord Northcliffe's death was the largest in the history of the paper, and no better index of vitality is needed.

The profits for the year, you will observe, were £531,239 19s 4d. It will be remembered that last year, under our reconstruction scheme, we distributed among our shareholders 679,428 5 per cent. preference shares of 10s each in the Imperial Paper Mills, Limited, and 2,038,284 8 per cent. preference shares of £1 each in the Anglo-Newfoundland Development Company, Limited, the preference dividend was raised to 7 per cent., while the ordinary shares of the Amalgamated Press were split into shares of a more marketable denomination, plus a payment of 2s per ordinary share. On account of this it was, of course, necessary to revalue the assets of the company in conformity with its altered capital.

THE YEAR'S NEW JOURNALS.

During the year under review we have established some 14 new journals, magazines, and fortnightly. You will not expect me to give details of all these new ventures, but I am pleased to be able to state that they have been most successful.

The serial publications we have issued include a new edition of the *Children's Encyclopedia*, the only work of its kind in the world, and its immediate success, quite eclipsing that of its first issue 15 years ago, is at once an indication of its unique merits and of public appreciation.

Harmsworth's *Household Encyclopedia*, an entirely new and novel publication, now being issued fortnightly, will, when completed, form the most up-to-date guide for every home. It was an assured success from the first number. *Wonders of the Past* is a superb art production and a work of genuine scholarship, which has also been very well received.

And here I must observe that in this difficult and peculiar field of literary enterprise, where the qualities of artistic taste, scholarship and worthy ideals of life are demanded, the success of our educational publications has become proverbial. They are world-wide in their range, and every post brings letters of appreciation from readers in the remotest parts of the globe. I am particularly proud of our achievements in this direction, and can assure you that our best energies are devoted to extending and enhancing a reputation that is already enviable.

The new magazines we have produced include the *Detective Magazine*, which has certainly struck a new note in mazedom. It numbers among its wide circle of patrons many influential readers, and it is a magazine that has made its way by personal recommendation.

Ever ready to take advantage of favourable opportunities for the launching of new publications and the exploring of new markets, we early realised the wonderful possibilities of wireless, and started *Popular Wireless*, which immediately jumped to the front with the largest circulation of any wireless publication.

This success was followed up by launching the *Wireless Review*, a paper on more advanced lines, and when I tell you that we have as scientific adviser Sir Oliver Lodge, and names like that of Professor Einstein are included among our brilliant list of

experts, you will readily see that with the renewed interest in this fascinating science, which, will, we believe, be evidenced this autumn, our wireless periodicals should prove a valuable addition to the firm's publications.

THE PRINTING EQUIPMENT.

Now a word about production. The cost of printing remains high. The greatly increased wages, reduction in working hours, heavy taxation and enhanced cost of materials constitute a problem in these difficult days.

The extensive Sumner street Printing Works are completed, and our printing is now concentrated in three large factories—Sumner street and Lavington street, S.E., and Gravesend, Kent. Five smaller factories have been closed down, and in the case of certain freeholds will be disposed of to advantage.

It is expected that the very considerable expenditure on additional printing works and plant will be fully justified by results, and the concentration will contribute in no small degree to greater efficiency and economy in working.

HUGE PUBLICITY MACHINE.

I am glad to report that the year's revenue from advertisements has again far exceeded all previous records. During the past five years—that is, from the first full year after the conclusion of the war—the revenue from this source has much more than doubled itself.

Year by year advertisers realise more fully the importance and value of your publications as "business bringers." Indeed, it is doubtful whether there is anywhere a selling organisation comparable to that constituted by the Amalgamated Press publications.

Many of your periodicals, as you know, are not open to the advertiser. The combined net sale per issue of those which do accept advertisements is nearer six million copies than five. I do not exaggerate when I say that these periodicals and magazines form the greatest self-contained publicity machine of its kind in the world. Greatest, not only in point of numbers, but in the extent and variety of its appeal. There is not a class or section of the public which is not catered for by some one or other, or by a group, of these publications; there is no district in the British Isles not covered by them. In 98 per cent. of the homes of England, Scotland, Wales—yes, and Ireland—some one or more of your publications is read regularly.

LEADING ADVERTISERS USE 9,000 PAGES.

I should like to mention one other figure—it is significant. During the year just closed nearly 9,000 full pages of advertisements in your journals were purchased and paid for by advertisers. This figure stands quite unrivalled. No other periodical publishing house in the country can afford the advertiser similar scope or offer him facilities and opportunities that can even compare with those provided by the Amalgamated Press.

Answers is, of course, a household word, and announcements in its columns continue to show advertisers exceptional results. Our three highest-grade magazines, *The London Magazine*, *Premier Magazine* and *My Magazine*—and *Home Chat*, the premier weekly, paper for women—have all been doing exceedingly good business, and stand higher than ever before in the estimation of advertisers.

Fashions for All, *Home Fashions*, *Children's Dress*, the *Best Way* series, *Woman's Pictorial* and *Woman's Weekly* provide the advertiser of all articles appealing to women with an exceptional field, of which increasing advantage is being taken. Indeed, these papers, with the addition of *Home Chat*, *Woman's World*, *Home Companion* and *Family Journal*, may be said to cover completely and efficiently the entire women's market.

Our religious section, *The Sunday Companion* and *Sunday Circle*, together with their old-established companion papers, *Sunday Stories* and *Hörner's Stories*, steadily maintain their influence. *The Sunday Companion* has the largest circulation of any religious paper in the country.

A SELF-CONTAINED COMPANY.

It is well that I should point out what may not be generally known, that this is the only periodical and magazine publishing company in the world that owns its own printing plant, makes its own ink and its own paper, and owns its own forests for the making of pulp. There are, of course, newspapers in this country in the same fortunate position. I refer to the Associated Newspapers (which owns *The Daily Mail*), and also to *The Daily Mirror* and *Sunday Pictorial*, the newspapers controlled by Lord Rothermere, who, with his brother, the late Lord Northcliffe, was the first newspaper proprietor in this country to realise the necessity of papers owning their raw material.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

I wish to emphasise this point, because it is a mistaken notion to think the entire profits of this firm are derived from the printing and selling of periodicals and magazines. Its outside investments will, I hope, with careful finance and good management, become both an increasing asset and a greater source of revenue.

The Amalgamated Press has the controlling interest in the Imperial Paper Mills, Limited, the second largest paper mills in this country, and the recent additions to its plant have made it probably the most up-to-date paper-making concern.

The Imperial Paper Mills, in its turn, has the largest interest in the Gulf Pulp and Paper Company, situated at Clarke City in the Province of Quebec.

A large proportion of the mechanical pulp used in the production of your periodicals is drawn from this source, and it is essential that your directors should maintain a very careful financial policy, in view of the fact that it may be necessary at an early date to provide for the purchase of further timber limits, to ensure an ample supply of the raw material required.

CONSERVATIVE FINANCE.

For many years your directors have been conservative in their system of finance, and this policy must be continued because of the unsettled conditions prevailing all over the world, and to make it possible steadily to extend the company's operations.

SUGGESTIONS AND IDEAS.

It has always been my custom to mention that we are at any time ready to receive and consider suggestions and ideas for new publications, and to welcome also applications from ambitious young men and women who may wish to embark on a journalistic career. I repeat that invitation to-day. As in the past, I shall be glad personally to receive any such suggestions or applications.

THE STAFF.

The staffs of our many and varied departments have worked well during the past year. I believe we have, perhaps, the most devoted and loyal staff in the country, and I want to tender to them the thanks of the company for their hard work and efforts to ensure a successful year. I am certain the shareholders will support me in this.

THE FUTURE.

With regard to the future, we have never ventured to prophesy at any of the Amalgamated Press meetings, but have rather contented ourselves with coming before you with something accomplished, as we have done again this year. Even if the directors had been given to prophesying of the future, it would be a difficult thing to do so in the present state of trade and the European situation generally, so I have a double reason for refraining.

When things become stabilised, and there is a revival in trade (of which, I must say, there seems no indication at the moment), when the unemployment figures show a very considerable reduction, and there is some relief from the heavy burden of taxation borne by every business, it is obvious that we must benefit to a very large extent. As far as I can judge, there are few signs of this at the moment, but when the long-hoped-for trade revival does come, this company being, as it is, financially strong, will be able to take full advantage of any favourable situation that may arise, and, as in the past, no opportunity of extending the business, which in the opinion of your directors is a wise one, is likely to be neglected.

I have now to move: "That the report of the directors produced, together with the annexed statement of the company's accounts at June 30, 1923, be received, approved and adopted, and that a final dividend for the year of 2s a share, less income tax at 4s 6d in the £, be now declared on the ordinary shares." I will ask Mr Linforth, the vice-chairman of the company, to second that resolution.

Mr Arthur E. Linforth (vice-chairman): Ladies and gentlemen, I beg to second the motion.

The Chairman: I shall be glad to answer any questions from shareholders.

No questions being asked, the resolution was put to the meeting and carried unanimously.

The Chairman: Perhaps a shareholder will now kindly propose the election of the auditors.

Mr C. R. Steele: I beg to propose that Messrs Turquand Youngs and Co. and Messrs E. Layton Bennett, Sons and Co., be elected as auditors to the company for the ensuing year.

Mr C. B. Rawlings: I have pleasure in seconding the motion. The motion was carried unanimously.

The Chairman: That, ladies and gentlemen, concludes the business of the meeting. I thank you for your kind attendance.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS AND STAFF.

Mr Hartley Aspdon, C.B.E., J.P.: I beg to propose a vote of thanks to the chairman, directors and staff, and I wish to couple with that an expression of our sympathy with Lady Sutton in her recent motor accident.

Mr J. H. Panting: Perhaps I may be allowed to second this

proposition, and, in doing so, I should like to add a few words to the sympathetic remarks which you, sir, have made in referring to the great loss which this company has sustained in the death of its founder. No one was more intimately associated with his work in all its varied stages than yourself, and no one, therefore, is more competent to express what that loss is. My only excuse for rising is that, while you have given expression to the feeling of yourself and your co-directors, it would be altogether unpardonable if we, on this side of the platform—the shareholders—were not associated in some way in that expression of regret. Your loss is our loss, and it is not the loss of this company only, but extends to that greater world outside. Both we and this country are the losers by the premature death of Lord Northcliffe at a time when he had reached the summit of a marvellous career. Our chief consolation, sir, is that you and your co-directors are inspired by the same ideals and energy that inspired him, and eloquent testimony of that inspiration is seen in the report you have just presented—the most successful report of the many successful reports which have marked the history of this company.

The vote was unanimously accorded.

The Chairman: Ladies and gentlemen, on behalf of myself, my colleagues and the staff, I thank you for the kind way in which you have received the resolution which has been proposed and seconded, and I am particularly indebted to Mr Panting for the kind way in which he has referred to the loss we have sustained by the death of Lord Northcliffe.

The proceedings then terminated.

It was announced that the dividend warrants would be posted on August 29th.

MINERALS SEPARATION, LIMITED. SUCCESS OF COMPANY'S PROGRESSES.

The eighteenth annual meeting of Minerals Separation, Limited, was held, on the 28th ult., at Winchester House, London, Mr Francis L. Gibbs presiding.

The Chairman, in moving the adoption of the report and accounts, said: He must say again this year what he said last year, that there was no reason for any depression because the company's operations during 1922 had not shown a more favourable pecuniary result. Although the apparent slowness of progress could not fail to be a source of regret to the shareholders as it was to the directors, he could assure them that a world-wide position of great strength for the company in the vital industries of coal and metalliferous ores was steadily being prepared, and would before long produce results which would amply repay the shareholders for any present disappointment.

SATISFACTORY RESULTS AT NANTES.

There was now little doubt that the department of their business which would prove to be the first to become income-bearing on a considerable scale would be that which dealt with the cleaning of coal and the briquetting of coal. It was their intention to proceed last year with the construction of a large briquetting works on the site which the Powell Duffryn Steam Coal Company and their company had acquired at Newport, but in view of the fact that La Compagnie Française des Mines Powell Duffryn decided to erect a large plant in France at Nantes, it was considered wise to await the completion and running of that plant before embarking on a large expenditure at Newport. The experience to be gained from the erection and running of the Nantes plant was considered to outweigh in value the disadvantage of the delay in the erection of their Welsh plant, and he thought this opinion was right. As shown in the report, the plant at Nantes had been erected to their complete satisfaction, and the experience already gained had put them into the position of knowledge which they desired to occupy. Arrangements for the erection of the large plant at Newport could now be made in earnest.

VALUE OF THE BRIQUETTES.

One point of particular interest, apart from costs, which had been determined at Nantes was that the cohesion, or, to use another word, the hardness, of briquettes made by their new wet briquetting system came up to the standard demanded by the French Government Railways. The cohesion of their briquettes fulfilled all requirements, and, in addition, of course, this fuel was much purer than other patent fuel, for it was cleaned of all free ash. Another outstanding point of great interest which had been established at Nantes was the truly marvellous calorific power of their briquettes as compared with others. The heat-producing quality of this fuel was immense.

OPTION IN SOUTH WALES.

They had lately, in combination with one of the leading colliery-owners in this country, taken an option over a works in South Wales for the purpose of manufacturing what would correspond to

anthracite nuts. He did not think there was much doubt that they would exercise that option before the end of this year, as the business was attractive and the terms reasonable.

The other side of their coal business related not to briquetting of coal, but to the cleaning of it for the purpose of producing a cleaner and harder coke than is at present produced. The demonstration they had just given in the North of England to coke manufacturers had been characterised as inaugurating a great advance upon anything which had been done hitherto in the method of dewatering washed coking coal. In addition to what the Powell Duffryn Steam Coal Company were doing, there were several other collieries in this country using the company's methods for cleaning coal for coking purposes, and several more in Spain, and new installations were going up in France, Belgium, and Germany.

Last year he said that they would shortly be taking steps to make their coal cleaning and briquetting methods known in Central Europe, where there was undoubtedly a large field for them. This step had now been taken, and several plants were being constructed for use in Germany and Austria, and many more were under consideration.

The ore reduction process for the treatment of oxidised silicate and carbonate copper ores, in which they were largely interested, had made a decided advance, and they were making great advances in Northern Rhodesia. The reputation already created for their new coal processes could not fail to be of immense benefit to the coal mining industry, and he hoped later on in the year to be able to give information that a similar reputation had been established for their new metals processes, with special application to the world's copper industry.

The report was unanimously adopted.

THE VEREENIGING ESTATES, LIMITED.

"ENORMOUSLY INCREASED VALUE OF FARMS."

At the twenty-fourth ordinary general meeting, held at Johannesburg on August 3, 1923.

Mr Julius Weil, who presided, said that the gross profit for 1922 was £27,206 18s 1d, as compared with £31,164 13s 11d for 1921, and this reduced profit was entirely due to the rebellion and general strike.

A dividend of 2½ per cent. had been declared, and unless something unforeseen occurred they should be able to do better next year.

Excellent rains falling at seasonable periods resulted in a marked growth of timber. Very shortly a much larger quantity of timber would be handled. This asset was of enormous value.

The forest had been extended by sowing Pinus Pinaster, equal to 26,000 trees, a further 9,000 gums and 5,000 arizonica.

The apple orchards were in splendid condition. The crop realised over £6,000.

The board had acquired the Largo Colliery and the Schoongezicht Colliery to give such varieties of quality and advantageous points of supply as would enable the combination to successfully compete for all classes of trade, as well as export and bunker trade. The consideration payable for Largo and Schoongezicht Collieries was 185,000 fully paid shares and a liability of £195,000.

The Vereeniging Brick and Tile Company, Limited, had been running full time, and had orders on hand to keep them fully equipped for many months to come. The outlook was distinctly encouraging. Their company now owned the whole of the shares of this company.

The opening of the Vaal River Barrage had been performed by Prince Arthur of Connaught a week ago.

This barrage across the Vaal River, 25 miles down-stream below Vereeniging, had created a storage reservoir capable of impounding 13,633,000,000 gallons of water.

Of the total cash, no less than £272,229 had been spent in Vereeniging in the construction of the main pumping station, service reservoirs, precipitation tanks, railway sidings, staff quarters, &c.

He wished, however, to draw the shareholders' attention to the enormously increased value of all their farms, and more particularly to their river farms. They had 65,000 acres of ground riparian to their reservoir. The potentialities of the district could hardly be imagined. Their company had a river frontage of approximately 50 miles, with an average depth of water of 17 feet. How many towns in South Africa were situated as Vereeniging was to-day? It had established on the banks of the Vaal River collieries, steel works, a power station, brick, pipe, and tile works, maize mills, with coal, lime, sand, clay, timber in practically unlimited quantities.

The bridge over the Vaal River at Vereeniging, connecting the Transvaal and Orange Free State, and thus linking up a number of important towns with Vereeniging, was opened for traffic some months ago.

Realising the advantages that would accrue to their company, they had popularised the town as a pleasure resort. The time was not far distant when Vereeniging, in addition to being the industrial centre, would also be the most popular inland holiday resort in South Africa.

The new Town Hall, a handsome building costing £16,000, had been completed, and would be opened on the 15th of this month.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

GOVERNMENT RETURNS, &c.

PUBLIC INCOME AND EXPENDITURE.

RECEIPTS INTO AND ISSUES OUT OF THE EXCHEQUER.

	Estimate for the Year 1923-24. (See Note.)	Total Receipts into the Exchequer from Apr. 1, 1923, to Aug. 25, 1923.	Total Receipts into the Exchequer from Apr. 1, 1922, to Aug. 25, 1922.	RECEIPTS. Week Ended Aug. 25, 1923.	Week Ended Aug. 26, 1922.

MOUNT LYELL.—During the four-weekly period ended August 22nd there were smelted Mount Lyell ore 459 tons, North Lyell ore (direct to smelters), 289 tons, concentrates 2,284 tons. The converters produced 401 tons of blister copper, containing copper 598 tons, silver 7,393 ozs, gold 119 ozs. The mill treated 9,752 tons of ore, and produced 3,368 tons of concentrates. Furnace ran 15 days.

MOUNT MORGAN.—Cable:—"For the four weeks ended Aug. 21st, treated 5,112 tons Mount Morgan ore, 141 tons Many Peaks ore, 5,074 tons concentrates, and nil tons purchased ore and secondary products. Produced 415 tons blister copper, containing 411 tons copper and 5,587 ozs gold, including 2 tons copper and 2 ozs gold from Many Peaks; also nil tons of copper and nil ozs gold from purchased ore and secondary products. Concentrator treated 16,145 tons ore for a production of 5,640 tons of concentrates, containing 301 tons copper and 3,786 ozs gold. In addition to above production have matte on hand containing 27 tons copper and 270 ozs gold."

Reports and Notices.

Mr Martin D. V. Holt has joined the board of the London and Scottish Assurance Corporation, Limited.

The directors of the Northern Assurance Company, Limited, announce that acceptance of their offer to purchase the shares of the London and Scottish Assurance Corporation, Limited, have already been received from shareholders representing over the prescribed proportion of 75 per cent. of the shares, and that the provisional agreement for the purchase has consequently become absolute. The offer will still remain open to those shareholders who have not yet had the opportunity of signifying their acceptance. In pursuance of the agreement entered into, Mr W. Aneas Mackay will take up his appointment as general manager of the Northern Assurance Company, Limited, on September 1st.

A branch of the Meadow Dairy Company, Limited, has been opened at 252 Wandsworth road, South Lambeth.

BANKS.

BANK OF NEW ZEALAND.—The report and accounts for year ended March 31, 1923, shows that profits, after providing for expenses of management, all bad and doubtful debts, and other contingencies, and after making provision for the annual donation to the provident fund, also bonus to staff, are £574,838, as compared with £703,242 in preceding year. The ordinary dividend is unchanged at 2s 8d per share. The reserve fund is strengthened by the allocation of £150,000, making reserve fund £1,825,000. The sum of £421,957 is carried forward, against £430,819 brought into the accounts. The balance-sheet totals £45,306,116, against £43,330,191. Deposits at £30,003,927 compare with £28,676,603. Bills payable are at £3,644,908, against £3,713,175. Cash is at £7,974,011, against £7,427,410. Money at call and notice stands at £5,961,591, against £4,105,403. Bills receivable stand at £4,847,930, against £2,869,861. Investments total £4,663,293, against £3,552,017. Bills discounted are at £1,595,043, against £1,471,430. Other advances at £17,746,718 compare with £23,312,130 in the preceding report and accounts.

BRITISH BANK FOR FOREIGN TRADE.—The report and accounts for the year ended April 30, 1923, show a net profit of £10,262, to which is added £32,981 brought forward from preceding year, making £43,243 available. The directors state that because of the Continental situation and the slow recovery of Russia they do not recommend the payment of a dividend, but that £23,000 be applied to writing down the value of investments and provision for bad debts, and the balance, £20,243, be carried forward. The balance-sheet totals £514,520. The assets are loans to customers, £256,106; investments at cost or under, £129,914; premises account, £46,000; and cash, £82,499. The liabilities are—issued capital, £240,000; deposits, £231,276; and profit and loss account, £43,243.

IMPERIAL BANK OF INDIA.—The net profit for the half-year ended June 30, 1923, amounted to Rs. 76,01,175, as against Rs. 63,52,241 in first half-year, 1922. The dividend is the same at 16 per cent. per annum. The sum of Rs. 12,50,000 is put to reserve, Rs. 5,00,000 to pension funds, Rs. 5,00,000 to premises, while Rs. 19,07,825 is carried forward. In comparing the figures for half-year ended June 30, 1923, with the half-year ended June 30, 1922, reserve is at Rs. 4,35,00,000, against Rs. 4,11,82,805. Public deposits stand at Rs. 70,47,71,973, against Rs. 63,36,20,604. Cash stands at Rs. 29,13,48,654, against Rs. 33,95,74,448. Government securities are at Rs. 8,02,63,672, against Rs. 7,72,37,918. Loans stand at Rs. 15,87,06,221, against Rs. 14,20,98,283. Cash credits amount to Rs. 30,40,20,515, against Rs. 26,25,77,119, and bills Rs. 5,32,45,861, against Rs. 4,54,98,991.

QUEENSLAND NATIONAL BANK.—The report for the year ended June 30, 1923, shows a net profit of £149,351, against £128,819 in preceding year. The sum of £8,826 is brought in to the accounts from preceding year, making £158,177 available. The ordinary dividend is again 12½ per cent., free of Queensland income-tax. This dividend absorbs £100,000. The sum of £40,000 is transferred to reserve fund, and £18,177 is carried forward. Deposits stand at £7,519,294, against £6,808,730 in preceding balance-sheet. Advances stand at £7,756,322, against £7,869,401.

MISCELLANEOUS.

JOKAI (ASSAM) TEA.—The secretaries write as follows:—"The questions of splitting up the ordinary shares of the company and of giving a bonus on those shares have been brought forward more than once at the annual meetings of the shareholders, and both these matters have been pressed on the directors privately by individual shareholders. The reasons urged for these changes are that they will make the shares more saleable by widening the market, and at the same time will bring up the capital to a figure more nearly representing the cost and the value of the company's property. The directors, after very careful consideration, have decided to recommend to the shareholders to split up the present

† Free of tax.

£10 ordinary shares into 10 shares of £1 each, and to give, as bonus, three additional £1 shares for each £10 share; that is, a shareholder will receive, for each single £10 share, 13 £1 shares. This bonus will be provided by capitalisation of a portion of the reserve, and it should be understood that future dividends will have to be distributed over the larger capital. In order to carry out this proposal, it is intended to increase the nominal capital of the company by £200,000, which will leave a margin for future developments. An extraordinary general meeting of the shareholders will be called early in October to consider and, if thought fit, to pass resolutions covering the above proposals. We take this opportunity of informing the shareholders that the directors have sold half the current crop at a price little above that obtained last year, thus ensuring a handsome profit for this season."

BARCELONA TRACTION, LIGHT, AND POWER.—The following figures from the eighth annual report give the revenue and interest charges of the company for each of the years 1920, 1921, and 1922:—

SUN LIFE OF CANADA.—The report and accounts for 1922 show that the new policies issued numbered 31,518, assuring £18,657,257. For 1921 the number of new policies was 35,096, and the amount £18,528,876. The total assurances in force on December 31st last were 298,304 policies for £129,740,727—an increase on the year of £19,456,180. The premium income was £5,289,926, against £4,732,105, and the funds increased from £25,800,042 to £34,784,777, including £5,178,530 received from other companies for reinsuring risks. The average rate of interest earned was 5.85 per cent. In the course of the year profits to the amount of £525,993 were paid or allotted to policyholders, and the valuation of assets over liabilities was £2,932,073—an increase of £798,393, after providing for investment fluctuations and other contingencies. The accounts deposited with the Board of Trade show that the new business transacted last year in the United Kingdom consisted of 3,538 life policies, assuring £1,701,452, and 462 annuities for £35,593. The premium income in the United Kingdom was £470,647, and the consideration for annuities £291,611.

GENERAL REINSURANCE.—The report for 1922 shows that the net premiums in the fire and general department were £285,346, and the claims paid and outstanding £164,398. After meeting expenses and providing for unexpired risks, there was a balance of £17,296. The marine account was closed for new business on December 31, 1921, and is being run off; after transferring £9,930 from profit and loss, a balance of £7,500 remains in the marine fund. Profit and loss shows a balance of £8,620, which reduces the accumulated preliminary expenses from £37,182 to £28,553.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Harvesting operations have been interrupted by adverse climatic conditions, and a few weeks of fine weather is now desired in order to secure the crops. Spring barley and oats have derived benefit from recent rains, and now present prospects of a better yield. In Southern localities winter wheat and oats are being threshed, but in other districts operations are delayed by heavy rainfalls, consequently only small quantities, so far, are coming to market. Native wheat continues to rule steady at 9s 2d to 9s 6d per 112 lbs, free on rail, as to sample. Imported descriptions were in better request, but after a firm opening, prices gave way slightly on sellers showing more disposition to press forward positions. No. 1 Northern Manitoba quoted 49s, No. 2 hard winter 44s 6d, choice white Karachi 43s, red ditto 42s 6d, Rosafe 62½ lbs 44s 9d, and Barusso 62½ lbs 43s 9d, all per 496 lbs ex ship terms. In the floating and forward cargo section a fair business transpired at generally firm prices, though top points were not always maintained. Of wheat, steamers of West Australian September shipment sold at 44s, Rosafe 62½ lbs afloat 43s, September 22nd 41s 10½d, choice white Karachi afloat 41s 3d, soft Western Pacific loading 44s, and No. 2 Western red ditto September-October 15th to Japan at 44s, all per 480 lbs. Maize.—Steamers of La Plata on passage 32s 6d to 33s 3d, according to size and position. September 15th-October 33s 3d., Bessarabian September 33s per 480 lbs. Barley.—Steamers of Algerian-Tunisian early September sold 22s 7½d to 23s per 400 lbs. Flour steady, while in fair demand. London standard straight run quoted 38s, patents 40s, to 41s, Town households 36s per sack, delivered in Metropolitan area. All English country straights

32s to 33s per sack, delivered to London stations. Of imported, Manitoba patents range from 37s to 41s, as to quality. Minneapolis good patents 40s 6d, and Australian 35s to 36s, all per 280 lbs. ex store. Millers' offers remain quiet. Broad bran quoted 5s 9d to 6s; ordinary, 5s 3d to 5s 6d; middlings, 8s 3d, bags included, 6s mill; light oats, 6s 3d; powdered oat husks, 5s 9d; feed oatmeal, 8s 9d; ground oats, 13s 9d, free on rail, all per cwt. Barley steady for native malting kinds at 10s to 12s 6d, with feeding sorts ranging from 7s to 9s as to sample, free on rail per 112 lbs. Imported steady. Californian quoted 40s to 42s; Chilean brewing, 39s to 43s, as to sample, both landed per 448 lbs; No. 4 Canadian Western, 26s 6d; American malting, 48 lbs, 26s; Algerian-Tunisian, 25s, all ex ship; Danubian, 27s 6d to 28s; Karachi, 27s; Persian, 26s 6d, landed, all per 400 lbs. Maize, 3d to 6d per qr dearer. Plate, ex ship, 33s 6d; ditto, landed, 35s; No. 2 white flat African, 34s 6d; No. 6 yellow ditto, 33s 6d; both ex ship, all per 480 lbs. Oats, English, steady, at 7s 8d to 10s 4d per 112 lbs, free on rail, as to sample. Imported tends firmer. Plate, ex ship, 21s 9d; ditto, landed, 23s; No. 2 Canadian Western, landed, 27s 3d; No. 3 ditto, 26s 9d; No. 1 Canadian feed, ex ship, 24s 6d; No. 2 ditto, landed, 25s; New Zealand "A" grade, 37s to 38s; "B" grade, 36s to 37s, landed, all per 320 lbs. Oatmeal steady, with a fair demand. London made, all cuts, quoted 17s 6d; whole groats, also-rolled oats, 17s 6d; flaked oats, 18s, ex mill; ordinary Scottish oatmeal, 20s to 21s, and American, all cuts, 16s 6d to 17s, all per cwt.

COMPARATIVE AVERAGES OF GRAIN.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated August 30th, is as follows:—Pig-iron: The market opened after the holidays with a better tone and more inquiry. Whilst No. 3 Cleveland G.M.B. has been reduced to 100s per ton, East Coast hematite mixed numbers are still quoted 98s 6d per ton, with No. 1 at 6d premium. Manufactured iron and steel: The local steel works have restarted after about 10 days' inactivity, and although things are quiet, there are signs of returning interest. Quotations remain unaltered at £10 for steel ship plates, £9 10s for steel ship angles, £12 for iron bars, and £9 10s for steel rails. Iron ore: There is no change in the position. Best Bilbao Rubio remains nominally at 23s per ton, c.i.f. East Coast.

Our Sheffield representative writes:—Another week having passed without any sign of a buying movement in the iron and steel trade, the position of the large works has reached a highly critical stage, and wholesale stoppages of plant are believed to be imminent. Furnaces here and there are being damped down, and not sufficient new business is coming in to warrant the continued operations of the remainder. A sudden revival of buying would, of course, save the situation. The dearth of orders has the effect of depressing prices below a remunerative level, and the reports of steel and iron works losing money every week are only too well founded. A lot of the work on hand was only secured by quoting below cost. Production to-day is a good deal below the level obtaining before the holidays. The contraction of activity extends to most branches of mild steel, finished iron, and foundry work. In tool steel and other products of the crucible matters could not be much worse than they have been in the past, and here and there one hears of improvement. Work is fairly constant in railway

steel, high-grade steel strip, and motor constructional steel. Conditions have never been so bad in the cutlery and plate trades as at present, as exports have been falling away at an alarming rate since the year opened, and shopkeepers are buying on a very niggardly scale. There is no indication yet of the customary spurt in connection with the Christmas season trade. The coal trade maintains considerable activity in the export market, and conditions at home are certainly no worse than last week, although manufacturing consumption has declined since July. Prices are being maintained. The damping down of a number of blast furnaces has reduced the demand for coke in this country. Nevertheless, makers can sell plenty to the Continent, and this enables them to maintain prices within a shilling or two of the highest figures. Current quotations per ton at pits are:—Best hand-picked branch, 30s 6d; best Barnsley silkstone, 26s 6d; South Yorkshire steam, 21s; Tyne steams, 23s 6d; Blythe steams, 23s; rough slacks, 11s 6d; nutty slacks, 10s; smalls, 7s to 9s.

Our Glasgow correspondent writes:—Business this week in iron and steel productions has continued very quiet, as featureless as it has been at any time since the year came in. Pig-iron makers are turning out uncommonly small quantities of tonnage, and here and there have felt constrained further to reduce their blowing furnaces—those on hematite as well as those on foundry iron. Demand on home account, it is stated, barely covers prompt needs, beyond which consumers do not care to go. Export inquiry (confined, it may be said, to the United States) has fallen off; but experienced traders are of the opinion that it will soon come again, in view of the improving business advices circulating on the other side. It was hoped a few days ago that the difficulties in the boilermaking branches would have been adjusted ere this, but that hope has not been realised. In the circumstances, it can be understood, no shipbuilding contracts worth speaking about are being given out, and the number of empty ships is steadily increasing. In the repair berths some half-dozen boats are under overhaul, as against 30 vessels in normal seasons. Structural steel sections are in encouraging request; but there is less doing at the moment in heavy engineering, such as bridge-building, wagon and carriage finishing, locomotive engineering, and engineering plant generally.

Our Cardiff correspondent writes:—Depressed conditions have

characterised the Cardiff coal market during the week. Exports under contracts have been well up to the average, but current inquiries have been scarce, and prices have not only been easier, but have touched their lowest point during the current year. Best Admiralties, for instance, which two or three months ago were ruling strongly round about 42s 6d, have been done at 28s 6d and even slightly less for prompt shipment. Moreover, this easiness has coincided with a slight reduction in the output of coal. Many of the miners are still taking their annual holiday, and the hopes that the normal August restriction of output would tend to stiffen values have been unfulfilled. Colliery salesmen are disquieted, but not unduly alarmed, by the depression. The collieries are faced with the prospects of a further increase in labour costs. The audit for May and June has certified an increase in wages from 37.62 per cent. to 41.47 on the standard rates of 1915, and this higher wage will remain operative until the end of October. The salesmen of the leading groups are acting in concert with a view of maintaining prices, but so far no general scheme has even been mooted with a view to the regulation either of prices or of output.

Current market quotations are approximately as follows:—Best Admiralties, 28s 6d to 29s 6d; second Admiralties, 27s 6d to 28s 6d; best dries, 29s 6d to 30s 6d; best bunker smalls, 10s to 21s; ordinary cargo smalls, 16s to 17s 6d; anthracite big vein, large, 45s to 55s; coke for export, 42s 6d to 50s; inland blast furnace coke at ovens, 30s to 35s; patent fuel, 30s to 33s; pitwood, ex ship, 32s 6d. to 33s.

In the tinplate trade the situation has appreciably improved. Tinplate and steel bar prices are firmer at the minimum figures than they have been for some months, and galvanised sheets have slightly advanced. Two or three heavy orders have been placed during the past few days, and the outlook generally is brighter. Baldwins, Limited, have recently acquired the Wern Tinplate Works, and are reported to be accumulating exceptionally heavy stocks of lower-grade iron ore from France and Canada for their blast furnaces.

CUMBERLAND IRON.

(FROM OUR WORKINGTON CORRESPONDENT.)

There is a somewhat better tone in the Cumberland and North Lancashire hematite pig-iron market this week, the more hopeful view taken of the Continental situation in consequence of the

probability of a meeting between the English and French Premiers having induced a livelier flow of inquiry than has been the case for two months past. There is, of course, no immediate prospect of an increase in production, but there is sufficient business available, even if it is still largely of a hand-to-mouth character, to render it certain that some of the plants holding stocks totalling nearly 50,000 tons will be able to clear all the iron out of the works' yards before mid-autumn. Bessemer mixed numbers are now quoted at £5 10s. per ton delivered at Glasgow and Sheffield, and £5 13s. at Birmingham and at South Wales ports. The demand for low phosphorous iron, though limited, is steady. As long as there is no increase in the output of pig-iron there cannot obviously be any improvement in the condition of the iron ore trade in West Cumberland and in the Furness district. It is only the mines controlled by the local iron and steel companies that are working, and some of these are not raising normal outputs. No ore is being sold outside the district, and prices are on the easy side, superior sorts of low phosphoric ore being quoted at 24s to 26s per ton, and ordinary kinds at 19s 6d to 21s 6d per ton. The steel trade is depressed, and the activity at Workington is of a spasmodic character only. A few small rail orders have been secured, and it is believed that the rail mill may, perhaps, work one week in four. Heavy sections of rails are quoted at £9 10s to £10; lighter sections £10 10s to £11; and billets £8 per ton. Engineering is dull, and there is nothing doing in the scrap-iron trade.

MANCHESTER, August 30.

Rather a more hopeful feeling has prevailed in the market during the past week, but at the same time developments are very slow in taking place. Here and there there has been more evidence to show that Lancashire cloths are urgently needed in the outlets abroad, but the stumbling-block in the way of progress is the matter of prices, for a big percentage of the offers received have to be turned down. It is very disappointing for manufacturers to cut prices to the lowest possible limit and then receive a bid which is from 15 to 20 per cent. out. Instances like that are all too numerous. There has been rather a larger inquiry for light cloths for India, but actual business has been very irregular. Producers of staple makes have continued full of complaints, and no immediate relief is in sight. Sales of any weight for China have been isolated. Most attention continues to be given to fancy materials. A larger business is expected to be done with Egypt in the near future. American yarn prices have remained firm, thanks to stocks in first hands being considerably reduced as compared with a few weeks back. A comparatively small business has been done in Egyptian descriptions. Occasional sales have taken place in export numbers for India.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The opening of the Colonial wool sales in London next Tuesday is being awaited with keen interest by all members of the trade. The impression is growing that values will be well maintained; indeed, many expect an advance in merinos, and topmakers are adopting a firmer attitude in anticipation of this. Another encouraging factor is the reduction announced this week in combing charges. The new tariff shows a general reduction of ¼d in merinos and fine crossbreds, a reduction of ¾d. in 50's, 50's and 48's, and ¼d. in lower qualities. The lower charges, however, are not accepted without a certain amount of grumbling, many users being strongly of the opinion that a more drastic cut should have been made. As it is, the current combing tariff still compares very unfavourably with Continental charges, and the temptation to send wool to be combed on the Continent remains. Rather more interest has been shown in tops during the week, and quotations are much steadier. Many firms, indeed, are asking slightly more money for their standard makes, and it will be interesting to see how this market reacts to the London auctions. Some spinners report that particulars against old contracts have come to hand more freely during the last few days, but new business in yarns does not show much expansion. Botany spinners in particular are badly in need of work, though crossbred spinners are doing rather better. Quotations still show a wide disparity between selling prices and cost of replacement. The piece goods trade is quiet. Demand is "spotty," and most orders lack bulk.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The outlook for the wool sales, which open on Tuesday, is very good, in spite of the fact that the series will last for the whole of September, and 238,000 bales will be catalogued. Of these, about 185,000 will be crossbreds, including 119,000 from New Zealand. Not many of them will be fine wools, and holders should be satisfied to sell the bulk of their medium and low qualities at last series' rates or perhaps 5 per cent. more. So far as is known at present, America is not a buyer, and business in tops in Bradford, though considerably increased during the past fortnight, is certainly not on a level that allows of an advance on last series' prices. There is a fair amount of stock in Bradford, except in fine sorts, which are expected to advance fully 5 per cent. Merinos will probably do the same, though most of the greasy wools are expected to be Continental type, and prices for them will depend almost entirely on Continental competition. The reduction in combing charges that occurred in Bradford last week will make practically no difference to the amount Bradford users can pay for wool. A halfpenny per lb reduction for combing merinos does not mean that more than a third of a penny extra can be paid for the wool, even assuming that top prices remain steady. The home woollen trade is in a decidedly better state than for some weeks past, and stocks of raw material in most qualities in merchants' hands are rather below the average. Very firm figures are being asked for most types of clothing wools, and during the last six weeks there has been a steady demand in

London through the merchanting section of the industry for medium slipe and scoured crossbreds from 46's upwards. This business has been mostly carried on at prices showing a very slight rise over those ruling last series in London, and it is expected that the B.A.W.R.A. offerings of New Zealand and Australian crossbreds, 70,000 bales in all, will include a large proportion of average scoureds and slipe. The Cape (11,000 bales) and South American (16,000 bales) wools to be offered will most probably be of more interest to Germany, Belgium, and France than to anyone else. For several series the Continental buyers have carried Punta wools above the Bradford level for their hosiery trade, and it will be surprising if the same thing does not happen again. The position of the industry, in spite of the greater hopefulness that prevails in Bradford and other woollen areas in this country, is not greatly changed. There seems to be a great amount of money at the wool end of the trade owned by people who have plenty of confidence in the raw material, but until the other great trades in the country become busy and the amount of unemployment is greatly reduced, there will be a shortage of money at the clothing end of the industry, and business will be correspondingly quiet.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

Generally speaking, the better tone in the markets has been continued, and all round there is some revival, but to what extent it will prove permanent time alone can show. Raw linseed oil, despite slight fluctuations, has well maintained the recent advance, and a fair trade has been done on spot and in near positions, with keen speculating interest forward. A good proportion of the old Plate and the current Indian crops of seed remains to be shipped; but demand is only moderate, and crushers only present in the market to cover immediate requirements. Dealings in the new crop are beginning, though tardily, and for new Plate £16 and upwards has been paid for January-February shipment. The strength in cotton oils has been aided by fairly large dealings in new crude Egyptian for November delivery, and prices both of crude and refined have further advanced. New black Egyptian cottonseed, which is expected to begin shipment early in September, has been dealt in at rising prices, but closes below the highest. Crude soya bean oil of English make, though in some request, is overshadowed by the offerings of cheap Oriental. Palm kernel oil is reported in good demand, and first-pressure castor oil has been reduced by manufacturers to £50 (barrels free), ex Hull mill. Exports of oil are moderately good, but below average, and reflect the lessened demand from the Continent and America over the past few weeks.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Business was very quiet at the Bermondsey hide auctions on Thursday, and sellers did not accept the bids made for either best or second ox. Best cows also failed to sell, but I understand sales of seconds were made at 5½d to 5½d per lb. Calf were also withdrawn, but sales of best calf were made from 5½d for heavies to 10½d to 11½d. Seconds ranged from 4½d to 9½d, and thirds at 5d. The tone was weak all round, and this is rather difficult to understand in view of the fact that provincial prices have held firm this week. The Australian market is also a little weaker in sympathy with frigorifics, and little interest has been taken in dry hides. Cable reports from New York report an easier market, with best Chicago packers offered at 14 cents.

Trade in sole leather is quiet in Bermondsey this week, as consumers think prices will fall. There seems no stability in prices,

THE BANK OF TAIWAN, LIMITED.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

as tanners with accumulations seem inclined to shade figures to effect sales.

The upper section is improving, and orders are more frequent for calf and sheep leathers. Some dressers are really busy, and all round the outlook is better, although Continental prices for calf are still a worry to home producers. Sheep leathers are dearer, and Continental makers have advanced prices.

The boot trade is moderately well employed. Leicester, which makes ladies' shoes, is, however, quieter, although orders for sports goods make up a fair turnover. Orders for men's shoes are now coming in, both on home and export account, to Leeds and Northampton districts.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 31.

Quiet trading was in force in several directions, but particularly in the case of fibres, as requirements of spinners do not extend, and such support as is forthcoming for both jute and hemp is mainly speculative, with increasing quantities reaching the Calcutta market with regard to the former. Manila hemp is reservedly offered on the part of shippers, with steady inquiries re-ordered by cable in local markets. Rice sparingly placed on offer, and shippers of Burma inclined to ask dearer prices owing to feared damage to supplies in sheds by floods with inundations reported from Siam, while the movement of Saigon has been impeded by typhoon. Buyers in the London centre, however, were not unduly disturbed, and failed to respond to the higher demands of shippers.

SUGAR.—Steady absorption was a feature in this market during the week with regard to refined goods, and with but a poor assortment of grocery imported British descriptions again came in for the larger share of patronage, and general stability characterised the market. Messrs Tate and Lyle's cubes, 57s to 58s; granulated, fin: and coarse grain, 55s½d; No. 1, 54s 10½d; No. 2, also London, 54s 7½d. Glebe K, granulated, delivery London, 54s 6d. Crystallised West India nominal. American granulated, spot, sold, 53s 6d to 54s; fine Dutch, also Czecho, held for 53s 6d. White Java, spot, sold, 49s 6d to 50s for grocery parcels, and afloat London, 21s to 22s 3d. c.f. and i. terms. Continental parcels for shipment more or less nominal, as very few definite offers are made. Raw refining kinds sell slowly. Peruvian basis, 96 per cent. to arrive, quoted 10s 3d, and Brazilian basis 80 per cent. ditto, 15s 6d, c.f. and i., U.K. terms. Terminal market was attended by slight irregularity, but business proceeded with fair freedom. August delivery, sold, 22s 6d to 23s; September, 22s 9d; December, 21s 7½d to 22s 6d; March, 22s 7½d. Cuban stocks stand at 445,330 tons, against 495,250 at same time last year.

COFFEE.—Spot market steady, but general course of trade proved quiet. Some mountain-grown Jamaica sold readily at fancy prices, in keeping with this particular description. Bold sizes, sold, 177s 6d to 207s; medium, 150s 6d to 188s; smalls, 111s 6d to 183s; bold Costa Rica, 98s 6d to 111s 6d. Future delivery market dull, unaltered.

COCOA.—Market remains in a quiet and generally featureless state. Accra, F/F quality, November-January shipment, sold, 30s 6d, f.o.b. terms.

TEA.—Indian auctions comprised 38,720 packages, and with no abatement in demand were readily disposed of. Good to fine qualities in particular were well competed for, with broken orange Pekoe favoured, while recent rates were not only fully maintained but frequently improved upon. Medium and common teas sold well at full to dearer prices. 17,700 packages Ceylon were brought forward, and while common grades sold at fully steady values finer descriptions were mostly dearer; while possessing attractive leaf and liquoring properties. Java and Sumatra sold well at very satisfactory rates. Fine, 3½d to 4½d per lb dearer. New season's China firm, with a good steady demand.

RICE.—There is not much business stirring in Eastern grain, but this is counteracted by considerable reserve on the part of shippers. Regarding recent floods in Burma, fears are entertained as to certain crop damage in the Bassein district. Two Stars, spot, 14s 6d; ditto, afloat, 13s, c.f. and i., U.K. Spanish of the new crop continues in demand, and there is quite a good trade proceeding, October shipment, at 17s 6d to 17s 3d, c.f. and i., London. Offers of new crop, American are circulating, and fancy Blue Rose, for shipment, quoted 26s to 27s per cwt, c.f. and i., U.K. Siam firmly held, and No. 1 garden, for shipment, held for 14s 9d, c.f. and i., U.K. Beans and peas quiet on about former terms.

SPICE.—Pepper quietly dealt in at late rates. Fair black, Singapore, spot, 4d; ditto, October-December steamer, London standard, 3½d; Aleppy, spot, 4½d; white Singapore, 5½d; Muntok, 5½d; ditto, October-December, 5½d for L.S. Zanzibar cloves, October-December, 1s 0½d per lb. Tapioca steady, and Singapore flake, September-November, Havre, sold, 2½s 6d. Sago flour, September-November, quoted 12s 1½d. Desiccated coconut firmer. Spot halves, spot, 38s 9d; September-October, 38s 6d; October-November, buyers, 38s 7½d per cwt. Ginger slow at previous level of prices.

GAMBIER.—Market firm. Block, September-October, 35s 6d per cwt, c.f. and i.

JUTE.—There has been a fair trade doing, and a steady tone mostly prevailed. First grade, August-September, Continent, sold, £21 10s to £21 12s 6d; September-October, £21 7s 6d to £21 5s; October-November, £21 5s; November-December, £21 5s ton. Lightning grade, 25s per ton under these prices. Hessians steadier. 10-oz, spot, sold, 25s 6d; September, 24s 9d; 8-oz, spot, done 19s; September, quoted 19s 6d; October-December, 19s; with business in the October-December position of 10-oz at 23s 6d per 100 yards. A twills, spot, sold, 83s; September, quoted 72s 3d; B. spot, sellers, 71s; September, 63s 6d; sugar, September, 76s; flour, spot, 91s; September, 76s; silts, September, 53s 6d; hessian bags, 56 by 28, spot, 52s 6d; and September, 46s per 100 bags.

HEMP.—Manila descriptions held firmly, owing to stimulating cable advices from the other side, a d there is a moderate inquiry. J grade, September-November, quoted £31 5s; K, £26 10s; L, £26 10s; M, value £25. L, afloat, offered at £26 5s; and M, £25 5s. African sisal is a steady market, and sales include No. 1 Tanganyika, in dock, London, at £35 10s. Italian steady, but trade moves quietly. Good quality P.C., for shipment, quoted £57 per ton. There is no movement to note with regard to Indian.

BRISTLE-FIBRE remains quiet, and three-tie, for shipment, quoted £29; and this figure is also named for Palmyra per ton, c.f. and i.

SHELLAC.—Market generally steady, and T.N. fair quality, spot, sold, 277s 6d; October quoted 270s; and December, 265s cwt.

COPRA.—The market was again subject to some irregularity. A very dull tone predominated at opening, but on buyers becoming more in evidence the market rallied. F.M.S. Straits, August-October, Rotterdam, changed hands at £26 2s 6d, £26 7s 6d, and £26 5s; October-December, £26 1s 3d to £26 7s 6d and £26 5s; Ceylon, September-October, Rotterdam, sold, £28 2s 6d; Java, ditto, quoted at £26 12s 6d; Dutch East Indies, August-October, sold, £26 5s; October-December, £26 5s, £26 6s 3d, and £26 5s; Cebu, August-September, quoted £25 17s 6d; South Sea Islands, ditto, £25 10s; F.M. Straits, September-October, to Marseilles, quoted £25 10s; Manila, £25 7s 6d. Palm kernels quieter. October-December, Liverpool, sellers, £18 per ton.

RUBBER.—There was no new feature to note in this market. Actual business was on a moderate scale, but with no undue pressure to sell, prices ruled steady for the main part. Standard plantation crepe and sheet, spot, sold, 15½d; September, 16½d to 16d and 15½d; October, 16½d; October-December, 16½d; January-March, 16½d. To New York, standard European estate, September-October, sold, 15½d; and October-November, 16½d, c.f. and i. terms. Wild quietly steady, a d fine hard Para, spot, quoted 15d; soft fine, 14½d; Caucho ball, 13d per lb.

ESSENTIALS.—There is only a quiet trade doing, but prices are steady. Menthol, spot, 39s; shipment, 38s 6d; Japanese peppermint oil, spot, 7s 3d; forward, 6s 9d; aniseed oil, spot, 1s 9d; shipment, 1s 8½d; refined camphor slabs, spot, 3s 6d; crude, 3s; citronella oil, Ceylon, spot, 3s 9d; Java, 4s 2d; oil of orange, Sicilian, spot, 12s 6d; West Indian, 10s to 10s 6d per lb.

EGG PRODUCTS.—There was only a quiet inquiry at prices showing no material alteration. Prime hen liquid yolk, 82s 6d on the spot and forward; August-September, 75s per cwt. Dried yolk, spot, 10½d; hen albumen, spot, 3s 6d; forward, August-September, 3s 6½d per lb c. f. and i.

FRUIT (DRIED).—Business in currants was on a moderate scale at steady rates. Pyrgos, 3 bags, quoted 49s; Amalia, 54s; Gulph, 58s; good Vostizza, 64s to 66s; Australian, 52s to 56s. Fair support was accorded sultanas owing to attractive offers with Smyrna on sale at 48s to 50s, for good colour, with better qualities up to 70s. Fine fruit practically cleared. Californian quoted 59s 6d to 62s. Raisins selling quietly, with Australian quoted 42s to 46s, according to quality. Dates remained a quiet market. Hallowee, 18s to 20s; Siam, 17s to 17s 6d. Evaporated fruits met a generally quiet market. Cape apricots quoted 65s to 80s, as to quality. Californian pears, 60s to 75s; ditto, apple rings, 50s to 52s. Australian apricots, 65s to 80s; ditto peaches, 50s to 60s. Californian plums, 40/50 quoted 70s; 70/80 at 43s; 80/90, 42s, and Bosnian, 38s per cwt.

CANNED GOODS.—There was no change to note in most cases, and with regard to sardines business proceeded quietly. French 18-oz quoted 15s 6d; quarter tins, 7s; Portuguese quarters, 2s 6d to 3s 3d; ditto, 12 oz, 5s to 5s 6d; 18 oz, 9s 6d to 11s per dozen tins. Lobster steadily held, but buyers were rather shy. Fancy halves quoted 160s to 165s; second quality, 152s. Salmon cleared at a steady pace, and quotations for the main part ruled unaltered. 1 lb flat reds, labelled, sell at 55s to 58s, as to quality; ditto tall, 41s 6d to 42s 6d; 1 lb flat pink, 24s 6d; ditto tall, 23s 6d, and cases of 96½ lb quoted 29s to 31s. Canned fruits fully steady in value, with fair inquiries circulating, particularly for the lower priced goods. Singapore pines of fair quality, on spot, quoted 5s 10½d. Californian apricots, 7s to 11s; peaches, 8s to 12s; pears, 12s to 14s 6d. Tomatoes sell rather quietly, though quoted at attractive prices. Spanish threes quoted 6s 6d. Italian ditto, 7s per dozen tins. Canned meats quiet, on about former terms.

OILSEEDS.—Linseed irregular, but tone firm. Bold Bombay, afloat, £20 7s 6d; small Bombay, ditto, £19 15s 6d; Calcutta, afloat, £19 15s; August-September, sold, £19 10s to £19 12s 6d. Plate, afloat, £18 10s; August-September, sold, £18 to £18 5s; January-February, sold, £16 2s 6d to £16 and £16 3s 9d. Rapeseed firmer. Toria, August-

GIRARD TRUST COMPANY
PHILADELPHIA, PENNSYLVANIA.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Chartered 1836.

Capital and Surplus - \$10,000,000.

Member of Federal Reserve System.

	Sept. 7, 1923.	Aug. 31, 1923.	Aug. 24, 1923.	Aug. 17, 1923.	Previous Rate and Date Changed.

Houses/Notice	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3½	3	3	3½	..

The Bank return showed an increase of £280,000 in the note circulation, and a decrease of £273,000 in the Reserve. From the banking department's figures it was evident that most of the eight millions borrowed on Ways and Means had already been repaid by Wednesday evening, since the Government securities were only 3½ millions higher. Other securities had risen by nearly a million, and Public deposits had declined by over two millions, and the Other deposits were 6½ millions higher, thanks to these various additions. Currency notes outstanding were increased this week by £953,000 to £286,021,600, which includes £1,452,200 for notes called in but not yet cancelled. The fiduciary issue is £235,119,400, or £35,064,400 below the maximum.

THE STOCK MARKETS.

The Japanese disaster has had a depressing effect upon the Stock Exchange, but the effect on prices has been localised to Japanese Government and Municipal bonds, which were heavily marked down. There was, however, some recovery from the worst at the end of the week. Money disbursed by the Government at the end of August in interest and repayment of War Bonds is finding its way back to British Government stocks, the rise in which was only checked by the decline in the American exchange, which gave rise to talk of the possibility of an increase in Bank rate. In the Home Railway market interest has centred in Undergrounds, while Argentine and Brazilian rails have moved with the rally in the exchanges. Rubber shares keep firm, but the carry-over disclosed a continuance of the previous bear account in oils. Industrials have moved irregularly, but the Kaffir market has been fairly good.

THE COMMODITY MARKETS.

Many of the commodity markets are showing signs of animation, but at present it is difficult to trace any direct effects of the Japanese disaster on conditions. The recent slump in Newcastle coals has not extended to South Wales productions, and prices at Cardiff are inclined to be firm. Pig-iron prices are falling, and the steel trade is very quiet, with prices slightly weaker. Our Sheffield correspondent is very pessimistic on the outlook. Tin has improved. The cotton trade has been under the influences of dearer raw cotton, but a considerable inquiry has come through for piece goods for India, possibly on account of a restriction of Japanese exports. In the wool trade the position of the raw material is strong, mainly on account of Continental support. The jute market was quiet. Sugar values were stable, and the demand continued for the finer qualities of tea. Rice manifested a hardening tendency, but wheat markets are dull. There is an improved tone noticeable in the vegetable oils and oilseed markets, but weakness has developed in the Bermondsey hide market.

FOREIGN EXCHANGES.

The foreign exchange market has been dull and heavy all the week as the result of the Japanese disaster and the complications in the European situation. The quotation for the Japanese yen has been a nominal one during the week, though it is known that Japan has considerable balances in New York. Yesterday, however, a very few transactions were being carried out on Kobe at 25 1/4d. It is impossible yet to estimate the situation, but Japanese credit has stood very high, and she should not experience any great difficulty in raising a loan either in London or New York. The dollar rate has moved steadily against

us under the combined influence of the European political situation, the seasonal movement, and reported Japanese purchase of dollars. The lowest quotation was 4.50½ on Wednesday, as against 4.54½ last Friday, but a slight reaction left it at 4.51½ yesterday morning. The forward rate has widened from 1/8 to 3/8 cent per month above spot. Of Reparation currencies, the mark has taken another headlong dive, and now stands at 200,000,000, as against 60,000,000 on Tuesday and 50,000,000 a week ago. The futility of the Government's attempts at financial reform is thus demonstrated. Ruhr expenditure is rapidly becoming an intolerable burden, and it is certain that the Reichsbank return which is due to-day will show a further huge increase in inflation. There is no definite quotation for forward rates. The Paris rate improved over the week-end from 80.70 to 80.25 on Monday. This, however, was followed by a rise on Thursday to 81.50, at which figure it still remained yesterday morning. This rise is largely attributed to the inflation revealed by the current return of the Bank of France, which shows an increase of 635 million francs in the note circulation, and of 500 million francs in advances to the State. Brussels has followed the same course, touching 97.35 on Monday, and thereafter rising, with a rush on Thursday, to 99.50, compared with 98.90 a week ago. In Paris forward rates are quoted slightly narrower at 3½ centimes per month above spot, while in Brussels the quotation is 7½ centimes per month above, as against 10 centimes last week. Italy, after rising on Saturday last from 106½ to 108, has quietly improved, and stood yesterday morning at 106. In view of the international situation, some doubt has been expressed as to the possibility of maintaining with Government help so favourable a rate for the lira, as well as for the drachma, which has remained steady round about 250 throughout the week. Among neutral rates, Amsterdam has moved sharply against us, following the lead of New York, and now stands at 11.51½, as against 11.56½ a week ago. Spain, after touching 34 on Tuesday, is once more steady at 33.75. Switzerland has moved against us from 25.20 to 25.12. In Northern Europe Stockholm is steady at 17.05, and Christiania at 27.95, but Copenhagen, after rising from 24.47 to 25.05 on Monday, has fallen again slightly to 24.82. Helsingfors is unchanged at 164½. In Central Europe, Vienna is slightly lower at 322,000, while Prague has fallen from 154 to 151½, but Belgrade has not varied greatly from 435. Warsaw is fairly steady at 1,100,000, while Bucharest, after remaining steady at 985 during the week, rose yesterday morning to 1,010. In the East, the rupee has improved 1-32d to 15 4-32d. The demand from China as a result of the Japanese catastrophe dominated the silver market in the early part of the week, and prices rose 1/8d in two days. There is little Indian demand, however, and the position eased somewhat towards the end of the week. Hong Kong has appreciated 1/4d to 2s 3/8d, and Shanghai 1d to 3s 1 1/8d. In South America Rio is rather better at 5½d, Buenos Ayres, on the report of an American loan, has appreciated 1/4d to 39½d, and Monte Video stands at 39½d, as against 38 a week ago, while Valparaiso, at 36.50, shows little change.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 1st:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	7-738	From Revenue	11-730
Interest, &c., on Debt	12-507	Taken from Exchequer Balances	2-18
Sinking Fund	1-011	Amount borrowed	9-582
sundries	174		
	21-430		21-430

Revenue at £11,730,000 compares with £16,139,300 in the corresponding period of last year. The chief causes of the decline were the lower receipts from Property and Income-tax and Super Tax at £5,228,000, against £7,100,000 in the corresponding period, and Special Receipts, which brought in only £400,000, against £2,316,100. Customs yielded £200,000 more at £2,229,000, while Excise at £1,158,000 compares with £1,099,000. Expenditure shows a welcome reduction of about £6,000,000 at £21,430,600, mainly brought about by a reduction in Supply Services. An interesting feature in the week's return is the repayment of £7,931,800 of National War Bonds which matured on September 1st. The week's operations increased the

National Debt by £9,582,200, and caused the following changes:—

	Min. £		Min. £
National War Bonds paid off ..	7-932	National Savings Certificates ..	100
		Treasury Bills	5-164
		Bank of England Advances ..	8-000
		Public Departments Advances ..	4-200
		Unemployment Insurance ..	0-050
	7-932		17-514

The floating debt was increased by £17,395,000 to £806,266,500.

FINANCIAL YEAR, 1923-24 (April 1 to September 1, 1923).

	£		£
Total Expenditure ..	324,905,365	Raised by Revenue ..	317,920,265

Company Meetings of the Week.—On a later page of this issue will be found the report of the meeting of the African and Eastern Trade Corporation. In the course of his speech Mr J. H. Batty, the chairman, suggested that an independent committee be appointed to investigate the system of Government administration and expenditure in the West African Colonies.

THE EARTHQUAKE IN JAPAN.

WORDS very inadequately express the emotions aroused by such a tragedy as that which has occurred this week in Japan. Of all natural phenomena, there are none more awe-inspiring than disturbances of the earth's surface through the working of unseen forces within. Our instinctive confidence in Mother Earth is shaken when man for a moment finds himself face to face with the elemental forces of the universe. Imaginations dulled to the records of slaughter and destruction laboriously achieved by years of man-made war are staggered by the suddenness and magnitude of the toll exacted in a single afternoon by an "act of God." In the presence of such a disaster, which so forcefully recalls us to the consciousness of our common humanity, we offer in all humility of spirit our profound and respectful sympathy to the stricken people of Japan.

It is still too soon to form any accurate idea either as to the loss of life or to the material damage done, and though it is probable that the earlier estimates were exaggerated, the figures are undoubtedly very large indeed. It is, for example, possible that the material damage amounts to as much as the cost of the Russo-Japanese War, which exceeded 200 millions sterling. But it is very wide of the mark to suggest, as one distinguished Japanese visitor in England has done, that the damage will amount to 1,000 millions sterling, or hastily to assume, as some of our less-balanced Press commentators, that Japan will no longer be a first-class Power. The total wealth of Japan was estimated by Sir Josiah Stamp in 1914 at roughly 2,400 millions sterling, of which 1,100 millions represented land, 300 millions represented buildings, 150 millions represented furniture, and 500 millions the value of mines, industries, and businesses of all kinds. The index number of wholesale prices is at present almost exactly double that of the year before the war, and allowing for an increase in population and wealth, the present valuation of Japan's wealth would be between 5,000 and 6,000 millions. The value of land will hardly be affected by the disaster at all. The chief damage is, of course, to buildings. The area over which shocks have been experienced apparently includes 10 to 12 per cent. of the population, but since the capital city is involved, it includes more than 10 per cent. in value of the buildings of Japan. The buildings of Japan to-day might perhaps be valued at 1,000 millions at present prices; even if the destruction had been universal and complete throughout this area—which,

of course, is not the case—the figure could not exceed 200 millions. Actually, it is certain to be very much less, for many important buildings in Tokyo are reported safe, and government and other work is being resumed in them. So far as industrial and commercial property is concerned, the proportion in peril is certainly smaller than in the case of buildings, for the greater part of Japan's industry is centred at Osaka (the Manchester of Japan) and other cities outside the stricken area.

When we come to the question of loss of life, the highest figures so far mentioned are half a million, and, as we have indicated, there is reason to hope fairly confidently that the final figure may prove to be very much less than this. In order to get a sense of proportion, we may recall that the Japanese population is about 56 millions, and that it has latterly been increasing at about 1.3 per cent. (about 700,000) a year. The casualties presumably include an average proportion of men, women, and children; and though the deaths have occurred among that section of the population which is best educated, and contains a specially high proportion of skilled artisans, the commercial classes and others who have contributed most to the advancement of Japan, it cannot be seriously supposed that the actual loss of life will affect her labour situation except temporarily, and in certain local directions, or modify her industrial potentialities. Moreover, when it is remembered how rapidly Japan has risen to her present position among the nations, it may be confidently assumed that her losses in personnel and in material goods, colossal though they be, will very quickly be made good.

But, while we have mentioned these considerations in order to check some of the wilder assumptions as to the effect of the disaster, the consequences will be of very great importance. It will be convenient to refer to them under three heads, namely: (1) The immediate commercial losses and their reactions; (2) the possibility of repercussion on the world's trade situation in general; and (3) the considerations involved in the rebuilding of the capital of Japan.

So far as the immediate commercial effects are concerned, it has to be remembered that for some little time past Japan has not been in an altogether flourishing condition. As late as a month ago our Japanese correspondent reported a renewal of runs upon the banks in Japan and a series of failures. Indeed, since 1921 the condition of credit has not been satisfactory, and it is to be feared that a number of Japanese firms may be unable to carry on. It is probable that a moratorium*, at all events for a short period in respect of trade credits, will be proclaimed. But this is only a way of postponing the difficulty, and anxiety will for some time be felt by British traders who have debtors in Japan as to their position. The difficulties will be produced by the actual loss of goods in circulation or in stock, by the collapse of credit based on real property, and by the actual cessation of economic activities in the devastated area. To some extent European firms will be involved directly in these three forms of damage, and to a greater extent indirectly through the cessation of business with Japanese correspondents. No estimate of these effects can yet be made; but so far as British or other interests are involved, the only thing that may be said is that the fact that Japan's trade has been rather under a cloud means that the reactions in these respects will be less serious than would normally be the case.

As to the repercussion on the trade of the world generally, there are obviously circumstances in which so serious a blow to one of the great trading nations might set up a series of trade crises and precipitate world depression. But, again, the universal stagnation of trade, and the fact that speculation has for this reason been

* As we go to press we are informed that: "At 4 p.m. on September 6, 1923, the Japanese Government proclaimed a moratorium. (1) All debts under civil law incurred before September 1, 1923, and falling due during the period of September 1, 1923, and September 30, 1923, will be extended for the period of 30 days. (2) It is to be applied in the districts of Tokio, Kanagawa, Shizuoka, Saitama, Chiba. (3) Counties, prefectures, public corporations having to meet debts, salaries, wages, &c., are exempted from the provisions of the moratorium. Withdrawals of bank deposits of not more than 100 yen per day are permitted. (4) The measures authorised by the Notary Act are suspended for the period of 30 days."

recently restrained within extremely narrow limits, means that commerce generally is not so vulnerable, as is sometimes the case, to a shock to credit. Indeed, looking at the matter from a purely narrow national standpoint, it is conceivable that the momentary withdrawal of Japan from world competition may cause buying by India and China in other markets, and that Great Britain may momentarily benefit from a cause which in the long run will reduce, and not increase, the trade of the world.

The rebuilding of Tokio will, of course, afford some compensation to the otherwise depressing effects of the disaster. A substantial proportion of the requirements for this purpose will be needed from overseas, which will involve the placing of loans abroad, presumably in London and New York. Some of the sums raised in this way may even be required for purchasing food if it should appear that very large stocks of these requirements have perished or been spoiled, and that internal Japanese resources are insufficient or cannot quickly be mobilised by the Government for the relief measures that will be necessary.

THE ITALO-GREEK CRISIS.

THE storm cloud to which we briefly referred last week has rapidly gathered. What was at first a serious diplomatic incident caused by an outrage committed against Italian officers carrying out their duties on Greek soil, has developed into a European crisis of the first magnitude, in which the efficiency of the machinery for keeping the peace of Europe is being seriously tested, and the validity of the undertakings embodied in the peace treaties on which so many territorial settlements depend are at issue. The episode has arisen out of the problem of Albania's boundaries which were left undetermined by the Peace Conference of Paris. At various moments in the diplomatic wrangles of the post-war years it seemed doubtful if Albania would survive at all as a separate nation. But in December, 1920, she succeeded in getting elected to the League of Nations, and was recognised by the Powers. In 1921, when Jugo-Slavia showed signs of taking matters into her own hands on the boundary question and began pushing troops further into the country, Albania appealed to the League, which stimulated the Council of Ambassadors to get on with the fixing of the boundary. Under threat of the economic sanctions of the League, Jugo-Slavia agreed in November, 1921, to accept the decision of the Ambassadors, and to withdraw her troops pending the delimitation, and the League sent a Commission of Inquiry to see that the withdrawal was carried out without friction, to render any help to the Boundary Commissioners, and to report to the League. This Commission, in its report, urged among other matters that the Boundary Commissioners should also deal with a disputed section of the southern frontier, the limit of which had been left unsettled when Albania was created in 1913. This was done, but the task has been carried out in an atmosphere not altogether friendly, for during 1921 Italy maintained a vague claim of special interest in Albania "for strategic reasons," and when the dispute with Jugo-Slavia was settled in November of that year, it emerged that England and France had recognised that in the event of intervention being called for under the Covenant, Italy should be the Power to act. This special privilege has been a source of disquiet to both Jugo-Slavia and Greece, and when it came to settling the southern boundary the Italian members complained that they found themselves hampered by the Greek representatives attached to the Commission. Indeed, it is declared that just before the tragedy the ill-feeling led to an open rupture, and to threats of personal violence by the Greek officer attached to the Mission. The cold-blooded assassination of Italian officers while actually engaged on their task on behalf of the Ambassadors' Council was an insult and an outrage both to Italy and to the Powers represented on the Council which sent them. Such an act justifies very strong action, the punishment of the guilty, and ample reparation by the Government which permits such outrages to be committed on its territory. Such action, however, ought clearly to be taken by the nations acting internationally, for it is important to remember that

the Italian general and his staff were present in Greece not as representatives of the Italian Government at all, but as the representatives of the Council of Ambassadors, and were deciding a question in which Italy was in no sense directly interested.

But so far as Great Britain, at all events, is concerned, Signor Mussolini contrived to check the anger that would have been felt in this country at such an outrage by the terms of his ultimatum, which were neither statesmanlike nor dignified, but seemed to be designed to humiliate Greece rather than to fix responsibility on the guilty or enforce retribution where it was due. Indeed, as we pointed out last week, the parallel with the story of Serajevo in 1914 forces itself on the mind. Even in France, where opinion has been slowest to take up an attitude of criticism, it is admitted that the demand for reparation was excessive. Although, however, the responsibility for the murder is not definitely fixed and Albania's strange attitude in refusing facilities for inquiry on her side of the border raises disturbing doubts which even Signor Salandra admitted at Geneva on Thursday, Greece, though protesting against the terms of the ultimatum, has expressed her willingness to accept the decision either of the League or the Council of Ambassadors, and to deposit in a neutral bank the full sum demanded by Italy pending a decision. It is understood that Signor Mussolini has assured the French Government that he would not object to inquiry by the Council of Ambassadors, but would reserve his right to independent action if dissatisfied with the award.

Unfortunately, the issue is complicated by the bombardment and seizure of Corfu by Italy last Friday. This island, though of great strategic importance at the mouth of the Adriatic, was undefended. Italy's warships appeared off the town at 3.0 in the afternoon. The Admiral announced his intention of occupying it without giving the Prefect time to communicate with his Government. The bombardment appears, in fact, to have been made before the ultimatum expired, and to have been carried out with a minimum of respect to diplomatic usage. The British Vice-Consul, for example, who only received a few minutes' notice of the Italian intentions, made every effort to approach the Italian Commander with a view to getting time to warn British residents and to explaining that a large number of refugees were under his supervision in the Citadel. But he was refused facilities, and was making his own way to the flagship when the Citadel was bombarded and some 20 refugees, mainly children in charge of the Save the Children Fund, killed. This action, which, in the words of Article 12 of the Covenant of the League of Nations, "threatens to disturb international peace or the good understanding between nations," clearly justified Greece—or, for that matter, any other of the States members of the League—in bringing the matter before the League at Geneva, and Signor Mussolini is straining the meaning of words in denying that his action was an act of war.

But the Italian Government has raised the gravest issue of all by denying that the League has any competence to deal with the question in any way. It is true that the Italian Prime Minister has not been quite so cynical as one of his few supporters in the British Press, who, speaking of Italy's refusal to submit the issue to Geneva, declares that "she has every right to exercise her own judgment in this matter, just as the United States refused to come into the League at all"—in other words, a party who has entered into a covenant is to be as free to decide whether he shall abide by it as to decide whether he will enter into the covenant in the first instance! But Signor Mussolini rejects the competence of the League on the ground that the incident does not raise a danger of war, and that in any case questions of national honour are not covered by the Covenant, an interpretation for which we can find no justification whatever in the clauses of the document itself to which Italy has appended her name. Indeed, Italy has found no support for her contention either from France or from any of the other nations represented at Geneva, and a group of the smaller nations have even declared that if the League is unable to handle a situation so obviously dangerous to the peace of the world as this, it can afford no protection whatever to any of them. It

might be argued that the attitude of the Little Entente in support of the League was dictated by suspicion of Italian ambitions in the Balkans. But no such consideration has weighed with Belgium, who has made clear the importance she attaches to the point at issue. Having surrendered the guarantee of individual powers which played so important a part in the drama of 1914, she looks with the greatest alarm on any action that weakens the collective guarantee contained in the Covenant which has taken its place.

The Italian Government at the moment of writing apparently adheres to the declaration that it will retire from the League if it continues to discuss either the question of the murders or that of the occupation of Corfu, whereas the rest of the Assembly is satisfied that it is in any case its duty to deal with the matter, and if need be to enforce its decision with all the sanctions that the Covenant provides. It would be a profound disaster if Italy were forced into isolation and incurred the hostility of the members of the League as the result of an incident in which she had received the greatest provocation. But it is equally clear that all hope of settling international issues by consultation instead of by force would disappear, and the territorial settlements and adjustments of the Peace Treaties would be back in the melting-pot if the mutual undertakings that so many nations have incurred towards one another are to be brushed aside whenever it may be convenient. The withdrawal of Italy would have a number of awkward consequences in connection with many co-operative efforts in which that country is a partner. The London market, for example, is wondering what will be the position of Austrian Reconstruction Bonds in respect of which Italy has given a guarantee of 20 per cent. As a matter of fact, we do not contemplate that Italy would in any case default on her specific undertaking, and the progress of the scheme in Vienna seems to be such that the security of the Customs and tobacco revenue are themselves fully covering the service of the bond. There is, therefore, no real anxiety on this account; but the case illustrates the problems that would be raised if the harmonious relations of Italy and the other chief Powers of Europe were interrupted by Italy's withdrawal. Nevertheless, the advantage of continued co-operation would be bought at too great a price if a compromise is patched up which leaves in doubt the necessity of the States of Europe abiding by the rules they have laid down, and carrying out the undertakings which they have incurred.

We profoundly regret that, judging from the strictly censored Press of Italy, the attitude of this country should be so completely misunderstood. Great Britain has no special love for the Greek Government, which, by the way, it has refused to recognise since the execution of the former Ministers last November; public opinion has a traditional goodwill towards the Italian people, and it would be a complete misconception to imagine that the solidarity of British opinion is in any way connected with strategical considerations. But this country is profoundly concerned in the peaceable settlement of Europe, which seems as far off as ever, and has instinctively realised that to support the authority of the League of Nations is the only hope of preventing a new conflagration spreading from that constant source of international disturbance—the Balkan Peninsula.

OUR INDEX NUMBER.

A REACTION that is barely perceptible has followed the sharp drop in the general level of wholesale prices which occurred in July, and our Index Number is a mere 6 points higher at the end of August at 4188. This is still the lowest since the Armistice, with the exception of the previous month, but is within one point of the figure recorded at the end of September, 1922, hitherto the bottom figure. While the net change in August, however, was small, there were some fairly wide fluctuations in individual commodities. But these offset one another to a greater extent than usual, and the changes in the five groups are relatively small, as may be seen from the following table:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5) ...	500	300	500	400	500	2200	100.0

" August, "	828½	762½	1119	734	744	4188	190.4

Both the food groups have risen, and there is a slight rise in textiles, but minerals and miscellaneous commodities are lower. With favourable prospects for the harvest, home-grown wheat has fallen considerably in price, but American wheat has recovered the small amount lost in the previous month. Flour has been reduced during the month by 2s per sack, and oats have fallen almost as heavily as home-grown wheat, but barley is higher. There was a seasonal rise in potatoes following the disappearance of the old crop from the market, and rice rose by a similar amount to that lost last month. A sharp rise in pork was accompanied by a decline in other meat prices. In subsidiary foodstuffs the principal feature was a sharp rise in tea, thanks to keen competition at the auctions, and heavy forward buying. Sugar is lower on balance, although the last fortnight has seen an increase in prices. In their report, dated August 30th, Messrs C. Czarnikow, Limited, write that "immediately on the termination of the dock strike in London, orders for large quantities came into the market, sugars in course of discharge being particularly sought after, and it soon became evident that the unsold quantities were not as large as had been generally anticipated. No doubt, a considerable portion has been used for tendering on the terminal market in liquidation of the August account, part of which may appear again later on, but a large amount is being transhipped to the Continent. The fact that several cargoes originally destined for the U.K. were also diverted to the Continental ports to fill urgent requirements helped to relieve the position, and instead of pressure to sell there is now a scarcity of ready Javas available, and the price has advanced from 20s 9d to 22s 3d c.i.f. London. This has reacted on the terminal market, not only for present crop, but also new crop, although the reports from the Continental beet districts have been generally more favourable owing to the recent heavy rains. Another stimulating factor was the demand from British India, with the result that over 40,000 tons have been sold for October/December shipment at from 20s to 21s 9d, c. and f. basis Calcutta. New York, too, has contributed to the firmness here."

In the textile group raw cotton prices have moved up, but yarn is slightly lower and cloth is unchanged. Raw cotton quotations have fluctuated widely during the month, owing to contradictory news of American crop prospects. English wool is slightly higher than a month ago, but Australian wool is unchanged on balance. The consumption of wool during the month has been on a satisfactory scale, and export demand for America and the Continent for the finer classes of home-grown wool has helped prices. Flax is lower, and Messrs W. F. Malcolm and Co., in their market report, state that the tendency of the market is towards lower prices, "but, as is generally the case during a period of stagnation, quotations are being put forward which are several pounds per ton under the lowest prices indicated as yet by holders of stock." Jute is lower on balance, but during the last fortnight, according to Messrs Wigglesworth and Co., Limited, a decidedly active market has prevailed. "Unquestionably," they write, "the heavy

fall in prices has attracted many buyers, and spinners in Dundee are said to have covered about one-third of their requirements, while Continental operators have nearly all participated in purchases."

In the minerals group, pig-iron and steel rails have again been reduced, but iron bars are still unaltered. Coal is a shade lower, but in the minor metals both lead and tin are higher. Further reference to the latter is made in a Note of the Week. Copper has fallen a little in sympathy with weakness in the New York market. In the miscellaneous group changes were small and of no great importance. The month's changes in each commodity's index are shown in the following table, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For...	81½	+ 5	Cotton, A	139	+ 2½	Copper	52	- 2½
English	70	- 19½	Cotton, E	115	+ 8	Minerals	734	- 10½
Flour	74	- 4	Yarn	127½	- 2½			
Barley	74	+ 9	Cloth	127	- 2½			
Oats	69½	+ 16½	Wool, Eng.	135½	+ 2½	Baltic timber	103½	..
Potatoes	75	+ 19	Do Aust.	122½	+ 2	Amer. timber	90	+ 2
Rice	101	+ 5	Silk	122	+ 5½	Leather	60	..
Beef	81½	- 6	Flax	114½	+ 1½	Petroleum	92	- 3½
Mutton	91	+ 3	Hemp	45	+ 1½	Oils	72	- 2½
Pork	111	+ 20	Jute	71	- 5	Oilseed	75	+ 1
						Tallow	63½	+ 1
Cereals & meat	828½	+ 9	Textiles	1,119	+ 3½	Indigo	87	..
Tea	144	+ 11	Pig-iron	107½	- 5½	Crystals	85½	..
Coffee	90	- 1	Steel rails	79	- 4½	Rubber	15½	+ ½
Sugar, cane	210½	- 5	Iron bars	92	..	Miscellaneous	744	- 2½
Sugar, beet	113	- 6	Coal, steam	136½	- 4			
Butter	88½	+ 7½	House coal	87	- 1	Total	4,188	+ 6
Tobacco	116½	..	Lead	105	+ 4½			
			Tin	75	+ 2½			
Other foods	762½	+ 6½						

These changes make the present level of prices 63.3 per cent. above the figure prevailing at the outbreak of war, as compared with 63.1 per cent. a month ago, and 73.1 per cent. at the end of April, which is the highest point reached this year. The position of each of the groups in relation to that recorded at the end of July, 1914, may be seen from the following table:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
Mar., 1920	261	260	484	269	309	325.6
Dec., 1920	233	229	209	261	230	230.9
Dec., 1921	159	180	180	164	168	169.6
June, 1922	174	192	184	149	160	171.1
Sept. "	151	194	181	150	148	163.3
Dec. "	149	200	193	152	146	166.2
Mar., 1923	143	214	191	181	144	171.2
Apr. "	148	214	195	180	144	173.1
May "	150	220	189	176	142	172.0
June "	141	223	191	167	137	167.7
July "	141	215	181	160	135	163.1
August "	143	216	182	158	134	163.3

In comparison with the end of September, 1922, when the total index number was at practically the same figure, cereals and meat and miscellaneous commodities show a decline, but other food is much higher, and minerals have also risen, while textiles are practically unchanged.

THE DISTRIBUTION OF FOOD.

THE Departmental Committee on the Distribution and Prices of Agricultural Produce have issued their third Report (Cmd. 1927), which deals with meat, poultry, and eggs. These reports are termed "interim," though, in fact, each of them is devoted to the complete discussion of one section of the subject referred to the Committee, and collectively they will form their final report. The issue of the Report of a Commission or Committee in parts is not unusual, but an "interim" report implies that the examination of the subject to which it relates is unfinished, and that the conclusions are subject to review. The Committee propose, after issuing their report on each of the four subjects into which they divided their inquiry, to prepare a fifth part dealing with "certain questions of wide application" which do not fall within the limits of any particular section. There is, however, no reason to

suppose that the reports already published do not represent the final word of the Committee on the subjects to which they relate.

In these circumstances it is fair to assume that in regard to milk, milk products, fruit, vegetables, meat, poultry, and eggs the public are in possession of all the facts the Committee have collected and the conclusions to which they have been led. These commodities include all those which have aroused the interest, and, in many cases, the indignation, of the public, and of which the prices and distribution are most obviously open to criticism. The Committee state that there have been no previous inquiries into the methods of distribution of milk, milk products, fruit and vegetables. This may be true in the sense that no official body has been appointed for this specific purpose, although at least two Royal Commissions on Agriculture have included these subjects within their inquiries. On the subject of meat distribution, there has been more than one official inquiry recently. The recommendations made by the recent Departmental Committees have, it is perhaps unnecessary to say, received no attention from the Government, although they were not entirely lacking in constructiveness.

The most obvious criticism of the report of the present Committee is that while they marshal, very clearly, the facts and reveal widespread abuses by which the public are more or less injured or defrauded, they content themselves with a series of mild protests against the practices they describe and of exhortations addressed to those who practise them. Constructive suggestions of legislative or administrative action to mitigate the evils which are elaborately exposed are very few.

In a complex civilised community, for the most part concentrated in large aggregations of population, the distribution of food involves a highly organised machinery, and distributors perform an important, and indeed indispensable, function. It is true that in a small degree direct contact between producer and consumer—such as is the common rule in primitive communities—is possible. So far as it is practicable in this country, it is made so by the existence of the very complete distributive machinery of the Post Office and the railways—the one State-controlled and the other State-regulated. The public have a right to demand that the facilities thus provided for enabling the consumer to deal directly with the producer should be extended to the utmost limits. But, however greatly these facilities may be developed, they can only affect an infinitesimal fraction of the regular food supplies of the people. The main problem remains, and intermediate agencies for collection from thousands of producers and distribution to millions of consumers are essential. The elimination of the middleman is a phrase which may serve for platform purposes, but as a practical proposition it is not possible, and if it were possible it would not serve the public interest.

If it is frankly recognised that middlemen—to use the convenient term for those who undertake the collection and distribution of food—perform a necessary and useful function, the ground is cleared for a consideration of the manner in which they perform it. The nature of their business undoubtedly offers opportunities for unfair and illegitimate dealings. Being largely speculative, their margins must be sufficient to cover risks and losses, and the temptation to take undue advantage of their superior knowledge of market conditions is great. So fearful were our forefathers of the power of middlemen to injure the public, that they harshly repressed, under severe penalties, what were then termed forestalling, engrossing, and regrating, which, in effect, were the necessary operations of a dealer in produce. The increasing complexity of life made these prohibitions absurd, and by general consent they were ignored without being formally repealed. But the principle that it is a proper function of the State to protect the people from exploitation is as sound in modern as in mediæval times. The task of statesmanship nowadays is to apply the principle to the commercial conditions of the twentieth century. It is by no means a simple one. In commercial matters it is extremely easy to do more harm than good by legislation or regulation. The best-laid schemes are very apt to miscarry, and the most admirable intentions of the Legislature commonly pave the road to a complete failure of its object.

It is already evident that in approaching this task—assuming the existence of a Government willing to undertake it—little guidance or assistance is to be looked for from this Committee. Their labours have not been wholly in vain. Their reports make a useful contribution towards a diagnosis of the defects of the present methods of distribution. But they have shrunk from probing too deeply and have been reluctant, or perhaps unable, to prescribe effective remedies.

They have so far discharged the duty entrusted to them with conscientious attention to details. In the three reports already published they have set out, paragraph by paragraph, more than 200 "conclusions and recommendations," and have done so impartially, giving no greater emphasis to one than to another. They have, in short, examined the trees with meticulous care, but they are in danger of overlooking the wood.

CONDITIONS IN BRAZIL.

(BY A CORRESPONDENT.)

CANDOUR has usually distinguished official utterances of Brazilian statesmen when dealing with the public finances of the country. Brazil's present financial status has been clearly explained. More, perhaps, than any South American State, it can show within the past two decades an industrial and commercial development as remarkable as it is general. Whereas in former times the country depended for its revenues almost entirely upon the value of its coffee, rubber and sugar crops, it contains to-day numerous native industries which contribute their quota to the economic resources of the State.

The cultivation of the coffee berry and the sugar cane must always remain of predominant importance, contributing, as they do, in some States of the Union (as sugar in Sao Paulo), about 90 per cent. of the total exports. For last year, however, the exports of Brazilian coffee, while still the most important of the country's products, displayed but a slight increase over those of the previous year, the figures being 12,673,000 bags in 1922, against 12,369,000 bags in 1921. The meat industry has likewise manifested a striking advancement. To-day, there are in operation 16 well-equipped packing houses, with a total declared capital of 187,000 contos of reis, whereas little over 10 years ago there were none. Even the coal industry, which derived much advantage from the Session of the Brazilian Coal Congress that took place in Rio de Janeiro during the latter part of last year, is continually increasing the domestic production. It is not without significance that the first Brazilian coal-mining company was formed (in 1872) in London. The estimated output at the present time of Brazil's almost untouched coal-fields exceeds 415,000 metric tons annually, equivalent to not quite one-half of the foreign imports in 1921, but nearly one-third of the national consumption in that year. A conservative estimate of the productive capacity of the few mines in operation shows an excess over total imports for the current year, though these surpassed any past period. It should, however, be remembered that the greater part of this production is consumed in Southern Brazil (Rio Grande do Sul and Santa Catharina), where the chief producing mines are situated, and that foreign imports of coal must continue for some years to come, if only for the reason that Brazilian coal is not at present found suitable for imported boilers, having a greater ash and sulphur content than the foreign product. In this respect it is interesting to recall that certain local experts have declared Brazilian coal to be of "the finest quality," though typical analyses quoted by the Imperial Mineral Resources Bureau show 30 per cent. ash, 8 per cent. moisture, 25 per cent. of volatile matter, and 36 per cent. carbon.

Then there is cotton, grown in nearly all States of the Union, chiefly, however, Sao Paulo, Ceará, Parahyba and Maranhão. Brazil has approximately 7,500,000 acres of land on which cotton could be profitably cultivated, and the Government is making efforts to assist cotton-farmers

in many ways. But for lack of the necessary capital, this assistance would have been given to a more liberal extent. For the period 1921-1922, 1,551,160 acres of land were under cultivation, producing, according to the Cotton Development Department of the Ministry of Agriculture, 306,250,000 kilos of unginned cotton, 92,000,000 kilos of ginned cotton, and 215,170,000 kilos of seed. To arrive at an accurate amount of the production, however, it would be necessary to allow 20 per cent. upon these figures for the cotton retained in the interior. Exports of the raw material increased from 19,667 tons in 1920 to 33,947 tons in 1921. The principal cities engaged in the manufacture of cotton goods are Rio de Janeiro, Sao Paulo, Petropolis, Sorocoba, Maranhão, Pernambuco and Bahia. The number of mills exceed 240, while in 1905 there were but 110 and in 1885 only 49; there are over 1,200,000 spindles, 36,000 looms and 60,000 operatives engaged in factories which use considerably over 40,000 h.p., and turn out something like 320 million metres of cloth annually. Improvements in wool-production are similarly noticeable, while sugar exports for last year increased from 172,094 tons to 250,111 tons. Rubber, over the same period, reached an export total of 19,855 tons, against 17,439 tons.

With all these and other productive advantages, Brazil nevertheless shows a reduction in its favourable balance of trade of no less than 32 per cent. when expressed in milreis, and of 70 per cent. when expressed in sterling. These conditions are attributable to the fall in exchange and the higher prices, especially of imported goods, and reflect in a remarkable manner the extent to which the balance of trade of a country can suffer by an aggravation of economic depression on account of the exchange.

Cautious critics profess to view in the present industrial activities of Brazil a sign of "impending misfortune." According to their view, the fall in exchange, while having given national industries the opportunity to manufacture almost every kind of thing, has resulted in a rapidity of output that is bound to have serious reactionary effects. These, when they do come, and when exchange touches 90 or 100, thus occasioning foreign competition again to be reckoned with, will precipitate a crash with far-reaching consequences. This calamity, they think, might possibly be averted were local manufacturers to reduce their working costs; this, however, seems hardly likely in view of the high cost of living and increasingly heavy taxes.

Foreign observers have likewise taken note that Brazil has laid out a programme to manufacture practically every class of article at present imported; and, with a view to protecting its own industries, has imposed heavy and discriminating duties against foreign manufactures. Brazil to-day can certainly produce, to the exclusion of similar imports, flax, wool, cotton, silk, hemp, jute—all of the finest quality—and treat the same in its own cotton mills distributed fairly well over the entire country. Similarly, sugar, confectionery, biscuits, and fruit-productions, as well as rubber products, motor tyres, and many descriptions of engineering manufactures, including sugar and agricultural machinery, are now made locally. This process of becoming commercially independent has been going on for a good many years. As far back as 1914 there were already 2,300 industrial establishments, employing 124,000 hands, capitalised at £32,500,000, and producing annually goods to the value of £37,330,000. During the last ten years an increase upon these figures has been witnessed.

With all this productive capacity to its credit the financial situation of the country, as even its warmest advocates admit, is decidedly unfavourable, and while it is by no means without hope of amendment, the position, as revealed, cannot but prove disquieting even to the least pessimistic. All the extraordinary sums represented by recent external loans of \$75,000,000 (U.S. currency), £9,000,000 (sterling), and the large emission of *apólices* have been totally expended, there being nothing left either to continue the services already initiated or to commence new and necessary services. The estimated revenues of 1922, although not even yet finally adjusted with the expenditures, have shown in the results achieved so far a wide discrepancy, receipts reaching 74,266:941\$376 gold and 568,944:149\$799 paper, against 92,276:320\$ gold

and 727,673,000\$ paper anticipated, a difference of 18,009:378\$624 gold and 158,728:850\$799 paper. Under the most advantageous circumstances, therefore, the present year is bound to result in a still larger deficit.

The favourable factors are the successful carrying out of certain fiscal operations, such as consolidation of the floating debt, balancing of the budget, and introduction of a complete banking organisation with a central bank of emission and credit institutions, which, combined, may serve to bring about a more wholesome and permanent economic development. If honest and energetic administration can help to bring about improvement, it will be met with during the Presidency of Dr Arturo Bernardes, who has devoted, and is devoting, all his great administrative ability to the task of grappling with an exceptionally grave economic situation.

THE COVENANT OF THE LEAGUE.

THE clauses of the Covenant of the League of Nations, embodied in the Treaties of Versailles (Germany), St. Germain (Austria), Trianon (Hungary), and Neuilly (Bulgaria), which bear upon the present crisis are as follows:—

ARTICLE 10.—The members of the League undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League. In case of any such aggression, or in case of any threat or danger of such aggression, the Council shall advise upon the means by which this obligation shall be fulfilled.

ARTICLE 11.—Any war or threat of war, whether immediately affecting any of the members of the League or not, is hereby declared a matter of concern to the whole League, and the League shall take any action that may be deemed wise and effectual to safeguard the peace of nations. In case any such emergency should arise, the Secretary-General shall, on the request of any member of the League, forthwith summon a meeting of the Council.

It is also declared to be the friendly right of each member of the League to bring to the attention of the Assembly or of the Council any circumstance whatever affecting international relations which threatens to disturb international peace or the good understanding between nations upon which peace depends.

ARTICLE 12.—The members of the League agree that if there should arise between them any dispute likely to lead to a rupture, they will submit the matter either to arbitration or to inquiry by the Council, and they agree in no case to resort to war until three months after the award by the arbitrators or the report by the Council.

In any case, under this Article, the award of the arbitrators shall be made within a reasonable time, and the report of the Council shall be made within six months after the submission of the dispute.

ARTICLE 13 lays down rules for submitting disputes to arbitration, as distinct from conciliation by the Council or the Assembly.

ARTICLE 14 relates to the establishment of the Permanent Court of International Justice.

ARTICLE 15.—If there should arise between members of the League any dispute likely to lead to a rupture, which is not submitted to arbitration in accordance with Article 13, the members of the League agree that they will submit the matter to the Council. Any party to the dispute may effect such submission by giving notice of the existence of the dispute to the Secretary-General, who will make all necessary arrangements for a full investigation and consideration thereof.

For this purpose the parties to the dispute will communicate to the Secretary-General, as promptly as possible, statements of their case, with all the relevant facts and papers, and the Council may forthwith direct the publication thereof.

The Council shall endeavour to effect a settlement of the dispute, and if such efforts are successful, a statement shall be made public giving such facts and explanations regarding the dispute and the terms of settlement thereof as the Council may deem appropriate.

If the dispute is not thus settled, the Council, either unanimously or by a majority vote, shall make and publish a report containing a statement of the facts of the dispute and the recommendations which are deemed just and proper in regard thereto.

Any member of the League represented on the Council may make public a statement of the facts of the dispute and of its conclusions regarding the same.

If a report by the Council is unanimously agreed to by the members thereof other than the representatives of one or more of the parties to the dispute, the members of the League agree that they will not go to war with any party to the dispute which complies with the recommendations of the report.

If the Council fails to reach a report which is unanimously agreed to by the members thereof, other than the representatives of one or more of the parties to the dispute, the members of the League reserve to themselves the right to take such action as they shall consider necessary for the maintenance of right and justice.

If the dispute between the parties is claimed by one of them, and is found by the Council, to arise out of a matter which by international law is solely within the domestic jurisdiction of that party, the Council shall so report, and shall make no recommendation as to its settlement.

The Council may in any case under this Article refer the dispute

to the Assembly. The dispute shall be so referred at the request of either party to the dispute, provided that such request be made within 14 days after the submission of the dispute to the Council.

In any case referred to the Assembly, all the provisions of this Article, and of Article 12 relating to the action and powers of the Council, shall apply to the action and powers of the Assembly, provided that a report made by the Assembly, if concurred in by the representatives of those members of the League represented on the Council and of a majority of the other members of the League, exclusive in each case of the representatives of the parties to the dispute, shall have the same force as a report by the Council concurred in by all the members thereof other than the representatives of one or more of the parties to the dispute.

ARTICLE 16.—Should any member of the League resort to war in disregard of its covenants under Articles 12, 13, or 15, it shall *ipso facto* be deemed to have committed an act of war against all other members of the League, which hereby undertake immediately to subject it to the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and the nationals of the covenant-breaking State, and the prevention of all financial, commercial, or personal intercourse between the nationals of the covenant-breaking State and the nationals of any other State, whether a member of the League or not.

It shall be the duty of the Council in such case to recommend to the several Governments concerned what effective military, naval, or air force the members of the League shall severally contribute to the armed forces to be used to protect the covenants of the League.

The members of the League agree, further, that they will mutually support one another in the financial and economic measures which are taken under this Article, in order to minimise the loss and inconvenience resulting from the above measures, and they will mutually support one another in resisting any special measures aimed at one of their number by the covenant-breaking State, and that they will take the necessary steps to afford passage through their territory to the forces of any of the members of the League which are co-operating to protect the covenants of the League.

Any member of the League which has violated any covenant of the League may be declared to be no longer a member of the League by a vote of the Council concurred in by the representatives of all the other members of the League represented thereon.

It is to be noted that a member is not bound to accept a decision of the Council, but must postpone warlike action for three months after the decision is given. It is, however, clear that the fact that a dispute has been reported on under Article 15 does not release other members from their covenants in regard to the disputants, but that in the event of aggression, even after delay, they would be bound to enforce their undertakings under Article 10, since a breach of that Article would have been committed by the aggressor. It is also to be noted that the powers of the Council as to military or naval action to be taken under Article 16 are advisory only. Finally, a member can only withdraw from the League and from its undertakings under the Covenant by giving two years' notice, and then only "provided that all its international obligations and all its obligations under this Covenant shall have been fulfilled at the time of its withdrawal."

Notes of the Week.

The Japanese Disaster and the Insurance Situation.—

Some time must elapse before the losses falling upon the marine and fire insurance markets in this country are definitely known. But it is already clear that they will be small in comparison with the tremendous claims which resulted from the earthquake and fire in San Francisco of 17 years ago. At San Francisco the British and American fire offices had not in their policies excluded liability for conflagrations caused by earthquake shocks. Just as at Tokyo and Yokohama gas and water mains were broken, the escaping gas fed the flames, and there was no water available to extinguish them. The fire insurance losses of San Francisco amounted in all to about 47 millions sterling, of which the British companies paid 13 millions. As the result of this disaster great care was taken, especially in countries like Japan, where earthquake shocks are a frequent experience, to exclude in ordinary fire insurance policies liability for the direct and indirect results of earthquakes. In the Tokyo and Yokohama disasters, the successive earthquake shocks appear to have extended over 24 hours, and the direct connection between the shocks and the fires to have been established beyond doubt. Therefore, as regards all ordinary fire insurance policies on buildings and contents, there will be no liability for insurances granted by branches of British offices, or for insurances accepted by British companies under treaty with

Japanese offices. There will, however, be some considerable claims in respect of property specially insured under contracts in which the earthquake liability was accepted in return for an extra premium. It is known, for example, that the Grand Hotel at Yokohama and the Yokohama United Club were insured in this way against earthquake and fire risks. An extra premium of 1 per cent. was paid for the special risks. It is anticipated that the British fire insurance companies and underwriters at Lloyd's may have to meet about £250,000 in claims on these specific insurances which included the earthquake hazard. Perhaps the marine underwriters will, when all is known, find that they are liable for a considerable amount. Fortunately for them there was no large amount of shipping in harbour exposed to the seismic waves which followed the earthquake shocks. Messrs Holt and Co.'s steamers trading in the area affected, and the P. and O. liner *Dongola* are reported to be safe. There will be a loss of goods in lighters and other small craft, but not apparently of great moment. On the other hand, the destruction by fire of goods in warehouses ashore—upon which marine insurance policies were in force—must cause serious claims, especially as the earthquake hazard in the marine policies will not have been excluded. In a destruction of this magnitude losses will be very difficult to ascertain and to prove, and it may be many months before the marine underwriters at Lloyd's and among the companies will know the full extent of their liabilities.

The Irish Elections.—Our Dublin correspondent writes:—For an accurate appreciation of the result of the General Election, it is well to consider a few summarised figures. They are taken from an article, specially contributed by a Proportional Representation expert, in the *Irish Times*, and they were compiled as far as possible from the official result sheets:—

BOROUGHES and COUNTIES—TOTAL FIGURES.

Party.	Votes.	Seats Obtained.	Seats in Proportion to Votes.
Government	411,074	60	57.3
Anti-Treaty	290,001	44	40.4
Labour, including Independent Labour	131,623	15	18.3
Farmers	129,247	15	18.0
Business and Independents	92,859	13	13.0
Total	1,054,804	147	147.0

The total membership of the Dail is 153, and the six seats omitted from the foregoing table are all held by supporters of the Government—three returned unopposed for Trinity College, Dublin, and three as the result of a contested election in the National University. The Treaty and the Constitution are supported, therefore, by a total majority on the principal issue of 109 to 44, or roughly 2½ to 1. And this result emerges from a system which gives—and the figures illustrate it—a disproportionately large influence to minorities. Majority supporters are mulcted of the value of their second preference votes to the extent and in the ratio of the successful candidate's total poll to his surplus over the necessary quota, while minority supporters of the most unsuccessful candidates enjoy second preference votes of undiminished value. The main result is unmistakable. The General Election, conducted without violence or popular excitement, has pronounced strongly in favour of political sobriety and national stability. The Business Men's candidates did fairly well in the recent elections in the City and County of Dublin, and two of their number were elected—both prominent members of the Chamber of Commerce, though Mr Shanks, the veteran president of the Chamber, who initiated the move, was unsuccessful. The greatest issue at the moment that touches the welfare of Dublin, and indeed of the Free State, is the matter of wages. Wages are at a level which forbids successful competition with others, and which in some cases forbids even remunerative production for direct consumption. But in Dublin high rates, high rents, and high prices of articles in the poor man's budget are the prompt answer to any attempt to reduce wages. High rates and high rents may be matters for the Legislature; but high prices of the common, everyday commodities can be cured by the business community itself if it will have the courage and energy to put its own

house in order. It is not necessary to indicate exact methods, nor the exact vices of the present system. But unquestionably there is too great a disparity between the big market wholesale prices and the prices charged in the little retail shops in the back streets for fuel, food, and clothing. Mr Cosgrave, in a recent speech, stated that he had had little difficulty in obtaining financial accommodation from the Irish banks. He mentioned two sums of £3,000,000—if the reports of his speech be accurate—as having been made available. The Exchequer returns to September 1st instant, however, show no larger borrowing than £814,000—raised by Irish Free State bills—so that the Government is in no immediate need of cash. About £750,000 is about to be paid out in compensation awards, which should give a much-needed stimulus to employment. The general revenue is coming in well. From April 1st to September 1st £12,800,565 was collected, against the corresponding period for last year (plus one day) at £9,654,076.

The Season Ticket Agitation.—Much excitement and alarm has been aroused among the army of daily workers, particularly in the London area, who travel from home to their business by train, in consequence of the new standard schedule for season ticket rates which has been lodged with the Railway Rates Tribunal by the companies. If these rates are put into force they will mean for a considerable number of persons an increase in their season ticket rates, but they will equally mean a reduction for others. Broadly speaking, they carry out the intention of the Act of 1921 to standardise railway charges of all kinds, and any process to simplify the railway rates necessarily means that some persons will pay more and some less. Whether this is a sound policy or not is a matter on which much may be said on both sides. A great variety of charges has come into existence throughout the country because the railway system has been built into the growing organism of national life. Low fares have been introduced at a particular point to develop a growing town, or special rates given to create an industry at a particular spot. If when the development has taken place the rates are put up, the calculations of those who have sunk their capital in a house or business are upset. On the other hand, if particular branches of traffic are continued indefinitely on a basis which does not cover their fair share of the standing charges, other classes of traffic have to bear the burden of a higher charge than seems reasonable. On the balance of these conflicting claims the Government decided that there should be some measure of uniformity introduced, and in the Bill as drafted the standard charges were to be universally applicable, and exceptional rates only granted by special permission of the Rates Tribunal on the grounds that it was the business of the regulating authorities to protect less favoured classes of traffic. The coal, iron and steel, and heavy traffic businesses have been completely built up on exceptional rates, and, being alive to the danger, they fought for, and ultimately secured, through a defeat of the Minister in Committee in the House, concessions, first that exceptional rates agreed on between the railways and the traders should remain, and, second, that when the new Bill came into force traders would be entitled to lodge their existing exceptional rates, which will automatically continue unless the companies can show causes to the contrary. In other words, the onus of change from existing exceptional rates is on the railway company. Now, most season tickets are in the nature of exceptional fares, but the season-ticket public were at the time not sufficiently alive to their interests and have omitted to get similar concessions. We may also venture to expect that, although the provisions we have described apply to all goods, the smaller trader will not be alive to the necessity of lodging his exceptional rates, or perhaps even in a position to draw up a schedule even if he were. And, therefore, when the new goods schedules are announced we shall probably have precisely the same outcry from the small trader as we have to-day from the season-ticket holder. From the information at present available we cannot tell on what proportions the companies have drawn up their schedules. If they are able to show to the tribunal that the revenue anticipated from season tickets as a whole will remain as at present, they may succeed in diverting the attack by forcing to the front

the opposition of interests of those who will benefit and those who will be more heavily charged. But from our knowledge of railway-company methods we suspect that the companies, in filing their new rates, will have left themselves a comfortable margin in hand. Remembering the history of rating controversies in the past, they may not unreasonably fear that in the end they may be forced to lower the rates they propose to reduce, and be refused permission to make adequate provision in those which are at present below the standard.

South Wales and the American Coal Strike.—The anthracite strike in the United States has had no effect upon the Cardiff coal market, writes our Cardiff correspondent. The United States produces approximately 100,000,000 tons of anthracite coal per annum. The production of anthracite coal in South Wales—the only coalfield in Europe where it is mined in any considerable quantity—is only about 4,500,000 tons per annum, and that output is normally absorbed in well-established home and foreign markets. There are two strong reasons why the American strike, however long it may continue, will not lead to the shipments to the United States of anything like the quantity that was shipped in the third quarter of last year as the result of the strike in the American bituminous collieries. One of these is that the supply of South Wales anthracite is too small and the productive power of the anthracite collieries too inelastic, and the other is that even an American demand for a small quantity would drive prices up to a prohibitive level. Except for certain special services, bituminous coal can be quickly substituted for anthracite coal, and once the movement of prices destroys the relative values to the consumer of bituminous and anthracite coals, the former coal will displace the other, and in the production of bituminous coal the capacity of the States is almost unlimited. For these reasons no active demand is expected from the States for anthracite coals for some time to come.

The Fall in Japanese Securities.—We set out below the daily record of movements in the principal Japanese securities quoted on the London Stock Exchange since the news of the earthquake was received:—

	Aug. 31, 1923.	Sept. 4, 1923.	Sept. 5, 1923.	Sept. 6, 1923.	Sept. 7, 1923.	Fall on Week.
Japanese Govt., 4% Ster. Loan, 1899	70	65½	61½	63½	64	6
" " 4% " 1905	88½	88	86½	86½	86½	2
" " 4½% " 1905	102	101	100	101	102	—
" " 5% " 1907	89	86	80½	82	83½	5½
" " 4% " 1910	69	65½	61½	62½	63	6
South Manchurian Railway, 5%, 1913-48	87½	85	83	84	84½	3
City of Nagoya 5% Bonds	89	87½	75	75	78	11
City of Osaka 5% Ster. Bonds	91	89	89	89	89	2
City of Tokio 5% Ster. Bds., 1916-36	89½	82½	82½	84½	84½	4½
City of Tokio 5% Loan, 1912	87	72½	72½	74½	74½	11
City of Yokohama 5%, 1924-54	88½	82½	75	75	75	23½
Tokyo Electric 6% Bonds	1½ prem.	1½ dis.	13 dis.	11 dis.	10½ dis.	11½

There has been some recovery from the lowest point, buyers having been attracted on Thursday by the tempting prices reached on Wednesday. It will be observed that while the 4 and 4½ per cents. of 1905, which are redeemable in 1931 and 1925 respectively, have fallen only slightly, a much heavier decline has been registered by the long-dated Government loans, the dates of redemption of which vary from 1947 to 1970. The South Manchurian Railway 5 per cents., of which £4 millions were issued in July at 88, are repayable in 1948, but the company has the right to redeem at par after 1933. Principal and interest are unconditionally guaranteed by the Japanese Government. The City of Osaka bonds have been little affected, as the city is outside the earthquake area, but the Tokyo and Yokohama stocks have fallen heavily. The Tokyo Electric Light Company 6 per cent. bonds, issued here at the end of June at 94, have only £64 paid, and stood at a premium until the end of last week. At one time they were written down to over 20 discount, but rallied from the worst on the news that the physical damage to the company's property was not so severe as at one time feared.

National Savings Certificates.—The Treasury has announced that, as from October 1st next, a new series of National Savings Certificates, bearing a lower rate of interest, will be placed on sale. The purchase price will be 16s, as before, interest accruing at the rate of 3d for the first year, and 3d. for every complete period of four months thereafter, until the tenth anniversary of the certificate's issue, when a bonus of 1s will be added, bringing the maturity value to £1 4s. The average compound interest (tax free) on a certificate of the latest series, held to maturity, will therefore be £4 2s 9d per cent., as compared with £5 5s 0d per cent. on the first series, and £4 19s 6d per cent. on the second, which was inaugurated on April 1, 1922. The maximum holding of certificates for any individual remains 500, however made up. The Treasury appears to have acted on the recommendation of the Montagu Committee that the interest on this security should be reviewed from time to time in accordance with prevailing conditions. Even at the reduced rate, the security at the back of the certificate is in itself sufficient to render it an ideal instrument for tapping the small investor's savings.

American Cotton Crop.—Our Manchester correspondent writes:—The Bureau of Agriculture of the United States Government has given the condition of the cotton crop for 1923-24 on August 25th as 54.1 per cent. The report which was published at the end of last week was below expectations, as in trade circles the figure of about 56.5 per cent. was anticipated. A month earlier the condition was 67.2 per cent., and at the end of August last year 57 per cent. On the basis of this statement the Bureau estimates that on a yield per acre of 134 lbs, the crop will be 10,788,000 bales, exclusive of linters, against 11,516,000 bales, according to the condition at the end of July. On the unfavourable news, prices advanced, but since then there has been a reaction, chiefly as a result of bearish influences, due to the political crisis in the Near East and the probability of a reduced consumption in Japan during the next 12 months. From the point of view of users, however, the situation is far from satisfactory. With a growth this season of 11,000,000 bales, and a probable consumption of 12,000,000 bales, stocks will again have to be called upon to meet the wants of spinners, and it is feared that the strong statistical position which may develop next summer will bring about higher values. It is expected that during the next few weeks, growers in the United States will want to sell a large proportion of the crop, and if action of this kind is taken, there may be a temporary downward movement.

Freight and Shipping Outlook.—The long period of dulness and depression in the freight markets is now beginning to lift a little, and prospects for an autumn revival are rather more promising. The withdrawal of the Greek tonnage from the market, the coal strike in the United States, the improving political situation, and the possibility of foodstuffs and raw material being required in large quantities for shipment to Japan, are points in favour of the British merchant marine, but there is still a big surplus of unemployed tonnage about. The outward coal trade is well engaged, and higher rates have been paid from South Wales to the Mediterranean, with business done also to the Norfolk-Portland range. In the home-ward markets the River Plate section has come up from 18s per ton, and steamers able to show October readiness have been taken up at 21s and a little over. For nitrates, 27s 6d to 28s 9d is offering for November-December loading to the Continent, and a fair amount of parcel business has been concluded. North America has been quiet both for grain and coal, but lumber should soon want tonnage from the North Pacific for Japan. India has paid 22s 6d on the deadweight to the United Kingdom-Continent, and wheat from Sydney, N.S.W., has been fixed at 22s per ton for Shanghai, with more steamers wanted. Maize from the South African ports has taken several steamers for October-November loading at 25s to 26s 3d per ton. Ore freights are still easy, with few orders about for early discharge, but a revival is expected. Later in the month all markets should show a better undertone, and charterers

must be prepared to meet shipowners a little on the score of rates, which have been very weak for several months past.

The Oil Price War in America.—A correspondent writes:—It is rare to find State officials arbitrarily enforcing the economic law of supply and demand. Yet this is what has been happening recently in the United States in regard to the gasoline business. The story is remarkable enough to bear repetition. Governor McMaster, of South Dakota, had been aroused, like many others, by the fact that the over-production of gasoline by some refineries in Chicago had led to a wholesale price being quoted of 9 cents a gallon, while the retail price remained unchanged at over 20 cents a gallon. He called upon the oil companies and demanded, in the name of the law of supply and demand, a reduction in their retail price, which in the case of Standard Oil was 22 cents a gallon. The "independents" met his request with a 4 cents cut, but Standard Oil refused. Immediately Governor McMaster purchased 20 tank cars of gasoline in the open market and ordered the State Highway Commission to sell it at 16 cents a gallon. Now the only facilities which South Dakota had for retail distribution were a single warehouse with a storage tank and a pump. But the *coup d'état* succeeded. A few tank cars of gasoline and a single pump were sufficient to cause the Standard Oil Company of Indiana to cut its prices, first in South Dakota and then in all its territory in ten other States, to 15½ cents a gallon. David had overcome Goliath. Other Davids arose. State Governors became oil merchants. "independents" reduced prices, and Standard Oil took severe reprisals. Meanwhile the consuming public, buying its gasoline at an average of about 17 cents a gallon as against 29 cents in 1920, is reckoned to be saving \$2,500,000 daily. Now that Governor McMaster has given another interpretation of the law of supply and demand by agreeing with the "independents" that a price of 20 cents a gallon would return a fair margin of profit, the price war may be expected to come to an end. The folly of these internecine trade wars lies in the popular appeal they make for Governments to interfere in the public interest. It appears that Congress, when it meets in December, is to be invited to consider some form of supervision of the oil industry, partly on the ground that the dominance of Standard Oil constitutes a dangerous monopoly, partly on the ground that the public is entitled to some form of stabilisation of oil prices. Of course, monopoly makes for stabilisation; but the public wants stabilisation of prices on lower levels. Senator La Follette is determined, it is said, on carrying through some restrictive oil regulations. If that be so, Standard Oil has been merely playing into his hands, and the oil industry is likely to be politically as well as economically disturbed.

The Rise in Tin.—The tin market, as foreshadowed in the *Economist* on August 11th, maintained during August a hard undertone, despite all the bearish talk in certain quarters, and the market at the close of last month had a very firm appearance at about £192 cash and £193 for forward standard. Early this week the tone became strong, with good buying on speculative account, coupled also with a demand from trade users. This carried the upward movement still further, and on Wednesday £200 was paid in the open market for the three months' position. The metal is, of course, a long way from the high level reached about the middle of March, when £235 was touched, but it is nearly £25 better than the low level recorded early in July, and the healthy statistical position is bound to be a sustaining factor during the next few months. The world's visible supply of tin has declined by no less than 1,881 tons since August 1st, and now stands at 16,295 tons, against 21,233 tons a year ago. The Straits shipments for all August amounted to 4,990 tons, and the total supplies only came to 6,964 tons, as compared with 8,623 tons in July. The deliveries were on a good scale, America taking 5,510 tons and the United Kingdom 1,676 tons, against 5,305 tons and 764 tons respectively for the previous month. Taking the twelve months ended August 31st, the supplies of tin amounted

to 100,058 tons, against 84,180 tons in the previous year, and the deliveries were 104,996 tons, against 84,180 tons for the year ended August 31, 1922. Of this quantity the United States absorbed no fewer than 68,714 tons, against 18,910 tons for the United Kingdom and 12,210 tons for the Continent, excluding Holland. American buyers have been prominent again in the tin market this week, and there is every prospect of further sales being made for that account. The tinplate trade, both here and in the United States, is improving, and the meeting to be held next week to decide the matter of minimum prices, &c., should lead to further business, makers being confident that the autumn will witness a good revival. The tin stocks in the United Kingdom at 3,759 tons, as compared with 6,628 tons a year ago, are very moderate, and there is now every prospect of the metal remaining firm up to the close of the year and even going better. With tin round about £200, most mining companies can do well, and the outlook in this respect is very encouraging, seeing that tin users everywhere are very lightly covered considering their potential requirements for the autumn trade.

The Tin Share Revival.—Our mining correspondent writes: Whether the recent recovery in the price of tin is premature or no remains to be seen—it is certainly somewhat in advance of the usual autumn movement anticipatory of the demand for the canning industry. However, the metal now stands some £15 above the level ruling at the end of July. The higher quotation has not prevailed long enough to exert any very marked influence upon the earnings of tin-producing companies, but the shares of the latter have been marked up in anticipation of "benefits to come." Of course, tin at anything like £200 per ton means very substantial profits on the part of the Far-Eastern dredging concerns, which are able to work at a low cost ratio, and a reasonable margin in the case of undertakings less fortunately situated in this respect. Appended is a tabulation of the monthly profits for the current year of each of the Malayan companies which publishes its returns on a financial basis:—

Company.	Profits.							
	Jan.	Feb.	Mar.	April	May	June	July	Aug.
Gopeng.....	£ 5,660	£ 5,850	£ 5,470	£ 5,310	£ 5,660	£ 4,560	£ 5,390	£ 5,770
Idris.....	360	460	540	1,170	1,400	1,100	790	820
Kinta.....	2,180	2,250	2,660	2,180	2,360	1,580	2,040	1,520
Kramat.....	1,260	1,060	1,580	1,560	1,390	1,420	2,390	1,650
Lahat.....	1,610	1,700	2,400	1,810	1,460	830	1,080	1,196
Malayan.....	1,620	3,400	6,801	7,470	4,310	4,810	4,410	3,060
Pengkalan.....	1,860	2,060	2,400	3,180	3,410	2,950	2,570	3,050
Rambutan.....	740	1,050	1,150	750	910	840	940	940
Southern Perak.....	2,860	1,870	3,620	1,940	2,600	820	580	1,050
Sungei Besi.....	2,320	2,820	3,550	3,000	2,320	2,370	1,550	2,430
Tekka.....	2,970	3,670	3,550	3,470	2,140	2,000	2,150	2,120
Tekka-Taiping.....	2,250	3,220	4,320	5,660	6,220	6,090	6,300	4,550
Tronoh.....	1,510	2,180	2,970	2,370	2,290	2,840	2,600	2,550

It will be observed that most of the profits for August reflect in a certain degree the appreciation in the price of the product; where such is not the case the explanation consists in a partial stoppage of the machinery or some other temporary hindrance. Last month the Southern Perak scored a substantial improvement, the dredge having passed through the stretch of poor ground responsible for the greatly reduced earnings of the past few months. The company has lately paid a second dividend of 1s per share. Appended is a schedule of the dividends declared during the current year by the Far-Eastern group of undertakings, whether included in the foregoing profits table or no:—

Gopeng Consolidated.....	9d March; 9d June.
Idris Hydraulic.....	6d July.
Kinta.....	6d March.
Kramat Pulai.....	1s July.
Lahat.....	1s May.
Malayan.....	1s April; 1s July.
Pari.....	3d April (5s share).
Pengkalan.....	1s March; 1s June.
Rambutan.....	8d April; 8d July.
Siamese Synd.....	2s January; 2s July.
Southern Perak.....	1s April; 1s July.
Sungei Besi.....	1s March; 1s June.
Tekka.....	4d March, May, August.
Tekka-Taiping.....	3d March, June, July.
Tronoh.....	1s March; 1s June.

In most cases a substantial yield is shown upon the shares at current quotation. The only point is that investors require to keep an eye upon the metal as well as upon the share market.

Argentine Iron and Steel Reorganisation.—Full details of the scheme for the reorganisation of the Argentine Iron and Steel Company, Limited, are now available. These reveal a total deficiency of £421,230. To meet these losses it is proposed, in the first place, to bring the share capital into due relationship with the present value of the assets. The £1 preference shares are to be reduced to 13s and the 12s ordinary shares to 1s 4d. Following the adoption of the scheme, the preference shares will be divided into one preference share of 12s and one share of 1s, the latter to rank as an ordinary share. The 1s 4d ordinary shares will be consolidated into 1s shares. If all goes well, there would be an issued preference and ordinary capital of £365,016, as compared with the existing total of £860,138. The principal item amongst the assets, "land, buildings, plant, &c.," which was valued in the last balance-sheet at £816,017, will now stand at £560,259; and the valuation of goodwill will be reduced from £146,893 to £80,000. The total of the new balance-sheet will be £1,258,736, against the previous total of £1,940,479. In the second place, to provide for the continuation of the business more capital is needed, and it is therefore proposed to create prior lien debentures for securing \$1,200,000 m/n, of which the English equivalent at par of exchange is £104,761. The following creditors have agreed to subscribe at par for these new debentures in proportion to the amounts of their respective debts, namely:—

British Bank of South America	£ 43,651
London and River Plate Bank	21,825
Anglo-South American Bank	122,222
New Italian Bank	21,825
Bank of the Province of Buenos Aires	21,825
Argentine National Bank	125,278
Consolidated Steel Corporation	62,440

The interest on the existing first mortgage debentures is to be raised from 6 per cent. to 7½ per cent. Unsecured creditors for sums in excess of \$150,000 will, it is proposed, accept in satisfaction of their indebtedness 7 per cent. second mortgage debentures, which will be repayable within three years. Unsecured creditors for sums of less than \$150,000 are to be paid in cash. This appears to be a reasonably fair arrangement, and it is hoped that preference and ordinary shareholders will fall in with the proposals.

French Army Leathers.—Our Bermondsey correspondent writes:—Some surprise has been caused in the leather trade by the receipt in England of the new regulations relating to the supply of leather for the French Army. The document is very long and technical, but the most important feature in it is the enactment that none but French leathers are to be used, either home or colonial, and that French materials are to be used for currying as far as possible. Some surprise is also felt that both sole, equipment, and boot leathers are to be tanned in the old style with bark liquors, the modern chrome tannage not being mentioned at all. Evidently the experience gained in the war is taken into consideration in this respect, but it is difficult to see how an army's requirements in leather could be obtained in a great and sudden emergency if the French regulations are to be carried out in their entirety. All sorts of stipulations are inserted in the regulations as to the length of time hides and skins shall be in process of tanning and currying, and various penalties are laid down for non-compliance. One leading expert in Bermondsey states that the regulations suggest a return to the old methods of leather manufacture, as such processes as de-liming are not to be carried out with organic acids, whilst no materials which will add to the weight of the leathers are to be used, the addition of barium chloride, glucose, or magnesium sulphate being specially mentioned. Even uncombined tannin is not to be fixed by the use of gelatine or tartar emetic, whilst only fish oils, moellon, degreas, and tallow are to be used in dressing army leathers. Leather is also to be a natural colour; in

short, the regulations appear to sweep away many processes which were regarded as progressive, and to re-instate methods which have become more or less obsolete. The result will probably be an improvement in the production, for it cannot be denied that the modern hastening of tanning has in many cases proved a drawback to the wearing qualities of all kinds of leather.

Railway Statistics.—We are glad to note that the Ministry of Transport's monthly railway statistics are beginning to appear at intervals of slightly less than one month, and are optimistic enough to hope that this rate of progress will be maintained so that the arrears may, in the course of a few months, be overtaken, and the figures appear with reasonable promptitude. The latest figures to be published are those for March. In the table below we show how traffic for the first three months of this year compares with that of the corresponding period of last year:—

	January.	February.	March.	Total.
Genl. merch. tons	+ 859,969	+ 421,237	+ 310,443	+ 1,591,649
Coal, coke, &c. "	+ 3,836,004	+ 2,330,136	+ 2,737,782	+ 8,903,922
Other minerals .. "	+ 1,986,827	+ 1,248,610	+ 1,457,831	+ 4,693,268
Total goods "	+ 6,682,800	+ 3,999,983	+ 4,506,056	+ 15,188,839
Freight train receipts £	+ 457,777	— 470,152	— 797,880	— 810,255
Passenger .. "	— 445,260	— 514,663	+ 115,476	— 844,547

Thus, while the tonnage carried during the first three months of this year increased by over 15 million tons, or 17½ per cent., freight train receipts declined by over £800,000, or 2¼ per cent., a result partly of the lowering of freight rates in the second half of 1922. Passenger fares, it will be recalled, were lowered from 75 per cent. to 50 per cent. above the pre-war level on January 1, 1923. How much of the decline in gross receipts has been met by a reduction in expenditure it is impossible to estimate, and until the railway companies see fit to publish weekly figures that show net receipts, and so make the returns of some value, we shall be left in the dark until the publication of the annual reports.

Oversea Correspondence.

LEAGUE OF NATIONS.—ARBITRATION AND THE RUHR—THE WORK OF THE FORTHCOMING ASSEMBLY.

(FROM A SPECIAL CORRESPONDENT.)

GENEVA, August 28.

THERE are some important considerations, which are sometimes overlooked, on the connection between the Covenant of the League of Nations and the legality of the Ruhr occupation, as well as the general problem itself. It is true that on a wide reading of the spirit of the Covenant the question of legality is obviously one which should be referred to the Hague Court, and there would be greater hope of a more reasonable settlement in general if the discussion were put on an international basis. But when considering questions of legality, the terms of the Covenant itself must be considered from the legal point of view, and its relations to the Treaty of Versailles must be clearly understood.

It is difficult on this basis to find a strict legal obligation on the part of France to consent to refer the legal question to arbitration or to the League. Article 13 of the Covenant has been frequently quoted within the last few weeks as binding, but it is a curious fact that the main conditional sentence is often omitted. This article deals with differences which may be suitable for reference to arbitration, and specially mentions disputes as to the interpreta-

tion of a treaty, as to any question of international law, and as to the existence of any fact which, if established, would constitute a breach of any international obligation, but its governing sentence is the opening one in which members of the League agree that "whenever any dispute shall arise between them which they recognise to be suitable for submission to arbitration and which cannot be satisfactorily settled by diplomacy, they will submit the whole subject-matter to arbitration." The question of the legality of the occupation of the Ruhr is without doubt one which should be "recognised as suitable" for such action, but the governing words are: "which they recognise to be suitable," and as France does not recognise it to be suitable—wrong though she may be—she is not breaking Article 13. Of course this does not prevent the British Government from taking action under Article 11 if she pleases, by bringing to the attention of the League circumstances "affecting international relations which threaten to disturb international peace, or that good international understanding between nations upon which peace depends." Here again such action would be an obviously reasonable interpretation of the general tone and spirit of the Covenant, but what is so frequently forgotten in dealing with these matters on a strictly legal basis is that the Treaty of Versailles, whatever may be said of it, is a duly signed and duly ratified agreement, giving particular rights and privileges, with special provisions that particular steps, which may in certain circumstances be permitted, are recognised by the signatories of the Treaty as not involving acts of war. If certain of these signatories prefer to insist upon the letter of their rights rather than to accept the broader spirit of the League, they are entitled to do so and nothing but persuasion is left.

That consideration, of course, swings round again to the question: Are they not exceeding their rights under the Treaty? But the Covenant does not say that reference to arbitration, to the Court, or to the League follows automatically. What might be possible within the strict letter of the Covenant, though it might not prove effectual, would be the invocation of Article 19, which says that the Assembly may, from time to time, advise "the consideration of international conditions whose continuance might endanger the peace of the world." That, again, is not an obligation on the Assembly, but it is a definite legal opportunity for any Member of the League to raise the whole subject on broad grounds. In short, the opportunity that is open to the British Government, or any other Government, in this particular case is to make an effort through the Assembly to get some organised expression of opinion by a free and public discussion to bring pressure to bear on France and Belgium. There are several ways in which the matter can be raised, but the League cannot impose a solution, except in the case of resort to war in specified conditions.

Taking the Assembly in general, the debate on the work of the Council may cover practically any subject of importance, and may give rise to any proposals. Among the specific items is the consideration of the applications for membership from the Irish Free State and from Abyssinia, and any other applications that may be received; the election of a judge to fill the vacancy on the Permanent Court of International Justice; the election of six non-permanent members of the Council; the consideration of a draft international convention on arbitration clauses in commercial contracts; detail recommendations concerning the equitable treatment of commerce; and a scheme (already approved by the Council) for placing the League health organisation on a permanent basis. There will probably be a good deal to be said about the Austrian reconstruction scheme which was set in motion during the last Assembly, and on the development of the plan for the settlement of the Greek refugee problem by means of an international loan. Plans for the Customs Formalities Conference and the General Transit Conference in the autumn will also be before the Assembly, together with a number of other subjects in various directions of international activity. There will be a determined effort behind the cover of economy to restrict the work of the League, and it is fairly safe to prophesy that in those quarters that are hostile to the League the budget will be the only League matter to receive attention and publicity.

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER
President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

UNITED STATES.—RAILROAD WAGE INCREASES—ARGENTINE LOAN—SILVER IMPORTS—IMMIGRATION.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 27.

ALTHOUGH wage advances granted so far this year by railroads of the United States to their employees have brought the annual pay-roll up to \$2,850,000,000, approximately, representing an increase of between 3 per cent. and 4 per cent. in the yearly total, further demands for higher wages are likely to be made by various classes of workers during the next month or two. Certain groups of employees who have reached agreements through direct negotiations with some railroads have cases pending before the Railroad Labour Board involving other carriers. It seems quite unlikely that the Board will grant smaller increases than those already agreed to voluntarily by certain roads, and if it authorises larger increases in cases now pending, higher rates of pay will probably be sought by the same classes of employees on railroads where direct agreements were previously made. More than 60 roads have granted to their maintenance of way and shop labourers increases ranging from ½ cent to 11 cents an hour; if similar advances are given to those classes on all railroads, the increase in the latter's annual pay-roll will approximate \$25,000,000. On behalf of clerks employed on 56 carriers, the union brotherhood has applied to the Labour Board for increases varying from 9 cents to 17 cents an hour, or much greater than the average advance already granted through direct negotiations with other railroads; if such demands are complied with and extended to the clerks of all railroads, at least \$15,000,000 will be added to the total annual pay-roll. Many of the carriers have already raised wages of their shop craft employees this year an average of about 3 cents an hour, which, if granted to all men in that class, would mean a total yearly increase of about \$35,000,000. Furthermore, wage advances have been made, or are being requested, before the Labour Board for other classes of employees. It will be seen, therefore, that the wage situation is by no means settled,

despite the numerous direct agreements that have been reached. Obviously, further increases in wages would serve to reduce net earnings. Many carriers have been spending large sums for maintenance of way and repairs to equipment, and all roads are still endeavouring to reduce operating costs wherever possible.

Imports of silver into the United States last month, amounting to \$10,066,463, were by far the largest of any preceding month this year; in fact, the excess of July imports over exports equalled the net imports for the first six months of the current year. The heavy increase in imports of the white metal last month is taken as a reflection of the discontinuance of silver purchases by the Government under the Pittman Act. With the United States Mint no longer buying domestic silver at the fixed price of \$1 an ounce, many American mines have closed, while others have reduced their tonnage by sorting ore so as to bring the value of the mill grade up to a profitable figure. The present market price of silver here—between 62 and 63 cents an ounce—is said to be too low to warrant full operation of the mines; the current quotation represents approximately the cost of production last year, according to data from the principal Nevada mines. For the seven months ending with July of this year, silver imports totalled \$39,098,825, and exports \$31,493,706, showing an excess of \$7,605,119 in imports. For the entire calendar year of 1922, imports exceeded exports by \$7,999,367; in 1921 by \$11,667,272. In 1920, however, silver exports were \$25,556,183 greater than imports, while in 1919, due to the heavy shipments to India for the account of Great Britain, exports were \$149,611,033 larger than imports. Unless the price of silver advances sufficiently to encourage domestic production, or unless costs of production are reduced, imports are expected to continue heavy.

As previously intimated, the Argentine Government, according to cable advices, has accepted the offer of an American banking syndicate, consisting of Kuhn, Loeb and Co., Blair and Co., and the Chase Securities Corporation, to take up within six months from September 1st about \$60,000,000 of the bond issue recently authorised by that Government. The bonds will carry interest at 6 per cent., with an annual amortisation charge of 1 per cent., and will be acquired by the syndicate, it is understood, at 92. The proceeds are to be used to meet the \$50,000,000 issue of Argentine Treasury bills maturing October 1st. The syndicate will probably advance to the Government for a six months' period from September 1st, whatever balance may be required to meet that obligation in full, in the event that subscriptions for the new bonds, to be offered at about 98½, are not sufficient to provide the entire amount. The rate which the Argentine Government has been obliged to pay for this apparently urgent short-term financing is undoubtedly high, and may seem onerous; but the present economic position of that Republic is not such as to enable her to secure a lower rate in this market. If conditions in that respect are more favourable next year, it will probably be possible to refund the present issue with long-term bonds on much better terms.

Immigrants to the number of 522,919 were admitted into this country during the fiscal year ended June 30th last, according to statistics recently published by the Immigration Bureau of the Department of Labour. Of that total 307,522 were men and 215,397 were women. In that same period 81,450 aliens emigrated from the United States, of whom 54,752 were men and 26,698 women. In the preceding fiscal year there were 309,556 immigrants and 198,712 emigrants. More than 20,000 persons were debarré in the past fiscal year, and 3,661 were deported. Of the aliens admitted, 16,542 gave their occupations as professional, 106,213 as skilled workers in various trades, 208,579 as miscellaneous, and 191,585 (including women and children) stated that they followed no particular occupation. German aliens admitted numbered 65,543; Mexicans, 62,709; English, 60,524; Hebrews, 49,719; South Italians, 39,226; and Scotch and Scandinavians approximately 38,000 each, while French immigrants numbered 34,371, Irish 30,386, and Polish 13,210. More than 130,000 of the immigrants who were admitted gave New York State as their future permanent residence, the remainder expressing their intention to go to various other States.

FRANCE.—FOREIGN TRADE—EMPLOYMENT—BUILDING COSTS—CROP PROSPECTS.

(FROM OUR CORRESPONDENT.)

PARIS, September 5.

DETAILED figures are published to-night analysing the French foreign trade returns for the first seven months of 1923. These show a surplus of imports from foreign countries amounting to 1,318 million francs, in round figures. Against this is the fact that French exports to the colonies show a surplus of nearly 600,000,000 over imports from the same colonies and protectorates. The total exports to foreign countries during the seven months had a value of 14,434,783,000f, as compared with 10,014,806,000f for the corresponding period of 1922. Imports from foreign countries during the same period amounted to 15,742,960,000f, against 11,349,891,000f for the period January 1st to July 31st last year. Imports, therefore, have increased by about 4,393 million francs, while exports show an increase of 4,410 millions. The increases were due, in each case, very largely to the increases in commodity prices, which in turn have been largely influenced by the rise in exchange rates. French exports to the colonies and protectorates during the seven months amounted to 2,160,463,000f, as compared with 1,624,663,000f last year, while the mother country purchased from her colonies and protectorates, during the same period, goods to the value of 1,562,147,000f, as against 1,282,237,000f last year. The detailed returns showing the imports from and exports to the various countries, are as follows:—

FIRST SEVEN MONTHS, 1923.
(In 1,000's of francs.)

	Imports.	Difference on 1922.	Exports.	Difference on 1922.
Sweden	199,447	+ 27,610	56,566	+ 31,246
Norway	90,170	+ 14,919	40,304	+ 17,656
Great Britain.....	3,058,330	+ 1,213,872	3,603,068	+ 1,355,551
Germany	463,954	- 297,091	580,702	- 522,298
Holland	508,289	+ 130,886	343,719	+ 123,158

Madagascar, &c.	84,312	+ 54,770	67,787	+ 20,470
French Indo-China	205,402	+ 105,189	211,959	+ 79,604

In striking contrast with the situation in Great Britain, unemployment in France remains practically non-existent. Figures issued by the Ministry of Labour last Saturday show that for the week ending August 30th the total number of persons who received unemployment allowances throughout the country was 1,575 (of whom 120 were women), as compared with 2,002 during the previous week. During the period August 13th to 28th, the number of persons granted unemployment allowances in the City of Paris was 146, against 151 during the period between July 31st and August 12th. The number of persons in receipt of allowances in the other communes in the Department of the Seine during the same period was 152, while the total assisted in the City of Marseilles was 318.

The continued high cost of commodities of every description is again exciting attention, both on the part of the ordinary consumer and by those responsible for the conduct of the nation's industries. In an exhaustive study of present-day conditions in the building industry, M. Verney, the vice-president of the French Association of Public Works' Contractors, deals with the difficulties which have hitherto prevented any solution of the housing problem in this country. As matters stand, the high rate of wages and the high prices of materials have rendered building construction on any large scale practically impossible, in spite of the ever-increasing demand that exists. In France

there is the additional factor, when the question of reducing the rate of wages is considered, that labour in many industries is distinctly scarce, so that the shortage of supply renders any general reduction impracticable. The fall in wages that has been brought about through unemployment in Great Britain, the United States, Japan, and other countries, is therefore unlikely to occur here. The most that can be hoped for under present conditions is a stabilisation of the cost of labour, and this has been largely attained.

Another factor which militates against a return to better conditions is the maleficent operation of the eight hours' law, which is now generally admitted here as having contributed appreciably to the maintenance of high prices. It is urged that the law should be modified, in the national interest, in such a way that it may be adaptable to the special circumstances of trades like that of building construction, where weather conditions are an important factor. In view of the fact that the General Elections are due next May, however, it is unlikely that any effort will be made in this direction for some time to come.

Reports furnished by the officials of the Ministry of Agriculture are now available, which show that the French wheat harvest for 1923 will almost certainly total over 79,000,000 quintals. The total area under wheat this year has been over 5½ million hectares, so that the average yield is equal to 14.30 quintals per hectare. The specific weight of this year's crop varies according to locality between 75 and 80 kilogrammes per quintal. The comparative figures for this and previous harvests are as follows:—

	Area in Hectares.	Yield per Hectare.	Total Yield in Quintals.
1913	6,542,230	13.28	86,919,050
1919	4,603,710	13.95	49,653,700
1920	5,093,570	12.65	64,482,180
1921	5,382,270	16.35	88,034,290
1922	5,289,970	12.52	66,220,100
1923	5,526,490	14.30	79,054,790

The area sown with rye this year was 878,710 hectares, and the yield is estimated at 9,376,720 quintals, or an average of 10.67 quintals per hectare. This quantity is slightly less than last year's crop, and some two million quintals less than in 1921. Méteil (meslin, or mixed wheat and rye) is expected to yield 1,332,550 quintals, from a total area of 107,280 hectares. In consequence of the recent fall in the price of flour, the retail price of bread in Paris has been reduced by 5c per kilo as from September 1st.

GERMANY.—REPARATIONS—EXCHANGES—INDUSTRY—PRICES—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 4.

DR STRESEMANN's speech at Stuttgart has given new hope that a settlement of the Reparations and Ruhr questions may be found. The speech was conciliatory in tone, and indicates that the Cabinet sees no use in continuing the purely fighting attitude of Dr Cuno. The main points are that Germany will give productive pledges, is willing to collaborate industrially with France and to guarantee interest on an international loan, and to make arrangements securing peace with the countries interested in the Rhine. But Germany is not willing to sacrifice the freedom of native territory. Dr Stresemann emphasised the duty of Property, of Labour, and of the officialdom to help in the crisis, promised definitely the creation of a stable currency, and declared that the miners ought to work one hour extra per day to produce fuel for heating. His belief that an international loan of large dimensions will be a part of the Reparations settlement is not shared here in expert quarters. On the question of passive resistance the Chancellor seems to have gone farther than any other German in office has done, though his meaning is open to some doubt.

The new Minister for Industry, Herr von Raumer, has also declared for creation of gold-secured notes. The normal way to do that, he says, would be to establish a gold-note bank, with participation of the Reichsbank, and independently of the State finances. Participation of international capital might be welcomed. Dr Raumer declared that measures must be taken to ensure that all foreign bills received should flow to the Reichsbank, and made

clear that he stands for continuation of intervention in favour of the paper mark. Against the latter policy there is a good deal of opposition on the ground that it would be better to use all foreign currency for making the issue of the new native gold currency as large as possible. The Reichsbank twice in the past week intervened to support the mark, each time with temporary success as far as the official quotations go, but both times the exchanges rose in free dealing immediately afterwards. Apart from the Reichsbank's gold reserves, several sources now exist from which to intervene. There are the yield of the dollar treasury bills, the new stable-mark voluntary loan, to which some of the subscriptions are in gold, and finally the foreign currencies supplied by gold-mark levy decreed last week. The position of the exchange market is, however, very unfavourable. The inflow of foreign bills from exports continues to fall off; and the intervention and rationing—yesterday only 10 per cent. of the demand of sterling was satisfied—favour speculation against the mark. Owing to the Reichsbank's temporarily successful pressure on the exchanges, persons who had handed over foreign bills under the gold levy decree bought them back at the cheaper official prices, and so made money out of the decree without increasing the mark intervention fund.

From private business quarters pressure is being exercised on the Government to make gold-mark calculation, credit, banking and accountancy obligatory and universal. The Federation of German Industries and the chief wholesalers' and retailers' associations have petitioned the Ministry of Industry in that sense, declaring that trade cannot possibly go on on the present basis. The present basis is that prices are almost universally calculated in gold marks, but that credit is only partially and banking only to a small extent in gold marks. This policy of the business organisations is new. It is a result of the complete revolution in conditions which has taken place in the last few weeks owing to the new gold or stable-value wages and the index rates for State services. Until lately business was fairly well satisfied with the depreciating paper mark, experience having shown that industrial depression in such conditions is almost impossible; further, that profit-making is ensured, even though the paper-mark profits tended to dwindle in real value. This period, characterised by low gold production cost, low wages and low prices for all native raw materials, seems to have come to an end. The universal move-over to gold-mark calculation, first of all in the State services, had, however, one of the chief results of stabilisation—that is, gold prices, being worked out on the day's exchange, are almost stable. Further, the gold price level so attained is about that of the world-market. This threatens a crisis of the same kind as was to come if the mark had been stabilised. The industrial prospect is extremely black. The Leipzig autumn fair was the dulllest since the war. Nearly all industries report reduction of output, reductions of working hours, and impending discharges; and it seems that the next employment statistics will show very bad conditions. This is a complete reversal of the process observed in past mark-exchange falls, and even in the present mark-exchange fall before August. In all these mark-fall times trade was good, and the speedier the fall the better was trade. The cause of the reversal, apart from the Ruhr dislocation, undoubtedly the gold-mark calculation system, is aggravated by a systemless way of introduction, which shows itself in the fact that certain articles cost three or four times as much as abroad, while others continue to cost much less.

The Customs gold surcharge has been raised to 129,019,900 per cent. Prices are still going rapidly upwards, the influences here being, firstly, the new conscious policy of following up the dollar's exchange, and, secondly, the flood of new paper money which is daily depreciating the mark at home. The *Frankfurter Zeitung's* monthly commodities index for August 31st shows

a price-level more than three millions times higher than that of before the war. The rises for the two groups, minerals and textiles, are still greater.

	Food.	Textiles and Leather.	Minerals.	Miscellaneous.	Manufactured Articles.	All 98 Commodities.
Mid., 1914	1	1	1	1	1	1
January, 1920	20	26	27	11	15	20
" 1922	38	58	52	31	33	42
" 1923	1,758	3,206	2,622	1,778	1,518	2,054
April 1, 1923	5,350	8,590	7,822	6,434	5,315	6,425
July 1, 1923	37,683	61,841	45,301	34,736	29,809	39,898
August 5, 1923	234,828	457,915	405,405	212,135	200,806	283,599
" 31, 1923	2,649,457	4,084,431	4,746,174	2,668,272	2,341,706	3,063,358

The official cost of living index shows for August 26th 1,183,434 (basis 1 in 1914), against 672,779 on August 20th, 149,531 on 6th, having thus risen nearly eightfold in twenty days during which the dollar exchange rose from 1,650,000 marks to 4,711,000 marks, or only threefold. This is a good instance of the increase in gold prices. In Berlin the supply of certain foods is still insufficient. Citizens wait in queues as long as four hours to buy 5 lbs of potatoes, or $\frac{1}{2}$ lb butter. Congestion, as in Russia during the worst period, is visible everywhere. An hour's standing in post offices is necessary in order to buy a postage stamp. The population shows great patience in these conditions, and the officials, municipal and other, with authority in such matters, exploit the patience, and make no attempt to remedy the evils.

The banks also are overburdened. The number of new small banks founded in recent months is incredible; some small streets have three or four. All over the city the "islands" at street crossings have been leased by the city to proprietors of ephemeral banking shanties. The big banks reject business. The union of banks is charging commissions for stock exchange deals on a gold mark basis. The Deutsche Bank has been obliged to request customers not to draw cheques for less than 100,000,000 marks, or to pay in or draw out cash in smaller units than 25,000,000 marks. The Westphalian Coal Syndicate has been renewed until December 31st. The Bourse boom continues, and last week stock averages more than doubled. The *Frankfurter Zeitung's* index for home dividend-payers shows for August 31st 1,012,673,500, against 439,723,700 a week earlier, 376,685 on January 5th, and 27,340 on January 4, 1922. During the year so far stocks have therefore risen over 2,600 fold.

No data have yet appeared as to the yield of the big tax payments due before August 31st. It seems, however, that the yield will be very small when compared with expenditure, which has risen to an entirely new basis since the rates of the taxes were fixed. The Government has obtained power to raise the rates of the direct taxes (chiefly income-tax and Ruhr-Rhine levy) due in October, without special legislation, and it will probably do so. But the rates must be announced at least a few days before the first date of payment, and in these days fresh currency depreciation may neutralise the raising of the rates. Without a complete reform in the methods of taxation, the deficits must continue. The prospect for the finances of railways and posts is somewhat better, because here rates will be raised according to an index, and at very short intervals.

RUSSIA.—GRAIN HARVEST AND EXPORT—FLAX—SUGAR—FINANCE.

(FROM A CORRESPONDENT.)

Moscow, August 28.

THE Central Statistical Bureau estimate the 1923 harvest at 2,962 million poods, which includes cereals and potatoes, and the surplus at 500 million poods, the purchase and distribution of which will be dealt with by the Klebproduct (Grain Produce Trust), the Centrosoyous, Selsko-Soyous, the State Bank, and certain private institutions. The last-named are likely to play a larger part than was anticipated owing to the serious lack of funds in the hands of the State institutions—in the Odessa region, for instance, the State organisations hoped to buy three million poods, but have at present sufficient funds for 100,000 poods only. Of the 500 million poods

surplus in the productive regions, 250 million poods is the most optimistic estimate as available for export, and the Grain Export Trust state that one million tons of grain will certainly be exported by the end of November, 1923, and a further one million tons before the end of the cereal year—August, 1924.* Under article 14 of the Decree concerning the single agricultural tax the Government has published a classification of the provincial Governments according to this year's harvest yields. In the ninth category (61-75 poods per dessiatine) are placed Podolsk, Poltava, Kharkov, and Kiev; in the eighth (56-60 poods per dessiatine) figures Volhynia; in the seventh (51-55 poods) the Kouban-Black Sea region. In the first and lowest category (up to 25 poods) are placed Orenburg, Kustanay, Aktubinsk, Oural, Tzaritzine, Astrakhan. These regions will need help from the more productive regions. Some uneasiness is being expressed that, owing to the heavy costs of transport, repairs to elevators, and particularly of port and indirect charges, the profit on the grain export will be small. The following table gives a comparison of the costs in gold kopecks of delivering a pood of grain this year as compared with 1913:—

	Total Rail and Port Expenditure.				Of which the Rail Charge alone is—	
	By Elevator.		By Wareh'g.			
	1913.	1923.	1913.	1923.	1913.	1923.
Armavir - Novorossisk (317 versts).....	10.05	31.90	21.45	33.40	8.08	17.77
Tchernigof - Odessa (726 versts).....	17.62	38.42	19.02	29.92	15.65	24.29
Jitomir-Odessa (543 versts).....	15.65	36.91	17.05	38.41	13.68	22.78
Voronsh-Od'ssa (1,172 versts).....	24.69	43.33	26.09	44.83	22.72	29.20

The average price of rye paid to the farmer is about 35 gold kopecks a pood. In connection with the export of grain, dredging operations have already been undertaken in the harbours of Odessa, Nikolaief, Kherson, and Marioupol. Odessa is now stated to have warehouse capacity for 1.5 million poods of grain; Kherson for 500,000 poods; Féodosia, 3 million poods; Novorossisk, 1.5 million poods; Rostov-on-Don, 600,000 poods. During a visit to some of these ports a few weeks ago it was clear that special efforts were being made to prepare for a considerable grain export, but at the time the ports were not active. In view of the more economical port charges at Riga and Windau, the Russian Grain Export Trust is also seeking elevator accommodation at those ports.

M. Lepechensky, of the transport section of the Gosplan, speaking on the railway situation, announced that during the year it was hoped to replace 22 million sleepers (43 per cent. of the total number of sleepers are in bad condition), and that 70 per cent. of the programme to the end of July had been executed; repair and replacement of points had been executed to the extent of 25 per cent., as compared with a pre-war year. Janouchevsky reported that 1,700 locomotives were to have been repaired during the year, and that the work during the first quarter had been up to programme. Capital repairs were required to 1,840 wagons, and lesser repairs to 2,680, but the work was proceeding slowly. Since January 1st, owing to the progressive increase in fares, the movement of passengers was greatly reduced, and the revenue from the passenger service at present represents 23 per cent. as compared with pre-war.

The cultivation of flax sown in the North for fibre, and more South for linseed, has decreased seriously as compared with pre-war years. The area under flax (for fibre) in the principal flax-growing governments in 1914 was 1,311,000 dessiatines (production, 24,035,000 poods); in 1922, 347,100 dessiatines. In 1923 an improvement on 1922 of 20 per cent. is estimated. In 1921 and 1922 1,300,000 poods of flax were exported, as compared with 14,100,000 in 1914. Expressed in terms of rye, 1 pood of flax was equivalent on January 1, 1923, to 5.75 poods rye, and on August 1st to 14.37 poods; the rise in the internal price, added to the greatly increased cost of rail transport, have now made it almost impossible to export flax from Russia with any profit. As far as oil seeds are

* For a criticism of these expectations see *Economist* for August 11th.

concerned, the following are the statistics of the areas sown (in thousands of dessiatines):—

	Linseed.	Hempseed.	Sunflowerseed.
1914	1,189.0	512.3	940.9
1921	605.6	247.6	589.9
1922	802.1	274.9	1,107.1

The area under sugar-beet has decreased from 689,395 to 232,369 dessiatines. Of the 235 crystallised-sugar factories, 87 only were working in 1922 in the Ukraine, and three in Soviet Russia; the output of these factories had diminished 33 per cent. as compared with the pre-war figure. In 1921-22 the Ukraine produced 10,232,067 poods of white sugar, and Great Russia 2,025,225. This production is quite insufficient for the internal needs of the country (consumption in 1914, 18.9 lbs per head); prices are very high, and recently 2,700 tons were imported from abroad.

The Naphtha Syndicate communicate that in the period April-June 56,500 tons of kerosene, 15,500 tons of machine oil, and 10,000 tons of paraffin were exported, chiefly to Great Britain and Germany from Batoum and Novorossisk, of a value of £600,000.

Following the decision of the last session of the Vzik, the Budget for 1923-24 is to be presented not later than December 1, 1923. M. Sokolnikof estimates that of the total of 1,650 million gold roubles, paper emission will cover 12 per cent., which will be reduced in proportion to the success of the internal loans. The Finance Commissar stated at the end of July that the amount of paper money in circulation in Russia at present is 10 milliard 1923 roubles, the equivalent at that time of 100 million gold roubles. The tchervonetz (bank-notes) in circulation represent 65 million gold roubles, of which 50 per cent. are guaranteed by gold. There are at present in circulation the equivalent of 250-300 million gold roubles in paper roubles, tchervonetz, bills, and gold roubles, whereas before the war the equivalent of 2½ milliard gold roubles were in circulation in Russia. Many of the Government and private institutions and companies are now paying salaries in tchervonetz, and the larger shops are quoting their prices in tchervonetz, payment being made in Soviet roubles at the exchange of the day. It is estimated that 250 million gold roubles are still hidden by the peasants. M. Reinhold, chief of the Budget Committee of the Finance Commissariat, states that the Government has the intention in the coming financial year to subsidise the coal and metallurgical industries only, leaving other branches of industry to have recourse to bank credits. The credit operations of the Government will consist of the second Grain Loan, the Lottery Loan, Finance Commissariat bills, and the railway bonds to be issued for 5 million gold roubles by the Commissariat for Ways and Communications.

GREECE.—FOREIGN EXCHANGES—LABOUR TROUBLES—COST OF LIVING.

(FROM OUR CORRESPONDENT.)

ATHENS, August 27.

As was foreseen, the great improvement of the drachma which took place during May has not been maintained, and foreign exchanges rose little by little, until the exchange on London reached 315 drachmæ early in August, after having stood for some time around 150 drachmæ to the pound. This rise, despite the signing of peace and the expected issue on the London market of the loan for the refugees (an advance against which has now been granted by the Bank of England), gave ground for much anxiety to the Government. As usual, the rise is attributed entirely to speculation. Measures, therefore, have been taken to increase the Government stock of foreign exchange on the one hand and to suppress speculation on the other. To obtain the first of these aims a decree was issued putting again into force Article 18 of the law of April last, which imposes on the banks the obligatory cession to the National Bank, for account of the State, of 15 per cent. of their daily purchases of foreign exchange. Further, authority has been given to the Minister of Finance to issue Treasury bills in pounds or dollars, running from one to five years, at a rate of interest of 7 to 9 per cent. The purchasers of such bills are exempt from

the tax on capital for the amount of bills so purchased, and if they have any tax left to be paid on property invested in foreign currencies, they may be allowed (under certain restrictions as to the extent of this concession) to pay it in foreign exchange instead of in drachmæ, and thus earn the difference of exchange between the higher rates of December 31, 1922, and the present lower rates. As regards suppression of speculation, after a vehement campaign against speculators by a section of the Press, and some attacks by groups of workers against exchange jobbers, here and in Salonika, the Government proceeded to close many of these offices, and has been since dispersing the dealers by police patrols. Finally, by a decree published in the Government *Gazette*, the purchase and sale of foreign exchange are to take place henceforth within the bourse by dealers and brokers appointed under the laws and regulations governing the bourse. Banks and bankers, duly authorised, may purchase and sell exchange over their counters for immediate delivery only, and without any restrictions, while forward contracts on exchange are also allowed to be made by them so far as they can prove that such transactions are not speculative. Otherwise the purchase and sale of exchange for immediate and future delivery, and the carrying over of exchange are permitted if effected in the bourse according to relative regulations. Further, the granting of loans against pledge of foreign exchange and currencies, and the payment of drafts in drachmæ issued abroad, are freely allowed. The payment of export duties in foreign currencies is still maintained on the whole. Thus freedom in exchange dealings is finally restored, and exchange speculation may consequently be carried on now on a larger scale than before, with the sole limitation that, in order to be valid, it must be consummated in the bourse instead of outside of it, as hitherto. How far legal invalidity (which existed also before) will be sufficient to prevent speculation outside the bourse remains to be seen. For the moment, all these preventive and prohibitive measures have had no appreciable effect on the rates, the present improvement of the drachma being attributed rather to the temporary disorganisation of the exchange market brought about by these measures, to seasonal influences, and to the business inactivity caused by the general labour strike. It should be observed, however, that had the Government followed the advice of responsible persons when the collapse of the rates took place in May and purchased through the National Bank, the exchange abundantly offered at that time by panic-stricken holders, not only would the Bank now be able to control the market through the great stock of exchange it would thus have accumulated, but stabilisation of the rates at reasonable levels would have been achieved, and the serious shock suffered by the country in consequence of the impetuous rise of the drachma and its subsequent fall would have been avoided. The Government chose instead the demagogic policy of non-intervention (contrary to what it was doing when the exchanges were rising), and even contributed to the collapse of the rates by the statements in the Press of the Minister of Finance, who mistook the abnormal and dangerous improvement of the drachma for a proof of healthiness of the home currency and attributed it self-complacently to his fiscal policy of heavy taxation.

Business stagnation due to over-taxation and to the anomalies of foreign exchanges is the cause of the general strike of labourers which took place last week. Wages having been cut down and working days reduced without a corresponding decrease in the cost of living, constant friction between employers and labourers was the result. Though the strike was intended to be general throughout the country, it was in fact confined to factories and certain classes of workers in public utility organisations. The Government took drastic and successful measures to face the situation, and the strikers saw themselves obliged, after a short resistance, to surrender without terms. According to Press reports, the Government will amend the existing legislation concerning trade unions, in order to protect the country in the future against exaggerations and extravagant claims of trade unions and their confederations. This will be most welcome, because the granting to labour, since 1909, of rights and privileges for which it was and is not yet mature, and the weakness always shown by the authorities in dealing with labour claims, have produced little by little a situation which, were it

allowed to continue, would end by rendering problematical the carrying on of any enterprise in this country.

The cost of living index, taking 1914 as 100, is 1112 for August, as compared with 1032 for July, and 1234 for the first half of the current year.

SOUTH AFRICA.—HALF-YEAR'S MINERAL PRODUCTION—LOWER COSTS AT RAND MINES—PRODUCTIVE CAPACITY AND GOVERNMENT EXPENDITURE.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, August 7.

THE mineral production of the Union for the half-year just completed was £23,787,507, to which falls to be added £729,350, estimated amount of the currency premium on gold on the monthly bases assumed by the Chamber of Mines. If the diamond output continues to advance as it has done in the past few months (the June value was £513,775, as against £274,001 in January), the mineral output for the year should not fall much short of 50 millions sterling. For the six months the value of gold, inclusive of premium, was £19,937,346, of diamonds £2,316,509, of coal £1,810,224; the value of silver, tin, copper, and miscellaneous base minerals was only £452,740. Among the latter the growth in the value of asbestos produced has been remarkable, the figures for the past two months averaging £10,000. The foregoing figures are abstracted from the monthly statement issued by the Department of Mines and Industries. For the profit aspect of the gold mining industry we may turn to that of the Transvaal Chamber of Mines. Rather over 13 million tons were crushed by the 38 Rand companies for a profit of £5,700,000. Working revenue was 29s per ton, costs 20s 4d, and profit 8s 8d per ton. These unit figures are in close correspondence with those of 1914, when the profit then averaged 9s a ton, the yield was 26s 6d, and working costs 17s 1d. It will be observed that the average yield per ton now is 2s 6d higher, which is explained by the average yield then being only 6.23 dwts, as against 6.69 in the first six months of this year, and the slight premium still being secured. Working costs are 3s 3d higher, accounted for by the fact that the heavy miners' phthisis charges are now debited to working costs instead of being disposed of through the appropriation accounts, the incidence of holiday leave varying from a fortnight to three weeks, and the continued high prices of certain stores.

The waning of the currency premium demonstrates how essential it was to reduce working costs if the low and medium grade section of the industry was to survive. The recovery in dwts per ton for the past six months is almost identical with that in 1921 (when it was 6.73), but owing to the premium the value of this yield, or, more strictly, the "working revenue" per ton, was 35s 2d, or 6s 2d per ton higher than the average this year. Costs are, however, only 5s 4d per ton less. The bulk aspect is more favourable than the unit aspect, because of the greater tonnage being milled owing to generally improved efficiency. It is noteworthy that, in July, Crown Mines and Randfontein were each able to reduce their costs to 19s a ton, respectively 3s 6d and 2s 6d above the average rate in 1914. Miners' phthisis assessments, which represent 7d to 9d per ton over the whole reef, but vary considerably from mine to mine, are now included. Randfontein has been thoroughly reorganised, and is now being operated on the most modern lines.

The address delivered by Mr Alexander Aiken, at the Witwatersrand University, on the "Resources of South Africa and Public Expenditure," has been reprinted. I referred in a previous letter to certain points, but the whole question is so important that I may be allowed to call attention to certain conclusions. Mr Aiken shows the total production of the Union, agricultural, pastoral, industrial, minerals (and a "guess" at fishing production) at £150½ millions a year. From this has to be deducted £14½ millions interest on Government and municipal debts, mining and other dividends, interest and profits due abroad, and at least £30 millions wages paid to natives and coloured persons. He concludes that "£109

millions is all the white people of the Union had to find their subsistence from in 1921. That population numbered 1,519,488, an average of £71 14s per head." This is very close to the figure arrived at by Prof. Lehfeldt, and confirms his conclusion that "the white people of South Africa are a comparatively poor community; contrary to the popular belief." Excluding the cost of postal and railway services, which are deemed to be reproductive, the expenditure upon Government amounted to £27½ millions, or 20 per cent. of the production. "This is a pretty heavy bill to pay for law and order, the primary benefits of good government; but, of course, the Government gives us more than these. We enjoy, for instance, free education, and generally poor roads." For adult white males the average income is calculated at £243 (the farming population lives on very little), while only one in four is receiving £300, the income-tax exemption limit. "Capital, if mobile, will quickly forsake a country where it is unfairly treated.....investors are very shy of new mining ventures.....there is no bid for new mining areas on the Far East Rand, as the prospects of mining are poor, and the mines are the first to be attacked when money is supposed to be needed for public purposes.....The country cannot afford to go on spending at the rate it is doing, and a radical change of policy will have to be adopted by political parties, unless the development of the country is to be strangled and enterprise cease. Development does not consist in the erection of palatial schools, and other Government buildings, but in the expansion of agriculture, mining, and industry generally." It would be instructive if the *Economist* could furnish some figures on a similar basis for Canada, New Zealand, and Australia. While desirous of avoiding being dubbed "the idiot who praises every country but his own," I am afraid any comparison would be unfavourable to the Union, though we are by no means singular in being "over-governed, over-borrowed, and over-expended," in Mr F. W. Hirst's striking phrase.

Books and Publications.

THE PIONEER OF FACTORY LEGISLATION.*

FEW people laying down Mr and Mrs Hammond's book on the work and character of Lord Shaftesbury would be ready to say without hesitation whether or not they regarded his life as a success. It is true that as the advocate in Parliament, and to a large extent the organiser of the campaign which led to the regulation of factories and mines in Great Britain, to the suppression of the worse forms of exploitation of the labour of young children, and finally to the prohibition of the incredible but long-continued inhumanities practised in the case of the chimney sweeps' boys, Lord Shaftesbury received recognition and a meed of praise which often only falls to men after their death. As the apostle of humanity and of the rights of the individual to protection against the worst excesses of the industrial revolution, supported, as they often were, by doctrinaire theorists, Lord Shaftesbury's name had become a household word. At the same time, Mr and Mrs Hammond do not conceal that even in this part of his work Lord Shaftesbury's career was in a sense a paradox. A really convinced Tory, satisfied that the people must expect to get improvement in their lot from the wisdom and goodwill of their superiors, who alone were competent to govern them, a man of autocratic ways and of the most unrelenting and rigid views of duty, religion, and social observance, Lord Shaftesbury, in fact, found himself carried forward on a tidal wave, the underlying waters of which consisted of the masses imbued with the ideas of chartism and the communism doctrines of Robert Owen. For his factory work Lord Shaftesbury sacrificed his keen but suppressed ambition for place and honour; but it must be confessed that the Governments which offered him office were not by any means overwhelming in their importunities. They recognised that Shaftesbury was an extremely difficult colleague, and that while he commanded great support in the country his personal qualities were not

* "Lord Shaftesbury." By J. L. Hammond and Barbara Hammond. Constable and Co. London. 1923. Price, 12s net.

attractive. Indeed, when we turn to the personal aspects of Shaftesbury's career, Mr and Mrs Hammond present to us a man soured by introspection (the results of which are revealed to us in his diaries), overwhelmed with the petty details of life which he never succeeded in delegating to anyone else, struggling with monetary difficulties, and burdened with an estate which he had neither the time nor the inclination to attend to, and though hating cruelty or injustice wherever found, unable to associate himself with the Christian Scientists or other contemporary groups actuated with motives similar to his own. "There was something wilful in his isolation and his melancholy. If he had had more resilience in his mind, if he had thrown open a lattice or two to the fresh air, and had had some welcome for ideas and interests that were stimulating others, he would have been a wiser as well as a happier man.....Shaftesbury died an old man, and a lonely man. But he had been lonely most of his life; he had not outlived his day, for he had long lived outside it." Like all the works of Mr and Mrs Hammond, the material for this study of Shaftesbury is handled with great discrimination and ability. The book is readable, and is well worth study, not merely for its insight into the interesting and important character of the 19th century, but also as a valuable reminder of the industrial conditions from which we have recently emancipated ourselves, and will serve as a stimulus to look a little further ahead along the road which we are travelling.

MUNICIPAL FINANCE.*

THE financial statement of the City of Birmingham for the year ended March 31, 1923, shows that the total liability for loans and bank deposits outstanding at the end of the year, including annuities, corporation stocks, mortgages, and municipal bank deposits (£2,891,680) amounted to £31,605,598, against £28,992,785 at the end of the previous year, an increase of £2,612,813, or nearly 10 per cent. The estimated population was 936,079, and thus the loans outstanding amount to £33 15s 3d per head. The increased loan liability falls under the heads of mortgages and municipal bank deposits, which again raises the question—Does not the growing practice of corporations of borrowing on the security of mortgages tend to impoverish the security of earlier lenders? The most striking facts disclosed by the accounts is the large increase in investments and cash in hands of treasurer. The investments—of which about £3,000,000 was in 5 per cent. War Loan—amount to £3,534,618, an increase of £608,496; and cash in hands of treasurer—including £2,333,829 bank cash with corporation at call—amounts to £3,702,537, an increase of £941,962. The published accounts of municipal corporations would be clearer if they showed the location and state of investment of the large balances of cash commonly in hands of the treasurers. No doubt this money is earning interest, but at what rates? The treasurer of the city, Mr J. R. Johnson, F.S.A.A., is to be congratulated on the prompt publication of this volume of accounts—a sure sign of good organisation. The preface to the present volume contains these weighty words:—"Reference to the summaries in the Blue Book or to the Epitome will indicate the rapid growth in capital expenditure since 1919. Over this period the amount of loans raised to meet expenditure on capital account amounts to over 8½ millions. A capital sum of over one million and a half has been provided to meet the cost of relief schemes for work for the unemployed. This entails a heavy strain upon local finance when it is remembered that these works are, to a large extent, unproductive, and that loans to finance them have had to be borrowed at a period when high money rates were prevailing. The future financial outlook is regarded with some apprehension by the treasurer, knowing that the cost of these relief works, heavy as it is, only touches the fringe of the question, and there is in addition the heavy cost of the guardians' calls for unemployment relief, which, for the most part, has to be met direct out of the rates and not out of borrowed money. The general result is that the standardisation of local finance is extremely difficult to effect."

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
September 18.	September 19.

THE tragic news from Japan cast a cloud over Stock Exchange markets, which, singular as it may appear, had an effect more sentimental than financial. On the day that the news became known men in the House went about their business as though half-numbed by the disaster. Markets were curiously quiet. A hush seemed to spread over everything. It was not because prices became greatly affected. In point of fact, the effect of the disaster became strictly localised to Japanese Government and municipal bonds, all of which were, and are, of course, severely depressed. But sentimentally the Stock Exchange appeared to be oppressed with the sense of the calamity, and it was not until a day or two had elapsed that markets regained their ordinary aspect.

Business quietly slid into normal channels. There has been a further noticeable absorption of gilt-edged stocks in the Consol market. The release of interest money, and the repayment of National War Bonds, sent fresh capital pouring into British Government stocks, and the rise was only checked when a seasonal movement in the American exchange, against this country, led to vague talk of the possibility that the Bank rate might be advanced. India Government stocks continue prominent in the upward movement; the subsequent reaction led to their declining from the best.

Heavy falls in Japanese Government and municipal bonds are the natural outcome of the idea that new loans may be required for reconstruction purposes. The absence of definite news brought in a good many selling orders, and, the market having so little definite information to work upon, marked down prices in advance. Thursday found a few bold buyers bidding again for the bonds. Other foreigners are fairly firm, with the French issues moving in volatile fashion, and strengthened on balance by Paris purchases. Brazilians have fluctuated, though narrowly, in both directions, and the Austrian scrip, after a drop to 1½ premium, recovered to 2 premium. Most of the Russian issues are higher. Little excitement attended the slump in Japanese bonds. The Stock Exchange has become too inured to shocks for its war-hardened nerves to be as greatly upset as in pre-war days by calamity or disaster.

Amongst Home Railways, the principal interest of the week has centred in Undergrounds, where Metropolitans and Dis-

tracts have both been active and strong. More business than usual went on in other Home Rails, though the movements on balance are unimportant. Grand Trunk Pacific debenture and Canadian North Income debentures are both better. Mexicans are unchanged. Argentine Railways, together with Brazilian stocks, moved up briskly in response to rallies in the rates of exchange of both these countries.

The rubber market keeps good, in consequence of the cheerful appearance presented by the statistical position, which has brought about a further rise in the price of the produce. In the oil market, the carry-over on Tuesday disclosed a continuance of the previous bear account, and backwardations prevailed in the cases of Burmahs, Anglo-Persians, and one or two others. This served to keep prices fairly firm. Phoenix have been flat. The textile market is steady, movements being upward on balance, but insignificant in extent. Insurance shares weakened a trifle on the news of the Japanese disaster, but it being generally understood that British companies decline to accept earthquake risks, there was no particular selling upon this account. The shipping market is still stagnant, though prices tend to harden. Business in banking shares is described as difficult. Amongst tobacco shares, United Souths are one of the outstanding features of strength; curiosity seeks an explanation of the present price, which, on the dividend payments, looks sufficiently high. Newspaper shares have improved. Cable stocks are a little easier in consequence of an attack made upon them by an outside source. Marconis, which were expected to droop as a consequence of the crisis that arose between Italy and Greece, stood their ground very well, the market in the shares, like that for most of the other securities round the House, regarding the Greco-Italian incident as unlikely to prove of any grave importance.

The South African markets have been tolerably good, thanks to spasmodic support from Paris. The French people turned out shares in the early part of the week, but came back a little later and bought back the Kaffirs eagerly at higher prices. Diamonds advanced with gold shares, and amongst Rhodesians dramatic improvements occurred in Selukwes, Eileen Alannah, and a few other speculative descriptions. Tin—the metal—crossed £200 for the first time since the end of May, without, however, bringing much extra business into the markets, or causing noticeable movements beyond moderate rises in a few West Africans. Balaghats advanced abruptly on dividend expectations, that were subsequently confirmed. Mexicans were inclined to be heavy. Russians improved in sympathy with the rise amongst Russian Government, municipal, and railway bonds. West Australians show a few sparks of animation, and are mostly better on the week.

The Stock Exchange Committee have fixed this week the 24 pay-days for 1924, as against the 26 in the present year. A fund has been opened for supplementing the Mansion House collection in aid of the sufferers in Japan.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded	£202,330,317	£100,000	£100,000	£100,000

ISSUES OF THE WEEK.

1917	1,097,092,860	1916	585,436,853

The Corporation of Manchester give notice that tenders will be received at the Bank of England on Thursday, September 13, 1923, for Manchester Corporation Bills to the amount of £1,000,000, in replacement of bills falling due on the 19th. The bills will be in amounts of £1,000, £5,000, or £10,000. They will be dated September 19, 1923, and will be payable at 12 months after date.

The Sherwood Starr Gold Mining Company, Limited—Authorised capital £100,000, divided into £1 shares. Half the shares have been allotted to vendors, and half for cash at par. The company takes over claims and a pumping site between the Sebakwe and Umniati Rivers. Sir Abe Bailey is chairman of the undertaking.

ACTIVE SECURITIES.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The secretary begs to intimate that the estimated gross production of crude oil for the month of August was 62,603 barrels, equal to approximately 8,900 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 8,300 tons.

LOBITOS OILFIELDS, LIMITED.—The production for August is cabled as 10,946 tons.

MEXICAN EAGLE OIL COMPANY, LIMITED.—The London financial agents of the Mexican Eagle Oil Company, Limited, are advised that the production for the week ended August 25, 1923, was 133,000 barrels.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during August, 11,000 tons; oil purchased during August from other companies, 8,250 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, August 29, 1923, amounted to 1,142 tons. Including from new well referred to last week 469 tons.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

COMPANY MEETINGS, &c.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.

HEALTHIER CONDITIONS IN WEST AFRICA.

FAVOURABLE OIL PROSPECTS.

Mr J. H. Batty (chairman of directors) presided over the annual ordinary general meeting of the African and Eastern Trade Corporation, Limited, which was held on Friday, the 31st ultimo, at Liverpool. There was a full attendance of directors and a large gathering of shareholders.

The Chairman, in his opening remarks, referred to the loss the West African trade had sustained by the death of Mr Geo. Miller so soon after that of Mr Alexander Miller, the founders of Miller Brothers (of Liverpool), Limited, and Millers, Limited, of London.

TRADE DEPRESSION.

Continuing, the Chairman said the trading results for the 12 months under review had been again seriously affected by the continuance of the profound depression in trade experienced during the previous year. The market conditions in West Africa and elsewhere were in a much healthier state now; there were indications that the greater part of the surplus stocks had been realised, and that merchants generally were enabled to turn their attention more directly to making profits than to the liquidation of stocks. Produce markets had been, and were still, overshadowed by the adverse influence of the French occupying the Ruhr district. The immediate outlook gave the directors much anxiety as the political position was more acute to-day than 12 months ago, and it was no use closing one's eyes to the fact that Germany industrially was being paralysed, and the wealth of a nation could rapidly be reduced to vanishing point by diminished output, and that was what was happening in Germany to-day. In pre-war days Germany was their best customer, and was practically the largest consumer of African raw material, and they had to find new markets for the produce exported from West Africa. One redeeming feature was the steady improvement in the econo-

mic conditions of Russia and Austria. Surveying the position as a whole, they could not look to any real revival of trade or expect that the wheels of commerce would revolve harmoniously as in the past, until their politicians had effected a permanent settlement of all the international problems before them.

OIL PROSPECTS.

After surveying the figures in the balance-sheet (which showed a balance to the credit of profit and loss account of £452,455), the Chairman referred to the corporation's option on four oil concessions in the district of Half Assinie in the Gold Coast Colony, comprising an area of some 150 square miles, and that a party consisting of two geologists had been despatched to investigate and report. As a result of their report, drilling engineers and boring plant were sent out, and the last report indicated that Well No. 1 was down 1,100 feet and Well No. 2 1,300 feet. They were given to understand that oil may be struck at any time after reaching 2,000 feet, and the indications so far might be looked upon as favourable, and everybody on the spot was optimistic. Should they be so fortunate as to strike oil in payable quantities, it would materially add to the development and prosperity of this colony.

ADMINISTRATION AND EXPENDITURE IN WEST AFRICA.

He felt it would be of immense advantage to the West African colonies and the trade in general if the Secretary of State for the Colonies would appoint an independent committee to investigate the whole system of administration and expenditure in these colonies. Such a committee would collect invaluable data which would prove of great assistance, both to the administrators out there, the Colonial Office here, and the community as a whole. Just recently a "private enterprise" committee had been appointed by the Secretary of State, its purpose being to endeavour to encourage private enterprise and British capital to improve and develop transport facilities in West Africa. He hoped that the finding of this committee would revolutionise the policy of Africa by State railways, constructed departmentally. He attached great importance to the ultimate outcome of the Imperial Economic Conference to meet in October next, and he trusted that, as a result, they might get nearer to arriving at some practical method of improving production within the British Empire.

ADVANTAGES OF AN IMPERIAL AGRICULTURAL COLLEGE.

There was a movement on foot to establish an Imperial Agri-

cultural College on similar lines to the School of Tropical Medicine, so that they might have students within the equatorial belt highly trained in tropical agriculture, and who would be available throughout their tropical dependencies for the purpose of teaching and increasing the produce needed for the European markets. This project should receive their hearty support, and if properly directed, might prove the foundation of a school of immense value, and greatly increase the available amount of raw material. They had in front of them a possible danger in the palm oil cultivation in Sumatra, and they might find, within the next ten or fifteen years, the cultivated oil palm ousting the wild indigenous oil palm in West Africa. The Chambers of Commerce had recommended to the Colonial Office the formation of a committee consisting of officials, experts, and merchants to investigate and put forward recommendations for the purpose of educating the native to use some intelligence and care in protecting and improving the oil palm in West Africa. In conclusion, the Chairman paid a warm tribute to the work of the staff both at home and abroad, and proposed the adoption of the report and accounts which included the declaration of a final dividend of 4 per cent. less tax payable on October 1st.

Mr Robt. B. Miller (vice-chairman) seconded, and the resolution was carried by a large majority.

The retiring directors, Messrs. Robt. B. Miller, Lieut.-Col. W. Nicholl, Mazzini Stuart, and John Tunnicliffe were unanimously re-elected.

The auditors (Messrs Harwood, Banner and Son) were re-appointed.

A vote of thanks to the chairman terminated the proceedings.

Messrs Samuel Montagu and Co. write on September 5th as follows:—

On Saturday last there occurred in Japan the most appalling disaster in history, and our sympathy goes out to our Japanese friends in the misfortune which has overtaken their country. In view of the meagre details yet to hand, it is difficult to speak with certainty as to the effect of the catastrophe upon bullion markets.

GOLD.

In view of the Japanese disaster we may mention that the last return to hand of the Bank of Japan gives the amount of cash and bullion held as equivalent to about £110,000,000. The demand from the Indian bazaars being on a small scale, the bulk of the moderate supplies of gold in the market this week will probably go to the United States of America. It is announced that the Commonwealth Treasurer has renewed until January 31, 1924, the permit granted to the Australian Gold Producers' Association for the export of gold produced by its members. The United States Mint Services announces that the refinery production of gold for the year 1922 was valued at \$48,849,100, and was \$1,218,200 less than that for 1921.

SILVER.

For the first few days of the week under review, the market kept steady, and the price remained unchanged for three days at 30¹/₄d and 30³/₄d for cash and forward delivery respectively. In the absence of supplies buying orders from China yesterday caused a sharp rise of a farthing in the prices, and further buying from that quarter to-day, aided by Indian bear covering, carried the quotations to 31¹/₄d and 31³/₄d, but the position was eased somewhat by offerings from the Continent. The value of the United States refinery production of silver for 1922 is given by the United States Mint Service as \$56,240,048, based on \$1 per ounce. This figure shows an increase of \$3,167,607 over that for the preceding year.

INDIAN CURRENCY RETURNS.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A period of fine weather would now be welcome in order to complete harvesting operations and facilitate threshings of winter wheat and oats in the United Kingdom. Barley and spring oats will yield below average, but prospects now appear better than earlier estimates. Offerings of new native wheat continue somewhat restricted owing to adverse climatic conditions, and prices ruled firm at 9s 2d to 9s 8d per 112 lbs, free on rail, as to sample. The market for imported descriptions maintained a very steady tone, despite recent liberal arrivals, while offerings of Manitobas and hard winters continue limited. No. 1 Northern Manitoba quoted at 46s 9d, No. 2 hard winter 45s, choice white Karachi 42s 9d, red ditto 42s, Rosafe, 62½ lbs, 45s 6d, and Barusso, 62½ lbs, 44s 3d, all ex ship, per 496 lbs. The cargo section showed more activity and a generally firm tone resulted, while a fair inquiry existed for Australian and Pacific cargoes to Japan. Sales include steamers of Australian August shipment at 44s 3d to 44s 6d; choice white Karachi, August, 41s 3d; No. 2 white Western Pacific, afloat, 44s; Rosafe, 62½ lbs, afloat, 43s; and No. 2 Northern Manitoba, October, to Italy, at 45s, all per 480 lbs. Maize cargoes also in request at firmer rates. Plate steamers, loading, sold 34s 1½d to 34s 7½d, September 20th 34s 6d, October 15th-December 15th 34s 7½d, and No. 2 white flat South African, loading, 36s 3d, per 480 lbs. Of barley, a steamer of Algerian/Tunisian September sold

24s 6d per 400 lbs. Flour steady, with a fair demand. London standard straight run quoted at 38s, Patents 40s to 41s, town households 36s per sack, delivered in Metropolitan area. All English country straights 30s to 31s per sack, delivered to London stations. Imported maintained. Manitoba patents range from 37s to 41s as to quality, Minneapolis good patents 40s 6d, soft winter 36s to 39s, and Australian 35s to 36s, all per 280 lbs, ex store. Millers' offals quietly steady. Broad bran quoted 6s, ordinary ditto 5s 3d, middlings 8s, bags included, ex mill; light oats 6s 3d, powdered oat husks 5s 9d, feed oatmeal 8s 9d, ground oats 13s 9d, free on rail, all per cwt. Barley: English malting firm at 10s to 13s 9d, with feeding kinds ranging from 8s 3d to 9s 6d per 112 lbs, free on rail, as to sample. Imported firmly held. Californian 40s to 42s, Chilean brewing 39s to 43s, as to sample, both landed, per 448 lbs. Persian 27s, Karachi 27s 6d, Danubian 28s to 28s 6d, all landed; No. 4 Canadian Western 27s 3d, American malting, 48 lbs,

IRON, STEEL, AND COAL.

Our Glasgow correspondent writes:—There is hardly anything on home account doing in Scotch pig-iron, the prices for which have been slightly shaded in the past few days—Scotch hematite by 2s 6d at £5 5s; Scotch foundry No. 1 by 2s 6d at £5 5s; and ditto No. 3 2s 6d at £5—all f.o.t. makers' works. Dealing in bar iron and steel varieties are easier in tendency at £12 for crown bars, £13 for boiler plates, £10 for ship plates, £9 15s for sections, £12 10s for ½-in. black sheets, and £18 17s 6d for 24 bg. (f.o.b. Glasgow). The Continent, India, China, and Australia are takers of steel plates, which makers are quoting 5s to 10s lower than what is named at home. Close on 1,000 tons pig-iron were shipped from the Clyde to the U.S. last week. Coals 6d to 1s dearer for the same period.

Our Sheffield correspondent writes:—An absence of buying on a substantial scale continues to be the outstanding feature of the iron and steel market, and the amount of work on makers' books has undergone a further reduction, with the result that the position of producers is decidedly critical. While confidence in an ultimate revival is by no means absent, there is nothing in the situation at the moment to warrant optimism. As firms cannot afford to make material for stock, a stoppage of plant involving increased unemployment is imminent. The local unemployment roll is increasing week by week, and the position to-day is a good deal worse than before the holidays. The decline of buying is most marked in basic billets. The steel foundries have little to do, this department being badly hit by the extensive importation of Belgian castings, which, owing to the state of the exchanges, can be bought much more cheaply than British material. The disaster in Japan will mean a serious blow to a considerable number of local steel firms, several of whom had depôts in the wrecked cities, with staffs and large stocks of expensive tool steel and tools. Apart from these, a regular trade has been done between Sheffield and Japan in rolled mild steel. The value of the stocks which it is feared are totally destroyed amounts to many thousands of pounds. The home demand for industrial and household fuel has shrunk considerably since the beginning of August, and while the export trade continues brisk, South Yorkshire can only secure a small share of it. Prices, although easier, are not notably lower. The considerable export demand for coke serves to counteract the effect of the lessened consumption at home, and the market is consequently firm. Quotations per ton at the pits are:—Best hand-picked branch, 30s to 31s; best Silkstones, 26s 6d; South York-

shire hards, 21s; rough slacks, 11s to 12s; nutty slacks, 10s; smalls, 7s to 8s.

Our Middlesbrough correspondent's report, dated September 6th, is as follows:—Pig-iron: Our pig-iron makers, both Cleveland and hematite, are very unfortunately placed at present. Pig-iron prices are falling, but there is no equivalent fall in the cost of production. There are no heavy stocks of Cleveland iron, but stocks of East Coast hematite pig-iron have been increasing. Prices are as follows:—97s 6d per ton for No. 3 Cleveland G.M.B., and 98s 6d per ton for East Coast mixed numbers hematite. Manufactured Iron and Steel: The steel trade continues to be very quiet, and prices have been reduced a trifle. Steel ship plates, £9 15s; steel ship angles, £9 5s; iron bars, £12; steel rails, £9 10s. Iron Ore: Owing to reduced consumption of imported ore, the demand has practically ceased for the time being. Works have sufficient stock for their needs. Best Rubio is nominally 23s per ton c.i.f. North-East Coast ports.

Our Cardiff correspondent writes:—There has been little, if any, material improvement this week in business on the Cardiff coal market. There has been a little better enquiry from West Italy, but other trades have been stagnant. Prices, however, have been well maintained. The recent slump in Newcastle coals has not extended to South Wales coals, and at the beginning of the present week there was a difference of about 8s per ton between best Cardiff and best Newcastle steams, although the normal difference between the two coals is only between 2s 6d and 3s. The following are the current approximate quotations:—Best Admiralties, 28s 6d to 29s 6d; second Admiralties, 27s 6d to 28s; best drys, 29s 6d to 30s 6d; Western Valleys, 27s 6d to 28s; Eastern Valleys, 25s to 27s; best bunker smalls, 19s to 21s; ordinary cargo smalls, 15s to 17s; anthracite big vein, 50s to 52s 6d; French nuts, 57s 6d to 60s; rubbly culm, 15s 3d to 16s; coke, for export, 40s to 45s; inland blast-furnace coke, at ovens, 30s to 35s; patent fuel, 30s to 33s 6d; pitwood, ex ship, 32s to 32s 6d. The improvement in the tinplate trade has been maintained. There is a better demand from abroad, and prices are much firmer, although

48 Gracechurch Street, London, E.C.3.

September, £16; real bold Ferozepore, September-October, £16 7s 6d; Jamba nominal. Cottonseed quiet. Egyptian black, September, £11 2s 6d. Bombay, afloat, £9 10s; December-January, £8 15s. Gingly seed quiet. Large Bombay, afloat, Continent, sellers, £21 10s. Chinese, October-November, £21 5s, Continent. Groundnuts firmer. Coromandel, machine-dried, August-September, £22 2s 6d. Chinese decorticated, f.a.q., October-December, £21; East African, September-November, £21. Soya beans firmer. Manchurian, August-September, £11 12s 6d. Castor-seed firmer. Bombay, August-September, £20 7s 6d per ton.

OILS.—Linseed firmer, with a fair demand. Spot, net, naked, quoted 41s 6d; September, 40s 4d; September-December, 39s 6d; January-April, 35s 9d. Rape steady. Crude, spot, 38s; refined, 41s. Cotton quiet. Crude Egyptian, spot, 36s; Bombay, 35s; common edible, 43s; deodorised (in barrels), 45s. China-wood quiet and easier. Hankow, spot (barrels), 90s; August-September, 86s. Cocoon steady. Ceylon, spot, 44s 6d; August-September, 43s 6d; Cochin, ditto, quoted 47s. Soya steadier. Oriental, barrels, August-September, 38s 6d. Cod quiet. English, spot, 34s. Groundnuts steady. English, crushed, naked, spot, 43s; deodorised, barrels, 51s. Turpentine easier. American, spot, 69s 3d; September-December, 70s; January-April, 72s 3d. Rosin firm. American, grade B, 13s; F, 13s 3d; G, 13s 3d; H to I, 13s 3d; WG, 17s 6d; WW, 18s 6d per cwt. French nominal. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon. Castor-oil firm. First pressure, spot, quoted 51s; second pressure, 50s, and pharmaceutical 56s per cwt.

METALS.—Tin opened the week with a firmer tone, though prices were somewhat irregular, and a fair business transpired. Standard, cash, sold at £193 10s, while three months fluctuated between £193 10s, £194 10s, £193 10s, £196, and £195 15s. Business was reported in the East on the basis of £198 5s to £197 10s, c.i.f. Prices further hardened, in sympathy with higher Eastern advices, combined with covering orders for distant positions. Business was on a larger scale, including cash at £197 15s to £198, and three months £199 15s to £200, £195 10s, and £199 2s 6d. Further business in the East occurred at £203 10s, c.i.f. At Thursday's session was in demand, and prices ruled firmer, while three months exhibited some irregularity. Standard, cash, sold at £200 to £201 5s to £201, and three months £201 to £202 15s to £202 5s to £202 10s, while finally registered at £201 10s. The upward tendency was continued on the following day, though business proved of smaller extent with chief interest shown in forward positions. Standard, cash, sold at £201, and three months £201 10s to £203 10s to £202 to £202 10s. English ingots, £202 to £202 10s. Copper commenced with a quiet and easier tone, but subsequently improved on more inquiry for distant positions and reserved sellers. Standard, cash, quoted £63 10s, with business in three months at

£63 5s to £64 2s 6d. With sustained inquiries especially forward and higher American advices prices were further marked up. By the middle of the week standard, cash, was dealt in at £64 5s, and three months £65 to £65 2s 6d. A steady tone prevailed on the following day with buyers less in evidence. Standard, cash, quoted at £64 5s to £64 7s 6d, with three months sold at £65 2s 6d to £65. At Friday's session tendency of prices was barely steady. Standard, cash, sold at £64 6s 3d, and three months at £65 2s 6d to £64 17s 6d. Electro, £69 5s to £69 15s; best selected, £67 10s to £69; strong sheets, £66; wire bars, £69 15s. Lead firmer at £25 17s 6d to £25 13s 9d, as to position. Spelter firmer at £34 to £33 10s, according to position. Aluminium; Home, £115; export, £120. Antimony: Ordinary brands, £30 to £32; specials, £34 10s to £35.

TALLOW.—Messrs Colchesters and Woolner write as follows on September 5th:—The tallow market was firm during the week, and prices are mostly 6d dearer to-day. There is no change in the value of inferior kinds. The stock in London on August 31st, as returned by the wharves, amounted to 19,692 packages, showing a decrease during the month of 1,172 packages. At auction to-day 1,915 casks tallow were offered, and 961 were sold. Quotations are:—Australian mutton: Fine, 42s 9d; good to fair, 42s to 41s; dull to dark, 38s to 36s 9d; hard, 43s. Australian beef: Fine, 42s; good to fair, 40s 6d to 38s 6d; dull to dark, 37s to 36s 6d; sweet, 42s. Present shipment from Australasia nominal. Present shipment from South America, 38s 6d to 37s 3d. The market letter is unchanged. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 14d; melted stuff, 26s 6d per cwt. Quotations are:—Town, 35s, net cash, naked, ex works. Country: Frail casks 35s; home melted, shipping casks, net, f.o.b., good coloured, 37s; fair to dull, 36s to 35s. Bone fat: White, none; pale, none; benzine, 33s; melted stuff, 33s 6d, f.o.b.

amount of buying of these bills for special quarters, without which even greater stringency would probably have been apparent in the money position. The ease of discounts has been assisted perhaps by fading of apprehensions of any immediate rise in Bank rate. December Treasury bills have changed hands freely at $3\frac{1}{2}$ per cent., and the rate for fine three months' bills has remained at about $3\frac{1}{4}$ per cent.

	Sept. 14, 1923.	Sept. 7, 1923.	Aug. 31, 1923.	Aug. 24, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	1 $\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills) ..	3 $\frac{1}{4}$	3 $\frac{1}{4}$	3	3 $\frac{1}{8}$	..

The Bank return shows a decline of £794,000 in the active note circulation, representing a seasonal reaction after the August holiday and usual end-of-the-month requirements, and the Reserve was £792,000 higher. Movements between Government and private accounts reflect the inflow of funds to the Government on account of taxes and the large amount of Treasury bills taken up by the market during the week. The Other deposits show a fall of £3,500,000, while Government securities were reduced by £2,800,000, and Government balances were increased by £1,600,000, hence the ratio of Reserve recovered to 19.0 per cent. The amount of Currency Notes outstanding was reduced by £708,000 on the week, the total standing at £285,312,000, which includes £1,450,705 for notes called in, but not yet cancelled. The fiduciary issue is £234,411,400, or £35,772,400 below the maximum.

The statement of the London Clearing Banks of average weekly balances for August is printed in full on another page; below we show the aggregate figures for the nine English banks:—

	Dec., 1922.	April, 1923.	May, 1923.	June, 1923.	July, 1923.	August, 1923.
Capital and reserves	116.0	116.2	116.2	116.3	116.3	116.3
Acceptances	72.8	78.0	77.5	73.8	73.8	70.7
Deposits (incl. undivided profits, &c.) ..	1,684.7	1,606.0	1,608.5	1,637.7	1,638.0	1,611.2
Total Liabilities	1,873.5	1,800.2	1,802.2	1,827.8	1,828.1	1,798.2
Coin, notes, balance at bank, and cheques in course of collection ..	253.0	240.0	234.6	240.7	236.6	231.0
Money at call	106.0	110.5	108.8	113.3	104.4	99.4
Investments	384.5	351.3	349.4	355.5	362.5	362.7
Discounts	298.3	249.5	262.3	270.8	276.4	264.7
Loans and advances	732.7	744.4	743.0	746.9	747.3	742.7
Over for accept., premises, &c.	99.0	104.5	104.1	100.6	100.9	97.7
Total assets	1,873.5	1,800.2	1,802.2	1,827.8	1,828.1	1,798.2

Deposits have declined by about £27 millions, cash and money at call is lower by about £5 $\frac{1}{2}$ millions and £5 millions respectively. Discounts show a reduction of £11 $\frac{1}{2}$ millions, and loans a reduction of £4 $\frac{1}{2}$ millions.

THE STOCK MARKETS.

Though the tone of the Stock Exchange has improved under the influence of better news from abroad, business has not been on a very large scale. The Consol market has been firm, and gained strength yesterday from the good reception of the Treasury Bills. Japanese securities have recovered to some extent from last week's fall. Russian securities improved yesterday, and French bonds and railway issues rose on the belief that a first step towards a Ruhr settlement is approaching. Buying of Royal Dutch shares on the part of New York and Amsterdam imparted a firm tendency to oil markets. Iron and steel, cable, and shipping stocks have advanced, in view of the direct or indirect benefits expected to accrue to these industries when Japanese reconstruction is taken in hand. Both the Kaffir market and mining sections generally suffered from the lack of marked public interest.

THE COMMODITY MARKETS.

With the advent of autumn a distinctly better tone is found in the commodity markets, partly due to the anticipation that the needs of Japan will involve considerable demand. Better conditions prevail in the Manchester cotton trade; there has been an important advance in raw material rates, while spinners and manufacturers have experienced a much larger inquiry. In the wool trade the raw material is firm, but business in Bradford is dull. Jute prices are well maintained, and a fair amount of

inquiry is noticeable. Our Middlesbrough correspondent reports a more cheerful outlook in the pig-iron market, and adds that though prices of steel are unchanged inquiries for reconstruction purposes are expected. Our Glasgow correspondent states that quotations for Scotch pig-iron and hematite are harder. Tin and copper values were on the dull side. Stocks of linseed are said to be low, and prices are firm. Wheat is weaker. The sugar market presented a buoyant appearance, exporters lending support. Demand continues for the finer teas, but commoner qualities are slightly lower in value. Rice dealings display no marked sign of activity. The Bermondsey hide market again showed signs of weakness, and small declines in values were recorded.

FOREIGN EXCHANGES.

In the foreign exchange market the extreme uncertainty in the international situation has been reflected during the week by movements exceptionally wide, even for these disturbed days. The Berlin rate, which at present levels reflects very little real business, recovered sharply to 150,000,000 at one time on the 7th, but since then, with wide swings in both directions, reached well over 500,000,000 in the middle of the week. Further fluctuations brought down the rate to about 430,000,000 yesterday morning. For the time being it would seem that the currency situation is entirely out of hand, and the quotation has so far been uninfluenced either by the feverish attempts for the establishment of a new bank of issue on a gold basis or by the new concessions offered by Herr Stresemann. For forward marks quotations are nominal at about 150,000,000 per month over spot. On the expectation of an imminent surrender by Germany, the Paris rate at one time recovered rapidly to 78, and although there was later a reaction to 79.15 on Thursday, yesterday afternoon's rate of 78 compares very favourably with the quotation of 81.45 a week ago. In the same way the Brussels rate, after falling to about 95, stood yesterday at 94.10, as compared with 99.45 on the 7th. In both cases an optimism which may prove deceptive has been the occasion of the improvement. The forward rate in Paris has widened again from $3\frac{1}{2}$ to $4\frac{1}{2}$ centimes per month above spot, and in Brussels from $7\frac{1}{2}$ to about 11 centimes per month above spot. The Italian rate has been equally erratic, but the clearing up of the Greek situation has brought a definite improvement on the week, the quotation yesterday morning standing at 102 $\frac{1}{2}$, as compared with 105 on the previous Friday. In the early part of the week the rate was, for the time, decidedly lower as the result of the purchase by the Greek Government of the 50,000,000 lire required as a deposit in connection with the recent murders. Even New York has this week suffered from unusual fluctuations, the rate at the end of last week being at one time \$4.51 $\frac{1}{2}$. On the 11th there was a sudden jump up to \$4.55, which was maintained on the following day, since when, however, the rate has reacted again to \$4.54. Forward rates are much the same at $\frac{1}{2}$ cent per month above spot. Amsterdam has followed the dollar movements, rising to 11.60 on the 11th and falling away again to 11.53 $\frac{1}{2}$ yesterday, as compared with 11.53 a week ago. The Spanish rate, which has recently shown some slight signs of improvement, has reacted, although less than might have been expected, to the news of the Barcelona revolt, and stood yesterday morning at 34, a rise of about $\frac{1}{2}$ peseta on the week. Switzerland has also depreciated, rising from 25.15 to 25.60. The Lisbon rate has continued to depreciate, and now stands at 2 $\frac{1}{4}$ d, in spite of a further increase in the bank rate to 9 per cent. In Northern Europe Copenhagen, Christiania, and Stockholm have all moved in our favour to 25.15, 28.17, and 17.12 respectively, as compared with 24.87, 27.92, and 17.02 a week ago, while Helsingfors has also depreciated from 164 $\frac{1}{2}$ to 170 $\frac{1}{2}$. In Central Europe Vienna, after the temporary appreciation at the end of last week, is back again at its well-established figure of 322,500. Warsaw has moved up slightly to 1,325,000, Prague is unchanged, and Bucharest has improved again to its old figure of 980. In the East, the rupee is quoted at 1s 4 5-32d, about the same as last week. The yen is settling down again at 2s 1 $\frac{1}{4}$ d, as compared with 2s 1 $\frac{1}{4}$ d a week ago. The silver market is firm, and prices are rather higher than last week, mainly on Indian buying, China having been in the market on both sides. Hong

Kong, at 2s 3 $\frac{1}{4}$ d, is unchanged, Shanghai, at 3s 1 $\frac{1}{4}$ d, being also the same as a week ago. In South America, Rio after being slightly higher, is unchanged on the week at 5 $\frac{1}{4}$ d, while Buenos Ayres has maintained its recent improvement at 39 $\frac{1}{4}$ d. Montevideo has appreciated from 39 $\frac{1}{4}$ d to 39 $\frac{1}{2}$ d, while Valparaiso has also moved from 36.50 pesos to 35.80 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 8th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	6,550	From Revenue	10,771
Interest, &c., on Debt	3,017		
Sinking Fund	500		
Reduction of Debt	558		
Added to Exchequer Balances ..	146		
	10,771		10,771

The total revenue during the week amounted to £10,770,900, as compared with £13,817,900 during the corresponding period of the previous year. The chief reason for the decline was Special Receipts, which amounted to only £216,900, as against £1,346,900 last year. Property and Income-tax produced £3,976,000, and Super-tax £410,000, against a combined total of £5,745,000 a year ago. Estate, &c., duties at £740,000, produced about £600,000 less than the figures given a year ago. The week's operations reduced the National Debt by £557,500, and caused the following changes:—

	Min. £		Min. £
National War Bonds paid off ..	4,900	National Savings Certificates ..	400
Bank of England Advances ..	7,000	Treasury Bills	7,549
Unemployment Insurance ..	333	Public Departments Advances ..	3,710
		Sundries	416
	12,233		11,675

The floating debt was increased by £4,255,000 to £810,521,500.

FINANCIAL YEAR, 1923-24 (April 1 to September 8, 1923).

	£		£
Total Expenditure ..	334,972,676	Raised by Revenue ..	328,691,204
		Decrease in Balances ..	3,064,346
		Net Borrowings	3,217,126
Total	334,972,676	Total	334,972,676

ESTIMATES for YEAR 1923-24.

	£		£
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

EUROPE'S TROUBLES AND THE LEAGUE'S POSITION.

AFTER rapid and baffling vicissitudes, the situation in Southern Europe has at the end of this week taken a more hopeful turn. The week opened with the good news that Italy and Greece had both accepted terms laid down by the Conference of Ambassadors. The relief afforded by the news of this rapid solution of a dangerous situation was profound; for it not only removed the immediate fear of a physical conflict whose ramifications could not be foreseen, but also allayed the anxiety as regards the consequences that might follow the withdrawal of Italy from the League of Nations, which, when we wrote last week, appeared quite probable. But the week was not destined to proceed without a fresh crop of European alarms and excursions. It quickly became apparent that the Ambassadors' settlement left in doubt the intentions of Italy regarding the date of the evacuation of Corfu, and it appeared for a time that over this important question tension might once more become acute. Fortunately this danger has also been averted after prolonged deliberations of the Ambassadors in Paris, and as we go to press we hear of Italy's agreement to evacuate on September 27th. In connection with this decision, it has been agreed that if by that date the Janina murderers have not been arrested, or if any negligence is shown by the Greek Government, Greece will pay the full 50 million lire to Italy. Otherwise Greece will simply indemnify the families of the victims.

But while this cloud was dispersing, another, which for a long time has been "as big as a man's hand" on the horizon, gathered overhead. In this new crisis Signor Mussolini is again the principal actor, having

chosen this unpropitious moment to bring to a head the disputed questions relating to the administration and boundaries of Fiume. Finally, as if to prove that instability spreads over other parts of the continent, Spain has fallen into the throes of a revolution.

Although we may heave a sigh of relief at the removal of the Italo-Greek danger, we cannot afford to shut our eyes to the grave questions which the episode has raised, and which must be faced and settled before Europe can look forward to immunity from constantly recurring threats to peace. In the main these questions revolve round the position of the League of Nations. The League, it is true, has emerged from the crisis less battered in prestige than was at one time feared. It has been saved from the withdrawal of a Great Power, some of the consequences of which we outlined last week. It can at least claim some share in the credit for achieving a quick settlement. If the Ambassadors' Conference was the *deus ex machina*, the League functioned as an essential part of the *machina*. The League has proved its effectiveness in assisting the maintenance of peace, even if it has not, as Lord Hugh Cecil suggests in his letter to the *Times*, proved effective in securing justice. But if the League is to continue to serve a really useful purpose, present misconceptions of its position will have to be removed. Signor Mussolini, and some lesser persons, appear to regard the League as a separate piece of international machinery whose authority or decisions may be flouted if inconvenient. Such an attitude is not merely perilous to the peace of Europe, but is also based on a complete misunderstanding of what the League is. It is not a separate disconnected piece of machinery. It is, on the other hand, the executive body of the principal post-war Treaties. It is the pivot on which the Treaty of Versailles turns, and the trustee of all the principal settlements made since 1918. It is the guardian of minorities and trustee of mandates. It is the arbitrator of hosts of international questions handed over to it by the various treaties. As trustee, as guardian, as arbitrator it has been set up by the signatory Powers, and is, as we have said, their executive body. For any member of the League to deny its authority and competence in cases where that authority and competence is clearly laid down is not to flout an outside body, but to repudiate its own Treaty signature and to flout the executive of itself and other nations. Upon the realisation of these facts the future of the League depends. The British Government were incontestably right in insisting upon the authority of the League in the Italo-Greek crisis. It is the more urgently necessary that the facts of the League's position should be understood, because the time is at hand to reach a clear decision on vital questions of international law. The Balkan crisis has been tided over, but a decision has not been given, and must be given, in the conflicting views of Italy and the other nations of Europe as to the competence of the League.

It appeared likely a few days ago, though the danger now seems more remote, that the League might at any moment be faced with a complaint by Jugo-Slavia against a *coup d'état* by Italy. Fiume was constituted a free port by the Treaties of Rapallo (November, 1920) and Santa Margherita (February, 1923). It was to be governed by a Constituent assembly, which, however, has never achieved effective existence. The treaties also left undecided questions of boundaries and administration. The port has been administered by a mixed Italian and Jugo-Slav commission, which has been unable to agree in the administration of Porto Barras and the Delta, both nations claiming right to these quay areas. Signor Mussolini has proposed a solution which Jugo-Slavia has rejected, namely, that these areas should eventually pass under Jugo-Slav rule, but first should for 99 years be indissolubly bound to the free Port of Fiume, which was recognised by the Treaty of Rapallo to be Italian in character. Further, the Italian Prime Minister has announced that if agreement was not reached on this question by September 15th (to-day), he would take the task of settlement into his own hands.

These questions are serious enough, but a bigger problem for the League looms ahead. The British Government has unequivocally pronounced the Ruhr occu-

pation to be illegal, and it cannot be long before this question is officially referred to the League. If the international machinery for the maintenance of peace is to be preserved, these vital questions of international law will have to be authoritatively decided by the League, or, on reference to it by the League, by the International Court of Justice. If the League is to live, its competence and authority must be clearly asserted. An impossible position is reached if first one member Power and then another is allowed to challenge it, whenever it finds it suitable to do so. If to-day it is Italy that challenges it, to-morrow it will be some other country. It has to be recognised that the present Government in Italy has no particular regard for the accepted ideas of constitutionalism. So far as internal affairs are concerned, we have nothing to say on this matter. But the Italian people must not be surprised if the revelation of this fact makes other nations the more determined that accepted standards should not be superseded in international relations. We welcome the signs that Signor Mussolini recognises the force of this very natural instinct.

LONDON AND ITS TRAFFIC.

It is stated that the Government intends to pass before Christmas the Bill which is to deal with London's traffic. This projected measure is designed to give powers for the control of traffic and roads over an area of 25 miles, taking Charing Cross as a central point. In general, it is stated, the Bill will follow the lines of the evidence given by Sir Henry Maybury before the Ullswater Commission. It may be recalled that the majority report of this Commission recommended that an advisory body should be set up under the name of the London and Home Counties Advisory Committee, "to advise and assist the appropriate Minister responsible to Parliament in the administration of such matters relating to transport, town planning, housing, and main drainage." This so-called advisory committee would have considerable powers, and would deal with—

- (1) The preliminary examination of all Bills affecting the means of locomotion and transport in the London area.
- (2) The making of necessary surveys and the preparation of schemes for the improvement of London traffic facilities, and the submission of such projects to the competent executive authorities.
- (3) The study of all town planning and housing schemes which must be submitted by the Ministry of Health, local authorities, and others for consideration on traffic grounds.
- (4) The preparation of an authoritative general development plan to which all new London transit schemes should conform.
- (5) The co-ordination in the public interest of all passenger transport agencies.
- (6) The selection and prescription of routes to be followed by all or any forms and classes of traffic.
- (7) The fixing of building or frontage lines on roads.
- (8) The application of remedies in respect of all factors impeding street locomotion.
- (9) Scientific research work in relation to the problems of transport and traffic.
- (10) The right to initiate or oppose traffic legislation, regulations and bye-laws, and to deal with the revision, simplification, codification, and extension of traffic legislation, regulations and bye-laws now in force so far as the London areas is concerned; the confirmation of all new traffic bye-laws and the fixing of speed limits within the area.
- (11) In cases where agreement cannot be arrived at by the various authorities interested in regard to the apportionment of the cost of improvement schemes or projects traversing or affecting several areas, the Traffic Authority shall act as Arbitrator.
- (12) The approval of all designs for any road vehicles used for the transport of passengers, and any alteration thereto.

Finally, the Bill will suggest that Local Authorities should have power to apply to the Ministry of Transport for the imposition of a building line with the idea of prohibiting building within a fixed distance of the road—a very essential provision as London ratepayers have learned to their cost. The London County and Middlesex County Councils possess these powers already, but it is now felt that similar powers should also be in the hands of other authorities in and around London. It may be as well here to quote some comments from the minority report drawn up by Mr Robert Donald and Mr Stephen Walsh with reference to the above proposals. These gentlemen state that, "It appears to us that the powers proposed to

be conferred upon this committee would interfere with the legitimate functions of local authorities. Sir Henry Maybury seems to have regarded the suggestion as a temporary expedient, as he concluded by stating: 'Obviously if some comprehensive authority were set up in future for larger London, the powers of the suggested London Traffic Committee might have to be merged in the greater powers of the greater Authority.'"

The problem of placing London's traffic and the roads in the guiding hands of a small, compact body is one which for years past has been engaging many able minds, and though it is too early as yet to congratulate ourselves that some concrete results have been achieved, we cannot but help feeling that as the solving of the problem has now become a vital necessity, conflicting interests will endeavour to round off all contentious clauses and to ensure a safe if not speedy passage of the necessary measure through Parliament. To obtain cohesion of views from so many interested public authorities, and to weld them into a workable proposition, agreeable to all parties concerned, must have been no easy task. On one hand it was felt that the London County Council, having its own tramway system, was not a proper authority impartially to control other forms of passenger transport. Another objection to municipalising transport powers in London was that the regulation of traffic is largely a matter for the police. And the fact that the police of London, except in the City, are directly under the Government, helped further to complicate an already intricate question. But it is only fair to add that the police evidence before the Kennedy Jones Transport Committee in 1919 showed a temperate desire on their part to act only within their province. But in practice they appear to exercise authority which is dependable on the goodwill of the public and of the local authorities. For this much is certain: the actual legal powers possessed by the police for controlling traffic are slender indeed. In their evidence, it is not without significance that the police made the singular admission that they had not seen New York traffic, although it is doubtful if the custom stated to be prevailing over there of clubbing drivers who do not obey traffic instructions would be an acceptable innovation in this country.

In considering the traffic problem of the metropolis, several points stand out clearly. The first is that the horse must now take a minor place in our transport system. Whether the patient friend of man shall be diverted to secondary roads entirely, or whether certain thoroughfares shall be closed against him during certain hours of the day, are questions which must be faced and decided; at best he will have to be contented with a place in slow-moving kerbside traffic. Secondly, heavy through traffic must be diverted from our main congested thoroughfares, even if this entails the reconstruction of secondary roads. Thirdly, there must be co-ordination between the various authorities which have powers to break the surface of our roads. The absurd spectacle of one authority undertaking a fresh repair to a road one week, and then in the following week another authority coming to pull up a part of it again, must cease. Comparatively minor points for consideration are: one-way traffic streets, and larger commercial and passenger vehicles. It is, we understand, quite a feasible proposition to build larger street vehicles with a bigger carrying capacity, but at present the development in this direction is arrested on account of police regulations. Some attention might be paid to the question of imposing penalties upon the owners of vehicles which by their action cause undue damage to roads. This might cause builders and owners of such vehicles to have a little more respect for public property, and seek fresh methods for saving the surface of the roads. It is very essential to put a stop to an idea only too common that it is to no individual's interest to prevent road damage.

One of the most important parts of the controlling body's duties will be that in connection with licensing of vehicles for road passenger traffic. It is to be assumed that all fares will be brought under control following the custom in other countries. Incidentally it is certain that the public will not take kindly to any bargain the basis of which rests upon the grant of a carrying monopoly on public roads to any one or two particular undertakings. The so-called "pirate bus" may be doomed as an

economic failure. But if this be so, let it die a natural death; any attempt to push it from our streets by back-door legislation will inevitably produce a reaction which will be deeply regretted sooner or later by traffic reform enthusiasts.

Finally, the Ullswater report reminds us that "It is as true now as it was when the Kennedy Jones Committee reported in 1920 that 'London requires new tube railways, in all cases linking up with main line railways; new tramway extensions, which will make for greater carrying capacity; a more scientific development of omnibus traffic; and, above all, a just and true perception of the proper functions of each form of transit in order that wasteful competition may be avoided, and each used to its highest efficiency.'"

THE ORIGINS OF THE WAR.

THIS generation cannot hope to learn the ultimate judgment of history as to responsibility for the Great War. Still less is it possible for any of the principal actors in the drama to detach themselves sufficiently to take a completely dispassionate view. At the same time, the various memoirs which are now being published are essential material for understanding the play of political forces and the influence of the leading personalities in the critical years before the war. None of these memoirs is more important for this purpose than the new book of Mr Asquith, for it reveals the outlook of the man who took the responsibility for bringing us into the great conflict, and is therefore the best qualified to speak for or to explain the attitude of this country.

In form, "The Genesis of the War" * is mainly a reply to the recently published memoirs of the Kaiser in so far as these relate to the years before the war, and Mr Asquith is at pains to refute many wild and unsubstantiated claims which the ex-Emperor puts forward. He has, for example, in correspondence with the British, French, and American Foreign Offices, taken the trouble to demolish the fairy tale that a "Gentlemen's Agreement" was made between England, France, and America in 1897, by which America undertook to join England and France if Germany or Austria should begin a war for the sake of Pan-Germanism. In this story the Kaiser finds the origins of the "encirclement" of Germany by the Allies; but the folly of this view is apparent from the fact that for some time thereafter British policy leaned in the direction of Germany rather than in that of France, and might even have culminated in a definite Alliance if Prince von Bulow had had the courage of his convictions, had carried out his part of the bargain, and responded in public to the friendly speech which Mr Joseph Chamberlain made by agreement with him at the end of 1899. Indeed, Mr Asquith has spent perhaps an unnecessary proportion of his space in refuting this and other suggestions of the Kaiser to which posterity will not attach the least importance.

His real thesis, however, as indeed must necessarily be the case with those who were responsible for British policy before the war, is to rebut the three main charges brought against the Government, namely:—(1) That their diplomacy aimed at the encirclement of Germany, and thereby made inevitable an attempt by the Central Powers to break the ring; (2) that, knowing war was probable, they made quite inadequate preparations for it, and (3) that at the very final stage war might have been prevented if Sir Edward Grey had in the early days of July categorically affirmed that Great Britain's obligations would compel her to take her stand with the Entente Powers, and that her sword would be thrown into the scale.

The first charge is perhaps the easiest to refute. The narrative which Mr Asquith gives of the diplomacy of the decade before the war, and in particular of the friendly overtures to Germany made by Sir Edward Grey at the time of the Balkan Wars; the series of offers held out to Germany by Mr Churchill to slacken or stop the competition in naval armaments; the negotiations and agree-

ments reached on detailed points, such as the Bagdad Railway, which stood between and blocked the way to a general understanding between England and Germany; the interesting independent testimony of newcomers to the European stage like Mr House and Dr Walter Page as to the militarist spirit which filled the Germany of 1914, but was notably absent in Great Britain; and last, but not least, the political outlook of the British Liberal leaders themselves as revealed in Sir Edward Grey's despatches and speeches, as well as in those of the author of this book, dispose convincingly of the myth that the isolation and ultimate crushing of Germany were engineered from London. That the existence of the Franco-Russian Entente as a counterweight to the Central bloc helped to consolidate German militarism is a very different thesis, which is rather outside the scope of Mr Asquith's *apologia*.

As to the charge of unpreparedness, Mr Asquith, in his brief narrative of the actions of the pre-war Government, sketches a fair and convincing picture of the remarkably efficient plans which were made during those years, in spite of the strong pressure for economy, both in and out of the Cabinet, to which the Government had to give heed. There is room for a very much more detailed study of this aspect of modern history. But we are convinced that it would show, as Mr Asquith's sketch, indeed, shows, that, in spite of pre-occupation with social legislation, and with grave internal political issues, the Government never lost sight of the possibility of war. It reorganised the administration of the fighting services, encouraged them to apply the lessons of recent conflicts, and through the instigation of the Committee of Imperial Defence, enabled the Departments by the exercise of imagination and by hard thinking to raise their limited resources to a degree of efficiency which compares very favourably with any other country or any other period of our history. The early failure of our shell supply and the slowness of the War Office to recognise the ultimate requirements of millions of men, is a story of the war, and is not a criticism of pre-war administration. At the outbreak of war there was none of the belligerents who, in proportion to the size of its army, was better supplied with ammunition than ourselves, moreover, all of the warring Powers had, like ourselves, assumed that the war would be fought to a finish from the stocks of ammunition with which they started, and had therefore omitted to make provision for the enormous outputs which experience proved to be necessary. Even Germany had not envisaged the industrial conflict which lay behind the military battle, and we have yet to read in this country the story of her difficulties in the field during the critical months of 1915 through inadequate preparation to manufacture munitions.

Finally, the contention that a word from Sir Edward Grey as to British intentions would have prevented the war, will, perhaps, not be dispelled by this volume. Mr Asquith is, however, able to urge with effect that Great Britain was not in a position to make such a statement on an issue which, until the last moment, did not touch our own vital interests; that all hope of acting as a mediator would have had to be abandoned if she had done so, and finally, that Chancellor von Bethmann Hollweg has himself ridiculed the idea that Germany made a miscalculation in counting in all events on England's neutrality.

Mr Asquith's book is not great literature. It is too heavily documented, and at the same time too short and concise in relation to the vast field which it covers to be always satisfying to a critical judgment. But its qualities of brevity and movement will, on the other hand, appeal to thousands of readers where a more laborious treatise would have attracted its hundreds only. Mr Asquith's clear and trenchant style, which scorns not merely all irrelevant but also all minor arguments, will make his book acceptable to many who find diplomatic mysteries a complex and difficult study. In choosing as the occasion of his book the memoirs of the Kaiser, Mr Asquith might, perhaps, have treated the exile of Doorn after the manner of Carlyle. But he is content to expose in the fewest possible words the weaknesses of the Kaiser's political mentality. His analysis, like all his character sketches, shows understanding, and in the final climax even sympathy, for, after quoting the Kaiser's account of his hesitations and ultimate decision to flee into Holland instead of either hurling himself to destruction at the front, return-

* "The Genesis of the War." By H. H. Asquith. Cassell and Co., London, 1923.

ing at the head of his army to restore his power by force, or committing suicide, he dismisses him with the charitable and characteristic phrase, "I confess myself unable either to quarrel with his reasons or to question his conclusion." Mr Asquith's book is a model of discretion in the use which he makes of the private documents and information at his disposal. Its most remarkable feature, at all events to contemporary readers, is its complete absence of bitterness to his opponents, whether those of these latter years or those of his pre-war battles, such as the Ulster crisis. All such episodes and their actors he describes with an almost cold objectivity, and a complete absence of personal comment. And, finally, remembering that in many ways he is the leading actor in the moving story he unfolds, Mr Asquith shows the most marvellous restraint in keeping a personal note almost entirely out of his pages. Even when he comes to the fateful fourth of August, 1914, he reproduces at second hand Mr Page's account of Sir Edward Grey's emotion on announcing the failure of Britain's efforts for peace; and though the memory of that time must still be very vivid to Mr Asquith, he never lifts the veil and allows the reader even to suspect the existence of his own.

THE WORLD'S COTTON POSITION AND PROSPECTS.

THE world's cotton position to-day with regard to supply is admittedly uncomfortable, to say the least of it. What is perhaps not generally understood, however, is that that position is not an accident, nor even a temporary condition which will shortly give place again to something like normal pre-war conditions. It is, on the contrary, the result of a steady development which has been going on for at least 20 years, and which is likely to become permanent.

The position may be very briefly outlined as follows:—

(1) As will be seen from the following table of the world's cotton crops for the last 20 years, the American crop has for many years dominated the world's supply. In pre-war days it averaged over 60 per cent. of the total, and even now it is over 50 per cent.

TABLE A.—THE WORLD'S COTTON CROPS, 1903-1922.

Bales of 500 lbs (approx.). 000's omitted. Linters included in American crop.

	America.	India.	Egypt.	Russia.	China.	Others.	Total.	% on 1914.

* 400 lb bales. † The high figures from 1909 to 1915 are of very doubtful authority. ‡ Estimates.

(2) The position of the American crop had even before the war become very unsatisfactory. The cost of production was increasing owing to the rise of labour and all other costs, and the average yield in fully half the belt had been seriously reduced by the steady advance of the boll weevil, which entered the country from Mexico in 1892, and was steadily eating its way northwards and eastwards. (3) The result was that a considerable proportion of the growers were finding themselves uncomfortably near the margin of profitable cultivation, so that when a favourable season produced a big crop the price fell to such a level that it failed to cover their cost of production. The effect was a reduced area in the following year, which, other things being equal, meant a smaller acreage, a shortage of supply, and a rise in price again. This had resulted in a sort of vicious circle, prices fluctuating from one extreme to another in a way that was harmful to everyone concerned. (4) This state of

affairs was intensified by the war, which raised the cost of production, especially wages, still further. As will be seen from the above table, practically all the world's crops were reduced during the war; but, on the whole, the supply was still sufficient to meet the reduced consumption of the war period, and it was not till the post-war boom of 1919-20 that the full effect was felt. In 1919, however, the small crop proved hopelessly insufficient to meet the revived demand, and prices went sky-high. In 1920 the acreage was substantially increased, and the weather conditions were, on the whole, the most favourable since 1914, with the result that a comparatively big crop coincided with the greatest slump in demand that has ever been seen, and prices fell again actually below pre-war levels. Once more the vicious circle came into play; the acreage in 1921 was severely reduced, and that year the crop was a disastrous failure, being the smallest recorded since 1895. At first it was thought that this was only an unfortunate accident. 1922 showed a partial recovery of the acreage, but again, thanks to bad weather and the boll weevil, the crop was under 10 million bales, with the result that prices soared again to levels only exceeded in the post-war boom. This, again, had its effect on the acreage of the current season, which is the largest on record, and most people seemed to take for granted that we would have a good crop again. For a time the weather was, on the whole, favourable, but the last two condition reports have again shown a very serious falling off in the crop prospects, and once more we are faced with a crop which is not likely to exceed 11 million bales (excluding linters), and may be as low as 10 millions.

There are still some who believe that these three bad years in succession are only a coincidence, but better instructed opinion points to the fact that the average yield per acre is, on the whole, coming steadily down (see Table B), and corresponds with the further advance of the boll weevil, which has now covered practically the whole belt. So far no really effective and cheap method of tackling the boll weevil has been discovered, and we must, therefore, assume that the pest has come to stay, and that in future we have no right to expect an average yield of more than 150 lbs an acre for the whole belt, whereas in pre-war days a good year would go over 200 lbs. The following table gives the details of the American crop in recent years:—

TABLE B.—AMERICAN ACREAGE, CROP, YIELD PER ACRE, AND PRICE, 1909-1923.

Season.	Acreage Harvested 000 Acres.	Crop (Running Bales).			Average Yield lbs per Acre (excluding Linters.	Average Price of Middling Pence per lb.
		Cotton.	Linters. (000's omitted.)	Total.		
1909-10	32,044	10,073	313	10,386	149	7.86
1910-11	32,403	11,568	398	11,966	171	7.84

* Fourth Bureau Report. † Estimated. ‡ Planted.

* Fourth Bureau Report. † Estimated. ‡ Planted.

As will be seen from Table A, there is, unfortunately, no prospect of compensation in any other direction for this serious loss on the American crop. The Egyptian crop has also shown a marked falling off in yield, both total and average, since before the war, and the only crop that has recovered to pre-war proportions is the Indian, which is of least use to the bulk of the world's spinners. The Russian and Chinese crops, which are the only other major crops, have also suffered severely since 1914. Nor can we look to any of the new cotton fields, of which there are many in the world, and especially to those of the British Empire, for any immediate relief from the scarcity. There is very little doubt that the British Empire can some day produce most of the cotton it requires; but that day is, unfortunately, very far away. The total quantity produced in all the British Empire (excluding India and Egypt) does not yet amount to much more than 100,000 bales, and it will be some years yet before we can hope to raise that figure to a million. And since 1914 the world has lost about eight million bales!

It will be seen that, as far as supply is concerned, the prospects are very poor. How, then, has the world

managed to adjust itself to the reduced supply in recent years, and what is the position likely to be in the immediate future? The answer to the first part of the question is that, owing to the restriction of consumption during the war, the reduced supplies had fairly well met the demand. The comparatively good crop of 1920, coinciding with the strangulation of demand throughout the world, resulted in the accumulation of the largest carry-over that has ever been seen, including nearly 10 million bales of American cotton alone. This was reduced by almost half in 1921-22; at the end of the following season (July 31, 1923) it had been reduced to about three million bales, which is rather below pre-war normal figures. In the meantime, however, the world's consumption had recovered to something surprisingly near pre-war figures. The final figures for 1922-23 are not yet known, but will probably turn out to have been about 13 million bales, which is over 90 per cent. of the amount consumed in the last pre-war year, for which we have full statistics, 1912-13. What has happened is that, while England and the Continent as a whole are still far behind their pre-war figures of consumption, America, India, and Japan have been going ahead at a rate which almost made up for the whole of the reduced consumption in Europe.

The position to-day is, therefore, as follows:—(a) The world's crops are barely 70 per cent. of the pre-war maximum; (b) the world's consumption last year was about 90 per cent. of pre-war, and would probably not be less during the coming season if the supply were available at anything less than double pre-war prices; (c) there is now no abnormal carry-over to enable us to tide over another bad year.

If, therefore, the American crop this year turns out as badly as it looks like at present, the position will be disastrously clear. The supply will be quite insufficient to meet the potential consumption. There is, of course, only one cure for that state of affairs—the consumption must be restricted. The only question is how far and by what means? Until the fate of the American crop is definitely known the first part of that question cannot be answered; but the result may be stated in the form of an equation with two unknown quantities. The price will have to rise high enough to reduce the consumption to the supply available. If, for example, the American crop is 11½ million bales, including linters, with a carry-over of about 3 millions, the world might carry on for another season at a consumption rate of 13 million bales by reducing the carry-over to the absolute minimum, because the carry-over is so widely distributed that a total of only 1½ million bales would be nearly invisible, and there would certainly be a scramble for what remained before the end of the season. If the crop is only 10½ million bales, then a 13-million consumption would be virtually impossible. This, of course, is looking only to the American position. It is possible that many of the world's spinners could use more Indian instead of American, and will be compelled to do so by the high price of the latter. During the past year the spinners of American have obtained considerable relief from the use of other outside growths—Peruvian, Brazilian, &c., and even Egyptian—but the whole amount of all these smaller crops is not sufficient to afford permanent relief. We cannot escape in that way from our dependence on the American crop.

The real question, however, is what is going to happen to the American crop in future years? High prices will maintain the acreage, but it will take a very high price to increase it substantially. The fact is that, with anything like the yield per acre of the last three years, it would take 50 million acres in America to produce the supply that the world would like, and that is as nearly as can be impossible. It seems clear, therefore, that the description of the position in the opening sentence as uncomfortable is certainly not exaggerated. It is, of course, possible that a real cure for boll weevil may be discovered which would alter the whole situation. Short of that, a great many things could be done in America to improve the final output of the crop; and there is no doubt that a permanent high price for cotton is the strongest possible advocate for a quick increase of the supplies from other parts of the world. Again, it is true that these last three years the American crop has had very bad luck in the weather, and any season might

bring a return to the ideal conditions of, say, 1911 or 1914. It must be remembered, however, that not even ideal weather conditions would now produce crops like these years, because it is an unfortunate fact that the hot dry weather in the Western Belt, which is the only thing that keeps the boll weevil down, is bad for the plant, while the temperate summers, with just sufficient rainfall, which are ideal for the crop, are also ideal for the boll weevil. Finally, in the old days the ultimate outcome of the crop depended very largely on the postponement of the first killing frost to a late period of the season, which allowed the making of a good "top crop" from late maturing bolls. Nowadays the boll weevil gets the whole of the top crop, so that the date of frost matters very little.

It seems, therefore, that it would need something very little short of a miracle to put us back to the days of big pre-war crops. If, therefore, we cannot hope for pre-war supplies, we cannot expect to indulge in pre-war consumption; and there seems no escape from the conclusion that for a good many years to come the world will have to do with less cotton. Until that miracle comes, we shall never get back to the "good old days" when cotton was 6d a lb, or less. If, in the meantime, the world gets tired of waiting for the miracle, it may have time to explore the possibilities of artificial substitutes for textile raw materials, such as artificial silk.

THE POSITION OF THE POTATO TRADE.

(BY A CORRESPONDENT.)

A VERY fractious, anxious, and discontented potato market is not a pleasant matter for the Ministry of Agriculture to contemplate, and it is to be feared that the present Minister in his handling of the present crisis has brought a hornet's nest about his ears. The onlooker will not be without a certain measure of sympathy for the unsuccessful attending, in this particular instance, a middle course. The late Viscount Chaplin, that stalwart Protectionist, would have had no difficulty. Pointing to the crops of 1917, 1918, and 1922, he would have said that the British Isles could easily grow all the potatoes they wanted, and that therefore he was against allowing imports. It would have raised a clear issue, and he would have had many supporters. Another Minister of Agriculture, Mr Walter Runciman, would have had no difficulty either. A staunch Free-trader, incidentally not uninterested in shipping, he could have told a deputation ten years ago that the imports were clearly too small to control prices, and that a home crop difference of 39,580,000 cwts between yields of 1912 and 1913 was to the import returns as the tides in the Bay of Fundy to those in the Mediterranean. And he, too, would have had his followers, numerous and convinced. Sir Robert Sanders, in alleging that Holland and Germany are no longer dangerous, is unfortunate, for the pre-war figures reveal them as very consistent export Powers in the potato market. France, too, which the Minister seems to regard as merely a shipper of fancy or luxury potatoes, has shipped 6,040,000 cwts in a single year. That is something more than a luxury competition. What the readers of the *Economist* will desire to learn is:—(1) How is the quite startling price change from 1921 to 1922 to be accounted for; (2) why did 8,807,000 tons overweight the market in 1922 when 8,084,000 tons in 1913 were well assimilated. Allowing for increase of population, the rate of supply *per capita* is about the same.

The following figures, not put together in any official report, though derived from different official sources, need considering in a dry light:—

BRITISH SUPPLIES OF POTATOES—UNITED KINGDOM.

	Home Crop.	Imports.	Total Supply.	Market Price.
	Tons.	Tons.	Tons.	
1912	5,726,000	296,000	6,022,000	80/-
1913	7,605,000	479,000	8,084,000	70/-
1914	7,476,000	169,000	7,645,000	
1915	7,540,000	111,000	7,651,000	
1916	5,469,000	91,000	5,560,000	
1917	8,604,000	81,000	8,685,000	
1918	9,223,000	71,000	9,294,000	
1919	6,312,000	52,000	6,364,000	
1920	6,374,000	264,000	6,638,000	
1921	6,554,000	155,000	6,709,000	320/-
1922	8,634,000	173,000	8,807,000	220/-
				180/-
				149/-
				70/-

* Highest week.

† End of year.

The German production of potatoes is enormous—15 cwt per *capita* in a good year; but the surplus left for export is seldom really large. France has rather declined as an exporter of potatoes, but Holland is clearly under-rated by the Minister.

PRE-WAR EXPORTS.

	Germany. Tons.	Holland. Tons.	France. Tons.	Special. Tons.	
1909.....	124,000 ..	275,000 ..	302,000 ..	Russia.....	111,000
1910.....	305,000 ..	205,000 ..	218,000 ..	U.S.A.....	45,000
1911.....	290,000 ..	457,000 ..	185,000 ..	Russia.....	302,000
1912.....	125,000 ..	470,000 ..	228,000 ..	New Zealand..	21,000
1913.....	332,000 ..	416,000 ..	181,000 ..	Canada	55,000

The writer can only account for the 1920 and 1921 prices on the following hypothesis. Potatoes at their dearest are still a cheap luxury, and, therefore, while a big rise in more expensive articles goes far to kill consumption, the public do not buy green potatoes because they rise in price. Potatoes at their highest on record, 320s, still cost only 1½d per lb, and at 220s they cost less than 1½d. If we concede this, Bagehot's law, as it is called, will apply. If the nation now eats eight million tons, but not more, the rise in the prices paid would represent not the difference between 6,700,000 tons and eight millions, but the determination and the resources of the competing buyers. But the gigantic decline, on a 10 per cent. superfluity, is a matter less easy to explain. Here we must assume that the resolve of each individual farmer not to be the man left with unsold tubers depressed prices not by 10 per cent. merely, but by the degree of his determination not to be undersold and saddled with unwanted stock. It must be remembered that with potatoes the fear of them going bad, the whiff of a musty or evil smell from the clump, may set up a *sauve qui peut* feeling, and deliver the grower almost bound into the hands of the buyer. The small imports coming inopportunely, and as consignments not asked for, but to be sold at all hazards, undoubtedly exerted an altogether disproportionate influence in London and at Bristol. There is a homely comparison which may be forgiven, as the figures are fairly exact in ratio. A railway carriage to seat five on each side can squeeze in 15, namely, the seated two groups of five each, and one in front of each of the two groups. But the attempt of a sixteenth to enter may easily lead to a *fracas*. An importation of only one-sixteenth more than the market could tolerate may legitimately be credited with a remarkable degree of disturbance. The fall in potato prices for 1922 undoubtedly helped the nation over a bad period of unemployment. Eight million tons of potatoes cost to grow about 40 million pounds. At £6 per ton, or £48,000,000, producers can thrive. The sale of the 1922 crop for about 30 millions sterling left the growers fully ten millions out of pocket, but it put £18,000,000 into the pocket of the consumer. The present price of potatoes averages £7 per ton, but will, it may be, fall to £6 after the main crop is lifted and safe. A further fall would discourage cultivation, and an easy-going autocrat might stop imports when, but not until, the price fell below £6 per ton. This, however, would bring us to the sliding scale and to stores going into bond at the ports. We have no easy-going autocrat, and we need not discuss the question now.

BRITISH FIRE OFFICES AND THE JAPANESE DISASTER.

THE British fire insurance offices in publicly defining their attitude towards the earthquake and fire losses in Japan, have taken a plain, straightforward course. They have not permitted illusions to be cherished by unprotected sufferers that losses not covered by insurance would nevertheless be paid. The position of the fire offices in this disaster could not be clearer. Since the earthquake fire of San Francisco they have inserted clauses in their policies all over the world exempting the offices in the most precise and definite terms from liability for losses caused by earthquake or its consequences. In countries subject to earthquake hazards, such as Japan, they have

made arrangements for covering earthquake risks as a distinct insurance on payment of a special rate commensurate with the risk. In Japan there is a department of the Government, as in the States of America, which regulates the conduct of insurance by native and foreign companies. The forms of policies adopted by the companies in Japan, both those excluding the earthquake risk and those specially including it, were submitted to and approved by this department. The great mass of the fire insurances in force at the time of the disaster had been issued under the conditions which excluded the earthquake liability. This exclusion was well known to all those interested in Japanese property, and some few, in order that the earthquake risk might be covered, had applied for and taken out special policies for this purpose, and paid premiums in accordance with it. Under these most definite of circumstances the British offices operating in Japan have unanimously resolved to adhere to the conditions under which their policies were issued. They will, of course, meet their liabilities under special earthquake policies, and equally, of course, will not assume liabilities which were definitely excluded in their ordinary fire policies. It was important that this statement should be made, so that the direct policyholders in Japan of British companies should understand the position. It was perhaps even more important that it should be made, so that the implications of the statement should be realised by Japanese insurance offices, which have treaties of re-insurance with British offices. It means that the British companies will adhere to the conditions of their policies, whether they be direct policies or reinsurance contracts with Japanese offices.

During the last dozen years or so native Japanese fire insurance offices have expanded widely, and secured the greater part of their home business. Enormous social and political pressure will be exerted upon these Japanese offices—whose conditions of insurance are the same as those of the foreign companies—to devote large sums from their funds in *ex gratia* payments to sufferers by the earthquake and fire who are not covered under the terms of their policies. This pressure will be difficult to resist, and one must appreciate the embarrassment of the Japanese directors and proprietors. It is obvious that the native companies, whatever the pressure, cannot do very much to meet the losses of the disaster. Their capital and funds amount to some 30 millions sterling, whereas the toll of loss in Tokyo and Yokohama must be 10 or 20 times as great. Nevertheless, the Japanese companies may feel bound to waive the earthquake exemption clause in the most necessitous cases among their policyholders, and meet some percentage of the losses for which they are not legally liable. While appreciating the position of the Japanese companies, the British companies, who have reinsurance treaties with them, clearly intimate that they are not prepared to follow. When one company makes a reinsurance treaty with another company to assume lines on its risks it undertakes "to pay as may be paid." If the original company in the ordinary course of business thinks fit to make an *ex gratia* payment, the reinsuring office follows and meets its proportionate amount. But this system, to pay as may be paid, assumes that all settlements by the original office will be conducted in terms of the insurance contracts in force, in the spirit if not always in the strict letter. A manifest departure by the original office, not only from the letter of the insurance contract, but from the spirit also—as would be the waiving of so well-known and well-established a condition as the earthquake clause in fire insurance policies in Japan—could not involve the reinsuring office in any legal or moral obligation to follow. Whatever Japanese fire offices to the extent of their resources may be induced to do outside the definite obligations of their policies they will do alone; the British companies, as reassurers, will not follow.

THE LEGALITY OF THE RUHR OCCUPATION.

(FROM A LEGAL CORRESPONDENT.)

IN our issues of January 20th and February 17th and 24th we discussed, as far as it was possible in the absence of official documents, the legal aspect of the occupation of the Ruhr by France and her co-adventurers, and we suggested that their action was illegal on the following grounds:—

(i.) That a condition precedent to action against Germany under Part VIII. (Reparation) of the Treaty is the unanimous decision of the Reparation Commission that there has been a "voluntary default" by Germany, unanimity upon questions of interpretation being required by paragraph 13 of Annex II. (We believe that the experts differ on this point, and it is at least arguable that the question whether Germany committed a voluntary default in coal and timber deliveries is a question of fact, and not of interpretation. At any rate, Sir John Bradbury does not appear, from the minutes of the meetings of the Commission, which have recently been published—"Report on the Work of the Reparation Commission," H.M. Stationery Office, August, 1923—to have taken this point.)

(ii.) That the measures to be taken against Germany under paragraphs 17 and 18 of Annex II. must be taken jointly by all the Powers interested in obtaining reparations.

(iii.) That the measures permitted by those paragraphs are "economic and financial prohibitions and reprisals," and similar action falling short of a definite military and political occupation.

The recent interchange of Notes between our own Government and the Cabinets of Paris, Rome, Brussels, and Berlin calls for very little restatement of the argument we outlined some months ago, but some comments may be made upon the official French argument now exposed for public consideration. In the first place, we think it fair to say that the disingenuousness with which British Ministers earlier in this year answered Parliamentary questions as to whether they had taken the advice of the Law Officers of the Crown on the matter, though doubtless dictated by a chivalrous consideration for the feelings of our Allies, has been mischievous for two reasons. Firstly, because it must have led the French Government and people to underrate the importance attached by us to what we are now advised is a breach of the Treaty, and secondly, because it helped an irresponsible, though powerful, section of the British Press in its endeavours to persuade France that the British people were solid behind her in her policy of the occupation of the Ruhr.

Bearing in mind that the French Government specifically rests its case on paragraphs 17 and 18 of Part VIII. (Annex II.) (Reparations) of the Treaty, the various lines of reply may now be summarised as follows:—

(a) That under paragraph 18 it is "for the respective Governments" as a body to determine what "measures" shall be taken against Germany within the limits of that clause on the occasion of a voluntary default, and that "the respective Governments" means "the interested Powers" mentioned in paragraph 17—namely, on this occasion Great Britain, France, Italy, and Belgium, to whom the defaults were notified by the Reparation Commission. (See p. 263 of the "Report on the Work of the Reparation Commission.")

(b) That likewise, under paragraph 18, it is for "the Allied Powers" as a whole to take the "measures" against Germany—that is, that the action must be taken under the authority of the Supreme Council, or whatever other organ may embody the executive authority of the Allied Powers. This principle was forcibly put by the Supreme Council itself in its Note addressed to Roumania on August 23, 1919, on the occasion of her invasion of Hungary, and signed by M. Clemenceau.

(c) That the "measures" which France is taking are not justified within paragraph 18, because the expression "economic and financial prohibitions and reprisals" and in general such other measures as the respective Governments may deem to be necessary in the circumstances,"

must be construed in the light of the *ejusdem generis* rule of construction, which confines the "other measures" to those of a kind similar to "economic and financial prohibitions and reprisals"; and that this argument is strengthened by the fact that military occupation and re-occupation form the special subject of a different part (XIV.) of the Treaty headed "Guarantees." "It would have been idle," says the British Note of August 11, 1923, "to stipulate expressly for such re-occupation in case of default on Reparations, if the Allies had already an unlimited right to occupy any German territory under another clause of the Treaty."

From the British Note of August 11, 1923, it seems that argument (c) alone is officially considered to be the most powerful; and it will be noted that it is advanced not by way of a direct challenge to the French occupation, but as a reason for being unable to "subscribe to the thesis that passive resistance must cease unconditionally because it is contrary to the Treaty of Versailles." Paraphrasing this part of the Note, the British Government says to France: "Germany contends that your military occupation does not fall within the measures sanctioned by paragraph 18; our legal advisers tell us that the German view is well founded; therefore we cannot tell Germany that her passive resistance is a breach of the Treaty and urge upon her its unconditional abandonment."

The French and Belgian replies to this suggestion of illegality consist of an invocation of what lawyers call the doctrine of Estoppel, which may be defined as "a rule of evidence whereby one party is precluded by previous conduct or writing from asserting that a certain statement is true or that a certain interpretation is correct." This appeal to Estoppel is two-fold. Firstly, France says to us: "When in October, 1920, you renounced your rights under paragraphs 17 and 18 to seize the property of German nationals in the United Kingdom, your Chancellor of the Exchequer (Mr Austen Chamberlain) stated that 'the terms of paragraph 18 clearly leave to each of the respective Governments the task of settling the action which may seem necessary to them under the said paragraph' (House of Commons, October 28, 1920)." Possibly it is for this reason that the British Note of August 11 does not deal with arguments (a) and (b) alone. But M. Poincaré might have referred to another Parliamentary answer given by Mr Chamberlain on May 24, 1922, to which attention has recently been drawn by an anonymous writer. On that occasion he said that in the view of H.M. Government paragraph 18 conferred upon the individual Governments "the right to take action independently," provided the action was of the nature contemplated by that paragraph, and he added that as paragraph 12 of the same Annex gave the Reparation Commission the right to interpret this part of the treaty, the views of H.M. Government on the point had no binding character. The second branch of the argument from Estoppel rests on the fact that on several occasions the London Cabinet have co-operated with our Allies in threatening to occupy, and on one occasion in actually occupying, fresh German territory; but the French Government themselves do not seem to be very comfortable on this part of their argument, for they admit that on every such occasion breaches of other clauses of the Treaty were also in question, e.g., disarmament or trial of war criminals, and are unable to point to an instance of our concurrence or participation in any actual occupation of territory merely as the result of a default in the making of Reparations notified by the Reparation Commission. Some of Mr Lloyd George's threats of occupation we are not particularly concerned to defend. Finally, upon the question of Estoppel, an appeal to that doctrine is double-edged. M. Clemenceau's deeds as Chairman of the Peace Conference are at least as important as the expression of views conveyed by a British Minister in an answer to a Parliamentary question, and it was M. Clemenceau who signed on behalf of the Allies, on August 23, 1919, the Note to Roumania pointing out that the Reparation Commission had been "established as an exclusive agency of the Allied and Associated Powers for the collection and distribution of enemy assets by way of Reparations," and that "if the collection of Reparation were to be allowed to degenerate into individual and com-

petitive action by the several Allied and Associated Powers, injustice would be done and cupidity aroused, and, in the confusion of unco-ordinated action the enemy would either evade or be incapacitated from making the maximum of reparation." Moreover, even if Great Britain were estopped by reason of her past conduct from insisting upon a particular interpretation, Germany is not thereby estopped—a fact which must be borne in mind by those who are urged to counsel her to abandon passive resistance.

In conclusion, we must insist upon the importance of the juridical aspect of the matter. There is a tendency even in this country to belittle it. Granted that the legal aspect is not conclusive; even if the French contention were right, we should protest with equal force the in expediency of her action; but when, as we believe, her contention is legally wrong, it is our duty to keep prominently before the world, whose opinion we seek to bring to bear upon France, both our belief in the illegality of her action and our offer to submit that belief to the test of the International Court of Justice at the Hague or other suitable arbitration. Moreover, as has recently been pointed out in the Press by an ex-Attorney-General, the question of legality or illegality is vital upon the attitude to be adopted towards Germany's passive resistance, for by paragraph 18 "Germany agrees not to regard as acts of war" measures capable of justification within that paragraph, so that her resistance, whether active or passive, to such measures would be a breach of the Treaty, and would put her entirely in the wrong. That the French Government have throughout been alive to the desirability of making out a good case in law becomes even more apparent upon a perusal of the recently published "Report on the Work of the Reparation Commission," and in particular of the minutes of the meeting of the Commission in December, 1922, at which the default in deliveries of timber by Germany was recorded, *dissentiente* Sir John Bradbury. That gentleman is there reported to have said that "the prosecution had relied on certain failures which, in view of the volume of the financial obligations under the Treaty, were almost microscopic." [These counts were eventually abandoned.] "The fact was that this trumped-up accusation was only before the Commission at the moment as a preparation for an offensive in other fields. Since, in the tenth year of the war, Troy fell to the stratagem of the wooden horse, history recorded no similar use of timber. The situation was at present somewhat different; it was the fifth year of the Peace, and the city under attack was not Troy, but Essen."

Notes of the Week.

Bradford's Cry for Protection.—By a majority of nine votes to six, the Council of the Bradford Chamber of Commerce has decided to seek protection against the competition of French imported woollen goods by means of Part II. of the Safeguarding of Industries Act. It is proposed to apply to the Board of Trade for a committee of enquiry into the alleged unfair competition of France, due to depreciated exchanges. The machinery of the Act requires:—First, that a *prima facie* case should be made out to the satisfaction of the Board of Trade; second, that a committee should be appointed to enquire into the case; third, that if the committee reports in favour of the application, and the Board of Trade concurs, that an Order should be made under the Act, imposing a duty of one-third upon imported French woollen goods; and, last, that Parliament should pass a resolution confirming the Order. This is the first time that a major industry in this country has sought to put the machinery of Part II. of the Safeguarding of Industries Act in motion, and it is a singularly ill-timed effort on the part of the Bradford Chamber of Commerce. For the sections of the Act which deal with protection against the results of depreciated exchanges are temporary, and come to an end on August 19th next. Therefore, even if the Board of

Trade were willing—which seems highly unlikely—to set in motion machinery which is so near being scrapped, no Order could possibly be put through the various stages in less than six months. Bradford's woollen trade could then enjoy just five months of protection against France—and after that farewell to a 33 per cent. duty upon imported French woollens. It is no doubt the hope and expectation of the Bradford Chamber of Commerce that if the Government, as represented by the Board of Trade, were so guileless as to put their application through the various stages laid down in the Act, and an Order resulted, then the Government in its legislative capacity would be obliged to extend the sections of Part II. dealing with collapsed exchanges beyond the present expiry date of August 19, 1924. We cannot imagine the Government, after the experience of its predecessor with the Safeguarding of Industries Act, being willing to extend its provisions, least of all a Government headed by Mr Baldwin, the reluctant stepfather of the existing Act.

Stresemann and the Ruhr.—The exchange of speeches between M. Poincaré and Herr Stresemann—with, possibly, explanations furnished to the German Chancellor by the French Ambassador in Berlin—cannot be said to mark very great progress towards a settlement of the Ruhr and Reparation problems. Herr Stresemann has endeavoured to develop a proposal for mortgaging German private property as security for reparations. This is, in effect, an explanation in more definite terms of the offer made last May to pledge certain revenues from German agriculture and industry. The plan has advantages in that if the mortgage were on a gold basis, the annual interest would ensure the payment of substantial sums in real currency by German industrialists. In other words, it helps to meet the budget aspect of the Reparation question. It does not touch the problem of enabling Germany to make a large payment abroad. On this, however, the Chancellor believes that on the security of a gold mortgage, it would be possible to raise a small foreign loan which would enable Germany to pay out of capital the first few annuities due under a general settlement. This would give time for the recovery of Germany without making a complete break in reparation payments. Some such arrangement will doubtless form part of the ultimate settlement; but this kind of long-range negotiation is a slow business, and the German Chancellor has not yet got to the point of satisfying France in regard to passive resistance. The important point for the moment is, however, a feeling in both France and Germany that the resistance of the Ruhr will, in fact, cease before long. The critical question is whether its cessation can be secured without the destruction of the unity and good government of Germany. Our Berlin correspondent on a later page refers to the belief that Herr Stresemann is preparing for something like surrender.

The Barcelona Coup.—Observers well acquainted with the currents of Spanish politics are not at the moment inclined to be unduly alarmed by the Barcelona coup. The town, always a storm centre, has for some time been regarded as a possible scene of fresh trouble. But the trouble has not taken the form that might have been anticipated, for there is no news up to the present that the discontented labour element, from which trouble was chiefly expected, has been concerned in the matter in any way. Dissatisfaction in the army appeared to have subsided to some extent after the last campaign in Morocco. The movement has spread to troops in other centres, but the army is by no means united. It will be remembered that when the infantry imprisoned the King in his palace some time ago, the artillery and cavalry, by threatening to turn their guns on the infantry barracks, compelled the King's release. Although further news must be awaited before the position will become clear, it would appear that the present revolt has little popular support, and unless matters take some unexpected turn for the worse, the final outcome, it is hoped, may not be far-reaching. It appears, however, to have involved the resignation of the Cabinet, and the position last night was somewhat obscure.

Overseas Trade in August.—The value of the official figures of overseas trade for comparative purposes continues to be vitiated by the fact that since April they have included the trade of Great Britain and Northern Ireland with the Irish Free State, and have excluded the direct foreign trade of the new Dominion. This fact must be borne in mind in reading the following summary:—

	MONTH OF AUGUST.			
	1922.	1923.	Increase or Decrease in August, 1923.	
	£	£	£	%
Imports	82,615,904	88,743,197	+ 6,127,293	+ 7.4
British exports	60,032,237	60,103,360	+ 71,123	+ 0.1
Re-exports	7,503,925	6,128,781	- 1,375,144	- 18.3
Total exports	67,536,162	66,232,141	- 1,304,021	- 2.0
Excess of imports over total exports	15,079,742	22,511,056	+ 7,431,314	+ 49.3

	EIGHT MONTHS ENDED AUGUST 31.			
	1922.	1923.	Increase or Decrease in 1923.	
	£	£	£	%
Imports	651,501,949	704,283,774	+ 52,781,825	+ 8.1
British exports	472,212,668	502,286,237	+ 30,073,569	+ 6.3
Re-exports	71,492,083	78,747,448	+ 7,255,365	+ 10.1
Total exports	543,704,751	581,033,685	+ 37,328,934	+ 6.8
Excess of imports over total exports	107,797,198	123,250,089	+ 15,452,891	+ 14.3

If comparison is made with the preceding month of July, the August figures show a rise of nearly £12 millions in imports and of just over £½ million in exports, but a decline of nearly £2½ millions in re-exports. Many comparisons being vitiated by the Irish factor, it is only safe to lay stress on a few points which that factor cannot account for. One surprise is that the dock strike did not produce a more visible effect upon the figures. Actually the shipping tonnage cleared from British ports in August was 6,047,339 tons, as compared with 5,539,837 tons in July. Another noteworthy point is that of the £12 millions increase in imports as compared with July, nearly £9 millions is accounted for by food, drink, and tobacco. But retained imports of leading raw materials were in many cases higher than in July. Raw cotton imports exceeded the July figures, but were only about 75 per cent. in quantity of the imports of August, 1922. Nevertheless, the figures for the export of cotton goods are better than present unsatisfactory conditions in Lancashire might suggest—which serves as a reminder that export figures are a poor guide to present conditions of manufacturers' order books. Cotton yarn exports at 12,802,800 lbs, though some 2½ million lbs less than in August, 1922, were over 3 million lbs better than the July figure. The decline as compared with a year ago is mainly due to a fall in India's takings. In the eight months of 1923 British India took from us 13.7 million lbs, as compared with 30.1 millions in the corresponding period of 1922. As regards cotton piece goods, the story is different. August exports were 57.7 million square yards, as compared with 46.5 millions in August, 1922, British India taking 24.5 millions, as compared with only 7.2 millions a year ago. Coal exports in August at 6,580,410 tons were appreciably lower than those of July, but similar to those of June. The following coal figures for this year are instructive:—

	COAL EXPORTS.		
	Total.	To France.	To Germany.
January	5,611,670	1,385,291	521,854
February	5,902,630	1,372,062	1,000,097
March	7,180,102	1,805,214	1,836,399
April	6,841,423	1,542,627	1,715,215
May	7,684,405	1,772,996	1,726,086
June	6,588,651	1,631,986	1,164,585
July	6,767,255	1,699,225	1,295,325
August	6,580,410	1,560,923	1,214,833
Eight months ending August, 1923	53,156,546	12,770,324	10,474,394
Eight months ending July, 1922	38,393,844	8,551,255	5,121,285

The table gives an idea of the effect of the Ruhr affair on the coal export figures. It will be seen that German purchases of British coal did not fall very much in August. Her takings from us of colonial wool also kept on a large scale, being 91,034 centals in August as compared with 78,736 in July and 65,885 in August, 1922, though

the August figure is only one-half of that recorded in August, 1921. Of worsted yarns, Germany took in August 1,042,100 lbs, against 1,663,400 last year; of wool tops, 7,379 centals against 9,787; of undressed hides and skins, 4,544 cwts against 4,437; of coffee, 2,452 cwts against an insignificant 206 in August, 1922; of colonial crude rubber, 8,355 centals against 8,615. Such figures as these do not reflect any striking effect as yet of the currency débâcle in curtailing Germany's power of purchasing raw materials in Britain.

The Trade Union Congress.—The Trade Union Congress which concluded its annual session on Saturday at Plymouth, cannot compare with some of its predecessors in respect of the interest or importance of the discussions and decisions. From the public point of view, interest centred mainly on the discussions of the Italo-Greek crisis, the Ruhr problem, and the desirability of continuing to publish a Labour daily newspaper at a big loss. On the two big international questions the debates revealed no new line of thought, with the possible exception that increasing stress was laid on Labour's suspicion that the Ruhr affair would result in an understanding between German and French capitalists, which would be detrimental to the workers of the two nations. Signor Mussolini's coup, as was to be expected, met with strong condemnation from the Congress. Within the Congress itself the question of the *Daily Herald*, clashes of interest between different unions, and plans for reviving the fallen trade union membership were the subjects which excited the most interest, and at times engendered a good deal of heat. The decision to reprieve the *Daily Herald*, in spite of the very substantial losses in connection with it, is to be welcomed, for it is from many points of view desirable that so important a force in our national life as the trade union movement should possess an official organ for the expression of views upon public affairs. The reprieve, however, is at the present a brief one, and is contingent upon £12,500 being raised before the close of the present month. If this sum is raised, then the respite will be extended to three months, and future continuance depends upon an increase in circulation. Many other subjects of general interest were discussed, including unemployment, housing, and the threatened reduction of wages in the Civil Service; while among the domestic features were the patching up of a threatened breach with the co-operative movement, the appointment of a new general secretary in the person of Mr Fred Bramley to succeed Mr Bowerman, and the decisive defeat of a proposal to extend the powers of the General Council. It cannot be said that a study of the proceedings conveys the impression of robust health. The "slump" in trade union membership to which the chairman of the Congress referred is, of course, to some extent a natural phenomenon in times of unemployment, and to what extent the drift away from the unions is due to internal quarrels and dissatisfaction is difficult to determine. But the Congress proceedings clearly brought out that the "back to the unions" campaign was not yielding satisfactory results. Another serious symptom of indisposition is the evidence which the Congress gave of jealousies and antagonisms between different unions, and, above all, the clash between the craft unions and the industrial unions. The economic circumstances of the moment certainly provide an acid test of the power of the trade union movement to maintain unity and strength, and although the chairman in his opening address to the Congress proudly contrasted the size of this year's Congress with that of 1913, the proceedings are not altogether suggestive of progress or even of maintenance of the harmony that spells effective power.

Irish Free State and the League.—On Monday last the Assembly of the League unanimously admitted the Irish Free State to membership of the League. The "delegates of Ireland" were introduced, and Mr Cosgrave made his *début*. A year ago, in examining the draft Constitution of the Free State, we foreshadowed this probable consequence of the grant of Dominion status. The Free State now takes her place side by side with Canada, Australia, South Africa, New

Zealand, and India. The semi-recognition which our daughter States have thus received through the Treaty of Versailles is entirely anomalous, and it must not be thought that they are now "international persons" in the full sense of that term. It is perfectly clear that in matters of peace and war the British Empire is, from the point of view of international law, one and indivisible, and that for the purpose of international intercourse the Crown in Council (in effect, the Sovereign advised by the London Cabinet) represents the Empire, except in so far as power to do so may have been delegated to any other person or body within the Empire. Even within the League of Nations itself our daughter States have a peculiar position, and much of the comprehensive language of the Covenant can only apply to them in a special sense. For instance, it is inconceivable that the League should ever accept cognisance of a boundary or any other dispute between the British Crown and the Irish Free State arising out of the "Anglo-Irish Treaty" of December, 1920, or between the British Crown and the Government of India on the subject of intra-Imperial emigration. Any attempt to do so would be fatal to the League, which is an international body framed to improve the relations between nations recognised as units of international law. In spite of such expressions in the Covenant as "disputes as to the interpretation of a treaty" and "the maintenance of justice and a scrupulous respect for all treaty obligations in the dealings of organised peoples with one another," the League was not intended or empowered to interfere in the domestic questions of its members, and its friends will not attempt to use it for that purpose. A clause in Article 15 of the Covenant (on disputes between members likely to lead to a rupture) supports this view:—"If the dispute between the parties is claimed by one of them and is found by the Council to arise out of a matter which by international law is solely within the domestic jurisdiction of that party, the Council shall so report, and shall make no recommendation as to its settlement."

German Measures and British Subjects.—Regarding the position of British subjects in Germany under the new Currency Dictatorship, our Berlin correspondent writes:—"The decree of September 7th does not mention foreigners. On the face, therefore, it claims to apply to all taxable persons, regardless of citizenship. The Cabinet issued an inspired Press statement, declaring that this, indeed, is the position, but that primarily the measure is to be applied to Germans. The Foreign Office confirmed this statement directly to your correspondent, adding that "the position of individual foreigners would be taken into account." In principle, therefore, the German Government claims (see page 402 of to-day's issue) that the whole property of foreigners of every kind and in every country can be expropriated, and that British subjects refusing to hand over all their property outside, as well as within, Germany, can be punished. It must be hoped that this is a platonic declaration; but it is a new instance of the confusion in German official circles concerning the rights of foreigners. No Government has ever claimed that it could even by valid law expropriate foreign-owned property outside its frontiers. The claim of the German Government is that it can do so by a revolutionary edict. Even during the war, Governments (in so far as they had not already the necessary legal power) sequestrated enemy property only under special law, and, of course, only within their frontiers. Apart from general international considerations, Germany is bound by the Versailles Treaty (Art. 277) to protect foreign property rights; and it cannot plead as excuse for violating this undertaking that it is also violating native property rights. The right policy for British subjects in Germany is to refuse to make any deliveries of property under the decree, and further to refuse to make any declarations or take any oaths.

The Weather and the Crops.—According to the monthly report of the Ministry of Agriculture and Fisheries the August weather was on the whole favourable for the corn harvest in the southern half of England, though in the latter half of the month work was delayed by rains which, however, were needed for the root crops and grass. In the north and in Wales unsettled conditions prevailed

throughout the month, with most rain in the last two weeks. The corn harvest began before the end of July in a few of the earliest districts, and in the south was becoming general very early in August, whilst in the extreme north cutting did not begin until about the third week of the month, and the winds and rain of the last week of August have laid some crops badly. In the south most of the corn had been carted in good condition by the end of August, though there was still a little to cut, mostly late-sown barley, but in the Midlands more than half the crops were still in the fields. Wheat is generally of good quality, but in some districts is not threshing so well as was anticipated, and crops have deteriorated in the north, so that the average yield over the whole country is now estimated at slightly less than last month. Winter barley and oats are also yielding good samples of grain, but the spring sown are not so good, as many fields ripened unevenly. Prospects as to barley yields have improved a little on the month, but forecasts of the oat crop remain on the whole much the same as a month ago. Beans and peas were being harvested at the end of August and over-average yields are estimated in each case, beans promising a yield of about 16½ cwt. and peas of 14½ cwt. per acre. The forecasts given last month of the production of this year's corn crops have been revised in accordance with the later information available, and the revised figures are set out in the table below. It is to be borne in mind, however, that these forecasts are based on estimates made at the beginning of September, and are consequently subject to modification.

	1922.	1923.	Production, 1922.	Forecast, 1923.
	Acres.	Acres.	Cwts.	Cwts.
Wheat....	1,967,000	1,741,000	33,478,000	30,468,000
Barley ..	1,364,000	1,329,000	19,123,000	19,138,000
Oats	2,164,000	1,974,000	25,033,000	26,452,000

In practically all parts of the country potatoes improved with the rains and were growing well at the end of August. The crop is generally healthy, but there are reports of second growth, and disease is showing in a few districts. On present appearances the average yield per acre over the whole country is forecasted at 5.6 tons, against 7.1 tons last year, and with the much smaller area this year the total production is only expected to reach 2,615,000 tons, against 4,012,000 tons last year and 2,958,000 tons in 1921. Favourable weather during September would, however, lead to a better yield than is at present anticipated. The root crops have made good growth during August, though mangolds would have done better in the north with drier and warmer conditions. Practically all the hay was secured in very good condition except in late districts in the north and in Wales. The yield per acre of seeds hay is estimated at nearly 32 cwt. per acre, and of meadow hay at 22 cwt., which indicate a total production of 7,700,000 tons against 5,789,000 tons last year. Hops improved very appreciably during August, and the plant is now healthy and free from blight. On present appearances the hops will be of good quality, especially in Kent. The total production is likely to be about one-sixth less than last year. Not more than half the normal crop of apples will be obtained. The fruit is small, and further heavy droppings have occurred through recent high winds. There are light crops of plums generally, and pears are practically a failure.

Coal, Iron, and Steel Production.—Statistics prepared by the National Federation of Iron and Steel Manufacturers show that the decline in iron and steel production, which began in June last, was continued in August. The total production of pig-iron was 599,800 tons, and of steel ingots and castings 582,700 tons. The falling-off amounted to 55,000 tons and 41,600 tons respectively, as compared with July, and 114,400 and 238,300 tons respectively in comparison with the "peak" month of May. The furnaces in blast at the end of the month numbered 196, a further decrease of ten during the month. Despite the recent decline, production remains above the average for 1922. Coal production in the four weeks ended August 25th averaged 4,776,950, this figure being affected by the incidence of Bank Holiday week, when only 3,566,400 tons was produced. For the week ended

September 1st production was returned as 5,280,600 tons, the highest in any week since July 7th. Exports were 187,000 tons below the July total, and included 1,215,000 tons to Germany and 1,561,000 tons to France, shipments to our late ally having fallen by 138,000 tons in comparison with those of July.

Shipping Freight Index.—The depression in shipping continued during August, and is reflected in our freight index number, the figure for the month being 116.53, which shows a decline of over three points as compared with July. The position generally is indicated in the table given below:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (average 1898-1913)	100	100	100	100	100	100	100
January, 1923	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1923	81.43	52.99	75.52	74.41	58.02	71.26	69.95
March, 1923	268.92	277.17	244.10	256.79	286.72	347.18	280.14
April, 1923	160.06	164.07	163.72	144.43	141.25	166.47	156.67
May, 1923	143.00	115.60	122.48	129.48	124.52	135.21	128.40
June, 1923	148.89	124.56	134.22	130.86	130.47	164.69	138.95
July, 1923	132.05	126.47	124.85	120.20	142.14	150.44	132.69
August, 1923	149.60	116.85	123.93	117.83	134.49	144.21	131.15
September, 1923	163.55	124.30	130.43	125.40	125.36	135.31	134.06
October, 1923	142.72	133.38	137.32	133.77	134.06	124.63	134.31
November, 1923	134.91	140.03	143.05	128.99	134.48	120.18	132.27
December, 1923	131.77	111.04	124.56	125.50	133.90	118.84	124.27
January, 1924	132.42	107.20	118.67	122.44	126.10	114.63	120.28
February, 1924	124.79	109.11	114.53	117.70	117.51	115.73	116.53

The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec.		Index No.	Inc. or Dec.
Home trade	123.76	-11.67	S. America—Outwards	109.62	-2.41
Bay—Outwards	135.79	-3.66	S. America—Home	119.04	-6.27
Bay—Home	135.48	-4.85	India—Outwards	117.25	+1.05
Mediterranean—O'wards	126.57	-11.66	India—Home	118.16	-10.52
Mediterranean—Home	103.40	-2.25	Far East, &c.	117.51	+8.59
North America	109.11	+1.91	Australia	115.73	+3.90

The downward tendency of rates, it will be seen, was more or less general. Freights in most of the outward trades fell sharply, while further relapses occurred in the homeward markets. Grain was especially weak, and in the case of the Plate, with abundant tonnage offering, freights dropped to an exceptionally low figure, though there was a slight turn for the better towards the end of the month. The relation of the index to the average for 1913 may be seen from the following table:—

Month.	1920.	1921.	1922.	1923.
January	545.42	194.59	131.60	114.05
February	593.90	164.54	135.76	112.73
March	588.24	162.17	135.53	115.23
April	519.40	147.48	129.46	115.45
May	480.60	158.42	125.12	114.55
June	463.16	165.73	117.45	106.82
July	384.43	169.87	114.52	103.39
August	350.96	170.60	113.16	100.16
September	360.27	154.47	110.37	..
October	394.80	141.85	114.42	..
November	340.33	136.47	119.43	..
December	240.79	134.66	117.39	..
Mean for year.	438.52	158.40	122.02	..

The fall of three points during August brings our index practically to where it stood in 1913—a striking commentary on the present situation.

Raw Cotton Dearer.—A marked rise has recently occurred in raw cotton prices. The upward movement has forced buyers into the market, and during the last ten days spinners in Lancashire and in the United States have purchased very extensively for forward delivery. It may be said that operators have adopted a distinct change of policy, as for several weeks purchasing has been from hand to mouth. This alteration in their attitude has been due to the realisation of the increasing strength of the article in view of the fact that the American crop for this season will be of only moderate extent, and not equal to the requirements of users. A good deal of interest has been taken in the first ginning report of the American crop for this season, the amount up to August 31st being given as 1,141,000 bales, against 806,000 bales the same time last year. The important increase is due to the larger ginnings in Texas, the total for that State being 1,088,000 bales, as compared with only 565,000 bales in 1922. It is

understood that the dry weather has resulted in the plants maturing quickly. The early ginning reports are seldom any guide as to the probable extent of the crop. On Thursday last the quotation for fully middling American cotton on the spot in Liverpool was 17.29d, the figure on the previous day being 17.43d, against 15.43d on September 5th and 13.40d on August 1st.

International Commercial Arbitration.—The consideration of a draft international convention on arbitration clauses in commercial contracts is, as noted in the *Economist* last week (page 365), one of the items on the agenda of the League of Nations meeting at Geneva. The Economic Committee of the League, as well as the Arbitration Committee of the International Chamber of Commerce, have been endeavouring to remove obstacles to the freer use of arbitration for the settlement of commercial disputes, especially where the parties are of different nationalities. The text of the proposed convention or protocol drawn up to advance this scheme was published in the *Board of Trade Journal* of May 31st last. To understand the problem one must appreciate the point that a difference between the rules of English law and those of other countries is at the root of present difficulties. Ideas as to "public policy" have varied. In this country the courts have refused, on the ground of public policy, to enforce agreements for the settlement of disputes by arbitration if in terms which oust the jurisdiction of the Courts altogether, but agreements that no action shall be brought till the matter has been referred to arbitration and an award made are valid and enforceable. In France, on the other hand, the law is typical of another view of public policy. There the ordinary clause used in England to provide for the settlement by arbitration of any disputes which may arise under a contract is invalid. It contravenes the requirement of Article 1006 of the Code of Civil Procedure, that the agreement between the parties must specify the names of the arbitrators and the matter they are to determine. American law has been similar, though in the State of New York the Walton-Martin Act of 1920 altered the rule, so that agreements similar to those under the English Arbitration Act can be made. The question came up at the Rome Congress of the International Chamber of Commerce last March, when resolutions were passed to the effect that the validity of arbitration clauses in commercial contracts ought to be respected, and urging that all States whose legislation or practice is adverse to international arbitration agreements should take action along the lines advocated by the Economic Section of the League of Nations. The negotiation of a convention pledging States to recognise arbitration clauses and make them effective was favoured. There can be no doubt that commercial opinion supports the proposals of the draft international convention. A proposal to alter the French law has been under consideration. To alter various national laws may take time, but the fact that the subject has been included among those for consideration at Geneva shows that the importance of the proposals has not been overlooked.

Unemployment Abroad.—Employment conditions in many foreign countries have shown continued improvement during the early summer, according to a statement issued by the International Labour Office of the League of Nations. Though the number of unemployed is still very high in the Netherlands and Scandinavian countries, the steady reduction since the beginning of this year continues uninterruptedly, being particularly marked in the wood, metal, and transport industries. The available German figures are misleading, as they do not cover conditions in occupied territory. Returns from 164 localities of more than 10,000 inhabitants showed 115,000 workers in receipt of unemployment benefit on July 1st, as compared with 140,000 on June 15th. Later figures, it may be pointed out, may indicate less favourable conditions. The improvement which took place in Austria at the end of June was chiefly due to increased activity in the building, textile, and printing trades. Recent figures for Czechoslovakia have not yet been published, but those for May show a decline

from 282,000 to 166,000 in the number of persons receiving unemployment benefit over the first five months of the year. While the situation in France is unchanged, unemployment has fallen rapidly in all Italian industries, especially in agriculture, and the total of 216,000 is the lowest since statistics were first compiled in 1921. In the United States increases in employed workers in some industries were balanced by decreases in others, but in Canada labour was in strong demand, especially for harvesting work. Doubtless the normal seasonal requirements of many agricultural countries have been enhanced by the prospects of very satisfactory harvests this year. In the period to which the greater part of the above statements apply—namely, early in July—our own unemployment figure was steady, though since that date it has shown a slight tendency to rise.

Calico Printers' Profits.—In common with most textile combinations, the Calico Printers' Association shows very satisfactory results for the past twelve months, both gross and net profits being the highest for any individual year in the company's history. The directors have accordingly been generous both to shareholders and reserves, the former receiving a total distribution of 12½ per cent., and the latter a sum of equal to nearly half the net profits. Of the £400,000 set aside for this purpose, reserve account receives £150,000, reserve for equalisation of dividends £150,000, and employees' benefit fund £100,000. Results since 1906 are shown in the following table:—

Year Ended June 30.	Gross Profit.	Maintenance and Depreciation.	Net Profit, Less Debenture Interest.	To Reserve, &c.	Dividends.	Ord. Rate.
1906.....	£ 682,160	£ 200,120	£ 354,040	£ 150,000	£ 201,074	4
1907.....	776,752	224,711	424,041	150,000	276,476	6½
1908.....	383,612	212,237	93,375	..	150,805	nil
1909.....	448,880	207,565	163,315	Dr 50,000	150,805	nil
1910.....	723,953	201,615	394,338	200,000	201,073	2½
1911.....	612,630	208,860	403,771	185,000	226,208	3½
1912.....	463,904	205,020	130,884	Dr 80,046	226,208	3½
1913.....	718,851	216,174	374,677	150,000	226,208	3½
1914.....	443,786	210,276	105,510	Dr 50,000	150,805	nil
1915.....	210,818	261,994	Dr 179,176	Dr 200,000	nil	nil
1916.....	1,104,732	312,345	664,387	300,000	351,878	2½
1917.....	1,268,058	562,340	577,719	300,000	251,342	5
1918.....	1,271,559	573,606	569,953	310,000	251,342	5
1919 and 1920	3,040,392	1,567,432	1,216,961	350,000	603,221	10
1921 and 1922	2,418,777	1,659,200	503,542	50,000	552,952	7½
1923.....	1,525,514	597,306	800,208	400,000	402,147	12½

It will be noted that maintenance and depreciation are charged at nearly three times the pre-war rate. The few changes shown in the balance-sheet, as compared with its predecessor, are mostly indicative of increased trading activity. Thus, cash and bills have fallen by £395,000, stock-in-trade has risen by £105,000, and the conglomerate item "sundry debtors, investments, and other debit balances" at £3,908,000 is £760,000 more than last year. It would add to the usefulness of the balance-sheet from the shareholders' point of view if those responsible could see their way to further sub-division of this item, which represents more than half the total assets of the association. At present it is impossible to ascertain what proportion represents amounts owed to the company on trading account, or how "investments" are divided between shares in subsidiary concerns and more liquid securities. A summary of the balance-sheet is given on the usual page.

Nobel Industries.—The indifference of Nobel Industries, Limited, to a period of trade depression is remarkable. In its latest report and accounts for the year ended December 31, 1922, just published, another prosperous year is recorded. The following table shows the progress made by this undertaking in the past three years:—

	1920.	1921.	1922.
Gross profit	827,073	809,242	1,157,137
Net profit	788,807	604,264	942,901
Brought forward	230,389	757,498	463,349
Available for shareholders	1,019,196	1,361,762	1,406,250
Preference shareholders	261,698	269,243	284,986
Ordinary shareholders	(nil)	279,170	413,301
Balance of note issue written off ..	..	..	148,945
Reserves	..	350,000	50,000
Carried forward	757,498	463,349	509,018

The cost of making the 8 per cent. note issue has now been completely written off, and the £148,945 showing in the balance-sheet on the asset side against this item will henceforth disappear. On the other side of the balance-sheet the £3,000,000 of notes still shows. But these, it may be recalled, were paid off in May last by taking a substantial sum from accumulated profits and applying the proceeds of an issue of £1,750,000 5½ per cent. first mortgage debenture stock made in February. The balance-sheet shows that investments in the constituent companies total £21,587,294, an increase of over half-a-million on the figures given a year ago. The special investment reserve has been increased from £350,000 to £400,000, although the directors anticipate "that the upward movement of market values.....will be maintained." Other details of changes in the balance is shown in an analysis given in another column.

Cable Companies and Japan.—After giving way upon an attack made upon the cable companies by a small publication, prices of stocks in the Eastern group have recovered by reason of the assumption that there will be an unusual accession of traffic to the Far East for some time to come as one result of the Japanese disasters. The Eastern Extension goes as far as Shanghai, whence the cable is continued for some 500 miles to Nagasaki, in Japan, by the Great Northern of Copenhagen. Messages are coming through from Shanghai with their customary facility. It is held that, apart from the personal messages which are throwing extra work upon the Eastern cables, there will be exceptionally heavy traffic for six months, or possibly more, in connection with the business arrangements for reconstruction in Japan. The Eastern group, comprising the Eastern Telegraph Company, the Eastern Extension, Western Telegraph, and Globe Telegraph and Trust, pays 10 per cent., free of tax, on its ordinary shares, and as these latter stand about 17½, or 173 in the case of Eastern stock, the yield on the money works out to 53s 4d per cent., free of tax. Last year was a poor one for the companies as compared with the corresponding period; but, in spite of this, substantial amounts were put to reserve by each of the undertakings, the financial position of which is exceedingly strong. The companies' reserves will stand in good stead in enabling the management to undertake whatever wireless developments may be considered advisable. It is already announced that the Eastern Company is amongst those which have applied for a licence for erection of two wireless stations, one in England, which shall take their place in the Imperial Chain that is contemplated by the Government. Holders of the stocks in the various cable companies, writes a Stock Exchange correspondent, have been subject for the past 20 years to spasmodic shocks as and when wireless developments have come into particular public attention. The position of the two systems is not unlike that which prevailed in the illumination world, when, 30 years back, holders of gas stocks suffered many a qualm lest the recently introduced electricity should render gas a back number. Events have proved, of course, that there is plenty of scope for gas and electricity. In the same way, the cable companies have gone on increasing their profits and their dividends for the past two decades, in the face of increasing wireless competition. Experience makes it clear that there is plenty of room for both systems to work, profitably to themselves and usefully to the community. The recent attacks to which reference has just been made would scarcely be worth notice were it not for the fact that proprietors in the cable companies have been favoured

with gratuitous copies of these attacks, and this, taken in conjunction with the recent wireless developments, have exercised a disturbing effect upon the minds of shareholders. The latter are of a class which holds cable stocks as an investment pure and simple. Many of them live in the country, and are out of touch with such considerations as those already advanced to illustrate the scope which exists to-day for the cable as well as wireless. They become apprehensive at the gratuitous attention paid them by circulars attacking their stocks, and every broker in the Stock Exchange knows that even anonymous attacks have their effect upon the minds of investors whose money is employed in any industry that is subject to competition. Probably, too, these cable stockholders are unaware of the fact that Italy, the home of wireless, has recently undertaken to spend two million pounds sterling in forming a new cable company. The big American cable concerns are laying large and new cables to supplement their existing lines, one of them having a cable ready, the capacity of which, taking length into consideration, is the most expensive ever yet manufactured. The Pacific Cable Board is engaged in duplicating part of its Australian line by laying new cables between Sydney and Brisbane and Fiji to Auckland. The chairman of the Eastern Telegraph Company at the recent meeting of proprietors quoted these facts, which in themselves are sufficient to prove the claim that the cable industry is neither out of date nor tottering to its doom. There is no need for apprehension, much less for alarm, and that a good many people recognise the fact is obvious from the way in which cable stocks, as soon as the first wave of selling had spent itself, rapidly recovered in price, on purchasing orders from people who appreciated the cheapness of the stocks on the fall.

Commercial Corporation of London.—The price of the shares of the Commercial Corporation of London, which have not been above 2s 6d for two years past, reflects the serious depreciation which has occurred in the company's assets. The chairman, Sir Charles Hobhouse, made no attempt to conceal the state of affairs in a communication which he made to the shareholders over a year ago, and it has been no surprise to the City that the company now proposes to go into voluntary liquidation. No accounts have apparently been published for a later date than December 31, 1920, and no statement has yet been made as to the present position since the company's action has been taken hastily as the result of a shareholder's petition for a compulsory winding-up order. During the last two years great efforts have been made, with apparent success, to reduce the company's liabilities, but this result has naturally been achieved by disposing of the most marketable shares. What the shareholders will be anxious to hear about is the value of what is left. The company was known to be largely interested in some glass and cement undertakings which had not fulfilled the hopes entertained in the optimistic days of 1920. Jute Industries, Limited, was among the largest and most successful of the corporation's promotions, but the shareholders do not appear to have been told whether it retains any of its holding in this concern. The Corporation has a more interesting history than most similar finance houses, because of its attempt to combine banking with company promotion business—a mixture of functions which has never been successfully carried out in this country. Since its start in 1914, when it acquired the assets of a company of the same name which had been originally established to take over the Anglo-Japanese bank founded in 1906, it has gradually shed its purely banking side, and finally omitted the word bank from its title. But when the prospectus of the present company was issued in 1920, we had occasion to call attention to the unsatisfactory nature of a statement which did not distinguish liabilities to depositors from other liabilities, or divide investments into those appropriate to a banking reserve, and those for which a market was in process of being created. It is now proposed that the company should re-establish itself as a holding company, and devote its energies to nursing the remaining assets.

Transvaal Gold Output.—The latest returns of gold output in the Transvaal make a satisfactory showing, the August output amounting to 769,371 ounces of fine gold, as compared with 754,306 ounces during July, 1923, and 752,490 ounces during August, 1922. Monthly figures from 1917 onwards are shown below:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January.....	782,634	714,182	676,059	670,503	651,593	639,728	764,469
February.....	781,321	659,759	636,728	625,330	558,137	..	704,970
March.....	787,094	696,281	712,379	707,036	671,123	..	761,586
April.....	742,778	717,000	694,944	686,979	681,382	511,338	743,651
May.....	779,385	741,317	724,995	699,041	687,776	623,786	786,564
June.....	759,724	727,696	702,379	715,957	678,490	675,697	755,309

August.....	766,658	740,210	706,669	702,083	711,526	722,490	769,371
Total (8 months).....	6,147,433	5,732,644	5,579,650	5,543,028	5,329,582	3,939,674	6,040,226
September.....	738,231	708,206	698,558	682,173	691,026	747,089	..
October.....	751,290	679,764	723,722	662,472	707,825	778,159	..
November.....	722,839	658,701	677,970	633,737	704,236	764,476	..
December.....	722,419	641,245	650,191	632,215	681,847	790,712	..
Total (12 months).....	9,082,212	8,420,560	8,330,091	8,153,625	8,114,516	7,020,110	..

It will be noted that the output for the first eight months of the present year is better than in any year since 1917. The following table shows the number of natives employed at end of last month by members of the Witwatersrand Native Labour Association and Contractors:—

	Jan., 1923.	Feb., 1923.	Mar., 1923.	April, 1923.	May, 1923.	June, 1923.	July, 1923.	Aug., 1923.
Gold mines.....	181,985	182,983	181,473	178,337	175,591	170,865	166,443	167,600
Coal mines.....	14,664	14,717	14,710	15,040	15,176	15,598	16,020	16,156
Diamond.....	1,222	1,227	1,273	1,860	2,668	3,063	2,893	3,107
Total.....	197,871	198,927	197,456	195,237	193,435	189,526	185,356	186,863

The figures show an improvement during August in all branches of mining in the Transvaal.

THE International Statistical Institute will hold its fifteenth session at Brussels during the week beginning October 1st. This marks the resumption of the biennial meetings which were interrupted by the war. Founded in London in 1885, the institute has met in most of the capitals of Europe, the last session being held in Vienna in 1913.

THE syllabus of lectures at the London School of Economics for the session 1923-4 has now been issued. Many of these lectures are open to the public gratis. Full particulars may be obtained from the Secretary, Houghton street, Aldwych, W.C. 2.

Oversea Correspondence.

UNITED STATES.—GOVERNMENT COTTON CROP REPORT—TEXTILE CONDITIONS—ANTHRACITE COAL STRIKE—PANAMA CANAL TOLLS—IMMIGRATION LAWS.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 3.

THE Government's latest cotton report was a complete surprise to the trade, since it indicated far greater deterioration in the growing crop than had been expected. The Department of Agriculture's estimate of condition as of August 25th, namely, 54.1 per cent. of normal, compares with 67.2 per cent. on July 25, 1923, 57 per cent. on August 25, 1922, 49.3 per cent. on August 25, 1921, and with 63.5 per cent., the average August 25th condition for the past ten years. The condition of the crop, therefore, showed a loss of 13.1 per cent. in the 30 days ending August 25th, and is almost 10 per cent. below the 10-year average as of that date. The Department's estimate was far below even the lowest trade prediction. The average of some 18 private estimates was 56.7 per cent. The August 25th condition forecasts a yield per acre of 134.8 lbs and a total production of 10,788,000 bales of 500 lbs each gross, or 728,000 bales less than was indicated on July 25th. Last year's actual harvest was 9,761,817 bales; in 1921 it was 7,933,641 bales, and in 1920, 13,430,603 bales. The average production for the five years 1910 to 1914 was 14,259,231 bales, and for 1915 to 1919 the average harvest was 11,481,084 bales.

This year's final outturn may be larger or smaller than that figured on the latest estimate. There is not much, however, to encourage hopes of a larger crop than the 10,788,000 bales now estimated; present indications, in fact, point to a further loss. The three W's—weather, weevils, and worms—are responsible for the heavy deterioration during the past month. Naturally, such a bullish Government report, pointing to a short crop for the third consecutive year, caused greatly increased activity and strength in cotton markets, where prices of futures soared fully \$5 a bale, and retained most of their advance. October cotton sold at 25.35 cents, and all months, with the exception of January, went above 25 cents a lb for the first time since last June. The future course of prices for the staple will be governed not only by crop developments, but also by consumptive demand. Last year's consumption of American cotton, according to the New Orleans Cotton Exchange, was 12,631,000 bales, and the carry-over from the last crop was 2,573,000 bales. Assuming that consumption during the ensuing year reaches the same total, there will remain next August a carry-over of approximately 500,000 bales, using the latest Government estimate as a basis. Developments of the past few months, however, do not indicate that this year's consumption will equal that of last year. It is indeed likely, therefore, that decreased consumption this year will materially offset the reduction in yield as a factor in cotton market prices, although to what extent remains to be determined. The prospect of another short crop has already had a decided influence in lifting prices of cotton goods, both unfinished and finished, and is likely to cause further advances, especially since many descriptions of cottons are still selling in the primary market at prices below replacement costs, based on current prices of raw material. Demand for cotton goods has also been stimulated, the bullish crop advices having served to impress many buyers, who had been holding off, with the advisability of placing orders without further delay.

Despite the efforts of Governor Pinchot, of Pennsylvania, to effect a settlement of the controversy between anthracite coal operators and miners, the long-threatened strike of union miners became a reality on September 1st. Both the operators and union workers were willing to accept some parts of the agreement suggested as a compromise, but appeared to be deadlocked on others, such as the question of wage increases, the check-off system, and other points. The way has been left open, however, for further negotiations, and some settlement may be reached before long. In any event, the country is much better prepared for a strike than it was a year ago. According to reliable estimates, the amount of anthracite in consumers' cellars, or *en route* to them, on September 1st was between 25,000,000 and 35,000,000 tons, or sufficient to last two or three months from the start of the consuming season. The geological survey places the amount of hard coal mined since April 1st at more than 40,000,000 tons. Since January 1st of this year a total of 64,427,000 tons has been mined, as against only 23,542,000 in the corresponding period of 1922. In the entire record year of 1917 only 77,133,305 tons were produced. Virtually all the anthracite mined from January to April went into consumption during that period, but the production since about the middle of April has gone into storage, or has been purchased by consumers for the coming season. By supplementing anthracite stocks with soft coal and various substitutes, the present supply of hard coal will last longer than indicated. Fortunately, there is an abundant supply of soft coal, and production is likely to be increased. There has been much talk, naturally, of importing coal from England. The extent of such a movement will depend upon the duration of the anthracite strike, which cannot now be forecast, and also upon the future course of prices for bituminous coal, which will probably be used extensively. Any sharp advance in soft coal prices here would doubtless lead to the placing of orders for foreign coal.

The Panama Canal is now yielding a profit of approximately \$500,000 a month, or more than 3 per cent. annually on the investment, according to Colonel Jay J. Morrow, Governor of the Canal Zone. The cost of

operating the waterway is placed at about \$600,000 a month. During the first 15 days of August tolls aggregated more than \$1,000,000; in July the total was \$2,124,399—a new high monthly record. On August 14th the Panama Canal had been in operation for nine years. In that period more than 20,000 vessels passed through the waterway, carrying about 34,200,000 tons of cargo, and paid in tolls upwards of \$76,500,000. Of that amount, \$17,600,000 was paid in the fiscal year ended June 30th last; a large part of last year's tolls was derived from the enormous shipments of California oil. Reports have been current that because of the increased earnings the Canal tolls may be reduced; nothing definite, however, has yet developed in that direction.

There is good reason to believe that a revision of the immigration laws of this country will be undertaken at the next session of Congress, although it is impossible to forecast exactly what changes the Administration may urge. Secretary of Labour Davis recently returned from Europe, where he made a thorough study of the subject. Generally speaking, it is understood that he favours a system of highly selective immigration, but believes the selecting should be done abroad, as far as possible, in order to prevent the turning back of prospective immigrants after they have actually reached this side. Such a system would probably require even greater co-operation than heretofore on the part of American Consuls, steamship interests, and foreign Governments. Intimations have been made in Washington advices that the basis for selection will continue to be the quota system, but whether or not larger numbers will be admitted than at present is uncertain. There are many authorities in this country who, while believing that immigration should be restricted, are strongly of the opinion that this country urgently needs a larger number of desirable aliens than the present law allows to enter in a given period. In many directions, and particularly in the steel industry, the labour shortage is still acute. For obvious reasons, any effort to admit larger numbers of immigrants will encounter stiff opposition from the labour unions in this country.

Further details, now available, of this country's export trade in July show that, while the total value of all exports in that month exceeded that of July, 1922, by 3 per cent., there was a material falling off in the outward movement of such important commodities as meats, dairy products, grain and flour, animal oils and fats, canned goods, raw cotton, and cotton fabrics. July exports of grains were less than half those of the same month a year ago; cotton exports were 43 per cent. less. Corn exports in July were only about one-tenth those of a year ago in quantity and value; wheat and flour exports were one-third less than those of July, 1922, while values were 40 per cent. lower; exports of foods as a whole decreased 35 per cent., and of textiles 38 per cent. Canned fruits exports were approximately only half those of July last year.

FRANCE.—CHANCES OF ECONOMIC ENTENTE WITH GERMANY—THE FUTURE OF THE NATIONAL FINANCES—COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, September 12.

It has now become evident to all observers that the Ruhr conflict that has been going on since the middle of January is nearing its end. All kinds of rumours, from Berlin, Rhineland, and London sources, have been current here during the past few days to the effect that negotiations are actually in progress between the two Governments, with a view to a settlement on the basis of an economic *entente* between France and Germany. These rumours have naturally aroused intense interest, not merely here, but particularly in Great Britain, therefore it may be opportune to set forth the real facts of the situation.

All impartial observers here are agreed that economic agreements between French and German industrial interests will undoubtedly be come to eventually. A marriage between the German coalfields and the French ore deposits is as certain an event of the future as anything that can be foreseen, for the simple reason that such

a union would be both natural and expedient, in the interest of both parties. It may be stated emphatically, however, that—for the time being, at any rate—this particular economic factor counts for practically nothing, the circumstantial rumours that have been prevalent during the past few days notwithstanding. The two primary factors in the Franco-German situation are still, as they have always been since the Treaty of Versailles was signed, those of the payment of Reparations and of the military security of France. From the French point of view to-day the demilitarisation of a zone embracing both the left and the right banks of the Rhine, and extending 30 miles eastward of that river (as provided by the Peace Treaty), and the payment of Reparations by Germany are the two points that must be settled first, after passive resistance in the Rhineland is renounced. Any suggestion by the Berlin Government of an offer to "transfer to France 30 per cent. of the shares of the total German industrial issues" is foredoomed to failure. The French industrial interests, anxious as they may be to conclude trade agreements that would be enormously to their advantage, are powerless in face of this determination of the country as a whole to place military security and Reparation payments first in any settlement that may be arrived at, and it is prudent that this fact should be made perfectly clear.

It was largely owing to this attitude of French opinion (plus, certainly, a substantial degree of ill-will on the part of the then German leaders) that the Loucheur-Rathenau and Stinnes-Lubersac agreements for payments in kind, as applied to the devastated areas, proved a fiasco. Those agreements, admirable as they were in many respects, were condemned, on analysis, as certain to prove merely palliatives, that left still unsatisfied the deep-rooted French desire for a safe frontier. The situation, as the average Frenchman sees it, remains the same to-day, and it may be predicted with certainty that, notwithstanding the inherent tendency of the French people to acquire riches and to inflate profits even beyond the standard that other peoples regard as reasonable, no offers of immediate material advantages will prove seriously attractive so long as the security of their eastern frontier remains as doubtful as the vast majority of Frenchmen regard it to be to-day, in spite of Germany's overwhelming military collapse.

The newly formed *Comité d'études de la production et des économies* has just issued a striking statement, in which it sets forth the financial situation in which France will find herself, even supposing that the efforts that are at present being made to "make Germany pay" prove successful. In this statement it forecasts what the position of the country may be in 1930, on the assumption that its revenue from taxation continues normal, that it receives a substantial amount in the form of Reparations from Germany, and that it has to meet the interest payments on the loans it has already contracted, and will have to contract in future for the completion of the restoration of the devastated areas. On this basis it estimates that in 1930, by which time the Minister for the Liberated Regions estimates the work of reconstruction will be terminated, that the national revenue may be summarised as follows:—

	Francs.
Receipts from taxation, estimated under the Budget for 1923 at 23,500,000,000 frs., but which may be assumed by 1930, in view of the recovery of the devastated areas and of the possibility of new increases of the yield of taxation, to amount to ..	25,000,000,000
Receipts from German reparation payments	4,500,000,000
	29,500,000,000

(The 4,500 millions which it is assumed may be received from Germany, it is explained, is based on the fact that, during the last exchange of views between the Allies, France agreed to limit her claim against Germany to 26,000 millions of gold marks, or, assuming the gold mark to be worth 3f 90c, 91,000 million francs, under condition that the rest of her claim shall be used to cancel inter-allied indebtedness. This sum of 4,500 million francs is equivalent to interest at the rate of 5 per cent. on the total due, that being the rate which it is stipulated in the treaty Germany shall pay on the bonds she agreed to hand over.)

The expenditure side of the account in 1930 the Comité sets forth as follows:—

INTERNATIONAL BANKING IN ALL ITS BRANCHES BANKERS TRUST COMPANY 16, WALL STREET, NEW YORK PARIS OFFICE 3 & 5, PLACE VENDOME CABLE ADDRESS: BANKTRUST, PARIS

Expenditure provided for under the Budget of 1923—		
	Francs.	Francs.
(a) Ordinary Budget—		
Service of the Public Debt	12,000,000,000	
Public services	11,400,000,000	23,400,000,000
(b) Budget of "Recoverable Expenditure"—		
Permanent expenditure apart from all initial expenditure..	3,000,000,000	
Pensions	3,000,000,000	6,000,000,000
Interest charges, &c., in respect of the expenditure of 45 milliards still to be made for reconstruction, at 6 per cent.		2,700,000,000
		32,100,000,000

Assuming these figures to be approximately accurate, therefore, the Comité foresees for 1930 "an incompressible deficit" of at least 2,600 million francs, under the most favourable circumstances. This figure, of course, is based on the assumption that France will be able to recover during each of the coming six years the whole of the annual amount it is assumed Germany will pay. This has already been contradicted by events, and the Budget of recoverable expenditure for the current year will certainly show a deficit of between 6,000 and 7,000 million francs, which will go to swell the above-mentioned total of annual expenditure by some 400 million francs to meet the interest charges on the money that will have to be borrowed because payments are not yet forthcoming from Germany. Further, the figures set forth above make no provision for amortisation of the debt. This money, it is pointed out, has been borrowed at an average cost of 4½ per cent., but it is unlikely that it can be consolidated at less rates than 6½ per cent., which will involve an additional burden of at least 3,000,000,000. In sum the Comité argues that in all probability the country will have to face a progressive deficit of some 7,000 million francs from 1930 onwards, which cannot be expected to be met by taxation without definitely ruining its productive capacity.

The French index figure of wholesale prices for the months of August is returned as 476.6, as compared with 470.1 for July, or a rise of 6½ points, whereas the figure for July showed a slight fall, explicable by seasonal causes. The detailed comparative figures are as follows:—

	July, 1923. (Corrected).	August, 1923. (Provisional).
General index figure (45 categories).....	470.1	476.6
Foodstuffs (ensemble of 20 categories)	445.6	442.0
Vegetable foodstuffs (8 categories)	408.4	396.1
Animal foodstuffs (8 categories)	464.3	476.3
Sugar, coffee, cocoa, &c. (4 categories) ..	482.5	464.9
Raw materials (ensemble of 25 categories) ..	489.8	504.3
Minerals and metals (7 categories)....	451.0	474.5
Textiles (6 categories)	616.6	651.9
Various (12 categories)	448.9	448.0

With the exception of meat, foodstuffs show an all round decline. The increase in the general index figure is therefore accounted for by the rise in the prices of raw materials, minerals being 23½ points higher, while textiles have risen by 35 points. Figure for June was 472.3, as against 418.4 at the end of last year. The index figure representing the retail prices of 13 categories of foodstuffs in Paris during August is returned as 3,524, repre-

senting an increase of 228 per cent. on prices prevailing in 1914, as compared with 3,446 in July, which is equivalent to a rise of 7 per cent. on the month. The retail price of bread, as I announced last week, has been reduced to 100 per kilogramme, by decree of the prefectural authorities, in view of the recent fall in the price of flour. The reduction has led to a bitter outcry on the part of the bread producers. The protest raised by the master bakers in Paris has taken the form of the resignation of the president and other officials of their trade association.

GERMANY.—RUHR—GOLD CURRENCY—EXCHANGE DICTATORSHIP — REICHSBANK — FINANCES — EXCHANGE AND BOURSE—BUSINESS.

(FROM OUR CORRESPONDENT.)

BERLIN, September 11.

ALTHOUGH no official statement has been made, it seems certain that the Stresemann Cabinet, in its new attempt at direct negotiation with France, is willing to give way on the questions of evacuation and passive resistance. It is true that an agreement, not an unconditional surrender, is aimed at; but the conditions for an agreement proclaimed up to the last by the Cuno Cabinet seem to have been thrown overboard. In the last few days a radical and sudden change of attitude in a great part of the Press has taken place. At a moment when the nation was proclaimed to be entirely solid in its demand that the resistance must be maintained, and at least that evacuation within a fixed term should be claimed, newspapers of various parties began to attack the whole Cuno policy, to denounce Herr Cuno as a "new Ludendorff" for a policy which the nation undoubtedly supported, to proclaim that passive resistance had not only failed in attaining its objects, but was also on the point of breaking down, and even to denounce the whole policy pursued so far towards France as bluff and swindle. Some journals have even declared that Germany is now compelled to give way, on terms or without terms. Although the recent aggravation of finance and business might justify such a change of front, the change is so sudden as to justify the belief that the Cabinet is systematically preparing the public for something like a surrender. If this view is right, the danger is that France will exploit Germany's need in order to raise her terms. The change of German policy has in no way tempered French policy on the Ruhr. The military terrorism against the population is being increased.

The new stable currency will shortly be a fact. A great many plans have been considered, including one by the former Finance Minister, Dr Helfferich, for basing the new notes on rye. The Federal Economical Council advised against this, and it is decided that the notes will be on a gold basis. The Council declared that the notes must be issued by the Reichsbank, on security of a special currency fund, declared also for the conversion into gold of the paper mark at its current exchange value, added that the new currency could be kept stable only if the Budget was balanced, and that the expenditure, at present enormous, on the Ruhr conflict should be limited to a fixed sum and rationed. Private inflation should be checked by a more drastic discount policy. The decision so far come to is to establish an entirely new gold note bank, independent of the finances, but "in organic connection with the Reichsbank." The paper mark will for the present be maintained without any attempt to establish a fixed relation of value to the gold currency. These measures would produce the same conditions as prevail in Russia. It is further suggested that the paper mark, as a measure of convenience, be denominated, perhaps to the one-millionth, as in Russia. No declaration has been made that the Reichsbank will part with any of its gold to the new bank.

The creation of the currency fund necessary for the gold notes has, however, been begun, this by a measure of expropriation of a very drastic kind. By decree of September 7th the Cabinet (formally the President of the Republic) suspended Articles 115, 117, and 153 of the Constitution. The first two guarantee inviolability of dwelling and post secrecy; the third declares that property may be expropriated only under law, and then if no law provides otherwise, against fair compensation. By the

same decree the Cabinet appointed a "Commissary for Expropriation of Exchange." The Commissary is empowered to expropriate foreign currency, foreign stocks and bonds, and precious metals, to search dwellings and open correspondence, to compel citizens to reveal under oath their holdings of the above kinds of property. Penalties are imprisonment, fine and expropriation without compensation. Currency, securities, and precious metals outside Germany may be confiscated. Compensation, the decree declares, is to be given in "gold loan." Gold loan is the polite name for the pure paper mark voluntary loan at present under subscription, the only gold element in it being that paper mark interest and principal vary with the paper mark's gold exchange. The Commissary is required not to expropriate currency needed for legitimate business, and in general the official instructions enjoin on him reason in the exercise of his powers.

This exceptional measure, which has a certain support in public opinion, is certainly the most remarkable demonstration of State authority outside Bolshevik Russia. The three Articles of the Constitution are suspended on the basis of a fourth Article, No. 48, which authorises suspension of the three only when "public security and safety are seriously disturbed or endangered." The Government has never claimed that under this Article it could even alter the rates of a tax, but it now declares that it can expropriate, by administrative measures, all property whatsoever, annul all the laws concerning property, and further refuse to give compensation, because, the clause of Article 153 requiring compensation being suspended, the present "gold loan" compensation is a voluntary concession. The claim that property may be expropriated because its possession disturbs or endangers public order is a remarkable one. This aspect of the measure, which is an outcome of the fact that the Reichstag will not work at normal financial law-making, and that the Cabinet will not ask it to work, might be ignored were it not for the circumstance, dealt with elsewhere, that the Cabinet claims a right to expropriate all property; whosoever situated, of foreigners in Germany. Not much result may be expected from this decree. The biggest holders of foreign currency are business concerns which will easily prove that their holdings are necessary for business; and the threatened raid on the miserable citizens who hoard odd pounds and dollars in self-protection cannot be carried out effectively. Meantime the currency situation becomes ever worse. The inflation has taken such wild dimensions that the banks pay out almost exclusively brand-new packages of notes. The Reichsbank's statement for August 23rd shows an increase of Commercial Bills by 40,164 milliards to 89,606 milliards, Treasury Bills by 329,246 milliards to 506,880 milliards, and circulation by 157,503 milliards to 272,906 milliards, both credits and circulation having more than doubled. At present circulation is increasing still more rapidly, and it has already probably reached 1,000 billions.

The State Finances no longer deserve that name. The view was expressed from here a month ago that the supposedly drastic tax reform which the Reichstag passed in two days, and which was acclaimed as a great achievement, would help little. It has not helped at all. As was foreseen everywhere, except in the Reichstag and the Finance Ministry, the deficits, at the rate involved by exchange and price conditions of a month ago, must swallow up the nominally large yield of the new taxes. The Finance Ministry's report for August 31st shows that this was so. The whole yield from taxes in the preceding decade term was 6,355 million marks, whereas the expenditure was 866,741 millions, or 136 times as much. The worst records of Soviet-Russia in 1918-20 are far exceeded. The present rate of inflation and of price rise also far exceed Russian records, and if no change takes place the absolute inflation will soon exceed Russia's. The Government was obliged in ten days to add 832 billions to the Floating Debt (thereby more than trebling it). At the end of August the debt totalled 1,235 billions. The debt has multiplied 600-fold since January 1st.

Bourse values more than trebled last week. The *Frankfurter Zeitung's* index for home dividend-payers rose from 1,012,673,700 to 4,332,573,500; home loans from 2,803,710 to 3,897,200. Stocks rose by hundreds of

millions per cent. in one day, the Stinnes security Gelsenkirchen reaching a quotation of one milliard. The main influence here continues to be the currency depreciation, but expectations of French participation in western industry as part of a Ruhr settlement has also been a bull influence. Money is plentiful, and the outside public is speculating. Increases of company capital from January to August inclusive were 132,417 million marks, against 46,029 million marks in the same months of last year.

Business continues to get worse. In August 2,000 employers in Saxony asked for permission (necessary under the law of 1920) to close their works entirely. Shortened working hours prevail in most branches. The official cost of living index number for September 3rd was 1,845,261-fold that of 1914, against 1,183,434 a week earlier. Standard Ruhr coal (*Fettfoederkohle*) has been raised from 91,913,000 marks to 168,700,000 marks per metric ton. The Steel Syndicate has begun to quote its prices in gold marks, payment being made in paper. General gold prices on August 28th were 50 per cent. above those of 1914. Crop reports are good.

CANADA.—ANOTHER BANK MERGER—THE BANKING SITUATION—CROP REPORTS—BUSINESS POSITION.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 28.

THE banking situation has become the chief focus of public interest in Canada for the time being, and scarcely a week seems to pass nowadays without some new sensation being provided. This morning comes the publication of an announcement by the Minister of Finance that the Canadian Bank of Commerce will be permitted to take over the assets and liabilities of the Bank of Hamilton. The approval to the merger thus given by Mr Fielding must be confirmed by a Cabinet order-in-council, and ratified by the shareholders, but there is no doubt of these steps being consummated. The terms to be given the shareholders of the Bank of Hamilton have not been announced, and are said not to have been definitely settled, but it is understood that they will be very satisfactory; the stock's ruling price on August 27th was 150, and to-day it has advanced a point. Undoubtedly, the Home Bank *débâcle* gave a hasty impetus to the plans for the merger, which had been afoot for some time. The merger process is still viewed with disquietude, and Mr Fielding has thought it necessary to issue a statement justifying his course. He contends that the merger is completely in the public interest, and that the Bank of Hamilton is entirely solvent, its paid-up capital of \$5,000,000 being unimpaired, and its reserve of \$4,850,000 being almost equal to its capital. But he admits that it has experienced heavy losses, which give its management anxiety about the future, and that if continued as an independent organisation the task of the directors would have been difficult. He had concurred in their view that they should not await events which might further impair the bank's position and prestige, but should embrace the opportunity to amalgamate with a larger bank. "I think," said Mr Fielding, "that the announcement of the merger will strengthen the banking position in the Dominion."

All the banks have been carrying heavy commercial accounts in Winnipeg and Western Canada generally, particularly for wholesalers and jobbers. These in turn have been supporting retailers, and when towards mid-summer business in the West did not show the recovery anticipated as the result of the good crop prospects then advertised, there was great disappointment; when, however, simultaneously the European situation worsened, carrying the threat of even poorer markets, and the early crop estimates had to be revised, a feeling of grave uncertainty developed through the western provinces, and a number of important wholesale and jobbing houses had to suspend operations. The farmers last year, owing to the low prices for their products, were unable to meet their obligations, or met only a small part of them, and there were symptoms that the process of liquidation would not be materially advanced by the present crop. The larger banks have been able to meet the situation thus created, but the smaller institutions were reduced to hard

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorized	£3,000,000
Paid Up Capital	1,050,000
Reserve Fund and Undivided Profits	1,352,105

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

straits. Now two of them have made heavy drains upon their reserves, one has suspended payment, and another has sought refuge in the bosom of a strong bank. What the Canadian public wants to know is whether the series of disclosures of banking troubles are now at an end, or whether more are to be expected. In well-informed quarters the suspicion exists that one or two further mergers will be announced in the near future. If the western situation does not improve, some of the lesser banks may have to make readjustments and draw on their reserves. The merger puts the Bank of Commerce back in the same class as the Bank of Montreal and the Royal Bank; it still lags behind the former in every particular, but while it is behind the Royal in total capital, assets, and liabilities, its absorption of the Bank of Hamilton raises it to second place, if comparison is made on the basis of saving and demand deposits payable in Canada and current Canadian business. The Royal, it should be explained, has a large external business in the West Indies and elsewhere. The Bank of Commerce will now have an authorised capital of \$32,000,000, of which \$25,000,000 has been paid up; its assets will be, according to the latest statement, \$455,643,890, and its liabilities \$412,519,482. The Bank of Hamilton, which was founded by a group of capitalists living in Hamilton—a thriving industrial city in Western Ontario—had 138 branches in six provinces of Montreal; of these, almost half were in Ontario, and there was no branch east of Montreal.

There is naturally grave concern at what the effect of these episodes will be upon the credit of Canada in the money markets of the world, and the *Financial Post* demands that the Canadian Bankers' Association should take active steps to restore public confidence. It is now plain that many of the criticisms offered by the Western Progressives against the Bank Act were completely justified, and that the reports submitted under it to the Finance Department afford little or no guidance as to the actual condition of the banks. The amendments of last session may offer some improvements, but the *Post* and other papers are demanding the appointment of a Federal banking superintendent who will be endowed with very wide powers. It is pointed out that the Federal Department of Insurance and Loans has demonstrated its value in respect to the control of insurance and mortgage companies. But it is doubtful if any such step will be taken, for the three big banks who now control the financial situation have very powerful and active friends at Ottawa.

Meanwhile, the curator appointed by the Bankers' Association, who is being assisted by an advisory committee of three leading Toronto bankers, is investigating the affairs of the Home Bank, and until his report is available the exact situation of the depositors and shareholders can only be surmised. The fear, however, is now expressed that the position is far from good, and that even the depositors may suffer some loss, which would mean that the shareholders get nothing. It is understood that if the prospects of the depositors could be ascertained roughly the other banks would advance cash which would permit a partial payment to them. There are some very disquieting rumours about the Home Bank *débâcle*, and the Federal Government is being pressed to hold a strict investigation. Its decision on this point will likely depend upon the curator's report.

Up to July 22nd there was every prospect that the western grain crop would equal and possibly surpass the

record yield of 1915, but on that date there commenced a spell of severe heat, following heavy rains, which produced exactly the conditions most favourable to the development of the worst scourges of the West. However, despite the reduction of the early roseate estimates, there will still be a good average yield of wheat, and if only the prices were better the economic plight of the West would not be intolerable. But in view of the chaos of the European situation, and the good domestic crops which are available for that continent, there is considerable anxiety about marketing conditions, and there is no expectation of any recovery in price.

Despite the awkwardness of the banking situation business generally, especially in Eastern Canada, is reasonably good. The mines in the North are busier than ever, and there is in progress keen competition between British and American capital to pick up the choicest of the available properties. The stock markets, however, have been very dull, and inclined to reactionary tendencies.

AUSTRALIA.—COMMONWEALTH BUDGET—OVERSEAS TRADE.

(FROM OUR CORRESPONDENT.)

MELBOURNE, August 6.

THE Commonwealth Budget, presented by the Treasurer, Dr Earle Page, on July 26th, shows that the estimated revenue and expenditure for 1923-24 (after deducting from both sides the proportion of revenue paid to the States on a "per capita" basis, £7,255,000), compares with the actual figures for the previous year as follows:—

	1922-23.	1923-24 (Est.)
Revenue	£ 57,620,084	£ 54,688,250
Expenditure	56,599,934	54,641,098
Surplus for year.....	1,020,150	47,152

The decrease in the estimated revenue is due mainly to the decrease of £2,847,306 in the estimate of Customs' revenue, which reached the high total of £22,597,306 for 1922-23, a total which cannot be relied upon for repetition, especially as the large imports of the 1922-23 financial year were partly due to heavy borrowings abroad. It is proposed to alter the Commonwealth income-tax on one point by taxing companies at the flat rate of 1s in the £, instead of the present tax at a higher rate on the undistributed portion of their profits, the dividends being at present taxed in the hands of the shareholders. But where the rate of income-tax imposed upon the shareholder on the graduated scale exceeds 1s in the £, he will continue to be charged upon his dividends subject to a rebate of 1s in the £. The charge is expected to facilitate administration, without appreciably affecting the revenue. So far as the smaller taxpayers are concerned (whose rate of Commonwealth tax is under 1s in the pound) it will mean an apparent direct saving, but a real increase indirectly, through the medium of the company, in the incidence of taxation. Commonwealth land tax is to be amended by the exemption of Crown leaseholds as from June 30, 1917, the collection of the tax on these leaseholds having been suspended for the last five years owing to the difficulties of administration, and the grave discrepancies in the valuation of the lessees' interest in the leasehold land. A reduction in postal charges is to be made, those charges being at present much higher than in England and New Zealand.

Adding the estimated surplus of £47,152 to the accumulated surpluses of former years, the total accumulation by June 30, 1924, would be £7,475,726, of which the Government propose to apply £2,500,000 to redemption of war gratuity bonds, £2,450,000 to reserve for defence, including provision for munitions reserve, and £2,475,276 to reserve to meet contingencies which may arise in rotation to taxation. The Government has undergone a little criticism for not using the accumulated surplus to make greater reductions in current taxation. The accumulation, however, is largely due to special causes, as the earnings of German requisitioned shipping and certain other German payments have been included in revenue, while the large Customs' revenue received during 1922-23 includes several millions, representing an indirect conver-

sion of loans raised abroad into revenue in Australia, owing to the high tariff on a swollen volume of imports.

Fresh loan proposals of the Commonwealth for 1923-24 amount to £18,945,622, including £9,000,000 to be advanced to the States for immigration and soldier land settlement. In addition, the necessary redemptions and conversions to be provided for by the Commonwealth during 1923-24, mainly locally, amount to £46,583,727. The public debt of the Commonwealth, on June 30, 1923, was £410,996,316. Of this £362,692,573 is war debt, including £90,388,603 due to the British Government.

The Commonwealth trade returns for the 12 months ended June 30, 1923, show an increase of £28,742,237 in gross imports, but a decrease of £9,933,452 in gross exports, as compared with the previous financial year. Imports, however, are still about 32 millions less than in 1920-21, which was the period of excessive importation. The following is a comparison for the last three financial years:—

	1920-21.	1921-22.	1922-23.
Imports—			
Merchandise ..	163,790,964	103,030,950	131,790,797
Gold	10,862	35,486	17,876
Total imports	163,801,826	103,066,436	131,808,673
Exports—			
Merchandise ..	126,844,831	124,363,296	115,693,752
Gold (inc. prem.)	5,314,081	3,483,239	2,219,351
Total exports	132,158,912	127,846,535	117,913,083

During 1921-22 Australian exports exceeded imports by about 24½ millions, but the 1922-23 figures show an excess of imports of nearly 14 millions, the balance of trade having thus swung round to the extent of nearly 38½ millions. Exports do not coincide with payments receivable by Australia, as they have included Bawra held-over wool, paid for some years ago by the British Government. The Bawra shipments, however, were finished early in May, 1923, and future statistics will consequently reflect current annual production and exports, as in pre-war years. On the other hand, the Bawra payments, representing the Australian wool-growers' half-share of profits, form a supplementary payment to Australia not appearing in the trade statistics. Interest and other payments to be made by Australia on British capital invested here may be reckoned at about 24 millions sterling. Against this there were the large public borrowings in London and New York in the 1921-22 financial year, the stimulating effects of which on Australian imports were only felt during 1922-23. Those borrowings represented about 38½ millions of fresh money, but as recent borrowings have been on a reduced scale, the basis for future importations is narrowed, especially as export trade is somewhat inelastic. The principal exports for the last three financial years compare as follows:—

	1920-21.	1921-22.	1922-23.
Wool and tops....	33,780,760	47,977,243	57,144,493
Wheat and flour..	39,422,106	34,164,036	12,991,550
Butter	11,067,104	7,987,558	6,133,864
Frozen beef, mutton, and lamb..	5,398,499	4,007,542	6,125,599
Copper	2,230,766	704,988	652,333
Lead	667,919	1,730,341	2,561,616
Tin	497,264	284,357	350,691
Zinc	139,026	237,175	846,054
Zinc concentrates	224,541	586,329	1,463,097
Silver	165,617	854,840	1,117,145

Wool exports during 1922-23 reflect the high prices ruling. Wheat and flour exports have been smaller owing to the reduced harvest at the beginning of 1923, while prices are lower than those of 1920-21. Metals have shown a revival following the more active operations at Broken Hill after the strike some time ago.

NORWAY.—FOREIGN TRADE—NORSKE LLOYD INSURANCE—COPPER DEPOSITS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, September 3.

THERE are no complete trade statistics available for the first half-year, 1923, as yet, but enough is known to disclose the satisfactory result that if things develop in the same manner during the last six months of the year, the adverse trade balance should be considerably lower

than for the last year. In that case, the total exports of the year should amount to nearly 800 millions, and the imports at the utmost to 1,000 millions. Last year imports and exports were 1,315 and 790 millions respectively. It is especially satisfactory to notice, from a Norwegian's point of view, not only that the total turnover of the trade with England is increasing, but particularly that exports to England exceed imports from that country by 38 million kroner during the first six months of 1923, and that there is a tendency to increase.

The various autumn fisheries are now commenced, but, so far, show no very satisfactory results. The whaling season also has arrived, and from the various places on the south-eastern coast of Norway, where the whaling industry is chiefly centred, about 2,700 men have shipped for the various stations in the Arctic and Antarctic regions.

In the Court of Probate, about a week ago, the first meetings of the creditors of the bankrupt estate of the large insurance company, Norske Lloyd, were held. Only a comparatively small number of claims were proved, and it is stated that the next meeting will take place in three months. As the company had ramifications in many lands, and the claims are extremely numerous, it will be a very long time before the estate can be wound up.

It is well known that the northerly parts of both Norway and Sweden contain immense deposits of iron ore. But there are, besides, in Norway, not far from the Swedish border, at about 65 deg. N. lat., very rich occurrences of copper pyrites. Experts think even that they are second only to the Rio Tinto Mines in Spain. A company was started some ten years ago under the style of A. T. Grong Gruber, to examine and exploit the fields, where there is also sufficient water-power. A couple of years ago or more, the Government, however, took over the greater part of the shares (about 35,700 out of 36,000 shares). Negotiations have for some time been going on between the Government and an American concern to take over the investigation and exploitation of these immense deposits. Most likely some result will be arrived at in the near future.

Weather conditions are not favourable to the harvest; it is rather cold, and hardly a day passes without rain. A fortnight of dry and warm weather would, however, suffice for ripening most cereals and also the potatoes, and facilitate harvesting.

Books and Publications.

INFLATION AND THE COURSE OF PRICES IN FRANCE.*

THIS book is an economic analysis of the causes and consequences of price fluctuations in France since 1914. It begins with a discussion of some underlying ideas which the author seeks to apply later to the actual course of events. He first takes up the question of the meaning of inflation. The correct definition, he maintains, ought to

* "Le Mouvement des Prix en France depuis 1914." By Dr Paul Einzig. (Paris) Librairie Rousseau et Cie., 1923.

be based on a distinction between "monetary inflation" and "inflation of prices." If an excess of the means of payment over economic requirements provokes a corresponding rise of prices, there is monetary inflation; if, on the contrary, economic requirements are in excess of the means of payment, and provoke an increase of the latter, there is inflation of prices. "Thus inflation is the state of affairs when an additional quantity of the means of payment tends to provoke a rise of prices, or when additional requirements of the means of payment created by an exaggerated rise of prices tend to bring about an increase of the quantity of the means of payment." There is much to be said in favour of such a double-headed definition of the term inflation; nevertheless, we do not think it can be regarded as wholly satisfactory. Under the definition, an increase in the means of payment due to an influx of gold would be regarded as inflation, but this is scarcely in accordance with accepted usage.

The author proceeds to discuss six of the most commonly accepted theories of price determination:—(1) The theory of demand and supply, which he shows to be an inadequate explanation of price movements; (2) the quantity theory in its broad aspects; (3) the so-called income theory, according to which the level of prices is determined by the aggregate of the incomes of consumers; (4) the theory of artificial purchasing power, propounded by Professor Cassel; (5) the metallist theory, according to which the value of inconvertible paper money is determined by the possibility of returning to the gold standard; and (6) the psychological theory, which suggests that the level of prices is determined by the chance of re-establishing the pre-war economic and financial situation. He indicates what he considers to be the relative importance of these theories and their relation to one another, indulging on the way in one or two tilts at Professor Cassel.

Dr Einzig proceeds to consider the application of his general principles to the course of events. The rise of prices during the war was caused by the increase of demand and the diminution of supply, the increase of demand being provoked by the creation of additional purchasing capacity in the form of an increase of the quantity of the means of payment, and being made permanent by a corresponding increase of incomes. The part played by psychological factors did not, he considers, become important until after the Armistice. The rise of prices during 1919 and the early months of 1920 was stimulated above all by the reaction of public opinion to the disappointment of its more optimistic hopes, and by public distrust of the monetary standard. There was some expansion during the period in the means of payment in consequence both of the issue of additional bank notes and of the return to circulation of hoarded notes. We would suggest also that there may have been an increase in the velocity of circulation of money and bank credit, but this is a question into which the author does not enter. He considers, nevertheless, that the boom of 1919-20 was, "if not exclusively, at any rate essentially, an inflation of prices," as distinct from an inflation of the means of payment. With regard to the slump, his view is that

while the fall of prices in the world market had its effects in France, the conditions necessary for a fall of prices already existed in France, so that a fall would have occurred even apart from the influence of outside prices. The fall of prices and wages, he claims, was more rapid in France than in the United States or England, while the commercial effects were comparatively small in consequence of the placing of orders for the restoration of the devastated areas, and also, he suggests, because commerce (as a result of war profits) was less dependent than before upon credit.

With regard to the exchange value of the franc in its relation to prices, he contends, justly in our opinion, that the co-operation between them has not been a result of unilateral action either of prices upon the exchange or of the exchange upon prices. "Each affects the other, and it is only the relative importance of their reciprocal influence which changes from time to time according to circumstances." For some time past the external value of the franc, relatively to sound currencies, has been below its internal value in consequence of the pessimistic view taken by the international market, but it has only been since the closing months of 1922 that the depreciation of the exchange has been so great that it has begun to react again upon the level of prices in France. The author does not consider, apparently, that inflation of purchasing power is now taking place in France, although he admits that monetary deflation is for the present impossible on account of the likelihood of National Defence bonds being used as currency. At present, he says, their use as money is exceptional, but if a policy of deflation caused a scarcity of the means of payment, economic needs would be satisfied by the popularisation of this means of payment. As an ultimate aim to be held in view, he still somewhat pathetically clings to the idea of restoring the franc to its pre-war gold parity. But he admits that the floating debt must first be consolidated, the equilibrium of the ordinary budget and the budget of recoverable expenses established, and the cost of the public debt reduced. Otherwise every effort in the direction of deflation would be futile. Dr Einzig's book is full of ideas and provocative to thought.

STOCK EXCHANGE NEWS. SETTLING DAYS.

TICKET. ACCOUNT.
September 18. September 19.

Had business been a little better in Stock Exchange markets, there is no doubt that the week which is now finishing would have proved satisfactory to the public as well as to the House. The news from abroad is better. It is an unexpected surprise to find Germany growing more complacent in connection with the Ruhr problem. Money is plentiful, and talk of a rise in the Bank rate has subsided. The Japanese tragedy, terrible as it is, has turned out to be less appalling than the first accounts suggested. Other favourable factors have presented themselves, but the markets, while keeping good as a whole, are not overburdened with public business. The Italian cloud cast something of a shadow over the markets at the end of the week.

The Consol market has received, at last, its expected big loan from Victoria, which offers £9,000,000 of 5 per cent. stock at 99. A friendly reception has been given to the issue, owing to the difficulty that exists nowadays of securing a full 5 per cent. from trustee stocks. The War Loan and its immediate satellites remain firm, movements being small, though fairly frequent. The gilt-edged market was generally good yesterday. Home Railway pre-ordinary stocks show a

reviving tendency, and the Colonial list, in spite of the new Victoria loan, is hard throughout.

French bonds and railway issues are generally better, in consequence of the hopes that surround a possible settlement on the Ruhr, which is taken to imply a rally in foreign exchanges, the movement gaining strength yesterday. The improvement extended to Government, municipal, railway and shipping descriptions. Japanese Government bonds have recovered materially from their worst. Tokyo and Yokohama Fives have both revived. Russian stocks were supported yesterday. The Austrian scrip has fallen rather heavily. The Stock Exchange subscription to the Japanese disaster fund has reached a total of more than £10,000.

Most of the interest in the Home Railway stocks has centred in Undergrounds, where Metropolitan and Districts provided lively movements inspired by a disproportionately small volume of business. Buyers are looking for Metropolitan stock to be taken over by one of the big lines on the basis of a 4 per cent. guaranteed dividend, and the District bulls talk hopefully of some similar arrangement being applied to their own stock sooner or later.

Canadian Railway stocks are a little better. Mexicans continue dormant, and Argentines have been moving somewhat sharply up and down; firstly by reason of dividend expectations, to be realised next week; secondly, on account of the movements in the Buenos Ayres exchange. Brazilian Railways are steady, and San Paulos have improved.

Rubber shares reacted in consequence of a slight decline in the price of the raw produce, owing to landings once more exceeding deliveries, which is explained by reference to the dock strike. In oil shares, both New York and Amsterdam have been buying Royal Dutch, and this has imparted a firm tendency to Royal Dutch shares and to others in the same group. Something of a feature was a revival in the Trinidad oil list, but the brightness of the market did not hold. Courtaulds went ahead, on the idea that the company, like other concerns engaged in the textile trade, will benefit from the enforced exclusion of Japan for some time to come from the silk and allied industries. Shipping shares are beginning to harden again, Indo-China deferred being prominent, though here the reason given for the improvement is the impression that the Japanese disaster will bring extra traffic to the company's business. For the same reason, cable stocks are better. Insurance shares have held their ground, and in the banking market something of a feature is the way in which shares of the Far Eastern banks have moved up. Hongkong and Shanghai shares, for instance, fell to 117, but have rallied to 125. The iron and steel market is buoyed by the hope that important new contracts will be placed in connection with reconstruction work in Tokyo and other Japanese cities. Newspaper shares are a little better, these, like those of the tobacco market, being strengthened by rumours of possible forthcoming bonus distributions in the near future. Brewery stocks stiffened a trifle. Stores and restaurant shares mostly improved where movements occurred at all.

The South African market is apparently in the same state as a good man struggling with adversity, the bull points being obscured by the reluctance of the public to take a hand in the market and by occasional outbreaks of selling from Paris-Rhodesians, after their recent flutter of animation, are quieter. The most animated spot amongst mining shares this week has been the market for Mining Corporation of Canada and San Francisco Mines of Mexico, both the shares advancing sharply on good reports from the companies, some of the buying, in the case of the former concern, coming from Canada. Tin went over £200 per ton before it fell back a few pounds, and the markets in the various tin-mining shares are eagerly awaiting some sign that the public recognises the changed conditions which this recovery in the metal promises. Other mining sections are uninteresting, and the amount of business done in shares in this department during the week could probably have been transacted, without much difficulty, in a couple of days.

We are officially informed that Mr Alexander Barnet Albert Harris has been declared a defaulter upon the Stock Exchange.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Government of Victoria 5 per cent. Conversion Loan, 1932-1942.—Holders of £6,968,600 3½ per cent. stock and £2,301,162 16s 7d 6½ per cent. stock, due October 1, 1923, are now offered conversion to the extent of £9,000,000 into an equal amount of Government of Victoria 5 per cent. inscribed stock, 1932-1942, plus a cash payment of £1 per cent. on October 1, 1923, being the difference between the nominal amount of the stocks maturing and repayable and the issue price of the 5 per cent. stock. Holders of 3½ per cent. stock converting will receive three months' interest due October 1, 1923, and holders of 6½ per cent. stock converting will receive six months' interest due the same date, in the usual course. Any portion of the stock not converted will be paid off. As a precautionary measure in the event of conversion not being sufficient, an offer is made to the public of the above-mentioned stock at £99 per cent. to the extent of any portion not so converted. The revenue of the State for the financial year ending June 30, 1923, showed a surplus of £374,000. This, it is stated, is the sixth consecutive year in which a surplus has been realised. A sound trustee investment.

The Ascot District Gas and Electricity Company.—Authorised share capital £140,000, of which, including premiums, £90,000 has been issued. The authorised loan capital is £70,000, of which £44,000 has been issued. This is an offer for sale by tender of 1,500 £10 6 per cent. preference shares, the minimum price of issue being par. This is the only preference capital issued. The net revenue of the company for the year ended December 31, 1922, was £10,529. Interest on debenture capital amounts to £2,403. As the dividends on the present preference issue will need only £900, the remaining margin of £8,126 is ample to insure safety against most contingencies. A good investment, but regard must be paid to the narrow market which must rule in the event of selling.

ACTIVE SECURITIES.

SIDNEY TURNER, Accountant-General.

India Office, September 11, 1923.

Messrs Samuel Montagu and Co. write, on September 12th, as follows:—

GOLD.

Of the moderate amount of gold placed upon the market this week, India is taking a fair proportion.

SILVER.

The market has continued to show a firm front. The Indian bazaars have been important buyers, covering rather heavy commitments falling due. China has worked both ways, but was more inclined to sell than buy on the rise. Some sales of silver were made on Continental account.

INDIAN CURRENCY RETURNS.

The figures given below reveal a very remarkable advance during recent months in the amount of silver held in reserve. At the beginning of 1911 the silver holding was about 53 per cent. of the note issue. On August 31st it had again risen to 53 per cent. When we recall that the total note issue at the former date was only about 50 crores and is now about three and a half times as large, we cannot but feel that the silver reserve is overwhelmingly strong for any call that is likely to be put upon it. The huge accumulation of 9,447 lacs of rupees on August 31st last—320,000,000 fine ounces—was equal to about twice the annual silver production of the world.

NOTICES.

The death is announced, at the age of 79, of Mr Joseph Herbert Tritton, of Lyons Hall, Great Leighs, Chelmsford, formerly a partner in Barclay, Bevan, and Co., bankers, and a director of Barclays Bank. He was also chairman of the Indo-European Telegraph Company.

The directors of the Bank of Liverpool and Martins, Limited, much regret to announce that, acting on the advice of his medical advisers, Sir James Hope Simpson has found it necessary to resign his position as general manager of the bank. The directors are, however, pleased to state that Sir James will retain his seat on the board. Mr Thomas Fisher Caldwell, hitherto assistant general manager, has been appointed general manager in succession to Sir James Hope Simpson.

The court of directors of the Colonial Bank announce with regret that Mr E. Hyslop Bell, having accepted the chairmanship of the Niger Co., Limited, has retired from the position of joint general manager of the bank, Mr Charles H. Hewett remaining as sole general manager.

The London Joint City and Midland Bank announces the opening of new offices at 9 The Parade, Cross roads, Southbourne, near Bournemouth, and Old Post Office buildings, Grasmere, Westmorland.

Lloyds Bank, Limited, announce that branches of the bank are now open at corner of London road and Grove road, Edgware (Middlesex), under the management of Mr W. H. Nichols, and at 45 New Oxford street, W.C.1, under the management of Mr W. J. Whittaker.

Barclays Bank, Limited, announce that they have opened a new branch at 23 Hare street, Woolwich, under the management of Mr E. G. Dixon, J.P.

A branch of the Commercial Bank of Australia, Limited, has been opened at Hawera, New Zealand.

BRITISH AUSTRALIAN BROKEN HILL.—Cabled mill returns for the four weeks ended September 8th:—15,135 tons crude ore produced 2,690 tons lead concentrates, containing 1,665 tons lead and 71,823 ozs silver; also 1,850 tons zinc concentrates, assaying 8 per cent. lead, 9 ozs silver per ton, and 45 per cent. zinc. 310 tons carbonates raised. Two days' stoppage.

BROKEN HILL SOUTH.—For four weeks ended September 8th 18,450 tons of crude ore and 8,323 tons of dump slime were treated and produced 5,590 tons of lead concentrates, assaying 53 per cent. lead and 21 ozs silver per ton; also 2,984 tons zinc concentrates, assaying 39 per cent. zinc.

BURMA CORPORATION.—August, 20,161 tons of ore were mined. 23,370 tons of ore milled, producing 11,288 tons of lead concentrates. 11,903 tons of lead-bearing material were smelted, producing 4,190 tons hard lead for treatment in the refinery. Refinery products 3,810 tons refined lead, and 434,680 ozs refined silver. Tonnage milled includes retreatment 2,494 tons tailings. Of silver production 19,000 ozs were recovered from treatment of copper matte. Experimental zinc plant produced 940 tons zinc concentrates, assaying 99 ozs silver, 6 per cent. lead and 48½ per cent. zinc. In addition to the above, 200 tons antimonial lead were sold and shipped, and 125 tons copper matte produced ready for shipment from the treatment of accumulated smelter by-products.

ZINC CORPORATION.—August:—"Lead concentrator treated 15,452 tons of ore, producing 3,618 tons of lead concentrates, assaying 63.8 per cent. lead and 5,655 tons of zinc middlings."

Reports and Notices.

The registered office of the Rosario Nitrate Company, Limited, is now 145 Dashwood House, New Broad street, London, E.C. 2, and the secretary is Mr F. W. Bishop, and the assistant secretary is Mr James Rennie.

Following on the recent acquisition of the old-established business of Sir Titus Salt, Bart., Sons and Co., Limited, by Salts (Salthaire), Limited, while the head office and directorate of Salts (Salthaire), Limited, will remain at Salthaire (Yorks), as hitherto, the registered office of the company will be located at the offices of the Austral Development, Limited, 27 Old Broad street, London, E.C. 2.

GOVERNMENT STOCKS, &c.

AUSTRIAN AND HUNGARIAN LOANS.—Holders of obligations of the old Austro-Hungarian Monarchy to the nominal amount of the equivalent of £500 or upwards are invited to attend a conference to be held at the offices of the Council of Foreign Bondholders, 17 Moorgate, London, E.C. 2, on 18th inst., at 3 p.m., for the purpose of appointing a bondholders' committee to act with the Council in the representation of the bondholders' interests, in view of an arrangement which has been formulated between the representatives of the Continental holders of the bonds and of the States between which the old Austrian and Hungarian debts are to be apportioned.

BANKS.

AUSTRALIAN BANK OF COMMERCE, LIMITED.—The net profit for the year ended June 30, 1923, amounted to £140,678, as compared with £137,106 in the preceding year. The ordinary dividend is unchanged at 7 per cent. for the year, and absorbs £84,000. The sum of £40,000 is transferred to reserve fund, and £10,000 is transferred for the purpose of reduction of bank premises account. The sum of £40,265 is carried forward, as compared with £33,587 brought into the accounts. Deposits amount to £10,257,269. Bills discounted, &c., stand at £9,187,613.

BANK OF VICTORIA.—The fifty-seventh report for the year ended June 30, 1923, shows a net profit of £183,706, as compared with £179,930 in preceding year. The dividend is maintained at 9 per cent. for the year. The sum of £50,000 is put to reserve, making that fund £700,000, and £3,000 is put to officers' provident fund. The sum of £27,439 is carried forward, against £29,745 brought in to the accounts.

COMMERCIAL BANK OF AUSTRALIA, LIMITED.—The report for year ended June 30, 1923, shows a net profit of £234,419, against £228,081 in the preceding year. The ordinary dividend is unchanged at 15 per cent. for the year. The sum of £85,066 is set aside for reserve fund, and £10,000 is utilised for reduction of bank premises. The sum of £44,786 is carried forward to next account, against £42,209 brought in to the accounts. In addition to the above amount of £85,066 transferred to reserve, the sum of £14,934, being balance of premium received on the new issue of shares, has been credited to that account, making £100,000 to credit of reserve fund.

COMMERCIAL BANKING COMPANY OF SYDNEY, LIMITED.—The report for the year ended June 30, 1923, reveals a net profit of £422,068, as compared with £307,885 in the preceding year. The sum of £86,421 was brought into accounts, making £508,489 avail-

able. The ordinary dividend is unchanged at 10 per cent., and absorbs £300,000. The sum of £120,000 is put to reserve fund, and the balance of £88,489 is carried forward. The reserve fund now amounts to £2,580,000, and the total paid-up capital is £3,000,000.

THE YOKOHAMA SPECIE BANK, LIMITED.—The general meeting of the shareholders for the half-year ended June 30th last was held on the 10th inst., on the site of the head office in Yokohama. At the meeting a dividend of 12 per cent. per annum was declared, 4,000,000 yen being taken to reserve account, and over 5,000,000 yen carried forward. It is confirmed that although the interior of the head office has been burnt, the safes and vaults are intact.

MISCELLANEOUS.

NEW RUSSIA COMPANY, LIMITED.—The committee of the debenture holders have issued a statement, dated September 11th, from which the following is extracted:—"The company is practically without funds, and under present conditions no cash payments on account of interest or sinking fund are possible. From the time of the Russian Revolution down to April, 1921, interest was not paid out of the company's profits, but by the Russo-Asiatic Bank, under an arrangement between the company's shareholders and that bank, which arrangement however broke down in the year 1921. Default on the debentures therefore occurred. The committee propose the following:—Interest on debentures to be increased from 6 per cent. to 7 per cent. as from April 1, 1921. All ascertained profits during the four years October 1, 1923, to October 1, 1927, to be applied towards payment of the unpaid interest on the debentures. If, after October 1, 1927, the company is able to resume the regular service on its debentures, all arrears of interest then outstanding to be funded in deferred interest warrants at par. Such interest warrants to be redeemable at a premium of 20 per cent. by the application annually towards such redemption of a sum out of the profits of the company equal to the amount distributed as dividends each year. The sinking fund to be suspended during the period to October 1, 1927. After the end of this period a cumulative sinking fund of 2 per cent. on the amount of the debentures now outstanding to be established. The debenture-holders to have representation on the board of the company until such time as all arrears of interest have been paid in cash and the sinking fund has been resumed. You will be aware that the Soviet Government has sequestrated all private property in Russia, including that upon which your debentures are secured. The committee is informed that the condition of the works may be described as fairly good taking all the circumstances into consideration. The company's works are being operated to a limited extent by the Russian authorities. Every possible effort is being made to obtain the return of the company's property."

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Harvesting operations have made better progress under more favourable climatic conditions, and the wheat crop generally reveals good quality. The total yield for England and Wales is estimated at about 7,100,000 qrs. Winter barley and oats continue fairly satisfactory, but spring crops are less favourably commented upon.

GIRARD TRUST COMPANY

* Half-yearly.

† Free of tax.

(k) For two years.

English wheat is now coming forward more freely both here and at provincial markets; consequently prices tend in buyers' favour.

Best milling samples quoted at 9s to 9s 3d, with inferior qualities ruling down to 8s 6d per cwt, free on rail. Imported descriptions were in moderate request, but prices are the turn easier, especially for Canadian qualities, in sympathy with lower forward offers. No. 1 Northern Manitoba quoted 49s 3d to 49s 6d, No. 2 hard winter 45s, Rosafe 62½ lbs 45s, Barusso 62½ lbs 44s, choice white Karachi 43s 6d, red ditto, 43s, all ex ship terms per 496 lbs. In the cargo section, white kinds were sparingly offered at full rates, in view of inquiries on Japanese account for Australian and Pacifics, but other descriptions tended easier on freer offerings. A feature was the demand for new crop Australian and Canadian by certain Mediterranean countries, and steamers of No. 2 Northern Manitoba February shipment sold at 44s, and about 15,000 tons of Australian January-March shipments at 44s 9d, all to Italy, with 44s done to U.K. Of maize cargoes, a sailer of No. 6 yellow African afloat changed hands at 35s, and steamer No. 2 white flat ditto on passage at 36s 3d per 480 lbs. Flour steady, with a moderate demand. London standard straight run quoted 38s, patents 40s-41s, town households 36s per sack delivered. All English country straights 31s 6d-32s 6d delivered to London stations.

Of imported, Manitoba patents range from 37s-41s as to sample, Minneapolis good patents 40s 6d, soft winters 36s-39s, Australian 34s-35s per 280 lbs, ex store. Millers' offers steady. Broad bran quoted 6s 6d, ordinary ditto 5s 6d, middlings 8s-8s 3d, bags included ex mill, light oats 5s 9d, powdered oat husks 5s 9d, feed oatmeal 9s 3d, ground oats 13s 3d, free on rail, all per cwt. Barley firm, and English malting quoted from 11s 3d. to 15s 9d, with feeding sorts ranging from 9s-9s 8d per 112 lbs, free on rail, as to sample. Imported, fully steady. Californian quoted 40s-42s, Chilean brewing 39s-43s as to sample, both landed per 448 lbs. Persian 26s 6d, Karachi 28s 6d, Danubian 29s 6d-30s, all landed. No. 4 Canadian Western 28s, American malting 48 lbs 27s 9d, Algerian Tunisian 26s-27s, all ex ship, per 400 lbs. Maize quiet, and occasionally 3d per qr easier. Plate, ex ship, arrived, quoted 34s 3d, landed 35s 9d, No. 2 white flat African 35s 6d, No. 6 yellow ditto 34s 3d, both ex ship, all per 480 lbs. Oats: English steady at 7s 9d-10s 4d per 112 lbs, free on rail, as to sample. Imported, quiet, and tendency easier. Plate, ex ship, 21s 6d, landed 23s 9d, No. 2 Canadian Western landed 28s, No. 3 ditto, ex ship, 25s 6d, No. 1 Canadian feed landed 25s 6d, Danubian, ex ship, 21s 3d, New Zealand A grade landed 37s-38s, B grade 36s per 324 lbs. Oatmeal steady, with a moderate demand.

London-made all cuts quoted 17s, rolled oats, also whole groats 17s flaked oats 17s 6d, ex mill, ordinary Scottish oatmeal 19s 6d-21s and American 16s 3d-16s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, 1921-22, 1920-21, and 1919-20:—

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated September 13th was as follows:—Pig-iron.—There is slightly more inquiry for pig-iron, and a more cheerful outlook prevails. Prices are as follows:—97s 6d per ton for Cleveland No. 3, G.M.B.; 99s per ton for East Coast hematite mixed numbers. Manufactured Iron and Steel.—Prices of steel are practically unchanged. Inquiries for re-construction purposes are expected. There is still no immediate prospect of a settlement of the boilermakers' dispute. Prices are:—Steel ship plates, £9 15s; steel ship angles, £9 5s; iron bars, £12 steel rails, £9 10s. Iron Ore.—Business remains stagnant, and there are sellers of best rubio at 23s.

Our Sheffield correspondent writes:—Conditions of local industry do not improve, some little improvement in the billet market being

counterbalanced in other directions, and unemployment is extending week by week, the total number in receipt of benefit being 2,000 more than a month ago. Bad as things are, the outlook is regarded as more hopeful. Makers of heavy steel seem confident that a revival of buying is now at hand. Stocks of iron and steel, whether in the hands of merchants or users, are almost non-existent, and the slightest all-round increase of buying would probably create a condition of scarcity and enable producers to force up prices to a remunerative level. Makers of raw and semi material have no desire in these circumstances to sell forward at the current quotations. It is now difficult to place orders either for tools or cutlery in Germany, and holders of stocks in this country are putting up their prices. Metallurgists in the non-ferrous section are actively engaged in experiments for the production of untarnishable alloys suitable for table ware. Not much new business is being booked in the fuel market, and consumption of boiler slacks and steam coal at home has been tapering off since the beginning of the holidays. Short time working at the pits is extending. Coke is a firm market. Prices per ton at pits are:—Best hand-picked branch, 30s 6d; Barnsley best Silkstone, 26s 6d; Yorkshire steams, 20s; best Blythe steams, 24s; Durhams, 24s 6d; rough stacks, 11s 6d; nutty slacks, 10s; smalls, 7s.

Our Glasgow correspondent (writing on Thursday) says:—Business in iron and steel material this week has been rather more animated than has been the experience for a period (a month or so), and the hope is maintained in some informed quarters that the betterment will continue. Demand has been mainly for steel ship plates, thin sheets, and structural sections, such as enter chiefly into house building and land constructional operations. Yesterday it was stated on 'change that several inquiries were on circuit for Scotch pig-iron and for hematite, and as a consequence quotations

were harder. Scotch hematite at £5 5s f.o.t. steelworks. Do. No. 1 foundry, f.o.t. makers' works, also £5 5s, and No. 3 foundry, makers' works (f.o.t.), £5 a ton. The reported increase in demand for steel is chiefly from abroad, and leans to the purchase of bars and black sheets, and is emanating from the Far East. Glasgow has for long years had a strong and active business connection with Japan, which is expected to revive and extend from the catastrophic events which have unfortunately laid our ally in ruins. To-day it was added that inquiries as to the export of sections (light and heavy) had come to hand from more than one devastated district; but the disposition is to attach no great measure of assurance, meantime, to the story. Bolts, nuts, and rivets are fairly asked after, as are tubes, hoops, billets, and nearly all sorts of semi-finished goods. Coals are in strong request for shipment to Germany, France, Italy, and Scandinavia.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—It was hoped that firm values at the Colonial wool auctions in London would have the effect of stimulating demand for tops and yarns, but although there was some response from users during the first week of the sales, demand has since eased off, and the market to-day is again somewhat sluggish. The tone is fairly good, this being governed to a large extent by the firmness of the raw material market, but the amount of business in Bradford is disappointing. Topmakers put up their quotations in sympathy with values in Coleman street Wool Exchange, and there has been very little change during the past week. It is doubtful, however, if full quoted rates can be made in most cases; indeed, concessions can be obtained here and there, and this notwithstanding that current rates are below replacement costs. Consumption, however, is so restricted that users have no encouragement to buy, although present prices are undoubtedly attractive, having regard to the cost of wool. There has been a slight improvement in the yarn trade, some firms being in a better position to run their machinery on account of particulars coming to hand, while in other cases some nice orders have been booked in crossbreds. The great difficulty in this section is to make prices that will leave even a small profit, and as there are several weak sellers, the market generally presents a weak appearance. The piece trade does not show much expansion. Orders on home account are comparatively small, and low prices are offered. It is hoped that the Japanese market for pieces will recover sooner than was at first expected. Inquiries are about for the usual lines, and it is expected that business will result. Home-grown wools are firmly held, and practically all qualities are against buyers.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The wool sales in London are making good progress, and the attendance of buyers is certainly encouraging. It is something to see a keen demand for the raw material at steady prices, even if there is no further "spring" in the bids buyers are making. Speculators are feeling disappointed that there is no chance of getting out on the right side with the wools they purchased in Australia and New Zealand, and which they are now offering in London, but this fact only confirms what we said at the time, which was that prices in the primary markets during last December to the end of January were exceedingly high. The falling off of trade and the serious political complications on the Continent have all helped to restrict consumption and arrest trade developments. It is quite probable that but for the occupation of the Ruhr by the French, importers would have made money on their Colonial purchases.

It is not probable that any further improvement in London values will take place, and certainly users do not want any further advance. Next Friday the first sale of the Australian season will be held in Adelaide, when about 25,000 bales will be catalogued. There does not seem to be any prospect of values being inflated, and in all probability the season will open just about where the previous one left off. Australian growers and sellers are very optimistic, and are expecting big figures, but they will be well advised to accept current rates. Some effect upon the Australian market is sure to be produced by the catastrophe in Japan. The American trade have been desirous of seeing a strong movement of raw material values, both in London and the Colonies, this apparently being wanted to substantiate prices current for partly and fully-made goods, but the catastrophe referred to has introduced a factor not previously anticipated, and it is impossible for such a thing to take place without at least a temporary check being put upon the buying powers of the country concerned. Great store is being placed upon Japan's recuperative power and the initiative of the people, but however bold a policy is pursued, a great deal will

depend upon the actual financial resources available. The ordinary activities of the areas affected being interfered with will certainly result in one important factor in wool and its products becoming at least temporarily less influential in the direction of maintaining or enhancing the recent level of values.

THE COTTON TRADE.

Corrected.

MANCHESTER, September 13.

A stronger feeling has prevailed in the market than for a long time back. There has been an important advance in raw material rates, and spinners and manufacturers have experienced a much larger inquiry. A feature of interest has been the more extensive buying of raw cotton by spinners for future delivery. Cloth demand has been on a considerable scale. Further activity of an encouraging character has shown itself for India in light fabrics and grey shirtings, although numerous offers for the latter qualities have been unworkable. Operations for China have expanded in a variety of goods, although most of the buying has been in fancies and specialities. Several minor outlets, such as Java, Singapore, Egypt, and South America, have given increased support. Most manufacturers have been enabled to reduce their stocks and obtain some relief, whilst in certain quarters engagements have been extended. Freer buying has taken place in American and Egyptian yarns at higher prices, and spinners are much firmer in quotation.

THE BANK OF TAIWAN, LIMITED.

VEGETABLE OILS AND OILSEEDS.

The feature of the markets is the firmness of linseed, especially in near positions, due to the fact that stocks are low and that there is only a comparatively small quantity afloat for this country, about 18,000 tons, and for the Continent 38,000 tons, together considerably less than half of the quantity afloat a year ago. Values of both old crop Argentine and the current Indian have steadily advanced. Crude oil is very difficult to buy, and is held for higher prices. With regard to Soya beans, spot demand is limited, and there is some reluctance to do business for future shipment in consequence of the earthquake disaster in Japan. Soya bean oil of English make is steady. Palm kernel oil continues in good request by the edible trades, and ground nut oil is scarce and dearer. An improved demand for oil cakes is reported.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The Bermondsey hide market was again weaker on Thursday, best ox from 6½d to 8½d showing a decline of ½d. Falls were also noted in seconds, whilst best cows did not find buyers. Calf were steady from 5½d to 11½d per lb. Lambs made from 2s 1d to 7s 6d, and pelts from 3s 10d to 7s 3d each.

There is more business passing in imported hides, and frigorifics have changed hands at higher prices, 6½d to 7d now being paid, this being accounted for to some extent by the rise in the Argentine dollar. Sales amounting to 60,000 hides have been bought on American account at 36 dollars for ox and 29 dollars for cows. Liebig ox has sold at a parity of 8d, and Colon ox at 7½d. Dry hides are firm in price, and B.A. Inservibles have been sold at 6½d. African hides are not moving off rapidly, and values are unchanged.

Orders have been coming along more freely for boots and shoes of late, as stocks in retailers' hands are small. Buyers of footwear, however, are holding off placing winter orders until the Shoe and Leather Fair which opens in London in October next. The value of exports of leather footwear up to the end of August was £2,396,018, as against £1,689,084 for the first eight months of 1922—a very satisfactory increase.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 14.

SUGAR.—With sustained inquiries both on grocery and manufacturing account, business proceeded with freedom, and a buoyant market resulted. White Javas continue to be well taken by exporters. With a scarcity of imported grocery sugars, the British-produced article is sought after. Messrs Tate and Lyle's cubes, 58s 6d to 59s 6d; granulated, fine and coarse, 56s 1½d; No 1, 55s 10½d; No 2, also

London, 55s 7½d; ditto, second half October, 55s 6d; yellow crystals, spot, 50s 1½d. American granulated, spot, sold, 55s 6d; white Java, as to sample, from 51s to 52s; ditto, arrived, steamer, 24s 3d, c.f. and i. terms. Continental sugars for shipment more or less nominal. Raw refining kinds firm, and sparingly offered. Peruvian basis 96 per cent., for shipment, 22s 6d, c.f. and i. terms. U.K. Cuban stocks, 392,900 tons, against 3,996,300 same time last year. Terminal market firmer, and there was a trade doing, particularly in the December position. September sold, 24s to 25s 9d; October, 24s to 24s 6d; December, 23s to 23s 9d and 23s 7½d; March, 23s 6d to 24s 3d; May, 23s 9d to 24s 6d. U.K. consumption of August, 132,000 tons, against 139,300 last year.

COFFEE.—Spot market steady, with a moderate demand for the finer sorts, but common meet a slow sale. Futures firm, but slow.

COCOA quiet at about late rates. Accra, F/F quality, November-January, 30s 9d, f.o.b. terms.

TEA.—Supplies of Indian were on a larger scale this week, amounting to 45,880 packages, and with a quieter demand for the commoner qualities, prices for such ruled weaker, but all the finer parcels were well competed for at full previous quotations. About 27,000 packages Ceylon were also submitted, and here also competition on balance was not so keen as previously, and rates were occasionally easier. Java and Sumatra met a fair demand.

RICE.—Business in this market proceeds quietly owing to marked paucity of offers on the part of shippers. Two stars, spot, 16s; September-October, 14s 9d. Spanish new crop, for shipment, 18s 9d. Japanese peas quiet. Spot, 26s; September-October, sold, 20s 6d; October-November, 20s; November-December, 19s 6d cwt.

SPICE.—Pepper firmer forward with a good inquiry. Fair black Singapore, L.S., October-December, sold, 4½d; Lampong ditto, 3½d. Muntok also October-December, L.S., at 6½d to 6½d and 6½d. Zanzibar cloves, October-December, sellers, 1s 1d per lb. Tapioca quiet, but firmly held at recent rates. Sago flour, October-December, sold, 13s. Desiccated coconut steady. Fine cut, spot, sold, 39s 9d; halves, September-October, quoted 38s 9d; October-November, 39s 3d cwt.

JUTE reservedly offered, and firm, with fair inquiries, but eased later. First grade, September, Continent, sellers, £21 10s; September-October, sold, £21 15s to £22, and £21 5s; October-November, £22 to £21 5s, and November-December, £22 to £21 15s ton. Hessians firm. 10 oz, spot, 28s 3d; 8 oz, 21s 6d 100 yards. Heavy goods firm.

HEMP.—Manila very steady, and a moderate demand ensued. J grade, July-September, and September-November, sold, £31 5s; K sellers, £27; L, £26 10s; M, £25. House marks of J, September-November, sold £32; K, £27 10s ton.

SHELLAC steady, quiet. T.N., spot, 28½s to 290s; October, 28½s; 277s 6d paid; December, 280s to 277s 6d cwt.

GOPRA remained a quiet, steady market. F.M.S. Straits, August-October and October-December, Rotterdam, quoted £27; Ceylon, ditto, £28 15s; Dutch E.I., August-September, sold, £27; October-December quoted £27; Cebu, September-November, sold £26 5s to £26 10s; South Sea quoted £26. Palm kernels, October-December, Liverpool, £18 7s 6d ton.

RUBBER again quietly dealt in, at rates showing no marked change. Spot and September standard plantation, sold, 15½d to 15½d; October, 15½d to 15½d; October-December, 15½d to 15½d; January-March, 16½d to 16½d. To New York, standard sheet, November-December, sold, 15½d for Estate per lb, c.f. and i. Wild, quiet, unaltered.

MENTHOL.—Japanese, spot, held for 70s; Japanese peppermint oil, spot, 13s; refined camphor slabs, 4s per lb.

EGG PRODUCTS.—Market firm, with a fair inquiry for albumen, which is held for firm rates. Prime hen liquid, yolk, spot, quoted 85s; September-October, 80s; dried yolk, spot, 10½d; hen, albumen, spot, 4s; September-November, 3s 11d.

DRIED FRUIT.—The market for currants is steady, with a moderate business. Patras, quarter cases, quoted 56s; ditto, Amalias, 53s; Gulf, 58s; Vostizza, 63s to 66s; Australian, 62s to 66s. Sultanias in fair support, at about previous rates. Smyrna, good colour, quoted at 50s; better qualities up to 70s; Californian, 52s to 56s. Raisins steady, but general course of trade quiet. Cape quoted 44s to 48s. Dais move off slowly. Siar, spot, 17s 6d. Evaporated fruits continue in quiet request, and any alteration in prices proved favourable to buyers. Cape apricots quoted 65s to 80s, as to quality; Californian pears, 60s to 75s; ditto, apple rings, 50s to 52s. Australian apricots, 65s to 85s; ditto, peaches, 50s to 60s. Californian plums, 40/50, quoted at 70s; 70/80, 43s; 80/90, 40s per cwt.

CANNED GOODS.—There is no improvement in the demand for

41s 6d; September, 41s; September-December, 39s 9d; January-April, 36s 3d. Rape firmer. Crude, spot, 38s; refined, 41s. Cotton steadier. Crude Egyptian, spot, 37s; Bombay, 36s; common edible, 43s 6d; deodorised (in barrels), 45s. China-wood firm. Hankow, spot (barrels), 92s; September, 87s 6d. Coconut steadier. Ceylon, spot, 45s; September-October, 43s 6d; Ceylon, ditto, quoted 48s. Soya steadier. Oriental, barrels, August-September, 38s 9d. Cod quiet. English, spot, 34s. Groundnuts firm. English, crushed, naked, spot, 44s; deodorised, barrels, 52s. Turpentine strong. American, spot, 74s; October-December, 75s; January-April, 76s 3d. Rosin firm. American, grade B, 13s; F, 13s 3d; G, 13s 3d; H to I, 13s 3d; W.G., 15s 9d; W.W., 16s 6d per cwt. French nominal. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon. Castor-oil firm. First pressure, spot, quoted 51s; second pressure, 49s; and pharmaceutical 56s per cwt.

OILSEEDS.—Linsed firm but quiet. Bold Bombay, September, sold, £21 7s 6d to £21 10s; small Bombay, ditto, £20 17s 6d; Calcutta, afloat, £20 17s 6d; August-September, sold, £20 12s 6d; September-October, £20 5s. Plate, afloat, £19 10s; August-September, £19 5s; January-February, £16 5s. Rapeseed firm. Toria, September-October, £16 15s; real bold Ferozepore, September-October, sold, £16 12s 6d; Jamba, £13 2s 6d. Cottonseed firm. Egyptian black, September, £11 12s 6d. Bombay, afloat, £9 15s; December-January, £9 5s. Gingelly seed firm. Large Bombay, October-November, Continent, sellers, £23 17s 6d. Chinese, October-November, £22 15s, Continent. Groundnuts firmer. Coromandel, machine-dried, August-September, £22 12s 6d. Chinese deodorated, f.a.q., October-December, £21 7s 6d; East African, September-November, £21 15s. Soya beans firmer. Manchurian, August-September, £11 12s 6d. Castor-seed quiet. Bombay, September-October, £20 2s 6d per ton.

METALS.—Tin commenced the week with an easier tone due to selling pressure, chiefly for forward positions, though a fair business transpired at the lower level of prices. Standard cash sold at £199 15s to £198 15s, and three months £201 5s to £199 10s and £200. Sales in the East were reported on the basis of £205, c.i.f. Subsequently prices were attended by some irregularity, but earlier declines were partially recovered. Standard cash sold at £199 5s, and three months fluctuating between £199 10s to £200 5s. Further sales occurred in the East at £204, c.i.f. At Thursday's market prices, after showing firmness, relapsed. A fairly good business transpired, including standard, cash, at £196 10s to £196 15s to £196, and three months at £199 10s to £199 15s to £196 15s, while finally at £196 17s 6d. On the following day the downward movement continued. Standard, cash, sold at £194 10s, and three months at £195 5s to £196 to £194 10s to £194 15s. English ingots quoted at £194 5s to £194 10s. Copper was a weaker market due to selling

desire, especially with regard to distant positions, combined with a quiet demand. Standard, cash, sold at £64 2s 6d, and three months, £64 10s. The downward movement continued throughout the greater part of the week with moderate dealings. By the middle of the week cash sold down to £63 10s, and three months, £64 2s 6d. On the following day further weakness was apparent, but a good business took place at the lower range of prices. Standard, cash, sold at £63 2s 6d to £63 1s 3d, and three months at £64 1s 3d to £63 15s 3d. Rates were again easier at Friday's session with moderate sales. Standard, September, sold at £62 17s 6d, and three months £63 15s to £63 8s 9d. Electros, £68 10s to £69; best selected, £66 to £67 10s; strong sheets, £66; wire bars, £69. Lead firmer at £25 15s to £25 7s 6d, as to position. Spelter easier at £33 2s 6d to £32 7s 6d, according to position. Aluminium quiet. Home trade, £115; export, £120. Antimony: Ordinary brands £30 to £32; specials, £34 10s to £35.

TALLOW.—Messrs Colchesters and Woolner wrote as follows on September 12th:—The tallow market was firm during the week, and prices are occasionally 6d dearer to-day. Supplies which arrived during the strike are now becoming available on a larger scale, and are meeting with an improved demand. At auction to-day 2,564 casks tallow were offered, and 1,802 were sold. Quotations are:—Australian mutton: Fine, 42s 9d; good to fair, 42s to 41s; dull to dark, 38s to 36s 9d; hard, 43s. Australian beef: Fine, 42s; good to fair, 40s 6d to 39s; dull to dark, 37s to 36s 6d; sweet, 42s 6d. Present shipment from Australasia nominal. Present shipment from South America, 39s to 37s 9d. The market letter is unchanged. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 13d; melted stuff, 26s 6d per cwt. Quotations are:—Town, 35s, net cash, naked, ex works. Country: Frail casks 35s; home melted, shipping casks, net, f.o.b., good coloured, 37s; fair to dull, 36s to 35s. Bone fat: White, none; pale, none; benzene, 33s; melted stuff, 33s 6d, f.o.b.

month approaches. Hence Treasury Bills have changed hands at a shade over 3 per cent., and the fine three-months' bill rate is not better than 3½ per cent. The market, however, is not working freely, as nowadays the banks are in a position to obtain nearly all the December maturities they may require without having recourse to the discount houses.

	Sept. 21, 1923.	Sept. 14, 1923.	Sept. 7, 1923.	Aug. 31, 1923.	Previous Rate and Date Changed.

Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3½	3½	3½	3	..

The Bank return showed a further contraction in the circulation of £707,200, and a very small increase in the coin raised the reserve by £707,600. The continued movement of funds from the market to Government account was reflected in a decline of £1,976,000 in Government securities and a rise of £2,334,000 in Public Deposits, against which Private Deposits lost £1,999,000 and Other Securities rose by £1,615,000, although there has been no market borrowing from the Bank in the ordinary sense. Currency Notes outstanding were reduced by £2,179,000 on the week, the total standing at £283,133,200, which includes £1,448,300 for notes called in but not cancelled. The fiduciary issue is £232,234,900, or £37,949,000 below the maximum for the current year.

THE STOCK MARKETS.

The week has seen spasmodic spurts of activity in various sections of the Stock Exchange, and, while demand is by no means idle for first-class investment stocks, there are signs that the public is on the look-out for promising speculations. On the whole, business generally shows some signs of expansion. Markets paid little attention to the Premiers' meeting in Paris, and the Consol market is heavy. French issues have moved with the franc exchange; Germans have attracted some notice from speculators, whose activities have also caused substantial rises in Russian issues. Argentine railways had a burst of strength on the dividend announcements. The tea-share boom continues, and nitrates are coming into favour. Rubber shares are heavy, and iron and steel shares irregular. Rhodesian, Mexican and Canadian mining shares are showing activity, and tin shares are the object of confident attention.

THE COMMODITY MARKETS.

There is little general change to record in the conditions of commodity prices. In coal markets the volume of trade is well maintained. A healthy tone is noticeable in the export trade, while the demand for house coal is brisk. More inquiry and a little more business is reported in the pig-iron market by our Middlesbrough correspondent. The steel trade is dull, and it is considered that no real improvement will take place until the shipyard labour trouble is settled. Prospective demand for Japanese account appears to have stimulated operations on the London Iron and Steel Exchange. Tin advanced during the week, but copper failed to improve. Prices in the Manchester cotton trade have gone against buyers, on account of the further advance of the raw material. Business in yarn and cloth has been difficult to arrange, but there has been a good inquiry. Demand for wool is well maintained in London, but adverse conditions in the Bradford manufacturing trade continue. The jute market is dull. Grain values are steady. Sugar was again a buoyant market, and an all-round advance took place. The demand for good descriptions of

tea continues, but the rice market experienced weakness. The linseed market is fairly active, and prices are inclined to be firm. Sales of rubber led to easier values. Hides were steady at the Bermondsey auctions, but some weakness was discernible in provincial markets.

FOREIGN EXCHANGES.

In the foreign exchange market business in the more important currencies, with the exception of the dollar, is still almost entirely under the influence of political considerations. For the past week New York has been fairly steady, falling away to slightly under \$4.54 in the middle of the week, but recovering later, so that yesterday morning's rate of \$4.54½ is only ½ cent below that of the 14th. At ¾ cents per month over spot forward rates are about the same as last week, but show a tendency to widen. At the end of last week Paris showed a sharp recovery, partly on the Corfu settlement, partly on expectation of a German surrender in the Ruhr. Some reaction brought up the rate again to 78.45 on the 18th, but the reports of Mr Baldwin's interview with M. Poincaré caused a sudden drop on Thursday to 76.30. This improvement was too rapid, and yesterday morning's quotation of 77.10 (as compared with 77.65 a week ago) showed considerable uncertainty. The Brussels rate shows the same general movement, but the recovery here, from 93.80 on the 14th to 91.35 yesterday morning, is more marked. Forward rates in Paris at 4 to 5 centimes per month over spot are about the same; in Brussels they have narrowed to 4 to 6 centimes above spot from 11 centimes a week ago. The lira shows an improvement from 102½ a week ago to 101 yesterday morning, but any decided improvement is unlikely so long as the Fiume question remains unsettled. The movements of the Berlin rate have been even more spectacular than before. From 500 millions a week ago, there was a complete collapse on Monday to over 1,250 millions, followed by a recovery on the following two days to rather under 1,000 millions. On Thursday, however, the rate dropped suddenly to under 500 millions. The explanation would appear to be that the Reichsbank, which for some time past has been able to satisfy a very small percentage of the demands made upon it for foreign currency, suddenly announced that it would satisfy requirements in full. This took by surprise the whole market, which had put in, as usual, applications far in excess of the amounts actually needed, and was forced to throw this excess of foreign currency on the market in order to obtain marks for payment to the Reichsbank. The lesson was a salutary one for the speculator, but, of course, a *tour de force* of this kind cannot prop up for long the value of the mark. For this there is more promise in the proposed new bank of issue, but without a settlement of the Ruhr question and of Reparation, schemes of this kind will be equally impotent. In the meantime, the Reichsbank's return for September 7th shows that notes in circulation were again doubled during the week. The Madrid rate shows an improvement on the 34.03 quoted a week ago, the quotation having fallen quietly to 33.62½ yesterday. Amsterdam at 11.55½ has moved slightly in our favour from 11.55½ a week ago. In Northern Europe Stockholm has moved from 17.12½ to 17.13½, Christiania from 28.22½ to 28.25½, but Copenhagen, after being higher, has recovered from 25.32½ to 25.15½. Helsingfors, after its recent rise, has remained steady at 169½, the Bank rate having been raised from 8 per cent. to 9 per cent. In Central Europe, Vienna remains at 322,500, while Warsaw is rather higher at 1,400,000. Prague at 151½ is ½ krone lower. Bucharest is about the same at 980. In the East the rupee at 1s 4½d is 7-32d more expensive, while the yen has moved up from 2s 1½d to 2s 1¾d. The silver market has been

steady, Chinese offerings being readily absorbed by India, and the spot price of 31½d is the highest since the middle of June last. Hong Kong at 2s 31½d is ½d higher, and Shanghai at 3s 1½d the same as a week ago. In South America, Rio is about the same as last week. Buenos Ayres has hardened to rather over 40d, while Monte Video also shows an improvement, and Valparaiso has moved down from 35.80 to 35.60 pesetas.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 15th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	6016	From Revenue	10385
Interest, &c., on Debt	459		
Reduction of Debt	3270		
Added to Exchequer Balances ..	571		
Sundries	569		
	10385		10385

Revenue amounted to £10,384,800, as against £11,523,900 in the corresponding week a year ago. Customs yielded £2,432,000, against £1,699,000. Excise brought in a lower revenue by about £500,000 at £1,545,000. Estate, &c., duties at £470,000 compare with a yield of £800,000 in the corresponding period. Property and Income-tax produced £3,722,000, and Super-tax £380,000, against a combined total of £4,197,000 a year ago. The week's operations reduced the National Debt by £3,270,000, and caused the following changes:—

	Min. £		Min. £
National War Bonds paid off ..	1250	National Savings Certificates ..	1450
Bank of England Advances ..	1000	Treasury Bills	8760
Public Departments Advances ..	11050		
Sundries	180		
	13480		10210

The chief feature of the above table is undoubtedly the large net sales of National Savings Certificates, due to the rush by the public to secure them before the interest is reduced on October 1st. The floating debt was reduced by £3,330,000 to £807,191,500.

FINANCIAL YEAR, 1923-24 (April 1 to September 15, 1923).

	£		£
Total Expenditure ..	342,016,374	Raised by Revenue ..	339,076,025
Net Repayments	52,874	Decrease in Balances ..	2,993,223
Total	342,069,248	Total	342,069,248

ESTIMATES for YEAR 1923-24.

	£		£
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found reports of the following company meetings:—Nobel Industries, Illingworth, Morris and Co., and Salts (Saltaire).

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include a review of the Dutch economic situation, and the views of Sir Alan Anderson on the shipping position.

GERMANY—A NEW PHASE.

IN spite of the French optimism described on a later page by our Paris correspondent, none but the most simple-minded will expect great results to follow from the meeting of Mr Baldwin with M. Poincaré this week in Paris, or will accept at its face value the meaningless communiqué—so reminiscent of the war and the succeeding conferences—which the Premiers approved with, no doubt, a cynical smile. To be told that "they were happy to establish a common agreement of views and to discover that on no question is there any difference of purpose or divergence of principle which might impair

the co-operation of the two countries," is trying the gravity of the long-suffering public rather severely. It is true that the recent Italo-Greek crisis and the solid support which the British representative received from the delegates of the nations assembled at Geneva, has not been without its effect in Paris, by bringing home the possibility of France finding herself at loggerheads with the opinion of the whole world. In recent weeks French Press comment has already shown a tendency to take a less narrowly nationalistic view, and to realise that Great Britain may, after all, be voicing an opinion inspired by something more than the self-interest of one of the parties financially concerned. At the same time, M. Poincaré went out of his way in his last Sunday speech to dissipate any idea that may be prevalent that France will consider anything less than unconditional surrender. It was, indeed, rumoured in Germany, though incorrectly, that this is his reaction to an effort made by the Belgian and British Ambassadors in Paris to persuade the French Prime Minister to ease the path of Germany in taking the step, now inevitable, of abandoning passive resistance. It should not require any outside pressure to emphasise such an elementary rule of statesmanship. But whatever the cause, M. Poincaré has gone out of his way to emphasise that recent developments, and, in particular, the conversations and speeches arising from the offers of Herr Stresemann, do not mean that France is in any way weakening, or is ready to discuss a settlement with anybody, except on her own terms. The vital differences of attitude revealed by the recent French and English notes therefore remain—namely, that Great Britain believes the Ruhr occupation to be contrary to the Treaty of Versailles; that France, on her side, is not prepared to exchange the occupation of the Ruhr for any other form of guarantee of payment, but, on the contrary, will remain there until the last penny of reparations is paid; and, finally, that France is not prepared to agree now to any reassessment of Germany's debt which might reduce Germany's payments below France's minimum demand. When we learn that these differences have been resolved, it will be possible to attach some meaning to a communiqué such as that issued on Wednesday last.

But while these differences of policy remain, it is evident that the problem is entering upon a new phase. During the last two months and a half Germany has extracted and spent the last remaining drops that can be squeezed out of the depreciation of the currency. The decline from about one thousand to the pound which was the rate current when the Bankers' Committee was sitting in Paris in June of last year, to nearly ten thousand in the first few months following the Ruhr occupation, to one million in the early days of July, when it had become evident that nothing was coming of the Anglo-French discussion, and touched 1,750 millions at the beginning of this week, is entirely without precedent in history. In Switzerland and New York the mark has ceased to be quoted, and in Germany itself the mark is at last to be abandoned as a standard of value, and to be reduced to the indignity of a form of small change. Thus ends the history of a shortlived currency which is no older than the United German Empire itself; for it was only in 1873 that the "thalers" of the various States of Germany were withdrawn and replaced by the new imperial gold mark. The final collapse of the mark has made it impossible to adjust wages and prices, and has been accompanied by a breakdown of industry with rapidly increasing unemployment, by disappearing imports and exports, by the withholding of food supplies from the town population, and in many areas by strikes accompanied with riots and demands for payment in gold. In its last stages the débâcle has been so rapid that even if the public had been willing to use the mark it has proved quite impossible to create and put into circulation sufficient monetary tokens to carry even the reduced trade of the country. On July 1st of this year three thousand marks were the equivalent of a penny, the note of one thousand marks being the lowest denomination that was of any practical service, and at that date one hundred thousand marks was the highest note in circulation. On August 1st 25,000 marks, on September 7th one million marks, and on September 18th seven million marks were the equivalent

of a penny. The notes issued in August are therefore useless to-day unless they are handled in large and cumbersome parcels. Therefore had it been able to cope with the situation the Government would have had to replace the whole circulating medium of the country three or four times on a new denominational basis during the last eight weeks.

Force of circumstances has thus driven the Government to take steps to provide some sort of medium of exchange which will enable business to be carried on. To issue currency notes under the old conditions, but with a new name, would not be the slightest use, and the Government is facing the inevitable when it recognises that it can no longer meet the expenses of Government, still less the added burden of supporting, at the expense of the State, the greater part of the population of the Ruhr by an unlimited use of the printing press. Taxation has failed, the printing press has now failed, forced loans have failed, the Government of Germany knows that it can no longer keep up the unequal fight, and the population of the Ruhr are being slowly but quite definitely led to realise that monetary support from Berlin is about to cease. Whether the Ruhr will be left to make its own terms with France, or whether the Chancellor will succeed in persuading Germany to surrender without breaking herself into pieces, the next few weeks will show.

But for the moment the Government is attempting to keep business from utter collapse by its emergency currency measures. Briefly, these are as follows:—(1) The Reichsbank is to become independent of the Government and resume the issue of gold notes as soon as circumstances permit. In order to maintain its position of independence the Government will abandon its practice of borrowing from the Reichsbank on Treasury bills. Apparently, however, this new note issue of the Reichsbank has not been fully planned, and is not expected to come into use until the financial crisis is over. (2) A new bank of issue is to be created, and to issue as an emergency measure a new note against a compulsory levy on agriculture, industry, trade, and banking. (3) The Government will no longer have the means of meeting its expenses except in so far as it can levy upon the property of its nationals by capital levy, forced loan, or taxation, and it is, therefore, to proceed with the utmost expedition to balance its budget by more regular means. Taxation is to be paid in the new currency, and the import of luxuries is to be prevented by heavy duties.

In theory these proposals are sound, and if carried out would be an earnest of what the Allies have so often demanded, namely, that Germany should give tangible proof of her determination to put her financial house in order. In effect, the Government would be meeting its immediate deficit by a levy upon capital, and the currency would be limited by the extent to which this levy was raised. This would be a practical limitation upon the note issue which would prevent inflation, and would compel the Government to cover its expenses by a charge upon its citizens. But, from the practical point of view, it is by no means so obvious whether the scheme is workable, and doubts about it are expressed on a later page by our Berlin correspondent. The need of Germany for an immediate ample medium of exchange is urgent. She wants a currency that will be reasonably stable, but she must have currency, for the growing use of foreign cheques, or of other substitutes, is quite inadequate to the situation. It is very doubtful whether her need can be satisfied, if the currency is limited to the amount which the taxation machinery of Germany is able to assess and collect in the next two or three weeks. In any case, there will be difficulties in suddenly changing from a system in which practically nothing of the tax-payers' income has been taken by the Government to one in which the whole budget is covered by taxation. We do not wish, however, to decry these new efforts to cope with a desperate crisis. The new bank will almost certainly have to issue uncovered notes, but if the scheme does nothing more than substitute a new note with a somewhat less headlong depreciation, it will have been a great help in postponing a complete economic and political collapse. It cannot alter the fundamental fact that Government can only continue in Germany if a settlement is reached, and reached quickly.

THE REVOLUTION IN SPAIN.

It is too early yet to judge what will be the effect of the Marquis de Estella's *Pronunciamiento* upon Spain herself, but it is to be feared that it will, in any case, prove a further blow to the stability of Europe, because it will lower by several points more the prestige of the parliamentary system of government. It is true that this would be an illogical outcome of what has happened; for almost everyone, inside Spain as well as outside it, would admit that the *régime* just overthrown was a misapplication of parliamentarism, and the misuse of a good thing ought not to discredit the thing itself. Parliamentary government has been slowly and painfully evolved by costly experience of the disadvantages of other systems, and the world is not so rich in political invention that it can lightly discard so well-tryed a method. Indeed, during the century that preceded the war, the parliamentary system flourished and extended its domain in spite of numerous misapplications of it, and reactions against such misapplications, in countries where it had been artificially planted and had not grown out of the soil. But the storm of the war has loosened all its roots to such an alarming extent that even lesser shocks have become a danger. From the point of view of Europe's political future, the military revolution in Spain follows unpleasantly close upon the Fascist revolution in Italy.

General de Estella's triumph is happily distinguished from Signor Mussolini's by having been achieved without bloodshed (though the members of the late Government are to be impeached, a measure which has sinister possibilities, illustrated by the fate of a recent Government in Greece). On the other hand, the Spanish revolutionaries share many of the Fascist's good intentions. Corruption and inefficiency are to be attacked all along the line. The "rotation system," by which parties undifferentiated by principles succeeded one another in office through a hardly disguised collusion between their professional organisers, is to be brought to an end; the pay of Senators and Deputies is to be abolished, and civil servants are to have—and to keep—longer hours. The author of this programme, the Marquis de Estella, has an honourable personal record, which is a certain guarantee that his aims are sincere. But are they realisable? Within a few weeks of the removal of the "old gang" the Spanish electorate is to return a phalanx of disinterested and patriotic *novi homines* to the Cortes. But is it likely that an electorate educated in the old school will make its first essay in free politics so wisely? And will politics really be free, if the corrupt influence of professional politicians is replaced by military government? And, lastly, are these saviours of society to be found among the nation? This is surely not the new, but the old psychology, with its myth of the innate goodness of human nature, if only you can strip its environment away. Certainly the Spanish revolutionaries, whatever their political theories may be, show further affinities with the Fascist in their readiness to destroy before they have proved their capacity for construction. All the old Ministries have been abolished except those of War and Foreign Affairs; the supreme executive authority is in the hands of a general who will not allow himself to be called either "Premier" or "Dictator"; 50 civilian governors of provinces have been dismissed at one blow, and their place has been taken by committees of generals, who represent nothing except the arms of their service. It is hardly necessary to add that the "constitutional guarantees" securing the rights and liberties of individuals are in suspension. This nakedly military character of the Spanish revolution is a point of difference from the Italian, and not one that is to Spain's advantage. Violent in ideal and method though Fascism may be, it is still a civilian movement, which may claim to represent certain important elements of the population in the most progressive parts of Italy. Had there been a parallel movement in Spain, its centre of gravity would have been in the industrial region of Catalonia and its headquarters in Barcelona, as Signor Mussolini's are in Milan. Now, it is true that Barcelona was the scene of the Marquis de Estella's *Pronunciamiento*, but this was the act of the

professional army of Spain, and not of the Catalan bourgeoisie, and the revolution among the garrison was actually precipitated by a demonstration among the Catalan civil population in favour of secession from Spain.

This is a measure of the difference between the politics of the two countries which we have been comparing. The Italian *risorgimento* of last century was a successful attempt of the more progressive parts of Italy to dominate and assimilate the remainder, and Fascism might be described (at a stretch) as a continuation of the process in a new form. But Catalonia, instead of developing a similar ambition in regard to the rest of Spain, has always attempted to extricate herself from what she rather superciliously regards as a country on a level of civilisation inferior to hers. The Marquis de Estella will have to grapple with this movement, and it is a hopeful symptom that he has already twice announced his intention of meeting it by the grant of regional autonomy. That is an admirable intention, but will he be able to put it into effect in face of the obstructive hostility of Spanish public opinion, and are his military colleagues, whom he has placed by his own side in the saddle, the men to back him in such an endeavour? The problem is urgent, for unless the new Government are able to reassure the Catalans by practical measures, its military complexion will lead them to fear the worst, and then, perhaps, to take advantage of the momentary weakness and confusion of the rest of the country in order to attempt their maximum programme of complete independence. For good or evil, the military revolution has brought the Catalan problem to a head.

But Catalan nationalism, though it was the immediate occasion of the *Pronunciamiento*, was not so profound a cause as the failure in Morocco. In fact, the Spanish revolution was chiefly stimulated—like the Italian, again—by a widespread popular dissatisfaction at the country's international position. If the Italian people accepted Fascism, it was largely because they felt that they had somehow been cheated by their allies of their fair share in the spoils of the European war, and because they were humiliated by their discomfiture in 1920 at the hands of the Albanians. Similarly, the acquiescence of Spain in the military revolution may largely be explained by a feeling that other Powers have made her their cat's-paw in Morocco.

The Spanish zone in Morocco lies immediately opposite the south-eastern coast of the peninsula, from which it differs little in soil and climate, while it is united with it rather than separated from it by the narrow intervening strip of inland sea. Four centuries ago, when the Spaniards extinguished the last remains of Moorish independence in Europe, they proceeded without a pause to occupy points of vantage on the neighbouring shores of Africa. But at this point in her southward expansion Spain suddenly diverted her energies to the other side of the Atlantic. The vast Spanish Empire in the New World was gained and lost while the *status quo* in Morocco remained or was altered, if anything, to Spain's disadvantage. Nor did Spain, in spite of her

geographical position, take a lead in the early stages of that movement by which the energies of Europe have again been directed into the Mediterranean during the past century. Morocco had become a diplomatic arena of all the Great Powers before Spain was drawn into the immediate hinterland of her ancient possessions along the north coast, and this was not on her own initiative, but because a mistaken pride prevented her from refusing the offers of the group of Powers to whom the spoils of Morocco had fallen.

The sequel has abundantly proved that Spain's earlier instinct of abstention was sound. To a country that is not a Great Power, and has its own internal economy to set in order, colonial commitments can be nothing but a burden. The last phase of Spanish dominion in Cuba and the Philippines closed by the disastrous war with the United States, ought to have warned Spain against embarking on another adventure, especially when she was invited into it by more powerful neighbours. Great Powers do not abandon to small Powers, much less press upon them, anything that might be of value to themselves. Italy has had unfortunate experiences in her attempts to pick up such "remainders" of imperialism as Abyssinia, Tripoli and Albania, and Spain has not fared better in the zone assigned to her in Morocco. Her acceptance of this zone was decidedly in the interests of England and France when they settled their Moroccan policy in 1911, firstly because it was a comparatively barren strip inhabited by a particularly recalcitrant population, and secondly because it is of such strategic importance that neither Power could afford to see it pass under the control of the other. In accepting this gift-horse, Spain performed a signal service to the Entente, but by omitting to look it more closely in the mouth she involved herself in losses of lives, money and prestige which have grown steadily heavier during the last twelve years. At this moment Raisuli, the leader of the native insurgents in the eastern part of the zone, has established his headquarters only a mile or two inland from Alhucemas, one of the ancient Spanish possessions on the coast.

The new military Government of Spain has taken the power into its hands in order to find a way out of this intolerable situation, and only two alternatives are apparent. Either they must come to terms with the *de facto* native masters of the hinterland and content themselves with a nominal suzerainty, or they must formally renounce their zone—a sacrifice which they could not venture to propose to their countrymen without at the same time demanding compensations from the Great Powers concerned in the settlement of Morocco. The former alternative is the less embarrassing for all parties. As is shown by Raisuli's overtures to the Marquis de Estella, the Riffi chiefs are intelligent enough to realise that the withdrawal of Spain's ineffective pretensions would only open the way to an effective intervention by France; while neither France nor Great Britain can desire their strained relations to be strained still further by the raising of new issues at Tangier and Gibraltar.

SOME THOUGHTS ON PROHIBITION.

A LAW is not necessarily a good or wise law because it aims at doing something which is desirable. If it is impossible of strict administration, it will not only fail in its object, but, what is far more serious, will bring both law, legislature and executive into open contempt. There is an old story of a youthful British Prince who said: "When I am king, I shall make a law prohibiting all sin." No one could be visionary enough not to laugh at this boyish, unsophisticated idea. Yet some highly-educated countries have allowed their elected representatives to pass laws almost as impossible of fulfilment as the mental project of the infant prince. The majority of Americans whom one meets appear almost ready to include in this category the United States Prohibition Law. On principle we hold no particular brief for anti-prohibitionists. Were it possible we should be delighted, no one more, to see excessive drinking stopped by law, just as we should rejoice to see "all sin" similarly rooted out. Nor are we blind to the good results that in some directions Prohibition has brought in countries where it has been introduced. We are prepared, for instance, to believe the industrialists when they speak of its good effect upon production. Nor, on the other hand, do we wish to criticise American policy in a matter which is mainly domestic. Whether the United States is to be "dry" or "wet" is a matter for the people of the United States. But since it is possible that we may be threatened with Prohibition here, it is highly necessary that we should learn as much as we can in advance of what Prohibition means in practice; and the one great object lesson for us to study is the experience which our friends across the Atlantic are gaining from their attempt to kill the drink evil. We do not think we shall be saying more than the unbiased American believes when we suggest the following main conclusions regarding the Prohibition experience of the United States. It has admittedly failed to stop drinking. It has decreased the regard in which the American constitution and American law are held abroad. It has led within the United States to open and widespread contempt for and breach of law, which some critics have even described as the "beginning of Bolshevism." It has proved exceedingly undemocratic, since in effect it denies to the poor anything but the most horribly debased and injurious forms of alcohol, but leaves more normal alcoholic beverages obtainable by those whose purses are better filled. It has led to a very serious outbreak of corruption, smuggling, and profiteering. Finally, its application to foreign ships entering American harbours has aroused diplomatic friction, and compelled the derisive notice of other countries to the position into which the experiment has brought the United States. Even after making the most generous allowance for the advantages which may have accrued, this is a very formidable list of disadvantages, which those who would like to impose Prohibition in the United Kingdom would do well to study.

A traveller recently returned reports the apology of a friend, with whom he was staying not a thousand miles from Boston, for the lack of alcoholic refreshment. "I usually have plenty," said his host, "but I always get it from the Prohibition officer of this district, and he is unable to do anything for me just now because he is suffering from *delirium tremens*." Such stories may be taken, if you like, with a pinch of salt. You may allow, if you like, for some concession to the picturesque in such accounts of smuggling and illicit sales as those which appeared recently in the *Morning Post*. But the fact cannot be denied that alcohol—including much poisonous and debased stuff—continues to be consumed; and since the law prohibits its production and consumption (except in special cases), then in so far as it is still being consumed the law is being flouted and circumvented by means of bribery, corruption, and underground plotting. The following admission in a leading article in the *New York Journal of Commerce* is perhaps worth quoting:—"There is no doubt that we as a nation have become increasingly callous both to the breaking of the law and to the graft

and corruption of public officials that is the necessary concomitant of widespread law-breaking." Some figures of present consumption of alcohol in the United States have recently been given in a despatch from Sir Auckland Geddes, the British Ambassador at Washington, "on the subject of the effects of Prohibition in the United States."* Sir Auckland gives statistics as regards consumption, arrests for drunkenness, deaths from alcoholism, &c., as supplied to him by the Anti-Saloon League, the Association against the Prohibition amendment, and by the officials of the Federal Prohibition Unit of the United States Treasury. Their figures naturally differ widely. Here are some examples, the percentage figures in each case being worked on a basis of figures recorded before the Prohibition law came into force:—

	Estimate of Prohibitionists.	Estimate of Anti-Prohibitionists.	Estimate of State Officials.
Amount of intoxicating liquor now consumed	20	At least 66	20
Arrests for drunkenness	50	At least 100	50
Deaths from alcoholism	20	250	20
Comparative criminal statistics	45	125	100

Most of these estimates are so obviously biased as to be of little value. Even the official estimates may in some cases be coloured by the desire to cloak the grotesqueness of the failure of the working of the law. But it is at least worthy of note that the official estimate admits that crime has not declined, and puts arrests for drunkenness still at 50 per cent. of the figure recorded when drink was lawful. Sir Auckland's despatch is brief and colourless, especially in its reference to economic effects. Perhaps he was right simply to give opposing American estimates and not to project himself into controversy.

The working of an American law in America is a purely American affair, and the foreign observer's function is not to scoff and advise, but to note and learn. But when the administration of that law begins to project itself into the international sphere, through the imposition of restrictions on the ships of other countries, then the law becomes the affair of other countries as well. This week has come the news that the American twelve-mile limit proposal, though rejected by the British Government, is to be raised by them for discussion at the Imperial Conference. We hold that their rejection of the proposal was sound; but, on the other hand, we consider that our Government should display practical sympathy with the Government of the United States in their main aim of strangling the smuggling trade, some at least of which is financed and organised over here, and we think that it might be within the province of the Public Prosecutor to turn his attention to the appeals, which have been sent out broadcast in this country, to induce the public to share in a venture which proposes to make large profits out of whisky-running. Drastic action in such a case as this, if such action is possible, might go far to smooth over the diplomatic differences to which the question of liquor on British ships has given rise.

It is the application of the law to foreign ships which has concentrated world attention upon the great muddle into which Prohibition has landed our American friends. From that muddle, we do not doubt, all level-headed Americans would welcome any practical means of escape. But escape is not easy, for Prohibition now constitutes part of the Constitution of the United States. A New York contemporary, pleading for a cessation of "tinkering with the Constitution," quotes the words of a wise man 100 years ago on the subject of amendments to the Constitution. "The grievance must first be clearly specified and fully proved. It must be vital, or, rather, deadly, in its effect; its magnitude must be such as will justify prudent and reasonable men in taking the always delicate and often dangerous step of making innovations in their fundamental law; and the remedy must be reasonable, and adequate to the end in view. The last clause, which we have italicised, will make an appeal to-day to the countless Americans who are ruefully contemplating the results of the "eighteenth amendment to the Constitution of the United States."

CANADA'S INDUSTRIAL GROWTH.

(BY OUR OTTAWA CORRESPONDENT.)

THE common idea that Canada is a country where agriculture and lumbering, varied with a little fishing and mining, monopolise the energies of practically the whole population now requires some correction. In the 17th and 18th centuries, as in the pioneer stages of all new communities, the early settlers carried on manufactures within the household for the needs of the household. Gradually as the scattered settlements took the form of an organised society manufactures began to be carried on in specialised workshops for the needs of the immediate neighbourhood without any thought of an export market. The first manufacturing processes in Canada were the construction of a mill equipped with a water-wheel and the grinding of grain into flour in the autumn of the same year. The earlier manufactures were inevitably of a crude and primitive type connected with the satisfaction of the primary wants of food, clothing, and shelter, or with the preparation of articles which were too bulky to bear the heavy transportation charges then prevailing. The type of raw materials available was also a determining factor. In the days of wooden ships the abundance of good timber brought to life a very prosperous ship-building industry in the Maritime Provinces and at Quebec. During the French régime the capture of the convoy bearing the annual supply of cloth by a British fleet led to the introduction of sheep and the domestic manufacture of homespun woollens, which came to be carried on very extensively. The census records show that in 1827 there were in Lower Canada, now Quebec, 13,243 spinning wheels, and in that year 1,153,673 French ells of home-made woollen cloth, 808,240 ells of flannel, and 1,058,696 ells of linen were produced. In 1842 Upper Canada produced 433,527 yards of cloth, 166,881 yards of linen, and 727,286 yards of flannel, all home-made. The infection of the Industrial Revolution, however, did not begin to show itself in Canada on any substantial scale till the middle of last century, when some ambitious *entrepreneurs*, chiefly natives of Scotland, who had carried with them to their new home a knowledge of the great economies in production made possible by the division of labour and the use of mechanical power, began to transplant the factory system of production to Canada. By 1858 the influence of the manufacturing element had become strong enough to induce the Government of Canada, then consisting only of the two central provinces, to adopt a policy of "incidental protection" for the growing industries, and in the latter year Sir Alexander Gait penned his famous despatch to the Colonial Secretary, denying the right of the British Cabinet to disallow the tariff legislation of 1858-59 in deference to the protests of British manufacturers. A full-blown Protectionist policy was not adopted till 1879, after Confederation had generated the beginnings of a real national spirit, and as a natural concomitant a demand for greater national self-sufficiency which was skilfully used by the manufacturers and their political allies to yield support for the "National Policy" programme in the election of 1878, but from 1858 onwards there has always been a substantial element of Protection in the Canadian tariff. The claim that the Protectionist tariff is entitled to the main credit for the growth of Canadian industry has been strenuously disputed, and is certainly an arguable matter. It certainly gave a great impulse to the establishment of factories in the five-year period 1879-84, but thereafter ensued a period of stagnation, the blame for which Laurier, Cartwright, and other Liberal leaders laid at the door of Protection, and it was not until the prairie provinces were provided with physical equipment and settled by a vigorous immigration policy inaugurated in 1896 that Canadian industry got into its real stride. There was a census of manufacturing production taken as far back as 1871, but

the earlier censuses were incomplete in many respects, and purposes of comparison can best be served by a study of the following tables:—

MANUFACTURES OF CANADA COMPARED FOR 1900-1910, 1915, 1917, 1920.

These tables show that a period of very rapid industrial expansion during the decade when the Western boom was at its height was followed by a stage of comparative stagnation. Then the demands of the war, especially the emergency production of munitions, and the advance of prices combined to produce a very striking increase both in the volume and variety of manufactures. To make this increase possible, there was the fortunate coincidence of the development of hydro-electric power on a large scale in the coal-less industrialised districts of Ontario and Quebec. Only preliminary figures for 1921 are available, and it is known that they forecast a decided retrogression from the peak reached in 1920.

But agriculture, the basic industry of Canada, showed evidence of a much more serious set-back, and there is no reason to fear that once the difficult period of readjustment is surmounted Canadian industry will not resume its career of expansion. Climatic conditions in Canada restrict the range of natural products, and force many industries to depend for their raw material upon foreign supplies. Raw cotton, for instance, is imported from the Southern States, rubber from the Malay Peninsula, sugar from Cuba and the British West Indies, and wool from Australia and New Zealand. But it is nevertheless true that the most important industrial activities of the Dominion are devoted to the exploitation of domestic raw materials and their transmutation into manufactured commodities. Naturally the manufacture of food products is an industry of great importance in a country like Canada, and the milling of flour has been, perhaps, the most consistently successful single industry. The manufacture of agricultural machinery also affords employment to thousands of people. In the pre-war days Canadian implement firms carried on a very large export trade with Russia and other European countries, and they have been very hard hit by its almost complete cessation. But, apart from the great mining development in Northern Ontario, which scarcely comes under the head of manufacturing industry, the great buttresses of the economic life of Canada during the trying period of post-war adjustment have been the forestry industries. They include not only the preparation of timber for construction purposes, but the manufacture of wood pulp and paper, of matches, of doors and windows, and of cheaper grades of furniture. To many lines of manufacture in Canada a decided stimulus was given by Mr Austen Chamberlain's establishment of certain preferences for Dominion and colonial manufactures. But it is doubtful whether, if their author had realised their full consequences, he would have been so zealous to perform this act of filial piety. The new system at once made it advantageous to great American corporations to secure a foothold in Canada which would enable them to take advantage of the preferential rates offered to Canadian goods, and while there has been built up by American firms who have followed this policy a very satisfactory

export trade in motors and other articles from their Canadian branch factories, the net result has been an enormous strengthening of the grip which American capital and influence already possessed upon the economic life of Canada.

The iron and steel industry of Canada naturally assumed great importance in the war years. Its beginnings date far back, for as long ago as 1737 furnaces were set up in the St Maurice Valley in Quebec for the smelting of local ores, and were in fairly constant operation till 1883. But it was the task of providing physical equipment in the shape of railways, bridges, elevators, &c., for the newly opened regions of the West that gave a great impetus to the iron and steel industries at the beginning of this century. There was a further artificial expansion during the war years, and now that railway building has come to a halt and few fresh public works are being undertaken, there seems to be a prospect of lean years ahead for the iron and steel plants of Canada. It is probable that their productive capacity to-day exceeds the country's immediate needs, and very careful management of them will be required.

To-day Canada finds herself in possession of a very extensive and efficient industrial equipment for the successful production of a wide variety of manufactured goods. It will be conceded, even by staunch Protectionists, that if certain highly artificial industries had never been fostered by bounties and tariffs there would have been a net profit to the country at large, but compared with the totality the proportion of industries which fall within this category is comparatively small. Only one thing is needed to enable the industries of Canada, which are now facing a period of dullness and stagnation, to recover their old standards of prosperity, and that is the provision of a larger and richer market. The comparative smallness of the Dominion's population, which has shown a very disappointing rate of increase in recent years, is a very serious handicap to the development of many staple manufactures on the large scale which assures the greatest profits and efficiency, and it is a fatal barrier to specialisation. But the factor responsible for the actual set-back which has come since 1920 to the Dominion's industrial life is the disconcerting diminution of the purchasing power of the farmers, who constitute almost one-half of the whole population. This diminution in turn has its origin in the economic chaos to which Europe has been reduced, and until this evil is cured there can be no real prosperity either for Canadian agriculture or industry.

THE TOBACCO TRADE.

THE tobacco industry in this country is showing remarkable virility, in spite of excessive general unemployment, the heaviest taxation in Europe, and consequent decreased purchasing power. A tenacious habit is smoking. It earns princely dividends for the companies, and is a sheet-anchor for the Chancellor of the Exchequer. No adverse circumstances seem materially to weaken its hold. While in most countries, such as America and France, the consumption figures are on the up grade, those for the United Kingdom show a reduction—86,899,679 lbs for the first eight months of this year, compared with 89,188,491 lbs for the corresponding period of last year. There is little likelihood of a lowering of the present tax of 8s 2d per lb on the raw material while vigour is still apparent in consumption.

It should be noted in regard to the export trade that more manufactured goods produced in this country are being exported, the figure for the first eight months of the year being 11,582,737 lbs, against 9,456,453 lbs in the corresponding eight months of last year.

The distribution of the trade is such that somewhat over 80 per cent. of production for the home market is in the hands of the Imperial Tobacco Company, and the lion's share of the export trade is done by the British-American Tobacco Company, whose goods are debarred from sale in this country. Outside these two great organisations an important fringe of independent com-

panies pay substantial dividends on their home trade, and in some cases have a fair share of export. A glance at the results of recent trading shows that a luxury industry can boast prosperity enviable by shareholders who finance some other trades.

The Imperial Tobacco Company's profits in the last recorded financial year were £7,199,076, compared with £6,927,641 the year before. The profits included a large sum derived from dividends on investments in companies operating abroad, and were arrived at after providing for all charges, including income-tax and corporation profits tax, and bonus to customers. The investments in associated companies stood at £6,017,612. The decision on April 24th to capitalise a portion of the reserve fund, and to make a free distribution to the holders of ordinary shares, so that each holder should receive one new share in respect of every three shares held, came as a windfall.

The British-American Tobacco Company made net profits, after deducting all charges and expenses for management, &c., and providing for income-tax and corporation profits tax, of £4,400,783. A dividend of 25 per cent. for the year on the ordinary shares was paid. A recent report from the U.S.A. foreshadows the possibility of a merger between the British-American Tobacco Company and the Tobacco Products Corporation of the U.S.A., which, if it matures, will be a dominating factor in the tobacco trade of the world. It is stated that Mr James B. Duke, who recently resigned the chairmanship of the British-American Tobacco Company, will be a prominent figure in the amalgamation.

Messrs. Carreras, Limited, showed £161,835 to the credit of profit and loss account; they paid 15 per cent., free of income-tax, for the year ended October, 1922, and carried forward £62,632. The company has a reserve fund of £205,000. The Ardath Tobacco Company, Limited, had a disposable net profit of £150,919; a dividend at the rate of £25 per cent. per annum for the year together with a bonus, free of income-tax, of 5s per share, was paid on the ordinary shares, and the directors reported a further expansion of the company's business throughout the world during the year. A substantial part of the profit is earned from trading abroad. The reserve fund is £180,000. Messrs Cope Brothers and Co. had a prosperous year, making a net profit of £102,051, and increased their reserve fund to £100,000. A dividend of 12½ per cent. per annum was paid, and £56,197 was carried forward. Messrs B. Morris and Sons, Limited, made a net profit of £25,230, a decrease of £6,556 compared with the previous year, an eminently satisfactory result in view of the unemployment and decreased spending power of the nation. The company has a reserve fund of £50,000. Messrs R. and J. Hill, Limited, showed a credit balance on trading account of £33,013, against £23,272 the previous year, an increase of £9,741. These results accrued from increased turnover, notwithstanding that the total consumption of tobacco in the United Kingdom during 1922 was less by 6,189,000 lbs in comparison with the previous year. Messrs Abdulla and Co., Limited, made a greater actual trading profit last year than in the preceding annual trading period. The balance disposable was £56,360. It should be said that prices of raw materials still rule high, while the wages in the factories under the Trade Board have not been reduced, a proposed reduction having been defeated.

To take a cigar manufacturing and importing firm, we find that Messrs John Hunter, Morris, and Elkan, Limited, made an increase of £3,120 on gross profits owing to increased volume of business, and the statement of the chairman that there had undoubtedly been an improved demand for cigars is particularly welcome. It may be added that at the Tobacco Exhibition held at Olympia in May last the best show of Havana cigars ever made in this country resulted in excellent business. Perhaps this was because the Havana cigars now available are extremely good, and are in some cases at pre-war prices. In the first seven months of this year 340,552 lbs of Havana cigars came into this country, against 248,916 lbs in the corresponding period of last year.

The retail trade has had much difficulty to contend with. The London chain of shops (and some country shops) owned by Albert Baker and Co. (1898), Limited, were able

to earn a profit of £34,863 to carry to the balance-sheet; they paid 12½ per cent. for the year, and transferred £10,000 to reserve, bringing that fund to £74,000. This company is a brilliant example of the application of new brains to a potentially fine proposition. However, the chairman, at the annual meeting in June, referred to unfair competition in the City. He mentioned that in many of the large institutions it has become the practice to run a tobacco department which supplies the staffs at wholesale prices, such prices being lower than the retail prices at which the ordinary retailer is allowed to sell in the usual way of trade. He appealed to such institutions to "play the game," and to adopt the motto of "Live and let live." Messrs Baker are not the only retailers to feel the pinch of this way of getting tobacco supplies by members of the staffs of banks, insurance companies, and other large institutions. The National Union of Retail Tobacconists have written to some of the firms concerned, and have received various replies. The practice has not been stopped, however. A new association called "The Associated Retail Tobacconists" was launched in August by a number of City tobacconists with the express object of opposing the underselling of tobacconists' goods. This underselling, it is said, affects some retailers by a percentage of from 30 per cent. to even 50 per cent. Retailers in most of the large towns are also suffering. At their meetings they protest, as shopkeepers who pay rates and taxes in respect of their shops, against the underselling in the large institutions. The latter sellers do not always comply with the statutory obligation of having the name and the words "licensed to sell tobacco" in letters one inch high over the main entrance of the place of business. Energetic steps are to be taken by tobacconists in their associated capacity to bring about more legitimate conditions.

A sequel to the constitution of the Irish Free State was the setting up of Customs barriers on land and at the ports between the Irish Free State on the one hand and Northern Ireland, plus the rest of the world, on the other. The Irish Free State has provisionally adopted the same tariff as that of Great Britain. This means that manufactured tobacco, cigarettes, and cigars entering the Irish Free State from Northern Ireland or from this country come under the higher rates of duty prescribed for the manufactured article. As a result, brands manufactured in Great Britain and costing here 1s were priced at 1s 3d in the Irish Free State after the tariff came into force. The Imperial Tobacco Company decided to build factories behind the Customs barrier in order to cope with the anomaly, and the W. D. and H. O. Wills, Players and Clarke's branches of the Imperial Tobacco Company are building factories in the Irish Free State, the work on which is well advanced. Southern Irish firms having an established trade in this country are also affected, and one of them at once decided to start an English factory. The factory is in Liverpool, and has commenced working.

The outlook for the tobacco trade is good, compared with some other industries. If the most stable trades were considered to be those which purvey food, these would be closely followed by the tobacco industry. Tobacco is purchased by rich and poor alike with proved constancy, even in hard times. The retail end of the trade is, however, heavily handicapped. Unless the retailer can be protected in some way from the piratical enterprise of private licensees, their position, already severely compromised, will become still more difficult.

THE PROBLEM OF LEWIS.

(BY A CORRESPONDENT.)

IT is in no wise to Lord Leverhulme's discredit that he has failed to solve the problem of Lewis, which successive proprietors and companies, boards, commissions, and committees have tackled in vain. The problem in essence is that of an over-large population on an infertile island which cannot be self-supporting according to modern standards. The crofters and fishermen of Lewis are a fine race in physique and in character, and a valuable national asset. In the war thousands of them did good service in the Navy and in the Highland regiments. But,

judged from a purely economic and administrative standpoint, their position has long been extremely difficult. They are all very poor, but they will not, as a rule, emigrate to better themselves. They marry young and have large and healthy families, but the arable land available is limited in area and less than half as productive as the mainland farms. Public services have thus to be provided for a large population, most of whom can pay little or nothing in the way of rates and taxes. The burden of local taxation thus falls with crushing force on the shoulders of the landowners and the few middle-class inhabitants, and the State has to assist with special subventions. Theorists who have never seen the Hebrides suggest from time to time that Lewis wants capital and new industries. Money may be spent there as well as elsewhere, but it is abundantly clear from past history, as well as from Lord Leverhulme's experience, that Lewis does not want to be industrialised. The islander's temperament revolts against regular daily work as distinct from fine-weather work on the croft or the intermittent task of inshore fishing.

More than three centuries have passed since King James VI. of Scotland, angered by the unruliness of the McLeods, gave Lewis to a company of gentlemen adventurers from Fife in 1598. The Fife men lost their money, and some of them their lives, in attempting to colonise the island, and soon disposed of their concession to Mackenzie of Kintail. Dutch fishermen were imported to teach the natives how to fish, but did not stay long. Successive fishery companies were founded in 1633, in 1670, in 1750, in 1786, to promote the fishing industry in the Hebrides and elsewhere; but none of them was successful, partly because the salt duties hampered the trade. Bounties on a lavish scale were long paid to the herring fleets before the Free-trade era, but the Lewis fishermen were not really benefited, and a rapid increase in the island population, owing to the temporary success of the kelp industry, made the land question more difficult. In 1844 a wealthy and patriotic Highlander, Sir James Matheson, bought Lewis from the Mackenzies, and began to develop the neglected estate. He made roads, built bridges and quays, provided a steamship service, drained much of the arable land, and supplied bulls to improve the island breed of cattle. He experimented also in the production of paraffin from peat. It is known that he spent about half a million pounds on Lewis, and that he never drew a penny of net revenue from the estate. But the only apparent results of his enterprise were the increase of the population by 40 per cent. in less than 40 years, and the outbreak, soon after his death in 1878, of the agrarian troubles, which led to the appointment of the Crofters Commission in 1883. Sir James's heirs struggled on with their costly white elephant, until they sold Lewis to Lord Leverhulme a few years ago.

Lewis has to-day about 28,000 inhabitants, or about three times as many as it might support in tolerable comfort. The last Census showed a slight decline, but this may have been due to the war losses, which were exceptionally heavy. Stornoway, the fishing port with some 4,000 people, is the only town, and the bulk of the population is scattered, so that the cost of education, for example, and other services is proportionately very high. The characteristic feature of the Lewis land system is not the smallness of the crofts, rented on the average at less than £2 a year, but the number of people who live on the crofts or on the common grazings, and yet are not recognised as crofters. These cottars and squatters often have better houses than the crofters, but they pay no rent, and are not rated. At a Government inquiry in 1906 it was found that there was at least one cottar to every two crofts, and in 1908 the cottars and squatters numbered about a fourth of the whole population. They have votes, they receive pensions, they enjoy all the benefits of local government, but they contribute nothing whatever to the State, the parish, or the landowner. The crofters in their turn can do little. In 1906 a careful estimate placed their average income from all sources at 10s a week, and the actual sum paid in rates by the average crofter varied from 2s 3d in Stornoway to 6s 2d in Uig. Such assessments, of course, would not support the elaborate fabric of administration. The proprietor, at that time Major

Duncan Matheson, had to pay as his share of the parish rates and as the occupier's share due from his sporting tenants no less than 56 per cent. of his net rental in three parishes and 23 per cent. in the remaining parish. Out of his total rental of £9,987 he paid in parish, burgh, and county rates no less than £6,481. When we remember how much rates as well as taxes have risen since 1906, we may begin to understand what it means to be the owner of a Hebridean island, and why even a Lancashire multi-millionaire may be anxious to give the island away rather than continue to bear the loss on it.

Lord Leverhulme's idea was not merely to assist the fishing industry by improving communications, but also to set up canning factories, so that wholesome fish might be supplied cheaply to the industrial centres in England. It was a good idea, but its author had not reckoned with the intense conservatism of the Lewis man. Repeated attempts to set up new industries in Lewis have failed. In the later eighteenth century the Mackenzies tried to encourage the cultivation of flax and the weaving of linen. In their autocratic way they ordered the crofters to send their daughters to Stornoway to be taught how to prepare flax. But the islanders, bitterly resenting these innovations, purposely supplied bad lint or bad yarn, and the nascent linen industry was soon abandoned. Before the war the Scottish Home Industries Association made a valiant effort to revive the craft of weaving, and for a time, with Government help through the Congested Districts Board, the manufacture of tweeds seemed to thrive; but it went the way of other Lewis industries by 1907. The remoteness of the Long Island and the isolation of the people, nine-tenths of whom still speak Gaelic, present difficulties that are not to be overcome in a few years. It is contended by some authorities that the Hebrides might be administered much more cheaply and efficiently if they were separated from the mainland and placed under a special sub-department. But the local revenue is so small in relation to the local needs that the Treasury will always have to be prayed in aid, and no shifting of boundaries will alter the fact. The immediate question for the Lewis people is to know how, if they accept Lord Leverhulme's gift of the island, they are to meet the deficit of income less owner's rates, which he has paid out of his own pocket.

GILT-EDGED MARKET AND TRADE PROSPECTS.

(BY A STOCK EXCHANGE CORRESPONDENT.)

HOPES of pacification of Europe, rightly regarded as the first step towards restoration of normal conditions in trade throughout the world, are not so dead that its possibilities are ignored by investors and others who have large or small amounts of capital with which to deal. The question is asked every day in the Stock Exchange as to whether a great many stocks and shares are not standing at levels so high as to invite the probability of a fairly general decline, if and when trade shows indications of reviving, and, therefore, of requiring funds which are at present locked up in securities of all kinds, gilt-edged stocks more particularly. The matter is one not merely of national consequence. It has a much wider bearing, in that, during the past year or two, it is an undoubted fact that enormous sums of money have come to this country from abroad on behalf of firms as well as private investors. Their previous faith in the stability of British Government stocks and British financial institutions of all kinds has been fortified by observation of the manner in which this country has shouldered its war responsibilities, and, almost alone amongst the nations of the world, has taken practical steps for meeting debts contracted during the struggle. Various incidental causes have also contributed to the attraction of money to this country. The threatened Capital Levy in Switzerland, the demoralisation of foreign exchanges, the unsettled conditions prevalent even in such countries as Scandinavia, the spread of Bolshevism in the Far East, and, finally, the announcement that Great Britain will honour her war debt to the United States of America are all factors that have driven foreign capital into this country.

It seems a little anomalous that in the United States, where all the money is supposed to be at the present time, the yields obtainable from gilt-edged stocks are higher than those offered over here, though this may be due in part to the more active condition of industry in the States than in Great Britain. The Stock Exchange has arrived at a time when the return available from such representative Government stocks as Conversion Loan, Funding and Local Loans is less than 4½ per cent. on the money. Home Railway debenture stocks return barely 4½ per cent., and the preferences mostly pay under 5 per cent. Amongst Industrials, the yields on such shares as Lyons, Harrods, Courtaulds, Imperial Tobacco, and many other similar issues are certainly modest, in view of the ordinary trading risks which attach to commercial undertakings. Good preference shares are not easy to obtain on a basis of a full 6 per cent. yield, and in such instances as those where trading concerns are paying little or no dividend at all the prices of the shares stand in many cases at what seem to be fully valued figures. It is natural, therefore, that with the possibility, obscure though it may be at present, of a trade revival occurring, investors and financial houses should be exercised somewhat seriously in their minds as to whether the whole trend of Stock Exchange prices is close to its apex. Speculative shares apart, the question is asked whether it can be right to continue investment of capital at such comparatively high quotations as those now current. From the practical point of view, these considerations are weighing but little in the every-day working of the markets. People continue to invest the money for which they are unable to secure profitable employment in trade, and upon which they are willing, from force of circumstances, to accept such yields as those just indicated. There is no indication of a tendency to turn out stocks at to-day's prices, though, by so doing, purchasers could obtain a substantial increment upon the money originally employed. The readiness to do so may, and does, exist, but those who are most intrigued by the outlook ask, with something approaching despair, what they shall do with the money if they sell the stocks which they hold. To accept the deposit rate offered by the banks, in lieu of the dividends which investors are getting now, holds out no advantage. At the same time, the lurking doubt prevails as to whether it might not be well to start unloading stock in advance of a possibly general realisation of securities which might follow a revival of industry if peace becomes assured, and the unemployment statistics should show marked diminution.

The Stock Exchange justification for present prices is that, if there should be a settlement of international trouble, with its concomitant of trade expansion, there is not likely to be such a flood of selling as would demoralise the markets—for that is the fear—but that any movement would come so gradually as to cause no immediate disturbance of values. The blocks of stocks that for two or three years past have been absorbed by insurance companies, for instance, can be regarded as permanently placed, in the absence of some vast cataclysm that might shake the world. The lines of British Government securities held by commercial undertakings would scarcely be likely, so it is maintained, to come to market, except in such piecemeal fashion as would but slightly affect prices. At the outset any indication of an industrial recovery might lead the holders of such stocks to their bankers, in order to obtain loans upon the securities, rather than to the Stock Exchange for the sale of the stocks at a time when it was still uncertain whether the revival were genuine or transitory. The private investor who in the aggregate holds such substantial amounts of stocks and shares might require to sell these as he found the necessity for providing funds with which to finance his growing business, though here, also, experience demonstrates the practical certainty that it would take a long time before such a movement became so general as to require a simultaneous stream of capital, the withdrawal of which from stocks and shares could undermine the markets.

What may happen in regard to the capital employed in our own securities by foreigners it is frankly admitted that no one can tell. The position is one which touches capitalists, large and small alike, in every part of the country, and the questions which we have thus summarised

are raised wherever men congregate at the present time. From the manner in which prices are maintained, and the way in which capital continues to flow into the investment markets of the Stock Exchange, it is obvious that the danger of all-round realisations resulting from a trade recovery are not regarded with any degree of acute apprehension for the time being, although the mere fact of their being so commonly discussed testifies to the lively interest that is being taken in the subject.

Notes of the Week.

The League and Corfu.—It is too early yet, writes our League correspondent at Geneva, to judge of the final effects of the Italo-Greek conflict on the status of the League of Nations, but it may already be said that the solution arrived at revealed the League's ability, even in its present form, to focus world opinion in preventing the worst consequences of hasty nationalism. The storm raised at Geneva, and the firm attitude based on undoubted Treaty rights adopted by Britain, the Little Entente, Belgium, and the ex-neutrals, is felt to have had a direct bearing on the rapid settlement of the whole matter and on the appreciable concessions which Italy accepted from the Ambassadors' Conference. There is, at the same time, undoubtedly some disappointment that what is considered to be a flat violation of the Covenant has not been reprobated, and that the challenge to the League's competence by Italy was not immediately met. But the majority consider that the Council did wisely in avoiding for the moment a stand-up fight on competence and in carrying on useful negotiations for the primary object of securing settlement, and it seems almost certain that the question of competence will be settled in the near future and in a much calmer atmosphere than would have been possible before. It must, however, be admitted that the situation has been rather painfully eased by the fact that Greece was so weak that she felt compelled to accept any conditions, provided they were presented to her by some international authority instead of in the form of an ultimatum by Italy. The affair has, in fact, shown at one and the same time the imperfections and the utility of the League, and the necessity of holding on to it and developing its authority. Some of the smaller States have reminded members of the League that if the League is to have the future which is looked for, the patrons and founders of it must set a better example in observing its constitution. For example, Mr Cosgrave, in his speech after the unanimous admission of the Irish Free State to membership of the League, said that Ireland's desire was to see the weakest able to live their own lives free from the shadow and fear of external violence, and in the discussion on the Draft Treaty of Mutual Assistance the case has obviously been in the minds of most speakers. This Draft Treaty is, in fact, one of the most important subjects for the consideration of the Assembly. It is an effort to get some precise provisions in order to give such sense of security to States that they may feel sufficient confidence to reduce their armaments. It is a Treaty of general guarantee, including partial Treaties, provided they have been approved by the Council of the League. It is laid down in the Draft that in case of any aggression, or threat of aggression, the Council shall meet, and within four days give its decision as to who is the aggressor, the members of the League undertaking to respect the Council's decision. This is followed by certain definite methods of assistance to be provided for the State attacked. In addition to the recognition of partial Treaties, the Draft also permits the automatic operation of such Treaties in case of attack, and the main controversy now going on in the Assembly Committee is on the compatibility of partial Treaties with the League idea and on the advisability of permitting their automatic operation. The French and British take the view that if any progress is to be made at all, these partial Treaties must be recognised, for the parties to them certainly would not relinquish them, and the best safeguard is, therefore, to make sure through Council examination of them that they are purely defensive and fall within the broad lines of the general Treaty. Italians and the Scandinavian countries are opposed to

the inclusion of partial Treaties, except on condition that they are open and accessible to all States, and several other States, including Spain, consider that the signatories of partial Treaties should not be allowed to put their Treaties into automatic operation, but should await the Council's decision. Some compromise seems inevitable upon partial Treaties as well as upon their automatic operation, for at present there is a definite line of cleavage. There are other difficulties involved, such as the *criteria* of acts of aggression; but, when all is said, the Italian-Greek affair has emphasised the need of some real and precise sense of security. It is not a little ironical to find the Italian Delegation asserting its conviction about "the evil effects which might result from partial Treaties which rely too much on material force and too little on moral force of a preventive nature."

Bradford and Roubaix.—Our Paris correspondent writes—The alarm that appears to have been caused in the Bradford and other British woollen centres owing to the recent remarkably successful invasion of the British market itself by French woollen manufacturers appears, as the result of careful inquiries here, to be based on an imperfect realisation of the facts. The Roubaix mills are certainly at present enjoying a period of extraordinary prosperity. A number of them are working continuously throughout the 24 hours, with successive eight-hour shifts, and practically all are producing to their utmost capacity. French woollen piece goods are selling in Great Britain and other countries to an extent never before experienced, but there is every reason to believe that this unusual situation will be of purely temporary duration, and that matters are even now well on the road to return to the normal. The explanation given in authorised circles here is that the favourable position which the Roubaix manufacturers have latterly enjoyed is almost, if not entirely, due to the fact that they have for some months past been producing from raw materials which were secured 18 months or so ago, when the pound sterling stood in the neighbourhood of 50 to 55. The fact that these stocks of wool are now within sight of exhaustion is clear from the fact that the Roubaix mills are now declining to accept orders beyond next spring, in view of the fact that after that date they will have to depend on wool that has been bought at prices much nearer 75 than 55, and that they prudently decline to risk being confronted with cancellations of orders in the event of the franc showing a substantial improvement in the near future.

New Free State Government.—Our Dublin correspondent, writing on Thursday, says:—The Oireachtas was summoned on Wednesday last, and the bulk of the new Dail took their seats. Mr Cosgrave, the outgoing President of the Executive Council, was re-elected unanimously, and the nomination of his colleagues followed in due course. While still without colleagues, he was faced with a proposal from the new Farmers' party that the Republican members should be accorded special facilities for meeting to consider and declare their future policy. As a considerable majority of the latter are at present either in gaol or internment camps or "on the run," the bizarre audacity of the suggestion was apparent, and evoked an impassioned reply from the newly elected President. He took his stand upon the unmistakable verdict of the country. Minorities must obey the law or be subjected to its penalties, though there will be every disposition to pass the sponge over the slate for those who will make their submission to the State. Thus far no Republicans have sought to take their seats—the oath prescribed by the Treaty and Constitution being the stumbling-block—and doubtless business will be despatched with the more smoothness and expedition for their absence. Serious attention has been given to the rumour that the Irish Free State proposed to register the Anglo-Irish Treaty with the League of Nations, with a view to raising before that body any points of difference which might arise between the high contracting parties. In these columns reference was made last week to the matter, and the British view that the Anglo-Irish Treaty is not a justiciable instrument to be dealt with by the League of Nations was clearly stated. Nothing is known

of any such proposed step in Dublin. It is, however, known that the Treaty necessarily became known to the League, inasmuch as it constitutes the patent of Ireland's right to be admitted as a member. A semi-official communiqué informs the public that when Ireland's credentials were being examined the question was asked whether the Free State possessed a stable government and well-defined frontiers, and that the reply necessarily alluded to Article 12 of the Treaty which provides for the establishment of a Boundary Committee for the delimitation of the boundary between the Free State and North-East Ulster. If, which Heaven forbid, there should be any difficulty in Great Britain's way in putting Article 12 into execution, the natural and obvious step would be—apart from direct negotiation—to raise the matter at the ensuing Imperial Conference, where all matters affecting the relations of the Dominions to the Empire and to Great Britain in particular are appropriate for discussion. Any question of an attempted reference of such a matter to the League of Nations is a very far-off contingency. It is not believed that Mr Cosgrave's Government have taken it into formal consideration.

Securities and Credit of Japan.—We are glad to be able to report that the following banks had re-started business by September 13th in the various districts in Japan affected by the recent earthquake:—The Yokohama Specie Bank and the other chartered banks, the Mitsui Bank, the Mitsubishi Bank, the First Bank (Daichi-Ginko), the Fifteenth Bank (Daijugo-Ginko), the Sumitomo Bank, the Furukawa Bank, the Hundredth Bank (Daihyaku-Ginko), the Yasuda Bank, the Yamaguchi Bank, the Kashima Bank, the Kawasaki Bank, and several other banks, making a total of 124 head and branch offices open. The Bank of Japan, it is stated, "has never ceased its business, in spite of the earthquake." In London, Japan's credit continues to be favourably considered, and there is ample evidence that her requirements will receive sympathetic consideration from London houses. As will be seen from the details given below, security values are recovering all round from the bottoms touched when the market was unnerved more by the absence of news than any actual knowledge of conditions:—

Some interesting official Japanese figures have been issued in London showing the total of Japanese borrowings up to the end of May last. Total loans outstanding then amounted to 3,826,467,200 yen, which, if the yen is reckoned to be worth 2s 0½d, would amount to approximately £390,618,500. Of this sum 2,505,842,400 yen consisted of internal borrowings, while loans raised abroad represented 1,320,624,800 yen, or say £134,813,800. The following table shows the Government's foreign debt, but it may be recalled that in July last guaranteed South Manchurian Railway bonds for £4,000,000 were issued here, and this amount should be added to the total:—

	Amount Outstanding. Yen.
Four per Cent., 1899	92,748,500
Four and a-Half per Cent., 1st Series	174,156,293
Four and a-Half per Cent., 2nd Series	177,125,813
Four per Cent., 1905	244,068,361
Five per Cent., 1907	224,543,532

South Manchurian Railway Bonds	117,156,000
	1,320,624,818

Loans raised by Japanese local authorities amounted to 395,743,000 yen, or £40,398,800, at the end of June last.

It may however come as a surprise to many that of this total only 134,749,100 yen, or £13,755,600, represents external borrowings. The following is a list of these loans:—

	Amount Outstanding. Yen.
Five per Cent. Tokyo, 1916-36	10,184,371
Do 1912 Loan	44,951,781
Do (French issue)	35,991,387
Five per Cent. Yokohama, 1917-37	2,716,588
Do 1924-54	7,000,000
Do 1915-29	740,572
Five per Cent. Osaka	24,628,000
Six per Cent. Osaka Harbour	2,185,900
Five per Cent. Nagoya	6,350,500
Total	134,749,099

We have no doubt that when the time comes, the necessary reconstruction loans of Japan will find in London a sympathetic welcome.

The Population Question.—Among the most interesting papers in the varied and attractive programme of the Liverpool meeting of the British Association were two which dealt with the subject of population. Dr Cornish, analysing the composition of the population of the Empire and its geographical distribution, argued that unless the British race increased—which for the present can only be achieved by an excess of births over deaths in Great Britain—"we could not insure the internal peace and external security of the Empire, or the continuance of its beneficent work of enlarging commerce and restricting the range of war." The lecturer was clearly right in thinking that there will not be political stability in the world so long as the vast and valuable areas of the dominions are under-peopled, and, as we have often suggested, the question transcends in importance any other that can be discussed at the Imperial Conference. Sir Wm. Beveridge dealt with the economic aspect of the problem, and brought forward a formidable and effective array of figures to disprove the view of Mr Keynes that after the opening of the 20th century the growth of the population of the industrial countries was running ahead of the development of the world's agricultural resources and raising for Europe the serious question whether she could continue to support an increasing population with a rising standard of life by exchanging her goods for those of other continents. Sir William Beveridge has compiled tables which show that both in Europe and in other white countries not only has the area under corn crops increased, but the yield per acre as well as the yield per head of total population has risen. He therefore argues that food should be more readily obtained in exchange for the products of industry. While the statistics are too wide and are affected by so many other factors—opening of new territories, raising standards of cultivation in backward countries, &c.—to have much bearing on the question whether and to what extent the land is yielding an increasing or diminishing return to the labour and capital employed upon it, they do show a gratifying increase in total agricultural production. The lecturer, however, recognised that since the turn of the century, and up to the war, real wages in England had been stationary, but he attributed this to the rapid increase of the adult population resulting from the high birthrate of twenty years previously, to the fact that prices were moving upward, and wages, as usual, lagging behind, and to the South African War. These influences may be the complete explanation of the facts, but Sir William Beveridge himself recognises that this is surmise. There is no readily available means of measuring the price of the goods or services procured by the urban population (including transport and commerce as well as industry) for comparison with the price of agricultural products; but while prices of commodities such as cotton and most minerals, the sources of which were not being rapidly enlarged, rose rapidly, and corn and animal products fairly steadily, retail prices, which combine transport and commercial charges with the wholesale cost of food products, appear to have lagged behind, while many things of common use, e.g., postal and railway charges had remained unchanged for years. Sir Wm. Beveridge has produced material for an active economic controversy for some time to come.

Cost of Living.—The Ministry of Labour's index of the cost of living for an average working-class family shows a rise of two points in August, at the close of which the figure was 73 per cent. above the level of July, 1914, as compared with 71 per cent. above that level a month earlier. The following table shows monthly movements over a number of years, and it will be seen that the August increase was the same as that recorded in July:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.	1923.
January 1st..	85.90	120	125	165	92	78
February " ..	90	120	130	151	88	77
March " ..	90	115	130	141	86	76
April " ..	90.95	110	132	133	82	74
May " ..	95-100	105	141	128	81	70
June " ..	100	105	150	119	80	69
July " ..	100-105	105-110	152	119	84	69
August " ..	110	115	155	122	81	71
September " ..	110	115	161	120	79	73
October " ..	115-120	120	164	110	78	..
November " ..	120-125	125	176	103	80	..
December " ..	120	125	169	99	86	..

For food only the figure for the increase over July, 1914, was 68 per cent. on September 1st, against 65 per cent. on August 1st. The rise was due mainly to increases in the prices of eggs, bacon, butter and cheese.

Employment in August.—The slight increase in employment which began in July continued in August. The statistics compiled by the Ministry of Labour show that, of all workers insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed on August 27th was 11.5, as compared with 11.3 at July 23rd, and 11.0 on June 25th. The trade union percentage also rose from 11.1 to 11.4. The table appended shows the trade union percentage of unemployed month by month over a number of years:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8	13.7
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3	13.1

April	1.7	0.3	0.9	2.8	0.9	17.6*	17.0	11.3
May	1.9	0.4	0.9	2.1	1.1	22.2*	16.4	11.3
June	1.9	0.4	0.7	1.7	1.2	23.1*	15.7	11.1
July	1.9	0.4	0.6	2.0	1.4	16.7	14.6	11.1
August	2.0	0.5	0.5	2.2	1.6	16.3	14.4	11.4
September ..	2.3	1.3	0.5	1.6	2.2	14.8	14.6	..
October	2.2	1.1	0.4	2.6	5.3*	15.6	14.0	..
November ...	2.0	1.1	0.5	2.9	3.7	15.9	14.2	..
December ...	2.6	1.4	1.2	3.2	6.0	16.5	14.0	..

* Excluding coal miners.

The increase was widespread, being particularly noticeable in the pig-iron, tin-plate, shipbuilding, woollen, hosiery, furniture, and pottery trades. In some districts the building trade showed improvement. The total number of registered unemployed on August 27th was 1,266,000, as compared with 1,235,000 on July 30th. The number of unemployed men included in this figure rose in the month from 936,000 to 943,000.

Trade Union Congress Membership.—In discussing the Trade Union Congress last week we referred to the decline in membership and some of its causes. Figures showing the extent of the decline have since been published in the September issue of the *Ministry of Labour Gazette*. In 1922 723 delegates attended the Congress, representing 171 organisations and 5,128,648 members. At the Plymouth Congress this month the number of delegates was 702, representing 167 organisations with 4,369,268 members. Thus the total membership has fallen off in the year by 759,380—a very formidable decline. The fall in membership is common to all groups of organisations except that coming under the head of "public administration," and more than half of it was accounted for by "general labour" and "the metal engineering, &c.," group. Proportionally the largest drop was in agriculture. One of the steadiest figures is shown by transport unions;

LEGAL & GENERAL
ASSURANCE SOCIETY LIMITED
ALL INSURANCE
EXCEPT MARINE
Head Office
10, FLEET ST. LONDON E.C.4
ESTABLISHED 1836 General Manager W. A. BOREMAN, F.I.A.

the figures for the railways were 447,374 against 464,794, and for "other transport" 405,650 against 407,570 a year ago.

Cotton Cloth Finishers.—For a long time, writes our Manchester correspondent, the policy of calico printers and dyers in the Lancashire cotton industry has been criticised in that they have been very slow in reducing their charges, which were put up to a considerable extent during the war and in the trade boom which followed. Strong representations have been made from time to time, but without much effect. This week there has been an important development in connection with this matter. The Piece Goods Dyers' Association has made a proposal to reduce charges by 10 per cent. on condition that those firms taking advantage of it are prepared to sign an undertaking to place all their orders for dyeing with members of the association. This offer really means a deferred discount. The proposal has been considered by the chairmen of the export sections of the Manchester Chamber of Commerce, and practically unanimously they are against the acceptance of the offer. So that the situation may have the full consideration of all firms that are interested, a mass meeting of Manchester merchants is to be held at the Manchester Chamber of Commerce rooms on Tuesday next. It is generally agreed that on this matter an important principle is at stake. The Piece Goods Dyers' Association is evidently trying to meet foreign competition by an arrangement of this kind. It is quite possible, however, that merchants from time to time will find it impossible to get particular shades and colours in this country which could be obtained abroad. If a scheme of the nature suggested were arranged, merchants would be tied in a way which is not at all desirable. The proposal undoubtedly means protection for English dyers, and according to the opinions so far expressed, there is no probability of the offer being accepted.

Textile Fusion.—Our Bradford correspondent, writing in regard to the absorption by Illingworth, Morris and Co., Limited, of the business of James Tankard, Limited, says:—This big fusion has aroused the greatest interest in the wool textile industry. It was not unexpected, but few in the trade had any idea that this new development would be on quite such big lines. It is clear from the statement made by Mr Ostrer that the combine have in view the acquisition of other businesses in the West Riding, and there is not a little speculation as to the next move. Various firms are mentioned as being likely to be absorbed in the near future, but nothing definite is known, and many of the rumours must be regarded as idle gossip. In view of the fact that the present concern of Illingworth, Morris and Co., Limited, controls a vast number of spindles and only a comparatively few combs, it is suggested that an effort may next be made to acquire a large combing plant. This might be regarded as a natural development, as it would place the combine in a very strong position in the matter of supplies. On the whole, the present tendency towards huge amalgamations in the wool textile industry is regarded with disfavour by the majority of traders. Up to within recent years it was the boast of the West Riding industry that private control gave the best results, but the movement in the direction of fusion is now a power to be reckoned with. Whether developments along these lines will prove to be best for the future of the industry remains to be

seen. That the system is open to abuse is apparent to all who have any knowledge of similar undertakings in this and in other countries, but, on the other hand, there are advantages to be derived under careful management, more especially in the direction of keeping down production costs, and it is conceivable that such advantages might outweigh the disadvantages.

More Movement in Freights.—The homeward freight markets during the last few days have been more active, with the undertone firmer, in striking contrast to the dullness that has been in evidence since the early part of July. Numerous steamers have been fixed to load from the Canadian ports, and with the close season for the St Lawrence approaching, more attention has been paid to the Northern Range, steamers having been taken for December. The North Pacific has been firm and active, with tonnage taken for grain and lumber for Japan. River Plate business has been rather quiet, but nitrates have been done for December loading, and the outlook is better. All the Eastern markets are firm, with more inquiry. Steamers have been done from Bombay, and manganese fixed for 8,000 tons, Bombay/Dunkirk, at 22s. Australia reports attention for January-March, and South Africa is still open for more maize tonnage. Ore receivers from the Mediterranean/Bay have not been doing much, but the Danube has been firm and dearer at 18s, with cottonseed from Alexandria in the market for steamers for London/Hull at 11s 6d to 12s. For a steamer to load North Pacific/Japan, 65,000 dollars in a lump sum has been paid. The outward markets have been busy for coal, especially to the Mediterranean, and the general outlook for shipping is much better.

Silver and Stabilisation.—The London silver market this week has shown something of its old-time activity, and the brokerage houses and others have been handling an unusually large number of orders. On Tuesday, for instance, writes a correspondent, one broker dealt in close on two million ounces, and the total business done has been quite large. India has been the chief buyer, while China has been a persistent seller, although in the late trade offers from this source were withdrawn. The exact reason for this sudden burst of buying on the part of the bazaars is rather difficult to define. Some time back a big stock of silver was transferred from Bombay to China, and probably the Indian market now wishes to regain some of this metal. In any case, be the reason what it may, the demand especially to cover has been very brisk, and prices moved steadily upwards. This waking up of the London silver market gives point to the news that the much-discussed Silver Export Association has now been formed in the United States. At a meeting held at Reno, Nevada, early in the month, it was decided to go on with the plan, and the managing director of the Silver King Coalition Mines was elected president, with Mr H. Rives, of the Nevada Mine Owners' Association, appointed secretary. The opening meeting was more or less formal, and it was decided to meet again in November, when the full programme of the association will be gone into. In the meantime the president will appoint an executive committee consisting of fifteen well-known men in the smelting and mining industry. It is claimed that more than 75 per cent. of the annual production of new silver in the world was duly represented at the conference, and the progenitors of the scheme profess to be very optimistic concerning its prospects. Briefly put, the Silver Export Association will have a capital of five to ten million dollars, with power to borrow up to 50 million dollars. It will seek to handle the world's supply of new silver and stabilise the price. The three big American companies—the American Smelting and Refining Company, the Anaconda Copper Mining Company, and the United States Smelting and Refining Company—handle between them something like 55 per cent. of the world's annual output of silver, and these companies are prominently represented in the newly-formed association. It is claimed that something like 75 to 80 per cent. of the world's production will go through the Silver Export Association's hands after it has been working for a few years. The world's output of silver last year amounted to 205,000,000 ounces.

Of this quantity 55 million ounces were produced in the United States, 81 million ounces in Mexico, 17½ million ounces in Canada, and 17½ million ounces in South America, Australia contributing about 12 million ounces. Seeing that most companies sell their silver in the shape of ore to the smelting concerns, who, to safeguard themselves, sell against their intake from day to day, and that it takes four months on the average for silver to go through the refineries, the association will have to be prepared to buy all the silver its supporters can produce, and this may prove a stumbling-block. On this side the plan has been received with marked coldness, and little or no support will be forthcoming from the London brokerage houses. The price is fixed in London daily, and there is no desire anywhere for a change. A similar scheme was attempted before, but failed, and it cannot be said that the plan to control copper in the United States has been a conspicuous success. New silver, of course, is not the sole source of supply, and any artificial rise in the price of this important commodity would at once release some of the long-hoarded supplies in India and China. Well-informed London opinion states emphatically that the suggested scheme is doomed to failure, and that it will do more harm than good. It is understood that certain legal difficulties stand in the way of the association beginning operations, and that it will not be easy to obtain the consent of Congress to remove them, but the promoters seem sanguine enough.

The American Motor Industry.—A correspondent writes:

—Some amazing figures concerning the motor industry in the United States are given in the current issue of *The Automotive Industries*, and it is expected that an output of 3,000,000 cars will be attained during the present year. From January 1st to June 30th no fewer than 240,000 Chevrolets were turned out, 107,000 Willys-Overlands and Willys-Knights, and 103,000 Durants—known in America as the Star. The first 100,000 Durant cars were produced twelve months after the experimental car had been put on the road, and it might have been expected that the entry into the lowest priced field of this car might have had a somewhat adverse effect upon other makers, but such has not been the case. Ford is making and selling more cars than he ever did before, and the same is true of the Chevrolets. It is predicted that the day is not far off when every American family will own a car. The great difficulty at present is the housing problem, and in New York it is impossible to garage a car for less than £5 a month. It is rather surprising to find, on the other hand, that the popularity of the motor cycle is rapidly declining, the number of machines in use having fallen from 154,000 on July 1, 1922, to 127,000 on July 1st of this year. Just the opposite is the case in this country, for the number of motor cycles registered increased from 335,796 in May, 1922, to 387,274 in May, 1923, an increase of 51,478.

The Cotton Industry of Soviet Russia.—The cotton industry represents the main branch of the so-called "light" industries of Soviet Russia, in which, according to official information, the greatest progress has been achieved, for it works for a large market as opposed to the heavy industries, which work for the State, which is too short of money to pay for its orders. As far as production is concerned, the Soviet cotton industry has really somewhat improved of late, for output is increasing and the productivity of labour improving. The following data were published recently by *Economic Life* (N. 150, 1923), which characterise the progress from 1922 to 1923*:

	Monthly Average in 1922.	February, 1923.	Percentage Change.
Number of working spindles ..	978,999	1,160,387	+18.5
Number of working looms	35,067	36,916	+5.3
Number of workers for 1,000 spindles	14.34	13.08	-8.8
Number of workers for 1 loom ..	0.83	0.79	-5.3
Pieces of manufactured goods per worker	2.63	2.75	+4.3

* These figures refer to the largest trusts, embracing 70 per cent. of the total production of cotton.

As regards development, however, the production of cotton goods is faced with an acute shortage of raw materials and a veritable crisis in marketing. Cotton-growing in Russia sustained a great loss during the revolution. On the one hand the population abandoned cotton-growing and began to sow cereals, while on the other the irrigation system in Turkestan was to a considerable extent destroyed, and reconstruction called for an enormous capital outlay. The result was that the cotton crop in 1920 amounted to but 3.5 per cent. of that of 1915. A certain improvement resulted from the abolition of the cotton monopoly, which led to the establishment of more reasonable prices in 1922. This year the area under cultivation in Turkestan, according to official expectations, will be about 135-175 million desyatins (1 desyatin = 2.7 acres), as compared with 80 million in 1921. In addition, several scores of thousands of desyatins will be sown with cotton in other parts of Soviet Russia. Consequently it is expected that the crops will amount to 13 million poods (1 pood = 36 lbs.) (i.e., 15 per cent. of 1915). This figure appears to be exaggerated, for it implies a yield from one desyatin of 60-70 poods, which is impossible under present conditions of irrigation. But even if we accept that figure, the prospects of the cotton supply seem rather bad. The fact is that the old stocks are nearly exhausted, and last year it was necessary to buy cotton abroad. At present the provision of cotton to hand (including the cotton purchased abroad which is on the way) is enough to ensure work for the factories up to September 15th (not counting the special reserve for two months which must always be kept). If we bear in mind that the new crops will only begin to be available in December, it follows that in the last quarter of this year the factories will be without any supply of raw materials. As to the prospects for next year, even if this year's crops reach the figure of 3 million poods, less than a half of the total annual industrial requirements will be satisfied (reckoning on the basis of the present normal output of 6½ million poods). The deficit will have to be made good by purchases abroad. Allowing for the rise in the price of the raw material in Russia, the cost price of cotton goods, according to the calculations of *Economic Life*, will be 40 roubles per pood next year, as compared with 12-13 roubles this year. This fact will certainly make the present crisis in marketing still more acute, for rising prices coincide with a considerable falling off in purchasing power.

British Cellulose.—It is now proposed to change the name of the British Cellulose and Chemical Manufacturing Company to that of British Celanese, Limited, to identify the company, we are informed, more closely with its principal product, "Celanese." If this would only turn fortune's adverse tide, we feel quite sure that most shareholders would clutch even at this straw. It is possibly reassuring to be told that the "directors have undiminished confidence in the future of the business," but the stern fact of past results has to be faced. For the year ended June 30, 1920, the loss on the year's operations amounted to £237,739. The following year a loss of £758,410 was sustained, while in the accounts now published for the period of 20 months ended February 28, 1923, a further loss of £491,782 is shown. Although the prospectus issued in March, 1920, held out promise of early success, and the board had "exact knowledge of the cost of manufacture," we ventured to point out at the time that the company had yet to prove that it could "produce artificial silk on a commercial basis." On turning to the new balance-sheet, we find that assets have been brought down from £6,329,019 to £5,698,327, and share capital reduced from £6,550,000 to £5,400,000. Loans of £180,000 now show as £85,000, but there are now debenture stock and income bonds for £586,000. Goodwill, patents, and patent rights at cost represent £1,886,451. In view of the time which has elapsed since goodwill and patents were acquired, it may be that these are over-valued. The balance-sheet is analysed in our usual column.

Argentine Railway Dividends.—The dividend announcements of three of the Argentine "big four" have come up to the best expectations of the market, and have caused a

pronounced rise in quotations. The Buenos Ayres Great Southern, the Buenos Ayres Western, and the Central Argentine have all reverted to their customary pre-war rate on the ordinary stocks. The two former declare final dividends of 4 per cent., making in each case 7 per cent. in respect of the full year 1922-23. The Central Argentine, with a final distribution of 3½ per cent., brings the full year's dividend rate on the ordinary stock up to 6 per cent., while the deferred stock also gets 6 per cent., which is only its second dividend since 1915. Some comparative figures relating to traffics, prices and dividends are appended:—

	Year 1922-23.	Total Receipts.	Ordinary Dividends.		Price of Ord. Stocks.	
			Year 1921-22.	Year 1922-23.	End of August 1923.	Sept. 20, 1923.
Buenos Ayres G.S.	Gross 9,586,000 Net 3,643,000	+ 1,160,000 + 1,494,000	% 4	% 7	81	88
Buenos Ayres W'st	Gross 4,643,000 Net 1,609,000	+ 549,000 + 730,000	% 4	% 7	73	79½
Central Argentine	Gross 10,652,000	+ 1,208,000	% 4 nil†	% 6 6†	69	73

† Dividend on deferred stock.

The traffic returns for the year ended June 30th were sufficiently good to warrant high dividend expectations; but the weakness of the Argentine exchange made the outlook in this respect doubtful, and the effect of the declaration was therefore to renew optimism with regard to current prospects, especially since the peso rate has recently improved. For the period since June 30th traffic returns, while remaining good, give some food for thought:—

	Aggregate Receipts, 11 Weeks, 1923-24.	
	£	£
Buenos Ayres Great Southern—Gross ..	1,711,000	+ 147,000
Net	447,000	+ 115,000
Buenos Ayres Western—Gross ..	783,000	+ 31,000
Net	144,000	+ 40,000
Central Argentine—Gross	2,207,000	+ 113,000

The Buenos Ayres Western shows some decline as compared with the corresponding period of last year, while in the case of this line and the Great Southern the relation of net receipts to gross receipts is not so favourable. In a later column will be found an article by our Buenos Ayres correspondent, in which he points out certain unfavourable features in the outlook. But while the chairmen's speeches at the forthcoming meetings will be examined with interest for their views on the aspects of the matter which he mentions, stockholders would appear at the moment to have sound reason for confidence.

Cam and Motor.—As a general rule to join a mining reconstruction is to throw good money after bad. The instance of the Cam and Motor provides an exception, and a striking one. Rather more than four years ago the undertaking was financially reorganised, with the heavy assessment of 7s 6d per £1 share. The money thus provided being found insufficient, Sir Abe Bailey lent a substantial sum in consideration of receiving an option on a block of shares at par. This transaction evinced a remarkable degree of faith in the prospects of the company, which at that time appeared none too brilliant. During the past twelve months the developments in the Motor mine have proved of such a character as to constitute the shares one of the speculative favourites in the mining market, the current price being about 2½. At the annual meeting held in August, 1922, the chairman made a categorical promise that the then current financial year would witness an increase in both the tonnage and value of the ore reserves, and in the working results, a decrease in costs, and a first dividend. All these predictions have been thoroughly fulfilled. Thanks to the developments above-mentioned, the ore reserve tonnage has increased by 90,800 tons to 756,900 tons, while the value has jumped from about 40s to 53s per ton. A larger tonnage was treated for an enhanced yield, and costs were reduced about 3s per ton to 24s 8d, with the result that the profits became more than doubled, both in total and average. Of the £111,600 available, the dividend of 7½ per cent. absorbed only £42,100, substantial allowances being made for depreciation and the extinction of preliminary expenses. Reckoning upon a further improvement in the ratio of extraction—for which there is room—and upon a

fresh reduction in working costs, it is assumed that the monthly profits will expand to £20,000, which would permit dividends of 30 per cent. per annum. Whether taken on this basis or on the basis of the "profit in sight," the shares would now appear to be fully valued. Hence those interested will need to keep a watchful eye upon developments.

Modder New and East.—These two Witwatersrand undertakings, writes our mining correspondent, have just issued their reports for the past financial year. An excellent showing is made by the former. At the New Modder a record tonnage of ore was put through on a cost basis which has only twice been equalled in the past. It is interesting and satisfactory to note that the reduction effected under this heading—6s 2d per ton as compared with the ratio for 1921-22—almost exactly offset the decline of 12s 5d in the average price received for the gold. As a result, the profit reached within a trifling amount of the total for 1920-21, when the gold premium was at its highest. The dividends for the two periods have been at the same rate—the highly gratifying one of around 100 per cent. The consulting engineer emphasises the point that while the saving in operating expenditure is due in part to the greatly improved efficiency of both white and coloured labour, better appliances and improved methods have been the main factors. Appended is a summary of the results for the past three years. The set-back of 1921-22 was, of course, mainly due to the strike and its effects:—

	Year Ended June 30th—		
	1921.	1922.	1923.
Ore crushed.....tons	1,083,000	947,000	1,340,000
Costs per ton	23/5	22/10	16/8
Total working profit ..£	1,699,050	1,167,270	1,653,480
Profit per ton	31/5	24/8	24/8
Dividends	£ 1,400,000	980,000	1,400,000
Rate per cent.....	100	70	100
Carried forward	306,850	245,540	216,380
Ore reserves.....tons	8,884,600	8,577,600	9,060,800
Value per ton.....dwt	8/4	8/6	8/8

The ore opened up by the extensive development operations not only more than replaced the tonnage extracted, but carried higher values; hence the ore reserve position scores an improvement in both respects. The quantity represents about six years' supply for the mill. Capital expenditure has to be faced in connection with the sinking of a large circular shaft for the exploitation of the south-western section of the property, but the work and the outlay can be spread over a period of years. Meantime, there would appear to be the prospect of a continuance of the recent rate of dividend—upon which basis the yield to the investor is about 12 per cent. gross. Fully three-fourths of the current market price may be reckoned as in sight as profit in the ore reserves. The Modder East reports a working profit for last year of £262,250, as against only £37,700 for 1921-22. This marked change for the better is partly due to a striking economy in working costs, and partly to the adoption of the policy of restricting development to the richer sections of the mine, at the same time treating ore above the average of the reserves. As developments proved very disappointing—only 70,000 tons of payable ore being opened up in place of some 378,000 tons extracted—the ore reserves are lower both in quantity and value. The consulting engineer intimates that this will be reflected in the current year's profits. The policy above referred to was, of course, decided upon to provide funds for the repayment of the debenture debt, which on June 30th last had been reduced by £215,000 to £185,000. Redemption of the balance is due between now and the end of 1924.

Johannesburg Consolidated.—Our mining correspondent writes:—The dividends disbursed by the Johannesburg Consolidated Investment Company usually bear so close a relation to the net profits that the latter can be fairly accurately estimated at the time of the former's announcement, which takes place in June, although payment is not made until towards the end of September. The accounts to June 30th last show that the 12½ per cent. just distributed absorbs slightly less than the earnings, whereas in the two pre-

ceding years a contrary condition prevailed. It may be noted that 12½ per cent. (tax free) is the highest rate so far paid on the existing capital. The main features of the present balance-sheet, as compared with that of 1922, are the decline which has taken place in the "Stocks and shares" item, and the expansion shown in "Properties and advances." An improvement has occurred in the actual cash position, the readily available resources being about half a million short of the liabilities, instead of three-quarters of a million a year ago. Appended is a comparison of the last three financial statements:—

	1921.	June 30, 1922.	1923.
Stocks and shares	£ 3,915,650	£ 3,930,960	£ 3,666,030
Mining properties and advances..	277,310	282,390	393,110
Real estate and buildings	421,030	407,150	388,590
Loans on mortgage	161,030	158,860	141,230
" to S.A. companies		342,870	284,340
" at short call	455,890	219,260	390,280
Sundry debtors and dividends....	798,320	426,670	305,880
Cash	190,350	96,850	369,560
Sundry creditors	1,449,100	1,213,890	1,079,580
Net profit.....	387,960	273,990	503,840
Dividend	395,000	296,250	493,750
Rate per cent., tax free.....	10%	7½%	12½%
Carried forward	184,410	162,150	172,240

At the moment, particular interest attaches to the New State Areas, which has lately commenced production. Results so far have proved somewhat disappointing, even when full allowance is made for the absorption of gold and other points attendant upon the starting up of a new plant. It would look as though dividends cannot be expected before the middle of next year, if then. The Randfontein Estates should, however, re-enter the list in the not very distant future, and be followed by the Randfontein Central. With regard to the company's interests in undertakings other than gold, the directors mention that the outputs of both the coal and diamond concerns have been restricted to demand—a sound policy. A substantial participation has been secured in the Angola Diamond Company, from whose property "very encouraging" reports have been received. Good progress is advised in the sales of the company's building sites. Altogether, a very satisfactory position is indicated. A point to be borne in mind in connection with the holdings is that they are written down to market value at the end of each financial year, whereas no account is taken of subsequent appreciation. On the basis of last year's dividend, "Johnnies" yield slightly over 8 per cent., tax free.

UNITED STATES.—EFFECT OF JAPANESE DISASTER —SILK INDUSTRY DEMORALISED—JULY RAIL- ROAD EARNINGS—COMMODITY PRICES ADVANCE—COAL STRIKE SETTLED.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 10.

AMERICAN securities markets were only slightly affected by the appalling Japanese disaster. When trading was resumed last Tuesday, following the Labour Day holiday, prices of shares generally on the Stock Exchange fell 1 to 3 or 4 points, the sharpest declines being recorded in speculative industrials. Transactions, however, were light in volume, and represented principally short selling by professional bear operators. There was little evidence of real liquidation by stockholders. Japanese Government bonds dropped 1 to 3 points, while Tokio municipals broke about 10 points; other bonds, foreign and domestic, showed comparatively small recessions. The weakness was only temporary. Prices of stocks have now recovered practically all of the loss then sustained, while Japanese bonds have enjoyed a substantial rally. The quick recovery was attributed to revised estimates of the economic effects of the Japanese calamity. Early apprehensions were offset considerably by prospects of large orders for reconstruction materials and supplies of all kinds being placed in this country. Additional reasons for taking a more optimistic view of the outlook were found in a revival of activity in various directions, follow-

ing the summer lull, the virtual settlement of the anthracite coal strike, and cabled advices pointing to an early termination of the Greek-Italian imbroglio. Leading bankers declare that Japan's credit here has not been impaired, and that whatever financing may be necessary will readily be accomplished.

Conspicuous American business interests directly affected by the Japanese disaster are the raw silk trade and the silk goods manufacturing industry. The United States is the largest consumer of Japanese raw silk, and Japan is this country's main source of supply of that material. Stocks of raw silk of all kinds in the principal warehouses of New York on September 1st were reported as amounting to 25,000 bales, approximately. Monthly deliveries to silk goods mills in the United States this year have averaged about 32,000 bales, according to data compiled by the Silk Association of America; those figures are generally taken to indicate actual consumption. So far as known, only about 10,000 or 15,000 bales of Japanese raw silk were *en route* to this country at the time of the earthquake. Manufacturers generally have very meagre supplies on hand, and it is figured that stocks available here, with the quantity due to arrive, will be sufficient to meet requirements for only a month or six weeks at most. Present indications are that only limited shipments, if any, will be made from Japan in that period, and there is some uncertainty as to the extent of supplies that may be obtainable from China, Italy, and France. Under such conditions the American raw silk markets were completely demoralised following news of the disaster, and were subsequently closed. Leading raw silk dealers here suspended all operations last week until to-morrow, hoping that more definite information may then be available. Before the suspension of trading there was a wild scramble to secure any offerings, and prices in this market soared \$3 and \$4 a pound, carrying Japanese sorts up to the basis of \$12 for Kansai No. 1, and Chinese and Italian raw silks to \$10 and \$11 a pound.

Net operating income, combined, of all the first-class railroads in the United States for July amounted to \$84,591,400, equivalent to a return at the annual rate of 4.93 per cent. on their tentative property valuation as fixed by the Interstate Commerce Commission. That is the lowest rate of return reported since last February. The rate earned on their investment by roads in the eastern district was 5.60 per cent.; in the southern district 5.26 per cent., and in the western 4.03 per cent. In the corresponding month of last year the same carriers had a net operating income of \$69,321,000, or at the annual rate of 4.12 per cent. Heavily increased expenditures for maintenance of way and equipment were largely responsible for the sharp decline in the rate of return during July. Gross earnings in that month totalled \$535,577,300, representing an increase of \$91,870,000 over the same month of 1922, while operating expenses were \$414,333,300, an increase of \$73,377,100. For the first seven months of 1923 net operating income has been equivalent to a return at an annual rate of 5.51 per cent. on a property valuation estimated at \$19,175,000,000, as compared with 4.46 per cent. on \$18,775,000,000 for the first seven months of 1922. It is estimated that net operating income for the entire year will exceed that of 1922 by some \$200,000,000, and will represent about 5 per cent. earned on the property valuation, as against only 4.14 per cent. in the calendar year of 1922. Traffic is still enormous in volume. Total car loadings for the week ended August 25th reached 1,069,932, a new high record, surpassing the best previous weekly total by 28,888. This traffic expansion has been caused by an increase in the general volume of merchandise.

The rise in prices of farm products, grain, livestock, and cotton last month clearly foreshadowed an advance in the average level of commodity prices. Bradstreet's index number on September 1st accordingly was 112.9143, marking a gain of seven-tenths of 1 per cent. over that of August 1st, and the first increase reported since March 1st of this year. The latest number, however, shows a decline of 7.3 per cent. from March. As compared with September 1st a year ago, it is 6.9 per cent. higher, while it shows an advance of 21.6 per cent. over June 1, 1921. The present index number is 38.1 per cent. lower than that of February 1, 1920, but 48.2 per cent.

STATE EXPRESS

above the level recorded on August 1, 1914. Eight out of 13 groups of commodities advanced during August, especially meats and other animal products; in fact, provisions and groceries accounted for practically the entire gain shown by the September 1st index. Building returns, compiled by the same authority, though not yet complete for August, are interesting. The figures received from 85 out of 167 cities in the United States indicate a gain of 14.7 per cent. over July and of 19.8 per cent. over August of last year.

The United States Shipping Board's proposal to operate its merchant marine fleet by forming subsidiary corporations to handle the various trade routes is held up, temporarily at least. The Administration is evidently not certain as to the legality of such a procedure, for the Attorney-General has been asked for an opinion. Direct Government operation continues to be opposed vigorously by steamship and shipping interests generally; meanwhile, the Board is making very slow progress in its efforts to dispose of ships and trade routes. The Shipping Board has placed a total valuation of \$226,733,315 on its fleet of 1,334 vessels, as at September 1st, according to a statement issued to-day by Chairman Farley. That figure represents a shrinkage of \$2,000,000,000, as compared with the original cost of the vessels. Of the total number of ships, 416 are in operation or ready for delivery, while 882 are laid up, exclusive of 36 tugs laid up or in operation. The value of ships in operation or ready for spot delivery is placed at \$137,311,940, and that of the laid-up ships, excluding the tugs, is given as \$87,906,375. Since July 1st the Board has disposed of six ships at a total sale price of \$999,300.

The anthracite coal strike which began on September 1st has been settled, both the operators and miners having finally accepted the compromise agreement suggested by Governor Pinchot, of Pennsylvania, and operations in the mines are expected to be resumed shortly. The agreement, which is to remain in force for two years, gives the miners an increase of 10 per cent. in wages and an eight-hour day, but does not provide for the adoption of the check-off system, which was one of their principal demands. The settlement means an increase of at least 60 cents a ton—probably more—in prices to consumers, unless the Interstate Commerce Commission, as suggested by Governor Pinchot, reduces freight rates on anthracite coal.

FRANCE.—PREMIERS' MEETING—HOPEFUL VIEWS —THE RUHR OUTLOOK—YIELD OF TAXATION.

(FROM OUR CORRESPONDENT.)

PARIS, September 19.

MR STANLEY BALDWIN's interview to-day with M. Poincaré, although it is perhaps yet too early to form any seriously considered judgment on the subject, has had a most inspiring effect on French public opinion that cannot but contribute substantially to improving the relations between Great Britain and France. Down to yesterday afternoon there was a feeling almost of indifference in Paris as to the pending meeting between the two Premiers, which it was taken almost for granted, by both Press and public, would be more or less of a formal and complimentary character. Events have shown, however, that the programme for the interview, almost at the last moment, apparently was radically modified, and that what was expected to be a purely formal affair was

in a few hours transformed into a political event of the first importance. Mr Baldwin returned from his visit to the President of the Republic at Rambouillet only a few hours ago, and has not yet actually left Paris; but already, from the terms of the official communiqué that was issued after this afternoon's meeting, a very strong impression prevails that the result of this afternoon's interview has been completely to transform the political outlook, so far as the two countries are concerned, and that there is now every probability that henceforward they will once more march much more closely in accord than has been the case since the months that immediately preceded Mr Lloyd George's retirement from office. The enormous effect this modification must inevitably have on the pending collapse of passive resistance in the Ruhr and on the reopening of discussions between the Allies for the definite settlement of the reparations problem, which is also generally believed here now to be within measurable distance, needs no comment. There need be no hesitation in saying that to-day's interview between Mr Baldwin and M. Poincaré has brought the possibility of ending the present financial and economic chaos in Europe appreciably nearer.

Reports from the Ruhr, however much they may be discounted by reason of the fact that most of them emanate from French sources, show beyond serious doubt that the end of passive resistance is approaching merely as the inevitable result of the wearing down policy adopted by the Franco-Belgian authorities since they occupied the area, plus the failure of Germany to obtain the direct moral and other support which she expected to receive from Great Britain. It still remains somewhat in doubt whether the French Government will decide first to open negotiations, once this resistance has really collapsed, for the conclusion of economic agreements between the two countries independent of the other Allies, or whether these will be relegated to a purely minor position, in order to leave a clear field for the situation in regard to reparations and inter-Allied debts to be cleared up first. All indications here show that the second alternative is the more probable. The whole of M. Poincaré's recent speeches support the belief that he will place first and foremost the enforcement of the integral carrying out of the Treaty of Versailles, and his statements at Brioules-sur-Meuse last Sunday fully confirm the opinion I expressed last week to the effect that France will insist on emphasising above all else the necessity for placing her frontier beyond the risk of danger. If this view prevails, the question of the much-discussed Pact of Security, in some form or other, may confidently be expected once more to fill a prominent place when the reunited Allies, as it is expected they will be in the near future, again meet in conference on the whole situation, as a preliminary to a final settlement with Germany.

The return of the yield of taxation for August shows a total revenue from all sources of 1,652,253,700f, of which 1,522,455,900f was obtained from normal and permanent resources (including income-tax), and 129,797,800f from the special tax on war profits and other exceptional and temporary sources. The amount received from normal and permanent resources was 205,328,300f in excess of the sum received from the same sources during August, 1922. Indirect taxation and State monopolies produced 1,285,570,600f during the month, and for the first time for some months showed a deficit as compared with Budget estimates for the month. The difference, as compared with the estimates, amounted to 20,332,500f, or about 2 per cent., whereas in July the yield from the same sources was, in round figures, 39,000,000f above what had been expected. The explanation is probably to be found in the fact that August was the holiday month, and that this year, owing to the absence of a much larger number of people than usual from their usual avocations, the volume of business done in practically every important category of affairs was considerably below the normal figure. Customs, as might be expected from the low situation of the franc, again showed a heavy falling off, and were nearly 34,000,000f below Budget estimates for the month. On the other hand, the yield from the tax on turnover, for so long the Cinderella of French taxation, was over 24 million francs more than had been expected. Registration duties also showed a falling off, amounting

to close on 12 million francs on the month, as compared with the Finance Minister's anticipations. Of the State monopolies, the yield from the Post Office alone was disappointing, being nearly 14½ million francs below expectation. Telegraphs and telephones, however, compensated for part of this, being nearly nine millions more than expected. In spite of a deficit of over 20 millions on the month, nevertheless, the revenue for the first eight months of the year from indirect taxation and State monopolies still shows a net increase of 20,458,000f over Budget estimates.

GERMANY. — NEW CURRENCIES — FINANCES — REICHSBANK — EXCHANGE AND BOURSE — PRICES AND INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, September 18.

THE prospects of a reparations settlement have again receded. It was expected a week ago that on the basis of very big concessions to be forced on the Stresemann Cabinet by the threatening situation negotiations on a really practicable foundation would have been taken up. M. Poincaré's last speeches seem to have killed that hope for the moment. It is understood that if Dr Stresemann had had the least encouragement he would have yesterday made a public statement calculated to move matters further, and that this statement was even prepared before the end of last week; but the plan to make the statement was abandoned. It is, however, in the nature of the reparations and Ruhr problems that continuous new initiatives towards settlement will be taken, and it is certain that something in this direction will again be done and done soon.

The plan for solution of the currency question was this evening published. It is a compromise between various plans which have been discussed in the Reichswirtschaftsrat and the Press, plans for a new currency bank, for retention of the Reichsbank, for creation of a pure gold currency and for creation (Helfferich and Minoux schemes) of currencies either expressing commodity units of value or secured by other values than gold. The official plan provides that the Reichsbank shall be the gold-note bank, and that it shall be entirely disassociated from the State finances, and shall no longer discount Treasury bills, so that the unsecured increase of circulation will cease. The State finances will be associated with a new temporary bank, which will issue another kind of (presumably stable-value) currency secured upon the assets of agriculture, industry, trade, and banking. These notes, which are unofficially called *Sachwertgeld*, will be compulsory legal tender. The existing paper mark will be proclaimed to be token money for the new notes, and to be convertible into them at a fixed ratio. Budget reform will consist in drastic limitation of expenditure, and with that, and with taxes payable in a non-depreciating currency, the covering of expenditure will be attained. So far the official statement. It is not clear exactly how the second kind of new notes above mentioned will be secured. Presumably by mortgages, bearing gold interest. The Minoux plan foresaw mortgages on land and business property not exceeding 5 per cent. of the pre-war values, and these were to yield a capital value of four milliard gold marks. The Reichsbank's new gold notes are officially described as being intended "for business life," but apparently they are not to be legal tender. The balancing of the Budget is an essential part of this scheme, because the *Sachwertgeld*, which is to be secured on private property, will be issued only temporarily, and the bank which issues it will ultimately disappear. It is expected that the *Sachwert* notes will be indirectly convertible, in that they will be exchangeable for fixed-interest gold bonds secured by the pledged property interests. No further details of the scheme are issued, and some big questions of principle are not yet dealt with. If the paper mark becomes mere token money, it will be necessary to legislate specially for regulation of outstanding mark claims, bonds, mortgages, &c.

It is not clear what will be done under the above scheme with the yield of the pending exchange expropriation. This yield, it was understood, would go to secure a new gold currency. So far the "exchange commissary" has not made much use of his dictatorial powers. He has required registration of all holdings of unmanufactured precious metals, but has taken no general measure against holders of exchange. He has reduced the number of banks authorised to deal in exchange. The public regards the exchange expropriation with open animosity, and very little exchange that can safely be concealed is likely to be handed over. The average citizen distrusts the Government; the paper-mark (so-called "gold") loan in which he is to be compensated will probably soon have no value at all; if it has a value, the Government can confiscate it in turn by applying Article 48 of the Constitution; and, finally, the average citizen reasons, the exchange seized from him is to be handed over to the big concerns which, being in "legitimate" business, are given a monopoly in profiteering from the currency decay. The Cabinet is so well aware of this public attitude that it has issued, again under Article 48, a threat to put citizens in gaol and confiscate all their property for publicly pointing out the illegality of the original confiscations.

These measures are supposed to be justified by the extreme emergency, and they would perhaps be justified if they were a supplement to foresight and energy, but as a substitute for foresight and energy they have little use. There is no sign that the Cabinet has any plan for putting the finances in order. The August tax reforms have now finally failed. The greater part of the multiplied taxes due in late August come in during the first decade term of September, when revenue of 118 billion marks was received, against 33,916 milliards (of which most, 27,551 milliards, were receipts from Funded Loan) in the preceding decade. But the increase was more than swallowed up by a rise in expenditure to 1,302 billions, against 866 billions. The result was that the floating debt nearly doubled, from 1,235 to 2,380 billions. The next big yield of taxes will not come in until October. The August measure only proves once more that it is useless to multiply taxes by a limited figure at a time when expenditure is free to multiply itself without any such limitation.

The ratio between expenditure and revenue remains as much as ever at the mercy of the foreign exchanges, working through the price-level. The funded loan (so-called gold loan) has brought in, nearly all in paper, the equivalent of 75 million gold marks, which is satisfactory in itself, but has had no effect on the finances, and has produced a new money shortage. The Government has stopped subscription to the wholly devalued Forced Loan. This loan proved useless. The Customs gold surcharge has been raised to 2,179,999,900 per cent. The surcharge will henceforth be fixed twice weekly, on basis of the dollar exchange. The tobacco tax is to be put on a gold basis. The Finance Minister, Dr Hilferding, has made a sound declaration against the inflation tax, and called the bank-note press "a murder machine"; but he has not yet attempted to reorganise his Ministry. The methods of the local Finance Bureaux surpass imagination. The Bureaux are still assessing after elaborate procedure taxes due by individuals of the 1-100th and even the 1-1,000th of an English penny.

The Reichsbank on the 14th raised its discount rate from 30 to 90 per cent., and reduced its rate for advances to 10 per cent. The reduction is due to the fact that the Bank now makes all its paper-mark advances on "stable-value" basis, so that the high interest rate, which is really meant as insurance against currency depreciation, is no longer necessary. On this basis even 10 per cent. is high, but the bank has still certain outstanding pure paper-mark credits. The 90 per cent. discount rate is low; on the Bourse day-money is lent at 2 per cent. per day and even more. The discount rate was raised from 5 to 6 per cent. on July 28, 1922, since when it has been raised seven times, the last occasion being August 2nd. Since the last rise the holding of discounted commercial bills has increased from 18,314 to 163,644 milliards, Treasury Bills from 53,752 to 987,218 milliards, and circulation from 43,594 to 663,200 milliards. The circulation increase in the last week of August was 389,293 milliards, com-

National Bank of Commerce in New York

JAMES S. ALEXANDER
President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

mercial bills increase 74,947 milliards, Treasury Bills 480,338 milliards. Outstanding Darlehns loans total 14,200 milliards. The Bank's clearings totalled 817,133 milliards in August, against 76,624 milliards in July, and 3,828 milliards in January.

The mark seems in the last few days to have lost all pretence to have any calculable gold value. Apart from the tendency of the foreign exchange rates to about double in a day, there have been the wildest fluctuations; thus to-day the dollar in a few hours fluctuated 220-375-150-280 millions, and was officially 150,375,000. Stocks and bonds have moved almost continuously upward. The *Frankfurter Zeitung's* dividend-payers' index for April 14th shows that quotations last week rose, on an average, 4½ fold. Bonds quoted:—War Loan, 200,000; Fours, 8,000,000; Three and a-Half per Cents., 4,000,000; Threes, 35,000,000; Prussian Threes, 3,000,000; Greater Berlin Fours, 300,000. Bond quotations, though generally upward, are quite erratic. Yesterday some doubled, and some even trebled.

The banks are charging gold marks or gold pfennigs for nearly all services, and they have refused to manage paper-mark bonds for their customers, and for collecting the interest charge gold pfennigs, which usually exceed the value of the interest. The *Frankfurter Zeitung's* commodities index for September 14th shows 25,649,210 fold that of 1914, against 3,063,358 on August 31st. The key-multiplier for railway rates has been put up to 9,000,000. Despite rapidly succeeding increases, the Government has again failed to keep railway and post rates in pace with the mark depreciation. The Federal Coal Union now quotes in gold marks, the price of standard Ruhr coal being 27.54 gold marks against about 13 gold marks before the war. The federal cost of living index (basis 1 in 1914) shows for September 10th 5,051,046, against 1,845,261 a week earlier. The index number on July 11th was 21,511, so that the rise in two months was 235 fold. Reports concerning industry continue to be gloomy. Some companies which could carry on complain of capital shortage. Some are issuing new

shares against payment in gold-loan. Crops are estimated as follows (in double-centners of 1-10th of a metric ton):—

	1922.	1923.	Per Cent. Increase in 1923.
Winter wheat....	15,827,434 ..	23,718,617 ..	49.9
Spring wheat....	2,638,366 ..	3,897,449 ..	47.7
Winter spelt....	1,279,360 ..	1,698,633 ..	32.8
Winter rye.....	50,826,815 ..	68,389,448 ..	34.6
Spring rye.....	615,560 ..	1,031,949 ..	67.6
Total	71,187,535 ..	98,736,096 ..	38.7

ITALY.—NATIONAL FEELINGS ON THE GREEK AFFAIR—POLITICS AND LABOUR CONGRESS—SPLITTING OF AGRICULTURAL LAND—RATES OF THE SUCCESSION DUTY—OCTROIS AND THE MUNICIPALITIES.

(FROM OUR CORRESPONDENT.)

TURIN, September 14.

A GREAT stirring of national feeling took place last week over the massacre of General Tellini and his officers in Greek territory. The nation stood firmly behind the Government while the issue was pending, and the whole situation was characterised by an unusual absence of public meetings and utterances calculated to embarrass the Government. From the Italian point of view, the Government's conduct was founded on a firm determination to obtain the proper reparation for the truculent deed. Times are past when Italians could be slain in foreign lands and the Government content itself with languid protests.

Domestic politics are quiet in this summer season. After the passing of the Bill for the new electoral system through the Chamber of Deputies, Signor Mussolini decided not to urge it through the Senate, and declared that general elections are not to take place shortly. As the new electoral system gives 356 places out of 534 to the party which receives the greatest number of votes, and not less than 25 per cent. of all votes polled, the Government is sure of a large majority in the next Chamber. It is highly improbable that the Socialist party, which at the two last General Elections polled the largest individual party vote, will next time take the lead. Socialism is splitting into minute factions—communists, revolutionary, girondinos, and so on. The General Labour Confederation at its meetings from August 23rd to 25th at Milan proclaimed its independence from all political parties—a novelty for a movement which was until lately almost identified with Socialism. There has been much talk of some representatives of the Labour Confederation going into the Mussolini Cabinet as under-secretaries; but so far nothing of the sort has happened. The severance of Labour men from Socialism is highly significant. The masses have tired of Socialist promises, and are increasingly inclining to the strenuous life ideals.

While industrial Italy is making great strides, in the agricultural world the old tendency towards the splitting up of the land in favour of small proprietors continues to gain ground. Recent statistics of the Finance Department tell us that the number of land and house sales, which amounted to 343,362 in the financial year 1914-15 rose to 508,440 in 1920-21, and to 489,803 in 1921-22. As the only buyers of agricultural land are farmers (*contadini*) it is easy to see how rapidly land is passing into the hands of small direct cultivators. There are villages, especially in the North of Italy's mountain and hill regions, where not a single non-cultivating great landholder survives. The great movement of property from class to class took place without Government aid and without credit organisation, and was almost entirely financed by the savings of the peasant class.

From the point of view of giving security to family holdings and to the saving tendencies of this great landholding community, the bold decision of Signor De Stefani, Minister of Finance, to abolish the succession tax will have beneficial effect. The decree was finally signed by the King on August 20th, and abolishes the tax on all successions between (1) parent and sons, grandfather, grandmothers, and descendants in direct line; (2) husband and wife; (3) brothers and sisters; (4) uncles and nephews. As to all other successions, between other

relatives and strangers, the tax is only graduated in relation to the sum received: 12 per cent. up to 10,000 lire, 15 per cent. from 10,001 to 25,000 lire, 18 per cent. from 25,001 to 50,000 lire, 22 per cent. from 50,001 to 100,000 lire, 26 per cent. from 100,001 to 250,000 lire, 30 per cent. from 250,001 to 500,000 lire, 35 per cent. from 500,001 to 1,000,000 lire, 40 per cent. from 1,000,001 to 5,000,000 lire, 45 per cent. from 5,000,001 to 10,000,000 lire, 50 per cent. over 10,000,000 lire. The old tax went up to over 100 per cent. in big successions, so that the new scale will prove a great boon to many embarrassed heirs, who were frequently obliged to relinquish the estate, not being able to pay the succession tax.

Signor De Stefani is quietly adding, almost every week, something to his rebuilding of our financial system. His last decree allocates to the municipalities the entire yield of the *octrois* or duties paid on the retail sale of some goods on their entrance in towns. The yield was hitherto shared between State and municipalities in a mysterious and complicated way. In some cases the State paid the cost of the collection, but the yield was received by the municipalities. The new decree sweeps away all those technicalities, and gives the whole yield of the tax and the whole responsibility of the collection to the municipality.

HOLLAND.—GOVERNMENT FINANCES—FOREIGN INVESTMENTS IN COLONIES—A BANK CONTROVERSY.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, September.

A CHANGE has occurred at the Ministry of Finance. The Minister was not willing to take the responsibility of the enactment of the Fleet Bill, and as his colleagues thought the adoption of that Bill of paramount importance, he withdrew, and was replaced by Mr Colyn, who, judging by his reputation, is suited to the task of drastic public economy.

A beginning will be made by reducing the wages of all Government officials, including the Ministers, by 20 per cent. Even the Queen has voluntarily expressed her desire to receive a proportionally reduced income. It is a pity that the Fleet Bill coincides with the necessity of cutting the expenses by some 105,000,000 fl. The new organisation of the fleet aims to provide our colonies with a weapon to guard their neutrality. If the Bill should be passed, the battleships would not be available before 1928, and it may be argued that it will not make much difference if the Bill be postponed for a couple of years, so that one may have an idea of the financial conditions of the motherland prevailing then. It is of no use to have well-defended colonies and a financially disorganised motherland. Many people do not see the necessity for Holland and her colonies of spending three hundred millions on a fleet of dubitable value. There are, fortunately, also people who attach some value to the Four-Power Treaty of Washington. We have always maintained the policy of the open door in our colonies. According to statistics, the foreign capital invested in our colonies was 750,000,000 fl, against 1,900,000,000 fl of Dutch capital. Great Britain occupies the first place with 300,000,000 fl, followed by China with 250,000,000 fl. Belgium, France, Japan and the United States are represented with amounts between 30 and 40 millions of florins. The greater part of investments—viz., 1,280,000,000 fl, out of a total of 2,650,000,000 fl, is placed in flotations of various kinds. A large part form the rubber estates, in which 480,000,000 fl are invested. Of this amount, 194 millions were provided by English and 170 millions by Dutch financiers.

A deplorable banking conflict has arisen. During the years 1916-19 the Netherlands Bank put at the disposal of the Java Bank some 80 millions of gold. The Netherlands Bank maintains that it expected this gold, which went to strengthen the "caisse métallique" of the Java Bank, to be returned to her as soon as the Java Bank could spare it. This, however, did not happen. The Java Bank sold the gold and made enormous profits, which assisted her to declare as high a dividend as 166 per cent. In the last report on 1922 the Netherlands Bank—whose financial stability is, of course, beyond

question—openly states that it will be compelled to become more restrictive in granting credits if it should not succeed in obtaining part of the profits of the Java Bank on the said gold transactions. It is curious that this banking controversy is being publicly discussed by the leading men of the two institutions.

AUSTRIA.—POLITICAL SITUATION—STATE FINANCES—GOLD RESERVES—FOREIGN CREDITS—EFFECTS OF GERMAN CRISIS.

(FROM OUR CORRESPONDENT.)

VIENNA, September 1.

THE Christian Socialists and the Social Democrats are zealously working for the preparations for the forthcoming elections. The differences between them on political questions now extend to the economic situation, because both parties want to prove that they each have the best interest of the public at heart. The Municipality of Vienna, which is entirely under the authority of the Social Democratic Party, will now carry through a wide programme of investment, one part of which has already been started, and which will cost hundreds of millions of kronen. On the other hand, the Christian Socialist Party declare that the plans of the Social Democrats are only propaganda on account of the elections, and that the money required for the carrying out of them will come from the receipts of the exorbitant high taxes which the municipality directly and indirectly demand.

With regard to foreign policy, the negotiations connected with the Treaty of Commerce with Czechoslovakia, Hungary and Jugo-Slavia are awaited with great interest. Commercial and industrial centres demand that the Austrian negotiators arrive at better results in their negotiations than on former occasions, all the more so as the progress of reconstruction has raised the purchasing power of the population, and as the stabilisation of the krone also represents an incentive to foreign countries to enter into closer business relations with Austria.

The last report which the Commissioner-General made regarding his impressions and activities made the criticisms that the dismissal of State employees was proceeding too slowly and the organisation of the railways and tobacco monopoly was still unsatisfactory. The deficit on the State railways for the last six months amounted to 298 milliard kronen; but when it is considered that, according to the Reconstruction Scheme, a deficit of 2,031 milliard paper kronen was foreseen for the period January 1st to June 30th, the visible success of the scheme is to be already observed. The most striking item to be noticed in the position of State finance is that since the stabilisation of the krone foreign credits are continuously coming to Austria; large outstanding investments, which Austrian subjects have in foreign countries, are returning and being exchanged into kronen, and even the terrible convulsion of the German money market does not influence the Austrian market. The Austrian delegation for the League of Nations' Loan have returned to Vienna after finishing their negotiations with the other countries, with the exception of Spain, where the Austrian loan will be sanctioned by Parliament in the autumn.

The annual report of the Vienna Chamber of Commerce just published, in which the detailed reconstruction programme and its beneficial results are depicted, considers the outlook of the Austrian economic situation

very hopeful. The crisis in Germany has a favourable effect on various Austrian industries; engineering, electrical and iron industries are released from the pressure of German competition. On the other hand, other branches—for instance, the wood industry—are somewhat affected by the stagnation of the German market. The textile industry further complains about strong French competition and about a dictatorship of French firms with regard to the sale of colours and chemical material confiscated in Germany. On the whole, unemployment has decidedly decreased of late. While there were 167,417 unemployed in Austria in the month of February, this number had gone down to 87,349 at the end of July.

Whilst during last year it was considered a great favour if prominent German banks and industrial firms took an interest in Austrian enterprises, now Austrian financiers grant credits to various German firms. It is true that these are exceptional cases, as generally great reserve is shown in view of the economic and financial disturbances in Germany. The economic relations between Austria and Germany have also been seriously affected by the change which has taken place in the coal supply. Germany does not come any longer into consideration for the Austrian coal supply, but only Upper Silesia and Czechoslovakia, which compete strongly with each other, though Upper Silesian coal is given the preference on account of its cheapness.

The change in the financial situation in Austria is reflected by the increase in the metal reserve of the Austrian National Bank. On January 7, 1923, the gold reserve amounted to 1,195 milliard kronen, the bank notes in circulation to 4,053 milliard kronen. By August 15th the cash reserves had increased to 3,004 milliards of kronen, while the bank notes in circulation represented an amount of 5,557 milliards of kronen. This improvement in the relation between the gold reserve security and the bank note circulation is surprisingly favourable. The question has also been discussed whether the National Bank should not attempt to use this gold reserve to raise the rate of exchange of the krone, but public opinion is against such an artificial measure as likely to have a bad influence on the industrial situation. It is expected that the question of creating a new currency will soon be discussed, this to be effected by introducing a krone which would represent 1,000 or even 10,000 times the value of the present paper krone. This would, at least, make it unnecessary to continue counting in millions.

The Commissioner-General of the League of Nations, Dr Zimmermann, and the Swiss Adviser to the Austrian National Bank, Dr Snyder, have expressed the opinion that a further relaxation of the restrictions imposed on the foreign money market ought to be considered. According to their opinion, the present restrictions still form a serious obstacle to the influx of foreign capital, which, they think, would have a beneficial effect in easing the chronic tightness of the Vienna money market. It is true that some improvement could be noted of late; the Post Office Savings Bank and some other big banks placed considerable funds at the disposal of the market, so that the rate for week-to-week money fell from $1\frac{1}{2}$ to $\frac{1}{2}$ per cent. Foreign exchanges showed but very little fluctuation, except, of course, the German mark.

HUNGARY.—FOREIGN TRADE AND CROPS—THE LOAN PROBLEM.

(BY OUR CORRESPONDENT.)

BUDAPEST, September 8.

HUNGARY's trade statistics for the first six months of the present year, compared with the figures for the same period of last year, are not encouraging. On the whole, considerably less trade has been carried on, and some of the shrinkage is remarkable. However, serious as is the passive balance, there are one or two bright spots. The appearance of sugar among the exports to the amount of five milliards of crowns is one of them, and these figures should be much higher in the next half-year. Certain other agricultural produce also show a remarkable advance, such as oats, dried beans, and fresh fruit. Against these are large reductions in the export of wine

KOENIGSWARTER & Co.

and slaughter cattle, the former showing 79 as against 689 thousand metercenters in 1922. The decrease in malt and flour will doubtless be more than made up when the figures for wheat come to be considered later in the year. Altogether there is an adverse balance of 78.9 milliards.

This year the harvest returns are 50 per cent. higher than a year ago, and the surplus for export should amount to at least 200,000 tons. Further, on high authority it may be stated that from forty to sixty thousand tons of sugar should be available for export. Thus it may be anticipated that the sales of wheat and sugar alone will go far to rectify the adverse balance of the first six months of the year. The yield of cereals and sugar also goes far to justify the contention of those who insist that it is agriculture and agricultural industry that must be relied on to save Hungary and restore her erewhile prosperity.

In this connection it is worth noting the formation of a very large and important company under the aegis of the British Hungarian Bank and backed by British capital. Nearly all the members of the board are large landowners, and its object is to help to develop agricultural enterprise of all kinds by granting loans, &c., and especially by encouraging intensive farming. The capital is two milliards.

It seems strange, but now that a loan for Hungary appears to be within a measurable distance of achievement, a feeling seems to be growing that the country can do without a loan. There is not much fear of Hungary falling into the state of Germany and Austria. She is a self-supporting country, and should always be able to export enough to secure her from utter collapse. Such is the opinion of responsible men in Budapest. In the same opinion, the great obstacles in the path of progress are the huge expenditure on the public service, the existence of the Devisen Centrale, and troubles with neighbouring countries regarding Customs and trade relations. That really friendly relations could exist between Hungary and her immediate neighbours is too much to expect from human nature. But that they should needlessly inconvenience each other is foolish. With regard to the public services, it is sufficient to state that they, together with the State undertakings last year, were run at a very heavy loss, the expenditure being estimated at over 75 milliards, against returns of under 50 milliards.

The final estimates for the harvest of the present year are as follows:—Wheat, 18 million quintals; rye, 8 millions; barley, 5.3; oats, 3.7; maize, 3.5; potatoes, 17; beet, 8.8. Of these figures it may be pointed out that wheat is two millions only below the yield of 1913, and at least 20 per cent. better than that of last year; rye is the same as 1913; the yield of maize is only 25 per cent. of last year's crop; all others are considerably better.

ARGENTINA.—GOVERNMENT BORROWINGS—TARIFFS — BRITISH TRADE — RAILWAY DEVELOPMENTS.

(FROM OUR CORRESPONDENT.)

BUENOS AYRES, August 25.

I DEALT last month with the authority given to the Government in connection with the proposed external gold loan. As was then anticipated, the immediate problem of a temporary advance to tide over the interval between maturing of the old borrowing and obtaining the proceeds of the new loan, has been settled by what is tantamount to a six months' renewal of the \$50,000,000 U.S. due on October 1st, at a rate higher than has been known for 25 years. \$60,000,000 U.S. are to be found by the bankers whose offer has been accepted—Messrs Kuhn, Lohb, Blair and Company and the Chase Securities Corporation—at 98½ and 6 per cent. per annum. This advance will be repaid on the issue of new bonds at 92, with 6 per cent. interest and 1 per cent. amortisation, as originally provided for by Laws 11206 and 11207. If this issue can be made with but little delay, the terms of the temporary advance are not of so much importance, in spite of the fact that they work out at a rate of 9½ per cent. per annum. And this, one is given to understand, is the Government's answer to the general and very bitter comment on the operation. Local criticism, though

affected to some extent by political bias, is at the same time not without warranty, owing to the delay which has characterised the treatment of Argentina's important financial problems both by the Government and the Legislature. It is now self-evident that it is largely to this cause that one must attribute the present stagnation of trade, the whole financial situation, internally considered, being now shown up as artificial and even dangerous. The plethora of money in the Argentine banks and the continued renewal of the short-date obligations at 4 per cent. per annum contrasts sharply with such operations as have just been completed. Indeed, specifically Argentine banks are asking why, when the Government insists on its cry of "support home industries," it is so ready to pay from 6 to 9½ per cent. on a gold loan abroad. That this is in a certain sense a case of *non sequitur* may be granted, the trouble being that money must be paid over in New York in one manner or another, and that exchange at the moment of writing is approximately \$136 Argentine gold for each U.S. \$100. Yet it strengthens the hands of those who are pressing for the opening of the Conversion Office and the shipment of gold, one Deputy having, indeed, brought forward a Bill seeking to ship \$100,000,000 gold to New York for the purpose of bringing exchange nearer to parity.

Exchange is, indeed, the key to the position of both finance and commerce at the present moment. To the confusion caused in the import trade by the half-sanctioned new Customs charges, the rates for dollars and sterling have added the final handicap required to transfer the entry of both British and American goods to the market for the time being. It is now certain, or as certain as anything purely political can be, that the additional Customs dues passed by the Deputies will not become law this year. Meanwhile, however, the Government has appointed a series of special commissions, composed of business men, to revise the whole tariff of values and base new dues thereon. With every form of so-called "national industry" busily engaged in showing good cause why anything which competes with its manufactures and is made abroad should be taxed so highly as to keep it out of the Republic for good and all, this revision is not making much progress. As an object lesson to the believer in Free-trade the present outlook in Argentina is hard to beat. One thing at least is already evident, namely, that the cost of living threatens to rise sharply, over and above the actual increase already noticeable in certain directions on account of the fall in the quotation of the Argentine dollar in London and New York. Britain is again Argentina's most important trade connection, the figures on the basis of values being equal to those of 1913. For the first six months of 1923 British imports of Argentine produce reached £35,013,000, while Britain shipped hither goods, including coal, to the value of £14,554,000 during the same period. American figures for five months were \$47,660,000, U.S. Argentine imports from U.S.A., and exports, though no figures were to hand at the moment of writing, are for a much smaller amount. Sir Francis Bielby Alston, the British Minister to Argentina, addressing the local British Chamber of Commerce on the occasion of their annual meeting, put the matter as pithily as it could be put when he declared, speaking of trade and finance as between Great Britain and Argentina, that "this interchange represents a vital factor in the life of both countries, and is especially important to the Argentine. So far as can be seen ahead, the Argentine must depend for her prosperity on the ability of the United Kingdom to continue to purchase her staple products."

The Province of Buenos Ayres is, nevertheless, pressing forward actively with its great plans for railway extension, and the increase of production that is to be its logical sequence. The line from Avellaneda to La Plata has been begun, likewise an important section running from C. Beguerie to Azul. The former runs almost parallel with the Southern Railway from Plaza Constitucion to the provincial capital, while the latter lies midway between two main connections of the same system, whose traffic it must tap once it is in operation. That it will open up a fertile district is true, but it is equally true that had conditions in the Argentine railway world been more favourable during the past ten years, such expansion could and

would have been carried out by the Southern with less expense and probably more efficiency, since the region traversed is certainly within their sphere of influence. Indeed, much though one may regret it, railway developments, both in connection with the State systems and the Province of Buenos Ayres, are not such as promise well for the future of the private systems. This year's traffic figures are favourable, but the sterling balances will be affected by exchange conditions. Fuel is still chiefly imported—coal; long postponed renewals and betterments in general, including fresh rolling-stock, must be paid for in sterling, and over and above this are the remittances towards dividend and interest charges. By taking figures and working out the position on the basis of actual rates, a discouraging picture can easily be drawn. It is not, however, right to do so, since one may be allowed to hope that before January-February of 1924, when the next crop movement is at its height, steps tending to improve exchange will have been taken by the Government, itself an interested party to the higher quotation of the Argentine dollar. At the same time one may also hope that the official world will realise that Anglo-Argentine railway interests, if somewhat better off than they were before the additional tariffs were sanctioned, have still an arduous task before them if they are to continue that expansion and improvement which was so largely contributory to Argentina's wonderful progress between the years 1895-1910.

Efforts are being made to get together the figures from the various Ministries in time to have the 1924 Budget estimates ready early next year, and nothing further will be done with the 1923 figures, monthly appropriations being made to cover administrative expenditure for the last four months of 1923. This is, however, sheer surmise, and but another factor making for uncertainty all round. Cereal prices have improved during the latter part of the month, wheat for export being quoted at \$11.30 Arg. paper, per 100 kilos, both spot and forward as far as November. Maize is \$8.65, also spot and forward, while linseed is \$21.10 spot and \$17.90 for January. Private market manipulations on the part of a large export firm which has now a virtual monopoly of grain shipments is creditably reported to be the explanation of the unusual equality between spot and forward quotations for wheat and maize, the object being to drive out of the market firms working in conjunction with the terminal elevators, the only ones which Argentina boasts.

Letters to the Editor.

RESULTS OF P.R. IN IRELAND.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of the 8th inst. your Dublin correspondent writes that the figures in the Irish election illustrate that P.R. gives a "disproportionately large influence to minorities." I venture to say that neither does P.R. do so, nor do the figures of the election, which you quote, illustrate the fact. Out of a total of 1,050,000 votes the Government polled 410,000, and were entitled proportionately to 57 seats. Actually they obtained 60. The four minor parties, Anti-Treaty, Labour, Farmers, and Business and Independent, polled together over 640,000 votes. Their proportionate share of seats is calculated to be (to the nearest figure) 90. They actually obtained 87. The disproportion, therefore, is against the smaller parties. Indeed, it is a well-known phenomenon that even under P.R. systems, where constituencies are of only moderate size, there is generally a slight advantage to the larger party or parties owing to the fact that in the limited areas of the constituencies the lesser parties frequently poll a number of votes too small to secure representation. This is illustrated in the Irish election, not only in the case of the Government party but also in the case of the next largest party—the Republican. In a number of constituencies they were the largest single party, and in accordance with expectation they benefited slightly, obtaining 44 seats while their strict proportional share was 41.

By way of explaining his thesis that the minorities are unduly favoured, your correspondent goes on to write:—

HARRISONS & CROSFIELD, LTD.,

EASTERN AND GENERAL MERCHANTS,
1.4, GREAT TOWER ST., LONDON, E.C.3.

With Branches throughout the East, and associated in Australasia with Harrisons Ramsay Proprietary Limited.

"Majority supporters are mulcted of the value of their second preference votes to the extent and in the ratio of the successful candidate's total poll to his surplus over the necessary quota, while minority supporters of the most unsuccessful candidates enjoy second preference votes of undiminished value." This passage is based on an imperfect understanding of the P.R. system, and is very misleading. Under this system, each elector has one vote and one only, and that vote cannot count towards the election of more than one candidate. If the candidate has indicated preferences beyond the first, the vote can be transferred, in either of two events: (1) if the candidate to whom the vote is given has more votes than are required for his election; (2) if the candidate is in a hopeless position at the bottom of the poll. In each case there is no increase in the number of votes in play. A vote is taken away from one candidate and, according to the voter's direction, is transferred to another.

A simple example may best serve to illustrate what takes place. Suppose that in a constituency where the quota or number of votes required for election is 1,000, one party, the Blues, presents two candidates, A and B, and another party, the Reds, two candidates, R and S, and that the first preference vote for the various candidates is as follows:—Blues—A, 1,800; B, 200. Reds—R, 600; S, 400. A has a surplus of 800 votes, which are available for transfer to the next preferences marked by the voters. Assuming for simplicity a strict party vote, so that all A's supporters give B their second choice, then all the 800 surplus votes from A will fall to B, and the Blue party will be regrouped as follows:—A 1,000 voters (who elect A by first preference votes); B 1,000 voters (of whom B is first preference of 200, and second preference of 800). The number of votes has neither been diminished nor increased. As regards the Red party, neither of the candidates having secured election on first preferences, the lowest candidate S is struck out and, again assuming a strictly party vote, his votes on transfer fall to R, securing his election with the requisite group of 1,000 votes, of which 600 are first preferences and 400 second preferences. The number of votes again has neither been diminished nor increased.

The Blue party having two quota groups obtain two representatives, the Red party having one quota group obtain one representative. Both parties obtain full value for their votes whether they count as first or second preferences. Any conclusion that the transfers of votes mysteriously diminishes the total of the greater party or improves the relative position of the minor party is obviously mistaken.—Yours very faithfully,

ALFRED J. GRAY,

Assistant Secretary, The P.R. Society.

Books and Publications.

ECONOMIC PRINCIPLES.*

WE welcome the appearance of a new edition of Mr Flux's well-known text-book, which was first published almost 20 years ago. Revision is confined to some five chapters of the original work, namely, those relating to money, international trade, and the foreign exchanges. These chapters have been entirely recast, and have been expanded to seven chapters in the new edition. In general the author expresses the view, with which we are inclined to agree, that "so far from demonstrating the errors of the accepted body of economic doctrine, the experiences of the last nine years have justified a trust in the soundness

* "Economic Principles: an Introductory Study." By A. W. Flux, C.B., M.A. (London: Methuen and Co., Limited.) 12s 6d net.

of the analysis, the principal features of which it was the object of the volume to present." Such recasting as has been necessary has been primarily due to the fact that circumstances have altered, and questions which could be conveniently neglected at the date of the first edition now require attention. This applies particularly to monetary questions and to problems of exchange, especially exchange between countries both of which have inconvertible paper currencies. The new chapters contain a discussion of the purpose and functions of money; of the relation between the supply of money and the general level of prices; of the economic and social effects of rising and falling prices; of the conditions of supply of money; of the relative values of different currencies, that is to say, of the circumstances which determine the rate of exchange both between countries with gold standards and countries with paper standards. The last question is dealt with in Chapter XVI., which approaches the problem (as is now widely done) from the standpoint of relative costs of production, as was formerly more common. "The conclusions reached from an examination of the problem from this angle are not found to differ in their nature from those which result from the more traditional approach to the problem."

Mr Flux gives us in comparatively small compass an unusually clear and at the same time comprehensive statement of orthodox economic doctrine. The author possesses a power of exposition and control over the precise use of language which are all too uncommon, and this, combined with his logical and yet concrete mind, placed the first edition in a prominent place among economic text-books, a place which the second edition should retain. A useful feature for the student is the inclusion under each chapter heading in the table of contents of a list of "Authorities" suitable for further reading.

AN INDEX OF AMERICAN EMPLOYMENT.*

NUMBER Four of the publications of the Pollak Foundation for Economic Research reflects that acute realisation of the evils of oscillating economic conditions which colours a good deal of contemporary American thought. "Trade cycles" are common to all countries, but in the United States the national history, commercial methods and temperament—and, it must be added, up to the middle of the last decade a faulty banking system—have in the past somewhat accentuated their effects. The rapid expansion of business in 1922 and 1923 has already made ancient history of the industrial malaise of 1921, but the prevailing tendency towards a searching analysis of years of depression, with future possibilities in mind, deserves every encouragement, and for that reason the present work is heartily welcomed.

"Cycles of Unemployment" was first composed two years ago, when its author was an instructor and graduate student at Harvard, and was deemed by three adjudicators, Messrs. Wallace B. Donham, Irving Fisher, and Wesley C. Mitchell, the best of 200 essays submitted to the Pollak Foundation. It aims and treatment are purely statistical. Dr Berridge advances no theories on the causes of unemployment, or the means by which this black spot in the modern economic system may be mitigated; he confines himself to the task of finding a measure of its fluctuations, and occasionally explaining their causal relations when this appears to throw light on the main mathematical question.

Available unemployment "totals" are rejected at the outset. Either they are based on certain trade-union returns, and take too short a cut to their final result, or they depend on a conglomeration of data regarding population, births, deaths, migration, &c., and travel by too roundabout a route. The writer is, therefore, compelled to fall back on the familiar "index" method, selecting

data covering part of the field, which he is able to verify to some extent, and assuming that their fluctuations are proportional to those of the whole body.

Dr Berridge's list of desiderata for his index of post-1914 conditions is interesting:—

"(a) Its components must have been reported in a comparable form for a sufficiently long period to establish a basis for empirical test, comparison, and appraisal;

"(b) It must be reasonably representative, industrially and geographically;

"(c) Its components must be reported currently, in monthly form, with reasonable promptness, and with accuracy."

If we might add a fourth section:—

"(d) The weighting of its components must be carefully adjusted from time to time in accordance with changes in the relative importance of the parts to the whole."

We would venture to submit that here we have a succinct and helpful definition of the ideal index-number. How many of the indices so prodigally lavished upon us at the present time would emerge scathless from such a test?

For his pre-war figures the writer relies on returns from New York, Massachusetts, and New Jersey, covering 27 per cent. of the wage-earners of the United States. He succeeds in showing a high degree of correspondence between the curves of the three sets of data taken separately, and adduces further evidence from census returns, tending indirectly to confirm his main contention. After 1914, there appears, at the first blush, to be a wider range of material on which to base the index, but a closer examination reveals that only the figures of the United States Bureau of Labour Statistics, and of the New York Industrial Commission, satisfy all the conditions enumerated above. From these the continuous curve is constructed, and the essay is concluded by a bold attempt to relate the resulting employment index with those of production and purchasing power.

The author is gifted with a clearness of expression that is always helpful when one is trying to grasp a sustained statistical argument. In making various necessary quantitative adjustments a degree of ingenuity is displayed such as earns a man the approbation of the experts, and once provoked a cynical unbeliever to declare that only three kinds of statement existed: lies, white lies, and statistics. We should have preferred an index based on data covering a wider part of the whole field of employment, but we believe that Dr Berridge has done valuable work in pointing out the direction which may be taken by subsequent inquiry into a pressing problem of the day.

STOCK EXCHANGE NEWS. SETTLING DAYS.

TICKET. | ACCOUNT.
October 3. | October 4.

Little spurts of animation and activity broke out in various parts of the House this week. They showed that public interest is on the *qui vive* for profitable avenues in which to employ money on speculative investment lines. Not that investment pure and simple is idle. The recent heaviness of Home Railway pre-ordinary stocks has been stayed. Demand is once more forthcoming for first-class securities round the markets. Business generally gives signs of expansion, though the Stock Exchange is still in that state when its members do a lot of trade one day and very little the next, so spasmodic and capricious is the course of business. The results of the Victoria issue of £9,000,000 in 5 per cents. at 99 will be out probably on Monday, and it will be interesting to see how far the optimistic anticipations of success will materialise. The Consol market is inclined to be heavy, with the War Loan keeping close to 102. If stocks in this market—e.g., Conversion, Local Loans, Funding, Victory Bonds—lose a moderate fraction, men are apt to complain that the market is flat, regardless of the present high range of prices and of the steady character of the improvement in values which has had so long a run.

Foreign politics are not troubling the markets to any great extent, and the pourparlers between M. Poincaré and Mr Baldwin affected prices but little. French Railway bonds, and more slowly French Government issues, have been moving upwards, in accordance with the fluctuations in the Paris cheque. Germans have come to life again, and the gambler who buys these is also trying to accumulate Russian bonds, Government, Railway and Municipal, with the result that fairly substantial rises have occurred in Russians. Turkish Unified is the most active speculative counter in the foreign market at present, the price being run up and down as Paris orders dictate. The Austrian scrip is a steadier market, and Japanese bonds have settled into a firmer stride. Brazilians are better.

The Underground group attracts most of the attention in the Home Railway market, on the expectations, already mentioned here, that both Metropolitan and Districts will be taken over some day on the basis of a guaranteed stock being given in one of the steam companies in exchange for the existing Underground issues. The preferred stocks in this market are also better, the hand of the investor being manifest. Grand Trunk Pacific put on a point or so. Mexican Railway stocks are unaltered. The Argentine Railway market enjoyed a boomlet, on declarations of dividends that came up fully to the best expectations. Antofagasta has recovered sharply, and San Paulos strengthened.

The Rubber market is inclined to be heavy, because of the continued increase of stocks of rubber on hand, but shares in companies connected with the tea industry, as well as rubber, are in demand, owing to the boom in tea shares which is now in full swing. Very substantial rises have occurred this week in shares of the leading tea companies, the outlook for the industry, in view of the possible re-entry of Russia as a tea buyer, being regarded as bright. Nitrates have also sprung into favour, on the statistical position being regarded as materially improved, and nitrate shares are strong, the supply being far from sufficient to meet the demand. Brewery stocks are better, and a fairly extensive rise occurred amongst Insurance shares. The Banking market remains passive. The Shipping group is hard, with Indo-China deferred still advancing, on expectations that the Japanese earthquake will assist its traffic. A similar consideration has sufficed to carry still further the rises of stocks in the cable companies' group, though wireless shares are inclined to be dull. The anxiously-awaited Marconi meeting is expected to be held next month.

Iron and steel shares have been moving narrowly and somewhat irregularly. In the various textile branches, Courtaulds have fallen upon quiet days, but the report of the British Cellulose Company caused a sharp fall, followed by prompt recovery;

an outbreak of firmness in British Dyestuffs shares is associated with the idea that it cannot be long before a reorganisation plan is submitted to the shareholders. The tobacco market is without feature except for another rise in United Tobacco South shares. Amongst land and property descriptions, City of London Real Property stand out with noticeable strength, on expectations of a bonus. The newspaper share market has been unusually quiet.

Kaffirs proper are somewhat neglected, more attention being devoted to Rhodesians, where recrudescence of activity in Cam and Motors and in several of the lower-priced shares aroused attention. The greater part of business in the mining markets this week, however, has been in Mexican and Canadian shares, where recent developments from some of the better-known properties encouraged, first, professional support, and, secondly, attention from outside. Prices are mostly better on the week. Tin, the metal, has risen again to nearly £200 per ton, and is talked higher, the effect being to strengthen a few of the principal West African and Malayan share prices. Russo-Asiatics advanced, in consequence of the better feeling current in regard to Russians generally, and there is not much doing in the shares of the copper group.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

Cartagena (Colombia) Waterworks, Limited.—Authorised capital £200,000, divided into shares of £1 each. This is an issue of £400,000 (being part of an authorised issue of £500,000) 7 per cent. guaranteed first mortgage debentures at 92. The prospectus states that "the issue is approved by the Municipality of Cartagena, Colombia, and is offered with the guarantee of the Municipality, as hereinafter set out." The debentures become repayable on January 1, 1904. The company will establish a sinking fund by setting aside in each year a sum equal to 1 per cent. of the debentures of this series issued, the first payment to the sinking fund to be made on March 31, 1926. The fund may be applied in the redemption of debentures by drawings at 110 per cent. up to December 31, 1929, and thereafter at par. The Stock Exchange Official Intelligence for 1923 states that the Cartagena (Colombia) Waterworks, Limited, latest dividend was 3 per cent. for 1916-17; it also mentions that the company has 28,000 £1 shares in the Colombian Mining and Exploration Company, 15s paid, at cost. The return to the investor denotes the measure of risk involved in a purchase of these securities.

Clayton-Murdoch Gas Appliances, Limited.—Authorised capital £75,000, divided into 60,000 7½ per cent. cumulative preference shares of £1 each and 150,000 ordinary shares of 2s each. This undertaking has been formed to acquire a device for a "gas switch" and the British rights for manufacturing a "dynamo." Assets to be acquired are valued at £14,000; it should be noticed, however, that "patent rights" and tangible assets are all grouped together, and these are to be paid for in cash. The estimated return on capital is modestly placed at 18 per cent. A speculative proposition.

Vipond Consolidated Mines.—Incorporated under Ontario (Canada) company law. Capital \$2,000,000 in shares of \$1 each, all of which have been issued. This is a gold mining undertaking with an office in Toronto. A statement is published to comply with London Stock Exchange regulations. No information is given as to the resources of the company, except that "considerable ore reserves have been opened up," and that "It is expected that milling of ore will commence towards the end of the year." The italics are ours.

* "Cycles of Unemployment in the United States, 1903-1922." By William A. Berridge. Houghton Mifflin Company, Boston and New York. \$1.25.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Liabilities:—

	£	£
10. Debentures in certain constituent companies	1,049,588	
11. Note issue and interest due	3,026,574	
12. Bank loans	nil	
13. Sundry creditors, including provision for final dividend	2,150,194	
14. Portion of surplus applicable to shares of constituent companies not exchanged at December, 1922 (i.e., not belonging to Nobel Industries)	201,820	
		6,428,176
15. Surplus belonging to Nobel Industries	£18,256,644	
16. Against Nobel Industries, share capital issued	15,892,986	

17. Surplus above share capital at December 31, 1922.. £2,363,658

(After providing for all capital losses on realisation of physical assets and goodwill through liquidation and concentration as known at that date.) The Nobel Industries' "carry forward" at December, 1922, of £509,018, is, of course, included in this surplus.

In 1920 we had, under the heading "Investments in allied and subsidiary companies," over £600,000 more than appears to-day, partly because one large business in which in that year we had only a percentage holding, has since come completely under our ownership, and instead of treating it as an investment, we have been able to classify its actual assets and liabilities, which are spread over the various other items of the account, and increase them accordingly. The item of "Patents, processes, and goodwill" has increased by some £265,000, which is the net result of additions from the cause I have just mentioned, less reductions representing the writing off which follows upon clearing up the accounts relating to our companies in liquidation.

FINANCIAL STRENGTH.

The balance of creditors over debtors in 1920 was £532,000, but this has now been turned into an excess of debtors over creditors of £178,000, while "Cash at banks and in hand" has increased by nearly a million sterling, and liabilities on bank loans in 1920, £1,203,046, have now entirely disappeared.

As you will note from the balance-sheet, our cash resources are ample for the ordinary requirements of our business, and I am

sure it must be a source of gratification to our shareholders to have seen the result of our refinancing of the £3,000,000 of 8 per cent. notes issued in 1920. The accumulation of cash, due, as I said last year, to a large extent to bringing down our stocks of raw material, semi-manufactured and finished products to the lowest possible figure consistent with safety, enabled us to repay no less than £1,250,000 of these notes, a very satisfactory accomplishment during such a short period as two and a-half years, when conditions of trade generally could not be described as anything like normal. The balance of £1,750,000 was placed with the public at a price of £99, carrying interest at the rate of 5½ per cent. You will be glad to hear that after the claims of the noteholders were satisfied (you will recall that they had a right to subscribe for one for every two notes held), there were applications at the outset from the public for six times the amount available, so that the lists had to be immediately closed.

The future of commerce is still uncertain. There has been undoubtedly a reaction in business during the past two or three months, and it is impossible for one to express an opinion as to when we shall see a return to normal conditions. It may be because the Ruhr and other European problems appear unsolvable at the moment that a settlement might come more quickly than many of us dare hope, but until we have a settlement of these problems those of us engaged in running big commercial undertakings such as this have got to walk warily and take no undue risks.

The first six months' results of the present year are of a promising character, and in the absence of any great upheaval, political or commercial, I see no reason to anticipate that the results of the present year will fall short of 1922, and as these were so much better than 1921 I think this must be a source of gratification to our shareholders.

I now beg to move the adoption of the following resolution:— "That the report and accounts for the year ended December 31, 1922, be adopted; that the half-yearly dividends at the rate of 6 per cent. per annum, less tax, on the preference capital, paid on August 1, 1922, and February 1, 1923, be confirmed; that the dividend at the rate of 7 per cent. per annum, less tax, on the ordinary shares paid on July 2, 1923, be confirmed as a final distribution on the ordinary capital for the year ended December 31, 1922; that the sum of £148,945 2s 4d, balance of the cost of issue of the 8 per cent. seven-year secured notes be written off; that the

sum of £50,000 be added to special investment reserve account, and that the credit balance remaining on profit and loss account of £509,018 3s 4d be carried forward to next account." The report and accounts were unanimously adopted.

SALTS (SALTAIRE), LIMITED.

STRONG CASH POSITION AND FAVOURABLE PROSPECTS.

The statutory meeting of Salts (Saltaire), Limited, was held, on the 17th instant, at Winchester House, Old Broad-street, London. Sir Henry Whitehead (the chairman) presided.

The secretary (Mr H. L. Searle) having read the notice convening the meeting,

The Chairman said: Gentlemen, as this is the first meeting of a new company, it may perhaps be convenient if I make some statement in regard to the present position.

As you are aware, the company has received par for all its capital and debenture stock, and there are no preliminary expenses of any kind to be deducted from its future profits.

The cash position is an exceedingly strong one, and enables the company to take advantage of any opportunities which may arise, and such are not infrequent when the markets for raw materials are in the present condition, and your directors are quite alive to the importance of securing all such advantages.

SATISFACTORY TURNOVER.

Probably the chief interest in what I have to say is in regard to the present position and immediate future of the company, and it will be remembered the business was taken over from April 1 last, so that a full six months' trading has not yet been completed, but I am able to say on the authority of the managing director, who, I regret, is not able to be here at the moment, as he is attending a conference with one of his Majesty's Ministers—although he may be here at a later stage in the proceedings—that the turnover from the inception of the company to the present date is quite satisfactory, and equal to that of the corresponding period of last year.

TRADING CONDITIONS.

It is a matter of general knowledge that the company, in common with the whole of the worsted industry, has had to meet severe competition during the last few months from goods manufactured in countries of depreciated currency, but I am pleased to be able to say that we have, so far, been able to keep our productive machinery running, and consequently have maintained employment for all our workpeople. I think I may venture to say that the results of the financial year are likely to be satisfactory.

At any rate, you may be quite certain that the energy, foresight, and experience we possess will be exercised to secure all that was promised in the prospectus.

No questions being asked, the proceedings of the statutory meeting then terminated.

An extraordinary general meeting, which was afterwards held, an extraordinary resolution, altering No. 17 of the articles of association, was unanimously approved.

ILLINGWORTH, MORRIS, AND CO., LIMITED.
ACQUISITION OF CENTURY-OLD BUSINESS.

An extraordinary general meeting of Illingworth, Morris, and Co., Limited, was held, on the 10th instant, at the Cannon Street Hotel, London, for the purpose of submitting for confirmation a resolution altering the articles of association, passed at an extraordinary general meeting of the company held on September 4th, in connection with the increase of capital to £5,000,000.

Mr I. Ostrer (vice-chairman and joint managing director), who presided and moved the resolution, said: Having increased our capital, it was desirable to alter the articles of association in so far as they set out the particulars of the company's nominal capital, and accordingly a further resolution for this purpose was also passed at the previous meeting. This further resolution is required by law to be confirmed at a special resolution, and our business to-day is formally to confirm this further resolution as a special resolution of the company.

At the previous meetings the board expressed the hope that by the time this present meeting took place we might be in a position to give the shareholders more definite information. I am now able to inform you that a contract has been entered into for the purchase of 95 per cent. of the issued share capital of James Tankard, Limited, of Bradford, upon terms, which we venture to think are exceptionally favourable. Those of you who are familiar with the industry will be aware that James Tankard, Limited, occupy in the coloured yarn business a position second to none.

In the opinion of your directors the acquisition of this business will prove of great importance and, we hope, of great benefit to this company.

I may mention that other important businesses are under discussion.

Mr F. W. Turner (joint managing director): Mr. Chairman, ladies and gentlemen, I have very great pleasure indeed in formally seconding this resolution. By the acquisition of the century-old business of James Tankard, Limited, Illingworth, Morris, and Co. have indeed added to their strength in the market. For the last 15 to 20 years—before Illingworth, Morris, and Co., Limited, was thought of—it has been my whole and sole ambition to be associated with this particular business that we have now acquired, and I think that is saying a great deal. This acquisition makes Illingworth, Morris, and Co. absolutely pre-eminent in the fine coloured yarn trade, as well as in the white yarn trade.

There being no questions, the chairman put the resolution to the meeting, and it was carried unanimously.

Shown Brothers announce that, having regard to results of last year and to fact that trade has not yet shown any marked improvement, directors deem it advisable to postpone consideration of payment of dividend on cumulative preference shares, due Oct. 1st, until after completion of accounts for current year.

Marion and Wynn.—The directors announce that, although the business for the present year is in excess of the similar period of last year, they think it right to inform the shareholders that, owing to the adverse foreign exchanges, they feel it prudent to wait until the accounts for the year have been made up before considering the declaration of a dividend on the preference or ordinary shares.

FALCON MINES.—August: Crushed, 17,157 tons of ore producing 228,399 short tons of blister copper, containing 2,206 ozs of gold, 4,141 ozs of silver. Estimated value £23,878 (taking copper at £60 per short ton, gold at 90s per oz, and silver 2s 6d per oz). Decreased output due to movement of ground upper levels affecting grade.

Reports and Notices.

The directors of the General Accident Assurance Corporation, Limited, announce that Mr Stanley Norrie-Miller, M.C., J.P., M.A. (Oxon), has been appointed deputy-general manager, and Mr Godfrey Scott Pearce and Mr Patrick Constable Hunter joint foreign managers of the corporation.

We are informed that Henry Hope and Sons, Limited, of Smethwick, Birmingham, have received the contract for the steel windows for the new General Post Office at Shanghai. This contract follows the recent completion by the same firm of the windows for the new Hong Kong and Shanghai Bank and the new municipal buildings in the same city.

GOVERNMENT STOCKS, &c.

GOVERNMENT OF VICTORIA 5 PER CENT. CONVERSION LOAN, 1932-1942.—Holders of Victoria 3 1/2 per cent. sto k, 1888 and 1889, and the 6 1/2 per cent. stock, 1923-25, repayable October, 1923, are reminded that the offer of conversion expires on Monday, the 24th instant. The list for cash applications will close on the same date.

BANKS.

BANK OF ATHENS.—In view of the trials undergone by Greece, during the last twelve months, it is interesting to compare the figures of the following half-yearly balance-sheets of the Bank of Athens, as drawn up on June 30, 1922 and 1923:—

LIABILITIES.	June 30, 1922.	June 30, 1923.
Capital, fully paid ..	48,000,000.00	48,000,000.00
Statutory reserve ..	5,250,000.00	8,750,000.00
Special reserve ..	5,600,000.00	7,600,000.00
Provision for taxes ..	5,602,372.55	5,602,372.55
Deposit accounts ..	493,560,546.62	646,797,761.40
Current accounts ..	84,648,383.71	137,905,539.17
Foreign correspondents ..	18,614,48.24	14,008,693.24
Cheques payable ..	15,696,141.63	57,071,846.59
Unclaimed dividends ..	2,558,545.50	1,949,678.59
Interim dividend, free of Greek tax ..	2,400,000.00	2,400,000.00
Profit and loss account ..	9,528,867.58	9,914,140.26
	685,896,966.28	940,000,632.08

ASSETS.	194,386,351.91	244,070,197.95
Cash in hand and Treasury bills ..	132,672,074.47	144,469,084.51
Balances due from banks abroad ..	8,491,343.33	46,532,141.91
Bills receivable ..	320,740,902.31	457,000,704.07
Loans, advances, bills discounted, &c.	..	6,996,628.50
Forced loan bonds of unsettled accounts ..	15,007,955.72	29,611,938.59
Investments ..	14,598,303.54	11,319,296.53
Freehold premises and property ..	35.00	40.00
Furniture, installations, safes, &c.	685,896,966.28	940,000,632.06

These totals show an increase of 254,103,065 drachmæ in favour of 1923, this notwithstanding the temporary interruption of the activities of the bank's branches at Constantinople. Profits for 1923 have exceeded those for 1922, and have again allowed the declaration of an interim dividend of 5 drachmæ per share.

MISCELLANEOUS.

ANGLO-SIAM CORPORATION, LIMITED.—The report and accounts just issued show a reduction in net profits from £94,679 for year ended March 31, 1922, to £76,346 for year ended March 31, 1923. The ordinary dividend has been reduced from 30 per cent. for 1921-22 to 25 per cent. for 1922-23. The directors have placed £4,265 10s to the general reserve funds, £7,500 to the reserve for contingencies, and £5,000 to provident fund, whilst they have written down the cost of acquiring the Indian business by £6,500, and they are carrying forward £32,303 to the current year, subject to any taxation payable. The directors point out that the 1922-23 floating season proved to be the fourth in succession of small deliveries at Bangkok, and forest stocks continue to increase, whilst, in view of the absence of demand in Europe and India for cut timber, and a further decline in the market value of teak, it was again decided to dispose of the deliveries of rough timber locally and take the opportunity of carrying out extensive repairs and additions to the saw mill. The profits derived from the timber business therefore are comparatively small, and at present there is no improvement in the outlook. In consequence of the depressed state of trade generally throughout the world, the turnover in the general business as a whole has suffered, but in India and at Singapore the results of the year under review are satisfactory. The new issue of capital, consisting of 22,134 ordinary shares and 50,000 preference shares of £1 each, offered in December last, was fully subscribed, and the premium obtained on the ordinary shares, less the expenses of the issue, and amounting to £20,734 10s, has been added to the general reserve funds, which, with the £4,265 10s mentioned above, now amount to £265,000. The company have found it necessary to obtain larger offices, and are removing to 5 and 7 St Helen's place, London, E.C. 3, on September 29th.

AUSTIN MOTOR COMPANY, LIMITED.—The report for the year 1922 shows a credit balance of £78,564, which reduces the debit balance brought forward to £1,805,037. The report states that "the directors did not resume active control of the company's affairs until April 5, 1922, too late to make adequate provision for the busy season, thus seriously limiting the output for the period. During the year the cash position was greatly improved and confidence established with our suppliers and agents. To maintain sales during the slack season in the home markets, strenuous efforts have been made to get back some of our pre-war export trade, and these efforts have met with success, in spite of the competition of those countries operating with the advantages of a depreciated exchange, and, in the case of the United States of America, with special contracts and facilities obtained during the war. Since January 1, 1923, the sales have considerably increased, and the position still further improved. It has been decided to revert to the pre-war custom of terminating the company's financial year at September 30th as being a more convenient date.

CHICAGO BREWERIES, LIMITED.—The following circular has been forwarded to us by the secretary of the Chicago Breweries, Limited:—"Although trading conditions in Chicago remain in the same unsatisfactory condition as last year, progress has been made in the realisation of some of the properties of the American companies in which we are interested. This has enabled them to remit further funds to our company, and has placed us in a position to pay off many of our outstanding debentures and to give notice of payment of the remainder on February 6th next. Seeing that money will not be required in Chicago, and that further realisation of assets may be expected, the board, after consultation with some of the principal holders, has decided to submit resolutions to the whole of the shareholders of the Chicago Breweries, Limited. It is proposed that the capital of the company be reduced from £400,000, divided into 40,000 shares of £10 each, to £200,000, divided into 40,000 shares of £5 each, to be effected by issuing one new share of £5 and one redeemable mortgage debenture for £5 in respect of each share at present held. It is also proposed that the redeemable mortgage debentures to be issued shall carry interest at the rate of 6 per cent. per annum as from the date when these resolutions shall have been confirmed, and shall be repayable at par only at the option of the company at any time, in whole or part, but if in part, then by means of drawings on one month's notice being given. These resolutions, if duly carried, will permit the redemption of the proposed issue of terminal mortgage debentures by means of drawings as money is remitted from the other side without interfering in any way with the conduct of their business. It is essential to keep these companies going with a view to beneficial realisation of their assets in the event of it being found impossible to carry on their business at a reason-

able profit under the altered conditions. In case it should be found that the profits earned were insufficient to provide for payment of interest on the debentures, then the same would be made good out of capital, but naturally this would diminish the ultimate return in the event of a deficiency on realisation of the assets."

ILLINGWORTH, MORRIS.—The chairman of Illingworth, Morris, and Co., Limited, at the meeting held September 19th to confirm the increase of capital to £5,000,000, announced that a contract had been signed whereby the company acquired 95 per cent. of the issued share capital of James Tankard, Limited, of Upper Croft Mills, Bowling, near Bradford, coloured worsted spinners, specialising in coloured yarns. James Tankard, Limited, was registered as a company in 1895, to acquire the century-old firm of the same name. The whole of the share capital, amounting to £200,000, is privately held, and it is stated that there will be no change in the present arrangement.

PACIFIC GAS AND ELECTRIC COMPANY.—The London office of the National City Company announce that its head office in New York is offering \$10,000,000 Pacific Gas and Electric Company first and refunding mortgage 5 1/2 per cent. bonds, due 1952, Series "C," at the price of 95 1/2 and interest, New York terms. The gross earnings of the company for the year ending July 31, 1923, amounted to \$39,448,000, while the net earnings amounted to \$16,684,000. It is pointed out that the present market quotations of the common and preferred shares represent an equity in excess of \$75,000,000.

PEARSON AND KNOWLES COAL AND IRON COMPANY, LIMITED.—An improvement is noticeable in the report just issued for the year ending June 30, 1923, as, after making all necessary provisions, the net profit amounts to £89,818, as compared with £40,918 in preceding year. The balance brought forward from last year is £59,912, making a total available balance of £149,730. An interim dividend of 3 per cent. on the first preference, and 3 1/2 per cent. on the second preference shares, less tax, amounting to £11,719, has been paid. The directors recommend that a final dividend be paid of 3 per cent. on the first preference shares, 3 1/2 per cent. on the second preference shares; the ordinary dividend is 5 per cent., same as last year, making a total distribution of £65,548 for the year, leaving a balance of £84,182 to be carried forward.

S. INSTONE AND CO., LIMITED.—The report states that the accounts have been extended to June 30, 1923, in order to meet the position arising by reason of the company's conversion into a public company at the end of 1922 and the advent of new shareholders. The directors announce that the work of opening out the roads to the recently located Barnsley seam in the Pollington district of Askern Colliery is proceeding satisfactorily, and coal is already being drawn therefrom. There is an increase in the output of Bedwas Colliery, and for the half-year ended June 30, 1923, has resulted in a net profit of approximately £45,000. No part of this profit, however, has been included in the accounts presented. The available balance at the credit of profit and loss account is £50,533, and it is proposed to deal with this as follows:—Dividend at the rate of 7 per cent. per annum on the 7 per cent. cumulative participating preference shares (already paid), further dividend on the cumulative participating preference shares at the rate of 3 per cent. per annum (for six months), thus bringing the dividend on the 7 per cent. cumulative participating preference shares up to 10 per cent. per annum, the maximum to which these shares are entitled; dividend at the rate of 7 per cent. per annum (for six months) on the ordinary shares. Further dividend on the ordinary shares at the rate of 3 per cent. per annum (for six months), leaving £19,464 to be carried forward.

SHEEPBRIDGE COAL AND IRON COMPANY, LIMITED.—The net profit for year ended June 30, 1923, amounts to £123,300. Add balance brought forward from last year, £41,631—£164,931; less interim dividend paid February 1, 1923, £33,463; balance for disposal, £131,468. It is recommended that this sum be appropriated as follows:—Final dividend of 5 per cent., making 7 1/2 per cent. for the year, less income-tax, payable on October 1, 1923, £66,926; to reserve fund, £20,000; balance to be carried forward, £44,542. The report points out that the demand for coal during the year has been satisfactory, owing principally to the increased foreign trade, and prices have advanced. The improvement in the realised price was reflected in the rise in miners' wages. The home trade in all iron products has been bad throughout the year. The occupation of the Ruhr district by the French caused a temporary increase in the export of pig-iron, with a corresponding increase in price, but the improvement was transient, and prices have fallen back to a level which is low as compared with working costs. The other departments of the ironworks have only been partially employed. The works and collieries have been maintained in an efficient condition. A new plant for breaking slag and making tar macadam has been erected at Sheepbridge works. In conjunction with Stokes Castings, Limited, of Mansfield, a company, entitled the Sheepbridge Stokes Centrifugal Castings Company, Limited, has been formed to purchase their patent rights and business in the manufacture of centrifugal castings, and a new plant is in course of erection at Sheepbridge for that purpose. The development of the new ironstone field at Roxby in Lincolnshire is approaching completion, and an area of 186 acres of surface near the company's ironstone mine at Desborough has been purchased. Having in view the necessity for commencing operations at Firbeck Main Colliery, the directors have arranged for the additional capital required by the undertaking by increasing this company's holding to 200,000 shares. The Dinington Main Coal Company, Limited, has also taken a further 31,000 shares. The Staveley Coal and Iron Company, Limited, have subscribed for 400,000 shares

(b) S. Instone and Co.—Period September 1, 1921, to June 30, 1923.

STAVELEY COAL AND IRON COMPANY, LIMITED.—The 60th annual balance-sheet for the year ending June 30, 1923, shows that, after allowing for depreciation and taxation, an interim dividend was paid on February 10, 1923, of 2½ per cent., and the directors now recommend the payment of a final dividend of 5 per cent., together with a Diamond Jubilee bonus of 2½ per cent., thus marking the 60th year of the company's operations. In future it is proposed to pay the interim dividend on March 30th instead of early in February as heretofore. It is proposed to allocate out of profits £100,000 to reserve fund, carrying forward a balance of £4,191 16s 7d. It is proposed to call up the 15s outstanding on the 463,773 shares now 5s paid, the call to be in three instalments of 5s each, the first to be made payable on November 5, 1923, the second on May 5, 1924, and the final on November 5, 1924. In view of the necessity of erecting a large number of additional workmen's houses, the requirements in the Staveley district being approximately 2,000, the company have decided to join the Industrial Housing Association, Limited, for the purpose of providing such dwellings. The directors have acquired a substantial interest in Firbeck Main Collieries, Limited. The whole of the plant and machinery has been maintained in good working order at the various collieries and ironworks.

barely steady. Broad bran quoted at 6s 6d, ordinary ditto 5s 6d, middlings 7s 9d-8s, bags included, ex mill. Light oats 5s 6d, powdered oat husks 5s 9d, feed oatmeal 9s 3d, ground oats 13s 3d free on rail—all per cwt. Barley.—English quiet, with malting ranging from 10s 3d-14s, and feeding sorts 8s 3d-9s per 112 lbs free on rail, as to sample. Imported firm. IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated September 20th, is as follows:—Pig-iron: Whether the turn for the better will be maintained remains to be seen. There is undoubtedly more inquiry and a little more business, but, on the other hand, stocks of pig-iron are large, and the output could be increased if prices maintain a paying level. Prices are as follows:—Cleveland No. 3 G.M.B., 97s per ton; East Coast hematite mixed numbers, 99s per ton.

Manufactured iron and steel: The steel trade is dull, and we shall probably see no permanent improvement until the shipyard labour trouble is settled. Prices are:—Steel ship plates, £9 15s; steel ship angles, £9 5s; iron bars, £12; steel rails, £9 10s. Iron ore: With the reduced number of furnaces making hematite pig-iron, orders for iron ore are very scarce. The current price for best Bilbao Rubio is about 23s, c.i.f. Tees.

Our Sheffield correspondent writes:—A good many inquiries are about for steel for Japan, but these prove to be in the nature of speculation, and have not emanated from that country. That the reconstruction of Japan will consume vast quantities of iron and steel is a certainty, and the supplying of material will undoubtedly benefit trade here at some future time. A good deal of work is on hand for railway tyres, axles, springs, and forgings, but it does not suffice for full-time working, and bookings lately have tended to fall off in spite of the notorious shortage of railway rolling stock in this country. German competition with British cutlery, tools, aluminium, and enamelled goods has practically disappeared so far as imports are concerned, although considerable stocks of foreign goods are held by merchants in this country. The beneficial effects of the decline are already being felt in Sheffield, however, in the shape of increased orders for pen and pocket cutlery, small tools, and a variety of hardware. Makers of the more expensive tool steels are doing an improved trade in the home market, but business with America and the European Continent is impossible, with the exception of oddments, in the present state of import tariffs and exchange rates. The fuel market generally is weaker, and, owing to the reduced operations of the blast furnaces, coke is more easily obtainable. The export demand for steam coal and coke is brisk, and rather more is doing in house coal. Nominal prices per ton at the pits are:—Best hand-picked branch, 28s; best silkstone, 26s; best South Yorkshire steams, 20s to 21s; best Blythe steams, 24s; rough slacks, 11s; nutty slacks, 10s; smalls, 7s; blast furnace coke, 34s (home).

Our Glasgow correspondent writes:—Though it can hardly be described as an improvement, there is no question as to an increased volume of business having been handled this week in iron and steel trade connections and as to immediate prospects being the turn more hopeful. Scotch pig-iron has been more freely in request, and a number of local orders for hematite and foundry sorts have been booked—the former at £5 5s a ton and the latter at £5 to £5 5s a ton. Foreign buying has led to an inroad, on a small scale, on makers' stocks, and that has overcome the fears recently entertained that production might be curtailed. A strong plank in the shipment position is the continued placing of fair lines from the Pacific, in which relation some 2,400 tons were despatched from the Clyde last week. Probably the most cheerful trade factor of the week is the activity that obtains in the production of thin, black sheets. At the moment these are asked for in bulk, with the result that the biggest makers in Scotland have contracts in hand that will keep them running full for at least a couple of months to come. These firms, it appears, have reason to calculate, also, on the receipt of substantial orders for light building materials for Japan and markets further west, influences which, it is felt, will help forward to the general improvement so greatly desiderated. Values of sheets naturally stand firm at round £12 10s for 2½ in. and £19 for 24 b.g. sizes.

Our Cardiff correspondent writes:—There is no improvement to report in the state of the Cardiff coal market. The volume of trade is well maintained. Current approximate quotations are as follows:—Best Admiralties, 28s to 29s; second Admiralties, 27s to 28s; best drys, 28s 6d to 29s 6d; black veins, 27s 6d to 28s; Western Valleys, 26s 6d to 27s 6d; Eastern Valleys, 24s to 26s 6d; best bunker smalls, 18s to 20s; ordinary cargo smalls, 14s to 16s; anthracite big vein large, 47s 6d to 52s 6d; machine-made cobbles, 55s to 60s; French nuts, 57s 6d to 60s; stove nuts, 57s 6d to 60s; rubbly culm, 15s 3d to 16s; inland blast-furnace coke at ovens, 30s to 35s; coke for export, 37s 6d to 45s; patent fuel, 29s to 33s; pitwood, ex ship, 29s 6d to 30s 6d. In the iron and steel trades there has been a further improvement. Inquiries for material, and particularly for galvanised sheets from Japan, have been active; a better demand has also developed in the European markets, and prices, particularly for tinplates and sheets, are distinctly firmer. The stabilisation agreement has been continued for another three months, and the tendency at the moment is for prices to advance beyond the figures fixed under that agreement.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Demand for wool in London is well maintained, and prices are steady, but the good tone in the raw material market is having very little effect in stimulating demand for semi and fully manufactured goods. The outstanding feature continues to be the great disparity between selling prices of tops and yarn and replacement costs, and this becomes more pronounced the further one proceeds with the processes of manufacture. Good average 64's tops can be bought in Bradford at about 5s per lb, yet, although they would cost about 5s 3d if made out of wool bought at the current series of London auctions, there is no big demand. Similarly, yarns are being offered at all sorts of ridiculous prices, in some cases at little more than the price of the top. However, sellers cannot command better prices, notwithstanding the strength of the raw material market, and business is accordingly confined within narrow limits. The new selling season in Australia also looks like opening on a level entirely out of reach of Bradford users, and the indications are

that trade will be very restricted for some time to come. A moderate amount of business is passing in crossbred tops, but orders generally lack bulk. In the yarn section the position is most unsatisfactory. Spinners are doing their best to keep machinery running, but many are working to stock, and where sales are made prices are exceedingly poor. This, of course, is merely a reflection of the unsettled conditions which obtain in the piece goods trade. Manufacturers have a large proportion of idle machinery, and prices of cloth, except in the case of a few special lines, are cut so keen as to leave practically no margin of profit. The suggestion that some measure of protection should be afforded, however, is received with mixed feelings, many members of the trade being of the opinion that it is "better to bear the ills we have rather than to fly to others that we know not of."

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The daily offerings at the London sales amount to between 10,000 and 12,000 bales, and though this is a fairly large quantity, the auctions have proceeded briskly, notwithstanding the frequent withdrawals of second-hand lots. If importers had to accept the prices bid, they would frequently lose at least 3d per lb, and in some cases up to 6d, and it is still an outstanding fact that the choicest Geelong wools are still by far the cheapest. This is an aspect of the market which, to say the least, is somewhat tantalising. It is poor encouragement to Australian wool growers to produce anything very choice, but this can only be regarded as a temporary phase, and in no sense affects the general wool position. At the same time, it is more than annoying to see only 32d to 34d bid for these wools, for many of the lots cost 3d more in Geelong and Sydney. When one calculates the expenses incurred in bringing the parcels home, the difference is well on towards 6d per lb. The wools which are being sold at around 32d to 34d are intrinsically the cheapest, and we take this to mean that the woollen trade cannot have any really keen demand for high-class fabrics, otherwise the demand for the superior wools from which these goods are made would have been better. An opportunity is now being afforded to America to acquire these wools at most reasonable prices, but unfortunately competition from that quarter is exceedingly limited, and we fully expect that America will commence to buy these wools when everybody else wants them. However, there is not much change in values, a very healthy demand being in evidence for good average top-making wools suitable for the home as well as the Continental trades.

Last Monday the Australian season commenced, with an important sale at Sydney. Another sale at Adelaide was also to follow yesterday. The Sydney cables clearly indicate a very strong market, private cables received in Bradford confirming the information previously received that 64's top-making wools were selling on a clean basis of 53d landed Bradford, which means that tops will cost well over 5s per lb. Sydney prices are fully up to the level of Coleman street. It is very significant that the Continent made the market in that centre, while Japan was also a decent operator, as well as Germany.

All the sales being held at present go to indicate that the raw material occupies a sound position, and that the values current are well in advance of what can be realised for partly and fully manufactured goods in consuming centres. News from France indicates great activity in wool textile manufacturing circles, and the Continent is likely to be the chief operator during the ensuing season.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Although weather conditions were somewhat unsettled, fair progress has been made with the ingathering of crops. The outturn of winter wheat and oats is fairly satisfactory, but less favourable with regard to spring cereals. Offerings of native grain were on a larger scale, and with a quiet demand from millers prices moved in a downward direction, while ranging from 8s 3d to 8s 9d per 112 lbs, free on rail, as to sample. Imported quiet, but North American grades fairly steady, owing to scanty offerings. No. 1 Northern Manitoba quoted 49s 3d, No. 2 hard winter ditto 44s 6d, Rosafé 62½ lbs, landed 46s 6d, Barusso 62½ lbs ex ship 44s 3d, choice white Karachi landed 44s 6d, and red ditto 43s 6d—all per 496 lbs. The floating and forward cargo section displayed quiet features, and prices occasionally the turn in buyers' favour. Sales included steamers of Rosafé 62½ lbs afloat at 42s 9d to 42s 6d, choice white Karachi September 41s, and Australian new crop January-February at 44s 6d per 480 lbs, the latter to France. Maize cargoes also dull and values weak. A steamer of No. 6 yellow African early October, loading, sold at 34s 3d, and 5,000 tons Plate September at 34s per 480 lbs. Flour remains quiet at previous rates. London standard straight run quoted at 38s, patents 40s-41s, town households 36s per sack delivered in. All English country straights 31s-32s, delivered to London stations. Imported, Manitoba patents range from 37s-41s. As to sample, Minneapolis good patents 40s 6d, soft winters 36s-39s, Australian 34s 35s per 280 lbs ex store. Millers' offers quiet and

Prices throughout the market have again gone against buyers, there being a further important advance in raw material rates. Business in yarn and cloth has been difficult to arrange, but there has been an extensive inquiry. Some operators have missed their opportunity of purchasing on a cheaper basis, and are now awkwardly situated. Some Manchester firms have been saved from financial trouble by the appreciation in value of stocks. In piece goods for India there has been a considerable demand, but actual business has been patchy. Offers have been dealt with for substantial quantities of grey shirtings for Calcutta, but most of the bids have been quite impracticable. Buying of fair extent has taken place in bleaching, printing and finishing styles. China has given very little support in standard makes, but useful orders have been booked in fancies and specialties. A little more activity has been shown itself for Egypt, with an improvement in the turnover for South America. Quotations in American and Egyptian yarns have hardened from day to day. It has not been an easy matter to obtain higher figures, but a fair amount of trade has been done, not only in home counts, but in export descriptions.

THE TIMBER MARKET.

(FROM A CORRESPONDENT.)

Imports of building and furniture woods have reached this country in large volume over the month. There undoubtedly has been some diminution in the arrivals of wood-laden vessels to the Port of London occasioned by the recent strike and the still congested state of the docks and a diversion of some cargoes to other ports, but up to the end of last month the statistics show in all descriptions a much larger import of wood into the United Kingdom than for the first eight months of 1922 and 1921.

Business in the metropolitan market is showing a decided improvement, and a large amount of material is going into consumption, mostly for building trade requirements, other timber-consuming trades being quiet and not calling for much wood. House building seems to have shown considerable improvement, and one can only gauge from this that those without a house, and who have the money or able to raise some ready cash and available opportunities for mortgage, are coming into line for the purchase of new dwelling-houses of their own.

Spot prices of timber for building certainly have firmed up for certain sizes over the month, especially two-inch thicknesses, but not so much as the lay Press sometimes informs us, for stocks generally are large (and will be larger later on, when the above-mentioned congestion is relieved and ships are able to come, discharge, and go more freely), money is somewhat tight and competition still keen, which presents anything like fancy prices for timber, and which is another confirmation of rumours early this year that there was a ring in the timber trade.

In the f.o.b. market the position is a little more promising for consumers and importers than when we last reported, there being an inclination on the part of a few Swedish and Finnish wood exporters to meet importers' ideas, though one cannot say yet whether the "concession" will be general or only coming from manufacturers of some middle-class and lower-grade stocks. The

imports from Russia, Latvia, and Danzig are increasing largely, and has had, and will continue to have, considerable influence on the market during the remainder of the year.

In the furniture woods trade the market seems fully stocked with the various kinds of American hardwoods, mahogany lumber included. Trading is difficult, and prices, generally, uneasy; but for good-class mahogany logs there is a demand, and values are increasing, stocks in first hands being of limited amount, with little expected to come forward.

VEGETABLE OILS AND OILSEEDS.

In view of a possible shortage of supplies of linseed between now and the arrival of the new Plate crop, there continues a fair amount of activity, and the market has thus kept pretty firm, with prices maintained. The oil produce has come in for a fair amount of attention, and value of crude Egyptian has advanced to £37 ex Hull mill for early delivery. A little more interest is evinced in soya beans, also in the crude oil, while palm kernel oil is likewise in good demand, more particularly for export.

Arrivals of oilseeds, nuts and kernels in Great Britain during August were 111,965 tons, which is 22,000 tons better than a year ago, but below the average of recent months. Exports of vegetable oils during the month were 4,729 tons, to which linseed oil contributed 2,390 tons. In the eight months to date, the exports of linseed oil from Britain totalled 27,363 tons, against 52,693 tons in the same period last year, when very large quantities were shipped to the United States.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Market hides were steady at Thursday's Bermondsey auctions, best changing hands from 6½d to 8½d per lb. Seconds sold from 6½d to 7½d, and alterations in each class were unimportant. Best cows were unsold, seconds making from 5½d to 5½d. Best calf were steady from 5½d to 11½d, the demand for lights showing some improvement. Lambskins sold from 2s 1d to 7s 9d, and pelts from 4s to 7s 9d each. The provincial hide markets were weaker last week, as tanners to a very large extent abstained from buying. Liverpool merchants report trade in imported hides as steadily improving with a firm frigorific market at the reduced range of values. Dry hides are quiet, with values unaltered. Cables from the U.S.A. report the Chicago position as firm, with best heavy packers offering at 14½ cents.

OVERSEAS PRODUCE MARKETS.

Mining Lane, Friday, September 21.

Sugar was again a buoyant market, with no cessation in buying either on grocery or manufacturing account, and British refiners recorded early clearances of supplies placed on offer. An all-round advance of 1s took place. Messrs Tate and Lyle's cubes 59s 6d to 60s 6d; crushed, 57s 6d; nibs, 61s; granulated, fine and coarse grain, 57s 1½d; No. 1, 56s 10½d; No. 2, also London, 56s 7½d; ditto, October delivery, 56s 6d; yellow crystals, spot, 51s 1½d; and pieces, medium yellow to fine white, 47s to 52s 6d. A limited assortment of grocery imported commands support, and rates appreciated in sympathy with the British product. Canadian granulated, spot, sold, 55s 9d to 56s. Recent extensive Continental requirements respecting white Javas have made a marked and unexpected inroad into available supplies of same, and something approaching a dearth of offers to-day imparted further strength to the market in general. It is computed that about 50,000 tons have been absorbed by French, Belgian, Scandinavian, and Russian interests. Spot parcels of white Java of medium quality opened with business at 51s 6d, and later 52s 6d was paid, with grocery lots 52s 9d to 52s 10½d. Afloat steamers, sold, 25s 9d to 26s, c.f. and l., London. White Brazilian, spot, sold, 50s to 51s; and Hungarian crystals, 51s 6d to 51s 9d. Czechoslovakian granulated, November, done 24s 9d; ditto, November-December, 24s 6d, f.o.b., Hamburg. Of Dutch, Dinteloord, November-December, held for 24s 6d, f.o.b., Rotterdam. Belgian granulated, November-December, 23s 3d; crystals, ditto, 23s, f.o.b., Antwerp. Of Scottish granulated, Glebe K quality, prompt delivery, London, also Greenock, sold, 56s 3d. Raw refining kinds scarce, and where business results prices gradually move against the buyer. White terminal market generally active, and prices firmer though slightly irregular. September delivery sold, 25s 9d to 26s 3d; November, 24s to 24s 6d; December, 24s 1½d to 24s 3d; March, 24s 3d to 24s 4½d; May, 24s 7½d cwt. It would appear that certain buying back on the part of Continental beet fabricants is taking place respecting contracts entered into previously with British refiners. Java shipments to all parts for last month, 188,200 tons, against 287,350 same time last year. U.K. and Continent accounted for 19,980 tons, against 85,000 last year. Cuban stocks, 363,560 tons, against 364,800 last year. Liquid glucose, spot, 30s 6d cwt.

COFFEE.—Spot market very steady for all the finer qualities and which receive fair support. Bold sizes of Nairobi, sold, 81s to 93s 6d; Matagalpa, 100s to 104s; Costa Rica, bold, 110s to 126s 6d. Futures idle.

COCOA.—Market generally quiet on spot at about late rates. Accra F/F, new crop, November-January, 30s 9d, f.o.b. terms.

TEA.—Indian auctions embraced some 54,830 packages, and while all the finer qualities met a good demand at steady rates inferior sold rather quietly at rates favouring buyers. Ceylon sales of 19,750 packages received fair support, but medium and common kinds sold in buyers' favour with fine commanding steady rates. Java and Sumatra firm for the more desirable qualities with a good demand.

RICE.—There is very little disposition shown to handle Burma grain owing to the comparatively high prices now current, and the general situation closed flat, and, as far as Europe is concerned, is somewhat nominal at the moment. Twostars, spot, 16s; September-October, 14s, c.f. and l., London. Demand for Siam and also Saigon is limited. Spanish is somewhat quieter, after recent liberal trading, and No. 3, October shipment, sells at 18s 6d to 18s 9d, c.f. and l., London. It is interesting to note that cutting operations have been completed respecting the Spanish crop, and which is a good one, but bearing in mind that the bulk has yet to be housed, it is not an opportune moment to touch upon quality. The Italian crop is also favourably commented upon, while the Egyptian leaves nothing to be desired, and exports thence are anticipated in the next two or three weeks. American cable reports record some delay in harvest work owing to heavy rains. Japanese peas, September-October, 21s 6d; October-November, 20s.

PEPPER.—Pepper steady, quiet. Fair black Singapore, spot, 4½d; October-December, L.S., 4½d; Lampung, October-December, 3½d; Muntok, L.S., ditto, 6½d. Zanzibar cloves, October-December, 1s 1d; Singapore flake tapioca, spot, 3½d; fine Java, 4½d per lb; and October-November shipment, 29s 9d and 35s respectively. Sago flour, October-December, 12s 10½d; desiccated coconut firm. Halves, spot, 40s 9d; September-October, sold, 39s 9d; October-November, 39s 9d per cwt. Ginger quiet, unaltered.

JUTE.—Barely steady, and general trade quieter. First grade, September-October, usual continental ports, sold, £20 2s 6d; October-November, £20 5s; November-December, £20 10s; December-January, £20 12s 6d; lightning grade, October-November, £18 15s per ton. The Indian Government's final forecast points to a crop of nearly 7,000,000 bales, against about 6,000,000 last year. Hessians remain slow. 10 oz, spot, 28s; October-December, 25s 3d; 8 oz, spot, 21s 9d; October-December, 20s 100 yards. A twills, spot, 84s; B, 72s; October-December, 74s and 64s respectively; sugars, October-December, 78s; flour, 75s 6d 100 bags.

HEMP.—Manila dull and featureless. J grade, October-December, quoted, £31 5s; K, £26 15s; L, £26 5s; M, £25 per ton. African sisal unaltered.

SHELLAC firm. T.N., spot, 295s to 300s; October, 300s; December sold, 295s to 300s cwt.

COPRA steadier. F.M.S. Straits, August-October, Rotterdam, sold, £27 5s; October-December, £26 18s 9d; Ceylon, October-November, quoted £29; Java, ditto, £27 5s; Dutch E.I., October-December, £26 18s 9d; Cebu, £26 10s; South Sea, £26 5s. Palm kernels, November-January, Liverpool, sold, £18 10s ton.

RUBBER.—Fair trading, particularly in the near positions, but selling pressure led to easier prices. Heavy shipments from the

Straits of 10,500 tons first half of the month to U.K., Continent and America, coupled with liberal estimates for second half, affords the market no encouragement. Plantation standard crepe and sheet, spot, sold, 15½d; October, 15½d to 15½d; October-December, 15½d to 15½d and 15½d; January-March, 15½d to 15½d; April-June, 16½d. To New York, standard estate sheet, November-December, sold, 15½d, c.f. and l. Wild dull.

MENTHOL.—Japanese, spot, sold, 80s; peppermint oil quoted 12s per lb.

OILSEEDS.—Linseed firmer, with a fair demand. Bold Bombay, September, sold, £21 15s; small Bombay, ditto, £21 2s 6d; Calcutta, afloat, £21 7s 6d; September, sold, £21 2s 6d; September-October, £20 10s. Plate, afloat, £19 12s 6d; August-September, £19 10s; January-February, £16 10s. Rapeseed firmer. Toria, September-October, sold, £17; real bold Ferozepore, September-October, sold, £17; Jamba, £13. Cottonseed firm. Egyptian black, October, £11 15s. Sakelariadis, sold, £11, to Hull. Bombay, November-December, £9 7s 6d; December-January, £9 2s 6d. Gingelly seed firm. Large Bombay, October-November, Continent, sellers, £23 17s 6d. Chinese, October-November, £22 15s, Continent. Groundnuts firmer. Coromandel, machine-dried, August-September, £22 12s 6d. Chinese decorticated, f.a.q., October-December, £21 7s 6d; East African, September-November, £21 15s. Soya beans quiet. Manchurian, September-October, £11 10s. Castor-seed quiet. Bombay, September-October, £20 2s 6d per ton.

OILS.—Linseed irregular, with a steady demand for all positions. Spot, net, naked, 42s; September, 41s; September-December, 39s 9d; January-April, 36s 3d. Rape firm. Crude, spot, 38s; refined, 41s. Cotton firm. Crude Egyptian, spot, 37s; Bombay, 36s; common edible, 44s; deodorised (in barrels), 47s. China-wood firm. Hankow, spot (barrels), 91s; September-October, 89s. Coconut quiet. Ceylon, spot, 44s 6d; September-October, 43s 3d; Cochin, ditto, quoted 48s. Soya steady. Oriental, barrels, August-September, 39s 3d. Cod quiet. English, spot, 34s. Groundnuts firm. English, crushed, naked, spot, 44s; deodorised, barrels, 54s. Turpentine irregular. American, spot, 74s 9d; October-December, 75s; January-April, 77s. Rosin firm. American, grade B, 13s; F, 13s 6d; G, 13s 6d; H to I, 13s 6d; WG, 16s; WW, 17s per cwt. French nominal. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon. Castor-oil steady. First pressure, spot, quoted 51s; second pressure, 49s, and pharmaceutical 56s per cwt.

METALS.—Tin opened with a firm tone, but with buyers not disposed to follow any advance a generally quiet tone resulted. Values were slightly erratic, with chief attention centred on forward positions. Business included standard cash at £193 15s to £193 5s, with three months fluctuating between £195 and £194 to £194 10s. Sales were reported in the East on the basis of £199, c.i.f. Prices subsequently took a sharp upward turn, in sympathy with higher Eastern cables, combined with a good demand for distant dates. By the middle of the week cash sold at £197 5s and three months £198 to £197 to £199. Further sales in the East occurred at £201 15s, c.i.f. At Thursday's market, on selling pressure forward, prices for these positions ruled easier; cash, however, remained firm. A fair business took place. Standard cash sold at £197 10s to £198, and three months £198 to £198 12s 6d to £198 5s. The downward movement continued on the following day. Standard, cash, sold at £197 5s to £197 10s, and three months at £197 10s to £197 to £197 5s. English ingots quoted at £198 5s to £198 10s. Copper commenced easier, due to lower American advices and selling pressure, though at the lower range of prices established a good business transpired, and a partial recovery resulted. Standard, cash, quoted at £62 10s, with dealings in the months at £63 7s 6d to £62 18s 9d to £63. Later prices were somewhat irregular while rather lower on balance, and a fair trade passed. On Wednesday standard, cash, sold at £62 1s 3d, and three months £62 10s to £62 15s. On the following day values were the turn firmer. Standard, cash, quoted at £62 10s, with transactions in three months at £62 15s to £63 to £62 15s, while finally at £63 2s 6d. At the final market rates again ruled firmer, with business on a good scale. Standard, cash, sold at £62 12s 6d; and three months at £63 5s to £63 10s. Electro, £67 15s to £68 5s. Best selected, £66 to £67 10s; strong sheets, £66; wire bars, £68 5s per ton. Lead easier at £25 10s to £25 2s 6d as to position. Spelter firmer at £33 10s to £32 15s, according to position. Aluminium quiet. Home trade, £115; export, £120. Antimony quiet. Ordinary brands, £30 to £32; specials, £34 10s to £35.

TALLOW.—Messrs Colchesters and Woolner wrote as follows on September 19th:—The tallow market was firm during the week, and prices averaged 3d dearer to-day. There is still a good export demand, but the demand from the home trade is not what it should be at this time of year. Shipments from Australasia in August

ALEXANDERS DISCOUNT Co., Ltd.,
24, LOMBARD STREET, E.C.3.

Telephones: 1882 & 225 Avenue. Telegrams: "Alexanders, Thread-London."

THE short-loan market has continued very firm in tone, but the market has escaped being forced into the Bank. Up to 3 per cent. has occasionally been offered for overnight accommodation, but in general the rate has been $2\frac{1}{2}$ per cent., which was also the charge for weekly fixtures. The discount market, too, has shown little change, the market still being disinclined to work at all freely. The three months' bill rate has remained at about $3\frac{1}{4}$ per cent.

while end of December Treasury bills have found very few buyers at less than 3 per cent., though the banks have bought a few Novembers at 2½ per cent. Yesterday's allotment of Treasury bills naturally went at a higher rate, as they represent January maturities, and the market is not looking for any relaxation in the short-loan market for the present, while the rate for January commercial bills was called 3½-5 per cent.

	Sept. 28, 1923.	Sept. 21, 1923.	Sept. 14, 1923.	Sept. 7, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discounts (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses (Notice)	2½	2½	2½	2½	1½ (Jly. 5, '23)
Market rate (3 months' bills)	3½-5	3½-5	3½-5	3½-5	..

The Bank return shows an increase of £618,500 in the active note circulation, presumably in connection with quarter day requirements, for the movement is seasonal, while the high Public deposits of the previous week have been drawn upon to reduce Government securities, the former showing a decline of £4,568,600, and the latter of £3,283,300. Other securities have declined by £616,800, after their rise, due to special transactions, in the previous week, and other deposits, despite the outflow of notes, have gained £52,800 on balance. As the result of the shrinkage of liabilities, the Reserve ratio is 0.3 higher at 19.8 per cent. The amount of currency notes outstanding showed a further decline of £347,800 on the week, the total standing at £282,784,250, which includes £1,447,150 for notes called in but not yet cancelled. The fiduciary issue is £231,887,100, or £38,296,700 below the maximum.

THE STOCK MARKETS.

The foreign bond market has responded to the rally in the exchanges following Continental developments, but elsewhere business has been spasmodic. In the industrial section tea, nitrate, and tobacco shares have been prominent. The success of the Victorian Government loan and talk of further Colonial issues produced a slight dullness in the gilt-edged market after early strength, but Home Railway prior charges have been in demand at rising prices. Rubber shares are languid, and in the oil market prices have moved downwards. Shipping shares have been very quiet, but banking and insurance shares have made slight progress. The Kaffir market has revived a little with the assistance of buying from Johannesburg and Paris.

THE COMMODITY MARKETS.

Irregular movements are noticeable in the commodity markets. An important feature has been a downward movement in cotton, followed by reduced quotations in the cotton trade, and, as usual, in a falling market buyers have been acting with caution. In the wool trade the market has shown some response to the improved outlook, which has been created by the suspension of import duties in Japan and the latest developments in regard to the Ruhr. Jute was in fair demand, but prices were irregular. In the Cardiff coal market it is thought that buyers are holding back in anticipation of lower prices. In Cumberland the coal trade is dull. There is as yet no decided improvement in the demand for pig-iron, while it is stated that steel works can only keep going with difficulty. Tin and copper are both lower on the week. Little change is shown in wheat quotations. The firm tone prevailing in the sugar market during the past few weeks has become more pronounced. Tea values are slightly higher. The London hide market is steadier, and linseed maintains its value.

FOREIGN EXCHANGES.

Political factors have again been the decisive influence in an excited and uneasy market. The Paris rate, which closed on Saturday last at 75.85, reflected on Monday a strong optimistic tendency, and fell to 73.75. On the following morning it fell at one time as low as 71.10, but this could not be maintained, and there was a reaction through the day to 72.95. The two following days showed a continuance of this reaction,

the rate at one time rising as high as 75, but closing on Thursday at 73.87½. Yesterday morning, at 74.27, the tendency was still upward. This reaction is quite natural, in view of the exaggerated fall in the early part of the week, and the less hopeful view is strengthened by the growing realisation in France that the collapse in the Ruhr does not mean the solution of the German problem, but only a reversion to the position in January last, with even less likelihood of Germany being able to pay than before. A further cause for uneasiness is the more attractive terms which the Government have felt it necessary to offer for the new bond issue. The movements in the Brussels rate have been more exaggerated in both directions than the French, but as compared with the quotation of 90.30 on the 21st, the rate of 87.75 yesterday morning shows a decided recovery. Forward quotations in Paris and Brussels have narrowed to 2 to 3 centimes per month over spot in both centres. The Italian rate has also fluctuated sharply, but at 99½ yesterday shows an improvement of 1½ lire on the week. The mark quotation is now little more than nominal, each transaction of any importance being a matter for a special arrangement. The rate quoted fell from 650,000,000 on the 21st to 500,000,000 on the 25th, but since then has risen again to 800,000,000 and over on the news of the declaration of martial law. Forward rates are no longer quoted. In conformity with the general optimism in the earlier part of the week regarding the European situation, the dollar rate recovered from \$4.54½ on the 21st to \$4.56½ on the 25th, but since that time there has been a gradual reaction again to \$4.54½ yesterday. A few more cotton bills are coming forward, but business is still very quiet. Amsterdam, in the early part of the week, moved sharply in our favour to as high as 11.60, but since then most of this recovery has been lost, the rate of 11.56½ being only 1 cent higher than the previous week's quotation. Forward guilders are quoted at par to ¼ per month over spot. Switzerland, after moving sharply against us, is up again to 25.52½, as compared with 25.67½ a week ago. Madrid has been somewhat irregular, but on balance shows an improvement from 33.52 to 32.90. In Northern Europe Stockholm, Christiania and Copenhagen have all moved slightly in our favour, and Helsingfors at 170 also shows a further slight depreciation. In Central Europe Vienna is unchanged, and Budapest remains more or less nominal at 85,000. Prague at 151½ is about ½ krone higher. Bucharest is about the same at 980. In the East the rupee is very slightly cheaper at 1s 4½d, as compared with 1s 4 9-32d; the yen has moved from 2s 1½d to 2s 1¼d. In the silver market there has been active buying in India counteracting sales from China. Towards the end, however, the tendency was rather easier. Shanghai is ¾d cheaper at 3s 1½d, Hong Kong ¼d cheaper at 2s 3½d. In South America Buenos Ayres shows a further slight recovery from 40½ to 39 31-32d, Montevideo is about the same at 40½, after being dearer, Rio at 5 3-32d is 3-32d cheaper, while Valparaiso has depreciated from 35.60 to 36.70.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 22nd:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Supply Services	7,800	From Revenue	15,121
Interest, &c., on Debt	588		
Sinking Fund	486		
Reduction of Debt	5,195		
Added to Exchequer Balances ..	148		
Sundries	804		
	15,121		15,121

Revenue at £15,120,700 compares with £18,025,000 in the corresponding week last year. Excise receipts were mainly responsible for this decline, amounting to only £6,516,000, as against £9,022,000 a year ago. Property and Income-tax amounted to £2,626,000, and Super-tax to £330,000, against a combined total of £3,912,000 a year ago. Special Receipts yielded £509,300, against nothing in the corresponding period. The week's operations reduced the National Debt by £5,195,100, and caused the following changes:—

National War Bonds paid off	Min. £	National Savings Certificates	Min. £
Other Debt	550	Treasury Bills	1,990
Public Departments Advances ..	6,612		4,797
Sundries	4,450		
	220		
	11,832		6,787

There was again a good demand for National Savings Certificates, which reached a net sale of £1,950,000. The floating debt was increased by £320,000 to £807,511,500.

FINANCIAL YEAR, 1923-24 (April 1 to September 22, 1923).

	£		£
Total Expenditure ..	351,794,235	Raised by Revenue ..	354,196,755
Net Repayments	5,248,022	Decrease in Balances	2,845,502
Total	357,042,257	Total	357,042,257

ESTIMATES for YEAR 1923-24.

	£		£
Ordinary Expenditure ..	801,013,000	Ordinary Receipts ..	778,500,000
Special Expenditure ..	15,603,000	Special Receipts	40,000,000
Total	816,616,000	Total	818,500,000
		Surplus	1,884,000

Company Meetings of the Week.—On later pages of this issue will be found reports of the following company meetings:—British Cellulose and Chemical Company, Anglo-Austrian Bank, S. Instone and Co., and the Cam and Motor Gold Mining Company. Sir Harry McGowan, at the meeting of British Cellulose, made some interesting remarks on the merits of artificial silk as against natural silk. At the Cam and Motor meeting, the chairman was remarkably optimistic as to the current year's prospects.

LORD MORLEY.

THE sudden death of Viscount Morley of Blackburn, at his Wimbledon residence last Sunday, removes one who held, even in the opinion of those differing from him on political issues, a high place among our most notable public figures. Lord Morley was one of that rare company who have achieved distinction both in letters and in politics. The study of history and philosophy is the natural training of the politician, but few attain to the highest rank in both spheres. Lord Morley has fully earned his place among the small band of Englishmen of the eighteenth and nineteenth centuries who have succeeded in this dual task. Born in 1838, it was not until 1882 that Lord Morley entered Parliament. But from 1867, when he assumed the editorship of the *Fortnightly Review*, his influence in politics and letters was unmistakable. Apart from a short period in the editor's chair of the *Morning Star*, his most important editorial work in the political sphere was comprised within the years, when, under his hand, the transformed *Pall Mall Gazette* became the authoritative mouthpiece of intellectual Liberalism. He first secured Parliamentary office in the Gladstone Ministry of 1885, but the defeat of Home Rule, which was adopted by Mr Gladstone and the Liberal party largely through his influence, made his tenure of the Secretaryship of Ireland very short-lived. He was again a leader in the Irish fight as Chief Secretary for Ireland in the Liberal Government of 1892-95, and at this period was Mr Gladstone's most intimate lieutenant. Lord Morley set his seal on his devotion to the Gladstonian tradition and policy by his great Life of Gladstone, which occupied his time between 1899 and 1903. His passing removes one of the few remaining links with that era. Entering Parliament rather late in life, his actual political career is contemporary with those of Mr Asquith and Lord Balfour. But he was over ten years their senior in age, and his activities really belonged to a somewhat earlier period. In his most important political efforts—the Irish agitation, and later on his opposition to the Boer War, he fought a losing fight; but he lived long enough to see his views carried out in the granting of independence to the Irish Free State and the establishment of the South African Commonwealth.

Lord Morley was a member of the Liberal Government of 1906 to 1914. If his influence on policy was less prominent during those years it was due mainly to advancing age; but it may also to some extent have been the result of a regret that it should be necessary for the Government to intervene so actively in individual affairs as is implied in National Insurance, Trade Boards, and other innovations of that epoch. His particular contribution to the

work of this period, namely, the legislative reforms in India, was, however, important, because it launched this country on the road which must lead ultimately to the granting of much greater independence to the Indian Empire. We have yet to hear his account of the reasons which led him to resign in August, 1914, and surrender to younger hands the ungenial task of carrying on a great European war.

In political outlook Lord Morley was in the direct succession to Cobden; his political philosophy being mainly distinguished by his devotion to economy and peace and to individual liberty as the greatest factor of human progress. His long life began before the repeal of the Corn Laws, and covered a period during which these principles carried this country through a period of exceptional moral and material progress. His name will be remembered not so much for his actual achievements as for his qualities of character. A reputation for honesty and uprightness is not a comfortable one to live with, and he was wont to deprecate the use of the sobriquet "Honest John." But no man was better fitted year in and year out to stand the test that such a reputation demands.

Lord Morley's life was marked by political consistency. This quality may be the result of prejudice or mere obstinacy, but it acquires the merit of one of the greatest political virtues when it is based, as in Lord Morley's case, upon an early and thorough understanding of the fundamental problem of politics. In the passing of Lord Morley English contemporary literature loses one of its outstanding figures; the public lose a statesman whose life was a reminder of the value in public affairs of honour, and high principle; and his political associates mourn in the words of Mr Asquith, "a comrade of unblemished integrity, a valiant and resourceful fighter, an indulgent, warmhearted, and affectionate friend."

THE NEW SITUATION IN GERMANY.

ANOTHER chapter in the long history of the Reparation question is brought to a conclusion this week by the abandonment on the part of the German Government of the policy of passive resistance in the Ruhr. The proclamation announcing this decision was issued by President Ebert on Wednesday. After thanking the population of the Ruhr for its loyalty, it frankly explains that the cost of continuing the struggle is beyond its power, and would make the creation of a stable currency, the reconstruction of commerce and industry, and even the securing of a bare existence for the German people impossible. The proclamation was promptly followed by the appointment in Bavaria of a Civil Dictator in the person of Herr Von Kahr, a man identified with definite monarchist aspirations. The Berlin Government hastened to counter this stroke by suspending civil liberties throughout Germany, and appointing the Minister of War as Dictator for the Reich. This action seems to indicate a state of nerves in Berlin, and it may be that the counter stroke has been overhasty, since later advices seem to indicate that the action in Bavaria was not prompted by any Separatist intentions, but to the fear in Munich of an attempt at a Communist *coup d'état*. We are not disposed to take too tragically these threatenings of a break-up of Germany, and at the moment affairs seem fairly quiet. At the same time it has to be recognised that the state of tension which has prevailed so long in Germany has worn away the power of self-control and produced over-wrought nerves, short tempers, and a discredit of moderate counsels. In this atmosphere the unexpected may happen, but it is at least as likely that apathy will produce ready submission to firm government wherever it may be shown. Indeed, the process of climbing down has been accomplished by the German Government more smoothly than might have been expected. This is due to the fact that for months past the secret conviction has gained ground among the people that their resistance could not succeed in the long run; that France's attitude was not to be influenced by diplomatic pressure or even by world opinion, and that her economic situation was too strong to be seriously affected by the disturbance which the Ruhr adventure was causing to international commerce.

It is not, however, surprising that in France there has been a singular absence of jubilation. The surrender has no doubt been a satisfaction to patriotic instincts. But most people in France are beginning to wonder whether they are much nearer their goal. We do not imagine that France is yet prepared to face the full implications of the economic debacle in Germany, but in England, at all events, there will be general agreement with Mr Lloyd George's summary of the situation in the preface to a reprint issued this week of his recent articles on public affairs.*

"I have never doubted that France could impose terms on Germany. It was clear that she could starve Germany into submission to any conditions dictated to her. It is astonishing that the Germans should have held out so long. What I have steadily predicted in these articles is that those terms will not produce as much reparation as a more conciliatory course would have brought—that to operate them will be a source of constant friction, and that the methods employed to impose and execute them will rouse a spirit of patriotic wrath which will in the end bring disaster to the victor of to-day."

If France is to falsify this dismal prediction she will need to draw upon all her reserves of statesmanship and chivalrous understanding of the havoc that the present situation is causing, not merely to her ancient foe, but to all the nations of Europe and to the prospects of establishing a more peaceful world.

It needs no argument to show that the prospects of immediate payment by Germany, which were small in January last, are grievously diminished. This fact is now clearly realised in Paris, and perhaps explains the extraordinary absence in the French Press, or in the many speeches that have this week been made in various towns of France, of any clear idea of what is to happen next. Indeed, most French publicists seem to be reduced to the statement that France will retain her attitude of watchful waiting, and even suggest that the only test of whether Germany has really given way will be the actual resumption of production in the Ruhr and the deliveries in kind to France. But this negative attitude is not what the world expects from the French Government. Belgium and France, as well as Great Britain, received in May an offer from Germany which, in British opinion, held out a basis of negotiations. The only ground for refusing to negotiate with Germany on these or any other terms was that passive resistance must cease. Nothing was said about waiting till the Ruhr had returned to a normal condition, and even M. Poincaré is not likely to attempt to enforce the terms of the London Schedule of Payments which are juridically still in force. We cannot believe that the French Government would be so churlish as to make a grievance of the form of words in which President Ebert has announced the end of passive resistance, seeing that the substance has been fully conceded. The world waits for a move from France.

But when we ask on what terms any arrangements must be made, we come back to all the old difficulties. It is difficult to say anything new on this perennial question, but an interesting, if belated, contribution towards the history of the subject is made in Mr Lloyd George's preface, already alluded to, where he gives for the first time a summary of the terms proposed to France by Great Britain in the August Conference of last year.

"It was proposed:—

(1) That Germany should be called upon to take such measures as the Reparation Commission should stipulate in order to balance her Budget and restore her financial stability.

(2) That the Reichsbank should be made independent of Government control.

(3) That 26 per cent. of the total value of German exports should be collected in gold or foreign currencies and paid into a separate account in the Reichsbank in the name of the Sub-Committee of the Reparation Commission, known as the Committee of Guarantees.

(4) That the produce of all German import and export duties other than the levy should be paid monthly to a special account at the Reichsbank, which should be under the security of the Committee of Guarantees. The German Government should have the disposal of the

* "Is It Peace?" By the Right Hon. David Lloyd George, O.M., M.P. Hodder and Stoughton, Limited, London.

sums standing to the credit of this account so long as the Reparation Commission was satisfied that it fulfilled the obligations imposed upon it. If at any time the Commission was not satisfied that this was the case, the Committee of Guarantees should have the right to take over the sums standing to credit of this account, and to secure the payment to it of the produce of these duties thereafter.

(5) There were stern provisions for supervision of German finance by the Committee of Guarantees, and for preventing the export of German capital.

(6) There were provisions for supervision over State mines and forests in the event of there being a failure in delivery of coal or timber, as the case might be.

A Moratorium up to December, 1922, was to be given conditionally on the acceptance of the above terms by the German Government, and the Reparation Commission were then to proceed to fix the further annual payments."

Mr Lloyd George is evidently obsessed with the efficiency of a 26 per cent. export duty on German exports, for, in another place, he says that by his plan "fifty millions would have been already collected in gold and paid into the Allied account. The mark would have been stabilised, and could have been made the basis of a considerable loan." This suggestion must not be confused with the 26 per cent. of German exports which figures in the London Schedule of Payments. In the latter case, this figure is merely used as an index of Germany's capacity to pay, the actual collection from the people of Germany in the form of various taxes and its transfer to her creditors either in the form of payments in kind or in cash being left entirely open to the discretion of the Reparation Commission. But Mr Lloyd George seems to think that practically the whole of the Reparation payment can be collected by means of a single export tax. He forgets that export taxes are often paid by the buyer, and not by the seller; and even where they are paid by the seller they do not simplify in the long run the task of making a large Reparation payment overseas, since if the exporter receives a reduced amount of foreign exchange for his exports, some other means has to be found of obtaining the foreign balances which are needed to pay for Germany's imports.

The August terms are, however, of great interest as showing that the British Government was prepared to go a very long way in the direction of controlling German finance and placing many of its revenues in the hands of the Allies, and of controlling the sources of delivery in kind in the event of a German default. The summary of these terms, and the fact that they were rejected out of hand, is a useful reminder that the root difficulty of agreement between England and France is not so much what the Allies are to get out of Germany as the question of allocating the proceeds between England, France, Belgium and Italy, and of deciding what payments in respect of the Inter-Allied debt are to be insisted upon. Mr Lloyd George omits to mention that what really destroyed any hope of success at the Conference of August, 1922, was the Balfour Note issued the day before M. Poincaré reached England.

THE COMING CONFERENCE.

WITHIN a couple of days of the assembling of the Imperial Conference the public do not yet know what it is to discuss, and we now learn that it will settle its own agenda at its first meeting. As a matter of form this is, of course, perfectly correct and in order, but it is to be presumed that the Dominions will expect the home Government, as the convener of the Conference, to have a schedule of subjects ready for submission, and it might have been anticipated that some indication would have been given of the Government's intention in order that public opinion might have some opportunity of expressing itself. The trouble is, however, that the Government has not been entirely free from embarrassment on the vexed question of the agenda. In the first rush of enthusiasm, when the new Cabinet took office last winter, it offered as the keynote of its economic policy the development of trade within the Empire—an object which every person in the country devoutly desires to see brought about—but

since the Departments came to grips with the question of how this was to be achieved some unpleasant truths began to emerge. In the first place, unless the Government are prepared to propose taxes upon food and raw material, which are bound to arouse the united hostility of the whole industrial and consuming population, any attempt to use Imperial preference as a regulator of Britain's commerce is like endeavouring to control the movement of the sea with a mop. In the second place, it was quickly realised that the hope of rapidly developing the capacity of the Empire to purchase British goods was not likely to be very successful, even if the Dominions abandoned many of their schemes for stimulating home manufactures. The President of the Board of Trade, in a number of statements which are in effect a warning to those who have placed their hopes too high, has pointed out that British exports to the Empire, though privileged by preferential tariff rates in most of the Dominions, only remain a constant proportion of our total exports. If the existing preferences have failed to make any vital changes in the channels of trade, it is not expected that high preferences will be much more successful. In these circumstances the object of the Conference has naturally and almost imperceptibly shifted from the economic to the political sphere. Two issues in this connection are of the very greatest importance. First and foremost comes the necessity for keeping the Dominions in touch with the home Government on foreign policy. There is no doubt that the Chanak affair, which brought the Dominions to the brink of war almost without warning, has caused a good deal of disquiet throughout the Empire. In the second place comes the closely related question of Imperial defence. In both of these matters the situation is complicated by the fact that the Dominions are now independent members of the League of Nations. The real problem of the Conference is to organise the new relationship between the self-governing Dominions and the Mother Country in such a way that the former retain an increasing measure of independence and yet remain united by a special tie to the Empire, of which they are an integral part. The Dominions attach the greatest importance to their status in the League of Nations, and the solution of what appears at first sight to be a contradiction should be sought principally along the lines of their retaining diplomatic representatives in London in some formal association with the Foreign Office. The solution of this problem is more likely to promote friendly relations and ultimately to react favourably upon trade between the members of the Empire than any manipulation of tariffs.

Though it appears most improbable that Imperial preference will emerge as the vital issue, it is, nevertheless, worth while considering briefly what is implied in the idea of a self-sufficing Empire which is at the back of the minds of most advocates of this strange conglomerate of interested sentiment.

The first question for consideration is one of economic fact: how far is the British Empire actually self-sufficing, and how far is it capable of being made so? In some materials the Empire already enjoys an actual or virtual monopoly of the world's market.* Thus Canada produces much the largest proportion of nickel, cobalt, and asbestos; New Zealand enjoys an actual monopoly of kauri gum and phormium fibre; and the Union of South Africa has a virtual monopoly of the world's supply of diamonds and ostrich feathers. India controls the world's production of jute, and, together with Canada, is the greatest producer of mica. The importance of the Federated Malay States in rubber production is, of course, well known; and these Eastern Colonies share with Nigeria a virtual monopoly of tin. Again, the acquisition of Nauru put the Empire into a very strong position as far as phosphate supplies are concerned. In these cases production is more than sufficient for the needs of the Empire itself, and an exportable surplus will probably always be available. This is also true of gold and wool, where production, though not constituting a world monopoly, is nevertheless very large indeed.

In the case of a large number of commodities, the Empire's requirements are approximately equalled by Empire production; though, while the Dominions have

* These supplies were considered in detail, and an account thereof embodied in the Report of the Dominions Royal Commission. Cd. 8462. 1917.

more than sufficient for their needs, the British Isles are far from being self-sufficing. Foodstuffs predominate in this category. Before the war the production of wheat in the Empire was probably slightly less than the consumption, though the phenomenal development of Canada, together with the great increase in the area down to this cereal in Australia, appears to have turned the balance of recent years. Of course, not all Empire-grown corn is consumed within the Empire itself, though it would presumably be so available in case of emergency. The meat supplies of the Empire have also been increasing fast of recent years, and the inter-Imperial trade in dairy produce has risen enormously.

The advocates of self-sufficiency appear to consider that it is imperative that Empire-grown foodstuffs should be consumed within the Empire itself, and propose, in effect, that trade should be diverted from its normal channels with this end in view. Of course it cannot be denied that, as far as our present knowledge goes, such minerals as quicksilver, platinum, borax, and potash are not available in sufficient quantities: and it is possible that petroleum production will still fall short of consumption within the Empire. Further prospecting may, however, show that the Empire's resources of these materials are much larger than is at present realised, though it seems doubtful whether it would ever be physically possible for the Empire to be self-sufficient in these commodities. At present, again, our cotton supplies are derived in very large measure from the United States, though development may well be expected in the future in Australia and South Africa: while the latter country, together with Rhodesia, offers great promise in the production of maize, which is at present derived almost exclusively from extra-Imperial sources. In a word, the ideal of economic Imperialists is that such articles as the principal foodstuffs, which are at present derived in large measure from the Dominions, should ultimately come exclusively from that source; that articles like cotton, maize, and timber, which might be produced within the Empire, but which do in fact come to us from foreign countries, should be encouraged to come from Imperial sources; and, finally, that a strict control should be exercised over articles in which the Empire enjoys a virtual monopoly, so that effective pressure could be brought to bear where necessary in bargaining for those articles which must of necessity be derived from foreign sources.

With regard to the first contention, an analysis of trade figures for foodstuffs shows that, without any artificial measures of protection or of preference, both Canada and Australia have found no difficulty whatsoever in maintaining and extending their position in the London market. An attempt to force the pace would lead to very great difficulties. On the one hand trade between Canada and the United States has acquired immense importance, and American industries are, on the whole, much better designed than our own to meet Canadian requirements. Moreover, to restrict the area of supply of so vital a commodity as wheat would inevitably lead to considerably wider price variations than we experience under existing circumstances. Australia and India are notoriously precarious as wheat exporters, and while in the past we have been extremely fortunate in replacing our crop failures here by a surplus there, a restrictive policy would mean putting too many eggs into one basket.

Again, just as it would be impossible for all Imperial raw products to be consumed within the Empire, so it would be highly unlikely that British industry could find in the Empire itself a sufficiently diversified market for its manufactures. This is all the more the case in that a number of our industries have been developed particularly to meet the requirements of foreign markets, whether in Europe, China, or South America. This consideration is even more important when we consider those materials which could theoretically be produced within the Empire, but which are not, in fact, produced in sufficient measure to meet Imperial requirements. If, for instance, the importation of maize and meat from the Argentine were to be subjected to artificial limitations in the interests of Canadian and South African production, what would happen to British exports to South America? Again, if trade restrictions succeeded in shutting out Scandinavian and French timber and substituting Canadian or New-

foundland timber in its place, British exports to Scandinavia and France would be rendered to that extent more difficult to finance. This would clearly affect our shipping position, for some three-quarters of our outward cargo consists of coal, and British coal exports to the Dominions and Colonies are practically negligible. Finally, it should not be forgotten that, even when allowance is made for preferential reductions accorded to goods of British origin, the British self-governing Dominions, and to some extent India as well, all impose high tariffs on imported manufactures in the interests of home industries.

Against all these economic arguments stands the political case based upon safeguarding supplies in the event of war. We can only say that if the overseas route to the United States or the Argentine is cut, we cannot hope for help from Canada or Australia; while a war in which the United States joins with South America, Russia and Roumania against Great Britain is not a contingency to be taken seriously.

It would seem to us, therefore, that any attempt to force trade within the Empire by the adoption of artificial restrictions is likely to produce very serious dislocations. The Empire is not a naturally self-contained economic unity. Many of its raw materials, no less than of its manufactured products, must perforce seek a foreign market, while for other products it is itself dependent upon foreign sources of supply. If, on the other hand, an attempt were to be made to monopolise commodities like tin, or wool, or rubber, for Imperial consumption, this would lead to serious loss, and would also give rise to considerable political friction.

THE QUARTER'S NEW CAPITAL.

As usual the past three months have proved to be the quietest period of the year in the new capital market, and our statistics, moreover, show that the past quarter has the distinction of producing the lowest total for any quarter since the third quarter of 1914, when the outbreak of war put a summary stop for the time being to all new capital operations. The total for the past three months is £25,381,000, which compares with £95 millions in the preceding quarter and £62 millions in the corresponding quarter of 1922. New capital applications in London quarter by quarter since the beginning of 1910 are shown in the following table:—

Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
1910.....	£ 99,355,600	£ 88,721,400	£ 28,111,600	£ 51,250,500	£ 267,439,100
1911.....	61,245,000	56,238,800	14,914,500	59,361,200	191,759,400
1912.....	47,966,100	62,377,500	48,687,100	59,819,300	218,850,000
1913.....	50,344,700	70,014,900	29,961,800	46,216,000	196,537,000
1914.....	97,610,200	54,739,100	20,265,200	339,908,100	512,522,600
1915.....	46,313,500	25,693,200	586,772,500	26,462,500	685,241,700
1916.....	156,251,200	131,022,500	111,578,000	186,584,700	585,436,400
1917.....	825,925,200	221,254,300	57,054,400	214,362,100	1,318,596,000
1918.....	475,258,700	220,921,500	329,674,000	367,527,200	1,393,381,400
1919.....	291,901,400	93,879,000	536,502,200	113,776,800	1,036,059,400
1920.....	135,094,500	98,011,700	61,195,600	73,247,800	367,549,600
1921.....	63,382,100	65,281,900	57,890,600	202,423,600	388,978,200
1922.....	286,207,100	162,567,100	61,920,200	62,981,200	573,675,600
1923.....	86,251,500	95,050,100	25,381,000	..	..

These figures include British Government borrowings, except money raised by the sale of Treasury Bills and by Ways and Means Advances, and were, of course, immensely swollen thereby during the war and early post-war years. During the past three months, however, borrowing on the part of the British Government has been on a much reduced scale, amounting to less than £5 millions. This is entirely the produce of the sale of National Savings Certificates, which was stimulated in September by the announcement of a reduction in interest as from Monday next. In the corresponding period of last year the British Government raised £42½ millions, of which £39½ millions was in the form of 4½ per cent. Treasury bonds and the balance in Savings Certificates. The new capital issued by other borrowers in the London market in the past three months was £20,531,000, which is about

£1 million more than the amount similarly raised in the comparable period of 1922. In the next table we set out the various purposes for which new capital was raised in the past quarter and in the nine months:—

Description.	Total, First Half-year, 1923.	Third Quarter, 1923.	Total Nine Months to September 30.	
			1922.	1923.
British Government Loans	£ 63,727,000	£ 4,850,000	£ 346,752,200	£ 68,577,000
Colonial Government Loans	39,337,900	1,083,700	41,582,300	41,02,600
Foreign Government Loans	25,561,900	nil	13,066,600	25,561,900
British Municipal and County Loans	nil	nil	5,555,300	nil
Colonial corporations	3,257,200	295,500	5,839,100	3,552,700
Foreign corporations	nil	nil	6,107,500	nil
British railways	1,199,700	nil	2,872,000	1,199,700
Colonial railways	1,963,000	3,520,000	14,687,500	5,483,000
Foreign railways	522,500	38,400	16,500	560,900
Australian mines	1,656,800	262,500	409,200	1,919,300
South African mines	778,000	nil	1,263,500	778,000
Other mines	3,944,600	1,228,800	5,385,300	5,173,400
Exploration, financial, & investment trust	3,975,000	nil	784,000	3,975,000
Merchants, importers, &c.	6,935,000	4,264,000	6,252,500	10,899,000
Manufacturing	1,382,000	645,000	170,500	2,027,000
Stores and trading	755,800	nil	612,500	755,800
Estate and land	2,041,000	26,200	125,700	2,067,900
Rubber	4,231,700	150,000	16,765,000	4,381,700
Oil	6,910,700	986,400	11,323,300	7,897,100
Iron, coal, steel, and engineering	6,567,000	1,453,400	3,566,800	8,020,400
Electric lighting and power	292,500	101,000	nil	393,500
Gas and water	262,100	466,200	1,687,300	728,300
Hotels, theatres, and entertainments	74,000	nil	1,628,900	74,000
Patents and proprietary articles	17,600	120,000	nil	137,600
Docks, harbours, and shipping	550,000	nil	14,102,700	550,000
Banks and insurance	230,100	1,405,000	2,920,700	1,635,100
Miscellaneous	4,828,500	4,484,900	6,733,500	9,313,400
	181,301,600	25,381,000	510,694,400	206,682,600

Foreign Governments have not put in an appearance in the market since the middle of the year, but there have been two Colonial Government loans, one by the Government of Newfoundland for £408,700 and one by the Kasimbazar Raj for £675,000. The City of Rangoon was the only municipality, either home or foreign, to raise fresh money during the period. Under foreign railways, the whole amount represents the issue of £4 millions by the South Manchurian Railway in 5 per cent. guaranteed bonds at 88. Three investment trust companies issued over a million during the quarter, while a further £200,000 in this group was raised by the Levant Company in ordinary shares. In the manufacturing group the bulk of the total is accounted for by the Newfoundland Power and Paper Company and the Newfoundland Pulp and Paper Company, both of which issued £2 millions in debentures, the former being guaranteed by the British Government under the Trade Facilities Act. In the iron and steel group the main item is an issue of £1 million in 8 per cent. debentures at 92 by the Skoda Works, while the Lima Light and Power Company accounts for £1,350,000 under the electric light and power section. Three banks have been in the market, the two principal ones being the Queensland National Bank, with an issue of £560,000, and Bank of New Zealand with £750,000, both in ordinary shares. In the miscellaneous group the chief items were preference share issues for £3,382,500 by the Union Cold Storage Company and for £575,000 by J. Lyons and Co.

In the final table we show the destination of new capital raised in London, distinguishing Government from other borrowing:—

Destination of New Capital.	First Nine Months.					
	1912.	1913.	1920.	1921.	1922.	1923.
United Kingdom—Government.....	£ nil	£ nil	£ 22,054,000	£ 59,159,300	£ 346,752,200	£ 68,577,000
Other	36,533,400	25,595,200	242,528,900	58,942,100	58,259,800	35,171,700
British Possessions—Government.....	7,714,900	20,003,800	7,970,000	32,409,600	41,582,300	41,021,600
Other	27,786,900	36,944,200	17,032,600	14,069,200	13,528,500	18,547,700
Foreign countries—Government.....	35,501,800	56,948,000	25,002,600	46,478,800	55,110,800	59,569,300
Other	9,584,500	24,021,500	nil	5,905,000	13,066,600	25,561,900
	69,411,000	43,756,700	4,716,300	15,979,900	37,505,000	17,802,700
Grand total	151,030,700	150,321,400	294,301,800	186,465,100	510,694,400	206,682,600

The greatest decrease in non-Government borrowing in the nine months is shown in the capital raised for home purposes, which has declined by over £23 millions, while

the money for foreign countries other than foreign Governments shows a drop of nearly £20 millions. Five millions more, however, have been absorbed by industrial and other enterprises in the Dominions. In the case of the United Kingdom, the non-Government issues are up to the pre-war average, but those destined for overseas are very much lower. Overseas Governments, however, are borrowing on a heavier scale than in pre-war days. The total amount going overseas, nevertheless, remains well below the pre-war average.

THE STATE OF TRADE.

THE less pessimistic view which we gave last week of the prospects of trade is confirmed by reports which continue to come to hand. The buying of goods as a result of the Japanese disaster has particularly affected South Wales, where the output of black steel sheets, which can be used for reconstruction purposes, has been sold up to April or May next year. Further information as to the stocks of steel in the Ruhr, while confirming that these are very large, indicates that they are in the main the more highly manufactured forms of steel, and are therefore only useful for limited purposes. On the other hand, buying from the Continent is more active than in the last few months. Any restoration of confidence resulting from a Ruhr settlement would make itself felt almost immediately, whereas it would be some months before either the Ruhr or Lorraine would be in a position to meet demand. There is a feeling of hope that in the metallurgical trades and perhaps also in some others an upward turn of trade is still possible this winter.

The position of the shipping industry is still extremely difficult, and likely to remain so for the reasons given by Sir Alan Anderson in our supplement last week; but even in this case a note of optimism is struck by Lord Inchcape, who writes as follows:—

“Notwithstanding the present arrest of trade, the impetus to travel, pent up during the war, is still unexpended, and with the substantial reductions in ocean passage rates which have lately become operative, passenger traffic should continue at a fairly satisfactory level. Its influence as a stimulant of the revival of international trade is not negligible, and anything that may tend to enlarge the quantity of cargo—at present woefully deficient—offering for British ships, at home and abroad, is to be welcomed.

“In my opinion, a rehabilitation of Germany's currency, a renewal of her purchasing power, and a revival of her foreign trade, inwards and outwards, would bring its own compensations for the trading nations of the world, and particularly for Great Britain. We withstood German competition in an economically free and active market before the war, and I believe could do so again. It is the present partial paralysis of the machine of world-commerce which is causing much of our economic mischief, and which is reflected in the unemployment of our people.”

Lord Inchcape adds a note of warning as to the harmful effect of any attempt by Imperial preference or otherwise to restrict the scope and freedom of British shipping.

“I am in entire agreement with the pronouncement which occurs in the Memorandum prepared by the Committee appointed by the Chamber of Shipping and the Liverpool Steam Ship Owners' Association for the Imperial Economic Conference:—

The prosperity of British shipping and the maritime ascendancy of the Empire is bound up with the maintenance of freedom in the overseas trade of the world. The British Mercantile Marine, as it exists to-day, carries one-half of the overseas trade of the world, and could not find scope in any restricted market.

Our opinion of trade conditions is not based, however, merely on the facts of the last few days or so, but rather on the indications that, taking the world as a whole, there are signs of a movement—though as yet a very slight one—towards expansion. The improving undertone of world trade through the early part of this year, and so far as figures are available, is illustrated by the trade

statistics given in our supplement last week. We supplement them in the table below, in which the values of imports and exports for each month of this year for each country have been reduced to sterling equivalents, and the totals found for the countries quoted:—

Month, 1923.	Number of Countries.	Imports.		Exports.	
		Total.	Average per Day.	Total.	Average per Day.
		Mln. £	Mln. £	Mln. £	Mln. £
January	23	361	11.6	295	9.5
February ..	23	334	11.9	296	10.6
March	23	384	12.4	324	10.4
April	21*	376	12.5	310*	10.3
May	17*	381	12.3	319*	10.3
June	14*	370	12.3	320*	10.7

* Average allowances have been made in the totals for the missing countries.

These figures show that though there has been a small set-back in the average volume of imports per day since April, the corresponding volume of exports has recovered, and in June was higher than for any other month of the year. On the whole, then, world trade has probably increased, though there is not much in it either way. This, of course, must not be interpreted as meaning that things might not have been better had the Ruhr not been occupied. It does, however, indicate one thing, that international trade has not decreased since the occupation of the Ruhr, as most of the prophets foretold at the time that it would.

The figures used above are open to the objection that they may not be representative. With a view to finding out how far they may be taken as a fair sample of world trade as a whole, the value of exports and imports for countries omitted from the lists of the *Economist* have been collected for the year 1921. In that year imports to some 74 other countries and dependencies (excluding, however, Russia and Austria) amounted to rather more than 1,100 millions sterling, and exports to over 1,000 millions. For the 23 countries used above, the total values of imports and of exports for six months were respectively 2,206 millions sterling and 1,864 millions. Thus the countries of the *Economist's* list may be taken as sharing something alike 80 per cent. of the total international trade of the world, and what is true of them may be taken as being true of the world as a whole.

Incidentally, it may be indicated that the difference between the import and export figures gives approximately the payments for freight and insurance, which, it will be seen, add 18 per cent., on average, to the f.o.b. cost.

PROTECTIONIST OPINION IN CANADA.

(BY A CANADIAN CORRESPONDENT.)

PROTECTIONIST sentiment in Canada showed its first signs of life nearly a century ago, but did not come into full flower until Confederation had created at least the semblance of an unified national spirit and germinated a desire for the possession of all the attributes of a modern nation, including industrial factory establishments. Since it achieved its great triumph in the popular endorsement of Sir John Macdonald's "National Policy" at the General Election of 1878, it has waxed or waned in volume according to general economic conditions. In times of stress and adversity the critics of protection multiply; in days of prosperity and boom its defenders and eulogists increase. But there has always been available for the safeguarding of the fabric raised by Macdonald a basic reserve of protectionist sentiment, which only needed skilful organisation to prevent any serious tampering with the main structure. While the Conservatives have openly and consistently championed the protectionist system, it has been the habit of the Liberals to revile it fiercely from the Opposition benches, and then, after they attain office, to accept and condone it.

It was Western impatience with the fiscal backslidings of the Liberals and the menace of a political insurgency

which drove Laurier to negotiate the Reciprocity Treaty of 1911, and if his Ministry had been less feeble, and not discredited by a series of scandals, he would have carried it through. To-day many strong opponents of the 1911 treaty regard its rejection as a cardinal error, and the general impression is that if the same bargain were to-day submitted to the Canadian electorate it would be endorsed by a handsome majority. The cry "Let well enough alone" which defeated it has ceased to be efficacious.

The Conservatives came to power in 1911 pledged to maintain the existing protectionist system. Despite vigorous pressure from the triumphant manufacturers, the Borden Ministry did not dare to move until the revenue necessities after the outbreak of war provided a pretext for a special war Customs surtax which raised the general tariff by $7\frac{1}{2}$ per cent., and the British preferential rates by 5 per cent. However, the Western Liberals, whose alliance alone had made possible the Coalition Ministry of 1917 and the enforcement of conscription, exacted, as the price of their continued support, the removal of this special surtax, and the 1919 Budget brought the main body of tariff schedules back to the pre-war level. The West, however, was far from satisfied with this standard, and as the Conservatives could make no further concessions, the managers of the Liberal party saw an opportunity for the rehabilitation of their fortunes, and embodied at the party convention in 1919 pledges of sweeping fiscal reductions in the official platform, which was solemnly ratified and accepted by Mr Mackenzie King, the new leader. Whether if the Westerners had swallowed the proffered bait and thrown in their lot with the Liberal party the latter's whole fiscal programme would have been carried out is a matter of speculation, but they were suspicious of the good faith of the Liberal leaders, and proceeded to organise a new third party called the Progressive, to which all the Radicals and Free-traders of the country rallied. So the Liberal party fell back under French-Canadian domination, and its leaders calmly proceeded to jettison the fiscal planks of the 1919 platform. The Liberal Ministry has now produced two Budgets, and the small tariff reductions sanctioned by them, chiefly by way of increases in British preferential rates, represent a feeble and timorous attempt to fulfil the very definite pledges of the Liberal platform on which Mr King reiterated time and again that he would stand or fall. His position, however, while hardly consistent with a fine sense of political honour, is intelligible. He was left dependent upon the support of the Province of Quebec, and Quebec, which, possessing in 1911 comparatively few factories outside Montreal, and being more interested in the naval than the fiscal issue, gave Laurier a substantial majority for reciprocity, has meanwhile moved definitely into the protectionist camp. In the intervening years large developments of hydro-electric power and the discovery that French-Canada is a fine reservoir of cheap, docile, and reasonably efficient labour, have made Quebec very attractive to industrial entrepreneurs, and to-day not only is Montreal a great industrial centre, but the rural counties are dotted over with small towns each containing a few factories; the St Maurice Valley, for instance, is filled with them. This industrial population creates a very accessible market for local farm produce, and the adjacent farmers, as in Ontario, are easily convinced that any lowering of the tariff means the ruin of these small industrial towns and the removal of their customers. The result is that to-day Quebec is probably the most protectionist province in Canada, and as it has always been the great harbour of the nationalist idea, its reproduction in politics is a logical outcome. The manufacturers of Ontario have a special dislike of American competition, but as the sittings of the Drayton Tariff Commission revealed in 1920, the chief bugbear of their brethren in Quebec is British competition, which coming to them as it does for half the year by cheap water freight rates, is more serious in its effects. Not that certain Ontario manufacturers do not show an acute aversion to British competition. To-day the cotton and woollen manufacturers are filling the heavens with their plaints that recent tariff cuts have flooded Canada with British goods offered at prices which they cannot hope to meet, and they are conducting a sedulous campaign of propaganda for the restoration of the old schedules.

But, on the other hand, powerful factors are working definitely against the Protectionists. The patriotic flavour of appeals for the support of home industries and demands for the achievement of national self-sufficiency have been enormously weakened by the wholesale invasion of the Canadian industrial field by American capital. It is impossible to appeal to local Canadian patriotism for the preservation or increase of the special privileges of an industrial concern which is known to be merely the Canadian branch of a great American corporation. The spectacle of Henry Ford making the same cars on two sides of the same river under parallel conditions, and, thanks to the Canadian tariff, charging Canadian purchasers at least 25 per cent. more than American, is not calculated to generate enthusiasm for the protective principle. Two years ago the *Toronto Star* found by careful investigation that, by the admission of their managers, industrial firms, which had plants both in the United States and Canada, faced no special handicaps in the latter country, but many of them profited greatly by the Canadian tariff. In the event of another election on the reciprocity issue the attitude of these American-Canadian firms would be doubtful. Some of them would want to keep their valuable preserves intact, but others would cheerfully see the fiscal barrier between Canada and the United States wiped out. Shrewd observers have argued that complete Free-trade on a permanent basis between the two countries would redound largely to the advantage of Canadian industry, for once an open door to the great United States market was assured manufacturers would flock in droves to utilise the vast water-powers of the St Lawrence and Ottawa valleys, and make of them the chief industrial region of North America. Undoubtedly some owners of Canadian water-powers discern the possibilities of such an outcome, and are no longer wedded to protectionist theory.

Other recent developments are inimical to the protectionist system. Up to 15 years ago the industrialists of Canada were almost a unit in favour of the protective tariff, but the development on a large scale in Eastern Canada, firstly, of pulp and paper manufacture, and, secondly, of mining, has destroyed that solidarity. The pulp and paper makers control the whole domestic market and export three-fourths of their produce; all that Protection can do for them is to increase their cost of production. The same is true of mining, which is handicapped by heavy duties on machinery and a wide variety of supplies. If some political leader arises who will educate the voters in the mining camps of Northern Ontario and British Columbia and in the numerous little pulp and paper towns about the true merits of the fiscal question from their point of view, and bring them into line with the large body of agrarian foes of the tariff, then it may easily go hard with the existing protectionist system.

The issue of Imperial Preference is not likely to be raised by Mr Mackenzie King, a professed disciple of Gladstone, and in this connection many eastern manufacturers would prefer a policy of *quieta non movere*. The Dominion Millers' Association at its annual meeting adopted a proposal that "The Dominion Government be requested to instruct its delegates to bring before the Economic Conference a resolution advocating Free-trade in such natural products as are produced within the Empire in sufficient quantities to meet the requirements of the Empire, and that a duty for revenue be imposed on such articles imported from without the Empire," but the *Toronto Globe* assailed the proposal as unfair to Great Britain, because out of a list of natural products imported into Canada last year exceeding 250 million dollars in value only a fraction came from Great Britain.

The idea of Free-trade within the Empire has an influential body of supporters in Canada, which is not decreasing. It is an integral part of the programme of the organised farmers, and it has many attractions for the numerous American-Canadian firms who appreciate the value of Mr Chamberlain's preference, and now conduct most of their export business from their Canadian plants. If the support available for it were efficiently organised it might be made to prevail, as far as Canada is concerned, despite the resolute opposition of manufacturers who are only interested in the domestic market. Compared with it the typical Imperial preference schemes of *Morning Post*

zealots are sheer futility, but one change in sentiment should be noted. The collapse of the old Tariff Reform campaign in Britain was materially helped onward by the repudiation on the part of the leaders of the Canadian farmers of any desire for a preference on their grain at the expense of the British workers, but it is doubtful if such a repudiation could now be secured. The average western grain grower regards himself in a plight too sorry to permit any indulgence in altruism, and he would probably now regard as a welcome windfall any preference which would give him a favoured position in the British market and offer a prospect of increased prices. But he also knows that no British preference can ever compensate him for exclusion from the vastly more valuable market in the United States, and he will always be wary of schemes which might set up permanent obstacles to good trade relations with the United States. The sum of the matter is that until a better substitute is proved to be available for them the people of Canada will not abandon their protectionist system, but they no longer regard it as a sacrosanct institution, and may, unless general prosperity returns within a reasonable time, be ready to contemplate an experiment with a fresh fiscal régime.

THE INDIAN TARIFF ON IRON AND STEEL.

RECENT advices from India state that the Tariff Board set up in June as the outcome of the recommendations of the Fiscal Commission commenced its meetings towards the end of last month, and in accordance with the recommendation that the "question of extending protection to the manufacture of steel should be one of the first subjects for inquiry by the Tariff Board" heard evidence from representatives of the steel manufacturing industry in favour of protection. Next to cotton and jute mills, the workshops which supply railway materials are the most considerable industrial establishments in India. The Indian import duty on iron and steel and railway materials was raised in 1922 from $2\frac{1}{2}$ per cent. *ad valorem* to 10 per cent. This was not then a measure of protection, but rather one for increasing revenue from Customs. Most of the other Indian import duties were advanced at the same time. But since the Indian Fiscal Commission advocated generally a policy of industrial protection for India, subject to a great many qualifications, and pressure is being exerted upon the Government to take up the question of iron and steel, as the Commission recommended in the words quoted above, there is small reason to doubt that iron and steel products from the United Kingdom are threatened with the possibility of increased Indian duties or of a subsidy to local manufacturers of similar goods.

We mention a subsidy or bounty because the Fiscal Commission, in discussing this very subject at considerable length, leant rather towards a bounty on Indian iron and steel than towards a protective tariff. Iron and steel, certain chemicals and minerals, and lubricating oils were discussed by the Commission as "basic industries." Protection by tariff, they suggested, might be regarded as undesirable in the case of basic industries, seeing that the effect of protection would be to raise the cost of the raw material of a number of Indian industries. "For this reason," said the Commissioners, "it may often be found that the best way of assisting a basic industry is by a bounty rather than by a protective duty." And also as regards machinery, for since the supply of machinery, at the cheapest possible cost, was an essential condition of India's industrial progress, the conclusion of the Commission was "that when a case is made out for the encouragement of the manufacture of machinery in India such encouragement should be given by means of bounties." This attitude of the Commissioners is consistent with the general trend of their report, which was that protection for Indian industries—whether by tariff or by bounty—should be temporary and not permanent, and should not be continued longer than was necessary to establish local industries on a firm competitive basis. This idea of temporary protection is common enough,

but the history of it is not encouraging. Many countries have started, no doubt in good faith, to give what they intended should be a temporary protection, and then found that the vested interests created by protection were sufficiently strong to prevent its subsequent removal. The tariffs of the United States and of the Dominions are full of "temporary" duties subsequently made permanent and even progressively protective.

The principal iron and steel producing company in India, associated with the name of Tata, will no doubt press for protection on a large scale. Its officials are reported to be asking for a tariff on wrought iron of 20 per cent., and on steel of 30 per cent., respectively double and treble the present rate of duty of 10 per cent. For the year ended March 31st last India imported iron and steel goods equivalent to about 1,200,000 tons of ingot steel. The Tata company claim that, with the extensions now projected, they will have a capacity of 570,000 tons of ingot steel per annum. So that even with these extensions the company will not be able to supply more than half the steel requirements of India. Their plea for protection, therefore, amounts to a proposal that the prices of their own production of steel, and as much more than they produce, should be raised against consumers for their benefit. This is protection in its very crudest form which, if acceded to, would knock on the head the Fiscal Commission's notions of using duties or bounties to give new industries a safe start and not to keep them in force longer than was necessary to effect this purpose. It is, however, perhaps just as well that the Indian Government should have its eyes opened to the difference between the Commission's pretty theories and the rude game of grab which is protection in ugly practice.

There are less than 1,400,000 industrial workers in the whole of India, and for every one industrial worker there are nearly 200 persons engaged in pasture and agriculture. Any protection of the industrialists would throw a direct burden upon the cultivators of the soil, who are already close to the margin of subsistence even in India. An increase in the price of iron and steel due to a tariff would at once raise the cost of the railway materials on which a cheap railway service depends. The Commissioners were clear on the point that machinery and railway material must not be made artificially more expensive—that their Indian manufacture must be encouraged, if at all, by bounties and not by tariffs. Yet it is obvious that if the manufacture of wrought iron and steel products were protected by tariffs then a demand for similar protection against imported machinery and railway materials would instantly arise and would be difficult to resist. Tariffs all round or bounties all round would inevitably follow. In economic effect a bounty is perhaps less objectionable than a protective duty, but both bounties and tariffs would have to be paid for by the Indian cultivators of the soil, who, as the Commissioners recognised, could themselves get no countervailing advantage.

NORTHUMBERLAND SHIPBUILDING COMPANY.

It is somewhat rare in the history of public companies to find the rapid expansion of a huge undertaking as shrouded in mystery as the development of the Northumberland Shipbuilding Company. Registered in 1898 as a private company, it was converted into a public company in February, 1919. In 1918 its capital was given as £500,000, which was increased in 1919 to £2,400,000 and in 1920 to £7,000,000. Six per cent. debentures were authorised for £3,000,000. Thus we are dealing with big figures. The issued share capital is now stated to be £6,900,000, and the loan capital £2,000,000. The ordinary shares of 1s each are quoted in the Stock Exchange Supplementary List of September 27th at $1\frac{1}{4}$ d, the latest bargain being on September 17th—a week before the presentation of the balance-sheet. The 10 per cent. preference shares of £1 were quoted at $1\frac{1}{2}$ d, this bargain being done on September 27th. As late as the year 1918-19 a distribution of 70 per cent. was made on the ordinary shares, while for 1919-20 10 per cent. and a capitalised bonus of

150 per cent. are recorded. For 1920-21 an interim dividend of 5 per cent. was paid. Then the distributions ceased. The veil, however, is lifted by the publication of accounts for three years ended June 30, 1923. No explanation is vouchsafed in the directors' report as to why the accounts have been held back. Moreover, it is to be noticed that the report is dated September 12th, and it would be interesting to know why it was held over until after the Workman Clark meeting.

The story of the difficulties of the undertaking as told by the directors is interesting. Firstly, it is pointed out that "the cancellation of steel contracts resulted in serious losses. When these contracts were entered into trade was exceedingly good and seemed likely to continue so for some time, while steel material was very difficult to obtain. It was necessary to cover requirements for all the orders then on the books, and arrangements were made with three firms of steelmakers for the necessary supplies on favourable terms. Unfortunately, shortly afterwards the slump in trade came with startling suddenness. The cancellation and suspension of work on hand became general, and in consequence the companies were left with large quantities of steel which they could not possibly utilise. To get rid of these obligations they had to enter into agreements to pay considerable sums by way of damages; and these, in conjunction with the slump in trade, heavy taxation, strikes and lock-outs, have had a most crippling effect on the businesses. On the other hand, it was impossible to obtain adequate compensation from shipowners for the cancellation of their orders." The report then proceeds to explain that "owing to the change in the ownership of Workman, Clark, and Co., Limited, Messrs Baldwins, who had previously supplied most of their steel requirements, did not feel under any obligation to continue to supply Workman, Clark, and Co. As the supply of steel from that quarter was absolutely essential, it became necessary either to acquire control of Messrs Baldwins or close the yards of Workman, Clark, and Co. Apart from this, Messrs Baldwins was represented as a very valuable concern, and on the estimate of profits submitted this certainly was the case. In view of the necessity of securing supplies of steel for Workman, Clark and Co., and taking into account the value of its assets, the volume of its business and the prospective profits, it was decided to acquire the shares of Baldwins, Limited. The financing of the transaction was made possible by reason of the profits which would be available after the abolition of the excess profits duty, which was confidently expected would be taken off at that time. Before payment became due, however, the excess profits duty, instead of being abolished, was increased from 40 per cent. to 60 per cent., thus rendering it impossible to carry out the financial scheme. In consequence, the associated companies and this company became liable for heavy damages for breach of contract." To attribute the breakdown of the arrangement with Baldwins entirely to the decision in regard to E.P.D. is disingenuous. The fact is that the expectation of an indefinite boom in shipbuilding and the panic to get hold of supplies of ship plates, was due to a mistaken appreciation of the prospects of trade. Throughout these dealings ample warning had been given of the transient nature of the boom, the end of which came before the deal was completed. The promoters of this and similar post-war creations cannot escape responsibility for one of the most serious misjudgments in our recent commercial history.

The publicity given to the affairs of Workman, Clark, and Co. throws an interesting sidelight on inter-company finance. On July 12, 1921, the Northumberland Shipbuilding Company created 5,000,000 6 per cent. "B" preference shares; it was pointed out that the "creation of such shares did not increase the authorised capital of the company," and that "no shares were issued to the public." These shares, we are told, were "applied for at par by and allotted to associated companies." This might be good business for the Northumberland Shipbuilding Company, but it was certainly bad for Workman, Clark, and Co. The trustees' report to the debenture holders of Workman, Clark, and Co., it may be recalled, stated that the deplorable position of that company was brought about

by, amongst other causes, "the conversion of assets which were at the date of the debenture issue in readily realisable form, and the reinvestment of the proceeds in these 'B' preference shares of the Northumberland Shipbuilding Company." The recital of the bare facts, we think, is almost sufficient commentary on this inter-company transaction. The balance-sheet gives many details, but it is a shining example of the urgent need for holding companies to be compelled to disclose the actual assets and liabilities of their subsidiary or associated undertakings. Under assets a grand total of £10,422,387 is recorded. But some items which appear under this heading, such as debenture issue expenses, £32,279, and charges re increased capital, £16,252, are not in the nature of assets. These last two items are dated "as at June 30, 1920." Yet, according to the Stock Exchange Official Intelligence, this company gave away a capitalised bonus of 150 per cent. for 1919-20, and its financial year ends on June 30th. Surely these charges could have been written off out of such huge profits. Out of total assets £8,863,976 represents share holdings in associated companies. What these shares are actually worth may be disclosed at the general meeting, which is to be held on October 1st at Winchester House, Old Broad street, London, at 12 noon. The directors' remarks are illuminating in this direction. "The shares in associated companies have been retained at cost," but "the unprecedented slump in trade and the present depressed state of the shipbuilding industry have made them of comparatively small value at the present time." The auditors are somewhat more explicit. They state that "owing to the fact that the shares of the associated companies are not quoted on the market and that recent balance-sheets are not available, we are unable to form a definite opinion as to the value of the investments in these companies." They mention, however, that the value of the shares "is negligible." One is naturally led to ask the question, Why were recent balance-sheets of associated companies not available? Surely, it is somebody's duty in the company to watch over the assets and liabilities of associated concerns. Until the exact facts are known about the value of these holdings the adverse profit and loss balance of £390,850 is of relatively small importance.

We fully recognise the adverse conditions which have prevailed in the shipbuilding industry, and do not minimise the difficulties with which soundly financed undertakings have had to contend. But the history of this group of companies is not one of which British industry may be proud. It is, however, to be observed that the scale of this setback is due to the combination of unwise finance with trade difficulties. The directors may properly remind us that the industrial and economic condition of some of the shipyards, &c., in the group is sound, and when trade improves may reasonably expect to become fully employed—though not to return a profit on excessive capitalisation.

Notes of the Week.

The Ambassadors' Decision.—Unless later information modifies the impression made by the first report of the Ambassadors' decision of the Italo-Greek controversy, the finding will produce something very like a feeling of despair among those who believe that fairness and justice are the only forces that can restore peace to Europe. The terms on which the Greeks accepted the arbitrament of the Conference of Ambassadors provided that the Conference reserved the right to order the payment of the full amount of the deposit of 50 million lire if the inquiry showed that Greece had not "ensured in all the desirable conditions of celerity the search for and the exemplary punishment of the culprits." Apparently the inquiry has pointed to Albanians as being responsible, and the murder as being one of revenge for the actions of General Tellini when he was Governor of Avlona. The Ambassadors, however, on receipt of a report which cannot possibly be based on anything but a very hasty inquiry, have decided to award the whole sum to Italy, and not to apply to the Hague Court to consider whether all or only a part of it is due.

In other words, Greece is convicted of negligence in bringing to book the perpetrators of a crime in an uninhabited borderland who are believed to have taken refuge in Albania. Even in Paris the feeling is freely expressed that this decision is the result not so much of a desire for abstract justice as by a desire to avoid an awkward diplomatic conflict with Italy, who, it will be remembered, reserved to herself some freedom of action in the matter, and might have delayed the evacuation of Corfu if the money had not been paid before the 27th of this month. Italy has now no excuse for remaining in the island, but we cannot but feel that the prestige of the Great Powers as the custodians of justice will have suffered very much in the eyes of smaller nations. If the Great Powers are wise they will dissolve a body whose existence has become an anachronism, and take steps to see that such duties as it has been performing hitherto shall be transferred to the Council of the League, where the Powers when in agreement can act quite as effectively and swiftly as in the Council of Ambassadors, with the difference that at Geneva their actions are annually exposed to the healthy criticism of delegates assembled from all over the world.

Ireland and the Imperial Conference.—Our Dublin correspondent writes:—It is announced here that the Irish Free State will be represented at the pending Imperial Conference by the President and Vice-President of the Executive Council, Mr Cosgrave and Mr O'Higgins. Their task will be difficult. Fiscal rather than political issues will predominate in discussion, and in fiscal matters Ireland's representatives must necessarily find it very difficult, at the moment, to adopt any definite national policy. Opinion in Ireland on fiscal matters is still fermenting, and no real clarification can be expected immediately. Until that comes it would be unwise for Ireland to enter into any binding engagements either with Great Britain on the one hand or with the Dominions on the other. It would not be safe for her, without due consideration, to make common cause with the latter in matters fiscal, although in matters political there is identity of interest. So far as Irish opinion has exhibited any tendency, it has been in the direction of wishing to lessen its dependence on the British market by opening up, so far as may be, direct trade with foreign markets. Yet it might not be anxious to lose its hold upon the British market by assisting a policy of making that market more accessible to Dominion produce in competition with her own in pursuance of a policy of fostering Imperial trade by preferential tariffs. The Fiscal Committee has been industriously taking evidence, and is likely to report in the near future. It is doubtful, however, if its report can be conclusive. Its main duty was apparently the ascertainment of the "facts," so that possibly its findings will merely provide the controversial weapons for the ensuing discussions as to the best policy to be adopted for dealing with the various interests involved. Again, the issue between the employers and labour has yet to come to a head, and the development of the struggle may well help to determine fiscal policy. President Cosgrave in the Dail on Tuesday adverted in grave terms to the enormous losses inflicted on the country, and appealed for a reasonable spirit of compromise from every section of the community. He definitely declined to commit the Government to either side of the controversy, but was willing to finance a big housing scheme if the rival parties would guarantee to co-operate in making it a success. His words clearly showed that he was impressed with the unwisdom and injustice of trying to force a reduction of wages before there is any reduction in the cost of living, and that he was not satisfied that the high cost of living was due entirely to high wages. The Government was not satisfied, according to Mr Cosgrave, with the co-operation afforded to the Commission on profiteering, and information that should have been made available was not forthcoming; "it looked as if there was a conspiracy on one side to keep up prices, and on the other a conspiracy to keep up wages." Truth to tell, there is plenty of selfishness and folly on both sides, and sound employers and good work-

men suffer for it. But wages must fall if the commercial life of the country is to be carried on. And if wages are to fall the cost of living must first be reduced.

Earthquake Losses in Japan.—The number of deaths resulting from the recent disaster is not yet accurately known, but it is believed to be approximately 85,000 in Tokyo and 35,000 in Yokohama. In the latter city the destruction by the earthquake was much more severe than in Tokyo, but destruction by fire was much less severe than in the capital, where the small wooden dwellings caused over large areas almost complete destruction of property, and has created a much more serious problem than in the seaport. Reckoning in percentages, it is roughly estimated that out of 100 buildings in Tokyo, 9 per cent. were destroyed by earthquake and 41 per cent. by fire, a total loss of 50 per cent. In Yokohama approximately 45 per cent. were destroyed by earthquake, and only about 25 per cent. by fire, a total loss of 70 per cent. When it is remembered that the population of Tokyo is about 3 millions, and of Yokohama about 600,000, it is obvious that the task of finding temporary accommodation is one of very great magnitude. The total material damage is now thought to be between £150-170,000,000 sterling. This figure includes damage to goods, but probably £100 millions is in respect of house property. Even this figure may, however, be excessive, as there was apparently a tendency on the part of house owners in Japan to over-insure. It seems highly probable that rebuilding in Tokyo will be carried out on modern European lines, since, as the above figures show, fire losses were much more serious than the destruction directly due to the earthquake. On September 17th an Imperial Ordinance was issued in Japan providing for the suspension, until the end of March next, of the import duties on a large number of commodities, principally building materials and necessities of life. The duties are to be reduced to half until the same date on all motor vehicles and their component parts, and on all motive machinery, with the exception of motor lorries, which are free of duty.

Japan's National Debt.—Owing to the probability of Japan endeavouring to raise loans abroad for the reconstruction of the towns and cities decimated by the recent earthquake, it is interesting to review the state of the national debt and inquire into the present amount of gold standing to Japan's credit abroad. At the beginning of the war in 1914 the total national debt of Japan amounted to 2,560,778,000 yen, a per capita indebtedness of 44.02 yen, of which about 1,320,000,000 represented foreign debt. At the end of June last the total national debt had increased to 3,820,906,568 yen, of which 2,500,281,750 yen was domestic loans and 1,320,624,818 yen foreign loans, with local loans amounting to some 581,000,000 yen, a per capita indebtedness of over 65 yen. The census taken in 1921 estimated the total national wealth of Japan at 86,677,070,000 yen, or 1,539 yen per capita. On this basis every Japanese owes about 4.8 per cent. of his property to the nation's creditors. By way of comparison it may be mentioned that England's public debt last year amounted to about £181, or some 1,800 yen, per head, and this figure is probably not far short of one-third of the average wealth per capita. Thus Japan's debt is quite small in proportion to the resources of the country. Before the war the total specie holdings of Japan amounted to about 341,000,000 yen. At the end of the war they had increased to over 2,000,000,000 yen. Owing to adverse balances of trade, the total has since considerably diminished until it now stands at 1,780,000,000 yen, of which only 632,000,000 yen belongs to the Government, and 1,148,000,000 to the Bank of Japan. Of this total, 1,204,000,000 yen is in Japan, and the balance, 576,000,000 yen, is held abroad, mainly in England and America.

Electricity Commissioners' Report.—The Electricity Commissioners have now issued their annual report on the generation of electricity in Great Britain for the year ended March 31, 1923. This report deals with the generation of electricity by public supply undertakings and tramways and railway authorities, and gives statistics as to fuel consumption and output in units. It will be remembered that the question of coal conservation and that of the reduction in the cost of producing electricity have been the subject of Government Committees' inquiry—the Coal Conservation Sub-Committee reporting on the one aspect in 1917 and the Board of Trade Electric Power Supply Committee dealing with the second question in 1918. This report confirms the deductions made by these Committees from the somewhat inadequate data which alone were available at the moment. With regard to the claim of these Committees that there existed ample scope for big economies, the present report shows that an efficiency has been attained in two of the stations of the Newcastle-on-Tyne Electric Supply Company of under 1½ lbs of coal per unit generated. The table grouping the stations according to capacity also shows that, as the stations decrease in size, the corresponding amount of coal gradually increases to 3 lbs, 5 lbs, and even to 10 lbs and upwards per unit generated, thus substantiating the claim that great economies can be effected. Further evidence towards the same end is furnished by the comparison between the previous year and the one under review. The total units generated by all stations in 1922-3 was 5,738,718,485 units, and in 1921-2 4,884,666,038 units, the increase being 854 million units, or 17½ per cent. This increase in output incidentally attests to the big progress made, but the vital significance comes in when the corresponding fuel consumption of the two years are compared. The increase in fuel consumption to cover this 17½ per cent. greater output is only 3 per cent. This big saving in fuel is also reflected in the comparison of the average consumption of fuel at steam stations for the two years, the coal per unit generated being reduced from 3.11 lbs to 2.78 lbs, i.e., a saving of 10.6 per cent. These figures are of more importance than may appear at first glance. They show that the electricity production of the country is moving on the right lines—first, in the advancing economies due to more efficient plant and the better design of generating stations, and secondly in the important economy being gradually effected by the universal re-organisation which is now taking place whereby wasteful stations are being eliminated and supply being drawn from the big efficient stations. Further, this effectual wrestling, as it were, of more electricity from the same amount of coal is a permanent gain, and one of very different value from any mere reduction in cost of generation which often figures in a balance-sheet, but which may be due to quite adventitious factors, such as decrease in cost of coal, labour, or some other variable item. It is a gain both absolute and permanent.

Miners' Wages in September and October.—In view of the forthcoming discussion on proposed amendments of the National Wages Agreement in the coal industry, it is not without interest to consider the relationship between miners' wages at present and those ruling before the war. The figures for September and October are based upon the ascertainment of the working of the collieries in the two-monthly period May-June. The ruling rates are given in the following table, together with the corresponding rates in June, 1914, for purposes of comparison:—

District.	June 1914.		Sept. and Oct., 1923.		Col. 2 Expressed as % of Col. 1.
	Wages per Shift.	s d	Wages per Shift.	s d	
Northumberland	6 2-25	.. 11 0-26	.. 178-13		
Durham	6 2-50	.. 10 10-40	.. 174-55		
Scotland	6 9	.. 11 8-59	.. 173-57		
East. Fed. Area	6 7-75	.. 11 2-23	.. 168-31		
Somerset (Radstock)	4 9-50	.. 8 0-25	.. 167-39		
Bristol	4 8-75	.. 7 10-57	.. 166-64		
Forest of Dean	5 4	.. 8 10-60	.. 166-56		
S. Wales and Mon.	6 9-25	.. 10 9-43	.. 159-30		
S. Staffs and Salop	4 10	.. 7 6-31	.. 155-71		
Cumberland	6 2-25	.. 9 4-40	.. 151-38		
Lancs, Chesh., and N. Staffs ..	6 0-25	.. 8 9-53	.. 146-06		
N. Wales	5 10	.. 8 4-04	.. 142-91		
Great Britain	6 5-64	.. 10 8-35	.. 165-31		

The cost of living figure for September was 173 per cent. of the 1914 level, while miners' wage rates in Northumberland, Durham, and Scotland show a still greater rise. Moreover, in nine districts, employing about 85 per cent. of the total number of men engaged in the industry, the average earnings per shift are 90 per cent. or more of the present equivalent of those ruling in June, 1914; while it is worth remembering that the latter month is hardly typical of the general level in pre-war years. It will be interesting to see, however, whether the ascertainment for July and August will warrant the maintenance of the present wage levels under the terms of the National Agreement.

Need for Port Improvements.—In the current issue of the Baltic and White Sea Conference *Circular*, prominence is given to an article raising the question whether British harbour facilities are behind present-day requirements. Complaints of losses sustained by shipowners on account of congestion at various British ports are stated to be increasing, owners interested in the coal and timber trades being particularly affected. The present state of affairs, it is admitted, has been aggravated, though not entirely caused, by the recent strike of dock labourers in various ports, and by the temporary boom in the British coal trade, which resulted from the Ruhr occupation. Business has, however, now slackened off, and, if there is heavy congestion with the present volume of trade, what, it is asked, will be the condition if activity increases? The somewhat sweeping statement is made that no substantial improvements in the existing harbour facilities have been effected for a great number of years. There is undoubtedly some substance in the complaint, and some point in the comparison with the principal continental ports where this trouble does not occur. Not long ago there was, for instance, prolonged loading pressure and much delay at most of the South Wales ports. At present there is great congestion on the Tyne and at the Humber ports. In both these districts shipowners, shipbrokers, and coal exporters are uniting in pressing on the London and North-Eastern Railway Company their complaints at the delay in the shipment of coal. An analysis of the factors in the situation would, however, perhaps show that other causes than failure to carry out improvements in port facilities have contributed largely. There was the question of the third shift, and, beyond that, it is necessary to take into account in the years since the war the shortening of hours of work throughout the inland transport services. This has reduced the carrying power of ships by lessening the rate at which cargo can be passed through the ports. More ships are required. More ships have, in fact, been employed than would have been the case formerly, not only for that reason, but also because, with depressed trade, they have had to run with incomplete cargoes. These circumstances help to account for crowding of harbours and docks. At the same time it is true that repairs and maintenance of plant have fallen into arrear owing to the war, to say nothing of absence of improvements. These things take time to put right. As to the means of improvement, the question whether adequate use is being made of the Trade Facilities Acts naturally suggests itself. The scheme is that a Government guarantee of loans will enable money for works of a capital nature to be borrowed more cheaply than would otherwise be the case. The measure was expressly stated, in Parliament, to be intended to apply to such objects as extensions of docks and harbours. The loans guaranteed under that scheme include £125,000 in the case of Ipswich, where timber is a leading feature, £300,000 for the construction by a company of a large dry dock at Swansea, and £500,000 borrowed by the Workington Harbour and Dock Board to provide improved facilities for ore imports. An application for a large sum for improvements at Dover to provide for expected coal shipments is pending. So many of the ports are now in railway hands that the number of those where advantage might be taken of the scheme is limited. The railways, as now grouped, can borrow as cheaply without a Government guarantee as with it. They are, in fact, spending largely on improving port facilities, e.g., the Great Western in South Wales. In London itself very extensive port improve-

ment schemes are, of course, being carried out. On the whole, though there may be congestion and delay, those responsible for the development of British ports are not solely to blame. Various causes have contributed, and efforts are being made to bring about improved conditions. Emphasis on the need for more determined effort, however, does no harm, and indeed cannot be wondered at.

International Cotton Statistics.—The International Federation of Master Cotton Spinners and Manufacturers' Associations has published its usual statistics relating to the consumption and stocks of cotton for the half-year ended July 31st last. A little time ago the committee decided that the statistics should be presented in tables showing the total figures of each country instead of merely the actual returns received as heretofore. This decision was arrived at because this census represents now over 90 per cent. of the spindles of the world, and it was felt that the remaining spindles, for which no returns had been received, could be correctly ascertained by calculation. No returns have come to hand from Germany and Brazil. The world's consumption of American cotton during the second half of the cotton season ended July 31, 1923, was 614,000 bales less than in the first half-year, and the falling off was entirely due to Europe. Great Britain used over one-quarter of a million bales less of American cotton during the second half-year than during the first, and her consumption of this cotton during last season was below 2,000,000 bales, or only one-third of the consumption of the United States, in spite of the latter country, having only a little more than half the number of spindles of Great Britain. France, Germany, and Italy, together consume more American cotton than Great Britain, and Great Britain's consumption of all kinds of cotton represents barely more than one-third of Europe's total consumption. It may be of interest to point out that in 1913 Great Britain consumed 3,500,000 bales of American cotton. France is the only important country in Europe that increased cotton consumption during the second half-year as against the first. In Asia, India and China have consumed less, Japan a trifle more. The United States have added to their consumption figure. The total world's consumption of all kinds of cotton for the second half of the season was nearly 700,000 bales less than in the first half, though for the 1922-23 season the world used 22,076,000 bales, against 21,162,000 bales in the 1921-22 season. The returns show a most decided falling off in the stocks of American cotton held at the mills. This shortage of mill stocks accounts to a great extent for the abnormal demand that has sprung up during the last few weeks for American cotton to be delivered in the early months. Interesting statistics are given relating to the amount of short time worked by spinners. Increases in stoppages owing to trade depression have occurred in Great Britain, Italy, Spain, Austria, Denmark, Mexico, and China. Great Britain's stoppage during the half-year was equal to a suspension of the entire industry in the country for seven and three-quarter weeks out of 26 weeks. The spinning spindles throughout the world are given as 156,576,497, and of these Great Britain has 56,582,873, the United States 37,397,331, France 9,600,000, Germany 9,605,077, India 7,331,219, Russia 7,245,935, Japan 4,877,416, and Italy 4,570,000.

The Oil Share Outlook.—The reduction of another twopence per gallon in the price of petrol this week has lowered the price to 1s 7d per gallon, which is as cheap as at any time since the outbreak of the war. The effect upon share-values of the recent cuts in the price of the product, writes a Stock Exchange correspondent, has been to bring down quotations, and at the same time to accentuate a growing uneasiness in the minds of proprietors lest the principal producing companies should have to reduce their dividends. It may be recalled that the Mexican Eagle Company passed interim dividends on its ordinary and 8 per cent. preferred shares in July. Although recent apprehensions in regard to the possibility

of the company's 7 per cent. first preference shares not receiving the dividend due to them a month hence have been allayed by what seem to be inspired statements that the dividend will be duly paid, the market in the shares is weak, and the quotation has fallen to 15s 3d, or 5s 3d per share less than the issue price. Anglo-Persians, for which there was a wide scramble when the shares were offered at 65s, have fallen to £3 for the old and 55s for the new. Shells, which dropped to 3½ in July and recovered to 3¾ with little effort, have begun to weaken, in spite of the bear account which exists. Instead of there being a steady influx of buyers of oil shares upon every decline in prices, each successive fall now has a tendency to bring in further sellers. Some time ago the banks were exercising pressure upon those customers who were running loans upon the security of oil shares to pay off such obligations, and this caused a good deal of selling of actual stock, a source of supply which appears to have come to an end for the time being. The market, nevertheless, is dull and heavy. Apprehension at vague possibilities of unfavourable character pervade the mind of people who bought oil shares at substantially higher prices, and who for some time past have been hesitating whether they ought to cut their loss lest worse things befall the market. The root trouble in the industry is that, at a time when trade conditions throughout the world are not active, there have been discovered upon some of the American fields large numbers of wells, the owners of which have flooded the oil market with petrol. Echoes have reached this country in the shape of highly-coloured advertisements of oil shares from companies working in Texas and Wyoming. The innocent British investor is still being invited to put his money into oil schemes that have little more to recommend them than glowing references to colossal fortunes which have been made in the past by Indian squaws and farmers, who have become millionaires in a night by reason of oil gushers discovered on their properties. The United States Government has hitherto declined to intervene in the oil industry, but the supporters of a restriction policy now take the line that the national interests require something to be done to conserve natural resources of oil before these are squandered recklessly. Where consumption will receive its greatest impetus must be from the extensive use of oil in the shipping world, which would take millions of gallons where cars would require thousands. With shipping stagnant and trade throughout the world by no means active, there is but an ordinary demand for oil as fuel, and the consequence is that all these new oil producers in California and other American States add to stores of oil already adequate for meeting present-day requirements. The experience of the rubber industry is quoted as showing what can be done when official intervention imposes a practicable scheme of restriction upon output, and it remains to be seen whether the United States Congress will act in the direction along which it is being urged not only by people intimately connected with the oil industry itself, but by others who take a broader view of the necessity to conserve the resources of their country. Shareholders in the best-class oil companies are no doubt resigned to the prospect of seeing diminution in the profits of their undertakings. The course of the Stock Exchange market demonstrates this. A great number of people, however, hold oil shares as a speculative investment, and intend to keep them against such time as the wheel shall come full circle again and they reap the benefit of a patience that may be tried to a still further extent before it meets with the reward to which it will be amply entitled. Oil speculation is not less risky than gold mining itself, and it stands to reason that the elements of the unexpected may bring about a much sharper recovery in the oil industry's prosperity than may appear probable at the moment.

Industrial Profits in Australia.—The "Australian Investment Digest," of Sydney, publishes in its issue of August 1, 1923, an interesting survey of Australian company profits, based on reports published during the quarter ended June 30th last. The following summary table, exhibiting the total net profits earned and their relation to paid-up capital and reserves in the most important

groups, throws a certain amount of light on contemporary economic conditions:—

REPORTS PUBLISHED IN QUARTER ENDED JUNE 30, 1923.

Group.	Number of Companies.	Net Profits.		Percentage of 1923 Profits to	
		1922.	1923.	Paid-Up Capital.	Capital and Reserves.*
Banks	7	£ 2,501,245	£ 2,623,343	14.53	7.92
Pastoral and Agricultural	9	252,885	331,884	12.93	7.82
Shipping	4	227,363	224,735	14.74	8.79
Manufacturing—					
Foodstuffs	5	40,494	66,105	12.12	8.57
Other	6	80,567	104,420	9.81	8.47
Wholesale—					
Soft goods	1	5,463	35,068	12.01	10.34
Foodstuffs	2	73,061	82,670	14.19	10.09
Other	4	14,859	82,514	10.57	7.73
Retail—					
Soft goods	4	112,852	200,914	16.62	12.35
Other	8	57,538	119,719	12.27	10.44
Remaining companies	46	736,155	897,197	10.51	7.50
Total	96	4,102,482	4,768,569	13.19	8.10

* "Shareholders' funds."

Reports published in the second quarter of any year are mainly concerned with the trading of the previous calendar year, so that the profits figures here shown probably reflect the conditions of 1921 and 1922 respectively. As might be expected there is a substantial all-round improvement in the latter year, most marked in the wholesale and retail groups, less prominent in the pastoral and manufacturing, and scarcely perceptible among the banks, whose annual profits have varied very little in recent times. Shipping alone has failed to improve its profit-earning position. The last two columns demonstrate the "earning power" of the different groups. The most striking fact is that the largest profits have been made in retail trading, the next largest in merchanting, with manufacturing activities and transport in the third place. Pastoral and agricultural profits seem to be about the average, or a little below it. It appears to have been more profitable to open a shop than to buy a farm in Australia last year. The profits of 425 British companies during the same quarter, analysed in the *Economist* of July 14, 1923, worked out at 9.8 per cent. on the total capital, in comparison with 13.2 per cent. in the case of these 96 Australian concerns. The *Economist's* figures, however, exclude returns from banks, and if these are similarly excluded from the Australian totals it is found that the remaining 89 companies earned profits amounting to 11.86 per cent. of their paid-up capital, or 8.33 per cent. of their capital, reserves, &c. The seven Australian banks paid dividends on their preference shares at the average rate of 10.00 per cent., and on their ordinary at 10.95 per cent., while in the case of the remaining 89 companies the average rates were 5.69 per cent. and 9.29 per cent. respectively, against 5.4 per cent. and 9.9 per cent. in the case of the 425 British companies. Australian shareholders evidently receive much the same return on their investments as their brethren in England. The Australian dividend policy, however, was the more conservative in this period, as the following table shows:—

	DISTRIBUTION OF PROFITS.			
	Total Profits.	Ordinary Dividend.	Preference Dividend.	Reserves, &c.
425 British companies	100	64.3	19.9	15.8
89 Australian companies	100	68.4	6.1	25.5

The Australian companies appear to have issued a much lower proportion of fixed dividend-bearing stocks than the English, and in all probability they were less heavily capitalised, since, in a year not particularly brilliant in either country, they were able to pay dividends at the same rate by drawing on only 75 per cent. of their earnings against 85 per cent. Such conclusions are bound to be tentative, but, at any rate, they seem to indicate that Australian company finance has little to fear from a comparison with our own.

An Australian Conversion Loan.—Our Melbourne correspondent, writing on August 20th, says: "The conversion loan issue of the Commonwealth Government, to meet the 5 per cent. War Loan maturing on September 15th, is making slow progress, and it is expected that the Government will require to lean upon the banks, in addition

to drawing upon its cash balances in Australia, to meet part of the amount. The 5 per cent. conversion loan, 1928, is being offered at £98 per cent., giving a yield of £5 9s 3d, inclusive of redemption, with interest subject to Federal income-tax. Meanwhile, the State Governments of New South Wales and South Australia are issuing fresh securities at the Treasuries at 5 per cent., Victoria at 4½ to 5 per cent., and Queensland at 5½ per cent., all free of State and Federal income-taxes. Thus there is considerable Government competition for any fresh money available for investment, while privately the tendency is somewhat tighter, and there is more demand for money on the security of country property." A Reuter telegram from Melbourne, dated September 25th, states that the deficit on the Commonwealth Conversion operation amounts to nearly £7 millions, which has been met out of general Treasury balances.

U.S. Government's Sale of Ships.—Our New York correspondent writes:—The United States Shipping Board has announced the sale of seven of its combination passenger and freight steamships. The Dollar Line, of San Francisco, purchased the steamships "President Garfield," "President Monroe," "President Adams," "President Van Buren," and "President Polk." All of those vessels are now operated by the Shipping Board between New York and London. They will be supplanted by fast freight carriers from the Board's fleet, and it is understood that the steamship "Republic," now being reconditioned, will be used in the Shipping Board's New York and London passenger service. The Dollar interests also purchased the steamships "President Hayes" and "President Harrison," which have been operated in the Board's service between the Pacific Coast and the west coast of South America. An interesting feature is the announcement that the purchasers will use the vessels to inaugurate a round-the-world service, starting at San Francisco, and touching at Japan, China, the Philippines, Java, Straits Settlements, Singapore, India, thence through the Suez Canal to Egypt and Mediterranean ports to New York, and through the Panama Canal to San Francisco. The steamships are of 10,533 tons gross and 6,195 tons net register, and each accommodates about 120 passengers.

Polish Trade.—The Polish trade returns for the first six months of this year have now come to hand, and are summarised in the following table:—

	(In Gold Francs.)	
	Imports. Millions.	Exports. Millions.
January	99.4	71.8
February	81.5	94.4
March	98.2	143.2
April	100.5	108.8
May	101.3	94.7
June	92.0	93.3

It will be noted that whereas imports totalled 572.9 million francs over the half-year, exports were over 33 millions higher at 606.2 million francs. The returns are given in Swiss francs, calculated on the basis of the current rates of exchange, and the unit cannot therefore strictly be regarded as being the gold franc. At the same time, this method of calculation is relatively simple and approximates fairly closely to a stable basis, though it leads to considerable delay in the publication of the returns. The fact that the balance of trade is favourable to Poland may come as a surprise to many people, though the total turnover, at the rate of under £100 millions per annum, gives some idea of the general deterioration of the Central European market under present-day conditions.

Anglo-Austrian Bank.—The first report of the Anglo-Austrian Bank since its reconstitution as an English company covers the period from March 27, 1922, to December 31, 1922. The bank was formerly an Austrian company carrying on business in the old Austro-Hungarian Empire. The London office was opened for business on July 1, 1922. The profit for 1922 was £70,777, from which has to be deducted £25,156, the profit earned before the English company took over the business in March.

This sum is transferred to an "Opening Reserve Account," and of the balance £25,000 is paid in the form of a dividend of 2½ per cent., free of British income-tax, leaving £20,620 to be carried forward. Deposits figure in the balance-sheet at £4,574,800, acceptances at £896,100, advances at £3,012,300, cash at £354,400, and investments, including British Government securities for £470,300, at £2,187,200. With reference to the investments held at the foreign branches, the auditors state that they are satisfied that "they are conservatively valued, and are subject to a proper control and internal audit which we have supplemented by periodical tests." The paid-up capital was increased during the year by an issue of £400,000 in 6 per cent. non-cumulative participating preference shares which rank for dividend as from January 1st last, and now amounts to £1,406,370. The confidence engendered by the stabilisation of the Austrian exchange has been reflected "in a steady increase of deposits and in the number of new accounts opened with the bank of Austrian and other clients." The directors, however, remind the shareholders that the beneficial effects of the bank's reconstitution, particularly as to the development of the relations of the London financial market in Central Europe, must be gradual, and cannot be fully realised for a considerable time.

The Californian Fruit Crop.—The planting of fruit trees in California has shown an enormous increase during the last few years. This applies especially to apple, pear and peach trees; the increase has not been nearly so great in the case of cherries, apricots or plums, while the number of grape-vines has been steadily on the decrease for some years past. The pear crop this year is expected to yield 112,000 tons, which, in spite of the increased area, is considerably less than last year, but this is due to the unfavourable weather early in the season, which injuriously affected the entire fruit crop. Of last year's pear crop of 135,000 tons, 52 per cent. was shipped fresh, 32 per cent. was canned, 12 per cent. was dried, and 4 per cent. was consumed within the State. The apricot crop this year is the largest on record—210,000 tons against 120,000 tons in 1922. The plum crop has done very well this year, over 46,000 tons having been produced, while cherries also did well, the crop yielding 14,000 tons. Notwithstanding the decreased area devoted to the grape-vine the yield of grapes this year is expected to amount to 1,900,000 tons, while the amazing total of 4,500,000 boxes of apples are expected to be gathered and shipped. A peach crop of 393,000 tons is estimated, or about 27,000 tons less than in 1922.

Opportunities in Central America.—Sight should not be lost, writes a correspondent, of the favourable field afforded for British enterprise in the young Central American States, where the immense natural resources are still almost untouched, and, to a very great extent, unappreciated. Panama is under the domination of the United States, but there still remain Guatemala, Costa Rica, El Salvador, Honduras, and even Nicaragua, notwithstanding the strong position held there by the United States. If indifference to the attractions of these promising lands reigns in British financial circles, the same does not exist among other European capitalists. French, Italian, and Belgian syndicates have been formed, or are contemplated, for the purpose of exploiting the countries of Central America, notably in connection with the immense mahogany forests of Honduras, and the provision of electric traction for Guatemala. Regarding the latter, a valuable concession has recently been granted for a complete installation of electric light and power for the City of Guatemala, and, notwithstanding the financial position of Belgium, not the least difficulty has been found in raising the necessary capital of 10,000,000 francs, the whole of the plant and machinery contracts going, of course, to Belgian firms. It is a sad commentary that some such concession might have been obtained by an English syndicate as long ago as 1913; but failure to recognise the opportunity and courage to undertake the enterprise led to abandonment of the project.

Consolidated Main Reef.—Our mining correspondent writes:—From the profit-earning standpoint this Witwatersrand company fared considerably better last year than in the preceding period. The quantity of ore crushed—621,700 tons—exceeded that put through in 1920-21, when there was no labour trouble, and the decline in revenue due to the fall in the gold premium was largely offset by saving in costs, with the result that the profit per ton figures at 4s 1d as against 3s 1d for the twelve months ended June 30, 1922, and 7s 1d for 1920-21. At £167,500 the working surplus amounts to more than double the 1921-22 total, and approaches within measurable distance of that secured in 1920-21. On the present occasion, however, capital expenditure absorbs a fair sum, and with further requirements in prospect the directors follow a conservative policy in the distribution of profits, the dividend being 6½ per cent. as against 5 per cent. previously, and 12½ per cent. in respect of each of the two preceding years. From the development standpoint, however, last year's experience was even more unfavourable than that of 1921-22. Despite the performance of a largely increased amount of exploratory work, the ore opened up failed to replace that extracted. About one-third of the tonnage crushed was obtained from reclamation; hence the ore reserves are no more than 71,300 tons down at 1,070,600 tons, representing well under two years' supply for the mill. In this connection the consulting engineer remarks that "with the exhaustion of the No. 2 shaft section the necessary exploiting of the better portions of the low-grade areas is likely to become a bigger factor, and the present rate of yield may not be maintained." It may be recalled that in last year's "Note" attention was drawn to the unfavourable development outlook. Meanwhile a substantial decline has occurred in the price of the shares. It is sometimes contended by Rand enthusiasts that the mining companies are mistaken in confining their attention to the main reef series, and that good results could be obtained from other ore bodies lying nearer the surface. It is, therefore, interesting to note that the C.M.R. Company has started prospecting the Kimberley reefs in a thorough manner. Information is at present too meagre to warrant the formation of an opinion as to the possibilities.

Union Diamond Industry.—Holders of shares in important South African diamond companies have lately received positive evidence of the revival in the demand for the stones, the De Beers Consolidated having paid off the balance of the arrears on its preference shares, while the New Jagersfontein is disbursing 3s per share on October 4th following upon 3s 6d in April, when the Premier announced a distribution of 7s 6d on the deferred shares. Official statistics just to hand show that for the six months to the end of June the production in the Union amounted to 755,200 metric carats, valued at £2,316,500, or more than for the whole of 1922. Moreover, the sales largely exceeded the production, totalling 1,130,700 carats, value £3,314,800. The average value realised was 58s 8d,

or about half-a-crown below the 1922 average. Of the half-year's total the appreciable quantity of 116,300 carats was obtained from the various alluvial fields, giving the high value of 135s 4d per carat.

The Co-operative Outlook.—A correspondent writes:—The report of the Co-operative Wholesale Society, Limited, to be submitted at the forthcoming delegate meeting, confirms the conclusions given in the *Economist* of July 7th, and strikingly endorses what was then written as to the impression gaining ground in many societies that "too heavy a tax is taken from the results of the present in the interests of the future." For the Committee will recommend alterations of rules to provide for new minimum rates of depreciation in place of the present system. The practice now is for all land and buildings (except for agricultural purposes), fixtures, and ships to be depreciated at not less than $2\frac{1}{2}$ per cent. per annum on land, 5 per cent. on buildings, and $7\frac{1}{2}$ per cent. on fixtures and ships. These amounts are taken half-yearly from the original value of such property. The proposed scale is at the rate of $1\frac{1}{2}$, $2\frac{1}{2}$, and 5 per cent. respectively, and this will afford partial relief, for according to the directors, "the excessive amount charged through the operation of these rates constitutes a very heavy burden upon our trading departments, and a severe handicap in the competition for trade." Evidently the directors have realised the force of the argument, so deeply impressed by the experience of the last few years, and have now determined on a policy which is essentially sound and safe—when the results of past depreciation have been completely to wipe out from the accounts much of the land and buildings. For the half-year ended June 23rd last the sales were £31,700,704, a decrease of £475,159, or $1\frac{1}{2}$ per cent. on the corresponding period of 1922. During the same period the supplies from the various productive works were £9,933,965, a decrease of £103,974, or 1 per cent. The profit was £952,354. From this £566,774 interest has been paid on capital according to rule, and £378,653 allowed as depreciation on property, leaving a surplus profit of £6,927, which is recommended to be placed to the credit of the reserve fund, which now stands at £721,847. It would thus appear that the slump in trade has been stayed, for the decrease of 17 per cent. in the first half of 1921, and of 24 per cent. in the first half of 1922, has been reduced to $1\frac{1}{2}$ per cent. in the past half-year. Trade has been restored to the 1918 level, which, having regard to the lower prices, means that in bulk the volume has been much greater. But there has been no great diminution in the distributive expenses. Before the war these were about $4\frac{1}{2}$ per cent.; in 1921 they rose to $5\frac{1}{2}$ per cent.; last year to $6\frac{1}{2}$ per cent., and during the past six months they were $6\frac{1}{2}$ per cent. In the C.W.S. Bank the deposits and withdrawals were £242,265,436 for the first half of 1923, a decrease of $4\frac{1}{2}$ per cent. Here the lessened funds of trade unions affected the returns as much as the reduced turnover of co-operative societies. At the present time there are 1,029 co-operative societies banking with the C.W.S., and there are now only 53 distributive or retail societies not banking with the central federal institution, while every society in the North-Eastern area is now conducting its banking business with the C.W.S. Conjointly with the Scottish Co-operative Wholesale Society the English C.W.S. has a tea department which sold 23,182,379 lbs, valued at £2,611,606, in the last six months, as compared with 23,146,802 lbs, valued at £2,553,136, in the corresponding period of 1922, increases of $\frac{1}{2}$ per cent. and $2\frac{1}{2}$ per cent. respectively. At its nine flour mills the society milled 1,500,970 sacks of flour and 1,123,203 sacks of offals, representing a value of £3,815,567; it sends out 744 tons of soap weekly, and made 1,390,876 pairs of boots and shoes in its works at Leicester, Derby, Leeds, Heckmondwike, Rushden, and Norwich, an increase of 40 per cent. as compared with the corresponding period of 1922. This is one of the most promising aspects of the co-operative industrial position. Altogether it would seem that the worst has been passed, and that the prospects of the co-operative movement for the coming year are more hopeful than they have been since the Armistice.

Overseas Correspondence.

UNITED STATES. — FOREIGN TRADE — INVISIBLE IMPORTS — GOVERNMENT FINANCE — STEEL CORPORATION.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 17.

ANOTHER monthly foreign trade balance in favour of the United States is shown by the returns for August, as compiled by the Department of Commerce. The total value of exports last month is placed at \$313,000,000, and of imports at \$275,000,000, as compared with \$301,774,000 and \$281,376,000 respectively, for August of last year. Last month's excess of merchandise exports, therefore, amounted in value to \$38,000,000, as against an excess of \$26,000,000 in July of this year, and of \$20,300,000, approximately, in August, 1922. For the eight months of the current year ending with August, however, the total value of imports was \$2,650,200,000 and of exports \$2,561,675,000, showing an excess of \$88,525,000 in imports, whereas for the corresponding period of 1922 exports were some \$470,831,000 larger than imports, and of 1921 about \$1,533,142,000 greater. Exports of gold last month amounted to \$2,200,961, as against only \$522,826 for July, while gold imports totalled \$32,837,397, compared with \$27,929,447 in July. During the eight months ending with August, gold imports aggregated \$192,699,304, against \$185,091,630 in the same period of 1922, while exports reached \$25,015,337, compared with \$11,744,036. The figures for the eight months' period reveal an excess of \$167,683,967 in gold imports over exports, as against \$173,347,594 in the like period a year ago. Exports of silver increased from \$6,233,163 in July to \$7,032,221 in August, but imports decreased from \$10,066,463 in July to \$6,465,949 last month.

The Department of Commerce has just completed an interesting report on the so-called "invisible" factors in the foreign trade and financial operations for the calendar year 1922. An analysis of the statistics presented showed that while the value of commodity and merchandise exports last year exceeded that of imports by some \$754,000,000, the "invisible" balance against this country was much larger and more than offset the favourable merchandise, or commodity balance. The balance of international dealings, including the "invisible" items, against the United States is placed at \$566,000,000, although it is admitted that is a rough estimate and that the current balance against this country may be as low as \$450,000,000, or as high as \$700,000,000. Various movements of capital and "invisible" items are set out in considerable detail. For instance, capital items, such as foreign loans matured and paid, show an unfavourable balance for last year of \$649,000,000, while invisible items indicate an adverse balance of \$425,000,000, and gold and silver imports exceeded exports by \$246,000,000. Expenditure by American tourists abroad in 1922 is put at \$300,000,000, and immigrants' remittances sent abroad at \$400,000,000. In striking an interest balance, those two items, it is explained, are in effect imports, since the money was spent abroad, although the actual commodities for which the money was spent were not imported into this country. Foreign Government loans floated in the United States last year totalled \$664,000,000, of which \$131,000,000 represented refunding. The net amount of capital advanced to foreign countries and corporations last year is put at \$637,000,000, and the par value of new loans to Europe, excluding refunding issues, is placed at \$229,000,000. Foreign securities purchased by Americans, the report shows, aggregated \$963,000,000, and yielded their holders in dividends and interest during 1922 about \$117,800,000. In the same period the gross value of imports into the United States reached \$3,113,000,000, and of exports from this country \$3,867,000,000. Referring to the present year, the Department says there have been further reports in recent weeks of buying of American securities by foreign investors, due to "unstable political and financial conditions abroad." In com-

menting on the report, Secretary of Commerce Hoover says that if the United States settled its balances in foreign trade and international finance every month in the year in gold "we should have exported gold to the amount of nearly \$340,000,000 during the year, instead of having imported gold and silver to the amount of \$245,000,000." The Department of Commerce refers also to the movement due to the smuggling of liquor into the United States, although that item is not included in its calculations. Estimates as to the amount involved in such smuggling, it says, vary from \$10,000,000 to \$250,000,000, but, it adds, there are "plausible statistics" indicating that "the value of smuggled spirits cannot be less than \$20,000,000."

As was quite generally expected, the Government's September financing took the form of an issue of approximately \$200,000,000 new Treasury certificates of indebtedness, dated September 15th, maturing March 15th, and bearing interest from September 15th at the rate of $4\frac{1}{2}$ per cent. per annum on a semi-annual basis. They were offered, as usual, to banks, trust companies, and investment interests generally at par and accrued interests, and were heavily over-subscribed. The total of applications approximated \$500,000,000, indicating that there is a large amount of loanable capital seeking employment in high-grade securities. About \$290,000,000 of Treasury certificates, according to Secretary Mellon's statement, became payable on September 15th, besides public debt interest of some \$145,000,000. Called and matured Victory notes aggregating \$53,000,000 and matured War Savings certificates amounting to \$30,000,000 approximately are still outstanding and coming in slowly. The Treasury Department expects to receive about \$340,000,000 in income-tax payments. The recent offering of Treasury certificates was intended to meet payments falling due the middle of this month over and above tax receipts, and to cover the Treasury's further cash requirements. No additional Government financing is expected until December, since no further payments of principal of the public debt will come due until December 15th. Last week's financing reduces the Government's outstanding obligations by about \$90,000,000.

The United States Steel Corporation's unfilled orders showed a further shrinkage of 496,100 tons last month, the total of unfinished orders on its books as of August 31st amounting to 5,474,663 tons, the smallest aggregate reported for any month since May 31, 1922. Since the end of March of this year the decrease in such unfilled business has totalled 1,988,669 tons. Shipments last month are estimated at not more than 1,200,000 tons, while new orders received are figured at 700,000 tons, approximately, or less than would have been sufficient, without using back orders, to assure profitable operations. The corporation's unfilled orders at the end of August represent about five months' business at the present rate of production, which is said to be close to 87 per cent. of capacity; it is not actually booked up to the end of January, however, since some of its business already booked consists of long-time contracts. Unless there is a material increase in new orders during the next month or two the leading interest will undoubtedly be obliged to curtail its present rate of production.

GERMANY. — RUHR — CURRENCY REFORM — FINANCES — BOURSE — PRICES — TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 25.

THE Stresemann Cabinet's decision—foreseen for some weeks—to abandon the passive resistance on the Ruhr has changed, without necessarily improving, the situation. On the one side is a gain through gradual cessation of the Ruhr subsidies, though it is not yet clear how soon the local industries will become self-supporting. On the other side are the threat of domestic troubles, and the possibility that neither the local Ruhr situation nor the reparations question generally will be helped by the surrender. The internal situation looks worse than at any time since the Armistice. The Communists have gained in strength through the failure of the Cuno Cabinet's financial policy, and from the various Nationalist, Fascist,

and Separatist movements, which have been increasing for months past, a combined move against Berlin may possibly take place. The probability, however, is against this. The future of the Ruhr and reparations questions is very vague. If the French maintain their claim that Germany had to abandon passive resistance without any pledge from their side, the present militarist terror may easily be continued in order to enforce surrender on the reparations and other questions. There would be nothing then to prevent a continuation of the wrecking measures against German industry and trade, and in that case the need for supporting the Ruhr might be as great as ever. The Stresemann Cabinet has practically admitted that it is helpless, and there has been nothing in France's policy of late to indicate that this helplessness will not be exploited with the aim of further destruction and perhaps of further invasion.

The Cabinet's currency reform measure has been published in the form of a Bill. This Bill has not been very well received, and already material changes have been made in it. The reform is tied up with the Ruhr surrender. It assumes the balancing of the Budget within a definite term, and would therefore be impossible to realise if the greatest industries continued living almost exclusively at the cost of the State. The central point is that a new bank, the Currency Bank ("Währungsbank"), shall be created with power to give the State limited credits, but no more, while the Reichsbank, being reconverted into a gold bank, and being entirely divorced from the State, will cease discounting Treasury bills altogether. The capital of the Currency Bank of 2,400 million "ground marks" (*Bodenmark*, according to a suggested amendment *Neumark*, or new marks) will be supplied in equal portions by agriculture, on the one hand, and by industry, trade, and banking on the other, and there will be a reserve of 800 million "ground marks." The Currency Bank will be taxation free and independent of the Government, except for the latter's right of confirming its president's nomination. The capital will be provided in the shape of gold mortgages of 3 per cent. of the 1913 value of agricultural and forest land, and in the case of industries and trade by gold bonds. Interest on the mortgages and bonds will be $6\frac{1}{2}$ per cent. (according to a suggested amendment, 6 per cent.). Industrial and trading concerns owning land will provide their shares in the shape of mortgages. On the security of the mortgages and bonds in its name the Currency Bank will issue gold-mark mortgage bonds bearing 5 per cent. interest, and these will be legal security for the bank's note issue, which is to be in "ground marks," each containing 100 "ground pfennigs." On the security of every mortgage bond of 500 gold marks the bank may issue notes for 500 "ground marks." The gold mark will contain 0.358 grammes of fine gold. The "ground mark" represents theoretically the same gold value, but it is convertible not into gold, but into a mortgage bond of the same number of marks. Also the Currency Bank is obliged to deliver "ground marks" in exchange for the same nominal value in mortgage bonds. The bank will transact general banking business only with the State, but (according to a proposed amendment) it may rediscount commercial bills discounted by the Reichsbank. After two years the Currency Bank will be liquidated. Within the two years the bank is authorised to give the Republic interest-bearing credits of up to 2 milliard "ground marks," and on the ground of this power to give the Republic an immediate non-interest-bearing credit of 300 million "ground marks," which the Republic must use for the partial or complete repayment of its Treasury bills debt to the Reichsbank, while the Reichsbank will use the money to redeem the present paper-mark circulation at a ratio yet to be fixed. The 300 million advance may be increased. The "ground mark" alone will be legal tender, but paper marks must be accepted in payments up to a value of 500 "ground marks" at whatever ratio is fixed. The persons and corporations contributing capital in the shape of mortgages and bonds will be shareholders of the Currency Bank, and will have a right to draw interest not exceeding 3 per cent.

This project, which is in principle the Helfferich plan, has, as stated, not been well received. In principle doubt is expressed as to the practicability of basing a currency primarily on land security, and there is historical reason

for such doubts. If the Government fails to balance its Budget after the credits provided for in the Bill are exhausted, there is nothing to prevent it, under a new law, increasing the 3 per cent. mortgage limit, increasing the bonds, and increasing the circulation. Also, the stability of value of the notes will depend exclusively upon the limitation of their issue, because they will be in no real sense convertible. The gold-mark mortgage bonds which the presenter of notes can claim will necessarily bear interest in, and ultimately be paid off in, the compulsory legal tender currency, which is the same "ground mark." The claim that the new notes, being immediately secured on land, industrial property, &c., in some way represent real values, is not justified. This defect seems to lie in the nature of the solution chosen, in the fact that land cannot possibly be made liquid. A foreign gold loan on mortgage or bond security of land, &c., would be in a different position, as this would make possible the issue of real gold notes, in which interest on the mortgages could be paid. In official quarters not very much faith is shown in the proposed solution.

The Finance Ministry has now published a final report on revenue in the financial year 1922-23 (ending March 31, 1923), with comparative figures for 1921-22:—

	1921-22. Marks.	1922-23. Marks.
Direct taxes and taxes on business	66,784,588,584 ..	958,068,405,397
Customs and taxes on consumption	21,215,592,983 ..	445,236,793,190
Export duties	3,311,465,068 ..	194,109,686,169
Not classified revenue.....	..	10,155,842,978
Totals	91,311,646,635 ..	1,607,570,727,734

The proceeds in 1922-23 of the Forced Loan (12,853 millions) are not included in the above. Revenue, it will be seen, increased over 18-fold. In the financial year 1921-22 the mark depreciated from 62 to 305 to the dollar; in 1922-23 it declined further to 21,000. The drop in the gold value of the revenue is therefore visible without testing it by the precise average gold value of the mark in the two years. The Cabinet is now, under the Law of July, raising excise duties in quick stages by administrative order, but the gold value of the yield continues to fall behind. The August report shows that 18 taxes, some of them direct, yielded at the month's average exchange £19 10s. The Customs gold surcharge has been raised as from the 26th to 3,479,999,900 per cent. Prussia has suspended payment of interest on her debt, 90 per cent. of interest instalments being under 500 paper marks. A new movement towards paying off the last mortgages and industrial bonds has begun, the aim being to provide against regulation under the currency reform. The Bill above described enacts that old mark debts shall be payable in the new "ground marks" at the ratio of conversion to be decided on. As this ratio will almost inevitably be fixed according to the paper mark's gold value of the day, the expropriation of secured creditors will be completed.

The Reichsbank's statement for September 7th shows a new drop in the gold reserve of 20,591,000 gold marks to 489,895,000 gold marks. The inflation of all figures continues; commercial bills rose by 113,795 milliards to 278,493 milliards, Treasury bills by 584,243 milliards to 1,571,462 milliards, while note circulation, rising by 518,838 milliards, passed the 1,000 billion limit to 1,182,038 milliards. The demand for credits from the Darlehnskassen increased rapidly, rising by 92,900 milliard marks to 107,000 milliards. This increase is in connection with a decline under the heading of advances. The statement says that the increase under the heading of commercial discounts is largely due to cheques, for which the bank is not a credit giver, and that the rest of the increase is due to short-distance credits, which it was not possible to put upon a stable value basis. In general, the bank's policy is that as long as the risk remains of further mark depreciation credits shall be stable value.

Money last week became easier, interest on day money dropping to between 4 and 7 per cent. a day. In Berlin large sums were received from the Rhineland in payment of exchange bought here. The "gold loan" (properly, stable-value loan on a gold calculation basis) was quoted on the Bourse for the first time on the 20th at 105,000,000, as against a dollar exchange of 109,725,500. This loan has become an object of speculation, as so long

as it fluctuates more or less in harmony with the dollar, it plays the same rôle as exchange speculation, though with prices automatically following the dollar a real gain from exchange speculation can hardly be made. Stocks last week had a slight fall. The *Frankfurter Zeitung's* index for dividend-payers shows 16,879,573,500 for the 21st, against 19,495,537,500 for the 14th. The decline was caused partly by shortage of money, partly by the mark recovery. Taking stock prices at 100 on January 4, 1922, the price on January 5, 1923, was 1,378, and on December 21st, 61,739,470.

The fall in the exchanges of last week brought no general drop in prices. Even those wholesalers and retailers who had for weeks avowedly changed their prices from day to day according to the exchanges, did not reduce them. Potash paper mark prices were reduced nearly 40 per cent., but coal gold prices have again been raised, the new price for standard Ruhr (Foerderkohle) being 38.46 gold marks per metric ton. There are other instances of prices of goods which are quoted only in gold being materially raised in gold. The cost of living index on the 17th was 14,244,900 times that of 1914, against 5,051,046 a week earlier. Trade reports are still unfavourable. Measures are being taken to encourage export and restrict import. The Finance Ministry has submitted a project for the imposition of duties on duty free goods, and for raising the duties on others. The goods concerned are mostly in the luxury or semi-necessary class. A very large number of articles which were hitherto exportable only under licence have been placed on the export free list.

FRANCE.—RUHR PLANS—COKE PRICES—NEW TREASURY BONDS—TRADE RETURNS.

(FROM OUR CORRESPONDENT.)

PARIS, September 26.

THERE is much speculation here as to what immediate action will be taken by the French and Belgian Governments in the direction of modifying the conditions of their occupation of the Ruhr once passive resistance has nominally and officially ceased. These speculations have involved the public in much confusion of thought, and as a result much nonsense has already been written and will be written as to the radical change which it is assumed will be brought about by the ostensible capitulation of Berlin. As a matter of fact, there is no reason to believe, if information gathered in high official quarters here be accurate, that any appreciable immediate change in the general situation will occur. According to present French plans, the actual conditions in the Ruhr will revert to the more or less "invisible" occupation that was in force when the French troops first entered the Ruhr in January. The French uniform will be much less seen than at present, but the French mailed fist will still continue to grip the Ruhr railways and collieries, and the postal, telegraph, telephone, Customs, and other services as firmly as at present. The German railway men and miners will be cordially welcomed back to work, and the German tax collectors will be given every possible moral aid in carrying out their duties. It will probably be some time, however, before Herr Krupp von Bohlen and his fellow-directors who are languishing in prison at Amiens, and other German common law prisoners are released, while some considerable interval must also elapse before those officials who have been expelled from the Ruhr will be able to resume their posts. The intention is that the cases of all these men shall be examined individually, and that all those whom there are no special reasons for maintaining in prison or in exile shall be restored to liberty. In the present temper of the French Government, however, there is not the remotest probability that the formal renunciation of passive resistance by the Berlin authorities will be followed immediately by a complete return to the status

quo ante in the Ruhr. The German authorities, industrial and working classes, will be almost certainly put on probation for several weeks, perhaps months, until the French and Belgians are satisfied that resistance is really and sincerely renounced, and after that period of trial, which will be utilised for a careful and detailed examination of the Ruhr's capacity to yield reparation payments under the changed conditions, we may expect the initiation of some kind of negotiations between the Allies as a whole and the German Government.

French plans to meet the new situation are stated in official quarters to be complete. The recent visit of M. Le Trocquer, the Minister of Public Works, to the Ruhr was for the express purpose of ensuring that the French authorities shall not be caught napping when industrial and commercial life is resumed there. It was foreseen that the staff which has the duty of issuing export and similar permits would be overwhelmed from the start unless very greatly strengthened, and this has already been done, while an adequate number of extra revenue officials has also been dispatched to superintend the collection of taxes, &c. The exact attitude the British Cabinet will take in the immediate future with regard to the French plans in the Ruhr is awaited with great interest, but no secret is made here of the fact that there is an intense desire in official circles that Great Britain and France should co-operate in the closest possible way in the general settlement of which the cessation of passive resistance in the Ruhr marks the commencement. Evidence of this is seen, to mention only one instance, in the proposal made by M. Poincaré in June last, that steps shall be taken to maintain in a state of seizure for some time to come the enormous stocks of metallurgical products that have been accumulated in the German factories since the occupation began. The reason for this, as M. Poincaré instructed the French Ambassador in London to point out to Lord Curzon, is that if the German manufacturers are able to carry out their obvious intention of suddenly throwing large quantities of these goods on the world's markets, very serious disturbance would be caused to British industries, as well as to those of other countries. The effect of such an eventuality on unemployment in England is too obvious to need comment.

A curious situation has arisen in connection with the supply of coke from the Ruhr for sale to the French metallurgical industry. It will be remembered that it was decided several months ago that the figure at which reparation coal and coke should be dealt with in France must be on the basis of German domestic prices for the same commodities. This for a long time proved very favourable to the French metallurgical industry. Lately, however, the price of combustibles in the German home market has risen so enormously that coke from the Ruhr, intended for the French metallurgical industry, has risen to 600f per ton, which is greatly above the price ruling in the world's markets. The conditions on which reparation combustibles are to be sold having been laid down by the Reparations Commission, the Minister of Public Works has addressed a letter to M. Poincaré urging that immediate steps shall be taken to induce that body to modify the conditions, in view of the altered circumstances, with a view to enabling coke to be sold at more reasonable prices. He asks, as a matter of fact, that the price should be fixed at the same figure as that of French coke in the home market.

The *Journal Officiel* on Sunday published the decree announcing the terms of the issue of the second portion of the Treasury Bonds authorised for the present financial year. The new bonds, which are in denominations of 500f and 5,000f, are issued at 98.50, and bear interest at the rate of 6 per cent. They are redeemable at par on May 20, 1926, at 103 per cent. in 1929, or at 108 per cent. in 1933. The first coupon is payable on November 20th next, and will be for 12f, instead of 15f, in view of the fact that the date of issue is as from June 27th only. The bonds are free of all present or future taxation.

The French trade returns for the first eight months of 1923, which were issued last Thursday, show an increase in the value of all categories of both imports and exports, as compared with the figures for the corresponding period of last year, together with a marked increase in the weight, except in the case of manufactured imports. The

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,352,105

Branches:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.
The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

detailed figures for the eight months, as compared with those for 1922, are as follows:—

(In Thousands of Francs.)

	First Eight Months of		Increase in 1923.
	1922.	1923.	
Imports—			
Foodstuffs	3,593,761	4,623,737	+ 1,029,976
Raw materials	8,378,658	12,514,674	+ 4,136,016
Manufactured goods	2,633,691	2,799,913	+ 166,222
Total	14,606,110	19,938,324	+ 5,332,214
Exports—			
Foodstuffs	1,123,604	2,016,377	+ 892,773
Raw materials	3,480,443	5,870,051	+ 2,389,608
Manufactured goods	7,982,367	10,243,559	+ 2,261,192
Postal parcels	859,487	998,079	+ 138,592
Total	13,445,901	19,128,066	+ 5,682,165

These figures show that during the eight months of the present year the value of French exports increased by over 42 per cent., as compared with the corresponding period of 1922, while imports had an increased value of 36½ per cent. At the same time, on balance, the imports during the eight months of 1922 exceeded exports to the value of 1,160,000,000f, whereas during the past eight months the deficit balance was only 810,258,000f. The visible balance on French foreign trade, which was a favourable one of 78 millions in May last, was marked by a deficit of slightly over 90 millions in August, as compared with deficit balances of about 192 millions in July and 79 millions in June. The outstanding feature of the figures showing the weights of French exports and imports during the eight months is that France has imported nearly 30½ million tons of raw materials this year (as compared with 28,841,000 tons during the corresponding period of last year), the increase being largely in coal, while her exports of the same class of merchandise weighed 12,185,000 tons, or about a million tons more than last year. Compared with the first eight months of 1913, French imports in 1923 show an increase of 14,442,885,000f and 6,150,542 tons, while exports are greater by 14,691,497,000f and 1,363,121 tons.

SOUTH AFRICA.—MINING CAPITAL—AN INCOME-TAX POINT—DIAMOND PRODUCTION

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, September 4.

THE Union Department of Mines and Industries has issued its annual return of capital statistics of the mining industry, the figures applying as at December 31, 1922. Out of a total of £82½ millions net issued capital for the whole Union the gold mining industry accounts for £59½ millions, the Rand itself for £54 millions. As regards the Rand only £19½ millions was in receipt of dividends, the total amount paid for the year being £5,668,708. The remunerative capital of mines in the outside districts was only £918,362 (being almost entirely represented by the Sub-Nigel Company), the amount paid being £67,700. It should be pointed out that the strike in the first portion of the year practically wiped out that five months' profit, and only the more prosperous mines were able to make dividend distributions. This goes to explain the fact that £23 millions invested in producing mines of the Rand

were non-dividend paying last year, while in the outside districts the capital in this category was £1½ millions. Developing mines of the Rand have a capital of £2,880,000, being the New State Areas, which commenced crushing in May, and the West Springs, due to crush next year. It is rather unfortunate that mining expansion is so limited. Over £8½ millions issued capital is lying dormant in non-working mines of the Rand, and the relatively larger sum of £3 millions in mines of the same class situated in outside districts. The specification of issued capital shows that, in respect of Rand concerns, nearly £20½ millions were issued for cash, and approximately £33½ millions for property, equipment, shafts, mine development and other assets. About half the amounts received by way of premium on shares and from debenture issues have been written off, the net amounts outstanding being £7½ millions and £4½ millions respectively, while temporary advances, mainly in regard to producing but non-dividend concerns, account for £3,657,000. The balance-sheet of the entire gold mining industry (Rand and outside districts) shows a total of £108½ millions.

Next to gold mines in the Transvaal summary comes the coal mining industry with a net issued capital of not very far short of £5 millions in respect of which dividends of £213,600 were paid, the collieries being also seriously affected by the strike. Transvaal diamond mines have a capital of £192,500, inclusive of £80,000 for the important Premier diamond mine, the sole contributor to the dividend aggregate of £100,000. No dividend whatever was forthcoming in respect of base mineral mines in the Transvaal, whose capital debentures and temporary loans exceed £3¼ millions.

With the exception of the diamond mines of Kimberley and Jagersfontein and the coal mines of Natal the mineral activity in the other three provinces of the Union is of minor importance. The diamond mines paid dividends totalling £706,250, while the Natal collieries paid £162,260 on issued capital of £4 millions. The strike did not affect them, in fact the export trade increased owing to the shutting off of Delagoa Bay, which is supplied from Witbank, the principal coal-producing centre of the Transvaal. The entire mining industry of the Union paid in this unrepresentative year something under £7 millions in dividends on a net issued capital of £82½ millions.

The majority of the Smuts Government has been reduced to ten, owing to the retention of the Turffontein seat by Major Hunt, who resigned his membership of the South African party owing to disagreement with the Government's retrenchment policy in Civil Service and railway salaries and wages, though at the same time complaining of expensive administration and ineffectual and insufficient measures of unemployment relief. Truth to tell, the Smuts Government has in measures of railway construction, irrigation works, and afforestation done far more than can be financially justified. The cost of white as against native labour, normally utilised, runs into many thousands of pounds, and may so inflate capital expenditure as to make these schemes unremunerative. This is virtually admitted in respect of irrigation schemes, local farmers cannot pay the heavy rentals, and General Smuts proposes to seek wealthier agriculturists in Britain, Holland, and Denmark, while £170,000 capital and interest has been written off five irrigation schemes in Cape Colony.

Rather an interesting decision was given on an income-tax point by the Supreme Court last week. Mr F. J. Lunn, formerly a director of the Pretoria Portland Cement Company, received a gratuity of £1,000 for loss of office when the headquarters were transferred to Johannesburg, and he could no longer continue to devote the necessary time to the work. The Commissioner of Inland Revenue called for the inclusion of the sum in question in Mr Lunn's income-tax return. But Mr Justice de Waal held that it was in the nature of a gift, testimonial, or tribute by the company to the director, an appreciation of high services rendered to the company during his period of office, and that the amount would not be deemed to be taxable income. "Where a receipt or accrual lacked the element of recurrence it must be classed as an accrual or receipt of a capital nature, and as such not taxable."

The diamond production is increasing gradually. For July the output was 203,383 metric carats, valued at £545,000. For the six months to June 30th the output figured at 755,187 carats, valued at £2,316,500. This output is 85,600 carats in excess of that for the whole of 1922, but the value is only £50,000 higher. It is noticeable that the actual sales reached 1,130,700 carats, with a value a million higher than the production, the average price realised being 58s 8d per carat, as against 61s 2d in 1922.

NEW ZEALAND.—LOWER TAXES—SOLDIER SETTLERS.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, August 10.

THE present season finds New Zealand expectant of better prices for her next year's exports and generally of returning prosperity. The course of prices in Britain, our chief market, has been eagerly watched during these months of the off-season, and the generally higher values of wool, meat, and dairy produce, added to the known world shortage of all pastoral products, has resulted in a pleasurable feeling of anticipation. Though the winter has been exceptionally severe with an abnormal rainfall, yet production, except of particular crops, such as wheat, which is grown almost wholly for domestic consumption, will not be affected.

Parliament is at present in session, and the Prime Minister is hopeful of getting most of the important legislation on hand through before he is due to leave for the Imperial Conference at the end of the month. Though parties are very evenly balanced there has not been undue feeling, and it is probable that most of the business will be successfully concluded before that time. The most important announcement made so far has been the decision to reduce taxation as a result of the momentarily favourable position of the national finances. So far no detailed announcement has been made of the exact remissions beyond the statement that farmers who are in any case subject to land tax will be relieved of their present obligation to pay income-tax as well. A slight remission was made of the duty on tea, but it is confidently expected that there will also be all-round reductions of the general rate of income-tax, which at present stands at a maximum of 7s 4d in the £.

Meantime, it has been found necessary to readjust some of the liabilities undertaken during the boom period. Any very drastic readjustment of general land values has so far been held up by the existence of the different moratoria, which do not expire until the end of 1924. But boards of inquiry set up by the Government to consider the state of the advances to soldier settlers have reported, and the Government has passed an Act providing for a considerable revaluation of these advances. Up to the present time advances amounting to approximately £27 millions had been made to 21,000 returned soldiers, but a considerable number of these were made to purchase or erect dwelling-houses in the towns. These urban loans have not so far been reviewed, though many of them were made to buy houses at peak prices. Their total amounts to approximately £9 millions.

The inquiry boards estimate that it is necessary to meet the difficulties of 7,625 soldier farmers by writing off over £1½ millions from the capital value of the land, remitting accrued rentals to the extent of another half million, postponing payments to the extent of over £400,000, and providing additional capital to the extent of about £300,000. The reports and the official action taken on them amount, therefore, to a writing off of approximately £2 millions of the £18 millions advanced on land.

The basis upon which the suggested revaluations have been estimated is not made very clear in the reports, but it is fairly evident that the inquiry boards have either taken present-day prices of produce or have anticipated better prices in forthcoming seasons. One report points out that if prices should fall it will be necessary to reconsider values again.

Of the 4,332 farms visited by members of the various inquiry boards, it is estimated that 50.6 per cent. have been successful, 18.7 per cent. outright failures, and the remainder temporarily unsuccessful, mainly through the high land values and the high prices of stock and

materials when the settlement was made. One cannot help feeling that the obvious reflection upon such a conclusion is that there is nothing to show why those civilian settlers who bought in the boom ought not to be regarded as in similarly unsafe circumstances. If the position of the soldier settlers is so unsound, it looks as if the end of the moratorium may reveal a state of affairs almost as bad among the civilian settlers also. Meantime, the country is asked and has agreed to relieve the soldier settlers of a liability of £2 millions, which will be added on to the already considerable public debt.

POLAND.—FINANCES—MR KUCHARSKI'S FINANCIAL PROGRAMME—A PROPOSED BANK OF ISSUE—POLAND'S ENGLISH FINANCIAL ADVISER.

(FROM OUR CORRESPONDENT.)

WARSAW, September 18.

THE last returns of the Polish National Bank reveal a very unsatisfactory state of affairs in the financial situation, as may be seen from the figures below:—

		Foreign Coin and Bullion.		Foreign Banks.		Circulation.		Advances to the Sov. Govt.	
		Million Gold Marks.		Billion Paper Marks.		Billion Paper Marks.		Billion Paper Marks.	
May	31	87.5	...	25.2	...	2.8	...	2.4	...
June	30	85.0	...	32.5	...	3.6	...	3.0	...
July	31	82.9	...	33.6	...	4.5	...	4.1	...
August	31	82.1	...	26.5	...	6.9	...	6.4	...

Since the end of June the reserve composed of bullion and of foreign currencies has decreased by 10.9 million gold marks. The circulation increased in June by 800 milliards, in July by 900, and in August by 2,400 milliards. Nearly the whole of this increase was due to the advances made by the Bank to the Government. Only a small percentage was used for the discounting of private bills. An amelioration of the financial situation during the next months can hardly be expected. The effects of the new capital levy (see *Economist*, September 1st, p. 333) cannot make themselves felt before the end of this year. The increase of taxes voted by the Diet in July is quite inadequate, because of the depreciation of the mark. For instance, the land tax is to be increased by 10 per cent., while the prices of agricultural products have risen by 300 per cent.

After Mr Linde's resignation, the portfolio of the Ministry of Finance has been taken over by Mr Kucharski. Mr Kucharski was in 1919 and 1920 Minister for the former Prussian Poland, and in Mr Witos' Cabinet he was at the head of the Ministry of Industry and Commerce. Hitherto he has had but little experience in financial affairs—he is an engineer by profession—and it is not known why at such a very critical time he has been offered this responsible post. It is supposed that Mr Kucharski, who has recently conducted negotiations with foreign capitalists, will be able to obtain a loan for Poland, and this may perhaps explain his nomination.

At the opening of the Oriental Fair in Lvów (Lemberg) Mr Kucharski delivered a speech in which he exposed the principal outlines of his financial programme. The new Minister of Finance intends to present the Budget for 1924 in October. This will certainly be a great improvement in comparison with the previous Budgets, which were discussed by the Diet in the middle of the new financial year, and which in consequence had lost their practical value and were simply historical documents. Mr Kucharski also promised in his speech that the Budget will balance, and that the sources from which the deficit may be covered will be stated. On this subject Mr Kucharski's statements were very vague, and it may be hoped that he will present a more detailed plan which he intends to apply for stopping the printing press. In Lvów the new Minister of Finance did not even say if he will base his Budget on the paper mark or if he will return to the method applied by Mr Grabski, who tried to introduce the gold mark in all public accounts.

Mr Kucharski dwelt in his speech on the necessity of realising simultaneously, and not successively, the three postulates of a financial recovery:—(1) The balancing of the Budget; (2) the stabilisation of the currency; (3) the introduction of a new standard and the foundation of a

bank of issue. Hitherto it was believed that all efforts must be concentrated on the increase of revenue, and the decrease of expenditure, so that the printing press may be brought to a standstill. Only after the achievement of this reform was it considered advisable to pass to the foundation of a bank of issue, which in the plans of the former Minister of Finance was considered as the crown of the whole financial reform. In this respect a change has partly taken place in the opinion of financial experts. The capital famine which is becoming every day more severe makes it necessary to hasten the opening of a modern bank of issue. Many factories are obliged to close their workshops, not because of a lack of orders, but because of the impossibility of obtaining the wherewithal to carry on.

The statutes of the new bank of issue are being discussed by a special commission. It has been announced by the Press that the capital of this new bank will be subscribed to a great extent by an American concern.

The arrival of Mr Hilton Young as adviser to the Polish Treasury in connection with these plans of founding a new bank of issue is expected in October. According to reports in the Press, Mr Hilton Young will devote himself in the first instance to an examination of the Budget. He will study the possibilities of bringing it into equilibrium, and in the case of a favourable opinion, negotiations for the opening of a Polish bank of issue, with the assistance of English and American capital, will be started. Probably the capital of the bank will be fixed at 100 million dollars.

ROUMANIA.—CROP YIELDS AND MOVEMENT—EXPORTS—SUGAR—BULGARIAN RELATIONS.

(FROM OUR CORRESPONDENT.)

BUCHAREST, September 22.

ON the basis of the latest data made available by the Ministry of Agriculture, the areas sown to grain this year—in comparison with 1922—and the estimated crop yields are as follows:—

	AREAS SOWN.		Increase or Decrease.	
	1922.	1923.	1922.	1923.
	Hectares.	Hectares.	Hectares.	Hectares.
Wheat.....	2,648,640	2,683,700	..	+ 35,060
Rye.....	266,500	263,200	..	- 3,300
Barley.....	1,727,450	1,959,100	..	+ 231,650
Oats.....	1,335,500	1,355,700	..	+ 20,200

	CROP YIELD.		Increase or Decrease.	
	1922.	1923.	1922.	1923.
	Hectolitres.	(Estimated.)	Hectolitres.	Hectolitres.
Wheat.....	32,687,400	40,440,000	..	+ 7,752,600
Rye.....	2,252,400	3,616,500	..	+ 354,100
Barley.....	32,262,200	23,712,700	..	- 8,549,500
Oats.....	29,288,200	20,068,700	..	- 9,219,500

Although the earlier estimates of the Ministry that the 3,261,200 hectares sown to maize this year would yield almost 50 per cent. more than the slightly larger area sown in 1922, the latest reports are that the long dry spell is now seriously affecting this grain, and the crop in Transylvania is stated to be so poor that this province will need to import corn from other parts of the kingdom.

A competent authority has recently estimated that, if the Ministry's harvest expectations as to wheat, rye, barley and oats for this year are fulfilled, there will be an exportable surplus worth close on 15 billion lei (roughly 15 millions sterling) and that—figuring Roumania's annual imports at a present value of 20 billion lei—the deficit of 5 billion would be more than made good by exports of other foodstuffs, petroleum, lumber, &c.

An exportable surplus worth 15 billion lei, however, implies an excess over domestic requirements of close on 4 million tons of grain—or three times the quantity exported last year; and, even if such an exportable surplus should turn out to be available, there is not the least likelihood that this quantity could be moved to the seaboard; first, because the country's transportation system is not yet equal to the task, and secondly, because the present banking resources of the New Kingdom could not finance it. The Roumanian peasant, knowing little or nothing of finance,

will only sell his products for actual cash, and, in the present acute shortage of currency, the purchase of such products is becoming increasingly difficult—if not impossible. Furthermore, as Mr Alexander Adams, the British Commercial Secretary, pointed out in his report for 1922, whereas a grain shipment before the war could be liquidated within ten days, transportation conditions are now such as it might take up to three months to liquidate a movement—and this becomes a serious obstacle to exports with money (when it can be obtained) loaning at from 2 to 3 per cent. per month. Also, it should be remembered that wheat—which promises so well this year, and as to which preliminary estimates would seem to indicate that there will be a yield of more than half a million tons over and above internal needs—is still prohibited for export, and it is understood to be the Government's intention to continue this prohibition until at least two million hectares have been sown to wheat this autumn. With this grain now selling at 10,000 lei below the Government's maximum price of 45,000 lei per carload, and in the present exceedingly dry condition of the ground, it is hardly to be expected that autumn sowings of wheat will come up to the Government's requirements.

Apart from internal difficulties, the competition of the excellent harvests in other countries is now being felt by Roumanian exporters, and latest advices from the ports of Braïla, Constantza, and Galatz indicate that, as yet, shipments from this season's crops are moving out very slowly, with a considerable amount of tonnage still lying idle in the Danube waiting for cargo.

The sugar crop promises very well this year, with an estimated yield of 80,000 metric tons—or almost double last year's crop. If the railways are able to move all the beet to the refineries, and if the refineries are able to get all the fuel they need, the output of refined sugar this season will probably be sufficient—for the first time since the war—to meet the country's requirements.

Considerable satisfaction is being felt over an interview given a few days ago by Premier Tzankoff, of Bulgaria, to the Bucharest daily *Universul*, in which very friendly sentiments towards Roumania and the Little Entente were expressed. In this interview the Premier called attention to the fact that Bulgaria has already delivered to Roumania, on account of war reparations, some 15,000 sheep, 5,000 cows, 5,000 horses, and 3,000 oxen.

DENMARK.—TRADE BALANCE—EMPLOYMENT AND PRICES—CROPS—TRADE WITH RUSSIA.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, September 15.

THE June foreign trade report showed a welcome improvement, imports being only Kr.141,000,000, and the total exports Kr.136,000,000, the import excess being thus only Kr.5,000,000, as against Kr.20,000,000 in May and Kr.53,000,000 in April. Unfortunately, the July figures published a few days ago show that the deficit has now been increased to Kr.40,000,000, as the result of the increase of the imports to Kr.167,000,000 and the decline of the total exports to Kr.127,000,000. The last-mentioned figure includes Kr.6,000,000 for re-exports of foreign goods—the only unchanged figure. The import excess for July is the second largest this year, only having been exceeded in April. Imports for the seven months January to July this year aggregated Kr.1,094,213,000, while the exports have amounted to Kr.874,046,000, of which Kr.42,000,000 represent re-export of foreign goods. The seven months' import excess is, accordingly, Kr.220,000,000, or about Kr.31,000,000 per month.

The unfavourable movement in the balance of trade had a certain effect on the foreign exchange market, which is otherwise rather quiet. However, the increase in imports is partly due to preparations for increased production in this country. The figures for unemployment are not very favourable, last week's report of the Statistical Department showing that the general percentage for all trades

averaged 7.6 at the end of August, as against 7.4 at the end of July. The weekly movements for the principal groups of labourers during the month have been insignificant. The small increase of unemployment in the building trades of the capital is due to the completion of some repair work, for instance, on the schools. Throughout this year the percentage of unemployment has been considerably lower than for the corresponding months of 1922.

During August the wholesale price index of the *Finanstidende* declined from 207 to 202. Danish wholesale prices are now 13 per cent. higher than last year at the same time, and the krone possesses hardly one-half of its pre-war purchasing power. But the paper states that, "in spite of all, developments are in the right direction, and if the good prices of agricultural export produce are maintained for some time, it is probable that so large sterling amounts will fall due to the country from this source that a further rise in the krone rate may be predicted, and this will not be without influence on the wholesale price-level. However, it will not be quite easy to get prices down, even if conditions should be favourable. For high wholesale prices have now gradually affected the cost of living, which is clearly shown by the July index figure recently published by the Statistical Department, and the wages of labour as well as the salaries of officials have, therefore, already adapted themselves to the present high level of wholesale prices. There is now the closest possible correspondence between the dollar rate and the level of prices in Denmark, which appears from the fact that the rate on August 1st was 556, while the figure to be expected was 555. The purchasing power of the Danish krone should accordingly be practically alike at home and abroad."

In all important respects the trade statistics show that the exports of agricultural produce have been larger this year than in 1922. For instance, in January to July the exports of bacon were 95,800,000 kilos, as against 62,000,000 kilos in the corresponding period of last year. To the United Kingdom were supplied 53,200,000 and 36,200,000 kilos respectively, which is a larger proportion this year than last year. Czechoslovakia has bought increasing quantities of Danish butter. This year 2,500,000 kilos have been sold to the U.S.A., 1,700,000 kilos to Switzerland, 1,600,000 kilos to Belgium, and 1,300,000 kilos each to France and Norway. The export of eggs aggregated 21,800,000 scores this year, as against 19,800,000 scores only last year. The United Kingdom has been the principal market also for this article, as it has been for many years. The sale to England amounted to 20,000,000 scores, the corresponding figure for last year being 17,000,000 scores. The rainy and stormy weather has unfavourably affected the harvest. According to the official report at September 1st, however, the damage hitherto caused is not more than may be remedied by lasting dry weather. Subsequent weather improvement suggests that the position on September 1st has at least been maintained. At the said time the figures for wheat, rye, barley, and oats were 4.5, 4.2, 4.8, and 4.8 respectively on the islands, and 4.2, 4.4, 4.4, and 4.4 respectively in Jutland, which is quite promising, as the figure 4 indicates average crops.

The Russian Trade Delegation, which has been appointed according to the commercial treaty agreed upon between Denmark and Soviet Russia, has now been permanently established in Copenhagen, and the Danish Government delegation has left for Moscow. In the first instance no great results are expected from the treaty, however. Russia sells to Denmark some cattle food (sunflower cakes), and it is now reported that the recently established official Russian company "Eksportchleb grain export" has appointed a representation in Copenhagen as well as in a number of places abroad. The representative of the company here is the Russian Trade Delegation.

In the banking world conditions are once more steady and the alterations in the balance-sheets are very small from month to month. It has now been decided to merge the Kjøbenhavns private Laanbank (established 1854) with Den Danske Landmandsbank; thereby a consolidation of interests advantageous for both banks is attained.

Letters to the Editor.

IRISH ELECTIONS AND PROPORTIONAL REPRESENTATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Alfred J. Gray, Assistant Secretary of the Proportional Representation Society, takes me to task for certain brief references to Irish election results, and to P.R. as bearing upon them. I was emphasising the conclusive character of the results, and merely alluded to the system under which they had been obtained for the purpose of showing that the minority had had full scope for demonstrating its full strength. I was not canvassing the merits of the system, of which, in point of fact, I am a supporter.

I wrote:—"The Treaty and the Constitution are supported, therefore, by a total majority on the principal issue of 109 to 44, or roughly 2½ to 1. And this result emerges from a system which gives—and the figures illustrate it—a disproportionately large influence to minorities." Mr Gray replies categorically "neither does P.R. do so, nor do the figures of the election, which you quote, illustrate the fact."

The Treaty and the Constitution were supported—as the quoted figures showed—by 764,803 voters (excluding University elections), who returned 103 members to take their seats under and in accordance with the Constitution. The Treaty and the Constitution were opposed by 290,001 voters, who returned 44 members pledged to repudiate both. The quoted figures showed that the 764,803 were entitled theoretically to 106.6 members, or 3.6 more than they got, and the 290,001 to 40.4 (Mr Gray apparently in error says 41) members, or 3.6 less than they got. If the majority had obtained as many members proportionally as the minority, they would have obtained a fraction over 116 instead of 103. If the minority had obtained as many votes proportionally as the majority, they would only have obtained a fraction over 39 instead of 44. The figures showed, therefore, that in this case at least a minority did obtain disproportionately large representation—presumably in virtue of the "disproportionately large influence" which P.R. not unwisely puts within the power of minorities for their own protection.

Mr Gray appears to have erred through unfamiliarity with Irish affairs. The issue at the General Election lay between the Treaty and the Constitution on the one side, and militant, non-constitutional Republicanism on the other. The Farmers, Labour, and the Independents were, and were patently so treated by me, only sections of the majority on the main issue. The election addresses and speeches of their candidates, the voting and cross-voting of their supporters, and the action of their representatives since being elected, all prove this. The pursuit of sectional interests concurrently with the decision of the main issue led to some dissipation of majority strength by which the compact minority benefited. Mr Gray lumps these majority sections with the minority in one class to show that the "minor parties" received proportionately less representation than the Government party. The misfortunes of the majority sections, due to overlapping candidatures and cross-voting, are to cloak the advantages of the real minority. To do this is to base an unrequired arithmetical defence of P.R. upon a wholly fallacious handling of the facts.

Brevity robbed a further sentence, challenged by Mr Gray, of complete precision. I alluded to two main features, favourable to minorities, of P.R. on the single transferable vote system—viz., the limitation to a single vote and that vote's transferability. The voters for a successful candidate have their second preferences limited just as I stated, while their third and other preferences appear to be fortuitous in their effect—if they have any. The voters for the more unsuccessful candidates can by their second and other preferences have their votes passed on, as I stated, among the minority or other candidates until one is found whom they can help to elect. I omitted to state that the voters for a candidate who just fails to obtain a quota may never have their second or other preferences distributed

at all. The burden of electoral sterility is thus shifted from the shoulders of the supporters of the most unpopular candidates to those of the supporters of the less unpopular candidates. Some of the minorities, if not all, obviously benefit by the system—which was rather obviously designed for that very purpose. The mobility of their voting power facilitates their combination for effective action in varying contingencies.—I am, yours faithfully,
"YOUR DUBLIN CORRESPONDENT."

FRANK ESSAYS IN ECONOMICS.

THERE are some people who imagine that the war has made it necessary to re-write political economy. To such we would commend the study of a *book of essays just published by the editor of the *Spectator*. The volume is called "Economics of the Hour," but a study of its contents quickly demonstrates how applicable to the present are the economic truths of the past. From beginning to end Mr Strachey's art illuminates and simplifies many subjects which in other hands would be difficult or dull. Perhaps the most arresting of them is the last of all, where he deals with the social conditions of England under the old Poor Law before 1834, and the situation to-day. The analogy between the forces which produced demoralisation a hundred years ago and the tendencies observable in our administration of measures of social reform to-day is, to say the least, disquieting. Mr Strachey's warning of the necessity for restoring into full vigour the incentives which will enlist the activity of the individual in the direction of finding work and of getting the utmost output is a timely one, and should be pondered upon by all thoughtful people.

In the matter of the national debt, Mr Strachey makes a strong appeal for abandoning ordinary sinking fund methods, and dealing with the burden by substituting a system of terminable loans, say, of 99 years' currency, on the analogy of leasehold property. It is by no means certain that the public, accustomed to perpetual loans, would understand or take up loans of this kind. But Mr Strachey thinks that the terminable clause could be introduced at a cost of very small increase in the interest yield, and his plan certainly has the merit that, once introduced, we should have a sinking fund which would be beyond the reach of needy Chancellors of the Exchequer. Mr Strachey deals his trenchant blows too freely on all sides to hope to escape without strong criticism. In his chapter on a Capital Levy, for example, an advocate of that measure would, we think, be able to show that he has exaggerated the technical difficulties which it would encounter. But whether they agree with him or not, readers of these essays will not fail to appreciate the healthy vigour of Mr Strachey's opinions, and his method of expressing them. Mr Strachey has dealt with his own intellect in the way in which he would have us deal with vices, or with the luxuries, whether of rich or poor. "The real test of luxury is 'are these things making me soft?' If they are, the man, in order to save his own soul, and curiously enough also to save his body, must cut them off."

* "Economics of the Hour." By J. St Loe Strachey, Editor of the *Spectator*. Hodder and Stoughton, Limited, London.

THE FINANCING OF FOREIGN TRADE.*

DURING and since the war widespread dissatisfaction has found expression among commercial communities with what is considered the unreasonable conservatism of bankers and their reluctance to help exporters in developing foreign and overseas markets. Business men of each country have cited the excellence of the facilities available to their foreign rivals. In England and France in particular the bold policy of the German banks has been held up

* "L'Organisation du Crédit au Commerce Extérieur en France et à l'Étranger." By M Maurice Caillez. (Paris) Librairie Générale de Droit et de Jurisprudence. 20 francs.

as an example. As it became apparent that mere criticism of the existing banks was unlikely to lead to any definite results, strong pressure was brought on the Government to act in the desired direction. This movement and the patriotic determination of business men and Government alike to capture German trade bore fruit in this country through the recommendations of Lord Faringdon's Committee in the British Trade Corporation. After the Armistice, the economic chaos of parts of the Continent led the Government to develop the War Risks Insurance Office into the Export Credits Department. In France the Government assisted in the formation of the Banque Nationale du Commerce, Extérieur, to which it makes an annual subvention. In Germany a similar scheme for a National Export Credits Bank has apparently failed to materialise. In the U.S.A. the Government found it necessary to revive for post-war purposes the War Finance Corporation, when private enterprise had shown itself unable to meet the somewhat exaggerated expectations of those who sought to restore Europe with American goods.

Dr Caillez' book, which was prompted by the recent controversies, treats the question on a historical and descriptive basis. After discussing the special need for credit in international trade, he describes the pre-war position of the banking system in England, France, Germany, and the U.S.A., with special reference to the commercial banks and the methods by which the special requirements of foreign trade are met, and goes in some detail into the measures taken by the various Governments and banks since the war to increase credit facilities.

Exigencies of time and space make credit of peculiar importance in international trade as compared with domestic trade. Standards of honesty and punctuality vary in different parts of the world, and in purely agricultural countries, especially where there is little diversity of crops, a bad harvest or fluctuations in the world price of the produce are always liable to affect the solvency of the local trader. Apart from risks arising from political and economic instability, judicial guarantees against fraud are often inadequate. The competition of the big manufacturing countries, especially since the entry of Germany into the markets of the world, has led to the offer of more attractive terms in regard to payment, and the consequent lengthening of the period for which credits are required by the exporter. Each additional reason, however, which makes credit a necessity to the trader is but one more reason to the banker against granting it. Deposit banks naturally dislike immobilising their resources for the lengthy periods often required in overseas trade, and on the varied forms of security offered. Even before the war, moreover, the risk of exchange fluctuations was not altogether absent. The gold point buffer was not always effective in new and comparatively undeveloped countries. Since the war the general inundation of paper money aggravated by the evils of currency speculation has brought about the present position, in which many States are no longer able as formerly to recover their equilibrium rapidly after a shock. The risk in foreign trade relates far more than formerly to the credit of the State rather than to that of the individual trader. This being so, it has generally been thought right that the State should shoulder part of the risk.

Dr Caillez' review of the steps taken with this object in various countries, and the ill-success which has generally resulted, leads him to reject absolutely the contention that the interchange of goods between country and country can be developed by the creation of export banks. The German banks, supported as they were by their Government, were possibly in certain cases able to open branches in countries where Germany had previously no trade. In so far as they did so, however, they were "expeditionary corps" rather than banks, and, apart from such manifestations of German imperialism, the truth is that the trader always precedes the banker. Before the war the banking organisation of each country tended to harmonise with the needs of its commerce, and the importance of the commercial banks depended on the state of international transactions. A time of general impoverishment like that following the war was, Dr Caillez considers, ill-chosen for an increase of credit facilities. The complex and artificial organisations created for that

purpose in various countries have not unnaturally yielded negligible results.

In the case of his own country in particular the author defends the banks against their critics, and points to the incompatibility of France's extreme protectionist policy, with her attempts to develop a big overseas trade. At bottom, he attributes the comparative stagnation of French foreign trade to the excessive cautiousness of the national character.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 3.	October 4.

There has been plenty of matter for excitement in Stock Exchange markets this week. The foreign market, in particular, was stirred in lively fashion by the various political developments reported from abroad. The way in which the value of the French franc improved gave a sharp impetus to French bonds of all kinds. Amongst industrialists, the boom in tea shares continued at an accumulating pace, while nitrates and tobacco shares have also bulked largely in the limelight. Business, however, has come spasmodically, but the end of the third quarter of the year turns over without the monetary apprehensions commonly current at this season.

The Victorian Government was very successful with its offer of £9,000,000 of 5 per cent. stock at 99, nearly twice that amount being applied for by the public. No doubt a good proportion was in respect of conversion operations. The price opened at 11½ premium and eased off to 10s premium. This, together with talk of other Colonial loans in the near future, led to the War Loan declining a trifle from its top price of 102½, and brought about sympathetic dullness in some of the other British Government securities. The Funding Loan is quoted ex dividend. It is noteworthy that the debenture and other prior-charge stocks of the British railway companies are in demand at rising prices.

Volatile movements in French Government, municipal, railway and shipping bonds are a feature of the week in the foreign market. The abandonment by Germany of the passive resistance policy in the Ruhr area led to a violent rise in French issues, and caused a little improvement in German bonds. Bears of French stocks climbed in hastily, and the market presented a one-time appearance of robust strength, which was not, however, fully maintained. Austrian scrip advanced on the increasing evidence that Austria is recovering from the effects of the war. Japanese municipal bonds are better, the effects of the earthquake wearing off to some extent, and Brazilians are coming into rather timid request from those who, being already holders at higher prices, think that the

present time is opportune for averaging their earlier purchases. Amsterdam Threes have gained 8 points.

Home Railway pre-ordinary stocks show up well, most of the prices being better. London, Midland and Scottish, still called "Brum" in the market, has also been a good spot. Profit-taking slightly reduced the prices of Metropolitan and Districts, though Undergrounds remain hard. The San Paulo Railway has declared an interim dividend of 4 per cent., against 2½ per cent. a year ago, and this had a striking effect upon the price, which rose by points at a time. Antofagasta deferred is another good spot, thanks to the activity and strength shown by nitrate-producing shares, where a long string of rises occurred. Argentine Railways continue to reflect the satisfaction felt with the recently-declared dividends, though the approach of next week's settlement brought in a few sellers, whose operations caused a setback from the top.

The rubber market is languid, the statistical position still being disappointing, but the boom in tea shares has assumed extensive proportions. It is curious that the higher-priced shares, to speculate in which absorbs large sums of money, are those which stand out most prominently in the movement, the public apparently eschewing the shares which are of more speculative character. Rises in most of the heavy tea shares are very substantial.

Oil shares pursued a downward course. Anglo-Persians gave way abruptly, on fears of earthquake disturbances, and although these were contradicted, part of the fall remained. Mexican Eagles improved, on buying said to be on behalf of a Paris syndicate, but fell back when the support was withdrawn. Shells gave way, and Agwis are flat, in consequence of the paucity of information vouchsafed as to how the company and its subsidiary are progressing. Hudson's Bays stand out with marked strength. Textiles are dull, in consequence of reports that the industry is doing none too well at the present time, and Courtaulds have reacted after their rise on expectations of elimination of competition from Japan, through the earthquake, for some time to come. Tobacco shares again went ahead, on support mainly from the West of England, but here again there was a reaction towards the end of the week. Liptons spurred, on consideration of the company's tea interests, and the rise brought in a good many sellers. Hotel shares are better, in consequence of the good results being published by some of the companies and the hopes of a proper season in 1924. Banking shares took a turn for the better, more especially in the Colonial and Foreign group, and insurance shares have made further upward progress. The shipping market is exceedingly quiet. The wireless list has drooped, and it is said that the expected Marconi meeting in October may have to be postponed. Cable shares, however, continue to advance, upon consideration of the arguments in their favour which have been set out in reply to an attack made upon the industry earlier this month. Newspaper shares weakened all round, owing to the fears of increased competition in the provinces.

The Kaffir market has enjoyed a modest revival, in the course of which the shares of the principal deep-level companies received most attention, some of the buying coming from Johannesburg, some from Paris, and a little from London. Considerations of this half-year's probable dividend payments are put forward as responsible for the attention which Kaffirs are now receiving. There has been little doing in Rhodesians, and some of the recently active Mexicans fell back, owing to lack of public interest. Tin has been up to £205 per ton, but its inability to maintain the price enforced caution upon people who might otherwise have been attracted to tin shares; the improvements in this market are confined mainly to shares in a few of the Malayan companies. Rio Tintos have depended upon Paris for their fluctuations.

NEW ISSUES.

Total offered for subscription for whole year

The American Cellulose and Chemical Manufacturing Company, Limited.—Incorporated under the laws of the State of Delaware, U.S.A. Details are given of this company in the Press, to comply with London Stock Exchange regulations. The authorised capital consists of \$15,000,000 7 per cent. cumulative first participating preferred stock, \$10,000,000 7 per cent. cumulative second preferred stock, and 220,000 shares of no par value of common stock. \$4,000,000 of the first preferred, \$2,150,400 of the second, and 200,000 common shares have been issued. The company was constituted in January, 1918, and has an issued loan capital, in the form of 8 per cent. ten-year bonds, amounting to £400,000. The works were established during the war at the request of the American Government, and the company owns the sole rights for the United States and its Dependencies, &c., to manufacture cellulose acetate and articles produced under the Dreyfus patents and processes. The 8 per cent. bonds have been marketed in London at par. They are repayable on or before December 31, 1932, at 110 per cent., are secured by a trust deed, and constitute a first charge upon property and plant. The bonds are convertible into shares. "Celanese" is linked up in this country with a company which has not been very successful, and it is difficult to appraise the security of the American company without the story of the British undertaking passing through our minds.

Rhombia Mines, Limited.—Authorised capital £250,000 in shares of 5s each, of which 600,000 are now offered for subscription. The company has been formed to acquire certain mines and mining property in Rhodesia. An interesting report is submitted—the public is optimistically told that profits should provide a 25 per cent. dividend. The purchase price is £110,000, of which £60,000 is payable in cash. A mining speculation without unusual merit.

Kopermyz, Limited.—Capital £137,500, divided into shares of 5s each, all of which have been issued. The company holds the whole of the shares of M. Z. Copper Syndicate, Limited. This syndicate owns "a copper-bearing property" in the Transvaal. It is stated that "102,243 shares of £1 each (now represented by 408,972 shares of 5s each) were issued credited as fully paid up in part consideration for the purchase of the whole of the shares of M. Z. Copper Syndicate, Limited; the balance of the purchase of such shares being the sum of £8,500 in cash." These and other details are published in the Press in connection with a proposed application to the London Stock Exchange for permission to deal in the shares.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

BROKEN HILL PROPRIETARY.—Four weeks ended September 12th:—Iron and steel works: Coke ovens produced 23,566 tons of coke, 294,891 gallons of tar, and 429 tons of sulphate of ammonia. Blast plant produced 58,580 gallons of benzol. No. 2 blast furnace produced 11,858 tons of pig iron. No. 3 blast furnace produced 12,772 tons of pig iron. Open hearth produced 12,991 tons. Blooming mill produced 19,497 tons. Rail mill produced 11,481 tons. 18-inch mill produced 5,772 tons. 12-inch mill produced 2,915 tons. 8-inch mill produced 1,505 tons. Rod mill produced 4,418 tons. Steel foundry produced 380 tons of castings. Iron Knob: Shipped 46,318 tons. Broken Hill (underground): Bailing out water preparatory to starting; otherwise position unchanged. Ore dressing mills produced 174 tons of lead concentrates and 5,367 tons of slimes. Zinc separation plant produced 488 tons of zinc concentrates. Slimes flotation plant produced 1,337 tons of lead concentrates and 3,669 tons of zinc concentrates.

BROKEN HILL SOUTH.—Six weeks ended Aug. 11th:—Crude ore treated, 29,910 tons, assaying 14.7 per cent. pb., 6.7 ozs ag., 12.9 per cent. zn., producing the following concentrates:—Lead conc. mill, 4,134 tons, assaying 69.4 per cent. pb., 21.8 ozs ag., 5.5 per cent. zn.; current lime, 1,238 tons, assaying 58.7 per cent. pb., 36.3 ozs ag., 8.3 per cent. zn.; total, 5,432 tons, assaying 66 per cent. pb., 25.3 ozs ag., 6.2 per cent. zn. Dump lime treated, 11,261 tons, assaying 13.7 per cent. pb., 6.8 ozs ag., 14.7 per cent. zn., producing the following concentrates:—7,752 tons, assaying 40.2 per cent. pb., 21.8 ozs ag., 17.8 per cent. zn. In addition to the above, 1,313 tons of classified sands from dump lime, assaying 4.6 per cent. pb., 3.5 ozs ag., 15.1 per cent. zn., were passed to the table section, producing the following concentrates:—37 tons, assaying 53.9 per cent. pb., 17.7 ozs ag., 13.0 per cent. zn. Slime zinc flotation, 14,965 tons, assaying 4.4 per cent. pb., 1.8 oz ag., 13.9 per cent. zn., producing the following concentrates:—4,008 tons, assaying 11.5 per cent. pb., 5.4 ozs ag., 4.5 per cent. zn. Despatches of zincy tailings, 15,881 tons net to Amalgamated Zinc.

MOUNT LYELL.—Four-weekly period ended September 19th:—Smelted Mount Lyell ore, 1,083 tons; North Lyell ore (direct to smelters), 801 tons; concentricates, 2,523 tons. The converters produced 511 tons of blister copper, containing copper 808 tons, silver 9,789 ozs, gold 190 ozs. The mill treated 8,512 tons of ore and produced 2,314 tons of concentrates. Furnace ran 23 days.

MOUNT MONAGHAN.—Four weeks ended September 18th:—Treated 5,883 tons Mount Monaghan ore, 5,078 tons concentrates, and 14 tons of purchased ore and secondary concentrates. Produced 428 tons blister copper, containing 424 tons copper and 2,394 ozs gold, including 3 tons copper from purchased ore and secondary concentrates. Concentrator treated 15,411 tons ore, assaying 6.6 per cent. pb., 1.3 ozs ag., 13.5 per cent. zn., containing 592 tons copper and 3,326 ozs gold. In addition to above production, have made on hand containing 43 tons copper and 430 ozs gold.

COMPANY MEETINGS, &c.

ANGLO-AUSTRIAN BANK, LIMITED.
FINANCIAL SITUATION IN AUSTRIA.

The first annual general meeting of the Anglo-Austrian Bank, Limited, was held, on the 28th instant, at Winchester House, Old Broad street, London.

General the Hon. Sir Herbert A. Lawrence, K.C.B., chairman of the company, presided.

The secretary (Mr M. McK. Turnbull) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that that was the first occasion on which he had had the privilege of addressing the shareholders of the bank since its reconstitution, in March, 1922, as an English company. He recalled how the former head office in Vienna, together with all the branches except those in the present Republic of Czechoslovakia, had been taken over as a going concern by an English group, and formed into a limited liability company. The

The Instone Air Line, Limited, was making good progress under exceptionally difficult conditions, but as the Government had decided that the present subsidy arrangements should come to a close in March of next year, and that a national company, to be the sole subsidised line, should be formed, introducing new capital and absorbing present operating companies, negotiations were proceeding on those lines.

With regard to the present position of trade, he was of opinion that the process of deflation had been far too rapid, and he suggested that the Government should give some relief from direct and indirect taxation, and call a halt for some years in the intensive deflation campaign, and so give merchants and manufacturers time to recuperate. There was a good demand for British coal all over the world, and he was glad to see that the increase in prices had been reflected in the miners' wages. What was the outlook in the coal trade for the future? One must never overlook the fact that the total output of coal in Great Britain was only about 300 million tons per annum. Now, bad as trade was with manufacturers, about 180 million tons of this quantity went for inland consumption and about 45 million tons was shipped as bunker coal at British ports, leaving a surplus of only about 75 million tons available for export. It was consequently obvious that, given a general revival of trade throughout the country, the quantities now available for export would soon be absorbed inland, and in consequence a shortage of coal would be felt which would naturally tend to harden prices. Development of the coalfields to increase output was therefore a necessity.

UNEMPLOYMENT.

He could not conclude without some reference to the alarming amount of unemployment at home compared with the actual shortage of labour on the Continent. He had always felt that the problem was not being successfully dealt with by the wasteful method of the dole and the rushing on with unproductive work, which was demoralising. His suggestion was that the Government would be taking steps to achieve that object in a far better way if they were to subsidise industrial firms all over the country. Such a method as this could be introduced by stages, and would, in his opinion, certainly help to solve the unemployment problem, as well as stimulate cheaper production, which in turn would enable us to sell abroad upon competitive lines.

Mr Theodore Instone (vice-chairman) seconded the resolution, which was carried unanimously.

BRITISH CELLULOSE AND CHEMICAL MANUFACTURING COMPANY, LIMITED.

PAST DIFFICULTIES OVERCOME—BETTER OUTLOOK. ENERGETIC SALES POLICY.

The fourth ordinary general meeting of the British Cellulose and Chemical Manufacturing Company, Limited, was held, on the 27th instant, at the Cannon Street Hotel, London, Sir Harry McGowan, K.B.E. (the chairman), presiding.

The Chairman, in the course of moving the adoption of the report and accounts, said: In the circumstances I do not think the loss, actually due to trading, is worse than was expected. But the following reasons, amongst others, should be present to your minds in any consideration of that result. During that period our processes of manufacture in almost every direction were undergoing changes, not only with the object of improving the quality of our material, but also with the object of cheapening cost. All our expenditure in this connection has been charged to revenue. Those of you who have practical knowledge of the running of a factory, particularly of a plant engaged in producing something of a novel character, will

appreciate the difficulties of endeavouring to keep up a steady rate of commercial output simultaneously with a keen and continuous battle against constructional and technical problems from day to day.

FRESH CAPITAL.

Since the date of our balance-sheet, as the report states, further money has been raised, and to some of you present to-day I daresay this recent increase in our bond indebtedness calls for explanation. Many discussions took place as to how best we should secure additional fresh capital. In these discussions we again placed all the facts of the company's position and prospects—as we saw them—before Messrs Dunn, Fisher and Co., with the final result that the Cellulose Holdings and Investment Company, Limited, agreed to take up a further £400,000 of debentures. While H.M. Government have no responsibility in connection with the decisions or the policy approved by your board, they duly and readily granted their consent to the increased debenture issue and the terms upon which it was arranged. To what has that money been devoted? Well, we have completed the extension of our numerous manufacturing departments, so that to-day Dr Henry Dreyfus assures us we can produce $\frac{1}{2}$ to 8 tons per day according to the varieties of yarn required by the trade. Our working capital remaining, composed of raw materials, goods in process and finished goods, and our liquid cash resources, are meantime sufficient to face the programme of production and sales we have set out to achieve, and given a return of demand in keeping with our new capacity to produce, we shall add to our working resources according as we make profits.

PRODUCTIVE CAPACITY.

Following upon the arrangements for new finance, to which I have referred, the company started to increase its capacity as quickly as possible, but during this time textile trade began to get worse, with the result that demand fell considerably. Coupled with this, we became conscious of reluctance on the part of the manufacturers to use our material, because, in spite of the superior qualities of our product, they were hampered in their dealings by the cheap material which was coming from the Continent, and, therefore, they were not willing to pay the prices at which we were prepared to sell at that time. Conditions of trade were such that they were inclined to take the line of least resistance and not to make the initial efforts which would be necessary to secure recognition for a new product with advantages which were not fully realised by them. During all this time we have had strikingly demonstrated to us the many different ways in which our basic material Celanese can be utilised in the production of fabrics of various kinds, with many beautiful qualities, and what we call the "applications" or more advanced uses of our material appear to us to be of the greatest importance in stimulating the demand for Celanese. Producers of fabrics may be conservative and satisfied with what they already market, and we cannot perhaps expect them to be eager pioneers without some demonstration, not only of the technical possibilities of manufacturing our material in the different fabrics, but also their superiority when made, and their high degree of saleability. We have, therefore, to show the way and also to stimulate demand by getting into closer touch with the public, who, when they get a knowledge of these fabrics, will undoubtedly ask the trade for them, and expect to have Celanese products, because of their quality. Such public recognition will be reflected indirectly upon the manufacturer and on the makers-up, and will induce them to buy our yarn and other intermediate articles, in order that they may meet the public demands. Simultaneously, therefore, with the erection of plant for the larger production of Celanese yarn, we have under installation weaving plant of various kinds designed to reproduce on a manufacturing scale what we have already seen satisfactorily produced in bulk samples.

THE FABRICS TO BE PRODUCED.

Now, I should like to say a word or two upon the class of output that we anticipate. The decision to carry our manufacture on a sufficient scale, beyond the stage of yarn and cord, was not suddenly adopted: it has been growing upon us as inevitable during the past two years. We had sufficient machinery of this class in our works to enable us to work out the various processes, as well as to assist other manufacturers to produce the materials. Moreover, in order to get quicker development, we made arrangements with a specialist in the natural silk trade, who had already produced with our material a series of bulk samples of articles which had never been produced before. The result was that over 100 fabrics, varied in kind, but all of great beauty, have been produced with our Celanese, and, particularly in the finer fabrics, these cannot be made with any of the existing artificial silks. They imitate natural silk with great exactness, and in certain instances are even more beautiful than articles made with natural silk. This fine-goods trade has, perhaps, the widest and most promising future, and has hardly any limit, although in saying this please do not forget that we are not neglecting the corn and yarn trade, for which there is a steadily growing demand.

THE INTRINSIC PROPERTIES OF THE PRODUCT.

It may not be out of place to give you an idea why we consider your silk is at least equal and in many respects superior to other artificial silks, and why it even supersedes natural silk in certain qualities. Celanese, which is the basic name of our product, is an excellent insulator for electricity and for heat and cold. Up to the present natural silk has been considered the best insulator from both points of view. It has now been proved, however, by tests made by various authorities that Celanese is much superior in its electrical insulating properties than natural silk. We are fully alive to the possibilities from the electrical point of view, but I will only say here that the non-conducting qualities have a special value in the textile industry, especially in clothing.

THE QUESTION OF DYEING.

At our last meeting you were told of the difficulties we had experienced, and the point that we had then reached. Since that time much has been done, and we have arrived at a stage when our technical advisers believe they are able to produce any colour, shade, or standard degree of fastness, as required. In view of this, you can take it that our dyeing methods are now just as simple as those for any other fibre, such as cotton, and are not likely to prove more costly. While upon the subject of dyeing, I might mention that it is a peculiar property of the new dyestuffs, in conjunction with Celanese, that if Celanese is mixed with cotton or other fibres, the latter will be unaffected by the dyes, and from this you will realise that when fibres are woven or knitted containing mixtures of Celanese with other fibres in various proportions, quite unique effects can be obtained. The other fibres can either be left white or simultaneously be dyed with other dyestuffs for the same or a totally different shade. The development is in its infancy, but the field of possibilities is a wide one. When these possibilities are developed, the saving in expense to the manufacturers of carrying different classes of stocks from which to make mixed colour goods should be very considerable.

SALES POLICY.

I do thoroughly believe that the quality of our goods is now such as to give satisfaction in their use, and believing that, we are pursuing a most energetic sales policy. We want to encourage manufacturers to see the advantage of using our material for their products. We want to encourage the friendliness of the wholesalers and retailers, but above all, it is necessary, in my opinion, that the demand should come from the actual user. To our mind, success is now a matter of selling, and I cannot too strongly urge our shareholders to help us in our efforts in this direction.

Of our ability to make profits under reasonable trading conditions I have no doubt whatever, and all our statistical records bear out this opinion, shared as it is by the entire board. Conditions of trade, now more difficult than ever in this country, may not right themselves so soon as we all might wish. Pending such improvement, we shall follow such a policy as will husband our resources to the best extent consistent with the development of our sales and the cheapening of our costs. We have continued to receive valuable assistance from our associates, the Tubize Company. Those of you who have been standing by patiently in the development of an unique product of such great prospects will, we feel sure, have ultimately a feeling of pride that you have continued to give your support to enable us to carry through when exposed to so many difficulties and temporary discouragements. We have given you our honest views as to our expectations, and what I have said to-day gives abundant justification for believing that the ultimate goal is worth all our efforts. Although the results to date must be looked upon as unsatisfactory, for the reasons given on

several occasions, this has not lessened our confidence in the future of this company, and we are convinced that we have a great industry in the making.

The report and accounts were unanimously adopted, and the proposed alteration of the title of the company to "British Celanese, Limited," was also approved.

CAM AND MOTOR GOLD MINING (1919), LIMITED. CHAIRMAN'S OPTIMISTIC FORECAST.

The ordinary general meeting of the Cam and Motor Gold Mining Company (1919), Limited, was held, on the 25th instant, at Winchester House, London, Mr L. E. B. Homan (the chairman) presiding.

Mr R. Roy Meldrum, representing the secretaries (the London and Rhodesian Mining and Land Company, Limited), read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: We have made during the year a working profit of £127,653, or 13s 6d per ton crushed—a considerable improvement on the previous year, when the figures were £59,300 and 7s respectively. After writing off various items we have a balance to take to the credit of appropriation account of £111,606. This has been used, first of all, to write off depreciation amounting to £22,983 on machinery, plant, buildings, &c.; secondly, to write off the whole of our preliminary expenses account; and, thirdly, to write £15,054 off the old working account, reducing this item to a round £30,000. Of the balance £42,096 goes to pay the dividend declared in June last, leaving £16,540 to carry forward. The working costs are down to 24s 8d, as compared with 27s 9d for the previous year, and we hope to see this figure still further reduced during the current year. For August the costs are 24s 4d.

DEVELOPMENT WORK.

The main shaft at the end of August was down 1,651 feet; the shaft-sinking position is very sound, and need cause no anxiety. The sinking of the circular shaft was continued, and at the end of August its depth was 761 feet. A start was made with the deepening of the Petrol shaft, from which the petrol lode will be developed. The total development footage for the year was 8,939 feet, showing an increase of 3,545 feet—a record since milling started. The rate of development for the last quarter had improved to nearly 1,000 feet per month, and the costs per foot were 60s, as against 63s for the previous year. The values exposed are highly satisfactory in the lower levels on both the Cam and the Motor lodes.

The tonnage milled was again a record at 184,600 tons, an increase of 15,900 tons on the previous year's record. Taking the normal price of gold, the increase in the mill grade was 6.5s, from 44.9s to 51.4s per ton, and the increase in recovery grade was 5.2s per ton, from 31.7s to 36.9s. It is gratifying to note that the total actual extraction showed an improvement of 4.31 per cent., to 74.67 per cent.

As regards working costs, the reduction is largely due to the increased tonnage milled, and to a general improvement in efficiency. The future will disclose further reductions, especially when the Nissen stamps which we are now installing come into commission.

The increase of 90,000 tons in our ore reserves is after milling 184,600 tons, so that we really developed 275,000 tons during 1922-23. We have now four years actually in sight ahead of present mill capacity, which is a sound position to be in.

A short summary of the programme of underground work for the year 1923-24 may be of interest. All the shafts will be continued—the Motor Main shaft on single shift only, the circular and Petrol shafts as rapidly as possible. As regards development, the 12th level south on the Motor lode will have been extended. We should be about half-way through the 13th level south, and we should have reached the northern end of the 14th level. On the Cam lode the 8th and 10th will be continued; the 9th will be started from the winze connection between these two levels and the 12th will also probably be started—this latter at no distant date—by driving from the 12th level motor. On the Petrol lode the shaft should be connected with the long drive from the 5th level motor and the 3rd and 4th levels will probably be opened up, and, so far as possible, the necessary winzes and raise connections for stopping, ore passes and sand passes will also be made.

With regard to the results obtained since the end of our financial year, in July we crushed 15,800 tons and made a profit of £15,868; in August we crushed 16,000 tons and made a profit of £16,793, and I look for an increased profit for September.

The latest development results exceed our most sanguine expectations. From present indications the 13th level looks like being even richer than the 12th level.

CURRENT YEAR'S PROSPECTS.

I will now venture to give you another forecast. Assuming no

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

untoward stoppage from causes impossible to foresee, the development footage will be increased, the ore reserve tonnage will be increased, its value will be higher, the tonnage milled will be higher, the grade recovery will be higher, working costs will decrease, and profits will be greatly in advance of last year, from all of which it is easy to anticipate increased dividends. In conclusion, I can reiterate that the Cam and Motor mine can now be classed as one of the best mines in the world, and its possibilities, with its vast unexplored grounds, are so great that I am confident we have not yet approached the zenith of our prosperity.

The report was unanimously adopted.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated September 27th, is as follows:—Pig-iron: There is as yet no decided improvement in the demand for pig-iron, and business continues to be for immediate requirements only. The total output of pig-iron on the North-East Coast is moderate, only 39 blast furnaces being in blast. No. 3 Cleveland G.M.B. is quoted 96s 6d per ton, but a good order might be put through at a little below this figure. East Coast mixed numbers hematite is still 99s per ton. Manufactured iron and steel: The boiler-makers' strike still blocks the way, and serious efforts are now being made to settle it. Steel works can only keep going with difficulty. Steel ship plates, £9 15s; steel ship angles, £9 5s; iron bars, £12; steel rails, £9 10s. Iron ore: Prices of best ore are firm, but unchanged. Best Bilbao Rubio is 23s per ton c.i.f. Tees.

Our Sheffield correspondent writes:—Prices of raw materials appear to have reached bottom, but "cutting" is still rife in the cheaper grades of manufactured steel. The crucible steel branch has lost a little ground just lately. Germany is now out of the market as a competitor with Sheffield in cutlery, tools and hardware, but as this country contains large stocks of German goods, makers have only benefited to a slight extent. The coal market is weaker in the home market, and coke is becoming more plentiful. Moreover, it is felt that a settlement of the Ruhr dispute will result in decreased buying of British coke for export. Very little is doing in house coal, and prices are unchanged. Best South Yorkshire hards are still quoted at 20s, and coke at 34s f.o.t.

Our Glasgow correspondent writes:—Scotch hematites keep firm at £5 5s. No. 1 foundry also £5 5s, and No. 3

£5—each at producers' works. A fair turnover has taken place in ship plates at £10 (Glasgow stations). Black sheet makers keep busy, mainly on orders in light sections for Japan, China, and Australia. These markets are said to be ripe, with prompt business. Much interest attaches to the efforts that are in hand for arranging the troubles existing in the boiler-making trade, which have run over 21 weeks, and the satisfactory adjustment of which would work untold benefit to the engineering and shipbuilding trades. Electrical machinery and plant building engineers are well employed and report that their prospects are good. Conditions in the locomotive engineering and wagon building connections are more hopeful at the moment than has been the case since the year came in, and a host of subsidiary in-

TIFLIS: 38 Rustaveli Prospekt.

dustries are participating in the animation, which at the same time leaves not a little to be desired. Managements advise that of late in quite a number of instances they have succeeded in adding to their operating staffs. Messrs. Alley and M'Lellan, Polmadie, have booked orders for half a dozen shallow draft barges for South America, and additional wants are under consideration.

CUMBERLAND IRON.

The Continental and home requirements of West Coast hematite pig-iron are still satisfied by the production of the 13 furnaces in blast between Workington and Carnforth, but the prospects of a substantial improvement in trade are improving. Output is no longer in excess of demand, and immediate requirements are bigger than has been the case for six weeks past. No forward sales yet are being effected, but it is believed that there will be such a recovery in trade before Christmas as to necessitate an increase in production. The most hopeful feature of the situation is that makers are renewing contracts for raw materials at somewhat reduced rates. Values on the whole are well maintained. Bessemer mixed numbers are unchanged at £5 10s delivered at Glasgow and Sheffield. Needs of ordinary iron are larger than those of low phosphorus iron. There is little business stirring as regards manganese alloys, but in this case makers are almost indifferent to current conditions, holding, as they do, delivery orders which will keep them busy for the remainder of the year. The steel trade is dull, with the promise of nothing better than spasmodic employment at the rail mills at Workington during the greater part of the winter. Heavy sections are quoted at £9 10s, lighter sections £10 10s, and billets £8 per ton. All the native ore being raised, and the production is low, most of the privately owned mines being idle, is going into local consumption. Superior sorts of low phosphoric ore are 24s to 26s, and ordinary kinds 19s 6d to 21s 6d.

The coal trade is dull, but the bigger production available now that the Whitehaven collieries, after a strike that lasted for 17 weeks, are working again, is nevertheless being absorbed. A large portion of the coal is going to Ireland, though as a result of keen Scotch competition for a market which Cumberland owners regard as peculiarly their own, prices are lower, best round being 26s per ton for export. Locally prices are unaltered. Best house is 38s 2d at pit, best steam 30s, and washed steam 29s. There are short supplies of nuts and smalls for export, the needs of the local coke ovens being large. The entire make of the coking plants is being consumed, the Continent buying up any surplus at 34s to 37s per ton that is at command after iron smelters have taken what they require at 29s to 33s, according to carbon content. East Coast coke supplies to this district are over 8,200 tons per week. Residuals are a steady trade.

SOUTH WALES COAL MARKET.

Our Cardiff correspondent writes:—There has been very little change in the situation on the Cardiff coal market this week. The current demand has been very inactive, and prices for practically all classes of coal have shown an easier tendency. The contract season is approaching, but so far there have been very few inquiries for supplies for 1924. A few contracts have been arranged on the basis of about 27s, f.o.b., for best Admiralty large, but the majority of buyers are holding off in the anticipation of a further decline in values. The discontinuance of passive resistance in the Ruhr is a disquieting factor. During the past eight months France, Belgium, and Germany have been importing far in excess of normal requirements, owing to the suspension of work in the Ruhr, but if production is resumed in that coalfield, and reparation deliveries are restored to anything approaching the quantities provided for by the Spa agreement, there must inevitably be a contraction in the requirements of the Continental countries, in which event, and failing the discovery of new outlets, the volume of trade must decline. The only effective way by which a fall in prices can be prevented is that of the regulation of output, but, so far, no proposal in this direction has been mooted.

The following are the approximate current quotations:—Best Admiralties, 28s to 29s; second Admiralties, 27s to 28s; best dries, 28s 6d to 29s; Black Veins, 27s 6d to 28s; Western Valleys, 26s 6d to 27s 6d; Eastern Valleys, 24s to 26s 6d; best bunker smalls, 18s to 20s; ordinary cargo smalls, 14s to 16s; anthracite big vein large, 47s 6d to 52s 6d; machine-made cobbles, 55s to 60s; French nuts and stove nuts, 57s 6d to 60s; rubbly culm, 15s 3d to 16s; inland blast furnace coke at ovens, 30s to 35s; coke for export, 37s 6d to 46s; patent fuel, 29s to 32s 6d; pitwood, ex ship, 30s 6d to 31s.

In the iron and steel trade the improvement in the position has been maintained, and prices are now firmer than they have been for the past two or three months. The works are more active, and heavy shipments to the East are anticipated during the next few months. A proposal for the creation of a central agency in the tinplate trade has been revived, and is receiving the support of the principal groups of manufacturers.

THE COTTON TRADE.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market to-day has shown some response to the improved outlook which has been created by the suspension of import duties in Japan, and the latest development in regard to the Ruhr. While it cannot be said that there has been any great rush of new business, there has been rather more inquiry, and, in the aggregate, a fair amount has actually been done in tops. Topmakers' quotations are firm, with, if anything, a slight hardening tendency, and it would take very little in the present state of the market to give an upward movement to values. It has to be borne in mind that tops and yarns are selling to-day at prices entirely out of harmony with the cost of the raw material, and this anomaly cannot continue indefinitely, especially as wool remains so firm. The Continent is leading the way in the raw material markets of the world, and fancy prices are being paid at the Cape for the first of the new season's wool. Good twelve months' wool, for instance, is making about 53d, clean scoured, ex-warehouse, at Port Elizabeth, and this sort of thing, taken in conjunction with the prices in London and Australia, is making traders here wonder if they are not being unduly pessimistic as a result of the recent spell of bad trade. A survey of world conditions would seem to suggest that the various adverse factors are beginning to exercise less influence, and it seems certain that more settled conditions on the Continent and a substantial recovery in the franc, would definitely remove the main obstacles which have been preventing developments in the wool textile industry of this country. At present Bradford is probably the cheapest market in the world for tops and yarns, but increased machinery consumption would soon make a difference and lead to more stable conditions.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The September series of sales finished yesterday, after four weeks of almost continuous selling. Prices have not gone altogether as the owners of the wool would have liked, but apart from the withdrawal of second-hand parcels on account of prices being below cost, the auctions have left nothing to be desired. On an average there is not a very great deal of difference compared with the close of the July prices, any improvement being covered by 5 per cent. Still, the very fact of a steady firm market is something which indicates better conditions than the majority will give credit for, the greatest weakness of the auctions being undoubtedly the lack of competition on the part of the home trade for merinos. That has been the missing link throughout the auctions, a clear indication that home trade spinners and manufacturers are feeling the pressure of untoward circumstances, due to the absence of profitable business in tops, yarns, and pieces; in fact, business is undoubtedly tending more in the direction of crossbreds than anything, it being the opinion of those nearest to the actual consumer that the demand to-day is for something cheaper. It is a thousand pities that London wholesale people set the pace for practically all England, and it is a fact that to-day both in men's and women's wear, as well as hosiery fabrics, the demand is for something cheap. It is becoming apparent to those who see the big difference there is between manufacturers' actual sale prices and the retail figures that there is far more margin than is reasonable, and we are certain that the public could be served with excellent botany cloths at less than they are being charged

to-day. Some exceedingly good 18-19 oz blue botany serges can be obtained to-day from the manufacturer at 11s 6d to 12s per yard. It takes 3 1/4 yds for a suit, and yet suits from these cloths are being priced at seven guineas, and in some cases more. This is having a direct effect upon the general demand, but we are satisfied that inherently trade is sound, and consumption large, the raw material still being the dominant factor.

VEGETABLE OILS AND OILSEEDS.

The feature of the market continues to be the high prices maintained for linseed. A fair demand for the surplus old crop from Argentine has been supplemented by decreased interest in the new linseed, which will begin shipment early in January, and a sharp advance in values. Indian linseed continues to offer freely, but trade is not extensive. The oil product, in sympathy with seed, is still firm, and the value about £41, ex Hull mill, for prompt and October delivery. Supplies are, however, on the short side owing to the small quantity of seed crushed in the mills of late and the small arrivals. Both home and foreign demand is fair.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The London hide market has steadied itself, as the tone at Thursday's auctions was slightly firmer. Best ox sold from 6 1/2d to 8 1/2d, two classes showing declines of 1/2d and 1/4d, whilst one class went up 1/2d on last prices. Seconds sold from 5 1/2d to 7 1/2d, two selections showing slight advances. Best cows sold from 6 1/2d to 6 3/4d, whilst best calf made from 5 1/2d to 11 1/2d, showing practically no alteration. Lambs sold from 2s 1d to 7s 9d, and pelts from 4s to 8s each. The demand for foreign hides has fallen off in view of the higher prices asked for frigorifics at origin, \$38 being now asked for Argentine ox. Liebig Fray Bentos ox are reported to have sold to the home trade on a basis of 8 1/2d. Dry hides are again more active, the Continent being regular buyers of this class. Cables from New York report the Chicago hide position as firm, with best heavy packers now making 14 1/2 cents.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 28.

SUGAR.—The firm tone predominating in this market for some considerable time past became more pronounced this week, and with falling supplies of grocery imported descriptions, British refined is naturally sought after. Of the latter, refiners' boards were cleared early, particularly with regard to standards at 1s per cwt advance, crushed; coffee crystals and nibs being raised 6d per cwt. Granulated, forward, 1s 6d higher. Messrs Tate and Lyle's cubes now quoted 60s 6d to 61s 6d, as to quality; crushed, 58s; nibs, 61s 6d; granulated, fine and coarse grain, also stoved, 58s 1/2d; No. 1, 57s 10 1/2d; No. 2, also London, 57s 7 1/2d, with 2 cwt bags 1 1/2d less money; and second half October, 58s in 2 cwt bags. Yellow crystals, spot, 52s 1 1/2d; 2 cwt bags, 52s; finest caster, 60s 4 1/2d; A, 59s 7 1/2d; B, ditto, 58s 9d. Glebe K, granulated, prompt London, 57s 3d; ditto, Greenock, 57s 3d; caster and icing ditto, 59s 3d. Spot supplies of imported become beautifully less; in fact, nothing appertaining to granulated being available, with the exception of Javas. The recent exceptional drainage made upon

same, not only on export account but also by British outports, has narrowed down the selection in London to an uncomfortable extent from a buyer's point of view. Offers of Java for shipment are very sparingly made, and then at firmer prices, owing to requirements on Indian and Japanese account being sustained in local centres. White Java, spot, sold, 54s to 54s 3d, duty paid; ditto, afloat, steamer "Hemisphère," changed hands at 27s 3d to 27s 6d; and August-September, 25s 9d, c.f. and i., London. White Egyptian, spot, 57s. Only retail quantities of Canadian granulated call for no comment. Dutch sugars for shipment remain scarce, and Dinteloord, October, quoted 27s 6d; November-December, 26s, f.o.b., Rotterdam. Belgian granulated, November-December, 24s 6d, f.o.b., Antwerp. There is a good inquiry for Czecho-Slovakian granulated, November-December shipment, with sellers of same reserved. Business resulted at 25s 6d to 25s 9d and 25s 1 1/2d, f.o.b., Hamburg. White Java, October-December shipment to Calcutta, sold, 24s 3d, c. and f. terms. The market for raw refining kinds tends upward on reserved offers, and there is a fair inquiry. Mauritius crystals, afloat, steamer, sold, 30s; October shipment quoted 27s 6d; West India, basis 96 per cent., October, 29s 9d; brown Java, October shipment buyers, 24s 6d. Peruvian basis 96 per cent., October, quoted 25s 6d; Brazilian basis 80 per cent., October, 18s 9d, c.f. and i. terms, U.K. An active and firmer market ensued in the white terminal section September delivery sold, 27s 6d to 27s 9d; October, 27s 6d to 26s 9d; November, 25s 9d to 25s 10 1/2d and 25s 6d; December, 25s 6d, 25s 4 1/2d, and 25s; March, 25s 3d to 24s 7 1/2d; May, 25s 7 1/2d to 25s 9d and 25s. Liquid glucose, spot, 30s 6d cwt.

COFFEE.—Spot market steady for all the finer qualities, and which sold to a fair extent, but demand for inferior descriptions remained quiet. Costa Rica, good to extra-fine bold colour, sold, 118s to 126s; Colombian ditto, 99s to 109s. Future delivery market firm but quiet.

COCOA.—Market barely steady, and general trade proved slow. Accra, F/F quality, new crop, November-January, sold, 30s to 29s 6d, and 30s, f.o.b. terms.

TEA.—Supplies of Indian brought to auction this week were on a smaller scale, amounting to 48,900 packages. With active and better distributed competition prices were not only fully maintained, but in some cases slightly exceeded. All the finer attractive parcels met a ready market. Some choice orange broken pekoe sold, 4s 1 1/2d per lb in bond. Ceylon auctions embraced some 18,680 packages, which cleared to a brisk demand at full rates. Java and Sumatra produced a fair quantity and realised a very good market. New season's China steadily dealt in.

RICE.—There is no new development to note with regard to Eastern grain. Of Burma Two Stars, parcels, September-October, sold, 14s, and buyers, c.f. and i., London. Saigon and Siam steady, but slow. No. 1 garden Siam, September-October, 17s; No. 1 Saigon, 15s 3d, c.f. and i. Spanish, new crop, October, 18s 9d to 19s, c.f. and i. London. American kinds very firmly held with business in force, particulars of which, however, are not forthcoming. It is stated that the crop will fall short of last year by about 3 1/2 millions of pockets (100 lbs each). Spanish, Italian, and Egyptian crops are very favourably commented upon. Japanese peas steady. September-October, sold, 21s; October-November quoted 20s 3d; November-December, 20s. Rangoon haricot beans, hand-picked, October-November, 9s 6d, sellers, c.f. and i. London. Madagascar butter-beans, spot, crop 1922, vary from 18s to 20s cwt, as to quality.

SPICE.—Pepper in moderate support, and market steady. Fair black Singapore, October-December, London standard, quoted 4 1/2d; Aleppy, ditto, 3 1/2d; Muntok, October-December, done, and buyers 6 1/2d for L.S. Zanzibar cloves opened flatly, but improved. October-December sold 1s 2 1/2d to 1s 3 1/2d; November-January, 1s 2 1/2d. Pimento, spot, 2 1/2d per lb. Tapioca unaltered on spot, forward firmer. Flake, Singapore, September-October, to Havre, sold 30s 6d. Penang seed, fair quality, spot, 30s. Sago flour, October-December, quoted 30s 3d. Desiccated coconut firmer. Spot halves sold 41s 6d; forward positions at 40s per cwt. Ginger slow, unaltered.

JUTE.—Market irregular, but with a fair demand and firm undertone on sustained covering orders. First grade, September-October, Continent, sold £20 15s; October-November, £20 17s 6d to £21 2s 6d and £21; November-December, £21 5s to £21; December-January, £21 7s 6d; January-February, £21 10s per ton.

HESSIANS firmer, with a good demand for spot and near parcels. 10 oz, spot, sold, 28s 6d; October-December, 25s 6d; 8 oz, spot, 22s 6d; October-December, 20s 6d 100 yards. A twills, October-December, 75s 3d; B ditto, 66s 3d; sugars ditto, 78s 9d 100 bags.

HEMP.—Manila met a quiet demand at about late rates. J grade, October-December, £31; K, £26; L, £25 10s; M, £24 10s. African Sisal, No. 1 Tanganyika, afloat, £36 10s ton. Indian slow, at late rates.

SHELLAC steady. T.N., spot, 320s; December, sold, 315s to 305s cwt.

GOPRA dearer, with reserve marked on the part of sellers. Demand from crushers is of a very steady character. F.M.S., Straits, August-October, Rotterdam, sold, £28 7s 6d; October-December, £27 12s 6d; Java to £27 10s; Ceylon, October-November, quoted £29 10s; Java ditto, £28; Dutch E.I., October-November, sold, £27 15s; October-December, £27 11s 3d to £27 12s 6d; Cebu, October-November, sold, £27 2s 6d to £27 5s; South Sea, September-October, quoted £27; Seychelles, afloat, London, £28 10s; F.M. Straits, September-October, Marseilles, sold, £27 2s 6d; Manila, October-December, quoted £26 17s 6d. Palm kernels, November-January, Liverpool, sold, £18 18s 9d to £19 1s 3d ton.

RUBBER generally steady, with business on a fair scale. Standard plantation, spot, sold, 15 1/2d; October, 15 1/2d to 15 1/2d; November, 15 1/2d; December, 15 1/2d to 15 1/2d; January-March, 16 1/2d to 16d; April-June, 16 1/2d; November-December, 15 1/2d; January-March, 16 1/2d to 16d; April-June, 16 1/2d. To New York, standard sheet, October-November, sellers, 15 1/2d; November-December, sold, 15 1/2d; December-January, 5 1/2d lb, c.f. and i. terms. Wild, quiet, unaltered.

MENTHOL.—Japanese, spot, 80s; ditto, peppermint oil, 11s 6d to

11s 9d; aniseed oil, spot, sold, 1s 10d; slab camphor quoted 3s 7d lb. **EGG PRODUCTS.**—Prime liquid yolk, spot, sold, 77s 6d to 80s cwt; albumen, spot, 3s 1 1/2d lb.

FRUIT (Dried).—With a continued slow demand for currants, there was only a small business doing during the week. Patras, quarter-cases, quoted 53s; Gulph, 55s; Vostizza, 63s to 66s; Australian, 62s to 66s. New crop, now about due, and Pyrgos, quarter-cases, 50s. Market remained quiet for sultanas at about late rates. Smyrna, good colour, quoted 50s; better qualities up to 67s. Raisins quietly steady. Cape, 48s to 50s. Dates selling quietly. Hallowee, 1st tide, 25s; Siar, 16s, paid, landed terms, London. There was only a quiet demand for evaporated fruits, and in some directions prices were too irregular to quote. Californian pears, 60s to 75s; Australian apricots, 55s to 65s per cwt.

CANNED GOODS.—Reports of the French pack remain unsatisfactory, only large fish being obtainable, and the market is firm. 18 oz, quoted, 16s 6d; quarters of good quality, 9s. Portuguese steady, unchanged. Quarters, 2s 6d to 3s 3d; ditto, 12 oz, 5s to 5s 6d; 18 oz, 9s 6d to 11s per dozen tins. Lobster easier, and fancy halves, quoted 150s to 155s; seconds, 145s. Salmon meets a very quiet market, at previous rates. 1 lb flat reds, labelled, 53s to 53s 6d; ditto, tall, 41s to 42s; 1 lb flat pink, 24s 6d; ditto, tall, 23s; and cases of 96 1/4 lbs, 28s to 31s. Canned fruits remained quiet, but mostly steady in value. Singapore pines, fair quality, spot, 5s 9d; Californian apricots, 7s to 11s; peaches, 8s to 12s; pears, 12s to 14s 6d. Tomatoes slow of sale. Spanish threes, quoted, 6s 3d; Italian, 6s 6d per dozen tins. Canned meats held for steady prices, but there is only a moderate inquiry.

EGG PRODUCTS.—Market is steady, but trade moves quietly. Prime hen liquid yolk, spot, 80s per cwt. Hen albumen, spot, 4s; September-October, 3s 1 1/2d per lb.

OILSEEDS.—Linseed active and dearer. Bold Bombay, September, sold, £22 2s 6d; small Bombay, ditto, £21 15s; Calcutta, afloat, £21 17s 6d; September, sold, £21 12s 6d; September-October, £21 10s. Plate, afloat, £20; September, £20; January-February, £16 15s to £17 5s; April-May, £17 7s 6d. Rapeseed firmer. Toria, September-October, £17 7s 6d; real bold Ferozepore, September-October, £17 7s 6d; Jamba, £13 2s 6d. Cottonseed irregular. Egyptian black, October, £11 5s. Sakellaridis, £10 15s, to Hull. Bombay, November-December, £9 7s 6d; December-January, £9. Gingly seed firm. Large Bombay, October-November, Continent, sellers, £24. Chinese, October-November, £23 15s, Continent. Groundnuts firmer. Coromandel, machine-dried, September-October, £23. Chinese decorticated, f.a.q., October-December, £22; East African, September-November, £22 17s 6d. Soya beans quiet. Manchurian, September-October, £11 15s. Castor-seed firmer. Bombay, September-October, £21 5s per ton.

OILS.—Linseed firmer, with a fair demand for all positions. Spot, net, naked, 42s 6d; September, 41s 3d; October-December, 41s; January-April, 37s 6d. Rape firm. Crude, spot, 38s; refined, 41s. Cotton firm. Crude Egyptian, spot, 38s; Bombay, 36s; common edible, 45s 6d; deodorised (in barrels), 47s. China-wood firm. Hankow, spot (barrels), 92s; September-October, 92s. Cocoanut firmer. Ceylon, spot, 46s 6d; September-October, 44s 9d; Cochin, ditto, quoted 48s. Soya steadier. Oriental, barrels, September-October, 39s. Cod quiet. English, spot, 34s. Groundnuts firm. English, crushed, naked, spot, 46s; deodorised, barrels, 54s. Turpentine irregular. American, spot, 73s 6d; October-December, 74s; January-April, 75s 6d. Rosin firm. American, grade B, 13s; F, 13s 6d; G, 13s 6d; H to I, 13s 6d; WG, 16s; WW, 17s per cwt. French nominal. Petroleum steady. American standard, white, spot, 11d; and water white, 1s per gallon. Castor-oil quiet. First pressure, spot, quoted 50s; second pressure, 48s, and pharmaceutical 55s per cwt.

METALS.—Tin opened the week with a strong tone, and prices advanced rapidly, chiefly for near position, which were in good request. Standard, cash, sold at £200 12s to £202 12s 6d, and three months £199 10s to £200 17s 6d. Eastern advances reported sales on the basis of £201 10s, c.i.f. After a further advance, prices became irregular, with an easier tendency on selling desire; but sales were generally on a liberal scale. On Wednesday, standard, cash, sold at £200 7s 6d, and three months £201 to £199 10s and £200 5s. Further sales occurred in the East at £203 15s, c.i.f. The downward movement was continued on the following day, while some irregularity was apparent forward. Standard, cash, sold at £198 to £199, and three months at £198 to £197 10s to £199 15s, while finally registered at £198 10s. At the final meeting prices ruled fully steady. Standard, cash, sold, at £199, and three months at £198 10s to £199 10s to £198 15s

to £199. English ingots quoted at £199 15s to £200. Copper: Commenced firmly, with a good demand for distant positions. Standard, cash, quoted at £63 5s, and three months sold at £63 11s 3d to £63 15s. Later, however, rates gave way slightly, but at the lower range active dealings were recorded. By the middle of the week standard, cash, sold at £63 17s 6d to £63 5s, and three months £64 5s to £63 12s 6d to £63 13s 9d. Quiet trading ensued at Thursday markets, and sellers were obliged to make concessions; demand was mainly directed to three months. Standard, cash, sold at £62 16s 3d, and three months at £63 12s 6d to £63 5s to £63 7s 6d. Again easier on the following day, with liberal sales. Standard, cash, sold, at £62 5s, and three months £62 15s to £62 12s 6d. Electrodes, £66 15s to £67 5s; best selected, £65 10s to £67; strong sheets, £66; wire bars, £67 5s per ton. Lead firm at £26 5s to £25 10s, as to position. Spelter steady at £33 to £32 7s 6d, according to position. Antimony steady, but quiet. English regulus, £34 10s to £35. Aluminium quiet. Home trade, £115; export, £120.

TALLOW.—Messrs Colchesters and Woolner write on September 26th as follows:—The tallow market was firm during the week, and prices averaged 9d dearer to-day. As prices have advanced, the margin between fine and inferior qualities has shown a tendency to increase. At auction to-day 1,287 casks tallow were offered, and all were sold. Quotations are:—Australian mutton: Fine, 43s 6d; good to fair, 42s 9d to 41s 6d; dull to dark, 38s to 37s; hard, 42s 9d. Australian beef: Fine, 43s; good to fair, 41s 6d to 39s 6d; dull to dark, 37s to 36s 6d; sweet, 43s 3d. Present shipment from Australasia: good mixed, 41s 6d asked. Present shipment from South America, 40s to 39s. The market letter is dearer. Tallow, 1s; stuff, 1s. Town tallow, 36s 6d per cwt. Rough fat, per 8 lbs, 2d; melted stuff, 27s 6d per cwt. Quotations are:—Town, 35s 6d, net cash, naked, ex works. Country: Frail casks, 35s 6d; home melted, shipping casks, net, f.o.b., good coloured, 39s; fair to dull, 36s 6d to 35s 6d. Bone fat: White, none; pale, none; benzine, 33s; melted stuff, 33s 6d, f.o.b.

THE MONEY MARKET.

HAVING turned the corner of the Michaelmas quarter more comfortably than it expected, the market was slightly disappointed by the absence of extreme ease this week, which had been anticipated in view of the large interest payment at the beginning of October. The Bank return showed a net increase of less than three millions in the Government securities, so that most of the sum borrowed on Ways and Means advances from the Bank had ap-

parently been repaid by Wednesday evening. Even so, however, the sum at the credit of the Other deposits seemed to indicate greater ease than was actually experienced. Discount business was still very stagnant, and rates eased off slightly, January Bank bills being taken at $3\frac{1}{16}$ to $3\frac{1}{8}$ per cent., while November Treasuries were wanted at $2\frac{1}{2}$ per cent, and Decembers at $2\frac{1}{8}$ per cent. Yesterday the Treasury bills went at a rather lower rate than was expected, but market conditions were not affected.

	Oct. 5, 1923.	Sept. 28, 1923.	Sept. 21, 1923.	Sept. 14, 1923.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	3 (Jly. 5, '23)
Banks' Deposit Rate	2	2	2	2	1 (Jly. 5, '23)
Discount (Call)	2	2	2	2	1 (Jly. 5, '23)
Houses' Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 5, '23)
Market rate (3 months' bills)	$3\frac{1}{16}$ to $3\frac{1}{8}$	$3\frac{1}{16}$ to $3\frac{1}{8}$	$3\frac{1}{16}$ to $3\frac{1}{8}$	$3\frac{1}{16}$ to $3\frac{1}{8}$	..

The Bank return showed a decrease of £780,000 in the Reserve, almost entirely due to increased note circulation. Government securities rose by $2\frac{1}{2}$ millions, and Public deposits declined by 2 millions. Other deposits were thus 4 millions higher. Currency notes outstanding were increased this week by £1,158,700 to £283,942,900, which includes £1,445,600 for notes called in, but not yet cancelled. The fiduciary issue is £233,047,300, or £37,136,500 below the maximum.

THE STOCK MARKETS.

In the Consol market and in a few special sections like the tea share market, where some profit-taking developed, business this week has been on a fairly heavy scale; moreover, the supply of first-rate stocks is not always adequate to the demand. But, taking the markets as a whole, the restraining influence of foreign politics is checking activity, and the public is adopting a waiting attitude as regards the more speculative sections. Australian issues were affected by the big new Commonwealth Loan, but War Loan, and Conversion Loan (the latter after exceptional weakness) improved. In the foreign market the feature has been the decline in French bonds on the German situation, and the continued recovery of Japanese municipal issues. Home Rails lack interest, and the Argentine group is easier. Oil shares weakened, and prices of rubber shares were inclined to droop. Good industrial preferences and debentures are being steadily bought. South African mines were cheerful, Chartered advancing on the Government payment, but other mining sections remained dull.

THE COMMODITY MARKETS.

Irregular movements, with a tendency to higher prices, are the features of the commodity markets. Our Cardiff correspondent reports that the depression in the coal export trade has been felt more acutely this week than perhaps at any other period this year. Makers of pig-iron are getting a little relief by reason of rather easier coke prices, but manufacturers of iron and steel are acutely affected by the boiler makers' strike. The price of tin improved sharply, and copper values were a shade better. Wide fluctuations in raw cotton rates continue to have an unsettling effect in the trade, and buyers act with extreme caution. Continental competition is keeping wool values out of reach of home manufacturers. Wheat prices have advanced. General stability was again the salient feature in the sugar market, while tea of the better descriptions realised high prices. American demand supported rubber values, although prices were inclined to show some irregularity. Linseed and linseed oil continues to be in firm demand. Prices in the hide market are slightly higher.

FOREIGN EXCHANGES.

In the foreign exchange market the disturbing developments in Germany have had a further depressing influence, from which most of the important Continental currencies have suffered. Sterling, however, after some depression, the rate having at one time on the 2nd being

quoted as low as \$4.53 $\frac{3}{4}$, has recovered again, and showed yesterday a firm tendency at \$4.55 $\frac{1}{2}$, an improvement of nearly $\frac{1}{2}$ cent on the preceding week. No definite cause has been assigned for this movement, but it should be noted that prices are again on the upward move in the United States, a tendency which, if it continues, must find its reflection in exchange quotations. Forward dollars are quoted at $\frac{1}{16}$ to $\frac{1}{8}$ cents per month above spot. In German marks there are now very few dealings at all. The rate, after its partial recovery last week, has again gone to pieces, the quotation yesterday being about 2 milliards, after having been $2\frac{1}{2}$ milliards the day before. The plans for the introduction of the proposed "basic" mark have, of course, fallen again into the background as the result of the present crisis. The Paris rate has been affected by the general depression, and has moved from 73.92 $\frac{1}{2}$ on the 25th to 77.00 yesterday morning, after being as high as 78.25 on Thursday. In addition to the German position, there is also the adverse influence of the last return of the Bank of France, which shows an increase of 904,000,000 in note circulation and a heavy increase in advances to the State. The Brussels rate has moved equally sharply from 87.05 to 91.50, after being at one time as high as 93. Forward rates in Paris are 5 to 6 centimes per month over spot, in Brussels 5 to 7 centimes over spot, a considerable widening as compared with last week's figures. At 101 $\frac{1}{2}$ the lira has also depreciated sharply from 99 a week ago. Among neutral exchanges, Amsterdam, in sympathy with the dollar, has moved in our favour from 11.57 to 11.59 $\frac{1}{2}$, while Stockholm, under the same influence, has moved up from 17.15 $\frac{1}{2}$ to 17.17 $\frac{1}{2}$. In the same way, also, the Swiss rate has depreciated slightly from 25.42 $\frac{1}{2}$ to 25.47 $\frac{1}{2}$. Madrid is rather higher at 33.52 $\frac{1}{2}$, as compared with 33.14 a week ago, and both Christiania and Copenhagen have moved up to 28.94 $\frac{1}{2}$ and 25.75 $\frac{1}{2}$ respectively from last week's quotations of 28.60 and 25.41 $\frac{1}{2}$. Helsingfors, however, has steadied at 169 $\frac{1}{2}$. In Central Europe Vienna remains fixed at 322,500, but Prague has shown a rather sharper movement than usual lately from 151 $\frac{1}{2}$ to 153 $\frac{1}{2}$. Bucharest remains about the same at 985. Warsaw, in spite of vigorous attempts at financial reform, is finding itself swept away for the time by the collapse of the German mark, and the rate has risen rapidly during the week from 1,400,000 to 3,000,000. In the East the rupee is 1-32d higher at 1s 4 $\frac{1}{2}$ d, the yen is about the same at 2s 2 $\frac{1}{2}$ d. The silver market has been active, with heavy bear covering from India, which brought up spot prices with a run. At the end of the week, however, a reaction came with sales from China. The Shanghai rate of 3s 1 $\frac{1}{2}$ d is lower than the 3s 1 $\frac{1}{2}$ d quoted a week ago. In South America Rio has got dearer from 5 3-32d to 5 11-64d, but Buenos Ayres has relapsed a little from 39 $\frac{1}{2}$ d to 39 $\frac{1}{4}$ d, and Monte Video from 40d to 39 $\frac{1}{4}$ d. Valparaiso, on the other hand, has appreciated from 36.70 to 37.60 pesos.

Company Meetings of the Week.—On later pages of this issue will be found reports of the following company meetings:—General Mining and Finance Corporation, Anglo-Siam Corporation, and Frederick Hotels. The chairman of the Anglo-Siam Corporation referred to Government measures to stabilise the Siamese exchange and to the effect which the latter has had on trade. At the meeting of Frederick Hotels Mr. Ronald Peake was optimistic as to the outlook.

THE OPENING OF THE IMPERIAL CONFERENCE.

THE reasons for according a hearty welcome to the Dominion statesmen who are conferring in Downing street this week are more than sentimental. It is true that settlement in Europe is the paramount problem of the day. But in facing this problem the overseas members of the British Commonwealth have some contribution to make, and at the same time cannot escape a certain responsibility arising out of the war in which they all participated with the Mother Country in a common effort. Even were this not so, we should still regard the assembling of this Conference as wise and timely, not merely because of exceptionally difficult economic circumstances of the day, nor on account of elusive hopes of making new markets to replace the old, but because the problem of Empire development in its various aspects is second only in immediate importance to the problem of European settlement. Of these aspects, the political is at the moment the most important. But there is also the material side, as General Smuts reminded us picturesquely when he said: "We have an enormous estate, which is very largely undeveloped, and we shall be rendering not only a great service to the Empire, and to its various component parts, but to the whole world, if we develop this great estate that has been entrusted to our care." Another notable feature of the Conference is that the Irish Free State for the first time takes part as an autonomous Dominion in the counsels of empire.

The speech with which the Prime Minister of Great Britain opened the Imperial Conference, on Monday, has been severely criticised in certain quarters. In the ears of some critics it smacked of the heavy formality of a King's speech. By others it was attacked because it omitted to give an explanation of the *communiqué* issued in Paris after the talk between the French and British Premiers. This omission is presumably explained by the simple fact that there was nothing to disclose. Indeed, in our opinion, the only inexplicable thing about that *communiqué* was that anyone paid any more attention to it than used to be paid to the monotonous statements of "harmony of view" during the war, and the years that followed. The fact that any large body of the public believed that the Baldwin-Poincaré *communiqué* meant anything is in a way a testimony to Mr Baldwin, for it indicates that the public have reacted from the low war standards, and are now looking for a greater degree of straightforwardness in the public statements of Ministers than they were accustomed to under Mr Lloyd George's régime, when the periodic announcements of "complete concord" with France were rated on much the same level as were war rumours emanating from Amsterdam *via* Rome. Apart from the suspicion of frigid formality, Mr Baldwin's speech was an excellent performance, for he succeeded in striking the right note all through, and particularly in the concluding passage, when he said: "I weigh my words when I say that we shall achieve agreement and so strengthen the bonds which unite us only in so far as each and all of us are seeking how to relieve, not only our own difficulties and troubles, but those also of a distracted world." This sentence reveals a deep-rooted sense of fundamentals, and we trust that Mr Baldwin will have it well imprinted on his mind when some aspects of the Preference question come up for consideration. One other speaker who, both at the full Conference on Monday, and at the economic assembly on Tuesday, succeeded in striking a deep chord, was General Smuts, who not only in the phrases quoted above, but in almost every sentence revealed conspicuous grasp of the root of things.

As we said last week, the political questions before the Conference transcend other questions in importance. It is not through tariff manipulations and bickerings that the Empire can be cemented. The only high road to unity and sound development lies through the establishment of a common outlook on world affairs, and of common objectives, which in the main must be political. Among thinking people of all sections of opinion, it is recognised that the political problem of the Empire has arisen in a

new form which calls loudly and urgently for solution, and if the present Conference can take a step towards such solution it will have accomplished a great work. Mr Lloyd George's telegrams to the Dominions at the time of the Chanak crisis caused profound uneasiness throughout the Empire, and stimulated the demand of the overseas Governments to be kept in close touch with foreign policy. Since that unfortunate affair the Foreign Office and the Colonial Office have established a *liaison*, and have carefully kept the Dominions informed of any important diplomatic movements. In one way or another this *liaison* ought to be capable of development, and the problem is therefore probably not as difficult as it is made out to be. It is nevertheless difficult, for the people of the Dominions are notoriously, and quite naturally, sensitive about any arrangement which conveys the least suspicion of Downing Street domination. For instance, the mere suggestion that a small permanent body representing the Imperial Conference should be set up here in *liaison* with the Foreign Office is regarded in Australia as nothing better than a device for establishing such domination. Were it not for the fear that the proposal would arouse similar criticism, there is reason to believe that the British Government would like to approach the problem by suggesting that diplomatic representatives should be attached to each of the London headquarters of the Dominions; and there is, we believe, little doubt that Mr Baldwin would welcome such a proposition, if it should come from the Dominions themselves.

At the Economic Conference on Tuesday the chief subjects to be discussed were mentioned in preliminary manner by the various speakers, and among the chief were emigration, financial assistance for Empire development, and Imperial Preference. On the subject of emigration, Mr. Massey, the Prime Minister of New Zealand, complained that the majority of British emigrants were going to foreign countries, and were "lost to the Empire." This complaint contains elements of truth and good sense. But, on the other hand, a policy of confining British emigration to the Empire would under present circumstances be impossible, and even if it were possible in one case at least undesirable. To cut off the stream of British stock into the United States would tend to dilute the Anglo-Saxon element in that country. This would be a disaster to those, like ourselves, who regard a growing community of outlook between the United States and the British Empire as one of the most important factors in the world making for peace and progress. Then, again, the Empire's capacity for receiving increasing numbers of British immigrants is limited by the fact that agricultural development in the Dominions, as elsewhere, has been accompanied by an intensive use of labour-saving machinery; so that a large increase in successful migration from the home country to the other countries of the Commonwealth demands as its condition a degree of industrial development in those countries, which must take time, and for which they may or may not feel themselves at present prepared. Sir Philip Lloyd-Greame, the President of the Board of Trade, laid particular stress on the stimulus to Empire development that might be provided through an extension of the Trade Facilities Act and other plans of financial assistance. This, in our opinion, is the most hopeful line on which the Economic Conference can pursue its investigations.

The preliminary discussions on Imperial Preference raised one or two points that call for notice. In particular, a remark by Mr Massey, in connection with the question of the grant of tariff preferences by Great Britain, that "it will be for this Conference to advise the British Government what should be done," cannot pass unchallenged. Fortunately, this ill-advised suggestion of dictation on fiscal policy was counteracted by General Smuts, who, after Mr Massey had spoken, was at pains to disavow any intention "to launch an attack upon your fiscal policy" or to impinge upon the British Government's perfect freedom "to settle the fiscal policy of their own country, as they have always done hitherto." Nor can some other points in Mr Massey's speech be allowed to stand. In the first place, he attributed the passing of the sugar scarcity of the war period to the preference accorded to the West Indies—a claim too patently absurd to require statistical refutation. From this he went on to argue that the big step towards

Empire self-sufficiency, which he apparently believes has resulted from the preferential duties on sugar and tea, might be repeated in the case of even more important commodities. If, as we may presume, he has wheat in his mind, we would respectfully call his attention to the following figures, compiled from the official returns, which show the proportion of British wheat imports obtained before the war, during the war, and since the war from foreign countries and from the Empire.

ANNUAL AVERAGE WHEAT IMPORTS of the U.K. (Million Cwts.)				
	From Foreign Countries.	From Within the Empire.		Total.
Pre-war years 1904-14	68.4	47.8		116.2
War period 1915-18	69.9	35.9		105.8
Post-war period 1919-1922 ..	65.6	44.5		110.1

The only individual years in which the United Kingdom obtained half or more of its imported wheat from within the Empire were 1912 and 1914. During the war period, when self-sufficiency, if ever, was surely of enhanced importance, the actual and proportional takings of wheat from the Dominions fell off, the sources from which the deficiency of receipts from Russia were made up being largely determined by compelling reasons of distance and shipping scarcity.

We trust that fallacious-founded illusions about diverting trade channels will not distract the attention of the Conference from useful work; for it has a real opportunity for achievement. That opportunity will be seized if it approaches its problems with a grasp on the fundamental ideas of Imperial development, and on the material side reveals an ability to eschew the pursuit of will o' the wisp and to concentrate on sound business propositions.

THE COMMON WILL IN INTERNATIONAL AFFAIRS.

A CORRESPONDENT writing from Geneva to *Headway*, the organ of the British League of Nations Union, calls attention to the striking fact that although the Assembly discussions this year have been robbed of much of their interest owing to the Italo-Greek dispute (which made it necessary to reduce the opportunities for inflammatory speeches to a minimum), the secondary and detailed work of the League, which is conducted in the Commissions, has aroused an unexampled amount of public interest. There has been an exceptional number not only of persons connected with various organisations, but also of private visitors, and evidence has been forthcoming that the international co-operation in various fields which is centred in the League is making its appeal to a steadily widening public. In finance, for example, the Austrian experiment has made everyone realise that the League is an organ to be taken seriously. The International Chamber of Commerce, whose influence, in its turn, is slowly percolating through commercial circles in many countries, is now working in harmony with the League, after having been at first somewhat suspicious as to what functions the League could properly assume in the commercial sphere. The League's economic and financial publications are now standard works of the highest authority and prestige. A similar record of ground consolidated could be given of many other spheres of League activity.

It is, however, in the political sphere that the League has advanced most this year, and developed from a vague and indefinite institution into a definite political influence which has to be reckoned with in Europe. The League has put its infancy behind it, and has reached the stage where its influence and the ideas for which it stands must measure their strength against the older methods of diplomacy and against narrow and selfish nationalism in politics. Every one realises that the League has played a leading part in the recent crisis in Europe. It is not so generally appreciated that it has asserted power.

It has not done this as an independent unit; but its influence, as must always be the case, has been proportionate to the degree of support given to it by its member States. The most important factor has been the attitude of the British Government, which has unreservedly committed itself to the view that the League is the most hopeful means to-day of solving the political issues of

Europe. We need not delay to refer to the currents of opinion which have led every political party in Great Britain to put active support of the League in the forefront of its political programme. It is more pertinent at this moment to observe that in adopting a strong League policy an important influence has been the attitude of the Dominion Governments. The political future of the British Empire is by no means easy to foresee, and it is not made simpler by the fact that the Dominions count as entirely independent voices in the League of Nations. This status seemed to follow naturally in 1919 from the great contribution that the Dominions made in the war. But in the rush and confusion of the Peace Conference we doubt if its full implications were more than half consciously appreciated by the British statesmen who insisted so strongly on this recognition. After three years, however, of experience, the Dominions attach more importance than ever to their position at Geneva, for to them it is not only a formal sign of their nationhood, but it is also the one channel through which they directly have a say in world affairs. In the Chanak incident, the Dominions found themselves almost at war without warning. In the case of the Corfu incident, if events had unfortunately led to economic or military sanctions being invoked, the Dominion representatives would have been present to give their vote on an equal footing with other interested nations.

The attitude of France is even more instructive and important. France has aspired to play the rôle of diplomatic leader in Europe. Last month she suddenly realised that there was growing up an independent force at Geneva with which she must put herself in harmony if she did not wish to arouse its hostility. There has always been a certain body of opinion in France which has heartily supported the League. To-day almost the whole of France, including the Government, is actively alive to its political importance, and we shall certainly see much more attention paid in France to the study of this new factor in Europe. Thirdly, it needs no gift of prophecy to see that German scepticism about the League will certainly become steadily modified with the realisation that at Geneva there is a machine through which there is being created a European opinion.

In short, it is commonly realised that the League has recently shown signs of developing a will of its own. This is, perhaps, not a correct phrase, for the League is merely a combination of Governments and peoples, and its will is the result of this combination. But this "common will" is something new, and the fact, which emerged last month, that there is in existence a means of giving expression to it, sets the present League of Nations on an entirely different plane from all former international organisations, such as the Court of Arbitration at the Hague or previous alliances or agreements.

For the politicians of the future the study of this common will is likely to be of the utmost importance, and philosophers will have to discuss not merely in terms of individuals, but now in terms of nations, whether and how far a common will is something different from the average of its component parts, and whether and in what ways it will react upon the national will of the individual nations composing it. That there will be such reactions is certain; for, as Governments act increasingly through the League, and as large sections of public opinion study and understand foreign problems better, policy will be directed with more conscious reference to the needs and the points of view of other nations. It is no more possible in international associations than in the case of trade associations or associations of individuals for any purpose whatsoever to enter into mutual relations without each member modifying to some extent his individual wishes, outlook and policy.

It may be objected that such confident assertions with regard to the League's position in Europe seem inappropriate after a session in which its authority has been flouted, apparently with success, by one of its leading members. An appeal to authority would show that the view we hold has been definitely supported this week by the Prime Minister and by General Smuts at the opening meeting of the Imperial Conference. We prefer to state quite clearly our own grounds. We believe the simple fact to be that the action taken by the Italian Government was decided upon without the least conception of the

OUR INDEX NUMBER.

CHANGES in commodity wholesale prices in September have restored our Index Number to approximately the level registered at the end of June last, an advance of 117 points in September, together with the very slight increase recorded in August, having sufficed to offset the decline of 119 points which occurred in July. The latest total is 4305, which compares with 4301 at the end of June and 4440 at the end of April, the highest point touched this year. As will be seen from the table below, last month's increase is entirely accounted for by the textile and subsidiary food groups, changes in the other sections being almost negligible:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5) ..	500	300	500	400	500	2200	100.0

" Sept. "	823	782	1222½	732½	745	4305	195.7

Among cereals and meat there were a fair number of changes, and these were mostly in an upward direction, but they were neutralised by a relapse of 24 points in pork, which rose by 20 points in August. Barley and rice rose by 11 and 9 points respectively, although in the case of the latter crop reports are favourable. In subsidiary foodstuffs the principal change was a rise of 10½ points in butter. Cane sugar has also risen. Commenting, in their latest fortnightly report, on the rise in prices, Messrs. Czarnikow, Limited, write that the motive power for the rise emanated from New York, where the statistical position is now making itself felt. "That America would be hard up for sugar during the latter part of the year was to be expected, in view of the short Cuban crop, and we should doubtless have had firmer markets during the summer months had it not been for the large invisible stock which kept down meltings. As the United States are mainly dependent on Cuba for their supplies, holders of sugar in that island are in a strong position, as the unsold portion of the crop cannot be a large one." There was a further small rise in tea prices. In the textile group, cotton, wool, and silk have all had a share in the advance, the last-named being most prominent owing to the expected effect upon supplies of the Japanese disaster. Raw cotton, yarn, and cloth have moved up substantially as a result mainly of the unfavourable nature of the American crop forecast. At the wool auctions prices for both merinos and crossbreds ruled about 5 per cent. higher than in previous sales in July. According to Messrs. Schwartz, Buchanan, and Co., competition was well maintained at the sales. "As in the previous sales, France and Belgium took the bulk of the merinos and fine crossbreds. The home trade operated sparingly in merinos, and then only in the broader stapled warp wools, but lifted the bulk of medium and coarse crossbreds." Flax, hemp, and jute were each a trifle lower on the month. In the minerals group there was a further small decline in pig-iron and steam coal, but tin and lead were both a little higher on the month. We make further reference to the non-ferrous metal markets in a Note of the Week. Changes in the miscellaneous group were of slight importance.

The month's changes in each commodity's index are shown in the following table, the figure 50 representing,

stern it would bring about their ears. But, having acted, Signor Mussolini could only have retreated from his position at the cost of losing his power in Italy. For the League to have carried the difference of view to a definite issue would thus have meant bringing pressure to bear which would have altered the internal government of Italy. In view of similar awkward actions in the past by Great Britain, the United States and France, an attempt to impose a higher standard upon Italy, under conditions which would apparently have met with the united opposition of the Italian people, would have been a difficult task over which the League would probably have come to grief altogether. In the result, peace has been maintained, Italy has retreated from Corfu, while a very unsatisfactory compromise has been reached on the payment of an indemnity—whose only merit is that it has served to cover the retreat of the Italian Government in other respects. The fact we wish to emphasise here, however, is not the terms of the settlement, but the certainty that neither Signor Mussolini nor any other Government in Europe, whether it be autocratic or democratic in its constitution, will again take drastic action without seriously considering, as one of the major factors in the diplomatic situation, what effect it will have on general opinion as expressed through the new organ—the Assembly of the League. This is a modest conception of the immediate power of the League, which has been fondly conceived by many as a heaven-sent invention capable of assuring forthwith an era of international peace. That higher conception is far from realisation while three leading nations of the world remain outside. The League is not an infallible support, but to have it on your side is at least the equivalent of the support of one of the major Powers, and might be worth considerably more. The demonstration that the "common will" of Europe may be organised into an effective influence is the best assurance that one day the League membership will be all-embracing.

To those sceptics who are accustomed to repeat the silly untruth that human nature never changes, we would point out that the development we have described is not an artificial thing manufactured by impractical idealists, but is the natural result of world-wide inter-communication, travel and the spread of knowledge. The transporting of millions of young men from the American and Australasian continents to Europe in the war was a fact of enormous educational influence, which largely explains why the Press of the most distant parts of the world finds it worth while to report the progress of European affairs; there are very few people among the industrial working classes in any country in the world to-day who do not appreciate and occasionally think about the meaning of depreciated exchanges and international competition. The fact that the world is more than ever a political and economic unity makes it inevitable that during the 20th century there will be a steadily growing international outlook which will find its political expression in the development of a common will such as that which has just been making its voice heard at Geneva. This evolution in the international sphere is as certain as was the spread of democratic institutions in individual countries in the 19th century.

A word in conclusion as to the question raised recently in the *Times* by Lord Hugh Cecil, who claimed that, though the recent action of the League might have been good for peace, it had been bad for justice. In response to this, Sir Ian Hamilton replied proclaiming loudly that at all costs the League must stand for justice though it should perish in the attempt. "Fiat justitia, ruat coelum." We may unite with Lord Hugh Cecil in regretting some of the features of the final settlement in the recent crisis. But we do not think there is any reason to fear in the long run that the League of Nations is in danger of becoming a machine for producing unsatisfactory settlements based upon opportunism or compromise between conflicting national interests. If we are right in thinking that the League contains the seeds of an international common will, we may rely upon it that its impulse will be in the direction of justice. Its influence will always be modifying action from a less just to a more just course. Perfect justice is unattainable in this world. But the stronger the League becomes the nearer will the relations between nations approximate to that ideal.

in each case, the average price during the basic period 1901-5 :—

Last month's increase in textiles has put that group at the highest figure recorded for over two years, while subsidiary foodstuffs are also at the highest point for a long time past. As compared with the end of June, when the total was practically the same as it is now, textiles are considerably higher, but minerals have fallen by a still larger amount.

THE IMPERIAL CONFERENCE: A DOMINION VIEW.

(BY OUR NEW ZEALAND CORRESPONDENT.)

THE first conference of British Premiers to meet in consultation after the world war is an event of international as well as Imperial importance. The problems of constitutional structure, of foreign policy, and of defence that must arise are both urgent and difficult. The British Commonwealth will, in fact, have to decide and declare its policy and build its machinery in relation to the embryonic world commonwealth that is struggling to birth. The decisions, and even the declarations, of the British League of Nations must clearly have an enormous influence upon the future of the wider League.

It is a little difficult at the Antipodes to glean reliable information of the probable procedure of the conference. The cable services are, perhaps, not quite untouched by party bias, or by a desire to provide news that is thought to be acceptable to colonial ears. From whatever reason, there is a steady neglect of the wider constitutional questions and an insistent emphasis on economic problems. Indeed, the conference is consistently described as an Imperial Economic Conference. It may be that this designation is not an accident, and that the conference has in some degree been instigated by those at home who see in the development of inter-Imperial trade the only possible recompense for the damage done by the war to Britain's international investments and commerce. It may even be that the conference is designed as part of that process

of Protectionist infiltration to which the *Economist* recently drew attention. It would not be the first time that patriotism has been used as a stalking-horse for economic advantage.

In any case, it is certain that the question of Imperial Preference will be resurrected, and probably supported and pressed by some or all of the Dominion delegates. The Premier of this Dominion, for example, has made no secret of his personal opinion that the Motherland might be expected to reciprocate the tariff advantages accorded to her by the various Dominions. While he has been wisely careful to avoid any utterance which would seem to demand such a return from the Motherland, he has stated his adherence to the principle of Preference and his intention to press for steamship subsidies and relief from double taxation. In this attitude he is supported by most of the newspapers and probably by a majority of the leaders of opinion in New Zealand, and quite possibly in other Dominions also. It seems clear, upon examination, however, that neither the Motherland nor the Dominions have much to gain, while they have a great deal to lose, from anything in the nature of a restrictive trade policy. It is true that the objections to straight-out subsidies to steamships and to relief from double taxation are not as weighty as the objections to concealed tariff preferences, though they raise very difficult and dangerous problems. The Dominion attitude on the whole question turns upon what is, perhaps, a pardonable exaggeration of the importance to British commerce of the various Dominion markets. The intimate dependence of Britain's prosperity upon the maintenance of her world-wide commerce and finance and the reduction in her purchasing-power by any policy that hinders freedom of trade, is, however, no less important to the Dominions than it is to the Motherland. The obvious fact is that Britain was, and is, still organised for world-wide trade, and that the direction of that trade is not a matter of choice or chance, but is largely determined by fundamental economic considerations. It does not need demonstration that whatever prejudicially affects the Motherland's organisation will be immediately reflected in her reduced capacity to purchase Dominion products.

There is no need in this connection to reopen the threadbare controversy concerning Free-trade and Protection. For various reasons, the Dominions have thought it better to use the Customs tariff for the protection of their secondary industries. It is an open question as to whether the results have been worth the cost. In New Zealand, as your correspondent recently showed, the protected industries are in a very weak economic position, employing less capital, paying lower wages, producing less output per unit of organisation than the natural strong industries of the country. Imperial Preference, in this and other Dominions, is really an additional form of tariff protection to local industries, though the patriotic argument provides one of the emotional bases of the protective policy. In the manufactures, while exports are chiefly raw materials and foodstuffs. There is no considerable export of manufactures needing cheap imported raw materials. In the Dominions, therefore, the "compact groups of producers" of whom Dr Marshall has written, who are active and zealous in the fiscal controversy, are all interested Protectionists. Moreover, the people of the Dominions have a real and deep affection for the land they call Home, so that any policy that is labelled "Imperial" and is represented as conferring benefits on the Motherland has a very strong *prima facie* appeal.

But it is a different matter when that muddled sentiment is used, under the guise of the proven loyalty of the Dominions, to play into the hands of interested groups at home whose real goal is Protection, even if they label it Imperial Preference. It seems, indeed, likely that the professedly democratic Dominions may be once again inveigled by their Imperialism into the support of policies that are anything but democratic.

It should be clearly understood that any tariff preference that does not tax food and raw materials will be of little or no value to the Dominions. Plantation owners in India or Ceylon or the West Indies may be helped by odd duties, but any real preference to the producing communities of Canada, Australia, South Africa, or New Zealand, must be given upon their principal exports—

wheat, wool, meat, and dairy produce. Upon these commodities they do not really need a preference. It is true that in each Dominion the farming community is temporarily in difficulties as a result of wild financing during the post-war boom, but even now these Dominion products need no artificial assistance in order to hold their own in the markets of the Motherland. Any preference would simply accrue as a windfall, a bonus that would directly inflate land values.

There seems little likelihood that the industrial areas of Britain will ever again consent to taxes on food or raw materials. There is, however, a considerable danger that, in supposed deference to the wishes of the Dominions, concessions will be made to the so-called principle of Imperial Preference, concessions that will give only psychological satisfaction to the Dominions, and yet will hamper British trade in its uphill recovery from the great depression. The slowness of that recovery, hampered by the warlike peace of Europe, by dear railway freights, and uncertain coal, is the real cause of the depressions in the Dominions. The outlying communities of the Commonwealth stand to lose far more by any further restriction of British trade and the consequent deterioration of their best market, than they can possibly gain by concessions made to their minor wares. The Imperial Conference had far better give its attention to the more prosaic, but constructive measures suggested by the Dominions Royal Commission, and especially to making the sea-ways into cheaper and more speedy highways for Imperial commerce. Whether the investment of public capital in the development of promising overseas markets in this way is worth making is largely a matter for Britain herself to decide.

THE FINANCIAL POSITION IN CHILE.

(BY A CORRESPONDENT.)

IT was a dictum of the late Lord Rothschild, who died in 1915, that through the quarter of a century that New Court had had financial relations with Chile the Government of that country had never caused trouble of any kind. In spite of the many difficulties caused by the war, and at a time when defaults were almost the order of the day, Chile, to her credit be it said, upheld the best traditions of South American finance by the faithful discharge of obligations incurred to her creditors. Indeed, the financial history of the country confirms the high opinion always held in London of her credit. Although more than one situation of greater or less gravity has been encountered, as in 1914 and 1915, embarrassments have been surmounted through wise and timely measures, courageously adopted and steadfastly adhered to, without compromising the financial future of the country.

The war, undoubtedly, affected Chile more deeply than most other neutral countries. Not only was the principal source of income—nitrates—suddenly stopped, but the crisis rendered it difficult, if not impossible, either to reduce expenditure or to find new sources of income. Yet this appeared imperative, since the whole of the reductions in expenditure which it was found possible to effect at that moment had already been included in the revised estimates. New direct taxation, therefore, was proposed in the shape of succession or death duties, liens on property, salaries, pensions, inheritances and legacies, as well as upon articles such as beer, tobacco, alcohol, &c. Broad as were these expedients, they did not wholly satisfy requirements, and Chile was once again compelled to have recourse to foreign borrowing. With a return to direct taxation in 1915, local interest was awakened rather in favour of economy than expenditure, since every measure benefiting any locality must inversely affect—by increasing—the burden. A desire for economy all round, therefore, became and remains the one object aimed at. The introduction of an income-tax was urged as one of the most important financial measures to be taken, such impost being regarded as the very axis upon which the most important factors of the Republic's revenue would turn. But not-

withstanding the strong desire of the Government to introduce such a tax, it has been unable, up to the present, to induce Congress to pass the Bill instituting it, which was introduced some time ago.

The financial status of the Republic to-day gives cause for some dissatisfaction. The external debt for 1923 amounts to \$34,739,000, while the internal debt in gold (which was reduced at the end of last year to \$4,714,000, and taking into account the \$150,000,000 of paper money in circulation) amounts to \$154,714,000 (gold) and 286,219,691 paper pesos, compared with 154,862,000 gold and 210,045,800 paper pesos at the end of 1921. To this has to be added the internal debt in notes, showing a balance of \$250,814,691 to the end of last year. The total revenues for the current year, including that derived from nitrate (estimated at \$23,235,000) are expected to amount to \$100,247,000 (gold); while total expenditures have been estimated at \$70,824,260 (gold), thus leaving an excess of \$29,422,740. But at the beginning of the financial year the general deficit reached the figure of 107,300,000 pesos, or very near the calculated deficit of 108,000,000 pesos.

On the other hand, in considering the internal debt one must not lose sight of the fact that against the \$150,000,000 of the paper money issue there is the Conversion Fund in actual gold specie—\$114,721,769—lying in the vaults of the Moneda (\$93,218,999), and of the Bank of England (\$21,502,780), which more than covers the amount at 14d per peso. The exchange is now below 7d. The notes issued under the Caja de Emisión law are also totally covered by actual gold deposits in London, at the rate of 12d per peso. The *Vales del Tesoro*, which have been issued against *vales salitreros*, are likewise completely covered by nitrate estimated far below the market price, and are, as the nitrate is disposed of, being withdrawn. Some surprise has been expressed that the considerable deposits represented by the Conversion Fund should be earning no interest. The question of a more advantageous distribution of this sum was raised by the ex-Minister of Finance (Señor Anibal Rodríguez), while the present head of the Treasury (Señor Guillermo Subercaseaux) finds his hands tied by the failure of Congress to arrive at a decision regarding the establishment of a State Bank, which would be based on the Conversion Funds as its capital.

Some home critics, like Señor Echinique, are inclined to regard with apprehension the facility with which the Chilean Government is enabled to raise sums abroad, as, for instance, in 1921, although this was the worst economic period that Chile had seen for 40 years. The Government, in the course of a little over 10 months, sought from Congress authorisation to contract more than \$1,000,000,000 (which, however, included the large railway loan)* at a time when the budgetary expenditure was estimated at \$320,000,000 (paper) and revenue \$200,000,000 (paper), and when exports had diminished in value by 44 per cent. (although the Treasury showed a favourable trade balance of \$19,000,000). There have not been wanting later indications that the Chileans will not for long reconcile themselves to paying-off old debts by raising new ones.

It is quite possible, however, to sympathise with Governments when they find themselves unable to carry out, in actual practice, honest resolutions arrived at for collecting revenue and effecting economies. In the spring of 1921, for instance, the exportation of nitrate of soda was estimated at 55,000,000 quintals; but, in the end, little more than 40,000,000 quintals were produced. In the summer of 1922 the Chilean Administration adopted the expedient of requesting each Minister to examine carefully the Budget for his particular Department, with the strict idea of recommending measures for reduction in expenditure, and, where possible, putting the same immediately into force. This expedient, however, was countered by a new and unexpected financial crisis, rendering it altogether impossible, in view of the closing down of nitrate oficinas and numerous mines, to discharge the quota of employed. A wide programme of public works of an extensive nature had also to be proceeded

* The proceeds of the Railway Loan are represented to-day by rolling-stock purchased, and by the electrification of the Santiago-Valparaíso line, which will effect an annual saving of a value of over 15,000,000 pesos.

with in order to provide work for these men, and for that purpose fresh borrowings had to be undertaken.

The critical position of the national finances at this time was revealed, in a cold analysis, by Dr Daniel Martner, then Minister of Finance. He confessed that at the beginning of the year the funds in the Treasury had amounted to no more than \$7,000,000, the previous Administration having been forced to make use of sums raised by special laws for the purpose of meeting expenses in the interval before the taxes were collected. At the same period pending obligations amounted to \$36,000,000.

The trade position contrasted with the financial shows very much better prospects. While the war removed Germany and Italy—two large purchasers of nitrate for agricultural uses (Germany alone having formerly taken 1,000,000 tons)—the demand for this product (for the manufacture of explosives in the factories of the United States) remained considerable, even if it failed wholly to compensate for the loss sustained by the closing of European markets. With the improvement in nitrate prices, which has been fairly maintained, there is justification for expecting an improved economic showing by the end of the year. An encouraging feature may be found in the condition of the crops, which are predicted at a little above normality. Should no marked change in the weather take place, growers of wheat may expect a good harvest. Industrial conditions generally have also shown capacity for improvement; although only three-quarters of the year have expired, there seems little doubt that imports and exports for the twelve calendar months will exceed the figures for 1922, which showed a total trading value at \$210,155,545 (imports \$86,571,275, and exports \$123,584,270). Much, however, will depend upon the political situation, which at present remains somewhat obscure and even disturbing, in view of the elections, which will be held in March next on a new registration of voters.

CANAL TRANSPORT PROBLEMS.

(BY A CORRESPONDENT.)

IN the coming session of Parliament the Government will be pressed to assist in, or to undertake, a great canalisation scheme. At least one member of the Cabinet is keen on a revival of the canals. A special Parliamentary Committee on Canals and Inland Navigation has been formed to push the idea. Outside Parliament we have a National Council for Inland Waterways, a very influential body, mostly composed of the old Waterways Association. Traders complain of high railway rates. It is observed that some foreign countries have excellent canals. It is urged that canals are useful and economical for certain heavy traffic. It is asked why we cannot have canals like those on the Continent. We have many men unemployed, and it is contended that some of these might be well employed in widening, deepening, and extending our inland waterways, many of which have fallen into decay within the last fifty or sixty years. The idea seems attractive. I beg to submit that it is not practicable.

When this country was thinly populated, when traffic was small and there was not much hurry, canals served a useful purpose. But they were made to meet purely local requirements. They were constructed without any attempt at uniformity or national organisation. The result is that they are of various gauges, and they are not well linked up. When the railway era came canals began to decay. Are they now worth reviving? For many years there has been a steady agitation for revival, conducted mostly under misapprehension. The question was subjected to inquiry by a Royal Commission, 1906-1909, and has since been kept to the fore by the Waterways Association (headquarters, Birmingham). The general plan is to modernise the canals so that 100-ton barges may travel between Birmingham and other Midland industrial districts and the Thames, Mersey, Severn, and Humber. The object is cheap carriage. But how can this object be attained in this little country, with its lack of rivers suitable for canalisation. Its lack of water for the

top levels, its abnormal number of lockages, involving many delays and much cost?

The Royal Commission presented an exhaustive report, but was not very definite or enthusiastic in its recommendations. And since then economic conditions have altered, and deeper study of the physical conditions strengthens the objections to canalisation. However, the Commissioners advised the formation of a Central Waterway Board to review the facts and opinions gathered, and, if satisfied that the acquisition and unification and, in addition, the reconstruction and improvement of the main lines of waterway would be desirable, they (the Board) should propose a scheme to Parliament for sanction before proceeding to carry it out. A very halting report. But the Commission did recommend the amalgamation and improvement of the waterways forming what is known as the "Cross" connecting the Humber, Severn, Thames and Mersey, *via* the Midlands, as the "first step in any comprehensive scheme" that might be decided upon. The Commission, however, was careful to lay it down that State funds or credit should be pledged only on the strength of a reasonable prospect of a return, direct or indirect, on the outlay.

The "Cross" comprises 464 miles of the 3,693 miles of inland navigations in England and Wales. Scotland has 183 miles and Ireland 848 miles of inland navigations. The nature of the "Cross" may be gathered from the following brief particulars:—Route 1 consists of the Grand Junction Canal, a portion of the Oxford Canal, the Warwick and Napton Canal, and the Warwick and Birmingham Canal. It starts at Digbeth Junction, Birmingham, and finishes at Brentford. It is 135 miles long. There are 160 locks, 336 bridges, and three tunnels. At Knowle the level is 379 feet above Ordnance Datum. Route 2 consists of part of the River Trent, the Loughborough Navigation, the Leicester Navigation, and the Leicester branch of the Grand Junction Canal to Norton Junction, where it joins Route No. 1, and it includes the Newark Navigation and the Nottingham Navigation. It is 157 miles long, has 58 locks, 108 bridges, and three tunnels. The tunnels are 880, 1,166, and 1,528 yards long. At Foxton the level is 412 feet above O.D. Route 3 is the main route from the Mersey and Manchester Ship Canal at Weston Marsh to Bordesley, Birmingham, by the Weaver Navigation, Trent and Mersey Navigation, the Coventry Canal, the Birmingham and Fazeley Canal, and the Birmingham and Warwick Junction Canal. The length is 97 miles, there are 82 locks, of which 27 are twins, one verticle lift, and 226 bridges. The level at Harecastle Summit is 408 feet above O.D. There are four tunnels, two of which are nearly 3,000 yards long. Route 4 connects Birmingham with the Bristol Channel—Worcester Bar to Sharpness Docks. It is made up of the Worcester and Birmingham Canal, the Severn Navigation, and the Gloucester and Berkeley Ship Canal, and includes the Worcestershire Canal to Wolverhampton, *via* Kidderminster. It is 75 miles long, has 62 locks, 115 bridges, and five tunnels, one of which is 2,726 yards long. At King's Norton the level is 453 feet above O.D.

Besides all these locks and bridges and tunnels to alter, there are hundreds of factories and other buildings right on the canal banks, and these would have to come down before the waterways could be widened. Sir John Wolfe Barry calculated for the Royal Commission that the cost of improving the "Cross" to carry 100-ton boats would be £17,500,000, apart from the purchase price and the cost of bigger barges. To-day the cost would be at least twice as much. And this is for what is little more than a local scheme—for only 464 miles out of a total of 3,822 miles in Great Britain. Figures were supplied to the Royal Commission showing that the cost of improvements sufficient to make our inland waterways accommodate 100-ton boats throughout would average £28,000 per mile. To-day the cost may be put at £50,000 per mile. Against that the German canals which take 150-ton boats only cost £8,000 per mile to construct, and those which take 600-ton boats were constructed for £8,450 per mile. British and Continental conditions are vitally different.

People who imagine that it is possible for this country, at any cost, to have a canal system approaching the Continental canals in utility and economy are hugging a delusion. In most of the Continental industrial districts

which are so well served by inland navigations there are big rivers flowing through comparatively flat country—natural waterways, which lend themselves to economical canalisation. Continental canals have been half made by Nature. But the rivers in our industrial localities are short, narrow, shallow, and full of weirs. The average rise or fall on the 7,000 miles of German canals is only 1.49 feet per mile. On our 3,800 miles the average is 10.80 feet. Only 1,482 miles of our United Kingdom inland waterways are natural or adapted river. If we brought our waterways to depths and widths to carry 100-ton boats throughout, at least nine miles in ten would have to be artificial. Against that Germany has 5,815 miles of natural river out of a total navigation of 7,038 miles; France has 4,392 miles of natural river out of 7,006 miles of navigation; Austria has 2,427 miles natural out of 2,772 miles, and Russia has 21,000 miles natural out of 22,000 miles.

In our case, the cost of construction, or reconstruction, would be colossal, owing to the bad levels, and the many bridges and locks, plus the many buildings on the existing banks of the canals. The consequent dues, or rates, to cover interest on the capital would be excessive. The constant and heavy pumping of water to the top levels would be a costly, if not an impossible, engineering problem. On our existing narrow canals there is often shortage of water in dry seasons. Suppose we widen and deepen the canals and locks, build bigger barges, and increase the traffic, involving a much greater loss of water downward with every boat "penned" up or down, how shall we stand with regard to water for the top levels? Finally, even if we spent the necessary money, we could never have anything like the cheap or speedy transport enjoyed on the Continent, owing to the abnormal number of our lockages. Between Berlin and Hamburg, 230 miles, there are only three locks—the country is so flat. Between Manchester and London we have 242 locks and seven tunnels!

In the Aire and Calder Navigation we have an efficient system, but there is tide water from Hull to Goole, and unusually level country from Goole to Castleford. This is an exceptional case. A few of our canals, or sections of canals, may be capable of economical improvement, and some are capable of carrying more traffic as they stand. This is purely a local question. The idea of a great national canal scheme is not practical politics.

THE MARCONI CONTRACT IN PERU.

(FROM A LIMA CORRESPONDENT.)

UNDER a contract, entered into provisionally on April 21, 1921, and approved by the Senate on February 23, 1923, the Marconi Company undertook the administration of all the Peruvian postal, telegraphic, and wireless services for a period of 25 years as from May 1, 1921. The chief undertaking, however, was the completion of a wireless station sufficiently powerful to maintain communication with the world-wireless system of stations maintained by the Marconi Company. There has always been a considerable amount of opposition. Existing contracts had to be cancelled, including that made for the sale of postage stamps (which earned a commission of £5,000 yearly) between the Government and the Compañía Recaudadora de Impuestos, the privilege being now conferred exclusively upon the Marconi Company.

These facts, together with other reforms, caused dissatisfaction, while opposition arose from political circles and also from certain American rival interests. Representations by the United States Government had been received by the Peruvian Government as early as 14 days after the provisional contract had been signed. On the other hand, the company was able to come to an arrangement with the Radio Corporation of America, La Compagnie de Télégraphie-sans-Fils, of Paris, and the Telefunken Company, of Berlin, while the rights of the Central and South American Cable Company, to the north

of Callao, were protected from anything which might affect them in the new contract.

Apart from the adverse majority-report of the Chamber of Deputies Committee, condemning the agreement, the Marconi Company formally advised the Peruvian Government of its intention to rescind the contract owing to the unexpected delay in confirmation, and, in any case, to insist upon several modifications in the original document before formal acceptance could take place. In the event of the contract being abandoned, very heavy losses will have been incurred. Under Article 31 of the agreement, if National Congress did not approve the reforms dealt with, or had not taken any decision regarding them, the company had the power to cancel the contract; and, in such a case, would have the right to demand—and the Government would be under the obligation to pay—an indemnity in reimbursement for the total sum, which, in compliance with this contract, the company might have expended up to the date of the cancellation.

The Marconi Company, which has been in actual control of the Peruvian postal, telegraphic, and radiographic services for more than two years, has, during this period, expended large sums upon the installation of radio-services (especially those between Lima and Casma, Lima and Tarma, and Lima and Ica); the construction of several new stations (including those at Callao, Etén, and Trujillo); designing at the London offices the necessary apparatus for the new system (the whole of which work, it is feared, must now be wasted); the despatch to Peru of a body of engineers and other employees from England; the drawing-up of elaborate plans and schedules; general administration of the services for over two years, &c.

In the first instance the company has been called upon to bear and pay all expenses on capital account of, or in connection with, the services, including the costs of construction, extensions, renewals, and rearrangement of the postal and telegraphic plant and services, or such proportion thereof as can be properly attributed to capital account. The company has also carried out, for the account of the Government, the construction and exploitation of extensions having administrative or strategical importance that the Government itself could not, or would not, execute. While all sums thus advanced by the company nominally earn 9 per cent. interest per annum during the first 10 years of the terms of the contract, and in the succeeding period at the rate of interest established by the Bank of England plus 2 points a large outstanding liability has been contracted, and remains to be paid.

The innovations introduced by Sir William Slingo (Controller-General of the Postal, Telegraphic, and Wireless Services Administration) from the outset caused much local obstruction and discontent, arising partly from the unaccustomed strictness with which the new control insisted upon reorganising each department, and the imposition of a partly British working staff. According to the contract of May, 1921, the Peruvian employees were to be retained "as far as possible," the company undertaking to inculcate modern methods, and at the same time to introduce no more than 20 per cent. of foreign employees. It is complained that this proportion has been exceeded.

Already considerable economies, as well as improvements, have been derived through the innovations introduced into the parcels post, postal delivery, telegraph and radio services. Up-to-date systems of message-filing, recording and accounting have brought the service into line with the regulations affecting the International Exchange of Radio-Telegrams laid down by the International Radiotelegraph Convention, of which Peru is a signatory. The greater part of the State telegraph lines have been completely overhauled or reconstructed, while in certain offices new batteries have been installed. Plans have been laid for a network of radio stations intended to form a trunk system supplementary to the existing telegraphic system, with corresponding improvement in the despatch of telegraphic messages throughout the Republic.

Should the Marconi Contract be cancelled, the carrying-out of the greater part of the plans for further increasing the efficiency of the Peruvian services will have to be abandoned, while it is feared that the improvements already effected will speedily be lost.

A STATISTICAL HISTORY OF THE WAR.

AT a time when Britain's interests and influence on the Continent are being somewhat underrated in Continental countries, it is as well to recall the importance of the part played by Great Britain in the war. This purpose will be served, and an important contribution made to the material available for the future historian, by the volume of statistics of the military effort of the British Empire, which has just been issued by the Stationery Office.* This document owes its origin to Mr Lloyd George, who, on becoming Secretary of State for War, took steps to introduce into the War Office a system of weekly statistical reports similar to that which had enabled him to keep an eye upon the many activities of the Ministry of Munitions during the preceding twelve months. The complexity of the activities, combined with the traditional reticence of departmental heads trained in the old army school, made the task more difficult, and in a short preface Sir Herbert Creedy tells us that it was not until October, 1916, that the machinery for compiling and abstracting monthly summaries of statistics was set up. Complete records are only available from that date, but subsequent study has enabled the compilers of this report to give as many figures as possible since the outbreak of war. The final edition of the monthly abstract was prepared for June, 1920, and the present volume contains gleanings of all the more important figures contained in the returns covering nearly four years.

It is impossible to attempt to summarise or even enumerate all the subjects dealt with in this valuable mine of information, and a few illustrations must serve to emphasise its importance. The first part of the volume is concerned with the growth of the Army itself. The actual strength shows the following changes between the opening and the end of the campaign:—

ARMY STRENGTH, AUGUST 1, 1914.

Regular Army	247,432
Army Reserve	145,347
Special Reserve	63,933
Channel Islands, &c., Militia	5,613
Territorial Force	268,777
Territorial Force Reserve	2,082
Bermuda and Isle of Man Volunteers	330

733,514
215,451

ARMY STRENGTH, NOVEMBER 11, 1918.

Expeditionary Force (including 558,143 men in Labour Units)	3,226,879
Troops at Home (excluding 248,444 Volunteers)	1,603,384
Troops in India and Burma	482,269
Garrisons of Defended Ports	24,411

5,336,943

In comparing the position on August 1, 1914, with that at the Armistice, it should, of course, be remembered that the Territorial Force and, still more, the National Reserve cannot for the most part be regarded as a fully effective fighting force. Moreover, the 1914 figure refers almost exclusively to British military forces, and makes no allowance for the peace-time effectives of India and of the Dominions. The distribution of the total on November 11, 1918, according to nationality is shown in the following table:—

NATIONALITY OF TROOPS.

British	3,563,466
Colonial	525,760
Indian Native	654,021
African Native	19,740
Egyptian and Native Troops	9,450
Local Forces	6,363
Natives, other than troops	558,143

The numbers enlisted show a considerable drop after 1915, and though the explanation is, of course, the need that existed for discriminating in the enlistment of recruits, it is significant that the highest total was reached in the year 1915 when enlistment was voluntary. The total amounts to 4,970,902, the figures for each year being:—

* 10s 6d net.

1914	1,186,357
1915	1,280,362
1916	1,190,075
1917	820,646
1918	493,462

The numbers of men in reserve occupations or protected in various ways amounted to 2,741,988. At the Armistice the numbers on the special register of the Ministry of National Service were 2,574,860. The total casualties reported throughout the war total rather more than 3,000,000, divided as follows:—

	No. of Soldiers Who Lost Their Lives in and Through the Great War.	No. of Wounds Received.	No. Reported Prisoners of War.
British Isles	702,410	1,662,625	170,389
Indian Empire—British	2,393	2,325	194
Indian	62,056	66,889	11,070
Dominion of Canada	56,639	149,732	3,729
Commonwealth of Australia	59,330	152,171	4,084
Dominion of New Zealand	16,711	41,317	498
Union of South Africa	7,121	12,029	1,538
Newfoundland	1,204	2,514	150
Other Colonies	507	810	..
	908,371	2,090,212	191,652

The figures of the output of munitions are already fairly familiar from statements made during and after the war by responsible Ministers. The report, however, contains more detailed statements than have yet been available, including the statement as to the number of guns, &c., in the field at various dates. The chief interest of this section will, however, be attracted by a brief note giving shortly the early history, from the War Office point of view, of the High Explosive Shell controversy. Toward the end of October, 1914, the head of the French Ordnance came to London to discuss the amount and nature of ammunition needed. In response to a query from London, G.H.Q. said that opinions were divided as to the efficiency of high explosives, but that they considered it advisable that H.E. should be produced if it could be done without affecting the supply of shrapnel. On October 19th 1,000 rounds of field gun H.E. shell were sent to France for report, which was favourable. On November 6th G.H.Q. asked for 50 per cent. shrapnel and 50 per cent. H.E., and a week later telegraphed to reduce the proportion of H.E. to 25 per cent. The War Office case for not turning over machines engaged on producing shrapnel to H.E. is conclusive. The expenditure of 18-pounder ammunition up to November 1st was 385,000 rounds, while up to that date the supply was only 45,000 rounds monthly. The note proceeds to state that additional instead of substituted orders were therefore placed at home and in America, but that out of 480,000 rounds due by May 15th only 52,400 had been delivered. It must, however, be admitted that this statement of the case does not altogether remove the doubt that the steps taken were sufficiently active and vigorous.

The orders placed as shown in this memorandum were very large indeed, particularly in view of the fact that Sir John French and General Joffre considered that 17 rounds per gun per day was all that they required—a very small figure compared with the 50 rounds per gun per day of later years for an enormously increased number of guns of all calibres. Moreover, in the early stages the War Office note shows that the official policy was to rely on the ordnance factories and large armament firms to organise the engineering industry, and not to trade direct with outside firms, but the delay is intelligible when it is realised that the pre-war output was only 3,000 rounds of field gun ammunition per month, and that this was raised to 1,000,000 rounds in a little over a year and that during the 33 months of the South African war only 273,000 rounds of gun ammunition of all natures were fired, whereas for the four weeks at the end of the Somme offensive the expenditure amounted to 1,120,000 a week.

The statistical tables are not without blemish; for example, in reporting on the artillery position in France at the Armistice it is a mistake to add up the number of rounds per gun for the different types of artillery and to say that the rounds per gun in general was 27,000. The average stock, in fact, was 2,804 rounds per gun. Again, on page 484 the surprising statement is made that in 1915 we supplied 189 and in 1916 396 guns to America. In the

latter year we did, indeed, supply guns to the United States, but these figures are evidently the number of guns of British type manufactured for Great Britain in the United States.

DIARY OF THE IMPERIAL CONFERENCE.

MONDAY, OCTOBER 1ST.—Full Conference opens. Survey of world politics and Empire problems by Mr Baldwin. Replies by Mr Mackenzie King (Canada), Mr Massey (New Zealand), General Smuts (South Africa), Mr Cosgrave (Irish Free State), Mr Warren (Newfoundland), and Maharajah of Alwar (India).

TUESDAY, OCTOBER 2ND.—First preliminary meeting of Economic Conference. General survey by Sir P. Lloyd Graeme, President of the Board of Trade. Other speeches by Mr King (Canada), Mr Massey (New Zealand), General Smuts (South Africa), Mr Innes (India), Mr McGrath (Irish Free State), Mr Warren (Newfoundland), and Mr Ormsby Gore (Crown Colonies). Among the chief subjects touched upon were migration, preference, communications, and financial assistance for Empire development. Some general aspects of the Conference, and the proceedings of these first two days are discussed in the first leading article in this issue.

WEDNESDAY, OCTOBER 3RD.—Review by the Duke of Devonshire of policy and problems in the colonies and protectorates, among the territories and subjects referred to being West Indies, Kenya, Tanganyika, Rhodesia, Iraq, Palestine, Ceylon, Malaya, an all-British cable, tropical agriculture, &c.

THURSDAY, OCTOBER 4TH.—Second meeting of Economic Conference. In absence of Australian delegation no issue of great importance was raised. The agenda and time-table settled subject to approval by Mr Bruce (Australia). Plans for the furtherance of inter-Imperial trade were preliminarily reviewed, among the subjects discussed being the co-ordination of commercial intelligence, the collection of statistics, co-operation in regard to trade marks and patents, and the valuation of goods for customs duties. These and other subjects will be dealt with in detail by sub-Committees, with the appointment of which some progress was made.

FRIDAY, OCTOBER 5TH.—Statement by Lord Curzon on foreign relations and foreign policy.

Notes of the Week.

The Growing German Chaos.—Events in Germany have moved with considerable rapidity during the week. The proposal of Herr Stresemann to amend the Constitution for the purpose of strengthening the hands of the Government produced disruption in the Coalition, which eventually came to a head on the comparatively minor issue of the suspension of the eight-hour day. In describing this controversy as a minor one, we do not mean to underrate its importance. Indeed, if Germany were ever to pay the fantastic sums at one time discussed as fair reparations, the whole German population would have had to work long and weary hours while living on a low standard in order to create the necessary surplus. But at the moment the issue is a minor one, because no one believes that a comparatively small lengthening of the working day would have much effect in setting Germany on the road to recovery. On Thursday it was thought that an attempt would be made by the Chancellor to carry on with a Directorate of four, five or six persons governing without reference to Parliament. The various names suggested all indicate that power is shifting more definitely into the hands of the industrialists. But the task of governing Germany in its present condition is so thankless that it is by no means certain that Dr Stresemann will be able to carry through the suggestion, and indeed the latest news is that he will meet the Reichstag once more and endeavour to govern with a reconstructed cabinet from which the Socialist minister will be dropped. Meanwhile the air is full of rumours of all kinds. It is suggested, for example, that the Rhineland industrialists are disposed to look with a little more favour upon the Separatist movement, which, under French protection, is becoming an influence to be reckoned with. The

Bavarian Dictator is enlarging his field of action and issuing decrees such as that which professes to apply the severest penalties against anyone assisting a Power occupying, in time of peace, any part of German territory. These things are seized upon by the French Press, who see in them a subtle fraud on the part of Berlin, which, while pretending to stop passive resistance, is allowing continued opposition to France to be engineered from Munich. The one thing we fail to discern amid these events is any sign that the French Government realises the danger to Europe from the growing confusion, and we are reluctantly driven to concur with the opinion of our German correspondent—who, as our readers are aware, has often taken a very critical view of the policy of Berlin, and cannot possibly be accused of being pro-German—that current events prove beyond a doubt that France is not pursuing reparations but is systematically crushing the life out of Germany. We do not doubt that the French nation desires, and desires very acutely and sincerely, to get reparations from Germany; nor do we imply that M. Poincaré has intentionally misrepresented his objectives. But it has not always been easy for the neighbours of Germany to realise that the obtaining of reparations and a policy of so-called "firmness" are incompatible, and when decisions have had to be taken, it has always been easier to envisage the policy of the strong hand than a policy which would, in fact, procure tangible results. We had hoped, however, and we believe that the British Government had reason to believe, that the moment the Berlin Government modified its attitude of passive resistance M. Poincaré would make clear the lines of a liberal, not to say a generous, policy on the part of France towards Germany, and such may, indeed, have been the intention of M. Poincaré. But a case like the present, when Germany is hovering on the brink of chaos, calls for immediate action. Ever since the Armistice it has been obvious that if France hoped to get paid it could only be done through a Central Government in Berlin which had sufficient strength to put the country into order, and ultimately to ensure that adequate taxes were collected. The first principle of statesmanship for France should, therefore, have been to combine with her firm insistence on her demands the utmost support to whatever Government held out the most hope of establishing its authority. Her last chance of doing this, in our opinion, was in the case of the Government which has just taken the very great responsibility of calling off passive resistance. Instead of doing this, her policy seems to be, as it has been in previous cases, to watch Berlin from a distance floundering in its difficulties, and even, in a quiet way, to add to its embarrassments. To this attitude the British Government can lend neither sympathy nor active support, and we hope Lord Curzon will say this clearly and without hesitation.

The Half-Year's Revenue.—The figures of national revenue and expenditure for the first six months of the financial year are on the whole satisfactory, and suggest that the Chancellor's estimate of a diminutive surplus for the full year will be realised. Revenue for the period shows a drop of £38 millions at £365.8 millions, the principal items which contributed to this reduction being income-tax, which produced £13.4 millions less, Excise with £8.2 millions less, Estate Duties with £5.3 millions less, and Miscellaneous receipts, which fell by £15 millions. The reductions in Excise and Income-tax are, if anything, less than the half-year's proportion of the loss anticipated for the whole year in the Budget forecast; but the Miscellaneous and Estate Duty receipts are down by more than their proportion. The most prominent increases in revenue were £2 millions in Corporation Profits Tax—a fact which will increase the Chancellor's reluctance to part with this tax when the time comes—£2.2 millions in interest on sundry loans, £745,000 in motor vehicle duties, and £858,000 in stamp duties, for which the Chancellor expected a drop of £2½ millions. The high yield is doubtless due to the continued activity of the Stock Exchange. Of the total decrease in revenue of £38 millions, £30 millions occurred in the second quarter, the whole of the decline in income-tax receipts occurring in that period. Expenditure has increased by £4.2 millions to £362.8 millions, which equals the total anticipated Budget increase for the year, and there is thus a small surplus to date of £3 millions. National Debt services, which include payment of the first instalment of the service of the American debt, show an increase of £22.5 millions. As compared with actual disbursements in the first and second six months of last year, the Treasury has paid out a higher proportion of the estimated total for the current year. This may be due to changes in interest rates or to higher money rates combined with a larger proportion of debt funded in the shape of 4½ per cent. bonds than was the case last year. If the second explanation is correct, the estimate for debt charges for the year may be exceeded. This increase has largely been offset by a saving of £21.4 millions in the Supply Services, towards which the Civil Services contributed nearly £14 millions. This is approximately the proper Budget proportion. Other changes on the expenditure side are small, and include increases of a million in payments to Northern Ireland Exchequer, of £1.5 millions in payments to Local Taxation Accounts and of £700,000 in the Road Fund. The figures undoubtedly indicate the necessity, which is already being emphasised in many quarters, for a further substantial pruning of expenditure if the accounts for 1924-25 are to balance, for on the existing basis of taxation revenue is bound to shrink to a considerably lower level than that of the current year. This week the full Finance Accounts for the year 1922-23 have been issued, and with their aid we have made the necessary adjustments to our table of the National Debt, printed on a later page. These adjustments involve an addition of some £83 millions to the total of March 31st. This discrepancy is due to several minor items, such as the conversion of War Bonds into 5 per cent. War Loan and the tender of Victory Bonds in payment of death duties, the amounts of which are not vouchsafed in the weekly returns. The major part of the difference, however, is accounted for by the funding of accrued interest on the American debt, which is responsible for the addition of some £100 millions to the nominal capital now entered at £958 millions. On this, however, an exceptionally low rate of interest is payable, and for purpose of comparison with other international obligations it will be remembered that the Treasury recently estimated the present value of the American debt on a 5 per cent. table as £700 millions. After making the necessary corrections, our calculations show that the National Debt on September 30th amounted to £7,808 millions, as compared with £7,813 millions on March 31st. During the six months the Floating Debt has been reduced by £6.4 millions, Ways and Means Advances from Public Departments having declined by £16 millions, while Treasury bills outstanding have increased by £9.6 millions.

Signor Mussolini and Fascism.—Signor Mussolini has entered upon his inevitable conflict with Fascism, and it may be predicted with some confidence that he will emerge the winner. Fascism was his creation, and is regarded as such by his fellow-countrymen. The dictator made the movement, not the movement the dictator; and now that it has served his purpose by hoisting him into the seat of government, it is evident that he has no intention of being "moved on." Mussolini will win, firstly, because he is a stronger and more able man than his Fascist henchmen, and, secondly, because, if it is a choice between him and Fascism, a dictator is the less intolerable alternative as a permanent factor in Italian political life. The Italian nation accepted the fantastic domination of this lawless brigade of young men as a passing refuge from a passing danger, namely, the Communist movement in Northern Italy during 1920-1. The antidote, however, makes as unwholesome a diet as the poison itself, and it was obvious from the beginning that Fascism, in the form of an *imperium in imperio*, could not long survive its victory, or, in other words, its *raison d'être*. It is not so with the dictatorship of an individual; for, though that is equally the antithesis of orderly self-government, it is by no means incompatible with the existence of any government at all, being, in fact, the very form of government that usually follows periods of instability or revolution. As a "reformist" autocrat, recognised as the legitimate master, and servant, of the Italian State, Mussolini will no longer be fettered by the limitations of the rôle in which he walked on to the stage, and he is therefore likely to show even more fight in his struggle for this position than he has shown in his career up to this critical point. The crisis has been precipitated by the expulsion from the central executive committee of the Fascist party of Commendatore Massimo Rocca, a prominent Fascist, who takes Signor Mussolini's view of the proper relations between Italy and Fascism. His offence consists in the publication of articles deprecating the efforts of the party extremists to establish themselves by violence as a ruling caste, and maintaining that the object of the revolution was the good of Italy, and not the personal advancement of the Fascists themselves. On this account he has been found guilty of "a serious breach of discipline and political unworthiness"; but it is more to the point that he has been received since his expulsion by Mussolini, and that when the Fascist executive sent in their resignations as a protest these were accepted by the dictator. The formal conflict will take place in the grand council of the Fascist party next week, but the issue will probably be decided in advance by the adherence of the local Fascist organisations to Mussolini (declarations to this effect are already pouring in), and by the discreet but solid support of all the moderate elements in the country. In this conflict the victory of Mussolini will certainly be to Italy's advantage, and it is probably better, from the point of view of Italy's neighbours, that one man of violence should rule in Rome than an army of fire-eaters. It would be far better for all parties, however, if some government of a less abnormal character could be re-established in Rome again, and we can only look forward with satisfaction to Mussolini's victory in this fight in so far as it may be a symptom of his settling down.

Irish Free State Problems.—Yesterday, writes our Dublin correspondent on October 4th, the Governor-General addressed the Oireachtas assembled in joint session. The address and the occasion correspond to the Speech from the Throne on the opening of the Imperial Parliament at Westminster. Following this precedent, the address was the work of the new Cabinet, and with some references to tasks achieved, contained the general programme for the ensuing session. Stress was laid upon the entry of Ireland into the League of Nations, and her participation as a full-fledged Dominion in the present Imperial Conference. Various measures were outlined, in particular one dealing with the administration of justice and a new judicial system, "including provisions for the reciprocal enforcement of judgments and judicial orders as between this country and the other members of the British Commonwealth in the interests of mutual accommodation in matters pertaining to the administration of

justice." The extraordinary powers exercisable for the maintenance of internal order will be gradually relaxed, and the "detained" prisoners released (they are, in fact, being released at the rate of some hundreds per month) so far as may be found compatible with the public safety, but the determination is expressed to take all necessary steps to protect the community from disturbance and destruction. Most important, however, were the references to the present industrial unrest and the fact that the Dail subsequently adjourned for a week to enable conferences with the different parties to be held as a prelude to further announcements of intended Government action. After a reference to unemployment and industrial disputes, which have begun seriously to affect the interests of the community, and to "inflation caused by the European war and artificially prolonged by our domestic strife," the Address proceeded: "High prices, high profits and high wages can no longer be sustained by a country whose economic life has agriculture as its base and foundation. Those engaged in the production and sale of essential commodities must realise their responsibilities to the general consumer, and your Ministers will vigilantly scrutinise the discharge of this responsibility in the coming winter. A recognition of these facts is of the first necessity if industrial friction is to be allayed." And again, this reference to pending fiscal changes is of interest:—"You will, in due course, be recommended to make such use of your fiscal powers as close and dispassionate inquiry shows to be best calculated to promote and diffuse prosperity." These considerations must receive effect if the Government schemes of large capital outlays upon roads and housing are to operate with success to reduce unemployment. Railway affairs are to be overhauled with a view to a reduction of costs. The Address has been well received by the Press and the public, but there is some little anxiety as to how the industrial problem is to be handled. Business is being strangled by labour disputes—particularly in Cork, though matters are serious enough in Dublin, and, apart from the real crux of wages and prices, there are evil-disposed influences at work seeking to make mischief. The Government clearly recognises that the cost of living is the crucial factor if wages are to come down to a practicable level. The point has been emphasised in these columns more than once. The difficult question remains, how the prices of commodities consumed by the poor and the wage earners are to be reduced. Little hope can be found in any attempted system of price fixing by the Government. In the meantime, the Exchequer returns continue to afford encouragement. From April 1, 1923, to September 29, 1923, revenue has been collected to the amount of £14,985,986, against the sum of £11,464,107 for the period from April 1, 1922 to September 30, 1922. The Government borrowings include £1,214,000 raised on Irish Free State bills, presumably from the banks, and £220,000 by Irish Free State Savings Certificates.

Broadcasting and the State.—There may be many people who regard broadcasting as a mild amusement on a par with the gramophone, and wonder why it should claim the time and attention of special committees set up by Parliament. The explanation is the simple one that the power of making one voice speak simultaneously to millions is a development of science the range of whose effects it is impossible to foresee. In their report just issued (White Paper Cmd. 1951) the Broadcasting Committee go so far as to say:—"It may be that broadcasting holds social and political possibilities as great as any technical attainment of our generation." This report loses some of its interest because it was issued simultaneously with a statement by the Postmaster-General indicating decisions already taken, which do not wholly carry out the Committee's recommendations. The immediate cause for the appointment of the Committee was the existence of a large and growing number of "listeners in" who were without licences, and had constructed their own apparatus. To meet this evasion the Committee recommend the placing on sale of one single type of receiving licence, and strong steps, including prosecution, to stop unlicensed receiving. The other main recommendations of the Committee are:—(1) That a Broadcasting Board

Dillon, Read & Co.,
New York

United States Government
and Municipal Bonds

Foreign Government Issues

Railroad, Public Utility and
Industrial Financing

should be established by statute; (2) that the broadcasting service should not be operated by a Government department, and that the existing service of the British Broadcasting Company should be continued and extended for two years on modified terms; and (3) that no protection should be given to the British manufacturers by the licence. In his statement the Postmaster-General explains that the terms of the existing agreement between the Government and the company make it impossible for the Committee's scheme to be brought into immediate operation. For instance, under this agreement it was intended that no licences should be granted to anyone except those using receiving sets marked "B.B.C." and manufactured by one of the firms forming the present company. Thus the agreement promised protection to the British manufacturer. As a compromise, the Postmaster-General has decided to issue for a limited period at an annual fee of 15s (as compared with 10s for the "B.B.C." licence) a "constructor's licence." Amnesty is offered to unlicensed users of receiving apparatus—estimated to number 200,000—if they purchase such licences before October 15th. This system of licensing will continue till December 31, 1924. Out of the licence fees the B.B.C. is to receive 10s on each constructor's licence and 7s 6d on each ordinary licence, instead of 5s per licence as at present. Experimental licences at 10s each will continue to be issued by the General Post Office to applicants who prove their *bona fide* status as qualified experimenters. Any surplus profit over 7½ per cent. is to be surrendered by the B.B.C. to the Post Office. As regards the other recommendations of the Committee, the Postmaster-General is to set up an advisory board, and also agrees to prolong the licence held by the B.B.C. Company, on certain conditions, up to the end of 1926. But after 1924 the power is reserved to license competing organisations and allot them a share of the proceeds of licence sales. In view of the existence of a binding agreement between the Government and the company, the compromise at which the Postmaster-General has arrived, with the consent of the company, is probably as satisfactory as it could be. But one of the most satisfactory points about it is that it is provisional and temporary, and the Government in a year or two will be free to re-examine the problem in the light of the developments in broadcasting which may be expected to take place. An interesting passage in the Committee's report is that which sets out the arguments for and against State operation of broadcasting. For State operation it is argued that it may be utilised for matters of widespread public importance, and therefore should not be in private hands; that it is undesirable for the State to collect licence fees and hand over part of the proceeds to a private concern; and that the service is analogous to others already controlled by the Post Office. On the other side, it is argued that a Government department is not a suitable body to arrange entertainment programmes, and that Government operation might lend itself either to political propaganda, or, through the desire studiously to avoid suspicion of propagandism, to intolerable dullness. These two arguments

against State operation seem to us, as to all the members of the Committee, with one exception, to be conclusive. Nevertheless, in respect of a public service so rich in potentialities of public influence, some sort of government supervision should be reserved.

Emergency Measures in Japan.—The moratorium proclaimed in Japan at the time of the earthquake disaster for a period of one month (September) having now terminated, an Imperial Ordinance regarding compensation for the discounting of bills has been promulgated. This ordinance authorises the Government to enter into a contract with the Bank of Japan to pay compensation up to an amount not exceeding 100,000,000 yen for loss which may be incurred by the bank through discounting certain categories of bills maturing before September 30, 1925. The time limit for discounting, however, by the Bank of Japan is March 31, 1924, for bills of the categories (a), (b) and (c) set out below. The different bills affected by the Ordinance are as follows:—

(a) Bills payable in the area devastated by earthquake or drawn by a person whose business domicile was in such district at the time of the disaster or in cases where the drawee was domiciled in the said district at the same period.

(b) Bills drawn in renewal of bills of category (a).

(c) Bills drawn by the Bank of Japan, either on the security of deposit certificates or call loan certificates issued before September 1, 1923, by banks domiciled in the devastated area to other banks, or on the security of the bills mentioned in categories (a) and (b).

(d) Bills drawn in renewal of either of the foregoing three categories, and discounted by the Bank of Japan.

The Bank of Japan has stated that, in addition to the discounting of bills referred to above, a more liberal accommodation will be given to banks against national bonds, municipal bonds, debentures and stocks or shares. In order to restore the various small industries scattered about in the devastated area, the Japanese Government is prepared to lend a certain amount of the Treasury fund through the Industrial Bank of Japan. For the larger industries the Government is promising the bank to give any help in its power so that the bank may be able to make ample accommodation for reconstruction.

Japanese Demand for Australian Wool.—As far as one can see, writes our Bradford correspondent, Japan is likely to be again a big buyer of wool in the Commonwealth markets. According to Dalgety and Co., Japan purchased in Australia during the season 1913-14, 20,500 bales; 1914-15, 81,890 bales; 1921-22, 207,786 bales; and 1922-23, approximately 235,000 bales. We have no actual figures for last year yet to hand from the firm named, but a leading buyer in Australia gave us the particulars when over in this country a good month ago. It is quite true that some woollen and worsted mills have been seriously damaged by the earthquake, but all the same we expect Japan to purchase no less wool during the ensuing season than last year. It has given the most satisfaction in Bradford in particular to know that no cancellations of piece goods are now going to take place, and during the past week further inquiries have come to hand for both yarns and pieces, and any time any important orders can be placed for dry combed 64's and 70's tops. This business will be very welcome indeed, for there are only too many causes for dissatisfaction and uneasiness in the home industry. The calls made for protective measures may do some good in rallying the forces of the industry, and compelling greater attention to be paid to factors which might otherwise have been overlooked. Whatever policy prevails it is beyond doubt that the consumption of wool is being curtailed by the unsettled conditions and the need for values for partly and fully made goods of fine quality to be put on a more economic basis.

Australia and Preference on Dried Fruit.—It is understood, writes a correspondent, that the Australian delegate to the Imperial Conference will press for an increased preference on dried fruit coming into this country from the Commonwealth. The question arises, however,

as to what purpose is likely to be served by an increased duty at the present moment. In the course of a conversation with a prominent dried-fruit merchant in the City I was able to confirm the opinion that Australian producers would not derive any genuine benefit, because the Australian season for the fruit alternates with the season when the fruit comes in from Greece and Spain, the two principal foreign suppliers to the English market. Arrivals of dried fruit from Australia cease at the end of September, when the first shipments reach London from Greece, and they begin again around May, when, except for a very cheap grade of currants, the Greek and other Mediterranean supplies drop off. Actually, therefore, there should not be any competition between the supplies from the two sources. That at the present moment there are quantities of Australian dried fruit unsold in London warehouses which will now have to face the competition of fresh arrivals from the Mediterranean is entirely due to the poor selling organisation for the Australian product. Sales on this side have been greatly mishandled. At the commencement of the season, for instance, a price of 110s per cwt was demanded for Australian sultanas, but this figure was altogether too high. Now the price is down to 66s, and even at this figure it will not be possible to sell the stock of around 3,000 tons now on hand, because Greek sultanas now coming in are quoted at 39s to 50s c.i.f., to which prices 15s should be added to put the quotation on an equal basis with that of the Australian fruit. The loss to the Commonwealth producers, or rather to the pool which the Australian Government has established for the disposal of the fruit, is therefore already a heavy one, and if the price is not now reduced to the level of the new supplies, the stocks are likely to rot in the warehouses. In the opinion of the market here, if the price of 90s, or thereabouts, had been asked for the Australian sultanas at the beginning of the season, all supplies would probably have been sold. As further proof that the Australian selling methods are getting worse, rather than better, it may be mentioned that the stocks of Australian sultanas in the United Kingdom at August 31st totalled 3,346 tons, whereas at the same date a year ago there were only 376 tons, and there was no appreciable difference in the quantity shipped to this country this season as compared with the previous year. Under these circumstances, and with such wide differences in prices, can it be wondered at that merchants in this country are not willing to give preference to the product of the Empire? It is absurd for Mr Bruce, or any other Australian politician, to come over here and expect that the British Government will agree to a preferential duty which would be sufficient even to put the price of Australian fruit on a level with the price of other supplies, and so give encouragement to the inefficiency with which the Australian dried fruit trade is at present carried on. If producers in the Commonwealth wish to make their business economically sound, they must immediately turn their attentions towards better organisation, both as regards packing and selling, and not look to artificial means, which, after all, only provide a temporary benefit.

American Cotton Crop.—Our Manchester correspondent writes:—The Department of Commerce of the United States Government has this week published important information relating to the cotton crop for the season 1923-24. The amount of cotton ginned up to September 25th has been given as 3,217,000 bales, against 3,866,396 bales at this time last year and 2,920,392 bales in 1921. The statement was rather worse than expected and prices hardened. The condition report which followed a little later caused some confusion in trading circles. The figure was 49.5 per cent., against 54.1 per cent. a month earlier and 50 per cent. same time last year. The report was about equal to expectations, but when it was announced that the Agricultural Bureau had increased the yield per acre compared with a month ago from 134.8 lbs to 137.7 lbs, the indicated crop being 11,015,000 bales, bearish sentiment prevailed, and there was heavy selling of futures in the Liverpool and New York markets. On the whole supplies this season will probably be rather more plentiful than anticipated two or three weeks ago. With linters the growth should be

about 11,500,000 bales. It is exceedingly difficult to estimate the consumption during the next 12 months. Last season it was 12,600,000 bales, and the requirements of users depend to a considerable extent upon industrial developments in Europe and a revival of demand in Lancashire. The consumption, however, is not likely to be less than 12,200,000 bales. There is a possibility of steadier prices for raw cotton before very long, as more settled ideas are beginning to prevail as to supplies this season. Spinners and manufacturers in Lancashire are faced with the problem as to how to do a larger trade with Eastern countries at relatively high prices compared with pre-war values.

The Consumption of Fuel Oil.—It is fair to say (writes a correspondent) that the only bright feature of the prevailing oil situation is the steady growth in the consumption of fuel oil. The biggest users of fuel oil are the railways and the merchant marine. Speaking generally, the higher costs of coal since the war have enabled fuel oil to make a keener bid for the locomotive and marine boiler, while further experience has enabled a more definite appraisal to be made of the economies resulting directly and indirectly from the use of liquid as against solid fuel. Railways derive much the same advantages from fuel oil burning as ocean-going vessels. They can increase runs on account of the time saved at terminals in handling and stoking. Steam can be raised more quickly, steam pressure can be maintained at the desired maximum more easily, the conditions of a changing load can be more rapidly met, with oil fuel. Moreover, unlike coal, fuel oil does not lose its calorific value when stored. On the other hand, the railway does not obtain nearly so great an advantage as the passenger ship, which can reduce its stokehold staff by 70 per cent., get away with less bunker space, and so with more cargo, and save labour on cleaning, apart from offering greater comfort and speed to its passengers. For this reason railways have not adopted fuel oil burning so widely as the passenger steamship lines except in oil-producing countries, which can offer special advantages in price and continuity of supplies. Taking the merchant marine as a whole, it is evident there is an increasing partiality for oil. In 1914 about 11 per cent. of the world's shipping had oil-fired boilers. To-day the percentage is over 31. In the building of new ships the 1919-20 programme provided for oil-burners to the extent of about 50 per cent., while the 1922-23 programme increased that percentage to 65. It is true that the construction of motor vessels shows a higher rate of increase than the construction of oil-burning vessels, and that the consumption of fuel oil under boilers is wasteful, and a passing economic phase. But it is not believed practicable to convert ships built for coal or oil-fired boilers into diesel-engined ships (*pace* the U.S. Shipping Board, which is going to make the experiment), and it is therefore obvious that until the existing fleets of steam-raising ships are worn out or scrapped, fuel oil burning will not be displaced by the diesel engine. The policy of the big steamship companies leaves no doubt as to the future magnitude of fuel oil consumption. The s.s. "Olympic" and "Aquitania," the queens of the Atlantic passenger service, were converted from coal to oil burning in 1920, and it was largely as a result of the startling economies obtained by these two ships that the White Star and Cunard lines decided to turn to fuel oil for their express passenger services. The Cunard Company converted the s.s. "Mauretania" and "Berengaria" and the White Star s.s. "Majestic" from coal to oil burning in 1922, and the s.s. "Homer" is laid up at the present time for a similar purpose. The "A" class of the Cunard Company—"Andania," "Ausonia," "Albania," and "Antonia," which run between Liverpool and New York—comprises oil-burners entirely. The s.s. "Scythia," "Sameria," "Laconia," "Tyrrhenia," and "Francia" are other additions to the huge oil-fired fleet of the Cunard Company. Of other important "converts" may be mentioned the Red Star liners "Finland," "Kronland," "Zeeland," and "Belgenland," the Royal Mail liners "Minnewaska," "Mooltan," and "Maloja," and the mail steamers of the P. and O. line, which sail between London and Australia. Then there is

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1746.

Capital (Paid Up) - £1,250,000
Reserve and Undivided Profits - £1,500,676

HEAD OFFICE: EDINBURGH.

REES GRIFFITH THOMAS, General Manager. R. W. STEVENSON, Secretary.

170 BRANCHES THROUGHOUT SCOTLAND.

London Office: 58, Threadneedle St., E.C.2.

JAMES FORREST, Manager. J. E. FANSHAWE, Manager.

Every Description of Home and Foreign Banking Business transacted.

the s.s. "Leviathan," of the United States lines, which under full steam will consume about 7,000 barrels of fuel oil every 24 hours, or about 6,000-7,000 tons on the round trip between this country and America. The total production of wells in Pennsylvania, producing 20,000 barrels a day, would not fill the requirements (supposing the wells were flowing fuel oil) of three of these mammoth Transatlantic liners going steadily under full steam. The following statistics will give some idea of the enormous and increasing turnover in bunker fuel oil:—

	Barrels (6.6 barrels to the ton).
Fuel oil taken in ships' bunkers (excluding Navy), at U.S. ports—	
1921	43,053,000
1922	51,996,000
1923—January	2,278,440
February	2,526,475
March	3,140,217
April	3,173,168
May	3,198,746
June	3,456,628
At U.K. ports—barrels a month	about 400,000

There is no doubt that for the passenger liner fuel oil burning has come to stay, but it should not be overlooked that for the ordinary freight ship the question of relative prices between coal and oil is the sole deciding factor.

Investors and Jobbers' Prices.—A Stock Exchange correspondent writes:—The continuance of the boom in tea shares, together with the recent revival of interest in nitrates and electricity supply issues, has brought once more to the front some of the questions that offer perennial matters for misunderstanding between broker and client, matters which require constant correction for them to be properly understood. Most people are aware, in a rather vague way, that Stock Exchange jobbers make prices, that is to say, they quote double prices in a particular share. At the higher price they are prepared to sell, at the lower price to buy, shares from any broker who comes along with an order, and who ascertains this dealing price before he announces what he wishes to do, whether to buy or to sell. This making of prices is one of the fundamental distinctions of the London Stock Exchange, and it is carried to a point in excess of that reached by any other exchange in the world. It is regarded as being the reason for the supremacy of London as a liquid market in so many hundreds of Stock Exchange securities. The willingness of jobbers to stand in the market-place ready to sell shares, or to buy them, indifferently, is always held up to be the justification for the system of jobbers that prevails in Capel Court. The tea boom, however, has emphasised one matter which is not readily grasped by the outsider who thinks that jobbers are compelled, under the rules of the Stock Exchange, to make prices in everything in which they deal. A client writes a broker to buy certain tea shares, and is annoyed to find from the answer that such shares are not obtainable at all; the broker replies that there are none in the market. Upon this, the client promptly demands how it is that the jobber will not make a price at which the broker could buy, however unwilling the jobber might be to sell. The fact of the matter is that jobbers are always willing to make prices in stocks and shares, provided they know where to get the stock if they sell it, or where to sell it if they buy it, or, alternatively, whether they think there is

a reasonable business risk of their being able to replace or to sell securities which they sell or buy, respectively, from the brokers. If a jobber has no shares on his book, and does not know where to go for them, he makes a price at a risk which is obviously considerable if the market in the shares happens to be active and popular. Some of the tea shares have been going up by a pound or a couple of pounds per diem, and were a jobber compelled to make prices, whether he wanted to or not, it would be impossible for him to satisfy people, who bought shares from him, if he were unable to get these back and had none of his own with which to supply the purchasers. This seems obvious enough to the Stock Exchange mind; to the outsider it carries little or no weight. If, however, the transaction were thought out to its logical conclusion, it would be obvious that the buyer who was able to force the jobber to sell to him shares which the jobber did not possess, and could not buy, that buyer might have to wait some very indefinite time before he could obtain delivery. And such waiting is, naturally, not to the liking of any client. It is the same with sales of stock. A man may be eager to get rid of securities—or, more frequently, insecurities—if a purchaser could be found at any price at all, and he demands from his broker how it is that the latter will not compel a jobber to make a price. But if the jobber has no buyer, and does not want the shares, if he sees many other sellers eager to get out, and nobody wanting to relieve him of his previously acquired stock, it is hardly fair to suppose that he is obliged to make a price which would ensure, nine times out of ten, his being landed with stock for which he could not find a home. The making of prices is an integral part of London Stock Exchange life, and has more to do than anything else with the liquid character of the London markets. But there are times, as I have endeavoured to show, when the making of prices is impossible, and perhaps this brief explanation of what happens in abnormal circumstances may help to dispel the misunderstandings, sometimes even suspicions, that arise in the minds of clients in connection with this particular branch of business procedure in the London Stock Exchange.

The Non-Ferrous Metals.—Copper last week fell to a very low level, with only a margin of about £4 between standard and refined, and although buyers were attracted this week the undertone still continued easy, with a further decline in values. The news from New York is very uncertain, and the big producers are feeling the absence of the German demand. Last year Germany absorbed fully 85,000 tons of American copper, but there has been a big falling off in this trade recently, and the stocks in producers' hands are accumulating very quickly again. Copper round about current rates looks cheap, and there should be more firmness later in the year. Tin, after rising to £205 towards the close of last month, fluctuated considerably round about the level figure, and after a strong opening this week the market became easier again on selling to take profits and the absence of American buying. The Government of the Federated Malay States have announced that up to September 25th they had sold 2,000 tons of their holding of Straits tin. This coming on top of rumours that the authorities mentioned were selling, caused a rather uncertain feeling, but when it was realised that the clearance of part of the State-owned tin was really a bull point for the metal, sentiment improved again. Early this week the position was very firm, but the publication of the monthly return showing that the visible supply is now 17,450 tons, against 16,295 tons in the previous month, and 20,440 tons on September 30, 1922, caused another set-back, although really the figures denote a very moderate total for the whole world, bearing in mind the possibilities of the late autumn demands of the tinplate trade both in this country and also in the United States. The Straits shipments for the month of September totalled 6,115 tons, against only 4,990 tons for August, and the total supplies were 8,632 tons, with deliveries only 7,477 tons. Of the shipments referred to above, no fewer than 5,025 tons went to the American ports, and the shipments to Great Britain were only 565 tons. The tin stocks in the United Kingdom are very small, being down to 2,995 tons, of which 1,584 tons

are in London and 1,411 tons in Liverpool. The tinplate trade in South Wales is well booked up, makers reporting good order-books; thus there is no reason why tin should not keep up to a price level round about the two hundred mark. America will buy more tin later on, and the feeling is that the market will come up again as soon as the present liquidation is finished. Lead has shown a very firm undertone, with the price of soft foreign pig lead over £26 per ton again, and this despite the liberal arrivals. There is still a fairly heavy premium on prompt metal, and the undertone of the market this week has been very hard. Spelter has been inclined to fluctuate a little after its good rise to £34 from below £28, but the market is still firm, and galvanisers this week have been buying more freely. The unsold surplus of zinc on October 1st was not more than 40,000 tons for the whole world, and there is a possibility of a shortage arising later on in the year. Japan is a buyer of slab zinc both in Australia and the States, and offers are small. Efforts are to be made next year to enlarge the British output. The statistical position of all the non-ferrous metals in this country is healthy. Copper stocks are 27,674 tons, tin 2,995 tons, lead 1,439 tons, and zinc (spelter) 803 tons. These would not go very far if trade revived.

The British Piano Trade.—The English pianoforte trade, both as regards exports and imports, has not yet regained the pre-war level. Imports both before and since the war have always exceeded exports. During the last entire pre-war peace year 93 per cent. of the pianos imported came from Germany, the average price of the German pianos being £31 os 5d. Our main exports went to Australia and New Zealand, smaller numbers to other colonies, and a few to South America. Holland, Belgium, and France also imported limited quantities. Comparing the numbers of instruments imported and exported, the latter were only 40 per cent. of the former. The following schedule gives our imports before and since the war:—

Year.	Number.	Value. £	Average Each. £ s d
1913.....	24,482	756,800	30 18 0
1919.....	418	24,900	55 0 0
1920.....	6,247	428,900	68 13 0
1921.....	9,079	334,500	36 16 0
1922.....	16,274	570,100	35 0 0
1923 (8 months)	7,817	320,200	40 19 2

These figures show remarkable fluctuations in the average prices of pianos from year to year; the more recent tendency is to increase. The present higher price-level will probably be maintained. The exports have been as follows:—

Year.	Number.	Value. £	Average Each. £ s d
1913.....	9,780	351,400	35 18 7
1919.....	1,862	135,100	71 9 1
1920.....	3,098	295,700	95 8 11
1921.....	1,538	150,100	97 11 10
1922.....	2,446	164,500	67 5 10
1923 (8 months)	3,395	179,700	52 18 7

These figures suggest that a better type of instrument is exported than imported. Our exports now are only half those of pre-war years.

United Steel Companies.—The report of the United Steel Companies for the year ended June 30th last states that the trading of the company's branches and subsidiary companies resulted in a net profit, before providing for depreciation, income-tax, and corporation profits tax, of £605,506, as compared with a loss on the same basis for the previous year of £505,531, an improvement of £1,111,037. In arriving at the previous year's loss, the report stated that stocks were written down altogether by £298,667, while the charge of maintenance of idle plant amounted to £312,321, so that apart from these items there was a surplus of £105,457. Moreover, the figure of £505,531 in any case bore no relation to the company's own balance-sheet, as it included £348,856 as the losses of "associated companies." The losses were said to be covered by these company's undistributed profits. The company's own profit and loss account, on the other hand, showed a profit in which it appeared that interest from associated companies, presumably on prior

charges, figured largely. This profit, after payment of debenture interest, amounted to £240,008. The profit for the past year on the same basis amounts to £348,032. A comparison of results for the past five years is set out below:—

	1918-19.	1919-20.	1920-21.	1921-22.	1922-23
Gross revenue.....	1,164,585	930,521	711,146	388,034	504,633
Administration expenses and income-tax.....	48,133	38,007	81,485	148,026	156,601
Interest.....	209,820	146,853	146,254	148,026	156,601
Net profit.....	906,632	745,661	483,407	240,008	348,032
Brought forward.....	64,674	64,674	80,381	308,293	440,743
Reserve and written off	906,632	810,335	563,788	548,301	788,775
Preference dividend....	41,822	119,369	32,021	32,021	79,890
Preference dividend....	79,024	79,051	55,336	27,668	122,626
Ordinary dividend.....	721,112	507,042	168,138	..	..
(10%)	(10%)	(10%)	(3%)	(nil)	..
Carried forward.....	64,674	104,873	308,290	440,473	666,149

The directors remark that "the trade depression referred to a year ago continued with rather less intensity until very close upon the end of 1922, when a material improvement was experienced, and the works which had been idle were enabled to resume operations to a moderate extent. The improvement is not quite so pronounced at this date, but considerable business is in hand, and there are large inquiries." Having regard to the requirements of increased business, the directors, however, do not propose to make any distribution to shareholders even upon the preference shares, and the available balance, after reserving £27,881 for sinking fund and £94,745 for taxation, is to be carried forward. The decision is a wise one. The amount provided for depreciation is only £67,067 this year, and nothing last year—for which the chief explanation given was the large expenditure on the maintenance of idle plant. But the chief problem for the company is to find funds for completing and paying for the enormous plate mill at Appleby, a very heavy task when added to the depression of trade and the high capitalisation of a combine formed at a time of swollen values. The dividend on the 6 per cent. cumulative preference shares is in arrear from January 1, 1922. The balance-sheet, which is analysed in detail in another column, shows no very striking changes. Creditors have risen by £383,000 and debtors by £279,500, while advances to associated companies have increased by £234,700 to £3,009,400. The auditors in their report point out that, except the amounts included under investments, or otherwise stated, nothing is included in the balance-sheet in respect of the assets and liabilities of associated companies. Shares in the latter stand in the balance-sheet at £6,803,200. It is highly desirable in the interests of shareholders that more information should be given as to the financial position of the constituent companies of a concern of this magnitude, whose total assets figure at nearly £17 millions.

Scottish-American and Tankers.—It is certainly to the credit of the directors of Tankers, Limited, and Scottish-American Oil and Transport Company, Limited, that the reports and accounts of both undertakings are issued simultaneously for like periods. As far as the accounts of the Scottish-American undertaking are concerned, we are at least presented with a simple document which is almost eloquent in its brevity. The Scottish-American now has an issued capital of £1,196,964, divided into ordinary shares of 5s each, fully paid. Sundry credits figure at £5, while there is a modest reserve item of £2,000. The undertaking is a holding company, its investment being the ordinary capital of Tankers, Limited, which consists of 4,787,855 ordinary shares of 5s each, fully paid, amounting to £1,196,964. Cash at bank is recorded as £2,005, which, balancing the two small items referred to above, finishes the balance-sheet of the Scottish-American Oil and Transport Company. Turning to the subsidiary concern—Tankers—we are informed that for the year ended March 31, 1923, a loss of £37,384 has been experienced, "after charging to profit and loss a sum of £28,896 16s. 2d., being the interest due to builders on current bills of exchange." The report then proceeds to remind us that "during the year under review the freight market has been exceedingly slack, and rates generally have been of a very unremunerative character." The directors mention that—"During a portion of the year it was impossible to obtain remunerative employment for a

considerable part of the Fleet, which necessitated laying-up a number of vessels, with consequent loss of revenue, and which was added to by the necessary lay-up charges. Fortunately, the directors are able to report an improvement, and, since the commencement of the current financial year, the vessels have all been employed at remunerative rates." In considering the question of the new boats which have been delivered, bringing the total of steamers owned by the company to eight in all, an examination of the balance-sheet is an essential preliminary. These eight boats are reckoned at £3,762,004. But depreciation of £60,000 has been written off to March 31, 1921. Six completed vessels are mortgaged—for what total we do not know, but under "liabilities" five steamers are pledged for £1,027,500. The next item of assets is tugs and barges as at March 31, 1922, £250,000. Of these two items, the auditors remark that "no provision has been made for depreciation on steamers, tugs and barges for the year ended March 31, 1923." This naturally leads one to ask the question if any depreciation has been allowed for the steamers for 1922. A year ago it was stated that "no provision has been made for depreciation on steamers" for 1922. The share holdings of the company are apparently still unremunerative. These total £921,343, but what the real value is it would be difficult to say. There are 769,210 shares of common stock of 10s each of Southern Oil and Transport Corporation, taken as at March 31, 1922, as worth £774,821. This is the value placed upon the shares when acquired from the Scottish-American Oil and Transport Company. Shares in the British Equatorial Oil Company represent £143,477, a further £20,000 being added in this direction on account of a 10s per share call on 40,000 shares. The auditors remark that "We have no evidence as to the present value of the investments in other companies," and though the few paragraphs in the report relating to these investments may be of use to shareholders, it behoves us to be very suspicious of share values when the auditors tread so warily. When the steamers are written down to current values, and some light is thrown on the value of the actual assets behind share holdings, it is doubtful if the market valuation of 1s 1½d each for Scottish-American shares is warranted. The annual general meetings of both companies are to be held on October 11, 1923.

Wankie Colliery.—South African coal undertakings as a whole, writes our mining correspondent, have recently experienced anything but prosperous times. There is, however, one prominent exception—the Wankie, which operates a large area in Rhodesia, and is favourably situated for supplying most of the mines in that country. Since the commencement of dividends in 1910 no break has occurred in the distributions. These have ranged from 10 to 15 per cent. upon the present increased capital; on account of the current year 5 per cent. was disbursed in February and 7½ per cent. in July. About a month ago rumours were current as to the intention of the directors to distribute a scrip bonus. Particulars are now issued of a scheme of reconstruction which, it is explained, has become necessary in view of the acquisition of additional coal rights and other developments. Shareholders are to receive three fully-paid 10s shares in respect of every two now owned, and a cash dividend of 7½ per cent. is to be paid on the existing capital—the latter presumably bringing the total for the financial year up to 20 per cent. Doubtless there will be few dissentients at next Tuesday's meeting.

Brazilian Trade and Exchange.—A correspondent writes, "The serious effect of the depreciation of the milreis upon Brazilian trade is to be seen in the official figures of the first three months' trading of the current year. The comparisons are remarkable. Whereas exports increased in value from 266,891,000 milreis for the first quarter of 1913 to 787,696,000 milreis in 1923, the actual dollar equivalents were \$86,205,793 and \$89,009,648 respectively. Imports, which totalled 266,662,000 milreis in 1913, increased to 554,671,000 in 1923, but here, again, the dollar equivalents were \$86,131,826 and \$62,677,823 respectively. The real value of the country's trade, how-

ever, can be best judged by studying the tonnage returns. Here the exports for the first quarter of the current year were larger than those for any corresponding period in the country's history, showing an increase of 86 per cent. over 1913. While coffee accounted for 70 per cent. of the total value of exports, sugar, raw cotton, cacao, rubber and other products realised, like the berry itself, prices higher than those prevailing in the previous year. Brazilian foreign trade still constitutes the more important factor of the economic situation, but the industrial position of the country revealed is even better than mentioned in the *Economist* of September 8th, when the writer, dealing with conditions in Brazil, pointed out the immense increase in the textile output. According to the figures adduced at the First Congress of Brazilian Textile Operatives, held recently at Rio de Janeiro, Brazil has 243 cotton textile mills, with 1,700,000 spindles and 60,000 looms, employing 130,000 operatives. The capital represented is 16,000,000 milreis, and the annual produce 700,000,000 metres of cloth.

Conditions in Belgium.—The cessation of the railway and postal strike, which so seriously affected Belgium in May this year, and the re-establishing of general confidence, aided no doubt by the depreciation of the exchange, have stimulated Belgian production and exports in the last few months, and caused something like a boom in industrial securities in Brussels. The movement of securities is shown by the following index numbers, quoted by the "Moniteur des Interêts Matériels":—

	State and Industrial Loans.	Other Fixed Interest Securities.	Industrial and Financial in General.
1922.			
May 1.....	83.64	87.68	123.00
Aug. 1.....	84.86	89.43	143.00
Nov. 1.....	84.43	89.15	180.00
1923.			
Feb. 1.....	80.91	89.10	204.40
May 1.....	79.33	89.62	198.76
Aug. 1.....	75.05	86.71	270.35

A notable feature of this table is the depreciation of Government securities since the occupation of the Ruhr by comparison with other fixed interest securities. Between May and August of this year a significant fall in the quotations of securities in the second column is indicated, illustrating the rule that when trade is prospering, absorbing capital, and increasing the rate of profit, fixed-interest securities tend to fall. The upward movement in general securities is not unconnected with the depreciation of the Belgian franc, but the rise is much greater than can be accounted for in this way. The price of the dollar in Belgian francs, and the internal level of Belgian prices for the periods comprised in the earlier table were as follows:—

	Wholesale Price Index (1913=100).	Number
1922—May 1.....	226.4	344
August 1.....	247.4	360
November 1.....	279.8	385
1923—February 1.....	311.8	434
May 1.....	335.4	480
August 1.....	395.2	504

* Average of quotations during preceding month.

Thus, over the period general securities have risen 110 per cent. since May, 1922, wholesale prices have risen 46 per cent., and the price of the dollar in francs has risen 80 per cent.

Venezuela's Finances.—A further amelioration in Venezuelan conditions is to be noted, writes a correspondent, the outlook for the current financial year being considered especially favourable. Budget estimates of revenues and expenditures, which again balance, show totals of 62,845,000 bolívares, against 61,706,000 for the previous year. The increase of 1,139,000 bolívares is distributed over a number of different items, mines being conspicuous, the actual revenues from this source showing latterly a remarkably steady advance. Other important sources of revenue are derived from Customs and Consular receipts and internal revenues, their respective proportions of the whole being 40 per cent. and 52 per cent. Perhaps the most satisfactory feature of the Venezuelan economic

situation is the continued reduction of national debt. The foreign debt was reduced, in 1922, to 114,803,092 bolívares from 124,790,291 bolívares in 1921, while, over the same period, the internal debt declined to 44,883,870 from 46,580,105 bolívares. The reduction of the Diplomatic Debt of 1905 amounted to 8,026,965 bolívares, and has accounted for approximately 90 per cent. of the entire reduction in the national debt. This security is held principally by British investors, while the home of the National Diplomatic Conventions Debt is found chiefly in France. Between January 1, 1909, and December 31, 1922, the amortisation and cancellation of the national debt totalled 118,177,402 bolívares, while, during the 14-year period (1909-1922), amortisation and cancellation reached a total exceeding the whole amount of the present national debt. The inauguration of Venezuela's financial reformation synchronised with the first period of office (as Acting-President) of Señor José Vicente Gómez, now serving his fourth full Presidential constitutional term.

Improvement in Cuba.—Political complications aside, writes a correspondent, economic affairs in Cuba show considerable improvement. The long-existent sugar production crisis seems to have come to an end, reports from the principal plantations foreshadowing a profitable season. The principal railways have been carrying increased traffics, both passenger and goods. The lines under British management are in little way concerned with the movement to consolidate the transport interests of the island by the abolition of a number of small ports. Notwithstanding the strong exception taken by American sugar interests to this measure, the Cuban Northern Railway Company have declared, through their counsel, that they consider the proposal to be both "fair and legal." Opponents to the port concentration scheme have invoked the intervention of the United States Government, which threatens strong measures against the Cuban Administration in regard to this and other recent enactments concerned with their domestic affairs. The Budget for 1923-24, now passed by Congress, is divided into two parts—fixed and variable expenses. The total expenditure upon both Budgets is \$61,672,169, against \$54,852,302 for the previous financial year, while revenues are put at \$68,500,000 against \$55,638,000. The figures are only approximate, however; while no details are issued, it is thought that the receipts will prove to be considerably above the total shown.

Conditions in Uruguay.—Although economic affairs in Uruguay mend but slowly, the two main industries of the country—wheat cultivation and live-stock breeding—are not without promising features. Climatic conditions, writes a correspondent, have, so far, proved distinctly favourable to the sowing now taking place over an area wider than that of last year, which produced one of the smallest harvests on record, namely, 140,220 tons, equal to a yield of 522 kilos. per hectare over a cultivated area of 268,450 hectares. With the exception of the 1914-15 harvest, the total yield of which was no more than 97,857 tons, averaging 309 kilos. to the hectare, over 316,962 hectares cultivated, the last harvest (1922) was the most unsatisfactory since the year of the war. One of the best years enjoyed was 1917-18, when there was a yield of 355,443 tons, or 900 kilos. per hectare, from a cultivated area of 394,949 hectares. Fat cattle is steadily improving in price, some recent quotations being as high as \$65 per head on the estancias. Late reports speak of 10 to 11 cents per kilo. live weight being offered for selected beasts; while, upon the entire stock of an estancia recently changing hands, horses and cattle realised \$13 and sheep \$4 per head, the total transaction reaching the sum of \$70,000. But while encouragement is lent to private enterprise, the financial position of the Government remains unsatisfactory. It has become necessary to raise a new foreign loan. This has been fixed at \$35,000,000 (Uruguayan) gold, or its equivalent in U.S. currency. It is not proposed to issue the whole of the amount at once, tenders being invited in two portions, one for 20 millions and the other for 15 millions. It was hoped to secure the loan to carry interest of 6½ per cent., at the highest, with amortisation

in 30 years. But as no guarantee was offered, failure to raise the loan upon such terms was a foregone conclusion. An offer by the National City Bank of a loan of \$20,000,000 at 89, carrying interest at 7 per cent., was, it is said, offered and rejected by the Minister of Finance, who, apparently, must look nearer home for the financial assistance required.

The Russian State Bank.—The balance-sheets of the Russian State Bank come to hand very late, but are, nevertheless, of considerable interest to the student of economic conditions in that country. On August 1, 1923,

the total balance of the Russian State Bank stood at 60 million tchervonetz, including the head office and 230 provincial branches, the former accounting for 44 million, and the latter for 16 million. This disparity between the central and provincial activity of the bank reflects the fundamental weakness of the present situation, in which the economic life of Russia suffers from the rupture of exchange between town and country—a situation which becomes more acute as the gulf between the indexes of industrial and agricultural commodities widens, and which is accentuated by the fall in cereal prices on the realisation of the harvest. Signs were, however, evident during July

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned period of the Year ending March 31, 1924, as compared with the corresponding period of the preceding Year.

Treasury, September 29, 1923.

that the operations of the bank's provincial branches were showing a tendency to develop faster than those of the central organisation, and every effort was made to stimulate this progress. In country districts there is a currency famine, and it is feared that the necessity of paying half of the single agricultural tax this year in money will compel the peasants to dispose of their produce at all costs, with the result that cereal prices will fall still further. The State Bank has instructed its provincial branches to grant liberal credit to traders anxious to realise articles of primary necessity in rural districts. The possibility of relieving the currency famine among the peasants by financing co-operative and agricultural credit societies with tchervonetz banknotes is restricted, because the denominations of the tchervonetz are not small enough to make them easily assimilated in local markets, where traders are often unable to give change, and can only offer written receipts. The fact that the bank's own resources are in Soviet roubles explains their continuous depreciation. Thus, the foundation capital fell during July from 172,000 tchervonetz to 117,000, and the profit and loss accounts for similar reasons show a decline during the same month of from 536,000 to 375,000 tchervonetz. At the same time, interest on operations and commission show an increase—from 1,904,000 to 2,462,000 tchervonetz, representing on August 1st 4 per cent. of the total balance-sheet. Interest and non-interest-bearing current accounts in tchervonetz, and in gold and foreign currency, show an increase of 470,000 tchervonetz on the returns for July 1st, but have fallen from 18 to 14 per cent. of the total balance-sheet. It is to be noted that, whereas the head office shows little or no change in current accounts, the provincial branches show a marked increase, both absolutely, and in relation to their balance-sheet, amounting to 5,251,000 tchervonetz on August 1st, as against 4,282,000 on July 1st. It is evident from these figures that the bank's activity, as far as the head office is concerned, is acquiring the character of a bank of issue, its banknotes providing the basis on which the greater part of its active operations are conducted. The provincial branches are, however, developing like ordinary banks, whose active operations expand in proportion to the growth of the resources which they attract. The difference in the composition of the liabilities of the head office and those of its provincial branches is reflected also in their active operations, as the following table shows:—

(In Thousands of Tchervonetz.)

	Head Office. July 1.	Aug. 1.	Provincial Branches. July 1.	Aug. 1.
Cash	351 ..	368 ..	2,624 ..	2,122 ..
Discount and loan operations	15,026 ..	15,243 ..	5,969 ..	8,421 ..
Foreign currency and precious metals	7,995 ..	10,297 ..	839 ..	1,260 ..
Goods and securities ..	1,112 ..	1,184 ..	1,140 ..	1,182 ..
Financing of branches ..	4,791 ..	5,888 ..	..	..
Other articles	1,447 ..	2,323 ..	633 ..	349 ..
Inter-branch accounts ..	..	..	1,839 ..	2,718 ..
Total balance*	30,722 ..	35,303 ..	13,044 ..	16,042 ..

* Less special State subsidies to industry in case of head office.

Discount and loan operations are being energetically developed by the provincial branches, but the head office shows most progress in respect of its balances of foreign currency in coin and banknotes, drafts, precious metals, and correspondence. While goods and securities belonging to the bank showed little change, the proportion of cash in hand to the total balance showed a further decrease in the period under review.

THE Board of Trade announces that the following gentlemen have been appointed to be members of the British Delegation to the League of Nations Conference on Customs Formalities, which will open in Geneva on October 15th: Delegate, Sir H. Llewellyn Smith, G.C.B. (Board of Trade); Deputy Delegates, Mr W. Christian, Customs Adviser; Mr H. W. Malkin, C.B., C.M.G., Legal Adviser; Sir Arthur Balfour, K.B.E., Business Adviser.

Oversea Correspondence.

UNITED STATES.—ATTORNEY-GENERAL'S DECISION AGAINST SHIPPING BOARD PLAN — OCEAN FREIGHTS IMPROVE—BANKERS' CONVENTION—TEXTILE MERCHANDISING OUTLOOK—COAL COMMISSION'S REPORT.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 24.

ATTORNEY-GENERAL DAUGHERTY'S recent decision that, under the Merchant Marine Act, the Shipping Board has no authority to dispose of the Government-owned merchant fleet to subsidiary corporations definitely eliminates the so-called Lasker-Farley plan for the future operation of such vessels, and places upon the Shipping Board the necessity of proposing some other solution of the complicated shipping problem, if direct Government operation is to be avoided. The Board is now taking up that difficult task, and various schemes are being discussed, but it is uncertain at the moment just what new method may be suggested by the Board. Meanwhile, the different trade and passenger services, in which Government vessels are being used, will probably continue to be handled, as heretofore, by the managing operators. It is quite possible that the matter may be referred to the Congress before any final plan is decided upon, unless some way can be found which will lead to private ownership and operation, and comply with the existing statute. The plan, which the Shipping Board is now barred from carrying out, contemplated the incorporation under State laws of some 18 subsidiary concerns to own and operate the Government's merchant ships in the various services. Briefly outlined, the Government was to hold the stock of those corporations, and the latter were gradually to acquire ownership of the vessels as such stock was retired from earnings. The Attorney-General, in his decision, holds that it was evidently the intention of Congress to authorise a sale of the ships either for cash or for credits up to 15 years, and that any arrangement whereby the Government received shares of stock for the ships was not a sale within the provisions of the Merchant Marine Act. Furthermore, serious questions, he points out, might arise if the Government assumed stock ownership in corporations controlled by State laws.

After months of acute depression and periods of almost complete stagnation, the ocean freight and charter market shows decided improvement in volume of business and in rates, although the increased activity is confined largely to the transatlantic grain trade, and in most instances vessels are being chartered for Montreal loadings. Comparatively little ocean tonnage is being engaged for full cargo grain shipments to Europe from United States Atlantic ports. There are prospects, however, of considerable business from such ports developing during the next month or two if charter rates become attractive to vessel owners. An exceptionally large amount of berth grain business has been done lately by regular steamship lines to Mediterranean, United Kingdom, and Continental ports, in marked contrast to the dearth of orders in recent weeks. Practically all grain parcel room available for prompt loading has been taken up, and in some instances has commanded premiums, whereas only a month or so ago steamship men could not secure such grain business even at ridiculously low rates. Prompt grain berth rates have advanced sharply from the season's minimum levels, but are still below the basis which owners of full cargo steamers will consider. Demand for overseas coal tonnage is extremely light in all directions, only occasional fixtures being reported. Time chartering is very dull, except in West Indies trade.

At the American Bankers' Association Convention, which opened to-day at Atlantic City, Mr Charles E. Mitchell, president of the National City Bank, declared in his address that business conditions at present are the most favourable this country has known since its entry into the great war. "So far as American business is concerned,"

he added, "the war is over and is paid for. The great body of indebtedness owing on that account from foreign countries represents commodities sold years ago, and while I am not advocating the wiping out of that indebtedness, I say that if we never got a penny of it, we would be no worse off than now." Mr Mitchell emphasised the difficulties American business must meet in the next few years, when conditions the world over, and especially in Europe, become stabilised, and business and trade become active; and turning to the gold problem, he declared: "We have a very real problem on our hands in determining how to accomplish a redistribution of this gold without going through the usual round of credit inflation, rise of adverse trade balances, falling prices and credit disturbances. The symptoms of last spring were alarming, but the good sense of the business community averted the danger for the time being. That danger will, however, continue to overhang so long as gold continues to flow into our already abundant reserves."

In primary markets, all descriptions of cotton goods, both finished and unfinished, are decidedly firmer, owing to the further sensational rise in prices of raw cotton, which has carried the staple above 30 cents a pound for spot middling. Although prices of cloths and finished lines have been advanced sharply, they are still far below parity of cotton at that level. Notwithstanding the latter fact, prospective buyers as a rule have thus far shown great reluctance in paying even moderate advances, and have confined their purchases in most cases to quantities only sufficient for current and nearby requirements. Among both buyers and sellers, especially manufacturers, there is, in fact, much uncertainty felt over the outlook for merchandising at the higher levels which must eventually be asked for all kinds of cotton textiles if the staple holds at present levels, or continues its upward trend. This is strikingly illustrated by the action of leading gingham manufacturers in naming prices on ginghams for the next spring season, unchanged from those that have prevailed for this autumn season, and on the same basis that was established for last spring, even though raw cotton is now fully 5 cents a pound higher and wages have been advanced 15 per cent. The doubtful prospect of a satisfactory distribution of those fabrics for the spring, 1924, season is probably the reason why prices were not advanced. It is unlikely, however, that mills, generally, will be willing to accept a large volume of business, should it be tendered, at such prices, because few manufacturers, apparently, have been able to cover their raw material needs at prices that would afford a profit on ginghams sold on the current basis. Another evidence of the unsold on the current basis. Another evidence of the unsold on the current basis. Another evidence of the unsold on the current basis. Another evidence of the unsold on the current basis.

In its final report to the President and Congress, the United States Coal Commission expresses its belief that "the logical and appropriate agency to exercise the necessary administrative and quasi-judicial functions required for the coal industry already exists in the Inter-State Commerce Commission," and it recommends "the creation, for this purpose, of a special division in that Commission. The fundamental evil of the anthracite industry, the Coal Commission declares, is monopoly—the treatment of limited natural resources as if they were like other private property. Reliance upon competition without supervision, it says, has resulted in the persistence of a permanent level of higher prices above which extortionate increases are made whenever a suspension gives rise to a premium on coal. The Commission vigorously assails the Pennsylvania State tax on anthracite coal, and suggests an excess profit tax to be imposed upon hard coal operators. "The price of anthracite," it declares, "is directly affected by the Pennsylvania State tax of 1½ per cent., producing a revenue of from \$7,000,000, to \$8,000,000 a year, which is necessarily borne by consumers. The higher the price to the consumer, the

greater the return to the State. The monopolistic feature of this tax is recognised by the policy of the State (Pennsylvania) in taxing anthracite, while its bituminous fields remain untaxed."

GERMANY.—POLITICAL CRISIS—CURRENCY—FINANCES—EXCHANGE AND BOURSE—BUSINESS.

(FROM OUR CORRESPONDENT.)

BERLIN, October 2.

THE fears of some pessimists that abandonment of passive resistance would not improve the general situation have so far been realised. Conditions on the Ruhr are not changed for the better. The reversal of Berlin's policy has merely been the signal for an outbreak by the very small, but openly French-supported, faction of Rhine-Republicans. The persecution of the local population by the military is as bad as ever, and Paris seems determined to use its present advantage in order to produce general anarchy. The "Putsches," and disorders nearer the centre, and in particular the anti-Republican action of Bavaria, are dangerous, not because they foreshadow any general overthrow of the present system of Government, but because they act as chronic irritants. There is no prospect of civil war or of a monarchical or Communist revolution, and the prospect of a formal Bavarian secession is small; but there is also no reason why the present movements in those directions should subside. A clear-cut, irreconcilable difference between two great factions which could be solved only by a test of strength would be in many ways preferable to the present situation, because the beaten side would presumably accept the logic of the situation. But there is no such difference, and there are no two great factions. The parties now making trouble are relatively small, and the great majority, who un-

doubtedly stand for the Democratic Republic, do not show the enthusiasm which they probably would show in a clear issue. A home settlement seems to be impossible without a Reparations settlement. It is on the Ruhr question, as a matter of national prestige, that the various extreme "vaeterlaendisch" associations, which are now making trouble, thrive; and the same question creates economic tensions which operate against national solidarity. The truth about the whole situation, domestic and international, is that France has got Germany by the throat, and is systematically crushing the life out of her. The view of those German extremists who maintained that the abandonment of passive resistance would not propitiate France, and would only facilitate her destruction policy, has been thoroughly justified by facts.

With such conditions, there is a certain unreality in Dr Stresemann's attempts at reform. The currency reform, it is admitted, cannot be carried out as long as the Ruhr crisis is unsettled. The Bill, however, is still being considered. The Reichsrat has suggested as an amendment that the new Currency Bank be required to give, via the Reichsbank and the private note banks, credits to industry of one million "new marks." The German Democratic Party has condemned the Bill in principle, declaring that the mortgage security of the new notes will be useless, not being realisable, and complaining that the old abuse of covering State deficits with notes is to be at least temporarily maintained. The party demands gold notes and a new gold note bank. This could be done on the basis of the present funded "gold loan," if only this loan (which is at present a paper mark, stable-value loan) were strengthened by payment of interest actually in gold, the resources therefor to be raised by collecting taxes in gold (or high exchange). In other quarters, including the financial committee of the Reichswirtschaftsrat, the general sentiment is against the planned "new marks," and in favour of a gold-secured mark. The president of this committee, Herr George Bernhard, has submitted a scheme for raising the necessary gold fund (at least one milliard gold marks) by the issue of gold shares and gold bonds by the Reichsbank. This, like all the currency schemes, is associated with a demand for State-financial reform, the first feature of which would be a gold mark Budget. The Cabinet's difficulties in putting through any financial and currency reform which require taxing away capital will be increased by divergences of opinion in the Cabinet. The German People's Party is objecting to some of the Socialist Ministers and their measures, and aims at the inclusion in the Cabinet of the avowedly Monarchist (and, in regard to Reparations, intransigent) German National Party. To this the Socialists, who stomach the much more moderate People's Party unwillingly, will certainly not agree. Should the Socialists withdraw from the Cabinet, they would probably actively oppose, and that would make government impossible.

Although nominal receipts from taxation have largely increased as the result of the August multiplications, only a fraction of expenditure is still being covered. The ten-day report for September 11th-20th shows expenditure of 5,445,794 milliards, of which 1,566,498 milliards were loss on railways, while revenue from taxes was only 84,660 milliards. Revenue from funded debt appears at 399,682 milliards. This really represents subscriptions to the "gold loan," while 4,961,451 milliards were added to the Funded Debt. On September 20th the Funded Debt of discounted Treasury bills reached 7,342,178 milliards, as against 2,380,727 milliards ten days before, and 1,494 milliards at the end of 1922. The Customs gold surcharge has been raised to 3,599,999,900 per cent. A new supplement to the Budget provides for the immediate raising of 12,416 billion marks, and for a further issue of 20,000 billion marks Treasury bills. The quarterly tax payments due in October have again been multiplied. The income-tax payments, in August 400-folded, will be 30,000-folded;

the 600-folded company income-tax will be 45,000-folded. Payment may be postponed on condition that the taxpayer compensates the State for further mark depreciation. A Government Bill putting certain taxes on a gold basis has been submitted. The Property Tax will be entirely in gold; after an exemption of property worth under 2,000 gold marks, the tax will be 2 per mille per annum on the first 10,000 gold marks of property, 4 per mille on the next 25,000 gold marks, and so on progressively up to a maximum of 10 per mille on property worth over 1,185,000 gold marks. The Succession Tax is also put on a gold mark basis. The Sales (Turnover) Tax is to be raised from the present 2 per cent. to 2½ per cent. Another Bill provides for "stable-value" tax payments. After December 31, 1923, all taxes which are not paid before the legal date must be paid in gold, irrespectively of whether or not the tax is itself a gold mark tax. Payment, if not made in gold, must be made in foreign exchange or in paper marks on the basis of the paper mark's current gold value, as determined by the Finance Minister. The Financial Committee of the combined Socialist Trades Union has put forward its own financial reform programme, based on partial expropriation of capital values. Companies should be required to increase their capitals by one-third in the interest of the State; all concerns employing more than 100 persons should become companies; and 25 per cent. State mortgages should be imposed on landed properties of above a certain value. In general, direct taxes should be collected at the source.

Money continues to be plentiful, and stocks last week had another big rise, the *Frankfurter Zeitung's* index for dividend-payers showing 22,987,073,500 on the 28th, against 16,879,573,500 a week earlier, and 376,685 at beginning of the year. The renewed rise in the foreign exchanges yesterday sent up all quotations, the favourites being oil papers. Despite new intervention by the Reichsbank, the Bourse regards the prospect of stopping the mark decline as very small. The home demand for foreign bills continues to be heavy, and the semi-speculative circles, which need foreign currency for genuine business purposes, but which in buying it are influenced by politics and sentiment, have been very active. Bonds were yesterday even firmer than stocks.

The rapid upward price-movement has begun again. The gold calculation, or "key-number" system proves very unsatisfactory, owing to the arbitrary way in which the basic prices are fixed. Staple food products are sometimes 100 per cent. higher in one town than in another. The temporary mark recovery had very little effect on wholesale prices, and none on retail. The official cost-of-living index for September 24th shows 28,000,000 against 14,244,900 a week earlier, and 1,183,434 on August 27th, having thus risen 25-fold in four weeks. The official wholesale index number for the 25th was 36,200,000, against 36,000,000 on the 18th.

The condition of industry continues bad. Iron-trade journals predict that the release of the stocks of iron and steel in the Ruhr district will not have any appreciable effect on the international market. The amount of heavy iron and steel stocked is estimated at 1,750,000 tons. Unoccupied territory can absorb a great part of that, and it is doubtful whether the owners will be willing to export it at the prices prevailing in the world-market. When the Government lately put certain heavy iron products on the export-free lists, home manufacturing consumers protested that exporters were charging low prices, often below production cost, to foreign buyers and recouping themselves by charging very high prices at home, being enabled to do this by the difficulty which the exchange shortage creates against importing. Unemployed in the metal industries in the second week of September amounted to 7.8 per cent., as against 3.8 per cent. at the beginning of August. The condition of most export industries is bad. This applies in particular to machines, the home demand for which has somewhat improved. In the textiles branch things are very bad. Export has almost entirely ceased, home prices are as a rule above foreign, and concerns with sufficient orders have difficulty in getting raw materials. Very small quantities of raw cotton are being imported, and the stock at Bremen has fallen to 16,632 bales, as against 115,000 bales a year ago.

CANADA.—THE BANKING SITUATION—HARVEST PROSPECTS—BUSINESS CONDITIONS—WHEAT POOL SCHEMES—THE GRAND TRUNK AGITATION—IMPROVEMENT IN C.N.R. EARNINGS—CANADA'S REPRESENTATION AT THE ECONOMIC CONFERENCE.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 10.

THERE have been no more overt developments in the banking situation, but the impression prevails that further mergers may be expected in the near future. Last week the stock of the Molson's Bank fell 10 points in one day on the Montreal Exchange, and there is considerable doubt about the exact situation of some of the smaller banks. Meanwhile pressure from the Press and public for a thorough public inquiry into the circumstances surrounding the Home Bank's failure has gathered force from the disclosure of the fact that early this year its president, when the true state of affairs must have been known to him, disposed of 1,000 shares of his stock holdings, and that other favoured insiders also managed through timely warnings to escape any serious loss. The curator has not made any report, but the condition of the bank's affairs is thought to be more serious than was at first surmised, and as the calls under the double liability clause of the Bank Act have always been disappointing in their results, the depositors have little chance of being paid in full. There seems now to be almost general agreement among the Press that some sort of Governmental inspection of the banks will have to be set up to restore public confidence.

The reports about the western wheat crop have once more taken a more favourable tone, and while the Dominion Bureau of Statistics will not commit itself to more than 366 million bushels of wheat for the three prairie provinces, the *Manitoba Free Press* in its latest survey of the date of September 8th claims a very much higher figure. Undoubtedly Alberta has one of the best crops in its history, reaching the high average of 25 bushels per acre; in the more northerly districts it is very late, and considerable areas still uncut are facing the serious risk of frost. The Manitoba wheat crop, on the other hand, which has been badly spoiled by rust, will not average more than 12 bushels per acre, and the quality is poor. This year only 20 per cent. of the Manitoba wheat inspected up to date has graded No. 1 Northern, whereas at the same date in 1922 about 80 per cent. had reached that standard. The Government of Saskatchewan, the chief wheat-growing province, predict a yield of 20 bushels per acre, which would give a total volume of 250 million bushels, but this figure is probably too optimistic. A substantial proportion of Saskatchewan's wheat will not reach the higher grades, but the crop is turning out better than was expected a fortnight ago. There is a serious scarcity of labour in the west, and complaints are made that the harvest labourers imported from Britain lack the physique needed for the strenuous work of the harvest fields. The harvest is practically complete in Ontario, and is on the whole good. In Quebec the grain harvest is late, and along the lower shores of the St Lawrence is very poor. However, thanks to six weeks of favourable weather, the Maritime provinces are in possession of very good crops.

Business continues to be reasonably good, and the lumbering, pulp, and paper industries are all very active. The toll now being taken from Canada's forests is exceedingly heavy, and the Government have now, as was forecast last session, appointed a Royal Commission to investigate the whole question of the country's timber resources, and the best policy which should be adopted for their judicious conservation. The cotton and woollen manufacturers complain that they are being ruined by British competition, but other kinds of factories report a sufficiency of orders. The stock markets, owing to the banking disclosures and the Japanese disaster, have been reactionary in tone.

The indications are that no wheat pools will operate in the Western provinces to handle the 1923 crop. The wheat pool committees have failed to reach the agreement which they hoped to make with the private elevator in-

terests for the use of their plants. The elevator owners are dissatisfied with the arrangements made for financing the wheat pools, and even some directors of the Saskatchewan Graingrowers' Association have openly criticised the scheme. Furthermore, the promoters of the pools, although they found a satisfactory response in Alberta, have been unable up to date in Saskatchewan to get the necessary minimum acreage under contract.

There is considerable disappointment among cattlemen at the announcement that as the result of the outbreak of foot and mouth disease among Irish store cattle a quarantine has been imposed upon Canadian store cattle because they use the same lairages, and if it is continued indefinitely on this pretext it is bound to generate the suspicion that it is merely a device to cancel the concessions secured by the removal of the embargo this spring. The continued virulence of the campaign of propaganda which is being sedulously conducted by certain interests in London against Canada on account of the Grand Trunk award is now creating some resentment here. Comparisons of the Canadian Government to the Bolsheviks such as have appeared in an investment circular issued by Arthur Wheeler and Co., to which considerable publicity has been given in Canada, do not promote good relations between the two countries, and simply tend to harden Canadian opinion in support of their Government's action. It is still felt, however, that the British public has been very imperfectly informed of the strength of the Canadian case.

The returns of the earnings and expenses of the State railway system for the current year up to the end of July continue to show a very welcome improvement, as the following comparative figures demonstrate:—

	1922.	1923.	Increase.
July—			
Gross earnings	19,534,941 ..	21,002,848 ..	1,467,907
Operating expenses	18,811,937 ..	19,530,620 ..	718,683
Net	723,004 ..	1,472,228 ..	749,224
Seven months—			
Gross earnings	122,105,576 ..	137,781,521 ..	15,675,945
Operating expenses	124,308,569 ..	134,797,061 ..	10,488,492
Net	*2,202,993 ..	2,984,460 ..	5,187,453

* Deficit.

In July the net earnings are actually more than double the revenue of July, 1922: as the gross earnings were only up 7½ per cent. this represents a very commendable improvement in the operating ratio, which has been ominously high compared with the parallel ratio of the C.P.R. In the first seven months of the year a deficit of \$2,202,993 has been transformed into a surplus of \$2,984,460, and as the crop movement in the last five months always swells the traffic returns there ought to be an operating surplus of at least 4½ million dollars at the end of the year. This sum will not begin to pay the fixed charges against the system, but it offers a hopeful augury that the annual drain upon the Federal Treasury for the railways may be steadily cut down. The notable feature of the situation is that the C.P.R. have not been able to record any such improvement in returns this year as the national system, and it is believed that this fact is not regarded without anxiety in C.P.R. circles. The *Montreal Star*, a powerful paper which has always been friendly to the C.P.R., has been publishing a series of alarmist articles entitled "The Whisper of Death." Assailing all the parties and the leading politicians for their folly and incompetence, they assert that Canada is drifting to bankruptcy, and that absorption in the United States is an imminent peril, and they lay the main responsibility for this untoward state of affairs at the door of the burdens which the country has to carry as the result of the acquisition of the national railways. Their return to private ownership is urged as the need of the hour, and at judicious intervals the merits of the C.P.R. are eulogised. This series of articles, which is still continuing, has attracted widespread attention, for their reproduction in leading papers from coast to coast was paid for, and they have been severely criticised as likely to endanger the public credit of Canada. Their exaggerated pessimism greatly discounts their authority, but there has been a sufficient substratum of truth in them to earn a hearing. Considerable speculation about their purpose exists, and one theory is that they are the preliminary moves in a well-planned campaign whereby the State railways will be sold by the Government to a

powerful syndicate of Canadians and Americans, and the menace of competition subsidised by the backing of the Federal Treasury removed from the C.P.R. However, in view of the recent improvement in the C.N.R. figures the time is scarcely propitious for such a coup.

As the Prime Minister will be preoccupied with the business of the main Imperial Conference, the representation of Canada at the subsidiary Economic Conference will chiefly be entrusted to Sir Lomer Gouin, the Minister of Justice, and Mr G. P. Graham, the Minister of Railways; a number of departmental officials from Ottawa will also be in attendance. It is understood that the Department of Trade and Commerce has prepared an exhaustive memorandum for submission to the Conference, in which Canada's trade position in relation to the rest of the Commonwealth is thoroughly reviewed, and the contention is made that Canada is taking advantage of the markets of the other British countries much more fully than they are taking advantage of the Canadian market. A plea is made for other British countries to concentrate more effective selling power in the Canadian market. There is no expectation that the Canadian delegates will of their own volition raise the preference issue, but as both Sir L. Gouin and Mr Graham are avowed Protectionists they are likely to give at least silent support to the demands for a more extensive system of preferences for the Dominions, which the Premiers of Australia and New Zealand evidently intend to make.

HUNGARY.—TAX ON BOURSE DEALINGS—EXCHANGE REGULATIONS—HOUSING CONDITIONS—INFLATION.

(FROM OUR CORRESPONDENT.)

BUDAPEST, September 23.

A CERTAIN amount of indignation has been expressed on the Stock Exchange here at the decision of the Government to double the tax on all transactions on the Bourse. The former tax was not a very heavy one, and if, as some contend, the effect of the change is merely to "freeze" out the "weaker brethren" and small speculators generally, little harm and some good may result. On the other hand, the first commercial paper here, viz., the *Pester Lloyd*, is up in arms against the proposal, and foresees a heavy loss of revenue to the Government in consequence.

A far more important matter is the concession made in regard to the Devisen Centrale and foreign exchange relating to export sales. Hitherto a Hungarian exporter could only receive the value of the foreign monies paid for his wares through the Devisen Centrale, which gave him exchange value at the official rate, a rate often as much as 50 per cent. below the commercial rate. The result was that many of the peasants refused to sell their produce. Now the exporter is permitted, to the extent of half his price, to purchase at any rate he can get, Hungarian crowns circulating outside Hungary, which he may import into the country. The other half of his money he will get as before through the Devisen Centrale. It is hoped by this means to induce the peasants to sell their produce, and also to relieve, to some extent, the shortage of money which is becoming extremely inconvenient, to say the least.

The question of the price of the crown continues to be the subject of much speculation. On the whole, the opinion seems to prevail that it should keep firm for the next month or so, in any case, owing to the import of foreign money by exporters. If, however, months are to elapse before anything is done about a foreign loan, and order is to be maintained, it is clear that the printing of notes will and must increase greatly.

The high cost of food must be causing terrible suffering to the poorer classes already, and the amount of poverty is appalling. Owing to the fact of millions of Hungarians being handed over to foreign countries, a great number of refugees have settled in Budapest, and it is as much as if not more than, the resources of the town are equal to furnish them with any sort of lodging. One of the most prominent of the members of the National Housing and Town Planning Council, who have been on a visit to Budapest, declared that, after what he had seen here,

he should find it hard to talk about the sufferings of the poor in England. This being so, a continuance of a policy of deflation must be accompanied by some drastic steps to relieve those in need, or trouble will ensue.

Apart from this depressing side of the picture, the outlook is brighter. The crop reports are constantly improving. Even the maize crop, which was said to be negligible, turns out to be better than last year, while potatoes largely exceed last year's crop.

Many new companies are being formed, of which one at least has managed to secure some English capital. This is a large agricultural company with a capital of two milliards, with a large number of landowners on the board. Again, a very old-established and well-known porcelain factory has been changed into a company with the modest capital of five hundred million crowns, the shares of which are already dealt in at a huge premium. Between September 7th and 15th the fiduciary liability of the country has been increased by 32 milliards, and now stands at 476.75 milliards of crowns, which from the Hungarian point of view is a large sum of money. Reduced to sterling, it is less than four million pounds, which is a reminder that a loan of even five millions would go a long way to placing the country on its feet.

FINLAND.—FOREIGN TRADE—STATE TIMBER AUCTIONS—BUDGET—COST OF LIVING—AGRARIAN REFORM.

(FROM A CORRESPONDENT.)

ACCORDING to Finnish foreign trade statistics for the first six months of the present year, Germany continued to occupy the premier place among supplying countries, with 35 per cent. of Finland's total imports, while Great Britain came next with 19 per cent., and the United States third with 13 per cent. of the total. The value of German imports exceeded by 193.5 million F.marks the value of German imports for the same period in 1922, a result partly due to the fact that Finnish imports of colonial products are arranged through commercial houses in Hamburg, the post-war attempt to shake off this system by establishing Finnish buying offices in foreign countries having been unsuccessful. Imports from Great Britain and the United States showed an increase in value respectively of about 20 million F.marks, in comparison with the same period in 1922. Imports from Russia were 14 times as great as last year. Argentina trebled, and Poland and Belgium doubled their exports to Finland. The largest class of imports consists of grain and grain products, of which the United States are the chief source of supply, with Russia second on the list. In colonial produce and metal goods, Germany comes first, while in the textile and spinning materials sections Great Britain heads the list with a total of 145.3 million F.marks, Germany being second with 126.5 million F.marks. As regards exports, Great Britain was far and away Finland's best customer, taking goods to the value of 888.5 million F.marks, or 42 per cent. of the whole. The United States came next to Great Britain with 220.4 million F.marks, or 10 per cent., and France third with 174.6 million F.marks. Compared with the corresponding period of last year, exports to England increased by 72.6 million F.marks, and to the United States by 89.9 million F.marks; on the other hand, exports to France declined by 58.2 million F.marks, while Germany bought from Finland 70.2 million F.marks less goods than last year. The total trade was as follows:—

(Million F.Marks.)
